**INQUIRY INTO HEALTH AND WELLBEING OF
KANGAROOS AND OTHER MACROPODS IN NEW SOUTH
WALES**

Name: Name suppressed
Date Received: 21 March 2021

Partially
Confidential

I am writing to object to the killing of any kangaroos. Enough is enough. This Country in which I am 4th generation I know my ancestors shot the kangaroo and euros and dingos and felt that was best for farming. Not a blade of grass or drop of water for anything but sheep & humans. We should know better now. The science shows that the native species are best adapted to the land and in presence of both macropid and dingo native grasses and bushes thrive and health of introduced species improves. Far too much land has been wholesaley cleared and suffers from erosion and drought. Stock are more often than not overstocked so needed supplementary feedng so where is SUSTAIBABLE FARMING. This should never have been encouraged. It has become a norm. Two farm areas to raise sheep & cattle the holding area and the cropping area! This needs review. we need to retain large aread if reserve forming wildlife corridors to preserve iur ici ic species. They are recognised as tourist attractions in themselves in native habitat. STOP THE CULLING. SHOW FARMERS THERE IS A BETTER WAY. STOP OVERSTOCKING & KET STOCK & NATIVE FAUNA CO EXIST. dingos inly take stovk when foolish farmers shoot the native roos or prey of the dingo so stop the shooting.
