

**Supplementary  
Submission  
No 29a**

**INQUIRY INTO REGULATION OF BUILDING  
STANDARDS, BUILDING QUALITY AND BUILDING  
DISPUTES**

**Name:** Mr Peter Nowlan

**Date Received:** 8 August 2019

---

In addition to this there must be more research on the use of Rebars and vertical or HOB beams.

I remain convinced that the Rebars rust - thus weakening and splitting the concrete. The Rebar must be delivered to the building site with stronger covering and protection.

As for electrical work

1 The electrician must undergo a colour blindness test - up to 60% of males are colour blind.

2. Electrical work carried out when there is greater than 60% humidity is asking for trouble.

Resting the palm of your hand against aluminium when sweating is going to cause a short because of the spreading of the moisture. The solution is to wear cotton gloves with the tips cut off the fingers .
