**INQUIRY INTO KOALA POPULATIONS AND HABITAT IN
NEW SOUTH WALES**

Name: Mr Karl Augustine

Date Received: 8 July 2019

Our Iconic Koala is becoming extinct. A leading cause is habitat destruction. Australia needs to transition to plant based diet as 56% of Australia's land mass is for cattle, sheep and dairy and only 3.5% for plant food production. By transitioning to plant based diet Australia can rewild our land and protect species like the koala from extinction ..

Better protection at roads with my local area many locals being run over PM Heathcote road.

The numbers have plummeted from 1 million to around 40,000 since I was a boy. 🐻🐾
