**INQUIRY INTO ELECTRICITY SUPPLY, DEMAND AND  
PRICES IN NEW SOUTH WALES**

**Name:** Mr Wayne Zaunders

**Date received:** 16 October 2017

---

In a true market, my solar electricity would be priced fairly and not be influenced by a retailers whim to increase profit by short pricing my mine free, pollution free, noise free, dust free, disease free energy.

A fair market price, enforced by legislation is the only trusted fair system for NSW citizens.

I have invested my money in solar and energy saving.

I have had solar panels since 2009, and will have the current system for another 22 years. They have offset over 100% of my entire yearly households electricity use. They have reduced the cost to the NSW Govt of providing electricity. I also need baseload and my daily network costs pay for that the same as anyone else. Why are you allowing me to be ripped off by monopoly energy suppliers? I vote and so do my family. Please fix the uncertainty in energy generation for the future. Thanks
