**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr David Newman

Date received: 16 October 2017

I am one of the 'lucky ones' - I invested in 20kW of solar on my roof and while I am a huge electricity user (the reason for my investment), I almost meet my needs. That said, there are times when I am not using solar that I produce, and it would be nice if I got reimbursed a fair price for my investment.

For users with smaller systems, and where they work a lot of the day, then use their power at night, the pennies they get paid for what they generate by no means goes anywhere near helping to offset the high costs they pay for power later in the day.
