

**INQUIRY INTO 2024 ANNUAL REPORT OF THE NET
ZERO COMMISSION**

Name: Dr Claudia Koller

Date Received: 12 February 2025

We have crossed the 1.5 degree global warming and are approaching 2 degrees. The negative impact on climate is continuously evidenced by wild weather events and abnormally high temperatures. As more and more tipping points are reached, heating will accelerate and our living conditions will deteriorate rapidly. If we want the younger generations to live in a safe world, we cannot allow further coal and gas expansions, we need to fully focus on reducing carbon emissions NOW. Reduction in profits for multinationals and even short-term job losses are a a minor price to pay compared to our future.
