**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Nialld Christopher

Date received: 16 October 2017

I am TOTALLY disillusioned with those entrusted to ensure the good management of the public affairs of NSW. This oath was intended to bind councillors and members to serving the people of NSW. Alas no longer focused on serving the people, EACH AND EVERYONE, only serves the management of their political party. In the words of Mercutio, a plague on your houses.

If you look at ANY 'state affair' incompetence, ignorance, interference, and even corruption are the basic markers of success seemingly aspired to by councillors and members - there are very few exceptions.

Selling of state assets to bank, robber barons and the confluence of spivs and underlives populating this state has become a daily occurrence in the 'affairs of this state'. No longer are members and councillors the guardians of the people's assets but rather the vultures ripping them from the people.

Not only do you lie when selling an asset or setting up a scheme but you will change the rules set to govern such transactions at the bidding of the banks, robber barons and spivs you 'sup' with. Take the scheme set up to encourage people to purchase, at great expense, to put solar panels on their roofs. This led to installed PV capacity in Australia being increased 10-fold between 2009 and 2011, and quadrupled between 2011 and 2016. So what do you do? Abolish the feed in tariff. After selling the infrastructure to the banks and robber barons the rebate was dropped from 60c to 6c. Thus ensuring my \$25,000 investment in the future of this planet will NEVER be paid off. This is further exacerbated by AGL and other thieves suggesting I will have to pay them for them to accept feed in power from me. Nearly 5% of electricity in this state is generated by roof top solar systems. Without this power blackouts will be a regular thing, and not just in summer. Unless a reasonable and fair rate is paid by the power companies for feed in electricity from roof top solar systems, then I'll simply stop feeding it to them. The shortfall in requirements if this was done across the state would be the need for a new coal fired power station. Try and explain that to the people of this state.
