**INQUIRY INTO LONG-TERM SUSTAINABILITY OF THE
DAIRY INDUSTRY IN NEW SOUTH WALES**

Name: Mr Robert McCormick

Date Received: 11 August 2020

Dear Reader,

As I'm sure has been explained, the exploitation of another species for their Milk is an outdated and cruel practice, propped up by government subsidies.

Here's a new video describing how subsidies prop these industries up, it is a false economy.

<https://youtu.be/bvX14U3gopU>

I'm sure the case is similar in this country, especially in our dry lands.

The water use, emissions, and cruelty, with the availability of many alternatives should be more than enough to cease government support of this industry. No other mammal ingests milk after infancy, and neither should we. We should be transitioning away from these products, nutritionist Brenda Davis R.D. is a reliable expert on the nutritional side.

I have kept it brief and clear.

It would be amazing to see New South Wales be progressive on this issue. Already over 26% of 18-25 year olds in Aus choose alternate milks, and this is a rapidly growing choice due to the clear abusive nature of dairy and the abundance of alternatives. Please choose compassion, make it happen.

Love and Appreciation,
Robert McCormick
