**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr David Mackay

Date received: 16 October 2017

The current disparity between the price paid to domestic solar-power suppliers and the price charged for that electricity is unacceptably high. Way too high! Either those domestic solar-electricity suppliers should be paid more, or the price charged for that electricity should be less. Currently all large energy suppliers charge a premium for 'green energy'. Yet the cost to them is less! The price charged for 'green energy' should be LESS than the normal price - now that would throw a spanner in! Could you please investigate and ask the companies to please explain?

Thank you.
