**INQUIRY INTO PROPOSED AERIAL SHOOTING OF  
BRUMBIES IN KOSCIUSZKO NATIONAL PARK**

**Name:** Miss Beverly Bugeja

**Date Received:** 2 September 2023

---

Dear Sir/Madam,

I am writing to express my deep concern and strong opposition to the proposed aerial killing of brumbies at Kosciuszko National Park. I am an avid lover of wildlife and an advocate for ethical and humane wildlife management practices. I firmly believe that there are alternative, non-lethal methods to address the concerns associated with brumby populations in the park without resorting to such a drastic and inhumane approach.

Kosciuszko National Park is a unique and precious natural ecosystem that is home to a diverse range of flora and fauna. Brumbies have been a part of this environment for over a century and have adapted to their surroundings. They are a symbol of Australia's heritage and history, and their presence in the park adds to its cultural and ecological significance.

While I understand the concerns about the potential impacts of brumbies on the park's delicate ecosystem, I believe that a more compassionate and scientifically sound approach can be taken to address these issues. There are several alternatives to aerial killing that can be explored, including:

**Fertility Control:** Implementing fertility control measures can help manage brumby populations over time without resorting to lethal methods.

**Habitat Restoration:** Investing in habitat restoration efforts can help mitigate the impacts of brumbies as well as humans by improving the quality and availability of natural resources for all wildlife species.

**Public Education:** Raising public awareness about the importance of preserving the park's unique ecosystem and encouraging responsible visitor behaviour can help reduce negative human impacts.

I urge you to reconsider the proposal for aerial killing and to prioritize the exploration and implementation of alternative, non-lethal methods for managing brumby populations in Kosciuszko National Park. It is our responsibility to protect and preserve our natural heritage in a way that respects the principles of compassion, science, and conservation.

I kindly request that you take into account the voices of concerned citizens like myself and engage in a meaningful dialogue with experts, conservationists, and stakeholders to find a more humane and sustainable solution to the issue at hand. Together, we can work towards a future where both brumbies and the park's ecosystem coexist harmoniously.

Thank you for your attention to this matter, and I look forward to hearing about the steps you will take to address our concerns.

Sincerely,

Beverly Bugeja
