**INQUIRY INTO HEALTH AND WELLBEING OF  
KANGAROOS AND OTHER MACROPODS IN NEW SOUTH  
WALES**

**Name:** Mr Rod Kerkhoven

**Date Received:** 2 April 2021

---

Dear Sir/Madam, please consider the following...

I live on 16 acres at the very end of the Murray system. I have lived in Adelaide since 1958. I have always paid close attention to the weather. My Dutch parents were strict about total silence when the weather man came on. This was due to their own history being on the North Sea and its violent affects along the coast where I was born.

Australia has dried out like much of the rest of the world. To appreciate this please ask yourself the question: 'If we can see the sun, can the sun see us?'

The temperature data that I have collected starts from 1966. It is based on the minimum temperatures set in the first two weeks of 66,7,8 and 1986,7,8 and 2006,7,8 in the locality of Alice Springs. I was looking at removing the variables and minimum temperatures took out the sun. There is also a wind drop at night, generally.

I purchased my 16 acres in 1989. It has a bore. When it was first equipped in 1990 the water temperature was estimated to be 5°C in January. This temperature has now risen to 16° in January. The bore is 20 meters deep and I know that it is the most accurate way of measuring global warming because of the absence of light and wind. So when some studies show 1 degree or 5 degrees, they are wrong. I am reading 11 degrees increase in thirty years.

This of course is due to the ozone layer disappearance, which can best be measured via soil evaporation rates locally, and at the Antarctic's Neutron Monitors. What comes next is an increase in gamma radiation. Over the last ten years I have noticed ground cover plants migrating underneath shrubs to survive. I have witnessed plants growing completely out of the sun in old rain water tanks. This means that the sun's rays are hitting the ground and going sideways. This is radiation and light has heat.

In 2019 I started to formulate a plan to flood the inland of Australia with sea water. I was half way to presenting the worlds last resort in saving itself from tectonic plate reconfiguration when some Chinese university film crews decided to film individuals falling down, putting bits of bat in their mouths, lying on the ground, and other antics that looked like a film about a deadly virus. It was of course acting, but nobody here knew that. Our media put the audio over the clips and made a fantastic story. Simultaneously the students started their Semester 1 on March 2nd and the media started to film old people being admitted into hospital for the first time in history. You can guess the rest. All were fooled, and China took the Darling away in the form of cotton that they are now selling back to us in the form of masks. Their parliament even continues to wear them. There is no vaccine roll out in China. We have been played.

As you can see, this issue has absorbed most of my time and the issue about the Kangaroos went on a back burner. If you want to save the Kangaroo you are going to have to control the weather. You are going to have to spend some money on flood preparation. You have no choice. Unfortunately, I do not believe that any government can fix this except China. They would look at my film, understand that Australia is one big iron rock and that my hypothesis that we are the initiator of global tectonic plate reconfiguration because of the iron in the soil.

I also believe that we as a nation could have pulled ourselves out of this mess if it was not for the virus hoax. That money could have been used elsewhere. As it stands, our economy will collapse and our society with it, and anarchy gets to a certain point of lawlessness, the Australian Chinese community will ask for assistance from their homeland, and that shall be received.

The choice for you is simple: look at my film and get back to me if you want me to continue down that line.

We had a earth dike built here at Clayton that cost \$40,000,000 and took about a month. As soon as you have greed or stinginess on this one, we all die.

Best regards for what it is worth.

PS you will have to chase up my film on youtube under Rod Ion. (I am often blocked from accessing them and both my phones, landline and mobile, are often blocked by Telstra.
