

**Submission  
No 100**

**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND  
PRICES IN NEW SOUTH WALES**

**Name:** Mr Les Crockford

**Date received:** 16 October 2017

---

The more Solar Power the better. People choosing to use their own Solar Power are relieving the load on the traditional Power Grid.

With more Solar on rooftops we could reduce demand on current Power Stations and reduce need to build new Power Stations.

Government should be helping Solar users to obtain Storage Batteries to further reduce Peak Hour demands.

Solar Power users should be fairly paid for the Power that they provide to the Grid.

Power generation companies are trying to get people to use less power in Peak times, what better way than to encourage people to produce their own power via Solar Panels and Battery Storage and provide the surplus to the Grid for a Fair Price?
