REPEATED BETRAYAL

No aerial cull of Brumbies, no more extermination and confiscation, lies. 3000 Brumby agreed to be left to carry out essential ecoservices has been betrayed by rogues abusing public positions now acting illegally immorally. Censorship manipulation is unacceptable. Those responsible should be sacked and any superannuation benefits perks withdrawn and returned to society. Shooting Brumby a beat up and crime against free multicultural Australia. The high country littered now with Brumby bodies breeding dogs and blowflies, leaching filth into the waterways. No comparison to impact from just horses crossing creeks or looking for a drink of water. A back drop of incinerated forests complete the scene of how well our public land has been saved for the people. Let's talk animal welfare in the greater context.

Public land and water managers have repeatedly demonstrated their incompetence as managers while betraying trust of the paying public. The Brumby beat up is no exception where horses have been belligerently destroyed in Guy Fawkes, Pilliga, Barmah, Singleton, Coffin Bay, Kosciuszko, Bogong, Gippsland, Lake Gregory inland stations, Kakadu, brainlessly blowing away Australia's horse camel donkey water buffalo biodiversity vilifying our sheep cattle goats deer in barbaric acts of racist genocide..... and the native species of birds lizards insect fish frog mammals plants that gravitate to their welcome mega fauna activity are too, jeopardised. The anti Brumby antigraze fanatics will be harshly judged by history as they have by the communities that have respect and understanding values for these big animals used by idiots for target practice. Many see the parallels of this genocide with the evils going on in Ukraine, Israel, Sudan..... communities suffering dysfunction with domestic violence. Activities Australia has sort to be rid of. The disrespect. So called salvation very hollow indeed. Morally bankrupt.

The city centric idiots trying to manipulate exclusive abuse of public and national assets are driving this manic elimination of big animals as hunting targets without looking objectively at what these animals are contributing. Bushwalkers infiltrate our public institutions with their ratbagery to justify massacres. Just acting out a formula of hard hoof hating for some commercial perception on water or tourism Bushwalker destinations apparently for the exclusives, green power. Kill off the camel and install solar panels in the wilderness to sell electricity to Singapore. Obliterate High country Brumby to dig holes, drape more roads, powerlines across rural Australia to whirl the gadgets in the far off green towns. Politicians, lobbyists, media, academia, bushwalkers are to be condemned with the greatest of strength. Their creditability in the eyes of majority of Australians and the world is dust. Horses cherished by rural communities honouring their contribution to the nation's construction as

renewable energy, maintenance of viable habitat for many species of greater antiquity than bushwalkers, the water shared by a vibrant vegetation piped off to town for government monopolies profits to splash on lawns to mow and dilute their sewage up to specified levels of salt and pathogens drained into our river systems, ground water, lakes and ocean fisheries. Fish kills declared unrelated.

Only bad people can murder hundreds of horses illegally sabotage any protective legislation and then call for submissions on animal welfare to further exterminate free living horses of the people and the nation subjected to aerial killing. Terrified animals that can't shoot back, galloped down and shot anywhere. Horses on death row because of the shape of their feet where they live and a beat up on impact in public land. Horses daring to get themselves a drink or cross a creek. Gallop in front of harassing helicopters. Townies can cement their city creeks over, sprinkle the world with cement bridges, causeways, tip sewage and worse into the nation's waterways with gay abandon. Salt, pathogens, potions, drugs, oils, nutrient for toxic algal bloom. Noxious plant seeds sent off to destroy food quality, water quality for drinking, bathing, livestock, food, irrigation.

Canberra and other cities have a very different view of water management up stream compared to down stream where anything goes and does. Burrenjack dam has been turned into Canberra's sewage settling pond for algal blooms. This reservoir was built to provide water for our first inland food bowl! No, people poo and worse, nothing to do with high country Brumby cattle sheep or other activity. People all 400000+ poo straight in the water, streets channel leaves oils right into the waterways. Sydney where other pretty people come from for their ski and pee activities demanding Brumby massacres, Cox river, Kosciuszko horses, Cotter horses killed for venturing over the border, horses moving from Victoria and around, shot on principle. City demands for ethnic cleansing of our public land. Why are blow in bushwalkers more influential than the public forced to pay for the public sector? Petrochemical mania taking over our travel routes for foot traffic and vilifying horses, camel, donkey, water buffalo. Even the menace mountain bike condoned to rip erosion tracks into our high country fire access tracks, hydro scars. Bushwalkers plastic clad, learning to ride on wheels in the wilderness. Follow their erosion gutters.

These demands of exterminating marginalised horses camel donkey cattle sheep goats deer are unacceptable barbaric acts of war from the ground or gibbering helicopters for the hunting zeal among society. Israel, Ukraine, Sudan, Iran unrest imposed on Australia blowing away animals that cannot shoot back. Environmentalism in Australia has unsettling senseless acts of aggression and mania parallel to the rise of environmentalism in Germany between world war one and two. Many in Australia remember how the guns and aggression quickly chose other targets for a similar propaganda preparation. Shape of feet, race religion belief..... Convicts slavery brutality is where the Brumby emerged into free Australia. Many still remember the Brumby origins and values associated with the emergence of modern Australia. The mindless massacre of so many fine horses recently was not part of these values.

Shooting Brumby is shooting at the very heart of free multicultural Australia.

To breed up packs of killer dingo to create an endangered species industry for your uni mates life long slush fund is also fraudulent. Burn our public land mercilessly after the Brumby fire fighters obliterated.

Animals grazing vegetation that is otherwise waiting to join a bushfire inferno to clear some mysterious city carbon trading policy with an 'accidental fire' by definition blowing particulates into the air, ocean and apparently nothing could be done or was done. Blowing away the conservation achievements by many generations of people of our birds, lizards, possum, koala, insects, seed, top soil water quality. This insulting business of Brumby butchering is more than just about the immediate animal welfare of the poor horses used for target practice by fanatics abusing public land access. Practicing their vile aggression for greater things perhaps. Bushwalkers sitting about in their departments, bars plotting an acceptable war on those that understand the imperatives of vegetation management for water sharing, fire mitigation, soil health, big animals literally feeding of biodiversity that has coevolved in Australia with big animal activity for 300M years or more. Stooze cronies calling themselves scientists, trying to clutch at credibility earned by others, into reporting otherwise to the paying public is nothing short of fraud. Absolute blatant fraud! Denial the big fire challenges of the last couple of decades are not man made, people's memory distance did not demonstrate clearly to objective observers "grazing reduced blazing" as it has done since plants ventured out of the lake beds and survived long enough to adapt. Animals made it possible for plants to move onto dry land and survive adapt to fire over the last 500M years. Anyone pretending to be a scientist ignoring this fundamental is not worthy of declaring themselves advisor. Stoozed to abuse their educational achievements to stand in for their bushwalking buddies to justify Brumby vilification and extermination. Manipulate the self service of public and national assets.

Betrayal manipulation are two principle traits of narcissists to bully their way into various property, financial advantage, classic schoolyard bullies. Bash and brutalise people their animals into submission. When these narcissistic people work from within privileged positions of trust as bureaucracy, political representation, media, academic advice, fanatical belief, evangelical right then we have a problem as a nation.

We have a problem as a nation as many coalesced as bushwalkers have focused on public land, water, facility, biodiversity, finance, forests farming, fishing resources, industry, innovation..... Disrespect an accomplice to these bullies for basically green people with a very red centre. Bypass sovereign government to international junkets. Democracies weakened by their generosity to dictatorial authoritarian fascist fanatics. Environmental agenda has been the foil to kid support from society because every sane person likes their environment. Yeah?! In Australia we have had over 100 years of collecting public and local community land and water accumulated, confiscated and largely the community's and people's conservation achievement destroyed starved, butchered, burnt by self appointed experts. This has now built a publically funded endangered species industry from specie covered in flammable scrub and toxic gum leaves, outcompeted by a few aggressive plants, local and introduced like blackberry turning productive diverse gully communities into inferno spreading despots and or pest animal harbour for truly invasive rabbits foxes dogs pigs living off each other's bounty at the expense of native species. Not to mention the other pest species from within

our various institutions that run to wilderness and climate change excuses, no money as excuses for chaos creation. Negligence incompetence greed ignorance.

The Brumby debacle is about war on rural minorities trying to provide for the masses, consumerists in town, demanding more for less and blaming farmers foresters fishermen for either not providing enough or impacting land or water to provide for the masses wanting to build the biggest houses in the world with all the whistles and bells available. Fast cars, jets, global junkets all for little deserving me, bushwalking on Brumby runs but not acknowledging why it is so attractive, biodiverse, fire safe, the water sweet clean, supportive to feed the bounty of birds, lizards, wildflowers, frogs, fish.....thanks Brumby cattle sheep wallaby kangaroo possum.... The committed guiding hand of rural communities black white brindle loving their environment until vile of bushwalkers had them misrepresented as "exploitive" and wrongfully displaced. Brumby the next on the list!

Modern Australia has had a very stressful beginning. Firstly mother England born of invasion by Rome displacing Celtic Viking tribes of Britain and Ireland variously. William the Conqueror destroying King Harold 1066 in true European behaviour. Just one defining moment of many. Yes you can be King until I get there from France. Victors in an unfair battle will share the land and workers. Australia black white brindle with their loyal horses answered the call Boer war 1898-1903, world wars one and two 1914-8, 1939-45, coincident with drought and rabbit plague like bushwalkers taking advantage of community distracted. Loss of family friends horses, steel for barbed wire, posts, machinery workforce injured, killed, skills, knowledge lost. The stay at home could take advantage to push their agendas hurried through parliament before the people could refute, propaganda spin. Rabbits fur industry over grazed not the sheep demonised by the Muir mythology growing out of the Scottish clearances, migrating to the American wilderness to Australia to build bonfires. Narcissist narrative. 'Salvation of the Snowy' water source for the major part of the SE Australia. They who claim they own the water in a dry country control the country. The grazing era legacy of vegetation management delivered some of the world's best and reliable water flows to engineers dams and pipes. The hard working sheep paid to muster the rabbit minimising their impact. Sheep funded removal of rabbits but the politically upward blamed the sheep for over grazing. Sheep paid research levies rabbits did not. Sheep built universities, research institutions for bushwalkers to demonise sheep and their owners. Fanatics and deniers in the John Muir wilderness movement hard hoof haters imported fanatical policies and concepts from the Americas by water engineers more expert on cement and opinionated on land management to reduce their workload harvesting water to enhance profitability at the cost of the environment long term. Bushfire inferno the killer across the world. Scientific process butchered by political and commercial agendas. University declared conveniently the only acceptable source of knowledge and wisdom. Fatally. Our public lands starved butchered burnt rural communities conservation achievement in the name of water catchment national park and wilderness. Some fraudulent foreign dogma. Foresters farmers fishermen subjected to public scorn, lies and demonizing without, denied right of response, reply. This submission process like many before it tokenistic and to be ignored by set predetermined agendas. Media, academia, bushwalkers running their own censorship rackets.

The Sydney Melbourne bushwalking club helped by Adelaide cronies, Federation, Murray Darling Basin authorities squabbling over water since about the 1850s or beyond. Since Tank Stream Sydney bricked over as polluted in 1820. Mentality moved on to what has become Qld SA NSW Vic ACT. Tank Stream 160ha catchment to Murray Darling 102M ha of Australia's main land 720M ha. Rural

communities charged with delivery of food and timber to the cities work on the city thinking or lack of it. On a clear or perish principle. Dig up the gold, cut down the trees, chase the whales for fashion and lighting for export, chase fur industry animals of rabbits and foxes, koala, wallaby, kangaroo, possum.... leather emu kangaroo water buffalo bullock... the scientific process manipulated by funding and politics. City majority and cost savings until the inferno in industrially fire suppressed vegetation denied grazing by domestic animals free living animals wildlife gone to water catchment dog packs naturalised by policy adoption.

Wilderness fanatic antisocial crank Muirs sheep clearances of Scotland rearranging the public perception of one of the most valuable management tools for biodiversity and water security this side of cool fire and selective clearing cost recovery log salvage. If you qualify for being a Bushwalker ski and surf lay about lobbyist then you can demand fire suppression, cheap water cheap holidays science spin and sit back in summer time and watch the nation incinerate dysfunctional vegetation on a broad scale by satellite. Climate change occurs after the event. Top soil volatilised, trees boiled in their own sap by the millions of hectare. What survives does so on the grazed green cattle leases and Brumby runs, in use stock routes. Even the ugly power lines draped between towns and engineers dams have some soil seed left testimony climate change exempt where vegetation management removes the dead rubbish and squalor of wilderness. The mown ski runs too are fire safe. Mown irrigated lawns of town. Those fanatics about banishing grazing, cool burning, selective logging rush to obliterate any oasis they have over looked to destroy. Shoot the remaining Brumby. Sabotage the remnant evidence that resisted global climate change! More lies and fraudulent misinformation. In Kosciuszko's case Yarrangobilly house, Blue Water hole, Peppercorn saved by Brumby so the antigraze mob can exploit what's left as their endangered species ticket to a life of scientific tinkering poking smokey mice, Broadtooth rats, Pygmy possum.... Yes spin suggests Brumby endanger species surviving on their grazed green runs when in fact the opposite true. Brumby runs saving what's left of ancient alpine bogs, streams by living fire proof aprons is declared by liars the very reason to destroy Brumby. Mustered by salt and helicopter into mobs claiming 1200 horses is in fact 25000. Enough for Genghis Khan's army! This is the Brumbies demise because many are profiting from the myths the bushwalkers have created. Abuse of trusted public positions and privilege.

The petrochemical industry of the 1880s has aggressively sort domination over renewable energy. The people's horses confiscated and shot for war, cavalry, gun placement logistics patrol. Save warring Europe repeatedly. Australia had proven valuable energy from horses, bullocks, donkey, camel. Prior to the infernal combustion engine 1880- to 1950s Australia was an independent nation for renewable energy. Net exporter. We even collected water buffalo also as renewable energy solar powered harnessed for thousands of years and brought to Australia as welcomed mega fauna ecoservices for our flammable vegetation coevolving with big mammal like reptile, dinosaurs and mammals for in the order of 300M years with few interruptions. Humanity just emerging out of the trees from 4M years ago. Most bushwalkers have never left the trees in reality. This the mega fauna science imperative conveniently being edited out by those bushwalkers with a self serving agenda to manipulate a living from beside the campfire while the rest of the tribe goes hunting, gardening, making tools and providing for the lay abouts pondering how they can justify confiscating food shelter for little input. Medicine men with spiritual connections and a tax system. They own the land water vegetation, decide what are acceptable animals to own. The shape of animals feet a

discerning factor of acceptable or not. Just look at bushwalkers to determine if their feet boots are acceptable. Is this serious?

among others judged by their feet to see if they are allowed to stand for Parliament or even stay in Australia. Their advice from among others hype beat up media enjoying ski and pee junkets in the high country eating cheese, rice, rack of lamb, roast beef, swilling wine beer and making up the narrative for the rest of Australia to live or die by. Dressed in irrigated cotton and plastics. Zero transparency or accountability for massive public commitment in land water finance resources for the self service. Worst of all misplaced public trust. International reputation on matters of scientific credibility and management of our biodiversity, water, land, forests, food security has all but been dashed irreversibly. Beautifully cared for forests teeming with koala feasting on new growth are turning into propaganda and misled city votes to confiscate state forests into national park water catchment and bonfire. Fodder for the endangered species industry through chronic mismanagement and ignorance enshrined in urban centric legislation. Koala are no longer made safe Kangaroo Island, Gippsland, Pilliga plantation forests of Grafton, SE Queensland, central coast bonfire bait. Poddied captives paraded up beaches for a propaganda selfie. Go fund the fraud.

Farming fishing forestry minorities underrated for knowledge acquired over 200+ years of integration observation are being sidelined by hired science. People having approval of the academic bushwalkers selection process with as little as three to four years university indoctrination by those that too don't know. Many political figures do not even have that qualification. Snowy science endorses soil conservation service staffers from north Sydney, shop keepers from the central west, boiler makers, city architects expert at cementing in urban creeks and frog habitat, pop star, boy scouts, trout fishermen, helicopter pilots, motor car wreckreationists, child care trainees, medical doctors, botanists, city architects, water engineers, hotch potch of unrelated qualifications and practical experience in not much. Imagine if a farmer or fisherman forester with a chainsaw turning up at a hospital operating theatre, or a dam construction site to sign off on a hydro scheme. Run an ABC documentary on tourism.

Opinionated fanatics loud around the drinking halls demanding some sort of special privileges subsidised by the rest of Australia. These people can tip their toilet where ever they please including leavings of high security risk from their global travels back to the home country and elsewhere to spread their propaganda based on unfounded belief gained from social events consuming mind deforming substances as a matter of routine. The algal blooms in the Murrumbidgee implicated in soil contamination and Motor Neurone Disease from toxic green water the Murray Darling Basin communities are forced to use. The livestock kills, fish kills disconnected from the scientific community in our national capital. Scientific advice more about their water quality than the water quality of the nation.

This submission is about animal cruelty of fanatics demand to obliterate the people's iconic Brumby horse. The animals bought to Australia to provide renewable energy to build our railways, fences, farms, muster our sheep cattle, build irrigation systems dams Hume, Burrenjack, Sydney water Cotter Canberra Melbourne water. Horses camel donkey bullocks that have built Australia 1788 to present day variously putting roads, water supplies, telephone power lines in place for the pretty

people in town. Now vilified our animals for unfounded accusations and spurious claims. Media is silenced for any challenge of this vile leading to genocide.

Calls for public consultation are more betrayal, misrepresentation, insincerity, destruction of trust. University staffers on the take for publically funded junkets counting horse populations and trying to demonstrate impact on the backwaters of Tantangra where changing dam water levels have eroded old stream beds and drowned vegetation once viable bogs fen alpine meadow grazed green biodiverse viable habitat as mega fauna activity restored from the 1820s to the time Snowy 1 drowned many valleys and communities reeling from the effects of two world wars, drought, rabbit plague, economic oblivion fighting for Europe's dignity, then made outcasts by the bushwalking led government policy vision to capture the entire great dividing range for a bushfire speedway. 2019-2020 just a taste of things to come in the name of city carbon trading, cost pinching among other abominations dreamed up in a bureaucratic tearoom, resort drinking halls, university union. walking around with his guns dogs sugar bag casing the expansion of his Sydney Melbourne Canberra based empire to pile up chaos and burn it one drought storm. Taking advantage of war and community attending destructed to confiscate Snowy for his bushwalking cronies 1943-4. Install the concocted narrative. Creating surprise from the inevitable wilderness inferno by those warned for decades about their incompetent management of land, water, the scientific process politicalised funding arrangements. Importing policy failure from overseas.

died none too soon in 1985 before the extreme horror of the demise of his and his followings creations. Inferno around Sydney, Blue Mountains, Warrumbungles, Pilliga, Mount Buffalo Victoria, Kosciuszko, Healesville, Grafton, Kangaroo Island, Canberra, Adelaide.... the list goes on. What survived? The grazed green Cattlemen's runs on the Bogong, mown ski runs on Mt Buffalo, selectively logged forests Wilson's Prom, Grampians, Brumby runs Kosciuszko Yarrangobilly, Peppercorn, Long Plain, Caledonia flats, lands traditionally managed vibrant well structured vegetation. The stuff bushwalkers grab and destroy repeatedly, belligerently so they can conjure endangered species funding from misled public sympathy. Used and abused.

The stock routes closed down by such as Bushwalker sympathiser, government grants of \$Ms for his retirement funds creating a bushfire speedway the length of the nation's watershed. All based on a false narrative removing fire risk mitigation processes by communities, selective logging now no longer a viable option, dingo naturalised killing machines harboured to destroy all native grazers indiscriminately completely except the ones living with the Brumby to chase the dogs away and fires going to nothing on the grazed green fire safe runs. Oasis in the holocaust Bushwalker built bonfire carbon tax dodge so they can conduct business as usual with their fast cars, jets, maxi yachts, maxi mansions dotted around the world playing green. Lording it over the rest of the world slaving to pay taxes for the bully gang green to exploit in a thousand different ways. Yes this is the context within which we contemplate animal welfare issues how to exterminate Brumby. Trapped and shot on salt and sugar. Blown away by snipers on the ground. Pregnant mates, foals orphaned, mobs blown away with spotlights and silencers. Sublethal shooting by madmen. Crazy fanatics with no soul for people or animals. No capacity to respect for greater societies value system. Any negotiated compromises or legislative protections just arrogantly ignored if not belligerently sabotaged by those abusing public office.

There is no way there were 25000 horses in and around Kosciuszko. The winter spring killing fields are a national disgrace and people should be criminally charged for the illegal massacres apparently condoned by departments, media, political figures misled and agitating academics stooging themselves probably for funding kickbacks to use their educational status to lie in the name of science. It is terrifying to have injustice delivered to our Brumby and the people that are informed about the truth of horses grazed green lawns delivering safe haven and viable habitat clean water. There is nowhere near 25000. A media typo now joins senate evidence to the consumption of the Federal Senate muchless NSW parliament. Absolutely frightening. Lies misrepresentation kangaroo court of injustice. Fraud. The Snowy science is a national embarrassment of decades standing. People and the process no credibility what so ever.

Feral horses in NSW should be culled using aerial shooting, Senate inquiry says | Australia news | The Guardian

<https://www.theguardian.com/australia-news/2023/oct/13/feral-horses-in-nsw-should-be-culled-using-aerial-shooting-senate-inquiry-says>
