**INQUIRY INTO HEALTH AND WELLBEING OF
KANGAROOS AND OTHER MACROPODS IN NEW SOUTH
WALES**

Name: Name suppressed
Date Received: 24 April 2021

Partially
Confidential

My parents have lived on former farm land which is now bush land farmers complain an shoot roos with or without permits and suffer no consequences if caught shooting roos without a permit.

Now back to my parents land the the roos (100+ estimated) that reside on 108 acres do vary little if any damage, yet if the neighbors sheep or cattle get on the property they destroy the ecology of the land within hours yet roos are a pest and an introduced species that is trespassing is not we are not allowed to kill farmers live stock for that have entered the property cause farmers can't keep up enough feed or maintain their fences.

I can tell you of one over abundant species and that is humans why the hell would a government want a population increase when we can't sustain the ecosystem and animals that already reside here.
