INQUIRY INTO PROPOSED ENERGY FROM WASTE FACILITIES

Name: Amie Nelson
Date Received: 19 October 2025

My name is Amie Nelson. I am 41 years old, have lived in Parkes my entire life, and work at Discount Daves in retail. I am a single mother to a two-year-old daughter, and my family—including my Mum, Dad, and Sister—also call Parkes home.

I am deeply concerned about the proposed energy-from-waste incinerator and the impact it would have on the health and future of my daughter and every child in our community. I want her to grow up breathing clean air, playing in a safe environment, and experiencing the natural world without fear of harm. The thought that this project could endanger her health and the health of her peers is terrifying.

Parkes is my home. It has always been my home. The idea that I might have to leave the town I have known all my life to protect my child is heartbreaking. I feel a responsibility as a parent to advocate for her wellbeing and ensure she can live a healthy, happy life in a safe environment.

This is not just about my daughter; it is about all families in Parkes. Our children deserve to grow up in a place where they feel secure, where the air is safe to breathe, and where the environment is protected rather than destroyed. Approving this project would put their health, their future, and the integrity of our community at serious risk.

I urge the Parliament to reject this proposal. The health and safety of our children, the wellbeing of families, and the preservation of our community must come first. Parkes should remain a safe, healthy, and vibrant place to live—for my daughter and for generations to come.
