**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Rick Priddin
Date received: 16 October 2017

A fair feed in tariff should be mandatory for all grid connected solar as we have installed solar at our own cost and it does help support the grid especially when the heat is on the air conditioners are going full blast, now a reasonable figure would be \$0.35 cents per KWH. This would help with cost of maintaining and maybe expanding the system. A reasonable FIT would also encourage new installs and create new jobs and we could even retrain those dopey coal miners when coal burning is banned which will come when we all get together and vote that it is banned. Climate change is happening and will only get worse if we don't do any thing about it all those people that do not believe should be ignored/
