**INQUIRY INTO PROPOSED ENERGY FROM WASTE
FACILITIES**

Name: Name suppressed

Date Received: 25 October 2025

Partially
Confidential

I am making a submission to say that I OBJECT to the Incinerator Proposal in Tarago or any other place in a Australia. It will damage our Agricultural Industry, our waterways and most importantly our HEALTH over the coming years.

There is scientific evidence in France and the USA that there are health problems with the Incinerators. They are closing the incinerators down .Why would NSW want to build out of date infrastructure. Why should our regional areas be subject to them.

I understand in Sydney people are advised not to drink water from their rainwater tanks because of pollution from aircraft. With local incinerators, regional folk will have no water to drink at all with the fallout onto our roofs from them. In addition pollution will fall onto the ground that is a large part of Sydney's water catchment.

The ACT Government banned these incinerators for health and environmental reasons. The NSW Government banned them in Sydney because they are not safe.

I strongly oppose this incinerator for Tarago and anywhere in Australia.

If the Government truly believes they are harmless, then put it closer to Sydney. That will stop thousands of tons of diesel fumes being belched out by trains and trucks transporting this material long distances.

If eventually this idea goes ahead, and in the future when it is found to be effecting the health of future generations has the Government considered the health care costs and possible legal challenges that will occur.

Does this Government want to be responsible for establishing an already out dated and dirty method of waste disposal, and impose it on so many of our population, when there are better, cleaner alternatives.
