As a resident of the Hawkesbury since 2013 and having to cross Windsor Bridge during peak hour most days, I can see no benefit in replacing the current Windsor Bridge given the RMS has stated that it can be maintained with relatively little cost. I strongly support the CAWB stance that the only real solution for Windsor is a bypass as this will allow heritage to be maintained whilst also alleviating the traffic issues and even potentially providing a route across the river during times of flooding if it has higher feeder roads, which the current bridge and any replacement does not/will not have.
