Murray-Darling Basin: water management issues

Background information

The River Murray Waters Agreement was signed in 1915 by the Commonwealth, NSW, Victorian and South Australian Governments. This Agreement was implemented by the River Murray Commission, which was responsible for regulating the Murray River to ensure each of the three States received their agreed share of water. Various amendments were subsequently made, culminating in the Murray-Darling Basin Agreement of 1987. A new Murray-Darling Basin Agreement was signed by the same four Governments in 1992, and placed on a legislative basis in NSW by the Murray-Darling Basin Act 1992. Queensland became a signatory in 1996. Two years later the ACT joined the Agreement. The 1992 Agreement established new institutions for its implementation: the Murray-Darling Basin Commission, Murray-Darling Basin Ministerial Council, and a Community Advisory Committee.¹

One of the most significant governance reforms introduced by the Murray-Darling Basin Commission was the Cap on water diversions for consumption. An Audit in 1995 resulted in the imposition of an interim Cap in June 1995, and the introduction of a permanent Cap for NSW, Victoria and South Australia on 1 July 1997.² As of November 2011, a Cap had been approved for every valley in the Murray-Darling Basin.

An Agreement on Murray-Darling Basin Reform was signed by the Commonwealth, NSW, Victorian, Queensland, South Australian and ACT Governments on 3 July 2008. Further to this Agreement, under the Water Act 2007 (Cth) a new governance structure for the Murray-Darling Basin was formed: the Murray-Darling Basin Authority; Murray-Darling Basin Ministerial Council; Basin Officials Committee; and Basin Community Committee. These reforms required a referral of powers from the participating States, as enacted by the Water (Commonwealth Powers) Act 2008 (NSW). In 2011, the Murray-Darling Basin Ministerial Council was renamed the Legislative and Governance Forum on the Murray-Darling Basin.

² Murray Darling Basin Commission, The Cap, 2008 [online - accessed 20/03/2012]
Under the **Water Act 2007** (Cth), the Murray-Darling Basin Authority is responsible for the development of a Basin Plan. This will replace the Cap with sustainable diversion limits (SDLs) for the Basin as a whole and for each water management area. In October 2010, the Authority released the Guide to the proposed Basin Plan (the Guide) to present proposals to the community for discussion. The proposals concerned the key decisions the Authority was required to make under the **Water Act 2007** (Cth). The Guide proposed the return of between 3000 GL/y and 4000 GL/y to the Basin. A key issue in the debate which followed the Guide’s release concerned the interpretation of the **Water Act 2007** (Cth). Three Commonwealth parliamentary inquiries were established following release of the Guide, one in the House of Representatives and two in the Senate. One of the Senate inquiries specifically investigated the provisions of the **Water Act 2007** (Cth).

On 28 November 2011, the Authority released the draft Basin Plan, legally referred to as the **proposed Basin Plan**, for a 20-week consultation period. The draft recommended that a long-term environmentally sustainable take of water from the Basin will be achieved by reducing consumptive use of water by 2,750 GL/y from a 2009 baseline level. The Basin Plan will be tabled as legislation by the Minister for Sustainability, Environment, Water, Population and Communities in 2012 following the consultation process.³

Upon enactment, the Basin Plan will have implications for NSW **Water Sharing Plans** under the **Water Management Act 2000** (NSW). Once the current Plans expire, each Water Sharing Plan in the Murray-Darling Basin will have to be consistent with the Basin Plan. The Plans will also require accreditation by the Commonwealth Minister for Sustainability, Environment, Water, Population and Communities, and will be audited along with the Basin Plan by the National Water Commission. Complicating the creation of a Plan for the whole Murray-Darling Basin are the political, social, economic, scientific and environmental issues inherent in any water sharing endeavour.

This Issues Backgrounder organises relevant material under the following headings:

- Murray-Darling Basin Authority
- NSW
- Commonwealth
- Council of Australian Governments
- Journal Articles 2011-12
- Books
- Advocacy/Interest Groups
- Relevant Research Service publications on water

³ Murray-Darling Basin Authority, *Draft Basin Plan*, no date [online - accessed 20/03/2012]
Murray-Darling Basin Authority

The Murray-Darling Basin Authority (MDBA) released the proposed Basin Plan in November 2011. A number of explanatory documents were released along with the Plan: Plain English summary of the proposed Basin Plan; Delivering a healthy working Basin; and The draft Basin Plan - catchment by catchment. The Environmental Watering Plan is a key component of the proposed Basin Plan. Supporting documents released by the MDBA include:

- The proposed ‘environmentally sustainable level of take’ for surface water of the Murray-Darling Basin: Method and outcomes. This document was reviewed by the CSIRO: Science Review of the Estimation of an Environmentally Sustainable Level of Take for the Murray-Darling Basin.
- Assessment of the ecological and economic benefits of environmental water in the Murray-Darling Basin (CSIRO)
- Hydrologic modelling to inform the proposed Basin Plan: Methods and results
- The proposed Groundwater Baseline and Sustainable Diversion Limits: Methods report
- Socioeconomic analysis and the draft Basin Plan
- River management - challenges and opportunities
- A yarn on the river: getting Aboriginal voices into the Basin Plan

The MDBA also provides fact sheets on the Basin Plan. The MDBA website hosts the Basin Plan Knowledge and Information Directory, which contains all the information used to inform the development of the Plan. Submissions made on the proposed Basin Plan can be found here.

The Authority runs a number of programs, including: The Living Murray; Sustainable Rivers Audit; and the River Murray Water Quality Monitoring Program. The Living Murray is a water buyback program – its latest report, and an audit of the report, can be found here. The MDBA has also released a Water Audit Monitoring Report 2009-10.

Murray-Darling Basin Ministerial Council communiqués can be found here.

The Murray-Darling Basin Authority has a blog: Free Flow.

Murray-Darling Basin Authority Media Releases can be found here.

Information on the Department of Sustainability, Environment, Water, Population and Communities (DSEWPC) water management responsibilities can be found here. DSEWPC is running a Strengthening Basin Communities Program, with two components: a Planning component and a Water Saving Initiatives component. The Department also manages the Sustainable Rural Water Use and Infrastructure program, which is part of the overarching Water for the Future initiative, and the Restoring the Balance in the Murray-Darling Basin program.

DSEWPC manages the Commonwealth’s Environmental Water. The Commonwealth has a Memorandum of Understanding in relation to water for the environment with NSW. Recent publications in this area include:

- Discussion paper - Trading of Commonwealth environmental water (November 2011)
- A Framework for Determining Commonwealth Environmental Water Use (December 2011)
- Commonwealth Environmental Water 2010-11 Outcomes Report (February 2012)
