**INQUIRY INTO MODERN SLAVERY ACT 2018 AND
ASSOCIATED MATTERS**

Name: Name suppressed

Date Received: 19 August 2019

Partially
Confidential

Robobai.com is an established AI procurement analytics platform, connecting 3rd party procurement spend data with external “Modern Slavery Data” to provide probability insights into modern slavery risk at the supplier and supply chain levels.

Robobai believe that our technology could play a significant role in supporting government policy and objectives of the act with real data that starts to show risks with three lenses - supplier, country and category.

Robobai have been identified as a Gartner Cool Vendor for 2019, we are proud to be an Australian business and have proven technology that is commercially available and, in the market, today.

Through supply chain mapping and connecting customer data with credible global third-party source data, we are now able to visualise risks by category, supplier and country.

This insightful perspective provides easy-to-use dashboards, showing slavery risk throughout the entire supply chain. Using smart AI powered classification and connected procurement analytics, our Robobai Anti-Slavery module can identify key areas of risk by suppliers and make sense of inconsistent and fragmented information.

Without good AI spend classification, supply chain slavery data is like finding a needle in a haystack for large complex organisations. Robobai helps you build a better risk profile the supply chain that can help avoid association with unethical practices and more importantly help save lives from modern slavery.
