**INQUIRY INTO HEALTH AND WELLBEING OF
KANGAROOS AND OTHER MACROPODS IN NEW SOUTH
WALES**

Name: Ms Sarah Avery

Date Received: 21 March 2021

I would like to suggest that before any decision is made on culling kangaroo and other macropods numbers in Australia there should be a more accurate count taken of the current populations.

My understanding is that the numbers are calculated based on a few areas which may or may not be typical of Australia as a whole. I also have concerns that the people noting these numbers are not unbiased and may have conflicting interests by standing to gain by the monies made by this industry.
