

**INQUIRY INTO LONG-TERM SUSTAINABILITY OF THE
DAIRY INDUSTRY IN NEW SOUTH WALES**

Name: Mr Bryan Russell-Keely

Date Received: 12 August 2020

The dairy industry is also responsible for large greenhouse gas emissions and it takes 1,020 litres of water to produce just 1 litre of milk. As consumers continue to become more aware of animal suffering and the environmental impacts of this industry, the sales in animal milk products will continue to decline.
