**INQUIRY INTO KOALA POPULATIONS AND HABITAT IN
NEW SOUTH WALES**

Name: Mrs Eira Battaglia

Date Received: 16 July 2019

As a wildlife carer and someone who cares about our environment especially in relation to how our wildlife are being continually threatened and stressed due to loss of their habitats. This is especially important to protect our iconic koalas, they cannot be 'translocated' to suit development or logging in old growth forests. We cannot continue to allow huge road developments which go through known koala habitats.

If governments do not take these concerns seriously, we will not have koalas in the wild in the next couple of generations.

Stop logging in old growth koala forests NOW, do not sign any more agreements

Save the only Chlamydia free koala colony in NSW at Appin/Campbelltown, put in place fauna protective measures to prevent roadkill on Appin Way.

These are important measures or the current politicians will be remembered as those that ensured the loss of koalas in NSW.
