I urge the state parliament to consider smoke stack filters that reduce the chemical pollution from road use on our people, families and children in the area

The impact to health in the next 20-30 years from pollution from unfiltered stacks will increase cancer and other related diseases

I urge the state to look at other methods of reducing congestion on roads including more and better public transport options from these areas

The land in CAMMERAY including the golf courses to be used for materials impacts local wildlife - surely there are other options than using the pond in the middle of it

Frogs are a diminished species around the world - a reflection of world pollution- ours and your futures are being compromised by this project especially the details including smoke stack construction
