**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Volker Pfannenberg

Date received: 16 October 2017

I am with Powershop and get 12.8 cents/KWh which is much closer to a fair FIT. Residential roof top solar plays an ever growing role in the NEM. It especially helps the supply system with coping at peak times in summer. Residential PV also reduces CO2 emission and consequentially the damaging effect of air pollution on human health. All these factors which will grow over the years justify a fair FIT. In NSW three power stations are 35 years and older. Renewable technology has overrun fossil fuels which serve a small minority of politicians and mostly foreign coal companies but not the majority of Australians. Game over.
