1. INTRODUCTION

In the lead up to the March 2011 NSW election, the Coalition announced that it would build light rail in the Sydney central business district (CBD) and conduct feasibility studies into extending the light rail network from Central Station to the University of NSW and University of Sydney.

In October 2012, Infrastructure NSW delivered its first 20-year State Infrastructure Strategy to the Premier. It recommended scoping a light rail project from Central Station to the University of NSW but “given the critical economic importance of maintaining a functional CBD” suggested that other solutions to bus congestion and capacity be implemented before committing to light rail in the CBD.

In December 2012, the NSW Government released a Long Term Transport Master Plan and a Sydney’s Light Rail Future strategy. These plans proposed construction of a light rail line from Circular Quay through George Street to Central Station and to the University of NSW via Anzac Parade and Alison Road. The estimated cost of this project was $1.6 billion.

The November 2013 business case summary stated:
...the state can expect to more than double its investment of approximately $1.6 billion, with a return of over $4 billion in total economic benefits. This equates to a benefit-cost ratio (BCR) of 2.5 or, to put more simply, $2.50 worth of benefits for each dollar invested.

Planning approval for the project was given on 4 June 2014. The contract to design, construct, operate and maintain the line was signed in December 2014 with the ALTRAC Light Rail consortium. The Minister for Transport issued a media release about the contract, which announced that the project cost was $2.1 billion and that the increased cost was “due to customer improvements to the original scope”. The media release also stated that light rail services were expected to commence in early 2019.

A 2016 NSW Auditor-General’s report commented on the cost increase and a reduction in the benefit-to-cost ratio:

While part of [the cost] increase was due to scope changes and planning modifications, $517 of the $549 million increase was caused by mispricing and omissions in the business case.

At the same time, the project benefits had decreased from the 2013 business case estimate of $4.0 billion to an estimated $3.0 billion in December 2014. This was mainly due to increases in travel time assumptions.

These changes reduced the project’s benefit-to-cost ratio from 2.4 to 1.4, excluding wider economic benefits. The project still went ahead because the ratio remained positive.

The Minister for Planning approved several modifications to the project in February 2015. These included increasing the length of light rail vehicles and stop platforms.

Construction of the light rail line began in October 2015.

There have been construction delays, in particular along George Street, and the scheduled April 2018 date for completing major civil works was not met.

In April 2018, the media reported that the main contractor, Acciona, was suing the NSW Government for $1.1 billion for misleading and deceptive conduct in providing information about how to handle Ausgrid’s electricity cables along George Street. Transport for NSW has denied these allegations.

In May 2018, the Legislative Council’s Public Accountability Committee commenced an inquiry into the impact of the project on residents and businesses in the vicinity of the light rail route. The Committee is due to report by 1 December 2018.

On 2 July 2018, ALTRAC stated that “we will have civil construction substantially completed by the end of 2018”; and “the systems, signalling, cabling and stop fit out, will start in each zone as the substantial civil construction work is completed”.

The following pages provide a collection of key sources on the project, including government publications, parliamentary material, and media articles. Links are provided to the full text of sources.
