1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGES AT KING'S FALLS AND LODDON RIVER.

(PETITION—CERTAIN INHABITANTS OF ILLAWARRA AND OTHERS.)

Ordered by the Legislative Assembly to be Printed, 14 April, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of Illawarra, and others,—

RESPECTFULLY SHOWETH :—

1. That a large population is now located on the South Coast, between North Bulli and Ulladulla, and that necessarily a large amount of correspondence is the consequence.

2. That between the town of Appin and Wollongong there are obstructions during time of flood, which invariably prevent the Mails from being carried with ordinary regularity.

3. That these obstructions exist at a place called the King's Falls, and also at another place known as the Loddon River.

4. That at a comparatively small expense, bridges could be erected at those two places which would prevent the delay that has frequently occurred in the arrival of the Mails, and as a consequence prevent inconvenience.

5. Your Petitioners therefore humbly pray that your Honorable House will take the foregoing into your favourable consideration; and your Petitioners, as in duty bound, will ever pray.

[Here follow 421 Signatures.]

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS AND ROLLING STOCK,

(REPORTS AND CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 4 March, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 22nd October, 1869, That there be laid upon the Table of this House,—

- “ (1.) Report of any Commission which may have been appointed by the Government to inquire into the state of the Existing Lines of Railways and Rolling Stock up to the time of the present Officer taking charge of that Branch of the Railway Department.
- “ (2.) A Report or Reports of any Officer or Officers in the Public Service on the same subject.
- “ (3.) All Minutes and other papers having reference thereto.
- “ (4.) All Minutes and other papers having reference to the removal of the late Locomotive Superintendent and Engineer for Existing Lines, and the appointment of any Officer or Officers to succeed him.”

(Mr. Lyons.)

SCHEDULE.

Railways and Rolling Stock—Report of Commission :—Mr. Lyons moved, pursuant to Notice No. 5, That there be laid upon the Table of this House, copies of the following papers, viz. :—

(1.) Report of any Commission which may have been appointed by the Government to inquire into the state of the existing lines of Railways and rolling stock, up to the time of the present officer taking charge of that branch of the Railway Department.

[No Commission appointed.]

(2.) A report or reports of any officer or officers in the Public Service on the same subject.

(3.) All minutes and other papers having reference thereto.

NO.	PAGE.
1. The Hon. John Sutherland to Engineer for Existing Lines, for information required as to rolling stock. 24 November, 1868	3

RAILWAYS AND ROLLING STOCK.

No. 1.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

Commissioner—Information required as to rolling stock.

You will please direct the Foreman of the Locomotive and Carriage Branches to report fully on the state of the rolling stock in your charge, including answers to the following questions:—

The number of locomotives now in stock?

The number in good working order?

How many have been supplied with new boilers, at what date did they begin to run before and after such repairs?

How many with new cylinders?

How many with engine refitted generally?

How many with engine and boilers thoroughly refitted and repaired, giving particulars of each?

How many new engines have come into use—on which line and at what date?

What duplicate gear was each engine supplied with?

Has that gear been in use—name the parts?

What is the present condition of each engine and the duplicate parts?

How many axles and tires have been used from stock?

What part has been replaced and is now in stock—with date of replacement, if by manufacture or importation?

What portion of carriage-work has been taken from stock instead of being repaired?

What is the extent of old work that has been stripped, that is fit to be repaired, and is not yet repaired?

What has been the practice in your branch with respect to testing or thoroughly examining the engines and boilers of your locomotives—detail the manner of conducting the examination. thus—

Boilers when tested, how prepared for testing?

By whom or in what way tested, and the result of test examination?

Framing of engines, cylinders, connecting rods, &c., &c., of engines?

Springs, couplings, bars, &c., wheels and tires?

Axles.—State what examination takes place, and how often?

Tenders, the same as engines?

Passenger carriages, the same, so far as springs, couplings, &c., &c.?

Horse-boxes, cattle vans, brake vans, and all other vans or trucks that are mixed with passenger trains?

State the difference, if any, of the inspection of the wheels, tires, and axles, of goods trucks and passenger carriages?

Have you any register of the axles in use, shewing the time they have been at work, whether imported or manufactured in the Colony on the works under your charge?

The number now in stock, &c.?

Are axles sometimes bent, strengthened, and used again—were those broken ever repaired, how and when?

Suggest any alteration or improvement in the present system of working, as to cheapening the cost and lessening the risk of accidents, and quickly repairing the damage caused by accidents, or from wear and tear.

Forward to me, as soon as possible, your own report on this subject, with these now asked for, and your remarks upon them.

These reports to embrace two periods: From 1st January, 1864, to 30th June, 1866; and from 30th June, 1866, to the date of the reports.

JOHN SUTHERLAND,
24/11/68.

No. 2.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

DEAR SIR,

In my letter to you, of date the 24th instant, I omitted to ask you why we have not trucks sufficient to take the produce of the people to market. The well-grounded complaints on this score that reach me from all quarters, satisfy me that there is need for a radical change in this branch of the department. Mr. Robertson, the present contractor, informs me that if he were supplied with wheels and axles he could furnish us with five trucks per week in excess of the number required under his contract.

Have we any spare wheels and axles for this purpose? If not, are there any ordered from England, and when may we expect them here, or can they be manufactured in the colony?

Yours truly,

JOHN SUTHERLAND,
27/11/68.

No. 3.

No. 3.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

As such a Report as you have instructed me, by your letter of the 24th instant, to prepare, will of necessity be a very voluminous one, as entering into details on 47 locomotive engines, 126 carriages, and 605 trucks, wagons, &c., of every description, and must take considerable time in its compilation, I have thought it advisable to at once obtain you the information upon what I presume is the main object of inquiry, viz.:—What is the present general condition of the rolling stock on the existing Lines of Railway.

Before entering myself upon the subject, I will lay before you the opinions of the practical men over each branch of my department.

First, I take that of Mr. Scott, who has charge of the fitting and erecting shops. He states:—

Appendix A.

"In answer to your memo., No. 1,443, there have no engines that I am aware of been permitted to leave the shops that have been in an unfit state for running, nor in any such condition as would endanger the safety of the public; but the present rate of wear and tear on those engines is very heavy, having so few of them that they are kept constantly running, and the demand for them will not allow sufficient time to repair them to my satisfaction, and some new ones should be got to relieve them as soon as possible."

The next report is from Mr. Bullen, who has entire charge of the running shed, engines engaged working the traffic, drivers, &c., and who formerly held the position of Locomotive Superintendent on the Waterford and Kilkenny Railway, and on the Cork, Youghal, and Queenstown Railway, and was engaged in London by Sir Charles Fox as Traffic Manager and Locomotive Superintendent of the G. N. Railways of Queensland, which position he held until the office was abolished.

Appendix B.

"In accordance with your request in memo. 1,445, I herewith beg to report on the present state of the engines under my charge.

"The engines employed for the train service are carefully examined, as far as possible, before leaving the yard, by me. I allow no engine out that is not in a fit and proper state, or that I would have the slightest hesitation in driving myself. I have further to state, that the present condition of the engine stock, considering the mileage, is very good—far better than other lines with which I have been connected.

"There are 24 engines daily in steam, the average number of miles run being considerably over 2,000 daily.

"The present traffic requires at least 6 additional heavy goods engines as soon as possible."

The following is the report of Mr. Boag, Locomotive Foreman, who has charge of both the engines and rolling stock generally on the Northern Line:—

Appendix C.

"In reply to your memo. 1,444, I have to report—

"1st. That I am not aware of any engine or other rolling stock under my charge having been permitted to run when in an unfit state, or in any way likely to endanger the safety of the public. Rolling stock shewing any defects is immediately brought into the shop, and repaired as opportunity offers.

2nd. A large portion of the rolling stock is necessarily in a worse condition than it was two years ago; most of the engines have been in constant use during that time; some of them have shewn considerable defects by the wear and tear, in consequence of the mileage they have run, and no sheds to put them in to protect them from the weather. Some of these defects are however, either repaired or are in course of being repaired. Our accidents have been few and slight, so that the condition of the rolling stock has only deteriorated from wear and tear. There have been a great number of wagons rebuilt, and we have the addition of 40 new D wagons now running."

We have then the statement of Mr. Bingham, the Foreman Carriage-builder, who has charge of the rolling stock on the S. W. and R. Lines.

Appendix D.

"I believe that the rolling stock generally, excepting the first class carriages for Western Extensions, and wagons and vans lately damaged by accident, are in fair condition, allowing for the manner they are exposed to the weather. I believe every precaution is taken in Sydney to ensure their running in a safe condition; likewise, that the Inspectors, by the wording of the reports received from them, are vigilant on the Southern and Western Lines. I have never known any rolling stock being allowed to run in such a state, as far as it was possible to ascertain, as would endanger the lives of the public. I consider the rolling stock, generally, is in as good condition as it was two years ago; and the same tests are now applied, and inspection more perfect, as an additional Inspector is employed, than there was two years ago."

Appendices E, F, and G.

I also send you several other reports, which, during the last two years, have been furnished me by these officers, and not intended to leave my office; and I think these will bear favourably in comparison with those published in Mr. Rae's reports of 1864 and 1865.

Before giving any opinion upon the question myself, it would perhaps be as well to show that I am qualified to do so. This I feel the more necessary, as it is a very common impression in this Colony that it forms part of every civil engineer's duty to do so; but such is not the case, for a man may be a very clever *civil* engineer, although his opinion on a subject such as this, immediately connected with mechanical engineering, would be utterly worthless.

This will perhaps be better understood if I quote a paragraph from the published address of Mr. John Fowler, C.E., to the Institution of Civil Engineers in London, on his taking the chair for the first time as President in 1866. After describing what the training and studies should be for a civil engineer, he goes on to say (page 38):—

"In the case of the *mechanical engineer*, however, it will be seen that although all scholastic and scientific training should be the same as that previously described for all the other branches, the period of pupilage of the *mechanical engineer* must necessarily be *passed chiefly* in large *workshops* or manufacturing establishments."

Now, I have gained my practical experience in the workshops in England, on the Continent, and in these Colonies; I therefore do claim to be a judge of such matters; and I assert most positively that, considering the limited amount of rolling stock in proportion to the present traffic requirements, that they could not be possibly kept in better order, or a greater vigilance exercised in their inspection.

It is true we have not either a sufficient number of engines and other rolling stock to work the greatly increased traffic either economically or with advantage to the public; and it was knowing this induced me to urge the necessity of calling for tenders for their supply in the manner that has been done.

I have also, during the last two years, added to our stock 234 trucks, all of which were made in the Colony. It is true also, that on account of the limited rolling stock, we have not the time given in the workshops to make them all *look* as they should do; but it is not true that any are allowed to run (so far as human foresight can ascertain) in a manner that would, in the slightest way, endanger the safety of the public.

With regard to the four axles which have broken lately I can only say they were of English manufacture, and the names of the makers should be a guarantee for their workmanship. There is no practical means known of testing them without doing an injury to the axle itself.

The broken portions of these axles have, by your direction, been sent to Mr. M'Arthur's, for his opinion as to the cause of fracture; and I will not anticipate the result of his examination and testing.

It is not the first time that axles have broken on our lines, as I find in Mr. Rae's report (as Commissioner), page 39, for 1864, the Locomotive Foreman states that "Nine solid axles have been forged at the workshops, and used instead of hollow ones broken from time to time in the tenders of Nos. 1, 2, 3, and 4." And it is worthy of remark that none of the axles made in our workshops have broken.

See Appendix H.

In Europe it is a very common cause of accident, as shown by the following extract from an official paper issued by the "Association of German Railways," on broken axles, in 1865 (*vide* "Engineering," Oct. 26, 1866) :—

"The returns are from twenty-three Railway Companies, and give a total number of 153 breakages, besides forty cases discovered before complete breakage occurred.

"Of these 153 cases, 34 happened in September, October, November; 45 in December, January, February; 36 in March, April, May; 38 in June, July, August.

"The average time of use before breakage was 9 years 11 months.

"The longest time was 21 years 4 months.

"The shortest only 5 months.

"The average mileage was 104,780 English miles.

"The greatest do. 332,580 do.

"The axles were—

"In 17 cases, of cast steel, and ran an average of 85,171 English miles.

1	do.	(hardened)	do.	93,339	do.
---	-----	------------	-----	--------	-----

461	do.	wrought iron (hammered)	do.	114,575	do.
-----	-----	-------------------------	-----	---------	-----

38	do.	(rolled)	do.	103,311	do.
----	-----	----------	-----	---------	-----

48	do.	(not stated whether rolled or hammered)		131,918	English miles.
----	-----	---	--	---------	----------------

3	cases hollow axles,	92,252	English miles.
---	---------------------	--------	----------------

"The consequence of the breakages were—

"In 5 cases the carriage or wagon got off the line without any damage.

37 do. the carriage was more or less damaged.

9 several carriages were damaged, including 1 case where 19 carriages were injured. No lives were lost.

98 cases happened with trains at full speed.

16 do. do. near station, *i.e.*, at low speed.

24 do. were found out during the stoppage of trains in stations.

15 do. occurred during shunting.

"The probable cause of breakage was—

"In 17 cases, bad workmanship of axle.

32 do. bad material.

21 do. bad design.

6 do. overloading.

10 do. want of grease or oil.

46 do. too long use.

3 do. breakage of another axle."

With regard to the inspection of rolling stock while it is employed in working the traffic, I may state that there are stationed at Sydney, Picton, and Penrith, whose *sole* duty it is to examine every train as it arrives, and the daily reports of these officers show in themselves that the duties imposed upon them *must* have been performed.

The appearance of the carriages, &c., suffer very considerably by the exposure they are at present subjected to while standing at the station; and to obviate this I obtained permission from the late Commissioner to erect a carriage-shed, 200 feet long, with three lines of rails through it; and this is now in course of erection, and, when finished, will afford great protection to the passenger rolling stock when not in use.

That we should have greatly increased wear and tear from the rapidly increasing mileage run is, of course, inevitable. Thus, in 1865, the miles run were 483,446; in 1866 they amounted to 499,415; and in 1867 to 600,707; and it is probable that it will not be less than 800,000 miles in 1868. And a corresponding increase in the yearly cost for repairs has been the result; thus, in 1866, it was £40,647, while in 1867, £43,230.

But there has been another and far greater cause for increased wear and tear during the last twelve months, and that is the opening of the Western Extension from Penrith to Mount Victoria. This is more particularly observable in the engines; locomotives that would run for months on the other portions of the line without repairs, have come in wholly disabled in as many weeks. We have also had to lend engines to the contractors employed in the construction of the lines; and the cost of the repairs of these will show the injury that is done them, from the rough and constant work (sometimes carried on night and day, Sundays included) they have been subjected to.

To show, also, that the carriages suffered proportionately from the same cause, I may mention that Mr. Bingham, the Foreman Carriage-builder, has within a few days reported that he had been compelled to take in No. 4 saloon carriage (one of those expressly imported for the Western Extensions), to be "lifted," in consequence of the flanges of tires being worn so thin as to render it unsafe to run any longer. Yet this carriage was only erected last April, and has been running (off and on) but for seven months, and is fitted with radial axles to facilitate its going round the sharp curves. Double the time on the other portions of the road would not have half the effect upon it.

That

That the Colony has been shamefully served by the contractors for our rolling stock in England I will give one or two instances to prove : Eighteen carriages (twelve second and six first class) were ordered expressly for the Western Extensions, costing together £15,562. These, on arriving in Sydney, were reported by the Foreman Carriage-builder to be of very inferior workmanship ; that, after inspecting them myself, I wrote to the late Commissioner upon the matter, and advised that a board of practical men unconnected with the Government should be appointed to examine them ; this was done, and Mr. George Russell, the mechanical engineer, and Mr. Robertson, the well-known coach-builder, were called upon to do so, and their report confirmed in every respect those of the officers of the department. A demand was then made of £280 on the contractors for the additional trouble and expense occasioned in their erection, in consequence of the inferior workmanship and material supplied, but it would have cost twenty times that amount to have entirely removed the bad, and replaced with such good work and materials as would make them as they should be. When at last they were got to run upon the line, the lateral motion was found to be so great that alterations have now to be made in their construction, which will cost a large sum of money.

There is also the case of the nine imported goods engines, costing £28,800, which were found to be of very inferior workmanship, and, it was clear, could never have been put together in the manufacturers' workshops, or tried in steam, as they should have been,—occasioning not only great expense, but a long correspondence, without arriving at any satisfactory conclusion.

I would here remark that such cases as these cannot occur, if made, as proposed, in the Colony, as the following clauses in the specifications would guard the Government against any such contingency :—

“The contractor is to be responsible, for a period of one year from date of delivery, for all breakages arising from defective construction, or the use of inferior materials.

“Throughout the whole, the very best materials and workmanship is to be used, in every way equal to the best class of locomotive engines ; and the manufacturer will be held responsible for their safe delivery at the Sydney Station, and for all defects, of whatever kind, that may arise from imperfect workmanship or material, until they shall have run a distance of (1,000) one thousand miles, with proper loads, upon some portion of the railway for which they are intended.”

In conclusion, I would again urge upon the Commissioner the necessity of providing the additional rolling stock with as little delay as possible ; and that, with the view of economy, the saving of time, as a protection against inferior articles being supplied, as well as for the general benefit it would confer, I strongly recommend that it be made in the Colony.

J. H. THOMAS,
Engineer for Existing Lines.

N.B.—I append the original reports of Inspectors, Foremen, &c., from which I have taken the several extracts.—J.H.T.

No. 4.

MR. THOMAS' REPORT ON LOCOMOTIVE ENGINES FOR GREAT WESTERN EXTENSIONS.

SOME twelve months ago I intimated to the Commissioner my opinion that the class of engine which would be found best adapted for working the steep gradients on the mountain lines would be, with some modification in the design, such as that built by Messrs. Vale and Lacy for Mr. Goddard, the contractor.

On the 20th ultimo I had an opportunity of testing the locomotive above referred to, taking with it ten loaded trucks of railway bars (53 tons 6 cwt.), together with a heavy brake-van, from Penrith up the Zig Zags, to Wascoe's.

We had fitted a temporary sand arrangement on the front of the engine, but it had none behind, yet it was enabled to stop on gradients of 1 in 30, and start again with ease. I may mention that it was found that from the starting, and during the whole journey, the ash-pan damper had been closed.

This engine weighs, when in steam with full load of fuel and water, 31 tons 11 cwt. It has 16 in. cylinders, $\frac{1}{2}$ in. stroke, and 6 coupled wheels 3 ft. 9 in. diameter, and a wheel base of 12 ft. 6 in. It cost £1,900.

This class of engines will not only, by the greater amount of adhesion they possess, be enabled to convey far greater loads up the steep inclines, but also prevent the great loss of time which now occurs with our present engines, from the slipping of the wheels,—an amount which is not counterbalanced by the advantages they derive in their wheels being of larger diameter when running on a level, or down an incline. Of course I do not propose that they should entirely supersede the present engines, but only be used for working the traffic over the heaviest portion of the line, viz., that between Penrith and Siding, at the Stone-crushers.

The following table will shew at a glance what the class of engines referred to have done,—what our present engines are capable of doing,—and what the engines I propose to build and guarantee shall perform :—

Description of Engine.	Weight of Engine.	Cost of Engine.	Load that each Engine, exclusive of its own weight, will take up the gradient of 1 in 30.	Diameter of Cylinder.	Length of Stroke.	Diameter of Driving Wheels.
	Tons cwt. qrs.	£	Tons cwt. qrs.	in.	in.	ft. in.
Contractor's	31 11 0	1,900	105 16 3	16	24	3 9
Our present goods	*50 12 2	3,200	84 5 1	18	24	4 0
Our present passenger	†49 16 3	3,200	43 0 0	18	24	5 9
Proposed goods	34 10 0	2,200	126 0 0	16 ²	24	3 9
Proposed passenger.....	32 0 0	2,200	70 0 0	16	24	4 3

¹ What I have put down is perfectly correct. It is true the engine alone weighs but 31½ tons, but as it would be utterly useless without the tenders it may, I think, be fairly considered as a portion of it.

² This is a clerical error, should be 17.—J.H.T.

That

That there is nothing new in what I propose, and that these tank engines have been found, under precisely similar circumstances, best adapted for mountain lines, even with steeper gradients and sharper curves than on our lines, will be seen from the following, from "A description of the Railway across the Blue Mountains, at the Rock Fish Gap, in the State of Virginia, America," in the *Engineer* of the 23rd January, 1857:—

"This road was opened to the public in the spring of 1854, and it has now, in the autumn of 1856, been in constant use for a period of more than 2½ years. In all that time the admirable engines relied on to perform the extraordinary duties imposed upon them in the passage of this summit, have failed *but once* to make their regular trips. The mountain has been covered with deep snow for weeks in succession, and the cuts have been frequently filled for long periods many feet in depth with drifted snow; the ground has been covered with sleet and ice, and every impediment due to bad weather and inclement seasons has been encountered and successfully surmounted in working the track.

"During the last severe winter, when the travel upon all the railways of Virginia and Northern and Western States was interrupted, and on many lines for days in succession, the engines upon this mountain track, with the exception of the single day already specified, moved regularly forward, and did their appointed work. In fact, during the space of 2½ years that the road had been in use, they have only failed to take the mail through in this single instance, when the train was caught in a snow-drift, near the summit of the mountain.

"These results are due, in a great degree, certainly to the admirable adaptation of the engines employed to the service to be performed; but they are due also, in no small degree, to the skill and energy of the superintendent in immediate charge of the track and machinery. The locomotives mainly relied on for this severe duty were designed and constructed by the firm of W. M. Baldwin & Co., of Philadelphia. The slight modification, introduced at the instance of the writer to adapt them better to the particular service to be performed in crossing the Blue Ridge, did not touch the working portions or principle of the engine, the merits of which are due to the patentee, W. M. Baldwin, Esq.

"These engines are mounted on six wheels, all of which are drivers, and coupled, and 42 inches diameter. The wheels are set very close, so that the distance between the extreme points of contact of the wheels and the rail of the front and rear drivers is 9 ft. 4 in. This closeness of the wheels of course greatly reduces the difficulty of turning the short curves of road.

"The diameter of the cylinders is 16½ inches, and the length of the stroke 20 inches.

"To increase the adhesion, and at the same time to avoid the resistance of a tender, the engine carries its tank upon the boiler, and the foot-board is lengthened out and provided with suspended side boxes, where a supply of fuel may be stored. By this means the weight of wood and water, instead of abstracting from the effective power of the engine, contributes to its adhesion, and consequent ability to climb the mountain.

"The total weight of these engines is 55,000lbs., or 27½ tons.

"With such trains the engines are stopped on the track ascending or descending, and are started again on the steepest grades, at the discretion of the engineer.

"Water for the supply of the engines has been found difficult to obtain on the mountain, and since the road was constructed a tank has been established on the eastern slope, where the ascending engines stop daily on a grade of 1 in 18, 280 feet per mile, and are there held by the brakes while the tank is being filled and started again at the signal, and without any difficulty.

"A supply of sand is not neglected, for although the brakes completely control the train in ordinary weather, yet, when the cold is intense, and the track, wheels, and brakes are all covered with snow, frozen into hard ice, they will not hold. Then, as usual, sand is applied in front of the forward drivers, or in front of the middle drivers, as is, under the circumstances, most expedient, and the friction may be increased to whatever amount is necessary for the safety of the train."

J. H. THOMAS.
3/7/68

No. 5.

THE ENGINEER-IN-CHIEF to THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 6 November, 1868.

LOCOMOTIVE ENGINES FOR WORKING STEEP GRADIENTS.

A REPORT by Mr. Thomas, dated 3rd July, 1868, was forwarded to the late Commissioner on the subject of engines required for the Great Western Railway, from which I extract the following:—

Description of Engine.	Weight of Engine.	Cost of Engine.	Load that each Engine, exclusive of its own weight, will take up the gradient of 1 in 30.	Diameter of Cylinder.	Length of Stroke.	Diameter of Driving Wheels.	
			Tons. cwt. qrs.			ft. in.	
Contractor's	31 11 0	£ 1,900	105 16 3	16	24	3	9
Our present goods.....	50 12 2	3,200	84 5 1	18	24	4	0
Our present passenger	49 16 3	3,200	43 0 0	18	24	5	9
Proposed goods	34 10 0	2,200	126 0 0	17	24	3	9
Proposed passenger	32 0 0	2,200	70 0 0	16	24	4	3

I advise that Mr. Thomas be called upon to show to the Commissioner how he arrives at the statement of the weights that each separate class of engine will take up an incline of 1 in 30.

This information should be obtained from Mr. Thomas before any tenders are accepted for the class of engine he recommends.

JOHN WHITTON.

No. 6.

IN reply to the question that Mr. Whitton has suggested should be put to me, I may state that the data given was arrived at by the daily experience of what these engines will do, by the written testimony of the drivers, and by actual experiment with Messrs. Vale and Lacy's engine.

But seeing that Mr. Whitton has no more to do with my department than I have with his, this questioning my statements certainly does appear to me impertinence on his part, equally so as if I were to suggest that inquiry be made as to his importing tons of chairs, spikes for the extensions, which now have to be altered, at a great expense, by Messrs. P. N. Russell & Co., to make them serviceable, and which will entail everlasting trouble and expense in the future maintenance of the line, or suggesting that so many curves were unnecessary on the extensions.

Two and a half years ago Mr. Whitton wrote the following upon the papers referring to my appointment, that were forwarded for his information:—

“Mr. Thomas took charge of the Locomotive Department and the maintenance of the existing lines yesterday, and on that day my responsibility with reference to those departments ceased.”

Why, I would ask, then, does Mr. Whitton now step out of his way to interfere in a matter in which he is no way responsible—is it the fear that this class of engines may fail to do all I have said they will—a failure which must crush me for ever, professionally? No, certainly not.

Is it the expense to which the country may be put? This, most assuredly, cannot be the cause, as, at the worst, it will add but *one* to the number of comparatively useless engines we possess for working these steep gradients (however well they may be adapted for other lines), as the Commissioner is in no way bound to have more. No, it is obvious that all this anxiety is caused from the fear, nay, the certainty, that it will be a success, *for what has been done elsewhere can be done here.*

If Mr. Whitton could assail, on scientific grounds, the principle upon which these engines are proposed to be constructed, I would know how to answer him; but this he carefully avoids, contenting himself with vague insinuations, and throwing doubt upon the veracity of my statements. Does he attempt to deny that these engines have been found to be admirably adapted for steep gradients under precisely similar circumstances in America? (See *Engineer* of 23rd January, 1857). Does he attempt to deny that one of our greatest engineers in England (Mr. Hawkshaw), when called upon to design an engine for working steep gradients of 1 in 27, adopted this principle, and at the present time there are a number of them at work in the Mauritius. (See leading article in the *Sydney Morning Herald*, advocating the use of this class of engine on our Mountain Lines, of 21st September last.)

I totally repudiate Mr. Whitton's assumption of superiority, and challenge him to prove that, either in practical experience or education, he knows so much as I do regarding mechanical engineering. This I am ready to put to the test at any time, either in the workshops, or by scientific examination.

It is not because he has, by a fortuitous combination of circumstances, been placed in the position he holds, that he of necessity is a better authority than one who was educated for a mechanical engineer, served his time to it, and who has worked his way up through every grade in England, on the Continent, and in these Colonies.

Neither I, or I feel quite sure will the public expect Mr. Whitton to advocate the manufacture of our rolling stock in the Colony, for obvious reasons, but which it would be useless for me now to enter upon.

In conclusion I repeat what I have before stated in reference to these engines, that in the event of failure I will instantly resign my present position; nay, more, I am willing to enter into a bond, binding myself to pay £500 (with the very best security—the money itself) that this class of engine will do all I have said it would. Is Mr. Whitton prepared to back his opinion in the same way?

JAS. H. THOMAS.

10/11/68.

No. 7.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.
(Minute Paper.)

I HAVE to request that Mr. Thomas will be so good as to inform me how he arrives at the statement of the weight that each separate class of engine will take up an incline of 1 in 30?

J.S., 16/11/68.

No. 8.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

THE data given was arrived at by the daily experience of what these engines will actually do, by the written testimony of all the drivers using them, and by experiment with Messrs. Vale and Lacy's engine, in the presence of a number of witnesses, the result of which will be found at length in my report enclosed, of 3/7/68.

J. H. THOMAS.

18/11/68.

No. 9.

No. 9.

THE CHIEF ENGINEER'S MINUTE, AND REPLY OF THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

As Mr. Thomas has based his statements of the power of the proposed engines upon reports only *made to him* by the drivers of the present engines, I conclude that he is not able to ascertain the power of an engine in the proper way. As the engines from which he has derived his information are of a different class to those he proposes, I shall be glad to learn how he has ascertained that the proposed engines will take up an incline of 1 in 30 double the load of the present goods' engines?

It is quite clear that Mr. Thomas knows very little about locomotive engines.

J.W., 27/11/68.

I—as could any schoolboy—have taken one of the several formula given in works on the subject, and covered the paper with figures, and thus shown that I did know what Mr. Whitton calls “the proper” way to ascertain what an engine will draw; but I thought it would be far more satisfactory to arrive at it from actual experiment.

Mr. Whitton *says* I arrived at the power of the proposed engines from reports of drivers on the present ones; I have, as he knows well, said nothing of the kind, but shown that it was from trials made by me with an engine exactly (or nearly so) similar to what I propose, as will be seen by reading my reports.

If I were to tell the Inspector of Telegraphs that he knew nothing about electricity, I should expect him to say—“What, Mr. Thomas, are your qualifications to enable you to judge?” and I think, therefore, such a question should be put to Mr. Whitton.

I, at all events, am prepared to put my qualifications to the test. I have designed and written specifications for an engine on the same principle as those lately designed by the most eminent engineer in England—the same as the contractors are using in this Colony—and the same has been found to succeed in other countries where steep gradients are worked. If it does not answer, I will resign. If it does, will Mr. Whitton do the same?

J.H.T., 28/11/68.

No. 10.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

Interruption to traffic for want of Locomotive Engines.

My attention having been so frequently directed to the urgent need of locomotive power, and which I have so *repeatedly been* informed could not be supplied, and as my attention has been called to the great number of locomotive engines standing idle in the Sydney yard, I have to request the Engineer for Existing Lines will, without delay, take the necessary steps for putting into efficient working order as many locomotives as may be required, not only for the present traffic, but for the daily increasing work.

Mr. Thomas, I am sure, must be fully aware of the difficulties of working the traffic under existing circumstances, and with the many locomotive engines in the yard, which ought to have been kept serviceable, bespeaks a want of foresight and management which, to say the least, is inexcusable, and which is now causing a very severe loss to the revenue, as well as great inconvenience to the country at large; besides which, it cannot be denied that actual danger is threatening throughout the whole department, from the disorganised state into which the entire traffic—passenger and goods—is now inevitably drifting.

I therefore request that not one moment be lost in doing what can be done by the employment of all available labour for putting such engines, as can be at once repaired, into such a condition as to be available for immediate use.

I cannot permit the overwork of the skilled mechanic beyond what is absolutely necessary, especially at such a time when business generally is known to be so slack, and so many good hands in the labour market. At all times I prefer extra labour should be employed when required, in preference to overtime being made, as it is self-evident that any working man, performing his fair day's labour, is not very well fitted to work overtime. In cases of absolute necessity this of course does not apply; but at the present moment I cannot admit such a necessity exists.

JOHN SUTHERLAND,
Commissioner.
9/12/68.

Reply herewith.—J.W.T., 11/12/68.

No. 11.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

REPLY to Minute on interruption to traffic for want of Locomotive Engines.

THE Commissioner has been grossly, and I fear maliciously, misinformed in this matter; advantage has been taken to the colouring of truth which the appearance of a number of engines in the Sydney yard would have upon anyone unacquainted with what they are capable of doing.

2. We have 30 engines upon the S. W. and R. Railways (24 of which are on an average in steam daily), but of these 30 engines there are but 6 (six) capable of taking a goods train up our heavy gradients.

3. For instance, one of these 6 engines could take 60 loaded trucks as a load to Penrith or Picton in one trip, whereas it would take the same engine 7 or 8 trips to get them up to Mount Victoria, or Marulan.

4. These 6 engines are distributed as follows:—

- 2 working mountain traffic, Western Line.
- 1 midnight goods.
- 1 southern „
- 2 under repair.

Those on the Western Extension will not remain running more than 5 or 6 weeks without requiring to come into the shops, and this is not a long time to repair an engine, as you cannot get a large number of hands on to them at once, that is, if the men are to *work* and not be looking at one another. So that of necessity we must nearly always have two of these engines under repair.

5. Although in your minute passenger and goods traffic are coupled together, I have never heard of any complaints of want of engine-power to work the passenger traffic, notwithstanding that two of our most useful engines are laid up from the fact of their crank axles being broken, owing to the shameful way they were forged, and I have been in communication with Messrs. M'Arthur & Co., with the view of their making us two others to replace them.

6. I have urged the necessity of obtaining more goods engines; I have pointed out that however good those we have are for comparatively level lines, they are not adapted for working steep gradients. I have shown what has been done elsewhere upon similar lines, having the same gradients as our own. The press have also drawn the attention of the Government to it. I have got out drawings and specifications for an engine upon such a model; their construction will cost £348 less than those we have. The contractor is willing to guarantee them and make one upon his own responsibility. I have also offered to bind myself, and there has been the money lying idle to make them with. All this I say I have urged upon the Government, and this is all I can do, and indeed more than could be reasonably expected of me.

7. I am accused of exhibiting a want of foresight and management to meet the requirements of the traffic; let us see how this is borne out by facts.

8. When I took charge, some two years ago, there were on the existing lines 207 A B and D trucks, and I have since that time had made in the colony 234, or considerably more than double the quantity. I have indented for 800 pairs of wheels which, allowing for renewals, would leave enough for 100 more trucks. Finding however that our wants were rapidly increasing and all the money voted (and considerably more) had been expended, I recommended that tenders should be called for all our rolling stock, engines, &c., which would be required during the next five years, which would amount to over 1,000 of different descriptions of vehicles; for these, and it is no light work, I got out specifications, had them printed to facilitate parties tendering, and got £60,000 placed on the Estimates for the first year's expenditure. The trouble and annoyance I have had in consequence is beyond belief. Does all this look like want of foresight and management on my part to meet the requirements of the traffic?

9. But this is not all that has been done to facilitate the working of the traffic. Let anyone who knew the Sydney Station-yard two years ago, and look at it now with its mile or two of additional sidings, the entrance of the tunnel widened, *sheep-pens erected* on the Darling Harbour Branch, and obstructions to the shunting removed,—must acknowledge that a vast improvement has been made. I have also got a large shed, 200 ft. by 40 ft., in course of erection, for the protection of the rolling stock, and to relieve the yard. Then there is the greatly increased accommodation given at Newtown by the enlargement of the station-yard; the new station at Petersham in place of the wretched accommodation there was previously; the commodious platforms and new stations at Homebush; new platforms at Haslem's Creek; fruit-shed at Seven Hills; sidings on the mountains; and 100 minor matters.

10. The rules and regulations of the service have been revised, and more efficient telegraphic instruments have been placed along all the lines at my request, to afford greater facilities and for the safer working of the lines. To obtain an efficient staff of drivers I have advertised and sent to Melbourne. Small telegraph instruments for the guards' vans have been ordered.

11. Does not all this prove that the charge of want of foresight, &c., is hardly justifiable, or do I merit such a minute as this being placed on record against me?

12. Does not rather the persevering way with which I have urged the carrying out of the rolling stock contract for five years (and I am not to blame that it has not 'ere this been in operation) prove the contrary, and that I should rather have credit given me in the matter?

13. And now as regards the want of men in the fitting shop: For the last twelve months the first application for an increase came on the 2nd instant, and these have been supplied; but I know at the same time that if the men in the shops did half a day's work in the day they would not be required.

14. That this shop is grossly, badly managed, and that Mr. Scott has not done his duty, I have repeatedly pointed out; and if the papers were read by any impartial person they would speak for themselves. It was not long ago that an engine, No. 7, was turned out of the shop, and on taking out the time I found for labour alone it had cost £408 15s. 8d., and any honest workman would tell you that this was ridiculous, considering the amount of repairs that were done. The cost of the forgings for this shop were formerly considerably more than they are now, that the work is done at per lb. notwithstanding the greatly increased mileage. Again, I found an engine had cost £95 or £97 for painting, and these are now being done for £20 each; and if the time was taken out for the making of the new boilers of Nos. 1 to 4 engines, it will be seen they cost some £500 or £600 each, for labour alone on each. What, it may be asked, is the remedy for this? There are two—

15. (1st.) To let the *labour* only of repairing the engines, and of course it would be to the advantage of the contractor to keep them in good repair. This would necessarily necessitate the same supervision as now, as a protection for the public.

16. (2nd.) To allow me to make what changes I think necessary in the management of the shops, and to hold me personally responsible for the result.

17. Upon every railway in the world there must of necessity be a large portion of the engines under repair. Things will wear out, and casualties occur under the best of management, and I challenge comparison with the returns of any line of railway in the world with the same mileage, notwithstanding the steep gradients and sharp curves which bears so heavily on rolling stock. It speaks for itself: Out of thirty engines there is an average of twenty-four in steam every day.

18. I attach a report of Mr. Bullens', showing the number of engines under repair at the present time; and to anyone who has a *knowledge* of what is required to keep up a heavy traffic, with a limited engine-

engine-power, and are able to *distinguish the difference* between mere running repairs and those necessitating a complete over-haul, will at once see that there is not an undue proportion of engines in the shops.

19. The time-table is no criterion of the number of trains, as there are regularly three or four extra, besides an enormous number of specials.

20. I might have pleaded in this case, that the very large increase in the traffic could scarcely be anticipated, as it is evident it has exceeded the expectations of those in charge of this branch, but I have not done so, as, had my advice been acted on, we should now have been in a position to meet all their requirements.

21. It is not often that a Government officer is accused of trying to save expense; I have been accused of this and plead guilty to the charge. I have no interest in doing this beyond that of faithfully discharging my duty. It is not my money I am spending, and therefore, as far as I am personally concerned, might have filled the yard with men did I not feel that it would be dishonest to do so. I know that I might have saved myself a deal of trouble and annoyance had I quietly have taken on as many men as could well be stuck in the shops, and got far more credit perhaps for doing so. However, to show there has been no want of a sufficient number of men, I refer you to a detailed report on the engines by the locomotive foreman, which was forwarded by me with my report on the rolling stock. It will be seen that in reply to a minute of mine, Mr. Scott distinctly states that it is not the want of hands but a sufficient number of goods-engines that causes the difficulty, and this he repeats in the report he made lately at your request.

22. With regard to the working over-time, I find upon reference to the sheets for the past three months that the most (and that in only two instances) any man worked in the *fortnight*, was $1\frac{1}{2}$ day. Surely this cannot be considered over-working the men!

23. According to the rules of the service, time and quarter is allowed for work done after hours, up to 10 P.M., from which hour time and half is allowed, so that the actual number of hours these men were at work is considerably less than $1\frac{1}{2}$ day. A man may have a job in hand which an hour or two will finish—that if you put on twenty men would not get it done any sooner. Most of the over-time is made by men repairing the goods-engines at Penrith on the Sunday, being the only day they are not running.

24. I am not responsible for the class of rolling stock imported, and which have proved a failure, as I predicted they would to the late Commissioner the first day I saw them; and it is now upwards of eighteen months since I urged the necessity of getting others more suitable.

25. I am in this position:—I, as the responsible officer (rather that should be), give advice, and immediately every influence is brought to bear by those who are *not* responsible to prevent such advice being carried out. Now can it be expected under such circumstances things can work well? Let but full confidence be placed in me. Let my advice be taken, and full powers given me to carry it out. In a word,—let me be placed in the position that I should be if a company or an individual, in place of the Government, had the railways, and things would be carried on very differently, and the result would, I am sure, prove satisfactory.

26. I have spoken out strongly on this occasion as the minutes upon these subjects may at some future date be made to have a different significance to what I know the Minister intends them to have. I wish therefore to put my reply on record with them, in defence of my character and professional reputation.

27. In conclusion I have to thank you for the fair way in which you have on every occasion given me the opportunity of answering all the insinuations (for in no case have they been open charges) made with the view of disparaging my reputation; but I feel confident that if my replies to them are read, any impartial person would acknowledge there has not been the slightest foundation for their being made, and could only be prompted by a want of knowledge of the circumstances connected therewith; and that I have done, or recommended should be done, all that it was in the power of man to do, to get sufficient rolling stock and a class of engines adequate to the requirements of the traffic. If my recommendations have not in some cases been acted upon, or in others deferred until too late, I at least, cannot be held responsible. I have not rested content with merely reporting these things, but as I think both yourself and the late Minister will bear me out, that I have left nothing undone—answered every objection, and urged that my advice should be taken. Neither I or anyone else could do more.

JAS. H. THOMAS.
12/12/68.

GREAT SOUTHERN AND WESTERN RAILWAYS.

RETURN of Engines running and under repairs, December 10th, 1868.

No. Engine.	Class of Engine.	In what condition.	Remarks.
1	4-wheel coupled	Under repairs	Will be ready in a few days.

N. BULLEN,
Sydney, 10/12/68.

No. 12.

THE COMMISSIONER FOR RAILWAYS to THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

Minute Paper.—Application for Locomotive Engines and other rolling stock.

WILL Mr. Thomas be so good as to at once send me a copy of his first application for Locomotive Engines to be made in the Colony or imported from England, with the date ?

Also, the dates of application since 1st January, 1867, for any other rolling stock ?

This is wanted for Cabinet at once.

J.S.—13/1/69.

No. 13.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS to THE COMMISSIONER FOR RAILWAYS.

MINUTES regarding rolling stock are scattered among a mass of papers in the Commissioner's Office, but our record books, not being as yet indexed up, I am unable to get you all the information unless a little time is given.

Most communications on the subject, both to the late and present Minister, have been verbal. I find, however, a very long report, dated 2/7/68, recommending that a more suitable class of engine for working steep gradients be procured, and in this report I find that I refer to some communications on the point some twelve months previous.

I find another report, dated 19/9/68, recommending, that as we were short of steam power, that tenders be at once invited for three goods engines.

Tenders were called for the whole of the rolling stock, 30/9/68, all the papers connected with which are in the Commissioner's Office.

There is also a reference made to the class of engines I recommend in my report, 12/6/68.

Dates of application for other rolling stock are, as far as I can find, 15/2/67, 9/3/68, and 23/5/68. These were for trucks, and the whole (234 in all) have been supplied by Colonial manufacturers.

In a report, dated 16/6/68, I pointed out the necessity, in order to meet the constantly increasing requirements of the traffic, that 100 sets of wheels should be indented for over and above what had been ordered for rolling stock then in hand, and these should now be on their way out.

Recent dates are 8/1/69 for brake-vans, and 12/1/69 for goods trucks.

JAS. H. THOMAS.

these papers.

Copy herewith.

[Enclosure.]

Engineer for Existing Lines of Railways to The Commissioner for Railways.

Government Railways—Existing Lines.

Locomotive Engines for steep Gradients.

WE have only six goods engines capable of working the 1 in 30 gradients on the Southern and Western Lines, and the great wear and tear they receive necessitates the keeping of two constantly under repair.

The daily increasing traffic (that from Mount Victoria, I believe, exceeding all the other Stations together) will, I fear, cause us to run short of steam power, unless means are at once taken to procure more locomotives for working these steep portions of our lines.

I would therefore recommend that Tenders be invited, as early as possible, for the construction of three of the class of engines referred to in my minute of 2/7/68 to be made in the Colony, the plans and specifications for which I have already prepared.

JAS. H. THOMAS.—19/9/68.

The Cabinet are disposed to advertise for rolling stock generally, which will include tank engines.

Engineer-in-Chief for Railways had better see these papers.—J.B., 26/9/68.

Mr. Whitton.—29/9/68.

No. 14.

MINUTE OF CABINET.

HAVING fully considered the whole of this question, the Cabinet are of opinion that the proper course will be to obtain, in addition to the papers now submitted, a report from the Engineer-in-Chief on the whole matter.

JOHN ROBERTSON.

See reports dated 14th January, 1869,—4th February, 1869,—and two reports of 15th February, 1869.—J.W., 16/2/69.

No. 15.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 14 January, 1869.

Report on the condition of the Locomotive Engines on the Southern and Western Railways.

SIR,

In compliance with the instructions of the Cabinet, conveyed to me by minute dated 18th December, 1868, I have the honor to submit the following report on the locomotive engines on the above-named Railways.

Locomotive Engines.

The total number of engines—including the three small ones used for working the Windsor and Richmond Railways, is thirty (30), as per tabular statement annexed, marked A. Seen, 19/1/69.
J.S.

I purpose to deal only with the engines belonging to the Main Southern and Western Lines, and shall therefore exclude, in alluding to the number of engines, those belonging to the Richmond Branch, Nos. 29, 30, and 31.

The total number of engines on the main lines named above is 27 (No. 10 engine having been sent to the north), which may be classed as follows:—

Passenger Engines.

Nos. 6, 7, 8, 9, 11, 12, 14, 15, 16, 23, 24, 25, 26, 27, 28,—fifteen.

There are therefore fifteen passenger engines for working the traffic on the main lines, which are in the following condition, viz. :—

No. 6 was in the shop, at various times, for ordinary repairs, between 1862 and March, 1866.

On the 13th July, 1866, it was stopped from running, requiring new cylinders, and has remained in the yard up to the present time without any repairs having been effected. It has therefore been useless for two years and five months.

No. 7 was stopped from running on the 11th June, 1866, requiring new cylinder, and was not taken into the shop for repairs until the 26th March, 1868.

The necessary repairs were made, and the engine resumed work on the 2nd September, 1868, having been useless for two years and two months.

No.

No. 8 had general repairs at various times up to April, 1867, and now requires to be taken into the shop for thorough repairs.

No. 9 had various general repairs from 1861 to May, 1868.

The cylinders are now in bad condition and should be renewed at once. No patterns have, however, yet been made for them.

No. 11 had ordinary repairs at various times from 1861 to December, 1868, and is now in fair running condition.

No. 12 had general repairs up to December, 1865,—was in that month taken into the shop for extensive repairs,—went out of shop on 23rd January, 1866, and after several minor repairs was taken again into the shop for a general overhaul on 17th December, 1868, and is not yet finished.

No. 14 had various general repairs up to 27th November, 1868, when it was stopped from running, a flaw having been discovered in the crank axle; duplicate driving-wheels and axle were at once substituted, and it is now running and in good working condition.

No. 15 had various general repairs up to September, 1868, and is now in good working condition.

No. 16 was repaired at various times up to 23rd October, 1868.

On the 20th November it was taken into the shop with a broken cranked axle, and is now laid up for a new axle.

No. 23.—Only very slight repairs have been made to this engine, but the driving and trailing wheels now require turning up.

No. 24 has had general repairs at various times up to May last, and although it is still running it should be taken at once into the shop to have the wheels of both engine and tender turned up, besides other minor repairs.

No. 25 has had considerable repairs, and although still running (with leaky tubes and cracked tube-plate) should be at once taken into the shop to have the necessary repairs effected and the wheels turned up.

No. 26 had general repairs up to 1st December, 1868, on which day it was taken into the shop with a broken cylinder, having been in a collision with No. 11 engine in the station-yard at Sydney. It is now under repair.

No. 27 had general repairs at various times up to October, 1868, and is now in good working condition.

No. 28 had ordinary repairs up to November, 1868, and is now in fair working condition.

All the passenger engines are either fully employed or under repair. There is no spare engine for special trains, or to take the place of any engine that may become disabled; and with so large a proportion of the total number of passenger engines in an unsatisfactory condition, such a contingency is by no means improbable,—nine engines out of the fifteen being either utterly disabled, or requiring to be taken into the shop for repairs.

Goods Engines and Engines used for Ballasting.

Nos. 1, 2, 3, 4, 5, 13, 17, 18, 19, 20, 21, 22,—twelve.

Nos. 1, 2, and 3 are in good condition, but No. 4 must be taken into the shop immediately for general repairs.

No. 1 had new boiler in 1862, and new cylinders in 1865.

No. 2 had new boiler in 1864, and new cylinder in 1867.

No. 3 had new boiler in 1863, and new cylinder in 1867.

No. 4 had new boiler in 1861, and new cylinders in 1866.

No. 5 ("Governor General") is in good working condition.

No. 13 had new pistons with double rods, new cylinders, covers, and glands, trailing axle-boxes lined up, slide-bars and eccentrics set up, and new brake-screws to tender, in December, 1865. It is now in bad order, and must be taken into the shop for general repairs.

Nos. 17 and 18.—These engines have just undergone a thorough repair, and are now in good working condition.

No. 19 was taken into the shop on 24th December, 1868, to have all wheels turned up, and for general repairs.

No. 20, after being thoroughly repaired, was sent out of the shop on the 4th November, 1868, and is now in fair working condition.

No. 21 was sent out of the shop on the 7th December, 1868, after having had all wheels turned up and general repairs effected, and is now in fair working condition.

No. 22 was taken into the shop on the 25th September, 1868, for general repairs, which were completed on 7th October, 1868. It is not in good condition, and must be taken into the shop at once for repairs.

The total number of goods engines, properly so called, is eleven (as No. 5, "Governor General," is a small engine); and out of this number one is under repair, and three others should be taken into the shop at once, leaving only seven effective engines.

These engines are fully employed, and no engine in reserve to meet any casualty that may arise.

I may here mention that No. 18 engine, on the Western Railway, is running from Monday morning until Saturday night, without the fire being put out during that time,—one driver making the day trip and another driver taking the night duty. The only day on which repairs can be made is Sunday. Such a system of working is utterly destructive to any engine.

It is therefore clear that additional engines are immediately required both for passenger and goods traffic, and to give an opportunity of thoroughly repairing the engines now in use, six (6) passenger engines and six goods engines should be ordered at once.

I fear the delay which has taken place in ordering additional engines will be productive of great loss to the Government and inconvenience to the public generally.

The opening of further extensions during the present year will, no doubt, give a large additional traffic; and, at least, from twelve to eighteen months must elapse before the requisite number of engines can be imported.

From

From a report by Mr. Scott on the condition of the rolling stock on the Southern, Western, and Richmond Railways, dated 31st December, 1865 (copy of which is appended, marked B), it appears there were at that date, thirty-one engines, and out of this number sixteen only were required for working the traffic (including the Richmond branch), fifteen were new engines, and one engine only was undergoing repairs.

I think it due to Mr. Scott, the locomotive foreman, to state that he is in no way to blame for the bad condition in which the engines now are, as I find from memoranda, which I give in the Appendix, marked C, that he has been constantly calling the attention of the Engineer for Existing Lines to the state of the engines, and entreating him to grant more assistance.

Mr. Cobb, the out-door foreman, also made many applications to be allowed more cleaners, but was generally met by a refusal.

In one instance Mr. Cobb mentions that there were seven engines running without any cleaners, and this will no doubt in a great measure account for the very filthy condition of all the engines on these lines.

Every engine should only do the work which is considered the proper amount of running for one driver, and should be thoroughly cleaned after every trip.

In the purchase of locomotives for the future use, I advise the Government to make the different classes as few as possible, for instance :—

No. 1 class, to work the passenger traffic between Sydney and Picton, and Sydney and Penrith.

No. 2 class, to run the passenger trains from Penrith to Bathurst, and from Picton to Goulburn.

No. 3 class, for the suburban trains.

No. 4 class, to embrace the heavy goods engines for the whole of the lines.

There are at present eight different classes of engines (exclusive of those working the Richmond line), and by providing what may be called standard engines, now that the traffic has become well known, the number of duplicates to be kept in store will be reduced one-half.

No. 1 class to have—

Inside cylinders	16" diameter.
Stroke	24"
Leading wheels	3' 9" "
Driving and trailing wheels coupled...	5' 6" "
Tender on six wheels to hold 1,800 gallons of water.						

No. 2 class to have—

Outside cylinders	18" diameter.
Stroke	24"
Leading 4-wheeled bogie	3' 0" "
Driving and trailing wheels coupled...	5' 6" "
Tender on six wheels to hold 1,800 gallons of water.						

No. 3 class to have—

Outside cylinders	15" diameter.
Stroke	22"
Leading wheels	3' 6" "
Driving and trailing wheels coupled	5' 0" "
Tank to hold 800 gallons of water.						

No. 4 class to have—

Inside cylinders	18" diameter.
Stroke	24"
Leading, driving, and trailing wheels, all coupled	4' 0" "
Tender on six wheels to hold 2,000 gallons of water.						

There are only six large goods engines for the Southern and Western Lines, two being in use on the Western Line, two on the Southern Line, and two generally undergoing repairs.

To work the present goods traffic in a satisfactory manner on the Western Line, four large engines are indispensable, and a similar number will be required in the South, but in order to meet the anticipated traffic not less than six new engines of this class should be provided, making a total of twelve heavy goods engines for the two lines.

The engines I now propose for the heavy goods traffic are precisely similar to those now in use, and which are admirably adapted for working the steep gradients on these lines.

They are, however, capable of hauling much heavier loads than they have yet done if properly used, but they have hitherto been worked in a manner most objectionable and unsatisfactory. I also advise that six engines of each of the classes I have named be provided as early as practicable, making a total number of twenty-four new engines for working the passenger and goods traffic on the Southern and Western Railways.

I have not had time to inspect thoroughly the carriage and wagon stock, but I have seen quite sufficient to state that it is generally in a very dirty and unsatisfactory condition.

I have, &c.,
JOHN WHITTON.

B.

The Locomotive Foreman to The Engineer-in-Chief.

REPORT on the condition of the Rolling Stock and Machinery, 31st December, 1865.

Great Southern, Western, and Richmond Railways.

Locomotive Engines.

There are thirty-one engines on these lines; twelve of these are daily in steam, but sometimes, on special occasions, we have as many as four additional ones at work.

Nos. 1, 2, 3, and 4 are always kept in constant use, and are now in good working condition. Nos. 1 and 2 have been fitted with wrought-iron pistons and brass rings, and Nos. 3 and 4 with solid cast-iron pistons and steel rings.

No. 5.—This engine and tender have just had a thorough repair, comprising new axle-boxes, brasses, tires to engine and tender wheels, and new frame and brake gear to tender.

Nos. 6 and 7 are in safe working condition, but their cylinders are much corroded, and cannot last much longer.

Nos. 8 and 12 (tank engines) are in a safe working state. No. 12 has been fitted with solid cast-iron pistons and double piston rods.

Nos. 9, 10, and 11 are in safe running order.

No. 13 is in a safe working condition; has been fitted with double piston rods and steel rings.

Nos. 14, 15, and 16 are new engines, and are all in good condition.

Nos. 17, 18, 19, 20, 21, and 22 are new goods engines. Only two of these have commenced running, but two of the others are put together.

Nos. 23, 24, 25, 26, 27, and 28 are new bogie engines. Three of these are put together but we have had steam only in one of them.

Nos. 29, 30, and 31 are in good working condition. Two of these are constantly running on the Richmond Line; the other is generally undergoing repairs at Sydney.

Steel Piston-rings and double Piston-rods.

Steel piston rings are proved to be a great economy in locomotives. Engine No. 2, with a set of brass rings, ran only 22,954 miles, and the pistons and springs had to be set up about once a month; while No. 3, with steel rings, ran 39,775 miles and little or no repairs to the pistons during that time.

The piston-rod, carried through the outside cylinder cover, is found to be a great improvement, by its keeping the piston in the centre of cylinder. I have just examined No. 12 (done this way and with steel rings) and find a beautiful gloss on the cylinder, causing very little friction; this engine has been running thirteen months, but the pistons have required no repairs, and have been only taken out twice for the purpose of examining them.

Lubricators.

I have put one of Roscoe's patent lubricators (for lubricating slide valves and pistons) on engines Nos. 3, 14, 15, and 17, and I find them of great service. I have examined the valves and pistons occasionally, and have always found them greasy and wearing smoothly, thus effecting a great saving in wear and tear, and reducing the amount of friction. The wearing part of those engines without these lubricators are generally dry and rough, wearing away the slides and pistons fast.

In my next report I shall give a comparative statement of the state of pistons and valves, and mileage run by engines with and without these lubricators; I would recommend all locomotives to be fitted with them, and they would soon pay for themselves by the diminution of wear and tear.

Carriages,

Carriages, &c.

First class.—These are in good running order, but some of them will soon require painting and the linings renewed.
Composites.—These are mostly in good repair.
Second class.—These are generally in good order, but some require painting.
Third class.—These are most in good running order, but some require repairing and painting.
Hearses.—These are in thorough repair.
Passenger brakes.—These are in good running order.
Carriage trucks.—These are nearly all in good condition.
Horse boxes.—These are generally in good order.
Tram cars.—One of these is past repairs; the others are in good repair.

Goods Wagons, &c.

Goods brakes.—One of these requires to be thoroughly renewed; the others are in good repair.
A wagons.—The most of these are in good repair, but some require renewing.
B wagons.—These are chiefly in good repair, but some require new wood-work.
C vans.—These are in good order.
D trucks.—These are nearly all in good order.
E wagons.—These are mostly in good repair, but the woodwork of some must be renewed.
Sheep vans.—These are in good order.
Cattle wagons.—These are in good repair, but they require painting.
Meat vans.—These are in good running order, but will soon require painting.
During the past year the whole woodwork of many of the goods wagons has been entirely renewed, and numerous repairs have been effected to carriages, so that these branches of our rolling stock are generally in good condition.
We shall not require any additions to our number of carriages during 1866; but notwithstanding the late additions we are still short of goods wagons.
The machinery in workshops and stationary engines are all in good repair.

WILLIAM SCOTT,
Locomotive Foreman, G. S., W., & R. Lines.

C.

Extract from Report, dated 9 September, 1867.

Locomotive Foreman to Engineer for Existing Lines of Railways.

I HAVE a memo. from Mr. Tipping about No. 18 tires getting loose of the same class. As you are aware, there are only six of this class, and cannot be kept long in the shop for repairs, and there are no tires ready for them when required.

Nos. 22 and 28 bogies, and Nos. 2, 4, 14, and 15, and one of the Windsor engines, would all require to come in for wheels turning up and other repairs. As you are aware I have only five fitters, and can only have two lifted at a time, and I cannot do the justice to them I should like.

W.S.,—9/8/67.

Extract from Report on Engines, dated 20 November, 1867.

Locomotive Foreman to Engineer for Existing Lines of Railways.

THIS will show nine engines and eight tenders that now require to come in for repairs, and two now in, among two sets of fitters, which it will be impossible to do with the number I have got. Two fitters and two labourers are constantly required for small repairs to running engines that come in daily; so this leaves me only with two available sets for lifting engines, which is now not enough. Hoping you will see the necessity of allowing me one good fitter and two labourers, then, I believe, I could manage, as our new engines will wear the working parts more and more every day, and will require renewing, and must be kept up to their work.

There are too few goods engines for the present traffic; three more, at the very least, for the present traffic will be required.

Yours, &c.,
W. SCOTT.
20 Nov., 1867.

Locomotive Foreman to Engineer for Existing Lines of Railways.

Locomotive Department,
26 Feb., 1868.

Sir,

I find the work of the locomotive repairs increasing, so that I find I cannot do justice to them without more hands. I require one good fitter and one labourer, and I can then have three engines off the wheels at once for repairs.

I applied for two labourers on the 28th November last, but have not had any as yet.

Yours, &c.,
W. SCOTT.

Extract from correspondence respecting Engines.

Locomotive Foreman to Engineer for Existing Lines of Railways.

May, 1868.

I INTEND the return to show that there is not a sufficient number of heavy engines to replace those that require to come in for repairs. You may also refer to my report of November, 1867, relating to more goods engines being required.

Yours, &c.,
W. SCOTT.

Locomotive Foreman to Engineer for Existing Lines of Railways.

Sir,

I beg respectfully to inform you that I have the following engines under repair, and fitters at work on No. 5, No. 1, No. 3, and No. 21, and I have No. 26, No. 11, and No. 28 laid up, waiting for fitters to commence on them, and No. 8, No. 19, and No. 18 require coming in. As you will see, I require two more fitters and one labourer as soon as possible, to enable me to get as many engines as possible ready for Christmas.

I may also inform you it takes two fitters to keep the daily running repairs going, independent of the general repairs.

Yours, &c.,
W. SCOTT.
21/12/68.

Fitters employed on engines:—
No. 21. Cahill and Bailey.
No. 5. Harkness and Twiss.
No. 3. Williams and Furlong.
No. 1. Crawford and Hosick.

Locomotive Foreman to Engineer for Existing Lines of Railways.

Sir,

No. 17 engine came in yesterday with leaky tubes, and a number of the stays require to be taken out and new ones fitted in. I cannot spare the boilermakers off No. 3 and No. 11 engines at present. Will you allow me to take on one boilermaker to get this done at once?

I beg to call your very serious attention to the number of engines requiring repairs at present, which are kept back for want of men to put on them, and are urgently required for working the traffic.

Yours, &c.,
W. SCOTT.
4/12/68.

No. 16.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 4 February, 1869.

SIR,

In accordance with your verbal instructions, I have the honor to submit the following report on the proposal of the Engineer for Existing Lines to construct tank engines for working the steep inclines on the Great Western Railway of this Colony.

Referring to the specifications under which these tank engines were to be constructed, I find that the cylinders were to be 17-in. diameter, stroke 24-in., wheels six coupled 3-ft. 9-in. diameter.

There is nothing stated in the specification as to the weight of these engines; but in a report furnished by Mr. Thomas to the late Commissioner, dated the 3rd July, 1868, the weight is stated to be 34½ tons.

From this report I extract the following:—

"Some twelve months ago I intimated to the Commissioner my opinion that the class of engines which would be found best adapted for working the steep gradients on the mountain lines would be with some modification in the design such as that built by Messrs. Vale & Lacy for Mr. Goddard, the contractor.

On the 20th ultimo I had an opportunity of testing the locomotive above referred to, taking with it ten loaded trucks of railway bars (53 tons 6 cwt.), together with a heavy brake-van from Penrith up the Zigzag to Wascoe's.

We had fitted a temporary sand arrangement on the front of the engine, but it had none behind, yet it was enabled to stop on gradients of 1 in 30 and start again with ease. I may mention that it was found that from the starting and during the whole journey the ashpan-damper had been closed.

The engine weighs when in steam with full load of fuel and water, 31 tons 11 cwt. It has 16-in. cylinders, 24-in. stroke, and 6 coupled-wheels, 3-ft. 9-in. diameter, and a wheel-base of 12-ft. 6-in.; it cost, £1,900.

This class of engine will not only, by the greater amount of adhesion they possess, be enabled to convey far greater loads up the steep inclines, but also prevent the great loss of time which now occurs with our present engines from the slipping of the wheels, an amount which is not counterbalanced by the advantages they derive in their wheels being of larger diameter when running on a level or down an incline. Of course I do not propose that they should entirely supersede the present engines, but only be used for working the traffic over the heaviest portion of the line, viz., that between Penrith and the siding at the Stone-crushers.

The following table will show at a glance what the class of engines referred to have done, what our present engines are capable of doing, and what the engines I propose to build and guarantee, shall perform:—

Description of Engine.	Weight of Engine.	Cost of Engine.	Load that each Engine, exclusive of its own weight, will take up the gradient of 1 in 30.	Diameter of Cylinder.	Length of Stroke.	Diameter of Driving Wheels.	
			Tons. cwt. qrs.			in.	ft.
1. Contractor's	31 11 0	1,900	105 16 3	16	24	3	9
2. Our present goods	^a 50 12 2	3,200	84 5 1	18	24	4	0
3. Our present passengers	^b 49 16 3	3,200	43 0 0	18	24	5	9
4. Proposed goods	34 10 0	2,200	126 0 0	17	24	3	9
5. Proposed passengers	32 0 0	2,200	70 0 0	16	24	4	3

^a 31½ tons.

^b 31 tons.

I may here remark that the statement furnished by Mr. Thomas of the weight which each engine can take up an incline of 1 in 30, has been arrived at partly by guessing, partly from an experiment which Mr. Thomas says was made under his direction, partly by reports from the engine drivers, but not in one single instance by ascertaining the tractive power of each engine by calculation. The results are, therefore, as might have been expected, utterly unreliable.

I now propose to give the tractive steam powers of each engine, and assuming the same steam pressure in the cylinders of each engine for the full length of the stroke, to show what load each engine would be able to haul up, in favourable weather, an incline of 1 in 30.

For convenience of reference I have numbered each engine as shown in the margin of the above table:—

No.	Description of Engine.	Weight of Engine.	Tractive steam-power in lbs.	Load each Engine will take up an incline of 1 in 30, including its own weight.
1	Contractor's	Tons. cwt. qrs. 31 11 0	10,922	Tons. 128
2	Present goods	31 10 0	12,960	152
3	Present passengers	31 0 0	9,016	106
4	Proposed goods	34 10 0	12,330	145
5	Proposed passengers	32 0 0	9,638	113

These

These calculations are based upon the assumption that the average steam pressure in the cylinders for the whole length of the stroke is 80 lbs., but if the lap of the valve be diminished each engine will have a greater tractive steam-power, but the speed will be reduced.

It is quite clear from the above table that No. 2, the goods engine at present in use on these lines, is the most powerful of all the engines in use or of those proposed.

The tank engines proposed to be constructed are to weigh, when in full working order, $34\frac{1}{2}$ tons; this would be their total available *adhesive* power; but it must not be forgotten that the adhesive power of a tank engine diminishes with every stroke of the piston, and as these engines must take at least 7 tons of water, it follows that when the whole of the water has been evaporated the engine will only weigh $27\frac{1}{2}$ tons instead of $34\frac{1}{2}$ tons, which was the weight at starting; or, if the average adhesive power be taken as 31 tons, these proposed *powerful* engines would have 10 cwt. of adhesive power and 630 lbs. of tractive steam-power *less* than the engines now in use.

But assuming that the whole of the water had been evaporated, these tank engines would have 4 tons less weight available for adhesive power than the present goods engines.

The large goods engines on the present lines do not weigh, as stated by Mr. Thomas, 50 tons 12 cwt. 2 qrs., but $31\frac{1}{2}$ tons, this weight being always available for adhesive power as the water is carried in a tender behind the engine.

The passenger engines weigh only 31 tons instead of 49 tons 16 cwt. 3 qrs.

The weight of the tender having been in each case most improperly included as a portion of the weight of the engine.

I wish to call attention to the price at which Mr. Thomas states in his report that the engines proposed by him could be manufactured in this colony, viz., £2,200. The lowest tender received for this class of engine was, I understand, a little under £3,000, or nearly £800 above Mr. Thomas' estimate.

The difference in cost between the large imported engines and the tank engines proposed is more apparent than real, as the tank engine dispenses with the tender, and is consequently worth considerably less than the engine with tender attached.

The comparison is therefore not a fair one, and unless explained is likely to mislead.

Having shewn that these proposed engines are not so powerful as the engines now in use (if properly worked), I wish to point out how extremely dangerous it would be to attempt to work engines of the tank class on the steep gradients of the Western Line. The present goods engine and tender weigh about 50 tons, the whole of this weight being made available for retarding the speed of the trains when descending steep gradients by means of brakes on all the wheels of both engine and tender, but even with this brake power and the assistance of a heavy brake van it is often difficult during foggy weather to keep the train under command. This being so it is not difficult to understand what might and most probably would be the fate of a train when attempting to descend the steep inclines on the Western Line with a break power (varying as the weight of water decreased in the tank) from 16 tons to 23 tons less than that now in use.

I may also point out another great defect in these proposed tank engines, which is of considerable importance.

The total weight of water to be carried will be about 7 tons; this weight, so far as I can understand from the specification, has to be placed in a great measure on the top of the boiler, and probably about 5 tons weight of water will be entirely above the boiler. This weight when running round the sharp curves, being precipitated suddenly from one side of the tank to the other, would not be unlikely to turn the engine completely over, assisted as it would be by the super-elevation of the outside rail.

I therefore advise that tank engines be not used on any of the main lines in this colony where steep gradients have to be worked, for, independent of the deficiency of weight available for brake power, should any accident occur to the brakes on the engine there would be no tender or other brake which could be used to stop the progress of the train when descending the steep inclines on such a line as that over the Blue Mountains; and in addition there is not one single advantage to be obtained in using them, as they are in every way inferior to the large goods engines now in use.

The other engines recommended by Mr. Thomas are simply copies of engines now in use on these railways. I recommend that the engines for the future be constructed without any alteration in the manner and of the dimensions named by me in my report on the condition of the locomotive stock on the Southern and Western Railways, dated 14 January, 1869.

The proposal to have engines manufactured in the colony and for the contract to remain in force for five years appears to me extremely injudicious.

It must be obvious to anyone who has given the matter the least consideration that in large establishments in England, where every possible use is made of machinery, where the sub-division of labor is carried out to its fullest extent, and where labor is not more than one-third the cost of labor in this colony, to obtain the same class of workmanship here for the same amount of money is manifestly impossible.

It must also be remembered that all the raw material has to be imported from England, and freight and duties must be paid; that the wheels, axles, springs, &c., will be manufactured in England; and if the contractor in this colony has to compete in price with manufacturers at home he must import all the material not in a raw but in a manufactured state, and rest satisfied with the simple process of putting the various pieces together on their arrival in this colony.

Improvements in the manufacture of engines and in their adaptation to the work to be performed are almost daily taking place in England and on the Continent; but if a contract be entered into for the manufacture of the class of locomotives now used, such contract extending over a period of five years, it would debar this colony from taking advantage of any improvements made during that period.

It is quite true that an arrangement might be made with the contractor that any improvements suggested should be carried out, but as the contract price must have been based upon the class of engine now in use, any alteration would most probably be looked upon as breaking the contract, or at least an additional sum would be charged for carrying out the improvements suggested, and the price of the engine considerably increased, although the alteration might not be expensive.

I consider such an arrangement would not be for the benefit of the colony.

I have, &c.,
JOHN WHITTON.

No.

No. 17.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 15 February, 1869.

MINUTE PAPER.

Reply to Mr. Thomas' Memo. of 12/12/68. M.P. 68-648.

1. See my report on condition of locomotive engines, dated 14th January, 1869.
2. Do. do. do. 4th February, 1869.
3. Any of the large goods engines would take the load of 60 wagons up the Southern or Western Line in five trips, if properly worked.
4. The goods engines on the Western Line, when wrought iron tires were used, did require the wheels turning up in five or six weeks, but with steel tires, which are now being used, they require turning up once in three months only. It will therefore in future not be necessary to have two engines from this cause always under repair.
5. Two engines might at the date of Mr. Thomas' Memo. (12 Dec., '68) be out of working order, but as duplicate wheels and axles were immediately put under engine No. 14, it was running again early in January. One engine only of this class is now out of working order.
6. Mr. Thomas first made application for more goods engines in July, 1868. I find Mr. Scott suggested to Mr. Thomas the necessity of more goods engines being provided, as far back as 20th November, 1867.

With respect to the class of engines proposed by Mr. Thomas, reference should be made to my report dated 4th February, 1869.

If Mr. Thomas' usefulness to the Government be of the character described by himself, it would manifestly be a loss to "bind" him and thus decrease the scope of his usefulness.

I think it could reasonably be expected of Mr. Thomas to make provision for the requirements of his own department, but this he appears to have entirely neglected.

7. It is quite clear that Mr. Thomas has exhibited great want of foresight in not having provided sufficient engine power for the working of the traffic. When all the available engines were in steam it was quite time to ask for additional locomotive power.

8. When Mr. Thomas took charge of this department there were fifteen new engines, and all the others in good working condition; but in less than three years the engines are all in use, and many of them in a very bad state of repair and the worst stage of uncleanness.

The wagon wheels indented for were not ordered in time to meet the requirements of the traffic.

Mr. Thomas was not aware of the necessities of the traffic until forced upon him by a deficiency of rolling stock, and all the "trouble" he appears to take credit for having experienced was inflicted too late to be of any service.

9. The additional sidings in the Sydney Station-yard are nothing extraordinary; nearly all the useful ones were laid out by me, and the plans forwarded to Mr. Thomas.

The small matters which Mr. Thomas says he has done in erecting sheep-pens, &c., are most insignificant. As to the carriage-shed which he says is in course of erection, I can only say that I regret that it is so, as it is evidently in the wrong position, and ought to be taken down.

The new station at Petersham, which Mr. Thomas has erected in place of the "wretched" accommodation previously existing, appears to have been anything but useful, as the Station-master (although his allowance for house rent has ceased) has not been able to bring his family into it, in consequence of the "wretched" manner in which a necessary provision for the comforts of a family has been neglected.

10. Mr. Thomas has, I believe, professed to revise the rules and regulations for working the line. The attempt however has not been successful, for one of the most important additions he has made is in reference to the distance signals; and although he has been on the railways of this Colony at different times, upwards of five years, he is still ignorant of the manner in which these distance signals are constructed.

The rule therefore had better be omitted.

The other alterations generally are not improvements, and some very useful rules have been omitted.

11. I consider the charge of want of foresight fully merited.

12. Mr. Thomas' first written application for additional locomotive power was made on the 2nd July, 1868, and tenders were invited on the 17th November, '68, but as no money had been voted by Parliament for this special purpose no tender could be accepted.

I may here remark that it was a very fortunate circumstance that no money had been voted, or it is probable the Government might have accepted an offer for the construction of a class of engines most unsuitable for the purpose intended.

13. Mr. Scott made application to Mr. Thomas for additional men on the following dates, viz. :—

1866.—August 23, October 22, September 24, December 10, and December 20.

1867.—January 4, February 25, March 10, May 2, September 9, and November 20.

1868.—February 26. To this Mr. Thomas replied by refusing to consent to any increase upon future applications. May 14 and December 2.

Mr. Thomas states that if the men in the shops "did half a day's work in the day" additional men would not be required.

This is a most extraordinary admission. Mr. Thomas is responsible for all the expenditure in the Locomotive and Carriage Departments, and he admits that if the men worked one-half their time the additional assistance asked for by Mr. Scott would not be necessary. Mr. Scott is one of Mr. Thomas' subordinates, and if he asks for more assistance than Mr. Thomas knows to be requisite why does he allow him to squander the public money in so wholesale a manner?

I understand the fact to be that Mr. Thomas never enters the shops to superintend any repairs to engines, and he is therefore not in a position to say what repairs are necessary.

14. That the shops are "grossly, badly" managed I am quite prepared to admit, and I fear they must remain in that unenviable condition so long as they are under the charge of Mr. Thomas, whose principal amusement, judging from the memoranda which I have seen, appears to be to insult Mr. Scott on every possible occasion, and to refuse him that assistance which is absolutely necessary to enable him to discharge with satisfaction the duties appertaining to his office as Locomotive Foreman.

All Mr. Thomas' absurd statements about the cost of engine No. 7, the painting of engines, and the making of the new boilers of engines Nos. 1, 2, 3, and 4, must be taken with great caution, as there is nothing given as to what repairs were done, to enable any person to form any opinion whatever. I, however, recommend the Commissioner to charge Mr. Thomas with all the money he admits to have thrown away under his mismanagement.

15. "To let the labour" of repairing the engines would be most unwise, for whether it would be "to the advantage of the contractor to keep them in good order or not," it certainly would be to the advantage of the contractor to do as little as possible in return for the money paid.

16. I always understood that Mr. Thomas had full power to make any recommendation he pleased with reference to the management of the shops, but I have never heard that any particular re-organisation had been recommended.

17. There are very few lines on which engines have been waiting for repairs for more than two years, more particularly when such engines were urgently required for working the traffic. This, however, was the case at the Sydney station under Mr. Thomas' management.

18. When engines are allowed to remain upwards of two years without repairs it is absurd to say that an undue proportion of it is not in the shops. The engines I have alluded to might have been repaired and in working order if Mr. Thomas had allowed the foreman sufficient hands for the purpose.

19. Mr. Thomas might have stated by whom the "enormous number of specials" was ordered, and for what purpose required.

20. If the advice referred to by Mr. Thomas means his first written communication, dated 2 July, 1868, asking for additional engine power, it is simply ridiculous to state that all requirements would have been met had his advice been taken. The engines should have been ordered twelve months before that date to have been of any use in the present emergency, and Mr. Thomas cannot plead ignorance of the requirements of the traffic, as his attention was called to the matter by Mr. Scott's memo. of 20 November, 1867.

21. This paragraph is the most perfect piece of what may be called twaddle that I ever read. I have never heard anyone charge Mr. Thomas with trying to save expense, but I have often heard him accused of the grossest extravagance in permitting all the works and rolling stock to fall into the very lowest state of disrepair. I have not heard him accused of taking on "as many men as could well be stuck in the shops," but I know that repeated applications have been made to him for a sufficient number of men to repair and clean the engines, and I know that he has generally refused without giving any satisfactory reasons for doing so. How Mr. Thomas can state that there has been a sufficient number of men, and quote Mr. Scott as his informant, I am at a loss to know, and Mr. Scott's and also Mr. Cobb's repeated applications for additional assistance will entirely disprove the statement.

22. It is always better to employ extra hands than to allow the men to work overtime, and although Mr. Thomas states that the workmen in the shops have not made much overtime, if I am not misinformed several of the enginemen have done so.

23. It is to say the least an unfortunate circumstance that the goods engines on the Western Line can only have repairs effected on Sundays. This does not look like having made proper provision for the requirement of the traffic. I have no doubt, however, that if the engines had been properly used one day of rest during the week might have been accorded to the fitters.

24. I am quite satisfied that Mr. Thomas is not responsible for the present class of engines ordered for the extensions beyond Penrith and Picton, but I am pleased to say that I am. Engines more suitable for working the traffic cannot be made, but when good engines are handed over to the charge of a man too ignorant to understand them and too conceited to learn, the result can hardly be doubtful. All Mr. Thomas' antecedents go to show that the only experience he has ever had on railways has been obtained in this Colony; and although his opportunities of improvement have been great, he appears to know little more than he did on his first appointment in 1859.

25. Mr. Thomas has had almost unlimited power over the Locomotive and Permanent-way departments for nearly three years, and a very pretty "hash" he has made of them. Before any further powers for an extended period be given to him he should be called upon to show that he has not abused the confidence which has hitherto been reposed in him.

26. I know of nothing that Mr. Thomas has done which can raise to any great height that "character and professional reputation" he appears so much afraid of losing. I do remember that on one occasion he was appointed one of a Commission to inquire into the explosion of a steam-boat boiler. The appointment was made on the 9th June, 1868, and on the 11th of the same month the following correspondence took place between himself and Mr. Scott, the Locomotive Foreman:—

Existing Lines Branch,
11 June, 1868.

Memorandum to Mr. Scott.

WITH a view of obtaining in writing the process adopted for testing the boilers of our locomotives, I desire replies to the following:—

1. Is any test applied to the boilers; and, if so—
2. What is the nature of the test?
3. How often is it employed?
4. What pressure is applied on these occasions?
5. Is there a fusible plug inserted in every boiler; and, if so, of what is it composed?
6. Are the boilers periodically examined?

JAS. H. THOMAS.

Mr.

Mr. Scott's replies.

1. Yes.
2. Cold water with the force pump.
3. It may be only once in four years, unless I have the lagging taken off for any other purpose; then I invariably test them.
4. The pressure is from 160 to 180 lbs.
5. There is a fusible plug in the crown-plate of all locomotive fire-boxes; it is a brass screw plug, 1½ in. diameter with a ¾ in. hole tapped in the centre, and run full of lead. Some of our fire-boxes have 2 in.
6. The boilers are examined every time they come in for repairs, which may be every 3 or 6 months; and if any leakage at any particular part is reported, that part is stripped and examined at once.

Mr. Thomas' remarks.

These boilers should be thoroughly examined internally at least once a year, or oftener if the water used is found to injure the plate.

Lead is found in practice to answer the purpose, as it melts in its pure state at 610° Fahrenheit, although I think a mixture, consisting of tin and lead, with a small portion of bismuth, preferable.

This is a most important matter, the majority of explosions are, I believe, owing to plates of boilers having been allowed to get too much worn by corrosion, and not from steam, by extreme tension generated by the drivers. To avoid this the boilers should undergo a thorough examination upon every possible occasion, and tested annually by hydraulic force, the pressure being 170 lbs., or 50 lbs. over which it has to withstand in ordinary working condition under steam,—no engine being allowed to run with a plate that is in the slightest degree doubtful in character.

Explosions from want of water would be entirely prevented by the use of lead plugs, which, to be in proper condition, should be removed frequently—say every month. ¾ in. diameter is not sufficiently large, and, when so small, there should be two in the crown of each fire-box.

Mr. Thomas, it should be remembered, has held his present position nearly two years, and yet he was entirely ignorant not only as to how or when the locomotive boilers were tested, but also as may be gathered from his memo., of the use of lead plugs in the fire-boxes of the locomotives.

After obtaining all information from Mr. Scott it is quite refreshing to read with what charming simplicity he gives instructions to the Locomotive Foreman how he should deal with the locomotives in future, merely, in fact, reiterating the information supplied to him by Mr. Scott.

I hope this information enabled him to discharge satisfactorily his duties as one of the Commission.

Mr. Thomas' concluding paragraph brought with it, I hope, the consolation which is generally accorded to those who feel that, amidst all the difficulties and dangers of this life, they at least have remained faithful to the trust reposed in them.

In his own moving language he has left nothing undone—answered every objection—and for so doing he at least cannot be held responsible.

It is lamentable to find how easily we can deceive ourselves.

JOHN WHITTON.

No. 18.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 15 February, 1869.

Great Southern Railway—Sydney to Parramatta Junction.

SIR,

In attention to your verbal instructions, I have examined the condition of the permanent-way on the Southern Railway, between Sydney and Parramatta Junction, and have the honor to submit the following report:—

From Sydney to the Parramatta Junction, Barlow rails were originally laid down for a double line of way, and this length was opened for public traffic in September, 1855.

These rails, being of a peculiar pattern (and the form of course patented), it was assumed by the inventor that sleepers would be unnecessary, and consequently only one sleeper was placed at the joints, and one sleeper under the middle of the rails.

Shortly after the opening it was found that more sleepers were necessary; and as the line was being worked by the contractor for the construction of the railway, under a lease for twelve months, saplings only were used for sleepers, being split down the middle, and laid with the round side down, to avoid, I presume, the expense of adzing a bed for the rails.

These in the course of a few years began to decay, and other sleepers were substituted of larger dimensions, and more in number, but still without being able to maintain with the patent rails anything approaching to a satisfactory permanent-way.

It was therefore deemed advisable as these rails began to wear, to relay the line with rails and chairs similar to the other portions of the railway beyond the Parramatta Junction; and during the years 1866 and 1867 the double-headed rail with chairs was laid from Sydney to Ashfield, a distance of five miles of double line.

Although this length has been relaid within the last three years with rails and chairs of the most approved description, so completely has the maintenance been neglected that some portions of it are more like a contractor's temporary road than the main line of a Government Railway.

There is scarcely a quarter of a mile on any part of this length in a satisfactory state; the whole requires lifting, straightening, and ballasting.

It is of little use relaying unless more attention is paid to the maintenance, as nothing but the greatest carelessness could have allowed a road composed of such good materials to fall into such a disgraceful state.

There was not one man on the line between Newtown and Sydney on the day of my inspection (the 9th instant); and as this is the worst part of the whole length it was a gross neglect of duty to take off (as I ascertained had been the case) men to attend to works in connection with the proposed new carriage-shed south of the Sydney Tunnel.

From

From Ashfield to near the 12-mile post the line is still laid with the original Barlow rails, but in such a condition from defective rails and rotten sleepers that I consider it unsafe for the trains to run over at the present rate; and I strongly advise the Commissioner to limit the speed of all trains over this portion (between Ashfield and the 12-mile post) to twenty miles an hour.

There is literally no ballast on this length but sand and a little burnt clay; the few stones that have been thrown in various places on the top of the sleepers are of little use, being much too large for packing. In fact the whole of this length should be relaid at once; but in doing so proper stone ballast should be laid for at least six inches under the sleepers, and after the rails are laid the road should be properly boxed up to within two inches of the level of the rails between, and within one inch of the level on the outside of the rails, and in the space between the two lines of way.

In several instances the embankments on this length are too narrow to receive the full width of ballast, and some of the cuttings to allow of the proper width of ballast being used with the open side drains now existing.

These, however, are defects which can be easily remedied, and should be attended to at once.

From near the 12-mile post to the Parramatta Junction, a distance of about a mile, the road is in much better condition. It was relaid in 1863 with a single-headed rail, fish-pointed, and fastened to cross sleepers with wrought-iron spikes; but even this length requires additional ballast before its condition can be considered satisfactory.

The bad state into which the road has been allowed to fall can be attributed only to ignorance of what constitutes a good permanent-way, or to negligence in its maintenance.

True economy is shown in the management of a railway when the whole of the works are maintained in the best possible condition; and there is no more certain sign of incompetence on the one hand and extravagance on the other, than to allow the permanent-way to fall into the lowest stage of disrepair before any expenditure is considered desirable.

New Carriage-shed.

I wish to draw attention to the position selected for a new carriage-shed, which is being erected about a quarter of a mile on the Newtown side of the Sydney Tunnel, adjoining the main (up) line.

Whenever carriages are taken into or removed from this shed, both the main lines must be blocked, or the engine must run on the wrong line. In either case it will be extremely inconvenient, if not absolutely dangerous. This shed should have been erected in the station-yard, where easy access could have been had to it at all times, without in any way interfering with the main line beyond the immediate station-yard.

To provide a convenient space for the additional shops and sheds, the whole station-ground should be excavated to the level of that portion of the yard on which the new goods shed is being erected, and I recommend that this be done at once.

Signals.

I feel it an imperative duty again to call attention to the defective signal arrangements in the station-yard at Sydney, which are totally inadequate for the protection of the public travelling on the railway.

To protect the station-yard, as it ought to have been protected long ago, proper junction signals should be erected near to the tunnel, at the junction of the goods lines with the main lines.

These signals should be above the tunnel, so as to be seen a considerable distance from the station-yard. The pointsman's box should also be above the tunnel, so as to give him a clear view of the whole yard, and of trains approaching the station from the south.

Distance signals should also be erected for the various branch lines, as well as for the main line, and the whole should be worked and controlled by one man.

Junction for goods lines.

I may remark that the goods lines have only what is termed a single junction, and this is formed with the down line; consequently, all up-trains will have to run (with a long train) down to the passenger station, shunt back through a crossover road on to the down-line before being able to place the trucks into the goods sidings. A proper double-line junction must be formed before the goods traffic can be satisfactorily worked.

I have, &c.,
JOHN WHITTON.

The Commissioner for Railways to The Engineer-in-Chief.
Government Railways.

Permanent-way materials required for relaying line Parramatta to Sydney.

WITH reference to my verbal request, I now direct that the Engineer-in-Chief will give the necessary instructions to supply from stocks on hand the requisite permanent-way materials for relaying the Sydney and Parramatta Line—the materials to be replaced by indent.

JOHN SUTHERLAND.

Mr. Whitton. 19/2/69.—R.M.

18/2/69.

Order No. 825.—17 Feb., 1869. Eight miles of rails = four miles of road, with the necessary chairs, fish-plates, bolts, nuts, spikes, and keys. W.H.Q., 19/2/69.

The Engineer for Existing Lines of Railways to The Commissioner for Railways.
Government Railways—Existing Lines.

Relaying line between Ashfield and Burwood.

HAVING observed that the sleepers and ballast have been advertised for, and also informed that the store-keeper has had a requisition sent to him to deliver the necessary quantity of rails, I should be glad to have the papers forwarded to me for my information, that no time may be lost in commencing this important work.

J. H. THOMAS,
p. ROBT. SHERIDAN.
This

This work should be commenced and carried out as quickly as possible. The papers in question are with the Cabinet.—J.S., 24/2/69.

Mr. Thomas, B.C.

Seen. As I understand that Mr. Whitton has made a report on the state of the Parramatta line, I respectfully request that in justice I may have at least an opportunity afforded me of seeing it; and this, I submit, is not an unreasonable request, seeing that I alone am responsible for this as well as all other portions of the existing lines of railway.—J.H.T., 25/2/69.

Mr. Thomas will perceive, in reference to my Minute of 24/2/69, the papers in question are with the Cabinet.—J.S., 26/2/69.

Mr. Thomas, 26/2/69.

Seen. J.H.T., 2/3/69.

The Engineer for Existing Lines of Railways to The Commissioner for Railways.

Government Railways—Existing Lines.

I GATHER from the discussion (as reported in the papers) on the Estimates for this branch of the department, that there were some charges against me now under the consideration of the Government. If such is the case it has never been intimated to me, and I certainly feel that I have been unfairly dealt with.

I am aware that an officer of the department, who both the present and late Minister have remarked the animus he has ever displayed in any matters touching my management, had been appointed by the Government to report on the rolling stock and the Parramatta line, and have heard various rumours regarding these reports, but I have not seen them; and if they contain charges questioning my management, I think that in justice I ought to have been called upon to make any remarks before being considered by the Cabinet, for as it is they have but an *ex parte* statement before them, and that from a personal enemy, and one also interested in proving that my management is a failure, as I felt bound to alter the system adopted by him when he had charge of the same department, more especially with regard to my efforts to have the rolling stock made in the Colony.

It may be unusual for officers to notice any discussion that takes place in the Assembly, but this being one in which my personal and professional reputation is questioned, I feel I am perfectly justified in asking that an opportunity at least may be given me of rebutting such charges.

JAS. H. THOMAS.—4/3/69.

Mr. Thomas' impressions as to the discussions referred to are not quite correct; no charges have been preferred against him, but Mr. Whitton has been requested to and has reported on the condition of the rolling stock and on the condition of the Parramatta line, which reports are now under the consideration of the Cabinet. Mr. Thomas may rest assured that if any charges arise from the reports in question, he shall have every opportunity of meeting them at the proper time.—J.S., 9/3/69.

Mr. Thomas.

Seen. J.H.T., 11/3/69.

No. 18A.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

MINUTE PAPER.

Condition of Locomotive Engines at North.

I WISH to have, without one moment's unnecessary delay, a detailed report on the present condition of the Locomotive Engines at the North, specifying each by number.

JOHN SUTHERLAND.

3/3/69.

MR. THOMAS' REPORT ON STATE OF ENGINES, NORTHERN LINE.

THE following will show the present condition of the engines on the Great Northern Railway:—

- No. 1—Laid up for general repairs, including new cylinders, having run eleven years.
- No. 2—Shunting in yard; will shortly require to come in for new cylinders, &c.; this engine has also been running eleven years.
- No. 3—In for slight running repairs.
- No. 4—Laid up for general repairs and new cylinders, having been running for twelve years.
- No. 5—Damaged by accident on 12/2/69, and consequently laid up for repairs of damage done.
- No. 6—In working order.
- No. 7—In working order.
- No. 8—In working order.
- No. 9—In working order.
- No. 10—At work, but will shortly require an overhaul.
- No. 11—Damaged by accident 8/2/69; laid up for repairing damage done.
- No. 12—In working order.
- No. 13—In working order.
- No. 14—Running for Messrs. Larken and Wakeford, but will no doubt require extensive repairs when returned by them.
- No. 15—In working order.
- No. 16—In working order.
- No. 17—Laid up for general repairs, which will be shortly completed.

It

It will thus be seen that there are—

- 10 at work.
- 1 at work for Messrs. Larkin and Wakeford.
- 2 damaged by accidents.
- 1 in for running repairs.
- 3 laid up for general overhaul and new cylinders.

—
Total 17
—

The mileage run by these engines in 1868 was 277,981, which does not include that run by engines lent to Messrs. Larkin and Wakeford.—J.H.T., 9/3/69.

Mr. Whitton.—J.S., 9/3/69.

This report is not in detail, and two of the engines stated to be in working order are nearly useless. There are not more than seven efficient engines on the line.—J.W., 10/3/69.

No. 19.

REPORT FROM MR. BOAG TO THE ENGINEER-IN-CHIEF.

Great Northern Railway,
4 June, 1869.

SIR,

In obedience to your instructions, contained in Memo. of June 2nd, I beg to furnish you with a detailed account of the state of the rolling stock under my charge.

Engine No. 1.—Is in good working order at present.

Tender No. 1.—Is in good working order, with the exception of the tires, which are very thin, and will require renewing shortly.

Engine No. 2.—Is laid up at present for a thorough repair; a new pair of cylinders; new slide valves, new packing rings for the pistons; all the glands require bushing; new slide rods; new piston rods; pump rams require turning; new packing rings for the pumps; all the clacks require to be examined; gauge-cocks; blow-off cocks; whistle; regulator; and several other minor repairs are required, too numerous to mention.

The boiler will have to be lifted out of the frame to have the bottom parts of the outside fire-box repaired with new plates.

Boiler No. 2.—The crown plate of the inside fire-box requires repairing in several places and several new crown stays require renewing.

A great many new copper stays will have to be put in through the water spaces of the fire-boxes, and the fire-box thoroughly cleaning out; the boiler and fire-box will require new lugging, and testing to 170 lbs. square inch with cold water.

Tender No. 2.—The tender requires to be lifted; brasses examining, probably new ones will be required; the tires are very thin and will require renewing.

Engine No. 3.—Is at present in good working order running the passenger trains. The tires on the tender wheels are very thin and will shortly require renewing.

Engine No. 4.—Is at present laid up for the following repairs; a new smoke box; new steam pipe; new set of tubes; and a few slight repairs to the boiler and fire-box; all the axle-boxes require to be fitted to the horn plates; motion bars, sink motion, pumps, eccentric, feed pipes, require to be fixed; blow-off cocks, whistle, water-gauge, regulator requires examining; the boiler and fire-box requires new lugging; the boiler must be tested to 170 lbs. on the square inch.

Tender requires lifting; brasses and valves examining; the tires are very thin and will require renewing shortly; engine and tender requires painting.

Engine No. 5.—Is laid up for repairs on account of running off the line at the Wallsend Junction on the 12th February, 1869.

The following repairs are required at present:—A new set of tubes; four new plates on the bottom parts of the outside fire-box; 60 new copper stays in the tube plate through the water spaces; 60 new copper stays through the water spaces where the new plates are being put on to the outside fire-box.

New driving axle boxes and brasses; all the glands require bushing; leading axle requires to be straightened; all the wheels require turning; gauge blow-off cocks, whistle, and regulator requires doing up; ash-pan, &c., requires repairing.

The boiler and fire-box requires new lugging; it must be tested to 170 lbs. on the square inch; leading, driving, and trailing wheels require painting.

Tender requires lifting, brasses examining; one axle bent—it requires to be straightened.

Tank Engine No. 6.—Is in fine working order, with the exception of the slide valves. They are very thin and will require renewing shortly. It requires painting as soon as practicable.

Engine No. 7.—Is in good working order, running coal trains. It requires painting.

Engine No. 8.—Is at present laid up for the following repairs:—A new set of tubes; a new angle iron round the boiler and smoke-box; several new stays are required to go through the water spaces; the crown plate of the inside fire-box requires repairing and some new crown stays putting in; the boiler and fire-box require new lugging; the boiler must be tested to 170 lbs. on the square inch.

The smoke-box is taken off to get the cylinder down; the steam chests are completely eaten through in some parts at the bottom from corrosion—these parts I intend to repair with new cast iron patches; new slide valves; new slide rods; piston turning up; all the glands require bushing; regulator; steam pipe inside of the boiler must be taken out and replaced; gauge-cock, blow-off cocks, and whistle requires repairing; all the gear requires fixing.

Tender No. 8.—Requires to be lifted, the brasses and valves examining.

Engine and tender require painting.

102—D

Tank

Tank engine No. 9, "Pioneer."—It was laid up on Thursday, 11th June, 1869, for the following repairs:—A new pair of cylinders; the top part of the right cylinder is completely eaten through in one place; it is not more than $\frac{1}{8}$ of an inch in thickness in other parts. A pattern will have to be made for new ones, unless Mr. Scott has one. This engine is the same class as those running on the Windsor Branch line (their names are "Sydney," "Richmond," and "Windsor"). A pair of new slide valves will be required; valve faces; filed-up tires require turning; the boiler and fire-box requires to be repaired in several places; several of the copper stays require renewing in the fire-box; blow-off cocks, whistle, water gauge requires to be examined; tank will have to be taken off the boiler and all the lugging taken off; the boiler tested to 178 lbs. on the square inch. And sundry other repairs, too numerous to mention.

I believe Mr. Scott has a pair of duplicate cylinders for this class of engine; if so I should be glad if you would give instructions for me to have them at once. This engine is very much wanted for the Morpeth Branch line.

Name, "Pioneer"—Manning and Wardle, makers.

Engine No. 10.—Requires to come into the shop for a general overhaul as soon as practicable. It is *two years* since it had a thorough repair.

The following repairs are required:—New tires on the leading, driving, and trailing wheels; all the axle-boxes require lining up, and probably new brasses fitted into the boxes.

The horn plates require to be filed up; piston and slide rods require to be turned; all the glands require bushing; new brass packing rings for all the glands; probably new slide valves, and the steam chest faces will require to be done up; blow-off cocks, water-gauge, injectors, regulator, ball and socket, and feed pipes, require examining; fire-box, boiler, and tubes, require examining; a great many new copper stays will be required in the fire-box; all the lugging will have to be taken off the boiler and fire-box and renewed where it is bad; the boiler will have to be tested to 170 lbs. on the square inch.

Tender No. 10.—The tender will have to be lifted, and probably new brasses fitted into the boxes, on account of the time it has been running; the valves and brake-gear requires repair; all the wheels require new tires; the horn plates require to be filed up. Engine and tender requires painting.

Engine No. 11.—Is in fair working order; running the goods train. It will run some months without any extensive repairs.

No. 11 Tender.—Is in good working order at present. The wheels have been turned up once, but will not stand it again. Engine and tender requires painting.

Engine No. 12.—Is at present in fair working order; running the Wallsend coal trains.

All the engine wheels have been turned once; they will not stand turning again; new tires will be required when it is laid up; the bottom parts of the outside fire-box require new plates, putting in similar to those put on engines 11 and 13.

A few of the tubes will have to be taken out and new ones put in, and several new stays require putting into the fire-box.

This engine will probably run some time before these repairs need be effected.

Tender No. 12.—Is in fair working order; the wheels have been turned up once, but will not stand it again.

Engine No. 13.—Is in good working order.

Tender No. 13.—Is in good working order.

I may also inform you that the duplicate engine wheels, that were ordered from England for Stephenson's Engines, Nos. 11, 12, and 13, I had to forward them to Sydney, January 12/1/69, for this class of engines.

I trust you will give instructions for them to be returned as early as practicable, in the same condition as when they left here. I have been put to a great deal of inconvenience in not having them, when one of these engines requires new tires. It must be laid up until the tires come from Sydney; after which they have to be bored out, put on to the wheels, drilled, riveted, and turned, which is a great waste of time, in not having duplicate work for engines and tenders.

Engine No. 14.—Has been used by Messrs. Larkin and Wakeford from the 12/3/68 until May, 29/69, and is returned for the following repairs:—New slide valves; cylinder requires to be faced up; piston rods very much bent; piston and slide rods require turning; all the glands require bushing; slide rod guides require bushing; horn-plates all require to be filed up; new brasses are required for the driving and trailing axle-boxes; all the axle-boxes require lining up; new bogie axle-boxes are required; bogie wheels required to be turned; new tires for driving and trailing wheels; the tires all require to be bored out, drilled, riveted, and turned; all the eccentric straps require letting together; all the engine springs require to be taken to pieces and examined; new pins fitted into the compensating levers; the engine-break requires renewing in several places; two footsteps broken; ball and socket pipes require examining; the frame betwixt the engine and tender is broken; new plates must be put on for the buffers to bear against; a new top will have to be made for the funnel; the plates of the inside copper fire-box are very much strained 2 feet from the bottom; the left back corner of the inside fire-box was split open 2 feet from the bottom. A patch was put on for Messrs. Larkin & Wakeford November, /68. This patch will probably have to be taken off, and a new piece of copper-plate put in.

There are about 90 stays that go through the water spaces where the plates are strained in the boxes; the heads are nearly eaten off, and very likely broken; they will require renewing. To replace these stays, and repair the fire-box, to make it as good as it was when the Contractors had it, the boiler will have to be lifted clean from the frame to effect these repairs.

Injector, blow-off cocks, whistle, feed pipes, require examining. A new steam gauge—one of Bourdon's Patent—is required; the gauge on it at present is about 30 lbs. out. Engine and tender requires painting.

Tender No. 14.—Requires to be lifted; horn-plates all require filing up; axle-boxes lining up, and probably new brasses fitting into the axle-boxes; all the wheels require new tires; the tank requires repairing in several places; tender valves require to be examined; one tender spring broken; drag-links and hooks damaged.

This engine and tender was new when the Contractors had it on 12/3/68.

Buyers & Peacock, makers.

Engine No. 15.—Is in poor working order.

Tender

Tender No. 15.—In good working order.

T. BOAG, 14/6/69.

7 engines out of 17 laid up for extensive repairs.—J.W., 16/6/69.

Mr. Boag to have every engine on this line put into the most efficient condition as quickly as possible, and whatever duplicates are required they must be applied for at once.—J.W., 1/7/69.

Memo. 69/283.—W.H.Q., 2/7/69.

No. 20.

REPORT from MR. SCOTT to THE ENGINEER-IN-CHIEF.

REPORT on Locomotive Engines on the Southern, Western, and Richmond Railways.—June 7/69.

No. 1.—In fair working condition. Running 11.30 p.m. Goods.

No. 2.—In fair working condition, but wheels are getting rough.

Tender.—Buffer castings broken, and plates bent, bottom of tank very thin and patched. Running 10 p.m. Goods.

No. 3.—Now under repair, cylinders taken out and rejointed, a knee-plate screwed on to bad place in steam chest, steam ports and valves refaced, piston rods turned up and glands bushed, new piston rings, slide bars let together, slide blocks bored out and bushed, and engine frames repaired, with strong plates bolted on, all brasses let up, &c.

Tender.—Sand box put on, tank very thin, and patched on bottom.

No. 4.—In working condition, tires thin, framing plates cracked, eccentric liners thin.

Tender.—Tires thin. Running special goods trains.

No. 5.—In working condition, boiler cracked and patched on top of fire-hole door-plate, and corroded through at bottom and patched. This engine is working on the Western extension, between Mount Victoria and the Clarence Tunnel.

Tender.—In working condition.

No. 6.—This engine has been undergoing extensive renewals, viz. :—New cylinders, slide bars, connecting rods, valves, pistons, and valve spindles, also a new set of driving wheels, with steel axle fitted, and two injectors, in the place of pumps, &c., and will be ready for running in 10 days or a fortnight, newly legged and painted.

Tender.—Tank repaired, and a spare set of wheels put under, and axle-boxes and brasses fitted and newly painted.

No. 7.—In safe working condition, but requires to come in for wheels, turning up, and brasses letting together. This engine was fitted with new cylinders, and wheels, &c., the same as No. 6 above, and has been running since September 2nd, 1868, and is still running, and run over 20,270 miles.

Tender.—Wheels require turning up, &c. Running Parramatta Trains.

No. 8.—In working condition, but requires to come in for repairs, wheels turning up, axle-boxes knocking, valve motion repairing, pistons and valves examining, piston and valve spindle rods turning up, and glands bushing, eccentric liners letting together, and two new ones required, slide blocks bushed or new ones, tank under the foot plate leaking and patched. This engine is stopped from running passenger trains, and is now working coals up Darling Harbour Branch.

No. 9.—In working condition, but requires coming in for the following repairs :—Wheels turning up, axle-boxes knocking, valve motion repairing, pistons and valves examining, piston and valve rods turning up, and glands bushing, slide blocks bushing or new ones, eccentric liners renewing; the left cylinder steam-chest is corroded through and patched; it may last sometime, but cannot be depended on.

Tender.—Wheels require turning up, and brasses examining (and this engine is ballasting).

No. 11.—In working condition, but requires to come in for the same repairs as No. 9, and is of the same class, left cylinder cracked and patched. Running short passenger trains.

No. 12.—In good working condition, having just been repaired. Running Funeral trains.

No. 13.—Requires coming in for the following repairs :—New tires on all wheels, axle-boxes and brasses examined and will require lining up or new ones, pistons and valves examined and may require new rings on valves, piston and valve spindle rods will require turning up and glands bushing, new pins in valve motion, eccentric liners and brasses letting together, &c.

Tender.—New tires on all wheels, and brasses examined. This engine is used for shunting in the yard, and has not been in the shop for 14 months.

No. 14.—In good working condition.

Tender.—In good working condition. Spare engine.

No. 15.—In good working condition.

Tender.—In good working condition. Running Trains from Parramatta Junction to Penrith.

No. 16.—In good working condition.

Tender.—In good working condition. Running Trains from Sydney to Picton.

No. 17.—The wheels and working parts of this engine is in good working condition, but came in with leaky tubes and the side of copper-plate of fire-box bulged in towards the fire, and 6 copper stays broken. I have now got the plate back to its proper place, and new stays put in; this must have been either from over-pressure or weakness; the firehole copper-plate is bulged between the stays, and shows signs of weakness, from the door to the bottom of box.

Tender.—

- Tender.—In fair working condition.
 No. 18.—Now under repairs, having a spare set of wheels, with new steel tires on, put under new driving brasses, axle-boxes lined up, pistons and valves examined, piston and valve spindle-rod turned up and glands bushed, valve motion repaired, slide bars let together, all brasses let up, springs repaired, break gear repaired, &c.
 Tender.—Wheels changed and require turning up, break gear repaired, &c.
 No. 19.—Requires coming in for the following repairs :—All brasses letting up, valves examining and reset, smoke-box repairing, and new door, &c.
 Tender.—Leading wheels, flanges very sharp. Running goods on Western extension. I will send No. 17 to take her place until these repairs are done—at once.
 No. 20.—Big end brasses has been running hot and side bars require letting together, top clacks bad, &c. Will come through to Sydney with goods train, and have these jobs done at once.
 Tender.—In good working condition. Running from Picton to Marulan and Goulburn.
 No. 21.—In good working condition.
 Tender.—In good working condition. Running goods from Sydney to Picton.
 No. 22.—In fair working condition, but requires all brasses letting together, tubes caulking, and other small repairs. This can only be done by sending men from Sydney on Saturday, and working on Sunday.
 Tender.—Leading wheel flanges getting sharp. Running goods from Penrith to Mount Victoria.
 No. 23.—In fair working condition, but wheels require turning up.
 Tender.—In fair working condition. Running from Picton to Goulburn.
 No. 24.—In fair working condition.
 Tender.—In fair working condition. Running from Sydney to Picton.
 No. 25.—In fair working condition.
 Tender.—In fair working condition. Running specials, and Saturday trains.
 No. 26.—In fair working condition.
 Tender.—In fair working condition. Running from Picton to Goulburn.
 No. 27.—In working condition, but wheels getting rough, and valves blowing through. Spare engine to relieve others.
 No. 28.—In fair working condition.
 Tender.—In fair working condition. Running from Parramatta Junction to Mount Victoria.
 No. 29.—Now in for the following repairs :—Leak on side of fire-box ; wheels require turning up ; brasses or big and small ends letting up ; pistons and valves examining ; rods turning up and glands bushing ; new pins in valve motion ; slide bars letting together ; new buffer plates.
 No. 30.—In working condition, but feed pipes and pump clacks require examining and some small repairs ; and wheels require turning up, but will have to run until I get No. 29 repaired. Running special goods on Richmond line and Saturday passenger trains.
 No. 31.—In good working condition, having just been repaired ; but regulator is leaky, and will have to come in for one day to have it done.

Yours respectfully,
 WILLIAM SCOTT.

Instructions given to Scott to put all engines into thorough good repair.
 The difficulty, however, in doing this, is the great deficiency of engine-power, which will not allow sufficient time to effect thorough repairs, being urgently required for the traffic.
 All, however, that can be done, will be accomplished.

J. W., 1/7/69.

Engines

Engines running every day	5
Engines running every day	23
Nos. 14 and 27.—Spare engines for specials, and other emergencies ...	2
Total ...	<u>30</u>

Engines marked thus (*) all would require to come in at once; but I have no engines to take their place, and must keep them running to keep the traffic going, and cannot lay up more than five at once, as you will see by this return. If I repair five engines every month, six months pass over before it comes to its turn again; and it is only by keeping axle-boxes, big-end coupling-rod, brasses, and other fittings in readiness, to be put in when the wheels are taken from under, that I can keep the traffic going,—and a number of them are overworked, having two drivers to one engine, which is most objectionable, but cannot be avoided, with the present number of engines. The copper fire-boxes of Nos. 17, 21, 22, 24, and 25, have been repaired and patched, and cannot be depended on; I see no danger, but if they get so bad that the box will require to be taken out, it will lay them up for two or three months, do our best, and would become a serious matter before we get some new ones to take their places.

Yours respectfully,
WILLIAM SCOTT,
 Locomotive Foreman.

No. 21.

REPORT FROM MR. BOAG TO THE ENGINEER-IN-CHIEF.

Great Northern Railway,
 20 July, 1869.

SIR,

Report of the present condition of the carriages and the repairs they require.

No. 1, Second class.—The body and under frame is in good condition; one step-board broken; wheels require turning; springs are in good order; painting looks very shabby; it will require painting shortly.

No. 2, Second class.—Is altered into goods van No. 10.

No. 3, Second class.—Two top-side panels split; the flooring is getting very bad, and will soon require renewing; wheels and springs are in good order; the painting is not very good.

No. 4, Second class.—The body and under frame are in good condition; wheels and springs are in good order; painting requires flattening down, and two coats varnish.

No. 5, Second class.—The body and under frame are in good condition; wheels and springs are in good order; painting requires flattening down and two coats of varnish.

No. 6, Second class.—The body and under frame are in good condition; the tires are getting thin; hollow axles; springs are in good order; painting very shabby; will require painting soon.

No. 7, Second class.—Is newly repaired and painted; hollow axles.

No. 8, Second class.—The body and under frame are in good condition; the tires are getting thin; wheels and springs are in good order; painting requires flattening down, and two coats of varnish; hollow axles.

No. 9, Second class.—The body and under frame are in good condition; the flooring is getting very bad, and will soon require renewing; wheels and springs are in good order; painting very shabby, but will last some time.

No. 10, Second class.—Two top-side panels split; one inside seat rotten—it will have to be renewed; wheels require turning; springs in good order; it requires to be painted.

No. 11, Second class.—The body and under frames are in good order; several of the flooring-boards are rotten at the ends, and require renewing; wheels and springs are in good order; painting very shabby; it requires painting.

No. 12, Second class.—The body and under frame are in good condition; wheels require turning; springs are in good order; the painting requires flattening down, and two coats of varnish.

No. 13, Second class.—The body and under frame are in good condition; wheel requires to be turned; springs are in good order; painting very shabby; too bad for varnishing, but will last a short time.

No. 14, Second class.—One end panel split; remainder of body and under frame in good condition; wheels and springs in good order; the painting is shabby; it requires two coats of varnish.

No. 15, Second class.—The body and under frame are in good condition; wheels require to be turned; springs in good order; painting very shabby; not fit for varnishing, but will last some time.

No. 16, Second class.—The body and under frame are in good condition; wheels and springs are in good order; the painting requires flattening down, and two coats of varnish.

No. 17, Second class.—The body and under frame are in good condition; wheels and springs are in good order; the painting requires flattening down, and two coats of varnish.

No. 18, Second class.—The body and under frame are in good condition; wheels and springs are in good order; the painting requires flattening down, and two coats of varnish.

No. 19, Second class.—The body and under frame are in good condition; the wheels require to be turned; springs are in good order; the painting requires flattening down, and two coats of varnish.

No. 20, Second class.—The body and under frame are in good condition; the wheels and springs are in good order; the painting is very shabby, too bad to be varnished; it will shortly require painting.

No. 21, Second class.—The body and under frame are in good condition; the wheels require to be turned; springs are in good order; the painting is very shabby, and will shortly require to be painted.

No. 22, Second class.—The body and under frame are in good condition; the wheels will soon require to be turned; springs are in good order; the painting is very bad; it requires painting.

No. 23, Second class.—The body and under frame are in good condition; two plates of glass cracked; the wheels will require to be turned shortly; springs are in good order; the painting requires flattening down, and two coats of varnish.

No.

No. 24, Second class.—The body and under frame are in good condition ; the inside trimmings are in fair working order ; four plates of glass are cracked ; wheels and springs are in good order ; the painting is shabby ; it will soon require painting.

No. 25, Second class.—The body and under frame are in good condition ; the inside trimmings are in fair repair ; four plates of glass cracked, and one broken ; the wheels and springs are in good order ; the painting is good.

No. 26, Second class.—Requires one cover to ventilator for the door ; the body and under frame are in good condition ; five plates of glass are cracked, and one broken ; the wheels and springs are in good order ; the inside trimmings are in fair condition ; the painting requires flattening down, and two coats of varnish.

No. 27, Second class.—The body and under frame are in good condition ; two plates of glass are cracked ; the wheels and springs are in good order ; the painting very soon will require to be renewed.

No. 28, Second class.—Requires four roof boards, and one hoop stick spliced for top roof ; the body and under frame are in good condition ; seven plates of glass are cracked ; the inside trimmings are in fair condition ; the wheels and springs are in good order ; the painting is in a fair condition.

No. 29, Second class.—The body and under frame are in good condition ; one plate of glass is cracked ; the wheels and springs are all in good order ; the painting requires flattening down, and two coats of varnish.

No. 30, Second class.—One end top panel split ; the body and under frame are in good condition ; the inside trimmings are in fair order ; five plates of glass cracked ; the wheels and springs are in good order ; the painting is in fair condition.

Composite Carriages.

No. 1, Composite.—Body and under frame are in good condition ; the inside roof and trimmings are very shabby ; three plates of glass are cracked, and one plate broken ; wheels and springs are in good order ; hollow axles ; painting requires flattening down, touched up, and two coats of varnish.

No. 2, Composite.—Body and under frame are in good condition ; the inside trimmings very much torn in several places, and moth-eaten ; it requires new trimming ; one plate glass cracked ; wheels and springs in good order ; painting requires flattening down, touching up, and two coats of varnish.

No. 3, Composite.—The body and under frame are in good condition ; the inside trimmings and roof very shabby ; the wheels require turning ; springs are in good order ; the painting looks shabby ; it will soon require to be painted.

No. 4, Composite.—The body and under frame are in good condition ; it requires new trimmings, and a new carpet ; a new set of inside ventilators over side-lights ; two plates of glass cracked ; wheels and springs are in good order ; it requires painting.

No. 5, Composite.—Two side bottom and two door panels split ; the body and under frame are in good condition ; the trimmings are much worn, and moth-eaten ; it requires a new set of trimmings ; the inside roof requires to be recovered ; seven plates of glass are cracked ; wheels and springs are in good order ; it requires painting.

No. 6, Composite.—The body and under frame are in good condition ; the inside trimmings are good ; wheels and springs are in good order ; the painting requires to be flattened down, and two coats of varnish.

Yours, &c.,
T. BOAG.

THE whole of these carriages must be put in good order and repair, in the shortest time practicable ; and I request Mr. Boag to attend to this immediately, the work to be done by day labour, under strict supervision. If the number of men now employed be insufficient for the purpose, other hands may be employed, their names and proposed rate of wages being first submitted.—J.W., 27/7/69.

Mr. Boag—to be returned. W.H.Q., 27/7/69.

One trimmer.—There is no trimmer in Newcastle ; one must be sent from Sydney.

One labourer.—S. Brown, at 6s. per day.

One female to do the sewing (10) cushions in each saloon, at 4s. 6d. each.

Piping, at 1d. per yard.

Miss Bourne submitted for approval.

T. BOAG.—4/8/69.

Approved.—Carriage-trimmer will be sent from Sydney. Mr. Boag—to be returned. W.H.Q., 6/8/69. T. Boag., 7/8/69. Noted. J.P.S., 7/8/69.

CORRESPONDENCE respecting the removal of Mr. J. H. THOMAS from the Office of Engineer for Existing Lines, &c., &c.

No. 1.

MINUTE FOR THE EXECUTIVE COUNCIL.

Department of Public Works,
Sydney, 22 May, 1869.

THE Honorable the Secretary for Public Works submits for the consideration of His Excellency the Governor and the Executive Council the accompanying Minute, showing the arrangements he proposes for a re-organisation of the Engineer Branch of the Railway Department, in connection with the Existing Lines, with a view to the more efficient supervision of the locomotives and permanent-way, and of the manufacture of rolling stock, &c.

Mr.

Mr. Secretary Sutherland at the same time recommends to His Excellency and the Council, that for the purposes of the proposed re-arrangement, Mr. James Henry Thomas be relieved of the charge and responsibility of the supervision of the locomotive works and permanent-way of the existing lines, and that the Engineer-in-Chief be requested to take the charge and responsibility of those branches in addition to his present duties, but without additional salary.

Mr. Secretary Sutherland further recommends that Mr. James Henry Thomas be appointed Inspector of all imported rolling stock, machinery, permanent-way materials, &c., and of the manufacture of such as may be obtained in the colony, with salary of £550 per annum, to be paid from the votes for rolling stock and machinery, for the expenditure of which his services are now, or may be hereafter required, and that this arrangement be carried into operation forthwith.

JOHN SUTHERLAND.

After careful consideration of the subject herein set forth, the Executive Council concur in the recommendation of the Honorable the Secretary for Works, and advise that the necessary steps be forthwith taken for giving effect to the same.—ALEXANDER C. BUDGE, Clerk of the Council.

Abst. of Min. 69/122, 31 May, 1869. Confirmed, 2 June, 1869. Approved,—B., 3 June, '69.

[Enclosure.]

Department of Public Works,
Sydney, 22nd May, 1869.

EXISTING LINES OF RAILWAYS.

BEING impressed with the necessity for a re-organisation of the locomotive and permanent-way branches of the Railway Department, I desire the approval of my colleagues to carry into operation certain proposed changes which, while they will tend to the greater efficiency of those branches, will not be attended with increased cost.

At present the locomotive and permanent-way departments are under the control of Mr. Jas. Henry Thomas, as Engineer for Existing Lines, but from the unmistakably disorganised condition into which all branches of his department have drifted, possibly from the very many sources of occupation requiring Mr. Thomas' attention, I consider it absolutely necessary, for the safety of the public and for the efficiency of the service, that Mr. Thomas should be relieved of the great responsibility involved in his present appointment, in order that he may be the better enabled to devote his energies and professional skill to one portion of the department, where full scope will be found for all the ability that gentleman may possess, viz. :—

The superintendence and inspection of the building of rolling stock, and the manufacture of machinery to be obtained in the Colony, and the inspection of such as may be imported, including all materials for which orders have been or may hereafter be sent to England.

I should perhaps remark that a very large sum of money has already been voted, and it is intended to invite the Parliament to supplement that vote by a very large amount, to enable contracts already entered into to be extended over a period of five years.

The rolling stock now so urgently required will thus be the more expeditiously and faithfully constructed under the direct supervision of a responsible officer of the Government, whose inspection will not be confined to viewing the article when completed, but whose whole time will be devoted, during the entire progress of the manufacture, to such duty, which will thus give an opportunity of examining and testing not only the qualities of various materials required, but also the workmanship of such parts as would be hidden from view in the finished state.

I am enabled to recommend this course with greater confidence, from the many reports of Mr. Thomas', pointing out what he considers the great defects in the present system of importation and inspection of rolling stock, &c., as well as from the general public impression that prevails that the Government is not well served by the present agency.

I therefore propose to appoint Mr. Thomas as Inspector of all rolling-stock, machinery, and materials for the permanent-way, &c., whether obtained in the Colony or imported, and I shall cause provision to be made in the new contracts that no money will be paid until the officer inspecting has duly certified that all the conditions of the contract have been faithfully complied with.

I propose to pay Mr. Thomas with salary equal to what he now receives (£550 per annum), to be charged to the vote for the expenditure of which his services are now or may hereafter be required.

Should my colleagues approve of this step, I then propose to place the locomotive and permanent-way branches under the control of the Engineer-in-Chief, who will be entirely responsible, and will provide all necessary supervision from his own department for the efficient working of these branches, without extra cost; this will enable me to dispense with the Engineer for Existing Lines, whose salary I propose to withdraw from the Estimates.

JOHN SUTHERLAND.

No. 2.

INSTRUCTIONS FROM THE SECRETARY FOR PUBLIC WORKS TO THE UNDER SECRETARY.

Public Works,
1 June, 1869.

THE Under Secretary will inform Mr. Thomas, the Engineer for Existing Lines, that upon my recommendation—with a view to a re-arrangement of the Existing Lines Branch of the Railway Department—His Excellency the Governor, with the advice of the Executive Council, has approved of his being relieved of the duties of his present office, to take effect from this date.

Mr. Thomas to be informed further that he has been appointed, with salary at the rate of £550 per annum, Inspecting Engineer of the manufacture of all rolling stock and machinery, for which contracts may be entered into in the colony, and also, upon its arrival here, of all rolling stock, machinery, permanent-way materials, &c., &c., as may be ordered from England.

The Under Secretary will inform Mr. Thomas that he will be immediately under the direction of, and responsible to, the Commissioner for Railways, from whom he will receive his instructions, and with whom he will correspond on all matters connected with his duties—such duties to be confined to a professional inspection, and not to extend to alterations by him of the plans and specifications.

Mr. Rae will instruct Mr. Thomas to hand over all papers and documents to the Engineer-in-Chief for Railways.

Instruct Mr. Whitton accordingly.

JOHN SUTHERLAND.

J. H. Thomas, Esq., informed. The Engineer-in-Chief for Railways informed.—J.R., 1/6/69.

No. 3.

THE UNDER SECRETARY FOR PUBLIC WORKS to J. H. THOMAS, Esq.

Department of Public Works,
1 June, 1869.

SIR,

I am directed to inform you that upon the recommendation of the Honorable the Secretary for Public Works, His Excellency the Governor, with the advice of the Executive Council, has approved, with a view to a re-arrangement of the Existing Lines Branch of the Railway Department, of your being relieved of the duties pertaining to the office of Engineer for Existing Lines, and your appointment in that capacity accordingly ceases from this date.

2. I am however further to inform you that you have been appointed, with salary at the rate of £550 per annum, Inspecting Engineer of the manufacture of all rolling stock and machinery for which contracts may be entered into in the colony, and also upon its arrival here of all such rolling stock, machinery, and permanent-way material, &c., &c., as may be ordered from England.

3. I am to add that you will be immediately under the direction of, and responsible to, the Commissioner for Railways, from whom you will receive your instructions, and with whom you will correspond on all matters in connection with the duties which will be entrusted to you; such duties will however be confined to a professional inspection, and will not extend to alterations of the plans or specifications.

I have, &c.,
JOHN RAE.

P.S.—I am to instruct you to hand over all papers and documents to the Engineer-in-Chief for Railways.

No. 4.

THE UNDER SECRETARY FOR PUBLIC WORKS to THE ENGINEER-IN-CHIEF.

Department of Public Works,
Sydney, 1 June, 1869.

SIR,

I am directed by the Honorable the Secretary for Public Works to inform you that upon his recommendation, made with a view to a re-arrangement of the Existing Lines Branch of the Railway Department, His Excellency the Governor, with the advice of the Executive Council, has approved of Mr. J. H. Thomas being relieved of the duties pertaining to the office of the Engineer for Existing Lines and Locomotive Superintendent, and Mr. Thomas has been apprised that his appointment in that capacity ceases from to-day. He has been instructed to hand over to you all papers and documents relating to his office.

2. I am further to inform you that His Excellency and the Council have requested you to undertake the duties connected with these branches, in addition to your present duties as Engineer-in-Chief for Railways.

I have, &c.,
JOHN RAE.

No. 5.

J. H. THOMAS, Esq., to THE UNDER SECRETARY FOR PUBLIC WORKS.

Sydney, 5 June, 1869.

SIR,

I have the honor to acknowledge the receipt of your letter of the 1st instant, relieving me of the duties appertaining to the office of Engineer for Existing Lines and Locomotive Superintendent, and appointing me Inspecting Engineer for Rolling Stock, and at the same time to express my surprise and regret that an officer of the Government, holding such a highly responsible position of nearly (16) sixteen years standing in the service, and one who has never done anything to forfeit the confidence placed in him, should have been so summarily dealt with as not to have received the slightest intimation of the intention to remove him until 4:30 P.M. o'clock on the day upon which it took effect.

I have, &c.,
JAS. H. THOMAS.

Seen. J.S., 12/6/69. Forwarded by Railways, 28/6/69.

CORRESPONDENCE, &c., from A No. 1 to A No. 34, respecting construction of 100 Wagons—70 by P. N. Russell & Co., 30 by D. Sim—April, 1867.

A No. 1.

The Traffic Manager, G.S., W., & R. Railway, to The Commissioner for Railways.

Redfern, Traffic Manager's Office,
3 January, 1867.

THE demand for wagons is so great on the lines now that I find it impossible to supply the stations, and when the extensions are opened for goods traffic the demand will be much greater; I therefore submit that 100 more wagons should be procured at once.—E. OWEN.

Mr. Thomas, for report. I presume the same deficiency will be felt in the North—J.R., 3/1/67.

The Traffic Manager, Great Northern Railway, to The Commissioner for Railways.

THE supply of rolling stock for this line is not adequate to the requirements. Out of the last 80 D trucks made only 20 were supplied to this line, although I understand that I was to receive 40.

I would strongly recommend that the following additional stock be provided before the opening of the line to Muswellbrook, or I am afraid it will be impossible to carry on the traffic in anything like a satisfactory manner, as goods are at present frequently detained for want of trucks.

30 half-box or D.
10 low-sided or A.
7 cattle trucks.
6 horse boxes.
6 break vans.

It would be of great assistance if a portion of the D trucks were supplied early.—JNO. L. BEESTON, 8/1/67. Submitted, 16/1/67.—J.R. Mr. Thomas, for report on the first instance.—17/1/67, J.R. Seen.—J.H.T., 12/2/67.

THERE can be no doubt as to the necessity of providing an additional supply of trucks for working the increased lengths of line, both on the Northern and Southern Railways, but to have had them available for the opening of these extensions they should have been ordered some eight or ten months ago. The bodies and ironwork might be made in the colony, while the wheels, axles, and springs are being sent for from England. The requisite quantity for which I have included in a list of things to be indented for by next mail.—J.H.T., 12/2/67. Submitted, 15/2/67.—J.R.

Invite tenders immediately for 100.—J.B., 15/2/67. Mr. Thomas, B.C., 16/2/67—J.R. Seen.—J.H.T., 18/2/67.

A No. 2.

The Storekeeper to The Chief Clerk.

Government Railways,
Store Branch,
12 February, 1867.

Lamps as described, are urgently required, viz. :—

Engine head.
Do. head or tail.
Carriage side.
Do. roof.

I called on Mr. Keep, with a view of obtaining samples of each, so that they might be submitted for approval, but his agent in Melbourne, as will be seen by enclosed copy of letter, declined making samples.

Mr. Keep supplied lamps of a similar description last year, which were found very superior.

EDWD. FIELDING.

Copy of Letter.

24 engine head and buffer lamps 6,009, 62/6.
12 head or tail, with ruby sides, 75/.
36 carriage side lamps, 6,015, 50/.
60 rectangular roof lamps, 6,023, 51/.

“This lot can be completed in four months, in quantities as required to go on with.”

If the above are supplied equal to those in 1866 at the prices quoted, I would recommend that the number shewn may be ordered.—EDWD. FIELDING, 12/2/67.

P.S.—Maker will not make samples.

Mr. Thomas to forward indent, and say if there be time to procure these from England—B.C., 12/2/67, J.R.

When the cost of Colonial-made articles is about the same as those of English manufacture, providing all other matters are equal, I consider that preference should be given to the former.

In this case I find that the Victorian engine lamps, of which we require the least number, are, taking freight into consideration, slightly lower in price than the Home made, while those of which large quantities are used are about 30 per cent. higher. I would therefore recommend that the first-named lamps (Nos. 6,009 and 6,010) be ordered from Melbourne, and the remainder from England; and anticipating approval, have included them in indent for stores, by next mail.—J.H.T., 15/2/67.

Submitted, 15/2/67.—J.R.

Approved.—J.B., 15/2/67.

Mr. Thomas, B.C., 16/2/67.—J.R.

Seen.—J.H.T., 18/2/67.

A No. 3.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

MINUTE PAPER.

Indent for Carriage and Wagon Wheels, Springs, Vulcanized India-rubber, Lamps, &c.

HEREWITH I submit an indent, to be forwarded by next mail for various articles required for stock in connection with the Existing Lines. The large number of carriage and wagon wheels have been set down in anticipation of the approval of the course to be taken regarding the additional rolling stock applied for by the Traffic Managers on the Southern and Northern lines.

The probable cost will be as per estimate herewith.

Estimated cost of articles in Indent.

	£	s.	d.
40 pairs of carriage wheels	940	0	0
350 do. wagon do.	6,256	0	0
700 springs	700	0	0
500 India-rubber springs	525	0	0
4 cwt. India-rubber sheet	112	0	0
400 feet do. do. hose	120	0	0
14 cwt. patent packing	196	0	0
3 dozen carriage side lamps, No. 6,015	66	0	0
3 do. duplicate glasses for do.	1	0	0
5 do. rectangular roof lamps, No. 6,023	83	0	0
	<u>£8,999</u>	<u>0</u>	<u>0</u>

This estimate includes freight and charges.

J. H. THOMAS,
15/2/67.

Submitted, 15/2/67.—J.R. Approved.—J.B., 15/2/67.

What amount is available of the votes for rolling stock?—J.R., 15/2/67. Accountant, B.C.

The votes for wagons are as follows:—

	£
1864	4,000
1865	9,000
"	10,000
1866	10,000
	<u>£33,000</u>

of which there is a balance still unexpended of £17,662 6s. 9d.—R.C.W., 16/2/67.

Prepare notice for 100 D wagons, 18/2/67.—J.R. See Indent Book, 18/2/67.

Mr. Thomas, B.C., 18/2/67. Seen, 18/2/67.—J.H.T. Wrote, 22/3/67.

Notice to Works.—Advertisement to *Gazette*, 25/2/67.

Department of Public Works,
Railway Branch,
Sydney, 25/2/67.

Supply of 100 Goods Wagons.

Tenders (for the supply of 100 goods wagons) to be opened 26th March next.—R.M.

Noted for advertisement, 25/2/67. Mr. Halligan, B.C.

A No. 5.

Mr. J. Draper to The Commissioner for Railways.

Newcastle, 5 March, 1867.

Dear Sir,

Having observed in the Government Gazette that tenders are called for the supply of 100 goods wagons, I beg to state that I am desirous of tendering for the same. I am also anxious to know what class or description of wagon—whether class A, B, C, or D; also, whether the kind of wagon, or kind of wagons, as the case may be, is at present in use on the Great Northern Line; if so, by receiving information, giving the particulars sought for, it will save me expense and loss of time.

I also beg to request you will inform me what part of the said wagons the Government provides—whether wheels and axles, springs, axle-boxes, patent buffers, &c.

Trusting you will be kind enough to forward me an early reply to same.

I am, &c.,

JOSEPH DRAPER.

Mr. Thomas, B.C., 8/3/67.—J.B.

Mr. Draper informed.—J.H.T., *pro.* R.J.S., 12/3/67.

A No. 5A.

The Engineer for Existing Lines of Railways to Mr. J. Draper.

Office of Engineer for Existing Lines,

12 March, 1867.

Sir,

In reply to your letter of the 5th instant, I have to state that the class of truck required is that known as D wagons. A specimen one, for the guidance of contractors, may be inspected at the Redfern Railway Works, Sydney. The portions of the trucks which the Government undertake to supply are wheels, axles, steel-bearing spring, and India-rubber draw and buffer springs.

The specification can be seen, and, if necessary, copied at this office by yourself, or anyone you may appoint on your behalf.

I have, &c.,

JAS. H. THOMAS.

A No. 6.

Mr. G. Halligan to The Commissioner for Railways.

Supply of 100 Goods Wagons for Railway.

Department of Public Works,

Sydney, 26th March, 1867.

THE Tenders for the undermentioned works—(14) fourteen in number—are referred to the Commissioner for Railways, for report.

GERALD HALLIGAN,

(B.C., for the Under Secretary.)

ANALYSIS OF TENDERS.

No.	Names.	Price for 70, for Great Southern Railway.	Price for 30, for Great Northern Railway.
		£ s. d.	£ s. d.
1	P. N. Russell & Co.	82 0 0	84 10 0
2	John Robertson	98 0 0	98 0 0
3	Vale and Lacy	91 5 0	95 5 0
4	Bubb and Son.....	85 10 0	85 10 0
5	R. Dawson & Co.	83 0 0	87 0 0
6	John Taylor.....	92 15 0	92 15 0
7	Geo. M'Cawley	83 10 0	85 0 0
8	A. Rodgers	60 0 0	58 0 0
9	Joseph Draper.....	95 0 0
10	Duncan Sim.....	80 0 0
11	Wm. Vaughan.....	92 0 0	96 0 0
12	Wm. Stoddart.....	89 0 0	95 0 0

I would recommend for acceptance Messrs. P. N. Russell's tender, at £82 each, for the 70 wagons required for Sydney, and Duncan Sim's, at £80 each, for the 30 required for Newcastle, provided of course their sureties are considered unexceptionable.

It will be seen that there is one tender, "Rodgers'," much lower than those recommended; but as I know that it is utterly impossible that they could be done for the price mentioned, as well as from the fact of his never having seen the specification, and consequently not aware of what would be required before tendering

tendering (See his letter herewith to Commissioner, 67/486), I have not taken his tender into consideration. Trucks of this description have previously been made here by contract at £82 10s., but then the Government supplied the buffers, worth £7 10s., which in this case they do not, so that the prices may be considered at about 10 per cent. lower than before received.

JAS. H. THOMAS,
27/3/67.

Approved.—J.B., 4/4/67. Accepted, 8/4/67. Notice to Works, 9/4/67.

A No. 6 A.

Mr. A. Rodgers to The Commissioner for Railways.

Newcastle Foundry,
22 March, 1867.

Sir,

Seeing that the Government have invited tenders for the supply of 100 goods wagons, may I ask, before tendering, how many are intended for G. N. Railway, and if the Government will receive a distinct tender for such a number as may be required for this district?

Believing you will pardon me for putting these questions, and kindly answer the same,

I am, &c.,

A. RODGERS.

Mr. Rodgers has tendered, but by his letter it would appear without ever seeing the specification, as the information he asks for is distinctly stated in one of its clauses.—J.H.T., 26/3/67.

Seen.—J.B., 4/4/67.

A No. 7.

Mr. John Robertson to The Commissioner for Railways.

Tender for Goods Wagons.

I, John Robertson, hereby propose to construct the goods wagons for the Southern and Northern Railway, at my workshops in Sydney, in strict accordance with the specification, and to the satisfaction of the Inspecting Engineer, at the following prices, viz. :—100 goods wagons,—70 to be delivered at the Locomotive Works, Sydney Railway Station, and 30 at the Newcastle Station, Great Northern Line, free of all charges, for the sum of £98 each.

JOHN ROBERTSON,
489, Pitt-street, Sydney,
22 March, 1867.

SHOULD the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract; and we hereby undertake, within seven days from the date of the notification of the acceptance of the said tender, to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways, in the penal sum of £800, for securing such performance.

CLARKE WHITE, Botany-street, Redfern.

A No. 27.

The dimensions of the scantlings as above given are to hold full when the work is finished.

The whole of the framing to be of the best blue-gum, and the flooring, flaps, and ends of Kauri pine.

The soles are to be framed into the head-stocks with two $1\frac{1}{2}$ in. tenons.

The transverse bearers to be framed into soles with two $1\frac{1}{2}$ in. tenons at each end, and housed $\frac{1}{4}$ in. into sole.

The four diagonal braces to be framed fair with the upper side of cross bearers and soles, and tenoned into head-stocks and transverse bearer with two $1\frac{1}{2}$ in. tenons on each, housed into each $\frac{1}{4}$ of an inch. Great care is to be taken that the horn-plates are correctly fixed vertically and by transverse and longitudinal measurement.

The flooring-boards are to be of the best Kauri pine, well seasoned, laid longitudinally, and each plank well secured on the head-stocks, cross-bearers, and diagonal brace, with 4 in. wrought iron rose-headed nails.

Each wagon is to be provided with an efficient lever-break on the wheel.

The whole of the work is to be executed in the strongest and most durable manner, and with the soundest and best materials,—the timber being perfectly free from knots, sap, wanes, and shakes, and thoroughly well seasoned.

Every part must be framed perfectly square and true in every direction, and all the tenons must fit well into the mortises and be bedded in with white lead. All holes for bolts must be bored slightly less in diameter than the bolt itself, so that the whole may be a solid and firm job.

The ironwork used in tie-rods, bolts, straps, plates, knees, &c., to be made from the very best BBH Staffordshire merchant bar-iron; and the hooks, links, draw-bar safety chains, &c., to be from the very best cable-iron,—the forgings being in all cases clean and sharp, perfectly free from scales, blisters, and all other defects. All bolts and nuts to be of Whitworth's standard thread.

The ironwork to be three times painted black, and the wood to be painted one coat lead-colour and three coats brown, the last coat being composed of two-thirds varnish.

The wagons are to be constructed in every respect (not herein specified to the contrary) the same as D truck, No. 140, to be seen at the Railway Works, Sydney Station; and no deviation from it will be allowed without the sanction of the Engineer has been first obtained in writing.

The trucks are to be completed in every respect to the satisfaction of the Engineer for Existing Lines of Railways, who shall have power by self or assistants to inspect the work at all periods of the manufacture, and to reject any portion he may consider unsatisfactory, either in materials or workmanship; and on any question arising as to the terms of the specification, or compliance therewith, his decision is to be final and binding on all parties.

The whole of the trucks are to be delivered complete and in proper working order on or before the 1st of April, 1868—seventy at the Sydney Railway Works, and thirty at the Newcastle Station, Great Northern Railway.

In case the whole of the trucks are not delivered within the specified time the Contractor shall forfeit the sum of twenty pounds (£20) for each and every week they are undelivered.

The Contractor shall be responsible for any breakage that may arise from defective materials or workmanship, for six months from the date of delivery.

The Engineer, on the part of the Commissioner, reserves to himself the power of making any deviation from or addition to the trucks, without invalidating the contract,—the value of such deviations, alterations, or additions, to be ascertained and allowed for by the Engineer at such rates as he shall consider to bear a due proportion to the other work in this contract, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the trucks not proceeding with that despatch which the Engineer may consider necessary, then the Commissioner for Railways shall have power to suspend the further progress of the work, and entirely take them out of the Contractor's hands and employ any other person to complete the same; and all additional charges so incurred shall be defrayed by the Contractor, or his sureties.

The Commissioner for Railways will find and supply all the wheels, axles, steel-bearing springs, India-rubber draw and buffer springs, if possible, within nine months of the date of contract,—the Contractor finding all labour and material required in the fixture of the same; but as these articles have been indented for from England, the Commissioner will not bind himself to their supply by the time specified, although, should any unforeseen circumstances delay their delivery to the Contractor, in that case a corresponding extension in the time for completion of the contract will be granted.

Payment will be made as the bodies of the trucks are delivered at the Redfern Railway Works, or at Newcastle, in the proportion of 90 per cent. of the contract price; and the remaining 10 per cent. will be paid after their being mounted on their wheels and the whole of the work completed to the satisfaction of the Engineer.

JAS. H. THOMAS.

This is the specification marked "B," referred to in the annexed articles of agreement and bond respectively, dated the 23rd day of July, A.D. 1867.

A No. 29.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office,
Sydney, 12 August, 1867.

Sir,

I have the honor to return herewith the papers in Russell & Co.'s contract for the construction of goods wagons, and to state that I have caused a memorandum, that it was intended that the certificates shall be given by the Engineer for Existing Lines instead of by the Engineer-in-Chief, to be indorsed on the articles of agreement, which memo. has been duly executed by all the necessary parties.

I have, &c.,
JOHN WILLIAMS.

(Seal.)—J.B., 13/8/67.

A No. 30.

Mr. D. Sim to The Commissioner for Railways.

Morpeth, 7 November, 1867.

Sir,

The contract and bond for the completion of my contract for the supply of (30) thirty goods wagons for the Great Northern Railway, not having been forwarded for execution, in accordance with your letter of No. 67-219, date 18th April, 1867, and as I have six wagons now ready for delivery in accordance with the specification, the payment for which I am much in need of,—you will do me a great favour by forwarding the said contract and bond for execution, as early as possible, with instructions as to the authority before whom the bond should be executed.

I am, &c.,
D. SIM.

Railways, 11/11/67.—J.R.
Crown Solicitor may be asked to send bond.—J.B., 12/11/67.
Crown Solicitor, 12/11/67.

A No. 31.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office,
Sydney, 13 November, 1867.

Sir,

I have the honor to return to you herewith the papers received by me this morning, respecting Mr. D. Sim's contract for goods wagons, together with the instructions received by me in April last for the preparation of the usual bond and contract, and with the bond and contract prepared by me in April last, for execution by Mr. Sim.

The advertisement calling for tenders, provides in the usual way that the bond and contract shall be executed at my office, and I was not aware that this had been altered, as Mr. Sim states was done by your letter of 18th April last.

As I have no agent at Morpeth to whom I can forward the bond for execution, I would suggest that if it is to be executed there it will be advisable to forward same to Mr. Beeston, who may perhaps be able to arrange for its due execution.

It will of course be necessary to have the documents duly stamped, and I presume at the cost of Mr. Sim.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Mr. Beeston.—J.B., 15/11/67.
Wrote with consent.—R.M., 16/11/67.

Department of Public Works,
Railway Branch,
Sydney, 23 February, 1867.

TENDERS will be received at this office until Tuesday, the 26th March, at noon, from persons willing to contract for the supply of 100 goods wagons.

Plan, specification, and form of tender may be seen, and further particulars obtained, at the office of the Engineer for Existing Lines, Sydney Station.

Tenders, which are to be endorsed, "Tender for Goods Wagons," must state the time within which it is proposed to complete the work; and attached to every tender there must be a memorandum, signed by the party tendering, and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract, in the event of the tender being accepted, and undertaking, in that event, that they will severally execute and deliver, at the office of the Crown Solicitor, in Sydney, within seven days from the usual notification of acceptance, a bond to the Commissioner for Railways, in the penal sum of £800, for securing such performance, otherwise the tender will not be taken into consideration. The Commissioner does not bind himself to accept the lowest or any tender.

JOHN RAE,
Commissioner for Railways.

This is the copy advertisement marked "A," referred to in the annexed articles of agreement, dated the 19th day of November, A.D. 1867.

Witness—JNO. L. BEESTON.

C.

Mr. Duncan Sim to The Commissioner for Railways.

Morpeth, 25 March, 1867.

I, the undersigned, do hereby offer to supply the thirty goods wagons required for the Great Northern Line, in accordance with the specification and pattern wagon, No. 140, shown at the Sydney Station, for the sum of eighty pounds (£80) each. I beg to submit the names of two gentlemen who have agreed to become sureties for my faithful performance of the contract, in the event of my tender being accepted,—Mr. HENRY GEEBING, freeholder, of Hinton; and S. S. DICKISON, Esq., freeholder, of Morpeth.

DUNCAN SIM,
Morpeth.

This is the tender, marked "C," referred to in the annexed articles of agreement, dated the 19th day of November, A.D. 1867.

Witness—JNO. L. BEESTON.

B.

New South Wales Railways,
Existing Lines Branch.

SPECIFICATION of work to be performed and materials supplied in the construction of one hundred (100) D trucks for the Existing Lines of Government Railways.

THE work for which tenders are to be made and to which this specification refers, comprises providing of all materials (with the exceptions hereafter enumerated), tools, labour, implements, and workmanship, and every other thing requisite for the full and satisfactory completion of one hundred (100) railway wagons of the class generally known as D trucks.

Each truck is to consist of one open compartment—the extreme length of body being 15 ft., the extreme width 7 ft. 6 in., and the height from floor to top of sides and ends, 1 ft. 10 in.

The gauge of railway is 4 ft. 8½ in.

The centre of buffers to be 5 ft. 9 in. apart, and 3 ft. 4 in. above the surface of the rail; the wheels 8 ft. 6 in. apart, from centre to centre.

The general dimensions of framing to be as follows:—

2 soles	11	x	4
2 head-stocks	12½	x	4
2 transverse bearers	11	x	4
2 do.	6	x	4
2 diagonals	11	x	3
2 longitudinals	11	x	4
2 do.	4	x	3
2 do.	4½	x	4
4 end stanchions	4	x	3½
Flooring	7	x	2
2 side flaps, each constructed of two 7 x 2½, and one 8 x 2½ planks.										
2 end do., do., do.										

The dimensions of the scantlings as above given are to hold full when the work is finished.

The whole of the framing to be of the best blue-gum, and the flooring flaps and ends of Kauri pine.

The soles are to be framed into the head-stocks with two 1½ in. tenons.

The transverse bearers to be framed into soles with two 1½ in. tenons at each end, and housed ¼ in. into sole.

The four diagonal braces to be framed fair with the upper side of cross-bearers and soles, and tenoned into head-stocks and transverse bearer with two 1½ in. tenons on each, housed into each ¼ in.

Great

Great care is to be taken that the horn-plates are correctly fixed vertically, and by transverse and longitudinal measurement.

The flooring-boards are to be of the best Kauri pine, well seasoned, laid longitudinally, and each plank well secured on the head-stocks, cross-bearers, and diagonal braces, with 4 in. wrought iron rose-headed nails.

Each wagon is to be provided with an efficient lever-break on the wheel.

The whole of the work is to be executed in the strongest and most durable manner, and with the soundest and best materials,—the timber being perfectly free from knots, sap, waness, and shakes, and thoroughly well seasoned.

Every part must be framed perfectly square and true in every direction, and all the tenons must fit well into the mortises, and be bedded in with white lead; all holes for bolts must be bored slightly less in diameter than the bolt itself, so that the whole may be a solid and firm job.

The ironwork used in tie-rods, bolts, straps, plates, knees, &c., to be made from the very best BBH. Staffordshire Merchant bar-iron, and the hooks, links, draw-bar, safety chains, &c., to be from the very best cable-iron,—the forgings being in all cases clean and sharp, perfectly free from scales, blisters, and all other defects. All bolts and nuts to be of Whitworth's standard thread.

The ironwork to be three times painted black and the wood to be painted one coat lead-color and three coats brown, the last coat being composed of two-thirds varnish.

The wagons are to be constructed in every respect (not herein specified to the contrary) the same as D truck, No. 140, to be seen at the Railway-works, Sydney Station, and no deviation from it will be allowed without the sanction of the Engineer has been first obtained in writing.

The trucks are to be completed in every respect to the satisfaction of the Engineer for Existing Lines of Railways, who shall have power, by self or assistants, to inspect the work at all periods of the manufacture, and to reject any portion he may consider unsatisfactory, either in materials or workmanship; and on any question arising as to the terms of the specification, or compliance therewith, his decision is to be final and binding on all parties. The whole of the trucks are to be delivered complete, and in proper working order, on or before the 1st of April, 1868,—seventy at the Sydney Railway-works and thirty at the Newcastle station, Great Northern Railway.

In case the whole of the trucks are not delivered within the specified time the Contractor shall forfeit the sum of twenty pounds (£20) for each and every week they are undelivered.

The Contractor shall be responsible for any breakage that may arise from defective materials or workmanship, for six months from the date of delivery.

The Engineer, on the part of the Commissioner, reserves to himself the power of making any deviation from or addition to the trucks, without invalidating the contract,—the value of such deviations, alterations, or additions, to be ascertained and allowed for by the Engineer, at such rates as he shall consider to bear a due proportion to the other work in this contract, and the value thereof added to, or deducted from, the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the trucks not proceeding with that despatch which the Engineer may consider necessary, then the Commissioner for Railways shall have power to suspend the further progress of the work, and entirely take them out of the Contractor's hands, and employ any other person to complete the same; and all additional charges, so incurred, shall be defrayed by the Contractor, or his sureties.

The Commissioner for Railways will find and supply all the wheels, axles, steel-bearing springs, India-rubber draw and buffer springs, if possible, within nine months of the date of contract, the Contractor finding all labour and material required in the fixture of the same; but as these articles have been indented for from England, the Commissioner will not bind himself to their supply by the time specified, although, should any unforeseen circumstance delay their delivery to the Contractor, in that case a corresponding extension in the time for completion of the contract will be granted.

Payment will be made as the bodies of the trucks are delivered at the Redfern Railway-works, or at Newcastle, in the proportion of 90 per cent. of the contract price, and the remaining 10 per cent. will be paid after their being mounted on their wheels, and the whole of the work completed to the satisfaction of the Engineer.

JAS. H. THOMAS.

This is the specification marked "B," referred to in the annexed articles of agreement, dated the 19th day of November, A.D. 1867.

D. SIM.

Witness—JNO. L. BEESTON.

A No. 34.

Department of Public Works,
Sydney, 14th January, 1868.

(4.) Railway Wagons:—Mr. Cunneen (on behalf of Mr. Terry) asked the Secretary for Public Works, pursuant to Notice No. 4,—

(1.) Was there a vote of £10,000 passed in April, 1866, for the purpose of providing Railway Wagons for the Government Railways?

(2.) Were these wagons, or any part thereof, ordered from England, in compliance with the above vote?

(3.) The date upon which the order for these wagons, or any part thereof, was sent?

(4.) Were any part of the wagons ordered in the Colony; the date of such order; and when completed?

Mr. Byrnes answered—

(1.) Yes, which formed part of the sum of £758,000, authorized to be raised by Act of Parliament, 2nd Vic., No. 23, but no account has yet been received of the sale of the Debentures for this amount.

(2.) The wheels, axles, and springs only were ordered from England.

(3.) The 24th February, 1867.

(4.)

(4.) Yes, the whole of the wagons, with the exception of the wheels, axles, and springs. Messrs. P. N. Russell and Co.'s tender accepted for seventy (to be delivered in Sydney), and Mr. D. Sim's tender for thirty (to be delivered at Newcastle), were accepted in March, 1867. The seventy for Sydney are all delivered, and only require to be fitted on the wheels, twenty of which have just arrived; and twelve of those in the hands of Sims are delivered and only require to be mounted on wheels.

(Votes and Proceedings, No. 104, 14/1/68.)

Mr. Moody, B.C., 6/1/69.—H.H.

B.

CORRESPONDENCE, &c., respecting 8 Ballast Wagons, bought from P. N. Russell.
1 Letter—11/9/67.

B No. 1.

P. N. Russell & Co. to The Engineer for Existing Lines of Railways.

Sydney Foundry,
4 August, 1867.

Sir,

Having lately supplied a number of ballast wagons to Mr. Farrell, Railway Contractor, Marulan, we have all the material in stock for 4 wagons, as per plan herewith; also, all the material for 4 wagons, excepting the wheels and axles, and have the honor to offer the above to the Government at the following prices, viz. :—

4 wagons, complete with wheels and axles, £98 10s. each.

4 wagons, exclusive of wheels and axles, £76 10s. each.

Should the Government accept our offer we could deliver the same in three weeks from the date of order.

We have, &c.,
P. N. RUSSELL & Co.

THE goods traffic is greatly impeded for want of wagons, and would be relieved if the permanent-way had trucks specially adapted for ballasting, in place of as at present, taking those which should be employed by the Traffic Department. I would therefore recommend that the four that Messrs. Russell could supply with wheels, &c., complete, be purchased, and charged to vote of £10,000 for additional goods wagons.—J.H.T., 11/9/67.

Approved.—J.B., 11/9/67.

Mr. Thomas, 12/9/67.—J.H.T., 13/9/67.

C.

CORRESPONDENCE, &c., from 1 to 19, respecting purchase of 80 Wagons,—60 from Robertson, 20 from D. Sim.—31/3/68.

C No. 1.

Government Railways.

5/3/68. P.W., 68/11,29.

C No. 2.

Department of Public Works,
Sydney, 31 March, 1868.

THE tenders for the undersigned work, seven in number, are referred to the Commissioner for Railways, for report.
JOHN RAB.

Construction of 80 goods wagons.—B.C.

ANALYSIS

ANALYSIS OF TENDERS.

No.	Name.	Amount.	Remarks.
1	John Taylor	£ s. d. 89 15 0	To deliver the 80 at Redfern Station in place of, as specified, 60, and 20 at Newcastle.
*2	J. Musson & Co.	78 0 0	No sureties given, but promises to do so in the event of tender being accepted, and no address.
3	P. N. Russell & Co.	82 10 0	
4	John Robertson	80 0 0	
5	Vale & Lacey	80 15 0	And for 20 at Newcastle, £85 each.
6	A. Rodgers	80 0 0	For the 20 only, required at Newcastle.
7	D. Sim	78 0 0	Do. do. do.

* Mr. Musson's tender is the lowest for the Southern Lines, but as he neither gave his address, nor names any sureties, I cannot recommend its acceptance, knowing nothing of him; the next lowest is John Robertson, the well known coach-builder, of Pitt-street, and I therefore recommend his tender at £80 for favourable consideration. Mr. D. Sim (the contractor for the last wagons) is the lowest for the Northern Line, and as he has given satisfaction before, I recommend his tender be accepted for the 20 for that line.—JAS. H. THOMAS, 1/4/68.

Specification required for two contracts.—R.M., 3/4/68. Specifications herewith.—J.H.T., 4/4/68.

Accept J. Musson & Co. and D. Sim's tenders.—J.B., 2/4/68.
Accepted—J. Musson & Co. 60, and D. Sim 20, 2/4/68.—R.M.

C No. 3.

Mr. John Taylor to The Commissioner for Railways.

Sydney, 31 March, 1868.

Sir,

I hereby offer to erect and complete eighty goods wagons, according to plans and specifications, and deliver the same at the Railway Station, Redfern, according to the time as so specified, and to do the same to the satisfaction of the Engineer for Existing Lines, for the sum of eighty-nine pounds fifteen shillings sterling (£89 15s.)

I have, &c.,

JOHN TAYLOR,
Manono Cottage, Cleveland-street, Redfern.

Sir,

Should the above tender be accepted, I hereby undertake to find the necessary bond for the due fulfilment of the above contract, should the same be accepted.

JOHN TAYLOR.

(No. 1.)—Seven tenders opened this 31st March, 1868.

Musson & Co. to The Commissioner for Railways.

Sydney, 31 March, 1868.

Sir,

We beg to tender for the construction of eighty goods wagons, according to patterns and specifications, for seventy-eight pounds (£78) each; and in the event of our tender being accepted we agree to produce the necessary security.

We have, &c.,

MUSSON & CO.

Accepted for sixty wagons, to be delivered at Redfern Station.
Withdrawn.—See 68/1,171.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney, 31 March, 1868.

Sir,

We hereby tender to supply eighty goods wagons according to plan and specification,—twenty of which we will deliver at Newcastle for the sum of six thousand six hundred pounds, say (£6,600).

Having a number of wheels and axles on hand we tender to supply as follows:—

16 wagons with wheels with cast iron bosses;
20 do. with solid wrought iron wheels.

These wagons we will deliver complete, excepting the V India-rubber and draw springs, for the sum of four thousand seven hundred and seventy pounds sterling (£4,770), at the Railway Station, Redfern.

Should our tender be accepted we offer the names of Mr. John Richardson and P. N. Russell as our sureties for the due fulfilment of the contract.

We are, &c.,

P. N. RUSSELL & CO.

Vale & Lacy to The Commissioner for Railways.

Tender for Railway Service.

31 March, 1868.

Sir,

We hereby tender, in accordance with advertisement in the Government Gazette, dated and in accordance with plans and specifications exhibited at the Railway Office, to build eighty goods wagons for the sum of eighty pounds fifteen shillings per wagon (£80 15s.),—twenty delivered at Newcastle for the sum of eighty-five pounds (£85) per wagon.

VALE & LACY,
Druitt-street Engine Works.

SHOULD the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract; and we hereby undertake, within fourteen days from the notification of the acceptance of the said tender, jointly and severally, to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways, in the penal sum of the amount named for securing such performance of said contract.

THOMAS O'NEIL, 643, George-street.
PATRICK LACY, Woolloomooloo.

TELEGRAM from Mr. A. Rodgers, Newcastle, to The Commissioner for Railways.

Tender for Goods Trucks, G. N. Railway.

My sealed tender missed the post yesterday; is posted to-day. Tender, eighty pounds (£80) each.

Mr. A. Rodgers to The Commissioner for Railways.

Newcastle Foundry,
24 March, 1868.

Sir,

I do hereby tender to make and supply the Government with twenty (20) goods trucks for the Great Northern Railway, as notified in the Government Gazette, in accordance with plan and specification, and will finish the same in a workmanship manner, for the sum of eighty pounds (£80) sterling each.

In the event of my tender being accepted, I do hereby nominate David Ross and James Brown, both of Newcastle, as my sureties for the due performance of the contract.

A. RODGERS.

The Commissioner for Railways to Mr. J. Robertson.

Department of Public Works,
Railway Branch,
Sydney, 29 April, 1868.

Sir,

I have the honor to inform you that your tender (without date), to construct sixty goods wagons for the sum of £80 (eighty pounds) each, in accordance with plan and specification, is accepted; and to state that the Crown Solicitor has been instructed to prepare the usual bond and contract.

I have, &c.,
JAMES BYRNES.

C No. 12.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office,
Sydney, 14 May, 1868.

Sir,

In compliance with the instructions contained in your minute of the 4th instant, on the enclosed letter, I have the honor to transmit the necessary bond, executed by Mr. John Robertson and his sureties, for the fulfilment of his contract to supply goods wagons.

The notice, specification, and agreement herewith, have been signed and witnessed in the usual manner.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

THE copy advertisement, marked "A," referred to in annexed articles of agreement and bond, dated the 12th day of May, A.D. 1868. Witness—J. J. LEE.

Department of Public Works,
Railway Branch,
Sydney, 5 March, 1868.

TENDERS will be received at this Office, until Tuesday, the 31st March instant, at noon, from persons willing to contract for the supply of 80 goods wagons.

Plans, specification, and form of tender may be seen, and further particulars obtained, at the office of the Engineer for Existing Lines, Sydney Station.

Tenders are to be endorsed, "Tender for Goods Wagons."

The Commissioner does not bind himself to accept the lowest or any tender.

Accepted for 60, to be delivered at Sydney.

C.

Mr. John Robertson to The Commissioner for Railways.
Tender for Railway Service.

Sir,

I hereby tender, in accordance with advertisement in the Government Gazette, dated March 10th, 1868, and in accordance with plans and specifications exhibited at the Railway Office, to construct the goods wagons at my workshops, in strict accordance with the specification, and to the satisfaction of the Engineer-in-Chief, at the following prices, viz. :—

"Eighty (80) goods wagons," sixty (60) to be delivered at the Locomotive Works, Sydney Station, and twenty (20) at the Newcastle Station, free of all charge, for the sum of eighty pounds each (£80).

JOHN ROBERTSON,
489, Pitt-street, Sydney.

SHOULD the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract; and we hereby undertake, within _____ days from the date of the notification of the acceptance of the said tender, jointly and severally, to execute and deliver, at the office of the Crown Solicitor, in Sydney, a bond to the Commissioner for Railways, in the penal sum of _____, for securing such performance.

CLARKE WHITE, Botany-street.
JAMES OATLEY, Bourke-street, Woolloomooloo.

New South Wales Railways.—Existing Lines Branch.

SPECIFICATION of work to be performed, and materials supplied, in the construction of eighty (80) D trucks for the existing Lines of Government Railways.

THE work for which tenders are to be made, and to which this specification refers, comprises the providing of all materials (with the exception hereafter enumerated), tools, labour, implements, and workmanship, and every other thing requisite for the full and satisfactory completion of eighty (80) railway wagons, of the class generally known as D trucks.

Each truck is to consist of one open compartment, the extreme length of body being 15 feet, the extreme width 7 feet 6 inches, and the height from floor to top of sides and ends, 1 foot 10 inches.

The gauge of railway is 4 feet 8½ inches.

The centre of buffers to be 5 feet 9 inches apart, and 3 feet 4 inches above the surface of the rail; the wheels 8 feet 6 inches apart, from centre to centre.

The general dimensions of framing to be as follows:—

2 soles	11	x	4
2 head-stocks	12½	x	4
2 transverse bearers	11	x	4
2 do. do.	6	x	4
4 diagonals	11	x	3
2 longitudinals	11	x	4
2 do.	4	x	3
2 do.	4½	x	4
4 end stanchions	4	x	3½
Flooring	6	x	1½
2 side flaps, each constructed of two 7 x 2½, and one 8 x 2½ planks.												
2 end do. do. do. do. do.												

The dimensions of the scantlings, as above given, are to hold full when the work is finished.

The whole of the framing and flooring to be of the best blue gum, and the flaps and ends of Kauri pine.

The soles are to be framed into the head-stocks with two 1½ tenons.

The transverse bearers to be framed into soles with two 1½ inch tenons at each end, and housed ¼ inch into sole.

The four diagonal braces to be framed fair with the upper side of cross-bearers and soles, and tenoned into head-stocks and transverse bearer with two 1½ inch tenons on each, housed into each ¼ of an inch.

Great care is to be taken that the horn-plates are correctly fixed vertically, and by transverse and longitudinal measurements.

The flooring-boards are to be of the best Kauri pine, well seasoned, laid longitudinally, and each plank well secured on the head-stocks, cross-bearers, and diagonal braces, with 4-inch wrought iron rose-headed nails.

Each wagon is to be provided with an efficient lever-break on the wheels.

The whole of the work is to be executed in the strongest and most durable manner, and with the soundest and best materials, the timber being perfectly free from knots, sap, waness, and shakes, and thoroughly well seasoned.

Every part must be framed perfectly square, and true in every direction; and all the tenons must fit well into the mortises, and be bedded in with white lead; all holes for bolts must be bored slightly less in diameter than the bolt itself, so that the whole may be a solid and firm job.

The ironwork used in tie-rods, bolts, straps, plates, knees, &c., to be made from the very best BBH. Staffordshire merchant bar iron, and the hooks, links, draw-bar, safety chains, &c., to be from the very best cable-iron, the forgings being in all cases clean and sharp, perfectly free from scales, blisters, and all other defects. All bolts and nuts to be of Whitworth's standard thread.

The ironwork to be three times painted black, and the wood to be painted one coat lead colour and three coats brown, the last coat being composed of two-thirds varnish.

The wagons are to be constructed in every respect (not herein specified to the contrary) the same as D truck, No. 140, except the draw-springs, which are to work in a cast-iron cylinder, to be seen at the Railway Works, Sydney Station; and no deviation from it will be allowed without the sanction of the Engineer has been first obtained in writing.

The trucks are to be completed in every respect to the satisfaction of the Engineer for Existing Lines of Railways, who shall have power, by self or assistants, to inspect the work at all periods of the manufacture, and to reject any portion he may consider unsatisfactory, either in materials or workmanship; and on any question arising as to the terms of the specification or compliance therewith, his decision is to be final and binding on all parties.

The whole of the trucks are to be delivered complete, and in proper working order, on or before the 30th November, 1868—sixty at the Sydney Railway Works, and twenty at the Newcastle Station, Great Northern Railway.

In case the whole of the trucks are not delivered within the specified time, the Contractor shall forfeit the sum of twenty pounds (£20) for each and every week they are undelivered.

The Contractor shall be responsible for any breakage that may arise from defective materials or workmanship, for six months from the date of delivery.

The Engineer, on the part of the Commissioner, reserves to himself the power of making any deviation from or addition to the trucks, without invalidating the contract, the value of such deviations, alterations,

alterations, or additions to be ascertained and allowed for by the Engineer at such rates as he shall consider to bear a due proportion to the other work in this contract, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the trucks not proceeding with that despatch which the Engineer may consider necessary, then the Commissioner for Railways shall have power to suspend the further progress of the work, and entirely take them out of the Contractor's hands, and employ any other person to complete the same; and all additional charges so incurred shall be defrayed by the Contractor or his sureties.

The Commissioner for Railways will find and supply all the wheels, axles, steel-bearing springs, India-rubber draw and buffer springs, the Contractor finding all labour and material required in the fixture of the same.

Payment will be made as the bodies of the trucks are delivered at the Redfern Railway Works and the Honeysuckle Point Station, in the proportion of 90 per cent. of the contract price; and the remaining 10 per cent. will be paid after their being mounted on their wheels, and the whole of the work completed to the satisfaction of the Engineer.

The specification, marked "B," referred to in annexed articles of agreement and bond, dated the 12th day of May, A.D. 1868.

Witness—J. J. LEE.

SPECIFICATION of work to be performed and materials supplied in the construction of eighty (80) D trucks for the Existing Lines of Government Railways.

THE work for which tenders are to be made and to which this specification refers, comprises the providing of all materials (with the exceptions hereafter enumerated), tools, labour, implements, and workmanship, and every other thing requisite for the full and satisfactory completion of eighty (80) railway wagons of the class generally known as D trucks.

Each truck is to consist of one open compartment, the extreme length of body being 15 ft., the extreme width 7 ft. 6 in., and the height from floor to top of sides and ends, 1 ft. 10 in.

The gauge of railway is 4 ft. 8½ in.

The centre of buffers is to be 5 ft. 9 in. apart, and 3 ft. 4 in. above the surface of the rail; the wheels 8 ft. 6 in. apart, from centre to centre.

The

The general dimensions of framing to be as follow:—

2 soles	11	x	4
2 head-stocks	12½	x	4
2 transverse-bearers	11	x	4
2 do.	6	x	4
4 diagonals	11	x	3
2 longitudinals	11	x	4
2 do.	4	x	3
2 do.	4½	x	4
4 end-stanchions	4	x	3½
Flooring	6	x	1½
2 side-flaps, each constructed of two 7 x 2½ and one 8 x 2½ planks.			
2 end do. do. do. do.			

The dimensions of the scantlings as above given are to hold full when the work is finished.

The whole of the framing and flooring to be of the best blue-gum and the flaps and ends of Kauri pine.

The soles are to be framed into the head-stocks with two 1½ in. tenons.

The transverse-bearers to be framed into soles with two 1½ in. tenons at each end and housed ¼ in. into sole.

The four diagonal-braces to be framed fair with the upper side of cross-bearers and soles and tenoned into head-stocks and transverse-bearer with two 1½ in. tenons on each, housed into each ¼ of an inch.

Great care is to be taken that the horn-plates are correctly fixed vertically and by transverse and longitudinal measurements.

The flooring-boards are to be of the best Kauri pine, well seasoned, laid longitudinally, and each plank well secured on the head-stocks, cross-bearers, and diagonal-braces, with 4 in. wrought-iron rose-headed nails.

Each wagon is to be provided with an efficient lever-break on the wheels.

The whole of the work is to be executed in the strongest and most durable manner and with the soundest and best materials, the timber being perfectly free from knots, sap, waness, and shakes, and thoroughly well seasoned.

Every part must be framed perfectly square and true in every direction, and all the tenons must fit well into the mortises and be bedded in with white lead. All holes for bolts must be bored slightly less in diameter than the bolt itself, so that the whole may be a solid and firm job.

The ironwork used in tie-rods, bolts, straps, plates, knees, &c., to be made from the very best BBH Staffordshire merchant bar-iron, and the hooks, links, drawbar, safety chains, &c., to be from the very best cable-iron; the forgings being in all cases clean and sharp, perfectly free from scales, blisters, and all other defects. All bolts and nuts to be of Whitworth's standard thread.

The ironwork to be three times painted black and the wood to be painted one coat lead-colour and three coats brown, the last coat being composed of two-thirds varnish.

The wagons are to be constructed in every respect (not herein specified to the contrary) the same as D truck, No. 140, except the draw-springs, which are to work in a cast-iron cylinder (to be seen at the Railway Works, Sydney Station); and no deviation from it will be allowed without the sanction of the Engineer has been first obtained in writing.

The trucks are to be completed in every respect to the satisfaction of the Engineer for Existing Lines of Railways, who shall have power by self or assistants to inspect the work at all periods of the manufacture, and to reject any portion he may consider unsatisfactory, either in materials or workmanship; and on any question arising as to the terms of the specification, or compliance therewith, his decision is to be final and binding on all parties.

The whole of the trucks are to be delivered complete and in proper working order on or before the 30th November, 1868—sixty at the Sydney Railway Works, and twenty at the Newcastle Station, Great Northern Railway.

In case the whole of the trucks are not delivered within the specified time the Contractor shall forfeit the sum of twenty pounds (£20) for each and every week they are undelivered.

The Contractor shall be responsible for any breakage that may arise from defective materials or workmanship, for six months from the date of delivery.

The Engineer, on the part of the Commissioner, reserves to himself the power of making any deviation from or additions to the trucks, without invalidating the contract, the value of such deviations, alterations, or additions to be ascertained and allowed for by the Engineer at such rates as he shall consider to bear a due proportion to the other work in this contract, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the trucks not proceeding with that despatch which the Engineer may consider necessary, then the Commissioner for Railways shall have power to suspend the further progress of the work and entirely take them out of the Contractor's hands and employ any other person to complete the same; and all additional charges so incurred shall be defrayed by the Contractor or his sureties.

The Commissioner for Railways will find and supply all the wheels, axles, steel-bearing springs, India-rubber draw and buffer-springs, the Contractor finding all labour and material required in the fixture of the same.

Payment will be made as the bodies of the trucks are delivered at the Redfern Railway and at Honeysuckle Point Station Works; in the proportion of 90 per cent. of the contract price, and the remaining 10 per cent. will be paid after their being mounted on their wheels, and the whole of the work completed to the satisfaction of the Engineer.

8 June, 1868.

Sir,

We hereby tender, in accordance with advertisement in the Government Gazette, dated , and in accordance with plans and specifications exhibited at the Railway Office, to build fifty B wagons,—

Forty delivered at Redfern Station, for the sum of eighty-two pounds (£82) per wagon.

Ten delivered at Newcastle, for the sum of eighty-seven pounds (£87) per wagon.

VALE & LACY,

Druitt-street Engine Works.

SHOULD the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract; and we hereby undertake, within fourteen days from the date of the notification of the acceptance of the said tender, jointly and severally, to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways, in the penal sum of one thousand pounds, for securing such performance.

THOMAS D. NEILL, 643, George-street.

PATRICK LACY, Judge-street, Woolloomooloo.

Four tenders opened this 10th June, 1868.—J.B., J.R., W.B., W.M.

This is the tender marked "C," referred to in the annexed articles of agreement, dated 31st day of August, A.D. 1868.

B.

New South Wales Railways—Existing Lines Branch.

SPECIFICATION of work to be performed, and materials supplied, in the construction of forty B trucks for the Existing Lines of Government Railways.

THE work for which tenders are to be made, and to which this specification refers, comprises the providing of all materials (with the exceptions hereafter enumerated), tools, labour, implements, and workmanship; and everything requisite for the full and satisfactory completion of forty (40) railway wagons, of the class generally known as B trucks.

Each truck is to consist of one open compartment, the extreme length of body being 15 feet, the extreme width 7 feet 6 inches, and the height, from floor to top of sides and ends, 3 feet.

The gauge of railway is 4 feet 8½ inches.

The centre of buffers to be 5 feet 9 inches apart, and 3 feet 4 inches above the surface of the rail; the wheels 8 feet 6 inches apart, centre to centre.

The general dimensions of under-framing to be as follow :—

2 soles	12 x 4
2 head-stocks...	12 x 4
2 transverse-bearers	12 x 4
2 do. do.	4 x 4
4 diagonals	12 x 3
2 longitudinals	12 x 4
2 do	4 x 4

The general dimensions of body framing :—

4 corner pillars	4½ x 4½
4 doorways	4½ x 4½
8 side rails	4½ x 4½
8 do. diagonals	3½ x 3¼
2 end rails	4½ x 4½
2 do.	4½ in. thick, 4½ ends, 8½ in. centre.	
8 do. battens	3 x 3¼
2 side flaps, each constructed of four 7 x 2½ and one 8 x 2½ planks.	

The dimensions of the scantlings as above given are to hold full when the work is finished.

The whole of the framing to be of the best blue gum, and the flaps and ends of Kauri pine 7 x 1½ planed, grooved and tongued with 1 x ½ iron tongues.

The soles and corner pillars are to be framed into the head-stocks with two 1½ in. tenons.

The transverse-bearers to be framed into soles with two 1½ tenons at each end, and housed ¼ in. into soles.

The four diagonal braces to be framed fair with the upper side of cross bearers and soles, and tenoned into head-stocks and transverse-bearer with two 1½ inch tenons on each, housed into each ¼ of an inch. Great care is to be taken that the horn plates are correctly fixed vertically, and by transverse and longitudinal measurements.

The

The flooring-boards are to be of the best Colonial hardwood 7 x 1½ in. well seasoned, laid longitudinally, and each plank well secured on the head-stocks, cross bearers, and diagonal braces, with 4 inch wrought iron rose-headed nails.

Each wagon is to be provided with an efficient lever-break on the wheels.

The whole of the work is to be executed in the strongest and most durable manner, and with the soundest and best materials, the timber being perfectly free from knots, sap, waness, and shakes, and thoroughly well seasoned.

Every part must be framed perfectly square and true in every direction, and all the tenons must fit well into the mortises, and be bedded in with white lead. All holes for bolts must be bored slightly less in diameter than the bolt itself, so that the whole may be a solid and firm job.

The ironwork used in tie rods, bolts, straps, plates, knees, &c., to be made from the very best BBH Staffordshire Merchant bar iron, and the hooks, links, drawbar, safety chains, &c., to be from the very best cable iron,—the forgings being in all cases clean and sharp, perfectly free from scales, blisters, and all other defects.

All bolts and nuts to be of Whitworth standard thread.

The ironwork to be three times painted black, and the wood to be painted one coat lead colour and three coats brown, the last coat being composed of two-thirds varnish.

The wagons are to be constructed in every respect (not herein specified or shewn on plan to the contrary) the same as B truck, No. , to be seen at the Railway Works, Sydney Station; and no deviation from it will be allowed without the sanction of the Engineer has been first obtained in writing.

The trucks are to be completed in every respect to the satisfaction of the Engineer for Existing Lines of Railways, who shall have power, by self or assistants, to inspect the work at all periods of the manufacture, and to reject any portion he may consider unsatisfactory, either in materials or workmanship; and on any question arising as to the terms of the specification or compliance therewith, his decision is to be final and binding on all parties.

The whole of the trucks are to be delivered complete, and in proper working order, on or before the 31st December, 1868.

In case the whole of the trucks are not delivered within the specified time the contractor shall forfeit the sum of twenty (£20) for each and every week they are undelivered.

The Contractor shall be responsible for any breakage that may arise from defective materials or workmanship, for six months from the date of delivery.

The Engineer, on the part of the Commissioner, reserves to himself the power of making any deviation from or addition to the trucks, without invalidating the contract, the value of such deviations, alterations, or additions to be ascertained and allowed for by the Engineer at such rates as he shall consider to bear a due proportion to the other work in this contract, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the trucks not proceeding with that despatch which the Engineer may consider necessary, then the Commissioner for Railways shall have power to suspend the further progress of the work, and entirely take them out of the Contractor's hands, and employ any other person to complete the same; and all additional charges so incurred shall be defrayed by the Contractor or his sureties.

The Commissioner for Railways will find and supply all the wheels, axles, steel-bearing springs, India-rubber draw and buffer springs, if possible, within nine months of the date of the contract, the Contractor finding all labor and materials required in the fixture of the same; but as these articles have been indented for from England, the Commissioner will not bind himself to their supply by the time specified, although should any unforeseen circumstance delay their delivery to the Contractor, in that case a corresponding extension in the time for completion of the contract will be granted.

Payment will be made as the bodies of the trucks are delivered at the Redfern Railway Works, in the proportion of 90 per cent. of the contract price; and the remaining 10 per cent. will be paid after their being mounted on their wheels, and the whole of the work completed to the satisfaction of the Engineer.

This is the specification marked "B," referred to in the annexed articles of agreement, dated the 31st day of August, A.D. 1868.

Existing Lines Branch,
Railway Department.

SPECIFICATION of work to be performed, and materials supplied, in the construction of ten (10) D trucks for the Existing Lines of Government Railways.

THE work for which tenders are to be made, and to which this specification refers, comprises the providing of all materials, with the exceptions hereafter enumerated—tools, labour, implements, and workmanship, and every other thing requisite for the full and satisfactory completion of ten (10) railway wagons of the class generally known as D trucks.

Each truck is to consist of one open compartment, the extreme length of body being 16 feet, and the extreme width 7 ft. 10 in., and the height from floor to top of sides and ends, 1 ft. 10 in.

The gauge of railway is 4 ft. 8½ in.

The centre of buffers to be 5 ft. 9 in. apart, and 3 ft. 4 in. above the surface of the rail; the wheels 8 ft. 6 in. apart from centre to centre. The general dimensions of framing to be as follows:—

2 soles	11	x	4
2 head-stocks	12½	x	4
2 transverse-bearers	11	x	4
2 do. do.	6	x	4
4 diagonals	11	x	3
2 do.	4	x	3
2 do.	6½	x	4
4 end stanchions	4	x	3½
Flooring	6	x	1½
2 side flaps, each construction of two	7	x	2½
And one	8	x	2½ planks
2 end do. do. do.			

The dimensions of the scantlings as above given are to hold full when the work is finished.

The whole of the framing and flooring to be of the best blue gum, and the flaps and ends of Kauri pine.

The soles are to be framed into the head-stocks with two 1½ in. tenons.

The transverse-bearers to be framed into soles with two 1½ in. tenons at each end, and housed ¼ in. into sole.

The four diagonal braces to be framed fair with the upper side of cross-bearers and soles, and tenoned into head-stocks and transverse-bearer with two 1½ in. tenons on each, housed into each ¼ of an inch.

Great care is to be taken that the horn plates are correctly fixed vertically and by transverse and longitudinal measurements.

The flooring-boards are to be of the best blue gum, well seasoned, laid longitudinally, and each plank well secured on the head-stocks, cross-bearers, and diagonal braces, with 4 in. wrought-iron rose-headed rails.

Each wagon is to be provided with an efficient lever-break on the wheels.

The whole of the work is to be executed in the strongest and most durable manner and with the soundest and best materials, the timber being perfectly free from knots, sap, waness, and shakes, and thoroughly well seasoned.

Every

Every part must be framed perfectly square, and true in every direction, and all the tenons must fit well into the mortises and be bedded in with white lead; all holes for bolts must be bored slightly less in diameter than the bolt itself, so that the whole may be a solid and firm job.

The ironwork used in tie rods, bolts, plates, knees, &c., to be made from the very best BBH Staffordshire Merchant bar iron, and the hooks, links, drawbar, safety chains, &c., to be from the very best cable iron,—the forgings being in all cases clean and sharp, perfectly free from scales, blisters, and all other defects. All bolts and nuts to be of Whitworth's standard thread.

The ironwork to be three times painted black, and the wood to be painted one coat lead colour and three coats brown, the last coat being composed of two-thirds varnish.

The wagons are to be constructed in every respect not herein specified to the contrary the same as D truck, No. 1, except the draw springs, which are to work in a cast iron cylinder, to be seen at the Railway Works, Newcastle; and no deviation from it will be allowed, without the sanction of the Engineer has been first obtained in writing.

The trucks are to be completed in every respect to the satisfaction of the Engineer for Existing Lines of Railways, who shall have power, by self or assistants, to inspect the work at all periods of the manufacture, and to reject any portion he may consider unsatisfactory either in material or workmanship; and on any question arising as to the terms of the specification, or compliance therewith, his decision is to be final and binding on all parties.

The whole of the trucks are to be delivered complete and in proper working order, on or before the 30th September, 1868, at the Newcastle Station, Great Northern Railway.

In case the whole of the trucks are not delivered within the specified time, the Contractor shall forfeit the sum of twenty pounds (£20) for each and every week they are undelivered.

The Contractor shall be responsible for any breakage that may arise from defective material or workmanship, for six months from date of delivery.

The Engineer on the part of the Commissioner reserves to himself the power of making any deviation from or addition to the trucks, without invalidating the contract, the value of any such deviations, alterations, or additions to be ascertained and allowed for by the Engineer, at such rates as he shall consider to bear a due proportion to the other work in this contract, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the trucks not proceeding with that despatch which the Engineer may consider necessary, then the Commissioner shall have power to suspend the further progress of the work, and entirely take them out of the Contractor's hands, and employ any other person to complete the same; and all additional charges so incurred shall be defrayed by the Contractor or his sureties.

The Commissioner for Railways will find and supply all the wheels, axles, steel-bearing springs, India-rubber draw and buffer springs,—the Contractor finding all labour and material required in the fixture of the same.

Payment will be made as the bodies of the trucks are delivered at the Newcastle Railway Works, in the proportion of ninety (90) per cent. of the contract price; and the remaining 10 per cent. will be paid after their being mounted on their wheels and the whole of the work completed to the satisfaction of the Engineer.

This is the specification marked "B," referred to in the annexed articles of agreement, dated the 2nd day of September, A.D. 1868.

NOTE.—A price must be given for every description of rolling stock (inclusive or exclusive of engines) in this Schedule, as although it is anticipated that no more than the quantity stated will be wanted, yet the requirements of the traffic may perhaps compel us to have some made.

SHOULD

SHOULD the foregoing tender be accepted, the undersigned agree to be responsible for the due performance of the contract, and undertake, within fourteen days from the notification of the acceptance of the said tender, jointly and severally to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways, in the penal sum of _____ for securing such performance.

THOMAS BARKER, Maryland.
O. B. EBSWORTH, Sydney.

E No. 6.

Mr. W. Williams, Melbourne, to The Commissioner for Railways.

Tender for Rolling Stock.

November 17, 1868.

Sir,

I hereby tender, in accordance with the advertisement in the Government Gazette, dated 6th October, 1868, and in accordance with plans and specifications exhibited at the office of the Engineer for Existing Lines, Sydney Station, for the supply of the rolling stock required on the Government Railways, for the term of five years, from the 1st January, 1869, at the following Schedule.

WILLIAM WILLIAMS,

Victoria Railway Carriage Works,
Melbourne, Victoria.

NOTE—A price must be given for every description of rolling stock (inclusive or exclusive of engines) in this Schedule, as although it is anticipated that no more than the quantity stated will be wanted, yet the requirements of the traffic may perhaps compel us to have some made.

SHOULD the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract; and we hereby undertake, within fourteen days from the notification of the acceptance of the said tender, jointly and severally, to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways, in the penal sum of _____ for securing such performance.

In the event of this tender being accepted, I shall be prepared to deposit in the hands of the Government, as security for the due performance of the contract (say) one thousand pounds cash security, by way of bond, deposit receipt, or otherwise, as may be approved by the Government.

WILLIAM WILLIAMS.

Mr.

Mr. H. Williams' application to amend Tender for Rolling Stock.

TELEGRAM from Mr. W. Williams, Melbourne, to Engineer for Existing Lines of Railways.

If Government take wheels and axles as those arriving, can take ten pounds (£10) off carriages—five pounds (£5) off wagons. Have written.

Forwarded for the information of the Commissioner. Notwithstanding the reduction proposed, Mr. Williams' tender would still be considerably higher than the one recommended for acceptance.—J.H.T. 24/11/68.

Seen; acknowledge telegraph.—J.S., 26/11/68.

Mr. Thomas, 26/11/68.

In reply to this telegram and letter attached, I have written to Mr. Williams to say that it would manifestly be very unfair to the other Contractors to permit of any modification in the schedules after the date up to which it was advertised that tenders would be received.—J.H.T., 3/12/68.

This matter must now of necessity stand over for the present.—J.S., 5/12/68.

M. W. Williams to The Engineer for Existing Lines of Railways.

November 25, 1868.

Sir,

I sent you a telegram, stating that if the Government would take wheels and axles of the same as those you have on the way, I could reduce my tender to the extent of ten pounds (£10) on carriages, and five pounds (£5) on wagons.

I am induced to modify my tender to this extent, because I am persuaded from experience that the price exacted in England by certain houses for wheels and axles is much higher in the case of competition being limited than it would be if a wider field of choice was left open.

In your specification it is confined to, I think, two houses; I have reason to believe that the facts respecting our wants in respect to wheels is well known in England, and it is not difficult to conceive that two English houses might come to an understanding by which each may benefit, and the Contractor be mulcted. Certainly in my calculation I allowed for each a price as I feel sure would have to be paid for the articles if confined to the houses named in the specification.

I trust you will see fit to abate my tender to the extent indicated, if it is not inconsistent with the interests of the department, and

I remain, &c.,

W. WILLIAMS.

E No. 7.

Thomas McArthur & Thomas S. Mort to The Commissioner for Railways.

Waterview Engine Works,

Patent Slip and Graving Dock,

Balmain, 17 November, 1868.

Sir,

In the absence of all the detailed drawings and specifications for the locomotive engines, which renders it a matter of great uncertainty taking out the estimates,—

We have the honor to tender for the construction of all the engines that may be required during the next five years, upon the following terms:—

We will undertake the manufacture of the locomotives, according to the drawings and specifications of the Engineer-in-Chief, and under the inspection of a Government Officer, at a price calculated as follows, viz.:—

All the materials used in the construction of the engines to be charged at the amount actually paid by us for them.

The labour to be charged at the amount actually paid by us to our workmen; all hand tools, &c., used in the work to be charged at cost price, and the machinery and fixed tools to be charged at per hour as per schedule; the accounts for labor, material, &c., for each engine to be kept separately, and on completion of each engine and the net cost ascertained, a sum of 10 per cent. on the said net cost to be added thereto, and such amount, after the addition of the 10 per cent., to be the sum to be paid by the Government for said engine; payments to be made monthly upon the certificate of the Government Inspector as to the amount expended.

In the event of your entertaining the foregoing proposition, either in its entirety, or in a modified form, we shall be prepared immediately to submit to you our schedule of prices, &c., and would at once commence the necessary works at our establishment (at our own expense) by the building of new workshops, and the importation from England of machinery of the newest and most labor-saving description, so as to enable us to turn out, after the first year, at least one engine per month, and at the lowest possible prices, and which prices may safely be calculated upon will be greatly reduced year by year, as the young workmen grow up and are able to take their part in the workshops.

By the adoption of this plan, we think that the Executive can depend upon having engines constructed of the very best materials, together with good honest workmanship, the whole being done under their own inspection; the only manufactured article necessary to import would be the wheels, and these only for the first year, until the necessary machinery for the manufacture of them could arrive.

We have, &c.,

THOMAS McARTHUR.

THOMAS MORT.

for securing such performance.

BURNS, Appin,
ROLFE, Sydney.

E No. 9.

Government Railways—Tenders for Rolling Stock.

Write Messrs. P. N. Russell & Co., and ask whether they are prepared to supply, during one year certain, at the prices named in their tender, such portion of the rolling stock as may be hereafter agreed upon; and also for a further period of two years, in the event of Parliament voting money for this purpose.—J. S., 7/5/69.

Messrs. P. N. Russell & Co. Wrote, 7/5/69.

Accept for the whole, except locomotives, for one year certain, and for a further period of four years, if sanctioned by Parliament.—J.S., 18/5/69. Mr. Moody to accept.—B.C., 18/5/69.—G.H.

Wrote, 19/5/69.—R.M. Accepted.—R.M., 22/5/69. Mr. Thomas, for specification, &c., 25/5/69.—R.M. Seen.—J.H.T., 25/5/69.

E No. 10.

The Under Secretary for Public Works to P. N. Russell & Co.

Department of Public Works,
Sydney, 7 May, 1869.

Gentlemen,

I am directed by the Honorable the Secretary for Public Works to request that you will have the goodness to say whether you are prepared to supply, during one year certain—at the prices mentioned in your tender—such portion of rolling stock as may hereafter be agreed upon, and also to supply the same for a further period of two years, in the event of Parliament voting the necessary funds for the purpose.

I have, &c.,
JOHN RAE.

E No. 11.

P. N. Russell and Co. to The Commissioner for Railways.

Sydney, 12 May, 1869.

Sir,

We have the honor to acknowledge receipt of your letter of the 7th instant, requesting us to say "whether we are prepared to supply, during one year certain, such portions of Railway rolling stock, as may hereafter be agreed upon, and also to supply the same for a further period of two years, in the event of Parliament voting the necessary funds for the purpose."

In reply we have the honor to state, that as the advertisement calling for tenders specified that the term of contract was to be for five years, all our estimates and prices were based on this and our tender was sent in accordingly; and not only so, but as the numbers of the different articles likely to be required within the next five years were also specified, in order to enable us to tender in accordance with the general conditions and advertisement, we took these numbers also as our guide in forming our estimates.

Seeing, therefore, that we made up our calculations from the published information, and seeing also that all other Contractors tendering along with us were placed on an equal footing, we hardly think it fair to expect that we should undertake to supply a portion only of what we tendered for, at our schedule prices, and that portion only for three-fifths of the time reckoned on by us.

It was, however, perfectly understood, that the contract was to be let, either as a whole, or in two parts (the locomotives and rolling stock); and for this latter contingency we were fully prepared, and made a corresponding allowance.

If, therefore, our tender for locomotives is not the lowest in the aggregate, although we may be lower in some of the items, we, in fairness to the lowest tenderer for them, must abandon all claim to any portion of this part of the contract; and on the other hand, if our tender for the rolling stock is the lowest in the aggregate, we respectfully submit that we are fairly entitled to this part of the contract, although other tenderers may be lower than us in some of the items.

If the Government is not in a position to accept tenders for more than one year certain, we are quite willing that our tender should be accepted in the meantime conditionally for five years, but certain for one year, until the five years contract is ratified and confirmed by Parliament, as we do not wish for a moment that the present Government should go beyond its province in dealing with our tender. If the contract were limited, as you have suggested, it would subject us to very serious disadvantages, as we would be deprived of the years in which we hoped to reimburse ourselves for the great outlay we must necessarily incur during the first year, an outlay which we calculate would, in providing suitable buildings, additional plant, machinery, &c., amount to from £8,000 to £10,000.

The many advantages which the Government would derive from the longer term are obvious; and one of them, which is of very great importance in incurring the durability of the work is, that we should be enabled to have the timber, to be used in the manufacture, cut down at the proper season, thoroughly well seasoned before working it up.

The prices we have tendered at are so low that it would only be during the last two years of the contract we would begin to reap the benefit of the extensive preparations we would necessarily be compelled to make, and this you can easily ascertain, by comparing our present prices with the prices we have been receiving for portions of rolling stock already supplied by us under contract.

We have, therefore, the honor to state, that we are prepared to enter into the contract as before-mentioned for one year certain, on the understanding that the time is to be extended to five years, if Parliament approves of it.

In

In conclusion we may remark, that some years ago the Victorian Government saw that great advantages would be derived from a five years contract.

Tenders were accordingly called for, and the contract fell to the lot of Mr. Williams, who completed it with so much satisfaction to the Government and credit to himself.

We have, &c.,
P. N. RUSSELL & CO.

E No. 12.

The Commissioner for Railways to P. N. Russell & Co.

Department of Public Works,
Railway Branch,
Sydney, 20 May, 1869.

Gentlemen,

I have the honor to inform you that your tender for the supply of rolling stock for the Government Railways is accepted only for the whole of the articles enumerated therein (except the locomotives) that may be required for one year certain; and also all such as may be required during a further period of four years, if sanctioned by Parliament.

An order for the number required will be furnished without delay.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

E No. 14.

The Commissioner for Railways to P. N. Russell & Co.

Department of Public Works,
Railway Branch,
Sydney, 15 June, 1869.

Gentlemen,

With reference to my letter of 20th May last, accepting your tender for rolling stock, I have now the honor to enclose you a list of the rolling stock for which your contract will be prepared, the whole to be completed within twelve months from date of acceptance of tender. I have also to add that should you not possess the necessary legal authority for Mr. P. N. Russell to enter into the bond as security, it will be necessary for you to submit another name for approval.

I have further to add that the necessary instructions have been forwarded to the Crown Solicitor, to prepare the usual bond and contract without delay.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

E No. 15.

LIST OF ROLLING STOCK—CONTRACT FOR ONE YEAR.

100 D trucks.
30 B do.
10 A do.
8 covered goods vans.
10 cattle wagons.
6 passenger brakes (4 wheels).
4 do. (6 wheels).
10 horse boxes.
10 carriage trucks.

Examined.—R.M., 15/8/69.

E No. 16.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney, 17 June, 1869.

Sir,

We acknowledge receipt of your communication of the 15th instant, enclosing a list of the railway rolling stock required for the next twelve months.

As regards security, we believe Mr. P. N. Russell's power of attorney is quite sufficient to bind him; but if it should be found defective, or otherwise unsatisfactory, we will submit another name as you desire.

We are, &c.,
P. N. RUSSELL & CO.

Seen.—J.S., 18/6/67.

E No. 17.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney, 23 June, 1869.

Sir,

Before making remittances to England to meet payments on account of our order forwarded by last mail for wheels and axles for railway rolling stock, we write to ask if the Government will agree to advance to our agent in London, Mr. P. N. Russell, payments from time to time as shipments of the said wheels and axles are made, to the extent of invoice cost, on condition that the shipping documents are placed in the hands of the Government Agent, and, if necessary, that the goods be hypothecated to the Government, and also on the understanding that we insure and hand him the policies?

If you can let us have an early answer we shall be obliged.

We have, &c.,
P. N. RUSSELL & CO.

Mr. Thomas, for report.—J.S., 23/6/69.

This is a matter which I think should be referred to the Treasury.—J.H.T., 24/6/69.

Refer to Treasury accordingly.—J.S., 24/6/69.

Under Secretary for Public Works, 25/6/69. Under Secretary, Finance and Trade.—J.R. Submitted, 28/6/69.—I.J.

The Secretary for Public Works will please ascertain and inform me what amount the Contractors will require to be paid to them if their request should be acceded to.—S.S., 2/7/69.

Under Secretary for Public Works.—J.T., for U.S. P.W., see minute of Finance Minister on face of application, 3/7. Railways, for report, B.C., 5/7/69.—J.R. 69/2,583. Wrote, 6/7/69.—R.M. Treasury, 14 July, 1869.

E No. 18.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney, 9 July, 1869.

Sir,

In answer to your letter of the 6th instant, in which you request me to state the amount which is likely to be required by us in London, on account of the wheels, axles, &c., to be imported for the railway rolling stock to be manufactured by us, we have gone carefully into an estimate, and we find it would not exceed £8,000—say eight thousand pounds—for the present order.

We have, &c.,
P. N. RUSSELL & CO.

Under Secretary, Public Works, 12/7/69. Under Secretary, Finance and Trade, B.C., 13/7/69.—J.R.

This amount may be advanced to Messrs. P. N. Russell & Co., to the extent of 90 per cent. on the invoice cost of the goods, exclusive of charges.

Every precaution should be taken by Captain Mayne to protect the Government, the bill of lading being handed over to him in terms of Messrs. P. N. Russell's letter of 23rd June, 1869, copy of which to be sent to him. Credit to be opened in favor of Captain Mayne for the amount, viz., £8,000. Policy of insurance to be handed over to agent in England.—S.S., 14/7/69.

Accountant to note and return, 14/7/69.—H.L. Letter of credit for £8,000 to Captain Mayne, 14/7/69.—J.H.R. Noted.—G.L., 15/7/69.

For the information of the Under Secretary for Public Works, who will kindly return the papers, B.C., The Treasury, 16/7/69.—H.L.

P.W., 17/9/69, Railways, for information, &c., &c., B.C., 17/7/69.—J.R. To be returned.

E No. 19.

P. N. Russell & Co. to The Engineer for Existing Lines of Railways.

Sydney, 7 July, 1869.

Dear Sir,

Will you be good enough to send word to the Traffic Manager to have No. 15 break van brought up to the station to enable us to take particulars of it; also the other vehicles, as we may require them, of which we will give him notice?

Yours, &c.,
P. N. RUSSELL & Co.

Ask Mr. Whitton which is the best model for this purpose.—J.S., 9/7/69.

As these matters are under the charge of Mr. Thomas I don't know what description of break-van Messrs. Russell & Co. have contracted to build.—J.W., 16/7/69.

Commissioner, 16/7/69.

I think the most useful vans for goods trains are those of the same class as No. 15, with cast-iron in floor; and for passenger trains, the same class, without the cast-iron on floor. The small vans will answer for the short trains.—J.W., 22/7/69.

Commissioner, 22/7/69.

Mr. Carlisle—do what is necessary. Mr. Thomas will point them out to contractors as suggested by Mr. Whitton.—J.S., 23/7/69.

Mr. Thomas will perhaps see Mr. Carlisle on this matter.—J.S., per R.M., 23/7/69. J.H.T., 24/7/69.

E No. 20.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office,
Sydney, 30 September, 1869.

Sir,

I have the honor to forward herewith Messrs. Russell & Co's. agreement and bond for the manufacture of rolling stock.

The bond you will notice purports to have been executed by Mr. Peter Nicol Russell, by his attorney, John Russell; the power of attorney, enabling Mr. John Russell to act on behalf of Mr. Peter N. Russell, has been, I am informed by Mr. John Russell, mislaid, and was therefore not produced at the time of the execution of the bond; on previous occasions the power was produced to me, and I am informed by Mr. John Russell that upon becoming aware that it could not be found, he at once wrote to Mr. Peter N. Russell for another power of attorney, which he expects to receive at an early date; under these circumstances you will probably consider that objection need not be taken to the manner in which the bond has been executed on behalf of Mr. P. N. Russell.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Received, 6/10/69. Bond, &c., placed in iron safe.

As the Crown Solicitor is aware of the existence of this power of attorney, I approve of the course pursued—J.S., 8/10/69.

E No. 21.

A.

CONTRACTS FOR PUBLIC WORKS.

Department of Public Works,
Sydney, 2 January, 1868.

It is hereby notified, for general information, that in all cases where tenders are sent in for works under this department, the following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration:—

1st. Each tender must state the time within which it is proposed to complete the work.

2nd. At the foot of every tender there must be a memorandum, signed by the party tendering, and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract, in the event of the tender being accepted, and undertaking, in that event, that they will severally execute and deliver a bond to Her Majesty, in a penal sum of one-tenth of the gross amount of the contract, for securing such performance.

It is to be understood that the Government does not bind itself to accept the lowest or any tender.

JAMES BYRNES.

Department of Public Works,
Railway Branch,
Sydney, 5 October, 1868.

TENDERS will be received at this office until Tuesday, the 17th day of November next, at noon, from persons willing to contract for making, at a schedule of prices, the whole of the rolling stock (inclusive or exclusive of locomotive engines) which may be required on the Government Railways for a period of five years, from 1st January, 1869.

Plans, specifications, and form of tender may be seen, and further particulars obtained, at the office of the Engineer for Existing Lines, Sydney Station.

Tenders to be endorsed "Tenders for Rolling Stock."

JAMES BYRNES,
Commissioner for Railways.

The above is the copy advertisement marked "A," referred to in the annexed articles of agreement, dated the 25th day of September, A.D. 1869.

C.
The Commissioner for Railways to P. N. Russell & Co.

Department of Public Works,
Railway Branch,
Sydney, 20 May, 1869.

Gentlemen,

I have the honor to inform you that your tender for the supply of rolling stock for the Government Railways is accepted only for the whole of the articles enumerated therein (except the locomotives) that may be required for one year certain, and also all such as may be required during a further period of four years, if sanctioned by Parliament.

An order for the number required will be furnished without delay.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

This is the copy letter marked "C," referred to in the annexed articles of agreement, dated the 25th day of September, A.D. 1869.

NOTE.—A price must be given for every description of rolling stock (inclusive or exclusive of engines) in this Schedule, as although it is anticipated that no more than the quantity stated will be wanted, yet the requirements of the traffic may perhaps compel us to have some made.

SHOULD the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract; and we hereby undertake, within fourteen days from the notification of the acceptance of the said tender, jointly and severally, to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways, in the penal sum of for securing such performance.

P. N. RUSSELL,
 No. 1, New-London-street, London.
 THE HON. JOHN RICHARDSON,
 Macleay-street.

D.

Government Railways, New South Wales—Existing Lines Branch.
(Specification for 1st and 2nd class radial Carriages for Western Extension.)

1st Class.

THESE are to be saloon carriages, with first class compartments at each end, to have wrought iron under-frames running on eight wheels, the end pairs working in radial axle-boxes, same as No. 18 second class, and not with the bar, as in the imported cars of this class. The length to be 35 ft., width 7 ft. 9 in., and height, 7 ft.

They are to be fitted with spring seats and backs, covered with Morocco leather.

The panelling and painting is to be performed as specified for the other first-class carriages.

In all other respects they are to be the same as the imported carriages.

Composite.

These are to be divided into three compartments, the centre being fitted up as first-class, and the two ends as second class. To have wrought iron under-frames, running on eight wheels, the end pairs working in radial axle-boxes, the same as No. 18 second class.

The length to be 35 ft., width 7 ft. 9 in., in height 7 ft.

The painting and panelling to be executed in the same manner as specified for the other first class carriages.

In all other respects they are to be the same as the imported carriages.

2nd Class.

The second class are to be divided into five compartments, that in the centre being used as a break and luggage van.

They are to have wrought iron under-frames, running on eight wheels, the end pairs working in radial axle-boxes, as in No. 18 of the same class.

Panelling and painting as specified for other second class carriages.

In all other respects they are to be the same as the imported carriages.

J. H. THOMAS,
Engineer.

This is the specification marked "D," referred to in the annexed articles of agreement, dated the 28th day of September, A.D. 1869.

JOHN RUSSELL.
GEORGE RUSSELL.
G. A. MURRAY.
J. RICHARDSON.
P. N. RUSSELL,
(By his Attorney—JOHN RUSSELL.)

Witness to the signature of John Richardson,—J. J. LEE.

Witness to the signatures of John Russell, George Russell, George Alex. Murray, and Peter Nichol Russell,—W. S. HART.

Government Railways, New South Wales.—Existing Lines Branch.
(Specifications of First Class Carriages).

General arrangements to be the same as No. —, now on the Great Southern and Western Railways.

The first class carriages are to be 18 ft. long, 7 ft. 4 in. wide, and 6 ft. 4 in. high, divided into three compartments, fitted with spring seats, and in all other respects the same as that specified for the composite carriages.

The panels must be of well-seasoned cedar, or other approved timber, no nails or wood screws being used in their fixture, but they are to be grooved in to the bottom, sides, rails, and pillars, with canvas glued on to them previous to fixing, and, when fixed, to receive a second lining of canvas and glue, then painted with two coats of oil colour.

Cloth, lace, and trimmings for the interior to be of the best quality.

Inside fittings to be of well-seasoned cedar, and receive three coats of varnish.

All the glass in the windows to be of the best plate, and not less than $\frac{1}{4}$ -inch thick.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.
(Specification of Composite Carriages.)

THE carriages required under this specification are known as "Composite Carriages," the general arrangement being the same as No. 17, built by Messrs. P. N. Russell, and are to consist of three compartments, the centre being a first-class saloon, and the ends second-class compartments with single row of seats.

The first class or saloon compartments to be 12 ft. 6 in., and the second class compartments 3 ft. 9 in. each, making the extreme length of the body 20 ft. out to out; the extreme width to be 7 ft. 9 in. over elbow, with turn under of $2\frac{1}{2}$ inches on each side, making width of bottom 7 ft. 4 in.; the height from under part of bottom side to roof to be 6 ft. 3 in., exclusive of the outer roof, with a rise in centre of 5 in., making the total height in clear inside, 6 ft. 4 in.

The whole of the framing of body and carriage to be of blue-gum or other approved timber, inside partitions Baltic deal, panels and inside fittings of cedar, and inside and outside roof to be of the best Baltic deals, and the floor boards the best Baltic deals in two thicknesses of $\frac{3}{4}$ in. each, laid diagonally.

The first class quarter lights and the doors to be provided with sliding Venetian blinds inside and glass

glass frames outside, the latter being fitted with balance weight and spring arrangements; the glazing to windows and doors throughout to be of the best British plate not less than $\frac{1}{4}$ in. thick.

The inside to be fitted up with seats all round 2 ft. deep, having elbow partitions at each end; the seats and backs to be spring-stuffed in the best manner, lined and canvassed, and covered with superfine cloth of an approved colour; the side elbows and rests to be covered with Morocco of same colour as seats, and properly finished and trimmed; the whole of the stuffing to be the best steel springs and curled horsehair. Silk cord hat-lines to be fixed over seats, and nets carried by brass brackets extending the width of the compartments at each end. The whole of the body above the backs and inside roof to be lined with fancy oil-cloth of pattern to be approved, and the floor covered with floor-cloth and carpets.

The second class compartments to be provided with cushions and backs stuffed with best horsehair and covered with American leather-cloth. The sashes of the doors to have the balance weight and spring arrangements same as centre compartment, but not Venetian blinds.

The extreme length of under carriage to be 19 ft. 11 in., and extreme width 6 ft. 10 in. outside dimensions; the sides to be 11 ft. x 4 ft., beaded top and bottom. Two bearers framed in the sides 11 in. x $3\frac{1}{2}$ in., 4 ft. 4 in. apart in centre of sides, and secured by a $\frac{5}{8}$ -in. strap-bolt at each end, 9 ft. long and $2\frac{1}{4}$ in. x $\frac{1}{2}$ in.; the strap fixed with two $\frac{1}{2}$ -in. bolts through the bearers and along through $\frac{5}{8}$ -in. bolt; at each bar on the top side two bearers $9\frac{1}{2}$ in. x 3 in. framed into carriage sides and secured in same manner as those in centre, 22 in. from inside of head-stock, which is to be 11 in. x 4 in., framed on the sides, and secured with two corner-plates inside at each corner, $\frac{5}{8}$ -in. thick, bolted to carriage sides and diagonals; the head-stock on outside to be secured to carriage sides with $\frac{3}{8}$ -in. corner plates, 14 in. on side, and head-stock by 11 in. deep. Two spring bearers, 6 in. x 3 in., let into the centre of middle bearers and supported by an iron plate at each end, 2 in. x $\frac{5}{8}$ -in., fixed to the middle bearers, with two $\frac{5}{8}$ in. bolts to each. Two iron plates on top, 2 in. x $\frac{1}{4}$ -in., for buffer springs to slide on, and two plates above buffer springs, 2 in. x $\frac{1}{2}$ -in., with lugs at ends bolted to the bearers. Four diagonals, 11 x 3, framed into the head-stocks, and middle bearers let into the narrow bearers, and fixed with $\frac{1}{2}$ -in. bolts through them, and secured to the head-stocks with the inside corner-plates mentioned above. Two longitudinal pieces, 4 x 3, framed into the head-stock and middle bearers, and lapped into the narrow bearers, fixed with a five-inch $\frac{5}{8}$ nut-headed screw through the lap, secured at the head-stock with a T plate, $2\frac{1}{2}$ x $\frac{3}{8}$, fixed with three $\frac{3}{8}$ -in. coach screws, and to the middle teams with iron plate, $2\frac{1}{2}$ by $\frac{3}{8}$; 1 ft. 10 in. along the bearers secured with $4\frac{1}{2}$ bolts, and 5 in. along the longitudines and diagonals secured with four $\frac{1}{2}$ bolts.

The draw rods are to be $1\frac{1}{2}$ round iron, to pass through the head-stocks, where a strong hook is attached to receive the coupling screw. Couplings to be provided for each end.

The buffer rods are to be made with solid W. I. discs, with Kauri facings, and to work through cast iron blocks at each end of the under carriage-frame, and in the framing, through best gun-metal sockets, bolted to the bearers and carriage sides. The rods are to be turned and squared, and the bushes bored and squared to fit them.

The buffer springs to be of 18 plates, 3 by $\frac{1}{16}$, and a back plate of $\frac{3}{8}$, with solid forged ends, and a compass of 15 inches.

The bearing springs are to be made of the best quality of spring steel, each spring 5 ft. 6 in. long from centre to centre of tension bars when weighted. To have 9 plates spear-pointed, 3 by $\frac{1}{16}$, and a short plate, which is to be $\frac{3}{8}$. The buffer and bearing springs to be of Turton's, Cammell's, or Brown's make. The tension bar to be of the best scrap iron, 3 by $\frac{1}{16}$, solid eyes and links.

The scroll irons to be of form shown in No. 17, of best scrap iron, made with solid eyes, and to be bolted up to the sole bars in the usual way.

The wheels are to be 3 ft. 6 in. diameter on running surface; 8 double spokes (Losh's pattern) of wrought iron, 3 by $\frac{5}{8}$ at run and 3 by $\frac{3}{4}$ at nave, formed in segments, welded together with glut pieces at the rim, and turned on the circumference to receive the tires. Rim to be $3\frac{3}{8}$ by $\frac{1}{4}$. The nave to be of wrought iron, 8 in. diameter, 7 in. through, to be bored out to fit the axle. Tires to be 5 in. broad, bored and turned to 2 in. thick at the thread, and properly shrunk on the wheel. They are to be fastened to the wheel by 4 taper rivets. Each wheel is to be balanced separately on its axle.

The axles to be 4 in. diameter in middle for space of 2 ft. 6 in., and tapering to $4\frac{3}{4}$ at back of nave, and through nave $4\frac{1}{2}$; the journals to be 3 in. diameter and 8 in. long, and 6 ft. 5 in. from centre to centre (turnplate to be supplied); the wheels to be forced on the axle by hydraulic pressure, and secured each by one steel key. The wheels and axles are to be Bowling's "Lowmoor" or "Taylor's" (Leeds) make.

The axle-boxes to be as shown, and the bearings to be of Stirling's patent metal, or best gun-metal; the grooves of the guides in axle-box and the joint between the two halves to be planed.

The axle-guards to be $\frac{3}{4}$ thick, to be properly fitted and bolted to the inside of sole bars exactly square and at right angles to the frame, with washer plates on outside; the surface against which the axle-box works to be made perfectly true; the ends of each guard are to be bound by a short strap, and connected together by a $1\frac{1}{8}$ rod, and to be properly fitted and bolted together.

An additional external roof to be provided with the proper hoop-sticks and to be attached to the inner roof with ornamental cast-iron brackets to project 6 inches at sides and 3 inches at ends, and to have bearers underneath at intervals, and both roofs to be covered with prepared canvas.

One roof lamp, of the best construction, to be placed in centre of saloon, and one at each partition, so as to throw light into second class compartments, and also into saloon.

The general dimensions of framing are as follows:—

		<i>Body.</i>							
		in.	in.	in.	in.				
Bottom sides	...	$8\frac{1}{2}$	x	3	Cant rails	...	3	x	3

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification of open and enclosed Second class Carriage.)

THESE carriages are to have four compartments, the partition in centre extending to roof, and the other two partitions to height of top of door, as shown in No. 25 second class carriage, now on Southern and Western Lines, with double row of seats in each compartment.

The extreme length of body to be 20 ft. out to out, extreme width at elbows, 7 ft. 9 in. straight on sides, height from underpart of bottom sides to be 6 ft. 3 in. with a rise in centre of roof of 5 in., making total height in clear inside, 6 ft. 4 in. There is to be no outer roof.

The whole of the under and upper frame-work to be of blue-gum, or other approved timber, roof of Baltic deal, partition, lining boards, panels, &c., to be of cedar, sound and free from defects. The floor to be of the best Baltic deals, in two thicknesses of ¾ inch, each laid diagonally.

The seats are to be slightly raised in front, the edges round, and to have ½-inch bent boarding at the lower part of the back.

The under-frame, wheels, axles, springs, buffing apparatus, and coupling, to be in all respects similar to the composite carriages.

The dimensions of framing to be as follows:—

Body.

	in.	in.		in.	in.
Bottom sides	10½	x	3	Partition pillars	2¼ x 2¼
End bars	7	x	3	Cant rails	3 x 3
Partition do.	6	x	3	Hoop sticks	2½ x 2
Intermediate do.	6	x	1½	Centre do. (in centre)	7¼ x 2½
Bottom longitudinals	6	x	1½	End compass rails do.	7¼ x 2½
Corner pillars	3	x	3	End battens and rails	2½ x 2
Standing do.	3	x	3	Door pillars	3 x 2¼
Top light do.	2¼	x	1½	Top partition rails	4 x 2
Light uprights	2¼	x	1½	Cornices	2 x 2
Short standing pillars	3	x	3		

Under-frames.

	in.	in.		in.	in.
Soles	11	x	4	Cradles for buffer springs	6 x 3
Head-stocks	11	x	4	Step boards	8 x 1½
Middle bearers	11	x	3½	Do. ledges	3 x 1½
Front do.	9½	x	3	Centre buffer back piece	10 x 3
Diagonals	11	x	3	Buffer spring top blocks	3½ x 2½
Longitudinals	4	x	3		

There is to be a roof lamp of best construction provided, to be placed in centre of carriage.

The handles, hinges, and other mountings to be of brass; the patterns to be submitted to the Engineer for Existing Lines.

Enclosed Second Class.

The enclosed second class will be in every respect the same, with the exception that all the standing, intermediate, and door pillars are to be continued to the roof, and the doors to be fitted with sliding window-frames, glazed with the best plate glass not less than ¼-inch thick, two intermediate quarters on each side to be fitted with sliding Venetian blinds, the whole being in general arrangement the same as No. 15.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Horse-boxes.)

To consist of one compartment, having two divisions, and a dog-box at each end.

The whole of the framing of under carriage and body to be of the best blue-gum; bottom, roof, and inside board of best Baltic deals; roof and outside board of pitch pine; and the panels of dog-box doors of blue-gum.

The outside length of upper portion of body, including head-stalls, to be 10 ft. 3 in.; lower portion, 8 ft. 10½ in.; the height from top of under carriage to under side of roof-boards in centre, 7 ft. 6 in.; and the extreme width 7 ft. 9 in.

The extreme length of under carriage to be 14 ft. 6 in., and the extreme width 6 ft. 10 in.

The

The general dimensions of under and upper framing, &c., are as follows :—

	in.	in.		in.	in.
Carriage sides	11	x 4	Breast-piece for manger ...	6	x 1½
Head-stocks	11	x 4	Hoopsticks	2½	x 2
Middle bearers	12½	x 3½	End compass rails	7	x 3 in centre
Diagonals	11	x 3	Do. do.	7	x 2½ do.
Longitudinals	4	x 3	Top sockets for stall posts ...	3	x 1½
Cradles	6	x 3	1 floor bearer	6	x 2
Bottom sides... ..	5	x 3	Dog-box, bottom side	5	x 2
Corner pillars	4½	x 4	Do. end bars	5	x 2
Cant rails	3½	x 3	Do. corner pillars	3	x 3
2 pillars	3½	x 3	Do. cross rails	3¼	x 1½
2 do.	4	x 3	Do. upright battens	3	x 1½
2 do.	3½	x 2½	Do. shutting pillars	2½	x 1¾
Cross rails	3	x 3	Do. side uprights	2½	x 1
End uprights	3½	x 3	Do. intermediate side rails	2½	x 2
Stall posts	3	x 3	Do. top rails	2¾	x 1½
Flap pieces	3½	x 1	Do. roof batten rails	4¾	x 1½
Do. uprights	3¼	x 1½	Do. 8 door pieces	5¼	x 1¼
2 short rails for ends	4½	x 3½	Do. 8 do.	8½	x 1¼
2 do. do.	3½	x 3½	Cornices	2	x 2

The body to be provided with stall flaps, fitted to carry three horses, and the dog-boxes at each end extending the width of under carriage.

The roof of horse-box and dog-boxes to be covered with prepared canvas.

The interior to be properly stuffed with horsehair and covered with best ox-hides, in the usual manner, to protect the horses, and the fittings similar to those used on the Great Southern and Western Railways.

The under-framing springs, axles, wheels, and buffing apparatus, &c., to be in all respects similar to the carriage trucks.

Each horse-box to have a lever break, as with D trucks.

The general arrangement to be the same as No. 10 on the Southern and Western Lines.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Carriage Trucks.)

To consist of one open compartment, extreme length 14 ft. 6 in., and extreme width 7 ft. 9 in., and height from under bottom side to top of side-rail 17 in., including cap-plate.

The whole of the under and upper framing to be of the best blue-gum, and the floor-boards best Baltic deals.

The extreme length of under-carriage to be 14 ft. 6 in., and extreme width 6 ft. 10 in.

The general dimensions of under and upper framing as follows :—

	in.	in.		in.	in.
2 soles	11	x 4	2 top side rails	3	x 3
2 head-stocks	12½	x 4	4 corner pillars	4	x 3
2 middle bearers	11	x 3½	6 side pillars	4	x 3
4 diagonals	11	x 3	3 floor-bearers	6	x 2
2 longitudinals	4	x 3	1 centre buffer, back piece ...	10	x 3
2 cradles	6	x 3	4 buffer springs stop blocks ...	3½	x 2½
2 false-bottom sides	6	x 3	2 sliding bars	2½	x 2½

The draw-ropes to be 1½ in. round iron to pass through the head-stocks, where a strong hook is attached to receive the screw-coupling; one screw coupling to be provided to each truck.

The buffer-ropes are to be made with solid wrought-iron discs with Kauri facings, and to work through cast-iron blocks at each end of the under carriage-frame, and through best gun-metal sockets bolted to the bearers and carriage sides; the rods are to be turned and squared and the bushes bored and squared to fit them.

The buffer springs to be of 18 plates, 3 in. x ⅞ in., and a back-plate of ⅝ in. with solid forged ends and a compass of 15 in.; the bearing spring to be 4 ft. long from centre to centre of tension bars when weighted, to have 7 plates spear-pointed 3 in. x ⅞ in., and a short one ⅝ in., the buffer and bearing springs to be of "Turton's," "Cammell's," or "Brown's" make, the tension bar to be 3 in. x ⅞ in.

The wheels are to be 3 ft. 6 in. diameter on running surface, 8 double spokes (Losh's pattern) of wrought-iron 3 in. x ⅝ in. at rim, and 3 in. x ¾ in. nave, the rim to be 3⅝ in. x ⅞ in., the nave to be of wrought-iron 8 in. diameter, 7 in. through, to be bored out and to fit the axle; tires to be 5 in. broad, bored and turned to 2 in. thick at the thread, and properly shrunk on the wheel, and fastened to it by 4 taper rivets.

The axles to be 4 in. diameter in middle for space of 2 ft. 6 in., and tapering to 4¾ in. at back of nave, and through nave 4½ in.; the journals to be 3 in. diameter, and 8 in. long, and 6 ft. 5 in. centre to centre; wheels to be forced on by hydraulic pressure and secured by one steel key; the wheels and axles are to be of Lowmoor or Taylor's (Leeds) make.

The axle-box bearings to be of Sterling's patent metal, or best gun-metal, the grooves of the guides of axle-boxes and the joint between the two halves to be planed; the lower half of the axle-boxes to be made so that Bricogne's method of lubrication can be applied to them.

The

The axle-guards to be $\frac{3}{4}$ in. thick, to be properly fitted and bolted to the inside of sole bars exactly square, and at right angles to the frame, with washer plates on outside, the surface in contact to be made perfectly true, the ends of the guard bound by a strap as shown.

Two sliding bars, with the necessary straps of leather, buckles, &c., to secure carriages, to be provided to each truck.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Passengers' Luggage and Break Van.)

THESE vans are to consist of two compartments; the extreme length to be 18 ft.; the width of the luggage compartment 7 ft. 4 in. out to out, and clear height inside in centre 6 ft. 3 in., and width of the front or break compartment 7 ft. 9 in., with a clear height inside of 1 ft. 6 in. above the luggage compartment; the roof of both front and after part to rise 5 in.

The under-frame wheels, axles, buffers, and draw gear, ironwork, &c., will be the same as described for composite carriages, except that the length of the under-carriage will be 17 ft. 11 in., and that the wheels will be placed 10 ft. apart, centre to centre; all other dimensions remaining the same.

The framing, pillars, and rails to be of blue-gum or other approved timber, and panels to be of the best Baltic deal; the inside boarding, partition, and door of Baltic deal; and the floor-boards of Baltic deal, in two thicknesses of $\frac{3}{4}$ in. each, laid diagonally, with blue-gum battens properly screwed down at intervals of 15 in.

The dimensions of the framing to be as follows, measured full when finished:—

				<i>Body.</i>							
				in.	in.						
Bottom sides	8	x	3	Front compass rails in centre	...	$7\frac{1}{2}$	x	$2\frac{3}{4}$
Bottom bars	6	x	3	Partition do. do.	...	$7\frac{1}{2}$	x	2
Intermediate do.	6	x	$1\frac{1}{2}$	Door pillars	...	$2\frac{1}{2}$	x	$2\frac{1}{4}$
Corner pillars	3	x	3	Do. do.	...	$2\frac{3}{4}$	x	$2\frac{1}{2}$
Do. do.	4	x	3	Luggage door rails	...	3	x	2
Standing pillars	$2\frac{1}{2}$	x	$2\frac{1}{2}$	Do. do.	...	3	x	$2\frac{1}{4}$
Intermediate do.	$2\frac{1}{4}$	x	$2\frac{1}{4}$	Do. do.	...	$2\frac{1}{2}$	x	2
End battens	3	x	2	Do. do.	...	4	x	$2\frac{1}{2}$
Do. rails	3	x	2	Guard's door rails	...	3	x	2
Do. centre rail	$2\frac{1}{2}$	x	$2\frac{1}{4}$	Do. do.	...	3	x	$1\frac{1}{4}$
Side rail	$2\frac{1}{2}$	x	2	Cornices	...	2	x	2
Fence do.	3	x	$2\frac{1}{4}$	Dog-box, framing all	...	$1\frac{1}{2}$	thick	
Hoop-sticks	$2\frac{1}{2}$	x	$2\frac{1}{4}$	Top dog-box rail	...	3	x	$1\frac{1}{2}$
Cant rails	$3\frac{1}{2}$	x	$2\frac{1}{2}$	Bottom do.	...	3	x	$2\frac{1}{2}$
End compass rails in centre	$7\frac{1}{2}$	x	$2\frac{1}{2}$					

				<i>Under-frame.</i>							
				in.	in.						
Soles	11	x	4	Longitudinals	...	4	x	3

Front do.	7	x	3	Centre buffer back-piece	...	10	x	3
Cradles	6	x	3	Buffer spring stop blocks	...	$3\frac{1}{2}$	x	$2\frac{1}{2}$
Diagonals	11	x	3					

The interior of the van to have a double door-way communicating from the guard's compartment to the luggage part. Side-doors of guard's compartment to have a sliding glass frame.

A roof lamp to be provided and fixed in the centre of luggage compartment.

Two strong shelves to be fixed at end of luggage compartment, $1\frac{1}{2}$ inch thick, with supporting brackets and ledge in front; and stout hooks for letter-bags, &c., one on each side, to be fixed, and also a letter-rack. A lock-up box, fixed to flooring, to form a step for getting to break; and a seat is also to be fitted in guard's compartment, so placed that he can see over and on one side of the train when sitting.

The windows at top of guard's compartment are to be fixed; the ventilation, as in No. 7, is to be carefully attended to, and is to be continued along part of the end of the van for the side of dog-box, and properly protected on the inside.

A powerful and efficient break apparatus of the best construction, as in No. 7, is to be fixed, having a wheel lever, and so arranged as to be under the most perfect control of the guard.

The roof is not to be double; but the inside is to be set up and lined with $\frac{1}{2}$ -inch boarding, and spaces left in the hoop-sticks for ventilation.

The luggage doors are to slide outside on a projecting iron-bar, the glazing in same to be fixed, the quality of the glass being British plate.

The mountings are to be of brass, lacquered patterns, to be submitted for approval; the projecting rail round the van to be of wrought iron.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Passenger, Luggage, and Break Vans.)

General arrangement to be the same as No. 15.

THESE vans are to consist of two compartments, the extreme length to be 18ft. 1in., the width of the luggage compartment 7ft. 4in. out to out, and clear height inside in centre 6ft. 3in., and width of the front or break compartment 7 ft. 9 $\frac{1}{2}$ in., with a clear height inside of 1 ft. 6 in. above the luggage compartment; the roof of both front and after parts to rise 5 inches.

The

The dimensions of the framing to be as follows—measured full when finished.

				<i>Body.</i>								
				in.	in.							
Bottom sides...	8	x	3	Front compass rails in centre	7½	x	2¼
Do. bars	8	x	3	Partition do. do.	7½	x	2
Intermediate do.	8	x	3	Door pillars	3	x	2¼
Corner pillars	3½	x	3½	Do. do.	3	x	2½
Do. do.	5¼	x	3	Luggage door rails	3	x	2¼
Standing pillars	3	x	3	Do. do.	3	x	2¼
Intermediate do.	3	x	2½	Do. do.	3	x	1¾
End battens	3	x	2	Do. do.	3	x	2¼
Do. rails	3	x	2	Guard's door rails	3	x	3
Do. centre rails	3	x	2	Do. do.	3	x	2½
Side rails	3	x	2½	Cornices	2	x	2
Fence do.	3	x	2½	Dog-box, framing all	1½	thick	
Hoop sticks	2½	x	2¼	Top dog-box rail	4½	wide	
Cant rails	3½	x	2½	Bottom do.	4½	do.	
End compass rails in centre...	7½	x	2½						
<i>Under-frame.</i>												
Soles	11	x	4½	Longitudinals	4	x	4
Head-stocks	11	x	4½	Step-boards	8	x	1½
Middle bearers	11	x	4	Do. ledges	3	x	1¼
Front do.	7	x	4	Centre buffer, back piece	10	x	3
Cradles	6	x	3½	Buffer spring stop block	3½	x	2½
Diagonals	11	x	4						

The whole of the framing to be of the best description of blue-gum, well seasoned, and put together with the best white lead.

Roof boards to be of the best Baltic deal 7 in. x 1 in., grooved to receive an inch iron tongue, and put together with white lead. Roof boards to be secured with 2¼ in. screws to roof sticks, side rails, and ends.

Top of roof to be covered with No. 1 best navy canvas secured to the top with hardwood battens across the roof, and on the sides and ends by cornice screwed on as shown in drawing. Roof to have two coats of paint previous to being covered with canvas, and three coats of white lead and oil afterwards. Sides and ends to be panelled with the best Baltic deal 1 in. thick, and not more than 5 in. wide, grooved to receive an inch iron tongue, and put together with white lead.

The interior of van to have two doors on hinges, each 13 in. clear of opening, communicating from the guard's compartment to the luggage part.

A hole, 8½ in. x 4¼ in., to be cut in centre of roof of luggage compartment, with wrought iron cover for lamp.

The breakwork to be constructed as shown on No. 15 van of the same class.

The glass windows at the top of the guard's compartment, and the glass hood over break-wheel, shown in drawing, are to be fixtures. The luggage doors are to be run on brass pulleys outside, on a projecting iron bar 2 in. x ½ in., as shown in drawing, the glass windows in which are to be fixed.

The whole of the glass used to be of the best British plate.

Two strong shelves to be fixed at the sides of luggage compartment 14 in. wide by 1½ in. thick, with supporting brackets and ledge in front; also stout hooks for letter bags, &c., one to be fixed on each side. A lock-up box to be fixed to the flooring to form a step for getting to a seat which will have to be fixed and placed so that the guard can see over the train when sitting. Two cast-iron sand-boxes 16 in. x 12 in., x 14 in. deep, one fixed at each end, inside the van.

The door handles and hinges are to be of brass—pattern to be submitted for approval. The projecting hand-rail to be of wrought iron, and fixed as in No. 15. Two lamp-irons to be fixed with bolts on corner pillars of guard's compartment, and one on each end for tail lamp, as shown.

The flooring of body to consist of ten cast-iron plates, as shown, the bottom sides and bars of body to be rebated 1½ in. wide by 1¾ in. deep, to receive the plates, which are 2¾ in. thick, with flanges to fit into the rebates, to be bedded in rebates, and on the top of framing with the best roofing felt and white lead, and screwed down with No. 20 2¼ in. screws.

The under-frame to be of blue-gum, well seasoned, and perfectly sound, and square on all edges; the extreme length to be 18 ft., and width 6ft. 10 in., the sides and ends to be beaded top and bottom.

The wheels to be placed 5 ft. 6 in. apart, 11 ft. over all from centre to centre of axles. Two spring bearers or cradles, 6 in. x 3½ in., to be let into centre of middle bearers, and supported by an iron plate 2 in. x ⅝ in. at each end, fixed to middle bearers with two ⅝ bolts to each. Two iron plates 2 in. x ⅝ in. on top, for buffer springs to slide on, and two plates 3 in. x ½ in. above buffer springs, with lugs at ends, bolted to bearers; four diagonals 11 in. x 4 in., framed into the head-stocks and middle bearers, let into the narrow bearers, and fixed with ½ in. bolts through them, and secured to head-stocks with inside corner plates, as shown in drawing. Two longitudinal pieces, framed into the head-stocks and middle bearers, and lapped into the narrow bearers, fixed with a 5⅝ in. nut headed screw through the lap, and secured at the head-stock with a T plate 2½ in. x ⅝ in. fixed with three ½-in. nut-headed coach screws, and to the middle bearers with an iron plate 2½ in. x ⅝ in. 1 foot 10 in. along the bearers, secured with ⅝-in. bolts, and 5 inches along the longitudinals and diagonals, also secured with ⅝-in. bolts.

The draw-rod to be of 1⅝ in. round iron, to pass through the head-stocks, where a strong hook is attached to receive couplings. Two side chains also are required, which, with the draw-rod, must be of the best iron. The buffer-rods with solid wrought iron disc, with Kauri facings, two to be convex and two flat, with ¼ wrought-iron plate, as in No. 15. Buffer-rods to work through cast-iron blocks at each end, and across bars of carriage frame, are to be turned in the round parts, and squared to fit bushes through bearers, with cast-iron shoes for buffer springs.

The scroll irons to be of the form in No. 15, made of BBH or other iron of equal quality, with solid eyes, and to be bolted up to the sole bars—one end let ¼ into under-frame as shown in drawing.

The axle-boxes to be as in No. 15 and the bearings to be of the best gun-metal; the grooves in the sides of axle-boxes and the joints between the halves to be planed and jointed with leather. The axle guards to be $\frac{3}{4}$ inch thick, to be properly fitted and bolted to the inside of sole bars, exactly square and at right angles with frame, with washer plates on outside; the surface against which the axle-box works to be made perfectly true; the end of each guard to be bound with a short strap, and connected together by $1\frac{1}{4}$ inch rod as shown, and to be properly bolted together.

The wheels, axles, springs, and all other materials not herein specified, must be the same as in pattern van No. 15.

Dimensions of
iron-work.

Plates on buffer heads, $\frac{1}{2}$ in. thick, 14 in. diameter.

Disc 13 in. x $\frac{1}{2}$ in. at edge, and $1\frac{1}{2}$ in. at root.

Rods—

Round part, 2 ft. 6 in. long by $2\frac{1}{2}$ in. diameter.

Square do., 6 ft. 4 in. do. do. $1\frac{1}{2}$ in. diameter.

Cast iron shoe, as per drawing.

Draw bar, &c.—

Draw bar rod, 2 in. square, for 12 in. from hook remainder, $1\frac{5}{8}$ in. round iron.

Do. do. plate $6\frac{3}{8}$ in. x 1 in. thick at hook.

$4\frac{1}{2}$ in. x $\frac{1}{2}$ do. do. side.

18 in. long.

13 in. from centre to centre of eye bolts.

Side chains—

Side chain, 5 links of $\frac{7}{8}$ in. iron.

Eye bolt collar, 3 in. x $\frac{1}{4}$ in.

Eye, 1 in. thick.

Do. $2\frac{1}{2}$ in. from collar to centre of eye.

Eye bolt, $5\frac{1}{2}$ in. x 1 in. between collar and nut.

Do. do. washer, 4 in. x 4 in. x $\frac{1}{4}$ in.

Tie rods for under-frame, all $\frac{3}{4}$ in. diameter.

Nut bolts through spring bearers and plates, above springs $\frac{5}{8}$ in. diameter.

Bolts—

All bolts in under-frame not otherwise specified, $\frac{3}{4}$ in. diameter.

Corner plates—

3 in. x 1 in. and $\frac{3}{4}$ in. at ends, and 11 in. from angle, secured with $\frac{3}{4}$ in. nut bolts.

Outside corner plates of body, 6 in. each way, x $\frac{3}{8}$ in. thick.

Handrails, all $\frac{5}{8}$ in. diameter.

Break-work—

Bracket for carrying break hangers, $2\frac{1}{2}$ in. x 2. $3\frac{1}{2}$ over collar, and $1\frac{1}{8}$ in. bolt.

Pins for break hangers, $1\frac{1}{4}$ in. diameter.

Hangers, 3 in. x 1 in.

Eyes of do., $2\frac{1}{2}$ in. diameter.

Tie rods for do., $\frac{3}{4}$ in. do.

Break block bolts, 4 in. x $\frac{5}{8}$ in. with nuts let into B block.

Break connecting rod, $2\frac{1}{2}$ x $\frac{1}{2}$ and 1 through eye.

Ditto shaft, 3 in. diameter.

Nut lever of do. $2\frac{3}{8}$ in. x by $1\frac{1}{2}$ x $5\frac{1}{2}$ over eye.

Nut. 3 in. diameter.

Break rod and screw.

2 in. under wheel, $1\frac{1}{2}$ in. in middle.

2 in. diameter of screw.

3 threads to the inch.

Screw, 16 in. long.

Hanging brackets, 3 x 1 x $4\frac{1}{2}$ over boss, and 3 in. through.

Do. levers, 1 in. thick.

Pillar bolts, $\frac{3}{4}$ diameter.

Break wheel and gearing wheels, to be the same as in No. 15.

Scroll irons—

3 in. wide, 1 in. thick, tapering to $\frac{3}{4}$ at ends.

Links, $2\frac{1}{4}$ in. x $\frac{3}{4}$ and $3\frac{1}{4}$ between centres of holes.

Pins for do., $\frac{3}{8}$ diameter.

Axle box bolts, $\frac{1}{2}$ in. square.

Horn plate, 3 in. x $3\frac{1}{4}$ in.

Washer plate, $2\frac{3}{4}$ in. x $\frac{1}{2}$ in.

Horn plate connecting rod—

Flat part, $1\frac{3}{4}$ in. x $\frac{3}{4}$ in.

Round do., $1\frac{1}{4}$ in. diameter.

Secured to horn plate by $\frac{5}{8}$ in. bolts.

Step hangers—

Round part, $1\frac{1}{4}$ in. diameter.

Flat do., 2 in. wide.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Sheep-wagons.)

To consist of four compartments, the extreme length being 18 ft., the extreme width 7 ft. 11 in., and the height from top of floor to underside of roof-boards at centre 6 ft. 4 in.

The under-framing wheels, axles, &c., to be in all respects the same as the cattle-wagons on the Southern and Western Railways.

The separate compartments to be 3 ft. 1 in. clear height in centre, and to have sliding doors 4 ft. wide framed as shown, and the sides to be strengthened with diagonals 4 x 4 properly tenoned into frame and fitted in with $\frac{3}{4}$ iron rods; the middle partition to be framed with diagonals 3 x 3.

The upper floor to be supported by joists 5 x $2\frac{1}{2}$ tapered at sides, and the flooring-boards of lower and upper compartment to be of Baltic deals $1\frac{1}{2}$ thick, grooved and tongued, and with Kauri battens screwed down to them.

The roof to have the ventilator running along the whole length, as in No. 2.

In all respects, as to scantlings, corner-posts, &c., the dimensions to be the same as the cattle-wagons in use on the existing lines.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Cattle-wagons.)

To consist of one compartment; the extreme length being 18 ft., the extreme breadth 7 ft. 11 in., and the height from top of floor to underside of roof boards at centre 6 ft. 8 in.

The

The whole of the under and upper framing to be of best blue-gum, and the boarding best Baltic deals or pitch-pine.

One flap, hung on hinges, to be provided on each side of wagon, 4 ft. wide and 3 ft. 6 in. high, the top rail ranging with side rails when closed; the boarding in flaps to be of Kauri pine $1\frac{1}{4}$ thick, with blue-gum battens firmly screwed on the inside of each flap, $\frac{3}{4}$ round rods to be fixed in lower part as shown, and 1-in. rods round the upper part.

The roof to be covered with prepared canvas.

The extreme length of under-frame to be 18 ft., and extreme width 6 ft. 10 in.

The general dimensions of framing to be as follow:—

	in.	in.		in.	in.
2 soles	11	x 4	2 compass end rails	7	x 3
2 head-stocks	12 $\frac{1}{2}$	x 4	(rounded to 3 $\frac{1}{2}$ at ends)		
2 middle beams	11	x 4	7 hoop-sticks	2 $\frac{1}{2}$	x 2
2 front beams	9	x 3 $\frac{1}{2}$	12 ventilator side rails	3	x 3 $\frac{1}{4}$
2 cradles	6	x 3	6 side braces	3 $\frac{1}{2}$	x 2 $\frac{1}{4}$
4 diagonals	11	x 3	10 door boards	7 $\frac{1}{2}$	x 1 $\frac{1}{4}$
2 longitudinals	4	x 3	4 end ventilator end rails	3	x 3 $\frac{1}{4}$
2 false sides	4	x 4	4 do. intermediate do.	4	x 2 $\frac{1}{4}$
4 corner pillars	4	x 4	4 do. uprights	4	x 2 $\frac{1}{4}$
6 side pillars	4	x 3 $\frac{1}{4}$	1 centre buffer spring piece	10 $\frac{1}{4}$	x 3 $\frac{1}{4}$
6 side rails	4	x 3 $\frac{1}{4}$	4 buffer spring top blocks	3 $\frac{3}{4}$	x 2 $\frac{3}{4}$
2 cant rails	4	x 2 $\frac{1}{2}$	4 buffer backs	11	x 2 $\frac{1}{4}$
4 door rails	4	x 3 $\frac{1}{4}$	10 pedestals	4	x 3 $\frac{1}{4}$
4 door pillars	4	x 3 $\frac{1}{4}$	floor		2
4 door braces	3 $\frac{1}{2}$	x 2			

The draw-rods are to be 1 $\frac{1}{8}$ round iron, to pass through the head-stocks, where a strong hook is attached to receive the coupling. Coupling links to be provided at each end, and safety chains.

The buffer and buffer springs to be same as specified for D trucks.

Wheels, axles, and axle-boxes to be the same as specified for D trucks.

The axle-guards to be $\frac{3}{4}$ in. thick, properly fitted and bolted to inside of sole bars, perfectly true and square, and the parts in contact with axle-box to be planed.

The flooring to be laid (across the frame) $\frac{1}{4}$ in. apart, the sides of planks bevelled inward, and throated underneath for drainage, and to have stout Kauri battens screwed down at intervals of 15 in.

In all other respects not herein specified, it must be the same as No. 20 on the Southern and Western Lines.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification of Covered Goods-vans and Powder-vans.)

The general arrangement of these vans to be the same as No. 15 van, at present on the Southern and Western Lines. General arrangement.

The frame to be 15 ft. long, and 7 ft. 6 in. wide over all. Frames.

Each sole to be in one piece, 14 in. by 4 in., framed into the head-stocks with two 1 $\frac{1}{2}$ in. tenons, and further secured by two knees at each corner of the sole, head-stock, and diagonal braces, and by 10 $\frac{3}{4}$ in. bolts in each, independent of the buffer-bolts.

The nuts to screw on to washer-plates outside the head-stock, and soles 2 in. broad by $\frac{1}{2}$ in. thick.

The head-stocks to be 7 ft. 6 in. long by 12 $\frac{1}{2}$ in. deep, by 4 in. thick, and to be framed level with the bottom side of sole.

The two transverse-bearers to be 11 in. by 4 in., and to be framed into the sole with two 1 $\frac{1}{2}$ in. tenons at each end, and housed $\frac{1}{4}$ in. into the sole; four $\frac{3}{4}$ in. bolts to pass through the soles across the frames with nuts at each end, and washer-plate 2 $\frac{1}{2}$ in. square by $\frac{1}{4}$ in. thick.

The four diagonal braces to be 11 in. by 3 in., framed fair with the upper side of the cross bearers and soles, and tenoned into the head-stock and transverse-bearer with two 1 $\frac{1}{2}$ in. tenons on each, housed into each $\frac{1}{4}$ of an inch, and further secured by a knee 4 $\frac{1}{2}$ in. deep by $\frac{3}{4}$ in. thick, in the root, and with eight $\frac{3}{4}$ in. bolts, independent of the two tie bolts.

The centre of this knee is to be placed in the centre line of draw-bar, so that a hole 1 $\frac{1}{2}$ in. diameter must be punched in the knee to allow the draw-bar to pass through it.

Two $\frac{3}{4}$ in. bolts screwed at each end, and with washers, 2 $\frac{1}{4}$ in. square and $\frac{1}{4}$ in. thick, draw the two transverse-bearers on to the tenons of the two inside longitudinal short bearers, and two $\frac{3}{4}$ in. bolts at each end of the frame, screwed at one end, and with the nut and washer on the transverse cross bearer, bring the whole frame well together.

Two short longitudinal bearers, 9 in. by 3 $\frac{1}{2}$ in., are to be tenoned into the two transverse-bearers, and also housed at $\frac{1}{4}$ in. in each end.

To be bolted with $\frac{3}{4}$ in. bolts against the inside of sole, and to be 8 ft. 6 in. from centre to centre; Horn plates. the nuts to be placed on the outside, and screwed up securely against washer-plates, as shown in No. 15.

Great care must be taken that these plates are correctly fixed vertically, by transverse and longitudinal measurement. They must be of form shown in No. 15, and planed on the inside, where they pass over axle-boxes.

Cases and rams of cast-iron, and fitted with vulcanized India-rubber springs, 8 $\frac{1}{2}$ in. long and 5 in. diameter, having a 2 in. hole through the centre. Buffers.

The cases must be bored, and the rams turned to fit them well; and great care must be taken that the ram will touch the end of the casing before the compression is wholly taken off the spring. The cases are packed off from the frames with pieces of Kauri pine, 1 in. thick.

The

The buffer-facings must be of good and well-seasoned Kauri pine, free from knots and shakes, neatly turned, and securely bolted to the rams, care being taken that the bolt-heads fit well, and do not project at all beyond the buffer-facing.

By means of the pin at the back end of the casing, $\frac{1}{2}$ an in. of compression must be put upon the spring before the buffer is put in its place. It will be seen that the centre bolt is square under the head, and passes through the ram in a square hole to prevent its turning round.

Draw-bar.

To be made of the best cable-iron, and with a vulcanized India-rubber spring, 6 in. diameter and 8 in. long, with a 3 in. hole through it, to work in a cast-iron cylinder.

Wheels.

There are to be four 3 ft. diameter on the tread, wrought-iron wheels, which must be turned and bored for the reception of the tire and axle, to the exact diameter and gauge.

Tires.

To be of the best Lowmoor manufacture, 5 in. wide and 2 in. thick on the thin edge, turned and bored to gauge.

Great care must be taken that the tires are shrunk securely on the wheels, and that no undue strain is put on either.

The diameter of the tire after it is bored, and before it is heated for expanding, must be precisely that of the wheel; it must be riveted to the rim of the wheel with four $\frac{7}{8}$ in. rivets coned into the tire, and with the head of the rivet on the inside of the rim of the wheel.

Axles.

To have journals $3\frac{1}{4}$ in. diameter by $7\frac{1}{2}$ in. long; diameter of wheel seating, $4\frac{1}{2}$ in.; length of do., $8\frac{3}{8}$ in.; diameter behind wheel, 5 in.; diameter in middle of axle, 4 in.; length between centres of journal, 6 ft. $3\frac{3}{4}$ in.; length between bosses of wheel, 4 ft. 3 in.; total length of axle, 7 ft.; nose of journal to be 4 in. diameter, and $\frac{5}{8}$ in. wide.

Axle-boxes.

To be made in halves, and fitted with gun-metal steps.

Care must be taken that the steps are fitted and bedded securely in the box, and that they be bored so that they bear on the journal on the top only, for a space equal to one-third of the circumference of the journal. The cores for the grooves for the horn-plates must be carefully fixed in the mould, so that they be out of winding, and perfectly opposite to each other.

Springs.

To be of the best spring steel, and tested before put in by being twice weighted, until the whole camber has been taken off, and the spring found to resume its original form. Length between centres, when unweighted, to be 2 ft. $8\frac{1}{2}$ in., with holes in the ends 1 in. diameter, to be perfectly true, and at right angles to the spring.

Each spring is to be formed of ten plates of steel, nine being 3 in. by $\frac{3}{8}$ ths of an in., and one 3 in. by $\frac{1}{2}$ an in.; compass, 7 in. from top of eyes to top of back-plate.

Break.

Each van is to be fitted with a break, as in the D trucks.

Spring hangers.

Are to be of wrought-iron, 3 in. wide and $\frac{3}{4}$ in. thick; they are to be blocked off from the bottom of the soles with cast-iron blocks, 3 in. wide, and secured to it by three $\frac{5}{8}$ in. bolts.

Great care must be taken that they are securely and correctly fixed, and out of winding in every direction.

Coupling and

Safety chains.

To be as in D trucks.

To be of well-seasoned blue-gum.

Pillars.

Door pillars to be 4 in. by $3\frac{1}{4}$ in., rebated to receive the side plates; centre pillars, 4 in. by 3 in.; corner pillars, 4 in. by 4 in., rebated to receive side and end plates of iron.

Side-door pillars to be 4 in. by $2\frac{1}{4}$ in.; end pillars, $4\frac{1}{2}$ in. by 4 in., tenoned into head-stock and top end rail; and to have a plate of iron, $2\frac{1}{2}$ in. by $\frac{3}{8}$ in., bolted to them.

Plates for corner pillars to be $2\frac{1}{2}$ in. by $\frac{1}{2}$ in., and each arm 14 in. long, secured by four $\frac{5}{8}$ in. bolts in each plate.

Iron knees, 2 in. by $\frac{3}{4}$ in., are also to be fitted at the foot of doorway pillars, each arm being 9 in. long, secured to pillar and bottom side by four $\frac{5}{8}$ bolts.

Inside of doorway pillars and bottom side to have screwed on a plate $3\frac{1}{4}$ in. by $\frac{1}{4}$ in.

There are to be distance pieces, 3 in. by 3 in., between the feet of the side pillars; the tops to be tenoned into top rail with $\frac{5}{8}$ in. tenons.

The corner and doorway pillars are mortised into the head-stocks.

Sides, ends, and

roof of body.

To be of galvanized sheet-iron, No. 12 wire gauge, 5 ft. 3 in. high above the level of the top of the floor; and the ends rounded, so as to give a clear height in the middle of the van, underneath the covering plate of the roof, of 5 ft. 9 in.

The sheet-iron, forming the sides to be screwed to the pillars, the top rail, and bottom side, with screws No. 18— $1\frac{3}{4}$ in. long, $3\frac{1}{4}$ in. between centres. Care must be taken that these and all other sheets composing the body, are perfectly straightened before they are fixed in their places; and that whenever they bed upon and are screwed to the framing or pillars, that strips of canvas, well covered with white lead underneath, and that when screwed up they are a sound, tight, and good job.

Two roof-sticks of well seasoned English ash, 3 in. by $2\frac{1}{4}$ in., two ditto, $2\frac{1}{2}$ in. by $2\frac{1}{4}$ in.; two short roof-sticks, $2\frac{1}{2}$ in. by $2\frac{1}{4}$ in.

Longitudinal pieces on centre of roof, $4\frac{1}{2}$ in. by 3 in., to be lapped into end rail; bottom sides 5 in. by 4 in. rebated $\frac{1}{2}$ in. into the sole to stand up the thickness of bottom boards above the under-frame, and bolted to the sole with eight $\frac{5}{8}$ in. bolts on each side.

Top rails, $4\frac{1}{2}$ in. by $3\frac{1}{4}$ in., rebated to receive the iron plates, and bevelled to compass of roof.

There is to be a space of $\frac{1}{2}$ an in. between the sheets on the roof, and they are to be screwed to the roof-sticks by wood-screws, No. 20, $1\frac{1}{2}$ in. long, $3\frac{1}{4}$ in. between centres. The space of $\frac{1}{2}$ in. is to be covered by a piece of hoop iron, 2 in. wide, 16 wire gauge, screwed down on canvas and white lead with wood screws, No. 20, $1\frac{1}{2}$ in. long, 3 in. between centres.

Doors.

There must be two doors, each 3 ft. 1 in. wide, on each side of the van, as in No. 15, moving in slides on two rollers, let into bottom of doors; the bottom slide is to be a bar of $2\frac{1}{2}$ in. iron upon the bottom, secured with wood screws, No. 20, $1\frac{1}{2}$ in. long, not more than 6 in. apart.

The frame of each door is to be of blue gum, $4\frac{1}{2}$ in. by $2\frac{1}{4}$ in., chamfered on the inside edges, and rebated on the outside of the bottom side, to secure the bar on which it slides, which must be 2 in. wide and $\frac{3}{8}$ in. thick.

Great care must be taken that all these parts are made and fixed perfectly true, and with the necessary play, so that they may move easily backward and forward.

The bar for securing the door to be $\frac{7}{8}$ in. diameter, and to be fastened as in No. 15.

To

To be the same width in the clear as the doors, but open on one side only, so that on the other side the roof runs the entire length of the body, and forms a stay for the ends; the slide to be framed as in No. 15, of well-seasoned wood, covered with sheet iron, No. 12 wire gauge, which is secured to the frame by wood screws, No. 20, $1\frac{1}{2}$ in. long, $3\frac{1}{4}$ in. between centres. Strips of iron, $1\frac{1}{4}$ in. by $\frac{3}{8}$ in., must be screwed to the sides of the door by wood screws, No. 20, $1\frac{1}{2}$ in. long, and not more than 6 in. between centres on which it slides; other strips, $2\frac{3}{4}$ in. by $\frac{3}{8}$ in., must be screwed on the sides of the two centre roof-sticks, with wood screws, No. 20, $1\frac{1}{2}$ in. long, and not more than 6 in. between centres, on which the roof slide moves. Roof slides.

A strip of wood is to be laid upon the outside of the roof, bedded in canvas and white lead, and screwed to the sheet iron by wood screws, No. 20, $1\frac{1}{2}$ in. long, to serve as a guide, and on the top of which a strip of hoop iron, $3\frac{1}{2}$ in. wide, 14 wire gauge, is screwed with wood screws, No. 20, $1\frac{1}{4}$ inch long.

This sliding door must be well and truly put together, to insure its perfect working.

Handles are to be fixed on the top slide and on the door.

To be of the best blue-gum, well seasoned, and free from all defects, 2 in. thick, and about 7 in. wide, laid longitudinally, and each plank well secured on the head-stocks, cross bearers, and diagonal braces, with $3\frac{1}{2}$ in. wrought iron rose-headed nails. Floor-boards.

Powder-vans.

The powder-vans are to be the same as the covered or C vans, with the exception that they are to be without sliding roof doors; and in all other respects like No. 1 powder-van on the Great Southern and Western Railways.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for Meat-van.)

THESE vans are to be 17 ft. long, 8 ft. wide, and 6 ft. 10 in. high; and the same, in general arrangement, as No. 7 Meat-van on the Southern and Western Lines.

The under-framing, wheels, axles, buffers, springs, &c., to be the same as specified for D trucks.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for A Trucks.)

THE under-frame (15 feet long and 7 ft. 6 in. wide), wheels, axles, buffers, and all iron-work, to be the same as specified for D trucks.

Height of body outside to be 11 in., and inside, above flooring, $6\frac{5}{8}$ in.

Round the top edge of body is to be fixed a plate of iron 2 in. by $\frac{3}{8}$ in., secured by wooden screws, and six $\frac{1}{2}$ -in. bolts on the sides, and four do. at each end.

The top sides to be of Kauri pine, $6\frac{5}{8} \times 3$, bevelled on the inside to $2\frac{1}{4}$ in. on the upper edge. The corners to be strengthened with a $\frac{1}{4}$ -in wrought iron plate, 12 in. long on sides and ends, and $10\frac{5}{8}$ in. deep, bolted to bottom side, head-stock, top side, and end boards, with ten $\frac{1}{2}$ -in. bolts in each corner plate.

In centre of each truck is to be fixed transversely a bolster of blue gum, 10×5 ; the ends to be shod for a length of 12 in. with a $\frac{1}{2}$ -in. iron plate, lapped 3 in. over the sides, each being secured by six wood screws on the top and two $\frac{5}{8}$ -in. bolts through the sides. These plates are to have $1\frac{3}{4}$ -in. square holes to receive the pins. The pins are to be of wrought iron, 2 ft. long, $1\frac{3}{4}$ in. square, with a shoulder 3 in.; they enter the bolster 6 in., and have fastenings with eye-bolt and $\frac{1}{4}$ -in chain.

The bolster is to be secured to under-frame by two $\frac{5}{8}$ -in. bolts, 2 ft. long, and two $\frac{5}{8}$ -in. bolts, 15 in. long, at ends, through bolster and bottom side of bottom.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for B Trucks.)

The under-framing, 15 ft. long and 7 ft. 6 in. wide, to be the same as specified for D trucks.

The height from floor to top of sides 3 ft., and ends to be 3 ft. 4 in. in centre.

The general dimensions of body framing:—

	in.	in.		in.	in.
4 corner pillars	$4\frac{1}{2}$	$4\frac{1}{2}$		8 side diagonals	$3\frac{1}{2} \times 3\frac{1}{4}$
4 doorway do... ..	$4\frac{1}{2}$	$4\frac{1}{2}$		2 end rails	$4\frac{1}{2} \times 4\frac{1}{2}$
8 side rails	$4\frac{1}{2}$	$4\frac{1}{2}$		2 do. $4\frac{1}{2}$ thick	ends $4\frac{1}{2} \times 8\frac{1}{2}$ in centre.
	8 end battens				$3 \times 3\frac{1}{4}$

Two side flaps, each constructed of four 7 in. x $2\frac{1}{2}$ in., and one 8 in. x $2\frac{1}{2}$ in. planks.

The whole of the framing to be of the best blue-gum, and the flaps and ends of Kauri pine, planed, grooved, and tongued, with 1 in. x $\frac{1}{8}$ -in. iron tongues.

The corner pillars are to be framed into head-stocks with two $1\frac{1}{2}$ in. tenons.

The wheels and axles, buffers, and all other ironwork, to be the same as specified for D trucks.

The trucks are to be constructed in every respect (where not specified to the contrary) the same as B truck No. 30.

J. H. THOMAS,
Engineer.

Government

Government Railways, New South Wales.—Existing Lines Branch.

(Specification of D Trucks.)

General arrangement. Frames.	<p>THE general arrangement to be as in truck No. 240, on the Southern, Western, and Richmond Railways.</p> <p>The frame to be 15 ft. long, and 7 ft. 6 in. wide over all, and 6 ft. 1 in. inside soles.</p> <p>Each sole to be in one piece, 11 in. x 4 in., framed into the head-stocks with two $1\frac{1}{2}$ in. tenons, and further secured by two knees at each corner of the sole, head-stock, and diagonal braces, and by five $\frac{5}{8}$ in. bolts in each, independent of the buffer bolts.</p> <p>The head-stock to be 7 ft. 6 in. long, $12\frac{1}{2}$ in. deep by 4 in. thick, and to be level to the bottom side of the sole.</p> <p>Two transverse-bearers 11 in. x 4 in., and two do. 6 in. x 4 in., to be framed into the sole with two $1\frac{1}{2}$ in. tenons at each end, and housed $\frac{1}{4}$ in. into the sole.</p> <p>Four $\frac{3}{4}$ in. bolts to pass through the soles across the frame, with nuts and washer-plates at each end.</p> <p>The four diagonal braces to be 11 in. x $\frac{3}{4}$ in. framed fair with the upper side of the cross-bearers and soles, and tenoned into the head-stock and transverse-bearer with two $1\frac{1}{2}$ in. tenons on each, housed into each $\frac{1}{4}$ of an inch, and further secured by a 3 in. x $\frac{1}{2}$ in. plate, 26 in. long on transverse bar, and 14 in. long on each diagonal bar, bolted by $\frac{5}{8}$ in. bolts, 12 in. long.</p> <p>Two longitudinal bearers 11 in. x 4 in., and two do. 4 in. x 3 in. are tenoned into the two transverse-bearers, and also housed in $\frac{1}{4}$ in. at each end.</p>
Horn-plates.	<p>To be bolted with $\frac{3}{4}$ in. bolts against the inside of sole, and to be 8 ft. 6 in. from centre to centre of each.</p> <p>The nuts to be placed on the outside, and screwed up securely against washer-plates, as shown in truck No. 240.</p> <p>Great care must be taken that these plates are correctly fixed vertically, and by transverse and longitudinal measurement.</p> <p>The horn-plate must be 3 in. x $\frac{3}{4}$ in. iron, and wings to do. $2\frac{1}{2}$ in. x $\frac{3}{4}$ in. They must be the same form as No. 240, and planed on the inside where they pass over the axle-boxes.</p>
Buffers.	<p>Cases and rams of cast-iron, and fitted with vulcanized Indian-rubber springs 5 in. diameter and $8\frac{1}{2}$ in. long, with a 2 in. hole through the centre.</p> <p>The cases must be bored and the rams turned to fit them well, and great care must be taken that the ram will touch the end of the casing before the compression is wholly taken off the spring.</p> <p>The cases are to be packed off from the end frames with pieces of Kauri pine 1 in. thick.</p> <p>The buffer facings must be of good and well-seasoned Kauri pine, free from knots and shakes, neatly turned and securely and carefully bolted to the rams—care being taken that the bolt-heads fit well, and do not project at all beyond the buffer facing.</p> <p>By means of the pin at the back end of the casing $\frac{1}{2}$ an in. of compression must be put upon the spring before the buffer is put into its place.</p> <p>It will be seen that the centre bolt is square hole under the head, and passes through the ram in a square to prevent its turning round.</p>
Draw-bar.	To be made of the best cable iron, with an India-rubber spring 6 in. diameter, 8 in. long, and a 3 in. sole through the centre—the spring working in a cast-iron cylinder to pattern provided.
Wheels.	There are to be four wrought-iron wheels to each truck, of the same pattern as those imported by the Commissioner from Lloyd, Foster, & Co., &c., and to be 3 ft. in diameter on the tread.
Tires.	<p>They must be turned and bored for the reception of the tire and axle to the exact diameter.</p> <p>To be of best Lowmoor manufacture, 5 in. wide, and 2 in. thick on the thin edge—turned and bored to gauge.</p> <p>Great care must be taken that the tires are shrunk securely upon the wheels, and that no undue strain is put on either; the diameter of the tire, after it is bored and before it is heated for expanding, must be precisely that of the wheel. It is to be riveted to the rim of the wheel with four $\frac{7}{8}$ in. rivets coned into the tire, and with the head of the rivet on the inside of the rim of the wheel.</p>
Axles.	To have journals $3\frac{1}{4}$ in. diameter by $7\frac{1}{2}$ in. long; diameter of wheel seating, $4\frac{1}{2}$ in.; length of ditto, $8\frac{3}{8}$ in.; diameter behind wheel, 5 in.; diameter in middle of axle, 4 in.; length between centres of journals, 6 ft. $3\frac{1}{4}$ in.; length between bosses of wheels, 4 ft. 3 in.
Axle-boxes.	<p>Total length of axle, 7 ft. Nose of journal to be 4 in. diameter, and $\frac{5}{8}$ in. wide.</p> <p>To be made in halves, and fitted with gun-metal steps.</p> <p>Care must be taken that the steps are fitted and bedded securely in the box, and that they be bored so that they bear on the journal on the top only for a space equal to one-third of the circumference of the journal.</p> <p>The cores for the grooves for the horn-plates must be carefully fixed in the mould, so that they be out of winding, and perfectly opposite to each other.</p>
Springs.	<p>To be made of the best spring steel, and tested before put in by being twice weighted until the whole camber has been taken off and the spring found to resume its original form.</p> <p>Length between centres, when unweighted, to be 2 ft. $8\frac{1}{2}$ in., with holes in the ends 1 in. in diameter.</p> <p>To be perfectly true, and at right angles to the spring.</p> <p>There are to be ten plates in each spring, nine being 3 in. by $\frac{3}{8}$ of an in., and one 3 in. by $\frac{1}{2}$ in.</p> <p>Compass, 7 in. from top of eyes to top of back plate.</p> <p>The centres of the springs must correspond with the centres of the journals over which they are placed, and be secured to the axle-boxes by (4) four $\frac{1}{2}$ in. bolts and nuts, and two spring plates.</p>
Break.	Each truck is to have a break fitted of the form and dimensions of that on No. 240.
Spring hangers.	<p>The spring hangers are to be made of wrought-iron, 3 in. wide and $\frac{3}{4}$ in. thick. They are blocked off from the bottom of the soles by cast-iron blocks 3 in. wide, and secured to it by three $\frac{5}{8}$ in. bolts.</p> <p>Great care must be taken that these are securely and correctly fixed, and out of winding in every direction.</p>
Coupling and safety chains. End standards.	<p>To be made of the dimensions of those in No. 240, and of the very best cable iron.</p> <p>The end standards are to be 4 in. by $3\frac{1}{2}$ in.</p>
Sides and end planking.	To be of the best clean Kauri pine; the ends and side-flaps are each to be constructed of two 7 in. by $2\frac{1}{2}$ in. planks, and one 8 in. by $2\frac{1}{2}$ in.

The

The depths of the side above the level of the floor is $22\frac{1}{2}$ in.

Four $\frac{1}{2}$ in. bolts to pass directly down through the whole depth of the ends and flaps, with cup-heads on the top of the sides, and nuts underneath.

Wrought-iron knees, $2\frac{1}{2}$ in. by 1 in. the full depth of end, and 14 in. into the sole bar.

A band of iron, $2\frac{1}{4}$ in. wide by $\frac{3}{8}$ in. thick, to be secured with wood screws, No. 18, $1\frac{1}{2}$ in. long, and not more than 18 in. apart, to run round the top of truck.

To be of the best well-seasoned blue-gum, free from all defects, $2\frac{1}{2}$ in. thick and 7 in. wide, laid Floor-boards. longitudinally, and each plank well secured on the head-stocks, cross-bearers, and diagonal braces, with $3\frac{1}{2}$ in. wrought-iron rose-headed nails.

Wherever bolts are used the washers underneath the nuts must not be less than $2\frac{1}{4}$ in. square by Bolts and washers. $\frac{1}{4}$ in. thick.

The whole of the work must be of the very best quality and finish in every respect. Quality of work

Every part must be framed perfectly square and true in every direction, and all the tenons must fit well into the mortises, and be bedded in with white lead; and all the holes for bolts must be bored slightly less in diameter than the bolt itself, that the whole may be solid and firm when fixed together.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for the Painting of Rolling Stock.)

Locomotive Engines.

Paint, in two coats of red lead, the inside of boiler and water-tank.

Previous to new lagging being fixed, the whole exterior of the boiler is to receive two coats of red lead.

The lagging to have two coats of lead colour; and under-side of iron lagging sheets, two coats of red lead.

After the lagging is fixed, the whole of the exterior of engine and tender to receive two coats of colour, stopped and filled up with not less than three coats of Noble and Hoare's patent filling, to be rubbed down to a smooth surface. It is then to receive one coat of lead colour and two coats of green, picked out with black, and edged with white.

The under-frame to be in every respect painted in like manner, the buffer plank being finished in vermilion, picked out with black.

The wheels to be painted with two coats of lead colour, stopped up, and to receive two coats of green, picked out with black.

The whole of the outside of the painted portion of the engine, tender, frames, wheels, &c., &c., to receive over all two coats of varnish.

Chains, springs, &c., to receive two coats of lead colour, and one of black or Japan.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint, &c., to become perfectly dry before the application of another.

Carriages.

They are first to be given three coats of lead colour, and four of filling up; then to be well rubbed down with pumice-stone, and receive two more coats of lead colour, and stopped with hard stopper; and then again faced down to a smooth surface with pumice-stone; then receive an additional coat of lead, and two coats of pattern colour.

The mouldings and framework to be picked out. The letters, garters, and number to be in gold, shaded with vermilion, lake, white, and black.

The whole to be finished with three coats of best copal varnish.

Roof to be covered with No. 1 navy canvas, but previous to this the wood-work is to receive two coats of paint, and three coats over all.

Inside of under-frame and bottom of body, steps, springs, wheels, axles, and other iron-work, to receive two coats of colour.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

Blinds, glass frames, and all inside fittings, to receive three coats of varnish.

C Vans, Sheep-vans, Cattle-wagon, and Meat-vans.

Paint body both inside and outside, as well as the under-frame, with four coats of colour, and one coat of pattern colour.

The outside of body and the under-frame to receive, in addition to the above, one coat of colour and varnish, and one coat of varnish to be given over all.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

The numbering and the lettering to be performed in a like manner to that which is done on the same class of vans and wagons as are at present on the Government Railways.

All the exposed iron-work, springs, wheels, axles, chains, and bottom, &c., to be painted one coat of lead colour and one of black.

A, B, D, and E Goods-wagons and Carriage-trucks.

Body to be painted both inside and outside, as well as the under-frame, in two coats of oil colour, and one coat of pattern colour.

The outside of body and the under-frame to receive, in addition to the above, one coat of colour and varnish.

Sufficient

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

The numbering and lettering to be performed in a like manner to that which is done on the same class of wagons and carriage-trucks as are at present on the Government Railways.

All exposed iron-work, springs, wheels, and axles, chains, and bottoms, &c., to be painted one coat of lead colour and one of black.

Funeral-cars.

To receive two coats of lead colour, three coats of filling up, one of staining, and then well rubbed down with hard pumice-stone.

It is then to be painted with two more coats of lead colour, and well stopped up with hard and soft stopper, after which it is to be faced to a smooth surface.

The panels to be finished with two coats of clean lead colour, and the frame-work, cornice, and moulding, with two coats of black paint.

Two coats of body varnish is to be given over all outside work.

The inside to receive three coats of clean light lead colour and two coats of varnish.

Roof, buffers, exposed iron-work, wheels, axles, chains, bottom, &c., to be given one coat of lead colour and one of black.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

Goods and Passenger Break-vans and Horse-boxes.

These vans to receive three coats of lead colour, stopped up, and two coats of brown oil colour according to sample supplied, and one coat of oil and varnish mixed, to be picked out with buff, and the whole to be finished with two coats of varnish.

The inside to receive three coats of paint, and afterwards grained oak, and finished with a coat of varnish.

The iron-work to have three coats of paint in oil, finished black. The inside of under-frame to receive two coats of paint.

The numbering and lettering to be performed in a like manner to that which is done on the same class of vans at present on the Government Railways.

Sufficient time must be allowed to elapse to enable each coat of paint to become perfectly dry before the application of another.

J. H. THOMAS,
Engineer.

E.

Government Railways, New South Wales.—Existing Lines Branch.

(Contracts for Rolling Stock.)

General Stipulations and Conditions.

Material and workmanship.	THE whole of the materials used in the construction of the rolling stock must be of the very best description, except where specified otherwise, and the work is to be executed in a sound, substantial, and workmanlike manner, and with a finish equal in all respects to the best class of their respective kinds of English manufacture.
Gauge.	The gauge of the railways for which the rolling stock is required is that of 4 feet 8½ inches.
Position of buffers.	The distance from centre to centre of buffers is in every case to be 5 feet 9 inches; and the height, above the upper surface of rail to centre of buffers, is to be 3 feet 4 inches.
Blinds, &c.	Venetian blinds in all the carriages are to be placed inside, and the glass frames outside, as in the imported carriages for the Western Line.
Panels.	It must be clearly understood that all the panels in carriages are to be grooved into the framing, and upon no account are nails or wood screws to be used in their fixture.
Contractor must provide all labour and materials.	The Contractor is to provide labour, materials, tools, machinery, and all other matters necessary for the due performance of the contract.
Bolts and nuts.	All bolts and nuts used throughout to be of Whitworth's standard thread.
Delivery.	It is to be distinctly understood that all the rolling stock required for either the Northern or Southern Lines are to be delivered at the Newcastle or Sydney Stations, as the case may be, free of all expenses for packing, cases, &c., &c.; and no allowance will be made for these, or for freight, insurance, or any other charges in connection with the delivery.
Tenders.	The Commissioner does not bind himself to accept the lowest or any tender.
Timber.	All timber, whether Colonial or Foreign, is, before being used, to be thoroughly well seasoned, free from wanes, shakes, or other imperfections, and worked full to the dimensions given.
Patent rights.	The tenders are to include the cost of all patent rights.
Rolling stock required for first year.	The probable amount of rolling stock which will be required during the first year will be about one-third of that set down for all the lines in the schedule attached to the form of tender.
Responsibility.	The Contractor is to be responsible for the period of one year from date of delivery, for all breakages arising from defective construction, or the use of inferior materials.
Time.	The whole of the rolling stock to be completed, delivered, and set to work entirely to the satisfaction of the Engineer for Existing Lines of Railways, within
Inspection.	The Engineer, or any officer appointed by him, shall have full liberty, at all reasonable times during the construction, to examine all material or work which may be intended for them, and to reject the whole or any portion that may be thought necessary; and any so rejected shall immediately be replaced in a satisfactory manner by the Contractor, and at his cost.
Dimensions on drawings.	The dimensions figured upon the drawings to be preferred in all cases to measurement by scale.

While

While the foregoing specification sets forth the general detail of the rolling stock, the Engineer reserves the option of such modifications as he may find necessary as the work proceeds, so long as the general dimensions are not interfered with, without any claim of extra payment being allowed. The drawings and specification must be taken to explain each other, but should there be any work and materials which may be reasonably and obviously considered necessary for the proper completion of the rolling stock, but which has not been shown on the drawings or described in the specification, or that may be mentioned or implied in one only, the same must be considered as included in the contract, and the Contractor must find whatever may be necessary to complete the rolling stock according to the true intent and meaning of the specification and drawings; and in all cases of defective description or any ambiguity, the explanation given by the Engineer shall be binding upon the Contractor.

Right of altering details.

The Engineer reserves to himself the power of making any deviation from or additions to the rolling stock, without invalidating the contract,—the value of such deviations, alterations, or additions to be ascertained and allowed for by the Engineer, at such rates as he shall consider to bear a due proportion to the other work, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

In the event of the construction of the rolling stock not proceeding with that despatch which the Engineer may consider necessary, or the Contractor fails from any cause to proceed in the execution of his contract, the Commissioner shall have full power and authority to cancel the contract, as far as relates to the work remaining to be done; and in such case the moneys which shall have been previously paid to the Contractor on account of the work executed, shall be taken by him as full payment for all the work done and materials supplied under the contract; and upon notice in writing, under the hand of the Commissioner, that he, under the authority of this condition, cancels the contract, being served upon the Contractor, or left at his last known place of abode, the contract shall be cancelled; and thereupon all sums of money that may be due or unpaid to the Contractor, together with the portions of the rolling stock left unfinished, and all sums of money named as penalties for the non-fulfilment of the contract, shall be forfeited and become payable to the Commissioner, and the said portions of the rolling stock shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid, shall be considered as ascertained damages for breach of contract.

Cancellation of contract.

If the Contractor become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the Contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the Trustee or Trustees under the assignment, to take such of, and all portions of the rolling stock, whether completed or not, from the Contractor and of the Assignees or Trustees of his estate, and re-contract with any other person or persons to proceed with and complete the said rolling stock, upon such terms, stipulations, and conditions as shall be deemed expedient.

Bankruptcy or Insolvency.

The Contractor will be required to provide two approved persons as sureties, to enter with him into a bond to the Commissioner for Railways, in the penal sum of for the proper performance and completion of the contract. The names of the persons proposed by him as sureties must be stated in the tender, the Commissioner for Railways reserving to himself the power of rejecting such proposed sureties, should he deem it advisable to do so.

Security.

Should the Contractor fail to procure such persons as may be deemed by the Commissioner to be eligible sureties, within days from the acceptance of the tender, or should the Contractor fail to execute the contract for the due performance of the work, or to execute and to procure the due execution, by the person so approved of, as sureties of the bond required for securing the due completion of the work to be done under the said contract, within days after the acceptance of such persons as sureties has been notified to him, the Commissioner will have the option of, and full power and authority to declare such acceptance to be annulled.

Payment will be made on the Engineer's certificate as the work progresses, unless same shall become not payable by reason of anything contained in these conditions up to the date specified for the completion of the contract, in the proportion of of the value of the work satisfactorily executed, and the remaining will be paid after the Engineer has certified that the whole of the rolling stock has been completed to his entire satisfaction.

Payment.

The words "or any officer appointed by him," in these general conditions, shall mean any person who may from time to time be appointed by the Engineer for Existing Lines of Railways, to supervise the work; and the words "Engineer for Existing Lines" or "Engineer" shall mean the Engineer for Existing Lines of Railways for the time-being of the Commissioner for Railways.

Interpretation clause.

J. H. THOMAS,
Engineer for Existing Lines of Railways.

These are the general stipulations and conditions marked "E," referred to in the annexed articles of agreement, dated the 28th day of September, A.D. 1869.

JOHN RUSSELL.
GEORGE RUSSELL.
G. A. MURRAY.

P. N. RUSSELL,

(By his Attorney—JOHN RUSSELL.)

Witness—W. S. HART.

E No. 22.

P. N. Russell & Co. to The Commissioner for Railways.

Wheels, Axles, and Springs.

Sydney, 15 July, 1869.

Sir,

Will you be good enough to give us an order to receive the wheels, axles, and springs, which you have on hand, for railway trucks? We require the vulcanized India-rubber springs at once.

It is understood that we return what you may now lend us, when we get them from England.

We have, &c.,
P. N. RUSSELL & Co.

Will Mr. Thomas say what arrangement was made, or is provision made in the specification, for lending these materials, or should they be paid for?—J.S., 16/7/69.

No provision was made in the specification, and consequently it is not compulsory on the part of the Commissioner to let Messrs. Russell have the wheels, &c., but it was understood that what wheels could be spared to enable the trucks as they were constructed to at once be made available would be lent, and the Contractor was to indent immediately for a little quantity.—J.H.T., 17/7/69.

Will Engineer-in-Chief be so good as to ascertain what we have in stock. I contemplate selling such as we do not want, but such as we may require for renewals I will lend to be replaced by those indented for by Messrs. Russell & Co.—J.S., 26/7/69.

Will storekeeper please to forward a statement showing the number of wheels and axles in stock?—J.W., 27/7/69.

Mr. Fielding, 27/7/69.

Number on hand	199 pairs.
Do. in harbour (not yet landed)	69 "
Total	268 pairs.

E.F., 29/7/69.

Will Messrs. Russell please to say how many wheels and axles they require?—J.W., 30/7/69.

Say 50 pairs wheels and axles, and necessary fittings.—P.N.R. & Co., 30/7/69.

What is the price of wheels and axles per pair, draw-bar and springs per set, and buffer springs per set, with store charges added in each case?—W.H.Q., 30/7/69.

Mr. Fielding.

Enclosed you have return required.—E.F., 30/7/69.

I suggest that twenty-five sets of wheels be offered to Messrs. Russell & Co., £32 16s. 6d. per set, and buffer springs £3 1s. per set. Draw-bar springs cannot be spared.—J.W., 30/7/69.

Commissioner, 30/7/69.

Offer at prices named.—J.S., 30/7/69.

Wrote, 31/7/69.

RETURN showing the number of Wagon Wheels and Axles, and fittings in Store, with net value and 10 per cent. added.

E No. 28.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney, 20 August, 1869.

Sir,

We have used up all the V. I.-rubber springs we have had from you. Will you be good enough to let us have an order for another case of 100?

Yours, &c.,
P. N. RUSSELL & CO.

Mr. Whitton.—J.S., 25/8/69.

E No. 29.

E No. 29.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney, 25 August, 1869.

Sir,

We require, in addition to the order already received from you, for railway rolling stock,—

100 wheels.
50 axles.
100 steel bearing springs.
212 V. L-r. springs.

As we are in immediate want of the above we will thank you to let us have them as soon as you conveniently can.

We have, &c.,
P. N. RUSSELL & CO.

Mr. Whitton ; see also 69/2,544.—J.S., 25/8/69.

Can the abovenamed articles be spared, without interfering with the requirements of the department.—J.W., 30/8/69.—Mr. Scott. The above can be spared and have sufficient to keep us going.—W.S., 31/8/69.

Will it be necessary to indent for an additional supply of wheels, &c., by next mail, if the requirements of Messrs. Russell be satisfied.—J.W., 31/8/69.—Mr. Scott. Railways, 69/3,321.

After these wheels and springs have been supplied, there will be in stock,—

150 pairs wheels and axles.
378 bearing springs.
(of this sort) 348 I-r. springs.

If Russell & Co. want any more, and they are not to return what they take away, I would suggest that more be indented for, say as follows :—

	Estimated cost.
200 pairs of 3-ft. wheels and axles	£5,150
400 pairs steel bearing springs, 2'8½ between centres of eyes, top plates 3" x ½"	362
1,000 cylindrical I-r. springs, 8½" long, 5" dia., and 2" hole	673
	£6,185

W. SCOTT, 2/9/69.

The Under Secretary for Public Works to P. N. Russell & Co.

Department of Public Works,
Railway Branch,
Sydney, 27 October, 1869.

Gentlemen,

I have the honor to acknowledge the receipt of your letter of the 25th instant, enclosing a cheque for £907 19s. 2d., in payment of the account against you for wheels, axles, and bearing-springs.

I have, &c.,
JOHN RAE,
(For the Commissioner for Railways).

F.

CORRESPONDENCE, &c., from F 1 to F 23, respecting Rolling Stock Locomotives, being made by Vale & Lacy.—7/5/69.

F No. 1.

The Under Secretary for Public Works to Vale & Lacy.

Department of Public Works,
Sydney, 27 April, 1869.

Gentlemen,

I am directed to inform you, that the Honorable the Secretary for Public Works will be glad to see you at this office, on 30th instant (Friday morning next, at 11 o'clock) on the subject of your tender for railway rolling stock.

I have, &c.,
JOHN RAE.

F No. 2.

Government Railways.—Tenders for Rolling Stock.

WRITE Messrs. Vale & Lacy and ask whether they are prepared to supply, during one year certain, at the prices named in the tender, *such portion of the rolling stock as may be hereafter agreed upon*; and also for a further period of three or four years (as may be agreed), in the event of Parliament voting money for this purpose.

J.S., 7/5/69.

Messrs. Vale & Lacy, 7/5/69.

Accept for the whole locomotives for one year certain, and for a further period of four years, if sanctioned by Parliament.—J.S., 18/5/69.

Mr. Moody to accept, B.C., 18/5/69. Wrote, 19/5/69.—R.M. J.S. (per R.M.) accepted, 22 May, 1869.—R.M. Mr. Thomas, for spec., &c., 25/5/69.

F No. 3.

Mr. G. Halligan to Vale & Lacy.

Department of Public Works,
Sydney, 7 May, 1869.

Gentlemen,

I am directed by the Honorable the Secretary for Public Works to request that you will have the goodness to say whether you are prepared to supply, during one year certain, at the prices mentioned in your tender, such portions of railway rolling stock, as may hereafter be agreed upon, and also to supply the same for a further period of three or four years (as may be agreed), in the event of Parliament voting money for the purpose?

I have, &c.,
GERALD HALLIGAN,
(for the Under Secretary.)

F No. 4.

Vale & Lacy to The Commissioner for Railways.

Druitt-street, 10 May, 1869.

Sir,

In answer to your inquiry, as to whether we will be prepared to accept the contract for one year certain, for the rolling stock, we have to state in reply that we are prepared to do so, providing the Government will give such an order as will pay to make patterns, &c.

At

At the same time we will expect the Government to guarantee the original contract for five years, should Parliament vote the money to carry out the same.

We have, &c.,
VALE & LACY.

Seen.—J.H.T., 26/5/69.

F No. 5.

The Commissioner for Railways to Vale & Lacy.

Department of Public Works,
Railway Branch,
Sydney, 20 May, 1869.

Gentlemen,

I have the honor to inform you that your tender for the supply of rolling stock for the Government railways is accepted only for the whole of the locomotives that may be required for one year certain, and also for all such as may be required during a further period of four years, if sanctioned by Parliament.

An order for the number required will be furnished without delay.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

F No. 6.

Vale & Lacy to The Commissioner for Railways.

Druitt-street, 20 May, 1869.

Sir,

We do ourselves the honor to acknowledge the receipt of your letter of the 20th instant, intimating your acceptance of our tender for rolling stock, for one year certain, for such portions as may hereafter be agreed upon.

We most respectfully request to be informed as to whether it is the intention of the Government that we should supply engines, or carriages and trucks, &c., as our tender was for the whole.

We would also take the liberty to remind you that it is necessary for the efficient carrying out of this contract that there should be some specific number, as you are aware that a great portion of the material will require to be imported from England.

We have, &c.,
VALE & LACY.

F No. 6A.

The Engineer for Existing Lines of Railways to The Commissioner for Railways.

Government Railways.—Existing Lines.
(Minute Paper.)—Engines and Rolling Stock.

I FORWARD herewith, in accordance with your request, a list of rolling stock, of which we are in immediate want. It will be seen that it exceeds the sum voted for 1869; but as nearly one-half of the year has already expired, there is no doubt that the quantity the Contractors will be able to deliver before the 31st December next will be far short of the vote, as it is scarcely probable that there will be even one engine delivered this year; however it will be necessary to order at least this quantity at once to enable the Contractors to indent for the material. It will be seen that I have not included other classes of engines as well as carriages, meat vans, powder vans, &c., as although much wanted. I have been forced to confine myself to what is most urgently required at the present moment.

Engines.

6 Mountain goods engines	£17,400
4 of class No. 1 to 4	13,000
2 do. 17 to 22.....	6,500
	<hr/>
	36,900
Add for Northern rates	200
	<hr/>
	£37,100

Rolling Stock.

100 D trucks	£11,500
50 B do.	5,800
10 A do.	1,120
10 covered goods vans	1,520
20 cattle wagons	2,960
6 passenger breaks (4 wheels)	1,890
4 do. do. (6 do.)	1,800
10 horse-boxes	2,450
10 carriage trucks	1,500
	<hr/>
	30,540
Add for Northern rates	1,000
	<hr/>
	£31,540

Grand

	<i>Grand Total.</i>	
Engines		£37,100
Rolling stock		31,540
		<u>£68,640</u>

J. H. THOMAS, 25/5/69.

Mr. Thomas to reduce, as this amount exceeds the vote.—J.S., *per* R.M., 4/6/69.

As instructed by the Commissioner I have reduced the list of engines and rolling stock so as to bring the total amount within the sum voted for 1869, viz.,—£60,000.

	<i>Engines.</i>	
4 Mountain goods engines		£11,600
4 of class Nos. 1 to 4		13,000
2 do. 17 to 22		6,500
		<u>£31,100</u>
Add for Northern rates		200
		<u>£31,300</u>

	<i>Rolling Stock.</i>	
100 D trucks		£11,500
30 B do.		3,480
11 A do.		1,120
8 covered goods vans		1,216
10 cattle wagons		1,480
6 passenger breaks (4 wheels)		1,890
4 do. (6 wheels)		1,800
10 horse-boxes		2,450
10 carriage trucks		1,500
		<u>£26,436</u>
Add for Northern rates		1,000
		<u>£27,436</u>

	<i>Grand Total.</i>	
Engines		£31,300
Rolling stock		27,436
		<u>£58,736</u>

J.H.T., 4/6/69.

Messrs. Vale & Lacy, I find, are willing to bind themselves to deliver the four mountain goods engines within 15 months, and the remaining six engines within 2 years of date of signing bond. Messrs. P. N. Russell will undertake to deliver the whole of the rolling stock contained in this list, within 12 months.—J.H.T., 7/6/69.

Mr. Whitton.

Memo. to Engineer-in-Chief.

The specifications for rolling stock, now I believe in Mr. Thomas' office, at Redfern Station, are urgently required for the Contractor. Please furnish.—R.M., 4/6/69.
Herewith.—W.H.Q., 7/6/69.

Government Railways.—(Minute Paper.)

Locomotive Engines required under Messrs. Vale & Lacy's Contract.

Will the Engineer-in-Chief be so good as to state how many, and the classes of locomotive engines it would be most advisable to order under the contract with Messrs. Vale & Lacy?—14/6/69.

Mr. Whitton.

The engines most wanted are those of classes 17 to 22, 23 to 28, and 1 to 4.

Engines 17 to 22.—I would suggest stronger stays to crown of fire-box, and an increase of strength to tube-plate between bottom tubes and crutch stays.

Lugs should be riveted on the inside of the boiler-shell, and stays screwed through the tube-plate.

The boiler would be better if made $4\frac{1}{4}$ in. diameter with a raised fire-box.

Proper sand boxes should be placed over each wheel.

All break-hangers to be of wrought-iron, with studs 2 inches in diameter on the engine frames, to hang to.

Liners to eccentrics to be of gun metal.

Brass packing-pieces $\frac{1}{4}$ thick to be put in each end of slide bars.

Iron plates to be bolted on instead of being riveted.

To have light corrugated iron roofs over foot-plate in place of wood.

To have "Cartazzi" axle-boxes to leading wheels in place of common axles.

To have stronger frames to tenders, especially when the breaks hang, and the bottom of the tender kept lower, similar to engine tenders from Nos. 23 to 28.

4 engines
required of class
17 to 22.
4 do. 23 to 28.
2 do. 1 to 4.

Steel

Steel tires on all wheels, both engines and tenders, and steel axles throughout.
Engines Nos. 23 to 28.—I suggest that the boiler be made 4 feet 4 inches in diameter, with raised fire-box.

The eccentric rods to be arranged with a T flange for bolting together, close to the strap, so as the rod can be lengthened as the liners wear.

The driving and trailing wheels to be 4 feet 6 inches in diameter instead of 5 feet 9 inches, as at present.

Engines Nos. 1 to 4.—The *driving* and *trailing wheels* should be coupled together, instead of the *leading* and *driving wheels*; the other portions of these engines remaining as at present.

Break gear should be applied to both driving and trailing wheels, in addition to the breaks on the tender.

The bottom of the tender should be lowered, similar to tenders to engines Nos. 23 to 28.

JOHN WHITTON.

15/6/69.

Locomotive Engines.

Approved 4..... 1 to 4.
4..... 17 to 22.
2..... mountain engines.

A copy of instructions to be sent to the Inspecting Engineer to arrange for necessary alterations and additions, except as to 23 to 28, which must remain in abeyance.

J.S., 16/6/69.

F No. 7.

Mr. Thomas.—J.S., 4/6/69.

Specification herewith.—J.H.T., 7/6/69.

Solicitor to accept list of stock, adv. original tender, &c., spec.—R.M., 15/6/69.

F No. 8.

Vale & Lacy to The Commissioner for Railways.

Druitt-street Engine-works,
Sydney, 10 June, 1869.

Sir,

After giving the fullest and most mature consideration to the necessity of saving whatever possible time in the construction of the locomotive engines, the terms of contract for which are now under your consideration,—

We have the honor to inform you that we find it perfectly impracticable for any engineering firm in the colony to deliver ten engines of the description required in twelve months from the date of contract. In order to comply strictly and properly with the specification of those engines it is necessary to import a part of the required material from England.

No stock of this material being held in the colony since the present contract is the first of the kind that was ever offered here.

We will not lose one single day in taking in hand and pushing on those parts of the work that can be done with the material to be procured in the colonies. The utmost we could undertake to do with regard to time would be to deliver four engines in fifteen months, four engines in nineteen months, two engines twenty-two months. Fully convinced that no other firm in the colony would shorten the time, and equally persuaded that the engines could not be imported and erected ready for use in less time, we confidently trust you will be pleased to give the matter your favourable consideration, and grant the time named for the delivery of the engines.

We have, &c.,
VALE & LACY.

Seen.—Mr. Lacy is to forward another proposition to-day, or early to-morrow.—J.S., 13/6/69.

F No. 9.

Vale & Lacy to The Commissioner for Railways.

Druitt-street Engine-works,
Sydney, 15 June, 1869.

Sir,

In compliance with your request to be informed as to the exact time we could finish the locomotives noticed in your annexed memorandum, we have the honor to state that of the four engines, Nos. 1 to 4, the four engines, Nos. 17 to 22, the two mountain engines, we could finish eight within fourteen months from date of signing contract, and two within two months after that time.

Four engines of class 23 to 28, four engines of class 1 to 4, four engines of class 17 to 22, would require a further time of six months before they could be delivered. We beg to inform you that if we could learn without delay which class of engines are most required, we would be able to save one month by making use of the outgoing mail.

We have, &c.,
VALE & LACY.

Order.—J.S., 15/6/69.

The Commissioner for Railways to Vale & Lacy.
 Department of Public Works,
 Railway Branch,
 Sydney, 15 June, 1869.

Gentlemen,

With reference to my letter of 20th May last, accepting your tender for rolling stock, I have now the honor to enclose you a list of the rolling stock for which your contract will be prepared.

I have to add that the necessary instructions have been forwarded to the Crown Solicitor to prepare the usual bond and contract without delay.

I have, &c.,
 JOHN SUTHERLAND,
 Commissioner for Railways.

ROLLING STOCK—ENGINES.

Two mountain goods engines; four of class Nos. 1 to 4; four of class Nos. 17 to 22. Eight to be delivered within fourteen months, remainder within sixteen months from date of acceptance, &c.

F No. 11.

T. S. Mort, Esq., to The Commissioner for Railways.

Payment made in England on shipment of Railway Materials for Locomotives, to the extent of invoice cost.
 Sydney, 25 June, 1869.

Sir,

With reference to the payment for the materials necessary to be imported from England, in connection with the contract for locomotives, may I ask if it will be in the power of the Government to cover the invoice cost thereof in London, provided no further payments were required on account of any engine until completed?

The bill of lading could of course be hypothecated, and further security given to the Government in Sydney prior to its being given up to us if so required.

I may mention that this is a matter of great moment to us, as if we have to send money from hence, or incur Exchange in England, the little margin we hope to preserve upon the undertaking will be entirely dissipated.

I am led to believe that I am not asking what will in anyway be prejudicial to the Government, and hope, therefore, you will kindly comply with my request.

I have, &c.,
 THOS. S. MORT.

Forwarded to Treasury with similar application from Messrs. P. N. Russell & Co.—J.S., 26/6/69.
 Submitted, 28/6/69.—I.J.

The Secretary for Works will please ascertain, and inform me the amount likely to be required by the Contractors to be paid in England, if their request should be acceded to.—S.S., 2/7/69.

The Under Secretary for Public Works, B.C., 2 July, 1869.—J.T. (for Under Secretary).

The Commissioner for Railways to Vale & Lacy.
 Department of Public Works,
 Railway Branch,
 Sydney, 6 July, 1869.

Gentlemen,

In reference to Mr. Thos. Mort's letter of the 25th ultimo, requesting that advances may be made in England to the extent of the invoice cost of railway materials imported therefrom by you, I have the honor to request you will be so good as to state what amount is likely to be required in the event of its being determined to comply with your application.

I have, &c.,
 JOHN SUTHERLAND,
 Commissioner for Railways.

F No. 13.

The Commissioner for Railways to Vale & Lacy.
 Department of Public Works,
 Railway Branch,
 Sydney, 8 July, 1869.

Gentlemen,

With reference to my letter of 20th May last, accepting tender for locomotive engines, &c., I have the honor to inform you, that as the mail leaves for England in a few days it is necessary that the bond and contract should be completed forthwith, and I have therefore to request you will provide the necessary security not later than noon on 10th instant.

I have, &c.,
 JOHN SUTHERLAND,
 Commissioner for Railways.

F No. 14.

Messrs. T. S. Mort, Vale, & Lacy, to The Commissioner for Railways.

Sydney, 13 July, 1869.

Sir,

In reply to your letter of 6th instant, asking what amount of advance would be required to be made in England on account of contract for locomotives, we beg to state that we shall be obliged by having the sum of seven thousand five hundred pounds (£7,500) placed at the disposal of Messrs. William Mort & Co., of 155, Fenchurch-street, London, to be advanced as the shipments are made against invoices and bills of lading.

The favour of your attention to this matter by the out-going mail will much oblige us.

We have, &c.,

T. S. MORT,
VALE & LACY.

The Under Secretary for Public Works, 14/7/69. The Under Secretary for Finance and Trade, B.C., 14/7/69.—J.R.

This amount may be advanced to Messrs. William Mort & Co. to the extent on the invoice cost of the locomotives, exclusive of charges.

Every precaution should be taken by Capt. Mayne to protect the Government; the bills of lading must be handed over to him in terms of Mr. Mort's letter of 25th ultimo, copy of which to be sent to him by the out-going mail. Credit to be opened in favour of Capt. Mayne for the amount required, viz., £7,500. Policy of insurance to be handed to Agent of the Government in England.—S.S., 14/7/69.

Letter of credit £7,500, sent to Colonial Agent, 14/7/69.—S.H.B.

Accountant to note and return.—H.L., 14/7/69. Noted.—G.L., 15/7/69.

Sydney, 13 July, 1869.

Sir,

We have to request that you will be so good as to make out the necessary bond, in respect of our accepted tender for locomotives, in the names of Thos. Sutcliffe Mort, Henry Vale, and Wm. Lacy, our sureties being Messrs. Alexander Brown and Peter Frank, both of Sydney. By acceding to our request you will much oblige

Yours, &c.,

VALE & LACY.

Approved.—J.S., 13/9/69.

Crown Solicitor, urgent, R.M.—13/7/79.

F No. 17.

Traffic Manager, Great Northern Railway, to The Commissioner for Railways.

OWING to the very large increase in the coal traffic on this line it is necessary that some more heavy goods engines should be provided. I inserted six in the form Mr. Thomas sent to me, and would suggest that two of them should be supplied as early as possible.

JNO. L. BEESTON.

We carried 48,000 tons coal last month.—J.L.B., 19/7/69. Commissioner. Mr. Whitton.—J.S., 21/7/69.

Additional goods engines are also wanted on the Southern and Western Railways, but I do not suppose that under existing arrangements these will be supplied in much less than two years from the present time.—J.W., 26/7/69. Commissioner, 26/7/69.

Mr. Beeston, 26/7/69.—J.S. Seen.—J.L.B., 31/7/69.

F No. 18.

67

F No. 18.

The Locomotive Foreman, G.S., W., & R. Railways, to The Engineer-in-Chief.

Extra Engines required.

I BEG to draw the attention of the Engineer-in-Chief to the fact that it is with the greatest difficulty that I can provide engine power to keep the traffic going; as the lines extend, the difficulty will increase. I see no probability of getting any engines from the Contractors here for 12 or 18 months.

Would it not be advisable to order from England, by the out-going mail, say six 18-cylinder goods engines?

The present engines are so over-worked that I have great difficulty in keeping them in good working order. I have had to put on screw patches on the boilers of some of the oldest of them in order to be able to keep them working.

W. SCOTT,
Oct. 5, '69.

Submitted for the consideration of the Commissioner.—J.W., 6/10/69.

Mr. Whitton, to prepare indent.—J.S., 7/10/69. Indent (69/510) herewith.—J.W., *pro* W.H.Q., 8/10/69.—Commissioner.

F No. 19.

Thos. S. Mort, Esq., to The Commissioner for Railways.

Sydney, 8 October, 1869.

Sir,

With reference to our conversation in respect of an order going Home for six locomotives (17 to 22), I beg to say that when I connected myself with the enterprise of making our locomotives in the colony, I had clearly in view that although only a small number of engines were specified in the tender, that your wants during the five years would be greatly in excess of the quantity specified, as otherwise I certainly should not have embarked in the venture.

I therefore respectfully beg to point out to you that, in fairness, all locomotives required by the Government in less time than should be reasonably allowed for manufacturing here—that is, under emergency conditions—should be passed through the Contractors for execution by importation.

With reference to the present emergency I may state that I am prepared to despatch Mr. Richard Lloyd by this mail, with the undertaking at the same time that the cylinders, the boilers, and the valve-motions shall be made here,—to be in readiness for putting together with the imported parts against the arrival of the same from England.

I have, &c.,
THOS. S. MORT.

Mr. Thomas to state whether, under the circumstances, he considers the last paragraph of Mr. Mort's letter should be agreed to.—J.S., 8/10/69. Yes.—J.H.T., 8/10/69.

Department of Public Works,
Sydney, 2 January, 1868.

CONTRACTS FOR PUBLIC WORKS.

It is hereby notified, for general information, that in all cases where tenders are sent in for works under this department, the following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration:—

- 1st. Each tender must state the time within which it is proposed to complete the work.
- 2nd. At the foot of every tender there must be a memorandum, signed by the party tendering, and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract in the event of the tender being accepted, and undertaking, in that event, that they will severally execute and deliver a bond to Her Majesty, in a penal sum of one-tenth of the gross amount of the contract, for securing such performance.

It is to be understood that the Government does not bind itself to accept the lowest or any tender.

JAMES BYRNES.

A.

Department of Public Works,
Railway Branch,
Sydney, 5 October, 1868.

TENDERS will be received at this office until Tuesday, the 17th day of November next, at noon, from persons willing to contract for making, at a schedule of prices, the whole of the rolling stock (inclusive or exclusive of locomotive engines) which may be required on the Government railways, for a period of five years, from 1st January, 1869.

Plans, specifications, and form of tender may be seen, and further particulars obtained, at the office of the Engineer for Existing Lines, Sydney Station.

Tenders to be endorsed, "Tender for Rolling Stock."

4 do. 17 to 22.

8 to be delivered within 14 months; remainder within 16 months from the date of acceptance, &c.

D.

Government Railways, New South Wales.—Existing Lines Branch.
Specification for Locomotive Engines.

Class 1.

TENDER engine, with inside cylinders, 16 in. diameter and 24 in. stroke; leading and driving wheels 5 ft. 6 in. (coupled), and trailing wheels 3 ft. 9 in.

To be constructed in every respect the same as Nos. 1, 2, 3, and 4 engines, built by Messrs. Stephenson & Co., and now employed on the Southern and Western Railways.

Class 2.

Tender engine, with inside cylinders, 14 in. diameter and 22 in. stroke; leading and driving wheels 4 ft. 6 in. diameter (coupled), and trailing wheels 3 ft. 6 in. in diameter, to be constructed in every respect the same as No. 5 engine, built by Messrs. Hawthorn & Co., and now employed on the Southern and Western Railways.

Class 3.

Tender engine, with outside cylinders, 14 in. diameter and 22 in. stroke; driving wheels, 5 ft. 6 in. diameter, and leading and trailing wheels 3 ft. 6 in. diameter.

To be constructed in every respect the same as No. 6 engine, built by Messrs. Fairbairn & Co., and now on the Great Southern and Western Lines.

Class 4.

Tender engine, with outside cylinders, 15 in. diameter and 22 in. stroke; driving wheels, 5 ft. 6 in. diameter, and leading and trailing wheels 3 ft. 6 in. diameter.

To be constructed in every respect the same as No. 7 engine, built by Messrs. Manning, Wardle, & Co., and now on the Great Southern and Western Railways.

Class 5.

Tank engine, with outside cylinders, 15 in. diameter and 22 in. stroke; driving wheels 5 ft. 6 in. diameter, and leading and trailing wheels 3 ft. 6 in. diameter.

To be constructed in every respect the same as Nos. 8 and 12 engines, built by Messrs. Manning, Wardle, & Co., and now on the Southern and Western Lines.

Class 6.

Tender engine, with outside cylinders, 15 in. diameter and 20 in. stroke; driving wheels 5 ft. 9 in. diameter, and leading and trailing wheels 3 ft. 6 in. diameter.

To be constructed in every respect the same as Nos. 9 and 11 engines, built by Messrs. Manning, Wardle, & Co., and now on the Southern and Western Lines.

Class 7.

Tender engines, with outside cylinders, 16 in. diameter and 22 in. stroke; driving and leading wheels (coupled) 5 ft. diameter, and trailing wheels 3 ft. 6 in. diameter.

To be constructed in every respect the same as No. 13 engine, built by Messrs. Manning, Wardle, & Co., and now on the Great Southern and Western Lines.

Class 8.

Tender engine, with inside cylinder, 16 in. diameter and 20 in. stroke; driving wheels 6 ft. diameter, and leading and trailing wheels 3 ft. 6 in. diameter.

To be constructed in every respect the same as Nos. 14, 15, and 16 engines, built by Messrs. Beyer, Peacock, & Co., and now on the Southern and Western Lines.

Class 9.

Class 9.

Tender engine, with inside cylinders, 18 in. diameter and 24 in. stroke; leading, driving, and trailing wheels, 4 ft. in diameter, and all coupled.

To be constructed in every respect the same as Nos. 17 to 22 inclusive, built by Messrs. R. Stephenson & Co., and now on the Great Southern and Western Lines.

Class 10.

Tender engine, with outside cylinder, 18 in. diameter and 24 in. stroke; leading wheels 3 ft. in diameter, with bogie arrangements; driving and trailing wheels 5 ft. 6 in. diameter, coupled.

To be constructed in every respect the same (with the exception of the diameter of driving and trailing wheels being 5 ft. 6 in., in place of 5 ft. 9 in.) as Nos. 23 to 28 inclusive, built by Messrs. Beyer, Peacock & Co., and now on the Great Southern and Western Railways.

Class 11.

Tank engines, with inside cylinders, 11 in. diameter and 18 in. stroke; leading, driving, and trailing wheels, 3 ft. in diameter, and all coupled.

To be constructed in every respect the same as Nos. 29, 30, and 31 engines, built by Messrs. Manning, Wardle, & Co., and now on the Windsor and Richmond Railway.

Class 12.

Tank engines, for working steep gradients, see detailed specification.

J. H. THOMAS,
Engineer.

Specification of Goods Tank Engines for the Great Railway.

THE work to be executed under this contract comprises the supplying and delivering of engines that class known as six-wheeled coupled tank engines, having the following general dimensions:—

	ft.	in.
Diameter of cylinder	0	17
Length of stroke	0	24
Diameter (outside) of boiler	4	4
Number of tubes, 196 (more or less).		
Length of do.	11	1
Diameter of do. (external)	0	2
Distance from centre to centre of cylinders	2	5½
From head of frame to centre of leading wheels	5	8¼
Distance between centres of leading, driving, and trailing wheels	5	9
Wheel base	11	6
From centre of trailing wheel to end of foot plate	7	3
Total length of frame	24	0½
Width between frames (inside measurement)	4	1
Thickness of frames	0	1½
Diameter of wheels	3	9
Length of fire-box (casing)	5	9
Do. do. inside	5	3
Area of fire-grate	19	3
Diameter of axle bearings	0	7½
Length of do. do.	0	6½
Ports (cylinder)	14 in. x	0 1½
Exhaust	14 in. x	0 3½
From centre to centre of buffers	5	9
Height of buffers above rail	3	4

BOILER.

The boiler is to be constructed of the form and dimensions shown on the drawings, lap-jointed, and all the plates used in manufacture must be $\frac{3}{8}$ inch thick; and both these and the angle irons must be of the very best Lowmoor iron, or such other as may be approved of by the Engineer for Existing Lines of Railways. Plates and angle iron.

The rivets to be $\frac{3}{4}$ inch diameter, of the best Yorkshire iron; the lap of plates to be $2\frac{1}{2}$ inches, and the pitch or distance between centres of rivets to be $1\frac{1}{2}$ inch. Great care must be observed that all the plates and angle irons are brought together before any rivets are put in, and that all the holes perfectly correspond with each other. Should any of them not do so exactly, they must be rimmed out until perfectly fair one with another, and a rivet made expressly to fit the enlarged opening thus caused. The heads of all the rivets must be properly set up, and all the joints perfectly caulked on both sides, care being taken in so doing that the plates are not injured. Rivets and riveting.

The

- Fire-box casing.** The fire-box casing is to be 5 ft. 9 in. long, and made of half-inch plates of the same quality of iron as that on the barrel of the boiler, and bent on the edges to a curve of 4 in. radius. The rivets and riveting to be performed in the same careful manner, and with the best material as that specified for the other portions of the boiler.
- Fire-box.** The fire-box is to be of copper, 5 ft. 3 in. long, and to have a tube plate 1 in. in thickness; the crown to be $\frac{5}{8}$ in. and the other plates $\frac{1}{2}$ in. The tube plate is to be pierced to receive 196 tubes (more or less), of 2 in. diameter, and the holes must be so set out as to insure a uniform distance between them; and no more chamfer is to be taken off their edges than is necessary to prevent them cutting the tubes. The fire-box stays to be made of copper, $\frac{7}{8}$ in. diameter; those for securing the fire-box to the casing to be placed 4 in. from centre to centre. They are to be screwed with a good sharp clean thread, with that portion in the water space turned off. Each stay must fit perfectly tight, with a full thread in the hole as well as on the stay. The holes in casing and fire-box must be true to each other, so that the stay through both may be perfectly square. Each stay must be well riveted over on both ends.
- The boilers to be stayed by gussets and double angle iron at smoke-box end, most carefully fixed; crown of the fire-box must be secured as shown on the drawings.
- Mud-plugs and doors.** Four mud-plugs and doors must be placed on the sides of the fire-box casing, level with the top of the fire-box, two being on each side, and placed alternately with each other; four at the corners of the casing, immediately above the water space, bosses of which to be forged on, and two in the smoke-box, fair with the inside of the bottom of the barrel. In this latter case the plug must be secured directly into the plate without a brass seating. There must also be two lead safety plugs in the top of the fire-box.
- Tubes.** The tubes to be brass, of the best description of metal, 196 (more or less) in number, and No. 12 gauge; they are to be 2 inches outside diameter, secured by approved steel ferrules.
- Testing.** The ordinary working pressure will be 120 lbs., and the boiler must be tested by hydraulic pressure; hot water being employed to 240 lbs. on the square inch, and afterwards in steam to 120 lbs.
- Smoke-box.** The smoke-box top, front, and door to be $\frac{1}{4}$ inch thick; the two former to be made of good plate, with a smooth face, and the latter to be made of best Yorkshire iron; the rivets countersunk and filed flush on the outside. Door and fastenings to be made, and a tube plate of the best $\frac{3}{4}$ inch Lowmoor plate.
- Chimney.** To be 16 inches diameter, and made of $\frac{1}{4}$ inch plate, flush-jointed outside, and well inside, with the top standing 14 feet above the rails, having 3 inches taper.
- Frame-bolts.** Frame-bolts of all kinds must be turned and accurately fitted and driven into their places, the holes being rimered out perfectly fair and true to receive them.
- Ash-pan.** The ash-pan to be constructed of $\frac{1}{4}$ inch plate and $1\frac{1}{2}$ inch angle iron; both the front and back ends must be provided with doors of $\frac{1}{4}$ inch plate, hinged by upper edge, and gear to work each from the foot-plate. A well is to be formed on bottom, by $1\frac{1}{2}$ inch angle iron, riveted all round.
- Spark-catcher.** The mouth of the blast pipe is to be covered by one of Moriarty's Spark-arresters, with $\frac{3}{16}$ inch spaces at top.
- Fire-bars.** The fire-bars must be made not only to change with each other, but with other engines of the same class.
- Wheels.** All the wheels are to be entirely made of wrought iron; they must be turned and bored, and have keyways cut strictly to a gauge, that they may all be precisely alike; and each wheel must be drawn on to its respective axle by hydraulic power, hot water being used to expand the boss; all the rims must be correctly turned to one gauge to receive the tires, so that the tires bored for one will fit any of the wheels equally as well on either of the engines.
- Gauge of railway.** The gauge of railway is 4 feet $8\frac{1}{2}$ inches.
- Tires.** The best steel rolled weldless tires are to be provided from Monk Bridge, Leeds, those on the driving wheels being without flanges; they must be bored out to the exact shape of the rims of the wheels, into which they are to be shrunk, and properly secured; they are to be turned or ground to a template.
- Axles.** The axles to be of the very best manufacture, having journals 7 inches diameter and 9 inches long.
- Gear.** Eccentrics to be of cast iron, $5\frac{1}{2}$ inches throw, and to be keyed fast on their places, the greatest possible care being taken before this is done that their correct positions upon the shaft have been ascertained. The eccentric straps and other portions of the gearing to be of the best Lowmoor iron, case-hardened, and re-cleaned up. The wrought iron-work to be all composed of Lowmoor, or of equally approved iron, and got up with the best finish. All the pins must be of shear steel, and hardened.
- Frames.** Longitudinal frames to be of the best iron in one plate, 2 feet 10 inches extreme depth, and $1\frac{1}{2}$ inch thick, planed inside. All the holes must be marked and drilled to one template, and rimered out to the exact size given; and every bolt securing the cylinders, stays, &c., &c., to be turned to gauge, fitted and driven tight into its place. All the bolts must be carefully made, and turned up to the exact size.
- When the frames, cylinders, &c., are all bolted and riveted together, and before the boiler and wheels and axles are put into their places, the correctness of all the dimensions, and the truth and accuracy of all the work, must be carefully checked by diagonal as well as longitudinal and transverse measurement.
- The frames must be strictly square and free from cross windings, and the guard-plate perfectly square with the engine in all directions.
- Cross stays.** The feet and angle irons on every stay, and of every kind, where they bed upon the frames, must be planed perfectly true, and to the exact length required, so that they fit perfectly to their places without setting or twisting; and every hole must be rimered out that it may be perfectly fair throughout, as specified for the frames. No liners or filling-pieces will be allowed to make up imperfect work for dimensions.
- Axle-boxes.** The axle-boxes to be of best cast iron, fitted carefully to template both inside for the steps and outside for the rubbing pieces. The steps to be of best hard gun-metal, and to be confined by iron boxes underneath the journals. Care must be taken in fixing the oil pipes in the top of the axle-boxes, that they be so placed as to convey all the oil directly on the top of the journals, and that it is not wasted by running away between the side of the brass and the inside of the box.
- The axle-box bottoms, or oil cellars, are kept up in their places by bolts as shown. All the steps must be perfectly bedded into their respective axle-boxes, and well fitted on the journals.
- The leading and trailing wheel boxes are to have half-inch lateral play, but the driving wheel boxes must have no more space allowed between the boxes and rubbing pieces than just sufficient to allow each axle-box to slip readily and freely into its place.
- The

The rubbing-pieces on the horn plates to be of hard and strong cold blast cast iron, correctly fitted. All the springs must be made of the very best spring steel. Each spring must be tested before being put in its place, by being weighted until the camber has been taken off, and on the removal of the weight the spring is found to resume its original form.

The cylinders to be 17 inches diameter, and 24 inches stroke, placed inside the framing, and inclined as shown, made of the very best iron, perfectly free from honeycomb or any defects whatever; they must be truly bored out, the front and end being bell-mouthed $\frac{1}{8}$ of an inch, so that the pistons may be easily put in their places. All the joints to be planed, turned, or scraped to a true surface, so that perfect joints can be made with a coat of very thin linseed oil laid on with a brush. Each cylinder to be bolted to the frames with $1\frac{1}{2}$ -inch bolts.

It is most essential that those as well as all the other bolts should be carefully turned, fit perfectly tight in good true holes. Steam ports, 14 x 1 $\frac{1}{2}$. Exhaust port, 14 x 3 $\frac{1}{2}$. Lap of valve, 1 $\frac{1}{4}$ inch outside, $\frac{1}{8}$ inside, lead bare $\frac{1}{8}$ inch, full travel 5 inches.

The body and plate of the pistons to be of the best toughened cast iron, and the rings of gun-metal; the latter must be turned $\frac{1}{8}$ inch larger than the diameter of the cylinders with a $\frac{1}{4}$ inch cut out of them, and then the two ends brought close together, and returned to the exact diameter of cylinder, and properly fitted with a stop. The weight of the piston must be carried upon the packing rings, and not upon the body of the piston.

All the flat surfaces must be well and perfectly scraped, and made steam-tight.

The piston rods to be 2 $\frac{3}{8}$ inches diameter, and made of steel.

The slide valves to be set with a lead of $\frac{1}{16}$ of an inch, and to be made of the best gun-metal.

The regulators to be made of gun-metal in joints, scraped up to a perfect surface, and the lever that works the valve must fit on without shaking, and work smoothly throughout the whole stroke of the valve.

The slide bars to be of steel.

The slide blocks to be of cast iron, and to have lubricating boxes.

The connecting rod to be of the best fagoted iron, and to be bright all over.

The boiler is to be fed by a pair of No. 10 Giffard's Injectors.

The feed pipes to be of copper, No. 8 wire gauge, and must be brazed on the inside with hard solder; care to be taken that the pipes are so set that the flanges of the joints come fairly to their places without any spring upon the pipes.

The steam pipes to be of copper, No. 14 gauge, and all the flanges must have scraped surfaces.

The hand rails to be of iron 1 $\frac{1}{2}$ inch diameter, and secured to saddle tank with brass studs.

The whole of the boiler and fire-box to be covered with white pine, well-seasoned in strips of not more than 2 $\frac{1}{2}$ inches wide by 1 inch thick, tongued into each other by hoop iron $\frac{3}{8}$ inch wide, and the whole well and neatly covered by sheet iron, No. 18 wire gauge, and well secured by brass hoops.

Two 3 $\frac{1}{2}$ -inch safety-valves, of Naylor's or Ramsbottom's arrangement, to be placed over the fire-box.

One glass gauge, and three gauge-cocks from pattern to be supplied.

The whistle to be made of hard brass, to pattern.

All bolts and nuts must in every instance be to Whitworth's standard thread.

The saddle tank, placed over the barrel of boiler is to be made of $\frac{1}{8}$ -inch best sheet iron, stiffened with ties inside, to be well riveted together, and the points of the rivets neatly snapped. The heads of all the rivets must be properly set up; all joints properly caulked. The plates to be riveted together with $\frac{1}{2}$ -inch rivets.

Buffer beams, 1 $\frac{1}{2}$ inch rolled iron, well gusseted, to be fitted with draw-hooks and chains at both ends of the engines. The buffers to be Corlett's patent.

Four sand-boxes to be provided, with copper pipes, &c., complete.

All the working parts to be furnished with perfect means of lubricating.

The glass water-gauge must be so placed that the lowest visible part of the glass is 3 inches above the highest part of crown of the fire-box. Lamp-holders to pattern to be fixed as instructed.

Cocks to be supplied and fitted for cylinders, blow-off scum-water, &c. (of which patterns will be supplied), to be of gun-metal.

The boiler and fire-box casing to have two coats red oxide paint, previous to having the lagging put on, and the wood with two coats of lead colour.

The frames, wheels, tank, and all other necessary parts of the engine, to have two good coats of lead colour previous to the filling, which must be done with three coats rubbed to a perfectly smooth surface, and with another coat of lead colour previous to the finishing, which is to be done in the usual way adopted at the Redfern Railway Works.

General Stipulations.

Throughout the whole the very best materials and workmanship is to be used in every way equal to the best class of locomotive engines; and the manufacturer will be held responsible for their safe delivery at and for all defects of whatever kind which may arise from imperfect workmanship or material, until they shall have run a distance of (1,000) one thousand miles with proper loads upon some portion of the Railway for which they are intended.

The whole of the engines are to be completed, delivered, and set to work entirely to the satisfaction of the Engineer for Existing Lines of Railway, within

The Engineer, or any officer appointed by him, shall have full liberty, at all reasonable times during the construction, to examine all material or work which may be intended for them, and to reject the whole or any portion that may be thought necessary; and any so rejected shall immediately be replaced in a satisfactory manner by the Contractor and at his cost.

The dimensions figured upon the drawings to be preferred in all cases to measurement by scale.

While the foregoing specification sets forth the general detail of the engines the Engineer reserves the option of such modifications as he may find necessary as the work proceeds, so long as the general dimensions are not interfered with, without any claim of extra payment being allowed. The drawings and specifications must be taken to explain each other; but should there be any work and materials which may be reasonably and obviously considered necessary for the proper completion of the engines, but which has not been shown on the drawings or described in the specification, or that may be mentioned or implied in one only, the same must be considered as in the contract, and the Contractor must find whatever may be

necessary to complete the engines according to the true intent and meaning of the specification and drawings; and in all cases of defective description or any ambiguity, the explanation given by the Engineer shall be binding upon the Contractor.

The Engineer reserves to himself the power of making any deviation from or additions to the engines, without invalidating the contract; the value of such deviations, alterations, or additions to be ascertained and allowed for by the Engineer, at such rates as he shall consider to bear a due proportion to the other work of the engines, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be.

Cancellation of contract.

In the event of the construction of the engines not proceeding with that despatch which the Engineer may consider necessary, or the Contractor fails from any cause to proceed in the execution of his contract, the Commissioner shall have full power and authority to cancel the contract, as far as relates to the work remaining to be done; and in such case the moneys which shall have been previously paid to the Contractor on account of the work executed shall be taken by him as full payment for all the work done and materials supplied under the contract; and upon notice in writing, under the hand of the Commissioner, that he, under the authority of this condition cancels the contract, being served upon the Contractor, or left at his last known place of abode, the contract shall be cancelled; and thereupon all sums of money that may be due or unpaid to the Contractor, together with the portions of the engines left unfinished, and all sums of money named as penalties for the non-fulfilment of the contract, shall be forfeited and become payable to the Commissioner, and the said portions of the engines shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid, shall be considered as ascertained damages for breach of contract.

Facilities afforded.

The Commissioner will afford every facility to parties undertaking this contract, so far as the selling of any stores, for which cost price, with 10 per cent. added, is to be paid, or the loan of any tools he may possess, and which can be conveniently spared at the time, to be charged for as may be arranged.

The Contractor will have to satisfy himself of the accuracy of the drawings, and lay down a full-size working drawing of the engine, showing all the details.

The tender is to include all expenses of removing, delivery, and trials, as well as all the necessary working plans, tracings, &c.

Bankruptcy or insolvency.

If the Contractor become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the Contractor, or to the Official or other Assignee, or Assignees of his insolvent estate, or to the Trustee or Trustees under the assignment, to take such of, and all portions of the engines, whether completed or not, from the Contractor and of the Assignees or Trustees of his estate, and re-contract with any other person or persons to proceed with and complete the said engines, upon such terms, stipulations, and conditions as shall be deemed expedient.

Security.

The Contractor will be required to provide two approved persons as sureties, to enter with him into a bond to the Commissioner for Railways, in the penal sum of

for the proper performance and completion of the contract. The names of the persons proposed by him as sureties must be stated in the tender, the Commissioner for Railways reserving to himself the power of rejecting such proposed sureties, should he deem it advisable to do so.

Should the Contractor fail to procure such persons as may be deemed by the Commissioner to be eligible sureties, within days from the acceptance of the tender, or should the Contractor fail to execute the contract for the due performance of the work, or to execute and to procure the due execution, by the persons so approved of, as sureties of the bond required for securing the due completion of the work to be done under the said contract, within days after the acceptance of such persons as sureties has been notified to him, the Commissioner will have the option of, and full power and authority to declare such acceptance to be annulled.

Payment.

Payment will be made on the Engineer's certificate as the engines progress, unless same shall become not payable by reason of anything contained in these conditions up to the date specified for the completion of the contract, in the proportion of of the value of the work satisfactorily executed, and the remaining will be paid after the Engineer has certified that the whole of the engines have been completed to his entire satisfaction.

Interpretation clause.

The words "or any officer appointed by him," in these general conditions, shall mean any person who may from time to time be appointed by the Engineer for Existing Lines of Railways, to supervise the work; and the words "Engineer for Existing Lines" or "Engineer" shall mean the Engineer for Existing Lines of Railways for the time-being of the Commissioner for Railways.

J. H. THOMAS,
Engineer for Existing Lines of Railways.

Government Railways, New South Wales.—Existing Lines Branch.

(Specification for the Painting of Rolling Stock.)

Locomotive Engines.

Paint, in two coats of red lead, the inside of boiler and water-tank.

Previous to new lagging being fixed, the whole exterior of the boiler is to receive two coats of red lead.

The lagging to have two coats of lead colour; and under-side of iron lagging sheets, two coats of red lead.

After the lagging is fixed, the whole of the exterior of engine and tender to receive two coats of colour, stopped and filled up with not less than three coats of Noble and Hoare's patent filling, to be rubbed down to a smooth surface. It is then to receive one coat of lead colour and two coats of green, picked out with black, and edged with white.

The under-frame to be in every respect painted in a like manner, the buffer plank being finished in vermilion, picked out with black.

The wheels to be painted with two coats of lead colour, stopped up, and to receive two coats of green, picked out with black. The

The whole of the outside of the painted portion of the engine, tender, frames, wheels, &c., &c., to receive over all two coats of varnish.

Chains, springs, &c., to receive two coats of lead colour, and one of black or Japan.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint, &c., to become perfectly dry before the application of another.

Carriages.

They are first to be given three coats of lead colour, and four of filling up; then to be well rubbed down with pumice-stone, and receive two more coats of lead colour, and stopped with hard stopper; and then again faced down to a smooth surface with pumice-stone; then receive an additional coat of lead, and two coats of pattern colour.

The mouldings and framework to be picked out. The letters, garters, and number, to be in gold, shaded with vermilion, lake, white, and black.

The whole to be finished with three coats of best copal varnish.

Roof to be covered with No. 1 navy canvas; but previous to this the woodwork is to receive two coats of paint and three coats over all.

Inside of under-frame and bottom of body, steps, springs, wheels, axles, and other iron-work, to receive two coats of colour.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

Blinds, glass frames, and all inside fittings, to receive three coats of varnish.

C. Vans, Sheep-vans, Cattle-wagons, and Meat-vans.

Paint body both inside and outside, as well as the under-frame, with four coats of colour, and one coat of pattern colour.

The outside of body and the under-frame to receive, in addition to the above, one coat of colour and varnish, and one coat of varnish to be given over all.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

The numbering and the lettering to be performed in a like manner to that which is done on the same class of vans and wagons as are at present on the Government Railways.

All the exposed iron-work, springs, wheels, axles, chains, and bottom, &c., to be painted one coat of lead colour and one of black.

A, B, D, and E Goods-wagons and Carriage-trucks.

Body to be painted both inside and outside, as well as the under-frame, in two coats of oil colour, and one coat of pattern colour.

The outside of body and the under-frame to receive, in addition to the above, one coat of colour and varnish.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

The numbering and lettering to be performed in a like manner to that which is done on the same class of wagons and carriage-trucks as are at present on the Government Railways.

All exposed iron-work, springs, wheels and axles, chains, and bottoms, &c., to be painted one coat of lead colour and one of black.

Funeral-cars.

To receive two coats of lead colour, three coats of filling up, one of staining, and then well rubbed down with hard pumice-stone.

It is then to be painted with two more coats of lead colour, and well stopped up with hard and soft stopper, after which it is to be faced to a smooth surface.

The panels to be finished with two coats of clean lead colour, and the frame-work, cornice, and moulding, with two coats of black paint.

Two coats of body varnish is to be given over all outside work.

The inside to receive three coats of clean light lead colour and two coats of varnish.

Roof, buffers, exposed iron-work, wheels, axles, chains, bottom, &c., to be given one coat of lead colour and one of black.

Sufficient time must be allowed to elapse to enable each of the foregoing coats of paint to become perfectly dry before the application of another.

Goods and Passenger Break-vans and Horse-boxes.

These vans to receive three coats of lead colour, stopped up, and two coats of brown oil colour, according to sample supplied, and one coat of oil and varnish mixed, to be picked out with buff, and the whole to be finished with two coats of varnish.

The inside to receive three coats of paint, and afterwards grained oak, and finished with a coat of varnish.

The iron-work to have three coats of paint in oil finished black. The inside of under-frame to receive two coats of paint.

The numbering and lettering to be performed in a like manner to that which is done on the same class of vans at present on the Government Railways.

Sufficient time must be allowed to elapse to enable each coat of paint to become perfectly dry before the application of another.

J. H. THOMAS,
Engineer.

Government Railways, New South Wales.—Existing Lines Branch.

(Contracts for Rolling Stock.)

General Stipulations and Conditions.

Material and workmanship.	THE whole of the materials used in the construction of the rolling stock must be of the very best description, except where specified otherwise, and the work is to be executed in a sound, substantial, and workmanlike manner, and with a finish equal in all respects to the best class of their respective kinds of English manufacture.
Gauge. Position of buffers.	The gauge of the railways for which the rolling stock is required is that of 4 feet 8½ inches. The distance from centre to centre of buffers is in every case to be 5 feet 9 inches; and the height, above the upper surface of rail to centre of buffers, is to be 3 feet 4 inches.
Blinds, &c.	Venetian blinds in all the carriages are to be placed inside, and the glass frames outside, as in the imported carriages for the Western Line.
Panels.	It must be clearly understood that all the panels in carriages are to be grooved into the framing, and upon no account are nails or wood screws to be used in their fixture.
Contractor must provide all labor and materials.	The Contractor is to provide labour, materials, tools, machinery, and all other matters necessary for the due performance of the contract.
Bolts and nuts.	All bolts and nuts used throughout to be of Whitworth's standard thread.
Delivery.	It is to be distinctly understood that all the rolling stock required for either the Northern or Southern Lines, are to be delivered at the Newcastle or Sydney Stations, as the case may be, free of all expenses for packing cases, &c., &c.; and no allowance will be made for these, or for freight, insurance, or any other charges in connection with the delivery.
Tenders.	The Commissioner does not bind himself to accept the lowest or any tender.
Timber.	All timber, whether Colonial or Foreign, is, before being used, to be thoroughly well seasoned, free from wanes, shakes, or other imperfections, and worked full to the dimensions given.
Patent rights.	The tenders are to include the cost of all patent rights.
Rolling stock required for first year.	The probable amount of rolling stock which will be required during the first year will be about one-third of that set down for all the lines in the schedule attached to the form of tender.
Responsibility.	The Contractor is to be responsible for the period of one year from date of delivery, for all breakages arising from defective construction, or the use of inferior materials.
Time.	The whole of the rolling stock to be completed, delivered, and set to work entirely to the satisfaction of the Engineer for Existing Lines of Railways, within
Inspection.	The Engineer, or any officer appointed by him, shall have full liberty, at all reasonable times during the construction, to examine all material or work which may be intended for them, and to reject the whole or any portion that may be thought necessary; and any so rejected shall immediately be replaced in a satisfactory manner by the Contractor, and at his cost.
Dimensions on drawings. Right of altering details.	The dimensions figured upon the drawings to be preferred in all cases to measurement by scale. While the foregoing specification sets forth the general detail of the rolling stock, the Engineer reserves the option of such modifications as he may find necessary as the work proceeds, so long as the general dimensions are not interfered with, without any claim of extra payment being allowed. The drawings and specification must be taken to explain each other; but should there be any work and materials which may be reasonably and obviously considered necessary for the proper completion of the rolling stock, but which has not been shown on the drawings or described in the specification, or that may be mentioned or implied in one only, the same must be considered as included in the contract, and the Contractor must find whatever may be necessary to complete the rolling stock according to the true intent and meaning of the specification and drawings; and in all cases of defective description or any ambiguity, the explanation given by the Engineer shall be binding upon the Contractor.
Cancellation of contract.	The Engineer reserves to himself the power of making any deviation from or additions to the rolling stock, without invalidating the contract; the value of such deviations, alterations, or additions to be ascertained and allowed for by the Engineer, at such rates as he shall consider to bear a due proportion to the other work, and the value thereof added to or deducted from the amount to be paid to the Contractor, as the case may be. In the event of the construction of the rolling stock not proceeding with that despatch which the Engineer may consider necessary, or the Contractor fails from any cause to proceed in the execution of his contract, the Commissioner shall have full power and authority to cancel the contract, as far as relates to the work remaining to be done; and in such case the moneys which shall have been previously paid to the Contractor on account of the work executed, shall be taken by him as full payment for all the work done and materials supplied under the contract; and upon notice in writing, under the hand of the Commissioner, that he, under the authority of this condition, cancels the contract, being served upon the Contractor, or left at his last known place of abode, the contract shall be cancelled; and thereupon all sums of money that may be due or unpaid to the Contractor, together with the portions of the rolling stock left unfinished, and all sums of money named as penalties for the non-fulfilment of the contract, shall be forfeited and become payable to the Commissioner, and the said portions of the rolling stock shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid, shall be considered as ascertained damages for breach of contract.
Bankruptcy or insolvency.	If the Contractor become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the Contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the Trustee or Trustees under the assignment, to take such of, and all portions of the rolling stock, whether completed or not, from the Contractor and of the Assignees or Trustees of his estate, and re-contract with any other person or persons to proceed with and complete the said rolling stock, upon such terms, stipulations, and conditions as shall be deemed expedient.
Security.	The Contractor will be required to provide two approved persons as sureties, to enter with him into a bond to the Commissioner for Railways, in the penal sum of for the proper performance and completion of the contract. The names of the persons proposed by him as sureties must be stated in the tender, the Commissioner for Railways reserving to himself the power of rejecting such proposed sureties, should he deem it advisable to do so.

Should

Should the Contractor fail to procure such persons as may be deemed by the Commissioner to be eligible sureties, within _____ days from the acceptance of the tender, or should the Contractor fail to execute the contract for the due performance of the work, or to execute and to procure the due execution, by the person so approved of, as sureties of the bond required for securing the due completion of the work to be done under the said contract, within _____ days after the acceptance of such persons as sureties has been notified to him, the Commissioner will have the option of, and full power and authority to declare such acceptance to be annulled.

Payment will be made on the Engineer's certificate _____ as the work progresses, unless same shall become not payable by reason of anything contained in these conditions up to the date specified for the completion of the contract, in the proportion of _____ will be paid after the Engineer has certified that the whole of the rolling stock has been completed to his entire satisfaction.

The words "or any officer appointed by him," in these general conditions shall mean any person who may from time to time be appointed by the Engineer for Existing Lines of Railways, to supervise the work; and the words "Engineer for Existing Lines" or "Engineer" shall mean the Engineer for Existing Lines of Railways for the time-being of the Commissioner for Railways. Interpretation clause.

J. H. THOMAS,
Engineer for Existing Lines of Railways.

These are the general stipulations and conditions marked "E," referred to in the annexed articles of agreement, dated the 17th day of December, A.D. 1869.

Government Railways—(Minute Paper.)

Wagon Wheels with Cast Boss, Tires, and Axles for Wagon Wheels.

WILL the Engineer for Existing Lines provide with as little delay as possible 56 tires for wagon wheels with cast boss, and forward same to Mr. McArthur as fast as they can be provided.

I also wish 28 axles forwarded to Mr. McArthur at once.

Mr. Thomas.—J.S., 18/1/69. Forwarded, 20/1/69.—J.H.T., 28/1/69.

H No. 2.

McArthur & Co. to The Commissioner for Railways.

Waterview Engine Works,
Patent Slip and Graving Dock,
Balmain, 20 January, 1869.

Sir,

Referring to the various conversations we have had the honor of having with you, relative to the manufacture of wheels for railway wagons, it is of course a matter of some difficulty to name a definite price at which we could make them. One of the great points of consideration is the number that may be required, as the larger the number the lower the price would be in comparison, thus—for 100 the cost would be less in comparison than for 50; and were we to have a large number placed in our hands to make, we feel confident that the price we could deliver them at would be little, if any, in excess of the cost of importing them from England. With the large resources of our establishment we are in a position to make any number that may be required, and we do not think that even at the commencement the cost would exceed £20 per pair.

We beg to enclose you a schedule of the prices we would charge for the use of the different machines, as also a schedule of the prices we charge for our general engineering work; and in conclusion would add that in the event of your honoring us with an order we would use our utmost endeavours to turn out the wheels at the lowest possible price compatible with good sound workmanship and material.

We have, &c.,

T. McARTHUR & CO.

Order 56 wheels to be forthwith prepared, the Government providing tires and axles—the whole to be completed at the schedule of prices, subject to modification if a larger order can be given.—J.S., 20/1/69.

T. M'Arthur & Co. to The Commissioner for Railways.

Waterview Engine Works,
Patent Slip and Graving Dock,
Balmain, 9 February, 1869.

Sir,

We have the honor to inform you that the seven pairs of wheels, being all for which we had the tires, are now completed and ready for delivery, and we would thank you to give the necessary orders for the inspection of the same, at your convenience.

We have, &c.,

T. M'ARTHUR & CO.

I understand these wheels are now in store. Ask Mr. Thomas to examine them.—J.S., 12/2/69.
I have examined them, and although a little rough I consider that of the kind they are very good wagon wheels.—J.H.T., 15/2/69.
Seen.—J.S., 16/2/69.

H Nos. 5 & 6.

Government Railways,
Store Branch Station,
25 February, 1869.

MEMORANDUM to the Chief Clerk,—

The contract price for conveyance of stores over 10 cwt. per package to and from store to back wharf is 6s. 6d. per ton; the Contractor expects to be paid a higher rate for the wheels and axles taken to Messrs. M'Arthur & Co.; 10s. 6d. per ton is quoted by him as being a fair charge. Please say if credit will be given at that rate.

EDWD. FIELDING.

This is not in contract, and the distance is at least three miles beyond the boundary of the city—10s. 6d. is I think reasonable.—J.S., 26/2/69.

Seen, 27/2/69.—E.F.

H No. 7.

Department of Public Works,
Sydney, 15 March, 1869.

I SHALL be glad to know if Mr. Thomas has tested the wheels and axles prepared by Messrs. M'Arthur & Co., as verbally instructed by me; and, if so, I shall be glad to have his report at once.

JOHN SUTHERLAND.

THE best test that can be given is to run them for some months in our goods trucks, but as yet they have not been running more than a week. From the fact of the tires being but $1\frac{1}{2}$ in. on those made by Messrs. M'Arthur & Co. (no fault of theirs), while those imported are $2\frac{1}{8}$ in., it will necessitate altering of springs, &c., to balance the truck, before we can run one pair of each, Colonial and imported, in the same wagon.

I examined on delivery those made by Messrs. M'Arthur, and to all appearance they are very well made; but it is right that I should point out to the Commissioner that they are far from being the best class of wheel, or such as any Engineer would now think of specifying for—as it is generally admitted that the solid wrought iron wheel is both the safest and most durable.—J.H.T., 15/3/69.

Seen, 18/3/69.

M'Arthur & Co. to The Commissioner for Railways.

Waterview Engine Works,
Patent Slip and Graving Dock,
Balmain, 5th March, 1869.

Sir,

We have the honor to enclose herewith the account for the twenty-eight pairs of railway wagon wheels, which we have completed as per your order of the 21st January, 1869.

We would take this opportunity of submitting for your consideration the prices at which we are willing to undertake to manufacture a certain number of these wheels, say at the rate of two pairs per day, providing that the Government will honor us by an order for such a number, and extending over such a term as will justify us in going to the expense necessary for such production.

The price for wheels, the Railway Department as heretofore finding axles and tires, would be twelve pounds (£12) per pair.

The price for wheels, we finding everything, would be twenty-three pounds (£23) per pair.

Trusting that these prices may be found such as to enable you to honor us with an order for a further and larger number,

We have, &c.,

THOS. M'ARTHUR & Co.

Treasury Voucher No.

CORRESPONDENCE, &c., from I No. 1 to I No. 4, respecting purchase of Wheels from P. N. Russell & Co.—23/1/69.

I No. 1.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney Foundry,
Sydney, 23 January, 1869.

Sir,

We have the honor to hand you enclosed a tracing of 66 all wrought-iron wagon-wheels we have on hand. The tires are all more or less worn, and most of the wheels would require new ones.

If you will instruct the Engineer for Existing Lines to give us two tires and one axle, we will turn and fit them on a pair of wheels, and which will enable us to arrive at the cost. We will then have the honor to offer you the bulk at the lowest rate we can supply them at.

We have, &c.,

P. N. RUSSELL & Co.

I No. 2.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney Foundry,
Sydney, 2 February, 1869.

Sir,

Referring to our letter, dated 23rd ultimo, respecting the wagon-wheels we have for sale, we will deliver the wheels as they are, at the Railway Station, Redfern, at the rate of eighteen pounds ten shillings stg. (£18 10s.) per set of 4 wheels and 2 axles.

We have, &c.,

P. N. RUSSELL & Co.

Will

Will Mr. Thomas be so good as to look at these wheels, &c., and report if they are useful, and as to the value.—J.S., 9/2/69.

The wheels are of a good, strong, description, but they are upon axles made for a different gauge of rail to ours, which would necessitate their being cut and shut; and this, for several reasons, it would not be advisable to do. I would recommend, therefore, that Messrs. Russell be asked to name a price for the wheels alone, and, if reasonable, that they be purchased.—J.H.T., 15/2/69.

Ask Messrs. Russell & Co. to name a price for wheels only.—J.S., 16/2/69.

Wrote.—R.M., 17/2/69.

I No. 2A.

The Commissioner for Railways to P. N. Russell & Co.

Department of Public Works,
Railway Branch,
Sydney, 17 February, 1869.

Gentlemen,

In reply to your letter of the 2nd instant, offering wagon-wheels and axles for sale, I have the honor to inform you the Engineer for Existing Lines reports that, as the axles you offer are made for a different gauge of rails, they would not be suitable.

I have therefore to request you will be so good as to name a price for wheels only.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

I No. 3.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney Foundry,
Sydney, 18 February, 1869.

Sir,

In reply to your letter, dated 17th instant, we will deliver the wagon-wheels referred to, at the rate of seventeen pounds stg. (£17) per set of 4 wheels.

We have, &c.,
P. N. RUSSELL & Co.

Mr. Thomas, for report.—J.S., 20/2/69.

I think these wheels should be purchased at the price named.—J.H.T., 25/2/69.

Approved, 26/2/69.

I No. 4.

P. N. Russell & Co. to The Commissioner for Railways.

Sydney Foundry,
Sydney, 1 March, 1869.

Sir,

We have the honor to inform you that we have a number of wagon-wheels in stock, as per tracing enclosed—in all, about 52 wheels—which we beg to offer to the Government for the sum of twenty-six pounds sterling (£26) per set of 4 wheels.

We beg to say that the above are new wheels.

We have, &c.,
P. N. RUSSELL & Co.

Mr. Thomas, for report, Railways, B.C., 3/3/69.—J.R.

Seeing that the 100 sets ordered last June are now arriving, and that we have already purchased some off Messrs. P. N. Russell, and that shortly contracts will be taken for the supply of rolling stock, including wheels, I don't think it would be advisable to take these.—J.H.T., 6/3/69.

RAILWAYS.

No. 1.

MR. THOMAS' REPORT ON LOCOMOTIVE ENGINES FOR GREAT WESTERN EXTENSIONS.

SOME twelve months ago I intimated to the Commissioner my opinion that the class of engine which would be found best adapted for working the steep gradients on the mountain lines would be, with some modification in the design, such as that built by Messrs. Vale and Lacy for Mr. Goddard, the contractor.

On the 20th ultimo I had an opportunity of testing the locomotive above referred to, taking with it ten loaded trucks of railway bars (53 tons 6 cwt.), together with a heavy brake-van, from Penrith up the Zig Zags, to Wascoe's.

We had fitted a temporary sand arrangement on the front of the engine, but it had none behind, yet it was enabled to stop on gradients of 1 in 30, and start again with ease. I may mention that it was found that from the starting, and during the whole journey, the ash-pan damper had been closed.

This engine weighs, when in steam with full load of fuel and water, 31 tons 11 cwt. It has 16 in. cylinders, $\frac{1}{4}$ in. stroke, and 6 coupled wheels 3 ft. 9 in. diameter, and a wheel base of 12 ft. 6 in. It cost £1,900.

This class of engines will not only, by the greater amount of adhesion they possess, be enabled to convey far greater loads up the steep inclines, but also prevent the great loss of time which now occurs with our present engines, from the slipping of the wheels,—an amount which is not counterbalanced by the advantages they derive in their wheels being of larger diameter when running on a level, or down an incline. Of course I do not propose that they should entirely supersede the present engines, but only be used for working the traffic over the heaviest portion of the line, viz., that between Penrith and Siding, at the Stone-crushers.

The following table will show at a glance what the class of engines referred to have done,—what our present engines are capable of doing,—and what the engines I propose to build and guarantee shall perform :—

Description of Engine.	Weight of Engine.	Cost of Engine.	Load that each Engine, exclusive of its own weight, will take up the gradient of 1 in 30.	Diameter of Cylinder.	Length of Stroke.	Diameter of Driving Wheels.
	Tons cwt. qrs.	£	Tons cwt. qrs.	in.	in.	ft. in.
Contractor's	31 11 0	1,900	105 16 3	16	24	3 9
Our present goods	*50 12 2	3,200	84 5 1	18	24	4 0
Our present passenger	†49 16 3	3,200	43 0 0	18	24	5 9
Proposed goods	34 10 0	2,200	126 0 0	16 ²	24	3 9
Proposed passenger.....	32 0 0	2,200	70 0 0	16	24	4 3

¹ What I have put down is perfectly correct. It is true the engine alone weighs but 31½ tons, but as it would be utterly useless without the tenders it may, I think, be fairly considered as a portion of it.

² This is a clerical error, should be 17.—J.H.T.

That there is nothing new in what I propose, and that these tank engines have been found, under precisely similar circumstances, best adapted for mountain lines, even with steeper gradients and sharper curves than on our lines, will be seen from the following, from "A description of the Railway across the Blue Mountains, at the Rock Fish Gap, in the State of Virginia, America," in the *Engineer* of the 23rd January, 1857 :—

"This road was opened to the public in the spring of 1854, and it has now, in the autumn of 1856, been in constant use for a period of more than 2½ years. In all that time the admirable engines relied on to perform the extraordinary duties imposed upon them in the passage of this summit, have failed *but once* to make their regular trips. The mountain has been covered with deep snow for weeks in succession, and the cuts have been frequently filled for long periods many feet in depth with drifted snow; the ground has been covered with sleet and ice, and every impediment due to bad weather and inclement seasons has been encountered and successfully surmounted in working the track.

"During the last severe winter, when the travel upon all the railways of Virginia and Northern and Western States was interrupted, and on many lines for days in succession, the engines upon this mountain track, with the exception of the single day already specified, moved regularly forward, and did their appointed work. In fact, during the space of 2½ years that the road had been in use, they have only failed to take the mail through in this single instance, when the train was caught in a snow-drift, near the summit of the mountain.

"These results are due, in a great degree, certainly to the admirable adaptation of the engines employed to the service to be performed; but they are due also, in no small degree, to the skill and energy of the superintendent in immediate charge of the track and machinery. The locomotives mainly relied on for this severe duty were designed and constructed by the firm of W. M. Baldwin and Co., of Philadelphia. The slight modification, introduced at the instance of the writer to adapt them better to the particular service to be performed in crossing the Blue Ridge, did not touch the working portions or principle of the engine, the merits of which are due to the patentee, W. M. Baldwin, Esq.

"These engines are mounted on six wheels, all of which are drivers, and coupled, and 42 inches diameter. The wheels are set very close, so that the distance between the extreme points of contact of the wheels and the rail of the front and rear drivers is 9 ft. 4 in. This closeness of the wheels of course greatly reduces the difficulty of turning the short curves of road.

"The diameter of the cylinders is 16½ inches, and the length of the stroke 20 inches.

"To increase the adhesion, and at the same time to avoid the resistance of a tender, the engine carries its tank upon the boiler, and the foot-board is lengthened out and provided with suspended side boxes,

3

boxes, where a supply of fuel may be stored. By this means the weight of wood and water, instead of abstracting from the effective power of the engine, contributes to its adhesion, and consequent ability to climb the mountain.

"The total weight of these engines is 55,000lbs., or 27½ tons.

"With such trains the engines are stopped on the track ascending or descending, and are started again on the steepest grades, at the discretion of the engineer.

"Water for the supply of the engines has been found difficult to obtain on the mountain, and since the road was constructed a tank has been established on the eastern slope, where the ascending engines stop daily on a grade of 1 in 18, 280 feet per mile, and are there held by the brakes while the tank is being filled and started again at the signal, and without any difficulty.

"A supply of sand is not neglected, for although the brakes completely control the train in ordinary weather, yet, when the cold is intense, and the track, wheels, and brakes are all covered with snow, frozen into hard ice, they will not hold. Then, as usual, sand is applied in front of the forward drivers, or in front of the middle drivers, as is, under the circumstances, most expedient, and the friction may be increased to whatever amount is necessary for the safety of the train."

J. H. THOMAS.

3/7/68.

No. 2.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works

Railway Branch, Engineer's Office,

Sydney, 6 November, 1868.

Locomotive Engines for working Steep Gradients.

A REPORT by Mr. Thomas, dated 3rd July, 1868, was forwarded to the late Commissioner on the subject of engines required for the Great Western Railway, from which I extract the following:—

Description of Engine.	Weight of Engine.	Cost of Engine.	Load that each Engine, exclusive of its own weight, will take up the gradient of 1 in 30.	Diameter of Cylinder.	Length of Stroke.	Diameter of Driving Wheels.
	Tons. cwt. qrs.	£	Tons. cwt. qrs.	in.	in.	ft. in.
Contractor's	31 11 0	1,900	105 16 3	16	24	3 9
Our present goods	50 12 2	3,200	84 5 1	18	24	4 0
Our present passenger	49 16 3	3,200	43 0 0	18	24	5 9
Proposed goods	34 10 0	2,200	126 0 0	17	24	3 9
Proposed passenger	32 0 0	2,200	70 0 0	16	24	4 3

I advise that Mr. Thomas be called upon to show to the Commissioner how he arrives at the statement of the weights that each separate class of engine will take up an incline of 1 in 30.

This information should be obtained from Mr. Thomas before any tenders are accepted for the class of engine he recommends.

JOHN WHITTON.

No. 3.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

(Minute Paper.)

I HAVE to request that Mr. Thomas will be so good as to inform me how he arrives at the statement of the weight that each separate class of engine will take up an incline of 1 in 30?

J.S., 16/11/68.

No. 4.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

THE data given was arrived at by the daily experience of what these engines will actually do, by the written testimony of all the drivers using them, and by experiment with Messrs. Vale and Lacy's engine, in the presence of a number of witnesses, the result of which will be found at length in my report enclosed, of 3/7/68.

J. H. THOMAS.

18/11/68.

No. 5.

THE CHIEF ENGINEER'S MINUTE, AND REPLY OF THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

As Mr. Thomas has based his statements of the power of the proposed engines upon reports only *made to him by the drivers* of the present engines, I conclude that he is not able to ascertain the power of an engine

engine in the proper way. As the engines from which he has derived his information are of a different class to those he proposes, I shall be glad to learn how he has ascertained that the proposed engines will take up an incline of 1 in 30 double the load of the present goods' engines?

It is quite clear that Mr. Thomas knows very little about locomotive engines.

J.W., 27/11/68.

I—as could any schoolboy—have taken one of the several formula given in works on the subject, and covered the paper with figures, and thus shown that I did know what Mr. Whitton calls “the proper” way to ascertain what an engine will draw; but I thought it would be far more satisfactory to arrive at it from actual experiment.

Mr. Whitton says I arrived at the power of the proposed engines from reports of drivers on the present ones; I have, as he knows well, said nothing of the kind, but shown that it was from trials made by me with an engine exactly (or nearly so) similar to what I propose, as will be seen by reading my reports.

If I were to tell the Inspector of Telegraphs that he knew nothing about electricity, I should expect him to say—“What, Mr. Thomas, are your qualifications to enable you to judge?” and I think, therefore, such a question should be put to Mr. Whitton.

I, at all events, am prepared to put my qualifications to the test. I have designed and written specifications for an engine on the same principle as those lately designed by the most eminent engineer in England—the same as the contractors are using in this Colony—and the same has been found to succeed in other countries, where steep gradients are worked. If it does not answer, I will resign. If it does, will Mr. Whitton do the same?

J.H.T., 28/11/68.

No. 6.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 4 February, 1869.

SIR,

In accordance with your verbal instructions, I have the honor to submit the following report on the proposal of the Engineer for Existing Lines to construct tank engines for working the steep inclines on the Great Western Railway of this Colony.

Referring to the specifications under which these tank engines were to be constructed, I find that the cylinders were to be 17-in. diameter, stroke 24-in., wheels six coupled, 3-ft. 9-in. diameter.

There is nothing stated in the specification as to the weight of these engines; but in a report furnished by Mr. Thomas to the late Commissioner, dated the 3rd July, 1868, the weight is stated to be 34½ tons.

From this report, I extract the following:—

Some twelve months ago I intimated to the Commissioner my opinion that the class of engines which would be found best adapted for working the steep gradients on the mountain lines would be, with some modification in the design, such as that built by Messrs. Vale & Lacy for Mr. Goddard, the contractor.

On the 20th ultimo I had an opportunity of testing the locomotive above referred to, taking with it ten loaded trucks of railway bars (53 tons 6 cwt.), together with a heavy brake-van from Penrith up the Zigzag to Wascoe's.

We had fitted a temporary sand arrangement on the front of the engine, but it had none behind, yet it was enabled to stop on gradients of 1 in 30, and start again with ease. I may mention that it was found that from the starting and during the whole journey the ash-pan damper had been closed.

The engine weighs when in steam with full load of fuel and water, 31 tons 11 cwt. It has 16-in. cylinders, 24-in. stroke, and 6 coupled-wheels, 3-ft. 9-in. diameter, and a wheel-base of 12-ft. 6-in.; it cost, £1,900.

This class of engine will not only, by the greater amount of adhesion they possess, be enabled to convey far greater loads up the steep inclines, but also prevent the great loss of time which now occurs with our present engines from the slipping of the wheels, an amount which is not counterbalanced by the advantages they derive in their wheels being of larger diameter when running on a level or down an incline. Of course I do not propose that they should entirely supersede the present engines, but only be used for working the traffic over the heaviest portion of the line, viz., that between Penrith and the siding at the Stone-crushers.

The following table will show at a glance what the class of engines referred to have done, what our present engines are capable of doing, and what the engines I propose to build and guarantee, shall perform:—

Description of Engine.	Weight of Engine.	Cost of Engine.	Load that each Engine, exclusive of its own weight, will take up the gradient of 1 in 30.	Diameter of Cylinder.	Length of Stroke.	Diameter of Driving Wheels.
	Tons cwt. qrs.	£	Tons cwt. qrs.	in.	in.	ft. in.
1. Contractor's	31 11 0	1,900	105 16 3	16	24	3 9
2. Our present goods	50 12 2	3,200	84 5 1	18	24	4 0
3. Our present passengers	49 16 3	3,200	43 0 0	18	24	5 9
4. Proposed goods.....	34 10 0	2,200	126 0 0	17	24	3 9
5. Proposed passengers.....	32 0 0	2,200	70 0 0	16	24	4 3

* 31½ tons.

b 31 tons.

I may here remark that the statement furnished by Mr. Thomas of the weight which each engine can take up an incline of 1 in 30, has been arrived at partly by guessing, partly from an experiment which Mr. Thomas says was made under his direction, partly by reports from the engine drivers, but not in one single instance by ascertaining the tractive power of each engine by calculation. The results are, therefore, as might have been expected, utterly unreliable.

I now propose to give the tractive steam-powers of each engine, and assuming the same steam-pressure in the cylinders of each engine for the full length of the stroke, to show what load each engine would be able to haul up, in favourable weather, an incline of 1 in 30.

For

For convenience of reference I have numbered each engine as shown in the margin of the above table.

No.	Description of Engine.	Weight of Engine.			Tractive steam-power in lbs.	Load each Engine will take up an incline of in 30, including its own weight.
		Tons.	cwt.	qrs.		
1	Contractor's	31	11	0	10,922	128
2	Present goods	31	10	0	12,960	152
3	Present passengers.....	31	0	0	9,016	106
4	Proposed goods	34	10	0	12,330	145
5	Proposed passengers	32	0	0	9,638	113

These calculations are based upon the assumption that the average steam-pressure in the cylinders for the whole length of the stroke is 80lbs., but if the lap of the valve be diminished each engine will have a greater tractive steam-power, but the speed will be reduced.

It is quite clear from the above table that No. 2, the goods engine at present in use on these lines, is the most powerful of all the engines in use or of those proposed.

The tank engines proposed to be constructed are to weigh, when in full working order, $34\frac{1}{2}$ tons; this would be their total available *adhesive* power; but it must not be forgotten that the adhesive power of a tank engine diminishes with every stroke of the piston, and as these engines must take at least 7 tons of water, it follows that when the whole of the water has been evaporated the engine will only weigh $27\frac{1}{2}$ tons instead of $34\frac{1}{2}$ tons, which was the weight at starting; or, if the average adhesive power be taken as 31 tons, these proposed *powerful* engines would have 10 cwt. of adhesive power and 630lbs. of tractive steam-power *less* than the engines now in use.

But assuming that the whole of the water had been evaporated, these tank engines would have 4 tons less weight available for adhesive power than the present goods engines.

The large goods engines on the present lines do not weigh, as stated by Mr. Thomas, 50 tons 12 cwt. 2 qrs., but $31\frac{1}{2}$ tons, this weight being always available for adhesive power as the water is carried in a tender behind the engine.

The passenger engines weigh only 31 tons instead of 49 tons 16 cwt. 3 qrs.

The weight of the tender having been in each case most improperly included as a portion of the weight of the engine.

I wish to call attention to the price at which Mr. Thomas states in his report that the engines proposed by him could be manufactured in this Colony, viz., £2,200. The lowest tender received for this class of engine was, I understand, a little under £3,000, or nearly £800 above Mr. Thomas' estimate.

The difference in cost between the large imported engines and the tank engines proposed is more apparent than real, as the tank engine dispenses with the tender, and is consequently worth considerably less than the engine with tender attached.

The comparison is therefore not a fair one, and unless explained is likely to mislead.

Having shown that these proposed engines are not so powerful as the engines now in use (if properly worked), I wish to point out how extremely dangerous it would be to attempt to work engines of the tank class on the steep gradients of the Western Line. The present goods engine and tender weigh about 50 tons, the whole of this weight being made available for retarding the speed of the trains when descending steep gradients by means of brakes on all the wheels of both engine and tender, but even with this brake power and the assistance of a heavy brake van it is often difficult during foggy weather to keep the train under command. This being so it is not difficult to understand what might and most probably would be the fate of a train when attempting to descend the steep inclines on the Western Line with a brake power (varying as the weight of water decreased in the tank) from 16 tons to 23 tons less than that now in use.

I may also point out another great defect in these proposed tank engines, which is of considerable importance.

The total weight of water to be carried will be about 7 tons; this weight, so far as I can understand from the specification, has to be placed in a great measure on the top of the boiler, and probably about 5 tons weight of water will be entirely above the boiler. This weight when running round the sharp curves, being precipitated suddenly from one side of the tank to the other, would not be unlikely to turn the engine completely over, assisted as it would be by the super-elevation of the outside rail.

I therefore advise that tank engines be not used on any of the main lines in this Colony where steep gradients have to be worked, for, independent of the deficiency of weight available for brake power, should any accident occur to the brakes on the engine there would be no tender or other brake which could be used to stop the progress of the train when descending the steep inclines on such a line as that over the Blue Mountains; and in addition there is not one single advantage to be obtained in using them, as they are in every way inferior to the large goods engines now in use.

The other engines recommended by Mr. Thomas are simply copies of engines now in use on these railways. I recommend that the engines for the future be constructed without any alteration in the manner and of the dimensions named by me in my report on the condition of the locomotive stock on the Southern and Western Railways, dated 14 January, 1869.

The proposal to have engines manufactured in the Colony and for the contract to remain in force for five years appears to me extremely injudicious.

It must be obvious to anyone who has given the matter the least consideration, that in large establishments in England, where every possible use is made of machinery, where the sub-division of labour is carried out to its fullest extent, and where labour is not more than one-third the cost of labour in this Colony, to obtain the same class of workmanship here for the same amount of money is manifestly impossible.

It must also be remembered that all the raw material has to be imported from England, and freight and duties must be paid; that the wheels, axles, springs, &c., will be manufactured in England; and if the contractor in this Colony has to compete in price with manufacturers at home he must import all the material not in a raw but in a manufactured state, and rest satisfied with the simple process of putting the various pieces together on their arrival in this Colony.

Improvements

Improvements in the manufacture of engines and in their adaptation to the work to be performed are almost daily taking place in England and on the Continent; but if a contract be entered into for the manufacture of the class of locomotives now used, such contract extending over a period of five years, it would debar this Colony from taking advantage of any improvements made during that period.

It is quite true that an arrangement might be made with the contractor that any improvements suggested should be carried out, but as the contract price must have been based upon the class of engine now in use, any alteration would most probably be looked upon as breaking the contract, or at least an additional sum would be charged for carrying out the improvements suggested, and the price of the engine considerably increased, although the alteration might not be expensive.

I consider such an arrangement would not be for the benefit of the Colony.

I have, &c.,

JOHN WHITTON.

No. 7.

L. SENTIS, Esq., to THE COMMISSIONER FOR RAILWAYS.

Consulat de France,
à Sydney.

MY DEAR SIR,

In reply to your note of the 6th instant*, I have much pleasure in stating that I have been acquainted with Mr. Richard Lloyd from the time of his first arrival in this Colony, about two years and a half.

He was the bearer of a letter of introduction from a friend of mine, an eminent Engineer-in-Chief in the Imperial Corps of Miners in France, from which letter I extract the following particulars, confirmed by subsequent communications from good authorities :—

In 1846 Mr. Lloyd joined, as Superintending Engineer of the Locomotive Department, the firm of Ernest Gouin & Co., of which the late Baron de Rothschild was one of the partners. He left this appointment in 1866, in consequence of his presence being necessary in Australia to look after some squatting property in which he was greatly interested. On his resigning the office which he had held for twenty years his employer presented him with a sum of £4,000 as an acknowledgment of his past services.

I may here state that the firm of Ernest Gouin & Co. have executed large contracts for the supply of rolling stock to the North, East, West, and South Railways of France, and also for the Railways of Russia, Austria, Spain, Italy, &c. They had the contract for constructing all the steam-dredges of the Canal of Suez.

Mr. Lloyd has been appointed by Lord Granville one of the English Commissioners† at the Great Exhibition of Paris, and in this quality he was one of the Judges for the Class of Machines.

I therefore firmly believe that Mr. Lloyd is perfectly qualified for the construction of locomotive engines, steam dredges, &c., &c.

I remain, &c.,

L. SENTIS.

* Private note—no copy kept.

† Note by Mr. Lloyd :—“Mr. Lloyd was appointed Juror (not Commissioner) by the Duke of Buckingham, at Earl Granville's presentation.”

FORWARD specification of rolling stock to Mr. Lloyd, and inform him that I require him to report on the construction of the proposed tank engine for working the Mountain Line, as to its adaptability to perform the duties Mr. Thomas states it can do, and as to whether the engine is the most suitable for the work on the Mountain Line.

Mr. Lloyd is to have access to all plans and specifications having reference to this particular question, including all plans and sections of the Western Mountain Line. The Engineer-in-Chief and Mr. Thomas should be requested to give to Mr. Lloyd any assistance or information he may require to enable him to report.

Messrs. T. Mort & Co. should also be officially requested (as I have already verbally requested Mr. Mort) not to apply to England for the materials required for these tank engines until the result of Mr. Lloyd's inquiry is known.

The expense of Mr. Lloyd's report must be paid out of the vote of £60,000 for Rolling Stock.

J.S., 20/8/69.

No. 8.

THE COMMISSIONER FOR RAILWAYS to R. LLOYD, Esq.

Department of Public Works,
Railway Branch,
Sydney, 20 August, 1869.

SIR,

I have the honor to forward herewith a copy of specification for rolling stock, for which the Government accepted tenders to have the work carried out in the Colony, and I shall be glad if you will undertake to report, for the information of the Government, upon the general construction of the proposed tank engine for working the Western Mountain Line, and as to its adaptability to perform certain work as shown in papers which will be placed before you for perusal; also, as to whether the engine is the most suitable for working the Mountain Line.

I have requested the Engineer-in-Chief (Mr. Whitton), and the Inspecting Engineer of Rolling Stock (Mr. Thomas), to furnish you with all plans and sections of the Mountain Line and of the tank engine in question, and I shall be glad to have your report as early as convenient.

Should you require any further information or access to papers not promptly available, the matter shall have my immediate attention.

I have, &c.,

JOHN SUTHERLAND,
Commissioner for Railways.

No. 9.

No. 9.

R. LLOYD, Esq., to THE SECRETARY FOR PUBLIC WORKS.

Australian Club,
Sydney, 21 August, 1869.

SIR,

I have the honor to acknowledge the receipt of your letter No. 69, August 20th instant, instructing me to report to you upon the general construction of the proposed engine for working the Western Mountain Railway traffic.

I will immediately communicate with your Engineer-in-Chief (Mr. Whitton) and the Inspecting-Engineer (Mr. Thomas), and will report to you on the subject as early as possible.

I have, &c.,
R. LLOYD.

No. 10.

THE COMMISSIONER FOR RAILWAYS to THE INSPECTING ENGINEER OF ROLLING STOCK.

Locomotive Tank Engine for working Western Mountain Line.

THE Commissioner having considered it necessary to obtain information as to the general construction of the proposed tank engine, as well as to its adaptability for working the Mountain Line, &c., has requested Richard Lloyd, Esq., an eminent engineer now in Sydney, to report on the plan and specification submitted by Mr. J. H. Thomas, late Engineer for Existing Lines.

To enable Mr. Lloyd to carry out his instructions, the Inspecting Engineer of Rolling Stock will be so good as to place at the disposal of Mr. Lloyd the plan and specification of the engine in question, with any other information in his power which Mr. Lloyd may require in the course of his inquiry.

JOHN SUTHERLAND,
20/8/69.Mr. Thomas.—20/8/69.
Seen, J.H.T.—21/8/69.

No. 11.

RICHARD LLOYD, Esq., to THE COMMISSIONER OF RAILWAYS.

Australian Club,
Sydney, 11 September, 1869.

SIR,

In compliance with the instructions in your Minute of the 20th August, 1869, I have the honor to submit to you the following Report:—

I consider that it is advisable, in the first instance, to place before your notice the result of the researches of eminent engineers who have successfully organized the working of mountain railways, where the permanent way is of necessity constructed with very steep gradients and curves of small radii; and the problem presenting itself for solution is, in what way large heavy trains can be conducted over such lines with efficiency and cheapness.

I am under the impression that the passage of the Zig Zag, over the Blue Mountains in Virginia, U. S., is in a great measure analogous to that of the Western Line of New South Wales. I believe that Captain Douglas Galton, R.E., made a report on the subject, which gave much information to European engineers, and which served as a basis for further development of mountain railway "exploitation." The Baltimore and Ohio Railway traction service has been effected over steep gradients and small curves, by the employment of tank engines with *eight* driving coupled wheels all equally loaded, in the normal condition of the engine, and with not more than $6\frac{1}{2}$ tons weight on *each pair of wheels*; the result is very little wear and tear of the working parts, great durability of tires of engine wheels, slight destructive action on the permanent way, and general economy in the expense of repairs. I believe the American mountain lines to have been the first of importance, and therefore to have set an example from which useful results have been obtained.

I much regret that I have not the necessary documents to refer to, so as to speak positively as to what has been done in America; but I mention this simply to show that, from the first attempt, it was considered important not to have *too great* a weight on any *one tire*, so as to avoid the very destructive action both on the permanent way and the engine itself *by excessive pressure* on the circumference of the *driving wheels*.

The great chain of the Alps, which separates the finest parts of Europe from each other—with great cities of manufacturing industry on each side, and immensely valuable agricultural products requiring international transport to realize the wealth of each region—has been for ages the great barrier to civilization, but it has been surmounted by the indefatigable labours of modern engineers; and the result of their researches, I believe, should be clearly laid before the Government of this Colony, as example, and as information of the greatest utility in the effort to promote the development of the agricultural, pastoral, and mining interests on the other side of the Blue Mountain Range, dependent on the Western Line of Railway for communication with the commercial advantages and resources of Sydney.

The Austrian Government has been the first to construct a railway over the Carnatic Alps; the Col of the Semmering having been chosen, and the railway service and system of engines successfully organized by the Government Engineer-in-Chief, Von Engerth.

The Lombardo Venetian Railway Company have also completed their line through the Tyrol to Verona by the Brenner.

The Italian Government has long studied the construction of the line of railway from Culoz to Suza, over the Mont Cenis, and the system of engines most suitable for the traffic of this line, destined to become the most important in Europe.

The

The Engineers of the French Government have studied with great care the passage of the Alps by the Simplon, between Brigg and d'Omo d'Ossola; and it is some of the considerations of the construction applicable to these lines that I have now the honour to lay before you, as bearing on the question as to the general system most suitable for heavy mountain traffic.

The following observations refer only to the comparative quantity of work which can be effected by the different types of engines submitted to you in this Report; and I therefore confine my observations to the passage of mountain railways, which requires the most powerful engines at slow speeds:—

- 1st. I consider the best ordinary type of luggage engine, with six wheels coupled, outside or inside cylinders, with separate tender. (See figures 8 and 11 and drawings annexed, AA and BB.)
- 2nd. The double engines fixed together back to back. (See figure 12.)
- 3rd. The large engines with eight coupled wheels and separate tender. (See figures 6 and 7.)
- 4th. The engines of the North of France Line, carrying their tanks and coal, without tenders, having eight coupled wheels. (See figure 4.)
- 5th. The large luggage engines, having twelve coupled wheels, with four cylinders, carrying their own water and coal. (See figure 5 and drawing CC.)

Whatever be the type of engine to be considered, the limit of real tractive power is the total adherence to the rails of the whole of the tires of the driving wheels; that is, the resistance to the rotation of the driving wheels without slipping on the rails. This resistance or adhesion is proportional to the pressure of the tires of the driving wheels on the rails; and, although it cannot be ascertained positively, as it depends much on the variable state of the rails, climate, and locality, yet (it is probable that) generally it may be taken, for the service of the Western Line, in dry fine climate, at one-sixth of the pressure on the rails.

The pressure of each pair of wheels should *not exceed* $11\frac{1}{2}$ tons, therefore the tractive force of an engine is limited to one-sixth of $11\frac{1}{2}$ tons for each pair of driving wheels. Thus, $11\frac{1}{2}$ tons = 25,760 lbs, one-sixth part of which, 4,300 lbs in round numbers, represents the tractive power of one pair of driving wheels due to adhesion.

The motive power of the cylinders should be deduced from the above by the following formula:— Suppose p to represent the mean pressure of steam on the pistons in pounds per square inch; d , the diameter of the cylinder; l , the length of the stroke; and D , the diameter of the driving wheels in inches—

$$\text{Then, } \frac{p d^2 l}{D} = 4,300 \text{ lbs., for one pair of driving wheels.}$$

The value of p and D being given, $2 d^2 l$, represents a certain volume of steam which is absolutely necessary to be produced at a given pressure for each half revolution of the driving wheels, and from which we deduce the quantity of heating surface, grate surface, and weight of coal to be burnt to produce the required volume of steam in a given time.

It is clear that the weight of the engine is implied by the foregoing observations; the grate surface, the section of the flues or tubes, and the sectional area of chimney, should be so calculated as to produce the most perfect combustion to furnish the caloric necessary for the production of the steam power required to act on the circumference of the driving wheels with the force of one-sixth of the pressure of the tires on the rails.

It follows therefore, that the evaporative power, the weight of the engine, and the motive power of the cylinders are mutually dependent and proportional, and are determined by the number of coupled driving wheels, as before observed, the weight on which should be limited so as not to exceed $11\frac{1}{2}$ tons for each pair. The weight of the engine in service, with its water and coke but without its tender, will vary between 50 and 55 lbs., being on an average $52\frac{1}{2}$ lbs., for each square foot of heating surface.

The engines which work on inclines, in the same climatic conditions, with a separate tender, and at a slow speed, are in every part of their course in the same conditions of adherence and power of cylinder; therefore, the tractive force is constant, but the *available tractive force augments* as the weight of water and coke in the tender diminishes. Therefore, at the end of an incline the engine has more *available tractive force* than at the commencement, whereas *the contrary* is the case with the *tank engine*; and it should be kept in view that the available force in the middle and end of an incline is less than at the commencement. If the maximum force of a six-wheeled tank engine be limited to $3 \times 11\frac{1}{2} = 34\frac{1}{2}$ tons, in the middle of an incline it may be not more than 31 tons for adherence, and at the end not more than 28 tons; therefore, during a great part of its course it will have all its elements of motive power uselessly expensive,—that is to say, a tank engine becomes less powerful as it ascends an incline, and as the supply of water which it carries diminishes the engine would not be able to continue the traction of as heavy a train as it commenced with. This is more apparent in referring to pages 6 to 8 of this Report.

Having summarily indicated the elements of the motive force, the elements of the resistance to movement should be estimated. These consist—

- 1st. The resistance of the atmosphere to the passage of a train at high speed is very considerable, and increases as the square of the velocity; but this element of resistance can be neglected, in considering the passage of the Blue Mountains, at a very low speed (say not exceeding 15 miles an hour, at which speed the resistance of the air is very insignificant).
- 2nd. The resistance to rolling is sensibly proportional to the weight of each engine, carriage, or waggon, at uniform slow speeds; and this may be stated at 7 lbs. for every 1,000 lbs. of the weight of locomotive—for the tender, 6 lbs. per 1,000 lbs.—for every luggage waggon loaded, 4 lbs. per 1,000 lbs.
- 3rd. The resistance due to the curves is sensibly proportional to the weight on the tires of the wheels:

And this has been estimated on curves of 1,320 feet, or .20 chains radius, at—

1.0	lbs.	per	1,000	lbs.,	weight	of	engine.
0.6	"	"	"	"	"	"	tender.
0.5	"	"	"	"	"	"	for a train of waggons.

The resistance due to curves of 660 feet, or 10 chains radius, has been estimated at—

2.0	lbs.	per	1,000	lbs.,	weight	of	engine.
1.50	"	"	"	"	"	"	tender.
1.20	"	"	"	"	"	"	for a train of waggons.

And

And the resistance due to the curves of 528 feet, or 8 chains radius—

2.50 per 1,000 lbs. weight of engine.
2.0 " " tender.
1.50 " " for a train of waggons.

4th. The resistance due to gravity being directly proportional to the sine of the angle of inclination, is taken at 1 lb per 1,000 lbs for each unit of incline in 1,000 feet of lineal measure.

The divers preceding considerations enable us to estimate directly the load which any one type or system of engine can draw up a given incline and on a given curve, and thus deduce the consumption of coal and the comparative efficiency and expenses of each system.

On your road from Sydney to Bathurst everything should be availed of to the fullest practical extent, to economize and reduce expense. This will in a great measure depend—

1st. On a moderate rate of speed (say not more than 15 miles per hour) over the mountainous parts of the line.

2nd. Very large trains and fewer in number, in preference to smaller and more numerous trains.

3rd. Well-made powerful engines, so constructed that the parts most liable to wear and tear should undergo as little strain as possible, and should be very easily and at the least *possible cost replaced* when worn out, and *inexpensive* to repair when in place.

4th. It is of the greatest importance that the normal weight on any one pair of tires *should not exceed 11½ tons*.

5th. That the axle-boxes and all the working bearings should be so constructed that the effort on each unity of surface should not heat or wear away too rapidly the brasses and bearings.

6th. It is, in my opinion, very important to avoid the use of crank-axles in the construction of powerful engines destined to work heavy traffic on very sharp and numerous curves.

I shall endeavour to show in what way the efforts of the different engineers have successfully arrived at a satisfactory result, by different means, but always keeping in view the several essential conditions above enumerated; and then to point out how far the general construction of the proposed tank engines differs from the most approved systems which are the result of long experience, and as to whether the engine is in any way suitable for working heavy mountain traffic.

I believe, the opinions and practice of engineers who have specially studied the working of heavy traffic over steep gradients and sharp curves, are in favour of the employment of outside cylinders, and outside couplings and valve motions, the engine necessarily having straight axles.

The employment of crank-axled engines is perhaps more general in English traffic than elsewhere; and the English constructors, with some reason, prefer the type of engine as shown in drawing No. BB. (annexed to this Report), for the following advantages:—

That the effort of the motive power of the pistons is much nearer the central line of motion of the engine, consequently there is a less destructive action sideways on the tires from the sinuous motion of the engine on the rails.

Again, the decomposed force of the piston, acting through the inclination of the connecting rod, tending to lift alternately each side of the engine, is obviously less in a crank than in an outside cylinder engine; but this is only the case when the cylinder is horizontal, and not inclined as in the proposed tank engine. The reciprocating weights of the organs of the motive power are much more easily balanced. The cylinders are generally lighter and more solidly attached to the frame sides, and the same power of engine can be constructed with less weight—that is to say, that with the same weight a more powerful engine can be constructed; therefore, for the services of a railway (principally with *straight lines* and *curves of great radius*, and where crank-axles can be easily and cheaply replaced when broken or worn out) engines of the type shown in drawings BB., and of which the proposed tank engine is a modification, are sometimes preferred.

But it is very important to call your attention to the opinion (resulting from long experience and calculation) of the Engineer-in-Chief Government Inspector of Railways in France, that all the advantages derived from less wear and tear to the engines and permanent way by the use of crank-axled engines are nullified if the crank-axle should require to be replaced before having run about 70,000 miles. The employment of outside cylinders avoids the use of crank-axles. The destructive action of the sinuous motion of the engine can, in a great measure, be nullified by the use of counter weights calculated after the method, now general, of M. Le Chatelier. The axle bearings can be made more suitable for engines with heavy loads, the valve motions being outside are much more readily oiled and inspected, and the repairs are much more easily effected, than in crank-axled engines; but the very great and *overwhelming advantage* is, that in comparison to the crank-axle the straight axle is almost *indestructible*. It is probable that the best crank-axle must be destroyed on your mountain line with small curves before having run 50,000 miles, while a very ordinarily manufactured straight axle would be readily guaranteed 250,000 miles. The perfect construction of crank-axles is very doubtful in this Colony, whereas good straight axles can be very readily manufactured *here*, and the relative cost is not more than *one-sixth* of a crank-axle.

I should therefore strongly recommend the adoption of outside cylinders, with straight axles, long interior axle-boxes, and all the valve motions to be outside, as shown in the drawings.

Mr. Crampton was the first to introduce this system of valve motion, which is now very generally preferred on account of its simplicity and the excellent result obtained on railways where it has been largely in service.

My opinion being strongly in favour of outside cylinder engines (for the working of heavy traffic at moderately slow speeds over sharp curves), it is not necessary further to comment on the other disadvantages of crank-axled engines.

The proposed tank engine for working steep gradients, as specified in the document you have forwarded (and in a drawing sent to me by the Inspecting Engineer for Rolling Stock, Mr. Thomas,) will, as he informs me, when finished, with all its accessories of service and its full complement of water and coke, weigh about 45 tons, which being carried by three axles, as shown in the drawing, will be 15 tons to each pair of tires. Now, this weight has been employed, and has been found to be very destructive to the permanent way, and the wear and tear of the tires, axle-boxes, and axles so very great, that the general opinion and experience of all railway engineers with whom I am acquainted have utterly condemned the practice; and it is my duty to inform you that I am convinced your Engineer would immediately abandon

Tractive force of piston on circumference of driving wheel, $\frac{p d^2 l}{D} = f = 12,625$ lbs.

Effective pressure of steam on piston, $\frac{f D}{d^2 l}$ per square inch.

$\frac{f D}{d^2 l} = p = 78$ lbs., and $\frac{78}{P} = 0.60$.

Resistance to movement of engine on straight level line, being taken at 7 lbs. per 1,000 lbs. weight	75.750 × 7.0 = 530.25
Resistance to passage of engine due to curve of 20 chains radius, taken at 1 lb. per 1,000 lbs. weight	75.750 × 1.0 = 75.75
Resistance of engine due to gravity on incline of 1 in 30, being 33½ lbs. per 1,000 lbs.	75.750 × 33.33 = 2525.00
Resistance per 1,000 lbs. of engine on the <i>Lapstone Hill</i> incline...					41.33

Total power required to move Engine itself 3131.00

Resistance to movement of tender on straight level line, taken at 6 lbs. per 1,000 lbs.	40.000 × 6.0 = 240.00
Resistance to passage of tender due to curve of 20 chains radius, taken at 0.6 lbs. per 1,000 lbs.	40.000 × 0.6 = 24.00
Resistance to tender due to gravity on incline of 1 in 30, being 33½ lbs. per 1,000 lbs.	40.000 × 33.33 = 1,333.00
Resistance per 1,000 lbs. of tender on the <i>Lapstone Hill</i> incline...					40.00

Total resistance to Tender in full charge 1,597.00

Total resistance to movement of Engine and Tender 4,728.00

Now, the tractive force of engine being 12,625 lbs., we have for the available useful tractive force, the difference between 12,625 and 4,728, being	= 7,897 lbs.
The resistance to each 1,000 lbs of luggage train, being taken at 4.0 on a straight line	= 4.0
For each 1,000 lbs. due to resistance in curve of 20 chains radius	= 0.5
For each 1,000 lbs. due to gravity on incline of 1 in 30	= 33.3
					37.8

And we have $\frac{7,897}{37.8} = 208.900$ lbs. nearly, or about 93½ tons, weight of goods train independent of engine and tender. As before observed, this description of engine would *have more useful tractive force before arriving at the Knapsack Gully*, when the consumption of water and coal will have lightened the tender. Therefore, it will be in strict accordance to railway practice in general to consider the maximum load of this engine to be 100 tons,—starting from Penrith to arrive at the top of *Lapstone Hill*, near to the 40-mile post, having in this distance to surmount the incline of 1 in 30 with a minimum radius of 20 chains up to the *Lapstone Hill Zig Zag*, which again has to be surmounted on a maximum incline of 1 in 33 and a curve of 8 chains radius.

Now, this method of calculation applied to the passage of that part of the line from the 47-mile post at *Springwood*, to the 66-mile post, being about four miles beyond the *Weatherboard Platform*, having maxima inclines of 1 in 33 and minima curves of 8 chains radii, will show that *Lapstone Hill* incline and *Zig Zag* is the most difficult passage of the Line; therefore, the weight of the train must be limited in consequence by this part of the Railway.

Resistance of engine on level	75.750 × 7.0 = 530.25
Resistance due to curves of 8 chains radius	75.750 × 2.5 = 189.37
Resistance of gravity	75.750 × 30.3 = 2,295.45
Resistance per 1,000 lbs of engine from <i>Springwood</i>	39.53

Total resistance of Engine 3,015.07

Resistance of tender on level	40.000 × 6.0 = 240.00
Resistance due to curves of 8 chains radius	40.000 × 2.0 = 80.00
Resistance of gravity	40.000 × 30.3 = 1,212.00
Resistance per 1,000 lbs. of tender from <i>Springwood</i>	38.3

Total resistance of Tender 1,532.00

Total resistance of Engine and Tender 4,547.00

Resistance to each 1,000 lbs. of luggage train	= 4.00
Resistance due to curves of 8 chains	= 1.50
Resistance due to gravity	= 30.30
					35.80

Total

Total tractive force of engine 12,625, minus 4,547 lbs. resistance of engine and tender, leaves 8,078 lbs. the total available power, and $\frac{8,078}{35.80} = 225.600$ lbs. = 100 tons as the minimum effective useful force over the Line from Springwood to four miles past the Weatherboard Platform.

Now, to compare the performance of this engine with that of a six-wheeled tank engine, the weight of which is limited to the same condition of load on each tire, we shall have at the departure,—engine in full service 75,750 lbs., resistance of engine on the Lapstone Hill inclines and curves as above, viz., 3,131.00 lbs.

Tractive force due to adhesion, as before	12,625 lbs.
Deduct, for engine	3,131 lbs.
Total useful force at starting					9,494 lbs.

And $\frac{9,494}{37.80} = 251.170$ lbs., or about 112 tons, as the maximum force of engine in full charge at starting to ascend the Lapstone Hill incline; but if the weight be diminished by the consumption of water and coal, the tractive force due to adhesion will be diminished proportionally,—thus, 75,750 lbs. at starting, diminished by 13,450 lbs. of water and coal consumed, leaves 62,310 lbs. to produce a tractive force of 10,385 lbs.

Now, we have resistance of engine when lightened 62,310 lbs. $\times 41\frac{1}{2} = 2,575$ lbs., which, deducted from 10,385 lbs., leaves 7,810 as the available force of tank engine, being $\frac{7,810}{37.8} = 206.613$ or about 92 tons.

Resumé.

A tender engine, minimum force at starting	93 $\frac{1}{4}$ tons.
Maximum force with 6 tons consumed from tender	102 tons.
Tank engine, minimum force with 6 tons of water and coal consumed from tank	90 tons.
Maximum force at starting with tank full	112 tons.

This comparison is based on the supposition that the six-wheeled tank engine be limited to the same weight on each pair of wheels as the tender engine, which has a constant tractive force due to its permanent weight of 75,750 lbs.; but the tank engine will diminish in weight from the maximum common to both systems of 75,750 lbs. to 62,310 lbs. at the end of its course, consequently it can only have a useful tractive force due to its minimum weight. And it is clear that the cylinder and evaporative power of each engine should be proportional to their weights, being, respectively, as 75,750 lbs. is to 62,310 lbs.,—showing that the tank engine is, of necessity, less powerful than a tender engine of the same weight.

The advantage of a tank engine not having to draw a separate tender, is shown in the above estimation; but this is not sufficient to counterbalance the inapplicability of the system to the working heavy traffic of main lines.

The proposed tank engine would (as stated by your Engineer, Mr. Thomas) weigh 45 tons in full service, and 37 tons with tanks quite empty, and would have a maximum force due to adhesion at starting equal to the traction of 150 tons on the Lapstone Hill incline, and a minimum force when empty to the traction of 125 tons on similar parts of the Line, being equal to a general regular service of 140 tons over the Blue Mountain Line from Penrith to the Weatherboard Platform; but I have shown that in other respects this engine would not be in a proper condition of service.

Now, if it be admissible to charge each axle beyond the above-mentioned limit, then the useful effect of each type of engine will remain nearly in the proportion above indicated; and, in my opinion, the result would be clearly in favour of the employment of engines with tender detached.

A great disadvantage in the use of tank engines for the service of steep inclines is, that the brake power is always inferior relatively to that of the tender engine (being the force of adhesion due to the weight of the tank engine alone, compared to that of the tender and engine combined) having the advantage of two separate brakes, less liable to fail in case of need than the one only on the tank engine.

Fig. 6

is the type of tank engine employed on the railway from Genoa to Turin, with curves of 1,300 feet radius and inclines of 35 in 1,000 or 1 in 28.7. The service is always made with the engines conjoined, having only one driver and one stoker. Service 120 tons. On account of the exceptional conditions of the inclines from Ponte Decimo to Busulla, and the very slippery state of the rails, the adhesion is not estimated for these engines at more than $\frac{1}{10}$ th; consequently the cylinders are much smaller, and the ratio $\frac{p d^2 l}{D} = f$ is different from all other examples given.

Weight of the engine in service with tanks full	66 tons.
Heating surface of engine	2,165 square feet.
Weight of engine in service with tank empty	57 $\frac{8}{10}$ tons.
Diameter of cylinders = <i>d</i>	16 inches.
Stroke of pistons = <i>l</i>	22 inches.
Diameter of driving wheels = <i>D</i>	48 inches.
Weight on each tire of driving wheels	5 $\frac{1}{2}$ tons.
Tractive power of engine due to adhesion at $\frac{1}{10}$ th = <i>f</i>	14,784 lbs.
Pressure of steam in boiler = <i>P</i>	103 lbs.

Tractive power of piston on circumference of driving wheels, $2 \times \frac{p d l}{D} = f = 14,500$ lbs.

This system appears to be the least suitable and the least effective of the types of engines in actual service; therefore, the calculation of its application to the Western Mountain Line of New South Wales is not shown.

Figs.

Figs. 7, 10, 15,

represent the type of engine now employed in the passage by the Semmering of the *Carnatic Alps*, as definitely adopted by the Engineers of the Austrian Government,—distance about 29 miles of inclines, the maximum being 1 in 40 or 25 in 1,000, and the curves being numerous with minimum radii of 600 feet. Order of service, 175 tons.

For the Eastern Railway of France on inclines of 10 in 1,000, order of service 280 tons; and on inclines of 5 in 1,000, order of service 400 tons.

Weight of engine in service	103,020 lbs.
Heating surface of engine	2,230 square feet.
Weight of tender when full in service	42,000 lbs.
Weight of tender when empty	19,000 lbs.
Diameter of cylinders = d	20 inches.
Stroke of pistons = l	26 inches.
Diameter of driving wheels = D	51 inches.
Number of driving wheels	8
Weight on each tire of driving wheel	12,880 lbs.
Tractive force of engine due to adhesion = f	17,170 lbs.
Pressure of steam in boiler = P	143 lbs.
Tractive force of piston on circumference of driving wheels	12,880 lbs.
Effective pressure of steam on piston = p
$\frac{p d^2 l}{D} = 17,170 = f$; therefore, $\frac{f D}{d^2 l} = p$	} = 84.0 nearly.

Total force required to move engine alone up the Lapstone Hill incline of 1 in 33 and curves of 20 chains radii, being $103,020 \times 41.33$

Tender full, $42,000 \times 40.00$

Total resistance of engine and tender	5,904
Tractive force of engine being	17,170 lbs.
Deduct resistance as above	5,904
Total available force	11,266 lbs.

Now, $\frac{11,266}{37.8} = 298,000$ lbs. or 133 tons, the minimum weight of a goods train at starting, with full complement of water and coal.

With the tender empty, we should have engine resistance as before—

$103,020 \times 41.33$	= 4,224
Tender, less water and coal, $19,000 \times 40.00$	= 760
						4,984

And $17,170 - 4,984 = 12,194$ available tractive force; therefore, in this condition, $\frac{12,194}{37.8} = 322,600$ lbs., = 144 tons, as the maximum weight of luggage train with the tender empty,—making an average practical load for this engine of 140 tons from Penrith to Bathurst.

Fig 4.

is a type of eight-wheeled coupled tank engine employed on the North of France Railway, especially for heavy traffic around Paris and on the line from Chauny to St. Gobain, with inclines of 18 in 1,000, upon which curves of 1,000 feet radius, but terminating at the station with curves of 400 feet radius each, and at the last a curve of 250 feet radius,—forty of these engines have each run about 25,000 miles per annum.

Weight of engine in service, with tank full	99,208 lbs.
Heating surface of engine	1,987 square feet.
Weight of engine in service, with tank empty	82,012 lbs.
Diameter of cylinders = d	$18\frac{2}{3}$ inches.
Stroke of pistons = l	$18\frac{2}{3}$ inches.
Diameter of driving-wheels = D	$41\frac{7}{8}$ inches.
Weight on each tire of driving-wheels, tank full	12,401 lbs.
Weight on each tire of driving-wheels, tanks empty	10,250 lbs.
Tractive force of engine due to adhesion, tank full, = F	16,534 lbs.
Tractive force of engine due to adhesion, tank empty, = f	13,690 lbs.
Pressure of steam in boiler = P	135 lbs.
Tractive force of piston on circumference of driving-wheels	$\frac{p' \text{ or } p d^2 l}{D} = \begin{cases} f \\ F \end{cases}$	$\begin{cases} 13,690 \\ 16,534 \end{cases}$
$F = \frac{p d^2 l}{D} = 16,534$, and $f = \frac{p' d^2 l}{D} = 13,690$; consequently $\frac{F D}{d^2 l} = p = 103$, and $\frac{f D}{d^2 l} = p' = 85$.						
Resistance to movement of engine on straight level with tanks full,						
$99,210 \times 7$	= 694.4
Resistance to curves of 20 chains, $99,210 \times 1$	= 99.2
Resistance to gravity, $99,210 \times 33\frac{1}{3}$	= 3,307.0
						4,100.6

Tractive

Tractive force of engine at the commencement of its course, $16,534 - 4,100 = 12,434$ lbs. available tractive power. Now, $\frac{12,434}{37.8} = 329,000$ lbs., or 147 tons, the maximum load at starting up the Lapstone Hill incline; and $82,012 \times 41\frac{1}{3} = 3,390, \frac{13690-3390}{37.8} = 272,500$ lbs., or 121 tons, the useful tractive power of the engine at its minimum with tanks entirely empty,—thus being able to effect a service of about 130 tons of luggage train over the *Blue Mountain Line* inclines.

Fig. 5—Nord, 1862.—Drawings CC, Nos. 18 and 19.

Type of engine constructed according to the system of M. J. Petiet, *Engineer-in-Chief* and Director of the Exploitation of the Northern Railway of France, for heavy luggage traffic. These engines have six pairs of wheels, but the two extreme axles have a lateral play of $1\frac{1}{4}$ inches, which corresponds to the passage in a curve of 500 feet radius. This system has been recommended by the Director of the Railway for the passage of the Simplon (with inclines of 40 in 1,000, or 1 in 25, and curves of 650 feet radii), and for the service of the Spanish Railways through the Pyrenees, by M. Salamanca.

The weight of the engine in service, with tank full, = W	145,500 lbs.
Heating surface of engine	2,530 square feet.
Weight of engine in service, with tank empty, = w	116,845 lbs.
Diameter of cylinders = d	18 inches.
Stroke of pistons = l	$18\frac{1}{2}$ inches.
Diameter of driving wheels = D	43.3 inches.
Number of driving wheels	12
Maximum weight on each tire of driving wheels, with tank full	12,125 lbs.
Minimum weight on each tire of driving wheels, with tank empty	9,737 lbs.
Maximum tractive power of engine due to adhesion = F	24,250 lbs.
Minimum tractive power of engine due to adhesion = f	19,474 lbs.
Pressure of steam in boiler = P	135 lbs.
Tractive force of pistons on circumference of driving wheels, $\frac{p d^2 l}{D} = F = \text{maximum}$	24,250 lbs.
Tractive force of pistons on circumference of driving wheels, $\frac{p d^2 l}{D} = f = \text{minimum}$	19,474 lbs.

$$\frac{p d^2 l}{D} \times 2 = \frac{W}{6} = F, \text{ and } \frac{p d^2 l}{D} \times 2 = \frac{w}{6} = f; \frac{F D}{d^2 l} = p,$$

$$\text{and } \frac{f D}{d^2 l} = p; \text{ and } \frac{p}{135} = 0.65, \text{ and } \frac{p}{135} = 0.52.$$

Resistance to the engine with tank full, on the incline of 1 in 30 and curve of 8 chains radius	$145,500 \times 41\frac{1}{3} = 6,014$ lbs.
Resistance to the engine, with the tank half empty	$131,200 \times 41\frac{1}{3} = 5,423$ lbs.
Resistance to the engine, with the tank empty	$116,845 \times 41\frac{1}{3} = 4,830$ lbs.
Tractive power due to adhesion at starting	$\frac{145,500}{6} = 24,250$ lbs.
Tractive power, with tank half empty	$\frac{231,200}{6} = 21,866$ lbs.
Tractive power, with tank empty	$\frac{116,845}{6} = 19,475$ lbs.
Available force, at starting, with tank full	$24,250 - 6,014 = 18,236$ lbs.
Available force, with tank half empty	$21,866 - 5,423 = 16,443$ lbs.
Available force, with tank empty	$19,475 - 4,830 = 14,645$ lbs.

$$\text{Consequently, } \frac{18,236}{37.8} = 412,420, \text{ or nearly 214 tons.}$$

$$\frac{16,443}{37.8} = 435,000, \text{ or nearly 195 tons.}$$

$$\frac{14,645}{37.8} = 387,430, \text{ or nearly 173 tons.}$$

Now, as this engine would not empty its tank on the first incline, between the commencement and the top of the Lapstone Hill zig zag, it would have sufficient force to draw a train of 185 tons over all other parts of the Line up to four miles past the Weatherboard Platform; therefore, a regular service of 185 tons could be counted on for this system of engine.

I do not refer in this Report to Mr. Fell's System of Railway Construction for the passage of great chains of mountains like the Alps, because this system depends essentially on the condition that an extra middle rail is required; consequently, neither the permanent way, the carriages, nor the engines are in any way applicable to the working of railways constructed on ordinary principles, and the tractive force does not entirely depend upon the weight of engine on the vertical driving wheels to produce adherence, but is augmented on all parts of the railway which require extra tractive power by the pressure of horizontal driving wheels on the central rail, thus rendering the tractive force due to adherence independent of the vertical pressure on the ordinary rails. But Mr. Fell has shown practically that railways can be constructed and worked advantageously with inclines of 1 in 15, and radii of curves less than 135 feet, at a very reasonable cost, being about £7,000 per mile on the Mont Cenis.

I have gone with Mr. Fell on his engines up inclines of 1 in 13, and over the most difficult parts of the Alps, between Lanslebourg and Susa, with perfect security, and mention this as example of the successful working of mountain lines with very light engines, having not more than 8 tons weight on one pair of wheels.

In conclusion, therefore, I recommend :—

- 1st. That the weight on each pair of tires of driving wheels should *not be allowed* to exceed a certain limit; I therefore, consider that the proposed tank engine of 45 tons weight on three axles would be injurious to the permanent way, and contrary to general railway practice on main lines.
- 2nd. The adoption for the Western Line over the Blue Mountains of outside cylinders and straight axles, with outside valve motions, as introduced by Mr. Crampton, in preference to inside cylinders and crank-axles, with inside valve motions, as in the proposed tank engines.
- 3rd. The axle-boxes to be longer and their slides larger than in the proposed construction, to prevent heating and rapid wear and tear.
- 4th. That should the ordinary traffic service over the Blue Mountains (from Penrith to about four miles beyond the Weatherboard) not require more than 100 tons load for each train,—that engines having three coupled axles, with separate four-wheeled light tenders, should be employed in preference to the proposed tank engine.
- 5th. If it be required to effect a regular service of 145 tons per train, it would be advisable to have engines with four coupled axles, similar to the type shown in Figs. 7, 10, 15, for the passage of the Semmering and other main lines service.
- 6th. The system shown in drawing CC, and of which the calculation is given at page 10, should be carefully considered, as to whether it be the best to adopt in case the general traffic service should require trains of 185 to 190 tons.

I recommend particularly to your notice this last-named system, not as being absolutely the best, but as being especially applicable to certain conditions of mountain railway luggage traffic requiring great tractive power.

I have, &c.,
R. LLOYD.

NOTE.—The co-efficients of the resistance to movement of Trains are deduced from the experiments of M. M. Gouin and Le Chatelier, M. Jules Poirie, Mr. Gooch, and others. I have purposely stated them very high. It is probable that, the permanent way being in a very excellent condition and the rolling stock in perfect working order, a much more favourable result may be obtained; but the comparative value of each system will be the same however much the co-efficients may be reduced in value, therefore the calculations do not give the absolute but only the comparative useful results.—R. L.

No. 12.

THE COMMISSIONER FOR RAILWAYS to R. LLOYD, Esq.

Department of Public Works,
Railway Branch,
Sydney, 1 October, 1869.

SIR,

I have the honor to acknowledge the receipt of your Report, dated the 11th ultimo, on the subject of the working of the mountain line of railway.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

1870.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 4. WEDNESDAY, 2 FEBRUARY, 1870.

23. Railway Extension :—Mr. Macleay moved, pursuant to Notice No. 16,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the best mode of facilitating inland traffic, and upon the subject of Railway Extension generally.
- (2.) That such Committee consist of Mr. Sutherland, Mr. Lackey, Mr. W. Suttor, Mr. Morrice, Mr. Alexander, Mr. Lee, Mr. Hoskins, Mr. Onslow, Mr. Speer, and the Mover.
- (3.) That the Progress Report, and Proceedings, &c., of the Select Committee of last Session on Railway Extension, be referred to the said Committee.
- Debate ensued.

The House continuing to sit until after Midnight,—

THURSDAY, 3 FEBRUARY, 1870, A.M.,

And Mr. Lord requiring that the said Committee be appointed by Ballot,—
Question,—That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the best mode of facilitating inland traffic, and upon the subject of Railway Extension generally, and that the Progress Report, and Proceedings, &c., of the Select Committee of last Session on Railway Extension, be referred to the said Committee,—put and passed.

Whereupon, the House proceeded to the Ballot, and the Speaker declared the following to be the Committee duly appointed :—Mr. Alexander, Mr. Hoskins, Mr. Lee, Mr. Lord, Mr. Macleay, Mr. Morrice, Mr. Sutherland, Mr. W. Suttor, Mr. Onslow, and Mr. Wisdom.

* * * * *

VOTES NO. 31. TUESDAY, 22 MARCH, 1870.

16. Paper :—Mr. Sutherland laid upon the Table, Report on proposed Tank Engine for working the Mountain Line, Great Western Railway. (*See Answer to Question No. 6 in Votes and Proceedings, No. 25.*)
Ordered to be printed, and referred to the Select Committee now sitting on "Railway Extension."

VOTES NO. 34. FRIDAY, 25 MARCH, 1870.

3. Railway Extension :—Mr. Macleay as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 2nd February, 1870, together with Appendix.
Ordered to be printed.

RAILWAY EXTENSION.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 3rd February, 1870, A.M.—with power to send for persons and papers—to inquire into and report upon the best mode of facilitating inland traffic, and upon the subject of Railway Extension generally—to whom was referred on the same date—the *Progress Report and Proceedings, &c.*, of the Select Committee of last Session on Railway Extension—and to whom was referred on the 22nd March, “*Report on proposed Tank Engine for working the Mountain Line, Great Western Railway,*”—have agreed to the following Report:—

1. The question as to what description of road is best adapted to encourage the settlement, and increase the productiveness of the large portion of our territory lying west of the coast range, is one which might be very readily answered if the accompanying question of cost could be set aside. A first-class railway, combining as it does in a high degree the qualities of speed, safety, ease, certainty, and cheapness of conveyance, is without a doubt the best, as it is the most costly of all roads.

2. Railways of this class have been sanctioned by the Legislature of New South Wales as far as Goulburn on the South, Bathurst on the West, and Murrurundi on the North; and as the lines so sanctioned are now either completed or rapidly approaching completion, the time seems to have naturally arrived for inquiring into the financial possibility of further extensions.

3. Your Committee therefore, in the first instance, sought information from the Officers of the Railway Department (see evidence of Messrs. Whitton, Thomas, Ashdown, Moody, and Beeston) as to the cost of the construction, maintenance, and working of the existing lines.

4. It will be seen, on reference to *Appendix E, page 13*, that the sum total borrowed for railway purposes amounts at the present time to £6,147,300, and the Accountant to the Treasury seems to think that a still further sum will be required to complete the lines to Bathurst and Murrurundi. (*Questions 1244–1250.*)

5. The number of miles of railroad which have been or are being constructed out of the proceeds of this Loan is 402—viz., 134 miles from Sydney to Goulburn, 132 miles from Parramatta Junction to Bathurst, 120 miles from Newcastle to Murrurundi, and 16 miles from Blacktown to Richmond; giving a general average of £15,291 a mile.

6. A reference to the return appended to Mr. Thomas’s evidence, *marked A 5*, giving the working expenses and receipts of the Railways for the years 1865, 1866, 1867, 1868, and 1869, will show the exact balance of receipts over expenditure in each year, and enable an accurate estimate to be made of the burden which these so called reproductive works throw upon the General Revenue. The working expenses for the year 1869 were in round numbers £182,000, while the receipts during the same period amounted to £266,000, thus leaving a balance of £84,000 towards the payment of over £300,000, the interest on the Railway Loan.

7. It appears then that last year £216,000 of the interest due on the Railway Loan fell entirely upon the General Revenue, or £514 for every mile of railway we possess.

8. Your Committee have inquired into the practicability of effecting reductions in the working expenses of the railways generally, but no suggestion has been made to them by any of the witnesses which promises a saving to any very important extent. The suggestion, for instance, of the amount of saving of one passenger train a day, South, West, and North, is made on the estimate that as the number of trains run in the

the year gives an average cost of 50d. per train per mile, the saving effected by running one train less each day would be 50d. for every mile so saved, which is evidently an erroneous calculation. No doubt however some considerable saving might be effected not only in this way, but in the reduction in the number of suburban trains run.

9. Mr. Whitton expresses a confident opinion (*Question 1037*) that the railways might be made to pay by reducing the mileage run and increasing the fares. It is obvious however, from the amount now derived from the railways at present charges, that nothing less than doubling the fares could produce such a desirable result; and to double the fares would certainly check traffic, and destroy the main object which the Legislature had in view in constructing these roads—the promotion of settlement and the development of the resources of the Country.

10. Your Committee believe, from the evidence which has been tendered to them on the subject, that the extensions to Yass, Orange, and Tamworth, now contemplated by the Government, might be constructed at a reduced cost—as low perhaps as £8,000 a mile; but the traffic upon these extensions will necessarily be so much less for a long time than on the existing lines, that your Committee cannot calculate upon a smaller annual loss in the one case than in the other, that is, over £500 on every mile of railway.

11. It does not require very great financial foresight to calculate the limit to which a system of this kind can be carried. To borrow for works which are really reproductive is beneficial to the country, and so long as the works are reproductive there need be no limit to the amount borrowed; but where the interest on the money borrowed becomes a burden on the General Revenue, there must be a limit to the power of paying, if not to the power of borrowing. In our case, the limit has, in the opinion of your Committee, been sufficiently nearly reached. No collateral advantages derivable from railway traffic can possibly be worth to the Country £500 a year on every mile of railway.

12. A largely increased population would alone justify the extension of costly lines of railway, for then not only would there be some prospect of future success, but the burden of the debt would be less felt; for a debt which would press ruinously upon a population of half a million might easily be borne by a population of two or three millions.

13. As there seems to be, however, no present prospect of any rapid influx of population, your Committee have come to the conclusion that no further extensions of the main trunk lines should be made on the present costly principle.

14. While taking the evidence of the officers of the Railway Department upon the matters alluded to above, your Committee had placed before them evidence of such a startling character relative to the working of the Department, that they feel it their duty to call the attention of your Honorable House to these disclosures, although they refer to matters not strictly within the scope of the inquiry entrusted to the Committee. Mr. Thomas (*page 4*) gives evidence as to the quality of the iron used on our railways, which would lead to the belief that the Colony has been for years largely and constantly defrauded to an enormous extent in the article of rails. Mr. Thomas's evidence is to a great extent corroborated by that of Mr. Mason, the Chief Assistant Engineer for Railways (*page 29*). Mr. Whitton, though denying the generally bad quality of the rails in use, admits that a number of very bad ones have been imported (*page 45*). The evidence also of Mr. Ashdown, with the letters appended, discloses a state of feeling between that gentleman and Mr. Whitton which can scarcely exist without injury to the Public Service. Your Committee are of opinion that the interests of the Country require that a strict investigation into both of these matters should be made without delay, either by the Government or by your Honorable House.

15. Your Committee having decided to recommend, for the reasons already stated, that first-class railroads should for the present, at least, not be further extended, turned their attention to the consideration of what kind of road could be substituted, which while giving the Country all the advantages of cheapness of carriage and certainty of communication which appertain to a first-class railway, might yet be constructed at a cost more suited to our limited means, traffic, and population.

16. On this subject several professional witnesses have been examined, and your Committee feel that it is only due to these gentlemen to express the grateful sense which the Committee entertain of the readiness they have exhibited to assist the labours of the Committee, and, at a vast amount of trouble to themselves, to furnish the Committee with information which would not otherwise have been easily obtained.

17. Fully aware of the loss and inconvenience attendant upon a change of gauge and the consequent transfer of goods from one truck to another, your Committee have endeavoured to discover among the various plans of railways submitted to them one which, while of the same gauge as the present lines, and capable of carrying the same rolling stock, would be of a sufficiently cheap character to suit the present position and wants of the country. A railway of this gauge, with rails weighing 40 lbs. to the yard, an inferior description of permanent way, and running at a reduced speed, might, according to Mr. Whitton, be made in an easy country for from £5,000 to £6,000 a mile, but he would not recommend it. Mr. Mason is of opinion (*Questions 672-678*) that the cost of the permanent way for this description of railway would only be £1,100 less than for a first-class line. Mr. Thomas thinks (*Question 509*) that £2,000 a mile would be the maximum difference between the cost of a line of this kind and the best description, and that in an easy country it would cost £6,000 a mile. Mr. Richard Lloyd, in a very elaborate and excellent paper, which appears in the Appendix (*page 15*) as a supplement to his evidence, strongly recommends this class of railway, and furnishes details of a suitable description of railway in use in England, and which he calculates could be laid down here at £4,053 a mile. This would appear to be a very strong and cheap railway, and whenever the time arrives at which we can prudently resume the extension of our main trunk lines, the railroad recommended by Mr. Lloyd may prove to be quite good enough for permanent purposes. Mr. Charles Mayes, in the appendix to his evidence, gives £6,000 a mile as his lowest estimate for a line of a second-class character in an easy country.

18. Your Committee are not however prepared to recommend railway extension, even of this comparatively cheap character. The cost of construction would probably be found to be only about £2,000 a mile under that of a very superior road, while the cost of maintenance would be as great or greater. The General Revenue would still be burdened with an annual charge, very nearly, if not quite equal to that on the existing lines in amount, while the over-taxed population of the Country would not even have the satisfaction of knowing that the money had been spent on a solid and permanent work.

19. Your Committee find therefore their choice of a means of transit superior to the common roads of the country limited to a class of locomotive railway of narrow gauge and low power and speed, or a very cheap and light railroad adapted to horse traction. Estimates of the probable cost of both are given by Mr. Thomas, in Appendix (*page 3*). Of these lines Mr. Thomas says, in Appendix A 4—"A horse tramway of 3-ft. gauge and 25-lb. rails to the yard, can be laid along the line of road, making use of the present bridges where practicable, or constructing others where found necessary, for £1,500 per mile." "A light railway of 3-ft. gauge and 40-lb. rails, employing locomotive engines of 10 to 14 tons weight, can be laid along the line of road, making use of the present bridges where practicable, and constructing others where found necessary to do so, for the sum of £2,500 per mile."

20. Of the two plans here submitted, and of which full details will be found in the evidence of Mr. Thomas, your Committee have come to the conclusion that the horse railway is the one which it is most expedient to use for the present in New South Wales.

21. The following are some of the reasons which have induced your Committee to arrive at this conclusion:—

1st. A railway of a very cheap, and consequently not a lasting character, with a gauge different from that of our main lines, must be regarded as a mere temporary road, to be replaced by a good railroad of the 4-ft. 8½-in. gauge, as soon as the traffic is sufficiently developed to warrant the requisite expenditure. Taking that view, it follows that the cheapest of the temporary roads must be the best, if it can be shown to be equal to the amount of traffic which may be cast upon it.

2nd. That a horse railway will be quite equal to the heaviest demand made upon it for years to come may be exemplified by taking the highest estimate of traffic upon the line of road where the traffic is likely to be heaviest. The line from Goulburn to Yass, *en route* to Gundagai and Wagga Wagga, cannot at the utmost be estimated to have an annual goods traffic exceeding 10,000 tons, including up and down traffic. This would, at 300 working days in the year, give about 33 tons as the daily traffic, or 16½ tons each way; so that as a horse can draw on a level

level rail, on the most moderate estimate, 19 tons, the entire actual work upon the Yass line, if at all level, would not be beyond the power of one horse.

- 3rd. Because a horse railway can, where the traffic is light, be worked at less cost than the locomotive, though the very opposite is the case where the traffic is heavy.
- 4th. Because the cost of working a horse railway need never exceed what is absolutely necessary for the transport of the goods carried; and consequently carriage may be charged at an equally cheap rate whether the traffic be light or heavy.
- 5th. Because every advantage, either actual or prospective, which railways are supposed to confer, will be conferred by the proposed horse railway. The cost of carriage can be made extremely low, the certainty and ease of transport will be perfect, and in everything but the element of speed, which is of little importance in goods traffic, the horse railway will be equal to the best locomotive line as far as the development of the resources of the interior is concerned.

22. The superiority of a horse railroad over the ordinary roads of the country, or even over the best macadamized road, is too palpable to require much notice. The cost of construction of the macadamized road must be nearly if not quite equal to that of the proposed horse railway, while the cost of maintenance will be greater, and the difference in the cost of traction enormous. One horse on a rail will do the work of eight horses on a good road and in about half the time, therefore in the conveyance, say, of 4 tons of goods a distance of 40 miles there will be a saving of the work of fifteen horses in favour of the railroad.

23. Your Committee next directed their attention to the question of the extent and direction to which they should recommend these cheap railways to be carried. With a view to this question your Committee have taken the evidence of two gentlemen,—Mr. Forsythe, of Wagga Wagga, and Mr. Adams, the Surveyor General. The determination of the Committee to recommend a system of railways so cheap as to enable 1,000 miles of road to be made for what formerly scarcely made 100, rendered it unnecessary to take further evidence as to the relative claims of different parts of the country for railway extension.

24. In the recommendations which they have decided to make, your Committee have been actuated by a wish to give to all parts of the interior of the country increased facilities of transit, but more particularly those districts whose mineral and agricultural resources are known to be very great. One of the proposed lines—that from Goulburn to Wagga Wagga—appears to your Committee to be of such great importance on national grounds, as almost to justify the formation of a first-class line: the large saving of revenue which it would effect would probably suffice to pay interest on the cost of construction. Your Committee, however, are aware that a most formidable opposition would be offered to any such proposal by the representatives of other portions of the country,

25. The Committee beg to submit the following recommendations to your Honorable House:—

1. That the main trunk lines of railway should not for the present be extended beyond Goulburn, Bathurst, and Murrurundi.
2. That horse railways of the description given in page 3 of Appendix be laid, without unnecessary delay, to the following places:—
 - (1.) From Goulburn to Queanbeyan and Cooma, with branch to Braidwood.
 - (2.) From Goulburn to Yass and Wagga Wagga, with branch to Gundagai.
 - (3.) From Bathurst to Carcoar, Orange, Wellington, and Dubbo—the first two separate branches.
 - (4.) From Western Line to Mudgee.
 - (5.) From Murrurundi to Tamworth, Armidale, and Tenterfield.
 - (6.) From Moama to Deniliquin.

WILLIAM MACLEAY,
Chairman.

Committee Room,
Sydney, 25 March, 1870.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 4 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay,		Mr. Lee,
Mr. W. Suttor,		Commander Onslow,
	Mr. Hoskins.	

Mr. Macleay called to the Chair.

Entry in Votes and Proceedings appointing the Committee, *read* by the Clerk.

Committee deliberated.

Ordered,—That J. H. Thomas, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 8 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. W. Suttor,		Mr. Hoskins,
Mr. Sutherland,		Commander Onslow.

Printed copies of the Progress Report and Proceedings, &c., of the Select Committee on Railway Extension, Session 1869, *referred* by the House on the 3rd February, before the Committee.

J. H. Thomas, Esq. (*Inspecting Engineer*), called in and examined.

Witness *handed in* Report from the Engineer for Existing Lines of Railway on Working Expenses, dated 30 March, 1868; Dimensions of Small Tank Locomotive Engines employed on the Broelthal Valley Railway, Germany; Estimate for laying a Horse-tramway, &c., &c.

Ordered to be appended. (*Vide Appendix*, A 1 to A 3.)

Witness withdrew.

Committee deliberated.

Ordered,—That A. Ashdown, Esq., and R. Moody, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Thursday next, at *Eleven* o'clock.]

THURSDAY, 10 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. Alexander,		Commander Onslow,
Mr. W. Suttor,		Mr. Hoskins.

A. Ashdown, Esq. (*Accountant, Railway Department*), called in and examined.

Witness *handed in* Diagram, illustrating the Divisions of the Southern, Western, and Richmond Railways; Statement of Earnings for January, 1869; Minute Papers respecting the Divisions of the G. S., W., and W. and R. Railways, Nos. 1, 2, 3 and 4; Schedules of Expenditure in Revenue Account as per Ledger, for six months ended June 30, 1869.

Ordered to be appended. (*Vide Appendix*, B 1 to B 4.)

Witness withdrew.

R. Moody, Esq. (*Traffic Manager*), called in and examined.

Witness withdrew.

Richard Lloyd, Esq., C.E., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That George Forsythe, Esq., J.P., be summoned to give evidence at the next meeting.

[Adjourned until to-morrow, at *Eleven* o'clock.]

FRIDAY, 11 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. W. Suttor,		Commander Onslow,
	Mr. Hoskins.	

George Forsythe, Esq., J.P., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That J. H. Thomas, Esq., and R. Moody, Esq., be summoned to give further evidence at the next meeting.

[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY,

TUESDAY, 15 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. W. Suttor, Commander Onslow,	Mr. Hoskins, Mr. Lee.
-------------------------------------	--------------------------

J. H. Thomas, Esq., called in and further examined.

Witness withdrew.

R. Moody, Esq., called in and further examined.

Witness handed in Statement of Tonnage and Passenger Traffic, during October, November, and December, 1869.

Ordered to be appended. (*Vide Appendix, C 1 to C 4.*)

Witness withdrew.

Committee deliberated.

Ordered,—That W. Mason, Esq., and J. L. Beeston, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Thursday next, at *Eleven* o'clock.]

THURSDAY, 17 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. Hoskins, Commander Onslow, Mr. Alexander,	Mr. Lee, Mr. Morrice, Mr. Lord,
Mr. W. Suttor.	

W. Mason, Esq. (*Chief Assistant Engineer*), called in and examined.

Witness withdrew.

J. L. Beeston, Esq. (*Traffic Manager, Great Northern Railway*), called in and examined.

Witness withdrew.

Committee deliberated.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 23 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Commander Onslow, Mr. Lord,	Mr. Morrice, Mr. Alexander.
--------------------------------	--------------------------------

The Chairman read a letter which he had received from John Whitton, Esq., requesting to be furnished with a copy of all the evidence taken before this Committee.

Motion made (*Mr. Alexander*), and Question put,—That Mr. Whitton's request be complied with,—*agreed to.*

Committee deliberated.

Ordered,—That John Whitton, Esq., and P. F. Adams, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 2 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. Morrice, Mr. Lee,	Mr. Hoskins, Mr. Lord,
Commander Onslow.	

P. F. Adams, Esq. (*Surveyor General*), called in and examined.

Witness withdrew.

John Whitton, Esq. (*Engineer-in-Chief for Railways*), called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That John Whitton, Esq., be summoned to give further evidence at the next meeting.

[Adjourned until to-morrow, at *Eleven* o'clock.]

THURSDAY,

THURSDAY, 3 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Commander Onslow,		Mr. Hoskins,
Mr. Lee,		Mr. Morrice.

John Whitton, Esq., called in and further examined.

Witness handed in Minute Paper No. 67/175, respecting working of trains on Western Railway.

Ordered to be appended. (*Vide Appendix D.*)

Witness withdrew.

Committee deliberated.

Ordered,—That George Layton, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 8 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. Hoskins,		Mr. Alexander.
--------------	--	----------------

George Layton, Esq. (*Accountant to the Treasury*), called in and examined.

Witness handed in Statement shewing the amounts authorized to be raised by Loan for Railway purposes, &c., &c.

Ordered to be appended. (*Vide Appendix E.*)

Witness withdrew.

Committee deliberated.

Ordered,—That Charles Mayes, Esq., C.E., be summoned to give evidence at the next meeting.

[Adjourned until Thursday next, at *Eleven* o'clock.]

THURSDAY, 10 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Commander Onslow,		Mr. Hoskins,
Mr. Lord,		Mr. Alexander,
		Mr. Morrice.

Clerk drew attention to certain alterations made in Mr. Whitton's evidence, on revision, which the Committee allowed.

Charles Mayes, Esq., C.E., called in and examined.

Witness withdrew.

Committee deliberated.

Chairman handed in a letter from Richard Lloyd, Esq., C.E., in confirmation of the opinions he expressed in the evidence given by him before this Committee on the 10th February.

Ordered to be appended. (*Vide Appendix F.*)

[Adjourned until Thursday next, at *Eleven* o'clock.]

THURSDAY, 17 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. Hoskins,		Commander Onslow,
Mr. Lee,		Mr. Lord,
		Mr. W. Suttor.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 24 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Macleay in the Chair.

Mr. Alexander,		Commander Onslow,
Mr. W. Suttor,		Mr. Morrice,
Mr. Hoskins,		Mr. Lord,
		Mr. Sutherland.

Mr. Sutherland handed in letter from R. C. Walker, Esq., respecting Mr. Ashdown's statement before this Committee on Railway Accounts.

Ordered to be appended. (*Vide Appendix G.*)

Chairman submitted Draft Report, copies of which had been circulated amongst the Members since last meeting.

Same read 1^o, as follows:—

“ DRAFT REPORT.

“ 1. The question what description of road is best adapted to encourage the settlement, and increase the productiveness of the large portion of our territory lying west of the coast range, is one which might be very readily answered if the accompanying question of cost could be set aside. A first-class railway, combining as it does in a high degree the qualities of speed, safety, ease, certainty, and cheapness of conveyance, is without a doubt the best, as it is the most costly of all roads.

“ 2. Railways of this class have been sanctioned by the Legislature of New South Wales as far as Goulburn on the South, Bathurst on the West, and Murrurundi on the North; and as the lines so sanctioned are now either completed or rapidly approaching completion, the time seems to have naturally arrived for inquiring into the financial possibility of further extensions.

“ 3. Your Committee therefore, in the first instance, sought information from the Officers of the Railway Department (see evidence of Messrs. Whitton, Thomas, Ashdown, Moody, and Beeston) as to the cost of the construction, maintenance, and working of the existing lines.

“ 4. It will be seen, on reference to Appendix E, page 13, that the sum total borrowed for railway purposes amounts at the present time to £6,147,300, and the Accountant to the Treasury seems to think that a still further sum will be required to complete the lines to Bathurst and Murrurundi. (*Questions 1244–1250.*)

“ 5. The number of miles of railroad which have been or are being constructed out of the proceeds of this Loan is 402—viz., 134 miles from Sydney to Goulburn, 132 miles from Parramatta Junction to Bathurst, 120 miles from Newcastle to Murrurundi, and 16 from Blacktown to Richmond; giving a general average of £15,354 a mile.

“ 6. A reference to the return appended to Mr. Thomas's evidence, marked A 5, giving the working expenses and receipts of the Railways for the years 1865, 1866, 1867, 1868, and 1869, will show the exact balance of receipts over expenditure in each year, and enable an accurate estimate to be made of the burden which these so-called reproductive works throw upon the General Revenue. The working expenses for the year 1869 were in round numbers £182,000, while the receipts during the same period amounted to £266,000, thus leaving a balance of £84,000 towards the payment of over £300,000, the interest on the Railway Loan.

“ 7. It appears then that last year £216,000 of the interest due on the Railway Loan fell entirely upon the General Revenue, or £514 for every mile of railway we possess.

“ 8. Your Committee have inquired into the practicability of effecting reductions in the working expenses of the railways generally, but no suggestion has been made to them by any of the witnesses which promises a saving to any important extent. The suggestion, for instance, of the amount of saving of one passenger train a day between Sydney and Goulburn, is made on the estimate that as the number of trains run in the year gives an average cost of 50d. per train per mile, that the saving effected by running one train less in the day to Goulburn would be 50d. for every mile so saved, which is evidently a most erroneous calculation. No doubt however some saving might be effected in this way.

“ 9. Mr. Whitton expresses a confident opinion (question 1037) that the railway might be made to pay by reducing the mileage run and increasing the fares. It is obvious however, from the amount now derived from the railways at present charges, that nothing less than the doubling of the fares could produce such a desirable result; and to double the fares would certainly check traffic, and destroy the main object which the Legislature had in view in constructing these roads—the promotion of settlement and the development of the resources of the country.

“ 10. Your Committee believe, from the evidence which has been tendered to them on the subject, that the extensions to Yass, Orange, and Tamworth, now contemplated by the Government, might be constructed at a reduced cost—as low perhaps as £8,000 a mile; but the traffic upon these extensions will necessarily be so much less for a long time than on the existing lines, that your Committee cannot calculate upon a smaller annual loss in the one case than in the other, that is, over £500 on every mile of railway.

“ 11. It does not require a very far-seeing financier to calculate the limit to which a system of this kind can be carried. To borrow for works which are really reproductive is beneficial to the country, and so long as the works are reproductive there need be no limit to the amount borrowed; but where the interest on the money borrowed becomes a burden on the General Revenue, there must be a limit to the power of paying, if not to the power of borrowing. In our case, the limit has, in the opinion of your Committee, been sufficiently nearly reached. No collateral advantages derivable from railway traffic can possibly be worth to the Country £500 a year on every mile of railway.

“ 12. A largely increased population would alone justify the extension of costly lines of railway, for then not only would there be some prospect of future success, but the burden of the debt would be less felt; for a debt which would press ruinously upon a population of half a million might easily be borne by a population of four or five millions.

“ 13. As there seems to be however no present prospect of any rapid influx of population, your Committee have come to the conclusion that no further extensions of the main trunk lines should be made on the present costly principle.

“ 14. While taking the evidence of the Officers of the Railway Department upon the matters alluded to above, your Committee had placed before them evidence of such a startling character relative to the working of the Department that they feel it their duty to call the attention of your Honorable House to these disclosures, although they refer to matters not strictly within the scope of the inquiry entrusted to the Committee. Mr. Thomas (page 4) gives evidence as to the quality of the iron used on our railways, which would lead to the belief that the Colony has been for years largely and constantly defrauded to an enormous extent in the article of rails. Mr. Thomas's evidence is to a great extent corroborated by that of Mr. Mason, the Chief Assistant Engineer for Railways (page 29). Mr. Whitton, though denying the general bad quality of the rails in use, admits that a number of very bad ones have been imported (page 45). The evidence also of Mr. Ashdown, with the letters appended, discloses a state of feeling between that gentleman and Mr. Whitton which can scarcely exist without injury to the Public Service. Your Committee are of opinion that the interests of the Country require that a strict investigation into both of these matters should be made without delay, either by the Government or by your Honorable House.

“ 15.

" 15. Your Committee having decided to recommend, for the reasons already stated, that first-class railroads should for the present, at least, not be further extended, turned their attention to the consideration of what kind of road could be substituted, which while giving the Country all the advantages of cheapness of carriage and certainty of communication which appertain to a first-class railway, might yet be constructed at a cost more suited to our limited means, traffic, and population.

" 16. On this subject several professional witnesses have been examined, and your Committee feel that it is only due to those gentlemen to express their grateful sense of the readiness which they have exhibited to assist the labours of the Committee, and, at a vast amount of trouble to themselves, to furnish the Committee with information which would not otherwise have been easily obtained.

" 17. Fully aware of the loss and inconvenience attendant upon a change of gauge and the consequent transfer of goods from one truck to another, your Committee have endeavoured to discover among the various plans of railways submitted to them one which, while of the same gauge as the present lines, and capable of carrying the same rolling stock, would be of a sufficiently cheap character to suit the present position and wants of the country. A railway of this gauge, with rails weighing 40 lbs. to the yard, an inferior description of permanent way, and running at a reduced speed, might, according to Mr. Whitton, be made in an easy country for from £5,000 to £6,000 a mile, but he would not recommend it. Mr. Mason is of opinion (questions 672-678) that the cost of the permanent way for this description of railway would only be £1,100 less than for a first-class line. Mr. Thomas thinks (question 509) that £2,000 a mile would be the maximum difference between the cost of a line of this kind and the best description, and that in an easy country it would cost £6,000 a mile. Mr. Richard Lloyd, in a very elaborate and excellent paper, which appears in the Appendix (page 15) as a supplement to his evidence, strongly recommends this class of railway, and furnishes details of a suitable description of railway in use in England, and which he calculates could be laid down here at £4,053 a mile. This would appear to be a very strong and cheap railway, and whenever the time arrives at which we can prudently resume the extension of our main trunk lines the railroad recommended by Mr. Lloyd may prove to be quite good enough for permanent purposes. Mr. Charles Mayes, in the appendix to his evidence, gives £6,000 a mile as his lowest estimate for a line of a second-class character in an easy country.

" 18. Your Committee are not however prepared to recommend railway extension, even of this comparatively cheap character. The cost of construction would probably be found to be only about £2,000 a mile under that of a very superior road, while the cost of maintenance would be as great or greater. The General Revenue would still be burdened with an annual charge, very nearly, if not quite equal to that on the existing lines in amount, while the over-taxed population of the country would not even have the satisfaction of knowing that the money had been spent on a solid and permanent work.

" 19. Your Committee find therefore their choice of a means of transit superior to the common roads of the country limited to a class of locomotive railway of narrow gauge and low power and speed, or a very cheap and light railroad adapted to horse traction. Estimates of the probable cost of both are given by Mr. Thomas, in Appendix, page 3. Of these lines Mr. Thomas says, in Appendix A 4—'A horse-tramway of 3-ft. gauge and 25-lb. rails to the yard, can be laid along the line of road, making use of the present bridges where practicable, or constructing others where found necessary, for £1,500 per mile.' 'A light railway of 3-ft. gauge and 40-lb. rails, employing locomotive engines of 10 to 14 tons weight, can be laid along the line of road, making use of the present bridges where practicable, and constructing others where found necessary to do so, for the sum of £2,500 per mile.'

" 20. Of the two plans here submitted, and of which full details will be found in the evidence of Mr. Thomas, your Committee have come to the conclusion that the horse railway is the one which it is most expedient to use for the present in New South Wales.

" 21. The following are some of the reasons which have induced your Committee to arrive at this conclusion:—

" 1st. A railway of a very cheap, and consequently not a lasting character, with a gauge different from that of our main lines, must be regarded as a mere temporary road, to be replaced by a good railroad of the 4-ft. 8-in. gauge, as soon as the traffic is sufficiently developed to warrant the requisite expenditure. Taking that view, it follows that the cheapest of the temporary roads must be the best, if it can be shown to be equal to the amount of traffic which may be cast upon it.

" 2nd. That a horse railway will be quite equal to the heaviest demand made upon it for years to come may be exemplified by taking the highest estimate of traffic upon the line of road where the traffic is likely to be heaviest. The line from Goulburn to Yass, *en route* to Gundagai and Wagga, cannot for a long time be estimated to have an annual goods traffic exceeding 10,000 tons, including up and down traffic; indeed this is a very large estimate. This would, at 300 working days in the year, give about 33 tons as the daily traffic, or 16½ tons each way; so that as a horse can draw on a level rail, on the most moderate estimate, 19 tons, the entire actual work upon the Yass Line, if at all level, would not be beyond the power of one horse.

" 3rd. Because a horse railway can, where the traffic is light, be worked at less cost than the locomotive, though the very opposite is the case where the traffic is heavy.

" 4th. Because the cost of working a horse railway need never exceed what is absolutely necessary for the transport of the goods carried; and consequently carriage may be charged at an equally cheap rate whether the traffic be light or heavy.

" 5th. Because even supposing that the interest on the cost of construction—£75 a mile—should fall on the General Revenue it would signify little, as the indirect benefits to the country would be great, and the saving of the present expenditure on the ordinary roads would be considerable.

" 6th. Because every advantage, either actual or prospective, which railways are supposed to confer, will be conferred by the proposed horse railway. The cost of carriage can be made extremely low, the certainty and ease of transport will be perfect, and in everything but the element of speed, which is of no importance in goods traffic, the horse railway will be equal to the best locomotive one as far as the development of the resources of the interior is concerned.

" The

" 22. The superiority of a horse railroad over the ordinary roads of the country, or even over the best macadamized road, is too palpable to require much notice. The cost of construction of the macadamized road must be nearly if not quite equal to that of the proposed horse railway, while the cost of maintenance will be greater, and the saving in the cost of traction enormous. One horse on a rail will do the work of eight horses on a good road and in about half the time; therefore in the conveyance, say, of 4 tons of goods a distance of 40 miles there will be a saving of the work of fifteen horses in favour of the railroad.

" 23. Your Committee next directed their attention to the question of the extent and direction to which they should recommend these cheap railways to be carried. With a view to this question your Committee have taken the evidence of two gentlemen,—Mr. Forsythe of Wagga Wagga, and Mr. Adams, the Surveyor General. The determination of the Committee to recommend a system of railways so cheap as to enable 1,000 miles of road to be made for what formerly scarcely made 100, rendered it unnecessary to take further evidence as to the relative claims of different parts of the country for railway extension.

" 24. In the recommendations which they have decided to make, your Committee have been actuated by a wish to give to all parts of the interior of the country increased facilities of transit, but more particularly those districts whose mineral and agricultural resources are known to be very "great." One of the proposed lines—that from Goulburn to Wagga Wagga—appears to your Committee to be of such great importance on national grounds as almost to justify the formation of a first class line: the large saving of revenue now flowing into the coffers of the neighbouring Colony which it would effect being alone sufficient to pay interest on the cost of construction. Your Committee, however, are aware that a most formidable opposition would be offered to any such proposition by the representatives of other portions of the country, and they believe also that the proposed cheap line will be sufficiently efficacious in checking the mercantile aggressions of Victoria.

" 25. The Committee beg to submit the following recommendations to your Honorable House:—

" 1. That the main trunk lines of railway should not for the present be extended beyond Goulburn, Bathurst, and Murrurundi.

" 2. That horse railways of the description given in page 3 of Appendix be laid, without unnecessary delay, to the following places:—

" (1.) From Goulburn to Queanbeyan and Cooma, with branch to Braidwood.

" (2.) From Goulburn to Yass and Wagga Wagga, with branch to Gundagai.

" (3.) From Bathurst to Carcoar, Orange, Wellington, and Dubbo,—the first two separate branches.

" (4.) From Western Line to Mudgee.

" (5.) From Murrurundi to Tamworth, Armidale, and Tenterfield.

" (6.) From Moama to Deniliquin."

Draft Report read 2^o paragraph by paragraph.

Paragraphs 1 to 19 inclusive read, *verbally* amended, and *agreed to*.

[Adjourned until to-morrow, at *half-past Ten* o'clock.]

FRIDAY, 25 MARCH, 1870.

MEMBERS PRESENT:—

Mr. Macleay in the Chair.

Commander Onslow,
Mr. Lee,
Mr. Lord,
Mr. Sutherland,

Mr. W. Suttor,
Mr. Hoskins,
Mr. Morrice,
Mr. Alexander.

Chairman *handed in* letter from G. E. Dalrymple, Esq., with reference to "India-rubber Tire and Tram Steam Traction Patent."

Ordered to be appended. (*Vide Appendix H.*)

Mr. Sutherland *handed in* certified Minute Papers, Railway Department.

Ordered to be appended. (*Vide Appendix I.*)

Chairman's Draft Report further considered.

Paragraph 20 read.

Question put,—That the paragraph as read stand part of the Report.

Committee divided.

Ayes, 5.

Noes, 2.

Mr. Alexander,
Mr. Morrice,
Mr. Hoskins,
Mr. W. Suttor,
Commander Onslow.

Mr. Lee,
Mr. Lord.

Paragraph 21 read, amended *verbally* and by the omission of section 5, and *agreed to*.

Paragraph 22 read.

Question put,—That the paragraph as read stand part of the Report.

Committee divided.

Ayes, 5.

Noes, 2.

Mr. Alexander,
Mr. Morrice,
Mr. Hoskins,
Mr. W. Suttor,
Commander Onslow.

Mr. Lee,
Mr. Lord.

Paragraph 23 read and *agreed to*.

Paragraph 24 read.

Question proposed,—That the paragraph as read stand part of the Report.

Amendment proposed (*Mr. Lee*),—To omit all the words after the word "great" in line 3.

Committee

Committee divided.

Ayes, 3.	Noes, 4.
Mr. Lee,	Mr. Alexander,
Mr. Lord,	Mr. Morrice,
Mr. W. Suttor.	Mr. Hoskins,
	Commander Onslow.

Paragraph then *amended* and agreed to.

Paragraph 25 read.

Question proposed,—That the paragraph as read stand part of the Report.

Amendment proposed (*Mr. Lee*),—To *omit* section (1) of the 2nd recommendation.

Committee divided.

Ayes, 3.	Noes, 3.
Mr. Lee,	Mr. Alexander,
Mr. Hoskins,	Mr. Morrice,
Mr. W. Suttor.	Commander Onslow.

The numbers being equal, the Chairman gave his casting vote with the Noes.

Amendment proposed (*Mr. Hoskins*),—To *omit* section (4) of the 2nd recommendation.

Committee divided.

Ayes, 2.	Noes, 5.
Mr. Lee,	Mr. Alexander,
Mr. Hoskins.	Mr. Morrice,
	Mr. W. Suttor,
	Mr. Lord,
	Commander Onslow.

Amendment proposed (*Mr. Hoskins*),—To *omit* section (6) of the 2nd recommendation.

Committee divided.

Ayes, 2.	Noes, 4.
Mr. Hoskins,	Mr. Alexander,
Mr. Lee.	Mr. Morrice,
	Mr. W. Suttor,
	Mr. Lord,
	Commander Onslow.

Original Question *carried*.

Motion made (*Commander Onslow*), and Question put,—That the Draft Report of the Chairman, as amended, be the Report of this Committee.

Committee divided.

Ayes, 5.	Noes, 2.
Mr. Alexander,	Mr. Lee,
Mr. Morrice,	Mr. Sutherland.
Mr. Hoskins,	
Mr. W. Suttor,	
Commander Onslow.	

Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Adams, P. F., Esq.	35
Ashdown, A., Esq.	8
Beeston, J. L., Esq.	34
Forsythe, G., Esq.	15
Layton, G., Esq.	51
Lloyd, R., Esq.	11
Mason, W., Esq.	26
Mayes, C., Esq.	52
Moody, R., Esq.	10, 24
Thomas, J. H., Esq.	1, 20
Whitton, J., Esq.	40, 46

LIST OF APPENDIX.

	PAGE.
<i>[To Evidence given by J. H. Thomas, Esq., Inspecting Engineer, 8 February, 1870.]</i>	
A 1.	
The Engineer for Existing Lines to the Secretary for Public Works, 30 March, 1868, relative to the Working Expenses of the Existing Lines of Railway	1
A 2.	
Dimensions of Small Tank Locomotive Engines employed on the Broelthal Valley Railway, Germany.....	2
A 3.	
Estimate for laying a Horse-tramway of 3 ft. gauge, with rails 25 lbs. to the yard; and a Light Railway of 3 ft. gauge with 40 lbs. to the yard	3
A 4.	
Opinion respecting desirability for Horse-tramways or Light Railways for this Colony.....	3
A 5.	
Return showing Working Expenses on existing Lines of Railway, from 1865 to 1869 inclusive	4
<i>[To Evidence given by A. Ashdown, Esq., Accountant, Railway Department, 10 February, 1870.]</i>	
B 1.	
Diagram illustrating the Divisions of Southern, Western, and Richmond Railways. (<i>See Separate Appendix.</i>)	
B 2.	
Statement of Earnings for January, 1869.....	5
B 3.	
Minute Papers, &c., respecting Division of the G. S. W. and W. & R. Railways	6
B 4.	
Schedule of Expenditure in Revenue Account, as per Ledger, for six months ending 30 June, 1869.....	10
<i>[To Evidence given by R. Moody, Esq., Traffic Manager, 15 February, 1870.]</i>	
C 1.	
Return of Tonnage, for October, November, and December, 1869	11
C 2.	
Further particulars of Tonnage	12
C 3.	
Return of Passenger Traffic, for October, November, and December, 1869	12
C 4.	
Further particulars of Passenger Traffic	13
<i>[To Evidence given by John Whitton, Esq., Engineer-in-Chief for Railways, 3 March, 1870.]</i>	
D.	
Engineer-in-Chief to Commissioner, 23/7/67, respecting the manner of working trains of the Western Railway	13
<i>[To Evidence given by George Layton, Esq., Accountant to the Treasury, 8 March, 1870.]</i>	
E.	
Statement showing the amounts authorized to be raised by Loan for Railway purposes, and particulars	13
<i>[Handed in by the Chairman, and ordered to be appended to Mr. Richard Lloyd's Evidence, 10 March, 1870.]</i>	
F.	
Richard Lloyd, Esq., to the Chairman of the Committee, respecting internal communication, &c.	15
<i>[Handed in by Mr. Sutherland, a Member of the Committee, and ordered to be appended, 24 March, 1870.]</i>	
G.	
R. C. Walker, Esq., to the Hon. J. Sutherland, M.P. (<i>Commissioner for Railways</i>), respecting Mr. Ashdown's Statement on "Railway Accounts"	19
<i>[Handed in by the Chairman, and ordered to be appended, 25 March, 1870.]</i>	
H.	
G. E. Dalrymple, Esq., to the Chairman of the Committee, respecting "India-rubber Tire and Tram Steam traction"	19
<i>[Handed in by Mr. Sutherland, a Member of the Committee, and ordered to be appended, 25 March, 1870.]</i>	
I.	
Certified Minute Papers, &c.	20

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

RAILWAY EXTENSION.

TUESDAY, 8 FEBRUARY, 1870.

Present:—

MR. HOSKINS,
MR. ONSLOW,MR. MACLEAY,
MR. SUTHERLAND,

MR. W. SUTTOR.

WILLIAM MACLEAY, ESQ., IN THE CHAIR.

James Henry Thomas, Esq., examined:—

1. *Chairman.*] You are in the Public Works Department? Yes.
2. What office do you hold? Inspecting Engineer.
3. You were for some years Engineer for Existing Lines of Railway—What are the particular duties of that office? I had the entire charge of all the lines open for traffic, their maintenance, the rolling stock, and in fact everything connected with them.
4. Then you can give us a tolerable idea of the cost of maintaining a good line of railway per mile? Yes, I can tell what the existing lines have cost up to a certain year.
5. Have you the details? Yes. I have here a statement which shows almost at a glance the cost of the various lines. (*The witness handed in the same. Vide Appendix A 1.*)
6. What is about the cost per mile of maintaining the road, and what is about the cost per mile of working it? — (*Vide Appendix A 5.*)
7. I presume that as you have had so much to do with our railways, the question must have occurred as to whether we can afford to extend our railways much further on the same costly principle as that we have adopted up to the present time? I think decidedly not. Looking to the population and the large area of country over which they are spread, it is utterly impossible the country can bear the enormous cost of constructing railways on the present system. I have embodied my opinions upon this subject in a paper which I had the honor to submit to the Chairman of this Committee some time ago.
8. You have considered the subject of a cheaper system of railways as adapted to the more scattered population of the interior? Yes.
9. And you have, I believe, made calculations as to the possibility of adopting a cheaper system of locomotives? Yes.
10. At a reduced speed? Yes.
11. Will you give the Committee the result of those calculations? I have here a memorandum I have drawn up respecting a tank locomotive narrow gauge railway, 2-ft. 7-in. gauge, which I think would be admirably suited to this country as feeder to the main trunk lines. (*The witness handed in the same. Vide Appendix A 2.*) Engines have been constructed of this gauge, and there are some of them now running in Germany upon a line of this gauge.
12. Does this engine carry water with it? Yes; it is called a tank engine, and carries the coal and water with it.

J. H. Thomas,
Esq.

8 Feb., 1870.

- J. H. Thomas, Esq. 13. What would be the probable cost of a line of this description—can you give the details of the permanent way? Yes; I have estimated the cost of laying a light railway of 3-ft. gauge, with rails at 40 lbs. to the yard; and also of a horse-tramway, of 3-ft. gauge, with rails 25 lbs. to the yard. (*The witness handed in the estimate. Vide Appendix A 3.*)
- 8 Feb., 1870.
14. What would be the cost per mile? I have estimated—supposing you take, not one mile, but hundreds of miles—that the light railway could be laid at £2,500, and the horse-tramway at £1,500 a mile.
15. What would be the average speed upon this 2-ft. 7-in. gauge with a tank engine? I do not think you would be able to exceed with safety ten miles an hour. In good places you might obtain a greater speed, but in others you could not exceed five or six miles, so that the average would not be more than ten miles.
16. As regards the horse-train, the speed would be still less? Yes, it would not average more than five or six miles.
17. You believe that £1,500 would cover the cost of laying a tramway for horse traction? Yes, along a common road.
18. Have you made any calculation as to what would be the actual cost at which goods could be carried upon different lines? No, I have not done that, but I could easily do it.
19. If a horse-rail were adopted, it would be a very simple matter, as you would never employ more power than was actually required? No.
20. If a horse would take a wagon of four tons, it would be easy to calculate the exact cost of carriage—a man and horse would do fifty miles a day? I think you would have to change the horse, but one man might do that distance. I have put down stabling at every twenty-five miles. Of course this would vary in different places.
21. On a road where the gradients never exceeded 1 in 20, and where one horse would be able at any time to draw four tons, the actual cost of carriage would be easily made? Yes.
22. What do you think would be the cost of maintenance of a road of that kind per annum per mile? Certainly not more than £30 or £40.
23. Would it be as much? I think it would. One man might look after four or five miles easily, and keep it in order. The items to be calculated are his pay, some little stores, tools, and so forth. If you put his pay down at 8s. a day, this would amount to about £150, which would have to be divided between the five or six miles.
24. That is about the cost of keeping a macadamized road in repair? The expense of maintaining a macadamized road varies very much according to the width.
25. A macadamized road would wear down very much more than one of the kind you describe, where one horse would do the work of eight? Yes, you would of course have to keep the tramroad up with a proper top upon it, or the sleepers would be constantly sinking in wet weather—they would get into slacks and would have to be brought up again. One man could look after four miles. At the present time they have in some places on the railway one man to a mile, and in others a man and a quarter to a mile.
26. That is for the maintenance? Yes.
27. It seems from the return you have handed in that the cost is about £300 a mile on the railway? Not so much as that, and you will find a great difference in different years. In 1865 it was about £211 a year, in 1866 it was a little less, and in 1867 it was about £133.
28. *Mr. Hoskins.*] What do you mean by maintenance? Repairing.
29. Only labour? Labour, material, and so on—they are constantly using ballast.
30. *Chairman.*] We may take it at an average of £200 a year? Yes.
31. What is the cost per mile per annum of working expenses and maintenance on a first class railway? The maintenance of all the lines and working expenses—that is, locomotive and carriage repairs, traffic and other charges—averaged per mile per annum in 1865 £756, in 1866 £737, and in 1867 £566.
32. Will you state to the Committee the probable cost of maintenance and working expenses for the same amount of traffic on the railway you propose at a cost of £2,500? —
33. Will you also state the probable cost of maintenance and working expenses of a horse railway as proposed to be constructed at a cost of £1,500, supposing the traffic to amount to 2,500 tons each way, or 5,000 tons altogether over a line extending 100 miles? —
34. There have been a great many propositions made of late years, and plans have been suggested for a cheaper system of railways than the present—have you studied many of them? Yes, I have read nearly the whole of them, for I have all the journals from England every month and read all these things.
35. Is there any necessity for so costly a permanent way as that you have referred to, for even £2,500 a mile is costly? It can be made more cheaply if a lighter locomotive is used.
36. Could a lighter locomotive draw a sufficient weight over the country where the gradients are steep? Locomotives have been made to do so in mining districts by having tank engines.
37. The thing to be avoided is weight, and where you have weight you must have expensive roads? Yes.
38. Have you not heard of a plan to give the wheel an additional bite on the rail, by covering the tire with India-rubber? I have heard of it with reference to vehicles running on common roads, and it has often struck me that it might be made available for railways.
39. The fact of having an India-rubber tire to the driving-wheel of an engine would not prevent the use of a flange? No, the wheel could be made so as to admit of the use of India-rubber, and yet to retain the flange.
40. You have never heard of any of these wheels having an India-rubber tire having also a flange? Never; I have never heard of India-rubber being used on the wheels of a railway carriage or engine.
41. The Traffic Manager has furnished the Committee with returns of the traffic on the railways here; but do you not think that the amount of traffic beyond Bathurst and Goulburn will be much less than it is from either of those places? Yes.
42. And the same remark, I suppose, will apply to Murrurundi? Yes.
43. So that in looking to the probability of a railway paying, if carried beyond either of those places, we must make our calculations in much lower figures? Yes.
44. And if our railways do not pay in the more thickly populated parts of the country, they will be still more unprofitable as we extend them to more sparsely populated districts? Yes. If you take a map of New South Wales, and mark upon it the existing lines of railway, you will be struck at the short distance into which they have as yet penetrated the interior, at a cost of six millions of money.

45. Has not the actual cost of our railways been really greater than is usually asserted? Yes. The proper way to arrive at their cost would be take the amount of capital voted for railways, and divide the total amount among the number of miles of railway actually constructed for the money. If that were done, it would be found that the cost was far above the stated average. J. H. Thomas,
Esq.
8 Feb., 1870.
46. The return you have handed in was made up by you? It was made up from data given to me by the Accountant for Railways.
47. We were unable to get these details for last year? It has never been carried out since. My object was to bring the whole matter into such a small compass that a person could see at a glance everything connected with the lines.
48. *Mr. Suttor.*] With regard to these cheap lines you speak of, the cost of maintenance and of working them would depend very much upon the number of times the passenger trains would run, whether once or twice a day? I have not yet made up what the cost would be, but of course it would depend greatly upon the amount of traffic, though the difference between running one train and two would not be much.
49. There will of course be a man to look after them? The estimate I have made refers to the laying down the line, not to its maintenance.
50. You spoke of certain horse stations at every 25 miles—a man would be required at each of these to look after the horses? Yes, but my calculation is merely for laying down the line.
51. What would be the expense of working these cheap lines? That is a question I have not gone into.
52. Have you been in the Bathurst country? Yes. You have now got, or shortly will have, a railway to Bathurst, and there is also a railway to Goulburn, and I think it quite right, as far as those places are concerned, that the railway should be of the best and most substantial character, but I think beyond those places cheaper railways might be employed as feeders to the main lines.
53. *Mr. Hoskins.*] You were for some years Engineer of Existing Lines? Yes, seven years.
54. Do you not think a material reduction might be made in the working expenses of railways, by reducing the number of trains in such a way as would not militate against the convenience of the public? I do not think more trains run now than is necessary.
55. Do you think that two trains a day, say from Picton south to Goulburn, or from Penrith to Bowenfels, are sufficiently well patronized by the public to justify their being continued? So far as the passenger traffic is concerned I do not think they are, because sometimes not more than one or two passengers travel by them, but still I think it is to the general interests of the country that they should continue to run.
56. I infer that you have been connected with railways some years? Yes, in England, Belgium, and Spain.
57. Is it usual or customary in either of those countries for the directors or managers of railways to run passenger trains merely for the convenience of the public, without regard to the remunerative nature of their business? Certainly not. They are principally managed by Companies in England, in Belgium by the Government as well as by Companies, and in the latter country they took this course,—they gradually lowered the fares and noted what the receipts were, and when they found they were getting a little too low, and that the receipts would not pay, then they raised them again till they got the exact figure at which they could work at a profit.
58. They ascertained what trains were most patronized and continued them, and took off those that were not supported by the public? Yes.
59. Do you not think that one train from Picton to Goulburn and one from Penrith to Bowenfels each day would be sufficient? If the railways were in the hands of a Company, and it were a mere question of profit, perhaps only one train might be run; but as they are carried on by the Government, I think the matter assumes a different aspect, and that they have a right to consider the public convenience.
60. Is it just that other people should be taxed for the convenience of those who travel? That is a matter of opinion.
61. Seeing that one passenger coach sufficed to bring all the people who travelled from Goulburn to Sydney and *vice versa*, and that the same accommodation was sufficient for travellers from Bathurst to Sydney and *vice versa*, do you not think one railway train ought to suffice? I know it does not pay to carry them, but I do not wish to give an opinion upon the policy of Government.
62. You have expressed an opinion about the matter, and therefore I ask you the question? My opinion then is that the Government ought to run the train whether it pays or not.
63. Would it be possible to estimate what would be the net profits of the existing lines of railways if the railway were run without any regard to economical results? I do not understand your question.
64. You say trains run that do not pay? I say some do not; but if you take the whole receipts, for goods and so forth, you will find that the railways are paying some percentage.
65. Can you tell me the cost of running a passenger train from Penrith to Bowenfels, or from Picton to Goulburn, per mile? Taking the distance at 50 miles, it would cost about £10.
66. Does it cost only £10 a day to run a heavy locomotive and train for 50 miles, including the *employés* on the engine, the wear and tear, and all other expenses? That is all. The report I have handed in gives you what each train costs for every mile run.
67. Then you must double the amount you have given? Yes, for coming back.
68. That is £120 a week at that calculation? Yes. That includes all expenses, even the office expenses in Sydney, Accountant, Clerks, Traffic Manager, and everything else.
69. You say the cost of maintenance of the permanent way is £200? It came down to £133.
70. Will you be kind enough to specify what that cost included? There is a man for every mile, all the tools, all the rails for renewal, and new sleepers are constantly required.
71. Does this calculation of £200 include damages from floods? Yes.
72. Are there not special votes taken in Parliament? No, we did not have a single penny voted in consequence of damage done by floods.
73. Can you give me any idea of the average cost of the maintenance of the Great Western or any English railway? They vary immensely; one railway has an immense traffic, another has very little. The principal railways, the Great Western or the Great Northern, would cost £90 or £100 a mile.
74. Are you aware of the number of trains that run there? It is an immense number.
75. Trains are running every quarter of an hour by day, and goods and cattle trains all night? Yes, there must be some hundreds of trains.
76. How then do you account for the fact that the cost of our working expenses and maintenance is double that of one of these great English railways? Labour and materials are much dearer here—more than double the English price. They can get good fitters for 16s. or 18s. a week.

- J. H. Thomas, Esq.
8 Feb., 1870.
77. Is not labour one of the smallest items of expense? No. Here we pay labourers 7s. and gangers 8s. a day.
78. The wear and tear of the permanent way ought to be the most serious item of maintenance, and this must be greater where trains are running every half or quarter of an hour than here? We have a considerable expense in turning rails; the rails wear out much sooner here than in England, and we have had very bad rails, made of the very worst description of iron—rails that have been down but a few months have to be turned. We have steel rails now that cannot be used on the main lines, they are so bad.
79. Who is responsible for passing these rails? I cannot say. There are an immense number of good makers in England. The making of a good rail does not depend upon any one kind of iron, but upon an admixture of ores. It is by the mixing of various kinds of iron you get the best quality.
80. Is it your opinion, based upon your knowledge of railways in other countries, that the description of rail supplied to us is very much inferior? It is. I have not the slightest hesitation in saying that there is not a line in England supplied with rails of so inferior a character.
81. Have you reported this matter? I have mentioned it several times.
82. Have you had any reply to these reports you have sent in? No, I do not know that I have.
83. Can you say whether of late years, since you have had the management of the railways here, the price paid in England by the Government for our rails has been equal to that paid generally by English Companies? It has been greatly in excess; they have paid a great deal more than would have been paid by any merchant. If a merchant had brought out the rails, I am within the mark in saying they would at least have cost him £2 a ton less.
84. *Mr. Onslow.*] We have paid more for an inferior article? Yes.
85. *Mr. Hoskins.*] Were those reports of yours made in writing? Yes.
86. Are any of them on record? Yes, I believe so. It was not my business to report on this matter; the line was not made by me, but was finished when I took charge. I have had to turn these rails very often. The falling of a stone upon them has caused them to break like a piece of glass. I know that four rails were put upon the Menangle Viaduct, and all four of them were broken.
87. Being the Engineer of Existing Lines, did you not feel it to be your duty to report upon the quality of the rails supplied to the road? They were all previously supplied; I never imported any.
88. All the rails you used during the time you had charge of the railway were imported previous to your appointment? Yes. I never indented any but once, twelve or eighteen months ago, and I do not think they have arrived.
89. Is it your opinion that if rails of a superior quality were supplied for the service of our railway, if equal in quality to the rails supplied at the same price to the Companies in England, the working expenses of our railways would be reduced? Yes. The working expenses include the locomotives and the maintenance of the line.
90. Therefore your estimate of the cost for maintenance might be materially reduced if we had good rails? No doubt. I look upon these steel rails as almost thrown away; they cannot be used except for sidings.
91. When were they supplied? Twelve years ago I believe. I did not know they were there until about twelve months ago, when I drew Mr. Sutherland's attention to them.
92. *Chairman.*] They have not been much used? No, and where they have been used they have proved a failure.
93. *Mr. Hoskins.*] Leaving out of consideration these old steel rails, you are of opinion that the iron rails supplied are extremely inferior? Yes, a very large proportion are extremely inferior.
94. Much inferior to those supplied to Companies in England? Much inferior. To give a proof of this, I may mention that Mr. Brown of the City Iron Works has refused to take the double-headed rails. He has said—"I cannot work them, but I will take the old Barlow rails because they are excellent iron."
95. Then I infer from your evidence that in consequence of the inferiority of the rails supplied, and the cost of running unnecessary trains, the public are not in a position to judge what would be the net profit derivable from our railways if they were worked on a more economical system? No doubt.
96. Have the principal railways in England found it more economical to use steel rails? Yes, where they have immense traffic.
97. But here, where there is not such a traffic, steel rails have been found to be worthless? Yes, I would not use one of them; I would use the old Barlow rails in preference.
98. Is it not your opinion, seeing that this Colony has been supplied with such inferior rails, that there must have been lax inspection of them in England before they were shipped? Yes. A Railway Company in England giving an order for rails would have a person stationed on the works to see every one of them passed through the rollers, to see every bloom made up,—in fact, to watch the whole process.
99. How long do you think, judging from the limited traffic we have on our railway, rails should last on the average? They ought to last twenty-five years.
100. As a matter of fact have they done so? No, the Barlow rails have not lasted more than twelve years, and they have had most of the traffic—all the suburban as far as Parramatta. The reason they have given way so soon is their defective shape which allows them to bend, and the constant bending of the rail is known to destroy the fibrous character of the iron.
101. If rails of the inferior description you have spoken of have been used on the Western Line, do you not think the public will be serious losers by having such inferior metal laid down? I believe the public will be great losers. The working expenses on that line will be great, owing to the necessity of constantly changing the rails—taking them up and laying them down. Besides I consider them dangerous.
102. Have you observed on the Western Railway where they have such sharp curves, whether the rails wear away by abrasion more than is usual on other railways? Yes.
103. More than might naturally be expected even on curved lines? Yes, being bad iron they wear much faster than they otherwise would.
104. How long do you think it will be, judging from your knowledge of the quality of the iron used, and the nature of the country, before the road from the first Zigzag to Blackheath will require to be relaid? Rails have already been taken up and condemned. In three or four years by degrees I believe all the line will have been relaid.
105. Have you had any experience of working such a mountain line with sharp curves and steep inclines? No, except in this Colony, I do not know of any such in Europe. We have no curves in England nor gradients approaching them.

106. I think there are gradients? Very few, and for very short distances. I do not think there is a gradient of 1 in 30 in England—there is in Belgium. J. H. Thomas, Esq.

107. As regards these narrow gauged lines in Germany to which you have referred, 2 feet 7 inches, would the cost of making lines so very narrow be relatively very much less than if we had the formation of the same width as that of existing lines? Of course in reducing the width of the line, you must reduce the weight of the rolling stock, the engines, and everything else in proportion—the length of the sleepers, the quantity of ballast, and have rails of a lighter character.

8 Feb., 1870.

108. But the most costly portion of the construction of a railway is the formation, is it not? Yes; but we have adopted for going over the mountains to Bathurst a plan such as can be properly employed on comparatively level lines in England. If a stranger in England were looking at a railway there for the first time, he would naturally say—"This is all very well for a country like this, but you cannot go over a mountain with it"; and the reply would be—"If we could, there would be no necessity to go to the expense of costly cuttings, embankments, and so forth." We have taken a class of railway adapted only to a level country and have carried it over mountains. A different course was taken at Mont Cenis; there they had a mountain to go over, they threw over all English notions of railway engineering, and have succeeded. But to attempt to carry a railway suited to a level country over mountains is absurd.

109. It has been given in evidence that when we go beyond the present boundary of our railways, with the exception of Liverpool Range, where the incline is 1 in 50, there will be no serious gradients? I may say that my objection to a substantial and well-made railway does not extend to the line made either to Bathurst or to Goulburn, but to the carrying out of an expensive line beyond those places.

110. It has been given in evidence by Mr. Whitton, that the narrowing the width of the formation from the existing formation would not relatively very much reduce the cost of formation? If you make a sketch of an embankment for the two different systems, it will be readily seen that there is a very great difference.

111. You must have a batter in both cases? Certainly.

112. Would it be worth while to continue our railways beyond the present termini on this plan, when the inconvenience of a break of gauge is considered? The inconvenience of a break of gauge in England, where there is an enormous traffic, is very great, but in a country like this, where the whole population is not greater than that of a second class English town, the break of gauge is not to be considered.

113. A very large proportion of the traffic which may fairly be expected from beyond Bathurst will be flour from the country, and copper from the copper mines—Would it not seriously increase the cost of the transmission of this produce, if it had to be unladen and transferred from trucks on a narrow gauge railway to those on the present railway? It would be certainly attended with some trouble; but when it is found that it does not involve any great inconvenience in Wales, which is a mining country, I do not think there could be any serious objection to it here where the traffic is so much less.

114. What railway is there in Wales which is the continuation of any main road where there is this change of gauge? —

115. There is the South Wales, and the continuation of the North-western—these continuing lines are not reduced in width? They are at the present time beginning to see that these are mistakes.

116. Can you give us an idea of the difference of the cost of making a line of 4 feet 8½ inches and one of 2 feet 7? By reducing the weight of the rails and so forth, as I have stated, you can make a railway of 2-ft. 7-in. gauge for £3,500 a mile, while a railway of 4 feet 8 gauge would cost from £8,000 to £10,000.

117. Is there a difference of cost between a 2-ft. 7-in. gauge, and a 4-ft. 8-in., of £4,000 or £5,000? The cost of the rails is a large item, and everything else must be stronger,—the bridges must be more substantial to take over a heavy locomotive.

118. Could you not have lighter rails on a 4-feet 8 gauge, and lighter bridges? Yes, but then you must have lighter rolling stock generally.

119. Could we not with the existing gauge have a cheaper railway than the present one which would be sufficient for the traffic; for instance, might we not have timber viaducts with shallow stone piers and even partially dressed timber? Yes.

120. Could we not have weatherboard stations? Yes, that would reduce the expenditure somewhat, but I think it would be better to reduce it to the figure I have stated, for we have to deal not with hundreds but with thousands of miles.

121. What has been the result of the adoption of this narrow gauge of 2 feet 7 inches in Germany? A great reduction of the working expenses.

122. What is the nature of the traffic? Mineral traffic.

123. It is purely mineral traffic on these German railways? Purely mineral.

124. Are there any steep gradients on the line to which you refer? No.

125. What are the general features of the line? The railway follows the exact course of the road; the curves do not exceed 38 metres, and the inclines are not more than 1 in 80.

126. In the description of engines indicated in the description of the line to which you refer? Yes, they are the same as I have stated in the memorandum I have handed in.

127. How long has that railway been working? The date of the publication in which it is described is March, 1869.

128. With respect to the horse railway to which you referred in answer to the Chairman's questions, I presume you propose that it shall be laid down on the site of existing roads? Yes.

129. Do you think they could be worked satisfactorily? I am not so favourably inclined to a horse as to locomotive lines, but I see no difficulty in working them—By having a little heavier railway with a locomotive you could convey more passengers or goods, and it would be more convenient.

130. Could we not have a railway extending beyond the present line with the existing gauge which would carry trains at a maximum speed of from ten to fifteen miles an hour, which would not cost more than £4,000 or £5,000 a mile, supposing we had cheap timber bridges, less costly culverts, and weatherboard stations? Yes, excepting that you would have to use lighter rolling stock, as the present trucks are far too heavy for rails of that size, and thus would have to do the thing you desire to avoid, namely, to shift the goods from one truck to another.

131. Could we not run these trucks with safety at a greater rate of speed over 60 lb. rails? Yes; the deflection is caused by the speed rather than by the weight. If you pass over a bridge at the rate of 20 miles an hour the deflection will be half an inch, while at 40 miles it will be an inch and a half.

- J. H. Thomas, Esq.
8 Feb., 1870.
132. Do you not think that even on the existing lines we have many costly structures in the shape of stone viaducts, culverts, and station-houses, that might have been avoided? Yes, there are a number of such works which have cost a great deal more than they ought; for instance, in the Menangle and Nepean viaducts the construction is defective as to the amount of iron used—the amount of iron is enormous in comparison with what they have to carry; however, when we have some hundreds of miles of line to make, such constructions come to but little upon the whole.
133. Beyond the existing termini, might not fencing be dispensed with? Yes.
134. You have heard that upon some of the lines in America this is the case? Yes, they do without fencing.
135. Where they cannot afford a costly railway, they simply fall the trees and spike them? In the memorandum to which I have referred, and which I gave to Mr. Macleay, I speak of the American railways as follows:—"It has been said that in America and other places where cheap railways have been constructed, that after some years it was found necessary to take them all up again, and substitute more substantial works. This is true to a certain extent, but it is also true that before this was done their work had been accomplished,—large centres of population established, and the country put in a position to pay for the more expensive lines. No one would advocate the erection of large and expensive buildings on the founding a new Colony, merely because in Sydney and other colonial cities the primitive structures are now giving place to buildings of more architectural pretensions."
136. Are you aware that even in the Colony of South Australia railways are not fenced in? Yes.
137. Do you consider that the cost of maintaining a tramway would amount to the cost of maintaining a macadamized road? No, I do not think it would. In the paper to which I have just referred, I say—"A horse tramway or light railway can not only be constructed but maintained at a less cost than a common road; indeed, in some parts of this Colony, such as Riverina (a district as large as France), macadamized roads cannot be made at all, owing to the want of metal or stone of any kind. In a pamphlet on Roads, Railways, and Canals in India, published by Messrs. ——— the writer Mr. T. Login, there are many useful suggestions connected with light railways. Mr. Login, writing upon roads, their construction and maintenance, states—portions of two grand trunk roads are actually costing more to keep in repair than a line of railway, the latter being about 100 rupees a month, a mile, while portions of the Grand Trunk Road are costing 120 rupees a month a mile. With such an enormous expenditure therefore, increasing year after year, a time must soon be reached when all the available money will be swallowed up in repairs, unless some other means be devised for facilitating the traffic, which is daily increasing. I go on to say—"After collecting data, and going carefully into the matter, Mr. Login arrived at the very remarkable conclusion that it is cheaper for Government to send all the traffic by railway freight free than to keep up metalled roads for its transport. In this Colony we are in a somewhat similar position; yearly we are paying large sums for the forming and maintaining of our roads, which if expended on light railways or horse-tramways would very soon cover the country with a cheap and expeditious network of conveyance."
138. I should think the maintenance of a tramroad would not be more than half the expense of maintaining a macadamized road? The macadamized roads here are made very narrow; indeed 18 feet is the average width.
139. It has been given in evidence by two scientific witnesses that the maintenance of a tramway would be very costly, because the horses' feet travelling between the rails would displace the sleepers, cause them to become loose, and render frequent repair necessary—Did you ever see a horse-tramway where there were no transverse sleepers at all? Yes. I do not know anything about the scientific witnesses, but I am sure they could have had no practical acquaintance with the matter.
140. You could make a tramway without any transverse sleepers at all? Yes; but it would be better to have a few to bind the tram.
141. *Mr. Onslow.*] You have stated that the steel rails you have are not good—As a rule, are not steel rails preferable to iron? Yes.
142. Do you think, taking the extra cost with the interest thereon into the account, it is better to have steel than iron rails? Where there was a considerable amount of traffic.
143. How long ought good iron to last? That would depend upon the traffic. On the Parramatta Line, with a few renewals, they have lasted twelve or fourteen years, and even now they are good rails; but I do not think it right to keep them down longer. Even now I would not mind running on the old Barlow rails at the rate of 30 or 40 miles an hour, I have so much confidence in them, but I would not run at the rate of 20 over the steel.
144. In the event of carrying on railways, sleepers would be a great cost? Yes.
145. How long does a good ironbark sleeper last? We have not had experience, but I should think a good ironbark sleeper would last thirty years.
146. There is not much ironbark in the country beyond the present lines? No; there is ironbark here and there; but box makes very good sleepers.
147. The white ant is not very troublesome on the other side of Bathurst? I am not sure of that; I have not had sufficient experience of the country to say.
148. You say, I think, that you have no doubt it would be cheaper to build the bridges of wood—Do you not think that in the long run it would be cheaper to have them substantially built of stone? That would depend upon the kind of railway required. I think it was quite right that upon the main trunk lines to Goulburn and Bathurst that the work should be strong and substantial; but I do not think, looking to the small population and the enormous extent of the country, that we are in a position to pay for these expensive lines to more distant places.
149. There is a great deal of wood-work on this side of the Menangle; do you know whether it has been attacked by the white ant? I know we have suffered most from the white ant to the north. At Homebush and Burwood the bridges over the line are completely riddled by white ant. We have found the best remedy to be kerosene oil, which we obtain for a 1s. or 8d. a gallon.
150. *Mr. Suttor.*] Have you ever tried arsenic? No.
151. *Mr. Onslow.*] How long do you think wood-work will last? If carefully attended to it will last a great number of years; it is difficult to say how long; perhaps forty or fifty years.
152. Have not iron rails been made in the Colony? Yes, we have made one or two—passed them through the rollers.
153. Have they been tried? No, I think not.

154. Do you know anything about Fitzroy iron—whether good rails may be made from it? By itself it is not capable of making good rails; if mixed with iron it would form a good basis. J. H. Thomas,
Esq.
155. Is there any difficulty in making a good rail? It requires a mixture of metal.
156. I am speaking as to skilled labour—does it require any particular art? No, it is principally machinery that is required. If we had a good set of rollers and the other appliances, we could make them in this Colony; but I would not advise the Fitzroy Company to make rails for which they could get only £10 or £12 a ton, when they might convert their metal into steel and get £60 or £70. 8 Feb., 1870.
157. The principal expense would be for machinery for rolling? Yes.
158. When a contractor takes up a contract for making a railway, does that include the laying of the rails? That depends upon the terms of the contract.
159. Do you think running these cheap trains increases the passenger traffic? It is a remarkable thing that in all other countries than this the traffic has been enormously increased by the making of railways; but I doubt whether many more people come from Bathurst to Sydney now than when Cobb's coaches ran.
160. Do you think a fair proportion of the people travel here—is there any estimate? A fair proportion travel between the suburban stations and Sydney.
161. Only between the suburban stations—not from and to the country? No. A town like Bathurst is but a little village in comparison with the English towns.
162. If the rates were materially reduced, do you think it would encourage travelling? I do not think we should take one more passenger. If a person wanted to come down from Bathurst, the difference of a few shillings in the fare would have no effect.
163. He would not be deterred so much by the expense of coming down as by the expense of staying in Sydney? He would not.
164. Do you know if the cheap excursion trips pay? Yes; but they occur only now and then, from the people in Sydney desiring to see something of the country.
165. The running of these trains does not involve a positive loss? No, I think there is a slight gain on them.
166. Goods traffic, you say, pays much better than passenger traffic? Yes; that is the reverse of the case in other countries.
167. At all events, for some years to come our railways must depend for payment upon the goods traffic? I think entirely, if you cut off the line beyond Parramatta, and take that as the last suburban station—beyond that we must depend entirely upon the goods traffic.
168. Do you think there is a sufficient quantity of rolling stock on the line at present? Not half sufficient; if we had 300 trucks on the line we could find employment for them. I have been pointing this out for the last eighteen months or two years.
169. Then your idea is that if we had double the amount of rolling stock, the railways would pay nearly double as much as they do now? We have not sufficient steam power. We now have thirty locomotives upon the Southern and Western Lines, and out of these twenty-four are daily in steam, consequently there is no time for repairing them, and if anything gives way the engine goes into the shed and is patched up and sent out again.
170. Then not only the trucks, but also the engines are short? Yes.
171. Are you short of passengers' carriages? No, I think we have plenty of passengers' carriages. There is another instance in which the Colony has been badly served. There were eighteen imported at a cost of £15,000, and when these came out we found that the panels went to pieces, and that it was dangerous to run them upon the line, and it was not until they were repaired and patched up that they were fit to run.
172. The goods trucks are not imported? No, they are all made here, and are being made as fast as possible. Messrs. Russell have erected very large works for the construction of rolling stock generally.
173. They are made only in Sydney or its neighbourhood? Yes. We have had trucks made at Morpeth, and they could be made up the country.
174. Do you not think it probable that in the process of the construction of railways great improvements are likely to take place? Yes, but if we are to stand still until they occur we shall never make any progress.
175. If we had now to commence the Western Railway, do you think we should adopt the same system as has been carried out there? I think not; we should be very foolish if we did.
176. You think the present system of working on the Western Line is very expensive? We cannot arrive at the expense. Some short time ago the Accountant suggested a plan for keeping the expenses of the Western Line separate, so that we might arrive at what that railway actually cost, and I joined with him, but the system has been upset.
177. You have been able to form some estimate—In comparison with the Southern Line, what do you think the working expenses are? I should say 50 per cent. more.
178. *Mr. Suttor.*] But the traffic is more? The traffic is larger.
179. Are you aware that sheep are now travelling by the road, in consequence of there not being trucks to convey them? Yes.
180. *Mr. Onslow.*] Speaking of the tramway, do you think the effect of rain and weather is greater than the effect of traffic on a macadamized road—if a little gutter is caused in a road by a shower, does not that do more damage than a considerable amount of traffic? On a good macadamized road drainage is the first thing to be looked to, and no such gutters should be formed on a good road or tramway.
181. Do you know if our railways have suffered from heavy rain? Slightly; nothing to speak of. They have suffered from floods.
182. Do you know how many contractors there are in the country—do not the contracts fall into the hands of some three or four persons? It has been so until recently, but a great number of men are now springing up who are able to undertake them.
183. *Mr. Hoskins.*] Are you familiar with the process of preserving timber called, in England, kyanizing? Yes, by means of kreosote.
184. To prevent the decay of the timber or the ravages of ants? Yes. We have commenced a similar thing here,—we dip the timber in cheap kerosene oil, the refuse obtained from the works.
185. Have you tried the system adopted in England of steeping the timber in tanks? Yes, we have tanks filled with kerosene oil into which we dip the timber.

- J. H. Thomas, Esq. 186. Do you think if we adopted the system employed in England we could employ other timber than ironbark advantageously here? Yes. The white ant attacks ironbark here as well as other wood, but the ironbark possesses peculiar advantages—it is very strong; the box however is a very good wood.
- 8 Feb., 1870. 187. *Mr. Onslow.*] Do you know anything of pot sleepers? Yes, I have read of them as applied to the desert railways; they are iron pots sunk in the sand. I have seen drawings of them.
188. Do you know whether they answer? I believe they do.

THURSDAY, 10 FEBRUARY, 1870.

Present:—

MR. ONSLOW,
MR. W. H. SUTTON,

MR. ALEXANDER,
MR. HOSKINS.

WILLIAM MACLEAY, ESQ., IN THE CHAIR.

Archibald Ashdown, Esq., called in and examined:—

- A. Ashdown, Esq. 189. *Chairman.*] You are still Accountant to the Railway Department? I am.
190. Since you were examined before the Committee of last Session, have you obtained additional information on some of the subjects on which you were then questioned? I have.
- 10 Feb., 1870. 191. Are you now able to complete the returns for 1869? No, I cannot do that. I should like to explain exactly in what position the matter is, and why what you have asked for cannot be done. In the first instance, I would say, with reference to the evidence I gave before, that it may be supposed possibly to reflect somewhat on my predecessor, Mr. Walker. I wish to remove any impression of that kind; I had no idea of doing so. On the contrary, as far as I have observed, the work performed by Mr. Walker was faithfully and reliably done, on the data furnished to him; the fault was in the imperfect nature of the data with which he was furnished. I desire to make that explanation, because what I said may possibly be held to reflect on Mr. Walker personally. In my last evidence I stated distinctly that the accounts, as they were kept and published in the Statistical Register, were fallacious—not truthful. I also stated how it so happened, and illustrated it with the publication for the year 1867–68, I think, in the Statistical Register. Now, at that particular time Mr. Walker was not in the office; it was during my time; therefore he could have had nothing to do with that. I was then merely carrying on the practice that had been in existence. At the request of the Minister I had some communication with the various officers of the department, and initiated a different system that should furnish the information desired—that should truthfully record the earnings and expenditure on the different portions of the lines. That was determined upon before the late Ministry retired from office, and it was agreed that it should begin, and it did begin, at the commencement of 1869, and it continued in operation during the first six months of that year—the end of June, when an alteration took place, so far as the expenditure was concerned, owing to some displacement of officers who had had charge of different parts of the line; the new system was then set aside as far as the accounts of the expenditure were concerned, on the recommendation of Mr. Whitton and the order of the Minister; consequently, it is impossible now to give the information which might have been obtained if the new system had been kept up. I explained in my previous evidence that the earnings were professedly divided on the Southern, Western, and Richmond Railways, that they were credited in this manner,—all sums of money received at Sydney, or between Sydney and all stations going to the south, were credited to the south; included therein would be, of course, a good portion of the traffic going to the west, that is to say, all passengers taking tickets between Sydney and the Parramatta Junction, and going on to the west, and all money paid for the carriage of goods within the same area, were credited to the south; the west received credit only for such sums of money as were paid at stations west of the Parramatta Junction; therefore, all goods coming down to Sydney from the west, and on which the freight was payable in Sydney, were credited to the south.
192. I see that, on the other hand, you mention in your evidence, that almost the total working expenses were charged against the south? Yes; of course, adopting that plan, the proper way would be to put all in one pot—railways generally. The whole of the expense of rolling stock and repairs were charged to the south, and nothing to the west. Upon that state of facts, I represented the matter to the previous Minister and Commissioner, and at his request, I put myself in communication with the various officers of the department, and initiated a new system that would thoroughly and fairly apportion the expenses and earnings to the different lines. We divided the lines. The line from Sydney to the Parramatta Junction was called the Trunk Line, as being common to all; from the Parramatta Junction to the Southern Terminus was called the Southern Line; from Parramatta Junction to Penrith was called the Western Line; from Penrith towards Bathurst was called the Mountain Line; and from Blacktown to Richmond the Richmond Line. On these divisions a system was initiated under which we were able completely to apportion the earnings to the different divisions. This is a little diagram I have had prepared by the Traffic Auditor, Mr. Vernon, who has charge of these matters, which will illustrate the plan better than anything I can say. The black lines represent the rails, the red lines the direction of the traffic and the different divisions of the railways. (*Diagram handed in. Vide Separate Appendix B 1.*) I have also a return showing the division of the traffic (coaching and goods) on the different lines, with the amounts for each and the totals. (*Handed in. Vide Appendix B 2.*) By continuing this plan we are able now exactly to appropriate the earnings on each of the different lines. Having seen that this can be accomplished, it is plainly desirable that the expenditure for the working of the lines should be divided in a similar way, and that was done during the first six months of last year.
193. I see you did not give us the returns for these six months last Session? No. I said that if I were furnished with the information I had asked for, I should be able to do so. I know these returns were continued at the time I applied for the mileage for the six months, but the information has not been furnished to me. I applied for it on the 1st October. I should like to put in, as part of my evidence,
- copies

copies of the minutes that have passed on the subject, as containing an explanation of the whole matter, and to show why I have been unable to comply with the request of the Committee. (*Papers referred to handed in. Vide Appendix B 3.*) Here is a document I can put in also, showing the expenditure during the six months to the end of June. (*Handed in. Vide Appendix B 4.*)

A. Ashdown,
Esq.
10 Feb., 1870.

194. Have you ever calculated the cost per mile of working the railways, not including the maintenance of the permanent way? No, I have not, but there would be no difficulty in doing it, if we had proper details; but unless the mileage be given it is impossible to give the information.

195. *Mr. Suttor.*] You think it is necessary that these accounts should be kept separate? I do; we ought to know exactly what is being done; I think any private firm conducting such a business would like to have their accounts kept intelligibly.

196. Do you think it desirable there should be so many passenger trains run on the Southern and Western Lines? I do not; I think one through train each way per day would be amply sufficient.

197. The only difficulty would be with the Post Office? I believe that difficulty could be easily overcome also. There are goods trains running at night; and if it be desirable that the mails should travel at night, they might be sent by those trains.

198. Trains often come down now almost empty? Yes; in fact it seems a monstrosity that a big train should be coming down with a few passengers twice a day for the extreme distances. I think for all practical purposes a daily train each way would satisfy all the requirements of the public.

199. Are you aware whether the people of Goulburn, or Bowenfels, or Bathurst, have ever asked for more than one train? No, I am not aware of it. I should be very glad to lease the railways. I believe I should be able to give more accommodation to the public, and make a great fortune for myself. That is my impression.

200. *Chairman.*] By increasing the rates? Only to a very trifling amount. I think the rates for passengers are lower than they need be. There has been a reduction made lately in the rates for the through traffic, but the suburban rates remain as they were. The rates were 2d. and 3d. per mile from Parramatta Junction to Campbelltown on the south and Penrith on the west, beyond that 2½d. and 3½d.; but they have been reduced to 2d. and 3d. all through. It makes a sensible reduction in the receipts, and I think a very unfair one, because the rates were extremely low before.

201. You have said that if you had the management of the railways you think you could make a profit? I am quite satisfied of it.

202. Have you included in your calculation the £750 per mile for interest on the first cost of construction? I feel satisfied the railways could be worked so as to yield a profit on the cost of construction.

203. The traffic would have to be increased very much? I think the traffic may be increased at judicious rates, not very much higher than the present ones.

204. *Commander Onslow.*] You say the system of keeping the expenditure accounts which you introduced was set aside on Mr. Whitton's recommendation? It was, and by order of the Minister.

205. Have you any idea why it was set aside—can you conjecture? I cannot understand it, excepting that Mr. Whitton disapproved of the abrogation of the system that prevailed when he had charge of it before; and I think, from a discussion that took place in the presence of the Minister, that he did not desire to show the Mountain expenditure as distinct from that on the other portions of the lines.

206. Do you think there is any wish on the part of the railway authorities, or the Minister, to hinder inquiry—to prevent any full knowledge of the working expenses of the different lines? Not on the part of the Minister.

207. But there is on the part of the railway authorities? I believe Mr. Whitton has thrown every possible difficulty in the way. I know I have received from him the greatest discourtesy and insult, as these papers will show. (*Vide Appendix B 3.*)

208. You cannot conceive of any other reason for objecting to the plan you have recommended, except a wish to prevent inquiry? I cannot tell about the inquiry; but it is a most extraordinary thing that he has alleged that in doing these things I was complicating the accounts and bringing them into the greatest confusion. These are charges I resent with the greatest indignation. Mr. Whitton may be a very clever engineer, but I believe I have a better knowledge of accounts than he has; and if what I have urged were carried out, these accounts, so far from being complicated and confused, would be clear and explicit, which they are not now.

209. Who was the engineer who laid out the Western Line? Mr. Barton, I believe.

210. Had Mr. Whitton anything to do with it? I have heard that Mr. Whitton was never on that line until it was constructed.

211. Have you been thwarted by any one besides Mr. Whitton in your endeavour to arrive at these conclusions—by any other official? No, excepting of course that Mr. Whitton has influenced the Commissioner, from whom I take my orders.

212. You cannot attribute any reason for such opposition? The only reason that I can see is a desire that the information should not be furnished as it was required, or a want of knowledge or understanding of the principles of accounts.

213. Have you submitted your scheme to the Commissioner? I did to the previous Commissioner, and to the present one, and with his full assent the thing was carried into operation for six months without any difficulty whatever.

214. Did Mr. Whitton assign any reason for his opposition? These papers will show what reason he gave—they contain the whole history of the grounds on which the opposition was based. (*Vide Appendix B 3.*)

215. You have stated that you think there are too many trains to the extreme termini—Do you think also that too many suburban trains are run? No, I think more suburban trains might be profitably run. My theory is, that where there is a large population, the more frequently the trains are run the more the traffic will be developed and the larger will be the revenue. These accounts, if carried out, would show the operation of the suburban traffic, whether profitable or otherwise.

216. You know nothing of the working of the railways practically? No, except that I have resided on the line for some time, and have therefore had a good opportunity of observation.

217. Have you formed any opinion as to extending the line into the interior—If the lines are to be continued, have you thought whether it would be advisable to have lines of the same gauge, and the same engines and carriages? I have long thought that a more economical system would answer all the requirements of this country for many years to come.

- A. Ashdown, Esq. 218. Will profits depend most on passengers or on goods? On goods.
219. Do you think that by any system of reduction of fares a larger proportion of the population could be induced to travel than at present? Not for long distances.
- 10 Feb., 1870. 220. Do you think increasing the fares would hinder people who at present travel from travelling? No; the railway rates are not more than one fourth what they used to be by coach; but I would at times run excursion trains at lower rates.
221. Do you think if the fares for long distances were materially increased there would be a great increase in the revenue—I am speaking of the rates to Goulburn and Bathurst? No, not a very great increase.
222. Business men must travel? Yes, but the number of persons who travel the long distances is so small that it would not materially increase the revenue. I may mention that it was at my instance the special rates were introduced. I contended that every facility should be afforded for bringing the products of the country to market, and that by doing so we should develop traffic of another kind as a necessary consequence.
223. Had you anything to do with arranging the tariff for goods? I had with the one that was in force previous to June last; but at that time an alteration was made, and a most complicated scale was prepared, which it was found impracticable to carry out.
224. Who draws up the tariff? I do not know who drew up the last tariff. The previous one was drawn up by myself and the Traffic Manager, with the Commissioner.
225. Have the people who have drawn up these applications been dunned with applications from different classes of men to favour their own particular products? I do not think so. Various recommendations have been made; but I would say that the principle adopted in these special rates was that the products of the country should be brought to market at low rates, with the view of stimulating the settlement of the country, and so creating traffic.
226. Do you think the present tariff is a good one, or that it could be amended? Some amendments might be made, but it is a very good tariff and is producing an increasing revenue.
227. Is the rolling stock sufficient for the traffic? It is not.
228. Do you think the goods traffic could be materially increased if there were more engines and trucks available for carrying it on? Undoubtedly, if there were more facilities more work could be done.
229. Even if the tariff charge were much higher, do you think people would still use the railway in preference to sending their goods by dray? I do not know. My idea is that we ought to get as much traffic as we can upon the railway, consistently with paying rates; and I think that, with moderate rates, we can get an increased revenue.
230. *Mr. Alexander.*] Have you ever taken any evidence as to the rates charged in England? I have examined several rates tables in England.
231. How do they agree with our charges here? We compare favourably with them; they are lower in some instances than ours; our rates are better than those prevailing in England. Even our special rates, which are said to be too low, will pay more than working expenses. If you take a 4-ton truck, and calculate it, you will find that the value of the carriage is much greater than the cost of running.
232. Of course these low rates provide traffic for the return trucks, which would otherwise come back empty? Yes; and if we stimulate the productions of the country, we are creating traffic for the railway.
233. Do you think the traffic has increased since the passenger rates were lowered? Yes, I think it has; but I do not think it has increased for the long distances. I have prepared a return which shows that, when the rates were increased, the suburban traffic fell off nearly a half in the number of people, and we received a very much less sum of money on the increased rates, although there were more trains running.
234. Are you aware that you lose most of the commercial passengers, who would go on the rail, whatever the passenger rate, if it were not for the high rates charged for the conveyance of horses and carriages? I do not think we lose them now; the rate has been modified. Formerly the rate was excessive, being more than it would have cost a man with a horse and buggy to travel by the road.

Richard Moody, Esq., called in and examined:—

- R. Moody, Esq. 235. *Chairman.*] You are Traffic Manager still? I am.
236. You furnished the Committee last Session with some returns relative to the amount of tonnage upon the different lines of railway? Yes.
- 10 Feb., 1870. 237. The Committee would like to get some further information from you on the subject. Have you similar returns to the end of last month? They are being prepared, but are not yet ready. I can give the Committee some information as to the wool traffic for the past two or three months. In November, 1869, there were 10,407 bales of wool altogether; for 1868, in the same month, 8,698 bales; the Western Line bringing for 1869, 5,343 bales, and the Southern Line 4,369 bales; the shorter lengths the difference. In December there were 14,090 bales of wool in 1869, and in the same month in 1868 12,344 bales. Of the 14,090 bales, 6,165 came from Mount Victoria, and 6,951 from Goulburn; the balance from intermediate places. In January, 1870, the total was 8,982 bales; the like period in 1869, 6,441; and last month from Mount Victoria 5,151 bales, from Goulburn 2,888; the difference from intermediate places. These bales run, on an average, about four bales to the ton; we have had very few bales indeed under 400 cwt.; the majority exceed that weight.
238. What is the total number of bales during these three months? 23,479; very much in excess of the previous year.
239. *Commander Onslow.*] Is the wool coming down at the same rate now? No, at about the rate of 150 bales a day.
240. *Mr. Suttor.*] What is the comparison of totals between the west and south? From the west, 16,659 bales; from the south, 14,208. The Committee will perhaps permit me to correct a misstatement—I hope they will believe an unintentional one—in my previous evidence, to which my attention was called by an article in a newspaper. I stated that the amount received for the mail trains amounted to the cost of one special train per quarter; I should have said one week; instead of 7s. 6d., it comes to about £11 10s. per mile per annum.
241. *Commander Onslow.*] Are you in the habit of making use of goods trucks to carry passengers by excursion trains? Occasionally cattle trucks have been used for passengers. 242.

- 242. Does that throw out of gear the traffic arrangements? Yes, for three or four days at least. On one occasion the cattle trucks were withdrawn from the general business for five days. Of course the trucks have to be cleaned and fitted up for the excursion passengers.
- 243. These excursion trains can hardly pay under such circumstances? No, they are sometimes a source of great loss to us.
- 244. *Mr. Suttor.*] Do not very few sheep come by train from the west? Very few.
- 245. Have you heard any complaints about the way sheep are treated in the trains? I have received none.

R. Moody,
Esq.
10 Feb., 1870.

Richard Lloyd, Esq., C.E., called in and examined:—

- 246. *Chairman.*] You are an engineer? Yes.
- 247. You have had great experience, I believe, amongst locomotives? Yes, I have been for thirty-three years more or less engaged upon them.
- 248. Where? In Manchester. I commenced with the firm of Sharp, Roberts & Co. in 1836, and since the dissolution of that firm in 1844 I have been occupied in France as director and engineer of the firm of Ernest, Gorim & Co.
- 249. Of late years you have given your attention to the question of locomotives, have you not? Yes.
- 250. Have you not been called upon lately by the Government for some report as to the character of the locomotives in use here? Yes, I was desired by Mr. Sutherland, the Minister for Public Works, to report to him upon the adaptability of tank engines to the working of the Western Line over the mountains.
- 251. I should like to know in what way you were called upon for that report—had you made any representations to the Government in the first instance? No. Mr. Sutherland met Mr. Sentis, and asked Mr. Sentis for some information with regard to me, and Mr. Sentis afterwards wrote to Mr. Sutherland and told him I should be able to give him the information he wanted.
- 252. Has your report been published or laid before the Assembly? I am not aware.
- 253. I understand that in your report you have objected to the very heavy locomotives at present in use on the lines here? I did not object to the weight of the engine in itself, but it is the too great weight on one pair of wheels or upon one axle—that is very injurious to the railway. Upon what are called first-class railways the weight is generally limited now to 11 or 11½ tons. It has been found very injurious to the permanent way to put more than 11½ tons on each pair of wheels. Therefore the tractive power of the engine is limited by this weight. You can have as many pair of wheels as your please, and by that means augment the tractive force, but not by putting excessive weight upon one pair of wheels.
- 254. What weight have we been in the habit of putting on one pair of wheels in engines here? The engines actually in service are well proportioned, and can be regulated to 11½ tons. Some are running now a little more, perhaps 12 tons, but with a little alteration by regulating the springs they can be brought down to 11½ tons.
- 255. What engine did you object to? It was an engine proposed to be made by Mr. Thomas. It was an engine in full service of 45 tons weight, bearing upon three pair of wheels—that is, 15 tons on each pair of wheels.
- 256. You considered that dangerous? It is, I believe, highly dangerous; and generally very destructive to the rails and permanent way.
- 257. Is the matter fully explained in your report? Yes.
- 258. Do you approve of tank engines? No, I would not approve of the proposed tank engines for working the Mountain Line—not tank engines carried upon three pair of wheels. Tank engines may be useful for working mountain railways when carried upon four or six axles.
- 259. Have you been over most of our railways since you came to New South Wales? I have not been down the Southern Line, but I have been a good deal on the Northern and Western Lines.
- 260. The Western Line is what you would call a first-class line? Yes, excepting that it has not a double way. Continental engineers would not call it a first-class line on that account; it would be in fact what they would call a second-class line. They generally have first-class, second-class, and third-class.
- 261. But as regards solidity and excellence of permanent way it is equal to a first-class line? Yes.
- 262. Have you heard anything about the quality of the rails used upon the lines here? No, I have not.
- 263. You do not know anything about it? No, I have never paid any attention to the quality of the rails used here.
- 264. Have you ever considered the question of the possibility of having a cheaper class of railways for the interior of this country? Yes.
- 265. Do you know of any description of railways that would suit? That is a question I have paid considerable attention to. I think the main trunk lines should always be considered as first-class railway; that is second-class only as regards the one way, but the permanent way being quite as well made as that of a first-class double line. The branch lines or extensions might be third-class railways, made considerably lighter but with the same gauge. I know many instances where they have been trying to make very cheap light railways with a narrower gauge.
- 266. Will you state first, as regards the third-class railways, what is the difference in cost of formation, character of the rolling stock, and everything else, between them and first-class railways? Of course the cost is a local question affected by local circumstances. I could give you particulars of some third-class lines. I am more particularly acquainted with them on the Continent; in fact I do not think that any system of that kind has been thoroughly studied in England. Some of the Continental second and third class railways have been made for £6,000 a mile.
- 267. *Commander Onslow.*] Through level country? No, tolerably steep gradients and average country. Those railways that I could particularly point to are in rather mountainous countries—the Vosges and Ardennes countries, where a great deal of agricultural and manufacturing industry is carried on. In these districts third-class railways have been established by the local interests. The Government has come to their assistance in great measure, but they have taken the management of these railways under different circumstances of concession to general first-class railways; that is, independent of buying the land. It is very probable that such classes of railways could be constructed in a country like this for much less money.

R. Lloyd,
Esq., C.E.
10 Feb., 1870.

R. Lloyd,
Esq., C.E.
10 Feb., 1870.

268. *Chairman.*] The price of land forms a considerable item in the cost? Yes.

269. If the gradients are steep, the locomotives must be just as heavy on these railways as on others? As for the locomotive, it does not matter much about the weight, provided it be properly distributed over the line.

270. How many wheels would you put upon these engines for the purpose of distributing the weight? The number of wheels would depend upon the tractive force you require. Supposing you have a given amount of transport over any line of railway, as a matter of course you are able to estimate the amount of tractive power you require for each train; then that tractive power will be approximatively the sixth part of the weight upon the driving wheel, so that you can form an equation which will give you the number of driving wheels required. Therefore you will see practically whether you can have the number of driving wheels adapted to the conditions of the construction of the permanent way. I have here plans of an engine with a great number of driving wheels; although it is a very heavy engine, weighing 66 tons, it is what may be called a comparatively light weight on the rails, on account of the number of wheels. (*Plan exhibited.*)

271. The wheels seem to be very near together? If you get the pressure of one pair of wheels between two chairs it is all you require; the load is much better distributed if the weight on one pair of wheels only happens to fall between two chairs.

272. You have planned this yourself? Yes.

273. Has it ever been in use? Yes; these are engines very much in use in the north of France. I have given the calculations of these engines in my report.

274. *Mr. Hoskins.*] Could such an engine be worked on a curve line? Yes, that engine would do the mountain work; that engine would do a service of 200 tons on the Blue Mountains.

275. Do you run the wheels in a bogie frame? No; the front and hind axles, that is the two extreme pair of wheels, require a considerable amount of lateral play.

276. *Commander Onslow.*] Would that engine be very much more expensive than those in use? No; of course it is proportional to the weight and power. A large engine is comparatively (to its power and weight) cheaper than a small one.

277. *Chairman.*] On what railways did you say that engine was used? Principally in the north of France; in fact on all the northern lines, over a very large extent of territory between Paris and the German, Belgian, and English frontiers. The requirements of those railways are something enormous; they bring down from Belgium all the coal and all the Paris supplies from the north; but at the same time the line is obliged to do the high speed service between London and Paris, Brussels and Paris, and the North German high speed traffic. Trains of six or seven hundred tons are obliged to be got through in a night to clear the way for the quick trains.

278. We were speaking about third-class lines. What kind of engines are used upon those lines? Of course it depends upon the traffic. You must have very light weights upon the tires of the wheels. Here is another plan (*exhibited*) which will show you the vast difference there is between these two engines. That is an engine weighing 15 tons, and doing service on that same railway; but that is for the branch lines of the Northern Railway.

279. Even to work an engine like that at a slower pace, you would require a good permanent way and an expensive line of railway? This type of engine would not.

280. Seven and a half tons on a pair of wheels would be a great weight to put on a cheap railway? It would bear that. This is one also of less weight (*another Plan exhibited*).

281. What weight of rails would be required to work that on? These engines are working on railways very frequently 35 lbs. to the yard, but I would not recommend this weight.

282. What is the speed? Say twelve miles an hour.

283. *Mr. Hoskins.*] Passenger or goods trains? These are generally used for goods, but of course they can be used for passengers.

284. *Chairman.*] You say that upon a different gauge you know of still lighter railways being drawn by locomotives? Yes.

285. Can you mention any instance? Yes, I am acquainted with several railways of that kind—in fact have made material for them. The Government Engineers have been making smaller railways still, about 3-ft. 7½-in. gauge, and with rails of 33 lbs. to the yard, running engines of about 12 tons weight in full service.

286. On six wheels? You might put the twelve tons on four wheels.

287. What are railways of that kind laid down for? For purchase of land and everything else, I know that railway cost about £2,350 a mile.

288. Including the purchase of land? Yes.

289. And rolling stock? Rolling stock and everything; with a vignolle rail and telegraph. The land in that place was worth £250 a mile. If I am not mistaken, the railway from Antwerp to Ghent is one of these narrow railways; it is an old railway.

290. The speed is never great on these lines? No; it is about ten or twelve miles an hour. There is no necessity for great speed.

291. Have you seen any horse railways in use on the Continent? Yes; the one I referred to was made for a horse railway to begin, but it has been transformed into a locomotive line.

292. Do you know the reason of its being transformed? The locomotives do the work very much cheaper, and the service is infinitely better done. I think the working of the horse line cost nearly double. An experience of about 22,000 tons carried gave the cost upon the horse railway at 1½d. per ton per mile, and by the locomotive 1¼d. per ton per mile.

293. Horse traction, where the traffic is small, must be the cheapest—where the quantity of goods carried is inconsiderable? I do not know; I have never known it to be so.

294. Have you ever made a calculation as to the point at which the one becomes more profitable than the other? In the case I refer to the traffic is very small—they only work three hours a day. The 22,000 tons is six months' work. It is a calculation made upon the transport of 22,000 tons. The traffic is very small, and requires only about 2½ hours actual running work a day.

295. I presume a horse railway for light traffic would not cost so much for laying down as one of those light railways? A horse railway would, I think, cost as much as the other, perhaps more.

296. The roadway would not require to bear such a weight? No, but there would be some other difficulties, as you could not put two horses abreast unless you have a considerable width of railway; you could not put two horses abreast on a railway of 3-ft. 6-in. gauge.

R. Lloyd,
Esq., C.E.

297. I fancy the proper way would be to have a single horse to each light wagon? That might be. I have seen some very few instances of that. There are several objections to the horse railway. The traction is greater with a horse; a horse throws up a great deal of dirt on the rail from between the rails; and you must go to considerable extra expense in keeping the road in order for the travelling of the horse.

I 10 Feb., 1870.

298. There would be only 3 feet instead of 30 feet on a macadamized road. I was only asking with a view to ascertain whether you had seen anything of the kind, and whether it could not be laid down cheaper than a locomotive line? In the case I refer to the permanent way was laid down with a view of making it a horse railway, but then the keeping in order of the road between the rails was a much greater expense than for locomotive lines, and the keeping in order of this railway for horse traction was a considerably greater expense. Then another objection found was that the horses going along the middle of the road threw a considerable quantity of dirt on the rails and augmented the tractive power considerably; and in fact the work was done very much cheaper with engines.

299. Was the railway laid down for horse traffic the same railway that was subsequently used for locomotives? The same railway.

300. And on that railway the traffic for six months was 22,000 tons? Yes, approximatively.

301. Where, as would be the case on almost all extensions in this Colony, the traffic does not exceed 5,000 tons annually, surely horse traction must be the cheapest? I have never gone into that calculation in this country, because the elements of the calculation are difficult to arrive at—the cost of horses and the expense of keeping them, and so on. The calculation I have mentioned was based upon the transport of 22,000 tons, but I am not quite sure of the time in which it was done. The relative cost of the tractive power in the two cases would be as 59 to 22.

302. Where the traffic does not exceed 10 tons a day, as would be the case in some places in this country, would there not be an enormous loss of steam power in sending such a small quantity by a train with steam power sufficient to draw 100 tons? Certainly there would be very great loss.

303. But you have never considered the question whether, in cases of that kind, horse traction would not be the cheapest? I have always been under the impression that steam power must be the cheapest and best.

304. For a small quantity? Yes. It is difficult to speak generally, because these things depend so much on local circumstances. On the Continent there are a great many horse railways laid down on the Imperial roads, but the cost of traction is considerable. There is a horse-railway about 30 miles long, near to Paris, doing a very great deal of work, but I believe the traction is very expensive.

305. *Commander Onslow.*] Have any of the horse-railways been converted into locomotive lines? Yes, but the particular ones referred to could not be converted, because they are on the main roads.

306. Where others have been made as horse-railways, do you know any that have been converted? Yes, it is always the tendency. I know a considerable number of railways have been transformed from horse traction railways to light locomotive.

307. *Mr. Suttor.*] With horse-railways could we not have steeper gradients? No, I do not think you could make any very great difference; I think a judicious formation of the road is equally requisite in both cases. The objection to very steep inclines is the same on horse-railways as on locomotive lines.

308. *Mr. Hoskins.*] Have they not discovered on the Continent a system by which, while not increasing the steam power, they increase the tractive power of the engine? Yes, Mr. Fell's system.

309. *Chairman.*] In saying that the cost of traction by locomotive is less than by horse power, do you not mean simply taking the cost of traction without considering other circumstances, such as the prime cost of the railway and interest to be paid per mile? No, I take all into consideration.

310. That is a line of the lowest description of railway? Yes, the class I refer to is the lowest description; it is a railway hardly to be recommended for this country.

311. In a matter of this kind—instituting a comparison between the usual steam railways and horse railways—do you not think the much greater cost of the roadway in one case than the other is a consideration which should be taken into account? Yes, but I doubt whether there is any very great deal of difference in cost of the permanent way.

312. We know here for a fact that our railways cost us £15,000 a mile, and we know we can get a horse railway for £1,500, laid down on the existing roads? Then the existing roads cost you a great deal; you do not take into consideration the cost of the existing road. I can only tell you I have not paid attention to the subject in this country; but the main road, the *Route Imperiale*, in France, costs £4,000 a mile to make the first class paved road; the other second class unpaved road costs about £2,800 a mile. Upon these roads they have laid down some horse railways.

313. *Mr. Suttor.*] You have been in the interior of the country—the flat country? Yes.

314. Do you not think a cheap railway for horse traction could be laid down across these plains for some hundreds of miles with wooden rails shod with iron? Yes, but I should not recommend it.

315. That could be done very cheaply? Yes.

316. Four horses would draw a great load on such a line? Yes, horse railways could be laid down very cheaply on some of those plains.

317. *Mr. Hoskins.*] Are there not some railways on the Continent where they only employ one man on an engine? Yes, but it is much more prudent to have two.

318. *Chairman.*] Have you the details of the railway you spoke of, that is to say, cost of rails, sleepers, and general formation? This small railway was made in the South of France. The curves are 197 feet, a vignolle rail of 33 lbs., and a 3-ft. 7½-in. gauge; and it has cost them £2,344 per mile.

319. What are the gradients? The gradients are 12 in 1,000, 1 in 80.

320. It must be almost a level country? Yes.

321. As I understand you, you believe that we might make our railways at a much less cost by giving up high speed, and that the most suitable locomotive for the purpose would be these tank engines with a weight not exceeding six tons on each pair of wheels? Yes.

322. And the probable cost of a railway of that kind would be about £5,000 per mile? Yes, a light third-class railway. I could give you the details of three railways costing in Europe about £6,000 a mile including land, rolling stock, telegraph, and everything.

- R. Lloyd,
Esq., C.E.
10 Feb., 1870.
323. In the event of such railways being made, in extension of our present lines, would the present rolling stock, the wagons in use on our present lines, be too heavy to run upon them? No.
324. Then there would be no necessity for changing the goods from one set of trucks to another? No.
325. *Mr. Hoskins.*] That is, provided they run at a moderate pace? Yes.
326. *Commander Onslow.*] What would be the weight of the rails? Upon those railways they use rails of nearly 70 lbs. to the yard, but the traverses are wider apart than you generally use them in this country.
327. *Mr. Hoskins.*] Do you think there is any necessity in a new country like this for fencing in our railways? That is a question I am not able to answer.
328. Are these cheap railways in France fenced in? Yes.
329. Probably because they intersect private land in a thickly populated country? Yes, the railway itself is private property.
330. Do you not think that here we might dispense with fencing, excepting in townships? Yes, but you might fence a railway for £100 a mile.
331. If our railways are extended beyond Bathurst, Murrurundi, and Goulburn, do you not think we could dispense with fencing, except in the townships? I should think it would be always necessary to fence. The American railways are generally not fenced.
332. And very few accidents arise from persons getting in the way? Yes. Cattle sometimes come on the lines. In Spain they do not generally fence their railways.
333. *Mr. Suttor.*] You are aware that on the Western Lines you can scarcely see 100 yards ahead, the curves are so sharp? Yes.
334. *Mr. Hoskins.*] In the cheaper railways you have suggested—cheaper than what we have—would you consider that timber bridges and culverts would be sufficient? Yes, I should advocate the employment of timber for bridges.
335. Not elaborate stone structures? Certainly not.
336. I suppose on these cheap railways you have spoken of in France they have cheap stations? Yes. I can give you the detail of railways of this sort. The land would cost about £560 a mile, ballasting and cutting about £700, stations and everything connected with the architecture of the railway, £240. These railways all have telegraphs. I should say the expense of the telegraphs is always counted. Laying down the line costs £1,600 a mile, including the expense of engineering and interest of money while the railway was making. The interest amounted to £125 a mile.
337. *Mr. Alexander.*] I suppose labour is very considerably cheaper there than here? Yes.
338. *Mr. Hoskins.*] I infer from what you said just now, that you think it would not be a very dangerous practice to adopt if we did not fence in our railways beyond Bathurst, Goulburn, and Murrurundi? Certainly not.
339. Could you give me an idea what a railway of this description would cost—on the existing formation, gauge 4 ft. 8½ in., timber bridges roughly dressed, timber culverts, cheap stations, an unfenced railway, rails about 45 lbs. to the yard, with rolling stock to work such a line, and land belonging to the Government? About £5,000 a mile.
340. *Chairman.*] That is, if there were no cuttings? Taking it as a general condition of light railway.
341. *Mr. Hoskins.*] Gradients not to exceed (say) 1 in 50? Yes. You could make another class of railway—a small railway—for about £2,500 a mile, with a narrow gauge. On the great plains of the interior you could lay down a very good, small, narrow line for £2,500 a mile.
342. What rate of speed could be adopted on such lines? From twelve to fifteen miles an hour for goods or passengers.
343. Supposing the traffic in particular localities was very small, could you not so reduce the size of the locomotive engines as to make it more advantageous to work with steam power than horse power—more economical? I think that is a question that requires to be studied, particularly with regard to locality; but my impression is strongly in favour of steam power under all circumstances. I think if you study the question exclusively with regard to economy in the two cases, you will find the steam power more advantageous than the horse power. I should prefer steam power in all cases. The dead weight of the horse is a very great weight compared with steam power, and of course he does very little besides carrying himself. The quantity of useful effect is very small compared with his weight. The basis of calculation for horse power is an effort of 150 lbs. travelling 220 feet per minute, or 2½ miles an hour.
344. Have you seen Mr. Fell's system of locomotive traction? Yes; I was with Mr. Fell in Savoy and Italy, and am well acquainted with him.
345. While in ordinary cases the weight of the locomotive is the important element in the traction, in Mr. Fell's system the tractive power has been increased by another arrangement? The real power of the engine is the quantity of coal that can be burnt in a given time.
346. Mr. Fell's railway is laid down on the side of a mountain, is it not—over Mont Cenis? It is laid down on the Imperial Road.
347. What is the steepest gradient? I think it is 1 in 13.
348. Do you think such a system of traction would be adapted for our requirements here, beyond Goulburn, Bathurst, and Murrurundi? No.
349. Why so—is it too expensive? Too expensive. The material is expensive, and of course the laying down of such a road is expensive.
350. Has Mr. Whitton seen the plans of the large engine you have shown us? Yes; I gave it in with my report.
351. Do you think it would be more economical to work such an engine as that on the Mountain Line than the six-wheeled coupled engines we are working now? Yes. I have given the calculation of that in my report; that was the special question of the report.
352. In working round the sharp curves, would not the number of wheels cause great abrasion, and ultimately lead to serious cost? No, we have not found it so. I have superintended the working of these engines 20,000 miles a year, on sharper curves than you have here.
353. It has been said these six-wheeled coupled engines are not adapted to working the Mountain Line, in consequence of the sharp curves? I do not think that there is an objection of great importance.

FRIDAY, 11 FEBRUARY, 1870.

Present:—

MR. W. H. SUTTON, | MR. HOSKINS,
COMMANDER ONSLOW.

WILLIAM MACLEAY, ESQ., IN THE CHAIR.

George Forsyth, Esq., called in and examined:—

354. *Chairman.*] You have been for a long time a resident of Wagga Wagga and the Murrumbidgee district? I have resided in the Murrumbidgee district for the last twenty-five years, and for the last sixteen years in Wagga Wagga.

G. Forsyth,
Esq.

355. And you have been extensively engaged in business there? Yes, as a storekeeper and squatter.

11 Feb., 1870.

356. Have you not found that of late years the tendency has been for the whole of the trade of that district to go to Melbourne? The trade has during the last ten years gradually gone to Melbourne; and I may say that Wagga Wagga does its chief business with Melbourne now.

357. At one time that was not the case? It was not the case prior to ten years ago; the whole of the trade was with Sydney.

358. How do you account for the change? By reason of the improved means of communication between Melbourne and Wagga Wagga, compared with that of Sydney. For instance, we get goods from Melbourne by rail to Echuca in twenty-four hours, and they come from there to Wagga Wagga in about nine days.

359. What is the distance from Echuca to Wagga Wagga? About 230 miles.

360. What is the distance from Sydney to Wagga Wagga? About 300 miles.

361. What is the distance from Wagga Wagga to Melbourne by the shortest route? I think we are about equidistant from Melbourne and Sydney.

362. But the roundabout route by Echuca is found more convenient for bringing up supplies than the comparatively short distance to Sydney? Yes.

363. What is the distance by Echuca? I suppose nearly 400 miles.

364. Is it not over 400? No, I think not; I do not know exactly the distance to Echuca.

365. Can you give us any idea of the quantity of goods imported into Wagga Wagga, in the course of the year, from Sydney and Melbourne? From a summary of the loading taken during last year, in the months of November and December, I think I made out that about 2,000 tons of goods have come there to the storekeepers alone, in twelve months, about 1,650 tons of which came from Melbourne, and only 350 tons from Sydney. That no doubt arises in a great measure from the facility afforded by the railway to Echuca, and the easy character of the road from there to Wagga Wagga. We have Melbourne wagons of a first-class kind plying between the two places—much better than any on the Sydney side. We have also steamers plying from Echuca, by a very roundabout way, going to the junction of the Murrumbidgee and Murray and the course of the Murrumbidgee to Wagga Wagga. That makes the freight cheap from Melbourne—about £7 or £8 a ton.

366. I presume many of the stations, particularly the larger stations, within fifty or eighty miles of Wagga Wagga, get their supplies direct from Sydney or Melbourne, and not from the townships? Yes, the townships only replenish the supplies of the stations if they should fall short; the chief supplies for the stations are brought either from Melbourne or Sydney.

367. So that the 2,000 tons of goods you speak of does not by any means represent the total quantity imported into the district? No, these are goods for sale—not for use on stations. When the teams go down during the wool season they generally bring back the supplies.

368. It has been said by a number of people that the extension of the railway to a navigable part of the river, such as Wagga Wagga, would have the effect of facilitating the intercourse of that part of the country with Melbourne, and thereby would increase the injury already done to the trade of Sydney—Is there any foundation for such a statement as that? I really do not know; opinions vary on the subject.

369. Do you believe it is possible it could have that effect? No.

370. What do you think would be the effect, as regards the direction the traffic would take, of carrying the railway to Wagga Wagga? I think a large portion of the trade would be brought to Sydney. I arrive at that conclusion from the fact that considerably more wool has come to Sydney from that district this season than in any previous year, in consequence of the extension of the railway to Goulburn. At least a dozen stations have sent their wool to Sydney this year, that in previous years sent it to Melbourne. I believe, when the statistics are made up, it will be found that the increase in wool from the Southern Districts is considerable this year.

371. What do you think would be the effect of a railway from Goulburn to Wagga Wagga, as regards the trade in the direction of Hay—down the Murrumbidgee River—the navigable portion? I think it would embrace the country lying towards Narrandera, which is about sixty miles below Wagga Wagga. I do not think it would touch the trade of Hay. Hay is about 200 miles from Wagga Wagga, lower down; and it is only about 80 miles from Deniliquin—130 miles from the rail at Echuca.

372. Do you think people would prefer the land carriage from Echuca to Hay, a distance of 130 miles, to the 200 miles of river carriage from Wagga Wagga? I have no doubt the steamers would induce people to bring their products to the railway terminus, if such a terminus were there, in preference to going over the plains.

373. My impression has always been that it would have a great effect? I think it would.

374. The extension of the railway to Wagga Wagga, from Goulburn, would have the effect then of regaining from Melbourne a considerable amount of traffic which at present goes there from portions of New South Wales? I think a large portion of the trade done with Melbourne now would be induced to Sydney if we had better communication. At present we only have bullock-wagons—very few horse-teams.

375. You are aware that the Victorian Government have sanctioned a railway, and actually called for tenders for the building of one, between Melbourne and the Murray, opposite Albury? Yes, I believe they have called for tenders for a line by way of Wangaratta to the Murray.

376. What would be the effect of that railway on those portions of New South Wales, if New South Wales at the same time makes no extension in the direction of the Murrumbidgee? If our railway is not

G. Forsyth, Esq. not carried further than Goulburn, I think the effect would be to take nearly all the trade of Riverina to Melbourne.

11 Feb., 1870.

377. Will you mention the districts—what parts of the country would it effectually take the traffic of? It would affect the Billibong Plains, Urana, Narrandera, Hay, and Wagga Wagga; and it would also affect the agricultural districts, such as Tumberumba, Adelong, Tumut, and Gundagai. I think nearly the whole trade would be done with Melbourne by these places if a railway went from there to Albury. I think a great deal of the agricultural produce would be sent there, and that the quantity raised would be increased. At present the farmers only grow for local consumption and for the use of stations—we never grow anything in our district for exportation, whereas I see that about Corowa and other townships along the banks of the Murray they farm on a much larger scale, and with all modern appliances, and send their grain, wheat, flour, oats, and so forth, to the Melbourne markets; they have the water carriage to Echuca, and the rail from there, which induces them to do so.

378. You remember some years ago a proposal made by the Government of the day to carry the Southern Railway to a point on the Murrumbidgee at Darlington, about 100 miles below Wagga Wagga, but that proposal did not meet the views of any of the people in that part of the country? The line ran from near Murrumburrah into the back country, through a number of scrubby runs, and they proposed to strike the Murrumbidgee somewhere near Darlington, for the purpose of inducing the trade further westward to come to the line; but my individual opinion is that it would not have done so.

379. But the object, I believe, was to endeavour to prevent the Echuca railway from taking so much of our traffic as it did at that time. Was it with a view of meeting the advance of the Victorian people in the direction of Echuca? Yes, but I do not think such a line would have had that effect. I think the stations to the westward—the Darling stations, and those in the Albert and Darling Districts, would have still used the Echuca railway in preference, inasmuch as they could go there by water, coming up the Murray or going down the Lower Murrumbidgee, as it is called, below Hay.

380. This new Melbourne railway of itself would necessitate our carrying our railway in another direction? Yes; it is some two hundred miles further south of the present Echuca railway, and would embrace the trade of the whole of the Upper Murray and Upper Murrumbidgee Districts. There can be no doubt that such a line to Albury, if completed, would take the whole trade from Gundagai southward to the Murray.

381. Do they not anticipate being able to complete that line in two years? It is said so. There will be some heavy cuttings, and there are three or four rivers to cross,—the Goulburn, the Broken River, the Ovens River, and one or two prominent creeks,—which they will have to bridge. Tenders for sixty miles are called for now, I think.

382. Do you know the quantity of sheep and cattle in the Murrumbidgee and Lachlan Districts? The statistics show that there are over five millions in the two districts; but I know we have lessened the number very considerably during the last nine months. The number of fat sheep that have gone to Melbourne has increased from 18,000 to 35,000 a week. The meat-preserving there has been a great advantage to us in that respect.

383. That quantity goes out of Riverina? Out of Riverina and the Lachlan—the two districts. They send sheep also from the borders of the Wellington District. Twelve months ago, before the boiling operations came into play, we only sent 18,000 sheep a week. They have no less than three meat-preserving Companies at Melbourne now; two have been in full play for some months, and another is forming.

384. I suppose, if there was a railway to the Murrumbidgee, that would be the proper position for a meat-preserving Company? Yes, I think on the Upper Murrumbidgee they could form Companies and send their meat down, if they had a rail.

385. In that case the preserved meat would go to Sydney instead of to Melbourne? Yes; at present they drive the sheep to Melbourne.

386. If there was an establishment of the same kind at Wagga Wagga—we will say, the preserved meat from there would go to Sydney for shipment, as a matter of course, if there was a railway? Yes, no doubt the improved means of bringing their produce to market would induce them to come this way.

387. *Mr. Hoskins.*] I suppose you are aware they are about to start a meat-preserving establishment at Goulburn? Yes. I think they would be obliged to send out and buy their stock for an establishment like that. The sellers like to have as much competition as they can, so that I think it will necessitate their going to stations and buying on the stations and bringing them to their establishment. I do not think people will take large numbers there to sell.

388. *Chairman.*] You are well acquainted, I believe, with the Tumut and Gundagai Districts? Yes, I know them both well. They are both districts in which a very large amount of agriculture could be carried on, if the farmers had the means of getting their produce away. But, as I remarked just now, they only grow enough for local purposes and to sell to stations.

389. I believe there is a good deal of farming carried on there? Yes, there has been a large increase in the number of farmers during the last twelve months.

390. The extent of good land is very considerable? Yes, I dare say they could grow enough in those districts to supply the Colony, if they were to adopt improved means of agriculture.

391. On the Tumut, particularly the upper portion, I believe they have never been known to suffer from drought? They have never any drought there to damage their crops. I have known the wheat crops average as high as thirty-five to forty bushels to the acre on the Tumut. On the Lower Murrumbidgee the average is about eighteen to twenty bushels. The two places are about eighty miles apart. The whole of the available points of the rivers Murrumbidgee and Tumut are occupied by farmers now. These farmers would increase their crops very considerably if they had the means of getting them away; but at present they only get a nominal price for their wheat.

392. *Commander Onslow.*] Does maize grow there? Very little maize; maize is grown chiefly on the Tumut; the Tumut is a very good maize country.

393. *Chairman.*] What, as a rule, could the farmers afford to give for carriage, to be enabled to sell their wheat with some chance of profit in Sydney? The year before last, when wheat was selling in Sydney at 8s., they were giving about 4s. a hundredweight to take it from Gundagai to Sydney; that would be at the rate of about 2s. a bushel.

394. *Commander Onslow.*] That was the whole carriage to Sydney? That was the whole carriage to Sydney by horse-teams.

395. Did that include carriage to Sydney, or only to the railway? The railway was not formed so far as Goulburn then.

396. Was it the carriage to Marulan or the nearest railway point? No, the rate to Sydney was £4 a ton.
397. *Chairman.*] What loads did they put on their waggons? Five to six tons; they were waggons with six horses. I should say the farmers could easily afford to pay from 1s. 6d. to 2s. a bushel to bring their wheat from the neighbourhood of Gundagai to Sydney.
398. I suppose you are aware that by rail it could not be done under the rate you mentioned just now—2s. a bushel, for such a distance? No, I do not think it could; still it would be giving a certain market to the farmer. If he paid 2s. and got 6s. for his wheat it would pay him better than selling it at 2s. 6d. as he does now. The farmers on the Murray, especially the Melbourne side, have a marked advantage over our men in that respect; they grow in much larger quantities and send their produce down by water, and so have it taken by rail from Echuca to Melbourne at about £2 10s. per ton.
399. You are aware that by arrangement with the Victorian Government this Government is paid £60,000 a year for the passage of all goods duty free across the water? Yes.
400. Do you believe they have the best of the bargain? I think Victoria must reap the benefit of double that amount from the duties.
401. When the Victorian railway is open to Albury it will add very much more to the amount of advantage received by that Government? Yes, of course they will monopolise more of our trade than they do at present.
402. I suppose you can make no very accurate calculation of the difference it will make in the revenue? No, it would be a mere matter of guess; but there can be no doubt of the fact that the duties would be considerably increased. In Wagga Wagga alone I see that the monthly duties average about £400 on articles taken out of bond there.
403. That is only one house of business? Yes; the bond there, which was built by myself, is used solely by our firm.
404. All the others get their goods from Albury? All the others get their goods at present from the Albury bond, and direct from Melbourne.
405. Of course the advantage of that goes to Melbourne? Yes. The duty paid at Wagga Wagga is on goods from Sydney only. I have no doubt the bonded store would do a very great deal more if there was a railway anywhere near.
406. Or if people were induced to trade with Sydney instead of Melbourne? Yes.
407. They would then use the bond which they cannot do now? It is rather an anomaly that they should deal so largely with Melbourne; the duties there are higher on many articles than ours, and yet from the fact of being able to get their goods more quickly they prefer dealing with Melbourne. They get goods in eight or ten days from Melbourne, whereas it takes three weeks or a month to get them from Sydney, and there is a degree of uncertainty about goods reaching them from there that causes traders to go to the former market.
408. Do you know of any cases in which, as has been asserted, the three months' bills given for the goods have become due before the goods reached their destination? That used to be the case before the railway went to Goulburn, when the carriers lost their bullocks or horses. It is not so now; but they are frequently four or five weeks.
409. *Mr. Suttor.*] Do you think it would pay to carry expensive railways, such as we have here now, into any purely pastoral district—a district not suitable for agricultural purposes? Such a railway as is contemplated to the Murrumbidgee, would not only go through a pastoral district but through the agricultural districts of Gundagai, Tumut, and Tumberumba. Railways increase trade as they progress inland.
410. Of course in all agricultural districts, where farming is carried on extensively, the produce of one small farm would be much more in tonnage than that of the largest station; for instance, a farm growing 10,000 bushels of wheat? Yes, of course, unless they carry out the meat establishments along the river and send their meat, hides, and tallow by the rail. Then there would be a very considerable amount of carriage. But as a rule it would not pay to take railways into squatting districts, unless there was some such prospect as that of sending other produce to market besides sheep and cattle.
411. You said just now, that if a railway were carried from Melbourne to Albury it would very much increase the trade of Melbourne—where would that be from? From the whole of those districts I have mentioned, ranging from the Murrumbidgee at Gundagai down to the junction of the Murrumbidgee with the Murray.
412. Have they not already got the whole of that trade, with the exception of the districts round Gundagai? No, I do not think they have. The duties we pay, £400 a month, show that there must be some business done with Sydney.
413. *Mr. Hoskins.*] You have no doubt about the accuracy of your statement, as to the increased quantity of wool that has come here? None whatever. I know the stations personally, and am interested a great deal in wool myself.
414. *Mr. Suttor.*] There is a great extent of agricultural land about Albury? Yes.
415. Is the climate favourable to agriculture? It is rather a cooler climate than with us—very similar to the Tumut; it is nearer to the main range—the Kiandra Range. There is a great deal of wheat grown about Albury.
416. *Mr. Hoskins.*] Supposing a railway were constructed from Sydney to Wagga Wagga, how can you demonstrate to me that by that means the Sydney people would retain the trade of Adelong, Tumut, Tumberumba. If the Melbourne people had a railway to Albury, which would be nearest of approach, the Sydney line to Wagga Wagga, or the Melbourne line to Albury? It would be nearer to the Sydney line at Wagga Wagga than to a Melbourne line to Albury, for Tumut, Gundagai, and part of Tumberumba; but the upper part of Tumberumba, reaching out towards the Murray, would be nearer to Albury. The larger proportion would be nearer to Wagga Wagga.
417. How far would it be to Tumut from the nearest point of the Wagga Wagga line? Tumut is distant about 60 miles from Wagga Wagga, and Gundagai and part of Tumberumba about 50 miles.
418. How far are they from Albury? From Tumut it is about 130 miles to Albury, and rather more from Gundagai.
419. Then no doubt the trade would be retained for Sydney? Yes.
420. I have forgotten how many miles you said it was from Echuca to Wagga Wagga? I think it is about 180 miles to Deniliquin, and 50 from there to Echuca—say 230 miles from Wagga Wagga to Echuca.

G. Forsyth,
Esq.

11 Feb., 1870.

- G. Forsyth,
Esq.
- 11 Feb., 1870.
421. Do they, as an average, convey loading from Echuca to Wagga Wagga, 230 miles, in seven days? From eight to ten days. The carrier has a good horse-team, sits on his box, and drives pretty rapidly. It is a very level country, and these men travel at a great rate, perhaps 30 miles a day.
422. That would not apply to wet weather? We have not a great deal of wet weather there—not much to do the roads harm.
423. What should you say is the average time it takes to get goods from Melbourne to Wagga Wagga? Eight or ten days. If you order goods by telegram this morning you have them at Echuca by night, and can load them to Wagga Wagga, and have them there in ten days.
424. How far is it from Goulburn to Wagga Wagga? About 130 miles.
425. Then how is it the transit of goods is so much slower? We have not the same kind of conveyances as they have on the Melbourne side. It is notorious that the Melbourne waggons are almost as good as railways. The horses are well-fed and fat, and do their work with ease.
426. Are our teams much inferior? Yes, much inferior. I have seen nothing like the Melbourne horses here in teams going up the country.
427. Then the reason why the residents of Wagga Wagga get their loading so much quicker from Melbourne is owing to their having better horse-teams? Yes, it is principally on that account.
428. Do you not think, seeing that the distance is much less from Sydney to Wagga Wagga than from Melbourne by Echuca to Wagga Wagga, that if our merchants and people showed as much enterprise as the Victorian people we ought to beat them in time? Our 180 miles from Goulburn to Wagga Wagga are worse than the 230 miles from Echuca to Wagga Wagga, in consequence of the road being so hilly; it is a very rugged country from Goulburn to Wagga Wagga.
429. Over the Levels? No, the Levels road is a misnomer, because there are as many hills as on the main line, but the railway line proposed was to go outside these hills altogether. The main road does not go that way. Either by the Levels or by Gundagai the road is very hilly—very mountainous.
430. Since our Southern Railway has been open to Goulburn has the trade and business connection between Wagga Wagga and Sydney increased? It has with respect to my own firm. I cannot speak much for others; but I am inclined to think it has. I know it has with regard to stations; a largely increased quantity of wool has come here, and I think more fat stock than came here before.
431. Do you see more Sydney teams in Wagga Wagga? No, not more than before, except they have gone up for wool.
432. Do they go up empty for wool? In many cases they have. The carriers are men who live on the road between Goulburn and Wagga Wagga, and a great many of them about Wagga Wagga.
433. Then while the produce of the stations has been more generally sent down to Sydney this year than before, the commercial relations between Wagga Wagga and Sydney have not been strengthened or increased in consequence of the extension of the Southern Railway? Yes, I think there has been an increase of trade with Sydney in consequence of the extension to Goulburn.
434. How far is it from Wagga Wagga to Albury? About 90 miles; in a direct line about 80 miles.
435. *Chairman.*] What is the distance between Goulburn and Wagga Wagga, because I think you made it over the real distance—170 miles is what it is called, by the Levels? I measure it in this way: 58 or 60 miles to Yass, 65 to Gundagai, and 50 from Gundagai to Wagga Wagga; that would be 175 miles. I suppose the railway line would be considerably less.
436. *Mr. Hoskins.*] Assuming such a thing may happen as that they may not be able to make the North-eastern Railway from Melbourne to Albury or Wangaratta, and that the distance from Goulburn to Wagga Wagga is very much less than from Echuca to Wagga Wagga—can you suggest any means by which we might secure the trade of Wagga Wagga for Sydney? Only by carrying the railway there or making a good road. If we had a better class of teams the trade might be induced to come here.
437. Have they not a Carriers' Act in force in Victoria? Yes.
438. Do you think that if we had a Carriers' Act in force in this Colony it would have a tendency to cause an acceleration in the transit of goods—say to Wagga Wagga. Would it not prevent any unnecessary delay on the part of the teamsters? It would prevent delay, but I do not know that it would increase the number of teamsters. You must have the trade to increase the number of teamsters. But a Carriers' Act is very necessary, I consider, and would no doubt induce these men to make their journeys quicker and with greater regularity. For instance, many of the men carrying between Goulburn and the interior have little farms, and on their way up they stop and do some little work of their own. They have been known to do it for weeks.
439. In addition to their having better horse-teams on the Melbourne side, do not residents in Wagga Wagga and other places consider that one of the reasons why more expedition is used in transmitting goods is the stringent provisions of the Carriers' Act? I do not think that affects them much. They are a better class of carriers; some of them are owners of five or six teams, each worth £200 perhaps; so that they are men of some mark and standing in society. Such a man is not so much bound to do his duty by the provisions of the Carriers' Act as by his desire to get plenty to do, because the quickest carriers are employed the most. There is one man named Hugh Arnold, who trades direct to Wagga Wagga; he makes about ten trips a year, and brings up four or five teams each time, with from sixteen to twenty tons of loading. It pays him to be quick and to feed his horses well. They feed their horses very much better on the Melbourne side than they do here.
440. I infer then it is your opinion that, unless we extend the railway to Wagga Wagga, when the North-eastern Railway is made in Victoria, the trade of Wagga Wagga will be gone from us? As a matter of course a person will go to the nearest and best market he can get, and a railway coming within eighty miles of Wagga Wagga would draw its trade away, if we have no railway, or better road than at present, to Goulburn. The road, as I have said, is very mountainous, and I do not see that much could be done in improving it, except by making a railway.
441. How far is it from Tumut to Albury? About 130 miles.
442. You think it inevitable that if the Victorian North-eastern Railway is made the trade will gravitate to Melbourne? Yes, it is sure to go to the nearest market. Farmers are increasing so rapidly that they will take advantage of the nearest and best mode of transit they can get for taking their grain to market. There is now no consumption for the quantity of grain that can be grown in the interior.
443. Are you of opinion that if our railway were extended to Wagga Wagga the Sydney people would recover all the trade of that district again? I think they would recover as much of the trade as ever they had.

- had with those districts. They used to have the whole of it, but it must be borne in mind that the trade has very considerably increased since Sydney had all of it. G. Forsyth,
Esq.
444. Might it not be fairly presumed that we should participate largely in the trade of the increased population? Of course the increased population would give us more trade with Sydney; and the majority of the sheep owners would send their wool to Sydney. As a rule they prefer sending it to this market; I know they do. 11 Feb., 1870.
445. If we supplied them with the means of conveying their merchandise to Sydney in a day and a half or two days, do you not think they would prefer sending to Sydney? Yes.
446. Then you think the Sydney people would inevitably get all the trade? Yes.
447. Do you think it possible the Melbourne people would send their trade by sea to Sydney and then to Wagga Wagga by our railway—I have been told that they would do that and keep the trade in spite of us? If we induce the larger portion of the wool to come to Sydney we shall by that means induce a larger commercial trade, because so many people are concerned in the sale of wool. I have no doubt the wool going to Melbourne during the last few years caused a good many to deal there who would not otherwise have done so; they would not send their wool to Sydney and for their supplies to Melbourne.
448. I have been told that the Melbourne wholesale houses sell cheaper than the Sydney houses and are more liberal in their terms—is that statement correct? Dutiable articles are not cheaper in Melbourne because the duties are higher than ours. With regard to terms I do not see any difference; I think you can get quite as much accommodation in Sydney as in Melbourne.
449. If the Legislature thought it desirable to abolish the *ad valorem* duties and extend our railway, you think we must inevitably get all the trade for Sydney? I think such inducements as those would command the trade. With regard to the remark that they would send their goods from Melbourne to Sydney and up by rail, I do not think they would do that—it would not pay.
450. *Chairman.*] If they did it would be giving us exactly what we want? The railway would benefit by it, but the merchants would not.
451. *Mr. Onslow.*] You stated that there is a great deal of agricultural country on the Tumut—is there much of it not taken up? Most of it is taken up, but it is not cultivated; it would be if the farmers had the means of getting to market with their produce.
452. Do you think a railway going through there would cause the country to be much more thickly inhabited? Yes, there would be a much larger population and a better class of farmers; we have a few farmers from Camden and other places who have done exceedingly well.
453. What is the general extent of the holdings? From 80 to 320 acres or more; there are very few small holders of 40 acres.
454. You think the land is so good that it is capable of yielding almost any kind of produce? I think so. The crops have always been so successful that I have every reason to believe they could grow almost any quantity of wheat for the Colony; but to do that they want steam ploughs, reaping machines, and so on.
455. *Chairman.*] Mr. Suttor asked you whether you thought railways should be extended into merely pastoral country—would you call the part of the Murrumbidgee we have been speaking of merely pastoral country? No, I think the agricultural interest is quite as important to the district.
456. What would you say was the limit of the really good agricultural country westward? I should say Wagga Wagga, excepting in the bends of the rivers, and they are all subject to flood.
457. You would place Wagga Wagga as about the boundary between the pastoral and agricultural country? Yes.
458. About the navigation of the Murrumbidgee—what would you look upon as the proper head of the navigation of the river. We know the river has been navigated to Gundagai, but the rapids are so great up there that there are comparatively few seasons of the year in which steamers of any size could get up—where would you look upon as the best point to strike the river at a navigable point with a railway? The head of the navigation may be said to be Wagga Wagga; steamers seldom go beyond that. Captain Cadell took one steamer to Gundagai, but that was the only one. The J. H. P. has been a few miles beyond Wagga Wagga, but the others do not think of going beyond that.
459. In fact it is the furthest west point of the river where there is any large population? Yes; but the difficulties are in the navigation higher up, from the rapids and shoals.
460. The population in the valley of the Murrumbidgee, between Gundagai and Wagga Wagga, has been increasing very much of late years? Yes, and is increasing almost every quarter.
461. And the whole of that country, though perhaps not equal to the Tumut, is very fine agricultural land? Yes, the whole valley of the Murrumbidgee upwards.
462. And the country about Gundagai is all good land? Yes, with the exception of the hills.
463. You have been over many parts of New South Wales—have you ever seen a district which you would consider more admirably fitted for the growth of wheat than the Tumut? I have not. It is called the garden of the Colony. The average yield of wheat there is very great.
464. In what other wheat producing parts of the Colony have you been? I have never been north, excepting by water.
465. Have you been west? No.
466. Have you ever been at Mudgee? No.
467. Or Orange? I have passed through Orange.
468. You could form no comparison between those districts and the Tumut, as wheat producing districts? No.
469. I presume if there was a railway to the Murrumbidgee, at or about Wagga Wagga, a very considerable trade would at once spring up on the river by steamers, between that and other places down the river, probably as far as Hay? The two steamers at present belonging to Wagga Wagga would be employed, I have no doubt, in taking produce to the terminus.
470. Is it not probable the number would be increased very largely? Yes.
471. These would act as feeders to the railway? Yes, as assistants to the trade of the railway.
472. Could you tell us what mineral lands the railway would pass through between Yass and Wagga Wagga? If the line went by what is termed the Levels, Binalong, Murrumburrah, and Junee, it would pass near the diggings at Young, and not a great distance from Grenfell.
473. How far? About 20 miles from Young. It would pass somewhere near Murrumburrah and then the reefs lying between Junee and the Bland country, the Sebastopol Reefs, the Junee Reefs, Coman's Reefs, and Cowabee Reefs—all within 20 miles.

474. Are there not some reefs near Gundagai? Yes. It would benefit the reefs on the Gundagai Creek; and also the Eurongilly Diggings, and the whole of the Adelong Diggings, which are rather large. You may say it would embrace the diggings at Tumberumba too, which is rather farther off than the others.
475. So that it would be a convenience to a very large number of miners? Yes, the miners are increasing very rapidly in numbers there now; the quartz reefers especially, who are the most prominent miners we have.
476. *Mr. Hoskins.*] For how many months in the year is the Murrumbidgee below Wagga Wagga, down to Echuca, open to navigation? From three to four months.
477. Not more? No.
478. *Chairman.*] That must be in dry seasons? There have been dry seasons the last two years.
479. *Mr. Hoskins.*] Say average seasons? For about six months in average seasons.
480. What is the cost of conveying merchandise from Echuca to Wagga Wagga? By water I think about £2 a ton.
481. What is charged by the land route at present? From £3 10s. to £5.
482. Take an average? About £4.
483. Do you not think this is to be apprehended—that if we extend our railway from Sydney to Wagga Wagga, for six months in the year, would it not give greater facilities for the Melbourne people to send their goods from Echuca by water, and further into the interior of our country by our railway. As carriage is an important element do you not think people nearer Sydney than Wagga Wagga is, might be induced to give their orders in Melbourne if they could get them brought cheaply by the river to Wagga Wagga, and then by the rail? I do not think so. As a rule we do not like the steamer traffic, because there is great risk; we have had a good many accidents. I know I had some 30 tons of sugar swamped the other day in the Murray in consequence of the steamer touching a very light snag. There is considerable risk in the Murrumbidgee; it is lined with snags and it is a very dangerous navigation, and I think it always will be.
484. And never very reliable? Never very reliable.
485. *Mr. Suttor.*] I gather from your remarks that supposing the Government determine upon carrying a railway to the borders of Victoria, it would be better it should go to Wagga Wagga, and then to Albury? Yes. I think it will be found that if a railway is ever to form a connecting link between the two capitals, Melbourne and Sydney, the shortest and most direct route would be by Wagga Wagga to the New South Wales terminus at Albury. I have no doubt that the engineers will see the advantage of carrying the line in that direction to Albury.
486. Independently of the character of the country there are other inducements? Yes, the route by Wagga Wagga and Albury is through a more agricultural country than the route by Echuca. Nothing can be grown on the way to Echuca; it is all salt-bush plains. The line by Wagga Wagga and Albury would be much the most likely to pay, because it is the most direct and level route to be got, and because it would embrace on the south side the whole of the country to the Kiandra Ranges. The Upper Hume, for instance, would be brought within reach of it, and the whole of the Tumberumba country.
487. If the Victorian Government were to meet us at Albury it would take our trade from us? Yes, if we do not have a counter-attraction.
488. *Mr. Hoskins.*] The abolition of the *ad valorem* duties would be greatly in our favour? It would make a great difference. I think engineers would recommend the route to Albury as being the line that would embrace the largest population—there would be twenty persons on the Albury line for one on the Echuca line. From Wagga Wagga upwards you may say it is an agricultural country essentially; below Wagga Wagga it is essentially a pastoral country.
489. I suppose you entertain no doubt that unless we extend the southern line to Wagga Wagga, or somewhere about there, we must inevitably lose the trade of the southern districts? I think the two railways from Melbourne to Echuca and Albury must inevitably command the whole trade, unless we make a railway to counteract their effect.

TUESDAY, 15 FEBRUARY, 1870.

Present:—

MR. HOSKINS,
MR. LEE,

MR. ONSLOW,
MR. W. H. SUTTOR.

W. MACLEAY, ESQ., IN THE CHAIR.

James Henry Thomas, Esq., again called in and further examined:—

490. *Chairman.*] You were requested by the Committee to make some calculations about the relative cost of working railways of a cheaper and of a more expensive construction? I have not yet had sufficient time to make the calculations, but have obtained the data from the accountant, and hope to be able to furnish the result to the Committee by Thursday next. (*Vide Appendix A 5.*) I find from the memorandum, to which I have referred, that the working expenses during the last six months had risen at the rate of £46,000 per annum. That was rather a startling thing to me.
491. Has there not been a considerable additional length of line opened? No.
492. *Mr. Hoskins.*] Has not the traffic largely increased? No.
493. *Chairman.*] I think you said that the description of tank-engine you would use upon these light railways, which you estimated at £2,500 a mile, would weigh about 12 tons? Yes.
494. Where the traffic is very light, and the gradients easy upon the line, I presume a very light engine would be sufficient? Yes, if the gradients were easy.
495. Where the traffic is very light, and the gradients easy upon a line, I presume a very light engine would be sufficient? Yes.
496. What do you call a powerful engine—what horse-power? If you take the usual formula, it is considered that a 60-horse engine is a powerful one.
497. What would be about the power of the tank-engine you have spoken of weighing 12 tons? With the sized cylinder I propose it would work to about 12-horse power.

498. What is that equal to, drawing upon a tolerably level line of railway? Upon a tolerably level line J. H. Thomas, Esq.
499. On a level line that would take from 5 or 6 tons? Yes; what I call a comparatively easy line is with gradients of not more than 1 in 60. 15 Feb., 1870.
500. I suppose there are locomotive engines of still less weight? Yes, there have been some still less, but I should prefer one of 12 tons.
501. Could an engine be made so as to bear a weight of about 2 tons on each wheel? That would be too small; I do not think we could do that.
502. If your calculation of the cost of this line is with the view of having it sufficiently strong to bear a weight of 4 tons on a wheel, of course that must add considerably to the cost—I mean that a much lighter and cheaper line of railway would be sufficient if the weight were never to exceed half that? Yes, of course; but I do not think that you would get a good serviceable railway with less weight of railway and a less weight of engine.
503. *Mr. Hoskins.*] What is the weight of the rail? 40 lbs. to the yard.
504. *Chairman.*] Is that your calculation for a 3 feet gauge railway? For a 2 feet 7—it is the same weight of rail that is on the Richmond line.
505. On the Broelthel Railway, mentioned in a publication called "Engineering," of March, 1869, to which I directed your attention when you were last before the Committee, the gauge I think is 2 feet 7 inches, and the weight of rails was only 22 lbs. to the yard? That is very light; and if the rail were so light it would be necessary to increase the number of sleepers—very likely in this case the rails were laid upon longitudinal sleepers.
506. Yet the locomotive weighed 12½ tons, and the weight drawn was something like 200 tons? Yes, on a level line—that is 200 tons, including trucks.
507. But for the mere carrying of that weight—we will say, at the most, 4 tons to a pair of wheels—would not a 22 lbs. rail be sufficiently strong? If you have a lighter rail you must have longitudinal sleepers or more sleepers to support them. It is a very weak rail for even 12 tons to run upon.
508. I suppose that difference in the weight of rail would make a difference in the cost, of £200 a mile—that is between 22 lbs. and 40 lbs.? Not quite so much as that I think.
509. If it were found to be a matter of importance to retain the present gauge, so as to prevent the change of waggons in carrying goods, but at the same time the question of speed were thrown out of consideration altogether, and a much lighter rail than the present were adopted, what reduction could be made upon the present cost? I do not think you could reduce the expenditure more than £2,000 a mile.
510. You might have lighter rails? 40 lbs. rails—that is the weight of the rails on the Richmond line.
511. *Mr. Hoskins.*] That is a difference of 35 lbs. to the yard? Yes; but you must have the same width of bridges, embankments, and so forth.
512. *Chairman.*] Your estimate is I think that the first-class railway over a pretty easy country would be about £7,000 a mile? About £8,000.
513. And this proposed very inferior kind would be about £6,000? Yes.
514. Would it make much difference in the plan of this very light railway you speak of, as to the cost, if the gauge were made the same as our present gauge? Yes; you would have to increase the width of embankments, bridges, and sleepers, and this would very much add to the expense.
515. Your estimate of £2,500 a mile you consider a liberal one? Yes; that is to run the line along the common road, using the bridges.
516. Making an allowance of over £500 for cuttings? Yes, about that, and using the bridges we have at present. In many parts of the country that I have seen you might run a line for hundreds of miles without any cutting. In Riverina for instance.
517. But you think a very light engine, not weighing more than 6 tons, could not be made to carry sufficient for the requirements of the more thinly peopled parts of the country, if the tire of the wheel were made of indiarubber to cause it to take hold? I think one might be constructed by altering the tires and putting on indiarubber tires, but I should not advocate it.
518. It has not been sufficiently tested? No; it has never been tried upon railways, although I have often thought it might be applied to them.
519. At present it has never been used, except on ordinary roads? No. [*The witness drew the section of a tire with indiarubber applied as proposed by him.*]

The idea was suggested to me by the use of indiarubber tires on wheels running on common roads, and I thought something of the kind might be done here.

520. Are there any wheels of this kind in this country? I think not.

521. Any in Queensland? I am not aware. Messrs. Russell & Co. had some photographs of those used on common roads.

522. *Mr. Hoskins.*] You would still have the iron flange? Yes.

523. *Mr. Suttor.*] Seeing that the cost of the best rail is something under £200 a mile more than the 40lbs. rail, do you think it would be worth while to adopt this inferior rail for the sake of saving that amount? There would be the saving not only of the additional cost of rail, but of sleepers, chairs, &c.

524. Taking all into consideration do you not think it would be well to have the best rail, as the difference of cost would be under £200 a mile? It would be far more than that. The price of the 40lbs. rail would be proportionally a little greater than that of the 75lbs.

525. You have said the cost of cuttings and embankments would be more—why should it be greater? Because of the greater width that would be required. 526.

- J. H. Thomas, Esq.
15 Feb., 1870.
526. I am speaking merely of the rail? But if you have a heavy rail you must have chairs in proportion to the rails, and the cost of laying will be greater. There would also be additional cartage and other expenses.
527. But the rail would last longer? No doubt if you have a railway that will cost £20,000 a mile no doubt that will be the best railway, but the question is as to whether the country is in a position to pay for such a rail.
528. Can you say what has been about the cost per mile of the present rail? 75 lbs. to the yard would be about 100 tons to the mile, and the cost about £800.
529. A lighter rail would of course be less, or about £600? Much less than that.
530. That does not include the laying of the rail? No; the best guide in making the calculation would be the present permanent way, and for a yard forward, including the sleepers, chairs, and rails, the cost is about a guinea.
531. *Chairman.*] Do you mean each side? No, a yard forward.
532. Including the laying? No, only the material—the iron.
533. *Mr. Suttor.*] Are the rails taken on the line at the cost of the Government or of the contractor? The Government deliver the rails.
534. How do the contractors get the sleepers along the line? The Government have nothing to do with that. It is the business of the contractors; some get them from one place and some from another, wherever it is most convenient. If they require an engine to procure it they pay the Government for the use of the engine.
535. Where there are two contracts, say No. 1 and No. 2, and the contractors commence their work at the same time—No. 2 contractor has no means of getting sleepers along the line until No. 1 is completed? Generally the permanent way is taken as a separate contract.
536. *Mr. Hoskins.*] How long on an average have the rails used on the Richmond line lasted? We have never had occasion to take them up, except where some extraordinary circumstance has occurred.
537. How long have they been down? Seven or eight years. I found about six or eight months ago that we had no rails in stock in case of accident, and I indented for a supply from England, but it was not in consequence of seeing that the rails were bad.
538. Generally they have lasted well? Generally they have there, but the traffic is very small.
539. What is the average weight of the engines employed upon that line? I suppose these engines weigh 15 or 16 tons.
540. What is the average speed of the trains—they are passenger trains are they not? They combine passengers and goods sometimes.
541. What is their average speed? 13 miles an hour.
542. That would be about 14 miles an hour, including stoppages? Yes. That would be rather fast in some places.
543. What are the most severe gradients on the line? There are some 1 in 40.
544. I must take the liberty of asking you a question respecting the iron supplied to the railway—Can you give the date when you first assumed the duty of Engineer of Existing Lines? On the first occasion?
545. Were you twice appointed? Yes.
546. When were you first appointed? I think in 1859.
547. How long did you remain in that office? Three or four years.
548. Did you leave the service then? No; I went into the Road Department.
549. When did you return to the position of Engineer of Existing Lines? About three years, or three years and a half ago.
550. You filled the office about three years after 1859? Yes; between three and four years.
551. Did you observe this bad railway iron being delivered at the railway, for the service of the public, from 1859, and during the subsequent three years? No; at that time the railway was open only to Campbelltown.
552. Were no iron rails delivered during that time? No; not to me.
553. Extensions were being made, and lines were in course of formation? I had nothing to do with them.
554. Did you see the rails that were being delivered at that time for the extensions beyond Campbelltown? I might see a stack of rails on the ground, or going up the line, but I had nothing to do with them; I never tested them; it was no part of my duty.
555. Can you tell me on what date you assumed the duty of Engineer of Existing Lines the second time? In 1866 or 1867,—I should say three years, or three years and a half ago.
556. Can you tell me how many indents of railway iron were executed or delivered during that time? I had nothing to do with the indenting.
557. You saw the iron delivered? I saw it as it was going up to be used on the extensions; I might see it on the trucks, or anything of that kind, but I never examined it. It was not until I came to see the working of the line that I knew the rails were defective. I have, for instance, picked up a handful of shavings from the rail after a train has passed and have sent them up to the office. You might do the same thing now.
558. You mean after an engine passed? Yes.
559. How long after the road had been opened did you detect these flaws? Just after the opening of the extension to the Weatherboard.
560. Were you, as Engineer for Existing Lines, supplied with rails for replacing rails that had been worn out on the length of line you had charge of—and can you give me an idea of the weight supplied to you in one year? I am not quite certain that I ever had any.
561. You are not certain whether you were supplied with any rails at all? No.
562. You know a portion of the road over which you had charge was relaid during the time you had the office of Engineer? We had a stock of rails for renewals belonging to the permanent way when I took charge.
563. And you did not exhaust the stock? No.
564. The stock you took possession of when you took charge of the line was not exhausted? No.
565. What was the quality of those rails? They were all bad. There has never been a rail upon the line but has been bad; not a rail that I have ever seen.
566. Either those then in use, or those supplied for relaying the road, or those you examined? I did not examine them; I saw them only as they passed on the trucks; in fact I did not take notice of the quality of the iron until I came to see the wear and tear.

567. Did you subsequently, after observing the wreck that had been made of those rails which had been so recently laid down, inspect those you had in stock? I knew they were the same rails, a portion of the same lot, and therefore I had no occasion.

J. H. Thomas,
Esq.

568. How do you account for it that the rails on the Richmond line have lasted so well in comparison with the rails on the main line? There is not the same heavy traffic on the Richmond as on the main line. There are heavy goods train coming down the mountain line, and when they start from Mount Victoria they put down all the breaks, and the whole train slides down all the way; of course, in that case, the wear and tear is enormous, and is widely different from that on the Richmond line.

15 Feb., 1870.

569. Although there are severe gradients on the Richmond line? Not comparatively.

570. You have told us that you have had some experience on other lines—do you consider that we ever have any heavy trains on our Southern or Western Railway? Yes, for a mountain line like the Western Railway.

571. Have you observed on any other places besides those severe gradients that the rails did not last so long as they ought to do? I have never seen good rails commence to exfoliate so soon. Even upon ordinary lines—from Sydney to Newtown—I have seen the commencement of this exfoliation in plenty of places, and this certainly ought not to have been the case where the line had been so recently relaid. Mr. Mason, who has charge, will tell you the same thing; in fact, he was struck with much surprise to see that when he took charge and went over the line.

572. You account for the rails wearing away so rapidly in consequence of the inferiority of the iron? Yes. I think I have already stated that in one case a stone fell on a rail when it broke into three pieces like glass. No good rail would have done that.

573. During the period of three years, when you were last in the position of Engineer of Existing Lines, how many written reports did you send in to the Commissioner for Railways, in which you represented that the rails supplied were of an inferior description? I cannot tell. There are plenty of reports in my office from inspectors, telling the number of times they have had to turn the rails—whole heaps of them; but I certainly have some objection to writing in about these things. It was a matter that concerned Mr. Whitton and I did not like to interfere, although I have reported to him; in fact, I once took up a handful of these very shavings, laid them upon his table, and told him about the rail breaking. In fact Mr. Whitton has seen that I was correct in what I stated, for he has sent directions home to England that no more shall be purchased from the makers who have hitherto supplied the colony. Mr. Mason, who has charge of the Southern and Western Line, will tell you the same thing—that they are shameful. Orders have also been given not to use these steel-faced rails on the main line.

574. Can you say of your own knowledge, having had some lengthened knowledge of the railway, how long this system of supplying inferior rails has existed? I know it has existed six or seven years.

575. You have no doubt about that? No doubt about it.

576. You do not happen to know whether any report has been sent from any responsible person to the Minister for Works, representing the inferior character of the rails sent from England? I do not.

577. *Mr. Lee.*] In reference to this Richmond Railway, what is the average speed upon that line? I think about fifteen miles an hour, including stoppages.

578. Would the reduction of speed upon our railways generally very much reduce the working expenses? Yes.

579. Would you recommend such a course? We could hardly adopt it now, for people have become accustomed to travel at the present rate.

580. But the cost of working would be very much reduced? Yes, in England they find that by increasing the speed from five to ten miles an hour the working expenses go up enormously. If you notice a railway, when a train is passing along rapidly, you will see that the wear and tear is very great—there is a lateral motion which tears everything up.

581. With reference to the enormous wear and tear you have spoken of upon the Western line, would it not be almost absolutely necessary to reduce the speed there, if that line is to pay? It is very slow now on the mountain line when trains go with goods.

582. Notwithstanding the wear and tear is enormous? Yes; a great number of trucks are coupled together, all the breaks are put down, and they slide down nearly all the way.

583. *Mr. Suttor.*] You allude particularly to the goods trains? Yes.

584. *Mr. Lee.*] In reference to this iron, which you have already stated has been bad during the whole time of the construction of these lines of railway, whose duty was it to examine these rails before they were taken over by Government? The Inspecting Engineer. They are passed and paid for before they come here. Mr. Fowler inspects them, and they are paid for in England upon his inspection.

585. Notwithstanding the fact that it was bad, you did not consider it within your range of duty to make it known? I beg pardon; I have made it known to a number —

586. Not to the Department? Yes, to the Department; I think I can turn up the reports.

587. You have already given your reason for not sending in reports? I did not like to do it too often—not only were the rails bad, but look at our engines—engines have come out that could not be put together—that never had been put together in England. Then, again, we had eighteen carriages sent out that cost over £16,000, that when they came out were all to pieces; the panels were out, and they had to be patched up before they could run. I have made reports over and over again about these things. I advised, with reference to these eighteen carriages, that a board of private gentlemen in Sydney should be appointed to examine and report upon these carriages, and the Minister for Works appointed Mr. Russell, of Messrs. P. N. Russell & Co., and Mr. Robertson, the coach-builder; their report will speak for itself. In fact there is a mass of correspondence of mine, pointing out how badly we had been served, and begging to have these things made in the Colony; and it is through my exertions that rolling stock has been made here.

588. *Mr. Hoskins.*] Have you seen the rails supplied to the owners of coal mines on the Northern line? I never examined them.

589. Have you had no opportunity of inspecting their quality? Never.

590. *Mr. Lee.*] What is the average cost of a locomotive of the first-class? First-class, including all charges, £3,200.

591. For general use would you advocate a cheaper locomotive? For lighter lines.

592. Not for the heavier ones? No, for a 75-lb. rail.

J. H. Thomas, Esq.,
15 Feb., 1870. 593. Nor for any kind of traffic at a reduced speed? I do not think it would be advisable. If it is necessary I can produce a mass of correspondence, pointing out how we have been treated by the English manufacturer; I have said it showed criminal neglect on the part of the inspecting engineer in England to allow such things to pass.

594. *Mr. Onslow.*] In your estimate of this cheap railway you do not include the rolling stock? No.

595. What do you consider would be the cost of the rolling stock? That would depend entirely upon the amount of traffic you had.

596. Could you form no idea from the existing traffic as to what would be the cost of the rolling stock that would be required, say from Albury to Goulburn? The rolling stock would be of a much cheaper description than at present; it would be a lighter rail.

597. Have we at present sufficient rolling stock upon the existing line? Not nearly; to put the Southern and Western line in a proper state we must have 300 trucks more than at present.

598. Could you form any idea how many more would be required if a railway of the same class as the present were extended to Albury? We should want three times the number, because we should have a single line and therefore be compelled to send trucks to the different sidings.

599. Would the engines prove insufficient? Yes; we now want double the present number; there are only thirty engines at present.

600. Have you any idea of the cost of sleepers per hundred? Our sleepers on the existing line of roads we have bought at various prices. I have known them to be as low as 1s. and as high as 4s.

601. Are they all of good quality? All. When I say they have been bought as low as 1s. each I should explain that in that case advantage was taken of a lot that had been left by the contractor.

602. Do you know what wood they are of chiefly? Ironbark.

603. Which wood do you think best? Ironbark, though I should not object to box.

604. Would you anticipate any difficulty in getting sleepers if the railway were extended to Albury? I think not.

605. Ironbark? I think you might obtain some, although it is thinly scattered.

606. Do you think it would be possible to obtain a sufficient quantity of timber to construct a viaduct like that at Menangle? No, you would have great difficulty, as you may cut down three or four trees and not get a good stock of 30 or 40 feet long.

607. You think if anything were to happen to the Menangle viaduct there would be a great difficulty in replacing it as it is? Yes, I think so.

608. *Chairman.*] Are the trucks in use upon the railway here made in this Colony? Yes.

609. They are made cheaper than they could be imported? Yes; in fact all the contracts taken for making the rolling stock here have been in favour of the Colony, that is—taking the cost of the English trucks as put down here, including freight and charges.

610. Can the engines be made in the Colony? Yes, they are being made now.

611. Our people could make them as well? Yes.

612. Have you seen the plan of a locomotive engine that was shown to the Committee by Mr. Lloyd; it is a long engine, with some twelve pairs of wheels—similar to one in use on the railways in the North of France? Yes.

613. Would that description of locomotive suit on the mountain line? I think not. I may say that I have seen Mr. Lloyd's, and that he inspected a drawing of a locomotive that I made; he did not approve of mine and I did not approve of his.

614. His chief objection to yours was, that too much weight was put upon the wheel? That was his objection.

615. *Mr. Hoekins.*] Will you state why such an engine as you have referred to would not answer upon our lines? My objection is, that an engine such as Mr. Lloyd proposes, in consequence of its great wheel-base necessitates a complicated arrangement—and a large number of working parts to admit of its going round the very sharp curves (especially the double or S shape curves) we have on the Western line, the outer rails of which have to be raised some five inches above the inner to enable the engines to travel round them with safety. I, on the contrary, adopted as my model a class of engine that had been found to be best suited for lines with similar gradients and curves in America, Mauritius, and other places, keeping the wheel-base as short, and working parts as simple as possible. It is not an experience gained in making engines in a workshop for ordinary railways, such as they have in Europe, that enables you to judge what is required for a mountain line. You must have seen the difficulties, and had to *work one* before you can give an opinion as to what class of engine is most suitable for such a line as we have.

Richard Moody, Esq., called in and further examined:—

R. Moody, Esq.,
15 Feb., 1870. 616. *Chairman.*] Have you got with you the returns asked for by the Committee? I have here a return of the gross tonnage of goods for October, November, and December last. (*Handed in. Vide Appendix C 1.*) That I have got out in further detail, showing exactly the tonnage from Sydney to Marulan, Sydney to Goulburn, Sydney to Mount Victoria, and *vice versa*, for each of the months. (*Handed in. Vide Appendix C 2.*) That is independent of the intermediate traffic.

617. When you gave in a similar statement last session I recollect you stated that a very considerable portion of the goods traffic, marked down as going from Sydney to Mount Victoria, consisted of rails and other materials for extensions beyond—Has that been much the case in the last three months? Very little indeed, not worth mentioning.

618. We may look upon this, then, as legitimate traffic? Yes. I have taken out similar information with regard to the through passenger traffic. (*Handed in. Vide Appendix C 3.*) That I have got out in like manner in detail, showing the passenger traffic from Sydney to Goulburn, Sydney to Marulan, Sydney to Bowenfels, and Sydney to Mount Victoria, each month. (*Handed in. Vide Appendix C 4.*)

619. Are these all the returns you have? These are all that are as yet prepared. I am getting out a return to show the tonnage of the various classes of goods; probably in two days more I shall have it in a form sufficient to give one month's information.

620. *Mr. Hoskins.*] How long were you Chief Clerk of the Railway Department? Over twelve years. R. Moody,
Esq.
621. Did you receive reports from the Engineer of Existing Lines at any time during that period, or, if any, how many times, complaining of the quality of the iron in the rails supplied for the permanent way? I had no such reports, nor should I have the custody of them now. I have no recollection of any such report ever having come into my hands—a report of the bad quality of the rails from the Engineer for Existing Lines. 15 Feb., 1870
622. Not from Mr. Thomas? No.
623. Did you never see any such reports? Never to my knowledge.
624. Did you never hear that such reports were sent? No; this is the first I have heard of bad rails having been imported for the permanent way. There were some bad* rails imported by Mr. Whitton for the station yards, and some of these were by mistake taken out of the yard and put on the line, but they were removed as soon as it was discovered. I believe Mr. Thomas complained of the iron in some crank axles.
625. Supposing Mr. Thomas, the Engineer for Existing Lines of Railway, had sent in reports to the Commissioner of Railways, complaining of the quality of the iron in the rails, who would keep those reports? They should have come through my hands, and if such reports were ever made they did come through my hands; but I have not the remotest recollection of anything of the kind. Probably, if you can refresh my memory, I may recall it. My memory is very good.
626. * If any special reports were sent to the Commissioner for Railways, who is the Minister in fact now, respecting the rolling stock, or the management of the railway, they would have been sent to you and kept as a record of the department? Yes.
627. Are there any such records in the department? Not to my knowledge.
628. You are not aware of any records or reports from Mr. Thomas, complaining of the quality of the railway iron supplied for the service of the Government? No. Perhaps I can explain in part what you are pointing to: Mr. Thomas has reported on the bad condition of the permanent way between Sydney and the Junction, and probably that may be what you mean.
629. No, I am asking a general question? I have no knowledge of it; my recollection does not carry me.
630. *Mr. Onslow.*] Can you form any idea as to the future extension of the railway to the southward, to Albury, or Wagga Wagga? I have heard the matter talked over, and I know there is an estimate in the office for the extension to Albury; but I have had no intimation of the provision necessary for rolling stock for that length. It will probably be some five years before such rolling stock will be required, and it would be premature to order it now, as many improvements may possibly be made before then, which it will be desirable to take advantage of.
631. In the returns you have given us the average seems pretty constant. Is there any difference at different times of the year? Yes, there are very great differences. The heaviest traffic as a rule is from October to May, and then it falls off again.
632. Up or down? Both ways, very materially.
633. What do you attribute the increase up to? Chiefly to wool and general produce coming to Sydney at that time of year.
634. I mean up the country—what you would call down? That is generally merchandise going to out-stations by carriers who bring in wool and other produce. There is a very large increase on the current year since we opened to Goulburn.
635. Is there ever now a surplus of rolling stock. Is it unusual for any length of time—at any time of year? None that I am aware of; certainly not. Since I was appointed to the office of Traffic Manager we have been short of every kind of rolling stock.
636. On any days of the year have there been as many as eighteen or twenty carriages lying idle for a week? I should not say that. After the usual requirements of our day's work are supplied we may have fifteen or sixteen carriages on ordinary days that I could detach for a special train; but on Saturdays these carriages are in requisition, so much so that there is scarcely a carriage we could put our hands on on Saturday for any special purpose.
637. Are there any carriages building now in the Colony? A contract has been entered into with Messrs. Russell for various descriptions of rolling stock.
638. Have you any idea of the prices? No; but I am aware that the prices are considerably less than they could be imported for.
639. *Mr. Suttor.*] Do you think the number of trains now running daily could be very much reduced? The Commissioner has sometime had under consideration a reduction in the number of trains, or a revision of the time-table, by which a great saving in mileage could be effected. He did attempt, when the line was opened to Mount Victoria, to revise the time-table to save running, but at that time it was found that under existing arrangements a very small saving could be effected, only about 11,000 miles per annum, which is insignificant. But I believe a saving could be effected to ten times that extent.
640. Do you not think a train running once a day to Bowenfels, and once to Goulburn, each way, would be quite sufficient? Quite sufficient. I stated roughly that a saving of £10,000 per annum could be effected by a revision of the time-table; there is no doubt I am 50 per cent. under the mark. I have no doubt we could save far more than £15,000. That is, supposing the public would be satisfied with one train to Goulburn, and one train to the west, and some alteration of the running of the present trains to the suburbs. Ample accommodation could be provided, and several of the trains could be dispensed with, without interfering with the comfort of the people travelling. The Commissioner has now under consideration some suggestions for that object.
641. *Mr. Lee.*] Reducing the present speed? Reducing the present speed would necessarily enter into the consideration no doubt, because under arrangements for economy it would be necessary to carry the mails by goods trains, which could only travel at much less speed, something like two hours less speed through the journey, but to go direct from Sydney to their destination. If it were necessary provision could be made for taking mail passengers who may book through for the mail, and in like manner to bring mail

* Revised :—Common.

* NOTE (on revision) :—I could not have understood this question aright, as Mr. Thomas has sent to the Commissioner reports on the condition of the rolling stock.—R. MOODY. 19/2/70.

R. Moody, Esq.
15 Feb., 1870. mail passengers from Goulburn or from the Western terminus to Sydney, on production of their mail ticket. But to accommodate all persons who might present themselves would entail just what we are now doing. I have no doubt that by carrying the mail by goods trains, and limiting them to mail passengers through, a very large saving could be effected.

642. *Mr. Suttor.*] Is there any reason why the mails could not go up in the morning instead of the evening? That is a matter entirely for the Post Office. We can either accommodate the mails by the early train, or by the goods train at night; but as the Post Office authorities insist upon a particular hour of delivery we are obliged to work accordingly, although we do not get paid for it. No doubt, even with our present traffic, if we could debit all our earnings we should show a considerable increase upon the revenue proper; for instance, we receive but a share of the cost of the mail train. Then we have various special trains to run for which we carry nothing to our credit. We have all the Members of Parliament to carry for nothing.

643. *Mr. Hoskins.*] Special trains are engaged for parties and paid for I presume? There are governmental trains for the Governor and others run which are not paid for.

644. They are very infrequent—are they not? For the Governor they are not; for the members of the Government there are not many—one I think.

645. *Mr. Lee.*] Does the Governor travel free? He does, either by general or special train.

646. If these trains were charged for an apparent increase would be shown in your returns—but it would be taking money out of one pocket and putting it in the other? But our returns would be increased for something for which we get no credit now. I merely mention this because it is often said that the railways ought to pay better than they do; but of course when all these things are not charged for they can scarcely show what they ought to show.

647. *Chairman.*] What are the earnings per mile, taking the average? I have not worked that out for the current year.

648. For any period? I have nothing before me from which I could take it at present. I could easily ascertain.

649. *Mr. Lee.*] What is your opinion as to the probable result to the railway receipts, supposing the rates were increased? I have no doubt the receipts would be increased pretty nearly in the ratio in which the rates were raised, so long as they were not increased beyond carriers' rates. If they are kept below carriers' rates we shall have the whole traffic; no carrier can compete with us.

650. *Mr. Hoskins.*] Do you think you could increase the tariff for goods without losing any of the present traffic? Yes, I think so. There are some things that would require consideration; agricultural produce for instance we must either carry for next to nothing, or give it up.

651. *Mr. Onslow.*] People could not send it down, except at very low rates? No.

652. *Chairman.*] What were the gross earnings of last year? I have not yet been supplied with that; it has not been worked up. There is one thing, perhaps, that would give the Committee a general idea of the profits arising out of the hay traffic. The hay traffic, as at present conducted, entails the use of a truck for never less than three days, and frequently for four or five, and the entire earnings of the truck for the time thus occupied amount to seldom more than a guinea. I have it on very good authority, from the auctioneers selling hay, that in some cases the returns, after deducting expenses and commission, have left no more than 10d., or even 7d., to the owner. In some instances they have even had to pay for expenses more than their hay has been sold for; so that agricultural produce at present is neither paying us nor the growers.

653. *Mr. Onslow.*] Do you see any way of remedying or obviating that? That I think is a question for the farmers.

654. Does it pay the Government to carry hay at present? No, it does not, because a truck, to pay us, ought to earn every day not less than a guinea.

655. The only people who benefit are those who buy the produce? The persons who chiefly profit by it are the auctioneers.

656. *Mr. Lee.*] Have you at present sufficient trucks for the traffic? At the present time I dare say we could make constant use of at least fifty more day by day. The wood traffic pays well, for the reason that the expense of conducting it is very small. We bring it in in two journeys a day, and it is thrown out of the trucks without much expense; and the trucks therefore earn more money on the average than in any other way. Their trips are very short, and of course they run up and down quickly.

657. Where does the wood come from chiefly? From Fairfield, Riverston, Rooty Hill, and South Creek. On some market days, Tuesdays and Fridays, we have as many as 140 to 150 trucks occupied coming into Sydney with produce, from seventy to eighty of them with hay alone, and these, as I say, occupied for three or four days to our very great loss.

658. *Mr. Suttor.*] Is there no charge for detention? No. On one or two occasions I have enforced it, and have even had to sell the hay to pay the freight.

THURSDAY, 17 FEBRUARY, 1870.

Present:—

MR. MORRICE,
MR. HOSKINS,
MR. ONSLOW,

MR. ALEXANDER,
MR. LORD,
MR. W. SUTTOR.

MR. LEE.

WILLIAM MACLEAY, Esq., IN THE CHAIR.

William Mason, Esq., Member of the Institution of Civil Engineers, called in and examined:—

W. Mason,
Esq., C.E.

17 Feb., 1870.

659. *Chairman.*] You are Chief Assistant Engineer for Railways? Yes.

660. You have been connected with railways for some time? For the last thirty years.

661. In England? In England, before I came here.

662. In any other part of the world? No.

663. You have been making estimates I believe of the probable cost of the extensions now proposed by the Government? I have.

664.

664. Have you been enabled to make minute calculations as to their probable cost? I have made approximate estimates merely, not in minute detail; they are only made on a preliminary survey and section.

W. Mason,
Esq., C.E.

665. Will you state what the estimated cost will be on the different extensions? The total cost of the extension of the southern line from Goulburn to Yass, a distance of 52 miles and 71 chains, is estimated to be £545,255 8s., which is at the rate of £10,312 3s. 2d. per mile; to the north, from Murrurundi to Tamworth, a distance of 58½ miles, a total of £568,110 6s. 2d., or at the rate of £9,711 5s. 9d. per mile; to the west, from Bathurst to Orange, a distance of 44½ miles, total £500,369 15s. 9d., or £11,244 5s. 4d. per mile.

17 Feb., 1870.

666. That estimate is made, I presume, upon the plan of making the railways very much of the same kind as those we have at present? Yes, a continuation of the present description of railway. These are taken at the very lowest possible prices at which the work could be executed.

667. Are there any very heavy cuttings upon these lines? Yes, there are some very heavy cuttings; but as this is only trial work many of the cuttings may be much lightened, and probably some of them avoided altogether, by various modifications of the curves and gradients; and in that way a considerable saving might be made.

668. Are there any very heavy gradients? Nothing steeper than 1 in 50 on the Southern and Western, and 1 in 30 on the Northern extensions.

669. As regards the Western extension to Orange, the line must be a very circuitous one? Yes, the line is rather circuitous.

670. Is that in order to avoid the worst country? Yes; the country in a direct line between Bathurst and Orange is impracticable. It is practicable to a certain point, but beyond that point it becomes so broken as to be impracticable; besides which, a line made in that direction would be of very little use, excepting to Orange.

671. I suppose the line goes in the direction of Carcoar? Yes.

672. Could these railways not be made at a less cost than you have named? They might be made at a less cost. The permanent way might be lightened; we might do probably with a lighter rail, say of about 60 lbs. to 65 lbs. to the yard. The rail now in use is 75 lbs. to the yard. I have made an estimate of the cost of the permanent way with 60 lbs. rail; I make the cost of that to be £2,686 13s. per mile. The present permanent way, with a 75 lbs. rail, taking the price at about the average paid for permanent way materials in London, would cost £3,781 12s. per mile. That is about as low as the present description of permanent way could be done for. This does not include any cuttings, but simply the permanent way.

673. Do you think 60 lbs. rails could be substituted for the other without any risk—without increased danger? The rail of course is not so strong as the other; but by placing the sleepers nearer together, instead of three feet apart from centre to centre as at present, and so reducing the bearing, the rail would be strengthened, and a weaker rail would carry the same weight.

674. *Mr. Lord.*] That would necessitate an increased expenditure for sleepers? Of course. The estimate I have given is for 60 lbs. rails with three feet bearings—the present arrangement. Such a line might be worked with lighter engines, lighter rolling stock, and everything lighter altogether.

675. *Mr. Morrice.*] Then they would not be able to carry so much weight? No.

676. *Chairman.*] You think lighter locomotives would require to be used with a 60 lbs. rail? Yes, lighter locomotives might be used. The extra sleepers required on the permanent way would not add greatly to the expense. Possibly the cost of these might be cheapened still by using any description of timber that might be found available and adapted to the purpose; the description used now is the best class of ironbark sleepers, squared, each 9 feet long, 10 in. by 5 in., and consequently are more expensive. I should use any description of timber that I found adapted for the purpose. Another saving might be made in the fencing,—by adopting the same course, using any description of timber; the timber now used for fencing is chiefly ironbark.

677. What could the cost of a railway be brought down to by adopting these changes? I must observe that £8 19s. per ton is about the average price paid in 1866 and 1867 for 75 lbs. rails, but I take the 60 lbs. rails at the lowest price, £6 10s., for which I think it probable they might be furnished.

678. *Mr. Lord.*] What would be the saving on using the 60 lbs. rail instead of the 75 lbs. rail? The difference would be about £1,100 per mile in the permanent way.

679. What would be the saving on using other descriptions of timber? That would depend upon the locality. In some districts there might be timber suitable for the purpose; in others it might have to be brought 8, 10, or 15 miles; but generally speaking, by using any description of timber that was suitable—for instance, box, blue or red gum, or any that had not to be brought a long way, a considerable reduction in the cost of timber might be made.

680. *Chairman.*] You are acquainted, I believe, with the Queensland railways? Yes; I have made an inspection of the Queensland railways. I was called upon by the Queensland Government to examine and report upon them.

681. They have adopted a narrower gauge than ours? Yes, a gauge of 3ft. 6in.

682. Are their railways all of one description? Yes, they are all the same gauge.

683. What is the cost of their railway per mile? The cost of one portion—from Ipswich to Toowoomba, 79 or 80 miles—was upwards of £15,000 per mile; beyond Toowoomba—to Dalby and Warwick—I think it cost from £6,000 to £7,000 per mile.

684. Then they have not gained much, in cheapening their railway, by adopting the narrow gauge? No.

685. What is the speed? About 20 miles an hour, over ordinary gradients; and over the main range about 12 miles. They use curves of 5 chains radius.

686. What sort of railway is this Queensland railway—do you look upon it as a useful and good kind of line? I think it would have answered the purpose of Queensland very well for several years, had it been constructed as it might have been, at a fair and reasonable cost; but the prices there were so excessively extravagant as to be to a great extent the cause of its costing more than it ought to have done. A 3ft. 6in. gauge is unquestionably cheaper in the earthwork.

687. Is it as safe? Yes at 20 miles, or even 30 miles an hour, it is perfectly safe; not of course over 5 chains curves.

688. It is a single line? Yes.

689. Have you ever seen any of the very cheap narrow gauge lines that are in use now in some parts of the world? Do you mean tramways?

690.

- W. Mason, Esq., C.E.
17 Feb., 1870.
690. Tramways or railways? They are generally termed tramways with a less gauge than 4ft. 8½in. I have seen them of all descriptions of gauge, from 2ft. up to 4ft. 8½in. They are made of every description in England, according to circumstances.
691. Are they made at a very small cost? Yes. Of course they are of a very temporary nature, merely for horse traction. In some cases they use horse traction, having stationary engines! on steep inclines. The lines for horse traction are generally level or nearly so, and made circuitous to avoid any great amount of earthwork, cuttings, or bridges.
692. I suppose where horse traction is used it is generally in cases where the traffic is light? Yes. They commence with horse traction, and immediately they find the traffic is sufficient to justify putting on an engine they reconstruct the permanent way, and use a certain class of engine. Some of these lines have been taken up and relaid on the 4ft. 8½in. gauge—for instance, in some of Earl Fitzwilliams' colliery lines in South Yorkshire—so that they could run the trucks direct from the railway to the pit. They find it more economical to do that where the traffic is large.
693. In a thinly-peopled country, where the amount of goods to be carried would not exceed (say) 5,000 tons a year, what kind of road would you, as an engineer, recommend? It would depend entirely on circumstances—where this line was. If it was to be an independent line a certain description of line might suffice for the traffic; but if it were a continuation of the present lines it ought not materially to differ from them, for if a different description of line were made, or there were a difference in gauge, all goods would have to be transhipped at the present termini, which would be a consideration of great importance. I think possibly a line might be constructed for £8,000 a mile, from Goulburn in any direction to the south, as far as I have been, of a similar description to the present line, by modifying the permanent way, fences, bridges—in fact everything about it.
694. Supposing that it is absolutely necessary to change the gauge—that we cannot get a cheap enough line without changing the gauge—what would you recommend? I should not recommend anything less than 3ft. 6in. gauge; but certainly, as a main line, I would not recommend that. I would recommend that the present gauge should be continued, even if of a lighter description. To break the gauge would cause the transhipment of all goods, and that would be a very serious matter. That was the cause of the mixed gauge being put down in England.
695. Are you aware that even up to Goulburn and Bathurst, we will say, the traffic never can pay anything like interest on the cost of constructing the railway? I imagine not.
696. And every mile we go beyond it will pay less? Certainly.
697. Under these circumstances, if we cannot afford to have these very good railways, it still is necessary for us that we should have some sort of roads—what do you think would be the best description of road that we could afford to have? It depends upon what the Colony can afford.
698. Say that 5,000 tons annually would be the full amount of traffic on the road, that of course would not pay for a railway, but might answer for a road as cheap as a horse tramway or a macadamised road? A 3 feet 6 inch gauge would be quite sufficient for that.
699. You think that ought to be the narrowest? I think it should not be less than 3 feet 6 inches, but it should not be constructed for horses—not a main line; any branch railways might be, but anything in the shape of a main line I would construct for steam traction.
700. We must look upon them all as branch lines if we cannot afford to go on with the trunk? If we look upon these as branch lines they might be constructed of any gauge found suitable; 3 feet 6 inches for such an amount of traffic as you name would no doubt be ample.
701. What would be the cost of a railway in the districts we have been speaking of—you have an idea of the country—with a light rail, and engines not exceeding 12 tons? 12 tons would be very light. You could not have an engine, to be of any great and effective service, of less than 16 to 20 tons; that could be put upon a rail of 60lbs. The Queensland engines and tender weigh about 22½ tons, and are put upon a 40lbs. rail, but the rail is too light; it causes considerable buckling in that way, and adds to the expense of repairs.
702. Then after all, this very inferior kind of railway, with a narrow gauge and light rails, would still cost £5,000 or £6,000 a mile? It would possibly cost more than that. It is chiefly in the earthwork the saving is made in adopting a narrow gauge; a little would be saved in the bridges, but the earthwork is the principal thing. The cuttings would be from 11 to 13 feet wide instead of 18 feet, which the present railways are. That is of course a great saving in excavation, where the excavations are heavy, but where the excavation runs light the difference is not so great.
703. Then there would be very little saving upon the whole? There would not be a great saving upon a 3 feet 6 inch gauge as compared with one of 4 feet 8½ inches. I made an estimate of it in my report to the Queensland Government, if you will allow me to refer to it. I was not able to obtain the necessary information as to the quantities that had been excavated on the Queensland line, but I took them from a length of 13 miles over a heavy part of the country on the Southern line in New South Wales, and I find that for the 4 feet 8½ inch gauge, 53,084 cubic yards of excavation, at 3s. 8d. per yard, gave £9,732 1s. 4d.; for the 3 feet 6 inch gauge 45,417 cubic yards cost, at the same price, £8,326 9s., making a difference in quantity of 7,667 yards, and in cost, £1,405 12s. 4d.
704. Where the traffic is considerable I presume steam-power is cheapest? No doubt; that has been proved beyond doubt.
705. But where the traffic is very light indeed I should fancy horse power would be the cheapest? Yes, up to a certain point no doubt.
706. I suppose it is very difficult to calculate what that point is? That becomes a matter of scientific inquiry where to draw the line—that is, where one is cheaper than the other.
707. It is calculated, is it not, that a horse will draw as much on a rail, as eight horses on a macadamised road, on a level? An average description of horse will draw from six to eight times as much.
708. That power is considerably decreased proportionately on a gradient, owing to the increase of gravity? Yes.
709. What is a horse's power equal to, on a gradient of 1 in 20 on a rail? About 1½ ton.
710. Would not a light rail laid upon sleepers—a light horse tramway laid along the sides of our present roads—be a very great improvement on our present system of roads? I am afraid not. In the first place, for the tramway to be of any use you would be compelled to keep up a good road for the horses to travel on.
711. Are you not compelled to do that with a macadamised road? Yes, of course, but for a tramway you will

will have to maintain continually in the centre of the track a good macadamised road ; that in itself must be an expensive matter.

712. In the one case you will have to keep up a road of three feet wide—in the other a road of twenty feet or more ? Yes, perhaps thirty.

W. Mason,
Esq., C.E.
17 Feb., 1870.

713. In the one case would you not have the wear and tear of eight horses and the wheels behind them to set against the wear and tear of one horse's feet in the other case ? Undoubtedly ; but the common roads can be used by all classes of vehicles—the tramway by one only ; besides, you would require to have frequent sidings laid down by which vehicles could pass. Many of our present roads are on very steep inclines, ranging from 1 in 8 upwards, and consequently would be very difficult to travel upon.

714. I presume these heavy gradients could always be avoided by increasing the length of the line ? Yes, by making a detour you could make a level line. That is the way they are made in England ; instead of coming in a direct line from the pits to the railway they come by a very circuitous route, making a detour of one or two miles to obtain a level line.

715. What do we pay for our rails here—75 lbs. to the yard ? I am not aware what we have been paying lately, but there are some prices stated in a printed paper I hold in my hand to have been paid in 1859-60-61-62, and 63. Up to that date the prices paid varied according to the fluctuations of the market. The prices herein quoted as paid per ton in London, at the abovenamed dates, vary from £6 18s. 9d. to £9 10s., the average of the whole being £8 0s. 8d. per ton for the iron rails.

716. Is that a high price ? Yes, that appears to me to be a very high price.

717. Have you observed that the price paid for rails here was somewhat over the market price in London at the time ? I observe that lower prices are quoted from the Economist, at the various dates, varying from £5 to £7 per ton, the average of the whole being £6 6s. 8d. per ton.

718. Then we have been paying as a rule remarkably high prices ? The rails that have been obtained from England are supposed to be of a different class from those quoted in the Economist ; whether it is so or not I am not able to say.

719. Are the rails sent out here of a very superior character ? Some of the rails are not of a very superior character.

720. Have you found any of them bad ? Yes, there are some of the rails that are not of first class quality.

721. Could you call them positively bad ? Yes.

722. Unfit for use ? They are such rails as I should not recommend to be used.

723. How long has this been the case ? I speak more particularly of the length that has been laid down recently from Marulan to Goulburn ; the rails on that are particularly bad ; and on the west they appear of very indifferent quality.

724. They wear very quickly ? Yes.

725. Were there not some steel rails imported lately ? Not recently. Some steel-faced rails were imported some considerable time ago—several years ago.

726. Have any of them been used ? None of them have been used by me for running passenger trains over.

727. Is that on account of the badness of their quality ? They are not suitable for the main line ; they were, I understand, obtained only for sidings.

728. You think we could really get a better description of rail at a cheaper rate, and thereby considerably reduce the cost of the railway ? Yes, it would make a considerable difference in the cost ; the cost of materials in London is an important item in the expense of the permanent way.

729. What difference would it make, taking it at £2 a ton ? That would make about £235 per mile.

730. How do you account for the circumstance of our being so ill supplied with rails from London ? I cannot account for it. They are inspected by Mr. Fowler. I am not able to say what is the reason of it.

731. Upon his inspection they are at once taken ? Yes, they are inspected by him and shipped after they have been passed by him.

732. In what way is it possible to avoid this sort of thing for the future ? That might be very easily avoided by having no one whatever to inspect the rails in England, but make the manufacturers responsible. If a person is there to inspect the rails, and the manufacturer can by any chance put in a bad rail, it is his interest to do so, and it is quite possible he may do it. If the rails are once passed by the inspector, he (the manufacturer) considers himself no longer responsible ; but if the manufacturer is held responsible for the rails landed here he will take care that none but good rails are sent out.

733. Is the inspector paid ? He is paid 1 per cent. on rails, and 2½ on rolling stock.

734. Then by not having an inspector at all in England we should save money and get a better article ? Yes, I think so.

735. *Mr. Hoskins.*] You would suggest that the manufacturer should be held responsible till the Government took delivery in the colony ? Yes, until the Government took delivery and tested the rails in the colony.

736. *Chairman.*] Have you ever had any rails made here, at the Fitzroy Iron Mines ? No. I think there was an attempt made to roll rails, but it failed.

737. *Mr. Suttor.*] Do you not think most of the iron manufacturers in England could get agents here, and have the rails imported at a certain price, subject to approval ? Yes. If the manufacturer is held responsible he will take care to send out a good article, especially if so much is kept in hand on account of them.

738. *Mr. Alexander.*] Are there not factories in England that are famous for the superiority of their iron ? The whole of the iron manufacturers could roll good rails ; there is no difficulty about it.

739. Are there none specially famous ? None particularly. There are several companies noted for doing an extensive business in that way ; but they are all equally competent to do the work. If tenders were invited from each party to state what description of rail they would roll, and to state what this rail was capable of as a test, I have no doubt the best description of rail would be got. The manufacturer would be certain to take every care and not send out any bad rails, as it would be a dead loss to him to do so.

740. What is the highest price quoted from the Economist, in the paper you have just referred to ? The highest is £7—the lowest £5.

741. What iron is that ? The usual description I take it to be—such as is used in the manufacture of good commercial rails.

W. Mason,
Esq., C.E.
17 Feb., 1870.

742. Is it Welsh or English? This is the description of iron from which rails are generally rolled for use in England. I take this to be the quotation of prices ruling in England, at the time, of the rails that are used in England, and therefore they must be of good average quality, otherwise they would never be used, and therefore never be quoted.

743. Have you any experience in the value of general bar iron? I have no particular experience in the value of bar iron.

744. Which iron do you consider should be cheapest—bar iron of different sizes, or this sort suited for railways? The iron from which rails are rolled is compounded of various qualities of iron. Each manufacturer has his own specification for using. Some use one description, some another. The object is to obtain stiffness in the rails, at the same time with strength and hardness. Solid steel rails are very expensive; but if you obtain such they will last considerably longer than the ordinary iron rails, under the ordinary wear and tear of traffic.

745. BBH iron is considered the best iron that comes here—that is invoiced, general sizes, at from £7 to £7 10s. per ton—would that not be more expensive iron than the iron from which rails are made? The manufacturers would not use that alone, but in conjunction with other iron. They mix certain descriptions of ore for making this railway iron. I have no doubt that rails might be obtained for about the prices stated in the Economist.

746. *Mr. Morrice.*] How do you account for the iron which is now used being much worse than the iron formerly used? Because it is being composed of an inferior material. I give you an instance: From Parramatta Junction to Liverpool the rails are of the same form, "double headed," as those from Marulan to Goulburn; they have been down about fourteen years, and all the traffic has gone over them for that period, yet hardly any of them are touched; whereas the rails on the extension from Marulan to Goulburn, which have only been down about eight months, show strong signs of wear. Some of them have had to be turned already, and others show very great signs of wear.

747. What I mean is this: How do you account for one wearing so much more than the other? One must be an inferior description of material to the other.

748. Is it through a difference in the prices? I am not aware what prices are now paid, but I have always understood that. They are all supposed to be a first class rail, and paid for as such; a good price is given for a first class material.

749. Both the later ones and the former ones? Yes, both. I am not aware what price was paid for those on the Liverpool line, but they are undoubtedly first class material.

750. Sometime ago there was some Parliamentary inquiry? Yes, I remember some question about them once before.

751. About the rails that were used formerly? It referred to the rails that were being shipped for the extensions beyond Liverpool towards Goulburn, and beyond Parramatta towards Bathurst. They came out in various shipments, just as they were required.

752. The inferiority was not on account of their being a cheaper rail? No, I am not aware of their being had cheaper. I have always understood that the best price was paid for the best quality of rail.

753. Do you not think the Fitz Roy iron would wear longer than the rails used now? I could not say; I have had no experience of that iron.

754. Do you not think that if we were to go on with one line at once, instead of going on simultaneously with the three—concentrate all the labour upon one—we should get our line done much cheaper? I do not think that would make any difference.

755. You think there is labour enough in the Colony to go on with all? Yes, I think labour would be found for all.

756. Speaking about the fencing of the railway lines—do you not think that if good saplings were put in, instead of split timber, it would answer the purpose, and be much cheaper? Yes, quite as well; and the posts might be pointed and driven with a small hand "ringing" engine. A fence could be made of a good strong rough character, sufficient to answer the purpose of the present fence, probably at about half the cost.

757. Do you not think that—without confining ourselves to ironbark—box, blue-gum, grey-gum, red-gum, water-gum, and stringybark, would all answer for sleepers? They would do, but none of them are so suitable for sleepers as ironbark.

758. Still these are all durable timbers? Yes. We find they are more durable in some districts than in others. Stringybark in some districts can hardly be called stringybark; it is a different timber altogether—a very inferior kind. It is the same with ironbark, the quality varies according to the district in which it is grown.

759. Do you not think that if all these timbers were used you would get sleepers much cheaper and more readily? Yes, no doubt. You would then be able to use the timber of the district, if there was any that was suitable for the purpose, and, not having a great lead upon it, it would be much cheaper.

760. *Mr. Hoskins.*] Are there many rails in stock now? Not many. There are some steel-faced rails in stock. Speaking generally, I think there are no more rails in stock than what are sufficient for the extensions from Bowenfels to Bathurst, and from Muswellbrook to Murrurundi; in fact some of these have not yet arrived in the Colony.

761. Have you inspected the rails that are in stock? No, I have nothing to do with inspecting the rails in stock. My remarks only apply to those that have been laid down.

762. You cannot say whether the rails in stock are of the same description as those of which you complain, between Marulan and Goulburn? They are all of the same form; the steel-faced rails appear to me not to be of first-class material.

763. You have no reason to believe that the rails in stock, intended for the extensions, are superior to those recently laid down? I am not aware of their quality.

764. When did you first observe that the rails laid down were inferior? I took charge of the maintenance of these lines on the 3rd June last. I went through the whole of the lines, west and south, and made a thorough inspection of the whole of the works, permanent way, and everything else, and it was then I observed the bad quality of the rails I have spoken of.

765. Have you inspected the rails on the Northern line? No, I have nothing to do with the Northern line.

766. Where did you observe that the inferior description of rails laid down on the Southern and Western lines commenced—on what part were they commenced to be laid down? On the line from Liverpool to Campbelltown the rails are not of very first-class quality, but are tolerably good; they get gradually worse all the way to Goulburn.

W. Mason,
Esq., C.E.

17 Feb., 1870.

767. *Mr. Onslow.*] I have always understood that the rails about Menangle and Picton are as good as any in the country? They appear to be of a better class than those on the Goulburn extension.

768. They have never been replaced—have they? Some of them have been turned. With the traffic over that line it should not be necessary to turn a first-class rail for several years.

769. *Mr. Hoskins.*] However, from Campbelltown South you remark that the rails are inferior to those laid down from Sydney to Liverpool? I think from Liverpool to Campbelltown they are inferior to those from Parramatta to Liverpool; and, taking the latter as a standard of comparison, the rails from Liverpool to Campbelltown are not so good; from Campbelltown to Picton they are of about similar quality, but not so good as those on the Liverpool line; and as you get nearer to Goulburn they get worse. Rails laid down so short a time as six or eight months ought not to show the signs of wear these rails show. That is what I judge from; I have not tested any of these rails. From that alone it is plain to be seen that they are not first-class rails.

770. Do you not think that is the best test—wear and tear? Yes.

771. How far on the Western line have these inferior rails commenced? I could hardly say. From Penrith over the mountains the wear and tear is greater, on account of the steeper gradients and smaller curves. Some are better than others, according to the manufacturers they have come from. I have made a report on these rails, with the manufacturers' names attached, and the particulars of them, which is in the office.

772. Having regard to the necessarily increased wear and tear upon the Mountain road, do you consider the rails supplied generally from Penrith to Bowenfels are equal in quality to those from Penrith to Sydney? I should not think so. From Parramatta to Sydney I may mention the rails have been recently relaid, the double-headed rail having been substituted for the Barlow rail.

773. Say from Penrith to Parramatta—do you think the rails on recent extensions over the Mountain road are equal? From Penrith to Parramatta they appear to be of better quality than over the mountains; but there is a difficulty in coming to any decided comparison, because an allowance must be made for extra wear and tear on the mountains beyond Penrith; I should, however, take them to be of a better class from Parramatta to Penrith, allowing for increased wear.

774. Having regard to the price paid for the rails—do you consider the Colony has been generally well served in the description of rails supplied? That is a question I should hardly be justified in replying to. As I understand the inspection of these rails has been entrusted to a first-class engineer it would not be professional etiquette to give an opinion without being specially requested to do so.

775. I apprehend you have seen some of the coal pit lines in England worked by locomotive power? There were not many worked by locomotive power when I was in England, thirteen years ago.

776. There are some? Yes; for instance, Earl Fitzwilliams' are worked by the Railway Company's engines on the branch lines just the same as on the ordinary lines.

777. Could you give us a rough approximation to the difference in cost per mile between the main lines on which these trucks are worked and these branch coal pit lines? They are very various in cost—some are only 2-feet gauge; some are laid down with strips of iron, some merely with wooden rails in place of iron—longitudinal sleepers; other have a piece of iron along the edge of the wooden longitudinal sleepers.

778. Are these worked with locomotive power? No; horse-power.

779. Have you ever seen tramways, worked by locomotive power, with simply a flat bar of iron for a rail? No.

780. You know the Newcastle Coal and Copper Company's line from the pits to the staiths—you remember that used to be worked by horse traction, but is now worked by locomotive power? Yes.

781. Can you say whether any improvement has been made in the condition of the permanent way? I am not aware.

782. Then the Australian Agricultural Company's line? I do not know the present state of any of these lines.

783. In all cases where locomotive traction has been substituted for horse traction, have you observed that the character of the permanent way has always been improved? They have generally found that they have been obliged to keep up a certain description of permanent way suitable for the traffic. Owners of collieries generally contrive to be at no more expense than is necessary for the traffic, and therefore they adopt locomotive or horse power just as the case requires.

784. Speed is an important element to be considered in the construction of railways? Yes.

785. Do you not think that, if we reduced the maximum speed for passengers to 12 miles an hour, and for goods to 6 miles, we could run 12-ton engines with light carriages and goods wagons on 40lbs. rails? Yes, you might run even heavier engines; it would depend upon the bearing of the sleepers. I presume you mean with the ordinary bearing. They are using 22-ton engines, including tender, on 40lbs. rails in Queensland, but, as I before observed, it cripples the rails.

786. They run 20 miles an hour? 20 miles on some portions, and 12 on others; but that makes very little difference to the bearing of the rails—they have the same weight to carry.

787. If the weight is propelled at a high velocity is it not more injurious to the rail? Yes; it is more injurious in the wear of the rail, but makes little difference to the weight. It is only the same weight passing over more quickly. I have tried that in testing bridges, and found no difference whatever at a high velocity or a dead weight on the bridge; both give the same amount of deflection; and the same must hold good with the bearing of a rail.

788. I infer that 12-ton engines, at a speed of 12 miles an hour for passengers and 6 miles for goods, with a 40lbs. rail, could be used with no more sleepers than at present? Yes; with a bearing of about 2ft. 10in.

789. What is the average cost of fencing our railways? I could not say what the average cost is—possibly from £160 to £165 per mile.

790. Are not these coal-pit lines in England, where locomotives are used, unenclosed, although in densely-populated neighbourhoods? Yes.

791. Do you not think that from our various terminal points, to which reference has been made, we might dispense with fencing? I think not, where passengers are concerned; it is much safer, in fact necessary to have fencing.

792.

- W. Mason, Esq., C.E.
17 Feb., 1870.
792. Even if the trains travel no faster than 12 miles an hour? There is not great danger in that, but there would be in travelling by night at any speed; cattle might stray on to the line, and throw a train off. In the day-time it might do.
793. I presume you are aware that there are about 30,000 miles of railway in America? Yes, I have heard so.
794. And that nearly all their lines are unenclosed? Yes; they ring a bell on the engine, I believe.
795. Our difficulty is, that we want to penetrate certain parts of the country with a better means of communication than our existing roads, which are generally only mud roads—can you devise any better system? There is nothing better than the railway system for penetrating the country at a fair and reasonable cost.
796. *Mr. Lee.*] At the present cost would you recommend that? No.
797. *Mr. Hoskins.*] Do you not think we might have a much cheaper description of bridge or viaduct than we have on our present lines—elaborate stone viaducts? Yes, I think so.
798. What would you suggest—iron or wood? I would use as little wood as possible; I would have brick or stone wherever possible; and then there is little or no expense for repairs—no white ant to look for and no painting required.
799. Would not iron be cheaper than brick or stone? In some cases it would, but it requires painting every two or three years.
800. Our borrowing power is limited; we want to reach certain parts of the country with better means of communication than the existing roads—would you, having regard to these obstacles, recommend the construction of a cheap locomotive line? I would recommend the construction of a cheaper locomotive line than the present lines. Everything might be cheapened upon the present lines.
801. Do you think you could give us a locomotive railway for £5,000 a mile? No, I am afraid not—not a main line—not in any direction from Goulburn, south.
802. Not with a 40 lbs. rail? Not for £5,000 a mile.
803. In reply to the Chairman you said that branch lines of railway might be constructed cheaply—will you describe what you mean by branch lines? Tramways might be laid down of a similar kind to those laid down from coal works in England.
804. Supposing we thought that they would answer for even what are termed main lines, what kind of lines would they be? You could have them of a description sufficient to meet the requirements of the traffic. You might make them with a 3ft. 6in. gauge, or a 3ft. gauge, or even less than that, if necessary.
805. And what weight of rail? You might use a very light rail—about 25 to 30 lbs. to the yard.
806. And use a light locomotive? No, I mean for horse traction.
807. *Mr. Lord.*] The estimates you have given us for extensions I suppose are official? Yes.
808. Have you been over the extension from Bathurst to Orange? No.
809. You do not know anything of it? Only from the surveys.
810. Do you know the distance by the road? I do not.
811. Who prepared the estimate per mile for these extensions? I have made out the estimates for these extensions.
812. And yet you do not know the line from Bathurst to Orange? I have not been over it; I have had surveyors there who have furnished me with all the information I required for making estimates.
813. What is the reason of the cost of the line from Bathurst to Orange being so much greater than the extension from Goulburn to Yass? There are greater earthworks, more excavation in the Western District than in the South—more culverts, more level crossings, and more station buildings, but less viaducts and bridges; but the chief item of difference is in the tunnel, there being no tunnel on the proposed extension to Yass. These estimates are only an approximation. In laying out the line the quantities upon which they are based can be considerably reduced by certain modifications of the gradients and curves. There is no gradient shown on the surveys steeper than 1 in 50, and the curves are not less than 30 chains radii.
814. Is it not the fact that on one portion of this line from Bathurst to Orange there are 5 miles of dead level? I am not aware—I have not the sections with me.*
815. And yet you say you have calculated what the line will cost? Yes.
816. Is it not necessary for you to know the difficulties? There are no engineering difficulties in these extensions.
817. You said just now that a portion of that line was impracticable? In a direct line the country is impracticable, and that accounts for the extra length of the line. The object of these general surveys is to ascertain the shortest route, with the easiest works, the best gradients, and at the least cost. We survey generally several routes—take several trials, according to the country; sometimes three, four, five, six, or even a dozen trial surveys are necessary.
818. I want to arrive at the reason why the extension to Orange is to cost more than the extension from Goulburn to Yass? On account of the difference in works. The quantities of each kind of work are taken from the sections, and the same prices are applied. There is a larger amount of work on the Western line than there is on the Southern. That is how the differences arise.
819. Are you aware that Mr. Whitton said it could be done for £9,000 a mile? I am not aware of it. The earthworks on the line from Murrurundi to Tamworth amount to £4,086 per mile; on the Southern line £4,920, and on the Western line £4,961; the bridges and viaducts on the Northern line, £107 per mile; on the Southern line £865 per mile; and on the Western line £44 per mile. The difference in cost is owing to the difference in these items, as well as to the tunnel. Some of the larger creeks require a different description of bridge.
820. I want to show that the line from Bathurst to Orange is a peculiarly simple line, and yet you make it cost more? These quantities are taken from the sections which show exactly what the country is. It may be very deceptive to the eye; to level it is the only way of testing it.
821. It does not follow that the cost will be what you state? No, it may be much less.
822. *Mr. Alexander.*] Or much more? It may be a little more, but I do not think so.

823.

*NOTE (on revision) :—On referring to the sections I find there is none of the district traversed by the proposed line that can be termed a dead level; over King's Plains there is a length of 2½ miles of level line, but the country is not a dead level. From Bathurst to Orange, 16½ miles, would be on the level, and the remaining 28 miles on gradients of various inclinations.

823. *Mr. Lee.*] Are you aware how long the Barlow rails were in use on the line between Sydney and Parramatta? Since the opening of the line on September 26th, 1855. We are just taking up the last of them.
824. They have shown signs of wear for some years? Yes, they are worn to the last thread.
825. Is that line being relaid with rails of a similar character to those you have described? Yes, of a similar kind or form.
826. Are you aware of the cost of relaying it? I am not at present; it is not quite completed.
827. Being relaid with this inferior rail, what time do you suppose these rails will wear without showing wear and tear? I am not aware that they are inferior—they may be of first class quality.
828. I thought you said they were of the same description of rails as those which showed signs of wear in six or eight months? I said they were of the same form. I have had no experience of those that are now being used to relay the Parramatta Line, and therefore cannot speak as to their quality.
829. Are you aware of the price paid for these inferior rails? I am not.
830. You do not know what they have cost the country? No.
831. If the price of a superior rail has been paid, would you consider that the Colony has received value for its money? I could not say.
832. You say you have made an examination of the Southern Line, and you have found it laid with an inferior rail, getting worse from Liverpool to Goulburn, and you have told us that the same quality of rail has been used for relaying the line from Sydney to Parramatta? I say the same form of rail, double-headed—not the same quality—I am not aware what the quality is. These rails were ordered for the extensions, and not being immediately required for them, they are being used for relaying the Parramatta Line.
833. If the full price of a superior rail has been paid for this inferior rail, getting worse from Liverpool to Goulburn, has the Colony received value? I cannot call it a first class rail. As to the Colony receiving full value, I could not say. I know nothing of the price that has been paid, beyond what I have already stated. I merely know that the rails of which I have spoken are not, in my opinion, of first class material.
834. Does that apply to those imported recently? I am not aware what is the quality of those imported recently; I have only spoken of those recently laid on the extension to Goulburn, that have come under my notice.
835. What is the lightest rail for locomotive use you would recommend for extensions? Not less than 60 lbs. to the yard.
836. What would be the cost of a line with a 60-lb. rail and corresponding lightness of locomotive, reducing the expense of fencing by adopting another kind of fence? I should think about £8,000 a mile.
837. What rate of speed would you estimate we should obtain on such a line? From 18 to 20 miles an hour.
838. Are you of opinion that that is sufficient for all purposes beyond the present termini? I think so.
839. *Commander Onslow.*] Do you think the price of ironbark for sleepers is increasing considerably? Yes.
840. Do you know if the Government have made any special reservations on Crown Lands, for timber? I do not.
841. Do you think it ought to be done? I think it would be advisable.
842. You have taken the average cost of excavation at 3s. 8d. per cubic yard? That was the comparative cost on the Queensland railways and on the Southern Line here for a certain length. I do not know what the average cost would be on the whole of these lines.
843. Do you know what it is in England? It generally ranges about one-third what it is here. A navy gets 2s. 3d. or 2s. 6d. a day there, and 7s. here. I have had work done in England as low as 8½d. per cubic yard.
844. Do you know if contractors here have ever tendered below the estimated cost of the lines? Yes, in some instances, but I do not know of many contracts that have been executed under the estimates.
845. In the approaches, both to the Menangle and Penrith Bridges, there is a great quantity of wood? Yes.
846. Would not earthwork be cheaper? Yes, in this instance; but it would not do, on account of the floods. At Penrith it was at first proposed to carry the line on a lower level, and part of the embankment was formed at the Sydney end for 5 or 6 chains, but a heavy flood came and showed that the bridge was not high enough, and it was altered in consequence.
847. Are there any rivers or creeks subject to flood on the extensions for which you have made estimates? Not high floods—nothing like Menangle and Penrith.
848. Will it be necessary to have wooden approaches to any of them? Wooden viaducts will have to be used in some cases, and brick piers or iron cylinders in others, as may be best adapted to the place to be crossed. There might be places where we could not drive piles, and therefore we should have to put down piers of masonry or brickwork.
849. Can you give any idea of the difference in cost between woodwork and embankment? Embankment will be more costly if you get into a large bank, but where the cutting is close by and you have a short lead, earthwork is cheaper than a viaduct up to a certain height of embankment.
850. *Chairman.*] In the event of Parliament voting the money for these extensions, how long would it take to complete the working surveys ready for calling for tenders? That would depend upon whether we put a large force on each of the extensions. They might be got ready in six or eight months; but a portion might be got ready in less time; for instance, tenders might be called for, for the first 20 miles, in three months.
851. Do you know anything of the road steamer—Mr. Thomson, I believe, is the inventor of it—The wheels have an India-rubber tire? I have read some account of it, but I have not seen it.
852. Are there none in this country? No.
853. Are there any in Queensland? Not that I am aware of.
854. All you know about it is just what you have read? Yes, just paragraphs in the paper.
855. Do you think if an India-rubber tire were put on the wheels of our locomotives here we should be able to make use of a much lighter engine? No. You require a certain amount of power in the engine. The only effect of the India-rubber is to prevent it from slipping. You would gain a small amount of adhesive power, but you would require a corresponding amount of tractive power.
856. Could not the same power be got with much less weight if the wheel could get what is called "bite"? "Bite" and adhesive power are in this instance synonymous terms—you would require the same power to overcome friction from India-rubber tires that would be required to overcome the same friction from weight. The power required in these engines is to work the steep gradients, and for that you get larger cylinders, larger boilers, and the whole thing larger altogether. The consequence is you get a certain weight, and require that weight. The tractive power is required to exceed the adhesive power.

- W. Mason, Esq., C.E.
 17 Feb., 1870.
857. If you had an India-rubber tire you surely would not require the same weight? It would make no difference in that respect—it would merely prevent the wheel from slipping.
858. Surely what you require is “bite”? Yes.
859. The India-rubber tire would give that? Yes, in a greater degree than the two surfaces of iron together; but then you would want extra traction.
860. *Mr. Alexander.*] You have said something about the difference in price of labour at home and here—What comparison do you draw between the work done by a navvy at home and the work done by a navvy here? There is comparatively less work done here. I could hardly say what would be the amount of difference—it would be only slight. Perhaps an English navvy might remove ten yards a day, and a navvy here half a yard less. In most cases possibly the amount of work done would be the same, where you get first-class men used to the description of work. That again makes a difference; a man used to the class of work will do nearly double what another will who is not used to it.
861. *Mr. Lord.*] Does the extension to the westward include Kelso? No, it is from Bathurst, over the river—not from Kelso.
862. *Mr. Morrice.*] Do you not think the railway carriages might be made much lighter, both in iron and woodwork? Yes, we might have a lighter description of rolling stock altogether.
863. *Mr. Suttor.*] I gather, from what you have stated before, that in the event of the Colony determining on carrying out cheaper railways for locomotives, you would in all cases recommend the existing gauge, to save transhipment? Yes.
864. *Mr. Alexander.*] Under any circumstances you could not save more than £2,000 a mile by making a lighter line? Not on a description of line suitable for a main line.
865. *Mr. Hoskins.*] As Parliament is to be the judge of that, do you not think you could give us a fair locomotive line for £5,000 a mile? No, I think not.

John Lievesley Beeston, Esq., called in and examined :—

- J. L. Beeston, Esq.
 17 Feb., 1870.
866. *Chairman.*] You are Traffic Manager on the Great Northern Railway? Yes.
867. When you were examined last Session, you gave us some account of the traffic upon the Northern Line, up (I think) to the end of October? Yes.
868. We would like to have the traffic for the last three months—November, December, and January? I have not got it separately; I can give you the traffic for the year.
869. You have put the whole year's traffic together? Yes.
870. *Mr. Hoskins.*] Can you not distinguish the months? No, it is simply summarized.
871. *Chairman.*] Will you state what was the through traffic to Muswellbrook during the year, from Newcastle—the quantity arriving at Muswellbrook? The quantity of goods arrived at Muswellbrook since the opening, from June to the end of January—8 months—has been 13,668 tons; of that quantity 4,149 tons were railway materials going up to the extensions.
872. What was the tonnage from Muswellbrook downwards? 574 tons 9 cwt. in the eight months, exclusive of wool, which we have carried by the bale, to the amount of 12,901 bales, or nearly 3,000 tons, most of it having been greasy wool.
873. I suppose by the end of January almost all the wool is down? The wool months are principally October, November, December, January, February, and March; the quantity during the other six months is comparatively nominal.
874. What is the total tonnage carried on the Northern Railway altogether? I can give you the year's tonnage for 1869, but I should explain that the figures are not audited, and may be slightly incorrect, though sufficiently accurate for practical purposes. The gross weight of goods carried on the whole line last year was 44,170 tons, exclusive of wool, coal, and hay. The quantity of coal was 542,039 tons, principally within a radius of nine miles of Newcastle; the bales of wool numbered 23,967; and the bales of hay, 9,956.
875. Do you keep any account of the earnings? The receipts for coaching—that is, for passengers, parcels, horses and carriages, and dogs, amounted to £25,096 14s. 1d.; for merchandise, including coal and all other descriptions of goods, £53,389 17s. 5d.
876. What is the length of line opened? 83 miles at present, including the Morpeth branch; 80 miles direct, and 3 to Morpeth.
877. Have you ever made an estimate of the cost of maintenance and working expenses? No, that information is not with me.
878. What is the amount of passenger traffic for the year on the whole line? 143,123; that is the number of tickets issued, not distinguishing the return tickets; some of these passengers travel two journeys.
879. A very large number of these only use the railway for very short distances? The greater portion of the traffic is between Maitland and Newcastle—the first 20 miles.
880. What is the passenger traffic through to Muswellbrook? I have not had time, since getting notice to come here, to prepare the return of passengers that travel to Muswellbrook. I can give the number that have left there, and from the information I have they are very nearly equal. The number of tickets issued at Muswellbrook, including some short time in May, before the formal opening, during which we ran through with mails and carried a few passengers, amounted to 5,330; it may be called eight months; there were only a few days in May.
881. What were the receipts for passengers at Muswellbrook? £1,974.
882. What do the 500 and odd tons of goods leaving Muswellbrook chiefly consist of? Hides and tallow are the principal things.
883. Is there much grain? No, I do not think we have had any grain from Muswellbrook; if we have it is very little.
884. Any maize? No; we have been rather carrying maize to Muswellbrook, and hay also.
885. *Mr. Suttor.*] Have you had many sheep from Muswellbrook? No; the trade in sheep is rather light, but the yards are only just got up. I do not think there is much trade in sheep that way.
886. *Mr. Hoskins.*] Sheep are generally sent down by Denman and Jerry's Plains? Yes.
887. If the railway were extended to Murrurundi, a large number of the sheep now sent by the Jerry's Plains Road would be sent by railroad? Yes, I think so.

WEDNESDAY,

WEDNESDAY, 2 MARCH, 1870.

Present:—

MR. HOSKINS,
MR. LEE,MR. LORD,
MR. MORRICE, †

COMMANDER ONSLOW.

WILLIAM MACLEAY, Esq., IN THE CHAIR.

Philip Francis Adams, Esq., was examined:—

888. *Chairman.*] You are the Surveyor General? I am.
889. You are pretty well acquainted with all parts of this country, I believe? I am pretty well acquainted with the country, but there are parts of the Colony to which I have not yet been.
890. But you have a general knowledge of the country? A very general knowledge of the western, the northern, and the southern country.
891. You of course must have seen the necessity which exists of having some improved mode of communication throughout the Colony? Decidedly.
892. Has it ever occurred to you that we could adopt some system of communication that would come more within our means than the present class of railways? It has been very apparent to me that the present class of railways is too expensive for the position of the Colony at present; but I have not been able to form an opinion as to a better system. I am not an engineer, and the subject is one which would require a vast amount of thought—far more thought and labour than I could possibly devote to it—so that any opinions which I have formed of it must be taken as merely general opinions.
893. That is, you cannot give any opinion as to what kind of road we should have, but you believe that to properly open up the country we must have roads, and we cannot afford to make them of an expensive character? I am afraid we cannot. I should certainly favour roads by which horse-traction could be used; but I must say that I never saw a tramway yet that at all answered our requirements, and I have not had time to give my attention to the subject, to endeavour to get out a better idea. It is a very serious question, and one that requires an immense deal of time and judgment.
894. What tramways have you seen? The tramways at Newcastle chiefly, and those in this Colony. I have never seen a tramway in America, nor in England or Ireland, where I have had some experience in these things. I have not seen tramways in actual operation by horse-power, excepting in this Colony, so that I have very little means of judging.
895. And you say that they have not answered the expectations formed of them? Yes; they have not at all answered expectations.
896. I presume the tramways you speak of at Newcastle are for the purpose of drawing coal? Yes.
897. And the amount of traffic on them is very large? Yes.
898. Under these circumstances, I suppose that the tendency is to substitute steam-power for horse-power, is that so? Yes, it is.
899. That is where the traffic is large? Yes.
900. But is it not evident that, where the traffic is very small, horse-power must be the cheapest? There is no doubt about that. I am perfectly in favour of horse-power if a tramway could be designed that would carry out all the requirements of the case—that would not in itself contain all the bad elements of a railway and a road. I would rather say, not all the bad, but some of the bad points. Those tramways which I have seen have combined a great many of the bad qualities of each. If a good design could be obtained free from these defects, I think that it would be a wonderful step in the progress of the Colony—it is just what we do want.
901. *Mr. Hoskins.*] Would you have any objection to state what you consider the defects in the tramways of which you have spoken? It is almost impossible that tramways as now made with rails and sleepers can be kept in good order for horse traffic. The vibration of the rails shakes the sleepers, and the sleepers shake the ballast. The roadway soon becomes in a worse state than a macadamized road would be in, because on a macadamized road the wheels to a certain extent do away with the injury done by the horses' feet, which, on a tramway, beat a channel in the same track. In the case of tramways you have the disadvantage of the vibration of the sleeper and the horses' track being always confined to one particular position between the rails. These, I take it, are the greatest drawbacks to tramways; but if some design can be hit upon which will do away with these objections the object will be attained. If the vibration can be kept away from the track of the horses' path, it will be a great step in the right direction.
902. *Chairman.*] When the traffic is light—when there is no great weight on any one pair of wheels, and when the speed is not great—the vibration, I should fancy, must be very small? Yes, it is considerably less. Where the traffic is small, the vibration will be proportionately reduced; but still there is vibration, and the vibration will cause the water to get in between the stringers, or whatever may be laid down for the rails to go upon, and the water will soak in there. Without some rather expensive connection between the two rails, I don't see how the breaking up of the roadway in consequence of that vibration, could be avoided.
903. What extent of road do you consider necessary to thoroughly open up the country—to give a sufficiently easy means of communication between the capital and the different parts of the country, and to what parts of the country would you point as being those to which railways of any kind should be extended? The question will require a little consideration. I think I had better add that on revision.*
904. There are no great difficulties, I believe, as regards the character of the country beyond the present termini. Take the extension of the Southern Line beyond Goulburn for instance,—the country is all tolerably easy, is it not? It is, with the exception of the approach to Gundagai, which also involves the approach to the Tumut. Some very great difficulties will be found in getting at those places. Probably the nature of the country would not be a very great drawback to a tramway, although it certainly would be to a railway. When I say to a tramway, I mean a tramway free from the defects to which I have referred, if that is possible.

P. F. Adams,
Esq.

2 Mar., 1870.

905.

* ADDED (on revision):—Dubbo to Great Western Railway—probably at Orange—Murrurundi to Armidale—Tumut to the Southern Railway—Wagga Wagga to Southern Railway—a line along the valley of the Murrumbidgee joining the Southern Railway—Goulburn to Cooma—and perhaps a line from Bega to the coast would also soon be required.

P. F. Adams, 905. Is the road from Yass to Wagga Wagga, by the Levels, of a better description than that to Gundagai?
 Esq. Yes, very much better. The physical features of the country from some point within four or five miles of Yass to Wagga Wagga present less difficulties—the country presents more than ordinary facilities for the making of a railway.

2 Mar., 1870.

906. I suppose there would be no difficulty, if it were found necessary to extend the Southern Railway, to take it in that direction, and that it would be very easy to have a branch from some point on that line running to the Tumut or Gundagai? Yes, I think a branch line could be carried down the valley of the Mutta Mutta Creek, by which Gundagai and the Tumut could be approached, but I am very doubtful whether a railway could be taken across the river, and go on either to Wagga Wagga, or, leaving Wagga Wagga on the right, and getting a nearer approach to the Tumut. I am afraid that we should meet there the same physical difficulties that would have to be contended with in going *via* Gundagai; but I think that there would be no difficulty in making a branch or tram to connect the railway with the Tumut, as I said before. The Tumut is a district of which I have the very highest opinion as a country capable of producing all the necessaries of life, and one which ought to be, if possible, connected with the capital. Crops may fail in the Bathurst or Orange district, although they are scarcely known to do so. While there might be a partial failure elsewhere, the Tumut may always be expected to produce abundantly. Failure of crops through a dry season is unknown in the upper part of the Tumut, that is, a season so dry as to prejudice the growing crops. I have never heard of any loss of crops there through drought.

907. As regards the West, that country is of a very level description beyond Orange to Dubbo? If you can get off the table-land at Orange, there is no difficulty in getting west as far as the boundary of the Colony.

908. I suppose you would not suggest the making of railways of an expensive description into a merely pastoral country—that you would not suggest going beyond what may be termed the agricultural country westward, in the direction of the interior? I may here be permitted to say that I should not. I think that the traffic would be sufficient to warrant the projection of even a cheap railway to Dubbo at present. I look upon Dubbo as being the furthest western point in which the country is of an agricultural character—the wool traffic converges at Dubbo—and that to go beyond Dubbo would be to leave a large portion of it out.

909. Consequently there would be very little traffic in that direction? I think that to Dubbo would be about the extent of it.

910. Are there any difficulties in getting on to the table-land in the north, from Tamworth, in the direction of Armidale? I am scarcely able to give an opinion upon that, but I am afraid that the difficulties are considerable. I am not sufficiently acquainted with the country away from the main road in that locality to be able to give an opinion, as I feel able to do in the other cases. I did not give the Committee my opinion about the table-land at Orange. There appears to me to be very great difficulty there, but that is an engineering question upon which I can only give a general opinion.

911. But the table-land at Orange is an isolated mountain, is it not? The country is all high, extending from the main dividing range of the Colony, ending in the Canobolas—the country is all high in going from Bathurst to Orange, and the line must keep upon this spur, and to get off that down upon the flat country I am afraid will prove a very serious difficulty.

912. You spoke of the main dividing range of the Colony? I mean the elevated land in the neighbourhood of Bathurst.

913. The term “main dividing range” is generally used to apply to the watershed between the eastern and western waters, but surely that cannot be said of the Canobolas? It is a spur of the main range.

914. *Mr. Lord.*] What of the coast range? It is connected with it, although across the Macquarie.

915. *Chairman.*] But the fall must be entirely to the Lachlan or to the Macquarie—it cannot have anything to do with the dividing range between the eastern and western waters, surely? There is a spur or elevated tract of land all the way from the Canobolas to the main range.

916. *Mr. Lord.*] How do the waters run from the Canobolas? The Canobolas divide the waters into several streams, all tributaries of the Lachlan or the Macquarie.

917. But they don't run eastward? No, they run to the west, because of the spur from the dividing range of which I speak.

918. *Chairman.*] You mean that the Canobolas is on a spur of the main range, running westward? Yes.

919. The fall from this very elevated piece of country about the Canobolas is, I suppose, very sudden on to the level country westward? The fall, wherever I have seen it, is very sudden. Of course an exhaustive survey would perhaps find a way of getting down without the difficulty which I fear exists.

920. But in the event of the adoption of a very cheap and what may be called a temporary line of railway, of course there would be no necessity for carrying the line westward—there might be a branch to Orange and a branch to Dubbo striking off from some point nearer Bathurst, so as to avoid the high country? I think that the difficulties to which I refer would hardly apply to a horse tramway, if such a thing is possible. I do not think that the difficulty I refer to in the height of Orange above the level country would be an insuperable objection to that kind of road, but quite the contrary, whatever it might be to a railway.

921. I think you said that you had been all over the north? No, I have not been much in the north.

922. Have you been north along New England as far as Tenterfield? I have been some distance to the north of Armidale, but only once.

923. The Queensland people now take a good deal of the trade of the northern part of New England? I believe they do; and I wonder that they don't take more than they do.

924. How near do their railways go to the northern boundary? About twenty-five miles at the nearest point.

925. By taking advantage of the Queensland Railway towards the northern boundary of this Colony, what distance would you say that Tenterfield is from Brisbane? By road and rail together 238 miles; of this 85 miles are by road from Warrick to Tenterfield.

926. I wish to ascertain from you whether it would be at all likely that by extending the railway far north towards Tenterfield, we should be enabled to prevent the trade of that part of the country from being carried to the neighbouring Colony? I am afraid that the expenditure would be greater than the return would warrant.

927. I mean if we can find out some means of making cheap railways? A horse railway, as I should desire

desire to see if it can be carried out, would probably draw a great deal more of the traffic this way, and P. F. Adams, instead of going to Queensland it would come here.

928. *Commander Onslow.*] Are there any gradients as steep as 1 in 12 on the roads on which these horse tramways are supposed to be constructed? I should think that a tramway would never work satisfactorily on a gradient of more than 1 in 20. P. F. Adams, Esq.
2 Mar., 1870.

929. *Mr. Morrice.*] Supposing a railway or a tramway to be constructed to Wagga Wagga, and it were thought desirable to continue it, do you think it would be advisable to take it on to Deniliquin or to Albury? The Victorian Government has, I believe, determined to carry its railway direct from Melbourne to Albury. If so, it would be better to join our line to theirs at Albury, as being the shortest distance to Melbourne. The distance to Melbourne would be shorter *via* Albury than by way of Deniliquin, and the line would moreover go through a country suitable for the production of the necessaries of life; but a railway from Wagga Wagga to Deniliquin would not do that.

930. Do you know all the country between Wagga Wagga and Albury? Yes, pretty well.

931. Is it an easy country for the construction of railways? It is not so easy as the line from Yass to Wagga Wagga, but I do not by any means consider that it would be a difficult line. I cannot see any great difficulty that would be likely to occur. I think the line would be one of average capabilities.

932. Do you think that a line to Albury would increase the passenger traffic much between Sydney and Melbourne? Nothing but a permanent railway would affect the passenger traffic. A tramway would not draw the passenger traffic at all.

933. But a railway you think would? A great many passengers would go by rail, but I very much question whether a railway would take all the passenger traffic—I don't think it would.

934. Do you think that a good many would still go by the steamers? I think so.

935. *Mr. Lee.*] The cost of going to Melbourne by sea would be much less than by rail? It would probably be less.

936. *Mr. Hoskins.*] Have you inspected the tramways that you spoke of about Newcastle? Yes, frequently, and have formed a general opinion of them.

937. The line you spoke of was the Newcastle Coal and Copper Company's line? I referred chiefly to the lines which have existed in that district for the last twelve or fifteen years, taking them generally. I did not refer to any particular line; but taking the horse railways in use during the last fifteen years in that district, I do not consider that they would be suitable to the requirements of the Colony. I think that tramways constructed on that principle would be a failure.

938. How long is it since you were last at Newcastle? About two years since I saw any tramway there.

939. Do you remember that there are two tramways on which large quantities of coal are brought to the wharfs at Newcastle,—one belonging to the A. A. Company, and the other to the Coal and Copper Company? I believe that they are abandoned.

940. But do you remember those trams? I remember trams in that direction some ten or eleven years ago—I travelled on them. There were also trams to Burwood. It was at that time that I considered the subject very much more than I have done since. Then I considered that it was a subject capable of being carried out with advantage to the country, but I came to the conclusion that it was not. I have not paid any attention to the subject since.

941. At the time that you saw those trams, was the coal hauled by locomotives or by horses? By horses.

942. Are you aware that the Companies have subsequently substituted locomotives? Yes.

943. Do you know whether they have made any considerable alterations in the consolidation or improvement of the permanent way? No, I am not aware that they have. The lines show a vast difference since the horse-power was taken off them—they look in a much better state of preservation. Probably they may have been strengthened, but I am not aware of it.

944. Do you remember how those tramways were laid—were they simply thick bars of iron spiked on to transverse sleepers? They were constructed in the ordinary way, with rail, chair, and sleeper, only that they were light.

945. What description of rail was used? I think that they were double-headed rails, as far as I can recollect.

946. That would be an expensive tramway, would it not? I don't think that you could construct a tramway much cheaper.

947. *Chairman.*] Do you mention any cost? No, I do not.

948. *Mr. Hoskins.*] Can you give the Committee any idea of a horse-tramway such as you could approve? No, I cannot. I have thought over the matter very often; but I have never been able to discover any tramway that would overcome the difficulties which I have pointed out.

949. The principal difficulty you consider is the disturbance of the roadway between the rails by the horses' feet? Yes; chiefly by the vibration, and also by the breaking up of the roadway by the horses' feet.

950. Which do you consider is the greatest cause of the injury to the roadway—the vibration from the wagons, or the injury caused by the horses' feet? The breaking up of the roadway by the horses' feet results very much from the vibration. The two causes of injury can scarcely be separated.

951. Don't you think that speed is an important element in calculating the vibration of the rails? I don't think that the speed was great on any of the horse railways that I have seen. I should think that there was not a higher rate of speed than five miles an hour.

952. You now refer to the tramways in the Hunter district? Yes.

953. Have you any idea whether the wear and tear was very great? It was so great that fast traffic by horses would have been almost impossible. With fast traffic you could scarcely have kept a horse on his legs. The roadway required constant repair, and these repairs would make such a line nearly as expensive as a railway. I believe that the ordinary principle of tramways is entirely unsuited to cheap and light horse traffic—some other design must be got out before they will succeed.

954. Have you any knowledge of any kind of railway adapted for locomotive traction which would be less costly than the style of railway in use here? No, I don't feel competent to say that I do know of any—I don't think there is.

955. I don't ask you for a professional opinion—Have you seen any yourself? I have seen cheap railways in America, but I should be very sorry to see their construction introduced here; and again, timber and material are not so plentiful, and such railways would not therefore be so cheap if constructed in this Colony on the same plan.

- P. E. Adams, Esq.
2 Mar., 1870.
956. Because the timber is dearer here? Because timber is dearer.
957. What would militate against their being cheap, excepting timber? Perhaps labour.
958. Is the price of labour here higher than it is in America? It is.
959. Would you have the kindness to describe what you observed in these cheap railways? You have a good illustration of them in the Windsor and Richmond Line, although that is rather a better style of railway than a great many of the cheap railways which I have seen.
960. *Mr. Lord.*] Is the speed about the same? Yes, the speed is about the same.
961. *Mr. Hoskins.*] Is it not the fact that they answer the purpose of opening up new country? Yes.
962. When the circumstances of the country, from increased production, or from the increase of population, justify a better kind of railway, they improve them, do they not? They are generally superseded by lines of a better construction.
963. With reference to a question which the Chairman asked you, don't you think that if a horse tramway or a good road were made from the Clarence River to Tenterfield, that it would prevent the diversion of the trade of the northern part of the Colony to Queensland? That has always been my opinion, and I have therefore always advocated the making of the Newton Boyd Road.
964. But are you aware that the Newton Boyd Road intersects the central part of New England, but not the northern part,—that from where it reaches the table-land at Glen Innes it is about sixty miles from Tenterfield at the north, and that therefore the Queensland Railway is as near to Tenterfield as the Newton Boyd Road is? You must consider that the line, to go direct from the Clarence River to Tenterfield would be nearly as long as by Glen Innes.
965. It would be the same distance, no doubt, but then would it not have the advantage of tapping the table-land of New England on its northern borders? The Newton Boyd Road has the advantage of tapping the table-land at its centre; and I think it better to do that than to push further north with a view to abstract the Queensland traffic, and leaving part of our own territory without a road.
966. The Newton Boyd Road is open for traffic at the present time? If it is open, it has only been opened recently.
967. But for all that, there is a large quantity of produce diverted to Queensland, to Allora, and thence by rail to Ipswich and Brisbane. Do you think that if a good road had been opened from the Clarence River to Tenterfield, which is only one hundred and twenty miles, it would have secured all that traffic to our own shipping port? In that case you would have left other portions of our own territory unprovided for.
968. *Mr. Lee.*] I suppose that you are aware that our lines up to the termini they have reached are not paying anything like a return on the money laid out? Yes.
969. Would you consider it advisable to continue the extension of these lines beyond the three termini—Goulburn, Bathurst, and Murrurrundi—which will complete the extensions already sanctioned? I think that the Western Line ought to go to Orange, but I am very doubtful about the others.
970. Even at the present cost of carrying them on? The question of a railway paying, in itself, should not be considered so much as the indirect benefit derived in other ways from its construction.
971. But I ask you whether past experience has shown that the large benefits expected to be derived from the completion of these railways to the points which they have already reached have been realized? I never for a moment expected that the line to Goulburn or that the Northern Line would pay; and I am agreeably surprised to find that the Western Line is beginning to pay something more than the working expenses.
972. *Commander Onslow.*] Is the Western Line beginning to pay? I am told so. I do not think that the benefit of the Western Line will ever be thoroughly understood until it reaches Orange, where the wheat grown can be brought to Sydney. If we could only save the enormous amount that goes out of the country for foreign wheat, we should have a practical benefit un mistakeable in its character. A railway to the south would have the same effect to a certain extent; but it would not be nearly so evident, because the wheat-growing country to the west is much nearer the capital.
973. *Mr. Morrice.*] But the wear and tear on the Western Line is something extraordinary? I believe it is considerable.
974. *Mr. Lord.*] You say that you are aware that the Western Railway is beginning to pay? I believe so.
975. And that the Northern is not paying? I think that the Northern Line is paying better than the South.
976. You have not seen any returns as to the traffic? No.
977. If the Western Line were extended to Orange—which you in your answer to me recommended—would it not be brought to a point at which it would be very costly to bring it down to a lower level, if practicable at all? It would be a difficult matter. The very same thing may be said of taking the railway to Murrurrundi: you carry it as far as you can, and there leave it.
978. I gather from your answers that you are decidedly against the construction of cheap railways, such as you have seen constructed in America, and as are evidenced in the short line to Windsor and Richmond? If the Windsor and Richmond Line is a failure I should not like to copy it. I don't think it is a failure.
979. But you would not recommend the adoption of cheap lines, such as you have seen in America? Not when there is a possibility or a probability of the country requiring a better line soon after. I would much rather incur the first expense.
980. And from your observations in reference to tramways, you think that it would not be at all desirable to increase or to alter the mode of traffic from the present drays or carriages to that of tramways? Not unless we can get a design for a tramway which has none of the objections to which I have referred. As soon as ever a design can be arrived at which has not those objections, then the sooner we can make tramways the better for the country.
981. Would not a good macadamized road, say to the width of an ordinary tramway, be in the end cheaper than a tramway subject to the immense wear and tear of horse traffic? At present I think that the construction of the macadamized road is the best course we can pursue.
982. Are you aware how much a macadamized road costs per mile? I could not say exactly. It would greatly depend on the circumstances of the country in which it was to be made.
983. I am speaking of the average cost of the roads in the Colony? I don't know the average cost.
984. You have travelled the road from Bathurst to Orange? Yes.
985. And from Orange to Molong? Yes.
986. You said that there would be very great difficulty in getting the railway down from the table-land at Orange to the lower land about Molong? I fear there will be.
- 987.

987. You had no difficulty in travelling over the road? No; the road is a capital road.
988. There is a gradual descent the whole way down? Yes.
989. Do you know the distance the Canobolas is from Orange? Not exactly, but I think it is about five miles to the summit.
990. *Chairman.*] You object to horse railways constructed on the system usually adopted, of laying the rails upon sleepers, because you say that the vibration of the traffic disturbs the roadway, which is still further injured by the horses' feet? Yes.
991. Do you think that it is absolutely necessary that the road should be hard and firm for horses to travel along it, or would not a gravel path be better than a hard macadamized road for horses drawing a light description of traffic? A horse cannot pull well if his foot-hold is not firm, and a gravel path or the nearer you approach to sand would be open to that objection. A horse going at any speed, also, would kick the gravel away from the rails.
992. I am speaking of slow traffic. Would not a horse be really able to draw better if he had a good gravel path than if he were pulling on a hard roadway? I should be afraid that the cost of keeping a path of that description in repair would be greater than with a hard roadway—greater than on a road with good macadamized metal.
993. You are aware, I suppose, that one horse will draw on a rail about as much as eight horses on a level macadamized road? I have heard that estimate.
994. Do you not think that the wear and tear of eight horses and four wheels on a macadamized road would be infinitely greater than the wear and tear of one horse on a tramway—the wheels in the latter case being on an iron rail? I think that the wear and tear would be greater on the macadamized road.
995. So that if a horse railway could be made alongside of the ordinary roads of the country, and at the same cost as a macadamized road, it would be an enormous saving to the country, and in many respects? Yes. I fully concur with the principle of making tramways in continuation of our railways, if it were not for the difficulties that I have already explained, and which I find exist in every scheme that I have seen as yet.
996. But do you still think that the loosening of the material of which the roadway is formed would be a very great objection? I do.
997. You think that the horses' track ought to be a hard roadway? I think so, decidedly.
998. Can it make much difference to a horse drawing on a level? The difficulty would be in the drainage. The mud and holes that the tramway would be liable to be worn into would be an insuperable difficulty under the present system, or to any track that was not sound and hard.
999. But notwithstanding that difficulty, you admit that the wear and tear would not be so great as would be the wear and tear of eight horses and four wheels on a macadamized road, these being substituted for one horse on the tramway? I do not think that it would be so much.
1000. About this Newton Boyd Road—Do you think that that is the direction which the traffic from the northern part of New England should be induced to go to the coast? It was with that object in view that I concurred in the recommendation of the Newton Boyd Road. I thought that it would be many years before the railway would go there.
1001. Do you think that it is possible to make a good road from the table-land of New England to the coast? I think so.
1002. Is there not a fall of 3,500 feet in a very few miles? I do not think that it is so much as that. I think that the total fall from Armidale to the coast is less than that, and therefore I do not think that any individual fall from the table-land down to the river can be anything like that.
1003. What is the distance from the eastern edge of the table-land to the coast in a straight line? I cannot say.
1004. You could make a calculation by looking at the map? I do not know exactly where the fall commences on the road.
1005. *Commander Onslow.*] Have the Government reserved any land upon the line of the present extensions with a view to the construction of railways? No.
1006. Do you know whether any persons have bought or selected land where the railways, if extended, are likely to pass, on any of the three lines? I don't think that anything of that sort has occurred in this Colony yet. If I thought that there was any prospect of it, I should immediately recommend the reservation of the land which would probably be required; but then it is a very difficult thing to make these reserves in anticipation, because without an exhaustive engineering survey, we cannot tell within miles where the railway ought to go.
1007. Would the expense of a rough preliminary survey be greater than the amount received from the land if sold? No, it would not; but I should not advise a rough survey.
1008. Not sufficiently rough so as to reserve a wide tract of land? I should recommend the surveys to be pushed on until the course of the projected railway can be determined within a mile all along the line. I think that it would be economical to push the surveys on to that extent on all the probable extensions.
1009. You are aware that three extensions are projected? Yes.
1010. Is there much land belonging to private individuals along those projected extensions? There is a good deal in the south.
1011. Would it not be advisable at once to reserve whatever Government land remains? I think that it would be advisable; but then the cost of the survey would be very great. A survey sufficiently accurate to determine the course of a railway within a mile would be very great.
1012. As a rule, have not the Government paid compensation greatly in excess of the value of the land which they have taken for railway purposes? I think so—very much in excess.
1013. Do you think that the quantity of good timber is decreasing very fast—is it being destroyed throughout the Colony? Yes.
1014. Have the Government made any reserves of timber that you are aware of? No.
1015. Not in the neighbourhood of towns? No, there are no timber reserves.
1016. Would you think it advisable to make reserves with a view to providing timber for sleepers? I am doubtful whether it would pay for the supervision.
1017. *Mr. Morrice.*] Do I understand that you think that the present macadamized road from Bathurst to Orange would answer present purposes? No, I think that the railway ought to be extended.
1018. Do you think it advisable that two trains should be run daily on the present extension, or that one only

P. F. Adams,
Esq.

2 Mar., 1870.

- P. F. Adams, Esq.
 2 Mar., 1870.
- only should be run? That is a matter which I have not sufficiently considered to warrant me expressing an opinion upon it.
1019. If one train only were run, the saving would go a long way towards paying the interest? It would appear so on the face of it.
1020. Don't you think that such a reduction would give an amount sufficient to pay the interest on the expenditure to be incurred in further extensions? I should not like to give an opinion, because it involves a matter which I have never considered.

John Whitton, Esq., Engineer-in-Chief for Railways, called in and examined:—

- J. Whitton, Esq.
 2 Mar., 1870.
1021. *Chairman.*] You are Engineer-in-Chief? Yes; Engineer-in-Chief for Railways.
1022. When you were examined before the Select Committee of last Session, you gave it as your opinion that the cost of the proposed extensions might be reduced to £8,000 a mile, without making a description of railroad at all inferior? The cost might be reduced to that amount, but the railway would of course be inferior. What I should propose would be, to dispense altogether with the use of chairs and the double-headed rail, to have a steel rail (contractor's pattern), and put on less ballast. Some alterations would no doubt also have to be made in the bridges, making an average saving of about £2,000 a mile.
1023. Would you be able to use the same locomotives and rolling stock on a line so constructed as you do on the present lines? Yes.
1024. With equal safety? Yes. Perhaps I ought to explain to the Committee that, if I found that the works were not excessive on these extensions, and if I found that I could do it, I should lay down the same permanent way we have now.
1025. Which is more lasting? No doubt. It would last double the time the single-headed rail would.
1026. I think you stated that you were averse to having railways at all if they were not of a good description? I am—for main lines, decidedly.
1027. In the event of its being found that the Country cannot afford to carry out these main lines to the extent which is desirable, what would you propose to substitute as a temporary road? I certainly prefer a locomotive line.
1028. In preference to horse traction? Yes, in preference to horse traction.
1029. In preference to a macadamized road? Yes, I prefer a locomotive line to a macadamized road, undoubtedly.
1030. What do you think a cheap locomotive line could be constructed for? It is almost impossible to say, unless you know what the works would cost. The permanent way might be reduced by using 40-lb. rails.
1031. Would you use the same gauge? I would certainly not advocate a narrower gauge.
1032. Would you employ the same trucks to carry goods on both lines, without having to change? You might do so by running at a very reduced speed.
1033. Can you give the Committee an idea of what would be your cheapest estimate for a line of that kind in an easy country? I could not tell unless I knew what works would be required.
1034. In an easy country? Probably you might make a line through an easy country for five or six thousand pounds per mile. My own impression is that if you spent £4,000 a mile you would be throwing the money away. I would rather have macadamized roads, or roads not macadamized, than construct a line of that sort.
1035. You told us before what was the average cost of the different lines per mile, so far as they have been completed? I think I did.
1036. Do you know what amount of money has been borrowed for railway purposes—the total amount? No, I do not.
1037. I believe too that you mentioned before that you thought by increasing the rates charged, which you now consider to be too low, it would be possible to make the railways pay? I am quite sure that you can make them pay if you increase the charges and reduce the mileage run of the engines.
1038. Do you mean that in addition to the working expenses they would pay interest on the cost of construction? I have not a doubt about it.
1039. Interest at the rate of 5 per cent.? I have not a doubt about it. We might reduce the mileage of our trains. The 5 o'clock train is not of the slightest use except for carrying the mails; scarcely any passengers travel by it, and the further we go the worse we are in reference to it. We are now running to the Mudgee Road, but we shall have no mails there. Of course when I say increase the rates I do not mean that they should be increased to an enormous extent—I should be sorry to propose anything of the kind; but we ought, I think, to increase all the rates excepting those for agricultural produce, which in my opinion should be brought down as cheaply as possible.
1040. *Mr. Hoskins.*] And wool? I think that wool ought to pay a fair rate.
1041. But if you fix the rate too high, will not the wool be brought down by the road? Wool will never be brought down by road from Mount Victoria to Sydney.
1042. They bring the wool down by the Northern Road? If you do not continue to repair the roads running parallel with the lines, in a few years they would be compelled to send all their wool by rail.
1043. *Chairman.*] I see that the total receipts from the railways only exceed the working expenses by seventy or eighty thousand pounds? I do not know what the gross receipts are. I have seen no accounts of the railway since 1866, I think it was.
1044. The interest on the cost of the construction of these railways must be something like £300,000, must it not? I think not; but I really do not know what is the total amount which has been expended upon them.
1045. If these figures be correct, then even doubling the rates would not make the railways pay? But by increasing the rates and reducing the mileage the railways might be made to pay. By reducing the mileage you might reduce the working expenses nearly one half. It is impossible to estimate what the traffic may be when the lines are completed.
1046. Would not increasing the rates stop the increase of the traffic? I think not.
1047. Do you not think that one of the chief advantages to be derived from extending the railways into the

the country is very cheap carriage? That of course is not a commercial consideration; but it rather belongs to the policy of any Government for the time being to say whether the railways shall be made self-supporting or not.

J. Whitton,
Esq.

1048. You say that a great saving might be effected by reducing the mileage—that is to say, by running fewer trains? By running fewer trains.

2 Mar., 1870.

1049. Has that question been considered at all? It has been considered for a long time. The mail train which leaves at 5 o'clock at night is run almost entirely for the mails.

1050. *Commander Onslow.*] The 5 o'clock evening train did you say? Yes. A train might leave Sydney at that hour and run as far as Picton and Penrith, where there is some population, but I consider that it is perfectly useless to run that train beyond those places.

1051. *Chairman.*] You think that if we cannot afford to make railways at six or eight thousand pounds a mile, we must do without roads altogether? I think without railways. That is my impression upon the subject.

1052. You made an application to the Committee with reference to some statements which have been made here respecting your department? Yes.

1053. You have seen the statements, whatever they are? Yes.

1054. Will you make what observations you wish to make upon the subject? I have had very little time to read the evidence. I only got it on Friday night, and I have been away from town until last evening—I have only gone through a portion of the evidence.

1055. Of course it is only respecting statements which have been made to this Committee respecting your department that you wish to explain—your application has no reference to anything which may have taken place previously? No, I do not wish to offer any opinions on the evidence generally, but it is simply with reference to matters affecting my own department that I wish to explain. The first thing that I wish to refer to is contained in the evidence of Mr. Thomas. At question No. 78 Mr. Thomas is asked respecting the wear and tear of the permanent way, and he informs the Committee that “we have steel rails now that cannot be used on the main lines, they are so bad.” In reference to this statement, I wish to say that there has never been a steel rail imported into the Colony—there are some rails made of common Welsh iron, and hardened on the surface by Dodd's process, but we have no steel rails. These rails were ordered by Captain Martindale, on my recommendation, in 1859.

1056. *Mr. Lee.*] What quantity of them? 150 tons were ordered by Captain Martindale, but I think that 300 tons were sent out. I may say, with reference to these rails, that about eight years ago some of them were laid down in sidings in the station-yard at Sydney. They are in the yard, where some of the heaviest traffic passes over them. They are there yet, and there is not the slightest appearance of wear upon them. None of them have been taken up or changed in any shape, and there is no fracture of the iron.

1057. *Mr. Lord.*] Then in fact no steel rails of any kind have been imported? No.

1058. *Mr. Lee.*] Do you remember the cost of those 300 tons? I think they cost about £9 a ton.

Witness continued:—At question No. 80 I find that Mr. Thomas says—“I have not the slightest hesitation in saying that there is not a line in England supplied with rails of so inferior a character” as those supplied to us. Now, Mr. Thomas can have no knowledge whatever of the rails used in England in any shape or way. I do not think that he has been in England for the last sixteen years, and he therefore can have no knowledge as to rails supplied to private Companies. At question No. 56 Mr. Thomas states that he has been connected with railways for some years “in England, Belgium, and Spain.” I am prepared to say that Mr. Thomas was never employed as an engineer upon a railway until he came to this country; or, if he has been, let him produce the papers to show that he was on these railways, and in what capacity. At question No. 83 Mr. Thomas is asked—“Can you say whether of late years, since you have had the management of railways here, the price paid in England by the Government for our rails has been equal to that paid generally by English Companies?” Mr. Thomas answers—“It has been greatly in excess. They have paid a great deal more than would have been paid by any merchant. If a merchant had brought out the rails—I am within the mark in saying that they would at least have cost him £2 a ton less.” With reference to this, I may state that we have always been in the habit of advertising for tenders for rails in the Colony, and some years ago we got in tenders. They were considerably higher than what we had previously imported the rails for. I advised the Government at the time not to accept these tenders but to send home for the rails, and in that one order we saved £13,337 2s. 9d. The papers have been all printed, and they were laid before the Legislative Assembly some time ago. At question No. 85, Mr. Thomas says that he has made reports as to rails of an inferior quality. I say that no report of the kind has ever been made to me, nor can I find that any report of the kind has been made by Mr. Thomas to any one with reference to the rails. In his answer to question No. 86, Mr. Thomas says—“The falling of a stone upon them [the rails] has caused them to break like a piece of glass.” I spoke to the Inspector the other day who had charge of this length, and he told me that the rail referred to was in one of the cuttings in Bargo Brush—that the stone was two tons in weight, and that it fell from a height of 45 feet. In Mr. Thomas's answer to question No. 88, which has reference to the importation of the rails said to be of an inferior quality, I find this statement—“I never indented any but once, twelve or eighteen months ago, and I don't think that they have arrived.” If Mr. Thomas knew that the rails which we were using were so inferior, why did he indent for them under precisely the same specification? The rails indented for by Mr. Thomas were under precisely the same specification as the other rails.

1059. *Commander Onslow.*] Were you in England at the time that Mr. Thomas indented? No; here. He indented for rails for renewing the Parramatta Line. Witness continued:—At question No. 92 reference is again made to steel rails. The rails referred to are, I repeat, the best wearing rails we have ever had. I see there are a number of other questions which refer to the same thing; but it is perhaps not worth while noticing the matter further. The next question I wish to draw the attention of the Committee to is No. 98, and it has reference to inspection. I do not think that anything can be more clear or carefully drawn than the instructions given by Mr. Fowler for the inspection of these rails. I have here the list of experiments which have been made; but I may tell the Committee that no inspection of any kind can ensure a good rail with a dishonest manufacturer. At question No. 101 Mr. Thomas is asked—“If rails of the inferior description you have spoken of have been used on the Western Line, do you not think that the public will be serious losers by having such inferior metal laid down?” Mr. Thomas replies—“I believe the public will be great losers. The working expenses on that line will be great, owing to the necessity of constantly changing the rails—taking them up and laying them down. Besides, I consider them dangerous.” There has not been a single renewal of the rails on the Western Line yet, nor do I believe

J. Whitton,
Esq.
2 Mar., 1870.

that there has been a single renewal on any of the lines excepting Sydney and Parramatta. The rails have been turned, no doubt; but, so far as I can make out, there has not been a single renewal.

1060. *Commander Onslow.*] A rail is never turned twice, I suppose? No, never. Witness continued:—At question No. 102 Mr. Thomas is asked—“Have you observed on the Western Railway, where they have such sharp curves, whether the rails wear away by abrasion more than is usual on other railways,” and he answered, “Yes.” I believe that I am correct in saying that Mr. Thomas was never over the Western Line excepting on an engine or in a carriage, and he therefore can never have seen the condition which any of those rails may be in. He therefore cannot have arrived at his opinion as to the rapid wear and tear of those rails from his own observation, and can only have done so from reports made by Inspectors. At question No. 104, speaking of the rails between the first Zigzag and Blackheath, Mr. Thomas says—“Rails have been already taken up and condemned.” I am told by the person in charge of that line that he has never renewed a single rail upon it.

1061. *Mr. Lord.*] That is on the Western Line? That is on the Western Line. Witness continued:—In his answer to question No. 106 Mr. Thomas says—“I do not think that there is a gradient of 1 in 30 in England.” There are several gradients of 1 in 30 in England, and some even less than that. At question No. 108 Mr. Thomas gives his opinion in reference to the manner in which the railway has been constructed over the Mountains. He says—“A different course was taken at Mont Cenis; there they had a mountain to go over; they threw over all English notions of railway engineering, and have succeeded; but to attempt to carry a railway suited to a level country over the Mountains is absurd.” I have nothing to do with Mr. Thomas’s opinion; but I may remark that the English people did not make Mont Cenis on purpose to take the railway over it; but it was there, and an expedient was resorted to by English engineers to carry the railway over the mountain as a temporary work until the completion of the tunnel. If we had adopted the inclines on the railway there, we should have had to make a country to fit the railway, and not a railway to fit the country. At question No. 110 Mr. Thomas is asked whether narrowing the width of the formation from the existing formation would not relatively very much reduce the cost of formation; and to that he replies that, “If you make a sketch of an embankment for the two different systems, it will be readily seen that there is a very great difference.” The only difference that there can possibly be must be the difference in the gauge, and that can only apply to the width of the centre. The two slopes are precisely the same. The difference between the gauges (3 feet 6 inches and 4 feet 8½ inches) is simply 14½ inches. With a cutting 18 feet in depth, with our eighteen formation, the slopes are equal to the centre piece. At question No. 112 reference is made to the break of gauge, and I only notice it because Mr. Thomas thinks that it is the population which it is difficult to move. The difficulty would arise with goods, and not with passengers. Question No. 131 is—“Could we not run these trucks with safety at a greater rate of speed over 60 lb. rails?” Mr. Thomas’s answer to that question is—“Yes. The deflection is caused by the speed rather than by the weight. If you pass over a bridge at the rate of twenty miles an hour the deflection will be half an inch, while at forty miles it will be an inch and a half.” Why should the deflection be half an inch at twenty miles an hour, and why an inch and a half at forty miles? If Mr. Thomas had profited by his experience in this country, he might have known that the difference in speed makes not the slightest difference in deflection. Why a bridge should deflect at all to that extent I cannot make out. It would depend entirely upon the strength of the bridge, and the material used in its construction.

1062. *Mr. Lord.*] I suppose that you would condemn a bridge if there was such a deflection in it? Yes, instantly. In large spans, of course you expect the deflection to be considerably more than in smaller spans. Witness continued:—I see that there are a number of matters here about the steel rails to which I might reply; but I think I have said enough to show that the rails referred to are in use, and are useful. At question No. 152 Mr. Thomas says that “we have made one or two iron rails in the Colony—passed them through the rollers.” I never heard of such a thing. I don’t think that any rail has been rolled here. In 1862 the Government gave the Fitzroy Iron Company an order for 10,000 tons of rails at £12 a ton, but I never saw any rails that they made.

1063. *Commander Onslow.*] Not one? I never heard of one.

1064. *Mr. Morrice.*] Don’t you think that good rails could be made at the Fitzroy Iron Mine? I don’t think that you could make them without a mixture of ore in them—it is too strong. In answer to question No. 169 Mr. Thomas says—“We have not sufficient steam power; we now have thirty locomotives on the Southern and Western Lines, and out of these twenty-four are daily in steam, consequently there is no time for repairing them, and if anything gives way the engine goes into the shed and is patched up and sent out again.” That is quite true. But in 1866, when I gave up charge of the Locomotive Department, there were fifteen perfectly new engines in the yard. They gradually became absorbed in the traffic, and no application was made to supply their place. The engines that had been in use were left unrepaired for the purpose of reducing the working expenses. One engine was for two years and five months unrepaired, apparently for the same purpose.

1065. *Commander Onslow.*] During what time was that? From the year 1866 to 1869.

1066. *Mr. Lord.*] Were you in charge of the Locomotive Department prior to that? Yes, I had charge of it from 1857 to 1859 I think it was; and I had charge of it again from 1861 (I think) to 1866, and then Mr. Thomas took charge. Witness continued:—At question No. 171 there is another matter which Mr. Thomas never fails to refer to. He is asked—“Are you short of passengers’ carriages?” and he replies, “No, I think we have plenty of passenger carriages. There is another instance in which I think the Colony has been badly served. There were eighteen imported at a cost of £15,000, and when these came out we found that the panels went to pieces, and that it was dangerous to run them upon the line, and it was not until they were repaired and patched up that they were fit to run.” The fact is that these carriages began to run from the time they came out. I cannot conceive how a carriage can be dangerous because it has got a cracked panel. If all the panels were cracked, it would not make any difference to the safety of the carriage. These carriages have been running, I believe, ever since they arrived.

1067. *Mr. Morrice.*] Without any repairs? Many of the panels were cracked, but they were repaired. I think that the only claim made by the Government against the manufacturers was for £230. That was for the eighteen carriages, so that the damage could not have been very serious.

1068. *Commander Onslow.*] Was that claim paid, do you know? I am not aware. Witness continued:—At question No. 175 Mr. Thomas is asked—“If we had to commence the Western Railway do you think that we should adopt the same system as has been carried out there?” and his answer is—“I think not; we should be very foolish if we did.” Why should we be very foolish? It is an important question to know why

why we should not adopt the same system under similar circumstances. Could a better system be devised? J. Whitton, Esq. We might have had in some instances better gradients, and fewer curves, if we had gone to more expense, but a more expensive line was not considered advisable at the time, and therefore it has not been constructed. Mr. Thomas' answer to question No. 106 has reference to the keeping of accounts; but that is a matter 2 Mar., 1870. that I will refer to when I come to Mr. Ashdown's evidence. I find that the next matter to which I wish to draw the attention of the Committee is with reference to the accounts. Mr. Ashdown says that I have obstructed him in every possible way in keeping the accounts; and he says that he has adopted a system by which, if carried out, there would be no difficulty in furnishing the information required by the House. We have the Southern Railway, the Western Railway, and the Windsor and Richmond Railway, but to call these the trunk lines is simply to take off a portion of the Southern Railway, which has been called a trunk railway, I believe, because they say that the lines which branch from it resemble a tree. If that be the trunk line, why should we not take the first branch of that tree, say to Liverpool, or Campbelltown, or Picton, or Marulan, and keep headings in the accounts for each of them? The system adopted by Mr. Ashdown in keeping his accounts when Mr. Thomas had charge of the Existing Lines, comprised headings for Trunk Line, Southern Line, Western Line, Mountain Line, Windsor and Richmond Line; and when he had enumerated all the lines he has yet a heading for General Lines. Why should there be a heading for General Lines, when the accounts of all the different portions of the lines are kept under their separate headings? I wish to point out to the Committee that it is utterly impossible to keep the accounts in the way which Mr. Ashdown suggests. Here are some of the time-sheets. The large sheets are called the "time-sheets," and show every half-day or quarter of a day a man is employed on any particular work. Mr. Ashdown has nothing to do with these sheets. When these accounts come into my office every man's time is taken out and put into a sheet under the heading of each engine, so that the total amounts chargeable to each of the engines are kept together in the appropriation sheet. This item refers to an engine running (say) from Sydney to Goulburn, and this heading will apply to No. 25 or any other engine. The whole of these amounts are put down in one column and added up, showing the total of each engine. These again are put into a summary and forwarded to the Accountant. It is impossible that the expenses can be charged from Sydney to the Junction, because the same engine which runs between those two points goes beyond (say) to Goulburn. Precisely the same thing applies to carriages and wagons. An engine which runs on the Southern Line one day may be running on the Western Line the next. When an engine comes into the shed for repairs, it is impossible to say what proportion of those repairs shall be charged to any particular portion of a line, for it has been running on all the lines. It is utterly impossible to do anything of the kind; and I was at the trouble of showing the Accountant that it was impossible. The Accountant has only had about three years' experience of railway accounts, but the moment he went into the office he commenced to make injudicious alterations. Mr. Ashdown informed the Committee that he kept the accounts during the first six months of last year as he wanted them to be kept. Here are Mr. Ashdown's own accounts, and the Committee will see that there is nothing charged for locomotives, carriages, or wagons, to the trunk line. Here is the account for the Southern Line, and there is nothing charged for locomotives, carriages, or wagons. Here is the account for the Western Line, and there is not a farthing charged to it, and yet he says that the charges are all appropriated in the manner in which he suggested. Yet the Accountant has managed to state what he assumes to be the cost of working the Mountain Line; because there has been an attempt ever since the Mountain Line was opened to make its working most unsatisfactory by those who had charge of it. The expenses of the engine running from the Mountains to Parramatta are all charged to the Mountain Line. With reference to this portion of the line, I may say that before I resumed charge of the Locomotive Branch the engines running up the Mountains took seven or eight trucks. I pointed out to the Commissioner that they were simply playing with the Western Line. I took up twelve trucks one day, and the engines have since taken up eleven or twelve trucks when required. After the Locomotive Department was placed in my hands, I issued an order that any engine-driver who refused to take twelve trucks should be dismissed.

1069. *Commander Onslow.*] When you say that they attempted to make the line unworkable, to whom do you refer? The late Commissioner—Mr. Byrnes, the late Engineer for Existing Lines—Mr. Thomas, and the Accountant—Mr. Ashdown.

1070. *Mr. Morrice.*] Did the same engine take up twelve trucks that took up eight? Yes, precisely the same engines.

1071. Without any alteration in them whatever? Without any alteration whatever.

1072. *Mr. Hoskins.*] Have you commenced building any sheds for the housing of the engines? Yes, I have commenced one shed at Penrith. I think it is perfectly clear that, if engines will take up twelve trucks, and they have been running with only seven or eight, fair play has not been given to the Western Line.

1073. Eighteen-inch cylinder engines, are they not? Yes. Witness continued:—The next entry in this account is for the Windsor and Richmond Lines, in connection with which there is no charge to the Locomotive Department. We then come to the General Lines, and there we find all the charges for the Locomotive Department, with the exception of the Mountain Line. If the whole of the information can thus be placed under the heading of General Lines, why need there be more than one heading for the Southern, Western, and Richmond Railways?

1074. *Commander Onslow.*] You admit that there is a greater expenditure in running up the Mountain Line? Undoubtedly; but you cannot arrive at what that expenditure is, because the same engine which runs over the Mountain Line also runs over the Southern Line and the Western Line to Parramatta. Supposing an engine to have been running to Goulburn for three months, and it comes into the shed and has repairs done to it to the amount of £30 or £40, how can you ascertain what proportion of that amount is chargeable to any particular part of the line? The total cost of the repairs can be known and is known, but it is impossible to say to which part of the line the amount or any portion of it is chargeable.

1075. You do not think that an approximation can be made? No.

1076. *Mr. Hoskins.*] You do not run an engine right through to Goulburn? We generally run to Picton, and then to Goulburn; sometimes we run the engines through.

1077. *Mr. Lord.*] But nothing of this kind would prevent you from arriving at an approximation of the amount to be charged to each? It can be arrived at by taking the mileage run on each line, by dividing the whole cost of the repairs to the Locomotive Department according to the mileage run on the whole of the lines.

J. Whitton, Esq.,
2 Mar., 1870. 1078. *Chairman.*] It cannot be done unless the rolling stock is kept distinct? That is the only way in which it can possibly be done.

1079. *Mr. Hoskins.*] As a matter of fact the engines used on the Mountain Line can now take twelve loaded trucks? They can—I have pointed that out repeatedly with reference to these engines.

1080. *Mr. Morrice.*] How many would they take from Mittagong? They would take heavier loads after passing over the gradients of 1 in 30. Witness continued:—In his reply to question No. 205, Mr. Ashdown represented that I set aside his way of keeping the accounts. I could have no possible interest in having the accounts kept in any other way than that which would enable any person to understand them. All that I want is that the accounts may be kept with as few headings as possible, so that they may be easily understood. It is plainly inferred from Mr. Ashdown's answer that I was desirous of preventing a full knowledge of the working expenses of the Mountain Line. I should be glad to give the information if I could ascertain it; but I do not think that it is fair to profess to keep the charges, and then to guess at them in the accounts.

1081. *Commander Onslow.*] Do you think that under the old system of keeping the accounts we arrived at a fair valuation on the different lines? We might have done so. The accounts have been published up to 1865, and I believe they are correct—as far as I know, they are correct.

1082. There is a direct conflict between you and Mr. Ashdown? This is simply a question whether the accounts can be kept in the manner in which he suggests—I say they cannot. Mr. Ashdown has nothing to do with the appropriations of these accounts at all until they are sent from my office to him to be entered into his books.

1083. *Mr. Lord.*] Then I take it that Mr. Ashdown's duty is simply to make his books tally with the returns he receives from you? His duty is not to find the headings of accounts, but to keep the accounts as forwarded to him, and at the end of the year to give a clear explanation of the accounts which pass through his hands. There is no difficulty in keeping the accounts of the permanent way in any shape we please, because there are direct charges for men and materials for each district. These are kept on the Southern and Western Lines, and the Windsor and Richmond Line also. With reference to the receipts of the year, they can be as easily kept and divided as on any other railway. The accounts for the Southern Line would be from Sydney to Goulburn, and the Western Line from the Junction at Parramatta to Bathurst; a proportionate part of the fares of passengers going to the West from Sydney, as represented by the distance from Sydney to the Junction, being credited to the Southern Line. It is precisely the same with the goods traffic.

1084. Mr. Ashdown said that you allowed him to keep the accounts, and not the expenses? He could hardly say that I allowed him, because I had nothing to do with him.

1085. The Commissioner then? It is very likely that the Commissioner did so. I had not time to go into the matter, and do not understand what arrangements were made between the late Commissioner and the Accountant.

1086. Do you think that the way Mr. Ashdown suggests the accounts should be kept would entail additional expense and trouble, and produce no corresponding benefit? I do think that it would entail additional expense and trouble, and that it could not produce any corresponding benefit, the whole system adopted by him being impracticable. There is no advantage in keeping the accounts in the way that he suggests; but he has kept the accounts in such a shape that they are hardly intelligible. He speaks of the Trunk Line. What is that? It is simply the Southern Line. We might have as many headings as we please, but the simpler the accounts are kept the better. Witness continued:—“At question No. 209 Mr. Ashdown is asked—“Who was the Engineer for the Western Line?” And he answers—“Mr. Barton, I believe.” That must be a deliberate falsehood on his part. Mr. Barton had only charge of the trial surveys. The next question, No. 210, he is asked—“Had Mr. Whitton anything to do with it?” and he says—“I have heard that Mr. Whitton was never on that line until it was constructed.” I may inform the Committee that Mr. Barton had nothing to do with the construction of the Western Line.

1087. *Commander Onslow.*] Who laid out that line? I did. Mr. Barton was employed on trial surveys; he was under my charge, I gave him instructions, and it was his duty to carry them out. He was only employed as Engineer for Trial Surveys, and he acted on all occasions under my direction. Mr. Barton had nothing to do with the construction of the works. Witness continued:—“At question No. 212 Mr. Ashdown is asked—“You cannot attribute any reason for such opposition?” and his answer is—“The only reason that I can see is a desire that the information should not be furnished as it was required, or a want of knowledge or understanding of the principles of accounts.” As I have said before, I could have no possible interest in withholding information—I have always been ready to give it; but when I do give it I like it to be correct, and not guessed at. At question No. 216 Mr. Ashdown is asked—“You know nothing of the working of the railways practically?” and he answers—“No, except that I have resided on the line for some time, and have therefore had a good opportunity for observation.” He might just as well say, that because he lived by the sea-side he was a thorough sailor and perfectly understood navigation. As to Mr. Lloyd's evidence, I have not had an opportunity of reading it; but I have heard that he has recommended the use of an engine weighing 60 tons. I should be very sorry to see engines of that description in use on these lines.

1088. *Mr. Hoskins.*] Would it not cause increased wear and tear? The excessive weight on so short a wheel base would be highly objectionable.

1089. *Chairman.*] Did he not offer some suggestions, or find fault with too great a weight being placed on a pair of wheels? Yes.

1090. And he proposed that that weight should be distributed? Yes.

1091. *Mr. Hoskins.*] Is not danger to be apprehended to the permanent way by running an engine with twelve wheels? I do not know that it is, because the whole of the wheels would be made with movable axle-boxes. They would have play in most of the axle-boxes, enabling them to go easily round the curves; but the great objection on my part is to the immense weight. I have never heard of engines of that description being used, excepting in France.

1092. They are used on some of the northern lines of France? I believe so. Witness continued:—The evidence which has been given as to bad rails can only have reference to the rails laid between Marulan and Goulburn, for I consider that the whole of the other rails are of very fair quality. I don't think that better rails could be used than those between Liverpool and Parramatta, and the rails all the way up to Picton are a very fair sample indeed. There is no doubt that in a long line you must have some rails defective; but there

there was certainly a greater proportion defective between Marulan and Goulburn than on any other portion of the line. Immediately I heard of it, I had a return made, and reported to the Commissioner, with a view to prevent any more rails being sent out by the parties who had supplied the rails referred to. It seems to me to be perfectly clear that if we have competition, and always accept the lowest tender, we must get an inferior article.

J. Whitton,
Esq.

2 Mar., 1870.

1093. *Commander Onslow.*] Do you think that monopoly would be better than competition? I think that it would be better to pay a few pounds a ton more for rails of a really good description, than to have an inferior article at a lower price.

1094. *Mr. Hoskins.*] Mr. Mason has given in evidence that the rails sent out are positively bad? Mr. Mason can have no knowledge of the rails, excepting from the wear of a few between Marulan and Goulburn.

1095. He speaks of the rails from Campbelltown? If he does, I can only say that he did not understand the question.

1096. *Commander Onslow.*] Do you think that on the whole we have been well served? I do.

1097. And that we have not paid an excessive price? Yes. The rails are made under a specification. You cannot tell from the prices quoted in the newspapers what such rails will cost. The number of rails that have been turned must show clearly, with the traffic they have had over them, that they must be of a very good sort. Mr. Higgins, the contractor, told me that on one of the suburban lines he laid rails which had been imported through a merchant in Melbourne, and that in twelve months after they were laid down every rail had to be taken up.

1098. *Commander Onslow.*] Would you recommend that more of Dodd's steel-hardened rails should be imported? No; I would import steel rails.

1099. Do you think that the higher price would counterbalance competition? I think that you could get steel rails for £10 a ton in England now. Our rails are costing from £7 to £8 a ton.

1100. Steel rails would last thirty years, while the others would only last twelve? No doubt of it. They would last forty years. I find that the line from Campbelltown to Menangle was opened on the 1st of September, 1862, and on that length of six miles fifty chains there have been twenty-seven defective rails; from Menangle to Picton, a length of twelve miles twenty-eight chains, opened on the 1st of July, 1863, there have been sixty-one rails which have been turned or show signs of wear; from Picton to Mittagong, which extension of twenty-four miles was opened on the 1st of March, 1867, there have been 103 defective rails; from Mittagong to Bowral, a length of three miles, opened on the 2nd December, 1867, there were six defective rails; from Bowral to Marulan (opened to Sutton Forest on the 2nd of December, 1867, and to Marulan on the 6th August, 1868), a length of thirty-four miles, there were thirty-one defective rails; and from Marulan to Goulburn, opened on the 27th May, 1869, a length of twenty miles, there were 258 defective rails.

1101. *Commander Onslow.*] What do you attribute the great wear and tear of the rails to from Picton to Mittagong? In a great measure to the inclines of 1 in 30.

1102. In going down or coming up? Both. In coming down they have all their breaks on, and the wheels sliding on the rails do very serious injury. As I stated in my report to the Commissioner, the rails between Marulan and Goulburn are the worst rails we have ever had. The rails appear to have deteriorated from Campbelltown to Picton, but they are not what I should call bad rails.

1103. *Mr. Hoskins.*] There must have been a number of orders? Yes.

1104. *Commander Onslow.*] Have you any means of knowing what rails come from each manufacturer? Yes; these inferior rails mostly came from Bolckow & Vaughan.

1105. Each rail is stamped, I suppose? Yes. I wrote to the Commissioner and recommended him to write to the Agent at home, directing him to have no more rails from Bolckow & Vaughan. At the same time I urged the Commissioner to have no competition.

1106. The bad rails are owing to no fault of the Inspector? I think not. I don't think that any amount of inspection will guarantee a good rail.

1107. *Mr. Hoskins.*] Why were the rails from Parramatta to Liverpool of a much superior quality? I am not sure whether those rails were ordered direct from the manufacturer, or whether they were tendered for. If they were tendered for, the tenders were limited most probably to very few houses.

1108. *Commander Onslow.*] And that, you think, is better than tendering for them in the general market? Far better.

1109. You think it would be better to limit the tenderers to only a few houses? Decidedly. If I were ordering anything of that kind for myself, I should go to a good house, and ask them to make me a good article at a fair price. Competition has deteriorated almost all the articles coming out from England; it has had the same effect with engines and other rolling stock.

1110. *Mr. Hoskins.*] We have paid for a good article? No doubt, and we have got a very fair article. I cannot say that the rails between Marulan and Goulburn are of first-class quality, judging from the number which have proved defective, but the remainder may wear well. Witness continued:—I see that Mr. Thomas, in his second examination, in answer to question No. 490, speaks of the increased cost of the lines under the head of "working expenses." I cannot say what that increase is, because I have not got the accounts, but there is no doubt that there was a very great increase. The whole of the rolling stock was in such a defective condition that we were obliged to put on a great number of men to effect the necessary repairs. In the next question, No. 491, Mr. Thomas is asked—"Has there not been a considerable length of line opened?" and he replies "No." The extension from Marulan to Goulburn, twenty miles, was opened on the 27th of May, the extension from Singleton to Muscleebrook, a distance of thirty-one miles, was opened on the 19th of May; and the extension from Mount Victoria to Bowenfels, a distance of twenty miles, was opened on the 18th of October. These extensions give an additional length of seventy-one miles, although Mr. Thomas informed the Committee that no additional length of line had been opened. At question 510, Mr. Thomas says that the weight of the rails on the Windsor and Richmond line is 40 lbs. to the yard. The rails on that line are 55 lbs. per yard. At question No. 528 Mr. Thomas is asked—"Can you say what has been about the cost per mile of the present rail?" and he answers—"75 lbs. to the yard would be about 100 tons to the mile, and the cost about £800." The 75-lb. rails weigh 118 tons to the mile. Questions No. 545 to No. 549 refer to Mr. Thomas's appointment. Mr. Thomas was appointed on the 12th January, 1859, and removed on the 25th of April, 1862. He was reappointed on the 1st of August, 1866, and he was removed on the 31st of May, 1869.

1111. *Commander Onslow.*] What is Mr. Thomas now? He is now Inspector of Rolling Stock. 1112.

J. Whitton, Esq. 1112. *Mr. Hoskins.*] Was it at your recommendation that a person receiving so high a salary as Mr. Thomas receives should be employed to inspect rolling stock? If Mr. Thomas had been at all fitted for his duties, I consider that his pay, £550 a year, was absurd.

2 Mar., 1870. 1113. But I mean as Inspector of Rolling Stock? In that capacity I don't think that he is of any use at all. The rolling stock could be examined by the foreman at the railway workshops; by Mr. Scott, who has charge of the Locomotive Department, and by Mr. Bingham, without any additional expense. I may say that it takes me a considerable portion of my time to reply to the absurd minutes of Messrs. Thomas and Ashdown, addressed by them to the Commissioner. When the papers which have been called for by Parliament are published, it will be a matter of surprise how I have ever been able to find time to do anything else. In speaking about the qualities of the rails at question No. 565, Mr. Thomas says—"There has never been a rail upon the line but what has been bad—not a rail that I have ever seen." That may be his opinion, but it is certainly not correct. At questions Nos. 608 and 609 Mr. Thomas makes some remarks in reference to the contracts which have been entered into for the making of rolling stock. I believe that those contracts were entirely under the charge of Mr. Thomas, and that when the agreements had been signed, it was discovered that there was no clause in the agreements compelling the contractors to make the articles in the Colony.

1114. *Commander Onslow.*] Have the contractors imported them? They are importing a great number of them; and they will be paid precisely the same price for the imported articles as if they were made in the Colony.

1115. What proportion are being imported? I do not know the number ordered. The papers were kept secret from me, and I never saw them during the time the late Commissioner was in office—I never heard of them excepting by accident.

1116. Has one person got the contracts? Messrs. Mort & Company and Messrs. Vale & Lacey have got the contracts for the engines.

1117. No trucks are being imported? No. The popular notion is that all these things are being made in the Colony, but even the trucks and carriages are not wholly made in the Colony—the carriage and wagon bodies are made in the Colony, but the wheels, axles, and springs are imported. In fact nothing more is now being done than has been done since I came to the Colony; for although we imported the carriages, we repaired and renewed them. Wagons have been built at the Railway-works for years past, and by contractors in the Colony.

1118. But we still save by making the wood-work in the Colony? I say not.

1119. We could import them cheaper? Yes.

1120. And get as good an article? Better. I am prepared say that I could import the whole of the engines at about £500 less for each engine.

1121. And get a better article? Yes, a better article.

1122. *Mr. Hoskins.*] Mr. Thomas said that engines had been imported that had not been put together in England? I think at that time I had charge of the department; and I wrote to Stephenson about the way in which they were put together. They were not first-class finished engines. They have however worked uncommonly well, but they were not what they ought to have been coming from such a firm.

1123. Did other manufacturers ever send out engines in good condition? Yes; Buyers & Peacock sent out the best engines we have lately imported.

1124. Then in your opinion we are making a mistake in obtaining them in the Colony? Most decidedly. The making of these engines will not benefit the workmen so much as the manufacturers, as the principal parts are imported. I believe that some *portion* of these engines are being made in the Colony, I think by Messrs. Vale & Lacey; but I know that Messrs. Mort & Company have ordered engines direct from England, but portions of other engines will probably be made by them in the Colony.

1125. *Mr. Lord.*] Do you know that it is a fact that there is nothing in the agreement to specify that the articles shall be of colonial manufacture? Mr. Mort himself, I believe, says so, and a correspondence which took place the other day showed it. Witness continued:—At question No. 615 Mr. Thomas speaks of an engine designed by him, and he says—"I adopted as my model a class of engine that had been found to be best suited for lines with similar gradients and curves in the Mauritius, America, and other places." The Mauritius engines are all of eight wheels, instead of six, as in that proposed by Mr. Thomas. At question No. 701 of Mr. Mason's evidence, I find that Mr. Mason says "It is chiefly in the earth-work that the saving is made in adopting a narrow gauge." That is quite a mistake—it is not so.

THURSDAY, 3 MARCH, 1870.

Present:—

MR. HOSKINS,
MR. LEE,

MR. MACLEAY,
MR. MORRICE.

COMMANDER ONSLOW, R.N.

WILLIAM MACLEAY, ESQ. IN THE CHAIR.

John Whitton, Esq., Engineer-in-Chief for Railways, called in and further examined:—

J. Whitton, Esq. 1126. *Chairman.*] You were making some statement yesterday connected with matters which have been brought in evidence before the Committee—Have you any further observations to make? Very few. The next matter I have to call the attention of the Committee to is in the Appendix (page 2), signed by Mr. Thomas, with reference to the system of task-work. When I took charge of the line in July, I endeavoured to ascertain the wages the men were earning on this task-work, and I found that a man named Hill, the principal blacksmith, was earning £2 6s. 1½d. a day, and Gerrard, another blacksmith was earning £1 11s. a day, Hill's ordinary wages being 16s. a day, and Gerrard's 3s.; and as I did not see the economy of that I stopped it at once.

1127. *Commander Onslow.*] Do you think they did any more work? I do not think so. With reference to a statement that I made yesterday, that every obstruction had been thrown in the way of the working of the Western (Mountain) Line satisfactorily, I wish to draw the attention of the Committee to the instructions

tions I wrote for the working of the line between Picton and Mittagong, when that line was first opened. I there stated that a load for goods trains should be twelve wagons, and I believe twelve and occasionally fourteen wagons have been taken up the incline of 1 in 30 for three miles between those stations. On the opening of the Western Line I wrote to the then Commissioner to say that the same regulations would apply to the working of the Western Line as to the Southern Line, mentioning particularly the extra strength required for the centre couplings and side chains on the Western Extension. Yet the Western Line was rarely worked with more than seven or eight trucks during the time Mr. Thomas had charge of the Locomotive Department, and the engines were simply doing little more than one-half the work they could have done, whilst on the Southern Line the engines were being worked up to their full power. By reference to the Accountant's abstract of the expenditure of the Locomotive Department, it will be seen that only on the Mountain Line, as he calls it, has he endeavoured to keep the working expenses distinct; and yet the engines on this part of the line were doing only one-half the work they ought to have done and could have done. I would ask if this is fair to the Western Line, or was it not, as I have stated, done with a view of showing the enormous difference in the cost of working the Western (Mountain) Line as compared with the Southern Line? If this arrangement was not intentional it looks very much like it. It was certainly not done in ignorance of what could be done by the engines, as my letter to the Commissioner pointed out that twelve wagons would be the load. I also called the Commissioner's attention to the dangerous manner in which the line was being worked, in a memorandum dated 3rd August, 1868; but, so far as I know, no notice whatever was taken of the matter. The mountain engines from Penrith run with the mail train down to Parramatta, and all expenses of running them were charged to the Mountain Line beyond Penrith, and the Western Line was credited with the mileage.

J. Whitton,
Esq.
8 Mar., 1870.

1128. *Mr. Hoskins.*] Would you be good enough to point out in what way the line was being worked in a dangerous manner? I have pointed it out in memoranda to the Commissioner from time to time, in regard to couplings and other matters. I do think that full justice has not been done to the Western Railway—that no attempt has been made to work it satisfactorily or to take up such loads as the engines could have taken. It must be obvious that, if the engines were running with half a load, in any comparison between the cost of working and the receipts, the receipts ought to be doubled pretty nearly, to compare favourably with other lines.

1129. *Commander Onslow.*] When the Western Line was first opened, had you the general superintendence of the working of the lines? I had not.

1130. Were you in the country? I was.

1131. Were you aware that this small number of wagons were being worked? I was.

1132. Did you make any representations on the matter? I pointed it out to the Commissioner on several occasions.

1133. For what length of time has the proper load been taken? Only since I took charge—within the last few months; since July or August last year.

1134. Prior to that the engines were never doing their proper work? They were never worked to their full power.

1135. *Mr. Hoskins.*] Would you have any objection to state what representations you made as to the unsafe working of the line? I believe that I made very strong representations to the Commissioner, and I said the line had been worked ignorantly, recklessly, and dangerously. For instance, rails were sent up with passenger trains with nothing but the centre links coupled. I have a memorandum here with reference to it. This is one letter that I wrote to the Commissioner calling attention to rails having been sent up with passenger trains. (*Witness read and handed in the same. Vide Appendix D.*) That is not the memorandum I alluded to as to the reckless manner of working the line.

1136. *Commander Onslow.*] You are of opinion that there should not be mixed trains—goods and passengers? Certainly.

1137. Is it not done every night? There is scarcely a train run on the Mountain Line without some goods trucks; I do not mean perishable goods, but trucks loaded with sleepers, rails, or heavy materials generally.

1138. *Mr. Hoskins.*] In point of fact goods trucks run on four wheels only, and are not expected to travel more than about sixteen miles an hour, whereas passenger carriages are expected to run at the rate of thirty miles an hour? The great objection is to the extra weight on the goods trucks. If an axle should break on one of these trucks it might be productive of serious consequences to the passengers.

1139. *Commander Onslow.*] Which is most dangerous,—having these trucks before or behind the passenger carriages? They are generally put behind. I do not think there is much difference as to danger between the two positions. Another very extraordinary part of this arrangement is that this Mountain Line, where the engines are not half worked up to their full power, should be the only portion where the Accountant should endeavour to keep a distinct account as to cost. There is nothing in his account for the Trunk Line, either for carriages, wagons, or locomotives, and nothing to the Southern Line, nor to the Western Line terminating at Penrith; but when we get to the Mountain Line we find all the details of the working expenses filled up. Now as these carriages are, according to the Accountant's division, running on three lines on the same day, the account cannot possibly be fair to the Western Mountain Line if the costs of repairs have been charged to it.

1140. *Mr. Hoskins.*] Do the same description of goods-trucks run on both lines? Not the same description only, but the same trucks.

1141. Have they not been fixing brakes to all the trucks on the Mountain Line? Yes, I believe all wagons on the Mountain Line have brakes.

1142. Did you ever remark, on looking at the rolling stock, that it frequently happens that the guard-iron is broken, and the handle of the brake trails on the ground? I never saw it to that extent; but it is just possible that if the brakes were worn away, and were very thin, the handle would go down. I endeavoured to get from the Accountant this morning what the Committee wished with regard to the total amount voted for Railways, but I could not get it.

1143. *Chairman.*] Have you finished your observations on the evidence? I think I have.

1144. I wish to ask you one or two questions about the locomotives—I do not think you gave any evidence on the subject when you were here last Session. Do you think any improvement could be made in our present system of locomotives which would have the effect of cheapening the working of the line? We might make heavier engines, and have them with eight wheels coupled, but I question whether that would very materially alter the expense.

1145.

- J. Whitton, Esq.
3 Mar., 1870.
1145. That would be with the view of enabling them to draw heavier loads? Yes. Of course that would be on the assumption that the engines now in use are not equal to the traffic; at present they are.
1146. That is not what I meant. Could you suggest any improvement by which a saving might be effected—for instance, you know the tank-engines which carry coal and water upon them—do you think these could be used with a view to economy? I have reported upon the tank-engines proposed to be made in the Colony a short time ago, and I have the strongest possible objection to using tank-engines on a main line, for several reasons; but one very important reason is that on a tank-engine there are brakes only on the engine itself, and if anything should give way in connection with these brakes, there are no other brakes to apply. On an engine with a tender there are brakes on the six wheels of the tender, which can be used, and therefore the consequences of any accident to the brakes on the engine would not be so serious as with a tank-engine. Besides, a tank-engine loaded with eight or nine tons of water has only its full maximum power when it leaves the station; every stroke of the piston on its journey diminishes the adhesive power of the engine, and the consequence is that at the end of the journey it has no more adhesive power to work the train than an engine weighing eight or nine tons less. To start with, there is an unnecessary weight upon the wheels, and at the termination of the journey there is no more adhesive power than there would have been had a lighter engine been used from the commencement.
1147. The sole object of having the enormous and apparently unnecessary weight on the engine is to give adhesive power? No doubt.
1148. Is there no other way in which that could be obtained? No other way, except by weight.
1149. Have you ever heard anything about a plan of using India-rubber tires? I have heard of it.
1150. Do you think that might have the desired effect? I do not.
1151. Would it not give additional bite? It might give additional bite, but I think the India-rubber would be destroyed in a very short time—it could never be made strong enough to stand the wear and tear at a high speed.
1152. You have heard, of course, of the road-engine? Yes, I know all about that.
1153. You are aware that India-rubber tires have been used for these engines, which travel over rough macadamized roads for months without a scratch? I am aware they have been used, but for what length of time I do not know; but the weights of these road-engines are very small in comparison with locomotives—only some three or four tons, whereas the locomotives are thirty or forty tons.
1154. The steam power necessary to draw a certain load in an ordinary train would not of itself necessitate any great weight in the engine? I beg your pardon—it would. It is impossible to make an engine of large tractive power without weight.
1155. But if you have adhesive power in the wheels—some means of getting “bite”—the steam power itself would not necessarily require a very heavy locomotive? You must have the steam power in any case, and that steam power necessitates a heavy engine.
1156. The locomotives we use now weigh about thirty tons—Could they not be made of the same steam power and yet be much lighter? No.
1157. I understood that they were made heavy for the purpose of giving adhesive power? Their weight simply arises from the fact of their having large steam power. You must have all the working parts very strong, and therefore very heavy, to resist the strain upon them.
1158. Then, in fact, a steam-engine of a certain horse-power could not be made lighter than these are made? No. I should prefer to put additional weight upon the wheels, and make them heavier than they are even now, by making the different parts of them very much heavier, rather than attempt to diminish their weight.
1159. *Mr. Hoskins.*] What is the thickness of the foot-plate that goes over the wheels? About three-eighths of an inch.
1160. Do you not think that if that was increased to an inch or an inch and a half it would increase the adhesive power? No doubt; but if you have sufficient adhesive power without that, there is no possible object in doing so.
1161. *Chairman.*] These locomotives we use here—what would you call their horse-power? I never calculate the horse-power of locomotive engines. They have a certain amount of tractive power which is arrived at in pounds.
1162. Is not the power of a steam-engine calculated in that way—so much horse-power? Yes, for marine and stationary engines. You very often see engines of a small nominal horse-power working up to a thousand. The nominal horse-power has very little to do with the actual power of the engine. It requires the diameter of the cylinder, the length of stroke, the diameter of the wheels, and pressure of steam to determine the power of a locomotive engine.
1163. What are the lightest locomotives you have seen? I believe locomotives are made as light as eight or ten tons.
1164. I have seen very small engines used as contractors' engines, drawing ballast-trucks and so on—what would be the weight of them? About twelve tons.
1165. Is that the smallest? One or two are smaller—probably about ten tons.
1166. *Commander Onslow.*] Is that without water and coal? No, they are tank-engines—water and fuel on the same foot-plate.
1167. *Mr. Morrice.*] Do you think the railway carriages might be made lighter? That is a question which has been very much discussed at home. They are trying to make them lighter, but at present they have not succeeded. It is possible the long eight-wheeled carriages might be made a little lighter, but I do not think the ordinary passenger carriages could be made much lighter with safety.
1168. *Chairman.*] Are there no locomotives under 10 tons? I really could not say positively. Of course something depends upon the gauge; on a narrow gauge they may be lighter; but the Queensland engines, on a narrow gauge, weigh something like 20 tons.
1169. Take for instance a locomotive sufficient to draw along a narrow line a light omnibus carriage full of passengers? The engine might be attached to the carriage on the same frame if there were only traffic for one or two carriages. It would depend however upon the gradients to be worked.
1170. How light might an engine be made for that purpose? An independent engine could not be made less than 10 tons, to be of much use. However light you make the engine, it must carry a certain quantity of water and fuel. I am not clear that it could be made so light as 10 tons. The lightest engines we have here are on the Windsor and Richmond Line; they weigh about 16 tons, and they are very small.
1171. *Commander Onslow.*] Could any system of cogs be tried for inclines? No, they are extremely dangerous.
- 1172.

1172. Going very slowly? If there were any particular part of a line that you wished to work with cogs. it might be done, but it would be going back to the system abandoned thirty-five years ago. J. Whitton, Esq.
1173. Are stationary engines quite out of date? Quite.
1174. You do not think it advisable to have stationary engines, for instance, at the Zigzag? Not at the Zigzag, certainly; but if there were a very steep incline that could not be otherwise got over one might be used. 3 Mar., 1870.
1175. Is there any part of our lines where a stationary engine could be worked with advantage? No, there is no part of our lines where the present engines cannot be worked well and with safety.
1176. What thickness of India-rubber could be put on the wheel if that plan were tried? You might make it any thickness you please, either by making the wheel so much larger or diminishing the diameter of the wheel to make room for the India-rubber.
1177. Would it weaken the wheel? No, I do not think so.
1178. Would not a wheel so made be less likely to slip off the rail than an ordinary iron wheel? I do not think it would last. I do not think it possible to make India-rubber that would be safe to run at the speeds we run at here.
1179. *Chairman.*] Suppose we adopted lower speed? It might do for ordinary roads, but I should be very sorry to recommend it for adoption in this country unless I had seen it in practical use.
1180. *Mr. Hoskins.*] During the progress of this inquiry, I think you have given answers somewhat similar to some of the other witnesses. They have always expressed the opinion that they wish to see the trunk lines of railway of a first class character. But supposing that we consider that any extensions of our railways from the various termini sanctioned by Parliament ought not be constructed on the same expensive scale, even although some persons may call them trunk lines, would you not consider that disregarding high speed would be one important consideration in having cheap railways? The extensions of these lines would be trunk lines in any case.
1181. Nevertheless, if we consider it not desirable to have the extensions of such a superior class of railway as the present, would not the important element of speed have to be considered. If there were a diminution of the speed there would be no necessity for having such solidly constructed lines? Speed makes some little difference no doubt; but if you have steep inclines you must have the same weight of engines if the same loads be carried; unless you reduce the gradients you cannot reduce the weight of the engines.
1182. Supposing that the amount of goods that will have to be transmitted from the interior as far as Goulburn on the south, Bathurst on the west, and Murrurundi on the north, will be much less than on the present lines, could we not then dispense with heavy engines and run lighter ones? No doubt if we run lighter trains we can use lighter engines.
1183. Could we not discard the higher rate of speed? No doubt, if the public would submit to it. There is no advantage in high speed, quite the reverse, so far as the cost of working the line is concerned.
1184. Could you suggest any means by which we can have locomotives constructed which would give us increased adhesive power without having such large tractive power, and therefore necessarily such costly engines in the consumption of fuel? Of course if you have engines of less tractive steam power you do not require to have nor would you have the same weight for adhesion; but additional adhesive power is only useful when properly proportioned to the steam power.
1185. Do you not think we might find means of giving increased adhesive power, for instance, by having heavier foot-plates over the wheels, and having wheels of much less diameter, provided we run at a lower rate of speed? I hardly see any advantage in weighting the engines in the manner proposed, if properly proportioned.
1186. I have seen on coal-pit lines engines with small cylindrical power but wheels low, not more than two feet in diameter, and they drew immense loads? No doubt, on tolerably level lines.
1187. You do not propose to have on these extensions steeper inclines than at present? That would depend upon the amount of money voted for the extensions. I do not propose to have worse inclines than 1 in 50; but if it should turn out impossible to make the gradients so favourable with the money voted, of course I should make them steeper.
1188. We may fairly assume that the amount of loading to be conveyed beyond Goulburn, Bathurst, and Murrurundi, will be less than nearer the seaboard, and therefore that a lighter description of locomotive, less costly in working, will answer every purpose, provided the one quality of speed be discarded? No doubt of it. If the traffic is much smaller, of course a much lighter locomotive will answer the purpose. The engine must be proportioned to the weight required to be drawn, and if the loads are not great, the weight of the engine may be considerably reduced. For instance, I may mention that the engines on the Windsor and Richmond Line, weighing 16 tons, would answer very well with light traffic on good gradients.
1189. They work now gradients of 1 in 40? 1 in 33.
1190. What is the average load these engines take on the Windsor and Richmond Line? Five or six loaded trucks, each truck weighing about $4\frac{1}{2}$ tons, and carrying 4 tons of loading; altogether about 40 tons.
1191. The case stands thus: we are in a fix—many of us are anxious to have railways extended, and we have to ask a perhaps reluctant Parliament to assent to the proposition, and we ask you if you cannot discard all notions of having first class lines, and yet give us something better than macadamized or mud roads beyond the present railway termini? No doubt a locomotive line could be constructed at a considerably less cost than the present lines—very little more than half. I believe a thoroughly good line could be made for £8,000 a mile. In that case we should have to reduce the rail and ballast and make the bridges of different material to what we are making them of at present. A line might possibly be made for less money, but I should be very sorry to recommend it, for I think it would be extremely dangerous to work it at the speed it will be found necessary to travel upon it.
1192. We would be satisfied with much less speed than at present? When I first commenced locomotive railways here, Mr. Donaldson told me that if I could beat the bullock drays it would do; but the public grumble now because we do not go fast enough. Unless you make a good railway to Albury, depend upon it the Melbourne people will take all the traffic; they will make a good one I have no doubt.
1193. I may tell you that a Member of the Legislative Assembly of Victoria has given notice of a motion to limit the expenditure upon their North-eastern Railway running towards Albury to £6,000 a mile? They will never have a railway fit to travel over at that price.
1194. Is it not the fact that the engines on our lines were worked too much when Mr. Thomas had charge? They are worked too much now on the Western (Mountain) Line. The fires are lighted on Monday morning, and are rarely put out till Saturday night. Each engine has two or three drivers employed upon it.

- J. Whitton, Esq. 1195. How long is an engine kept out of dock, as it is called? These engines never go into dock till Sunday and they start again on Monday morning.
- 3 Mar., 1870. 1196. How many more engines do you require to carry on the existing traffic? Twenty at least.
1197. Have any engines been ordered? Yes.
1198. How many? Twelve or fourteen, I think.
1199. When were the orders given? Some time last year. I advised the Commissioner to send home direct for four engines, which he did; Mr. Mort I think has ordered six more from England, and is making others; and Messrs. Vale & Lacy are making some.
1200. How do you account for it that we are so short of engine-power, and that no provision has been made to supply the extensions? Provision ought to have been made when the whole of the engines left in 1866 became absorbed by the traffic—other engines ought to have been ordered.
1201. Who is accountable for the remissness? That I cannot say.
1202. Do you not think serious loss will result in consequence of the excessive wear and working we are putting our engines to now? No doubt there will; the engines will rapidly wear out, working as at present.
1203. They do deteriorate? Unquestionably.
1204. *Commander Onslow.*] In fact they are not fairly treated? They are not fairly treated. The engines are running so constantly that it is impossible to get the repairs done.
1205. *Mr. Hoskins.*] Then we have never really had an opportunity of testing the capabilities of our locomotive engines on our Mountain Line, because they have never been in first-class order? Never since they first began to run. I reported upon this matter some time ago to the Commissioner, with reference to the defective condition of the rolling stock and the engines particularly; there was scarcely a carriage on the line fit for use, in consequence of the filthy condition in which they were kept.
1206. *Commander Onslow.*] Do you think any of the carriages are dangerous? No.
1207. *Mr. Hoskins.*] When was the period when—if a proper amount of forethought had been exercised in reporting to the Commissioner or the Minister that there was a necessity, having in view the probable opening of extensions, for ordering more rolling stock—when do you think these orders ought to have been given? They ought to have been given immediately after it was found that the other engines were being used. The moment it was found that the fifteen engines left were not sufficient, others ought to have been ordered.
1208. How long is that ago? Fifteen new engines were in the yard in 1866, and others have only recently been ordered.
1209. There have been no orders for locomotives between 1866 and quite a recent date? I think it was some time last year the orders were sent. If all the papers that have been called for had been printed and laid on the table, it would have been seen that Mr. Scott, the locomotive foreman, recommended to Mr. Thomas, two years ago, the advisability of ordering more locomotive engines for the goods traffic.
1210. I infer from your observations, that in the course of a short time Parliament will be asked to vote a large sum of money to put our engines in a thorough state of repair, in consequence of their having been unduly worked? No, I do not think that; I think the amount voted for repairs will be sufficient. The difficulty is that we cannot get the engines into the shops; they are only temporarily repaired, and sent out again; there is not time to repair them thoroughly.
1211. Do you not think that, if this system of merely temporary repairs is carried on much longer, it will culminate in a thorough break down? It is very likely, and I should not be at all surprised to find that we cannot work the traffic.
1212. Can you tell me when the indents were sent to England for the railway iron that was used in the construction of the line from Campbelltown south to Goulburn? I cannot say positively, but they commenced about 1858. The first shipment of rails for the line beyond Picton came out in 1863, and for the Western Line beyond Penrith the first shipment came out in October, 1863, and they have been coming out at intervals ever since.
1213. It is given in evidence that the rails laid down from Campbelltown South have not been equal in quality to those used between Liverpool and Campbelltown? I do not think they are, but there is a very small proportion of defective rails on that length.
1214. I should like to know when the indents were sent for these? We can tell you from the office books.
1215. Was it in 1858? I am not positive whether they were sent for in 1857 or 1858.
1216. Can you tell me whether, when railway iron was ordered, the Colonial Agent was instructed to purchase the best quality of railway iron? I do not know whether he had any instructions to that effect, but from the specifications the assumption would be that the iron was to be the best.
1217. Were specifications in all cases sent? Yes. In England a certain number of manufacturers were written to in the first instance to give in tenders for the supply of these rails, and no doubt in every instance, without regard to the character of the maker, the lowest tender was taken. Of course the assumption would be that the person who tendered was a proper person to be entrusted with the contract.
1218. If the specifications provided that rails of first-class quality should be supplied it does not matter what firm supplied them, provided that the rails were equal to the requirements set forth in the specification? Certainly not; but it is a well-known fact that some makers scarcely ever turn out a good rail if they tender for them. When tenders are called for and the lowest tenderer gets the order, if he cannot make a good rail at the price, as a matter of course he makes a bad one; and under such circumstances I defy any amount of inspection to ensure a good rail.
1219. Then specifications are valueless? I say they are to a certain extent, and inspection also. I should write to a good maker and ask him to give me his price for a good rail, and then you would get better rails than now, but you cannot get them at the same price.
1220. *Commander Onslow.*] Reserving the right of rejecting them after their arrival here, if they were not good? It is rather a long distance off to guarantee a rail, but I have no doubt they would do it.
1221. *Mr. Lee.*] Have we not always paid the highest market price? We have paid a fair market price. Our rails are a very fair sample. No doubt there are some inferior ones among them, but not a large proportion. So far as the Western Line is concerned, I see it is stated that the whole of the rails on the Western Line will have to be renewed in four years. I have no hesitation in saying that many of those rails will be there fifteen years hence.
1222. Did the Colonial Agent inspect the rails or have them inspected in England? The Colonial Agent did not inspect them, but I believe every care was taken by the gentleman who was paid to inspect them
to

to see that we got a thoroughly good article; but I know, as a matter of fact, that it is utterly impossible to ensure a good article by any amount of inspection if the maker is inclined to make an inferior rail. I do not believe it possible to guarantee a good rail except by making it the manufacturer's interest to supply it.

J. Whitton,
Esq.

3 Mar., 1870.

1223. From the evidence you have given as to the condition of the rolling stock and engines generally, do you not think it would be advisable that there should be some special supervision over them, something like that over marine steam-engines? There is a special supervision by Mr. Scott, the foreman at the Sydney Station.

1224. I mean apart from the Government themselves—I mean under the Steam Navigation Board, which is very stringent in its examination of marine engines, through its Engineer? I do not think so. I am quite sure that no Inspecting Engineer over steam-boats can know one tithe as much of locomotive engines as the foreman whose duty it is to inspect them.

1225. Do I understand that they are in a condition that is dangerous to the travelling public? No, they are not at all dangerous. What I said was that some of them were not in the condition they ought to be, but I did not say they are at all dangerous; they would not be allowed out if they were. Goods trains run at slow speeds, consequently there is not so much danger with them even if the engine should break down. Sometimes engines will break down, even when they seem to be in the most perfect order. It is impossible to prevent it on all occasions.

1226. But unquestionably the pecuniary loss to the country is great from the mode in which they are being temporarily repaired? No doubt; and that arises from the fact of some one not having sufficient foresight to order a supply of new engines in time.

1227. Whose duty was that? I cannot give an opinion on that point. It certainly was not mine.

1228. In reference to the trucks carried upon the Western Line by one engine, you have stated that one engine can take twelve? I have. Sometimes there are not twelve to take—it all depends upon the traffic.

1229. I understand that if an engine-driver declined to take twelve trucks he would be dismissed? Yes, if that number were ready to go.

1230. Has there ever been any remonstrance from any engine-driver that he did it under compulsion? There has been no remonstrance of the kind, but quite the reverse; the engine-drivers have taken them cheerfully. Before I issued the order I took twelve up myself. I mean twelve ordinary trucks, weighing when loaded 8 tons each, and a brake-van, altogether about 105 tons.

1231. You think there is not the slightest danger of over-weighting the engine and drawing the train with that load? Not the slightest. It has been done, and eleven trucks are constantly taken up. I have had no remonstrance of any kind. I may mention that I did dismiss one man a short time ago for excessive insolence to the guard, and refusing to take the number of trucks he was ordered to take; he refused to take more than seven, and as he refused to do what he was ordered to do I dismissed him. He would be very glad to come back to the line now and take as many trucks as might be ordered.

1232. *Commander Onslow.*] Do you know that cattle-trucks are generally used with excursion trains for carrying passengers? I believe they have been.

1233. Do you consider that a proper thing to do? Not at all.

1234. Do you think these excursion trains pay? I do not know.

1235. Do you think the hay traffic pays? I have been told it does not. I know there is very great detention of the trucks in the yard. It is made into an auction yard for all the auctioneers of Sydney.

1236. You have nothing to do with that? No.

1237. Had you anything to do with the drawing up of the special rates? No.

1238. Do you think as a rule it is better to pay by day-work than by piece-work? In some instances piece-work, but as a general rule day-work is the best. You can always guarantee better work by the day; and if the men are properly superintended you ought to know whether they are doing a fair day's work or not.

1239. What do you think is the difference between the rates of wages given here and in England for fitters and labourers? I think the rate of wages here is on an average three times more than it is at home.

1240. Do you think the Government as a rule gives more than the current rate of wages? Not that I am aware of. I do not in the Locomotive Department.

1241. Do you think that there would be enough traffic to warrant a first-class through railway between Melbourne and Sydney? I do. My own idea would be to let almost the whole of the Southern Line at once, to have at the same time a judicious system of immigration, and employ the immigrants on the works, so as to complete the line to Albury as soon as possible.

TUESDAY, 8 MARCH, 1870.

Present:—

MR. ALEXANDER,

MR. HOSKINS.

WILLIAM MACLEAY, Esq., IN THE CHAIR.

George Layton, Esq., examined:—

1242. *Chairman.*] You are the Accountant to the Treasury? I am.

1243. Can you give us an account of the amount that has been borrowed for railway purposes? Yes, I have here a "Statement showing the amounts authorized to be raised by loan for railway purposes, the nominal value of debentures issued, the proceeds of such debentures, the actual amount of expenditure to 31st December, 1869, and balances remaining unexpended to that date, so far as can be ascertained from the books of the Audit Office and Treasury." (*The witness handed in the same. Vide Appendix E.*)

G. Layton,
Esq.

8 Mar., 1870.

1244. I suppose all the money that has been sanctioned has been borrowed? Yes.

1245. Is that sufficient to complete the lines at present in process of being made? I imagine not.

1246. They will require more? I think so. There is something on the Estimates for this year.

1247.

- G. Layton, Esq. 1247. That is for extension. I mean is the money borrowed sufficient to complete the lines to Bathurst and Murrurundi? I believe not.
- 8 Mar., 1870. 1248. You have not added what would be required for that purpose? I have taken the actual amounts authorized by Parliament.
1249. I suppose the paper you have handed in states how much has actually been expended upon the railway works? Yes.
1250. As well as what has been borrowed? Yes.

THURSDAY, 10 MARCH, 1870.

Present:—

MR. ALEXANDER,
MR. HOSKINS,

MR. LORD,
MR. MORRICE,

COMMANDER ONSLOW.

WILLIAM MACLEAY, Esq., IN THE CHAIR.

Charles Mayes, Esq., C.E., called in and examined:—

- C. Mayes, Esq., C.E. 1251. *Chairman.*] Are you a civil engineer? Yes.
- 10 Mar., 1870. 1252. Have you been engaged on railway works? Yes, for about eleven years altogether; about four years in England and seven years in Victoria.
1253. And in South Australia? No.
1254. I see it mentioned in a paper before me that you made extensive surveys at Glen Osmond and Kapunda? That had nothing to do with railways. I laid out 60 miles of trial lines in Victoria to Echuca, and I also made a very extensive survey for a railway terminus at Echuca.
1255. Have you been long in New South Wales? About seven years.
1256. Have you been engaged in railway works here too? Yes, for a short time.
1257. You have expressed a wish to give evidence before this Committee on the subject of railway extension? Yes.
1258. You have written upon the subject, have you not? Yes. Here is a work I published, being the second work of the kind. (*Book produced.*) The edition is sold out now. It treats of many engineering subjects, railways among others; railway sleepers especially, and timber for bridges, and so forth. There is one thing I would like to call your attention to,—the experiments on colonial timber made here by Captain Martindale in 1858. I have his formula, and have cast out useful tables to ascertain the actual weight four kinds of timber used out here will bear. I believe these are the only tables of the kind ever published. I find that box is 82 per cent. stronger than red pine, and ironbark 70 per cent. stronger. I have gone into the subject a good deal. As you will see, I was appointed by the Commissioners for the Exhibition in Melbourne as a juror with regard to all exhibits relating to colonial timber and building materials.
1259. You are aware that the object of this Committee is to inquire into the best and most suitable mode of railway extension? Just so.
1260. And of course any inquiry of the kind you mention does not come within our province unless it has reference to the object of our appointment? The subject of sleepers seems largely connected with it. Sleepers are known to be extremely scarce. There are only two or three kinds of timber used for the purpose, and there seems to be a good deal of ignorance on the subject of our colonial timber. Captain Martindale mentions some forty different kinds of colonial timber, and many of these would be found to be good for sleepers if properly tried and tested. Ironbark and box—the only two kinds of timber used for sleepers, are at present becoming so scarce that the lines are actually kept back for the want of the permanent way being laid with these materials. If there were a premium offered for other kinds of sleepers that could be shown to be suitable, I have not a doubt that several kinds of timber would come in that we have little idea of at present. Of course this information is not easily obtained. Very few people know anything of Australian timber at all, unless it is the three or four kinds most commonly used. You will see by the experiments made by Captain Martindale that there is yet a great deal to be brought out in that way. Then, as regards the sleepers, and the use of timbers for the works, if you wish to save expense it seems to me that other colonial timbers might be much more largely used.
1261. Do you mean for bridges and station-houses? Yes, they might be used for bridges if properly seasoned. That is another thing that is not attended to, and there is a great loss in consequence to the people.
1262. Can you season the hardwood of this country? Yes, if it is kept from the sun. The timber should be grown on hills, should be felled at a certain age, and should be sound when felled; it should also be felled at a certain time, when the sap is down, from March to September. Independently of that, it should be stacked in rough sheds built on purpose. It wants the air and not the sun. Exposing it to the sun seems to be a mistake. The ends open, the wet gets in, and the sleepers do not last out half their natural lives. If they were properly seasoned in a shed, and properly stacked with a space between each one, so that the air could get to them, and not the sun, and then to be coal-tarred, they would last double the time they do now. They would answer the purpose also if they were not quite so long; they are 9 feet now—a waste of at least a foot and a half, in consequence of the ends splitting. At Melbourne they bolt the ends of the sleepers to close up the splits partially. They have had some miles done in that way—some hundreds of thousands of sleepers. I was in the department under the Engineer-in-Chief there for seven years, and I saw a good deal into these things. Then again there is another thing as regards timber. At the present time there is only a fence used, and that fence of course will soon rot, and there is nothing to take its place. I think there should be a live fence. We have plants here suitable for live fences—the prickly pear and other plants—so that when the other fence goes down the live fence might take its place. Otherwise there will be a continual expense for fresh fences, which will have to be renewed every few years.
1263. Have you thought at all upon the subject of a cheaper system of railways than we have at present—

I mean independently of these minor recommendations of yours? As regards the kind of lines I think we should have a cheap kind of railway, for the present population I believe is only about one person in the square mile. It appears to me that lines could be built a great deal cheaper than they are at present. The present lines are suitable for a population ten times greater than we have now.

C. Mayes,
Esq., C.E.

10 Mar., 1870.

1264. Have you any plan or suggestion as to how these railways should be constructed? I have made some notes, but I could have gone much more extensively into the subject if I had had longer notice. I have been making notes for the last twenty years, and I have an immense amount of information by me published and unpublished.

1265. Will you send in a statement? If I could put in this article (*handing a printed paper*) that I published here, as evidence, I think it bears upon the point.

1266. This is too indefinite. What we want is some plan, something laid down, so that we could see whether it was a thing that could be recommended, giving the exact cost? That could not be done so as to suit all cases, because so much depends upon the physical outline of the country—the nature of the inclines; in fact *all depends upon that*. If the inclines are as a rule easy, and there is only one range to cross, you might have the permanent way light and the engines and rolling stock light; and there might be an extra engine at the foot of the range, to be joined on to the other, one to take the train over the range, perhaps for a length of seven or eight miles. By that means there would be only half the wear and tear upon the permanent way. I understand that from Goulburn going westward towards Yass and Wagga Wagga the country is pretty light and the inclines easy. It has occurred to me that beyond Goulburn the line might be lighter than the present lines, with lighter rolling stock, and that it might be worked independently.

1267. Do you mean with a different gauge? No, I would always keep to the same gauge in every instance.

1268. And the same rolling stock? No, the rolling stock should be lighter.

1269. That would do away with all the benefit of adhering to the same gauge, if you had to unload at Goulburn in consequence of using different rolling stock? I would preserve it with the passengers. Passengers pay as a rule the best I believe.

1270. No, the passenger traffic is of no great amount in this Colony? To carry on the goods traffic you might have two light engines. It is the heavy engines that wear away the line; their great weight (some forty tons) is very severe upon the permanent way.

1271. Do you know much about locomotives? No, not much in detail. I know the kind of engine suitable to a certain kind of incline. I know that light engines are suitable for light inclines, and that even for heavy inclines two engines may be used instead of one, with the advantage of less wear and tear in the permanent way. That has been adopted, I believe, and found to answer well. I could furnish plans of cheap lines that could be made at any price almost.

1272. Will you state at what prices? I think a line of about 170 miles between Goulburn and Wagga Wagga, taking it all through, might be made for £8,000 a mile, including rolling stock, stations, and everything.

1273. That would not be a light line? The line itself would not cost more than half that, say £4,000 a mile; but including stations, rolling stock, and everything from first to last, it might be done for from £6,000 to £8,000 a mile. That would be for a trunk line. Of course other lines might be made for even half that, suitable for the present population.

1274. You have not seen the South Australian Lines—they have been made since you left? They have. I have seen a good deal of the lines in Victoria; in fact I was engaged on them for several years, and I know they are very heavy, more so than these are; they have a cheaper mode of working here.

1275. What weight would a 16-ton locomotive on six wheels draw up a gradient of 1 in 50—Could you give an idea of that? I know that a gradient of 1 in 50 requires about six-horse power per ton—about three times as much as it would do on a level. That would take it up at a speed fully equal to the present speed—thirty miles an hour. Did you mention the speed?

1276. No. You know at a certain point it is impossible for an engine of a certain weight and power, even at a walk, to take more than a certain load. I want to know what weight a 16-ton engine—which is looked upon as a very light one—would take up an incline of 1 in 50, at any speed? It would all depend upon the speed.

1277. Take the lowest speed—five to ten miles an hour? I am not prepared to answer that question just now. I could give you the information.

1278. Can you make an approximation to it—would it take 30 tons? Yes.

1279. And more? Yes.

1280. If an engine of that kind were sufficient for the traffic—an engine of 16 tons weight on six wheels—surely the working of such an engine as that would not require such an expensive permanent way as that you have mentioned? No, not more than half the weight of the present permanent way. 40-lb. rails would do for that.

1281. It would not require the same amount of ballasting? No. As regards ballasting, it could be put on the line for half the price, if broken by a machine instead of by hand labour.

1282. *Mr. Hoskins.*] It is broken by machinery here now? I was not aware of that.

1283. *Chairman.*] I suppose in an ordinary level country it is very easy to construct a railway without having a gradient exceeding 1 in 50? Yes, if the country is at all easy. Of course 1 in 50 would be a steep incline. They have no incline in Victoria more than 1 in 50 on the Government Railways at least, and that is only $1\frac{1}{4}$ mile in length, at Ravenswood.

1284. Have you ever seen any horse railways or tramways in use? Yes; there was one made between Melbourne and the Yan Yean—a very cheap line—it did not cost more than £1,000 a mile. You could make a tramway here for £1,000 a mile, wholly of timber—the sleepers and also the rails of timber. If there were a great deal of traffic, there might be an iron bar, 2 in. by $\frac{1}{2}$ in., spiked on to the rails.

1285. Would not a very light rail be cheaper than that? No, I think not. These were used in America for many years, and found to answer well, not only for tramroads, but also for the kind of locomotive you were speaking of. 16-ton locomotives could be used on a well-seasoned wooden rail, 9 in. by 5 in., with an iron bar, 2 in. by $\frac{1}{2}$ in., spiked upon it.

1286. Would not a piece of angle-iron do? No, that would interfere with the flange of the wheels. The flange runs close up to the rail, and in passing round a curve it would throw it off. A flat bar of 2 in. by $\frac{1}{2}$ in. would do. If you had locomotives of 16 tons and inclines approaching 1 in 50, then it would be better perhaps to have it $\frac{3}{4}$ in., but that would be the maximum. They use it in America much less than that.

1287.

C. Mayes,
Esq., C.E.

10 Mar., 1870.

1287. A very light rail, say 22 lbs. to the yard, placed upon light sleepers, would surely not cost more than that you speak of—a wooden rail with iron lining. Have you reason to know by calculation that it would not be as cheap? Probably it would be much about the same.

1288. The reason I ask is this, that you have stated it would be cheaper, and I think we have calculations to show that a light iron rail would be just as cheap as a wooden rail protected in the way you mention? It would be as cheap, and probably cheaper, taking it over a period of fourteen or twenty-one years, because wooden sleepers, unless you get them of first class timber and well seasoned, would have to be replaced every six or seven years.

1289. Was there much traffic on the tramway from Melbourne to the Yan Yean? No.

1290. What was it used for? Chiefly for the pipes that were taken up for the Waterworks. They had no kind of iron plate—merely the hardwood itself.

1291. It was in fact the cheapest possible kind of tramroad—inferior to the ordinary tramroad? Yes.

1292. I suppose it was made to save the heavy cost of carrying these pipes on a common road? Yes; the cost of transit on it would not be more than a third or fourth of that on common roads.

1293. Did they use more than one horse in a wagon? They used two horses to take two pipes, because there was not very good foothold for the horses. If they had kept the line in better repair one horse would have done very well—he could have taken up five tons.

1294. What were the gradients? I think the maximum was not more than 1 in 66.

1295. Was the pace superior to that on an ordinary macadamized road? Yes, the horse went as fast as he could walk—some four miles an hour. In going down inclines of course they had to put on the brake; he could trot down the inclines very well.

1296. I suppose these pipes would have taken eight horses, and double the time, to take along a common road? Yes; it was an ordinary bush road, and almost impassable in places.

1297. If it had been a good macadamized road it would have taken eight times the power exerted on the tramway? Not eight times—not more than five times; eight times where they use iron for the rail; here they used wood. In order to cheapen your lines you might adopt a system which is in use I believe in South Australia, of having a couple of ditches instead of gates at cattle-crossings. It answers the purpose, and saves the expense of gate-keepers. (*The witness explained by means of a sketch.*)

1298. *Mr. Hoskins.*] Would you have had any hesitation, if you had had charge of the tramway from Melbourne to the Yan Yean, in running a locomotive on it? I would not have done so; it was not suitable for it, unless it was a very small affair like the 8-ton engines first used in England.

1299. Would you have had any hesitation in running a locomotive weighing eight tons, at a speed of six miles an hour, on such a line as that? I would not; if the wooden rail had had a piece of bar-iron on the top, in that case it would have been perfectly safe—in fact such lines are in use. If I were to use engines on such a line I would increase the depth of the rails. These were only 7 in. by 3½ in.; I would have made them 8 in. by 4 in.

1300. *Chairman.*] What is the tractive power of an 8-ton locomotive engine? It would have something like thirty horse power.

1301. It would be of no use on a steep gradient, for want of weight? No.

1302. Upon a properly made tramroad, such as would be used for a horse railway, might not a light passenger carriage and an engine of that kind be used? It might be used; but I should think it would be advisable to have the engine and carriage in one, by which means you would obtain not only increased weight on the driving wheels, but also a considerable saving of dead or lost weight in proportion to the number of passengers conveyed.

1303. The object would be to use as light a locomotive as possible on such a line, to avoid the weight on the wheels, to suit the class of railway? Yes, engines of that kind might be used if the population was not larger than it is at present. Now it is no unusual thing for a train of 400 tons to stop at a station to put down a passenger, at perhaps a shilling fare, at a cost for wear and tear and loss to the train of about 7s. or 8s., in consequence of the stoppage and the brakes being put in force. As regards horse railways or lines for a small population, they could be made at almost any price.

1304. For £1,000 do you think? Even for £1,000, if it was a level country; £2,000 would answer the purpose better probably. I could give you more definite information if you were to show me a section of the country; I could tell you then the kind of permanent way and rolling stock suitable for it.

1305. *Mr. Hoskins.*] Could you give a rough approximation of the weight a locomotive of eight tons could take up an incline of 1 in 50? I could not give you any definite information now.

1306. It would take something more than its own weight? Certainly; perhaps three times its own weight; it might take a great deal more. I have not been engaged on railways now for the last six years, and I cannot bear all these things in mind. I could give you the information if I were to come again, in such a form as you could depend upon.

1307. Would you have any hesitation in saying that an engine such as we have been speaking of would take up an incline of 1 in 50 three times its own weight? It could if the wheels were coupled.

1308. Would it not in your opinion be cheaper to use a locomotive engine, taking that weight of goods up a line with such inclines, rather than use horse-power, seeing that, according to your calculation, it is equal to the power of thirty horses? Yes, it would be cheaper no doubt. Horse-flesh and horse-feed is cheap; still over a period of years it would be cheaper to use the locomotive.

1309. *Chairman.*] Do I understand you to mean, when you say that an engine of 8 tons is equal to 30 horse power, that it would draw up a gradient of 1 in 50 the same weight as thirty horses? Yes, I think it would.*

1310. Then the weight it would draw must be very much more than three times its own weight, because you are aware that one horse will draw a weight of over 4 tons, which is the ordinary calculation—in fact I think you mentioned a case in which one horse drew 5 tons where the gradient was 1 in 66? I said a horse could draw five times as much as on a common road.

1311.

* NOTE (on revision):—If the driving or coupled wheels could be connected with a central toothed rail by a toothed wheel secured to the axle of the coupled or driven wheels, so that it could be readily thrown in or out of gear by the engine-driver in the same way it is now done on shafts of ordinary machinery, this would give the bite or hold now obtained by horses on ordinary roads, and would dispense with the use of heavy engines altogether. With the ordinary friction or adhesive power of locomotives on iron rails, there would be a loss of about 70 per cent. of effective power on an incline of 1 in 50, reducing the actual power of the engine to nine horses.

1311. That is not the question. Mr. Hoskins, in order to show the superiority and cheapness of steam-power, put the question in this way,—that the engine would draw three times its own weight, say 24 tons, and that it would require thirty horses to draw the same weight. Now I wish to know from you whether you admit that, or whether you did not very much understate the power of an 8-ton engine, if it was equal to the power of thirty horses? I did not state that to be the power of the engine; I merely mentioned that it was *at least that*. I fully believe it would take up a great deal more, probably double as much; but I could not give any definite information unless I see a little further into it.

C. Mayes,
Esq., C.E.

10 Mar., 1870.

1312. Would not thirty horses on the same gradient, 1 in 50, draw 120 tons on an iron rail—4 tons per horse? They could do it at a slow speed, say 4 miles an hour.

1313. *Mr. Hoskins.*] I infer from the nature of your answers that you are of opinion that where a high rate of speed is not required, and the traffic is small, horse traction is cheaper than locomotive traction? There is a point where it would be as cheap. I cannot draw the line of demarcation now. If I were to take a note of it and come again, I could give you more definite information. There is a point where horse-power is as cheap as steam-power, but at a very small speed and with a very small amount of traffic. I should say, even with the present population, between any of the principal towns, it would be cheaper to use steam; but as regards branch lines it might be cheaper to use horse-railways as feeders to the main lines.

1314. Was the tramway you speak of from Melbourne to the Yan Yean laid on the ground, or was there a formation? It was formed and drained, but not ballasted.

1315. With culverts? There were very few culverts.

1316. What was the length of it? About 19 miles.

1317. Could you give us any idea of the amount of loading taken on that line? The pipes were 9 feet long, and would weigh something like 30 cwt—each, and then there would be the truck. I know that the line was not put to its greatest test; it might have done double the work without difficulty. I believe it was used chiefly for the pipes, and it was afterwards abandoned.

1318. How long was the line used to your knowledge? Probably a year.

1319. Was it taken up afterwards? No, it was not taken up, I know, for three or four years.

1320. Did you ever see any of the cheap railways you speak of in America? No; but I have every information about them, and I know they have answered. They have sometimes been replaced with better lines on account of the population having increased very rapidly, but where the population does not increase rapidly they would answer the purpose for many years.

1321. Have you seen any of the tramways in South Australia? No.

1322. Have you ever seen any coal-pit lines in England? Yes, I have seen some of them near Birmingham.

1323. Were these coal-pit lines worked by locomotive power? No, I saw them worked by horses, much the same as the line at Wollongong here. I have been over that line—a short line from the Bulli Mountain.

1324. Were the coal-pit lines you saw in England long lines? No, short lines, some three miles long perhaps.

1325. *Mr. Lord.*] What was the diameter of the pipes used at the Yan Yean? Thirty inches, I believe. They were very thick, to resist the pressure of the water. The Yan Yean is 600 feet above the level of Melbourne.

1326. *Commander Onslow.*] You have spoken about the tests of colonial timber made by Captain Martindale. Are you aware that in 1854 or 1855, in Paris, a series of almost exhaustive tests was made of Australian wood, previous to those made by Captain Martindale? I understood that they were made after Captain Martindale's experiments, and that they confirmed the tests made by him.

1327. *Mr. Hoskins.*] Have you ever had experience yourself in the management and laying out of cheap locomotive railways? No; the lines I laid out were for trunk lines in Victoria.

APPENDIX to Evidence given before the Select Committee for Railway Extension, by Charles Mayes, Civil Engineer, on 10th March, 1870.

HAVING given the subject of "Economic Railways" for Australia considerable attention, I am of opinion that railways suitable to the wants of the Colonies may be constructed and brought into working order for from £6,000 to £8,000 per mile, with maximum gradients of 1 in 50, and the sharpest curves of 5 chains radius, to be worked by six coupled wheel 16-ton engines for goods traffic, and Fairlie's standard 14-ton double bogie tender engine, with carriage combined, to seat 100 passengers, for passenger traffic.

Estimate for single line per mile.		£
Clearing two-rail fences and ditches		300
Permanent way with longitudinal sleepers.....		1,700
Works—such as bridges, culverts, crossings, breast-walls, piling, gates, &c.		500
Earthworks, including road approaches.....		1,500
		4,000
Stations, with buildings and all appliances.....	800	
Rolling stock ditto	800	
Laying out line, supervision, and other incidental expenses.....	400	
		2,000
		£6,000

The above items are presumed to be the average cost per mile for 100 miles through a favourable country; any extra cost will be for earthworks, tunnels, viaducts, road or river diversions, &c., which might cost £1,000 or £2,000 more per mile even over 100 miles of average country.

The permanent way is a very important item, because if not strong or substantial enough it will lead to interruption (on a single line) to the traffic by repairs and accidents; it is therefore essential that it should be constructed on sound principles and also be well drained.

The Great Western Railway of England is probably the most perfect in construction and also the easiest to travel on of any. One of its many excellent features is its permanent way, which consists of longitudinal sleepers 15 x 7½ laid upon ballast, and "preserved at their correct distance apart by transverse pieces 6 x 6 placed between them at every 11 feet, being notched into the timbers on both sides, and further secured to them by wrought-iron knee-straps." [*Civil Engineering, by Henry Law, C.E., page 56.*]

The steadiness of the Great Western Railway may be partly due to the 7-ft. gauge and very easy curves, but narrow gauge lines, both English and American, with longitudinal sleepers, are also noted for their smoothness in travelling and small cost

C. Mayes,
Esq., C.E.

10 Mar., 1870.

cost of maintenance. A continuous bearing or solid foundation is always preferable to a girder, and no engineer or architect would think of using a girder in preference to a solid wall or sleeper, where the latter is practicable, yet the ordinary permanent way on transverse sleepers is a succession of iron girders on rigid iron bearings in the form of cast-iron chairs, hence the enormous weight of rails required—from 60 to 80 lbs. per yard, and even the latter are so much injured by the jarring that double-headed rails are not good enough to reverse when one head only is worn out; as for light rails they are quite unsuitable, because of their weakness as girders. The Great Western Railway has bridge rails from 44 to 62 lbs. per yard, but this is required chiefly to keep the flange of the wheels off the sleepers, as the rail itself is not adapted or used as a girder. In proof of the efficiency of the continuous bearing given by the longitudinal sleeper, I may state that the locomotives on this line weigh not less than 60 tons, and that Brunel, the Engineer of the line, himself drove one of these engines from London to Bristol, 120 miles, in 90 minutes, without injuring the permanent way. I have therefore adopted this form of permanent way in its main features, and find it cheaper than any other. The longitudinal sleepers I propose to make in pairs by sawing a tree down the middle, of not less than 15 inches diameter, in 12 feet lengths, to break joint alternately at every 6 feet, to be kept from spreading by 1-inch iron tension-rods through the joints (housed to receive it) with a washer in the form of a fish-plate 12" x 3" x ½" secured to each sleeper by a small driving bolt or strong wood screw, the double nutted end of the tension-rod to pass through the centre of the opposite sleeper and to be tightened on to a washer. For a spanner, I propose using a 1½-inch cast-iron pipe, 4 feet long, with flanged ends, which will encase the tension-rod. The rolling stock will run upon 2 x ½ inch bar iron, screwed to the sleeper (adzed level to receive it), sufficient of the inside of the sleeper being also removed to allow room for the flanges of the wheels. The ballast in the cuttings will average only 30 cubic feet per lineal yard, in 2 trenches 2½ feet wide, 1 foot deep, and 2½ feet apart, the top being covered 6 inches deep. The embankments will require about 50 cubic feet per lineal yard, the average being 1½ cubic yard per lineal yard. It will be seen that any portion of this permanent way can be readily removed and replaced if required. The detail estimate is as follows for a mile of single way :—

	£
Ballasting 1½ cubic yard per lineal yard, @ 4/-.....	528
880 longitudinal sleepers, half round, 15 inches diameter, @ 7/-.....	308
11 tons bar-iron with holes and screws, @ £14 per ton	154
880 tension-rods and spanners complete, @ 8/-	352
880 fish-plates or washers with screws, @ 2/-	88
1,760 yards laying, including adzing, boring, &c., @ 3/-	264
	1,694

I calculate the 16-ton goods engines with 6 wheels coupled will take 80 tons gross weight up an incline of 1 in 50, at 6 miles per hour, on wet rails; and with dry rails in good order, about 120 tons, including tender and dead weight. A goods engine with six coupled wheels, weighing 26½ tons, on the East Lancashire Railway, took 171.6 tons up an incline of 1 in 40.6, two miles long, at 6.31 miles per hour. This was the average duty of thirty-eight trips, and as a reliable precedent is to be taken in preference to a calculation,—the data upon which theoretical calculations of the *duty* of locomotives are made being seldom constant or necessarily realized in practice.

Fairlie's standard 14-ton double bogie tender engine, with carriage combined, to seat 100 passengers, would be well adapted for our passenger traffic. The *Illustrated London News* of August 14th last contains a perspective view of a similar engine and carriage combined, taken while on trial at the Hatcham Iron-works in London. The wheels of the engine are coupled near together; one end of the carriage (which is 43 feet long) rests on the engine, the other on a 4-wheel bogie or truck. The whole, weighing 13½ tons, and 18½ tons loaded, passed round an oval line of rails 200 yards in circumference at 18 miles per hour. The standard proposed by Fairlie, to weigh 14 tons and to seat 100 passengers, in all 21 tons, could be driven 40 miles per hour up inclines of 1 in 100. This would give a speed of at least 20 miles per hour on dry rails, or a minimum speed of 12 miles per hour on wet rails, up inclines of 1 in 50, and would therefore be pre-eminently adapted for our future lines.

The half-tree sleepers, although not so durable as those obtained from large trees, would be found the cheapest in the end, since they could be obtained at one-fourth the price, and would last at least half as long as the sawn-sided sleepers, bevelled on the inner side to admit the flanges of the wheels coming close to the iron bar on the centre of the sleeper, and also on the outer side to throw off the rain.

The viaducts, bridges, and culverts, would be constructed chiefly of hardwood, and would last at least fourteen years without any extensive repairs, and would be so constructed that any portion might be easily replaced. If our best hardwoods were exclusively used, with proper selection and seasoning they would last at least twenty-eight years without much cost for maintenance. The proposed light engines and slow speed would require much less strength or timber for the under-bridges, culverts, and viaducts, than for heavy engines with great speed.

In my evidence allusion is made to the Yan Yean tramway. On referring to the specification for the construction of the tramway, and the conveyance and laying of the water-pipes, I find that it was enclosed with a two-rail fence. The sleepers were small trees, of any kind, 9 inches thick, and for joint sleepers 12 inches wide, adzed down to 7 inches in depth. The rails were 7 x 3½, of ironbark, red, white, or blue gum, or other approved hardwood. The keys were hardwood, dovetailed, wedge-shaped, and keyed or driven between the rail and the sleeper, housed and undercut to receive it. It took up 4,350 pipes 30 inches diameter, and weighing 26½ cwt. each; also 120 pipes 27 inches diameter, weighing 24 cwt. each. It was not ballasted in any way; it was badly drained, and allowed to get into very bad order. The stringy-bark and white-gum rails (approved of) wore away during the contract; the ends of the rails were also allowed to cock up, not being fished or otherwise sufficiently secured.

This horse railway, 18½ miles in length, from Melbourne to the Yan Yean Reservoir, and which I walked over at least fourtimes from end to end, soon after its completion in 1856, is anything but a good sample of what a horse railway should be.

RAILWAY EXTENSION.

APPENDIX.

[To Evidence given by J. H. Thomas, Esq., Inspecting Engineer, 8 February, 1870.]

A 1.

REPORT ON THE WORKING EXPENSES OF THE EXISTING LINES OF RAILWAY.

The Engineer for Existing Lines to The Secretary for Public Works.

Government Railways,
Office of Engineer for Existing Lines,
Sydney, 30 March, 1868.

Sir,

In accordance with your instructions, I forward a return showing at a glance the working expenses of the Existing Lines of Railways under the different branches, together with the miles of line open for traffic, the cost per train mile run, the total mileage, and traffic receipts during the last three years.

It will be seen that the cost per train mile run was—

	d.
In 1865	54·073
1866	52·035
* 1867	46·182

or a reduction in 1867, as compared with 1865, of $7\frac{9}{10}$ pence each mile, or, in the aggregate, a reduction of about £20,000.

The train miles amounted to—

In 1865	483,446
1866	490,415
1867	600,707

This great increase of 117,261 miles on 1865 is attributable to the additional miles of line open for traffic, and the increased number of suburban trains.

The number of miles of line open for traffic were—

In 1865	144 miles.
1866	144 „
1867	204 „

an increase in 1867 over the two previous years of 60 miles, or 42 per cent.

The receipts during the three years were as follows :—

	£	s.	d.
1865	165,942	0	3
1866	168,534	14	6
1867	188,761	2	1

giving an increase of £2,592 14s. 3d. in 1866 over the previous year, and an increase of £20,226 7s. 7d. in 1867 over 1866; and the following table will show how these amounts are apportioned to the various lines :—

Years.	G. N. R.	G. S. R.	G. W. R.	W. & R. R.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1865	60,722 7 8	76,539 4 0	22,509 17 7	6,170 11 0	165,942 0 3
1866	61,987 3 0	76,894 0 0	23,659 7 8	5,994 3 10	168,534 14 6
1867	59,503 11 8	94,572 0 1	29,722 3 5	4,963 6 11	188,761 2 1
	£ 182,213 2 4	248,005 4 1	75,891 8 8	17,128 1 9	523,237 16 10

The proportion of receipts to working expenses will stand thus :—

Years.	Receipts.	Working Expenses.	Receipts over Working Expenses.
	£ s. d.	£ s. d.	£ s. d.
1865	165,942 0 3	108,926 3 1	57,015 17 2
1866	168,534 14 6	106,229 9 6	62,305 5 0
1867	188,761 2 1	115,598 8 10	73,162 13 3

The total increased cost, then, of working the lines in 1867, over that of 1865, is £6,673; but if we take the first three items of expenditure, viz., locomotive, carriage, and permanent way, for which alone I am responsible (since June, 1866, when I was appointed), it will be seen that the 204 miles of permanent way (which includes the repairs of all station-buildings &c.) have been worked this last year for £3,227 less than the 144 miles were in 1865; and this would have shown a still more favourable comparison but for the great cost during the past year for flood-repairs, and relaying of three miles of line between Sydney and Parramatta, the wages and cost of ballast for which were charged to working expenses.

In the carriage branch, notwithstanding the great increased wear and tear on the Weatherboard Extension, and the enormously increased mileage, there is a reduction of over £2,000 upon the two previous years.

There

* The general average for 1867 on the Victorian Railways was 56·970.

There has been an increase in the locomotive branch of £4,078, which is entirely owing to the fuel and stores used in running the additional mileage (*viz.*, 117,261). But, taking the three branches of my department together, it will be seen that the 204 miles of line open in 1867 have been worked for £1,000 *less* than the 144 miles in 1865; and this favourable result has been mainly attributable to the system of paying only for work actually performed, or what is commonly known as piece-work, and not by time as heretofore. On this principle all the blacksmith's work at the Redfern Establishment is being done, and the same system has been carried out in all carpentering, carriage and house painting, bricklaying, masonry, erecting of engines and carriages, and numerous other matters incidental to the maintenance of railway works and rolling stock.

This system of piece-work, which has been adopted since I took charge of this department, affords the best means of reducing the expenses of large undertakings, and is being felt by the authorities in England as the only means by which they can hope to make any reduction in their overgrown dockyards, and other enormous expensively worked establishments, which are such a burden to the country. The following quotation from a speech of Lord H. Lennox, in moving the Navy Estimates in the House of Commons, will evidence the correctness of my views:—

“The late First Lord of the Admiralty agreed to nominate two gallant officers and two civilians to inspect the dockyards, with a view of reducing the expenditure under the head ‘Yard Service,’ and yet promoting the advantage of the Public Service. Complaints are made as to the inefficiency of dockyard shipbuilding as carried on under the system of day-pay. Sir J. Pakington inquired into this during his official tour, with a view to economy. At Chatham and Pembroke piece-work is carried on up to a certain point; and the last two vessels, both iron-clads, the ‘Hercules’ and the ‘Bellerophon,’ built there under the orders of the Duke of Somerset, were so built. There is some hope that the system will be applied to repairs and rebuilding.” (See *S. M. Herald*, 28th May, 1866.)

The expenses of working the traffic at per mile run has been about $\frac{1}{2}$ d. less the last year, compared with the two previous—the total cost being for each year as follows:—

	£	s.	d.
1865.....	34,946	3	10
1866.....	35,920	2	10
1867.....	42,727	2	7

and the cost per train mile run has been each year respectively—

	d.	d.	d.
1865—17-348.			
1866—17-578.			
1867—17-070.			

The computations in this report are based upon returns furnished me by the Accountant for Railways.

J. H. THOMAS,
Engineer for Existing Lines of Railways.

RETURN of Working Expenses of Existing Lines of Railways.

A 2.

Dimensions of small Tank Locomotive Engines employed on the Broelthal Valley Railway (Germany), 2 ft. 7 in. gauge:—

Diameter of cylinders	ft. in.
Stroke	0 10 $\frac{3}{8}$
Diameter of wheels	0 10
Distance between centres of leading and driving wheels	2 3 $\frac{1}{4}$
Distance between centres of driving and trailing wheels	3 8 $\frac{3}{8}$
Total wheel base	2 11
Diameter of barrel of boiler	6 7 $\frac{1}{8}$
Number of tubes, 73	2 9 $\frac{3}{8}$
Length of do.	5 7
Diameter of do.	0 1-38
Length of fire-grate	2 4
Width of do.	1 6 $\frac{1}{2}$
Heating surface—	sq. ft.
Tubes	147
Fire-box	27
	174
Area of fire-grate	4 $\frac{1}{4}$ sq. ft.
Pressure of steam	90 lbs. per sq. in.
Weight of engine	12 $\frac{1}{2}$ tons.

A 3.

Estimated cost of laying a Horse-tramway of 3-ft. gauge, with rails 25 lbs. to the yard:—

Rails, 40 tons at £10	£	400
Sleepers, 1,760 at 2s.		176
Spikes		10
Laying, at 3s. per yard		264
Ballasting, at 3s. do.		264
Stabling, every 20 miles		25
Stations, officers, do.		25
Bridges other than those on road		100
Small cuttings, drainage, &c.		200
Superintendence, &c.		36
		<hr/>
	£1,500	

Estimated cost of laying Light Railway of 3-ft. gauge, with rails 40 lbs. to yard:—

Rails, say 63 tons at £10	£	630
Sleepers, 1,760 at 2s.		176
Spikes		20
Laying, at 3s. per yard		264
Ballasting		264
Sheds		25
Station, offices, &c.		25
Bridges other than those on road		400
Small cutting, draining, &c.		600
Water-tanks, signals, &c.		20
Superintendence, &c.		76
		<hr/>
	£2,500	

A 4.

MY opinion is, that horse-tramways, or a less expensive class of railway with light rails, and employing tank-engines of about 12 tons weight, with rolling stock in proportion, would not only be most valuable as feeders to the present lines, but would supply a cheap mode of communication over the country sufficient for present exigencies, and which would pave the way for the more expensive and substantial lines of railway when the country becomes "opened up," and a more rapid and extended means of traffic is demanded.

It has been said that in America and other places where cheap railways have been constructed, that after some years it was found necessary to take them all up again and substitute more substantial works. This is to a certain extent true, but it is also true that before this was done their work had been accomplished—large centres of population established, and the country put in a position to pay for the more expensive lines. No one would advocate the erection of large and expensive buildings in the founding of a new Colony, merely because in Sydney and other colonial cities the primitive structures are now giving way to buildings of more architectural pretensions.

It is now, I believe, some twenty years since railways were commenced here, yet if we glance at a map of the Colony with the existing lines marked upon it, we shall be struck with astonishment to find that after an expenditure of some six millions, what a comparatively short distance we have penetrated into the interior. This, it must be admitted, is not a very satisfactory state of things. It is the old story that "while the grass is growing the steed is starving"; for if we are to wait for the country being "opened up" by this slow and expensive process, we shall not only have to wait a long time, but plunge the country into such a debt as it will be found difficult to extricate it from.

A horse-tramway or light railway can not only be constructed but maintained at a less cost than a common road. Indeed, in some parts of the Colony, such as Riverina (a district as large as France), macadamized roads cannot be made at all, owing to the want of blue-metal or any kind of stone.

In a pamphlet on Roads, Railways, and Canals in India, published by Messrs. Spon, the writer, Mr. T. Login, there are many useful suggestions connected with light railways. Mr. Login, writing upon roads, their construction and maintenance, states:—"Portions of the Grand Trunk Road are actually costing more to keep in repair than a line of railway; the latter being about 100 rupees a month a mile, while portions of the Grand Trunk Road are costing 120 rupees a month a mile. With such an enormous expenditure therefore, increasing year after year, a time must soon be reached when all the available money will be swallowed up in repairs, unless some other means be devised for facilitating the traffic, which is daily increasing."

After collecting data and going carefully into the matter, Mr. Login arrived at the very remarkable conclusion that it is cheaper for Government to send all the traffic by rail freight free than to keep up metalled roads for its transport.

In this Colony we are in a somewhat similar position: yearly we are paying large sums for the forming and maintaining of our roads, which if expended on light railways or horse tramways would very soon cover the country with a cheap and expeditiously laid mode of conveyance, quite sufficient to meet all our requirements for years to come.

A reviewer of the pamphlet I have referred to, in a late number of the *Delhi Gazette*, says—"It is evident that light railways as recommended by Sir Macdonald Stephenson would be preferable to roads. These and all district roads that may be made, should run at right angles to and not parallel with the great railways and canals; thus they would act as feeders for the great lines of communication, and should be as numerous as possible."

A horse-tramway of 3-ft. gauge and 25-lb. rails can be laid along the line of road, making use of the present bridges where practicable, or constructing others where found necessary, for £1,500 per mile.

A light railway of 3-ft. gauge and 40-lb. rails, employing locomotive engines of from 10 to 14 tons weight, can be laid along the line of road, making use of the present bridges where practicable, and constructing others where found necessary to do so, for the sum of £2,500 per mile.

In both these estimates I have allowed for slight cuttings and embankments (in the latter three times that of the former); and from my knowledge of the country I am convinced that a thousand miles could be laid in five years at a less cost than I have estimated.

JAS. H. THOMAS,

Late Engineer for Existing Lines of Railway, New South Wales.

[To Evidence given by J. H. Thomas, Esq., Inspecting Engineer, 15 February, 1870.]

Locomotive branch	£ 33,407	d. 16 585	£ 288	144 miles.	£ 33,420	d. 16 357	£ 232	144 miles.	£ 37,498	d. 14 981	£ 183	204 miles.	£ 44,522	d. 13 849	£ 181	246 miles.	£ 56,153	d. 15 082	£ 177	317 miles.
Carriage branch	7,585	3 765	52		7,227	3 536	50		5,732	2 290	28		8,137	2 531	33		14,017	3 764	44	
Permanent way and works	30,408	15 096	211		27,082	13 253	188		27,181	10 859	133		30,009	9 334	122		50,440	13 547	159	
Traffic and all other charges	37,523	18 627	260		38,499	18 889	267		45,186	18 052	221		61,410	19 102	249		63,205	16 976	199	
Total working expenses	108,923	54 073	811		106,228	52 035	737		115,597	46 182	565		144,078	44 816	585		183,815	49 369	579	
Total receipts	£165,942				£168,534				£188,761				£222,390				£266,712			
Number of train miles run	483,446				490,415				600,707				771,529				893,552			

From the annexed table, it will be seen that the average cost on all our lines of maintaining a mile of line per annum was in

1865.....	£211
1866.....	188
1867.....	133
1868.....	122
1869.....	159

Our total cost of maintenance and working of a mile of line per annum, including all charges, was in

1865.....	£811
1866.....	737
1867.....	565
1868.....	585
1869.....	579

If we take the total expenditure and divide it by the number of train miles run, we shall find that every mile run has cost in d.

1865.....	54·073
1866.....	52·035
1867.....	46·182
1868.....	44·816
1869.....	49·369

As I was relieved from the duties of Engineer for Existing Lines on the 1st June, 1869, and from which date they have been in charge of Mr. Whitton, I would wish to state that our working expenses for the first six months amounted to £79,718 10s. 3d., and from the 1st July to 31st December they amounted to £104,098 17s. 2d.,—an increase at the rate of £48,000 per annum.

The number of train miles run during the two portions of the year were respectively 429,812 and 463,933, making the cost per train mile run, including all charges, for the first half-year 44½d., and for the second half, 53½d.

I estimate that the maintenance of a mile of a light locomotive line such as I described in my memo. to the Chairman would not exceed £50 per mile, and the cost for locomotive power, traffic, and all other charges about £120, for doing the same amount of work as at present.

A horse-tramway would cost for maintenance about £40, and traffic with all other charges about £80, but its capabilities would not be so great as the locomotive line.

JAS. HY. THOMAS.
18/2/70.

[To Evidence given by A. Ashdown, Esq., Accountant, Railway Department, 10 February, 1870.]

B 3.

MINUTE PAPER.

Subject :—Division of the G. S. W. and W. & R. Railways.
Accountant to Commissioner.

Railway Branch,
Sydney, 9 June, 1869.

Prior to the commencement of the present year, the above railways were subdivided as follows, viz. :—

Great Southern Line—From Sydney to Parramatta Junction, and from thence southward.

Great Western Line—From Parramatta Junction westward.

Windsor and Richmond Line—From Blacktown Junction to Richmond.

The earnings were apportioned to the above lines in the following manner :—

Great Southern Line was credited with all sums received at all stations from and including Sydney to Parramatta Junction, and thence to the Southern Terminus, both for coaching and goods, including therein all amounts received for like traffic, to and fro, west of Parramatta Junction (excepting the portion appropriated to the Windsor and Richmond Line).

Great Western Line was credited only with such sums as were received at stations west of Parramatta Junction.

Windsor and Richmond Line was professedly credited with the value of the traffic over the sixteen miles from Blacktown Junction to Richmond, which apportionment was generally incorrectly made by the various Station-masters.

The expenditure was apportioned in the following manner :—

Great Southern Line was charged with the whole of the expenditure under Schedules A and B (excepting the proportion of Schedule A charged to Windsor and Richmond Line), and the expenditure under Schedules C, D, E, and F, appertaining to this portion of the line.

Great Western Line was charged with the expenditure under Schedules C, D, E, and F, appertaining to this portion of the line.

Windsor and Richmond Line was charged with the expenditure under Schedules A, C, D, E, and F, appertaining to this portion of the line.

With the view of more correctly apportioning the earnings and expenditure on the lines, the following subdivision was made, and came into operation on 1st January last.

Trunk Line—Sydney to Parramatta Junction.

Great Southern Line—From Parramatta Junction to Southern Terminus.

Great Western Line—From Parramatta Junction to Penrith.

Mountain Line—From Penrith to Western Terminus.

Windsor and Richmond Line—From Blacktown Junction to Richmond.

As regards the earnings, the actual value of the traffic (coaching and goods) passing over these subdivisions are credited to the respective lines.

The expenditure under Schedules C, D, E, and F, is charged to the several lines as it is incurred.

The expenditure under Schedule A, and carriage repairs appertaining to the Mountain Line, is charged to that line, and the remainder of the expenditure under Schedules A and B is charged to General Lines, the amount of which at the end of the year will be transferred, and distributed to the several lines according to a mileage rate.

It will be observed that the vouchers herewith, viz.,—

	£	s.	d.	
F. Kellaway.....	6	0	0	dated 29 May, 1869.
Edwd. Robinson.....	18	6	0	29 " "
T. Gerrard.....	28	1	9	29 " "
James Budd.....	66	5	0	27 " "
G. F. Chapman.....	3	0	0	2 June, "
Robert Davis.....	2	18	6	" "

have been altered from the subdivisions now in force to that which previously prevailed.

The Accountant respectfully requests instruction from the Commissioner whether such vouchers and others prepared in a similar manner are to be entered, and the accounts and books altered accordingly.

A. ASHDOWN,
Accountant.

M.P. 69/1715.

Permanent Way Branch,
Sydney, 14 June, 1869.

Memo. to Engineer-in-Chief for Railways.

I BEG respectfully to report, for the information of the Engineer-in-Chief, that the extra men employed in relaying the line complain very much of inconvenience entailed on them by the delay in the payment of their wages, many of them having, they state, to leave their families residing at a distance in the country, without the means of providing for maintenance in their absence.

JOSEPH LEWTON.

Forwarded for the information of the Commissioner. I may however remark, that the conduct of the Accountant in this matter appears to me most inexplicable, and I do trust that some steps will be taken to prevent a recurrence of such reprehensible conduct. As I have already stated to the Commissioner, the appropriation of the amounts had nothing to do with the payment of the men. A number of the permanent-way men will lose a quarter of a day, I have no doubt, in having again to come to Sydney for their wages. J.W.—13/6/69.

Commissioner. 13/6/69.

Accountant to make the necessary provision to avoid such delay. J.S.—15/6/69.

Mr. Ashdown. 16/6/69.—R.M.

It will be in the recollection of the Commissioner that the Accountant waited upon him on Friday, 4th instant, with some vouchers he had just received, of which the appropriation had been altered—certified by the Engineer-in-Chief, Mr. Whitton; and having explained to him the nature of such alterations, the Commissioner undertook to confer with Mr. Whitton on the subject. In the early part of the following week the Accountant again directed the attention of the Commissioner to the matter, and having learnt from him that Mr. Whitton had expressed an unwillingness to certify vouchers in the same manner as heretofore, the Accountant represented to the Commissioner that, until the matter was decided, the vouchers could not be entered, and consequently the money could not be obtained from the Treasury for the payment of the men. The Accountant then prepared, for the information of the Commissioner, and handed to him on Friday morning last, a minute (copy of which is attached hereto, marked A) explaining the division of the lines, and the appropriation of the earnings and expenditure which formerly prevailed, and the new arrangement which came into operation on 1st January, 1869. He also produced appropriation statements for the fortnights ending 22nd May and 5th June, the latter certified by Mr. Whitton, showing the appropriation of the expenditure to be the same as previously obtained. Whereupon the Commissioner sent for Mr. Whitton to his room, and after considerable discussion on the subject, the Accountant understood that the present subdivisions were to be continued, with the following modification regarding the appropriation of the expenditure, viz. :—Instead of continuing to charge the Mountain Line with the expenditure under Schedule A, and the carriage repairs appertaining specially to this section, which the Engineer-in-Chief stated could not be separated, the whole of the expenditure under Schedules A and B would be charged to one account, designated by the Engineer-in-Chief "G. S. & W. Railway," excepting only the proportion of Schedule A for the Windsor and Richmond Line, which it was stated can be kept distinct.

The Accountant then left the room, with the understanding that the appropriation statement last alluded to, for fortnight ending 5th June, would be altered accordingly, and furnished to him, so that the vouchers could be duly entered in the books, and the money obtained from the Treasury. The statement was not furnished on that day; and on the following morning, Saturday, the Accountant saw the Commissioner in presence of Mr. Whitton, and pending the preparation of the corrected appropriation statement, and with the view of avoiding, if possible, a delay in the payment of the men, the

Accountant

Accountant, at the request of the Commissioner, instructed the Book-keeper to take a pencil memorandum of the amount of the pay-sheets, and leave a blank page in the cash-book for the entry of the vouchers when such corrected appropriation statement was furnished. After placing such pay-sheets in abstract, and obtaining the Commissioner's signature thereto, the Accountant proceeded to the Treasury, and endeavoured to obtain a cheque for the same, but failed in so doing; he arranged, however, to procure it early on the Monday morning, on which day the money was forwarded to the various portions of the line, and the men paid. On that day the Accountant waited upon the Commissioner with a memo., which he suggested should be indorsed on the minute before referred to, as embodying the determination arrived at, viz. :—"The present subdivisions to be continued, and, with the exception of the W. and R. Railway, which can be distinctly charged with the expenditure appertaining to it under Schedule A, the whole of the remaining expenditure under Schedules A and B to be charged to one account, designated by the Engineer-in-Chief 'Great Southern and Western Railway'; the amount of such expenditure at the end of the year to be distributed over the several divisions, according to a mileage rate."

As the minute in question had been handed to Mr. Whitton, the Commissioner requested the Accountant to see that gentleman, and arrange the matter with him. In pursuance of such request, the Accountant waited upon Mr. Whitton, and communicated the above memo. to him, to which he assented, and stated that the vouchers would be appropriated by him correctly, and in accordance with the Minister's directions.

The amended appropriation statement has not yet been furnished, and in consequence no entries have yet been made in the railway books of the amounts comprehended in the pay-sheets above referred to.

The foregoing explains how the delay occurred in the payment of the men in this instance; and to enable the Accountant "to make the necessary provision to avoid such delay," definite instructions from the Commissioner, as requested in the minute above referred to, are required, and which the Accountant again respectfully requests may be furnished to him.

To Commissioner.

A. ASHDOWN, Accountant.
18/6/69.

Mr. Whitton will perhaps put this matter in a tangible shape to be dealt with. J.S.—24/6/69.
Mr. Whitton.

NOTE.—The appropriation statement for fortnight ending 5th June, as also the vouchers referred to in M.P. 69/1674 (9th June), were, in pursuance of the determination arrived at after the discussion within referred to, altered accordingly by the Engineer-in-Chief to the new division which came into operation on 1st January last (excepting that the "designation" of such divisions were altered by him as follows, viz. :—

Trunk Line was marked Sydney to Parramatta Junction.
Western Line " Parramatta Junction to Penrith.
Mountain Line " Penrith towards Bathurst.

All subsequent vouchers and appropriation statements have continued to be so appropriated by the Engineer-in-Chief until July, when by the order of the Commissioner a reverting to the former state of things was directed—see M.P. 69/1715.

M.P. 69/1715.

MINUTE PAPER.

Subject :—Division of working expenses, G.S.W. & R. Railways.
Engineer-in-Chief to Commissioner.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 2 July, 1869.

WITH reference to the enclosed long minute from the Accountant, I have only to say that, before he attempted to improve upon the forms which were originally prepared by me, there was no difficulty in appropriating the accounts. There are only three lines, which were called the Southern, Western, and Richmond Railways, but the Accountant has by great ingenuity invented for them the following doubtful designations :—Trunk Line, Southern Line, Western Line, Mountain Line, Richmond Line, and General Lines. I have pointed out verbally to the Commissioner and Accountant that it is impossible to keep the accounts in the manner suggested, so far as the rolling stock is concerned; and therefore for this service the mileage proportion of the expenses will be charged to the different lines at the end of the year or half-year, as may be required. I see no use in the divisions which have been adopted for the permanent way accounts, for instead of dividing the lines into six sections, why not divide them into as many sections as there are stations?

The permanent way sheets, during the time I had previously charge of the maintenance of the lines, were divided into the following sections, viz. :—Sydney to Parramatta, Parramatta to Liverpool, Liverpool to Campbelltown, Campbelltown to Picton, Parramatta to Penrith, Blacktown to Richmond. It was not considered necessary to have separate entries for all these in the Accountant's books, but if the cost of each section was wanted it could be easily got at. I consider the division of the lines as proposed by the Accountant to be absurd and useless, entailing a large amount of additional labour without any possible advantage.

The whole of the mileage on what is called the Trunk Line is, in reality, southern mileage, and the only headings in the accounts should be—Southern, Western, and Richmond Railways.

In collecting the mileage from the different returns now kept it requires the addition of six different sheets, the headings being—Trunk Line, Southern Line, Western Line, Mountain Line, Richmond Line, and General Lines.

Having enumerated all the lines by special name, it may well be asked where the General Lines are. I consider by adopting these useless subdivisions the Accountant is succeeding in getting the whole of the books into a state of inextricable confusion, out of which I see no way of escape except by reverting to the old system, and this should be done at once.

On looking over some of the forms under the heads proposed by the Accountant, I find one headed General Lines, but which in reality contains nothing but shunting, so I suppose that general lines and shunting are synonymous. On this sheet also an ingenious attempt has been made to apportion to the mileage for shunting the cost of fuel, but it is quite evident that this can only be arrived at by the average mileage consumption, and is therefore just as well arrived at by the old system.

I desire to call the Commissioner's attention to another alteration made by the Accountant in Schedule C, Maintenance of Way—

1. Salaries and wages of Inspectors, &c.
2. Repairs of permanent way.

No. 1 was intended to show the salaries of Inspectors, time-keepers, and others whose duty it was to superintend the labourers; No. 2, the wages of men repairing the permanent way.

In the statement of working expenses for 1868, the Accountant has included the labourers' wages with the Inspectors, and makes it appear as if the cost of superintendence was £10,500 9s. 6d., and the repairs of permanent way (whatever this may represent), £757 12s. 11d.

As the accounts now stand, it appears that it cost £10,500 9s. 6d. to superintend the labour represented by £757 12s. 11d. I can do nothing more than call the Commissioner's attention to these matters, and it rests with him to say whether the accounts are to be properly kept or not.

JOHN WHITTON.

AFTER an examination of the distribution-sheets, and having carefully considered the whole of this long and complicated correspondence, I think the best course that can now be pursued is to return to the distribution of the working expenses as previously initiated by the Engineer-in-Chief, and carried out previous to the present method being adopted, as the present system appears to me to be quite unintelligible.

On reference to the distribution-sheet referred to by the Engineer-in-Chief, it would appear that it costs £10,500 9s. 6d. to superintend labour represented by £757 12s. 11d. I am decidedly of opinion that the more simple the divisions of these working expenses, the more easily these very complicated accounts will be understood; and I therefore direct that the recommendation of the Engineer-in-Chief to revert to the old system be at once carried out.

JOHN SUTHERLAND.

Mr. Ashdown. R.M.—7/7/69.

THE Commissioner's directions will be carried into effect.

With regard to the offensive observations contained in the minute of the Engineer-in-Chief, the Accountant begs to state that he has not attempted to improve upon or in any way alter the forms which the Engineer-in-Chief states were originally prepared by him, and that he resents with indignation the disgraceful accusation that "the Accountant is succeeding in getting the whole of the books into a state of inextricable confusion," which is as untruthful and unwarranted as it is ungentlemanly.

He also denies having made any alteration in the charges under Schedule C, Maintenance of Way. The vouchers have been charged as they have been marked and appropriated; and for their correctness or otherwise the officer certifying them is alone responsible, as per M.P. 67/1358 (attached).

The Accountant feels that having in his minute enclosed herein, 69/1674, dated 9th ult., clearly placed the matter before the Commissioner, he has performed his duty, and that by the directions now received he is relieved from all responsibility in reverting to the state of things formerly in operation.

A. ASHDOWN, Accountant.
9/7/69.

To Commissioner.

Mr. Whitton to see. 15/7/69.

Mr. Whitton to see. 15/7/69.

As it would be useless to argue with a blind man about colours, or a deaf man with respect to sounds, so would it be absurd on my part to argue with the Accountant, as to what is or what is not "gentlemanly" conduct.

I would however advise the Accountant to keep his temper in future, and to be a little more choise in his language, or I may see occasion to write to him in a manner that he will not easily forget.

I again state that it is thoroughly muddling the accounts to attempt to keep them in an impracticable manner, and by adopting for them a number of headings, useless and unintelligible, when a simple, straightforward, and efficient course can be pursued.

With reference to the alteration in keeping the Permanent Way Accounts under Schedule C, I am informed that the course recently adopted was in compliance with the wishes of the Accountant.

It appears the Accountant considers the officer who signs the accounts responsible for the correctness of their appropriation, and yet he issues instructions binding the officers to appropriate them in a manner indicated by himself.

The Commissioner.

JOHN WHITTON.

The Accountant to see and return, as I shall have to take further steps in this matter. J.S.—23/7/69.

Mr. Ashdown. 23/7/69.

The Accountant has never manifested any other than an anxious desire to facilitate the business of the department, and to treat with courtesy and respect all with whom he came in contact.

He feels that he has good reason to be aggrieved in being subjected to the unmerited and offensive observations of the Engineer-in-Chief, and that he is bound to resent with the indignation he feels, the unfounded and unwarranted aspersions cast upon his character and ability by that officer.

The Accountant courts the fullest inquiry and investigation into all his proceedings, and would respectfully suggest that the Auditor General, the Examiner of Public Accounts, or any one or more competent gentlemen, be instructed to inquire into and report upon his department.

To Commissioner.

A. ASHDOWN, Accountant.
26/7/69.

67/1358

MEMORANDUM.

In the Accountant's office all vouchers for payment of moneys on account of Railways, &c., duly certified by the proper officers, who are alone responsible for the correctness of such vouchers, will be received and must be duly entered in the cash-books by the Book-keeper; such entries being indicated by the marking on the vouchers the consecutive number and folio of cash-book in which such entry has been made.

The verification of such entries will be the initials of the Accountant on the vouchers, and will be the justification of the Commissioner's signature being attached thereto. Approved.—J.B.

Railway Office,

July 17, 1867.

Appropriation of Expenditure.—Working Expenses.

In pursuance of M.P. 69/1715, the Accountant requires the accompanying vouchers to be marked to which of the three divisions of Southern, Western, and Richmond Railways they are to be charged respectively, so that they may be entered in the books in accordance therewith.

	£	s.	d.	
Edward Robinson...	118	13	6	Marked chargeable to G. S. W. & R. Railways.
G. W. Hanks ...	2	10	0	Do. do. do.
W. H. Quodling ...	1	15	6	Do. do. do.
Thos. Gerrard ...	41	4	0	as to 10/4 do. do.

To Commissioner.

A. ASHDOWN, Accountant.
16/7/69.

Return these vouchers to the Accountant. J.S.—23/7/69. Mr. Ashdown.

I am astonished at the conduct of the Accountant in wasting not only his own time but mine also in asking such absurd questions with reference to the appropriation of the accounts. As the general locomotive expenses and those of the rolling stock cannot be charged direct to any one of the lines, how can the painting of engines, carriages, and wagons be charged to any particular line when they are used on all lines? Take Robinson's account. To painting No. 29 engine and tender, £15. To which line would the Accountant charge this item, when the engine may be to-day on the Southern Line and to-morrow on the Western?

The next item, amounting to £101 6s., is for painting first class carriages, second class carriages, composite carriages, tram cars, and brake vans. How is it possible to charge the painting of these to any particular line, when the different vehicles may be used in one week's time on all the lines?

The same may be said of the item of £2 7s. 6d. for painting D wagons.

If the Accountant would give himself the trouble to think, he must see how impossible it is to comply with his request.

J.W.—19/7/69.

Commissioner, 19/7/69.

The Accountant, if permitted to perform his functions, would have no difficulty in dealing with vouchers marked chargeable to G. S. W. & R. Railways; and, as the Commissioner is aware, all such expenditure not specially appertaining to any one line, but to all generally, was duly provided for under the heading of General Lines, in the system introduced by the Accountant and recently in operation. The amount charged against such heading to be distributed to the several lines at the end of the year by a mileage rate. Such

Such functions however have been usurped by the Engineer-in-Chief,—see M. P. 69/1715. In that paper it distinctly states that “the only headings in the accounts should be Southern, Western, and Richmond Railways”; and the Accountant conceives it was a reasonable request for him to be informed to which of such three headings or divisions vouchers marked as above should be charged.

A. ASHDOWN, Accountant.
26/7/69.

To Commissioner.

(69/2175.)

MINUTE PAPER.

Appropriation of Expenditure.—Working Expenses.
Accountant to Commissioner.

22 July, 1869.

In pursuance of M.P. 69/1715, the Accountant requests the accompanying vouchers to be marked to which of the three divisions of Southern, Western, and Richmond Railways they are to be charged respectively, so that they may be entered in the books in accordance therewith.

	£	s.	d.	
Edward Robinson	112	13	6	Marked chargeable to G. S. W. & R. Railways.
G. W. Hanks	2	10	0	Do. do.
W. H. Quodling... ..	1	15	6	Do. do.
Thos. Gerrard	41	4	0	as to 10/4 thereof do. do.

A. ASHDOWN, Accountant.
16/7/69.

THE foregoing is a copy of a minute handed by the Accountant to the Commissioner on the day it bears date, and the vouchers specified therein have not yet been returned to him.

Upon receiving this day the pay sheets of the Locomotive and Permanent Way Branches, and the accompanying appropriation statement for the fortnight ending 17th July, in which a portion of the amount is also charged to G. S. W. & R. Railways, the Accountant again waited upon the Commissioner requesting his instructions, which instructions the Commissioner declined to furnish in writing.

In pursuance, however, of verbal directions communicated by the Commissioner to the Accountant, in the presence of the Journal-keeper, Mr. Barling, the Accountant now begs to report that he has instructed the Book-keeper to open an additional or fourth heading in the railway books, under the designation of G. S. W. & R. Railways, to which all vouchers so marked will be entered.

A. ASHDOWN, Accountant.

BEFORE taking further action in the matter, I require to see the authority under which the recent alterations are made in the mode of keeping the accounts, which I understand have been carried out under the Accountant's directions.
The Accountant.

J.S.—23/7/69.

THE authority for making alterations in the mode of keeping the books, and of determining generally the manner in which the accounts should be kept, the Accountant conceives to be inherent in his office; and upon the occasion of the appointment being offered to and conferred upon him by the late Commissioner for Railways and Minister for Public Works (Mr. Byrnes), it was so explained to him. Further, he was specially desired to examine into and suggest such alterations and improvements in the mode of keeping the books and accounts as he should consider necessary.

The fallacious manner in which both the earnings and expenditure on the Railways were recorded and published in the Statistical Register was pointed out and explained to the late Commissioner by the Accountant; and after several consultations with him, and communications with the officers of the several branches, it was decided that the system which is explained in M.P. 69/1674 should come into operation at the commencement of the present year, and arrangements were made accordingly.

Prior to that date the Accountant explained to the present Commissioner the changes that had been determined on, to which he expressed his entire assent; and to enable the Traffic Auditor to fulfil his duties, and specially to carry out clause No. 3 of the instructions furnished to him by the Commissioner, Mr. Thomas Underwood (who for some time previously had been engaged in the Accountant's office) was, upon the recommendation of the Accountant, appointed by the Commissioner to Mr. Vernon the Traffic Auditor's office.

The letter containing such recommendation set forth that the monthly statement required would comprehend the correct apportionment of the earnings on the several lines under the following divisions, viz:—

- The Main Trunk Line, between Sydney and Parramatta Junction (keeping the suburban traffic between Sydney and Parramatta distinct from the general traffic to and from all places beyond).
- The Southern Line, from Parramatta Junction southward.
- The Western do. do. to Penrith.
- The Mountain do. Penrith towards Bathurst.
- The Windsor and Richmond Line, from Blacktown Junction to Richmond.

The new system, so introduced on 1st January last, continued in operation until the beginning of June, without any difficulty whatever being suggested by any of the officers in charge of the several branches.

A. ASHDOWN, Accountant.
26/7/69.

To Commissioner.

(69/1519.)

MINUTE PAPER.

Return of Mileage.

Accountant to Commissioner.

THE Accountant respectfully requests that the Engineer-in-Chief may be instructed to furnish herewith a statement of the mileage, during the six months from 31 December, 1868, to 30 June, 1869, under the following headings:—

Trunk Line;
Southern Line;
Western Line;
Mountain Line;
Windsor and Richmond Line; and
General Lines.

Also, for G. Northern Line.

A. ASHDOWN, Accountant.
1/10/69.

[To Evidence given by John Whitton, Esq., Engineer-in-Chief for Railways, 3 March, 1870.]

MINUTE PAPER.

(67-175.)

Engineer-in-Chief to Commissioner.

I HAVE to call the attention of the Commissioner to the enclosed memorandum from Mr. Firth, with reference to the manner in which the trains are being worked on the Western Railway.

It appears that on Friday night last, in addition to a carriage-truck, a horse-box, and the break-van, four trucks of rails were attached to the mail train from Penrith to the Weatherboard, without the precaution being taken of using side chains in addition to the centre couplings.

Mr. Owen complained to me yesterday, that rails, &c., had been sent by the contractors, with this train, and I gave instructions to Mr. Wakeford that no permanent materials were to be sent in future by the train conveying passengers, and that on and after the 23rd (this day) the arrangement of the trains would be entirely under Mr. Owen's direction.

The instructions I wrote for the working of the Mittagong Extension should be carefully carried out on this line, particularly with reference to the use of strong side chains, in addition to strong centre couplings, for both carriages and wagons. If this be not done, and careful supervision exercised over the condition of the couplings and rolling stock generally, I should not be surprised to hear of the occurrence of some serious accident.

JOHN WHITTON.

23/7/67.

The Treasury, New South Wales,
8th March, 1870.GEORGE LAYTON,
Accountant.

F.

[Submitted by the Chairman, and ordered to be appended to Mr. Richard Lloyd's evidence, 10th March, 1870.]

Sydney, 9th March, 1870,
197, Macquarie-street.

To William Macleay, Esq., M.L.A., Chairman of the Select Committee on Railway Extension.

Sir,

The important subject which now occupies your attention as to the best method to adopt for internal communication (in the absence of river and ocean navigation) has been in all ages and countries the principal preoccupation of the governing powers, and is evidently the criterion of the degree of civilization that a people or nation is capable of attaining; and it is no less evident that the interior of this great country must either remain in a state of *marasme* or even fall back in civilization, if the present state of the means of interior communication be not steadily and persistently reformed and improved.

The whole of the public of this Colony must be interested by the result of your inquiries, which will lead to the adoption of sound principles, and arrest the reckless and wasteful expenditure which frequently takes place from absence of true principles, especially when private interests combine with other causes to squander uselessly the resources of a community, such as indicated by the recent disclosures in Europe. The advancement of Australia will much depend on the solution of the problem now under your consideration, and ceasing to be technical, must embrace the whole question as to the most advantageous system to adopt for the internal communications necessary to develop the agricultural, mining, and pastoral productions.

Three general artificial methods present themselves for examination: roads, railways, and canals.

Horse roads from the earliest ages down to the time of MacAdam and Telford have been carefully studied, and every improvement of which they are capable has been followed by an advance in every stage of civilization.

It was by those magnificent monuments of engineering skill, remains of which are still to be found after so many centuries of existence, perfect as when first constructed, from the Euphrates to the Clyde, and from the frontiers of Nubia to the German Ocean, that ancient Rome passed those formidable barriers which confined her power to Italy, and founded her universal and imperishable dominion of laws, policy, and civilization.

"From far o'er the western foam
Shall fall great fear on all who hear
That mighty name of Rome."

Telford's roads revolutionized and civilized the Highlands of Scotland.

Napoleon's road over the Simplon, and the road opened by his order over the Mont Cenis by Fabroni, were the commencement of a new era of political existence, and the revival of every element of prosperity and civilization in Italy. The great modern roads, in this last country, in many instances follow the track of the ancient Roman military roads, and imitate their peculiar indestructible construction.

But perfect as the formation of the ancient paved roads of the Romans may have been, or perfect as the Telford and MacAdam roads of modern time may be, it seems unnecessary to observe that the latter are the result of centuries of civilization in densely populated countries, and have a history of their own, like the people whom they serve; also, that they have only gradually arrived at their present state of excellence.

It would be impossible to apply the system of construction of the Via Appia, or that of the Holyhead Road to the passage of the immense plains and forests of the interior of this country; and it is probable that the Austral Countries can learn more from the *new* than from the *old world* on the subject of internal communications.

During the American war, when the railways were partially destroyed, it was found that very few common roads existed, especially in Virginia, the Carolinas, and Louisiana—the principal seats of the war—and those in a condition generally very inferior to any in the European States; which shows that a new country must depend much more on modern systems of internal communication than on ancient ones, though with the lapse of time and progress of population, as we find in the Northern States, the extension of common roads for local purposes must of course be developed.

The method of construction of first class roads, which in Europe, with cheap labour, good material, and every facility of transport, costing from £2,500 to £4,000 per mile, should be confined to localities densely populated and to main trunk lines, consequently we must search in new countries for information on systems applicable to the present condition of New South Wales.

It is in the construction of charcoal, plank, or block roads of Canada and the United States, that we may study a system which would utilize our vast forests of excellent timber; and it seems apparent that no system of paved or macadamized road could be maintained, or even constructed, over our extensive plains of soft swampy ground, which cannot be drained, and where all the necessary material for road metal is almost impossible to obtain; but the timber by which these plains are surrounded can readily be made use of instead of broken stone, which must be in most cases far too difficult and expensive to transport to the localities where it would be most required.

There are several thousand miles of plank roads now in existence, which have cost from £250 to £500 per mile; and if horse traffic be adopted in this country in preference to steam power, the system of construction of plank roads should be carefully studied in its adaptability to the requirements of this part of Australia.

Tram railways or track ways, either of stone, iron, or wood, have in general been used or applied to existing common roads.

Track ways of wood and stone are very ancient; they render great service both in England, France, and Italy, but their adoption seems to suppose the pre-existence of a good, well-formed common road, either paved or macadamized. A horse tramway would require the same expense of construction as a locomotive line, *plus* the additional expense of a good macadamized track between the rails, the keeping in repair of the railway line, and the continual maintenance of the roadway for the horse. Again, it has been found that the action of horses' feet is much more destructive to the roadway than the wheels of vehicles or waggons, and that horses' shoes form a very considerable item in the expense of horse traction. The best horse-shoes will not last, on an average, more than ten days' work of 20 miles per day. When horses follow one another in the same track the macadamized road is rapidly destroyed; but to yoke them two abreast requires a much wider and necessarily more expensive road.

Good common roads cannot exist generally through the vast interior of this country; and every Australian traveller will admit that so-called roads in the interior are mere tracks marked over the plains and through forests, where teams of bullocks and horses deviate hundreds of yards on each side. Often in wet seasons these tracks become totally unfit for the transport of heavy goods; upon some of these tracks in the north-west twenty teams of ten horses each pass per day during the season of the transport of wool, skins, and other produce, and frequently a dray will be detained for weeks before it can be drawn through the slough of several miles wide.

Along these same tracks hundreds of thousands of sheep have to pass and large herds of cattle, which proves that neither enclosed macadamized roads, nor consequently horse tramways, are in any way applicable to the wants of this country; besides, it is impossible to estimate the cost of a thoroughly well constructed macadamized road, either narrow or wide, in combination with horse railway, and large tracks suitable for general transport, and droving of immense flocks of sheep, herds of cattle, wool, and provisions, over the vast plains of the interior; but it is probable that good and cheap plank roads may be constructed so as to combine all other requisite conditions of communication, leaving large wide tracks for the passage of herds and flocks.

The permanent way of a first-class type of European railway, either of a double or single line, is generally acknowledged to be inapplicable to this country, with the exception of small portions of trunk lines near to populous towns or seaports. It must be obvious to all that the extension of lines of permanent way costing from £15,000 to £30,000 per mile would be positively ruinous to the Country to make; and even if they were made, would be impossible to work or to keep in order in the present position of the Colony.

It is in the second and third class of railways, as they are being now thoroughly systemized in France and Italy that we can probably find much information which will lead to more precise ideas on this subject of railway extension.

The

The construction and maintenance of the great roads, and the control and inspection of railways in France, are under the charge of the Imperial Corps of Engineers of the "Ponts et Chaussées," who have sanctioned railways of second and third order, the details of which will be found in the "Annales de construction des Ponts et Chaussées" and "Informations pour la construction des Chemins de fer Départementaux et vicinaux." Three of these railways I am well acquainted with are constructed with great solidity—nearly as much so as a first class railway—but with only a single line, and with great attention to economy. Steep inclines and small curves have been adopted, to avoid great cuttings and embankments. The buildings and stations, although solid, have been reduced to the most simple expression, and the crossings, sidings, and turn-tables are as small and light as possible.

The foregoing observations apply only to the construction of the roads and the laying of railways for horse traction; but I will endeavour to show that, of all motive powers that can be used, locomotive power will be the cheapest and the most suitable to a new country, either employed on a plank road or on a light railway. In fact, the motive power can be considered as entirely distinct from the question of the construction of a permanent way.

I give in the following table the detail of expense of the different items of these three permanent ways.

	Strasburg to Bale. (30 miles.)	Niederbronn. (12½ miles.)	Sainte Marie. (13 miles.)
	£	£	£
Purchase of land
Earth-works, cuttings, embankments.....	1,270	708	1,330
Works of art—bridges, culverts, &c.....	253	241	438
Rails, sleepers, and accessories—telegraph	1,940	1,641	1,790
Buildings—stations, sheds, and houses.....	922	550	863
Modifications and connections	10	64	61
Fences and barriers.....	118	109	141
Personal staff and divers expenses.....	475	560	319
Interest of money during the construction	130	130	145
Engines and rolling stock	1,280	1,280	1,280
Total expense per mile, independent of the price of land.....	6,398	5,283	6,367

The railways above referred to are made with double-headed rails of 70 lbs. weight per yard, with cross sleepers and chairs. The estimated total receipts per mile, per annum, before they were constructed, was about £650, and the total expense of maintenance and working about £380 per mile. It is difficult to ascertain the exact results, but I have given the above details to show that the construction of second class railways has engaged the attention of continental engineers, and so far they have succeeded in setting us an example which we can improve upon.

Mining engineers have sanctioned the construction of small light railways for mineral traffic, having very narrow gauges, varying from 2 ft. 6 in. to 3 ft. 8 in., with curves of 200 feet radius, and inclines of 1 in 50, with sleepers about 5 ft. 4 in. long, 6 in. wide, and 5 inches thick, costing about 1s. 7d. each, and 2 ft. 6 in. from centre to centre, with a vignolles rail of 33 lbs. to the yard.

It is generally admitted that the minimum weight permissible to a rail, to prevent lamination and distortion under an ordinary rolling weight, even when supported throughout its whole length, should be that of the section of the head of the ordinary rail, being from 25 to 30 lbs. to the yard.

The following specimen of construction will show about the type and expense of this description of railway, as it is generally employed.

This particular one is exclusively employed for mineral traffic, conveying about 45,000 tons per annum a distance of 5 miles. The land on which it is made was worth about £65 an acre. There is very little fencing.

	£

Personal staff—divers expenses	11
Interest of money during the construction.....
Engines and rolling stock.....	860
Total expense per mile.....	£2,775

This railway was made for horse traction, but after three years' service was transformed into locomotive traction without any change being made to the permanent way.

The engines, with tanks in full service, weigh 11 tons, and cost £900 each.

I have given these two examples of construction of permanent ways, either of which would be applicable to the extension of railways in the interior of Australia; but I am very strongly of opinion that the gauge of 4 ft. 8½ in. should always be maintained in preference to the narrower gauge; and I believe that, with great care and strict economy, the cost of the permanent way of such railways may be reduced generally throughout this country to the cost of about £4,000 per mile.

The great advantage of the adoption of the 4 ft. 8½ in. gauge is that, although the rails, and generally the permanent way, may be light and economical to begin, yet, with the lapse of time, increase of population, greater development of the agricultural, mineral, and natural produce of the country—such as timber, gum, charcoal, and potash—the railways can be gradually transformed from third class to first class. At the same time the rolling stock can also be gradually transformed with the progress of colonial prosperity, whereas narrow gauges must of necessity remain impermutable and not susceptible of the necessary change or amelioration. The same may be said of horse traffic railways: unsuitable as they would be, in my opinion, to the present wants of the community—they would ever become more and more incompatible with the future prosperity of the country.

I will now proceed to give the elements for the estimation of a permanent way suitable for the present extension of railways in this country, that is to say, extension in continuation of the main trunk lines, which ought of course to be of a more solid and consequently of a more expensive nature.

The inclines should be limited if possible to about 1 in 50 or 20 in 1,000. This will determine the amount of earth-work in cuttings, and in some measure the direction of the line.

The road bed should be, on an average, 16 feet wide. It may be reduced to 15 feet, but it would be better to have a road bed capable of future amelioration; therefore 16 feet should be the minimum limit, with a ditch on each side of about 2 feet wide at the top, narrowing rapidly downwards to 8 inches deep.

The openings of bridges and tunnels may be restricted to 15 ft. wide by 13 ft. 9 in. high.

The rail may be 50 lbs. to the yard, with 3 ft. from centre to centre of sleepers, and chairs of 16 lbs. weight. The sleepers should be 8 ft. 8 inches long, 6 in. thick, and 10 in. wide. This is the weight of the rails on the lines from Newcastle to Carlisle, Strasburg to Bale, and the original London and Greenwich Railway.

There

There are some English and foreign railways with rails much lighter, for instance, the Brandling Junction of 44 lbs., and the Montpellier and Cette of 40 lbs.; therefore, there can be no doubt that a railway as strong as the Newcastle and Carlisle would be quite sufficient for the service of the interior of this country, of which the following is an estimate:—

	Weight and No. of Pieces.	European Price.		Australian Price.		Australian Price System Vignolles.

* Estimate of these items given hypothetically.

† Estimate of the first six items given hypothetically.

‡ Probably too high. Upon these items a considerable economy can be effected.

I have endeavoured to be as precise as possible, and in giving positive facts and figures of existing constructions (but upon some of these items given a considerable saving can be effected). It appears, *a priori*, that a very great difference exists between the expense of the mineral railway referred to at page 16 and the lines proposed; but a strict analysis will show that the real difference would not amount to more than £400 per mile,—an expense which would be quite justifiable by taking into consideration the immense advantages of a uniform gauge and the facility of gradually transforming the lines from a third class to a second or first class, to suit the future development of the country.

Thus, in the mineral railway of 3' 7½" gauge, we have—

Earthwork, cuttings, embankments.....	£	843
Rails, sleepers, chairs, laying-down, and ballast.....		953
To make rails equal to 50 lbs. we must add 22 tons.....		182
To make chairs equal to 16 lbs. we must add.....		22
To make sleepers strong enough to carry a 50-lb. rail.....		210
	£2,210	

Estimated cost of permanent way of 3' 7½" gauge in same condition of relative strength as a railway 4' 8½" gauge, the cost of the permanent way being..... 2,610

Difference being..... £400

But even this difference is in a great measure only apparent, as it is clear that a permanent way of 4' 8½" can be established for the same price as a 3' 7½" gauge, adding on the extra price of 1 ft. 1 in. of earth-work and ballast, and the extra 13 inches length of sleeper. In fact, a 4' 8½" permanent way may be constructed with little more expense than a narrower of the same strength.

A *résumé* of the different systems of permanent way for the interior communication, whereby the advancement of every material interest can be promoted in Australia, will show more clearly the adaptability of light common gauge railways to the requirements of this country.

First.—The Roman paved military road, or its modification—the modern French "Route Imperiale."

Second.—The Macadam and Telford modern English roads.

Third.—The plank roads of Canada and the United States.

Fourth.—Track ways in stone or iron, only as accessories to existing roads.

Fifth.—Horse-railway, with the middle track paved or macadamized.

Sixth.—The mineral railway type for locomotives, narrow gauge.

Seventh.—The light class of locomotive railway, ordinary gauge, 4' 8½".

Eighth.—The main trunk double line first-class railway.

The essential advantages of the last but one enumerated over all others, in its applicability to the present wants of the Colony, its cheapness, its susceptibility of gradual improvement and transformation to a higher class, should give it a preference over all other systems of road communication for the present requirements of New South Wales.

I do not think it opportune to enter on the question of canals as a permanent way; but whatever advancement of prosperity any other system would promote, it is clear that in many parts canals would pre-eminently render vast services, in being at the same time the cheapest means of conveyance, and also of inestimable service for irrigation and storing water for pastoral uses. Unfortunately, we are far from the epoch when the financial state of this country and increase of population will permit of a thoroughly civilized and enlightened system of water communication and irrigation.

The previous observations are entirely confined to the subject of the establishment of the permanent way. I will now endeavour, in a very general way, to show that the superiority of steam over horses, as motive power, can be deduced from sound theoretical principles and practical results.

MOTIVE POWER.

There are a great many sources of mechanical power, but the cheapest and most universally available, as far as yet has been ascertained, is the combustion of coal. The motive power thus developed is most conveniently utilized by the means of water or steam, although not more than from one-eighth to one-fifteenth can be transformed into useful mechanical effect by the very best constructed steam-engines.

Now, Watts' standard of horse-power (33,000 lbs. lifted one foot high per minute, or a horse travelling 2½ miles per hour with an available effort of 150 lbs) applied to the measure of useful effects of locomotive and horse traction, will clearly show the immense superiority of steam locomotion over an equivalent amount of horse-power on a railway of ordinary construction.

Relative

Relative power by Joule's standard of horse food and coal.

Joule's standard of the mechanical equivalent of heat being 772 lbs. lifted one foot high by one unity of caloric, then the combustion of one grain of coal will lift 1261.45 lbs. one foot high, and the combustion of one grain of horse food composed of equal weights of hay and corn will lift 557 lbs. one foot high.

Comparison of useful effect obtained from engine and horse power food.

A well-made steam-engine, with the consumption of *one grain of coal*, will lift 143 lbs. one foot high. A horse, by the consumption of *one grain of mixed food* of corn and hay will (working 12 hours per day, by Watts' standard) lift 143 lbs. one foot high.

Price of coal and horse-food to produce the same power compared.

A mixture of equal weights of hay, at £4 per ton, and corn at 3s. 3d. per bushel, will be £10 per ton, which will be at least fifteen times the price of a ton of coal, to produce the same amount of mechanical available power.

The effort of an engine compared to the equivalent effort of 28 horses.

A tank-engine of an average weight of 12 tons can exert an effort of 4,200 lbs. during the whole time of working, besides carrying its own weight, and provisions of coal, water, and men. A horse weighing 13 cwt. will make a continued effort of 150 lbs. during his time of work, besides carrying his own weight; consequently it will require 28 horses to produce an effort of 4,200 lbs., equivalent to the effort of the locomotive.

Dead weight of horse-power compared to a locomotive.

The available power of a horse is $\frac{143}{130}$, or about $\frac{1}{10}$ of his weight; that of an engine is $\frac{26880}{42720}$, or about $\frac{1}{15}$ of its weight.

Effort exerted in one year by an engine, compared to that of a number of horses of the same power as the engine.

The working travel of a horse, on a level plane, will be 20 miles in every 24 hours, and 300 days in a year; consequently 28 horses will exert an effort in one year of 25 million pounds one mile; and the same power of locomotive will work 70 miles during 300 days in a year, and will exert an effort, on a level, of 88 millions of pounds one mile.

Comparison of the Engine to horse-power on an incline.

Upon an incline of 1 in 50 the available effort of an engine in the above conditions will be reduced to 3,755 lbs. The elements of the comparison of engine to horse power on an incline cannot be very precisely ascertained, but it is admitted to be an error to suppose that a horse can with impunity exert extra muscular force to lift himself on an incline without diminishing his draught power, therefore it is probable that the available force of the 28 horses on the incline does not exceed that of the engine in the condition above referred to.

Comparison of work done by the engine and horse-power on an incline and curve.

Suppose the draught power of a horse *not to be* diminished on an incline, then the utmost power of 28 horses would be, with a gradient of 1 in 50 and a curve of 8 chains radius, to draw 73 tons 20 miles per day, or 438,000 tons one mile in one year; and the power of the engine would draw 1,386,000 tons one mile in one year, or 66 tons 70 miles per day.

Cost of transport on railways in Europe. Practical result.

The total expense of luggage transport on several great lines amounts to about 7-10ths of a penny per ton per mile, including the maintenance of rolling stock and permanent way; and the transport of coal in one direction and empty return, including all expenses—except the maintenance of the permanent way (charged to general luggage traffic)—amounts to a little less than a *half-penny* per ton per mile. We cannot compare these results to horse traction; but if these rates existed in Australia, all the produce of the interior could be transported, including cattle and sheep, in preference to driving.

Expense of running locomotives as a criterion of equivalent duty to perform in Australia.

The expense of running an engine in full service on the railway above referred to may be estimated and analyzed as follows:—

	s.	d.		s.	d.
Personnel (staff) and expenses of management, per mile	0	3	to	0	3½
Combustible	0	5½	„	0	7
Oil, tallow, water, and waste for cleaning	0	1	„	0	1½
Repairs and maintenance of engine	0	4	„	0	5½
Total expense per mile run	0	13½	„	0	17½

In the absence of precise knowledge respecting the expense of working horse-power in Australia, it may be supposed that the running of 28 horses, or their equivalent power of locomotive traction, would cost very much more than 1s. 6d. per mile; but it is especially evident that 28 horses could not be maintained and worked—in any case or in any country—at the rate per mile above mentioned.

Practical result of the working of 9 horses compared to 1 locomotive.

The actual working expenses of 9 horses on a mineral railway transporting 26,000 tons 5 miles in 6 months, and the transport of 18,000 tons also in 6 months on the same railway, the same distance, was—

Total cost of traction per mile	0.9912	0.3696
Repairs of rolling material, per mile	0.1000	0.1000
Maintenance of the line, per mile	0.1680	0.2352
Total cost per ton per mile in pence	1.2592	0.7048
	for	for
	9 horses.	1 locomotive.

The prime cost of an engine in Europe, of first-rate construction, material of the very best choice, and all the working parts case-hardened, will be free on board—

From 7½d. to 8½d. per lb. for engines weighing from 25 to 30 tons.	
„ 8½d. „ 9½d. „ „ „ 20 „ 25 „	
„ 9½d. „ 10½d. „ „ „ 15 „ 20 „	
„ 10½d. „ 11½d. „ „ „ 10 „ 15 „	

It is most probable the prime cost of an equivalent horse-power would, with all accessories, greatly exceed the above prices.

Suitable carriages could be made for £200 each on an average.

From which we may deduce that a rolling stock for very light railways, with limited traffic, may be established for about £250 per mile.

In conclusion, I reaffirm the opinion that I have had the honor to submit to your Committee at your request, and to observe that I do not pretend to any originality, but on the contrary have freely made use of the writings and opinions of many eminent engineers of great experience and research. It would be fastidious in me to cite the names of all the authorities to whom I am indebted. I have found much practical information in the "Bulletins de la Société des Ingénieurs Civils," of which I am a member.

I have, &c.,

R. LLOYD.

[Handed

[*Handed in by Mr. Sutherland, and ordered to be printed in the Appendix, 24 March, 1870.*]

G.

R. C. Walker, Esq., to The Commissioner for Railways.

Sydney, 7 February, 1870.

Sir,

I have the honor to draw your attention to a leader in the *Herald* of the 1st instant on the Railway Accounts, in which reference is made to statements of Mr. Ashdown, Accountant for Railways, given in evidence before the Select Committee on Railway Extension; and beg to submit to you the following facts relating to these accounts:—

Mr. Ashdown is reported in his evidence as having said—"that the manner of keeping the accounts until recently was not such as to show the earnings and expenditure of each line. As the documents were kept they were utterly fallacious." And he further adds—"For instance, the accounts published in the Statistical Register for 1867-8 profess to give the total earnings and total expenses, but they are utterly fallacious—not truthful."

With regard to the first statement, I assert, and the books can prove it, that up to the time of my leaving the department the information which the Committee asked for could have been furnished without the slightest difficulty, upon one hour's notice being given, and details could have been supplied in almost any form that the information was required. The statements, from the way they are made by Mr. Ashdown, could therefore only have the effect of misleading the Committee as to the actual state of the accounts prior to his taking charge of them.

So far as the returns for 1867-8 are concerned, Mr. Ashdown is alone answerable for their correctness, as they could only be prepared under his supervision; and it appears strange to me, after he had two years' experience in keeping the Railway Accounts, before being called upon to furnish the returns for 1868, that he should take such a time to discover the system to be inaccurate.

In Mr. Ashdown's answers to the Committee, he asserts that everything booked between the Sydney and Junction Stations, whether South or West, was carried to the credit of the Southern Line. This is not correct. The cash receipts between the Sydney and Junction Stations, with the outstanding accounts for the South, have alone been credited to the Southern Line. The cash receipts of the Western Stations, with outstanding accounts of the West, have alone been credited to the Western Line. The expenditure has all been charged in proper proportion, in accordance with the approved forms in use when I entered upon the duties of Accountant, a full explanation of which has been laid before Parliament in Mr. Rae's Reports on Railways for 1864 and 1865; and I feel quite satisfied—unless a very large and unnecessary staff is maintained—that the Parliament will never receive any information in the shape of Railway Returns that will give more reliable and useful information than these reports supply, however incomplete they may be.

The mode of crediting the Railway Revenue was from time to time considered by the various Ministers who held office while I was Accountant, and it was always deemed unnecessary to create a staff specially to show more minutely the revenue of each portion of the Southern and Western Lines than the books then supplied. It must however be borne in mind that at the time I gave up the accounts there were only 21 miles of the Western Line open for traffic, and the mode then of crediting the revenue was quite equitable in accordance with the outlay for constructing the lines. The opening of the extensions beyond Penrith since I left the department would necessarily call for some change in the station returns for the traffic receipts, but would not interfere with the system for charging of the expenditure. If this has been overlooked in crediting the receipts since 1866, the fault lies with those who keep the accounts.

I can only add that had I been in Mr. Ashdown's position, I should certainly have shown so much generosity to my predecessor as to have explained this to the Committee when giving my answers.

I have, &c.,

R. C. WALKER.

P.S.—I shall feel obliged if you would lay this letter before the Committee of Inquiry now sitting on Railways.—
R.C.W.

[*Handed in by the Chairman, and ordered to be printed in the Appendix, 25 March, 1870.*]

H.

G. E. Dalrymple, Esq., to William Macleay, Esq., M.L.A.

Sydney, 23 March, 1870.

Sir,

1. I have the honor to enclose, for the information of your Committee, a pamphlet upon the subject of my patent for cheap internal communications by means of "India-rubber tire and tram steam traction"; and I beg to submit to you, for the information of the Committee, the following statement on this important subject, with the view of obtaining for the invention that investigation at their hands which on examination I trust it will be found to merit.

2. Taking the characteristics of the means of internal communications desired to be arrived at to be cheapness in construction of permanent way, with economy of up-keep and certainty of transit, admitting of the construction of an extensive system of such lines throughout the Colony, *versus* heavy expenditure in construction and working expenses, necessarily therefore confining the means of transit to a few trunk lines of limited extent,—I will, to facilitate arrival at a fair opinion on this subject, state in a classified form the several descriptions of permanent way suitable for colonial use.

Horse-traction.	Cost per mile.	Locomotive steam.	Cost per mile.	Steam road traction engine.	Cost per mile.	India-rubber tire road steamer.	Cost per mile.
Macadamized road, say ..	£ 4,000	Railroads from and upwards	£ 6,000	Macadamized road...	£ 4,000	Macadamized road, say	£ 4,000
Plank or Corduroy Road, say	1,000			Plank road	1,000	Plank road, say	1,000
Tram-road with plank on macadamized horse track, say	1,000			Tram-road of wood or iron, say	4,000	Tram-road of wood, say or iron, say	1,000 2,500

3. It is an established fact, of which your Committee are doubtless in possession of more incontrovertible evidence from practical engineers than I can supply—that steam-traction is superior in every way (including economy especially) to horse-traction.

4. Any argument founded upon the assumption that horse-traction requires permanent way of a cheaper description than steam-traction is at once negated by the above tabular statement, which shows that both steam-traction engines and India-rubber tire road steamers require not only no more expensive roads than horse-traction, but can combine the superiority and economy of steam-traction with the cheapest description of horse traffic permanent way, viz., plank-roads and tram-roads. We may therefore dismiss horse-traction from further consideration in this discussion.

5. Again, with regard to the comparative advantages of ordinary locomotive engines on iron railways or of traction-engines and road steamers on common roads, plank-roads, or tram-roads—according to the above table it will be seen that far greater economy in construction of the permanent way exists in favour of the latter over the former, whilst at the expense of the great speeds attainable on the iron railroad by the locomotive (but wholly unnecessary in our sparsely peopled interior), traction engines and road steamers (especially the latter) possess also the advantages of greater economy of working and the achievements of gradients far steeper than have ever been even attempted by locomotives.

6. Taking therefore cheapness and certainty of permanent way and transit as that which it is desirable to accomplish in our internal communications, it is evident that the great additional expense of construction and maintenance and working of locomotives and iron railroads necessitates their dismissal also from further consideration in this discussion.

7.

7. In further proof of this necessity, I beg to draw your attention to the following, taken from pages 4 and 5 of the accompanying pamphlet—"But in the great majority of colonial routes, especially in the interior—the passengers between termini are not numerous and the goods traffic is intermittent. In such cases certainty and economy of transit are considerations of primary importance to rapidity. A provision for that would not only militate against, if not destroy the chance of reproductiveness, but lessen the value of the means of transit to every one who employed them. Increase of first cost involves increase of charges to meet it."* Also, to quote from page 6—"All that is contended for is that while population and commerce are growing, they do not require an accommodation adequate to all their demands in their most extended and complete form; and that such a provision would be not only not remunerative, but so far as it was in excess, thrown away. It then becomes a waste of the resources of a community."

8. It must also be borne in mind that, if the traffic of a certain route is (say) 100 tons per diem, and this it is found can be carried at (say) 12 miles per hour and with perfect safety and certainty, on a permanent way costing (say) £1,000 per mile,—and taking on the other hand the cost of an iron railway at the very low estimate of (say) £6,000 per mile,—the former (and perfectly sufficient line) could be carried six times further into that district than the latter; or, for the cost of every 100 miles of the latter could be constructed 600 miles of the former.

9. Macadamized roads, to which the foregoing remarks equally apply, are for the same reasons removed from further consideration here; and the argument that they would be available for both horse and steam traction being insufficient to justify the great additional cost of construction and upkeep, when it is considered that the horse traction would be competing not only close alongside of but on the very same line of traffic with its proven giant rival and superior steam.

10. Plank roads possess the advantage of economy of construction and of being suitable for either horse or steam traction. The latter qualification however may be dismissed on the grounds stated in clause 9 with regard to macadamized roads; but the chief objections to this description of road for steam traction are not only the liability of the cross planks to warp in this climate (unless of a bulk to adopt which would very seriously increase the cost of construction), but as the planks lay across the line of transit, their edges or joinings cause a certain inequality of surface detrimental to steam traction, and which in case of warping would cause serious wear and tear of roadway and rolling stock, inconvenience to passengers, and shaking of perishable goods; also, as it has been decided that steam traction is superior to and preferable to horse traction, the centre way or cross planking (which in fact is the plank road itself) is wholly unnecessary, as the wheels only of the traction engines or road steamers require permanent way to run upon, and this the longitudinal logs on which the planks of the plank road rest, if smooth dressed on top, amply provide, while they are of such bulk as to escape warping.

11. Having imported one of Thompson's patent India-rubber tire road steamers myself, for use in Australia, I became aware that this valuable tractive power can only be availed of during fine weather, and on the best bush tracks, while it is debarred from being made use of on some of the most paying traffic routes of the country, from unsoundness and inequalities of the surface. In Europe the admirable macadamized roads enable these wonderful little steamers to work in all times and weathers, and over any district, and I at once saw the necessity for putting them in this country on some cheap description of permanent way, to render them equally if not more thoroughly available. The line of argument which I have done myself the honor herein to lay before you led me to the simple invention which is the subject of my patent, viz., putting the India-rubber tire road steamer on a tramroad formed of hardwood—forest trees (of as large girth as is consistent with possibility of moving into their required positions), smoothed on top, laid parallel to each other at the necessary gauge distance, and united every few feet by strong sleepers bolted to the longitudinal log trams. The India-rubber wheel tires and the rolling stock wheels, all smooth and without flanges, run evenly on the broad smooth surface of the hardwood log tram, with no edge—nothing to cut or injure the wooden tram in any way whatever; the engines and other rolling stock being kept upon the line by a centre rail either of iron or of hardwood sawn scantling (and this latter will be perfectly sufficient for moderate speeds), on which two upright guide-wheels with double flanges attached to the centre of every bogie-truck will traverse, or horizontal guide-wheels gripping the centre rail on each side may be used, as in the Fell Railway over Mont Cenis.

The materials for this line will be taken from the forests of the districts traversed, and (with the exception of the centre rail if of iron) the whole money cost of it would be spent within the Colony.

It lastly remains for me to compare the capabilities and adaptability of the ordinary road traction engine with iron tires with those of the "Thompson India-rubber-tire Road Steamer" for haulage on such lines.

To do so I beg to quote from a report addressed to me by the patentee of the patent "Road Steamer" (Mr. R. W. Thompson, C.E., Edinburgh), upon the comparative performances of the road steamer "The Enterprise" which he has sent out to me here, and which received the first prize silver medal of the Royal Highland and Agricultural Society of Scotland last year, and a first class road traction engine, by Tennant & Co. (Limited), of Leith. Mr. Thompson writes—"It was tried against a very fine traction engine with ordinary iron tires, built by Tennant & Co. (Limited). This engine weight 14 tons, yours weight 6 tons; and yours accompanied the 14-ton engine, and hauled more weight up the steep inclines than the 14-ton engine. Yours hauled 17 tons up 1 in 12, and 34 tons up 1 in 20."

I had a telegram yesterday from Brisbane, stating that this same road steamer had the day before drawn 18 tons of salt (in 3 waggons which themselves weigh 25 cwt. each) all about the town with perfect success.

Such being the capabilities of this wonderful engine, I may be permitted to place it beyond competition in lightness, cheapness, swiftness, and tractive power over gradients unapproachable by any other engine.

If such results can be obtained on common roads, where much of the power is lost by the crunching of the laden wagon wheels into the stones, earth, or general inequalities of the road surface, what may its capabilities of haulage be on such an even smooth log tram permanent way as that described where nothing whatever interferes with the smooth transit of the smooth wheel tires, while the grip of the India-rubber traction tires is no more diminished than would be an elephant's foot?

The exact cost of such lines can easily be arrived at by obtaining bush contractor's estimates for their construction, the whole works being perfectly within their capabilities of workmanship. I believe on ordinary country it may be put down at £1,000 (one thousand pounds) per mile.

I would beg most respectfully to urge upon the Committee the advisability of thoroughly testing the system of cheap internal communications which I advocate, feeling convinced that it is in every way suitable to the country, and sufficient for its internal traffic requirements for many years to come; and should your Committee be desirous of having more practical and ocular proof of the capabilities of the "Road Steamer," I shall be happy to enter into some arrangement for bringing it to Sydney at once for that purpose.

I have, &c.,

G. ELPHINSTONE DALRYMPLE.

[Handed in by Mr. Sutherland, and ordered to be printed in the Appendix, 25 March, 1870.]

I.

The Accountant to The Commissioner.

69/2175. 69/2109.

Railway Branch,
Sydney, 22 July, 1869.

Appropriation of Expenditure.—Working Expenses.

In pursuance of M.P. 69/1715, the Accountant requires the accompanying vouchers to be marked to which of the "three divisions of Southern, Western, and Richmond Railways" they are to be charged respectively, so that they may be entered in the books in accordance therewith.

	£	s.	d.	Marked chargeable to—

A. ASHDOWN, Accountant.
16/7/69.

The

* Vide the heavy rates which it is found necessary to charge on expensive iron lines in these Colonies generally.

The foregoing is a copy of a minute handed by the Accountant to the Commissioner on the day it bears date, and the vouchers specified therein have not yet been returned to him.

Upon receiving this day the pay sheets of the Locomotive and Permanent Way Branches, and the accompanying appropriation statements for the fortnight ending 17th July, in which a portion of the amount is also charged to G. S. W. & R. Railways, the Accountant again waited upon the Commissioner requesting his instructions, which instructions the Commissioner declined to furnish in writing.

In pursuance however of verbal directions communicated by the Commissioner to the Accountant, in the presence of the Journal-keeper, Mr. Barling, the Accountant now begs to report that he has instructed the Book-keeper to open an additional or "Fourth heading" in the Railway books, under the designation of "G. S. W. & R. Railways," to which all vouchers so marked will be entered.

A. ASHDOWN, Accountant.
22/7/69.

Before taking any further action on this paper, I require from the Accountant his authority for making the alterations in the form of keeping the books, which I understand from the Accountant has been carried out under his directions. J.S., 23/7/69.
Mr. Ashdown. 23/7/69.

1. I must deny the inherent authority of the Accountant by virtue of office, without first obtaining my authority in writing. This is a matter affecting the Commissioner.

2. This is no doubt correct, but has this course been adopted before giving written instructions to Heads of Branches, over whom the Accountant has no control, to alter the vouchers, and still hold the parties responsible for their correctness? (See M.P. Copy of instructions.)

3. I have made inquiry, but can find no communications having reference to this subject.

4. I have never heard of this until after my instructions to the Auditor were issued, and certainly never assented to it.

5. My memo. on the appointment of Mr. Underwood, 69-308, will speak for itself; it has no reference to the mode of division of the Revenue Account, as shown by the Accountant.

6. I had certainly no knowledge of the order given by the Accountant to alter the accounts or vouchers until the matter was brought under my notice by the Engineer-in-Chief. I confess I do not see what the Accountant means by the "officers" in charge of the "several Branches," as I have always understood the Accountant was the principal officer of the Revenue Branch.—27/7/69, J.S.

1. The authority for making alterations in the mode of keeping the books, and of determining generally the manner in which the accounts should be kept, the Accountant conceives to be inherent in his office; and upon the occasion of the appointment being offered to and conferred upon him by the late Commissioner for Railways and Minister for Public Works (Mr. Byrnes), it was so explained to him.

2. Further, he was specially desired to examine into and suggest such alterations and improvements in the mode of keeping the books and accounts as he should consider necessary.

3. The fallacious manner in which both the earnings and expenditure on the railways were recorded, and published in the Statistical Register, was pointed out and explained to the late Commissioner by the Accountant, and after several consultations with him, and communication with the officers of the several branches, it was decided that the system which is explained in M.P. 69/1674 should come into operation at the commencement of the present year, and arrangements were made accordingly.

4. Prior to that date the Accountant explained to the present Commissioner the changes that had been determined on, to which he expressed his entire assent, and to enable the Traffic Auditor to fulfil his duties, and specially to carry out clause No. 3 of the instructions furnished to him by the Commissioner.

5. Mr. Thomas Underwood, who for some time previously had been engaged in the Accountant's office, was upon the recommendation of the Accountant appointed by the Commissioner to Mr. Vernon, the Traffic Auditor's Office. The letter containing such recommendation set forth that the monthly statement required would comprehend the correct apportionment of the earnings on the several lines, under the following divisions, viz. :—

The Main Trunk Line.—Between Sydney and Parramatta, keeping the suburban traffic between Sydney and Parramatta distinct from the general traffic to and from all places beyond.

The Southern Line.—From Parramatta Junction southward.

The Western Line.—Do. to Penrith.

The Mountain Line.—From Penrith towards Bathurst.

The Windsor and Richmond Line.—Blacktown Junction to Richmond.

6. The new system so introduced on 1st January last, continued in operation until the beginning of June, without any difficulty whatever being suggested by any of the officers in charge of the several branches.

A. ASHDOWN, Accountant.
26/7/69.

To Commissioner.

Cabinet for to-day. 29/7/69.—J.S.

The Accountant to The Commissioner.

69-308.

Railway Office,
Accountant's Branch,
January 27, 1869.

Sir,

Referring to our various conversations, and to the memo. of instructions issued by you, dated 9th ultimo, for the regulation of the "Traffic Audit Branch," I beg to call your attention to the immediate necessity of appointing a clerk capable of preparing the statement required to be furnished to the Accountant in terms of clause No. 3 of such instructions.

This statement will, from 1st January inst., comprehend the correct apportionment of the earnings on the several lines under the following division, viz. :—

The Main Trunk Line.—Between Sydney and Parramatta Junction—the suburban traffic between Sydney and Parramatta being kept distinct from the general traffic to and from all places beyond.

The Southern Line.—From Parramatta Junction southward.

The Western Line.—From Parramatta Junction to Penrith.

The Mountain Line.—From Penrith towards Bathurst.

The Western and Richmond Line.—From Blacktown Junction to Richmond.

The mode hitherto pursued of crediting to the Southern Line all amounts received in Sydney and at all stations intermediate and including Marulan, and of crediting to Western Line only such amounts as have been received at stations at and beyond Parramatta towards Bathurst, is, as I have previously explained to you, fallacious, and not only useless for all purposes of comparison, but mischievous as untruthfully apportioning the earnings to the several lines.

The clerk required, although employed in the office of the Traffic Auditor, should I conceive be under the direction of the Accountant, seeing that his duties will be especially devoted to the compilation of returns, &c., required by him. Mr. Thomas Underwood, who has been employed in this office as assistant clerk during the past fifteen months, from the knowledge thus acquired, will, I have reason to believe, be found capable of fulfilling the duties required, and I beg therefore to recommend him for such office.

I have, &c.,
A. ASHDOWN,
Accountant.

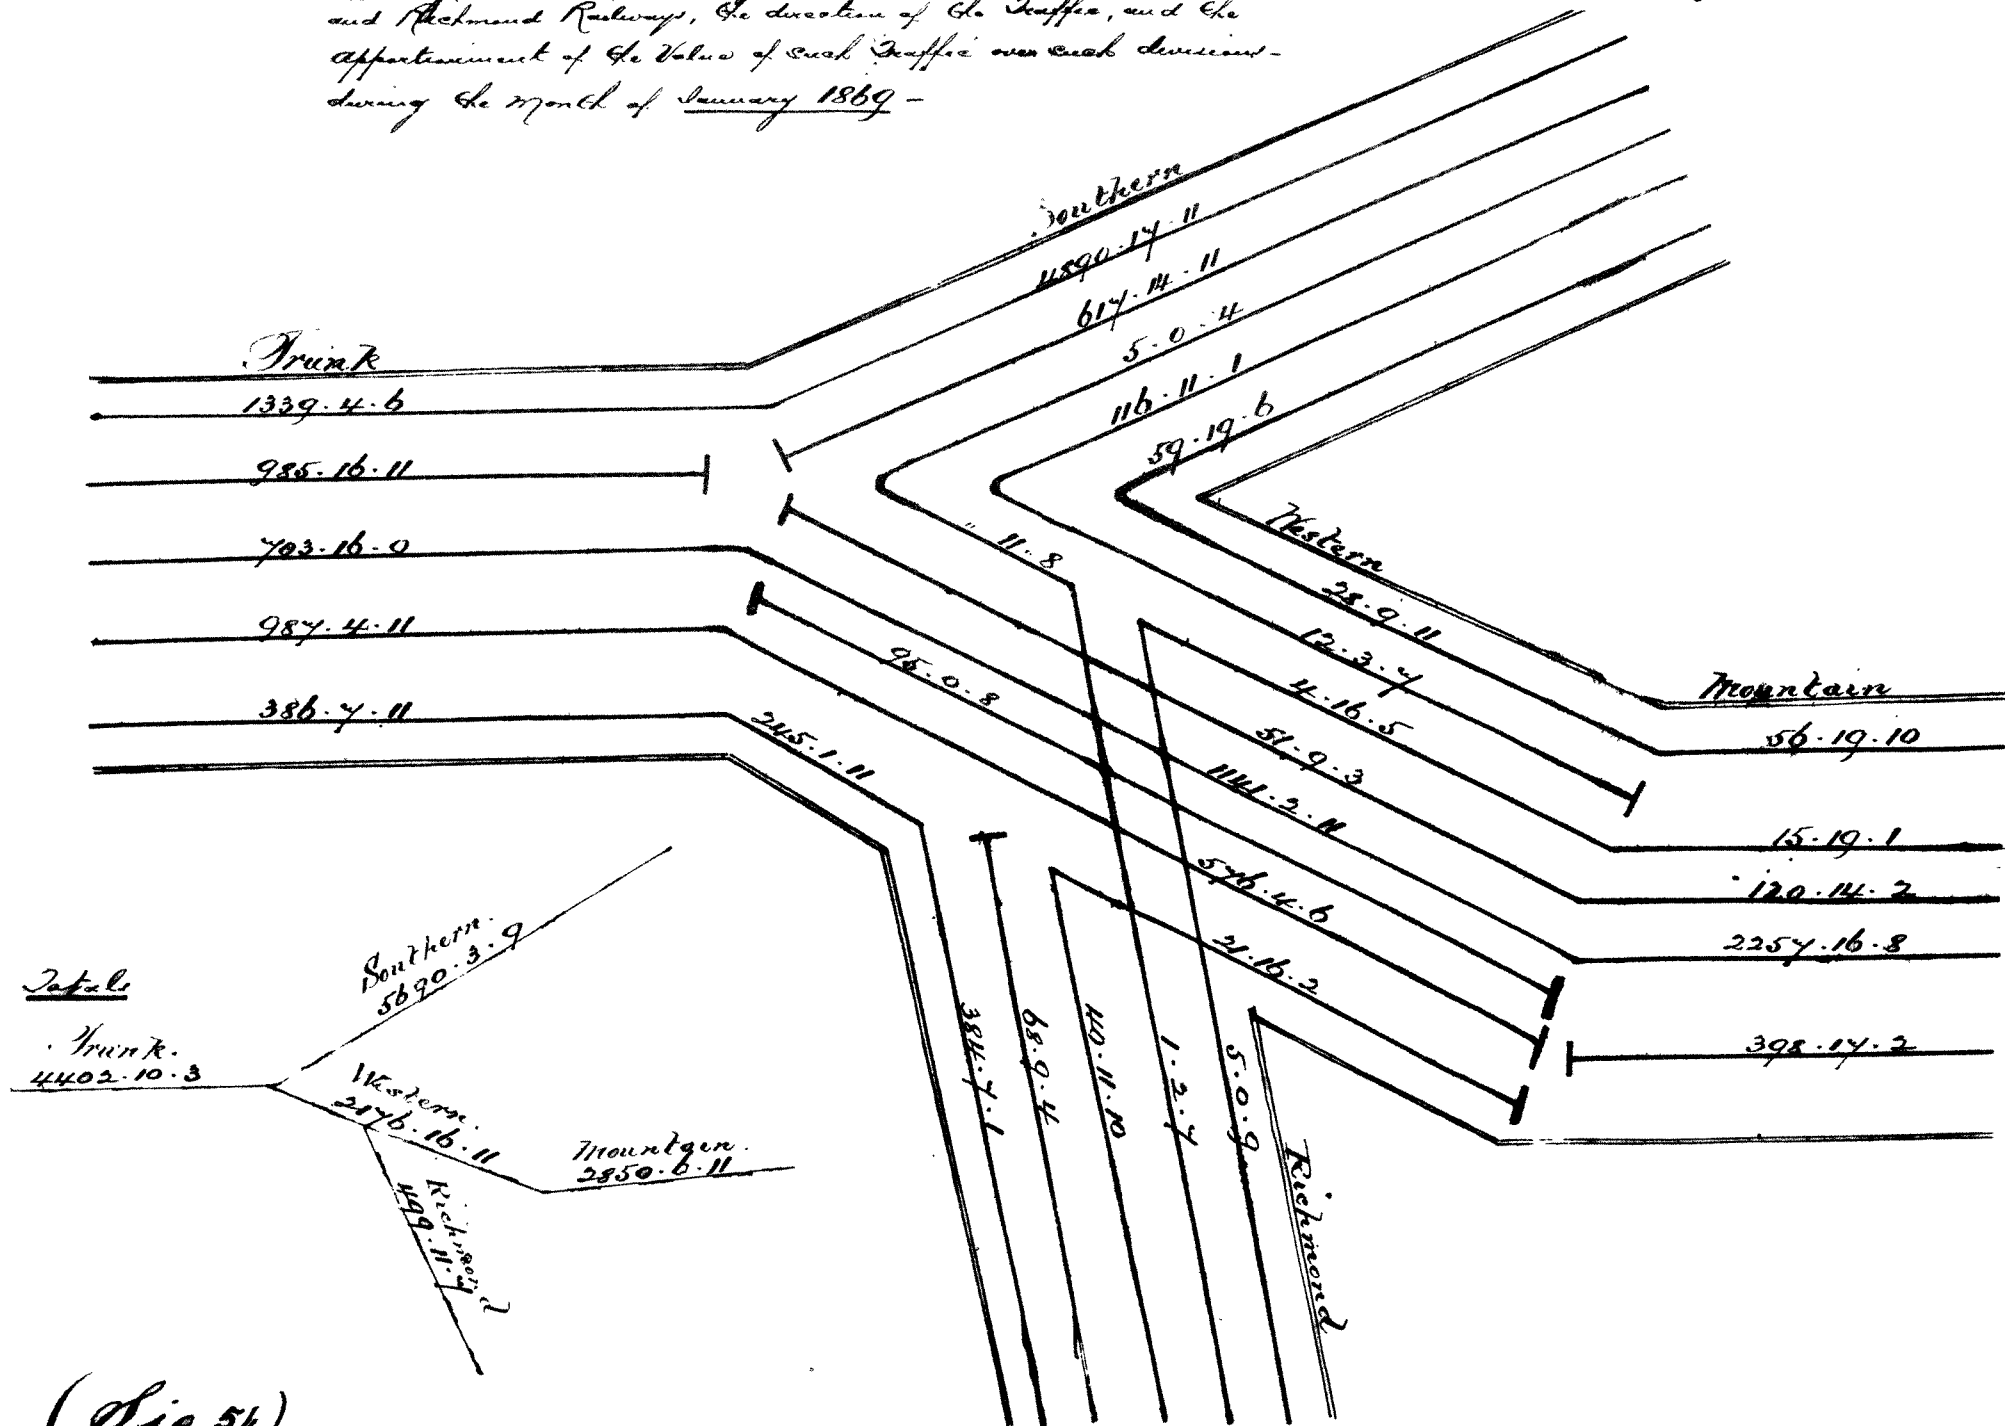

Approved. Mr. Underwood to commence, but the Accountant is to have no control of Mr. Underwood, nor in any way to interfere with the Audit Branch of this Department.

A division of the earnings on the various lines, as agreed on by the Traffic Auditor and myself in December last, and shown by diagrams with lines in distinctive colours. The total earnings will be taken and returns furnished in accordance with my instructions of December 9th, 1869. If the Accountant requires further information or returns, he can have them by application to the Commissioner in accordance with the instructions referred to. I wish to say nothing of the past; but if it was useless, mischievous, and untruthful, as stated by the Accountant, it seems strange that nothing was said of it until the instructions referred to were issued by me.

JOHN SUTHERLAND.
28/1/69.

I certify that this is a true copy of the document recorded in this office.—J.R., 25/3/70.

Diagram— Illustrating the Divisions of Southern, Western,
and Richmond Railways, the direction of the Traffic, and the
apportionment of the Value of such Traffic over such Divisions—
during the month of January 1869—

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY EXPENDITURE.

MINUTES of EVIDENCE taken at the Bar of the Legislative Assembly in
Committee of Supply.

THURSDAY, 24 MARCH, 1870.

JOHN LACKEY, Esq., Chairman of Committees, in the Chair.

THE Chairman read the following Resolution, agreed to by the House, on the 23rd of March:—"That it be an instruction to the Committee, before voting any further sums for the working expenses of the Railways, or for completing the re-laying of the line from Sydney to Parramatta, to examine at the Bar of the House, Mr. Whitton, the Engineer-in-Chief for Railways, and Mr. Ashdown, the Accountant to the Railway Department, in reference to the details of the expenditure under the above heads since the end of 1859, and in reference to the proposed votes for these purposes in the Estimates and Supplementary Estimates under the consideration of the Committee, and that such evidence be taken down by the Short-hand Writer."

Archibald Ashdown, Esq., was called in and examined:—

1. *Sir James Martin.*] You are the Accountant of the Railway Department, Mr. Ashdown? I am.
 2. Are you aware that upon the Supplementary Estimates for 1869 there appears a sum of £35,000 for the completion of the re-laying of the line from Sydney to Parramatta? Yes.
 3. Are you aware that in the Supplementary Estimates, submitted in October last, a sum of £25,000 was asked for the same purpose? Yes.
 4. Can you inform the Committee how it is that £10,000 more are now asked for the same service than were asked for in the last? I cannot. The only information that I have in the office is an Executive Council Minute, authorizing payments in anticipation of the vote of £25,000, against which large payments have been already made.
 5. When did that Minute reach your office? In October.
 6. Before the Supplementary Estimate was submitted? Well, I am not aware; it reached my office in October. An application minute from the Engineer-in-Chief, recommending that a sum of £25,000 should be placed on the Supplementary Estimates, and the Executive Council authority obtained to anticipate that vote and to make payments against it; that the Executive Council Minute in pursuance of that was obtained and forwarded to me properly recorded in October last, against which many payments, amounting to £10,000 or £12,000, have been already made.
 7. Have you the means of informing the Committee of the amount expended out of that sum of £25,000? To the end of February, not including the value of the stores issued in February, and not yet furnished by the storekeeper, the amount charged against this vote of £25,000, this anticipated vote, as stated in the railway books, is £11,779 1s. 8d.
- Mr. Garrett.*] With regard to the practice pursued on the present occasion, I think that the proper form of examination is, that all the questions should be put through the Chairman.
- Debate ensued,
- Mr. Lackey.*] I think that it is quite in order that the examination should be proceeded with in the way in which it is now being conducted.
8. *Sir James Martin.*] Can you give the items of that expenditure? Yes, I can; that is to say, generally. That expenditure consists of cash paid for sleepers, amounting to £1,767 11s. 5d., and cash paid for rails and other materials, £10,011 10s. 3d. The wages and the ballasting for this work have been charged, as has been the custom for years past, to the votes for working expenses.
 9. The two sums you mention make up the total? Yes; the total of £11,779 1s. 8d.
 10. There is still unexpended of the sum so set apart, how much? From the £25,000 there would be about £13,000. The amount expended is £11,779, or nearly £12,000, and that would leave £13,000 unexpended out of the £25,000.

A. Ashdown,
Esq.

24 Mar., 1870.

- A. Ashdown, Esq.
24 Mar., 1870.
11. Are you aware whether the relaying of this line is now completed? I know nothing about it; I am not aware of it.
 12. Have you any means of knowing whether, in addition to the balance of the £25,000 remaining for that expenditure, £10,000 more will be required to complete this work? I have not.
 13. How much money has already been voted for this work? For relaying?
 14. Yes? There have been two previous votes of £20,000 each—£40,000.
 15. Have you any of the details of the expenditure of these two sums of £20,000 here? I have.
 16. Can you state how they were expended? I can. I am now reading from copies of returns which I furnished to the Minister, in obedience to a return moved for, by Mr. Byrnes, I think, relating to amounts for relaying. The first is a vote of £20,000, 23 Victoria, No. 10, to replace nine miles of Barlow rails with the double-headed rails, between Sydney and Parramatta, being one-third of the distance.
 17. How was that expended? The expenditure appears from the railway books as follows:—For replacing Barlow rails with double-headed rails and T rails, between August and October, 1860—rails, chairs, and other material, £831 3s. 4d. In 1862, from August to December, the expenditure for rails, chairs, and other material, was £3,888 2s. 8d., and during the same period the wages amounted to £406 7s. 9d. In 1864, between May and November, £91 7s. 7d. were charged for rails, chairs, and other materials, and £264 8s. 3d. for wages. In 1865, between September and December, £6 16s. 8d. were charged for rails, chairs, and other materials, and £239 19s. 3d. for wages. In 1866, between January and May, £472 17s. 9d. were charged for rails, chairs, and other materials, and £53 17s. 9d. for wages. The total amount charged against that loan for replacing Barlow rails with double-headed rails and T rails, was £5,290 8s. for rails, chairs, and other materials, and £964 13s. for wages; altogether £6,255 1s.
 18. Is that all that has been expended?
 19. *Mr. Samuel.*] What were the dates? Between 1860 and 1866. There has also been charged to that vote for riveting and relaying Barlow rails—not for replacing—from May, 1863, to April, 1864, rivets, sleepers, tools, and other stores, £6,583 8s. 5d., and for wages £4,767 10s. 10d.; altogether £11,350 19s. 3d.
 20. *Sir James Martin.*] That is for riveting the old rails, and not for relaying the line? For riveting the old rails—relaying the Barlow rails.
 21. Relaying and riveting the old rails? Yes; £11,350 19s. 3d. In 1865,—May, 1865,—there was a charge against this vote of £2,538 1s. 1d., paid to Peto & Company for T rails and other materials.
 22. Were these rails purchased for relaying this line between Sydney and Parramatta? I understand so. I understand they were put on the line near to the Junction.
 23. Does that make up the whole amount of £20,000? £20,144 1s. 4d. charged against that vote. £144 1s. 4d. in excess of that vote has been paid out of £178 10s., the proceeds of Barlow rails supplied to the Department of Harbours and Rivers, and paid to the credit of the vote on the 11th of May, 1863.
 24. It would appear by that that more than one-half the amount was expended, not in relaying the line, but in patching up the old line? In relaying, but not in replacing the Barlow rails.
 25. Not replacing the old rails by Barlow rails? Not in replacing. The vote is to replace nine miles of Barlow rails with the double-headed rails. The vote appears to have been expended in maintaining the old Barlow rails in their place.
 26. Is it the fact that no new Barlow rails were laid down by means of this vote? I am not aware.
 27. Now as to the next sum of £20,000—How was that expended? The next vote of £20,000 is under 29 Victoria, No. 23; and the words are—"towards relaying the line from Sydney to Parramatta Junction." This vote appears from the railway books to have been expended in the following manner:—In 1866, cash paid for sleepers, £1,590; for rails and other materials, £5,129 18s. 7d. In 1867, paid for sleepers, £558 11s. 9d., and for rails and other materials, £3,384 14s. 2d. In 1868, the amount charged for sleepers was £526 15s. 6d., and for rails and other materials, £5,913 11s. 5d. In 1869 there was paid for sleepers £2,003 19s. 2d., and for rails and other materials, £5,436 0s. 6d.; making the whole amount charged against that vote, £24,543 11s. 1d. The cost of the labour and the ballasting for this work has all been charged to the vote for working expenses.
 28. What is the cost of that labour and ballasting? I cannot tell. It is all charged in the working expenses under the schedules—charged, as I have been informed, under some minute which was made, ordering that it should be so.
 29. Over and above that? I will explain that the excess of £4,543 11s. 1d., beyond the vote of £20,000, has been paid in part from the proceeds of the sale of the old Barlow rails, which has been paid to the credit of this vote, amounting to £3,147 10s. There is still an excess of expenditure of about £1,400, which I presume will be transferred to the new vote.
 30. Since that expenditure you have incurred the expenditure you mentioned in the first instance? Quite so—of £11,779 1s. 8d.
 31. So that if this £35,000 now asked for should be voted, there will still remain about £24,000 to expend on this work—£23,000 or £24,000? About £22,000.
 32. About £22,000? About that.
 33. You do not know whether the work is not now completed? I do not.
 34. You cannot say whether a single shilling more is required for that purpose? I cannot say.
 35. Is there a separate account kept of the expenditure of each sum—of each loan in the Works Department? Yes.
 36. In every case? In every case.
 37. Is the money in every case of loan applied to the purposes for which the loan was authorized? The loans that have been taken for railway purposes have been taken under a great variety of heads, and in the disbursements of them very great confusion has arisen.
 38. In what way? By charging to some votes the deficiency of some votes upon other votes.
 39. Will you give me an example? There is on the Estimates—the Supplementary Estimates—a new loan for the Windsor and Richmond line, a further sum of £2,000. Of that, £1,476 14s. 9d. has been paid. That expenditure has been made upwards of six years since.
 40. Not made in 1869 at all? It was made upwards of six years since, and has been a debit in the books for some time past. The Treasury, until the last few months, always reported that they had a credit for that vote, but in the railway books it appeared overdrawn. Only recently, within the last few months, by information I believe from the Auditor General—entries supplied by the Auditor General—entries have been made which brought this in a debit of £1,476 14s. 9d.

41. Out of what fund was that payment made six years ago? I cannot tell you that; but I would mention that shortly after my entering upon office, in September, 1867, I made a proposal, which was submitted to the Treasurer, that the votes for railway purposes should be amalgamated for the more convenient working of them. I have a copy of the minute here; but it appears that there was a legal objection, and it could not be done so. As another illustration I may mention that there is a large vote of £688,000—25th of February—19—£688,000 extension to Goulburn. In October, 1867, the Treasurer reported that that vote was then exhausted. By the railway books it appeared that upwards of £74,000 should be available. From that period the construction of the line to Goulburn has been charged against the new vote of a million; but within the last few months I have been informed at the Treasury that they had received from the Audit Office information that upwards of £101,000 was available on that vote of £688,000.
42. Have you any means of stating how the fact really is—whether there is a balance of £70,000, £100,000, or no balance at all? According to the railway books there should be a balance of £70,000, and all I can say is that I believe they are correct.
43. How much money has been expended out of the million loan for this work for which £688,000 was voted? I have not the figures with me.
44. Can you give me any rough statement? I could not.
45. Is it more than £100,000? Oh, yes.
46. More than £200,000? I think so.
47. Well, you think that more than £200,000 have been expended on the Goulburn line out of the million vote which ought to have been charged on that £688,000? I say that the £688,000 ought to have been exhausted before the other was worked upon. We were unable to charge against that vote, because the Treasurer reported that there were no more funds, and we were then bound to charge it against the new vote of a million.
48. With reference to this loan for the Windsor and Richmond line—can you state whether £1,476 14s. 9d. closed that transaction and paid for the land? No. My impression is that that is not for land, but for other purposes. The amounts remaining unpaid are the postponed claims that are likely to be presented for land. The £1,476 14s. 9d. does not, I think, comprehend any land in it at all. It is for some claims in connection with the line.
49. Then is it a fact that in 1869 there was no such payment as £1,476 14s. 9d. made for land for the Windsor and Richmond line? It is a fact.
50. And no payment under that head within the last six years? I say that the greater part, if not the whole of that amount, is comprehended in expenditure made about six years ago.
51. Have you any means of telling the Committee how this sum of £1,476 14s. 9d. is made up? I have not.
52. Do you know what it represents? That is the balance which has been advised by the Audit Office to the Treasury, as being the overdraft against that vote.
53. What vote? The vote for the Windsor and Richmond line; and to cover that balance and a few outstanding claims for the line—£525 5s. 3d.—which are likely to come in.
54. Did any claims come in in 1869 for land for the Windsor and Richmond line? I think there was one.
55. What was the amount of it? About £300, I think. I am not quite clear whether it was for that line or another line. I think there was one for that line.
56. Has it been paid? It was paid, paid in anticipation of this vote.
57. Is that the only payment made in anticipation of this vote? I think so. I am not quite satisfied on the matter, but I think so.
58. What is the amount voted for that Windsor and Richmond line? I do not recollect that without reference.
59. Do you not know in any way how this sum of £1,476 14s. 9d. is made up? I cannot give you the figures; I have not taken them out. They could be readily taken out.
60. Do you remember any of them? They could be readily taken out; I cannot give you the particulars; but I say that that account has appeared overdrawn in the railway books for some years past.
61. What account are you speaking of? The votes against the Windsor and Richmond line.
62. Do you mean the land —

Mr. Garrett.] I rise to order. I submit that the examination with regard to this item is entirely beyond the instruction to the Committee.

Debate ensued.

Chairman.] I think that the line of examination is exceeding the instructions to the Committee.

63. *Sir James Martin.*] There is a sum of £3,500 in the Supplementary Estimates, at page 7—do you know anything of that matter—how the sum appears on the Supplementary Estimates? If you will allow me I will give you an explanation of what I know of that matter. I am now reading from a copy of the paper which I furnished to the Under Secretary on the 14th of this month after the item was postponed, explaining what I know of the matter. This is the document from which the Honorable the Treasurer was last night quoting: Working expenses, 1868. Amounts voted were under 31 Victoria, No. 29, £101,865, and under 32 Victoria, No. 12, £40,000—in all, £141,865. The amount expended and charged in the railway books for that year is £143,137 16s. 1d., shewing an excess of expenditure beyond the amounts voted, of £1,272 16s. 11d. In a statement from the Treasury, dated 29th June, 1869, the balance shown by the Treasury books on the 31st May, 1869, to the credit of the above votes, 31 Victoria, 29, and 32 Victoria, No. 12, is stated to be £2,920 13s. 6d. Against which there is the value of the stores issued in December, 1868, and which have been charged in the railway books, and are included in the above amount of £143,137 16s. 1d.; but which had not been charged in the Treasury books, the amount at credit of the votes being insufficient to meet it, £4,169 3s. 5d.; and which being charged would show an excess of expenditure over votes of £1,248 9s. 11d. In addition to which, in the same statement, the following amounts, which have been paid and charged against the working expenses vote of 1869, were, in pursuance of directions from the Auditor General, transferred in the Treasury books from the vote of 1869 to that of 1868, namely,—compensation claims arising from accidents in 1868:—Davies, £250; Fleay, £150; and T. Evans, £1,139 17s. 11d. These claims amount in the aggregate to £1,439 17s. 11d., and with the excess of expenditure over vote of £1,248 9s. 11d., make a total of £2,688 7s. 10d. The difference between £2,688 7s. 10d., and the sum of £3,500 put on the Supplementary Estimates, is intended to meet the

A. Ashdown,
Esq.
24 Mar., 1870.

A. Ashdown, Esq. the unascertained claim now pending in the Court against the Commissioner by Judge Cheeke. That is an explanation of how the £3,500 came to be put on the Estimates as far as I know, as far as the railway is concerned. It is a mere adjusting entry between the Treasury and the Audit. As far as the railway books are concerned all that is required to adjust their account is £1,272 16s. 11d., the excess of the expenditure beyond the amounts voted for 1868.

24 Mar., 1870.

64. Then are we to understand that it is not the fact, as would appear by these Supplementary Estimates, that no part of this £3,500 was already expended? All those amounts have been paid.

65. The whole has been paid with the exception of £400 or £500, the amount reserved to meet this claim of Mr. Justice Cheeke? The whole of this £2,688 has been paid.

66. Are you aware that by the Supplementary Estimates it appears that no part of it was paid in 1869? That is an error—that is a mistake—that is not the fact.

67. It is not the fact that no part of this money was expended, but it is the fact that £2,600 was expended in the way you say? Yes.

68. Can you state whether the whole of that £140,000, which you mentioned was devoted to the working expenses of the railways, or whether any of it went in another direction? —

69. *Mr. Samuel.*] What £140,000? —

70. *Sir James Martin.*] The money voted for the working expenses in the year 1868. I think you mentioned £140,000? £143,116 13s. 1d. have been charged against the working expenses of the railway for the year 1868.

71. But I want to know whether all that amount was expended in the working expenses? Yes; I presume so; the vouchers for the whole of that sum are in the Treasury.

72. The money was not spent in any other direction, for any other service? Not that I am aware of. The money has been expended upon vouchers, but whether they are correctly charged or not, rests entirely with the officers certifying those vouchers. I have no means of knowing whether those vouchers are correctly prepared and certified or not.

73. Can you tell how much money was actually expended in the year 1869, for the working expenses of the railways? The amount expended and charged in the railway books against the working expenses for 1869, is £184,009 17s. 6d. The amount voted was £154,025, and the expenditure shows an excess beyond that amount of £29,984 17s. 6d.

74. Are you aware that in the Supplementary Estimates £15,000 is asked for to meet that deficiency? I am aware that there is a sum of £15,000 put down on the Supplementary Estimates.

75. At page 13? But I am quite sure that it will not meet that deficiency.

76. By how much will it fall short of that deficiency? £14,984 17s. 6d.

77. Did you any time in December make any representation to the Treasurer, or to any other person, as to the amount that would be required to meet the deficiency? I did on two occasions, to the Honorable the Minister for Works, the Commissioner for Railways, Mr. Sutherland; and I also had communication with the Treasurer. On the 6th of December I wrote a minute to the Minister, intimating to him that the vote for working expenses would be insufficient for the purposes of the year, and that it would be necessary to obtain Executive Council sanction for the payment of moneys in anticipation of the Parliamentary vote for the payment of such services, which I estimated would be to the extent of £30,000.

78. *Mr. Samuel.*] What year was that? 1869, and it was on or about the 22nd of December; the vote had then become exhausted.

79. *Sir James Martin.*] Nothing had been done in the meantime in the way of sanctioning additional expenditure? No, it had not.

80. On the 22nd of December? On the 22nd of December the amount was exhausted, or nearly so, and large claims were coming in for wages and other matters; and then another representation was made to the Minister.

81. By you? By me; and a rough estimate was prepared, shewing what money would be required, and for what purpose. I think that the figures then shewed a sum of £27,000 or £28,000, as estimated to be required.

82. What step was taken on that, so far as you are aware? Upon that there was an order of the Treasurer sanctioning, in the meantime, the payment of the pressing claims then for wages.

83. Out of what fund? I know not. The money was obtained from the Treasury on vouchers charged against the working expenses of 1869, in anticipation of a vote being obtained from Parliament for the purpose.

84. Have you any means of knowing why, instead of £29,000 or £30,000, the sum of £15,000 only was asked for on these Supplementary Estimates? None whatever. It has been a matter of surprise to me, and to every one in the office, why this small sum should be asked for, when a much larger sum is required.

85. Double the amount? Double the amount.

86. Is it the fact that in that sum of £184,000, which you just now mentioned, there is included £10,000, which ought to be charged for loan? Not that I am aware of.

87. Are you aware whether there is a single shilling included in that large sum which ought to be charged against loans? I am not aware of it.

88. Did you ever hear of anything of the sort? No; but I beg to remark that the charging against this vote rests with the officers expending the money. They alone are responsible for the proper appropriation and expenditure of this money against the vote.

89. Do you keep the books in which are entered the expenditure of the money? Yes, and enter the vouchers as they are appropriated by the officers. It would be impossible for the Accountant to discriminate whether they are correctly appropriated to the votes, on the vouchers, or not. The man who attends to the expenditure only can be made responsible. Shortly after I entered into the office, in July or May, 1867, I prepared a minute to clearly protect myself in that respect. There were numbers of vouchers coming into the office to be entered into the books, bearing the signature of the officer certifying the expenditure, and probably the initials of the Clerk preparing the account, and possibly other initials. I had to inquire what should be the value and meaning of these initials as they came through the Accountant's branch, there entering into the books; and I prepared a memorandum minute clearly defining the fact, and putting the responsibility on the parties certifying the accounts.

90. Is there any separate account kept of the working expenses of the railways? Yes; oh yes.

91. Is there a separate account kept of the working expenses of each line, or are the expenses of all the lines kept in one account? Separate accounts; it is kept under schedules.
92. Then there would be no difficulty—the books being here—in referring to the items of expenditure which make up this sum of £184,000 for the last year? None. The gross details can be got, and by to-morrow I hope the books will be posted up. The working expenses are put under a variety of schedules; A, being for locomotive power; B, carriage repairs; C, maintenance of way; D, coaching charges; E, goods charges; and F, general charges. A again is divided into various heads—Locomotive power—(1) wages of engineman and fireman; (2) wages of engine-cleaners and out-door labourers; (3) cost of fuel for engines and wages of fuelmen; (4) water and repairs of engine for pumping; (5) oil, tallow, waste, and sundry stores; (6) clothing. Repairing engines:—(1) locomotive foreman and time-keepers; (2) wages for repairs and renewals of engines; (3) materials for ditto; (4) repairs of machinery and workshops; (5) tools and implements; (6) general charges; (7) fuel and lighting; (8) casualties. All these are under schedule A, and are kept under these particular numbers.
93. In your books the full detail will be shown? Yes.
94. Will there appear in those books the names of the servants employed in the department? Not the names of the labourers, but on the vouchers and pay-sheets their names will appear.
95. Where are the pay-sheets kept? After paying the men they go to the Treasury, and are records for the payments made.
96. In the case of other person employed who are not mere labourers, do their names appear? Yes, they do, charged to the different heads.
97. Have you the salary paid to each? Yes.
98. Would it be possible to furnish a return—would it be a very long return, comprising the names of all the persons who were paid out of this vote, other than labourers? No; I think not.
99. For 1869? Salaried officers.
100. Yes? No, it would not be a long return that would comprise the names of the station masters and other persons receiving salaries.
101. These are provided for as officers—are they not? No; they come under the head of working expenses. There are so many station masters at so much each.
102. Can you tell me now what the working expenses of the railways have been from 1869 up to the present time—what they have been in each year? Since when?
103. 1869? That is last year.
104. I mean 1859? I have not the materials here. I can do so, but not now.
105. Can you tell me the expenditure for 1868? Yes. I have done so. £143,137 16s. 1d.
106. Can you tell me how much larger the expenditure for 1869 was than the expenditure for 1868? £41,000 nearly.
107. How did that increase arise? One is £143,000, and the other £184,000.
108. How did that increase arise? That I cannot tell you. The books are all but posted up now. The accounts are only just closed for 1869. The details can be got out, and the increase can easily be ascertained by comparing one sheet with another. I cannot tell you without comparing the accounts where the increase has been.
109. Can you tell us how many additional persons have been employed at salaries since 1868? I cannot now. I could do so by reference.
110. But not at this moment? No.
111. Under whose orders do you act in keeping these accounts—I am speaking now of the accounts for the working expenses, and the relaying of the Parramatta line? Well, I should like to explain, that when I accepted this office, which was offered to me by the late Minister for Works (Mr. Byrnes), I was informed that I should receive my orders from the Commissioner, and I have received my orders from the Commissioner. When so appointed, he requested me to examine into matters, and to suggest such alterations and improvements as I might find desirable in the mode of keeping the accounts. I did suggest, and carried out an alteration in the mode of keeping and working the railway accounts. I would explain, that as the accounts were kept of the earnings and expenditure of the railways, and as those earnings and expenditure have been published in the Statistical Register they were utterly fallacious. If you refer to the Statistical Register for 1867 and 1868 —
112. That is not what I wanted to ascertain from you. I want to know under whose orders do you act in keeping these accounts? The Commissioner's.
113. Do you ever receive any directions from the Engineer-in-Chief? No, never.
114. Has he interfered, so far as you are aware, in keeping these books? Yes; he has interfered, through the Commissioner.
115. How do you know that? I know it to my cost, from the insulting and opprobrious minutes which I have received from the Engineer-in-Chief through the Commissioner.
- Mr. Garrett rose to order, and objected to the examination as irrelevant.
116. *Sir James Martin.*] Are we to understand that the Engineer-in-Chief has interfered with you, or sought to interfere with you—I do not want to know the particulars —? Well, I have received my instructions through the Commissioner, which instructions have been minutes of the Engineer-in-Chief, forwarded on to me through the Commissioner.
117. Your instructions were received through the Commissioner, but actually the instructions were by the Engineer-in-Chief? They were as to the subverting of a system which I introduced for the purpose of truthfully keeping the railway accounts.
118. So that the Minister, instead of giving you instructions, has sent on to you minutes by the Engineer-in-Chief? And with his minute upon them.
119. With a minute of his own upon it, adopting it? Yes, with his minute upon it, and directing that in some instances certain matters are to be done.
120. Now with reference to items which are required to be adjusted—items going back for years—what will the effect be if the amount is now covered by a new vote;—will it involve additional expenditure of public money, or is it a mere matter of account? —
- Mr. Garrett objected to the question as involving the general mode of keeping the accounts.
- Debate ensued.
121. *Sir James Martin.*] Does it involve a mere adjustment, or a further payment? It will involve no expenditure

A. Ashdown,
Esq.
24 Mar., 1870.

A. Ashdown, Esq. expenditure as far as the railway is concerned. I think that I have already explained that it is a mere matter of adjustment between the Auditor and the Treasurer.

24 Mar., 1870. 122. Will that answer apply to the £3,500 asked to be voted. Will it involve a new expenditure, or merely legalize the expenditure already made? So far as the expenditure has been made. I do not know that £3,500 has been expended. It will cover £2,588 that has been expended.

123. Can you explain how it is that this matter has remained in this unsatisfactory state for the last six years? Which item?

124. Can you explain how it is that the £3,500 have remained over? No. I have explained that as far as the railway accounts are concerned; the amount in excess of the amount voted is £1,272.

125. I think you told us that the Auditor General directed that certain charges paid in 1869 should be charged back to 1868, and that that is a mere matter of account? That is all.

126. But as to the £30,000 deficiency in the working expenses for 1869, £15,000—if the estimates are passed in this way—will remain to be voted sometime or other? Nearly so—£14,000 and odd.

127. That is a fact? That is a fact.

128. Then I suppose that it follows from that, that the indebtedness of the country is understated to the extent of nearly £15,000? Exactly. If £15,000 has been put down as the further sum required when £29,000 is the sum bound to be expended.

129. The indebtedness of the country has been understated by a sum amounting to nearly £15,000? Yes.

130. Or in other words our finances are made to appear £15,000 better than they really are? Precisely, nearly £30,000 has been paid.

131. And all that is asked to cover that is £15,000? Yes.

132. Have you ever heard that it is intended to devote £10,000 out of the loan fund to partially defray this £15,000? I have not, excepting from what has transpired in this House.

133. I mean have you ever heard of it in your department? Not a word. If it were chargeable to Loans I cannot understand why it should not have been charged when the expenditure was incurred, because the loan votes have been charged with relaying, the same as the other votes have been charged.

134. Has it been the practice in the department, as far as you are aware, to defray the cost of repairing and maintaining the line out of the funds provided for working expenses? That is the practice. The whole theory and practice is that the line and the rolling stock shall be maintained in perfect order out of the working expenses.

135. *Mr. Samuel.* The rolling stock? The rolling stock and the maintenance of the line.

136. *Sir James Martin.* How do you know that—from the books that you have kept? From the books that I have kept, and from the schedules. In the schedules for working expenses, under division C, maintenance of way, there are charges for ballasting; slips; repairs of tunnels, viaducts, bridges, &c.; repairs of sidings, turn-tables, &c.; repairs of gates, fences, &c.; relaying line; repairs of stations, platforms, and buildings; repairs of signals, cranes, weighing-machines, &c.; repairs of approach-roads; casualties; and branches.

137. Will you state again, if you have done so already, in what year the £11,000 were expended, out of one of these sums of £20,000, in re-riveting the old Barlow rails, and laying down new sleepers only? In 1863 and 1864—between May, 1863, and April, 1864.

138. *Mr. Samuel.* In 1863 and 1864? Between May, 1863, and April, 1864. I beg also to state that in these working expenses there is provision made for paying compensation claims for accidents.

139. Repeat that? In the working expenses under the Schedules there is a schedule there for the payment of compensation for casualties.

140. *Sir James Martin.* Then I presume that it is not the fact that any portion of this sum of £3,500 has been expended in traffic expenses, maintenance, maintenance of way and works, wages to workmen, stores, and incidental expenses? Yes; I should say to the extent of £1,272 16s. 11d.

141. For stores? Generally; I cannot divide it.

142. The rest would come under the head of incidental expenses? The rest arises from the transfer from 1869 to 1868.

143. Which you would call incidental expenses? No, under the schedule belonging to it.

144. What are these called? Compensation claims.

145. Then this entry at page 7 does not accurately describe what the expenditure has been incurred for—You see there Railways—existing lines, working expenses: traffic expenses, maintenance of way and works, wages to workmen, stores, and incidental expenses. That is the general head? Yes.

146. Then there are the words “further sum,” and there is carried out the amount, £3,500? Yes; so far as the balance of £1,272 16s. 11d. I fancy it would be comprehended in that.

147. But as to the rest that entry does not correctly describe what that money is wanted for? No.

148. And there is a still further error in not showing that £2,600 have been already spent? Yes; that is a mistake of somebody.

149. *Mr. Samuel.* Will you be kind enough to state again the manner in which you said the first £20,000 voted for replacing nine miles of Barlow rails with double-headed rails, the vote taken in 1860, was expended? Shall I repeat it?

150. Yes—I should like you to repeat it? The vote of £20,000, 23 Victoria, No. 10, to replace nine miles of Barlow rails with the double-headed rails between Sydney and Parramatta, being one-third of the distance, appears to have been expended, from the railway books, as follows:—Replacing Barlow rails with double-headed rails and T rails—in 1860 there was charged for rails, chairs, &c., £831 3s. 4d.; in 1862, £3,888 2s. 8d., and for wages, £406 7s. 9d.; in 1864, rails and chairs, £91 7s. 7d., and wages, &c., £264 8s. 3d.; in 1865, the charge for rails and chairs was £6 16s. 8d., and for wages £239 19s. 3d.; in 1866 there was paid for rails, chairs, &c., £472 17s. 9d., and for wages £53 17s. 9d.

151. What do you make the total? The total for materials was £5,290 8s., and for wages £964 13s.

152. What do you make the total expenditure as charged to that vote? £20,144 1s. 4d.

153. £20,144 1s. 4d. Then the whole of that vote was expended upon this line? Which line?

154. Upon the line between Sydney and Parramatta? I presume so.

155. You presume so? Yes.

156. You seemed to lay great stress, if I understood you correctly, upon the manner in which this vote was taken, that is, the vote of £20,000, to replace nine miles of Barlow rails with the double-headed rails

- in 1860; and you say that a considerable portion of this amount—£11,000—was charged for riveting and relaying the line with Barlow rails—Is that so? It appears so.
157. That is so? That is so; so the books show.
158. Do you know of your own knowledge—do you know anything beyond the fact stated in the books that this money was so expended? No; but I am aware of my own knowledge that that work was done, because I lived on the line, and remember seeing the work going on; but I know nothing of the amount expended beyond what I find in the books.
159. Do you know whether an indent was sent to England for double-headed rails? I know nothing about the indents.
160. Are you aware that there were no double-headed rails in the Colony between 1860 and 1863 for this purpose? I am not aware.
161. Are you aware that the line was in such a state as rendered it imperative that something should be done to it? I am not aware.
162. You are aware that £11,000 and odd were expended on this line for relaying with Barlow rails, and you obtain that information from the books? Yes, from the books.
163. The whole amount appropriated by this House, the £144 beyond it, which I think you spoke of, was it expended on this work? It appears so by the books.
164. It was expended? No doubt.
165. Another vote was taken—there was another vote in 1863, I think you said, for £20,000? I do not know the date. It was 29th Victoria.
166. There was another vote taken, which also was chargeable to the Loan Fund? Yes, also charged to the Loan Fund.
167. Will you repeat again how that amount was expended? In 1866, cash paid for sleepers, £1,590; rails and other materials, £5,129 18s. 7d. In 1867, sleepers, £558 11s. 9d.; rails and other materials, £3,384 14s. 2d. In 1868, sleepers, £526 15s. 6d.; rails and other materials, £5,913 11s. 5d. In 1869, sleepers, £2,003 19s. 2d.; rails and other materials, £5,436 0s. 6d.—Making a total, which has been charged against that vote, of £24,543 11s. 1d.
168. That is £4,543 expended in excess of the appropriation? Yes, quite so.
169. That is to say, that both these amounts have been expended, and £4,000 and upwards besides, on these lines? Quite so.
170. Now the second vote was taken for relaying the line? The second vote was taken towards relaying the line from Sydney to Parramatta.
171. This expenditure commenced between 1863 and 1864—the relaying of the Barlow rail on the line to Parramatta? And the first vote was in 1860.
172. The Barlow rails were laid in 1863 and 1864? The riveting and relaying was in 1863 and 1864.
173. Who was the Minister at that time, do you remember? I do not.
174. Do you know what Minister was in office then? I think Mr. Arnold was in office.
175. Was Mr. Holroyd the Minister? I do not know.
176. Will you venture to say that he was not—in October, 1863, this expenditure took place, and in the year 1864—Mr. Arnold was the Minister in 1864? I do not know at all who was the Minister.
177. At all events these two amounts, and the excess of these two amounts, were expended upon these two lines? It so appears by the railway books.
178. Now in the year 1868 there is a vote for £3,500 on the Supplementary Estimates? Yes, on the present Estimates.
179. On the present Estimates? Yes.
180. That vote is stated in these words:—Traffic expenses, maintenance of way and works, wages to workmen, stores, and incidental expenses, further sum £3,500—is there anything unusual in the way in which this item is placed upon the Estimates? I do not think so.
181. Nothing unusual? I do not think so.
182. I think you stated that on some former Estimates provision was made for casualties and accidents under precisely the same terms as those of this vote for working expenses? In precisely the same terms, yes; it comes under working expenses.
183. They have been always under the head for working expenses? Exactly so.
184. Sir James Martin has asked you whether the whole of this amount was not paid. Are you aware that a certain portion of this amount of £2,688, of this estimate of £3,500, was paid in 1869 and charged to the working expenses of 1869? No, Sir, not that; £1,439 was paid in 1869.
185. £1,439 was paid in 1869, was it? In the statement I received from the Treasury, dated 29th of June, 1869, by the Treasury books they appeared to have to the credit of these votes, £2,920 13s. 6d.; but then they had held over, not charged, the value of the stores issued in December, 1868, which amounted to £4,169 3s. 5d., the amount at the credit of the vote being insufficient to cover it.
186. Do you say that you are not aware that this amount of £2,688 was not charged to the year 1869? I am aware that it has been paid.
187. Will you undertake to say that it was paid in 1869, and, at the request of the Auditor General, transferred to 1868? Only so far as relates to £1,439 17s. 11d.
188. £1,439 17s. 11d. was paid in 1869? Yes.
189. And, at the request of the Auditor General, transferred to 1868? So I understood.
190. You are not certain that the whole £2,688 7s. 10d. was not charged? I do not know that. I do not see why it should be.
191. Can you give us any reason why the £1,439 17s. 11d. should be? The Auditor General requested it because, I understood, that it arose out of the expenditure accruing in 1868.
192. You say that these amounts were paid—£2,688 7s. 10d.? Yes.
193. Were they not charged to the revenue of 1869? Yes.
194. They were? As far as the £1,439, yes.
195. You will not undertake to say that the remaining portion was not? I say this:—There were £4,169 3s. 5d., the value of stores issued in December, 1868, which were charged in the railway books, and which the Treasury had advice of; but the Treasury did not transfer it, and charge it against the working expenses vote, because the vote was not sufficient to cover it. But the stores had been issued, and therefore paid.
196. Was the amount of £3,500 placed on the Supplementary Estimates at your instance, as the Accountant? No, at the instance of the Accountant of the Treasury, at his request.

A. Ashdown,
Esq.

24 Mar., 1870.

A. Ashdown, 197. Will you read that minute? Yes.

Esq. 198. What does it say? Executive Council authority is required for the charging of expenditure incurred in the above year, in anticipation of the amount being voted by the Parliament, of the sum of £3,500, which has been placed on the Supplementary Estimates.

24 Mar., 1870.

199. What is that signed? "A. Ashdown, Accountant." That was done at the request of Mr. Layton.

200. It is your minute? Yes.

201. You would not have acceded to any improper request? No; I think there is nothing improper about it.

202. I asked you the question whether it was not at your request that this amount had been placed on the Estimates? Yes.

203. You did not say that this amount had been improperly placed on the Estimates? No; never have said so.

204. Let us come to the year 1869. You say, if I understand you correctly, in answer to a question by Sir James Martin, that you were not aware that any amount which had been charged to the working expenses of the year ought to have been charged to capital account? Yes, I said that.

205. You were not aware of it. Now do you know, and are you in a position to tell exactly, from the vouchers you receive, what ought to be charged to capital account and what ought not? No.

206. You are not in a position to tell us that? No.

207. Then if the engineer with the Minister should say that £10,000 out of the expenditure for 1868 is properly chargeable to the capital account, the loan account, would you undertake to say that they have acted improperly in that? No; but I suppose that I should have a voucher to transfer it, and an explanation of it.

208. You might or you might not. However, you say at all events that you are not in a position to tell of your own knowledge, whether in the working expenses of 1869 a sum of money, amounting to something like £10,000, was properly chargeable to loan account? I am not in a position to tell whether the amounts charged and certified by officers are correct or not.

209. If £10,000 were improperly charged to working expenses and ought to be transferred to the loan account, would you require to ask Parliament to vote as much for working expenses as though that amount was not so charged? If the working expenses were reduced by any amount, the amount would be less to the extent of the debit.

210. You stated that in December last you asked for £30,000 to be placed on the Supplementary Estimates as an additional amount required for working expenses? No; I do not think I asked for that, but that Executive sanction should be obtained for the payment of vouchers to the extent of £30,000.

211. Did you say in your minute that the present vote would be insufficient to meet the necessary expenditure during the remainder of the current year, to the extent, according to the Accountant's estimate, of £25,000, but that it would be well to ask for £30,000? Yes.

212. You said that £25,000 would be required, but that it would be well to ask for £30,000? Exactly.

213. Is not that rather a wholesale way of dealing with a matter of this kind, and does it not give the appearance of guess-work about it—(I do not say that it is so)—but has it not that appearance when you think that £25,000 will be sufficient, and you ask for £30,000? The asking for money is not the paying of it. The payment of it can only be on the vouchers of the officers making the expenditure. If £25,000 only had been asked for, and £28,000 required, an additional application would have to be made to cover the deficiency between the estimated and the actual expenditure. Therefore to avoid that, it is desirable to ask for an amount sufficient to cover the expenditure required. I estimated that £25,000 would be sufficient, but I was wrong in my presumption, that is all.

214. I will come to that presently. You had not the whole of the figures before you, but you did it on the assumption that that amount might be required? It might be required on the expenditure then going on.

215. Did I understand you correctly, to say that your books were not posted up for 1869? The account for 1869 was only closed a few days ago.

216. Your books were not posted until a few days ago? The working expenses account has been kept open for the purpose of getting in everything up to the end of 1869.

217. They were not posted up until a few days since? No; they cannot be balanced until all the accounts are in.

218. They are not balanced yet, in fact? No.

219. I understood you to talk of some vote being deficient by a large sum—£26,000 I think you said—rather than there was a balance to the credit of some vote, an amount unexpended of £26,000, I think you said. You said that there was an amount unexpended? I do not know what you are referring to.

220. You said there will remain to the credit of these two accounts £22,000;—I was wrong in saying £26,000? Upon the railway votes?

221. Yes, upon the railway votes? —

222. *Sir James Martin.*] £35,000 are asked for, and if that amount is voted, there will remain £22,000 for that service —

223. *Mr. Samuel.*] Will you tell us how you make that out again—If both these votes have been expended, and £4,000 and upwards, besides that £40,000, I should like to know how you make out that there remains this balance to the credit of these accounts? There is the first vote of £20,000, the second vote of £20,000, and the anticipated vote of £35,000, making in all £75,000. On the first vote there has been expended £20,144, on the second vote there has been expended £24,543, and of the anticipated vote there has been expended £11,779 1s. 8d. These sums amount to £56,476, and if you take from this amount the £3,147—the credit for old rails—you reduce it to £53,329 which deducted from the £75,000, leaves about £22,000 available.

224. You are crediting in that account the proceeds of the old Barlow rails? Yes; that is to say, the debit of the anticipated vote of £11,779 1s. 8d., and the balance overpaid, of about £1,300. That makes about £13,000, and this from the £35,000 will leave about £22,000.

225. You say there is a sum of £2,000, and something paid to Peto & Company for rails? £2,538 12s. 1d. appears in the books.

226. You have stated that those were rails purchased from Peto & Company? It is so stated in the books.

227. Are you aware that those rails were formerly lent to Peto & Company, charged to Peto & Company, and when they were returned Peto & Company were credited with the amount? I am not aware of it.

228.

228. No money passed at all. The rails belonged to the Government—You are not aware of that? I A. Ashdown, Esq.
229. Have you endeavoured to trace out the large quantity of rails lent to Peto & Company, charged to Peto & Company, and do you know that this was the balance of the rails returned to the Government, and the amount was credited to Peto & Company when the rails were returned? I have not made any such reference; and I don't know anything at all about it. 24 Mar., 1870.
230. Are you prepared to say that you have gone through all the books since 1860, and that you may not have missed some items of the account? I do not say that. I say that I have gone through the accounts as far as the expenditure of these votes is concerned. I have not gone through the books beyond that, and these were gone through at the special request of the Commissioner.
231. *Mr. Piddington.*] Did I understand you to state, in reply to Sir James Martin, that you informed the Treasurer, on the 6th of December, that the amount of money voted for working expenses in 1869 was nearly exhausted? Not on that date; it was subsequent to that.
232. *Mr. Samuel.*] Was it to me personally? You were in the office with Mr. Sutherland, and you expressed yourself very warmly and angrily that this money should be required, and that you had had no intimation of it before. I then prepared a statement. We were then urging you for the payment of wages.
233. Did that apply to any particular amount of money? The money required for the payment of wages for the balance of 1869.
234. But did it apply to any particular amount? It applied to this amount of £25,000 or £30,000. We were talking about it.
235. You are quite certain that you mentioned the amount? Quite certain, because I prepared a statement, showing how the sum was made up. I remember so much for wages, so much for the north, so much for the south, and so much for stores.
236. *Mr. Piddington.*] The witness has answered the question. I understood the witness to state that he communicated to the Treasurer on the 6th of December that the vote for working expenses for 1869—£154,000—was nearly exhausted, and that there would be a probable necessity of £25,000 to £30,000, an additional amount for the working expenses of 1869? That was communicated to the Minister for Works; when it was communicated to the Treasurer was about the 22nd of December.
237. But I understood you to say that the Treasurer was present when you made that statement? Not on that date. That was on a later date—on the 22nd of December.
238. About the 22nd of December did you make any communication to the Treasurer that from £25,000 to £30,000 was required as an additional sum for the working expenses of the railways for 1869? On that occasion I produced a copy of the minute, I think, now shown by the Treasurer. The Treasurer complained that he had not been earlier made acquainted with the matter; and I stated that as far back as a fortnight, that on the 6th of the month, I prepared that minute.
239. I understood you to say that on the 22nd of December you presented to the Treasurer, or communicated to the Treasurer, a written statement, showing that a sum of £25,000 or £30,000 would be wanted for the working expenses of 1869? I did.
240. If the Treasurer has stated that he knew nothing of such a sum I suppose he must have forgotten the statement? I fancy so.
241. You are quite sure that you did state to him that the sum of £25,000 or £30,000 would be required? Quite so; it was in the presence of Mr. Sutherland and of Mr. Rae, in the Minister's office.
242. If the Treasurer has stated —
Mr. Garrett.] I object to this question being taken down.
Mr. Piddington.] I have no other question to put.
243. *Mr. Sutherland.*] With reference to this £25,000 or £30,000 vote—take it either way—you sent a minute to me, requesting me to get Executive authority for £25,000 or £30,000? £25,000 was the amount required, and you suggested that I should get £30,000 in the same minute. I see here that I sent a note to you requesting you to explain —
Mr. Tunks objected to the form of the question.
244. *Mr. Sutherland.*] Did I send a note to you, requiring a detailed account of the sum required for working expenses of 1869,—stating that then there was only some ten days of the year to go, and wishing to know why you required this large sum when there were only ten days of the year then unexpired? Yes, quite so.
245. Did you give me that statement? I gave you a memorandum.
246. What was the amount that you made that up to? I forget.
247. Is that (*handing document to witness*) the statement you refer to? This is it:—Working expenses, 1869; it is dated 22nd December, 1869. Estimated amount required beyond the sum voted: For wages, &c., fortnight ending 18th December, 1869, £4,630 12s. 3d.; fortnight ending 24th December, 1869, £1,250; fortnight ending 31st December, £5,000 for the Southern, Western, and Windsor and Richmond lines, and £700 for the Northern line—making a total for wages, &c., of £11,580 12s. 3d.; stores issued—particulars to be furnished by the storekeeper—September, October, November, December—£4,000 a month; in all £16,000. That together amounts to £27,580 12s. 3d. Against that there was to the credit of the vote £1,068 7s. 4d. on the 21st of December, 1869, so that that would leave the estimate of the amount required at £26,512 4s. 11d. That was the estimate prepared at that time.
248. Did I question you with reference to the amount you calculated for stores, £4,000 a month;—did I not ask you what the average amount for stores would be, stating that the expenditure seemed to me a large amount? I think you did. The amount has turned out to be as nearly as possible as I estimated it to be.
249. What was the amount expended during these four months? I cannot tell you from memory.
250. Was it not £1,500 less than this estimate? It may be so.
251. For the months of September, October, November, and December, 1869? It appears to me that I then estimated that £26,000 would be required; and what has actually been wanted is £31,000.
252. I am asking you upon these four months issue of stores? Those were my estimates of the amounts.
253. I ask you what is the expenditure for stores on these four months? I have not got the figures with me, and cannot give them to you. I can furnish them from the office.
254. The actual expenditure has been £1,500 less, leaving the vote nearly £25,000. I made the vote £25,000, as first requested by the Accountant —

- A. Ashdown, Esq.
24 Mar., 1870.
255. With reference to the £20,000, or the balance of the £20,000 at the credit of that vote in December, 1869, can you tell me the amount at the credit of that vote in 1868—in December, 1868? What vote?
256. The £20,000 for relaying the Parramatta line. I simply wish to get from you what amount was at my disposal for the purpose of relaying this line when I came into office; and I have the accounts at that time which showed what was at the credit of the vote then? I have not the materials here, but if you have got the account there I can show you.
257. I have not got the account, but I have got copies of a few minutes from Mr. Thomas, who then required a vote for that purpose? I remember furnishing you with an account. I have got a copy of the account I furnished, in my bag.
258. I want to know the amount when I came into office. I have only got to account for that, which is quite enough for anyone to do, I believe? I have here a copy of a minute from you, dated 23rd December, 1868—"The Commissioner wishes to have, without delay, a detailed account of expenditure of the vote for relaying the line between Parramatta and Sydney." I furnished you with a statement, which showed £4,878 4s. 9d. to the credit of that vote on that date.
259. To the credit of the vote? Yes; which included £1,923 5s., the proceeds of old Barlow rails sold, which the Law Officers stated we had no right to make use of, leaving only at the credit of that vote properly an amount of £2,954 19s. 9d.
260. Properly speaking, you say that £2,954 legally at the credit of that vote? I suppose so from the minutes and letters that passed. The amount has never been transferred but has still gone on, and no account taken in the matter. Further amounts have been paid in, and further amounts have been paid out.
261. Can you give me the total expenditure from that vote since that time? Since that time, yes. There has been charged against that vote about £7,000. The amount expended was then £17,606 11s. 11d.; it is now £24,543; and there is a difference of £7,000 nearly.
262. There only remained £2,900, and still there has been paid £7,000 do you say? That is quite right.
263. From what was the excess of the vote paid? It has been paid in part from the proceeds of Barlow rails—paid to the credit of the vote.
264. And what was the other part? I do not know. There is an over-payment apparently; an over-payment in the Treasury books, which I understand they are going to transfer to this new vote.
265. Out of what vote was this over-charge paid—It must have been charged from some vote? It has been charged to that vote. Where the money has come from I don't know.
266. What amounts have been expended in relaying the Parramatta line from the date that I refer to up to the present date? There is £7,000 there, and £11,800,—that is £18,000 or £19,000.
267. And what amounts, if any, are outstanding? I cannot tell you.
268. To when have you the stores' accounts? I have not the store account for February, last month.
269. You have not the store accounts for February? They are not furnished yet.
270. Then you really cannot say what has been expended up to the present time, or to any given date? I did give you the expenditure, with the exception of the store accounts, which are not furnished; £18,000 or £19,000 that I know of, and to be added to that, is the value of the stores issued in February, but which has not yet been furnished.
271. You have stated in your evidence that the Engineer-in-Chief and the Commissioner have interfered with you in the mode of keeping the accounts of the railway? I have.
272. What do you mean by the accounts—do you mean the books in the office, or the returns of the earnings?
- Mr. Garrett objected to the question.
273. *Mr. Farnell.*] Is it your duty as Accountant to prepare an estimate for the necessary working expenses of the railway? No.
274. I think you have told us that at the instance of the Minister you did prepare a rough minute, showing that £25,000 or £30,000 would be required for the working expenses over and above what had been voted? I did.
275. When you prepared that minute did the Minister in charge of the Department approve of it? I presume so; I heard nothing to the contrary.
276. What was the amount that you recommended? I recommended that sanction should be obtained to the extent of £30,000.
277. £30,000? Yes.
278. Did the Minister demur to that amount—did he say that he thought that it was too much, or that it would not be required? He thought that it was very large.
279. Did you explain to him that it would be required? He wanted to know how I arrived at that; and I prepared him the memorandum of that account.
280. However, it has turned out since that that amount was required? Yes, and more.
281. And more? Yes.
282. Are you aware that there is a sum of £15,000 on the Supplementary Estimates to meet working expenses? I am.
283. And that that £15,000 is intended to meet that £30,000? It will not meet it.
284. I am well aware it will not.—Are you aware that £15,000 have been placed on the Estimates? Yes; and that it will go to the credit of that expenditure.
285. But £30,000 will be required? £29,000 and odd will be required.
286. Speaking in round numbers? Yes.
287. Are you aware whether the relaying of the line to Parramatta is completed? I am not aware.
288. Have you ever heard that it is completed? No, I have not. I am not aware of it at all. I do not think it is. I think that I have heard that there is more work yet to be done up near the Junction.
289. If that work is not completed, is there any money at the disposal of the Government for the completion of it? All the charges that have been made against that have been paid under the Executive Council's sanction of £25,000—an Executive Council Minute—authorizing the payment of vouchers to the extent of £25,000, in anticipation of the Parliamentary vote, that is for the relaying of the line.
290. For the relaying of the line? Yes.
291. But is not that £10,000 short of what the Government is now asking? Yes. I say the Executive Council Minute, of which I have only official knowledge, is for £25,000, and against that minute the charges have been made,—vouchers have been charged and debited against that to the amount of £11,779.

292. Of the £25,000? Of the £25,000. I have no official knowledge of more than the £25,000; but I see on the Supplementary Estimates £35,000, so that I presume the £25,000 is to be increased to £35,000.

293. You say that £11,000 has been paid out of this £25,000, or has been set against the Executive Minute? Yes.

294. In page 7 of the Supplementary Estimates, under the head of Secretary for Works, there is an amount of £3,500. I think you stated that a large portion of that amount had been paid for sundry services? For what?

295. That a large portion of this £3,500 has been paid for sundry services; will you just state what services? To the extent of £1,272 16s. 11d., which is the balance in excess.

296. The balance in excess of what? The amount expended and charged in the railway books for 1868 is £143,137 16s. 1d., and the amount voted £141,865. Therefore the amount expended in excess of the amount voted is £1,272 16s. 11d., and this is intended to be comprehended in this £3,500.

297. Will you state how any part of this £3,500 has been expended? £1,272 16s. 11d. has been expended in working expenses.

298. And what about the rest? £1,439, or thereabouts, is intended to be transferred from the amounts paid, and charged in 1869 to 1868, by the Auditor General's directions.

299. I want to know what the money has been paid for? £1,439 have been paid as compensation claims on account of accidents which happened in 1868 to Davies, Fleay, and Evans.

300. Will you look at the Supplementary Estimates for 1868, under the heading Railways, Existing Lines, Working expenses, and see whether there is anything about claims for compensation? There is not; but they are fairly comprehended under that description, because these compensation claims are charged and have been charged under working expenses. They have been charged under the schedules for working expenses.

301. Is it usual to describe amounts such as you have spoken of as having been paid as compensation, and other amounts of a like nature, in the way or under the heading now described in these Estimates? I think it would have been very much better to have avoided the description unless it had given the whole of the charges usually comprised under the head of working expenses. If they had put working expenses, that head would have embraced all these things.

302. *Mr. Garrett.*] That has been the usual practice? It is; working expenses include all these things.

303. *Mr. Farnell.*] Could "stores" be said to comprehend compensation? No; but I think that the words "incidental expenses" would comprehend a great deal.

304. Was the payment of money for accidents comprehended under the head of "incidental expenses"? I think so, indeed fully comprehended, because under working expenses there is such a variety of headings. There is a whole list here under coaching charges—Schedule D, No. 2, is compensation; and under the goods charges, schedule E, No. 2, is compensation, so that these amounts are fairly chargeable in this way.

305. Do you contemplate that there will be a number of accidents every year? I contemplate that railways will not be worked without accidents. I would just tell you that in 1868 under that schedule there was charged £7,162 11s. 11d., as part of the working expenses of that year.

306. Can you tell me under what head that was placed on the Estimates? Working expenses.

307. Working expenses? Yes; under just this head.

308. An accident comes under the head of working expenses? It does. It is comprehended in these Schedules.

309. *Mr. Hoskins.*] Then if any large amount of money, say two, three, or five thousand pounds, was comprised in a special vote for a particular object, it would be included on the Estimates under the category of working expenses? If any vote were taken for a special object, it should be applied to that object and no other.

310. Suppose money were required for any special object, say compensation, would it be included under the category of incidental expenses? It would be included under the head of working expenses. It is a charge incidental to the working of the railways, and is so provided for among the working expenses.

311. *Mr. Garrett.*] And that has always been the practice? Yes.

312. *Sir James Martin.*] With reference to the £2,688, part of the £3,500, can you say whether that amount is not already covered by some Appropriation Act—by some other vote in an Appropriation Act? No; I think not. There is an excess of expenditure on the votes, and the vote is wanted to cover that excess.

313. It is not at present covered by any vote? It is not at present covered by any vote. As far as the railway books are concerned in 1868, there was an excess of £1,272 required to be covered, and as regards 1869 there is £29,000 and odd to be covered.

314. If you go back six years, I suppose all expenditures have been covered long ago by some vote? Yes.

315. If that £2,000 is covered by a new vote—having been covered years ago—will it not have the effect of covering an amount that has been already covered by vote? —

316. *Mr. Garrett.*] Is that for the Windsor and Richmond line? Yes.

Then I object to the question.

317. *Mr. Thinks.*] I should like to ask you whether the schedule referred to has been the usual schedule for years past? Yes; I believe it has been in use for several years.

318. *Mr. Lord.*] You mentioned that there was a debit to Sir Moreton Peto & Company of £2,000 and odd? £2,530—yes.

319. Is there also a credit to that amount? I do not know—I am only saying that that has been charged to this vote—that out of this vote there has been taken the sum of £2,530.

320. There is a debit of £2,500 and odd against Sir Moreton Peto & Company; but is there not also a credit to that amount? No; it is not a debit against Sir Moreton Peto & Company, but against this vote. It appears that this was paid to Peto & Company.

321. Is there a credit to Peto & Company for having refunded that money? I am not aware—I have not looked at that.

322. *Mr. Piddington.*] Don't you think that where accidents may arise, and compensation money may be paid to the amount of £7,000 or £8,000, or £10,000 —

Mr. Garrett objected to the question.

323. *Chairman.*] Will you repeat the question? —

324. *Mr. Piddington.*] I wish to know whether in the schedule of working expenses, it would not be more

A. Ashdown, more correct to give a detailed account of the various sums paid for compensation, arising from injuries, so that we may know what amount is paid for compensation, and what amount for wages.

Chairman.] It appears to me that the question is admissible.

24 Mar., 1870. 325. *Mr. Piddington.*] I wish to know whether in the preparation of these schedules of working expenses—and seeing that railways cannot be conducted without injuries arising to persons and property—it would not be better to specify the amount of compensation money, so that it may be known to the public and to this House? —

Mr. Garrett objected to the question.

Debate ensued.

326. *Mr. Piddington.*] I wish to have an answer; I cannot see why every possible detail cannot be furnished upon every one of these items? I mentioned the amount for compensation; but the whole detail appears in the railway books, and can be furnished.

327. With reference to this £3,500, in page 7 of the Supplementary Estimates, can you tell the Committee how much of that sum has been paid for traffic expenses? I presume that to the extent of £1,272 16s. 11d.

328. Was that £1,272, or any portion of it, paid for traffic expenses? I cannot separate it; it embraces the whole.

329. You cannot say how much has been paid for traffic expenses? I cannot dissect it.

330. Can you say how much has been paid for the maintenance of way and works? No.

331. How much for wages to workmen? I could from the books, by taking the last debits, and the different schedules would give an analysis of how the amount is made up; but I cannot give it now.

332. Can you give me any idea of the proportionate amount of the £1,200 which has been paid as wages for workmen? Not at present.

333. Can you give any information with respect to the proportion of that amount of £1,200 which has been paid for stores? I can give you no analysis of the thing at all, unless by reference to the books.

334. Then so far as regards the description on page 7 of the objects which this sum of £3,500 is intended to meet—you cannot say that any sum of money whatever is necessary for the payment of the expenses so mentioned, excepting under the terms “incidental expenses”? I could not give an analysis without having the books before me in order to collate the last debits against the account.

335. Can the Committee rely on this description of the objects of this sum of £3,500—can they rely on it as being a correct description of the purposes for which the money is wanted? —

Mr. Garrett objected to the question.

336. *Mr. Piddington.*] I wish to know whether there is anything in this description of the objects for which this amount of money is required that will lead the Committee to a correct knowledge of what are really the services for which the money is wanted? No. I think that this is a very imperfect description, and it would have been very much better to have confined it to the mere expression—“working expenses.”

337. *Mr. Garrett.*] That is the minute you wrote to the Minister? Yes.

338. And in that minute you asked the Minister to place this item of £3,500 on the Supplementary Estimates for working expenses? Yes.

339. With regard to the £1,248, which forms a portion of it, is it not for stores, according to the details of your own minute? That is the Treasury account.

340. This is your own handwriting? This is the Treasury writing. As far as we have gone, the debit in our books shows an excess of £1,272; and it is an adjusting entry between the Treasury and the Audit Office.

341. *Mr. Wilson.*] In that minute I think you have stated that you were instructed to draw out this sum of £3,500 to be placed on the Supplementary Estimates? Yes.

342. By whom were you instructed to do it? By the Accountant to the Treasury.

343. The Accountant to the Treasury? Yes. The Accountant to the Treasury requested it to be done; that it was necessary to adjust their books, and that as it belonged to the Railway Department it should be put on by that Department.

344. *Mr. Samuel.*] I think you have stated over and over again that this amount has always been charged to working expenses? Yes.

345. *Mr. Sutherland.*] I wish, Mr. Ashdown, you to look at those figures—(document handed to witness)—there is a difference between your figures and the balance stated there—those figures show a different balance to what you have stated to the Committee—I ask you whether those figures are not correct? Yes. I have got £1,439. There are some other amounts to make up £1,721. There are sums of £80 5s., £153 3s., £4 4s., and £7 0s. 1d., further amounts which have been paid and charged in the railway books of 1869, but ordered to be transferred to 1868.

346. Will you look at the balance there and say whether that is the correct balance, which states the amount now required to be voted by this House at £3,500? Yes, that seems right. It starts here with the amounts already voted and proposed to be voted—£145,365; and it then gives the expenditure, according to our books, at £143,137 16s. 1d., leaving a balance of £2,227 3s. 11d., from which are the claims for compensation for the railway accident at the Redfern Station, on the 4th of September, 1868, but which were paid in 1869. These were entered in the Treasury books for 1868, the transfer from 1869 being directed by the Auditor General. They amount to £1,721 0s. 6d., which being deducted from the £2,227 3s. 11d., leaves £506 3s. 5d. for Mr. Cheeke’s claim, not now required. So that if the vote were taken according to this, there would be £506 more than was required.

347. Is that correct? Yes, that is correct.

348. *Mr. Wilson.*] What document is that you are reading from? It is a document which seems to have been prepared by Mr. Rae. If you will allow me I will read it:—“Railway Working Expenses, 1868. The exact amount required could not be stated when the Estimates were made up, as there was an outstanding claim of Judge Cheeke’s for damage to racehorse in 1868, which was decided by the Court in favour of the Commissioner, only on the 15th instant. Voted for 1868:—By Appropriation Act, 31 Victoria, No. 29, £101,865; 32 Victoria, No. 12, £40,000; on Supplementary Estimates for 1869, £3,500, making the total £145,365. Expenditure, as per railway books, £143,137 16s. 1d., leaving a balance of £2,227 3s. 11d.”; and against that there is the transfer of £1,721 for compensation claims from 1869 to 1868. The effect of that would be to reduce the working expenses of 1869 by this £1,721 0s. 6d.; so that if the vote of £3,500 be taken as now proposed, a less sum than £29,000 will require to be taken to equalize 1869, seeing that £1,721 of that amount for 1869 will be paid out of the £3,500 for 1868.

349. *Mr. Sutherland.*] Read the document as it is, and it shows the actual amount we do require? £1,721 Os. 6d. A. Ashdown, Esq.
350. That is not the amount required to be voted? £2,993 16s. 7d.
351. That is the actual amount we require to have voted out of that £3,500? According to the statement,—yes. 24 Mar., 1870.
352. And that statement you believe to be correct? These figures are right so far as they go. That being done, the working expenses on the Supplementary Estimates will be reduced by £1,721.
353. *Mr. Wilson.*] What is the date of that document? It has no date.
354. Is it in the form of a minute to the Minister? It appears to be an explanatory memorandum.
355. Does that statement, which you just now held in your hand, appear to have been taken from the books of the Accountant's Branch of the Railway Department? He has got the figures, as far as our expenditure goes, correctly; but as to the £1,721, transferred amount, that has been obtained from the Treasury.
356. Were you applied to by the Under Secretary to give him any of that information which he has given? No, not beyond—. Well, yes, I was applied to to give him the amount of these working expenses. I gave him the figures on his application.
357. You gave the figures for working expenses on the application of the Under Secretary? Yes.
358. *Mr. Byrnes.*] You stated, in answer to the Colonial Treasurer, that your books were not posted up—Will you inform the Committee why they were not posted up? Well, they are posted up. The working expenses account has been posted up, but not closed, posted up, but not closed for the month of December. The account has been kept open in order to cover anything that belongs to the year.
359. That is the only reason why they are not finally balanced? They cannot be balanced until posted up.
360. Have you all the materials now at your command for closing the accounts for 1869? Yes.
361. When were you furnished with the whole of the materials? This week.
362. This week? This week.
363. Then you could not have had the books closed, at all events, not until late this week? They could not possibly be closed.
364. Do you remember any conversation that took place between you and the late Commissioner, in reference to the accounts, soon after you took office? —
Mr. Garrett objected to the question.
Debate ensued.
365. *Mr. Byrnes.*] Were you instructed by the late Commissioner to keep your accounts in a certain way, showing —
Mr. Garrett objected to the question.
Debate ensued.
Chairman.] The hon. member would be in order in putting questions respecting the keeping of the accounts in reference to the details of the expenditure for the services comprised in the instruction to the Committee.
366. *Mr. Byrnes.*] When you took charge of the Accountant's branch of the Railway Department was it possible for you to have shown by any means what each line of railway—what the working expenses of each line of railway, cost? No; the accounts were improperly kept and would not show that.
367. Were you instructed then by the late Commissioner to arrange the books and accounts in that way that you could show at any moment the working expenses of each line separately? Yes.
368. Did you carry out those instructions? I did.
369. Has any interruption taken place since to your carrying them out? Yes.
370. Will you state to the Committee what that interruption was? —
Mr. Brookes objected to the question.
Witness was directed to withdraw.
Debate ensued.
Mr. Byrnes withdrew the question.

John Whitton, Esq., Engineer-in-Chief for Railways, called in and examined:—

371. *Sir James Martin.*] Can you state how much money has been spent in relaying the Parramatta line? I cannot. That is clearly a matter for the Accountant. J. Whitton, Esq.
372. It does not come within your province? Not at all.
373. You are aware that £20,000 were voted, as far back as the year 1860, in connection with that service? I am. 24 Mar., 1870.
374. Do you remember the exact terms of the Appropriation Act? I do.
375. What are they? To replace nine miles of Barlow rails with double-headed rails.
376. You cannot inform the Committee how that £20,000 was expended? I think I can.
377. I thought you said you could not? You asked me if I could supply the total amount of expenditure.
378. I asked you about the £20,000? In 1860 a vote was obtained from Parliament for replacing nine miles of Barlow rails with double-headed rails. In the same year (August, 1860) an indent was sent to England for those rails. They arrived in this Colony in the following year, 1861. At that time the Government had a difficulty with Mr. Rhodes, as agent for Messrs. Peto, Brassy, & Betts, who had contracted for the construction of the line from Campbelltown to Picton. Mr. Rhodes took forcible possession of many of the rails ordered for this extension, to use them for temporary purposes. On the arrival of those rails in the Colony we were unable to use them for the purpose for which they were intended, because he had taken the other rails away: and we were compelled to use those rails for completing the line to Picton. In 1866 another vote was obtained.
379. Before you get to that—I do not quite comprehend your answer? It is simply this —
380. Allow me to put questions. I want you to explain, if you can, how the £20,000 were expended, because your answer does not give the slightest information? I simply explained to you the reason why the double-headed rails were not laid down.
381. That is not my question. I want to ask you to tell me, if you can, how the £20,000 were expended? That

NOTE.—The alterations printed in the margin were made by the Witness on revision.

- J. Whitton, Esq. That money was expended in a great measure in re-riveting and relaying the Barlow rails throughout; but that arose simply from the fact —
382. How much was spent in re-riveting? About £11,000.
- 24 Mar., 1870. 383. You were present when Mr. Ashdown was being examined? Yes.
384. You heard his statement? I did hear it.
385. And you take exception to that? I take exception in this way: The intention was to lay down the double-headed rails, and they were imported for that purpose; but these having been required to complete the line to Picton it was impossible to use them. On several occasions I had reports from the district engineer that it was necessary to relay the Barlow rails with double-headed rails, or to take some other steps to secure the public safety; therefore, having £20,000, which had been voted by the Assembly, and which it was impossible to spend in the manner authorized, I directed the re-laying and re-riveting of the Barlow rails throughout, and charged that to the vote of £20,000.
386. Then it is a fact that of that £20,000, £11,000 were expended not in laying down the double-headed rails but in repairing the old Barlow rails? No doubt; but simply from this fact the intention was perfect in itself—to get out these double-headed rails; and they did come into the Colony, but from circumstances, over which I had no control, they were used in laying down the line to Picton, and consequently could not be used in re-laying the Parramatta line. Therefore, to provide for the public safety, I ordered the district engineer for the time-being to re-lay and re-rivet the Barlow rails, and they have lasted from six to seven years longer than they would otherwise have done. Probably, however, you will allow me to explain another case.
387. No; I cannot allow you to run on in that way and go away from my questions. The fact is, that £11,000—more than half this £20,000—were expended in repairing old rails and old sleepers? The vote of the Assembly was distinctly to maintain in thoroughly good order and condition the Parramatta railway. To enable that line to be maintained a vote of £20,000 was asked for to put down double-headed rails; but in the absence of those rails the Barlow rails were re-riveted.
388. That is not an answer to my question, which I must again repeat. Is it not a fact that of that vote of £20,000, £11,000—more than half of it—was expended in repairing the old rails? No doubt of it.
389. That is a fact which cannot be gainsaid? That is a fact.
390. And the rails, having been repaired in that way, have lasted for seven years? Yes.
391. Is not the repair of a line of railway part of the working expenses? It is, but let me explain: By the express action of the Parliament in voting £20,000 for extraordinary repairs of the Parramatta line, I was prevented from charging that to working expenses; because the Parliament had assented to the vote in those terms I could not charge it to working expenses.
392. Was there any order by Parliament, or by anybody, to the effect that you were not to charge that £11,000 for the working expenses of the railway? The vote provides for it.
393. Was there any order of Parliament, or any authority of Parliament to you, to charge that £11,000 to loan and not to working expenses? There was a most decided expression of opinion that extraordinary repairs of the Parramatta line were to be charged to capital and not to revenue.
394. But because £20,000 were voted for laying down double-headed rails you thought you were justified in expending the money in repairing the old line? No doubt. Both are for the maintenance of the railway. The laying down of double-headed rails is as much a repair of the line as any other work to maintain it.
395. No doubt it is in one sense; but are we to understand that repairing the old Barlow rails in such a manner as to make them last seven years longer is just the same as replacing those rails with double-headed rails? Certainly not; but as we could not do an impossibility we did the only thing which was possible. It was impossible to get the double-headed rails.
396. Circumstances having compelled you to delay relaying the railway line with double-headed rails, and having compelled you to repair the old line, why was not the cost of that repair applied in the usual course—or defrayed in the usual course out of the working expenses? Simply because the working expenses were not voted for such a purpose. All extraordinary repairs—such as laying down double-headed rails or re-riveting these Barlow rails—were always voted by Parliament.
397. Supposing it had not been contemplated to relay the line, would not the re-riveting be considered part of the ordinary repairs? No; we should have had to apply to Parliament for the purpose.
398. Were you justified in re-riveting these rails further than was necessary for the public safety? I did what was necessary.
399. For the public safety? For the public safety.
400. And this work of repairing the old rails, being necessary for the public safety, does it not follow that the cost was part of the working expenses? It was not part of the ordinary expenses of the railway. It was a special work which would have required, if we had done it, a special vote of Parliament.
401. What did those rails cost that Messrs. Peto got possession of—what was paid for them? I do not know; I suppose from £9 to £10 a ton.
402. That is not what I want. I want to know the amount? I cannot tell the amount.
403. Can you tell whether it was £500 or £5,000? It might be nearer £5,000 than £500.
404. Cannot you come nearer to it than that? I really cannot; the nine miles would not be £9,000.
405. I want to know what these people took away? I cannot tell you. The whole matter has been before Parliament over and over again.
406. Can you give us any idea whether the sum was £500 or £1,000, or any other amount between that and £10,000? I cannot say. Messrs. Peto, Brassy, & Betts, got ten and a half miles of rails, but whether they obtained them for temporary purposes or not, I cannot say.
407. After that money was voted, do I understand you to say that rails were sent for to England, for the purpose of carrying on that work? They were.
408. Can you say how much money was sent to England for that purpose? No.
409. You have no idea? No.
410. That we can get from some other quarter, but not from you? Not from me.
411. Do I understand you also to say that you do not know what quantity of these rails, so imported, were taken away by these people? I do not know; but the whole of the papers were laid before Parliament. I cannot remember all these things; it is now ten or eleven years ago.
412. After you had relaid, was anything else expended out of that £20,000, except that £11,000? Nothing was expended out of the £20,000, except for the purpose for which it was intended,—the maintenance of the line between Sydney and Parramatta.

413. That gives me not the slightest information in the world. I want to get "sums of money," and not general statements. Can you tell me any sum which was paid out of that £20,000, beyond the £11,000? The Accountant can furnish the information.

J. Whitton,
Esq.

24 Mar., 1870.

414. I am asking if you can tell? I cannot.

415. I presume Mr. Ashdown can tell it better than you? Yes.

416. Did you hear him make a statement of figures, showing how that was expended? I did hear him make a statement of that kind, but I cannot remember what it was.

417. Did you hear him make any statement of those figures? If he stated that any portion was appropriated for any purpose other than that for which it was intended, he made a mistake; he was not justified in stating it.

418. You either know these facts, or you do not? If you will tell me what you want I will answer you.

419. I want to know whether you can tell me of any other sum expended out of that vote of £20,000 but the £11,000 you have mentioned? I think there would be an amount for sleepers and very likely for ballast, and wages for railway —

420. Sleepers and ballast—Is that part of the working expenses? No doubt; but when Parliament grants special sums of money for special repairs we are bound to charge ²it to that vote.

² the cost to such votes.

421. Am I to understand that you cannot give me any figures? I cannot. They are easily ascertainable in the office.

422. You cannot tell me any of the sums expended out of that £20,000, except the £11,000? No.

423. You are aware that there was voted another sum of £20,000—What was that for—do you remember the terms? It was for relaying the line from Sydney to Parramatta. I may perhaps explain the matter. Two votes of £20,000 each were obtained from Parliament for the maintenance of the line from Sydney to Parramatta. The first vote was obtained in 1860, and was to replace nine miles of Barlow rails —

424. We have heard that before? With double-headed rails. The second vote, which was obtained in 1866, was expended in relaying the lines³. With these votes twelve miles of double-headed rails, in place of nine I intended to lay down, were laid down, and two miles of single-headed rails were laid down to replace the Barlow rails. There were three miles more of double-headed rails⁴ than were intended in the first vote.

³ line.
⁴ Insert, laid down

425. Can you tell me how any portion of the second vote of £20,000 was expended? In providing rails.

426. Can you mention any sums? No.

427. It is not in your province? No. It is impossible that I could remember the sums; I certify them and they go to the Accountant. He is the proper person to give information respecting a matter of that kind.

428. All you know is this, that you did direct the re-riveting of the old rails and the placing of fresh sleepers under them, and that the cost was £11,000? I did.

429. Since then the whole line, I presume, has been relaid with double-headed rails, and new sleepers and ballast? Yes.

430. But what was the actual cost you cannot tell? There were two votes of £20,000.

431. That is what was appropriated; but you cannot tell what has been spent? No.

432. May I ask you whether that work is done now? It is not done. The two miles of single-headed rail laid down from the Junction has not been relaid at present; but the whole of the line to the twelfth mile-post, within a mile of Parramatta Junction, has been relaid with double-headed rails throughout.

433. I speak of the terms of that Act—"relaying the line from Sydney to Parramatta"—Has that work been accomplished? It has not been accomplished.

434. Within how far has it been completed? Within a mile of the Junction.

435. On this side—on the City side? On the City side.

436. There is a mile still to be relaid? Yes.

437. The old Barlow rails are still there, on that last mile? No.

438. What then? Single-headed rails; and it is intended to take those up shortly.

439. This year, or within two or three years? Shortly.

440. Not immediately? No.

441. So far as is necessary the work is completed? Nearly so.

442. What do you mean by "nearly so"? I cannot say within a few shillings, because the second line is not open from the Junction to Haslem's Creek. It will take only a small sum to finish it.

443. Will it take £22,000 to finish the work almost finished in relaying the Parramatta line? No. I do not know how that sum of £22,000 is arrived at.

444. Neither do I; perhaps you and I agree upon that point—it will not take £22,000; will it take £1,000? It will take £5,000.

445. How is the £35,000 asked for explained? That is easily explained. £25,000 is an estimate of the cost of the line from Burwood to the Junction, to be relaid, and find rails, chairs, sleepers, and everything that is necessary. But the expenditure charged to revenue during the last six months has been very heavy, amounting to something like £8,000 on that length of line. It was thought desirable, instead of charging the whole of it to revenue, that a portion of it might be charged to loan, therefore £10,000 was placed to the loan account, making it £35,000.

446. The intention was to conceal from Parliament the fact that the working expenses were as large as they were, and to induce the House, under the pretence of voting for the relaying of the Parramatta line, to vote £10,000 for working expenses? I do not see how it is possible for the Parliament to be misled in that manner, when the matter is placed on the Estimates, and Parliament is asked to vote it.

447. Do you think it is the same thing to ask for liberty to borrow £35,000 to complete the relaying of the Parramatta line as to ask for £35,000 to defray working expenses out of the Consolidated Revenue Fund? I beg your pardon, it is not £35,000 for working expenses.

448. Well, £10,000? It is simply for relaying the line.

449. Don't you see that you have just now said that even including the mile, which is not going to be relaid immediately, all can be done for £5,000 more? But it is a special vote of Parliament.

450. We have been told that all that has been expended out of the £25,000, for which Executive authority was taken, is about £11,000? I think it is a mistake.

451. What do you think has been expended? The Accountant ought to be able to give every single shilling which has been expended in the department.

- J. Whitton, Esq. 452. But you do not know how much has been expended? No. I think £25,000 will be sufficient to do the work required.
- 24 Mar., 1870. 453. You are not answering my question, and you will not take me away from it if you repeat that fifty thousand times—I ask you again whether the £11,000, stated by Mr. Ashdown as having been expended out of the £25,000, has been spent, or whether more has been expended. I want to know whether that statement is correct? I have no information —
454. If only £11,000 has been expended out of the £25,000, why should £25,000 be asked for, if no more than £5,000 is required? No more money is asked for than is required. But what the Accountant may state, or how he may have kept his books, I cannot tell. I simply state that £25,000 is required for relaying the line from Homebush to the Junction.
- 5 Burwood 455. You speak there by rote, apparently? No.
456. I am coming back again now. You are aware that £25,000 was asked for, and Executive authority to use it? Yes.
457. Did you suggest that that should be done? I did.
458. At the time when you made that suggestion how much did you think you required for that work? £25,000.
459. How much has been spent? I do not know.
460. Has more than £11,000 been spent? I have no doubt that something like £20,000 has been spent.
461. What is “something like”? A close approximation—more than £11,000.
462. But you said you knew nothing about it? I cannot know what is in the Accountant’s books.
463. But the Accountant having stated positive figures, do you deny them? I venture to doubt the statement.
464. Why do you doubt it? Because I do not believe it is correct.
465. Why do you not believe it is correct? Because I think it is a mistake.
466. Why do you think it is a mistake? Because I think it is not correct.
467. Are we to suppose that the Accountant, giving the information from his books, is incorrect, and that you are correct who know nothing about it? I do know something about it. I know it ought to cost £25,000 from Burwood to the Junction—£25,000, including rails and sleepers. The whole has been done within about a mile, and as that will not cost more than £5,000 there must be about £20,000 expended.
468. Do you assert that more than £11,000 has been expended? I assert that I believe it has.
469. And yet you know nothing about it? Yes, I do.
470. Only by guess? Yes.
471. Did you take the trouble to examine the books before you came here to make this statement? I did not take the trouble to see the books.
472. And yet you contradict the Accountant, when he says that only £11,000 has been spent? I think he is incorrect.
473. Can you give us any details to show incorrectness? I have told you that I estimated the whole length at £25,000, and that it is all done but one mile; that the cost of that mile will be about £5,000, and that therefore about £20,000 must have been expended.
474. I am asking about the actual expenditure—Do you know what is the actual expenditure? I do not; but I think that if it is required the Accountant ought to give it.
475. The Accountant has given it? I doubt it.
476. I presume the books will show? No doubt of it.
477. Who was it suggested that £35,000 should be put on the Estimates for this service? It was suggested I believe by the Minister—I think it was the Treasurer.
478. Suggested that £35,000? No.
479. My question was—who was it suggested that £35,000? As you are aware, £25,000 was recommended by myself, and there can only be £10,000 in dispute.
480. That is not an answer to my question. I want to know who suggested that £35,000; if you know tell me? I will explain it.
481. No; tell me that first—who suggested the £35,000? I suggested £25,000, and—
482. Who suggested the £35,000? The Treasurer, £10,000.
483. Who suggested the £35,000? The Treasurer, I think, suggested the £10,000.
484. Who suggested the £35,000—do you know? No, I do not; but I have some explanation to give. The £25,000 was recommended by myself, and £10,000 was suggested as a proper charge to be put on the loan vote, we having expended nearly £11,000 on that length for the half-year. It was thought that this was a very large amount for that one portion of line, and that we might transfer it from loan to capital.
485. Who suggested it? I believe it was the Treasurer.
486. Are you sure? I believe I have a minute that I wrote on the subject.
487. I think you must have made some mistake? I never make mistakes.
- 6 Insert No. 488. You assert that the Treasurer suggested that that £35,000 should be put on the Estimates? The papers were returned to me, and I believe, from the Treasury. The Minister can be referred to. I stated that the expenditure had been an excessive one.
489. If it is a surmise that is another matter? It is not a surmise at all.
490. It is more than a surmise? It is more than a surmise.
491. That the Treasurer suggested that this vote of £35,000 should be put on the Estimates? That a portion of the amount chargeable to revenue should be transferred to loan.
492. Was that in reference to the then ascertained deficiency of the vote for working expenses? I do not know. I do not know that there was a deficiency.
- 7 did 493. Did you not know how much was paid for working expenses on this line of railway last year? I do not.
494. How much was voted for that purpose? I do not know.
495. Then how was it that you came to have a conversation about the expenditure of that sum? I never spoke of that expenditure at all.
496. You said that the Treasurer thought so much ought to go to loan? No, I spoke simply with reference to the ballasting and laying of a portion of the Parramatta railway. It had nothing at all to do with working expenses.
497. How do you make out that by Mr. Samuel increasing by £10,000 more than was necessary that loan vote, you would relieve the loan vote—or relieve the current expenditure? It would relieve the revenue, and not the loan vote.
- 498.

498. Was it done to relieve the Consolidated Revenue Fund of a part of the expenditure for working expenses—was that the object? If you take it in that way, it was.

499. I do not take it in any way, but I want to know what you and the Treasurer did? I did not see the Treasurer about it, but the papers passed through the office.

500. Was it arranged between you and the Treasurer that £10,000 more should be asked for than was required for that vote, so that the surplus might be applied to defray part of the working expenses? I do not think it was asked for in that way at all—not in the way you put it.

501. In what way then? As a large expenditure had been going on during the half-year, amounting to nearly £11,000, which was chargeable to revenue, and had been charged, and as that was an excessive expenditure, it was thought that the revenue should be relieved of that £10,000, and that it should be put on the loan vote.

502. What expenditure was that? For the Sydney and Parramatta Railway.

503. What do you mean—the relaying of the Parramatta line, or ordinary working expenses? I mean the relaying of the Sydney and Parramatta line.

504. Have you not already said that £25,000 was more than enough for it? I have not. I said that £25,000, in my estimate, would complete it.

505. I ask you again whether it was not agreed between you and the Treasurer that the £10,000 more than was necessary should be asked for, so that it might be devoted to working expenses;—so that you might cut down £35,000 to £15,000? It was not. I never saw the Treasurer on the subject.

506. How was it you said anything about the Treasurer at all? I said the papers were referred to him.

507. How do you know that the Treasurer had anything to do with this matter at all, if you never saw him—how do you come to mix his name up in it? I said that the papers came to me in the ordinary course of business.

508. How do you know that the Treasurer was cognizant of this matter if you never saw him? Because the papers distinctly stated that it was a proper charge to make—to take off £10,000; and he asked my opinion whether it might not be transferred.

509. Whether what might be transferred—and from what? Whether the amount for ballasting and relaying, charged to revenue (£10,000), might not be transferred to loan vote instead of to revenue.

510. In other words, whether part of the cost of the working of the railway line could not be taken out of loan? It is not working expenses, because there has been a special vote for the extraordinary expenses on that portion of the railway; and although the ballasting and relaying have been charged to revenue it was a proper amount to have been charged to capital originally.

511. Was not all the ballasting you laid on the Parramatta line, and all the sleepers paid for out of the two sums of £20,000 and £25,000, for which you had executive authority? The ballasting?

512. The ballasting, last year? No, it was all charged to revenue. The rails and sleepers are charged to the vote.

513. Did you not hear the Accountant say distinctly that the ballasting was charged on those votes? I did not hear him say so.

514. Will you venture to say that a single penny of that was paid out of revenue? I say that nearly the whole, since 1865, has been paid from revenue. I am not sure whether it was so before that.

515. You mean to say that the ballasting of the Parramatta line, during the last two years, has been paid out of the Consolidated Revenue Fund, and not out of the Loan Fund? I believe it has.

516. And if the Accountant says it is not so, he is not correct? No.

517. You do not know anything about it? Yes; I certify the accounts.

518. But you cannot tell us how much has been expended out of these two sums of £20,000? I believe the whole has been expended.

519. You cannot say whether the whole has been expended in relaying the line? In relaying the line and replacing Barlow rails with double-headed rails.

520. You say that the work has been completed all but within a few shillings? I did not say so.

521. You said it might cost a few shillings more? I spoke of the completion as far as the twelfth mile-post, and that there was one mile to finish.

522. Did you not say that the work was not urgently required at the present time? I said that it might stand over for a short time. It will have to stand over till we get the rails.

523. For a few years? No, not for a few years.

524. How long do you think that line will last without relaying? New sleepers will be probably required within twelve months of the present time; but in asking authority to relay that portion I thought it advisable to ask for money to relay to the Junction. I should probably have laid the whole by this time had it not been that there were no rails in the Colony.

525. Apart from that mile, how much more work is to be done—is it finished, or is anything more to be done? It is not done yet.

526. How much will it cost to finish it? That I cannot tell. It will not cost much.

527. Will it be £100? It may be, or more.

528. £200? I really have not seen it for three weeks; some few hundred pounds; I cannot say exactly.

529. Give us some idea—When were you last over the work? Three weeks ago. The road was relaid, and they were ballasting the line, but how far they had proceeded I cannot say exactly.

530. Are you not aware that a train has been running over this line for the last three weeks—Is it not open for traffic? I am not aware; it may be.

531. Can it be so without your knowledge? Yes; I do not know whether it is open or not. I do not think it is; but Mr. Mason is in charge of that line. He has not reported to me in regard to its completion.

532. It may cost a few hundred pounds, you think, to finish it? Yes.

533. If £11,000 only are expended out of the £25,000, £12,000 in all would suffice to complete the work? To complete that portion of the line I think it would.

534. Then £13,000 out of the £25,000 is not required, and yet you ask for £10,000 more? No. £10,000 is simply to replace the £10,000 on revenue.

535. That is to say, you take them out of vote and put them into loan—is not that what it comes to? There is no doubt it is to replace an excessive expenditure on revenue upon that charge during the year.

536. To conceal from Parliament the total amount of the working expenses, and to take £10,000 out of loan

J. Whitton,
Esq.

24 Mar., 1870.

- J. Whitton, Esq.
24 Mar., 1870.
- loan—to deceive Parliament—to pretend that you require £35,000 by way of loan for relaying a line which will now only cost two or three hundred pounds to complete? This portion of the line ought to be charged to capital; I say that distinctly.
537. Is that any justification why that should be concealed from Parliament? I do not think it is.
538. Should we have known but for this examination that £35,000 was asked for to pay, in part, working expenses—should we have known it but for this examination? I do not know how you would have known it at all; but I say that this is fairly chargeable to capital.
539. What would you understand by this—relaying line to Parramatta, £35,000—would you understand that it would be required for the completion of that work? That it had either been expended or was required.
540. When we are told that we possess a balance of £13,000 out of the £25,000, the natural inference is that it is not required for that purpose? No doubt.
541. It turns out that it is not required for that purpose at all—does it not? I do not think so. It is precisely so, whether the money has been expended or asked for.
542. If you take £20,000, and say that ought to be loan —? But if the £20,000 ought to be charged to capital in the first instance, and has been charged to revenue —
543. If you choose to take £20,000 expended for working expenses, and say that ought to be taken out of loan, of course you can justify this in that way? But if it ought to have been charged to capital in the first instance, and has been charged to revenue, it is a proper charge.
544. Really, don't you think the Parliament ought to be informed of this manipulation? I do not think there is any concealment.
545. What else can it be—asking £35,000 for a work for which only £12,000 are required? I think it is a matter for the Government whether they will charge that matter to revenue or to loan.
546. But what justification is there for concealing that matter from Parliament? I do not think there was any attempt to conceal it.
547. Why did you take £10,000 from loan? I do not know, except —
548. Did you suggest it? No.
549. Did you agree to it? Yes.
550. Why not take £20,000? Because we did not want it.
551. Why stop at £10,000? Because during the last six months we had spent £10,000 on that part of the railway relaying it, and as that was an unusual expenditure —
552. You thought the working expenses were so great that a sum of money ought to be borrowed to pay them? I assure you I did not. I do not know what the working expenses were.
553. Then what do you mean by saying that £10,000 ought to go to loan? That is for the cost of relaying and ballasting a portion of the Parramatta line.
554. How much did it cost altogether? The ballasting and relaying of that I think cost £9,000.
555. What did the ballasting cost? I do not know.
556. But the ballasting and relaying from Burwood to Parramatta cost £9,000? I think it was from Burwood.
557. Does that include sleepers? No.
558. Only the relaying? The labour of relaying.
559. The labour of putting down the sleepers and rails? The real manual labour.
560. And not the cost of the ironwork and the wood? No, they are charged to separate votes; but the ballasting, which might have been charged as well to capital as any other portion, has been charged to revenue.
561. How much would it take to buy out and out rails for the whole distance, from Sydney to the junction at Parramatta—the whole distance, thirteen miles? I cannot tell.
562. Give me some idea? I cannot guess in a matter of that kind.
563. You could make a calculation; you know how many tons there would be to the mile? But I do not know the cost of them.
564. I can give you some idea of it? I could give an idea of it myself.
565. How many tons would there be to a mile? 118.
566. How much would it be per ton? I do not know. The price might be from £8 to perhaps £10.
567. Don't you know that it is much less than £8? I do not. Some are £10. I cannot tell exactly what they cost.
568. You do not know how much money was expended for the working expenses of these lines in the year 1869? No.
569. And you never did know? No.
570. You do not know how much was expended out of the two sums of £20,000 and the £25,000, authorized by Executive authority? I do not know the precise amounts, but I am satisfied that the £40,000 has been expended, and some portion of the £25,000.
571. Do you know how? No, it is no part of my business.
572. Why did you not ask for £50,000 instead of £35,000? I did not ask for it at all.
573. Why did you suggest it? I did not suggest it.
574. Did you suggest the £35,000? No, I did not.
575. *Mr. Samuel.*] Do you recollect what Ministry was in office in 1863-4? I think Mr. Holroyd was Minister for Works at that time.
576. Was Sir James Martin the head of that Ministry? He was.
- Mr. Wilson objected to the last question. Discussion ensued. Examination continued.
577. *Mr. Samuel.*] You stated I think that this re-riveting and relaying of this line in 1863 and 1864, arose in consequence of your inability to apply rails imported expressly for the purpose of this line? Yes.
578. I shall not prevent you from offering any explanation in reference to the question I am about to put to you. Will you please to state why it was that you were unable to relay this line with double-headed rails at the time you commenced to re-rivet and relay it with the Barlow rails? Simply because Mr. Rhodes had then got possession of ten and a half miles of rails imported for the extension; and as he used these for a temporary purpose we could not use them for the permanent way. I have an extract from a letter from Mr. Rhodes to Captain Martindale, which will explain the matter. Captain Martindale was Commissioner for Railways at that time. "Long negotiations took place, the Chief Commissioner opposing the granting of the rails by every means in his power, but ultimately the Minister for Lands and Works agreed.

agreed. (See his memo. attached to my letter, 21st April) : ' That I should be entitled to all such rails and chairs as might be in the possession of the Government and necessary to the carrying out of the works, including those which have already been sent for the permanent way, and which might not be required by the Government, upon the terms previously arranged.' That is, all the rails we had at the time for laying the line to Picton ; Mr. Rhodes was to use his own discretion as to whether he should use them for temporary purposes or not, and although I objected to that by all the means in my power, the Minister for Works at the time authorized Mr. Rhodes to take possession of these rails. We were not therefore in a position to relay the nine miles of double-headed rails on the Parramatta Railway.

J. Whitton,
Esq.
24 Mar., 1870.

579. Will you please to inform the Committee whether at the time—during 1863 and 1864—any objection was taken by the Government then in power to the expenditure of this money. During the year 1863-4, was any objection taken by the Government in power to the expending of this money out of the loan fund for relaying this line with the Barlow rail? Not the slightest.

580. Have you heard it complained of anywhere, or on any occasion, that this expenditure, which occurred during 1863-4 for relaying this line with the Barlow rails, was an improper and unauthorized expenditure of the public money? No, but I have seen a statement made by the Accountant that this was an improper expenditure in regard to the re-riveting of these rails; but as Mr. Ashdown was thoroughly unacquainted with the circumstances of the case, he was the last man I know to give an opinion on the matter. ~~I may also state, as Mr. Ashdown has stated to-night that we purchased rails from Messrs. Peto, Brassy, and Betts I should like to know in what condition his books can be in when he stated here to-night that we purchased from them), that we made no such purchase. He stated that we purchased rails to the value of £2,527.~~ I say, as a matter of fact, that we never purchased one shilling's worth of rails from Messrs. Peto, Brassy, & Betts, and on his statement to that effect I request a thorough examination of his books, because I believe they are not to be relied upon in any particular.

⁸ As Mr. Ashdown has stated to-night, that we purchased rails from Messrs. Peto, Brassy, & Betts to the value of £2,527, I should like to know in what condition his books can be to enable him to make such a statement.

⁹ requested

581. Mr. Ashdown has told us that the whole of this vote of £20,000 is exceeded by £144, and that the whole was expended on this line to Parramatta—is that a fact? Both votes were expended on that line.

582. And the public funds have not suffered in any way by that expenditure? Not the slightest. The public have gained by having the Barlow rails down six or seven years longer than they otherwise would have done.

583. During the years which have elapsed since this expenditure was made, you have never, from any competent authority, had any complaint that you had acted improperly, or that the various Governments had acted improperly in expending this money in this way? Never.

584. Is the line between Sydney and Parramatta one that has been properly constructed? It is not.

585. Is it a line which, from its bad construction originally, has required an extraordinary expenditure upon it? It is.

586. Was it adapted in the first instance for traffic such as we have now upon it? It was no doubt intended for that, but the adaptation was very imperfect.

587. Did the line require an extraordinary expenditure upon it, in order to render it suitable for the present traffic? It did.

588. Is it the practice not only in railway companies, but has it been the practice elsewhere to charge extraordinary expenditure of this kind to capital and not to working expenses? To charge it to capital.

589. Do you remember (I ask you now professionally) that any amount charged to the loan account during your long experience in this Colony and elsewhere, has been improperly charged on this line? No; but many of the votes for loans have been very improperly expended.

Question of order raised about cheering; examination continued.

590. I would like to direct your attention to the vote of £35,000, which appears on the Supplementary Estimates for 1869, and I wish to ask you whether ever I had any personal communication with you in reference to that vote? No. I have previously stated so.

591. I would wish also to ask you whether this matter was not put to you by the Minister of your department—whether there was any portion of the large expenditure of that year fairly chargeable to the capital account? I should prefer to refer to the minutes. I have written a minute on that matter.

592. There is a minute: I will give it you? (*Minute handed to witness.*) This is Mr. Rae's minute to me. As the Estimates are now under consideration, will Mr. Whitton be good enough to furnish a statement of the total amount paid for ballasting on the line from Sydney to Parramatta, and for any other works which have been paid temporarily from revenue, though properly chargeable to capital, in order that a vote may be taken to relieve the working expenses vote from charges that don't belong to it?—J.R., 20/1/70." On my minute of 6th November, 1865, it was decided to charge the cost of ballasting and labour in relaying the Parramatta line, to revenue, and the rails and sleepers to the "capital" votes for relaying. It continues:—"The cost of ballasting and labour in relaying for 1869 was £8,097 2s. 4d. (exclusive of stores). As it is now proposed by the Minister to relieve 'revenue' of this charge, £10,000 should be added to the amount of £25,000 on Supplementary Estimates for 1869. The amount therefore to be voted for relaying the Parramatta line should be £35,000 instead of £25,000, and the vote for working expenses for 1869 should be credited with the amount of £8,097 2s. 4d., and the value of stores issued for this service.—J.W., 25/1/70. Approved.—J.S., 25/1/70."

593. Will you inform the Committee whether in writing that minute and in approving of that amount you considered, and still consider, that the £10,000 working expenses, incurred during the year 1869, were fairly chargeable to the capital account? It was; as I have stated previously, that amount should have been charged ¹⁰previously to capital, but it has been charged to revenue ¹¹and relieved the capital vote.

¹⁰ Omit previously
¹¹ to relieve

594. The estimate of £35,000 is in the following words: "Completion of the relaying of the line from Sydney to Parramatta"—do you consider that there is any concealment from Parliament in that item of any circumstance whatever? Not the slightest.

595. Were you ever asked by any person connected with the Government—by any Minister—to conceal anything? Never.

596. Did anyone ask you to so frame your estimate as to conceal anything? I am very much afraid that if he had I should have seriously offended him; I never concealed anything in my life, and I never intend.

597. There are two items on these Estimates—one for working expenses and the other for the cost of relaying this line? Taking those two items together do you think they expose anything whatever that is deceptive? There is nothing deceptive in the matter; I simply estimated the cost of completing this line at £25,000; and as we had expended a very large amount ¹²indeed in this relaying it was thought right to

¹²in

transfer

- J. Whitton, Esq. transfer a sum to capital; but I have already stated distinctly that in my opinion that amount should have been in the first instance charged to capital and not to revenue.
- 24 Mar., 1870. 598. Were the working expenses in 1869 excessive, do you know? I do not know; but there is one matter which I should wish to state with reference to the supplementary estimates; I think it is extremely objectionable and highly disagreeable to the Railway Department that they should come here for supplementary estimates for working the line. In February last I suggested to the Commissioner that he should obtain from the Accountant monthly the cost of working the railway, so that I might keep within the expense for the working of the department sanctioned by Parliament; but up to the 24th of the present month that account was not rendered for January; it is impossible to carry on with such an Accountant as we have; how is it possible ¹⁴that the votes cannot be exceeded in that way.
- ¹⁵ discreditable 599. Has it been the practice at any time in your department to apply sums granted on votes of this House for an express purpose for other purposes? No, but it has been the practice of others to apply votes for special purposes to things entirely and utterly distinct, and with which they have no connection in any shape whatever.
- ¹⁴ to avoid exceeding the votes when business is conducted in such a way. 600. Where a sum of money has been voted for a particular purpose in the Works Department, in connection with the railway, has it been applied to another purpose? It has been, but I wish to observe not by me.
601. Has that been made a matter of complaint or charge against anyone? No; misappropriations which took place in 1866-7 have not been inquired into in any shape; but the matters which occurred in 1859-60 have been looked into.
602. Before these repairs—or whatever may be the proper term to apply to it—before the line was put into proper order, was the charge for the maintenance of the line between Parramatta and Sydney larger than it is at present, or is likely to be? It was very much larger than it is likely to be. It ¹⁵is a most expensive part of the railway.
- ¹⁵ was 603. I would like to go back again to the second vote of £20,000. That was taken in a different form from the first vote. The first was taken for relaying the line with double-headed rails; the second vote was taken for relaying the line? Yes.
604. Can you account for the votes being taken differently? The difference is simply this, that in the first vote it was the intention to replace the Barlow rails with double-headed rails; but finding that that was impossible, the money was devoted to the relaying of the line. In 1866 an application was made to Parliament for relaying the line, and out of that vote the rails intended to be used under the first vote were ¹⁶applied.
- ¹⁶ supplied. 605. Are you aware whether the vote was taken in this way (for relaying the line and not to replace double-headed rails, as in the first vote) to correct any difficulty which might arise in consequence of the line not having been laid with double-headed rails in the first instance? Undoubtedly. It was my intention ¹⁷to apply for it. I have endeavoured to find the papers upon the subject, but cannot.
- ¹⁷ in applying 606. All this relaying and re-riveting took place in 1863-4? Yes.
607. And did not occur in 1868, 1869, or 1870? No.
608. There have been successive administrations since? There have been.
609. Could you give the Committee any idea of the annual cost of keeping this line in repair before the year 1863? I cannot do so now, but the figures might be obtained from the books.
610. Was the cost then greater than it is now? I will not say as a fact, but I believe it was considerably more. That can be obtained from the accounts.
- ¹⁸ Omit indeed 611. When you ordered the line to be relaid with Barlow rails, was it reported to you that the line—In what state was the line in when you had it relaid? It was in a very bad state ¹⁸indeed, and almost dangerous to travel over. I find that in January, 1863, a report was made to me to ask me to provide materials to relay the line, and I wrote in the margin (20th January, 1863), "This matter must stand over for the present as there are no rails in the Colony for this purpose." There was another letter from Mr. Trotter on 2nd April, 1863, for similar rails; I wrote on the margin, "I have instructed Mr. Trotter to rivet the joints of the Barlow rails, and procure additional sleepers for relaying; by this means I believe the Barlow rails will make a tolerable road for some years to come." On that the expenditure took place.
612. *Sir James Martin.*] What was the length of line to be relaid—was it more than 11 miles? It was 13 miles.
613. Was it 13? It was a little over 13.
614. Where would 13 miles from Sydney take it? To the Junction.
615. You have told us that these repairs or relayings fall short of the Junction about a mile? The present ones do.
616. I am speaking of the present one. I am speaking of the work already done. How many miles is it? Twelve miles.
617. Are we to understand that the relaying of that would cost £75,000? I am not aware that any such sum has been voted.
618. You know how much two sums of £20,000 would come to—£40,000 and £35,000? Yes.
619. £75,000? Yes.
620. Are we to understand that this relaying cost £75,000? I have no doubt of it.
621. £7,000 a mile for new rails and new sleepers? It is a double line you must remember.
622. Would it cost that? £7,000 a mile?
623. £7,000 a mile? I have no doubt of it.
624. Has it cost that? I cannot say. The Accountant should be able to furnish you with the figures.
625. Has it cost within £20,000 of it? I have no doubt of it.
626. Do you know anything about the figures? I know what those figures are and what the total cost of relaying should be.
627. Are we to understand you to say that £75,000 is a reasonable sum for relaying a double line of rails twelve miles? Yes, I do.
628. £75,000? Yes.
629. The work now being done, will you undertake to say that it has cost more than £60,000? I will not say. There should be no difficulty in obtaining the information. The Accountant ought to be able to supply the whole of it; and if he cannot, I can, but not at the present moment.
630. What is the principal sum which you think ought to be charged to the loan fund and not to the Consolidated Revenue fund in this expenditure? I do not know the principal sum; but the whole line, from beginning to end, should have had new rails, new sleepers, and ballast. 631.

631. Don't you know that is not my question. I am not asking you what ought to have been done, but what particular part of the expenditure for the working expenses of 1869, in your opinion, ought to be charged to loan? The whole of the re-ballasting of the line.

J. Whitton,
Esq.

24 Mar., 1870.

632. How much is it? About £10,000.

633. Did you not read a memorandum a short time ago, showing that it was only £8,000? That is ¹⁹stores—¹⁹ Insert exclusive of

eight thousand and some odd pounds.

634. What do you call "stores"? Things supplied to the department.

635. For what purpose—what are they? Tools and implements and other things. They could readily be ascertained from the Accountant's figures.

636. For what purpose? For re-ballasting the line.

637. The whole of the line? I do not say the whole of the line; that portion in regard to which the expenses have been incurred for last year.

638. Would anybody understand from this statement, "Completion of the relaying of the line from Sydney to Parramatta, £35,000," that it was intended to devote £8,000 or £10,000 to ballasting the line? It ought to have been charged to capital in the first instance, but was unfortunately charged to revenue. This being a proper charge to capital, the amount of £25,000 was increased by £10,000, making it £35,000.

639. Has it been the practice at all times to charge ballasting to capital? All extraordinary works.

640. Don't you see that is not an answer to my question? Yes.

641. You have not answered my question? I did answer it.

642. You did not? —

Mr. S. Brown rose to order. Debate ensued. Examination continued.

643. I was asking you whether it has always been the practice, as far as you know, to charge the ballasting of lines to loans or to Consolidated Revenue? Generally to revenue, except in special cases.

644. What are the exceptions? The exceptions would be in a case like the Parramatta railway, which required to be reconstructed entirely. In such a case we charge to capital; in others to revenue.

645. Do you know any other exception in connection with our lines beside that? I do not.

646. That is the only case in which you apply that principle of charging re-ballasting to loan instead of to Consolidated Revenue? It is the only case; but I wish to explain that up to the present time it has been charged to revenue.

647. Even in that case, in the first instance, the charge was to revenue? Yes.

648. It was not until the preparation of these Supplementary Estimates that the principle was departed from, by setting down that sum to loan instead of to Consolidated Revenue? I think that up to 1865 the whole of the ballasting was charged to capital, but I cannot be positive.

649. And even this until the other day —? It was charged to revenue until the other day, but ²⁰ to 1865 ²⁰ Insert up the whole was charged to capital.

650. This is the first time since 1865 that you have departed from that principle? It is; but I wish to explain that the expenditure was very excessive during those six months.

651. You thought that a very excessive expenditure for those six months, and because of that you thought it right to charge this re-ballasting to loan? Not entirely on that account.

652. For what other reason? From the first, instead of being charged to revenue at all, it should have been charged to capital.

653. But your motive for charging it to capital was the very large expenditure which took place in the year 1869, under this head of working expenses? No doubt I thought it unfair to charge it to working expenses; it was a very large and excessive expenditure for those six months.

654. You would not have suggested this course had not the expenditure been so large, so you said? I said from the first that it should be charged to capital; that it was an excessive expenditure for that six months, and that I thought it should be charged to loan.

655. That is the reason—the large expenditure was the main reason of your conclusion? And from the fact that I thought it should have been originally charged to capital.

656. And that opinion was strengthened by the large increase of expenditure, which took place in 1869? Yes; I thought it unfair.

657. Is there anything in this proposition to vote £35,000 for relaying the Parramatta line, which would show that this expenditure is to be withdrawn from the Consolidated Revenue and cast upon loan? No, I do not think so.

658. And inasmuch as that is not shown is it not concealed? I do not think the fact is concealed.

659. Must not a fact be concealed that is not shown? So far as I am personally concerned there could be no concealment at all, because I have written upon the papers what were my reasons for transferring it.

660. I am not charging you with that. I say, if the figures do not show that it was intended to devote a portion of the £35,000 to this ballasting, which was before charged to the Consolidated Revenue Fund, and that it is nevertheless the intention to devote it, is not the effect to conceal it from Parliament? I do not know what was the intention of the Ministers.

661. I am not speaking of the acts of the Ministers, but of the Estimates alone. Inasmuch as the Estimates do not disclose the intention of devoting £10,000 towards the ballasting of the line—so far as that Estimate is concerned—is not the fact concealed? I can give no opinion on the act of the Government.

662. Is not a fact concealed that is not disclosed? You must pardon me, but I decline to answer that question.

663. When did you ascertain that the cost of ballasting this line was £8,000 or £9,000—when did you take out those figures? When I was written to by the Under Secretary to know what cost had been incurred in ballasting the line during the last six months.

664. How many days is that ago? I cannot tell you.

665. Was it since this matter has been discussed? It was not.

666. How long before? It was long before that. The papers will explain themselves—there are dates upon them. The paper from the Under Secretary is dated 20th January, and my reply the 25th January.

667. That is not very long ago? But it is before this matter was discussed.

668. Was it before or after this interview when the Treasurer, as you say, expressed himself in warm terms? —

669. *Mr. Samuel.*] Did you have any interview with me? No; ²¹ not that I am aware of.

²¹ Omit not that I am aware of.

670. *Sir James Martin.*] Did you not say that you were present on some occasion when the Treasurer was present? No.

671.

- J. Whitton, Esq.
24 Mar., 1870.
671. It was not you, it was Mr. Ashdown. You said you had no personal interview with Mr. Samuel; but you knew in some way or other that he approved of increasing this vote from £25,000 to £35,000? The papers explain themselves. I may have heard a conversation in the office about it, but I do not remember.
672. Did you not say that you knew that was his proposal? No, I beg pardon; I said "I understood"—but I had no conversation with the Treasurer on the subject. The papers explain the whole transaction.
673. You have already told us that Mr. Ashdown is in a position to know more about this expenditure than you, he having charge of the books? He ought to be.
674. Are we to understand from you that his statements, in your opinion, of the figures disclosed by these books are not correct—that they are not to be relied upon? It is my impression.
675. Have you any objection to state the ground of that impression? Simply that I think the amount which he states has been expended ²²has not been expended.
- ²² is not correct.
676. Is not that a matter which can be obtained by a competent person from an examination of the books? I think it ought to be inquired into.
677. Might it not be done easily now? No; I do not think it could be done now.
678. Between this and to-morrow? No.
679. How long would it take? I should be sorry to give my opinion, or to say how long it would take to put the books in proper order.
680. Do I understand you to say that he is not able to keep these books? That is distinctly my impression.
681. What are the grounds of your impression? He adopted a new mode of keeping the railway accounts, which was perfectly absurd ²³thoroughly impracticable.
- ²³ and
682. Will you explain what it is? I explained it to the Railway Committee the other day. If we are to go into the whole matter of railway accounts it will take me some time.
683. Perhaps you can explain, briefly, what it is? The Accountant has divided the railway into different ²⁴lines. From Sydney to Parramatta is the Trunk Line; the Southern Line is from the Junction to Goulburn; the Western Line from the Junction to Penrith; the Mountain Line from Penrith to Mount Victoria. Then he has the Windsor and Richmond Line. And, having enumerated all the lines, he has a heading for general lines. I hope it will not be thought that there is any intention on my part to shirk the question in regard to the accounts. If it be the wish of the Committee I will go through the whole process.
- ²⁴ sections.
684. We do not want to have a long statement of an hour or two; but if you can make a brief statement we have no objection. You do not know, and cannot tell us how these two sums, amounting to £40,000, have been expended? I have explained very clearly how they have been expended.
685. I think you have only told us how the sum of £11,000 has been expended? I have explained distinctly the manner in which the two sums of £20,000 have been expended.
686. Can you mention any other sum than £11,000? I cannot. It was not £11,000 exactly.
687. Can you mention any other sum? I do not remember the items, but I know that the whole of the £40,000 have been expended. There are sleepers, rails, and ballasting.
688. Can you give us the amounts? I cannot carry the whole in my head; it is impossible.
689. That is a matter for the Accountant? Entirely.
690. *Commander Onslow.*] Had the ballasting of the Parramatta line cost £2,000 instead of £10,000, would you have recommended that that cost should have been applied to revenue or to capital? My impression from the first was that it should have been charged to capital throughout. But as we had only two sums of £20,000, we made the vote go as far as possible in purchasing ²⁵these rails.
- ²⁵ Omit these.
691. *Mr. Piddington.*] Can you tell the Committee from what account the ballasting and relaying of the line between Sydney and Burwood was carried to? It was paid from revenue partly. I am not positive, as I explained this evening before, that the ballasting of ²⁶lines was not carried to capital until 1865.
- ²⁶ Insert this line.
692. I mean in reference to this relaying of the line recently between Sydney and Parramatta—with reference to that portion of the line between Sydney and Burwood, to what account was the expenditure for that purpose carried? I am doubtful. I am not positive whether it was carried to capital or to revenue. My own impression is that up to 1865 it was charged to capital, and after that to revenue. The relaying has been going on from 1862 to the present time. It is impossible that I can remember, but if the Committee desire, it can be readily ascertained. It is quite clear that we are in a far different position to that of Companies at Home. We have simply to expend the amount voted in this Colony; at Home the Directors have the entire revenue of the lines, and can apportion as much as they please to renewals, and pay the balance to the shareholders. Here we have simply to expend the money voted and have no opportunity of charging any extraordinary expenditure. Therefore when extraordinary expenditure is required for relaying or ballasting a line, we have to ask Parliament for a special vote for the purpose.
693. Upon what grounds did you form your opinion that the amount of money expended during the last six months on working expenses was excessive? From the large amount of work we did; not excessive in point of quality, but from the amount we had to do in the time.
694. How did you arrive at the conclusion that £10,000 was the sum which ought to be carried from the ordinary expenditure to the loan fund? The amount is eight thousand and some odd pounds. The amount given to me is that amount without stores, and therefore I assume that £10,000 will be a fair amount to put on the Estimates to cover the cost.
695. Why did you limit yourself to the assumption that £10,000 would be a fair amount to cover the cost? Because that is the expenditure incurred in that year.
696. Was that the entire sum expended from the ordinary revenue which you thought excessive? It was the entire sum expended in six months on that portion of the line between Burwood and the Junction, and I considered that a fair charge upon capital.
697. Do you recollect how many miles of rails Mr. Rhodes demanded as the agent of Messrs. Peto & Company? I know that at the time I made my memorandum that he had ten and a half miles of rails, equal to a capital of £15,000. He seized upon ²⁷them to that extent.—He got permission to appropriate them to temporary purposes, when one-third the ²⁸length would have been sufficient ²⁹for the purpose.
- ²⁷ rails ordered for the line to Picton and
²⁸ Insert whole
²⁹ Omit for the purpose.
698. Ten miles and a half? Some of the rails were got for temporary purposes, and others for permanent purposes. These rails he seized for temporary purposes.
699. As a contractor? Yes; and he so damaged the rails that we could not use them for the extension.
700. Can you say the entire length of rails which remained in Mr. Rhodes' possession? No.

701. It might be three miles, or it might be ten? Three or four miles, I think. It could easily be ascertained from the books. J. Whitton, Esq.
702. *Mr. Hoskins.*] Were Messrs. Peto & Company charged for the damage caused to the rails? No³⁰
703. Then they have not paid the country for the damage at all? Some rails Messrs. Peto & Co. were charged for, but I think permission was given to use these rails for temporary purposes, and they were not charged. I believe I am incorrect in that—the charges were made simply for the damage done to the rails, and for rails not returned. 24 Mar., 1870. ³⁰ Insert but for their use.
704. *Mr. Campbell.*] Were you in the Colony when the Sydney and Parramatta Railway was carried on by a private Company? I was not.
705. Are you aware how many honorable gentlemen who now have seats in this House were connected with that railway as shareholders? I really cannot say.

NOTE.—I find, on reference to Messrs. Peto & Co.'s accounts, that the sum of £4,153 8s. 4d. was paid by them to the Commissioner for the use of rails for temporary purposes.—J.W., 7/4/70.

[1s. 3d.]

Sydney: Thomas Richards, Government Printer.—1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(SPECIFICATION, &c., OF NEW GOODS SHED AT REDFERN STATION.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 15th March, 1870, That there be laid upon the Table of this House copies of the following Papers, viz. :—

“ Specification, accepted Tender, and all other Papers, except Plans, of
 “ new Goods Shed erected at Redfern Station; also, an Account of actual
 “ cost of double-headed rails, chairs, sleepers, and relaying of the Parra-
 “ matta Line of Railway, particularizing the expenditure of all sums of
 “ money which appear on the Loan Account for that purpose.”

(Mr. Byrnes.)

SCHEDULE.

NO.		PAGE.

8.	Crown Solicitor, forwarding John Taylor's bond. 17 October, 1868	10
9.	Memorandum of amount paid to contractor for this work and additions thereto. 18 August, 1869	11
10.	Account of actual cost of double-headed rails, chairs, sleepers, and relaying of the Parramatta Line of Railway with particulars of expenditure.....	11

ADDENDA.

1.	Correspondence respecting alleged misappropriation of Vote for relaying Line. 17 March, 1869, to 15 July, 1869...	12
2.	Correspondence respecting irregularity of Accountant in crediting Votes for relaying Line with proceeds of sale of old material	13

RAILWAYS.

No. 1.

A.

Great Southern Railway.—Goods Warehouse in the Sydney Station-yard.

SPECIFICATION for the erection and completion of a Goods Warehouse in the Sydney Station-yard.

1. The work to which this specification refers is the construction and erection of a goods warehouse and urinals complete in the station-yard at the Sydney Terminus, together with all the expenses of finding the whole of the materials, tools, scaffolding, labour, and every other thing which may be necessary for the full and proper completion of the work to the satisfaction of the Engineer-in-Chief, in strict accordance with this specification and the drawings herein referred to.

2. The whole of the materials used under this contract shall be of the best description of their several kinds, and subject to the approval of the Engineer; the whole to be executed in a good and workmanlike manner to his entire satisfaction.

3. The contractor must state in his tender the amount for which he will execute the whole of the work, in accordance with the drawings herein referred to and the conditions in this specification. He must also attach to his tender a schedule of prices, on which all additions or deductions from the work are to be made, in accordance with clause No. 5 of General Conditions.

4. The foundations must be excavated to the depths shown on the drawings, or to any other depth the Engineer may consider necessary. The trenches must be cut to a uniform width of their respective dimensions, no more being taken out than is necessary to get in the foundations; and all spaces left in the foundations, between the sides of the excavation and the masonry must be filled in up to and level with the surface of the ground with good strong clay or marl, and be well and firmly punned.

All surplus material from the foundation, or of any other description, must be removed to any distance within 300 yards where the Engineer may direct.

5. The walls of the building must be built in good sound sandstone, from the best Pymont quarries, or if from any other quarry it must be of equal quality to the best Pymont stone. They must be built in horizontal courses, 12 inches deep, and each stone must be laid on its natural bed, and be equal in thickness to that part of the wall in which it is used, that is, 18 inches in the base and piers, and 14 inches in the panels respectively. To have a bond throughout the whole of the work of not less than 18 inches. The whole of the beds and vertical joints must be boasted throughout. All the face joints, both inside and outside, must be tool-pitched to a proper joint line, and the faces between the joints on the outside must be hammer-pitched or rock-faced, and those on the inside must be axe-faced to a uniform surface throughout.

A chisel draft, $1\frac{1}{2}$ inch wide, must be worked on each side of the stones forming the outside angles of the building, and also upon each side of the projecting angles of the piers or pilasters, base and parapet walls to panels, and also round each of the arch stones over the doors, &c. The whole of the walls must be built in mortar, composed of one part good stone lime to one part of clean sharp sand.

The mortar in the whole of the joints, both on the inside and outside of the walls, must be raked out to the depth of $\frac{1}{2}$ an inch, and be pointed with the best Portland cement gauged 1 of cement to 1 of clean sharp sand. The mortar must be raked out whilst wet, and the pointing with cement done as the work proceeds.

6. The window-sills, steps, hearth and back hearth to the office, copings and corbels to gables, stone blocks for cranes, and the chimneys, are to be clean chiselled and cut clean.

7. Each block for carrying the sills of the floor-joists must be in one stone, and be squared at end, and are to be bedded in mortar and fixed as shown upon the drawing.

8. The stones carrying the timber pillars in the centre of the building must each be of the dimensions shown, be axe-faced, dressed throughout, and properly bedded in cement; and having a hole 12 inches square and 2 inches deep to receive the foot of the pillar.

9. The whole of the six loading-bays to be paved with axe-faced stone not less than 12 inches thick, neatly bedded and jointed in sand. The area of each stone to be not less than 1 square foot.

10. The partition wall in the office is to be built with bricks laid in mortar, and of the dimensions shown on the drawing.

11. The sleeper walls of offices to be of the dimensions shown on the plans, and must be well bedded and jointed in good lime mortar.

12. The piers for the cranes must be built of axe-faced stone laid in Portland cement mixed 1 to 1. Stones to be of the full dimensions of the piers, and laid in 12-inch courses, the top course being 1 foot 6 inches.

13. Glazed earthenware drain-pipes of the several dimensions shown are to be laid as shown by the drawings, to carry the water away from the rain-water pipes. The drain-pipes must be laid with sufficient fall to carry the water where required, and the joints must be securely fixed and stopped with clay, and the earth is to be well rammed in when the pipes are laid.

14. A damp course composed of the best Portland cement mixed with clean sharp sand in the proportion of 1 of sand to 1 of cement, must be laid on the whole of the external walls of the building to the full width, and not less than half an inch thick, neatly trowelled smooth.

15. Four 9-in. x 6-in. cast-iron air-bricks must be fixed in the walls of the office upon said coating of cement, so as to give a good ventilation to the floor timbers.

16. The internal walls of the offices must be rendered float and set, and the ceiling to the same must be lathed, rendered float and set. The laths must be of the best forest oak, or any other hardwood which may be approved by the Engineer.

17. The finished setting to the ceilings must be white, and the float and set materials to the walls must be coloured to such a tint as may be directed by the Engineer.

18.

18. The walls in the interior of the goods warehouse are to receive two good coats of lime whitening.

19. All the timber used is to be of the best description of black-butt, ironbark, or timber of an equal quality and strength, except where it is otherwise provided in this specification or shown on the drawings, sawn square, and to the sizes (long lengths) and scantlings shown thereon, in work free from wany edges, stakes, sap and loose dead knots, the whole being perfectly seasoned.

20. The deals which may be used for the folding-gates, sashes, and frames, office fittings, fascias, soffits, &c., must be of the best red Memel or Petersburg deals or battens, as the case may require.

21. The whole of the roof timbers must be of black-butt, excepting the tie-beams, which must be of ironbark. The roof is to consist of fourteen pairs of queen-post principals, framed and placed as shown on the plan and detail drawing. The outer ends of the tie-beams are to project over the walls, and be securely fixed to the wall-plate or tem-plate. The inner ends are to be scarfed and bolted to the corbel pieces, which are to be notched and secured to the longitudinal tie 12 in. 12 in., which is to be mortised to receive the tenons at the upper ends of the wrought and chamfered ironbark pillars, and secured thereto with bed bolts as shown. The lower ends of the pillars are to be set in white lead in the stone blocks before described.

The ends of the longitudinal tie are to be securely fixed to tem-plates and built in the walls, and where scarfs are necessary they are to be on the pillars. The purlins and ridges are to be in long lengths, properly scarfed and notched on, and securely fixed to the backs of the principal rafters and the blocks shown on the detail drawing. The ends of the purlins are to be built into the walls. The valley gutters must be formed with $1\frac{1}{2}$ -inch deal or cedar boards fixed upon cleats secured to the under sides of the purlins as shown by the detail drawing, and have sufficient fall to carry the water into the down pipes fixed to the sides of the pillars. The roof is to be furnished with all necessary wrought-iron straps, bolts, and spikes as shown.

22. A fascia and soffit of deal wrought and beaded is to be fixed to the ends and underside of the projection of the tie-beams, and to be blocked where necessary.

23. The roof of the office is to be framed as shown. Tie-beam 9 in. x 3 in., king-post 9 in. x 3 in., rafters 4 in. x 3 in., hip rafters 9 in. x $1\frac{1}{2}$ in., purlins 4 in. x 3 in., wall-plates 4 in. x 3 in., ceiling joists 6 in. x 2 in. spaced as shown. Short pieces of 4 in. x 3 in. quartering are to be trimmed into the ceiling joists where necessary, to carry a 1-inch wrought and beaded soffit and fascia. The whole to be properly and securely fixed, and provided with all necessary bolts, straps, &c. Gutter between roof and wall to be of $1\frac{1}{2}$ -in. deal, with fall to carry the water into both cistern heads.

24. The timber used in the platforms is to be hardwood. The planking is to be ironbark, 9 in. x 3 in. in long lengths, closely laid and securely spiked to the joists, and all inequalities are to be adzed down. The joists, blue or grey gum or black-butt, 9 in. x 3 in., are to be spaced as shown by the detail drawing, and notched 1 inch on to the bearers and well spiked thereto, and to the wall-plates 6 in. x 3 in., which are to be in long lengths, properly halved, and spiked together where necessary, and well bedded in mortar on the walls. The bearers, 10 in. x 10 in., are to be blue or grey gum or black-butt, in long lengths, notched to receive the joists, and be properly halved and bolted together where necessary, and be bedded in mortar on stone blocks as shown by the drawing.

25. Four flights of steps, each 2 ft. 6 in. wide, must be fixed where shown on the drawings.

26. The floor of the office must be framed with 6 in. x 2 in. hardwood joists, on $4\frac{1}{2}$ in. x 3 in. wall-plates, and covered with $1\frac{1}{2}$ -in. G & T best Baltic pine boards wrought on one side, and $2\frac{1}{2}$ -in. mitred mar-gins to the hearthstone; joists 18 in. from centre to centre.

27. There are to be six cranes fixed where shown on the plan. Each crane is to be 16 ft. long on the gib, 12 ft. 8 in. high in the clear. The cross-stays for the cranes are to be hardwood, approved by the Engineer, 6 in. x 6 in., framed and securely bolted to each other, and to the tie-beams and wall-plates or tem-plates. Each crane is to lift not less than 2 tons, and have all the necessary cast and wrought iron work, endless rope chain, &c., complete, engine-turned, fitted and fixed complete and ready for use. These cranes to be first approved by the Engineer.

28. Sixteen pairs of 3-inch folding gates, wrought throughout, must be fixed where shown by the drawings; the framing to be cyphered, stopped, and shouldered, filled with inch-battens, ploughed, tongued, and beaded. One of the gates is to have a wicket-door, 5 feet high, and 2 feet wide in the clear, hung with a pair of $3\frac{1}{2}$ inch butt-hinges to the framing of the doors, having a 7-inch iron rim lock, best brass furniture, and two keys to the same.

29. Hang the sixteen pairs of folding gates with 3-inch by $\frac{1}{2}$ -inch wrought-iron bands each side of the gate, as shown on the drawing, with $1\frac{1}{2}$ -inch strong hooks, tapped and bolted through the walls, and four $\frac{3}{4}$ -inch bolts through each, at top and bottom rail. See detail drawing.

30. Each pair of gates to have $2\frac{1}{2}$ -inch x $\frac{1}{2}$ -inch strong iron knuckle bar fastenings, with plate and staple screwed on each gate, having a strong padlock and key to each, approved by the Engineer.

31. Each pair of gates is to have a long tail bolt, 7 feet 6 inches long, with handle stud hook fastening and plates; the bolt to shoot into a hole in the soffit of the arch; also, a 24-inch strong iron bolt, $\frac{3}{4}$ inch diameter, to shoot into the hardwood sills, or into hardwood stops securely fixed in the ground, as may be required.

32. One leaf of each of the end gates is to be kept open by a strong hook and eye, and staple attached to the gates, and the hardwood stops 8 inches x 8 inches x 2 feet securely fixed in the ground for that purpose.

33. All the other gates are to be kept open by similar hooks eyes and staples, secured to the gates, and leaded into walls of the building.

34. Hardwood stills 18 inch x 6 inches are to be fixed to the openings for the short gates in the sides of the buildings; they are to be well bedded in mortar, and the ends let into and well secured in the walls.

35. Below each of these gates a fender of hardwood is to be fixed; it is to be of the scantlings shown, properly framed and bolted together, and securely fixed in its place.

36. The entrance door and the door from the office to the warehouse are to be 2-inch, 4-panel bead and flush and square-framed cedar doors, hung with $3\frac{1}{2}$ -inch wrought-iron butts, to 5-in. x 3-in. wrought and rebated frames.

37. The inner doors to be $1\frac{1}{2}$ -inch 4-panel doors, moulded on both sides, hung to the framing of the lobby, and to have $1\frac{1}{4}$ -inch wrought and rebated jambs in the partition wall, and furnished with 6-inch architraves.

38. Each door is to have a 7-inch Carpenter's patent rim lock, with the best brass furniture, and two keys.

39. A 2-inch wrought and moulded fanlight is to be fixed over the entrance door; it is to be hung on pivots, and have all necessary stops, pulleys, and line complete.

40. All the doors and folding gates are to be of wrought cedar.

41. The framing for the entrance lobby is to be of deal, 3 inches x 3 inches, wrought, framed, and stop-chamfered, and securely fixed to the walls and floor, and covered on the top and sides with inch deal boarding, grooved, tongued, and beaded on both sides. A 3-inch O.G. moulding is to be planted under the soffit, and round the upper edge on the inside.

42. The window-frames for the warehouse are to be of hardwood, 4½-in. x 3-in., wrought and rebated, and hardwood weathered and rebated sills, and fixed in openings 6 feet high and 4 feet wide. The sashes are to be 1½-inch wrought deal, with plain cyphered bars, glazed with hammered plate glass, and fixed with proper stops in the hardwood frames.

43. The windows in the office are to be 2-in. deal, wrought and moulded sashes, double hung in proper box frames, with proper wire lines, weights and pulleys complete. To be glazed with best crown glass. The fanlight over the entrance door is also to be glazed with the best crown glass.

44. ¾-in. linings and 6-in. architraves must be fixed to doors and windows in the office. 1½-in. deal window boards must be fixed to the office windows.

45. A moulded skirting, 1 in. thick and 9 inches high, is to be fixed round the walls of the offices.

46. 1½-in. deal wrought louvre boards, housed into 4½-in. x 3-in. wrought and beaded frames, must be fixed in the circular openings in the gables.

47. A mantel-piece with 9-in. jambs and frieze and 1½-in. moulded shelf, approved by the Engineer, must be fixed in each office, together with a half-registered stove.

48. The roofs must be covered with Morewood & Co.'s No. 24-gauge galvanized corrugated iron. The lap at the ends must not be less than 8 inches, and the lap at the sides not less than one corrugation.

49. The sheets must be secured to each other at the sides and ends, and also to the purlins and hip rafters, with galvanized iron screws placed 1 foot apart.

50. All the nuts and screws, &c., must be fixed with proper lead-washers to prevent leakage in the roof. The whole of the iron sheets must be hammered to fit one another at the edges before being fixed.

51. Galvanized iron eaves guttering, of the description and dimensions shown on the drawings, must be fixed to the eaves of the building.

52. Galvanized iron rain-water pipes are to be fixed to the pillars between the roofs, and also to the outer walls, where and in the manner shown by the drawings. Each pipe is to be 4 inches internal diameter, and have a large cistern head, and all necessary bends, elbows, and shoes, &c., for effectually draining the water from the roof into the glazed earthenware drain-pipes.

53. An iron railing with 1-inch round bars must be securely fixed to the steps to the office with lead, and to have a strong rounded hand-rail fixed to the top.

54. The gutter between the roofs is to be of the dimensions shown on the detail drawing, and be lined with 5-lb. lead in one width and sufficient to cover the top of the purlins under the iron of the roof, and must have a lap of 9 inches at each joint, and be properly doubled at the edges at the joints and under the roof to prevent leakage.

55. The gutter between the office and the warehouse is to be lined with 5-lb. lead, dressed as above described over the purlin on one side, and turned up 6 inches and covered with an apron or flashing-piece 4 inches wide let into and pointed with cement in the wall of the warehouse.

56. 4-lb. lead 24 inches wide is to be dressed to the corrugated iron covering of the roofs, lapped and nailed with lead-headed nails to the ridge rolls and hips of the warehouse and office. The flashings to the walls to be of 4-lb. lead 10 inches wide, with one side fixed under coping.

57. The flashings to the chimney bases must be of 4-lb. lead 10 inches wide. The whole of the lead both for gutters and flashings must be in long lengths, and the joints in the flashings must not have a less lap than 6 inches.

58. Paint four times both sides of the gates, doors, and windows; paint four times door-linings, mantel-pieces, fascias, soffits, eaves, guttering, cistern-heads, and rain-water piping; paint four times iron railing of office, also iron and wood work of the cranes. The iron-work on the gates to be finished a good black.

59. Any other work usually painted but omitted to be specified is to be painted four times.

Urinals.

60. A portion of the bank and the site of the cesspit is to be excavated in the manner and to the depths shown by the drawing, and the earth is to be well rammed in at the back of the walls as the works proceed. The surplus is to be removed to where directed, not exceeding 300 yards distance.

61. The walls are to be built with the best hard burnt bricks laid in mortar (as before described), and grouted at every course. The retaining wall is to be built with curved ends, and to a batter of 1 in 8 and of the dimensions shown.

62. The front walls are to be panelled, arches are to be turned over the entrances, and also in the cesspit, the walls of which are to be built in brick as before described. A stone corbel course is to be built as shown, to carry the flagging for covering the pit and also the 4½-inch partition walls as shown.

63. The flagging for the floors of urinals and water-closet, and the covering and bottom of the cesspit is to be 6 inches in thickness, hammer-dressed, square-jointed in mortar, and bedded in sand. The covering is to be bedded in mortar on the walls and corbel course before described.

64. A 6-inch glazed earthenware drain-pipe is to be built into the wall of the cesspit, laid where directed and in the manner before described for drain-pipes.

65. A hammer-dressed stone trough or channel 12 in. x 12 in. closely jointed and bedded in sand is to be fixed in the urinals, and be provided with a 6-inch iron grating at one end as shown.

66. The coping on the walls is to be of the dimensions shown, chiseled-dressed and weathered, closely jointed and bedded in mortar.

67. A watercourse or channel formed of bricks laid in cement 1 to 1 is to be formed at the back of the retaining wall as shown.

68. The slabs for the urinals (a drawing of which will be provided) are to be of cast-iron. The lower ends are to be cemented into a chase or channel cut in the stone flagging, and the sides are to be bolted through the brickwork.

69. The end walls and spaces between the iron slabs of the urinals, and also the inside of the $4\frac{1}{2}$ brick risers to water-closet, are to be covered with cement (as before described) $\frac{3}{4}$ -inch in thickness. The joints of the brickwork, where seen, are to be raked out, filled in, and pointed with cement; and the whole of the internal walls to have two coats of lime-white.

70. The coping to the $4\frac{1}{2}$ brick risers is to be of hardwood, 6-in. x 3-in., in one length, wrought and rounded, bedded in mortar, and built into the walls as shown.

71. The plates for the roof are to be of hardwood, 6-in. x 3-in., in long lengths, placed as shown, and the ends to be built into the brickwork.

72. The roof is to be of corrugated galvanized iron, 24 gauge; the side joints to be lapped one corrugation and riveted together at every 12 inches. The ends are to be screwed to the plates at every 12 inches.

73. A half-round galvanized iron gutter is to be properly fixed to the plate at the eaves, and to be furnished with a 3-inch galvanized-iron pipe, to convey the rain-water into the cesspit, or into the drain-pipe, as may be directed.

74. No advantage shall be taken of any omission in this specification or in the drawing of any particular work which may be necessary to make the building complete; the intention of this contract being that the whole of the work shall be carried out in a satisfactory manner, notwithstanding any omission which may have taken place of matters obviously necessary for the due completion of the works.

75. Each person tendering must enclose with his tender a Treasury deposit receipt of £50, without which his tender will not be taken into consideration. Such deposit will be returned to him when the successful tenderer has completed the necessary bond, or in the event of fresh tenders having to be called for, excepting in the case of the person whose tender may be accepted; and should he fail to find the necessary security within the time named in the specification, then this said deposit of £50 shall be forfeited by him to the Commissioner.

This is the specification marked "A," referred to in the annexed Articles of Agreement and Bond, dated the fifteenth day of October, A.D. 1868.

Witness—J. J. LEE.

JOHN TAYLOR.
J. B. HOLDSWORTH.
JOHN SANDS.

B.

GENERAL CONDITIONS.

Interpretation clause.

1. The words "superintending officer" in these Conditions shall mean any person who may from time to time be appointed by the Engineer-in-Chief of Railways to supervise the works or buildings, and the words "Engineer-in-Chief" or "Engineer" shall mean the Engineer-in-Chief for the time being of the Commissioner for Railways.

Dismissal of workmen, removal of improper materials, &c.

2. The Engineer shall have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the line of railway (or any land belonging to the Commissioner), any materials, plant, or implements, which in his opinion are insufficient for the purpose intended, or at variance with the meaning and intention of this specification. The cost of the removal of any such plant, materials, or implements, to be paid by the contractor.

Instructions to be obeyed.

3. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the superintending officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

Drawings, specification, &c.

4. The plans, sections, and drawings represent generally the form and dimensions of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached. And if there should be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the drawings, and the dimensions and materials given in the specification, the directions of the specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the drawings and not in the specification, or anything contained in the specification and not shown in the drawings, shall be equally binding as if it were contained in both.

Extra works, omissions of works, &c.

5. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to increase or diminish the dimensions of any works to be done under this contract, or to alter their situation, or to vary the form or dimensions of any of the said works, or of any part thereof, he shall have full power to do so, and to order and direct any such increase, diminution, or alteration, which shall be executed by the contractor, if of the class of works provided for in the schedule of prices; and no such increase, diminution, or alteration of works, shall in any way annul or set aside this contract, or extend the time for the completion thereof; but such additions or alterations shall be measured and allowed and paid for, or such deductions credited to the Commissioner for Railways, as the case may require, according to the schedule of prices. And if any portion of the works so ordered to be done shall not be of the class of works provided for in the schedule of prices, the same shall be executed by the contractor at such price as may be agreed for with the Engineer; but if the contractor and the Engineer cannot agree as to the works required to be done which are of a class not provided for in the schedule of prices, the Engineer may order and direct the same to be done by such person or persons as he may think fit.

Net measurements.

6. All measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

Labour,

Labour, materials, plant, &c.

7. The contractor shall provide at his own costs and charges all materials, labour, tools, plant, tackle, machinery, scaffolding, &c., for the proper completion of the works at the prices stated in his schedule.

Damages, &c., to be paid for by contractor.

8. The land inside the fences of the railway may be used for the purpose of carting the materials for the works on this contract, but all damage that may be done to any land not actually the property of the Commissioner must be paid for by the contractor, whether such damage be caused by the carting of materials, or the straying of cattle in consequence of the destruction by the contractor or his workmen of the original fences, or of the fences alongside the railway, or by any other cause connected with the construction of the works; and should such damage not be at once paid for, such an amount as shall appear reasonable to the Commissioner may be paid by him in compensation for the same, and deducted from any money that may be due to the contractor for work done under this contract.

Setting out works.

9. The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner.

Contractor to be represented.

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer stationed on them to receive instructions from the superintending officer or Engineer-in-Chief, and to represent the contractor for all the purposes of this contract.

Progress of works.

11. Should the Engineer be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, the Commissioner shall have full power without vacating this contract, to take the works wholly or in part out of the hands of the contractor, and to employ, procure and make use of all labour or materials which he may deem necessary for completing the works; the cost of such labour and materials to be deducted from any money that may be then due, or may hereafter become due to the contractor. And if the money then due or thereafter becoming due to the contractor shall not be sufficient for that purpose, the balance remaining unpaid may be recovered in an action for damages for breach of contract or as money paid for the use of the contractor.

Cancellation of contract.

12. The Commissioner shall have the option, and full power and authority, in lieu of proceeding under the last preceding clause of these conditions, if the contractor fail to proceed in the execution of, and to carry on the works in the manner and at the rate of progress required by the Engineer, of cancelling this contract, so far as relates to the works remaining to be done; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed shall be taken by him as full payment for all works done under the contract; and upon notice in writing under the hand of the Commissioner, that he, under the authority of this condition, cancels the contract, being served upon the contractor, or left at his last known place of abode, the contract shall be cancelled, and thereupon all sums of money that may be due or unpaid to the contractor, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, and all sums of money named as penalties for the non-fulfilment of the contract within the time specified, shall also be forfeited and become payable to the Commissioner; and the said implements and materials shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

Time of completion.

13. The contractor shall complete the whole of the works comprised in this contract, on or before the 30th day of June, 1869; and in the event of their non-completion at the specified time, should the Commissioner not have proceeded under clauses Nos. 11 and 12 of these Conditions, or either of them, the contractor shall forfeit and pay £50 sterling per week, or for every part of a week that shall elapse after such specified time until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. No certificate will be given after the date specified for the completion of the contract, until the whole of the works shall have been properly completed to the satisfaction of the Engineer-in-Chief.

Copies of drawings, &c.

14. All copies of drawings or specifications required by the contractor for carrying on the works must be made at his expense; but should any copies of drawings or specifications be furnished to him at the expense of the Commissioner, they must be returned to this office before a final certificate for the work can be given.

Free passes, &c.

15. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

Liability of contractor.

16. The care and maintenance of all works under this contract shall remain with the contractor until their completion, and until the Engineer-in-Chief for Railways shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof; and until such notice shall have been given the contractor and his sureties shall be jointly and severally responsible for all accidents from whatever cause arising, and shall make good all damage thereto.

Contractor not to sub-let works or assign moneys.

17. The contractor shall not assign over or under-let this contract, or any part thereof, or assign all or any of the moneys payable or to become payable under the contract, or all or any part thereof, or any other benefit whatsoever arising, or which may arise under this contract, to any other person, without the consent in writing under the seal of the Commissioner for Railways first obtained. The contractor, for each

each and every breach of this condition, shall pay to the Commissioner for Railways the sum of £500 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Commissioner for Railways; and any permission to assign over or under-let works to be done under this contract shall not discharge the contractor from liability to see that the works so assigned or under-let are executed and completed in terms of this contract.

Truck system not allowed.

18. The workmen, tradesmen, and labourers of every class employed on the works to which these Conditions refer, shall be paid their wages in full, in money, current coin of the Colony, at least once in every month; and no ticket or other system of payment by provisions, liquors, or goods, will on any pretence be allowed; nor shall the contractor or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen of every class shall be paid on the works if it be possible, or in some building adjoining, and in no case shall they be paid at a public-house, or other place where liquors or refreshments are sold.

Power to the Commissioner to pay workmen's wages.

19. Before the payment of any money to the contractor, the Commissioner may require from him a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these Conditions refer have been paid their wages and claims of every kind in full, in money, the current coin of the Colony, and to the latest date at which such wages or claims are due; and the Commissioner may withhold the payment of any money that may be due or may become due to the contractor until such declaration has been made and delivered to him.

If the contractor shall fail or omit to pay the wages of any workman employed upon the works, in the current coin of the Colony, it shall be lawful for the Commissioner, as often as the same shall happen, upon complaint of such failure or omission made by any such workman, and upon production or other satisfactory proof of any judgment or order of a Court of Petty Sessions, or of any other Court of competent jurisdiction, to pay the amount mentioned in such order to such workman, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing to the contractor under this contract.

Bankruptcy or insolvency.

20. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the contractor, or to the official or other assignee or assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to recontract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient; and all the then remaining materials, implements, and plant aforesaid may be used in and applied for the purposes of the works; but on the final completion of the works, the surplus of such materials, implements, and plant shall cease to belong to the Commissioner, and shall become the property of the said assignees or trustees, without any allowance for or payment by the Commissioner, or on account of any loss or diminution, wear, tear, or injury they may have sustained in the meantime.

Security.

21. The contractor will be required to provide two approved persons as sureties to enter with him into a bond to the Commissioner for Railways, in the penal sum of £1,000, or a cash deposit of £500, for the proper performance and completion of the contract. The names of the persons proposed by him as sureties must be stated in his tender, the Commissioner for Railways reserving to himself the power of rejecting such proposed sureties should he deem it advisable to do so.

Should the contractor fail to procure such persons as may be deemed by the Commissioner to be eligible sureties, or provide the cash deposit, within six days from the acceptance of the tender, or should the contractor fail to execute the contract for the due performance of the works mentioned in the said tender, or to execute and to procure the due execution by the persons so approved of as sureties of the bond required hereunder for securing the due completion of the works to be done under the said contract, within fourteen days after the acceptance of such persons as sureties has been notified to him, the Commissioner will have the option of and full power and authority to declare such acceptance to be annulled.

No tenderer will be allowed to proceed with the work tendered for until he has provided approved sureties, has executed the required contract, and has with such sureties duly executed the bond before mentioned for the due performance of the said contract,—it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract and bond, he shall not have any right of action, claim, or demand against the Commissioner.

Progress payment without prejudice, &c.

22. No certificate given to the contractor for the purpose of any progress payment shall prevent the Engineer-in-Chief from, at any future time before the termination of the contract, rejecting all unsound materials and improper workmanship discovered subsequently to the giving of the last previous certificate; and notwithstanding the giving of any certificate that portions or the whole of the works have been satisfactorily performed, the Engineer-in-Chief may require the contractor to remove and amend, at any future time previously to the final payment on account of the construction or maintenance of the works, any work that may be found not to have been performed in accordance with the contract; and the contractor must remove and amend, at his own cost, all such work when so required, notwithstanding any approval made or given by the superintending officer; and the Commissioner shall have power, on the report of the Engineer-in-Chief that the work approved of as aforesaid is not in accordance with the contract, to deduct from any moneys that may be due or that may become due to the contractor, the whole amount that has been paid on account of such work.

If in the opinion of the Engineer-in-Chief, further inquiry is necessary or desirable before any certificate is given, he shall have power to withhold such certificate for a period not exceeding one month from the date at which, in the ordinary course, the certificate would have been given.

None of the conditions of this contract shall be varied, waived, discharged, or released, either in law or in equity, unless by the express consent of the Commissioner, testified in writing under his seal.

Payments.

23. Payments will be made once in every month, unless same shall become not payable by reason of anything contained in these Conditions, up to the date specified for the completion of the contract, on the Engineer's certificate, as the work proceeds, in the proportion of 90 per cent. of the value of the work satisfactorily executed, and the remaining 10 per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his entire satisfaction. And it is expressly declared that the obtaining a certificate from the Engineer that the work done by the contractor has been satisfactorily executed, or completed to his satisfaction, shall be a condition precedent to the contractor having any right or cause of action in respect of any work done, or materials provided, and to the contractor having any right of action or claim to the payments from time to time to be made hereunder, as well as to the final payment upon the whole of the work being finished.

No. 7.

THE COMMISSIONER FOR RAILWAYS TO MR. JOHN TAYLOR.

Department of Public Works,
Railway Branch,
Sydney, 3 October, 1868.

SIR,

I have the honor to inform you that your tender of 29th September last, to construct a Goods Warehouse at the Redfern Railway Terminus, for the sum of £8,495 (eight thousand four hundred and ninety-five pounds), in accordance with plan and specification, is accepted; and to state that the Crown Solicitor has been instructed to prepare the usual bond and contract.

I have, &c.,

JAMES BYRNES,

Commissioner for Railways.

No. 8.

THE CROWN SOLICITOR TO THE COMMISSIONER FOR RAILWAYS.

Crown Solicitor's Office,
Sydney, 17 October, 1868.

SIR,

Referring to the instructions contained in your letter of the 9th instant, No. 2579, I have the honor to transmit the accompanying bond, executed by Mr. John Taylor and his sureties, for the fulfilment of his contract to erect a goods warehouse at Redfern Station.

J. B. Holdsworth
and J. Sands.

The notice, agreement, specification, and general conditions herewith, and the two drawings in your office, have been signed and witnessed in the usual manner.

I have, &c.,

(For the Crown Solicitor),

J. J. LEE.

Mr. Whitton to note, 20/10/68.

Noted.—W.H.Q., 21/10/68.

232 10 0 0 T rails.					

A. ASHDOWN,
Accountant for Railways.

17/3/70.

The Vote of "£20,000, 29 Vic., No. 23, towards relaying the Line from Sydney to Parramatta Junction," appears from the Railway books to have been expended as follows:—

1866. Cash for sleepers	£1,590 0 0		
Rails and other materials.....	5,129 18 7		
		£6,719	18 7
1867. Cash for sleepers	558 11 9		
Rails and other materials	3,384 14 2		
		3,943	5 11
1868. Cash for sleepers	526 15 6		
Rails and other materials	5,913 11 5		
		6,440	6 11
1869. Cash for sleepers	2,003 19 2		
Rails and other materials	5,436 0 6		
		7,439	19 8
		£24,543	11 1

The cost of labour and ballast for the above has been charged to the Votes for "Working Expenses." The excess of £4,543 11s. 1d. beyond the Vote of £20,000 has been paid in part from the proceeds of sales of old Barlow rails, which have been paid to the credit of this Vote, amounting, to end of January, 1870, to £3,147 10s.

A. ASHDOWN,
Accountant for Railways.

17/3/70.

ADDENDA 1,

ADDENDA 1.

The Engineer for Existing Lines to The Commissioner.
Government Railways—Existing Lines.

Votes for Relaying.

REFERRING to your minute, 69/784, calling upon me to estimate the cost of the relaying between Ashfield and Burwood, in order that you might get Executive authority for the expenditure, seeing that the balance of the Votes for relaying was insufficient to cover the cost,—I have to call your attention to the fact that there was one Vote of £20,000 for the purchase of rails, and another of the same amount for relaying.

Now, as there are only five miles of double way relayed, viz., between Sydney and Ashfield—and this could not honestly have cost more than £17,000, as the labour and ballast were charged to Revenue—it follows that there should be a balance of £23,000. There must either be some error, or a misappropriation of the Votes.

I thing, therefore, the matter should be inquired into at once.

JAS. H. THOMAS.
17/3/69.

Accountant, for report.—J.S., 19/3/69.

The Vote of £20,000, 23 Vic. No. 10, "to replace 9 miles of Barlow rails with the double-headed rail between Sydney and Parramatta, being one-third of the distance," appears from the books to have been expended as follows:—

In 1860.	August and October—Rails chairs, &c., were charged, amounting to	£831	3	4
1862.	August to December— Do. do.	£3,888	2	8
	And during same period—Cash paid for relaying line at Long Cove Viaduct and Old Parramatta Station Yard	406	7	9
				4,294 10 5
1863.	From May, 1863, to April, 1864, inclusive—			
	Cash for wages for riveting and relaying Barlow rails	6,583	8	5
	Rivets, sleepers, tools, and other stores issued for the above work	4,767	10	10
				11,350 19 3
1864.	May to November—			
	Cash—wages for relaying	264	8	3
	„ sleepers	83	2	6
	Stores issued.....	8	5	1
				355 15 10
1865.	May—T rails and sundry materials from Peto & Co. are charged, amounting to	2,538	1	1
	September to December—			
	Cash—wages, relaying	239	19	3
	Stores issued	6	16	8
				246 15 11
1866.	January to May—			
	Cash for relaying, wages	53	17	9
	„ sleepers	472	10	0
	„ stores issued	0	7	9
				526 15 6
				£20,144 1 4

The £144 ls. 4d. in excess of the Vote has been paid out of £178 10s. the proceeds of Barlow rails supplied to Department of Harbours and Rivers, and paid to credit of the Vote on 11 May, 1863.

It would appear from the foregoing that a misappropriation has been made of the sum of £11,350 19s. 3d., paid for riveting and relaying Barlow rails or maintenance of the line, and the further sum of £2,538 1s. 1d., paid to Peto & Co. for T rails—not double-headed rails, amounting in all to £13,889 0s. 4d., out of a Vote of £20,000, the terms of which are specifically "to replace 9 miles of Barlow rails with the double-headed rail between Sydney and Parramatta, being one-third of the distance."

The remainder of the expenditure comprises wages paid for relaying, amounting to 964 13 0
And the value of rails and other permanent way material issued, amounting to 5,022 5 6

The Vote of £20,000, 29 Vic., No. 23, towards relaying the Line from Sydney to Parramatta Junction, has been expended in part as follows:—

1866.	May to September—			
	Cash for sleepers.....	1,590	0	0
	Rails, &c., issued.....	5,129	18	7
				6,719 18 7
1867.	July to November—			
	Cash for sleepers.....	558	11	9
	Rails, &c., issued.....	3,384	14	2
				3,943 5 11
1868.	March to December—			
	Cash for sleepers.....	526	15	6
	Rails, &c., issued.....	5,913	11	5
				6,440 6 11

The following is a summary of the rails and other permanent way materials charged to these Votes, from which I presume the Engineer for Existing Lines can ascertain whether the proper quantities have been charged for the distance of line relayed.

To Vote, 23 Vict., No. 10:—											
Rails.		Chairs.		Fish-plates.		Bolts and Nuts.		Spikes.		Keys.	
Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.
318	1 3 12	86	8 0 14	9 11 2 24	2 12 2 0	8 0 0 2				12,000.	
232	10 0 0 T rails	and		and		and					
	218 24 ft.	1,758		440		880		3,516			
	2 21 ft.										
To Vote, 29 Vic., No. 23.											
Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.		
1,131	18 1 13	373	8 3 16	51 1 1 17	14 16 2 17	32 13 1 8				36,604	

A. ASHDOWN,
Accountant.
12/4/69.

Mr. Thomas, for report.—J.S., 23/4/69.

I have had all the double-headed and T rails measured between Sydney and Parramatta, and find that the quantity agrees to within a fraction of the above.

It

It will be seen, however, by this return furnished by the Accountant, that, as I stated, there should be a large balance to the credit of relaying, in place of the Minister having to obtain Executive authority for an additional expenditure, had not the Votes been misappropriated in the manner they have been; as there is no doubt that the riveting the old Barlow rails, costing upwards of £11,000, was as much a charge on working expenses as the ordinary repairs of the lines; whereas the very cost of labour and ballast of the relaying was charged by me to working expenses, so that I at least cannot be accused of reducing the cost of working the line by improperly charging such items to capital.

J.H.T.,
22/5/69.

Mr. Thomas takes credit to himself for charging ballast and relaying to "working expenses"; but he only did so on my instructions, approved by the Minister. See M.P. 65/1630.—J.W., 16/7/69.

The Engineer-in-Chief to The Commissioner.

69/326.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 15 July, 1869.

Alleged misappropriation of Votes for relaying line from Sydney to Parramatta.

THE Accountant appears to me to have the most ludicrous notions of what he calls misappropriations of public moneys, and evidently the term is one which he does not understand.

In 1860 a sum of £20,000 was voted by Parliament to replace Barlow rails with double-headed rails.

In 1863 my attention was called by Mr. Trotter to the very bad condition of the whole line between Sydney and Parramatta, and he suggested the relaying of a portion of the distance with double-headed rails. *At this time there were no rails of this description in the Colony* available for this service, and I therefore gave instructions, in order to provide for the public safety, to have the whole of the Barlow rails riveted and additional sleepers provided, the cost being charged to the Vote of £20,000. By this arrangement the Barlow rails on a great portion of the line have lasted six years longer than they otherwise would have done.

In 1866 another Vote of £20,000 was obtained, not for laying down the double-headed rail, but for relaying the line. Both these sums (£40,000) have been expended in replacing 12 miles of Barlow rails with double-headed rails and 2 miles with T rails, and relaying the Barlow rails throughout.

The Accountant says, in an elaborate paper which must have taken much time to prepare, that the riveting and relaying of the Barlow rails, which cost £11,350 19s. 3d., was a misappropriation of the Votes from Parliament, as this sum is clearly chargeable to maintenance of the line.

I might ask the Accountant what is the difference between relaying the Barlow rails and replacing such rails with double-headed rails? Are they not both *maintenance of the line*? Are they not both properly charged to the Votes which were given by Parliament for maintaining the Sydney and Parramatta Line in safe working condition? Where then is the misappropriation?

I do not blame the Accountant for not understanding these matters, because his experience of railway accounts does not extend beyond a period of about two years; but I do blame him, and his conduct deserves the severest condemnation, for bringing forward charges of misappropriation of public Votes when no misappropriation has been made, and when the papers produced only exhibit his want of knowledge of the meaning of the terms used in the accounts.

The Accountant does not consider it a misappropriation of public money to sell Barlow rails and supplement Parliamentary Votes, thereby expending money without the sanction of Parliament.

He does not consider it a misappropriation of Parliamentary Votes to lay in sidings on the Northern Railway and debit the cost to the Vote for the extension of the Morpeth Railway; nor does he consider the Vote for the extension of the railway to Bathurst misappropriated when the money is being used for laying in sidings at Penrith. These are gross misappropriations, and probably there are many others of a similar kind.

But the most extraordinary statement made by the Accountant is, that the Government paid to Peto & Co. for T rails a sum of £2,538 1s. 1d., when as a matter of fact the Government never paid one shilling to Peto & Co. for rails.

In what condition can the books be when such statements as these are made by the Accountant? Does the Accountant understand the original books, or were they so kept as to be useless? It is quite time that a thorough investigation be made into the matter, with a view to ascertain what reliance can be placed upon the official records of the expenditure and receipts shown by the railway accounts.

The paper prepared by the Accountant bears on the face of it the fact that it was concocted by the Engineer for Existing Lines and himself, and no doubt considered by both of them a very able document; but unfortunately the subject is one upon which they are both very "innocent," and it can therefore cause no surprise that they have signally failed in showing any misappropriation of the two £20,000 Votes obtained for relaying and replacing with double-headed rails a portion of the line from Sydney to Parramatta.

I may however here state that it is no portion of the Accountant's duty, nor does it become his position, to question the correct appropriation of any document bearing my signature, and in future he would do well to attend strictly to his own duties, which if satisfactorily performed, will find full scope for all his energies.

For the information of the Commissioner, I may remark that for the ordinary repairs of the line and rolling stock, in fact "working expenses," a Vote is obtained yearly from Parliament, but if any extraordinary repairs or renewals are required, special application is made to Parliament for the necessary funds. The repairs on the line from Sydney to Parramatta were heavy, and could not be carried out under the money voted for working expenses, and therefore Parliament was applied to for extra Votes. These were obtained (two of £20,000 each), and have been expended for no other purpose than that for which they were voted.

JOHN WHITTON.

ADDENDA 2.

* * * I wish to call the Commissioner's attention to the account furnished, showing the expenditure under the Vote of £20,000; the Accountant making an available balance of £4,878 4s. 9d., when the actual balance on this and a former Vote is only £2,954 19s. 9d.

It appears that a number of Barlow rails were sold, and the amount I presume paid into the Treasury, to the credit of Revenue, yet this amount £1,923 5s. is brought forward to supplement the Vote of £20,000, without any authority from Parliament. In fact, this sum £1,923 5s. is not available, and could not be drawn from the Treasury.

J.W.
16/1/69.

Accountant to explain.—J.S., 19/1/69.

If the Commissioner will refer to M.P. 69/133 which accompanied the account herein mentioned, he will find an explanation of the balance of £4,878 4s. 9d. still available under the Vote of 20,000 for relaying line to Parramatta.

The £1,923 5s., part thereof being proceeds of sale of "old Barlow rails," was not paid to the credit of Revenue, as was formerly most improperly the custom, but has been paid to the credit of the Vote above mentioned; and the balance above stated is in fact available, and can be drawn from the Treasury for services performed thereunder.

A.A., 20/1/69.

Mr. Whitton to see and return for mail.—J.S., 21/1/69.

All

All money expended upon railways is, or ought to be voted by Parliament. If the Accountant's view of this matter be correct, anything belonging to the railways may be sold, and the money so obtained may be used to supplement the Votes which have been sanctioned by Parliament.

In the present instance, £20,000 was voted for a special purpose; but Barlow rails having been sold for the sum of £1,923 5s., this amount is added to the Vote of £20,000, making a total of £21,923 5s., or £1,923 5s. is proposed to be expended without any parliamentary authority.

If hundreds can be used in this way, it may easily be converted into thousands. In my opinion the Accountant's method of dealing with this matter is incorrect. J.W., 25/1/69.

Commissioner, 25/1/69.

Will Crown Solicitor advise me on this question.—J.S., 25/1/69.

The Crown Solicitor to The Commissioner for Railways.

69/735. No. 69/242

Crown Solicitor's Office,
Sydney, 3 March, 1869.

Sir,

I have the honor to return the papers relating to the Vote of £20,000 for relaying railway line between Sydney and Parramatta, and to state that the sum of £1,923 5s., the produce of the sale of the old rails taken up in course of relaying line, cannot be carried to the credit of this Vote and expended as part thereof.

The proceeds of the sale of the old rails will have to be paid into the Treasury and carried to the proper credit there, and can only be expended under the authority of an Act of Council, in the same way that all other moneys received on account of the Government are expended.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

I wish to know if any other Vote has been supplemented by similar means; if so, what Vote or Votes, and to what amount?—J.S., 9/3/69.

Mr. Ashdown, 9/3/69.

Looking no further back than 1863, the Accountant begs to furnish herewith a summary of amounts that have been paid to the Treasury to the credit of Loan Votes,—a course which he is informed has prevailed in the Service generally.

As the whole of these Votes have been expended, together with the amounts referred to, and by which they have been supplemented, the Accountant presumes, from the tenor of the within letter, that it will be necessary to obtain "Parliamentary Indemnity" as well for the erroneous receipt of these amounts by the Treasury to the credit of the Votes as for the erroneous sanction by the Auditor General of their expenditure.

With regard to the sum of £1,923 5s., proceeds of "old Barlow rails" paid to the Treasury to the credit of the Vote 29 Vict. 23, £20,000 "towards relaying Line to Parramatta," this amount being unexpended no such indemnity will be required, and the amount can be transferred as directed in the letter of Crown Solicitor to the proper credit there—whatever that may be.

To Commissioner.

A. ASHDOWN,

Accountant.

18/3/69.

Mr. Whitton to see.—J.S., 20/3/69.

See Memo. 69-130.—W.H.Q., 31/3/69.

SUMMARY of Amounts paid to Treasury to credit of Loan Votes, and re-expended by Railway Department.

	£		£ s. d.
23 Vic., No. 10.....	20,000	To replace nine miles of Barlow rails with double-headed rails :— 11 May, 1863.—per Harbours and Rivers Department, for 25½ tons Barlow rails at £7	178 10 0
20 Vic., No. 30.....	312,000	Extension—West Maitland to Singleton :— Dec., 1862.—For twelve Dobbin carts sold to Commissioner for Roads, in July, 1862. (See statement of Engineer-in-Chief, 23 April, 1863)	120 0 0

The Engineer-in-Chief to The Commissioner.

69-130.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 31 March, 1869.

Crediting Loan Votes.

THE Summary of Amounts paid to Treasury to credit of Loan Votes, furnished by the Accountant to show how previous Votes have been improperly supplemented, proves most distinctly the reverse of what the Accountant intended, as in nearly every Vote referred to the original Votes have *not* been supplemented.

The Accountant fails to see the difference between crediting a Vote by the sale of articles purchased out of *such* Vote, and improperly supplementing a Vote by the sale of articles purchased out of a Vote obtained from Parliament for *other purposes*.

The distinction is very easy of comprehension, and I trust there will be no necessity for any further correspondence on the subject.—J.W., 31/3/69.

Accountant, 2/4/69.—J.S.

The Accountant to The Commissioner.

THE Accountant has never alleged that the Loan Votes have been *improperly supplemented* by the payments made to them; on the contrary, he maintains that all realizations of property acquired and paid for out of "Capital" should be refunded to "Capital" in reduction of the cost of the particular works to which they may appertain, and the amounts applied to the liquidation of the Loans voted for their construction.

The Summary of Amounts referred to distinctly proves that the *original Votes have been supplemented* as therein stated, no matter from what source, whether from the sale of articles originally purchased, and which involved an expenditure in the first instance from the particular Votes credited or otherwise; and although the expenditure of such amounts would to their extent render unnecessary the creation of additional Loans, yet, as contended for by the Engineer-in-Chief in his observations in these papers, dated 25/1/69, and in accordance with the opinion of the Crown Solicitor, as expressed in the concluding part of this letter on this subject, dated March 3, 1869, *such expenditure can only be made with the authority of Parliament*, and in the instances referred to *no such authority has yet been obtained*.

A. ASHDOWN,
Accountant.
15/4/69.

Mr. Whitton to sec.—J.S., 27/4/69.

The Engineer-in-Chief to The Commissioner.

It is quite clear to me that the Accountant can not or will not understand this matter, and I shall not therefore give myself any further trouble to try to convince him that his views are incorrect.—J.W., 2/6/69.

Seen.—J.S., 2/6/69.

Sydney: Thomas Richards, Government Printer.—1870.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(SUPPLEMENT TO CORRESPONDENCE IN REFERENCE TO RAILWAY PLANT AND STATISTICS.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1870.

FURTHER RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 12th March, 1869, That there be laid upon the Table of this House,—

- “(1.) Copies of all Letters, Reports, and any other Papers, referring to the imperfect construction and inferior workmanship of eighteen Railway Carriages, lately imported for the Great Western Line; together with Invoices for the same.
- “(2.) Copies of all Reports on the condition and proposed relaying of the permanent line of Railway between Sydney and the Parramatta Junction.
- “(3.) Number and condition of Engines employed in working the Great Southern, Western, Windsor and Richmond lines of Railway, number of Engines in steam daily, average number of miles run daily by each Engine, number of Carriages of each description, and all other rolling stock, classified, with their state and condition clearly set out, and the number of years each description has been in use.
- “(4.) Number of Break-vans, Trucks, Carriages, and any other rolling stock constructed, or ordered to be constructed in the Colony, for the Railway Department, during the tenure of office of the late Government.
- “(5.) Copies of all Specifications and Schedules prepared by the Engineer for Existing Lines, by order of the late Government, for additional rolling stock; with Advertisements for Tenders.
- “(6.) Number of Tenders received for such rolling stock by present Government, and names of parties who tendered.”

(Mr. Byrnes.)

SCHEDULE.

No.	<i>Radial Carriages.</i>	PAGE.
1.	Engineer for Existing Lines, drawing attention that the Carriages were laid up, and showing what action he had taken in the matter, 4-3-69, with Commissioner's Minute thereon, 8-3-69	2
2.	Engineer for Existing Lines, showing carrying capacity of Rolling Stock in connection with the loss sustained in this respect by the defective Carriages, 8-3-69; reporting with reference to Commissioner's Minute of 8-3-69, 12-3-69	2
3.	Commissioner to Mr. Thomas, in reply, 20-3-69; with Mr. Thomas' rejoinder of, 24-3-69	3
4.	Commissioner to Mr. Thomas, further Minute respecting, 25-3-69; with Mr. Thomas' rejoinder, 1-4-69	3
5.	Traffic Manager respecting leaky state of Carriages, 7-4-69; with Mr. Thomas' report thereon, 14-4-69	4
<i>Relaying Line.</i>		
1.	Minute of Commissioner to Accountant for a detailed Statement of Expenditure of Votes for relaying, 23-12-68	4
2.	Statement applied for, 13-1-69	4
3.	Engineer for Existing Lines reporting that the relaying was urgently required, and suggesting that the rails for the Extensions should be made available, 12-1-69	4
	Mr. Whitton's report thereon, 14-1-69	5
	Commissioner's Minute requesting Mr. Whitton to supply Rails, 15-1-69	5
	Mr. Whitton's reply	5
4.	Engineer for Existing Lines to the Commissioner preferring charge of misappropriation of Votes for relaying, 12-4-69	5
	Mr. Whitton's reply, 15-7-69	6

RAILWAYS.

Radial Carriages.

No. 1.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

Government Railways (Existing Lines).—Minute Paper.

Radial Carriages.

I AGAIN call the Commissioner's attention to the fact that there are 18 of the newly imported long Radial Carriages laid up,—being from their defective construction and bad workmanship dangerous to run, and the traffic thus deprived of a very large proportion of our Rolling Stock which has cost upwards of £15,000.

On the 4th April, 1868, I reported upon the bad workmanship in these carriages, and advised that a Board of competent persons unconnected with the Department should be appointed to inspect them.

This was done, and their report will speak for itself.

On the 10th March, 1868, I forwarded cost of damage done to them by sea-water.

On the 8th October, 1868, I sent in an estimate of what it would cost to put them in decent repair.

On the 23rd October I wrote to the Traffic Manager advising him, on account of their unsafe condition, to discontinue their use.

On the 16th November the Acting Traffic Manager (Mr. Carlisle) wrote me regarding complaints of passengers about these carriages, and I in reply sent him a copy of my previous memo. to Mr. Owen.

On the 19th November I reported one of the links breaking, and called attention to the bad workmanship generally.

On the 27th November I reported the unusual wear and tear there was on the tyres of these carriages, notwithstanding the radial bar arrangements they were fitted with.

On the 4th December I again referred to the defects in these carriages.

On the 29th December I called attention to the unsafe condition of these carriages.

The Commissioner then ordered me to get them all altered at once, and I shortly after sent in a draft advertisement calling for tenders for their alteration; but since then I have never heard anything more regarding the matter, so that the carriages are still lying idle and exposed to the weather.

JAS. H. THOMAS, 4/3/69.

This proves to me that it is almost next to useless to direct Mr. Thomas to do what is required by the Commissioner, for if my Minute of 13/11/68 had been carried out this delay of work would not have arisen, as the alterations in question would have been long since completed.

I hope Mr. Thomas will have this done as directed.—J.S., 8/3/69.

No. 2.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

Government Railways (Existing Lines)—Minute Paper.

Radial Carriages.

I THINK it desirable that I should add to my Minute of the 4th instant regarding the Radial Carriages, a return showing what is the carrying capacity of all our passenger rolling stock, in order that you may see what proportion these 18 carriages bear to the whole:—

	Passengers.
6 old 1st class carriages will carry	108
2 coupe do. do.	32
14 open 2nd class do.	504
9 enclosed do. do.	360
24 open and enclosed do.	960
11 composite do.	264
6 do. do.	192
Total	2,420

	Passengers.
The 12 Radial Carriages, 2nd class, will carry	480
„ 6 do. 1st. class do.	192
Total	672

It will thus be seen that these 18 carriages would add over one-fourth to the carrying capacity of the entire stock at present in use.

A very large proportion indeed, when we consider that during holiday times it is necessary to fit a lot of cattle waggons for the accommodation of the public.

JAS. H. THOMAS, 8/3/69.

Seen; return to Mr. Thomas with previous Minute.—J.S., 9/3/69.

Mr. Thomas, 1/3/69. To be returned, as they are required to be copied.

Received.—12/3/69, J.H.T.

3

I respectfully submit that it will be seen that this Minute is not justified by the facts, and if only grounded on this case I feel wants but the *whole* of the Minutes to be read to exonerate me from such a censure as "that it is almost next to useless to direct me to do what is required by the Commissioner."

On the 13th November the Commissioner did instruct me in his Minute to get these carriages altered without delay, and I, in accordance therewith, recommended that the work be done by contract, and that tenders be invited—the draft advertisement for which I enclosed.

Although I have never seen the papers since or had any reply to my recommendation that tenders be called for the performance of the work, I now find by a Minute of the Commissioner (written on the back of draft advertisement forwarded by me) dated 18/12/68, and which he has evidently forgotten, *decided* "that the matter must stand over for the present," and no doubt for some cogent reason.

But even had this Minute of the Commissioner, of the 18/12/68, not existed, I submit that there is nothing in the correspondence or facts to show that the delay was attributable to me or that "it was almost useless to direct me to do anything." I, having made a recommendation, had no other course open to me but to wait for authority to proceed, as the work was of considerable magnitude.

Looking at this censure, which is a most severe one, and which I have most clearly proved, is not justified by the facts; in this case it would appear (if not contradicted) as if it was called for by a repeated neglect of duty on my part, whereas it is the first time I have to my knowledge fallen under the Commissioner's displeasure from a similar or any other cause, and I would therefore respectfully ask what other (if any) cases of a like nature there are which could lead the Commissioner to arrive at the conclusion he evidently has.

J.H.T., 12/3/69.

No. 3.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

Government Railways.—Minute Paper.

Radial Carriages.

REFERRING to Mr. Thomas' Minute of 12/3/69, I desire to remind Mr. Thomas that had he carried out my order of 13/11/68, instead of questioning the propriety of the directions given and suggesting other mode of doing what was so urgently required, as he alleges, the whole of the work would have been completed by this time.

Mr. Thomas' reference to a Minute of mine to the effect that "the matter must stand over," could have had no effect in the cause of delay through my Minute of 13/11/68 not being carried out, as the paper was not seen by Mr. Thomas as he admits, and the only cogent reason for my Minute, was simply that the matter was to be allowed to remain over until I could have a proper opportunity of personally pointing out to Mr. Thomas the necessity of his carrying out my wishes on all occasions, but more especially when conveyed in writing. I am not in the habit of acting without justifiable reasons, and what I said in my Minute of 8/3/69 I still adhere to, and I trust the next I shall hear on the subject will be that my instructions have been obeyed.

J.S., 20/3/69.

In explanation of the course pursued by me in this matter, I would respectfully point out that the Commissioner's Minute of 13/11/68 *did not state how* the work was to be carried out, but merely that "Mr. Thomas will have the whole of these carriages altered without delay," and I surely cannot be charged therefore with questioning the directions given, by suggesting other modes of doing what was so urgently required, when I never received any specific instructions as to *how*, but merely an order for its *being* done, and I assumed, as would any other officer in my position, that it was left to me as the professional head of the branch to decide upon the most expeditious and economical mode of carrying out the instructions, and from my experience of work done by day-labour as compared with contract, I have no doubt the course I proposed was the best, especially as it effects an expenditure of over £1,000.

I certainly had not seen the Commissioner's Minute stating "that it must stand over for the present," as none of the papers were returned to me until I called attention to the delay in mine of 4/3/69, which Minute I took myself to the Commissioner and read it in his presence, and although I have seen him repeatedly since, yet he has not pointed out any neglect of duty on my part in carrying out his instructions, and he may rest assured that I never will neglect doing so, but I am even now at a loss to know how to proceed, seeing that the Commissioner has called for a copy of the specification and form of tender which I have supplied.

This job being all ironwork cannot be done in the carriage-shed, and the locomotive smiths have all their fires going to keep pace with the engine-repairs, besides which a large portion of the work being castings must of necessity be sent out to be done.

J.H.T., 24/3/69.

No. 4.

THE COMMISSIONER FOR RAILWAYS TO THE ENGINEER FOR EXISTING LINES OF RAILWAYS.

Government Railways.—Minute Paper.

Radial Carriages.

Mr. Thomas' reply to my Minute of 20/3/69, is simply frivolous.

Mr. Thomas is fully aware the workshops have been erected at great cost, and are maintained with a staff of officers, also at great cost, to carry out such like works, whether alterations or repairs, and I have heard a good deal of the new system of task-work which I had supposed was to meet such cases as the present, without inviting public tenders and the loss of time consequent thereon—however, I apprehend when I give directions to have work done, it is reasonable to suppose the usual methods will be resorted to, and so far as I can learn, I cannot see any reason why the present case should be made an exception.

J.S., 25/3/69.

I am very sorry that the Commissioner can deem me capable of writing anything frivolous on matters of business concerning the working of the Branch under my charge, for I have had but one object in view throughout, viz. :—that of getting the work performed expeditiously and economically; however, as the Commissioner does not consider the recommendation made by me, for having a large work like this done by Contract, worthy of attention, I shall endeavour to carry out his instructions—by inviting likely parties to take the job by task, although I may state that it does not come under that class of work to which this system was or ever has been applied, so that there is no departure from the usual method, and consequently this can hardly be considered an exceptional one.

J.H.T., 1/4/69.

No. 5.

Government Railways—Memorandum to Manager.

Penrith Station,
6th April, 1869.

Sir,

I beg leave to inform you the roofs of the long carriages are in a very leaky state, and in some of them there is scarcely a dry place for anyone to sit on.

I am, &c.,
ED. HIGGS.

To the Commissioner, *pro* E. Owen.—J.R.N., 7/4/69.
Mr. Thomas—J.S., 12/4/69.

This has already been reported to me, and steps taken to remedy it. These carriages are certainly a disgrace to the builders, and have been a source of trouble and annoyance from the first, as the correspondence would show, for they are not only from their faulty construction dangerous to run on a straight road—and consequently necessitates an entire alteration in the underframes—but the whole of the panelling is going to pieces, and will have to be renewed before they can be painted, yet they are perfectly new carriages, and cost £15,000.

A. ASHDOWN,
Accountant.
13/1/69.

No. 3.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

Rails for relaying Line.—Government Railways—Existing Lines.

In my Minute of 21st ultimo, forwarding Indent for rails, &c., I drew the Commissioner's attention to the fact that the work of relaying between Ashfield and Burwood was urgently required to be done, and recommended that some of the rails (17,000) in the yard be used for the purpose, to be replaced by those ordered from England.

As I have received no reply to this Minute, and I find we have now used all the best of the Barlow rails which were reserved from sale for renewals, thus causing the work to be still more urgently required—I again draw the Commissioner's attention to the matter.

JAS. H. THOMAS.
12/1/69.

Can

Can Mr. Whitton make arrangements for these rails, &c., being supplied?—J.S., 14/1/69.
Mr. Whitton.

The rails ordered for the extensions cannot be lent for the purpose required, as they will all be wanted during the present year for the Southern and Western lines. Mr. Thomas has previously borrowed about 10 miles of rails, and it is not too much to expect that he should have sufficient forethought to provide for the requirements of his own department.—J.W., 14/1/69.

Commissioner, 14/1/69.

As it is understood dangerous to life and property further to delay this relaying, I request the Engineer-in-Chief will be good enough to order the loan required, which shall be returned as soon as some are obtained from England.—J.S., 15/1/69.

Mr. Whitton, 15/1/69.

Rails cannot be obtained from England in less than eighteen months, and all the rails now in stock will be required this year. I regret that I cannot give my consent to this proposition, as by so doing I should be sanctioning a delay in the opening of a portion of the Western Railway, for which I should no doubt be severely censured; in addition to which there is not a sufficient balance available to pay for the rails now asked for by Mr. Thomas.

* * * * *
NOTE.—The concluding portion of Mr. Whitton's Minute, indicated by the stars, has reference to the improper practice of crediting Votes with proceeds of sale of old Barlow rails, and thereby spending money without Parliamentary sanction.

No. 4.

THE ENGINEER FOR EXISTING LINES OF RAILWAYS TO THE COMMISSIONER FOR RAILWAYS.

Votes for Relaying. Government Railways—Existing Lines.

REFERRING to your Minute 69/784, calling upon me to estimate the cost of the relaying between Ashfield and Burwood, in order that you might get Executive authority for the expenditure, seeing that the balance of the Votes for relaying was insufficient to cover the cost,—I have to call your attention to the fact that there was one Vote of £20,000 for the purchase of rails, and another of the same amount for relaying.

Now, as there are only 5 miles of double way relaid, viz. :—between Sydney and Ashfield, and this could not honestly have cost more than £17,000, as the labour and ballast were charged to Revenue; it follows that there should be a balance of £23,000. There must either be some error, or a mis-appropriation of the Votes.

I think, therefore, the matter should be inquired into at once.

JAS. H. THOMAS,
17/3/69.

Accountant for report.—J.S., 19/3/69.

The Vote of £20,000, 23 Victoria, No. 10, "to replace 9 miles of Barlow rails with the double-headed rail, between Sydney and Parramatta, being one-third of the distance," appears from the books to have been expended as follows:—

In 1860. August and October, rails, chairs, &c., were charged amounting to ...	£831	3	4
1862. August to December, do. do. do. ...	£3,888	2	8
And during same period cash paid for relaying line at Long Cove Viaduct and Old Parramatta Station-yard ...	406	7	9
			<u>4,294 10 5</u>
1863. From May, 1863 to April, 1864, inclusive—			
Cash for wages for rivetting and relaying Barlow rails...	6,583	8	5
Rivets, sleepers, tools, and other stores, issued for the above work ...	4,767	10	10
			<u>11,350 19 3</u>
1864. May to November—			
Cash—wages for relaying ...	264	8	3
Do. sleepers ...	83	2	6
Stores issued... ..	8	5	1
			<u>355 15 10</u>
1865. May—T rails and sundry materials from Peto & Co. are charged, amounting to ...	2,538	1	1
September, to December—			
Cash—wages for relaying ...	239	19	3
Stores issued ...	6	16	8
			<u>246 15 11</u>
1866. January to May—			
Cash for relaying—wages ...	53	17	9
Do. sleepers ...	472	10	0
Stores issued ...	0	7	9
			<u>526 15 6</u>
			<u>£20,144 1 4</u>

The £144 1s. 4d. in excess of the Vote has been paid out of £178 10s., the proceeds of Barlow rails supplied to Department of Harbours and Rivers, and paid to credit of the Vote on 11th May, 1863.

It would appear from the foregoing that a misappropriation has been made of the sum of £11,350 19s. 3d. paid for rivetting and relaying Barlow rails, or maintenance of the line, and the further sum of £2,538 1s. 1d., paid to Peto & Co. for T rails—not double-headed rails—amounting in all to £13,889 0s. 4d. out of a vote of £20,000, the terms of which are specifically "to replace 9 miles of Barlow rail with the double-headed rail between Sydney and Parramatta, being one-third of the distance."

The remainder of the expenditure comprises wages paid for relaying, amounting to £964 13 0
And the value of rails and other permanent way materials issued amounting to ... 5,022 5 6

The

The Vote of £20,000, 29 Vict., No. 23, towards relaying the line from Sydney to Parramatta Junction, has been expended in part as follows:—

1866. May to September—							
Cash for sleepers	£1,590	0 0
Rails, &c., issued	5,129	18 7
							6,719 18 7
1867. July to November—							
Cash for sleepers	558	11 9
Rails, &c., issued	3,384	14 2
							3,943 5 11
1868. March to December—							
Cash for sleepers	526	15 6
Rails, &c. issued	5,913	11 5
							6,440 6 11

The following is a summary of the rails and other Permanent Way materials charged to these Votes, from which I presume the Engineer for Existing Lines can ascertain whether the proper quantities have been charged for the distance of line relaid:—

To Vote, 23 Vict., No. 10.

Rails.		Chairs.		Fish-plates.		Bolts and Nuts.		Spikes.		Keys.
Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	Tons	cwt. qrs. lbs.	lbs.

A. ASHDOWN,

Accountant.
12/4/69.

To Commissioner.
Mr. Thomas for report.—J.S., 23/4/69.

I have had all the double-headed and T rails measured between Sydney and Parramatta, and find that the quantity agrees to within a fraction of the above.

It will be seen, however, by this return furnished by the Accountant that, as I stated, there should be a larger balance to the credit of relaying, in place of the Minister having to obtain Executive authority for an additional expenditure, had not the Votes been misappropriated in the manner they have been; as there is no doubt that the re-rivetting the old Barlow rails, costing upwards of £11,000, was as much a charge on working expenses as the ordinary repairs of the lines. Whereas the very cost of *labour* and *ballast* of the relaying was charged by me to working expenses, so that I at least cannot be accused of reducing the cost of working the line by improperly charging such items to capital.—J.H.T., 22/5/69.

Mr. Thomas takes credit to himself for charging ballast and relaying to working expenses, but he only did so on my instructions, approved by the Minister. See M.P. 65/1630.—J.W., 15/7/69.

The Engineer-in-Chief to The Commissioner for Railways.

Department of Public Works,
Railway Branch,
Engineer's Office, Sydney, 15th July, 1869.

Alleged misappropriation of Votes for relaying Line from Sydney to Parramatta.

THE Accountant appears to me to have the most ludicrous notions of what he calls misappropriations of public moneys, and evidently the term is one which he does not understand.

In 1860, a sum of £20,000 was voted by Parliament to replace the Barlow rails with double-headed rails.

In 1863, my attention was called by Mr. Trotter to the very bad condition of the whole line between Sydney and Parramatta, and he suggested the relaying of a portion of the distance with double-headed rails. At this time there were no rails of this description in the Colony available for this service, and I therefore gave instructions, in order to provide for the public safety, to have the whole of the Barlow rails re-riveted, and additional sleepers provided, the cost being charged to the Vote of £20,000.

By this arrangement the Barlow rails on a great portion of the line have lasted six years longer than they otherwise would have done.

In 1866, another Vote of £20,000 was obtained, not for laying down the double-headed rail, but for relaying the line. Both these sums (£40,000) have been expended in replacing 12 miles of Barlow rails with double-headed rails, and 2 miles with T rails, and relaying the Barlow rails throughout.

The Accountant says, in an elaborate paper which must have taken much time to prepare, that the rivetting and relaying of the Barlow rails, which cost £11,350 19s. 3d., was a misappropriation of the Votes from Parliament, as this sum is clearly chargeable to "maintenance of the line."

I might ask the Accountant what is the difference between relaying the Barlow rails and replacing such rails with double-headed rails?

Are they not both *maintenance of the line*? Are they not both properly charged to the Votes which were given by Parliament for maintaining the Sydney and Parramatta Line in safe working condition? Where then is the misappropriation?

I do not blame the Accountant for not understanding these matters, because his experience of railway accounts does not extend beyond a period of about two years; but I do blame him, and his conduct deserves the severest condemnation for bringing forward charges of misappropriation of public Votes, when no misappropriation has been made and when the papers produced only exhibit his want of knowledge of the meaning of the terms used in the accounts.

The Accountant does not consider it a misappropriation of public money to sell Barlow rails and supplement Parliamentary Votes, thereby expending money without the sanction of Parliament.

He does not consider it a misappropriation of Parliamentary Votes to lay in sidings on the Northern Railway and debit the cost to the Vote for the extension of the Morpeth Railway. Nor does he consider the Vote for the extension of the Railway to Bathurst misappropriated when the money is being used for laying in sidings at Penrith. These are gross misappropriations, and probably there are many others of a similar kind.

But

But the most extraordinary statement made by the Accountant is that the Government paid to Peto & Co. for T rails a sum of £2,538 1s. 1d. when as a matter of fact, the Government never paid one shilling to Peto & Co. for rails.

In what condition can the books be when such statements as these are made by the Accountant? Does the Accountant understand the original books or were they so kept as to be useless? It is quite time that a thorough investigation be made into the matter with a view to ascertain what reliance can be placed upon the official records of the expenditure and receipts shown by the railway accounts.

The paper prepared by the Accountant bears on the face of it, the fact that it was concocted by the Engineer for Existing Lines and himself, and no doubt considered by both of them a very able document; but unfortunately the subject is one upon which they are both very "innocent," and it can therefore cause no surprise that they have signally failed in showing any misappropriation of the two £20,000 Votes obtained for relaying and replacing with double-headed rails a portion of the line from Sydney to Parramatta.

I may, however, here state that it is no portion of the Accountant's duty, nor does it become his position to question the correct appropriation of any document bearing my signature, and in future he would do well to attend strictly to his own duties, which if satisfactorily performed will find full scope for all *his* energies.

For the information of the Commissioner, I may remark that for the ordinary repairs of the line and rolling stock, in fact "working expenses," a vote is obtained yearly from Parliament, but if any extraordinary repairs or renewals are required, special application is made to Parliament for the necessary funds.

The repairs on the Line from Sydney to Parramatta were heavy, and could not be carried out under the money voted for working expenses, and therefore Parliament was applied to for extra votes. These were obtained (two of £20,000 each) and have been expended for no other purpose than that for which they were voted.

CROWN LANDS.

No. 1.

[Alienation Act, section 13.]

C.P., No.

Land Agent's No. 22 of 1868.

Application for the Conditional Purchase, without competition, of 40 acres unimproved Crown Land, under section 13 of the Lands Alienation Act of 1861.

Received by me, with a deposit of £10, this 16th day of April, 1868, at half-past 3 o'clock.

WM. DUDDING,
Agent for the Sale of Crown Lands
at Patrick's Plains.

16 April, 1868.

SIR,

I am desirous of purchasing, without competition, under the 13th section of the Crown Lands Alienation Act of 1861, the portion of unimproved Crown Land hereunder described, containing 40 acres; and I herewith tender the sum of £10, being a deposit, at the rate of five shillings (5s.) per acre, on the area for which I apply, and on which it is my intention to reside.

To the Agent for the Sale of Crown Lands
at Singleton.

I am, &c.,
WILLIAM JAMES ARTHUR,
By his father, JAMES ARTHUR,
Gresford.

Description:—

County of Durham, parish of St. Julian, 40 acres; on the head of a creek running into Webber's Creek.

Mr. Maitland, senior, to measure, if unobjectionable.—J.S.A., for S.G. B.C., 5 June, 1868-70.

No. 2.

[Alienation Act, section 13.]

C.P., No.

Land Agent's No. 38 of 1868.

Application for the Conditional Purchase, without competition, of 40 acres unimproved Crown Land, under section 13 of the Lands Alienation Act of 1861.

Received by me, with a deposit of £10, this 16th day of July, 1868, at 11 o'clock.

WM. DUDDING,
Agent for the Sale of Crown Lands
at Patrick's Plains.

16 July, 1868.

SIR,

I am desirous of purchasing, without competition, under the 13th section of the Crown Lands Alienation Act of 1861, the portion of unimproved Crown Land hereunder described, containing 40 acres; and I herewith tender the sum of £10, being a deposit, at the rate of five shillings (5s.) per acre, on the area for which I apply, and on which it is my intention to reside.

To the Agent for the Sale of Crown Lands
at Singleton.

I am, &c.,
WILLIAM DRINKWATER,
Gresford.

Description:—

County of Durham, parish of Tangorin, 40 acres; on a branch of Webber's Creek, and about $\frac{1}{4}$ of a mile from Matilda Ellen Arthur's selection of 60 acres, made 16th April, 1868.

Mr. Maitland, senior, to measure, if unobjectionable. B.C., 29 August, 1868, No. 111.—J.S.A., for S.G.

No. 3.

[Alienation Act, section 21.]

C.P., No. 68,2709.

Land Agent's No. 57 of 1868.

Application for the Conditional Purchase, without competition, of 40 acres unimproved Crown Land, under section 21 of the Lands Alienation Act of 1861.

Received by me, with a deposit of £10, this 29th day of October, 1868, at 12 o'clock.

WM. DUDDING,
Agent for the Sale of Crown Lands
at Patrick's Plains.

29 October, 1868.

SIR,

I am desirous of purchasing, without competition, under the 21st section of the Crown Lands Alienation Act of 1861, the portion of unimproved Crown Land hereunder described, containing 40 acres, which adjoins my conditional purchase of 40 acres, made on the 16th April, 1868; and I herewith tender the sum of £10, being a deposit, at the rate of five shillings (5s.) per acre, on the area for which I apply.

I am, &c.,
WILLIAM JAMES ARTHUR,
 By **JAMES ARTHUR,**
 Gresford.

To the Agent for the Sale of Crown Lands
 at Singleton.

Description:—

County of Durham, parish of St. Julian, 40 acres; on a creek running into Webber's Creek, and adjoining my selection of 40 acres, made 16th April, 1868, on the south-west corner, and running south-west, north and east, to point of commencement.

Mr. Seccombe (if first C.P. is satisfactory) to measure if unobjectionable. B.C., 19 December, 1868.—C. J. FINCH, for Sur. Gen.

This portion has been already surveyed.—G. T. SECCOMBE, 7 April, 1869.

No. 4.

MR. LICENSED SURVEYOR MAITLAND TO THE SURVEYOR GENERAL.

Maitland, 10 December, 1868.

SIR,

Referring to your instructions herein of the 5th June, 1868 (68-70), I do myself the honor to Appendix A. report survey of the land therein indicated, and enclose a plan thereof.

I have, &c.,
D. M. MAITLAND,
 Licensed Surveyor.

Report.—Date of survey, 18th April, 1868.—D. M. MAITLAND.

Chartered, &c.—B.C., 22/2/70.

The portion herein referred to has been now selected by Charles Drinkwater.—69-4650.

No. 5.

MESSRS. RUSSELL & HOLDEN TO THE SECRETARY FOR LANDS.

Mort's Buildings,
 No. 179, Pitt-street, Sydney,
 11 February, 1869.

SIR,

On behalf of Mr. William Drinkwater we have the honor to submit the following facts for your consideration:—On the 16th day of April, 1868, one James Arthur, a settler in the district of Singleton, selected, under the 13th clause of the Crown Lands Alienation Act, two selections—one of 60 acres, in the name of his daughter, Matilda Ellen Arthur, in the parish of Tangorin (since forfeited); and the other of 40 acres in the name of his son, William James Arthur, in the parish of St. Julian. On the 16th day of July, 1868, Mr. Chas. Drinkwater selected, in the name of his son, William Drinkwater, under the same clause, a block of 40 acres upon the same creek, and about a quarter of a mile below the selection of William James Arthur, which it now appears was described by the Land Agent (who prepared the application) as about a quarter of a mile below the selection of Matilda Ellen Arthur, being the other selection taken up on the same day as that of William James Arthur.

Relying upon the Land Agent's description, Mr. Drinkwater at once occupied the selection which his father described to the Land Agent, and has continued to reside upon it to the present time; he has also made considerable improvements upon it.

James Arthur, the father of William James Arthur, having discovered that Drinkwater's selection had been wrongly described, on the 29th day of October, 1868, applied for the selection occupied by Drinkwater, in virtue of the occupation, and in the name of William James Arthur. We are in a position to prove beyond all doubt that neither the selector nor any of his family have ever occupied the selection taken up in the name of William James Arthur on the 16th day of April, and in virtue of which occupation the selection occupied by Drinkwater is claimed. It has merely been occupied by a servant in the employ of the selector's father, who has now a flock of sheep upon it; and even he did not reside there until after the expiration of one month from the day upon which the deposit for the selection was paid.

It is submitted in the first place that the Government could not have provided Mr. Drinkwater with land answering the description given by the Land Agent, as all land upon the creek below Matilda Ellen Arthur's selection had been already purchased. And secondly, that the mistake in the application having arisen entirely through the misdescription given by the Land Agent, the Government should protect Mr. Drinkwater, and allow him to amend the description, as it is certain beyond all doubt that he never intended to select anywhere else but where he at once erected his hut, and has ever since occupied as his home.

It is only within the last few days that Mr. Drinkwater has discovered the Land Agent's error, and we now have to request, on his behalf—

- (1st.) That the Land Agent may be instructed to amend the description given to the selection.
 (2nd.) And that William James Arthur's application for the same may be cancelled.

We have, &c.,
RUSSELL & HOLDEN.

Herewith :—

Appendix B.

- (1.) Statutory declaration of Charles Drinkwater.
 (2.) Sketch showing selections.

The facts of this case are so fully stated in this letter that nothing more need be added.

From the statutory declaration enclosed, it appears evident that the name of the wrong parish was inserted in Drinkwater's description by a mistake of the Land Agent's.

The points for decision are specified in the last part of this letter.—3 March.

The Land Agent to report and explain how the error was committed.—W.F., B.C., 11 March, 1869.

[Enclosure to No. 4.]

DECLARATION.

In the Colony of New }
 South Wales. }

I, CHARLES DRINKWATER, of Gresford, in the Colony of New South Wales, farmer, do solemnly and sincerely declare that on the sixteenth day of July, one thousand eight hundred and sixty-eight, I visited Singleton for the purpose of making a conditional purchase in the name of my son, William Drinkwater, under the thirteenth clause of the Crown Lands Alienation Act of 1861. I called upon the Government Land Agent there and told him that I wanted to select a piece of land on one of the selections rented by Doctor Lindeman in my son's name, as we were shepherding a flock of sheep for Dr. Lindeman, and that the land I wanted to select was a piece of 40 acres, between James Arthur's purchased land and one of the selections he made on the 16th day of April then last. I told him that the piece of land I wanted was on a branch creek; the agent then asked me if it was half a mile from Arthur's; I answered no, that it was close to one of the selections before mentioned, he then said he had better describe it as about a quarter of a mile from it, as that would suffice, and did so accordingly; he then advised me to see that the selection was occupied within one month from that day, as being so close to Arthur's he (Arthur) might try to make my son forfeit it. He asked me if I knew whether the 40 acres I wished to select were near the selection taken up in Arthur's son's name, or that taken up in his daughter's name; I said I did not, but that it was close to the upper selection. He asked me if I knew the name of the parish; I told him that I did not know anything about parishes; he then said it must be near Matilda Ellen Arthur's selection, in the parish of Tangorin. I mentioned to him several times that the 40 acres I wished to have were in Dr. Lindeman's rented section. Not doubting that the selection was properly described by the Land Agent I paid the deposit, and my son immediately went to reside on the 40 acres described by me, cleared the land, and planted tobacco beds, and we have had Dr. Lindeman's sheep folded upon it every night since, except when they went to be shorn and for water, and my son has continuously resided upon it as his usual home ever since, and paid the deposit. Neither William James Arthur nor any of his family have ever resided upon the selection taken up on the 16th day of April, 1868, as his or their usual home. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extrajudicial oaths and affidavits."

CHARLES DRINKWATER.

Taken and declared, at Clevedon, in the said Colony, this 16th day of February, }
 one thousand eight hundred and sixty-nine, before me,—

JAMES MCCORMACK, J.P.

No. 6.

THE LAND AGENT, SINGLETON, to THE UNDER SECRETARY FOR LANDS.

Court House, Singleton,
 March 15, 1869.

SIR,

Under a separate envelope I have this day returned the papers noted in the margin (received yesterday) from the Department of Lands, which have reference to a conditional purchase made in this Office on the 16th July, 1868, I beg to report that the application of Charles Drinkwater was prepared in conformity with his directions, yet at the same time his idea of the locality of the land he wished to select was incorrect; he appeared under the impression that there was only one branch of Webber's Creek, and settled himself down on that branch, which is in the parish of St. Julian.

With respect to the error alleged to have been committed by me (by Messrs. Russell and Holden) I would most respectfully submit that the particulars of the land Drinkwater attempted to describe to me, as far as I can recollect, were such as to lead me to a wrong conclusion respecting the position of the land he actually wanted. He was satisfied with the application prepared after it was read to him.

I have, &c.,

WM. DUDDING,
 Crown Lands Agent.

With respect to the mistake said to have been committed by the Land Agent, he states that to the best of his recollection the land described to him by Drinkwater was that which he (the Agent) specified for him in the application. On the other hand there is the statutory declaration with 69/1947 that the land pointed out to the Agent is that on which Drinkwater has settled down, and which he has improved. The application made by Messrs. Russell and Holden is to allow Drinkwater's description to be amended, and Arthur's C.P. to be cancelled.—W.W.S., 20th.

 his father, James
 Arthur.

No. 7.

MINUTE OF THE SECRETARY FOR LANDS.

Drinkwater v. Arthur.

MESSRS. Russell and Holden, solicitors for Drinkwater, say, "We are in a position to prove beyond all doubt that neither the selector nor any of his family have occupied the selection taken up in the name of William James Arthur, on the 16th day of April, and in virtue of which the selection occupied by Drinkwater, is claimed." I think Messrs. Russell and Holden should be required to produce the proof upon this point, and a report from the Land Agent obtained. The solicitors aforesaid say also, "The mistake in the application having arisen entirely through the misdescription given by the Land Agent." This is an assumption entirely without proof. It is denied by the Land Agent and has an exceedingly vague foundation even in Drinkwater's declaration, which shows either ignorance of, or inability to give, a description of the locality he intended. The case exhibits very strongly the inconvenience of the practice of allowing Land Agents to prepare these descriptions. But so long as such a practice exists it is obvious that no Land Agent can be fairly held responsible for any error in a description conveyed to him by another person supposed to know, and to be able to state, what he means, and who puts his meaning on paper through the mouth or the pen of the Land Agent.

Refer accordingly.—W.F., March 24, 1869.

No. 8.

THE UNDER SECRETARY FOR LANDS TO THE LAND AGENT, SINGLETON.

Department of Lands,
Sydney, 6 April, 1869.

SIR,

With reference to your letter of the 15th ultimo, explaining that the land applied for by Charles Drinkwater, in the name of his son, William Drinkwater, was described by you in accordance with his directions,—I am directed to request that you will ascertain, and report to this Department, with as little delay as practicable, whether William James Arthur has fulfilled the conditions of residence, with regard to the 40 acres conditionally purchased by him on the 16th April last, and which is the land occupied and claimed by Drinkwater.

I have, &c.,
M. FITZPATRICK.

No. 9.

THE UNDER SECRETARY FOR LANDS TO MESSRS. RUSSELL & HOLDEN.

Department of Lands,
Sydney, 6 April, 1869.

GENTLEMEN,

With reference to your letter of the 11th February last, in which you state that you are in a position to prove that neither William James Arthur nor any of his family ever resided upon the land selected by him at Patrick's Plains, on the 16th April last, and in view of which the selection occupied by William Drinkwater, but erroneously described in his application is claimed by the latter, I am directed to request that you will accordingly furnish the proof alluded to, with the view to the relative merits of the case being duly considered.

I have, &c.,
M. FITZPATRICK.

No. 10.

THE CROWN LANDS AGENT, SINGLETON, TO THE UNDER SECRETARY FOR LANDS.

Court House, Singleton,
April 20, 1869.

SIR,

In acknowledging the receipt of your letter, dated 6th April, 1869 (and numbered as per ^{69,2847} margin), requesting me to ascertain and report whether William James Arthur has fulfilled the conditions of residence, with regard to the 40 acres of land conditionally purchased by him on the 16th April last, I beg to enclose, herewith, the usual proof of residence in such cases.

I have, &c.,
WM. DUDDING,
Crown Lands Agent.

[Enclosure in No. 10.]

Proof of residence, &c., upon a Conditional Purchase of 40 acres of Crown Lands, made by William James Arthur, at Singleton, on the 16th April, 1868.

WE, the undersigned, being uninterested in the purchase herein referred to, certify that we know Mr. William James Arthur to have permanently resided upon, and improved as his usual home, the conditional purchase of 40 acres of Crown Lands in the County of Durham, made by him at Singleton on the 16th April, 1868.

No. 11.

MESSRS. RUSSELL & HOLDEN to THE SECRETARY FOR LANDS.

Mort's Buildings, Pitt-street,
Sydney, 21 April, 1869.

SIR,

In reply to your letter of the 6th instant, we have the honor to enclose three statutory declarations in further support of proof of non-residence, also a certificate of Dr. Lindeman, J.P., corroborating some of the facts stated in our application.

We have, &c.,
RUSSELL & HOLDEN.

The enclosed declarations appear to bear out the statements of Messrs. Russell and Holden.—
W.W.S., 23rd.

Await further report of Land Agent; re-submit therewith.—W.F., 3 May, 1869.

Land Agent's report in the meantime received; now herewith.—5th. (See No. 9.)

I recommend compliance with the application on behalf of Drinkwater, by Messrs. Russell and Holden, in their letter of 11th February.—W.F., 12 May, 1869.

[Enclosure in No. 11.]

DECLARATION.

In the Colony of New }
South Wales. }

I, EMMA DRINKWATER, of Gresford, in the Colony of New South Wales, spinster, do solemnly and sincerely declare, that during the time my brother William was residing upon his free selection, I saw the child William James Arthur and his mother, almost daily, and many times a day, upon James Arthur's homestead, three or four miles away from my brother's ground; and I declare, to the best of my belief, that the child and his mother never were on the selection taken in his name, or ever slept away from the homestead during that period. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extra-judicial oaths and affidavits."

EMMA DRINKWATER.

Taken and declared at Trevallyn, Paterson River, in the said Colony, this }
16th day of April, one thousand eight hundred and sixty-nine, before me,— }

G. B. TOWNSHEND, J.P.

[Enclosure in No. 11.]

DECLARATION.

In the Colony of New }
South Wales. }

I, WILLIAM DRINKWATER, of Gresford, in the Colony of New South Wales, free-selector, do solemnly and sincerely declare, that neither William James Arthur [an infant about (3) three years old], nor any of his family, ever resided upon the free selection made in his name on the 16th of April, 1868, nor did any one reside upon it for nearly four months after that date, and then it was resided upon by a man named Falkner, a shepherd of James Arthur, who had a flock of James Arthur's sheep upon it. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of oaths and affirmations, taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extra-judicial oaths and affidavits."

WILLIAM DRINKWATER.

16th day of April, one thousand eight hundred and sixty-nine, before me,— }

G. B. TOWNSHEND, J.P.

[Enclosure in No. 11.]

DECLARATION.

In the Colony of New }
South Wales. }

I, ARTHUR LINDEMAN, of Cawarra, Gresford, in the Colony of New South Wales, gentleman, do solemnly and sincerely declare that, during the time Drinkwater had the charge of my father's sheep from about the 10th of May last past, I frequently went to inspect them, and in doing so passed close to the selection made by James Arthur on the 16th of April; and I never, on any occasion, saw the child Wm. J. Arthur there, or any of his family; and that during all the time Wm. Drinkwater resided upon his selection, that neither the child or his parents resided there; but on several occasions I have seen them all at James Arthur's homestead, about four miles away, during that period. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act, made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations, taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extra-judicial oaths and affidavits."

ARTHUR LINDEMAN.

Taken and declared at Clevedon, in the said Colony, this 12th day of }
April one thousand eight hundred and sixty-nine, before me,— }

JAMES M'COORMACK, J.P.

[Enclosure

[Enclosure in No. 11.]

At the request of William Drinkwater I certify what I know relative to his conditional purchase, which appears to have been sold to another while resided upon by him. His father, Charles Drinkwater, who has charge of a flock of sheep of mine, asked me if I would object to his son's selecting a piece of land in one of my leased sections to make a home upon and to cultivate, while receiving wages for shepherding my sheep; I replied certainly not; and he then described and pointed out to me the piece of land he wished to select. There was no other land on my leased sections or in that neighbourhood that could at all answer the description.

Sydney, 19 May, 1869.

GENTLEMEN,

With reference to your letter of the 21st ultimo, enclosing three statutory declarations, corroborative of certain statements in your former letter of the 11th February last, on behalf of William Drinkwater, I am directed now to state, for your information, that the Secretary for Lands has decided that Drinkwater's purchase may stand, and Arthur's application has been therefore cancelled.

I have, &c.,
M. FITZPATRICK.

No. 15.

MR. LICENSED SURVEYOR MAITLAND to THE SURVEYOR GENERAL.

Maitland, 19 May, 1869.

SIR,

Referring to your instructions herein, of the 29th August, 1868 (68-111), I do myself the honor to report survey of the portion therein and above indicated, and enclose a plan thereof.*

I remain, &c.,
D. M. MAITLAND,
Licensed Surveyor.

Appendix C.

REPORT :—Date of survey, 5th May, 1869, not resident.—D. M. MAITLAND.
Applicant to show cause.—T.H.L.

No. 16.

THE UNDER SECRETARY FOR LANDS to THE LAND AGENT, SINGLETON.

Department of Lands,
Sydney, 29 July, 1869.

SIR,

I am directed to apprise you of an alteration which has been made in the description of William Drinkwater's conditional purchase, 68-1744, 40 acres at Patrick's Plains, on the 16th July, 1868, and to request that you will note your books in accordance therewith. The description will read as follows :—County of Durham, parish of St. Julian, on Myall Creek, a branch of Webber's Creek, being portion No. 6, parish of St. Julian, lot M, of sale at Singleton on the 27th December, 1865.

I have, &c.,
G. J. ARMYTAGE,
(For the Under Secretary.)

No. 17.

THE UNDER SECRETARY FOR LANDS to MR. W. DRINKWATER.

Department of Lands,
Sydney, 7 September, 1869.

SIR,

Information having been received that you have not resided on the 40 acres of land, conditionally purchased by you at Patrick's Plains on the 16th July, 1868, as required by the 18th clause of the Crown Lands Alienation Act, I am directed to inform you that it will be necessary for you to prove, within one month from this date, by the testimony of at least two disinterested and respectable persons, that your conditional purchase is your usual home and residence; and that in default of your doing so the purchase in question, and any additional ones held by you in virtue thereof, will be considered forfeited, and submitted to sale by auction with as little delay as possible.

2. A form of proof is annexed, which you should get duly signed, and forward to this Department within the time prescribed.

I have, &c.,
MICHAEL FITZPATRICK.

No. 18.

MESSRS. RUSSELL & HOLDEN to THE SECRETARY FOR LANDS.

Mort's Buildings,
No. 179, Pitt-street, Sydney,
21 September, 1869.

SIR,

In reply to your letter to Mr. William Drinkwater, of the 7th instant, requiring proof of residence upon the conditional purchase of 40 acres in the county of Durham, made by him on the 16th July, 1868, we now beg to enclose a proof, signed by several well known persons.

Immediately

Immediately previous to our application on his behalf, of the (? 11th) 5th February last, there had been an impounding by the father of William James Arthur of the sheep in William Drinkwater's possession, and as there was a great probability of a breach of the peace being committed, if he remained upon the land, we could not advise him to remain in possession during the period that our application was before the Government.

The day upon which we received your letter of 19th May last, informing us that the application had been granted, we apprised Mr. Drinkwater of its contents, and with our advice he immediately resumed his occupation, and has continued to reside upon the land up to the present time.

We have, &c.,

RUSSELL & HOLDEN.

In accordance with decision of Secretary for Lands on 69-4356 (see letter 21 April, 1869), Wm. James Arthur's original conditional purchase has been included in list of forfeitures, about to be submitted for approval of Executive Council. Should the four additional purchases, made on 9th ultimo, be forfeited also, or having been made prior to declaration of forfeiture of the original conditional purchase, and in ignorance of the intention to forfeit apparently, should they not rather be cancelled? It seems questionable whether in a case like this, applicant should forfeit the whole of the deposits (£50).—W.W.S., 26.

It may be a hard case, but parties who accept legal privileges, subject to certain conditions, must be presumed to do so with their eyes open to the consequences of the non-fulfilment of such conditions. It appears clear to me that additional conditional purchases must follow the fate of the original, and be equally liable to forfeiture.—W.F., October 29, 1869.

Additional conditional purchase applications, 69-2878, 2879; 69-3519, 3520, are included in forfeited list. 4/11/69.—69-13-507.

[Enclosure in No. 18.]

PROOF OF RESIDENCE.

We, the undersigned, being uninterested in the purchase herein referred to, certify that we know Mr. William Drinkwater to have continuously resided upon, as his usual home, the conditional purchase made by him on the 16th July, 1868, of 40 acres of Crown Lands in the County of Durham, with the exception of the period during which his application of the (? 11th) 5th February last, through his solicitors, Messrs. Russell & Holden, was before the Minister for Lands.

As witness our hands:—

Names.	Calling.	Address.
Herbert H. Brown.....	Grazier	Colstown, Gresford.
C. A. Long	Grazier	Colstown, Gresford.
his		
John × Harris	Farmer	Bowhill, Gresford.
mark		
his		
George × Turner	Farmer	Coleston, Gresford.
mark		
H. S. Lindeman.....	Wine Grower	Cawarra.

Dated this 13th September, 1869.

This certificate may, perhaps, be considered satisfactory.—5/10/69.—W.W.S., 5th.

Residence for a certain period, excepting a part of such period, is not residence for the whole period. But if applicant can produce proof that he had been illegally dispossessed, or kept away by force, from his residence, declaration might be satisfactory.—W.F., October 12, 1869.

No. 19.

THE UNDER SECRETARY FOR LANDS TO MR. W. DRINKWATER.

Department of Lands,
Sydney, 21 October, 1869.

SIR,

Referring to your proof of residence on your conditional purchase of the 6th July, 1868, at Patrick's Plains, forwarded under date the 21st ultimo, I am directed to inform you, that you should produce proof that you were illegally dispossessed, or kept away by force, from the land during the period in which you state you were non-resident, when the certificate might be considered satisfactory.

I have, &c.,

M. FITZPATRICK.

No. 20.

MESSRS. RUSSELL & HOLDEN TO THE SECRETARY FOR LANDS.

Mort's Buildings,
No. 179, Pitt-street, Sydney,
5 November, 1869.

SIR,

In reply to your letter to Mr. Drinkwater of the 21st ultimo, requiring further proof of the fact of his being illegally dispossessed, or kept away by force, from his selection during the period in which his application was before the Government, we have the honor to enclose a certificate from Henry John Lindeman, Esq., J.P., and can, if necessary, procure further proof.

216—B

To

To show what our client has had to endure for the sake of retaining his selection, we enclose an original note, received by him about the 16th July last, purporting to be from the infant selector, William James Arthur, and written some two months after we had advised Mr. Drinkwater of the contents of your letter to us of the 19th May last, "that Drinkwater's purchase may stand, and Arthur's application has been therefore cancelled."

It was a few days after the receipt of this note, namely, on the 27th July, that the father of William James Arthur went upon Drinkwater's selection and demanded the sheep in his possession; he was prevented from taking them, and the consequence was that a charge of pound rescue was brought by James Arthur, the father, before the Singleton Bench against Charles Drinkwater, our client's father, a very old man, who lives with and shepherds for his son. The result we enclose on a separate sheet of paper, marked C, in the handwriting of Mr. Dudding, the Clerk of Petty Sessions, who is also the Government Land Agent at Singleton. Mr. Drinkwater was undefended in consequence of the return day of the summons not giving him sufficient time to obtain professional assistance. He handed the enclosed papers, marked D, to the Bench, which was read in Court, and he appealed also to Mr. Dudding, who was sitting in the Court at the time, whether this statement was not correct, but Mr. Dudding would not assist him. Our client is a poor man, and can ill afford to be so unjustly deprived of his earnings, or to bring the matter before a higher tribunal. Since he resumed possession, with our advice in May last he has made his selection his *bonâ fide* residence, although since he was fined for pound rescue he has been obliged, at great inconvenience, to make arrangements to have his sheep folded elsewhere. In the meantime James Arthur has been making further selections for his infant son, and is endeavouring to enclose Drinkwater, so that he can go neither in or out without going upon the selections surrounding.

Whilst our client was daily and anxiously awaiting the decision of the Government, contained in your letter to us of the 19th May last, he was deprived of a home, and lived out in the open bush, watching his sheep, with nothing at night to cover him but a few sheets of bark, and upon resuming occupation, with the authority of the Government, he has been dragged into paying the damages in an action for pound rescue for preventing sheep being taken off land, which the Government had given Arthur notice did not belong to him (Arthur).

Taking all this into consideration, coupled with the fact of our having procured abundant proof that the infant William James Arthur has all along been a trespasser, even upon the 40 acres he selected under the 13th section of the Alienation Act, we beg to request that Mr. Drinkwater may be provided with a certificate of residence, and also that the selections made by William James Arthur, or by his father on his behalf, may be forfeited with as little further delay as possible.

We have, &c.,

RUSSELL & HOLDEN.

The Secretary for Lands has decided that Arthur's conditional purchases are to be forfeited, and under the representations now made, Drinkwater's residence may be accepted as satisfactory.—W.W.S., 11 November.

Approved.—W.F., November 15, 1869.

[Enclosures in No. 20.]

Wm. Jas. Arthur to Mr. W. Drinkwater.

Myall Creek, near Gresford,
16 July, 1869.

Dear Sir,

I beg leave to give you notice to leave the property upon which you are now living, against Wednesday next, the 21st day of July, 1869; if not, the sheep thereon will be impounded and the yard levelled, together with the hut, fence, or any other building erected thereon.

I beg leave to remark that I have received instructions to do so.

I remain, &c.,

WILLIAM JAMES ARTHUR.

D.

THE land in question is undoubtedly my son's, as when I found Mr. Arthur was disputing his right and title to the land I had the whole cause laid before the Minister for Lands. After some considerable delay a letter was sent to my lawyer from the Minister for Lands, saying that my son could hold possession of the land, as his claim to the right and title to the land in question, land being allowed him. The letter is held with my lawyer, but have had no means of receiving since the serving of the summons, as he resides in Sydney, and I was also informed that notice had been sent to Mr. Arthur to the same effect, and therefore Mr. Arthur must have trespassed to impound the sheep, knowing he had no legal right to do so. I should also think that Mr. Dudding must be aware that my son's claim has been allowed by the Minister for Lands.

Arthur v. Drinkwater.—"Pound Rescue."

THE defendant sentenced to pay fine of 40s. and 6s. 4d. costs in 7 days; in default of payment distress to issue, and in default of sufficient distress, defendant to be imprisoned in Maitland Gaol 14 days, also to pay £2 2s. professional costs.

JAMES SMITH, P.M.

£2	0	0	
0	6	4	Total... £4 8 4
2	2	0	

Received from Drinkwater, £4 8 4
W. DUDDING, C.P.S.

£4 8 4
Court House, Singleton,
3 August, 1869.

Cawarra, October 26, 1869.

I HEREBY certify that I know William Drinkwater was dispossessed of the land he free selected, from the fact that the Drinkwater family shepherded a lot of sheep belonging to me, and the father, Drinkwater, asked me if I would allow him to fold my sheep at night on their selection so that his son might reside upon it. The sheep were folded there for several months after the selection was made; then they were impounded by James Arthur, who claimed the land in right of an infant son. This James Arthur then placed his own sheep there, or ran them over it. Wm. Drinkwater is a very poor man, and had then to reside where he could gain his daily bread, being deprived of doing so on the selection which he was cultivating with that view; he vacated it therefore during the time occupied by the appeal he made for redress to the Minister for Lands, but re-occupied it immediately he received a letter confirming his right to it, which seems to have availed them very little, as he has suffered much persecution from James Arthur since, and his father has suffered also much loss and annoyance.

H. J. LINDEMAN.

No. 21.

THE UNDER SECRETARY FOR LANDS TO MR. W. DRINKWATER.

Department of Lands,
Sydney, 23rd November, 1869.

SIR,

With reference to your letter of the 13th September last, furnishing proof that you are carry- See enclosure to No. 18.
ing out the requirements of the Crown Lands Alienation Act of 1861, as regards residence on your conditional purchase of 40 acres of land in the district of Patrick's Plains, I am directed to inform you that the proof adduced by you is considered satisfactory.

2. I am to remind you that it will be necessary for you, before the expiration of three years and three months from the date of your purchase, to furnish the declaration required by section 18 of the Act above referred to, as to your continuous residence on the land for that period, and the value of your improvements, and that should the same not appear to be satisfactory, the Government will not be bound in any way by this communication to the acceptance of it.

I have, &c.,
MICHL. FITZPATRICK, U.S.

No. 22.

J. BOWIE WILSON, Esq., M.P., to THE UNDER SECRETARY FOR LANDS.

Sydney, 6 December, 1869.

SIR,

May I request the favour of being informed of the reasons for the cancellation of Mr. William James Arthur's selection of 40 acres, county of Durham, parish of St. Julian, selected 16th April, 1868, as it has been represented to me that Mr. James Arthur has strictly acted up to the requirements of the Act as to residence, and that improvements to the value of £40 are already on the ground.

I have, &c.,
J. BOWIE WILSON.

No. 23.

THE UNDER SECRETARY FOR LANDS TO J. BOWIE WILSON, Esq., M.P.

Department of Lands,
Sydney, 7 December, 1869.

SIR,

In reference to your letter of the 6th instant, inquiring the reason of the cancellation of William James Arthur's C.P. of 40 acres, made at Patrick's Plains on 16th April, 1868, I am directed to inform you that under the statements contained in certain declarations forwarded to this Department from residents in the district, by Messrs. Russell & Holden, the above purchase was declared forfeited, not cancelled, for non-residence.

Four additional purchases, made in virtue of the said purchase, were also at the same time declared forfeited by direction of the Minister for Lands, in the *Government Gazette* of the 23rd ultimo.

2. It may be added that a C.P., made by Arthur on the 29th October, 1868, was cancelled on the ground of its having been previously (*i.e.* on the 16th July, 1868) selected by Wm. Drinkwater; a slight error appears to have been made in the description given by Drinkwater, but not sufficient, in the opinion of the Minister, to invalidate his application, which was evidently intended for the land which he actually took possession of, and which was subsequently taken up by Arthur.

I have, &c.,
G. J. ARMYTAGE,
for U.S.

No. 24.

MR. W. J. ARTHUR TO THE SECRETARY FOR LANDS.

Myall Creek,
14 December, 1869.

SIR,

Having reference to your letter of the 7th instant to the Honorable John Wilson, in answer to a letter of inquiry from that gentleman, respecting the cancellation of my conditional purchase of 46 acres, made at Patrick's Plains on the 16th April, 1868, in which you say, "I am directed to inform you

you that under the statements contained in certain declarations forwarded to this department from residents in the district, by Messrs. Russell & Holden, the above purchase was declared forfeited."

As I am at a loss to know what statements the declarations referred to contain to cause you to declare my conditional purchase forfeited, I would most respectfully beg to be informed what they are, as I have in every way fully complied with the provisions, as regards residence and improvement, of the Crown Lands Alienation Act of 1861. On the other side I beg to forward a certificate from several gentlemen, resident in this district, with whom I am well acquainted, and who can certify to my residence on the land.

I have, &c.,
his
WILLIAM JAMES × ARTHUR.
mark.

Letter handed in by Mr. Hoskins, M.P., who represents the case as one of great injustice to Arthur, and states that Drinkwater has never fulfilled any of the conditions required by law.—W.F., Jan. 10, 1870.

The action taken with respect to Arthur's and Drinkwater's conditional purchases, is shown in the accompanying letter to Dr. Wilson, in reply to 69-14710. (See letter of 7th December.)

Drinkwater's proof of residence was accepted as satisfactory by decision on 69-13507 No., and Arthur's purchases were declared forfeited in accordance with decision on 69-11320 No.—W.W.S., 14th.

[Enclosures in No. 24.]

WE, the undersigned, residents on Myall Creek and surrounding district, do hereby certify that we are well acquainted with William James Arthur, of Myall Creek, and we also know the 46 acres of land selected by him on the Myall Creek, and that we have known him to be permanently resident on the said selection since April, 1868, and it is the only place of residence we are aware of, belonging to the said William James Arthur.

PATRICK SULLIVAN, farmer, Allwood.
JOHN TURNER, farmer, Lostock.
WM. KELLY, farmer, Upper Paterson.
W. O'NEIL, farmer, Lostock.
GEO. BROOKE, stockowner, Tea Tree.
JAS. KELLEHAR, farmer, Lostock.
JAS. IRWIN, farmer, Myall Creek.
JAS. FAULKNER, Myall Creek.
WM. BRUMSBY.
JOHN BROOKEE.

High-street, West Maitland,
23 December, 1869.

I BEG to certify that having acted as assistant to Mr. Licensed Surveyor Seccombe, in May, 1869, when the conditional purchases, taken up in the name of William James Arthur, parish of St. Julian, were surveyed, we found the applicant resident upon his land, as required by the clause of the Act requiring such residence.

L. P. DUKE.

MINUTE OF THE UNDER SECRETARY.

WILLIAM James Arthur's selections were cancelled apparently on the enclosed statutory declarations that the selector, a child three years of age, lived with his father at a place three miles distant. These are very precise and quite irreconcilable with the present declarations, unless, as seems probable, there is a misunderstanding in the latter as to the locality. I see no ground to doubt the propriety of the decision arrived at.

No. 25.

THE UNDER SECRETARY FOR LANDS to J. HOSKINS, Esq., M.P.

Department of Lands,
Sydney, 27 January, 1870.

SIR,

With reference to the letter lately handed in by you from William James Arthur, complaining and protesting in the matter of his forfeited conditional purchases in the parish of St. Julian, county of Durham, and forwarding the certificate of several parties as to his compliance with the residence clause of the Act,—I am directed to explain that Arthur's selections were forfeited in consequence of certain statutory declarations, which were forwarded to this department, that the selector, a child three years of age, lived with his father at a place three miles distant. These are very precise, and quite irreconcilable with the certificate now forwarded by Arthur, unless, as seems probable, there is a misunderstanding in the latter as to the locality.

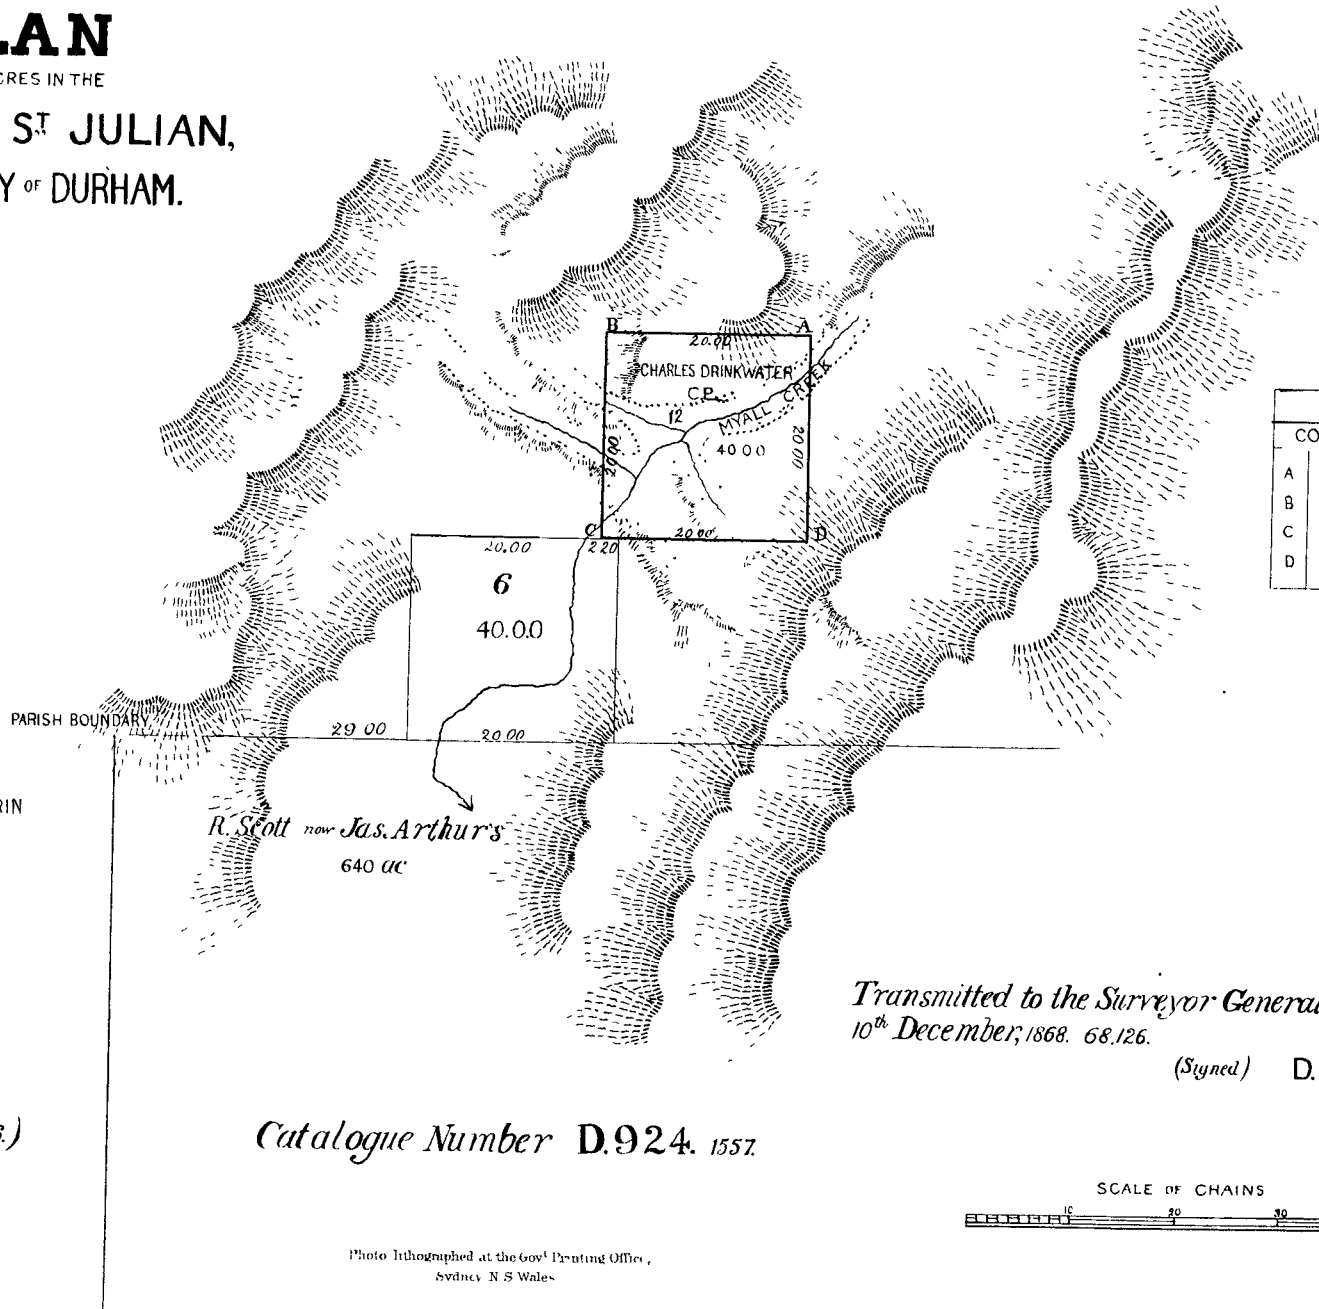

There appears no ground for doubting the propriety of the decision arrived at.

I have, &c.,
A. O. MORIARTY.

NEW SOUTH WALES.

CROWN LANDS ALIENATION ACT OF 1861.

(ADDITIONAL REGULATION.)

Presented to Parliament, pursuant to Act 25 Vict., No. 1, sec. 30.

Department of Lands,
Sydney, 25 January, 1870.

It is hereby notified for public information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following additional Regulation under the Crown Lands Alienation Act of 1861, having reference to applications to purchase unnecessary roads.

WILLIAM FORSTER.

Every application shall be accompanied by a deposit of £5, which if the application be complied with, will form part of the purchase money, but will be returned if the application be refused. If the application be withdrawn, or the applicant fail to complete the purchase within the six months limited by the 16th clause of the Regulations, the deposit will be forfeited.

No. 3.

LICENSED SURVEYOR DEANE to THE SURVEYOR GENERAL.

Goulburn, 23 July, 1868.

SIR,

I have the honor to transmit herewith the plan* of a portion of land containing 40 acres, numbered 110, in the parish of Upper Tarlo, in the county of Argyle, applied for by Michael Seery as a conditional purchase under the 38th clause of the Crown Lands Regulations of 1861, and measured by me on the 6th March last, in accordance with your letter of instructions of the 6th June, 1867. Plan cancelled.
*Appendix A.

At the time of survey, applicant had effected improvements on this portion, consisting of about 12 acres of trees ringbarked, worth about £1. On T. Doyle's, now applicant's 40 acres, upon which he resided, the improvements consisted of a hut; a stockyard, 5 acres partly cleared, and some sapling fencing, worth altogether £35. The three-railed fence shown on plan, and worth about £15, was erected by Eli Peach.

I have the honor to direct your attention to my letter of this date.

I have, &c.,
E. R. DEANE.

Not measured in accordance with the application. To await resurvey.—C.E.F., 10/8/68.

No. 4.

LICENSED SURVEYOR DEANE to THE SURVEYOR GENERAL.

Goulburn, 23 July, 1868.

SIR,

I have the honor to return herewith an application by Eli Peach for the conditional purchase of 40 acres in the parish of Upper Tarlo, in the county of Argyle, the land having been already measured for Michael Seery, and the plan thereof transmitted by my letter of this date.

I beg to point out that Eli Peach selected this land, being at the time aware that it had been measured for M. Seery, but hearing that the latter had wrongly described his portion, he hoped to be able to save the removal of the fence erected by him on this land.

I have, &c.,
E. R. DEANE.

The portions should be measured in accordance with the applications. The land applied for by E. Peach is not described in M. Seery's application, and must therefore be measured for him.

Tracing* herewith, showing approximately the position of M. and W. Seery's and E. Peach's conditional purchases as described in the application.—J.S.A., for S. G. *Appendix B.

No. 5.

LICENSED SURVEYOR DEANE to THE SURVEYOR GENERAL.

Goulburn, 2 February, 1869.

SIR,

I have the honor to transmit herewith the plan* of two portions of land containing 40 acres and 60 acres, numbered 110 and 115, in the parish of Upper Tarlo, in the county of Argyle, applied for by Eli Peach as conditional purchases under the 38th and 41st clauses of the Crown Lands Regulations of 1861, and measured by me on the 8th December last, in accordance with your letter of instructions of 20th April and 24th August, 1868. *Appendix C.

At the time of survey applicant had effected improvements on portion No. 110, consisting of about 80 rods of three-railed fencing, worth about £15; on portion No. 115, consisting of about 60 rods of two-railed fencing, worth about £9. With reference to his previous conditional purchases for improvements, see report of 21 June.

A road has been reserved through portion No. 110, to afford access to T. Doyle's, now M. Seery's, 40 acres.

On the 8th December last, the applicant did not reside on any of his conditional purchases, but lived on part of A. Kemmi's 2,560 acres, near the Tuena Road.

I have, &c.,
E. R. DEANE.

No. 6.

LICENSED SURVEYOR DEANE to THE SURVEYOR GENERAL.

Goulburn, 2 February, 1869.

SIR,

I have the honor to transmit herewith the plan* of a portion of land, containing 40 acres, numbered 113, in the parish of Upper Tarlo, in the county of Argyle, applied for by Michael Seery as a conditional purchase, under the 38th clause of the Crown Lands Regulations, and measured by me on the 8th December last, in accordance with your letter of instructions of the 11th August. *Appendix D.

The applicant had effected no improvements on this portion, and altogether declined having this portion of land, but at the same time said he was willing to take portion No. 109.

I have, &c.,
E. R. DEANE.

The

The Chief Draftsman,

Applicant declines taking the land (portion No. 113) now measured, but offers to take portion No. 109, which is resided on by Winifred Seery. Shall she be asked to show cause? Her application is dated 18th April, 1867.—T.H.L., 11 March, 1869.

There appears to be no objection to noting portion 109 instead of 113 as M. Seery's c. p.; but before dealing further with this case, Winifred Seery's reply to letter to show cause should be seen.—J.S.A., 1 April.

No. 7.

LICENSED SURVEYOR DEANE TO THE SURVEYOR GENERAL.

Goulburn, 2 February, 1869.

SIR,

Not required in
this case.

I have the honor to transmit herewith a plan of a portion of land, containing 40 acres, numbered 114, in the parish of Upper Tarlo, in the county of Argyle, applied for by Winifred Seery, as a conditional purchase under the 21st clause of the Crown Lands Regulations of 1861, and measured by me on the 8th December last, in accordance with the letter of instructions of 11 August.

At the time of survey, applicant had effected no improvements, and did not reside on the portion of land above described.

I have, &c.,

E. R. DEANE.

The Chief Draftsman,

Applicant does not reside on portion No. 114, now surveyed, although it is in accordance with her description. She resides on the land first surveyed, being portion No. 109. Shall she be allowed to amend her application, or be asked to show cause? Her application is dated 6th June, 1867.—T.H.L., 11 March, 1869.

Applicant should perhaps be called upon to show cause, and at the same time to be informed that she has been reported non-resident on the portion No. 114, described by her, and that the portion No. 109, on which she is reported resident, appears to have been previously conditionally purchased by Michael Seery.—J.S.A., 1 April, 1869.

Winifred Seery alienated her purchase to Michael Seery, on 2nd July, 1868.—14 April, 1869.

CROWN LANDS.

No. 1.

APPLICATION TO PURCHASE.

APPLICATION for the conditional purchase of unimproved lands without competition, by John Wood, of Kiama, farmer.

Received with deposit, this twenty-first day of March, 1867, at ten o'clock, by Geo. Hry. Rowley, Land Agent for Berrima District.

Berrima, 21 March, 1867.

SIR,

I desire to purchase, under the Crown Lands Alienation Act of 1861, without competition, the portion of unimproved Crown Lands hereunder described, and I tender herewith a deposit at the rate of five (5) shillings per acre on the rate for which I apply.

I am, &c.
JOHN WOODS,
Kiama.

Description.

County of Camden, 320 acres, at Yarrawah, parish of Yarrawa: bounded on the north by the entire southern boundary line of Charles Vandenberg's conditional purchase of 320 acres as made by him on 14th August, 1862,—being somewhere about 60 chains by 53.

Mr. Houghton for measurement if unobjectionable. B.C., 15 May, 1867.—W.R.D.

No. 2.

LICENSED SURVEYOR HUNTLEY to THE SURVEYOR GENERAL.

Bell's Chambers,
171 Pitt-street,
Sydney, 30 December, 1867.

IN pursuance of instructions by your B.C., No. 22, May 15, 1867, I have made the necessary survey, and have now the honor to transmit you* plan of same, and to report that selector is resident and has effected improvements as under:—

* Appendix A.

	£
200 acres killed timber.....	30
120 „ cleared	150
Half cost of house	10
	£190

I have, &c.,
A. S. HUNTLEY, C.E.

No. 3.

THE SURVEYOR GENERAL to LICENSED SURVEYOR HUNTLEY.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of John Wood's 320 acres, No. 237, parish of Yarrawa, transmitted by Mr. L. S. Huntley, letter No. 67/106, of 30th December, /67, and on which Mr. Huntley's report in explanation is requested.

Subject.

1st. Mr. Huntley to explain his reasons for the eccentric form of measurement he has adopted in the above survey.

2nd. This is to inform Mr. Huntley that, without the portion that has been added to the west boundary, the total area, excluding the reserved road, will be greatly deficient of the amount applied for.

Report.

1st. No water on the farm without this addition, which was measured solely to give John Wood access to water. If increased in width, accessible crossing cannot be obtained outside the farm, and if this west boundary of addition, or even the creek line were made the west boundary of the farm, Wood must have purchased many acres of precipitous stony and utterly worthless land.

2nd. Taken into account on the ground.

3rd.

*Subject.**Report.*

3rd. To state whether the small portion on the west boundary had not better be made into a water reserve?

4th. Vandenberg's south boundary is 57'00, and not 57'40 as shown by Mr. Huntley.

5th. Bearing and distances of Vandenberg's S.E. and S.W. corner-pins wanted.

17 June.

P. F. ADAMS.

3rd. No—as access to the water can be obtained for some chains along the west side of the creek.

4 and 5. I cannot account for this discrepancy, as the ground was clear, the chaining done very carefully, and the position of the corner-pins, which were destroyed by fire, was pointed out to me by Mr. Vandenberg, stating that he was present at the time of survey.

A. S. HUNTLEY.

Submitted, which length of line should be adopted—Huntley's line being 57'40 links, and Campbell's line 57 chains.

Mr. Huntley, in the last paragraph of the within report, states that the position of the corner-pins of Vandenberg's were shown him, but on his plan he states they were found (no bearings or corners shown).—Can the form of survey be accepted?—T. H. LEWIS, 20 Oct., /68.

I still infer that Mr. Huntley did not take proper means to determine the actual position of the corners; but before referring to the District Surveyor, I wish to know whether he took the bearings and distances from the trees and replaced the corners, and then found the discrepancy by chaining from one to the other.—P.F.A., 5 Nov.

No. 4.

MEMORANDUM OF INSTRUCTIONS TO DISTRICT SURVEYOR TWYNAM.

24 November, 1868.

Mr. District Surveyor Twynam is requested at his early convenience, to report on Mr. Licensed Surveyor, Huntley's survey of portion 236, Parish Yarrowa, County Camden.

1st. Mr. Twynam's attention is particularly directed to the notes in *blue* on the accompanying tracing,* which signify errors by comparison with adjoining measurements.

*Appendix B.

2nd. Mr. Huntley's rough plot in explanation of sundry discrepancies, is also forwarded herewith, to be returned with Mr. Twynam's reply. It will show how the straight road line between No. 236 and C. W. Wood's and Finlayson's portions has been protracted from a succession of small bearings. The length shown on this rough plot may be received by Mr. Twynam as those actually stated by Mr. Huntley as marked. The memorandum 68/80 is referred for Mr. Twynam's report on the true length and position of corners of north boundary of Jno. Wood's 320 acres, No. 237.

B. On Mr. Huntley's plan he says Vandenberg's corner-pins were found, *but gives no trees*. In his reply to memo (68/80) he says they were destroyed by fire.

Mr. L. S. R. J. Campbell's corner as taken from his original, are noted in blue on Mr. Huntley's rough plot.

P. F. ADAMS.

No. 68/167.

No. 5.

DISTRICT SURVEYOR TWYNAM TO SURVEYOR GENERAL, REPLY TO ABOVE WITH MINUTES THEREON.

Goulburn,

22 February, 1869.

MEMORANDUM with reference to the survey of three portions numbered 236, 237 and 238 in the parish of Yarrowa; and two portions numbered 240 and 241 in the parish of Jamberoo, in the county of Camden; the plans of which were transmitted by Mr. Licensed Surveyor Huntley under cover of his letters, dated the 30th December, Nos. 67/105, 106, &c.

Some of the boundary lines are marked, others are not marked, and apparently have not been measured. One boundary line is not in its proper position. Some of the corners are marked by pegs with reference trees, and others are not marked by either.

2. A diagram on linen is hereto annexed, showing the lines which I have re-measured, and by placing this diagram over Mr. Huntley's plot numerous discrepancies are apparent.

3. The timber and brush on both sides having been felled but not burned off, it is impossible at present to measure the south and east boundaries of S. Bush's 100 acres except at great cost. In any present re-survey of these portions the lengths of these boundaries must be determined by calculation. The length of Vandenberg's 320 acres is 57 chains 64 links and it was re-measured by my assistant with the same result.

4. There appears to be such utter disregard of the regulations of your department in this survey, that I cannot advise that Mr. Huntley be allowed to amend the same, but I would submit the desirability of causing a thorough re-survey to be effected by the local Licensed Surveyor.

5. Should you approve of the course suggested in the last paragraph, it will be necessary to reserve a road one chain wide between G. W. Wood's 200 acres and W. H. Vidler's 50 acres, instead of the road between the former portion and D. Finlayson's 100 acres which is impracticable.

Submitted.—E. TWYNAM.

UNDER

Under this report I think it advisable that Mr. Licensed Surveyor Twynam should issue the necessary instructions to a Licensed Surveyor to re-measure each portion and send in separate plans, with a view to surcharging Mr. Licensed Surveyor Huntley a certain per-centage in the event of the surveys disagreeing; with the roll plan and tracing are also enclosed Mr. Huntley's plans of portions which require re-adjustment.

Approved.—Any balance standing to Mr. Huntley's credit to be stopped.—P.F.A., 13 April.

Mr. Licensed Surveyor Binsted is instructed to re-survey the lands conditionally purchased by John Wood, James Wood, Geo. Wood, G. W. Wood, and D. Finlayson, respectively, separate plans of which are to be transmitted under separate letters in the usual manner. A road one chain wide is to be marked between Vidler's and G. W. Wood's lands, also a deviation for temporary traffic around the swamp on the main road as shown upon tracing.

It is desirable to ascertain whether it is necessary to reserve the road proposed by Mr. Huntley through John Wood's land.

Mr. Binsted should apply for copies of all the applications to be enclosed with new plans and letters so that each set of documents may be complete in itself.

A copy of the plan of the Robertson and Kiama Road (Haddle's Track) is enclosed with the other tracings and plans now forwarded for Mr. Binsted's use.

E. TWYNAM,
District Surveyor.

Goulburn, 17 April, 1869.

No. 6.

LICENSED SURVEYOR BINSTED TO THE SURVEYOR GENERAL.

Yarrawa, 31 May, 1869.

SIR,

*Appendix C.

I have the honor to transmit herewith, the plan* of a portion of land containing 320 acres, numbered 237, in the parish of Yarrawa, county of Camden, applied for by John Wood, as a conditional purchase under the 13th section of the Crown Lands Alienation Act, and surveyed by me this day, in obedience to your instructions issued to Mr. District Surveyor Twynam, dated 13th April, 1869, B.C., No 60, and transferred to me.

I have to report to you that at the time of survey, applicant was residing upon the land, and had effected the following improvements, namely:—About 71 chains split fencing; about 53 chains sapling fencing; part of a hut erected; about 150 acres of land partly cleared. I estimate these improvements to be worth about £163.

320 acres of land were erroneously measured by Mr. L. S. Huntley, on this application. The marks of Mr. Huntley's survey where not occurring on my lines I have obliterated.

I have, &c.,
W. H. BINSTED, L.S.

Chief Draftsman,

I think the protest of Mr. John Wood, 69/7124, deserves some consideration, and a reserve perhaps had better be notified for access to water if recommended by Mr Binsted. I do not see how Mr. Wood could have the strip alluded to included in his application.—T. H. L., 24 July, /69. Yes, should be reserved.—J. S. A., 27.

No. 7.

MR. JOHN WOODS TO THE SECRETARY FOR LANDS.

Yarrawa, June 21, 1869.

SIR,

I have the honor most respectfully to inform you that on the 21st March, 1867, I selected a block of 320 acres of land, south of Vandenberg's, in the parish of Yarrawa, county Camden, about January, 1868. The land was measured and the boundaries marked by Mr. Surveyor Huntley; at this time an occupation road or path was being used through it, and for the convenience of those settlers interested, I consented to a road being reserved through the centre of the block, which cut me off the water on the south portion, provided that a road 4 chains wide and 17 chains long were allowed, and measured to me for the purpose of obtaining water to the north portion. As this road would pass through worthless land which will never be selected, and the law, as Mr. Huntley said, allowed him to have access to the water, it was done, and I have fenced the land at a cost of £23 10s.

At the beginning of the present month, Mr. Surveyor Binsted again measured the land, adopting the road I allowed through the centre of the block, but cut off the road allowed me to the water; all the fencing and necessary improvements were at this time completed. The road to the water in question cannot possibly be an injury to future selectors, as the land is of no value, and besides the fencing entails on me a serious loss and inconvenience.

I have the honor to request your careful consideration of the matter, and allow me access to the water according to original survey.

I have, &c.,
JOHN WOOD.

5

No. 8.

MEMORANDUM.

A.B., 7166/69.

SUBMITTED for the consideration of the Honorable the Minister for Lands, that the defined area, 7 acres, situate in the county of Camden, parish of Yarrawa, be reserved for water supply under section 4 of the Crown Lands Alienation Act.—B.C., 2nd August, /69.—S.G. Office.
Under Secretary for lands.

Chief Draftsman,

Mr. Wood, conditional purchaser, complained in his letter of 2nd June last, that a portion had been cut off his land—He had better be informed that it has been *Gazetted* as a water reserve of 7 acres, viz. :—17 chains 83 links by 4 chains.—T. H. L., 20 October, /69. Approved by.—69/4674, Mis. Notified in *Gazette* of 17th September.

No. 9.

MINUTE PAPER.

69/3998

Department of Lands,
Sydney, 9 August, 1869.

It is recommended to His Excellency the Governor and the Executive Council for the reasons given in the enclosed Report of the Surveyor General, that the portions of Crown Land described in the annexed Schedule containing _____ acres, be reserved from sale until surveyed, for preservation of water supply under the 4th section of the Crown Lands Alienation Act of 1861.

WILLIAM FORSTER.

Clerk of the Council.—B.C., 9 August, M.F.

The Executive Council advise as herein recommended, that the several portions of land described in the accompanying Schedule, be reserved from sale, in terms of the 4th clause of the Crown Lands Alienation Act of 1861.—A. C. Budge, Clerk of the Council. Minute 69/34, 17 August, 1869, Confirmed, 30 August, 1869. Approved.—B., 1/9/69.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CROWN LANDS.

(APPLICATION OF MR. GEORGE WOOD FOR COMPENSATION FOR REMOVAL OF BOUNDARY FENCE OF HIS CONDITIONAL PURCHASE)

Ordered by the Legislative Assembly to be Printed, 26 April, 1870.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 22nd March, 1870, That there be laid upon the Table of this House,—

“ A copy of all Minutes and Correspondence that have passed between
“ the Government and any person or persons, relative to the application
“ of Mr. George Wood for compensation for the removal of a boundary
“ fence erected on his conditional purchase of 320 acres, in accordance
“ with the measurement of Mr. Licensed Surveyor Huntley, but since
“ ordered to be moved,—the original survey having been declared wrong
“ by Mr. Licensed Surveyor Binsted.”

(*Mr. Wilson.*)

SCHEDULE.

NO.	PAGE.
1. Application by George Wood to purchase conditionally. B.C. to Mr. Houghton to survey, 15 May, 1869. 21 March, 1867.....	2
2. Licensed Surveyor Huntley to Surveyor General, reporting survey and forwarding plan. 30 December, 1867	2
3. Memorandum of subjects requiring explanation. 17 June, 1868.....	2
4. Licensed Surveyor Binsted to Mr. H. A. Allan, for copies of applications. 22 May, 1868.....	3
5. Same to Surveyor General, reporting survey and forwarding plan. 1 June, 1869.....	3
6. George Wood to Secretary for Lands, claiming compensation for moving fences, &c., under resurvey. 21 June, 1869	3
7. Same to same—reminder. 23 August, 1869.....	4
8. Mr. Dist. Sur. Twynam to report on claim for compensation. 6 October, 1869.....	4
9. D.-S. Twynam to Surveyor General. Report. 18 October, 1869	4
10. Minutes in the case of James Watkins, adopted as a precedent in this case	5
11. Under Secretary for Lands to George Wood—compensation cannot be allowed. 8 March, 1870	5

CROWN LANDS.

No. 1.

APPLICATION for the conditional purchase of unimproved land without competition, by George Wood, of Kiama, farmer.

Received with deposit this twenty-first day of March, 1867, at 10 o'clock, by
G. H. ROWLEY,
Land Agent for Berrima District.

Berrima, 21 March, 1867.

SIR,

I desire to purchase, under the Crown Lands Alienation Act of 1861, without competition, the portion of unimproved Crown Land hereunder described, and I tender herewith a deposit at the rate of five (5) shillings per acre on the area for which I apply.

I am, &c.,
GEORGE WOOD,
Kiama.

The Crown Land Agent.

DESCRIPTION.

County of Camden, parish of Yarrawah, 320 acres, at Yarrawah; commencing at the north-eastern corner pin of Arthur Claudius Bush's conditional purchase, as made by him on 21st August, 1862; from thence running east about 28 chains having Bush's eastern boundary on the west of selector's present application; from thence running south 75 chains (both the above lines being bounded by Hoddle's Road); from thence running west about 56 chains to a point about 15 chains south of the south-eastern corner pin of Vandinburg's conditional purchase of 320 acres, as made by him on 14th August, 1862; from thence along that eastern boundary line to its north-east point of termination.

Mr. Houghton for measurement, if unobjectionable. B.C., 15 May, 1867. W.R.D.

No. 2.

LICENSED SURVEYOR HUNTLEY TO THE SURVEYOR GENERAL.

Bell's Chambers, 171, Pitt-street,
Sydney, 30 December, 1867.

SIR,

* Appendix A.

In pursuance of instructions by your B.C. dated 15th May, 1867, I have made the necessary survey, and have the honor to transmit you plan* of same, and to report that selector is resident and has effected improvements as under:—

Clearing 200 acres	£250
Half cost of house	10
	£260

I have, &c.,
A. S. HUNTLEY, C.E.

No. 3.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of Geo. Wood's 320 acres, No. 236, parish of Yarrawah, county of Camden, transmitted by Mr. L. S. Huntley, letter No. 67/105 of 30th December, 1867, and on which Mr. Huntley's report in explanation is requested.

Subject.

1st.—The addition of the northings is 75·07 instead of 72·25, and of the eastings is 68·35, and not 67·00. The east boundary of Bush's 100 acres is 40·22, and not 37·00, as shown by Mr. Huntley.

2nd.—Mr. Huntley is hereby informed that one link in seven chains is the outside difference between two surveyors that can be admitted, unless very good reasons can be shown for a greater discrepancy.

3rd.—Mr. Huntley has also given the No. of Bush's selection as 38, instead of 48.—P. F. ADAMS, 17 June.

Report.

I beg to send in explanation of these discrepancies, the office plottings of the surveys of the Woods and Finlaysons portions. The length 37·00 is that measured by me on the marks.

3. I give the number marked on the trees.—A.S. HUNTLEY.

Submitted which length of line should be adopted. Huntley's line being only 37 chains, and Campbell's line 40·22 links. Mr. Huntley, by his plan, shows the residue of the west boundary to be 35·25, but by adding the lengths shown on his rough plan it is 38·25, and the south boundary line by rough plan is 67·50, but by his other plan 67 chains, but by the traverse table it should be 68·35 about.—T.H.L., 26 Oct., 1868.

This must be referred to Mr. District Surveyor Twynam, who will be good enough to measure the line.—P.F.A., 5 Novr.

No. 4.

No. 4.

MR. LICENSED SURVEYOR BINSTED to MR. H. A. ALLAN.

Burrawang, 22 May, 1869.

MY DEAR SIR,

I am about to proceed to resurvey the portions of land which were erroneously measured by Huntley.

I have written to the Survey Office requesting that I might be furnished with copies of the original applications. They have not sent them to me yet, and as I shall be in the locality next week I urgently require them.

If I do not get them, I shall have to leave the survey for many months.

Will you be kind enough to refer to Mr. Johnson's books, and copy the descriptions, and forward to me, at the earliest possible opportunity? Direct to Post Office, Burrawang. Please do not fail in letting me have them.

List of descriptions required:—

Application—James Wood.....	200 acres,	P. Yarrawa.
George Wood	320 "	" "
John Wood	320 "	" "
Chas. Wm. Wood	200 "	Jamberoo.
Donald Finlayson.....	100 "	" "

Yours, &c.,

W. H. BINSTED.

Supply the applications on this.—G.J.A., 25 May.
Herewith.—P.D., 25 May, /69.

No. 5.

MR. LICENSED SURVEYOR BINSTED to THE SURVEYOR GENERAL.

Yarrawa, 1 June, 1869.

SIR,

I have the honor to transmit herewith the plan* of a portion of land containing 320 acres, numbered 236, in the parish of Yarrawa, county of Camden, applied for by George Wood, as a conditional purchase, under the 13th section of the Crown Lands Alienation Act, and surveyed by me this day, in obedience to your instructions issued to Mr. District Surveyor Twynam, dated 13th April, 1869, B.C., No. 60, and transferred to me. Appendix B.

I have to report that at the time of survey applicant was residing upon the land, and had effected the following improvements, namely,—about 76 chains split hardwood fencing; about 170 chains sapling fencing; about 38 acres brush felled; about 80 acres partly cleared; about 5 acres cleared and under cultivation, and part of a hut erected. I estimate these improvements to be worth about £296. Considerable discrepancies in the adjoining surveys of portions numbers 47 and 48 appear to exist; also a discrepancy in the bearing from the marked tree at the south-east corner of A. C. Bush's 100 acres. The old marked lines of Mr. Campbell's survey were found by me at the south-west corner of Bush's 100 acres; the old corner tree has been destroyed, and I have marked another one.

320 acres of land were erroneously measured by Mr. Licensed Surveyor Huntley on this application. The marks of Mr. Huntley's survey, where not occurring on my lines, I have obliterated.

I have, &c.,

W. H. BINSTED,

Licensed Surveyor.

No. 6.

MR. GEORGE WOOD to THE SECRETARY FOR LANDS.

Yarrawa, 21 June, 1869.

SIR,

I have the honor most respectfully to inform you that, on the 21st of March, 1867, I selected, at the Berrima Land Office, 320 acres, in the parish of Yarrawa, county Camden, on the south and east of A. C. Bush's selection; bounded on the east and north by the main road to Jamberoo, and on the south by Government land since selected by James Wood.

About ten months afterwards Mr. Surveyor Huntley measured the land, and marked the boundaries; and I erected fences exactly on the lines marked by him. Twelve months after this Mr. Surveyor Twynam again measured the land, and told me there was something wrong with the measurement, but so little that it would not be necessary to remove the boundary fences, which at that time were all erected, and all necessary improvements completed.

About the beginning of the present month (June, 1869) Mr. Surveyor Binsted again measured the land, and marked my south boundary 66½ chains long, 2 chains inwards from the fence on Mr. Huntley's line, alleging that when shifted the fences contain 320 acres of land.

I certainly have no wish to dispute this, but the alteration entails upon me a serious loss—say £4 10s. for clearing, 16s. for a drain, and £19 16s. for shifting fence. As this loss (if the alteration be enforced) will have been caused by a Government surveyor, and through no fault of my own, I trust you will take the matter into favourable consideration, and allow me the compensation to which I am justly entitled.

I have, &c.,

GEORGE WOOD.

Report by my letter to the Surveyor General, No. 69/111.—E. TWYNAM, 18 Oct., /69.

No. 7.

No. 7.

MR. GEORGE WOOD TO THE SECRETARY FOR LANDS.

Yarrawa, 23 August, 1869.

SIR,

Not having received reply to my letter of the 21st June, 1869, requesting that the original survey of my selection at Yarrawa, 320 acres, No. 236, be adhered to, or compensation allowed me for fencing, I beg to call your attention to the subject, and request an early answer.

I am, &c.,

GEORGE WOOD.

Address—Kiama.

Report by my letter to the Surveyor General, No. 69/111, dated the 18th October, 1869.—E. TWYNAM, D.S., 18th October.

No. 8.

C.E.F., 6 October, 1869.

CHARTING BRANCH.

Previous letter. Mr. District Surveyor Twynam is requested to report, if possible, from his knowledge of the locality, upon the claim for compensation set forth by the within paper (69/10108), for erroneous fencing, clearing, &c., by George Wood, caused by the resurvey by Mr. L.-S. Binsted of his selection originally marked out by Mr. L.-S. Huntley; the said resurvey having been made upon Mr. Twynam's report, 69/1958, of the 22nd February 1869, which is amongst the papers 69/4674 Misc.

Mr. Binsted's plan, c. 982 will show the fencing and clearing referred to.

This was handed to Mr. D.-S. Twynam in the Chief Draftsman's room.—P.D.

Report accordingly by my letter to the Surveyor General, No. 69/111, dated the 18th October, 1869.—E. TWYNAM, D.S.

No. 9.

MR. DISTRICT SURVEYOR TWYNAM TO THE SURVEYOR GENERAL.

Goulburn,
18 October, 1869.

SIR,

With reference to a claim for compensation by George Wood, in respect to removal of fencing and loss of improvements, caused by the resurvey of his 320 acres con. pur., in the parish of Yarrawa, in the county of Camden, on which you have requested further information as to value and extent of improvements, I have now the honor to report the claim is reasonable, inasmuch as G. Wood erected his fence upon the boundary marked by the licensed surveyor authorized to measure the land, which was subsequently discovered to be erroneous, and another the correct boundary marked within the area occupied, thus compelling the selector to remove and re-erect his fence, besides losing the benefit of any improvements effected upon the strip of land between the erroneous and correct boundary.

2. The compensation to which the selector might be entitled would be the cost of removing his 268 rods of post and rail fence at 1s., worth £13 8s.; about 8 rods of excavation for drain, worth about £1 12s.; and about £2 for clearing boundary-line for erection of fence; altogether amounting to £17. This amount is less than that demanded, but I have no doubt that it would be accepted, as I have appraised the work at the current rates.

3. I submit that it would be an injustice to the applicant to inflict injury or loss upon him through an erroneous survey by an authorized Agent of the Government, and therefore I would beg to recommend this claim for compensation to your favourable consideration.

I have, &c.,

EDWARD TWYNAM.

Mr. Licensed Surveyor Huntley, who was authorized to measure Wood's conditional purchase, made an erroneous survey, in accordance with which Wood fenced and occupied. Subsequently Mr. L.-S. Binsted resurveyed the land and marked the (correct) south boundary some 1 chain 83 links inside the area occupied, thereby excluding about 12 acres of the land improved by applicant, and necessitating the shifting of the fence erected on the erroneously marked boundary.

21 June.

Applicant accordingly claims £25 2s. compensation. See his letter 69/7123 alien.

Mr. D.-S. Twynam now reports on the case, and states that the claim is reasonable, but that £17 would be ample compensation (see paragraph 2).—J.S.A., 15th November, 1869.

See memo. here-
with as precedent

In a similar case (Jas. Watkins) 69/10821 herewith, a like claim was refused. Submitted that nothing can be allowed in compensation for removal of the fencing.—P. F. ADAMS, 28 December.

The case seems a hard one.—A.O.M., 11 January.

Has the surveyor by whom the error was made been charged for the cost of resurvey? Resubmit.—W.F., 11 January, 1870. Surveyor General, B.C., 12 January, 1870.

He was not paid for his erroneous survey.—J.S.A., for Surveyor General, 17 January.

No. 10.

MINUTES IN THE CASE OF JAMES WATKINS.

SURVEYOR GENERAL,

The application of James Watkins is for compensation for labour lost and cost of fencing, caused by an erroneous survey in consequence of the adjoining measured old portion not being clearly defined on the ground. The surveyor, Mr. Biden, was instructed to run a traverse of the creek, so as to give Turnbull, the owner of the old measured portion, the full area, and it was then found necessary to amend the survey of Watkins' conditional purchase which is now objected to.

The resurvey was made at Biden's own expense. The application to conditional purchase of Watkins was made 5th December, 1867; date of survey, 2nd April, 1868; and resurvey 12th May, 1869. Shall any compensation be given?—T.H.L., 29 October, 1869.

APPLICANT appears to be aggrieved by the error in the survey, through which a portion of fencing is alleged to have been taken possession of. I do not think the Government can be held responsible. The error was on the part of the surveyor, and was rectified at his cost.

Under Secretary for Lands.

P. F. ADAMS.
1 Novr.

Compliance not recommended.—W.F., 5 November, 1869.

No. 11.

THE UNDER SECRETARY FOR LANDS TO MR. GEORGE WOOD.

Department of Lands,
Sydney, 8 March, 1870.

SIR,

In reply to your letter of the 21st June, 1869, and subsequent letters, requesting to be allowed compensation for removal of fencing consequent upon an erroneous survey of your conditional purchase, noted in the margin, I am directed to inform you that the compensation asked for cannot be allowed.

I have, &c.,

A. O. MORIARTY.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMMONS REGULATION BILL.

(PETITION—TRUSTEES AND COMMONERS, PITT TOWN COMMON.)

Ordered by the Legislative Assembly to be Printed, 17 February, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Trustees and Commoners of the Pitt Town Common, County of Cumberland, Colony of New South Wales, agreed to at a public meeting,—

RESPECTFULLY SHOWETH :—

That your Petitioners have observed that a Bill has been introduced into your Honorable House by the Honorable the Secretary for Public Lands, intituled “ A Bill to regulate Commons in New South Wales.”

That, in the opinion of your Petitioners, the principles of such Bill are objectionable in the following particulars :—

First. Your Petitioners object to the provision in the said Bill, that the Trustees of Commons shall be elected annually. Such a course of proceeding would lead to endless trouble and inconvenience, occasion much turmoil, and engender ill feeling, and would lead to much uncertainty and mismanagement, besides at once destroying the independence and efficiency of the Trusteeship.

Secondly. Your Petitioners object to the provision in the said Bill which empowers the Trustees to sell the Commons, or parts thereof, under certain circumstances. Your Petitioners are opposed to power being given in any way whatever to sell or dispose of Commons. As regards the Pitt Town Common it is a place of refuge in times of floods, and its loss to the people of the district would be great, if ever taken from them.

Your Petitioners therefore humbly pray your Honorable House not to pass the said Bill, or, if passed, to modify it so as to meet the objections of your Petitioners.

And your Petitioners will ever pray.

[Here follow 50 Signatures.]

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMMONS REGULATION BILL.

(PETITION—CERTAIN INHABITANTS AND COMMONERS OF PITT TOWN.)

Ordered by the Legislative Assembly to be Printed, 1 March, 1870.

Pitt Town, 21 February, 1870.

To the Legislative Assembly of New South Wales, in Parliament assembled.

WE, the undersigned Inhabitants and Commoners of Pitt Town, having heard with much pleasure, that a Bill is now before your Honorable House of Assembly, to alter the Laws relating to Commons in New South Wales, and well considering the various clauses contained in the said Bill, humbly pray that your Honorable House will be pleased to pass the said Bill; and your Petitioners, as in duty bound, will ever pray.

[*Here follow 61 Signatures.*]

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMMONS REGULATION BILL.

(PETITION—CERTAIN COMMONERS, ETC., WILBERFORCE COMMON.)

Ordered by the Legislative Assembly to be Printed, 3 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Commoners of the Wilberforce Common, county of Cook, New South Wales,—

RESPECTFULLY SHOWETH :—

That your Petitioners have observed that a Bill has been introduced into your Honorable House by the Honorable the Secretary for Public Lands, entitled "A Bill to regulate Commons in New South Wales."

That in the opinion of your Petitioners the principles of such Bill are objectionable in the following particulars :—

First. Your Petitioners object to the provision in the said Bill that the Trustees of the Common shall be elected annually ; such a course of proceeding would, from its frequency, lead to unnecessary trouble and inconvenience, and would occasion much uncertainty and mismanagement, besides at once destroying the independence and efficiency of the Trusteeship. Your Petitioners would prefer that the Trustees be elected not more frequently than every three years.

Secondly. Your Petitioners object to the provision in the said Bill which empowers the Trustees to sell the Commons, or parts thereof, under certain circumstances. Your Petitioners are opposed to power being given to sell or dispose of Commons in any way whatever. The Wilberforce Common is of great service to the people of the district for wood, grazing, and refuge, in times of floods.

Thirdly. Your Petitioners object to the provision in the eighteenth clause, that the Trustees shall lose their right of commonage during their tenure of office, as it would lead to the Common getting into the hands of parties having no interest therein.

Your Petitioners therefore humbly pray your Honorable House not to pass the said Bill, or, if passed, to modify it so as to meet the objections of your Petitioners.

And your Petitioners will ever pray.

[Here follow 106 Signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMMONS REGULATION BILL.

(PETITION—CERTAIN COMMONERS OF RICHMOND COMMON.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Commoners of the Richmond Common, in the County of Cumberland, in the Colony of New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners have observed that a Bill has been introduced into your Honorable House by the Honorable the Secretary for Public Lands, entitled a Bill to regulate Commons in New South Wales.

That in the opinion of your Petitioners the principles of such Bill are objectionable in the following particulars:—

First,—Your Petitioners object to the provision in the said Bill that the Trustees of Commons shall be elected annually. Such a course of proceeding, from its frequency, would lead to unnecessary trouble and inconvenience, and would occasion much uncertainty and mismanagement, besides at once destroying the independence and efficiency of the Trusteeship.

Secondly,—Your Petitioners object to the provision in the said Bill which empowers the Trustees to sell the Commons, or parts thereof, under certain circumstances. Your Petitioners are opposed to power being given in any way whatever to sell Commons. The Richmond Common is of great service to the people of the District for wood, grazing, and a refuge in times of floods.

Thirdly,—Your Petitioners object to the provision in the eighteenth clause, that the Trustees shall lose their rights of Commonage during their tenure of office, as it would lead to the Commons getting into the hands of parties having no interest therein.

Your Petitioners therefore humbly pray your Honorable House not to pass the said Bill; or, if passed, to modify it so as to meet the objections of your Petitioners.

And your Petitioners will ever pray.

[*Here follow 108 Signatures.*]

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CONDITIONAL PURCHASES.

(PETITION — CERTAIN FREE SELECTORS — ALBURY AND COROWA.)

Ordered by the Legislative Assembly to be Printed, 16 March, 1870.

To the Honorable the Legislative Assembly of New South Wales.

The Memorial of the undersigned Free Selectors of the Albury and Corowa Districts,—

HUMBLY SHOWETH:—

That your Petitioners consider that the present system of payments for Conditional Purchases of land is open to objection on the following grounds:—

- 1st. Because it does not sufficiently provide, in the interest of the State, for the completion of the purchase within any reasonably definite period, thus enlarging opportunities for repudiation by future free selectors, while such selectors as have already paid the full price of their land would consequently be placed at a disadvantage in the event of such repudiation being effected.
- 2nd. That the system is one which of itself tends to postpone indefinitely any completion of contract between the State and the selector, inasmuch as the required payment of 5 per cent. interest on unpaid balances, in most cases helps in a very sensible degree to increase the selector's difficulty in making up the fifteen shillings balance upon his land.
- 3rd. Because indefinite length of agreement between the State and the selector (as between landlord and tenant) not only necessitates an expensive system of book-keeping in the Lands Department, but disposes the selector to rest content with a tenure which does not possess the full advantages of freehold, and thus weakens the guarantee which freehold tenure alone can give, that the farms will be improved up to the full means of the selector.
- 4th. That the amount of interest yearly levied on unpaid balances would be more profitably expended, for the advantage both of the selector and of the country, by being left at the disposal of the selector for use in his business, or for aiding in converting his farm into a freehold.

That your Petitioners are of opinion that some readjustment of the present system of indefinitely deferred payments for land is now desirable, and that it would be expedient to affiliate upon the system some arrangement by which selectors would be allowed the option of making up their unpaid balances of fifteen shillings per acre in regular annual instalments, say of eighteen-pence per acre, without payment of interest.

Your Petitioners would moreover recommend, with the view of encouraging the paying up of balances, that the arrangement here proposed should be made retrospective, and that all selectors who have taken up land since the present Act came into force should be allowed the amount of interest already paid, provided that such retrospective allowance be made only to selectors who may pay up in full within (say) ten years from the time of taking up their land.

By some such concession your Petitioners consider that the prospects of agriculturists would be materially improved, and that consequently the country would gain more than it would lose in foregoing the strict carrying out of the present terms of conditional purchase. Furthermore, the introduction of the amendment suggested would at once place the Legislature in the possession of a large amount of revenue, and would tend in a very desirable degree to give a definite term to what is at present virtually little more than a conditional tenancy of unlimited length. Furthermore, your Petitioners humbly represent,—

That great inconvenience is caused by the action of the regulation which forbids the taking up of a selection having a frontage on two sides of a road, thereby unnecessarily limiting the selector's free choice of the land, and in many instances either shutting him out from access to water, or compelling him to take the alternative of selecting in some other situation where his business could not be so conveniently or profitably carried out.

That in the opinion of your Petitioners, any alteration of the Land Laws should provide that a road passing through a portion of 320 acres should prove no barrier to the land being taken up in one name, and that the land so intersected by a road should be considered to join if another selection could not be taken up between its separated parts.

Your Petitioners would summarize their views as follows:—That your Honorable House would be pleased to pass a measure to provide that selectors shall in future have the option of paying their land balances when the usual three years' grace shall have expired after the taking up of the land, by regular instalments of 10 per cent., or eighteen-pence per acre, and that such concession shall be made retrospective as regards selectors who within some certain time may elect to pay under the amendment here proposed, provided that 10 per cent. on unpaid balances be paid up for the back years of occupation of the land.

Your Petitioners, therefore, humbly pray your Honorable House to take the premises into your early and favourable consideration, and to grant such relief as to your Honorable House may seem meet.

And your Petitioners will ever pray.

[Here follow 586 Signatures.]

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HENRY COX.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 5 May, 1870.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Henry Cox, late of Minore Falls Station, near Dubbo, now of Bathurst, blacksmith and wheelwright,—

SHOWETH :—

(1.) That in or about the month of November, one thousand eight hundred and sixty-five, one Tuting, being the lessee from the Crown of a certain station in the District of Dubbo, known as the Minore Falls, in the presence of Surveyor W. Brocklehurst, gave your Petitioner permission to erect on the said run a house which was intended to be used as a public-house.

(2.) That having obtained such permission as aforesaid, your Petitioner marked out a piece of land on the said run, and thereon resided, and improved the same by building a house and erecting fences thereon, which cost your Petitioner upwards of four hundred pounds, exclusive of labour.

(3.) That your Petitioner, hearing that the said Tuting had made an application under the improvement clause of the Crown Lands Act to the Honorable the Minister for Lands about the said land, sent to the said Minister a protest against any grant of the land whereon your Petitioner's improvements stood to Mr. Tuting or any other person.

(4.) That your Petitioner caused the said land to be surveyed by Licensed Surveyor Clements, and the boundaries thereof clearly set out and defined by marked trees and otherwise; and on or about the twenty-third day of May, one thousand eight hundred and sixty-seven, your Petitioner applied to the said Minister for Lands to purchase forty acres of land on the said run called Minore, on a part whereof your Petitioner's improvements stood; and your Petitioner transmitted the sum of ten pounds as a deposit thereon, and received in reply thereto the letter of which the following is a copy :—

“Department of Lands,
“Sydney, 27th November, 1867.

“Sir,

“With reference to your applications of the 23rd May and 26th July last, to purchase, in virtue of improvements, forty acres of land, on the south bank of the Macquarie River, part of the Minore run, applied for by Messrs. Farmer & Painter, I am directed to inform you that as you are not the lessee of the run you cannot purchase under the 8th section.

“2. As, however, it would appear from a report received from the Surveyor General that the improvements in question were erected by you, and are in your occupation, there will be no objection to your purchasing conditionally the forty acres measured by Mr. Surveyor Campbell.

“I have the honor to be, Sir,
“Your most obedient servant,

“M. FITZPATRICK.”

“Mr. Hy. Cox,
Care of Mr. Fredk. Bradley, Dubbo.”

(5.) That in or about the month of May, one thousand eight hundred and sixty-seven, one Charles Brett, well knowing that your Petitioner had made improvements on the said land before mentioned, selected a piece of land adjoining the land occupied by your Petitioner, and also took in three chains and forty-eight feet of your Petitioner's land; and also the improvements, some of which latter the said Charles Brett, under the instructions and in the presence of the Government Surveyor Campbell, pulled down and destroyed; and afterwards the said Charles Brett erected buildings and fences of his own thereon, within four feet of your Petitioner's house and premises.

(6.) That in the month of July, one thousand eight hundred and sixty-seven, your Petitioner applied to free select the land he had originally marked out and applied for under the improvement clause, but his application was refused by the Land Agent at Dubbo.

(7.) That your Petitioner built the said house on the said land with the view of applying for a license to keep a public-house there, and did so apply, but such license was refused in consequence of the said land being in dispute.

273—

(8.)

(8.) That your Petitioner feels aggrieved by the conduct of Mr. Surveyor Campbell in measuring for the said Charles Brett land which was fenced in and otherwise improved upon by your Petitioner; and also by giving to the said Charles Brett the most choice and available part for agriculture of the said land so marked by your Petitioner.

(9.) That at the time the said Mr. Surveyor Campbell surveyed the said land for the said Charles Brett, your Petitioner informed the said surveyor of the permission obtained by him from the said Tuting, and of his several applications to the Government, and the remittance he had made, and requested him not to measure any of the land your Petitioner had taken up, but the said surveyor obstinately insisted upon running his line right through your Petitioner's yard and improvements.

Your Petitioner therefore humbly prays,—

- (1.) That he may be permitted to occupy, possess, and enjoy the land as originally marked out by him and his surveyor.
- (2.) That the land selected by the said Charles Brett being improved, land could not be selected by him, and ought not to be granted to him.
- (3.) That in the event of the said land being so granted to the said Charles Brett, your Petitioner is entitled to some compensation.
- (4.) That your Petitioner may obtain such further and other relief as the nature of the case may require.

And your Petitioner, as in duty bound, will ever pray, &c.

Dated 30th April, 1870.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMPILATION OF MAPS OF PASTORAL DISTRICTS.

(MINUTES, &c.)

Ordered by the Legislative Assembly to be Printed, 14 April, 1870.

MINUTE OF CHIEF COMMISSIONER OF CROWN LANDS.

I APPEND, for the information of the Honorable the Minister for Lands, a Memorandum by Mr. Du Faur, explanatory of the progress, and some of the results of the compilation of maps of the squatting districts, showing the boundaries of runs, which has been in progress, under his direction, for little more than a year past, and has already much more than verified the expectations under which it was undertaken.

It would be difficult, without entering into tedious details, to describe the measures which have been in progress since 1848, for ascertaining and defining the limits and areas of the numerous and extensive tenancies previously taken up under licenses giving no boundaries, or subsequently under tenders which, whether from imperfect acquaintance with the country, or from the variety and frequent insufficiency of the systems of definition in various districts, gave boundaries intelligible only on the very ground, and not always that. All such arrangements were, from the circumstances of the Colony, long antecedent to survey; and the utmost that was effected or attempted was a rough estimation of contents, and either a local determination or arrangement by linear description of limits, such as ultimate survey should illustrate or carry out.

Attempts of course had been made to prepare maps, local and general, of such areas, but the data were so imperfect that, in place of being illustrative, they were often illusory.

When in progress of years surveys crept into the squatting territories, being made, where relating to runs, wholly at private cost, they were unconnected and fragmentary; and even when communicated to the Government, admitted neither of systematic direction, examination, nor adoption, until they attained such a bulk as to repay detailed investigation and compilation of the results in connection with the geographical surveys of the Survey Department. Such investigations could only be conducted effectually in this office, because the surveys were made in furtherance or in illustration of the arrangements of boundaries settled and recorded here, and demanding attention in the first instance.

This was undertaken, at first in his private time, by Mr. Du Faur, who then occupied a clerical position in my department—a gentleman of indefatigable zeal and industry, and high attainments; and it very soon became apparent that the prosecution of the work, while no more than just to the parties who had been at the expense of the surveys, would be largely beneficial, by the information which it made available, to the Government and the general public.

I had long experienced the necessity of information more rapidly and easily attainable than heretofore, as to the progress of alienation out of the squatting runs, and felt that this could only be attained by having the latter so defined and mapped as to admit of surveys of the alienated lands, and the pre-emptive leases contingent thereupon, being immediately shown upon maps of the runs. This object the compilation now in progress will also effect.

Further, I may observe that, as pointed out by Mr. Du Faur, these compilations will necessitate, from the large areas and long lines and systems of boundaries which must be shown or projected upon them, greater accuracy of representation than has been required, except on geographical grounds, in the maps published by the Survey Department. The compilations already made warrant me in asserting that in these maps, when carried to completion, the public will possess a representation of most of the pastoral districts of the Colony, more reliable and more detailed than anything that has yet been attempted.

A. O. M.
Crown Lands Office,
6th April, 1870.

THE increased desire to improve pastoral properties by fencing, and by a large outlay of money for the preservation of water, &c., necessitated a greater accuracy in the definition of their boundaries than had hitherto obtained. This the experience of many years had proved to be unattainable (especially in the more level parts of the Colony), when depending solely on the written reports of the local Commissioners, in the absence of maps sufficiently to be relied upon to show the effects of isolated surveys, which had been made at the expense of some lessees, on the claims of others, when those claims were liable to a very wide interpretation, based on the vagueness of the existing descriptions—and when, in most cases, neither Commissioners nor the general class of lessees were able to explain those effects with sufficient minuteness to justify the Government in issuing formal leases, even of surveyed runs, without further investigation of such claims.

The result of this state of things was to weary lessees of undertaking surveys of this character, which, solely from the impossibility during past years of understanding them, led in most cases to no such result as they had been undertaken to obtain, and to a great loss to the revenue, in the inability of the Government to prove the existence of unleased lands, where systems of runs, depending on different frontages or points, impinged on each other; or of the excess of country in many cases held over and above the estimated area on which, to some extent, rents had been fixed; while, with the increasing value of such properties, and the new interests formed by repeated transfers, there arose (owing to the original vagueness of descriptions) questions as to boundaries and overlaps, which it was almost impossible for Government to determine; thus undoubtedly causing a deterioration in the value of the properties, to the vexation of the lessees and the discredit of the system.

In 1868 an attempt was made in the Crown Lands Office to illustrate on a map the boundaries of the runs in the western portion of the Lachlan district, which resulted—

- (1.) In the proof that such a course was fully practicable.
- (2.) In a large addition to the revenue, by the sale of land thus proved to be vacant.
- (3.) In the proof of areas, very largely in excess of those hitherto estimated, being held by a large number of the lessees of that district, from which arrears of rent and increased future payments were or will be obtained.

In the course of this work, which had been carried out, in addition to the already heavy work of the office, without extra assistance, it was found quite impracticable to rely on the existing maps of the pastoral parts of the Colony—such maps having been compiled for the requirements of the Survey Department, which are to some extent distinct from those of the Crown Lands Office; in the former, minute accuracy of small portions of the frontages being the principal object, while in the latter it is necessary to have maps on which reliance can be placed in lines *projected* over great distances between the *surveyed* frontages—a test which it has been fully proved that the maps referred to will by no means stand.

With the aid of one assistant draftsman, temporarily appointed last year, the task of recompiling, on geodetic principles, the features of the principal pastoral districts, was undertaken with a view of obtaining the accuracy stated above to be essential, and of subdividing the several districts into such areas as would be more suitable for run maps than the existing counties.

The heaviest work of these compilations, as far as regards eight pastoral districts, has been completed during the last fifteen months, on which a very large number of runs (at least 1,000) have been projected, or shown from actual survey.

Schedule A.

The accompanying schedule will show some of the monetary results of this introduction of systematic mapping into the department:—

- (1.) From vacant country leased at auction or by tender, which could not otherwise have been so disposed of.
- (2.) From arrears of rent actually received, and increased future rentals on proved increased areas; but this Schedule refers (except with regard to accepted tenders) solely to the results in one district, viz., "The Lachlan." Many similar cases have been submitted in other districts, but the actual monetary results will not be ascertained until the reappraisements have been made.

Schedule B shows approximately the number of revised descriptions, minutely defining run boundaries, which have been actually submitted to the lessees for approval; and though at present only about one-half have been formally accepted, it may be stated that in scarcely any instances have protests been received against such defined descriptions, while a large proportion represent cases which have been in dispute with adjoining runs for many years; and the preliminary work of compilation of features being now very far in advance of the submission of cases, a far larger number of such cases can be brought forward for approval of lessees for the future than has been possible, in an equal time, while those compilations were absorbing the principal attention of the "Draughting Branch."

E.D., 14/3/70.

NEW SOUTH WALES.

GOLD FIELDS.

(AURIFEROUS LANDS UNDER LEASE—REPORTS FROM COMMISSIONERS REFERRING TO A STATEMENT MADE IN THE
LEGISLATIVE ASSEMBLY.)

Ordered by the Legislative Assembly to be Printed, 23 March, 1870.

SCHEDULE.

NO.	PAGE.
1. Under Secretary for Lands to Commissioners in charge of Gold Fields, calling attention to a statement made by Mr. Baker, M.P. 21 and 22 February, 1870	1
2. Gold Commissioner, Northern District, reporting on No. 1. 25 February, 1870.....	1
3. Gold Commissioner, Southern District, reporting on No. 1. 26 February, 1870	2
4. Gold Commissioner, Western District, reporting on No. 1. 1 March, 1870.....	2

No. 1.

THE UNDER SECRETARY FOR LANDS TO THE GOLD COMMISSIONER, WESTERN DISTRICT.

(No. 36.)

Department of Lands,
Sydney, 21 February, 1870.

SIR,

I am directed by the Secretary for Lands to call your attention to the statement made by Mr. E. A. Baker, M.L.A., in the Legislative Assembly on Friday last, that large tracts of auriferous ground under lease remain unoccupied for a longer period than appears consistent with Gold Fields Regulations, and also to invite your attention to the Sydney Morning Herald of the 16th instant, making similar statements, and in particular, specifying the mode in which the conditions for employment of labour on ground under lease are invaded. 11th Feb., 1870.

2. I am to request that you will give an explanation, or report with whatever suggestions may occur on the subject.

I have, &c.,
A. O. MORIARTY.

(Nos. 37 and 38.)

Department of Lands,
Sydney, 22 February, 1870.

SIMILAR letters to No. 36 sent to the Gold Commissioner in charge of the Southern District, Young and the Gold Commissioner in charge of the Northern District, Armidale.

No. 2.

THE GOLD COMMISSIONER, NORTHERN DISTRICT, TO THE UNDER SECRETARY FOR LANDS.

Gold Commissioner's Office,
Armidale, 25 February, 1870.

SIR,

Referring to your letter of the 22nd instant, No. 70-398 M., calling my attention to a statement made by Mr. Baker, M.L.A., in the Legislative Assembly on Friday, the 11th instant, that large tracts of auriferous ground under lease remain unoccupied for a longer period than appears consistent with Gold Fields Regulations, and also inviting my attention to the *Sydney Morning Herald* of the 16th instant, making similar statements, &c. In reply, I do myself the honor to state that since my advent to the office of Commissioner in charge of the Northern Gold Fields, a brief space of some four months, I am ignorant of anything warranting such assertions so far as the district under my charge is concerned.

I would take this opportunity of respectfully pointing out the impossibility of my satisfactorily supervising such a very extensive tract of country as the Northern Gold Fields, extending as it does from Scone to far beyond Tenterfield. I have, as Police Magistrate for New England, five Benches to attend monthly, and I am as a rule invariably wanted; added to this the correspondence arising out of gold fields business, the preparation of returns, issuing of rights, &c., &c., keeps me so fully occupied that I find it an utter impossibility to give that attention to the mining interest it so much requires. The only way out of this difficulty appears to me to be the appointing of a Sub-Gold Commissioner to act also as clerk. I think that the salary of such an officer would be repaid in the extra rights and licenses issued, and that the gold fields would be much more efficiently managed than at present.

In obedience to the last paragraph of your letter, I would take the liberty of pointing out that the 9th clause of the new regulations, published on the 17th instant, virtually prohibits the issuing of leases for new alluvial ground within the Southern District, no sinking having reached the depth of 250 feet.

I have, &c.,
J. BUCHANAN,
G. C.

No. 3.

THE GOLD COMMISSIONER, SOUTHERN DISTRICT, to THE UNDER SECRETARY FOR LANDS.

Southern Gold Fields Office,
Young, 26 February, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter, 70-398 M., of the 22nd instant, calling my attention to a statement made by Mr. E. A. Baker, M.L.A., in the Legislative Assembly, that large tracts of auriferous ground under lease remain unoccupied for a longer period than appears consistent with Gold Fields Regulations; and also inviting my attention to the *Sydney Morning Herald* of the 16th instant, making similar statements, and in particular specifying the mode in which the conditions for the employment of labour on ground under lease are evaded.

I cannot but think the statements alluded to are exaggerations of facts, for I am not aware that any ground under lease has been held without the proper employment of labour. It has repeatedly happened that objections have been lodged against the granting of certain leases applied for, and pending due investigation into such cases, the ground has of necessity remained unworked, frequently beyond the prescribed probationary period; but this was unavoidable, as of course the disputants could not take possession of the ground until their differences were determined.

The delay in the adjustment of these disputes arose in some instances from my not being able at all times to proceed to the spot to investigate these matters, and on other occasions the services of a surveyor were essentially necessary, and his attendance could not always be procured.

With regard to the remarks of the *Herald's* correspondent, it is quite possible that in some instances the Regulations may have been abused, and that fictitious applications may have been made. It appears to me, however, that those interested should have exposed such practices, in order that they might be put a stop to, for no official could know intuitively that such devices were being resorted to, and they were never in any instance brought under my notice.

I have, &c.,
G. O'MALEY CLARKE,
G. C.

No. 4.

THE GOLD COMMISSIONER, WESTERN DISTRICT, to THE UNDER SECRETARY FOR LANDS.

Western Gold Fields Office,
Bathurst, 1 March, 1870.

SIR,

I have the honor to acknowledge the receipt of your communication of the 21st ultimo (70-389 M.), calling my attention to the statements made by Mr. E. A. Baker, M.L.A., in the Legislative Assembly on the 11th ultimo, that large tracts of auriferous ground under lease remain unoccupied for a longer period than appears consistent with Gold Fields Regulations, and also inviting my attention to the *Sydney Morning Herald* of 16th ultimo, making similar statements, and in particular specifying the mode in which the conditions for employment of labour on ground under lease is evaded, and requesting my explanation or report, with any suggestion that may occur to me on the subject.

2. In reply, I beg to state, that until the promulgation of the amended Gold Fields Regulations of the 24th September, 1869, there was no means of compelling labour to be employed on leases of auriferous tracts, until one month after the lease was actually in the hands of the lessee. Under the most favourable circumstances, from two to three months must elapse from the date of application before the lease can be issued; and from many causes, such as conflicting applications for the same portion of ground, delay in returning the printed letter of application (forwarded to applicants from this office), with the information required under the regulations, and frequently with an insufficient remittance, some months may also elapse before the lease can be recommended for approval. Time for the erection of machinery is all provided for, and endorsed on the lease, and even, as in many instances, should there be no *bonâ fide* intention of erecting machinery, the lease cannot be cancelled for non-fulfilment of labour conditions until such time has expired. To such an extent was this mode of evading the labour conditions carried, that for some time past I have refused to grant any special time for the erection of machinery until operations for doing so have commenced. The system under which leases are surveyed is also favourable to delay in the occupation of the ground. Instead of one or more surveyors being under the direction and disposal of the Commissioner for the measurement of auriferous tracts, which cannot be too rapidly surveyed after being

being marked, I have no voice in the direction of these matters. Lists for survey are forwarded with the lands for approval, which are, I presume, returned to the licensed surveyor, who sends his plans and descriptions to the Surveyor General's Office, the latter being returned to me long after the lease has been issued, which necessitates a very vague description of the locality in the lease.

3. The chief difficulty however in enforcing labour conditions on leases of auriferous tracts is the utter impossibility of the Commissioner in charge, in conjunction with his other duties, attending to these matters. In this district alone, during the year 1869, some 600 applications for leases on Gold Fields have been lodged in this office from upwards of thirty different localities, varying from 20 to 120 miles distant from Bathurst, and the labour conditions can therefore, as far as I am able to prevent it, almost be evaded with impunity; as a rule, however, if the ground taken up is likely to be remunerative, labour is employed, and I have had but few direct complaints from miners on the subject of the monopoly of any particular tract. There is also an uncertainty as to how leases, on which the rental for the current year has been paid, are to be forfeited; I have invariably ruled that the authority under which a lease is issued can alone cancel it; and my place has been, in the few instances where direct complaints have been made, to call upon the leaseholder to show cause why his lease should not be forfeited for non-fulfilment of labour conditions, and, upon the nature of the reply, either direct the requisite amount of labour to be employed upon the ground, or recommend the cancellation to the Minister for Lands. The latter course I have never found necessary to pursue, except in case of non-payment of rental or admitted abandonment.

4. The suggestions I would make on the subject are these:—

1st. That directions for survey of leases should be sent direct from this office to the surveyor (a list of such surveys also being as heretofore forwarded to the Surveyor General), who should, as soon as practicable, survey the ground, furnishing this office with plans and descriptions, which would enable the leases to be properly and expeditiously made out. In many instances more than twelve months has elapsed between application and survey, and the lessees have then had a convenient excuse for delay in working the ground.

2nd. That it should be understood that the Government will cancel leases, although the rental has been paid, on the report of the Commissioner in charge that the labour conditions have not been fulfilled.

I have, &c.,

WHITTINGDALE JOHNSON,
G. C.

P.S.—I may add that I have been unable to find the article with reference to the evasion of labour conditions on auriferous leases, stated to be contained in the *Sydney Morning Herald* of the 16th instant.—W.J., G.C.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOLD FIELDS.

(LEASES OF AURIFEROUS LANDS.)

Ordered by the Legislative Assembly to be Printed, 23 March, 1870.

RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated 11th February, 1870, That there be laid upon the Table of this House,—

“ A Return showing the number of leases of auriferous tracts granted since the 31st July, 1866,—stating whether of alluvial ground, quartz reefs, or river-bed, and whether unworked or abandoned—the areas of such tracts, duration of leases,—stating also periods of time respectively which elapsed between the application for such leases and the notifications respectively of the same being granted ; also, in what cases the Commissioner granted leave for the occupation of the lands so applied for, and whether, where such leave was given, labour was employed upon the ground, as provided for by the regulations in that behalf.”

(Mr. M. H. Stephen.)

SCHEDULE.

NO.		PAGE.
1.	Gold Commissioner for the Southern District to the Under Secretary for Lands, forwarding the return in respect of the Gold Fields under his charge. 28 February, 1870.....	2
2.	Gold Commissioner for the Northern District to the Under Secretary for Lands, forwarding the return in respect of the Gold Fields under his charge. 14 March, 1870	7

No. 3.

THE GOLD COMMISSIONER, WESTERN DISTRICT, to THE UNDER SECRETARY FOR LANDS.

Western Gold Fields Office,
Bathurst, 14 March, 1870.

SIR,

In reply to your letter of the 9th instant, 170-55, with reference to the completion of a Return of Leases of Auriferous Tracts in the Western District, required by resolution of the Assembly, I have the honor to transmit the same, with all the information under the several heads I am able to supply, and to state, in explanation of the delay, that the Return—which is a very lengthy one—was commenced as soon as called for, and has been completed at the earliest possible period.

I have, &c.,

WHITTINGDALE JOHNSON, G.C.

Mr. R.—16. Gold Commissioner for Northern District, who has not furnished the Return, to be again reminded?—16. Yes.—17. Now herewith, 70-596 MS.—18.

Under separate cover.

TOTALS OF PAPERS.

Western Gold Fields Office,
Bathurst, 14th March, 1870.

WHITTINGDALE JOHNSON,
Commissioner for Western Gold Fields.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOLD FIELDS,
(REPORTS FROM COMMISSIONERS, FOR 1869.)

Ordered by the Legislative Assembly to be Printed, 29 March, 1870.

SCHEDULE.

NO.	PAGE.
1. Under Secretary for Lands to Commissioners in charge of Gold Districts (Circular). 26 February, 1870	1
2. Commissioner for the Gold Fields, Western District, in reply to above (1 enclosure). 1 March, 1870	1
3. Commissioner for the Gold Fields, Southern District, in reply to No. 1 (2 appendices). 1 March, 1870	3
4. Commissioner for the Gold Fields, Northern District, in reply to No. 1. 7 March, 1870	7

No. 1.

THE UNDER SECRETARY FOR LANDS TO THE COMMISSIONERS IN CHARGE OF GOLD DISTRICTS.

Department of Lands,
Sydney, 26 February, 1870.

SIR,

No report having been received on the conditions and prospects of the Western Gold Fields for the year 1869, I am directed to request that you will have the goodness to furnish a report thereon for the past year, at your earliest convenience.

I have, &c.,
A. O. MORIARTY.

Similar letter to the Commissioner in charge of the Southern Gold Fields.

Similar letter to the Commissioner in charge of the Northern Gold Fields.

No. 2.

THE GOLD COMMISSIONER, WESTERN DISTRICT, TO THE UNDER SECRETARY FOR LANDS.

Western Gold Fields Office,
Bathurst, 1 March, 1870.

SIR,

I do myself the honor, for the information of the Honorable the Secretary for Lands, to submit my annual report for the year 1869 upon the condition and prospects of the Gold Fields in the Western District.

2. There has been a marked increase in the activity of mining operations during the year 1869, as compared with previous years, and some valuable discoveries have been made, more particular at Two-mile Flat, where diamonds in considerable quantities have been found, and at Trunkey Creek and Tuena, where a series of gold-bearing quartz have attracted the attention of capitalists in this and the neighbouring Colony of Victoria.

3. The other Gold Fields have fully maintained their previous reputation, and although on the year there has been a slight decline in the amount of gold transmitted by escort, compared with 1868, a calculation which cannot be relied upon as showing the entire yield of gold, much being conveyed by private hands—the general prospects of the Gold Fields have undoubtedly improved, and I am confident that the result of mining operations during the present year will show the stride that has been taken since 1868.

4. Of the older fields, Tambaroora has been the most prosperous, the quartz reefs there having yielded a very high return, in some instances at the rate of many hundreds of ounces to the ton.

5. I annex a return, showing the number of miners' rights and business licenses, also the leases issued at each Gold Field in this district for 1869, and the estimated population on the 31st December ultimo, which exhibits an increase in all its items over the corresponding return of 1868. In leases especially it will be perceived that the increase is very great, being more than two-thirds; in addition, 39 applications have been made on Church and School Lands near Carcoar, where rich quartz reefs have been opened up and successfully worked, and 122 other leases, applied for in 1869, have been authorized to be issued in 1870, bringing the number of applications made in 1869 up to 536, exclusive of about 50 rejected for various reasons. The majority of the quartz reef leases are situated at Trunkey Creek and Tuena, and those of alluvial and river-bed at Two-mile Flat, and on the Cudgegong River, near Mudgee, where the search for diamonds is being prosecuted with much spirit and a fair prospect of success in the alluvial flats, basalt hills, and in the drift of the bed of the river. Small diamonds in large numbers are found in some of the claims, and a few of fair mercantile value. Whether this new industry will ever be successful is still a matter for speculation; but at any rate the prospects have been sufficient to induce the formation of two Companies for the purpose of mining for diamonds, as well as for gold, on an extended scale, both of which are sanguine as to their ultimate success, and satisfied with the existing indications of a valuable deposit of precious stones.

6. At Trunkey Creek, a discovery which was unduly magnified before its auriferous capabilities had or could be fairly ascertained, there has been the re-action consequent upon the failure to realize the most extravagant expectations based upon the, in many instances, purely fictitious value of the reefs, merely because a very rich crushing was obtained from a portion of one of the reefs first opened in that locality, it was assumed that the surrounding reefs, of which a great number exist, must also be valuable. Some of these have been amply remunerative, and many others I feel assured will, when systematically worked, prove of real value. Recent operations have tended to show that the veins now opened will continue to descend to considerable depth, increasing in size and depth, and not disappear within a comparatively short distance from the surface, as was at first predicted by many practical miners. It requires some time to fully develop a quartz mining district, and also necessitates the expenditure of much capital. I am aware that an outcry has been raised against the system of leasing auriferous tracts now in vogue, and that Trunkey Creek has been specially pointed out as having been retarded in its development from that cause only; but I am of opinion that, although a larger population might for a time have remained there, and a temporary and fictitious prosperity thereby promoted, had extended areas not been available under safer conditions than ordinary claims, the extensive and valuable machinery now erected, or in course of erection, at Trunkey Creek, would never have been there, and the apparent prosperity of the place would have subsided as soon as it had been ascertained that capital was necessary to work the ground with any prospect of success. I am still of opinion that Trunkey Creek, including Tuena and the adjacent country, will afford a large and profitable field for the employment of capital and organized labour in connection with quartz mining. In proof of this I may state that the stone crushed at the several engines has averaged two ounces to the ton.

7. I cannot close the Report without adverting to the necessity of some improved system of dealing with miners' disputes, more especially in the matter of appeals from the decisions of unpaid Justices of the Peace. The only appeal under the Gold Fields Act of 1866, that of from one to two or more Justices in Petty Sessions, is in some districts now unattainable from the difficulty of obtaining Justices who will consent to hear these appeals, from the fact that prohibitions are frequently moved for in the Supreme Court against their ruling in gold mining cases; and in one instance obtained with costs against the Justices for a mere error in judgment as to the application of the law of evidence. The result of this has been latterly to bring many of these appeal cases to Bathurst, in which I have felt it my duty to adjudicate as one of the revising Justices; and the fact of their being so brought from other districts is also a proof of the anxiety of the miners to have their cases heard before a tribunal presided over by officials who have had some experience in deciding upon Gold Fields matters.

I have, &c.,
WHITTINGDALE JOHNSON,
G.C.

WHITTINGDALE JOHNSON,
G.C.

No. 3.

THE GOLD COMMISSIONER, SOUTHERN DISTRICT, to THE UNDER SECRETARY FOR LANDS.

Southern Gold Fields Office,
Young, March, 1870.

SIR,

I have the honor to submit, for the information of the Honorable the Secretary for Lands, a report on the Gold Fields in the Southern District, for the year 1869.

During that period there has not been any discovery of such importance as to render the proclamation of a new Gold Field necessary; nevertheless, gold has been found in many localities not at present proclaimed, which may eventually prove to be rich and important fields. It will be seen, therefore, that the chief and most notable mining operations carried on during the past year have been on the Gold Fields that have been proclaimed for some years; and I now propose to notice them according to their order of importance.

The most productive and consequently the most important Gold Fields in the Southern District last year were those in the immediate vicinity of Grenfell, known as Emu Creek and Tyagong Creek. On the former the mining operations carried on were for the most part in connection with the quartz reefs that have given that neighbourhood such a foremost place in the Gold Fields of the Colony, and caused such a valuable impetus to this branch of mining. I think it may be said that at the commencement of 1869 the quartz reefs at and around Grenfell had reached the summit of their importance, and that since that time they have, with one or two exceptions, been gradually on the decline, the quantity of stone produced by them and the yield of gold having decreased proportionately. At the period referred to there were within a radius of 3 miles of Grenfell, twelve crushing machines, with employment actively and positively ensured to them for some months, as soon as the drought that then prevailed, broke up, and a sufficiency of water would be obtainable. At the expiration of the year the yield of stone from the once singularly productive reefs only afforded employment to four of these crushing mills. The remainder are either now idle or have been removed to other localities. The reefs that have shown the greatest decline are the "Homeward Bound," "Britannia," the "Outward Bound," the "Prussian," the "Leased Ground," and "Wilson's Reefs," some of which are entirely abandoned, and the remainder have fallen into the hands of the owners of crushing machines, to whom alone can they prove remunerative, as the stone is too inferior to pay for crushing at the public mills.

With regard to the decline of these reefs it is worthy of remark, that whenever they showed a falling off in their yield, or became unpayable, they were at once abandoned by the original proprietors. I am aware that the claim-holders cannot be blamed for the adoption of a course that will generally be pronounced to be the exercise of a wise discretion, but at the same time it shows a lack of spirit of enterprise and perseverance, and is quite at variance with the course of action that is invariably pursued under similar circumstances in Victoria, where the breaking-off of a reef, or a decrease in its yield, does not dishearten its owners, nor deter them from using every effort and appliance to enable them to ascertain, beyond all doubt, as to the possibility of tracing the reef, or of its yield being payable. I need hardly say that in innumerable instances the energy and perseverance thus displayed are crowned with complete success. The want of enterprise to which I have alluded is attributable I am sure to the fact that these reefs have been taken up in ordinary claims by small parties of men, many of whom were entirely ignorant of this branch of mining, and who, when the yield of their claims became poorer, gave them up, being either satisfied with the results already attained, or without the means to incur any further outlay. The time may come perhaps when these abandoned reefs will be taken up by companies, with the capital and improved appliances necessary to insure their future successful development.

The reefs that continue to yield good returns for the capital and labour expended on them, are "O'Brien's," "Lucknow," and "The Welcome." On the first named two claims still produce an immense body of stone that affords handsome dividends to the proprietors. The "Lucknow Reef," although not considered so productive as it was at one time, nevertheless is very valuable mining property, and it may be said has already yielded fortunes to the shareholders. The "Welcome Reef," though far inferior to those already referred to, turns out a large amount of stone that proves moderately remunerative.

The alluvial workings on the Emu Creek Gold Field during the past year have been of a very unimportant character, and have mainly consisted in the reworking of ground formerly abandoned.

On the Tyagong Creek Gold Field some extensive alluvial discoveries have been made, which have afforded occupation to a large number of miners. At and in the neighbourhood of the Seven-mile, the various gullies and slopes were worked to considerable advantage by many of the claimholders, although the deposits of gold were found to be very "patchy," or partially distributed. The leasing system was brought into active operation here, and the miners availed themselves of it very generally. In fact, had it not been so I question very much whether the greater part of the ground would have been worked, as the sinking was too deep and the course of the gold-bearing deposits too uncertain, to have induced the miners to take it up in ordinary claims, or even under the popular "frontage system."

When the diggings at the Seven-mile were nearly exhausted, new discoveries were made in Quandong Gully, some 3 miles distant from the former place, and here again the leasing system was generally adopted. The sinking varied from 120 to 180 feet in depth, and the deposit of gold was likewise partial and uncertain.

It was here, however, that the discontent respecting leased tracts, which has since been so loudly expressed, commenced. (Before closing this report I shall take the opportunity of noticing the working of this system, and of stating my views respecting it.)

The discoveries I have described, led to others in the neighbourhood, and towards the close of the year the Two-mile Gully was opened up, and it was there that the complications arose, in regard to the simultaneous operation of the leasing and frontage systems, which resulted in the recent abolition of leases in new alluvial ground.

It will thus be seen that the mining operations on the Gold Field under notice during the past year have been in alluvial ground; for the quartz workings were of a very insignificant character, and it was the yield from these alluvial workings that assisted so materially to keep up the standard of what are generally known as the Grenfell Gold Fields. Without these discoveries the falling off in the return of gold

gold from Grenfell, owing to the decline of the quartz reefs, would have been very marked. It will be seen, on reference to the appendix, that on the whole year there was a falling off from its predecessor in the amount transmitted by escort. I would here remark that the gold from Grenfell, for some unaccountable reason, is conveyed by a Western escort to Bathurst, established specially for that purpose. The Southern escort already comes as far as Young, only 30 miles distant from Grenfell, and I am at a loss to know why the gold from that place should not be transmitted by it. It seems only reasonable and proper that the produce of a Southern Gold Field should be conveyed by the Southern escort, the more especially when by so doing a great saving would be made in the public expenditure.

The scarcity of water in the neighbourhood of the recent discoveries on the Tyagong Creek Gold Field is likely to interfere materially with the speedy development of the workings, and to delay any positive knowledge as to their value or future prospects. My own impression, however, is that they will not prove of any very great extent, and that the yield will not remunerate the claimholders beyond ordinary wages.

The population on the Grenfell Gold Fields during the year, has, I think, averaged about 2,700 persons, and of these the number of miners may be set down at 1,200.

The Gold Field next in importance is Araluen, the yield from which, during the year very nearly comes up to that of Grenfell, but nevertheless, is considerably below the standard of previous years. Although thus placed second on the list as a producing field, I think that in all other respects it may be said to excel any other in the Southern District. As a permanent Gold Field it has no equal, and the amount of capital invested and of labour employed in connection with the mining operations that are carried on there, give it a character of very prominent importance.

The principal and larger portion of the claims are on private property, and are held under special agreement with the owners of the land, who derive a very handsome income from their rents and licenses.

The high rents and fees charged by these proprietors for permission to occupy their lands for mining purposes are in marked contrast to the liberal terms offered by the much-condemned leasing regulations. On the private ground the lessee of a claim is subject to a heavy rent, and has also to pay a license fee of £1 per month for each man employed. On some of these claims 100 men are employed, so an idea may be formed of the enormous expense thus imposed on the claimholders.

On the Crown lands at Araluen several leased tracts have been taken up, which have proved very productive, and still continue to be worked successfully, and to afford employment to a large number of miners. The nature of the soil in the valley presents unusual difficulties, and necessitates in most instances the employment of machinery, and the construction of costly works, thus involving the expenditure of a large amount of capital. As a matter of course these extensive operations require the employment of a large amount of hired labour, and a means of livelihood is thereby afforded to some thousands of miners. The terms of agreement between the employer and the employed have been reduced to a regular system, which appears to work most satisfactorily. This certainty of regular employment has had the effect of retaining a fixed and settled mining population at Araluen, and its beneficial results are noticeable in the substantial and permanent character of the miners' residences, and the comfort and contentment that appear to prevail. It must be acknowledged, I think, that a most striking argument is here given in favour of encouraging by all legitimate means the introduction and investment of capital on the Gold Fields.

The population on the Araluen Gold Field may be estimated at 4,500 persons, of whom about 400 are Chinese. The number of European miners cannot be less than 2,600.

The returns from the Adelong Gold Field during the year have nearly come up to the yield of 1868. The quartz reefs at Lower Adelong continue to be worked to much advantage, and keep four crushing-mills pretty constantly employed. The names of the reefs are the Victoria, Crown, Gibraltar, Kurragong, Fletcher's, Caledonia, and Donkey Hill, Reefs, and the number of claims occupied and worked about 30.

These reefs contain a very large body of stone which, although not rich, still, with the low price of crushing, yields very satisfactory dividends to the shareholders.

At the Lower Adelong there is also a large leased tract in the creek bed, held under the old royalty regulations, which is worked by a Victorian company. A very considerable amount of capital has been invested and expended in this claim, as the difficulties to be contended with were very great, and rendered the erection of machinery and other costly works necessary. I am led to believe that notwithstanding the disheartening nature of the obstacles at first presented, and the heavy expenditure in preliminary works, this claim is now in a fair way to reimburse its spirited proprietors.

Middle and Upper Adelong are, for the most part, occupied by Chinese miners, who appear to be contented in re-working the old and abandoned claims. At Reedy Flat some leased tracts have been obtained, and the sluicing works in connection with them are of a very extensive and valuable nature. In most instances races to convey water from a great distance have been cut, and large reservoirs have been formed to store all surplus and storm-water. The yield from these claims has been unusually good, and has amply rewarded the proprietors for their outlay and labour. The number of miners on the Adelong Gold Field, including Chinese, may be set down at about 500.

The Braidwood Gold Field is the only one in the Southern District that has, during the past year, shown any improvement in its return, which is mainly attributable to some reefs that have been discovered in the neighbourhood of the Little River, some of the stone from which proved singularly rich.

These reefs or veins are very narrow, and do not produce any very great body of stone; and it is, therefore, perhaps questionable whether the main reef has yet been traced. The veins or leaders that are now being worked are very numerous, and are, as before stated, very productive. The appearances they present bear sufficient promise to have caused the erection of the crushing-mills that are now being worked in connection with them. At Major's Creek, also, some productive reefs have lately been discovered that may perhaps, eventually, prove valuable and extensive.

The alluvial workings on the Braidwood Gold Field have not shown any improvement during the year, and no new discoveries of any importance have been made. The slopes of the Warrambucca, the Mongarlowe River and its tributaries, and the Shoalhaven River, continue to afford occupation to a limited number of miners, and some sluicing operations at Major's Creek and Bell's Creek have been attended with satisfactory results.

The most noteworthy feature in mining matters at Burrangong has been the leasing of some large tracts on the old alluvial workings near Young, known as the "wet lead." In the early days of this Gold Field

Field this ground was partially worked and was found to contain very rich deposits. Owing to the great quantity of water to be contended with, a considerable portion of valuable ground had to be abandoned, and has since remained unworked. It has now been taken up by Companies possessed of the capital and appliances necessary to overcome the difficulties hitherto presented. The claims are in full work and give employment to a number of miners, and it is anticipated that in a short time the probable results and future prospects of these important undertakings will have been ascertained.

During the wet season the sluicing parties have been enabled to render their water rights available on some of the shallow slopes of the main creek, and the yield has, I am informed, proved satisfactory. Beyond this there has not been any work done worthy of record. The yield for 1869 is slightly in excess of the previous year, but I think that the increase has been caused by the importation of small parcels of gold from places beyond the limits of the Gold Field.

At Nerrigundah, the principal localities where mining operations are carried on, are Deep Creek, Bullock Creek, and the Gulf Creek. These and a few sluicing claims give occupation to about 200 miners, and have produced during the year about 4,000 ounces of gold.

The quartz reefs discovered at Kiandra some time since, created some excitement in that remote region, and led to the hope that some important results might follow. The subsequent opening up the reefs did not realize these expectations, and it found that the stone was poor and difficult to bring to grass. Some 400 tons of the quartz was crushed, and did not average more than half-an ounce to the ton.

The plentiful supply of water, always obtainable at Kiandra, enable the holders of races and water permits to avail themselves of the means thus offered to work the shallow surface ground that abounds in the neighbourhood, and it is this branch of mining that has mainly contributed to the return from that Gold Field.

The diggings at Delegate are occupied principally by Chinese, who are satisfied with small returns for their labor and perseverance. About 200 miners are at work there, and during the year they obtained about 2,400 ounces of gold.

The prospects of Tumberumba Gold Field have not shown any signs of improvement, but nevertheless it still retains about 250 miners, who for the most part are old residents, and who follow their occupation with varying success. The yield of gold does not however show that mining in that part of the world is a very profitable employment.

In the neighbourhood of Gundagai some quartz reefs have engaged the attention of a few parties of miners, the return for whose labor has been certainly above the average; and it therefore appears strange that the workings on this Gold Field are not on a larger scale.

The Black Range closes the list of Gold Fields in the Southern District and I may simply state, with regard to it, that during the year it has produced no gold, and I therefore would recommend that its proclamation as a Gold Field be at once cancelled.

Some discoveries made on Crown Lands other than Gold Fields during the past year, demand a brief notice.

At Houlahan's Creek, near Junee, several very promising quartz reefs were opened up, and claims on them were eagerly sought after. A number of leased tracts were also obtained there in the expectation that the prospects obtained would eventually lead to the development of a Gold Field of considerable importance. It was subsequently found, however, that most of the reefs were not sufficiently productive to afford remunerative employment to the claimholders, and at the present time only two or three are occupied and worked. They yield a very large quantity of stone of a payable quality, and two crushing-machines in course of erection will in a short time have ample employment ensured to them.

Some gold-bearing reefs have also been discovered at Cumbaming, on the border of The Levels, about 15 miles distant from Junee, and it was thought that they also would be unusually productive. The description given of Junee Reefs would apply to these, for a few claims still promise to pay well, and a crushing-mill is kept constantly employed in connection with them.

Cowabie, about thirty miles north of Narrandera, for a time attracted a considerable mining population, and one reef there certainly presented as promising prospects as any that ever came under my notice. I regret to say, however, that a subsequent testing did not show any encouraging results.

At Spring Creek, in the neighbourhood of Bungonia, the discovery of some masses of gold-bearing quartz induced a number of persons to take up claims, and for some time considerable excitement prevailed, and no small amount of labour was expended on them. The shareholders were chiefly farmers and labourers in the neighbourhood, and had had little experience in mining; and this may account perhaps for the unusual pertinacity displayed in the retention of many valueless claims. The country around Spring Creek is much broken and upheaved, and does not favour the expectation of the successful tracing of quartz reefs. A crushing-mill has, however, been erected there; but I cannot think that it has been a profitable investment.

Appended to this report will be found tabular statements of the yield of the various Gold Fields during the year, the number of licenses issued, and leased tracts taken up during that period, and also an approximate estimate of the machinery employed, and capital invested, in connection with mining in the Southern District.

Having thus given a description of the state of the Gold Fields in the district under my superintendence, and a narrative of the course of events on them for the past year, a few general remarks will not, I trust, be considered altogether out of place.

It has been already stated in another part of my report, that the complications that arose at Grenfell, through the simultaneous operation of the leasing and frontage systems, led to much difficulty, and have resulted in the abolition by the Government of leases in new alluvial ground. As a matter of course the opinions that exist respecting the proper settlement of the question of the occupation of claims are very numerous and conflicting. The ordinary miner thinks and contends that he has a prior and absolute right to occupy for mining purposes all alluvial ground, where the difficulties as regards depth and requisite preliminary works come within his means and resources. His view in this respect is not limited to the Gold Fields, or even Crown Lands; for at a large meeting of miners, held at Grenfell a short time ago, it was proposed that any new Gold Fields Act should contain a clause authorizing any miner to enter and work upon any private lands, and this proposition was carried without a dissentient voice. It will therefore be conceded, I think, that the demands of the miner are not at all times reasonable.

The mining capitalist at the same time seeks a right and opportunity to invest his means in a legitimate manner in developing the resources of the Gold Fields to his own profit and advantage. The question

question to be determined is, whether the views of the miner are to prevail, or whether the capitalist is to have a fair chance given him for the employment of the means at his command.

The regulations recently issued entirely favour the views of the miner, and he has now the *perpetual* monopoly of all new alluvial ground when the depth of sinking does not reach 250 feet. There is a great deal of ground on the Gold Fields of a less depth than 250 feet, that presents many difficulties with which the miner cannot contend, and which can only be worked by the employment of machinery, the cutting of races for the conveyance of water from great distances, and the construction of other costly works. Such ground must now remain idle, for the miner cannot work it, and the capitalist is debarred from taking it up. Had these regulations been in force hitherto, a great extent of ground that is now being worked to great advantage on the Gold Fields would still have remained unoccupied. At Adelong more especially would this have been the case; and I can positively state that some large areas of ground, hitherto unworked on the Burrangong Gold Field, were about being taken up at the time that these regulations were promulgated. The intentions of the proposed lessees had of course to be abandoned. My opinion therefore is, and I submit it with very great respect, that the giving to the ordinary miner a complete and perpetual monopoly of all new alluvial ground is a step in the direction of retrogression, for the introduction of capital on the Gold Fields is thereby discouraged, and large areas of ground that would otherwise be taken up and profitably worked, must now remain unoccupied.

By the same regulations the size of claims is largely increased, and the frontage system is made to obtain on all ground where the sinking is of the depth of 60 feet. It appears to me that the size of claims ought to be on a graduated scale, and should increase in area according to the depth of the ground. The facility now afforded for the operation of the frontage system is likely to have a very injurious and pernicious effect on the Gold Fields. The system when first introduced was intended only to be resorted to on ground where the sinking was of unusual depth, or the difficulties otherwise presented were very great; and therefore to apply it to ground where these difficulties do not exist, is to bring it into operation where it is unnecessary, and where it may produce the most baneful results. The great charm of this peculiar system to the miner is, that it insures to him within certain parallel lines a claim on the lead of gold. In admiration of a regulation that may thus confer a possible benefit on him, he forgets, and fails to calculate the loss he may sustain in time and expense while the lead is being traced and while he is "shepherding" his claim. The spectacle presented by some hundreds of men, divided into parties of eight, "shepherding" or occupying in idleness, claims on perhaps an imaginary lead for weeks, or may be months together, is not calculated to impress an impartial observer with any degree of admiration for it, nor to lead to a favourable impression of the efficacy or ultimate benefit to the miner of this system. During the course of my experience I have seen some hundreds of men occupying claims in this manner for many weeks, and after all it was proved that there was no payable lead.

There is no system that retards the development of a Gold Field more than this, or that is so likely to hold out false hopes to the miner, or is so deceptive to the public. It is also a system that leads to endless litigation, and requires a staff of officials daily in attendance to carry it out with any degree of satisfaction; and for these reasons I think that it is only in extreme cases and under extraordinary circumstances that it ought to be called into requisition.

Recent occurrences have shown me that it is quite impossible that the licensing and transfer systems can be made to work harmoniously in new ground; either the one or the other must remain in abeyance; and it was to meet the advocates of the two systems half-way that I proposed, in a memorandum I submitted a short time since, that no leases should be granted in new alluvial ground until four years after the proclamation of the Gold Field within which such ground is situated. I still think that this would have met the difficulty. The admirers of the frontage system will have four years to avail themselves of the benefits to be derived from it, when it would close, and afterwards the leasing system should prevail. Perhaps to make this better understood it would be as well to have the Gold Fields recognized by the terms "new" and "old"—the former to be so designated for the period of four years, and to be subject to the frontage system; at the expiration of that period they would be known as the "old" Gold Fields, and available for leasing purposes, and the former system would cease.

I presume that the general question of the Gold Fields management will be dealt with in the amended Act proposed to be introduced.

With regard to the settlement of mining disputes, I would beg to remark that the jurisdiction at present given to all Justices of the Peace in these cases has not led to any satisfactory results. These gentlemen invariably decline to adjudicate in these matters, and I do not think they can be blamed for pursuing that course, for it cannot be expected that they should intuitively possess the technical knowledge required in determining these cases, which can only be gained by experience on the Gold Fields.

It has been urged in many quarters that the framing of regulations and by-laws should rest with the miners themselves, and that for that purpose Local Courts or Mining Boards should be established. I must confess that my experience of Local Courts has not impressed me favourably with regard to them, and my chief objection to them is that the practical and *bonâ fide* miner is not likely to be properly and really represented among the members. The persons who are elected to these Courts are invariably professional agitators, whose sole functions appear to be to bully the Government, abuse its officials, and invent imaginary grievances. They manage the elections, and the real miner is not seen among their number. These Courts are also costly, for the Government is called upon to pay the expenses of the elections and the salaries of the officers. No good results ever came of these establishments in this Colony, and I never yet heard any person speak in favour of the similar institutions that exist in Victoria.

The Appeal Court, in cases of dispute, has proved most unsatisfactory, and may be said to be wholly inoperative. An appeal from the decision of a Magistrate in one Court to the same Magistrate in another Court cannot be viewed otherwise than as a very ineffectual and useless proceeding; a speedy alteration in the constitution of this Court is therefore urgently required.

I have, &c.,

G. O'MALLEY CLARKE,
Gold Commissioner.

THE GOLD COMMISSIONER, NORTHERN DISTRICT, to THE UNDER SECRETARY FOR LANDS.

Gold Commissioner's Office,
Armidale, 7 March, 1870.

SIR,

In the records of this office there does not appear to have been any copy kept of the conditions and prospects of the Northern Gold Fields; this must be my excuse for not forwarding such report at an earlier date.

I assumed office on the 19th October, 1869, as Commissioner in charge of the Northern Gold District, in conjunction with my separate appointment as Police Magistrate for New England; from that time until the present, save the Rocky River, I have been unable, from my multifarious duties, to visit the diggings under my charge; judging however from the number of miners' rights issued in 1870, as compared with those issued in 1869, I believe the prospects of the Northern Gold Fields are improving.

At Bingera, or rather Manilla, new diggings, alluvial and quartz have been found tolerably rich; a slight rush has taken place, and I believe will pay the individual miner. The quartz reefs, or rather portions of them, at Wood's Reef, Ironbark, had been released, and the licensees appear confident of success.

Of Nundle and the Denison (Moonan Brook) I have nothing to report.

At Drake (late Fairfield) new gold-bearing quartz has been discovered; the "Perseverance Reef," as well as the "Lunatic" promise well; on each of these reefs leases have been granted, and I am informed they satisfy their proprietors, the latter (the "Lunatic") particularly.

In forwarding this my first report since I have refilled my present position, I deem it a fitting occasion to point out, for the information of the Honorable the Minister for Lands, how practically impossible it is for any one individual, however energetic, situated as I am, to visit the whole of the Northern Gold Fields, say even twice or thrice a year, without assistance; I need but respectfully draw attention to the extensive country over which these gold mines are spread, and then if the Minister will bear in mind that I have, in my capacity as Police Magistrate, five Courts, some of them sixty miles away from my residence, to attend monthly, I am certain he will allow the impossibility of any one man doing the work.

Having directed attention to the impracticability, it is, it appears to me, my duty to show as well as I can its remedy, and this I would suggest is contained in my letter of the 25th ultimo. I believe a Sub-Gold Commissioner would earn his salary in the issuing of miners' rights and licenses alone; he might also act as clerk, the correspondence being very heavy. I would recommend his being, after a brief period, appointed

appointed a Magistrate, in order that he might be empowered to settle disputes on the diggings, and take my place on the Bench during my absence at out-lying Gold Fields; and here I would point out the great necessity of a trooper accompanying the Commissioner in Charge, with a view to the enforcement of that officer's decisions; in a recent case, that of M'Cumstick & Co., at Bingera, the Honorable the Secretary's Minute pointed out the desirability of a personal knowledge of the circumstances by the Commissioner; no doubt such is always the best where practicable, and when the Commissioner's decisions can be enforced; in this case however these requisites were unobtainable. Under the present system a Commissioner has no police at his command to enforce his decisions. As an instance of how difficult it is to procure police when required, I may mention that at the polling at the last General Election on the Rocky River, I requested, a day previously, the head of the police for the district to send to that locality extra men for that one day polling, and he promised me it should be done, but failed in doing so; as I anticipated, a frightful row occurred, and but for the exertions of myself and one or two others the result would have been very serious. There is, I observe, another election to take place for the Northern Gold Fields. I sincerely trust better arrangements, as regards the police, will then be organized.

I have, &c.,
J. BUCHANAN,
Commissioner in Charge, Northern Gold District.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOLD FIELDS.

(REPORTS ON SOUTHERN, FOR 1866, 1867, & 1868.)

Ordered by the Legislative Assembly to be Printed, 3 May, 1870.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 29th April, 1870, praying that His Excellency the Governor would be pleased to cause to be laid upon the Table of this House,—

“ Copies of the Reports of the Commissioner for the Southern Gold Fields, “ for the years 1866, 1867, and 1868.”

(Mr. Watson.)

SCHEDULE.

NO.	PAGE.
1. Commissioner, Southern Gold Fields, to the Under Secretary for Lands. Report for the half-year ending 30 June, 1866. 31 July, 1866	2
2. Do. do. Report for the year 1867. 7 January, 1868	4

(No other reports received from Southern District for the years named.)

GOLD FIELDS.

No. 1.

THE COMMISSIONER, SOUTHERN GOLD FIELDS, TO THE UNDER SECRETARY FOR LANDS.

Gold Commissioner's Office,
Goulburn, 31 July, 1866.

SIR,

I have the honor to submit, for the information of the Honorable the Secretary for Lands, a report on the present state of the Southern Gold Fields now under my charge; and having, during the present month, personally visited them all (with the exception of Kiandra), I propose to take them *seriatim* and in the order in which they came under my observation.

Burrangong.

This gold field has been gradually on the decline for the last three years, and at the present time bears a very deserted and exhausted appearance. No new ground has been opened up for many months, and the mining operations that continue to be carried on are the old and already worked diggings, namely, Wombat, Stony Creek, Main Creek, Tipperary Gully, and The Two-mile, or Hurricane Gully. The mode of working at all these localities is of the most primitive order, and is confined simply to "fossicking," or reworking the old ground, and washing with tub and cradle, and I fear that in too many instances the gold thus procured affords but a scanty and barely sufficient means of subsistence to those employed. All the diggings to the north of Hurricane Gully are almost entirely deserted.

Prospecting on the Burrangong Gold Field may be said to have ceased altogether, which I believe may be attributed to the poverty that exists amongst the mining population, who cannot afford the time for that pursuit, and who prefer to make sure of the little that can be obtained in the old workings. The continued drought during the past seasons was very severely felt by the miners, and I have no doubt that the great scarcity of water had the effect of compelling many to leave who might otherwise have remained. The number of miners at present on this gold field I estimate at about 700, but as they are scattered over such a very large area, it is difficult to pronounce with any accuracy as to their numbers. The quantity of gold sent down by escort, during the half-year ending 30th June last, was 5,640 ounces, and the number of miners' rights issued during the same period was only 320, by which it will be seen that more than one-half of the persons engaged in mining are without licenses, and are in fact unauthorized trespassers on the gold field. This is to be accounted for by the fact that, from the nature of the mining operations that are at present pursued, few disputes are likely to arise, and it is notorious that in the majority of instances licenses are seldom taken out, unless to protect some questioned or disputed holding.

I need scarcely state that the Chinese are prohibited from mining beyond a certain area that has been prescribed for them, which nearly virtually excludes them from the whole gold field, and I deem it my duty respectfully to submit that the period has arrived when the restrictions respecting them should be removed. The gold field is now occupied by persons the majority of whom do not pay the small license that is required of them to entitle them even to reside there, and therefore, they ought not in fairness to expect this very large area to be reserved for them. The diggings at Burrangong are essentially adapted for Chinese, who from their frugality, perseverance, and peculiar system of combination in labour, can effectually and successfully work ground that Europeans would regard as valueless. I believe that if this gold field were thrown open to the Chinese all the diggings would be reworked by them to advantage, which would give employment to many thousands of them, and in all probability new discoveries would be made, by which of course European miners would benefit, the prosperity of the district would be revived, and an increased revenue from it would necessarily follow. I may state that no machinery has even been employed or capital expended in mining operations at Burrangong, which I think is mainly attributable to the very restrictive nature of the Local Court By-laws in force there. In several localities there is ground known to be very rich that has never yet been effectually worked, in consequence of the difficulties presented by the great quantity of water to be contended with; and it is only by considerable outlay in machinery and other preparatory works that this ground could be properly tried and proved. I have hopes that the encouragement offered by the liberal leasing system in the new regulations will have the effect of inducing persons of enterprise and capital to turn the ground in their localities to good account.

Eurongilly.

This gold field has never been proclaimed, and I have recommended that it should be, in consequence of the fluctuating and uncertain character of the yields that have been obtained from the different workings there. It was anticipated at one time that some extensive and payable "leads" existed at Eurongilly, but time and experience have shown that they were only "patches" of very limited extent, and of insignificant value, besides which the ground was of unusually great depth. I now question very much whether any one of the alluvial claims ever proved remunerative or payable, and it only remains for me to state that all mining on the alluvial ground has entirely ceased.

Some very rich quartz has been discovered at and near Eurongilly, which certainly encourages the opinion that payable reefs exist there. In most instances the stone procured, although most promising, appears to belong to "leaders" or offshoots from some main reef. I have little doubt, however, that if the workings were on some more extensive scale, and more diligently and perseveringly carried on, some important reefs would soon be opened up. The quartz claims now occupied are being constantly registered, through the want of means on the part of the miners to work them properly and effectually, and in many instances they have been entirely abandoned. This has had a most depressing effect on all concerned, and Eurongilly now presents a most dismal appearance.

A crushing-machine has been erected near some of the principal quartz claims, but the very high rate that is charged for its use (35s. per ton) has prevented many from availing themselves of it, except when the stone has been of more than ordinary value. There are at present eighty miners at Eurongilly, and the total population may, I think, number 200 persons.

Gundagai.

The alluvial diggings on this gold field are for the most part worked out and abandoned, and the attention of the mining population is now chiefly directed to the quartz-workings that have been discovered at Mount Kimo and in its vicinity, which are of a very promising and encouraging character. Several veins of quartz of a good thickness are now yielding very payable stone, and the crushings that have as yet taken place have produced highly satisfactory returns. The whole neighbourhood appears to abound in quartz of a gold-bearing character, and I feel convinced that the period is not far distant when very extensive and rich reefs will be found to exist there. At present upwards of 200 miners are at work on the quartz claims that have been taken up, who appear most satisfied with the result of their operations. A crushing-machine has for some time past been at work in the immediate vicinity of these quartz-workings, and another is in course of erection there.

Black Range, Albury.

"Rushes" have at various times taken place to the Black Range, none of which have been of any long continuance, and which consequently have not resulted in establishing for it a very favourable or important character as a gold field. The workings have hitherto been in alluvial ground of a very great depth, where much water and other difficulties had to be contended with, involving unusual expense and labour. The frontage system has invariably been followed here, and at the period of my visit a new lead had been struck at a depth of 120 feet, which tended in some degree to revive the hopes of the miners. Prospects yielding an average of 6 dwts. to the load of wash-dirt had been obtained from several claims, and sinking was being proceeded with for some distance along the lead. Gold has also been discovered in some quartz-veins at the Black Range, and the yield has been sufficiently promising to induce the erection of a crushing-machine there. The work on the quartz claims however was not pursued with any vigour, and the machine has remained idle for some time. A Company is now being formed, who will I believe take advantage of the new system of leases, and who will no doubt thoroughly test and prove the gold-bearing qualities of the quartz workings. I estimate the number of miners now at the Black Range at 130.

Tumberumba.

The mining operations carried on here are principally ground-slucing, and during the wet seasons, when water is plentiful, those so employed have moderately satisfactory returns for their labour. Some very long and expensive races have been cut in connection with many of the claims, and I have no doubt that a number of leases under the new regulations will be taken up, on which the races will be made available. The quantity of gold sent down by escort from Tumberumba, during the half-year ending 30th June last, was 1,144 ounces, and there are about 200 miners at work there, including Chinese.

Adelong.

At Upper Adelong ground-slucing on the banks of the creek is carried on to a considerable extent. The bed of the creek itself is also being constantly reworked by Chinese, who appear to obtain profitable remuneration for their labour. The population is very much scattered, and the diggings generally look remarkably quiet. They extend continuously from Upper Adelong to Adelong Proper (or Lower Adelong), a distance of about seventeen miles, and it is therefore impossible to estimate the number of miners at work there. Lower Adelong has long been well known for its very rich and important quartz reefs, four of which are now being worked on the hill opposite the township. I was however much surprised at the want of energy and activity displayed by those connected with these reefs, and amongst the miners generally. Although the Adelong reefs have long since been proved to be very rich, and still produce most satisfactory returns, there are at the present moment only sixteen claims occupied on them, which are worked in the most primitive manner, and with little vigour. Scarcely any endeavour appears to have been made to trace these valuable reefs beyond the present workings, and it is difficult to account for the singular apathy thus shown by the mining community. Very great opportunities are here afforded for the profitable employment of capital, and it is to be hoped that before long some improvement may take place in the mining prospects of this very important gold field, and that the facilities and inducements offered by the new regulations may have a beneficial effect. At a short distance below the town a large claim has been taken up in the Adelong Creek by a Victorian Company, under the 70th clause of the Gold Fields Regulations of 1861. After a period of two years of very great labour, involving a large outlay, this claim is now in working order, and the proprietors may soon look forward for some reward for their enterprise and perseverance. The quantity of gold sent down from Adelong during the half-year ending 30th June last was 5,600 ounces, and the number of miners at present on the gold field may be estimated at 800.

Braidwood.

I found the various diggings around Braidwood in the same depressed condition that appeared to characterize all the other gold fields that I visited. The mining population is very widely scattered, and no new ground has been discovered for a very lengthened period. The principal workings at present are at Mongarlowe, Little River, where about 200 Europeans and about 150 Chinese are at work; Warremucca and Sawpit Gully, with 100 Europeans and sixty Chinese. These localities occupy a space of about eighteen miles in length. At Narrega, Spring Creek, and the Shoalhaven, there are also about 180 Europeans at work. The mode of working at these places is principally box and ground slucing, and in many instances the tub and cradle may also be seen in use. The yield of gold I was led to believe was generally little more than to afford a very moderate livelihood to those employed. At Major's Creek, where the principal workings are on private land, and at Long Flat, about 220 Europeans and Chinese are
at

at work. At Jembaicumbene, the diggings are entirely on private ground, and there are about 700 Europeans and Chinese there, which certainly appears to speak in favour of this portion of the gold field, when it is remembered that each miner has to pay £1 per month for the privilege of working there.

At Araluen there is a very large population, and the number of miners cannot, I think, fall short of 2,000. The greater portion of the workings are on private ground; in fact the mining operations on the Government land are comparatively of a very insignificant nature. A number of steam-engines have been employed in connection with the claims at Araluen, but I remarked that not one was to be found in use on the Government land, which I believe to result from the more liberal nature of the system that is carried out by the owners of the private ground, which has offered greater inducements for the expenditure of capital and employment of machinery, without which no portion of the valley could be properly and efficiently worked. The system of leasing contained in the present Government regulations was hailed with much satisfaction by the mining community at Araluen, and I feel confident that its operation there will be most beneficial; and during my short stay I received intimation that several Companies intended to avail themselves of the opportunity thus afforded for testing much ground that has hitherto remained untried. I regretted to find that just previous to my arrival a very disastrous flood had swept through the valley, completely filling all the claims, and putting a stop to all mining operations, thereby inflicting great damage and loss to all concerned. This of course had a very disheartening effect on the owners of all these claims, and I fear it will be some time before they can again be placed in working order.

Nerrigundah (The Gulph).

About 300 miners are at work on this gold field, and the principal workings are at Balimbla, Tinport, Dromedary, Bumbo, and Stony Creek. At Nerrigundah proper, which is the chief diggings, a large amount of labour has been done, and some very payable alluvial claims, *situated on private ground*, are still being worked there. The other portions of this gold field present no feature worthy of remark.

In conclusion, I have the honor to state that the whole of the gold fields in the Southern District are in a most depressed condition, and I was much struck with the apathy and want of energy that appeared to characterize the mining community generally. I entertain a sincere belief however that the new Act and regulations will have a very beneficial effect, and that in a short time, under their operation, the prosperity of the gold fields will be revived.

I have, &c.,
G. O'MALLEY CLARKE, G.C.

No. 2.

THE COMMISSIONER, SOUTHERN GOLD FIELDS, to THE UNDER SECRETARY FOR LANDS.

Gold Commissioner's Office,
Young, 7 January, 1868.

SIR,

I have the honor to submit, for the information of the Honorable the Secretary for Lands, a Report on the several Gold Fields in the Southern Gold District, for the year ending 31st December now past.

The Emu Creek and Tyagong Creek Gold Fields (which are contiguous) have during the past year attracted more attention, and have consequently been deemed of more importance than any other gold fields within the limits of the Southern District. At the commencement of 1867 the diggings at Emu Creek had been quite recently discovered, and gold had only then been traced in one gully, which however was soon found to be payable only to a very limited extent. Subsequently payable workings were discovered in two adjoining gullies; but these, either for richness or extent, were not to be compared with that first discovered. These were the only payable alluvial workings that were found to exist within the area of this gold field, and did not afford occupation to those employed for more than five or six months. Owing to the very depressed state of the gold fields generally throughout the Colony, these discoveries naturally drew to Emu Creek and the neighbourhood a very large population, which at one time I should think must have numbered nearly 5,000 persons. As there was not employment for more than a third of that number on the three gullies that I have alluded to, prospecting in its various branches was very vigorously carried on, which resulted in the discovery of some very promising gold-bearing quartz reefs; but the prospecting for payable alluvial ground was attended with but very little success, as the only discovery made was in a gully on the watershed of the Tyagong Creek, known as the "Seven-mile," where a few patches of payable ground were opened up. The ground generally however, was, with these exceptional and limited portions, not found to be remunerative, and although at the time this discovery attracted much attention, raised the hopes of many, and I presume, led to the proclamation of the Tyagong Creek Gold Field, the alluvial workings there are now almost entirely worked out and abandoned.

At one time it was thought that rich deposits of gold existed in some deep ground on the flats adjoining the Tyagong Creek, and a considerable amount of labour was expended thereon, without, however, resulting in any discovery worthy of notice.

The inducements offered by the liberal leasing regulations were here taken much advantage of, and a number of leased tracts were applied for, the deposits for the majority of which have, however, since been forfeited, owing partly to the discouraging nature of the prospects obtained in the few shafts that were bottomed, and partly to the fact that many of the leases were applied for by speculators who never intended to work the ground themselves, and who, when the time came, were unable to pay the balance of the rent. This is a brief description of the alluvial workings on the Emu Creek and Tyagong Creek Gold Fields, and I have only to add that, although prospecting is still being carried on with much perseverance, I am of opinion that no further discovery of payable ground of any extent or importance will be made. The gold-bearing reefs at Emu Creek form by far the most important and permanent branch of gold mining on that field. The principal reefs are as follows:—O'Brien's Reef, the first that was discovered, has now been traced in five claims. The stone is of unusual width, averaging quite 8 feet, and the crushings have, up to this period, yielded at the rate of more than an ounce to the ton. Taking into consideration the immense body of stone the reef contains, this is of course a very good yield. I may state that one-sixth share in a claim on this reef was recently sold for £1,720.

The

The Lucknow Reef contains at present three very rich claims, with payable stone of a width of nearly 3 feet, and the yield therefrom has been very rich, in some instances reaching an average of 5 ozs. to the ton.

The Homeward-bound is likely to be the richest reef on the gold field, and has been already traced in three claims. The payable stone is of unusual thickness, and the crushings have exhibited a very high yield.

The Welcome Reef is being worked in several claims, from all of which promising stone is being raised; and although the yield from this reef has not been remarkably rich, still with such a width of stone as it contains the returns will be very satisfactory.

The other reefs of any importance are the Britannia, Wilson's, the Outward-bound, and the Leased Ground, which are all being worked, and from which promising and payable stone has been obtained.

On the Tyagong Creek Gold Field a number of reefs have been discovered and occupied, many of which are said to be payable. It is difficult however to pronounce any decided opinion as to their value, as no crushing of stone from any of them has yet taken place. I do not anticipate, however, from their appearance, that any of them will be of any great richness, although perhaps some of them may prove to be moderately payable.

The want of a sufficiency of crushing power on the Emu Creek and Tyagong Creek Gold Fields has hitherto seriously retarded the development of the reefs that have been found to exist there. Until the month of September last, but one small machine was at work, capable of crushing only about 70 tons of stone per week. Since that period several others have been erected, and at the present moment there are six machines in full work, capable of crushing nearly 600 tons of stone per week. Several others are now in course of erection, and when these are completed there will not be less than ten machines in active operation, which will crush on an average from 1,000 to 1,200 tons of stone per week.

The great scarcity of an adequate supply of water for mining purposes was much felt on these new gold fields in the early part of the last year, and caused the holders of alluvial claims much inconvenience and loss of time, and also had the effect of keeping the public in ignorance of the nature and value of the workings. During the winter, which was unusually wet, there was an abundant supply of water for all purposes, but the dry weather that has prevailed during the past few weeks has diminished the water that was stored in the numerous dams and reservoirs to a very great extent, and I much fear that should the drought continue for a short time longer, the majority of the crushing mills will be rendered temporarily idle and useless.

The population at present on the Emu Creek and Tyagong Creek Gold Fields is now about 2,500 persons, but in the absence of fresh discoveries that number must soon decrease by at least 1,000. During the past year 41,000 ounces of gold have been transmitted by escort from Grenfell, which is the entire produce of the gold fields under notice since their discovery in 1866. This gives an average yield of a little more than 700 ounces per week for the fourteen months, which certainly appears small, considering the undue excitement that these limited discoveries caused, and the large population that they drew together.

On the Burrangong Gold Field mining operations have almost entirely been confined to the old workings, and I am unable to report any new discoveries worthy of notice.

The unusually wet season of the past year enabled the holders of water rights to use them to much advantage, and some of the shallow workings have shown very remunerative yields. The Chinese miners have exhibited much perseverance and industry in working old and abandoned ground, which has afforded employment and a livelihood to a large number. I estimate the present number of miners on this gold field to be, Europeans 300, Chinese 900, and the amount of gold transmitted by escort from Burrangong during the past year was 15,274 ounces.

The Braidwood Gold Fields have not shown any material changes during the past year, and the miners have been chiefly employed on the old workings or in their immediate vicinity. The slopes of the Warrambucca, the Mongarlowe River and its tributaries, and the Shoalhaven River, continue to afford remunerative employment to a limited number.

Some attention has lately been paid to the prospecting of a quartz reef at the Little River, from which some very promising stone was extracted; but the further development of the reef and the subsequent trial crushing of the quartz did not realize the anticipations of the shareholders.

The number of miners at work on the different diggings around Braidwood on Government and private land I believe to be about 600; and the amount of gold transmitted by escort during the year was about 8,000 ounces.

Araluen still maintains its character as the leading gold field in the Colony; and the amount of gold it has produced during the year, namely, 50,000 ounces, is remarkably large, considering the great difficulties that the miners there have had to contend with, and the losses they have sustained. No less than five floods in succession occurred during the past twelve months, spreading devastation through the valley on every side, filling in claims and races, and causing incalculable loss and damage. Notwithstanding these repeated disasters, the majority of the claims were again and again opened up, which speaks as well for the untiring perseverance of the claimholders, as for the valuable nature of the deposits. The miners at Araluen have availed themselves largely of the advantages and inducements offered by the leasing regulations, and a number of leases have been taken up on ground that has hitherto remained unworked, and this has had the effect of increasing the workings on Crown Lands in a very marked manner, although the principal and larger portion of the diggings are still on private lands. The mining population at Araluen is now estimated to be about 3,000 persons.

The Gulph Gold Field continues to afford profitable employment to a limited number of miners, the majority of whom however are at work on private lands, where it would appear the more payable deposits are found to exist. The sluicing claims have been more than usually productive, which has caused increased activity in that branch of mining. I am unable to report any discoveries in any new localities, the principal workings continuing in the immediate vicinity of the older diggings. The population on this gold field may be estimated at between 500 and 600 people.

Some portions of the Adelong Gold Fields have shown some marks of improvement during the past year. At Lower Hunter some claims on the quartz reefs continue to be worked to much advantage; and on Gibraltar Hill a new reef has been discovered that has proved more than ordinarily rich, and has handsomely

handsomely repaid the claim-holders for their labour and outlay. The sluicing parties at Lower, Middle, and Upper Adelong have also reason to be well satisfied with the results of their industry during the recent prolonged wet season.

At Reedy Flat a number of leased tracts have been taken up, and some of the works and appliances that have been constructed in connection with them are of a very extensive and costly nature. In some instances races to convey water from a very great distance have been cut, and large reservoirs have been formed to store all surplus and storm water.

The yield from these leased tracts has been remarkably good, and I know some parties that cleared as much as £1,000 per man for six months' work. The amount of gold sent by escort from Adelong in 1867 was 10,800 ounces, and the number of miners—Chinese included—may be set down at 600.

During my recent visit to Tumberumba, I noticed little change in mining matters since the period of my last inspection. The mode of working there is confined almost entirely to sluicing, and the average yield per man so employed is certainly satisfactory.

Kiandra continues to support a population of some 200 persons, and the majority of the claim-holders derive a fair livelihood from their labours. Considerable excitement was recently caused by the discovery of a quartz reef at Charcoal Gully, near Kiandra, and some of the stone extracted yielded payable prospects, but in the absence of adequate machinery no sufficient quantity of quartz could be crushed to give any criterion as to the permanent value or importance of the discovery.

In tabular forms I append statements of the number of miners' rights and business licenses issued on the various gold fields in the Southern District, during the past year, and of the number of leases of auriferous tracts applied for and issued during the same period, showing the revenue derived therefrom. It will be seen that the total amount of my collections for the year has exceeded my estimate of revenue by nearly £1,000.

With respect to the general management of the gold fields, and the working of the new Gold Fields Act and Regulations, I have the honor to state that I find there are various matters that require much alteration and prompt attention.

The Appeal Court as at present constituted has been found to be almost useless and inoperative. From the fact that, as on most of the gold fields, the Police Magistrate is the only Justice of the Peace, and constitutes the Bench, an appeal from his decision has to be entertained and heard by himself alone; and even on gold fields where there are other local Magistrates it has been found that they are singularly disinclined to take any part in any matters relating to the gold fields. The period within which an appeal should be lodged requires also to be defined.

The regulations having reference to the occupation of quartz reefs has also been found to be rather vague and indefinite. The Police Magistrate on the Emu Creek gold field, where the chief quartz workings are, appears to have found great difficulty in interpreting and properly carrying out these regulations, and has in some instances placed singular and novel constructions upon them. They will require to be so altered as to prevent a recurrence of these arbitrary proceedings.

The regulations providing for the registration of claims, and for the fees to be paid in connection therewith, has been in some instances grossly abused, and requires immediate amendment in order to put an end to the imposition and abuses that have been practised.

In conclusion, I have the honor to recommend that the responsibility of reporting to the Government respecting matters generally connected with the gold fields (more especially new gold fields) should rest with one officer, as reports from various and different officials must inevitably contain contradictory accounts and statements, which can only have the effect of causing uncertainty, confusion, and dissatisfaction.

I have, &c.,

G. O'MALLEY CLARKE, G.C.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOLD FIELDS.

(PETITION—CERTAIN MINERS, ROCKY RIVER.)

Ordered by the Legislative Assembly to be Printed, 22 February, 1870.

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Gold Miners, residing on the Rocky River,—

HUMBLY SHOWETH:—

That your Petitioners have resided on the Rocky River Gold Fields for upwards of thirteen years, during the whole of which time they have continuously held a license, authorizing them to reside upon and occupy Government land, under the provisions of the Gold Fields Act and Regulations for Gold Mining purposes.

That in or about the year 1857 the Commissioner in charge of the Rocky River Gold Field (James Buchanan, Esq.) did, under the provisions of the Gold Fields Act and Regulations then in force, grant to authorized persons, to wit, Dr. Foote and party, the right to cut a water-race on a part of the Rocky River gold field, known as Sydney Flat, and from thence to Mount Jones, on said gold field,—such water-race being for the purpose of gathering the storm water which fell in the locality, and conveying it to works on Mount Jones, for washing auriferous earth.

That in March, 1861, your Petitioners did purchase from the sole representative of the original grantees the whole of their right, title, and interest in and to such water-race and reservoir connected therewith,—such purchase or transfer being sanctioned by and made in the presence of the then Commissioner (Frederick Dalton, Esq.), and registered by him.

That in the year 1863 the Government, by its officers, did survey to one Bernard Rooney two acres of land across the line of said water-race, said portion of two acres being above and below, and intersected by, said water-race, and that said Bernard Rooney, subsequent to such survey, was permitted to purchase said portion of two acres.

That from the time of such purchase your Petitioners were subject to much annoyance in cleaning and maintaining the portion of such water-race which ran through or between Rooney's portion of land; to prevent such continued annoyance your Petitioners agreed with said Bernard Rooney, that he said Bernard Rooney should clean and keep in order such portion of said water-race as ran through or intersected the portion of land aforesaid.

That in May, 1868, said Bernard Rooney did by letter request your Petitioners to come and clean "their race," where it intersected his allotment of land, stating that if such work was not performed your Petitioners would suffer loss through waste of water, and his said Bernard Rooney's garden would be damaged; this request your Petitioners complied with, and within a few days afterwards were threatened by said Bernard Rooney with an action at law for alleged damages.

Your Petitioners thereupon sought protection from the Commissioner in charge of the Northern Gold Fields; but that gentleman declined to act, stating that when Bernard Rooney purchased the aforesaid allotment of land no reserve had been made or allowed in such for the said water-race, therefore the matter would have to be decided in a Court of law.

That your Petitioners then appealed to the Minister for Lands, as chief of the Gold Fields department, for protection, but that gentleman also declined to interfere.

Thus, left unprotected and unsupported by the Government in the rights and privileges granted to them, as authorized persons by Act of Parliament, your Petitioners were compelled to engage professional assistance in defence of such.

That the cause was tried before His Honor Sir Alfred Stephen and a special jury of four, at the Assize Court in Armidale, 1869 (April), when an unanimous verdict was given for the defendants (your Petitioners), His Honor concurring in the verdict.

That in defending such action your Petitioners suffered loss to the extent of upwards of £150, the legal expenses alone amounting to £104.

Your Petitioners would most respectfully draw the attention of your Honorable House to the following enactments made and passed by the Honorable the Parliament of New South Wales :—

In the Gold Fields Act, 1861, sec. 2, the word "claim" is interpreted—xxx. "And every holding whatever occupied by virtue of this Act"; and section 5, "miner's right"—And every such holder shall during the continuance of such miner's right be deemed in law to be the owner of the claim which shall be occupied by virtue of such miner's right.

And section 2 "trespass"—Unlawful interference in any way whatever with *any water-right* or other right or easement lawfully enjoyed under this Act.

And in the Gold Fields Regulations, 1861, clause 33—And no person shall sink or drive within eight feet of any race, of whatever description, without the sanction of the Commissioner.

In the Gold Fields Act and Regulations, 1866, the above enactments are repeated; *vide* secs. 2 and 5 in the Act, and clause 15 in the Regulations.

Your Petitioners humbly submit that they were by Parliamentary grant the owners of the water-race during the continuance of their miners' rights.

That the Government did, by alienating a portion of such water-race or claim, commit a trespass on your Petitioners.

That your Petitioners lawfully enjoyed holding extended to eight feet on each side of their water-race.

That had such trespass not been committed on the water-right lawfully enjoyed by your Petitioners by Parliament grant, the said Bernard Rooney could have had no pretext for suing your Petitioners in a Court of Law, and the very heavy loss your Petitioners have sustained in defending such water-right would have been avoided.

Your Petitioners humbly pray that your Honorable House would inquire into the circumstances here set forth; and that your Honorable House will take the premises into your favourable consideration, and grant such relief as your Honorable House may in its wisdom award.

And your Petitioners, as in duty bound, will ever pray, &c, &c., &c.

[*Here follow (3) three Signatures.*]

Rocky River, February 7th, 1870.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOLD FIELDS.

(PETITION—CERTAIN MINERS, ADELONG CREEK.)

Ordered by the Legislative Assembly to be Printed, 26 April, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned persons, licensed Miners employed in mining for Gold on Adelong Creek, Adelong Township, District of Murrumbidgee, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

(1.) That your Petitioners are the holders of a claim forty yards square on the western bank of the Adelong Creek adjoining the western end of Wilson & Co.'s dam near the town of Adelong, and that your Petitioners took up the said claim in the month of December, 1867, under and by virtue of their miners' rights, and that they the Petitioners now hold renewals of their said rights from that time to the present period.

(2.) That at the time of your Petitioners' taking up the said claim in December, 1867, one Mathew Hamilton had not then purchased or applied to purchase (2) two acres adjoining the Petitioners' measurement, which land the said Mathew Hamilton has since been permitted to purchase. Survey made, and deeds granted to the said Mathew Hamilton in October, 1868; the Honorable John Bowie Wilson being then Minister for Lands.

(3.) That in consequence of said grant to the said Mathew Hamilton an injunction was obtained from the Honorable Supreme Court of the Colony of New South Wales by the said Mathew Hamilton and served on your Petitioners on the second day of November, 1868, restraining your Petitioners from any further workings in the said two acres so granted, which workings your Petitioners had commenced, and hoped to profitably retain, as your Petitioners had out of forty feet (40 ft.) of said two acres two hundred and fifty-six pounds worth of gold. 2nd Nov., 1868.
£256.

(4.) That your Petitioners on being so served with the said injunction forwarded a Petition, signed by (208) two hundred and eight miners, setting forth the injury to the said Petitioners' interests, to the then Minister for Lands, the Honorable W. Forster, which Petition was sent on the (29th) twenty-ninth day of November, 1868, protesting against the said grant to the said Mathew Hamilton as being auriferous land.

(5.) That in February, 1869, Henry Mac, one of your Petitioners, had an interview with the Hon. W. Forster, then Minister for Lands, and that the said Minister in consequence applied for the report of Mr. Frederick Wheeler Vyner, then Police Magistrate of Tumut and Adelong, who reported without taking any evidence in favour of the said Mathew Hamilton, and as your Petitioners respectfully urge against fact and as destructive of their claim.

(6.) That upon the said Minister for Lands, the Hon. W. Forster, receiving the said report, your Petitioners received a letter from the Department of Lands informing your said Petitioners that grant and deeds must issue to the said Mathew Hamilton.

(7.) That your Petitioners most respectfully beg to point out the very great hardship inflicted on their interests as gold miners by the said grant, and that your Petitioners are prepared to prove that a valuable lead of gold runs through the said two acres so granted to the said Mathew Hamilton, the same being in direct contravention of the law.

(8.) That your Petitioners pray that your Honorable House will cause to be produced to you copies of all papers, viz., applications, letters, and telegrams, both from the said Mathew Hamilton and David Wilson, the proprietor of the dam before mentioned, together with Mr. F. W. Vyner's report, and the deeds of grant, and all such other papers patineal* to the said grant to the said Mathew Hamilton as may seem to your Honorable House necessary for the obtainment of information in enabling your Honorable House to do justice to your Petitioners.

* Sic in MS.

(9.) Your Petitioners humbly pray that your Honorable House will take such steps as may give your Petitioners justice; and if the facts set forth by them be sustained, that the said deed so granted to the said Mathew Hamilton may be revoked and rescinded, and justice done to the working of your Petitioners for the foregoing reasons.

And your Petitioners will, as in duty bound, ever pray.

Adelong, 14th April, 1870.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LEASES OF CHURCH AND SCHOOL LANDS FOR GOLD MINING
PURPOSES.

(ADDITIONAL REGULATIONS.)

Ordered by the Legislative Assembly to be Printed, 15 February, 1870.

Department of Lands,
Sydney, 7 January, 1870.

His Excellency the Governor having been pleased to approve of the following Additional Regulations with respect to the issue of Leases for Gold Mining on Church and School Lands, the same are now published for general information.

WILLIAM FORSTER.

LEASES OF CHURCH AND SCHOOL LANDS FOR GOLD MINING PURPOSES.

1. The regulations dated 21st August, 1868, are hereby repealed.
 2. Leases for Gold Mining on Church and School Lands may in future be obtained by application in like manner, and will be granted subject to the several terms and conditions applicable under the regulations in force for the time-being to leases of auriferous tracts of Crown Land.
 3. The Gold Commissioner of the district will deal with such applications as with applications of the character last mentioned, and will be empowered to authorize the occupation of the land after the application shall have been forwarded by him with his recommendation for the approval of the Minister for Lands; but no person will be at liberty to commence operations until such approval shall have been duly notified.
 4. Existing authorized holdings on Church and School Lands may be converted into leases by application to the Commissioner in manner above indicated, but the preliminary marking required in other cases will not be necessary.
 5. No other mode of occupation for gold mining than that here provided for will be permitted on Church and School Lands; and any person found mining, or otherwise occupying without the requisite permission, will be prosecuted for trespass as upon private land.
 6. All moneys received for leases of Church and School Lands are to be separately accounted for.

NEW SOUTH WALES.

GOLD FIELDS ACT.

(NEW REGULATIONS.)

Presented to Parliament, in accordance with the provision of the 13th clause of the Act.

Department of Lands,
Sydney, 17 February, 1870.

REGULATIONS—GOLD FIELDS.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following new Regulations, made in pursuance of the Gold Fields Act of 1866.

WILLIAM FORSTER.

NEW REGULATIONS UNDER THE GOLD FIELDS ACT OF 1866.

1. Sections 39, 43, 44, 45, 48, 67, 77, 78, 79, 80, 81, 83, 86, 88, 92, 94, and 95, of the Regulations of 24 September, 1869, are hereby repealed. Repeals.

2. In alluvial ground the extent of a prospecting claim shall not exceed as follows :—

	Feet.	Feet.	
At a distance from any claim then producing gold, not less than half a mile	250	by 200	Prospecting claim in alluvial ground.
Exceeding half a mile and not less than 1 mile	300	by 300	
Exceeding 1 mile and not less than 3 miles ...	350	by 300	
Exceeding 3 miles and not less than 7 miles...	400	by 400	

After the claim shall have been so marked off no fewer than four men must be kept continuously employed.

3. Any person desiring to take up a prospecting claim on a declared lead may do so at a distance not less than half a mile in advance of the last paying shaft, by registering the same; and he may mark out and hold on such prospecting claim an additional claim for each man employed therein, so long as the entire extent of claim shall not exceed 320 feet. On any undeclared supposed lead double claims may in like manner be marked out and registered, so long as the entire extent shall not exceed 480 feet. All prospecting claims must be effectively and continuously worked. Any number of claims taken up for the purpose of prospecting may be amalgamated; but the additional claims, by way of reward, will only be allowed (on the discovery therein of payable gold) to the registered prospecting claim. No prospecting claim on any declared or undeclared lead shall be taken up within half a mile of any other prospecting claim. Prospecting claim on declared lead.

4. The extent of a claim in new alluvial ground shall be as follows, namely :—

	Feet.	Feet.	
One miner, not exceeding	80	by 80	New alluvial claims.
Two miners	80	" 100	
Three miners	120	" 160	
Four miners	160	" 200	

Every such claim when practicable shall be in rectangular form, and shall not exceed the extent allotted for four miners. The Commissioner may however sanction a departure from the rectangular form when found impracticable. In no case shall the length of a claim exceed twice its breadth. All claims belonging to one party shall be contiguous.

5. Claims in rivers and creeks shall be as follows :—

For one man, not exceeding	30 feet frontage.	River claims.
For two men	60	
For three	90	
For four	120	
For five	150	
For six	180	

extending across the whole bed.

6. Claims on quartz reefs shall be as follows :—

For two miners, not exceeding 60 feet on the base-line by 100 yards.	Quartz claims.	
For three		90 feet by 100 yards.
For four		120 " "
For five		150 " "
For six		180 " "

Provided that until the party shall have commenced crushing, only one-half of the number need be employed. Spare ground, or ground held in excess by any working party, may be taken up according to the extent available. The boundaries of each claim shall be marked at each end of the line or reef, and at each corner, by substantial pegs, securely sunk into the ground, and leaving at least 2 feet of each of them at all times exposed to view.

Applications for sites for machinery.

7. Every application for permission to erect machinery must be in writing, and duly registered, notice of application being also posted on the proposed site. At the expiration of four clear days, should no objection be lodged and upheld, the Registrar shall issue a certificate of registry. Every such site shall be of the same dimensions and form of measurement as prescribed for business allotments in the case of machinery worked by steam. For a puddling-machine driven by horses, $\frac{1}{4}$ of an acre only shall be allotted: Provided that the Commissioner may under special circumstances permit a different form of measurement and allot a different area.

Leases of old alluvial ground, quartz reefs, and river-bed.

8. Leases will be granted of from 1 to 25 acres of old or abandoned alluvial ground or quartz reefs, and from 200 to 1,000 yards of a river-bed, for a period not exceeding five years, at an annual rent of £2 per acre, or per 100 yards respectively.

Leases of new alluvial ground.

9. No lease of new or untried alluvial ground will be granted unless within special areas, ascertained by competent persons after the fullest investigation not to contain any auriferous ground capable of being worked at a less depth than 250 feet, and notified in the Government Gazette; within such areas, leases of from 1 to 10 acres will be granted for a period not exceeding five years, at an annual rent of £2 per acre.

Surveys of quartz leases.

10. Quartz leases shall be marked upon a base-line, and shall be contiguous or at a distance of not less than 48 yards from each other. Should that distance not be preserved they will be measured as if marked in contiguity. Leases shall be marked upon the base-line in the proportion of 48 yards for each acre up to 5 acres, 32 yards exceeding 5 up to 20 acres, and 24 yards exceeding 20 acres—the width of the claims being regulated by the Surveyor, in accordance with Schedule B of Regulations of 1869. The Commissioner in charge shall in case of dispute determine the direction of the base-line, and any other matter in connection with the priority or mode of marking and notice.

Applications for leases.

11. Any holder or holders of a miner's right, desirous of obtaining a lease of auriferous land, shall, in the case of a river-bed or quartz reef, erect at each end of the portion of river-bed or quartz reef, and in the case of alluvial ground, at each angle of the land proposed to be leased, a post not less than 3 inches square, and standing 3 feet in height above the surface of the ground, with notice thereon of intention to apply to lease such ground; and shall within four (4) days of such preliminary marking substitute for the original notice on such post a board with the words "Applied for Lease," together with the date of such application, the name and address of the applicant, or names and addresses of the applicants, and the extent of the area applied for, legibly marked thereon; and such posts shall be maintained at the expense of such applicant or applicants until the application shall have been granted or refused. The applicant or applicants, as the case may be, will also be required within four (4) days to post a copy of every such notice at the nearest Post, Police, and Mining Registrar's Office, and apply in writing to the Commissioner in charge for such lease, setting forth the boundaries and area of the ground proposed to be taken up, the machinery intended to be used, and describing the proposed method of working, the extent and nature of preparatory work to be performed, and, if the application be on behalf of a company, the constitution of the company, the number of shares, and the names of the shareholders.

Rent and deposit.

12. The rent for each year must be paid in advance, and the application for lease accompanied by a deposit of £5 when the extent of ground does not exceed 10 acres, and £5 for every additional 10 acres or portion of 10 acres, or £2 for every 100 yards of a river bed, together with the fee for survey, as per Schedule C of Regulations of 1869—such deposit to be forfeited by the applicant should the lease not be taken out within one month after the granting of the same shall have been duly notified.

Applications forwarded to Government.

13. The Commissioner in charge shall forward to the Government every application for lease, with his report thereon, and may issue the lease whenever duly authorized; and if the notices required in such case shall have been duly posted, and after the expiration of fourteen days from the day when the same were so posted, no objection to such lease shall have been preferred to the Commissioner in charge and upheld, the applicant or applicants may occupy the ground subject to the decision of the Government as to the granting of such lease.

Conditions of leases.

14. Leases will be subject to the following conditions:—

1. That the ground applied for is not required for any public purpose, or is not in the authorized occupation of any person.
2. That labour shall be employed upon the ground as follows, namely:—Fourteen days after application, should no notice of objection have been received from the Commissioner in charge—one man for each acre, and in a river bed two men for every 100 yards, shall be immediately employed thereon; and within one month from the issue of the lease, an additional man for each acre; and in a river bed, two additional men for each 100 yards: Provided always that while steam or water power is employed, each horse-power of the machinery, and each horse employed in draught or in driving machinery shall be computed as equal to two men; and when other works of an expensive nature, such as dams, reservoirs, or races have been constructed, a diminution in the number of men required to be employed will be allowed at the rate of two men for every £100 so expended, to be determined in case of dispute by the Commissioner.

Ground to be taken up in block claims.

15. When the sinking in new ground shall be found not to reach a depth of 60 feet, of which the bottoming of one or more shafts on the supposed line of lead shall be a sufficient test, unless the Commissioner shall specially sanction a further testing, all markings on the supposed line of lead shall be null, and the ground shall then be open for taking up block-claims: Provided that each miner shall have the right to include in his block-claim any shaft which had actually been commenced by him, taking such shaft for the centre.

Frontage system when in operation.

16. When any person shall strike payable gold at a depth not less than 60 feet, the frontage system shall be deemed to be in operation and the lead declared. And all claims previously held on such lead shall be cancelled, and the holders thereof shall be entitled to occupy claims according to their priority of occupation on the lead, excepting where any claim-holder may have sunk a shaft at least 20 feet in depth, in which case he shall be entitled to the claim in which his shaft is situated.

17. When on any declared lead the sinking shall have been found to have diminished in depth so as not to reach 60 feet, the frontage system shall cease, and block-claims thereafter shall thereupon be taken according to priority of occupation on the frontage. Frontage system when to cease.

18. The length of every frontage claim shall be at a rate not exceeding 40 feet for each miner, but no such claim shall be taken up by a greater number than six miners. Frontage claims.

19. No person shall remove or destroy any peg or post, marking the boundary of a lease or claim, or deface or obliterate any notice thereon, on penalty of forfeiture of any privilege under the Regulations. Prohibition to remove or destroy marks.

20. The Commissioner in charge may authorize in writing the construction of a road or tramway from any lease, claim, or authorized holding, over or through any other lease, claim, or authorized holding: Provided always that any person applying for such authority shall, with such application, lodge in the hands of such Commissioner full compensation for any damage or injury that may accrue from the passage of such tramway or road through or over any lease, claim, or other authorized holding as aforesaid; and also give notice in writing to the owner or owners of every such lease, claim, or authorized holding, of the intention to apply for such permission—the amount of compensation, if disputed, to be determined by the Commissioner in charge and two assessors. Permission to construct roads and tramways.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

JOSEPH NATHANIEL COOKE.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 24 February, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Joseph Nathaniel Cooke, gold miner of Nerrigundah,—

RESPECTFULLY SHOWETH :—

That under the hand of the Mining Registrar of the District, himself and John Cooke were duly registered, on the 23rd August, 1869, as the owners of a tail-race in Bullock Creek, on the Nerrigundah Gold Field; and that up and previous to that period, the said John Nathaniel Cooke had expended in money value labour and materials about £800, in the construction of the said tail-race and other works appertaining. This expenditure commenced in May, 1868.

That on the 28th August, 1869, Messrs. N. Riley and W. Jessop trespassed upon the same, and on the 29th October of the same year the Petitioner took the necessary proceedings to put an end to such trespass.

That the defendants on that date, being before W. S. Caswell, Esq., Police Magistrate, of Moruya, elected to be tried before assessors; and Messrs. Joseph Parker and Charles Watson were the assessors appointed.

That Petitioner, relying upon the 15th section of the Gold Fields Regulation Act of 1866, represented that no person was authorized to sink or drive within eight feet of any race of whatever description, and Petitioner asked that witnesses should be examined on his behalf. Mr. Caswell refused to take the testimony offered, and dismissed the case.

That your Petitioner applied to Mr. Caswell, in his capacity as Police Magistrate, being authorized by Order in Council to exercise the powers of Clerk of Petty Sessions, for a *précis* of the proceedings in the case, and Mr. Caswell refused to reply favourably to the request, alleging that he was not compelled to record the same.

That the refusal of Mr. Caswell, as above, deprived your Petitioner of the opportunity of resorting to a Court of Appeal under the provisions of the Gold Fields Act, and thus deprived him of his rights under the statute law of the Colony.

Your Petitioner therefore having suffered material loss and injury through the Police Magistrate's remissness, and being deprived thereby of his beneficial interest in a race of the present value of £800, respectfully prays that your Honorable House will take his humble Petition into consideration, and adopt such measures relating thereto as may be expedient.

And your Petitioner, as in duty bound, will ever pray, &c., &c., &c.

JOSEPH NAT. COOKE.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEWCASTLE STEAM COAL CRANES.

(CORRESPONDENCE AND RETURNS.)

Ordered by the Legislative Assembly to be Printed, 3 May, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly, dated 29 October, 1869, That there be laid upon the Table of this House, Copies of the following Papers :—

- “ (1.) The bond and specification of the conditions and terms of the
 “ present contract for working the Newcastle Steam Coal Cranes ; also,
 “ all correspondence, letters of complaint, and petitions in reference to the
 “ management of the said Cranes, and the Railway store accounts from May
 “ 14th, 1868, to October 28th, 1869.
- “ (2.) The number of tons of coal the Government have received payment
 “ for from the Colliery owners or their agents, from May 14th, 1868, to
 “ October 13th, 1869, inclusive ; also, the number of tons of coal the
 “ Government have paid the contractor for shipping by the Steam Cranes,
 “ for the same period.
- “ (3.) What number of Cranes, out of the eight, have been broken down at
 “ one time during the contract.”

(Mr. Lee.)

NEWCASTLE STEAM COAL CRANES.

No. 1.

ADVERTISEMENT INVITING TENDERS FOR LEASE OF STEAM CRANES.

Department of Public Works,
Railway Branch,
Sydney, 16 April, 1868.

Contract for working steam cranes, Newcastle.

TENDERS will be received at this office, until Tuesday, the 5th May, at noon, from persons willing to contract for the working of the steam cranes on the wharf at Newcastle, from 15th May next to the 31st December, 1869,—the contractor finding all labour, fuel, stores, tools, and all other matters and things required for the proper and efficient working of same.

Specification, conditions, and form of tender may be seen, and further particulars obtained, at the offices of the Engineer for Existing Lines, Sydney Station, and the Traffic Manager of the Great Northern Railway, Newcastle.

JAMES BYRNES,
Commissioner for Railways.

JAMES RUSSELL.
ALEX. BROWN.

Witness.—JOHN WOOD, jr.

No. 2.

TENDER ACCEPTED.

The Honorable the Minister for Public Works, Sydney.

Newcastle, 1 May, 1868.

SIR,

I beg to submit the following tender for the working of the steam cranes at Newcastle, from the 15th May, 1868, to 31st December, 1869, viz. :—

To put on shipboard all coal coming to the wharf for shipment, by means of the steam cranes which are now erected or which may hereafter be erected, either by day or night or both, at the uniform rate of 2½d. per ton; also, to load or unload by means of the steam cranes any other goods or cargo at the same rate, namely, 2½d. per ton.

The coal for shipment to be placed on the wharf by the Government engines as heretofore, and I agree to find all horses, manual labour, fuel, tools, oil, &c., further required for placing it on shipboard, and to keep the cranes in efficient working order, in accordance with the specification issued for the working of the cranes.

I beg to submit Messrs. Alexander Brown and John Wood, both of Newcastle, who are willing to become my sureties in the sum of £1,000 each, and myself for £2,000, as required.

I would further make reference to the different Coal Companies using the cranes as to my eligibility for carrying out the above contract, viz. :—Messrs. Morehead & Young, Lambton Colliery, the Wallsend Coal Company, the Waratah Coal Company, and the Messrs. J. and A. Brown of New Lambton.

I have, &c.,
JAMES RUSSELL.

We, the undersigned, beg to say that we are willing to become security for Mr. James Russell, each of us in the sum of £1,000 sterling, for the due performance of the contract for working the steam cranes at Newcastle, from 15th May, 1868, to 31st December, 1869.

ALEXR. BROWN.
JOHN WOOD, JUNIOR.

Newcastle, 1st May, 1868.

Witness.—JAMES RUSSELL.

No. 3.

Government Railways.—Existing Lines Branch.

SPECIFICATION for working the steam cranes, Newcastle.

1. The work to be executed, or the services to be performed under this contract, will consist in the loading and unloading of all goods, coals, or cargo of any kind whatsoever, requiring to be shipped or unshipped by means of the steam cranes now erected, or which may be hereafter erected at Newcastle.

2. The cranes as they now stand, with all their appliances and tools, will be handed over to the contractor, who will thereupon become responsible for their safety and good condition during the term of his contract.

3. The contractor shall find security in the sum of £2,000; himself and two sureties in the sum of £1,000 each, that he will *maintain the cranes, with all their gear, appliances, and tools, in thorough working order during the time of his contract*, and perform all the other conditions and things required under the contract.

4. The contractor shall be bound to maintain the whole of the cranes, with all their gear, appliances and tools, in good repair and in thorough working order, to the satisfaction of the Engineer for Existing
Lines

Lines of Railways, or any other officer who may be appointed by the Government to supervise them; and he and his sureties will be held wholly responsible and liable in the full amount of their respective bonds, for all accidents, breakage, damage, or injury of every description whatsoever, which may occur to the cranes, or that may result in any way from or be caused by them while being worked during the term of the contract; and on the termination thereof, the contractor shall be bound to hand over to the Government the cranes, with all their gear, tools, tackle, and appliances of every kind whatsoever, in thoroughly good repair and efficient working order, to the satisfaction of the Engineer for Existing Lines of Railways, or such officers as the Government may appoint to receive the same.

5. Should any of the cranes break down, or be rendered unable to work by reason of any damage or injury they may have sustained while in charge of the contractor, he shall immediately cause the same to be properly repaired, at his own cost, to the satisfaction of the Engineer aforesaid, or other authorized officer; and should he neglect or omit to do so, then the latter may cause such repairs as he may deem necessary to be effected, and shall charge the cost of the same against any moneys which may be then due or which may thereafter become due to the contractor; and should such moneys not be sufficient to defray the cost thereof, the contractor or his sureties shall immediately make good the deficiency.

6. The contractor shall find and provide at his own cost all labour, fuel, oil, and other stores, tools (if any should be required beyond those now on the ground), and all other matters and things, the best of their respective kinds, required for the proper and efficient working of the cranes, and the expeditious loading and unloading of coals or other cargo requiring to be shipped or unshipped by them; and for the due performance of all the other requirements and conditions of the contract; and he shall not fail to maintain at all times during the period of his contract a sufficient staff of skilled mechanics and other labourers to ensure the safety of the cranes and their proper and expeditious working. Should he fail to do so, the Commissioner for Railways may employ such additional mechanics or labourers as he may deem necessary to work them, and shall deduct their wages from any moneys then due, or which may thereafter become due by the Government to the contractor, or otherwise charge the amount of the said wages to the contractor or his sureties.

7. The contractor shall state in his tender the rate per ton at which he is willing to contract for loading on board of ships all coals coming to the wharf or cranes for shipment; and the rate per ton for loading or unloading, by means of the cranes, other cargo of whatsoever kind it may be.

8. In order to avoid mistakes as to the extent of the duties of the contractor in regard to the loading or unloading of coals or other cargo, it is distinctly to be understood that in case of coals or other cargo requiring to be placed on shipboard by means of the cranes, the trucks or other vehicles containing them will be brought to and left in the nearest disengaged siding by the Railway Traffic Manager or his authorized subordinate. All further shunting necessary to bring them to the cranes and return the trucks to such place as may be appointed by the said Traffic Manager or his subordinate shall be performed by the contractor at his own cost; and with regard to cargo unloaded by the cranes, the trucks for receiving or containing the same shall be shunted by the contractor from and to such siding or other portion of the line as may be directed by the Traffic Manager of the Great Northern Railway or his authorized subordinate.

9. The contractor will be held strictly bound by, and shall conform to any regulations of the Government now in force, or which may be hereafter in force in regard to the management of the port, shipping wharfs, or cranes at Newcastle; and should he infringe any such rules or regulations as aforesaid, he shall for every such infringement forfeit and pay to the Government such sum not exceeding £20 by way of fine as may be imposed by the Commissioner for Railways.

10. The contractor shall in all cases be bound to work overtime when called upon to do so.

11. Payments will be made monthly to the contractor in accordance with the terms specified in his tender, on the number of tons of coals or other cargo loaded or unloaded within that time, on the certificate of the Traffic Manager of the Great Northern Railway.

12. Should the contractor become insolvent or in any way take the benefit of any Act of Parliament relating to insolvent debtors, then the contract shall be void and of no effect, and the Government may thereupon take possession of the cranes, as well as all stores, tools, or other matters thereunto appertaining, whether the property of the contractor or the Government, and may retain or use the same for the working of the cranes without being in any way liable to the contractor therefor; and any such stores, tools, or other matters then the property of the contractor shall be considered as thereby forfeited to the Government by reason of such failure or insolvency.

13. The contractor shall not sub-let or assign over his contract in respect of any of the cranes or the working thereof without the special written sanction of the Government given under the hand of the Commissioner for Railways.

14. The contractor will be held strictly bound to give equal facilities and despatch as required by the wharf regulations to the persons requiring the use of the cranes for the purpose hereinbefore mentioned.

15. Should it appear to the Government that the contractor is not performing the service or work referred to in this contract satisfactorily, or with the requisite despatch, then they shall have full power to take immediate possession of the whole of the cranes, tools, tackles, gear, and appliances of every kind, whether the property of the Government or the contractor, and either to annul the contract altogether or appoint such other person or persons as they may deem fit to carry on the same, the contractor and his sureties remaining liable to the Government for any loss or damage which may have been or may be sustained by reason of his failing to carry out his contract satisfactorily.

16. There will be no objection to the contractor making such charges to the owners or masters of vessels, receiving coals from the cranes, for trimming such coals (should they desire the employment of, and should he supply proper trimmers for the purpose) as may be mutually agreed upon between them.

17. The contract is for working all the steam cranes the property of the Government, from 25th May, 1868, to 31st December, 1869.

18. Night service will be considered as between the hours of 6 p.m. on the one day until 4 a.m. on the following, and will be paid for on condition that the contractor keeps at least three gangs at work.

JAMES RUSSELL.
ALEX. BROWN.
JOHN WOOD, JUNR.

No. 4.

ARTICLES OF AGREEMENT, made and entered into this second day of July, in the year of our Lord one thousand eight hundred and sixty-eight, between James Russell, of Newcastle, in the Colony of New South Wales, contractor, of the one part, and the Commissioner for Railways in the said Colony, a Corporation sole, created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, No. 19, of the other part,—

WITNESS that the said James Russell, hereinafter styled or referred to as the contractor, for himself, his heirs, executors, or administrators, doth hereby covenant, promise, and agree with and to the Commissioner for Railways aforesaid and his successors, that he, the said contractor, shall and will provide all labour, fuel, oil, stores, tools, and all other matters and things required for, and do and perform everything necessary in and about the proper and efficient working of the Government steam cranes on the wharf at Newcastle, in connection with the Existing Lines of Railways in the said Colony, and shall work the said cranes for the Commissioner for Railways, by loading and unloading therewith all goods, coals, or cargo of any kind whatsoever requiring to be shipped or unshipped by means of the steam cranes now erected, or which may be hereafter erected on the wharf at Newcastle aforesaid, for a period commencing on the fifteenth day of May, one thousand eight hundred and sixty-eight, and terminating on the thirty-first day of December, one thousand eight hundred and sixty-nine; and at and after the uniform rate or price of two-pence farthing per ton, whether such loading and unloading be done by day or by night, or both: That the contractor shall keep and maintain the whole of the cranes, with all their gear, appliances, and tools, in good repair and in thorough working order, to the satisfaction of the Engineer for Existing Lines of Railways, or any other officer who may be appointed by the Commissioner for Railways or his successors to supervise them; and shall and will make good and repair all and every breakage, damage, or injury of every description whatsoever which may occur to the cranes, and shall keep the Commissioner for Railways and his successors harmless and indemnified from all actions, suits, claims, or demands that may arise or be made, or that may result in any way from or be caused by the said cranes while being worked during the term of the contract; and on the termination thereof the contractor shall hand over the said cranes to the Commissioner for Railways or his successors, with all their gear, tools, tackle, and appliances, of every kind whatsoever, in thoroughly good repair and efficient working order, to the satisfaction of the Engineer for Existing Lines of Railways, or such officer as the Commissioner for Railways or his successors may appoint to receive the same: That should any of the cranes break down or be rendered unable to work by reason of any damage or injury they may have sustained while in charge of the contractor, he shall immediately cause the same to be properly repaired at his own cost, to the satisfaction of the Engineer aforesaid or other authorized officer; and should he neglect or omit to do so, then the latter may cause such repairs as he may deem necessary to be effected, and charge the cost of the same against any moneys which may be then due or which may thereafter become due to the contractor; and should such moneys not be sufficient to defray the cost thereof, the contractor or his sureties shall immediately pay to the Commissioner for Railways the amount of the deficiency: That the contractor shall at his own cost maintain at all times during the period of his contract a sufficient staff of skilled mechanics and other labourers to ensure the safety of the cranes, and their proper and expeditious working; should he fail to do so the Commissioner for Railways may employ such additional labourers or mechanics as he may deem necessary to work them, and shall deduct their wages from any moneys then due or which may thereafter become due to the contractor, or otherwise charge the amount of the said wages to the contractor, which amount shall, upon the request in writing of the Commissioner for Railways, be immediately paid by the contractor to him: That the contractor shall and will in all things conform to any regulations of the Government now in force, or which may hereafter be in force, in regard to the management of the port, shipping, wharves, or cranes at Newcastle, and should he infringe any such rules or regulations as aforesaid, he shall for every such infringement forfeit and pay to the Commissioner for Railways such sum not exceeding £20, by way of fine, as may be imposed by the Commissioner for Railways: That the contractor shall in all cases work overtime when called upon to do so: That the contractor shall not sublet or assign over his contract in respect of any of the cranes or the working thereof, without the special written sanction under the hand of the Commissioner for Railways: That the contractor shall and will at all times strictly give equal facilities and despatch as required by the wharf regulations to the persons requiring the use of the cranes for the purpose hereinbefore mentioned: That in order to avoid mistakes as to the extent of the duties of the contractor in regard to the loading or unloading of coals or other cargo, it is distinctly to be understood, that in case of coals or other cargo requiring to be placed on shipboard by means of the cranes, the trucks or other vehicles containing them will be brought to and left in the nearest disengaged siding, by the Railway Traffic Manager, or his authorized subordinate; all further shunting necessary to bring them to the cranes, and return the trucks to such place as may be appointed by the said Traffic Manager or his subordinate, shall be performed by the contractor at his own cost; and with regard to cargo unloaded by the cranes, the trucks for receiving or containing the same shall be shunted by the contractor from and to such siding or other portion of the line as may be directed by the Traffic Manager of the Great Northern Railway or his authorized subordinate: That night service under this agreement will be considered as work done between the hours of 6 p.m. on the one day until 4 a.m. on the following, and will have to be paid for only if the contractor shall keep during these hours at least three gangs at work continuously: That there will be no objection to the contractor making such charges to the owners or masters of vessels receiving coals from the cranes for trimming such coals (should they desire the employment of, and should he supply proper trimmers for the purpose) as may be mutually agreed upon between them: That if it should appear to the Commissioner for Railways that the contractor is not performing the service or work referred to in this contract, or satisfactorily, or with the requisite despatch, then he shall have full power to take immediate possession of the whole of the cranes, tools, tackle, gear, and appliances of every kind, whether the property of the Commissioner for Railways or the contractor, and either to annul the contract altogether, or appoint such other person or persons as he may deem fit to carry on the same, the contractor and his sureties remaining liable to the Commissioner for Railways for any loss or damage which may have been or may be sustained by reason of his failing to carry out his contract satisfactorily: That should the contractor become insolvent or in any way take the benefit of any Act of Parliament relating to insolvent debtors, then this contract shall be void and of no effect, and the Commissioner for Railways may thereupon take possession of the cranes, as well as all stores, tools, or other matters thereunto appertaining, whether the property of the contractor or the Commissioner for Railways, and may retain

retain or use the same for the working of the cranes, without being in any way liable to the contractor therefor; and any such stores, tools, or other matters then the property of the contractor shall be considered as thereby forfeited to the Commissioner for Railways, by reason of such failure or insolvency: That the Commissioner for Railways shall and will pay the contractor for all work done by him under and in pursuance of the terms of this agreement in loading and unloading goods, coals, and other cargo of any and every kind whatsoever required to be shipped or unshipped by means of the said steam cranes at and after the uniform rate or price of two-pence farthing per ton, whether such loading be done by day or by night, or at both times, such payment to be made by monthly payments for the number of tons of coals or other cargo loaded or unloaded within that time, upon the certificate from time to time of the Traffic Manager for the time being of the Great Northern Railway; and it is hereby declared that the obtaining such a certificate monthly and every month during the continuance of this contract shall be a condition precedent to the contracts having any claim or right of action against the Commissioner for Railways for any money claimed to be payable under this contract.

In witness whereof, the said James Russell has hereunto set his hand and seal, and the Commissioner for Railways his official seal, the day and year first before written.

Signed, sealed, and delivered by the said James
Russell, in the presence of—

JOHN L. BEESTON.

JAMES RUSSELL.

The Seal of the Commissioner for Railways was
affixed hereto, in the presence of—

R. MOODY, Chief Clerk.

No. 5.

BOND.

Know all men by these presents, that we, James Russell of Newcastle, in the Colony of New South Wales, contractor, Alexander Brown of Newcastle, aforesaid, and John Wood junior, of Newcastle, aforesaid, are held and firmly bound unto the Commissioner for Railways in the said Colony, a Corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, No. 19, in the penal sums following, that is to say, the said James Russell in the penal sum of two thousand pounds sterling, and the said Alexander Brown and John Wood in the sum of one thousand pounds sterling each, to be paid to the Commissioner for Railways aforesaid and his successors; for which said several payments well and truly to be made we severally and respectively according to our several and respective obligations bind ourselves and our several and respective heirs, executors, and administrators, and every of them, firmly by these presents. Sealed with our seals; dated the second day of July, one thousand eight hundred and sixty-eight.

WHEREAS by Articles of Agreement bearing even date herewith, and made between the above-bounden James Russell of the one part and the Commissioner for Railways aforesaid of the other part, the said James Russell has covenanted and agreed with the Commissioner for Railways aforesaid to provide all labour, fuel, oil, stores, tools, and all other matters and things required for, and to do and perform everything necessary in and about the proper and efficient working of the Government steam cranes on the wharf at Newcastle, in connection with the Existing Lines of Railway in the said Colony, and to work the said cranes for the Commissioner for Railways, by loading and unloading therewith all goods, coals, or cargo, of any kind whatsoever, requiring to be shipped or unshipped by means of the steam cranes now erected or which may be hereafter erected on the wharf at Newcastle aforesaid, for a period commencing on the fifteenth day of May, one thousand eight hundred and sixty-eight, and terminating on the 31st day of December, one thousand eight hundred and sixty-nine, and at and after the uniform rate or price of two-pence farthing per ton, whether such loading and unloading be done by day or by night or both: And whereas the said Alexander Brown and John Wood have severally offered to become and be bound to the Commissioner for Railways aforesaid and his successors for the due performance and fulfilment of the said contract, which offer the Commissioner for Railways aforesaid hath accepted: Now the condition of this obligation is such that if the said James Russell do and shall well and truly observe, perform, fulfil, and keep all and every the terms conditions and stipulations of the hereinbefore recited Articles of Agreement, and do and shall perform the services therein agreed to be done in accordance therewith in all things, then this obligation shall be void and of none effect, otherwise to be and remain in full force and virtue.

No. 6.

LAIDLEY, IRELAND, & Co., to THE SECRETARY FOR PUBLIC WORKS.

Sydney, 14 August, 1868.

SIR,

From time to time we have received from the Secretary of the New South Wales Co-operative Mining Works, Newcastle, complaints as to the delay in loading vessels in that port; and from all we can gather,

gather, arising from some partiality on the part of the Government officials. This being the case, as given to us, we have the honor to bring it under your notice, and should esteem it an especial favour if you would issue such instructions as will in future prevent the necessity of our lodging complaints.

In order that you may be able to see exactly how the matter stands, we subjoin extracts from Captain C. Robertson's letter to us on the subject, under date 30th July, viz. :—"It is with regret that I feel myself bound to formally complain of the treatment the Co-operative Coal Company receives from the Government Wharfinger at this port. I have repeatedly tried to get a second crane, to keep our mine going, and Mr. Scott refuses to allow two vessels under at once, although they are in turn, and the mine is only working half-time. Since Monday last we could have shipped nearly double the quantity of coal, and had vessels waiting to load, but the reason assigned was that our Company was only allowed one crane; and thus we are deprived of the opportunity of loading vessels when we could do so."

This statement is borne out by the captain of the barque "City of Melbourne" to us as follows, viz. :—Arrived Newcastle 25th August (Saturday); ready for loading Monday morning, alongside wharf, ahead of crane. Messrs. Scott & Collins, on being informed that she was to load Co-operative coals, ordered her into the stream, and she did not load until the Friday following, thus losing one entire week; and this in the face of the fact that had she been allowed to remain she could have been loaded on the Monday early. This morning Captain Robertson writes that he is compelled, from the before-mentioned cause, to make a further complaint, and that a vessel loading for us for Sydney had gone to another Company to load her.

These delays being to us of a most injurious character, we trust you will give the matter your early attention, with a view to some alteration being made; and soliciting your kind consideration of the foregoing,—

We have, &c.,
LAIDLAY, IRELAND, & CO.

Mr. Beeston to investigate this matter immediately and report.—J.B., 15/8/68.
Railways, 15/8/68.—J.L.B.

No. 7.

MR. BEESTON'S REPORT AND MR. SCOTT'S REPORT THEREON.

I enclose copy of Wharfinger's report, from which I think the Commissioner will perceive that the Co-operative Company (if they could produce the quantity) could not bring them in with the limited quantity of wagons that they have at command. From personal knowledge, I am aware that greater forbearance has been shown towards this Company than any other, and they have I think the least ground for complaint. To give them two cranes (except when a vessel is just finishing) would be folly, as they do not produce scarcely 300 tons a day. The only way to remedy the evil is for them to get a sufficient supply of wagons, if they can produce the coal required by the regulations.—J.L.B. 18/8/68.

Mr. Scott to J. L. Beeston, Esq.

Newcastle, 18 August, 1868.-

SIR,

I beg to acknowledge receipt of letter, dated 14th instant, from Messrs. Laidley, Ireland, & Co., complaining of delay to vessels, and likewise partiality.

1st. Whatever delay occurs to the vessels loading Co-operative Company's coals is occasioned by their being unable to supply a larger quantity of coals, and likewise in their very limited number of wagons. As a proof of this, I would especially direct your notice to the guard's daily report, wherein you will find that we often make trips with five or seven wagons each way, for the purpose of affording them every facility in our power to keep their pits at work; this, with the exception of the A. A. Company, is a system which we do not adopt towards any other Company, thereby proving if any partiality exists they reap the benefit, at the same time evincing our desire to do all we can do to ship their coals.

With reference to the "City of Melbourne," I beg to offer the following statement for your consideration :—

July 25,	Co-operative Company, loading	"Cray Ellichee"	'	supplied	200 tons
27,	"	"	brig	"Caroline"	...	"	100 "
28,	"	"	"	"	...	"	192 "
29,	"	"	schooner	"Vibilia," and "Armston"	"	"	250 "
30,	"	"	"	"Amateur" and "City of Melbourne"	"	"	180 "
31,	"	"	"	"City of Melbourne"	...	"	150 "
3,	"	"	ship	"Starling"	...	"	120 "
4,	"	"	"	"	...	"	250 "
5,	"	"	"	"	...	"	160 "
6,	"	"	"	"	...	"	160 "

You will perceive from this statement, which is correct, that the average quantity of coals supplied is under the required quantity for one crane, and that the second vessel has been berthed before the completion of the vessel under. I might mention more cases of the kind—as, for instance, August 14th, two vessels occupying cranes Nos. 1 and 2, the "Vibilia" and "Our Hope," and at all times when I am satisfied the coals are there.

I may venture to suggest that there is a method of removing this grievance, viz., of allowing vessels to occupy the shoots, as in former times, as they are in turn; but it would not facilitate their despatch,

despatch, and I am quite sure I should have to bear any amount of abuse for my incapacity of working the cranes to advantage.

Further I may add, the Co-operative Company lose sight of the principal feature, viz., the number of wagons they possess, numbering thirty-six, a quantity quite unable to supply what they desire.

I have, &c.,
W. SCOTT,
Wharfinger.

Report enclosed, 19/8/68. P. Wks., 19/8/68.
Inform.—J.B., 19/8/68.
Messrs. Laidley, Ireland, & Co., 20 August, 1868.

No. 8.

THE UNDER SECRETARY FOR PUBLIC WORKS to MESSRS. LAIDLEY, IRELAND, & Co.
Department of Public Works,
Sydney, 20 August, 1868.

GENTLEMEN,

In reference to your letter of the 14th instant, complaining that in consequence of partiality shown to other shippers by the Government officials at Newcastle, the coals of the New South Wales Co-operative Mining Company are not shipped with adequate rapidity, and that the Wharfinger has refused to allow two vessels under the crane at the same time,—I am directed by the Honorable the Secretary for Public Works to inform you that it appears from reports in this matter which have been made by the Wharfinger, and also by the Traffic Manger, Mr. Beeston, the Co-operative Company (if they could produce the quantity of coal at the mine) could not bring it to the wharf with the limited number of wagons which they have at command; and Mr. Beeston states that to give the Company the use of two cranes (except when a vessel is just finishing) would be folly, as they do not produce more than 300 tons a day. If the Company can produce the quantity of coal required by the regulations, in respect of the occupancy of the cranes, their best course to remedy the evil they complain of is to procure a sufficient supply of wagons to bring it to the wharf.

2. The Traffic Manager adds, that from his own personal knowledge he is aware that very great forbearance has been shown the Co-operative Coal Company, and that they have no cause whatever for complaint.

I have, &c.,
JOHN RAE.

No. 9.

MESSRS. LAIDLEY, IRELAND, & Co., to THE SECRETARY FOR PUBLIC WORKS.

Sydney, 31 August, 1868.

SIR,

Referring to your reply of 20th instant, 68/2286, to ours of 14th, on the subject of complaints against some of the Government officials in Newcastle, we do ourselves the honor to enclose herewith for your perusal a statement signed by Charles Robertson, Secretary of the Trust for the Newcastle Co-operative Coal Mining Company, bearing out what we have already laid before you, and would respectfully suggest that an inquiry be instituted into the facts therein alleged, which if borne out prove most incontestably that partiality has been shown, and will, if unchecked, continue to be shown, much to the detriment of the Co-operative Mine.

We should esteem it an especial favour if you would give the enclosed your personal perusal and consideration, and have the honor to be,

Sir,
Your obedient servants,
LAIDLEY, IRELAND, & CO.

[Enclosure in No. 9.]

Mr. C. Robertson to Messrs. Laidley, Ireland, & Co.

Newcastle, August, 1868.

Gentlemen,

In our capacity as Trustees to the N.S.W. Co-operative Coal Mining Company, and also as standing in the relationship of contractors to your firm, to whom we are responsible for the proper and efficient working of the mine, and the delivery of coal at this port, we have felt it to be our duty thus formally to lay before you the sources of certain impediments thrown in the way of our satisfactory fulfilment of the duties devolving upon us.

You have been previously and on several occasions made aware of the difficulties we had to encounter in the shipment of coal, in consequence of the irregular proceedings of the Government Wharfinger, Mr. Scott, and in reference to whose conduct, on a former occasion, you made a representation to the Minister for Works at our instance. In that case we entertained the hope that a knowledge of his conduct having been reported in the proper quarter would have had a beneficial influence upon him for the future, and therefore the complaints on that occasion were not followed up. In that, however, we were mistaken,

mistaken, and at length are constrained to report him again, and this time with a determination to prosecute the cause of complaint against him to the utmost, whatever may be the consequences. Digressing for a moment from the subject of the Wharfinger, while we make you aware of another great disadvantage which, in our opinion, this Company labours under since Mr. Francis, the former contractor for the Government cranes, has been superseded by one Russell. During the period Mr. Francis held the contract for the cranes we experienced no such obstacles in regard to their management as those we have now to complain of; indeed, so far as we know and believe, Francis was entirely unconnected with any of the Companies, was invariably courteous to masters of vessels, strictly impartial towards the Companies, and obliging to all. Not so with Russell,—he is a contractor with the Waratah Company, for whom he undertakes the loading of all vessels at their shoots in the South Channel, and was so at the time his tender for the cranes was accepted by the Government, a fact we presume they were unaware of at the time, otherwise it surely would not have been accepted.

Russell is also in partnership with the Local Manager of the Lambton Company, with whom he is joint owner of vessels engaged in the coal trade. Hence, the anomalous and unsatisfactory position he occupies in relation to the Government and the Companies gives rise to grave suspicions, whilst it holds out to him strong inducements to tamper with vessels, and by adroit management, secure for himself and others advantages incompatible with the public interests, and such as no individual should be allowed to enjoy, through having the control of important public facilities, such as the cranes at this port. We have however many proofs afforded us, on the testimony of captains of vessels and others, of the systematic way in which prejudice is created against our Company. It is by no means an uncommon occurrence, when a master of a vessel inquires about his turn at the cranes, to be told that if he intends loading with the Co-operative it may be very uncertain because they are not in a condition to supply with any reasonable prospect of despatch. This, you will recollect, was strikingly exemplified in the case of the "Tamana," Captain D. Mayne, who, after finding the prediction falsified by our putting on board of his vessel, in the space of three days, no less than 900 tons of coal, left us a note to that effect, a copy of which was forwarded to your office subsequent to the instance mentioned. A similar attempt was made on Captain Brown, of the "City of Melbourne," who was told by Scott that if he intended to stick by the Co-operative Company, he would do no good, and perhaps get himself into "King-street," or words to that effect.

That Scott and Russell co-operate to bring about certain results is no longer a matter of doubt with us, although it is difficult of legal proof; we have, therefore, for some time past had a record kept of some of the more flagrant cases through which expense and delay has been wantonly occasioned. Passing over many, we come to the series that have occurred within a comparatively recent period, namely, since the month of May last, at which period you are aware the colliery resumed work after its suspension for the completion of the embankment and viaduct.

On Tuesday, May 26th, the day after the Queen's Birthday had been kept, we had the "Helene" under the cranes, and were anxious to complete her cargo, as a Sunday had intervened and the Monday following having been observed as a Government holiday. About 9 a.m. the Wallsend engine was going out with empties, when Walker, our Wharfinger, requested the guard to take certain empties of ours along with him as he had been accustomed to do. The guard made answer that he had just received instructions to take no other wagons than those for the Wallsend Company during that day, so ours were left behind. On Walker endeavouring to find Scott he came in contact with Russell, who in reply to his inquiries informed him that Scott was gone to the Races, but he would see that our empties should go by the 2 o'clock train. At this time the pit was idle, the men having been knocked off for some hours for the want of empty wagons. Walker then reported the state of things to Captain Robertson, who together went to Mr. Beeston to whom they represented the case, and also reported the absence from duty of Mr. Scott, on a day not set apart as a public holiday. Beeston expressed regret at what had happened, and whilst reminding him that he had no longer the direction of the coal engines, nevertheless ordered a special to proceed at once with our empties, which arrived at the colliery at 12:30 p.m.

June 25th.—On this day we had two vessels in turn both of which were under the cranes—the "Frowning Beauty" and the "Secret." Having put on board the "Frowning Beauty" more coal than her trimmers could dispose of, her hatches were completely blocked up, so that the crane man could put no more there for some time. Having nearly all our wagons full and at the wharf, and having the "Secret" under No. 1 crane, our Wharfinger suggested that the remaining wagons should be emptied into the "Secret," both as a means of facilitating the loading of the two vessels, as well as of keeping the pit going by sending up the empties. This Mr. Scott persistently refused to do. The "Secret" did not commence taking in cargo until the following morning, and our pit was thrown idle for several hours in consequence. In reference to this case it may be remarked that the other Companies are continually loading at two cranes at the same time, and do so whenever they have vessels to load, and coal sufficient to supply. Why Mr. Scott should have made so invidious an exception in this case can only be surmised. Here was a vessel actually occupying a berth at the crane which was idle, while plenty of coal was already on the wharf, and refused to be put on board.

Now whether this refusal arose from a determination that the Co-operative should not establish a claim in this instance which is accorded to all the other Companies we know not, or whether it was in consequence of a deficiency of crane men—a system by which Mr. Russell profits whoever may lose. It may have been that the loading of the "Secret" at No. 1 crane might have involved the withdrawal of men from some other at which a vessel more favoured was loading at the time, for it should be understood Russell, unlike Francis, keeps only two sets of men for each three cranes. In time of pressure the trade suffers while the contractors gain from this parsimonious system of management. July 11th.—About noon on Saturday, July 11th, we wanted to load a lighter to complete the cargo of the "Shun Lee," then hauled away into the stream. The lighter was alongside, under No. 1 crane, but Mr. Scott refused to allow any coal to be put on board the lighter, under the pretext that our full wagons were standing at No. 7 crane. In consequence of this obstruction we lost the working of the "back shift" for that day. Subsequently Mr. Scott gave a promise that the lighter for the "Shun Lee" should be loaded the same evening. Notwithstanding this promise, only two wagons out of eleven standing full were put on board the lighter, when he gave the crane men orders to leave off and go home. The following day being Sunday, the remainder were put on board in the course of Monday morning. Mr. Scott having made the above promise, and also that the wagons so emptied on the Saturday evening should be sent from the wharf by 5 o'clock on Monday morning, the front shift went to work, but had to leave off again in consequence of the empties not reaching the works until 9 a.m. Thus three hours' wages had to be paid to about fifty men for doing nothing, entirely owing to this default on the part of the Government Wharfinger, entrusted likewise with the direction or control of the engines. On Monday 13th July Mr. Scott kept an engine waiting from 3 p.m. until 5 p.m., in the expectation that the Wallsend Company would by that time have a dozen empties,—at least so he alleged. She left with only four for the Wallsend Company, while nine of ours had stood ready during the whole time, and the colliery was thrown off for two hours before their arrival, for want of them. We do not lay particular stress upon this case further than as showing the capricious and perverse management, by which both Companies have occasionally suffered from similar causes. In this instance it was the big engine, and twenty-two wagons is her complement. July 14th.—On this day Walker wanted the engine to be sent out with twelve empties we had standing—that number being the full complement for the small engine in question. He wanted them to reach the colliery by 7 a.m., knowing that there was a full train of loaded wagons waiting her there. The "Ecliptic" was under loading at the time, and Scott promised on the previous evening that the engine should be sent as required, instead of which, however, the same engine was sent out by him to the Waratah Colliery, from whence she brought a train of — at 8:30. She was then sent out to our colliery, and arrived there at 9:30, at which time our work had been stopped for two hours.

On July 15th Walker inquired of Scott when he would send out the engine to our colliery, with nine empties standing at the wharf, and a full train ready for her at the other end; his reply was, that he should send when he considered the coal was wanted, but not till then.

July 29th.—Captain Francis, of the "Amateur," reported, that on his applying to Scott the day before, to be allowed to come under a then vacant crane, the "Amateur" being next in turn, he (Scott) refused, alleging that the Co-operative was entitled to the use of only one crane at a time, because they had not the means of supply. At the same time there was about 200 tons of our coal standing in the wagons on the wharf. The "Vibilia" was loading with us under another crane, but could not take them fast enough, and the pit standing half a shift in consequence. Scott ordered another vessel not loading with our Company under the crane the "Amateur" sought to take her proper turn under. The prejudice this created is very injurious to the interests of the Co-operative. Masters of vessels are impressed with the idea that their loading with us will cause them indefinite delay, and hence some have been heard to say that they would rather pay a shilling a ton extra to another Company than risk the alleged delay with ours.

July 30th.—We required a lighter loaded, and the Wallsend Company another, while No. 2 and No. 5 cranes were kept standing for want of men to work them; the former from 6 o'clock a.m. to 7:30 a.m., and the latter until 11 a.m. Such delays

to us are sometimes attended with considerable loss, and arise from preventable causes, since if Russell employed, as Mr. Francis did, a set of men for each crane, these delays would not occur. Of course it suits his pocket to thus economize his labour, while it inflicts serious inconvenience and loss upon us.

August 12th.—On this day we had the "Caroline" under the crane, with three more vessels in port to follow. The first engine left at 6.30, and returned with a train of coal from our mine about 8.30. Thirteen wagons of coal were all that were put on board during the day, and although repeatedly reminded of the consequence, Mr. Scott did not allow another engine to go out until 5.30 same evening. The mine was thrown idle as well as the vessel under the crane, and in consequence of this manœuvring we lost the loading of the "City of Melbourne," as well as run a risk with regard to others to whom these failures became known, and create prejudice and dissatisfaction throughout the trade. When Mr. Scott saw what he had done he became very anxious to conciliate matters, and made an offer to put the last train of coal on board during the night, without charging us the extra cost usually demanded for "night loading," and he actually did so. But it was then too late to remedy the evil he had occasioned, or rather may we infer that he had accomplished the object of getting the "City of Melbourne" from us, and therefore could afford to make a display of generosity and professions of regret at what had happened. It may be mentioned also that the engine which was sent up in this case only brings twelve of our wagons a trip, whereas at the time she arrived at the mine twenty-six full wagons were ready for her.

In bringing these matters under your notice, we need scarcely remind you of the losses we sustain whenever the men are thrown off work under such circumstances, because all but the actual coal-getter are paid by the day. This considerably enhances the cost per ton for the raising and shipping of the coal; and limited as we are in the price for this work, may make all the difference between gain or loss on the series of transactions. We also think that a representation should be made respecting the manner in which the cranes are managed in the hands of the present contractors, as compared with the time they were under the control of Mr. Francis. During the greater part of his time and before we had the embankment completed, there were some grounds for refusing the Co-operative the use of more than one crane at a time, but there exists no such reason now; but whenever Mr. Francis saw that an opportunity occurred of allowing us to occupy a second crane without detriment to others he did not refuse us in the cases we have cited above.

We remain, &c.,
(For the Trust),
CHARLES ROBERTSON,
Secretary.

No. 10.

MINUTE OF THE SECRETARY FOR PUBLIC WORKS.

THE statements put forward in this paper are of too serious a character to be passed over lightly, and Mr. Beeston is requested to report upon them fully by Thursday or Friday next, as I intend being in Newcastle early next week.—J.B., 1/9/68.

Messrs. Laidley, Ireland, & Co., 1/9/68. Railways, 1/9/68. Report herewith.—J.L.B., 3/9/68.

No. 11.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. LAIDLEY, IRELAND, & CO.

Department of Public Works,
Sydney, 1 September, 1868.

GENTLEMEN,

In acknowledging the receipt of your letter of the 31st ultimo, enclosing a letter addressed to you by Mr. C. Robertson, Secretary of the Trust for the Newcastle Co-operative Coal Mining Company, setting forth certain instances in which the Co-operative Company have been prejudiced, owing to the alleged partiality shown by the Wharfinger at Newcastle, and by the lessee of the steam cranes, to other Companies shipping coal at the same port,—I am directed by the Honorable the Secretary for Public Works to inform you that the statements put forward by Mr. Robertson are of too serious a character to be passed over lightly; and Mr. Secretary Byrnes has instructed Mr. Beeston, the Traffic Manager, to report upon the case fully by Thursday or Friday next, it being the intention of Mr. Byrnes to visit Newcastle early next week.

I have, &c.,
JOHN RAE.

No. 12.

REPORT FROM THE WHARFINGER, NEWCASTLE.

Newcastle, 2 September, 1868.

SIR,

Desirous of being brief and also explicit, I must pass over the first portion of Mr. Robertson's letter, as it refers more to the present and former contractors than to myself, and begin with the first charge brought against me—namely, that captains of vessels are influenced by me not to load with that Company.

Firstly.—Captains of vessels (who are not thorough strangers), on their arrival in port, if they are already acquainted with what Coal Company they intend loading with, in all cases seek me for information with regard to their prospect of loading-turn; and I admit that I am in many cases compelled to tell them that they will have to wait some time, there being several vessels on turn waiting to load that Company's coal before them; and in my capacity as Wharfinger I feel I am bound to give every information in my power to those interested, and who ask it; but further than this I can confidently assert that they cannot bring one case to prove that I have ever tried to influence any captain or person at any time to load with any Company: this is a point which I have invariably carried out without the slightest deviation.

Secondly.—We come to the case of the ship "Tamana" that loaded Co-operative coals. This vessel (the only one apparently that had any chance of substantiating their charges) was berthed at 6 a.m. on the 17th June, at No. 6 crane—a crane requiring 300 tons daily; she occupied the berth thirty-three hours, and took in 691 tons of coals. This vessel, if she could have got coals, could have finished loading in eighteen hours.

hours. 'Tis true the vessel went to sea with 900 tons, but they have forgotten that over 200 tons of that went on board before she came to the crane, and that she actually occupied the crane ten hours over time. With regard to the expression that Captain Brown, of the barque "City of Melbourne," getting himself into King-street, I absolutely deny ever making use of such language, either direct or indirectly. The most that ever I told Capt. Brown was that I could not give him a crane until there was coals for him.

Thirdly.—With reference to my co-operating with the contractor to bring about any result except that of shipping the largest quantity of coal possible, is purely a mistake on the part of Mr. Robertson. If such things existed, they would soon be known to more than Mr. Robertson, and could not possibly last.

Fourthly.—The guard refused to take the empty wagons out by the order of their Mr. Walker. Ever since the complaint that the Lambton Colliery Manager sent to Sydney, relative to empty wagons, the guards of each train have positive orders not to bring any coal except such as they are ordered; the same with returning empties. The reason for this is obvious: that when an engine goes to the mine some reasonable calculation can be arrived at when she will be back; whereas if the agents are allowed to control the guard, we should often be much inconvenienced.

Fifthly.—In reference to my promise of loading a lighter; having no record I do not recollect the circumstance; but had the grievance been brought forward at the time, I should have been fully prepared to sustain an act I might have done, for unless convinced I was acting right I would not act until instructed by my superiors.

Sixthly.—June the 25th, the Co-operative Company had the "Sea King" under the crane. This vessel took the berth at No. 6 crane, on the 20th, at 1 p.m., and left the berth at 1 p.m. on the 25th, making forty working hours under the crane, and taking 700 tons of coals. The "Secret" did not arrive in port until the 26th. June 26th berthed the "Frowning Beauty," a vessel taking at the cranes about 460 tons; left the berth at 29th, occupying the crane twenty-five working hours, taking 460 tons of coals, ten hours overtime. The "Secret," with the expressed wish of the manager, was berthed on the 27th, and completed loading, thus actually taking the coals the "Frowning Beauty" claimed, and leaving her without, thus causing her to be at the cranes at least ten hours beyond her time.

Seventhly.—July 13th. There is no doubt that the engine waited some time for Wallsend empties on the day named, but not to the extent Mr. Robertson has laid down, as the engine left the wharf at 4:30 p.m. This I take from the guard's daily report; but the peculiar circumstances attending that delay it is impossible for me to remember.

Eighthly.—August 12th. There were twenty-three wagons of coals put on board the "Caroline," instead of thirteen, as represented by Mr. Robertson. The engine left the wharf at 4:5 p.m., instead of 5:30, as related by Mr. Robertson, and so on. It would be an endless matter to go on with, but I think I have shown that the statements of Mr. Robertson are entirely wrong, whether intentionally or not is not for me to say; but looking at the whole tenor of the letter, I cannot refrain from thinking that there is a great deal of malice displayed. In fact, the statement of Mr. Robertson in Newcastle is so well known that I have not been able to find one who would listen for a moment to him. The owner of the brig "Caroline" is a resident of Newcastle, and he is prepared at any time to speak from close observation with regard to the faulty side. This he told me some days ago, when I little expected such a letter. Not content with speaking of his own grievances, Mr. Robertson attempts to espouse the cause of the Wallsend Company, and complaining also of the loss of time with reference to their lighter as well as his own; and when you consider that Mr. Robertson has extended his grievances over four months back, I think you will be able to understand the position I am in to refute these details. So far I have given nothing but what is on record, and producible at any time, and this I feel certain will be satisfactory to you.

Before closing, I would suggest that something should be done to protect me from the abuse I am compelled to submit to from their Mr. Walker. With all other Companies I have the representative of the Company to deal with; but in this case, if Mr. Robertson see fit, he can send any one on the wharf to abuse and dictate in a very unbecoming manner to me, without my having the chance of helping it.

I may here also remark, that although he admits that during the two previous years there were causes why the Company should not occupy more than one crane at a time, yet during those two years they were quite as eager for two cranes as they are at present, and was constantly endeavouring to obtain them. This is a fact well known to yourself.

I remain, &c.,

W. SCOTT,
Wharfinger.

Inform satisfactory.—J.B., 19/9/68.
Mr. Scott. P.Wks., 21/9/68.—R.M.

No. 13.

THE TRAFFIC MANAGER to THE COMMISSIONER FOR RAILWAYS.

Great Northern Railway.—Minute Paper, No. 68/2280.

Laidley, Ireland, & Co.'s complaint.

1st—I believe the statements of Messrs. Laidley, Ireland, & Co., that Mr. Russell is contractor for shipping coal at Waratah Company's shoots, and, in conjunction with Mr. Waddell, of the Lambton Company, is part owner of two vessels; but it appears to me the main matter we have to deal with is to see that Mr. Russell ships all coal at the cranes in accordance with the directions of the Commissioner, or other officers appointed by him; this I believe has invariably been done.

Whether he keeps as many men as Mr. Francis did or not I do not know, neither do I consider it material to the issue, so long as Mr. Russell ships all the coal in a reasonable time. The best evidence of this will be afforded, I think, on perusal of the following figures.

On

On examination of the crane shipping books, I find the quantity shipped in the three highest months of Mr. Francis' having the contract was as follows, viz. :—

June, 1867	36,752
April, 1868	37,331
May, ,,	39,437
					<u>113,520</u>

During the first and only three months that Russell has had the contract, the quantity shipped was as follows, viz. :—

June, 1868	38,312
July, ,,	37,990
August, ,,	43,563
					<u>119,865</u>
Francis	113,520
Difference in favour of Russell	<u>6,345</u>

And I may observe that he has not by any means been kept fully employed.

The case of the ship "Tarrara," which Mr. Robertson puts forward as showing conclusively what they are capable of doing, is far from being in accordance with fact, if not absolutely false, as the seconds will show. I find on reference to the crane books, that the quantity put on board in three days was as follows, viz. :—

					Tons.	cwt.	[qrs.	lbs.
17th June...	282	2	0	0
18th ,,	226	5	0	0
19th ,,	157	10	2	0
20th ,,	24	11	2	0
					<u>691</u>	<u>9</u>	<u>0</u>	<u>0</u>

She took the berth at No. 6 crane on the morning of the 17th, at 6 a.m., occupying the berth thirty-three working hours; and the Wharfinger states she could have taken the coal in eighteen working hours if it had been supplied.

This ship certainly took 900 tons of coal from the port, but Mr. Robertson appears to have forgotten (whether intentional or otherwise I cannot say) that she took over 200 tons of it from a lighter before she came to the crane.

Mr. Scott informs me that captains of vessels who are not thorough strangers, on their arrival in port, if they are already acquainted with what Coal Company they are to load with, in nearly all cases seek him for information with regard to their prospects of a loading turn, and that he is compelled to tell them the truth, and, as it frequently happens that they (the Co-operative Company) have several vessels on turn, the information thus given is frequently unpalatable to the agents of the Co-operative Company; but nevertheless I perfectly agree with him that he is bound to answer all the reasonable questions on the subject.

As to the remarks that Mr. Scott made to Captain Brown, that if he stuck to the Co-operative Company he would have to go up King-street, Mr. Scott most emphatically denies ever having made use of any such remark.

The statement as to their stoppage on the 26th May is not in accordance with what I recollect of the circumstance, which was as follows :—About half-past 10 a.m., Mr. Robertson, accompanied by Mr. Walker, waited upon me complaining that their wagons had not been sent out, and that the back shift would have to wait or not go in in consequence. I inquired if they had seen Mr. Scott, and they replied that he had gone to the races. I replied, I doubted this, as I had seen him not ten minutes before; when they said they had been looking for him but could not find him. I then remarked that I would send the wagons out in a short time, which they said would do. As to my stating that I had given up control of the engines, I never made any such remark; the fact of my sending an engine is, I think, sufficient to contradict that statement. I may have made the remark that I had placed the whole of the coal engines at the disposal of Mr. Scott, and should like to consult him before sending an engine.

In reference to the statement of promising to load a lighter for the "Shun Lee," Mr. Scott informs me that he has not any recollection of this circumstance; but had the grievance been made known at the time, he has not the slightest doubt but that he should have been able to give a satisfactory reason for his course of procedure, as he is conscious of having acted right; and that had he been doubtful on the point he should have referred the matter to his superior officer.

June 25th.—Mr. Scott informs me that the "Sea King" was under No. 6 crane, where she was berthed at 1 p.m. on the 20th, and did not leave it till 1 p.m. on the 25th, making forty working hours, taking 700 tons coal. This crane should ship 300 tons per day. The "Secret" did not arrive till the 26th, on which day the "Frowning Beauty" was berthed—a vessel taking 460 tons coal. She left the berth on the 29th, occupying the crane ten hours overtime.

The "Secret" was berthed at the expressed wish of the Manager on the 27th, and completed loading the same day, thus actually taking away the coal that was claimed and ought to have been shipped in the "Frowning Beauty," and causing the latter to be behind time.

July 13th.—Engine detained two hours for Wallsend wagons. Mr. Scott informs me that no doubt the engine waited some time, but not to the extent named by Mr. Robertson, as the engine left the wharf at 4.30, as shown by the guard's report, but the peculiar circumstances he is unable to remember.

July 30th.—Lighter required loading, stating that if Russell employed a gang of men to each crane the same as Mr. Francis did, delay would not occur. I find on inquiry from a man named Bates, late foreman to Mr. Francis, that Mr. F. employed five full gangs to the seven cranes, and I also find that Russell employs five, and that both occasionally divided their gangs and worked six cranes at one time.

August

August 12th.—I find on reference to the shipping books that there was twenty-three wagons put on board the "Caroline," and instead of the first engine leaving at 6:30 a.m. she did not leave till 7 p.m., and again it is stated the engine did not leave till 5:30 p.m. same evening. Now the guard's report shows her leaving at 4:5 p.m. and being in on the return journey by the time named by Mr. Robertson.

In conclusion, Mr. Robertson states that there was some time ago a reason why they ought not to be allowed to have more than one crane, but no such reason now exists.

In my opinion the principal difficulty has not yet been removed, viz., the short supply of wagons. They have only thirty-six and with this I contend they cannot carry on their trade without stoppages, even if an engine could be had at a moment's notice, which their supply would not warrant.

The Wallsend Company have 150 wagons and the Lambton Company 120, and we cannot avoid stopping their works at times, therefore how much oftener must we stop the Company with thirty-six?

In reporting on this case I am placed at considerable disadvantage, owing to the long period that has been allowed to elapse before bringing forward the complaints, and having no record of some of the circumstances; but I think where the statements of Captain Robertson could be tested by the records kept by disinterested parties, they are shown to be grossly exaggerated if not absolutely false, and consequently his other statements should be received with great caution.

I am debarred from going further into the question, owing to the limit fixed for the time of my reporting by the Commissioner. I may further remark that Mr. Scott complains bitterly of the abuse he is subjected to by the Co-operative Company's agents, and trusts that some steps will be taken to prevent a repetition of it; and I would strongly urge that in future Messrs. L., I., & Co. should be requested to make their complaints at the time they occur, as from the many conflicting interests that the Wharfinger has to reconcile it is impossible for him to remember them at so long a period as has been allowed to elapse in this case. It should be borne in mind that whilst there is only seven cranes there is eight Companies to use them, and consequently their interests are bound to clash at times, and the only surprise to me is that Mr. Scott has been able to keep so clear of complaints.

As the Commissioner is about to visit Newcastle next week, I should be glad if he could bring the papers with him, and if he could spare time to inquire into this matter himself.

JNO. L. BEESTON.
3/9/68.

Inform satisfactory.—J.B., 19/9/68.
Public Works, 21/9/68.

MEMO.—Having made personal inquiries and examined the records of the department, the Minister considers the explanation of the Traffic Manager and Mr. Scott quite satisfactory. Messrs. Laidley, Ireland, & Co., may be so informed.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. LAIDLEY, IRELAND, & CO.

Department of Public Works,
23 September, 1868.

GENTLEMEN,

In reference to my letter of the 1st inst., promising a further inquiry with respect to complaints preferred by you on the statements of Mr. C. Robertson against the Wharfinger at Newcastle and the lessee of the steam cranes, for having shown partiality in the shipment of coal to certain Coal Companies at Newcastle, to the prejudice of the Co-operative Coal Mining Company,—I am directed to inform you that, having made personal inquiries and examined the records of the department, the Honorable the Secretary for Public Works considers that the explanation afforded by the Traffic Manager and Mr. Scott the Wharfinger quite satisfactory.

I have, &c.,
JOHN RAE.

No. 14.

MESSRS. LAIDLEY, IRELAND, & CO., TO THE SECRETARY FOR PUBLIC WORKS.

Sydney, 22 September, 1868.

SIR,

Referring to our previous letters on the subject of the conduct of some of the Government officials in Newcastle, we herein hand you copy of letter received from the Master of the brig "Our Hope," the details of which we commend to your careful consideration. Provided the facts therein alleged are borne out (and you will observe that the language complained of was used in the presence of a witness), it seems perfectly clear that obstructions and impediments are thrown in the way of business by those who should endeavour to expedite it as much as possible, and we would ask for a thorough investigation.

Asking your kind consideration of the matter,—

We have, &c.,
LAIDLEY, IRELAND, & CO.

[Enclosure

[Enclosure in No. 14.]

Captain Beedell to Messrs. Laidley, Ireland, & Co.

"Our Hope,"
Newcastle, N.S.W.,
17 September, 1868.

Gentlemen,

The brig's ballast is out, and there being two cranes disengaged and your coal ready for shipment, I applied to Mr. Scott for a berth at a crane. His reply was that I could not get a berth, as *every* ship in port was in turn before me, and that he had power to keep me until he thought proper; that I and the *damn'd* set were trying to put him out of his billet, and if I did not be careful he would lock me up. I asked him what he meant by *the damn'd set*, and he replied the *Co-operative folks*.

If I am to be placed at the caprice of a man like Mr. Scott, and to have my ship detained thro' any grievance of the Co-operative Company, I feel myself compelled to lay the matter before my owners; hoping to have some satisfactory account of Mr. Scott's conduct per return of post.

Capt. Graham, of the "Daphne," was present and heard the conversation.

I am, &c.,
WALTER BEEDELL.

No. 15.

TELEGRAM FROM CHIEF CLERK, RAILWAYS, to TRAFFIC MANAGER, NEWCASTLE.

23 September, 1868.

THE Master of brig "Our Hope" complains that Mr. Scott has most unwarrantably interfered with his loading. "Scott told him he had power to keep him until he thought proper"; that Scott threatened to lock him up, as he said the *d——d set* were trying to keep him out of his billet. The Master of the "Daphne" was present.

No. 16.

TELEGRAM FROM TRAFFIC MANAGER, NEWCASTLE, to THE COMMISSIONER, SYDNEY.

23 September, 1868.

AM in Maitland; know something of this; on being informed by Capt. Beedell, made inquiry from Capt. Graham of "Daphne," who does not corroborate Beedell, but says Beedell used very aggravating, and what he considers impertinent language to Scott. His manner when addressing me was offensive. Will report by letter when I return to Newcastle, but should like to see his letter.

No. 17.

THE WHARFINGER, NEWCASTLE, to THE TRAFFIC MANAGER, GREAT NORTHERN RAILWAY, NEWCASTLE.

Newcastle, 23 September, 1868.

SIR,

I beg to acknowledge receipt of telegram, and in reply beg to state that the statements made by the Master of the Brig "Our Hope" are untrue.

I cannot do more than refer Mr. Beeston to the Master of the Ship "Daphne," and abide by the statement given by him, as he was present at the time and apparently a friend of his; but I am confident that he will not substantiate such assertions.

I may here remark that not only this time, but every time this vessel has been here since Captain Beedell commanded her, I have been subjected to the grossest insult, witnessed both by the Deputy Harbour Master and contractor, at different periods.

The "Our Hope" was berthed for coals on Friday 18th instant, and left the berth on Monday 21st, taking two full days at the cranes, and taking 360 tons of coals. When the vessel was loaded, the Harbour Master waited until he was compelled to send for a pilot to take her from the berth. The captain refused to take any coals on board his vessel after 3:30 on Saturday, although there was coals on the line for him; and as we have often loaded this same vessel in one night, it shows, I think, very clearly, that the master alone is in fault as regards interfering with him. I am here for that purpose, and this is the source from which springs the feeling of animosity; but unless I relax in my duty, I shall be compelled to keep him more strictly to the regulations than he ever has been.

The agent, Mr. Robertson, on being informed on Saturday that the vessel refused to take any more coals, said he would see that he did take them; but Mr. Robertson did not see, or if he did, nothing was done in the matter.

The Captain of "Our Hope" has told me on the wharf that he knows my duty better than I do, and that he would have me out of this before long. This has been said in the presence of more than one or two witnesses, and on several occasions during the last three months. If he accomplishes this, I have no doubt he will be perfectly satisfied.

I have, &c.,
W. SCOTT,
Wharfinger.

No. 18.

No. 18.

THE WHARFINGER, NEWCASTLE, to THE TRAFFIC MANAGER, GREAT NORTHERN RAILWAY, NEWCASTLE.
Newcastle, 24 September, 1868.

SIR,

The statement made by the Master of the Brig "Our Hope" about the cranes being disengaged is absolutely false, for the two cranes that he alludes to were filled by the vessels the "Anne and Jane" and the "Ben Nevis," vessels that arrived in port one week before him.

At the time he applied to me for a berth he was near No. 5 crane which had just been vacated, and the "Anne and Jane" was coming in. He held out his hand in a menacing manner, and told me to look, there was a crane empty and his coals were ready, and if he did not get the berth he would see my masters, and take damned fine care I should not rule him. I answered him that every ship in the port arrived before he did, and if there was coal for them they would take their turns before him; he said no, they should not, he would take d——d fine care if I did not know my duty he did, and he would learn me. After such insults I did tell him that unless he was more careful in his language I would find means to have him locked up; his answer was, I would not be here long if he could do anything; I replied, that him and the set he was with had told me that often; he said, who do you mean by the set; I said, the Co-operative Coal Company; he said, that was all he wanted, he felt quite satisfied now that he had all that was required. Feeling assured that the man was doing all he could to excite me to say or do something wrong, I left him to talk to those who were willing to listen.

I regret having to trouble you with such details, but I think they are necessary for your fully understanding the position I am in. I must submit to all that is said as if I were here for that purpose, and I can assure you that such conduct makes me appear very small in the eyes of those who might be around.

I have, &c.,
W. SCOTT,
Wharfinger.

No. 19.

THE TRAFFIC MANAGER, GREAT NORTHERN RAILWAY, to THE COMMISSIONER FOR RAILWAYS.

(Laidley Ireland's complaint and Captain Beedell's report.)

I HAVE the honor to state, for the information of the Commissioner, that on Friday the 17th, about 10 a.m., as I was crossing the steamer's wharf I was accosted by Capt. Beedell, a perfect stranger to me, who commenced *in a most offensive tone* a long harangue about the obstacles that was thrown in his way both by the Wharfinger and Harbour Master, Deputy Harbour Master, and all other officers connected with the port, and expressing his determination to move the whole lot. I inquired in what way the Wharfinger had obstructed him, and he said that there was two vacant berths the day previous, and that he would not give him one but threatened to lock him up *if he asked him another question*, and said that him and his d——d lot were trying to make him lose his billet, and he, Capt. Beedell, expressed his determination to effect that object on this occasion, as he said there was not any mistake this time, as his friend Capt. Graham of the "Daphne" heard the whole of it, and would testify to the correctness of his statements. I asked him if he had given Mr. Scott any provocation, when he replied no. I said that it appeared a strange proceeding to arise without any provocation, but he assured me that it was perfectly correct. I informed him that I would make inquiries, and if his statements were correct, I would take such steps as would prevent anything of the kind in future. He then said *he* would take care it should not occur again, as he would write to Sydney and have him "sacked" before he left the port. I strongly advised him to do so if his statements could be borne out. From Capt. Beedell's manner, I was under the impression that he wished to make me lose my temper, which I studiously avoided, although with great difficulty.

Immediately after this I saw Mr. Scott and questioned him respecting the matter, and he denied most emphatically that he used any bad language, but on the contrary he had received gross provocation, and was most grossly insulted by Capt. Beedell. These statements being so directly at variance, I asked Scott if any one was present, and he replied yes, Capt. Beedell's friend, the captain of the "Daphne," and others whom he did not recollect. I then made it my business to see Capt. Graham of the "Daphne," who is also a perfect stranger to me (and I believe Mr. Scott has not seen him before this voyage). I told him that Capt. Beedell had preferred a complaint of the conduct of the Wharfinger on the previous day (at this time I did not know of the remarks that Scott had power to keep him out as long as he liked), and that I had been referred to him. In reply to my question relative to d——d lot, Capt. Graham said *Mr. Scott made no use of bad language*. He made use of some expression to the effect that you and a certain set are trying to get me out of my situation, and I am determined I will not submit to be continually insulted in this way by you on the public wharf, and if you do not cease doing so I will take means to stop you, even if I have to go to the extent of having you locked up; and during the whole period Captain Beedell made use of the most aggravating, irritating, and what he considered most insulting language to Scott, and that Scott kept his temper under the trying circumstances much better than he, Captain Graham, could have done.

On my return from Maitland after receipt of telegram, I again saw Captain Graham, and questioned him relative to Scott having said that he had the power to keep him out as long as he liked. Captain Graham said he did not say anything of the kind.

I also made inquiries from different parties to find out any person that might possibly have heard the altercation, and I find that Captain Hescott, Agent for the A. A. Company, heard it, and he gives as near as possible the same version as Captain Graham, and adds that if he had been insulted by Captain Beedell as Mr. Scott was he would have thrown him over the wharf.

I may further state, at the risk of being considered tedious, that we have loaded the brig "Our Hope" in a night, that on this occasion she took two days to take the coals, being three hours over the time allowed at one of the small cranes. He refused to take any coal after 3:30 p.m. on the Saturday, and
Captain

Captain Robertson, the Agent of the Co-operative Company, was informed of this, and said he would see that she did take them; but nothing came of it, and even after the vessel was loaded there was considerable difficulty in getting Captain Beedell to move from the berth, and it was only at last done by threatening to put a pilot aboard that he did move. I believe this is not the first time he has done this. Mr. Scott complains of having difficulty with him and being subject to repeated insults, which is borne out by the enclosed letter from Captain Collins, the Deputy Harbour Master, and Captain Allan it appears has also been insulted by him.

I enclose reports from Mr. Scott for Commissioner's perusal. The one dated 23rd was written, as per request from me by telegram from Maitland; the second after Captain Beedell's letter was received, and from which it will be observed that Captain Beedell's statements that two cranes were disengaged is absolutely false.

JOHN L. BEESTON.—25/9/68.

Inform Laidley, Ireland, & Co. Explanation of Scott satisfactory. Papers may be seen on application to Chief Clerk.—J.B., 30/9/68.

Wrote, 2/10/68.

No. 20.

PILOT COLLINS AND CAPTAIN ALLAN, HARBOUR MASTER, NEWCASTLE, to J. L. BEESTON, Esq.

Newcastle, 25 September, 1868.

SIR,

In reply to your question as to whether I was present on any occasion you refer to, I answer I was, and have more than once heard Captain Beedell make use of insulting language to the Wharfinger, telling him he would see his master, and have him out of his billet very shortly, and this in the presence of all who may happen to be on the wharf at the time; telling him also that this was another hitch, and that was all he wanted, and his manner at all times of the most offensive kind.

2nd. In reference to my own dealings with this man, I have at all times much trouble in getting him from the berth, when loaded, to make room for the next ship, having occasion, after waiting some time to send a pilot to remove him; and he likewise shows a strong desire at all times to ignore all authority.

I am, &c.,
A. COLLINS,
Pilot and Deputy Harbour Master, Newcastle.

I confidently confirm the second part of Captain Collins' letter, and may add that I have personally received insulting and disrespectful language from the present master of the brig "Our Hope."

D. T. ALLAN,
Harbour Master.
25/9/68.

No. 21.

THE COMMISSIONER FOR RAILWAYS to MESSRS. LAIDLAY, IRELAND, & Co.

Department of Public Works,
Railway Branch,
Sydney, 2 October, 1868.

GENTLEMEN,

I have the honor to acknowledge the receipt of your letter of 22nd of September last, preferring certain charges against the Government Wharfinger at Newcastle, and to inform you that the explanations offered by Mr. Scott appear to me to be quite satisfactory.

Should you, however, wish to make further inquiries into the matter, all the papers connected with the case can be seen on application to the Chief Clerk of the Railway Branch.

I have, &c.,
JAMES BYRNES,
Commissioner for Railways.

No. 22.

CAPTAIN SIVIER to THE SECRETARY FOR PUBLIC WORKS.

Sydney, 8 April, 1869.

Brig "Spec."

SIR,

I arrived in the port of Newcastle on or about the 26th of May, 1868, to load a cargo of Waratah coal under the Government cranes, and to take my turn in rotation. On Friday, the 29th of May, 1868, it was then my turn to follow the ship or barque "Wallaroo," which left the cranes that evening. Not being well myself, I left Newcastle at 10 o'clock, a.m., for Sydney, with the understanding, from Mr. Scott the Wharfinger, and Mr. Collins the Pilot, that they would see my vessel, the "Spec," was put under the cranes that evening, as the coal was already waiting for me. Mr. Cunningham, the Manager of the Waratah Company, repeatedly asking me, if I was ready, I told him I was. Therefore, as I have said before, I left for Sydney, thinking I should have justice done by Mr. Scott and Collins

Collins the Pilot, as I had to pay pilotage for mooring my vessel, so that there should be no obstacle thrown in the way; but to my surprise, when I wrote Mr. Hewison, my agent, on Monday, to know if the "Spec," my vessel, was loaded and ready for sea, I had a telegram from him to say the "Spec" was not under the cranes yet, but for why he could not say. But I must say there is one Coal Company that get the preference of the Government cranes, and that is the Lambton Company, which should not be allowed to do so. The other Companies have no chance with them as long as such things are allowed, and it is not only the Coal Companies, but owners of ships, that charter these ships to load with other Companies, that suffer likewise. Again, I arrived in the port of Newcastle about the 10th January, 1869, to load a cargo of coal under the Government cranes, from Messrs. James and Alexander Brown, and finding it would soon be my turn to load and go under the cranes, I got my ballast out and stiffening on board ready, and on the 15th day of January, 1869, when it was my turn to go under, and as the coal was all ready, and had been for several days, which the Messrs. Brown can prove, for they repeatedly told me they were, and through Scott not giving me my proper turn they lost £40 through it. I told them I could not help it if Mr. Scott got drunk and was not there to do his duty—I could not help it; but to my surprise, Mr. Russell the lessee of the cranes, and Mr. Wadle the Manager of the Lambton Coal Company, have a vessel called the "Stranger" belonging to themselves, that had but that very day come in from sea. The consequence was she was put under No. 6 crane and loaded, and my vessel was kept back, and she got away on Sunday morning. Now if Mr. Scott had not been away drunk, and for him to do his duty such and give justice to every one, such unfairness could not take place. I made complaints about it, and so did the Messrs. Brown. I told Scott I would see into it on my return from Adelaide; he said I could do what I liked. After his doing me out of my turn he was not satisfied, but just as my vessel was nearly loaded, two hatchways being full, the third one nearly so, Scott came down about half-past 6 o'clock in the morning, at the time I was dressing myself, and commenced blocking up my vessel's fore hatchway, trying to smother my crew below. I heard a noise on deck, therefore I went upon deck and saw what was the matter. My chief mate was begging of Scott not to smother the men below; he said he would do as he liked, therefore I went on shore and told him I would make him remember me. I also asked him what he had to do with the cranes, as he was not the lessee of them. I told him he was there to see vessels placed in their berths, and when loaded to see them out again. He told me I had been over my time; I told him I had not been anything of the sort. Scott and Russell together gave the coal that was for my vessel to another ship to keep me waiting, so that is the way the Government cranes are managed at present. No one can say that I take a longer time to load my vessel than is necessary; she carries 420 tons, and I can load her in a little over a day, and if I could get the coal as we could take then I could load her in a day, but we have to wait for coal for hours until the trains come in; and then, when they do come, the coal is put on board in such a way which is a disgrace to any one, the decks are filled fore and aft, smashing mast-coats, pump-coats, blocking up windlass, winches, and everything about a ship's deck. The result is, it takes longer to get the coal off the ship's deck and clean away than what it would to load a ship if the coal was put on board in a proper manner. The fact is there is not a sufficient staff at the cranes to load ships properly; the men at the cranes are sent from crane to crane; they will come and fill the ship's decks full, and then go and serve another the same way. I am not the only one that complains, but it is a general thing. I can only say I was never served in the same kind of way when a gentleman by the name of Francis leased the cranes, nor did I ever hear of any one saying they were treated in such a way. If Mr. Francis is in Sydney, or should be in Sydney, any one can ask him if ever I delayed my vessel in any way, whether I was taking in cattle or coal, for I always try and get my vessel away as soon as possible, which no one can dispute. When I have been in Melbourne and Adelaide I have been asked by different masters of English ships; I have told them there is every convenience; they will then say they have been told their ships will be smashed to pieces by having the coal pitched upon the decks half way up the masts, the same as I was served.

I remain, &c.,

THOMAS INGLES SIVIER.

Camden Cottage, near Camden College,
Newtown, Sydney.

No. 23.

MINUTE REFERRING LETTER TO TRAFFIC MANAGER.

Brig "Spec."—Captain Thomas Ingles Sivier—complaint against cranes.

Mr. Beeston, for report.—R.M., 19/4/69.

Mr. Scott's reply to complaint of Captain Sivier enclosed. The Commissioner perused it whilst at Newcastle.—W. Cox, 20/5/69.

Let this matter stand over for the present.—J.S., 22/5/69.

Mr. Scott to The Traffic Manager.

Newcastle, 30 April, 1869.

Sir,

I hereby tender my reply to the letter dated April 8th, 1869, from the master of the Brig "Spec."

I should be sorry to trouble you with all the details this letter would attempt to draw forth, but I will give you sufficient to show there is not the slightest foundation for any complaint on the part of Captain Sivier; so far from his being the sufferer, the loss is all on our side. In answer to the first charge,—I deny that any ship has ever been put under the cranes out of her legitimate turn. Such proceeding as this you are as well aware as I am could not exist one week; the difficulty is that masters of vessels, in some few cases, think they know much better than I do when they should be berthed. There are too many persons in Newcastle that are quite as much interested in the coal trade as Captain Sivier to admit of anything wrong without at once seeing into it, and none would be more ready than the Messrs. Brown to complain if they had through any fault of mine lost £40. In reference to the Messrs. Brown

telling him his coals were ready,—they did tell him his coals were ready—they did tell him so in my presence, which I had to contradict to them; and as a proof of this I may remark that I had in this present case to remove the "Spec" from the cranes both for want of coals and wait one full day after she had taken a portion of her cargo; in fact the whole of the letter is in terms that none who once read it could doubt the motive that induced. I showed the Messrs. Brown the portion that spoke of their loss, at which they heartily laughed; in short, malice is so prominent in the whole of the letter, that I think I cannot do better than say that Captain Sivier has not the slightest ground for complaint, and rest satisfied you will take the same view.

I have, &c.,
W. SCOTT,
Wharfinger.

No. 24.

Messrs. MOREHEAD & YOUNG to THE SECRETARY FOR PUBLIC WORKS.

Sydney, 12 July, 1869.

SIR,

I have the honor to enclose extracts from letters recently received from the Manager and Newcastle Agent of the Lambton Colliery, on the subject of the defective state of the shipping appliances at Newcastle for coal brought to port by the Great Northern Railway, and would respectfully urge upon the Government the necessity for immediate action being taken with a view to remedy the evils complained of.

This morning we have a further letter from our Newcastle agent, from which I also send an extract relating to the arrangements as to the accommodation for shipping resorting to that port.

Doubtless the Government will make an effort to prevent any avoidable discouragement being given to the growth of the trade of that important and rising place.

I have, &c.,
R. MOREHEAD,
(For self and M. YOUNG.)

[Enclosures in No. 24.]

Extract from letter from Mr. Croudace, dated 9 July, 1869.

We have been working very well lately, but are hampered for want of greater shipping facilities. The boilers for the steam cranes are in very bad order, and I should not be in the least surprised if two or three of them were suddenly to fail, and so put an end to shipping for a time.

Extract from letter from Mr. Waddell, dated 9 July, 1869.

We are not at full work, although if we could get our ships in without having to wait turn at the cranes we could be. I have lost the "Prince Edward" and "Alcandre"; at the same time the pit has been idle longer than would have produced sufficient coal to have loaded them, if we had only accommodation to ship it when we required. We feel this now that the harbour is so full, and the ships not apportioned properly to the different Companies. If the new crane or the shoots had been ready now it would have been a great benefit to us.

Extract of a letter from Mr. Waddell, dated 10 July, 1869.

It is time, or rather past time, that some other system of mooring the ships in harbour should be adopted. You are aware how it is done—every one moored singly. This is all very well when there is plenty of room, but when that is not the case they ought to be moored together. It is a pretty state of things when we have our commodity in abundance, and customers coming to buy it, that they are to be told they must not come in for it.

No. 25.

MR. WHITTON'S REPORT ON ABOVE.

Railways.—B.C., 14/7/69, J.R. Mr. Whitton.—R.M., 15/7/69.

I have written to Mr. Boag for a report on the condition of the boilers to the cranes, but it appears to me to be a legal question whether the Government or contractor should supply them. The question is now with the Crown Solicitor—J.W., 16/7/69.

Commissioner, 16/7/69.

No. 26.

A. MARSHALL AND OTHERS to THE SECRETARY FOR PUBLIC WORKS.

Sydney, 11 October, 1869.

SIR,

On noticing an advertisement for new tenders for working the Newcastle steam cranes, I would respectfully submit that a change be made from the present bad management.

There are no regulations. We are told that the coasters have no right to a crane at all, and when we do get under we are subject to much delay—not enough of hands to work the cranes. There is also much delay by long-headed vessels being put under the shallow-water cranes, causing them to take the ground, while there is shallow vessels get into deep berths.

Dear Sir,
I remain yours,
A. MARSHALL,
Master and owner "Australia," "Gleaner."
JAMES CRAIG,
Master, owner of "Gleaner."

No. 27.

TRAFFIC MANAGER, ENCLOSING REPORT FROM WHARFINGER.

Mr. Beeston for report. B.C., 21/10/69.—J.R.

I enclose report from the Wharfinger in this case. There is no grounds for complaint as to the number of hands; there being, when necessary, seven and eight gangs at work at one time, and there is only eight cranes. It is impossible to avoid vessels taking the ground, the berth at No. 1 crane being allotted for coasters, in consequence of it being the shallowest, and the coasters generally are light draught vessels.—J.L.B. 2/11/69.

[Enclosure.]

Mr. Scott to The Traffic Manager.

Newcastle, 26 October, 1869.

Sir,

I beg to acknowledge receipt of letter, dated October 11, from Messrs. Marshall and Greig, complaining of bad management of steam cranes.

In reply, I would respectfully draw your attention to the fact that both persons have been trading constantly for the last four years, or during my time of office, to this port, in the employ of other owners of vessels, and it is only since they became owners themselves that they have found out the cranes are badly managed.

The brig "Australia" has loaded at the cranes twice (having to make another trip before becoming a coaster, according to the regulations).

In reference to the contractor not having hands to load the vessels the fault is on the vessel's side, as in nine cases out of ten the men at the cranes are waiting to put coals on board while the ship is unable to trim, and I would here suggest that the trimming of vessels should be done by the contractor for the cranes, as we are often placed at the mercy of the trimmers in getting vessels finished in time for the tide. Last evening a case occurred in point with one of the coasters. She was to load, but the master found, on berthing the vessel, that the crew would not work at night; thus giving the contractor the trouble of furnishing men for night and then sending them home without doing anything. These failures are of constant occurrence. In reference to the shoal-water at No. 1 crane, the Commissioner will no doubt remember my mentioning the circumstances to him when in Newcastle, and I believe that nearly the whole of the coasters touch the ground in the course of loading.

I have, &c.,
W. SCOTT,
Wharfinger.

No. 28.

R. MOREHEAD, Esq., to THE SECRETARY FOR PUBLIC WORKS.

Lambton Colliery Office,
Newcastle, 16 October, 1869.

SIR,

I think it impossible your Department can be aware of the position in which the Companies depending on the Government for the shipment of coal are now placed. Four of these Companies are entirely dependent on the cranes for this work, and three others use these appliances occasionally. Two of the eight cranes are at present unavailable, No. 5 being under repair and No. 8 is stopped by the dredge; this leaves six to do the work above indicated, a provision preposterously inadequate for the work to be done. With plenty of ships in harbour, and ready to put out coal in abundance, we feel ourselves helpless to carry on our trade. As for the staiths they seem to be practically a mockery, standing unused and unusable after the years during which they have been promised to be available to Companies depending on the Government for the shipment of their coal, now considerably increased in numbers since these structures were commenced.

I very respectfully but very urgently call your attention to the state of matters above set forth, and would point out, unless a remedy is immediately afforded there will be obviously no course for us to follow but to set about getting a private shipping place for our colliery, if we are not to have our trade entirely destroyed.

I have, &c.,
R. MOREHEAD.

No. 29.

Received from Mr. Francis, 25/10/69.—J.S.

PETITION.

To the Honorable John Sutherland, M.L.A., Minister of Public Works.

RESPECTFULLY SHOWETH:—

We, the undersigned ship-owners, merchants, and masters of vessels trading to the port of Newcastle, in the Colony of New South Wales, for coals.

We humbly petition you to redress the grievances we now labour under in having our vessels unnecessarily delayed at the Government coal cranes by the present mismanagement of the shipping and insufficient working of the cranes, for the want of the required number of men to each crane. There are eight cranes, yet there are not more than five gangs of men lately employed to work them, and three cranes are so out of repair that they cannot be used; and further, the owners of the coasting craft are informed by the contractor there are no cranes for their vessels, which are sometimes detained two or three weeks to obtain a cargo of coals at the cranes. And as the Government have called for tenders for working the cranes for

for the next three or five years, we humbly petition that such measure may be taken to prevent the continuance of the grievances that we now labour under from the neglect of the Government in not seeing that the contractor loads our vessels in a reasonable time, for the loss we sustain from this source and the injury to the coal trade is a public grievance.

George Robertson.

No. 30.

TRAFFIC MANAGER'S REPORT THEREON.

Mr. Beeston for report.—J.S., 25/10/69, B.C.

1st.—That there are eight cranes, and only five gangs to work them.

This is not in accordance with facts, as I have seen seven cranes at work at one and the same time ; and on reference to the Wharfinger's explanation enclosed, it will be noticed that he has had the whole of the cranes working at one time.

2nd.—And three cranes are so out of repair that they cannot be used.

This statement I meet with a simple denial, not being in accordance with facts.

3rd.—That the owners of coasting craft are informed by the contractor there are no cranes for their vessel.

This the contractor denies ; but it would not be of any importance if he had said so, seeing that he has nothing whatever to do with the allotting of berths, that duty being performed by the Wharfinger.

I may further observe that I am not aware of any instance where coasters have not had the use of one crane-berth. It is quite possible that from force of circumstances, such as the arrival of a large fleet of coasters on the same day, that they may be detained for a considerable period waiting their turn, having claim to one crane only ; but at times, when opportunity offers, two or three are allotted them temporary.

J.L.B., 2/11/69.

THE WHARFINGER, NEWCASTLE, to THE TRAFFIC MANAGER, GREAT NORTHERN RAILWAY.

Newcastle, 29 October, 1869.

SIR,

The letter or petition received by the Commissioner from Mr. Francis, which you placed in my hands yesterday, I have perused, and now respectfully submit my reply.

With few exceptions the names of the petitioners are strange to me, but all the vessels' names mentioned are familiar. With the following vessels' names I will give a brief outline of my position to them :—

Barque "Reconnaissance" loaded twice at the crane during my term of office, namely four years, or nearly.

Barque "Lion" loaded three times.

"Dashing Wave" has not to my knowledge loaded at all.

However these petitioners could for one moment hold themselves up as any authority for the management of the cranes I am at a loss to conceive, and can only surmise that they have been led to such actions by the advice of others ; and if the other petitioners will only select some case upon which they are grieved, I am quite prepared at any time to prove that if their vessels have been subject to any delay in Newcastle, that it has been from want of coal, and not from want of facilities, even in our present limited condition. In the case of the "King Oscar," the name of one vessel mentioned,—this vessel has lain sixteen days in port before she was fixed for loading ; and vessels that arrived a week after her, that were fixed on arrival, were loaded and gone before she was prepared to load,—and yet her owner, Thos. Robertson, believes that the cranes are badly managed. I cannot say more than this,—that I am prepared to show that if a vessel has been detained in the port unusually long that the management of the cranes has had nothing whatever to do with it. Permit me to observe, that during the first two years of my management of the wharf and cranes, ask where or whom you would, the answer was the utmost satisfaction was given ; and it is only since the former contractor, Mr. Francis, was disappointed in not getting the cranes again that so much of this apparent dissatisfaction prevails. I have endeavoured to add other names to this petition since I have had it, but out of the sixty vessels now in port I cannot find one master that would willingly place his name there ; but all are willing, if I wish it, to sign one of an opposite character. I merely mention this to show what an amount of trouble some one must have taken, that out of more than 100 ship-owners and masters in Sydney they have managed to prevail on some twenty odd to sign such a document ; and also the animus that must have existed to prepare such, as Mr. Francis' name does not appear on it either as a loser or a gainer.

I need not inform you that the eight cranes as mentioned in the petition as being at work is a mistake, as although we have used No. 8 cranes on some occasions when the dredge was repairing, yet it has only been for a very short time, and then principally on account of other cranes being under repair; and that it is only within the past week that we have had eight cranes at work, and during that time I have had the whole of the eight cranes working at once. Whether the contractor did this with five gangs I shall not trouble, but that it was done I know, and will be again whenever requisite while I am here. Although I still remember what the former Commissioner told me when the same complaints was made about Mr. Francis, that the Government did not wish to oppress the contractor, and that unless the ships or the Coal Companies could guarantee constant work for the contractor, that some amount of discretion was necessary in compelling him to put on extra labour for so short a time as is sometimes wanted. Further, I may say that the petition to the Coal Company did not succeed half so well amongst them as it apparently did amongst masters and ship-owners, and this is the very place where the first real complaints are likely to arise; but as long as the produce of a pit is shipped away there cannot exist any ground for complaint, and this I make my first study in all my action with regard to the management of the wharf.

In conclusion, I cannot help remarking this fact,—that all or most of the complaints that has reached the Commissioner has emanated from one source, but that I have carefully avoided any allusion to that source in my previous replies; but seeing Mr. Francis' name on the petition has induced me to throw all scruple on this point on one side, and it may be summed up in a few words, viz., that Mr. Francis was the unsuccessful tenderer last time, and he desires to be the successful one this time. Permit me also to remark, in reference to the management of the cranes, that one look at the returns will convince any one on this point, but at the same time I should deem it an especial favour (if the Commissioner should deem it prudent) to exchange for some other situation wherever the Commissioner should think fit, as the continued complaints makes it very unpleasant, more especially when I know that the whole of my time is given to its proper fulfilment.

I have, &c.,
W. SCOTT,
Wharfinger.

No. 31.

COMMUNICATION PRESENTED BY MR. FRANCIS.

Received from Mr. Francis, 1 Novr.—J.S.

Sydney, 27 October, 1869.

To the Honorable J. Sutherland, M.L.A., Minister for Public Works.

SIR,

Tenders having been called for working the steam cranes at Newcastle from the 1st of January, 1870, we, the undersigned merchants, ship-owners, and others, respectfully draw your attention to the very serious delay and uncertainty there is in loading vessels, especially the smaller vessels engaged in the coasting trade, believing that under different arrangements, even with the present limited appliances, the grievance could in a great measure be remedied.

At present only one crane is given for the coasters, although there are sometimes as many as from twelve to twenty of those vessels entered in in one day.

The water at this crane (No. 1) is so shallow that the vessels have very often to load while aground at the risk of sustaining injury, the crane being sometimes idle for hours while the tide is rising, before the vessels can be removed.

The night loading has not proved of so much benefit as was at first anticipated, through being irregular; the Companies have not always sufficient coal on hand, consequently, when a vessel takes a night turn, the next vessel on turn is very often as much delayed as the other is accelerated.

We ask for nothing unreasonable, but simply this—that before the cranes are again leased, such conditions should be embodied in the lease as will secure to the smaller vessels a fair proportion of accommodation; and we would respectfully suggest that two cranes should be set apart for coasting vessels, which arrangement would, we believe, greatly facilitate the loading of all classes of vessels, as the loading of large and small vessels at the same crane is a hinderance to both; a crane often being idle through a large vessel being unable to shift in consequence of the state of the tide or weather.

Hoping that the general management of the cranes will have your serious attention,—

We have, &c.,

No. 32.

THE TRAFFIC MANAGER'S REPORT.

Mr. Beeston for report.—B.C.—2/11/69., J.R.

I do not think it desirable that a second crane should be placed at the service of the coasters; if such was, I have very little doubt but the Commissioner would have a much longer petition from the captains and owners of other vessels than coasters. The practice has been to occasionally place a second crane to load coasters, and I think it would be the best to continue that course. I enclose report from the Wharfinger, who goes fully into the matter.—J.L.B., 12/11/69.

See report also on 69/3432, herewith.

[Enclosure.]

Mr. Scott to The Traffic Manager.

Newcastle, 9 November, 1869.

Sir,

The similarity between these petitions and the previous one are such that my former replies will serve for them, with one or two exceptions, which I will write on.

Respecting night loading, the grievance will be readily overcome by the vessels on turn during the day to be compelled to load at night whenever requisite, thus saving the trouble of removing the vessel under and saving a loss of time the next day, as the vessels that load at night are scarcely away from the berth to do any good before 8 o'clock a.m.

In reference to the allotting of two cranes to the coasters, I would strongly urge the refusal, as such a course would be highly detrimental to the proper working of the cranes, and be the source of a vast amount of dissatisfaction in other quarters. The coasters at present enjoy far more privileges than any vessels trading to the port and customs, as established, a precedent that at times would be much better if not existing, viz., that of giving them one crane; but this even interferes with the work at times, and leads to annoyances, and likewise the loss of vessels by their going to other shoots, when they might with advantage be loaded here, by giving them their turn of arrival. But to say that coasters shall claim either one or two cranes would be so seriously to interfere with the work that it could not last. The captains of coasters, from this cause, have been under the impression that they have a claim on one crane, in spite of any authority; but on reference to clause (6) of the instructions to the Wharfinger, it will be seen that they have only a claim amongst other small vessels; and this is my view of what should be, for it is not an uncommon occurrence for coasters to lay in Sydney one week and more before getting a place for their coals, and that we have lost the loading of other small crafts through placing a coaster under No. 1 crane in preference to other small vessels that have waited here for ten or twelve days, and been on turn before the coaster; moreover, coasters are not confined to one crane, but they have the advantage of all the cranes at times. I have had as many as five coasters under, on several occasions, when there has been coal to supply them; and I assert most strongly that no coaster that comes here need be in the port sixty hours without being loaded, provided he can find coals, and is willing to find trimmers; and I would again strongly urge the necessity of compelling all vessels to trim by trimmers, instead of, as at present, by the crew. We number about forty coasters, all told; we load an average about two a day, and A. A. and Waratah at least three more: so that there are five coasters a day loading, out of forty.

I have, &c.,

W. SCOTT,

Wharfinger.

No. 33.

PETITION PRESENTED BY MR. CUMMINGS.

J.S., 2/10/69.

To the Honorable John Sutherland, M.L.A., Minister of Public Works.

We, the undersigned ship-owners, merchants, and ship-masters of vessels trading to the Port of Newcastle, in the Colony of New South Wales, for cargoes of coals,—

WE humbly petition you to redress the grievances we now labour under in having our vessels unnecessarily delayed at the Government coal cranes, by the present mismanagement of the shipping, and insufficient working of the cranes for want of the required number of men to each crane. There are eight cranes, yet there are not more than five gangs of men to work them, and this number only lately employed. Three of the cranes are so out of repair that they cannot be used to ship coal.

The owners of coasting craft are informed by the contractor there is no crane for their vessels, so they are often detained two or three weeks before they can get under the cranes to ship their cargoes.

The Government having called for tenders for working the cranes for the next three or five years, we humbly petition that such measures may be taken to prevent the continuance of the grievances that we now labour under, from the neglect of the Government in not seeing that the contractor loads our vessels in a reasonable time. The loss we sustain from this detention is so great an injury to the coal trade as to be a public grievance.

Dated this 27th day of October, 1869.

P. B. Sutje, owner of De Elgues.

John Blue, ship-owner.

Wm. Llewellyn, ship-master.

David Howells, ship-master, owner of "Fox."

Jas. Neill, ship-master.

Edward Foster, ship-owner.

S. Wilkinson, master of brig "Rookh."

W. R. Stephenson, ship-master.

George Robertson, owner of "Fruiterer" barque,
brig "Venture," brig schooner "Scotia."

Wm. Linklater, owner brig "Freak."

No. 34.

THE TRAFFIC MANAGER'S REPORT THEREON.

Mr. Beeston for report.—B.C., 2/11/69.—J.R.

THE contents of this are very similar to the one presented by Mr. Francis, and my report upon that may be taken for this also, with the addition that I have some reason to question the signatures of some of the parties being genuine, and enclose a letter given to the Wharfinger by Captain Foster denying that he either signed or authorized any one to sign it for him.

J.L.B., 12/11/69.

[Enclosure in No. 34.]

Mr. E. Foster to Mr. Scott.

Newcastle, 9 November, 1869.

IN reference to my name appearing on the petition presented by Mr. Cummings to the Commissioner, I totally deny any authority for placing it there, and I am happy to say that I have been treated in Newcastle in a way that reflects the highest credit on the Wharfinger and all concerned, and am confident that not only all is done that can be done, but that the management is conducted in such a manner that few could equal it.

I remain, &c.,
EDW. FOSTER,
Owner "Ino" and "Storm Bird."

P.S.—I consented to an application to two cranes, but not for any mismanagement.

34A.

MINUTE PAPER.

Petitions with reference to the working of the steam cranes, Newcastle.

There have been four petitions received recently on the above subject, viz. :—

1. From ship-owners, merchants, and masters of vessels trading to the port. Vessels not loaded within a reasonable time—Not more than five gangs to work eight cranes—Three cranes out of repair.

Mr. Beeston denies these allegations, and is supported by the statement of the Wharfinger, who points out the unreliable nature of the petition.

2. From A. Marshall and James Greig. No regular crane for coasters—Not enough hands to work the cranes—Vessels put under shoal-water cranes.

Mr. Beeston reports no ground for complaint. No. 1 crane is allotted for coasters; when necessary eight gangs are at work; cannot avoid putting coasters in shallowest berth, they being generally of light draft.

3. From merchants, ship-owners, and others. Delay in loading vessels—Only one crane allotted to coasters—Shallow water at that crane—Two cranes required for coasters, &c.

Mr. Beeston reports that he cannot recommend two cranes for coasters, and the Wharfinger points out that coasters are exceptionally well used as it is. No coaster he says need be in port ten hours without being loaded. On the average two are loaded a day at the cranes, and three by the Companies (five a day), and there are only forty coasters in all.

4. From ship-owners, merchants, and ship-masters. Vessels delayed through mismanagement, want of men at cranes—No crane for coasters—Now that cranes are to be re-leased, the Government should oblige contractor to load vessels in a reasonable time.

Mr. Beeston points out the similar nature of this petition to that presented by Mr. Francis, and gives it the same reply. In support of his statement as to the want of *bona fides* of the petitions, encloses a letter from Captain Forster, one of the petitioners, denying that he signed, or authorized any one to sign for him, and speaking in high terms of the management of the cranes.

The several petitions may be replied to separately, and petitioners informed that, from inquiries made, it is apparent that any delay that occurs in loading vessels is not attributable to the Department, but arises either on the part of the shipping, or through the Companies not having coal to ship. They may be told that amended regulations for the management of the cranes are to come into operation on the 1st January next, and that if the Shipping and the Coal Companies will co-operate with the Government in expediting thereunder the loading of vessels, no unreasonable delay will take place.

J.S., 16/11/69.

These petitions are to the Minister, and should be replied to by Public Works.

Mr. Halligan, 20/11/69.

Petitioners informed, 22/11/69.

No. 35.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. FRANCIS AND OTHERS.

Department of Public Works,
20 November, 1869.

GENTLEMEN,

IN reference to your petition of the 23rd ultimo, praying that certain alleged grievances in the working of the Government steam cranes at Newcastle may be remedied, I am directed by the Honorable the Secretary for Public Works to inform you that, from inquiries made it is apparent that any delay that occurs in loading vessels was not attributable to the Government, but arose either on the part of the Shipping or from the Companies not having coal to ship.

2. Mr. Secretary Sutherland desires me to add, that amended regulations for the management of the cranes are to come into operation on the 1st January next, and that if the Shipping and the Coal Companies will co-operate with the Government in expediting the loading of vessels, no unreasonable delay will take place.

I have, &c.,
JOHN RAE.

No. 36.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS A. MARSHALL AND OTHERS.

Department of Public Works,
22 November, 1869.

GENTLEMEN,

In reference to your letter of the 11th ultimo, praying that certain alleged grievances in the working of the steam cranes at Newcastle may be remedied, I am directed to inform you that, from inquiries made, it is apparent that any delay that occurs in loading vessels is not attributable to the Government, but arises either on the part of the Shipping or from the Companies not having coal to ship.

2. Mr. Secretary Sutherland desires me to add, that amended regulations for the management of the cranes are to come into operation on the 1st January next, and if the shipping and the Coal Companies will co-operate with the Government in expediting the loading of vessels, no unreasonable delay will take place.

I have, &c.,
JOHN RAE.

No. 37.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. ELLIOTT & Co., AND OTHERS.

Department of Public Works,
22 November, 1869.

GENTLEMEN,

In reference to your memorial of the 27th ultimo, praying that certain alleged grievances in the working of the Government steam cranes at Newcastle may be remedied, I am directed to inform you that, from inquiries made, it is apparent that any delay that occurs in loading vessels is not attributable to the Government, but arises either on the part of the Shipping or from the Companies not having coal to ship.

2. Mr. Secretary Sutherland desires me to add that amended regulations for the management of the cranes are to come into operation on the 1st January next, and that if the Shipping and the Coal Companies will co-operate with the Government in expediting the loading of vessels, no unreasonable delay will take place.

I have, &c.,
JOHN RAE.

No. 38.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. BLUE AND OTHERS.

Department of Public Works,
22 November, 1869.

GENTLEMEN,

In reference to your petition of the 27th ultimo, praying that certain alleged grievances in the working of the Government steam cranes at Newcastle may be remedied, I am directed by the Honorable the Secretary for Public Works to inform you that, from inquiries made, it is apparent that any delay that occurs in loading vessels was not attributable to the Government, but arose either on the part of the Shipping or from the Companies not having coal to ship.

2. Mr. Secretary Sutherland desires me to add, that amended regulations for the management of the cranes are to come into operation on the 1st January next, and that if the Shipping and the Coal Companies will co-operate with the Government in expediting the loading of vessels, no unreasonable delay will take place.

I have, &c.,
JOHN RAE.

No. 39.

(2.) The number of tons of coal from May 14th, 1868, to October 13th, 1869, which the Government have received payment for, and the number of tons the Government have paid the contractor for shipping.

The number of tons for which the Government have been paid for	...	717,259½
The number of tons paid for to contractor	...	707,823½

(3.) What number of cranes out of the eight have been broken down at one time during the contract?

One. Mr. Beeston, the Traffic Manager, states that he has no recollection of more than one at a time being laid up for repairs. It is just possible there might have been a second laid off for a temporary repair of an hour's work or so, but there is no record of it, nor does any of the officers on the spot recollect such a case.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

—
COAL FIELDS.

(REPORT FROM EXAMINER OF, FOR 1869.)

—
Ordered by the Legislative Assembly to be Printed, 7 May, 1870.

REPORT from the Examiner of Coal Fields upon the condition and prospects of the Coal Fields,
for the year 1869.

—
THE UNDER SECRETARY FOR LANDS to THE EXAMINER OF COAL FIELDS, NEWCASTLE.

Department of Lands,
Sydney, 22nd April, 1870.

SIR,

I am directed to request that you will be good enough to state whether 24th clause of the Coal Fields Regulation Act of 1862 has been complied with, and, if so, to forward the half-yearly Inspector's Reports since the date of the report alluded to in your letter of the 30th June, 1869.

2. I am at the same time to request that you will furnish a report upon the conditions and prospects of the Coal Fields for the past year.

I have, &c.,
A. O. MORIARTY.

—
MR. T. LEWIS to THE EXAMINER OF COAL FIELDS.

Newcastle, 8 July, 1869.

MY DEAR SIR,

In availing myself of the honor of presenting to you this my half-yearly report for the six months ending 30th June, 1869, on the present state and condition of the collieries and kerosene shale mines in the Colony,—I beg to state that no material change has taken place during the term of this as compared with that of my last half-yearly report, either in the quantity of coal produced, selling price thereof, or the number of collieries, &c., in actual operation.
