**INQUIRY INTO PROPOSAL TO RAISE THE
WARRAGAMBA DAM WALL**

Name: Name suppressed

Date Received: 9 September 2019

Partially
Confidential

It has been fairly well established by now that humans, as a species, need to reduce their level of impact on the environment and other species around us. If we fail to take this advice seriously then the human species, and our civilizations, are driving toward bio-diversity collapse. The consequences of this action will be dire.

There is no point in the NSW state government attempting to sell its "green" credentials if its actions are then primarily focused on destruction of the natural environment.

It is for this reason that I would request the NSW government reject forever the proposal to raise the dam wall. The short term, financial, gain from this action will pale into insignificance in the shadow of its' consequences.
