**INQUIRY INTO IMPACT OF THE WESTERN HARBOUR
TUNNEL AND BEACHES LINK**

Name: Ms Sally Gyzen

Date Received: 15 June 2021

1. The proposed dive site is contaminated and known contaminants will be exposed during the tunnel construction
- 2.No full business case has been released to the public and that there has not been a proper assessment of public transport alternatives.
- 3.Please consider ecologically sustainable alternatives to the car tunnel and fully scope alternative public transport options.
4. The location of the dive site in Flat Rock Gully will be a contamination hazard due to the historical legacy of it being a tip site.
5. It is now an amazing wildlife corridor supporting a number of ecosystems, and amazing native wildlife including powerful owls, tree snakes, lorikeets, cockatoos, king parrots, wallabies, echidnas, kookaburras, magpies, possums, Urban bushland is fast disappearing please let this be.
6. Council has designated this bushland as a wildlife protection area as it provides significant habitats that support a wide range of birds – particularly small birds – mammals, reptiles and frogs and therefore should not be destroyed.
7. The works pose a real risk to human health to all residents who live nearby and also to those who train and play sport regularly, bushwalkers, and the abundance of daily dogwalkers. This site will generate contaminants in the way of aerosol, run-off, spills, leakages.
