**INQUIRY INTO IMPACT OF THE WESTERN HARBOUR
TUNNEL AND BEACHES LINK**

Name: Dr Frances Doull

Date Received: 4 June 2021

The release of toxic heavy metals into the harbour must be avoided. this will have significant effect on marine life and great scope to affect swimmers in harbour side pools

It may enter our food chain

These metals are extremely carcinogenic

2 air pollution will be significant during and after project

3 noise pollution during construction in quiet residential areas

4 we have witnessed how important each life in this pandemic ,how important mental and physical well being is ,this project puts commuters over community .

5 ferry services essential to some impacted

6 tunnels not deep enough under waterfront homes

7 unless this project goes under the sea bed with filtered air stacks with tunnels more than 40 metres below homes it simply should not proceed

The noise pollution and disruption and inconvenience is just not acceptable or justified on an environment or community well being basis
