**INQUIRY INTO HEALTH AND WELLBEING OF
KANGAROOS AND OTHER MACROPODS IN NEW SOUTH
WALES**

Name: Mr Hayden Roberts

Date Received: 24 April 2021

The population of kangaroos in Australia is 4x that larger than the Australian human population they need to be culled to manage numbers otherwise they would cause mass destruction to the agricultural sector.

I myself living on the land have seen the damage they can cause when numbers get out of control and have seen a lot of different ways of trying to stop crop damage and the professional harvesting "shooting" is the only way to keep them under control
