**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Kevin McDonnell

Date received: 16 October 2017

It is vital for the future of Australia that we make a rapid transition to renewable energy. Coal is not the future.

Therefore it is imperative that support be given by the NSW government to clean energy projects. Part of this is legislation for a fair price for solar generated electricity.

I live in institutional buildings with extensive roofing fully covered with solar panels with feed-in to the grid, but the financial benefit has been very disappointing because of the present pricing structure.

The government should be extending all possible support to renewable energy production throughout the state if it is to be credible overseer of the state's resources, and genuinely concerned about the welfare of its citizens.
