**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND
PRICES IN NEW SOUTH WALES**

Name: Mr Peter Mumford

Date received: 16 October 2017

As a home solar array owner, I believe I should be paid a fair price for the power I export to the grid. The rooftops of Australian houses provide a great opportunity for distributed power generation, it makes sense to encourage owners to install solar by ensuring a fair return on investment. Distributed generation and storage is expanding and should be supported, along with a smart grid. Minimum feed-in tariff should be at least 20c per kWh.
