

INQUIRY INTO FLOODPLAIN HARVESTING

Name: Name suppressed

Date Received: 11 July 2021

Partially
Confidential

Ban Floodplain harvesting .

Floodplain harvesting would be one of the most detrimental environmental disasters that would be impeached on our land. The thought of not letting the precious water not reaching our streams,creeks,rivvers and lakes is an environmental disaster waiting to happen. This with not allow natural water flow through its courses and the wildlife that depends on it.

To think that floodplain harvesting should be allowed is pushed through corporate greed and without thought of the consequences.

It will be the death of Australia's wildlife rivers and lakes, and a permanent record of what man has done to kill off our native wildlife and water ways.

Floodplain Harvesting is an environmental disaster waiting to happen.

Already it shows that the poorly mismanaged MDBP is not working and to remove more water from the Murray Darling Basin is a horrifying thought and already struggling with the mass extraction, it can not handle. Fish deaths . Low to no water flows because of mass extraction, and now to not even let any water reach those vital streams creeks river is a disaster wasting to happen.

Ban floodplain harvesting !!
