**INQUIRY INTO GAY AND TRANSGENDER HATE CRIMES
BETWEEN 1970 AND 2010 - 57TH PARLIAMENT**

Name: Dr Bernard Vincent Burns

Date Received: 28 February 2020

Partially
Confidential

The unreported missing persons list

- Create a list with the following
 - Australian births
 - Entry into Australia
 - Remove Australian deaths
 - Remove exits from Australia
- Now remove people paying taxes within the last, say, 5 years
- Now remove people paid Centrelink benefits
- The remainder are either in receipt of an undeclared income or are missing persons
 - Police should be interested in either case
 - I suspect a large number of these people are victim to hate crime
 - For each case, pull their telecoms records to see if they are still moving and making phone calls. If they are not, you must assume they are dead and start a murder enquiry
 - Were they gay?
 - Were they in the same postcode area?
 - Did they have a false diagnosis of schizophrenia (reported persecutory voices and were disbelieved)?
 - Were they recently charged with a crime (framed)?
 - Did they have a recent diagnosis of an unusual cancer?
 - Did they have HIV?

Deliberate transmission of HIV

- There has never been a person charged with deliberate transmission of HIV to a male in Australia's history
- All cases that went to court, 18 in number, were all heterosexual, white, middle-class females, something that cannot be explained easily
- The rate of HIV in gay males is 100 times that seen in heterosexuals in Australia, so that statistic is very worrying
- There is disinformation on the internet to suggest otherwise, and that males have transmitted HIV to other males and been prosecuted in Australia.

- Police in Sydney regularly approach _____, for advice on legal matters relating to HIV. If this is the case, why have there never been any prosecutions where the victim is male?
- _____ works at Sydney Sexual Health Centre. She heads a team that specialise in deliberate transmission of HIV. How do they operate? Who else is involved in this team? If Law Enforcement is involved, why has there never been a case that has gone to court in Australia's history where the victim is male? This is increasingly suspicious

Concealed gay hate-crime murders

- Please do the following data requests to look for concealed gay hate-crime. Split the data based on sexuality to compare gay versus straight, derived from the HIV Central Register, psychiatric records, GP records
 - Cremation where the cause of death is unnatural (to conceal evidence)
 - Cremation in any death age < 50 years of age (to conceal evidence)

- Oran failure age < 50 years (chronic exposure to low dose cyanide)
- Malignancies related to the following
 - Oncogenic viruses
 - Chemical carcinogens
 - Radiation exposure
 - Brain site (hacked mobile phone, dominant side of head, non-dominant side of brain)
 - Pelvic site
 - E.g. prostate, bladder, rectal, anal, penile, testicular
 - All but anal should be no higher in MSM
 - Cause could be hacked mobile phone adjusted antennas to emit dangerous levels of RF continuously
- Psychosis
 - Persecution campaigns are being passed off as a mental health diagnosis, and called psychotic symptoms and auditory hallucinations
 - There should be a LOWER incidence of suicide in schizophrenics as, by definition, there is no mood disturbance in schizophrenia. You do not commit suicide if you are not depressed, and you are not depressed if you are schizophrenic
 - Other causes of death in schizophrenia
 - There is a 20 year reduced life expectancy in schizophrenia in Australia
 - Schizophrenics are physically the same as non-schizophrenics
 - The increased rate of death is explained by increased rates of smoking and a sedentary lifestyle
 - There is no direct evidence that a sedentary lifestyle reduces life expectancy
 - Antipsychotics have a detrimental effect on lipid profile, and could account for an increased number of deaths from atherosclerosis
 - Adjusting for rates of smoking differences, you can only account for a maximum of 10 years reduced life expectancy due to smoking, and only if the deaths seen are smoking related deaths
 - Causes of death in schizophrenics are bizarre, and do not reflect smoking related illnesses or atherosclerosis
 - I suspect these deaths are concealed homophobic hate crime, and murders
- Death by misadventure
 - There are 1,500 deaths put down to misadventure annually in the UK due to GHB alone
 - Forensic post-mortems DO NOT routinely look for GHB
 - NONE of these cases should have been cremated as unnatural deaths need to be able to have the body exhumed if later evidence of foul play becomes available, yet I suspect many have been
 - All you need to do to murder someone with GHB is to meet them on a dating app, go around to their place (worrying sign is if they ask if you live alone), give them 2mls of strong GHB, wait for them to go unconscious, pinch their nose and cover their mouth for 5 minutes, and leave
 - Leaving an unused condom next to the body is the calling card of the “bare basher”, the new term for “gay bashing”, killing someone for having sex without a condom because it is no longer acceptable to kill them based on their sexuality alone

- All cases of death by misadventure in MSM should be treated as murder
- Death by fire (to conceal evidence of poisoning, malignancy, parasitic infection by removing hair and nails)
- Any death where hair and nails have been removed
- Any case where cyanide has been discovered. Chronic exposure to cyanide in low doses causes accelerated organ failure
- Any cases where chemical carcinogens have been discovered
- Any suspicious death where the victim is high profile
 - E.g. famous, a doctor, a judge, etc.
 - These are “trophy killings”
