**INQUIRY INTO PROPOSED ENERGY FROM WASTE
FACILITIES**

Name: Name suppressed

Date Received: 31 October 2025

Partially
Confidential

I am opposed to the construction of an energy to waste facility at Parkes. Central Western NSW.

I am concerned about the

B. Spread and quality of the emissions

I am concerned that the proposed filtration system may not be effective enough, and that the material processed may not be sorted well enough. Safety concerns as well as environmental.

D. Impacts on human health

I do not think enough study has been done on the long term effects of being located near an energy to waste facility.

Also our children attend a school which can be seen from the intended site of the waste facility.

E. Impacts on agriculture

I am a farmer, and I strive to produce food to feed the world. We strive to do this in a sustainable and environmentally responsible way as possible. Australian farmers are known around the world for their clean, green food production. It is important for our markets and financial stability.

I am concerned that pollution from this facility may cause contamination to our products. Even if there is a perceived contamination issue, then our markets will be negatively effected.

I realise that Sydney has a waste problem, but I do not want it to be our whole communities problem. Our farms are our history (over 100 years our family has run the farm), our livelihood and our family cohesion. We desire our farm to continue for many generations into the future, this can not happen if the soil, groundwater or our produce is polluted..

Thank you for the opportunity to voice my concern.
