**INQUIRY INTO LONG-TERM SUSTAINABILITY OF THE
DAIRY INDUSTRY IN NEW SOUTH WALES**

Name: Ms Alexandra Jamieson

Date Received: 11 August 2020

I am Lodging a submission regarding the dairy industry which I believe the government are reviewing soon.

I believe the dairy industry to be cruel and outdated. There is strong research to show that cows form attachments to their babies- taking them away from their mothers repeatedly is barbaric. The mothers cry for weeks- and the babies are either taken away for slaughter or the females suffer the sane terrible future.

Dairy farming is well evidenced to be catastrophic for the environment- with carbon emissions causing huge damage to the atmosphere and the water usage to make milk and other dairy products is unsustainable.

I deplore the government to consider supporting less cruel, less damaging ways to produce daily products- and to support
The numerous amazing, cruelty free alternatives to dairy, that are much healthier- for humans, animals and the future of this planet.
