Partially  
Confidential

Destruction of more of our unique landscape, will not benefit anyone.

We exist on the original world, wide web.

If we continue to interrupt the natural order, we will lose.  
No doubts, no argument, it is fact.

How many animals, plants and trees will be lost?

To use a south american example...poignant in the current catastrophic fire situation...

Without either, an insect, an orchid and the brazil tree....we will have no brazil nuts.

Our indigenous folk know the relationship between a queensland flower and the fish in the ocean shores.

When are we going to have politicians who work FOR OUR COUNTRY, and not against it?

When are we going to choose need over greed?

When are we going to realise we all need to be conservative, not continue to treat our land as if it is an infinite resource?

Please think, and act for the future of our country, children, and the world...
