Hansard metadata search terms for use on www.parliament.nsw.gov.au

Using the site search text box in the top-left corner of every page, you can construct searches across Hansard fragments using field search operators to narrow your results. For example, you can search for all speeches of a particular type made by a given member between two dates, also using keywords to further narrow your search. These fielded searches can operate across multiple parliaments, back to 1991 which is when Hansard metadata was first captured (as in Lotus Notes).

The search results still appear ordered in "relevance" order as determined by SharePoint and can cannot be sorted by sitting date at this stage, but sort options are coming in V1.2 which is due around 8 June.

Hansard field operators

Field name	Description	Example
Member	Allows a user to search on a particular speaker by member name: Surname, Full FirstName	Member:"Baird, Michael" Member:Foley
Topic	Allows a user to search hansard by the topic that was spoken on (ie words in the title).	Topic:Debt Topic:amalgamations and Wollongong

Examples

Looking for	Search String	
All of Mr Foley's questions without notice during Oct/Nov 2014 on highways	sittingdate:2014-10-012014-11-30 member:"foley" Proceeding:"Question*" Highway	see link
All questions without notice directed to the Police portfolio on royal commissions	portfolio:Police proceeding:questions royal commission	see link

Boolean, wildcard and logic operators in SharePoint (*: AND OR <> .. "")

For an overview of the syntax for all the boolean and other logic operators that can be used see the following link. Note, AND OR operators must appear in upper case or they are simply treated as text.
