There were then sixteen collieries working in the Northern and four in the Southern District, making twenty collieries, and three kerosene shale mines—in which numbers there is now no alteration to report. However, besides some material additions in several collieries in the north there is a new company just starting, another in the south. The approach of the railway seems also to be awakening colliery enterprise in the Western District, although I have not visited that part yet.

Present condition of mines.

With one exception during the term of this report I found a general desire in colliery managers and proprietors to comply with the spirit of the law. In so far as the creation of main air-currents the ventilation of our larger collieries especially is unquestional; but the distribution and circulation of the currents among the workings involve most difficulties and therefore require constant attention. As may be readily conceived, those difficulties multiply in proportion as the workings extend from the ventilating apparatus, and this is the part of the subject mostly demanding the Inspector's interference.

The Anvil Creek Colliery is the exceptional case alluded to. Besides neglecting several minor matters, Mr. Farthing, the proprietor and manager, persisted in making no adequate provision for the efficient ventilation of his new mine while it was in course of opening, and not before the law was about to be enforced did he reluctantly take steps to comply with the reasonable requirements of the Coal Fields Act. I hope soon to be able to report favourably; but failing that, the Coal Fields Office will have to bring its utmost pressure to bear.

Accidents in mines.

To whatever cause or causes the present somewhat long list of accidents may be attributable, one thing I am certain of from personal observation and inquiries, that abundance of timber, &c., is sent down into all the mines; and in my travels amongst the workings I find no grounds for complaints as to sending the same all into places or workings, although I too often find men neglecting to use it when necessary.

The present list exhibits eleven separate accidents, all from falls of coal and roof, resulting in as many injuries. Three of them proved fatal and eight non-fatal.

The Waratah Colliery was the scene of four casualties—two fatal, two non-fatal; one fatal by a fall of roof and one by a fall of coal. The two non-fatals by falls of coal.

Two cases at Lambton Pit, one fatal and one non-fatal, both by falls of coal.

Two non-fatal cases in the Borehole Pit, both by falls of stone, &c.

One non-fatal by a fall of coal in the Bulli Colliery, and two non-fatal in the New Lambton Pit—one by a fall of coal, and one by a fall of stone.

The first fatal case happened in the Waratah tunnel on the 4th January, to an experienced miner named Thomas Hughes, by the roof falling on him in a heading which he and his mate had just commenced to work back, after it had been idle for about eighteen months—the seam is 9 feet high, the upper 2½ feet, worked in tops, over which is 2½ feet of coarse coal or jerry, then the ordinary strong stone roof; the fatal morning being the first for them in the place. Deceased and mate (Robert Price) started to drop tops at the board end, 6 yards wide, with an open board behind on the other side of heading, and a solid pillar on both sides. In his evidence at the Coroner's inquest, Robert Price stated,—“That a row of props was set across the mouth of the board behind, but shortly after they commenced working at the coal, they heard a move overhead, which prompted them to set other props nearer to the working face, and then resumed work for some hours, and consulted about setting another prop, although doubting the necessity. Deceased was clearing a place for the props, when all of a sudden a large piece of the coarse coal, &c., broke over the props completely covering him, and while his mate was away seeking assistance, a large block, some tons weight, of the upper roof fell, after which he was heard only to moan once or twice; it took the men about half an hour to liberate the body.” Mr. T. Oswald, underground manager, stated in his evidence,—“That he had examined the place on the day before the accident, and it was then, to all appearances, in a safe condition”; he said, moreover—“That a deputy visited all workings every morning before the miners.” The said manager stated to the jury,—“That it was considered the second clause of third special rule was applicable only to fire mines,” to which I made the following reply;—“These rules being the approved code for the Waratah Colliery, therefore no part thereof can remain in operation when circumstances warrant its enforcement.” As to the cause of the roof giving so little warning to the men, I made the following observation;—“The roof having already broken during the time the place was idle, therefore the usual cracking sounds could not be repeated.” Verdict of jury—Accidental death.

The second fatal accident happened on 24th February, to an old miner named Hugh Fyfe, by a fall of coal in Waratah tunnel also; the sufferer lived till 28th. The scene was a pillar working, 8 feet high and 7 feet wide, 3 feet of which was left on the right side; there were vertical breaks in with a slight pressure on the coal. Deceased and mate had undermined the place from the corner to the fast end up to a facing 2 feet thick, and after removing the sprag, deceased drove a wedge at the fast end which moved the coal, but failed to bring it down, owing to a post hole holding it fast to the roof. Fyfe then drove another wedge into the “jack” which brought down the mass before he was able to clear himself, the top part of which struck him so severely that he died in four days. In most pillar workings the seam bodily, the miners use what they term “soldiers,” long props for warding off the falling coal, which expedient was overlooked on this occasion, notwithstanding that timber of all lengths is supplied for security. The seam being both high and breaky, and both of the men advanced in years, &c., were additional reasons why greater care should have been taken, which circumstance I pointed out to the men on the place as well as at the Coroner's inquest. Verdict of Jury—Accidental death.

The third and last fatal casualty occurred to an experienced and careful miner named Michael Murphy, by a fall of coal in the Lambton Pit on the 29th April, and died on the 2nd May. As in all similar cases, I made a personal examination of the scene of the misfortune, and attended the Coroner's inquest. Deceased worked in an ordinary 8-yards board, height of working lift, 5ft. 9in. His mate, George Holland, who worked on the other shift, whose evidence, confirmed by the aspect of the plan, is:—The facing on the left half of the board was worked away on the previous shift by myself, Holland, and the other half undermined to the same facing, and two sprags, one over the other, set about 3ft. from the loose end of the hanging coal, with a “lid's cog” in the holding still nearer the end. On the fatal morning, after cutting the fast end, Murphy prepared for dropping the coal, and was struggling to remove the “lid's cog” with his pick, when the outer end of the coal broke off close to the sprags from a joint or cross-facing, over a ton's weight of which fell on him and caused his death in four days. This case affords another instance of the varied dangers which surround the coal miner, against some of which the most scrupulous human forethought and experience fail adequately to provide—the presence of the treacherous cross-facing being so unusual and unexpected in this part of the mine, the men never thought of spragging the end of the coal, although timber, &c., was plentiful. Verdict—Accidental death.

Of the eight non-fatal cases, two happened in the Waratah Colliery, each resulting in leg fracture to an experienced miner by a fall of coal; two in the Borehole Pit. In each case an experienced miner got his leg broken by a fall of stone or rubbish; one leg fracture by a fall of coal in the Lambton Pit, one collar-bone fracture by a fall of coal in the Bulli tunnel, and two in the New Lambton Pit—a leg fracture by a fall of coal, and an arm fracture by a fall of stone. From personal inquiries made into each of the cases, I may safely state that, with a single exception, they were all accidental; whilst the case of Henderson at Bulli was the result even of reckless disregard of positive orders by the overman to drop the coal, and set a prop; he had only been about four months in the mine along with another man.

The usual classified list of accidents is hereto appended.

I have, &c.,
THOMAS LEWIS.

A CLASSIFIED List of Fatal and Non-fatal Accidents in the New South Wales Collieries, during the six months ending 30 June, 1869:—

Name of Colliery.	No.	Date.	Name of Person.	Occupation.	Remarks on Nature and Extent of Injuries.	Injuries.		Fatal.		Total Injuries.	Total Fatal.
						Falls of coal.	Falls of stone.	Falls of coal.	Falls of stone.		
Waratah	1	4 Jan. ...	Thomas Hughes ...	Miner ...	Lived a short time	1	...	1
Lambton	2	11 Feb. ...	David Williams ...	Do. ...	Leg fracture	1	1	...
Waratah	3	13 " ...	Frank Hutchison ...	Do. ...	Do. ...	1	1	...
Do.	4	24 " ...	Hugh Fyfe ...	Do. ...	Lived four days	1	1
Borehole	5	19 Mar. ...	Michael Nash ...	Do. ...	Leg fracture	1	1	...
Waratah	6	12 April. ...	David Jenkins ...	Do. ...	Do. ...	1	1	...

REPORT of the proceedings of the Inspector of Collieries in New South Wales, during the six months ending 31st December, 1869.

MR. THOMAS LEWIS to THE EXAMINER OF COAL FIELDS.

MY DEAR SIR,

As Inspector of Collieries I have the honor to report to you my proceedings in connection with the collieries and kerosene shale mines in the Colony, during the half-year ending 31st December last.

The number of collieries in active operation in the Northern District was the same at the close of the year 1869 as it was at the close of 1868—sixteen. One was added in the Southern District during last year, making five at present.

The number of kerosene shale mines is unaltered—one in the south and two in the west—three. During my recent and first visit of inspection to the Western District, I found that two other shale and seven coal mines had been started, all of which are at present comparatively idle, awaiting the settlement of the railway tariff for taking the materials by rail to Sydney, as the proprietors informed me.

Accidents in and about the mines.

It is painful to have to present this heavy list of seven separate fatal accidents, resulting in the deaths of one person each, and ten separate non-fatal casualties, causing serious bodily injuries to ten persons—as compared with three fatal and eight non-fatal cases during the preceding six months. All were duly reported to you.

Summary of separate fatal accidents—

	Accidents.	Lives lost.
By falls of working coal seams	5	5
By winding rope breaking in sinking pit	1	1
By falling from scaffold on surface	1	1
Total fatalities	7	7

Summary of non-fatal accidents—

	Accidents.	Persons injured.
By falls of working coal seam	5	5
By falls of stone roof	2	2
By shot explosion in sinking pit	1	1
Jammed by full coal skip	1	1
Kicked by a horse below	1	1
Total non-fatals	10	10

Notwithstanding the praiseworthy care of the masters to furnish the miners with the necessary materials for securing their working places, I am sorry to say that out of the five experienced miners killed by falls of coal, three resulted from the neglect of the deceased themselves; and I venture to say that if the masters were as slow in supplying timber, &c., as the miners are in using it, the latter would have serious and just cause of complaint. As stated in some previous reports, I have succeeded in getting most of the larger collieries to adopt a stringent by-law, making it imperative on the miners to set sprags against the coal while the dressing process is being carried on; but I fear that some of the managers have not been over scrupulous in its enforcement. Both at inquests and in my ordinary visits through the mines do I endeavour to press this important matter.

The

The first fatal accident, No. 2 in the tabulated list, happened on the 15th July, in the Waratah Company's old tunnel, through deceased, Alban Davies, himself, carelessly allowing a large piece of dressed coal in a wide board to hang unsecured, which fell on him while doing other work in front of it. Verdict found—Accidental death through deceased's own neglect.

Second fatal, No. 3 in the tabulated list, occurred on 12th August, to an aged but strong man named William Bragil, carpenter, while putting up a weigh-house at the foot of the Waratah Company's new tunnel screens. Deceased had, for his own convenience, erected a temporary stage or scaffold over one of the two railway lines leading under the screens, and the end of the loose board forming his footing projecting over the near rail of the other line was struck by an empty waggon, driven towards the screens by a screener named Dixon, and poor Bragil was toppled over head-foremost on to the iron rail below and fractured his skull, from which he died in a few days. Verdict—Accidental death.

Third fatal, No. 10 in tabular list, happened on 18th September, in the Lambton Colliery, through deceased, Robert Gibson, who was an experienced miner, thoughtlessly resuming the undermining operation under a large block of coal with both ends loose in a narrow holing between two boards, which was already prepared for taking down, without re-securing it, which fell on him. Verdict—Accidental death through deceased's own neglect.

Fourth fatal, No. 12 in tabulated list, occurred on 4th October, in the Co-operative Colliery, to a young man, but an experienced miner, named John Adamson, through a large piece of loosened coal discharging, the only sprag set to secure it falling on him while filling his coal skip close by—deceased having had no room to set another sprag, the coal ought to have been dropped. Verdict—Accidental death.

Fifth fatal, No. 13 in the tabulated list, befel a water bailer, named Peter Séús, on 12th October, while bailing water in a sinking pit belonging to the Lambton Company, by a loaded bucket falling on him through the winding well rope breaking. The wire rope was $2\frac{1}{4}$ in. diameter, its calculated breaking strain when new was 7 tons, working load 24 cwts. It was proved at the inquest that the load was not over 9 cwts. when the rope broke within 3 ft. of the socket; only a few weeks before the misfortune I had been to the shaft, and in addition to my own personal observations, I made strict inquiry of the engine-man, George Smith, and of the master sinker, Jas. Harrison, as to the condition and working of the winding apparatus generally, and nothing was wrong. However, a few days before the accident, deceased himself, who usually paid attention to the ropes, discovered a single wire, $\frac{1}{8}$ th part, severed near the socket, which he at once reported to the manager, who sent without delay to Sydney for a new rope to replace it, not that he feared the old one, but to be on the safe side as he said. The sinkers having expressed themselves perfectly satisfied with the old rope were therefore allowed to work on till the new one came to replace it, and which had come on to the ground the day previous to the accident. The old rope had been in gear only about five months, but had worked no more than half that time. Of the several separate single wires since tested by me, only one of them parted at a strain of 2 cwts., which 2 cwts. \times 35 cwts. = $3\frac{1}{2}$ tons.

In my report of case I said—I can account for the sudden breaking of the rope in no other way (however unsatisfactory) than the result of a secret and unobservable deterioration by the chemical action of the pit mineral water, assisted perhaps by that of the atmospheric air; however, I have since then thought it quite possible that it was due to the loaded rope missing the pulley and dropping on to the axle or shaft. Verdict—Accidental death.

Sixth fatal, No. 14 in the tabulated list, took place on the 18th October in the Waratah Company's old tunnel, to an experienced miner named Jabes Biddle, who worked with care, and had set a sprag against the coal within 4 ft. of the wall in a wide board, and while working in the corner a piece of the hanging coal fell on him from an undetected joint or break inside the sprag, and killed him. Verdict—Accidental death.

The manager of this colliery has never manifested much determination to enforce the by-laws as to spragging the coal, although as good as any for providing the miners with props, &c.

Seventh, and last fatal, No. 17 in the tabulated list, happened on 31st December, in the Anvil Creek Colliery, to an experienced miner named Richard Buchanan, through his own neglect to secure a piece of coal with one end loose he was undermining, which fell on and killed him. Verdict—Accidental death.

In this case the Coroner for the Maitland District, Mr. James Thomson, held the inquest in my absence, without either adjournment or notice.

NON-FATAL ACCIDENTS.

From a personal examination of the circumstances each of the ten non-fatal cases, I found four of them of a preventable nature, although only one of them, I think, is of such character to demand special notice herein.

No. 1 in the tabulated list.—The sufferer, William Lundy, who lost one eye and hand, was sinking for Lambton Company, and on 1st July he and his brother were down, and had a side shot 18 inches long, charged with half a pound of gunpowder, to which they set fire on coming up to dinner.

The shot not having exploded during dinner-time, both brothers went down again to clean out the hole, and get it re-charged; for this dangerous operation Lundy used the steel-pointed drill, which, as soon as it passed through the stemming into the powder struck a spark of fire from the hard rock, and the charge exploded unexpectedly, and removed its load. The wonder is that both men were not killed in such a narrow place as the bottom of a shaft only 9 feet diameter. The sufferer said he thought the powder must have got damp by the heavy water in the shaft, and that was the reason given for using the steel-pointed drill.

This case ought to teach sinkers that iron tools cannot be used safely in holes charged with gunpowder.

CONVICTION.

Pursuant to your instructions I summoned the manager of Bulli Colliery, Mr. Alexander Ross, for having neglected to give proper notice of an accident by which a miner, named Samuel Hurley, No. 8 in the list, sustained serious bodily injuries by a fall of stone roof in the Bulli Colliery, on 9th September. The Bench at Wollongong sustained the charge, and defendant was fined in a nominal sum of 20s. and costs, in the hope that such neglect should not be repeated, on 18th November. This being the first case under the Act it was not pressed.

PRESENT

PRESENT CONDITION OF THE MINES.

Here I beg to make the following statements. I never give any previous intimation to the colliery officials of my inspection visits, except when I revisit to see that any cause of previous complaints is removed, according to promise. I always go my rounds through the mines alone, except when the officials happen to meet or overtake me, thereby affording any man unrestrained scope for making any well-grounded complaints in matters that may escape my personal notice. It is my universal practice to find out the workings most likely to be suffering for want of ventilation, such as the innermost boards in and greatest distance from the air-ways.

When I was transferred from Wollongong to this district, in July, 1864, the larger as well as the smaller collieries had but very inadequate means employed for creating air-currents in the mines; but whilst I can now congratulate the parties concerned on the removal of that evil, I am sorry to say that another equally prejudicial in its effects is gradually but too palpably taking its place, and I think that the nature and results of my proceedings and some of my official correspondence on the ventilation of some of the collieries forcibly indicate the desirability if not the absolute necessity for altering the law to meet the evil complained of before it grows too strong.

In my last half-yearly report I was constrained to make particular reference to the deplorable state of the ventilation in the Anvil Creek Pit, after having both written and spoken many times to the proprietor Mr. William Farthing during the previous year on the subject, which reference I closed by expressing a faint hope that the proprietor would carry out a vague promise he was induced to make to improve the ventilation of the pit as well as other matters complained of. On 3rd July last I revisited the pit to see what steps were taken to ventilate the mine which I found in its usual condition.

Again on the 18th August with similar results; again on the 7th October in company with yourself, I found no perceptible improvement.

The result of all the above visits, with the letters on the subject, having been duly reported to you at the time and repeated references to the subject in my two monthly reports, I think it unnecessary to reproduce the whole herein, although I think I cannot justly omit the report of my last visit on the 14th December, which shows in some measure the present state of things. I ought first to state, on 18th August, when calling Mr. Farthing's attention to the deplorable condition of the pit, I was subjected to a torrent of most abusive language from him. All the following correspondence was duly reported to you at the time.

"To W. Keene, Esq., &c., &c.

"My dear Sir,

"I have the honor to report to you of my having this day revisited the Anvil Creek Pit to see if any improvement was made in the ventilation since our joint visit on 7th October last.

"2. I regret to report that no attempt has been made to effect such improvement, no artificial means used for creating an air-current, and that moving to-day was very feeble, even in the main air-way, through which it makes a short cut direct from the downcast to the upcast shaft, owing to the air-door which ought to be good and well looked after being left both *open* and *broken*.

"3. The third or fourth board end on both sides of the downcast shaft is open, so even if there was a current moving it could not pass such openings to the workings, most of which are inside a considerable distance.

"4. After coming out of the pit I reminded Mr. Farthing that the ventilation was not improved; he replied—'No, and having carefully considered the Act I conclude that the ventilation of my pit is quite up to its requirements, but if it comes to the worst then I shall rely on the arbitration clause therein.'

"I have, &c.,

"THOMAS LEWIS.

"Newcastle, 14 December, 1869."

I venture to say that if the somewhat vague and indefinite language used in the second general rule in the Coal Fields Act as to ventilation of mines affords an opportunity for defeating the spirit and intention of it, so flagrantly as in the above case, the sooner it be altered the better; at any rate the Law Courts should be appealed to at once and should they decide in favour of Mr. Farthing, such decision would render the present Act a "dead letter" in regard to the *ventilation* of mines.

"To Thos. Croudace, Esq., Manager of the Lambton Colliery.

"Dear Sir,

"On visiting Robinson and Dip Flats to-day I found the air both slow and dull amongst the workings, notwithstanding the main air-current being faultless at the time. Doubtless, broken and neglected doors contributed materially to the unpleasant result.

"The ventilating furnace was nearly exhausted at 12 o'clock (no work for afternoon shift). I believe the furnace should be constantly kept up when there is constant work in the pit, and after a stoppage it should be fired again the day before starting the pit. I intend to revisit the above flats in a week or so when I hope to find the cause of complaint removed.

"I have, &c.,

"T. LEWIS,

"Inspector of Collieries.

"Newcastle, 29 July, 1869."

Again—

"To the Manager of the Lambton Colliery.

"Dear Sir,

"I am sorry to have to reiterate my oft-repeated complaint of the state of the ventilation in Robinson's and Cross-cut Flats. On visiting the above flats yesterday, I found the air-currents very feeble, and all the canvas brathers torn down in the former flat; so that the little air passing through made the shortest cuts, instead of serving the men in the innermost workings.

"The air-current was scarcely perceptible amongst the inner workings in the Cross-cut Flat; also which defect was mainly, if not wholly, due to a want of proper care in circulating the air.

"Trusting you may at once use effectual means to remedy this long-standing cause of complaint,—

"I have, &c.,

"T. LEWIS,

"Inspector of Collieries.

"Newcastle, 1 December, 1869."

On revisiting the above parts on 31st December last, I found the grievance only partially removed.

"To Thos. Harsfield, Esq.,

"Manager of the New Lambton Colliery.

"Dear Sir,

"Having visited the New Lambton Pit on 4th instant, and found the ventilation unsatisfactory, to which matter I then called your attention by a note, to-day I revisited the pit and found things rather worse than better in the pair headings known as Coak's and Penman's, as well as No. 6 heading, in each of which places a large number of miners work.

The

The air-current does not circulate through them at all, and the miners suffer great and unnecessary hardship in consequence; therefore I request you at once either to remove the men from the parts complained of, or cause a constant current of air to circulate through said headings, in compliance with the requirements of the second general rule in the Coal Fields Regulation Act of 1862.

"I have, &c.,
"T. LEWIS,
"Inspector of Collieries.

"Newcastle, 27 October, 1869."

Again—

"To the Manager of the New Lambton Colliery.

"Dear Sir,

"On visiting your pit to-day, I found the narrow board for the new engine bank inside the fault several chains in advance of the air-current; moreover, there were also three headings all a considerable distance beyond the reach of the current, and as a matter of course all the men working in such places suffer unnecessarily for want of air. The second general rule in the Coal Fields Regulation Act of 1862 enacts 'That all working places of the pits levels and workings of the colliery shall be constantly ventilated', &c. I therefore request you to withdraw the men from the part complained of at once, except such as may be needful for driving an air-way, until the workings therein shall have been ventilated, in accordance with the provisions of the above-recited Act.

"I have, &c.,
"T. LEWIS,
"Inspector of Collieries.

"Newcastle, 26 November, 1869."

I feel in duty bound to add, that on my revisiting the pit on 1st December, to see whether my request had been complied with, I received rather harsh treatment from the proprietor, Mr. James Brown, and the manager.

"To J. B. Winship, Esq.,

"Manager of the A. A. Company's Colliery.

"Dear Sir,

"I regret being under the necessity of calling your attention to the state of the ventilation in the Gully Cross-cut Flat, in Borehole Pit. On Saturday, 16th instant, Mr. Elliott, overman, accompanied me through said flat, when I pointed out to him the unsatisfactory state of the air. When I suggested the removal of the men in top of one heading until an improvement was made, he promised to effect such improvement at once.

"To-day, 23rd, I revisited said flat, fully expecting to find the promised improvement effected, but to my surprise, it was only partially carried out, whilst in the other places things were as bad as on previous visit.

"On both occasions your main air-currents were good, therefore there was but little excuse for the unsatisfactory state of the air in the parts complained of.

"Having no reason to doubt that you will at once attend to the matter,—

"I have, &c.,
"T. LEWIS,
"Inspector of Collieries.

"Newcastle, 23 October, 1869."

The above letter secured another promise from the overman (the manager being absent at the time, otherwise faith would have been kept), which, on 28th, I found was not kept. The grievance is now removed.

"To J. Y. Neilson, Esq.,

"Manager of the Wallsend Colliery.

"Dear Sir,

"On the 8th of last month I found some of the lower boards in the back heading new district considerably beyond the air-current, consequently the men suffer unnecessary inconvenience, to which I then called your attention by a note. To-day I revisited said boards, and found the lowest one about fifty yards, and the next to it not much less, before the air; and rising sharply as they do, it is evident the pillars ought to have been holed and the current carried through. Even a single board should not be overlooked.

"In the No. 1 flat, on the other side of the pit, the air-current was feeble, and several of the workings therein warm.

"The second general rule in the Coal Fields Regulation Act enacts 'That ventilation shall be constantly produced in all working places of the colliery', to which I respectfully call your attention.

"I have, &c.,
"T. LEWIS,
"Inspector of Collieries.

"Newcastle, 2 November, 1869."

The grievance was removed on 6th December.

On another subject—

"To Chas. Croudace, Esq.,

"Manager of the Lambton Colliery.

"Dear Sir,

"In availing myself of the honor to acknowledge the receipt of your notice of a slight accident, on 18th instant, to the lad William Johnson, employed as guard to ride in front of the full trains drawn by steam-power from the dip flats, who no doubt had a very narrow escape with life, I now call your attention to my letter of 18th November last (1868), in which I pointed out at some length the peculiar and grave dangers attending such employment. Being fully convinced, as I am, there is no absolute necessity for placing the lad in such position, where his life is in the balance, as it were, every trip, I must now repeat my most solemn protest against employing any person in such dangerous position.

"I have, &c.,
"T. LEWIS,
"Inspector of Collieries.

"Newcastle, 20 August, 1869."

Not until another lad, 15 years, named George Hagan, had a similar narrow escape to that of William Johnson, a few months ago, did the above honest and solemn protest produce the desired effect. Now the trains find the road quite as well without the guard.

I have, &c.,
THOMAS LEWIS.

7
 TABULATED List of Fatal and Non-fatal Accidents in the New South Wales Collieries, during the six months ending 31st December, 1869.

No. of Accident.	Date of Accident.	Name of Colliery.	Name of Person.	Occupation.	Remarks on cause and extent of injuries.	Fatal.			Non-fatal.					
						Falls of Coal.	In sinking pit.	Fall on surface.	Falls of Coal.	Shot in sinking pit.	Kick by horse.	Jammed by skip.	Total, Non-fatal.	
1	1 July	Lambton	William Lundy	Sinker	Loss of hand and eye in sinking pit							1	1	
15	"	Waratah	Allan Davies	Miner	Fatal, by fall of coal—own neglect	1								
12	Aug.	Do.	William Bragil	Carpenter	Fatal, falling from a stage on surface		1	1						
25	"	New Lambton	Luke Smith	Miner	Collar-bone fracture and bruises—fall of coal				1				1	
31	"	Do.	Charles Bartholomew	Do.	Severe bruises to back and abdomen								1	
31	"	Do.	Thomas Grierson	Do.	Leg fracture								1	
3	Sept.	Bulli	Thomas Thomas	Do.	Dislocation of ankle joint				1				1	
7	"	Do.	Samuel Harley	Do.	Leg fracture and dislocation of ankle joint—fall of coal.					1			1	
9	14 "	Borehole	William Jack	Do.	Severe bruises to head and legs—fall of coal.				1				1	
10	18 "	Lambton	Robert Gibson	Do.	Fatal, own carelessness	1		1						
11	28 "	New Lambton	Fred. Walters	Wheeler	Severe bruises to head—fall of stone					1			1	
12	4 Oct.	Co-operative	John Adamson	Miner	Fatal, spine dislocated by the coal.	1		1						
13	12 "	Lambton	Peter Seris	Water-bailer	Fatal, loaded bucket in sinking pit—rope breaking	1		1

EXAMINER OF COAL FIELDS TO THE UNDER SECRETARY FOR LANDS.

Coal Fields Office,
 Newcastle, 28 April, 1870.

SIR,

I do myself the honor to forward you herewith the Reports of the Inspector of Collieries, Mr. Thos. Lewis, for the year 1869; and in attention to the request in your letter of the 22nd instant, that I would report upon the condition and prospects of the Coal Fields in the past year,—I beg to state for the information of the Honorable the Secretary for Lands, that no preceding year has equalled the promise and activity of 1869.

2. The quality of our coal is year by year better appreciated, and I am informed that at Madras it meets English coal at equal prices, and is greatly esteemed for gas manufacture. In the China market the difference in price, which used to be from five to six thaelers has fallen to one-and-a-half thaeler. I have always expressed the opinion that time would dissipate the prejudices as to the qualities of our coal, and that when shipped direct from the mines here, it would be found to be more advantageous in use than English coal, generally subjected to two or three transshipments.

3. The error as to the geological position of our coal, and which attributed it to a much later age than the European beds, has entirely disappeared, and in a "Treatise on Coal and Coal Mining," by Warrington Smyth, published only two years ago during his presidency of the Geological Society, he says that the numerous observations on them, contributed by Mr. Beete Jukes, the Reverend W. B. Clarke, Mr. Selwyn, and Mr. W. Keene leave no doubt as to the Paleozoic character of the lower part of a great conformable series of "strata," and in the table of stratified rocks he places the New South Wales coal as belonging to a period from the Devonian to the Trias.

4. New works are in progress in various directions. New Lambton is an important extension of our colliery workings, and the original Lambton, or Scottish Australian Company, is engaged in an important and interesting sinking for coal, at Stockton, on the North Shore, opposite Newcastle. A cast-iron "tubbing," or shaft, of seven feet diameter, has, in a few weeks work, been very expertly let down, without pumping out the water, through eighty-two feet of loose sand, to the clay-bed, by special, ingenious, and well adapted contrivances of the Manager, Mr. Croudace; and I expect that from knowledge acquired by previous borings, they will win the same seam as is worked by the Australian Agricultural Company, at a depth of about two hundred and forty feet.

5. Messrs. Vindin and Mitchell are commencing operations at Greta, and further to the north, in the direction of the line of railway, coal is found near Muswellbrook, at Wingen, Page's River, and Murrurundi. In the west, researches continue to be made for workable seams near Mount Victoria and Little Hartley. The Western Petroleum Coal Company have greatly increased their facilities of transport to the railway, and a fine seam of coal has been opened at Lithgow Valley near to the Bowenfells Railway Station. The Reverend W. B. Clarke has reported on this seam for a Company now forming to work it, and from my own examination I can confirm all that Mr. Clarke has reported as to the extent, thickness, quality, and facility of working of this coal. In the south, Wollongong maintains its reputation as producing a good steam coal, and near to the Great Southern Railway seams have been proved to be workable at various points particularly at the Cataract and Sutton Forest.

6. I have examined seams more than seven hundred miles to the north of Newcastle, belonging to the same deposits we are working here, covered and underlaid by the same fossil flora and fauna; and we may, without boasting, claim to rank with the most extensive coal field in the world.

7. A very correct idea may be formed of the number of persons supported by our colliery workings, independent of navigation, by the following Statistical Table, furnished to me by the courtesy of Mr. Merewether

Merewether, taken from the books of the Australian Agricultural Company, and which shows the number of persons immediately dependent on the workings of that company's colliery only:—

	Men.	Women.	Male Children.	Female Children.	Total.
Staff.....	3	3	4	3	13
Sundry	109	57	91	84	341
Miners and Wheelers	264	165	218	250	897
	376	225	313	337	1,251

8. From the same books it appears that of the 376 persons directly employed, as shown in the preceding table, an average of 278 were getters and wheelers of coal, to whom was paid the gross sum of £28,861 1s. 7d., or at the rate of £103 16s. 4d. per man per annum, equal to 7s. 6d. per day for each day worked. The total quantity of coal raised by this company was 168,108 tons.

9. I also annex a tabular statement of the numbers of persons employed in each colliery, and the quantities of coal raised, from which it will be seen that the entire quantity of coal raised in 1869 by the collieries of Newcastle and its vicinity, including Minmi, amount to 778,263 tons. The Northern pits have raised 35,892, and the Southern, 99,091 tons; and 6,276 tons of oil-coal and shale have been raised in the Southern and Western Districts, making a total of 919,522 tons.

10. On the average it may be estimated that 2,000 tons of shipping enter and 2,000 tons of shipping per day leave the port of Newcastle. The new coal staiths when ready for use will greatly facilitate the work of loading, to the great advantage of the port. From all I can learn from the principal mercantile houses of Newcastle, an equal, and probably a greater amount of business may be expected in this, than in the last year, for the exportation to India, China, and San Francisco, is steadily on the increase. The shipment to the latter port was 21,895 in 1868, increased to 65,589 tons in 1869; and already, in the 1st quarter of the present year, the shipments amount to 19,774 tons.

11. The complaints of insufficient ventilation in some of the collieries, as set forth in the reports of Mr. Inspector Lewis for the last six months, have given me much anxiety, for I considered it doubtful that I would obtain any conviction under the Act without some very positive means of proving the fact out of the mine. To effect this object I have made a very simple apparatus for showing the purity of any volume of air in which it may be placed, and which I can exhibit in action to any Bench of Magistrates to support any complaints I may judge necessary to bring before them. I therefore consider that the law will be sufficient as it stands; should it prove otherwise I will report it to you.

12. I have given attention to all accidents as they have arisen, of which, particulars will be found in Mr. Lewis's Reports, with a tabular statement annexed.

I have, &c.,

WILLIAM KEENE,
Examiner of Coal Fields.

TABULAR List of Collieries and Kerosene, Coal, and Shale Mines in New South Wales, with the Number of Persons employed, and Quantity of Mineral raised in 1869.

No.	Mines.	Names of Proprietors.	Tons of Coal raised.	Tons of Oil-coal, and Shale, raised.	No. of persons employed.	Remarks.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SHEEP AND CATTLE.

(REPORT FROM CHIEF INSPECTOR, FOR THE YEAR 1869.)

Ordered by the Legislative Assembly to be Printed, 3 February, 1870.

REPORT OF THE CHIEF INSPECTOR OF STOCK to THE HONORABLE THE MINISTER FOR LANDS.

Department of Lands,
Sydney, 1 January, 1870.

I HAVE the honor to submit for your consideration my Report on the number and state of the sheep and cattle throughout the Colony, and on other subjects connected with stock, for the year ending 31st December, 1869.

In the early part of the year most of the runs were suffering from the late protracted drought, and many of them in the dry portion of the Colony were deserted from the want of grass and water. On others again—which, in their natural state, were also dry runs—large sums had been expended in water-saving and fencing, which enabled their owners to keep their stock on their own runs. They thus not only escaped the heavy losses which those owners suffered who were obliged to travel their stock through the want of these improvements, but they saved the stockowners through whose runs they would have passed the infliction which the travelling of these additional stock would have caused, and to a great extent prevented the losses from becoming much more general than they even were.

Since the drought broke up (which in the South-western Districts it began to do about the end of March) the season has been all that could be desired, and both feed and water have been plentiful in every part of the Colony.

I.—SHEEP.

1.—*Number of Sheep in the Colony.*

As this is the first Report of the description now contemplated, it may not perhaps be uninteresting to glance at the annual returns of the sheep in the Colony since 1860, when Queensland was separated from New South Wales. In that year the number of sheep in the Colony is given in the Statistical Register at 5,615,054; and adding to that and to the other years, up to 1864, one-sixth for the annual discrepancy which has been found to exist for the years from 1864 to 1868 inclusive, between the numbers as given by the police and those actually returned on oath by the owners themselves, the numbers are as follows:—

Date.	Year.	Number of Sheep.
1 January	1861	6,119,163
„	1862	6,550,896
„	1863	7,169,926
„	1864	9,089,463
„	1865	9,650,106
„	1866	11,644,593
„	1867	15,066,377
„	1868	16,000,000
„	1869	16,848,217

THE following Table shows the number of Sheep returned to the several Clerks of Petty Sessions throughout the Colony in 1868 and 1869, and the increase for the latter year:—

District.	No. of Sheep—1868.	No. of Sheep—1869.	Increase—1869.	Decrease—1869.

*The difference between the returns for 1868 and 1869 is not always real, as the owners' returns have been sometimes sent to one C P S and sometimes to another in the same Police District. Thus the returns for Armidale for 1869 show a decrease, but this arises through the returns, which were sent to Bundarra in 1869, having been made to Armidale in 1868.

District.	No. of Sheep—1868	No of Sheep—1869.	Increase—1869.	Decrease—1869.
Walgett	163,274	65,313	97,961

Wellingrove.	334,572	351,137	16,565
Young	358,830	423,209	64,379
Yass	150,171	174,762	24,591
Add	15,820,890	16,808,217	1,919,648	932,321
Lots under 500	179,110	179,110
	16,000,000	16,987,327
Net increase on the year 1869	987,327

2.—Losses from Drought.

By the above tabulated statement it appears that, at 1st January last (1869) there was an increase on the number of sheep in the Colony of 987,327; but I regret to say that the losses since that date, through the late protracted drought, will more than swamp this increase; for, according to the estimates furnished by the Inspectors for their respective districts, these losses amount to upwards of 1,000,000 sheep, and it is to be feared that they have been rather under than over estimated. The greatest number of deaths occurred in the western and north-western portions of the Colony.

3.—The Lambing.

As a whole the lambing has been a very favourable one, although in some instances the hardships which the ewes underwent during the drought has had a prejudicial effect on the percentage of lambs. Besides, in a good many cases the ewes were considered too low in condition to rear lambs, and were not put to the rams; and this will also tend to diminish the increase for 1870.

4.—Imported Sheep.

Although with such flocks as those of Messrs. Bayley, Cox, Riley, Traill, Dangar, Bettington, M'Canish, Campbell, Learmonth, and others, this Colony is, as regards stud sheep, more an exporting than an importing one, the following lots of stud sheep have been imported during the year:—

Date of Arrival.	Where from.	Breed.	Sex.		Total	Name of Owner.	Destination.
			Rams.	Ewes.			
1869.							
Feb. 1	Victoria	Merino	56	56	Mr. Dangar	Neotsfield.
„ 2	Do	Do.	6	..	6	Messrs. White	Hunter.
„ 9	England	South Downs	..	3 & lamb	4	Peel River Company .	Goonoo Goonoo.
Mar. 8	Tasmania	Merino ...	3	..	3	Australian Agricultural Company.	Warrah, Murrurundi.
„ 16	England	South Downs	6 & 5 lambs	11	W. J. Dangar	Neotsfield, Singleton.
„ 29	Victoria	Merino . . .	485	90	575	Messrs M'Kinnon, M'Gaw, and others.	Burabogie, Hay.
„ 31	America	Do	10	..	10	Mr. Brown	Young District.
May 7	England	South Downs .	..	3	3	D. M'Leod	Nelligen.
„ 10	Do	Do	..	3	3	His Excellency the Governor	Government Domain.
„ 13	Queensland	Merino	17	15 & 2 lambs	34	A. Loder and others .	Liverpool Plains.
Aug. 24	Tasmania	Do.	14	3	17	E King Cox	Mudgee.
Sept. 25	Victoria	Do.	91	91	Messrs. Hebden, Osborn, and others.	Brookong, Urana.
Nov. 10	France	Do.	3	..	3	D. H. Campbell	Cunningham's Plains
„ 22	South Australia	Do.	20	..	20	J. M'Evoy	Gundagai.

The sheep from Victoria were principally from the studs of Messrs. Learmonth, Shaw, Currie, and Cummings; those from Tasmania were bred by Mr. Gibson; those from South Australia by Mr. Fisher; and those from Queensland by Mr. Deuchar and by Messrs. Armistead & Parr; while those from France are from the stud of the Emperor of the French.

5.—Improvement of the Sheep.

Considerable improvement is taking place in the quality of the sheep, by culling, and the introduction of a better class of rams into the flocks; but a great deal has yet to be done in both respects, and good rams are comparatively scarce. This is especially the case with respect to the south-western portion of the Colony, where owners were accustomed some years ago to obtain their stud sheep from Victoria.

Now,

Now, however, through the infected state of the flocks in that Colony, this source of supply is stopped, unless by way of Sydney, and the expense and trouble of introducing them in that way is too great to be generally adopted. Owners are, therefore, as a rule obliged to purchase their rams in this Colony, and as the breeders already named have also to supply many of the flockowners in Queensland with stud sheep, the supply of first-class stud sheep is not equal to the demand.

6.—*The Clip.*

The clip has upon the whole been a good one, though there are complaints from some quarters that the staple is not so sound as might have been wished. This of course is also attributable to the drought.

In the Albury, Carcoar, Dubbo, Hay, Maitland, Merriwa, Narrabri, Yass, and Young Districts, the clip is reported as "heavy," "above the average," or "very good." In Eden, Forbes, Goulburn, Grafton, Singleton, Wagga Wagga, Warialda, and Wentworth, it is said to be "good"; and in Balranald, Bathurst, Bourke, Corowa, Deniliquin, Glen Innes, and Mudgee, it is reported as below the average.

A very decided improvement is this year observable in the getting up of the clip, both through water being more plentiful and through improved modes of washing being adopted. Large sums have been expended on many of the stations in machinery for hot-water washing; and although this mode has been unsuccessful in some few cases through mismanagement, there is no doubt but it will eventually supersede the cold-water system.

More care has also been exercised in the sorting and packing of the wool; and it is to be hoped that this is the commencement of decided annual improvement of the clip shipped from this Colony for the London market.

7.—*Scab.*

Now that the Colony is entirely free from this disease, the closest vigilance will be exercised at all the ports to which there is any probability of imported sheep being brought. In order also as far as possible to remove the risk of infected sheep being brought into our ports by vessels from Great Britain, it has been suggested to their captains, through the agents here, to have their "ships" sheep inspected before they are taken on board, as in nine cases out of ten the infection among imported stud sheep is traceable to "ships" sheep.

Our flocks have been and still are subjected to very great risk from the infected state of the sheep in Victoria. There they are all running at large, and liable at any time on the Upper Murray portion of the Colony, and during the summer season, along the whole Border, to cross the river. Numbers of Victorian sheep have found their way to this side and been destroyed by the boundary riders now patrolling the northern bank; and it is only by the vigilance of these riders, and the constant care and energy of the Border Inspectors, ably supported as they have been by their Directors, that our flocks have been kept free from infection. Besides the risk, the infected state of the Victorian sheep thus entails a heavy expense on this Colony. There are now *nine* riders patrolling the northern bank of the Murray, and as the river becomes lower there will no doubt be demands for more. It is to be hoped therefore, for the sake of both Colonies, that the new Scab Bill which was lately before the Victorian Parliament will shortly become law, and that it will prove a thoroughly efficient measure. The introduction of sheep from Victoria, except by sea, is of course strictly prohibited by proclamation.

As a fresh outbreak of scab recently occurred in South Australia, the sheep from that Colony were interdicted from entering this on the 8th October last, and the interdict will remain till it is certain that all the infected sheep in that Colony are securely quarantined, and that no infection exists except in the south-eastern portion of the Colony.

8.—*Catarrh.*

Two outbreaks of this disease have occurred during the year,—the one on the Oregon Run, near Warialda, belonging to Mrs. M'Millan, and the other on the Looanga Station, near Bendemeer, belonging to Mrs. Stitt, in the Armidale District. That on the Oregon Run was a very slight one, only thirteen sheep in all being affected, and they were at once destroyed. But on the Levanga Station the outbreak was a more serious matter, and several thousand sheep died of the disease or were destroyed as affected.

The outbreak in the Warialda District is traceable to that of 1868, the disease being beyond all doubt constitutional and hereditary as well as infectious or contagious; and there are good grounds for believing that near Bendemeer to be also attributable to an hereditary taint—the infected sheep being the progeny, though certainly far removed, of sheep which had been catarrhed.

After destroying a considerable number as they exhibited any symptoms of disease Mrs. Stitt declined to kill any more, but at my suggestion she tried the sulphur treatment, as practised by Dr. Dewar in Scotland, on the affected sheep, and put them through a course of fumigation. This was attended with apparent success, for the disease left them shortly after it was commenced. But although the result of this experiment affords some hope of this treatment being a preventive, and ought to be again tried should another outbreak occur before any alteration in the law giving compensation for sheep destroyed for catarrh can be obtained,—the only safe mode of dealing with catarrh is to boil down or destroy the infected flock immediately the disease unmistakably shows itself; for, as has been already said, it is not only infectious or contagious, but constitutional and hereditary, and after sheep have been once affected they are very likely to be so again at certain seasons of the year.

So long as these tainted sheep remain undestroyed, there is considerable risk of the infection being spread, and especially so through some of them being sold and taken into other parts of the Colony where their true character is not known, and where the neighbouring owners would not be on their guard.

It is to be hoped therefore that the necessary measure (which has been framed, and will be laid before Parliament when it meets) for dealing with catarrh the same as scab will soon become law; when, should an outbreak occur, the infected sheep would be at once destroyed, and the disease would soon be eradicated from our flocks. There are only *five* stations in the whole Colony on which the disease or any taint of it is known or suspected to exist.

9.—*Cumberland Disease.*

This disease is reported to have appeared in only twelve out of thirty-four districts, and the deaths from it have been comparatively few, except on a station in the Young District, where they are said to have exceeded 1,000. The cases which are reported occurred in the Coast Upland and Intermediate portions of the Colony.

10.—*Foot-rot.*

Foot-rot has been more than usually prevalent during the past year, through the frequent rains with which the Colony has been favoured; but with the exception of those which occurred in the Coast Upland and North-eastern portions of the Colony the attacks have been very temporary, and there are now few lame sheep to be seen in any part of the Colony. In fifteen districts there have been no cases of this disease, and in ten only a few; while in five districts it has been prevalent, and in four very prevalent.

11.—*Fluke.*

Very few cases of fluke are reported. Its treatment is becoming much better understood, and sheep are now kept on country and do well where some years ago it would have been considered madness to run them.

12.—*Travelling Sheep.*

The number of sheep travelling solely for grass and water, and not for sale, *i.e.* "loafing," has for some years past been very great; and those owners through whose runs public roads pass have suffered most severely from these sheep; while the stock of the *bonâ fide* traveller have been all but starved by them. Last season, the evil reached its climax—not less than 7,000,000 of sheep being reported by the Inspectors as having travelled for sustenance during the year. Some of these are the same sheep reported by two or more Inspectors, but the fact of these sheep having consumed the grass and water in one district in no way alleviated the effect of their visitation in the next.

Under these circumstances it was only to be expected that there should be numerous demands for a legislative remedy for this crying evil; and it was accordingly dealt with in the Impounding Bill, introduced in the Legislative Council during last Session, but that measure unfortunately did not become law. By it a distinction is endeavoured to be made between the legitimate traveller and the "loafer," by granting travelling permits to the owners of stock which have been sold or are intended for sale, and giving owners of runs passed through power to exact a grass charge from all owners of travelling stock who could not produce such a permit.

Another mode of dealing with this subject would be to levy a grass charge per mile on *all* owners of travelling sheep, but to fix the charge at such a low rate as the legitimate traveller, who is seldom long on the road, would not feel it, while the "loafer" would find it cheaper to rent ground to keep his sheep than to travel and pay the charge.

The subject of travelling stock, however, is of so great magnitude, as well as so difficult, as to render it questionable whether it should not be dealt with in a separate measure, distinct from the Impounding or Road Acts. Not only does the question as to how the "loafer" is to be got rid of arise, but the settlement of the still more difficult one of providing and keeping open sufficient droving roads and watering places on Crown Lands is urgently called for, in the face of the rapid selection of the land along the main roads and rivers which is now going on.

II.—CATTLE.

1.—*Number of Cattle in the Colony.*

The numbers of cattle in the Colony during the several years from 1st January 1861 to 1st January 1868 inclusive are stated in the Statistical Register as follow:—

1st January 1861	2,271,923
„ 1862	2,620,383
„ 1863	2,032,522
„ 1864	1,924,119
„ 1865	1,961,905
„ 1866	1,771,809
„ 1867	1,728,427
„ 1868	1,761,411

From these returns it will be seen that a very considerable decrease took place in the number of cattle during the year 1862, and that, although there is not the same serious rate of decrease in 1863 and the following years, the numbers so far from increasing have up to 1868 gradually decreased. The decrease here noticed is of course mainly attributable to pleuro-pneumonia, which broke out in this Colony in the end of 1861, and was most virulent and widely disseminated in 1862 and 1863. It was more or less prevalent in every district throughout the Colony. Where its ravages were not checked by a timely resort to inoculation, it carried off from 20 to 35 per cent. of the cattle; and so dilatory were owners generally in adopting this remedy, that the average loss throughout the Colony from pleuro-pneumonia cannot be put down at less than 25 per cent.

Besides this direct cause for the decrease in the number of our horned stock, there were indirect causes tending to the same result. Thus the risk of pleuro-pneumonia led owners to dispose of their cattle and replace them with sheep; and they were all the more inclined to make this change that sheep, until recently, were paying better than cattle.

2.—*Losses from Drought.*

The losses from drought have not been quite so severe in cattle as in sheep, the Inspectors' returns fixing them at about 80,000. These occurred principally in the salt-bush and intermediate country, and the deaths were most numerous in the north-western portion of the Colony.

3.—*Imported Cattle.*

Besides those brought across the Border from Victoria, the following lots of valuable pure cattle have been introduced by ship during the year :—

No.	Breed.	Sex.	Where from.	Owner.	Destination.
5	Hereford	Cows	England ...	Messrs. White	Edinglassie and Martindale, Denman.
2	Do.	Bulls	Do.	Do.	Do.
1	Short Horn ...	Do.	Do.	Do.	Do.
2	Do.	Do.	Do.	W. J. Dangar	Neotsfield, Singleton.
1	Do.	Do.	Victoria.....	— Greaves	Clarence River.
1	Do.	Cow	England ...	W. J. Dangar	Neotsfield, Singleton.
2	Do.	Heifers ...	Do.	Do.	Do.
1	Hereford	Cow	Do.	Do.	Do.
1	Short Horn ...	Bull	Do.	Mr. Rouse.....	Mudgee.
3	Do.	Cows	Do.	Messrs. White	Martindale and Edinglassie, Denman.
4	Hereford	Do.	Do.	Do.	Do.
1	Do.	Do.	Do.	W. J. Dangar	Neotsfield, Singleton.
14	Do.	Cows and calves.	Victoria.....	Messrs. Bundock, Barnes, and Smith.	Clarence River.
3	Short Horn ...	Bulls	England ...	Australian Agricultural Company.	Stroud.

These importations will prove a very great acquisition to our cattle stock, several of the animals being of high merit, and prize-takers at some of the principal shows in England.

4.—*Improvement in Cattle.*

There is very great room for improvement in our breed of cattle ; and although there has latterly been more inquiry for pure-bred bulls, the demand is by no means so great as it ought to be ; while the prices offered for them are, with a few exceptions, too low to induce many owners to turn their attention to the breeding of thorough-bred stock. Some few owners may be willing to give from £20 to £40 a head for well-bred bulls, but the majority think £10 to £15 enough. Even the highest of these figures cannot pay the breeder of pure cattle ; and the consequence is that there are comparatively few pure herds in the Colony. When it is considered that the progeny of a well-bred bull will, as a rule, fetch at least £1 more a head than the increase from an inferior animal, besides coming earlier to maturity, and that there will at the least be fifty calves in a season by one bull—the folly of using low-priced bulls must be apparent to every owner.

5.—*Pleuro-pneumonia.*

I regret to have to report that pleuro-pneumonia has again shown itself in several parts of the Colony, though not in a very virulent form or to a very great extent. It is hoped however, that as the result of the late inquiry, which has established the efficacy of inoculation, becomes known, that treatment will be at once resorted to. This will tend to check the spread of the disease ; but until an Act is passed, preventing infected cattle from travelling, and putting that class of cattle, when properly inoculated, on a more favourable footing than those that are infected but not inoculated, as well as providing for the examination and licensing of inoculators, and the inspection and disinfecting of town dairies,—it is not to be expected that the disease can be kept within moderate bounds, much less eradicated. With such a measure, however, as here indicated, there is every reason to believe that pleuro-pneumonia would in the course of a few years be banished from the Colony.

6.—*Poison Pea.*

A considerable number of deaths have this year resulted from cattle eating the poison pea—a species of *Swansonia*, of which there has been a very luxuriant growth. The deaths have principally occurred on the Liverpool Ranges and in the adjoining country.

III.—GENERAL.

1.—*Metropolitan Stock Markets.*

I may perhaps be permitted to call attention here to the very great loss owners of stock are now sustaining through the want of central markets. It would seem that the Corporation have resolved to erect these markets, and it is to be hoped that there will now be no unnecessary delay in their establishment. Should there be so, it is the intention of some gentlemen interested in the disposal of stock to form a Market Company, of which a prospectus has actually been framed. Whether the Corporation or a Market Company proceed with the matter, such a site should be selected for the yards as will permit of the abattoirs being eventually erected in the same neighbourhood, as their situation is now most inconvenient for getting stock into the slaughter yards, and a serious nuisance to the inhabitants in many parts of the Glebe and Balmain. If the market yards were placed on the north side of the railway, the abattoirs might be erected near them on the Parramatta River, and the stock could pass without trouble from the market to the slaughter yards, while the meat could be taken to town by the train.

2.—*Meat-preserving Company.*

The establishment of a Meat-preserving Company is also urgently called for in Sydney ; but until central markets are established and the disposal of the stock placed upon a more satisfactory footing than it now is, it would be scarcely possible for such a Company to carry on its operations with success. The establishment of a Meat-preserving Company would be highly advantageous both to stockowners and to the Colony generally ; for so soon as it was fairly in operation stock *must* rise to Melbourne prices, and the preparing and shipping of the meat would add considerably to our trade. The proof that the prices of stock here would then advance to the Melbourne rates lies in the fact that owners are now sending their cattle from the Castlereagh to Melbourne, where they are largely purchased by the Meat-preserving Company, and at 25 per cent. advance on the Sydney prices. At the same time, although it may appear somewhat anomalous, it is the case that the retail price of meat is no higher in Melbourne than in Sydney.

3.—*Conveyance of Fat Stock by Rail.*

Whether our fat stock travel by the "Bulga," by "Bell's Line," or by the Southern Road, their condition is now greatly deteriorated during the last portion of their journey,—a great deal more than is generally imagined. It is a well ascertained fact that at home a fat beast crawling along a good road at a snail's pace, and rested, and well fed day and night, loses 8 lbs. a day during the journey; and surely here, with bad mountainous roads, little or no feed, and that little exceedingly inferior, and the cattle comparatively wild, we are justified in putting the loss at the same amount in the summer and one-half more in the winter. It may be that stall-fed cattle when taken on the road would fall off very much, but they cannot possibly do so to the same extent as our cattle on the last 120 or 140 miles of their journey to Sydney by either of the principal droving roads.

If then our stock travelled by the road waste even to the extent that they do at home,—and I believe stockowners themselves, when they consider how the cattle die on the station and in Sydney, will allow that I am rather under than over the mark,—there cannot be a doubt but it would pay the owner much better to send his stock by railway from any distance over 80 miles than by the road. The question stands thus on cattle from Goulburn:—

	<i>By rail.</i>	s. d.
Railway charge		8 6
Loss of weight, say 1 day's waste, @ 8 lbs., @ 2½d. per lb.		1 8
		10 2
	<i>By road.</i>	£ s. d.
Droving		0 3 6
Waste of condition, say 10 days, @ 8 lbs. per day = 80 lbs. at 2½d.		0 16 8
General deterioration of quality of meat, say 0½d. per lb. on 650 lbs. =		0 6 9
		£1 6 11
		0 10 2
		£0 16 9

That is a clear gain of 16s. 9d. a head, exclusive of the advantage of a far quicker return (a matter of very material importance to all, but especially to the dealer), and also that of far less risk of damage or loss than if the stock are sent by the road. The price put on the quantity deficient is not too high, considering that it is the best of the fat that is wasted, and the rate fixed for the general deterioration is considerably under than over the mark.

I believe a good many sheep are now sent by rail to Sydney, and there can be little doubt but all ought to be so when the distance is over thirty or forty miles. It is comparatively little trouble to put them on and off the trucks, even with the present convenience, which might be increased; and they waste as much as cattle on the road in fine weather, and a great deal more in bad. I have it on the very best authority that sheep sent by rail from Goulburn in ordinary weather are worth at least 1s. 6d. a head more than those travelled by the road. This would bring the saving to be effected by sending *cattle* by rail to about the same amount as that already estimated.

Were these facts brought prominently before stockowners, and proper accommodation provided for trucking the stock, there is no doubt but the greater part of the cattle and sheep coming to the fat market would be carried by rail,—say from Murrurundi on the Northern Line, from Bathurst and the Mudgee Road Junction on the Western, and from Goulburn on the Southern; and this additional traffic would give a great impulse to railway extension, as the carriage of fat stock by rail would, even at the present rate of consumption, amount to some £40,000 or £50,000 a year.

I am aware that the comparative wildness of our cattle stock and the difficulty of trucking them will be brought forward as objections to sending them by rail; but the fact that cattle are now frequently sent from Sutton Forest to Sydney by the train is a sufficient answer to these objections. The arrangements for trucking cattle could however be improved, and I will now endeavour to point out how this might be effected.

The present close covers, which frighten the cattle and stop them from going into the trucks, should be removed. The cattle are of course wholly unaccustomed to anything of the sort, and the covers have to account for a great deal of the punishment and bruising to which the cattle sent by rail are now subjected. As they will almost always be carried at night they require no shade from the sun, and they are too closely packed to suffer from cold or wet even in winter. Should, however, exceptional hot or cold weather occur, iron stays could be thrown across the trucks, and tarpaulins tied over the stays. Besides the side-doors in the truck (which would be required for loading goods for the up-country trip), there should be one at each end the whole width of it, but divided into two halves, so that when they were opened and swung back on the sides they would fill up the gap between the trucks caused by the buffers.

The yards and line should be so constructed as to place the trucks when loading end on to the yards. The proper number of trucks, according to the size of the mob of cattle to be dispatched, could then be drawn up to the yards in a continuous line and firmly chained up to each other, while a piece of flooring, made for the purpose, could be placed between each truck over the buffers, and so secured by bolts or otherwise to the two carriages and the buffers as to carry the cattle steadily over them. On this being done, the half-doors could be thrown back at each side and fastened by strong chains or iron bolts on the outside to secure them against the pressure of the cattle. The trucks would thus form an unbroken line or lane from end to end; and if the engine were kept at a distance, and the wheels of the trucks as much as possible out of sight, there is no doubt but, with a few quiet workers or milkers to lead them on, the cattle would take the trucks nearly as readily as they would a lane in a stockyard, and more readily than they crossed some of the bridges on their road to the station, for at the station the forcing yards would of course assist in making the cattle go into the trucks. As the cattle went on the trucks they could be kept from going either backward or forward by putting round rails through here and there, where required, between the rails of the trucks or through openings made in the sides for the purpose, till each of the trucks could be filled up with the proper complement of cattle, and the doors closed and fastened.

In

In this way I think it will be seen that the whole number of trucks would be more easily loaded than one would now be with the cover on it, and by the small door in the side; and the cattle need not be knocked about or bruised more than they would be in putting them into a drafting-yard or lane. The sides of the trucks should be closely and smoothly boarded all round, from the height of say 4½ or 5 feet down to a level with the animals' knees, to prevent bruising through the one beast crushing the other, and the insides of the fore and hind doors should be padded, to save the cattle from the effects of the jolting occasioned by the train stopping or starting.

With these precautions, well planned forcing yards, and quiet careful management in putting on and taking off the cattle, they ought to have fewer bruises upon them than if they had come through some of the double lines of fences between which they would have had to travel if they came by the road; and the saving in condition by the rail has been already pointed out.

Some of the details of the plan which is here sketched may no doubt be susceptible of improvement, but any one who has had to do with the working of cattle knows that the principle of having one filling up is the right one, as it not only saves time and labour but also the condition of the cattle. In working cattle in a yard, whether it be merely drafting them, or inoculating or spaying, the "filling up" occupies a very large share of the time.

Closely connected with this subject is that of the Central Cattle Yards; and the carriage of the fat stock by rail will tend to remove one of the chief difficulties with which that question seems at present beset,—the providing of sufficient paddock accommodation near the sale yards, if they are brought near enough to Sydney to suit the convenience of the retail butchers. For when stock are brought down by rail, the principal waiting paddocks will be situated near the up-country termini of the different lines; and with stock thus within eight or ten hours' journey of the market, and the telegraph at less than half an hour's ride of the drover, a large over-supply of stock will seldom be yarded, and extensive paddock accommodation near the sale yards will, under these circumstances, be unnecessary.

4.—*Inquiries.*

As a great deal of valuable information was elicited by the inquiry lately instituted with respect to the efficacy of inoculation for pleuro-pneumonia, I would suggest that a similar course be adopted with regard to Cumberland disease, foot-rot, fluke, yellows, and the poison pea; and that circulars be sent to all owners possessed of more than 500 sheep and 100 cattle, inviting them to give their experience of these diseases, and to state the treatment they have adopted for their prevention and cure—with the view to the facts which they supply being arranged and published, as was done in the case of the inquiry alluded to.

If the information thus obtained did not in the first instance lead to the successful treatment of the diseases mentioned, it would at any rate tend in that direction, and would dispel many erroneous ideas which now prevail with respect to them. Besides, if a scientific investigation as to the nature and proper treatment of any of these diseases be hereafter instituted, as it is hoped it will be, the information collected in this way would be of very material assistance to the gentlemen to whom such an inquiry might be confided.

ALEX. BRUCE,
Chief Inspector of Stock.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

STOCK STATISTICS.
(REPORT ON COLLECTION OF.)

Ordered by the Legislative Assembly to be Printed, 3 February, 1870.

THE CHIEF INSPECTOR OF SHEEP to THE UNDER SECRETARY FOR LANDS.

REFERRING to the suggestions made in my memo. of the 20th January, 1869, that the Inspectors of Sheep should be made collectors of statistics, I have now the honor to submit the accompanying statement, showing the difference in the number of sheep collected for the Registrar General by the police, and those returned under declaration by owners to the Clerks of Petty Sessions, and registered with Inspectors by owners of less than 500 sheep, with a view of showing the necessity for these as well as all other statistics being collected by the Sheep Inspectors.

This is the only case in which there is a check upon any of the collections by the police, and it is not unfair to assume that all other returns made by them to the Registrar General are in the same unsatisfactory and incorrect state, and therefore of comparatively little value, if they are not even worse than useless.

From their knowledge of stock and general acquaintance with country matters the Sheep Inspectors are well qualified to act as collectors; and, as their duties in the inland districts are now comparatively light, they could be attending to them while collecting the statistics.

I understand that a sum of £2,000 was at one time placed upon the Estimates for collecting the statistics of the Colony, but less than half that amount would be sufficient to remunerate the Inspectors for this additional duty, should the suggestion of their appointment be approved.

A.B.
19/10/69.

COMPARATIVE Statement of the number of sheep returned by the police to the Registrar General, and of that returned under declaration by owners to the Clerks of Petty Sessions, for the years 1865, 1866, 1867, and 1868.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF MORPETH—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 11th November, 1869.

BOROUGH OF MORPETH.

BY-LAW.

THE following By-law made by the Borough of Morpeth, in substitution of No. 46 of the existing By-laws of that Municipality relating to Public Works, having been confirmed by His Excellency the Governor with the advice of the Executive Council, is published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BY-LAW.

No Public Work of any character shall be undertaken (except as in Rule No. 41 of Finance Committee By-laws) until the nature thereof and estimate of probable cost be first brought before the Council for consideration and approval.

1870.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF MORPETH—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 21st December, 1869.

BOROUGH OF MORPETH.

AMENDED BY-LAWS.

THE following amendments, made by the Council of the Borough of Morpeth, in the 61st By-law, and in Schedule A of the By-laws of that Municipality, as published in the *Government Gazette* (No. 155) of the 16th July, 1869, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

61. The Bailiff in making a distress as aforesaid, may impound or otherwise secure the distress so made, of what nature or kind soever it may be, in such places or in such part of the land or premises chargeable with the rate as shall be most fit and convenient for the purpose; and it shall be lawful for any person whatsoever, after the expiration of five days, and agreeably to clause 176 of the Municipalities Act of 1867, to come and go to and from such place or part of the said land or premises where any distress shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove the same, on account of the purchaser thereof.

situate at _____, for the sum of _____, being the amount of municipal rates due to the Borough, to the day of _____, for the said dwelling-house, land, or premises (as the case may be), and to proceed thereon for the recovery of the said rates according to law; and should the amount so distrained for, together with costs, be not paid at or before the expiration of five days, you shall then proceed to the sale by public auction of the goods and chattels so levied upon to the amount of said distress and sale.—Dated this day of _____, 18 _____.

Mayor.

SCHEDULE A.
Warrant of Distress.

I _____ the Mayor of the Municipality of Morpeth, do hereby authorize you, _____, Bailiff of the said Borough, to distrain the goods and chattels in the dwelling-house, or in and upon the land and premises of _____,

MEMO.—Passed at Council Meetings of 12th and 26th October, 1869.

J. J. HAYNES,
Council Clerk.

CHAS. E. JAKUES,
Mayor.

MUNICIPALITIES.

(BOROUGH OF ST. LEONARDS—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vict. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 21st December, 1869.

BOROUGH OF ST. LEONARDS.

BY-LAW.

THE following By-law, made by the Council of the Borough of St. Leonards, to regulate, control, and manage the Public Reserves within the Borough, and for planting and preserving trees and shrubs therein, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BOROUGH OF ST. LEONARDS.

BY-LAW the better to enable the Municipal Council of the Borough of St. Leonards to regulate, control, and manage the Public Reserves within the Borough, and for planting and preserving trees and shrubs therein.

WHEREAS certain portions of land within the Borough of St. Leonards, described in the annexed Schedule, have been reserved for the purposes therein set forth; and whereas, by a notification in the *Government Gazette*, dated Tuesday, 10th August, 1869, No. 171, His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint the Municipal Council of the Borough of St. Leonards Trustees for the said portions of land; and as it is expedient the better to enable the said Council to regulate, control, and manage the said Reserves or any others which may be hereafter dedicated to a like purpose and placed under their control, and for planting and preserving the trees and shrubs therein, that certain By-laws should be passed: Be it therefore enacted—

1. The Council may appoint a ranger, bailiff, or overseer with powers and authorities necessary to enable him to perform his duties, as they may from time to time think fit.

2. The said ranger, bailiff, or overseer, or any officer of the Council shall protect the said Reserves, and for that purpose shall be at liberty to call in the aid of the Police for the removal, by force if necessary, of any person or persons who shall be found committing a breach of these By-laws, or who shall by disorderly conduct cause annoyance to any person therein.

3. Any person who shall remove any firewood or timber from any of the said Reserves, or who shall wilfully destroy or damage any of the trees or shrubs growing thereon, or who shall set fire to any grass, tree, or shrub, or timber therein, or shall injure any fence, gate, seat, or turn-stile therein, shall on conviction before any two or more Justices of the Peace forfeit and pay a penalty not exceeding ten pounds.

4. Any person who shall injure or destroy any dam, well, fountain, or reservoir in any of the said Reserves, or who shall wash any clothes, or the person, or any animal, or in any way pollute the water in any such stream, dam, well, fountain, or reservoir, or who shall bathe in any of the said waters (except such as may be set apart for bathing purposes and during the hours appointed for such purposes), shall on conviction before any two or more Justices of the Peace forfeit and pay a penalty of not exceeding ten pounds.

5. Any person who shall offend against decency by the exposure of his or her person in any of the said Reserves, or in view thereof, shall forfeit and pay a penalty of not exceeding ten pounds.

6. No tents, booths, or stalls shall be erected on any of the said Reserves without the consent of the Council first had and obtained, under a penalty of not exceeding ten pounds.

7. No horse-racing or horse-breaking shall be allowed on any of the said Reserves, under a penalty of not exceeding ten pounds.

8. Any person who shall deposit any rubbish on any of the said Reserves, or who shall remove any rock, stone, earth, or other material therefrom without the leave of the Council first had and obtained, shall upon conviction forfeit and pay a penalty of not exceeding ten pounds.

9. The Council may annually let, from year to year or for any less term, by public auction or by tender, the exclusive right to depasture stock on all or any of the said Reserves; and may delegate to any lessee power to impound any swine, goats, horses, sheep, or cattle straying thereon.

10. The Council may also annually let, from year to year or for any less period, by public auction or by public tender, the exclusive right to remove any trees, firewood, or timber not required for ornamental purposes from any of the said Reserves; and they may make such regulations as may be necessary from time to time for the protection of trees and shrubs required for ornamental purposes.

SCHEDULE REFERRED TO.

Reg. No.	County.	Section.	Description of land.	Area.	For what purposes dedicated.
W 63-3360	Cumberland	19 & 20	At the eastern side of Miller-street, the southern side of Falcon-street, the western side of Alfred-street, and the northern side of Ridge-street.	28	Public recreation
		—	Parish of Willoughby, near the Willoughby Waterfalls.	53	Access to water.
		15	At the intersection of Carlow & Walker Miller & Ridge Streets.	8	Recreation and Cricket grounds.

Passed by the Municipal Council of St. Leonards, this twelfth day of November, one thousand eight hundred and sixty-nine.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF SINGLETON—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 21st December, 1869.

BOROUGH OF SINGLETON.

BY-LAWS.

THE following By-laws, made by the Council of the Borough of Singleton, for the care and management of the roads and streets of the Borough, and the suppression of nuisances, &c., having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BY-LAWS—BOROUGH OF SINGLETON.

No turf, gravel, &c., to be removed from streets without permission.

65. Any person who shall form, dig, or open, any drain or sewer; or remove, or cause to be removed, any turf, clay, soil, or gravel, stone, or other material, in or from any part of the carriage or foot way of any street or other public place within the said Borough, without leave first had and obtained from the Council; or who shall wantonly break up or otherwise damage any such carriage or foot way,—shall, on conviction, forfeit and pay for every such offence any sum not exceeding five pounds nor less than one pound.

Holes to be closed.

66. Any person or persons who shall dig or make or cause to be dug or made any hole, or leave or cause to be left any hole, adjoining or near to any public place within the said Borough, for the purpose of making any vault or vaults or the foundation or foundations to any house or other building, or for any other purpose whatsoever; or shall erect or pull down or cause to erect or pull down any building, and shall not forthwith enclose the same and keep the same enclosed in a good and sufficient manner, to the satisfaction of the Committee for Works of the said Borough; or shall keep up or caused to be kept up and continued any such enclosure for any time which shall be longer than shall be absolutely necessary in the opinion of said Committee, and shall not place lights upon each side of said enclosure and keep the same constantly burning from sun-set to sun-rise during the continuance of such enclosure,—shall forfeit and pay for every such refusal or neglect any sum not being less than forty shillings nor exceeding five pounds.

Temporary stoppage of traffic for repairs.

67. The Improvement Committee, or any officer or person acting under the authority of the Council, may at any time cause the traffic of any street, lane, or thoroughfare or any

portion thereof to be stopped, for the purpose of repairing the same or for any necessary purpose; and any person or persons offending against this By-law, either by travelling on any such lane or thoroughfare or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

Drawing or trailing timber, &c.

68. Any person who shall haul or draw or cause to be hauled or drawn upon any part of any street or public place within the said Borough, any timber, stone, or other thing, otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing, which shall be carried principally or in any part upon any wheeled vehicle or barrow, to drag or trail upon any part of such street or public place to the injury thereof, or to hang over any part of such vehicle or barrow so as to occupy or obstruct the street beyond the breadth of the said vehicle or barrow,—shall, upon conviction, forfeit and pay for every such offence a sum of not more than forty shillings nor less than five shillings over and above the damages occasioned thereby.

Driving carriages, &c., on footways, and throwing filth, &c., &c.

69. Any person who shall throw, cast, or lay, or shall cause to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth or annoyance, or any matter or thing, in or upon the carriage-way or foot-way of any street or other public place in the said Borough; or shall kill, slaughter, dress, scald, or cut up, any beast, swine, calf, sheep, or other animal in or so near to any such street or other public place as that any blood or filth shall run or flow upon or over or be on any or either of any such carriage or foot way; or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said foot-ways of any such street or public place any waggon, cart, dray, sledge, or other carriage, or any wheel, wheel-barrow, hand-

barrow, or truck, or any hogshead, cask, or barrel; or shall wilfully lead, drive, or ride, any horse, ass, mule, or other beast upon any such footway, shall, upon conviction, forfeit and pay—for the first offence a sum not exceeding forty shillings nor less than five shillings; for the second offence a sum not exceeding five pounds nor less than ten shillings; and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound for each such offence.

Placing carriages, goods, &c., on footways, &c.

Not to prevent awnings being erected in front of shops.

70. Any person who shall set or place, or cause or permit to be set or placed, any stall, board, chopping-block, show-board (on hinges or otherwise), basket, wares, merchandise, casks, or goods of any kind whatsoever; or shall hoop, place, wash, or cleanse, or shall cause to be hooped, placed, washed, or cleansed, any pipe, barrel, cask, or vessel, in or upon or over any carriage or footway in any street or public place within the said Borough; or shall set out, lay or place, or shall cause or procure, permit or suffer to be set out, or laid, or placed, any coach, cart, wain, waggon, dray, wheel-barrow, hand-barrow, sledge, truck, or other carriage upon any such carriage-way, except for the necessary time of loading or unloading such cart, wain, waggon, dray, sledge, truck, or other carriage, or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals from such coach, cart, wain, waggon, dray, sledge, truck, or other carriage; or if any person shall set or place or cause to be set or placed in or upon or over any such carriage or foot way, any timber, stones, bricks, lime, or other materials or things for building, whatsoever (unless the same shall be enclosed as herein directed), or any other matters or things whatsoever; or shall hang out or expose, or shall cause or permit to be hung out or exposed any meat, offal, or other thing or matter whatsoever, from any house or other building or premises over any part of any such foot-way or carriage-way, or over any area of any house or other building or premises or any other matter or thing from and on the outside of the front or any other part of any house or other building or premises over or next unto such street or public place, and shall not immediately remove all or any such matters or things, being thereto required by the Inspector of Nuisances, or other proper officer of the Council; or if any person who, having in pursuance of any such requisition as aforesaid removed or caused to be removed any such stall-board, show-board, chopping-block, basket, wares, merchandise, casks, goods, coach, cart, wain, waggon, dray, wheel-barrow, hand-barrow, sledge, truck, carriage, timber, stones, bricks, lime, meat, offal, or other matters or things, shall, at any time thereafter again set, lay or place, expose or put out, or cause, procure, permit or suffer to be set, laid, placed, exposed, or put out, the same, or any of them, or any other stall-board, shop-board, chopping-block, basket, wares, merchandise, goods, timber, stones, bricks, lime, coach, cart, wain, waggon, dray, truck, wheel-barrow, hand-barrow, sledge, meat, offal, or other things or matters whatsoever (save and except as aforesaid), in upon or over any such carriage or foot way of or next unto any such street or public place as aforesaid, shall, upon conviction for every such offence, forfeit and pay—for the first offence, a sum not exceeding forty shillings nor less than five shillings; for the second offence, a sum not exceeding five pounds nor less than ten shillings; and for a third and every subsequent offence, a sum not exceeding ten pounds nor less than one pound. Provided that nothing herein contained shall be deemed to prevent any person from placing an awning in front of his or her shop or house, in such manner as that such awning shall be at least seven feet above the height of the foot-way, and that the posts be placed close up to the curb-stone or outer edge of such foot-way.

Riding on drays, carelessly driving, &c.

71. If the driver of any waggon, wain, cart, or dray of any kind, shall ride upon any such carriage in any street as aforesaid, not having some person on foot to guide the same (such carts as are drawn by one horse and driver, or guided with reins only, excepted), or if the driver of any carriage whatsoever shall wilfully be at such a distance from such carriage, or in such a situation whilst it shall be passing upon such street that he cannot have the direction and government of the horse or horses or cattle drawing the same; or if the driver of any waggon, cart, dray, or coach, or other carriage whatsoever meeting any other carriage shall not keep his waggon, cart, dray, or coach, or other carriage on the left or near side of the road or street, or other thoroughfare; or if any person shall in any manner wilfully prevent any other person or persons, from passing him or her or any carriage under his or her care upon such street, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the same,—every such driver or person so offending, shall upon conviction forfeit and pay any sum not exceeding forty shillings.

Riding or driving furiously, &c.

72. Any person who shall ride or drive through or upon any street or public place within the said Borough, so negligently,

carelessly, or furiously that the safety of any other person shall or may be endangered, shall on conviction forfeit and pay a sum not exceeding _____ pounds nor less than _____ pounds.

As to damaging public buildings.

73. Any person who shall damage any public building toll-gate, toll-bar, toll-board, wall, parapet, fence, sluice, bridge, culvert, sewer, water-course, or other public property within the said Borough, shall pay the costs of repairing the same; and, if such damage be wilfully done, shall forfeit and pay a sum not exceeding twenty pounds nor less than five pounds.

Dead animals, &c., not to be thrown into any public water-course, &c.

74. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public water-course, sewer, water-hole, river, creek, or canal; or who shall suffer slops, suds, or filth of any kind to flow from his or her premises into any such water-course, river, creek, or canal; or who shall permit or suffer any such slops, suds, or filth, to flow from his or her premises over any of the foot ways or streets of the Borough; or shall permit or cause, by means of pipes, shoots, channels, or other contrivances, filth of any kind whatsoever to flow into any public water-course, sewer, water-hole, river, creek, or canal; or shall obstruct or divert from its channel any such sewer or water-course, river, creek, or canal,—shall forfeit any sum not exceeding five pounds, and shall pay the cost of removing such filth or obstruction, or of restoring such sewer, water-course, river, creek, or canal, to its proper channel.

Swine not to be kept.

75. Any person who shall suffer any kind of swine, or any horse, ass, or mule, sheep, goat, or other cattle belonging to him or her, or under his or her charge, to stray or go about or to be tethered or depastured in any such street or public place, shall on conviction forfeit and pay for such offence a sum not exceeding forty shillings and not less than five shillings.

As to private avenues.

76. Any owner or occupier of any private house or place within the said Borough who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, shall on conviction forfeit and pay a sum not exceeding forty shillings nor less than ten shillings for every such offence.

Cleansing butchers' shambles, slaughter-houses, &c.

77. For preserving the cleanliness of the said Borough and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council from time to time, and when and as often as he or either of them shall see occasion, to visit and inspect the butchers' shambles, slaughter-houses, boiling-down establishments, tanneries, and fellmongering establishments in the said Borough, and to give such directions concerning the cleansing of the said shambles, slaughter-houses, tanneries, and establishments both within and without as to him shall seem needful; and any butcher or the owner or occupier of any such shamble, slaughter-houses, tannery, or establishment who shall refuse or neglect to comply with such directions within a reasonable time, shall forfeit and pay a sum not exceeding ten pounds nor less than ten shillings.

Inspection of premises.

78. Upon the reasonable complaint of any householder, that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any other person appointed by the Council shall make an inspection of the premises complained of, and the officers of the Council shall have full power without any other authority than this By-law to go upon such premises for the aforesaid purpose.

79. Every person who in any street or other public place or passage within the said Borough, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences, shall on conviction for any and every such offence forfeit and pay a penalty of not more than two pounds:—

Every person who shall hoist, or cause to be hoisted, or lower or cause to be lowered, goods of any description, from any opening in any house fronting any street or public place, and close to the footway thereof without sufficient and proper tackling.

Every person who shall carry or convey or cause to be carried and conveyed in any street or public place the carcase or any part of the carcase of any newly slaughtered animal, without a sufficient and proper cloth covering the same for the concealment from public view, or shall hawk or carry about butchers' meat for sale without covering the same as aforesaid.

Every person who shall be the keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person who may have the right of way or use of any yard, alley, street, or any other place within the said Borough.

Bathing prohibited within certain hours.

80. Any person who shall bathe near to or within view of any inhabited house or any public wharf, quay, or bridge, street, road, or other place of public resort within the limits of the said Borough, between the hours of *six o'clock in the morning and eight in the evening*, shall on conviction forfeit and pay a sum not exceeding one pound for every such offence.

Penalty on indecent exposure of person.

81. Any individual who shall offend against decency, by the exposure of his or her person in any street or public place within the said Borough or in the view thereof, shall on conviction forfeit and pay for every such offence a sum not exceeding ten pounds nor less than five pounds.

Licensing public vehicles.

82. All water-carters, carriers, and owners of vehicles plying or carrying passengers and goods for hire, shall be licensed by the Council, and the owners shall have their names painted in legible letters with the word "licensed" on some conspicuous part of such vehicles respectively. The license-fee shall be at the rate of ten shillings per wheel per annum, and be in force until the 30th day of June in each year; and every owner who shall omit or fail to comply with the provisions of this By-law shall forfeit a sum not exceeding forty shillings.

Rain-water not to be carried on footways.

83. It shall not be lawful for any person whatsoever to carry by means of pipes, gutters, or other contrivances any rain-water from the roof of his or her premises or house, nor permit nor suffer any rain-water to drop from the roof of his or her premises or house upon any part of the footways of any street or public place within the Borough; and any owner or occupier of any such house or premises who shall neglect or refuse to remedy or remove any such pipes, gutters, or contrivances when required to do so by any Municipal Officer, shall on conviction forfeit and pay any sum not exceeding ten shillings, and a like sum for every day or part of a day that the same shall not be remedied or removed. Provided that the owner or occupier of any such house or premises may convey any such rain-water by means of pipes laid under the surface, or by stone gutters on the surface of any such footway, into the gutters adjoining the same; and provided also that all such pipes and gutters shall be laid down to the satisfaction of and under the superintendence of the Town Surveyor or any other person appointed by the Council.

84. Unless where hereinbefore otherwise directed, all complaints of offences against these By-laws shall be heard and determined within three months from the committal of the offence complained of; and no such complaint shall be made unless within one month from the time when such offence shall have been committed.

ALEXR. MUNRO, Mayor.

Singleton, 5th October, 1869.

1870.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF CENTRAL ILLAWARRA—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 31st December, 1869.

BOROUGH OF CENTRAL ILLAWARRA.

BY-LAWS.

THE following By-laws, made by the Council of the Borough of Central Illawarra, for repealing the existing By-laws of the Borough; for regulating the proceedings of the Council, and the duties of the officers and servants thereof; for determining the modes of collecting and enforcing payment of rates—the sub-division and change of property—opening new public roads, ways, and parks—aligning roads and streets—the extirpation of weeds—and the general management of the Borough,—having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BY-LAWS for repealing the existing By-laws, and for regulating the proceedings of the Council of the Borough of Central Illawarra, and the duties of the officers and servants of such Council—for determining the modes of collecting and enforcing payment of rates—the sub-division and change of property—opening new public roads, ways, and parks—aligning roads and streets—the extirpation of weeds—and the general management thereof.

PART I.

Repeal of existing By-laws.

1. The By-laws of the Municipal Council of Central Illawarra, passed by the Council on the 28th day of November, 1862, and re-adopted by resolution thereof on the 13th day of November, 1863,—confirmed by His Excellency the Governor on the 8th day of February, 1864, and proclaimed by the Honorable the Colonial Secretary on the 25th day of February, 1864,—to regulate the proceedings of the said Council, the collection of rates, and for the general good rule and management of the Municipality, are hereby repealed.

PART II.

PROCEEDINGS of the Council and Committees—preservation of order at Council meetings—duties of officers and servants, &c.

Meetings of the Council.

Ordinary meetings.

1. The Council shall meet at the Council Chamber, Dapto, for the despatch of business, and shall fix the day and the hour for holding the regular meetings by resolution; and in case such day shall happen to be a public holiday, the meeting shall be held on such other day as the Mayor may appoint.

Election of Chairman in absence of Mayor.—Adjournment for want of a quorum.

2. If at any meeting of the Council the Mayor be absent at the expiration of fifteen minutes after the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting. Whenever there shall be an adjournment of any such meeting for want of a quorum, the names of the members present shall be taken down, and shall be recorded in the minute-book.

Order of business.

Business of ordinary meetings.

3. The following shall be the order of business at all meetings of the Council other than special meetings:—

- (1.) The minutes of the last preceding meeting to be read, corrected if erroneous, and, after being confirmed by the Council, shall be signed by the Mayor or presiding Alderman. No discussion to be permitted on such minutes, except as to whether they are correct.
- (2.) Petitions (if any) to be presented and dealt with.
- (3.) Correspondence to be read, and, if necessary, ordered upon.
- (4.) Reports from Committees, and minutes from the Mayor (if any), to be presented and ordered upon.
- (5.) Questions as to any matters under the jurisdiction or within the official cognizance of the Council to be put and replied to; and statements as to any facts, matters, or circumstances requiring attention by the Council or any of its Committees or officers, to be made.
- (6.) Motions of which notice has been given to be dealt with in the order in which they stand on the business paper.
- (7.) Orders of the day to be disposed of as they stand on the business paper.

Business may be dealt with out of regular order.

Provided that it shall be competent to the Council at any time, by resolution, without notice, to entertain any particular motion, or to deal with any particular matter of business out of its regular order on the business paper, without any formal suspension of this section,—also, and in like manner, to direct that any particular motion or matter of business shall have precedence at a future meeting.

Business at special meetings.

4. At special meetings of the Council, the business—after the minutes shall have been read and verified, which shall be done in the same manner as at an ordinary meeting—shall be taken in such order as the Mayor, or the Aldermen at whose instance such special meeting shall have been called, may have directed.

Business paper for ordinary meeting—how prepared.

5. The business paper for every meeting of the Council, other than a special meeting, shall be made up by the Council Clerk not less than two nor more than three days before the day appointed for such meeting. He shall enter on such business paper a copy or the substance of every notice of motion, and of every requisition or order as to business proposed to be transacted at such meeting, which he shall have received, or shall have been required or directed so to enter, in due course of law, and as hereinafter provided. Every such entry shall be made (subject to the provisions of section 3 of this "Part" of these By-laws) in the same order as such notice, requisition, or direction shall have been received.

Business paper for special meeting.

6. The business paper for each special meeting shall contain only such matters as shall have been specially ordered to be entered thereon by the Mayor or Aldermen calling such meeting.

Summons to members.

7. The summons to members of the Council for every meeting thereof shall be prepared from the business paper for such meeting, and shall embody the substance of such business paper.

How business paper is to be disposed of.

8. The business paper for each meeting of the Council shall at such meeting be laid before the Mayor or Chairman, who shall make a note upon such business paper of the mode in which each matter entered thereon has been dealt with. And such business paper so noted shall be a record of the Council.

Notices of motion, &c., to be numbered as received, and preserved until matter disposed of; unless withdrawn before business paper is made up.

9. All notices of motion, and all requisitions from Aldermen, and directions from the Mayor as to the entry of any particular matters of business for the consideration of the Council at its then next or any future meeting, shall be numbered by the Council Clerk as they are received. And each such notice, requisition, and direction shall be preserved by such Clerk until after the matter to which it relates shall have been disposed of, and the record in the minute-book of the manner in which such matter has been so disposed of shall have been duly verified as required by section 3 of this "Part" of these By-laws: Provided however, that the person giving or forwarding any such notice of motion, requisition, or direction to the Council Clerk shall be at liberty to withdraw the same at any time before the making up of the business paper.

After business paper made up, all notices, &c., to be the property of the Council.

10. After the business paper shall have been made up as aforesaid, all the said notices of motions, requisitions, and directions, as to which entries have been made thereon, shall be the property of the Council, and shall not be withdrawn, altered, or amended without leave having been first obtained from the Council for such withdrawal, alteration, or amendment.

Motions and Amendments.

Motions—how to be moved.

11. Except by leave of the Council, motions shall be moved in the order in which they stand on the business paper, and if not so moved or postponed shall be struck from such business paper and be considered to have lapsed.

Absence of proposed mover.

12. No motion of which notice shall have been entered on the business paper, shall, except as hereinafter provided (see s. 20), be proceeded with in the absence of the Alderman by whom such notice shall have been given, unless by some other Alderman producing a written authority for that purpose from such first-named Alderman.

Motion to be seconded.

13. No motion in Council shall be discussed unless and until it be seconded.

Amendment may be moved.

14. When a motion in Council shall have been made and seconded, any Alderman shall be at liberty to move an amendment thereon; but no such amendment shall be discussed unless and until it be seconded.

Motions and amendments to be in writing—only one amendment at a time.

15. No motion or amendment shall be discussed until it shall have been reduced into writing.

16. No second or subsequent amendment shall be taken into consideration until the previous amendment or amendments shall have been disposed of.

Amended question binding on the Council.

17. If an amendment be carried, the question as amended thereby shall become itself the question, and the Council shall to all intents and purposes be bound by such amendment as if it were the original question.

How subsequent amendments may be moved.

18. If any amendment upon an original question shall be negatived, then a further amendment may be moved to the question to which such first-mentioned amendment was moved, and so on: Provided that not more than one question and one proposed amendment thereof shall be before the Council at any one time.

Motions for adjournment.

19. No discussion shall be permitted on any motion for adjournment of the Council; and if, upon the question being put on any such motion, the same be negatived, the subject then under consideration, or the next in order on the business paper, or any other on such paper that may be allowed precedence, shall be discussed before any subsequent motion for adjournment shall be receivable.

Requisitions from Aldermen—how to be dealt with.

20. Every requisition by an Alderman, that any particular matter of business be brought before the Council, shall be regarded and treated as a notice of motion by such Alderman that such business be taken into consideration by the Council. And he shall be called upon in due order to move that such business be so considered, or to make any other motion which he may think fit in reference thereto which shall be consistent with the notice of such business and with good order. And if such Alderman be absent, or if being present and so called upon he shall make no such motion, then it shall be open to any other Alderman to make such motion. And when any such motion shall have been made, it shall be dealt with in precisely the same manner as if notice thereof had been given, subject however to any objection which may exist as to its not being in accordance with the notice actually given of such business or with good order. And if no motion shall be made in reference to such business, the entry relating thereto shall be struck from the business paper.

Orders of the Day.

Of what orders of the day shall consist.

21. The orders of the day shall consist of any matters, other than motions on notice, which the Council shall at a previous meeting thereof have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entered on the business paper for consideration.

How they are to be dealt with.

22. Section 20 of this "Part" of these By-laws shall be considered applicable to orders of the day. And the Alderman who has the usual charge of, or who has previously moved in reference to the particular business to which any such order of the day relates, shall be the person called upon to move: Provided that as to any order of the day entered as aforesaid by direction of the Mayor, such Mayor may move or may arrange with any Alderman to move, and may in such case call upon the Alderman with whom he has so arranged.

Petitions.

Petitions to be respectfully worded.

23. It shall be incumbent on every Alderman presenting a petition to acquaint himself with the contents thereof, and to ascertain that it does not contain language disrespectful to the Council. The nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same.

Petitions—how received.

24. All petitions shall be received only as the petitions of the parties signing the same.

How petitions are to be dealt with.

25. No motion shall, unless as hereinafter provided, be permissible on the presentation of a petition, except that the same be received; or that it be received and referred to one of the permanent committees hereinafter mentioned; or that it be received, and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice of a motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to move such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

Correspondence.

Duties of Mayor as to correspondence.

26. The Mayor shall have the same duty in reference to letters addressed to the Council, before directing the same to be read, as by section 23 of this "Part" of these By-laws is imposed upon Aldermen presenting petitions. The Mayor shall direct as to the order in which all correspondence shall be read, and no letter addressed to the Council shall be presented or read by any Alderman. If the Mayor be absent, and shall not have examined any such letters addressed to the Council, or have given any such directions as aforesaid, then the duties imposed by this section shall devolve upon the presiding Alderman.

Sec. 25 to apply to letters.

27. Section 25 of this "Part" of these By-laws shall be considered as fully applicable to letters addressed to the Council as to petitions.

Letters sent not to be discussed, but every letter may be subject of motion.

28. No discussion shall be permitted in reference to any letters, which have been written and sent by the Mayor or by any officer of the Council, and copies of which may be read to such Council: Provided, however, that any notice of motion, consistent with good order, may be entertained with reference to any such letters whether read or not, or with reference to any letters addressed to the Council which the Mayor or presiding Alderman may not have ordered to be read as aforesaid.

Reports from Committees and Minutes from the Mayor.

Form of Report.

29. All reports from Committees shall be written on foolscap paper, with a margin of at least one-fourth of the width of such paper, and shall be signed by the Chairman of such Committee, or, in his absence, by some other member of the same.

Mayor's minutes.

30. The Mayor shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction or official cognizance, by a minute in writing. Every such minute shall be written upon paper of the same kind and with the same margin as a report from a Committee, and shall be signed by such Mayor.

How reports, &c., are to be dealt with—Duties of Chairman, &c., in certain cases.

31. No motion shall (unless as hereinafter provided) be permissible on the presentation of a report from a Committee or a minute from the Mayor, except that the same be received, or that it be received and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice in reference to any such report or minute, or if an order for the consideration of such report or minute shall have been entered among the orders of the day, such motion or order may, if otherwise unobjectionable, be moved or considered in due course. And whenever any such report or minute embodies any recommendation which cannot legally be carried out without due notice, and it is nevertheless desirable that such report or minute shall be definitely ordered upon during the meeting of the Council at which such report or minute is presented, it shall be the duty of the Chairman or member of such Committee signing such report, or of such Mayor, as the case may be, to give or transmit to the Council Clerk such a notice of motion, requisition, or direction as aforesaid, as will enable such Council Clerk to make the necessary entry on the business-paper, and to give such due notice.

Questions and Statements.

Limitations as to questions and statements.

32. No question or statement shall be allowed to be put or made which is inconsistent with good order, or is not in strict accordance with the requirements of Section 3 of this "Part" of these By-laws.

Notice to be given.

33. Sufficient notice of every question shall be given to the person who is expected to reply thereto, to allow for the consideration of such reply, and, if necessary, for a reference to other persons or to documents.

Answer not compulsory.

34. It shall not be compulsory upon any person questioned as aforesaid to answer the question so put to him.

Question to be put without argument, &c.

35. Every such question must be put categorically, without any argument or statement of fact.

Similar provisions as to statements.

36. Every such statement must be made without argument.

No discussion on question, &c. Rights of objection and of subsequent motion reserved.

37. No discussion shall be permitted as to any such question, or as to any reply or refusal to reply thereto, or as to any such statement, at the time when such question is put, or such

reply or refusal to reply is given, or such statement is made: Provided, however, that nothing herein contained shall prevent the taking of any objection as to any such question or statement being out of order, or shall prevent the discussion, after due notice, as hereinbefore provided, of any matters properly arising out of or relating to any such question, or reply, or refusal to reply, or any such statement as aforesaid.

Order of Debate.

Mode of addressing the Council, &c.

38. Every Alderman who shall make or second any motion, or shall propose or second any amendment, or shall take any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way or for any other purpose address observations to the Council, shall while so doing stand up in his customary place (unless he shall be prevented from so doing by reason of some bodily infirmity), and shall address himself to the Mayor or other Chairman then presiding: Provided, that in the case of a question, such question may, by permission of such Mayor or Chairman, be put directly to the Alderman or Officer to be questioned, and may be replied to in like manner. But in every such case, the question so put and the answer thereto shall be subject to every legal objection on the ground of disorder or irrelevancy. And all Members of the Council, shall, on all occasions when in such Council, address and speak of each other by their official designations, as Mayor, Chairman, or Alderman, as the case may be.

Speaker not to be interrupted if in order.

39. No Alderman shall be interrupted while thus speaking, unless for the purpose of calling him to order as hereinafter provided.

Limitations as to number of speeches, &c.

40. Every mover of an original motion shall have a right of general reply to all observations which may have been made in reference to such motion, and to any amendments moved thereon, as well as a right to speak upon every such amendment. Every Alderman other than the mover of such original motion shall have a right to speak once upon such motion and on every amendment thereon. No Alderman shall speak oftener than once upon any question other than a question of order, unless when misrepresented or misunderstood, in which case he shall be permitted to explain without adding any further observations than may be necessary for the purposes of such explanation.

Mover and seconder.

41. An Alderman who has moved any motion or amendment shall be considered to have spoken thereon; but an Alderman who shall have seconded any such motion or amendment without any further observation than that he seconded the same, shall be at liberty to speak on such motion or amendment.

Speaker not to digress, &c.

42. No Alderman shall digress from the subject under discussion, or shall make personal reflections on, nor impute improper motives to, any other Alderman.

Adjournment of debate.

43. A debate may be adjourned to a later hour of the day or to any other day specified; and the Alderman upon whose motion such debate shall have been so adjourned shall be entitled to pre-audience on the resumption of the same.

Mayor to decide as to pre-audience.

44. If two or more Aldermen rise to speak at the same time, the Mayor or Chairman shall decide which of such Aldermen shall be first heard.

Alderman may require question to be stated, &c., under certain restrictions

45. Any Alderman may request the question or matter under discussion to be read or stated for his information, or may require the production of any records of the Council bearing upon such question or matter which are readily accessible. Provided, however, that no such request or requisition shall be so made as to interrupt the discussion; also, that if such request or requisition shall appear to the Mayor or Chairman not to have been made *bona fide*, it shall not be complied with.

Mayor or Chairman may move or second motion, &c.

46. The Mayor or Chairman may move or second any motion or amendment, or put any question, as provided for by section 3 of this "Part" of these By-laws; and such Mayor or Chairman shall have the same right as any other Alderman to speak once upon every such subject or amendment. The Mayor or Chairman shall rise when so speaking (unless prevented by some bodily infirmity from so doing), but shall be considered as still presiding.

Questions of Order.

Mayor or Chairman to decide points of order.

47. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice shall be final, except in so far as the same may be questioned as in the manner hereinafter provided.

Acts of disorder.

48. Every member of the Council who shall commit a breach of any section of this "Part" of these By-laws, or who shall move or attempt to move any motion or amendment embodying any matter as to which the Council has no legal jurisdiction, or who shall in any other way raise or attempt to raise any question, or shall address or attempt to address the Council upon any subject which the said Council has no legal right to entertain or to discuss, or who shall use any other language which according to the common usage of gentlemen would be held disorderly, or who shall say or do anything calculated to bring the Council into contempt, shall be out of order.

Mayor, &c., may call member to order.

49. The Mayor or Chairman may, without the interposition of any other member of the Council, call any Alderman to order, whenever in the opinion of such Mayor or Chairman there shall be a necessity for so doing.

Any member may raise question of order.

50. Every member of the Council shall have the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation moved, used, or made by any other member which such first-named member may consider out of order.

Mode of proceeding thereon.

51. A member called to order shall withdraw while the question of order is being discussed and decided upon, unless specially permitted to offer an explanation, retraction, or apology; but on obtaining such special permission such member may explain, retract, or apologise for the matter or remark alleged to have been out of order. And if such explanation, retraction, or apology be deemed satisfactory, no further discussion on the question of order shall be permitted. If any member on being called to order shall ask such permission to explain, retract, or apologise as aforesaid, the Mayor or Chairman may of his own authority grant or refuse such permission as he may think fit, unless any member shall require the sense of the Council to be taken on this question. In such case it shall be the duty of the Mayor or Chairman to take the sense of the Council at once and without discussion as to whether such permission shall be granted; and when any such explanation, retraction, or apology shall have been made or offered by permission of the Mayor or Chairman, the latter shall in like manner decide, or if required so to do shall take the sense of the Council, as to whether such explanation, retraction, or apology is considered sufficient. If such permission be refused, or if such explanation, retraction, or apology be considered insufficient, the question of order shall be considered and decided before any further business is proceeded with: Provided that if such Mayor or Chairman shall have decided the question of order before any member shall have required the sense of the Council to be taken in reference thereto, such question of order shall not be re-opened; and provided further that nothing herein contained shall be held to affect the right of such Mayor or Chairman to decide finally, as hereinbefore provided, upon any such point of order, after the same shall have been discussed.

Decision of points of order.

52. The Mayor or Chairman when called upon to decide points of order or practice, shall state the provision, rule, or practice which he shall deem applicable to the case, without discussing or commenting upon the same.

Motions out of order to be rejected—Members to explain, retract, or apologise, &c.

53. Whenever it shall have been decided, as aforesaid, that any motion, amendment, or other matter before the Council is out of order, the same shall be rejected. And whenever anything said or done in Council by any Alderman shall be similarly decided to be out of order, such Alderman shall be called upon by the Mayor or Chairman to make such explanation, retraction, or apology, as the case may require.

Penalties for persisting in disorderly conduct.

54. Any member of the Council who shall have been called to order, and who, after having been twice directed to withdraw as aforesaid, shall refuse to do so, or who shall persist in any line of conduct, or argument, or of observations which shall have been decided as aforesaid to be disorderly, or who shall refuse to make such explanation, retraction, or apology as aforesaid when required so to do, or who shall be guilty of any other act of disorder as defined in section 48 of this "Part" of these By-laws, and shall refuse to make such explanation, retraction, or apology as a majority of the Aldermen then present shall consider satisfactory,—shall be liable, on conviction, for the first offence, to a penalty of not less than ten shillings nor more than five pounds; and on a second conviction for the like offence, he shall be liable to a penalty of not less than one pound nor more than ten pounds; and on a third conviction, and for every further conviction, for the like offence, he shall be liable to a penalty of not less than two pounds nor more than twenty pound

Power of Council as to laying down general rules, &c.

55. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or practice, may by motion on notice respectfully worded, invite the Council to lay down a different rule or principle for the determination of any similar questions of order or of practice which may thereafter arise. Any rule or principle thus laid down, shall be binding upon all parties unless and until it be rescinded, but shall have no retrospective operation: Provided, however, that nothing herein contained shall be held to bind any Mayor or Chairman to put any motion to the Council which in his opinion is contrary to law.

Mode of voting.

How questions are to be put.

56. The Mayor or Chairman shall put to the Council all questions on which it shall be necessary that a vote be taken, and shall declare the sense of such Council thereon. And he shall be at liberty to put any such question as may be necessary to enable him to form and declare his opinion as to the opinion of the majority.

Divisions.—Penalty for refusing to vote.

57. Any Alderman shall be at liberty to call for a division. In such case the question shall be put first in the affirmative and then in the negative and the Aldermen shall vote by show of hands, and the names and votes of the Aldermen present shall be recorded. Any Alderman who shall be present when a division is called for, and shall not vote on such division, not being disabled by law from so voting, shall be liable for every such offence to a penalty of not less than ten shillings nor more than five pounds.

Protests.

Mode of protesting.—Protest to be recorded, but may under certain circumstances be expunged.

58. Every member of the Council (the Mayor included) may protest against any resolution or vote by the Council. Notice of the intention so to protest must, however, be given at the meeting when such resolution is passed, or such vote is arrived at, and the protest itself must be handed or sent to the Council Clerk not later than seven days after such notice. The Council Clerk shall enter every such protest in the minute-book; but if, in the opinion of the Council, it be inconsistent with the truth or disrespectfully worded, it may (by resolution or notice) be ordered to be expunged. In such case the expunction shall be made by drawing a perpendicular line with the pen through the entry of such protest, with a reference in the margin to the resolution ordering such expunction.

Committees of the Whole Council.

Rules applicable to business in Committee.

59. The following sections of this "Part" of these By-laws shall (except as is herein excepted) be taken to apply to the conduct of business in Committee of the Whole Council, namely: Sections 14 (except that it shall not be necessary that any motion or amendment in Committee shall be seconded), 15, 16, 17, 18, 38, 39, 42, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 56, and 57.

Disorderly conduct in Committee.—Refusal to vote.

60. Whenever any member of the Council shall, while the Council is in Committee of the Whole, be considered guilty of an offence against good order within the meaning of section 54 of this "Part" of these By-laws, it shall be competent to any Alderman to move that the Council resume its sitting, and that such matter be reported. And if such motion be carried, such matter shall be reported accordingly, and an entry of such report shall be made in the minute-book. And whenever any Alderman shall have failed to vote on any occasion in Committee of the Whole Council as required by section 57 of this "Part" of these By-laws, the facts shall be reported to the Council, and such report on such facts shall be duly recorded in the minute-book. Provided that in the case of an Alderman failing to vote as aforesaid, no special motion that the Council resume its sitting shall be necessary; but it shall be the duty of the Chairman of such Committee of the Whole in making his report of the proceedings in such Committee, whenever such report may be made, to include in such report a statement of such failure to vote as aforesaid, and of the question as to which such Alderman has so failed to vote.

Divisions in Committee on points of order may be reported.

61. Whenever a decision upon any question of order shall have been given by the Chairman of a Committee of the Whole Council, under the provision of section 47 of this "Part" of these By-laws, any Alderman may move that such decision be embodied in the report to the Council of the proceedings in such Committee; and if such motion be carried such decision shall be so embodied in such report whenever the same shall be made.

How progress may be reported, &c.

62. Any Alderman may at any time during the sitting of a Committee of the Whole Council move that the Chairman report "progress" or "no progress" (as the case may be), and

that leave be asked to sit again at a later period of the same day, or on any future day, or that no leave be asked to sit again. And if such motion be carried, the Council shall resume its sittings and a report shall be made accordingly. But no discussion shall be permitted on any such motion, and if the same be negatived, the subject then under consideration shall be discussed before another such motion shall be receivable.

Reports of proceedings in Committee.—Want of quorum in Committee.

63. All reports of proceedings in Committee of the Whole Council shall be made to the Council *vivâ voce* by the Chairman of such Committee; and a report of such proceedings shall be made in every case, except when it shall be found on counting the number of members during the sitting of any such Committee that there is not a quorum present. In the latter case the sitting of the Council shall be resumed without any motion for that purpose, and the proceedings in Committee shall be considered to have lapsed. Provided that in making any such report as aforesaid, it shall not be necessary to report any such proceedings *in extenso*, but only to state the result, general effect, or substance of such proceedings.

How reports are to be dealt with.

64. All such reports of proceedings in Committee of the Whole Council shall be recorded in the minute-book; but except as hereinafter mentioned no such report shall be considered as adopted by the Council, nor shall any such application as aforesaid for leave to sit again be considered to have been granted by such Council, until a motion shall have been made and passed for such adoption or for the granting of such leave. And every such motion for the adoption of a report or for the granting of leave as aforesaid, and the order of debate on such motion, shall be subject to all the same rules as other motions in Council and the order of debate on such other motions. Provided however that where a report shall have been made under section 60 of this "Part" of these By-laws of disorderly conduct in Committee, or under section 57 of this "Part" of these By-laws of failure to vote on division, or of any decision in Committee upon any question of order, such report shall, so far as it relates to such facts, be regarded and recorded as a statement thereof, and to that extent shall not, unless for the correction of a manifest error, be interfered with upon any pretext whatever.

Calls of the Council.

How call of the Council may be ordered.

65. A call of the Council may be ordered by any resolution of which due notice shall have been given, for the consideration of any motion or matter of business before such Council.

Such call compulsory in certain cases.

66. There shall, without any special order to that effect, be a call of the Council for the consideration of every motion which may be made under section 55 of this "Part" of these By-laws, and of every motion for the rescission of any resolution, order, or decision of such Council.

Mode of proceeding.

67. The call shall be made immediately before the motion or business for which such call has been ordered or is required to be made by the last preceding section shall be moved or considered. Such call shall be made as follows:—The Council Clerk shall call the names of all the members in their alphabetical order; each member present shall answer to his name as so called, and if any members are absent a record shall be made of such absence. But if leave of absence to any such member shall have previously been granted, or if such an excuse in writing shall have been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member shall stand excused, and a record shall be made of such excuse and of the reasons for the same.

Penalty for absence without legal excuse.—Further call when question adjourned.

68. Any member of the Council who, having had notice of such call of the Council, shall not answer to his name as aforesaid, or who being absent shall not be legally excused as aforesaid, or who if absent and not so excused shall fail to show that by reason of extreme illness or any other sufficient cause he has been unable to send an excuse in writing as aforesaid, or who having answered to his name as aforesaid shall not be present when a vote is taken on the motion or business as to which such call has been made as aforesaid, shall for every such offence be liable to a penalty of not less than ten shillings nor more than five pounds. Provided that if the consideration of every such motion or matter of business be adjourned to a future day, there shall be a further call on the resumption of such consideration; and the provisions herein as to penalties for absence, shall have reference to such further call; and if there shall be more than one adjournment, this proviso shall be taken to extend to the resumption of the consideration of such motion or matter of business after every such adjournment.

Standing and Special Committees.

Standing Committees.

69. There shall be four Standing Committees, namely, a By-laws Committee, a General Committee for Works, a Finance Committee, and a Committee for General Purposes. These Committees shall be appointed every year at the first meeting of the Council which shall be holden after the election of the Mayor.

Constitution of Standing Committees.

70. The By-laws and Finance Committees, also the Committee for General Purposes, shall consist of three members each, of whom one shall be taken from among the Aldermen of each ward. The General Committee of Works shall consist of seven members, namely, the Mayor and six Aldermen, two of whom shall be taken from each ward. This Committee shall be formed into three Sub-committees, one for each ward, to consist of the Mayor and the two Aldermen chosen from the ward they represent, and such Sub-committee shall have the management of all minor works and repairs in the ward to which they are appointed; but all works on the Main Road and other important works shall be under the management of the General Committee of Works.

Mode of appointing Standing Committees.

71. The appointment of Committees may be by ballot in the ordinary way; and if there shall be an equal number of votes for the appointment of any two or more members to any Committee, the Mayor or Chairman shall decide which of such members shall be appointed to such Committee.

By-laws Committee.

72. The By-laws Committee shall prepare for the consideration of the Council drafts of all such By-laws as may be required for the good government of the Borough. They shall also watch over the administration of the By-laws, and of any Statute of which the operation has been or may be extended to the Borough; and shall take such steps as may be necessary for the prevention or punishment of offences against such By-laws or Statutes, and for the preservation of public health, order, and decency.

Committee for Works.

73. The General Committee for Works shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other public places under the care and management of the Council. They shall also inquire and report from time to time as to such improvements or repairs as they may think necessary, or as they may be directed by resolution of the Council to inquire into and report upon.

Finance Committee.

74. The Finance Committee shall examine and check all accounts, and shall watch generally over the collection and expenditure of the municipal revenues. They shall inquire and report, from time to time, as to all matters which they may consider to affect or to be likely to affect the finances of the Borough, and as to such matters or subjects of the like nature as they may be directed by resolution of the Council to inquire and report upon.

Committee for General Purposes.

75. The Committee for General Purposes shall take cognizance of every matter, subject, or question within the jurisdiction of the Council not coming within the province of one or other of the before-mentioned Standing Committees, and shall from time to time inquire into and report upon any such subject, matter, or question as they may think necessary, or as they may be directed by resolution of the Council to inquire into and report upon.

Special Committees.

76. Special Committees may consist of any number of members, and may be appointed for the performance of any duty which may be lawfully intrusted to a Committee, and for which, in the opinion of the Council, a Special Committee ought to be appointed. And no Standing Committee shall interfere with the performance of any duty which may for the time being have been intrusted to any such Special Committee. The appointment of every such Special Committee shall be made by resolution, after due notice; and it shall be incumbent on the mover of such resolution to embody therein a statement of the duties proposed to be intrusted to such Special Committee. The mover of any such resolution may name therein such members as, in his opinion, ought to constitute such Committee, or he may propose that such Committee consist of a certain number of members to be appointed by ballot, and in the latter case, or if an amendment to the effect that such Special Committee be appointed by ballot be carried, each member then present shall receive a list of all the members of the Council, from which list he shall strike out all names but those of the persons whom, in his opinion, such Special Committee ought to be composed. And the Mayor or Chairman shall examine such lists, and shall declare the result. And in the event of its becoming

necessary, through an equality of votes, to decide as to which of two or more Aldermen shall serve on such Committee, such Mayor or Chairman shall so decide.

Chairman of Committee.

77. Every Committee of which the Mayor shall not be a member shall elect a permanent Chairman of such Committee within seven days after their appointment.

Term of Service in Committee.

78. Appointments to the By-laws Committee, the General Committee of Works, the Finance Committee, and the Committee of General Purposes, shall be for the whole municipal year. The appointment of every Special Committee shall be considered to endure until the duties for which such Committee have been appointed shall have been fully performed. Provided, however, that nothing herein contained shall be held to affect in any way the right of such Committee to remove any Chairman of such Committee, or to appoint another such Chairman in his stead, or to militate against the general provisions as to Committees in sections 109 and 110 of the Municipalities Act of 1867, and that so much of this By-law as relates to the appointment, powers, and duties of Committees shall be read and interpreted in connection with such last-mentioned general provisions.

Committee Meeting—how called.

79. The Council Clerk shall call a meeting of any Committee whenever requested to do so by the Chairman or any two members of such Committee.

Records of transactions in Committee.

80. The Chairman of each Standing Committee may make or cause to be made in a book to be kept by him for that purpose, memoranda of all the transactions of such Committee, which book he shall, on ceasing to be such Chairman, hand over to his successor.

Expenditure.

Except in emergent matters cost of all work to be estimated before undertaken.

81. With the exception of emergent matters, hereinafter specially provided for, no work affecting the funds of the Borough shall be undertaken until the probable expense thereof shall have been first ascertained by the Council.

Emergent matters and necessary current expense.—Expenses authorized to be reported.—Outlay to be in accordance with orders of the Council.

82. For emergent matters and for necessary current expenses during the intervals which may elapse between the meetings of the Council, outlays to the following extent may be incurred:—

(1.) By order of the General Committee for Works, or of the Mayor and one member of such Committee, for repairs or emergent works, to the extent of five pounds.

(2.) By order of the Mayor, for necessary current expenses, repairs, or emergent works, to the extent of two pounds. Provided, that in every case a detailed report in writing of every such outlay shall be laid before the Council at its next meeting; such report to be signed by the Chairman of the General Committee of Works, or the Mayor, as the case may be, by whom such outlay shall have been authorized. Also, that such outlay shall only be permissible in reference to matters coming strictly within the jurisdiction or functions of the Council; and that no outlay involving a disobedience or evasion of any order or resolution of such Council shall on any pretence be thus authorized.

All claims to be examined and reported upon by Finance Committee.

83. All accounts and demands of money against or from the Council, shall be examined and reported on by the Finance Committee before any order shall be made for payment of such accounts or demands; but at meetings for considering the accounts on the pay-sheet, in case there be not a quorum at the appointed time the Chairman of the Committee may examine and report thereon.

Certificate required with each claim.—Salaries and wages to be payable on Mayor's order.—Certificates to be attached to report.

84. No payment shall be so ordered unless there shall be a certificate or memorandum from the Committee, from the Mayor, or from the officer of the Council to whom the direction or the guardianship of such expenditure properly belongs, showing that the demand is a legitimate one and has been duly authorized or inquired into. It shall be the imperative duty of the Finance Committee to see that this requirement is fulfilled, or to report specially as to the reasons for its non-fulfilment before recommending payment: Provided, however, that such special report as last herein mentioned may be embodied with the report by which payment of the amount in question is recommended: Provided also, that in cases of special expenditure under section 82 of this "Part" of these By-laws, the report directed by that section to be laid before the Council shall, if the outlay shall have been lawfully incurred, be deemed a sufficient certificate: And provided further, that in regard to salaries and wages of labour for officers, servants, and labourers employed at fixed rates of payment by order of the Council, the certificate of the Mayor of the amount due to any such officer, servant, or labourer, and the order of such Mayor for payment

of such amount, shall be a sufficient authorization; and such certificates, memoranda, and authorizations shall be attached respectively to the reports from the Finance Committee on the payments or outlays to which such certificates, memoranda, or authorizations have reference.

Common seal and records of the Council.

Common seal how secured

85. The common seal shall be in the custody of the Mayor, or if found more convenient it may by resolution of Council be placed in charge of the Council Clerk, and shall be kept in such secured form as the Mayor may direct.

When and how common seal to be used.

86. The common seal shall not be attached to any paper or document unless the same be signed by the Mayor, or in case of his absence or illness by two Aldermen duly authorized by resolution of Council.

How books of account are to be kept and inspected.

87. The Treasurer shall keep such books of account and such records, statements, and memoranda of receipts and expenditure, in such manner and form as the Council may from time to time direct. It shall be the duty of the Finance Committee to inspect all such books of account, records, statements, and memoranda, from time to time, to ascertain that the same are properly kept, and to report at once to the Council any act of neglect or appearance of inefficiency which they may have discovered in the keeping of the same; also to report to the Council from time to time any changes which such Committee may think advisable in the mode of keeping the accounts.

Records of the Council defined.—Provisions for proper keeping of same.

88. The minute-book, letter-book, and all rate and assessment books, books of account, records, statements, and memoranda of receipts and expenditure, electoral rolls, and other records relating to elections, business papers, reports from Committees, minutes from the Mayor, petitions, letters on municipal business addressed to the Council, or to the Mayor, or to any officer or servant of the Council, orders, reports, returns, and memoranda relating to municipal business, drawings, maps, plans, contracts, specifications, agreements, and all other books and papers connected with the business of the Council, shall be deemed records of the Council. All such records other than the minute-book and other books, and other than electoral rolls and other records relating to elections, shall be numbered and filed in due order, and shall be duly registered by the Council Clerk in a book to be kept by him for that purpose. Upon the face of every document thus registered, to which there is any reference in the minute-book, there shall be a note of the page wherein it is so referred to. And when any order has been made by the Council, or a report has been brought up by any Committee thereof in reference to any document so registered as aforesaid, a note of such order or report shall be made upon such document.

Impression of seal not to be taken, &c., without leave of Council.—Penalties.

89. No alderman or officer of the Council shall be at liberty to take any impression of the corporate seal, or to show, lay open, or expose any books or records of the Council to any person other than a member of the same, without leave from such Council, except as otherwise provided by law. Any member or officer of the Council who shall be guilty of a breach of this section shall be liable on conviction—for the first offence, to a penalty of not less than five shillings nor more than two pounds; for a second offence, to a penalty of not less than one pound nor more than ten pounds; and for a third and every subsequent offence, to a penalty of not less than five pounds nor more than twenty-five pounds.

Records not to be removed, &c.—Penalties.—Exceptional circumstances.—Receipt to be given in every case before document received.—Proviso as to use of records as matter of evidence.

90. Any person removing any such book or other record of the Council as aforesaid from the Council Chamber, or the place where by direction of the Council such book or other record is usually kept, without leave for such removal having been first obtained from such Council, or without other lawful cause for such removal, as hereinafter provided, shall for every such offence be liable to a penalty of not less than ten shillings nor more than ten pounds. And nothing herein contained shall be held to affect the further liability of any person who shall have removed such book or other record as aforesaid, and shall not have returned the same, to prosecution for stealing such book or record, or to an action at law for detention of the same, as the circumstances of the case may warrant: Provided that leave for temporary removal of a book or other record may be granted to the Council Clerk or the Treasurer by the Mayor, in order that such Clerk or Treasurer may post up entries, prepare returns, or perform any other duty which it may be necessary that he should perform; also, that the Mayor, or the Chairman of any Committee, or any Alderman acting for any such Chairman may temporarily remove any record necessary for the preparation of a minute or a report, or for the purposes of any prosecution or suit at law, by, against, or at the instance of

the Council; but in all such cases such Clerk, Treasurer, Mayor, Chairman, or Alderman, as the case may be, shall give a receipt under his hand for every document so removed, and every such receipt shall be carefully preserved among the records until the book or other record to which it refers shall have been returned, when such receipt shall be destroyed: And provided also, that the Mayor, Council Clerk, or other officer of the Council, who may be subpoenaed to produce any book or other record of the Council in a Court of Law, shall have the right to remove such book or other record for the purpose of obeying such summons, but shall return such book or record as speedily as may be, and shall before removing the same leave at the Council Chamber a receipt for such book or other record as aforesaid; and every such person so temporarily removing any book or other record of the Council as aforesaid, shall be legally responsible for the safe keeping and return of the same.

Penalty for defacing or destroying record.

91. Any person destroying, defacing, or altering any record of the Council, shall for every such offence be liable to a penalty of not less than five pounds nor more than fifty pounds.

Officers and Servants.

Notice to candidates.

92. No appointment to any permanent office at the disposal of the Council, shall take place, until public notice shall have been given inviting applications from qualified candidates for the same.

Mode of appointment.

93. Every such appointment may be made by ballot in such mode as may at the time be determined on by the Council.

Exceptional cases.

94. Nothing herein contained shall be held to prevent the appointment by the Council without advertisement, of any salaried officer or servant of the Corporation to any other permanent office or employment at the disposal of such Council, to which no further salary is attached, or to prevent the appointment in like manner of any such officer or servant to any other office or employment of which the duties require only occasional attention, and are to be paid for by allowances proportionate to the extent of such duties; or to prevent any similar appointment or employment by the Mayor or by any Committee or officer of the Council of any such officer or servant under the authority of any By-law, or to prevent the employment as may be from time to time found necessary, and as may be ordered by the Council, of any workmen or labourers on the public works of the Borough.

Bonds for good conduct.

95. All bonds given by officers or servants of the Council for the faithful performance of their duties, shall be deposited with the Mayor or the Bankers of the Corporation, as the Council may order; and no officer or servant of the Council shall be received as surety for any other such officer or servant.

Duties of all officers and servants of the Council.

96. The duties of all officers and servants of the Corporation shall be defined by such regulations as may from time to time, and in accordance with law, be made by the Council.

Special powers of Mayor.

97. The Mayor shall exercise a general supervision over all officers and servants of the Corporation, and may order the preparation of any such return or statement, or the giving of any such explanation or information by any such officer or servant as he may think necessary, unless such return or statement shall have been already prepared, or such explanation or information already given, and such return, statement, or information is on record as hereinbefore provided; or unless the Council shall have expressly forbidden or dispensed with the preparation of such return or statement or the giving of such explanation or information. All such returns or statements as aforesaid shall be in writing, and shall be recorded; all such explanation or information may, except as hereinbefore provided, be either rendered *viva voce* or put into writing as the Mayor may direct.

Miscellaneous.

Leave of absence.

98. No leave of absence shall be granted to the Mayor or to any Alderman, otherwise than by a resolution of the Council adopted after due notice.

Mode of calling for tenders.

99. Whenever it is decided that any work shall be executed or any materials supplied, it shall be done or supplied by contract. Tenders for the execution of such work or the supply of such material shall be called for by public notice as hereinbefore provided.

Drafts of intended By-laws.

100. A draft of every intended By-law shall lie in the office of the Council for at least seven days before such draft shall be taken into consideration by such Council, and shall be open to

the inspection of any ratepayer who may desire to inspect the same; and public notice shall be given as hereinafter provided that such draft is so lying for inspection.

Motions for rescission of previous orders, &c.

101. Whenever a motion for the rescission of any order, resolution, or vote of the Council shall have been negatived, no other motion to the same effect shall be permissible until a period of three months shall have elapsed from the time of negativing such first-mentioned motion: Provided that nothing herein contained shall be held to prohibit the reconsideration and amendment of any proposed By-law which may have been submitted to the Governor for confirmation, and may have been remitted to the Council with suggested amendments of the same; or the passage after due notice as hereinbefore provided, and in due course of Law, of any By-law for the repeal or amendment of any other By-law.

Lapsed business.

102. Whenever the consideration of any motion or matter of business shall have been interrupted by reason of a quorum not having been present the resumption of such consideration may be ordered by resolution of the Council, after due notice, and such consideration shall in such case be resumed at the point where it was so interrupted as aforesaid.

Suits and prosecutions for penalties, &c.

103. Such suits or informations for the enforcement of penalties for or in respect of breaches of the Municipalities Act of 1867, or of any By-law made thereunder, or of any Statute the operation of which may have been extended to the Borough, as may have been directed by the Council, or by the By-law Committee, or by the Mayor, to be commenced or laid, shall be so commenced or laid as follows, namely:—When against a member of the Council or an Auditor, or any officer of the Corporation, by the Council Clerk, unless such Council Clerk shall be the officer to be proceeded against, and in such case by any other officer or person named by the Council for that purpose; when against any other person—by the officer to whom the carrying out of the statutory provision or By-law imposing the penalty sought to be enforced has been intrusted; and if there shall be no such officer, then by any such officer or person as shall be appointed for that purpose by the Council, or the By-law Committee, or the Mayor, as the case may be, on directing such suit or information as aforesaid. And no such suit shall be brought or information laid as aforesaid against any member of the Council or Auditor except by order of such Council; nor shall any similar proceeding be taken against any officer of the Council except on the order of such Council or of the Mayor, nor against any other person except upon the order of the Council, or of the Mayor, or of the By-law Committee. And no such suit shall be directed to be brought, nor shall any such information be directed to be laid as aforesaid, except on an express resolution of the Council, in any case where the bringing of such suit or the laying of such information will be adverse to any previous direction by such Council, or where on the trial or hearing of any such suit or information the same shall have been dismissed on the merits: Provided that in any such case the conduct or prosecution of any such suit or information may on the order of the Council or Mayor be intrusted to an attorney.

How notices are to be published.

104. In all cases where public notice is or shall be required to be given by any By-law of any appointment, resolution, act, order, or regulation, done, made, or passed, or proposed to be made, done, or passed by the Council, or by any Committee thereof, or by the Mayor or any officer of the said Council, such notice shall be given and published by posting the same on or near the outer door of the Council Chambers for the space of seven days, and by advertising the same in some newspaper circulating in the Borough.

Mode of proceeding in cases not provided for.

105. In all cases not herein provided for resort shall be had to the rules, forms, and usages of the Legislative Assembly of New South Wales, so far as the same are applicable to the proceedings of the Council.

Power to suspend temporarily certain portions of these By-laws.

106. Any section or sections of these By-laws, or any portion or portions of such sections or section as are not hereinafter excepted, may be suspended by resolution on notice at any meeting of the Council: Provided that there shall be a distinct statement in every such resolution, and in the notice of motion whereon the same shall have been adopted, of the purpose for which such suspension is required; and that for every separate matter or business as to which such suspension is so required there shall be a separate resolution as aforesaid: And provided also that the following sections hereof shall never be suspended nor shall any one of them, nor any portion of any of such sections be suspended on any pretence whatever, namely:—Sections 5, 6, 7, 8, 9, 20, 21, 22, 23, 25, 26, 27, 29, 30, 31, 34, 38, 39, 42, 44, 47, 48, 49, 50, 51, 53, 54, 55, 56, 57, 58, 59, 60, 61, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 95, 97, 98, 101, 103, 104, and 105.

PART III.

Subdivisions and change of property. Change of occupier.—Subdivisions of property.

1. If the owner, tenant, or occupier of any property within the Borough for which he or she is assessed shall give up the possession of such property, he or she shall within seven days from the date of giving up the possession thereof deliver to the Council Clerk a notice in writing showing and setting forth the name and address in full of the person to whom possession of such property has been given. And if any property shall be subdivided in the interval between one assessment and another, and let to two or more persons, the tenant or owner who previously occupied the whole of such property, or who is still in possession of a portion thereof, shall within seven days from the time of such subdivision being made, deliver to the Council Clerk a notice in writing, showing and setting forth the area, the rent, and the names in full of the occupier or occupiers of such subdivisions; and any such owner, tenant, or occupier, failing or neglecting to give such notice as is herein required, shall on conviction forfeit and pay any sum not exceeding five pounds nor less than five shillings for every such offence.

PART IV.

Collection and enforcement of rates.—Times and modes of collection.

Rates under s. 164 of the 31st Viet. No. 12 to be collected yearly or half-yearly.

1. All rates levied or imposed by the Council under the provisions of section 164 of the Municipalities Act of 1867, and for the purposes mentioned in the said section, shall be collected yearly or half-yearly as may be determined upon from time to time by resolution of Council when fixing the rate for the Municipal year.

Rates to be paid at the Council Chamber and other places.

2. All persons liable to pay any rates as aforesaid shall pay the amount thereof within the time prescribed by the Act to the Treasurer, at the Council Chamber, Dapto, and at such other place or places and on such days and at such hours as may be fixed by resolution of the Council.

Person served in error to return rate-paper.

3. Any person who has been assessed and served with a rate-paper in error, shall, within seven days from the date of service thereof, return the same to the Council Clerk, failing which he shall be liable to pay to the Council the amount of rate for which such assessment has been made.

Defaulters.

4. It shall be the duty of the Treasurer to furnish the Mayor with a list of the names of all persons whose rates are unpaid at the expiration of the times fixed for payment of the same as aforesaid.

Mayor to enforce payment.

5. It shall be the duty of the Mayor to issue distress warrants against all such persons, and to cause such warrants to be enforced; or to cause such defaulters to be sued for the amount of such rates in a Court of competent jurisdiction.

Enforcement by distress.

Bailiff—tenure of office.

6. The bailiff shall be appointed by resolution of the said Council and shall be at any time removable by a like resolution.

Sureties for bailiff.

7. The bailiff shall find two sureties to the satisfaction of the Mayor to the extent of fifty pounds each for the faithful performance of his duty.

Duties of bailiff.

8. It shall be the duty of the bailiff to make all levies by distress for the recovery of rates, in the manner hereinafter provided.

Warrant of distress.

9. All levies and distresses shall be made under warrant in the form of schedule A hereto, under the hand of the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office.

Distress and sale.

10. If the sum for which any such distress shall have been made shall not be paid with costs as hereinafter provided, on or before the expiration of five days, the bailiff shall sell the goods so distrained, or a sufficient portion thereof, by public auction, either on the premises or at such other place within the said Borough as the said bailiff may think proper to remove them to for such purpose, and shall pay over the surplus (if any) that may remain after deducting the amount of the sum distrained for and costs as hereinafter provided, to the owner of the goods so sold, on demand of such surplus by such owner.

Inventory.

11. At the time of making a distress the bailiff shall make out a written inventory in the form of Schedule B hereto, which inventory shall be delivered to the occupant of the land or premises, or the owner of the goods so distrained, or to some person on his or her behalf resident at the place where the distress shall be made; and in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress is made; and the bailiff shall give a copy of the inventory to the rate-payer on demand, at any time within one month after the making such distress.

Goods may be impounded.

12. The bailiff, on making a distress as aforesaid, may impound or otherwise secure the goods or chattels so distrained, of what nature or kind soever, in such place or places, or in such part of the land or premises chargeable with rates, as shall be most fit and convenient for this purpose; and it shall be lawful for any person whomsoever, after the expiration of the five days hereinbefore mentioned, to come and go to and from such place or part of the said land or premises where such goods or chattels shall be impounded and secured as aforesaid in order to view and buy, and in order to carry off and remove the same on account of the purchaser thereof.

Owner may direct order of sale.

13. The owner of any goods or chattels so distrained upon, may, at his or her option, direct and specify the order in which they shall be successively sold, and the said goods or chattels shall in such case be put up for sale according to such direction.

Proceeds of distress.

14. The bailiff shall hand over to the Treasurer all proceeds of every such distress within forty-eight hours after having received the same.

Costs.

15. There shall be payable to the bailiff for the use of the Council, for every levy and distress made under this By-law, the costs and charges in the Schedule hereunto annexed marked C.

SCHEDULE A.

Warrant of Distress.

I, Mayor of the Borough of Central Illawarra, do hereby authorize you the Bailiff of the said Municipality, to distrain the goods and chattels in the dwelling-house (or in and upon the land and premises) of situate at for being the amount of rates due to the said Borough to the day of for the said dwelling-house (or land or premises as the case may be) and to proceed thereon for the recovery of the said rates according to Law.

Dated this day of 18 .

Mayor.

SCHEDULE B.

Inventory.

I HAVE this day, in virtue of the warrant under the hand of the Mayor of the Borough of Central Illawarra, dated , distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises) of situate at within the said Borough, for , being the amount of rates due to the said Borough to the day of

Dated this day of 18 .

Bailiff.

SCHEDULE C.

Costs.

Table with columns for description of costs and amounts in s. d. For every warrant of distress, For serving every warrant and making levy, For making and furnishing copy of inventory, For man in possession, each day, or part of a day, For mileage, where the warrant shall be executed, for every mile or part of a mile from the Council Chamber, For sale, commission, and delivery of goods, not exceeding One Shilling in the pound on the proceeds of the sale.

PART V.

Roads, &c.

New roads to be reported on.

1. No new public road, street, way, park, or other place proposed to be dedicated to the public, shall be taken under the charge and management of the Council until after such road,

street, way, or park, shall have been examined by the General Committee for Works, or Inspector of Works, and reported upon to the Council by such Committee or Inspector of Works.

Plan of proposed new road, &c., to be deposited.

2. Whenever any proprietor or proprietors of land within the said Borough shall open any road, street, or way, or lay out any park or other place for public use or recreation, through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, park, or other place, he or they shall furnish the Council with a plan or plans signed by himself or themselves, showing clearly the position and extent of such road, street, way, park, or other place as aforesaid.

Dedication of new roads, &c.

3. If the Council shall determine to take charge of any such road, way, or other place as aforesaid, the plan or plans so signed as aforesaid, shall be preserved as a record or records of the Council, and the proprietor or proprietors aforesaid shall execute such further instrument dedicating such road, way, park, or other place, to public use or recreation as aforesaid, as may be considered necessary by the Committee for General Purposes, and such further instrument of dedication shall also be preserved as a record of the Council.

Alignment of roads, and the removal of encroaching fences.

4. The Council may at any time cause an alignment of any proclaimed road within the Borough to be made, and shall cause a notice in writing signed by the Council Clerk or other officer to be served either personally or at the usual or last-known place of abode of the occupier, tenant, or owner of any land, the fence, wall, or other erection whereof projects or encroaches on any such road or any path thereof, to remove such fence, wall, or other erection within fourteen days from the date of service of such notice; and if such fence, wall, or other erection be not removed within the time herein required, it shall be lawful for the Council to cause the removal thereof, at the cost of such occupier, tenant, or owner; and such occupier, tenant, or owner failing or neglecting to remove such fence, wall, or other erection within the time herein required, after service of notice as aforesaid, shall on conviction for every such offence forfeit and pay in addition to the cost of removing such fence, wall, or other erection, any sum not less than one pound, nor more than ten pounds.

Removal of fallen trees, &c.

5. If any tree, or the part of any tree, shall fall on or across any public road within the Borough, from any land by which such road is bounded, it shall be lawful for the Mayor, or any Alderman or officer of the Council to give notice in writing to the occupier, tenant, or owner of such land to remove such tree or the part of any tree forthwith; and if such occupier, tenant, or owner, on whom notice has been served as aforesaid, shall fail or neglect to remove such tree or the part of any tree, the Mayor, Alderman, or officer giving such notice may cause such tree or the part of any tree to be removed; and the occupier, tenant, or owner on whom notice has been served as aforesaid, shall on conviction forfeit and pay, for every such offence, a sum of not more than two pounds nor less than five shillings over and above the cost of removing such tree or the part of any tree.

No turf, gravel, &c., to be removed from streets or roads without permission.

6. Any person who shall form, dig, or open any drain or sewer, or remove or cause to be removed any turf, clay, sand, soil, gravel, stone, or other material in or from any part of the carriage or foot way of any street, road, or other public place within the said Borough, without leave first had and obtained from the Council, or who shall break up or otherwise damage any such carriage or foot way, shall on conviction forfeit and pay for every such offence any sum not exceeding five pounds nor less than one pound.

Entrances to public roads to have culverts across water-table.

7. Where an entrance has been made from any land by the occupier, tenant, or owner thereof to any public road within the Borough, and the traffic caused by such entrance crosses the water-table of such public road, the occupier, tenant, or owner of any such land from which such entrance is made shall, on notice signed by the Council Clerk or other officer being served either personally or at the usual or last-known place of abode of such occupier, tenant, or owner, by some person duly authorized by the Mayor, erect such necessary culvert across such water-table for the protection thereof from injury by the traffic caused by such entrance as may be required by the Council, and in accordance with a plan and specification to be supplied by the Council for such purpose; and in case such occupier, tenant, or owner making, or causing, or permitting such entrance to be made shall fail or neglect to erect such culvert within thirty days from the date of such notice being served, it shall be lawful for the Council to cause such culvert to be erected at the cost of such occupier, tenant, or owner, on whom notice has been served as aforesaid, and if such occupier,

tenant, or owner of such land shall fail or neglect to erect or cause to be erected such culvert within the time herein required, he or she shall on conviction forfeit and pay any sum not exceeding five pounds for every such offence in addition to the cost of erecting such culvert as aforesaid.

Temporary stoppage of traffic for repairs, &c.

8. The Council or any officer or person acting thereunder being duly authorized may, at any time, cause the traffic of any road, street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose; and any person or persons offending against this By-law, either by travelling on such road, street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

Drawing or trailing timber, &c.

9. Any person who shall haul or draw, or cause to be hauled or drawn, upon any part of any street, road, or public place within the said Borough, any timber, stone, or other thing, otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon any wheeled vehicle or barrow, to drag or trail upon any part of such street, road, or public place to the injury thereof, or to hang over any part of any such vehicle or barrow so as to occupy or obstruct the street or road beyond the breadth of the said vehicle or barrow, or shall lock any wheel of any vehicle to the injury of such street or road, shall upon conviction forfeit and pay for every such offence a sum of not more than forty shillings nor less than five shillings over and above the damages occasioned thereby.

Driving carriages, &c., on footways.

10. Any person who shall throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth or annoyance, or any matter or thing, in or upon the carriage-way or footway of any street, road, or other public place in the said Borough; or shall kill, slaughter, dress, scald, or cut up, any beast, swine, calf, sheep, lamb, or other animal, in or so near to any such street, road, or other public place as that any blood or filth shall run, or flow upon, or over, or be on any or either of any such carriage or foot way; or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said footways of any such street, road, or public, any waggon, cart, dray, sledge, or other carriage, or any wheel, wheel-barrow, hand-barrow, or truck, or any hogshhead, cask, or barrel, or shall wilfully lead, drive, or ride, any horse, ass, mule, or other beast, upon and such footway, shall, upon conviction, forfeit and pay—for the first offence, a sum not exceeding forty shillings nor less than five shillings; for the second offence, a sum not exceeding five pounds nor less than ten shillings; and for a third and every subsequent offence, a sum not exceeding ten pounds nor less than one pound for each offence.

Careless driving, &c.

11. If the driver of any waggon, cart, dray, or coach, or other carriage whatsoever, meeting any other carriage, shall not keep his waggon, cart, dray, or coach, or other carriage on the left or near side of the said street or thoroughfare; or if any person shall in any manner wilfully prevent any other person or persons from passing him or her or any carriage under his or her care upon such road, street, or thoroughfare, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the same, every such driver or person so offending shall upon conviction forfeit and pay any sum not exceeding forty shillings.

Riding or driving furiously, &c.

12. Any person who shall ride or drive through or upon any street, road, or public place within the said Borough, so negligently, carelessly, or furiously that the safety of any other person shall or may be endangered, shall on conviction forfeit and pay a sum not exceeding ten pounds nor less than two pounds for every such offence.

Erection and removal of fences.

13. Any person who shall erect any fence or remove any existing fence on the side of any road within the Borough, without first giving the Council seven days notice in writing, such person shall on conviction for every such offence forfeit and pay any sum not exceeding five pounds.

Filling in water-tables, or diverting flow of water.

14. Any person who shall fill in, or cause to be filled in or choked up, any water-table, culvert, or water-escape on any road within the Borough, or on land through which such water-escape passes, or shall in any way divert the flow of water without the sanction of the Council, shall on conviction for every such offence forfeit and pay any sum not exceeding ten pounds.

Dangerous trees, &c., to be removed.

15. If any tree, building, or other erection shall be standing in such a tottering or dangerous state on any land within such a distance of any road within the Borough as shall or may in the falling thereof or any part thereof endanger the life or lives of any person or persons passing along such road, it shall be lawful for the Council or the Mayor to cause a notice to be served on the owner, tenant, or occupier of such land to remove any such tree, building, or other erection, and if such person on whom notice as aforesaid has been served, shall fail, neglect, or refuse to remove any such tree, building, or other erection forthwith, he shall on conviction for every such offence, forfeit and pay any sum not exceeding ten pounds; and the Court may authorize the Council to cause the removal of any such tree, building, or other erection forthwith, at the cost of such owner, tenant, or occupier, in addition to any penalty that may be inflicted upon him as aforesaid.

PART VI.

Extirpation of Weeds.

Council may cause officer to inspect lands and report on the same.—Notice to be served.

1. The Council may at any time cause an inspection of all lands within the Borough to be made by an officer appointed for the purpose, whose duty it shall be on making such

inspections to report to the Council on the state of the growth of the Scotch thistle, the Bathurst bur, the cotton plant, or other weeds that may be detrimental to good husbandry on all such lands, and the Council may direct such officer to serve a notice signed by the Council Clerk or other officer on the owner, tenant, or occupier of any such lands to destroy all such weeds within a reasonable time, not being more than sixty days nor less than seven days from the date of service of such notice; and if such owner, tenant, or occupier shall fail or neglect to destroy all such weeds as aforesaid, within the time required by such notice, he or she shall on conviction for every such offence forfeit and pay any sum not less than one pound nor more than ten pounds for every such offence; and the Court may order all such weeds to be destroyed at the expense of such owner, tenant, or occupier forthwith, in addition to any penalty that may be inflicted upon him or her as aforesaid.

Passed by the Municipal Council of Central Illawarra, this twenty-fourth day of September, in the year of our Lord one thousand eight hundred and sixty-nine.

(L.S.) JOHN BROWN,
Mayor.

By order of the Council,

EDMUND F. SMITH,
Council Clerk.

1870.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF BROUGHTON CREEK AND BOMADERRY—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 12th January, 1870.

MUNICIPAL DISTRICT OF BROUGHTON CREEK AND BOMADERRY.

BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Broughton Creek and Bomaderry, for regulating their own proceedings, for the suppression of nuisances, &c., and for determining the times and modes of collecting and enforcing payment of rates, having been confirmed by His Excellency the Governor with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BY-LAWS for the Municipal District of Broughton Creek and Bomaderry.

Preamble.

Whereas it is expedient that provision should be made for regulating the proceedings of the Council of Broughton Creek and Bomaderry, it is hereby ordered by the said Council, by virtue of the powers and authority vested in the said Council in that behalf, that the following shall be the By-laws and Standing Orders for regulating the proceedings of the said Council.

Ordinary Meeting.

1. The Council shall meet for the despatch of business, on every alternate Saturday at the hour of 2 P.M., unless such day shall happen to be a public holiday. In the latter case, the meeting shall be on such other day as the Mayor may appoint.

2. If at any meeting of the Council the Mayor be absent at the expiration of fifteen minutes after the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting. Whenever there shall be an adjournment of any such meeting for want of a quorum, the names of the members present shall be taken down, and shall be recorded in the Minute-book.

Order of Business.

3. The business of each ordinary meeting of the Council, shall be transacted in the following order, viz. :—

- (1.) The reading and confirmation of the minutes of the previous meeting.
- (2.) The reading of official correspondence.
- (3.) The presentation of petitions.
- (4.) Miscellaneous business.
- (5.) Reports brought up from Committees or officers.
- (6.) Motions of which notice has been given.
- (7.) Notices of motion.
- (8.) Orders of the day.

4. The question for confirming the minutes of the previous meeting shall be proposed by the Mayor or Chairman immediately upon their being read, and shall be to the effect that the minutes now read are a correct record of the proceedings, and

no discussion shall be allowed thereon except on the point of accuracy.

Rules of Debate.

5. Except in committee, no member shall speak more than once on the same question, unless in explanation when misrepresented or misunderstood: Provided however that the mover of any question shall have the liberty of reply, and provided further that every member shall be at liberty to speak once on any amendment as well as on the original motion; but the right of reply shall not extend to the mover of an amendment.

6. No motion shall be discussed until it shall have been reduced into writing.

7. If more than one Alderman rise at one time, the Mayor or Chairman for the time being shall decide which is entitled to pre-audience.

8. No Alderman shall digress from the subject under discussion nor impute motives, and all personal reflections shall be considered highly disorderly and withdrawn accordingly.

9. The Chairman, when called upon to decide a point of order or practice, shall state the rule or precedent applicable to the case without argument or comment, and his decision as to what is order or explanation shall be final.

10. Any Alderman may demand the production of any of the documents of the Council relating to the subject under discussion.

Motions.

11. Any number of amendments may be proposed on a motion before the Council, and when more than one amendment is moved and seconded, the question shall first be put on the last amendment, and then on the one next to the last, and so on in the inverse order in which they are moved: Provided, however, that when such motion or amendment shall relate to the fixing of salaries, rates, or other matters of finance, the lowest sum shall be put first, then the next lowest, and so on to the highest.

12. No motion, the effect of which if carried would be to rescind or be repugnant to any resolution which has been passed by the Council shall be entertained during the same

municipal year, unless a call of the whole Council has been duly made for that purpose; and no such motion, if negatived by the Council, shall be again entertained during the same municipal year.

13. No proposition once brought before the Council shall be withdrawn without leave of the Council, nor shall any proposition be entertained by the Council until the same be seconded.

14. No discussion shall be allowed on any motion of adjournment; but if the question be negatived, the next motion or order of the day shall be considered before the question of adjournment shall be again entertained; provided the motion be carried, any business left undecided shall take precedence at the next meeting of the Council.

Standing and Special Committees.

15. There shall be two Committees, viz., the Improvement Committee and the Finance Committee.

16. The Improvement Committee shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other public places under the care and management of the Council. They shall also inquire and report from time to time as to such improvements or repairs as they may think necessary, or as they may be directed by resolution of the Council to inquire and report upon.

17. The Finance Committee shall examine and check all accounts, and shall watch generally over the collection and expenditure of the municipal revenues. They shall inquire and report from time to time as to all matters which they may consider to affect, or to be likely to affect, the finances of the Municipality, and as to such matters or subjects of the like nature as they may be directed by resolution of the Council to inquire and report upon.

Nuisances.

18. Any owner or occupier of land situated within the Municipality, where the lands for the most part are under cultivation, or have been cleared and enclosed by fences, negligently allowing any weeds known as the Bathurst-burr, the Scotch thistle, or other noisome weeds, to grow on such land, or refusing or neglecting to extirpate the same within twenty-one days after due notice from the Council so to do, shall upon conviction forfeit and pay any sum not less than ten shillings nor more than five pounds, and the costs of extirpating such weeds; provided, however, that such costs and penalty shall not exceed fifty pounds.

19. If any person shall in any public place, road, street, or thoroughfare within the Municipality, throw, cast, lay, or deposit any manure, filth, rubbish, night-soil, offal, dead animal, or any offensive matter or thing, except in such place or places as the Council may appoint,—or shall deposit or cause to be deposited any such unwholesome matter within two hundred yards of any such public place, road, street, or thoroughfare,—or shall allow any such to flow in or upon, or to be in any way deposited on any such place, road, street, or thoroughfare,—shall on conviction forfeit and pay any sum not exceeding two pounds nor less than five shillings.

Miscellaneous.

20. It shall not be lawful for any person to remove any stone, sand, turf, clay, or gravel, or other material, from any road, street, or public place within the Municipality, without the authority of the said Council; neither shall it be lawful for any person to place any timber or other material on any such road, street, or public place,—or to cause any obstruction whatever to any such road, street, or public place,—or to ride or drive any horse or other animal through, in, or upon any such road or street as aforesaid; and any person who shall offend against any of these provisions shall upon conviction forfeit and pay any sum not exceeding five pounds nor less than five shillings.

21. It shall not be lawful for any person whomsoever to suffer any kind of cattle, horse, ass, mule, sheep, swine, or goats, belonging to him, or under his or her charge, to depasture, stray, or go about, or to be tethered or depastured in any street, road, or public place within the said Municipality; and any person who shall so offend shall forfeit and pay, in respect of every such offence, any sum not exceeding two pounds nor less than five shillings.

22. Any person or persons placing or causing to be placed any timber in any river, creek, or rivulet within the Municipality, whereby any bridge, culvert, or road might be in danger of being destroyed in time of floods, if not removed within thirty days after receiving notice from the Council, will be subject to a fine of not more than five pounds nor less than two pounds.

Collection of rates.

23. The rates shall be levied and collected yearly in advance, and shall be held due and payable on such day as the Council shall by resolution from time to time appoint.

24. The Council Clerk shall prepare every year a list of the names of all persons whose rates are unpaid at the expiration of thirty days notice; and the Mayor of the said Council shall, as soon as the necessary arrangements can be made, proceed

against such persons for the recovery of the rates and assessments then due and unpaid, either by summons or the issue of distress warrants as he may determine.

The Bailiff and his duties.

25. The Bailiff shall be appointed by a resolution of the Council, and may be at any time removed in a similar way.

26. The Bailiff shall make levies and distresses for the recovery of rates under warrant, in the form of the Schedule hereto annexed and marked with the letter A, under the hand of the Mayor.

27. At the time of making a distress, the Bailiff shall forthwith make out a written inventory, in the form or to the effect of the Schedule annexed hereto and marked with the letter B, which inventory shall be delivered to the occupant of the land or premises, or the owner of the goods so distrained, or to some person on his or her behalf resident at the place where the distress has been made; and in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress has been made, and the Bailiff shall give a copy of the inventory to the ratepayer, on demand, at any time within one month after the making of such distress.

28. The Bailiff, in making a distress as aforesaid, may impound or otherwise secure the distress so made, of what nature or kind soever it may be, in such places or in such part of the land or premises chargeable with the rate, as shall be most fit and convenient for this purpose; and it shall be lawful for any person whatsoever, after the expiration of the five days hereinbefore mentioned, to come and go to and from such place or part of the said land or premises where any distress shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove the same on account of the purchaser thereof.

29. The owner of any goods so distrained upon may at his or her option direct and specify the order in which they shall be successively sold, and the goods and chattels shall in such case be put up for sale according to such direction.

30. The Bailiff shall hand over to the Council Clerk all proceeds of such distresses within forty-eight hours after having received the same.

31. The Bailiff, with the sanction of the Mayor of the Municipality, may authorize any person to act temporarily as his deputy; and the person thus authorized shall have and exercise for the time being all the powers of the Bailiff himself, but the Bailiff and his sureties shall in every case be held responsible for the acts of such deputy.

32. The Bailiff shall be paid, for the use of the Council, for every levy made under these By-laws, according to the Schedule hereunto annexed marked C.

SCHEDULE A.

WARRANT OF DISTRESS.

I, the Mayor of the Municipality of Broughton Creek and Bomaderry, do hereby authorize you, Bailiff of the said Municipality, to distrain the goods and chattels in the dwelling-house, or in or upon the land and premises of _____, situate at _____, for the sum _____, being the amount of municipal rates due to the Municipality, to the _____ day of _____, for the said dwelling-house, land, or premises (as the case may be), and to proceed thereon for the recovery of the said rates according to law.—Dated this _____ day of _____, 18 _____.

Mayor.

SCHEDULE B.

INVENTORY.

I HAVE this day, in virtue of a warrant under the name of the Mayor of the Municipality of Broughton Creek and Bomaderry, dated _____, distrained the following goods and chattels in the dwelling-house, or in and upon the land and premises of _____, situate at _____, within the Municipality of Broughton Creek and Bomaderry, for the sum of _____, being the amount of rates due to the said Municipality, to the _____ day of _____, 18 _____.—Dated this _____ day of _____, 18 _____.

Bailiff.

SCHEDULE C.

FEE TO BAILIFF.

For making entry and inventory, five shillings; if in possession more than five hours, five shillings additional; and for every subsequent day whilst in possession, five shillings; and five per cent. on the net amount of sale.

Made and passed by the Municipal Council of Broughton Creek and Bomaderry, this 9th day of October, 1869.

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 6th May, 1870.

MUNICIPAL DISTRICT OF BROUGHTON CREEK AND BOMADERRY.

The following By-law made by the Council of the Municipal District of Broughton Creek and Bomaderry, in substitution for No. 20 (Miscellaneous) of the By-laws of that Municipality, contained in the Supplementary Government Gazette of the 13th January last, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the Municipalities Act of 1867.

CHARLES COWPER.

MISCELLANEOUS.

20. It shall not be lawful for any person to remove any stone, sand, turf, clay, or gravel, or other material from any road, street, or public place within the Municipality, without the authority of the said Council; neither shall it be lawful for any person to place any timber or other material on any such road, street, or public place, or to cause any obstruction whatever to any such road, street, or public place, or to ride or drive upon any foot-path, or to furiously race, ride, or drive any horse or other animal through, in, or upon any such road or street as aforesaid; and any person who shall offend against any of these provisions shall upon conviction forfeit and pay any sum not exceeding five pounds nor less than five shillings.

Passed by the Municipal Council of Broughton Creek and Bomaderry, this 26th day of March, 1870.

JAMES WILSON,
Mayor.

HENRY TAYLOR, Council Clerk.

MUNICIPALITIES.

(BOROUGH OF NEWTOWN—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 12th January, 1870.

BOROUGH OF NEWTOWN.

BY-LAWS.

THE following By-laws, made by the Council of the Borough of Newtown, for the regulation of the "Newtown Free Library," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BY-LAWS FOR THE REGULATION OF THE NEWTOWN FREE LIBRARY.

1. The Library shall be open every evening from 7-30 to 9 P.M., except on Tuesdays and Fridays, when it shall be open from 4 to 5-30 P.M.

In connection with the Library there will be a Reading-room, which shall be open every lawful day from 2 to 5 P.M., and from 7 to 10 P.M., except Tuesdays.

2. Every person who shall enter the Library or Reading-room shall, immediately on entering the same, write his or her name and address in a book to be kept for such purpose at each such Library and Reading-room, and to be called the "Visitors' Book"; and if such person shall be unable to write, then such name and address may be so written by any other person, or shall be so written by the proper officer of the Council at such Library or Reading-room, at the request of such person; and no person who shall refuse to comply with this regulation shall be permitted to remain in such Library or Reading-room; and it shall be the duty of the officer of the Council in charge of such Library or Reading-room to enforce this By-law.

3. Any person who, being intoxicated, shall enter such Library or Reading-room, shall be at once removed from the premises. Any person who shall use therein any abusive, improper, or unbecoming language, or who shall by unnecessarily loud talking, or by any noise or otherwise, disturb or annoy the persons using or resorting to such Library or Reading-room, or who shall without lawful excuse, but without felonious or larcenous intent, remove any property from such Library or Reading-room, shall forfeit and pay any sum not less than ten shillings nor more than ten pounds; and any such person may be forthwith removed by any officer of the Council in charge of such Library or Reading-room.

Loan of books.

4. Any ratepayer, or any member of his or her family over fourteen years of age may take, on obtaining a written order from any Alderman, and depositing with the Librarian 2s. 6d., not more than one volume at a time of any work marked "L" in the Library, and retain the same for any period not exceeding fourteen days, provided he or she make known to the Librarian the title of the work he or she may desire to take away.

Renewable.

5. Any person desiring to retain a book for a longer period may renew the loan on making his or her desire known to the Librarian at the expiration of fourteen days, provided no other person shall have expressed a wish to have the book in the meantime. Every person who shall retain a book longer than the specified time shall be fined 3d. for the first seven days, and 6d. for each and every additional seven days.

Exceptions.

6. All publications received from the Government Printing Office, and books purchased with the Government grant, also books marked "R," shall not be considered within the class of books persons may borrow. No periodical shall be considered within the class "L" until it shall have been on the Library table for two months.

7. Any society or class for mutual improvement or instruction, or for study or experiments, may, with the consent of the Council, be formed in connection with, or may hold its meetings or carry on its studies or experiments at the said Library or Reading-room: Provided that the general free access to and use of the said Library or Reading-room by persons who are not members of such society or class be not thereby interfered with: Provided, however, that no rule made by the members of any such society or class for the management of the same shall conflict in any way with these By-laws, or with any regulation made by the said Council hereunder.

8. Any person who shall wilfully damage any visitors' book, catalogue, copy of By-laws, or other book or record kept at any such Library or Reading-room for the general uses thereof, shall for every such offence forfeit and pay any sum not less than ten shillings nor more than ten pounds.

9. It shall be the duty of the Librarian to report at every meeting of the Library Committee any infraction of these rules or any injury to the books.

10. The foregoing rules shall be printed, framed, and suspended in the Library room, for the information of visitors.

Passed by the Municipal Council of Newtown, this ninth day of October, in the year of our Lord one thousand eight hundred and sixty-nine.

ROBERT N. BANKS,
Council Clerk.

WILLIAM CURTIS,
Mayor.

1870.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF NEWCASTLE—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 6th May, 1870.

BOROUGH OF NEWCASTLE.

THE following By-laws, made by the Municipal Council of Newcastle, for determining the mode of collecting and enforcing the payment of rates levied or imposed by that body, having been confirmed by his Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

CHARLES COWPER.

BY-LAWS for determining the mode of collecting and enforcing the payment of Rates levied or imposed by the Council of the Municipality of Newcastle.

1. All rates levied or imposed by the Council of the Municipality of Newcastle, under the provisions of section 164 of the Municipalities Act of 1867, and for the purposes mentioned in the said section, shall be collected and paid yearly; and shall be held to be due and payable thirty days after service of the notice of assessment and rate, as by law required.

2. All rates levied or imposed by the said Council under sections 165, 166, and 167 of the said Municipalities Act of 1867, and for the purposes mentioned in the said sections, or under the provisions of any of the said sections, or for any of the purposes mentioned therein, shall be collected in such manner, and shall be held to be due and payable on and after such day or days as the Council may, by resolution at the time of making or imposing such rates or any of them, have appointed.

3. All persons liable to pay any rates as aforesaid, shall pay the amount thereof, when due, into the office of the Council Clerk, during office hours, that is to say, between 9 o'clock A.M. and 4 o'clock P.M., Saturdays excepted.

4. It shall be the duty of the Council Clerk to furnish the Mayor with a list of the names of all persons whose rates are unpaid at the expiration of the times fixed for the payment of the same as aforesaid.

5. It shall be the duty of the Mayor to issue distress warrants against all such persons, and to cause such warrants to be enforced, or to cause such defaulters to be sued for the amount of such rates in a Court of competent jurisdiction.

6. The person appointed by the Council to the office of bailiff shall find two sureties to the extent of £50 each, for the faithful performance of his duty—such sureties to be approved by the Mayor.

7. It shall be the duty of the bailiff to make all levies by distress for the recovery of rates in the manner hereinafter provided.

8. All levies and distresses shall be made under warrant in the form of Schedule A hereto, under the hand of the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office.

9. It shall be lawful for the bailiff and such assistants as he may take with him to enter into or upon any part of the land, dwelling-house, or other premises, in respect of the rate or rates for which a warrant shall have been issued, and to distrain the goods or chattels therein or thereon, and to remain in or upon any such land, dwelling-house, or other premises, in charge thereof.

10. If the sum for which any such distress shall have been made shall not have been paid, with costs and charges as hereinafter provided, on or before the expiration of five days, the bailiff shall sell the goods so distrained, or a sufficient portion thereof, by public auction, either on the premises or at such other place within the said Municipality as the said bailiff may think proper to remove them to for such purpose, and shall pay over the surplus (if any) that may remain after deducting the amount distrained for, and costs and charges, to the owner of the goods so sold.

11. At the time of making a distress the bailiff shall make out a written inventory, in the form of Schedule B hereto, which inventory shall be delivered to the occupant of the land, dwelling-house, or other premises, or the owner of the goods so distrained, or to some person on his or her behalf resident at the place where the distress shall be made. And in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land, dwelling-house, or premises on which the distress is made.

12. The bailiff, on making a distress as aforesaid, may impound or otherwise secure the goods or chattels so distrained, of what nature or kind soever, in such place or places, or in such part of the land, dwelling-house, or other premises chargeable with rates, as shall be most fit and convenient for this purpose; and it shall be lawful for any person whomsoever, after the expiration of the five days hereinbefore mentioned, to

come and go to and from such place or part of the said land, dwelling-house, or other premises, where such goods or chattels shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove, the same on account of the purchaser thereof.

13. The owner of any goods or chattels so distrained upon, may, at his or her option, direct and specify the order in which they shall be successively sold, and the said goods or chattels shall in such case be put up for sale according to such direction.

14. All sales of goods and chattels upon which levy has been made shall be held between the hours of twelve at noon and three in the afternoon.

15. The bailiff shall hand over to the Council Clerk all proceeds of every such distress within forty-eight hours after having received the same.

16. There shall be paid to the bailiff for the use of the Council for every levy and distress made under these By-laws, the costs and charges set forth in the schedule hereunto annexed marked C.

17. The Mayor for the time being shall have power and authority to make such allowances as he may think proper to the bailiff, out of the costs and charges so recovered.

SCHEDULE A.

WARRANT OF DISTRESS.

To _____ and his Assistants.

Whereas _____ has been rated by the Borough Council of Newcastle in the sum of £ _____, as _____ of the premises comprised in the Schedule hereunder written: And whereas the said sum was due and payable on account of such rate by the said _____ on the _____ day of _____; and whereas default has been made in payment of the same, and the same is still due and owing; and whereas due notice demanding payment of the said sum of £ _____ was served _____: These are therefore to authorize you forthwith to make distress of the goods and chattels of the said _____; and if, within five days after the making of such distress, the said sum of £ _____ and also all costs and charges thereon shall not

be paid, that then you do sell the goods and chattels of the said _____ so by you distrained, and out of the money arising by such sale you retain the said sum of £ _____, rendering to the said _____ the surplus, if any, after deducting the costs and charges as aforesaid, and that you certify to me, on or before the _____ day of _____ what you shall have done by virtue of this warrant.

SCHEDULE B.

INVENTORY.

I have this day, in virtue of the warrant under the hand of the Mayor of the Borough of Newcastle, dated _____, distrained the following goods and chattels in the dwelling-house or in and upon the land and premises of _____, situate at _____, within the Municipality of Newcastle, for the sum of £ _____, being the amount of rates due to the Council of the said Municipality to the day of _____, 187 _____.

Bailiff.

SCHEDULE C.

COSTS AND CHARGES.

	s.	d.
For warrant of distress	2	6
For levy and inventory	2	6
For man in possession, each day or part of a day	6	0
For sale, commission, and delivery of goods, 5 per centum on the net proceeds of sale		
Given under my hand this _____ day } of _____, 18 _____ }		

Mayor.

Made and passed by the Council of the Borough of Newcastle, on the 31st day of March, 1870.

JNO. BURROWES,
Town Clerk.

WM. A. SPARKE,
Mayor.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF ALBURY—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 5th April, 1870.

BOROUGH OF ALBURY.

The following By-laws, made by the Council of the Borough of Albury, for the regulation of the "Albury Free Library," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

CHARLES COWPER.

BY-LAWS FOR THE REGULATION OF THE "ALBURY FREE LIBRARY."

Rule 1. The Library shall be open to the public every day, except Sundays, Christmas Days, and Good Fridays, between the hours of 2 and 5 P.M., and 7 till 10 P.M.

2. Every person shall, immediately on entering the Library, write his or her name in a book to be kept for such purpose, to be called the "Visitors' Book"; and no person who shall refuse to comply with this regulation shall be permitted to remain in such Library; and it shall be the duty of the officer of the Council in charge of the Library to enforce this by-law.

3. Any person who, being intoxicated, shall enter such Library, shall be at once removed from the premises. Any person who shall use therein abusive, improper, or unbecoming language, or who shall by unnecessarily loud talking, or by any noise or otherwise disturb or become offensive to the persons using or resorting to such Library, or who shall without lawful excuse, but without felonious or larcenous intent, remove any property from such Library, shall forfeit and pay any sum not less than ten shillings nor more than ten pounds; and any such person may be forthwith removed by any officer of the Council in charge of such Library.

4. Every person who, at such Library, shall desire to read any book or other publication placed in such Library for public use, shall have the same handed to him in his turn by the officer in charge of such Library. But no person shall remove any book or other publication from such Library without the permission in writing of the Council of the said Borough.

5. Any person who shall wilfully damage any Visitors' Book, Catalogue, copy of By-laws, or other book or record, or any other property kept at any such Library for the general uses thereof, shall for every such offence forfeit and pay any sum not less than ten shillings nor more than ten pounds.

6. It shall be the duty of the Librarian to report immediately to the Council Clerk any infraction of these rules, or any injury to the books.

7. The foregoing rules shall be printed, and suspended in the Library-room, for the information of visitors.

Passed by the Borough Council of Albury, this twenty-sixth day of January, in the year of our Lord one thousand eight hundred and seventy.

GEORGE DAY,
Mayor.SAMUEL MUDGE,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF BATHURST—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vict., No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 26th April, 1870.

BOROUGH OF BATHURST.

THE following By-laws, made by the Municipal Council of Bathurst, for regulating their own proceedings, for the collection and enforcing payment of rates, for preventing and extinguishing fires, for the care and management of public places, thoroughfares, roads, and streets, and for regulating slaughter-houses, &c., having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

CHARLES COWPER.

BOROUGH OF BATHURST.—BY-LAWS.

CLASS I.

REGULATIONS OF PROCEEDINGS.

Day of meeting.

1. The Council shall meet every alternate Wednesday, at 3 o'clock in the afternoon, or on such other day and at such hour as may by resolution of the Council be from time to time appointed.

Failure of meeting for want of quorum.

2. When any meeting shall lapse or be adjourned for want of a quorum, the names of the members present shall be taken down and recorded in the minute-book.

Order of business at ordinary meetings.

3. The following shall be the order of business at all meetings other than special meetings :—

Firstly.—The reading and confirmation of the minutes of the proceedings of the previous meetings; no discussion to be permitted on such minutes except as to their accuracy.

Secondly.—Statement of accounts, showing all moneys received and paid since last meeting, with the present state of the banking account of the Municipality.

Thirdly.—The reading of correspondence, and if necessary ordering thereon.

Fourthly.—Presentation and reading of reports from Committees and ordering thereon.

Fifthly.—Reading of special reports from members or officers of the Council.

Sixthly.—Presentation of petitions.

Seventhly.—Order of the day and adjourned motions.

Eighthly.—Motions of which notice has been given.

Ninthly.—Notices of motion.

Tenthly.—Such other business as may lawfully be brought before the Council.

Provided that it shall be competent to the Council at any time by resolution without notice, to entertain any particular motion, or to deal with any particular matter of business out of its regular order on the business paper, without any formal suspension of this section; also and in like manner to direct that any particular motion or matter of business shall have precedence at a future meeting.

Order of business at special meetings.

4. At special meetings, the business after reading and confirmation of minutes—which shall be conducted as at ordinary meetings—shall be taken in such order as the Mayor or the Aldermen at whose instance such meeting shall have been called may have directed.

Mayor may take part in discussions, &c.

5. The Mayor or presiding Alderman may take part in all discussions and proceedings of the Council.

Petitions.

6. All petitions shall be received as the petitions of those persons only whose signatures shall be attached thereto; and it shall be incumbent on any Alderman presenting a petition to assure himself and to state to the Council his assurance that its language and tone are not disrespectful to the Council nor otherwise objectionable. It shall also be incumbent on him to state, on presenting the petition, its purport and prayer.

Mayor or presiding Alderman to preserve order.

7. The Mayor or presiding Alderman shall preserve order, and may at any time call to order any Alderman whom he may deem to be out of order.

Calls to Order.

8. Any Alderman may call the attention of the Mayor or presiding Alderman to any Alderman being out of order or to any other point of order.

Decision on points of order final.

9. Every point of order shall be taken into consideration immediately upon its arising, and the decision of the Mayor or presiding Alderman thereon shall be final and conclusive.

Statement of reason of decision on such points.

10. The Mayor or presiding Alderman when called upon to decide points of order or practice, shall state the provision, rule, or practice which he shall deem applicable to the case without discussing or commenting upon the same; and no discussion upon such ruling shall at that meeting be permitted, but any Alderman who is dissatisfied with the decision of the Mayor or presiding Alderman on any such question of order or practice may, by motion after notice, invite the Council to lay down a different rule or principle for the determination of any similar question of order or practice which may thereafter arise.

Mayor to put questions to the Council.

11. The Mayor or presiding Alderman shall put all questions for the vote of the Council, and shall declare the sense of the Council thereon. He shall be at liberty to put any such question as often as may be necessary to enable him to form his opinion as to the sense of the majority thereupon.

Divisions.

12. Any Alderman may call for a division; in such case the question shall be put first in the affirmative and then in the negative, and the Aldermen shall vote by show of hands and the names and votes of the Aldermen present shall be recorded. Any Alderman who shall be present when a division is called for and shall not vote on such division, not being disabled by law from so voting, shall be liable for every such offence to a penalty of not less than ten shillings nor more than five pounds.

Right of pre-audience.

13. If two or more Aldermen rise to speak at the same time, the Mayor or presiding Alderman shall decide which Alderman is entitled to be first heard.

Aldermen to speak only once.

14. No Alderman shall speak twice on the same question unless in Committee or in explanation: Provided that any Alderman, though having previously spoken on the original question, may speak once on each amendment, and the mover of every original question shall always have the right of final reply.

Digressions not to be permitted.

15. No Alderman shall digress from the subject under discussion.

Offensive personal reflections not to be permitted.

16. No Alderman shall make offensive personal reflections upon or impute discreditable motives to any other Alderman. Any Alderman so offending shall, immediately upon being thereto required by the Mayor or presiding Alderman, withdraw the offensive expressions, and retract any such imputation of motive, and make an apology satisfactory to the Council. Any Alderman declining so to apologize, and to withdraw the offensive expressions or to retract the imputation of motive, shall be liable on conviction to a fine or penalty of not less than one pound nor more than five pounds for every such first offence, and on a second conviction for a like offence he shall be liable to a fine or penalty of not less than two pounds nor more than ten pounds.

Duration of speeches.

17. No Alderman shall speak upon any motion or amendment for a longer period than fifteen minutes unless by leave of the Council.

Adjournment of debate.

18. A debate may be adjourned to a later hour of the same day or to another day, and on the resumption of the debate the Alderman upon whose motion the same shall have been adjourned shall be entitled to priority of audience. Any motion for adjournment if seconded shall be immediately put without discussion, if such motion be negatived it shall not be competent for any member to make a similar motion within thirty minutes from the time of negativing such last motion for adjournment.

All motions must be seconded.

19. No notice whatever shall be taken by the Mayor or presiding Alderman of any motion or amendment unless it be seconded.

Motions to be reduced into writing.

20. No motion or amendment shall be discussed until it shall have been reduced into writing, and signed by the mover.

One amendment to be discussed at one time.

21. Only one amendment shall be discussed at one time, and upon the adoption of an amendment the original motion shall be rejected, and the amendment so carried shall be acted upon.

Production of documents.

22. Any Alderman may demand the production of all papers and documents relating to the subject under discussion.

Question may be read.

23. Upon the request of any Alderman the question or matter under discussion shall be read.

Protests.

24. Any member may protest against any resolution or vote of the Council. Notice of intention so to protest must, however, be given at the meeting when such resolution or vote is come to; and the protest itself, in writing, must be handed or sent to the Council Clerk not later than seven days after such notice. The Council Clerk shall enter every such protest in the minute book; but if in the opinion of the Council it be inconsistent with truth, or disrespectfully worded, it may, by resolution or notice, be ordered to be expunged. In such case, the expunction shall be made by drawing a perpendicular line with the pen through the entry of such protest, with a reference in the margin to the resolution ordering such expunction.

Council Clerk to give notice of Committee meetings.

25. The Council Clerk shall give notice of the intended meetings of any Committee to the members thereof, whenever requested so to do by the Chairman of such Committee.

Duration of Special Committees.

26. The appointment of Special Committees shall continue until the specific duty for which they shall have been appointed shall have been discharged: Provided that such Committees may at any time be dissolved by vote of the Council.

Rules observed in Committee of the Whole.

27. The Rules of the Council shall be observed in a Committee of the whole Council, except the rule limiting the number of times of speaking.

Committee Report to be signed by Chairman.

28. Every report of a Committee shall be signed by the Chairman of such Committee.

Composition of Committees.

29. No Committee of the Council shall consist of less than five members, of whom three shall form a quorum.

Standing Committees.

30. Besides such Special Committees as may from time to time be found necessary, there shall be three standing Committees, viz.—a By-law Committee, a Finance Committee, and an Improvement Committee.

By-law Committee.

31. The By-law Committee shall prepare, for the consideration of the Council, drafts of all By-laws which may be required for the good government of the Borough; they shall also consider and report upon all questions affecting such good government committed to them by any resolution of the Council.

Finance Committee.

32. The Finance Committee shall examine all accounts, and report upon all questions affecting the finances of the Borough committed to it by the Council, and the right of calling by Report the attention of the Council at all times to the financial administration of the Borough.

Improvement Committee.

33. The Improvement Committee shall inspect all public works in progress throughout the Borough, and may call the attention of the Council by report at all times thereto, and to the state of any public street, lane, or thoroughfare which may require attention; they shall also consider and report upon all questions of an analogous character referred to them by any resolution of the Council.

Committees may take evidence.

34. Every Committee may take evidence upon any question or questions of fact, and a minute of such evidence or its substance must in all such cases be appended to their report.

Time of appointment of Standing Committees.

35. The Standing Committees shall be appointed within thirty-one days after the commencement of each municipal year.

Mode of appointment of Committee.

36. Any member moving for a Special Committee may propose certain Aldermen as members thereof, or they may be chosen by ballot; and every member moving the appointment of a Select Committee, and naming its proposed members, shall name himself as one of them: Provided that any Committee thus moved for may, on the demand of any member of the Council, be appointed by ballot.

Where appointment is by ballot.

37. In any case where a ballot shall have been demanded, the names of all the Aldermen shall be written or printed upon slips of paper, of which one shall be handed to each Alderman, who, having struck out the names of all but those for whom he desires to vote, shall fold his paper and hand it folded to the

Mayor or presiding Alderman. The ballot papers having all been handed in and mixed shall afterwards be inspected by the Mayor or presiding Alderman, in the presence of all the Aldermen then present; and the Mayor or presiding Alderman shall after inspection order the result to be recorded.

Suspension of By-laws.

38. Any of these By-laws relating to or affecting proceedings at meetings of the Council or of Committees may be suspended temporarily in cases of emergency, if not less than five-sixths of the members of the Council then present shall deem such suspension necessary.

Appointment of officers.

39. In all cases where security is required, the sureties offered must be approved by the Council; and it shall not be competent for the Council to accept as surety any of its members or any person holding office under the Council.

The like.

40. No officer shall be appointed until a specification of his duties and the amount of his salary shall be approved of by the Council, nor until one week's notice at least shall have been given in one or more of the local newspapers inviting applications for such appointments.

Complaints against officers.

41. No notice whatever shall be taken of any complaint against any officer or servant of the Municipality unless the same be in writing and signed by the person or persons complaining.

Custody of seal and records.

42. The Common Seal and all charters, deeds, muniments, and records of the Corporation, or relating to the property thereof, shall be kept at the Town Hall, Bathurst, in the office and in the charge and custody of the Council Clerk for the time being.

Mayor to affix Common Seal.

43. The Mayor shall affix the Corporate Seal to and shall sign all documents creating an obligation upon the Council, such affixing of the Seal and such signing shall be done in the presence of the Council Clerk, who shall witness the same.

Moneys to be deposited in Bank.

44. The Treasurer of the Council shall within twenty-four hours of the receipt of moneys on behalf of the Council, or as soon as possible, deposit all such moneys in a Bank to be named by the Council, to the credit of the Corporation, and his cash-book and Bank pass-book balanced shall be laid before the Council at every meeting. He shall also lay his accounts before the Council at the first meeting of each quarter or oftener if required.

Preliminary proceedings before undertaking work.

45. No work shall be undertaken before the probable expense be ascertained by the Council, and all accounts shall be examined by the Finance Committee and their report obtained before any warrant can issue for payment thereof, which warrant must be signed by the Mayor, the Treasurer, and at least one member of the Finance Committee. In cases of emergency, however, a warrant may be granted by the Mayor with the assent of any two Aldermen, authorizing the expenditure of a sum not exceeding forty pounds; but in all such last mentioned cases the issuing of such emergency warrant shall be reported to the Council at its next meeting.

Absence of Aldermen without leave.

46. Any Alderman absenting himself for more than two consecutive meetings without leave previously obtained, shall be liable to a penalty of not less than ten shillings nor more than two pounds for each subsequent absence from the meetings of the Council.

Lapsing of motion through absence of Alderman.

47. In the event of any Alderman who may have given notice of a motion failing to attend or to provide a substitute to make such motion, the same shall lapse.

Drawing of cheques.

48. No cheques for money shall be drawn except on production of a warrant authorizing payment, the number of the cheque shall thereupon be inserted in the warrant, and the number of the warrant shall be entered on the body and on the butt of the cheque.

Records and papers to be kept private.

49. Excepting as otherwise provided by law, if any person shall without the permission of the Council first had and obtained, show, lay open, or expose any of the books, papers, or records of the Council to any person not being a member of the Council, the person so showing, laying open, or exposing any of the said books, papers, or records, shall, on conviction thereof, forfeit and pay a penalty of not less than ten shillings nor more than five pounds, and on every subsequent conviction a penalty of not less than two pounds nor more than thirty pounds.

Records not to be defaced or altered.

50. Any person who shall deface, alter, or destroy, or attempt to deface, alter, or destroy, any such common seal, charter, deed, muniment, paper, or record, shall on conviction thereof forfeit and pay for the first offence a penalty not exceeding fifty pounds nor less than five pounds, and upon every subsequent conviction a penalty of not less than twenty pounds nor more than fifty pounds.

Nor removed.

51. Any person who shall remove or attempt to remove any such seal, charter, deed, muniment, paper, or record from the Council Chamber or office of the Council Clerk, without leave of the Council first had and obtained, shall, on conviction thereof, forfeit and pay a penalty of not less than two pounds nor more than twenty pounds, and for every subsequent offence a penalty of not less than five pounds nor more than thirty pounds.

CLASS II.

COLLECTION AND ENFORCING PAYMENT OF RATES.

52. The rates and taxes levied by the Council under the provisions of section one hundred and sixty-four of the Municipalities Act of 1867, and for the purposes mentioned in the said section, shall be collected half-yearly, and such half-yearly payments shall be held to be due and payable on and after such days as the Council shall, by resolution at the time of making or imposing such rate, appoint.

Special rates.

53. All rates levied or imposed by the Council, under the provisions of any sections other than section one hundred and sixty-four, for the purposes mentioned in any of such other sections of the said Municipalities Act of 1867, shall be collected in such manner, and shall be held to be due and payable on and after such day or days, as the Council may, by resolution at the time of making or imposing such rates or any of them, appoint.

Rates to be paid at Office of Council Clerk.

54. All persons liable to pay any rates as aforesaid, shall pay the amount thereof within the time prescribed by the Act into the office of the Council Clerk during office hours, that is to say, every Tuesday and Thursday, between the hours of 11 A.M. and 4 P.M.

Defaulters.

55. It shall be the duty of the Council Clerk to furnish the Mayor with a list of the names of all persons whose rates are unpaid at the expiration of the times fixed for payment of the same as aforesaid.

Mayor to enforce payment.

56. It shall be the duty of the Mayor to issue and direct the enforcement of distress warrants against the goods, chattels, and effects of all such defaulters, or to cause such defaulters to be sued in a Court of competent jurisdiction, for the amount of such rates as in the payment of which they shall respectively be in default; the Council to determine by resolution from time to time whether the Mayor shall enforce by distress or by suit.

Bailiff—tenure of office.

57. The bailiff shall be appointed by resolution of the said Council, and shall be at any time removable by a like resolution.

Sureties for bailiff.

58. The bailiff shall find two sureties to the satisfaction of the Mayor, to the extent of fifty pounds each, for the faithful performance of his duty.

Duties of bailiff.

59. It shall be the duty of the bailiff to make all levies by distress for the recovery of rates in the manner hereinafter provided.

Mode of proceedings in distress.

60. All levies and distresses shall be made under warrant signed by the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office; and all proceedings under or in respect of such distresses and warrants and upon the sale of goods levied upon by virtue thereof shall be, except in so far as they may be otherwise provided for by the Municipalities Act of 1867, or by these By-laws, the same as are directed by the provisions of the Act 15 Vic. No. XI with respect to distresses for rent under a lease or demise.

Proceeds of distress.

61. The bailiff shall hand over to the Council Clerk all proceeds of distresses within forty-eight hours after having received the same.

Bailiff to appoint deputy.

62. The bailiff with the permission in writing of, and signed by the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office, may employ any person or persons to act temporarily, as his deputy or deputies

and assistant or assistants in carrying into effect any distress warrant: Provided always that in such case the bailiff shall be held responsible for the acts and omissions of all and any such persons so employed by him.

Costs of distress.

63. There shall be payable to the bailiff for the use of the Council, for every levy and distress made under these By-laws, the costs and charges as follows:—

	s.	d.
Distress warrant	6	0
Levying distress and making inventory	5	0
Man in possession each day or part of a day	5	0
Advertising (whatever amount has been paid) and 5 per cent. on the net proceeds of the goods.		

CLASS III.

PREVENTING AND EXTINGUISHING FIRES.

Fire or combustible materials.

64. Every person who shall place or shall knowingly permit to be placed in any house, yard, workshop, out-offices, or other premises, fire, gunpowder, or combustible or inflammable materials of any kind, in such a manner as to endanger contiguous buildings, shall on conviction for every such offence forfeit and pay a penalty of not less than five shillings and not more than five pounds, and shall forthwith remove such fire, gunpowder, or combustible or inflammable materials; and every such person who shall suffer any such fire, gunpowder, or combustible or inflammable materials to remain as aforesaid for twenty-four hours after any such conviction shall be deemed guilty of a further offence against this By-law.

Inflammable fences.

65. Every person who shall erect any fence of brushwood, bushes, or other inflammable material, or shall make or place any stack of hay, corn, straw, or other produce, or place as or for the covering of any such stack, any inflammable material so as to endanger contiguous buildings or properties, or any trees, shrubs, or other produce thereof, or any chattels therein, shall forfeit, on conviction, for every such offence, a penalty of not less than five shillings nor more than five pounds, and shall also remove such fence, stack, or covering, within a reasonable time after such conviction; and any person failing to remove such fence, stack, or covering within a reasonable time after any such conviction as aforesaid, shall be deemed guilty of a further offence against this By-law.

Setting fire to matter without notice.

66. Every person who shall wilfully set fire to any inflammable matter whatsoever, in the open air, without having given notice in writing to the occupiers of the land adjoining to the land upon which such matter shall be, and also to the Council Clerk, of his intention so to do, or within twenty-four hours after giving the last-given of such notices, or between the hours of four in the afternoon of any day, and eight in the morning of the following day, shall forfeit a sum of not less than ten shillings nor more than five pounds.

Fireworks.

67. Every person who without leave of the Council previously had and obtained, shall light any bonfire, tar-barrel, or firework upon or within sixty yards of any public or private street or any public place; or who shall sell gunpowder, squibs, rockets, or other combustible matter, by gas, candle, or other artificial light, shall forfeit for every such offence a sum not less than ten shillings nor more than ten pounds.

Wilfully setting fire to chimneys.

68. Every person who wilfully sets or causes to be set on fire any chimney, flue, smoke-vent or stove-pipe, herein called in common "chimney," shall forfeit a sum not less than five shillings nor more than five pounds: Provided always that nothing herein contained shall exempt the person so setting or causing to be set on fire any chimney from liability to be informed against or prosecuted before any Criminal Court for such act as and for an indictable offence.

Negligently allowing chimney to be on fire.

69. If any chimney accidentally catch or be on fire, the person occupying or using the premises in which such chimney is situated shall forfeit a sum not less than five shillings and not more than forty shillings: Provided always that such forfeiture shall not be incurred if such person prove to the satisfaction of the Justices before whom the case is heard, that such fire was in no wise owing to the omission, neglect, or carelessness whether with respect to cleansing such chimney or otherwise of himself or his servant.

CLASS IV.

PUBLIC PLACES AND THOROUGHFARES, ROADS, STREETS, AND ENCROACHMENTS THEREON.

Certain roads, streets, &c., to be henceforth under charge of Council.

70. All roads, streets, lanes, and thoroughfares within the Municipality, and exceeding eighteen feet in width, which are

now in public use, or which previously to the passing of these By-laws have been proclaimed or laid down and marked out (except such as are vested in any road-trust), shall from henceforth be under the charge and care of the Council.

New roads, &c., to be reported upon.

71. No new public road, street, lane, thoroughfare, way, park, square, or other place proposed to be dedicated to the public (excepting only such streets, &c., as by the provisions of the Municipalities Act of 1867, the Council is compelled to take the charge of) shall be taken under the charge and management of the Council until after such road, street, lane, thoroughfare, way, park, square, or other place as aforesaid shall have been examined by the Improvement Committee and reported upon to the Council by such Committee.

Surveyor to mark out roads, &c.

72. The Surveyor of the Municipality or other officer or person duly authorized by the Council in that behalf shall, under the Improvement Committee, be the proper officer for making out, when and where necessary, the roads, streets, lanes, and thoroughfares which now are or shall hereafter be under or subject to the care, construction, or management of the Council. In marking out such roads, streets, lanes, or thoroughfares recourse shall be had when practicable to the plans under which land with frontage to the road, street, lane, or thoroughfare in question shall have been sold. The Surveyor shall also be the proper officer for marking out, when deemed necessary by the Council, the carriage and foot ways in such roads, streets, lanes, thoroughfares, or other public places; but it shall be sufficient for him for this purpose to place posts at the corners or intersections of the streets, roads, lanes, or thoroughfares, or wherever the same may be necessary or desirable, so as to give a width of forty-two feet for the carriage-way and twelve feet for the foot-way on each side when the road, street, lane, or thoroughfare shall be sixty feet wide, and in proportion, and in the discretion of the said officer, in any public roads, streets, lanes or thoroughfares, or other public places of other width than sixty feet.

Temporary stoppage of traffic on streets, &c.

73. The Surveyor of the Municipality, or other officer or person duly authorized by the Council in that behalf, may at any time, by order of the Council, cause the traffic of any road, street, lane, or thoroughfare, or of any portion thereof, to be stopped during necessary repairs, or for the taking up or laying down of any pipes, or for any other necessary purpose. Any person offending against this By-law by travelling on such road, street, lane, or thoroughfare during such temporary suspension of traffic, or by removing, demolishing, or injuring any obstruction placed on any such road, street, lane, or thoroughfare for the purpose of such suspension of traffic, shall forfeit and pay a penalty of not less than ten shillings nor more than five pounds.

No encroachment on streets, &c., allowed.

74. Whenever any road, street, lane, or thoroughfare has been marked out in manner herein provided, no house, shop, fence, or other structure shall be allowed except as hereinafter mentioned to project or encroach on any part thereof. And in order that the due alignment of the roads, streets, lanes, or thoroughfares within the Borough shall be observed, and that no encroachment shall be made thereon, it shall not be lawful for any person, unless for some temporary purpose permitted by the Council, to erect or put up any building, erection, obstruction, fence, or enclosure, or to make any excavation or hole on, under, or near such road, street, lane, or thoroughfare, unless due notice of the same shall have been given to the Council at least three weeks before any such building, erection, obstruction, fence, or enclosure, excavation, or hole as aforesaid, shall be commenced to be erected or put up or made, and the assent of the Council thereto obtained; and in default of the same, the person so offending shall forfeit and pay for every such offence a sum not less than two pounds nor more than five pounds; and on every subsequent conviction for a similar offence, shall forfeit and pay a penalty of not less than three pounds nor more than fifty pounds.

No balcony, &c., to project more than eighteen inches.

75. With regard to buildings hereafter to be built or rebuilt, it shall not be lawful for any portico, balcony, coping, parapet, overhanging, eaves, cornice, windows, string cornice, string course, dressing, or other architectural decoration forming part of or attached to any external wall, to project more than eighteen inches beyond the general line of front in any road, street, lane, or thoroughfare; nor shall any balcony or any other external projection as aforesaid, which may hereafter be added to any existing building, be allowed to project more than eighteen inches as aforesaid, under a penalty not exceeding five pounds nor less than one pound.

Levelling foot-ways.

76. When any foot-way shall have been marked out in manner hereinbefore directed, the Surveyor or other officer as

aforsaid may cause the same to be levelled and made as nearly as practicable of equal height and breadth and with an equal slope and inclination, and for this purpose may remove any flagging, steps, or other matter, thing, or obstruction that may injure or obstruct the said foot-way, or render it unequal or inconvenient, and which now is or hereafter may be erected or placed on the space marked out for any of the said foot-ways.

Penalty for interference with servant of Council removing obstructions or encroachments.

77. Any person who shall wilfully obstruct or interfere with the Surveyor or other officer as aforesaid, or with any person or persons acting for or under him, in the exercise of any of the duties or powers by these By-laws imposed or cast on the said Surveyor or officer; or who shall wilfully obstruct or interfere with any servant or servants of the Council in the exercise of any powers given to the Council, or in carrying out of any orders lawfully given by the Council under the provisions of section one hundred and thirty-six of the Municipalities Act of 1867, shall on conviction forfeit and pay a penalty of not less than two pounds nor more than twenty pounds.

Restrictions on certain trades, &c.

78. It shall not be lawful for the business of a soap-boiler, tallow-melter, tripe-boiler, tanner, currier, or cow keeper, or any other trade or manufacture of an obnoxious or unwholesome nature, prejudicial to the health of or otherwise offensive to the inhabitants, to be newly established or carried on in any building or place within the limits of the said Borough, except in such place or places as shall be previously approved by the Council, so that the same shall not be a nuisance to the inhabitants or prejudicial to public health; and from and after the first day of January, A.D. 1870, the business of a soap-boiler, tallow-melter, tripe-boiler, tanner, currier, or cow keeper, or any other obnoxious offensive or unwholesome trade or manufacture as aforesaid which has been already established shall not be continued or carried on in any building or place within the said Borough, except with such approval as aforesaid; and whosoever shall offend against this By-law shall forfeit and pay on conviction for every such offence before any two or more Justices of the Peace a penalty not exceeding fifty pounds.

Proviso to preceding By-law.

79. Provided always that if any question shall arise whether any trade or manufacture is of an obnoxious or unwholesome nature, dangerous to the health of the inhabitants of the Borough, the same shall be determined by the Justices as incident to the case: Provided also that notice in writing shall be given to the person engaged in such trade or manufacture, and if he shall discontinue the same within six months after the receipt of such notice he shall not be liable to any penalty in that regard; and if any person after having received such notice and discontinued such trade or manufacture shall again renew or re-establish the same, he shall be liable to the penalties in that regard imposed by these laws.

Drawing or hauling timber.

80. Any person who shall haul or draw or cause to be hauled or drawn upon any part of any street or public place within the said Borough, any timber, stone, or other thing otherwise than upon wheeled vehicles or barrows, or shall suffer any timber stone or other thing which shall be carried principally or in part upon any wheeled vehicle or barrow to drag or trail upon any part of such street or public place to the injury thereof, or to hang over any part of any such vehicle or barrow so as to occupy or obstruct the street beyond the breadth of the said vehicle or barrow, shall upon conviction forfeit and pay for every such offence a sum of not more than forty shillings nor less than five shillings over and above the damages occasioned thereby.

Driving carriages or throwing filth on foot-ways.

81. Any person who shall throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth or annoyance, or any matter or thing, in or upon the carriage-way or foot-way of any street or other public place in the said Borough; or shall kill, slaughter, dress, scald, or cut up any beast, swine, calf, sheep, lamb, or other animal, in or so near to any such street or other public place as that any blood or filth shall run or flow upon, or over, or be on any or either of any such carriage or foot-way; or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said foot-ways of any such street or public place, any carriage, buggy, gig, dog-cart, waggon, cart, dray, sledge, or other carriage, or any wheel, wheel-barrow, hand-barrow, or truck, or any hogshead, cask, or barrel; or shall wilfully lead, drive, or ride any horse, ass, mule, or other beast upon any such foot-way,—shall upon conviction forfeit and pay for the first offence a sum not exceeding forty shillings nor less than five shillings, for the second offence a sum not exceeding five pounds nor less than ten shillings, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound for each such offence.

Placing carriages, stalls, goods, &c., on foot-ways.

82. Any person who shall set, or place, or cause or permit to be set or placed any stall, board, chopping-block, show-board (on hinges or otherwise), basket-wares, merchandise, casks, or goods of any kind whatsoever—or shall hoop, place, wash, or cleanse, or shall cause to be hooped, placed, washed, or cleansed any pipe, barrel, cask, or vessel, in, or upon, or over any carriage or foot-way, in any street or public place within the said Borough—or shall set out, lay, or place, or shall cause, or procure, permit, or suffer to be set out, laid, or placed any coach, carriage, buggy, gig, dog-cart, cart, wain, waggon, dray, wheel-barrow, hand-barrow, sledge, truck, or other carriage upon any such carriage-way (except for the necessary time of loading or unloading such cart, wain, waggon, dray, sledge, truck, or other carriage, or taking up or setting down any fare, or waiting for passengers when actually hired, or, if private vehicle, waiting for persons lawfully using the same, or harnessing or unharnessing the horses or other animals from such coach, cart, wain, waggon, dray, sledge, truck, or other carriage)—or if any person shall set or place, or cause to be set or placed, in, or upon, or over any such carriage or foot way any timber, stones, bricks, lime, or other materials or things for buildings whatsoever (unless the same shall be enclosed as herein directed), or any other matters or things whatsoever; or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal or other thing or matter whatsoever from any house or other building or premises over any part of any such foot-way or carriage-way, or over any area of any house or other building or premises, or any other matter or thing from and on the outside of the front or any other part of any house or other building or premises over or next unto such street or public place, and shall not immediately remove all or any such matters or things being thereto required by the Inspector of Nuisances or other proper officer of the Council—or if any person who having in pursuance of any such requisition as aforesaid removed or caused to be removed any such stall, board, show-board, chopping-block, basket wares, merchandise, casks, goods, coach, cart, wain, waggon, dray, wheel-barrow, hand-barrow, sledge, truck, carriage, timber, stones, bricks, lime, meat, offal, or other matters or things, shall at any time thereafter again set, lay or place, expose or put out, or cause, procure, permit, or suffer to be set, laid, placed, exposed, or put out, the same or any of them or any other stall-board, show-board, chopping block, basket-wares, merchandise, goods, timber, stones, bricks, lime, coach, carriage, buggy, gig, dogcart, cart, wain, waggon, dray, truck, wheel-barrow, hand-barrow, sledge, meat, offal, or other things or matters whatsoever (save and except as aforesaid), in, upon, or over any such carriage or foot-way of or next unto any such street or public place as aforesaid,—shall upon conviction for every such offence forfeit and pay, for the first offence a sum not exceeding forty shillings nor less than five shillings, for the second offence a sum not exceeding five pounds nor less than ten shillings, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound: Provided that nothing herein contained shall be deemed to prevent any person from placing an awning in front of his or her shop or house in such manner as that such awning shall be at least seven feet above the height of the foot-way, and that the posts be placed close up to the curbstone or outer edge of such foot-way.

Areas to be covered and enclosed.

83. Every owner or occupier of any house, building, or premises having any entrance, area, garden, or other open space adjoining the foot-way of any street or public place within the said Borough beneath the level of the curbstone or exterior edge of such foot-way, shall protect and guard the same by good and sufficient rails, fences, or other enclosures, so as to prevent danger to persons passing and repassing; and every such owner or occupier as aforesaid having any steps adjoining the foot-way of any street or public place, shall in the like manner protect and guard the same so as to prevent the like danger. In failure thereof every such owner or occupier shall for every such offence forfeit and pay a penalty of not less than two pounds nor more than five pounds.

Cellars or openings beneath foot-ways prohibited.

84. It shall not be lawful for any person to make any cellar or any opening, door, or window, in or beneath the surface of the foot-way of any road, street, lane, thoroughfare, or other public place within the said Municipality; and if any person shall offend in the premises he shall forfeit and pay any sum not exceeding five pounds over and above the expense of remedying or removing any such cellar, opening, door, or window, such expense to be assessed and allowed by the convicting Justice or Justices, provided that such expense and penalty shall not together exceed fifty pounds.

Wells to be covered

85. Every person who shall have a well situated between his or her dwelling-house or the appurtenances thereof, and any street or foot-way within the limits of the Municipality, or at the side thereof, or in any yard or place open and exposed to such street or foot-way, shall within the space of three calendar

months from and after the passing of these By-laws cause such well to be securely and permanently covered over, and shall not be at liberty to open the same or to draw water therefrom unless by means of a pump closely and securely fixed therein; and if any person having such well as aforesaid shall fail to cover and secure the same within the time and in the manner hereby required and directed, every such person shall upon conviction for every such offence forfeit and pay the sum of two shillings and sixpence for every day that such well shall remain open or uncovered contrary to the provisions of this By-law.

Polluting or diverting water-courses, &c.

86. Any person casting any filth or rubbish into any public water-course or sewer, or obstructing or diverting from its channel any such sewer or water-course, shall forfeit and pay a sum not less than one pound nor more than five pounds in addition to the costs of removing such filth or obstruction and of restoring such water-course, such costs of removal to be recovered summarily in the manner provided for the recovery of penalties under these By-laws; provided that such penalty and expenses together shall in no case exceed fifty pounds.

Damaging public walls, &c.

87. Any person who shall damage any public building, wall, parapet, bridge, road, street, sewer, water-course, sluice, pump, fountain, cock, water-pipe, or other public property, shall pay the costs of repairing the same, such costs to be recovered in a summary manner in the mode provided for the recovery of penalties under these By-laws; and if the same be wilfully done, shall forfeit and pay a penalty of not less than five pounds nor more than twenty pounds.

Removal of night-soil, &c.

88. Any person or persons who shall drive or cause to be driven any cart, or other carriage with any night-soil or ammoniacal liquor therein, through or in any street or public place within the said Borough, between the hours of five o'clock in the morning and ten o'clock at night, or shall fill any cart or other carriage so as to turn over or cast any night-soil, ammoniacal liquor, slop, mire, or channel-dirt, or filth, in or upon any such street or public place, or shall deposit night-soil, ammoniacal liquor, or other offensive matter nearer to any street, road, or dwelling-house than shall be directed by the said Council, or by the Inspector of Nuisances, or shall remove night-soil or other offensive matter otherwise than in properly covered and water-tight carts or other vehicles, or shall cause any vehicle used for this purpose to stand on any premises nearer to any road, street, or dwelling-house than shall be directed by the said Council or the said Inspector of Nuisances, shall, for every such offence, forfeit and pay a sum not less than ten shillings and not more than five pounds; and in case the person so offending shall not be known to the said Council or Inspector, then the owner of such cart or carriage in which such night-soil or other offensive matter shall be put or placed, and also the employer of the person so offending, shall be liable to and forfeit and pay such penalty as aforesaid.

Discharging fire-arms.

89. Any person discharging fire-arms without lawful cause, or without the sanction of the Council first had and obtained, in or near to any road or street, shall forfeit and pay a penalty not less than ten shillings nor more than five pounds.

Bathing in public.

90. It shall not be lawful for any person to bathe within the said Municipality in any waters exposed to view from any road, street, or dwelling-house in or near to the said Municipality, between the hours of six in the morning and eight in the evening; and any person who shall offend against this By-law shall forfeit and pay a sum not exceeding twenty shillings.

Indecent exposure.

91. Any person who shall offend against decency by the exposure of his or her person in any street or public place within the said Municipality, or in the view thereof, shall forfeit and pay a sum not exceeding ten pounds nor less than five pounds.

Swine not to be kept; horses, goats, &c., not to stray.

92. It shall not be lawful for any person whomsoever to breed feed or keep any kind of swine in any house, building, yard, garden, or other hereditaments situate and being in or within forty yards of any street or public place within the limits of the Borough, nor to suffer any kind of swine, or any horse, ass, mule, sheep, goat, or other cattle belonging to him or her, or under his or her charge, to stray or go about, or to be tethered or depastured in any street or public place therein; and any person who shall so offend shall on conviction forfeit and pay for every such offence a sum not exceeding forty shillings nor less than five shillings.

Removal of hog-sties and nuisances.

93. In case any privy, hog-sty, or any other matter or thing which shall at any time or times hereafter be in any place within

the limits of the said Borough, shall be or become a nuisance to any of the inhabitants thereof, it shall be lawful for any two Justices of the Peace, upon complaint thereof to them made by any person thereto deputed by the Council, and after due investigation of such complaint, by notice in writing to order that every or any such privy, hog-sty, or other matter or thing being a nuisance, shall be remedied and removed within seven days after such notice shall have been given to the owner or occupier of the premises wherein such nuisance shall exist, or shall have been left for such owner or occupier at his or her last or usual place of abode, or on the said premises; and every such occupier neglecting to remedy or remove such nuisance pursuant to such notice, and to the satisfaction of such Justices, shall forfeit and pay on conviction before the said Justices the sum of ten pounds for every such neglect or disobedience; and also it may be lawful for such Justices to indict or cause to be indicted for such nuisance such person or persons so neglecting or disobeying any such notice, at the then next Court of General or Quarter Sessions to be held at Bathurst, and such person or persons being found guilty thereof, such nuisance or nuisances shall be removed, taken down, and abated according to law with regard to public or common nuisances; and the person or persons so offending shall be subject to such punishment for the misdemeanor as the Justices assembled at a General Quarter Sessions within any of the said towns shall direct, provided that in no one case shall the penalty, costs, charges, and expenses together amount to more than fifty pounds.

Private avenues.

94. Any owner or occupier of any house or place within the limits of the said Borough who shall neglect to keep clean all private avenues, passages, yards, and ways, within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, shall on conviction forfeit and pay a sum not exceeding forty shillings nor less than ten shillings for every such offence.

Injuring or extinguishing lamps.

95. Any person who shall be convicted of wantonly or maliciously breaking or injuring any lamp or lamp post, or extinguishing any lamp set up for public convenience within the limits of the said Borough, shall over and above the necessary expense of repairing the injury committed, to be estimated by the Justice before whom such offender shall be brought, forfeit and pay upon conviction for every such offence, any sum not less than one pound nor exceeding five pounds, provided that in no one case shall the expenses and penalty together amount to more than fifty pounds.

Riding on drays.

96. If the driver of any waggon, wain, cart, or dray, of any kind shall ride upon any such vehicle in any road, street, lane, or thoroughfare as aforesaid, not having some person on foot to guide the same (such carts as are drawn by one horse and driven or guided with reins only excepted); or if the driver of any carriage or vehicle whatsoever shall wilfully be at such a distance from such carriage or vehicle, or in such a situation whilst it shall be passing upon such street that he cannot have the direction and government of the horse or horses or cattle drawing the same; or if the driver of any waggon, cart, dray, or coach, or other carriage or vehicle whatsoever, meeting any other carriage or vehicle, shall not keep his waggon, cart, dray, or coach, or other carriage or vehicle on the left or near side of the road, street, lane, or thoroughfare; or if any person shall in any manner wilfully prevent any other person or persons from passing him or her or any carriage or vehicle under his or her care, upon such road, street, lane, or thoroughfare, or by negligence or misbehaviour, prevent, hinder, or interrupt the free passage of any carriage or vehicle or person in or upon the same,—every such driver or person so offending shall upon conviction forfeit and pay any sum not exceeding forty shillings.

Careless or furious driving.

97. Any person who shall ride or drive through any street or public place within the limits of the said Borough so negligently, carelessly, or furiously that the safety of any other person shall be actually endangered, shall on conviction forfeit and pay a sum not exceeding ten pounds nor less than two pounds.

Riding on foot-ways.

98. Any person damaging any foot-path, or leading, driving, or riding any horse or other animal upon any foot-way of any street or road within the said Borough, shall pay a penalty not exceeding forty shillings nor less than ten shillings.

Placarding or chalking on walls.

99. It shall not be lawful for any person to paste or otherwise affix any placard or other paper upon any wall, house, or building within the limits of the said Borough, nor to deface any such wall, house, or building by chalk or paint or in any other manner; and any person who shall be guilty of any such offence shall, upon the complaint of the owner or occupier of any such wall, house, or building, forfeit and pay, on conviction, the sum of ten shillings.

Driving cattle in the Borough.

100. No person shall drive through any street, lane, or public thoroughfare of the Borough, any live stock, between the hours of 8 A.M. and 6 P.M. during the months of May, June, July, and August, nor between the hours of 8 A.M. and 7 P.M. during the other months of the year, except calves and foals under one year old, quiet milch cows, quiet broken-in horses or cattle, and known as such, sheep, pigs, and goats. Every person offending against this By-law shall forfeit and pay a penalty not exceeding five pounds nor less than one pound, and the burden of proving that any animals the subject of any information hereunder come within the above exceptions shall be cast upon the defendant, provided that nothing herein contained shall prevent the driving of cattle through the Borough before noon of any day, if the route of such cattle be through Havannah-street, and shall not prevent the driving of stock from the present sale yards between half-past two o'clock and half-past three o'clock in the afternoon, if the route taken shall be the nearest to Havannah-street, and this right shall cease upon the thirty-first December in the year 1870.

Cleansing shambles, slaughter-houses, &c.

101. For preserving the cleanliness of the said Borough, and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council from time to time, and when and as often as he or either of them shall see occasion, to visit and inspect the butchers' shambles, slaughter-houses, boiling-down establishments, tanneries, and fell-mongering establishments in the said Borough, and to give such directions concerning the cleansing the said shambles, slaughter-houses, tanneries, and establishments both within and without as to him shall seem needful; and any butcher, or the owner or occupier of any such shamble, slaughter-house, tannery, or establishment, who shall obstruct or molest any such officer in the inspection thereof, or refuse or neglect to comply with such directions within a reasonable time, shall forfeit and pay a sum not exceeding ten pounds nor less than ten shillings.

Inspection of premises.

102. Upon the reasonable complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any other person appointed by the Council shall make an inspection of the premises complained of, and the officer of the Council shall have full power without any other authority than this By-law to go upon such premises for the aforesaid purpose.

Miscellaneous offences against health and comfort of inhabitants of Borough.

103. Every person who in any road, street, lane, thoroughfare, or other public place or passage within the said Borough, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences, shall on conviction for any and every such offence forfeit and pay a penalty of not more than two pounds:—

Every person who shall hoist or cause to be hoisted, or lowered or cause to be lowered, goods of any description from any opening in any house fronting any street, road, lane, thoroughfare, or public place, and close to the foot-way thereof, without sufficient and proper ropes and tackling.

Every person who shall carry or convey or cause to be carried or conveyed in any road, street, lane, thoroughfare, or public place, the carcase or any part of the carcase of any newly slaughtered animal, without a sufficient and proper cloth covering the same for the concealment from public view, or shall hawk or carry about butchers' meat for sale without covering the same as aforesaid.

Every person who shall place any line, cord, or pole across any road, street, lane, thoroughfare, or passage, or hang or place clothes thereon, to the danger or annoyance of any person.

Every person who shall place any flower-pot in any upper window near to any road, street, lane, thoroughfare, or public place, without sufficiently guarding the same from being thrown down.

Every person who shall throw or cast from the roof or any part of any house or other buildings, any slate, brick, part of a brick, wood, rubbish, or other material or thing (unless within a hoard or enclosure, when any house or building is being erected, pulled down, or repaired).

Every blacksmith, whitesmith, anchorsmith, nailmaker, metal founder, lime burner, brickmaker, potter, or other person using a forge, furnace, or kiln, and having a door, window, or aperture fronting or opening into or towards any street, lane, or passage, and not closing such door, or not fastening the shutters or other fastenings of such window and closing such aperture, or placing a screen before the same every evening within one hour after sunset, so as to effectually prevent the light from showing through the doorway, window, or aperture, next or upon such street, lane, or passage.

Every person who shall within the distance of one hundred yards from any dwelling-house, burn any rags, bones, cork, or other offensive substance to the annoyance of any inhabitant.

Every person who shall carry goods or any frame to the annoyance of any person upon the foot-way of any road, street, lane, thoroughfare, or other public foot-way.

Every person who shall be the keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person who may have the right of way or use of any private or public yard, alley, road, street, lane, thoroughfare, or any other place within the said Borough.

Trading on Lord's Day

104. No house, shop, or store, or other place, within the limits of the said Borough shall be open on the Lord's Day for the purpose of trade or dealing (the shops or houses of butchers, bakers, fishmongers, and green grocers, until the hour of ten in the forenoon, and of bakers between the hours of one and two in the afternoon, and of apothecaries at any hour, only excepted); and any person who shall within the said limits trade or deal or keep open any shop, store, or other place (except as aforesaid) for the purpose of trade or dealing on the Lord's Day, shall on conviction, forfeit and pay for every such offence a sum not exceeding three pounds nor less than one pound.

Gambling on Lord's Day.

105. Any owner or occupier of any public billiard room or other public place of amusement within the limits of the said Borough who shall permit or suffer any one to play in his house or premises any game on Sunday, shall on conviction forfeit and pay a sum not exceeding five pounds nor less than three pounds.

Flying kites.

106. Any person flying any kite or kites in any road, street, lane, thoroughfare, or other public place within the said Borough, shall forfeit and pay a penalty of not less than five shillings nor more than two pounds.

CLASS V.

SLAUGHTER-HOUSES.

Inspection of animals, &c.

107. Every Inspector of Slaughter-houses shall upon receiving information of any cattle having been slaughtered or of any cattle being intended to be slaughtered, and also in all cases in which notice shall have been given to him or left at his usual place of residence of the intention to slaughter any cattle, repair without delay to the place where such slaughtering has taken place or is intended to be done, and shall examine and inspect the said cattle slaughtered or intended to be slaughtered, and shall take a particular description thereof, with the colour, mark or marks, brand or brands, sex, and apparent age, together with the name or names of the owner or owners thereof, and of the time and place of slaughter, which particulars he shall carefully enter or cause to be entered in a book to be kept by him for that purpose, which book such Inspector shall, when required, produce for examination by the Council or by any person or persons deputed by the Council to make examination thereof.

Notice of intention to slaughter, &c.

108. Every person intending to slaughter any cattle within the limits of the said Borough, shall first give twelve hours' notice in writing to the Inspector of Slaughter-houses of the cattle intended to be so slaughtered, specifying the place and time, under the penalty of five pounds for each and every head of cattle which shall be so slaughtered without such notice having been given as last mentioned, unless it shall be made to appear to the Justices before whom such fine shall be sought to be recovered, that such notice could not have been given, and that owing to some unforeseen accident it was necessary that such cattle should have been immediately slaughtered; and in all cases in which any cattle shall have been slaughtered within the said Borough without having been previously inspected as aforesaid, notice thereof shall be immediately given to the said Inspector, and the skins of such cattle shall be kept or preserved for three days, and be produced upon demand at the place of slaughter to the Inspector for the Borough, under the penalty of five pounds for every skin so neglected to be preserved and produced.

Where inspection to be made.

109. Every inspection of cattle or sheep shall be made in the yards adjoining a licensed slaughter-house; and the owner or occupier of any such licensed slaughter-house shall keep the melts or spleens and lungs of all animals slaughtered therein for twelve hours after the same have been slaughtered, unless the Inspector shall have previously examined such melts spleens or lungs; and every owner or occupier as aforesaid who shall neglect or refuse to comply with these provisions or any of them shall forfeit and pay a penalty not exceeding five pounds for every such offence.

Slaughter of diseased animals.

110. If the owner or occupier of any such slaughter-house shall knowingly cause, permit, or suffer any animal infected with any disease affecting the melt or spleen or lungs to be

slaughtered in any such slaughter-house, or if after the slaughter of any animal it shall be found to be diseased, and such owner or occupier as soon as the animal is inspected and condemned shall not immediately thereupon cause the entire carcase to be destroyed by fire in the presence of the Inspector, such owner or occupier shall for every such offence forfeit and pay any sum not exceeding fifty pounds nor less than ten pounds: Provided however that should the owner of any animal which may be condemned by the Inspector object to the decision of that officer, such owner shall be at liberty to appoint some veterinary surgeon or other competent person as arbitrator in his behalf; and in the event of the Inspector and such veterinary surgeon or other competent person not agreeing, it shall be lawful for and incumbent upon them under a penalty of ten pounds each to appoint an umpire, whose decision shall be final.

Inspector may enter shops, &c., for certain purposes.

111. Any such Inspector may and he is hereby empowered at all reasonable times with or without assistants to enter into and inspect any shop, building, stall, or place kept or used for the sale of butchers' meat or as a slaughter-house and to examine any animal, carcase, meat, or flesh, which may be therein, and in case any animal, carcase, meat, or flesh appear to him to be intended for the food of mankind and to be unfit for such food, the same may be seized; and if it appear to a Justice of the Peace, upon the evidence of a competent person, that any such animal, carcase, meat, or flesh is unfit for the food of mankind, he shall order the same to be destroyed or to be so disposed of as to prevent its being exposed for sale or used for such food, and the person to whom such animal, carcase, meat, or flesh, belongs or in whose custody the same is found, shall be liable to a penalty not exceeding ten pounds for every animal or carcase, piece of meat, or flesh so found.

Cleansing of slaughter-houses.

112. Every slaughter-house within the said Borough shall be thoroughly washed and cleansed within one hour after any animal or animals shall be slaughtered therein, and the blood, offal, and filth of all such animals as may be slaughtered in any slaughter-house, or in the premises or appurtenances thereunto belonging, shall be removed once at least in every twenty-four hours; and any owner or occupier of any slaughter-house who shall neglect to comply with this By-law shall forfeit and pay on conviction, for every such offence, before any two or more Justices of the Peace in a summary way any sum not exceeding ten pounds.

Slaughtering in unlicensed premises.

113. If any person or persons shall slaughter or cause to be slaughtered any animal in any house or place not licensed for such purpose according to law, such person or persons shall forfeit and pay the sum of ten pounds for each and every animal so slaughtered.

Animals slaughtered for home consumption.

114. Nothing in these By-laws contained shall extend to or affect any person or persons slaughtering at his or her or their own residences within the said Borough, animals for the personal consumption of himself herself or themselves, or of his her or their family servants or labourers: Provided that

the place where any such animal so slaughtered be not less than fifty yards from any street or other public place or from any residence other than the residence of such person or persons so slaughtering as in the By-law aforesaid.

Collection of slaughtering fees.

115. The fee upon every inspection of cattle under the provisions of these By-laws, of cattle slaughtered or to be slaughtered, shall be at the rate of threepence per head, which fee shall be paid by the owner of or person slaughtering any such beast to the Inspector for the said Borough, or other authorized officer of the Council, upon demand; and if not so paid, the same may be sued for and recovered in the name of such Inspector or other authorized officer of the Council, without any further authority than is hereby given, in any Court of competent jurisdiction; and it shall be incumbent upon such Inspector or other officer as aforesaid to collect all slaughtering fees not later than the first day in every month.

GENERAL PROVISIONS.

Construction of terms.

116. The word "animal" used in these By-laws shall be held to mean and include bulls, bullocks, cows, heifers, steers, oxen, sheep, pigs, calves and lambs; and the words "die of any disease" to apply to all cases of death other than by killing or slaughtering.

The like.

117. The words "Borough," or "Borough of Bathurst" (where necessary), shall be deemed to apply to and shall be taken to be included in every clause of these By-laws, whether the same shall be expressly mentioned or not; and no objection shall be taken or allowed by reason of the absence of such words, or any or either of them, in any part of these said By-laws. And where anything is directed to be done, or prohibited from being done, whether in any road, street, lane, thoroughfare, or other public place, or in any manner howsoever, or by whomsoever, the same shall be taken to mean within the Borough of Bathurst, anything herein contained to the contrary notwithstanding.

The like.

118. Any words in these By-laws appearing in the singular number shall be taken to include the plural number, and any words in the plural number shall be taken to include the singular number, and any words in the masculine gender shall be taken to include the feminine gender, and vice versa.

As to interference with Council in enforcing By-laws.

119. Any person obstructing or interfering with any officer or officers of the Council, or other person or persons doing or performing any duty or act under these By-laws, shall forfeit and pay a penalty not exceeding ten pounds nor less than two pounds.

Passed by the Municipal Council of the Borough of Bathurst, this sixteenth day of February, A.D. 1870.

ALEXANDER B. RAE,

FREDK. WM. HOLLAND,
Town Clerk, &c.

Mayor of Bathurst.

NEW SOUTH WALES.

SYDNEY ABATTOIRS.

(AMENDED REGULATIONS.)

Presented to Parliament, pursuant to Act 14 Vict., No. 36, sec. 4.

The Treasury, New South Wales,
23 October, 1869.

PUBLIC ABATTOIRS AT GLEBE ISLAND.

His Excellency the Governor having been pleased, with the advice of the Executive Council, further to amend the Orders and Regulations concerning the Public Abattoirs at Glebe Island, as published in Treasury notice of 3rd December, 1864, it is hereby notified, that in lieu thereof the following shall be enforced from and after the 1st of January next.

SAUL SAMUEL.

1. The slaughter-houses shall, with the exception of six beef and six mutton slaughter-houses, be retained in the hands of the Government, for the use of persons slaughtering therein.

2. Six beef and six mutton slaughter-houses shall be submitted to public competition, by lease, at an upset price of £175 per annum for the beef, and £110 per annum for the mutton, slaughter-houses.

3. An inspection fee of three-pence per head shall be charged upon every head of cattle slaughtered in the leased houses.

4. Parties desirous of using the slaughter-houses reserved by the Government, shall be permitted to do so in priority of application to the Inspector of Abattoirs, or to the Assistant Inspector of Abattoirs, and on payment of the following fees:—

	s.	d.
For every ox, cow, bull, heifer, or steer (including an inspection fee of 3d.)	1	0
For every calf (including an inspection fee)	0	6
For every sheep or lamb	0	1½
For every head of swine	0	6

5. No person or persons shall slaughter or attempt to slaughter in any of the houses, without the sanction of the Inspector or Assistant Inspector of Abattoirs.

6. All fees shall be paid to the Inspector or Assistant Inspector of Abattoirs on demand, who shall pay the same into the Colonial Treasury under such directions as he or they shall from time to time receive from the Secretary for Finance and Trade.

7. Printed receipts shall be demanded by, and given to, all parties paying any fees.

8. All horned cattle shall be driven in and yarded before 8 a.m.

9. All animals, on which fees are chargeable, shall be reported to the Inspector or Assistant Inspector of Abattoirs, at his Office, without delay, and the fees paid forthwith.

10. Sheep and cattle will not be permitted to remain in the Abattoir-pens for more than forty-eight hours from the time of being brought in.

11. No person shall refuse or neglect, when ordered by the Inspector of Abattoirs, to remove and destroy at once diseased cattle, or shall slaughter for food diseased cattle, or expose for sale diseased meat.

12. All blood, filth, and offal shall be removed, and each slaughter-house be thoroughly cleansed, to the satisfaction of the Inspector of Abattoirs, daily, before 8 a.m.

13. The premises attached to, and the roadways in front and rear of, each slaughter-house shall be kept clean by the Lessee or person occupying or using the same to the satisfaction of the Inspector of Abattoirs.

14. No hide of horned cattle, if slaughtered without previous inspection by the Inspector or Assistant Inspector of Abattoirs, or spleen of horned cattle or carcase of any animal, whether inspected before slaughtered or not, shall be removed from any slaughter-house until after inspection by the Inspector or Assistant Inspector of Abattoirs.

15. No meat shall be blown in any slaughter-house; and if any meat be found blown in any slaughter-house, the owner of such meat shall be held to be the person liable.

16.

16. No cattle, sheep, or pig, or other animal shall be slaughtered, nor shall any meat be exposed for sale, between midnight of any Saturday and midnight of any Sunday, between the 1st of May and the 31st of October in any year; nor shall any cattle, sheep, or pig, or other animal be slaughtered, nor any meat be exposed for sale between the hours of 9 a.m. and 12 p.m., upon any Sunday between the 1st of November and the 30th of April in any year.

17. The lease of the tank to contain the blood of the slaughtered animals and the washings of the slaughter-houses, shall be sold annually, or for a term of years, by public auction; if not so disposed of the contents shall be removed in such other manner as may be deemed expedient.

18. The Lessee shall, once in every twenty-four hours, remove from off the Island the contents of the tank, in covered carts or covered casks.

19. The Lessee shall also keep clean the roadway in front of, over, and immediately around the tank, to the satisfaction of the Inspector of Abattoirs.

20. The Inspector or Assistant Inspector of Abattoirs may examine the tank whenever either he or they may think fit; and no person shall obstruct, delay, or hinder his or their so doing, or shall otherwise obstruct, delay, or hinder him or them in the execution of their duty.

21. No person or persons shall yard or attempt to yard at the Reserved Mutton Slaughter-houses, any animal without the sanction of the Inspector or Assistant Inspector of the Abattoirs.

22. The hours fixed for driving animals into the pens of the Reserved Mutton Slaughter-houses shall be from 6 a.m. to 6 p.m., between the 1st November and the 30th April in each year; and between the 1st of May and the 31st of October the hours shall be from 7 a.m. to 5 p.m. in each year.

23. Any person or persons offending against any of the orders and regulations contained in paragraphs 5, 8, 9, 10, 11, 12, 13, 14, 15, 16, 18, 19, 20, 21, and 22, shall for each and every offence forfeit and pay a sum not exceeding five pounds.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY WATER SUPPLY.
(REPORT FROM MR. WOORE, ONE OF THE COMMISSION.)

Ordered by the Legislative Assembly to be Printed, 2 February, 1870.

To His Excellency the Right Honorable SOMERSET RICHARD, EARL OF BELMORE, Captain General and Governor-in-Chief of the Colony of New South Wales.

MAY IT PLEASE YOUR EXCELLENCY :—

I regret that I cannot join my colleagues in their Report on a supply of water for Sydney, as our views on that subject are entirely at variance; and being so singularly in a minority, I trust I may be allowed to explain the circumstances under which I have acted and arrived at my conclusions.

Several years before this Commission was appointed I had carefully examined the subject, being led to do so from a love of science, and the evident necessity that existed for a more copious and permanent supply of water than the Botany Swamps afforded; and also from having previously obtained much information on the different elevations of Cumberland, when voluntarily making the original trial surveys for railways, which placed me in a favourable position to do so.

Having satisfied myself as to the best means of obtaining such supply, and in fact that there was only one worthy of adoption, I laid that scheme before the Minister for Works, on the 6th November, 1866; but not until after the public had been thoroughly roused to the necessity of the case, and that every other person so inclined had given his opinion on the subject, did I intrude my thoughts. However the late Government did not then feel justified in taking the matter up, but that circumstance led to my being appointed to this Commission.

Having thus formed and expressed strong opinions on the subject, I doubted whether I ought to sit in judgment on other plans that would be submitted to the decision of that Commission, I therefore at once declined the appointment, but on being told the Ministry had considered that point, and would waive the difficulty were I disposed to act, and believing I was capable of throwing aside my own views should more promising appear, I acquiesced, and went into the inquiry, which was supposed would not occupy more than three months, for a longer time I could not spare from my home.

Under these circumstances I have been peculiarly situated in the Commission, acting both as a judge and advocate. In consequence of which, I determined from the first not to allow any preconceived views I entertained to interfere with whatever investigation was proposed by the other members of the Commission—that each might satisfy himself and form his own judgment, without prejudice from me—but to follow them willingly in their explorations; and when required by them, to bring forward my own scheme for discussion. This I have done throughout, although feeling convinced there were objections to each source of supply we visited that would render the excursion valueless, further than by proving negatives.

Moreover, I naturally supposed, when all places had been visited, some of the most promising would have been selected, and such a survey made of each as would enable their prominent features being shown on paper,—that a comparison founded on correct data, sufficiently clear that intelligent men though not engineers might judge of them, should be laid before the public through your Excellency. Such survey need not have been an expensive affair; it was only necessary a correct but not very minute section of each line should be made, such as would have shown the length and course proposed, with the heights and depressions on it, which any good surveyor might have accomplished at the rate of 2 or 3 miles per day, and in some cases these might have been obtained from existing maps.

Such data would have been a valuable record, and have clearly exhibited on paper what means were necessary to convey water along each proposed route—whether by open canal, iron pipes, tunnels, or a combination of each—whether the supply would have been obtained by gravitation or pumping, and have given a very good idea of the extent of the works required: circumstances that would vary so much in each case that even an approximation to the truth would have shown their various qualities so distinctly that one of them might have been confidently selected to make a minute survey of, to ascertain the cost of its construction.

My colleagues did not think so, but rejected every scheme for examination but that proposed by Mr. Moriarty, although there were no facts in that case before the Commission to ground an opinion upon—much less warrant its being given a preference over all others. My own proposal was contemptuously dismissed as the wild project of a benighted unofficial not worthy of consideration, as will be seen by the papers in the Appendix.

In doing so I believe two great errors were committed: *first*, in not obtaining a comparison of schemes by preliminary survey, that the Commissioners themselves and others interested might have an opportunity of judging of their relative merits from ascertained facts before going into minute detail that would involve considerable expence; *secondly*, in too hastily adopting the Nepean project for a costly survey, even before it had been ascertained that it was possible to bring that water into Sydney. This has now only been accomplished, on their plans, by plagiarizing the greater portion of the line I had previously surveyed and recommended to Government, which the Commission refused to entertain when brought forward by me.—that from Prospect to Sydney. The map that accompanied this report shows at what increased distance and difficulty this was done, as their line had to traverse the Puzzling Hills to reach Prospect.

I think it would have been wiser had we followed the example set us in the conducting of the Aberdeen Waterworks, that have created so much interest in Europe lately, the plans and reports of which were lying on our table. They show the very great care that had been bestowed in investigating each scheme that was proposed. The engineer there felt it to be his duty to lay every circumstance of each before the public, with his opinions thereon, that those capable of judging of the engineering difficulties, and others that were pecuniarily interested in the cost of construction, might have an opportunity of doing so, and of deciding on which they would expend their money. It so happened the corporation of that city acted contrary to their engineer's recommendation; nevertheless great success was attained. In the present case, although a heavy expenditure has been incurred, and much valuable time spent, the subject is but little advanced, there being no data to show that the scheme recommended by the majority of the Commission is the best the country affords, or means of comparing it with any other. It is put forth by them, merely as being *in their opinion* a valuable source of supply, and that apparently without much confidence; therefore a similar work must be gone over in another direction before a correct decision on the merits of this question can be arrived at.

I believe that the sources of the Nepean, as proposed to be collected, are quite inadequate in dry seasons to afford the quantity of water required, even were it all drawn from the river; and also that the swamps, which from their storage properties keep up the present stream (as in Botany) are rapidly drying up. This is well known to the old colonists that were in the habit of visiting that locality, and was the unanimous opinion of the Commissioners when we first visited the coast ranges; but it appears a few showers of rain and a gauge placed in the river afterwards has dissipated it.

When I found this uncertain course was adhered to, and that the only scheme I thought admissible for further examination, was especially rejected by the Commission, I saw that further attendance on my part would be useless, as the proceedings were directly opposed to what I considered they should be; and having then spent nine months unprofitably in Sydney at considerable expense and inconvenience, I retired from taking a further active part; consequently, I am in no way answerable for the manner in which so large a sum of money has been expended. I would at that time have resigned my appointment, had I not felt bound, after the strong assertions I had made, to prove them.

The Warragamba, as a source of supply, did not entirely originate with me, for I find that it is mentioned in Count Streletzki's work on this Colony with that view, although I did not know that at the time I proposed it; but it is much in advocacy of the scheme that that eminent man should have pointed it out as evidently the source from whence the future supply of a great city must be drawn. But no person has attempted to grapple with the difficulty of bringing its water into Sydney except myself. I admit that the wild scene at its junction with the Nepean—the only point at which it can be tapped—is enough to damp the courage of any but those who have been brought up in a school where it is supposed all difficulties can be overcome by determination and skill. I did not see my way clearly at first, but I was strongly impressed it could be done; and the advantages that would be gained by accomplishing the object were too great to permit of its being thrown aside lightly.

The proposition is to bring a voluminous stream of water from that river to Sydney by a small canal through the centre of Cumberland, sufficient to supply that city to its utmost requirement at present, and capable of expansion for ages to come. It would afford the means of irrigating the country throughout its whole length, as the canal would pass along the high ridge that lies between Parramatta River and George's River, and to supply the neighbouring towns *en route*. This to be effected by gravitation, although it may be necessary to pump from a low to the higher parts of the city if a power derived from the water falling from the reservoirs at Petersham to the lower levels cannot be obtained, which I think is possible.

From the uncertainty in the rainfall and great evaporation that takes place in this Colony, no river in it is capable of supplying such a continuous stream of water as is required without storage; and looking forward to the enormously increasing demand that will undoubtedly be made on any work for supply, it is of the utmost importance we should seek one from where the greatest quantity is attainable, irrespective of any other consideration; the more so as we propose to bequeath the payment for its construction to future generations, who may fairly expect an adequate return for the debt we thus entail upon them, instead of a barren legacy; which I have no doubt would be the case if the Nepean River be resorted to as proposed by the majority of this Commission. The extent of the area for collecting water and facilities for storage afforded by the great southern river and its tributaries, place it pre-eminently beyond all other means in that respect. The quality of its water is unexceptional. And if it can be shown that it may be conveyed to Sydney at a moderate cost—that by drawing off so vast a supply as is wanted no other part of the Colony will be injured; on the contrary, that the quantity taken, coupled with the effect of storage dams, in interrupting the sudden descent in the river of heavy falls of rain, will materially lessen, if not wholly do away with the evil consequences of floods in the Hawkesbury; no other source possesses anything equal to its advantages.

The length of the aqueduct would be the shortest by which any supply approaching to sufficiency can be obtained—little more than half that recommended by the majority of the Commission. The cost of construction, if judiciously carried out, will be less than by any other route, while the income derived from the sale of the fluid would be at least double, and the enormous increase given to the value of property adjacent to the canal, with the facility afforded to manufactures in Sydney, would cause this enterprise to be the greatest boon ever conferred upon this Colony, and would greatly if not wholly relieve it of the heavy taxation looming in the distance to meet the interest of our yearly increasing national debt. But to obtain this end it must be effected with greater skill and judgment than has hitherto been bestowed upon such works.

The following table, showing the leading features of the two schemes proposed, affords such a comparison between them as the circumstances admit.

From whence it is proposed to draw the Supply of Water.	Distance of the source from Sydney in a direct line.	Distance of the source from Sydney by the proposed lines of aqueduct.	Area for collecting rain water.	Length of tunnelling required.	Length of iron pipes proposed.	Summary.
From the head of the Nepean River	Miles. 39	Miles. 63	Square miles. 254	Miles. 9½	Miles. 13	<p style="text-align: center;">NEPEAN.</p> Iron pipes 3 feet 6 inches diameter 13 Tunnels 9½ Raised aqueduct and open canal 40½ <hr/> Total length .. 63 <hr/> <p style="text-align: center;">WARRAGAMBA.</p> Iron pipes 0 Tunnels 1½ Raised aqueduct and open canal 36½ <hr/> Total length .. 38
From the Warragamba River	33	38	3,247	1½	0	

As the majority of the Commission have adopted the line of country I proposed, from Prospect to Sydney (although it has been laid out in a very different manner to what I thought of doing), there can be no difference between the elevations of the two schemes as far as this part is concerned. It remains for me to show there is sufficient fall in the country from Mulgoa to Prospect for the purpose required on the remainder of the line. This I am enabled to do from Mr. Wyndham's section and my own; the latter having been checked by the railway line, and proved to be strictly correct, notwithstanding it was made twenty-two years ago, under very adverse circumstances.

Mr. Wyndham's section extends 11 miles, in which the land gradually falls 80 feet (averaging 7½ feet per mile), which may be reduced to uniformity by the aid of 1,300 yards of tunnel, and 1,000 yards of iron aqueduct raised in the valley of South Creek 60 feet over ground. This may be supported on timber piles, with greater facility than our railway trains cross similar valleys—leaving more substantial work to be erected in future years, when an increased supply of water is demanded—and I would adopt this principle throughout the aqueduct wherever practicable with a due regard to safety. From Mr. Wyndham's section to Prospect, 6 miles, there is a fall in the land of 2½ feet per mile, where an open canal may be made without any difficulty whatever, as Rope's Creek and Eastern Creek at this point are mere ditches, notwithstanding they are advanced in the Report as objections to this scheme. (No circumstance exhibits the prejudice that exists against this scheme more than that assertion.)

Mr. Moriarty has selected the head of Prospect Creek on the line I proposed as the site of the principal reservoir for storing sufficient water to supply the city during the long droughts that take place in this Colony—in my opinion a most inappropriate spot, but I dare say it is the best he could find on the route so injudiciously chosen. The land is there so flat that the water must be shallow and subject to the greatest amount of evaporation, but it serves well for getting up a mass of figures, as one inch of depth on its extensive surface amounts to something considerable, and looks well on paper, but is very deceiving. As I have said, the Commission have adopted the line of country I surveyed from Prospect to Sydney, consequently have admitted its practicability.

The greatest difficulty in the scheme I propose, and that which has been designated by my colleagues as impracticable, is in raising the water of the Warragamba about 170 feet, which would cause it to flow into Mulgoa; from whence *there is a gradual descent in the land to Sydney* in nearly a straight line. A dam to effect this and a duct to convey it across the Nepean River appear formidable to those who have not studied the subject, but in my mind they are easily accomplished. They are the only works of magnitude on the line; and, as I have said, the advantages of obtaining so copious a supply from this source are so preponderating that this difficulty *ought not* to be lightly thrown aside without consideration, as has been done by my colleagues.

Not being disposed to act thus myself, I went into the study of dam-building, and the effect of large bodies of water upon them, to ascertain their proper form, but could not discover any defined principles had been established for the construction of such works, both theory and practice varying in different countries, it being too much the custom to follow the examples set by other engineers, taking it for granted they must be correct, and suitable to the locality in which the new work is required, without proper investigation. We have a glaring instance of this in the dam at Parramatta, where the old Spanish practise of building a perpendicular wall across the river of a circular or polygonic form, with the apex up the stream, has been adhered to and signally failed.

I urged this upon my colleagues, and entreated them to make the matter a subject of special inquiry, being one on which the success of every scheme depended and of the greatest importance to the Colony generally; but I was overruled as will be seen by the papers in the Appendix. I am glad to find that the subject is now taken up by more enlightened minds offering a handsome premium for its elucidation.

The result of my inquiry is that all obstructions thrown across a stream in order to resist its downward course with the utmost effect, should be formed with a face considerably inclined on its upper side (or that next to the reservoir); the angle should be in proportion to the force to be resisted, it being of no consequence how much the lower or opposite side diverts from a perpendicular plane, provided there is sufficient batter to retain the material of which the structure is composed. The reason is, *that the fluid in a quiescent state always acts upon it at right angles to that face, whatever may be the inclination, and resistance to oppose this with effect must come from an opposite direction, which would be from the bed of the river.*

If

If this principle is correct—and there can be no doubt of that—it will be seen how very defective a perpendicular wall is in resisting the force of water; for the fluid acting at right angles on its face is forcing the structure out in a *horizontal direction*, that being its weakest point, and also that any deviation from a perpendicular to a horizontal plane proportionably strengthens the structure.

In the Appendix will be found a woodcut of a form of dam that will resist any force brought against it, and if the foundation is sufficiently solid and secure, may be safely carried to a height far beyond what has hitherto been accomplished. I have adopted this in my works on the Wollondilly River at Pomeroy, but of course in a minor degree, and have found it to be thoroughly effective, although exposed to huge trees with their roots and branches projecting in all directions, that are brought down the stream with the torrent, caused by a descent of over 60 feet in the bed of the river within 2 miles. These slide over the top with facility. It is now two years since I designed that embankment. Since then I have gained much experience and have given the subject the consideration a man is likely to do who is expending a large sum of money upon similar works entirely upon his own responsibility, and I feel still unshaken in the principles I recommend and have adopted; although I would modify the construction better to suit the locality of the Warragamba, where stone is plentiful, but puddling material scarce.

In order to carry out the scheme I propose, I would now fill up the river channel to the height required immediately below the gully intended to be converted into an overflow channel, for (say) a quarter of a mile, by blasting the rocky sides, which are perpendicular, into the bed, in the same manner that railway contractors blow away cliffs that intercept their paths, but with a different object. In this instance the material would be required to fill up a chasm, while theirs is to level the road; but the same operation would be performed; so there is nothing new in that.

These blasted rocks and the rubbish that comes from the cliffs with them (which for the purpose of this explanation I will call debris) I would throw promiscuously into the river to form a bank there, arranging each end so that its surface would make an acute angle with the horizon. And I would roughly pitch the top of it with the same material, that the least resistance may be offered to the current and floating bodies passing over it. In such a bank there would be nothing for floods to act against, the approach to it being so inclined the water must pass freely over; but as there would be nothing to prevent the fluid from getting through its interstices, to prevent this I would erect a wall of rubble, that is, *built of the rocks which had been already thrown down from the cliffs in their rough unhewn state and the ordinary lime mortar*, across the stream from bank to bank, in the midst of this debris deposit, pointing up that work with cement, and packing the debris close in to its face as the work advanced upwards. (If these stones were laid in cement, of course the wall would be stronger, but more costly. I have found good lime mortar answer the purpose.) As this wall would always be protected by a mass of rocks packed around it, even during its construction, there would be no possibility of its being washed away unless the whole went with it, which I believe to be equally impossible, as the water would have no power to act upon it.

In the Appendix will be seen a woodcut and description of the manner I propose to meet the difficulty of building such a wall across a constantly running stream, which there is no doubt in my mind would be effective. The worst that could happen would be the displacement of the sluice-gates during erection, which might be easily remedied.

Here are two points to consider: the efficacy of the entire structure, and the impervious nature of a rubble wall. There is no time for me now to go into a scientific explanation of these points, as I have only just received my colleagues' report containing their objections to this scheme, and must hasten these remarks. I can only say I satisfied myself both in theory and practice upon them, went into considerable expense on that faith, and have since proved their efficiency, and perhaps one example is better than fifty theories. We have only to look at what takes place in any stream, and follow nature. Shingle and sand-banks are formed in every river by local causes, and there, it will be observed, they remain for ages, long after the rivers themselves have disappeared or changed their course—the heaviest floods having passed over them. We find water-worn shingle beds on the top of high hills—evidence of a stream having once been there. Why can we not make an artificial bank like one of these, and divert this stream into another channel that seems to be provided for our especial use? Nature affords us opportunity, great facility, and even example, in the Warragamba River. I see no difficulty that is not to be overcome by skill and prudence. And let not the simplicity of such a work draw sneers upon it. Remember Nature deals in simplicities; 'tis only man's vanity in attempting to substitute his own puerile conceits for her unerring laws that renders his efforts abortive. In forming my own judgment on these points, I have inquired into her school, and in consequence, succeeded in overcoming difficulties at Pomeroy that were considered as impracticable as the Warragamba scheme, although trifles in their comparative magnitude.

The acute angle of the incline, which is exposed to the stream in such a bank as I recommend, offers so little resistance to the current and bodies floating in it, that their course is but slightly retarded, and easily diverted—a twig in a stream will change the direction of the water, as a feather will that of a projectile in the air; and any person may see the effect of a sand-bank in a river on its running water, where, if it cannot get round, the fluid must pass over, and does so without even disturbing it. I have seen great trees come down the Wollondilly, and pass over my dams, without even swinging broadside on to the work, but toppling over endways, their heads or roots, as happened to be the last, coming down with a crash like thunder; and in one instance, the carcass of a huge bullock rolled over the dam without any detention there, as if it were a straw. Nothing could be more conclusive than this that the proper form of construction to facilitate the passage of flood-waters had been adopted.

These dams are much inclined on the upper face, and perpendicular on the lower—somewhat similar to that represented in the woodcut, the perpendicular face being built of *rubble masonry*, which is perfectly watertight. The largest is 12 feet high, and exposed to a terrific current. From this work there is a lade wall, nearly half a mile long, of irregular height (from 2 to 10 feet), also of *rubble masonry*, built along a bank of granite cliffs and boulders, for the purpose of conveying the water from the reservoirs to a mill. Although only 18 inches thick, it retains the water, which is 2 feet in depth and from 4 to 6 feet in width, thoroughly, no leakage being perceptible.

It is the irregularity in the form of these rubble stones, which causes the joints to run in every direction, that ensures this property in the wall. When they are properly grouted with mortar or cement—or a mixture of the two—they become a most efficient concrete, that, if allowed to dry, is impervious to water. I have found lime mortar answer my purpose, pointing the wall with cement around the sluices, where the water is constantly in action. I see that many works of this kind are erected of rubble masonry in Europe. No doubt other engineers are aware of its advantages over ashlar work.

Mr.

Mr. Moriarty, in his defence of the Parramatta dam, takes credit for having substituted ashlar work for rubble masonry; the latter, he says, was made use of in the model he purposed following: there, in my opinion, lay the cause of failure from leakage.

Ashlar stones by themselves are the very worst material that can be used for making a watertight wall, although good for facing any other substance, as their joints all lie parallel and are mostly in the direction of the force to be resisted. It is nearly impossible to stop them effectually, which difficulty is increased by the carelessness and desire of masons to make their joints *look close* and the work plumb on the outside, to effect which with greater ease they generally draft the stones a little thinner at the inner side, and bring the outside face up plumb and the bed joint close by introducing a small stone or trowel of mortar behind, which, of course, leaves an open joint. It is to this practice I attribute the leakage that takes place in many houses in Sydney, where gales drive the rain through these joints into the rooms. For these reasons I believe that a rubble wall as a water-retaining medium is much more effective than ashlar, while the cost is infinitely less.

It is not my intention the Warragamba should be allowed to run always over this embankment, although that should be provided for, as it must do so during erection, and afterwards the water may occasionally rise to such a height that the joint action of the aqueduct and overflow channel could not take it all away, when a portion of the stream must flow over, but all ordinary floods and surplus water should be carried off by the overflow channel.

Were this embankment made, a reservoir of over 12 miles in length, averaging 80 feet in depth, would be formed, but not remain so, for it would silt up with sand more rapidly than may be imagined. The changes that take place in these rivers are surprising. I have ample experience of that at Pomeroy, and it was that difficulty principally which prevented me for years from taking advantage of the water power running through my property, but which I have now overcome. In case the Warragamba should fill up with sand, which I have no doubt it would in time, and become merely a shallow stream, I would recommend a similar means of storage being adopted to that I have carried out in the Wollondilly and found to answer so well.

The river Cox and other tributaries to the Warragamba, afford an unlimited supply of the purest water caught in this manner. Moreover these reservoirs would afford the means of retaining heavy rainfalls in the upper part of the river until the flood-water had time to subside in the Hawkesbury district—a remedy that has been extensively applied in Europe, and the only one I believe that would be effectual in this Colony.

It will be seen I have no faith in the wild estimates and opinions that have been expressed with reference to this scheme; to me they betray a total ignorance of the subject, which is not surprising, as a proper investigation has not been gone into, and only a few hours in one day were devoted to an inspection of the locality—to say the least, very unprofitably. I have no personal interest in advancing it. What I have done has been entirely from a desire to impart information, as was the case when I laid out the Southern Railway, on which occasion every engineer in the Colony rose in opposition and continued it fifteen years; nevertheless it is now *un fait accompli*. I am therefore not the least discouraged by the present adverse opinions, feeling confident in the soundness of my views, and that they will ultimately be adopted. I have but stated my honest convictions, and if in doing so I have had occasion to censure, I hope it will be remembered it has been in *self-defence*.

I have the honor to subscribe myself,

Your Excellency's faithful servant,

THOMAS WOORE.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WATER SUPPLY.

(PETITION PRAYING APPOINTMENT OF SELECT COMMITTEE—MAYOR, ALDERMEN, &c. OF SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 9 March, 1870.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the Mayor, Aldermen, and Citizens of the City of Sydney,—

MOST RESPECTFULLY SHOWETH:—

That your Petitioners have now and for some years past have had the management of certain Works for the supply of Water to the City of Sydney, and have expended large sums of money in connection therewith.

That your Petitioners have observed that a motion is now before your Honorable House for the purpose of taking the management of the said Water-works out of the hands of your Petitioners.

That the adoption of such a motion, without affording your Petitioners an opportunity of being represented, would be unfair and unjust to the citizens generally.

Your Petitioners, therefore, humbly pray that a Select Committee may be appointed by your Honorable House to inquire into the matter fully, and that your Petitioners may be heard thereon.

And your Petitioners, as in duty bound, will ever pray, &c.

WALTER RENNY,
Mayor.

CHAS. H. WOOLCOTT,
Town Clerk.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 42. FRIDAY, 8 APRIL, 1870.

9. Water Supply—Sydney and Suburbs.—The adjourned Debate, on the motion of Mr. Neale,—
 “ (1.) ‘That,’ in the opinion of this House, it is necessary to the health and safety of the people of
 “ the City and Suburbs of Sydney, that the Government should resume the control of the Water
 “ Supply, and take immediate measures for carrying into effect the recommendation of the Sydney
 “ Water Commission, as contained in their Report, laid upon the Table of this House on the 21st
 “ October last.
 “ (2.) That the foregoing Resolution be presented by Address to His Excellency the Governor.”
 Upon which Mr. Cowper had moved, by way of amendment, the omission of all the words of the first
 Resolution after the word “That,” with a view to insert the following words—“this House, having
 “ had under consideration the Report of the Sydney Water Commission, is of opinion that, having
 “ due regard to the health and safety of the people of Sydney, the Government should take
 “ immediate steps to provide an adequate supply of water for the City and its Suburbs,”—resumed
 and continued.
 Question—That the words proposed to be omitted stand part of the Question,—put and negatived.
 Question put,—That the words proposed to be inserted in the place of the words omitted, be so
 inserted.

The House divided.

Ayes, 10.

Mr. Cowper,
 Mr. Sutherland,
 Mr. Forster,
 Mr. Dodds,
 Mr. Neale,
 Mr. Webb,
 Mr. Egan,
 Mr. Robertson,

Tellers.

Mr. Tunks,
 Mr. Church.

Noes, 18.

Mr. Parkes, Mr. Wilson, Mr. Wearne, Mr. Byrnes, Mr. King, Mr. Allen, Mr. G. A. Lloyd, Mr. Weaver, Mr. Hoskins, Mr. J. Suttor, Mr. W. Suttor, Mr. Clarke,	Mr. Farnell, Mr. Flood, Mr. Nowlan, Mr. Lackey, <p style="text-align: center;"><i>Tellers.</i></p> Mr. Speer, Mr. Driver.
---	--

Mr. Wearne then moved, by way of amendment, That the following words be inserted in the place
 of the words omitted :—“ a Select Committee be appointed, with power to send for persons and
 “ papers, to inquire into and report upon the propriety of the Government resuming the control
 “ of the Water Supply to the City of Sydney.

“ (2.) That such Committee consist of Mr. Cowper, Mr. Neale, Mr. Flood, Mr. King, Mr. Wilson,
 “ Mr. Allen, Mr. Robertson, Mr. Farnell, Mr. Speer, and the Mover.”

Question put,—That the words proposed to be inserted in the place of the words omitted, be so
 inserted.

The House divided.

Ayes, 19.

Mr. Sutherland,
 Mr. Robertson,
 Mr. Wilson,
 Mr. Byrnes,
 Mr. King,
 Mr. Allen,
 Mr. Clarke,
 Mr. Weaver,
 Mr. G. A. Lloyd,
 Mr. W. Suttor,
 Mr. J. Suttor,

Mr. Flood,
 Mr. Farnell,
 Mr. Dodds,
 Mr. Speer,
 Mr. Neale,
 Mr. Webb,

Tellers.

Mr. Tunks,
 Mr. Nowlan.

Question then,—That a Select Committee be appointed, with power to send for persons and papers,
 to inquire into and report upon the propriety of the Government resuming the control of the
 Water Supply to the City of Sydney.

(2.) That such Committee consist of Mr. Cowper, Mr. Neale, Mr. Flood, Mr. King, Mr. Wilson,
 Mr. Allen, Mr. Robertson, Mr. Farnell, Mr. Speer, and the Mover,—put and passed.

VOTES No. 47. THURSDAY, 21 APRIL, 1870.

4. Water Supply—Sydney and Suburbs :—Mr. Wilson (*with the concurrence of the House*) moved, without notice, That the Select Committee on “Water Supply—Sydney and Suburbs” have leave to make visits of inspection.
Question put and passed.
-

VOTES No. 51. THURSDAY, 28 APRIL, 1870.

9. Water Supply—Sydney and Suburbs :—Mr. Wilson (*with the concurrence of the House*) moved, without notice, That leave be given to the Select Committee on “Water Supply—Sydney and Suburbs” to sit during any adjournment of the House.
Question put and passed.
-

1870.

WATER SUPPLY, SYDNEY AND SUBURBS.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 8th April, 1870, “to inquire into and report upon the propriety of the Government resuming the control of the Water Supply to the City of Sydney, with power to send for persons and papers”,—to whom was given, on the 21st April, “leave to make visits of inspection”,—and to whom was also given, on the 28th April, “leave to sit during any adjournment of the House”,—have agreed to the following Progress Report:—

This Committee having been appointed at a very late period of the Session, it has been found impossible to complete the investigation; but the Evidence taken clearly shows the great importance of the subject, and the propriety of its being again referred to a Select Committee at an early period of next Session, which course your Committee respectfully recommend.

J. BOWIE WILSON,
Chairman.

No. 3 Committee Room,
Sydney, 3 May, 1870.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 12 APRIL, 1870.

MEMBERS PRESENT:—

Mr. Flood,		Mr. Wearne,
Mr. Neale,		Mr. Wilson,
Mr. Allen,		Mr. Robertson.

Mr. Wilson called to the Chair.

Entry in Votes and Proceedings appointing the Committee, *read* by the Clerk.

Committee deliberated.

Ordered,—That the Right Worshipful the Mayor of Sydney, the Town Clerk, and the City Treasurer, be summoned to give evidence at the next meeting.

[Adjourned until Thursday next, at *Half-past Ten* o'clock.]

THURSDAY, 14 APRIL, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Flood,		Mr. Neale,
		Mr. Farnell.

C. H. Woolcott, Esq. (*Town Clerk*), called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That the Right Worshipful Mayor of Sydney, and the City Engineer, be summoned to give evidence at the next meeting.

[Adjourned until Thursday next, at *Half-past Ten* o'clock.]

THURSDAY, 21 APRIL, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. King,		Mr. Neale,
Mr. Flood,		Mr. Farnell.

Walter Benny, Esq. (*Right Worshipful Mayor of Sydney*), called in and examined.

Witness withdrew.

Edward Bell, Esq. (*City Engineer*), called in and examined.

Witness withdrew.

Committee deliberated.

Resolved,—That the Chairman take the usual steps to obtain leave from the House to make visits of inspection.

[Adjourned until Thursday next, at *Ten* o'clock.]

THURSDAY, 28 APRIL, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. King,		Mr. Flood,
		Mr. Farnell.

Entry in Votes empowering the Committee to make visits of inspection, *read* by the Clerk.

Committee deliberated, and decided not to proceed on a visit of inspection this day.

Resolved,—That the Chairman move the House to obtain leave to sit during any adjournment.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

MONDAY,

MONDAY, 2 MAY, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. King, | Mr. Flood,
Mr. Neale.

Entry in Votes empowering the Committee to sit during any adjournment of the House, *read* by the Clerk.

Committee deliberated, and proceeded on a visit of inspection to the Sydney Water Reserves.

[Adjourned until to-morrow, at *Ten* o'clock.]

TUESDAY, 3 MAY, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. King, | Mr. Flood.

Chairman submitted Progress Report.

Same read and *agreed to*.

Chairman to report to the House.

LIST OF WITNESSES.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

WATER SUPPLY, SYDNEY AND SUBURBS.

THURSDAY, 14 APRIL, 1870.

Present:—

MR. FARNELL,
MR. FLOOD,MR. NEALE,
MR. WILSON.

THE HON. JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Charles Henry Woolcott, Esq., Town Clerk of the City of Sydney, called in and examined:—

1. *Chairman.*] This Committee has been appointed to inquire whether it is desirable to take the control of the Water Supply of the City of Sydney out of the hands of the Corporation, and we wish to ask you, as Town Clerk, with regard to the powers that the Corporation have received from the Government to regulate the supply of water—under what Act are they derived? There is a special Water Act, passed in 1853, which gives the City Council the entire control of water supply for the city and suburbs.
2. What are the powers given to the Corporation by that Act? The entire control of the water supply, with power to resume lands, purchase lands, and construct water-works.
3. Does the Act limit their borrowing power? The power to borrow money is given under the Sydney Corporation Act, 20 Vict. No. 36. Under that Act the Council have authority to borrow to the extent of £150,000 beyond the amount previously authorized to be borrowed by the City Commissioners.
4. Is this sum of £150,000 applicable to the water supply only? Only. They have other powers for borrowing money, but that is the only sum they have power to borrow for water purposes.
5. Have they availed themselves of the powers given to borrow £150,000? Not to the full extent.
6. To what extent have they done so? They have borrowed about £80,000.
7. Then they are still entitled by law to borrow about £70,000. Yes, a further sum of £70,000.
8. If that sum should not be sufficient, they would require to apply to Parliament for extended powers? Certainly.
9. Has anything been brought under your notice at all officially as to the sufficiency or insufficiency of this sum of £150,000 for the purpose of supplying Sydney with an adequate supply of water? It is considered by the Council sufficient for present purposes—that is, for obtaining a supply from the present source. Of course if the operations were extended to an altogether different source, additional powers would most certainly be necessary; but I think the Council consider that with the revenue at present drawn from the water supply, and the power they possess to borrow an additional sum, they would be able to carry out the scheme which Mr. Bell has proposed for the extension of the supply from the present source.
10. Have the Council taken that scheme into consideration? They have to a certain extent, but there are other suggestions now under consideration, and awaiting further report and estimate from the Engineer.
11. *Mr. Flood.*] Have there been any plans submitted by the City Engineer to the Council in reference to the further improvement of the watershed at the Lachlan Swamp and Botany? There have been plans or suggestions submitted for the construction of an additional reservoir, but they have been referred back to Mr. Bell for further report and estimate.
12. What clause in the Act 20 Vic. No. 36 do you refer me to, as to the power to borrow? The 73rd clause, by which the Corporation are authorized to borrow £200,000 for sewerage, £100,000 for the city, and £150,000 for water supply.

C. H.
Woolcott,
Esq.

14 April, 1870.

Esq.
14 April, 1870.

13. That £150,000 is in addition to £200,000 previously borrowed by the Commissioners? Yes, the clause expressly states that.
14. And there is still £70,000 of that money available? Yes.
15. Has the question of the water supply engrossed the attention of the Council at all? Do you mean the sufficiency of the present supply, or its extension?
16. The water question generally—whether there is a sufficient supply during ordinary seasons for the present inhabitants, or whether you contemplate increasing the supply to meet the increased population? Yes, the matter is constantly under consideration; scarcely a week passes that some matter affecting the supply is not under the consideration of the Water Committee; and, as I stated before, the Council have had submitted to them the question of constructing a very large reservoir in Moore Park. I think that is the principal additional means that the Engineer proposes; and it has been under consideration for the last seven or eight months, I think.
17. Have any plans been submitted by the Engineer and adopted by the Council? No plans in detail. The matter first came forward as a recommendation from the Engineer, and was considered by the Committee on one or two separate occasions; it was then referred back to Mr. Bell for a more detailed estimate of the cost, and for more definite plans.
18. How long ago is that? Five months, I should think.
19. Has anything been done since? I do not know what means Mr. Bell has taken to furnish the information, but I know he finds considerable difficulty in obtaining the necessary assistance to make the preliminary surveys. I believe that is the principal cause of the delay.
20. Has he requested assistance from the Council to carry into effect the improvements he suggests? He has not made any special application for the purpose.
21. I suppose he is constantly in communication with the Water Committee? Weekly.
22. Does he attend their meetings? Very frequently.
23. And these matters are discussed at such meetings? All these matters are fully discussed in Committee before coming to the Council.
24. I should like to have your own opinion. Has Mr. Bell a sufficient amount of assistance for the purpose of carrying out any large scheme for increasing the present supply of water to the city? I think he has not. In fact, with the work he has now under supervision, it would be utterly impossible for him to do so, or to prepare these estimates, without further help.
25. What assistance has he? His principal assistant is the Assistant Engineer, Mr. Bradridge.
26. Then in point of fact he has only one officer under him that is of any service in carrying out any engineering survey that might be necessary for the purpose of water supply? I think Mr. Bradridge is the only person in the office who can assist him in that respect.
27. *Mr. Farnell.*] Are any complaints made by the citizens generally as to the supply of water? There have been occasional complaints when the season is unusually dry, but for the last twelve months we have escaped pretty well, I think.
28. *Mr. Neale.*] Do you not have complaints more or less every summer? Yes, until this last summer.
29. *Mr. Farnell.*] Does any great quantity of water run to waste in the city of Sydney? Judging from the quantity pumped in, I should say one-third the supply is wasted.
30. How does that arise? Principally, I should think, from the flushing of closets and drains. The quantity pumped into Sydney during the last few months has averaged sixty gallons per head daily.
31. *Mr. Neale.*] Do you consider the water used for flushing drains and closets wasted? I consider that an unreasonable quantity of water is used in that way—it is allowed to run night after night.
32. Would not the officers of the Corporation be likely to take action against those who allowed water to run during the night for no purpose? It is impossible to discover these cases.
33. Then how do you know it happens? Although we know such is the case, we have not sufficient evidence to enable us to prosecute or convict. Still it is patent it is done.
34. *Mr. Farnell.*] You know that a certain quantity of water runs away during the night, but you do not know any person in particular that wastes it? No.
35. How do you ascertain that—from the reservoirs? From the register kept at the engine-house, which shows the quantity delivered in Sydney.
36. Do the engines work all night? They work night and day, and have done so for many months past.
37. From the register kept at the Water-works you know exactly the quantity of water pumped into Sydney? Yes.
38. *Mr. Flood.*] You were under the City Commissioners? Yes, and under the old City Council. I have been for twenty-six years in the service of the City.
39. From your long experience, what is your opinion as to handing the Water-works over to the Government in lieu of the Corporation? That is rather a delicate question to put to me.
40. From your experience under the City Commissioners and under the Corporation, do you think the works are not as safe in the hands of the City Council as they would be in the hands of the Government? I think that every member of the City Council has shown as great a desire to protect the interests of the citizens and the residents in the suburbs of Sydney as any body of gentlemen could possibly do. It is a thing which engages their attention every week, and every question is very carefully considered before they come to a determination upon it. I do not think any body of gentlemen could give more attention to their duties.
41. They exhibit the greatest solicitude and anxiety for the interests of the city? Yes.
42. But you think the engineering staff is not sufficient, as at present constituted, to carry out any great undertaking, such as the one now before the Legislature? I do not think Mr. Bell, with the assistance he has at present, could bring up any elaborate reports or plans, even connected with the present supply from the Botany and Lachlan Swamps.
43. With an increased staff, have you any doubt as to the capabilities of Mr. Bell to superintend the carrying out of such large works as are contemplated under the Water Commissioners' report? I have not the slightest. I think Mr. Bell's long experience in connection with the water supply puts him in a position to decide more correctly than any other gentleman in the city as to the needs of the citizens and residents in the suburbs; and no person can possibly be in a better position to judge of the necessity for further works, or the nature of those works, than Mr. Bell himself.

THURSDAY, 21 APRIL, 1870.

Present:—

MR. FARNELL,		MR. KING,
MR. FLOOD,		MR. NEALE.

THE HON. JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Walter Renny, Esq., examined:—

44. *Chairman.*] You are Mayor of the City of Sydney? I am.

45. The Mayor and Corporation have presented a Petition to the Legislative Assembly, wishing to be heard before the Select Committee, before any steps are taken to withdraw the control of the water supply from the Corporation? They have.

46. Are you in a position to give any evidence upon the subject yourself, or would you prefer that it should be given by the City Engineer and the other officers of the Corporation? I think the Engineer is the proper and competent person to give any information on this matter.

47. I suppose you are aware that a good many complaints are being made as to the supply of water to the citizens of Sydney, as to its insufficiency? Yes, there are complaints, but I think a great many of them are without foundation. In this way: there is such a wilful waste of water that if it were properly husbanded there would be no deficiency. Owing to this waste there may be at times an insufficient supply.

48. In such a city as Sydney is not a certain waste unavoidable, and therefore to be provided for? I am in favour of giving as much water to the citizens as they could possibly use, or even waste; but having only a certain quantity of water at our command, it is necessary, at least in dry seasons, that there should be some amount of caution. At present people wilfully waste it, and it is a well known fact that in hundreds or I may say thousands of houses in Sydney the inhabitants make it a practice, at 12 o'clock at night, or when they are going to bed, to fasten back the handles and leave the water running in their water-closets until the next morning. I call that a wilful waste. No doubt if there were an endless supply this would do some good, as it would cleanse the sewers and wash down all impurities, but looking to our present supply we cannot afford to expend it in this way.

49. That is a waste that really takes place in all large cities I should think? That is a matter of opinion. I do not know of any city where it is the case, but I am more particularly acquainted with London, and I know that the water there is turned on only two or three hours a day.

50. Is that the case now? That is the case now. The water is turned on and off at certain hours, from 6 to 8 o'clock, and the inhabitants are provided with casks, cisterns, or tanks, to retain a supply. As a proof of the waste that takes place here at night, it has been found when we have turned the water off at night there has been a saving of more than half the consumption.

51. When you turn off the water at night on these occasions, at what hour do you turn it off? About 10 o'clock. There is one objection to turning off the water at night, which is, that after it is turned on again some two or three hours elapse before the water can reach the more distant parts of the town, owing to the presence of air in the pipe and the insufficient force of the water.

52. Have the Corporation had under consideration the necessity for the storage of water in dry seasons? For some considerable time Mr. Bell has been engaged in the preparation of plans for the construction of a very large reservoir on Sydney Common, originally granted for a burial-ground. I believe it will hold three or four months' supply. It has been in hand some time, and has been approved by the Council.

53. Is Mr. Bell allowed to devote his time to the great and important works connected with water supply, or is his attention distracted by the performance of other duties? No doubt the great amount of work Mr. Bell has to perform prevents his devoting his time especially to that.

54. Do you not think, in a matter of such paramount importance as the water supply to the city of Sydney, Mr. Bell ought to have more assistance, or be able to give more of his time until the wants of the city are met? My opinion is that Mr. Bell as City Engineer should devote the whole of his time to engineering duties, instead of having it messed away with paltry sewerage matters and throwing down metal on the roads.

55. Do you think it is a question that would occupy the attention for years of a man of engineering skill and ability? I believe that if the works we contemplate carrying out as soon as our funds will allow, namely the construction of a very large reservoir, and the making of a dam at the upper end of Randwick, whence the water will come by its own gravitation, were to be commenced, Mr. Bell would have work for a year or two in accomplishing those works.

56. Supposing this Committee were of opinion, and the House adopted their report, that it was not advisable to take the control of the water supply from the Corporation, would the Council be willing to allow Mr. Bell to devote the whole of his time to these works, so that they might be done with expedition and with satisfaction to the public? I believe if we had the money to go on with these works at once the Corporation would allow Mr. Bell to do nothing else. They are quite alive to the want of a better supply of water, and they do all they can to extend the supply so far as their means will allow, but they cannot extend it faster than they are doing. They have been obliged to spend a large sum of money—something like £15,000 or £16,000—in the purchase of land from Sir Daniel Cooper and from Mr. Lord, and also in the construction of dams and extension of pipes. All these things are taking away our funds. I believe if the Legislature were to grant us a sufficient sum of money to construct the works we contemplate, Mr. Bell, who is so competent and who knows the whole question so thoroughly, would be allowed by the Corporation sufficient assistance to leave him at liberty to hurry on this work. From whatever sources the supply may ultimately be brought, these works are absolutely necessary for the storage of water. The construction of this large reservoir and the upper dam at Randwick would be useful as storage for water wherever it may be brought from, and would not involve any waste of money. These works, if not carried out now, will have to be done at some future time.

57. It has been given in evidence before this Committee that the Corporation have still power to borrow £90,000? Yes, I think something like that.

58. What would the Corporation require to carry out these necessary storage works which you allude to? I think about £200,000 altogether.

W. Renny
Esq.

21 April, 1870.

W. Renny, Esq. 59. An additional £110,000? £110,000 or £120,000.

60. Had you got power from the Government of the country to borrow an additional £110,000, you are of opinion that these various reservoirs that you have alluded to at the head of the Lachan Swamp—one at the Cemetery Reserve, and is there not one at Waverley and another at Paddington —? I am speaking now only of the works the Corporation authorized, and that Mr. Bell had taken surveys of. I am sorry to say these surveys and plans were burned in the fire that occurred recently at the Town Hall, which will render other surveys necessary, still Mr. Bell has sufficient statistics to show the quantity of water these dams would preserve and the desirableness of carrying them out. I am speaking only of the two dams we have authorized him to construct as soon as we get the money. If a large dam were constructed on the Randwick Road by the Racecourse, where we have an engine-house, that would supply the greater part of Sydney with water by its own gravitation without pumping. Then the engines at Botany could pump into the large reservoir, and that would save the wear and tear of the engines at Botany of 90 to 100 feet, and to Paddington; then by an engine erected near the burial-ground reserve you could pump the water to any height at Randwick.

21 April, 1870.

61. In an estimate given by Mr. Bennett to the Commission appointed to inquire into the water supply for the city of Sydney and its suburbs, it is computed that £170,000 in all would be necessary for constructing a dam at Long Swamp, connecting this with the engine-pond by means of a pipe; one at Lachlan Swamp with a pumping-engine to raise the water to Paddington and Waverley, it being proposed to extend the Paddington reservoir and to construct a new one at Waverley; also a reservoir at Strawberry Hills? He may be quite correct. I am giving only my opinion, and I have no exact data to go upon, but merely some rough estimates of what this work would cost, and I think about £200,000 altogether would be sufficient to construct permanent works which would give a supply of water to Sydney for many years to come. That would anticipate some other works to be done at some future time for the supply from other sources.

62. From the information you have received, you are convinced that by an expenditure of £200,000 an ample supply of water could be got, even in dry seasons, for the inhabitants of Sydney? I am, for many years.

63. These works you say the Corporation are willing and anxious to carry out? They are preparing to carry them out, and in fact do carry them out, as far as they can. I believe the large reservoir would have been commenced, had not the construction of the dams in the lower part of Botany, the purchase of the land, and the other matters to which I have referred, taken away all our surplus.

64. Then whether any other scheme on an extended scale, such as that proposed by the late Commission, from the Upper Nepean were carried out or not, these works ought to be performed? At any rate, because I consider that from whatever source you obtain the water, you will want storage for it—and this would form part of the storage at any time; it is only anticipating or making preparation for some scheme which may be carried out in twenty or thirty years' time.

65. *Mr. King.*] The land purchased has been paid for out of the revenue? Yes, out of our income. As far as I recollect we had a balance of £15,000 or £16,000 on the water account, of which we keep a debit and credit account, and it took all that, and we had besides to overdraw to pay off for this land. We hoped to have had money in hand to go on with the permanent works for the supply of water, but it was all absorbed in this way.

66. In order to get this £110,000 or £120,000 you require a legislative enactment to enable you to borrow? Yes.

67. Would you expect Government to guarantee the interest of the money? I think not; I think the power we possess to collect the rates in connection with the extension of the water-mains would enable us to pay the interest.

68. *Mr. Flood.*] You merely want the power to borrow? Yes.

69. I think you stated that Mr. Bell's time was fully occupied in attending to the various requirements of the city? In connection with the water supply, as well as in the performance of other duties.

70. Do you not think the supervision of the other business of the city, altogether irrespectively of the water supply, is quite sufficient to occupy one gentleman's time? Yes; I think if Mr. Bell were to devote his whole time to matters connected with the further supply of water it would be much better for the city.

71. What staff have you, including Mr. Bell? An assistant engineer and one or two draftsmen in connection with him, besides apprentices, and of course we have building surveyors and overseers.

72. The building surveyor's time I presume is wholly employed in attending to matters connected with buildings in the city? No, not entirely; he is inspector of pavements also.

73. That is in some way connected with building? Yes, perhaps it is. I should say that Mr. Bell, Mr. Bradridge, and one draftsman, are the three principal officers to carry on the work of the city.

74. Do you not think it would be better to have an officer wholly in charge of the water? Yes.

75. And another officer placed under him who should be called the City Surveyor, for the purpose of attending more properly to the ordinary duties? The fewest words I can use to express my feeling on the subject are these—Mr. Bell has too much to do; that is my opinion.

76. He requires more assistance? Yes.

77. You stated that you had purchased a large quantity of land lately—Have you purchased the whole of the land necessary to ensure the water stream to Botany? Yes, I think so; I do not think there is any more land along the course of the stream in private hands. The stream must naturally flow to Botany, but I think we have purchased sufficient land to construct all the necessary dams and reservoirs that are required.

78. Can the owners of land contiguous to the stream erect buildings where they may carry on offensive trades? No, because the whole watershed is purchased by the Corporation, excepting the land on D. Cooper's estate lying between No. 6 dam and the Randwick Road, and no buildings can be erected on the land which drains into the stream, excepting on that part of Cooper's estate —

79. You spoke of a reservoir I think at Paddington? We have one there.

80. Is there any defect in that reservoir? Not that I am aware of.

81. Do you know what it will contain? No; it is small.

82. You also said something of a reservoir at Waverley? That I do not know anything of. What I spoke of there was a work that we anticipated doing at some future time.

83. Do you know whether the Corporation of which you are the head has ever applied to the Government or Legislature for additional power to borrow or raise money? I do not since I have been connected with the Corporation, now about seven years. The reason has been this,—that Mr. Bell has been instructed to make surveys and prepare plans and estimates and things of that kind, that we might be in a position to ask for further legislation. Until we had facts to bring before the House we thought it was useless to make any application. If we had asked for £100,000 or £200,000 without having prepared plans, sections and so forth, we could hardly expect to succeed.

W. Renny,
Esq.

21 April, 1870.

84. Has the question ever been mooted in the City Council as to giving the City Engineer sufficient assistance to enable him to prepare the necessary plans for these great works? Yes, very lately they have taken one step towards that object by appointing the Architect of the Town Hall to superintend the whole of the buildings now in progress. That will relieve Mr. Bell of all those duties, and enable him to devote more time to this special work.

85. Do you think you have acted with sufficient diligence in that direction, looking to the great importance of the question at issue, that is, a sufficient supply of water to the city and its suburbs? I think so. The reason I think so is that we have always had in view the fact that we had not sufficient means at our command to do all we desired, and we have done what we could with the money we had in hand, by the extension of the mains here and there, and in the construction of the dams I have referred to.

86. You think they have been acting with extraordinary care in not expending the citizens' money unnecessarily? I think so.

87. Do you not also consider that the citizens are in great danger of being overtaken in serious droughts by a want of water in consequence of that extraordinary care? I quite believe if we had long droughts there would be an insufficient supply of water, yet I believe there is plenty of water there if it is stored. An immense quantity of water went to waste last month which could have been stored.

88. *Mr. Neale.*] How? By the construction of these dams and reservoirs providing storage capacity.

89. Do you think the reservoirs contemplated by the Corporation would have held one-fourth of the water that fell last month? No.

90. How then would you have stored it? If you have storage capacity to hold only six months' supply of water, it is better to have the means of saving that quantity than of saving none.

91. You spoke of storing the whole of it? Of course an immense quantity must run to waste in the case of heavy floods; but the more storing capacity you have the better.

92. You say you think the Corporation have exercised every care in endeavouring to secure an ample supply of water for the city of Sydney? Yes, I think so, for it is a question of such vital importance that they have it always in view.

93. Can you tell me what works have been erected by the Corporation since the water supply has been entrusted to the Corporation—with the view of improving it? All I know is that during my time very large sums of money have been expended in the construction of two or three dams.

94. What amount? I could not tell the amount.

95. Would the whole cost amount to £10,000? A great deal more I feel sure; it is only from memory I speak.

96. *Mr. Flood.*] You have been Mayor now upwards of a year, or a year and a half? Just over a year.

97. During your career as Mayor has it appeared to you that the aldermen have exhibited great solicitude for the citizens generally in watching over their interests? I am positive they have; they are elected for that purpose, and they endeavour to do all they can to give the citizens satisfaction in every possible shape. This matter is of such vital importance that it is always under their consideration to devise the best means of using the money at their disposal.

98. Do you think the sixteen aldermen are as capable of looking over the expenditure of a large sum of money as the Government of the day would be? I think so; I do not see why they should not. So far as their qualifications and elections go, they are elected by *bonâ fide* householders, while members of Parliament are elected by people who have no stake in the country. The aldermen are picked from among the citizens by *bonâ fide* householders.

99. And they have necessarily a direct interest in this question? Yes, most of them have household property, and whatever they do is for the improvement of their own property, as well as for the benefit of their fellow citizens.

100. Do you think they are more likely to be imposed upon, looking at their position as citizens, than the Government? I think they are not so likely, because they have such a direct interest in the welfare of the citizens; they are citizens themselves and their only interest is in the city, while the Government would not have such a direct interest in the welfare of the citizens.

101. You are not prepared to recommend that the construction of additional works for the supply of the city and suburbs with water should be handed over to a smaller body than the City Council? I do not think there is any body of gentlemen, whatever position they may hold, who could do more than we have done. We have endeavoured to do the best with the means at our disposal, and I am sure the aldermen have taken that matter seriously under their consideration over and over again and have done all they can.

102. Can you inform the Committee how those works you have alluded to are to be carried out? By contract.

103. Are all your works? All by contract. Surveys, plans, sections, elevations, and specifications are given and tenders are called for.

104. Are your water-pipes laid by contract or by day labour? By day labour. The excavation and filling is done by piece work.

105. *Mr. Farnell.*] I understood you to say that Mr. Bell's time was wholly taken up with the management of Corporation affairs? Yes.

106. That he had not sufficient time to devote to the water question? That is part of the Corporation affairs—the water question. His whole services are devoted to the Corporation for everything connected with the improvement of the city, whether water supply, sewerage, streets, bridges, or anything else; and I say this,—that I believe his time could be fully occupied in the various works which would have to be undertaken for the supply of Sydney with water for some years to come.

107. You have stated that he would require some assistance in this matter? Yes; I believe he has too much work to do to devote any special time or any extra time to the question of the supply of water to Sydney; and in anticipation of that, we have within the last few weeks appointed as an assistant the gentleman who is acting architect in the erection of the Town Hall, to superintend the erection of all buildings.

W. Renny,
Esq.

21 April, 1870.

108. *Mr. Neale.*] That is the building surveyor? No; the building surveyor carries out the Paving Act. The gentleman who is appointed—Mr. Wilson, the architect of the Town Hall—has the superintendence of all erections, so that Mr. Bell has to visit only once a week those buildings which he was formerly supposed to inspect once a day.
109. *Mr. Farnell.*] Has the fact of Mr. Bell's time being so much occupied in other matters retarded the proceedings of the Corporation in reference to the supply of the city with water? To some extent. Each alderman wants some improvement to be brought up, and of course if Mr. Bell is pressed to hasten on these various matters he cannot devote his time to the water supply.
110. Do you not think the water question is the most important for the Corporation to take up? It is one of the most important things; but there are very many matters which are of great importance to the citizens.
111. You have some plans, sections, and specifications prepared by Mr. Bell for the supply of water. Yes.
112. Have any of these been carried out? Do you mean for this further supply of water?
113. Yes? There are none of the later ones that have been ordered by the Council carried out, because the surveys and plans are not perfected. Surveys were taken, and plans and sections were nearly perfected, of the large reservoir, but these were destroyed by the fire. This will necessitate the making of fresh surveys; but I believe Mr. Bell is in possession of sufficient statistics from his own observation to give a good deal of information with reference to the construction of this dam.
114. Some dams have been constructed? Yes, at Botany; Nos. 1, 2, 3, 4, 5, and 6.
115. These dams were constructed previously to the last drought, were they not? They have been completed, I suppose, about eighteen months.
116. That was previous to the last flood? Yes. I might say too that we are continually increasing the holding capacity at Botany. At the reservoir at Botany we have always a staff of men who are employed in deepening and widening the stream; so that there is a continual increase going on, though almost imperceptible.
117. I believe it is the fact that the citizens are sometimes short of water after a few months' dry weather—three or four months? When we have a long drought we find it necessary, if we think it likely to continue, to cease watering the streets. That is the extent of the want of water on the part of the citizens.
118. When you speak of Mr. Bell requiring assistance, what kind of assistance do you mean that he requires? That would be a question for himself. No doubt he is relieved now to some degree with reference to the supervision of buildings. He would now want a competent surveyor, and I have given him instructions to employ a man temporarily for a month or two to get up these surveys as quickly as possible, independently of the Council.
119. After the plans and sections of this land were taken, Mr. Bell would not require any further assistance? I think not.
120. Then it is only temporary assistance after all he requires? Yes.
121. Have not the Council the power of providing this assistance? Yes.
122. How is it then that it has not been done previous to this occasion? Because there were other works which were being pushed forward, for instance the Exhibition Building, railway bridge, the erection of the new shops in George-street, and other improvements. These have taken Mr. Bell away from this important work.
123. Finding it was so necessary, from the deficient supply of water, that there should be a further provision made, had not the Corporation power to employ some professional gentleman specially to have performed the survey and done whatever scientific work was necessary for making that further provision? Yes, they had the power.
124. How was it then the Council did not do that if Mr. Bell were busily engaged in other matters? The only way in which I can answer that question is that perhaps Mr. Bell has not drawn the attention of the Council to the fact that he has been compelled to neglect this question and that he would require further assistance. Each alderman has required certain works to be done, and the Council's attention not having been drawn to the matter they have forgotten the main question.
125. When did Mr. Bell first report that he required further assistance? Last Thursday.
126. How long is it since the Corporation have known that it was necessary to make further provision for the water supply to Sydney and its suburbs? They have always known that the increase of population and the extension of the city would require a further supply of water, and they have always been endeavouring to carry that out as far as their means would enable them.
127. How long is it since they have taken any active steps in that direction? About five years; and they have been going on as actively as possible from that time.
128. You have known only since last Thursday that Mr. Bell required some assistance in order to enable him to carry out any measures for the improvement of the water supply? Yes, Mr. Bell informed me previously, and when he did so I told him at once to employ the best man he could get there and then.
129. There are a great many persons who are now idle who would be glad to obtain such employment as engineers? I believe there are.
130. It is not a work that would take any great time to perform? No. I believe in two months the whole of the surveys might be taken; and there would then be the work of plotting, which would be performed in the office.
131. The Corporation have decided that they could obtain a sufficient supply from the Botany Swamps? Yes, for some years to come.
132. Do they contemplate supplying the suburbs? Yes.
133. Balmain? The whole of the suburbs, as far as they have the power.
134. Newtown? I have not heard Newtown spoken of.
135. Do you know what is in the power of the Corporation? The power to supply the city and its suburbs with water.
136. How far does that power extend? I do not know.
137. I mean their power of performance; they may be very desirous to supply the suburbs, but I want to know how far they have the power to carry it out? The further they extend the supply now the shorter would be the citizens' supply, as the consumption would be greater.
138. Are you able now to supply the heights of Waverley? I think the heights of Waverley are above the level of the highest reservoir.
139. What is your debt now for water purposes? I would suggest that that question would be more satisfactorily answered by the City Treasurer.

140. Mr. Bell has not yet laid any plans before the Corporation? They are not completed.
141. What were the works proposed by Mr. Bell some time ago for the construction of dams—were they for the temporary supply of Sydney? Not for a temporary but for a further supply.
142. Is it intended to carry out works for the further supply similar to those already constructed? Yes; one is constructed at Paddington, and another at Crown-street. It is these covered reservoirs for storing purposes we want to construct.
143. That is for present supply? For present supply; but by increasing them you increase the supply for some time to come.
144. If you have reservoirs of sufficient capacity to hold a supply of water? Yes.
145. Then as I understand, it is not to increase the supply from other sources, but to husband the water? That is all.
146. The supply of Sydney depends a great deal upon the rainfall, does it not? Yes, and we have about 500 acres of watershed from which we obtain it.
147. Are you aware whether the water there is at all deteriorated by the adjacent buildings or dwellings? I do not think so; they are so few, and those are up the Paddington or Waverley heights.
148. Is the Corporation selling land which has any frontage to the water? No.
149. Have you ever heard that in dry weather the water contained in the reservoir where the pumps are working at Botany has been brackish? It has been so in consequence of bad weather when the boundary or seawall has been washed down in parts; but that has not occurred for two years and a half or three years. The wall has since been well built and well puddled for some thirty feet wide, so that that will not occur again.
150. Would the Corporation have any objection to the Government taking the water supply of Sydney and its suburbs into their hands—? They would not have the slightest objection, provided they would take the sewerage with it.
151. Why would it be necessary for the Government to take the sewerage as well as the water supply? They were both handed over to us at the same time by the Commissioners—the one to help the other. The greater part of the water is used to flush these sewers, and the great waste of water occurs at night, and not in the day-time, in running down the water-closets and sewers, and it is this which causes any deficiency there may be.
152. It is necessary for the health of Sydney to use the water in that way? If we had sufficient water I would give the people all I could, and let them have it night and day; but as it is I consider it a wilful waste to allow the water to run away as it does at present by drawing the plugs of the water-closets and turning on the taps.
153. But the Corporation themselves flush some of these sewers, do they not? Yes, it is necessary. The one must go with the other.
154. Do you consider the water wasted that is used for the purpose of the sewers? I do consider that the person who deliberately, on going to bed, fastens back the tap of the water-closet, and allows the water to run all night, wastes the water.
155. I am speaking of the Corporation—could that properly be called waste? I do not think so, because it is a matter of necessity to flush the sewers.
156. Have you a sufficient force of water to flush these sewers upon all occasions? I think so.
157. I mean a sufficient head of water—not a dribbling stream—a force to flush them? I think so.
158. *Mr. Neale.*] Have you a sufficient force to do it when you have occasion to stop the watering of the streets? Yes; I have never had any complaint.
159. Is it not the fact that the flushing of the sewers has been stopped at the same time as the watering of the streets? I think it is not often done.
160. Has it occurred above once in the year; is it not the fact that the sewers are not properly flushed? Not that I am aware of—I never heard a complaint in any way. All these things come under the notice of the Mayor. Mr. Bell reports such and such things are required to be done, and it has never been reported to me that the sewers have required to be flushed where there has not been water for the purpose.
161. Have you ever received any complaints of the absence of water in various parts of the city for a day or two together? Yes, very often.
162. Do you frequently receive such complaints? When we receive them we generally know the cause of them. For instance, there has been a complaint for the last few days, and this has been caused by the falling in of the crown of the tunnel at Busby's Bore from the heavy rains. This has blocked up the tunnel, and caused a want of water in the lower parts of Woolloomooloo and Fort-street. A number of letters came to me in consequence, and the want was attended to by sending round the water-carts.
163. Have you not also had complaints of want of water in dry seasons? I think not; I never knew any want of water, except, as I say, where we have known the cause of it. If we had only one engine, from any accident to the other, there would be a short supply, but not a want of water.
164. I believe the Corporation supply the Glebe and Redfern with water? Yes.
165. Is it not the fact that in both these places many inhabitants who pay for water have not been able to secure one drop for as long as a week at one time? I believe there have been many complaints from the Glebe; but that has been caused when we have had to turn the water off at night in order to husband it in dry seasons. In such cases two or three hours elapse before the air can be expelled from the pipes and the water force itself to the more distant parts. We have had more complaints from the Glebe than from any other part. But in reply to your question is it not the fact that the people at the Glebe have been without water for a week at a time, I can only say that I do not know it, and do not believe it to be so.
166. Such complaints have been made through the Press? They are not true.
167. *Mr. Farnell.*] Has the Corporation ever had brought under their notice by their Health Officer the state of the sewer at Fort Macquarie? I think not.
168. Has it ever been brought under the notice of the Corporation? I think not. I have seen the filling in of the harbour at the end of Fort Macquarie sewer—I have noticed it myself, but I have never heard any complaint about it. Indeed there are no householders about there to complain.
169. I am speaking more in reference to the health of that part of the city, which of course must affect the whole of the city—Have you heard that fever is more prevalent in that part than in any other, at certain seasons of the year? I think not.
170. Have you ever had a report of it? I think not.

- W. Renny, Esq.
21 April, 1870.
171. Have you ever read the evidence of the Harbour Commission? No. I have heard indirectly that when Sir John Young was here he observed some disagreeable smell arising from it, but I have never had any complaint made to me.
172. You never heard that persons residing on Dawes Point, opposite to this sewer, when the wind was blowing from the north-east, were affected by typhoid and other low fevers, from the effects of that sewer? I never heard of it.
173. *Mr. Flood.*] As this matter of sewers has been introduced, do you know whether the Corporation had anything to do with the recommendation of their construction? No.
174. Do you know under whose guidance and instruction they were constructed? The Government appointed Commissioners.
175. During the administration of Sir William Denison? I believe it was. I remember now that Sir William Denison had that sewer on his own recommendation brought to his own door.
176. Had you not in contemplation to sell a portion of the present watershed of the Lachlan Swamp? We have not the slightest intention of selling any of the watershed.
177. Do you not contemplate selling land at the back of the Military Barracks? Not exactly at the back, but beyond on each side. The park road divides all the land we sell, and beside that park road is a sewer which drains all to the other streets.
178. Do you contemplate selling any land east of the Randwick Road? No, we do not; we are improving and grassing all the east side and the west side too.
179. We have heard something of a road lately that has been opened by the Government passing through the water reserve at Lachlan Swamp? The Government advertised for objections to this road, and the Corporation being the only parties to object sent in their objections, but the Government took no notice of them, proclaimed the road, and knocked down our fences, leaving the whole of the watershed open to cattle. I had several interviews with Mr. Forster, and induced him to postpone for a few weeks the opening of the road, and hoped he would have withdrawn the proclamation, but it was not done.
180. Do you know where the new road commences and where it terminates? It commences at St. Matthias's Church and goes right over to Waverley. The traffic cannot get over that without bridges, as there are in some places perpendicular rocks, and the road passes right over our watershed.
181. Is it your opinion that this road should be closed up and the land resumed? Decidedly, I think it most important that it should be closed, as at present it is thrown open for the grazing of cattle or to be used in any other way.

Edward Bell, Esq., C.E., examined:—

- E. Bell, Esq., C.E.
21 April, 1870.
182. *Chairman.*] You are the City Engineer? I am.
183. And a civil engineer? And a civil engineer.
184. I suppose you are aware of the object of this Committee—to inquire into the advisability of taking the water supply of the City of Sydney from the control of the Corporation of Sydney, and that you are also aware that the Mayor and Corporation have petitioned Parliament to be heard before the Committee upon this subject? I am.
185. Will you be kind enough to state to the Committee what is the present supply of water per head here to the citizens of Sydney, and the source from which it is obtained? What am I to assume as the population?—If I am to assume the population as that stated in the return contained in the Commissioners' report, I should say about 65 gallons per day per individual in the summer, or 48 or 49 gallons per head in the winter.
186. At what does that compute the inhabitants of the city and suburbs? About 80,000; that is, the city and the suburbs we are now supplying. The city is put down at 64,000; in addition to that we supply the Glebe, 5,500; the population of Redfern I put down at 6,000; at Paddington we probably supply 3,000 or 4,000; we also supply Darlington and some small municipalities, the population of which I am unable to give. Altogether I reckon the number supplied to be about 80,000. These receive on the average 32,000,000 gallons weekly from Botany, and in addition to that there is the supply brought in through the tunnel, but which has ceased within the last ten days in consequence of the roof having fallen in.
187. What was the supply by that tunnel before? We used to estimate it at 600,000 or 700,000 gallons a day.
188. Or about four millions a week? About that.
189. Which would make the supply altogether from Botany about 36,000,000 weekly? Yes.
190. Will you state to the Committee what is considered to be a good average supply for cities in other countries per head per day? From 30 to 35 gallons.
191. Is not that a large supply? That is a full, an abundant supply.
192. Then the supply at Botany exceeds by nearly one-half what is considered to be a full supply—looking to the number of the population who get water from these works? During the last summer nearly double the quantity of water was supplied to Sydney that is ordinarily supplied to other towns.
193. Yet notwithstanding this large supply there are certain complaints that the supply is insufficient, or rather that the supply is not continuous? These complaints have arisen chiefly, as at the present time, when the crown of the tunnel has fallen in and has reduced the supply, from the water not rising sufficiently high to get a supply in all parts of houses. I do not think when the works were in full order there were any complaints about short supply. We have had an abundant supply during the last year, but in some parts of the town, in consequence of the distance it has had to travel, and the long and heavy draught upon the larger mains which branch from the reservoir, there may have been cases of temporary inconvenience.
194. But I think it has been conceded that, in order to secure confidence in the supply of a sufficient quantity of water in Sydney for all seasons whether dry or otherwise, ample provision ought to be made? No doubt of it. We cannot go on long as we are supplying the people with 60 gallons a head, unless there be some provision for the storage of water, or the bringing water into Sydney.
195. Supposing sufficient storage were made for water, do you consider that the present supply or the present means of supplying Sydney would be adequate for this city for many years? I do for some years to come.

196. Will you be kind enough to state to the Committee what you, as Engineer for Sydney, have had in contemplation with the view of increasing the storage? I proposed in the first instance to make a reservoir in Moore Park, to cover about 40 acres. E. Bell, Esq.,
C.E.

197. How many millions of gallons did you suppose that would hold? About 361 million gallons. 21 April, 1870.

198. Were there any other reservoirs? Prior to carrying out this large reservoir I deemed it necessary to put the Lachlan stream in such a state as that we could avail ourselves of what water fell in that watershed. The first work I considered it necessary to do was to put some dams across the stream to prevent its reaching Botany too fast. There is a fall of about 104 or 105 feet in five miles, and the water reached Botany in a very short time, in times of heavy rain, and ran into the sea. I considered that before making a large storage reservoir in the city, it was necessary in the first place to provide some means by which we could check the flow of water to the sea while we pumped it in. For that reason I recommended some dams, which have been made across the stream, and others which were contemplated, not altogether as storage reservoirs, but chiefly to check the flow of water on its way to the sea, in order that we might have time to pump it.

199. They would act to a certain extent as storage reservoirs? After the main reservoirs were full. They are quite tight and capable of acting as reservoirs, and have done so for the last three or four years. One could not wish for better reservoirs, if they were deeper; but, as a matter of course, in shallow reservoirs the evaporation is excessive, while in deeper reservoirs it is not so great.

200. Will you state how many of these dams you propose to erect on the watercourse? I have erected six; but one was destroyed by (I will say) the carelessness of the man in charge not opening the sluice, but allowing the water to pass over the top. Of course the new earth-work, when a stream of water was rushing rapidly over it, was carried away. A breach was made, and the force of the water rushing down destroyed the other two dams, which were only partly finished. Two of these may be repaired and put in perfect order for about £3,000, and that is one work I propose to do.

201. Do you propose to carry out the other dam? I propose to carry out the large dam above the Randwick Road at the Lachlan Swamp; and I propose to carry out two between that and No. 6, which is at present in operation.

202. Would the work of the dam at Lachlan Swamp be very expensive? No.

203. Have you been able to make any calculation of the extent of storage you would have in the dam? The storage of the Lachlan will depend upon the extent. I propose in the first instance to excavate about 20 acres to the depth of 14 feet, and to raise the embankment 8 feet above the present level of the road; that would give a reservoir capable of containing water 22 feet deep over 20 acres.

204. Would not the water extend over the ground that you had not excavated? Yes, it would to a great extent; I have not estimated that exactly.

205. Could not a dam higher than 8 feet be formed there with prudence, so as to throw back a greater quantity of water? It could be erected, but I doubt whether we could ever get a sufficient quantity of water to raise it so high, because the watershed is so contracted, besides which an embankment carried so high would be very expensive.

206. Could you make it convenient to accompany the Committee to Lachlan Swamp and explain on the ground your ideas with reference to this matter? With much pleasure. This ought to have been the first thing done, as we have occasionally, and it has been so during the present year, the heaviest rainfall upon the Lachlan and the lightest at Botany. We have had $2\frac{1}{2}$ inches at Botany and nearly $4\frac{3}{4}$ on the Lachlan watershed, or over that watershed to Double Bay, and the consequence was that my number 6 dam had to do the duty of four or five contemplated dams; however it performed its function well, withstood the rush of the stream, and is sound as ever. The object of forming the large reservoir at the head of the Lachlan Swamp is to prevent undue pressure upon the dams below, leaving them each to collect the water of its own watershed without any undue pressure from the watersheds above.

207. You have not stated to the Committee the number of dams you now propose to make on the watercourse? I propose to repair Nos. 1 and 3; Nos. 4, 5, and 6 are in operation; and I propose two between No. 6 and the Lachlan, and the Lachlan will be the eighth.

208. But I think, if I am correctly informed, you propose still further to enlarge the storage capacity for the water supply of Sydney by making other reservoirs. You told us that you proposed to make one on Sydney Common—Do you not also propose to have one at Waverley? Yes, I proposed to the Commissioners that there should be a reservoir at Waverley, but I did not contemplate the carrying out of that at the present time until some experiments are made which I have to propose, and which may avoid the necessity of pumping from Paddington to Waverley. The Waverley site is at a great elevation above Paddington.

209. Will you state what you propose to do? I propose to make the reservoir at the cemetery that I have already mentioned, at Lachlan Swamp the dam already mentioned, to repair Nos. 1 and 3 dams, to construct two more dams between the Lachlan and No. 6. I would fence and plant the Botany reservoir and Lachlan Swamp. In order to pump the water into Sydney which these would hold back I would employ the three engines at present in operation at Botany to pump the water as far as the cemetery reserve only. They would be capable, under the diminished head they would have to work against, of sending in ten millions per day instead of, as at present, only seven. I then propose to erect another engine at Botany capable of sending in five millions to the same reservoir, and through the same main. The main will have less duty to perform considerably than it has now. Supposing I had these three engines and the reservoir in operation now, I should be able to pump five millions a day for the consumption of Sydney, and about five millions for the reserve in the reservoir. Assuming that we were able to pump in ten millions every day by these engines, it would give us a reserve of something like 1,500,000,000 in the course of a year, in addition to the five millions we supply to Sydney per diem. But as the water falls only occasionally, we must assume that we should not have above forty-five or fifty days in which we could pump water into this reserve; and this would give us 250,000,000. As the rain falls sometimes so rapidly we could not always reckon upon fifty days, and consequently I think it necessary to have another engine at Botany, which might work when it was required, more especially to send in all the surplus water from Botany.

210. You have explained how you intend to get the supply of water into the reservoir in Moore Park—How do you distribute it through the city,—do you pump that again to the high level at Crown-street? I should bring the water from Botany through the present main as far as the cemetery reservoir, and I should then require two engines to be stationed at that reservoir at Bourke-street, to pump the water on to Paddington.

E. Bell, Esq.,
C.E.
21 April, 1870.

211. And perhaps to Waverley? The site proposed for a reservoir at Waverley stands at an elevation of 350 feet above the sea—that would be 214 feet above the reservoir in the cemetery reserve, or about the same height to which we pump the water from Botany at the present time. It is not impracticable to pump the water to that height, but there is always a risk when there is such a heavy pressure, and I should endeavour to avoid it if I could discover other means of supplying Waverley, and to which it is my intention to draw the attention of this Committee to.

212. Is it your intention to enlarge the Paddington reservoir? Yes.

213. What is its capacity? About a million and three quarters of gallons.

214. To what do you propose to extend it? We propose to extend it six millions and a half, or about eight millions altogether, which I can do at a cost of £20,000.

215. Consequently, that reservoir would hold nearly two days' supply for the city of Sydney? Two days for that part of Sydney which it supplies, and Woollahra and the lower part of Paddington.

216. I thought you stated just now that the expenditure of water in the city of Sydney was about five millions daily? Yes, in addition to the Lachlan Swamps supply. I calculated that Paddington will shortly require three millions a day, that is, when Woollahra and the lower parts of Paddington are connected with it.

217. Are these all the works you propose at the present time with the view of supplying the city of Sydney? Yes, at the present time.

218. Would these proposed improvements, in your opinion, give an ample supply of water to Sydney in all seasons? Yes, for some considerable length of time.

219. For a number of years? Yes.

220. That is to say, there will be no danger for some years of the people of Sydney suffering from a season of drought? There will be no danger of their suffering any privation at all. I would say in addition to what I have already stated, that we must increase the supply mains in Sydney and the suburbs, and extend them so as to give an abundant supply with a good pressure.

221. What do you calculate the cost of these additional works would be? Without the Waverley reservoir, £192,000.

222. The Committee have had evidence to the effect that the Corporation have now power to raise £90,000, and consequently they would require additional power from the Legislature to borrow £100,000 or £110,000? I would rather say in round numbers that the cost of the work would be £200,000, as my calculation comes to £192,000 or £193,000.

223. I suppose you have read with some care the Report of the Commission appointed to inquire into the water supply of the city of Sydney and its suburbs, and the evidence taken before it, which have been laid upon the table of the House? Yes.

224. You are aware that a certain scheme has been suggested by this Commission as most advisable to be carried out? Do you mean with regard to the Botany Works or generally?

225. Generally? Yes, I have.

226. Supposing the Government determined to carry out the suggestions of this Commission, would the works you have now spoken of to the Committee not be a necessary part of such a scheme in a very great measure? Undoubtedly they would.

227. Consequently, whether the report of the Commission were adopted or not, it would be prudent to carry out these improvements as soon as possible? Undoubtedly, for I conceive it would be seven or eight years at least before any such scheme could be carried out.

228. The carrying out of the improvements you have suggested would not be a waste of money, even supposing the larger scheme were adopted? No; a few of the dams on the Botany stream might be dispensed with, but the others would all be useful, in fact indispensable.

229. Do you get sufficient assistance from the Corporation to pay attention to the requirements of the city, as far as the water supply is concerned, or have you sufficient time to devote attention to it? No, I have not sufficient assistance. I have but one assistant and four apprentices (youths) for the city, the water, and the sewerage works. In the course of my career as an engineer I have had as many as thirty or thirty-five persons under me in an office at one time, making surveys, plans, &c., to carry out the various works I had in hand. I could employ as many usefully now if I had the work and required the men. I could employ four more assistants than I have in the office of the Corporation with great advantage; three upon waterworks and one upon city and sewerage works. The supply of assistants is so limited that I lose much valuable time in working out details that might be done equally well by assistants at less cost.

230. Supposing it were determined by the Corporation to carry out these works, would they not necessarily occupy the whole of your attention while they were in progress? I think they should.

231. In the meantime, the making of these surveys plans and sections, and preparing to lay them before the Council, I should imagine, to do it with satisfaction to yourself and to the public, would require the whole of your time and attention? I think it would. After a few months, when the surveys and plans were made and the specifications prepared there would remain only the pleasurable duty of seeing the works carried out, but while they were in course of preparation they would require almost undivided attention. I do not mean to say that the mere supervision of this expenditure of £200,000 would occupy the whole of my time, but during the progress of the works there are many things that would require close attention, and there is a great deal beyond what I have stated to you that would require to be looked to. I mean with reference to works to be carried out for the supply of Sydney with water in future years. These should occupy the rest of my time.

232. With reference to the road which leads from St. Matthias' Church to Waverley across the Lachlan Reserve, are you of opinion that that road is likely materially to injure the water supply? I am, and always have been opposed to it, and have done everything in my power to oppose it.

233. Have the Government confirmed that road? I understand that the Government have confirmed it, and that one of the Government surveyors has been to the Town Hall to say that unless we remove the fence he will cut it down and leave an open road from Paddington Church to Avoca-street.

234. You have made all the representations in your power against it? Yes, and I know that the most peremptory measures have been taken by the Government to insist upon its being open. It would not only be very injurious to the water reserve, but would deprive the South Head and Randwick Road Trusts of the whole of their tolls.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WATER SUPPLY.

(RESPECTING A ROAD BETWEEN PADDINGTON CHURCH AND AVOCA-STREET, RANDWICK.)

Ordered by the Legislative Assembly to be Printed, 7 May, 1870.

(70/965 R.S.B. 5 May, 1870.)

Legislative Assembly.

INQUIRY made yesterday evening with reference to road or street between Paddington Church and Avoca-street, Randwick.

Have orders been issued to remove a fence or fences considered to obstruct this road or street? Considering the doubtful position of the Water Supply question, it may be advisable to stay proceedings of whatever kind.

Urgent.

W. F.

Surveyor General, B.C., 4 May, 1870.

All action has been postponed on memo. of the Honorable the Minister for Lands (Nov. 23rd, 69/2756).

ROBT. D. FITZGERALD,
(For Surveyor General),
6 May, 1870.

(R.S.B. 1102/68.)

It is recommended that the request of the Municipal Council at Randwick be granted by proclaiming the road in question, on the understanding that the whole expense of the formation is to be defrayed by them; and that culverts are placed where required, so as not to impede the flow of the water to the drains.

I am not of opinion that such road would be any injury to the water supply.

R. D. FITZGERALD,
(For Surveyor General),
2 July, 1868.

Approved.—J.B.W., 11 July.

THE COUNCIL CLERK, RANDWICK, to THE SECRETARY FOR LANDS.

(869. 29 April, 1870.)

Council Chambers,
Randwick, 27 April, 1870.

SIR,

I am directed by the Mayor and Council of this Borough to request that you will cause the road from Paddington to Avoca-street, Randwick, to be opened without delay, under the arrangement and in accordance with the promise contained in your letter of the 16th July, 1868.

I have, &c.,
E. O. SAYERS,
Council Clerk.

1870.

NEW SOUTH WALES.

SEWERAGE AND WATER SUPPLY.

(THIRTEENTH ANNUAL REPORT OF MUNICIPAL COUNCIL—1869.)

Presented to Parliament, pursuant to Act 20 Vict., No. 36, sec. 75.

THE TOWN CLERK TO THE UNDER SECRETARY, COLONIAL SECRETARY'S OFFICE.

Town Clerk's Office,
Sydney, 1 March, 1870.

SIR,

I have the honor, by direction of the Right Worshipful the Mayor, to transmit herewith the Thirteenth Annual Report of the proceedings of the Municipal Council of Sydney, under the Water and Sewerage Acts, in order that the same may be submitted for the information of the Parliament of New South Wales, in terms of the "Sydney Corporation Act of 1857."

I have, &c.,

CHAS. H. WOOLCOTT,
Town Clerk.

THIRTEENTH ANNUAL REPORT of the Municipal Council of the City of Sydney, of their proceedings under the Water and Sewerage Acts.

THE Municipal Council of the City of Sydney have the honor to submit, for the information of the Parliament of New South Wales, the following Report of their proceedings under the Water and Sewerage Acts, from the 1st January to the 31st December, 1869, together with Statements of the Receipts and Expenditure for the same period.

WATER.

The engines and machinery at Botany have continued to work day and night throughout the year, including Sundays during the dry season.

The only accident on the 30-inch main which occurred during the year was the breaking of one pipe in the month of January, within the enclosed land near the engine-house. The crack in the main, when exposed to view, exhibited the appearance of a very old fracture; and the injury was repaired and the engines started again in a few hours, so that the supply to the city from the reservoirs was uninterrupted.

The quantity of water pumped into Sydney and its suburbs from the Botany Works was 1,394,563,536 gallons, being 172,000,000 in excess of the previous year.

The district of Woolloomooloo and the lower levels of the city have been abundantly supplied with water from the Lachlan Swamp Tunnel. During the year several shafts along the line of the tunnel were opened, and a considerable quantity of *débris* removed from the watercourse.

Rain-gauges have been established at the Botany Dam No. 1, and at Double Bay. During the year 1869 the quantity of rain which fell at the former place was 45.87 inches, and at the latter place 56.65 inches, as shown by the appended register. The return from the Sydney Observatory during the same period shows a rainfall of 48.13 inches.

It has not been deemed expedient or necessary during the past year to continue the practice of the previous two years, of shutting off the supply of water to the city and suburbs during the night-time, as no scarcity has been felt during that period.

The usual annual contracts for the supply of Osborne Wallsend Coal, castings, locks, pipes, stores, &c., have been satisfactorily carried out.

Upwards of five miles of new watermain have been laid in the city and suburbs, of the sizes and in the localities mentioned in the accompanying Schedule A.

SEWERAGE.

No defects have been found to exist in the main sewers during the year, and they appear to be in perfect order.

The undermentioned new works have been undertaken, and are either satisfactorily completed or in course of construction:—

Prince Alfred Park.—630 feet of 3-ft. oviform sewer.

Blackwattle Swamp.—2,950 feet of 6-ft. oviform sewer from Abercrombie-street.

Elizabeth-street South.—435 feet of 6-in., 640 of 4½ ft., and

Gipps-street.—400 feet of 3-ft. 6-in. sewer.

Goulburn-street.—300 feet of 3-ft. 6-in.

Goulburn-street.—265 feet of 6-ft. oviform sewer.

Stoneware sewers have been laid for a distance of 31,389 feet, of the sizes and in the localities detailed in the attached Schedule B.

The number of houses connected with the sewers was 1,552; making, with previous connections, a total number of 4,289.

The number of trapped street gullies connected with the sewerage works since the new system came into operation is 1,098, each capable of containing at the least 40 cubic feet of silt, which is prevented by the trap in each gully from approaching the harbour. The united capacity of these gullies amounts to 1,626 cubic yards, or about 2,440 tons. These gullies are continually being emptied and cleaned, more especially after every rainfall, and thus a large quantity of silt which would have gone into the harbour is intercepted and carted to Moore Park, or sold for manure.

FINANCIAL.

Abstracts of the Receipts and Expenditure on account of the Water and Sewerage Funds for the year 1869, duly certified by the City Auditors, are attached hereto.

WALTER RENNY,
Mayor.

Adopted by the Municipal Council of Sydney, on the 28th February, A.D. 1870.

CHAS. H. WOOLCOTT,
Town Clerk.

(ALLEGED COMPLAINTS.)

Ordered by the Legislative Assembly to be Printed, 8 April, 1870.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25th February, 1870, that there be laid upon the Table of this House,—

- “ (1.) Copies of all Official Correspondence from the Board of the Destitute Asylum, complaining of the inhumanity of the Sydney Infirmary authorities, in refusing admission to persons suffering from severe disease.
“ (2.) Copies of all Official complaints, forwarded by the Board of the Destitute Asylum to the Managers of the Sydney Infirmary, respecting the general carelessness of the Infirmary Medical Officers, in misdescribing diseases of inmates forwarded from that Institution for admission into the Liverpool and Parramatta Asylums.
“ (3.) Copies of all reports from the late Inspector of Charities, bringing under notice of the Government the verminous condition in which certain boys belonging to the Industrial Training-ship ‘Vernon’ were returned to that vessel, after being in-patients in the Sydney Infirmary.
“ (4.) Copies of all complaints respecting the verminous condition in which the other patients, forwarded from the Sydney Infirmary, after being inmates of that Institution, to establishments under Government control, have been received.
“ (5.) Report of proceedings and depositions taken at an inquest held during the month of November last, affecting the death of an infant that died in the Sydney Infirmary of neglect, and in which the jury severely censured the Medical officers for their want of humanity, and inattention.”

(Mr. Farnell.)

SYDNEY INFIRMARY.

I.—Complaints of refusal of Infirmiry Authorities to admit Patients.

No. 1.

THE BOARD OF MANAGEMENT, GOVERNMENT ASYLUMS, to THE PRINCIPAL UNDER SECRETARY.

The Government Asylum,
Sydney, 26 August, 1869.

SIR,

I am directed by the Board of Management to request you to be good enough to solicit the attention of the Honorable the Colonial Secretary to the case of a young girl, whose admission to this Institution, while suffering from a dangerous disease, "erisypelas," was forced on the Board in consequence of the refusal, on the part of the authorities of the Sydney Infirmiry, to give her shelter.

Application for her admission to the Hyde Park Asylum, was made to the Chairman by the Rev. Mr. Moreton, who stated that he had made personal application at the Infirmiry for her admission, but had been informed that as the girl was suffering from an infectious disorder she was ineligible. This is one of numerous instances in which, for the sake of humanity, the Board have been constrained to admit to the Government Asylums for the Infirm and Destitute, patients, requiring active medical treatment, who have been refused admission to the Infirmiry, and they desire to call the attention of the Government to the expediency of instituting an inquiry into the rules and practice of the Infirmiry, with the view of causing such modification thereof as will open the doors of that Institution, which is so largely supported out of the public funds, for the reception of such cases as that which they have brought under notice.

I have, &c.,

FREDERIC KING,
Secretary.

Annie Jeston
Jesmond, 18
years of age.

No. 2.

THE PRINCIPAL UNDER SECRETARY to THE JOINT HONORARY SECRETARY, SYDNEY INFIRMARY.

Colonial Secretary's Office,
Sydney, 2 September, 1869.

SIR,

In transmitting to you the accompanying copy of a letter from the Secretary to the Board of Management of the Government Asylums for the Infirm and Destitute, drawing attention to the fact of the authorities of the Sydney Infirmiry having declined to receive the woman named in the margin, into that Institution, and stating that the case of Jesmond is one of numerous instances in which the Board have been constrained, for the sake of humanity, to admit to the Government Asylums, patients requiring active medical treatment, who have been refused admission into the Infirmiry,—I am directed by the Colonial Secretary to request that you will bring the matter under the notice of the Board of Directors, with a view to their furnishing a report thereon.

HENRY HALLORAN.

26 August, 1869.

Annie Jeston
Jesmond.

No. 3.

THE JOINT HONORARY SECRETARY, SYDNEY INFIRMARY, to THE PRINCIPAL UNDER SECRETARY.

Sydney Infirmiry,
28 September, 1869.

SIR,

I have the honor to acknowledge the receipt of your letter, dated 3rd instant, enclosing a communication from the Board of Management of the Government Asylum to yourself, in which attention is directed to the case of a young girl, whose admission was refused at the Infirmiry; and it is affirmed that other patients requiring active medical treatment have not been received, &c.

Your letter also contains a request from the Colonial Secretary that the matter should be brought under the notice of the Directors, with a view to their furnishing a report thereon.

Your letter, and the subject thereof, having been taken into consideration by the Board of Directors, I am instructed to report, for the information of the Colonial Secretary,—

1st.—That the young woman (Annie Jeston Jesmond) presented herself for admission into the Hospital on the — of August. She was examined by the Honorary Surgeon admitting for the week, who found her suffering from a slight attack of erysipelas, which was in no degree dangerous to life.

2nd.—On the morning of August 21st the Rev. G. Moreton visited the Infirmiry, and personally made an application for her admission. It was explained to him that the patient was unfortunately suffering from a disease which experience had proved to be infectious and dangerous to others, and that it would be contrary to the rules of the Institution for her to be admitted; but Mr. Moreton was also informed that, had her symptoms been such as *to place her life in danger, she would have been at once received and placed in a tent.*

3rd.—Having, upon more than one occasion been compelled to remove all the patients from certain wards, and keep the latter unoccupied for many days, owing to the existence and extension of erysipelas, the

the Directors, having regard to the welfare of the patients (185) always under treatment for acute disease, have decided upon endeavouring to protect them as much as possible from the risk of taking a disease which is especially dangerous to those already suffering from severe illness.

4th.—For the purpose of immediately relieving the wards of any cases of erysipelas which might arise within the Hospital, the Directors some time since applied to the Government for two tents, which the Colonial Secretary was good enough to supply. Since that time, besides using them for the accommodation of such cases, *all patients* applying for admission, and suffering from erysipelas, *attended by dangerous symptoms*, have been received and placed in the tents separate from the other inmates.

5th.—In reference to a remark in the last paragraph of the Report, enclosed in the Colonial Secretary's letter, to the effect that "This is one of the numerous instances in which, for the sake of humanity, the Board has been constrained to admit to the Government Asylums for the Infirm and Destitute, patients requiring active medical treatment, who have been refused admission to the Infirmary, &c."—I am to observe that, after a full consideration of the accommodation and character of the Sydney Infirmary, the Directors have arrived at the conclusion that it is capable of receiving and of securing the efficient treatment of the acute cases of disease and accident in the community; but that the admission of incurable patients, as well as of those whose chronic ailments would require a lengthened and comparatively unskilled treatment, would very much lessen the amount of benefit they might otherwise be able to confer upon more important and severe cases of suffering. With the single intention, therefore, of affording the utmost benefit to the greatest sufferers from severe illness, the Directors have felt it their duty to select, as far as possible, patients afflicted with acute and curable disease for treatment in the Infirmary, leaving those suffering from chronic and incurable affections to be provided for in institutions where they can be equally well-treated and cared for at a less average cost.

6th.—I am further to mention that a limited but sufficient number of beds are always kept vacant for the reception of urgent cases of accident and disease, and I believe that no such case has for many years been refused admission.

I have, &c.,
JOHN E. MANNING,
Joint Hon. Secretary.

No. 4.

THE BOARD OF MANAGEMENT GOVERNMENT ASYLUMS, to THE PRINCIPAL UNDER SECRETARY.

The Government Asylum,
Sydney, 18 November, 1869.

SIR,

I am directed by the Board to bring under the notice of the Honorable the Colonial Secretary a similar case to that reported on the 26th August last, of harsh treatment on the part of the authorities of the Sydney Infirmary.

A poor woman named Ellen Nugent, suffering from cancer of a severe type, was sent from Maitland to Sydney, where she obtained an order of admission from Mr. J. G. Raphael to the Sydney Infirmary. Although in great agony and misery she was refused admission because she was suffering from a malignant disease, and was forwarded with a note requesting her admission to the Hyde Park Asylum. Her case did not appear to the Secretary to be eligible for admission to that Institution, and he made several unavailing applications to the Infirmary, and at last was compelled, for humanity's sake, to give her the shelter of the Institution.

The poor woman was received into the hospital ward of our Asylum on the 6th instant, and has there obtained such relief that she now feels able and intends to return to her home at Maitland.

I have, &c.,
FREDERIC KING,
Secretary.

II.—Carelessness in naming diseases of persons forwarded from Infirmary for admission into Government Asylum.

No. 5.

THE SUPERINTENDENT OF THE SYDNEY INFIRMARY to THE SECRETARY TO THE GOVERNMENT ASYLUMS BOARD.

Sydney Infirmary,
5 May, 1868.

DEAR SIR,

Would you be good enough to procure orders for the transmission of the following patients in this Institution to the Government Asylum at Port Macquarie, their medical attendants having recommended change of air as their only chance of recovery, and oblige, dear Sir,

Yours, &c.,
JOHN BLACKSTONE,
Superintendent.

William Hugh Dixon, aged 25, native of Ireland, a miner, suffering from scrofula and ulcers.
William Smith, aged 37, a native of England, a bushman, suffering from chronic rheumatism.
William Browle, aged 43, native of England, a grocer, suffering from the effects of poison.

No. 6.

No. 6.

THE SECRETARY TO THE GOVERNMENT ASYLUMS BOARD TO THE SUPERINTENDENT OF THE SYDNEY INFIRMARY.

The Government Asylums,
Sydney, 7 May, 1868.

SIR,

I am directed by the Board of Management of the Government Asylums for the Infirm and Destitute, to call your attention to the discrepancies in the descriptions given in the recommendations sent by you with applicants for admission to the Government Asylums, and the real state of the cases as they appear when examined by the Board.

I allude particularly to the cases of William Smith and William Browle, who are mentioned in your letter of the 5th instant.

William Smith, stated to be suffering from chronic rheumatism, proves, on examination, to be nearly blind, and according to his own statement to be free from rheumatism. William Browle, aged 43, said to be suffering from the effects of poison, stated that he had suffered from an old wound in the head which caused him to have fits, which rendered him unfit to obtain his livelihood.

The Board direct me to request that recommendations may be prepared with greater care, otherwise they will challenge a greater degree of scrutiny than has hitherto been deemed necessary.

I have, &c.,
FREDERIC KING,
Secretary.

No. 7.

THE SUPERINTENDENT OF THE SYDNEY INFIRMARY TO THE SECRETARY TO THE GOVERNMENT ASYLUMS BOARD.

Sydney Infirmary,
18 May, 1868.

SIR,

I have been desired by the House Committee of this Institution to forward herewith a copy of a letter from Dr. Schuette, the Resident Physician, to whom was referred your letter of the 7th instant, drawing attention to the discrepancies in the descriptions given in the recommendations sent with applicants for admission to the Government Asylums.

I have, &c.,
JOHN BLACKSTONE,
Superintendent.

[Enclosure in No. 7.]

The House Physician to the House Committee of the Sydney Infirmary.

Sydney Infirmary,
17 May, 1868.

Gentlemen,

In reply to your request, contained in the letter herewith returned, I beg to state—1st. As regards the case of William Browle, I find, by referring to the Hospital Books, that he was admitted on the 10th March last, and was discharged on the 14th of April, and treated for epilepsy. That on the 18th April he was brought back by the *police* with a paper signed by the Police Surgeon, stating that Browle was suffering "from the effects of poison." If any discrepancy should exist, the mistake must be attributed to the Police Surgeon and not to me. I do not know whether I possess the right to correct the diagnosis of the Police Surgeon, but if I do I would only exercise it in cases of grave necessity. Now, as the Hyde Park Asylum has its own medical officers, they are, it is to be presumed, quite competent to correct the mistakes of the Police Surgeon as well as myself, and as Browle is still suffering from epilepsy would be all the more a fit subject for admission into the Asylum; the mistake has inflicted no injury on that institution. 2nd. William Smith was refused admission into the eye ward by Dr. McKay. The admission or rejection of that class of patients is out of my province; he was recommended to the care of the physicians for rheumatism.

The diagnosis is that of the physicians as well as mine. Nor can I understand how the affection of the eyes necessarily negatives the fact of the patient suffering from rheumatism.

The same observation as made in the case of Browle also applies here. If Smith is "nearly blind" surely he is a fit subject for admission. I beg to state, however, that as *diagnosis* is not a matter that admits positive proof in all cases, there exists no imperative necessity that the Members of the Board of the Hyde Park Asylum must accept our diagnosis as undoubted facts in all cases.

They have their own medical officer or officers, who also ought to exercise their own discretion, and use their own intelligence and means of knowledge.

I have, &c.,
RUDOLF SCHUETTE, M.D.,
House Physician.

III.—Dirty state of Patients on discharge from Infirmary.

No. 8.

THE INSPECTOR OF PUBLIC CHARITIES TO THE PRINCIPAL UNDER SECRETARY.

Sydney, 26 May, 1869.

SIR,

I have the honor to report, for the information of the Honorable the Colonial Secretary, a matter which I consider should be brought under the notice of the Committee of the Sydney Infirmary.

On the 12th day of March last a young woman named Bridget Keys, who is nearly blind, was sent as an in-patient from the Hyde Park Asylum to the Infirmary for medical treatment, and on the 18th instant she was discharged; but being unable to provide for herself was again admitted into the Hyde Park

Park Asylum, on that day, direct from the Infirmary; and when she was examined by a wardswoman of the Asylum, as usual on the entry of inmates, it was found that her head was in a very filthy state.

I have questioned Bridget Keys, and she states that her head was perfectly free from vermin when she left the Asylum, but that during the time she was in the Infirmary—over two months—no person ever examined her head to see that it was kept in a cleanly state, and she never had a small-tooth comb given to her, nor did she hear of one being used there. She also states that she was only twice in a bath during the time she remained in the Institution.

In bringing this matter forward, I may mention that I saw myself one of the boys of the "Vernon," who had been for some time in the Infirmary, soon after he was sent on board, who was so covered with vermin that his hair had to be cut off and ointment applied to his head. This circumstance I spoke of to the hon. secretary and some members of the Committee of the Infirmary, and I am informed by Captain Mein that two other boys have been received on board from the Infirmary with vermin in their heads.

As these statements reflect strongly upon the internal management of the Infirmary, and as there is such a large staff of trained nurses under the direction of a lady superintendent, who are maintained at a very heavy cost to the Government, I think it desirable that the Committee should be called upon for some explanation; for, if these things are of such frequent occurrence, there must be some fault in the supervision.

I have, &c.,
R. C. WALKER,
Inspector of Public Charities.

No. 9.

THE PRINCIPAL UNDER SECRETARY TO THE JOINT HONORARY SECRETARIES, SYDNEY INFIRMARY.

Colonial Secretary's Office,
Sydney, 1 June, 1869.

GENTLEMEN,

I am directed by the Colonial Secretary, to enclose, for enquiry and report upon the allegations therein made, the accompanying copy of a letter from the Inspector of Public Charities, relative to the woman named in the margin, and boys from the N.S.S. "Vernon," having, when discharged from the Sydney Infirmary, been found to be infested with vermin. 26 May, 1869.
Bridget Keys.

I have, &c.,
HENRY HALLORAN.

No. 10.

THE JOINT HON. SECRETARY, SYDNEY INFIRMARY, TO THE COLONIAL SECRETARY.

Sydney Infirmary,
4 June, 1869.

SIR,

I have the honor to acknowledge the receipt of your favour, covering a letter of complaint from the Inspector of Public Charities, of the 26th May.

The charges were at once made known to the Lady Superintendent, and I now have the pleasure of handing you her report on them, which must appear quite satisfactory.

I remain, &c.,
JOHN E. MANNING,
Joint Hon. Secretary.

[Enclosure in No. 10.]

The Lady Superintendent, Sydney Infirmary, to The Joint Hon. Secretary.

Sydney Infirmary,
4 June, 1869.

Sir,

I have received the memorandum, enclosing the copy of report made by the Inspector of Public Charities on the dirty state of Bridget Keys and some boys of the "Vernon," on their leaving the Institution.

The sister and nurse of Ward No. 11, report that Bridget Keys was in a miserable dirty state when admitted, and while in was a refractory obstinate patient, in continual rebellion against the nurse, whose orders she generally set at defiance. We all pitied her helpless condition, or she would have been reported and discharged a few weeks after admission.

There are small-toothed combs in every ward; when I have suspicion of a patient's head, I see them used myself; we also have procured Stavis Agria, with which the patients' heads are frequently washed.

When patients are able to get up, and are strong and able-bodied, as was Bridget Keys, the nurse is not required to comb out their hair every morning,—as with 21 patients under her charge, this would be impossible, but that the heads are inspected I know, for I have often assisted in the work myself. The female wards are, of course, more difficult to keep clean in this respect than the male wards, on account of the long hair, and there being almost daily accessions of people in the filthiest condition. When I see a head beyond our powers of cleaning I order the hair to be cut short, but so piteous are the tears and lamentations over the loss of the hair, that when it is possible my orders are evaded.

You reported to me the case of a "Vernon" boy having been found in a dirty state on being sent back to the ship some months ago, I recollect. I suppose the case referred to in the Inspector's letter is the same.

I could not at the time account for such a state of things, as Sister Eliza, who has charge of the wards where he was, is most particular about her patients' heads, and will wash them all round the ward frequently herself.

In an Institution of this kind, where people of the lowest class are daily admitted, I have found, both in England and on the Continent, it is impossible wholly to prevent the introduction of this calamity, and where there are old people, and cases of severe disease, a few hours suffices for their incredible multiplication; in this hot climate of course the evil is increased, for more are brought in; there is scarcely a patient admitted who can be said to be entirely clean in this particular.

I am extremely sorry it has been found necessary to report us for negligence; in future I must have more heads cropped, and a stricter watch kept on the patients.

I have, &c.,
L. OSBURN,
Lady Superintendent.

P.S.—Bridget Keys had for some time a bath every morning; when we were scarce of water this could not be allowed to all the patients, but she continued to have one frequently.

THE INSPECTOR OF PUBLIC CHARITIES, B.C., 8 June, 1869.—H.H.

No. 12.

THE INSPECTOR OF PUBLIC CHARITIES TO THE PRINCIPAL UNDER SECRETARY.

Sydney, 12 June, 1869.

SIR,

69-4252 herewith.

In returning the papers connected with a complaint respecting the condition of Bridget Keys, a discharged patient from the Sydney Infirmary, I have the honor to state, for the information of the Honorable Colonial Secretary, that I considered it necessary to make some further inquiries, after reading the report of the Lady Superintendent of the Infirmary, in which she remarks—"that Bridget Keys was in a miserable dirty state when admitted, and while in, was a refractory obstinate patient, in continual rebellion against the nurse, whose orders she generally set at defiance."

I find the latter part of this statement is borne out by the Matron of the Hyde Park Asylum, who says the girl is very troublesome and difficult to manage, but before permitting Keys to leave the Asylum for the Infirmary, she, herself, assisted by a wardswoman, carefully examined the girl, which enables her to affirm positively that Keys was quite free from vermin, and her clothing was also very clean; which statement is confirmed by the wardswoman and several of the inmates who were present when the girl was inspected, and they all agree she could not have been in a dirty state when she left that Asylum.

The Lady Superintendent in her report points out the impossibility of wholly preventing the introduction of vermin in Institutions like the Infirmary, which, I think, shows a necessity for the nurses to increase their vigilance and care in order to guard against the evil I have had occasion to report.

I have, &c.,

R. C. WALKER,

Inspector of Public Charities.

No. 13.

THE PRINCIPAL UNDER SECRETARY TO THE JOINT HONORARY SECRETARY, SYDNEY INFIRMARY.

Colonial Secretary's Office,
Sydney, 22 June, 1869.

SIR,

12th June, 1869.

In acknowledging the receipt of your letter of the 4th instant, transmitting a report from the Lady Superintendent of the Nursing Sisters of the Sydney Infirmary, upon a communication from the Inspector of Public Charities, complaining of the filthy state of the head of a late inmate of the Institution, named Bridget Keys, I am directed by the Colonial Secretary to enclose the copy of a further report from Mr. Inspector Walker upon the subject.

I have, &c.,

HENRY HALLORAN.

No. 14.

THE JOINT HONORARY SECRETARY, SYDNEY INFIRMARY, TO THE COLONIAL SECRETARY.

Sydney Infirmary,
30 June, 1869.

SIR,

I have been requested by the House Committee to acknowledge the receipt of your letter, of date 22nd June, enclosing a letter from the Inspector of Public Charities, with reference to the case of Bridget Keys.

I have, &c.,

M. H. STEPHEN,

Joint Hon. Secretary.

No. 15.

THE SECRETARY TO THE GOVERNMENT ASYLUMS BOARD TO THE HOUSE COMMITTEE, SYDNEY INFIRMARY.

The Government Asylum,
Sydney, 30 April, 1868.

Gentlemen,

I am directed by the Board of Management of the Government Asylums for the Infirm and Destitute, to inform you that Margaret White, who was admitted to the Hyde Park Asylum on the 18th instant, from the Sydney Infirmary, on Dr. Alleyne's order, was found on her arrival to be "swarming with vermin."

I have, &c.,

FREDERIC KING,

Secretary.

No. 16.

No. 16.

THE SUPERINTENDENT, SYDNEY INFIRMARY, to THE SECRETARY TO THE GOVERNMENT ASYLUMS BOARD.
Sydney Infirmary,
4 May, 1868.

SIR,

I have been desired by the House Committee to acknowledge the receipt of your letter of the 31st April, complaining that Margaret White, who was admitted to the Hyde Park Asylum on the 18th ultimo, from this Institution, on Dr. Alleyne's order, was found on her arrival to be "swarming with vermin."

The House Committee called upon the Sister, under whose immediate care the patient was whilst in the Hospital, for her report on the case.

The messenger in charge of the patient's clothes, who accompanied Margaret White to the Asylum, was also called on to report.

I forward herewith a copy of these reports, for you information.

I have, &c.,
JOHN BLACKSTONE,
Superintendent.

[Enclosures in No. 16.]

COPIES of Reports received from Sister Haldane and Messenger Bennett, respecting the case of Margaret White, late a patient of the Sydney Infirmary.

SISTER Haldane having been in charge of the Ward from which Mrs. White was removed to the Hyde Park Asylum, begs to state that while she was there Mrs. White's habits were such that she required to be washed all over the body, always once, and sometimes twice or thrice a day, and that she required and had more frequent changes of bed and body linen than any other patient.

Sister H. is aware that Mrs. White's head produced lice, on which account her hair was cut off close to the scalp. It was constantly attended to by the nurse, and an application for destroying them used.

On going out like other patients Mrs. White was dressed in her own clothes.

The Sister cannot undertake to say in what state they were.

Sydney Hospital,
4th May, 1868.

Copeland Bennett to House Committee.

Sydney Infirmary,
4 May, 1868.

Gentlemen,

Having been called upon by the Superintendent this morning to make a statement respecting Margaret White's clothes, discharged from this Institution on the 18th April, for Hyde Park Asylum, I beg to state that her clothes were under my charge while she was here; and on receiving patients' clothes I make it a practice to inspect them, to see that they are clean, so that they may be kept separate from clean clothes belonging to other patients. Her clothes appeared to me to be perfectly clean, and free from anything like vermin.

I also went with her to Hyde Park, and did not then notice anything like vermin on her person. I think if there were any I must have seen them.

I beg, &c.,
COPELAND BENNETT.

IV.—Coroner's Inquest on Infant.

No. 17.

THE UNDER SECRETARY TO THE LAW DEPARTMENT to THE PRINCIPAL UNDER SECRETARY.

Crown Law Offices,
Sydney, 23 March, 1870.

SIR,

Referring to your letter of 21st instant, requesting copies of the depositions taken at an inquest held during the month of November last, touching the death of an infant, said to have died in the Sydney Infirmary, for the purpose of being laid before the Legislative Assembly,—I am directed by the Honorable the Attorney General to forward the accompanying copy of the depositions in the case of an infant named Annie Louisa Miller; and also a copy of the correspondence on the subject of the rider attached to the verdict of the jury, between this office and the City Coroner, and the medical officers of the Infirmary.

I am at the same time to observe that the Attorney General believes this case must be the case referred to, although the death did not, as supposed, take place in the Sydney Infirmary.

I have, &c.,
W. E. PLUNKETT.

[Enclosures

[Enclosures in No. 17.]

New South Wales, }
to wit. }

AN inquisition indented taken for our Sovereign Lady the Queen, at the house of Charles M'Auley, known as the "St. Peter's Hotel," St. Peter's, in the District of Sydney, in the said Colony of New South Wales, the eighth day of November, in the thirty-third year of the reign of our Sovereign Lady Queen Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and in the year of our Lord one thousand eight hundred and sixty-nine, before Henry Shiell, gentlemen, Coroner for the District and City of Sydney, on view of the body of Annie Louisa Miller, lying dead at Campbell-street, St. Peter's, in the said district of Sydney, upon the oath of Charles M'Auley, foreman, Abraham Howarth, Henry Booth, William Evis, Alfred Gannon, Allen Grey, good and lawful men of the said Colony, duly chosen, and who, being then and there duly sworn, and charged to inquire for our said Sovereign Lady the Queen, when, how, and by what means the said Annie Louisa Miller came by her death, do, upon our oath, say, we find that Annie Louisa Miller, at Sydney, on the 6th instant, died from natural causes, and that the conduct of the medical officers at the Infirmary, in not looking at the child when brought there by the mother, is highly censurable.

In witness whereof, as well as the said Coroner, the Jurors aforesaid have hereunto set their hands and seals, the day and year first above-written.

HENRY SHIELL, Coroner. (L.S.)
CHARLES M'AULEY, Foreman. (L.S.)
ABRAHAM HOWARTH. (L.S.)
GEO. AVIS. (L.S.)

ALFRED GANNON. (L.S.)

New South Wales, }
to wit. }

INFORMATION of witnesses severally taken and acknowledged on behalf of our Sovereign Lady the Queen, touching the death of Annie Louisa Miller, at the house of Charles McAuley, known as the "St. Peter's Hotel," St. Peter's, in the District of Sydney, in the said Colony of New South Wales, on the eighth day of November, in the thirty-third year of the reign of our Sovereign Lady Queen Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and in the year of our Lord one thousand eight hundred and sixty-nine, before Henry Shiell, gentleman, Coroner for the District and City of Sydney, on an inquisition then and there taken on view of the body of the said Annie Louisa Miller, lying dead at Campbell-street, St. Peter's, in the said District of Sydney, as follows:—

James Ebenezer Miller, on oath, says:—I am a woolwasher, and reside at Campbell-street, St. Peter's, District of Sydney; the dead body, now viewed at my residence and in my presence, by the Coroner and jury, is that of my daughter, named Annie Louisa Miller, aged eight months, a native of Liverpool, in this Colony; deceased has been weak and delicate since her birth; my wife nursed deceased for eight days, when she became out of her mind, and upon medical certificate she was sent to the Lunatic Asylum, where she remained for five months, during which time the deceased was nursed by the Benevolent Asylum, for which I paid six shillings per week; I saw deceased frequently while she was in there; she was ill there; I spoke to Dr. Renwick about deceased, and he said her illness was caused by weakness; deceased did not improve in condition or grow; I saw the woman who was nursing deceased; she was suckling her own child as well as deceased; a week after the return of my wife from Tarban Creek I brought deceased home; deceased was then healthy, but thin, and had a good appetite; my wife was unable to suckle deceased, who was fed on corn-flour, milk, and arrowroot; although deceased had a good appetite she did not grow in flesh; within the last week I observed a change in deceased; that was on last Friday; deceased has been suffering from looseness of bowels more than usual during the last fortnight; her bowels were very much relaxed during that time; I gave deceased some soothing powders and castor oil; on last Friday I observed a marked change in deceased, her eyes became sunken, and she was very much weaker; I became alarmed about her; that was on last Friday night, before I left home; on Saturday morning my wife started for Sydney, to take deceased to the Infirmary; I went to my work, and in consequence of something I heard I returned to St. Peter's during the afternoon, about twenty minutes to 4 o'clock, and found my child dead; during the last fortnight I changed deceased's diet from corn-flour to arrowroot; my wife's memory is not quite good yet; she was able to take care of deceased, but sometimes she was neglectful; she is not to be depended upon in her statements; she wanders in her statements; she told me, on my return home on Saturday afternoon, that she arrived at the Infirmary with deceased about 10 o'clock, and there saw two doctors, who only looked at the child, but would not prescribe for her, saying, she would have to wait and see the District Doctor (Dr. Fyffe); that she waited about, and that the child died before Dr. Fyffe arrived; Dr. De Kempf certified that my wife was insane, and she was also examined at the Police Office, by the Police Surgeon, and then committed to the Receiving House at Darlinghurst, and transferred from thence to Tarban Creek, from whence she was discharged three months ago cured.

Sworn before me, this 8th day of November, A.D. 1869,—
HENRY SHIELL, Coroner.

J. E. MILLER.

Ellen Miller, on oath, says:—I am a married woman, and reside with my husband, James Ebenezer Miller, at St. Peters, Cook's River Road; the dead body now viewed in my presence by the Coroner and jury in a house in Campbell-street, St. Peter's, is that of my child, named Annie Louisa Miller; I have been dry-nursing the deceased during the last three months, during which time she eat very little, her diet was corn-flour, arrowroot, milk, and bread; I gave her soothing powders and castor oil about a fortnight ago; I gave deceased soothing powders as I thought she was teething; during the last fortnight her bowels were much relaxed, having stools about three times daily and three times nightly; she seemed to be suffering from dysentery, and for that I gave deceased one dose of castor oil; deceased became weaker and thinner; when her bowels became loose I changed her diet from corn-flour to arrowroot; she eat very little during the last fortnight; on last Friday night I observed a change in her; her eyes, which became sunken, had an unnatural appearance; on Saturday I took deceased to the Infirmary; I had an order from Hordern the draper for a doctor to see deceased at the Infirmary; on my arrival there I asked for the doctor; the old man at the gate asked me for the order; I produced the order; the man said I would have to wait till 2 o'clock to see the doctor, Dr. Fyffe; I returned at 1 o'clock, and some people advised me to go in and see a doctor; I did so; he told me to go out into the air with the child as she was dying; he looked at the child; I saw another doctor who told me to wait till Dr. Fyffe arrived; I went into the long-room and sat on a seat near the window, and the child died shortly afterwards; where I saw the first doctor was in a small room off the long-room at the end of the room; I do not know the doctors or their names.

Sworn before me, this 8th day of November, 1869,—
HENRY SHIELL, Coroner.

ELLEN MILLER.

William Gillett Sedgwick, on oath, says:—I am a legally qualified medical practitioner, residing at Newtown; this morning I made an external examination of the body of a child lying dead in a house in Campbell-street, St. Peter's; that child I saw in the presence of the Coroner and jury; the child was thin and attenuated in appearance, not larger than a four-months child; there were no marks of violence or injury on the body, there are two teeth in the lower jaw, and from the evidence I have heard I am of opinion that the child was never a healthy child, and that she died from exhaustion, consequent on diarrhoea, the effect of teething.

Sworn before me, this 8th November, 1869,—
HENRY SHIELL, Coroner.

W. G. SEDGWICK.

The Under Secretary to the Law Department to the City Coroner.

(No. 254.—1782.)

Crown Law Offices,
Sydney, 22 November, 1869.

Sir,

Referring to the case named in the margin, I am directed by the Honorable the Attorney General to state, that the jury appears to him to have been rash in censuring the medical officers of the Infirmary upon such evidence as they had before them, and without an opportunity being afforded to these gentlemen to be heard.

The Attorney General has observed that the only evidence was that of the unfortunate mother of the deceased child, who had lately been in a lunatic asylum, and whose husband stated that her testimony was not reliable, and that she was still subject to wander in her statements; and there was nothing to show that any of the officers had been guilty of any neglect, whereby the child's inevitable death was hastened.

But the Attorney General considers it is of more importance to note, that the censure was pronounced behind the backs of the gentlemen censured, and without their having had the slightest opportunity of answering or explaining the statements, such as they were, which had been made to their prejudice.

I have, &c.,
W. E. PLUNKETT.

The City Coroner to the Under Secretary to the Law Department.

Coroner's Office,
Sydney, 25 November, 1869.

Sir,

I have the honor to acknowledge receipt of your letter of the 22nd instant, No. 254, communicating the Honorable the Attorney General's nonconcurrence, on grounds assigned in the censure by the jury, in the case noted in the margin, upon the medical officers of the Infirmary; and to state, in reply thereto, that although I signed the inquisition, I did not thereby endorse the finding of the jury.

I dissented from it, considering that the evidence did not justify the expression of such a condemnatory opinion.

But the question arises, on due consideration of your letter, whether I have legally the power to refuse (if I dissent from) the verdict of a jury, who by law are the judges of the evidence.

Will you have the goodness to invite the Honorable the Attorney General's opinion on this point, for my future guidance.

I have, &c.,
HENRY SHIELL,
Coroner.

The Under Secretary to the Law Department to the City Coroner.

(No. 283.—1782.)

Crown Law Offices,
Sydney, 8 December, 1869.

Sir,

Referring to your letter of 25th ultimo, relative to the case named in the margin, and enquiring whether you have legally the power to refuse the verdict of a Jury.—I am instructed by the Honorable the Attorney General to state, he was glad to find that you were not a party to the condemnation of the medical officers of the Infirmary behind their backs, and that on the contrary you dissented from it on the ground that the evidence was not sufficient to justify its expression.

In reference to the question put to the Attorney General by you, he is of opinion that the condemnation of persons who have not been heard and who might readily have been called upon for denial or explanation, if desired, cannot legitimately fall within the scope of a sworn verdict of Coroner's Juries,—especially when, as is in the case under consideration, it is not even imputed to those persons that their conduct has been a cause of deceased's death.

If, however, the jury will in any case insist upon attaching a rider to their verdict, giving expression to a like condemnatory opinion, the Attorney General does not advise you to reject it; you should however, I am to add, caution the jury against such a breach of the principles of justice as to condemn upon *ex parte* and insufficient statements, and against travelling out of the limits of enquiry as to the causes of death; and if your own judgment should be opposed to the propriety of the rider, the Attorney General advises that you should openly state your opinion to that effect, and place it on record with the proceedings.

By so doing you may, in the Attorney General's opinion, prevent serious and unwarrantable injury to innocent persons.

I have, &c.,
W. E. PLUNKETT.

The Under Secretary to the Law Department to the Medical Officers, Sydney Infirmary.

(No. 1782.)

Crown Law Offices,
Sydney, 26 February, 1870.

Gentlemen,

I am directed by the Honorable the Attorney General to forward for your information the accompanying copy verdict of the jury in the case of Annie Louisa Miller, deceased, upon whose remains an inquest has been held in November last; and also the enclosed copy correspondence with the City Coroner on the subject of the rider attached to the verdict, censuring the medical officers of the Infirmary.

The correspondence would have been furnished on an earlier date, but the matter has been inadvertently overlooked.

I have, &c.,
W. E. PLUNKETT.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 19. TUESDAY, 1 MARCH, 1870.

11. Sydney Infirmery:—Mr. S. Brown moved, pursuant to Notice No. 1, "That" having considered the papers relating to the Sydney Infirmery, ordered, on the 13th October, 1868, and 19th January, 1869, to be printed, this House is of opinion that the Government should at once cause to be issued to the Trustees of such Infirmery a grant of the land situate in Macquarie-street, Sydney, referred to in such papers.
Debate ensued.
Mr. Parkes moved, That the Question be amended by omitting all the words after the word "That," with a view to inserting in their place the words "a Select Committee be appointed to consider and report upon the expediency of granting the land in Macquarie-street, on which the Sydney Infirmery at present stands, to Trustees, for the purposes of the said Infirmery."
" (2.) That such Committee consist of Mr. Cowper, Mr. S. Brown, Mr. Clarke, Mr. Wearne, Mr. Dodds, Mr. Wilson, Mr. Piddington, Mr. King, Mr. Webb, and the Mover."
Debate continued.
Question,—That the words proposed to be omitted stand part of the Question,—put and negatived.
Question,—That the words proposed to be inserted in the place of the words omitted, be so inserted,—put and passed.
Question then,—That a Select Committee be appointed to consider and report upon the expediency of granting the land in Macquarie-street, on which the Sydney Infirmery at present stands, to Trustees, for the purposes of the said Infirmery.
(2.) That such Committee consist of Mr. Cowper, Mr. S. Brown, Mr. Clarke, Mr. Wearne, Mr. Dodds, Mr. Wilson, Mr. Piddington, Mr. King, Mr. Webb, and the Mover,—put and passed.

VOTES NO. 27. TUESDAY, 15 MARCH, 1870.

9. Sydney Infirmery ("Formal" Motion):—Mr. Parkes moved, pursuant to Notice No. 6, That Mr. Montagu Consett Stephen be appointed a Member of the Select Committee on the Sydney Infirmery, in place of Mr. Stephen Brown.
Question put and passed.

VOTES NO. 36. WEDNESDAY, 30 MARCH, 1870.

5. Member of Legislative Council as Witness:—*Mr. Farnell*, on behalf of Mr. Parkes, moved, *without previous notice*, That the following Message be carried to the Legislative Council:—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee "to consider and report upon the expediency of granting the land in Macquarie-street, on which the Sydney Infirmery at present stands, to Trustees, for the purposes of the said Infirmery," and that Committee being desirous to examine the Honorable George Allen, Member of the Legislative Council, in reference thereto, requests that the Legislative Council will give leave to its said Member to attend and be examined by the said Committee, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 30th March, 1870.*

Speaker.

Question put and passed.

14. Member of Legislative Council as Witness:—The Speaker reported the following Message from the Legislative Council:—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 30th March, 1870, requesting leave for the Honorable George Allen, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, on the "Sydney Infirmery," the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,
Sydney, 30th March, 1870.*

T. A. MURRAY,
President.

VOTES

VOTES No. 45. THURSDAY, 14 APRIL, 1870.

3. * * * * *
- (2.) Mr. Cowper laid upon the table a letter from the Medical Adviser to the Government, enclosing a letter from Mr. Alfred Roberts, on the state of certain hospitals in the country districts.
Ordered to be printed, and referred to the Select Committee now sitting on "Sydney Infirmary."

VOTES No. 48. FRIDAY, 22 APRIL, 1870.

2. Sydney Infirmary:—Mr. Parkes, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 1st March, 1870, together with Appendix.
Ordered to be printed.
-

1870.

SYDNEY INFIRMARY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 1st March, 1870,—“to consider and report upon the expediency of granting the land in “*Macquarie-street, on which the Sydney Infirmary at present stands, to Trustees, for the purposes of the said Infirmary*”,—and to whom was referred, on the 14th April, “a letter from the *Medical Adviser to the Government, enclosing a letter from Mr. Alfred Roberts on the state of certain Hospitals in the country districts*”,—have agreed to the following Report:—

1. Your Committee have taken the evidence of a number of intelligent witnesses on the special matter referred to them, and in the course of their inquiry much valuable information has been received on the question of providing adequate hospital accommodation for the increasing wants of the metropolis. On the larger subject thus incidentally introduced your Committee do not consider that they are permitted to enter by the terms of their appointment, but this part of the evidence cannot fail of being useful in future inquiries of a cognate character.

2. On the expediency of the site on which the Sydney Infirmary is built being granted to Trustees, the evidence leads to the following conclusions:—

- (1.) That the situation is convenient for a large part of the population, and is unexceptionably healthy.
- (2.) That the buildings at present erected on this site, though not without some disadvantages, are not unsuitable for hospital purposes.
- (3.) That the front range of buildings—the only part to which serious objections may be urged—is capable of being much improved by the enlargement of the windows, and other means of better ventilation.
- (4.) That the Infirmary buildings, as they at present exist, will probably last for fifty years without any large expenditure in further alterations.
- (5.) That there is reason to believe that, if the site were granted to Trustees, the Infirmary would be benefited as a public institution, by private persons taking a more active philanthropic interest in its support and management; while there does not appear to be any public advantage in the Government retaining possession of it.

3. Your Committee therefore recommend to your Honorable House, that the site of the Infirmary be granted to three or more Trustees, for the purposes of a general Hospital, on condition that no part of the main buildings shall be removed without the sanction of both Houses of Parliament, obtained by express resolution.

No. 1 Committee Room,
Sydney, 22 April, 1870.

HENRY PARKES,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 8 MARCH, 1870.

MEMBERS PRESENT:—

Mr. Parkes,		Mr. King,

Witness withdrew.

Alfred Roberts, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That A. Moffitt, Esq., J. C. Cox, Esq., M.D., and A. M. Brown, Esq., M.D., be summoned to give evidence at the next meeting.[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY,

TUESDAY, 22 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Parkes in the Chair.

Mr. Wilson, | Mr. King.

Andrew Moffitt, Esq., called in and examined.

Witness withdrew.

James C. Cox, Esq., M.D., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That A. M. Brown, Esq., M.D., E. Bedford, Esq., and C. Nathan, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 25 MARCH, 1870.

MEMBER PRESENT :—

Mr. Wilson.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 29 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Parkes in the Chair.

Mr. Wilson, | Mr. Webb.

A. M. Brown, Esq., M.D., called in and examined.

Witness withdrew.

C. Nathan, Esq., called in and examined.

Witness withdrew.

E. Bedford, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

Motion made (*Mr. Wilson*), and Question put,—“That the Chairman move the House that a Message be sent to the Legislative Council requesting leave for the Honorable G. Allen, M.L.C., to attend and be examined by this Committee,”—*agreed to*.

Ordered,—That R. Schuette, M.D., and the Honorable G. Allen, M.L.C., be summoned to give evidence at the next meeting.

[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 1 APRIL, 1870.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 13 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Parkes in the Chair.

Mr. Cowper, | Mr. King,
Mr. Wilson, | Mr. M. C. Stephen,
Mr. Wearne, | Mr. Webb.

The Clerk laid before the Committee a letter from Alfred Roberts, Esq., requesting that he may be re-examined before the Committee.

Alfred Roberts, Esq., called in and further examined.

Witness withdrew.

The Clerk laid before the Committee a letter from Thos. Rowe, Esq., asking “whether he was expected to furnish the Committee with plans of the ground and buildings of the Infirmary without charge.”

The Committee were of opinion that no charge ought to be made, and desired the Clerk to inform Mr. Rowe accordingly.

Committee deliberated.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 20 APRIL, 1870.

In the absence of a Quorum, the meeting called for this day lapsed.

FRIDAY,

FRIDAY, 22 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Farkes in the Chair.

Mr. Wilson,

Mr. Webb.

Mr. King,

Chairman submitted Draft Report. Same read 1°, as follows :—

DRAFT REPORT.

1. Your Committee have taken the evidence of a number of intelligent witnesses on the special matter referred to them, and in the course of their inquiry much valuable information has been received on the question of providing adequate hospital accommodation for the increasing wants of the metropolis. On the larger subject thus incidentally introduced, your Committee do not consider that they are permitted to enter by the terms of their appointment, but this part of the evidence cannot fail of being useful in future inquiries of a cognate character. -

2. On the expediency of the site on which the Sydney Infirmary is built being granted to Trustees, the evidence leads to the following conclusions :—

- (1.) That the situation is convenient for a large part of the population, and is unexceptionably healthy.
- (2.) That the buildings at present erected on this site, though not without some disadvantages, are not unsuitable for hospital purposes.
- (3.) That the front range of building—the only part to which serious objections may be urged—is capable of being much improved by the enlargement of the windows, and other means of better ventilation.
- (4.) That the Infirmary buildings, as they at present exist, will probably last for fifty years without any large expenditure in further alterations.
- (5.) That there is reason to believe that if the site were granted to Trustees, the Infirmary would be benefited as a public institution, by private persons taking a more active philanthropic interest in its support and management, while there does not appear to be any public advantage in the Government retaining possession of it.

3. Your Committee therefore recommend to your Honorable House, that the site of the Infirmary be granted to three or more Trustees for the purposes of a general Hospital, on condition that no part of the main buildings shall be removed without the sanction of “the Governor in Council.”

Draft Report read 2° paragraph by paragraph.

Paragraph 1 read and *agreed to*.

Paragraph 2 read and considered.

Sections 1, 2, 3, and 4 *agreed to*.

Section 5 read.

Question put,—That section as *read* stand part of the paragraph.

Committee divided.

Ayes, 2.

Mr. King,
Mr. Webb.

Noes, 1.

Mr. Wilson.

Paragraph then *agreed to*.

Paragraph 3 *read* and considered.

Amendment proposed (*Mr. Wilson*), to *omit* the words “the Governor in Council” at the end of paragraph, and *insert* in lieu thereof the words “both Houses of Parliament obtained by express resolution”—*agreed to*.

Paragraph as *amended* agreed to.

Motion made (*Mr. King*), and Question put,—That the Draft Report of the Chairman, as *amended*, be the Report of this Committee,—*agreed to*.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SYDNEY INFIRMARY.

THURSDAY, 10 MARCH, 1870.

Present:—

MR. COWPER,
MR. DODDS,
MR. KING,
MR. PARKES,

MR. PIDDINGTON,
MR. WEARNE,
MR. WEBB,
MR. WILSON.

WILLIAM RICHMAN PIDDINGTON, ESQ., IN THE CHAIR.

Thomes Rowe, Esq., examined:—

1. *Chairman.*] Do you hold any office in connection with the Sydney Infirmary? Yes, I am the Architect T. Rowe, Esq. to that institution.
 2. Have you formed any opinion with regard to the stability of the building fronting Macquarie-street? 10 Mar., 1870.
Yes.
 3. Can you give the Committee any opinion as to the probable duration of that building, in its present state? It is in a very defective state at present—unfit almost for the purpose it is used for as a hospital.
 4. With regard to the carcass of the building, as I may term it,—are you aware of the thickness of the walls? The walls are thick, but are bulging a little in some places. I think the walls are the best part of the building.
 5. What is the material of the wall? Ordinary freestone. I am inclined to think it is backed up with rubble—cut courses in front.
- Mr. Parkes here entered the room and took the Chair.
6. *Chairman.*] Have you directed your attention to hospital architecture? Yes.
 7. To the most improved methods of construction for hospital purposes? Yes; I think I have erected more hospitals than any other architect in the city of Sydney.
 8. Have you given your attention to what has been done in the improvement of these buildings in other parts of the world—in England and elsewhere? Yes, I have studied the matter a good deal.
 9. I believe the general opinion is, that the pavilion style is the best, and most suited to the purpose? Yes.
 10. A building so constructed and lighted that the air should pass right through from one side to the other? Yes.
 11. The old building here is of that construction, is it not? Yes, the wards are in the pavilion style.
 12. Is the building as at present constructed, in your opinion, quite suitable for a hospital—the old building? Not at all; there is a want of convenience —
 13. I mean the shell of the building as it stands—without reference to the conveniencies—is the building suitable for hospital purposes? It is not suitable as it stands, without being altered in some way.
 14. Will you be kind enough to inform the Committee, speaking professionally, what alterations you consider necessary to make it in a high degree suitable for hospital purposes? I may mention to the Committee that I received my notice only about three-quarters of an hour ago. If I had had it before I should have referred to my reports and plans, but I speak now from memory. I examined the building with Mr. Barnet, the Colonial Architect, on one occasion. Prior to that of course I knew the state of the building.

T. Rowe, Esq.
10 Mar., 1870.

The roof is bad ; it is a double roof, called a W roof, and there is a large gutter running between, which is in a very defective state ; the windows are bad—very bad ; the doors are bad ; the staircases are bad ; and the floors are bad. The walls, as I before said, are the best part of the building.

15. If you were called upon to prepare a plan for reconstructing that building—we are now talking exclusively of the old building, the front range—should you advise any alteration? Most decidedly.

16. What would you advise? The windows are not sufficiently near the ceiling for ventilation, the vitiated air that ascends has no means of escape, and there is a down draught through all the building, which is very injurious to the patients.

17. At present foul air collects in the upper part of the building and there being no means of escape it must pass downwards towards the patients in order to escape? Yes.

18. *Mr. Cowper.*] Could there not be ventilation all round the top of the ceilings to allow the foul air to pass off? That would only afford the means of escape for the vitiated air, but it would not prevent the down draught from the window, which is very injurious to patients.

19. *Chairman.*] Is the foundation good? I believe the foundation is very fair. We had it opened by a mason and examined down as far as the footings.

20. Are the walls sufficiently strong to bear cutting away in order to carry the windows up to the ceiling—the method which I believe is approved at the present time? It is rather dangerous to interfere with walls of that kind, still it is possible with care, to cut openings anywhere.

21. With regard to the out-buildings of the Infirmary, there are a series of buildings for washing and other purposes, are there not? Yes.

22. A rather extensive laundry? Yes.

23. There are necessarily extensive cook-houses? Yes.

24. These at present form a group of buildings in the rear? In the rear, in the centre part.

25. I suppose you are of opinion, from what you have read of hospitals, that it is a very undesirable thing to have these outhouses situated as they are in connection with the building in Macquarie-street? I do not know that they are badly situated; they are unsuitable for the purposes for which they are used.

26. Are they not generally in modern buildings in the basement story? Not always.

27. They are in some instances? Yes.

28. Are they in many instances that you know of? I scarcely know of a hospital having basements; I certainly do not know of any modern hospitals.

29. If you were going to erect a new building as a hospital, should you have the out-buildings similarly situated to those in the rear of the Infirmary? Not on that ground. If I were designing a hospital for that particular site, I should bring all the necessary offices you speak of into the basement, because the ground is not very extensive; but if I were about to design a hospital for a large piece of ground, I should put the kitchens, &c., outside, detach them, and connect them with the main building by a covered way.

30. What is the area of the ground occupied by the Infirmary? About 366 feet frontage to Macquarie-street by 351 feet deep, giving an area of 128,466 feet, which is 14,274 yards, or about 3 acres.

31. Some two or three years ago, the Directors of the Infirmary proposed some extensive alterations? Yes.

32. Can you state to the Committee what was the extent of the plan of alteration then proposed by the Directors? The intention at that time was to take down the entire buildings you have mentioned in the rear—the kitchens, laundry, closets, &c.—and to build new kitchens, laundry, engine-house, and sundry other conveniences, in one entire block. The old building was to be altered by extending the centre portion, back and front, which were to include bath, lavatories, and nurses' rooms. At the two extreme ends of the buildings the verandahs were to have been enclosed, and to have had bath-rooms, closets, lavatories, &c., for the convenience of patients.

33. Did that plan include any material interference with the old range of buildings we have been speaking of? The windows were altered in this way,—there were to have been apertures made in the old walls, over the windows, a sort of mezzanine or window, in such a way as to prevent down draughts.

34. This was before the nurses arrived from England, or the Prince Alfred Memorial Hospital was originated? Yes.

35. *Mr. Cowper.*] Do you think it desirable to interfere with the building for the purpose of making improvements in it, or might it answer the purpose for many years to come? I certainly do not think it answers the purpose it is used for; it ought to be altered or improved on in some way.

36. You think there would be no danger in cutting the walls? No, with proper care.

37. *Chairman.*] Supposing the building were altered in the manner you think it desirable it should be, how long would be its probable duration? What was intended to be done was almost a reconstruction—it would not last so long as a new building, but I should say it would last fifty years.

38. *Mr. Cowper.*] Do you think there is a necessity for interfering with it at all? I do certainly.

39. To what extent? To the extent I have mentioned—to modernize it.

40. What would be the cost to modernize it? I have made calculations of all these matters and should have brought them with me. I think the tenders received for the alterations were somewhere about £6,000 or £7,000 at that time.

41. Do you think it would be desirable to pull the building down and to erect a new building in its place? I think I reported to the effect that the outlay would be so much to modernize it that I recommended the building should be taken down and reconstructed.

42. That could not be done for £6,000? No. The tenders of £6,000 or £7,000 were for the alterations shown in the plan and specifications, but besides these it was found that the altering the floors, windows, doors, staircases, roof, &c., would create a considerable outlay; and reasoning in that way I thought it would be better to take down the entire building and reconstruct it.

43. Do you think it would be better to pull this building down and to erect another in its place, or to erect another hospital more suited to the prospective wants of the Colony on another site? I think there should be a hospital on the present site or near it, but I still think there should be another and more commodious one in some other part a short distance from the city.

44. If £6,000 were spent upon this building in modernizing it, would it answer the objects of a hospital for many years to come? I think it would—I would not say £6,000, but from £6,000 to £8,000.

45. There are a number of new buildings in the immediate vicinity of the old building? Yes.

46. Are they all valuable and well constructed? Yes.

47. Were you the architect of them? Yes, of the Nightingale wing. I also altered the southern wing; T. Rowe, Esq. that, like the main front, was without the necessary conveniences that a hospital should have.
48. These have all been erected under your superintendence? Yes.
49. And have the requirements necessary for such institutions according to modern ideas? Yes. 10 Mar., 1870.
50. These form a large proportion of the building now on the ground? Yes; the southern wing. The officers' quarters have also been altered.
51. Do you think it is absolutely necessary to pull the building down and to re-erect it? I do not say it is absolutely necessary to pull it down and to re-erect it, but that it is necessary to alter it in some way.
52. *Mr. Wilson.*] You have, in answer to a question from Mr. Cowper, used the expression to "modernize" this hospital—Is it possible to modernize this hospital, and to render it suitable for the requirements of a city like Sydney, on that site of three-quarters of an acre? An enlarged hospital?
53. A hospital suitable for the requirements of the city of Sydney, and of the country generally—supposing the whole of that building were swept away? You do not refer to the Nightingale wing, but to the main front only when you speak of sweeping the buildings away?
54. You have spoken of modernizing the present hospital—I wish to know whether it would be possible to erect a building on these improved modern principles suited to the requirements of Sydney, on that site, supposing the land were cleared of the buildings at present upon it? It would be possible to build a hospital there, but whether it would be sufficient for the wants of Sydney is another question.
55. I am asking you whether upon that small area it would be possible to erect a hospital with the modern appliances you speak of suited to the requirements of the city of Sydney? I do not think it would, and I do not think it desirable that there should be but one hospital to meet the requirements of the city, but I think the present building could be modernized so as to suit it for a receiving hospital, from which patients might be drafted to another.
56. Are you aware of discussions at present going on in Edinburgh with reference to the quantity of land necessary as the site for a hospital with all the modern appliances of such an institution? I know there has been such a discussion.
57. Are you aware of what space of ground was occupied as the site of the old Edinburgh Hospital? I am not aware of the precise area.
58. Are you aware that that site has been abandoned, and that another, that of Watson's Hospital, has been chosen, where there is an area of nine acres? Yes.
59. You have said that the hospital does not answer the purpose at present—Will you explain what you mean by that general answer? There are no bath-rooms, or rather there are not sufficient bath-rooms, and I think there are no closets in connection with the building, or nurses' rooms, and lavatories, &c.
60. How many patients are accommodated in the hospital at the present time? I cannot say.
61. If there were fewer patients, would there not be room to put up many of these accommodations you speak of? Yes.
62. You are not in a position to state whether there is sufficient accommodation—whether there are a sufficient number of beds—in the hospital, for applicants? No.
63. With regard to the defective state of the roof-gutters, windows, doors, staircases, and floors of this building, can you say how much it would cost to remedy these defects as a building irrespectively of its being a hospital? I think it is somewhere over £8,000.
64. I think you have stated that all the additional improvements which were recommended in these external buildings could be made for £8,000—I am now restricting you to the absolutely necessary repairs of the present building, without any addition such as repairing the roof, the guttering, enlarging the windows, repairing the floor, &c.? I have not made the calculation in that way.
65. Will you have the goodness to do so, in order to enable the Committee to form an approximate idea of the cost that would be necessary to fit it for a receiving house or casual ward for the city, supposing an additional building as a hospital to be erected in some other locality? The probable cost about £3,500.
66. *Mr. Piddington.*] Are you of opinion that the present building could be continued as an infirmary, after the defects you have enumerated in the roofs, gutters, windows, floors, staircases, and doors were repaired? It might be continued if the bath-rooms, closets, and nurses' rooms were added.
67. I am now speaking of the description you gave of the building—the roof bad, the gutters bad, the windows bad, the doors bad, the staircases bad, and the floors bad—With reference to these objections, if the front building were repaired could it not be continued with advantage as an infirmary? I could scarcely recommend it to be continued without being modernized in some way—without the necessary conveniences being added.
68. Are you aware how long this present building has been used as an infirmary? I am not aware as to the number of years.
69. It has been used, I suppose you are aware, for a considerable number of years? For a considerable number of years—over thirty years.
70. You have described what in your opinion constitutes a modern hospital—Can you inform the Committee what would be the cost of a modern hospital, with all the appliances you describe as sanctioned by the highest authorities, sufficient for the wants of the city of Sydney? I could only give a rough estimate of the probable cost of such a building.
71. Can you give a rough estimate? I think something could be done worthy the city of Sydney for £60,000.
72. Are the northern and southern wings built with all the improvements you have described as necessary to constitute a modern hospital? The northern wing is simply a nurses' training establishment; the Nightingale wing is not arranged for a hospital; the southern wing has been modernized, but there was great difficulty in bringing in these conveniences, and I do not say that it is so well arranged as it ought to be, still the conveniences are there.
73. *Mr. Dodds.*] If the city of Sydney is likely to double its population in the next twenty years, do you think the site is a suitable one to meet the requirements of the city? I do not think it is a suitable site, looking forward to the next twenty years, for the building of a general hospital for the city of Sydney, I have not expressed my opinion in reference to that point, being the Architect of the institution, and knowing the minds of the Directors upon the subject, but my private opinion is that it is not a suitable site for a general hospital for the city of Sydney, looking forward twenty years.
74. *Mr. King.*] If the present building with certain repairs would last fifty years, at an outlay of six or eight

T. Rowe, Esq. eight thousand pounds to modernize, would it not be well to expend that sum upon it, and to erect with the funds provided another hospital in a different locality? That is my opinion; I think it would be the wisest plan.

10 Mar., 1870.

75. *Mr. Webb.*] You stated that in the southern wing you had some difficulty in introducing modern improvements? Yes.
76. How did the difficulty arise—from want of land? Part of the southern wing is built within 16 or 18 feet of the southern boundary against the Mint; I should have liked to have extended some of the offices in that direction, but it was impossible from want of space.
77. You had not sufficient land there to introduce the necessary improvements even for a small wing? No.
78. *Mr. Wearne.*] You have stated that you would prefer to have the hospital removed—that there is not sufficient accommodation at present for the wants of the city? I did not say that.
79. I understood you to say so. In the event of the Government giving compensation and taking the building as it now stands, would you not prefer having a hospital near the University? I stated that I thought it would be wise to retain the present building as a receiving hospital.
80. Why do you think it necessary to retain that—would there be any objection to having but one hospital, and that hospital near the University? I think it would be far better to retain this, or to have one near the centre of the city.
81. Why do you think so? We might have a general hospital at the extreme boundaries of the city.
82. Supposing the Government resumed the present building, would it not be better to have one hospital at the University? I think not. It would be a very long way, for instance, to take to the extreme end of the city, a man who had fallen down on board ship, and who was half killed.
83. If the man were in a cab, why should he object to be taken to the University; besides the University will very soon be in the centre of the city? Every half-mile of distance when a man is hovering between life and death is an important matter.
84. You forget that many accidents occur at the other end of the city and out of the city—that people are brought in from places miles distant? Of course accidents occur all round us, but I think the greater part among the shipping and in the harbour.
85. Is it necessary to have this hospital here, if there were a hospital near the University—would it not be better to put this building to some other purpose—could not the Government convert it into an asylum for old people? I still adhere to my first opinion; I think there should be a hospital in the centre of the city—a sort of receiving house.
86. If you still adhere to that, would it be necessary to expend £7,000 or £8,000 upon it, merely as a receiving hospital? Certainly it would be necessary to expend this money, if the building were retained for that purpose.
87. *Chairman.*] When you stated that a hospital suitable for the city of Sydney, looking to the next twenty years, could be erected for £60,000, did you convey your opinion that, looking to the next twenty years, it would be desirable to have only one hospital? No, I think there should still be a receiving hospital at this end of the city.
88. As far as you are competent to give an opinion—and I suppose you do not profess to be able to give any other than a layman's opinion—would it not be better to have two or more comparatively small hospitals, than one very large hospital? I have frequently thought that hospitals, like places of worship, should be distributed over large cities.
89. Is it desirable to concentrate all the diseases that are thrown up by the population of a large city of 100,000 or 150,000? It is possible to concentrate them, but not desirable.
90. *Mr. Wilson.*] I think you have mentioned the pavilion system of building hospitals? Yes.
91. The pavilion system of building hospitals consists of having a distinct and separate building for each class of cases, and a space intervening between each ward—Is that kind of building necessarily as expensive, or likely to be as expensive as one building upon the old plan? Far more expensive.
92. Are you aware that in building these pavilion hospitals, a suggestion has been made that the walls should be of a light, temporary, and inexpensive character, so that when they become impregnated with infectious matter, the expense will not be great of taking them down and rebuilding them? I have not met with that recommendation, but I know it is necessary to line the walls and floors as much as possible with non-absorbing materials.
93. Has any non-absorbing material yet been discovered? Not unless it is glass, though I suppose glazed tiles would be non-absorbent.
94. I suppose you are aware that one of the finest Paris hospitals has tried highly polished stone, thinking it would not absorb, and that they had found it as bad as ordinary stone and lime? Yes, it is a difficult matter to find a non-absorbent material for the purpose.
95. Supposing a pavilion hospital of the kind I have described, and that it were not necessary to erect walls of a massive and substantial character, not looking forward to its lasting a number of years—would not that materially lessen the cost of erection? Of course the lighter the walls the less expensive would be the building; but I do not know what material could be used excepting iron.
96. Sir James Simpson has suggested iron; but even if built of brick it could be erected much more economically than if massively built? Yes.
97. *Mr. Piddington.*] Would iron be a material suitable to the climate of this country? I avoid the use of iron for walls or roofing—it attracts the heat. I am inclined to think that the walls and plaster of the present Infirmary building must be impregnated with infectious disease.
98. Would it be easy to remedy that? It would be easy to replaster it with Keen's cement.
99. *Chairman.*] Can you prepare a tracing showing the ground plan of the present buildings, and also a tracing showing the alterations suggested by the Directors? (*Vide Separate Appendix.*)

TUESDAY, 15 MARCH, 1870.

Present:—

MR. KING,
MR. COWPER,MR. WILSON,
MR. WEBB,

MR. CLARKE.

HENRY PARKES, Esq., IN THE CHAIR.

James Barnet, Esq., called in and examined:—

100. *Chairman.*] You are the Colonial Architect? Yes.
101. Did you receive a summons to attend and give evidence before this Committee? Yes.
102. On the Sydney Infirmary? Yes.
103. Are you acquainted with the Infirmary building? I am not much acquainted with it. About two years ago I examined the building for the Government.
104. Have you not seen it since? I have not been in it since.
105. What portion of the building did you examine—the front range? Yes, on the same line as this building.
106. Fronting Macquarie-street? Yes, fronting Macquarie-street.
107. Are you acquainted with the modern improvements in the construction of hospitals? I am only acquainted with them by reading about them, not having built any? I have built additions to our Government Institutions—Gaols, Lunatic Asylums, and Benevolent Asylums.
108. What I mean is, have you made yourself acquainted with the plans of that class of institution in other countries? I am well acquainted with the plans adopted at home for hospitals.
109. What was the object of your inspection of the Infirmary building? My object was to examine as to its stability. I think I have got the report upon it with me.
110. Did you make yourself thoroughly acquainted with the building? I looked through it with a view to ascertaining its stability. I was asked to report twice—once with regard to the foundations, which I reported as being sufficiently secure; and then there was a further report upon the building.
111. What was the substance of your reports? After careful examination I found that, although the walls of the original building were of bad construction, they were in a good state of preservation, which I attributed in a great measure to the protection afforded them by the wide verandahs. It was my opinion that they would remain for many years in a good condition, provided the verandahs were retained. The floors were in good repair. The roof required shingling, but I don't think anything has been done to it since. With ordinary repairs the building would last for many years.
112. What do you mean by many years? As long as it has lasted—it is about fifty-six years old now.
113. Do you consider the foundations good? The foundations are good for the purpose for which they are used, but not good enough to build upon, or to heighten the walls of the present building.
114. Would it at all weaken the walls to cut them up to the ceiling and make the windows higher? No, I think not. I have cut about the walls of the adjoining buildings without any bad effect.
115. In what way? Made the window and door openings larger, and made several new rooms by adding to the building. There was no difficulty about that.
116. Can you hand in to the Committee copies of your reports? I can. These are the reports. (*Vide Appendix, A 1 and A 2.*)
117. *Mr. King.*] You would not think it desirable to pull down this building, would you, for the sake of erecting another in its place? That depends upon circumstances. The building will stand for many years.
118. It is not desirable to pull it down? I think not.
119. *Mr. Webb.*] Do you think it a suitable building for a hospital? I think it is well built for a hospital, of course not with the present modern improvements; but at the time it was built it was, I think, in advance of the general run of hospitals. There are windows on both sides, protected by verandahs back and front.
120. It requires shingling? Yes, and it has no eave-spouting about it. The Parliamentary buildings were repaired only recently, and were much injured for the want of proper spouting. These buildings required eave-spouting very much, and it has been done recently. It would not be fair to add more weight to the foundations.
121. *Mr. Cowper.*] Have you formed any idea of the probable cost of building a suitable hospital with all the modern requirements for a limited number of persons? I have not formed any estimate of that kind.
122. I gather that your feeling is that that building should be repaired and not pulled down? It should not be pulled down, unless to put up another building. The building itself will stand.
123. Do you consider it very defective? I don't consider it defective.
124. As regards ventilation? Oh yes, as regards ventilation it can be improved very much by enlarging the windows.
125. You would not recommend that it should be pulled down? Certainly not.
126. You think it may be made sufficient for many years to come? I think so.

J. Barnet,
Esq.

15 Mar., 1870.

The Rev. Alfred H. Stephen, M.A., called in and examined:—

127. *Chairman.*] You are one of the Directors of the Sydney Infirmary? Yes, I am one of the Vice-Presidents and a Director.
128. How long have you held that office? I think, as a Director, about eighteen years.
129. Continuously? Yes, continuously. I was Honorary Secretary for a few years—three or four years I think.
130. This Committee is appointed to inquire into and report to the Legislative Assembly upon the expediency of granting the land on which the Infirmary stands to Trustees for the purposes of the Infirmary, and it is desired to get information as to the adaptability of the present range of buildings fronting Macquarie-street, for the purposes of a hospital, and also what are the intentions of the Directors with regard to further improvements of the premises. Perhaps you will state in your own way such information

Rev. A.
H. Stephen,
M.A.

15 Mar., 1870.

Rev. A.
H. Stephen,
M. A.
15 Mar., 1870.

as the Committee requires—? Well, there has been a difference of opinion amongst the Directors upon the subject, and therefore I can hardly say what the views of the Directors are as a body. The matter has not, to the best of my recollection, come to a definite vote, so that we could tell which way the majority would be. I can only give my own individual opinions.

131. Well, the Committee will be glad to hear them—? My opinions, like those of some others, have altered materially lately. I was one of those who thought it would be desirable to pull down the present institution, and build, with the money which had been subscribed towards the erection of the Prince Alfred Memorial Hospital, a new hospital altogether; but for two or three reasons I have changed my opinion, and think it will be desirable to retain the present institution as a hospital for accidents, and for urgent and serious cases of illness, and expend the money raised for the Prince Alfred Memorial upon another hospital, in connection with the present one, for the reception of convalescent patients, many of whom are now sent out of the institution before they are fully cured, in consequence of want of room.

132. At different times there have been some definite proposals made for reconstructing the hospital or enlarging it in some way—Could you explain what they were? One proposal which has been entertained by some of the Directors—and myself among the number—was to pull down the hospital, and erect an entirely new institution. But I am not aware that there has been any proposal to do more than has been already done in the way of enlarging the present institution. I don't see how it is possible to do it. What with the Nightingale Wing, and the new South Wing, we have taken up all the available room. The only part of the hospital ground which could be built on is on the east side, and to build there would completely block up the place from the nice easterly breezes which are of so much advantage to patients in the summer.

133. That would be in violation of the principle laid down for the construction of hospitals now-a-days, would it not? It would prevent a perfect current of air.

134. Two years and a half ago, were not some plans submitted to the Government for enlarging the front range of buildings, or remodelling the whole, without contemplating the pulling down of any part? There may have been, but I am not aware of it.

135. Some time before the Prince Alfred Memorial Fund was subscribed? I am not aware of anything else beyond what has been done since then. It may have been so—I don't remember it.

136. You have given a good deal of attention to the management of institutions of this kind. Yes, I have in Sydney.

137. Do you think the front range of these buildings well ventilated for hospital purposes? They always struck me as being very fairly ventilated; in fact the patients have complained of almost too much ventilation. There are large windows on both sides, and it is easy at any time to get a thorough draught through them.

138. It has never occurred to you that there is any objection to the windows being so low? I think not. I have been in the habit of visiting there frequently, both as a Director and a clergyman, and I never perceived any want of ventilation. There never was any disagreeable smell which would arise if the ventilation were imperfect. Doubtless the ventilation is not so thorough as it might be, with the modern appliances, and as is obtained in the new English hospitals; but it is an infinitely better ventilated building than the old Benevolent Asylum.

139. What is your view of the question as to the granting of the land—the present site? As a matter of personal opinion, and as a matter of abstract justice, I think it should be granted.

140. On what do you found that opinion? From the fact that having been connected with the institution some seventeen or eighteen years, I know we have always gone upon the supposition that the building was ours for all practical purposes, and the getting of a mere piece of paper from the Colonial Secretary's Office was simply matter of form.

141. When you say “we have gone on the supposition,” who do you mean? The Directors of the present building.

142. But you don't mean that the building belongs to the particular gentlemen who are Directors at the present time, do you? Well to the public if you like; they represent the public.

143. *Mr. Cowper.*] Very large sums of money have been spent during several years past in giving additional accommodation—erecting various buildings? Very large indeed.

144. In your opinion you have occupied pretty well as much of the vacant space that should consistent with healthy considerations be so occupied? I think so. I should be sorry to see more buildings put upon that site.

145. The present institution is insufficient for the purposes of a hospital? I think it will last for many years to come, and serve the purpose admirably of a hospital for taking in accidental cases and acute cases of disease. I think that is the idea nearly all the Directors have come to; and I think we shall arrive at a happy agreement upon that subject. If we had an auxiliary hospital into which we could draft the convalescent patients, this hospital would answer the purposes of Sydney for many years to come.

146. *Chairman.*] You stated to the Committee that some time ago you were of opinion that this building should be pulled down—have you any objection to state the considerations which led you to that opinion? I was led to believe that the walls were unsound, and the building generally not in that condition which would warrant its continuance—that it would not very long be in such a state of repair as we should like to see it in; but I have heard since that that was a mistaken idea. We have had one new ward made lately out of some old rooms there, and where the plaster has been cut away. In doing this we find the walls are in an excellent state of preservation—that at least is the idea I entertain from inspecting them. I am no builder, but I have got eyes, and have seen other buildings; and it appears to me that they are in an admirable state of preservation. I don't see anything to prevent that building, with occasional repairs, lasting for fifty or sixty years yet. Of course it will want shingling.

147. Was there not an examination of the building made by your own Architect and the Colonial Architect, in February, 1868, and did not those gentlemen bring up a report in which it was stated that the walls were sound and the foundations sound? I was not aware of it. I may state that at the time this matter originated I was absent a good deal from the meetings of the Committee from ill health; therefore a good deal occurred of which I personally knew nothing.

148. *Mr. Cowper.*] When you speak of an auxiliary hospital to this, have you made up your mind as to any particular plan on which a building should be erected? No, I have not gone so far as that.

149. Has it ever occurred to you as desirable to establish a new hospital that might be considered a School of Medicine in the neighbourhood of the University? I think that this new hospital should be near the University.

Rev. A.
H. Stephen,
M.A.

15 Mar., 1879.

University. At that distance and at that end of the town a convalescent hospital might be established, without the scheme being open to the objections raised to the erection there of a hospital where capital operations are performed, and which should be near at hand for the convenience of the surgeons.

150. Do you not think it would be better that this building should be retained as a receiving hospital, but that if any new building were to be erected it should be on a large scale, and in the neighbourhood of the University, with a view to its being used as a School of Medicine? That would be desirable with a view of these two hospitals being connected together.

151. Do you think they should be connected together—that the one should be auxiliary to the other? I think it would increase the expense to have two distinct institutions managed by different bodies.

152. But you would hardly call it auxiliary to this would you? If it were managed by the same Committee, and we drafted off into it all the patients that could be sent from the present building, then it would be an auxiliary hospital.

153. That is the sense in which you use the term? Yes, that is the sense.

154. But at present you don't consider it expedient to spend a large sum of money in the improvement of this building or the erection of a spacious hospital elsewhere? I think not; that is my opinion.

155. What number of patients can you say, speaking from memory, were at any one time kept out of the hospital from the want of accommodation? The other morning—one Monday morning—I think there were a dozen patients who would have been admissible (of course I speak approximately)—I think it was stated there were ten or twelve patients waiting for admission who could not be admitted for want of room.

156. Has there ever been at any one time more than a dozen kept out for want of accommodation? I have never heard of more than twenty cases. A great number of persons come, expecting to get in who are not admissible. I never knew of more than twenty persons admissible under the rules who were kept out for want of room.

157. Take the case of the young woman mentioned by Mr. Moreton—Was that a solitary case, or are such cases of frequent occurrence? That was a case in which the young woman had erysipelas.

158. That was a disease the doctors did not desire to have in the institution—I mean it was a disease of a contagious character? I have known of two or three cases within the last two or three weeks in which urgent cases have been refused. One case you know something about. It was the case of a young man from Queensland. His relations came to me, and said he had been taken to the Infirmary in a cab, and refused admission. I came into town about it and made a little disturbance—almost insisted that he should be taken in. The innkeeper where he was stopping refused to take him back, and said “I have no means of attending to him.” The poor fellow was refused admission at the Infirmary, was refused admission at the inn where he had been stopping, and was taken to a German lodging-house in Castlereagh-street. His relations—poor people in my parish—did the best they could for him,—sat up night after night with him, until one of them, who was in danger of losing his situation, from being so often absent from his work attending to him, came to me, and I succeeded in getting the patient's admission next morning. In that case there was nobody to blame. It was a hard case, but there was no room for him. I almost insisted that they should *find* room under the circumstances, and I got him in. There was a somewhat similar case in which I felt interested, and another in which the Rev. Mr. Piddington felt an interest also. They were urgent cases. I brought them before the House Committee, and an order was given for their being admitted at once. Yesterday the institution was so full there was an urgent case brought, and they were obliged to put the patient in the operating room—at least I think it was that room. There is no doubt the hospital at present is not large enough for the purposes of the city; but I think it would be large enough provided we have a place into which we can draft the convalescent patients.

159. What would the number amount to at any one time? Sixty or seventy, I dare say.

160. There is no room for such a building on the premises? There is no room on the premises. It struck me if we got this Prince Alfred Memorial money we might get a grant of a few acres of land at Grose Farm, and make an auxiliary hospital into which the convalescent patients could be drafted. In that way we should provide accommodation for the wants of the sick poor for many years to come.

161. What is the class in life of these patients—are they persons of the humbler class or of the better class? The larger proportion of them are people in the humbler classes of life. I suppose I send in every year to the Colonial Secretary's Office at least 100 or 150 recommendations, and at least 80 per cent. of those are persons in the humbler classes of life. Sometimes a broken-down gentleman applies for admission as a pauper.

162. What do you think of the vacant buildings on Cockatoo Island being appropriated as a hospital if made suitable? I don't know; there would be something not very pleasant in the name. A person might be accused of having been at Cockatoo for crime instead of misfortune. However something of the sort is wanted immediately. We really require it very much.

163. One of the contagious diseases on the list is cancer—Do not the doctors object to cancer? Except in the case of a patient who was likely to be benefited by an operation or other treatment, they would not take a case of cancer. They would not take a case which was perfectly hopeless. But cases of cancer are taken in—I have known cases.

164. But was there not a case refused lately? That must have been a hopeless case—a chronic case. I knew of a case of cancer in which the patient's tongue was removed in the hospital. If there is any chance of a man's recovery he will be taken in.

165. I may state that I have applied to Parramatta for a building which has been used as a residence for the police—Do you know that building? No, I do not.

166. It was with a view of providing a place where such cases as these might be dealt with. What do you think of the idea—supposing by the expenditure of a limited amount, the Government were to fit up that place, would it answer the purpose? I should say anything would be better than to go on as we are at present. That case of Mr. Moreton's has done our institution a great deal of harm—our collector says it has caused a falling off in the subscriptions to the extent of several hundreds of pounds. Of course people are glad to jump at any excuse for not subscribing. One case of that kind is more damaging to the institution than anything you can think of. Therefore additional accommodation would not only be a boon to the sufferers themselves, but to the institution. On the other hand, if that case had been admitted and we had introduced erysipelas among the patients we should never have heard the end of it. What is a calamity to one person may be the saving of many others.

167. *Mr. Clarke.*] Do you think the Trustees of the Prince Alfred Memorial Fund would build an auxiliary hospital in the way you have indicated? I think they would be inclined to consent to the money being so expended.

168.

- Rev. A. 168. You said you had seen some cases of cancer admitted? Yes, and operated upon.
 H. Stephen, 169. Have you known any to be refused? I have not—the only reason for refusing them would be that
 M.A. they were incurable. I think any case of cancer which was curable would be regarded by the medical
 men as admissible.
- 15 Mar., 1870. 170. With reference to the grant applied for lately—have you ever applied for it until recently to the
 Government? We have not—we never thought it necessary. We have never got our Randwick grant
 yet, and I should be very much surprised if the Government turned round and said “We won’t give it
 you.” There is as much reason in one case as in the other.
171. Were you under the impression that if you applied for the land it would be granted? Yes, we have
 applied for the Randwick grant some time ago, but though not yet issued we have not been refused. We
 have been told there is some difficulty in the way of its issue under the Lands Alienation Act. I was
 always under the impression that the Infirmary grant was a settled matter—I never thought it would be
 refused any more than the Randwick one.
172. *Mr. Cowper.*] You considered the promise equivalent to the grant itself? Yes.
173. *Mr. King.*] You think it should issue for a certain specific purpose? I think so. I think a large
 number of the Directors have given up the idea of pulling down the present Hospital. I for one have
 changed my opinion on the subject, and I believe others have too.

W. M. Alderson, Esq., called in and examined :—

- W. M. 174. *Chairman.*] You are a Director of the Sydney Infirmary, I think? Yes.
 Alderson, Esq. 175. How long have you held office as such? A good many years—I forget how many now, I am sure.
176. Six or seven years? Yes, something about that.
- 15 Mar., 1870. 177. Have you made yourself acquainted with the buildings of the Infirmary at different times? Yes.
178. By visiting them often, and inspecting them, and so on? Oh yes, I have gone through them many a
 time.
179. With regard to the front range of buildings, do you think that range is suitable for the purposes of an
 Infirmary? I think so—most suitable.
180. Would you explain what you mean? I think it is suitable in this way—that it happens to be one of
 those old-fashioned buildings, built at a time when we used to study the necessities of a building to suit
 the climate. It has large verandahs and balconies round it, which keep the building nice and cool. It is
 pretty well ventilated; it might be improved perhaps a little in ventilation by some trifling alterations.
181. What kind of alterations would improve it? Why for instance you might carry up the windows to
 the ceiling and have openings in the ceiling and walls—we have them now in many of the wards.
182. You have reason to feel satisfied that the building is sound? Oh yes. The other day they were
 putting in some new closets and bath-rooms, and had occasion to break through the walls, and I took
 particular notice of the walls. I was well satisfied. It is a rubble wall, built thick and strong; and a
 rubble wall, well built, is one of the best you can have. In my places I build nothing else now.
183. Are the floors sound? Yes, they appear to be very sound.
184. You have frequently passed through the wards of the Infirmary, I suppose? Oh yes.
185. They always appear clean and sweet? Yes, generally. I have often taken notice of it.
186. Do you think the building would last any considerable time? I think so; I think it would stand
 a hundred years.
187. Almost as long as you would? I wouldn’t mind if I could wait until it fell down.
188. You think the building is sound, durable, and that it is pretty well adapted for the purpose of an
 Infirmary? Yes. There is no doubt the place could be improved. It was proposed at one time to spend
 a few thousand pounds to improve it; for instance, to shingle the roof and various other things.
189. You recollect when some plans were laid before the Government in order to improve the building
 generally, about two years and a half ago? Yes; about that time it was proposed either to spend £4,000
 or £7,000, or £14,000, if I am not mistaken. These were the ideas. It was the idea of some gentlemen in
 connection with the Infirmary to spend £14,000 to pull a wing down and build it up, but my idea was
 to spend £4,000 on the west wing, and make it sufficient for all we wanted.
190. You would then be altogether opposed to pulling the building down, I infer, from your evidence?
 Oh yes, decidedly against it, and always have been.
191. Has there been a proposal to spend the money subscribed to the Prince Alfred Memorial Fund, for
 the purpose of pulling it down and rebuilding it? Yes.
192. You were opposed to that? Yes. That was brought before the Board. The idea about the Prince
 Alfred Memorial Hospital originated with some gentlemen who had connection with the Infirmary.
193. Do you recollect the names of the gentlemen? Well, Dr. Roberts was one. I can’t recollect them
 all. At any rate, it was brought before the Board of the Infirmary, to go into this Prince Alfred Memorial
 Hospital and put the building on the site of the western wing of the present Infirmary. There was me
 and a few others opposed that before the public meeting took place in the Exchange, but we were beat by
 a majority and the thing went on.
194. Was there a full attendance of the Directors on the occasion? Yes, there was a very good attendance
 of the Directors.
195. Then there must have been a majority of the Directors in favour of pulling down this wing? Oh
 decidedly; and when the public meeting took place I threatened to get up and oppose the resolution that
 had reference to building the Memorial Hospital on the site of the western wing, only the Prince at the
 time being dangerously situated at Government House, some gentlemen begged me not to create any
 difference of opinion as regards the Memorial Hospital, for fear the Prince might think it unsettled. I said
 I would not propose any opposition motion at the public meeting, but with the thorough understanding
 that many of the leading men were to take into consideration the advisability of pulling the wing down for
 the sake of building a hospital there. Ever since then we have had many a fight on this question in the
 most pure good feeling, because my opinion is that every view the gentlemen take is with the best inten-
 tions to do the most good. It came before the Prince Alfred Memorial Committee, and we were beat there;
 but there is a good number of the Infirmary Committee there.

196. Then both Committees beat you? Yes, both Committees. We were always beat. The last time we were beat at a Board Meeting in the Infirmary. I found the only chance I had was this grant. I think I was the first person who spoke about it. I said "Well gentlemen, what about the grant?—Surely you are not going to spend our money on ground that does not belong to us?"—and that stopped any further operations for a long time. If it had not been for that the building would have been down now, and dear knows what would have happened. We should have killed a good many patients—that's my opinion.

W. M.
Alderson, Esq.
15 Mar., 1870.

197. Do you recollect the majority of the Directors—was it a decided majority? I can't recollect. It was a decided majority.

198. Two to one? Not two to one I think. But I am happy to say some of them have altered their opinions since then. I must tell you that when this came on there was a letter sent to the late Ministry, and it pleased me to hear the reply read—it was a decided refusal of the grant; although mind you at the same time I was never opposed to the grant if it was given conditionally. They might have the grant, as far as I was concerned, on the condition that they did not pull down the Western Wing. When I say "I," I am speaking for some other gentlemen who worked with me. Mr. Raphael and I always voted against it, and we happen to be men who are not afraid to speak out what we think no matter who was present; and that is the reason we were often left out no doubt.

199. If the site of the building were granted by the Government for the Infirmary, how do you think it should be vested—should it be vested in separate Trustees for the purposes of the Infirmary, or in a varying Directory—a Directory which is elected every year? I think it should be vested in Trustees for the benefit of the Infirmary.

200. Apart from the Committee of Management? Yes, apart from them, because don't you see they are continually changed. I don't see how you can do it any other way. There should be certain names mentioned.

201. Have you ever thought upon the advisability of an Act being passed by the Legislature incorporating the Infirmary and defining more distinctly their duties? I think it would be a good thing.

202. Supposing this land to be granted for the purpose of an Infirmary, do you think it should be granted by specific Bill? I think it would be better.

203. Making a distinct reference to the Infirmary in future? Yes; but there is another view I take of it. I think in the course of years all this block of land will be wanted from Hyde Park to Governor Bourke's Statue for Government Offices. I don't say when; but still when going into a large affair we should consider these things, and be guided by the peculiar circumstances we are placed in. I think it is a pity for the Government to cramp themselves too much. They should keep these things in view. There is another view I take of it. We should try to get a grant of land for the Prince Alfred Memorial Hospital, and begin a large hospital which might be extended to any extent in future years. We might build a middle wing, and call it the Prince Alfred Memorial Hospital, and use that in connection with this as a convalescent hospital. I think it would act admirably. We could go on using this Infirmary, and with a little more expense make it doubly useful by having a convalescent hospital in the University Paddocks. There is another view to take of it, and one highly spoken of by many gentlemen, who thought it would be necessary to have a Medical School there in future years. There is one gentleman would give you a good deal of useful information on the subject, and that is Dr. Moffitt. He takes a strong view of it as regards the Medical School.

204. You say you were pleased when the letter was received refusing the grant—Were the other Directors pleased? Oh no, they were very much annoyed at it. Some of them chafed me about it, and thought I had something to do with it; but I had nothing to do with it—I had never seen any Minister at the time. I have been blamed for many things in that line although I was completely innocent. I never go into matters until the proper time comes, and then I do what I can. Mind you our idea is this—that if we got a grant of so much land out by the University (which I was given to understand we possibly might get by trying for), bear in mind that this would be merely the commencement of a most extensive hospital that might be extended years after as population increased. The population is tending that way, and there might still be an accident ward here at this end of the town, so that it would answer admirably for the public generally.

205. *Mr. Cowper.*] That is this building as it is? Yes, let it stand.

206. But would you not require a receiving hospital in this large city? Yes, we might have a smaller building than that for accidents or extreme cases. This would be too large, according to my idea, merely to be kept as a receiving hospital in after years.

207. You would hardly consider it necessary to resume the whole of Macquarie-street for public buildings? Yes. I think if this is to be a large Colony with some millions of inhabitants instead of a few paltry thousands, you will stand in need of it in the course of years.

208. *Mr. Wilson.*] What advantage is likely to arise from this land being granted to Trustees—are the Directors at all interfered with in their operations by other parties? I have never known them to be interfered with except in the way of kindness. Whatever Government is in power they always have treated the Infirmary with the greatest consideration, and we never had the least hint we should be interfered with.

209. Then the grant would be of no benefit, but perhaps the reverse? I must say that the idea of those who wished to get the grant was to pull the building down and build the Memorial Hospital upon it. That is the real object. They will try to put you off from it by saying that is beside the question; but still that is what they are aiming at; and if they get that grant it should be conditional. I am speaking for the benefit of the public now, to the best of my judgment.

210. Can you give the Committee any information as to the sufficiency of the accommodation of the present Infirmary for the wants of the people—as to whether it is sufficient or not? We are turning cases away every day. It is not sufficient. There were seven cases turned away yesterday, and all the beds are occupied.

211. Have you heard it stated that persons are discharged from this Infirmary before they are sufficiently recovered, in order to make room for others? I can't speak positively. You must bear in mind that a great many go into the hospital who like to stay there because they are well treated. That's a question for the doctors; and if they think it necessary to turn a patient out they do so, and I think the sooner they can do so the better, if they can do it with safety, for the sake of those who want to come in.

212. Have you heard the medical men complain that they have, from want of room, been compelled to turn patients out before they were cured? No, I can't say I have.

213.

W. M. Alderson, Esq. 1213. *Mr. Clarke.*] Have you heard that any of the gentlemen who were opposed to you, who wished to pull the building down and erect another in its place, have changed their opinions? Oh yes; there is a gentleman waiting outside, and a very worthy gentleman too, who says he has changed his mind. He was in favour of pulling down the building at first.

15 Mar., 1870.

214. Why were you glad that the grant was refused? Because it saved the western wing, and put a stop to the waste of money that would have been caused by putting the hospital on that site.

215. *Mr. Cowper.*] You don't wish it to be absolutely refused? Oh no; only that it may be granted conditionally.

216. *Mr. Clarke.*] Had there never been any intention to pull the present hospital down would you have approved of the grant being given? Well, I would not have cared much about the grant, but as one of the Directors I would consider it my duty to be in favour of the grant being given.

217. But I understand you to say you were as well in the hands of the Government? As far as my opinion goes I think we were just as well.

218. *Mr. Webb.*] You stated that you objected to the building of the Prince Alfred Hospital here, because the land would be required for Government Offices? Yes.

219. Supposing it is not required, have you any other objection? Yes.

220. What is it? I think the space is too limited by a long way.

221. And therefore would not be suitable? It would not be suitable according to the requirements which would arise in the course of a few years. We are now pinched for room. We could do with more land. We have to put all the washing out, which I think is a very bad thing to do. That's another idea of mine—if we were to build this hospital near the University, we could have all the washing done there, and likewise give the convalescent patients a little exercise in doing a little gardening and supplying this and other institutions with vegetables. It would do them more good than walking about those verandahs.

222. *Chairman.*] In the last Report of the Directors it is stated,—“The main building is old and ill-adapted to its purpose, not to mention that it is unsightly and out of keeping with the Nightingale and southern wings. It is behind the age altogether in hospital requirements and comforts.” Is that so? That was their idea—that was the opinion of the majority opposed to us. I must mention to you that the Directors stated we should not be able to get a medical gentleman to go out as far as the University, but I have been told privately by some medical men of high standing that if the gentlemen connected with the institution now would not go out to the locality, they would be happy to do it. So that shut them up altogether. Dr. Moffitt is one who is willing to go out, and some other of the leading men of the city will do the same.

FRIDAY, 18 MARCH, 1870.

Present:—

MR. COWPER,
MR. DODDS,

MR. WILSON,
MR. WEBB.

HENRY PARKES, ESQ., IN THE CHAIR.

Miss Lucy Osburn called in and examined:—

Miss Lucy
Osburn.

18 Mar., 1870.

223. *Chairman.*] This Committee has been appointed to inquire into and report upon the expediency of granting the land on which the Sydney Infirmary is built to Trustees for the purposes of the Infirmary, and it is considered that in this two or three distinct questions are involved:—First, the suitability of the present site for the purposes of a hospital, looking to the future; and, in the second place, whether the old buildings are of a sound and durable character, and adapted for the purpose for which they are employed. The Committee have thought that you would be able to give evidence on this latter point particularly—as to whether the buildings as they now exist are adapted for the purposes of a hospital? The main building—the front part—is not adapted for a hospital. The Committee have been making some additions and some repairs to try and carry it on for the present as a hospital, but I doubt its lasting very long. It has not been built on proper ideas of ventilation for one thing; the windows and doors are very low, and there is a vast space above that is always full of bad air, with no means of ventilating it at all; but the new part—the south wing—is a very good hospital indeed; it holds about seventy-eight beds, and is built on much better principles. The main building is shown to be bad by the fact that we have had outbreaks of erysipelas at least four times since we have been here, but none in the south wing. The floors are very bad; they appear to be built over a kind of well or hollow space which is not ventilated at all; the floors are now old and rotten, and if we put much water on the boards to wash them it runs down into this place below, and a miasma, partly arising from damp, and partly from want of ventilation, comes up, which is very injurious to the patients.

224. You hold the office of Lady Superintendent of the hospital? Yes.

225. How long have you held that office? I have been here two years on the 5th of March.

226. Were not some plans of improvements that were intended to be made in the Infirmary submitted to you after your arrival here, and subsequently sent home for the inspection of Miss Nightingale? I believe there were.

227. Do you remember anything distinctly about them? I remember that Mr. Rowe, who was then Architect for the hospital, came to me with these plans. They were very extensive indeed, and included the re-roofing of the hospital, and repairing the walls and floors, which are in a very bad state.

228. Had these plans anything to do with the building of what is called the Nightingale Wing? No; that had been already gone on with before we came here.

229. Was not the south wing altered in some way after you arrived? Yes; the staircase, which was before inside was put outside, and the place where the staircase had been was made into sisters' rooms, so that they might be there to overlook the wards; and new lavatories, sinks, and so on, were provided at the end of the building, which is now very efficient indeed; before it was very incomplete.

230. So far as the south wing is concerned, I understand you to say that it is a very excellent building for the purpose? Yes.

Miss Lucy
Osburn.

18 Mar., 1870.

231. If the premises continue to be occupied as at present for the purposes of an Infirmery, is there any very serious drawback on the use of the old building? Its greatest drawback is the bad air we have in it, shown by our constantly having erysipelas breaking out. We now have a case in a tent.

232. What does erysipelas arise from? From bad ventilation. We reckon at home that in a good hospital we never have it. There must be some fault if erysipelas breaks out in a hospital.

233. Some fault in the construction of the premises? Yes; or it might be the windows or ventilators not being opened sufficiently.

234. Some fault in the sanitary precautions? Yes.

235. With regard to the area of land on which the premises stand, and its situation in relation to the population of the city, do you consider it sufficiently large and at the same time eligible as a site for a hospital? It is a beautiful site for a hospital there is no doubt. I should think no city in the world could have a better site, being so near the town, and yet having such an open space around it and such good air. The patients praise it immensely; they say the fresh air does them more good than the medicine. I consider that that building in a bad situation could not have been inhabited—it would have been impossible to go on with it as a hospital if it had been in a close situation or on a clay soil. The soil is gravel, and of course the very best that could be had.

236. Do you think the old walls of the front range of building are charged with infection to any extent? Yes. I do not think it would be worth while making the repairs that were proposed with the old walls standing, now that I know it so well. At first, when I saw the plans I thought they would make the hospital everything that could be desired, but now I believe the walls are thoroughly bad.

237. Could you state more in detail the objections you entertain to the old building? First, I consider that the floors are a great objection, because they are over this hollow space which is not ventilated at all, and we often have miasma rising through the floors from underneath. The walls are in a very broken condition, and are getting yearly more so by the rats making ravages; they want a very great deal of repair. Then the windows are much too low for a hospital; it is impossible it can be a healthy hospital with windows only of that height.

238. Could they not be enlarged? If the walls would stand it, of course they could.

239. I do not think you have answered that part of my question which referred to the area of land—whether it is sufficiently large? I should like more land certainly. It is small for the out-buildings—kitchen, dead-house, and so on.

240. Is it usual to have kitchens, wash-houses, and buildings of that kind, grouped together on a ground story outside? In modern hospitals it is, because the same steam-engine does for the kitchens and wash-houses, and they have them outside the main buildings because it is generally considered not good to have kitchens within the building where the patients are.

241. They are not constructed in the basement story? In some hospitals they are, but it has been objected to on account of the smell of the cooking.

242. What is the number of patients in the Infirmery at the present time? We have 210 beds; there are 195 patients, I think, this morning.

243. Is the average success in treatment equal to that of English hospitals with which you have been acquainted? No, I scarcely think so; but I think it unfair to compare our Infirmery with English hospitals, because people are brought in here in a far worse state than at home; many of the cases are really dying when brought in.

244. What hospitals are you best acquainted with in England? St. Thomas's, King's College, St. Bartholomew's, and St. George's.

245. Are these new buildings? No; St. Thomas's is in a temporary state; there is a new building going up opposite the Houses of Parliament.

246. What is your opinion, founded upon your knowledge of the requisites in a well managed hospital, as to the advisability of continuing to use the old building here? We could go on with the old building, as we have been going on with it for many years, but we should always be subject to outbreaks of hospital gangrene or erysipelas; and I think if an epidemic were to come upon us, such as cholera, it would not be a proper place to put the patients in.

247. I think I understood you to say the site was an eligible site in relation to the population? That I can only tell you by the cases we take in. We take in a great number from William-street, South Head Road, and those parts—casualty cases arising from accidents—and we also take in a great number from King-street, George-street, Pitt-street, and the wharves; and from all these parts the hospital is easily accessible.

248. You know the direction in which the city lies at present—that it extends a dense population to the sea in the northern and western directions, to Miller's Point and Darling Harbour, and that it also extends a dense population over the district called Woolloomooloo. Having regard to these parts of the city, what is the situation of the Hospital. Suppose there were a new Hospital about to be built to suit these portions of the city, and the persons who were about to originate the Hospital were looking for a site, would it be an eligible site? For the most populous part of the city I do not think it could be better. I have never heard it complained of as being a long way to bring a patient, or an out-of-the-way place to get to.

249. As to healthiness? I think it is perfect as far as its site goes. I do not think in any city in the world you could find a better site.

250. *Mr. Cowper.*] I gather from your evidence that you do not consider the building, even in its present state, so objectionable that there exists any pressing necessity for pulling it down—It might be better, but you would hardly condemn it, would you? I think I have shown that the building itself is unhealthy for the patients.

251. That it is defective in ventilation, the walls objectionable in some respects, the floors bad, and the windows small? Yes.

252. But if the ventilation were improved, the floors relaid, and the windows enlarged, a great many of your objections would be removed? Yes.

253. If the Architect reported that these alterations could be made at anything like a moderate cost, I imagine you are not prepared to condemn the building altogether? No; not if it is well ventilated and other objections are done away. At present I consider it unhealthy because our cases get on badly there—fever cases particularly. We have had the female patients removed to the south wing, and they have certainly done better since.

254.

- Miss Lucy Osburn.
18 Mar., 1870.
254. With regard to what you call the hollow space below the floors—Does that hold water, do you know—have you ever seen it examined—You spoke of miasma arising from it; surely it could be ventilated and drained? I should imagine that defect could be remedied, but there is not at present any ventilation down there at all—it is very bad indeed in damp weather like this.
255. Have you good fire-places, so that in damp weather you can light fires to air the wards? Yes, there are fire-places.
256. When you came out first, did this building strike you as very bad indeed for a Hospital? No, not very bad indeed.
257. You were not much shocked? No. I saw directly the want of ventilation the first time I went into the wards; but I have got more disgusted with it since I have seen its effects upon the patients. I do not consider it healthy at all.
258. Has the idea ever occurred to you of employing this as a receiving hospital and having a better built hospital a little way out of town, say in the neighbourhood of the University, in connection with a School of Medicine attached to the University? No, I have not heard that proposed; but I should suppose that in such case the south wing, which holds seventy-eight beds, would be sufficiently large for a receiving hospital.
259. Without using the old building at all? Yes.
260. What is the capacity of the main building—the front portion? At present we have 130 beds in the main building. We have barely enough for the wants of the city. We can make one more ward for twenty beds, and we will do so.
261. We have heard something of a class of patients called convalescent patients—Have you any idea what number of the patients usually in the Infirmary would be so classed by medical men? I should think one-half. Many of them are surgical patients who would go to a convalescent hospital as soon as operated upon.
262. Speaking of the management—do you consider the institution fairly managed? Very well indeed; I have always considered the Directors and Officers very attentive.
263. Are the Medical Officers attentive to their duties? Yes. They are always spoken well of by the patients.
264. Coming as you do from the first hospitals in England, you do not consider that we suffer very much by comparison so far as the buildings will permit? No, not at all; I consider the patients are very comfortable indeed.
265. And that all the persons officially connected with the institution give their best attention to it? I think so honestly. I have seen nothing underhand since I have been here.
266. Are the buildings clean, and the wards well attended to? Yes.
267. How about the walls—We have heard a good deal with reference to disease getting into the walls and vermin being harboured in them—Do you consider the walls much infested with vermin, or impregnated with disease? I should think so. I should like to see the whole of the plaster taken off.
268. If the plaster were all taken off and renewed, that would be a great improvement? Yes.
269. Are your kitchens sufficient? No, they are very bad indeed; and we have no laundry at all—the washing is sent out on account of the want of accommodation.
270. Is the accommodation for the servants of the institution good? For the females it is very good. We have very few male servants.
271. *Mr. Wilson.*] With regard to erysipelas, one would gather from your evidence that you thought it arose from bad ventilation only—Are not all old hospitals subject to erysipelas? Yes, where there is bad drainage or bad ventilation. Very bad smells will at any time bring it on.
272. Even where the drainage is good, and there are no bad smells except those incident to a hospital, is erysipelas not common to old hospitals? Not if they are well ventilated, and in good repair. If the plaster is broken on the walls, that is always dangerous.
273. Do you think that the area on which this hospital in Macquarie-street is built—which is, I believe, an acre and three quarters—is sufficient to build a modern hospital suitable for the requirements of the city of Sydney? It is very small, no doubt, and it would not be sufficient if it was a place enclosed by buildings, but it is so open that I do not see that the comparatively limited space is objectionable. The Domain in front of us is as good as if it were our own.
274. I am talking of the actual space irrespective of the position altogether—Is an acre and three quarters sufficient to build a modern hospital with modern improvements, for a population like the city of Sydney and suburbs? I do not think, under the circumstances, the small space would be a great objection. I think a new building might be so arranged as to give sufficient space for everything.
275. Do you think it is possible to build a modern hospital on the site? Yes.
276. What would you propose to do with the erysipelas patients under these circumstances? We might have a small place built for them.
277. Do you think you could find isolated spaces for erysipelas patients in an acre and three quarters? Yes, we should merely want a small ward. In St. Thomas's the erysipelas patients have a small building out in the grounds. As a rule, erysipelas patients are not taken into hospitals, but if it breaks out while they are in the wards they are put in a separate place.
278. In many of the hospitals they have adopted tents for cases of erysipelas—Have they not been very successful? Miss Nightingale likes tents very much.
279. In this acre and three quarters there would be no room for tents? No.
280. You have stated that there are 210 beds in this hospital—Is that sufficient for the requirements of Sydney? No, scarcely.
281. How many beds would be required? I think 250.
282. Do you think a modern hospital with 250 beds could be built on an acre and three-quarters? Yes, on such a site as this. It depends upon the site. I would never recommend it in a close place.
283. Irrespective of site altogether? Yes, I think the necessary buildings could be erected on that space, but it would not do unless there were open land around it, as there is here.
284. Are many applicants refused admission into this Infirmary in Sydney? Of course we have more applications than we have beds for, but I think if we had 250 beds we should have space for all.
285. One of the Directors of the Infirmary, in giving evidence, stated that as many as nine applicants had been refused admission in one day—Have you heard of that? I think it is quite possible. These things ebb and flow. But numbers apply that are not fit cases at all, and are rightfully declined.

Miss Lucy
Osburn.

18 Mar., 1870.

286. With regard to convalescent patients, can you state whether they are dismissed from the Hospital sooner than you think they ought to be, with the view of making room for other urgent cases? No, I think that in some cases they are kept longer than they need be. Once, when they were making repairs in the south wing, and we were consequently short of accommodation, several cases were sent out that I was sorry for—I thought it would have been better they should have remained longer; but, excepting in that instance they are kept rather an extraordinary length of time.

287. Supposing the front building were pulled down with the view of erecting another Hospital on the same site, what would you propose to do with the patients? I have heard that there is a temporary place in the town which we could have.

288. Capable of holding 250 beds? We should only require to replace 130 beds; that is the number in the main building.

289. Would you propose to allow the unfortunate patients to remain in the south wing with all the dust and noise of the building operations about them? I believe it was intended to carry on the south wing for urgent cases such as accidents, but only for a time.

290. Then of course accommodation would require to be got for nearly the whole of the patients. Supposing there was a suitable site—as good a site as the one you have in Macquarie-street, with (say) 25 acres of land, in the neighbourhood of the University, and that the drainage was excellent, do you not think it would be more prudent to build a new hospital on such a site, keeping the present one as a receiving house for urgent cases, than to pull down this hospital and attempt to build a modern one in its place? I have heard that proposed before. There would be a great objection to it, that there would be two hospitals to keep up, and we find it quite enough to do to get the public to support one.

291. I was not aware that the public supported this one, and I rather think that no application on behalf of this Infirmary has been made to the Government that has not been at once met? Yes, I believe they always consider the Government very generous indeed; but I think a hospital should be supported to a great extent by the public, and not by the Government only; and I understand there is some trouble in getting the public to come forward. If that is the case now, how much more would it be so if there were two hospitals to support.

292. But there is never any difficulty in getting the Government to come forward? No.

293. Consequently you must look to the Government as the mainstay. Supposing the money were available to build a new hospital, and also a good site of 25 acres, with the drainage good, and otherwise unobjectionable, do you not think it would be more advisable to build a modern hospital on such a site than on the present site in Macquarie-street? I would like the 25 acres better than the acre and three-quarters. It is true it is very small. I always cast longing eyes upon the Mint when I am thinking of extending it.

294. *Chairman.*] From your knowledge of hospitals, do you think so large a space as 25 acres of land would be of any material use to a hospital? It is very nice to have an open space round a hospital; but in St. Thomas's we had a very large garden and grounds, and I was astonished that they were so little used by the patients—one scarcely ever saw a patient in them, except when we used to carry them down in their beds.

295. In point of fact, patients in a hospital do not take exercise out of doors? No; a hospital as a hospital, not an infirmary, only keeps in acute cases, and when a person can go out to walk in a garden, he ought to leave the hospital altogether.

296. Is there any large infirmary or hospital connected with a dense population which has a large space of ground like 25 acres attached to it? No, I do not remember any.

297. Do you not think an establishment of that kind out near the University would be very inconvenient for all the more densely peopled parts of the city? Very, for all the northern parts of the city. For these parts there must be a hospital nearer; but I understood there was still to be a hospital at this end of the town.

298. With regard to the support given to the Infirmary by the public, it is a fact that large numbers of persons do subscribe to the support of the Infirmary? Yes, I believe so.

299. Is it not a fact that a sum of something like £24,000 has been subscribed towards the building of a hospital, without reference to the Government? Yes.

300. That sum remains now for the purpose of building a hospital? Yes, a hospital on the site of the present Infirmary, which is specially stated on each subscribing sheet—at least it was so on several that I saw.

301. Should you think it a wise expenditure of that particular fund to reconstruct the Sydney Infirmary? Certainly.

302. You would be in favour of that? Yes, I should; not that I have heard of any other plans. I am only speaking of what I know.

303. Suppose that money were supplemented by the Government, and the joint sum were devoted to the erection of a hospital in the southern suburb, which has been pointed out by Dr. Wilson, reserving this place as at present, should you think that a better arrangement than reconstructing this hospital with the same expenditure—Suppose you had the two proposals before you—the one to expend what is called the Prince Alfred Memorial Fund in reconstructing this Infirmary, so as to make it a complete hospital, with all modern improvements, as far as the land will admit, and another proposal, to leave the present building as it is as a receiving hospital, and apply the fund referred to in the erection of a new hospital on the site near the University—which would you prefer? I think this would be the better site for a general hospital—the one in Macquarie-street—from what I know of the patients that are brought in to the medical as well as the surgical side; they are from the more central parts of the town.

304. *Mr. Wilson.*] You state that at St. Thomas's the patients very seldom take exercise in the gardens—Do you not think the difference in climate between this Colony and in England would enable them to do so to a greater extent here than there? It might; but there are not many patients that could go out.

305. We see a good many walking up and down the balcony—are there not many of these that would be as well walking in a garden? Not all. The phthisical patients would not be allowed to walk in the grounds except in the very driest weather—not many of them would be allowed to go out.

306. *Chairman.*] What I wished to get from you on that head was this—whether it is consistent with the character and general state of a hospital that the inmates should be in a position to take exercise physically? No, I do not think it is.

- Miss Lucy Osburn.
18 Mar., 1870.
307. Are they not too weak, even those that are recovering, to take exercise? Yes, unless it is a convalescent hospital—then they are supposed to go out; but not in a general hospital, where the cases are supposed to be all acute, and to need medical attendance about every other day.
308. In fact, as soon as they are in a condition to take exercise they leave, or ought to leave, with some very few exceptions? Yes, with few exceptions.
309. *Mr. Cowper.*] Without speaking of twenty-five acres, would five acres be better than an acre and three-quarters? Yes, more space would be better no doubt.

Alfred Roberts, Esq., called in and examined:—

- A. Roberts, Esq.
18 Mar., 1870.
310. *Chairman.*] You are one of the Surgeons to the Sydney Infirmary? I am.
311. How long have you been so? About fifteen years.
312. This Committee has been appointed by the Legislative Assembly to inquire into and report upon the expediency of granting the land on which the Infirmary stands to Trustees for the purposes of the Infirmary, and the Committee are desirous of getting information on one or two matters that appear to be involved in the expediency of taking this step. First, as to the eligibility of the present site for a hospital, having regard to the situation and the population of the city, that is, its availability for the use of the bulk of the population,—and also as to the suitability of the present buildings as they now stand for the purposes of the Infirmary. The Committee would be glad if you could afford them any information on these points? As to the eligibility of the site, perhaps it would be necessary to deal with it a little more largely than your question indicates. I take it as proved, not from my own experience, but from works of authority I have endeavoured to look into, that every community of a certain size requires a central hospital. There has been of late years a strong feeling among leading professional men, say in London and other large cities, that patients do better in the country, and strenuous attempts have been made to remove some of the London hospitals to the country; but it has been found that where they have removed hospitals beyond a certain extent, other hospitals have sprung up within the same centre of population. As near as can be calculated, a central hospital is required to about every 121,000 persons, and they cannot do without it. That being the case, and the population of Sydney and suburbs being about 122,000, I look upon it as a necessity that a central hospital should exist in some generally accessible part of Sydney. As to the site, I cannot conceive of any better than that of the present Infirmary, either for present or future purposes. My reasons for coming to this conclusion are—first, that it is near the wharves and the main streets of the city, and at the same time within tolerably easy reach of most other parts where there is any great aggregation of population. If you take a map of Sydney and suburbs, you will find that it is a little to the northern extremity but tolerably near the centre of population, and that the tendency of the population is to extend in a south-westerly direction. The site is on a gravelly soil, on the summit of a hill; it is bounded on one side by the Domain and the Harbour, and beyond that the sea; it is also freely exposed to the prevailing winds, especially during the summer months, when they are most beneficial to such an institution. Owing to its position in this respect it has free access of air and sun, the two main requisites of a good hospital site. The two conditions rendering space necessary round a hospital are,—1st, free access of air, and the power of preventing other buildings from encroaching upon the walls so as to cast their shade upon them; and 2nd, to afford room for exercise for the patients. Holding the opinion that a central hospital should be limited to the treatment of acute cases, and that other cases should be removed as much as possible away from the centre of population, and that this should be kept as a central hospital, I think a limited quantity of ground is necessary for the patients themselves, so long as there are large verandahs, and sufficient ground to make the place look cheery by the plantation of trees and shrubs, the formation of lawns, &c. I may mention that one very seldom sees a patient beyond the verandahs in the City Infirmary—they never care to walk about; and it is so with every general hospital; so long as they have a few seats and a few trees the patients do not care for exercise. I mean patients convalescing from serious accidents or disease. The site in Macquarie-street is also central for the visits of friends and the reception of accidents, as well as for the combined working of the hospital with the dispensary. Another important point, and more so in this Colony than in London, is the proximity to the residences of the honorary medical staff, who at present attend regularly at the Infirmary and undertake the treatment of the cases, the resident officers only attending in the absence of the honorary medical officers. If the hospital were removed away from the centre of population it would come to this,—that being strictly an honorary staff, they would not attend to the patients as well as they do now. They might visit them perhaps twice or three times a week; but the duties would devolve chiefly on the resident medical officers, and the honorary staff would only be sent for to support them in their duty occasionally. The same objection does not apply so strongly in the London hospitals, because the gentlemen who form the honorary staff are consulting surgeons and physicians, and their afternoons are comparatively their own, so that they can attend more regularly. When I was in Brisbane, a short time ago, I visited the hospital there, which is about as far from Brisbane as the University is from here. I saw there a very intelligent gentleman, who was the resident medical officer, and I asked him how often the honorary staff attended. He said it was difficult to say, but giving a rough guess—perhaps rather more frequently than the fact was—they attended about twice a week, but that he had authority from the Committee to send for them in a cab when necessary. That had originated out of their coming so seldom. I mention that as bearing somewhat on the question. May I add that it is understood that here we are all engaged in general practice, which renders our attendance at the hospital more arduous, and it would be practically impossible to give regular attendance if the hospital were at any distance. For instance, I frequently attend three times a day here if I have an urgent case, but I could not do so or even attend every day if at a distance.
313. What is your opinion of the suitability of the buildings for the purpose to which they are applied, as they at present stand? I think the south wing is a good substantial building; not everything that one could wish, but well adapted to the treatment of cases; there is nothing in it to be materially desired.
314. That is quite a recent building? Yes. The front building speaks volumes for the foresight with which it was erected, but I hold it to be quite unadapted for the purposes of a central hospital—a hospital confined to the treatment of acute cases. The faults are perhaps the good qualities of its first construction. It consists of two floors each divided into four wards of equal size, and in the original condition the wards were

were sufficiently ventilated for the purpose in view,—that is to say, it is on the pavilion principle, the windows being placed along both sides of every ward. The walls are of fair height, but the windows are small, and do not extend to near the ceiling. Up to a short time ago there was neither water-closet nor bath in the place, except the single bath used for washing the patients when admitted. The very simple construction of the building almost prevents the possibility of adding to it without interfering with the ventilation and producing currents of air. This was the point that I think the Committee appointed to investigate the subject two and a half years ago found it impossible to counteract without producing so many angles as to obstruct the ventilation of the plain straight walls which now exist. We were also informed by the architects that it would be impossible to cut the walls with safety to the building, and in that way to heighten the windows; and finally we found that the foundations were indifferent. Of course the architects will be better able to tell you how far these defects may be remedied.

A. Roberts,
Esq.
18 Mar., 1870.

315. I may mention that the Colonial Architect, and also Mr. Rowe, the Architect of the Infirmary, have been examined here, and both are of opinion that the walls might be cut? Mr. Rowe expressed himself differently when I was acting on the Sub-committee, which sat for some months; and the late Mr. Hume, who was Architect of the institution for some time, told me repeatedly, knowing that I was anxious to reorganize, that it would be unsafe; he used to say in his old-fashioned way—"Now, doctor, do what you like, but don't cut one of the walls, or you will have the place about your ears."

316. Were not some plans of alterations the Directors proposed to make sent to England for the inspection of Miss Nightingale some time ago? Whether they were sent to England I cannot tell you, but I have brought with me the plans drawn by Mr. Rowe, and submitted to the Committee.

317. Did not the Board of Directors, or some one connected with the institution, receive a letter from Miss Nightingale in acknowledgment of some plans, and stating her approval of them? Of what is called the "Nightingale Wing" she expressed strong approval, but I do not call to mind any other plans that were sent to her.

318. Were not some extensive alterations projected in order to convert the Infirmary into something like a modern hospital, which should last for some time without further alteration? Yes, a Committee was appointed to investigate the subject in conjunction with Mr. Rowe. I forget who the members of the Committee were, but I know I met Mr. Rowe frequently on the subject, and the plans agreed upon were these I have brought with me. These plans were recommended in a report of the Committee to the Directors, and the Directors decided upon carrying them out. Advertisements were put in the paper calling for tenders, and when persons came to examine the place preparatory to sending in their tenders they requested to see the foundations, and, under Mr. Rowe's sanction the foundations were examined. It was then found that they were not so strong as he had been led to suppose, and he declined then to recommend that these additions should be carried out. The Committee then again met, and made a further report to the Board of Directors, in which they suggested three plans, one of which was to carry out the alterations I have been speaking of—I forget what the third was, but the final one was that upon the whole it would be cheaper to pull down the building and erect a new one.

319. Was this previous to the subscriptions for the Prince Alfred Memorial Fund? Yes, some months previous.

320. Before there was any idea of this public subscription? Yes.

321. The Committee did in fact report that it would be expedient to pull down the old building, before there was any idea of getting up the subscription for the Prince Alfred Hospital? They did; they reported to the Directors to that effect.

322. Are you of opinion that the old range of building is not a fit building for the purposes of an Infirmary? I am; and I may say my opinion has been confirmed since I first expressed it, and partly by the painfully frequent occurrence of erysipelas in the wards, &c. I have not for some time considered that the operation cases have done at all satisfactorily, and I attribute it to a great extent to a condition of what may be termed "hospitalism," by coining a new word. I may also mention that the rats run all through the walls, owing to the squared stones which form the face being thin, and the interior being mere rubble.

323. Do you mean that the rats are in the walls? Yes. If you refer to the report of the Inspector of Charities, when he last visited the institution, you will find that the only complaints the patients had to make was as to the annoyance from the rats.

324. Could you state as briefly as you can, and at the same time as fully as you can, your objections to this old building? The building did not possess any bath, water-closet, lavatory, or sink, or anything of that kind—

325. These could be introduced? Not without making so many projections as to interfere with the ventilation.

326. *Mr. Cowper.*] The deficiency has been to some extent remedied? Accommodation has been put up, but the lavatories are very injurious. I dare say they were the best that could be designed under the circumstances, but they all open into the wards. Now you will not find this tolerated in any hospital of modern construction. The mere fact of an apartment in which is a water-closet opening into a ward is considered to give rise to the very evils we are complaining of. The new lavatories can only be looked upon as very cheap make-shifts, perhaps better than none, but not what they ought to be. The accommodation required is there—the lavatory basins are there, the bath is there, the urinals in the men's ward are there,—but instead of being open to the external air only, they open by a doorway into the ward. All that could be done has been done to ventilate them, so that the evil of a closet atmosphere should be removed as far as possible, but still it cannot be wholly remedied; and one great fault is that they have blocked up some of our few windows, which before were not sufficient in proportion to the wall space. I think I can show you what I mean on these plans. (*Witness referred to plans of the Infirmary which he had brought with him.*)

327. You said there were three schemes submitted to the Directors by the Sub-committee? Yes.

328. Where could we get them? I think I have a copy of them.

329. Could you put them in with your evidence? Yes. (*Vide Appendix B.*)

330. *Chairman.*] I do not think you have stated your objections? Another incidental objection is that the building contains nothing but the wards, and the consequence is that the ground, which is limited, is necessarily covered by the numerous other buildings—kitchen, a large closet at the back of the kitchen, store, dispensary and waiting room, and resident medical officers' rooms. All these necessarily occupy a great amount of space and interfere with the ventilation, but all might be absorbed into one central building. Then there is no proper operating theatre—the operating theatre is a mere wooden make-shift.

A. Roberts,
Esq.

18 Mar., 1870.

331. It has been stated in evidence that there is some space under the floor from which miasma arises, rendering the place unhealthy? I know that there is a very large space, which was unventilated and that the main sewer passes directly under the building, which is a most undesirable state of things. I have frequently seen the boards in the accident ward rise up at the edges, which I have no doubt arose partly from moisture, partly from the confined state of the air underneath.

332. Are you of opinion that the want of ventilation and other defects in the construction of the building, operate injuriously upon the patients, so as to prevent their recovery, or their recovery so speedily as would otherwise be the case? I am.

333. That is your deliberate opinion? That is my deliberate opinion, that if the building is retained a certain amount of lives will be sacrificed.

334. Do you think the ill effects of the state of the buildings is so great as to have caused death in many cases in which under more favourable conditions life might have been preserved? I cannot say positively.

335. I am quite satisfied of this, that cases of erysipelas have arisen, some of which have been fatal; and the frequent occurrence of erysipelas has been the subject of conversation among the medical staff.

336. These cases have arisen in the Infirmary from causes which might have been prevented? Yes, to the best of my belief.

337. *Mr. Couper.*] I think you said the population of Sydney was in your opinion extending rather in a south-westerly direction? Yes, as near as I can judge.

338. In that view you can hardly call the present hospital central, and still less so if the population extends in that direction—that is, away from the present site? Quite so. And I think that is one of the points in favour of the present site. For the present population the site is sufficiently central, near the wharves, and near many of the manufacturing parts of the city—near those parts where the greatest number of accidents happen—and I do not consider that it is desirable to increase the size of the present hospital, or of any central hospital, beyond about 200 beds. I would infinitely rather erect another in the direction in which the population seems to be extending; and I think considering that we must in the course of time have another central hospital, that this hospital should remain where it is. The situation will be better still as soon as we require a second hospital.

339. One of the reasons why you approve of the present site is that you look forward to the necessity of having another hospital for the suburbs in the south-western direction? Yes.

340. You spoke of the dispensary part of the establishment—that, I apprehend, you would desire to retain in its present position. You look upon the establishment as divided into three branches: the Dispensary, the Infirmary, and the Hospital? No, it is really a Hospital; it is not an Infirmary. There is a Dispensary and Hospital, or rather it is a Hospital with an out-patient department and an in-patient department. I would leave it as it is, but extend, and probably modify its organization. I should like to draw the attention of the Committee to one fact, because I think it is just as well we should look forward to it. The position of Sydney and that of London is very different. The total number of beds supplied by the London Hospitals is a little over 3,000; the total supplied by the workhouse hospitals, in addition to these, extends to a very large number, 7,463. Then, in addition to that, any poor person who is taken ill in London can obtain an order for a Union Doctor, and a very large number are attended in that way. Here we have no organization of that kind; yet the pauper class is increasing rapidly, and the wants of the community are very large in that way. My first experience of private practice was gained in working one-fifth of the City of London Union. The work was very heavy indeed. We often hear of the London Hospitals supplying hospital accommodation for the poor, but the workhouse hospitals themselves really supply more than double the number of beds; and therefore I think something will have to be thought of to enlarge the system of the Sydney Infirmary and Dispensary here. The Dispensary is the out-door department. What I mean is, that those poor who do not require to come into the Hospital have not sufficient attention in Sydney.

341. *Mr. Wilson.*] Have you any means of ascertaining what is the percentage of recoveries after capital operations in the Sydney Hospital now, as compared with the time when you first interested yourself in the institution? No, I am sorry to say I have not. The staff have just had a book made for the purpose, and I hope full records will be kept. I have endeavoured to work it up quite lately, but the records are imperfect—I cannot give it.

342. From what I have heard, I suppose there is no doubt the proportion of fatal operations is increasing? I think it is; but the mortality is still less than in the London hospitals, though nothing like so little as it ought to be. I am satisfied this climate is favourable to operations, but I conceive the mortality in the Infirmary is considerably more than it ought to be.

343. Of course you understand my object is to show how far the building has become infected? Yes, quite so. What I have noticed is that the patients get into a state which a surgeon recognizes as the state of those who have been some time in a hospital atmosphere and do not get on; they look thin, there is a lassitude about them, sores do not heal, and altogether they are in a state in which I long to be able to pack them off into the country.

344. Have you noticed whether erysipelas breaks out more frequently when the dry westerly winds prevail, or when the damp north-easterly breezes are the rule? I cannot say I have. I have a general but very decided impression to the effect that the atmosphere of Sydney, including the north-easterly breeze, is favourable to the first stage of disease and the first stage of recovery after operation, but after that the inland air is better.

345. I suppose you have paid some attention to the advisability of establishing a school of medicine in Sydney—Do you not think the time will shortly arrive when it will be absolutely necessary? We have been in active correspondence with the Examining Boards at home on the subject.

346. Would it not be a great advantage that the school should be as near the University as possible? I do not think the distance of the Infirmary from the University is so great as to be attended with much inconvenience. I do not advocate the completion of the entire course of medical education in Australia. I think the amount of education we can give should be confined to the first two years, and that it would be to the advantage of the young men and of the community in which they are afterwards to practice that they should go home for the second two years. I conceive, therefore, that the distance between the University and the Infirmary is not such as to act prejudicially on the school.

347. Do you not think it would militate against the establishment of such a school of medicine, if the public were to learn that only the richer classes could complete their studies by going home? I do not think the expense would be so much greater. I do not think we are yet ripe for a full medical school.

348. Not at the present time perhaps, but the day will arise very shortly? The day will arise, whether shortly or not I cannot say. I am a strong advocate for their going home for the last two years.

348½. One objection to the Infirmary being so far from the University is not so much the distance as the localities through which the students would have to pass between the two places—having to go through the town, some of them might be led away from their studies? My experience of students is that when they once enter upon their work they become very much interested in it.

349. *Mr. Webb.*] From what you state, you are in favour of reconstructing the present building? I am.

350. Do you think there is sufficient room to introduce all modern appliances? I do, quite sufficient.

351. Where would you put the kitchens? In the basement. I do not say so without having gone fully into the matter. I have gone into the subject with the Architect and ascertained how it could be done; and when the late Dr. Montgomery, Sanitary Commissioner at Madras, was here, I talked the whole matter over with him, and he was of the same opinion. The idea was that the kitchen, the out-patients department, the dispensary, and one or two other things, would all be in the basement floor. The ground recedes at the back, so that the basement in front would be scarcely a basement at the back. The administrative department might be in the centre, semi-connected on either side.

352. Do you not think the fact of the kitchens being below would materially affect the atmosphere in the wards? No, I think not. There would be verandahs all round, and no connection whatever with the kitchens, because the staircase would be a separate thing. There would be nothing to affect the wards.

353. Have you not found that all rooms over kitchens in this climate, or even adjoining them, are very warm? The kitchen could be under the central hall of the administrative department, not under the wards at all. A hospital kitchen of modern construction is comparatively a small matter, and does not take up a great deal of room.

354. If that is the case, why was not something of the kind introduced into the new wing? There was accommodation provided in the new wing for a steam-engine for supplying hot water, but that was only a wing, and the position there would be injudicious for a kitchen.

355. Do you not think the present building could be made to answer all purposes for many years to come if the windows were altered—You have heard that the Colonial Architect states that the windows can be altered—Now do you not think that if the windows were altered and the place repaired it would serve the purpose for many years to come? Not as a well-constructed hospital for the treatment of acute cases. It would do for a benevolent asylum perhaps, or even for chronic cases, especially if the patients could get into the verandah, but not for the treatment of severe cases of accident or acute disease. I take it we are now discussing the question whether it should be retained for cases of acute disease and accident, and for that purpose I consider the present building ought not to be retained.

356. That is the front building? Yes.

357. You do not condemn the south wing? No, not in the least. I should like to see in Sydney a central hospital which anybody from the country could take as a model for a district hospital, of course on a smaller scale. For instance, a gentleman from Toowoomba, Director of the hospital in that place, which, at the present time is being rebuilt, visited me, and I took him round the hospital; but although he was able to gain a great many hints from the south wing, still the institution generally is not what I should desire to hold up as an example to our country friends. I should like to see a hospital that we could utilize in that way; because I think the condition of the country hospitals is something perfectly frightful, and I hope this question will ere long be taken up.

358. *Chairman.*] Have you paid any attention at all to the question of granting the land which is the present site of the hospital? I have frequently discussed the question with Mr. Deas Thomson and several others, who knows more about it than I do.

359. Do you think the grant ought to issue? I think so very decidedly. I have arrived at the conclusion that it would be but simple justice and for the good of the community; I conceive nothing better could be done.

360. You do not profess to give any opinion as to whether the Government is legally bound by any previous promise to issue the grant? I should desire to say that my opinion as an ordinary man is a very strong one, that they are bound—morally bound certainly.

361. You say it would be for the good of the community that the grant should issue—Will you explain what benefit could arise to the community from the land being granted? In order that there might be erected a good central hospital.

362. To whom would you desire the grant to issue? To Trustees.

363. Not necessarily to the Board of Directors? Not necessarily.

364. To Trustees who might be Directors or not? Quite so.

365. Will you state what advantage you think would arise from the issue of the grant to Trustees? At present the form of the front building is the form of a hospital of which as a surgeon I am quite ashamed, and I feel is prejudicial to the patients; and I also feel that it is not such as anybody seeking information on such subjects would gain it from. I think it is a bad example, a bad type, in a young country like this, for anybody interested in establishing similar institutions in other parts, to see and go away with the impression that what we have here is sufficient, whereas it is really very insufficient for the treatment of disease, and not at all such a model as should be followed.

366. How do you connect that with the question of the advisability of granting the land to Trustees? Because otherwise we cannot improve the building. No permanent improvements can be entered upon until the land is secured by a grant, although we have at present funds to which we could go to make the hospital a model one.

367. What funds? The Prince Alfred Memorial Fund Committee has offered the sum of about £22,000 to the Board of Directors, provided it is spent in the reconstruction of the main front building of the Sydney Infirmary, and that that building is kept for all time to come as a hospital for the poor.

368. When you said that it would be for the good of the community to grant the land to Trustees, did you mean in order that they might avail themselves of this offer of the Prince Alfred Memorial Fund Committee? Yes; in order that the Hospital should be reconstructed, and knowing that the funds are at our disposal to do so.

369. Supposing that these funds were not available for the purpose of rebuilding the front wing, would you still be of opinion that it would be advisable to issue the grant of the land to Trustees? I should. The existence of the Prince Alfred Memorial Fund does not in the least affect the question whether or not it is desirable to improve the Infirmary by reconstructing the main front building: it simply renders it possible to do at once

A. Roberts,
Esq.

18 Mar., 1870.

once that which was previously decided upon as necessary. In either case I should feel it my duty to assist in perfecting our principal hospital as soon as possible.

370. Might not that be done even though the land were still in the hands of the Government. If it were desirable to pull down the building and reconstruct it, might it not be done just as well with the land in the hands of the Government as if it were granted to Trustees? The Committee of the Prince Alfred Fund would not be justified in letting them have the money for the purpose.

371. Apart from the Prince Alfred Fund? If the Government wish to hold the land —

372. What I want to get at is this: what greater security for the public is there in the land being granted to Trustees than there is at present when it is in the hands of the Government? Simply that it would be done at once.

373. What; the reconstruction of the building? Yes.

374. With the Prince Alfred Fund? Yes.

375. But setting that aside, what advantage would there be in handing over the land to Trustees that is not existing now when it is in the hands of the Government? It seems to me very desirable that it should be a private institution. I should be sorry to see it fall into the hands of the Government.

376. Is it not in fact supported almost entirely by the Government now? No; because you cannot look upon the amount paid by the Government for the treatment of patients recommended by the Government, and for whom they have no other provision, as money paid by the Government towards the support of the institution generally. They could not get these patients provided for at so small a cost in any other way.

377. Independently of the sum paid for these patients, does not the Government contribution equal all the contributions from all other sources put together? It may be so. But another point occurs to me. Lately, since we have made improvements in the hospital, and more public attention has been directed to it, we have had several bequests; and it seems to be important that we should endeavour to conciliate those who have the opportunity of leaving their wealth to the institution.

378. In your opinion, wealthy persons would be more ready to make these bequests if the land were in the hands of private Trustees? I think so.

379. Supposing the land were granted to private Trustees for the benefit of the hospital, do you think the Directors would be prepared to relinquish all Government aid? If the Government were to send no patients there, I think perhaps they might.

380. And trust to public subscriptions for support? Yes, I am not sure it might not succeed, but I really cannot give an opinion on the subject. I think it is very likely indeed that, if they had not to take charge of Government patients, who are now very numerous, the Directors might, by diminishing the expenses, be met by sufficient private support. I am certain it would act as a stimulus to private subscriptions.

381. You think that if the Infirmary were in the hands of private Trustees, as a private institution, there would be a greater probability of receiving a response from the benevolent part of the public in support of it? I do.

382. *Mr. Wilson.*] Do you suppose the Directors, under such circumstances, the Government support being taken away, would admit the poor patients and pay the expense of treating them out of the funds raised by subscription? The principles on which patients are admitted I fancy would continue. There are a certain number of beds vacated, and a certain number of applicants, every day. Of course the number of applicants far exceeds the number of beds, and the worst cases of disease—those which can be most benefited by hospital treatment—are selected, wholly irrespective of where they come from or whom they come from.

383. Supposing that the grant were made to Trustees, you are of opinion that the same number of patients would be accommodated without Government aid? No, I take it for granted that in that case the expenses would have to be diminished.

384. Would the Government be justified in giving away land for Infirmary purposes, to be used only for the advantage of a section of the community? If you remove the Government patients—I take it for granted they would be otherwise provided for if the Government aid be discontinued; the Directors would have a smaller number to provide for, and I look upon it that the expenses of the hospital, at per bed, are more likely to increase than to diminish. At present the cost per bed is £46 per annum, whereas the average cost in the Benevolent Asylum is £14 per annum, so that we have a certain number of beds filled by patients who could be quite as well treated in a Benevolent Asylum, and we are therefore committing a clear extravagance by keeping these people in this institution. Yet it must not be understood that the Sydney Infirmary is extravagantly conducted. I have only been able to put my hand on the expenses of a few hospitals, and I find that in St. Mary's, London, the cost is £56 per bed per annum; the Children's Hospital, £60; and the Hospital for Consumption, about £50.

385. What is the estimated cost of erecting a Memorial Hospital on this site? Architects always tell you under the mark; but I have endeavoured to face the question practically, and I do not believe it could be done under £30,000, which is more than the Prince Alfred Fund at presents amounts to, but I have no doubt whatever we can get the remaining portion.

386. What would be the cost of the temporary accommodation of the patients during the erection of the hospital? There are many plans of doing that, and of course it is a difficulty. If I might be allowed to suggest what I think would be the best course, it appears to me that the central Government must for many years, if not permanently, provide for a large portion of the chronic and incurable cases of disease among the pauper population; and that being the case, I should suggest that they select some suitable site of ground, somewhere on the line of railway, consisting of from ten to twenty acres, for a Benevolent Hospital. Let the establishment be thoroughly well considered and designed, and the administrative department, together with accommodation for 200 beds, be put up at once —

387. At a cost of another £30,000? No, about £10,000, because the expense of such an institution ought not to be more than one-third of that of a central hospital. The original cost of such an institution ought to be in the same ratio to the cost of a central hospital as the cost of supporting a patient in a benevolent asylum bears to that of supporting a patient in a hospital, that is, as I have just stated, about one-third. If such a building were put up, I consider that a great number of cases in the Infirmary might be drafted into it; but in the meantime it might be used to accommodate the Infirmary patients during the reconstruction of the hospital.

388. Then £22,000 only having been subscribed towards the £30,000 which it will cost to reconstruct the hospital,

hospital, the Government must look forward in the meantime to an expenditure of £18,000, that is to say, £10,000 for the building you suggest for a Benevolent Asylum, and £8,000 to make up the £30,000, for the hospital? You must not take it for granted that the Government will have to make up the £30,000; I feel confident we shall readily get the remainder of the money from the public.

389. *Mr. Webb.*] Will the new building you propose erecting on the present site accommodate more patients than the existing one? It could be made to do so, but I should not recommend it. This is a matter on which I hold a very strong opinion. It is a very popular notion that if you put up a new building you must have increased accommodation, but on sanitary grounds I should not recommend its being done.

390. You spoke just now of a number of patients being sent to a benevolent asylum—Suppose the Government sent them to Cockatoo Island, would that be a suitable place? Cockatoo Island would do, but the buildings would not do; the buildings are unsuitable for the purpose.

391. You know the buildings? I have not seen them, but I have heard them described by Dr. Manning, with whom I have gone over the subject.

A. Roberts,
Esq.
18 Mar., 1870.

ADDENDUM.

I desire to mention that I have for some time past looked anxiously about for a hospital site that might be a good substitute for that of the Sydney Infirmary, but that I have failed to find one. Also, that the proposed site at Grose Farm possesses, I believe, a clay subsoil, that it would require to be walled in, and that the administrative portions for the perfect institution would have to be erected before any of the ward accommodation could be utilized. If the Government were willing to drain the land, wall it in, and build the administrative portion, and if the subscribers would be willing to allow the Prince Alfred Hospital Fund to be devoted to the erection of the wards, the hospital would be put up; but that in Macquarie-street (the Infirmary) would probably remain the leading hospital, and I fear the Government would be called upon for the entire support of the new one, or an equivalent outlay between the two.

I would desire to sum up the opinions which it was my wish to express in the foregoing evidence as follows:—

That all cases of disease not of an acute nature should be accommodated away from the mass of population.

That the site of the Sydney Infirmary is unexceptionable in healthfulness and utility for the purposes of a central hospital for cases of acute disease and accident, and that no other site equally suitable is attainable.

That the site of the Sydney Infirmary is sufficiently convenient for the purposes of a medical school.

That the accommodation provided in the Sydney Infirmary, and in the St. Vincent's Hospital, will be ample to meet the requirements of Sydney, if chiefly devoted to the reception of acute cases.

That it is a serious extravagance to accommodate cases of chronic and incurable disease in a hospital capable of doing justice to patients afflicted with acute disease.

That an urgent necessity exists for a hospital for cases of chronic and incurable disease, in the grounds of which it is desirable there should be a pavilion for convalescing patients.

That the original cost of erection, and the subsequent cost for maintenance, at per bed, of such an establishment, should not exceed from $\frac{1}{3}$ to $\frac{1}{2}$ of that of a hospital for acute cases.

That judging from present indications of the direction in which population tends to extend, it is desirable a portion of ground at Grose Farm should be set apart for the purpose of an additional central hospital at a future time.

That the present front building of the Sydney Infirmary is out of substantial repair, and unfitted for the purposes of a central hospital; that the South Wing is a substantial building of recent construction, well adapted to form part of such an institution, and that the Nightingale Wing is in every way suited for the accommodation of a full nursing and training staff.

That a building can and should be erected upon the site of the front building, embodying within it all the structures at present encumbering the ground of the institution, except the South Wing and the Nightingale Wing.

That the Prince Alfred Hospital Fund was collected for the express purpose of rebuilding this structure.

ALFRED ROBERTS.

TUESDAY, 22 MARCH, 1870.

Present:—

MR. KING, | MR. WILSON.

HENRY PARKES, ESQ., IN THE CHAIR.

Andrew Moffitt, Esq., called in and examined:—

392. *Chairman.*] You are a physician practising in Sydney? I am.

393. How long have you been here? Nearly thirteen years.

394. Are you acquainted with the Sydney Infirmary? Yes.

395. You are not one of the medical officers of the Infirmary? No.

396. Have you visited the Infirmary? Yes, frequently.

397. Have you paid particular attention to the condition of the Infirmary? Yes, I have been through all the wards, most of them at least.

398. Have you paid attention also to the arrangement of the buildings? Yes.

399. You are aware, I presume, that the building is a property belonging to the Government? Yes, I have read so in the paper.

400. Do you think it would be for the interest of the public that the land should be granted to Trustees for the purposes of an Infirmary? I look upon this Infirmary as a very small place, not at all large enough for the city. I do not see any means by which it could be enlarged; the ground seems very crowded.

401. That is not a direct answer to the question. Do you think it would be for the benefit of the community if the land were granted to Trustees—that is, alienated from the Government? I do not think so.

402. It has been stated in evidence that if it were in private hands altogether there would be greater likelihood of obtaining contributions from the general public? I do not think that either.

403. It is thought that the idea of its being a Government property engenders the notion that it derives its support from the Government, and would do so whether contributions were made by the public or not, and hence there is not the same zeal to support it among the different classes of the community as there might otherwise be. What do you think about that? I do not think so; I think the public are very well aware how the thing is supported; I do not suppose there is any person here who does not know it. I do not believe it could be supported without Government aid.

404.

A. Moffitt,
Esq.
22 Mar., 1870.

- A. Moffitt,
Esq.
22 Mar., 1870.
404. The question is whether, if it were in the hands of private Trustees, and thus the idea was disseminated that it was a private institution, it would be more largely supported by private subscriptions than at present? I do not think so; I think those that give to it would give under any circumstances.
405. Do you think the buildings are well arranged for hospital purposes? They might be better, but I think they are very good buildings; I do not see anything wrong with them.
406. With regard to the old range of buildings—the front wing——? If there were room the place could be greatly improved, but I do not see room to make any improvement.
407. Confining your attention to the Infirmary as it actually stands, do you think the front range of building well adapted to hospital purposes? I think so.
408. Does it appear to you to be sufficiently ventilated? Yes.
409. It is given in evidence, that on account of the lowness of the windows a great deal of foul air collects in the upper part of the wards? I have been through all the wards, and I think they are as well ventilated as most hospitals I have seen at home, and perhaps even better, because there they are obliged to exclude the air frequently on account of the temperature. I think the wards are very well ventilated here; I would not find fault with the hospital on that ground.
410. I gather from your evidence that in your opinion, on account of the insufficiency of land a good hospital could never be constructed there? I do not believe it could. The hospital which I attended at home covered 11 acres of ground.
411. Where was that? The Richmond and Whitworth Hospital, in Dublin. That was in the city, though not in the heart of it.
412. *Mr. Wilson.*] Supposing it were determined to have a hospital erected, say near the University, upon the spare ground there—do you think there would be any difficulty in getting as highly qualified medical men as could be found in the city to attend to it? Not the least. I for one would give my services if I were asked.
413. Do you think the distance would prevent medical men from acting as honorary officers of the institution? No. I know several of the medical men of the city, who, if they were asked to do so, would give their services, but they will not canvass for anything of the kind.
414. Have you ever paid any attention to the probability of our having a School of Medicine in connexion with the University? That is one of the things I think most necessary. We should have a School of Medicine, and as near the University as possible, for the sake of using the University Hall as a lecture-room.
415. And so that students attending the University might be able to attend clinical lectures at the hospital? Yes.
416. Do you not think it would be a great disadvantage to students to have to pass through such a town as Sydney in going from one lecture to another? Yes.
417. There is a space of ground near the University which I believe contains over 20 acres of land—Do you think in building any new hospital it would be advisable to attempt to erect it on such a space instead of on an acre and three-quarters, which is the area of the ground on which the Infirmary stands? Decidedly I would build it where there would be plenty of room. I do not think any general hospital should be erected on so small a space as that occupied by the Infirmary. One might be erected on 10 acres, but 15 or 20 would be better.
418. Would there not be great probability, supposing gardens were laid out round the hospital, of the convalescent patients being ordered to take exercise in them, in such a climate as this? Yes, under the shade of the trees, of course.
419. *Mr. King.*] Do you consider that the present Infirmary buildings will do for many years to come, until a new hospital can be erected outside the city? Yes, I think so; they are strong and substantial; I do not see anything wrong with them more than with any ordinary house; the walls of every old house get impregnated more or less; you cannot avoid that, but it can always be met by fumigations.
420. The buildings answer for the present the purpose required? I think so.

James C. Cox, Esq., M.D., called in and examined:—

- J. C. Cox,
Esq., M.D.
22 Mar., 1870.
421. *Chairman.*] You are one of the Visiting Physicians of the Sydney Infirmary? I am.
422. And have been for some time? Yes—for upwards of nine years.
423. This Committee has been appointed to consider and report upon the expediency of granting the present site of the Infirmary to Trustees for the purposes of the Infirmary. An application has been made to the Government, by the Directors of the Infirmary, for the execution of the grant of the land which it appears was promised by a former Government some years ago; and in consequence of this application, this Committee has been appointed to consider whether it is expedient this grant should issue or not? I feel thoroughly convinced it is necessary to have a city hospital——
424. That is a larger question, if you will permit me. This Committee is appointed to consider the expediency of granting this particular land in Macquarie-street for the purposes of this Infirmary; and it is considered that in the expediency of doing this are involved several other questions; first, whether this site is eligible for the purpose of the city, whether it is reasonably convenient for the mass of the population or for a large part of the population; in the second place, whether, if it is eligible in situation, it is sufficiently large; and in the third place, whether the buildings as they at present stand are adequate in all their arrangements for hospital purposes, and if not, whether it would be wise to pull them down and construct others where they are now standing. It may be presumed that all these matters are involved in the expediency of issuing the grant? In answer to one point, this hospital is very far from being large enough for the accommodation of this city, or for this Colony I may almost call it; and in considering this matter, it is worth while pointing out the very large number of persons that come from the different Colonies here, and are admitted into this hospital, and for whom we require to provide hospital accommodation. It is a point well worth keeping in view. My most painful duty at the Infirmary is to turn away persons that apply for admission to it. Last week I had to refuse eighteen persons beds there. Yesterday there were no less than six persons refused beds there. I feel myself that if a large hospital were built somewhere a little more out of town, and more central than this hospital is, for the accommodation particularly of the less urgent cases, and for chronic and incurable cases, the present buildings would be ample to accommodate the city.
425. As they stand? As they stand.

426. I understand from you that the adequacy of the present building, in your view of the matter, would depend upon another hospital being erected in some other position? Yes, I think it is absolutely necessary to build another hospital.

J. C. Cox,
Esq., M.D.

22 Mar., 1870.

427. And then you think this one would serve the purpose for which it is used for a considerable time? Yes. It does not accommodate all the wants of the city at present—or rather the country, for they flock in from all parts of the Colony. There are at present 207 beds in the institution; in the old building there are 130, and it is proposed to add another ward of 20 beds more, which will give us 150 beds in the old building; in the south wing, the female part, there are 77 beds. Now these 77 beds alone for acute and urgent cases would accommodate the greater part of the wants of the city in that respect; and other cases might be treated in a new general hospital to be established elsewhere.

428. Do you consider the old portion of the buildings adequately ventilated and arranged for hospital purposes? The ventilation would be excellent if there were some small windows swinging on pivots put in above the present windows.

429. Have you ever known the patients to complain of rats running about in the walls? I have in former times, but not recently. I may say I have had long experience in that hospital, for I served my apprenticeship there for three years—six years before I became connected with it in my present capacity.

430. It has been given in evidence that the patients complain of the rats running about in the walls? It may be so, but not to an extent that a medical officer's attention should be drawn to it.

431. Are the buildings pretty well arranged, supposing them to be sound and durable, for the purposes for which they are used? No, I do not call them well arranged. The kitchens are particularly bad, and the water-closets, up to the present month, have been extremely bad also.

432. Could they be improved? The kitchen should be pulled down and a new one built. It is the worst feature about the hospital.

433. Could another kitchen be erected in a similar position? I think it would be the best position for it, if you intend to keep up the building as a hospital.

434. Do you think that, if the land were granted to Trustees for the purposes of the Hospital, that is, if it were alienated from the possession of the Government, it would have any effect in inducing the public to subscribe towards its support? I do. I think if you had a city hospital, where people knew their servants would be admitted at once, they would subscribe. I know several families who would do so. I was myself a subscriber to that hospital for several years; I had a coachman very ill in my house; but I could not get him in there, and I was obliged to send him to private lodgings. I know a number of families that have withdrawn their subscriptions because they could not get patients in.

435. Do you think the idea of the place being a Government hospital engenders in the public mind a feeling that under any circumstances it will be supported, whether they subscribe or not? It does; I believe it influences the public and prevents them subscribing.

436. What then may be your opinion, if you have formed any, upon the expediency of granting the site to Trustees? If the Government decide on having a city hospital, I do not know any other better position for urgent cases occurring in the city—that is, accidents from houses falling down, scalds, burns, boilers blowing up, and so on.

437. Have you any opinion upon this question of granting the site to Trustees? I would advise its being granted.

438. *Mr. Wilson.*] You say you would advise the granting of this land to Trustees—Would you be in favour of placing any restrictions upon those Trustees, or would you allow them to pull down the present hospital, with a view of building another general hospital in its place? My belief is that the present hospital, if put in proper repair, would last for years. Not a drop of water has shown through the roof during this present heavy rain, but the floors, and the ventilation under the floors, require to be looked to.

439. Then you do not think it would be advisable to take the present building down and erect a general hospital in its place? At present I think it would be an unnecessary expenditure.

440. But you think it would be advisable to commence another general hospital in a different locality where there is more room? I do. I think the sooner a general hospital is built more in the suburbs, or in a more central part of the population, the better. It will relieve this hospital, and it is absolutely wanted.

441. Supposing another general hospital or convalescent hospital were built in another locality, I gather from your evidence that you think the present hospital in Macquarie-street might be made an excellent hospital to accommodate about a hundred patients? Excellent.

442. And would meet all the requirements of accidents likely to take place in this part of the town? Yes.

443. It has been stated to this Committee that if a hospital were built on such a site as the spare ground near the University, there would be some difficulty in getting medical men to attend as honorary physicians and surgeons—Do you think there would be any such difficulty? I do not; I do not think one in fifty would refuse; in fact they would rather canvass for the appointments.

444. You have stated that it is quite distressing to see the number of applicants refused admission for want of room—Is it also the case that many patients are dismissed from the hospital sooner than they ought to be, before they are thoroughly convalescent? Yes, it is the case; there are many patients sent out that in my opinion would be better remaining under hospital treatment.

445. Is there sufficient room on the present site of this hospital to build a modern hospital, equal to the requirements of the Colony, supposing the whole of the land were cleared, beginning *de novo*? No, far from it. You require plenty of ground.

446. If a hospital were built on a sufficiently large site, say 15 or 20 acres, are there many patients in the hospital that the medical officers would be justified in ordering to take a little exercise in the gardens that might be placed round about the hospital? Yes, I always like myself to order my patients as much as possible into recreation grounds.

447. In a climate like this do you think it would be a considerable advantage to have a large space in connection with any hospital that might be built? I do; a place where patients could go and get out of the hospital, so as to let the hospital be as free of habitation as possible.

448. Would it not be desirable also, before deciding upon the proper site of any new hospital, to take into consideration the propriety of our having a School of Medicine as near the University as other circumstances would allow? I do, and nothing would please me more than to see it built in the neighbourhood

of

J. C. Cox,
Esq., M.D.
22 Mar., 1870.

of the University. I know of no better site, and it would in every way facilitate the carrying out of a Medical School connected with the University.

449. It is not considered very advantageous in general to allow students to walk through any city or town in going from one class to another? No, it is not.

450. *Mr. King.*] You would recommend the subscribers to the Prince Alfred Hospital Fund to apply for a piece of land at Grose Farm, or in that direction, and commence operations there, rather than pull down the present building? When these subscriptions were originally asked for, I was given distinctly to understand that the present building—the main front building—was not likely to last more than a year or two, and I was one of those who solicited subscriptions to build a new hospital on its site, with that understanding. I put my name down with the distinct understanding at that time that it was to be built there. However, it appears from investigation since, that the front building in Macquarie-street is not in such an unsatisfactory state as it was made out to be, and I should recommend the subscribers to apply for another site, simply because I think it would be a pity to pull down the present building. I think it would be an unnecessary expenditure to pull down this building and spend the money in reconstructing it. This will suit the city, and you can build a Memorial Hospital at the University.

451. And you would recommend the Government to issue the grant of this piece of land in Macquarie-street to the Directors of the Infirmary in trust? I would.

452. *Chairman.*] Without any conditions? With conditions.

453. *Mr. King.*] With conditions to keep up the building and to use it for the purposes of a city hospital? Yes.

TUESDAY, 29 MARCH, 1870.

Present:—

MR. WILSON, | MR. WEBB.

HENRY PARKES, ESQ., IN THE CHAIR.

Alexander M. Brown, Esq., M.D., called in and examined:—

A. M. Brown,
Esq., M.D.
29 Mar., 1870.

454. *Chairman.*] You are a medical practitioner residing in Sydney? Yes.

455. How long have you been practising in Sydney? For over fifteen years.

456. Has your attention as a medical man been directed to the Sydney Infirmary at any time? Yes; I have been one of the honorary medical officers of that institution for several years.

457. One of the honorary Surgeons? Physicians, sir; and I have been particularly interested in the management of the institution.

458. How long have you been a medical officer of the institution? I think from five to six years—about five years.

459. Have you formed any opinion of the eligibility of the site of the present Infirmary in relation to the situation of the population of the city? Yes sir, I have thought over the matter very carefully, and I have arrived at a decided conclusion upon that point.

460. Will you be good enough to state what your views are? As to the eligibility of the site in relation to the city, there can be little objection I think; considering the extent of the institution there can be little objection to the site; that is, as to its being central and convenient as a receiving house, and for the reception of accidents occurring at the wharves and public buildings of the city.

461. You think then that the situation of the Infirmary is pretty good? I think that the situation is convenient enough as the site of a city hospital.

462. Have you ever directed your attention to the character of the buildings—that part of the building which has recently been erected—(erected within the last few years) and the part which was erected some sixty years ago? One of the buildings called the south wing was erected some few years ago, and I think the style of the building is very suitable.

463. That is of the new building? The new building—the new wing. Of course it would not be considered advisable now to attach wings in that particular way; but the wing itself and the style of the building is suitable, and would meet the modern requirements provided it stood alone.

464. You say it is not considered advisable to attach wings in that way—Would you explain what you mean? It is not advisable to mass them together, but rather to have them separated in pavilion forms. For instance, supposing the new wing were built parallel with the front, it would have been a better arrangement than placing it at one end in that way.

465. Do you think that would have been in accordance with modern ideas of hospital building? I believe so from all that I have seen or read, and I have been very careful in my inquiries into such matters.

466. With regard to the front range of buildings, which is the old part, do you think that as it now stands suitable for the purposes of a hospital? It answers all the purposes which a hospital of this character can supply. The buildings are old—I believe that is objectionable. What I mean is that they would not be worth improving, but that they would serve and do serve at present a useful purpose as a hospital for the receiving of accidents and cases of acute disease in the city. That cannot be denied.

467. Is it in any way ineligible on account of want of ventilation do you think? I don't think there can be any objection as regards that. They have been at great expense in improving the building, and matters have no doubt been made better. But it appears to me that the building is old, and the expenditure that they have been at scarcely justified. I am speaking of the front range of course.

468. Do you think the land upon which the Infirmary stands is sufficiently large for the site of a hospital for the city of Sydney? I think it is insufficient even for the present buildings that are upon it.

469. Insufficient for the present buildings? Yes, even for the present buildings.

470. Then you would consider it out of the question to extend the present buildings? Yes, that is my view of the matter. I think it is undesirable to add to the building even as they have done.

471. *Mr. Wilson.*] Do you consider this hospital we have got in the city insufficient to meet the requirements of the city and the Colony generally? It is not sufficient; it would require a building twice the size to meet the requirements.

472. Are there many patients refused admission to the Infirmary that in your opinion should be admitted? Yes, very many. The most painful part of our duties is the refusing of eligible cases.

A. M. Brown,
Esq., M.D.

29 Mar., 1870.

473. Are patients dismissed from the hospital on account of the necessity of making room for others sooner, in your opinion, than they should be? Yes, I believe that is too generally the practice. In consequence of the insufficient accommodation, we are bound often to dismiss cases before perfect recovery.

474. Is it advisable to have, as we have got here, both acute and chronic cases treated together in one building? There is no accommodation for chronic cases here. If we accommodate chronic cases—which we avoid as much as possible—we must exclude acute cases. There seems to be an understanding that chronic cases are not eligible.

475. I am aware that they are not eligible, but notwithstanding that many are admitted? Yes, in that respect we violate the rules frequently, at least I do if the cases are urgent.

476. Though you require additional accommodation, yet you state there is not sufficient space upon the site of the building here, and that consequently the idea of putting an additional building in that locality would be, in your opinion, absurd? Yes, it would be absurd to add to the existing building. The fact is, the space is so limited that they could not carry out the necessary arrangements.

477. Could a modern hospital, suitable to the requirements of the Colony, be built upon the site of the present Infirmary? No, not at all.

478. I suppose you are aware there is a proposal to take down this front building and build a Memorial Hospital on the site—Do you think that would be an advisable thing for the Government to accede to? I have thought the matter carefully over, and have come to the conclusion that such a proceeding would be exceedingly objectionable. There is no space. I don't know where they would begin, supposing they were to lay out a large sum of money in improving the building. They could not enlarge it, seeing that 215 patients are accommodated now. The character and style of the building would not be improved—would not be made consistent with modern ideas of hospital architecture; and the accommodation would not be increased materially.

479. Consequently, after spending a large sum of money upon the building, we should be no better off than now? No, no better off as regards the character of the building.

480. Nor could you accommodate more patients? No, we could not have the accommodation increased to any extent.

481. Supposing it was determined by the Government to erect another hospital near the University, do you think that this hospital in Macquarie-street could be so far improved as to make it a hospital for acute cases to accommodate about 120 patients—Do you not think a hospital to meet the requirements of the city might be made out of it to last a number of years? I don't see that very many improvements would be necessary, supposing that you diminished the number of beds and kept them for acute cases. More good could be done by improving the management of the building. The building is excellent in itself; and by furnishing a fresh hospital for chronic cases you would relieve the institution very much, and without expense at all—it would answer all the requirements. There has been too much money spent upon it as it is.

482. Supposing a new hospital were built near Grose Farm, near the University, would there be any difficulty in getting qualified medical gentlemen to undertake the superintendence of such a hospital—would the distance deter them? No, there would be no probability of that? It is a complaint in the profession that these appointments have been monopolized. You could get ten for every one you require.

483. Would any advantage accrue to the young men of the Colony by having a medical school established? I think the advantage would be great indeed in having a practical field so closely associated with the school for theoretical instruction; and the situation seems to me very eligible. Many accidents and acute cases coming in from the country could be admitted there.

484. Do you think it advisable that medical students, to attend clinical lectures, should have to walk through such a city as Sydney, going from one lecture to another? I think it would be a great loss of time. As lectures are given at home, it would be scarcely possible for them to do it, unless compelled to attend early in the day. It appears to me that if a hospital were built in the neighbourhood you have mentioned, there would be a certain number of acute cases received and treated there. It would be better to receive surgical patients from the country there than convey them a mile and a half further on, provided that there was the requisite medical and surgical skill awaiting them.

485. Do you think in an Infirmary devoted to chronic cases, and in which there would be many patients, it would be necessary to provide space for out-door exercises and good gardens? I think no hospital should be built on a limited space. There should be ground for garden purposes—even land enough for agricultural purposes also. No doubt out-door exercise would be a most valuable portion of the treatment.

486. *Chairman.*] Would you kindly say what you mean by "land for agricultural purposes"—you would not have fields of maize and wheat and barley? Probably not large fields, but I think it would be a great advantage secured in connection with such an institution. There are classes of cases constantly under treatment with little or no hope of recovery. By means of this kind they could be turned to good account, and the sufferers get useful employment from time to time.

487. Did you ever know of any such cases? No, I don't know that any such institutions exist, but we see men employed in ordinary gardening purposes every day in connection with our institutions here—benevolent asylums and elsewhere—chronic sufferers.

488. Are you aware that application has been made to the Government for a grant of the site on which the Infirmary now stands, for the purposes of the Infirmary? I believe an application was made to have the grant confirmed.

489. Do you think it would be an advantage to have the land granted? Well, that depends upon the object. If it were to spend a large sum of money on this building, I think it would be exceedingly injudicious; I should not like to see it done.

490. Under any circumstances would you think it an advisable course? I would not.

491. You would be opposed to the grant altogether? Yes, I object to the rebuilding of the place.

492. But under any circumstances would you consider it advisable? So long as the hospital is required in that situation it may be allowed to remain; the site is in itself a good site.

493. With regard to the one simple question as to whether it is more expedient to retain the site in the hands of the Government or alienate it,—what is your opinion? It would be safer in the hands of the Government I believe. The first move would be to spend money unnecessarily in enlarging the building

A. M. Brown, as they have done. The building now is too large for the site. In speaking of the site just now I said Esq., M.D. "it is very eligible in itself"; but its contiguity to the Domain is accompanied with many evils. That has been alluded to in letters to the public Press here; and I am able to speak with confidence on that point.

29 Mar., 1870. Fetes are continually taking place here which interfere with the comfort and mental quietude of the inmates and the officials themselves, disturbs their minds, gives rise to nervous excitability, and other unfavourable states; there are reviews, balloon ascents, and things of that sort. As regards the site itself for a small hospital, a hospital such as we should be justified in building on such a space, it is a good one. But this is a very serious objection.

494. Is there any other matter you desire to state to the Committee? No, I don't think there is at present.

Charles Nathan, Esq., called in and examined:—

C. Nathan, Esq. 495. *Chairman.*] You are a Consulting Surgeon of the Sydney Infirmary? I am.

29 Mar., 1870. 496. How long have you occupied that position? I was Surgeon for more than twenty years, and have occupied the position of Consulting Surgeon about four years.

497. Then your knowledge of the Infirmary is rather extensive? Yes, I have been connected with it ever since its foundation.

498. And when was it founded? In the year 1845, I think.

499. I may as well tell you that this Committee has been appointed to consider the expediency of granting the site of the present Infirmary to Trustees for the purposes of the Infirmary; and it is considered there are two or three questions especially involved in the expediency of taking this course; in the first place,—whether the site is eligible, having regard to the situation of the population of the city and the tendency of the population; in the second place, whether if it is eligible the land is sufficiently extensive; and in the third place, whether the buildings as they now exist are suitable, and in accordance with the modern views of hospital architecture for hospital purposes? Would you like me to answer these questions as you give them, or one at a time?

500. Well, as to the eligibility of the site? I think it is a most eligible site for a small hospital for the northern parts of the city for accidents and urgent cases.

501. There is in fact a large mass of population near it as it were; but that is not an answer to the question, which was as to the site, and not facility of getting to the hospital? Yes, the accidents chiefly occur on the wharves, and the different places about.

502. Is the site healthy? I look upon it as a healthy site. It is upon the brow of a hill—well drained and watered, and it is on a sandy formation.

503. Is the healthiness of the site in any way impaired by proceedings in the Domain, such as holding reviews, the band playing there, the firing of infantry, and so on? Yes, these are all objectionable; but I cannot conceive it would be advisable to give up having a small hospital there on that account. These are certainly objections to the site, but I think that they are more than counterbalanced by the advantages of proximity to the places where most of the accidents occur. The population will always be thick on this side of the town. I would not increase that hospital or make it larger than it is. The land is in my opinion fully covered now for hospital purposes, and we must have more accommodation elsewhere.

504. Are the buildings existing at present suitable for the purposes of a hospital? I think that they are.

505. The old and new buildings? With regard to the old hospital, its walls are thick, it is a sound building, well ventilated by large staircases, windows, and chimneys. The walls are very thick, and well guarded by verandahs. I think it is an excellent hospital as it is. With regard to the new building it is of two different styles of architecture, certainly not an improvement to the appearance of the place, but lately additions have been made.

506. Do you consider it necessary to have extensive grounds? Not for all hospitals. Hospital patients in acute diseases do not walk about much. A verandah such as that would enable them to take all the exercise that they could take.

507. What is the fact as to the generality of patients in the Infirmary—do they remain there sufficiently long? No, they usually leave too soon. It is considered to be a hospital for the treatment of acute cases. When the cases become chronic they are discharged. When the patients are able to take exercise they are sent away.

508. Beyond a little ground round the hospital, and a garden, is it desirable to have more extensive grounds? We do want another hospital, and when we get it will be desirable to have grounds about it. Many of the people are helpless when they are suffering from chronic disease, and it is painful to turn them out. I think there should be grounds about it, and that a new hospital should not be on this side of the town at all.

509. You think, if any expenditure is incurred, it should be in the erection of another hospital at the other end of the town? I think so.

510. In the event of a new hospital being erected at the southern end of the city, what area of land do you think it should have assigned to it? Looking forward—not taking the city as it is—and looking forward to the various useful buildings that may be put upon the hospital grounds, and also taking into account the fact that a hospital should consist of a series of pavilions at a sufficient distance from each other, I think that 25 acres would not be too much.

511. With regard to the granting of the site of this building—which is the main question this Committee has to consider, all others being subordinate to it—Are you of opinion that the site should be vested in Trustees? I think there should not cease to be a hospital there. I do think it should be vested in Trustees; but in the present state of our affairs it would be a great pity to pull down the hospital, which will stand for fifty years to come. If the site can be conditionally granted, it would be desirable to grant it.

512. Some persons—a considerable number who pay attention to the architectural features of the city—think it would be desirable to have the whole extent of the land in Macquarie-street for a range of buildings corresponding in architectural appearance; but if the land where the Infirmary at present stands were granted away, that would stand in the way of carrying out an object of that kind? Well, I have taken a merely professional view of the matter. I don't know of any site equally good at this end of the town for a hospital, and should be sorry to see it lost for that purpose.

513. Then you are in favour of the site being dedicated to the purposes of a hospital, and the land being granted to Trustees for that purpose? Yes, with some conditions.

514. What conditions? That the present building should not be pulled down and destroyed.

515. You could not make that a perpetual condition—you mean so long as the building is in a sound state? Yes, in a sound state. We shall have to lay out money in other buildings, and I should like to see it spent in the right direction.

516. *Mr. Wilson.*] What advantage would be derived from granting the land to Trustees—would the public subscribe more liberally to the hospital, and would the hospital do without Government aid? We have never done without aid. We have had some handsome sums left to us, and we hope that as charitable individuals die, large sums will be left to the Infirmary, and so the fund will accumulate.

517. But these bequests have been made while the land was in the hands of the Government, and would they not be continued—would not people be just as liberal and as willing to give if the thing were left in the hands of the Government? I don't think the grant would make any difference.

518. Do you not think if the grant was now made, there would be a probability of the managers of the Infirmary and the Trustees coming into collision with the Government, and carrying out improvements that the Government might not agree to? I think that the Government should have a large voice in the management—a larger voice than it has now. It is a large contributor.

519. *Chairman.*] Is it not a fact that the Government has no voice in the management of the hospital? I believe not. But is there not now an Inspector of Charities, and has he not a voice in the Committees?—I certainly think the Government should be represented.

520. *Mr. Wilson.*] It has been stated to this Committee that if a hospital were built at the other end of the town, there would be great difficulty in getting medical men to attend there in their honorary positions as they do to this Infirmary—is that so? I do not think that question should be entertained at all. If some doctors would not do it others would. In other places doctors go great distances to attend hospitals.

521. Do you think any future advantage would be gained by building the hospital in the neighbourhood of the University? Decidedly; as a Medical School it would be a great advantage.

Edward S. P. Bedford, Esq., called in and examined:—

522. *Chairman.*] You are one of the medical officers of the Sydney Infirmary? I am one of the honorary Surgeons.

523. How long have you been so? Four years last month.

524. Have you given your attention to the condition and character of the Infirmary? Yes, independently of my ordinary duties as Surgeon to that institution, I have been on several Committees with regard particularly to the buildings.

525. Were you at any time on the Directory? All the honorary medical officers are *ex officio* on the Directory. They have no votes, but can attend at the Board, and are placed on sub-committees occasionally.

526. Do you think the site of the Infirmary an eligible one, having in view the position of the population of the city? I do.

527. In relation to that part of the population situated at the northern end of the city, and over the district known as Woolloomooloo, it is almost central, is it not? Yes, I should say nearly central.

528. Is it an eligible site in regard to those quarters of the city where accidents most frequently occur? Yes; it is not only near to the part in which the occupations in the city which give rise to accidents are carried on, but accidents coming down by railway, and the accidents occurring on board ship, are nearer there than they would be in any other locality.

529. Is the situation thoroughly healthy? Yes, I think so; and considering that the situation is open to the Domain, its position in that respect is very healthy.

530. Is the healthiness of the situation in any serious degree impaired by proceedings in the Domain—by the playing of the band, the firing of soldiery, and things of that sort? The firing of the soldiery is no doubt a great source of annoyance to the patients; but while it would be very desirable to get rid of that, I don't think that alone should determine the question as to whether a hospital should remain there or be placed elsewhere.

531. But it is a drawback? Oh yes, it is a drawback.

532. That could be got rid of by the soldiers firing somewhere else? Yes, at Moore Park, for instance.

533. Do you know the character of the soil on which the building stands—is it clayey or sandy? I don't know.

534. Is the land seriously limited in extent—so limited that its size is a serious defect? The land is no doubt not a large area, but I think for the treatment of cases if they are limited to proper hospital cases—that is, accidents and cases of acute disease—there is quite enough land. Patients under these circumstances are not likely to be able to move about, and will not require a very large surface of ground to walk over. As far as view is concerned, when in the verandahs they overlook a very great space, and it is quite sufficient for the purpose of enjoyment.

535. In your opinion could the different buildings massed together in the rear or front wing be so arranged as to allow the land at the back to be made into a garden? I don't know of any at present. They have taken away all the unsightly water-closets, and the old lunatic cell and messenger's cottage have been taken down. When they put up a new dead-house it may be put up at the side. The only difficulty will be with regard to the kitchen—there would be some difficulty in placing that.

536. What I wish to get at is, whether anything can be done to make the look-out more grateful to the senses of a sick person? Yes, of course, if all that land was put into a garden it would make the place look much more pleasant.

537. Has your attention been directed to the building? Yes, my attention has been directed to that subject.

538. What are your views with regard to it? I think that the south wing is well adapted for the purpose of a hospital as it is at present, having been recently altered.

539. That is a comparatively new part of the building? Yes, it is. The opinions I have formed of the old building are partly from my own observations, and partly from the opinions of architects who have stated

E. S. P. Bedford, Esq. to the Committee and Directors their views. The windows are not high enough, and the roof of the building is in need of alteration. It is a pavilion hospital, and the ventilation is through from one side to the other, so that with well-constructed windows and fireplaces made perfect—provided the building would be able to stand it—it might be made good as to ventilation; but in the opinion of some architects who have been consulted on that question it can't be done.

29 Mar., 1870.

540. But your own architect, Mr. Rowe, has stated here his opinion that the walls may be cut? I did not know that that was his opinion.

541. The Colonial Architect has also stated so to this Committee? I did not know the exact opinion of the Colonial Architect.

542. Did you ever hear of any complaints about rats living in the walls? Yes, there have been complaints of rats living in the walls, and no doubt there are a great many rats about the building. There are many parts defective, such as the condition of the flooring, the condition of the plastering, the condition of the roof; all these would require alteration I believe, to make the building perfect; it wanted baths and water-closets too. In the Committee that sat, there was a calculation made—I can't recollect any figures now—as to the expense likely to be incurred in making the necessary alterations, and it was considered that very little more money than was required to put this building into an efficient condition would be enough to rebuild the building on that site, enable them to get rid of the building in front towards Macquarie-street, which stands in the way of getting further ground, and put up a hospital on a better plan. The offices would be so arranged as to get rid of the offices at the back (some of which have been taken down, though the kitchen yet remains to be taken down). It is right to say that some additions have been made lately in the shape of lavatories and water-closets for some of the wards in the main building, but I don't think they have been made with judgment.

543. Are you a member of the Prince Alfred Memorial Committee? I am.

544. Are you aware that a proposal was made at any time to expend the money subscribed for the Prince Alfred Memorial Hospital upon the site of the Sydney Infirmary? Yes; the original paper or prospectus published prior to the first meeting was for the purpose of collecting money to build a hospital on that site.

545. The money was subscribed on that condition? Yes, on that condition—it was made a condition.

546. Can you state what was done between the Prince Alfred Memorial Committee and the Committee of the Infirmary? The Prince Alfred Memorial Committee offered the money to the Directors of the Sydney Infirmary, on condition that they would build the Memorial Hospital on that site.

547. That was pursuant to a condition on which the money was subscribed? Yes.

548. Pursuant to what? The condition published in the papers, and adopted by resolution at a meeting held just after the attempt made on the Duke's life.

549. What followed? The Directors accepted the proposal of the Prince Alfred Memorial Committee.

550. How does the matter stand now? An application was made by the Directors to the Government for a grant of the land. There never was any grant issued to the Directors, and the Government did not think it right that the grant should be issued.

551. Supposing the Government had granted the land in 1868, speaking from your own knowledge, would the money have been expended, or have been in the course of expenditure in the construction of hospitals now? I should think it would.

552. Do you know what it was proposed to do? There was no arrangement come to as to what was actually to be done.

553. But as far as you have heard matters discussed, you can state what it was proposed to do? To build a central Memorial Hospital on the site of the main building.

554. Leaving the southern wing? Leaving the southern wing and the Nightingale wing, and altering the place so as to make it as perfect a hospital as they could.

555. Would the money subscribed have been sufficient for that do you think? I doubt whether it would have been sufficient; but they calculated upon getting assistance from the Government.

556. Are you in favour of that being done? I was in favour of that being done.

557. Have you seen cause to modify your opinion? I have seen no cause to modify my opinion further than the great difficulty there has been in the matter. The great difficulty has not been the putting the building on the site of the old one, but in making provision for the patients during the erection of the new hospital.

558. Have you formed any opinion upon the expediency of granting the land to Trustees for the purposes of a hospital? My opinion with reference to that was formed quite upon other views of the question. I think the land was promised, and should be granted.

559. Setting aside that element of the previous promise, do you think it would be expedient to grant the land? Yes, I think it would.

560. For what reason? Because I think that old hospital must be retained as a hospital, even if the centre building is not rebuilt.

561. Is it a fact that the Government takes no charge of it in any way whatever, or takes any part in its management, beyond the visits of the Inspector of Charities? Yes.

562. The Government have had no voice in the construction of the new building, have they? I believe not, as far as my knowledge goes. I am not aware whether the plans were submitted by the Board of Directors to the Government or not: they were not prepared by the Colonial Architect.

563. Supposing the land were to be granted, and the Infirmary became a private institution, do you think the public would more generally contribute towards its support? No, I don't think it would have much effect.

564. *Mr. Wilson.*] You have said here that this hospital should be retained, and that you think a grant of the land should be issued, as long as the Government do not interfere, but leave the matter in the hands of the Directors—What advantage would there be in issuing the grant? If it is right for them to hold the land by perpetual lease as it were, I think it would be the same thing if they had such a possession of the property that they could not be disturbed.

565. Don't you think the Government would be more likely to assist the Infirmary, which is a *quasi* Government institution, than one managed by private individuals? No; I think that the Government would not give so liberally towards an institution directly in their own control and management, as to an institution under the management of a Board of Directors, over which the Government have no control at all.

E. S. P.
Bedford, Esq.
29 Mar., 1870.

566. The Government have no control? They have no control, and the Directors are at liberty to spend the money according to their judgment, for the objects of the Charity. There is nothing in my mind which overcomes the defects in the management of institutions by Boards, but the fact that public subscriptions to those institutions would not be given to any large amount unless the subscribers had the management of the Charity that they subscribed to.
567. But there has been no proposition to take the management over from the public. The only proposition is, that the land should be granted in perpetuity to these Directors, and you think that the public would be more likely to support an institution managed by private Directors than one managed by public officers? Yes, certainly.
568. I don't suppose any one would imagine such an institution might be managed by public officers, but by private Directors, the Government having a voice in the directory? And the Directors irresponsible to the Government.
569. The general Directors of course irresponsible, but the Government might have the nomination of some, as they subscribe so largely to the institution? I don't think that would affect the grants the institution might get—it would not limit the grants. I think the other element in the Board of Directors would ensure a more liberal supply of money.
570. Supposing the Directors decided to make extensive alterations, and went to the Government for money, might the Government not turn round and say they should have been consulted before it was done? That depends upon the terms on which the Directors are placed in office.
571. The Directors are elected to manage the institution by the subscribers, and independently of the Government—If they got into any monetary difficulty, and applied to the Government for aid, might not the Government refuse to grant them any money? I think that a Board of Directors are more likely to get money to carry out improvements in an institution of that sort, than if the institution was under the direct control of the Government.
572. It has been said that the number of beds in the Infirmary is 215—Are you aware what was the number of beds it was proposed to have in the hospital when remodelled? I think it was about 250, but I am not sure.
573. It was proposed to have an additional story? Yes, there were to be three stories.
574. Do you think it advisable to have a hospital of three stories? I don't see any objection to that, provided they are all built on the pavilion plan.
575. Don't you think that the time is arriving when we shall require additional hospital accommodation? The time has already arrived. Very many patients are now unable to obtain admission; but whether the time has arrived that it is the duty of the Government to find hospital accommodation for all patients to avail themselves of is another question.
576. Do you take in any venereal patients? Yes, there is a venereal ward upon both the male and the female side.
577. How many beds are there in each? There are 12 on the female side, and 8 on the male side.
578. Is that sufficient to provide for the cases that come in? It is not sufficient to carry out the principles of the Contagious Disease Act.
579. Is it sufficient to carry out the exigencies of the present time? It is. Sometimes there are empty beds, but not often. It would be desirable to have other accommodation.
580. Is it not desirable to separate them and have a lock hospital? They are separated at present.
581. But to have them in a separate building? There is no absolute necessity for that; and you know that all additional establishments become very expensive—the staff is such a great element of expense. If by enlarging the present building the work could be carried out it would be much better.
582. But you can have a detached building without increasing your staff? Yes, I say if we can do that.
583. Then to carry out hospital structures on that plan would require a larger area than you have in Macquarie-street? Yes, certainly.
584. *Mr. Webb.*] You have said that you don't think the subscriptions would be increased if the grant were issued, have you not? Yes.
585. Then what is the object of obtaining the grant? That the Directors might be sure of the possession of the land; and if at any time circumstances rendered a change of site necessary, that they might have the power of disposing of the land.
586. Supposing that increased accommodation being necessary it was decided to increase it, is there sufficient room on this site to put up any more buildings? No, I don't think so, except on the site of the present front building. There is no room there besides the place which is covered with buildings at present.
587. By the plan suggested for the Memorial Hospital, you would, according to your statement, increase the number of beds by 35? Yes.
588. At what cost? Well, the cost would I dare say be about £40,000.*
589. And you acknowledge that the present wing facing Macquarie-street is a strong building, and can be made suitable for all present purposes? Excuse me; my opinion was that it was not a strong building. I was informed by the Chairman of the opinions which the architects had given, but my own impression was that the building was not a sound building, and that the required alterations and repairs would be nearly equal to the cost of a new building.
590. Well, from the information you have received to the effect that it is a strong building, and that it may be made suitable for present purposes, at a cost of a few thousands—do you now think it is desirable to tear that building down, and increase the number of beds by 35, at a cost of £40,000? That is more a question for an architect than for a medical man. Of course it would be absurd to spend more money than is necessary—to spend a large sum when a less sum would be sufficient; but until I heard of this evidence, the opinion I had was quite in the opposite direction. Of course I could not myself form any correct opinion upon such a subject.
591. From your experience of the capabilities of this hospital, if you are informed by a competent architect that the old building can be repaired at a cost of £6,000, do you think it would be desirable in the face of that to tear this building down, and spend £40,000 in increasing the accommodation by only 35 beds? Of course, if you can make a good hospital for £6,000, it is not advisable to spend £40,000 upon the same thing.

592.

* NOTE (on revision):—In this I had calculated as if the Nightingale wing had not been built. It should be £32,000. I should wish this sum to be mentioned instead of £40,000 wherever it occurs in my evidence.

E. S. P. Bedford, Esq. 592. It is said that the repairs can be done for £6,000, and that the ventilation can be increased, the floors repaired, and several other matters. In the face of that, do you think it is judicious or wise to tear that hospital down, and erect in its place another hospital at a cost of £40,000, and only increase the accommodation by 35 beds? Certainly not, if what you state can be done for £6,000.

29 Mar., 1870.

593. *Chairman.*] With reference to a question put by Mr. Wilson, what advantage would be gained by the Government retaining the site of the Infirmary if the Government never in any way interferes or interests itself in the management of the institution? No advantage would arise that I know of.

594. As a fact, the Government never has interfered in the management, or in any way whatever, has it? No, it has not interfered with the Committee.

595. Are you aware of the manner in which the general hospitals of the neighbouring Colony of Victoria are aided by the Government? I am not aware exactly of the way in which they are aided. I am not aware of the amount of support they receive, but I know it is a large amount.

596. It is a fact, I believe, that in all cases the Government gives £2 for every £1 subscribed by the public? Yes. I was not aware of the amount.

597. The whole of the hospitals throughout the Colony receive aid to the extent of £2 for every £1 subscribed by the public? I was aware that the support given to them was large.

598. If it be a fact that the hospital here is in a more favourable position than this, would it not be just as much a private hospital as those in the neighbouring Colonies? Certainly; in Tasmania they are so, and there the Government pays the whole amount of the cost.*

599. You are aware that the Government here gives a certain sum in aid of the hospital, which is put down as the Government subsidy; and that it also pays for the support of what are called pauper patients, which come from various parts of the Colony, independent of Sydney altogether? Yes, admitted by the order of the Colonial Secretary.

600. So that the assistance derived from the Government is in two distinct forms. The subsidy down for the year 1868 was £3,000, and then there was also a sum for the support of what may be called the Government patients—pauper patients admitted by the order of the Colonial Secretary? Yes, I am aware of these two sums.

601. This balance sheet which I have here only gives the amount paid for the support of the pauper patients for the three quarters of the year, and I find that to be £3,508 19s. 8d. Adding to that the amount put down for the last quarter giving £1,097 3s. 8d., it would make the sum for the year £4,606 3s. 4d. paid by the Government for these Government patients or pauper patients admitted into the Infirmary upon the authority of the Government. Adding to that the £3,000 subsidy, it gives a total derived from the Government of £7,606 3s. 4d. I see that the private income of the Infirmary in 1868 was, from subscriptions, £3,775 2s. 1d., amount received from paying patients £118 0s. 4d., and the amount of interest on the Directors' investments (on sums which the Board had invested) £237 12s., making a total of £4,130 14s. 5d., or more than £1 for every £2 subscribed by the Government, including the amount paid for pauper patients—Do you think that is a handsome sum to be subscribed by the public? I think it is as much as can be obtained under the present system of management. I don't mean to say that the institution is not well managed, but I refer to the class of people who come into that hospital.

602. If it be a fact that the Government of Victoria gives to the hospitals there £2 for every £1 subscribed, then the Sydney Infirmary is in a little better position than those hospitals? Yes sir.

603. I presume you have given a good deal of attention to the character and situation of charitable institutions generally. What is your opinion as to the Government having a hospital in its possession—is it likely to work it well? It would work it more economically.

604. Are you sure of that Dr. Bedford? Yes, I am; but on the other hand, if the Government had the institution there would be no hope of the public supporting it.

605. But is it not a popular opinion that a Government works everything more expensively than private individuals? No, not under their own officers.

606. Did you ever hear of the Government having charge of hospitals? Yes, military hospitals and convict hospitals are under the charge of the Government.

607. They take charge of those from necessity? Yes.

608. Is there any instance in England of a general hospital being under the control of the Government? No; they are managed there by Boards or by Trustees, as they have there large funded property and assets. But the majority of pauper patients in England are in sick wards of poor-houses, and not public hospitals, under the management of Poor Law Officers.

609. *Mr. Webb.*] When you state that the Government manages hospitals cheaper than private parties, you refer particularly to the military hospitals? Yes, to the military.

610. Those places you know have been managed cheaper? Yes. I don't speak of a civil hospital being managed in that way.

611. You don't wish to see the Infirmary managed in that way? No; I was merely answering a question put to me by the Chairman.

612. But they are not managed so well by the Government? No; the provisions are not so good, and they are not managed so well.†

* NOTE (on revision) :—At Hobart Town the hospital is entirely supported by the Government, with some few paying patients, but no private subscriptions. At Launceston there are some subscriptions.

† NOTE (on revision) :—The expenditure is less, and many luxuries are not allowed in military hospitals that are permitted in many others, but they are well managed.

WEDNESDAY, 13 APRIL, 1870.

Present:—

MR. COWPER,

MR. M. C. STEPHEN.

MR. KING,

HENRY PARKES, ESQ., IN THE CHAIR.

Alfred Roberts, Esq., called in and further examined:—

613. *Chairman.*] You have addressed a letter to the Committee, desiring to be re-examined on some point? Yes.

A. Roberts,
Esq.

614. The Committee will be happy to hear anything you have to say? Thinking over the evidence I gave the other day, it occurred to me that I failed to give a definite idea of my views in regard to the mode in which relief could be best given to the present hospitals of Sydney; and I was the more anxious to supply the omission because I remembered a remark made by Mr. Wilson which appeared to rather misinterpret what I said. Feeling as I do that the hospitals require relief, it appeared to me that it could only be given in two forms: one by the erection of a general hospital on Grose Farm, and the other by the erection of a hospital at some distance from Sydney on the line of railway, of a much more economical character, for the accommodation of cases of chronic disease, cases of incurable disease, and convalescing patients.

13 April, 1870.

615. *Mr. Cowper.*] You mean relief from their overcrowded state? Yes. I have been making inquiries as to the amount of the present hospital accommodation which is occupied by chronic and incurable cases, and by convalescing patients; and as far as I can ascertain, I should suppose about half the beds are occupied by them at the present time. I would propose that the Government should devote a piece of ground of 20 acres, where they can most conveniently spare it, on the line of railway—say at Homebush, to show the character of the site,—that they should there put up a cheap pavilion building for 100 cases of chronic disease of females, 150 chronic male cases, 100 convalescent males, and 100 convalescent females; and that there should be also an administrative block. From calculations I have made since I was here last, founded principally upon the cost of the new building at Liverpool, I think this institution could be put up for certainly less than half what would be the cost of a general hospital that would ultimately have to be devoted to acute cases. The Liverpool building only cost £40 per bed, with a cubic space of 800 feet to each patient. Such an institution as that now suggested will in this country be certainly required as a Government institution, and should therefore fairly be built by Government money and supported from Government funds—far better so than any general hospital could—and at the same time it appears to me it would confer exactly the kind of relief which the hospitals here require. The other plan would be the building of a general hospital at Grose Farm; but looking to the future, and feeling that such a hospital would be required as a second central hospital at some no very distant date, I am loath to entertain its erection in the present emergency, for this reason,—that if built merely for convalescent cases, I should feel that it would not be erected on so good a scale as such a hospital requires. It appears to me that such a hospital should be built in anticipation, if I may say so, of the advance of medical science, and be such as would be well suited to its ultimate purpose—worthy of its future as a hospital for treating acute diseases, and as a modern school of medicine. Since giving my former evidence I have made some inquiries about the ground at Grose Farm, and I find that it is a clay soil, that the clay soil extends to some depth, that at present the nearest sewerage is half a mile off; and it further appears that the ground would have to be fenced in, and the administrative portion built before any ward accommodation should be put up. There is only one other point I wish to draw your attention to, and that is, that I think there are two sides to the question of a convalescent hospital. One is the evident and desirable relief it would give to the present hospitals; the other is the effect it is likely to have upon the growing spirit of dependence among the lower orders here. In the present hospital we are all satisfied—at least those are with whom I have talked it over—that many of the patients exhibit a great tendency to remain in as long as they possibly can, where they are supplied with every comfort, and spend a life of ease. While therefore on the one hand a convalescent hospital would meet a great evil, no doubt, on the other, the necessity for turning patients out obliges the authorities of the hospital now to do that which reacts beneficially upon their independence of character.

SYDNEY INFIRMARY.

APPENDIX.

[*To Evidence given by James Barnet, Esq., Colonial Architect, 15 March, 1870.*]

A 1.

The Colonial Architect to The Under Secretary for Public Works.

Department of Public Works,
Colonial Architect's Office,
Sydney, 25 February, 1868.

Sir,

68-106.

In attention to the instructions conveyed by your minute upon the enclosed correspondence from the Honorary Secretary to the Sydney Infirmary, forwarded to me under B.C., on 15th instant,—

2. I do myself the honor to report that I have, in concert with Mr. Thos. Rowe, Architect of the institution, made a careful examination of the foundations of the old building, and find that they are sufficient and perfectly safe for their present purposes, but quite unfit for building new work upon.

I have, &c.,
JAMES BARNET,
Colonial Architect.

A 2.

The Colonial Architect to The Under Secretary for Public Works.

Department of Public Works,
Sydney, 20 March, 1870.

Sir,

68-534.

In attention to the instructions conveyed in your minute on the enclosed letter, referring to the condition of the main buildings, Sydney Infirmary, referred to under B.C., 27th ultimo,—I do myself the honor to report that, after a careful examination of the building, I find that, although the walls are of original bad construction, they are in a good state of preservation, which may be attributed in a great measure to their being protected by wide verandahs. In my opinion they will remain for many years in good condition, provided these verandahs be retained. The floors, with trifling exceptions, are in good repair. The roofs, which require re-shingling, appear to be sound, although it would be advisable to add a few stays and struts. With ordinary repairs, from time to time then, the building may be expected to remain in a safe and serviceable condition for a considerable period.

I have, &c.,
JAMES BARNET,
Colonial Architect.

[*To Evidence given by Alfred Roberts, Esq., 18 March, 1870.*]

B 1.

REPORT of the Sub-committee appointed, on the 5th March, 1867, to report as to the best mode of providing quarters for the Sister Superintendent and Trained Nurses: to consider and report generally whether it is desirable to proceed with the new wing or to erect a hospital in the suburbs: to consider finally what new buildings should be built, or arrangement be made upon the present site, either with or without a new wing: to confer with the Government as to what assistance in land or money they would be disposed to render for any of the above purposes: such Committee to consist of the Honorary Officers and Honorary Medical Staff of the Institution.

Your Committee desire to refer to the Progress Report which they brought up on the 25th June, 1867, recommending that the idea of building a new wing should be abandoned,—a recommendation which was confirmed by the resolutions of the Board, dated 25th June, 1867.

In consequence of this resolution, the duty of the Committee has been directed to the best means of introducing into the present buildings the various improvements which have recently been made in the hospitals built under the immediate directions of Miss Florence Nightingale, and to the proper accommodation necessary for the Matron and Trained Nurses who may be expected to arrive in the Colony towards the close of the present year.

Your Committee held their first meeting as soon as possible after the adoption of their Progress Report, and have lost no opportunity of accelerating a searching investigation into the important subject entrusted to them.

They have made a close examination of the ground and present buildings of the Infirmary. They have also made themselves acquainted with the present working of the establishment, as a whole and in detail; and have obtained from various books, as well as from the valuable letters of Miss Nightingale, an acquaintance with the improvements which the rapid progress of medical and social science have lately developed.

They have further made a calculation of the staff which will in future be required to work the institution efficiently and economically, and have endeavoured to provide such accommodation as will afford its members facility in the discharge of their duties, comfort in their homes, and close supervision by their superiors.

Your Committee have now to recommend that the additions and alterations named in the Appendix A should be made to the present buildings and grounds, and that the accompanying plans embodying the same should be adopted.

These designs have been drawn by Mr. Rowe under the instructions of your Committee, and will be found not only to embrace the whole of the above-mentioned additions and alterations in such form as materially to improve the external appearance of the grounds and present buildings, but also to embody the principles of improved arrangement necessary for the due efficiency of every branch of the institution.

Your Committee sought an interview with the Colonial Secretary, and submitted to him the plans and estimates for the various improvements which they now recommend to be carried out. It will be perceived that in addition to the £8,000 voted for the erection of a new wing, and for the accommodation of the officers and servants belonging to the establishment, a further sum of £6,000 will be required. Your Committee have to acknowledge with thankfulness the courtesy with which their proposals were received by the Colonial Secretary, and the readiness he evinced to bring them under the favourable consideration of his colleagues, with a view to the amount being placed on the Estimates during the present session of Parliament.

By

By the adoption of these plans there will be an additional accommodation for forty-six beds, or more than one-half of what would have been provided by the erection of an entirely new wing, whilst increased cubic space will also be allotted to each bed in the wards of the main building.

The cost of the various improvements recommended by your Committee will be found in Appendix B.

The Committee have much pleasure in expressing their sense of the diligence and ability evinced by the Architect in the preparation and elaboration of the plans now submitted; and finally have to recommend that these suggested alterations and additions should be commenced and carried out with the least possible delay.

E. DEAS THOMSON,
President and Chairman of the Committee.

APPENDIX A.

1. That the present buildings at the north front gate should be increased, and rendered suitable to accommodate the Board of Directors, Superintendent, Clerk, and Resident Medical Officers, &c.

2. That the present buildings at the south front gate should be increased, and rendered suitable to accommodate the staff of District Medical Officers and out-patients, Resident Medical Officers, consulting and examination room, dispensary and drug store, instrument and surgical apparatus room, Dispenser's living rooms, gatekeeper's room, &c.

3. That a detached building should be erected on the north side of the ground, at the back of the main building, for the accommodation of the matron, housekeeper, sisters in training, female domestics and under-nurses, linen-room, library, &c.

4. That the male servants of the establishment should be accommodated in the ground floor of the present wing, where the reserve store should also be placed.

5. That the kitchen, scullery, housekeeper's store, &c., the laundry, ironing-room, &c., and principal bath-room, with engine-house, boiler, &c., should comprise a block of buildings to be placed in the centre of the ground, at the back of the main building.

6. That all the female patients (except the syphilitic cases) should be placed in the northern half of the main building, and all the male patients in the southern half of the main building, and the south wing.

7. That a detached building be erected for the female syphilitic cases, to the eastward of that erected for the accommodation of the matron, sisters, and nurses. The accommodation to consist of two wards to contain twenty patients, with sisters' room, bath, lavatory, &c.

8. That a small ward should be erected for the reception of special male patients, and one for special female patients; each ward to contain two beds.

9. That a larger and more complete operating theatre should be constructed over the special wards, and be fitted with a lift for moving patients.

10. That each set of wards, containing about twenty beds, should be provided with a separate apartment containing one bath, with hot and cold water laid on; one sink-pipe for emptying pans; expectoration cups; and two or three water-closets; one lavatory-shelf, with four basins; and one urinal, &c.

11. That each sister should have charge of a ward or wards containing not more than forty patients, and be accommodated with suitable apartments between the wards placed under her care.

12. That the main building should be divided into eight symmetrical wards, each of which should contain in future not more than eighteen beds.

13. That the dead-house or mortuary be placed between the eastern extremity of the present wing and the Domain wall, and consist of two floors, the ground floor having two apartments, and the upper floor one.

14. One of the former to be fitted as a post-mortem-room, and as a general receptacle for the bodies to be viewed by relatives, friends, or juries.

15. The upper room to be fitted as a museum for the reception of specimens.

16. The building to be provided with a carriage-way on the south side of the present wing.

17. That all the buildings, except the wing situated at the back of the main building, and the large cistern, situated in the ground, be removed.

18. That the whole of the unoccupied ground at the back of the main building be cleared, levelled, and ornamentally laid out, and planted with trees and shrubs.

APPENDIX B.

ESTIMATE of intended alterations and additions to the Infirmary in Macquarie-street:—

	£
Dead-house, post-mortem, &c.	550
Nurses' quarters.....	3,400
Kitchen, offices, theatre, &c.....	2,100
Front of old wing.....	1,650
Superintendent, Doctors' Board-room, north and front	750
Dispensers, south end	800
Porter's lodge and w.-c.....	160
New stair, turret, bath-rooms, &c., to the south wing	650
Machinery	1,000
Extra plumbing, baths, &c.	300
Extra fittings required throughout	250
Incidental expenses	350
Syphilitic ward	1,350
	13,310
	665
	£13,975

B 2.

17th March, 1868.

REPORT of the Committee on the proposed additions and alterations to the buildings of the Infirmary.

THE Committee have to report to the General Board, that they have had several interviews with the Architect (Mr. Rowe), and that under their directions he has prepared the accompanying report and estimates. They have also had under consideration the report of the Colonial Architect (Mr. Barnett), stating that, although the present main buildings may last for a considerable time, they are not sufficiently strong to admit of new work being built upon them.

In consequence of this report, it has become necessary to review the whole subject, as it is now proved to be impossible to carry out the former recommendations of the Committee.

It will be perceived from Mr. Rowe's report that three distinct propositions have been brought under the notice of the Committee:—

1st.—

1st.—Repairs, alterations, and additions to the present buildings, including the erection of a syphilitic ward, kitchens, and other offices, in separate buildings,—the total cost of which (including the new wing for the nursing staff) will amount to £20,746 18s.; and as the sum applicable to the purpose voted and placed on the Estimates is only £16,300, application would have to be made to the Government for a further grant of £4,446 18s.

2nd.—The cost of a new main building, comprising three stories of wards and basement, with separate offices as above, would be £28,652 15s. The deficiency of funds in this case would be £12,352 15s.

3rd.—The cost of a new main building, comprising three stories of wards and basement, bringing all offices, &c., as far as possible under one roof, would be £30,682 15s., and consequently a further sum of £14,382 15s. would have to be applied for.

Your Committee have to refer to Mr. Rowe's report in respect to the relative advantages and disadvantages of these several plans, and also as to the details of the items contained in the foregoing estimates. As it is now apparent that none of the plans can be carried out unless further funds be granted by the Government, your Committee recommend that copies of the several reports and estimates be sent to the Colonial Secretary, with a request that the Government will determine which of the plans will be adopted.

It is proper to point out that in the whole of Mr. Rowe's estimates he has omitted to include his charge for commission. It will be necessary therefore, in estimating the additional funds required, to add 5 per cent. to the gross amount of each estimate.

Your Committee, in conclusion, beg to recommend that as the south wing is a comparatively new building, and quite strong enough therefore to admit of the alterations and improvements previously determined on, the Architect be entrusted to call immediately for fresh tenders for the same—the former tenders being considered too high. The cost, estimated at £900, can be met from the funds now in the hands of the Treasurer.

E. DEAS THOMSON,
President.

T. Rowe, Esq., to The Board of Directors, Sydney Infirmary.

Sydney, 4 March, 1868.

Gentlemen,

I have the honor to forward for your consideration the following report on the present main front buildings of the Sydney Infirmary, together with enclosed copies of estimates and abstract of comparison submitted by me for the consideration of the Colonial Architect.

On the 5th ultimo, by previous appointment, I met the Colonial Architect and Clerk of Works of his department, and we examined the state of the foundations, walls, floors, roofing, &c., of the main front building, which in many places are defective, and necessitate an immediate outlay, at the lowest estimate (including necessary alterations), of £5,823 10s. to make them habitable. (See estimate No. 1.)

It was found on examination that the main walls are sufficiently substantial on the whole to last a number of years, but will require great care in cutting out for openings and other necessary repairs or alterations, but the verandah-wall has given in many places, and is certainly unfit to build upon. The present construction of roof is defective, (having sunk in several places), and throws considerable weight on the columns, which are supported on this (verandah) wall, and those parts immediately under the columns are very defective in construction.

The shingles on the roof are very bad, and the fact of the roof being as weather-proof as it is, is simply owing to the high pitch given.

The entire roof will require to be stripped, strengthened, and reshingled; and taking into consideration the exposed position of the balcony, the defective wall supporting the columns, as well as the danger of leakage from V gutter between the roofs, it would be advisable to take off the present roof and reroof in one span, with separate balcony roof, thereby doing away with the large centre gutter.

A considerable portion of lower floors throughout buildings must be taken up and replaced; and nearly all the plastering of walls must be taken off and replastered; a portion—say 6 to 8 feet high round whole of wards—being cemented with Keene's cement. The sashes generally throughout are defective, and will require to be replaced with new in a short time.

Therefore, merely taking into consideration the question of necessary repairs, it will appear advisable from this statement, to adopt the higher estimate of repairs (No. 2—£7,186 18s.), and it becomes a serious question whether in reality it be not more economical to erect an entirely new building.

The advantages of securing as much open space about the premises by not over-crowding the buildings, of being enabled to arrange the premises on the most approved principles (a basement of offices with two stories of wards) and of securing proper and efficient drainage (a serious difficulty in the plan of proposed alterations and additions),—added to which, is the facility for increased accommodation by the addition of another story of wards at any future period (which cannot be attempted on the present walls),—are all so apparent that they need not be dilated upon.

In the meantime, I would suggest to the Board of Directors the desirability of deciding as to whether the additions to the south wing are at once to be proceeded with, for in such case it will be necessary to call for fresh tenders, as the contractors whose tender was the lowest for proposed alterations and additions to both main front and south wings are not willing to execute that portion of the work at such a price as I consider to be fair and reasonable.

I would further remark, that I delayed sending in my report waiting a communication on the subject from the Colonial Architect, and considering that I had made the question upon which you were desirous of obtaining his opinion sufficiently plain, by the statement and estimates submitted to him for consideration.

In conclusion, I beg to state my opinion that it will be by far the most satisfactory course, if funds will permit, to erect an entirely new building, with all modern appliances, as the best that can be done with the present building will still be an imperfect arrangement.

I have, &c.,
THOMAS ROWE,
Architect.

REPORT on proposal to erect new main buildings, in lieu of the proposed additions and alterations to Sydney Infirmary.

In order to lay before the Board of Directors a clear statement of the probable difference of expenditure between erecting entirely new buildings and the proposed additions and alterations to main front buildings, as at present, including new syphilitic ward, kitchens, and offices, in separate buildings, estimates of the probable costs are given under three separate heads, viz. :—

1st.—Repairs, alterations, and additions to present building, including proposed additional syphilitic ward, kitchens and other offices, in separate buildings.

2nd.—The probable cost of a new main building, comprising two stories of wards and basement, with the necessary offices, &c., as above.

3rd.—The probable cost of a new main building, comprising three stories of wards and basements, bringing all offices, wards, &c., as far as practicable, under one roof.

Reference is made in these calculations to estimates in detail, and reports previously furnished to the Colonial Architect, copies of which are here annexed; and a statement of comparison, showing the advantages of the increased expenditure, is there given.

SYDNEY

SYDNEY INFIRMARY.—1ST ESTIMATE.

Total.....	£30,682	15	0

STATEMENT of comparison referred to.

It will be seen on reference to the 1st and 2nd estimates preceding, that the difference of cost between the proposed and necessary repairs to present buildings, with additional wings and offices, and an entirely new building of two stories and offices, basement, &c., will be about £7,906 sterling.

The advantages of erecting a new building, in comparison with repairing present buildings, may be briefly stated as follows:—

- 1st.—The basement will include a large portion of the out-offices, and thus in part avoid crowding up ground with buildings.
- 2nd.—The whole of the arrangements will be more perfect and convenient.
- 3rd.—The building will be sound and strong in all its parts, thereby preventing a constant outlay for repairs, which is almost unavoidable in old buildings.
- 4th.—The architectural effects will correspond with the new additions, and be appropriate to the purpose for which the buildings are intended to be used.

Referring to preceding estimates, viz., 1st and 3rd, also 2nd and 3rd respectively,—the difference of cost between erecting a new building of three stories and basement and the proposed repairs and alterations to present buildings is found to be £9,936 sterling, and is but a bare increase of £2,032 on the two-story building.

There can be no question but that, in a comparison between the new buildings, the advantages are in favour of the larger building, as by that plan the syphilitic wards will be placed on the second floor; and with either of the other arrangements there is a difficulty in determining where this ward shall be placed, and a further and more serious difficulty in obtaining proper and sufficient drainage.

The further advantages of this three-story building (beyond the two-story building as previously stated), as compared with the "proposed alterations to old buildings," are that it will afford extra accommodation to eighty (80) patients at an increase of cost of £2,030 (the syphilitic ward being on the second floor, avoiding difficulty in drainage, &c., as previously stated). Most of the offices intended to be placed or built detached can be included in the building or basement; thus the whole arrangements will be concentrated in one building comprising all modern improvements, the site will not be crowded with scattered buildings obstructing a proper ventilation, and the general effect in an architectural sense will be worthy of the principal philanthropic institution of the Colony.

THOMAS ROWE,
Architect.

B 3.

[A copy of the following letter was sent to the Presidents and Vice-presidents of the Royal Colleges of Physicians and Surgeons, and the Society of Apothecaries, London.]

Sydney Infirmary,
24 September, 1869.

Gentlemen,

Two months since we had the honor of writing to request that you would recognize the Sydney Hospital (Infirmary) as a school for affording clinical instruction, and we stated it would be our duty to address you again ere long upon the subject of "the establishment of a medical school" in Sydney.

We have now to inform you that, with the desire of securing a high class of medical education to the young men of the Colony, it has been decided by the Senate of the Sydney University and the Board of Directors of this Hospital, to establish, with the sanction of the Council of Education, a Medical School, upon the principle of providing the first two years of education in Sydney and sending the students to England to complete their full term.

We have the honor to enclose a copy of the curriculum of study at present decided upon, and are requested to draw your attention to some of the many advantages which it is thought are embraced in the proposed scheme:—

- 1st.—It is considered more desirable that young men should leave their home with its associations, to reside at the Antipodes for a period of two or three years at the age of twenty years, rather than for the longer term of four or five years at the age of eighteen years.
- 2nd.—That a sufficiently large hospital, having but a limited number of students, offers more available opportunities for acquiring sound professional knowledge during the first two years of the medical curriculum, than a large school, with its attendant excitement, &c.
- 3rd.—That the large schools of an older country, with their greater opportunities and spirit of competition, are better calculated to enable the well-grounded student to complete his course of professional study in a satisfactory manner.
- 4th.—Many gentlemen entering the profession in this Colony will possess the means of visiting the continental schools after attaining their qualification, and will by the course suggested have the opportunity of doing so brought nearer to them.

This hospital offers unusual opportunities for the quiet and effective study of clinical medicine and surgery—its wards will shortly contain more than 200 beds—the cases of disease and accident admitted are received from an area embracing the whole of New South Wales, Queensland, New Zealand, and the Pacific Islands, &c., thus offering to the student's observation a variety of disease not usually met with in one medical school.

The high character of the Sydney University is sufficient guarantee that the lectures given will be of a high class, and the supply of subjects for dissection will be ample.

In conclusion, we have the honor to request that the Council of the Royal College of Surgeons will be pleased to recognize the course of medical training proposed to be given in the Sydney School of Medicine, and accept the certificates of the Professors at the University and honorary medical staff of this hospital.

We send by the same mail a report and a copy of the rules and by-laws of this hospital, with a calendar of the Sydney University.

We have, &c.,
JOHN E. MANNING,
M. H. STEPHEN,
Joint Hon. Secretaries.

PROPOSED Course of Preparatory Medical Education in Sydney.

All students to pass the Matriculation Examination at the Sydney University prior to commencing their medical course of study.

B 4.

Gentlemen,

We have the honor to transmit to you a copy of the resolution passed this day at a meeting of the General Committee of the Prince Alfred Hospital Fund. We have also to state that, in passing the resolutions therein referred to, the public meeting was fully aware that the proposed scheme cannot be carried out without your consent, and that as the Trustees of a large public fund, the General Committee will be unable to hand it immediately over to your charge; but they trust that your Board will heartily co-operate with them in erecting such a structure upon the site of the present front building of the Sydney Infirmary as will improve the accommodation and arrangements of your noble institution, and at the same time serve as a memorial that will best accord with the wishes of H.R.H. the Duke of Edinburgh. It is perhaps necessary to add that the General Committee, on behalf of the subscribers, have no intention of seeking any share in the control or management of the new building, other than that it shall to all time be called the "Prince Alfred Hospital," and be devoted to the purposes indicated in the second of the resolutions passed at the general meeting.

(Signed by the Honorary Secretaries.)

To this letter the following reply was received:—

To the Honorary Secretaries,
Prince Alfred Hospital Committee.

Sydney Infirmary
4 June, 1868.

Gentlemen,

We are directed by the Directors of the Sydney Infirmary to acknowledge the receipt of your letter of 24th March, which was laid before the Board at its next meeting. Inasmuch however as the subject of your letter of the 24th March was of such importance, involving as it did such radical changes in this institution, the Directors deemed it essential that a special notice should be given to the members of our Board, and that sufficient time should be allowed them for mature consideration of the matter to be submitted to them.

We have now the honor to enclose a copy of the minute passed at the meeting of the Board held on the 2nd June inst. :—

"Motion.

"The Board having taken into consideration the communication from the Committee for raising a memorial to H.R.H. the Duke of Edinburgh, desires to express its willingness cordially to co-operate with them, as proposed, in erecting a new hospital, including a ward for convalescing patients, with all the modern improvements, upon the site of the present main building, provided that a sufficient sum be available for the purpose, and that it be understood that the building can be devoted only to the relief of such cases as come within the present or any future rules of the institution."

Carried unanimously."

In order that the above resolution might be acted upon as speedily as possible, the following motion was at the same meeting passed by our Board :—

"That the following gentlemen be appointed to form a deputation to wait upon the Honorable the Colonial Secretary, for the purpose of obtaining a grant of the land at present occupied by the Sydney Infirmary, to a Board of Trustees, of which the Hon. the Colonial Secretary shall *ex officio* be a member; the said deputation also to solicit the support of the Government in carrying out the object proposed in the letter from the Committee of the Prince Alfred Hospital Fund."

Dated 24 March, 1868.

Members of deputation :—The Hon. E. Deas Thomson, President; the Rev. John Graham; the Rev. James Milne; Mr. Robt. Coveney; and the Honorary Secretaries; together with Messrs. Walter Lamb, Edward Knox, Alfred Roberts, and J. Grafton Ross.

With reference to the proposed title of the new hospital, our Directors are of the opinion that the title "Prince Alfred Memorial Hospital" would be more in consonance with public feeling.

We remain, &c.,

M. H. STEPHEN,
J. E. MANNING,
Joint Hon. Secretaries.

B 5.

SPECIMENS of the lists upon which all the money subscribed to the Prince Alfred Hospital Fund was collected and entered generally by the subscribers. The object of the fund is clearly defined upon each list. H.R.H. the Duke of Edinburgh sanctioned the use of his name and coat of arms, &c., upon the understanding that the building was to be on the present Infirmary site.

HOUSE LIST—PRINCE ALFRED HOSPITAL.

For the relief of the sick, the maimed, and the convalescing, from all parts of the Colony.

The following resolutions were passed unanimously at the public meeting of colonists held in Sydney on the 20th March, 1863 :—

"1st. That this meeting regards with the deepest interest the steady progress of His Royal Highness the Duke of Edinburgh towards recovery from the dangerous wound inflicted by an assassin during his sojourn in Sydney, and determines that a substantial and permanent monument shall be erected in commemoration of the heartfelt gratitude of the inhabitants of New South Wales for the preservation of His Royal Highness.

"2nd. That this meeting is of opinion that the form of memorial most appropriate to the object in view, and best calculated to represent the feelings of the community, will be a hospital for the relief of the sick and maimed, possessing all modern appliances necessary for the effective treatment of disease and comfort of the inmates, including a ward for convalescents until suitable accommodation is provided for such.

"3rd. That, in the opinion of this meeting, the proposed edifice should be erected upon the site of the present main front building of the Sydney Infirmary, and be named the 'Prince Alfred Hospital.'"

The Committee have determined that subscriptions may, if desired, be payable either in cash or by promissory notes, due at below-mentioned dates (extending over two years).

They have also resolved that one of these lists shall be left at every house in the Colony, so that every man woman and child may have an opportunity of giving something, no matter how small the sum, towards the great national Memorial of Prince Alfred.

RESOLUTIONS passed at a special meeting of the Honorary Medical Staff of the Sydney Infirmary, held in September, 1868.

1. That ample hospital accommodation should be provided in Sydney for the reception of the full average of acute cases of disease and of severe accidents.
2. That patients convalescing from long and severe illness, as well as those suffering chronic disease, can in the majority of instances be treated better and more economically in an institution properly situated out of town.
3. That no portion of Sydney is so well suited for the erection of a general hospital for the treatment of acute disease and severe accidents as that section of it lying between Hyde Park and Government House, on the east side of Macquarie-street.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOVERNMENT ASYLUMS.

(REPORT FROM THE BOARD, RELATIVE TO EXPENDITURE DURING 1869.)

Ordered by the Legislative Assembly to be Printed, 25 March, 1870.

THE SECRETARY TO BOARD OF GOVERNMENT ASYLUMS TO THE PRINCIPAL UNDER SECRETARY.

Hyde Park Asylum,
Sydney, 22 March, 1870.

SIR,

I am directed to transmit, for the information of the Honorable the Colonial Secretary, a Return of the annual expenditure of the Government Asylums for the Infirm and Destitute, for the year 1869, and to request that it may, with this Report, be laid before Parliament.

I am desired to call the attention of the Honorable the Colonial Secretary to a few facts connected with the management of the Government Asylums, as brought out in the accompanying Returns.

(1.) The daily average number of inmates in all the Asylums for the six years (1863 to 1868) exhibited a steady increase, as will be seen in the accompanying comparative return; but in the year 1869 ^{Marked A.} the daily average appears to have reached its limit, as the number in that year was only one above the number in 1868. This gratifying fact is not attributable to any unusual mortality, since the number of deaths was actually thirty-eight less in 1869 than it was in 1868, but the Board are inclined to regard it as an evidence that the maximum of pauperism, as regards candidates for admission to the Government Asylums, have been reached.

(2.) The Board are gratified to be able to report that the average expense per head for the past year is considerably under that of former years; the comparative return shows that while the average ^{Marked B.} expenditure for each pauper, for the years 1863 to 1868 inclusive, was £13 18s. 4d., that for 1869 was £12 14s. 1d., or £1 4s. 3d. under the average of the former six years. This result may for the most part be attributed to the favourable contracts which have been made for the supplies of provisions, clothing, &c., and it is viewed as a complete realization of the Board's anticipations when they applied to be allowed to make their own contracts, that they would be enabled to manage the Asylums, not with greater economy only, but with greater satisfaction to all concerned.

(3.) The comparative return includes the expenditure of the Hyde Park, Parramatta, and Liverpool ^{Marked B.} Asylums only; the Asylum at Port Macquarie, which was established in 1866, has always been looked upon as a temporary shift only, and therefore has not been included in the return, which embraces the three years prior to its establishment. With reference to the Port Macquarie establishment, the largely increased cost, not only in the transport of the people, but in their maintenance, added to the difficulty of exercising an efficient supervision over its management, induced the Board, upon the completion of the new wing at Liverpool, to recommend its abandonment, and this was effected, with the approval of the Government, at the expiration of last year, when the women (55 in number) were transferred to the Asylum at Hyde Park, and the men (126 in number) to Liverpool.

(4.) The average daily number in all the Asylums in 1869 was 970, and the total average cost per head, including salaries, rations, clothing, medicines, travelling expenses, &c., was £12 16s. 6½d. per head, ^{Vide Return, marked C.} an expenditure which the Board think will contrast favourably with that of any Institution of a kindred nature in this or any of the adjoining Colonies.

(5.) I am desired further to add that whilst it has always been the object and study of the Board to maintain a strict watch upon the admissions, and to enforce the utmost economy in the working of the Institutions under their charge, they have never refused shelter to any well established case of helpless destitution, nor have the health and comfort of the unfortunate class of persons who have obtained that shelter been otherwise than the object of their constant solicitude.

(6.) There is one other point to which I am desired to draw attention, and that is to the necessity for some enactment similar to that in force in the Colony of Victoria, by which lunatic, idiotic, deaf, dumb, blind, or infirm persons, arriving by ship, who are likely to become a charge upon the public, are prohibited from landing at any port, unless under bond to Her Majesty for the repayment of expenses which shall or may be incurred within the space of five years, for the maintenance or support of such persons. (*Vide* "The Passengers, Harbours, and Navigation Statute of 1865," section 36.)

The necessity for some such law was pointed out in the Board's letters of the 13th July and the 3rd August, 1869, and every day's experience convinces them of the injury which arises to the Colony from the unchecked reception of infirm paupers from Queensland, New Zealand, and elsewhere, to be a tax upon its charity.

I have, &c.,

FREDERIC KING,
Secretary.

Sydney : Thomas Richards, Government Printer.—1870.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROMAN CATHOLIC ORPHAN SCHOOL, PARRAMATTA.
 (CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 1 March, 1870.

[Laid on Table in reply to Question No. 3, Votes and Proceedings, No. 18, of Friday, 25 February, 1870.]

No. 1.

MR. JAMES O'SULLIVAN to THE PRINCIPAL UNDER SECRETARY.

Catholic Orphan School,
Parramatta, 24 January, 1870.

SIR,

I most respectfully beg to call the attention of the Honorable the Colonial Secretary to the deaths—sickness—the numerous cases of ophthalmia, &c., so prevalent in this Institution, likewise neglect in the education of the children, and the other abuses so frequent in the management of this school.

1. Within the last twelve months eleven children died in this school, whose deaths I attribute to the want of not been properly attended to. They were all very young, from three months to three years old; there was none to look after them; they were allowed to wander under the cold, rain, and heat; got bad nourishment, unfit for their tender years; the consequence was, they contracted disease, which was most painful even to witness, and the sufferings some of those poor creatures endured, until death terminated their existence, was most appalling. I do not know what the medical certificate of the deaths may be, but I am sure if a proper investigation is made my statement will be found correct.

2. Sickness—Cases of ophthalmia, &c., are so prevalent, that I wish particularly to draw attention to. Those cases are nearly produced in the dormitory; there the ventilation is not good, but to add to it the beds are made up early in the morning, between 7 and 8 o'clock, and so confine the night effluvia, and prevent its escape; also, the boards are washed between the beds daily—the bed-clothes absorbs and retains the damp evaporation, consequently the air in the dormitory, and especially in the winter time, is damp, chilly, and fetid; it's no wonder then, when this air is inhaled night after night, that sickness, sore eyes, &c., follows.

3. The diet also is bad, and there is never a change of diet made—the tea, sugar, milk, and the meat are of the very worse kind. On such diet the children are obliged while out of school to work hard; they cut over a ton of wood into very small pieces, as also to pump over 400 gallons of water; in no other Institution are the children compelled to work so hard and do work of this kind; they are too young, and not able to do it here.

4. I wish also to call attention to the children who are apprenticed. Some of those poor things run away from their masters, and come back here in a miserable condition, complaining of the harsh treatment they receive; others, who serve their time, state that their masters do not pay them the money they ought to receive at the end of their service.

5. The education of the children is also neglected; I know a number of grown-up boys, who attended school every day for the last two or three years, and who can neither read nor write. I wish here also to state that I was appointed assistant teacher, but I am not allowed to teach; I have to attend to the children out of school, and do other things which are not in accordance with that of a teacher's duties.

6. There is also a farm of 59 acres attached to this school; I should think it costs the Government over a £100 a year; as it is managed at present it's of no benefit to the Institution.

I am very well aware in making this report I will incur the displeasure of the Sisters of the Good Shepherd, who are managing this school, and the Vicar-General; that they will do their utmost to injure me I feel positive; I do not consider myself, if I can benefit the poor orphans who can neither use their voice or pen to show their miseries.

I have, &c.,
JAMES O'SULLIVAN.

2

No. 2.

THE PRINCIPAL UNDER SECRETARY TO THE VICAR-GENERAL.

Colonial Secretary's Office,
Sydney, 2 February, 1870.

VERY REVEREND SIR,

I am directed by the Colonial Secretary to refer to you, for your observations on the allegations therein made, the accompanying copy of a letter from Mr. James O'Sullivan, teacher at the Roman Catholic Orphan School, containing statements affecting the welfare of the inmates of that Institution.

I have, &c.,
HENRY HALLORAN.

No. 3.

THE VICAR-GENERAL TO THE COLONIAL SECRETARY.

Vicar-General's Office,
14 February, 1870.

SIR,

I have the honor to acknowledge receipt of your letter of the 2nd instant (70-792), enclosing copy of a letter written by Mr. James O'Sullivan, assistant teacher at the Roman Catholic Orphan School, for the purpose of bringing under the notice of the Government his allegations concerning certain imaginary abuses affecting, as he says, the welfare of the children.

2. The main matter of his assertions belongs to the responsibilities of the Visiting Surgeon, and to details of which a medical man is the fittest judge. The Committee therefore have procured Dr. Pringle's report, which they have now the honor to enclose.

3. Mr. O'Sullivan says that the farm produces nothing; on the contrary, although it has been so lately taken in hand, it already supplies a considerable proportion of the whole quantity of vegetables consumed; besides this saving, the training of some of the boys to agricultural labour was a principal advantage intended by Government in granting the land.

4. Mr. O'Sullivan says that some boys have run away from their masters back to the school, and complained of illusage and nonpayment. It is not to be expected that, amongst boys beginning a life of regular industry, there should be none to run away from their labor, and invent tales of excuse. The Committee have always been ready to inquire into any case of apparent hardship. Of course it may sometimes have been difficult, in the case of runaway apprentices, to obtain their yearly fee, but the Committee have recently ordered their clerk to make a yearly application for this fee, which is paid by the Chairman into the Savings' Bank, so that every possible injustice will be obviated.

5. With reference to Mr. O'Sullivan's assertions, relative to the school instruction and management of the children, it is sufficient to point out that examinations have been made by the Inspector of Public Schools and by the Inspector of Public Charities.

6. The Committee leave in the hands of the Honorable the Colonial Secretary the appreciation of the gross breach of ordinary discipline committed by Mr. O'Sullivan in appealing to the supreme authority without first offering his statements to themselves; and they refer to the insolence of the concluding paragraph of his letter, and to its date, following close upon a serious charge which had been made against his own conduct, as very forcibly suggesting a motive for his attack for other than his professed anxiety for the welfare of the children.

I have, &c.,
S. J. A. SHEEHY,
V. G.

The Visiting Surgeon, Roman Catholic Orphan School, Parramatta, to the Clerk to the Committee of Management.

Parramatta, 7 February, 1870.

Sir,

I have just received, and read with equal disgust and indignation, the tissue of falsehoods penned by Mr. Jas. O'Sullivan, respecting the treatment of the children in the Roman Catholic Orphan School. With regard to the education of the children of course I cannot report, but on every other point I can speak with authority, and most emphatically deny the man O'Sullivan's allegations.

2. The eleven deaths which have occurred during the past year have, with one exception (a case of British cholera), occurred in infants suffering from inherited disease,—one case, Bridget Rudd, was placed in hospital on the day of her admission to the school, and never left her bed. The children received every possible attention, both before admission and while in hospital. The food was excellent, and as a change there was no stint of eggs, butter, milk, arrowroot, wine, brandy, &c., &c., while the attention of the Sisters was beyond all praise. A regular certificate of the cause of death was furnished by me in each case, the most common causes of death being low fever, marasmus, and cancrum oris.

3. It is untrue that there are many bad cases of ophthalmia; there are more chronic cases than I should like to see, but these are nearly all attributable to the defective drainage now being remedied.

4. The general diet of the school is good and abundant, while no child to my knowledge has ever suffered from over work.

5. Mr. O'Sullivan's statement that children, when apprenticed, run away and return to the school, contradicts his previous statement that the children were starved and badly used.

Lastly. It appears strange that Mr. O'Sullivan should have witnessed all this bad treatment for twelve months in silence, nor felt himself compelled to remonstrate until his own conduct in the school was called in question by the Mother Superioress.

I have, &c.,
G. HOGARTH PRINGLE, M.D.,
Visiting Surgeon, R. C. School.

Catholic

The Matron, Roman Catholic Orphan School, Parramatta, to the Chairman of the Committee.

Catholic Orphan School,
Parramatta, 12 February, 1870.

Very Reverend Sir,

In answer to the charges made by Mr. O'Sullivan regarding the farm, I beg to say I have calculated the expenses for the year 1869, and can only make them amount to seventy-one pounds nine shillings and six-pence.

The produce for the same year amounts to eighty-five pounds nine shillings and one penny.

I duly received permission, in the month of April, to have the farm ploughed. In the month of July we received a small supply of vegetables, increasing each month, until December, when we received a full supply—three thousand two hundred pounds—which we shall continue to receive for some months.

From this statement you will see it has more than cleared itself, though only so short a time under cultivation.

Such being the case, we have every reason to hope that the saving this year will be considerable.

I remain, &c.,
M. A. ADAMSON.

Expenses of Farm, 1869 :—

	£	s.	d.
Mens' wages	35	0	0
Rations for man and wife	13	14	6
Forage, one horse	22	15	0
Total	£71	9	6

Produce of Farm, 1869 :—

1,557 quarts milk— $2\frac{1}{2}$ d.	16	4	4
3,568 do. — $2\frac{3}{4}$ d.	40	17	8
9,899 lbs. vegetables— $\frac{1}{8}$ d.	28	7	1
Total	£85	9	1

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROMAN CATHOLIC ORPHAN SCHOOL, PARRAMATTA.

(REPORT OF INSPECTOR OF PUBLIC CHARITIES.)

*Ordered by the Legislative Assembly to be Printed, 16 March, 1870.**[Laid on Table in reply to Question No. 3. See Votes and Proceedings No. 28, of Wednesday, 16 March, 1870.]*

THE INSPECTOR OF PUBLIC CHARITIES TO THE PRINCIPAL UNDER SECRETARY.

Sydney, 8 February, 1870.

SIR,

I have the honor to report, for the information of the Honorable the Colonial Secretary, that I inspected the Roman Catholic Orphan School on the 7th instant.

2. Before proceeding to remark on the state of the institution, I would beg to call attention to the fact that there do not appear to be any printed rules and regulations for the guidance of the officers in the fulfilment of their several duties, and would refer to a letter from my predecessor, dated 11th December, 1868, submitting regulations for approval; they appear to have been lost sight of, and I would now wish to point out the serious inconvenience and irregularity which is caused by the want of such proper rules as are in force in similar institutions.

3. I found the building in a wretched state of repair, the walls and ceilings have not been white-washed, or the woodwork painted, for more than two years, and consequently the aspect of the wards, dormitories, and school-rooms, is most forlorn. The kitchen and bakehouse have the same neglected appearance, the walls being literally black from smoke and dirt. Mrs. Adamson (the Matron) stated to me that repeated application had been made for the white-washing and painting, but without effect. I can only add that the state of the premises is disgraceful.

4. Cleanliness.—The dormitories are infested with bugs, and in that part of the premises called the infirmary they are positively swarming—how the children can sleep at all it is difficult to imagine; the bedding was very indifferent, and the sheets presented a very soiled appearance. The children were clean in their persons, but the hair of several was infested with nits.

5. Health.—The children appeared to be generally in good health, but there were several cases of sore eyes and scald heads.

6. Clothing.—The children have a very untidy look, and the boys do not wear boots or shoes. This is allowed merely because they wish it. Boots are provided by the Government, but the Matron does not enforce their use. Her want of proper action in this matter should be censured, as the appearance of the children is slovenly in the extreme.

7. Store.—The store accommodation is very limited. The month's supply of flour was stacked on the kitchen table, where, it was, of course, at the mercy of the servants of the establishment. Some additional room should be set apart for this requirement.

8. Food.—The bread baked in the establishment appeared good. I did not see the meat, but it was reported to be generally good. Mrs. Adamson had no complaints to make as to the supplies sent in by the contractors.

9. Mrs. Adamson drew my attention to the appointment of the Drill Sergeant, who holds office in some degree independent of the Matron, and, according to her statement to me, Mr. O'Sullivan takes repeated opportunities of showing that he is not wholly under the Matron's orders. His conduct may not, under the circumstances, be open to censure, but I am clearly of opinion that all subordinates in that and all other similar establishments should be placed under the control of the Matron or Superintendent, and be bound to obey all his or her orders.

I have, &c.,
FREDERIC KING,
 Inspector of Public Charities.

THE PRINCIPAL UNDER SECRETARY TO THE VERY REV. S. J. A. SHEEHY.

Colonial Secretary's Office,
Sydney, 19 February, 1870.

VERY REV. SIR,

8 February, 1870.

In transmitting to you the accompanying copy of a Report from the Inspector of Public Charities, respecting the Roman Catholic Orphan School, I am directed to state that the Colonial Secretary will feel obliged by being favoured with your observations thereon.

I have, &c.,
HENRY HALLORAN.

MEMO.—Dr. Pringle's letter is transmitted, as requested, for the information of the Honorable the Colonial Secretary.

On it I would merely remark that, though Dr. Pringle "demurs to three remarks" in my Report, he acknowledges to the correctness of two assertions,—that the walls of the infirmary are infested with bugs, and that "there are more cases of ophthalmia than he likes to see." With reference to his statement that he cannot find one case of scald-head in the Institution, I can only say that I may have used a wrong term, but that there were cases of sore head in the Institution I still assert.

FREDERIC KING,
Inspector of Public Charities.

DR. PRINGLE TO THE INSPECTOR OF PUBLIC CHARITIES.

Parramatta,
25 February, 1870.

MY DEAR SIR,

The Very Reverend the Vicar-General has shown me your Report on the state of the Roman Catholic Orphan School.

There are three and only three remarks therein that to some extent tell against me, and to these I beg respectfully to demur:—

- 1st. You say "the infirmary is swarming with bugs," and you "wonder how the children can sleep." Now I maintain that you cannot find six bugs in all the beds in the infirmary. By my order, every bed is unscrewed twice a week, scalded with boiling water, and all the joints touched with a strong solution of bi-chloride of mercury in turpentine and spirit. I grant that the walls are infested; but remember, in spite of repeated applications, the infirmary has never been plastered, and only once whitewashed in seven years.
- 2nd. You say you "saw many cases of ophthalmia." There are more than I like to see, but these and the fatal cases of fever and *cancremoris* are mainly due to the disgraceful state of the drainage, and the want of earth-closets. I wrote on this subject to the late Dr. Greenup twelve months before his death, and have since worried both the Committee and the Colonial Secretary's Office on the subject continually. Nevertheless, until the last week, we have been living with a foetid cesspool in the middle of the yards—choked up drains in every direction—no outlet from the closets, until the people of Parramatta have arisen against the nuisance; and now that they are remedying matters, they are actually depositing the night-soil in a pit not three yards from the boys' schoolroom and dormitory, and last night one load was discharged in the middle of the yard.
- 3rdly. You say "there were several cases of scald-head" in the school. I cannot find *one*. One case of ring-worm of the scalp is, after months of patient treatment, cured; and, except a few spots of *impetigo* common to all children in hot weather, I can find certainly nothing contagious.

I trust you will forward this explanation to the Colonial Secretary, and remain,—

My dear Sir,
Yours faithfully,
G. HOGARTH PRINGLE.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROMAN CATHOLIC ORPHAN SCHOOL, PARRAMATTA.

(LETTER FROM ARCHBISHOP POLDING, ON STATE AND CONDUCT OF.)

Ordered by the Legislative Assembly to be Printed, 8 April, 1870.

THE MOST REV. J. B. POLDING, D.D., to THE COLONIAL SECRETARY.

Sydney, April 8, 1870.

MY DEAR MR. COWPER,

When I had the pleasure of an interview with you some few days ago, I said that I would pay a visit to the Orphan School, with a special view to the hard things that have been lately said against it, and would give you my estimate of the state and conduct of the place. Seeing that the Institution was originally established on my own petition and that of the Catholic people of this Colony, at a time when our religious liberty was beginning to be recognized, *in order* that Catholic orphan children might receive the training which we consider necessary, and that, without the shadow of injustice to any other class, the Institution has been carried on to our satisfaction by a Catholic Committee, under the supreme authority of the Colonial Secretary, I do not think that I am making any unreasonable request in asking you, as I do now ask you, to receive my assurance that the condition of the children, in respect of health, of bodily comfort, of mental and religious training, is all that can be fairly expected, and all that can in fact be accomplished by conscientious and disinterested officials. I do not choose to speak in superlatives, or I might say more : I might say that no other Institution can surpass it. I can understand the report of which you spoke to me from the Inspector of Charities. His visit was made at an unfortunate time. The aspect *was* forlorn and untidy. Well it might be. Plastering and whitewashing, and the numberless little repairs that go to make up a general appearance of neatness and order, had not been done, and besides the large open space was covered with the unsightly operations of the repairs and alterations of sewerage. He was quite right so far. Then comes the question who was in fault. I cannot say that any one whom I desire to criticise was. The Committee had been discouraged, had been—I must say it—insulted. Their right to act had been most offensively challenged, the right of men who had been in possession since the Government had first assigned to Catholics the privilege of conducting their own orphanage, under account to the Government—the right of men who had no interest in their charitable work beyond the charity itself, who year after year devoted care, and money too out of their own purses, to the work ; yet even under discouragement they had done what they could—the records of official correspondence will show it. But neither do I blame any Government Department. I have no sympathy with the vulgar abuse that charges at once neglect where there is nothing but a natural, necessary delay. I assume, and believe, that on both sides—on the side of the Committee, and on the side of the Government Departments—all was done that under the novel circumstances could conveniently be done. So far as the Inspector's visit and report are concerned there was a concurrence of unfavourable circumstances, and I for one do not wonder that it hid from him the habitual, permanent character of the management. I do think this would have been understood easily at any other time, but just now the air is thick with prejudice, the usually kind hearts of our fellow-colonists have been chilled towards us, and our momentary difficulties colour and obscure everything else. Meantime the truth is simply this,—that in this Catholic Orphan School the welfare of the children is admirably attended to ; if there is any excess, it is on the side of care and kindness. And with respect to administration, the public money could not be more advantageously and conscientiously expended ; if there is any error, it has been on the side of a too strict and timid economy. I have only to add that my visit has not been hasty nor perfunctory : I have gone over the whole establishment, and seen, I think, almost every child in it. I have no hesitation in saying that a set of children in better health and spirits can nowhere be found. I have suggested some alterations of detail which will I think be an amendment.

I am, &c.,

+ J. B. POLDING, Sydney

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NAUTICAL SCHOOL-SHIP "VERNON."

(LETTER FROM SUPERINTENDENT, RELATIVE TO FUTURE MANAGEMENT OF.)

Ordered by the Legislative Assembly to be Printed, 8 March, 1870.

CAPTAIN MEIN TO THE PRINCIPAL UNDER SECRETARY.

N. S. S. "Vernon,"
3 May, 1869.

SIR,

I do myself the honor to draw your attention to the following suggestion in reference to the future management of the N. S. S. "Vernon," with the view of carrying out in the most effective manner the objects for which she was intended; and by the same means, to provide for the establishment of a Reformatory under the same management, viz. :—

1. To remove the "Vernon" from her present moorings, and moor her in Middle Harbour above the spit abreast the Government Reserve or lands not yet disposed of by sale, and made a receiving ship for all male juvenile delinquents.

The reserve to be enclosed in with a high, close fence; working parties to be told off daily to erect substantial workshops and sheds for trades—such as shipwrights, carpenters, boatbuilders, blacksmiths, shoemakers, tailors, baking, quarrying, &c.; large tanks could be quarried out of the rock to hold a quantity of water, and the rest of the ground laid out as a farm; cows could be kept to produce sufficient milk for the establishment and to make butter for the market.

2. For the efficient training of seamen, to purchase a small vessel, either a schooner or brig, as a tender to the "Vernon," of about 100 tons—a good weatherly craft—which I think could be obtained ready for sea for about £800. This vessel could go to sea when wanted for exercise, or could be made use of in going either to the islands, or a cruise along the coast, or visits to light-houses, or any special Government service, and to be entirely worked by the boys from the receiving ship "Vernon." The boys would thus become really practical sailors.

The shore-working party could be conducted as nearly as possible on the Red Hill Farm system, or Mettray, as would be found from experience the best adapted to the juveniles of this Colony. A Reformatory, Industrial School, and Training Vessel for Seamen, would thus be all under the one superintendence, and be an easy distance from Sydney, where the head of the department could inspect at any moment required; and being under one superintendence and staff, the expense would be much less than by separate establishments. From this dépôt the whole Colony could be supplied with trained artisans, agriculturists, servants, and seamen.

The expense of adopting these suggestions would not be attended with any material increase of the present estimate for this Institution. The boys who are on board the "Vernon" have now acquired such habits of industry that all the manual labour required could be furnished from the decks of this vessel, and it would be only necessary to engage the services of one or two skilled persons to direct their energies in certain special departments.

With reference to that portion of paragraph 1. where it is recommended that the vessel should be "made a receiving ship for all male juvenile delinquents," and which has been objected to on the grounds that it is not advisable that juveniles who had been convicted of offences should be mixed with those who have committed no fault,—I beg to remark that the objection would be obviated by the ground on which I propose to locate the boys being divided by a close fence, of such a nature as would effectively prevent any communication between the two classes; or, if it suited the view of the Government, the ship could be used for the accommodation of one class, and the others could be quartered on shore. But I would observe that it may be worthy of consideration that, after sufficient accommodation had been provided on shore, whether it would not be advisable to exchange the "Vernon"—which, even if she was a new ship, would, from her size, be always a source of great annual expense for repairs, &c.—for a small craft, on board of which the boys could be taught with equal facility the theory of navigation, and would at the same time have the advantage of acquiring the knowledge of practical seamanship.

Since I have made the suggestions which I now take the liberty of specially directing your attention to, I have visited the locality referred to in them, and also other parts of Middle Harbour, and I am more than ever impressed with the advisability of the plan I propose. The Government Reserve in Long Bay, of which I enclose a chart,* is easily isolated, abundantly supplied with a never-failing spring of water, and includes a sufficient quantity of soil well-suited for gardening purposes. There are also suitable places for workshops, dormitories, &c., and is at the same time easily accessible from Sydney, not being at a greater distance than half an hour's drive from Milson's Point.

* See Appendix.

But if the Government have any ulterior views in respect to the Dock Reserve which would be incompatible with its occupation as a Reformatory or Industrial School, I would point out that there is abundance of land in Middle Harbour which has not yet been disposed of, which would be well suitable for the purpose under consideration.

In conclusion, I would urge upon your consideration that, by the adoption of these measures, that not only would the Institution be made to carry out to the fullest extent the object for which it was established, but there would ultimately be a very considerable reduction in the annual expenditure.

I have, &c.,
J. S. V. MEIN.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HOSPITAL FOR THE INSANE, GLADESVILLE.

(REPORT FOR THE YEAR 1869.)

Ordered by the Legislative Assembly to be Printed, 10 March, 1870.

THE SUPERINTENDENT to THE COLONIAL SECRETARY.

Hospital for the Insane, Gladesville,
25 January, 1870.

SIR,

I have the honor to submit to you a Report on the general condition and progress of the institution under my superintendence for the year 1869.

On December 31st, 1868, the number of patients in hospital was 664, of whom 428 were males and 236 females. Hospital statistics.

During the year, 218 patients have been admitted—143 males and 75 females, of whom 179 were new cases, and 39 had been previously under treatment. The total number under care during the year has been 882, and the average population resident 650—435 males and 215 females. The number discharged during the year was 166, of whom 88 recovered, 26 were relieved, and 52 were not improved. The deaths were 60—53 males and 7 females; and these, with 4 patients escaped, make up a total of 230 discharged, died, or escaped, within the year.

On December 31st, 1869, the total number of patients in hospital was 429 males and 223 females—total 652. These numbers are set forth in a tabular form in Appendix 1 to this Report, Table I.

The number of admissions (218) during the year is a very large one: the reception, diagnosis, classification, and treatment of these cases, added to the constant superintendence of an average number of 650 patients, and the responsibilities of discharge of those who are sane, or sufficiently recovered to return to the care of their friends, has taxed my energies to the utmost; and I would beg to point out, as a strong reason for the erection of additional institutions for the reception and treatment of the insane, the growing necessity for some division of this primary labour. Admissions.

The number of recoveries yields a percentage on the admissions of 40·36; the females showing a percentage of 42·66, and the males of 39·16. Recoveries.

The number of those relieved and so far restored to sanity as to be taken charge of by their friends, shows a total percentage of 11·92, making with the recoveries a total of 52·28 per cent. on the admissions. Patients relieved.

In reference to these in the main satisfactory figures, I desire to express my opinion that, with increased facilities for treatment, with further means for amusement, and with a number within the capabilities of the hospital accommodation, the result would have been much more satisfactory.

The discharges under the heading of Relieved include 14 to the care of their friends, under the Regulations (Appendix 2) issued by the Honorable the Colonial Secretary, and dated July 17th, 1869. 12 of these were discharged under section 1, and 2 under section 2 of these Regulations; and although, owing to the fact that no provision has yet been made on the Estimates for the support, and no distinct regulations for the visitation of the patients discharged under section 2 have been issued, the number is as yet small, the general result has been so far satisfactory, and has fully justified me in making the recommendation which led to the issue of the Regulations referred to.* These Regulations were however only intended as preliminary to an entire revision of the Laws relating to the Insane. Discharges under recent Regulations.

Of the 52 patients discharged "not improved," 28 were transferred to the private institution for the insane at Cook's River, under the superintendence of Mr. Tucker—27 under your directions, to afford some relief to the overcrowded wards of this institution, and 1 at the instance of his friends; the remaining 24 were transferred to the Lunatic Asylum, Parramatta, as vacancies occurred. I regret very much to report that the long anticipated transfer of 200 patients to the new buildings at the Lunatic Asylum, Parramatta, has not yet taken place, owing to the delay in completing the buildings for their reception; the greater number of my efforts for the amelioration of the condition of the inmates of this institution have in consequence been paralyzed. Patients discharged "not improved."

The deaths show a mortality of 9·23 per cent. upon the mean average population, and exhibit a striking difference in the percentage between the two sexes—the deaths among the males being 12·18 per cent., and among the females only 3·25. Deaths.

* "The improved treatment of the chronic insane lies in this direction,—in removing them when possible from the weary imprisonment of asylum surroundings, and in placing them amid the healthier influences of home life. 'Many chronic insane,' writes Dr. Maudesley, 'incurable and harmless, will then be allowed to spend the remaining days of their sorrowful pilgrimage in private families, having the comforts of family life, and the priceless blessing of the utmost freedom that is compatible with their proper care.'" Dr. Lockhart Robertson—*Lancet*, Sept., 1869.

The reasons for this marked difference are chiefly three :—

- 1st. General paralysis, one of the most fatal forms of insanity, is much more common among men than women ; and, so far as the experience of one year in this Colony allows me to judge, is even more common here than in Great Britain.
- 2nd. The hospital, overcrowded in all parts, has been more grossly insufficient for the needs of the inmates on the male than on the female side. The day-rooms are extremely small, and will not contain more than one-third of the patients ; so that the remainder, on cold and wet days, are exposed to all the inclemency of the weather. From the fact that 24 out of the 50 deaths among the male patients occurred during the three winter months—May, June, and July—it may be judged to how great an extent the cold weather acted injuriously upon the patients, and how much the mortality was increased by the want of proper accommodation.
- 3rd. The difference in nursing.—Under the watchful care of the Matron the women are, by the aid of their own sex, nursed most efficiently ; but it seems almost impossible to train men to be equally tender and careful. In the male wards of the institution I have seen instances of careful nursing at the hands of attendants, which have met with my warmest approval, but men are in the majority not naturally nurses, and cannot be trained to be so. The difficulty, which has been equally felt in the asylums of Great Britain, has been met by the appointment of a married middle-aged couple to the charge of the ward in which the infirm and sick patients are specially placed (see Appendix 3), but this arrangement is not possible at present in this institution.

The causes of death will be found set forth in Appendix 1, Table IV.

In three cases the death was sudden, and I deemed it necessary to report the circumstances to the Coroner, who held an inquiry in each case.

INQUESTS held during the Year.

Name.	Sex.	Age.	Date of Admission.	Date of Death.	Verdict.	Remarks.
Vance, William...	M.	51	26 Aug., 1867..	11 Mar., 1869..	Died from disease of the heart.	Found dead by the Dispenser at 6 a.m. <i>Post mortem</i> examination.
Behr Fredk.....	M.	42	14 Feb., 1868..	8 Sept., 1869..	Died from suffocation, owing to the impaction of a piece of meat over the windpipe. Accidental death.	A case of advanced general paralysis. The patient seized and forced into his mouth several large pieces of meat, and one became so firmly impacted over the opening of the larynx that it was found impossible to remove it. <i>Post mortem</i> examination.
Prosser Joseph...	M.	40	12 Aug., 1869..	26 Sept., 1869..	Died from epilepsy	Found dead in bed at 6 a.m. when the day attendant went to call him. <i>Post mortem</i> examination.

Inquests.

In the case of Frederick Behr, I was not able altogether to acquit the attendants of blame, but the case was in reality one of those accidents which are very likely to occur in a large institution of this character even under the most careful management; and I cannot too strongly record my thankfulness and my satisfaction that this was the only case of accidental death occurring during the year, and that no case of suicide has happened within the walls.

Accidents.

The only other accidents of importance which have occurred to the patients during the year are a dislocation of the ankle caused by a fall from a ladder when the patient was employed in cleaning a window—a fracture of the leg caused by stepping on a loose rock,—and a fracture of the arm, which happened during a struggle between three of the nurses and a very violent female patient, and for which I did not consider the nurses in any degree to blame.

General health of patients.

The clothes of one of the nurses took fire in the kitchen, and she was badly burnt. The promptness of one of the male patients, who threw a bucket of water over her, saved her from more severe injury.

The general health of the inmates has been on the whole good; the ill effects likely to arise from the overcrowding in close and often offensive dormitories during the night, being to some extent counteracted by the open air life during the day which the climate of this country allows. Still nine cases of death from pulmonary consumption, in all of which the disease apparently originated within the hospital, have occurred during the year; and notwithstanding the liberal supply of vegetables in the diet, and a more or less constant supply of fruit and green vegetables from the garden, it has been frequently necessary to give wine and beer, and to prescribe lemons and salads medicinally, on account of a low form of scurvy, characterized by tenderness of the gums, purpurous blotches on the arms and legs, and eruptions of boils and carbuncles, which has at no time of the year been quite absent from the hospital, and which I believe to be due to the breathing of vitiated atmosphere by persons of low vitality.

Case of scarlet fever.

During the last three months of the year scarlet fever was very prevalent in the neighbourhood, and some cases occurred in the families of the attendants living *outside* the hospital.

On the 20th of September, a patient sleeping in one of the crowded corridors was attacked with the disease in a well marked form. Fearing the alarming consequences which might follow the spread of so highly infectious a disease in such an overcrowded institution, I immediately took steps for the isolation of the patient, removing him to an old cottage in the garden which is in a ruinous state, but habitable in the fine weather of summer, and placing him under the charge of two extra attendants, who during the entire time of their attendance on the case had no duties in the hospital.

All bedding which had been used was burnt, and the strictest measures were adopted for disinfecting the room which had been occupied, and all clothes, &c., worn by the patient during the continuance of the malady. The measures adopted met with your full approval, and I am now happy to report to you that the patient has completely recovered, and has been since December 26th, 1869, in the wards; and that no fresh case of the disease has up to this time occurred. My anxiety at the first occurrence of this malady is only equalled by my thankfulness that it did not spread, as the results in the present state of the institution must have been most deplorable.

Four patients escaped from the institution and were not retaken within fourteen days,—the time within which by the 31st section of the 31st Victoria No. 19, the Superintendent of an asylum is allowed to retake a patient or to detain him on his original warrant after his recapture. In one of these cases the patient was returned to the hospital under a new warrant about a month after discharge; the other three have not since been heard of. Escapes.

I have taken every possible precaution consistent with what I consider the proper government of the hospital to ensure the safe keeping of the patients, and have invariably punished severely such negligence on the part of the attendants as has resulted in escape; but I cannot forget in the first place that I am the Superintendent of a hospital, and not of a gaol; and in the second, that it is my duty to utilize as far as possible the labour of the patients for the benefit of the Government, and that I am therefore bound to allow them such an amount of liberty as will conduce to their recovery on the one hand and to their employment in profitable labour on the other. I am fully aware however, that under such a system as I am endeavouring to carry out there is more danger of escape than on the gaol system, which is as easy to work as it is cruel in its results; and I would beg to point out that so far as danger is concerned, there is in the majority of instances little or none to be apprehended either to the patient himself or to the public at large. Escapes occur almost invariably from the working parties, who are composed chiefly of men who possess a certain amount of self-control—who can be trusted with tools, allowed a greater degree of liberty, and who are very often quite harmless and far on their way to recovery. In two of the instances which have occurred during the year, I was on the point of recommending the patients for their discharge when they escaped, having, I suppose, grown tired of the restraints of the hospital. In neither case have I heard anything further of them, and in neither did I expect to hear, as the exertion consequent on escape and the subsequent efforts for safety and work are likely to stimulate healthfully, and to cause complete recovery in those already far advanced thitherward. It remains to be noted that during the past year alterations to the closets and various repairs carried on whilst the patients were in the yards, with the constant ingress and egress of workmen ignorant of the necessity for watchfulness, called for additional care on the part of the attendants and nurses, and afforded frequent and unusual opportunities for escape, and that it is only the experience gained during the past year under the further liberty allowed to the patients that has proved the complete uselessness of the large wall round the grounds for purposes of safety.

On taking charge of this institution I forwarded to you a Report on its general condition, and offered a series of suggestions for its improvement; and I purpose now noting briefly such additions and alterations in the structure of the buildings as have been completed under your sanction; but first, I wish to reiterate my opinion that the hospital is fitted to contain from 300 to 350 patients only, and that with any in excess of the latter number the day and dining rooms and dormitories will be overcrowded. In Appendix No. 3 to my Report above mentioned there is a statement by the Colonial Architect in reply to a communication from the Under Secretary for Public Works, showing the accommodation at this institution as sufficient for 557 patients. It appears that this calculation has been made on an allowance of 500 cubic feet for each patient in the associated dormitories (a space which I consider decidedly insufficient); and even taking the allowance at this figure, I am prepared to show that the statement is most unfair as showing the accommodation which exists:—

Report dated
Oct., 1858.

Accommodation
in institution.

1. The calculation is made solely on the sleeping accommodation, the necessity for any day or dining accommodation is ignored, and the mistaken idea is encouraged that for hospital accommodation nothing is necessary beyond dormitory space.
2. Three day-rooms on the male side and two on the female are reckoned as dormitories, and thus accommodation for 87 patients is obtained.
3. The total number of single rooms is reckoned at 112, and no mention is made of the fact that four of these were destroyed in making the earth-closets, and that twenty others are either occupied by the attendants and nurses or fitted as store-rooms, so that accommodation is thus afforded for 88 patients only.
4. The temporary dormitories, on which I shall speak elsewhere, and which have been of the greatest service, were erected after the date of my Report, hurriedly, and to meet a pressing need. They are of wood, and therefore a very unsafe residence for the insane; have no closets or other conveniences, no attached day or dining rooms, but are reckoned in the general total, as affording accommodation for 161 patients.

The Board of Visitors, in their letter published as Appendix No. 2 to my Report, fully bear out my statement with regard to the accommodation, expressly stating that the building is adapted for 350 or 300 patients. I am the more desirous to insist on the accuracy of this calculation, because of its bearing on the absolute necessity for the speedy erection of additional accommodation. After the anticipated removal of 200 patients to Parramatta, I shall be left with 460 patients—35 men and 75 women more than there is proper accommodation for; and at the ordinary rate of increase the total number will have risen to upwards of 500 by the close of the year. Besides these, it is well to remember that there are now 25 patients at the private institution at Cook's River supported by the Colony, at the rate of 25s. per week, owing to absolute want of space in the public establishments for the insane.

The most crying want in this institution at present is that of single rooms for those patients who are so violent, noisy, or dirty, or so ill, that they cannot be placed in associated rooms; and this want will not be in the least diminished after the transfer of the 200 patients to Parramatta, since the new buildings contain only large associated dormitories, fit for the more quiet class of patients. Want of single
rooms.

For some years past there has been a gradual accumulation of violent and noisy patients in this institution, owing to the fact that only the most quiet could be transferred to Parramatta; and now every single room has its occupant, and many who should for their own safety and the comfort and welfare of all about them be placed in single rooms, sleep in the associated dormitories. Scarcely a night passes but the night attendants and nurses are obliged to remove some patient violent, noisy, sick, or dying, from the large dormitories to a single room, and displace some other patient who may be quiet and manageable for the time, or who may resent the interference, and cause turmoil and disorder and a sleepless night to some 30 other patients in the room to which he is transferred. I have only too often to remark cuts and bruises at my morning rounds which are the result of quarrels among violent patients necessarily placed in association at night, and I am not unfrequently called upon to decide which among the present occupants of a single room shall be removed to make room for some one perhaps only a trifle more violent or troublesome, or to say which out of two sick patients is most able to bear any excitement, or is least likely to die during the night.

night. How much noise and disorder in the dormitories at night are likely to interfere with the recovery of the patients, and how a sleepless night is likely to be followed by irritability, if not noise and violence during the day, I need not point out to you, but I must insist that the only remedy for this daily growing evil is the erection of further accommodation.

Alterations and improvements.

The most important alterations during the year have been the erection of temporary dormitories of wood and corrugated iron for 150 patients, the erection of sheds and earth-closets in the recreation grounds of both the male and female side, the enclosure of these grounds by substantial fences, and the substitution of earth-closets in all the yards on the male side, and in two on the female side, for the old and very offensive cesspit privies.

Temporary dormitories.

The temporary dormitories were completed early in January, and have ever since been occupied by from 150 to 170 patients, thus affording the greatest relief to the wards, but still not altogether obviating the necessity for placing beds on the floor in some of the dining-rooms. The cubic space in these dormitories averages about 500 cubic feet; the ventilation is on the whole very satisfactory; and the rooms are, owing to their well-pitched roofs and their wooden lining, much cooler than their iron covering would lead any one to suppose. Still it must be always borne in mind that they are a mere temporary provision, that they are unfitted with closets or other conveniences, and lightly built, afford great harbour to bugs, and that as dormitories for insane persons they are by no means safe.

Sheds in recreation grounds.

The sheds in the recreation grounds are both slightly in appearance and useful as affording shelter both from sun and rain, and the fences enable the attendants to mingle with and watch the patients much more closely than when they were employed simply in keeping them within bounds.

Earth-closets.

The establishment of earth-closets instead of the filthy privies which before existed has been the greatest possible improvement; but I cannot report them as altogether a success, since at times, owing to their constant use, to the difficulty of obtaining a full supply of sufficiently dry earth, and to the fact that the earth is applied by hand instead of by a mechanical arrangement, they are somewhat offensive. Earth-closets with mechanical arrangements for applying the earth had before the recent alterations been tried in one of the closets used by the patients, and in those used by the officers of the institution, and had signally failed. In fitting the new closets in the wards, as no new mechanical appliance could be procured without considerable trouble and delay, it was deemed advisable to apply the earth by hand at the back of the closets, wherever such an arrangement was practicable, and from the front where the arrangement of the buildings did not allow of any other approach. Experience has proved what I fully anticipated—that such an arrangement is only a partial success,—that with a paid servant to apply the earth and every possible care to ensure frequent application, the closets are often by no means free from smell, because every excretion is not immediately covered. The deodorizing power of dry earth, which has been the subject of such extravagant laudation, is well known to all who have had practical experience on the subject to have been grossly exaggerated if it is not absolutely non-existent. Its mechanical action in preventing offensive exhalations has been well known since the days of Moses, whose direction to the Israelites for every man to go abroad without the camp to dig with a paddle and turn back and cover that which came from him is, after some centuries of neglect, with curiously little modification, one of the most approved sanitary regulations of our day. To ensure the full action of dry earth in preventing offensive exhalation, it is absolutely necessary that every excretion should be immediately covered, and this is only possible either by each individual applying it by means of a scoop, on rising from the seat, or by the use of some mechanical contrivance. In all large public institutions (with the single exception of those for the insane), in schools, barracks, and in private houses, the use of mechanical contrivances may be dispensed with; they are unnecessary to any one in possession of his intellect and a scoop; but with all except a very small number of the insane, some simple yet strong piece of mechanism working with the seat and throwing a shower of earth after every use of the closet, is absolutely essential. No regulation, no drill, no watchfulness, will serve in an institution for the insane without some mechanical means; and without this, almost absolute freedom from smell—the success which attends the dry-earth system only under the best arrangements and the most favourable conditions—cannot be attained.*

Shed for dry earth, straw-store, &c.

In addition to the alterations and improvements above mentioned, a shed has been erected for storing dry earth, a straw-store and room for filling and mattressing beds has been built. The old wooden baths in the male division have been replaced by new ones of cement. Store rooms have been fitted in six of the wards; two rooms have been panelled with wood, so arranged that each panel can be removed to ensure cleanliness; the walls of two other rooms have been cemented, and all four (intended for the use of patients in a state of excitement) have been fitted with movable louvres, so that they can be darkened at pleasure. The whole of the Superintendent's and officers' quarters and the central offices have been painted and papered; an office and a store room have been fitted for the chief attendant; the attendant's rooms have been made more comfortable; the dead-house has been properly fitted for *p. m.* examinations; numerous minor alterations, calculated to add to the comfort of the patients have been made in every part of the hospital, and throughout the year a very large amount of repairs have been in more or less constant progress. I am now happy to report to you that the building is on the whole in excellent repair; but the wear and tear incident to such an institution, occurring in old buildings, and assisted by the ravages of white ants, will render minor repairs more or less constantly necessary. These should be in the main done by the patients under a carpenter attached to the institution, and I trust that the liberality of Parliament will soon place a skilled artisan on the permanent staff.

Suggestions made in Report of 1868, not yet adopted.

Kitchen.

Whilst acknowledging the liberality with which my numerous requisitions have been met, it is with deep regret I have to report to you that the main suggestions contained in my Report to you dated 22nd October, 1868, have not been adopted, and that my letters written during this year, and urging the necessity for a new laundry, a new store, such alterations as will transform the present store into a kitchen, and the present kitchen into a chapel, reading and amusement room, the erection of a gardener's cottage, &c., remain still unanswered. The arrangements for cooking are almost as bad as described in my first Report; the abominable details I need not again trouble you with. Such minor improvements as were possible have been made, but I have felt that to recommend any large outlay in the present kitchen would be foolish in the extreme, and that no mere patching could

* A Committee appointed by the War Office have recently decided against the adoption of earth-closets for the Army, on account of the difficulties attending their arrangement and their only partial success. See Army Medical Report, 1868.

could be in any way satisfactory. The laundry is, as I have before reported to you, utterly inadequate to the wants of the institution, in its arrangement, its size, and its fittings, indeed in every essential particular. It is impossible to prepare in it a due supply of clean clothes for the patients, and an *economy of cleanliness* has therefore to be practised throughout the institution. As there is no drying room, the kitchen is in wet weather used for the purpose, and reeks all night with damp clothing. The want of a large room for use as a chapel on Sunday, and as a reading and amusement room, has been keenly felt. Protestant and Catholic worship has been conducted every Sunday in one of the dining and day rooms, but it is always overcrowded, and its preparation for service involves considerable trouble. It is besides the only room available as a day-room for the aged and weakly patients, and these have to remain in the verandah, or in the dormitories, during service. Whenever concerts or other entertainments have been held in the hospital during the past year, one of the large dormitories has been cleared for the purpose, but the trouble occasioned and the difficulty of finding a place for the patients to sleep has rendered it impossible to repeat the experiment more than three or four times. These are some of our most urgent necessities. I will not weary you with a recital of all our minor miseries, because these depend in the main on overcrowding, and because, as Superintendent of the institution, I feel ashamed of its deficiencies, and shrink now from exposing them as unsparingly as I did in my Report on taking charge.

I have endeavoured in every way to encourage the patients in useful occupation, and a large amount of work has been accomplished. A tank holding 30,000 gallons has been excavated, mainly out of the solid rock, and will afford a good supply of water to the garden, where it is much needed. The garden has been enlarged by the addition of about one acre and a half of bush land; about two acres of ground have been cleared, quarried, and trenched, and are now planted with 450 vines. A new wharf has been erected, roads have been made to the bath-house, vineyard, and wharf, a tool-house and garden-frame have been built, several of the yards have been newly turfed, and the gardens, yards, and general grounds have been greatly improved. The patients working as carpenters have not been idle; a considerable amount of fencing has been done, new pigeon and rabbit houses have been made, the aviary has been completed, fences have been made for the trees in the yards, and a very large amount of minor repairs have been executed; the blacksmiths have been constantly employed in necessary repairs and other labour. On the female side the whole of the washing for 700 people has been done under most disadvantageous circumstances, without the aid of a single machine of any kind except a mangle.

The following returns for two days, taken from the Ward Reports, will afford a fair average of the number of patients employed daily throughout the year:—

August 31, 1869—Employed.				December 31, 1869—Employed.

Compared with the number engaged in useful occupation in British institutions, this number is small. From whatever cause it may arise,—the enervating nature of the climate, the fact that work has not hitherto sufficiently been encouraged, or the want of sufficient variety of employment,—I have found in a very large number of patients who physically and mentally are quite capable, an insuperable repugnance to anything in the shape of work. One cause of the unwillingness to employ themselves I am quite sure is the high market value of labour in this Colony. In the English asylums, where a patient is well clothed, well fed, and well housed, he is receiving, and he knows he is receiving, almost, if not quite, the value of his services, and is therefore contented; but here, beyond the necessaries of life, labour is worth a high money payment. Its value is well known to the patients, and they work grudgingly or not at all. I have much pleasure in recording that in no instance during the year has any injury been inflicted by one patient on another with the tools or implements with which they have been engaged, and the few accidents that have occurred have been of the most trifling character. In excavating the tank of which mention has been made above, there was almost daily blasting, and a very large amount of heavy and more or less dangerous labour, but happily no accident occurred.

Early in the year kerosene lamps were fixed in all the day-rooms, in all the dormitories of the male and in some of those of the female divisions. The lamps in the dormitories are now always lighted at bedtime and kept burning during the night. This has been attended with the best results, the patients have seemed thoroughly to appreciate the comfort of the light, and have been much more quiet, whilst the fights and disturbances and the abominable practices which before were almost of nightly occurrence have been much less frequent. In the female division it was found necessary to remove two of the lamps, as danger from fire was apprehended through the mischievous propensities of some patients for whom single rooms could not be found, but on the male side no accident has happened, and I am not aware that interference with the lights has ever been attempted even by the most troublesome class of patients. Owing to the overcrowding it has been found impossible to use the lamps in the day-rooms except to a very small extent, and the large majority of the patients still go to bed at dark both in winter and summer. I regret to report that no apparatus for extinguishing fire has yet been supplied, although a requisition was forwarded early in the year.

Believing as I do that out-door amusements are calculated to produce the best effect on the minds of the patients, assisting most materially those who are convalescing on the progress towards recovery, and creating

Cricket, &c. creating a feeling of interest and contentment in those of whom little hope of recovery can be entertained, I have been glad to see the unflagging interest which both patients and attendants have taken in cricket and other games. There is not on the hospital estate any field sufficiently level for cricketing purposes, but Mrs. Isler has generously placed a paddock adjoining the hospital at my disposal for the amusement of the patients, and here on most fine days the patients play at cricket and other games. On several occasions parties of gentlemen from Sydney and elsewhere have kindly played set matches with the patients, and invariably expressed themselves as both surprised and pleased with their orderly behaviour. A match with the Protestant orphan boys at the hospital was a source of great enjoyment to all, and I subsequently allowed a number of the patients under proper attendance to visit Parramatta and play a return match at the Orphan School. In the winter football is played occasionally, a good skittle alley has been recently made, and quoits are a favourite game with a certain number. A boat supplied to the institution by your orders in February last has been of the greatest service. Almost daily throughout the summer a number of patients have been on the river fishing or pulling, and several visits have been made in it to Sydney and Parramatta. Small parties of patients have gone to concerts, &c., given in the neighbourhood; upwards of twenty visited the Flying Squadron on different days, and I have frequently sent out walking parties in the neighbourhood, and occasionally sent three or four to Sydney to see the Gardens, Museum, Markets, &c. With the women out-door games found but little favour; occasionally rounders serve to amuse them, but a walk outside is generally more appreciated by them. There are in both male and female wards bagatelle boards, cards, dominoes, draughts, chess, &c. I have only been able to carry out associated amusements in the evening to a very limited extent, owing to the want of a large room. On three occasions I have cleared one of the large dormitories for concerts. Twice, ladies and gentlemen engaged in the profession of music or distinguished as amateurs have with a kindness which I cannot too thankfully acknowledge given their time and services, and afforded a great treat to the patients; and on the third occasion, a party of amateurs living in the neighbourhood performed a like kindly service. Through the kindness of the Rev. Christian Corlette, of Ashfield, and of Mr. Flavelle, of Sydney, two magic-lantern exhibitions have taken place, and a reading from the work of Charles Dickens was thoroughly appreciated.

Boat. On October 15th, the anniversary of the day on which I took charge of the institution as Superintendent, I invited 130 of the patients, several of the officers, and as many of the attendants as could be spared from their duties, with their wives and families, to a picnic at Clontarf. The entire party numbered nearly 200. The "Pelican" steamer was engaged for the occasion, and Mr. Compagnoni supplied the necessary refreshments. The evident enjoyment of the patients and their excellent behaviour more than rewarded me for any trouble I had taken, and the complete success of the entertainment was more than a compensation for the anxiety I could not help feeling as the leader of such an exodus. The interest which the patients have always taken in reading and looking at pictures induced me, after obtaining your sanction, to advertise for contributions of illustrated and other papers, pictures, pet animals, &c. My appeal was most liberally responded to, and I have never since been without a supply of illustrated papers. The following donations, with several anonymous ones, were received during the year:—3 emus, Acclimatisation Society, *per* Mr. C. Moore; 9 parrots, Mr. Jas. E. Boydell; 3 rabbits, Mr. J. E. Manning; 2 pet sheep, 1 opossum, Mr. J. A. Mann; 1 pet lamb, Mr. W. Smith; 1 magpie, Mr. C. Hazeland; 3 Guinea-fowls, Mr. Edye Manning; 2 Guinea-pigs, Mr. Baxter, Burwood; plants, shrubs, &c., the Hon. E. Deas Thomson, C.B., Sir Wm. Manning, Mr. Thomas Mort, Mrs. Buchanan, Messrs. Guilfoyle & Sons; a load of fruit, Mrs. Darvall; magazines, illustrated and other papers (a large collection), St. Leonards School of Arts, *per* Mr. C. H. Woolcott, Committee of Reading Club of 50th Regiment, *per* Lieutenant Barker; 3 donations, Messrs. J. Fairfax & Sons; Illustrated London News, complete, from 1852 to 1868, Mr. H. H. Kater; books, &c., the Rev. Mr. Bayly, Hunter's Hill; Scott's Works, illustrated, and other papers, Mrs. Allen, Parramatta; illustrated and other papers, Lady Manning, Mrs. Edye Manning, Mrs. Andrew Lenehan, His Honor Mr. Justice Hargrave, Mr. Edwd. S. Hill, the Hon. J. Docker, Mr. Stewart Murray, Mr. William Goodman, Mr. J. Curtis, Mr. Ernest O. Smith (a monthly donation), H. A. B., Messrs. Broadhurst & Greenhill, Mr. Dodds, Mr. Bernard M'Laughlin, Mr. J. M'Douall, Mr. Jas. Laidley.

Concerts and associated entertainments.

Picnic to Clontarf.

Newspapers, &c.

Donations during the year.

Country newspapers. On August 12th I addressed the following letter to the proprietors of the various country newspapers:—

Hospital for the Insane, Gladesville,
(Late Tarban Lunatic Asylum),
12 August, 1869.

Sir,

The funds placed at my disposal by the Government for keeping up the small library attached to this institution, and for the amusement of patients, do not enable me to become on their behalf a subscriber to your journal,—therefore, I am induced to ask if you will supply to this institution free of cost a copy of each issue. I need not plead at your hands the case of the unfortunate beings committed to my care, beyond stating that in many cases local news is of great interest, and its receipt tends to lighten the burden of confinement. Trusting that you may be either able to grant my request or refer it to some one of your subscribers who will forward addressed to me his own copy of your paper, after perusal,—

I am, Sir,

Faithfully yours,

With three exceptions only my request was complied with by the proprietors of the entire provincial Press, and in several cases I was warmly thanked by them for the step I had taken. The following papers have ever since been forwarded to the institution with the greatest regularity, and my best thanks are due to the proprietors for their liberality. If they could on some occasion accompany me in my visit to the wards—could see the almost greedy delight with which the newspapers are received—the marked appreciation of the little attention when their own especial local journal is picked out for any of them—and could know how many hours the perusal of these newspapers has made less weary,—they would feel that they were amply rewarded for their kindness:—*Burrangong Argus; Bathurst Times; Bathurst Free Press; Cumberland Times; Cumberland Mercury; Clarence and Richmond Examiner; Dubbo Dispatch; Deniliquin Chronicle; Goulburn Herald and Chronicle; Grafton Observer; Illawarra Mercury; Kiama Independent; Kiama Pilot; Lachlan Reporter; Moruya Telegraph; Mudgee Liberal; Maitland Mercury; Monaro Mercury; Newcastle Pilot; Newcastle Chronicle; Queanbeyan Age; Southern Argus (Goulburn); Wagga Wagga Advertiser; Wagga Wagga Express; Western Examiner (Orange); Yass Courier.*

Religious services.

The Protestant and Roman Catholic Chaplains have each conducted services on every Sunday, and on other special occasions. These services, held in one of the dining-rooms in the male division, have been invariably attended by attentive congregations; the instances of disturbance being few and unimportant, and the general effect has been unquestionably beneficial. In many patients the religious sentiment does

not

not appear to be either exalted, perverted, or depressed, but still retains its natural condition. To these the services are as applicable as ever. Many among the most wayward, and least subject to self-control at ordinary times, are still so far under the influence of their devotional feelings, or so far affected by their former habits of attending religious gatherings, or perhaps both, that they sit quietly through the service; and it is a most noticeable fact that on Sundays the whole of the patients are, as a rule, calmer and quieter than on any other day. The number of patients attending the services has averaged 120 every Sunday, and in every instance the attendance has been purely voluntary. I believe that with a little encouragement or persuasion the number of attentive and well-behaved worshippers might be doubled, but with the present number the room is often overcrowded and hot. The Chaplains have noticed the marked improvement in the behaviour of the patients since the service has been conducted with more care and decorum, and held in the large dining-room instead of the board-room, in which only about twenty could assemble.

No report on an institution of this character would be satisfactory without a distinct statement of the practice pursued in regard to the restraint and seclusion of the patients; and I enter into this subject the more readily because I differ from many of those charged with the care or supervision of the insane, and believe that in the adoption of absolute "non-restraint,"—in the reaction from the abominations and cruelties which, under the name of restraint, were the almost universal practice in asylums thirty years since,—a step too far has been taken, and a mode of treatment, most useful in a certain number of cases and under proper care unattended with any evil results, has been lost to the alienist physician.

During the year I have employed mechanical restraint in the form of the camisole or long-sleeved jacket, in three cases, and I have every reason to be satisfied with the result.

The first case was one in which I found it necessary to operate for a cancer of the lip. The patient, an irritable and sometimes violent man, was quiet at the time of the operation and for one or two subsequent days, but afterwards became exceedingly troublesome, tore off the dressings, would brook no control or direction, and walked about with an irritable and bleeding sore which he constantly rubbed. The jacket was used for three days, and the sore improved and ultimately healed without any bad result.

In the second case the patient was subject to long continued attacks of extreme destructiveness, during which he broke all windows near him, tore his boots and the stoutest canvas clothing to shreds and walked about in absolute nudity. For days together this man was confined to his room, and for months he spent almost as much time in seclusion as in association with the other patients, whilst every kind of moral and medical treatment was tried without effect. Believing this to be a fit case for restraint, I had him placed in a jacket, and promised to liberate him whenever he would promise to try and restrain his destructive propensities. After two days he promised—was dressed in his ordinary clothes, and remained quiet for some time. At each succeeding attack of destructive furor he was again placed in the jacket, and was released whenever he would give a promise to refrain from tearing his clothes or breaking windows. He seemed to be much more contented, and always looked happier in association with the other patients, and enjoying the full liberty of the recreation ground, than he formerly was in his room, and he evidently recognized the fact that the jacket helped him to do what he was unable to accomplish without it—restrain his destructive propensities. On one occasion, at the bathing-house, when I was standing on the bank looking on, he dressed himself in the jacket after bathing and selected me to fasten it, coming past one or two of the attendants for the purpose. Whilst fastening it I asked if he would promise not to break or tear, and he refused. The attacks of destructive furor gradually became less prolonged and less frequent; and although he is still an untidy and sometimes violent patient, there has been no necessity for placing him in restraint for some months.

In the third case the jacket was used on two occasions only—once for one hour, and once for three hours. On both occasions a very destructive patient, who was completely deaf to persuasion or coaxing, promised to leave off tearing his clothes and kept his promise once for a month, and once for a much longer period, and he has ever since been much more tidy in his dress and in all respects more manageable.

In these three cases, which are the only ones in which any form of restraint has been used, recourse was not had to it until all ordinary methods of treatment, medical or moral, had failed, and in all the success was unqualified. The jacket is kept under the care of the chief attendant, and is used only under my immediate orders.

Seclusion—the separation of a patient from the rest of the inmates by placing him in a room by himself—is of somewhat frequent occurrence, the chief reasons being violence, and extreme noise or excitement. During the month of December, which may be taken as affording a fair proportion for the year, the daily average number of instances of seclusion was 4, and nearly three-fourths of these occurred in the female division. The period varied from one hour to twelve—the instances in which it was prolonged beyond four hours being extremely few. Seclusion is practised purely as treatment; for the safety or well-being of the patient himself, or for the comfort and quietude of those with whom he is associated. The attendants and nurses are permitted to place the patients in seclusion, but are directed to report the fact immediately,—in the male division, to one of the medical officers, and in the female division to the Matron, who informs the Medical Officer at the visit next following.

The changes among the attendants and nurses have been much too frequent during the year, as long training is necessary for efficient service. The changes have been mainly due to resignations; and among the nurses these have been very numerous, and I have had the greatest difficulty in obtaining suitable persons to fill the vacancies, notwithstanding the fair wages offered. The bad accommodation, the ill-ventilated and crowded sleeping-rooms provided for them, the absence of comfortable rooms for meals, and for the evening, and the inaccessible situation of the hospital, which is a barrier to any social enjoyment, have, I believe, been the main cause of the difficulty. The changes among the attendants have been fewer than among the nurses. I have however had quite as great difficulty in filling the vacancies with suitable persons, owing mainly to the fact that the remuneration offered is not sufficient to enlist in the service of the Government the class of persons required. The service is an important and peculiar one, and for its proper fulfilment there must be added to a fair degree of education, the most perfect sobriety, honesty of purpose, tact, temper, and forbearance. To the attendants and nurses is entrusted in no small measure the happiness of the patients, and the main execution of the plans for their restoration to health. They must be able and ready to subdue their own feelings and temper, to bear the brunt of unreasonable abuse, to humour caprice in all its forms, and frequently to perform acts of kindness to the ungrateful. The failings and the follies of humanity deprived of the veil which prudence or reason supplies,

Restraint and seclusion.

Changes in the staff.

Difficulty in obtaining suitable attendants.

supplies, and urged to assume their most aggravated forms by imaginary misfortunes and injuries, or by delusions of various kinds, can only be met, subdued, and soothed, by firmness and sound judgment, combined with tact and forbearance. The perfect attendant is the perfect Christian—the saint deserving canonization. Good attendants and nurses then are of great value, and their duties are of the most trying character. It is essential therefore that their remuneration should be ample, and that their situations should be made as comfortable as is consistent with a regular and conscientious discharge of duty. I hope to submit to you during the present year some proposals for increasing the comforts, and thereby adding to the efficiency of the staff under my orders.

“Statement of particulars” not forwarded with patients.

On December 11th, 1868, I addressed to you a letter requesting that directions might be given to all Governors of Gaols, the officers of the Police, and others through whom the insane are sent to this institution, to fill in and transmit with each patient “the statement of particulars,” and that the medical certificates might be forwarded in every case. On February 15th, 1869, I deemed it necessary again to call your attention to the frequency with which patients were still forwarded without any particulars, to point out the importance of the subject in its medical and in its purely statistical bearings. I am glad to be able to report to you that the number of cases in which the “statement of particulars” is not forwarded has lately been much less, but cases do still frequently occur, and in some individual instances in which I have made direct complaint, I have met with the answer that the same methods of obtaining information were open to me as to the police.

I would beg to submit that it is no part of my duty to institute inquiries of this kind, that the sources of information are often closed to me from the fact that I cannot find out where the patient was living at the onset of his malady, and that in many cases the patient, able at an earlier period to furnish trustworthy information, is so far sunk into fatuity, or so much under the influence of delusions on his admission to the hospital, as to render it impossible to gather any information from him. Even a detailed account of the circumstances under which the patient fell into the hands of the police would be of value, especially if accompanied by a note showing the then existing mental symptoms; but under present arrangements the patient's name in the Governor's warrant is sometimes the single fact with which I am furnished. I am left to my own guesses as to whether intellect has slowly waned in the course of fever, or has suddenly taken flight through sunstroke; whether it has been wrecked on the quicksands of intemperance, or has foundered in the troubled waters of business speculation. I must leave others to judge of the value of treatment undertaken under such circumstances. The only effectual remedy I can point out is such an alteration of the law relating to the insane as shall necessitate the sending of a “statement of particulars” and the medical certificate with every patient presented for admission.

Patients sometimes enticed to hospital.

I desire to call your attention to one other point connected with the transmission of patients to the hospital. In several instances in the course of the year the patients have been enticed here by false pretences. I do not question the purity of intention of those who have thus acted, but I am bound to denounce the practice, because it is fraught with the greatest danger to the mind of the patient, because it sows in him a suspicion and distrust of all about him, and because the officers of the institution, on whom the exposure of the deception devolves, are very often the objects of this suspicion. It being decided to place a person in a hospital, let him be frankly informed of that decision. By proper management in doing this he will generally consent to the change, or at least he will not oppose it. If he does not consent and does oppose, better by far that he should be brought manacled or strongly guarded than that he should be lured by promises bound to be broken, and by anticipations which are doomed to disappointment. We should have a perfect *inferno* under this roof if we attempted to pursue that systematic course of deception which is but too frequently practised on patients before their admission.

Necessity for further accommodation.

I cannot conclude this Report without again urging the adoption of some further measures for the accommodation of the insane, and I desire to state my decided opinion that no mere additions to this institution or to the Parramatta Asylum will meet the requirements of this Colony.

Any new buildings must be fitted to receive the violent, dangerous, clamorous, and a multitude of others for whom such buildings as those now nearly completed at Parramatta are utterly unsuited. They must be constructed with all the means of security for life—safety against fire and other casualties, and arrangement for proper classification, and they cannot be properly completed in less than eighteen months or two years. Before the expiration of that time this institution, containing now 300 patients more than it will properly accommodate, and having within its walls an accumulation of the worst classes, will be crammed almost to suffocation; many who under better arrangement would have recovered and be no longer a burden on the Colony will have become incurably insane; and should some pestilence make its appearance, it will decimate the inmates, and force that public economy which procrastinates its measures of relief to settle the account with compound interest.

Whatever evils may befall, the fault is not mine. I have so frequently urged the necessity of increased means of accommodation that I almost dread to renew my recommendations on this head, lest my pertinacity might be regarded as indicative of mental infirmity.

I have the honor to be,

Sir,

Your most obedient Servant,

FC. NORTON MANNING.

APPENDIX 1.

THE Medico-Psychological Association recommended in 1865 a series of forms for statistical tables; and this effort to promote a uniform system of asylum statistics was thus noticed by the English Commissioners in Lunacy, in their Nineteenth Report to the Lord Chancellor, 31st March, 1866:—

"The importance of adopting in all asylums a uniform system of statistical tables and registers has long been felt by us, and we are glad to find that the subject has recently been again under the consideration of the Medico-Psychological Association, at whose last meeting a Committee, to whom it had been referred, submitted forms of tables, which were adopted and recommended for general use. These tables, confined to medical statistics, are simple in form, and only include the main and most important facts required to constitute a basis for more elaborate and detailed information.

"The Superintendents of most County Asylums publish in their annual reports tables more or less elaborate, and containing a large amount of valuable information. While, however, the facts recorded may be identical in many, if not most, of the reports, the form in which they are recorded varies so greatly that it becomes impossible to tabulate them for the purpose of showing general results.

"In any future legislation it would no doubt be desirable, as suggested in the report alluded to, so to revise the present 'Registry of Admissions' as to include some of the more important particulars required, in order to obtain correct statistics of insanity. But in the meantime we trust that, with the view of facilitating statistical comparison, the visitors and superintendents of all institutions for the insane will not object to adopt the forms of tables recommended.

"Table I gives the numbers of admissions, readmissions, discharges, and deaths, with the average numbers resident during the year; the sexes being distinguished under each head.

"Table II gives the same results for the entire period the asylum has been in operation.

"Table III furnishes a history of the yearly results of treatment since the opening of the asylum.

"The table also embraces a column for the mean population or average numbers resident in each year. In other columns are shown for each year the proportion of recoveries calculated on the admissions, and the mean annual mortality, or the proportion of deaths, calculated on the average numbers resident. It is of the first importance that these two principal results under asylum treatment, when given, should be calculated on a uniform plan, and according to the methods here pointed out.

"Table IV gives a history of each year's admissions; how many, for example, of the patients admitted, say in 1855, have been discharged as cured, how many have died, and how many remain in the asylum in 1865.

"The value of this table in regard to the vexed question of the increase of insanity is evident. The table is adopted from the Somerset Asylum Reports.

"Table V shows the causes of deaths, classified under appropriate heads. This form is adopted from the Reports of the Commissioners in Lunacy for Scotland, with some addition and modification. It appears sufficiently detailed for statistical purposes.

"Table VI gives the length of residence in the asylum of those discharged recovered, and of those who died during the year.

"Uniformity in recording the ages of patients on admission, the duration of the existing attack, and the form of the mental disorder under which they labour, is also very desirable; and it is to be hoped that the medical officers of asylums may see the great importance of coming to some agreement on these points. How far the table of the causes of death may require modification or extension will be a matter for subsequent consideration."

I have endeavoured as far as possible to adopt the forms of tables thus noticed, so as to bring them from this institution into uniformity with those from similar institutions in Great Britain, and thus facilitate comparison. Owing to the form in which the records of this institution have been kept, and the number of years over which they extend, I have been quite unable to make these returns retrospective, without an amount of labour which would have been out of all proportion to the value of the result. I have therefore commenced the statistics with the year 1869, and have necessarily omitted Table II, which is arranged so as to place on record the statistics for more than one year.

Those tables are confessedly less elaborate than is desirable; and so soon as the medical officers of British asylums shall have agreed upon a modification or extension of them, I shall cheerfully furnish the additional information so far as I am able to do so; but meantime, with the difficulties which I have experienced in obtaining anything approaching to trustworthy information concerning the patients on their admission, I feel that in preparing or attempting to prepare the elaborate tables which form such a large part of the reports of English asylums, I should be affording figures often unbased on facts—"a coinage for fools to hoard or to circulate."

TABLE I.—Showing the Admissions, Readmissions, Discharges, and Deaths, during the year 1869.

	Male.	Female.	Total.
In the hospital on December 31st, 1868	428	236	664
	Male.	Female.	Total.
Admitted for the 1st time during the year	120	59	179
Readmitted during the year	23	16	39
	143	75	218
Total under care during the year	571	311	882
Discharged or removed,—			
Recovered	56	32	88
Relieved	17	9	26
Not improved	12	40	52
Died	53	7	60
* Escaped, and not recaptured within fourteen days	4	...	4
Total discharged, died, and escaped during the year	142	88	230
Remaining in hospital on December 31st, 1869	429	223	652
Average numbers resident during the year	435	215	650

* In Tables III and IV the Escapes are calculated under the head of "Relieved" or "Not improved" as the case may be.

TABLE II.—

APPENDIX 2.

Colonial Secretary's Office,
Sydney, 17 July, 1869.

His Excellency the Governor, with the advice of the Executive Council, directs the publication, for general information, of the following Regulations for facilitating the discharge of certain classes of patients from the Lunatic Asylums.

JOHN ROBERTSON.

REGULATIONS for facilitating the discharge of certain classes of patients from the Lunatic Asylums of New South Wales.

1. Any lunatic patient, other than a criminal, considered by the Superintendent and Board of Visitors to be a suitable patient, may be discharged on the Governor's Warrant, to a relation or friend stating his or her ability and willingness to take charge of any such patient, and on their providing "sufficient recognizances" to the satisfaction of the Superintendent and Board of Visitors of the institution.

2. Patients may be discharged on the Governor's warrant, to the care of relations or friends who may be willing to take charge of them, but are unable to do so from want of sufficient means; and, as an inducement to such relations or friends to take patients out, they will in such case be allowed a sum towards the support of the patient (to be agreed upon with the Superintendent and the Board of Visitors) not exceeding (without special authority) 10s. (ten shillings) per week, on their providing "sufficient recognizances" to the satisfaction of the Superintendent and the Board of Visitors.

3. A bond in each case must be given; the amount of such bond to be fixed by the Superintendent and Board of Visitors, at such sum as they may deem sufficient; the cost of executing the said bond to be defrayed by the Government.

4. In each case a certificate must be furnished to the Government once in every three months by the medical officer of the district, testifying to the existence, the continued insanity, and the proper treatment of the patient, for which a fee will be allowed.

APPENDIX 3.

FEMALE NURSING IN ASYLUMS.

Extract from Report of West Riding Asylum for 1868.

"How to provide suitable and trustworthy attendants is certainly the great problem of the day in the management of our lunatic asylums, and anything which may assist even in its partial solution is deserving of consideration. Such an auxiliary seems to be found in the appointment of female nurses to male wards,—an arrangement that tends to inspire the male attendants with gentleness and self-command, and confers great benefits on the patients. One such appointment has taken place here during last year. A female nurse, the wife of an attendant, was placed, in April, in one of the largest male wards, containing seventy epileptic and suicidal patients. Her presence in the midst of these lunatics, many of whom are of impulsive or depraved character, has been productive of the most excellent and pleasing effects, which have transcended even the sanguine expectations that led to her appointment. The ward has become quieter and more orderly under her influence, and a marked change for the better has taken place in the personal neatness and general deportment of the patients. A singular power of self-control seems to have been awakened in them, so that they are enabled to suppress those outbursts of violence, that abusive language, and those offensive habits, to which they used formerly to give way. Their whole nature seems to have been softened, and their tone of feeling ameliorated, by the simple expedient of introducing a kind-hearted female amongst them.

"It is in the male sick wards, however, that female nurses will be found most useful. There they may prove invaluable; for it is open to doubt whether the high mortality which prevails amongst male lunatics, which is about one-third greater than that which obtains amongst females similarly afflicted, may not be in some slight degree due to defective nursing, to the absence of those sick-room comforts and attentions which women alone are capable of offering. No one can visit an asylum without being struck by the difference which exists between the male and female infirmaries. They may be alike in structure, furniture, and arrangement, and yet they are widely different. An air of wholesome cleanliness and hopeful solicitude pervades the one, which has no parallel in the dismal precision or dreary apathy of the other. And no one but the initiated can know how much hangs upon the most trivial details of nursing, how much art may be expended in the mere smoothing of a pillow, and how often the issues of life and death are decided by the watchfulness or neglect of those who minister at the bed-side. It is not too much to say that life is often prolonged, nay, saved, by a little intelligent care, and that it is often cut short by the want of that care at a critical moment. By far the greatest number of deaths takes place not, as might have been expected, at those hours when vital power is lowest, but at those when vigilance is most relaxed—when nursing is at its minimum. Seeing that this is so, that good nursing is of paramount importance, and that good nursing is not to be obtained from blunt unsympathizing men, however well disposed they may be, it follows as an inevitable corollary that female nurses should be added to our sick wards whenever it is practicable to do so. With the approval of your committee, this arrangement will be carried out here as soon as a fitting opportunity presents itself."

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HOSPITAL FOR THE INSANE, GLADESVILLE.

(REPORT OF DR. CAMPBELL, LATE SUPERINTENDENT.)

Ordered by the Legislative Assembly to be Printed, 8 March, 1870.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 4th March, 1870, praying that His Excellency the Governor would be pleased to cause to be laid upon the Table of this House,—

“ A Copy of the Report of Dr. Campbell on the state of the Lunatic
“ Asylum at Tarban Creek, at the time of his retiring from the superin-
“ tendence thereof.”

(*Mr. Wilson.*)

HOSPITAL FOR THE INSANE, GLADESVILLE.

DR. CAMPBELL TO THE COLONIAL SECRETARY.

SIR,

Whatever value others may place on the success of my early labours in eradicating the abuses and inhumanities formerly practised in this Asylum, it will always be a source of the purest enjoyment to me to reflect that this success, though elaborated at the sacrifice of peace, health, and fortune, has proved, through my own personal energies alone, tantamount to the conversion of a hell into a heaven for that isolated portion of the human brotherhood whom it has pleased God to bereave of all that is transcendent in man, and all that makes his life worth the tenure. The circumstances of this revolution are still fresh in the memory of many; and if they are not known generally at this distant date it should be no subject of wonder: they belong as it were to a bygone generation. Toned down by time, and thrown back upon the verge of oblivion by the swelling tide of rapid and numerous social changes which has been flowing on since the epoch of the gold discovery, they have been so overlaid by the newer strata which the successive immigrations superposed on them that they only crop out here and there, and now and then, in the recollection of the stationary inhabitants of the Colony who were cognizant of them at the time, and who have no object in ignoring them, and no interest in derogating from their worth and truthfulness.

I make this observation advisedly. Much has been said in praise of my successful efforts in the cause of humanity, and the happy effects of them on the general condition of that ill-starred community, to whose essential well-being the most valuable part of my life has been unselfishly devoted; on the other hand, detraction also for a time cast its Upas shadows on the stream and darkened its surface, but poisonous as they were they left no stain on the purity of the water.

Yet notwithstanding my escape from the blighting influences of envy, craft, and falsehood, I feel myself now, at the close of my connection with the Government, led irresistibly, both by sentiments of self-respect and the consciousness of having fulfilled my manifold duties like a man of honor, to furnish you with a very short report of that department of my management which has been most blamed, during the twenty years of my service, consisting almost entirely of what may be termed the *hard material concerns* of this Institution. You and the public generally are already well acquainted with the moral government of it, through former Reports; but there is still something requisite to be known which has not yet been ventilated in that way. I am convinced therefore that a statement of the kind I propose, partial though it may appear, will prove, better than any other evidence that can be cited, whether I have been in truth and reality that incompetent, dishonest, ruthless, perfunctory trustee of a great and important charge, which my limners have painted me. In presenting this Report, my only object is the vindication of my character as an officer and a man. The testimony which I shall adduce is the irrefutable records of the Asylum, and they may be consulted there and in the various Government offices, by any one doubtful of the accuracy of my statements.

When I entered on the duties of my office on the 1st January, 1848, I soon discovered that the disclosures made in 1846 were not exaggerated; both the male and the female inmates were openly undergoing an unmerciful degree of severe and rough breaking in, if I may so speak—not, I firmly believe, from any savageness of disposition, or motives of cruelty on the part of those in charge of them—it was the hereditary system of inhuman expediency transmitted from one generation of unreflecting men to another, for God knows how many thousand years.

So, with prudence and resolution for my guide, I began to introduce gradually a change in that revolting mode of managing the lunatics, which to that time was a very dark and disgusting blemish on the character of the Colony; and before the expiration of six months, I had the satisfaction of having set the corporeal part of every insane man and woman in this Asylum as free as a zephyr on the mountain top, I trust, for ever. Of course the disenthralment of their minds was the paramount object to be achieved, and though the lesser necessarily took precedence of the greater at the beginning, they ran on parallel lines ever after.

In the life of the Superintendent of this Asylum, apart from his professional engagements "there is no peace." It is a species of perpetual strategy, conducted in skirmishes, in which he is obliged, single-handed, to act continually on the defensive, against a heterogeneous host of antagonists, each assailing in his own peculiar mode; and this Report, besides its other uses, might be made to furnish an instructive example of it by the citation of several instances in their proper places. My official correspondence, detailing sometimes the results and sometimes the very essence of this forced plan of coping with the many-headed monster, would, I am sure, make at least half a dozen bulky octavo volumes, relating to wars and rumours of wars; but I have neither time nor inclination for such amusement.

I must deal chiefly in extracts, which I hope will demonstrate satisfactorily that I have never on a single occasion, or through unmanly fears of the frowns of office, neglected any practicable form of duty, however severe or dangerous, which I conceived to be conducive to the well-being of my patients; but also to display the supernumerary labours entailed on an officer fully occupied in the higher functions of his situation by the blamable apathy, if nothing worse, of those whose especial business it was to facilitate and promote all his useful suggestions.

On the 3rd day of January, precisely three days after I took charge, I applied to the Government, through the Colonial Architect, for the erection of an additional washing-house, and the enclosure, by a high paling fence, of a portion of the adjoining ground for a drying green. A piece of land, consisting of about four acres near the river, had been designed for a garden; the fencing was nearly complete, and the trees had been felled, but nothing else had been done; the stumps were all there, and the eradication of these being clearly a kind of work far too severe for lunatics—one of the main characteristics of whose disease being vitiation of the constitution and low vitality—I applied, on the 6th day of the same month, to the Colonial Secretary, requesting the grant of a sum of money for the purpose of having the ground stumped and cleared and prepared for use.

The money was granted, and an orchard was formed by planting ninety-five fruit-trees of the best sort in the Colony, presented at my solicitation to the Asylum by the late James Macarthur, Esq., of Camden, while plenty of room for a kitchen garden remained.

In

In a letter to the Governor General, dated the 3rd February, 1848, I find myself reporting to His Excellency "that the completion of a temporary slab building, including a small dormitory on the male side, begun last year, has enabled me to make a trifling advance in the classification of the patients, and to give the administration of the Asylum a small but permanent tendency toward true sanatory principles," &c. But in order to proceed in carrying out these principles to the utmost extent admissible at the present stage, "I propose," the letter continues, "for the consideration, and I hope for the approval of His Excellency the Governor, that the dead wall forming the front of the convalescent square or airing court looking upon the river, be rendered subservient to the general scheme of mental cure, by operating on the mind through the senses of the patients. And this object can be achieved to a considerable extent by opening four moderate sized windows in each wall, and a small gateway with an iron gate in the middle for the egress and ingress of the patients when the pleasure ground (already verbally discussed) shall have been enclosed." The letter concludes in words to the effect that, by this simple and elegant improvement in the wall, one of the most charming scenes in the Colony would be exposed to view for the mental recreation of the patients, and while it promoted the cure it would cheer and abstract the mind from its erroneous impressions.

I now approach an important subject, and I wish it to be borne steadily in mind. In order more effectually to assist and advance the internal moral reform, early in the month of February, 1848, in preparing the Estimates for the year 1849, I proposed "£2,000 for the purpose of enlarging the Asylum so as to enable it to accommodate 200 inmates; for erecting a bath-room within the pleasure grounds close by the river; for enclosing with a paling fence a small bight of the bay for the bathing and ablution of the patients; for the erection of two infirmary wards with bath-rooms and the necessary apparatus; for six padded rooms, viz., three to each department; for the construction of an additional water-closet, and for improving the others; and lastly, for enclosing the paddock in front of the Asylum for pleasure grounds with a high paling fence, and the erection of sun-shades for the protection and convenience of the patients.

On the 7th of March following, among several other demands I made on the Government for improvements, was a sum of money to defray the expense of flooring four rooms which had been left incomplete, and for making four fire-places in them; also, for removing to better suited situations certain privies, as well as to make some additional ones; and lastly, for making a verandah at the rear of the main building. £150 had been requested of the Governor General for the same purposes, on the 9th of the foregoing February.

"Exhaustion of the vital endowments is so prominent a feature, and so constant a concomitant of insanity, as to form one of the pathognomonic symptoms of that disease. In numberless instances, also, it first operates even as a cause and then remains as a companion; in all cases of insanity, indeed, it is a powerful supporter of the disorder when it is once established. Hence arises the imperious necessity of regular and sufficient supplies of nutritious and stimulating food to the insane. There is no condition of life, not even the growing period of youth, and the active and laborious stage of manhood, in which a good and plentiful diet is so essential as in the prostration of the vital powers when accompanying or occasioned by madness." Thus I wrote to the Colonial Secretary on the 22nd of July, 1848, on discovery that for a long time past the item "vegetables" in the dietary had been taken advantage of by the contractor from its vague and expansive meaning; and nothing but cabbage, and that of a very inferior kind, was ever or rarely supplied for the vegetable portion of the dinner of the inmates. I therefore recommended potatoes specifically and by name, to be allowed twice a week, so as to prevent any mistake in future on the part of the contractor, who had it in his power to force upon the patients whatever kind of vegetables he found it most expedient to supply. Cabbage alone, with seven ounces of meat, makes but a meagre dinner for a lunatic.

The slab airing courts afforded no means of shelter for the patients in foul weather, or protection from the fierce rays of the sun in summer. I therefore applied to the Government on the 16th of October, 1848, to allow a verandah to be made to serve in some measure for both purposes; instead of which, after some delay, I am happy to report that a substantial and capacious sun-shade was erected in each of these airing courts.

Reverting to pleasure grounds in front of the building for the amusement and recreation of the patients, I had been meditating on a plan which would combine all the advantages of the former with the addition of a farm attached, for exercise, if not for profit. I had found that the soil in front was poor, stony, and rocky, and could only be turned into a simple playground, without other advantages; and on the 2nd December, 1848, I wrote the following letter on the subject to the late Mr. Patrick Hill, Colonial Surgeon, and "Visitor" to this Asylum:—

"I enclose an advertisement which, if carried into effect, will at once and for ever doom this Asylum to the state of a prison. The land advertised for sale belongs to Mr. Stubbs, and consists of about thirty acres; it is contiguous to the Asylum, and is the only spot that could be turned into pleasure grounds for the use of the patients. It is admirably adapted for this purpose; it is mostly cleared, and only wants fencing to render it a pleasure ground ample enough for both sexes, with a reserve for a small farm. A small stream of water runs through it most of the year, except when the season is very dry.

"I have learned that the whole of the thirty acres could be obtained for about £250. And here I may suggest that this outlay might be met by the sale of the useless portion of the Asylum Reserve in the form of allotments, &c." "I need not urge the great necessity that exists for pleasure grounds to an establishment where all the conveniences are on too small a scale for a rapidly-increasing population and a system of immigration which has hitherto furnished nearly one lunatic for every ship that arrived since its commencement."

For the sake of uniformity, I must state here by anticipation that, in a letter to Secretary Parker of the 11th August, 1857, reference is made to the above land in these words:—"And there is abundance of fine arable land contiguous to it, suited for every purpose—enlargement grounds for recreation and dairy farming, which I consider an essential appendage to a Lunatic Asylum."

When I was preparing the Estimates for 1849, on reconsidering the number of inmates in the Asylum on the 11th February of the previous year, and taking into account the great strides which insanity had been making in the five preceding years, and the results which might fairly be expected to arise from the rapid increase of the population, with other specific causes to be noticed in due time, I deemed it necessary to propose the sum of £2,000 towards the extension of the Asylum. My particular reason for pressing this expense on the Government was of so delicate a nature that, though I did not disclose it then, I hoped notwithstanding that the proposal would be favourably considered by the Governor General and the Legislature, on general principles of necessity. I regretted afterwards I had not fully explained my objects at the same time, for nothing came of my application.

My

My motive was founded simply on this fact:—It had been the custom for several years, through want of room, to place two men to sleep in the same single sleeping apartment—and this is a practice which no circumstance or necessity can ever justify. Wherefore I repeated the application for extension of the Asylum on the Estimates for the year 1850, in the list of buildings and alterations in “buildings applied for but not sanctioned”; but more particularly in my letter of explanation accompanying the Estimates. In this letter, dated 20th January, 1849, I gave my ultimate reasons for urging the Government to this outlay, by stating that—

“Maniacs, during the whole period of their mental perturbation, are horribly depraved in their animal appetites, so lost to feelings of decency and rectitude of thought, that if they are to be estimated by their actions, they will be found to approximate the brute more than the man. Hence the circumstance of placing two lunatics to sleep in the same apartment is equivalent to furnishing them consciously with the opportunity of committing certain practices which are abhorrent to nature, and repugnant to every sentiment of religion and morality. That such is a fact is beyond a doubt, yet under the circumstances there is no means of preventing these deplorable excesses.”

Among the unsanctioned buildings, &c., &c., you will find repeated, with additions, the list proposed last year, namely, four “padded rooms”; “alterations, &c.,” to the water-closets; “eight windows in the front walls of the two convalescent wards”; “the enclosure,” by a strong fence, of a small bight of the cove near the garden, “for the patients to bathe in, with a shed for a dressing-room”; “additional guttering to supply the tank”; “the deepening and fencing the fresh-water-hole of Tarban Creek”; “the erection of forty single sleeping apartments”; the conversion of the long useless gallery, that runs the whole length of the Asylum, into “six ample sleeping or mess rooms.”

As to “the water-hole,” this subject was a matter of great concern to me from the first, being the only source of supply for the Asylum, with the exception of one underground tank. On this account, besides calling attention to it in the Estimates for 1849, I afterwards bespoke the Governor General’s careful consideration to the urgent necessity of providing a permanent supply, in my first Annual Report, dated 1st February of the same year, when I suggested that an abundant and permanent supply of water for all time might be secured if a small underground tank was excavated in the centre of each of the four airing courts, and the verandahs furnished with guttering all round, and down pipes to convey the water into them.

On the 21st of January, 1850, in framing the Estimates for the year 1851, most of the forementioned requisitions being in arrear, I again appealed to the Government, repeating my applications, with additions, reminding them that the works applied for in 1849 were positively indispensable. But notwithstanding all my endeavours, you will see in the Estimates for 1850 most of the same wants reproduced, in the column headed “buildings and alterations in buildings, &c.” “not sanctioned,” namely, “the four padded rooms,” the formation of “eight windows in the front wall,” and the £300 to carry on and “complete the high paling fence all round the cleared ground of the Asylum,” with sun-shades, as first proposed in 1848, and which I had further recommended to the consideration of the Governor General in my “first Report,” in these words:—“One of the most beautiful and exhilarating prospects in the Colony is that opposite to the Asylum, where every step along the front forms a different point of view, which gives a rare charm and variety to the scene. How delightful, refreshing, and restorative it would prove to many of the convalescent patients, to whom, in the meantime, all this natural beauty—this heavenly gift—is rendered a perfect blank by the dead wall which forms the front of the airing courts. The Superintendent had the honor, early last year, to propose the exposing of this singularly captivating prospect for the benefit of the patients, by opening four windows in this wall for each of the two front wards. There can be no doubt of the effect this new source of enjoyment would have upon minds to which pleasure is almost a stranger.”

On the 17th of June, 1850, I applied for “an hospital wardsman or night warden to minister to the wants of the sick patients during the night”; no such attendant ever having been attached to the Asylum before. The circumstance of an aged man in ill health having been found dead on the floor in the morning showed the great necessity of night wardens; and I stated that it was quite impossible for the ordinary attendants, wearied and harassed with their day work, to perform this duty to a greater extent than they do of their own will, namely—“to make frequent visits in the night when this extra duty is found necessary.” A provisional permission was accordingly granted me to engage a night wardsman.

On the 8th of September, 1851, in forwarding the Estimates for 1852, the erection of a dead-house, authority for the permanent employment of the night warden already taken on, as well as for the engagement of a female night warden, were applied for, in addition to these former unsanctioned requisitions—namely, the erection of a small infirmary, with baths, boiler, &c., for each sex, as proposed on the Estimates for 1849; the repairing of the airing courts; the formation of four under-ground water tanks, with pumps, troughs, &c., &c., in the centre of these respective yards, and the guttering and piping of the verandahs to convey the rain water into the tanks.

In another letter of the same date, I called the attention of the Government to “the sum of £5, which I have proposed on the Estimates for the year 1852, under the designation of ‘The Cured Pauper Lunatics’ Fund,’ wherefrom to furnish the friendless pauper patients discharged from this Hospital with a trifling sum to pay their passage hence to Sydney, and to procure a night’s lodging and a meal.

“Nine out of every ten patients who are admitted here are entirely destitute of pecuniary resources or friends to aid them, and consequently, on leaving the Asylum, they would be dependent upon the precarious offerings of chance for their first bed and first meal, at a time when they are less competent than at any period of their lives to grapple with moral or physical difficulties, were it not that the office-bearers of this Institution have hitherto supplied their first wants. But while in the absence of an established fund for this purpose, humanity dictates to them a continuance of the same course of kindness, His Excellency the Governor General will perceive that this peculiar liability must be seriously felt by persons whose only income is their salaries.”

On the 31st December, 1851, I applied for an additional attendant for the male refractory ward—only two having been hitherto allowed. The circumstances of the Asylum had become altogether different from what they had been at any former period. The management was now beset with difficulties which never before existed, arising from the following among other causes:—The insane population is daily increasing, and vigilance now takes the place of coercion; yet the number of attendants remains the same, wherefore I state that “the refractory wards, which are the proper receptacles of fresh and troublesome incomers, are not provided with a sufficient number of attendants, and the evils of this insufficiency of them are aggravated by the constant change of hands going on since the discovery of gold in the Colony; the places of those who leave being supplied by successors of inferior qualifications, whom sheer necessity obliges

obliges me to engage. They are often of narrow capacity and dull comprehension ; and of course wanting in the two main essentials in the government of Lunatic Asylums—that calm intrepidity which operates on insane people by its mere manifestation, and that acquired vigilance which is equally indispensable for maintaining order and rendering quarrels and escape difficult. There is no provision for the absence of an attendant from duty through sickness, accident, or other causes, and when this occurs with regard to the refractory wards, the turbulence and danger are inconceivable when managed by a single attendant without sufficient experience to inspire him with confidence, or coolness and judgment to ensure presence of mind. Hence attempts at escape, which are generally carried out with admirable cunning, are of very frequent occurrence, for no man so quickly apprehends the difficulties and perplexities of a ‘green hand’ as a lunatic. These and numberless other impediments have forced me to appeal to the Governor General thus earnestly, to give me additional assistance, &c., &c.”

Three weeks elapsed without any notice having been taken of this application, and I again addressed the Government on the 28th January on the same business, stating that “I find it quite impossible for a complement of only four men, however experienced, to perform the arduous and dangerous duties of the two refractory wards, any longer, since two-thirds of all the cases in the Asylum are the very worst and the least manageable forms of insanity.”

Still no notice was taken of these earnest appeals for help ; and, on the 20th February, 1852, I remarked that, in addition to the foregoing, “an extra hand for the two refractory wards is positively indispensable. I can assure you that, during the last six months, both myself and the steward (for the steward and myself constituted all the officers of the establishment at the time), have frequently been obliged, from want of hands, to take our station in the respective wards as keepers, in order to relieve the man on duty, to his meals. There is hardly a week indeed, that some one of the attendants is not off duty for a day or two, disabled by sickness or from blows or kicks inflicted by the patients.”

On the 20th February, 1852, I had to repeat in the Estimates for 1853 the old cry of “padded rooms”; the “eight windows” in the front dead wall of the convalescent wards of the Asylum ; the “dead-house”; the building of an “infirmary for each sex”; “repairing of the yards”; the “guttering and piping” of the same ; and the excavation of a “water-tank” in the centre of each of the airing courts, with all the necessary appliances, as pumps, &c., for the purposes of general cleanliness, &c.

The following memorandum, with part of my lengthy answer, dated 28th June, 1853, is a subject conducing essentially to the completeness of this Report ; it is only the periodical trial of conclusions with the Auditor General, but the testimony it bears is very important, which is the reason why I have inserted it here. I am bound by every obligation of justice, as an earnest supporter of the rights of my patients, to bring into Court at least one impartial witness of each species of the many and diverse actions in which I have been obliged to engage in their defence for so long a period.

The Auditor General states his case in this manner :—“Having examined the contractor’s accounts for supplies to the Lunatic Asylum, Tarban Creek, in May, I find the following questions for consideration :—

“The average daily number of patients in the month was 135, all of whom were supplied with full daily rations, no deduction having been made for the reduced scale of diet directed to be issued in cases of sickness, and on inquiry I find that no deduction is ever made for portions of rations not drawn, when half-diet, low, and fever diet, are necessarily substituted for full rations.

“One patient, James ———, died on the 10th of May. On the day of his death he was supplied with full rations, consisting of—

1 lb. of meat,	}	Made into a pie for dinner.
$\frac{1}{2}$ oz. of suet,		
6 ozs. of flour,		
And a proportion of pepper and salt.		
1 lb. of bread,	}	For breakfast and supper.
$\frac{1}{4}$ oz. of tea,		
$1\frac{1}{2}$ oz. of sugar,		
1 gill of milk.		

“A charge is made in the account for 89,580 lbs. of firewood in the month, amounting to £24 5s. 1d. The issue of this large quantity is not regulated by authorized scale, as in the case of the Asylum at Parramatta, Gaols, and other establishments, but is made at the discretion of the Superintendent.

“The allowance of fuel fixed by the schedule is 25 tons of coals per annum for cooking ; and as the regulations admit of the substitution of wood for coal in the proportion of 3 lbs. of the former to 1 lb. of the latter, the monthly quantity of wood would be 13,998 lbs. only. This might perhaps be altogether insufficient, but without special authority the expense of a larger supply should not in my opinion be allowed.

“Further, salary is paid to a carter for the establishment, and forage is charged for a horse. Firewood is abundant in the neighbourhood (Lane Cove District), which might be collected and conveyed to the Asylum at a trifling expense. 28th June, 1853.” Thus far the Auditor General.

Memo.—“With reference to the queries from the Office of the Auditor General on the account of H—H—, for supplies furnished to this establishment for the month of May, 1853, the Superintendent offers the following explanation :—

“1. In consequence of the distance from the contractor’s residence (9 miles), the provisions are of necessity ordered the day previous to that on which they are actually required, the order being always on the actual number of patients ; and it is scarcely requisite to state that a lunatic may be in a condition to consume his full ration one day and be in hospital or dead the next, for this is indeed the habit of insanity. A patient may also be quite well in the morning after his rations are in the hands of the cook, and be taken ill or refuse his food from whim or delusion so as to leave either the whole or part of it. Besides, in this curative Asylum, and perhaps in every other where the number is limited to supposed curable cases only, it is never found necessary and certainly very seldom expedient to put them on half rations.

“2. Fatal somatic [bodily] diseases are mostly so masked by the nature of the psychical [mental] disorder, that they frequently cannot be detected by any manifestations on the part of the lunatic, and he continues to take eagerly to the last whatever is offered to him. Milder attacks very rarely indeed prevent patients from eating their full allowance and more if they could obtain it.

“3. This doctrine may appear strange to persons unacquainted with the nature of mental diseases, and justly so ; for being immeasurably dissimilar to every other human distemper, the treatment and general management of them must remain for ever an enigma to the inexperienced. “4.

"4. But a fact, clear and intelligible to all, may be added in elucidation. Madness in all its forms and dispositions is essentially a disease of debility, a depression amounting in many cases to exhaustion of the vital powers. This state of body requires an unvarying sufficiency not only of the most nutritious but of the most analeptic food. But the Superintendent being obliged to stint the inmates, no matter what the capacity of their stomachs be, to the limit of commissariat gauge, the unreasonable mode of rationing that limits the appetite of a hungry lunatic to about 7 ounces of usable butcher's meat in the day, the best is done that can be done to meet the inconvenience. If by any chance a patient refuses a meal when it is offered to him, it is not to be supposed that the steward is to account for the whole or a portion of a cooked ration which could not be kept till the next day. Instead, therefore, of losing any windfall of this kind, it is distributed as far as it will go to those who have better appetites in some wards; or in others, to such inmates as assist in the work of the establishment. And it may be confidently asserted that for every ounce of a ration thus placed at interest a pound's worth of public work is the result. All this, and even the minutest details respecting the regulation of the dietary, are well known to the Government; they were fully explained to the Board of Inquiry into the management of this Institution in 1850. Governments and Boards of management of similar establishments, without perhaps entering into the latent reasons of every circumstance or foreseeing every casualty, have by good fortune acted wisely in giving some latitude to the discretion, judgment, and honesty of Superintendents of Madhouses.

"5. There is another point that ought to be considered here. During the present and last five months forty-nine patients have been admitted into this Asylum, not one of whom of course was provided for here the day they were admitted; and coming early, as they generally do, they have to be fed—but how is the question. No man with a heart in his bosom could keep an unreasoning brother in humanity without food for four and twenty hours, while others were feeding him. The Superintendent is perfectly aware that those who come from Gaols and Government establishments are rationed for that day at the place they start from, but they never bring their allowance here; at least, only two instances in which provisions (a piece of bread) were sent with them have occurred in the last five years and a half. It must be recollected also that numbers come immediately from their own homes, to which of course Government regulations do not extend. These also have to be fed. If a balance between morsels of unused food, and even the very few whole rations not used by the individuals for whom they were drawn and cooked, and the numbers to be casually supplied were struck, there would be a heavy amount due to the mercy of the officers and attendants of this Asylum, &c., &c."

The eight windows in the front of the Asylum at last? Now the 6th of February, 1854, after an annual application for them during six years, a move is made towards opening the beautiful prospect in front of the Asylum for the benefit of the patients. But according to the plan, I plainly perceive that all my objects and intentions in my original recommendation will be frustrated. I wrote accordingly to the Colonial Architect, requesting to be informed "whether the hideous caricature of windows now preparing by the contractor for the work be really his design." Independent of its incompatibility, I could not suppose that a man of his standing in his profession could originate or sanction such a disfigurement of the building, and such an outrage on the commonest principles of taste. I had explained to him some months previously, when considering the matter on the spot, that the present design if carried into effect, would be to render the two convalescent airing grounds entirely useless when the weather was boisterous and rainy from any point from north-east to south-west; for that is the side of the airing court to which the patients retire for shelter and exercise in such states of the weather.

I reminded him that my own original suggestion was "that while the Asylum is kept secure, it is to be made as little like a prison as possible; whereas the present design is clearly not to make the place more secure, for it is not wanting in that respect, but to give it all the gloomy and disheartening characters and worst features of a prison; and to make the airing courts in a great measure useless during the prevalence of those winds,—not to speak of the architectural disfigurement of the building from without." I therefore expressed my determination to appeal to the Governor General to forbid the sacrilege. All that was wanted was simple windows like any other windows—not the barred openings of a dungeon as designed.

No movement or likelihood of any effort being made up to 17th March, 1854, to increase the accommodation of the Asylum in order to adapt it for the reception of the insane population daily flowing in, I proposed "the erection of one hundred single sleeping apartments for the present number of patients, as well as for such cases as might be admitted during the present and following years." I also drew attention to the state of the dam of "the water-hole," the mainstay of the Asylum as to water, which as soon as it is patched up is washed away by the first succeeding heavy rains. For the last twelve months the influx and efflux have been in exact equilibrio.

29th March, 1854.—Since the discovery of gold, I have been obliged in sheer despair to engage as attendants whatever forms of human garbage presented themselves. The one or two really valuable and experienced men and women who resisted the temptations of the golden calf had petitioned for an increase of pay in 1851, but no notice was taken of it by the Government. On the 27th of February last, three years afterwards, the same class of attendants again petitioned the Government on the subject, and the petition being referred to me for my report thereon, I stated, on the 29th of March, 1854, "that it embodied facts which could not be controverted; and that if the first memorandum to the same effect, transmitted to the Governor General had been acted upon by the Government in ever so small a degree, the Institution would not have been so often placed in extreme difficulties for want of hands; that if the successful management of social establishments in general arises from the steadiness, ability, earnestness, and experience of the persons engaged in them, the postulate becomes an axiom in the administration of Lunatic Hospitals. This establishment has not had the advantage of a fit and experienced staff for the last three years. When a vacancy occurred—and vacancies occurred every month—I was obliged to hire whatever kind of man or woman, old or young, strong or weak, sober or intemperate, could be induced to try the situation for a month. Here necessity had a law, and it was supreme.

April 21st, 1855, on my return from a six months' leave of absence, I found that two padded rooms had at last been erected, and a commencement made of the other two; also ten new single sleeping apartments begun and somewhat advanced. Furthermore, the two bath-rooms reported finished last year, have in reality only just now been rendered fit for use; but nothing had been done towards gravelling, paving or flagging the airing courts, which in wet weather are perfect sloughs. The dam of the "water-hole" lies in the state of ruin adverted to the last and previous years.

On the 15th April, 1856, "the water-hole" continued in the same ruinous state mentioned in former years! I again therefore called the attention of the Government to the dilapidated condition of the dam, and the filling up of the hole with silt.

The want of sufficient accommodation is an endless theme, and will continue to be so as long as the Government relies solely on this lilliputian affair and the Factory at Parramatta. So I continued to harp upon the erection of a hundred single sleeping apartments to meet immediate and future demands for room; and on the 9th of August, 1856, I reported to the Government, as an incident corroborating the steady increase of insanity, and one otherwise worthy of remark, that during the months of June and July no less than thirty-six cases of insanity were admitted, which makes the ratio '6 per day.

Again, on the 15th May, 1857, I reminded the Government of the one hundred additional single sleeping apartments on former Estimates to supply immediate demands, and also that no movement had yet been made towards gravelling or paving the airing courts, which "in wet weather are perfect sloughs"; moreover, that "the water-hole" at Tarban Creek, our main dependence, remains *in statu quo prius*. "In conclusion," I restated in general "that notwithstanding my frequent representations of the urgent want of room and accommodation in this establishment, nothing has been accomplished beyond a few inconsiderable repairs or stop-gaps."

I had occasion, on the 25th March, 1858, to report to the Colonial Secretary that the experimental padded room in the course of erection in the female department of this Asylum was a complete failure in respect to the objects of its construction. I had objected some time ago to the contractor as to its principle," but it was not then in a sufficiently forward state to justify me in giving a fair and honest opinion on its ultimate applicability, before this day, when I had it in my power to examine and consider well one of its sides just placed in position. I therefore do not hesitate to affirm that it is as unlike a padded room and as unfit for the ends in view as a stone wall. Besides, in constructing it I am deprived of an apartment at a time when, instead of being in a position to suffer any diminution of the present number of single sleeping rooms on the female side, I require at least twenty additional ones.

I reported, on the 14th April, 1858, to the Colonial Secretary, the completion of one padded room, better adapted than the first; stating that "it will be useful in certain forms of suicidal mania." At the same time I pleaded the necessity of sanctioning the formation of a second "while the workmen are on the spot"; and also reminded him that there was a "small roofless and useless yard in the female department which is capable of containing five additional beds if it were rendered usable by being roofed and floored." "This work has been promised to be executed for the last five years, but always deferred." The roofing of four small courts was recommended to be done on the 21st of January, 1850: this is one of them.

After all my requisitions to the Government for several years past, made in the most clear and emphatic way possible, on the Estimates for each ensuing year, I receive only the annual circular letter from the Colonial Secretary, dated 14th August, 1858, asking whether the erection of "any new buildings, or any other alterations or repairs to the buildings under my charge will be required in the year 1859." It gives me however another opportunity of asking for 150 new separate sleeping apartments, &c., &c., 100 having been applied for on the 15th of May, 1857, in answer to the printed circular of that date.

In compliance with a request of the Honorable John Robertson to give him my written views on certain matters to which his attention was called when he visited the Asylum on the 3rd of October, 1858—after discussing other important matters—I conclude by reminding him of "the pernicious influence on the health of the inmates caused by the ill adapted design and construction of the privies, as pointed out to you on your visit to the Asylum yesterday; also, the wretched state of the yards or airing grounds of the several wards, in weather like the present, &c."

In my letter of the 14th June, 1859, accompanying the Estimates for 1860, referring to the item "buildings," I state that, "besides the new buildings already designed, and in some degree of progress in the male department of the Asylum, which, when completed, will double the room and afford the means of establishing a more congenial and salutary system of classifying the patients, two additional wards are urgently called for on the female side, both for the purpose of increasing the accommodation, and of reducing to order the present chaos by some shape of classification, &c." Also, that "a new washing-house and laundry are equally necessary, as well as a few skillings, in the form of small cottages built against the outside wall of the laundry and the wood-yards, for the patients who work out of doors."

As time went on, and the inmates increased and crowded the small space into which they were forced to compress themselves, the disgusting condition of the privies intensified in proportion. This state of things has been frequently submitted to the Government; but with all its disgusting accompaniments it is nothing in the main to another shocking evil of a different nature, which, in the present form and construction of the latrines cannot be prevented by all the vigilance brought to bear upon it. On this account, when I discovered in the new buildings in progress that no alteration in the design of them was contemplated of a character either sufficient to mitigate the nuisance or prevent the continuance of it, on the 30th August, 1859, I appealed earnestly to the Colonial Secretary on the subject, stating that the arrangement of the privies as laid down and approved, if carried out, will not only render the maintenance of morality impossible, but will give every encouragement and facility to the commission of one of the most revolting practices of which humanity can be guilty, and to which men deprived of the guidance of reason and the controlling power of the will, and left entirely to the directions of the animal instincts, are especially prone.

"I have taken uncommon care to point out the great error in the construction of those in use, to every Colonial Architect of my time, and to enforce my observations by the painful disclosure of what should be to them and to every lover of decency an invincible argument, &c." "In the lately finished portion my plan was to some extent adopted, so far indeed as to prevent the evil; and it is therefore very discouraging to find that my good intentions have been frustrated in respect to the new wards, for no valid reason that I can conceive, or that can be advanced by those concerned with the building."

On the 16th September, 1859, I had occasion to call the attention of the Colonial Secretary to a most unaccountable and injudicious deviation from the useful model afforded by even the old part of the Asylum. I reported "that I had just discovered that the airing-courts of the three new wards now in course of erection are designed to have the advantage of verandahs only on two sides of the square, while on the remaining two the patients will be open to all the evil consequences of exposure to the rain and the sun." "This very serious defect will be severely felt in a country at one time tropical as to heat and rain, and at another, hyberborean as to cold." I am very happy to add that my representation had the effect of getting the yards sheltered all round.

The

The disgusting subject of the privies continues in immortal freshness ; the impediments thrown in the way of moral improvement in this affair by ignorance and self-conceit could hardly be credited by men of common sense and generous feeling. The nature of this opposition is adverted to in my letters to the Colonial Secretary. On the 26th of September, 1859, referring him to my letter of 30th August last, respecting these water-closets, I bespoke his best consideration "of my motives and objects, if, as a Christian man and a moralist, I appeal to you a second time against the final arrangement of these recesses as explained to me this day by Mr. Cole, whereby all the objectionable conditions of the old form of water-closet are restored, affording as it were especial encouragement to irresponsible men to indulge in the most revolting practices." In another letter of 27th September, 1859, to the same gentleman, I close the dispute as far as I was concerned thus—"Having urged my objections perhaps beyond all prudence, and thereby at all events performed a great moral as well as public duty, discretion warns me that I have proceeded in the matter as far as my responsibilities require. I was not aware till to-day that I have been acting in antagonism to the opinions of the Board of Medical Visitors."

"Having learnt," on the 7th of October, 1859, "that in the scheme of the Estimates for 1860, just laid before Parliament, there is no sum proposed to carry out the objects and the very necessary additions I have urged therein upon the consideration of the Government," in order to rectify the omission, if possible, I forwarded a copy of part of my letter of 14th January last, accompanying the Estimates of this Asylum for the year 1860, in which I proposed the erection of two additional wards on the female side, where a hundred and three people "are crowded into two wards," each not adapted for the habitation of more than fifteen persons according to the original plan of the building, which was designed to hold only sixty convict lunatics in all.

The dam at Tarban Creek being again in trouble, I reported to the Colonial Secretary, on the 30th April, 1860, "that the breastwork of earth forming nearly half of the dam across the freshwater hole of Tarban Creek has been washed away by the floods occasioned by the late rain ; and that the efflux of water appears at present to be greater than the influx, so that in no long time, if the weather continue dry, the reservoir will be empty."

In the same letter, I recommended the guttering and piping of all the old part of the building, and the "placing of capacious ships' tanks under the roof to receive the rain."

In the supplemental circular from the Colonial Secretary's Office, dated 20th June, 1860, I am requested to state "whether the erection of any new buildings, or repairs to the buildings, if any, will be required in the year 1861," and in answer I repeated, on the 13th July, 1860, a former recommendation "that two additional wards, similar in most respects to those now nearly completed in the male division of the Asylum, are urgently required for the accommodation and classification of the female inmates in that department of the establishment." Moreover, that "after the termination of the present contract for building on the male side, there will still remain a pressing want of money to complete the work. Two sides of three of the wards—that is nearly one-half of each airing court—will remain destitute of pavement under the verandahs ; and one-fourth will remain without any verandah at all. Then there is the guttering to be considered, which if I am rightly informed is not included in the contract. At all events, the whole of the original buildings require to be thoroughly fitted with gutters (under the eaves), and iron tanks to catch some of the enormous waste of water which is allowed to flow away from the extensive roofing for want of means to save it, &c."

In answer to another circular, dated May 21st, 1861, asking the same questions as above with respect to the Estimates for 1862, I am, alas ! under the necessity of reiterating almost the same wants, recommendations, and remarks. "Sleeping-room is the pressing want. I have been necessitated to convert for the time the long mess-rooms of the two refractory wards into dormitories, and they are already full of beds, so that the inmates are thus entirely deprived of a place wherein to take their meals." Then comes a list of dilapidations requiring repair, and lastly, the padded rooms are become both useless and "dangerous, on account of the materials of which the framework is constructed."

In the following letter to the Colonial Secretary of 9th September, 1861, will be seen a specimen of the emergent troubles and sources of anxiety incidental to the office of a Superintendent. "The female department of this Asylum comprises a hundred and twenty-two inmates, distributed into two small wards, both of which are consequently overcrowded during the day, and every available nook and space are crammed with beds for sleeping accommodation through the night. The slab skilling, begun to be erected in 1847 and finished in 1848, at the south-west end of the building, contains at night nineteen individuals ; and these, as in the other rooms, are so closely packed that nothing but sheer necessity could justify such unhealthy and unsafe aggregations of insane human beings.

"But packed as it is, this extremely useful skilling stands right in the way of the workmen busied in laying the foundation of the new wing, and it must come down to enable them to proceed with the work. The immediate demolition of it is therefore decided upon, no doubt necessarily, by authority of the Colonial Architect. Now the whole matter resolves itself into the question—where are those nineteen helpless individuals to sleep during the next six months the time calculated to elapse before they can be supplied with quarters in the forthcoming new wing ?"

My difficulties with the Auditor General are interminable. The Auditor General is an honorable man, and I am not at issue with him because every inch of firewood which is burned, every tea-spoonful of oil which is consumed, or every bite of food which is swallowed by an inmate, must be strictly accounted for. Such accuracy is indispensable in the Government Service, and perhaps may be closely observed everywhere, but I am constrained to state that it is scarcely possible and never practicable in a Lunatic Asylum, for reasons perfectly satisfactory to those who understand the physical conditions of madness. There ought to be a reasonable margin allowed for strange incidents ; consequently, I am resolute in keeping my patients warm and comfortable in cold weather, whether it be in winter or summer, and well fed in all seasons. On the other hand, the Auditor General is equally determined to check what he calls my extravagance, and like Hotspur, splits up each fraction of comfort, and light, and nourishment, into the "ninth part of a straw." Thus the dispute was maintained, till, on the 4th September, 1861, he reported me to the Colonial Secretary for my prodigality, supporting his arguments with offensive language, and such illogical reasoning that his postulates came to a *casus questionis*. The following is the close of a long reply, dated the 17th, to his Report, in which he invidiously and unnecessarily compares the economy of the Parramatta Asylum with my lavishness :—

"From

"From the commencement of my management till this hour, it has been my earnest endeavour to keep the expenses within the prescribed bounds; but I acknowledge freely that while I have paid the strictest regard to economy even in trifles, I have not forgotten, as the constituted guardian of a considerable population of unreasoning and helpless men and women, for whom I have to think and feel and provide, that there is a far higher claim to my regard than economy in trifles. I have not forgotten what is due to the comfort and well-being of my peculiar charge, even at the risk of committing a petty excess. It does not appear from the conditions of the office of Superintendent of a Lunatic Asylum, that he is bound to vie with the kindred institutions in any meaner rivalries than in the increasing degrees of happiness he can infuse into the stricken hearts entrusted to his kindly and healing sympathies. And how can he bring into active and useful energy, the full and quickening powers of an enlarged and humane philosophy, if his common sense and manly feelings are to be frozen up and confined within the cold commissariat limits of a few pounds of firewood or an ounce of lamp oil?"

In my letter of 1st April, 1862, in answer to the usual annual circular, dated 14th March, regarding the Estimates for the following year, I reported to the Colonial Secretary the prospect of a speedy completion of the new dormitories on the female side, reminding him at the same time that they would only relieve the plethora already existing in the establishment, and that the same might be predicated of the male department; "so that, at the very utmost, and with the most rigid economy in respect to sleeping-room, the Asylum, when all the buildings for which funds have been voted are completed, will scarcely accommodate 400 patients; yet there is no question," I said, "that room could be made for fifty more by adding another ward to the female quarter, in the vacant angle at the south-west front, in a line with the hospital ward on the male side, for the erection of which, I believe, it is in contemplation to call for tenders shortly. It now only remains to bring under your notice a want as important as any that has been or is in the course of being supplied. Every period of windy or wet weather proves more and more painfully the necessity of having the airing courts paved or flagged," &c., &c. It is very disheartening to have occasion to repeat the necessity of this indispensable work so often, without the smallest notice being taken of one's earnest appeals to have it effected. I was over sanguine in my calculation as to the capacity of the Asylum when completed. 350 patients should never be exceeded.

It was necessary to apply to the Colonial Secretary, on the 17th September, 1862, for a small additional sum of money to complete some defects or wants in the hospital-ward in progress of erection, because "in the present state of the Asylum, for every two wards there is only one bath-room, the inhabitants of one using it in the forenoon, and those of the other in the afternoon of bathing days; and this is just as much work as can be done there in that space of time."

"As the new ward after completion, however, will contain, in round numbers, 100 inmates, which is fully as many as any two of the ordinary wards, and these mostly infirm, helpless, and paralyzed people, to whose cleanliness a much larger and more frequent attention will be required than in other departments, I find it necessary to convert the old dormitory called the infirmary into a bath-room for the especial use of these invalids. This is a necessity which cannot be resisted, for, if not altogether impracticable, it would at least be cruel, and often hazardous, to drag infirm patients through a neighbouring yard to a distant bath, perhaps a dozen times a day. It will now be easily understood that it is this conversion which will cause the trifling extra expense in the filling up of three or four baths, cold and warm, in widening a small lumber closet into a furnace-room, and in moving forward to great advantage the wall of the adjoining water-closet, which is tumbling down, and would require rebuilding under all circumstances."

Accordingly this work was immediately sanctioned, and soon accomplished; that is, a bath-room was formed, but except the bare floor and walls, the inmates had not a single bath or vessel to bathe in till the year 1866, when it was fitted with all the proper apparatus. It had remained a sort of lumber-room. "There are no funds," was the constant answer to troublesome questions.

After that work was finished, I wrote to the Principal Under Secretary, on the 2nd November, 1862, in these words:—

"With reference to those alterations and repairs in this establishment which require special attention, I am given to understand by the Clerk of Works that it is necessary for me to apply to the Chief Secretary for authority to empower the Colonial Architect to act, before any work of that description can be undertaken; and as there are certain minor requisites which I believed had been included in the present contract, chiefly or in some degree connected with the system of guttering and collecting the rain-water from the roofs, now in progress, and which, although they are one and all absolutely necessary to be done for the comfort and convenience, the cleanliness and health of the people, are not yet sanctioned,—I have the honor now to state them *seriatim*, and to request that the Chief Secretary will have the goodness to authorize the execution of them immediately, seeing that the expense of the work would be materially increased if the contractor should once move his plant and appliances off the ground, &c.

"1st. The removal of the small and insufficient leaden cisterns for the two original shower-baths, and the substitution for them of three of the capacious iron tanks now on the ground, with the necessary connecting pipes, some of them fitted with drinking taps, into suitable positions in the respective yards.

"2nd. The opening of a door into the unused back lumber room of ward No. 3, to form a scullery, which will involve the laying on of water from the pipe in the adjoining passage, a table, a gully in the floor, and a drain-pipe to carry off the foul water.

"3rd. The removal of the stone arch of the back and main entrance of the Asylum, under the store-room; the formation of a door instead of the arch; and a lifting tackle, to raise the bales and heavy goods to the first floor of the store, &c.

"4th. The alteration of the water-closet in the female convalescent ward; and the furnishing and adapting for use of the new bath-room, already applied for."

"Water is the best of all blessings," said the prince of ancient lyric poets: it is the last blessing considered or provided for in New South Wales, and seldom considered at all with respect to the Tarban Lunatic Asylum. With this conviction on my mind, and a drought impending, without a week's supply in the fountain at the creek, I wrote, on the 27th November, 1862, to this effect, to the Colonial Secretary:—

"The reasonable expectation of rain from day to day having withheld me as long as consistent with prudence, from making you officially acquainted with the state of the water at Tarban Creek, I have the honor to report that the quantity remaining in the dam will not, in my estimation, last longer than eight or ten days. I know that I should not have had to make this statement for the next three months, even should the drought continue, but water has been necessarily used in the building of the walls of the new ward, as well as by the crowd of workmen and horses employed, to an extent that would not have been previously supposed.

"In submitting this report therefore to the Chief Secretary, I request that you will have the goodness to represent to him the necessity of at once causing the five iron tanks, asked for some time ago by requisition to the Colonial Architect, for a different use, to be sent up without delay, in order to be placed at the wharf in readiness to receive water from the boats, should it be necessary at the last moment to have recourse to Sydney for supplies. With reference to these tanks, I may explain that they are due to the Asylum, and are intended to be placed under the roof in various parts of the building to receive the rain."

With reference to the memorable strictures made upon the conduct of this Asylum by two or three Members of the Legislative Assembly, I wrote, on the 1st December, 1862, to the Principal Under Secretary,

tary, that "though I am conscious of their purely fanciful character and entire injustice as applicable by implication to me personally, yet they have to my knowledge already made a most painful impression on many persons connected by consanguinity or friendship with the inmates of this establishment, which no logic of mine shall ever be able to mitigate or remove. I do myself the honor earnestly to request that the Chief Secretary will be so kind as to appoint, at his earliest convenience, a Commission of Inquiry, in order that the public, and especially those most interested, may be disabused of the monstrous sophisms and mirepresentations which can only be intended to inflame the passions of the people, and impel them to acts of dangerous ferocity against men whose every act, thought, and word, are the offsprings of human love and beneficence." But the Government refused my application on the score that it was unnecessary. There was, however, a particular imputation on my character, which one of the Members had chosen to dwell on with insulting emphasis to excite emotion in the House, which it behoved me on the grounds of personal honor to resent with indignation. In writing, therefore, to the Colonial Secretary, on the 6th December, 1862, I said,—“With regard to the moot point which was lately severely discussed in the Legislative Assembly as another instance of the ‘despotism of Superintendents,’ namely, ‘the arbitrary withholding of the letters of patients addressed to their friends,’ &c., as far as I am concerned, I can conscientiously declare that this is a simple myth. From the first hour of my appointment to this situation, it was a regulation of the moral discipline to be carried out in the Asylum, that the patients should be encouraged to write, and be furnished with writing materials in order to communicate with their friends at reasonable intervals of time; and I cannot accuse myself of ever having infringed this good rule, because, in addition to the justice of the thing, and to the gratification of their instinctive longings to maintain the natural relations of affection with their friends and acquaintance, I have frequently been enabled by this means to discover many of the occult, wayward processes of thought which would otherwise have escaped my keenest scrutiny,” &c. “I have always endeavoured even to induce those patients who can write to answer the letters of their friends addressed to myself.” “I have only to add that I exercise not ‘the despotism’ so frantically denounced in the Legislative Assembly, but the cautious, discretionary judgment of experience as to the wisdom of forwarding such balderdash as composes the two accompanying letters of a patient now in the Asylum. Whenever this discretionary power is taken from the office of Superintendent, farewell to all management, all order, all moral and mental discipline, and all public tranquillity. When the wild delusions of a maniac are to be weighed against reason, character, honor, and all the Christian charities, let him be a slave to legislative infatuation who has a stomach for it—the hungriest bone-grubber of the profession would recoil from the office on such incendiary terms.”

I had always believed that when new works in Government departments are first planned and prepared for execution, that the specifications include something more than the bare walls, doors, and windows. I have always been under the impression that furniture suited to the purposes of the building was included. If not, it ought to be. It is really painful to remind Colonial Architects of indispensable works left undone which ought to have been done. I admit that “want of funds” may frequently be the cause of any apparent neglect; besides, there is the *vis inertiae* of the Board of Works to be overcome before anything can be undertaken, whether it be important or trifling, and that is no easy task. At any rate, this is often the plea set forth for delays. Wherever the fault may lie in the present case, hope deferred forced me at last to write to the Government, on the 5th of December, 1862, that “it is now full six months since the new wing of the female department of this establishment was finished and first occupied by the patients, and yet there is neither a table for them to take their meals at nor a form to sit upon in the dining-room.”

It is distressing enough for me to be obliged to witness every day these poor women squatted like savages, and eating their food on the floor; but one can hardly contemplate with equanimity the consequences of one or many strangers of a censorious temper of mind visiting the Asylum during meal-time under such circumstances. It is the same with the two dining-rooms of the male side, which were opened nearly two years ago. There are neither tables nor forms.

Circumstances obliged me, on the 5th February, 1863, to call the attention of the Chief Secretary “to the dilapidated and insecure state into which the doors and other particulars of the male refractory ward have fallen in the short space of two years since this wing was finished. I find that patching up the original defects of the timber and of the workmanship is attended with no permanent or satisfactory results; but on the contrary, only furnishes ingenious lunatics with instruments of mischief or of danger to life, according to the disposition of the individual who has them in his power, as the specimens herewith sent will demonstrate.

“Every part of the woodwork of this contract requires, to say the least of it, to be thoroughly renewed, otherwise I have but one consequence to expect, and that is the sacrifice of some innocent life. My fears are well grounded.”

Having made frequent ineffectual applications for more warders to carry on the work of the establishment with efficiency on account of the great increase of lunatics, and reiterated, especially on the 25th of April, 1864, I was asked in reply how I managed without them, namely the sixteen additional attendants; to which not unreasonable question I replied (calling in the wisdom of the adage to help me out of the dilemma, “that it is the last feather which breaks the camel’s back”) that my wants have been frequently expressed both officially and privately, but I had forborne for the last year and a half to press them as urgently as I otherwise should have done, because I was led to believe [on certain reliable assurances] that the establishment would be relieved of the surplus by drafting off a considerable number of incurables, and I waited to see the extent of the actual relief promised, in order that I might more accurately estimate the extra assistance required” [for the long-promised relief had never come; so that lest the camel’s back should break in earnest, I made the present request] “for sixteen additional hands, the due proportion to the number of patients.” Mr. Secretary thought seven sufficient.

In my letter of the 3rd of August, 1864, accompanying the Estimates for 1865, I mentioned in clause 2 “a scheme or list of all the main alterations, repairs and work requiring to be executed, which I had placed in the hands of the Colonial Architect at the end of the year 1862, but which I presume that officer had been prevented from undertaking from the want of funds, or from the conglaciation of the board of Works: namely, seats to be fixed along the walls below the verandahs of the various airing courts, for the repose and convenience of the patients during the day; a covered scullery at the end of the kitchen, including repairs and some alteration connected with the archway close by; apparatus for bathing

bathing in the new bath-room of the infirmary ward—this room has been a *nominis umbra*, an empty useless space, since the ward was finished in 1862—the placing in position over the bath-rooms of two of the wards the six iron tanks purchased for the purpose of receiving the rain from the roofs, &c., and of supplying these two rooms with water from other sources when necessary, these tanks having been left lying on the ground awaiting this consummation since the end of the year 1862; and the restoration of the ceiling which has fallen down from time to time in several of the rooms of the main building.

“3rd. In addition to the above category, I now propose that the privies of the Asylum be one and all fundamentally altered, that is, new-modelled and reconstructed on some better principle than the one on which they were originally designed: and while I submit this project, I earnestly press the consideration of it on the Government, in order that the establishment may, if possible, be relieved from an intolerable nuisance alike subversive of comfort and noxious to health. The exhalations constantly reeking in greater or less degree from these confined and stagnant fecal accumulations pervade every part of the building, and are always offensively perceptible to the smell. In some states of the weather indeed, it is hardly an exaggeration of them to say, that they are so dense and voluminous as to be almost perceptible to the touch. This is a very chronic grievance, it has often been complained of, frequently under professional treatment, but never even mitigated, because no rational and radical means have hitherto been administered.

“4th. The fresh-water-hole at Tarban Creek demands attention to its condition; and I feel compelled to entreat that immediate steps be taken to widen its area, on the grounds of necessity, and to prevent it from being filled up by the washings from the road, &c.

“5th. An accident which has just befallen the senior attendant of the male refractory ward affords me the opportunity of calling the attention of the authorities to the prime cause of this and many similar casualties of daily occurrence, chiefly to the same portion of the establishment. A mischievous patient so injured his attendant this morning by striking him violently on the head with a large stone that he has been obliged to take to his bed; and only last week a stone or brickbat weighing four pounds was taken from a lunatic of a malicious disposition, who had concealed it about him for the purpose, as he candidly confessed, of knocking out my brains. The source of these dangerous incidents is the nature of the soil of which the airing courts, more particularly those of the new part of the Asylum, is formed; consisting of a mixture of stones of all sizes, and a light sandy loam which the rains regularly wash off, leaving the ground more like a macadamized road than anything else to which it can be compared,” &c. “I have frequently in bygone years called the attention of the Government to the state of the old yards [airing courts], and applied to have them flagged or paved, and I objected strongly to the inconsiderate and dangerous quality of the soil [material] employed in forming them; but I was uniformly soothed by the promise that all the big stones should be so deeply buried that no mischief need be feared. Time has disclosed both the fallacy of the argument and the buried stones, of which the above is a proof.”

I found it necessary, on the 9th August, 1864, to subjoin to the “list of requirements specified on the 3rd curt., an addition in respect to the laundry, which had been omitted in the copying from my notes: namely, a drying shed with a heating apparatus for the purpose of drying effectually the clothes of the patients during wet weather. This is a want which needs no advocacy to enforce the necessity of having it supplied. No words can describe the difficulty and almost the impossibility in some seasons of getting the enormous weekly amount of washed clothing dried thoroughly, in time for use, on the bathing days; and I frequently fear that, in spite of all the efforts of the laundresses, with their limited means, an unavoidable degree of dampness may attach to the clothes, quite contrary to the intent of all our sanitary ordinances.”

Referring to the cemetery of this establishment, I wrote to the Chief Secretary, on 13th May, 1865, that “I have, times out of number, taken upon me the responsibility of attempting to keep the fence enclosing it in repair; but it has uniformly happened that as soon as it was just put in order it has been partially and sometimes to a great extent destroyed by bush fires kindled and left burning on property to the south of the reserve. At length, about a year ago, on a very stormy day, a fire swept over the reserve from that quarter, which in its fury could only be likened to a hurricane of flame, and consumed in the space of a few seconds the entire fence, leaving only a few charred memorials of its destructive energy.

After this catastrophe I was obliged necessarily to desist from the sheer impossibility of doing any good by the aid of timber, resolving in due time to recommend to the Government to have the burial-ground surrounded by a rubble stone wall about three or four feet high, which would be both a complete defence against fire and a permanent means of enabling me to keep the place in decent condition. A public road passing alongside of it is now formed, and the fencing which formerly shut out the public from the reserve is taken away, so that the cemetery is completely exposed. The time therefore is now arrived to make the above recommendation, which I was deterred from doing sooner, for very obvious reasons which will readily occur to you.”

The want of room still obliged me to sue for further additions; I therefore applied the second time, 10th August, 1865, for a number of skillings to be built against the outer side of the two dead walls of the No. 2 wards, male and female departments; the one set against the wall bounding the wood-yard, and the other leaning to the party wall of the laundry green. “These small erections are designed for the accommodation of the attendants and a few of the confidential working patients who cut up the firewood for the establishment. The sleeping room of the male attendants holds only eight beds, nearly touching each other, and the accommodation of the female attendants is not much better. It will be readily understood therefore how indispensable these are for the convenience, comfort, and health of this useful body of men and women. In suggesting these additions to the Colonial Architect a year ago, he acknowledged the great necessity of them, and I believe prepared plans and specifications of them. This however is only the second time I have had the opportunity of recommending the erection of them in the regular way.”

In my letter of 13th May, 1865, I drew attention to the propriety of enclosing the cemetery of the establishment with a new fence or dry wall; and in respect to “alterations” I observed that there are four ranges of single sleeping apartments in the old and central part of the Asylum, namely, one range in each ward; the only entrances to which are through the four respective mess-rooms. The windows of these apartments and ranges are all secured by iron bars, so that when the patients are locked in for the night there is no access to them except through the mess-rooms. Now it is an undoubted fact, suggestive of horrible reflections, that if one of these mess-rooms should happen to be on fire, the only possible way of obtaining entrance to the corridors, and to the doors of the patients locked up within, would be through the

the burning mess-rooms! I need not picture the results; and on this account I propose that a door be made through the wall into the open yard at the bottom of each of these ranges or corridors, in order that on any emergency of this kind there may be free ingress and egress—at least at one end of them—for the purpose of rescuing the inmates. Taking into consideration the danger and difficulty of the case as supposed and probable, I took care to have doors made into the yards at both ends of the other similar ranges in those buildings which have been erected since I took charge of the Asylum.

For the sake of easy access in cleaning, as well as facility in the transference of refractory patients from one room to another, it is necessary that a door be also made from the sleeping-room of the attendants into the adjacent westernmost dormitory of the female department. The necessity of this ready communication was not seen or felt till after experience pointed out the want. In my letter to the Colonial Secretary of 3rd August, 1864, I proposed the “fundamental reconstruction of the water-closets.” “I am still of the opinion expressed therein, and believe that nothing but a thorough reform of them in all their conditions will be of any avail. As to repairs:—The floors of several of the corridors, passages and rooms, and a great portion of the flagging of the yards under the verandahs, are in urgent need of repair, and the ceiling of the dry goods store is in a sad state of dilapidation, requiring to be restored. All the padded rooms also require renovation, being entirely unfit for use in their original adaptation.”

In forwarding, on the 10th August, 1865, the Estimates of this establishment for the year 1866, and referring to the proposed increase to the officers' salaries, I begged “that it might be borne in mind, in adapting salaries to the quantity of work and the value of the services of the officers, that this establishment holds out to them no form of onward incitement, such as the hope of promotion, to encourage a rational ambition, and no reward either for talent or merit. In whatever condition they are placed at first, there they remain stationary perhaps for life, if not neglected, at least unrequited, though their work may increase tenfold. Seeing, therefore, that there is no scope for promotion, they are, as it appears to me, surely entitled to a moderate increase of salary—if neither on account of the length of service nor personal desert, at all events by reason of a steady annual increase of labour.” This would only accord with the spirit of the Civil Service of other countries.

Having occasion to call at the Colonial Secretary's Office about this date, I took the opportunity of submitting to Mr. Cowper a few suggestions for him to ponder before they were made into formal requisitions; because they are all very important elements of the “hard material concerns” of this Asylum, several of them being positive wants, and all of them demanding speedier action than the ordinary rate of the *paulo post futurum*:—

“Enlargement of the dam.

“A tennis-court (or ball-alley). Promised three years ago by Sir Charles Fitz Roy.

“Crib-rooms. Windows would be an advantage in them, though much light is not desirable in the sleeping apartments of Lunatic Hospitals.

“Mess-rooms in the old building might be enlarged. But if the number of patients is to be kept down to 350, the present arrangements will suffice; if not, the space of the nearest cell could be added to each by taking away the party walls.

“Smell from latrines. This difficulty I fear can never be got rid of.

“Decidedly incurable patients, namely, the aged, the imbecile, the idiot, the maimed and blind, the paralytic and the epileptic, should on no account be sent to a curative establishment.

“The four old wards and several of the new have no receptacles for clothing, night utensils, brooms, mops, &c., &c.

“A cooking apparatus, latest improved, for 350—if the surplus population is to be removed—or for 500 at least, if retained. There ought also to be a means of warming the tables in winter, on which the food has to stand cooling for hours during the preparation. [This was suggested to Mr. Cowper on his visit to the Asylum last year.]

“Lavatories. A range of lavatories might be formed outside the walls, like skillings, where necessary, with small windows looking into the back yards, and a door of entrance made in the wall inside.”

These selections from twenty years' correspondence with some of the departments are confined purposely and for the most part to one subject; and are only brought together to furnish evidence which no one will doubt that I have not been either an idle or negligent manager of the important trust reposed in me. Incompetent I may have been; for I am only human, and plead guilty to many imperfections; but I must observe in justice to myself that notwithstanding all my faults and short-comings—notwithstanding all the obstacles and contravening incidents continually starting up, and they are legion, notwithstanding all the blemishes and defects of this Asylum in respect to its original plan, size, framework, conveniences, suitability, and the want of all the suppletory conceits you can think of, which are considered necessary constituents of a Lunatic Asylum, I have not only been able to conduct the moral and mental affairs of it to the entire satisfaction of every Government down to the present, but, as stated on a former occasion, have brought the general management—all other things being equal—to a degree of perfection not surpassed in any country in Christendom. The free and happy condition of the patients; the total absence of all personal restraint; the small ratio of deaths; the high average of *bonâ fide* cures; the exemption from common diseases; and, what forms the highest encomium that could be pronounced on the conduct of it—the extreme rarity of suicide; only two cases having occurred in twenty years! If you add to these favourable results of a hard and laborious life, the incredible amount of good that has been achieved without a conceivable atom of evil resulting from it, not to mention the order, the cleanliness, and the general arrangements, both within and without the Asylum, you will have indubitable proof that on my part nothing has been left undone, which untiring energy of body and soul could accomplish, in fulfilling the diversified duties of my situation.

Yet I have been bitterly reproached for not performing impossibilities, and maligned in the same category of slanders, with no common degree of rancour and spite, for achieving conscientiously all the possibilities in my sphere of action. I have been taunted with the absence of mental luxuries, ornamentations, and pleasure-giving accessories of endless shape and name, as if I were in any way answerable for what was not in my power; while, as the foregoing pages clearly demonstrate as far as they go, I have had to overcome unexampled difficulties and torturing delays, which would have disheartened many a man far less sensitive and anxious than I am in obtaining things necessary to the health, the comfort, the safety, and in many instances the very subsistence of the inmates. Indeed, up the end of 1866, I have been so incessantly engaged in striving for the needful and the useful, and that with such tardy and scanty success,

that

that the ornamental, and to some extent, the recreative, were unavoidably postponed till the coming of a happier era and more propitious auspices. It will no doubt seem incredible, but it can be shown, that not less than a fifth of the inmates of this Asylum went barefooted for a great part of the winter of 1866, for want of boots, which no requisition could wring from the Treasury Stores till it pleased the economists of that department to send them. This is one example of what I have been stating: I could furnish with ease a hundred more of a similar nature.

As to the paroxysmal clamours of sensation-dealers raised for the vilest of purposes, I repeat here, that a time will arrive—indeed, the recoil has already commenced—when the new-fangled and premature exuberances which form a caricature on all rational management of pauper lunatics, will give way to sound common sense, and better notions of the fitness of things. Moral innovations mostly tend to excess at first, and the more so when they are leavened with a little sham. But—

Naturam expellas furcâ, tamen usque recurret.

I need hardly repeat to you here what I said on a similar occasion before, that “I am as sincere and earnest an advocate of every conceivable mode and extent of amusement, moral, physical, and mental, that can be brought into practice, and has its foundation in reason and utility, as any man living; and I have not only acted up to these sentiments to the utmost verge of my limited means, but advocated them twenty-two years ago to a degree which was called “Utopian”; and I was laughed at in pity for my “thick-coming fancies.”

Nor is it from any apathy of mine, I repeat, that this Asylum cannot vie with similar institutions of older countries in the various devices of landscape ornamentation, tasteful embellishment, and other well-adapted plans for bodily and intellectual exercise and amusement; the true and ultimate end of which, after all, is seldom understood by those who are most loud and zealous in advocating them.

I have not deemed it necessary to continue my citations later than the year 1866, because, in the latter half of the preceding year a sudden and wondrous change appeared to come over the drowsy spirit of the ministerial dream. All at once I was staggered at finding that any recommendations I made were attended to with a very unusual alacrity; and since the beginning of last year the rule has been only to ask and have as soon as the authority was obtained. Thus, at length, a drop of honey fell into my cup of gall. Important propositions which I had made in the first year of my superintendence began, in the hands of the contractor, to put themselves into form and substance in the last year of my service; and no sound—not even the famous “howling”—has been heard in the Asylum for almost the round year but the cheerful din of a hundred sturdy workmen striving with all their energy and skill to make up for nineteen years of lost time.

You have seen, in a former page, that in the beginning of February, 1848, I recommended the Government to surround the beautiful grounds in front of the Asylum with a high paling fence, to erect sun-shades for the shelter of the patients from the weather, to enclose a bight of the bay for the purpose of bathing with safety, and to build a shed for them to dress and undress in. I need not inform you that, with the important exception of the sun-shades, all these necessary works have been going forward since the end of last year, and several finished; but one of them in particular, I grieve to say, in a different form from that proposed. I speak of this in no critical or censorious spirit; I simply state my opinion, and give the reason why I differ from the authorities.

A palisade enclosure would not in itself tend to excite in the mind of the lunatic any idea of imprisonment, or inspire any painful or depressing emotions. In its worst aspects it is only a fence; and a fence of any description is, so to speak, too familiar and domestic an object ever to be associated by him with the thought of constraint. It is the stone wall which to his sensitive and jealous mind represents captivity in all its hopeless intensity, and often fills his soul with the bitterness of despair. Several years after my suggestion was submitted to the Governor General, it happened that the Town Council of Glasgow erected a new Lunatic Asylum at Gartnavel, in the most modern style of architectural perfection and usefulness. It is a princely edifice, second to none in Europe in beauty, capacity, convenience, and completeness. Thus far only do I mention it, in order to show by the pattern of a first-rate Asylum in the centre of the highest civilization, that, for the two essential purposes of the recreation and the safety of the patients, it was considered sufficient to environ the pleasure-grounds of this palatial structure with a simple palisade fence 8 or 9 feet high; a mode of enclosure which renders them as secure as if they were surrounded by a rampart; and thus my early views are supported by a great example. A palisade is in no way offensive to the sight, it obstructs no view, and it never irritates the feelings of the inmate by presenting to his eye the perpetual memento of “durance vile.”

There cannot be a doubt that the continual obtrusion of high stone walls on them in this very limited area will exert unpleasant influences on the temper and disposition of some of the patients. Knowing well indeed that such will be the result, I regret deeply that my original proposition was not carried into effect. For twenty years I have been making strenuous efforts to banish every suggestive memorial of prison from the Asylum; and though I have been successful to a considerable extent, there can still be seen by the discerning eye the legible impress of gaol on many parts of the building; yet, forgetful alike of the encroaching infirmities of age, and many nameless insuperable obstacles, I went on hoping almost against hope that I might ultimately be able to sweep away or at least modify most of those hateful relics of a less enlightened age. But my further efforts are repressed by the one, and my hopes blighted by the other. During my residence here I have had removed perhaps as many as a hundred ponderous iron bars from the windows, and in so far obliterated the prison-like character of the wards. Some still remain; but whilst the inmates are obliged to sleep in the corridors, through the overcrowded state of the Asylum, it has not been thought advisable to displace them.

The lunatic is now walled in as well as jammed in, and some sad special results will probably ensue. As long as those afflicted with a certain form of unreason, remain sojourners here with all the supposed advantages of out-door liberty at their command, wherever in their quaquaversal movements they turn their eyes, they will rest of necessity upon unequivocal indications of imprisonment; and then will be transmuted in their bewildered brain a fleeting idea into a settled conviction that they are detained as criminals; and next, their active imagination will close all argument by pointing to their sentence stereotyped on every stone in the wall. Thus will the miseries of that class be aggravated, and their small appreciable modicum of happiness embittered.

I do not think it is out of place here to restate what I wrote to the Government many years ago. New Asylums must be had, and the suggestion may still be useful. “In the older designs of European Asylums

Asylums every consideration was sacrificed to security. In the general anxiety to be secure, the comfort and the recovery of the patients were scarcely taken into account; and it is neither unjust nor unreasonable to infer from such a premise, that the edifice was not made for the patients but the patients for the edifice. In strength and massiveness of structure, combined with their internal coercive adaptations, they not only were prisons, but, in their gloomy seclusion and the sombre and repulsive aspect of their exterior, appeared what they were as unequivocally as if their character were engraved on their door-posts.

In the construction of Madhouses it should ever be borne in mind that numberless lunatics sent to Asylums have their perceptions and feelings as acute and perfect as those who are sane; that even the intellectual faculties of some, as in moral mania, are entirely unclouded; that the primary intention of their admission is restoration; and that every circumstance bearing upon or likely to influence their future processes of thought, down to the external appearance of the building, should have an air of simplicity, cheerfulness, and familiarity, conducing to evoke hopeful anticipations, rather than ideas of endless confinement, with the characters of prison emblazoned on every door and window.

Security is confessedly one of the principal ends to be attained in the construction of Hospitals for the Insane; but no useful or elevating principle should be sacrificed for it, and the means of achieving it should be skilfully concealed. A hospital of this kind may be secure, and yet be so arranged as to comprehend all the elements of cheerfulness, freedom and domesticity, without the appearance of studied security. This is a consideration of the highest importance. If we would be successful we must possess the means of success. In the treatment of insanity we can only influence the mind through the senses, therefore they should be consulted in all matters that have a direct or indirect bearing upon the cure, the comfort, and the happiness of the inmates. The temper of a lunatic is as liable to be chafed and irritated by the appearance of imprisonment obtruded upon him wherever his eyes wander, as by the consciousness of security suggested to his mind by the conviction of imprisonment itself. This is the incontrovertible reason why a Hospital for the Insane, while it is rendered perfectly safe, should also be so planned and constructed as to produce, both to the eye and the conceptions of the mind, all the cheering and tranquillizing effects of a country residence in the midst of rich landscapes, with varied aspects of surrounding nature."

But it is an ill wind which blows nobody good. These walls have given many months' employment to grumbling workmen, and the place is brought to the fittest possible state of preparation to enter upon its final and legitimate destiny. A suitable Reformatory is very much wanted for youthful offenders; the exigencies of the time are pressing for it, and here is one ready made. There is no use in striving against the irresistible spirit of progress and the imperious necessities of the Colony: new Lunatic Asylums are wanted, and must be had. This is not one. From the first it was only a modified gaol for sixty convict lunatics, suitable enough in its way, no doubt; but all the wealth of Attalus will never convert or arrange it into a structure in harmony with modern taste, or commensurate with the accumulating requirements of a more sensational, exacting, and utilitarian age. These are not new or hastily formed opinions. I gave expression to them so far back as the year 1854 to the Commissioners appointed to inquire, &c., &c., and are they not written in their Report? They may be of no value in the estimation of those audacious pretenders who know nothing of the true state of the case; but with me, not altogether a sciolist, time has only had the effect of converting my opinions into firm convictions. Perhaps not less than £30,000, including the last vote, have been expended on the establishment since 1848, in additions and alterations; yet in spite of this enormous outlay, it is, and must continue to be, a simple make-shift. If the amount of its population were strictly confined to its capacity of accommodating (say) 350 at the most, it would even then rank only as an expedient servitor to a higher order of Asylums. Notwithstanding all that this Institution cost, and all it appears to be, 350 inmates is the utmost number that ought to be congregated within its narrow precincts. It must therefore strike with amazement and concern those who are not in the secret, when they are told that, in defiance of all the impressive maxims of sanitary wisdom, it contains at this moment of writing between six and seven hundred men and women, including the establishment. And this in a Colony where it would appear that madness, instead of being an incident in the life of man, is becoming the rule in his mental constitution. The wonder is, that this massing of human beings in so small a space, diseased as they are in body and disordered in mind, has not long since engendered among them an exterminating plague, diffusing its baneful influences far beyond the narrow circle of its first victims.

I have the honor to be,
Sir,

Your obedient humble servant,

FRANCIS CAMPBELL, M.D., M.A., F.A.S.L., Superintendent,
Medical Adviser to the Government.

Tarban Lunatic Asylum,
30 July, 1867.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HOSPITALS.

(MEDICAL ADVISER TO THE GOVERNMENT, COVERING LETTER FROM MR. A. ROBERTS ON, IN COUNTRY DISTRICTS.)

Ordered by the Legislative Assembly to be Printed, 14 April, 1870.

THE MEDICAL ADVISER TO THE GOVERNMENT TO THE PRINCIPAL UNDER SECRETARY.

Medical Adviser's Office,
23 March, 1870.

SIR,

I have the honor to forward, for the information of the Honorable the Colonial Secretary, a letter I have received from Mr. Roberts.

The facts mentioned as to the state of the Hospitals might be inquired into by the Inspector of Public Charities, and the suggestions of Mr. Roberts are of interest; but as each Hospital is under the management of its own Committee, the action of the Government can only be indirect, by advice, and the conditions on which the aid of public money is granted.

I have, &c.,
E. S. P. BEDFORD.

[Enclosure.]

A. Roberts, Esq., to The Medical Adviser to the Government.

Castlereagh-street,
21 March, 1870.

Dear Sir,

During November last I was induced to make an overland tour from Sydney to Brisbane, and availed myself of the opportunity to visit most of the Hospitals in the country through which I passed.

I beg now to submit to you, for the information of the Government, some of the facts which have thus and otherwise come under my observation, together with certain impressions arising therefrom, which have suggested themselves to my mind.

Without entering upon a description of individual institutions, I would remark upon—

1st—The unfitness of the buildings generally, whether old or new, for the purposes of a Hospital.

2nd—The absence of means for securing efficient ventilation, and the frequent neglect in fully utilizing such as existed.

3rd—The general absence of necessary medical and surgical appliances.

4th—The frequent want of attendants qualified for the duties of wardsmen and nurses.

5th—The use, in every instance, as far as I can recollect, of the Hospital for the double purpose of Hospital and Benevolent Asylum, without classification.

I beg to express my firm conviction that the system of receiving infirm paupers (many of whom are especially dirty and loathsome in their habits) into Hospitals lies at the root of these evils, and that any attempt to remedy the latter without in the first instance removing the former will be of no avail. The existence of this pernicious custom appears to keep down the character of the Hospital to that of the Benevolent Asylum; its depressing and injurious influence being equally apparent in the subscription lists, and upon the subdued energies of the Committee, the Medical Officers, and the attendants; but the combined evils of the system tell with painful force upon the patients.

I am aware of the unavoidable circumstances which, in the early stages of the Colony, induced the Government and local authorities to utilize the country Hospitals for the double purpose alluded to, but I also feel that the time has arrived when a system so pernicious to the recovery of the suffering patients should be modified, to meet the true interests of humanity and further the advancements of medical science.

It is but repeating an established fact to affirm that no serious case of illness or accident can be efficiently treated in the rooms of a small Hospital which are also appropriated to the uses of a Poor-house.

I have, &c.,
ALFRED ROBERTS.

1870.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(REPORT FOR 1869.)

Presented in pursuance of the Act of Incorporation, 14 Vict., No. 31.

THE REGISTRAR, UNIVERSITY, TO THE COLONIAL SECRETARY.

University of Sydney,
21 March, 1870.

SIR,

I do myself the honor to transmit herewith the Annual Report of the University for the year 1869, together with an account of the Receipts and Expenditure, and copies of all By-laws* and Regulations which have been passed during that period.

* The By-laws transmitted have already been laid before Parliament.

I have, &c.,

HUGH KENNEDY,
Registrar.*REPORT of the Senate of the University of Sydney, for the year ended 31st December, 1869.*

1. In accordance with the provisions of the Act of Incorporation, 14 Victoria, No. 31, the Senate of the University have the honor to submit to His Excellency the Governor and the Executive Council, the report of their proceedings during the year 1869.

2. In Lent Term eighteen students passed the statutory examination and were admitted to Matriculation.

3. Dispensations were granted to the following persons who produced satisfactory evidence that there were sufficient reasons for their being allowed exemption from the University lectures during the current year, viz. :—1. Mr. Thomas Bowyer, an undergraduate of two years standing, and late scholar of Corpus Christi College, Cambridge, who was admitted "*ad eundem statum*," in this University. 2. Mr. Joseph Coates, a matriculated student of the University of London; also admitted "*ad eundem statum*," in this University. 3. Messrs. W. Boles and T. Rawlinson—on the understanding that they would be required to give attendance on the full course in their second and third years.

4. Twenty-nine candidates presented themselves at the Public Examinations—nine at the senior, and twenty at the junior; of the former seven, of the latter fifteen, obtained certificates. The names and order of merit will be found in Appendix A.

5. Certificates of having passed the B.A. examination were granted to seven students.

6. The following degrees were conferred, the candidates having qualified themselves by passing the prescribed examination, viz. :—

M.A.

George Faithfull, B.A. (Sydney.)
Grantley Hyde Fitzhardinge, B.A. (Sydney.)
John Hunter, B.A. (Sydney.)
Charles E. Manning, B.A. (Oxford.)
Alexander Oliver, B.A. (Oxford.)
Albert Bythsea Weigall, B.A. (Oxford.)
Arthur Haute Wyatt, M.A. (Cambridge.)

B.A.

John Wilson Alston.
David John Cooper.
James Coutts.
Henry Montague Faithfull.
William V. Gibbes.
Andrew Houison.

John Purves.
Thomas Roseby.
Allan Yeomans.
James White.
John Kinross, admitted
"*ad eundem statum*."

LL.B.

William Adams Purves.
Joseph Thompson.
Joseph Tole.

7. The Scholarships were awarded as follows :—

“ Deas Thomson ” (*for proficiency in Physical Science*) :—
R. Morris.

“ Lithgow ” (*for the best student of the second year*) :—
Richard Meares Sly.

Scholarships for General Proficiency :—

Third year—R. Morris.

Second year—Edward Rennie.

First year— { Charles Coghlan.
Frederick D. Kent.

“ Salting Exhibition ” (*awarded to a scholar from the Sydney Grammar School*) :—
Charles Coghlan.

8. The *Special Prizes* were gained by the following students :—

£25 *for first-class honors in Mathematics* :—
John Wilson Alston.

£10 *prize for Chemistry and Experimental Physics at the B.A. examination* :—
R. Morris.

£10 *prize for Logic at the B.A. examination* :—
Thomas Roseby.

£5 *prize for same* :—
David John Cooper.

Professor Smith's prize (*for Physics*) :—
E. Rennie, } *æq.*
C. Coghlan, }

The Honorable George Allen's medal (*for Greek Iambics*) :—
Richard Meares Sly.

9. The Senate have to announce with deep regret the death of the Honorable John Hubert Plunkett, B.A., Vice-Chancellor of the University. Mr. Plunkett was one of the original members of the Senate, and during the period of his connection with the University rendered many and valuable services. A vacancy having been created, a Convocation for the election of a successor was holden on the 7th day of July, when Nicol Drysdale Stenhouse, Esquire, M.A., of the University of Edinburgh, was unanimously elected to the vacant seat.

The Reverend Canon Allwood, B.A., was elected to the office of Vice-Chancellor for the remaining portion of the year.

10. The by-law providing for the election of Fellows of the Senate was amended by the introduction of a clause requiring that notice of candidature should be publicly given at least eight days before the day of Convocation; and further, that no election should be held during the long vacation. (The by-law is appended.)*

*This has already been laid before Parliament.

11. A by-law was passed, declaring the Curator of the Museum to be a superior officer of the University, entitled to the rights and privileges conferred by the “ Sydney University Incorporation Act Amendment Act of 1861.”

12. A regulation was made, providing that public examinations should be held at any place within the Colony, where a person approved by the Senate could be found to conduct the examination: Provided that the aggregate amount of fees paid by the candidates at such place should be sufficient to defray the expenses. An application having been made by certain candidates in the town of Bathurst for a local examination, and the Police Magistrate of the district having offered to take charge of the papers, an examination was held in that town simultaneously with the one in Sydney. The work was carried on under the supervision of three clergymen of different denominations. The Senate have reason to believe that had the regulation been promulgated at an earlier period, the inhabitants of other districts would have availed themselves of this privilege.

13. In reply to their application the Senate have received a communication from the Medical Council of England, stating that the University of Sydney was constituted one of the Institutions whose certificates of proficiency in general preliminary education would, under certain conditions, be received.

14. A change has been made in the by-law relating to the election by candidates for the B.A. degree of subjects of examination.

Three groups of subjects have been established in lieu of four, as heretofore, viz. :—

1. Greek and Latin languages.

2. Mathematics and Natural Philosophy.

3. Chemistry, Experimental Physics, Geology, and Mineralogy.

With a view to ensure, on the part of the candidate, a competent knowledge of every subject, it is ordered that no one at the commencement of his third academic year shall elect to be exempted from examination in one of the above groups of subjects, unless he shall have obtained a second class place in that group at the second yearly examination.

15. Alexander Morrison Thompson, Esq., D. Sc. of the University of London, and Reader in Geology and Mineralogy in this University, has been appointed a Professor in those subjects.

16. A report of the Receipts and Expenditure of the University for the year 1869 is appended.

PUBLIC

PUBLIC EXAMINATIONS.

SENIOR.

(The names in the classes are in alphabetical order.)

GENERAL PROFICIENCY.

1st Class.

Sutherland—Private study—Passed in English, Mathematics, Chemistry, Experimental Physics, and Geology.

2nd Class.

Adams—Public School Teacher—Passed in English, Latin, Mathematics, French.
Anderson—Sydney Grammar School—Passed in English, Latin, Greek, Mathematics, Chemistry.

3rd Class.

Booth—Mr. Savigny's School, Bathurst—Passed in English, Latin, Mathematics, French.
Fletcher—Newington College—Passed in English, Latin, Mathematics.
Hurst—Newington College—Passed in English, Latin, Mathematics.
Warden—Newington College—Passed in English, Latin, Mathematics.

DISTINGUISHED IN—

English—Sutherland—(First Class.)

Coghlan—Sydney Grammar School—Passed in English, Latin, and Mathematics.
Dawson—Newington College—Passed in English and Mathematics.
Jones—Sydney Grammar School—Passed in Latin, Greek, and French.
Keep—Camden College—Passed in Latin, French, and Mathematics.
Lee—Mr. Savigny's School, Bathurst—Passed in Latin, French, and Mathematics.
Metcalf—Mr. Savigny's School, Bathurst—Passed in Latin, French, and Mathematics.
Middleton—Newington College—Passed in English and Mathematics.
Moore—Newington College—Passed in Latin and Mathematics.
Neill—Newington College—Passed in Latin and Mathematics.
Rennie—Sydney Grammar School—Passed in Latin and Mathematics.
Smith—Sydney Grammar School—Passed in Latin and Mathematics.
Wilkinson—Newington College—Passed in English and Latin.

UNIVERSITY OF SYDNEY.

PUBLIC EXAMINATIONS.—GENERAL REGULATIONS.

1. The Public Examinations shall be held annually at the University in the month of December, commencing on the first Monday after the conclusion of the Michaelmas Term.
2. The fee for admission to the Junior Public Examinations shall be £2, and to the Senior Public Examinations £3. Candidates holding certificates of having passed the Junior Public Examination shall be admitted to the Senior Public Examination, upon payment of an additional fee of £1.
3. No candidate shall be admitted to either of the Public Examinations, unless he shall have notified to the Registrar his intention to become a candidate, specifying the subjects in which he elects to be examined, and shall have paid to the Registrar the required fee, on or before the 16th day of November next preceding.
4. The Examinations shall be conducted by means of written or printed papers and *visà voce* at the discretion of the Examiners.
5. Public Examinations shall be held at any place within the Colony, where a person approved by the Senate can be found to conduct the Examinations: Provided always, that the aggregate amount of fees paid by candidates at any such place, shall be sufficient to defray the expenses of such Examination.
6. Local Examinations, as provided for in clause 5, shall be held at the same time as those at the University, and shall be conducted as follows:—
 - (a) Copies of the papers to be set at the Public Examinations at the University, together with such additional papers as the absence of *visà voce* Examination may render necessary, shall be transmitted under seal to the person appointed by the Senate to conduct the Local Examination.
 - (b) Candidates shall write out answers to the questions set, in the presence of the person appointed to conduct the Examination, and in accordance with such detailed instructions as may be furnished by the Chairman of the Board of Examiners.

(c)

- (c) The written answers shall be transmitted to the Board of Examiners, who shall examine them and report thereon to the Senate.
- (d) The person conducting the Local Examination shall receive such remuneration for his services as the Senate may in each case determine.
7. The Senate may, at their discretion, send an Examiner or Examiners, to conduct the Local Examinations at any place within the Colony.
8. The subjects for the Junior Public Examinations shall be those comprised in the following Sections:—

SECTION I.

Reading aloud a passage from some standard English author.
 Writing from dictation.
 The rudiments of English Grammar.
 The first four rules of Arithmetic—simple and compound, and the Rule of Three.
 Geography.
 The outlines of English History since the Conquest; that is, the succession of Sovereigns, and the chief events of each reign.
 All candidates will be required to pass in this section.

SECTION II.

English Grammar and Analysis.—History of England: some period, not exceeding four reigns, to be fixed annually.
 Physical and Political Geography.

SECTION III.

Latin.—Passages for translation from portions of the works of Latin authors; such portions to be fixed annually.
 Short sentences for translation into Latin.
 Questions on historical and other allusions and parsing.
 Easy passage for translation from some other Latin author.
Greek.—Passages for translation from portions of the works of Greek authors; such portions to be fixed annually.
 Questions on historical and other allusions and parsing.
 An easy passage for translation from some other Greek author.
 A fair knowledge of either of these languages shall entitle a candidate to pass in this section.

SECTION IV.

French.—Passages for translation from some standard work; to be fixed annually.
 Passage for translation from some other French work.
 Easy English sentences for translation into French.
German.—The examination in German shall be similar to that in French.
 A fair knowledge of either of these languages shall entitle a candidate to pass in this section.

SECTION V.

Mathematics.—Euclid, Bk. I., II., III., IV., Arithmetic, Algebra to Proportion, including Surds, and Simple and Quadratic Equations.
 A satisfactory knowledge of Euclid, Bk. I., Arithmetic and Algebra to Simple Equations, without Surds, shall entitle a candidate to pass in this section.

Every candidate, in addition to Section I., shall be required to pass in two at least of the remaining Sections.

9. The subjects for the Senior Public Examinations shall be those comprised in the following sections:—

SECTION I.

The same as for the Junior Examination. All candidates will be required to pass in this section, except those who hold certificates of having passed the Junior Examination.

SECTION II.

English Grammar and Analysis.
 English Composition.
 Civil, Military, and Constitutional History of England during some period not exceeding four reigns; the particular period to be fixed annually.
 Some standard English work, with philological and other questions arising out of the subject; the particular work to be fixed annually.
 Physical and Political Geography.
 The outlines of Political Economy.
 A fair knowledge of the first of these four divisions, and of one of the others, shall entitle a candidate to pass in this section.

SECTION III.

Latin.—Passages for translation from particular works; to be fixed annually.
 Questions on historical and other allusions, and Grammar.
 Passages for translation from other Latin works.
 A passage of English for translation into Latin prose.
Greek.—The examination in Greek shall be similar to that in Latin.
 A fair knowledge of either of these languages shall entitle a candidate to pass in this section.

SECTION IV.

French and German.—The examinations in these languages shall be similar to that in Latin, and a fair knowledge of either shall entitle a candidate to pass in this section.

SECTION V.

Pure Mathematics.—Euclid, Bk. I.—IV., and VI., Arithmetic, Algebra, Logarithms, Trigonometry, to the Solution of Triangles inclusive, and the elements of Analytical Geometry.
Natural Philosophy.—Statics, including the Equilibrium of forces in one plane, the Mechanical Powers, and the Laws of Friction.
Dynamics.—Motion of a particle in a straight line, and Projectiles treated without the use of the Differential Calculus.
 A satisfactory knowledge of Euclid, Bk. I.—IV., Arithmetic, Algebra to Quadratic Equations, and Logarithms shall entitle a candidate to pass in this section.

SECTION

SECTION VI.—CHEMISTRY AND EXPERIMENTAL PHYSICS.

Inorganic Chemistry, including the composition of several minerals.

Organic Chemistry.

Heat, Magnetism, and Electricity, statical and dynamical.

A fair knowledge of either of these three divisions shall entitle a candidate to pass in this section.

SECTION VII.—GEOLOGY AND PALÆONTOLOGY.

Descriptive Geology, including general description and classification of rocks.

General stratigraphical distribution of organic remains.

10. Every candidate, in addition to Section I., shall be required to pass in two at least of the remaining Sections.
11. The names of those candidates who shall pass the Junior Examination shall be arranged alphabetically.
12. The names of those candidates who pass the Senior Examination shall be arranged in classes, the names in each class being arranged alphabetically. Separate lists shall be made of those who may specially distinguish themselves in particular subjects, and in these lists the names shall be arranged in classes and in order of merit.
13. After the name of each candidate in the above lists shall be added his place of residence, and the school or other educational establishment (if any) from which he comes to attend the Examination, and the name of his school-master or tutor.
14. The subjects to be fixed annually shall be determined by the Board of Professors in the Faculty of Arts; and the subjects for each year shall be advertised not later than the first day in February of that year, excepting for the current year 1869.
The subjects for the year 1869 shall be determined and advertised as soon as possible.
15. A separate account shall be kept of all receipts and disbursements, on account of the Public Examinations.
16. The fees shall be collected by the Registrar, and paid into the general fund of the University, and shall be appropriated in the first place to the payment of all expenses incurred, including printing, stationery, and fees paid to Examiners, other than the Professors and Assistant Professors. The residue, if any, shall be appropriated amongst the subjects of examination in proportion to the number of candidates for examination in each, the portions so appropriated to be divided amongst the Professors and Assistant Professors, who shall have examined in those subjects respectively.

TRAVELLING EXPENSES OF DR. BADHAM.

THE REV. CHARLES BADHAM, D.D., to THE COLONIAL SECRETARY.

University of Sydney,
20 April, 1869.

SIR,

I have the honor to inform you that I have made arrangements for visiting the interior of the Colony and some of the towns of the Coast, for the purpose of giving further development to a plan for assisting the studies of all such adults as wish to apply themselves to liberal branches of study. As the journeys which I shall have to undertake in consequence will be attended with considerable expense, I venture to make the request that the Government would allow my travelling expenses up to the sum of £100 for the twelve months, upon my showing that the expenses charged have been incurred in furtherance of the object abovementioned.

I have, &c.,
CHARLES BADHAM.

THE PRINCIPAL UNDER SECRETARY TO THE REV. CHARLES BADHAM, D.D.

Colonial Secretary's Office,
Sydney, 10 May, 1869.

REVEREND SIR,

In reply to your letter of the 20th ultimo, I am directed to inform you that the Colonial Secretary approves of the payment of such sum, not exceeding £100 for the twelve months, as may be expended by you on account of travelling expenses in connection with your proposed visits to the interior of the Colony and some of the towns on the Coast, for the purpose of giving further development to a plan for assisting the studies of all such adults as wish to apply themselves to liberal branches of study.

I have, &c.,
HENRY HALLORAN.

THE PRINCIPAL UNDER SECRETARY TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Colonial Secretary's Office,
Sydney, 10 May, 1869.

SIR,

I am directed to state, for the information of the Colonial Treasurer, that the Colonial Secretary approves of the payment to Dr. Charles Badham, Professor of Classics and Logic in the University of Sydney, of such sum, not exceeding £100 for the twelve months, as may be expended by him on account of travelling expenses in connection with his proposed visits to the interior of the Colony and some of the towns on the Coast, for the purpose of giving further development to a plan for assisting the studies of all such adults as wish to apply themselves to liberal branches of study.

I have, &c.,
HENRY HALLORAN.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

PUBLIC SCHOOLS

FOR

1869.

Presented to both Houses of Parliament, in pursuance of Act 30 Vict., No. 22, sec. 27.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1870.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON THE CONDITION OF PUBLIC SCHOOLS FOR 1869.

To His Excellency the Right Honorable SOMERSET RICHARD, Earl of Belmore, Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY,

In accordance with the provisions of the Public Schools Act of 1866, we, the Council of Education, have the honor to submit to your Excellency, this our Third Annual Report.

I.—COUNCIL.

In accordance with section V of the Public Schools Act, two of the original Members of the Council, namely, The Honorable George Allen, and Professor Smith, retired from office at the close of 1868, but were reappointed. The Council is therefore at present constituted as follows:—

The Honorable George Allen, Member of the Legislative Council.

The Honorable William Munnings Arnold, Speaker of the Legislative Assembly.

The Honorable Sir James Martin, Member of the Legislative Assembly.

Henry Parkes, Esq., Member of the Legislative Assembly.

John Smith, Esq., M.D., Professor of Chemistry and Experimental Physics in the University of Sydney.

At a Meeting of the Council held, on 11th January, 1869, Mr. Parkes was re-elected to the office of President.

2. The business of the Council, as compared with that of 1868, has undergone no diminution. Sixty meetings have been held, usually of a protracted character. The Council had in operation in 1869 807 Schools, or 849 School Departments, attended by about 60,000 Pupils; and the Teachers, including Pupil Teachers, numbered 1,093.

To the duties arising out of the control of schools in operation, were added the consideration of applications for new schools, improvements to those erected, and a large correspondence of a general character.

The Council also issued, on the 8th of March, a revised Code of Regulations.

Towards the close of the year, the Council was temporarily deprived of the valued services of its Secretary, Mr. Wilkins. His very arduous and responsible duties had so seriously impaired his health that after an imperfect recovery from a severe illness, and acting under medical advice, he sought and obtained from the Council (with the concurrence of the Executive Government) leave of absence for one year, with the view of making a voyage to England. He sailed for London on the 18th of November. The Chief Clerk in the office, Mr. R. E. Webster, was then appointed Acting Secretary.

II.—PUBLIC SCHOOLS.

The number of Public Schools in operation under the Council during 1868 was ...	318
Opened during the year 1869	32
	350
Closed or reduced to the rank of Provisional Schools and Half-time Schools ...	14
	336

A list of the applications for Public Schools (37 in all) will be found annexed, with a statement of the action taken by the Council in each case. Of these applications, one was declined, as eligible for aid only as a Provisional School, and ten were under consideration at the close of the year. Appendix A.

The Public Schools mentioned above as closed or reduced to the rank of Provisional Schools were so dealt with on account of small attendance. In two cases in the Albury District the decline is believed to be temporary, and in one—that of Sussex-street, Sydney—operations had to be suspended solely because of the difficulty experienced in procuring a suitable building to which the pupils could be transferred.

A reference to the foregoing statement will show that a considerable increase has taken place in the number of Public Schools. Four of these, however, were formerly Provisional Schools, and six more of the number opened were Church of England Schools transformed into Public Schools, by desire of the residents of the several localities interested.

Detailed statistics respecting the Public Schools in operation will be found annexed to this Report. Appendix B.
In some instances the numbers given in attendance were below the stated minimum, the causes assigned being sickness, harvest operations, and other circumstances of temporary operation. In several, the grounds assigned were held as valid, but other cases the Council has still under consideration.

III.—

III.—PROVISIONAL SCHOOLS.

The number of Provisional Schools under the Council during 1868 was	103
Number opened in 1869	57
	160
Number closed during the year	14
	146

Appendix C.

Total number in operation during 1869 146

Appendix D.

Four of the above fourteen, as already stated, were converted into Public Schools, and two of that number were formed into Half-time Schools.

The manner in which the applications for new schools (71 in all) were dealt with will be seen on reference to the annexed Schedule. Fourteen of these applications were declined, and thirteen remained under consideration. Four out of the fourteen declined appeared to the Council to be cases where Public Schools ought to be established, and the Council intimated its readiness to receive applications for that purpose.

One of those opened had originally been a Church of England School, but the attendance having declined, it was reduced to the rank of Provisional.

It will be seen that a considerable augmentation has taken place in the number of these schools, the largest increase being in the Goulburn District. These schools continue to be supported by all denominations, and tend to supply many destitute and thinly settled localities with the means of elementary education. Though popular, comparatively little can be said for their efficiency, the results being in most cases, except in reading and writing, low, and the instruction, to a great extent, confined to these subjects, with the addition of arithmetic. The intention of the Act is of course that they should eventually expand into Public Schools, and in several instances this transformation has been accomplished. In a pioneering point of view, they aid considerably the regular schools; but they have a further use, not perhaps at first sight apparent, namely, that of being a species of probationary or experimental school for teachers. Worked as they are in many instances by those who do not possess the necessary qualifications for the efficient discharge of the teacher's office, these persons strive, by study and experience, to qualify themselves for the Training School. Should they show a decided aptitude for teaching, they are encouraged and aided by the Inspectors; should it be otherwise, the expense of a fruitless training is avoided. When, however, the better class pass into training, they do so conscious of their deficiencies, alive to the bearing of the methods employed in tuition, and, as a rule, acquire knowledge and assimilate ideas much more thoroughly than do those who have had no previous experience of teaching.

IV.—HALF-TIME SCHOOLS.

The number of Half-time Schools in operation during 1868 was	38
Number opened during the year 1869	31
	69
Number closed during the year	8
	61

Appendix E.

The manner in which the applications for new schools (48 in all) were dealt with will be seen on referring to the annexed Schedule.

One Church of England School in the Goulburn District was, on account of the low attendance, converted into a Half-time School. As in the case of the Provisional Schools, there has been a decided increase in Half-time Schools, and the greatest increase has also been in the Goulburn District.

The Inspector of the Goulburn District speaks very favourably of their operations, and appears to think that, when under trained teachers, vigorously conducted, open for two or three hours daily, and having the instruction limited to the more useful subjects, a very satisfactory degree of efficiency can be attained. That they are popular cannot be questioned; but there can also be little doubt that, in order to secure full efficiency, the efforts of the teacher should be concentrated upon not more than two stations. When this limit is passed, as has been done in some cases, the amount of benefit accruing is greatly lessened; and either the teacher must be a very superior person, or the surrounding circumstances particularly favourable, to secure, with one master to three or four stations, substantial good, and an adequate return for the money expended.

Appendix F.

A list of these schools, with detailed statistics, will be found in the Schedule annexed.

The subjoined table exhibits, in a connected form, the numbers of the various schools existing during 1869. Similar data for 1867 and 1868 are also given, in order to afford an opportunity for comparison as regards increase or decrease:—

	Schools.			Pupils enrolled at the close of the respective years.		
	1867.	1868.	1869.	1867.*	1868.*	1869.
Public Schools	288	318	336	20,986	24,355	26,208
Provisional Schools	31	103	146	661	2,625	3,813
Half-time Schools	6	38	61	267	509	1,044
Denominational Schools	317	289	264	26,416	25,204	25,909
	642	743	807	48,330	52,693	56,974

It will thus be seen that the Public, Provisional, and Half-time Schools, have increased in number. The Denominational Schools have decreased.

The total increase of schools, as compared with 1868, has been 59.

V.—

* The numbers in these columns differ from those given in a similar table in last year's Report. The numbers there stated represented the total number of children enrolled during the year. These statistics lead to the same conclusions, though the attendance having been taken from the last quarter only, does not exhibit the total number of children under instruction in the course of the year.

V.—INSPECTION.

The following statement will exhibit the arrangements for inspection, and the number of schools inspected during the past year:—

District.	Inspector.	Existing Schools, given according to the number of Departments.	Schools inspected.
Albury	Mr. Coburn	41	38
Armidale	Mr. Jones	80	60
Bathurst	Mr. M'Creddie	125	92
Camden	Mr. Huffer	113	51
Cumberland	Mr. Forbes	81	78
Goulburn	Mr. M'Intyre	148	97
Maitland	Mr. Dwyer	83	78
Newcastle	Mr. Allpass	80	77
Sydney	{ Mr. Johnson	98	98
	{ Mr. Flannery		

Owing to the increase of schools in some of the districts, the number has become too great for the officers in charge to deal with satisfactorily, and thus a portion has not been visited. The Council has consequently had under consideration the expediency of increasing the staff of Inspectors, and of making a redistribution of the territory into more manageable areas, but hitherto it has been unable to carry out the designed alterations. In the work of supervising schools, the Inspectors have been, as usual, guided by the Council's instructions; and the mode of examining has throughout been nearly the same in form, but more stringent in its application. The results will be found in their respective reports.

Inspectors were required to apprise the Local Boards of the time of holding the chief inspection of the year, but in some cases, by permission of the Council, this course was departed from. The notices were withheld by Mr. Dwyer where he deemed it advisable to do so, and he states that the effects were such as to show the advantage and necessity of the step pursued. Mr. M'Intyre also visited without notice—his design being to see the schools in their ordinary working condition. The Inspectors are very generally agreed that, although the custom of giving notice at the regular inspection is not without its recommendations, it is nevertheless open to serious objections; and, as the Council has had the matter under consideration, it is not improbable that these intimations will be altogether withheld where one annual visit only can be paid to a school. It is proper to state that the schools of the Newcastle and Sydney Districts have been visited twice during the year. In the case of the latter all have been fully examined, and in the former, all have been visited, even where not regularly examined. In other districts incidental visits were made to the schools as opportunity offered.

VI.—SCHOOLS IN THEIR EXTERNAL ASPECT.

About three-fourths of the schools are advantageously situated. The exceptions occur among the Provisional Schools, Non-vested Public, and older Denominational Schools. In the case of the first-named, the defect arises from the inexperience of the local promoters, and the difficulty of procuring eligible premises in the proper position. In the case of the latter, it has frequently arisen from dispersion of the original population, or other changes in the circumstances of the locality. As the Provisional Schools, however, become transformed into Public Schools, this fault will to a great extent disappear. As a whole, the buildings of Vested Public Schools and of leading Denominational Schools are passably good. Many of the Non-vested and Provisional School-houses are far from satisfactory, and residences of the teachers are too often out of repair, unsuitable as regards accommodation, or altogether wanting. 33 new buildings have been erected during the year, and extensive repairs and improvements have been effected; the total amount expended under this head being £13,490 0s. 3d.

The great majority of the schools are supplied with play-grounds and out-offices. There are, however, still not a few cases in which one or other of these conveniences is not provided. In the remoter country districts much indifference on this point is manifested by Local Boards. Except in rare instances, little is done by the teachers to interest the children in the culture of ornamental or arborescent plants, most play-grounds being destitute of shade, unless where supplied with an edifice erected for this purpose.

Three-fourths of the schools are tolerably well supplied with furniture and apparatus. Defects exist mainly in the case of outlying (especially in Provisional) Schools, where the outfit is generally unsuitable. In most instances the form and quality are at fault rather than the quantity, the construction being rude, and at variance with modern educational views. Nearly all the schools are well supplied with books. The minor requisites are granted once a year on application to the Council, and altogether the absence of much complaint on this head is one of the most satisfactory features. In the Sydney District so carefully is economy practised by both Inspectors and teachers that the average cost per annum for books and requisites is only 7d. for each pupil. Others among the Inspectors state that the teachers, as a rule, are careful over the property placed in their charge.

In almost all the regular schools the records are reliably kept. The Provisional School Teachers, however, being untrained and inexperienced, require frequent instruction from the Inspectors in this important branch of duty.

VII.—SCHOOLS IN THEIR INTERNAL ASPECT.

Except in the case of recently established schools, or those where the circumstances are of an exceptional nature, the punctuality of the children is reasonably satisfactory. Complaints are however still made as to the difficulty of securing a regular attendance; and although the Sydney District is favorably reported of in this respect, yet it would appear that, on an average, not more than 65 per cent. of the children on the roll are continuously at school. Field work, assistance to parents, or indifference on their part to the claims and interests of their children, are the leading causes of irregularity. It would seem that the people are willing enough to apply for schools, and promise to give them a cordial support, but in too many instances the children attend only when it does not interfere with the convenience of the parent.

In

In point of cleanliness the schools are in a satisfactory state, even where they are defective in other disciplinary features. The order is in the great majority of cases good, the government mild and reasonably judicious, and the prevailing tone healthy. A perusal of the Inspectors' Reports will show in what schools the moral character is defective. That the Provisional Schools should as a class rank lowest is to be expected; but taking into account the circumstances of the teachers, the difficulties they contend with, and the inexperience of many among them, it must be regarded as a gratifying feature that the discipline should, apart from the question of "regularity," be in so many instances well reported of.

VIII.—INSTRUCTION.

Appendix G.

There has been no material change in the subjects taught as compared with 1868. The general routine of instruction is determined in accordance with the Regulations; the classification is on the whole appropriate, and the distribution of time judicious. The latter necessarily varies to meet the circumstances of the classes, but as a rule in country schools five hours per week are devoted to reading, five to writing, dictation, and composition, six to arithmetic, one and half to grammar, one and half to geography, one to object lessons and the study of common things, one to drawing, one to music, four to needlework, and three to the higher subjects studied by boys. As regards the choice and application of methods, the reports of the Inspectors differ materially; some speaking of the method as unintelligent and decidedly moderate in its character, others regarding it as fairly satisfactory. Advanced reading, scripture, writing, dictation, grammar, elementary geography, and advanced needlework, appear to be more successfully taught than elementary reading, composition, arithmetic, advanced geography, object lessons, plain and elementary needlework, drawing, and music. In the treatment of the last-mentioned subjects too little improvement is stated to be manifested. In drawing, however, the Sydney schools are to be regarded as an exception, and the efforts of the Drawing Master are praised. That the teachers are industrious, well-intentioned, and often studious, is not denied; but it is affirmed that in many instances they do not prepare their oral lessons properly beforehand. The knowledge of modern method must be tolerably extensive among the profession; and the absence of a larger measure of success appears to arise more from misapplication of method than from ignorance of it. For example, it is stated by the Inspectors that some overdo the teaching, and leave too little for mental exercise on the part of the pupils; some do too little for the scholar; some have not the earnestness which would to a great extent compensate for defective methods, and without which no methods can penetrate; some are fitful, and lack both equability and consistency in lesson-giving. It cannot be denied that in all the districts these classes have one or more representatives; but on the other hand, a very considerable number unite skill, perseverance, and earnest-mindedness, and the results are then of a higher order.

IX.—PROFICIENCY.

Appendix H.

Details as to the proficiency of the pupils will be found in the Inspectors' reports annexed. Keeping out of view the case of schools newly established, and others only recently subjected to inspection, there is reason to believe that very fair progress has been effected during the year. Viewed in the aspect of attainments mainly, out of 690 schools visited, 312 may be regarded as ranging from the limit of fair to that of good, 158 as passable, and 220 as ranging from moderate to indifferent. The general range of attainments is lowered by the results afforded by the Provisional Schools. Judging by the regular and detailed reports of the Inspectors, the greatest amount of success has been attained in the Sydney and Bathurst Districts. In that of Maitland it is much less satisfactory. It may here be observed that scattered over the various districts lie a series of schools efficiently conducted; and these, acting as exponents of excellence, are centres of influence and good example to those around—in some cases going far to prevent a very serious declension from the standard set up by the Council. Among those referred to may be mentioned the leading schools of Sydney and its suburbs, Newcastle and its neighbourhood, and the Manning River; together with the Public Schools of Morpeth, Kirkconnell, Clarencetown, Albury, Armidale, Bathurst, Wollongong, Parramatta, Grafton, Dubbo, Wellington, and the Mudgee schools generally.

X.—TRAINING AND EXAMINATION.

During the past year the whole number of written examinations has been 788.

Of these, 156 were effected in connection with pupil teacher applicants, 151 were for pupil teachers in office, 147 belonged to applicants for admission to the Training School, 55 to candidates in training, and 279 to teachers holding appointments in the service, and examined in accordance with article 37 of the Council's Regulations. Each of these will be dealt with separately.

Applicants for training.—Of the applicants for admission to training we cannot speak in uniformly favourable terms. In point of general knowledge they certainly stood considerably higher than those of 1868, and their moral character was in most cases unquestionable, but they had nevertheless serious disqualifications. Numbers of them were very young single persons of low energy, apparently unaccustomed to active exertion or useful employment, with no just appreciation of the teacher's calling and responsibilities, and seemingly seeking the profession because nothing more easy or more eligible presented itself. Of 147 examined, 55 were regarded as eligible for admission to the Training School.

Candidates in training.—As a number of persons trained at the close of 1868 were unemployed at the commencement of 1869, the Training School was not opened until the month of April; but during the last nine months fifty-five candidates were trained, with the following results:—

8	candidates obtained	Class III, section A.
21	do.	" III, " B.
22	do.	" III, " C.
4	were unable to gain any classification.		

This is by no means satisfactory. Under a healthy state of matters, and considering the stringency of the entrance examination, two-thirds ought to have gained the highest grade. None should have failed. There was evidently an absence of zeal. On the part of the candidates it is to be feared that too

too much dependence was placed upon the Training School, and too little upon private study and efforts in self-improvement. Among many, ideas of an extremely fallacious nature prevail. The name of Training School is to them a species of charm—they appear to think that it can impart skill where no aptitude exists, and they seem to rest secure in the conclusion that, in the formation of teachers, it can do almost anything. Such is not the case: mere training cannot make a teacher. It can assist in developing the powers of those who are fitted for the occupation; but it cannot mould a teacher out of *any* material, nor will it make a teacher out of even ordinary material, without a foundation of natural aptitude. For the man who has what may be designated a natural gift to teach, the Training School can do much—it can increase his powers fourfold; but for those who lack this gift, it can do absolutely nothing that the Council can esteem valuable to the community. Teachers of natural aptitude and real energy, but comparatively untrained, working in the same district with those who have passed through a full training course without any special aptitude for teaching, sometimes surpass the latter in the results they achieve. It is noticeable that the lowest results in the Council's service are sometimes obtained from men of comparatively high attainments, of good general information, an extensive acquaintance with modern method, but lacking aptitude, and earnestness in duty, and often unable to see or unwilling to admit their deficiencies when they are pointed out. Unless a candidate for the office of teacher, in addition to good character, health, active habits, and literary attainments, is also possessed of this natural aptitude for teaching, it is found by experience almost useless to admit him to the Training School. Without these qualifications he is more likely to be a source of trouble to the Council than an acquisition to the community. Under any circumstances, the class of single females, varying from seventeen to twenty-five years of age, who in such numbers seek admission to the Training School are the least available material. In America young women are much employed, and apparently perform very fair average work, but here they are not in demand, the parents as a rule seeming to have comparatively little confidence either in the firmness of their discipline or in the thoroughness of their teaching. The vacancies to which they can be appointed are consequently few; and these few can, to a great extent, be supplied by the advanced class of pupil teachers falling due for training by the effluxion of time. What the Council really does want is young married couples, enthusiastic in the profession they have chosen, apt to teach, not daunted by ordinary difficulties, willing to learn, steady in self-improvement, contented to remain in the interior and to labour assiduously to elevate the localities in which they may be placed.

Examination of Teachers.—In accordance with article 37 of the Council's Regulations, 279 teachers Appendix I. were examined during the year, with the following results:—

Promoted from the rank of probationers to that of Class III, sec. C	15
Do. Class III, section C to Class III, sec. B...	46
Do. " III, " B " III, " A...	48
Do. " III, " A " II, " B...	11
Do. " II, " B " II, " A...	4
Do. " II, " A " I, " B...	1
Not promoted	154
Total examined	279

In nearly all cases promotion, where accorded, involved advancement merely one grade.

These results can scarcely be regarded as gratifying. If anxiety to study carefully and ardent desire to rise in the profession existed, the numbers advanced to the higher grades would have been greater, and those failing to gain promotion considerably fewer. Apart from those persons of limited education who had no classification at the period of the passing of the Public Schools Act, and who still are unable to gain one, there still remain those whose attainments would entitle them to promotion were they possessed of equal practical skill. In cases of this nature promotion is never granted unless the Inspector's report upon the condition of the school proves to be satisfactory. There are also strong reasons for believing that many among the Assistant Teachers have not exerted themselves. Occupying a subordinate position, an increase of classification would not, while they remained Assistants, have the direct effect of raising their emoluments; and they have in consequence failed to avail themselves of the opportunity thus open of gaining a qualification for more important charges, when such become vacant.

The promotions to the higher grades, *i.e.*, those above the range of Class III, have, in nearly all cases, been acquired by Teachers voluntarily applying for examination with a view to higher classification. Among these, however, there have been instances of persons entering upon examination whose answers showed that they either had no just apprehension of the work they had undertaken, or that they could have made no due preparation for such an ordeal.

Applicant Pupil Teachers.—During the year 156 applicants for the office of Pupil Teacher were examined in due form as regards attainments and aptitude for teaching. Of these 77 were rejected as ineligible, and 79 were passed as eligible for appointment on the usual terms. The Council has not been able to find situations for all these young persons; a considerable number have been appointed, and the rest will be disposed of as occasion may arise. The number of applicants is, however, always greatly in excess of the demand, and many have to wait long before appointment.

Pupil Teachers Examined.—151 Pupil Teachers were examined during 1869, with the following results:—

Promoted from the rank of Probationers to Class IV	3
Promoted from Class IV to Class III	36
Do. " III " II	36
Do. " II " I	9
Advanced to the Training School	11
Failed to gain promotion	56
Total	151

Pupil

Pupil Teachers employed in service.—At the close of 1869 there were in the service of the Council 188 Pupil Teachers, about two-thirds of whom belong to the Sydney District and its environs. They are classified as follows:—

Probationers...	3
Class Fourth	82
Class Third	52
Class Second	39
Class First	12

A large portion of the work of instruction devolves upon these young persons; and the Colony must look to them for its future supply of efficient teachers. As a body they are favourably reported of. They receive lessons regularly, and are examined annually to test their progress in knowledge and skill. Three-fourths of them are studious, attentive, and diligent in the performance of duty. A considerable proportion of those not promoted owe their failure as much to defective results in teaching as to the absence of attainments sufficient to satisfy the conditions of examination.

XI.—TEACHERS.

905 Teachers were employed in the Council's service at the close of 1869. They are classified as follows:—

Probationers or teachers unclassified	200
Class III, section C	154
" III, " B	158
" III, " A	267
" II, " B	76
" II, " A	34
" I, " B	13
" I, " A	3

Teachers of Provisional Schools are nearly in all cases Probationers, and frequently remain so until they have acquired sufficient knowledge and experience to qualify them for entering the Training Department. Fully two-thirds of the Teachers are well reported of. They are stated to be attentive, faithful in the discharge of duty, of respectable attainments, and held in good estimation in their respective spheres of labour. There can be no question that the work performed by a section of the middle grade Teachers is of a high order, would do much credit to any country, and it is doubtful if it be surpassed in any school system of the present age. On the other hand, it must be conceded, that not a few are inapt to teach; some do not exert themselves to improve, and, instead of cheerfully meeting the difficulties around them, they sink into a state of apathy, and occasion much anxiety to the Council and trouble to its officers. The condition of teachers' residences has altered little since last year; a considerable number of schools are still unprovided with dwellings, and many of the edifices occupied as such are unsuitable.

The amount of school fees paid during the year to Teachers was £39,618 13s. 11d., showing an increase of £5,509 0s. 5d. over 1868. The emoluments of teachers, including salary and fees, may be stated as follows:—

	£
Of Third Class Teachers	123 per annum.
Of Second Class Teachers	165 "
Of First Class Teachers	230 "
Of Probationers	75 "

This is intended to exhibit the ordinary emoluments of Teachers in average country schools, where in most cases a residence is provided.

The Council had under consideration the expediency of increasing the salaries of third-class teachers, more especially those of the lower grades, but has been unable to do so owing to deficiency of funds.

XII.—LOCAL SUPERVISION.

This feature is not as satisfactory as could be desired. Only in a minority of the schools do we find intelligent supervision, and an abiding interest manifested in their welfare. In the majority of instances much apathy exists, and regular monthly meetings are the exception rather than the rule. To a great extent this, no doubt, arises from two causes: first, that some members of Local Boards are by education very moderately qualified for the duties they undertake to perform; and secondly, not a few of those who are fairly qualified are much occupied with their own business, and can afford little time for school duties. But it may also be admitted that where a school is going on smoothly under an able and judicious master, there is little need for interference on the part of the Local Board.

These probably are the main reasons why the oversight of the school is virtually delegated to the leading member of the Board. It is but just to remark under this head that the Cumberland District is favourably noticed by Mr. Forbes, for the attention shown by a considerable portion of the school managers though inadequately supported in their labours by the parents. Mr. Huffer also speaks favourably of two-thirds of the Local Boards, but unfavourably of the remainder.

XIII.—FREE SCHOLARS.

In all cases where parents are unable to pay school fees, such fees are remitted on application being made in the proper quarter. The Council delegates to Local Boards the responsibility of inquiring into such cases, and of granting orders for the free admission of pupils, reports on these cases being furnished to the Council. Applications for free admission to the Sydney Public Schools are inquired into by the Inspectors, and decided on by the Council. There are strong grounds, however, for believing that the privilege is in many cases abused. Mr. Johnson, in speaking of this, observes:—

“Enough has come under our notice to induce the belief that the matter is one which, in the case of one or two schools, will call for the interference of the Council. We have seen it stated

stated in more than one quarter that the special merit of Denominational Schools, as compared with Public Schools, lay in the fact that, whereas the former provided for the education of the poor, the latter did not. Upon what just grounds that statement was based we have failed to discover. There certainly are more children educated gratuitously in Denominational Schools than in Public, but this arises from the fact that in some instances, and notably in one or two, facilities are afforded to parents to evade the payment of school fees, and this apparently for no other reason than to enable such schools to compete, in point of attendance, with Public Schools in the same neighbourhood. During the year, the number of free children educated in Public Schools [Sydney] was 220, or nearly 2 per cent. of the total number of pupils on the roll. The number educated in Denominational Schools is 1,389, or 9 per cent. of the total number on the roll. In 1868 the percentages were $2\frac{1}{2}$ and 10 respectively."

9

XIV.—COST OF EDUCATION.

The usual statement, exhibiting under the various heads the receipts and expenditure for the year, Appendix J. will be found appended hereto.

The amount apportioned to Public Schools from the Church and School Estate was £713 4s. 5d.

The amount of fees paid during the year was, for all schools, £39,618 13s. 11d. sterling. Appendix K. Of this sum £22,815 3s. was contributed to the Public, Provisional, and Half-time Schools—and £16,803 10s. 11d. to the Denominational Schools. The local contributions towards the erection and maintenance of Public School buildings amounted to about £6,000. Adding the fees and local contributions to the amount expended by the Council, the total expenditure on all classes of schools under the Council is seen to be £147,040, besides the amount (unknown to the Council) spent in maintaining Denominational School buildings. Omitting the cost of buildings, and taking 60,000 as the number of children brought under instruction during the year, the cost per head is found to be £2 2s. 6d.; of which £1 9s. 3½d. is contributed by the State, and 13s. 2½d. by the parents.

Speaking of the cost of education in the Goulburn District, Mr. McIntyre gives the rate per annum for each pupil at £1 13s. 2d., about 10s. of which are contributed by the parent, and £1 3s. 2d., or rather more than two-thirds of the sum, by the State. Mr. Johnson, in a carefully constructed statement, gives the total cost per pupil at £1 18s. 1¼d. for Public Schools [Sydney]. Of this sum the parent pays £1 0s. 8d. In Denominational Schools it varies from £1 16s. 7¼d. to £1 9s. 8d., of which the parents pay, respectively, 16s. 4d. and 11s. 0½d. It will thus be seen that Public Schools are more liberally supported by the parents; and since the fees paid are considerably higher in them, the cost to the State of each child is less than in the Denominational Schools.

The one statement may be regarded as representing the conditions prevailing in Sydney, and the other those of the average interior.

XV.—GENERAL SUMMARY.

Upon a review of the operations of the year, as disclosed in the Inspectors' Reports, it appears that much good has been accomplished. No prominent feature is in a lower position than it occupied last year; and in many respects a marked improvement has been effected. In the establishment of new schools in destitute localities considerable effort has been made, a large increase has taken place in the attendance, the school fees have been augmented, the organization has been improved, the moral character has been elevated, and a decided progress in the work of instruction has been effected. The Council, however, does not profess to regard the state of education as fully satisfactory. Much yet remains to be done in extending schools, in providing better buildings, in securing a more regular attendance, earnest Teachers, and vigilant Local Boards. There are schools far less efficient than they ought to be, claimants asking for aid unreasonably, and correspondents whom it is almost impossible to satisfy. In reviewing the adverse features, it should of course be remembered that the results in the temporary or Provisional Schools reduce the general average, that the standard of proficiency is high, and that, when reached, a real and abiding good is gained. On the whole, it is impossible to doubt that a very decided advance has been made in the education of the people, and that amidst some discouragement, there is much ground for satisfaction.

We submit this as our Report upon the Public Schools for the year ending 31st December, 1869; and in testimony thereof, we have cause our corporate seal to be affixed hereto, this 22nd day of March, one thousand eight hundred and seventy.

R. E. WEBSTER,

APPENDIX G.

LIST of Books sanctioned by the Council of Education for use in Public and Denominational Schools, in accordance with the requirements of Article 15, section II, of the Regulations of 27th February, 1867:—

First Book of Lessons.....	}	Published by the Board of National Education in Ireland.
Second Book of Lessons.....		
Sequel No. 1 to the Second Book of Lessons		
Sequel No. 2 to the Second Book of Lessons		
Third Book of Lessons		
Fourth Book of Lessons.....	}	published by J. J. Moore, Sydney.
Supplement to the Fourth Book of Lessons		
Australian Class Book, parts 1, 2, and 3; published by J. J. Moore, Sydney.	}	"Constable's Series"; published by J. Laurie, Edinburgh.
First English Reading Book (in three parts).....		
Second English Reading Book		
Third English Reading Book		
Fourth English Reading Book.....		
Fifth English Reading Book.....		

APPENDIX H.

1. Inspector's Report upon Schools in the Albury District.
2. Inspector's Report upon Schools in the Armidale District.
3. Inspector's Report upon Schools in the Bathurst District.
4. Inspector's Report upon Schools in the Camden District.
5. Inspector's Report upon Schools in the Cumberland District.
6. Inspector's Report upon Schools in the Goulburn District.
7. Inspector's Report upon Schools in the Maitland District.
8. Inspector's Report upon Schools in the Newcastle District.
9. Inspector's Report upon Schools in the Sydney District.

ALBURY DISTRICT.—GENERAL REPORT.

INSPECTOR'S REPORT on the Public, Provisional, and Certified Denominational Schools in the Albury District, for the year 1869.

I have the honor to submit, for the information and approval of the Council of Education, my Report for the past year.

The number of schools in this district at the close of the year was—

Twenty-one Public Schools,
Thirteen Provisional Schools, and
Seven Certified Denominational Schools—

in all, forty-one schools.

Public Schools at Hay and Jereelderie have been opened during the year. The Public School at Bungowannah was not in operation at the end of the year. The Public School at Tumburumba was at the date fixed for my visit vacant, and was not therefore inspected during the year. The Public School at Jereelderie having been opened a few weeks only, when I was in the neighbourhood, was not visited.

During the year the following Provisional Schools have been established:—Adelong Crossing, Big Ben Creek, Lacmalac, Major's Plains, Tarramia, Wanganella, Wilcannia, and Wondalga.

The Provisional School at Urama was not open, in connection with the Council, during the year, and it is not therefore included in my list. The Provisional School at Ten-mile Creek was closed in June, on account of the small attendance, and since that time it has not been re-opened. The Provisional School at Adelong Crossing was closed at the end of the year in favour of a Public School erected at that place. The Provisional School at Wondalga was not officially recognized at the date of my visit, and it was not inspected.

The number and situation of the Certified Denominational Schools are not altered since my last report.

Application for the establishment of a Provisional School at Bungowannah had been made at the end of the year, and favourably reported on; but the school is not included in the list of schools already given, as it was not officially recognized until after the end of the year. At Mullengandra the building, which is to be used in the first instance for a Provisional School, was on the point of completion at the close of the year. Applications for the establishment of Provisional Schools at Gerogery and Huon (Dead Horse Creek) were reported on, but aid was refused by the Council on the ground that they were in fact Denominational Schools. The former belonged to the Lutheran Church, and was attended wholly by children of German parents; the latter belonged to the Roman Catholic Church.

At Sandy Creek, near Albury, an effort is being made to establish a Public School, and at the Billabong, to establish half-time schools, but in neither instance had buildings been erected at the end of the year. At Oberne the attempt to establish a Public School failed, not from want of a sufficient number of pupils, but from the difficulty of getting a suitable building. I am of opinion, however, that this is not an insuperable difficulty. At Coolac the attempt to open a Provisional School failed from want of sufficient encouragement to the teacher on the part of the parents.

The number of schools inspected during the year has been—

Nineteen Public Schools,
Twelve Provisional Schools, and
Seven Certified Denominational Schools,

making in all thirty-eight schools.

Of these, twenty-one were inspected twice—viz.: Eight Public, six Provisional, and seven Denominational Schools. The remaining seventeen were inspected once during the year. The following table shows the kind of visit paid to each class of school:—

Nature of Visit.	Class of School.			Total.
	Public.	Provisional.	Cert. Denom.	
For General and Regular Inspection	4	6	0	10
For Regular and Ordinary Inspection	8	3	7	18
For Regular Inspection only	6	1	0	7
For Ordinary Inspection only	1	2	0	3

Besides

Besides these there were ten visits of inquiry paid, chiefly to Provisional Schools. The nature of these visits may here be briefly stated:—The schools which were visited for general, in addition to the regular inspection, were either new schools or such as had not before been visited. Regular inspections were made chiefly with the object of ascertaining the attainments of the pupils; and at such visits the Inspector constituted himself the sole examiner. To see schools in their every-day aspect was the object of the ordinary inspections, at which the Inspector refrained, as a rule, from taking any active part in the work before him. Care was taken, however, to point out, at the close of the day, such defects as called for remark, and suggestions towards the remedy thereof were submitted verbally and in writing. Visits of inquiry were made for the purpose of reporting upon applications to the Council for aid in the establishment of schools.

In addition to the foregoing, incidental inspections have been paid to such schools as were on the various roads to and from head quarters.

The number of miles passed over in these journeys, 3,392.

The correspondence for the year amounts to 642 letters, &c.

The number of persons examined during the year is as follows:—

Six teachers in charge of schools,
Four pupil teachers,
Two candidates in training, and
Four applicants for appointment;

making in all sixteen.

ORGANIZATION.

Sites.—The newly-erected Public Schools have all had good sites chosen for them. At Wagga Wagga the proposed new Public School will occupy a situation superior in every respect to the present. The position of the Public School at Bungowannah is not sufficiently central, and this in a great measure has led to the closing of the school. The proposed Provisional School stands on a more suitable site. At Brungle the situation of the Provisional School is not central, but a better site has been applied for. The Provisional School at Wanganella is not well situated, but a better site could not be obtained without incurring considerable expense.

Buildings.—I am glad to be able to report great improvement in respect of these. At Balranald a residence is being erected and other improvements are being made. At Hay a new Vested Public School was near its completion at the end of the year. At Howlong a subscription list has been opened with the view to erect new and more suitable premises. At Lake Albert a very neat and commodious Public School, with residence, has been erected and opened, and the same has been the case at Thurgoona. At Tumut a large and well-furnished Public School has been opened. At Wentworth, a building similar to that at Hay was nearly finished at the end of the year; and at Wagga Wagga the foundation of a very superior school-room was about to be laid. There are now twelve Vested Public Schools in this district. As regards the Provisional Schools, four are held in indifferent buildings, the remainder in premises of a very fair description. Of the Certified Denominational Schools, three are too small for the proper accommodation of their pupils.

Playgrounds.—At the Model School a large shed has been recently erected. One other Public School is provided with the means of shelter from the sun and rain, but in a limited degree compared with the Model School. With these exceptions, however, none of the schools in the district have sheds or efficient means of protection for the pupils during recess time. In the schools situated in the western part of the district, the cultivation of trees is attended with considerable difficulty from the scarcity of moisture; but the schools in other localities might be readily enclosed with shrubs and trees, if proper efforts were put forth.

Furniture and Apparatus.—Of the Public Schools seventeen are well appointed. In respect of these, the remainder only partially so. All the new Public Schools are fitted up in strict accordance with the Council's plans and specifications. As regards the Provisional Schools, three are fairly furnished, but the rest only moderately so. It is, as a rule, a difficult matter to induce the Committees of these Schools to provide suitable furniture. Of the Certified Denominational Schools, four are well, and the rest tolerably well, furnished. Almost all the schools are supplied with the greater part of the apparatus required.

Books, Maps, &c.—In general, the schools are well supplied with these working materials. As before, when certain items of the stock run short, the fault is as a rule the teacher's, and it is an evidence of want of foresight on his part. With ordinary care, the amount allowed per annum by the Council is quite sufficient to provide and keep up a stock of materials equal to the demand.

Registers and Official Documents.—In the Public and Certified Denominational Schools these are, in the majority of instances, arranged and kept with a very fair degree of intelligence and accuracy. In the Provisional Schools, however, much trouble is experienced in the endeavour to secure neatness, completeness, and accuracy in the compilation of these documents.

DISCIPLINE.

Punctuality.—In general the attendance is in this respect fair. Where the pupils are found to be uniformly unpunctual, the fault lies, in a great degree, with the teacher; although the absence of bells has of course some effect adverse to the cultivation of punctual habits. The common means of punishment for the want of punctuality, is the keeping in of such pupils after school hours. To be effectual, however, tasks should always be assigned to these late pupils.

Regularity.—I cannot report much improvement in this respect. At two Public Schools the attendance was so small and irregular that for some months the 46th Article of the Council's Regulations had to be enforced; and one of these schools was ultimately closed on account of the inability to maintain the necessary average attendance. In sparsely populated places the inhabitants are often very indifferent in their efforts to keep up the attendance promised. Such persons are loud and persistent in the demand for the establishment of schools; but their zeal soon evaporates, when the object sought has been attained. One Provisional School had to be closed on this account, and the continuation of several others is extremely precarious. The number of pupils in the schools at the dates of inspection was as follows:—

Pupils.	Public.	Provisional.	Certified Denominational.	Total.
Enrolled.....	1,131	237	405	1,773
Present	896	224	300	1,420

Cleanliness.—This part of discipline may be considered to be, on the whole, satisfactory. There are of course degrees of tidiness, varying from good to tolerable, according to the personal habits of the teacher in the matter; but as I have not found any school to be positively untidy, to a degree calling for marked reprobation, I think I am justified in pronouncing the verdict above. I am pleased to see more care taken in cleaning the slates.

Order.—In twelve Public Schools the order is good; in three, tolerable; in the rest, it varies from fair to very fair. In two Provisional Schools it is good; in five it ranges between fair and very fair; in the rest it is tolerable. At five Certified Denominational Schools it is very fair; in two it is tolerable.

In

In assembling and dismissing the pupils, there is an improvement in most of the Denominational and in some of the Provisional Schools. I have, however, to complain that, in several schools the order is yet imperfect, in consequence of the neglect of the minor points thereof.

Government.—The general management of the greater number of the schools is carried on by the employment of moral force only. I have, however, found several teachers in the habit of carrying canes in their hands, to serve chiefly, I am bound to say, as pointers. This practice is, however, an injudicious one, and as such, I have invariably checked it. Canes and straps should be kept out of sight; nor should they be used for punishment, unless in a formal, discriminating, and judicial manner.

INSTRUCTION.

Classification.—Of the Public Schools, four have in each four classes; two have two classes only in each; the rest have three each. There were in four Provisional Schools three classes in each; in one there was only a first class; the others had two classes in each. In one Certified Denominational School there were four classes, but the remainder had a complement of three each. With the exception of the Model School and the Public School at Wagga Wagga, no school in the district had more than one department. In almost all the Public and Certified Denominational Schools the classification was appropriate, but in the Provisional Schools it was not so judiciously planned.

Subjects.—In four schools, object lessons are not taught; at twenty-two, singing is excluded from the course of instruction, and drawing at five schools. At four schools, "extra" subjects are taught to a portion of the scholars, viz., Latin, German, Geometry, and Algebra. The Tonic-sol-fa system of singing is taught at four schools, but not with any great success; at three schools the elder pupils draw on paper. Special religious instruction is given by clergymen of the Church of England, Presbyterian, and Wesleyan denominations, at four Public Schools. Needlework has been introduced into several schools since my last report. As a general rule, it may be stated that, with the exception of singing, all the prescribed subjects are taught in the Public and Certified Denominational Schools.

Occupation.—There is a visible improvement in most of the Public and Certified Denominational Schools, in the mode in which the time-tables and programmes are drawn up—both as regards the character of these documents and the form in which they are made out. Although in the Provisional Schools there is great room for improvement, in respect to the distribution of the time for, and the subjects of work, I am yet glad to see an attempt to conform to the requirements of the Council is manifest. The endeavour to systematize the work of instruction is a good sign. The lesson documents are, except in some of the Provisional Schools, arranged and drawn up, as a whole, with fair care; but in two Public Schools I found the lesson register had not been regularly used.

Method.—I cannot report any marked improvement in method, nor, on the other hand, any very decided falling off. While the number of untrained and uncertificated teachers remains so large it seems to be impossible to raise the standard in this direction to any great degree. In cases of bad method the chief causes remain unaltered: a lack of discrimination, a want of penetrative power; and, akin to these, a neglect of frequent and systematic revision. Having had during the year extended means of observing the every-day life of the majority of the schools, I am in a position to judge of the causes of failure—entire or partial—in the mode of teaching. It is however to be hoped that, in future, greater attention will be paid to the suggestions offered by the Inspector, on the occasion of his visits of ordinary inspection, especially by the untrained teachers. Every teacher can practice regular and frequent revision of the work done, and by this means discover the defects of his teaching, so far at least as the mere acquisition of knowledge is concerned.

The teachers and assistants are classified as under:—

Teachers of	First Class.		Second Class.		Third Class.			Not classified.
	Section A.	Section B.	Section A.	Section B.	Section A.	Section B.	Section C.	
Public Schools	1	1	3	11	4	4	1
Provisional Schools	13
Certified Denominational Schools.....	3	1	2	1

In this list there are four assistants, three of whom are in section A of Class III, and one in Section B of the same class.

Reading.—Of the pupils examined, about one-sixth were classed as good, about one-ninth as moderate to tolerable, and the rest as from fair to very fair. Compared with last year's standard, this result is not quite so high as might have been expected. I am, however, inclined to believe that the great increase in the number of Provisional Schools has brought down the standard of attainments in this as well as in other subjects. These schools being taught by untrained and—speaking generally—unskilled teachers, must of necessity reduce the average of the proficiency of the pupils. As regards the manner in which this subject is taught, I have to notice two great faults which are pretty general: one, a want of distinct enunciation; the other a lack of the power to give proper expression. The former fault is especially characteristic of the reading of the juniors, and the latter of the senior scholars. Another defect is the neglect to use, as they should be used, the spellings at the head of each lesson. Hence, at examination, the "oral spelling" is too often feeble and uncertain, both in the order of the component words and syllables, and the pronunciation of the whole word. Some teachers, especially those fresh from the training-school, fail to distribute in proper proportion the time given to the explanation of the words and sentences read and that set apart for reading proper. As the result, the main object of the lesson, viz., to teach reading—is not attained to the degree it should be. Amongst the girls there is still great difficulty encountered in getting a distinct and clear utterance.

Writing.—Of those examined, about one-eighth passed as good; about one-fourth, as from moderate to tolerable; the rest, as fair or very fair. Compared with last year's results, the number of pupils whose writing is good is smaller by one-half. It should, however, be borne in mind that the results described above include dictation; and in the new schools very few, if any, of the pupils reach a higher standard than fair in this branch. I find the faults of the last year again too prevalent; such, for instance, as a want of care in teaching the elements (as the table at foot shows); a tendency to practice small in preference to large hand. In dictation the chief fault lies in the neglect to revise with sufficient care the exercises of the classes. This important branch of writing loses its chief value unless the teacher marks the errors in punctuation and spelling, and insists upon these being corrected by the pupils.

Arithmetic.—About one-seventh of those presented for examination passed as good, about one-third as moderate or tolerable, the rest as from fair to very fair. On the whole it will be seen that this is a slight improvement upon the results obtained last year; but it should be noticed that the failures are large in the elementary stages of this subject. The want of care and intelligence in the teaching of the simpler rules is apparent from the fact that pupils of the higher classes often fail in working, with accuracy and readiness, sums in these rules; this is especially the case with notation. The slate-work appears to be generally done with more care and neatness than formerly. Mental arithmetic, however, does not in the majority of instances receive its proper share of attention; its relative as well as its absolute value is unduly estimated.

Grammar.—

Grammar.—Of the pupils presented for examination in this subject, about one-tenth were classed as good, one-third as either moderate or tolerable, and the remainder as fair or very fair; the proportion passed as good is not so great as it was last year. In Provisional Schools this subject is taught in a very indifferent manner, depending solely on oral teaching. The higher branches of this subject—analysis and composition—are in several schools wholly neglected from inability to teach them. In the elementary stages of grammar one or two faults (and often both) militate against success. The former is the want of a ready and an accurate knowledge of the definitions; the latter, the inability to apply such a knowledge in parsing from the reading lessons. In some advanced classes the analysis is taught entirely as though it were a separate subject; at all events it is not made to throw light upon the other divisions of grammar.

Geography.—About one-eighth examined were classed as good; about one-fourth as from moderate to tolerable; the rest as fair or very fair. The proportion of pupils passed as good is not so large as it was last year; but those pupils classed as moderate or tolerable form the same share both seasons. Maps are now in universal use; although, in a few schools, they are limited to those of this Colony or continent. I remark that, as formerly, in some schools—in teaching the elementary portions of this subject, there is a tendency to depart from the course prescribed by the standard of proficiency, in favour of some more showy description of teaching.

Object Lessons.—These are not given at six schools. Where they are taught, the result of examination showed that about one-fifteenth of the pupils passed as good, about one-fifth as either moderate or tolerable, while the remainder were put as fair or very fair. The proportion classed as good is this year lower. The aim of most of the teaching seems still to be the acquisition of certain technical facts, rather than the development of the thinking faculties, especially of the power of observation and judgment. In several schools there are no diagrams illustrating the subjects upon which these lessons should be given. Application has been made for supplies of the recently issued "Diagrams of Australian Natural History," to such teachers as possess the skill to use them to advantage. In one or two schools I found small cabinets of objects which had been collected by the teachers as subjects for lessons.

Singing.—I regret to have to report that at twenty-two schools this subject is not taught. About one-seventh of those instructed passed as good, about one-fifth as moderate or tolerable, and the remainder were classed as fair or very fair. At four schools the "Tonic Sol-fa" method of instruction is taught, but the scientific knowledge attained is small. I trust that teachers will see the advantage of adding this to the ordinary course of instruction. In the great majority of instances the singing (which is taught by ear) is confined to simple marching and didactic songs; in a few, part songs are practised.

Drawing.—This is not taught at five schools; at three it is practised both on paper and slates. Nearly one-twenty-fourth of the pupils examined passed as good, nearly one-eighth as moderate or tolerable, the rest were either fair or very fair. Higher results under the head moderate and tolerable were obtained this year, and lower under good. The ability to *teach* this subject is possessed by few teachers only.

Scripture Lessons.—The pupils of the third and fourth classes are the only members of the Public and Provisional Schools who are required to read these lessons, but in a few instances the second-class children are permitted to join the others. Of the number examined one-fourth were classed as good, nearly one-fourth as either moderate or tolerable, the rest as fair or very fair. This result is not quite so high as at last inspection. For the most part, however, the pupils exhibited an intelligent acquaintance with the subject.

Needlework.—Increased attention has during the year been given to this subject. The Model Public School at Albury and the C. D. Roman Catholic School at Tumut are especially distinguished for the success with which this subject has been taught.

The following is the Table of Attainments referred to above in speaking of the several subjects of instruction:—

Subjects.	Good.	Fair to Very Fair.	Moderate to Tolerable.	Total.
<i>Reading:—</i>				
Monosyllables.....	105	479	100	684
Easy Narrative.....	25	284	36	345
Ordinary Prose.....	72	198	16	286
<i>Writing:—</i>				
On Slates only.....	95	327	242	664
On Paper.....	61	519	54	634
<i>Arithmetic:—</i>				
Simple Rules.....	71	573	376	1,020
Compound Rules.....	65	98	14	177
Higher Rules.....	61	64	125
<i>Grammar:—</i>				
Elementary.....	23	210	110	343
Advanced.....	40	134	109	283
<i>Geography:—</i>				
Elementary.....	78	267	97	442
Advanced.....	16	192	80	288
Object Lessons.....	75	778	260	1,113
Singing.....	91	438	147	676
Drawing.....	22	434	70	526
Scripture Lessons.....	60	84	68	212

Local Boards.—At all the examinations, with eight exceptions, some members of the Local Boards or Local Committees have been present; on several occasions all the members have been present. It appears that, as a rule, more interest is felt in the work of popular education than formerly. Still there are instances in which the members of these bodies of local supervision almost wholly neglect to perform the duties expected at their hands, with the single exception of signing certain documents. There is also an unwillingness to act as visitors on the part of many members.

On the whole, while it is to be regretted that greater progress has not been made in the instruction of the pupils, and a higher standard attained in the general management of the schools, it is satisfactory to find that the number of schools is increasing, and the material condition of these institutions greatly improved.

J. COBURN,
Inspector, Albury District.

Albury, 19th January, 1870.

APPENDIX.

DETAILED Statement of the Condition of the Schools inspected.

The remarks under head 1 relate to the material condition of the Schools.
 2 to their moral character.
 3 to the subjects and methods of instruction.
 4 to the proficiency of the pupils.

PUBLIC SCHOOLS.

ALBURY (Model—Vested) :—Visited, 15th to 19th November.

Pupils enrolled :—Boys, 126 ; girls, 103 ; total, 229.
 Pupils present :—Boys, 111 ; girls, 86 ; total, 197.

1. The organization is now complete. Since the last inspection a play-shed has been erected, and both departments have been provided with suitable furniture. 2. The discipline is, throughout, in a very satisfactory state. 3. All the prescribed subjects are taught, as well as Latin, algebra, and mensuration. The method is earnest and intelligent. 4. The proficiency of the pupils ranges from very fair to good.

ADELONG (N.V.) :—Visited, 3rd and 4th June.

Pupils enrolled :—Boys, 43 ; girls, 21 ; total, 64.
 Pupils present :—Boys, 30 ; girls, 14 ; total, 44.

1. Although increased since last inspection, the furniture is incomplete—another desk, a book-press, and a blackboard and easel, being wanted. The classification is, in general, appropriate. 2. The discipline is not sufficiently thorough, the younger pupils being too noisy and restless. 3. The method is improved, but it is still too superficial in character. 4. The proficiency ranges from fair to very fair.

ADELONG, UPPER (V.) :—Visited, 7th June.

Pupils enrolled :—Boys, 20 ; girls, 17 ; total, 37.
 Pupils present :—Boys, 19 ; girls, 14 ; total, 33.

1. Another teacher has been placed in charge since my last visit. The desks have too much slope, but in all other respects the furniture is complete. The classification is not quite appropriate. 2. The order is imperfect, especially amongst the girls, and in its minor points. More firmness on the part of the teacher would remedy this. 3. The course of instruction is incomplete, and some of the lesson documents are neither neat nor entire. The method is too tame. 4. The proficiency ranges from tolerable to very fair.

BALRANALD (V.) :—Visited, 30th August.

Pupils enrolled :—Boys, 12 ; girls, 17 ; total, 29.
 Pupils present :—Boys, 12 ; girls, 17 ; total, 29.

1. The property has been conveyed to the Council, a contract for building a teacher's residence and for enclosing the premises has been taken, and suitable furniture has been provided. 2. The discipline is in a very satisfactory state, and the spirit of the school is pleasing. 3. The instruction is carefully and intelligently given. Needlework has been introduced since last inspection. 4. The range of the attainments is from fair to very fair.

BOWNA (N.V.) :—Visited, 20th October.

Pupils enrolled :—Boys, 12 ; girls, 12 ; total, 24.
 Pupils present :—Boys, 12 ; girls, 11 ; total, 23.

1. The organization has been greatly improved by the introduction of proper furniture ; new out-offices are however required, and the ground should be fenced in. 2. Since my last report another teacher has been placed in charge. The attendance is still kept down through the existence of a private Denominational (R.C.) school, on the adjoining allotment. The discipline, although improved, is still imperfect. 3. The course of instruction does not include singing. The method is tolerably intelligent. 4. The results range from tolerable to fair.

BUNGOWANNAH (N.V.) :—Visited, 14th May.

Pupils enrolled :—Boys, 17 ; girls, 15 ; total, 32.
 Pupils present :—Boys, 13 ; girls, 8 ; total, 21.

This was a visit for ordinary inspection only. The attendance up to this date had been so small that the 46th Regulation had been for some time enforced, and soon after my visit the school was closed. It had not been re-opened up to the end of the year ; and at that date an application for the establishment of a Provisional School, in a more central position, had been sent to the Council.

DENILIKUIN (V.) :—Visited, 16th and 17th August.

Pupils enrolled :—Boys, 52 ; girls, 25 ; total, 77.
 Pupils present :—Boys, 44 ; girls, 22 ; total, 66.

1. The condition of the premises is satisfactory, and the organization is complete. 2. The discipline is, on the whole, in a very fair state. 3. The classification would be better if the junior pupils were brought into closer contact with the head master. The method is generally effective. 4. Considering the age of the majority of the pupils—of whom more than one-half are in the first or second class—the results obtained may be described as being generally satisfactory.

EUSTON (N.V.) :—Visited, 2nd September.

Pupils enrolled :—Boys, 11 ; girls, 14 ; total, 25.
 Pupils present :—Boys, 11 ; girls, 13 ; total, 24.

1. The effort made to furnish the schoolroom, to build a dwelling-house for the teacher, and to convey the whole property to the Council, has not been successful. 2. The discipline is not sufficiently firm and even. 3. The course of instruction has been extended since my former visit. The method is earnest and fairly intelligent. 4. The proficiency of the pupils ranges from fair to very fair. Much discomfort is felt on account of the material condition of the building.

GUNDAGAI (V.) :—Visited, 21st June.

Pupils enrolled :—Boys, 43 ; girls, 37 ; total, 80.

Pupils present :—Boys, 20 ; girls, 15 ; total, 35.

1. Since my last visit another teacher has been appointed. The organization has been greatly improved, so far as the schoolroom is concerned, but new out-offices are much needed, and the residence wants to be repaired. 2. Although imperfect in its minor points the discipline is improved. In consequence of the re-opening of a Denominational (R.C.) school in the township, the attendance has of late somewhat fallen off. 3. A more vigorous and systematic method has been put in force by the present teacher ; and there is now good promise of great success. 4. The attainments are, on the whole, very fair.

HAY (N.V.) :—Visited, 12th August.

Pupils enrolled :—Boys, 30 ; girls, 32 ; total, 62.

Pupils present :—Boys, 25 ; girls, 21 ; total, 46.

1. This school was opened in February, in a temporary building. The room is too small, but it is very fairly furnished. A vested building, after designs by the Council's architect, is being erected, and by the beginning of next year it will be ready for occupation. 2. The discipline is much too lax. 3. The course of instruction is too limited, and although the teaching is earnest and fairly intelligent, the method is not the best under the circumstances. 4. The proficiency is only tolerable. Since my visit another teacher has been appointed.

HOWLONG (N.V.) :—Visited, 27th October.

Pupils enrolled :—Boys, 19 ; girls, 25 ; total, 44.

Pupils present :—Boys, 14 ; girls, 23 ; total, 37.

1. An effort has been made to build a suitable school ; but sufficient money has not been subscribed at present to enable the Local Board to apply for aid to the Council. 2. Owing to much illness the attendance has for some time been very fluctuating. With the exception of a want of punctuality the discipline is satisfactory. 3. The instruction is, in general, well regulated, and with the exception of singing all the prescribed subjects are taught. The majority of the pupils are very young. 4. The general results of the work done are very fair.

JERELDERIE (N.V.) :—Not visited.

Pupils enrolled :—Boys, 17 ; girls, 9 ; total, 26.

When in the neighbourhood this school had been so recently opened that no working materials had been supplied, and therefore I did not visit it. The numbers given above, represent the pupils admitted during the time the school has been in operation.

LAKE ALBERT (V.) :—Visited, 25th May.

Pupils enrolled :—Boys, 15 ; girls, 18 ; total, 33.

Pupils present :—Boys, 14 ; girls, 18 ; total, 32.

1. The new school, which is in every respect well adapted to the requirements of the locality, was opened in April. The organization is very complete. 2. The discipline, although weak, is somewhat improved since the new quarters have been occupied. 3. The teaching is earnestly and conscientiously conducted ; but, from lack of firmer discipline, the results are small in proportion. 4. The proficiency of the pupils ranges from tolerable to fair.

MENINDIE (N.V.) :—Visited, 14th September.

Pupils enrolled :—Boys, 22 ; girls, 15 ; total, 37.

Pupils present :—Boys, 18 ; girls, 15 ; total, 33.

1. The present building, which is lent by a member of the Local Committee, is too small for the proper accommodation of the pupils, more especially in the hot season. An attempt, however, to build a suitable school is being made. With the exception of the drawback named, and also the want of out-buildings, the organization is good. The room and its contents are very neatly kept. 2. The discipline is in a very satisfactory state ; and the spirit of the school is pleasing. 3. The teaching is conducted in an intelligent and careful manner. 4. The proficiency of the pupils ranges from very fair to good.

MOAMA (N.V.) :—Visited, 19th August.

Pupils enrolled :—Boys, 9 ; girls, 17 ; total, 26.

Pupils present :—Boys, 6 ; girls, 16 ; total, 22.

1. The organization is in a very satisfactory state. 2. The attendance is very much smaller than it was at the last inspection, owing to the departure of several families from the township. The discipline is improved, and it may now be considered as fairly satisfactory. 3. The teaching is careful and tolerably intelligent in its tone, but the course of instruction is incomplete. Most of the pupils are very young. 4. The proficiency ranges from tolerable to fair.

MOULAMEIN (V.) :—Visited, 26th August.

Pupils enrolled :—Boys, 17 ; girls, 7 ; total, 24.

Pupils present :—Boys, 17 ; girls, 5 ; total, 22.

1. No alteration has taken place in the organization since the last inspection. 2. The discipline is in general effective ; but the attendance has for some time past been very fluctuating and also somewhat diminishing in its character. 3. The course of instruction has been extended. The method is wanting in penetrative power to a considerable extent ; but the teaching is careful and earnest in its tone. 4. The state of the attainments varies from tolerable to very fair.

THURGOONA (V.) :—Visited, 19th and 22nd October.

Pupils enrolled :—Boys, 41 ; girls, 38 ; total, 79.

Pupils present :—Boys, 33 ; girls, 36 ; total, 69.

1. The present building, which consists of a school and residence, was opened in January. Having been built from the authorized design, it is thoroughly adapted to its required purpose, and the schoolroom is very completely fitted up. 2. The discipline is in all points satisfactory ; and the spirit of the school is pleasing. Notwithstanding the establishment of a Denominational School (R.C.) a short distance therefrom, the attendance of this school has increased since last inspection. 3. The course of instruction

instruction is complete; and, in addition to the prescribed subjects, a few of the pupils learn German, French, and Latin. After the examination some readings and recitations were given in the first tongue here named, to the manifest delight of many parents. 4. The proficiency of the pupils ranges from very fair to good.

TUMBARUMBA (N.V.) :—Not visited.

Pupils enrolled :—Boys, 20; girls, 10; total, 30.

The late teacher had left, just before my visit became due, and his successor had not arrived in time to open the school before the Christmas vacation. The numbers given above are those on the roll at the end of September.

TUMUT (V.) :—Visited, 10th June.

Pupils enrolled :—Boys, 29; girls, 19; total, 48.

Pupils present :—Boys, 12; girls, 11; total, 23.

Just after my visit, the present building was opened under a new teacher. A change was very greatly needed in every respect; and since the opening of the new school the attendance has very largely increased. The vested building is very commodious, and it is exceedingly well fitted. A residence is however needed to complete the new property.

WAGGA WAGGA (V.) :—Visited, 26th to 28th May.

Pupils enrolled :—Boys, 88; girls, 65; total, 153.

Pupils present :—Boys, 75; girls, 45; total, 120.

1. The present building being in every respect unsuited to the requirements of the place, an effort was made at this date to erect a suitable room on a better site. Although a considerable sum had to be raised in the locality, the effort had been so successful that at the end of the year the plans had been determined upon, and the building was about to be begun. 2. Considering the disadvantages of the present room, the discipline is very creditable in character. 3. The course of instruction might be slightly enlarged. Latin and algebra are taught to the fourth class as extra subjects. The method is, in general, intelligent and earnest; but the manner of the pupil teacher is too apathetic. 4. The proficiency of the pupils is in the girls' department very fair; while in the boys' it ranges from fair to good.

WENTWORTH (N.V.) :—Visited, 7th September.

Pupils enrolled :—Boys, 24; girls, 4; total, 28.

Pupils present :—Boys, 17; girls, 3; total, 20.

1. The present room is only equal to the accommodation of a few pupils. The foundation stone of a new vested school had, however, been just laid; so that this complaint will shortly cease to have any force. The organization is, considering the size of the room, good; and very great care is displayed in the carrying out the routine prescribed. 2. The state of the discipline is very good. 3. The method is intelligent in its tone; and the teacher is painstaking in his manner. He has, however, had charge for a few months only, while for many weeks the school was vacant. 4. The state of the attainments is fair.

PROVISIONAL SCHOOLS.

ADELONG CROSSING :—Visited, 17th June.

Pupils enrolled :—Boys, 10; girls, 6; total, 16.

Pupils present :—Boys, 9; girls, 5; total, 14.

1. This school was opened in March. The room is sufficiently large for its purpose; and it is fairly well furnished. It is, however, intended to be a temporary room only, as a Public School is being built. 2. The discipline is fair. 3. The method is tolerably intelligent and suitable, although the teacher has not been trained. 4. The proficiency of the pupils is fair.

BIG BEN CREEK :—Visited, 18th June.

Pupils enrolled :—Boys, 21; girls, 12; total, 33.

Pupils present :—Boys, 17; girls, 11; total, 28.

1. The building is of good size and shape; but the organization is incomplete. Out-offices, a floor, and additional furniture are required. The first supply of books, &c., had not been received at the date of this visit; but the prescribed routine was followed as far as possible. 2. The state of the discipline is very fair. 3. The teaching may be described as earnest and fairly intelligent in its tone. 4. The attainments vary from tolerable to very fair.

BRUNGLE :—Visited, 15th June.

Pupils enrolled :—Boys, 11; girls, 9; total, 20.

Pupils present :—Boys, 8; girls, 8; total, 16.

1. Since my last report the school has been removed to other premises. The change is not for the better, although the new room is large enough at present. A new school, properly furnished and in a central position, is much needed. 2. The discipline is tolerably good. 3. The curriculum is too limited; but the method is fairly well adapted to the ages of the pupils. 4. The results obtained range from fair to very fair.

COLLENDINA :—Visited, 4th August.

Pupils enrolled :—Boys, 6; girls, 11; total, 17.

Pupils present :—Boys, 6; girls, 11; total, 17.

1. Since last inspection, a brick floor has been laid down; but there is no additional furniture, nor is there any out-office. 2. The attendance has been very fluctuating; but in other respects the discipline is fair. 3. The subjects taught are comparatively few, and the method is not the most skilful; but the teacher is very careful and painstaking. 4. Many of the pupils are young. The general proficiency ranges from tolerable to fair.

GILMORE (UPPER) :—Visited, 8th June.

Pupils enrolled :—Boys, 13; girls, 15; total, 28.

Pupils present :—Boys, 8; girls, 13; total, 21.

1. The space for teaching has been recently enlarged, and an out-office put up; but the furniture remains in its former awkward position. The classification needs revision. 2. The state of the discipline is on the whole satisfactory. 3. Singing is not included in the course of instruction, but the method is skilful, and the teaching earnest and careful. 4. The proficiency of the pupils ranges from very fair to good.

LACMALAC :—Visited, 14th June.

Pupils enrolled :—Boys, 9 ; girls, 14 ; total, 23.

Pupils present :—Boys, 5 ; girls, 12 ; total, 17.

1. At the time of my visit the school had been taken into connection with the Council so short a time that the stock of working materials was very limited. Suitable furniture had been provided, but a wooden floor and out-buildings were found wanting. 2. The general management was, under the circumstances, creditable; and the teacher appeared to be desirous of conforming to the regulations of the Council. 3. The method was somewhat crude, but the manner was pleasing. 4. The results may be regarded as tolerably satisfactory.

MAJOR'S PLAINS :—Visited, 28th October.

Pupils enrolled :—Boys, 8 ; girls, 12 ; total, 20.

Pupils present :—Boys, 5 ; girls, 12 ; total, 17.

1. This school was placed under the Council early in the year. The building—a church—is suitable in size and form; but it is scantily furnished, and has, outside, no accommodation. 2. The pupils are well conducted, but the discipline is unsystematic. 3. The instruction is imparted with intelligence, and, considering that the teacher is untrained, with a fair degree of skill. 4. The attainments range from fair to very fair.

MULWALA :—Visited, 6th August.

Pupils enrolled :—Boys, 14 ; girls, 15 ; total, 29.

Pupils present :—Boys, 11 ; girls, 13 ; total, 24.

1. No alteration in the organization had been made at my last visit; but the Local Board had promised to provide suitable furniture before the close of the year. 2. The general management had been slightly improved; but the discipline is not systematic. 3. The instruction is faulty in two points: one, a neglect of regular class-teaching; the other, a want of rigid adherence to the standard of proficiency. 4. The results of examination are, in consequence, only tolerable.

TARRAMIA :—Visited, 5th August.

Pupils enrolled :—Boys, 11 ; girls, 7 ; total, 18.

Pupils present :—Boys, 9 ; girls, 5 ; total, 14.

1. This school was opened in February; but the books and lesser requisites were not received until May. The building is of good size and shape; but it has no floor, and the roof is too slight. The furniture is sufficient, but its shape is not the best. 2. The pupils are generally quiet and attentive; but not as the result of any system of discipline. 3. The great majority of the scholars are at work upon the bare elements of learning; none, at present, are out of the first class.

TEN-MILE CREEK :—Visited, 3rd May.

Pupils enrolled :—Boys, 8 ; girls, 8 ; total, 16.

The school was temporarily closed at this date. Since the end of June it has been vacant, owing to the want of proper support on the part of the residents.

WANGANELLA :—Visited, 10th August.

Pupils enrolled :—Boys, 13 ; girls, 11 ; total, 24.

At the date of this visit the school had not been officially recognized. The room is small, and the furniture scanty; but both these faults will doubtless soon be remedied.

WILCANNIA :—Visited, 16th September.

Pupils enrolled :—Boys, 9 ; girls, 18 ; total, 27.

Pupils present :—Boys, 7 ; girls, 11 ; total, 18.

1. The building is large and of suitable shape. It is fairly well furnished, and the organization is, in general, tolerably satisfactory in character. 2. The discipline is lax, and the tone of the school low in consequence. 3. The instruction is too limited in its range, and the method is not very skilful. The teacher, however, is very painstaking with his work and kind in his manner. He has had no training for this kind of work. 4. The proficiency of the pupils is moderate throughout.

WONDALGA :—Not visited.

The school was not at work when I was at this place. At the end of the year there was an attendance of twenty pupils, who were taught in a newly-built room.

ARMIDALE DISTRICT.

INSPECTOR'S General Report for 1869.

Sir,

I have the honor to submit, for the information of the Council of Education, my General Report for the year ending 31st December, 1869.

The district assigned to me is of vast extent, including within its boundaries the Tweed River, Tenterfield, and Yetman, on the north; Warialda and Wee Waa on the west; Wallabadah and Port Macquarie on the south; and the coast districts of the Hastings, McLeay, Bellinger, Clarence, and Richmond Rivers. Exclusive of hindrances to the work of inspection by floods and the slow means of communication which characterize the coast region, the district is so large, the centres of population are so far apart, and the increase in the number of schools is so great, as to render the efficiency of inspection almost impracticable.

The work of the year has been distributed as follows:—

Travelling (3,243 miles).....	86 days
Regular inspections	70 "
Examination of (20) teachers	15 "
Inquiries (20) and conferences (12)	10 "
Clerical work and incidental inspections.....	123 "
Holidays	8 "
Illness	1 "
Sundays	52 "
	<hr/>
	365 "

The present year has been a prosperous one in regard to the establishment of Public and Provisional Schools in districts previously destitute of the means of education; but there still remains much to be done in many squatting districts where Half-time Schools or itinerant teachers are much needed; and it behoves squatters and landed proprietors to "be up and doing" to stem the tide of ignorance among the pitiable children of their workmen and tenantry. During the year eighty schools have been in operation. Public Schools have been established at Woodford Leigh, Rainbow Reach, and

and Bowling Alley Point; Provisional Schools at Carroll, Coldstream, Fernbank, Limestone, Sancrox, Sherwood, Taloumbi, Wallaby Hills, and Woodburn; and Half-time Schools at Huntingdon and Beechwood. Early in the year the Provisional School at Bundarra was changed into a Public one, and the Goonoo Goonoo C.E. School, previously closed for low attendance, was opened as a Provisional School. Steps have also been taken to establish Public Schools at Nundle, Barraba, Yarrowell, Kinchela Creek, Darkwater Creek, Alumny Creek, Reid's Swamp, and the Bellinger River; and Provisional Schools at Moonbi Creek, McGowan Creek, Rock Vale, Attunga, Gosswich, Puddledock, McIntyre Flat, and Orundumby. It is gratifying and encouraging to remark that the increase of schools during the past two years has been 50 per cent. on those in operation at the close of 1867.

Owing to the increase of schools and travelling, the time occupied in making special inquiries in connection with existing and proposed new schools, and the consequent increase of office work, the business of inspection has not been as widely distributed as could be desired. Delays have been occasioned by floods, but more especially and unnecessarily by teachers failing to forward at the proper time correct quarterly returns of their schools. I may also be permitted to add (1) that it was not till the 17th January that I reached Armidale after a lengthy tour of four months, and with an accumulation of office work that, with other duties, occupied me till 17th March; and (2), that in addition to the ordinary visit I was instructed to pay a special one to the Hastings and Macleay districts, but for which last circumstance all the schools in my district would have been visited for regular inspection. As it is, only sixty of the eighty schools open at the close of the year have received such an inspection in addition to incidental visits (32) made to them whenever opportunities offered. Of the remaining twenty schools, eight have received incidental inspection, and among the rest are a few that were not established when I visited their districts. In the case of four schools it was considered expedient to inspect them on Saturdays; otherwise they would have been closed for the midsummer holidays. Referring to the incidental visits paid to schools, it is important to remark that in several instances the results have not been satisfactory. They have been such as to confirm my opinion that the present practice of giving notices to teachers is objectionable, on the ground that it impairs the efficiency of inspection.

The sites of the schools established during the year, and of those not reported upon last year, are in most cases suitable in point of freedom from floods, healthiness of situation, centrality, and convenience of approach, in which last particular those of Coldstream, Fernbank, Sancrox, and Taloumbi Provisional Schools are defective. A steady improvement in the character of school buildings has manifested itself during the year. Of Public Schools, new ones have been erected—one of brick at Rocky River, three of weatherboard at Woodford Dale, Woodford Leigh, and Bowling Alley Point, and one of slabs at Rainbow Reach—all of which are commodious and well designed, though a few of them show obvious signs of defective workmanship. Others are also in course of erection at Swan Creek, Bundarra, and Barraba, and the one at Armidale is about to be enlarged to meet the demands of boarders and an increased attendance. Those at North Grafton, South Grafton, and Tamworth, are much too small and otherwise unsuitable; and those at Inverell, Ballina, Wallabadah, and Port Macquarie, in need of repairs. It is very necessary also that some of the weatherboard ones should be painted outside; and it would add materially to their neatness, cleanliness, and comfort of appearance, if many of them were lined inside to hide the stanchions, and thus render an orderly arrangement of the diagrams, etc., practicable. Provisional School buildings are generally inferior to those of other schools in the district, both in appearance and structure, which arises from the difficulty of raising funds for their erection. Many of them are of slabs, with barked or shingled roofs, boarded floors, but no fire-places, and in some instances with small-hinged shutters instead of glazed windows. They are of such a character that, though provisional in name, yet permanently located in districts of settled and increasing populations, few of them will be suitable for Public School purposes, except as kitchens for the teachers, which fact suggests the expediency, for reasons of economy, of having all future such buildings built upon a uniform plan. In three instances school is held in the teachers' dining-rooms; and in two others, in rooms much too small for the purpose. At Tynedale, Dondingalong, and Limestone Creek, new and more suitable buildings have been provided, and the one at Redbank has been made more comfortable. The buildings of the two Half-time Schools are tolerably suitable. Those of Certified Denominational Schools are in general spacious, airy, and well lighted; but in eight cases out of thirteen they are used as churches, which is to some extent a source of trouble to the teachers, as well as of disorganization in their schools, owing to the presence of church furniture, and the necessity of placing it and removing it at appointed times. The residences of teachers, which are generally attached, and similar in material structure to the schoolhouses, are on the whole clean, and in reasonably good repair; but many of them, however, have rather a dingy and bare outer appearance, so unlike the pleasing looking dwelling, whose whitened walls, grass plats, gravelled walks, or flowers, are but half seen through shady trees. Only three Public School teachers are without residences, owing to the non-vested character of their schools—those at Wallabadah, Gundarimba, and Palmer Island; and the teacher at Bingera has but a miserable one-roomed bark hut with earthen floor. The residences of Provisional School teachers are generally very meagre in condition and accommodation, and there are as many as fourteen teachers out of twenty-five without them, which is much to be regretted on account of the comparatively small emoluments they receive. In three cases out of thirteen there are no residences in connection with Certified Denominational Schools, and in one of these the teacher complains that he is compelled to provide the schoolhouse free of rent. With regard to playgrounds little can be said in their favour, except those of Public Schools, which are, however, not as free of animadversion as they ought to be. Few people appear to appreciate the important moral influences which properly organized playgrounds exercise over their children, and it is displeasing to discern the indifference which is manifested with regard to the absolute necessity of providing lavatories and suitably commodious and arranged out-offices. Nearly one-half of the schools are without fences; weather-sheds there are none, though so much needed in the extremely warm parts of the district; and in forty-nine schools there is no supply of water other than that obtainable from the distant creek, river, or swamp, or probably the brackish well. Some of the schools are without a clock and a bell, and in extremely few cases are seen door-mats, foot-scrappers, or window blinds. In thirty schools there are no tables, chairs, or book-presses, and in twenty, unsuitable or insufficient supplies of hat-pegs. All the schools are well supplied with books, and fairly so with maps, diagrams, and other working materials, except many of the Provisional Schools, which are in need of diagrams.

The following tabular form exhibits the material condition of the schools:—

	Public.				Provisional and Half-time.				Church of England.			Roman Catholic.				Presbyterian.			Wesleyan.

It is gratifying to remark that during the past two years the number of children attending the schools of the district is nearly double that for the year 1867. According, also, to the testimony of the teachers and to my own observations, which have not been of as wide a range as could be desired, the attendance has improved in punctuality; it is really good in some schools, whose scholars are to be seen in healthy amusement about the doors long before the time of opening. It is a noticeable feature, well known to experienced teachers, that children, imbued with a spirit for playground amusements, stand in the foremost rank of early comers; and it would be well if those teachers who complain of 10 o'clock scholars would study more the idiosyncrasies of their pupils, mingle more in their plays, and foster in them a spirit of activity and healthy rivalry, for it must not be overlooked that bush children at play is oftentimes a tame spectacle. As was remarked last year, pupils are less punctual in those schools marked for defective discipline and want of liveliness and vigour in the teachers, in those of river districts, and more so in those of the country than of the towns. In not a few instances, however, children are not wholly responsible for late coming; for either their homes are destitute of time-pieces, or their schools of bells, or they have to walk to school distances of two, three, or four miles. In order to suit the convenience of parents living at a distance, or requiring the indispensable aid of their children in the house, cow-yard, or field, it has been found necessary in some places to defer the opening of the school to half-past 9 or 10 o'clock, but such expediency is known to fail even with children living near the school. According to the yearly School Returns, no improvement is observable in the attendance, either in regularity or duration. Only two-thirds of the pupils are regular, or, to put it another way, each child on an average attends school only 150 days in the year; but what is a matter of graver consideration is, that nearly four-fifths of the children leave school at the age of ten years, at a time when, as experience shows, they only begin to appreciate the benefit of instruction, to feel their mental strength, and to apply themselves to study; and taking these two facts into consideration with a third one, that the methods of instruction given in far too many schools, chiefly Provisional, are of a mechanical character, it is obvious that comparatively few children leave school with that requisite amount of information and mental training necessary to qualify them to engage efficiently in the active pursuits of life.

Totals	1,784	1,767	3,551	1,715	735	649	389	63	3,551

Judging the schools from their appearance on the day of regular inspection, notice of which is given beforehand, most of them are in a satisfactory condition of cleanliness; the schoolrooms clean and swept; the apparatus orderly, though not always tastefully arranged; the furniture free of dust, and reasonably so of stains and scratches, and the scholars clean and decently attired. The condition of some of them, however, has been less satisfactory on the days of incidental inspection, when they have been visited unexpectedly; for it has been surprising in some instances to see so large a proportion of the children with bootless and dirty feet, long and ruffled hair, or without blouses or jackets. Some of these defects are doubtless

doubtlessly due to the negligence or poverty of the parents; but when one finds neighbouring schools attended by a similar class of children in a superior condition of neatness and cleanliness, the teachers are to be justly blamed for their want of sustained vigilance, tact, and firmness. Generally speaking, fair order is maintained in most of the schools, and the government appears to be of a mild and healthy character, for I remember to have seen but two or three instances of harshness. But, as observed last year, the discipline is not sufficiently vigilant and strict in the detection and correction of little errors in the speech, attitudes, and movements of the pupils, and in the distribution of school materials, defects in which latter particular are not unfrequently the source of undue noise, confusion, and loss of time. Drill, of an efficient character, is practised in few schools; and I regret to report, that in too many instances the supervision of pupils in the playground, or the orderly dismissal of them to their homes, is performed in too perfunctory a manner.

TABULAE view of the moral character of Schools.

SCHOOLS.	Cleanliness.			Order.		
	Good.	Fair.	Moderate.	Good.	Fair.	Moderate.
Public	22	9	2	14	16	1
Provisional	2	6	5	9	4
Denominational	6	6	1	2	10	2

The classification of the pupils, according to their general attainments and intelligence, is fair; and the objectionable practice of dividing the classes into uselessly small sections is gradually disappearing. The first classes of most schools, however, are still subdivided into two sections for reading, which is quite unnecessary when that subject is well taught, for good oral teaching obviates the necessity for sub-classification, and teachers should remember that the efficiency of their labours varies inversely with the number of their classes. Some teachers adopt the objectionable plans either of re-classifying their pupils a little before the day of regular inspection, or of detaining children in the lower classes when they are fit for promotion. One feature in the classification that is of grave consideration, and one that shows signs of weakness in the teaching and the evils of irregular attendance is, that the ratios of pupils in the lower classes are excessively large; for of the 2,185 children, presented for examination, 48 per cent. of them were in the first class, 32 in the second, 18½ in the third, and only 1½ in the fourth.

TABLE showing the percentages of pupils in the various classes of the different Schools:—

CLASSES.	Public.	Provisional.	Church of England.	Roman Catholic.	Presbyterian.	Wesleyan.
First	48	52	48	49	51	47
Second	30	35	38	34	30	32
Third	20	13	14	17	19	21
Fourth	2

The occupation of the pupils appears to be in general tolerably well regulated. Time-tables and programmes of lessons are used in all the schools but eight, chiefly Provisional, and are in general constructed with improved though not sufficient care and forethought. The defects of most time-tables are want of strict conformity to the standards of proficiency, and of due provision for an equitable distribution of the teachers' labours among the classes. The programmes are still marked by the presence of dittos, or general statements in lieu of a systematic arrangement of lessons on each subject. Some teachers have been unable to produce all the programmes used during the year; and others, on occasions of incidental inspection, have been found using old ones, to save themselves the little trouble of framing new ones. The lesson registers are kept with apparent punctuality, but are as defective as the programmes, and in particulars useless. Some teachers, when unexpectedly visited, have been found departing from the time-table, and others are known to use other books than those named in the programmes; otherwise, I believe these documents to be faithfully observed by most of the teachers. The character of them in the different schools is as follows:—

Public.....14 good 14 fair 4 moderate.
 Provisional..... 3 " 9 "
 Denominational 2 " 8 " 2 "

In a few schools an improvement has shown itself in the teaching and in the attainments of the pupils; but in most of them, particularly Provisional and Denominational, the character of the instruction continues to be, as remarked in my last report, the least satisfactory feature of them. In still too many instances the teaching, though earnest and apparently diligent, is too mechanical and too deficient in inventiveness, as well as the power of interesting pupils and stimulating them to sustained mental exertion. Few teachers make sufficient use of the chalk and blackboard, show signs of preparedness in their lessons, or make due allowance in their programmes for the recapitulation of lessons and the periodical examination of pupils. The children in general evince fair attention and self reliance under examination, but their answering is usually deficient in promptness and thoughtfulness.

Reading.—As regards fluency and correctness of pronunciation, the reading has improved in most of the schools. In few of them however is it pleasing and intelligent. In the lower classes it is chiefly marked by a low and sometimes painfully inaudible intonation, a slovenliness of articulation, and an inattention to pauses; and in the upper by an inattention to emphasis and to the grouping of words according to their logical relations in the sentences read. These errors are owing to the defective method of treating the subject, especially in the earlier stages, to the objectionable practice of passing too quickly from one lesson to another, and to the little attention given to recitations and the explanation of the subject-matter of each lesson; but they are such as can be eradicated by painstaking and intelligent teachers, who are imbued with a full sense of the importance of reading as a means of self-instruction. In oral spelling, the proficiency of the pupils generally is both fairly satisfactory and improving; but I regret to report that little or no improvement has been made in the moderate knowledge of the meanings of words, or of the subject-matter of the lessons which they displayed last year.

Writing.—The examinations in writing and in other subjects capable of similar treatment have been stricter, though more tedious this year than last; the name and age, time in class, and proficiency of each child, have been noted in a book for future reference. The quality of the writing ranges from moderate to fair. In Public Schools it has improved, except in the third classes; but in the other schools it has rather fallen off. I am still of opinion that many teachers treat the subject more as a silent lesson than as one requiring close supervision and intelligent instruction. There are too many instances of first-class children being left to themselves practising writing on unruled slates, resting on their arms or knees; and too many signs of a careless and cursory inspection of the upper classes copy-books. Two noticeable faults are that children are allowed to write too much in a given time, and that they do not appear

appear to have, when questioned, a clear and distinct notion of the difference between writing and copying. The condition of the copy-books in point of cleanliness is generally satisfactory; but in some schools it is such as to reflect great discredit on the teachers, and it is not surprising that some parents should complain to me about the matter. Copy-books of varying sizes and qualities are used in each school, except where the teacher is enterprising enough to obtain from Sydney those of a superior and graduated character. But in several schools there are a few children without them, owing to the indifference or poverty of their parents, or to the fact that the teacher or storekeeper has none to sell. In the theme and the dictation exercises, which are of high importance as tests of a child's knowledge and thoughtfulness, and real progress in spelling, the writing is usually inferior to that in the copy-books, owing no doubt to the divided state of the attention required in them. In the more efficiently conducted schools the themes written by the more advanced pupils are pleasing both in matter and style; but in many schools they are meagre, and often indicative of the little remembrance which pupils retain of past lessons. In general the dictation exercises are tolerably satisfactory. In some schools they are neglected in the lower classes, and in most they are not so intelligently and effectively treated as to bring the errors of the whole class under the notice of its individual members.

Arithmetic.—Except in a few instances the proficiency of each pupil in this subject has been registered, and the same plan of dictating each question has been adopted this year as it was last. The proposed questions also have been of a simple and practical character, so simple that some teachers have been surprised at the low results obtained; and no incursions have been made into the regions of the higher arithmetic, before ascertaining that those of the lower have been well surveyed and learnt. Judging by results, little improvement is discernible in the teaching of the subject, except in a few Public Schools. The methods are too mechanical and feebly applied, and the important interests of the lower classes neglected. The replies of teachers to questions put to them, show that they follow text-books too slavishly, and that they neglect to use small numbers in their explanation of arithmetical processes, and in the questions they give their children for solution. In a few of the schools, where the subject is taught on first principles, the pupils exhibit signs of healthy intelligence; and it is to be hoped that all teachers will make themselves better acquainted with the method. In the knowledge of the common arithmetical tables and in power of mental calculation, the proficiency of the pupils generally is tolerable; the teaching of the tables, however, needs to be more intelligent, and of mental arithmetic more widely diffused and practical.

Grammar.—The proficiency of the pupils in this subject ranges from moderate to fair. In three of the schools it is not taught, and in thirty-five of them it is taught with indifferent efficiency. The superior teachers continue to treat the subject intelligently, and the children of Public Schools are better acquainted with its principles and terminology than those of Provisional or Denominational Schools; but the teaching is still wanting in precision as regards the correct spelling of grammatical terms. The teaching of analysis, though more widely diffused throughout the schools, is less intelligent and successful, than it ought to be, on account of its importance as a means of mental culture, which remark applies more especially to Provisional Schools, most of whose teachers are untrained and moderately acquainted with the subject. In some of the Public Schools the analysis of difficult pieces of prose and verse has been creditably done by the elder pupils; but I have seldom found the subject employed for elocutionary purposes, and as a means of improvement in composition. The exercise of paraphrasing proverbs, and the figurative and condensed passages occurring in the reading lessons is little practised, which is to be regretted, on account of the power it gives of laying bare the meaning of an author and of expressing it again in appropriate other language.

Geography.—Geography is taught in all the schools, but with little improved efficiency. The teaching of it varies in results from fair to indifferent, according as the teachers have been trained or untrained, but more particularly I think according to their study of the aim, matter, and method of their lessons, and their energy in giving them. Considering that the subject is so interesting to children and so highly instrumental in extending their language and knowledge, and in exercising their mental powers, it is to be regretted that it is not more intelligently taught. The younger pupils of most schools still show little acquaintance with their own localities or the features and relations of the simple physical phenomena around them, and few of them clearly understand either the plans of their schools and surrounding neighbourhoods, or the terms used in the geographical definitions. I find also that the knowledge of the elder ones is too exclusively limited to maps rather than to the appearances and relations of the things they represent; their memories are not sufficiently exercised in tracing the outlines and groupings of the lands and waters, nor their imaginations in realizing the varied aspects of distant countries. Maps are the only appliances in the schools for teaching the subject, only one instance occurring where there is a globe and a map of the district. It is desirable that each school should be furnished not only with a globe, compass, and a map of the district, but with the useful and cheap geographical diagrams published by Colton, of New York, and Groombridge, of London.

Object Lessons.—Object lessons are given in all the schools but five, four of which are Provisional and one Denominational. Except in a few Public Schools, no improvement is manifest in the results attending them. They are marked by the same defects as I described last year, most teachers still continuing to use them exclusively as means of conveying information on remote objects than as means of training the children to habits of observing, reflecting, and reasoning on matters in the world around them; and I have again to remark, that many teachers show a want of preparedness in the lessons they give before me. It is not unusual for me to see on school tables Ross's, Lakes's, or other manuals on object lessons, and in a few cases teachers have made use of one or the other in my presence. The possession of such books may be a healthy sign; but the use of them before a class is calculated to lower a teacher in the opinion of his pupils, and is viewed by others as a sign of negligence or incompetency. The careful preparation of lessons is absolutely necessary to success in teaching, and will in great measure compensate for defects of training, for skill in this art like all others is less the result of natural gifts than of patient labour. The words of Sir Joshua Reynolds, on imitation in Art, are worthy of the careful consideration of untrained teachers. He says: "It is very natural for those who are unacquainted with the cause of anything extraordinary to be astonished at the effect, and to consider it as a sort of magic. They who have never observed the gradation by which art is acquired; who see only what is the result of long labour and the application of an infinite number and infinite variety of acts, are apt to conclude from their entire inability to do the same at once, that it is not only inaccessible to themselves, but can be done by those only who have some gift of the nature of inspiration bestowed upon them."

Singing.—It is gratifying to report that during the year the teaching of this subject has been improved and more widely diffused among the schools of the district. It is now taught in two-thirds of the schools; but the interests of education demand that it should be taught in all; for it is pleasing both to pupils and parents, and is of high importance as a means of culture and moral training. Some teachers who do not teach it have expressed a desire to have the subject taught by itinerant teachers, but such a plan could not be efficiently carried out, except in the more numerous and closely connected schools of the Clarence River District. In some schools the pupils are taught singing from the tonic-solfa notation, and others, through the ear, the songs sung being generally of a simple and pleasing kind, though sometimes sung in rather too loud, harsh, and indistinct a manner.

Drawing.—Drawing also is taught in most of the schools with steadily improving results, the present proficiency of the pupils in general being fair. I am glad to find that several teachers, who complained last year of their inability to teach it, have introduced it into their schools by the aid of the Council's useful manuals; and that they bear testimony to the fact that it is highly interesting and instructive to the pupils and pleasing to their parents. I feel it due to a few teachers to express publicly my approbation of their zeal, patience, and intelligence in teaching the subject, as well as my pleasure in the success of their labours.

Sewing.—

Sewing.—The character of the sewing, both in quantity and quality, has been less satisfactory this year than it was last. In a few schools only is it taught with praiseworthy efficiency, and in some it appears to be a matter of secondary consideration. Some teacher's wives complain of the difficulty of inducing the parents to provide their children with suitable materials, whilst on the other hand some parents complain that their children's needlework is carelessly done, and that the teachers are inefficient. What truth there is in these complaints I am hardly able to judge; but I am still of opinion that in some schools sewing is not taught as intelligently as it ought to be. It seems to me desirable that each school under the charge of a married teacher should be furnished with simple materials, such as needles, thimbles, and coloured cottons, and with a book published under the Council's directions, and containing suitable instructions on sewing, illustrated by graduated specimens of needlework, such as are done by the best sewers in each class of one of the Council's Model Schools.

Latin and Geometry.—Latin and Geometry are taught in two Public Schools, and algebra in one, with tolerable success. The instruction in these is as yet elementary, and is given to a few pupils only, on account of the difficulty of retaining children at school till they are old enough to engage in such studies.

TABLE showing the Proficiency of the Pupils in the different Schools.

	Public.				Provisional.				Denominational.			
	Good.	Fair.	Moderate.	Failure.	Good.	Fair.	Moderate.	Failure.	Good.	Fair.	Moderate.	Failure.

Teachers.—Five examinations of teachers have been held in central parts of my district during the year. They occupied fifteen days, and were attended by twenty teachers, four candidates, and five pupil teachers, some of whom failed to pass for want of improvement in their attainments and practical skill, or for the defective condition of their schools. The number of teachers employed in the schools at the close of the year was eighty-seven:—seventy-nine teachers, three assistant teachers, and five pupil teachers. The following is the classification of the teachers and the assistant teachers in the different schools:—

	Class I.		II.		III.			Probationers.
	Section A.	B.	A.	B.	A.	B.	C.	
Public	1	2	1	18	10	6	4
Provisional.....	3	1	22
Denominational.....	2	...	4	3	4	...

It is again my pleasing duty to report that all the teachers in my district are persons of good moral character; that they evince a ready disposition to please; and that, except in a few instances, they perform their duties with earnestness and tolerable average ability.

The character of the local supervision of the schools, though a little improved, is in general but moderately satisfactory. Some teachers still complain of the little interest manifested by their Local Boards in their schools. In a few instances, however, the members of Local Boards act with praiseworthy energy, perseverance, and self-denial in maintaining the character of their schools in point of good attendance and good material condition.

I have, &c.,
J. S. JONES,
 Inspector of Schools, Armidale District.

ARMIDALE DISTRICT.

SUMMARY of Reports on Public Schools inspected in 1869.

ARMIDALE (V.) :—Visited, 5th, 6th, and 10th August, 1869.

1. The building needs pointing and painting ; otherwise it is in good condition. Increased accommodation for day pupils and boarders is urgently needed. The organization is good. 2. Except in a few matters of detail the prevailing tone of the school is very good. 3. The prescribed subjects are taught, inclusive of Latin, Algebra, and Geometry ; the instruction is well regulated ; the teaching is animated, painstaking, and intelligent, and the general proficiency of the pupils ranges from tolerable to very fair. The character of the attendance, sewing, singing, and drawing, is deserving of special praise.

BALLINA (V.)

This school was not visited for want of opportunity.

BENDEMBEE (V.) :—Visited, 12th July, 1869.

Numbers at the examination :—Boys, 12 ; girls, 14 ; total, 26.

1. The building is in good condition ; the schoolroom is rather small and the out-offices are not properly arranged. The supply of furniture and working materials is adequate. The organization is fair. 2. The moral character of the school is very fair, except in regard to the attendance. 3. The prescribed subjects are taught ; the instruction is appropriately regulated ; but the teaching, though earnest and diligent, is wanting in animation, vigour, and intelligence. The mental culture and general proficiency of the pupils range from moderate to tolerable.

BINGERA (N.V.) :—Visited, 28th August, 1869.

At the date of my visit this school was closed on account of the death of the teacher. 1. The organization of this school is defective in playground, out-offices, and supply of water. The furniture is scanty and ill arranged, and the stock of material appliances insufficient. The teacher's residence is a miserable bark hut.

BOWLING ALLEY POINT (V.) :—Visited, 8th August, 1869.

Numbers at the examination :—Boys, 24 ; girls, 39 ; total, 63.

1. The schoolhouse, with attached teacher's residence, is a well designed and amply furnished weatherboard structure. The organization is good. 2. The moral character of the school is pleasing. 3. The instruction is well regulated ; the lesson documents are constructed with exemplary care ; and the teaching is marked by zeal, painstaking, and fair skill. The general proficiency of the pupils is reasonably satisfactory, considering their limited school experience.

BUNDARRA (N.V.) :—Visited, 27th August, 1869.

Numbers at the examination :—Boys, 16 ; girls, 14 ; total, 30.

1. The organization is defective as regards the smallness of the building, the absence of playground, and supply of water, and the insufficiency of furniture and apparatus. A suitable schoolhouse, with attached teacher's residence, is in course of erection. 2. The discipline is healthy and promising ; but the attendance requires to be more regular. 3. Scripture lessons, singing, and drawing, are not taught, nor are the standards of proficiency strictly observed. The classification is defective ; the lesson documents are constructed with fair skill, and the teaching is painstaking and tolerably intelligent. The mental culture and general proficiency of the pupils are from small to moderate.

CASINO (V.)

This school was not visited for want of opportunity.

CHATSWORTH ISLAND (V.) :—Visited, 2nd December, 1869.

Numbers at the examination :—Boys, 18 ; girls, 31 ; total, 49.

1. The organization is in most respects good. 2. The moral tone is pleasing and steadily improving. 3. The prescribed subjects are taught with fair intelligence and more than ordinary energy and diligence ; and the lesson documents are arranged with care and efficiency ; but the classification is too low for the ages of the pupils. The general proficiency and mental culture are reasonably satisfactory.

EUROKA (V.)

This school was not visited for want of opportunity.

NORTH GRAFTON (V.) :—Visited, 16th, 17th, and 18th December, 1869.

1. The material organization remains as unsatisfactory as it was last year. 2. The discipline has much improved in firmness, vigilance, and efficiency ; the moral tone is healthy and pleasing. 3. The prescribed subjects are taught, inclusive of Latin and Geometry ; the instruction is regulated with very fair skill, and the teaching is painstaking and intelligent. The general proficiency of the pupils is very fair, and a marked improvement on that noted last year.

NORTH GRAFTON (Infants) (V.) :—Visited, 26th November and 18th December, 1869.

Numbers at the examination :—Boys, 34 ; girls, 34 ; total, 68.

1. The schoolroom is suitable, clean, and orderly, but somewhat in need of repairs. A book-press and additional hat-pegs are needed ; otherwise, the organization is on the whole fair. 2. The discipline is firm and gentle ; the pupils neat, clean, and orderly. The moral tone in general is pleasing. 3. The course of instruction is suitable and fairly well regulated, and the teaching is marked by fair intelligence, earnestness, and patience, but rather a lack of liveliness and inventiveness. 4. The general proficiency ranges from tolerable to fair.

SOUTH GRAFTON (N.V.) :—Visited, 19th November, 1869.

Numbers at the examination :—Boys, 36 ; girls, 41 ; total, 77.

1. The building is a slab structure, much too small for the numbers in attendance, and rendering therefore the erection of a suitable schoolhouse very necessary. The organization in other respects is fair. 2. As regards the appearance and behaviour of the pupils, and the almost faultless neatness and cleanliness of the schoolroom, the moral tone is very satisfactory. 3. The prescribed subjects are taught with quiet energy, industry, and fair skill, and the occupation of the pupils is judiciously regulated. 4. The pupils manifest a marked improvement in their attainments and general intelligence.

GUNDARIMBA (N.V.)

This school was not visited for want of opportunity.

INVERELL (V) :—Visited, —

Numbers at the examination :—Boys, 31 ; girls, 20 ; total, 51.

1. Repairs to the schoolhouse and residence are still needed. The defaced condition of the desks, walls, and windows, is unsatisfactory. The organization is fair. 2. The discipline is not as strict and vigilant as it ought to be, signs of laxity being observable in the very untidy appearance of some children, and the over free and easy conduct of others. The school operations are not performed with the requisite attention to quietness, order, and precision. 3. With the exception of singing, the prescribed subjects are taught with fair intelligence and energy, and the instruction is regulated with fair judgment. More care should be bestowed upon the writing. 4. The general proficiency of the pupils is fair.

KELLY'S PLAINS (V) :—Visited, 25th March, 1869.

Numbers at the examination :—Boys, 17 ; girls, 18 ; total, 35.

1. The schoolhouse and residence need painting, and the playground providing with a fence and well of water ; otherwise the organization is fair. 2. The pupils are clean and cheerful, fairly well behaved and orderly ; the schoolroom looks clean and orderly, and the school work is done with earnestness and fair efficiency. 3. The prescribed subjects are taught with lively energy, diligence, and fair skill. The instruction is better regulated, but little improvement is observable in the attainments of the pupils, owing to the irregularity of their attendance. 4. The general proficiency is tolerable.

N.B.—Since the date of inspection the efficiency of the Board has been much improved by the election of additional members, and steps have been taken to improve the material condition of the school.

KEMPSEY (V) :—Visited, 19th October, 1869.

Numbers at the examination :—Boys, 19 ; girls, 22 ; total, 41.

1. The schoolhouse and residence need painting. The out-offices are ill arranged. The school is well found in furniture and apparatus. The organization is fair. 2. The pupils are in general clean and decently attired ; and the schoolroom is clean and orderly. The school work is marked by cheerfulness and energy, but lack of precision and quietness. The conduct of the pupils, in the intervals of play, is not quite satisfactory. The moral tone in general is fair. 3. The instruction is regulated and imparted with fair skill and efficiency. 4. The general proficiency ranges from tolerable to fair.

LISMORE (V.)

This school was not visited for want of opportunity.

NARABRI (V.) :—Visited, 9th June, 1869.

Numbers at the examination :—Boys, 23 ; girls, 10 ; total, 33.

1. This school is now held in a superior brick building, including teacher's residence and accommodation for boarders. It is abundantly supplied with suitable furniture and working materials. The organization is good. 2. The character of the attendance is not satisfactory, and the school operations are not performed with the requisite regard to order and quietness. The pupils are neat and clean ; the schoolroom is clean and orderly, and the discipline is tolerably effective, but rather harsh. 3. The prescribed subjects are taught, except singing ; but the standard of proficiency is not strictly followed. The classification, moreover, is defective, and the teaching only moderately effective. The school work requires to be done with more energy and painstaking. 4. The general proficiency of the pupils is moderate.

PALMER'S ISLAND (N.V.) :—Visited, 1st December, 1869.

Numbers at the examination :—Boys, 12 ; girls, 16 ; total, 28.

1. The organization is defective. There is neither teacher's residence, out-office, lavatory, supply of water, fence to playground, nor sufficient furniture. 2. Laxity of discipline is observable in the somewhat untidy condition of the children and the schoolroom, as well as in the dirty and scribbled state of the copy-books. The attendance is irregular, and the school operations are not performed with due regard to order and quietness. 3. The prescribed subjects are taught, except singing and sewing. The instruction is tolerably well regulated ; but the teaching is too mechanical, and the younger pupils are rather neglected. 4. The proficiency and mental culture of the pupils are moderate.

PORT MACQUARIE (Boys)—V. Visited, 3rd and 4th November, 1869.

Numbers at the examination :—Boys, 32.

1. The schoolhouse, teacher's residence, fence, out-offices, and well are still in need of repairs, and additional furniture is required. The organization is tolerable. 2. The pupils are clean, cheerful, and intelligent, decently attired, and fairly well-behaved. The discipline is healthy, but requires to be more vigilant in minor details of school routine. 3. The prescribed subjects are taught with earnestness, painstaking, and very fair intelligence ; and the instruction is judiciously regulated. 4. The general proficiency and mental culture of the pupils range from fair to very fair.

PORT MACQUARIE (Girls)—V. Visited, 3rd and 4th November, 1869.

Numbers at the examination :—Girls, 27.

1. The same remarks apply to this school as to the boys' in regard to its material defects. 2. The discipline is pleasing. 3. The prescribed subjects are taught with pleasing earnestness and painstaking, and very fair intelligence. The instruction is judiciously regulated. 4. The general proficiency of the pupils is fair, particularly in drawing, sewing, and singing.

RAINBOW REACH (V.) :—Visited, 21st October, 1869.

Numbers at the examination :—Boys, 9 ; girls, 17 ; total, 26.

1. The schoolhouse and attached teacher's residence are recently erected slab structures, suitable in design and accommodation, but rather rough in the workmanship. The schoolroom is well furnished, but the supply of apparatus is barely sufficient for present requirements. The playground needs clearing and fencing. 2. The discipline is healthy, and the moral tone of the school is promising and reasonably satisfactory.

satisfactory. 3. The prescribed subjects are taught, the instruction is well regulated, but the teaching, though painstaking and earnest, is too mechanical. 4. The general proficiency of the pupils is low, owing to their short school experience.

MACLEAN OR ROCKY MOUTH (V.) :—Visited, 3rd December, 1869.

Numbers at the examination :—Boys, 10 ; girls, 11 ; total, 21.

1. The building needs painting, the well deepening, and the play-ground clearing of tall rank grass. The schoolroom has been made too small by the teacher partitioning one half of it off for his residence. The organization is passable in general. 2. The attendance is low and the discipline lax. 3. The prescribed subjects are taught, except singing, but the instruction is not properly regulated, and the teaching is not sufficiently painstaking. 4. The general proficiency and mental culture of the pupils are moderate.

ROCKY RIVER (V.) :—Visited, 27th May, 1869.

Numbers at the examination :—Boys, 12 ; girls, 13 ; total, 25.

1. This school is now held in a substantial brick building, attached to which is a teacher's residence. There is a good supply of furniture and a sufficient one of apparatus. The organization is on the whole satisfactory. 2. The discipline is deficient in firmness, vigilance, and precision, in regard to the operations of the school. The pupils are tolerably neat, clean, and well behaved, but not diligent enough in their work. 3. The prescribed subjects are taught, except sewing and drawing ; the instruction is regulated with moderate skill, and the teaching is tolerably intelligent, but wanting in earnestness and energy. 4. The mental culture and general proficiency of the pupils are moderate.

SAUMAREZ CREEK (V.) :—Visited, 24th March, 1869.

Numbers at the examination :—Boys, 21 ; girls, 24 ; total, 45.

1. The situation of this school is healthy, but not central. The schoolhouse and attached residence have been repaired ; the supply of furniture and apparatus is adequate and in good condition, and the organization is in general very fair. 2. The pupils are clean, orderly, and well behaved ; the aspect of the schoolroom is pleasing, and the moral tone is good. 3. The prescribed course of instruction is followed and judiciously regulated, and the teaching is spirited, painstaking, and fairly intelligent. 4. The mental culture and general proficiency of the pupils range from tolerable to fair.

SEVEN OAKS (V.) :—Visited, 20th October, 1869.

Numbers at the examination :—Boys, 10 ; girls, 8 ; total, 18.

1. The buildings are suitable and in fair condition, and the furniture and apparatus adequate. The playground needs clearing. The organization is fair. 2. The attendance is unsatisfactory ; otherwise the discipline is healthy and the moral tone fair. 3. The prescribed subjects are taught, except singing ; and the instruction is regulated with fair judgment. The teaching is earnest and tolerably intelligent ; the lower classes, however, need more attention. 4. The mental culture and general proficiency of the pupils are from moderate to fair.

SMITH'S FLAT (N.V.) :—Visited, 29th November, 1869.

Numbers at the examination :—Boys, 17 ; girls, 15 ; total, 32.

1. The buildings are in good condition and the supply of furniture and apparatus adequate. The erection of a class-room and the fencing of the playground are needed. 2. The moral tone is pleasing. 3. The prescribed subjects are taught, except sewing and singing ; the instruction is judiciously regulated ; and the teaching is marked by pleasing diligent earnestness and very fair practical skill. 4. The general proficiency of the pupils is very fair.

SOUTHGATE (V.) :—Visited, 11th December, 1869.

Numbers at the examination :—Boys, 9 ; girls, 14 ; total, 23.

1. The playground needs stumping and the well cleaning ; otherwise the organization is good. 2. The discipline is lax and the moral tone unsatisfactory. 3. The prescribed subjects are taught, except singing and drawing, but the instruction is carelessly regulated and the teaching is not only empirical but deficient in liveliness, energy, and diligence. 4. The general proficiency and mental culture of the pupils are moderate.

STRONTIAN (N.V.) :—Visited, —

This school has been closed since the translation of its teacher to the school at Woodford Leigh.

SUMMERLAND (V.) :—Visited, 21st October, 1869.

Numbers at the examination :—Boys, 20 ; girls, 16 ; total, 36.

1. A verandah and repairs to the building are needed ; otherwise the organization is passable. 2. The moral tone is passable. 3. The prescribed subjects are taught, except singing ; the instruction is regulated with fair judgment ; but the teaching proves itself to be less diligent and painstaking than it was last year. 4. The proficiency of the pupils is moderate.

TAMWORTH (V.) :—Visited, 15th June, 1869.

Numbers at the examination :—Boys, 47 ; girls, 32 ; total, 79.

1. Repairs to the roof and well are needed. The schoolroom is much too small for the attendance. A classroom for special religious instruction is urgently needed. A good supply of working materials is provided. 2. The moral tone is pleasing. 3. The prescribed subjects are taught, except singing, and the instruction is regulated with fair skill. The teaching is painstaking and tolerably intelligent. 4. The general proficiency of the pupils ranges from moderate to tolerable.

TENTERFIELD (V.) :—Visited, 14th September, 1869.

Numbers at the examination :—Boys, 26 ; girls, 17 ; total, 43.

1. The buildings need painting, repairing, spouting, and guttering ; otherwise the organization is good. The discipline is strict, vigilant, and effective, but somewhat harsh. The moral tone is very fair. 3. The prescribed subjects are taught, except singing. The instruction is judiciously regulated and imparted with lively energy and fair intelligence. 4. The general proficiency of the pupils is tolerable.

TUCKI TUCKI (N.V.) :—

This school was not visited for want of opportunity.

ULMARRA (V.) :—Visited, 10th December, 1869.

Numbers at the examination :—Boys, 27 ; girls, 28 ; total, 56.

1. The buildings need to be repaired, painted, and freed of the white ant. A supply of good water is badly needed. In other respects the organization is satisfactory. 2. The pupils are clean, decently dressed, cheerful, and well behaved ; the schoolroom is also clean and orderly ; and the moral tone of the school is on the whole good.

UBALLA (V.) :—Visited, 25th May, 1869.

Numbers at the examination :—Boys, 26 ; girls, 26 ; total, 52.

1. This school is deserving of the high praise bestowed upon its appearance, plan, and general organization, and is a good type of what provincial towns' schools should be. 2. The moral tone is very satisfactory. 3. The prescribed subjects are taught with zeal, energy, painstaking, and tolerable efficiency. 4. The general proficiency of the pupils is passable.

VIOLET DALE (V.) :—Visited, 23rd March, 1869.

Numbers at the examination :—Boys, 19 ; girls, 9 ; total, 28.

1. The schoolhouse has been much improved, and a residence has been erected for the teacher. Out-offices are provided, but a supply of water is needed. The organization is fair. 2. The pupils are tolerably neat and clean, respectful in demeanour, but somewhat listless and diffident under examination. The attendance is unsatisfactory. The moral tone is passable. 3. The prescribed subjects are taught, and the instruction is tolerably well regulated. The teaching is marked by earnestness and tolerable intelligence, but the general proficiency of the pupils is only moderate.

WALCHA (V.) :—Visited, 3rd May, 1869.

Numbers at the examination :—Boys, 23 ; girls, 16 ; total, 39.

1. Recent repairs have placed the schoolhouse and teacher's residence in good order. The organization is, on the whole, very fair. 2. The pupils are clean and decently clad, and well behaved. The schoolroom is cleaner and more orderly in appearance, but the school operations require to be performed with greater exactness and quietness. The moral tone is passable. 3. The prescribed subjects are taught with tolerable diligence and fair intelligence. 4. The general proficiency of the pupils ranges from moderate to tolerable.

WALLABADAH (N.V.) :—Visited, 22nd June, 1869.

Numbers at the examination :—Boys, 22 ; girls, 21 ; total, 43.

1. The slabs of the schoolhouse need refitting. The playground also requires to be fenced and provided with lavatory, well, and an additional out-office. The furniture is good and adequate, and organization, in general, tolerable. 2. The moral tone is very satisfactory. 3. The prescribed subjects are taught, the teaching being well regulated, earnest, spirited, and fairly intelligent. 4. The general proficiency of the pupils is from tolerable to very fair.

WARIALDA (V.) :—Visited, 30th September, 1869.

Numbers at the examination :—Boys, 8 ; girls, 6 ; total, 14.

1. The material condition of the school has been improved, but a supply of water is much needed. The organization in other respects is fair. 2. The pupils are clean and decently dressed, well behaved, but neither regular nor punctual in attendance, nor properly regulated in their actions. The schoolroom is kept in cleaner and more orderly condition. 3. The prescribed subjects are taught, except singing and sewing ; the instruction is regulated with fair judgment, but the teaching is marked by a want of industry and intelligence. 4. The general proficiency of the pupils is moderate.

WAUCHOPE (N.V.) :—Visited, 20th April, 1869.

Numbers at the inspection :—Boys, 16 ; girls, 15 ; total, 31.

1. The organization is bad as regards the character of the school buildings and furniture, and the absence of play ground, out-offices, water, and lavatory. 2. The attendance has slightly improved, and the pupils are neat, clean, and well-behaved, but rather dull, diffident, and indiligent. 3. The prescribed subjects are taught, except singing and drawing ; the instruction is better regulated ; and the teaching has improved in earnestness and energy, though still too mechanical.

WOODFORD DALE (V.) :—Visited, 6th December, 1869.

Numbers at the examination :—Boys, 12 ; girls, 17 ; total, 29.

1. This school is now held in a well designed and furnished weatherboard building, with attached teacher's residence and suitably furnished playground. The organization is good. 2. The attendance is low ; the pupils are well-behaved and reasonably clean and tidy ; and the school-work is performed with fair efficiency. The moral tone is fair. 3. The prescribed subjects are taught, except singing, and the instruction is regulated and imparted with earnest industry and fair intelligence. 4. The attainments and mental culture of the pupils are passable.

WOODFORD LEIGH (V.) :—Visited, 7th December, 1869.

Numbers at the examination :—Boys, 12 ; girls, 21 ; total, 33.

1. A newly-established and well organized school. 2. The moral tone is in general pleasing. 3. The prescribed subjects are taught, except singing ; the instruction is arranged with fair skill ; and the teaching, though somewhat stiff and mechanical, is earnest, vigorous, and painstaking. 4. The general proficiency of the pupils is from tolerable to fair.

SUMMARY OF REPORTS ON PROVISIONAL SCHOOLS INSPECTED IN 1869.

ASHFORD (N.V.) :—Visited, 3rd September, 1869.

Numbers at the examination :—Boys, 8 ; girls, 14 ; total, 22.

1. The schoolhouse is a slab structure, commodious, eligibly situated, and in fair condition. The play-ground is without fence, out-offices, or water ; and the furniture is rough and inadequate. There is a tolerable supply of working materials. 2. As regards the appearance and behaviour of the pupils, the aspect of the schoolroom, and the character of the discipline and school routine, the moral tone is passable. 3. The prescribed subjects are taught with tolerable earnestness and ability, but the instruction is defectively regulated. 4. The mental culture and general proficiency of the pupils are moderate.

BUSH GROVE (N.V.) :—Visited, 8th December, 1869.

Numbers at the examination :—Boys, 16 ; girls, 13 ; total, 29.

1. A larger and better designed schoolhouse, with playground, supply of water, and lavatory, are much needed. 2. The attendance is steadily increasing, and the pupils are neat and clean, tolerably diligent, and well behaved. The schoolroom is clean and orderly, but the school operations are not performed with sufficient regularity. The moral tone is fair. 3. Instruction is given in all the subjects, except singing, and is regulated with fair judgment. The teaching is painstaking and moderately intelligent. 4. The mental culture of the pupils is moderate, and their general proficiency passable.

CARROLL (N.V.) :—

This school was not established when I visited its district.

COLDSTREAM (N.V.) :—Visited, 10th December, 1869.

This school was visited incidentally after school hours.

1. A fair weatherboard schoolhouse, but much too small for the attendance, one half of schoolroom being occupied by the teacher as a residence. The playground is fenced in, but not sufficiently cleared of fallen timber, and not provided with out-offices, water, and lavatory. The furniture is defective, but the supply of working materials tolerably adequate. The instruction is imperfectly regulated, and the teaching is apparently of indifferent quality.

CORAKI (V.) :—

This school was not visited for want of opportunity.

DARKWATER CREEK (N.V.) :—Visited, 29th October, 1869.

Numbers at the examination :—Boys, 14 ; girls, 11 ; total, 25.

1. This school is held in a small ill-conditioned slab hut. Out-offices, supply of water, lavatory, and additional furniture are needed. The supply of working materials is tolerable ; otherwise, the organization is indifferent. 2. The moral character of the school is moderate. 3. The instruction is very elementary, and is defectively regulated. The teaching is earnest, but mechanical. 4. The mental culture and proficiency of the pupils are low.

DONDINGALLONG (N.V.) :—Visited, 11th November, 1869.

A "regular inspection" of this school was not held for want of opportunity.

1. The schoolhouse is a newly-erected and suitable weatherboard building, well lighted, but defectively ventilated. There are no out-offices, lavatory, supply of water, and fenced in playground. The supply of apparatus and furniture is fair, but owing to the use of the school as a chapel, the furniture ill designed and arranged.

FERNBANK (N.V.) :—Visited, 8th November, 1869.

The school was closed on the 29th October, the teacher having resigned on account of the small attendance, low school fees, and bad house accommodation.

1. The schoolhouse is used as a chapel, and is fairly suitable. The working materials are sufficient for present requirements ; but additional furniture is needed. There are no out-offices, lavatory, supply of water, and playground. The teacher's residence is merely an enclosed small shed.

GOONOO GOONOO (N.V.) :—

This school has been re-opened as a Provisional School since my visit to the district.

KENTUCKY (N.V.) :—Visited, 13th July, 1869.

Numbers at the examination :—Boys, 13 ; girls, 8 ; total, 21.

1. The schoolhouse is a tolerably suitable slab structure. There is a fair supply of working materials and furniture, which latter is of approved description. Out-offices, lavatory, and supply of water are needed. 2. The moral tone is moderate. 3. The instruction is elementary, and badly regulated. The teaching is apparently earnest, but indifferently skilful. 4. The mental culture and general proficiency of the pupils are low.

LAWRENCE (N.V.) :—Visited, 6th December, 1869.

Numbers at the examination :—Boys, 13 ; girls, 9 ; total, 22.

1. The schoolroom has been enlarged but needs repairs to the ceiling and lining ; fence to playground, lavatory, supply of water, suitable out-offices, and book-press are required ; otherwise, the organization is fair. 2. The moral tone is less satisfactory than it was last year. 3. The prescribed subjects are taught, except singing and sewing. The lesson documents are framed with fair skill ; but the classification is defective. The teaching is painstaking, tolerably vigorous, and intelligent. 4. The mental culture and general proficiency of the pupils range from moderate to fair.

LIMESTONE (N.V.) :—Visited, 25th August, 1869.

Numbers at the examination :—Boys, 10 ; girls, 6 ; total, 16.

1. The school is held in a dirty and dilapidated hut. The furniture is defective in quality and quantity, and the supply of apparatus only moderate. The organization is bad. Tenders have, however, been accepted for the construction of suitable buildings and furniture. 2. The pupils are tolerably neat and clean, and subdued in demeanour, but the moral tone is unsatisfactory as regards the dirty and disorderly

orderly condition of the schoolroom and the irregularity of the school operations. 3. The prescribed subjects are taught, except singing, sewing, and drawing; but the standard course is not strictly followed. The teaching is empirical and moderately effective. 4. The mental culture of the pupils is moderate, and their general proficiency from moderate to tolerable.

NOWENDOC (N.V.) :—Visited, 30th April, 1869.

Numbers at the examination :—Boys, 9; girls, 8; total, 17.

1. A fair slab building, without fire-place, and inconveniently situated. There is neither playground, out-office, lavatory, nor supply of water, and the furniture is defective in quantity, design, and arrangement. The supply of working materials is insufficient. 2. The moral tone is passable. 3. The prescribed subjects are taught, except sewing. The instruction is regulated with tolerable skill, and the teaching is tolerably painstaking and intelligent. 4. The mental culture of the pupils is moderate, and their attainments range from small to moderate.

REDBANK (N.V.) :—Visited, 8th November, 1869.

Numbers at the examination :—Boys, 15; girls, 11; total, 26.

1. The schoolroom has been repaired and a playground with an out-office provided. A lavatory, supply of water, and a more suitable book-press are still needed, to render the organization passable. 2. The pupils in general are clean and orderly but rather diffident; the schoolroom is tolerably neat and clean; but the discipline is rather lax in the details of school management. 3. The instruction comprises the usual subjects, except singing and sewing, and is but moderately well regulated. The teaching also, though passable in point of energy and diligence, is but moderately skilful. 4. The mental culture and attainments of the pupils are moderate.

ROCKY MOUTH (N.V.) :—

This school was not visited for want of opportunity.

ROSE HILL (N.V.) :—

This school was not visited for want of opportunity.

SANCROX (N.V.) :—Visited, 8th November, 1869.

The inspection of this school was only incidental, on account of its very recent establishment.

1. The schoolhouse is a passable slab structure, well lighted and ventilated. The playground is not fenced in nor provided with out-offices, lavatory, or water, and the furniture is wanting in a book-press and hat-pegs. The apparatus is sufficient in diagrams and a blackboard and easel. Few of the pupils have had previous schooling.

SHERWOOD (N.V.) :—Visited, ———

This school was closed at the time I visited its district, on account of the teacher's illness.

1. The organization is very defective, the school being held in the teacher's dining-room, which is not properly furnished for the purpose. There is but a moderate stock of apparatus.

TALOUMBI (N.V.) :—Visited, 1st December, 1869.

I was unable to hold a regular inspection of this school for want of opportunity.

1. The schoolhouse is a comparatively suitable slab building, but not as yet properly furnished, nor provided with out-offices, lavatory, water, or fenced-in playground. 2. The schoolroom is clean and orderly. 3. The lesson documents are framed with moderate intelligence, and the teaching is moreover mechanical and moderately effective. 4. The mental culture and general proficiency of the pupils are moderate.

WALLABY HILLS (N.V.) :—Visited, 10th November, 1869.

Numbers at the examination :—Boys, 13; girls, 9; total, 22.

1. The schoolhouse is suitable, but the material organization is in other respects defective—the furniture rude, insufficient, and ill-arranged, the playground not fenced-in, nor provided with out-offices, lavatory, or water. The supply of working materials is moderate. 2. The pupils are clean and tolerably well-behaved; but in other respects the moral tone of the school is only moderate. 3. The prescribed subjects are taught, except singing, drawing, and object lessons. The instruction is defectively regulated; and the teaching, though earnest and diligent, is but moderately skilful. 4. The general proficiency of the pupils is moderate.

TYNEDALE (N.V.) :—

This school was not visited for want of opportunity.

WARDELL (N.V.) :—

This school was not visited for want of opportunity.

WOODFORD PARK (N.V.) :—Visited, 3rd December, 1869.

Numbers at the examination :—Boys, 8; girls, 14; total, 22.

1. The roof and floor need repairs, the schoolroom better lighting and ventilation, the playground fencing in, and providing with out-offices, water, and lavatory. The supply of furniture and apparatus is passable. The organization is moderate. 2. The schoolroom is clean and tolerably neat; the pupils are clean and well behaved, and the discipline is healthy; but the school operations are not performed with due precision and vigour. The moral tone is tolerable. 3. The prescribed subjects are taught, except singing, sewing, and drawing; but the instruction is indifferently regulated.

YAMBA (N.V.) :—Visited, 30th November, 1869.

Numbers at the examination :—Boys, 4; girls, 7; total, 11.

1. The organization is very defective. The schoolroom is very small, and ill-furnished; there is neither playground, out-offices, lavatory, nor water; and the time of the teacher is partly occupied in the pilot service. A peculiar feature of the school is, that there are no school fees. The supply of working materials

materials is moderate. 2. The pupils, though unaccustomed to drill in or out of school, are well-behaved, and particularly neat and clean; but diffident and low in mental culture. 3. The instruction is very elementary, and is not regulated by the necessary lesson documents. The classification is defective, and the teaching empirical and inefficient. 4. The attainments of the pupils are low.

YETMAN (N.V.) :—Visited, 2nd September, 1869.

Numbers at the examination :—Boys, 10; girls, 6; total, 16.

1. The organization is very defective, except as regards the supply of working materials. The school-room is ill furnished, without flooring, and used by the teacher as a sitting room and bedroom. The roof, moreover, is pervious to the rain, and the windows are of rude structure; besides which, there is no playground, and but indifferent out-offices. 2. The moral tone of the school is indifferent. 3. The prescribed subjects, excepting those of drawing and sewing, are taught with moderate skill; but the instruction is not regulated by the requisite lesson documents, nor is the classification judicious. 4. The mental culture and general proficiency of the pupils are only moderate.

HUNTINGDON & BEECHWOOD (Half-time) :—Visited, 21st April, 1869.

The Beechwood school was not established when I visited the district.

Numbers at the examination :—Boys, 3; girls, 4; total, 7.

1. The schoolhouse is tolerably suitable, but disadvantageously situated. The playground needs clearing and furnishing with out-offices, lavatory, and water. The supply of furniture is moderate, and of working materials, fair. The organization is moderate. 2. The attendance is low, irregular, and unpunctual. The pupils are clean and well-behaved, but not orderly in their movements. The school-room is neat and clean. The moral tone is passable. 3. The prescribed subjects (omitting singing, drawing, and sewing) are taught with tolerable skill. The classification and lesson documents are judicious. 4. The mental culture and general proficiency of the pupils are passable.

MEMORANDUM to the Secretary, Council of Education, Sydney.

GENERAL REPORT FOR 1869.

(B.C., No. 70-132.)

HEREWITH is forwarded the above Report, with the exception of Annex F, which will contain the detailed statement regarding schools, to be appended thereto. The drawing up of this Annex will occupy about a week.

I would further observe that as I only finished the Report at 11 p.m. to night, I have no time to revise or even to read it over, to-morrow being Sunday, previous to forwarding it. From want of time I have been unable to complete the closing paragraphs of the Report to my satisfaction.

Should the Council grant my request to proceed to Sydney, as requested, I would desire to revise it then.

Bathurst, 29 Jany., 1870.

J. M'CREIDIE,
Inspr., Bathurst District.

BATHURST DISTRICT.

INSPECTOR'S General Report of Schools for the year 1869.

THE early part of the year was occupied in writing the General Report of Schools for 1868, and in attending to arrears of work from the previous year. It was not, therefore, until the month of March, that the usual work of inspection began in accordance with the programme furnished to the Council.

1.—GENERAL DETAILS.

At the beginning of 1869 the following schools were in operation in the Bathurst District :—

Public Schools	59
Provisional Schools	24
Half-time Schools	2
Denominational Schools	22
Total	107

Of these, the Lithgow Valley and Macquarie Plains Non-vested Public Schools were closed during the year. The former was situated on the line of Railway, and was closed because of the opening of the section on which it was situated, and the consequent withdrawal of population from the locality. Aid was also withdrawn from the Provisional Schools at Rydal and Sodwalls, on account of the establishment of Public Schools at these places. The Church of England Schools at Fredericktown, Guntawang, O'Connell, and Rylstone, are now in operation as Public Schools, having been established as such on application from the residents of these localities.

Counting each department as a separate school, there were, at the end of the year, the following on the list of schools in the Bathurst District :—

Public Schools	70
Provisional Schools	32
Half-time Schools	4
Denominational Schools	19
Total	125

From these statements it will be seen that there has been an increase during the year of thirteen Public, ten Provisional, and two Half-time, Schools; and a decrease of four Church of England Denominational Schools.

The following were the numbers enrolled for the Quarters ending as undermentioned :—

For Quarter ending	Public, Provisional, and Half-time Schools.	Denominational Schools.	Totals.
December, 1868	3,462	1,683	5,145
March, 1869	3,702	1,619	5,321
June, 1869	3,793	1,525	5,318
September, 1869	3,900	1,568	5,468
December, 1869	4,164	1,574	5,738

It appears therefore, from a comparison of the numbers enrolled at the corresponding periods given of 1868 and 1869, that there has been an *increase* in the Public, Provisional, and Half-time Schools, of 702, and a *decrease* in Denominational Schools of 109, while there has been an *increase* on the whole, of 593.

Eighty-eight schools, as hereafter specified, were examined under the general or regular form of inspection.

Public Schools	55
Provisional Schools	15
Half-time Schools	2
Roman Catholic Schools	9
Church of England Schools	6
Presbyterian School	1
Total	<u>88</u>

Four schools, Public and Provisional, were also visited incidentally, thus making a total of ninety-two visits paid to schools during the year.

About thirty schools belonging to the district have therefore either not been visited at all, or have not undergone the usual inspection. This has arisen from the large amount of clerical work connected with the district, the distances to be traversed in reaching schools, and the time taken up in visiting localities to inquire respecting applications for schools, and to hold special investigations. However desirable it may be to visit every school in the district at least once a year, it is quite impracticable to do so, and give the time and attention required for other duties, which arise incidentally in the course of business, and constantly break in on the programme of inspection, rendering it impossible to visit the schools as laid down therein. In the circumstances, therefore, it has been my aim to inspect the more important schools, and those at a distance from Bathurst, which could not be attended to at an early date in 1870.

Hereto is appended, in a tabular form, a list of the schools which have either not been visited or inspected.

Name of School.	Kind.	Cause of Non-Inspection.
Burrowa	Pub.	New school—not open.
Burkeville	Pub.	Do.
Cullenbone	Pub.	Closed when I visited the locality.
Cunningar	Pub.	New school—not open.
Duramana	Pub.	New school—want of time.
Fredericktown	Pub.	Closed when I visited the locality.
Gulgong	Pub.	Closed.
Guntawang	Pub.	Incidentally visited.
Lawson's Creek	Pub.	Do.
Limekilns	Pub.	Do.
Mount Tarana	Pub.	New school—want of time.
Mutton's Falls	Pub.	Do.
Spring Grove	Pub.	Closed at the time of my visit.
Wattle Flat.....	Pub.	Want of time.
Coombing	H. T.	} New schools—want of time.
Teesdale	H. T.	
Bourke	Prov.	Want of time.
Cow Flats	Prov.	Want of time—new school.
Fitzgerald Valley	Prov.	Do.
Glanmire.....	Prov.	Want of time—new school.
Goolagong	Prov.	Do. do.
Ilford	Prov.	Incidentally visited.
Mackenzie's Creek.....	Prov.	Want of time.
Macquarie Plains	Prov.	Do.
Morungulan	Prov.	New school—opened after my visit to the locality.
Mountain Run	Prov.	Want of time.
Merrindee	Prov.	Closed when I visited the locality.
Newrea	Prov.	New school—opened after my visit to the locality.
Obley	Prov.	Do.
South Apsley	Prov.	Want of time.
Spring Terrace	Prov.	New school—want of time.
Trendon Grange	Prov.	Do. do.
Sofala	C. E.	} Want of time.
Sofala	R. C.	

THE following statement contains a detailed summary of the amount of work done during the year :—

Number of—	
Schools inspected (including incidental visits)	92
Pupils enrolled at the date of inspection	4,570
Pupils present at the date of inspection	3,641
Visits of inquiry and special investigations	48
Teachers, pupil teachers, and candidates examined	57
Reports, memoranda, &c.	1,753
Miles travelled	4,200

As supplementary to the above specific details of the manner in which my time has been occupied, it may be remarked that a considerable portion of an Inspector's time is spent, when travelling, in interviews with teachers and members of School Boards, attending meetings of the latter, inquiring into the means of education in the localities through which he may pass, and furnishing information to those who may be desirous of promoting the establishment of schools. But for the pressure of other duties, which do not admit of the necessary leisure, greater attention to these matters would be desirable.

Annex A may be consulted for details as to the numbers and ages, &c., of the pupils enrolled and present, at the date of inspection, in the several kinds of schools, and reference may be made to Annex F for a Summary of the Reports on Schools.

II.—INSPECTION.

Of the ninety-two schools inspected, more than three-fourths have undergone the regular examination; the remainder—with the exception of four, which were only incidentally visited—were subjected to inspection under the general form. No schools have received ordinary inspection, which is intended to follow the general and regular inspection, whenever practicable, and is well calculated to afford an

Inspector

Inspector a clear insight into the every-day life and working of the school, of which he can only obtain glimpses on the occasion of the regular examination. To inspector and teacher alike, these would prove valuable. The former would be in a position to detect faults in discipline and methods of instruction not otherwise to be discovered, and the latter would profit by the suggestions and directions arising from the observations of the former. The earnest and faithful teacher would welcome such visits, and court the criticism resulting therefrom; the careless and indifferent would be roused to greater exertion and care; and all would receive benefit. As the Bathurst District now exists, however, nothing can be accomplished in this direction.

The character of the inspection has not differed from that of previous years. In examining to test the attainments of a class, the period of enrolment has been taken into account in forming an estimate of the results obtained, and constant reference made to the requirements of the Council.

The time occupied in examining a school has varied from four to nine hours a day, and in a few instances the examination has been continued on another day.

III.—ORGANIZATION.

Situations.—The situations of the large majority of Public and Denominational Schools are suitable but many of the Provisional Schools have faulty sites. This sometimes arises from want of attention and knowledge on the part of the promoters of the school, when selecting a site for their building, but often from the school being conducted in some old building, which is badly situated.

Of all the schools inspected in the usual way, sixty-eight are from fair to good, and twenty from tolerable to indifferent.

Buildings.—In the course of the year considerable improvement has taken place in regard to school-buildings. The Bathurst Girls' and Infants' Roman Catholic Schools are now conducted in new and suitable schoolrooms, belonging to the Convent recently erected at Bathurst; and the Bathurst Boys' and Mudgee Roman Catholic Schools have also been improved.

The following new Public Vested Schools have either been built during the year, or were in course of erection at its close:—Burrowa, Burkeville, Cunningham, Crudine, Guyong, Hill End, and Pipeclay Creek, while active steps have been taken to secure suitable Public School premises at Forbes, Grenfell, Gulgong, Marengo, Palmer's Oaky, Rydal, Rylstone, and Wilberree. Improvements or additions have been projected or carried out at Blayney, Dubbo, Evans' Plains, Molong, Mount Macquarie, Mudgee, Ophir Road, and Teapot Swamp Public Schools.

Of schools not inspected in the usual way, the new premises at Limekilns have been opened during the year, and a new Church of England schoolroom has been built at Sofala, while the Roman Catholic premises at the same place have been improved by the erection of an additional room. Considerable spirit and earnestness have been manifested along the line of railway, in the erection of Non-Vested Public School buildings. Of these, considering its temporary character, that at Sodwalls reflects credit on its promoters. The Public School buildings at Hargraves and Wattle Flat are in a wretched condition. New premises are urgently needed at these places as well as at Forbes and Grenfell. The Roman Catholic building at Wellington also needs replacing.

Teachers' Residences.—Of Public Schools, forty-six out of fifty-five are furnished with teachers' residences, and of the nine without them, all are of the Non-Vested kind, except Grenfell and Marchvale, which were also originally of that class. Ten Denominational Schools are provided with residences, which are the property of the denomination to which the schools belong. The teachers of the remaining six schools live in private houses, the rents of which, as I am informed, are, in most cases, paid by the Local Boards. Some of these residences are too small for the decent accommodation of a married teacher with a family, and a few are in a wretched condition as to repair and general appearance. Those connected with the Hargraves and Wattle Flat Public, and the Mudgee Roman Catholic, Schools, deserve prominent notice in this respect; their condition is disgraceful. Only a few Provisional Schools are furnished with residences.

Playgrounds.—Twenty playgrounds are unfenced, and several schools can scarcely be said to have any playground. Thirty fall to be classed under the heading of tolerable to indifferent, while fifty-seven range from fair to good. Dividing fences between the sections appropriated to boys and girls are rarely seen, although it is desirable that they should be found in every playground of sufficient size. In some cases the necessary outhouses are altogether wanting, and in many instances there are not *separate* closets for the sexes,—one divided by a partition of slabs, with wide openings between, being all that is frequently provided. In such circumstances common notions of delicacy can scarcely be entertained, nor habits of decency fostered as they should be by every teacher. In only one or two playgrounds are sheds to be found for the protection of the children from the weather, and I cannot recall to mind observing any systematic attempt at rendering the playground attractive by planting trees or flowers around its borders. Few teachers seem to understand or appreciate fully the value of the playground in this respect, or as affording scope for observing quietly and unobtrusively the tempers and general dispositions and characters of their pupils, as well as for encouraging kindly feelings, and fostering those social virtues which the intercourse of the playground is fitted to develop. Hence the supervision of the pupils when at play is commonly very slack, and in some instances is not attended to at all, the teacher contenting himself with inquiring into complaints, and punishing for faults, which would never have been committed in his presence. In this, as in most cases, "prevention is better than cure," and such superintendence is as much the teacher's duty as enforcing discipline, or imparting instruction in school.

Furniture and Apparatus.—On the whole, the supply of furniture and apparatus in Public and Denominational Schools is reasonably satisfactory, but only moderately so in Provisional Schools. The furniture in the former has been improved both in quantity and quality, and the stock of apparatus is more ample and of a better kind than it was during the previous year. Many Provisional Schools still need black-boards, but all other schools, with a single exception, have one or more. The exceptional case alluded to was caused by the teacher not applying in the usual way for it. In a few instances the supply of apparatus was not so complete as was to be wished, owing to the articles applied for not being in stock at the time.

Books and Registers.—In nearly all Public and Denominational Schools the supply of books is sufficient and suitable. It may be observed here, that the waste of books in some schools, as compared with others, is remarkable, and cannot but lead to the conclusion that the teachers of the schools referred to, do not exercise proper care in their preservation. In six-sevenths of the schools inspected, the records are from fair to good. In the Provisional Schools, as may be seen upon reference to Annex B, these documents are not well kept. This has arisen chiefly from ignorance, but occasionally from carelessness and sheer incompetency.

IV.—MORAL CHARACTER OF SCHOOLS.

Punctuality and Regularity.—In regard to punctuality, sixty-five of the schools inspected rank from fair to good. In this respect, therefore, the majority of schools appear to be in a reasonably satisfactory condition. It is difficult, however, to form an accurate estimate of the condition of a school in this matter from observation on the day of inspection, as the proposed visit for that purpose is almost invariably known beforehand, and pupils rarely come late on such an occasion. Were a daily record kept of all late arrivals, it would probably do something towards curing the evil, and also furnish correct information on the subject, which has to be gathered at present from other sources. As a rule, this feature in the discipline of a school is dependent on the personal influence and example of the teacher. When, therefore, he is respected and popular, and has acquired that moral influence which every earnest teacher should possess, there is generally little fault to be found in this particular.

Taking

Taking as a basis for calculation the returns for the various quarters during the year, it appears that the average attendance of the numbers enrolled has been 67 per cent. Several schools during some of the quarters have only reached a per-centage of 50, while a few of the larger and more important have reached, and occasionally exceeded, 80 per cent. of average attendance, which is perhaps satisfactory, taking absolutely necessary causes of absence into account. Viewed, however, as a whole, the regularity of the attendance at the schools in the Bathurst District cannot be regarded as satisfactory. In country districts the irregularity of his pupils is the most disheartening obstacle in the teacher's path, paralysing his best efforts, and causing him almost to give up his weary work in despair. The "task" of instruction, in such circumstances, is anything but "delightful," and soon becomes irksome to both pupil and teacher, while the progress made must be small, and the moral influence of the school produce but little effect. The teacher, by his personal character and moral influence, may be powerful in ensuring punctuality on the part of the pupil, but in the matter of regularity he is comparatively impotent, for here he has to contend with the ignorance, the apathy, and the pecuniary interests of the parent. To counteract the ruinous effects of this prevailing irregularity, and cause the education of many children who do not now attend any school, even when accessible to them, I believe some legislative enactment will be necessary to compel parents to do their duty in this matter. The practicability of such a measure may be doubted; but few will question that something of the kind is not only desirable but necessary. That public opinion is tending strongly in this direction in England, may be seen by the formation of the "National Education League," one of whose leading principles is that of compulsory education. The following are the words of one who has well earned the right to speak with effect on the subject:—"I am an advocate of compulsory education. I hold that no man has a right to bring up his child a burden, a nuisance, and a danger to society; and that if he is bound by law to feed its body, by law also he should be bound to educate and cultivate its mind. If he will breed up children as savages let him retire to the desert. For those employed in mines and mills and otherwise we have already a compulsory system; and there are thousands of poor, unhappy, neglected children that need it as much, or even more than these * * * Some talk much nonsense about the liberty of the subject, and how unpopular a compulsory system of education would be in a free country; but there is no compulsion to the willing—*volenti non fit injuria*. Those who are doing their duty by their children can have no objection to such a system; and those who are not, need it. At present the first 'having not the law are a law unto themselves.' The passing of a compulsory Act, therefore, would make no difference to them; but from long and extensive acquaintance with the condition of the ignorant and lapsed classes, I believe it to be indispensable to their improvement and elevation * * * The upper classes, who know very little of the poor, may oppose a compulsory system; but *I have not seen a sober, well-doing, intelligent man who did so. He knows the need of it.*"

Cleanliness.—The cleanliness of the pupils is generally found to be satisfactory. On the day of examination it is rare to find anyone that is not clean and tidy, and dressed with more or less neatness. As, however, on that day the pupils come specially prepared for the Inspector's visit, there is not an absolute certainty as to what is the normal condition of their cleanliness. This remark applies equally, of course, to the state of the schoolroom and apparatus. Were no intimation of such visits given, the real state as to cleanliness could be ascertained with more accuracy than it can be at present, except when incidental or ordinary inspections take place. The closets are often far from satisfactory in this respect, and the playground is sometimes found untidy from papers, &c., scattered about. In very few schools is there any provision made in the shape of washing apparatus for enforcing habits of cleanliness.

Order and Government.—In about two-thirds of the schools the order and government are from fair to good, the remainder being from tolerable to indifferent. In regard to the position of the desks and the arrangement of apparatus, &c., some improvement has been effected, and the order so far improved thereby, but there is still room for amendment in regard to order in many schools. The successful working of every school is dependent on the order and government maintained therein, and failure in these points on the part of the teacher is a fatal barrier to the production of good results. In fact instruction is thrown away where the order is bad and the government feeble and vacillating. Where they are satisfactory the demeanour of the pupils is quiet and cheerful; they are attentive while under instruction, which is thereby rendered effective, apply themselves vigorously to their work, obey orders with alacrity, perform the usual class movements with precision and promptitude, and carry on the class work with quiet energy and determination. This state of things is only found in a few of the best schools. In some instances whispering and prompting during lessons are attempted, a listlessness and mental inactivity prevail, while the marching in and out of school and the passing of materials, especially slates, are performed in a noisy and slovenly way, which shows a want of attention or disciplinary power on the part of the master. The lounging attitude of the pupils too, and the shuffling of feet beneath the desks, manifest an undesirable state of things, which the teacher cannot be too prompt or careful in correcting. Constant vigilance, and a uniform firmness of demeanour, together with making all possible previous arrangements to facilitate the working of the school, are necessary to reform these abuses. Corporal punishment is not often resorted to, other expedients being adopted for the correction of offenders, unless in exceptional cases. As a rule, the order and government in Provisional Schools are of a low type. Half-time Schools are more satisfactory in these respects. The cause of this is obvious, the teachers in the latter class of schools being regularly trained men, while those in the former are not.

There are but few schools in which a regular system of drill is practised. This is to be regretted, as it is a good corrective of slovenly habits, and a powerful agent in promoting the general discipline of a school.

V.—INSTRUCTION.

Classification and Occupation.—In respect of classification and occupation considerable improvement has taken place during the year in Public and Denominational Schools. The principles on which judicious classification should be based seem better understood by many and appear to have been carried into practice with fair success. The pupils seem, on the whole, more equally matched in point of attainments and mental development. Still, occasional instances are found of promotions being made before the pupils are ripe for removal, while on the other hand cases are sometimes met of children being detained in a class long after they should have been removed to another. In one school I found an entire class presented as a second, which was equal, in point of attainments, to a third in at least the second quarter of enrolment. The teacher expected commendation instead of blame in the matter, and seemed surprised that his classification should be condemned. He evidently looked for an excellent mark instead of reproof. In a few schools the tendency to form too many divisions in the first class still continues, but generally speaking this error is avoided. In Provisional Schools the classification is seldom of a satisfactory kind.

The occupation is regulated by a time-table and programmes of lessons for each class. Except in several Provisional Schools these documents are found in nearly every school in the district. For the most part the time-tables are formed with reasonable judgment, and on the appropriate principles of furnishing constant and suitable work to every child, subordinating the time allotted to each subject to its relative importance, and alternating the lessons so that the teacher shall be enabled to give his attention specially to each class in succession. Considerable improvement has taken place in some schools in the framing of the programmes of lessons, but there is still room for amendment in a large number of schools, and especially in those of the Provisional kind, in many of which, indeed, there is no attempt made to construct such documents. In the programmes for the first class the columns set apart for writing and arithmetic in the programme are rarely filled up satisfactorily, and indicate but small knowledge of the best modes of teaching these subjects to very young children. The entries are often vague and diffuse and almost useless as a guide for the work of the class. A programme should be so precise and clear that any stranger with an ordinary amount of intelligence in such matters could, without difficulty, understand it.

Methods.—

Methods.—As no inspections of the ordinary kind have taken place during the year, the quality of the methods in use can only be inferred from the results obtained on examination. Judging from these, they appear to be in a considerable number of schools of a reasonably satisfactory character. Except in the cases of untrained teachers in Public and Denominational Schools, and those conducting Provisional Schools, the methods appear to be more or less successful imitations of those of the modern kind. There are few thoroughly conversant with good methods, and at the same time capable of reducing them successfully to practice. Much depends on the character of the teacher as to his success in the application of the methods with which he is acquainted. Even moderately skilful methods, in the hands of an industrious and earnest teacher, will be productive of better results than good methods applied with small energy, industry, or intelligence. As has been said, "Character without methods never fails, we may rest assured, of at least partial success; but the most skilful methods, without the elements of personal character, will invariably fail to attain the great object of the school." Vigorous and intelligent questioning seems to have been more practised than heretofore. This with frequent repetition of previous work should always accompany any methods, and the intelligent teacher will not adhere slavishly to one particular mode of teaching a subject. Variety of treatment, with earnestness and penetrative force in the teaching, will invariably produce satisfactory results, where the irregularity of attendance does not prevent progress.

SUBJECTS.

The subjects taught are those prescribed by the Council, and include reading, writing, dictation, arithmetic, grammar, geography, object lessons, needlework, in the majority of schools, together with singing and drawing when the teachers are competent to teach them. Singing is practised in thirty-eight schools, and drawing in forty-two.

Reading.—The subject of reading is supposed to comprehend oral spelling, meanings of words, thorough explanation and mastery of the subject-matter of the lessons, and in its more advanced stages the giving of equivalent phrases, together with exercises in derivation and in paraphrasing suitable passages that may occur in the lesson. Spellings and meanings are fairly attended to in most schools, but the giving of synonymous expressions and derivation have too little prominence, while paraphrasing is scarcely at all practised. In regard to the art of reading, in some schools there has been a marked improvement, but in a large number the subject continues to be treated in an unsatisfactory manner. The same faults still exist in a large measure as in the previous year. The tone is low, drawling, and far from natural; the pronunciation is of a slovenly character; the enunciation wants firmness and deliberation, and is therefore indistinct; while emphasis and expression are total failures. Generally speaking, there seems to be a want of preparation on the part of the teacher, who should come before his class master of the lesson, both as to its subject-matter and the art of reading it. Reading *aloud* should be practised more *in* schools and *out of* it. "To tell a child to 'speak out' or to 'mind his stops' is an utterly useless expenditure of words." Read it before him, and he will imitate what he hears. It has been well said,—"If a schoolmaster wishes to learn to read well, let him first learn to read himself." The quality of reading among teachers themselves must first be raised before a decided improvement in their pupils will take place. In some schools the reading is materially injured by corrections being made while the pupil is reading. This should not be permitted. The attention of the class will be kept up as well by the pupils pointing out errors after each has read, and the reader will not be bewildered or confused by the interruptions.

The "Alphabetic Method" of teaching beginners, though irrational and absurd, still prevails. The names of the letters, and not the sounds are taught first, although the former have no connection, or but a slight one with the latter, and the child continues to "spell" his way onward through bee-a-tee, bat, see-a-tee, cat, &c., until by dint of sheer force of memory and association he gains in a laborious way some power of reading. When urged to introduce the phonic system, it is said,—"Parents would not understand the system and I should lose my scholars." The black-board is seldom used in giving lessons to beginners, and books are put too soon into their hands. One of the greatest drawbacks to securing good reading in the first class is the habit (a vicious result of the "Alphabetic Method") of spelling each word before pronouncing it. It is painful to listen to the "dry-drilled lesson, forced down word by word" in this fashion. I cannot forbear from quoting the following sentences regarding the phonic method:—"In learning to read according to the phonic method, the child, in addition to possessing all the advantages of the method ordinarily adopted at present, is furnished with an instrument—namely, the sounds of the letters—which he can *himself* apply with a view to fresh acquisitions. He thereby has his love of power and discovery gratified, and in the pleasing act of word elaboration, he finds an exercise of understanding, humble indeed in its object, but beneficial in its disciplinary effects, and most interesting to him.

Writing and Dictation.—The writing from copy on slates in the first class is now, generally speaking, of a better quality than before. More care is taken in the arranging of letters and words in the order of their simplicity, and slates are rarely found unruled, or pencils of an improper kind. Formerly the alphabet was gone over from A to Z in many instances, whereas now in all the better class of schools the alphabet is analyzed, and letters combined into words as soon as those given admit of it. As in reading, the quality of the writing depends much on the ability of the teacher in that respect, it being usually found that where the teacher excels in this subject, the writing is of a superior kind. The copy-books in use are often far from suitable, the head-lines being objectionable in various respects. A uniform and properly graduated series of copy-books is much needed. In a few schools the condition of the copy-books as to cleanliness, defacement of covers by writing and drawing of figures on them, is far from creditable, and exhibits gross carelessness. Dictation is generally fairly done in all the classes. The most marked improvement, however, in this particular, is discernible in the first class, greater prominence having been given to it in most schools than had been the previous practice. The value of this exercise in cultivating the attention is sometimes weakened by repeating the words several times. A few words at a time should be given, and they should be dictated *only once*. The revision of the work too requires more care in certain cases.

Arithmetic.—In the majority of schools notation is fairly taught. Some success has been attained in mental arithmetic in many schools, very marked advance having been made in a few. It still, however, requires a more practical direction than is generally given to it. It is found that a practical question of no great difficulty will puzzle and perplex pupils who can calculate with rapidity and accuracy prices of dozens and other stock questions of that class. This shows a weak point to which teachers should give attention. The same remark is applicable to slate arithmetic. The practical utility of the subject is not sufficiently impressed on the children's minds, and hence its value is not appreciated by them; considering the importance of the subject, and the amount of time devoted to it, the results obtained on the whole are not of a very satisfactory character. A more extensive use of the black-board is needed for explanation and illustration of principles, and the constant working of questions, many of which it would be well to make the class work out under mutual correction. The pupils in many instances are left too much and too long to their own unaided efforts, and the revision of previous work does not seem sufficiently attended to. Were teachers to discard books, study carefully the wants of their classes, and frame their questions accordingly, greater progress would be made, and the subject more thoroughly mastered. There seems a want of vigorous questioning, and an impression that such is not so necessary in this as other subjects.

Grammar.—In a few of the better class of schools this subject is well treated, and good results are obtained; but, on the whole, it can only be considered partially satisfactory. The attainments of the pupils therein, to the extent of about half of those examined, range from tolerable to indifferent. In Denominational Schools—except in a few instances—only moderate success has been attained in analysis. Except in the reproduction of object and other lessons, composition is little practised.

Geography.—

Geography.—On the whole, the geography of New South Wales is beginning to be tolerably mastered by the more advanced pupils, but there is too much cramming by rote in many schools. Of 1,771 examined in this subject, 833 are from tolerable to indifferent, and the remainder from fair to good, about 10 per cent. being good. In general the subject is taught orally, with the aid of maps, but the black-board seems to be little used by way of illustration; map drawing, on slates or otherwise, is not much practised.

Object Lessons.—This subject is represented as being taught in nearly every school, but in a large number it is more nominal than real. In only a few schools are these lessons given with intelligence and effect. It is true that a considerable amount of information is crammed into the pupils' minds, but the result, so far as strengthening and developing the mental powers, is meagre.

Singing and Drawing.—Singing is practised, as already stated, in thirty-eight schools, and drawing in forty-two. In about one-half of the number singing is taught by ear; in the remainder from the tonic-sol-fa notation. In several schools considerable proficiency has been attained. The drawing is principally on slates, only a small per-centage using paper. In a few schools the results are fair.

VI.—TEACHERS.

At the close of the year the number of teachers in the Bathurst District, holding the classifications indicated in the annexed table, was as follows:

CLASS I.		CLASS II.		CLASS III.			Pro-bationers.	Total.
Section A.	Section B.	Section A.	Section B.	Section A.	Section B.	Section C.		
.....	1	1	12	31	20	13	10	88

Besides these, there were in charge of Provisional Schools twenty-five teachers, none of which hold certificates, as they are not subject to examination. The total number of teachers therefore was 113. Eleven pupil teachers were also employed in the Public and Denominational Schools of the district.

Taken as a body, the teachers are, I believe, earnest and faithful in the discharge of their duties.

VII.—LOCAL SUPERVISION.

In Denominational Schools, as a rule, the Clergyman is careful in supervising the school, especially as regards the attendance. Some Public School Boards do their duty, and take much interest in the schools with which they are connected, but the majority are very remiss and apathetic.

J. McCREDIE,

Inspector, Bathurst District.

Bathurst, 29th January, 1870.

ANNEX A.

ATTENDANCE OF PUPILS.

Public Schools.

ANNEX F.

DETAILED Statement of the condition of Schools in the Bathurst District, visited in 1869.

PUBLIC SCHOOLS.

BATHURST (N.V.)—Infants :—Visited, 20th October, 1869.

Numbers enrolled :—Boys, 55 ; girls, 44 ; total, 99.

Numbers present :—Boys, 42 ; girls, 37 ; total, 79.

The schoolroom is much too small for the attendance, and is not furnished with a gallery. The want of a suitable playground is also a serious defect. The material condition is not satisfactory. The discipline is genial, and marked by firmness and vigilance. The teaching is characterized by energy, fair intelligence, and a systematic arrangement of subjects. The attainments range from fair to good, and the prevailing spirit of the school is pleasing. New vested premises are urgently needed, but inability to procure a suitable site has hitherto prevented any definite action in the matter.

BATHURST (N.V.)—Primary :—Visited, 21st October, 1869.

Numbers enrolled :—Boys, 84 ; girls, 54 ; total, 138.

Numbers present :—Boys, 70 ; girls, 47 ; total, 117.

The schoolroom is commodious and suitable, but there is still no playground belonging to the school. The order is good, and the discipline, on the whole, is fair. The lesson documents are judiciously framed, and the teaching is earnest and fairly skilful. The attainments are, on the whole, reasonably satisfactory, and the moral tone is very fair. The elements of Latin are taught to a few boys.

BINALONG (V.)—Visited, 13th April, 1869.

Numbers enrolled :—Boys, 22 ; girls, 18 ; total, 40.

Numbers present :—Boys, 22 ; girls, 18 ; total, 40.

The material condition of the school is, on the whole, reasonably satisfactory. The discipline is healthy, and the teaching is conducted with earnestness and industry, while the lesson documents are fairly framed. The average proficiency is fairly satisfactory, and the moral tone is fair.

BLAYNEY (V.)—Visited, 17th May, 1869.

Numbers enrolled :—Boys, 15 ; girls, 11 ; total, 26.

Numbers present :—Boys, 15 ; girls, 8 ; total, 23.

The material aspect of the school is good. Steps are being taken to enlarge the teacher's residence, which is rather small. The discipline is tolerable. Greater promptness and vigilance are desirable, and more attention to the minor points of order. The lesson documents are tolerably arranged, and the teaching is earnest and industrious, but fails in impressiveness. The proficiency and general spirit of the school are tolerable.

BOWENFELLS (V.) :—Visited, 23rd August, 1869.

Numbers enrolled :—Boys, 34 ; girls, 20 ; total, 54.

Numbers present :—Boys, 23 ; girls, 15 ; total, 38.

The school is well furnished, and supplied with necessary teaching appliances. The discipline continues effective, and the instructional documents are properly compiled. The proficiency is reasonably satisfactory, and the prevailing spirit of the school is pleasing. Owing to the removal of the population along the line of Railway, the attendance has been greatly diminished.

BURRUNDULLA (N.V.)—Visited, 3rd December, 1869.

Numbers enrolled :—Boys, 25 ; girls, 29 ; total, 54.

Numbers present :—Boys, 21 ; girls, 18 ; total, 39.

The organization has been improved in the matter of furniture, some new desks having been provided. The discipline is careful and marked by energy, and the lesson documents are fairly arranged. The average proficiency is from fair to very fair, and the prevailing tone of the school is healthy.

CADIA (V.)—Visited, 1st November, 1869.

Numbers enrolled :—Boys, 22 ; girls, 20 ; total, 42.

Numbers present :—Boys, 20 ; girls, 18 ; total, 38.

The schoolroom is well furnished and supplied with the necessary appliances for teaching. Materially, therefore, its condition is good. More attention to the minor points of order is needed, and the government is not sufficiently prompt and vigilant. The instruction is defective in care, industry, and thoroughness. The pupils, especially in the first class, do not answer well, and are indisposed to mental exertion. With a few exceptions their thinking powers are small. The results of the examination are unsatisfactory, and the moral tone of the school is not healthy.

CARCOAR (V.) :—Visited, 19th May, 1869.

Numbers enrolled :—Boys, 25 ; girls, 15 ; total, 40.

Numbers present :—Boys, 18 ; girls, 11 ; total, 29.

The material condition is, on the whole, good. The discipline is healthy, but more vigour in its application is desirable. The lesson documents are judiciously arranged, and the teaching is industrious. The attainments on the average range from fair to very fair, and the general spirit of the school is fairly pleasing. For reasons known to the Council the attendance has fallen off.

CARRAWA (V.) :—Visited, 22nd July, 1869.

Numbers enrolled :—Boys, 10 ; girls, 8 ; total, 18.

Numbers present :—Boys, 9 ; girls, 7 ; total, 16.

The school ground is not fenced, but otherwise the material state is respectable. The discipline lacks attention to detail, and the instruction is not guided by the usual documents. The proficiency and moral tone are moderate.

COWRA (V.) :—Visited, 23rd April, 1869.

Numbers enrolled :—Boys, 40 ; girls, 43 ; total, 83.

Numbers present :—Boys, 31 ; girls, 27 ; total, 58.

The playground has been fenced since last inspection. The material condition is good. The discipline is vigorous and healthy, and the instructional documents are well arranged. The attainments are satisfactory, and the moral tone is good.

CRUDINE (N.V.) :—Visited, 10th June, 1869.

Numbers enrolled :—Boys, 12 ; girls, 9 ; total, 21.

Numbers present :—Boys, 10 ; girls, 9 ; total, 19.

From the conduct of the contractor, the new Vested building is still unfinished, and the school is therefore held in a shepherd's hut. The government is firm, and the lesson documents are tolerably constructed. In the circumstances the attainments are tolerably satisfactory, and the moral tone is tolerable.

CUDGEGONG (N.V.) :—Visited, 6th December, 1869.

Numbers enrolled :—Boys, 18 ; girls, 14 ; total, 32.

Numbers present :—Boys, 17 ; girls, 12 ; total, 29.

The building is suitable, but the desks need repairing or replacing, and the playground is not fenced. The accommodation for the teacher is small and uncomfortable. The discipline is wanting in promptness and vigilance, and the instruction is not properly regulated. The attainments are unequal ; the average proficiency is from moderate to tolerable. The moral tone is only moderate, but has improved.

CURRAJONG (N.V.) :—Visited, 22nd March, 1869.

Numbers enrolled :—Boys, 21 ; girls, 11 ; total, 32.

Numbers present :—Boys, 16 ; girls, 9 ; total, 25.

The building is suitable, and the school is well furnished and supplied with apparatus. The playground is unfenced. The discipline is healthy, and the instruction is fairly regulated. The proficiency is reasonably satisfactory, and the spirit of the school is fairly pleasing.

DENNIS ISLAND (N.V.) :—Visited, 23rd July, 1869.

Numbers enrolled :—Boys, 19 ; girls, 13 ; total, 32.

Numbers present :—Boys, 17 ; girls, 13 ; total, 30.

The furniture is neither suitable nor properly arranged, and the teacher's residence is only partially floored. The discipline is fairly effective, but marred by the bad arrangement of the desks, and the necessary instructional documents are fairly drawn up. The attainments, are on the whole, reasonably satisfactory, considering the previous proficiency, and the general spirit of the school is fairly pleasing.

DUBBO (V.) :—Visited, 12th November, 1869.

Numbers enrolled :—Boys, 39 ; girls, 35 ; total, 74.

Numbers present :—Boys, 33 ; girls, 29 ; total, 62.

The premises have been repaired since last inspection, and may now be considered fairly satisfactory. The discipline is prompt and vigorous, and the lesson documents are arranged with fair skill. The pupils are spirited and fairly correct in answering. The average proficiency ranks from fair to very fair, and the moral tone is healthy.

EGLINTON (N.V.) :—Visited, 13th July, 1869.

Numbers enrolled :—Boys, 14 ; girls, 10 ; total, 24.

Numbers present :—Boys, 13 ; girls, 10 ; total, 23.

The teacher's residence is too small, but otherwise materially the school is fair. The discipline is firm and energetic, and the lesson documents are fairly framed. The average proficiency is from tolerable to fair, and the tone of the school is fairly pleasing.

EVANS' PLAINS (V.) :—Visited, 14th July, 1869.

Numbers enrolled :—Boys, 17 ; girls, 22 ; total, 39.

Numbers present :—Boys, 16 ; girls, 20 ; total, 36.

The teacher's dwelling needs repair, and the erection of a verandah is desirable ; otherwise there is no particular defect in its material aspect. The discipline is quiet, but firm and vigilant, and the instruction is well regulated. The attainments are reasonably satisfactory, and the moral tone is very fair.

FISH RIVER CREEK (V.) :—Visited, 20th September, 1869.

Numbers enrolled :—Boys, 16 ; girls, 23 ; total, 39.

Numbers present :—Boys, 9 ; girls, 12 ; total, 21.

Like most buildings converted to school purposes, the premises are only tolerably suitable. A supply of furniture is much needed. The discipline wants firmness, promptitude, and vigilance, and there are no lesson documents to guide the instruction. The attainments and moral tone are tolerable. On account of the inclemency of the weather the attendance was smaller than usual.

FORBES (N.V.) :—Visited, 15th March, 1869.

Numbers enrolled :—Boys, 70 ; girls, 53 ; total, 123.

Numbers present :—Boys, 38 ; girls, 29 ; total, 67.

The material condition is still unsatisfactory, though the building has been improved since last inspection. There are no closets, and the playground is unfenced. Active steps have since been taken to erect new vested premises. The discipline is fair, and the instruction is well regulated. The proficiency ranges, on the whole, from tolerable to fair, and the prevailing spirit of the school is pleasing.

GREENFELL (V.) :—Visited, 25th March, 1869.

Numbers enrolled :—Boys, 92 ; girls, 44 ; total, 136.

Numbers present :—Boys, 47 ; girls, 18 ; total, 65.

The building is too small, is not well situated, and is in bad repair. The playground is unfenced. Altogether the material condition is very unsatisfactory. The discipline is kindly, but prompt, and the instruction is properly regulated. Considering that the teacher has had no assistance, the attainments are reasonably satisfactory, and the moral tone is fair. The small attendance was owing to the prevalence of sickness among the children.

HARGRAVES (V.) :—Visited, 10th December, 1869.

Numbers enrolled :—Boys, 22 ; girls, 24 ; total, 46.

Numbers present :—Boys, 15 ; girls, 21 ; total, 36.

The premises are in a wretched condition, and urgently need replacing. Neither the schoolroom nor the teacher's residence will be fit for occupation next winter. The discipline is careful, and the instruction is tolerably regulated. The proficiency varies, for the most part, from tolerable to fair, and the moral tone is tolerably healthy.

KIRKCONNELL (V.) :—Visited, 13th August, 1869.

Numbers enrolled :—Boys, 30 ; girls, 28 ; total, 58.

Numbers present :—Boys, 29 ; girls, 28 ; total, 57.

The organization is good. The discipline is thorough, and the lesson documents are skilfully constructed, while the teaching is earnest and impressive. The attainments and general intelligence of the pupils are satisfactory, and the moral tone is good. In every respect this school is worthy of commendation.

LITHGOW VALLEY (N.V.) :—Visited, 25th August, 1869.

Numbers enrolled :—Boys, 12 ; girls, 22 ; total, 34.

Numbers present :—Boys, 7 ; girls, 15 ; total, 22.

Materially, the school is not satisfactory. The discipline is not effective, and the teaching is not guided by the necessary lesson documents. The attainments are, on the whole, meagre, and the teaching is mechanical. Good methods are unknown, and the moral tone is only moderate. The section of Railway on which the school is situated having been opened, the school has since been closed.

LOWTHER (V.) :—Visited, 30th August, 1869.

Numbers enrolled :—Boys, 10 ; girls, 15 ; total, 25.

Numbers present :—Boys, 9 ; girls, 13 ; total, 22.

The building has been left in a somewhat unfinished state ; otherwise, the material condition might have been pronounced good. The discipline is effective, and the lesson documents are fairly arranged. The average attainments are, in the circumstances, reasonably satisfactory, and the general tone is pleasing.

LUCKNOW (N.V.) :—Visited, 26th October, 1869.

Numbers enrolled :—Boys, 18 ; girls, 26 ; total, 44.

Numbers present :—Boys, 17 ; girls, 22 ; total, 39.

The supply of apparatus and furniture is tolerably sufficient, but the playground still remains unfenced. The discipline is wanting in firmness, decision, and energy, and the lesson documents are compiled with only moderate judgment. The average proficiency is tolerable, and the moral tone of the school is moderate.

MAIN CAMP (N.V.) :—Visited, 24th August, 1869.

Numbers enrolled :—Boys, 30 ; girls, 39 ; total, 69.

Numbers present :—Boys, 27 ; girls, 32 ; total, 59.

There is no proper playground, but otherwise the material condition is fair. The discipline is fairly effective, and the teaching is earnest, intelligent, and fairly regulated. The proficiency ranks from fair to very fair, and the prevailing spirit of the school is pleasing.

MARENGO (N.V.) :—Visited, 16th April, 1869.

Numbers enrolled :—Boys, 18 ; girls, 13 ; total, 31.

Numbers present :—Boys, 14 ; girls, 12 ; total, 26.

The building is unsuitable, in bad repair, and the playground is unfenced. The furniture is clumsy, and badly arranged. Materially, therefore, the condition of the school is not satisfactory. Steps are being taken for the erection of new premises. The discipline is tolerably effective, and the instruction is guided by the necessary lesson documents. The attainments are reasonably satisfactory, and the moral tone has improved.

MARCH VALE (V.) :—Visited, 29th October, 1869.

Numbers enrolled :—Boys, 16 ; girls, 16 ; total, 32.

Numbers present :—Boys, 14 ; girls, 14 ; total, 28.

The playground is unfenced, and there are no outhouses. The arrangement of furniture has been altered, but it is still capable of improvement. The discipline is tolerable, and the instruction is moderately regulated. The average proficiency is from moderate to tolerable, and the general spirit of the school is moderately pleasing.

MEADOW FLAT (V.) :—Visited, 17th August, 1869.

Numbers enrolled :—Boys, 18 ; girls, 13 ; total, 31.

Numbers present :—Boys, 14 ; girls, 8 ; total, 22.

The teacher's residence needs repair ; but otherwise, in a material point of view, the school is satisfactory. The discipline is passable, and the instruction is moderately regulated. The proficiency and general spirit of the school are tolerable.

MITCHELL'S CREEK (V.) :—Visited, 16th August, 1869.

Numbers enrolled :—Boys, 32 ; girls, 30 ; total, 62.

Numbers present :—Boys, 28 ; girls, 27 ; total, 55.

Materially, the school is in a fair condition. The discipline is firm and fairly sustained ; and the instructional documents are carefully compiled. The methods are suitable, and the teaching is industrious. The proficiency is reasonably satisfactory, and the moral tone is fair.

MOLONG (V.) :—Visited, 3rd November, 1869.

Numbers enrolled :—Boys, 48 ; girls, 33 ; total, 81.

Numbers present :—Boys, 35 ; girls, 26 ; total, 61.

New furniture is still wanted ; the schoolroom needs enlarging ; but otherwise, the material aspect of the school does not call for remark. The order and government are reasonably satisfactory ; and the instruction is careful, intelligent, and suitably regulated. The pupils answer with considerable spirit, and with fair correctness. The average proficiency is from fair to very fair ; and the prevailing spirit of the school is pleasing.

MOUNT MACQUARIE (V.) :—Visited, 18th May, 1869.

Numbers enrolled :—Boys, 15 ; girls, 13 ; total, 28.

Numbers present :—Boys, 10 ; girls, 13 ; total, 23.

The teacher's residence has been enlarged since last inspection. The discipline is marked by firmness and tact, and the instructional documents are tolerably arranged. The attainments are tolerably satisfactory, and the moral tone is fair.

MOUNT VITTORIA (N.V.) :—Visited, 2nd and 3rd September, 1869.

Numbers enrolled :—Boys, 48 ; girls, 28 ; total, 76.

Numbers present :—Boys, 38 ; girls, 21 ; total, 59.

For a school of a temporary character the material condition is reasonably good. The discipline is firm, prompt, and watchful, and the instruction is properly regulated. The average proficiency is fairly satisfactory, and the general spirit of the school is fairly pleasing.

MUDGE (V.)—Infants :—Visited, 29th November, 1869.

Numbers enrolled :—Boys, 52 ; girls, 39 ; total, 91.

Numbers present :—Boys, 40 ; girls, 32 ; total, 72.

The room is rather small for the attendance, which has considerably increased since last inspection. The organization may be considered fair. The discipline is kindly, but firm and prompt, and the instruction is fairly regulated. The average proficiency is fair, and the general spirit of the school is cheerful and pleasing.

MUDGE (V.)—Girls :—Visited, 30th November, 1869.

Numbers enrolled :—Girls, 53.

Numbers present :—Girls, 45.

The schoolroom, which is situated upstairs, is not a good one, and is particularly objectionable during the summer months. It is suitably supplied with the usual necessary teaching appliances. The discipline is firm and watchful, and the lesson documents are fairly compiled. The attainments range from fair to very fair, and the moral tone appears healthy. The erection of new schoolrooms appears desirable.

MUDGE (V.)—Boys :—Visited, 1st December, 1869.

Numbers enrolled :—Boys, 66.

Numbers present :—Boys, 58.

The entire premises are undergoing repairs, and a new closet is being erected for the boys' playground. The order is careful, and the discipline generally is watchful and well sustained. The teaching is earnest and guided by the requisite lesson documents, which are judiciously compiled. The proficiency of the second and third classes is fair—that of the fourth from fair to good. In addition to the subjects prescribed, the upper section of the fourth class receives instruction in elementary Latin and Algebra.

MURRUMBURRAH (N.V.) :—Visited, 12th April, 1869.

Numbers enrolled :—Boys, 10 ; girls, 12 ; total, 22.

Numbers present :—Boys, 7 ; girls, 11 ; total, 18.

The building is tolerably suitable, but is insufficiently furnished. The discipline is only moderately effective, and the instruction is not properly regulated. The attainments are not satisfactory, and the moral tone is only moderate. The school has been conducted for some months by another person, during the absence of the teacher.

O'CONNELL (N.V.) :—Visited, 17th June, 1869.

Numbers enrolled :—Boys, 19 ; girls, 19 ; total, 38.

Numbers present :—Boys, 12 ; girls, 11 ; total, 23.

The supply of furniture is not sufficient, but otherwise there is little to find fault with in the material condition of the school. The discipline is vigorous and watchful, and the lesson documents are judiciously framed. The proficiency is reasonably satisfactory, and the moral tone is very fair. Preliminary steps have been taken towards the erection of vested premises.

OPHIE ROAD (V.) :—Visited, 15th July, 1869.

Numbers enrolled :—Boys, 12 ; girls, 15 ; total, 27.

Numbers present :—Boys, 11 ; girls, 13 ; total, 24.

The fences are in bad repair, and the schoolroom needs lining and other repairs. The discipline and instruction are failures. The proficiency is not satisfactory, and the moral tone is only moderate. The teacher has since resigned.

ORANGE (V.) :—Visited, 28th October, 1869.

Numbers enrolled :—Boys, 58 ; girls, 16 ; total, 74.

Numbers present :—Boys, 48 ; girls, 10 ; total, 58.

The material condition of the school is good. The only noticeable want is that of a detached kitchen for the teacher's residence. The discipline is satisfactory, and the lesson documents are judiciously drawn up. The proficiency varies from tolerable to good, and the teaching is earnest and industrious. The prevailing spirit of the school is pleasing, though more animation is desirable.

PEEL (V.) :—Visited, 30th July, 1869.

Numbers enrolled :—Boys, 10 ; girls, 12 ; total, 22.

Numbers present :—Boys, 9 ; girls, 10 ; total, 19.

The roof leaks in some places, but otherwise the material condition is satisfactory. The discipline is marked by a quiet firmness, and the instruction is carefully regulated. The average proficiency is fair, and the moral tone is tolerable. For reasons known to the Council, but from no fault of the teacher, the attendance is small.

PIPECLAY CREEK (V.) :—Visited, 15th December, 1869.

Numbers enrolled :—Boys, 31 ; girls, 30 ; total, 61.

Numbers present :—Boys, 17 ; girls, 14 ; total, 31.

The schoolground is substantially fenced, and the school is now conducted in the new vested premises, which are suitable and properly furnished. A detached kitchen is still needed for the teacher's residence. The discipline is tolerably satisfactory, and the instruction is tolerably regulated. The average proficiency is from moderate to tolerable. Owing to the time of my visit being in the middle of harvest, the attendance was small, and the school did not show to advantage.

PLEASANT VALLEY (N.V.) :—Visited, 21st September, 1869.

Numbers enrolled :—Boys, 12 ; girls, 13 ; total, 25.

The organization has been improved by new and fairly suitable desks. The discipline is passable, and the instruction is tolerably regulated. The average proficiency is tolerable, and the moral tone is fair.

ROCKLEY (V.) :—Visited, 28th July, 1869.

Numbers enrolled :—Boys, 12 ; girls, 21 ; total, 33.

Numbers present :—Boys, 9 ; girls, 17 ; total, 26.

The playground is unfenced, and the building needs some repairs. The discipline is not sufficiently sustained or vigorous, and the teaching, though marked by industry, is defective in penetrative force. With some exceptions in the first class, the attainments are tolerably satisfactory, and the moral tone is passable.

RYDAL (N.V.) :—Visited, 18th August, 1869.

Numbers enrolled :—Boys, 28 ; girls, 21 ; total, 49.

Numbers present :—Boys, 23 ; girls, 21 ; total, 44.

The building, in which the school is temporarily conducted, is suitable, but unfurnished. There are no closets, or proper playground fenced in, and the supply of apparatus is scarcely sufficient. The discipline is firm and vigilant, and the instructional documents are suitably arranged. The proficiency in the circumstances is reasonably satisfactory, and the moral tone is fair.

RYLSTONE (N.V.) :—Visited, 17th December, 1869.

Numbers enrolled :—Boys, 19 ; girls, 28 ; total, 47.

Numbers present :—Boys, 15 ; girls, 20 ; total, 35.

The material condition is not satisfactory. The school is still conducted in temporary premises, the new vested building not being yet ready, though now in course of erection. The discipline is fairly effective, and the lesson documents exhibit careful arrangement. The proficiency varies from tolerable to very fair, the average being about fair, and the moral tone is fairly healthy.

SODWALLS (N.V.) :—Visited, 19th August, 1869.

Numbers enrolled :—Boys, 41 ; girls, 39 ; total, 80.

Numbers present :—Boys, 32 ; girls, 33 ; total, 65.

The building is suitable, and well furnished. A new class-room has been added since the date of inspection. For a school of a temporary character the organization is very satisfactory. The discipline is quiet, firm, and watchful, and the instruction is fairly regulated by the necessary guides. The average proficiency is fair, and the moral tone is very fair.

TAMBAROORA (V.) :—Visited, 7th June, 1869.

Numbers enrolled :—Boys, 36 ; girls, 31 ; total, 67.

Numbers present :—Boys, 19 ; girls, 22 ; total, 41.

The teacher's residence has been repaired, and is now habitable, and occupied by the teacher. New forms are needed. The government is fairly efficient, but the order is marred by unsuitable forms. The lesson documents are tolerably constructed, and the attainments are passable. The moral tone is tolerable.

TEAPOT SWAMP (V.) :—Visited, 21st July, 1869.

Numbers enrolled :—Boys, 13 ; girls, 13 ; total, 26.

Numbers present :—Boys, 13 ; girls, 10 ; total, 23.

Some repairs are needed to the building, but in most respects the material condition is satisfactory. The discipline is fair, and the instruction is tolerably regulated by the necessary documents. The attainments are fair, and the moral tone is tolerable.

WALLEROWANG (N.V.) :—Visited, 27th August, 1869.

Numbers enrolled :—Boys, 40 ; girls, 29 ; total, 69.

Numbers present :—Boys, 31 ; girls, 18 ; total, 49.

The furniture is clumsy, insufficient, and unsuitable ; but otherwise the material aspect of the school is fair. The discipline is feeble, and the instruction is not well regulated. The attainments are not satisfactory, and the moral tone is only moderate.

WARREN (N.V.) :—Visited, 15th November, 1869.

Numbers enrolled :—Boys, 14 ; girls, 25 ; total, 39.

Numbers present :—Boys, 11 ; girls, 22 ; total, 33.

The schoolroom is suitable, but is too small, and the teacher's residence needs lining. The playground is unfenced. The discipline needs more promptitude and energy, and attention to the minor details of order is necessary. The instruction is earnest and industrious, but not well regulated. The attainments are only partially satisfactory, and the moral tone is only moderate.

WELLINGTON (V.) :—Visited, 9th November, 1869.

Numbers enrolled :—Boys, 31 ; girls, 16 ; total, 47.

Numbers present :—Boys, 24 ; girls, 13 ; total, 37.

A more complete supply of apparatus is desirable, but otherwise the material condition is good.
The

The discipline has improved in energy and care, and the instruction is judiciously regulated. The average proficiency is fair, and the moral tone is healthy.

WHITE ROCK (N.V.) :—Visited, 22nd October, 1869.

Numbers enrolled :—Boys, 17 ; girls, 18 ; total, 35.

Numbers present :—Boys, 17 ; girls, 17 ; total, 34.

The teacher's residence has been improved since last inspection, and the schoolroom is fairly suitable, and is tolerably supplied with furniture. The discipline is wanting in firmness and vigilance, and the lesson documents are only moderately suitable. The attainments range from moderate to tolerable, and the moral tone is only moderate.

WINBURDALE (N.V.) :—Visited, 6th August, 1869.

Numbers enrolled :—Boys, 18 ; girls, 15 ; total, 33.

Numbers present :—Boys, 17 ; girls, 14 ; total, 31.

As regards its material aspect, the condition of the school is only moderate. The furniture is clumsy ; there is no proper playground, and the site is not a good one. The order and government are fair, and the usual instructional documents are judiciously framed. The results of the teaching and the general spirit of the school are fair.

WINDEYER (V.) :—Visited, 9th December, 1869.

Numbers enrolled :—Boys, 17 ; girls, 17 ; total, 34.

Numbers present :—Boys, 12 ; girls, 11 ; total, 23.

The playground needs clearing and fencing, and the verandah of the teacher's residence repairing. Otherwise, the school is fairly furnished and supplied with teaching requisites. The discipline is tolerably effective, but the pupils are improperly classified, and the instruction is only moderately regulated. The teaching is industrious, but wanting in intelligence and impressiveness. The attainments are tolerably satisfactory, and the moral tone is moderate.

YOUNG (V.) :—Visited, 7th April, 1869.

Numbers enrolled :—Boys, 36 ; girls, 20 ; total, 56.

Numbers present :—Boys, 34 ; girls, 18 ; total, 52.

The material condition of the school is good. The discipline is healthy, and the instruction is properly regulated. The proficiency is fairly satisfactory, and the prevailing spirit of the school is fairly pleasing.

INCIDENTAL INSPECTIONS.

GUNTAWANG (N.V.)—Visited, 13th December, 1869.

Numbers enrolled :—Boys, 25 ; girls, 23 ; total, 48.

Numbers present :—Boys, 21 ; girls, 15 ; total, 36.

The arrangement of furniture has been improved, and, as regards the school building, there is no particular defect. The teacher's residence needs repairs. The school records are properly kept, and the general work of the school appears to be carried on effectively. The school has only been a short time opened.

LAWSON'S CREEK (N.V.)—Visited, 17th December, 1869.

Numbers enrolled :—Boys, 18 ; girls, 13 ; total, 31.

The playground is still unfenced, and the general material condition is only moderate. The school records are fairly kept, but the lesson documents are not well framed. As my visit was made about 6 a.m., I had no opportunity of seeing the pupils at work.

LIMEKILNS (V.)—Visited, 11th June, 1869.

Numbers enrolled :—Boys, 24 ; girls, 18 ; total, 42.

Numbers present :—Boys, 8 ; girls, 16 ; total, 24.

The material condition of the school is, in nearly all respects, satisfactory. The records are neatly kept, and the lesson documents are fairly constructed. The order and discipline appear fairly effective.

HALF-TIME SCHOOLS.

HARTLEY :—Visited, 1st September, 1869.

Numbers enrolled :—Boys, 14 ; girls, 18 ; total, 32.

Numbers present :—Boys, 7 ; girls, 14 ; total, 21.

The school is conducted in the room of a private house, which is fairly suitable. The supply of furniture is tolerably sufficient, but the apparatus is somewhat defective. The discipline is fair, and the instruction is tolerably regulated. The attainments are satisfactory, and the moral tone is fair.

KANIMBLA :—Visited, 13th September, 1869.

Numbers enrolled :—Boys, 16 ; girls, 14 ; total, 30.

Numbers present :—Boys, 9 ; girls, 10 ; total, 19.

The building is suitable, and has been recently enlarged and improved. The furniture is scarcely sufficient, and the apparatus is but scanty. The playground is not furnished with the necessary outhouses. The discipline is effective, and the instruction is fairly regulated. For the time and kind of school, the proficiency is satisfactory, and the prevailing spirit of the school is pleasing.

J. MCCREDIE,

Inspector, Bathurst District.

PROVISIONAL SCHOOLS.

CANOBOLOS :—Visited, 9th March, 1869.

Numbers enrolled :—Boys, 16 ; girls, 11 ; total, 27.
Numbers present :—Boys, 14 ; girls, 6 ; total, 20.

The building is suitable, and in good repair. The desks are insufficient in quantity, and badly arranged. On the whole the material condition is fair. The discipline is firm, and the instruction is tolerably regulated. The proficiency is reasonably satisfactory, and the general spirit of the school is fairly pleasing.

CONDOBOLIN :—Visited, 18th March, 1869.

Numbers enrolled :—Boys, 14 ; girls, 15 ; total, 29.
Numbers present :—Boys, 8 ; girls, 5 ; total, 13.

The building is moderately suitable, and the schoolroom is tolerably furnished. The playground is partially fenced. The order and government have improved since last inspection, and the instruction is moderately arranged. The proficiency, in the circumstances, is reasonably satisfactory, and the prevailing spirit of the school is tolerably pleasing.

CROWTHER :—Visited, 20th April, 1869.

Numbers enrolled :—Boys, 3 ; girls, 6 ; total, 9.
Numbers present :—Boys, 3 ; girls, 4 ; total, 7.

The material state of the school is tolerable. The discipline is not effective, and the instruction is badly arranged. The attainments are meagre, and the moral tone of the school is low. This school has since been closed.

FISH RIVER CREEK :—Visited, 22nd September, 1869.

Numbers enrolled :—Boys, 13 ; girls, 11 ; total, 24.
Numbers present :—Boys, 10 ; girls, 9 ; total, 19.

The building is tolerably suitable, but it is only partially floored, and the furniture is of a wretched description, and badly arranged. The playground is neither cleared nor fenced, and is not furnished with the necessary out-houses. The discipline is not effective, and the instruction is unregulated. The attainments are meagre, and the moral tone is low.

FIVE ISLANDS :—Visited, 14th May, 1869.

Numbers enrolled :—Boys, 7 ; girls, 10 ; total, 17.
Numbers present :—Boys, 5 ; girls, 7 ; total, 12.

The building is tolerably suitable, but the playground is unfenced, and unfurnished with the necessary outhouses. The discipline is not effective, and the instruction is not properly regulated. The proficiency is not satisfactory, and the moral tone is low. This school has since been closed.

IRONBARKS :—Visited, 11th March, 1869.

Numbers enrolled :—Boys, 19 ; girls, 24 ; total, 43.
Numbers present :—Boys, 9 ; girls, 9 ; total, 18.

The material condition is moderate. The site is not good, and the playground is unfenced, and without the requisite offices. The furniture is neither sufficient, suitable, nor properly arranged. The discipline is mild, and only moderately effective, and the instruction is not well regulated. The proficiency and moral tone are moderate.

LAGOON, CAMPBELL'S RIVER :—Visited, 16th July, 1869.

Numbers enrolled :—Boys, 3 ; girls, 9 ; total, 12.
Numbers present :—Boy, 1 ; girls, 8 ; total, 9.

The building is tolerably suitable, but the supply of furniture is only moderate. The playground is not fenced, and the closet is in bad repair. The discipline is feeble, and the instruction is indifferently regulated. The attainments are small, and the teaching is wanting in intelligence and vigour. The moral tone is low.

MIDDLE RIVER HILL :—Visited, 26th August, 1869.

Numbers enrolled :—Boys, 25 ; girls, 17 ; total, 42.
Numbers present :—Boys, 20 ; girls, 10 ; total, 30.

This is a temporary school on the line of railway. The material condition is very unsatisfactory, but its temporary character prevents any improvement. The discipline is not effective, and the instruction is badly regulated. The attainments are small, and the moral tone is moderate.

MUNDORAMA PONDS :—Visited, 20th May, 1869.

Numbers enrolled :—Boys, 11 ; girls, 7 ; total, 18.
Numbers present :—Boys, 10 ; girls, 4 ; total, 14.

The building is tolerably suitable, but there are no closets. The discipline is effective, and the lesson documents are fairly compiled. For the time the proficiency is satisfactory, and the moral tone is fair.

NUBRYGYN :—Visited, 10th March, 1869.

Numbers enrolled :—Boys, 9 ; girls, 9 ; total, 18.
Numbers present :—Boys, 6 ; girls, 6 ; total, 12.

The material condition is only moderate. There are no closets, and the furniture is unsuitable. There is no properly fenced playground. The pupils are tolerably orderly and attentive. The discipline is moderate, but the instructional documents are not properly arranged. The proficiency, in the circumstances, is moderately satisfactory, and the prevailing spirit of the school is tolerably pleasing.

PYRAMUL :—

PYRAMUL :—Visited, 9th June, 1869.

Numbers enrolled :—Boys, 18 ; girls, 14 ; total, 32.

Numbers present :—Boys, 16 ; girls, 11 ; total, 27.

The schoolroom is tolerably suitable, but needs flooring and suitable furniture. There is no proper playground, and closets have not been provided. The order and government are indifferent, and the instruction is not regulated. The attainments are small. The school, when visited, had only been recently aided, and books and apparatus had not been received ; it therefore appeared to disadvantage.

STONY CREEK :—Visited, 9th April, 1869.

Numbers enrolled :—Boys, 17 ; girls, 14 ; total, 31.

Numbers present :—Boys, 17 ; girls, 14 ; total, 31.

The material condition is indifferent. The building is only moderately suitable, and is badly supplied with furniture, which is not properly arranged. There are no closets, and the playground is unfenced. The discipline is feeble, and the instruction is not regulated. The attainments are meagre, and the moral tone is low.

THREE-MILE RUSH :—Visited, 5th April, 1869.

Numbers enrolled :—Boys, 20 ; girls, 8 ; total, 28.

Numbers present :—Boys, 20 ; girls, 8 ; total, 28.

At the date of inspection the building was in an unfinished state, and needed flooring, a fire-place, and furniture. The playground was unfenced, and without the necessary offices. The discipline is feeble, and the lesson documents are not properly arranged. The proficiency is moderate, and the moral tone is low. The school had only been opened a short time.

VITTOBIA :—Visited, 8th March, 1869.

Numbers enrolled :—Boys, 11 ; girls, 9 ; total, 20.

Numbers present :—Boys, 8 ; girls, 5 ; total, 13.

The school is conducted in a bush hut, which is in bad repair, and neither suitable nor sufficiently furnished. The school has since been removed to a new building. The pupils are not punctual, and are only tolerably clean. The discipline is feeble, and the teaching is mechanical and badly regulated. The attainments are meagre, and the moral tone is low.

WISEMAN'S CREEK :—Visited, 24th September, 1869.

Numbers enrolled :—Boys, 12 ; girls, 17 ; total, 29.

Numbers present :—Boys, 11 ; girls, 16 ; total, 27.

The building is moderately suitable, but is not properly furnished. Even a sufficient quantity of forms has not been provided. The pupils are neither orderly nor attentive. The discipline is wanting in firmness and vigilance, and the instruction is not regulated by the necessary documents. The attainments are meagre, and the moral tone is low.

INCIDENTAL INSPECTION.**ILFOED :—Visited, 18th December, 1869.**

Numbers enrolled :—Boys, 15 ; girls, 16 ; total, 31.

The building is tolerably suitable, but is not properly furnished or well situated. There is no playground, owing to its position, being close to the Mudgee Road, and no ground behind the building being available for that purpose. The records are tolerably kept. As my visit took place the day after the school had closed for the Christmas holidays, I did not see the pupils at work.

J. MCCREDIE,

Inspector, Bathurst District.

CAMDEN DISTRICT.—GENERAL REPORT FOR 1869.

On the 31st December, 1869, there were 109 schools or 113 departments on the list for this district, viz. :—Forty-nine Public, one Half-time, fifteen Provisional, and forty-eight Certified Denominational Schools. Of these, four (two Public and two Provisional) had been added to the list in the year.

In the early part of the year I was engaged in completing reports and other work left over from 1868 ; and in the months of September, October, and November, I was unable, through continued ill-health, to undertake all the work of inspection I had intended ; consequently, the number of schools inspected in the year is considerably less than it would otherwise have been.

Numerical statement, showing work done in the year—

Number of schools on the list in the year	109
Number of pupils enrolled in the year	8,039
Average number of pupils enrolled for each quarter in the year	5,809
Number of teachers, pupil teachers, and assistants	128
Number of visits for inspection and inquiry	90
Number of teachers, pupil teachers, and candidates, superintended at examination	66
Total distance travelled in the year, 3,702 miles.	

INSPECTION OF SCHOOLS.

Fifty-one schools were visited for the regular examination in the year, viz. :—Nineteen Public, seven Provisional, and twenty-five Certified Denominational.

The ages of the pupils enrolled, and also of those present at examination, in these schools, is shown in the following tables.

TABLE I.—PUPILS ENROLLED.

CONDITION OF THE SCHOOLS.

I.—MATERIAL CONDITION.

Considerable improvements in the material condition of the Public Schools in this district have been effected in the year. Wollongong building has been extensively altered and repaired. New buildings of a suitable character have been erected at Botany, Bulli, Glenmore, Lower Picton, and Rose Valley; and the necessary arrangements have been made for the erection of others at Kiama, Shellharbour, and Kangaroo Valley. Substantial improvements have also been made in the school premises at Fairy Meadow, Marshall Mount, Peterboro', and Violet Hill. Many of the non-vested premises are, however, still in a very unsatisfactory state—both as regards buildings and furniture. At Liverpool and Pyree particularly, new premises are greatly needed. The schools there are large and important, but the premises in use are very inadequate and unsuitable. As regards Certified Denominational School premises, material improvements have, in several instances, been effected during the year, but much still remains to be done to render the premises suitable for school purposes. There are in this district twenty-one schools where residences are not provided for the teachers, viz. :—Eight Public Schools and thirteen Certified Denominational Schools.

II.—DISCIPLINE.

1. *Attendance.*—In the schools inspected the pupils are on the whole fairly *punctual* in their attendance, but their *regularity* is still unsatisfactory. The present system of school fees is, undoubtedly, one great hindrance to the pupils' regularity of attendance. Those parents who are careless about the payment of fees—and many are so—are, as a rule, equally careless about the regularity of their children's attendance at school. Again, some parents who pay fees very regularly for the time their children are actually at school, make it a rule (for the purpose of saving the week's fee) to keep the children from school the whole week whenever circumstances may have prevented their attendance on the first day of the week; and indeed, when children have attended the first day, but were unable to attend on the following days in the week, I have known parents in one part of this district to send the teacher *one penny* (the week's fee being six-pence) for the one day the child had attended.

An enactment, enforcing a small local rate for education, in lieu of the present system of paying fees to the teacher, would, no doubt, greatly improve the regularity of the pupil's attendance; at the same time, however, I am still of opinion that, to effectively remedy the evil complained of, it would be necessary the enactment should also make school attendance compulsory.

2. *Cleanliness.*—With one or two exceptions, I found this part of school discipline well attended to by the teachers in all the schools visited.

3. *Order and Government.*—In one-half the Public Schools, and in one-third of the Certified Denominational Schools inspected, the government was *kind* and *firm*, and the *order* good. In the other Public Schools—two excepted—these matters were tolerably well attended to. In three Provisional Schools, and in six Certified Denominational Schools, the *government* was merely nominal, and the *order* was decidedly unsatisfactory.

TABLE showing the discipline of the Schools inspected.

Totals	18	21	11

III.—

III.—INSTRUCTION.

1. *Classification and Occupation.*—In two-thirds of the Public Schools, in one Provisional School, and in two-fifths of the Certified Denominational Schools, the classification of the pupils had been carefully attended to, and the school work was regulated (in several instances very judiciously) by the necessary instructional documents. Many teachers however do not yet understand the proper use, or the construction of time-tables and lesson programmes; and although in nearly all cases these documents are posted in the schoolroom, in accordance with the letter of the regulations, in several instances they are but little used afterwards in regulating the school-work. The lesson-register also is often kept very imperfectly—in some cases uselessly.

2. *Subjects and Methods.*—Singing and drawing are not taught in a number of schools, viz., singing in eight Public, and in eleven Certified Denominational, Schools; drawing in two Public, and in eight Certified Denominational, Schools. In Provisional Schools only the ordinary subjects are taught. With these exceptions, all the prescribed subjects are included in the work of the schools visited. Geometry, Algebra, and Latin, are also taught to upper sections of the third or fourth classes in three Public, and in two Certified Denominational, Schools. In about one-half of the schools visited, the methods in use may be described as ranging from tolerable to good; in one-fourth as moderate; and in the remaining one-fourth as indifferent or bad.

Reading.—The proficiency of the pupils in this subject is, on the whole, only moderately satisfactory. In a few schools—Public and Certified Denominational—the pupils read well, and have a very fair knowledge of the language and subject-matter of the lessons. Some progress is being made in nearly all the schools, but in a large majority of them much still remains to be done before the pupils can be considered as up to the standard. Careful and systematic teaching of this subject is not yet sufficiently practised in the junior classes.

Writing.—An improvement in the teaching of this subject is discernible. In three-fourths of the Public, in one-half the Provisional, and in two-thirds of the Certified Denominational, Schools the writing ranges from fair to good. Writing from dictation may also be considered as fairly satisfactory in fully two-thirds of the schools visited.

Arithmetic.—The general proficiency of the pupils in arithmetic is only moderate. Intelligent and systematic teaching of the subject is only met with in a few schools, hence the general results are unsatisfactory. Some teachers (generally new beginners) give too much assistance to their pupils, or afford them too little opportunity of thinking and working for themselves. After explaining a principle, and working one or two exercises on the black-board, to demonstrate its application, such teachers appear to think that their pupils have thoroughly mastered that part of the subject, and are ready to receive further instruction. This is of course a great mistake, which is only found out when an examination of the pupils is held; and as such teachers are not in the habit of examining their pupils themselves on their past work, it generally happens that the inefficiency of their teaching is only demonstrated at the regular examination of the school by the Inspector. Of course the teachers are greatly astonished at the failure of their teaching, and are apt to complain of the pupil's stupidity, when they themselves only are to blame in the matter. Again, other teachers (chiefly those who have not been trained) make a mistake in the opposite direction. They give little or no teaching or explanation of principles, but keep the pupils working mechanically from rule. Under these teachers class-work is not practised, but each pupil is left exclusively to his own unaided effort. When an examination takes place there is of course a failure, unless each question be put in the exact routine form to which the pupils are accustomed. Further, an intelligent system of mental arithmetic is but little practised by a majority of the teachers. Teachers appear to forget that mental arithmetic should precede slate arithmetic, and that prominence should be given to it at every stage of the pupil's progress.

Grammar.—As regards this subject, too much at a time is often attempted by teachers, and the methods generally used present the subject to the pupils in a very dry and uninteresting form; the results therefore are but moderately satisfactory. The following legitimate objects in teaching grammar in the common schools should be constantly kept in view by the teachers, viz. :—

(a.) Mental discipline.

(b.) The more thorough understanding of the reading lesson, or the art of composition.

To secure the first, thoroughness in the work is absolutely necessary. The second can only be attained by analytical parsing, aided by actual practice in constructing sentences, &c.

Geography.—In one-half the Public, and in one-third the Certified Denominational, Schools, this subject is fairly well taught. In the other schools visited, the teaching and results may be described as indifferent.

Object lesson, Singing, and Drawing.—The proficiency of the pupils in these subjects is, on the whole, very moderate. In only six of the schools visited, the proficiency ranges from fair to good.

Needlework is taught wherever the teacher is a married man, or where there is a female teacher. The proficiency is, on the whole, tolerably satisfactory.

SCHOOL FEES.

The total amount of school fees received by the teachers in the year was £3,287 16s. 4½d. Of the number of pupils (8,039) enrolled in the year, 1,174 are returned as "free scholars." In a large majority of the schools in the district the nominal rate of fee ranges from sixpence to a shilling per week for each child; and in a few it is as low as threepence per week; but the amount actually received gives less than threepence per week for each pupil of the average (5,809) enrolment. The information shown in the following table, with reference to school fees, may, perhaps be useful.

Schools.	Number of pupils enrolled in the year.	Number of free scholars in year's enrolment.	Per-centages of free scholars.	Average number of pupils enrolled for each quarter in the year.	Year's amount of fees received from the different schools.	Average amount paid locally for a year's instruction for each pupil.

TEACHERS.

Forty-eight teachers, ten pupil teachers, and eight candidates were examined in the year. The number of teachers—including assistants and pupil teachers—employed in the schools of this district is 128. Their classification is shown in the following table.

LOCAL SUPERVISION.

Local supervision is exercised beneficially in two-thirds of the schools visited; in the remaining one-third it is of a useless character.

Separate detailed statements for Public and Certified Denominational Schools, showing the condition of each school at the time of inspection, will be found appended to this Report.

J. HUFFER,
Inspector.

CAMDEN DISTRICT.—INSPECTOR'S REPORT.

APPENDIX A.

DETAILED Statement of the condition of Public and Provisional Schools, inspected in 1869.

The remarks under head 1 relate to the material condition of the schools; under 2, to their moral condition; under 3, to the subjects and methods of instruction; under 4, to the proficiency of the pupils.

ASHFIELD (N.V.) :—Visited, 9th December, 1869.

Numbers present :—Boys, 27; girls, 10; total, 37.

1. The material condition of the school premises is unsatisfactory. A new building is much needed. 2. The pupils are only moderately regular; otherwise, the discipline is good. 3. The prescribed subjects are taught; the methods are appropriate. 4. The general proficiency of the pupils ranges from fair to very fair.

AVONDALE (V.) :—Visited, 10th August, 1869.

Numbers present :—Boys, 19; girls, 20; total, 39.

1. The school buildings are in moderate repair. The furniture is suitable and sufficient. 2. The discipline is fair. 3. Singing is not taught; otherwise, the necessary instruction is carried on with zeal and industry. 4. The proficiency is, on the whole, satisfactory.

ARNcliffe (N.V.) :—Visited, 14th December, 1869.

Numbers present :—Boys, 14; girls, 9; total, 23.

1. The schoolroom-floor has been boarded; otherwise, the premises and furniture are in the same unsatisfactory condition as at last inspection. 2. The discipline is fair. 3. The prescribed subjects are taught with tolerable skill. 4. The results range from tolerable to very fair.

BERKELEY

BERKELEY (V.) :—Visited, 6th August, 1869.

Numbers present :—Boys, 23 ; girls, 18 ; total, 41.

1. Some shingling and other repairs are much needed, and the whole buildings should be painted.
2. The discipline is satisfactory.
3. The instruction is well attended to.
4. The pupils' attainments are very fair.

BANKSTOWN (N.V.) :—Visited, 15th November, 1869.

Numbers present :—Boys, 23 ; girls, 23 ; total, 46.

1. The teacher's residence should be enlarged, and a verandah and additional out-buildings are also needed. The supply of furniture and other requisites is fairly satisfactory.
2. The discipline is fairly healthy.
3. Singing is not taught; otherwise, the instruction is tolerably satisfactory.
4. The pupils' proficiency is tolerable.

CAMDEN (V.) :—Visited, 6th May, 1869.

Numbers present :—Boys, 34 ; girls, 22 ; total, 56.

1. The furniture is only moderately suitable; otherwise, the material condition of the school is satisfactory.
2. The pupils are fairly regular and punctual in their attendance, and the general tone of the school is healthy.
3. The prescribed subjects are taught.
4. Some of the third class pupils are well advanced in the subjects of fourth and fifth classes; but in the first and second classes the pupils' attainments are only moderate.

FAIRY MEADOW :—Visited, 14th June, 1869.

Numbers present :—Boys, 32 ; girls, 12 ; total, 44.

1. Extensive repairs and improvements to the premises were being carried out at the date of inspection. The material condition of the school is now satisfactory.
2. The discipline is fair. On the day of inspection it was raining heavily, consequently the attendance was smaller than it would otherwise have been.
3. The instruction is carried on with energy and care.
4. On the whole, the results are very fairly satisfactory.

GLEDWOOD (V.) :—Visited, 5th May, 1869.

Numbers present :—Boys, 5 ; girls, 6 ; total, 11.

1. The material condition of the school is tolerable.
2. The discipline is weak and ineffective.
3. The teacher is fairly well informed, but he is very unskilful.
4. The proficiency of the pupils is very unsatisfactory.

JAMBEROO (V.) :—Visited, 20th September, 1869.

Numbers present :—Boys, 13 ; girls, 12 ; total, 25.

1. The teacher's residence is too small; the schoolroom needs repairs and painting, and the playground should be divided for the sexes.
2. The enrolment of pupils is much smaller than it should be, and those enrolled are only moderately regular in their attendance; otherwise, the discipline is fair.
3. The prescribed subjects are taught. The methods are appropriate.
4. The pupils' attainments are fair—one boy is well advanced in fourth class subjects.

LIVERPOOL (N.V.) :—Visited, 26th April, 1869.

Numbers present :—Boys, 26 ; girls, 28 ; total, 54.

1. The schoolroom is too small, and it is badly furnished. There is no residence for the teacher. New premises are greatly needed.
2. The discipline is fair.
3. The prescribed subjects are taught. The methods are fairly appropriate.
4. Considering the circumstances of the school the progress made is satisfactory.

MARSHALL MOUNT :—Visited, 10th August, 1869.

Numbers present :—Boys, 18 ; girls, 19 ; total, 37.

1. The building has been painted and colored, and otherwise improved; but a verandah to the residence side of the structure is still much needed. There is a good supply of furniture and requisites.
2. The pupils are only moderately regular and punctual; otherwise, the discipline is good.
3. The instruction is carried on with intelligence and care.
4. The proficiency is fairly satisfactory.

MOUNT KEIRA (N.V.) :—Visited, 16th September, 1869.

Numbers present :—Boys, 18 ; girls, 13 ; total, 31.

1. New desks and forms have been provided; and there is a fair supply of other requisites; otherwise, the material condition is bad.
2. The discipline is fair.
3. The instruction is carried on with earnestness and fair skill.
4. The general proficiency is fair.

MEROO (N.V.) :—Visited, 22nd September, 1869.

Numbers present :—Boys, 16 ; girls, 20 ; total, 36.

1. The school premises are too small; otherwise, their material condition is fairly satisfactory.
2. The discipline is good.
3. The prescribed subjects are taught with energy and skill.
4. The proficiency is very fair.

PICTON, UPPER (V.) :—Visited, 24th March, 1869.

Numbers present :—Boys, 24 ; girls, 8 ; total, 32.

1. The premises are greatly in need of repairs, and new furniture should be provided.
2. The discipline is fairly healthy.
3. The prescribed subjects are taught with intelligence and zeal.
4. The general proficiency is fairly satisfactory.

PICTON, LOWER (N.V.) :—Visited, 22nd March, 1869.

Numbers present :—Boys, 36 ; girls, 37 ; total, 73.

1. New vested buildings were completed and occupied shortly after the date of inspection, consequently the material condition of the school is now satisfactory. 2. The discipline is only moderate. 3. The teacher is fairly well informed, and he works with much energy ; his methods, however, are very defective. 4. The proficiency of the pupils is very small. (When the school was removed to the vested buildings, a new teacher was appointed.)

PETERBORO' (N.V.) :—Visited, 23rd September, 1869.

Numbers present :—Boys, 39 ; girls, 22 ; total, 61.

1. This school has been re-opened in a new slab structure, which the residents have erected in place of the dilapidated building formerly in use. The site is not central, and the material condition of the school, as improved—furniture and requisites excepted—is very unsatisfactory. In its present situation the school is, to some extent, a rival school to the one at Shellharbour. 2. The discipline is healthy. 3. The prescribed subjects are taught—singing excepted. The methods are appropriate. 4. The proficiency of the pupils ranges from fair to very fair.

STONY CREEK (V.) :—Visited, 4th September, 1869.

Numbers present :—Boys, 15 ; girls, 10 ; total, 25.

1. The material condition of the school—furniture and requisites excepted—is unsatisfactory. 2. The discipline is moderately healthy. 3. The prescribed subjects are taught—singing excepted. The methods are tolerably appropriate. 4. The general proficiency is tolerable.

VIOLET HILL (V.) :—Visited, 11th August, 1869.

Numbers present :—Boys, 19 ; girls, 27 ; total, 46.

1. Some necessary repairs having been carried out since the date of inspection, the material condition of the school is now fairly satisfactory. 2. The discipline is tolerably healthy. 3. The instruction is carried on with care and industry. 4. The general proficiency is fair.

PROVISIONAL SCHOOLS.

BROWNLOW HILL :—Visited, 3rd May, 1869.

Numbers present :—Boys, 10 ; girls, 10 ; total, 20.

1. The material condition of the school is moderate. 2. The discipline is bad. 3. The instruction is mechanical and inefficient. 4. The proficiency is very moderate.

BOTANY HEADS :—Visited, 11th December, 1869.

Numbers present :—Boys, 14 ; girls, 5 ; total, 19.

1. The school is at present carried on in a part of the Customs' officer's residence, but a suitable schoolroom is to be provided as soon as practicable. 2. The discipline is fair. 3. The instruction is carried on with intelligence and earnestness. 4. The proficiency is fairly satisfactory.

BARGO, WEST :—Visited, 18th December, 1869.

Numbers present :—Boys, 8 ; girls, 5 ; total, 13.

1. The material condition of the school, requisites excepted, is very moderate. 2. The pupils are not regular in their attendance. The general discipline is weak and ineffective. 3. The teacher is unskilful. 4. The proficiency of the pupils is small.

CORDEAUX RIVER :—Visited, 5th August, 1869.

Numbers present :—Boys, 6 ; girls, 10 ; total, 16.

1. The building and furniture in use are of a very rough description, but the residents promise that better provision shall be made as soon as practicable. 2. The discipline is moderately healthy. 3. The instruction is carried on with much industry, and painstaking. 4. The proficiency is tolerable.

MOORFIELDS :—Visited, 10th December, 1869.

Numbers present :—Boys, 8 ; girls, 8 ; total, 16.

1. The material condition is fair. 2. The discipline is tolerably healthy. 3. The teaching is carried on with earnestness and industry. 4. The progress made under the present teacher is fairly satisfactory.

SAGGART FIELD :—Visited, 13th September, 1869.

Numbers present :—Boys, 8 ; girls, 14 ; total, 22.

1. The material condition is only moderate. 2. The discipline is very weak and ineffective. 3. The teacher's attainments and skill are small. 4. The general proficiency of the pupils is very unsatisfactory.

THERESA PARK :—Visited, 3rd May, 1869.

Numbers present :—Boys, 14 ; girls, 11 ; total, 25.

1. The material condition is tolerable. 2. The discipline is fair. 3. The instruction is carried on with much industry, and painstaking. 4. The proficiency is fair.

F. HUFFER,
Inspector.

CUMBERLAND

CUMBERLAND DISTRICT—GENERAL REPORT.

INSPECTOR'S General Report upon the condition of Schools in the Cumberland District, for the year 1869.

So far as number is concerned, the schools remain much the same as last year; but there is a considerable increase both in the numbers of pupils enrolled and in the daily average attendance. A goodly increase has also taken place in the amount of money paid to the teachers in the shape of school fees. The following tables exhibit the numbers and descriptions of schools, the numbers of pupils enrolled, the daily average attendance, and the fees paid in 1869 and 1868 respectively:—

1. In 1869—

No. of Schools.	Description of Schools.	No. of Pupils Enrolled.	Daily Average Attendance.	Amount of School fees paid.
				£ s. d.
25	Public Schools	2,375	1,226·8	1,315 1 9
11	Provisional Schools	415	197·1	151 16 2
2	Half-time Schools	36	18·0	4 18 0
20	Church of England Schools.....	1,908	924·8	1,055 4 10
14	Roman Catholic Schools	1,216	584·9	378 11 0
4	Presbyterian Schools	306	164·8	131 15 5
5	Wesleyan Schools	368	188·8	202 17 0
81	TOTAL.....	6,624	3,305·2	3,240 4 2

2. In 1868—

No. of Schools.	Description of Schools.	No. of Pupils Enrolled.	Daily Average Attendance.	Amount of School fees paid.
				£ s. d.
24	Public Schools	2,072	963·1	1,047 2 4½
9	Provisional Schools	260	91·4	44 13 3½
2	Half-time Schools	33	16·6	2 6 8
21	Church of England Schools.....	1,945	950·3	1,024 18 5
14	Roman Catholic Schools	1,134	539·9	338 3 6
5	Presbyterian Schools.....	296	179·8	137 11 4
5	Wesleyan Schools.....	422	198·5	229 8 5
80	TOTAL.....	6,126	2,939·6	2,824 4 0

One of the twenty-five Public Schools—the new Public School at Dundas—was opened on the 23rd of September. It has therefore been in operation but one quarter. Two others—those at Castlereagh and St. Alban's—were closed during a portion of the year. As therefore the average attendances at these three schools during the periods of their operation, have been distributed over the whole year, in making up the total average in all Public Schools for 1869, that average is thereby diminished. The same has occurred, though in a less degree, in the case of the Church of England Schools, one of the twenty, that at Hunter's Hill, having been closed at the end of June, whilst its average attendance up to that time has been distributed over the whole year. This school at Hunter's Hill has had its place taken temporarily during the erection of Public School buildings by a Provisional School, which, with one of the same class opened at Guildford, about the middle of the year, has increased the number of Provisional Schools from nine, as at the end of 1868, to eleven, at the end of 1869. The Provisional School at Lower Portland was closed for want of a teacher, for several months. The course already indicated, in reckoning the total average attendance for the whole year, has been observed in the case of the Provisional Schools, and hence also their average attendance is apparently much smaller, when compared with the numbers enrolled, than it would otherwise be. As regards the other four descriptions of schools, no such reducing calculation has had to be adopted, inasmuch as they have all been open during the whole year, and yet one of these, and that the most numerous as regards schools, bears unfavourable comparison in point of attendance with those whose averages have been reduced in the manner described. A reference to the amount of fees paid gives deeper colouring to the unfavourable aspect of the comparison.

In connection with what has been stated respecting existing schools, it is proper here to notice what is doing as regards new schools. It has already been remarked that one new Public School has been opened. Another is in course of erection in Windsor, and it is expected that it will be completed and ready for being opened in February, 1870. Considerable progress has also been made towards the establishment of Public Schools at Enfield, Hunter's Hill, and Burwood, all of which are likely to be in full working order before the end of next year.

II.—THE WORK OF INSPECTION.

Within the year seventy-eight schools have been regularly examined, and of the reports steadily furnished upon their condition, a summary will be found in the tabular annexes and detailed statement at the close of this Report. To many of these schools several incidental visits of inspection were paid; and in the case of not a few there was the ordinary inspection, whose object was to study the every-day life of the schools so inspected, by carefully observing their whole discipline and instruction when under the sole management of their respective teachers. In the case of these inspections no notice of their times had to be sent before-hand, as is required in the case of the regular inspections; and it is worthy of remark, although not creditable to the teachers, that in some of the schools there was a very considerable inferiority of aspect to that which they presented at the regular inspections, of which previous notice had been given.

Three schools were not examined,—the Provisional School at Lower Portland; the Church of England School at Hunter's Hill; and the Public School at Dundas. The first of these had been for a time closed. After the lapse of some months it was removed to a different situation, and placed under a new teacher, when it was visited and reported upon with a view to its re-establishment. The Church of England School at Hunter's Hill had been discontinued before the time appointed for its examination had arrived; and the Public School at Dundas had not been opened till the beginning of the last quarter of the year,—so that it could scarcely be in a condition for examination. With these three exceptions, therefore, all the schools in the district were examined during the year.

In addition to the inspection and examination of schools, there was the annual examination of teachers. The number examined, including pupil teachers and applicants for the office of pupil teacher, was sixty-seven. Forty out of this number were teachers, of whom nineteen received promotion; seven were pupil teachers, all of whom were advanced one grade; and twenty were applicants for office, of whom four were appointed to situations; and a fifth will likely be appointed at the beginning of the year,

The

The number and classification of teachers at the end of the year are the following :—

TEACHERS IN PUBLIC AND HALF-TIME SCHOOLS.

1st Class.		2nd Class.		3rd Class.			Probationers and Pupil Teachers.
Section A.	Section B.	Section A.	Section B.	Section A.	Section B.	Section C.	
.....	1	1	4	12	9	2	9

TEACHERS IN DENOMINATIONAL SCHOOLS.

1st Class.		2nd Class.		3rd Class.			Probationers and Pupil Teachers.
Section A.	Section B.	Section A.	Section B.	Section A.	Section B.	Section C.	
.....	18	10	11	11

Of the thirty-eight teachers and pupil teachers in the twenty-five Public and two Half-time Schools, nine teachers and six pupil teachers have been promoted in the course of the year ; of the fifty teachers, including one pupil teacher, in the forty-two Certified Denominational Schools, eleven, including the pupil teacher, have been advanced. To these eighty-eight teachers have to be added the eleven teachers in the eleven Provisional Schools, who are not subject to examination and consequently not classified. Thus at the close of the year there were in operation eighty schools under the charge of ninety-nine teachers.

Among so large a number of teachers as this, considerable variety of character, competency, and efficiency may reasonably be expected. All are not alike naturally gifted for the teaching profession ; all are not alike educated and trained for it ; nor are all equally industrious in and devoted to the performance of its momentous duties. But amid this diversity there has been manifested throughout the year a general harmony of desire and determination to do good work. With few exceptions they have been punctual and regular, faithful and industrious, in the performance of their duties ; and in point of moral character and social position they stand well generally in their respective spheres.

III.—ORGANIZATION.

In several particulars the material condition and general organization of many of the schools have been improved. New buildings have been erected and new furniture provided for the Public School at Petersham, and the Presbyterian School at the Parramatta Junction. It is much to be regretted that no class-room has been embraced in the building for the Petersham Public School. Inconvenience and annoyance have already been experienced, from the circumstance that special religious instruction is given in the schoolroom to a small portion of the pupils, whilst the ordinary business of the school is being carried on by the teacher. If special religious instruction be so much valued, as professedly it is, surely those who desire it might make an effort to provide a remedy for such a case as this, and have the necessary class-room erected.

In the case of a number of schools the furniture has been increased and improved ; but there is still ground for complaint, that in several schools the furnishing is unsatisfactory in character and insufficient in quantity. This remark applies mainly though not exclusively to Denominational Schools. In nearly all the schools there is now a good supply of apparatus and books ; and in the great majority of instances the teachers are careful in the management of the property placed in their charge.

IV.—DISCIPLINE.

On this depends—far more than is generally felt—the true usefulness of a school. Without proper discipline established and firmly yet gently maintained, the moral character of a school cannot stand high ; and its efficiency for imparting knowledge must be very seriously impaired. It is a great mistake with many, and even with some of those who swell the religious instruction cry, to regard schools as mere institutions for imparting a certain amount of information, be it secular, religious, or both. The grand aim of all schooling should be to develop and cultivate and train the various powers and faculties of the immortal mind. To do this involves the communication of knowledge ; but it involves what is of far more consequence—the guiding of the mind rightly to comprehend and use that and any other kind of knowledge that may be presented to it. This cannot be done without inculcating those habits and traits of character which give moral beauty and worth to an individual scholar or school. That a teacher be in a position to bring about the best results intellectually and morally, pre-supposes on his part a hearty acquiescence in the power of religious truth, a continuous conformity to its requirements and obligations in his walk and conversation, and a being influenced by it in all his school teaching and intercourse. A well regulated character in the teacher, constantly presented to the pupils, will do more to mould their character aright than any amount of verbal teaching. It may not be unimportant here to note a few of the elements of character which it is the province of the school to aid in cultivating and developing. They are punctuality and regularity of attendance ; cleanliness and tidiness of personal appearance ; attention, diligence, and self-reliance at lessons ; kindness, forbearance, honesty, and truthfulness in all their intercourse with their fellows. To form such habits as these is the aim of school discipline, and in proportion as this aim is reached, will the moral worth of the school and its efficiency in imparting knowledge be high or low, great or little. It must not be supposed, however, that the most perfect school discipline is capable, of itself, of effecting all that has been here indicated. It needs, as it claims and deserves, the cordial aid of proper home influence and authority. Give it this, and humanly speaking, nothing can prevent a most salutary change being wrought in the whole moral and intellectual aspect of the school system of the Colony. Many teachers fully realize this, and during the year they have sought the sympathy and support of parents in their endeavours to form in their pupils those correct habits which, whilst they benefit them at school, will be their introduction to positions of influence and honor in after life. This appeal to parents has not been made in vain, but in the case of several it has met with a cordial response. Throughout the year the character of the attendance has frequently been interfered with by rainy weather, but, as a whole, improvement has been manifested. In many instances there is also better order maintained, and more systematic working observed in the whole routine of school duty. To several schools even yet this remark is inapplicable. Their teachers either do not know what order implies, or they are not careful to secure it. They either do not comprehend the value of quiet, orderly, industrious, working, or they are devoid of the moral qualities and professional attainments requisite to beget it.

The

The following may be regarded as a reasonably accurate estimate of the moral character of all the schools examined :—

Of thirty-six Public, Provisional, and Half-time Schools, twenty-eight rank from fair to good, and eight from indifferent to tolerable.

Of nineteen Church of England Schools, thirteen rank from fair to good, and six from indifferent to tolerable.

Of fourteen Roman Catholic Schools, five rank from fair to good, and nine from indifferent to tolerable.

Of four Presbyterian Schools, three rank from fair to good, and one is tolerable.

Of five Wesleyan Schools, four rank from fair to good, and one is tolerable.

The average daily attendance is a tolerably good index of the moral condition of a school ; but, as there are ways of keeping up this attendance, of questionable character no doubt, and difficult to deal with, because difficult clearly to trace, it is by no means the invariable evidence that the moral condition of a school professing to show it, is either fair or even tolerable. The subjoined table gives the state of the several classes of schools as regards numbers and fees. It is drawn from the returns furnished for the last quarter of the year 1869 :—

Schools.	Numbers of Pupils enrolled.	Daily average attendance.	Amount of fees paid.	Rate per head.
25 Public	1,847	1240.6	£ s. d. 333 0 2	s. d. 5 4
11 Provisional	360	226.9	46 11 2	4 1
2 Half-time	22	17.7
19 Church of England.....	1,343	908.8	257 0 9	5 7½
14 Roman Catholic	883	601.1	105 1 0	3 5½
4 Presbyterian	243	175.1	31 7 9	3 8
5 Wesleyan	255	183.3	58 17 3	6 5
80	4,953	3353.5	831 18 1

The following table contains similar information for the last quarter of 1868 :—

Schools.	Numbers of Pupils enrolled.	Daily average attendance.	Amount of fees paid.	Rate per head.
24 Public	1,633	1134.6	£ s. d. 317 9 5	s. d. 5 7
9 Provisional	221	161.5	19 13 10	2 5
2 Half-time	22	14.4	2 6 8	3 1
21 Church of England.....	1,369	936.1	270 16 11	5 9
14 Roman Catholic	870	586.8	97 14 4	3 4½
4 Presbyterian	230	166.0	33 6 10	3 11½
5 Wesleyan	288	204.3	59 15 7	5 10
79	4,633	3203.7	801 3 7

A comparison of these two tables is in favour of 1869 ; 320 more pupils have been enrolled ; the average attendance has been 149.8, and the school fees have been £30 14s. 6d. more than for the same period in 1868. At all schools, other than Denominational, there has been an increase in the enrolment of 353 in the average attendance of 174.7 ; and in the fees of £40 1s. 5d. At all Denominational Schools, taken collectively, there is shown a decrease of 33 in enrolment, 24.9 in average attendance ; and in fees of £9 6s. 11d. at the end of the last quarter of 1869, as compared with the same period in 1868. It will no doubt be observed that the increase in average attendance and school fees, although considerable, is not commensurate with the increase in the numbers enrolled. This, however, is accounted for by the fact of there having been a good deal of rainy weather during the last quarter of 1869. This diminished the average attendance, and as a consequence the fees ; bearing this in mind then, it will readily be admitted that very fair progress is being made in extending the advantages of education, and that the value and influence of the school are being more generally realized.

V. INSTRUCTION.

It has already been observed that very much of the efficiency and value of instruction depends upon the discipline and moral character of a school. Whilst this is true, there are other things to be taken into account in forming an estimate of its condition. There is the arrangement of the pupils into classes—mistake here is seriously injurious ; to place pupils in a class below their attainments retards progress ; and to place them in one too high tends to discourage. It is the part, therefore, of a skilful teacher, to see that his classes are composed of pupils whose attainments and capacities are reasonably similar ; and to this point, by many teachers during the year greater attention has been paid. There are still some teachers in Denominational Schools mainly, who, whilst they have a nominal classification shown in their records, do not adhere to it in their teaching.

Again,—a correct classification having been secured, the subjects of instruction require to be carefully adapted to the several classes. This is done by properly graduated programmes ; and these, to be of full value, demand more judgment in their construction than in many cases has yet been bestowed upon them. A goodly number of teachers, however, appears fully sensible of the importance of these documents and studies to make them really useful. When such documents are judiciously arranged and strictly followed, the results of the teaching are usually satisfactory. Further, and still essential to profitable and efficient teaching, there is the mode of working. This implies a knowledge of the structure of mind ; of its various powers and faculties to some extent at least ; it implies a thorough comprehension of the objects or lessons to be presented ; and above all it implies an earnest unwearying determination to discover how, with the strongest probability of success, these lessons may be laid open to the comprehension of the pupils. There is perhaps no element in a teacher's practical skill, that demands his more serious and continued attention than this—how best to make his work tell in the genuine progress of his pupils. As a valuable help in this direction, regular preparation of all lessons to be given may be recommended. Skeleton lessons, embracing the salient points, or those that deserve most prominence, drawn up by the teacher at home from the work laid down in his programmes for the following day, will be found vastly helpful towards an economising of school-time and rendering school-duties more interesting and profitable. In this way teachers find themselves in a position to give their lessons with greater clearness, regularity, and confidence. The pupils come to comprehend this, mutual sympathy is engendered, and good results follow. A tendency in this direction is becoming apparent, and greater anxiety and earnestness to acquire and to practise appropriate and effective methods are manifested by many of the teachers.

Reading.—

Reading.—Fair attention generally is paid to the teaching of reading. The efforts to teach reading well are in the case of several teachers ineffectual from two causes—they do not begin to teach it early enough, and they do not themselves exemplify it. That scholars may become good readers, more care than is usual requires to be taken with them at the very outset, in accustoming them to the clear and accurate perception and enunciation of sounds, as represented by letters, syllables, and words. Carelessness and slovenliness here, as is too often the case, form a serious obstacle to after attempts at good reading. The ear has become familiar with inaccurate sounds, and the habit of improper, indistinct, enunciation has been acquired, which it is exceedingly difficult to eradicate or overcome. The second obstacle to success in teaching reading well, is the failure, on the part of teachers, to furnish patterns of good reading to their scholars. Pleasing, accurate, and attractive reading is an art which teachers may acquire by care and study; with the abundant aids, of which they may avail themselves, and frequent practice, they may readily qualify themselves for being more successful in teaching this subject in their schools.

Whilst, however, it is of much importance that reading as an art be well taught, this is not all that is implied in teaching reading. No reading lesson is taught, however well the mechanical part may have been performed, until its full import have been comprehended by the learner; this necessitates skilful exposition and judicious questioning on the part of the teacher, and thus is reading rendered an invaluable means of developing, refining, and storing the mind. It is satisfactory to find, that improvement is perceptible in the directions indicated; and that in a fair proportion of the schools the teaching of reading, both as an art and as a means of intellectual culture, is better attended to, and more successfully performed.

Writing.—Considerable care is shown in most schools that the writing look well. It is felt that it is one of the subjects through which the general public judges of the worth and efficiency of a school. The ordinary visitor admires and praises neat writing and clean copy-books, and records a favourable opinion of the school. That such frequently happens is no ground of fault; it is rather desirable that through any of the subjects of instruction schools create a favourable impression. They are the more likely to command support and to be useful. But it must be observed that there is to be met with neat writing in carefully and cleanly kept books, worthy of admiration and praise in so far, and not by any means entitled to be regarded as good writing. There may be the want of regular slope, proper shape, and seemly correct joining either in the several letters that compose the words, or in the words themselves. This strikes the eye of the critical observer whilst it escapes the notice of the ordinary visitor. The estimate of the former is consequently less laudatory than that of the latter, and in some instances received by the teacher with less favour and confidence. Still this discrepancy of estimates does good. It compels observation and inquiry; and it leads in many cases to voluntary admission, that after all the estimate of the closer observer was the correct one. In this way teachers are led to look more minutely and carefully to the formation of the very elements of letters and their various combinations. Here improvement has to be noted. The blackboard is more frequently called into requisition, in order to point out the component parts of letters and their combinations, and to guide from these to the formation of words. This is clearly the proper plan to proceed, from the elementary and more simple to the composite and more difficult.

Under the head of writing it must be remarked that in many of the schools more attention is paid to exercises in dictation. These exercises, when properly gone through, are of vast importance, not merely as regards writing, but as regards spelling and punctuation. There are still several schools in which this is little realized. No dictation is given to the first class, and very little to the second. Even in the case of the third the exercise is of such a kind as to be of little value. Such cases are few, comparatively; but the sooner they disappear the better.

Arithmetic.—Beginning with notation, it has to be stated at the outset that in many of the Public, and several of the Denominational, Schools, there has been improvement. In several schools, however, there is still cause for complaint, that notation is very imperfectly taught; and the evil effect of this runs through the more advanced processes in these schools. Another cause of complaint has not yet been removed from several schools,—that of putting text-books on arithmetic into the hands of the pupils, and allowing them to take thence exercises, and work them as best they can. A more worthless method of teaching arithmetic cannot well be conceived. Pupils thus get into a way of doing exercises of a certain type, with little thought and less reasoning; hence, when a simple exercise is read out, or placed upon the blackboard for them to do, they do not understand it, and often make the most stupid attempts to do it. In a large majority of the schools, however, there is a fair approximation to correct and effective methods of teaching this subject. The blackboard is freely used, and the pupils are accustomed to assign reasons for the various steps in their arithmetic exercises. In several schools fair progress is made in the more advanced rules.

Grammar.—The same practice which has been condemned in the case of arithmetic—the improper use of text-books—is met with in the teaching of grammar, but in fewer instances than formerly. Upon the whole it may be stated that during the year grammar has been taught with more intelligence and better effect than in the preceding year. The subject of analysis is not very well understood by many of the teachers, and, as a consequence, it is not very fully or profitably taught; but there has been shown a tolerably general disposition among the teachers to improve in this department. Were teachers to practise writing short articles upon particular subjects, and carefully to study why they place certain words or clauses in certain positions and relations in their sentences, and the effects of these words or clauses upon other and what other parts of their sentences, they would understand analysis better themselves, and so be better fitted for the profitable teaching of it in their schools.

Geography.—With the exception of three or four Denominational and six Provisional Schools, in which little attention is paid to this subject, the teaching of geography, speaking generally, ranks from tolerable to fair. A few schools exceed, and a few fall below, this estimate; but upon the year there has been evident improvement. There is, however, room for recommending a more frequent use of the blackboard in teaching geography. Outlining maps upon it in the presence of the class, and accustoming the pupils to do this for themselves, would be a vastly more efficacious and profitable way of teaching geography than keeping boys and girls for weeks drawing and painting maps for mere exhibition.

Object Lessons.—There are a few teachers who do not attempt the giving of object lessons, assigning as a reason their inability from ignorance of the way of doing it; and there are a few who profess to give these lessons, but they might as well not be attempted. In a good proportion of the schools the case is favourably different. The giving and the reproduction of lessons on objects are attended with beneficial results; they are found to stimulate and develop the thinking and reasoning faculties of the pupils, and to help them in transferring their ideas to writing. The benefits of object lessons would be far greater were the teachers to give more attention to their preparation. An object lesson, to be well given, must be well and regularly arranged in the teacher's own mind before it can, with any reasonable hope of profit, be submitted to a class.

Singing.—In only a very few of the schools is not some endeavour made to teach singing. It is indeed true that very much of the teaching consists in the mere practice of singing by ear, and in so far it is tolerably successful; but in a considerable number of schools singing is taught and practised on the tonic-sol-fa system, and with good effect.

Drawing.—The teaching of drawing, although pretty general, is not in the majority of schools very profitable. Instead of the lessons being given to classes, according to their advancement, by the teacher, through figures drawn by him on the blackboard, they are too frequently given, if it can be so called, by laying prints before the pupils that they may copy or imitate them. This may teach children something of mere copying, but it cannot give them any intelligent ideas of drawing. In about a third of the schools this subject is taught in a manner ranging from tolerable to fair; in a few, the character and value of the teaching is higher; but in the remainder it is only moderate.

Needlework.—

Needlework.—Very fair specimens of needlework are now to be seen from the hands of the girls in many of the schools. A reasonable amount of time and attention is paid to this subject in nearly all the schools, and generally satisfactory results follow.

Scripture.—The scripture lessons are steadily read in all the Public Schools, and in not a few of the Denominational Schools. It is frequently very gratifying to find how accurate and extensive is the acquaintance with Bible truth that is possessed in many schools through the use of these lessons.

VI.—LOCAL SUPERVISION.

Little change has taken place in this particular since last year. It is matter of regret that Local Boards generally meet with so little support and encouragement from the body of the parents. The want of this is peculiarly felt in the case of needed repairs to premises. It is often difficult to collect even small amounts for repairs; and some Boards, rather than subject themselves to disagreeable refusals, have the repairs effected at their own cost. This is not as it should be. Parents and others interested in the cause of education ought to support the Local Boards in the efficient performance of their important and gratuitous work.

VII.—RESULTS OF INSPECTION.

Several changes by removals to other schools have taken place among the teachers during the year. A fair proportion of teachers has received promotion; a reasonable number of schools has advanced in proficiency; and, excepting in a very few instances, the schools generally have been better attended and better supported than during the previous year.

ALEXR. L. FORBES, A.M.,
Inspector of Schools,
Cumberland District.

Richmond, 26 January, 1870.

DETAILED Statement of the condition of Schools in the Cumberland District, inspected during the Year 1869.

1.—PUBLIC SCHOOLS.

CASTLEREAGH :—Visited, 21st July.

Present at examination :—Boys, 9 ; girls, 9 ; total, 18.

1. The school buildings have received some repairs since last inspection ; but their condition is still unsatisfactory. 2. An improvement has taken place in the attendance. It is larger and more regular, although it was small on the day of the examination through unfavourable weather. 3. The aim of the teaching is to make the pupils receive and comprehend the lessons presented to them, and for these ends the methods employed are tolerably suitable. 4. The proficiency ranks between tolerable and fair.

COLYTON :—Visited, 16th April.

Present at examination :—Boys, 12 ; girls, 24 ; total, 36.

1. Taken as a whole the premises are good, although they stand in need of considerable repairs. 2. The pupils are clean and tidy in dress and appearance, but they are somewhat wanting in diligence and self-reliance. 3. Whilst in themselves the methods employed are fair, it is desirable that more animation and energy be manifested in their application. 4. The proficiency reaches to nearly fair generally ; in some subjects it exceeds that limit.

DOBROYDE :—Visited, 25th June.

Present at examination :—Boys, 7 ; girls, 24 ; total, 31.

1. The school building is good, and well supplied with all requisites. 2. The discipline has not perceptibly improved since last examination. 3. The usual subjects are taught, but without sufficient penetrativeness. 4. The attainments are little beyond tolerable. Self-reliant diligent working is not a characteristic of the pupils.

DURAL :—Visited, 10th June.

Present at examination :—Boys, 20 ; girls, 24 ; total, 44.

1. The school premises require several repairs and improvements. So far as the teacher is responsible, the organization is tolerably satisfactory. 2. The instruction, which embraces the ordinary subjects, is imparted with earnestness. 3. The moral aspect of the school demands attention. Regularity, punctuality, and cleanliness are open to improvement. 4. The pupils have not learnt to rely upon themselves in endeavouring to answer questions. Their attainments range from indifferent to fair.

FIVE DOCK :—Visited, 12th August.

Present at examination :—Boys, 32 ; girls, 24 ; total, 56.

1. The school building, which is likewise the Church, is good. It is well and suitably furnished, and plentifully supplied with apparatus and books. 2. The attendance of the pupils is fairly regular and punctual. They are generally clean, orderly, and diligent. 3. The prescribed subjects, with the exception of music, are taught, and the methods are careful and fairly effective. 4. The attainments rise to nearly fair.

FREEMAN'S REACH :—Visited, 8th June.

Present at examination :—Boys, 30 ; girls, 29 ; total, 59.

1. The material condition of the premises generally has been improved. The schoolroom needs enlarging. 2. The demeanour of the children, and the spirit that prevails among them, are in the main pleasing. 3. The methods practised are fairly effective ; all the prescribed subjects, except music, are taught. 4. The proficiency ranks from tolerable to very fair ; as a whole it is nearly very fair.

LLONDEILO :—

LLONDEILO :—Visited, 28th April.

Present at examination :—Boys, 10 ; girls, 7 ; total, 17.

1. The schoolhouse is in fair condition, and the teacher's residence has been considerably improved. 2. The attendance, which for some time had been very irregular, is now very small. 3. The instruction is imparted with fidelity and steadiness, but animation and energy are wanting to render it more penetrative. 4. The proficiency is little beyond moderate.

LOWER HAWKESBURY :—Visited, 20th September.

Present at examination :—Boys, 15 ; girls, 17 ; total, 32.

1. The building is good ; but as it was primarily erected for a church, and as it contains the church pews and other church furniture, it is found to be somewhat difficult properly to arrange the school furniture. 2. The attendance has improved during the year, and the school now presents a pleasing aspect. 3. Instruction in all the prescribed subjects is given with vigour and fair results. 4. The attainments approach to nearly fair.

LUDDENHAM :—Visited, 26th February.

Present at examination :—Boys, 26 ; girls, 30 ; total, 56.

1. The premises require very considerable repairs ; in other respects the organization is satisfactory. 2. The character of the attendance is tolerably good, and the pupils generally are clean and tidy. Fair order and diligence in the performance of school duties are maintained. 3. All the prescribed subjects, except music, are taught, and the methods employed are tolerably appropriate and successful. 4. The attainments range between tolerable and fair.

MANLY :—Visited, 20th August.

Present at examination :—Boys, 24 ; girls, 5 ; total, 29.

1. The buildings are good, and the organization, as a whole, is fairly satisfactory. 2. The pupils, especially those in the junior classes, are wanting in diligence and application. They are given to talking and trifling, thus evidencing that discipline has not secured proper results. 3. There is still considerable room for amendment in the imparting of instruction. Greater discrimination in the putting of questions and receiving answers is necessary. 4. The proficiency is very unequal ; but in the main they vary from tolerable to fair.

M'DONALD RIVER (UPPER) :—Visited, 15th September.

Present at examination :—Boys, 17 ; girls, 9 ; total, 26.

1. The building is tolerably good ; but in other particulars the organization is unsatisfactory. This latter remark applies specially to the records and lesson documents. 2. The moral aspect of the school is not pleasing. This is the result of feeble inoperative discipline. 3. The instruction is not well regulated, nor energetically imparted. 4. The attainments are moderate.

MACDONALD RIVER (CENTRAL) :—Visited, 14th September.

Present at examination :—Boys, 12 ; girls, 9 ; total, 21.

1. The school premises are in very bad condition. 2. The attendance is punctual, but not very regular. The pupils are clean and orderly, but not sufficiently thoughtful and diligent. 3. Greater firmness in the manner of teaching, coupled with more animation and energy, is required. 4. The average proficiency is nearly tolerable.

NORTH SYDNEY :—Visited, 6th August.

Present at examination :—Boys, 9 ; girls, 15 ; total, 24.

1. The school premises are very fair, and the organization in other respects is suitable. 2. The children are clean and orderly : but their attendance is not so regular as is desirable. 3. The more ordinary subjects are taught with persevering patience and fidelity. 4. The proficiency is fair.

PARRAMATTA :—Visited, 12th and 13th May.

Present at examination :—Boys, 129 ; girls, 45 ; total, 174.

1. It would be a great advantage to the school if the playground could be enlarged, and a teacher's residence erected. The premises require several repairs. 2. The attendance is good, and the appearance and conduct of the pupils generally is pleasing. 3. In addition to the prescribed subjects, geometry is taught. The whole business of the school is carried on with life and vigour. 4. The grammar of the third class excepted, the proficiency of the whole school in the other subjects of instruction ranges from fair to good.

PENNANT HILLS :—Visited, 25th August.

Present at examination :—Boys, 40 ; girls, 37 ; total, 77.

1. The school premises are unsuitable and in bad condition ; otherwise, the organization is fairly satisfactory. 2. The attendance is fair, and the appearance and demeanour of the scholars are creditable. 3. The standard course is followed as regards the matter of the instruction ; and with a little more animation and energy in their application, the methods employed might be deemed effective. 4. The attainments are nearly fair.

PENRITH :—Visited, 24th and 25th March.

Present at examination :—Boys, 56 ; girls, 39 ; total, 95.

1. For the increasing numbers, a larger and more suitable schoolroom is necessary. The organization, so far as the teacher is responsible for it, is satisfactory. 2. The pupils are clean and neat in their appearance, and orderly and diligent at their work. 3. Besides the ordinary subjects, Latin is included in the course of instruction ; and the methods in use are zealously and energetically applied. 4. The attainments reach to very fair.

PETERSHAM :—

PETERSHAM :—Visited, 11th August.

Present at examination :—Boys, 34 ; girls, 43 ; total, 77.

1. The school premises are new ; they are rather limited in accommodation, whether as regards the teacher's residence, or the schoolhouse. The organization, apart from this, is fair. 2. There is room for improvement in the outward appearance of the pupils, as also in their attendance. 3. The prescribed subjects of instruction are attended to ; and the methods practised need only to be employed with greater animation and vigour. 4. The proficiency varies from tolerable to fair.

PROSPECT :—Visited, 12th April.

Present at examination :—Boys, 21 ; girls, 11 ; total, 32.

1. The school is carried on for the present, in leased premises, which are inconveniently confined. 2. The children attend with fair regularity, and they are tolerably clean and attentive. 3. Singing is not taught, but, with this exception, the standard course is followed. 4. The proficiency, as a whole, is little beyond tolerable.

RICHMOND :—Visited, 9th and 10th March.

Present at examination :—Boys, 47 ; girls, 61 ; total, 108.

1. The schoolroom is too small for the effective management and instruction of the numbers in attendance. 2. The discipline is improved, but it is not yet sufficiently comprehensive and effective in its operation. 3. Instruction is imparted in all the prescribed subjects, and the methods employed are in themselves appropriate. 4. The proficiency ranges from fair to very fair.

RYDE (Primary) :—Visited, 19th October.

Present at examination :—Boys, 51 ; girls, 38 ; total, 89.

1. The schoolroom is very fair, and suitably and sufficiently furnished ; but it is too small. 2. The discipline is healthy. The pupils are clean, orderly, and generally well conducted. 3. Appropriate methods of communicating and instructing in the prescribed subjects are employed with animation and zeal. 4. The proficiency varies from tolerable to very fair. The pupils exhibit considerable industry and self-reliance.

RYDE (Infants) :—Visited, 20th October.

Present at examination :—Boys, 36 ; girls, 36 ; total, 72.

1. A very fair schoolroom, well furnished. 2. The children present a very pleasing appearance. They are clean, lively, and obedient. 3. The prescribed infant school course is followed ; the lesson documents are carefully drawn up, and the teaching is distinguished by animation and skill. 4. The proficiency is very fair.

SMITHFIELD :—Visited, 29th July.

Present at examination :—Boys, 12 ; girls, 16 ; total, 28.

1. The material condition and general organization are satisfactory. 2. The attendance is somewhat irregular. The pupils are clean, orderly, and tolerably ready. 3. The ordinary subjects only are taught. 4. The proficiency is nearly fair.

ST. ALBAN'S :—Visited, 16th September.

Present at examination :—Boys, 18 ; girls, 13 ; total, 31.

1. The school is still held in temporary premises. It is very important that the proper buildings be erected. 2. The children are under good control, and they are diligent and attentive. 3. The more ordinary subjects are taught, and the instruction is imparted with fair skill and energy. 4. The pupils are being trained to habits of self-reliance, and their attainments approach to nearly fair.

ST. MARY'S :—Visited, 23rd March.

Present at examination :—Boys, 13 ; girls, 12 ; total, 25.

1. The organization is generally satisfactory. 2. The attendance is irregular, but in general the children are clean, orderly, and diligent. 3. The instruction is imparted with steadiness and care. 4. The proficiency ranges from moderate to fair.

WALLGROVE :—Visited, 12th July.

Present at examination :—Boys, 16 ; girls, 16 ; total, 32.

1. The schoolroom is small, but suitably furnished. 2. The pupils are tidy in appearance and well behaved. 3. The instruction, which is confined to the more ordinary subjects, is imparted with tolerable tact and energy. 4. The proficiency varies from tolerable to fair.

II.—PROVISIONAL SCHOOLS.

BAULKHAM HILLS :—Visited, 9th June.

Present at examination :—Boys, 10 ; girls, 19 ; total, 29.

1. The premises are good, but the schoolroom being nearly square, and rather small, is not well fitted for the proper arrangement of the pupils. The classification and the programmes are moderately suitable. 2. The children are clean and tolerably regular, but wanting in diligence and self-reliance. 3. The methods in use are not indicative of skill, and there is the want of animation and vigour in their application. 4. The proficiency is about moderate.

GUILDFORD :—Visited, 4th November.

Present at examination :—Boys, 13 ; girls, 7 ; total, 20.

1. The room is too small and insufficiently furnished. 2. The discipline is tolerably healthy. 3. The ordinary subjects are taught, and the work of the school is carried on with diligence and earnestness. 4. The attainments range from moderate to tolerable.

HUNTER'S HILL :—Visited, 18th October.

Present at examination :—Boys, 22 ; girls, 15 ; total, 37.

1. The material condition of the school and the organization generally are fairly satisfactory. 2. The attendance is tolerably regular, and the pupils as a whole are clean. There is a want of order and ready obedience. 3. Whilst in imparting instruction, suitable methods and fair skill are employed, the results are low through ineffective discipline. 4. The proficiency is between moderate and tolerable.

M'DONALD RIVER :—Visited, 15th September.

Present at examination :—Boys, 10 ; girls, 19 ; total, 29.

1. A new slab building has been erected. As yet it is not quite finished, nor is it sufficiently furnished. 2. The attendance is tolerably regular, but proper order and diligence have not been established. 3. The more common subjects are taught, but without much method. 4. The attainments vary from moderate to tolerable.

NEWINGTON :—Visited, 15th July.

Present at examination :—Boys, 17 ; girls, 10 ; total, 27.

1. The organization is improved. 2. The attendance is more regular than formerly, and the work of the school is managed with better effect. 3. The instruction in the more ordinary subjects is imparted with care and earnestness. 4. The proficiency reaches to nearly fair.

NORTH ROCKS :—Visited, 10th September.

Present at examination :—Boys, 5 ; girls, 5 ; total, 10.

1. The building is substantial and suitable, but not quite finished. 2. The attendance, though small on the day of examination, owing to the unfavourable state of the weather, is ordinarily reasonably good. The scholars are tolerably clean and orderly. 3. Instruction in the ordinary branches is diligently and carefully imparted. 4. The attainments rank from tolerable to fair.

REGENTVILLE :—Visited, 12th February.

Present at examination :—Boys, 6 ; girls, 16 ; total, 22.

1. The material condition of the school is unsatisfactory, but the erection of more suitable premises is contemplated. 2. The attendance is irregular. The pupils want earnestness and application. 3. Instruction is given in the more ordinary subjects, but the skill manifested is only moderate. 4. The proficiency, viewed as a whole, does not reach much beyond indifferent.

SACKVILLE REACH :—Visited, 13th July.

Present at examination :—Boys, 22 ; girls, 11 ; total, 33.

1. The building is rather small, but tolerably furnished. 2. The discipline is feeble, not securing due attention and diligence in the performance of school work. 3. The teaching is limited to the simpler subjects, and the methods employed are too mechanical. 4. The attainments are a little over tolerable.

SHANCAMORE :—Visited, 24th February.

Present at examination :—Boys, 8 ; girls, 8 ; total, 16.

1. The furniture is still insufficient, and the lesson documents are not profitably constructed. 2. The attendance is irregular, but the cleanliness, order, and attention, are tolerably satisfactory. 3. Antiquated modes of teaching prevail, and there is little mental development. 4. The proficiency is barely tolerable.

WRIGHT'S CREEK :—Visited, 14th September.

Present at examination :—Boys, 10 ; girls, 7 ; total, 17.

1. The room is small and unsatisfactorily furnished. 2. The children are tolerably regular, fairly clean, and attentive. 3. The teaching is painstaking and moderately skilful, but the classification is injudicious. 4. On the whole, the progress is nearly fair.

3.—HALF-TIME SCHOOLS.

COLO :—Visited, 13th October.

Present at examination :—Boys, 7 ; girls, 3 ; total, 10.

1. The building is very much in need of repair. The furniture has been somewhat improved. 2. The attendance is tolerably regular, and the cleanliness, order, and attention are fair. 3. The more ordinary subjects are taught with considerable earnestness and tact. 4. The proficiency ranks from tolerable to fair.

WHEENY CREEK :—Visited, 12th October.

Present at examination :—Boys, 4 ; girls, 6 ; total, 10.

1. The room is insufficiently and unsuitably furnished. 2. The children attend with fair regularity, and they are clean and orderly. 3. The teaching, which is limited to the more ordinary subjects, is earnest and painstaking. 4. The attainments vary from moderate to tolerable.

ALEXR. L. FORBES,
Inspector.

GOULBURN DISTRICT—INSPECTOR'S GENERAL REPORT UPON PUBLIC, PROVISIONAL,
AND HALF-TIME SCHOOLS, FOR 1869.

In accordance with instructions I beg to submit, for the information of the Council of Education, my General Report upon the condition of the Public, Provisional, Half-time, and Denominational Schools, inspected by me during the year. A statement, including a separate abridged abstract of my report upon each school, is hereunto appended. The information contained therein chiefly relates to the material condition of the schools, the organization, discipline, and moral training of the scholars, the subjects and methods of instructions, and the general progress of the pupils in learning.

SCHOOLS

SCHOOLS IN OPERATION.

At the close of the year 1868 there were 118 schools in operation, attended by 5,560 scholars, as hereafter set forth :—

35 Public Schools, attended by 2,162 pupils ; average for each school,	61
19 Provisional, " 583 " "	30
28 Half-time, " 474 " "	17
17 Church of England, " 990 " "	58
18 Roman Catholic, " 1,289 " "	71
1 Presbyterian, " 62 " "	62

Now (25th December, 1869) there are 148 schools in operation, attended by 6,530 scholars, being an increase of 30 schools and 970 scholars during the year. The following statement shows the number of each class of schools in operation in the district at the close of the year, with the attendance of pupils :—

41 Public Schools, attended by 2,313 pupils ; average for each school,	56
32 Provisional, " 930 " "	29
41 Half-time, " 724 " "	17
14 Church of England, " 952 " "	68
18 Roman Catholic, " 1,403 " "	77
2 Presbyterian, " 208 " "	104

The aggregate attendance of pupils at all the schools for the year was 8,806, and during the year eight Public Schools were established at the following places :—

Mossvale	Tirranna
Candelo	Kangaloon West
Mittagong Upper	Nelligen
Berrima	Tarago.

In consequence of the small attendance of pupils, the Public Schools at Eling Forest and Millbang were reduced to the rank of Provisional Schools, and fourteen additional Provisional Schools were established at the undermentioned places :—

Mogo	Tarlo
Tuena	Bolong
Fairy Plain	Murrumbateman
Mullengullenga	Nimitybelle
Kangaloola Creek	Charlegong
Black Heath	Bateman's Bay
Cotta Walla	Middle Arm.

In consequence of the small attendance of pupils, the Provisional School at Breadalbane was closed, and the Provisional Schools at Richlands and Tarago were converted, the former into a Half-time School, and the latter into a Public School. Half-time Schools were established during the year at the following places :—

Adaminaby and Boconnoc
Crookwell and Gullen
Kippelaw and Run of Water
Coolamatong and Gejedzrick
First Creek and Third Creek
Lochiel and Greig's Flat
Richlands and Gilbraith
Long Flat.

With regard to the Church of England Schools the certificate was withdrawn from Adaminaby at the beginning of the year, in consequence of the small attendance of pupils, and a Half-time School established in conjunction with Boconnoc. Kiora was closed at the request of the Local Board, in order to establish a large popular Public School, the population not being sufficient to support two schools. The school at Tirranna was converted into a Public School at the request of the Local Board. The Roman Catholic Schools remain the same as at the close of last year. In the statement showing the number of schools there appears to be an additional Presbyterian School, but this arises from an alteration in the furnishing of the returns of the attendance of scholars.

OCCUPATION OF TIME.

During the year I inspected ninety-three schools, consisting of ninety-seven departments. Of the schools inspected :—

33 were Public Schools
14 Provisional
25 Half-time
9 Church of England
11 Roman Catholic, and
1 Presbyterian.
3,407 scholars were examined
1,297 communications were written
31 Teachers and Pupil Teachers were examined
8 Investigations were held
24 Visits of Inquiry were made
15 School sites were selected and described
97 Visits of inspection were made
8 Public Schools were established
14 Provisional Schools, and
15 Half-time Schools.
2,875 Miles travelled.

The following statement shows the names of the places visited in order to report upon applications for the establishment of new schools :—

Chain of Ponds	Kyla
The Gap	Charlegong
Tuena	Yass River
Berlang	Bolong
First Creek	Howlong Creek
Mudmalong	Tarlo
Parkesbourne	Mummell East
Cathcart	Butmaroo Creek
Mullengullenga	Township of Robertson
Black Springs	Jambaicumbene Creek
Towamba	Cochrane's Flat
Merimbula	Jellatt Jellatt.

SCHOOLS NOT INSPECTED.

The subjoined table shows the names of the schools not inspected in 1869 :—

<i>Public Schools.</i>	
Cooma Dalton Gunning	Myrtleville Queanbeyan Taralga
 Millbang.	
<i>Provisional Schools.</i>	
Bangalore Bateman's Bay Grabben Gullen Kenny's Point Michelago Nimitybelle Tarlo Tuena Laggan	Bolong Bungendore Killenamella Kiandra Murrumbateman Tarralla Spring Valley Kangaloola Creek Charlegong
<i>Half-time Schools.</i>	
Adaminaby and Boconnoc Bullamalita and Springfield Carwoola and Foxlow Crookwell and Gullen Coolamatong and Gejedzrick Jamboye and Jerricknorra Nerriga and Corang Richlands and Yelbraith First Creek and Snaphook	
<i>Church of England Schools.</i>	
Braidwood Queanbeyan	Canberra Ginninderra
 Yass.	
<i>Roman Catholic Schools.</i>	
Bungendore Queanbeyan	Cooma Yass
<i>Presbyterian School.</i> Yass.	

CHARACTER OF THE INSPECTION.

The inspection of the schools during the year was as rigid as usual, perhaps more so, because in almost every instance my visits were made without any notice of the examination being given to either teachers or School Boards. I had therefore the advantage of seeing the schools in their usual working condition. I endeavoured to arrive at every school in sufficient time to notice the punctuality of the pupils; I examined the class rolls to ascertain whether the attendance was regular; I noted the cleanliness of the teachers, of the schoolrooms, and of the pupils; and if the floor, windows, desks, seats, and maps were free from ink and dust. I carefully considered how the operations of the schools were carried on, the system of government, the character of the discipline, as well as the attention, manners, and morals of the pupils. The examination of the scholars upon the subjects taught, occupied a large portion of my time. I examined every class, noted the subjects of instruction, the attainments of the pupils, the practical skill of the teachers, and if the School Boards manifested an intelligent interest in the success and usefulness of the schools. I, in every case, observed if the fundamental regulations of the Council were complied with, if the necessary documents were suspended on the walls of the schoolroom, such as the time-table regulating the time devoted to each branch, the notice to visitors, the course of secular instruction, the programmes of lessons, names of the School Board, scale of school fees, and the regulations of the Council. I also inspected the school library, and the books in the hands of the children, and in all the Denominational Schools. I was careful to ascertain if the *special religious instruction* was confined to the time specified in Article 73 of the Council's Regulations, and if the school records were correctly and neatly kept. The suitability of the site, the condition of the buildings and fences, the extent of the playgrounds, and the quantity and suitability of the furniture and apparatus, were all carefully noted. In deciding upon the attainments of the scholars, the time in class was taken into consideration, and at the conclusion of the inspection of every school, if required, I made such suggestions to the teachers and School Boards as I considered necessary; and I embodied in my reports such recommendations for the information of the Council as I considered would improve the schools and benefit the public.

MATERIAL CONDITION OF THE SCHOOLS.

Of the thirty-three Public Schools inspected, seventeen are Vested, and sixteen Non-vested. Thirty-one of the sites are suitable in almost every respect, and two are tolerably so. Twenty-five of the school buildings are suitable for the purposes of teaching, and in good repair. Six are tolerably satisfactory in these respects, and there are only two of an indifferent kind. At Berrima, Araluen, Norwood, and Gundaroo, new buildings were in course of erection at the dates of inspection. Thirty-one of the schools visited have sufficient and suitable playground accommodation; but in several cases, there are no closets, nor fencing, and some schools are in much need of a supply of water. The majority of the Public Schools inspected are well furnished and supplied with sufficient apparatus and books. In ten schools there are some deficiencies in these respects, but there are only two where the supply of furniture is indifferent. Of the fourteen Provisional Schools inspected, there are several where the buildings and furniture are of an inferior description. The grounds are generally not enclosed, closets are often wanting, and in many cases there are no residences for the teachers. The same remarks apply to the Half-time Schools. As regards the Denominational Schools, about half the number inspected are held in churches; the buildings are generally suitable, and in good repair. Of the other schools, not held in places of worship, there are only two schoolrooms, of an indifferent kind. In the majority of the twenty-two Denominational Schools inspected, the furniture is either insufficient or unsuitable in some respects; but in eight the supply is of a good description. In nearly all the schools, of every class, the supplies of books and apparatus are sufficient, or almost sufficient.

DISCIPLINE

DISCIPLINE.

The Council's rules relative to punctuality, regularity, cleanliness, order, and government of the pupils receive a considerable amount of attention in most schools of all classes, both Public and Denominational; but there are many where the general discipline could be much improved. The pupils in many schools, but chiefly those recently established, are not sufficiently punctual, much given to talking, and wanting in attention. In a large number of the schools, however, both Public and Denominational, the cleanliness is tolerably satisfactory. This is in itself of great importance to the community, because it is so conducive to health and morality, that it has been often and truly said that "cleanliness is a virtue." In some schools, however, the daily inspection of the scholars is either neglected or not sufficiently strict, and in most schools the late pupils are seldom inspected before taking their seats. The general rule is, that every morning and afternoon the children form themselves into parallel lines on the playgrounds before entering school, and the teachers satisfy themselves, by personal inspection, that the hands, faces, necks, and ears of the pupils are clean, their hair brushed, and their clothes clean and neat. The teachers are bound not only to promote the health of their pupils, but to protect them from everything detrimental to it, and should any of them be found to have any of those infectious diseases incidental to children, their parents or guardians are requested to keep them at home until perfectly cured. In about two-thirds of all the schools inspected, the order seemed to range from tolerable to fair, or good, and in the remainder from tolerable to indifferent, or bad. In few of the schools is the order of so high a standard as may be attained; much time is often wasted when changing lessons, and in repeating orders, which are not, when first given, promptly obeyed. Order and uniformity of action, and strict attention to work among the pupils attending all classes of schools inspected, admit of improvement. A school or class of children under efficient discipline, is so trained to habits of order and obedience that the pupils, when told what to do, do it exactly as it ought to be done without a second command; but this excellence does not obtain in many schools. Speaking generally, the government of the schools is mild; moral suasion is the ruling principle, but I did not inspect any, in which corporal punishment had been wholly abandoned, neither did I hear of undue severity having been practised by any teacher. Of the kinds of punishment adopted in the schools, rebuke is considered sufficient for some children, while others, according to their faults and dispositions, require different treatment, such as confinement in school during play-time, separation from their class fellows, or the administration of the cane. I do not recollect any instance of any pupil having been expelled from any of the schools for bad conduct. Generally speaking the supervision of the scholars in the playgrounds is not attended to with sufficient care, but this part of the discipline has been improved during the year. With the exception of one school, I found the school records correctly kept, but in several cases they were not fully posted up to date, and in some schools they are not kept with sufficient neatness and care. The quarterly returns of the numbers of pupils attending the schools are, with few exceptions, furnished with correctness and despatch. Excepting in four or five cases, the Regulations of the Council are carefully observed in all the schools inspected.

ATTENDANCE OF PUPILS.

The following table exhibits the attendance of pupils at all the Public, Provisional, and Half-time Schools in the Goulburn District:—

	Boys.	Girls.	Total.
Numbers of pupils enrolled in the schools inspected	1,366	1,267	2,633
Numbers of pupils at examination	1,070	980	2,050
Numbers enrolled for the last quarter of the year	2,042	1,925	3,967
Average attendance for the same period	1,441	1,324	2,766
Total numbers of pupils who attended the schools in 1869	2,679	2,472	5,151

The following table shows the attendance of pupils at all the Denominational Schools in the District:—

	Boys.	Girls.	Total.
Numbers of pupils enrolled in the schools inspected	886	857	1,743
Numbers of pupils at examination.....	689	668	1,357
Numbers of pupils enrolled for last quarter of year	1,319	1,244	2,563
Average attendance for the same period	923	853	1,776
Total number of pupils who attended the schools in 1869	1,925	1,730	3,655

By comparing the figures in the foregoing tables, it may be observed that nearly four-fifths of the pupils on the rolls at the time of inspection were present at examination; and the average daily attendance of pupils for the last quarter of the year was about 70 per cent. of the number enrolled. This may be considered rather irregular; but on the whole, compared with other countries, the result is not unsatisfactory. The daily average attendance of pupils at the Public Schools in Great Britain, for the year ending 31st August, 1868, was about 68 per cent. of the pupils enrolled. The irregularity of many scholars may be traced to all or some of the following causes, such as the poverty of the parents, the high price of labour, heavy rains, and floods; and often sickness and disease. The incompetency of teachers has much to do with the attendance of pupils; a good cheerful popular school exerts an attractive influence over the scholars; they become anxious for learning, are less liable to be kept at home if they manifest a desire to go to school, attend more regularly and in greater numbers. In a school of this class the average attendance is usually about 80 per cent. of the number enrolled, whereas in schools managed with but little skill, the average attendance is about 60 per cent., and sometimes so low as 50. It is certain that no enactment making education compulsory could compel children to attend school in times of rain and floods, or snow-storms, or when suffering from sickness or disease. I am of opinion that if such an enactment were passed by the Legislature, and carried out in that kind and considerate spirit which would be necessary, it would not increase the attendance more than 10 per cent.

AGES OF CHILDREN EXAMINED.

Of 2,769 pupils present at the time of inspection:—

658 boys and 520 girls were	7 years of age and under.
181 " 147 "	8 years of age.
166 " 138 "	9 "
140 " 134 "	10 "
114 " 115 "	11 "
226 " 230 "	11 " and above.

From

From this statement it appears that about 42 per cent. of the pupils are not above 7 years of age, that one-third are between 7 and 10 years, and the remainder of the children examined are over 10 years. These proportions of the different ages are much the same in all classes of schools inspected, both Public and Denominational. There are very few pupils over 14 years of age attending any of the schools.

PROFICIENCY OF THE PUPILS.

The following statement shows the number of scholars learning the different branches of study at the time of inspection :—

Learning—	
The alphabet, and to read monosyllables	1,557
To read easy narrative	1,071
To read ordinary prose	779
To write on slates	1,672
To write on paper	1,705
To write from dictation	2,827
Simple rules of arithmetic	2,272
Compound rules	566
Advanced rules	417
Elements of English Grammar	1,134
Advanced parts of the subject	561
Analysis and composition of English language	779
Elements of modern geography	1,278
Advanced parts of the subject	779
Scripture	2,570
Lessons on common things and objects	2,750
Drawing	1,133
Vocal music	1,670
Latin	27
French	7
Algebra and geometry	56
Mensuration and bookkeeping	21
Needlework, knitting, netting, tatting, and crochet	1,257

The following statements show the classification of the pupils in the schools inspected :—

First class	833 boys, 724 girls; total, 1,557
Second class	541 " 530 " " 1,071
Third class	317 " 359 " " 676
Fourth class	68 " 35 " " 103

As regards the character of the instruction and the attainments of the pupils, the proficiency is much the same in both Public and Denominational Schools. When a school is inspected, the answering of the pupils is very carefully noted, and the teacher always has the advantage of seeing his scholars examined upon the subjects which he professes to have taught them. The following is the standard used for measuring results :—

Proficiency of Pupils.	Marks.
If each pupil answers correctly	Excellent.
If seven in eight answer correctly	Very good.
If three in four answer correctly	Good.
If five in eight answer correctly	Very fair.
If four in eight answer correctly	Fair.
If three in eight answer correctly	Tolerable.
If one in four answer correctly	Very moderate.
Or a smaller number	Bad.

In accordance with this standard, the attainments in three of the Public Schools inspected are good; in eight, fair or very fair; in seventeen, tolerable; in three, moderate; and in four, bad. As regards the attainments of the pupils in the Provisional Schools inspected, they are chiefly learning reading, writing, and arithmetic, and in some cases the elements of grammar and geography. Four of these schools are managed with tolerable skill, in five the proficiency is moderate or bad, and in six cases the schools have been recently established, and the pupils are beginning to learn the mere elements of reading and writing and some easy mental arithmetic. My remarks relative to the proficiency of the pupils attending the Half-time Schools will be found in the following paragraph of this report. The proficiency of the pupils in the Denominational Schools inspected is good in one, fair in six, tolerable in eight, moderate in two, and bad in three. Now if the general condition of the schools is compared with the standard, it can be easily observed that the attainments of the scholars admit of considerable improvement in a large number of all classes of schools, both Public and Denominational. In many schools the pupils read with hesitation and indistinctness, in others the enunciation is rapid and often incorrect, and it is remarkable how little attention generally is paid to the punctuation. In a large number of schools, however, the reading is passable, but it is evident too little attention is paid to the meanings of words and the matter of the lessons. Writing from dictation is taught in nearly all the schools, and in general the spelling was tolerably satisfactory. The penmanship is, in general, clean and careful, but in many schools the method of teaching admits of much improvement. As regards arithmetic, there are few schools where it is well taught. In grammar the attainments are tolerable in a considerable number of schools, but in few are analysis and composition of the English language well taught. In many of the Provisional and Half-time Schools grammar is not taught. A large number of pupils are learning geography; the junior classes learn the mere elements, such as the cardinal points, the topography of the school district, the uses of a map, and the relative positions of the continents and oceans. The more advanced are learning the physical geography of the globe. Nearly all the schools are well supplied with maps, but globes are found in few. A large number of the scholars learn Scripture history. Needlework is taught in nearly all the schools conducted by married teachers, but in few schools do the advanced boys learn classics or mathematics. The schools inspected in 1868 I found to be considerably improved in 1869. The teachers are in general anxious for improvement; they are also industrious and attentive to their duty.

HALF-TIME SCHOOLS.

These schools have increased from twenty-eight to forty-one during the year, and they are now attended by 724 scholars. The Half-time Schools are becoming popular among the people. The pupils are chiefly learning reading, writing, and arithmetic, and in some cases the elements of grammar and geography, with drawing and vocal music in two or three. In two of the schools inspected, the pupils are beginning to learn the

the mere elements of reading and writing with easy mental calculation, but in fifteen schools the progress is tolerable, in six fair, and in two good. The schools under trained teachers are much more efficient than the schools under untrained men, and the business of the schools is much hindered when they are conducted in private houses. In no case should any teacher have more than two schools to manage; there should always be suitable, schoolrooms, and trained teachers employed. Under such arrangements—the number of pupils in no case to be less than ten—I am of opinion Half-time Schools can be managed as efficiently as full-time schools, so far as regards the progress of the pupils in reading, writing, and arithmetic; and a knowledge of these subjects is surely of great value to children who without such schools must grow up to be men and women without any education. I have inspected twenty-five of these schools during the year, and summaries of my reports are hereunto appended, and I have no hesitation in saying that I am of opinion Half-time Schools can be managed so as to produce very satisfactory results. The attainments of the pupils in some of the schools inspected were truly gratifying, and I have no doubt much progress will be made during the current year. In connection with this subject I beg to submit the following quotation from the Report of the Royal Commissioners:—

“That for children under the age of twelve years, twenty-four hours a week is nearly the limit of profitable studies requiring mental effort. That eighteen hours a week is often a more useful period of mental effort than twenty-four. That fifteen hours a week—the utmost that is obtained by the factory children—is, to use the most unfavourable expression, not insufficient. That much may be done in twelve hours a week, or two hours a day, provided that those two hours be two fresh hours in the morning.”

FREE SCHOLARS.

The numbers of free scholars educated in the schools of this district are set forth in the following statement:—

Schools.	Boys.	Girls.	Totals.
Public	154	185	339
Provisional	78	120	198
Half-time	139	128	267
Church of England	43	39	82
Roman Catholic.....	181	157	338
Presbyterian	2	1	3
Totals	597	630	1,227

CLASSIFICATION OF TEACHERS.

There were employed in the schools of the district, at the close of the year,—

128 Teachers
 14 Assistants, and
 4 Pupil teachers.
 110 were males and
 36 females.
 43 were employed in Denominational Schools, and
 103 in Public, Provisional, and Half-time.

Several promotions and removals of teachers were made during the year, the result of which has been to improve the schools to some extent. As I have already observed in a previous part of this report, nearly all the teachers, in both Public and Denominational Schools are earnest, industrious, and painstaking in the discharge of their duties. The following statement shows the classification of the Teachers in each class of schools:—

Schools.	First Class.		Second Class.		Third Class.			Not Classified
	Section A.	Section B.	Section A	Section B.	Section A.	Section B.	Section C	
Public Schools	1	1	...	6	16	6	13	5
Provisional.....	32
Half-time	1	7	12
Church of England	3	4	5	5
Roman Catholic.....	2	4	10	6
Presbyterian	1	...	1	1
	1	1	...	6	22	15	36	61

COST OF EDUCATION PER PUPIL.

The total number of pupils who attended the schools in the district in the year was 8,806, and the total annual salaries of the teachers, with the cost of inspection added, amount to £10,211. From the Abstracts of Annual Returns it appears that the total school fees paid to the teachers during the year was £3,807 10s. 4d. Now if the grants made by the Council for permanent improvements and the erection of school buildings are not taken into account, it will then follow that each pupil who attended the schools in 1869 cost the Council of Education £1 3s. 2d., the same amount as last year, and the parents or guardians about 10s., not including the free scholars. The total cost of education for each pupil is £1 13s. 2d. From this statement it appears that the Council pays rather more than two-thirds of the total cost of each child's education, and the people a little less than one-third. The total vote for public education in Great Britain for the year ending 31st August, 1870, was at the rate of 9s. 11d. for each pupil likely to attend school.

CONCLUDING REMARKS.

A large number of schools have been established during the year, and nearly 1,000 additional children have been brought under instruction. Most of the schools inspected in 1868 were found to be considerably improved in 1869. The local supervision of the Public Schools is tolerably efficient; but with regard to many of the other schools it is of little value. Free scholars have increased in proportion to the number of additional schools, and a large number of new schools, and more frequent inspection, about half-yearly, are urgently needed in many parts of the district, to secure to the people the

the full advantages of the Public Schools Act, which daily increases in public favour. The Half-time Schools have been much improved during the year, and they promise to do much for the education of the sparsely populated districts of the Colony.

W. McINTYRE,
Inspector of Schools.

Goulburn, 12th February, 1870.

THE following remarks are abridged statements of my detailed reports upon the condition of the Public Provisional, and Half-time Schools, inspected by me from 19th March to 16th December, 1869. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning :—

PUBLIC SCHOOLS.

KIORA (N.V.) :—Visited, 19th March.

Numbers of pupils enrolled :—Boys, 18 ; girls, 15 ; total, 33.
Present at examination :—Boys, 17 ; girls, 14 ; total, 31.

This school is held in the Wesleyan Chapel. It is a neat building, in good repair and well furnished, but the grounds are not enclosed and there are no closets. The stock of apparatus and books is sufficient. Three-fourths of the pupils enrolled are regular and punctual in attendance, and they are clean and attentive to their work. The general proficiency of the scholars ranges from moderate to tolerable.

NERRIGUNDAH (N.V.) :—Visited, 23rd March.

Numbers of pupils enrolled :—Boys, 15 ; girls, 20 ; total, 35.
Present at examination :—Boys, 15 ; girls, 17 ; total, 32.

The schoolroom is constructed of slabs and bark, and in fair repair, but the grounds are not enclosed, and there are no closets. Some additional furniture, apparatus, and books are required. About three-fourths of the pupils are regular and punctual in attendance, orderly and attentive to their lessons. The progress in learning varies from moderate to tolerable.

EUROBODALLA (N.V.) :—Visited, 24th March.

Numbers of pupils enrolled :—Boys, 19 ; girls, 17 ; total, 36.
Present at examination :—Boys, 16 ; girls, 16 ; total, 32.

The furniture is unsuitable and badly arranged, and the schoolroom is much too small. There are no closets, and the teacher's residence is uncomfortable. Additional books and apparatus are required, and the general discipline admits of much improvement. The pupils are unpunctual, and order and attention are much wanting. The organization is defective and the general attainments of the pupils are small. The teacher is but little acquainted with the modern methods of tuition.

GUNDABOO (N.V.) :—Visited, 16th June.

Numbers of pupils enrolled :—Boys, 20 ; girls, 15 ; total, 35.
Present at examination :—Boys, 17 ; girls, 17 ; total, 34.

This school is held in temporary premises, but new buildings are in course of erection. The supply of furniture, apparatus, and books is sufficient, and the organization, discipline, and progress of the pupils in learning are tolerably satisfactory.

TARAGO (N.V.) :—Visited, 25th June.

Numbers of pupils enrolled :—Boys, 17 ; girls, 20 ; total, 37.
Present at examination :—Boys, 14 ; girls, 15 ; total, 29.

This school is held in the English Church. It is a good building. The grounds are enclosed, and there is a fair supply of furniture, apparatus, and books. The discipline and attainments of the pupils have been much improved since the last inspection.

BRAIDWOOD (V.) :—Visited, 20th July.

Numbers of pupils enrolled :—Boys, 64 ; girls, 44 ; total, 108.
Present at examination :—Boys, 51 ; girls, 37 ; total, 88.

The schoolroom is sufficient in size, in good repair, and well furnished. There is a good stock of books and apparatus, but a supply of water is much required. The pupils are not sufficiently punctual in attendance, but in other respects the discipline is tolerably satisfactory. The attainments of the younger children are moderate, but the progress of the elder pupils is fair in most respects.

MONKITTEE (N.V.) :—Visited, 22nd July.

Numbers of pupils enrolled :—Boys, 11 ; girls, 19 ; total, 30.
Present at examination :—Boys, 8 ; girls, 14 ; total, 22.

Repairs to the schoolroom, closets, and some additional furniture are required. The cleanliness and punctuality admit of much improvement. Vocal music is not taught, but the attainments of the scholars in the other branches range from moderate to tolerable.

LITTLE RIVER (V.) :—Visited, 23rd July.

Numbers of pupils enrolled :—Boys, 26 ; girls, 25 ; total, 51.
Present at examination :—Boys, 17 ; girls, 15 ; total, 32.

The buildings have been recently erected ; they are suitable and substantially built. The grounds are not enclosed ; some additional books and apparatus are required, but there is a good supply of furniture. Many of the pupils are unpunctual in attendance, but the discipline is passable in other respects. The progress of the pupils in learning is tolerable.

ARALUEN,

ARALUEN, WEST (V.) :—Visited, 30th July.

Numbers of pupils enrolled :—Boys, 58 ; girls, 49 ; total, 107.
Present at examination :—Boys, 48 ; girls, 42 ; total, 90.

A residence for the teacher, fencing, a bell, and a permanent supply of water are much needed. The schoolroom is rather small, but there is a fair supply of furniture and school materials. All the usual subjects are taught, and the attainments of the pupils are fairly satisfactory. The order is tolerably good, but many of the scholars are unpunctual, and some are not sufficiently clean.

MAJOR'S CREEK (V.) :—Visited, 3rd August.

Numbers of pupils enrolled :—Boys, 39 ; girls, 35 ; total, 74.
Present at examination :—Boys, 32 ; girls, 30 ; total, 62.

The closets and flooring of the schoolroom need some repairs, but in other respects the material condition of the school is passable. The discipline admits of improvement, but the progress of the pupils in learning is fair in most respects.

MARULAN (N.V.) :—Visited, 30th August.

Numbers of pupils enrolled :—Boys, 29 ; girls, 35 ; total, 64.
Present at examination :—Boys, 20 ; girls, 28 ; total, 48.

This school has been removed since my last inspection to premises on the opposite side of the main street. The schoolroom is sufficient in size, but it needs some repairs. The supply of furniture, apparatus, and books is not quite complete. The cleanliness and order of the pupils are passable, and the habit of attention has been improved during the year. Three-fourths of the children enrolled are regular and fairly punctual in attendance, and the attainments range from tolerable to fair.

NEW SHEFFIELD (N.V.) :—Visited, 7th September.

Numbers of pupils enrolled :—Boys, 41 ; girls, 33 ; total, 74.
Present at examination :—Boys, 29 ; girls, 23 ; total, 52.

This school is held in the Wesleyan Chapel. It is a commodious building and in good repair, but the playgrounds are not enclosed. Two additional desks are necessary, but in other respects the material condition of the school is good. The teacher is advanced in years, and very little acquainted with the modern methods of school management. The general discipline and instruction of the scholars are unsatisfactory.

BERRIMA (N.V.) :—Visited, 8th September.

Numbers of pupils enrolled :—Boys, 29 ; girls, 11 ; total, 40.
Present at examination :—Boys, 26 ; girls, 10 ; total, 36.

This school is held in temporary premises, but excellent buildings are in course of erection, and almost complete. The classification of the pupils admits of some improvement, but all the usual subjects are taught, and the proficiency of the scholars is tolerable for the junior classes, and fair for the senior. The discipline is tolerably strict, and there is a fair stock of working materials.

BOWRAL (V.) :—Visited, 13th September.

Numbers of pupils enrolled :—Boys, 35 ; girls, 29 ; total, 64.
Present at examination :—Boys, 30 ; girls, 23 ; total, 53.

The school buildings are suitable and in excellent repair, but a classroom and lavatory are required. The furniture is tolerably good, and the stock of apparatus and books is sufficient. The general discipline is fairly satisfactory, all the usual subjects are taught, and the attainments of the pupils range from tolerable to fair.

SUTTON FOREST, NORTH (V.) :—Visited, 14th September.

Numbers of pupils enrolled :—Boys, 32 ; girls, 35 ; total, 67.
Present at examination :—Boys, 19 ; girls, 25 ; total, 44.

The buildings are quite new and suitable, and the material condition of the school is very good. For the time the school has been in operation the discipline and progress of the pupils in learning are fairly satisfactory. The teacher is industrious, all the usual subjects are taught, and the school is much appreciated by the inhabitants. Arrangements are in progress for a permanent supply of water for the establishment.

KANGALOO, WEST (V.) :—Visited, 21st September.

Numbers of pupils enrolled :—Boys, 12 ; girls, 11 ; total, 23.
Present at examination :—Boys, 11 ; girls, 8 ; total, 19.

The buildings have been recently erected, they are suitable, and the material condition of the establishment is good. The school has been recently opened, and the pupils are learning the mere elements of reading, writing, and arithmetic. The discipline is promising.

UPPER MITTAGONG (V.) :—Visited, 24th September.

Numbers of pupils enrolled :—Boys, 14 ; girls, 16 ; total, 30.
Present at examination :—Boys, 14 ; girls, 12 ; total, 26.

The buildings have been recently erected, they are suitable, and the material condition of the school is good. Singing and drawing are not taught, and the methods of teaching are defective in some respects. The school has been but a short time in operation, and the attainments of the pupils are elementary. The discipline is passable.

KANGALOO (N.V.) :—Visited, 22nd September.

Numbers of pupils enrolled :—Boys, 22 ; girls, 19 ; total, 41.
Present at examination :—Boys, 19 ; girls, 14 ; total, 33.

This school is held in the English Church. The building is suitable and in good repair ; and there is a good supply of furniture, apparatus, and books. The discipline and methods of instruction admit of considerable improvement. Object lessons, drawing, and music, are not taught. The attainments of the scholars in the other branches are barely tolerable.

COLLECTOR (N.V.) :—Visited, 18th June.

Numbers of pupils enrolled :—Boys, 14 ; girls, 25 ; total, 39.
Present at examination :—Boys, 13 ; girls, 19 ; total, 32.

This school is held in temporary premises. The schoolroom is rather small, but there is a sufficient stock of furniture and working materials. The number of pupils has been considerably increased during the last six months, and the attainments of the scholars are fairly satisfactory. All the usual subjects are taught, and the methods of tuition are effective. The discipline is satisfactory.

NEW COUNTRY FLATS (N.V.) :—Visited, 6th October.

Numbers of pupils enrolled :—Boys, 11 ; girls, 12 ; total, 23.
Present at examination :—Boys, 9 ; girls, 5 ; total, 14.

This school is held in temporary premises. It was established for the education of the children of the labourers employed on the railway works. The material condition of the school is passable, and the discipline and progress of the pupils are tolerable. The greater number of the workmen have removed to the Spring Creek Quartz Reefs, near Bungonia, and the attendance of pupils has been reduced.

NORWOOD (N.V.) :—Visited, 1st October.

Numbers of pupils enrolled :—Boys, 16 ; girls, 17 ; total, 33.
Present at examination :—Boys, 15 ; girls, 13 ; total, 28.

The schoolroom is too small, but new buildings are in course of erection. There is a fair supply of working appliances, and the organization, discipline, and attainments of the pupils are very fair.

TOWRANG (N.V.) :—Visited, 7th October.

Numbers of pupils enrolled :—Boys, 14 ; girls, 17 ; total, 31.
Present at examination :—Boys, 12 ; girls, 15 ; total, 27.

This school is held in the Wesleyan Chapel. The building is suitable, and in good repair, and some additional furniture has been supplied since my last inspection. The general discipline and progress of the pupils in learning are tolerably efficient.

TIRRANNA (N.V.) :—Visited, 8th October.

Numbers of pupils enrolled :—Boys, 22 ; girls, 20 ; total, 42.
Present at examination :—Boys, 16 ; girls, 14 ; total, 30.

This school is held in the English Church. The building is commodious, and the supply of working materials is sufficient, but the furniture is not in good condition. All the usual branches are taught, and the general discipline and progress of the pupils in learning are tolerably efficient.

ROSLYN (V.) :—Visited, 9th November.

Numbers of pupils enrolled :—Boys, 17 ; girls, 13 ; total, 30.
Present at examination :—Boys, 12 ; girls, 8 ; total, 20.

The building is now in good repair, and well furnished, and the working materials are sufficient. The general discipline and progress of the pupils in learning are tolerably satisfactory.

BINDA (V.) :—Visited, 12th November.

Numbers of pupils enrolled :—Boys, 6 ; girls, 6 ; total, 12.
Present at examination :—Boys, 4 ; girls, 3 ; total, 7.

The buildings need some repairs, and the general management of the school is very unsatisfactory. The teacher appears to be suffering from aberration of intellect, and I am of opinion he is unfit for his office. The attainments of the pupils are small.

PANBULA (V.) :—Visited, 18th November.

Numbers of pupils enrolled :—Boys, 23 ; girls, 18 ; total, 41.
Present at examination :—Boys, 14 ; girls, 15 ; total, 29.

The buildings are in a passable state of repair, but liable to inundation occasionally. There is a sufficient supply of furniture, apparatus, and books, and the discipline and attainments of the pupils are tolerably satisfactory. A comfortable residence for the teacher in a healthy situation is much wanted.

EDEN (V.) :—Visited, 22nd November.

Numbers of pupils enrolled :—Boys, 28 ; girls, 21 ; total, 49.
Present at examination :—Boys, 24 ; girls, 16 ; total, 40.

Three additional desks, another room for the teacher, and some repairs to the fencing, are required, but the material condition of the school in other respects is passably good. The pupils are not all sufficiently punctual, but the general discipline is fair, and the progress of the pupils in learning is tolerable in the junior classes and fair in the senior.

BOMBALA (V.) :—Visited, 30th November.

Numbers of pupils enrolled :—Boys, 41 ; girls, 25 ; total, 66.
Present at examination :—Boys, 34 ; girls, 18 ; total, 52.

The material condition of this school is good, with the exception of a supply of water, which is very much needed. The discipline is good. The style of reading and the proficiency of the pupils in arithmetic admit of considerable improvement, but the attainments in the other branches are tolerably satisfactory. The mapping and drawing of a number of the pupils are good. The services of a pupil teacher are much needed for the younger children.

WOLUMLA NORTH (N.V.) :—Visited, 3rd December.

Numbers of pupils enrolled :—Boys, 26 ; girls, 26 ; total, 52.
Present at examination :—Boys, 21 ; girls, 21 ; total, 42.

This school is held in temporary premises, but new buildings are in course of erection, and almost complete. The pupils are not all sufficiently punctual, but in other respects the discipline is passable. The attainments of the pupils are tolerably satisfactory for the time the school has been in operation.

WOLUMLA SOUTH (V.) :—Visited, 4th December.

Numbers of pupils enrolled :—Boys, 23 ; girls, 22 ; total, 45.
Present at examination :—Boys, 18 ; girls, 15 ; total, 33.

The material condition of this school is good, and the discipline moderately strict, but the proficiency in learning is not satisfactory. The most advanced class is very backward in spelling, arithmetic, and English grammar, and the attainments of the junior classes are small.

BEGA (V.) :—Visited, 9th December.

Numbers of pupils enrolled :—Boys, 37 ; girls, 41 ; total, 78.
Present at examination :—Boys, 36 ; girls, 24 ; total, 60.

The buildings are in passable repair, but the fencing and gates are in a dilapidated condition. The schoolroom is not sufficiently clean, and the books and apparatus are kept in a very disorderly manner. Additional hat-pegs and a supply of water are required. The general management of this school needs much improvement. The attainments of the pupils are not satisfactory.

GOULBURN (V.)—Boys' Department :—Visited, 14th December.

Number of pupils enrolled :—129.
Present at examination :—107.

The schoolroom is rather small, owing to the increase of pupils, but the furniture, apparatus, and books, are sufficient ; sheds for the playgrounds, to protect the pupils from sun and rain, and a permanent supply of good water, are much needed. The general management of this department has been much improved under the present head master, and the assistant performs his duty with much efficiency. The government is mild and effective, and the methods of teaching are applied with much skill and energy. The course of instruction is well arranged, and, in addition to the ordinary branches, includes Latin, algebra, and geometry. The general progress of the pupils is satisfactory, and in some respects very good.

GOULBURN (V.)—Girls' Department :—Visited, 15th December.

Number of pupils enrolled :—98.
Present at examination :—77.

The organization and general discipline are good, but owing to the increase of pupils a classroom is much needed. The general attainments of the pupils are good, so far as examined.

GOULBURN (V.)—Infants' Department :—Visited, 16th December.

Numbers of pupils enrolled :—Boys, 74 ; girls, 62 ; total, 136.
Present at examination :—Boys, 56 ; girls, 46 ; total, 102.

The organization and general discipline are satisfactory, and the methods of teaching are judicious. The instruction is more practical than last year, and the attainments of the pupils are good, so far as examined.

CANDELO (V.) :—Visited, 6th December.

Numbers of pupils enrolled :—Boys, 16 ; girls, 14 ; total, 30.
Present at examination :—Boys, 13 ; girls, 6 ; total, 19.

The buildings are almost new ; they are suitable, and the schoolroom is well furnished. The pupils are very unpunctual, but tolerably clean and orderly, and the progress in learning is passable.

PROVISIONAL SCHOOLS.

NEWSTEAD :—Visited, 20th March.

Numbers of pupils enrolled :—Boys, 8 ; girls, 9 ; total, 17.
Present at examination :—Boys, 3 ; girls, 9 ; total, 12.

This school is situated at the Moruya Heads, near the Pilot Station. The schoolroom is a good building, but the grounds are not fenced ; there are no closets, and the supply of furniture, apparatus, and books is small. The children are clean and orderly, but the methods of teaching and attainments of the pupils are unsatisfactory.

BERGALIA :—Visited, 25th March.

Numbers of pupils enrolled :—Boys, 27 ; girls, 17 ; total, 44.
Present at examination :—Boys, 14 ; girls, 17 ; total, 31.

The schoolroom is a good building, but the furniture is insufficient, and not well arranged. The grounds are fenced, but there are no closets, and some additional apparatus and books are necessary. The methods of teaching are very unsuitable. The reading of the pupils is indifferent, the writing is moderate, and the knowledge of arithmetic is extremely small. No other subjects are taught.

MOGO :—Visited, 27th March.

Numbers of pupils enrolled :—Boys, 13 ; girls, 12 ; total, 25.
Present at examination :—Boys, 13 ; girls, 12 ; total, 25.

The school is held in a small building, which was erected by public subscription. It is in good repair, but a supply of furniture is required. The school has been in operation but a short time, and the pupils are learning the mere elements of reading, writing, and arithmetic.

FAIRY PLAIN :—Visited, 4th June.

Numbers of pupils enrolled :—Boys, 9 ; girls, 7 ; total, 16.
Present at examination :—Boys, 9 ; girls, 7 ; total, 16.

This school has been recently opened. The schoolroom is too small, and it is not properly furnished. The pupils are learning the elements of reading and writing. The discipline needs great improvement.

GUNDAROO :—

GUNDAROO :—Visited, 17th June.

Numbers of pupils enrolled :—Boys, 16 ; girls, 16 ; total, 32.
Present at examination :—Boys, 15 ; girls, 16 ; total, 31.

The school buildings are in good repair, and sufficient in size. There is a good stock of working materials, but some additional desks are still required. The general discipline and attainments of the pupils are tolerable.

SIX-MILE FLAT :—Visited, 6th August.

Numbers of pupils enrolled :—Boys, 13 ; girls, 15 ; total, 28.
Present at examination :—Boys, 7 ; girls, 14 ; total, 21.

The schoolroom is sufficient in size, but a boarded floor is required. There are no closets, and the grounds are not enclosed. The pupils are not sufficiently clean, nor punctual in attendance, and their progress in learning is small. The teacher has but little knowledge of the modern methods of tuition, and somewhat eccentric in his manner.

MULLENGULLENGA :—Visited, 26th August.

Numbers of pupils enrolled :—Boys, 11 ; girls, 12 ; total, 23.
Present at examination :—Boys, 11 ; girls, 7 ; total, 18.

This school was opened in June. The schoolroom is suitable, but some additional furniture is required. There is a fair stock of books. The pupils are tolerably clean, and orderly and regular in attendance. They are learning the elements of reading, writing, and arithmetic.

BUNGONIA :—Visited, 2nd September.

Numbers of pupils enrolled :—Boys, 13 ; girls, 12 ; total, 25.
Present at examination :—Boys, 9 ; girls, 9 ; total, 18.

The schoolroom is sufficient in size, and in fair repair, and additional desks have been supplied since my last inspection. The children are tolerably clean and orderly, but in some cases they are not sufficiently punctual in attendance. Drawing, singing, scripture lessons, and object lessons, are not taught. The school is not conducted in all respects as a Public School, but the teacher has promised to correct the irregularities in the management. The proficiency of the pupils varies from moderate to tolerable.

ELING FOREST :—Visited, 17th September.

Numbers of pupils enrolled :—Boys, 10 ; girls, 16 ; total, 26.
Present at examination :—Boys, 9 ; girls, 12 ; total, 21.

The schoolroom is in fair repair, suitable, and well furnished. The organization, discipline, and progress of the scholars are tolerably efficient.

BLACKHEATH :—Visited, 10th August.

Numbers of pupils enrolled :—Boys, 17 ; girls, 16 ; total, 33.
Present at examination :—Boys, 10 ; girls, 17 ; total, 27.

This school was opened in July last. It is held in a building used for a Roman Catholic Chapel. It is suitable for school purposes, and there is a good supply of furniture, books, and apparatus. The scholars are learning the elements of reading, writing, and arithmetic.

MUMMELL :—Visited, 19th October.

Numbers of pupils enrolled :—Boys, 22 ; girls, 20 ; total, 42.
Present at examination :—Boys, 14 ; girls, 14 ; total, 28.

The schoolroom is a tolerably good bush building, constructed of slabs and shingles. The playgrounds are not enclosed, and some additional desks and forms are much needed. The cleanliness is passable, but the order, punctuality, and attention need much improvement. The school is not conducted in some respects as a Public School, but the teacher has promised to correct the irregularities in the management. The scripture lessons sanctioned by the Council are not used by the pupils. The attainments are moderate.

MIDDLE ARM :—Visited, 9th November.

Numbers of pupils enrolled :—Boys, 11 ; girls, 13 ; total, 24.
Present at examination :—Boys, 9 ; girls, 12 ; total, 21.

This school was opened in October last. The schoolroom is constructed of split timber and bark, and of a very temporary nature. The books and apparatus are not quite sufficient. The pupils are beginning to learn the elements of reading, writing, and arithmetic.

COTTA WALLA :—Visited, 10th November.

Numbers of pupils enrolled :—Boys, 10 ; girls, 10 ; total, 20.
Present at examination :—Boys, 8 ; girls, 7 ; total, 15.

This school has been recently opened. The schoolroom is very small and unsuitable, but the settlers have promised to erect a comfortable schoolhouse, and a residence for the teacher. A school was much needed at this place. The scholars are beginning to learn the elements of reading, writing, and arithmetic.

REDGROUND :—Visited, 11th November.

Numbers of pupils enrolled :—Boys, 13 ; girls, 20 ; total, 33.
Present at examination :—Boys, 8 ; girls, 13 ; total, 21.

The schoolroom requires a boarded floor. Closets and some additional furniture are necessary. Singing, drawing, and scripture lessons are not taught, but the attainments of the pupils in the other branches are tolerably satisfactory.

HALF-TIME SCHOOLS.

BURRA BURRA :—Visited, 19th March.

Numbers of pupils enrolled :—Boys, 8 ; girls, 7 ; total, 15.
Present at examination :—Boys, 8 ; girls, 7 ; total, 15.

The schoolroom is sufficient in size, but it is not well furnished. There is a sufficient stock of books, but a map of the world is much needed. The proficiency in reading is tolerable, and the writing is clean and careful, but the attainments in arithmetic and grammar are small. The discipline is moderately strict. The school at Snaphook, which is managed in conjunction with Burra Burra, was closed on the day of my visit.

ARNPRIOR, DOURO, MULLOON, and BLACK RANGE :—Visited, 9th, 10th, and 20th August.

Numbers of pupils enrolled :—Boys, 18 ; girls, 19 ; total, 37.
Present at examination :—Boys, 15 ; girls, 17 ; total, 32.

There is a comfortable schoolroom at Arnprior, but it is not suitably furnished. The schools at the other places are held in the private houses of the settlers. The children at each place are under tuition about a day and a half in each week, and for the time under instruction, nearly two years, they have made tolerable progress in reading, writing, and arithmetic. The knowledge of grammar and geography is small, and the general management admits of improvement. The teacher requires training, and, in order that his services may be more beneficial, he has been directed to confine his attention to the schools at Arnprior and Black Range, where the majority of the scholars can attend.

NORONGO and WINSTONE VALLEY :—Visited, 11th and 12th August.

Numbers of pupils enrolled :—Boys, 12 ; girls, 10 ; total, 22.
Present at examination :—Boys, 5 ; girls, 8 ; total, 13.

These schools are situated in the Jingera district, about 40 miles from Braidwood, near the base of the main Gourcock Range, about 20 miles apart. The schools are held in the houses of two of the settlers, and instead of the usual desks and forms, the pupils use chairs and tables. The books and apparatus are barely sufficient. The children at each place are under instruction for about half the week, and the progress in reading, writing, and arithmetic, for the time the schools have been in operation (nearly eighteen months) is tolerable, but the general management admits of great improvement. Suitable schoolrooms, properly furnished, are urgently needed, and the teacher requires training for his work.

ORANMEIR and JERRABATTGULLA :—Visited, 14th August.

Numbers of pupils enrolled :—Boys, 17 ; girls, 18 ; total, 35.
Present at examination :—Boys, 11 ; girls, 16 ; total, 27.

These schools are situated 25 miles from Braidwood on the upper waters of the Shoalhaven, about 4 miles apart. The school at each place is held in a small building of sufficient size, erected for the purpose, and fairly furnished. The pupils are clean and orderly. Singing and drawing are not taught. Few of the pupils knew the alphabet when the schools were opened, about two years ago. Now, many of them can read ordinary prose, write legibly, and they have made some progress in the elements of arithmetic. The teacher has been trained, and the schools are well managed.

NITHSDALE and BALLALABA :—Visited, 16th August.

Numbers of pupils enrolled :—Boys, 6 ; girls, 13 ; total, 19.
Present at examination :—Boys, 5 ; girls, 12 ; total, 17.

These schools are situated about 3 miles apart, 12 miles south of Braidwood, on the Shoalhaven River. At Ballalaba six of Mrs. Clarke's children attend. The schoolrooms are in passable repair, but the furniture and apparatus are not quite sufficient. The pupils are clean, orderly, and attentive to their work. The schools have been about two years in operation, and a considerable number of the pupils can read and write well, and know the simple and compound rules of arithmetic. They can distinguish the parts of speech, and know the relative positions of the continents and oceans.

FARRINGTON and GINGOMONIA :—Visited, 18th August.

Numbers of pupils enrolled :—Boys, 18 ; girls, 14 ; total, 32.
Present at examination :—Boys, 17 ; girls, 14 ; total, 31.

These schools have been in operation nearly two years. They are situated about 12 miles from Braidwood, and 4 from Ballalaba, on the opposite bank of the river. The schoolrooms are in good repair, but the furniture is not suitable, and the books are not quite sufficient. The elder pupils can read with considerable ease and intelligence, and the writing is neat and legible. They have some knowledge of the elements of English grammar, geography, and arithmetic. Drawing is taught with fair success. Many of the younger pupils have been recently admitted. The schools are managed with tolerable efficiency. The teacher requires training.

HAROLD'S CROSS and VERNELLY :—Visited, 17th August.

Numbers of pupils enrolled :—Boys, 8 ; girls, 10 ; total, 18.
Present at examination :—Boys, 6 ; girls, 8 ; total, 14.

The schools are held in small buildings erected for schoolrooms. They are suitable, and the supply of working materials is sufficient. The pupils are clean, orderly, and attentive to their work, and the progress of the majority, in learning, is tolerably satisfactory. About four-fifths of the pupils enrolled are regular and punctual in attendance. The teacher is attentive to his work. A map of the world is required.

THIRD CREEK :—Visited, 16th July.

Numbers of pupils enrolled :—Boys, 10 ; girls, 15 ; total, 25.
Present at examination :—Boys, 4 ; girls, 7 ; total, 11.

This school was opened a few months ago. The schoolroom is small, and not well furnished, but there is a moderate stock of apparatus and books. The general behaviour and morals of the children have been improved since the school was established, and some progress has been made in reading, writing, and arithmetic. This is one of those localities where a school was very much needed. The teacher is industrious and attentive to his duty. The school at First Creek, which is managed in conjunction with Third Creek, was closed on the day of my visit.

KIPPELAW and RUN OF WATER :—Visited, 13th October.

Numbers of pupils enrolled :—Boys, 29 ; girls, 25 ; total, 54.
Present at examination :—Boys, 18 ; girls, 11 ; total, 29.

The school at Kippelaw is held in the English Church, and at the Run of Water in the Primitive Methodist Chapel. The buildings are excellent, but they are not well furnished. The discipline and attainments of the scholars are tolerably efficient for the time the schools have been in operation. These schools are situated about 4 miles apart, 7 miles south-west from Goulburn.

LONG REACH and ROCK VIEW :—Visited, 1st September.

Numbers of pupils enrolled :—Boys, 11 ; girls, 20 ; total, 31.
Present at examination :—Boys, 9 ; girls, 15 ; total, 24.

These schools are held in small buildings erected for schoolrooms. They are suitable ; and there is a fair supply of working materials. Singing and drawing are not taught, but the progress in the other subjects is passable. Few of the pupils knew the alphabet about eighteen months ago, when the schools were established. Long Reach and Rock View are situated on the Wollondilly River, 9 miles north from Marulan.

BURRAGATE and WYNDHAM :—Visited, 24th November.

Numbers of pupils enrolled :—Boys, 17 ; girls, 10 ; total, 27.
Present at examination :—Boys, 11 ; girls, 8 ; total, 19.

The schoolroom at Burragate has been recently erected. It is suitable and well furnished. At Wyndham, about 8 miles distant, the schoolroom was consumed early in the year in a bush fire, but the school is carried on in temporary premises, and the necessary arrangements have been made for the erection of another schoolhouse in a more central position. The discipline of these schools—Burragate in particular—and the general progress in learning, are highly satisfactory. The most of the pupils read well, write beautifully, and they have a fair knowledge of the elementary rules of arithmetic. The management of these schools is good, and highly creditable to the late master. The present teacher has been very recently appointed.

LOCHIEL and GREIG'S FLAT :—Visited, 25th November.

Numbers of pupils enrolled :—Boys, 15 ; girls, 18 ; total, 33.
Present at examination :—Boys, 15 ; girls, 18 ; total, 33.

These schools have been but two or three days in operation. They are situated near Panbula, about 7 miles apart. The furniture is not quite complete. The children are beginning to learn the mere elements of reading, writing, and arithmetic.

W. MCINTYRE,
Inspector of Schools.

Goulburn, 12th February, 1870.

MAITLAND DISTRICT.—GENERAL REPORT, 1869.

EXTENT OF DISTRICT.

Nature and amount of duties.—The limits of the district continue unaltered, and at the close of 1869 included the following schools :—

Public	33	—	containing 35 departments.
Provisional	16	”	16 ”
Half-time	1	”	1 ”
Church of England	17	”	18 ”
Roman Catholic	8	”	11 ”
Presbyterian	1	”	1 ”
Wesleyan	1	”	1 ”
Total	77	—	83

which, in general terms, are thus distributed :—Forty-five are situated in and within 20 miles of Maitland, thirty-three lie in and around the villages and townships from Wollombi on the south to Murrurundi on the north, and from the Paterson on the east to the Blue Mountains on the west ; and five are scattered beyond that boundary, at distances varying from 25 to 140 miles apart. The amount and nature of inspection may be stated as follow :—

Under the form of general inspection 7 schools were visited.

” regular	65	”
” ordinary	14	”
” incidental	23	”

In other words seventy-two schools were thoroughly examined and six inspected incidentally ; and of the total number inspected, twenty-six received more than one visit. I was unable to visit five, of which one was closed when I was in the neighbourhood, two were opened towards the end of the year, and time did not permit me to reach upon the remaining two. The occupation of my time may be stated thus—

Inspection	117	days.
Correspondence	137	”
Examination of teachers	22	”
Travelling	23	”
Special inquiry	1	”
Sundays and holidays	60	”
Total	365	”

Inspection.—The character of the inspection was the same as in the two preceding years, but its application in 1869 was slightly varied. As mentioned in my last report, I found it impossible to visit each school twice ; and in order to make the most of one visit, where only one could be made, I obtained the Council's sanction to withhold the usual notification, so that in many instances I was enabled to see the schools in their ordinary condition, and to arrive at a pretty accurate estimate of their real worth. Having had, however, to conduct examinations of teachers in particular towns, my movements there were not sufficiently rapid to render my visits unexpected ; and the extent of the district, and the amount of work to be done, prevented any division of time corresponding in distinctness to my several duties. Notwithstanding this inconvenience, I am satisfied that the modification has worked advantageously as regards the schools, and rendered my sources of information more reliable.

Organization.—

Organization.—In three-fourths of the schools inspected, the eligibility of the sites ranges from fair to good; in the remainder from moderate to tolerable. Want or insufficiency of out-offices continues the standing defect of the playgrounds; but it is gradually becoming less, and the foregoing estimate shows an improvement upon former years. With regard to the buildings, half the number may be considered as from fair to good, three-eighths tolerable or moderate, and the remainder indifferent to bad. New premises were opened at Coonamble and Warkworth, and important repairs were executed in the East Maitland Public School. The Public School at Dunmore is in a most deplorable condition, materially considered, and, up to the end of the year, no successful steps had been taken to improve it. The Murrurundi Public School also is utterly insufficient, very unsuitable, and almost unserviceable. The supply and character of the furniture is fair to good in three-eighths of the schools, tolerable or moderate in half, and bad in the remaining number. This is a slight improvement. The stock of apparatus and books is very nearly satisfactory, being really inferior in only five schools. The records are generally kept with fair accuracy, punctuality, and care.

Discipline.—In about two-thirds of the schools inspected, punctuality is well observed, in two-ninths tolerably, and in one-ninth badly. Though this is a satisfactory state of things, it might be improved, as some teachers are still very dilatory in observing and enforcing punctual attendance. These, however, are very few; and the results stated comprehend the great majority of cases. The pupils are satisfactorily regular in one-third of the schools, tolerably so in four-ninths, and irregular in the remainder. Having dwelt at some length on this point in my reports for 1867-8, and external circumstances continuing much the same, I see no occasion for farther discussion of the matter at present. I may, however, observe, that compulsory education seems to offer the only remedy against the fatal obstacle of irregularity; but as such a measure does not accord with the spirit of public opinion, either in this country or in England, its application to the evil seems far from being realized. It would likewise involve organic changes in the legislative and administrative policy of the present system, which would scarcely agree with the temper of the times, and which would hence render its operation unpopular. There is no doubt that a compulsory enactment would be beneficial; but in the present circumstances of the country any law, at variance with the instincts of the people, however excellent in theory, would, instead of effecting the desired end, only arouse a general and violent hostility. In the meantime much can be done by the teachers if they exert themselves in the manner pointed out in last year's report. Upon them devolves the important and responsible duty of forming the ground-work of future public opinion, which, when properly educated, will hail as a national blessing, that compulsion for the enlightenment and mental elevation of the masses, which now it would probably condemn as illiberal and oppressive. Cleanliness is fairly satisfactory in general, there being but one school unenviably distinguished by gross neglect of it. I have noticed, during the past three years, a few teachers who do not set a good example of cleanliness in their own persons. They appear in school carelessly dressed, sometimes without a coat, sometimes unshaved, and otherwise negligent in what they teach most effectually, and their pupils learn most readily their own habits and manners. It is to me extremely humiliating to have to notice in a teacher the violation of so fundamental, so necessary, so simple a requirement as that of cleanliness. I speak, however, for the few, and hope I may not be obliged to repeat my remarks. This neglect is generally found to be associated with graver defects, and to be always the sure index of laxity and disorder. In the matters of order and government there is a marked improvement upon the two preceding years—these elements of discipline being inefficient or inoperative in only one-eighth of the schools, while they are from fair to good in three-eighths, and moderate to tolerable in one-half.

Instruction.—The classification is, for the most part, judicious and decided, in accordance with modern ideas, upon one basis only; there are but six schools in which the pupils were badly classed. In four-ninths of the number of schools the occupation is appropriate, well arranged, and systematically conducted; in three-eighths it is tolerably suitable, and faulty in one-sixth. This is very nearly satisfactory and shows a steady improvement in the tact and skill of teachers. The methods may be described as fair to good in one-fourth of the schools, indifferent to bad in the same proportion, and moderate to tolerable in one-half. So much having been said on the subject of method in former reports that there ought to be no need to enlarge upon it here; but as it is, so to speak, the very soul and essence of the teacher's art, as also one of his most serious sources of anxiety, a few words may not be out of place. The practice of teaching pursued in the generality of schools falls into two opposite extremes, the one of giving too much, the other too little, oral instruction. In the former the pupils do nothing for themselves; in the latter the teacher does nothing for them. Now as instruction is education only as it determines the mind to active thought, both in the subjects introduced and in matters of general interest, it follows that teachers who come under the form category, do almost as much mischief as those of the latter, though they may be credited with the best possible intentions. What is really deficient in the methods pursued is apt, ready, and thorough examination on the part of the teacher; well-timed questions, so put as to draw the child's mind over every step of the ground to be traversed, and afterwards skilfully varied, to test the extent and accuracy of the knowledge acquired. This course may seem minute, tedious, and very laborious; but as labour and attention are demanded in any case, and seldom accompanied by adequate results, that mode of instruction is surely to be preferred, which, if rightly applied, offers at every stage a substantial fulcrum, on and by which what precedes may be easily collected by the mind, and what follows rendered comparatively easy of comprehension. In some of our best schools this method is successfully employed; but in the majority I fear it is not understood.

Progress and Proficiency.—The numbers of pupils enrolled in the schools examined, are as follows:—

TABLE showing the numbers of pupils enrolled.

	7 years and under.		8 years.		9 years.		10 years.		11 years.		12 years and over.		Total.	
	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.
Public Schools	347	305	101	91	92	85	77	53	67	80	164	122	848	736
Provisional Schools	92	75	18	20	24	23	19	27	15	24	32	38	200	207
Church of England Schools.....	319	327	77	86	87	69	65	62	52	46	102	69	702	659
Roman Catholic Schools	251	222	52	68	75	73	59	49	49	39	77	74	563	525
Presbyterian Schools.....	26	13	7	2	2	4	4	2	3	1	3	3	45	25
Wesleyan Schools	18	20	8	6	7	5	12	6	7	7	16	9	68	53
Totals	1053	962	263	273	287	259	236	199	193	197	394	315	2426	2205

To the total number shown in the foregoing table, 148 children, enrolled in schools incidentally inspected, are to be added, making the gross number 4,779.

THE numbers present at examination are :—

	7 years and under.		8 years.		9 years.		10 years.		11 years.		12 years and over.		Total.	
	Boys	Girls	Boys	Girls	Boys	Girls	Boys	Girls	Boys	Girls	Boys	Girls	Boys	Girls
Public Schools	256	208	83	68	62	64	60	35	47	55	111	83	619	513
Provisional Schools	73	60	14	17	17	17	13	23	13	20	17	25	147	162
Church of England Schools	239	236	61	66	68	48	49	44	43	34	68	46	528	474
Roman Catholic Schools	208	188	36	53	58	61	46	43	32	30	60	49	440	424
Presbyterian Schools	20	11	6	2	2	3	4	2	3	1	3	3	38	22
Wesleyan Schools	18	18	7	5	6	5	12	5	6	4	12	8	61	45
Totals	814	721	207	211	213	198	184	152	144	144	271	214	1833	1640

There were also present at schools incidentally inspected, eighty-two pupils not included in the foregoing table, making the entire total 3,555. Of the aggregate number enrolled, 74 per cent. were present at examinations. This is a slight reduction upon last year's figures; but it is accounted for by the prevalence of wet weather during the inspection of some of the largest schools, and to some extent by the fact of my having visited the majority without previous notice.

Reading.—The proportion of pupils learning the elementary and advanced stages, continues much the same as last year. The subject has received increased attention in the majority of schools, and gross errors of articulation or enunciation are now met with in comparatively few. I cannot speak equally favourably of the knowledge of meanings and subject-matter evinced; that is in most schools a failure; but there are, nevertheless, a few gratifying exceptions. Having dwelt, in former reports, upon the necessity of cultivating this most essential condition of good reading, I see no present need of further remark. The results are given in the subjoined tables.

Per-centages of Pupils Reading.	Monosyllables	Easy Narrative.	Ordinary Prose.	Total.
Public Schools	28.7	30.5	21.2	80.4
Provisional Schools	34.6	30.0	13.0	77.6
Church of England Schools	24.3	28.1	19.9	72.3
Roman Catholic Schools	32.3	25.7	19.2	77.2
Presbyterian Schools	21.6	31.6	11.6	64.8
Wesleyan Schools	14.1	27.3	45.2	86.6

Per-centages of Proficiency.	Monosyllables.			Easy Narrative.			Ordinary Prose.		
	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.
Public Schools	46.0	38.1	15.9	29.6	56.0	14.4	55.4	41.3	3.7
Provisional Schools	27.1	43.9	29.0	15.0	59.1	25.9	12.5	57.5	30.0
Church of England Schools	40.1	37.3	22.6	33.7	50.0	16.3	57.0	33.3	9.5
Roman Catholic Schools	58.0	30.5	11.5	36.3	46.7	17.0	48.8	43.9	7.3
Presbyterian Schools	46.1	53.9	...	47.4	47.4	5.2	100.0
Wesleyan Schools	68.8	31.2	...	51.7	34.5	13.8	70.8	20.8	8.4

Writing.—This subject is in the majority of schools carefully taught, and many of the faults noticed in former reports have disappeared. In country schools great difficulty and trouble are experienced by teachers in the quality of copy-books obtainable, and very often parents neglect to provide them for their children. Dictation occupies a prominent position among the ordinary subjects; and its importance, as a means of teaching orthography and strengthening the memory, is now generally recognized. In the following tables the progress and proficiency of the pupils are set forth.

Per-centages of Pupils writing.	On slates.	In copies.	Total.
Public Schools	28.8	46.0	74.8
Provisional Schools	28.7	37.2	65.9
Church of England Schools	28.6	42.7	71.3
Roman Catholic Schools	27.8	37.7	65.5
Presbyterian Schools	28.3	40.0	68.3
Wesleyan Schools	13.2	57.5	70.7

Per-centages of Proficiency.	On slates.			In copies.		
	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.
Public Schools	33.7	46.6	19.7	49.6	43.5	6.9
Provisional Schools	20.1	49.4	30.5	27.8	62.6	9.6
Church of England Schools	19.2	58.9	21.9	47.7	47.2	5.1
Roman Catholic Schools	37.5	43.3	19.2	39.9	46.0	14.1
Presbyterian Schools	23.5	59.0	17.5	58.7	41.3	...
Wesleyan Schools	42.9	35.7	21.4	49.2	39.3	11.5

Arithmetic.—

Arithmetic.—A fair proportion of the pupils learn this subject, and a reasonable amount of time is devoted to its study; but the results are still unsatisfactory. The great majority of the pupils are not beyond the simple rules, those learning the more advanced portions being comparatively few. The knowledge evinced also is, for the most part, very meagre, though, as a whole, it shows improvement. The subject has received increased attention at the hands of the teachers; but in few instances has it been rendered plainly intelligible and interesting to children. There is by far too much sameness in the questions given, too much adherence to rule, and very frequently too much instruction. In many cases, on the other hand, the amount of teaching is a minimum, and the children are left to the guidance of text-books, from which they work sums, and by some means find the answers, but know nothing of the reasoning involved. The proper method lies between these extremes, and consists in brief but lucid explanations, in varied and abundant exercises. In mental arithmetic the proficiency is poor as a whole.

Subjoined is a tabular statement of results:—

Per-centages of Pupils learning.	Simple rules.	Compound rules.	Higher rules.	Total.
Public Schools	60.0	16.2	4.6	80.8
Provisional Schools	63.1	7.2	70.8
Church of England Schools.....	58.9	19.6	78.5
Roman Catholic Schools	51.7	16.8	3.5	72.0
Presbyterian Schools.....	60.0	11.6	71.6
Wesleyan Schools	40.6	28.3	14.1	83.0

Per-centages of Proficiency.	Simple rules.			Compound rules.			Higher rules.		
	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.
Public Schools	30.8	29.9	39.3	29.3	25.5	45.2	79.2	20.8
Provisional Schools.....	18.5	19.5	62.0	17.0	12.5	70.5
Church of England Schools	18.6	14.9	66.5	16.7	27.5	55.8
Roman Catholic Schools.....	39.7	16.6	43.7	34.5	29.7	35.8	26.6	26.6	46.8
Presbyterian Schools	52.8	5.5	41.7	85.5	14.5
Wesleyan Schools	14.0	16.3	69.7	60.0	40.0	46.6	33.3	20.1

Grammar.—There are very few schools in which grammar is not taught, and to a reasonably appropriate extent; but the difficulties, heretofore pointed out, still continue to offer a serious hindrance to progress. These may be said to lie principally in the teachers, who, in very many instances, have only a limited knowledge of the subject, and still less of the most effectual methods of imparting it. As in teaching arithmetic, there seems to be a stereotyped routine pursued, which blunts all efforts at clear and original thought, and leaves the pupils, in point of true proficiency, very ignorant indeed. In the course of my examinations I have frequently seen this verified. I select a sentence from the reading lessons, direct the children to parse and analyse it, and am often surprised at their dulness and absurd answering. It is true the subject has inherent difficulties, always rendering it more or less hard to be thoroughly mastered; but teachers seem to forget these in preparing their programmes and delivering their lessons. The results are as follows:—

Per-centages of Pupils learning Grammar.	Elementary.	Advanced.	Total.
Public Schools	30.8	21.4	52.2
Provisional Schools	28.4	4.8	33.2
Church of England Schools	27.8	19.9	47.7
Roman Catholic Schools	25.7	19.8	45.5
Presbyterian Schools	33.3	11.6	44.9
Wesleyan Schools	27.3	45.3	72.6

Per-centages of Proficiency.	Elementary.			Advanced.		
	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.
Public Schools	25.8	41.8	32.4	27.3	34.3	38.4
Provisional Schools	1.1	21.6	77.3	33.3	66.7
Church of England Schools	21.5	32.2	46.3	5.5	24.5	70.0
Roman Catholic Schools.....	16.0	27.8	56.2	18.7	38.6	42.7
Presbyterian Schools	20.0	40.0	40.0	28.6	42.8	28.6
Wesleyan Schools	14.0	45.0	41.0	14.6	29.2	56.2

Geography.—This subject loiters considerably in the background. In last year's Report I pointed out how teachers mistake their true standpoint in reference to it, but I am yet unable to discern much improvement. The want of a map of New Zealand still continues, and very few schools are provided with globes—these are not furnished by the Council. The results appear in tabular form as follow:—

Per-centages of Pupils learning Geography.	Elementary.	Advanced.	Total.
Public Schools	32.5	21.4	53.9
Provisional Schools	26.8	6.4	33.2
Church of England Schools.....	27.3	19.6	46.9
Roman Catholic Schools	24.2	20.4	44.6
Presbyterian Schools.....	33.3	11.6	44.9
Wesleyan Schools	27.3	42.4	69.7

Per-centages of Proficiency.	Elementary.			Advanced.		
	Good or fair.	Tolerable or moderate.	Indifferent or bad.	Good or fair.	Tolerable or moderate.	Indifferent or bad.
Public Schools	21.5	26.3	52.2	15.3	31.0	53.7
Provisional Schools	100.0	10.4	89.6
Church of England Schools	10.2	31.8	58.0	12.2	13.7	74.1
Roman Catholic Schools	3.8	25.0	71.2	2.3	15.3	82.4
Presbyterian Schools	30.0	40.0	30.0	57.0	43.0
Wesleyan Schools	41.4	58.6	28.8	35.5	35.7

Object Lessons.—Although the practice of giving instruction on common things is pretty general in the schools of this district, the results are yet very small. The value of these lessons, as means of promoting mental vigour, and increasing the pupil's stock of knowledge, is generally admitted, and is moreover testified to by every eminent educationist; but as yet we can hardly say that our school children fully realize their advantages. Perhaps, however, now that these subjects occupy a conspicuous place in our schools, they are silently working a beneficial change in the minds of pupils and teachers, and that whether their present value be externally manifest or not, their future success will be beyond doubt. I am inclined to this opinion.

Statement of results :—

	Public Schools.	Provl. Schools.	C.E. Schools.	R.C. Schools.	Presb. Schools.	Wesln. Schools.
Per-centages of Pupils learning object lessons in	87.5	49.8	71.4	78.7	65.0	79.2
Per-centages of proficiency—						
Good or fair	4.3	2.3	1.0	19.0
Tolerable or moderate	31.8	10.4	31.5	29.8	20.6	32.1
Indifferent or bad	53.9	89.6	66.2	69.2	79.4	48.9

Scripture Lessons.—These extracts are read only in the Public and Provisional Schools—no account being taken of the Half-time School, which was not inspected—I found three in which they were not in use. In one case the parents objected, and in the others the teachers had laid them aside at their own discretion, but under a mistaken view of the regulation bearing on the matter. The proportion of pupils reading these lessons is 17.8 per cent. of the numbers present in Public and Provisional Schools. Their proficiency in the former is—

Good or fair	23.5 per cent.
Tolerable or moderate	21.0 "
Indifferent or bad	55.5 "

In the latter class of schools the knowledge evinced is very small.

Other Subjects.—The following subjects are taught to the extent specified in the Table :—

Subjects.	Public Schools.	Provl. Schools.	C.E. Schools.	R.C. Schools.	Presb. Schools.	Wesln. Schools.
Geometry in	4	1	1
Algebra "	3	1
Latin "	1
Vocal music "	9	2	13	4	1	1
Drawing "	18	1	12	7	1	1
Needlework "	22	5	15	6	1	1

Teachers.—During the past year thirty-seven teachers were summoned to examination, of whom twenty-seven attended; two obtained a special examination; five candidates for the Training School, six candidate pupil-teachers, and nine holding appointments, were examined. The total number examined was—teachers, thirty-four; pupil-teachers, fifteen. Of the former, ten were promoted, seventeen remained stationary, and seven failed. The entire staff of the district at the close of the year was—

	Males.	Females.	Total.
Principals	63	21	84
Assistants	2	8	10
Pupil-teachers	7	8	15
Totals	72	37	109

Their rank is shown as follows :—

	Class II.		Class III.			Probationers.	Pupil-teachers	Class I.	Class II.	Class III.	Class IV.
	Sect. A.	Sect. B.	Sect. A.	Sect. B.	Sect. C.						
Teachers ...	6	3	21	22	18	24	1	3	1	10	

Speaking generally, the teachers of this district have sustained, during the past year, their character for respectability, intelligence, and zeal. Some of them make vigorous efforts to improve their qualifications, and render their schools efficient; and their exertions are certainly worthy of encouragement and reward. I cannot say, however, that the remuneration awarded is commensurate with the importance of their positions, or adequate to their wants. Looking over the return for the last year, I find the average emoluments of twenty-three teachers of Public Schools to have been *from all sources* £103 14s. 11d., the lowest £59 6s., the highest £151 11s. 10d., and twelve of these receive less than £100 per annum in all. Taking the second class teachers, who as a rule hold the most lucrative situations, their average income *from all sources* was £164 11s. 6d., the highest having been £205 9s., the lowest £118 6s. 6d. These figures do not represent the incomes of persons who turned to teaching as a last resource, but, in many instances, of trained, well informed, and efficient teachers, who are also, for the most part married, and have families depending

depending on them for support. Now, that there seems no prospect of any public provision being made for teachers, in their declining years, in the shape of pensions or other allowances, I think the time has come when the question of enabling them to provide for old age by their own savings, ought to be considered. The pupil-teachers employed are eligible and give good promise of efficiency.

Local Supervision.—My remarks in last year's report continue still applicable. In the case of several schools the Local Boards are well constituted, and manifest a steady interest in the institutions, but for the most part the members are poorly qualified, and indifferently attentive to their trusts. In matters affecting the general welfare of the several schools, I cannot complain of the willingness of many members to render what service they can; but very few have either the disposition or the means to act a liberal part in advancing public education.

Concluding Observations.—The time intervening between each general report being so short, there is but little to note in the way of new or important developments in the system. During the past year the schools of this district proceeded in their career of usefulness, guided by an experience tolerably well matured, and manifesting a fair adaptation to the wants of the community. Most schools have exhibited some improvements, and several have acquired a high degree of excellence, while some, as might be expected, have failed to confer any appreciable advantages. A considerable number of those included in the last category were, however, opened for the first time within the year, under untrained and unskilled teachers, and could not have succeeded very well, though for the most part they are not without healthy indications for the future. Upon the whole I am of opinion that the educational requirements of the district are well provided for; that the teaching power is intelligent, reasonably effective, and fairly sufficient; that the moral and mental culture of the children have sensibly advanced, and that the results of the year's labors are hopeful and encouraging.

Maitland, 28 January, 1870.

WM. DWYER,
Inspector.

APPENDIX.

Detailed Statement.—Showing the condition of the Public and Provisional Schools inspected in the Maitland District, as regards—

1. Their material condition.
2. Their moral characters.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

PUBLIC SCHOOLS.

ABERDEEN :—Visited, 26th July.

Numbers present at examination :—Boys, 11 ; girls, 13 ; total, 24.

1. The condition of the premises has been improved by the erection of out-offices; but the organization of the school is only moderate. 2. The children were docile and well-behaved, but addicted to whispering, slightly attentive, and not under steady and effective discipline. The moral tone of the school is moderate. 3. The subjects are for the most part appropriate, but without arrangement. The instruction is tolerably intelligent, but poorly effectual. 4. The average proficiency ranges from small to very small.

ABERGLASSLYN :—Visited, 4th March.

Numbers present at examination :—Boys, 18 ; girls, 11 ; total, 29.

1. The premises are in good condition, sufficient and suitable for the place, and the schoolroom is fairly organized. 2. The pupils are irregular and unpunctual in general—slow to obey the orders of the teacher—noisy and hurried in their movements, but show some improvement in their attention and general behaviour. 3. The subjects are suitable, but the methods are very ineffectual. 4. The proficiency evinced was very unsatisfactory.

BISHOP'S BRIDGE :—Visited, 21st December.

Numbers present at examination :—Boys, 18 ; girls, 7 ; total, 25.

1. Slight repairs have been done to the schoolroom, and temporary out-offices erected, but the material condition of the premises is still very indifferent. 2. The demeanour, attention, and order of the pupils have improved, and the moral aspect of the school is moderate. 3. The occupation is appropriate, but not precisely arranged; the instruction is stiff and uninteresting. 4. The general proficiency is moderate.

CAMPSIE :—Visited, 23rd June.

Numbers present at examination :—Boys, 17 ; girls, 13 ; total, 30.

1. The building is extremely awkward, unsuitable, insufficient, and in a wretched condition as regards repair and equipment. 2. Most of the pupils are irregular and many untidy, but otherwise their moral bearing is tolerable for the facilities of the school. 3. The subjects are in fair accordance with the standard; the methods are tolerably intelligent, impressive, and effectual. 4. The proficiency ranges from tolerable to fair.

CESSNOCK :—Visited, 20th May.

Numbers present at examination :—Boys, 19 ; girls, 31 ; total, 50.

1. The site is ineligible, but the condition and organization of the school are moderate. 2. The pupils are not satisfactorily regular; otherwise the moral tone of the school is tolerable. 3. The instruction is suitable, tolerably intelligent, and effective. 4. The proficiency shows improvement, and ranges in general from moderate to tolerable.

COONAMBLE :—Visited, 3rd September.

Numbers present at examination :—Boys, 12 ; girls, 10 ; total, 22.

1. The premises are new and suitable, commodious and well-appointed; and the organization of the school is very fair. 2. The pupils are regular, punctual, and clean, but inattentive, forward, and disorderly. 3. The instruction is badly arranged, very uninteresting, and ineffectual. 4. The general proficiency is bad.

DUNMORE :—Visited, 14th April.

Numbers present at examination :—Boys, 34 ; girls, 18 ; total, 52.

1. The building is in a dangerous state, and incapable of improvement. The organization is moderate under the circumstances. 2. The moral aspect of the school is tolerable as a whole. 3. The instruction is reasonably intelligent and moderately skilful. 4. The proficiency ranges from moderate to tolerable, and is a considerable improvement upon previous results.

ELLALONG :—Visited, 18th May.

Numbers present at examination :—Boys, 14 ; girls, 15 ; total, 29.

1. The schoolroom is badly lighted, but otherwise in tolerable condition as to repair and organization. 2. The discipline has improved, and the moral tone is tolerable. 3. The instruction is fairly suitable, but not effectively imparted. 4. The proficiency is unsatisfactory, although improvement is discernible.

FALBROOK :—Visited, 15th July.

Numbers present at examination :—Boys, 11 ; girls, 13 ; total, 24.

1. The roof of the teacher's dwelling is partially insecure ; otherwise the premises are in tolerable condition. 2. The moral aspect of the school is very fair. 3. The occupation is appropriate ; the instruction tolerably intelligent and skilful. 4. The average proficiency is moderate.

HINTON :—Visited, 16th March.

Numbers present at examination :—Boys, 17 ; girls, 9 ; total, 26.

1. The buildings are tolerably sound, but in need of repairs. The school is fairly organized. 2. The moral character of the school is unsatisfactory and has become lower within the year. 3. The instruction is fairly intelligent and suitable, but imparted with little or no effect. 4. The general proficiency is very unsatisfactory.

IONA :—Visited, 15th April.

Numbers present at examination :—Boys, 12 ; girls, 10 ; total, 22.

1. The organization of the school is moderate, but the state of the building very bad. 2. The pupils are but partially regular and punctual, otherwise their discipline is fairly effective. 3. The occupation generally is judicious and interesting, and the methods are earnest, tolerably intelligent, and skilful. 4. The general proficiency ranges from moderate to tolerable, and is a decided improvement upon previous results.

LOCHINVAE :—Visited, 16th December.

Numbers present at examination :—Boys, 15 ; girls, 18 ; total, 33.

1. The schoolroom is badly ventilated, otherwise the premises are in all respects fairly satisfactory. 2. The moral tone of the school is good. 3. The instruction is appropriate, and imparted with fair intelligence and judgment. 4. The proficiency and mental culture range from fair to very fair.

MAITLAND, EAST (Infant) :—Visited, 23rd February.

Numbers present at examination :—Boys, 9 ; girls, 13 ; total, 22.

1. The room is clean, well furnished, and in good condition ; and the playground accommodation in course of improvement. 2. The discipline is fairly suitable and effective. 3. The subjects are suitable, but the methods want interest and penetration. 4. The average proficiency is moderate.

MAITLAND, EAST (Primary) :—Visited, 23rd February to 3rd March.

Numbers present at examination :—Boys, 68 ; girls, 42 ; total, 110.

1. The premises are very suitable, but need extensive repairs ; the organization of the school is very good. 2. The moral aspect of the school is, upon the whole, good. 3. The subjects are appropriate and well arranged ; the methods vary from tolerable to very fair. 4. The average proficiency of the lower classes ranges from moderate to tolerable ; of the higher, from tolerable to very fair.

MERRIWA :—Visited, 20th August.

Numbers present at examination :—Boys, 15 ; girls, 22 ; total, 37.

1. The buildings are in bad condition, but the organization of the school is tolerable. 2. The pupils are fairly attentive, well-behaved, and tolerably orderly. 3. The subjects accord for the most part with the standard ; the methods are rather slow and suggestive, but tolerably intelligent, vigorous, and effective. 4. In the junior classes the average proficiency ranges from tolerable to fair ; but in the highest class it is very moderate.

MURBURUNDI :—Visited, 11th August.

Numbers present at examination :—Boys, 33 ; girls, 22 ; total, 55.

1. The schoolrooms are very unsuitable, inadequate, badly organized, and otherwise unsatisfactory. 2. The discipline is ineffective, and the moral tone indifferent ; but something must be attributed to defective accommodation and equipment. 3. The instruction for the most part accords with the standard, is intelligent and careful, but not satisfactorily effectual. 4. The general answering of the pupils evinces improvement upon former examinations, and ranges, upon the whole, from moderate to tolerable.

MORFETH :—Visited, 6th to 9th December.

Numbers present at examination :—Boys, 85 ; girls, 52 ; total, 137.

1. The premises are in excellent condition as a whole, but need a few trifling repairs ; the school-rooms require additional ventilation. 2. The moral character of the school is very good. 3. The occupation is appropriate and judiciously arranged ; the methods are skilful and vigorous. 4. The average proficiency ranges from fair to very fair.

NELSON'S PLAINS :—Visited, 23rd March.

Numbers present at examination :—Boys, 26 ; girls, 20 ; total, 46.

1. The site is low and damp, but the building and organization are tolerable for the place. 2. The moral aspect of the school is tolerable. 3. Most of the prescribed subjects are taught and arranged with fair judgment. The methods are intelligent and tolerably skilful. 4. The average proficiency is nearly tolerable.

OSWALD :—Visited, 17th December.

Numbers present at examination :—Boys, 16 ; girls, 13 ; total, 29.

1. The interior aspect of the school is very dingy, and its general material condition only very moderate. 2. Its moral tone is tolerable. 3. The occupation is fairly suitable and the instruction tolerably energetic and animated, though hurried and confused. 4. The general proficiency is unsatisfactory, but it shows a slight improvement.

SCONE :—Visited, 4th August.

Numbers present at examination :—Boys, 15 ; girls, 11 ; total, 26.

1. The state of the premises and the general organization of the school are tolerable. 2. The discipline is suitable and tolerably effective. 3. The occupation is fairly judicious and the instruction reasonably intelligent and animated. 4. The general proficiency is unsatisfactory, but most of the pupils are very young, and several of the best were absent.

SCOTT'S FLAT :—Visited, 26th November.

Numbers present at examination :—Boys, 18 ; girls, 15 ; total, 33.

1. The condition of the schoolroom is in all respects barely moderate. 2. The pupils are awkward in their habits, attitudes, and movements ; otherwise their discipline is reasonably effective. 3. For the most part the subjects accord with the prescribed course ; the methods are earnest and tolerably intelligent, but rather devoid of interest. 4. The proficiency and mental culture are tolerable.

SINGLETON (Primary) :—Visited, 22nd and 23rd November.

Numbers present at examination :—Boys, 28 ; girls, 15 ; total, 43.

1. The school is suitable and effectively organized, but the premises continue much in need of repairs. 2. Nearly half the pupils are irregular, but the moral tone of the school is good. 3. The subjects are appropriate and judiciously arranged ; the methods are intelligent, skilful, and fairly efficient. 4. The average proficiency approaches fair, and the mental culture evinces a decided improvement.

SINGLETON (Infant) :—Visited, 24th November.

Numbers present at examination :—Boys, 19 ; girls, 14 ; total, 33.

1. The room is much too small, but in good condition and tolerably well organized. 2. The moral tone of the school is tolerable. 3. The classification and occupation are suitable ; the instruction is only moderately appropriate, but earnest, persevering, and tolerably effectual. 4. The general proficiency is fair.

SUGARLOAF :—Visited, 28th May.

Numbers present at examination :—Boys, 7 ; girls, 16 ; total, 23.

1. The condition of the premises and the organization of the school are, in every respect, tolerable. 2. Upwards of half the pupils are irregular, but the moral aspect of the school is tolerable. 3. The instruction is suitable and imparted with moderate energy and effect. 4. The proficiency of the younger pupils approaches tolerable ; that of the elder ones is small.

VACY :—Visited, 22nd June.

Numbers present at examination :—Boys, 8 ; girls, 14 ; total, 22.

1. The state of the premises is moderate, and the supply of furniture, apparatus, and books, tolerable. 2. The pupils are generally irregular ; otherwise the discipline is tolerably effective. 3. The occupation is injudiciously arranged, and the instruction is, upon the whole, a failure. 4. The general proficiency is very small, but a few pupils evince a tolerable knowledge in reading, writing, and arithmetic.

WARKWORTH :—Visited, 30th April.

Numbers present at examination :—Boys, 27 ; girls, 27 ; total, 54.

1. The premises are new and very eligible, but proper furniture had not been provided. 2. The moral aspect of the school is pleasing. 3. The instruction is judicious, and imparted with intelligence and skill. 4. The general proficiency is tolerable—a good result for a school not more than three months in operation.

WALLALONG :—Visited, 18th March.

Numbers present at examination :—Boys, 13 ; girls, 15 ; total, 28.

1. The premises are in an effective state, and the organization of the school is fair. 2. The pupils are not satisfactorily regular, but the moral character of the school is good. 3. The subjects accord, for the most part, with the requirements of the standard ; the methods are intelligent, earnest, and well applied. 4. The average proficiency is nearly fair.

WOODBURN :—Visited, 11th June.

Numbers present at examination :—Boys, 12 ; girls, 16 ; total, 28.

1. The school is a rude wooden structure, but moderately suitable and sufficient for the place ; the organization is very indifferent. 2. Most of the pupils are irregular, but tolerably punctual, attentive, and orderly. 3. The occupation is moderately judicious, and the instruction reasonably skilful and effective. 4. The general proficiency may be estimated as moderate.

WOLLOMBI :—

WOLLOMBI :—Visited, 6th to 10th May.

Numbers present at examination :—Boys, 29 ; girls, 30 ; total, 59.

1. The premises are in fair condition, suitable, and (except the teacher's residence) sufficient ; the organization is tolerable.
2. The moral character of the school is fair.
3. The pupils are constantly and suitably occupied—carefully, judiciously, and effectively instructed.
4. The proficiency and mental culture have improved, and range, on the average, from moderate to fair.

PROVISIONAL SCHOOLS.

BULGA :—Visited, 3rd May.

Numbers present at examination :—Boys, 7 ; girls, 13 ; total, 20.

1. The site is destitute of out-offices, and often inaccessible from floods, but otherwise the premises and the organization of the school are of a passable character.
2. The pupils are irregular, but the moral aspect of the school is moderate.
3. The instruction is moderately suitable, intelligent, and effective.
4. The general proficiency is tolerable.

COOLAH :—Visited, 14th September.

Numbers present at examination :—Boys, 9 ; girls, 8 ; total, 17.

1. The condition and organization of the schoolroom continue tolerable.
2. The moral aspect of the school is moderate.
3. The *real* occupation accords but partially with the prescribed course ; the teaching, as far as it goes, is tolerably earnest and effective.
4. The general proficiency is small, but to a partial extent there is a slight improvement.

CAERGEORLE :—Visited, 25th June.

Numbers present at examination :—Boys, 6 ; girls, 13 ; total, 19.

1. The schoolroom is very unsuitable and destitute of appliances ; a new school was in course of erection.
2. The pupils are passably clean, but untidy—moderately attentive, but ignorant of order ; their attendance is generally irregular.
3. The occupation is desultory, and very partial ; the methods, judging by results, are very ineffective.
4. The elder children write pretty well ; but the general proficiency is very bad.

FOUR-MILE CREEK :—Visited, 26th February.

Numbers present at examination :—Boys, 12 ; girls, 17 ; total, 29.

1. The premises, as a whole, are in fair condition, but need, however, considerable repairs. The school is fairly provided with requisites.
2. The pupils are shy and poorly attentive, but otherwise under moderate discipline.
3. The occupation is appropriate, but badly arranged ; the methods are mechanical and ineffectual.
4. The proficiency and mental culture are very small.

GRESFORD :—Visited, 24th June.

Numbers present at examination :—Boys, 10 ; girls, 8 ; total, 18.

1. The schoolroom, as to repair and organization, continues tolerably satisfactory.
2. As regards regularity and punctuality the discipline is very defective, but in other respects passable.
3. The occupation is partial and poorly arranged ; the instruction very meagre and ineffective.
4. In reading, writing, and arithmetic, there are a few fair instances, but the general knowledge evinced is exceedingly poor.

KAYUGA :—Visited, 23rd July.

Numbers present at examination :—Boys, 10 ; girls, 13 ; total, 23.

1. The room is too small, but moderate as to condition and organization.
2. The moral tone of the school is moderate, but the discipline is neither intelligent nor effective.
3. Most of the prescribed subjects are taught, but not well arranged ; the instruction is conscientious but ineffective.
4. The general proficiency is very small.

MOONAN BROOK :—Visited, 17th August.

Numbers present at examination :—Boys, 9 ; girls, 13 ; total, 22.

1. The schoolroom is fairly suitable and sufficient, and pretty well furnished.
2. The discipline is ineffective, but the moral aspect of the school moderate.
3. The classification is unsuitable, the occupation partial and injudicious, and the instruction desultory and feeble.
4. The general proficiency is very bad.

MUNMURRA :—Visited, 26th August.

Numbers present at examination :—Boys, 7 ; girls, 11 ; total, 18.

1. The schoolroom is good of the kind, tolerably suitable and moderately well organized.
2. The pupils are shy, but otherwise under tolerable discipline.
3. The occupation is for the most part fairly appropriate, but subject to no orderly arrangement ; the instruction is tolerably intelligent, but slow and mechanical.
4. The general proficiency ranges from moderate to tolerable.

MOUNT WILLS :—Visited, 21st May.

Numbers present at examination :—Boys, 13 ; girls, 17 ; total, 30.

1. The schoolhouse is unsuitable, insufficient, and wretchedly furnished ; it has since been disused.
2. Under the circumstances the moral tone of the school is moderate.
3. The occupation is suitable but badly arranged, and awkwardly conducted ; the methods are very mechanical and poorly effective.
4. The knowledge evinced is unsatisfactory.

MUSCLE CREEK:—Visited, 16th July.

Numbers present at examination :—Boys, 10 ; girls, 13 ; total, 23.

1. The premises are moderate as regards condition, capability, and organization. 2. The children are shy and awkward, but otherwise the discipline is moderately effective. 3. The occupation is suitable, but desultory and unsystematic ; the instruction is intelligent and tolerably effectual. 4. The general proficiency is moderate.

QUORROBOLONG :—Visited, 19th May.

Numbers present at examination :—Boys, 13 ; girls, 15 ; total, 28.

1. The building is good of its kind, but there are no out-offices, and the organization is very defective. 2. No discipline exists in the school, and the conduct of the pupils is very turbulent. 3. The classification is bad ; the occupation partial and injudicious ; the instruction very feeble and ineffectual. 4. The proficiency in every class and subject is very low.

ROSEBROOK :—Visited, 5th March.

Numbers present at examination :—Boys, 25 ; girls, 14 ; total, 39.

1. The building is in moderate repair, but the organization very awkward. 2. Cleanliness and tidiness are greatly neglected, and order is almost unknown, but the pupils are obedient and respectful. 3. For the most part the occupation accords with the standard, but it is very unsystematic ; the methods are wholly mechanical. 4. The knowledge evinced in reading, writing, and arithmetic, shows considerable improvement, and the general proficiency ranges from moderate to tolerable.

SOMERVILLE :—Visited, 5th May.

Numbers present at examination :—Boys, 16 ; girls, 7 ; total, 23.

1. The schoolroom and furniture are very rudely constructed, and only indifferently suitable. 2. The pupils are ignorant of order, but the moral tone of the school is moderate. 3. The classification is bad ; the occupation partial and without arrangement ; the instruction very superficial. 4. The general proficiency is very small.

INSPECTOR'S REPORT FOR 1869 UPON THE PUBLIC AND CERTIFIED DENOMINATIONAL SCHOOLS IN THE NEWCASTLE DISTRICT.

1.—SCHOOLS.

During the year the following additional schools have been brought into operation :—

1.—William Town	Public.
2.—Mitchell's Island	Public.
3.—Marlee	Public.
4.—Hexham (re-opened)	Public.
5.—Upper Mangrove Creek	Provisional.
6.—Kimbriki	Provisional.
7.—Bo Bo Creek	} Half-time.
8.—Killawarra	
9.—Wallamba R. (2)	Half-time.
10.—Mambo Island	} Half-time.
11.—Landsdown River.....	
12.—Myall River (2).....	Half-time.

On account of the low average attendance Croom Park (Public) has been worked as a Provisional School ; and, for a similar reason, the Public School at Bendolba, and the Provisional Schools at Underbank and Pelican Point, have been closed temporarily.

The schools in operation in this district at the close of the year were—

Public Schools	47
Public Schools worked provisionally	3
Provisional Schools	3
Half-time Schools	8
Certified Denominational—Church of England	12
Roman Catholic.....	5
Presbyterian	2
	—
	80
	—

2.—INSPECTION.

Omitting the four Half-time Schools at the Myall and Landsdowne Rivers and Mambo Island, which have been opened since my visit to those localities, and also the Public School at Boolambayte, which I could not visit on account of the flooded state of the creeks, I have been able to cover the intentions of my programme. My visits are as follows :—

15 schools	3 visits each.
46 „	2 visits each.
14 „	1 visit each.

The pupils of the Public Schools at Boolambayte, Bulladelah, Coorannbong, and the Monkerai, have not been examined. I was unable to visit the two first-named on account of the flooded state of the creeks ; and the latter schools were temporarily closed at the intended periods of visitation.

The time occupied in travelling to, inspecting, and reporting upon schools was 230 days, and the distances travelled make an aggregate of 2,310 miles.

I am in a position to report that this year the examinations have been more thorough than heretofore. The tests applied have been searching and personal, and, excepting as an occasional means of sustaining general attention, class answers have not been encouraged.

3.—SCHOOL BUILDINGS.

Of the schools reported in 1868 as being in bad condition, the Public Schools at Pit Town, Teralba, Wallsend, and Seaham maintain the same wretched character. I believe however that efforts are being made to obtain suitable buildings at the three first-named places. In other respects the material state of the schoolhouses and premises remain unimproved. About two-fifths of the Public and Provisional Schools are badly off for teachers' residences, school playgrounds, and out-offices, and the same may be said of one-third of the Denominational Schools.

With

With very few exceptions the Public Schools to which I refer are Non-vested; but viewed without this distinction, *sixteen* Public and two Denominational Schools are unprovided with teachers' residences, *i.e.*, one-fourth of the teachers in the district have not equal privileges with their fellows. I am aware that the Council is ready to assist in the erection of masters' dwellings in the usual way, but Non-vested properties may not come under the rule which proffers assistance, and either from the poverty or apathy of the people in most of the localities having such defective premises, it is next to hopeless to endeavour to evoke a movement involving subscriptions.

I subjoin tabulated returns, showing the material condition of the respective schools.

PUBLIC SCHOOLS.

	Good in supply or condition.	Fair and moderate.	Bad or unprovided.
1. Schoolhouse (Vested property).....	20	9	1
Schoolhouse (Non-vested)	2	12	6
2. Teachers' residence (Vested)	17	6	7
Teachers' residence (Non-vested) ...	2	5	13
3. Playground (Vested)	12	12	6
Playground (Non-vested)	2	4	14
4. Out-offices (Vested)	17	9	4
Out-offices (Non-vested)	2	5	13

PROVISIONAL AND HALF-TIME SCHOOLS.

	Good in supply or condition.	Fair and moderate.	Bad or unprovided.
1. Schoolhouse	4	5	2
2. Teachers' residence.....	1	2	4
3. Playground	1	3	7
4. Out-offices	1	1	9

DENOMINATIONAL SCHOOLS.

	Good in supply or condition.	Fair and moderate.	Bad or unprovided.
1. Schoolhouse.....	9	9	1
2. Teachers' residence.....	10	3	6
3. Playground	8	6	5
4. Out-offices	7	7	5

IV.—CLASSIFICATION OF PUPILS.

This branch of school organization is correct in the majority of schools, but untrained men, and others of low professional skill, exhibit a strong tendency to multiply the subdivisions of their classes to an unnecessary extent; but whenever I found this state of things, I generally succeeded in proving to the teacher, by the results, that he could not effectively manipulate such a manifold classification.

There is one feature of classification that is by no means satisfactory. I allude to what is termed "progress from class to class." I found that of 5,070 pupils, who were on the rolls at the times of inspection, less than 1,800 had been promoted since the previous examination, or in somewhere about twelve months. Considerable allowance must be made for irregular pupils, and also for what is termed *new scholars*, say, for both kinds, some 2,000 pupils, yet even then 50 per cent. appears to have been unaffected by the instruction imparted.

In many schools the progress has been highly creditable, but in others the verdict of indolence can scarcely be escaped; and the insinuation of the parents, not infrequently uttered, that "their children are not really worked until the examination is close on," has a deep colouring of truth to sustain it.

I subjoin a return of the enrolment, average attendance, and also the numbers present, at the examination:—

	Enrolment.	Average attendance.	Present at examination.
Public Schools, &c.	3,278	2,425	2,653
Denominational Schools.....	1,792	1,230	1,277

The enrolment given above is an aggregate of the numbers on the respective rolls at the times of inspection, but I perceive that the returns for the quarter ended 25th December show the following:—

	Enrolment.	Average.
Public Schools	3,830	2,430
Denominational Schools	1,776	1,189

Speaking of schools as Public and Denominational, it is somewhat worthy of note how few there are in reality of the latter class. Excepting those belonging to the Roman Catholic persuasion, the term is not far from a misnomer.

In the Church of England Schools, whilst 721 pupils are of that denomination, 402 belong to other persuasions, and receive an unsectarian education. In the Roman Catholic schools only twenty-eight of 381 belong to other churches. In the Presbyterian schools, only sixty-five of 272 enrolled are Presbyterians.

The following will also give another aspect of the denominational distribution of the pupils :—

	Children Enrolled.	Taught in Public Schools.	Taught in Church of England Schools.	Taught in Roman Catholic Schools.	Taught in Presbyterian Schools.
Church of England	2,182	1,386	721	24	51
Roman Catholic	1,047	547	124	353	23
Presbyterian	943	762	112	4	65
Wesleyan	674	571	95	8
Other Denominations	760	564	71	125
	5,606	3,830	1,123	381	272

Thus it may be seen that more than two-thirds of the Church of England children are educated in Public Schools, or else in schools of other denominations.

Nearly two-thirds of the Roman Catholic, and more than fourteen-fifteenth's of the Presbyterian, children are educated in the same way. There are no Wesleyan Denominational Schools in this district.

In localities of town-like character the Denominational Schools have, as may be supposed, a greater hold upon the children of the respective persuasions, yet even in the City of Newcastle the parents of one-third of the Church of England and Roman Catholic children appear to prefer other schools than those which belong to their own denominations, or at least have not marked denominational predilections.

For my own part, guided by a tolerably intimate acquaintance with the facts of the case, I have strong doubts whether the question of *kind* of school influences the great majority of the parents. They know that the Council's supervision reaches their children in whatever school they may be placed, and that systematic education is ensured to them by the provisions of the "Public Schools Act."

V.—DISCIPLINE.

Under this head my remarks have chief reference to the results of the ordinary or unannounced inspections. In most respects a notified visit induces illusory results. Then *all* the children are punctual, clean, and orderly, and the well-filled forms would lead an uninitiated person to believe that the public money was being spent to advantage.

The most unsatisfactory features of the prevailing discipline are, the irregularity and want of punctuality of a very considerable number of the pupils. Teachers, not without force, blame the parents, but I am cognizant of cases in which the personal habits of the teachers deepen, rather than lessen, the evil. There are instances in which the best-intentioned teachers feel themselves greatly frustrated in their efforts to enforce regularity and punctuality (I refer to those places possessing two or more schools in close proximity), but, viewed as a whole, it is not an unreasonable test of a teacher's disciplinary influence to judge of him by his ability to enforce harmony between the *school* and the *home*. An earnest man will sometimes be beaten by circumstances, but if he retain his earnestness in the face of defeat he must ultimately succeed.

My experience is, that when parents see that the teacher is a man of unflinching purpose, the defective features of school discipline, now chargeable on the "home," disappear to a very appreciable extent. Upon the other distinctives of discipline I have nothing to add to previous reports. Excepting in a few incorrigible cases, the schools of the district present satisfactory results as to order and industry.

The following is a tabulated statement of the discipline prevailing in the respective schools at the time of visitation :—

	Good.	Fair and moderate.	Bad.
Public Schools—			
Punctuality	23	23	10
Regularity	13	23	20
Order	27	24	5
Industry	14	28	14
Denominational Schools—			
Punctuality	8	8	3
Regularity	3	9	7
Order	5	9	5
Industry	3	8	8

6.—INSTRUCTION.

As previously reported, there is a uniform observance of the Council's standard course.

In schools conducted by trained teachers, the time-tables and lesson programmes are effective documents, but in several schools I should prefer to see prescribed time-tables, similar to those used in Half-time Schools. It is scarcely to be expected that men practically ignorant of the cast and scope of these instructional documents will skilfully devise such, and an *approved* form will not only greatly assist them, but ensure a systematic instruction of their pupils. Lesson programmes that do credit to the compilers, and beneficially influence the instruction, are still infrequently found, but the lesson registers are on the whole faithfully kept.

Distribution of Teaching Power.—No very sensible improvement in this respect has taken place during the year. The younger children appear to be infrequently, and certainly feebly, taught. There are honorable exceptions; but in very many schools a great amount of time is devoted to thumbing books (preparation of lessons, I believe, it is called), or scribbling on slates. As time-killers the latter is preferable to the former, because less damaging to the Council's property.

Subject and Method.—Reading, writing, dictation, arithmetic, and grammar, form the staple instruction in most of the schools under my superintendence. In many schools the arithmetic and grammar yield moderately satisfactory results, but of geography and object lessons the most favourable verdict I can give is, that they are generally ineffectively taught. I am of opinion that these and other orally-taught subjects fail through want of due preparation of the matter to be imparted.

Educators are wise in demanding a frequent revision of the work *done*, and theoretically no teacher ignores this duty perhaps; but if the *primary* duty of "preparation" has been neglected, no amount of *revision* will obviate the inevitably barren results. No one unaccustomed to school-life would credit the mental poverty, to say nothing of the mechanical inaptitude, evidenced by not a few teachers, who

boast

boast that they have been many years in the profession. The information given by one such is that "digitigrade animals include men, apes, and monkeys, all other animals being plantigrade!" A second, in giving an object-lesson, carries on thus:—

Teacher: Our lesson to-day is upon the lion. What is it? *Pupils*: The lion.

Teacher: What is the lion called? *Pupils*: The king of beasts.

Teacher: Yes. What else is he? (A pause.)

Teacher: What has the Queen got on her coat-of-arms? (No reply.)

Teacher: A lion. What is it? *Pupils*: A lion.

Teacher: What else does the Queen wear?

(To this rather awkward question no one likes to venture a reply, but I confess, that had I been a member of the class I should have suggested a unicorn.)

Teacher: An ermine cloak—what is it? *Pupils*: An ermine cloak.

In this strain the lesson continued until the time prescribed by the time-table had expired. Both these teachers are uncertificated, and therefore, fortunately for the profession, can reflect but little discredit upon it; but the following is a sample of oral instruction by one who holds a fair certificate, and must to a considerable extent be chargeable with a neglect of due preparation, and of having talked against time just because the time-table indicated "geography" as the lesson for the hour.

The lesson was propounded as one on the mountain system of New South Wales, and as such it was entered at the close of the day in the lesson-register.

Teacher: What is this a map of? *Pupils*: Australia.

Teacher: What is a map? *Pupils*: A picture of the world, or of some part of it.

Teacher: What are these lines? *A pupil*: Latitude and longitude.

Teacher: What is latitude? *A pupil* (and the same who answered before): Distance of a place north or south of the equator.

Teacher: Who discovered Australia? *Pupils*: Captain Cook.

Teacher: Yes. Well now, we will run over the mountains of New South Wales.

Then followed a simultaneous repetition of a list of *words* evidently long since committed to memory. As I reported in 1868, so now. "In few schools is the subject treated intelligently. Constructive illustrations on the black-board are rarely used, nor could I often detect evidences of deductive teaching. The system of cramming the pupils with a few *stock* facts is too frequently followed."

Reading.—In most schools there is tolerable attention given to this branch of instruction, and in some of the junior classes I have witnessed an improvement both in method and result, but *expressive* reading is rarely met with. In many schools the lesson is merely a mechanical utterance of the text; in others this is sensibly improved by an intelligent explanation. Much that is unsatisfactory in the reading of the advanced classes is due to the *inroads* to which it is subjected. A reading lesson generally lasts for three-fourths of an hour, during which time a dozen children or so are expected to master the text and scope of the lesson. They mechanically go through the lesson, the object of the teacher being to satisfy his conscience that the class *has read* (and this is generally effected in about twenty minutes), books are then closed, and the remainder of the time is devoted to *spelling* and *parsing*. Until teachers make the reading lesson what it is called, and cease to convert it into a pretext for teaching subjects which although valuable in themselves are absolutely foreign to the purpose of the lesson, until they strive to exhibit it as a proof of their skill, and treat it intelligently, the results must remain unsatisfactory.

Writing.—Is fairly taught in most schools.

Dictation.—Considering the importance of this subject, I am surprised that so many teachers fail to realize worthy results. I find that where "home lessons" in spelling and reproductions are systematically prosecuted, a very sensible difference for the better is manifest in the school dictation.

Arithmetic.—The treatment of this subject, judging by the results, is defective in many schools. Either the methods are vague or the testings feeble. In the fundamental rules the pupils' work very incorrectly, and in the applied rules a practical problem, no matter how simple, staggers the examinees. As far as I am able to judge, I am of opinion that the failure is to be attributed chiefly to the insufficient amount of *personal* testing each pupil receives. The *class* is perhaps well worked, but the training fails to force the *pupil* to rely upon himself, or feel his own individuality.

I subjoin specimen sums given to the second, third, and fourth classes:—

Second Classes, an aggregate of 1,003 pupils—

1. Notate 7010015 and 1076.
2. Take 908909 from 50831427.
3. Multiply 379214387 by 87.

Results—

Notation 519 pupils correct; 484 incorrect.
Subtraction ... 448 " " 555 "
Multiplication 320 " " 683 "

Third Classes, an aggregate of 687 pupils—

1. Notate 38000011 and 90017.
2. Multiply 376985743 by 70809.
3. I bought 17 hats, at 3s. 2d. each; and 205½ yards of calico, @ 5½d. per yard. I paid £5 18s. 5d. on account; what do I still owe?

Results—

Notation..... 458 pupils correct; 229 incorrect.
Multiplication 249 " " 438 "
Compound question (money).. 206 " " 481 "

Fourth Classes, an aggregate of 80 pupils—

1. One-third of the following account was paid, the remainder standing as a debt:

What was paid and what is owing?
38½ yards of cloth, @ 15s. 6d. per yard.
76½ " flannel, @ 1s. 9d. "
165 " calico, @ 7½d. "
29 hats, @ 7s. 6d. each.
87 neckties, @ 11½d. "

2. 3 cwts. and 17lbs., @ £5 17s. 6d. per ton.

Work by proportion and practice.

3. A party of seven gentlemen on a journey together, spend £150 in 3 weeks and 4 days: What would be the expense at the same rate of another party, consisting of 11 persons, travelling for a fortnight?

Results—

Bills of parcels Correct 44 pupils; 36 incorrect.
Simple proportion and practice " 51 " 29 "
Compound proportion " 34 " 46 "

Excepting in a very few instances, the pupils of these classes had been enrolled in such more than nine months.

Singing and Drawing.—Singing by "note" is taught in ten Public, and in three Denominational, Schools, with results which range from tolerable to good. Drawing is also taught with moderate success in eight Public, and two Denominational, Schools.

Needlework.—

Needlework.—This very necessary part of female instruction does not take the rank it should. Even in many schools, where it is ostensibly taught, the girls fritter away the hour at *crochet*, tating, and kindred finery. The general statement of teachers is, that the parents either neglect to furnish their children with material, or else request that their girls may go on with their studies. There is some force in this statement, but it should be obvious to the teachers that if a routine can be infringed in one particular it may be in another.

The following shows the relative proficiency of the schools in the subjects upon which I have treated.

PUBLIC SCHOOLS.

	Good.	Fair.	Moderate.	Bad or failure.
Reading	18	27	7	1
Writing	20	26	5	2
Spelling and dictation	5	20	21	7
Arithmetic	4	15	17	17
Grammar	7	13	11	22
Geography	6	12	14	21
Object lessons	2	10	20	21
Needlework	8	14	11	20
Singing	1	4	5
Drawing	6	2

DENOMINATIONAL SCHOOLS.

	Good.	Fair.	Moderate.	Bad or failure.
Reading	5	10	4
Writing	6	11	2
Spelling and dictation	1	6	10	2
Arithmetic	6	8	5
Grammar	1	3	6	9
Geography	1	3	6	9
Object lessons	2	8	9
Needlework	6	3	6	4
Singing	2	1
Drawing	1	1

VII.—TEACHERS.

These are, for the most part, earnest and intelligent men, but in the ranks are some who have unmistakably missed their calling, and to whom the work can be nothing short of an unpleasant drudgery. I am glad to be able to report that, with one or two exceptions, the teachers in this district maintain a good moral and professional repute in their respective localities. They are classified as follows :—

PUBLIC SCHOOLS.

Class II.		Class III.			Probationers.
Sec. A.	Sec. B.	Sec. A.	Sec. B.	Sec. C.	
5	10	22	9	12	8

DENOMINATIONAL SCHOOLS.

Class II.		Class III.			Probationers.
Sec. A.	Sec. B.	Sec. A.	Sec. B.	Sec. C.	
.....	1	7	6	2	5

PUPIL TEACHERS.

Class I.	Class II.	Class III.	Class IV.
1	2	3	7

VIII.—SCHOOL FEES.

The amount of fees paid during the year is £2,978 10s. 4d., or £458 9s. 10½d. more than in 1868. Part of this increase is due to an increase upon the enrolment of 1868 of 957 pupils.

In twelve schools the fees for the year range from £1 to £5; in sixteen, from £5 to £10; in sixteen, from £10 to £20; in thirteen, from £20 to £30; in eight, from £30 to £40; in three, from £40 to £50; in two, from £50 to £75; in two, from £75 to £100; in four, from £100 to £150; in two, from £150 to £250; in one, from £250 to £300; and in one they exceed £400. The incomes of more than one-half of the teachers in the district range from £60 to £100 a-year.

I shall indeed be glad when I can report more favourably upon this *vital* feature of our educational system.

IX.—LOCAL SUPERVISION.

Matters remain as reported last year. The official local interest taken in the Public Schools is apparently of a negative character, and as far as lay-members of Boards are concerned, the Denominational Schools are quite as infrequently visited.

In conclusion, I have the pleasing duty to state that my intercourse with School Boards and teachers has been marked by a courteous consideration on their parts.

J. W. ALLPASS,
Inspector of Schools,
Newcastle District.

Newcastle, 11 January, 1870.

ANNEX A.

NEWCASTLE DISTRICT.—TABULATED REPORTS FOR 1869.

PUBLIC SCHOOLS.

BANDON GROVE (V.) :—Ordinary inspection, 1st June; examination of pupils, 10th November.

Pupils enrolled :—Boys, 21 ; girls, 22 ; total, 43.
Pupils present at ordinary inspection :—Boys, 13 ; girls, 21 ; total, 34.
Pupils present at the examination :—Boys, 18 ; girls, 20 ; total, 38.
Ordinary average attendance :—34 pupils.

Although this schoolhouse was a short time since put in a proper state of repair, it is through the perishable nature of the material becoming again dilapidated, and the out-offices are in a discreditable state. The organization and discipline are very satisfactory, and the instruction is careful and searching. In most subjects the pupils passed creditably. The school secretary, V. Dowling, Esq., was present at the examination.

BARRINGTON (N.V.) :—Examined, 31st August.

Pupils enrolled :—Boys, 22 ; girls, 12 ; total, 34.
Pupils present at examination :—Boys, 13 ; girls, 9 ; total, 22.
Ordinary average :—20 pupils.

This school is, on account of its low average attendance, worked as a Provisional School. The schoolhouse is in tolerable condition and is fairly furnished, but the teacher's dwelling is a mere hovel. The organization is suitable, but the discipline is of negative character. In mechanical subjects the results are fair, but the mental tone of the school is exceedingly feeble.

BLUE GUM FLAT (N.V.) :—Ordinary inspection, 16th April ; examination of pupils, 8th December.

Pupils enrolled :—Boys, 27 ; girls, 23 ; total, 50.
Pupils present at ordinary inspection :—Boys, 18 ; girls, 16 ; total, 34.
Pupils present at examination :—Boys, 16 ; girls, 18 ; total, 34.
Ordinary average :—30 pupils.

The schoolhouse, a wooden structure with a bark roof, is getting into marked disrepair. The school-room is large enough for the average attendance, but it could not accommodate the children of the locality if all sought admission. With a proper schoolhouse and a competent teacher, an average of at least fifty pupils could be maintained. The furniture and working material are fairly equal to the present wants of the school. There are no out-offices. The organization is correct ; the discipline does not benefit the mental tone of the school, nor does the instruction show satisfactory results. One member of the School Board was present at the examination.

BULLADELAH (N.V.) :—Ordinary inspection, 21st May.

Pupils enrolled :—Boys, 19 ; girls, 19 ; total, 38.
Pupils present at inspection :—Boys, 14 ; girls, 14 ; total 28.
Ordinary average :—28 pupils.

This schoolhouse is substantially in good condition and there is a fair supply of working material, but the furniture is insufficient and badly arranged. The school operations are satisfactory, and the instruction appears to be methodical and careful. I intended to have examined this school on 23rd November, but was prevented by tempestuous weather.

BOOBAL (N.V.) :—Ordinary inspection, 20th May ; examination of pupils, 19th November.

Pupils enrolled :—Boys, 17 ; girls, 9 ; total, 26.
Pupils present at ordinary inspection :—Boys, 16 ; girls, 9 ; total, 25.
Pupils present at examination :—Boys, 16 ; girls, 9 ; total, 25.
Ordinary average :—22 pupils.

The schoolhouse is an excellent structure, and is complete in all the requirements of a school. The organization and discipline are complete and effective, and the instruction gives fair results. A member of the School Board was present at the examination.

BROOKFIELD (V.) :—Ordinary inspection, 7th June ; examination of pupils, 4th November.

Pupils enrolled :—Boys, 28 ; girls, 27 ; total, 55.
Pupils present at ordinary inspection :—Boys, 18 ; girls, 16 ; total, 34.
Pupils present at examination :—Boys, 15 ; girls, 18 ; total, 33.
Ordinary average :—38 pupils.

The schoolhouse is in a satisfactory state, but the teacher's dwelling is exceedingly small. As regards furniture and working appliances the school is in a satisfactory state. The playground is unfit for use when wet weather prevails, and the out-offices are badly situated. The school is organized after approved methods, but the instruction is unskilful.

CLARENCE TOWN (V.) :—Ordinary inspection, 10th June ; examination of pupils, 1st November.

Pupils enrolled :—Boys, 41 ; girls, 36 ; total, 77.
 Pupils present at ordinary inspection :—Boys, 33 ; girls, 29 ; total, 62.
 Pupils present at examination :—Boys, 36 ; girls, 35 ; total, 71.
 Ordinary average :—64 pupils.

The material state of this school is very satisfactory, excepting that the rooms are much too small. The master's dwelling is also much too small, and is in need of repair. All the features of the organization and discipline are efficient and effective. The tone of the school is thoroughly healthy, and the instruction is sound, intelligent, and effective. The Members of the School Board were present at the examination.

COORUMBONG (N.V.) :—Ordinary inspection, 13th April.

Pupils enrolled :—Boys, 12 ; girls, 10 ; total, 22.
 Pupils present at ordinary inspection :—Boys, 9 ; girls, 8 ; total, 17.
 Ordinary average :—21 pupils.

This school is held in the Roman Catholic Church. The building is suited to the use, but is much out of repair. On the whole it is fairly furnished. The teacher's dwelling is small and damp, and although the land might be made valuable to the school and the teacher, it is unfenced. There are no out-offices. The school operations are fairly satisfactory, and the instruction is careful and tolerably effective. This school was not in operation at the visit for examination.

CROKI (V.) :—Ordinary inspection, 18th March ; examination of pupils, 15th September.

Pupils enrolled :—Boys, 33 ; girls, 41 ; total, 74.
 Pupils present at ordinary inspection :—Boys, 29 ; girls, 37 ; total, 66.
 Pupils present at examination :—Boys, 28 ; girls, 32 ; total, 60.
 Ordinary average :—60 pupils.

The school premises are good, and, excepting that a lavatory would be an advantage, the appointments are sufficient and suitable. The organization and discipline are correct, and the instruction gives results which range from fair to good. The School Board was present during a portion of the examination.

CROOM PARK (V.) :—Ordinary inspection, 28th May ; examination of pupils, 16th November.

Pupils enrolled :—Boys, 10 ; girls, 16 ; total, 26.
 Pupils present at ordinary inspection :—Boys, 3 ; girls, 6 ; total, 9.
 Pupils present at examination :—Boys, 9 ; girls, 13 ; total, 22.
 Ordinary average :—17 pupils.

On account of low average this school is worked provisionally. The building is in good repair, and is suitably and sufficiently equipped. This school was closed for a time, between the two inspections, and the falling off in the attainments of the pupils is very marked. The present teacher has held the appointment but a very short time, and her instruction does not as yet show satisfactory results. The school secretary was present at the examination.

CUNDLETOWN (V.) :—Ordinary inspection, 2nd March ; examination of pupils, 7th September.

Pupils enrolled :—Boys, 28 ; girls, 24 ; total, 52.
 Pupils present at ordinary inspection :—Boys, 28 ; girls, 18 ; total, 46.
 Pupils present at examination :—Boys, 23 ; girls, 17 ; total, 40.
 Ordinary average :—33 pupils.

The schoolhouse is commodious, in fair condition, and properly furnished and supplied with material. The organization is correct, the discipline is effective, and the teaching is thorough. The results of the examination ranged from fair to good. The school secretary was present at the examination.

DINGO CREEK (N.V.) :—Ordinary inspection, 10th March ; examination of pupils, 24th September.

Pupils enrolled :—Boys, 17 ; girls, 12 ; total, 29.
 Pupils present at ordinary inspection :—Boys, 18 ; girls, 15 ; total, 33.
 Pupils present at examination :—Boys, 14 ; girls, 11 ; total, 25.
 Ordinary average :—20 pupils.

The schoolhouse is a substantial building, suited to its uses, and is properly furnished. The teacher's dwelling has at last been repaired and rendered somewhat fit for human habitation ; but the school-ground is unfenced and out-offices are still wanting. The organization is correct, the discipline is fair, but the instruction is unskilful. The pupils are wanting in intelligence and self-reliance. Two Members of the School Board were present at the examination.

DUMARESQ ISLAND (V.) :—Ordinary inspection, 8th March ; examination of pupils, 20th September.

Pupils enrolled :—Boys, 27 ; girls, 36 ; total, 63.
 Pupils present at ordinary inspection :—Boys, 26 ; girls, 21 ; total, 47.
 Pupils present at examination :—Boys, 22 ; girls, 29 ; total, 51.
 Ordinary average attendance :—40 pupils.

Excepting that the schoolroom is much too small, it is suitable and the appointments are good. The ground is properly enclosed, and the general appearance of the place is enhanced by flower-beds. The organization is correct, the discipline is judicious and of excellent tone, the instruction is methodical, careful, and fairly effective. The Members of the School Board were present at the examination.

DUNGOG (V.) :—Ordinary inspection, 2nd June ; examination of pupils, 8th November.

Pupils enrolled :—Boys, 32 ; girls, 33 ; total, 65.
 Pupils present at ordinary inspection :—Boys, 17 ; girls, 18 ; total, 35.
 Pupils present at examination :—Boys, 24 ; girls, 26 ; total, 50.
 Ordinary average :—45 pupils.

The schoolhouse is in a proper state of repair, and the appointments are good and sufficient. The ground is properly enclosed, and steps have been taken for the erection of a teacher's residence. The out-offices are badly situated. The classification is judicious and the discipline is effective. The pupils are orderly, fairly industrious, and a marked improvement in their mental and moral tone has been effected by the present teacher. The Members of the Board were present at the examination.

EAGLETON (V.) :—Examined, 29th October.

Pupils enrolled :—Boys, 17 ; girls, 26 ; total, 43.
Pupils present at examination :—Boys, 16 ; girls, 21 ; total, 37.
Ordinary average :—32 pupils.

The material state of this school is in all respects satisfactory. The organization is correct, the discipline is mild but effective, and the instruction gives results ranging from fair to good. Two Members of the School Board were present at the examination.

GHINNI GHINNI (V.) :—Ordinary inspection, 16th March ; examination of pupils, 13th September.

Pupils enrolled :—Boys, 28 ; girls, 26 ; total, 54.
Pupils present at ordinary inspection :—Boys, 24 ; girls, 19 ; total, 43.
Pupils present at examination :—Boys, 25 ; girls, 23 ; total, 48.
Ordinary average :—35 pupils.

A new schoolhouse is close upon completion, and so far it is faithfully built. The school is well furnished and supplied with appliances, and the exterior requirements will be, when completed, of a satisfactory kind. The organization is correct, the discipline is judicious, and the attainments of the pupils range from fair to very fair. The tone of the school is healthy. Most of the Members of the School Board were present.

GLENWILLIAM (V.) :—Ordinary inspection, 8th June ; examination of pupils, 3rd November.

Pupils enrolled :—Boys, 18 ; girls, 21 ; total, 39.
Pupils present at ordinary inspection :—Boys, 10 ; girls, 15 ; total, 25.
Pupils present at examination :—Boys, 11 ; girls, 8 ; total, 19.
Ordinary average :—28 pupils.

The schoolhouse is in good condition, is commodious, and has proper appointments. The organization is correct, the pupils are clean and orderly, but are much wanting in energy. One very great hinderance to their progress is their irregularity of attendance. The instruction gives results which range from moderate to very fair.

GOSFORD (N.V.) :—Ordinary inspection, 27th April ; examination of pupils, 6th December.

Pupils enrolled :—Boys, 15 ; girls, 23 ; total, 38.
Pupils present at ordinary inspection :—Boys, 11 ; girls, 19 ; total, 30.
Pupils present at examination :—Boys, 10 ; girls, 18 ; total, 28.
Ordinary average :—30 pupils.

The school is taught in a portion of the Catholic Church. The whole of the building is very dingy in appearance and is in a bad state of repair, whilst the portion permitted to be used for school purposes is much too small. The furniture is badly arranged and is insufficient and out of condition. The fencing and out-offices are in a discreditable state. The organization and discipline are good ; the instruction gives results ranging from fair to very fair in reading, writing, and arithmetic, but grammar, geography, and object lesson are ineffectively taught. One Member of the Board was present.

HANBURY (V.) :—Ordinary inspection, 29th January ; examination of pupils, 2nd, 3rd, and 4th August,

Pupils enrolled :—Boys, 120 ; girls, 114 ; total, 234.
Pupils present at ordinary inspection :—Boys, 67 ; girls, 67 ; total, 134.
Pupils present at examination :—Boys, 96 ; girls, 95 ; total, 191.
Ordinary average :—165 pupils.

The school building is an excellent structure, but is defectively ventilated. The schoolroom is well furnished, but a fuller supply of diagrams and maps is necessary. The ground is enclosed, but the fences are of such a character that they afford no protection against goats, which resort nightly in great numbers to the shelter of the spacious verandahs and out-offices ; the labour each morning, in removing their filth, is a serious tax upon the teachers' time. The lavatories are useless, not being supplied with basins. There is an excavation in the playground, which is not only unsightly but positively dangerous. The organization is fair ; the discipline is also on the whole fair ; the instruction exhibits a reasonable amount of method, but requires to be made more searching in its character. The results of the examination ranged from tolerable to very fair in all the classes but the infants'. The School Board exercises a fair supervision ; three Members were present during a portion of the examination. A change in the head teachership takes place on the 31st December.

HEXHAM (N.V.) :—Ordinary inspection, 17th May ; examination of pupils, 23rd August.

Pupils enrolled :—Boys, 28 ; girls, 16 ; total, 44.
Pupils present at ordinary inspection :—Boys, 26 ; girls, 14 ; total, 40.
Pupils present at examination :—Boys, 19 ; girls, 14 ; total, 33.
Ordinary average :—32 pupils.

The schoolhouse is a substantial wooden building, but it is much too small for the requirements. The land is unfenced, and no provision is made for a teacher's residence. The unprotected state of the school-ground is a more than ordinary defect, on account of the frequent passing of droves of cattle from the Maitland Markets. The organization is correct ; the discipline healthy and promising ; and the instruction gives reasonably satisfactory results. Two Members of the Board were present at the examination.

LAMBTON, Infants' Department (V.) :—Ordinary inspection, 1st February ; examination of pupils, 6th August.

Pupils enrolled :—Boys, 85 ; girls, 102 ; total, 187.
Pupils present at ordinary inspection :—Boys, 64 ; girls, 52 ; total, 116.
Pupils present at examination :—Boys, 59 ; girls, 69 ; total, 128.
Ordinary average attendance :—130 pupils.

The schoolroom is a neat and airy building, but excepting forms it is positively unfurnished. The organization is as effective as it is possible for it to be under the disadvantages of the school ; the discipline is fair, but the results of the examination were decidedly discreditable.

LAMBTON, Primary Department (V.) :—Ordinary inspection, 1st February ; examination of pupils, 9th and 10th August.

Pupils enrolled :—Boys, 123 ; girls, 91 ; total, 214.
 Pupils present at ordinary inspection :—Boys, 98 ; girls, 97 ; total, 195.
 Pupils present at examination :—Boys, 103 ; girls, 72 ; total, 175.
 Ordinary average attendance :—166.

This school was built to accommodate 120 pupils ; it is therefore obviously much too small ; it is in good condition, and is well furnished and supplied with material. The organization is good, allowing for the impediments to a thorough classification induced by the overcrowded state of the classes ; the discipline is healthy ; the methods of teaching are modern and careful, and an earnestness pervades the school-work. The results of the examination ranged from fair to very fair. Local oversight by visitation is infrequent, but the school secretary watches over the interests of the school in an unmistakable manner.

MANGROVE CREEK (N.V.) :—Examined, 16th December.

Pupils enrolled :—Boys, 14 ; girls, 14 ; total, 28.
 Pupils present at examination :—Boys, 13 ; girls, 14 ; total, 27.
 Ordinary average :—18 pupils.

This school is held in the Roman Catholic Church. The building is in fair condition and is suitably furnished. The classification is correct, the order is good, and the general demeanour of the pupils pleasing. The methods of instruction are careful and thorough, and the results range from fair to good.

MARLEE (V.) :—Examined, 25th September.

Pupils enrolled :—Boys, 16 ; girls, 15 ; total, 31.
 Pupils present at examination :—Boys, 12 ; girls, 12 ; total, 24.
 Ordinary average :—22 pupils.

This school was opened on 26th May. The buildings and appointments are excellent. I am, however, afraid that the school is badly situated for water, and a tank is a great desideratum. The organization and discipline are good, and the instruction is careful and effective. The School Board was present at the examination.

MINMI (N.V.) :—Ordinary inspection, 5th February ; examination of pupils, 20th August.

Pupils enrolled :—Boys, 43 ; girls, 23 ; total, 66.
 Pupils present at the ordinary inspection :—Boys, 35 ; girls, 19 ; total, 54.
 Pupils present at the examination :—Boys, 30 ; girls, 11 ; total, 41.
 Ordinary average :—40.

The schoolhouse is a substantial brick building. It is properly furnished and supplied with working material. The land is unfenced but proper out-offices are provided. The classification is correct, and the pupils are clean, well-behaved, and reasonably industrious. The instruction is methodical and fairly effective in its results.

MONKERAI (N.V.) :—Ordinary inspection, 27th May.

Pupils enrolled :—Boys, 14 ; girls, 16 ; total, 30.
 Pupils present :—Boys, 10 ; girls, 12 ; total, 22.
 Ordinary average :—16 pupils.

The schoolhouse is a suitable building, in fair condition, and sufficiently furnished. The classification is tolerably correct. The discipline is ineffective, the pupils being talkative and officious. The provisions for the due regulation of the instruction are singularly inappropriate, and the methods of teaching are not only valueless but objectionable. It makes no approximation to modern practices, nor does it even exhibit the merits of a rote system. On the 30th of June this school was closed for the remainder of the year. In 1870 it will be reopened as a Provisional School.

MITCHELL'S ISLAND (V.) :—Examined, 16th September.

Pupils enrolled :—Boys, 24 ; girls, 20 ; total, 44.
 Pupils present at examination :—Boys, 24 ; girls, 19 ; total, 43.
 Ordinary average :—33 pupils.

This school was open on 20th July. The premises are in all respects very good, and appear to suffice for the requirements of the district. The organization and discipline are correct and healthy, and the instruction bids fair to be sound and effective. The Members of the School Board were present at the examination.

MOSQUITO ISLAND (V.) :—Ordinary inspection, 13th July ; examination of pupils, 20th January.

Pupils enrolled :—Boys, 22 ; girls, 23 ; total, 45.
 Pupils present at ordinary inspection :—Boys, 21 ; girls, 23 ; total, 44.
 Pupils present at examination :—Boys, 17 ; girls, 22 ; total, 39.
 Ordinary average :—35 pupils.

The school premises are new and suitable buildings. The pupils are properly classified ; the discipline is mild but effective ; the instruction is careful and tolerably successful. The Members of the School Board were present at the examination.

NEWCASTLE (V.) :—Ordinary inspection, 14th January ; examination of pupils, 14th, 15th, 16th, and 29th July.

Pupils enrolled :—Boys, 201 ; girls, 93 ; total, 294.
 Pupils present at ordinary inspection :—Boys, 158 ; girls, 72 ; total, 230.
 Pupils present at examination :—Boys, 163 ; girls, 76 ; total, 239.
 Ordinary average :—220 pupils.

The buildings are substantial but much too small, and it is to be regretted that no effective steps to increase the accommodation have been taken by the Public School Board. I am of opinion that an attendance of 400 pupils could be maintained if the school premises permitted such. The schoolroom is properly furnished and well supplied with apparatus, books, maps, &c. The organization and discipline are good and effective ; the instruction is modern, and the results, as ascertained by the examination, range from fair to good.

OXLEY ISLAND (V.) :—Ordinary inspection, 17th March ; examination of pupils, 14th September.

Pupils enrolled :—Boys, 20 ; girls, 28 ; total, 48.

Pupils present at ordinary inspection :—Boys, 20 ; girls, 21 ; total, 41.

Pupils present at examination :—Boys, 14 ; girls, 22 ; total, 36.

Ordinary average :—30 pupils.

The schoolhouse is in good condition and is properly furnished and supplied with the necessary apparatus and material. The teacher's dwelling is in a very dilapidated condition ; the ground is unenclosed, and out-offices are wanting. The organization and discipline appear judicious and effective, the children being clean, orderly, and fairly self-reliant. The teaching is reasonably searching in its character, and the results range from fair to good in reading, writing, spelling, and dictation. In the other branches from moderate to tolerable. Most of the Members of the School Board were present at the examination.

PARADING GROUND (V.) :—Ordinary inspection, 12th February ; examination of pupils, 28th October.

Pupils enrolled :—Boys, 11 ; girls, 16 ; total, 27.

Pupils present at ordinary inspection :—Boys, 8 ; girls, 7 ; total, 15.

Pupils present at the examination :—Boys, 9 ; girls, 14 ; total, 23.

Ordinary average :—22 pupils.

The school is, on the whole, in fair condition, but the teacher's apartments are very dingy, small, and uncomfortable ; both as regards furniture and working material the school is properly supplied. The organization is correct, and, as far as order is concerned, the discipline is effective. The instruction is not very efficient nor do the pupils make progress ; much of this is due to their irregularity. The School Board was present.

PELICAN POINT (N.V.) :—Examined, 17th September.

Pupils enrolled :—Boys, 16 ; girls, 8 ; total, 24.

Pupils present :—Boys, 12 ; girls, 7 ; total, 19.

Ordinary average :—16 pupils.

The schoolhouse is a substantial and suitable building, and it is properly furnished and supplied with material. The teacher has no proper means of residence, but is obliged to place boards on the rafters of the schoolroom for a sleeping-place ; and, as there is no fire-place, he has to cook his food in the open air. According to the teacher's statement the Local Board is inclined to make no effort for his comfort.

The organization is tolerable, the discipline is fair, and the instruction, although not highly educative, gives fair results in the more mechanical subjects. The school has since been closed.

PIT TOWN (V.) :—Ordinary inspection, 9th April ; examination of pupils, 11-12th August.

Pupils enrolled :—Boys, 106 ; girls, 108 ; total, 214.

Pupils present at ordinary inspection :—Boys, 79 ; girls, 55 ; total, 134.

Pupils present at examination :—Boys, 82 ; girls, 85 ; total, 167.

Ordinary average :—155 pupils.

The schoolhouse is seriously dilapidated by the ravages of the white ant, and it is to be regretted that the likelihood of obtaining a suitable building is still very remote. The organization and discipline are effective, and the instruction shows reasonably satisfactory results. The school is never visited by the Local Board, and whether it exercises any beneficial influences for the school I cannot say.

PLATTSBURG (N.V.) :—Ordinary inspection, 4th February ; examination of pupils, 13th August.

Pupils enrolled :—Boys, 31 ; girls, 23 ; total, 54.

Pupils present at ordinary inspection :—Boys, 40 ; girls, 20 ; total, 60.

Pupils present at examination :—Boys, 23 ; girls, 16 ; total, 39.

Ordinary average :—30 pupils.

The school is held in a rented building, which is in good condition and is suited to the purpose. The furniture and material are equal to the requirements. No provisions are made either for decency or cleanliness. The organization and discipline are judicious, and the teaching is modern and intelligent, but judging by the results of the examination it is not thorough and searching.

PURFLEET (V.) :—Ordinary inspection, 3rd March ; examination of pupils, 8th September.

Pupils enrolled :—Boys, 20 ; girls, 16 ; total, 36.

Pupils present at the ordinary inspection :—Boys, 15 ; girls, 9 ; total, 24.

Pupils present at the examination :—Boys, 9 ; girls, 11 ; total, 20.

Ordinary average :—24 pupils.

The school buildings are in good condition ; the organization and discipline are tolerably satisfactory, but the instruction is feeble in its results. One Member of the School Board was present at the examination.

RAYMOND TERRACE (N.V.) :—Ordinary inspection, 16th June ; examination of pupils, 26th October.

Pupils enrolled :—Boys, 18 ; girls, 18 ; total, 36.

Pupils present at ordinary inspection :—Boys, 21 ; girls, 16 ; total, 37.

Pupils present at examination :—Boys, 16 ; girls, 17 ; total, 33.

Ordinary average :—29 pupils.

The schoolroom, which is also used as a chapel, is suitable as to size, light, and ventilation. The furniture is old, but sufficient, and there is a proper supply of working material. The playground is of little use, being low and swampy, and there are no closets. The school is properly organized, and the discipline is good. The results of the instruction range from moderate to tolerable.

REDBANK (V.) :—Ordinary inspection, 4th March ; examination of pupils, 9th September.

Pupils enrolled :—Boys, 30 ; girls, 22 ; total, 52.

Pupils present at ordinary inspection :—Boys, 17 ; girls, 9 ; total, 26.

Pupils present at examination :—Boys, 15 ; girls, 12 ; total, 27.

Ordinary average :—31 pupils.

The schoolhouse has been recently put in repair, and it is suitably furnished and supplied with material. The site of this school is swampy, and cannot be healthy. The organization is satisfactory, the discipline is judicious, and tolerable progress has been made by the pupils. The School Board was present at the examination.

SEAHAM (N.V.) :—Ordinary inspection, 11th June ; examination of pupils, 30th October.

Pupils enrolled :—Boys, 25 ; girls, 11 ; total, 36.

Pupils present at the ordinary inspection :—Boys, 13 ; girls, 8 ; total, 21.

Pupils present at the examination :—Boys, 12 ; girls, 10 ; total, 22.

Ordinary average :—24 pupils.

The schoolroom is small, badly lighted, and much out of condition. The supply of furniture is ample, and in fact would suffice for a room twice the size. The pupils are properly classified, and appear to be under proper management. In the more mechanical branches of instruction the pupils make fair progress, but their training is not very educative.

STOCKTON (N.V.) :—Ordinary inspection, 12th July ; examination of pupils, 18th January.

Pupils enrolled :—Boys, 19 ; girls, 15 ; total, 34.

Pupils present at ordinary inspection :—Boys, 19 ; girls, 10 ; total, 29.

Pupils present at examination :—Boys, 17 ; girls, 15 ; total, 32.

Ordinary average :—24 pupils.

The schoolhouse has recently been repaired, and, excepting being too small, may be reported as suitable for its uses ; the out-offices, however, are in such a bad state that they cannot be used. The classification and discipline are fair, the teaching is somewhat methodical, but not highly educative. The results of the examination range from moderate to very fair.

TABEE (V.) :—Ordinary inspection, 1st March ; examination of pupils, 6th and 8th September.

Pupils enrolled :—Boys, 65 ; girls, 46 ; total, 111.

Pupils present at ordinary inspection :—Boys, 44 ; girls, 29 ; total, 73.

Pupils present at the examination :—Boys, 55 ; girls, 35 ; total, 90.

Ordinary average :—85 pupils.

In general terms the school premises are in good condition, but the schoolroom is much too small for the attendance. The appointments are suitable and good, and the general appearance of the property is enhanced by flower-beds in front of the schoolhouse. The classification appears to be judicious ; the discipline is effective in all its intentions, the pupils being orderly, obedient, and self-reliant, to a very fair degree. In this latter particular a marked change for the better has been effected by the teacher. The results of the examination show that the instruction is careful and effective. The Public School Board takes an active interest in the welfare of the school, and most of its members were present at the examination.

TELEGHERRY (N.V.) :—Ordinary inspection, 26th May ; examination of pupils, 17th November.

Pupils enrolled :—Boys, 44 ; girls, 27 ; total, 71.

Pupils present at ordinary inspection :—Boys, 24 ; girls, 18 ; total, 42.

Pupils present at examination :—Boys, 30 ; girls, 21 ; total, 51.

Ordinary average :—44 pupils.

The schoolhouse is in good condition ; the supply of furniture and apparatus is sufficient ; the ground is properly enclosed, and excellent out-offices have been provided. The pupils are correctly classified ; the discipline is much too mild ; the results of teaching are tolerable. The moral tone of this school is pleasing.

TERALBA (N.V.) :—Examined, 26th November.

Pupils enrolled :—Boys, 12 ; girls, 10 ; total, 22.

Pupils present at examination :—Boys, 6 ; girls, 6 ; total, 12.

Ordinary average :—20 pupils.

The schoolhouse as previously reported is a bark-hut in a very dilapidated state, but I believe steps have been taken to provide proper premises. The furniture consists of a table and a few forms, but there is a suitable and sufficient supply of ordinary material. The organization is but tolerably satisfactory, the discipline is fair, and the teaching is fairly effective.

THALABA (N.V.) :—Ordinary inspection, 4th June ; examination of pupils, 15th November.

Pupils enrolled :—Boys, 22 ; girls, 15 ; total, 37.

Pupils present at ordinary inspection :—Boys, 12 ; girls, 14 ; total, 26.

Pupils present at examination :—Boys, 16 ; girls, 14 ; total, 30.

Ordinary average :—23 pupils.

The schoolhouse and teacher's residence are in a fair state of repair. There is a proper supply of furniture and educational appliances, but the out-offices are badly situated. The school is properly organized, both as regards the classification of the children and the provisions for systematic instruction. The discipline is judicious, and the instruction is tolerably effective.

TINONEE (V.) :—Ordinary inspection, 5th March ; examination of pupils, 10th September.

Pupils enrolled :—Boys, 30 ; girls, 23 ; total, 53.

Pupils present at ordinary inspection :—Boys, 24 ; girls, 19 ; total, 43.

Pupils present at examination :—Boys, 17 ; girls, 16 ; total, 33.

Ordinary average :—35 pupils.

The schoolhouse and premises are in good condition, and, excepting that the room is too small, the internal and external appliances are suitable and sufficient. The organization is correct ; the discipline is but moderately effective in its influences over the mental tone of the school. The instruction is much wanting in thoroughness, and the results of the examination are very unsatisfactory. For reasons that I need not here particularize, the School Board did not attend the examination. The teacher has since been removed.

TOMAGO (V.) :—Ordinary inspection, 10th February ; examination of pupils, 25th August.

Pupils enrolled :—Boys, 13 ; girls, 21 ; total, 34.
 Pupils present at ordinary inspection :—Boys, 9 ; girls, 14 ; total, 23.
 Pupils present at examination :—Boys, 13 ; girls, 18 ; total, 31.
 Ordinary average :—23 pupils.

The schoolhouse is a substantial building, and it is sufficiently furnished, but the desks require repair. The supply of working material is sufficient. The organization is correct, the discipline is good, and the instruction is careful and in most subjects effective. The school secretary was present at the examination.

WALLESEND (N.V.) :—Ordinary inspection, 2nd February ; examination of pupils, 16th and 17th August.

Pupils enrolled :—Boys, 93 ; girls, 91 ; total, 184.
 Pupils present at ordinary inspection :—Boys, 82 ; girls, 72 ; total, 154.
 Pupils present at examination :—Boys, 68 ; girls, 61 ; total, 129.
 Ordinary average :—125 pupils.

The material state of this school is bad in the extreme, but steps have been taken for the erection of suitable buildings. The organization is correct, but the discipline is weak. The instruction, excepting that imparted to the infants, gives results which range from tolerable to fair. With proper premises this school can be brought into an efficient state, but as it is I am surprised that it even exists. The Chairman to the Local Board was present at the examination.

WARATAH (N.V.) :—Ordinary inspection, 28th January ; examination of pupils, 5th August.

Pupils enrolled :—Boys, 28 ; girls, 31 ; total, 59.
 Pupils present at ordinary inspection :—Boys, 21 ; girls, 16 ; total, 37.
 Pupils present at examination :—Boys, 21 ; girls, 22 ; total, 43.
 Ordinary average :—42 pupils.

The schoolhouse is small, and also badly ventilated, but it is substantially in good condition. The supply of furniture and apparatus is sufficient, and the working appliances are nearly equal to the requirements of the school. The organization is correct in most respects ; the discipline is good ; the results of the examination show that the attainments of the pupils range from tolerable to very fair. A Member of the School Board was present at the examination.

WILLIAM TOWN (V.) :—Ordinary inspection, 17th June ; examination of pupils, 29th November.

Pupils enrolled :—Boys, 26 ; girls, 26 ; total, 52.
 Pupils present at ordinary inspection :—Boys, 20 ; girls, 12 ; total, 32.
 Pupils present at examination :—Boys, 24 ; girls, 21 ; total, 45.
 Ordinary average :—38 pupils.

This schoolhouse, a wooden structure, was opened about eight months since, but the ravages of the white ant are already evident. The schoolroom is well furnished and found in material ; the school-ground is enclosed, and proper out-offices are provided. The organization is fair, the discipline is promising, and the instruction is marked by industry and reasonable success, considering the material with which the teacher has had to deal.

WINGHAM (V.) :—Ordinary inspection, 9th March ; examination of pupils, 28th September.

Pupils enrolled :—Boys, 27 ; girls, 25 ; total, 52.
 Pupils present at ordinary inspection :—Boys, 10 ; girls, 11 ; total, 21.
 Pupils present at examination :—Boys, 24 ; girls, 20 ; total, 44.
 Ordinary average :—38 pupils.

The schoolhouse is a good wooden structure ; but the comfort of the teacher's family would be increased if his rooms, which adjoin the schoolroom, were ceiled. A verandah and a water-tank are also very much needed. The schoolroom is fairly furnished and supplied with material. The organization is judicious, the discipline is tolerable, and the instruction gives results which range from moderate to fair.

WOOLLA WOOLLA (N.V.) :—Ordinary inspection, 22nd March ; examination of pupils, 21st September.

Pupils enrolled :—Boys, 21 ; girls, 17 ; total, 38.
 Pupils present at ordinary inspection :—Boys, 7 ; girls, 1 ; total, 8.
 Pupils present at examination :—Boys, 15 ; girls, 13 ; total, 28.
 Ordinary average :—25 pupils.

The schoolhouse is small and low-pitched, but is substantially in good condition. The supply of furniture and apparatus is good and sufficient. The organization is correct, the discipline appears to be judicious, and the instruction gives results which range from moderate to fair. The school secretary was present.

YAYPO (V.) :—Ordinary inspection, 15th March ; examination of pupils, 23rd September.

Pupils enrolled :—Boys, 24 ; girls, 20 ; total, 44.
 Pupils present at ordinary inspection :—Boys, 19 ; girls, 12 ; total, 31.
 Pupils present at examination :—Boys, 18 ; girls, 18 ; total, 36.
 Ordinary average :—28 pupils.

This is a new schoolhouse, having all the usual appointments. The organization is very satisfactory, the discipline is judicious, and the teaching, which is of modern cast, is careful and effective. The tone of the school is good. One of the Members of the School Board was present at the examination.

PROVISIONAL SCHOOLS.

MANGROVE CREEK (UPPER) :—Inspected, 15th December.

Pupils enrolled :—Boys, 12 ; girls, 11 ; total, 23.

Pupils present at inspection :—Boy, 1 ; girls, 8 ; total, 9.

Ordinary average :—18 pupils.

The schoolhouse is a wooden structure. It is small and in but a moderate state of repair. This school has been opened but a very short time, and in all respects it is in a crude state. My visit was an unexpected one, and the reason assigned for the small attendance was pressure of farm labour.

MANGROVE CREEK (LOWER) :—Examined, 17th December.

Pupils enrolled :—Boys, 17 ; girls, 10 ; total, 27.

Pupils present :—Boys, 13 ; girls, 8 ; total, 21.

Ordinary average :—21 pupils.

The schoolhouse is much out of repair, but it is sufficiently large, and has a tolerable supply of furniture and material. The land is enclosed, but there are no out-offices. On the whole the pupils are tolerably classified, but the teacher is by no means skilful in the methods of school organization. The discipline, while it obtains tolerable order, has not yet succeeded in affecting the mental features of the school. The results of the examination were small.

KIMBRIKI.

Pupils enrolled :—Boys, 11 ; girls, 19 ; total, 30.

Stated average attendance :—Boys, 9 ; girls, 15 ; total, 24.

I visited this school for purposes of inquiry, previous to its being placed under the Council's superintendence, but I have not been in its locality since its official existence.

HALF-TIME SCHOOLS.

Bo Bo CREEK and KILLAWARRA.

Bo Bo CREEK :—Ordinary inspection, 25th March ; examination of pupils, 4th October.

Pupils enrolled :—Boys, 15 ; girls, 5 ; total, 20.

Pupils present at ordinary inspection :—Boys, 8 ; girls, 3 ; total, 11.

Pupils present at examination :—Boys, 14 ; girls, 5 ; total, 19.

Ordinary average :—13 pupils.

The schoolhouse is in a tolerable state of repair, and is fairly furnished and supplied with working material. The organization is satisfactory, the discipline is fair, but the teaching is neither skilful nor very effective.

KILLAWARRA :—Examined, 27th September.

Pupils enrolled :—Boys, 7 ; girls, 9 ; total, 16.

Pupils present at examination :—Boys, 6 ; girls, 9 ; total, 15.

Ordinary average :—12 pupils.

The schoolroom is sufficiently commodious, and, excepting the need of another desk, the furniture and appliances are sufficient. The organization is appropriate, the discipline is moderate, and in reading, writing, dictation, and arithmetic, the results range from tolerable to fair. This school is worked with Bo Bo Creek school.

WALLAMBA RIVER.—UPPER and LOWER SCHOOLS.

WALLAMBA RIVER (UPPER) :—Inspected, 3rd September.

Pupils enrolled :—Boys, 14 ; girls, 10 ; total, 24.

Pupils present at examination :—Boys, 14 ; girls, 10 ; total, 24.

Ordinary average :—11 pupils.

The schoolhouse is moderately satisfactory in size and condition, but it is badly furnished. The organization and discipline appear to be correct, but excepting in reading and writing the progress of the pupils is small ; the greater part of the blame falls upon the parents, who keep their children away upon every pretext.

WALLAMBA RIVER (LOWER) :—Inspected, 2nd September.

Pupils enrolled :—Boys, 17 ; girls, 14 ; total, 31.

Pupils present at examination :—Boys, 13 ; girls, 11 ; total, 24.

Ordinary average :—14 pupils.

The school house is a bark building with a slab floor. It is of suitable size and is fairly furnished. The organization and discipline are satisfactory, and the progress in reading and writing ranges from moderate to fair. As at the upper school, the attendance of the pupils is very irregular. The explanation is that the people are free selectors of a very needy stamp, and the school is subordinated to the farm.

MAMBO ISLAND and LANDSDOWN RIVER ; MYALL RIVER (UPPER and LOWER SCHOOLS.)

These four schools have commenced operations since I visited the respective localities.

J. W. ALLPASS,
Inspector of Schools, Newcastle District.

SYDNEY DISTRICT.

INSPECTORS' General Report upon the condition of Public and Certified Denominational Schools, for the year 1869.

THE number of schools in operation in this district at the commencement of the year 1869 was sixty-two. Towards the end of the year the Public School at Sussex-street had to be closed, owing to the difficulty of procuring a suitable building; and at an earlier period of the year the Certified Denominational R.C. School at Church Hill ceased to be connected with the Council. With the exception of an Infant Department, formed in connection with Darlinghurst C.E., no new schools were opened. The number in operation at the close of 1869 was sixty, of which fifteen were Public and forty-five Denominational. The Public Schools comprised twenty-nine (29) departments, and the Denominational sixty-nine (69).

All the schools underwent regular inspection, and fully four-fifths further received the ordinary inspection. The special advantage of the latter lies in the fact that an Inspector is not required to give any previous notice of his visit, and is thereby enabled to see schools in their every day aspect. He is further in a position to become acquainted with the precise nature of the methods in use, and the mode in which the general working of the school is carried on. Much of the value of the regular inspection is lost through the rule which requires the Inspector to give notice of his intended visit. He is thus prevented from forming a complete or final judgment upon the organization and discipline, the only feature upon which he can speak unreservedly being the actual results of the teaching disclosed by an examination of the several classes. In addition to the two inspections mentioned, nearly the whole of the schools were visited once or oftener, incidentally. The amount of inspection therefore effected during the year enables us to speak with much confidence on the actual condition of the schools under our charge.

Annex A.

Material Condition.—Little change has taken place in the material condition of the Public Schools, the chief improvements being the drainage of premises and alterations in out-offices at Fort-street, and the erection of classrooms at Cleveland-street. The want of suitable buildings is much felt at Pyrmont P., Waterloo P., and Paddington P. In the two first-mentioned places some steps were taken during the year to procure sites for schools; and in the case of Paddington, tenders have been recently invited for the erection of school-buildings suitable to the wants of that populous and important suburb. The present attendance at Pyrmont P. and Waterloo P. is out of all proportion to the accommodation provided, the schoolrooms being literally crammed with children. Were suitable buildings provided, the attendance at both places could be doubled at once with little difficulty.

The material condition of Denominational Schools is on the whole considerably better than would appear from last year's report. New buildings have been erected at St. Andrew's C.E., Darlinghurst C.E. (Infants'), Kent-street South R.C. (girls'), St. Mary's R.C. (girls'), and Newtown R.C.; and substantial repairs have been effected at the following schools:—Balmain C.E., Haymarket R.C. (enlarged), Parramatta R.C., and Waverley Pres. A playground has also been provided for St. Mary's R.C. (boys'). The absence of classrooms, lavatories, and playsheds, comprises the chief defects of several schools, Public as well as Denominational. Many of the Local Boards of these schools are alive to the necessity of such adjuncts to every properly organized school, and it has been alleged in many instances that the want of funds alone has prevented their erection.

The supply of books and apparatus is good, and we are able to report that with few exceptions the teachers are scrupulously careful of the materials entrusted to their care. No doubt the improved form of requisition issued by the Council at the beginning of the year has contributed largely to this result. No other proof is needed in support of this statement than the fact that the average yearly cost of books and apparatus for each child on the rolls for each quarter did not exceed 7d. The several books and documents included under the head of school records continue to be carefully, and as a rule, neatly kept. In one school only were they found to be incomplete and unreliable, and there it arose from negligence and not from ignorance as to the manner in which the several books should be kept.

Annexes B and C.

Moral Character.—It is a matter of very general and serious complaint that school attendance in this Colony is marked by considerable irregularity. Whatever causes may conspire to produce this result in country districts, and they are well known, they only operate to a partial extent in Sydney. But whether they prevail in part or in full, matter is, viewing the momentous interests involved, afforded for grave consideration. It is difficult to see how they can be entirely overcome without legislative enactment; and any system of compulsory education to be equitable and effective in its working would in all likelihood have to be free. Under existing circumstances the character of our schools in point of regularity can only be deemed satisfactory or otherwise by comparison with that which obtains in countries placed under the same or similar conditions. It is not easy, however, to adduce examples, as in most countries where education has made any progress, either the law makes it compulsory or school attendance forms an element in determining the teacher's remuneration. In the adjacent Colony of Victoria the latter policy is adopted, and upon referring to the Victorian Educational Board's Report for 1868 we find the average attendance to be 75·7. This, however, would appear to be exceptionally good and in excess of that usually obtained. The average attendance at schools in this district for the past three years is shown below:—

	1867.	1868.	1869.
Public Schools.....	69·8	69·4	70·2
Church of England Schools	69·9	69·2	69·3
Roman Catholic „	64·4	65·3	65·3
Presbyterian „	68·2	69·7	69·4
Wesleyan „	64·1	65·9	67·4
Mean average	66·1	68·3	68·7

It will thus be seen that in this particular we have tolerable ground for satisfaction.

The number of children on the roll for the quarter ending 31st December, 1868, was 16,836; the number on the roll for the quarter ending 31st December, 1869, was 17,609. This gives an increase for the year of 773, or about 4½ per cent., and this notwithstanding that Church Hill R.C., with an attendance of nearly 800 pupils, is omitted from the calculation. The following table will show how these 17,609 children were divided in regard to sex and religious denomination:—

	Boys.	Girls.	Total.	C.E.	R.C.	Pres.	Wes.	O.D.	Totals.
Totals of Public Schools...	3,942	3,207	7,149	3,119	898	1,031	820	1,281	7,149
„ C.E. „	2,743	2,163	4,906	4,146	114	211	284	151	4,906
„ R.C. „	2,226	1,727	3,953	55	3,883	8	5	2	3,953
„ Pres. „	399	337	736	317	40	194	94	91	736
„ Wes. „	445	321	766	201	19	42	438	66	766
„ Hebrew „	61	38	99	1	1	97	99
Totals of all schools ...	9,816	7,793	17,609	7,839	4,955	1,486	1,641	1,688	17,609

Comparing

Comparing this with a similar table published in last year's report, it will be seen that there has been more or less of an increase in the attendance of schools of all classes. It is further apparent from the foregoing table that denominational predilections are exceedingly weak, and that, except to a partial extent in Church of England and Roman Catholic Schools, Denominational Schools as such do not really exist.

The number of pupils on the rolls of Public Schools, at the time of inspection, was 6,337, and of these, 5,196, or 82 per cent., were present at examination. Of those examined

37.5	per cent.	were	7	years of age, or under.
10.1	"	"	8	years of age.
10.4	"	"	9	"
10.5	"	"	10	"
10	"	"	11	"
21.3	"	"	12	years of age, or above.

The number of pupils on the rolls of Denominational Schools, at the time of inspection, was 9,231, and of these 7,477, or 81 per cent., were present at examination. Of those examined

47	per cent.	were	7	years of age, or under.
12.7	"	"	8	years of age.
11.3	"	"	9	"
10.3	"	"	10	"
7.8	"	"	11	"
10.9	"	"	12	years of age, or above.

It would thus appear that whilst 41.8 per cent. of children of Public Schools were of ages ranging from 10 years upwards, only 29 per cent. of the children in attendance at Denominational Schools were of corresponding ages. These per-centages approximate closely to those arrived at for last year. A further comparison of the above tables with those contained in the report for 1868, discloses the following gratifying fact, that the number of pupils present at examination in Public Schools rose from 4,534 in 1868 to 5,196 in 1869, or at the rate of 20 per cent., and in Denominational Schools from 6,796 to 7,477, or at the rate of 10 per cent. during the same interval.

Unlike regularity of attendance, the kind of punctuality that distinguishes a school rests very much with the teacher. Not only does it help to form an index to his own personal character, and to the character of his government, but it is intimately associated and bound up with other essential features of good discipline. A school is seldom unpunctual that is not also low in point of order, and in which radical defects may not be discovered in the general management. To promote punctuality, various means have been devised, a few of which have met with partial success. It may be safely affirmed however, that where a teacher is really enthusiastic in his work—where the business of teaching is carried on in an earnest, vigorous, and skilful manner—where a desire is fostered in the minds of children for learning, a punctual attendance is the natural result. Under such a teacher the school-work will go on like a well-regulated clock, the time-table will be rigorously adhered to, and the importance of punctuality will be impressed on the minds of the children in a variety of ways. Compared with last year the schools shew, in this feature of school discipline, a decided improvement. In only one school was the punctuality decidedly bad, whilst in a large number vigorous efforts had been made to place it on a satisfactory footing.

There is no part of discipline in which our schools, Public and Denominational, shew to better advantage than in cleanliness. A large number have been completely changed for the better in this particular. Were we to descend to individual instances, cases might be cited in which, after the interval of a few months, so great has been the improvement in the appearance of the children and in the aspect of the schoolroom and its surroundings, as to render the schools thus affected difficult of recognition. The means to ensure cleanly habits are now to be found in nearly all our Public and Church of England Schools. They have also been provided in several Roman Catholic Schools in which the local supervision is active. There still remain several schools in which exists no provision even for a water supply, and where local Boards have for the past two years been intending and still intend to provide lavatories. These have been elsewhere separately reported on. With regard to schoolrooms there is, in point of neatness, room for improvement.

Upon the government will depend much that is good or bad in the general discipline. If based upon sound and well-defined principles—if marked by firmness joined to gentleness—if administered uniformly and equitably, little apprehension need be felt about the character of the moral tone that will be sure to distinguish a school. Perhaps more mischief is caused by capriciousness in the government than by any other cause, and to no other source may more breaches of school discipline be fairly ascribed. The aim of an experienced teacher will be rather to repress these latter than to punish for them. His chief aid in this direction will be the constant and profitable employment of all pupils entrusted to his care. He will endeavour to weigh nicely the degree of heinousness attaching to each kind of fault, and will carefully refrain from falling into the too common habit of punishing indiscriminately. Speaking generally it may be said that more enlightened views are entertained by teachers on this subject than formerly. It is far from true that harshness prevails to any extent; it might be more correctly affirmed that where the government of a school fails, the failure arises most commonly from over tenderness and from the exercise of a mildness that occasionally merges into feebleness. We are not insensible to the value and power of moral suasion, but we feel that unhappily the time has not yet arrived when teachers can rely exclusively upon the use of that principle as a means of government. Much will have to be changed in the home training of the children of the Colony before the use of corporal punishment can be safely abandoned. It is so far satisfactory to know that the government adopted in our schools is on the whole mild and humane, and, all things considered, reasonably effective.

In forming a judgment upon the order of a school, a variety of details must of necessity engage an Inspector's attention. The appearance and arrangements of the schoolroom and its surroundings will probably be the first of these. If the spirit of order pervade the school as an institution, its absence or imperfect maintenance will be sure to be discovered in the slovenly, untidy, and confused character of its material aspect. It were vain to expect the inner life of the school to prove sound and healthy, if the externals referred to fail to bear favorable scrutiny. The habit of order is slowly formed, and can only be properly fostered or maintained by devoting attention to a number of minute details. The movements of the children afford, in most cases, a pretty correct although partial indication of the character of the order that will be found to prevail in a school. From these it will be seen whether the teacher has fully availed himself of all mechanical aids necessary to produce the desired result, and incidentally whether the children have been trained to habits of close attention and prompt obedience. Without some acquaintance with elementary drill, it is difficult to see how any school can be pronounced orderly, for it is evident that where loose irregular movements prevail, much that is pleasing to the eye and usually associated with order is wanting. If order meant simply the absence of undue noise, then fully four-fifths of the schools might be considered orderly; but the standard which the Council has laid down for the guidance of its Inspectors in this matter, is far higher and consequently much more difficult of attainment. Not only does it take cognizance of the material arrangements of the schoolroom, the different movements of the children, their attention to instruction, and obedience to command, but it has special reference to their deportment and conduct, not only when they are immediately under the teacher's eye, but when they are apparently removed from under his influence; and it ceases not to lose its application until they have actually left the precincts of the school. Under all conditions and circumstances, children imbued with a love of order will evince a modest and subdued demeanour as much removed from a spiritless or passive obedience on the one hand as from boisterousness on the other. More remotely, under order will be included the children's love of truth, their self-reliance and honesty; although in this wider application of the

the term, the expression "moral tone" is ordinarily and more correctly used. Viewed as a whole, the schools of this district bear favourable comparison in point of order with their condition in this respect during previous years. Higher importance is attached by teachers to its maintenance, and a keener appreciation of its influence on successful teaching is more widely felt.

Annex D.

Instruction.—It is hardly possible to over-estimate the importance of a judicious classification—one that is based upon the ages and mental capacities of the children. This in collective teaching is an absolute condition to uniform and general progress. Most of the irregularities in the results elicited by inspection have arisen from want of judgment in this matter. Placing young children in classes for which they are mentally unfit, detaining others in classes for unduly long periods, and making a minute sub-division of classes, are the faults most commonly committed. It is perhaps unnecessary to point out evils likely to result from the first two, whilst with regard to the third, although the intention that leads to its commission may be good, the end desired is seldom or never realized. On the contrary, the teacher merely fritters away his energies, and a consequent loss of educational power is the result. In one large school a somewhat anomalous classification was found to obtain. According to the instructional documents that ostensibly regulated the teaching, the school appeared to consist of five classes. In the course of inspection, however, it was found that these consisted of a first, second, third, upper third, and fifth. The reason advanced by the teacher for not having a fourth class was, that there was not the material for one. With more truth he might have said there was not the material for a fifth class. We refer to the case, first, because the teacher is a person of some pretensions, and secondly, because the school, being a large one, there was no excuse for the course adopted. It is not often that irregularities of this kind are met with; and the mere mention of this will probably not be without its effect. Upon the whole we are able to report that the principles that regulate good classification are better understood than heretofore, and are more intelligently applied.

The instances have been few where the occupation of the pupils has not been reasonably well provided for. The documents dealing with the instruction are fairly understood, and for the most part carefully compiled. Defects in the arrangement of the programmes of lessons referred to in former reports are being gradually removed; and the time-table ordinarily met with is a very passable document. With regard to method, we are able to record some improvement, although much doubt and confusion still exist in the minds of some teachers respecting its nature and use. A good number appear to become acquainted with fair practical method by careful observation; others adopt a certain style of teaching for no better reason than that it comes naturally to them; and the smaller but more successful body adopt one kind of method in preference to another, because it accords more with the laws regulating mental development, and because their experience has proved it to be sound and efficacious. Whatever method may be employed, and that will depend greatly upon the subject to be taught, success can only be ensured by attention to certain safeguards. Too much must not be taken for granted; the teacher must entertain a reasonable distrust of the efficacy of his work, and in all cases of doubt thorough examination of the pupils must be freely resorted to. The teaching should not be overburdened with talk, but every scope given to the pupils to exercise their thinking powers. It is possible for good method in the hands of some teachers to become perfectly valueless. To prove otherwise, it must go hand in hand with sound discipline; it must be thoroughly understood by the teacher, and thoroughly believed in.

Reading.—Reading continues to receive increased attention. The defects that mark the teaching of the elements, adverted to in a former report, still exist in part. The number of schools in which method, or even tolerable intelligence is shown in the teaching of this part of the subject, is small indeed. The sounds of the letters are rarely taught, and even a knowledge of their names is imparted in a desultory manner, with little regard to system or any well-defined programme. It is hardly necessary therefore to remark that a large amount of time is lost at this stage, or that the good resulting from the practice is of small value. It has been a matter of no little surprise to us how teachers could thus seemingly trifle with so pressing and important a duty, or how they failed to observe the damaging influence produced by their indifference or neglect on the mental growth of their pupils. Experience has so convinced us of the prevailing tendency to leave the teaching of the first steps in reading to chance and time, that we have devoted a more than usual attention to an inquiry into the mode in which this part of the subject was treated, and to estimating with the utmost rigidity the actual results produced. We have already indicated in part the nature of the conclusions which that inquiry has forced upon us. One hopeful feature of the case is, that in all instances where the facts have been laid bare to the observation of teachers, there has been little attempt to undervalue their importance, and a pretty general disposition has been manifested to remedy existing mistakes as soon as possible. The higher reading is taught with fair intelligence and with reasonable results. Ample elucidation of the subject-matter is given in most instances; the language where necessary is simplified and explained; frequent and appropriate illustration is resorted to; and, viewed intellectually, the subject receives careful and skilful treatment. As an art equal progress has not been made, and probably will not be made, until teachers as a body study to read well themselves.

Writing.—In a former Report we endeavoured to direct attention to the unskilful treatment which the teaching of the rudiments of this branch received at the hands of our teachers. The methods in use were described as hap-hazard and mechanical, and the supervision as casual and imperfect. We are able to report now a marked improvement upon that state of things. The teaching has lost much of its desultoriness, reasonable pains are exercised in framing the programmes so as to ensure adequate progress, a more rigid supervision is exercised over the efforts of the pupils, bad slovenly work is more frequently rejected, and a pretty general disposition is manifested to devote to the subject that care and attention which its importance demands. In the more advanced writing, although fair progress has been made, better taste and judgment are required in the choice of head-lines. Those ordinarily used are contained in copy-books, and are not merely ill-chosen, but are, as regards matter, pointless and absurd. Where practicable, head-lines set on the black-board will be found to answer well, and may refer to the more salient points of the daily lessons. The advantages of this plan are, that the pupils have an opportunity of observing how the letters are formed, and the teacher is enabled by oral explanation to convey useful hints upon various points.

Dictation.—Dictation continues to receive great attention. The mode in which it is given varies slightly, but the differences are not material, provided care is bestowed upon the revision of the pupils' work. In our regular inspection of schools every class was examined in the subject, and the same course was followed in the higher classes of infant schools. The results disclosed by such examinations are on the whole satisfactory. In a few instances the importance of dictation, as a means of teaching spelling, was found to be undervalued, but these were purely exceptional cases. Dictation on paper, whether from supineness or otherwise, is little practised even in schools conducted by teachers of experience and ability. This is much to be regretted, as, in our opinion, it is the most reliable test of a child's ability to spell.

Arithmetic.—We regret our inability to report any decided improvement in the teaching of arithmetic. The results obtained this year are seemingly worse than those given for 1868. We say seemingly, because, although the standard used was the same, we are not prepared to say that the form which our questions took may not have appeared slightly more involved than those given at previous inspections. This deterioration in the results may therefore be more apparent than real, and has reference more particularly to the compound and higher rules. The teaching of the simple rules is still very mechanical. There is too little explanation of principles, judgment is needed in selecting appropriate examples, and it may be affirmed generally that the methods are wanting in thoroughness. Either from overhastiness or superficiality of treatment, the work is not well grounded, and rarely bears the application of legitimate tests. Teachers would appear to be too easily satisfied, and to be wanting in originality and resource in illustrating the forms in which questions may be presented. The only part of elementary arithmetic, which is handled with anything like intelligence or skill, is notation, and this, it is satisfactory to know, receives

receives very general attention. Our examinations in arithmetic usually commence with notation, and it may be owing to this circumstance that the subject receives so conspicuous a place on the various school programmes. As already intimated, the results produced in the compound and higher rules are far from satisfactory. The faults of method referred to in last year's Report are certainly less glaring, and some attempt has been made to apply the hints which we have from time to time given on the subject; but probably further time is required before full results will follow the use of the more modern methods.

Grammar.—Considering the peculiar nature of this branch, and the difficulties surrounding the teaching of it, fair results have been realized. The methods in use, although faulty in some schools conducted by inferior teachers, closely assimilate in the majority; they are all more or less synthetic in character. The amount of success with which they are applied depends in a measure upon the skill and energy evinced by the teacher. Indeed it seldom happens, where the results in grammar are satisfactory, that the teaching as a whole is seriously defective, or that the results in other subjects are far below the standard. We have been pleased to note some improvement in the way in which the more advanced parts of the subject are handled. Parsing is beginning to be largely practised in connection with the reading lessons, and explanation upon obscure or doubtful points freely and intelligently given. Analysis cannot yet be said to be successfully taught; the results produced therein are poor, but probably not more so than might be expected under the circumstances. It is not too much to expect better work in this department of grammar during the ensuing year. In a few of the best schools composition receives fair attention, but in the large majority the subject is entirely neglected. Having regard to its importance, we have invariably in our examinations instituted some test to ascertain the pupils' ability to express themselves in simple and intelligible English. Their attempts however in this respect have been far from encouraging.

Geography.—Elementary geography receives on the whole rational and tolerably successful treatment. The order in which the subject should be taught is so defined in the Council's standards as to leave little room for possible deviation. This is an immense advantage both to teacher and inspector. The former knows beforehand the exact ground touched by the examination, and the latter is placed in a position to weigh accurately the results produced. These results for the past year afford fair ground for satisfaction. A steady improvement is maintained in the methods in use, in the interest with which the teaching is invested, and generally in the amount of mental gain derived by the pupils from a careful and intelligent treatment of the subject. In the more advanced geography the methods are less skilful, and the results as a consequence less satisfactory. The lessons are seldom thoroughly learnt; there is too little recapitulation of work done; and a subject, that in the hands of an earnest skilful teacher is made to afford interest and instruction, thus becomes wearisome and profitless to a degree.

Object Lessons.—The examinations in this subject during the past year have disclosed a falling off in the results formerly obtained. One reason for this is that the tests applied have been more severe. The mode in which the subject is treated is becoming very mechanical. Certain well-known text-books are slavishly followed; teachers exhibit little resource or originality; the lessons appear stereotyped in form, are given in a constrained mechanical manner, and lack life and interest. As a means of mental training they are of little use, and the amount of information they afford is not great. It is hoped that during the next year better results will be realized.

Singing.—Two teachers are now specially employed in this district to assist in diffusing a knowledge of singing in schools under the Council's superintendence. A course of instruction in the subject has been imparted to the pupil-teachers, and to many of the teachers. Under these circumstances it were fair to expect that reasonable results would be produced. Such however is not the case. Whether from the very irregular manner in which many of the schools have been visited, or from want of a proper appreciation of the value of singing as a branch of elementary education, the absolute progress made therein is far from adequate. Exclusive of schools immediately taught by the singing masters, the number in which a tolerable knowledge of the tonic-sol-fa method has been communicated does not exceed fifteen. Considering that that method has been in operation for over two years, and that a large number of our teachers acquired a knowledge of it either under the Privy Council in England, or the late National Board of this Colony, the actual progress made will appear small indeed.

Drawing.—Drawing is taught in all the schools. The system in operation assimilates closely to that recommended and adopted by the Department of Science and Art in England. The progress made in drawing during the past year has been large and substantial. In several schools the proficiency attained is of a high order, whilst in nearly all a reasonable effort has been made to reach the standards laid down by the Council. The drawing master, Mr. Fowles, has been indefatigable in the discharge of his duties; and it is to that gentleman's ability and zeal that much of the success in drawing is to be attributed.

Scripture Lessons.—The examinations in this subject show a fair advance upon the results reported for the previous year. In one or two schools we noticed a falling off, but these were purely exceptional cases. It is observed that the number of Denominational Schools in which the scripture lessons of the Irish National Board are used, is yearly becoming larger. Unless where specially requested by Local Boards, we have not examined such schools in scripture.

Needlework.—Speaking generally, it may be said that the proficiency attained in needlework is unsatisfactory. In several schools it is neglected or taught in such a desultory way as to be productive of little good. It not unfrequently happens that no care is taken to see that the children bring work—oftener the teachers have no work to give them; and in one instance the teacher actually complained of having to expend 3d. a-week for needles. When the needlework is called for, a common excuse is, that the children have it at home, and the teacher forgot to tell them to bring it. We shall take no such excuse for the future. It is our intention to examine closely into the manner in which needlework is taught, and schools where the results are unsatisfactory in that branch, shall be specially brought under the Council's notice.

Teachers.—Several changes have been made in the teaching staffs of schools during the year, the general effect of which has been to improve the efficiency of the schools affected. Unclassified teachers are fast becoming less numerous; those remaining are exclusively females who are either too old to undergo the ordeal of examination, or are for other reasons exempted therefrom by the Council. The number of teachers and assistant-teachers employed in Public Schools is sixty-two, an increase of seven on the number employed last year. The number of teachers and assistant-teachers attached to Denominational Schools is 109, an increase of six on the number employed last year. The teachers and assistant-teachers are classified as follows:—

	First Class.		Second Class.		Third Class.			Not Classified.
	Section A.	Section B.	Section A.	Section B.	Section A.	Section B.	Section C.	
Public Schools	2	6	11	10	23	7	3
Denominational Schools	3	17	36	21	19	11
	2	6	14	27	59	28	22	11

The

The teachers as a body are respectable and trustworthy. A large number evince considerable enthusiasm in their work, and nearly all are earnest, diligent, and painstaking. Some have little natural aptitude for the work; others are unable to think or work out of a certain groove; and a few, the least promising of all, are, in their own opinion, so near perfection as to be above learning anything new. The pupil-teachers now number 127, an increase of twelve on the number employed in this district last year. The subjoined table will exhibit their classification:—

	First Class.	Second Class.	Third Class.	Fourth Class.
Public Schools	6	16	14	17
Denominational Schools	1	10	27	36
	7	26	41	53

They form a most useful element in the teaching staff. They are all possessed of more or less aptitude for the work; are reasonably diligent and studious in their habits, attentive to instruction, and form a hopeful feature in the future educational work of the Colony. The following table is intended to show in what proportions the teachers and pupil-teachers are distributed among the several classes of schools under the Council's superintendence:—

Schools.	Teachers.	Pupil-teachers.
Public.....	62	53
Church of England	44	44
Roman Catholic	42	25
Presbyterian	11	3
Wesleyan	10	2
Hebrew	2
	171	127

Local Supervision.—Local supervision of schools is not very active. In most instances one Member practically constitutes the Board, and to him is delegated the duties of the entire body. Regular periodical visitation of schools is extremely rare. In some few cases Local Boards are of the smallest possible use, and in a few others they are a positive injury. There are, however, a fair number who entertain enlightened views of their duties and responsibilities, who manifest an abiding interest in the schools with which they are connected, and to whose untiring watchfulness and active sympathy much of the efficiency and success that characterize those schools is to be attributed. We do not hope for any great improvement in the local supervision of schools until they are placed under the control of the various Municipalities.

Free Scholars.—In a former report we gave the results of inquiries which we made into the grounds upon which children were exempted from paying school fees. We have not deemed it necessary to continue those inquiries to any great extent during the past year; but enough has come under our notice to induce the belief that the matter is one which in the case of one or two schools will call for the interference of the Council. We have seen it stated in more than one quarter that the special merit of Denominational Schools, as compared with Public Schools, lay in the fact that whereas the former provided for the education of the poor, the latter did not; upon what just ground that statement was based we have failed to discover. There certainly are more children educated gratuitously in Denominational Schools than in Public; but this arises from the fact that in some instances, and notably in one or two, facilities are offered to parents to evade the payment of school fees, and this apparently for no other reason than to enable such schools to compete in point of attendance with Public Schools in the same neighbourhoods. During the year the number of free children educated in Public Schools was 220, or nearly 2 per cent. of the total number of children on the roll. The number educated in Denominational Schools was 1,389, or 9 per cent. of the total number on the roll; in 1868 the per-centages were $2\frac{1}{2}$ and 10 respectively.

Cost of Education.—The following table is intended to show the approximate cost of each child's education in Public and Denominational Schools for the year:—

	Salary or Cost to the State.			Fees or Cost to Parents.			Total.		
	£	s.	d.	£	s.	d.	£	s.	d.
Public Schools	0	17	5 $\frac{1}{2}$	1	0	8	1	18	1 $\frac{1}{2}$
Church of England Schools	0	17	9 $\frac{1}{4}$	0	12	11 $\frac{1}{2}$	1	10	8 $\frac{3}{4}$
Roman Catholic Schools.....	0	18	7 $\frac{1}{2}$	0	11	0 $\frac{1}{2}$	1	9	8
Presbyterian Schools	0	19	10	0	14	5 $\frac{1}{2}$	1	14	3 $\frac{1}{2}$
Wesleyan Schools	1	0	3 $\frac{1}{2}$	0	16	4	1	16	7 $\frac{1}{2}$

A glance at the above table discloses the following facts: That whereas Public Schools cost least to the country they are the most liberally supported by the people; that, after the Public Schools, those belonging to the Church of England are the least expensive to the State, and that the most expensive are the Wesleyan.

Summary.—The results of the year's inspection may be thus briefly summarized:—The material condition of schools continues to improve; the discipline is fair; the proficiency shows an advance upon that attained in previous years; local supervision is probably as efficient as can be expected under existing circumstances; and in all essential features of school management appreciable progress has been made.

Inspector's Office, Sydney,
31st January, 1870.

E. JOHNSON,
EDMUND H. FLANNERY, } Inspectors.

ANNEX F.

DETAILED statement of the condition of Public Schools in the Sydney District, inspected during the year 1869.

- The remarks under head 1 relate to the material condition of schools.
 2 to their moral character.
 3 to the subjects and methods of instruction.
 4 to the proficiency of the pupils.

BALMAIN :—Visited, 17th June.

Numbers present at examination :—Boys, 132 ; girls, 116 ; total, 248.

1. Additional accommodation is required. The fences are beginning to be damaged in places. More care is needed for the proper keeping of the school property. 2. The order and discipline are satisfactory. 3. Except that a premature and ill-judged attempt has been made to form a fifth class, the classification is appropriate. The methods are of fair average merit, and are applied with vigour and effect. 4. The proficiency is very fair. Arithmetic and algebra are the weak subjects.

BALMAIN (Infants) :—Visited, 17th June.

Numbers present at examination :—Boys, 58 ; girls, 53 ; total, 111.

1. The schoolroom is far too small for the ordinary attendance, but the organization is in other respects reasonably good. 2. The discipline has in almost every feature been sensibly improved since the date of the ordinary inspection, and is now good. 3. The course of instruction is complete, the lesson documents are suitably arranged, and the teaching is marked by industry and fair skill. 4. The proficiency ranks from fair to very fair.

BOTANY ROAD :—Visited, 24th August.

Numbers present at examination :—Boys, 100 ; girls, 65 ; total, 165.

1. The schoolroom is altogether unsuitable to the educational requirements of the locality. The property is in tolerable repair, and is fairly kept. 2. The attendance steadily improves, and could, were proper accommodation provided, be largely increased. At present the crowded state of the school interferes greatly with the discipline and interposes obstacles to successful management. The pupils are fairly regular and punctual, and, all things considered, in very passable order. A healthy tone pervades the school. 3. The classification is tolerably judicious; the instruction is properly regulated; the methods are suitable, and are applied with earnestness, zeal, and a fair degree of skill. 4. Recent promotions have affected the relative attainments of the classes. The average proficiency approaches fair.

BOURKE-STREET :—Visited, 22nd July.

Numbers present at examination :—Boys, 108 ; girls, 74 ; total, 182.

1. Since the date of last report several of the more serious defects in the material state of the school have been remedied. The schoolroom has been enlarged, the closets improved, the yard paved, and a make-shift lavatory provided. 2. The attendance is fairly kept up, and the pupils are passably punctual. Little improvement is visible in the order, which continues unsatisfactory. The government lacks vigour and firmness. 3. Indifferent judgment is evinced in the classification. The lesson documents, although faulty in some respects, are nevertheless calculated to answer the desired ends. The methods are wanting in force and penetrativeness. The teaching, whilst apparently careful, is immethodic, slovenly, and deficient in vigour and thoroughness. 4. In those subjects that appeal more directly to the thinking faculties, the attainments are poor, whilst in others, less intellectual, passable progress has been made.

BOURKE-STREET (Infants) :—Visited, 8th July.

Numbers present at examination :—Boys, 45 ; girls, 59 ; total, 104.

1. The schoolroom has been enlarged and a suitable gallery erected during the past year. A book-press and suitable desks have yet to be provided. The school is amply found in working materials. 2. The pupils are regular and fairly punctual. The order is passable, and the moral tone of the school tolerably healthy. 3. A fair classification obtains ; the lesson documents are carefully compiled ; and the instruction embraces the usual infant school course. The methods are modern, but need to be more vigorously and skilfully applied. 4. The attainments are tolerable.

CAMPERDOWN :—Visited, 12th August.

Numbers present at examination :—Boys, 57 ; girls, 47 ; total, 104.

1. Serious defects in connection with the material state of this school have already been specially reported on. Greater care is now manifested by the teacher in the arrangement and preservation of the school property placed in his charge. 2. The attendance has received a substantial increase within the past twelve months. The pupils are fairly regular and punctual. Except in the case of the first class, the order is fair. 3. The classification is unobjectionable. The instruction is fairly regulated, the methods are tolerably skilful, but require to be applied with greater vigor. 4. The proficiency varies from tolerable to fair.

CLEVELAND-STREET (Boys) :—Visited, 14th, 15th, 16th, and 20th July.

Number present at examination :—351.

1. The accommodation is inadequate to the large and increasing attendance. A classroom and additional desks and forms are required to render the organization complete ; otherwise, the school is excellently equipped. 2. A high standard of discipline is judiciously and effectively maintained, and the moral tone of the school is very good. 3. The course of instruction includes all the extra subjects prescribed by the standard. Both taste and judgment are manifested in the compilation of the lesson documents, and the teaching is vigorous, skilful, and effective. 4. The proficiency ranges from fair to very fair. The pupils as a whole acquit themselves well under examination, and evince a considerable degree of self-reliance and mental culture.

CLEVELAND-STREET (Girls) :—Visited, 14th, 15th, and 16th July.

Number present at examination :—259.

1. Some repairs are needed to the playground, and the want of classrooms is greatly felt. In other respects the organization is susceptible of little improvement. 2. The pupils are regular, punctual, clean, and in good order. The government is mild but firm, and the moral tone of the school is satisfactory. 3. Reasonable judgment is shown in the classification, and the instruction is well regulated. The methods are generally appropriate, but need, in the case of the younger teachers, to be applied with greater vigor and effect. 4. The attainments range from moderate in the lower classes to very fair in the higher. Recent changes in the classification have had a lowering tendency on the proficiency of the classes.

CLEVELAND-STREET (Infants) :—Visited, 21st and 27th July.

Numbers present at examination :—Boys, 179 ; girls, 115 ; total, 294.

1. An excellent schoolroom, amply supplied with the most modern educational appliances. The playground needs improvements. 2. The discipline is on the whole good, and the moral tone of the school healthy. 3. The pupils are classified with passable judgment, and the instruction is fairly regulated. The methods are in the main suitable. 4. The proficiency ranges from fair to very fair. Reasonable progress has been made within the year.

FORT-STREET (Boys) :—Visited, 1st, 2nd, 3rd, and 8th.

Number present at examination :—525.

1. The schoolroom is admirably adapted for teaching purposes, but is much too small for the number of pupils in attendance. Under existing circumstances the organization admits of little improvement. 2. The order and discipline are satisfactory. 3. The classification is appropriate, the instruction judiciously regulated, and the methods are skilful and applied with vigor and effect. 4. The proficiency in all the subjects is satisfactory, but particularly so in grammar, geography, singing, drawing, and geometry. The fourth and fifth classes answer well under examination, and evince a high degree of mental culture.

FORT-STREET (Girls) :—Visited, 1st, 2nd, 3rd, 8th, and 11th May.

Number present at examination :—501.

1. The accommodation is inadequate to the requirements of the present large and steadily increasing attendance. The material condition is in other respects unexceptionable, and the equipment of the school is complete. 2. The order is good, the government judicious, and the prevailing spirit of the school pleasing. 3. The course of instruction is complete and well regulated. The teaching is conducted with zeal, earnestness, and more than fair average ability. 4. The proficiency in most subjects is very satisfactory. The pupils of the upper second, fourth, and fifth classes evince in the quality of their answering much thoughtfulness and intelligence.

FORT-STREET (Infants):—Visited, 26th and 27th May.

Numbers present at examination:—Boys, 214; girls, 156; total, 370.

1. This department is reasonably well organized. 2. The comparatively small number present on the days of inspection was attributable to unsettled weather. The order has slightly deteriorated, but in other respects the discipline is healthy. 3. The instruction is appropriate and skilfully regulated, and is based upon intelligent and fairly effective methods. 4. The attainments are satisfactory in all the subjects except arithmetic.

GLEBE:—Visited, 23rd July.

Numbers present at examination:—Boys, 92; girls, 42; total, 134.

1. Existing defects in the material state of the school are,—the rain beats in under the eaves of the roof, a portion of the verandah requires to be cemented, and part of the fence dividing the playgrounds wants renewing. The school is in other respects reasonably well organized. 2. The attendance is temporarily affected by wet weather. The pupils are punctual, tolerably regular, and in very good order. The government is firm and effective. 3. A suitable classification obtains, the instruction is properly regulated, and the methods are applied with energy, intelligence, and skill. 4. The proficiency ranks from fair in the lower classes to good in the higher. The pupils are attentive, self-reliant, and answer with intelligence and spirit.

GLEBE (Infants):—Visited, 23rd July.

Numbers present at examination:—Boys, 35; girls, 29; total, 64.

1. The business of this department is conducted in a portion of the primary school. The organization is the best possible under the circumstances. 2. The pupils are punctual and neatly dressed. The order is less satisfactory, many of the pupils being restless and inattentive under instruction. The government is wanting in firmness and tact. 3. The instruction is properly regulated. The methods, although modern in kind, need to be applied with greater vigour and skill. 4. The proficiency varies from tolerable to fair,—a falling off from the results obtained at the previous inspection.

JAMISON-STREET:—Visited, 6th July.

Numbers present at examination:—Boys, 33; girls, 18; total, 51.

1. The playground has been fenced in, and furniture supplied since last inspection. In other respects the organization is indifferent. 2. The pupils are tolerably punctual, but untidy in dress. The order is bad and the government lax. 3. The classification is defective; little care is evinced in the arrangement of the lesson documents; and the standard of proficiency is to a great extent disregarded. 4. The proficiency is but indifferent.

NEWTOWN:—Visited, 29th July.

Numbers present at examination:—Boys, 65; girls, 36; total, 101.

1. The interior of the schoolroom has been recently coloured, and the out-offices improved. There is an ample stock of working materials. 2. Except that the pupils are to some extent unpunctual, the discipline is very fair. 3. The classification is fair, the instruction is appropriately arranged, and the teaching is on the whole fairly intelligent, painstaking, and effective. 4. The average proficiency is fair.

NEWTOWN (Infants):—Visited, 29th July.

Numbers present at examination:—Boys, 36; girls, 25; total, 61.

1. The schoolroom is in good repair, reasonably well-furnished, and presents a clean and tidy appearance. 2. Sickness has latterly much affected the attendance; under ordinarily favourable circumstances the pupils are tolerably regular and punctual. They are clean and in fair order. 3. The classification is appropriate. The lesson documents are imperfectly arranged, and the methods defective. The questioning is almost wholly suggestive. It is well nigh impossible to obtain individual answering. 4. In most subjects the attainments are below the standard. Examination was difficult, owing to the systematic prompting carried on. The results disclosed by the examination were most unsatisfactory.

PADDINGTON:—Visited, 27th and 28th July.

Numbers present at examination:—Boys, 110; girls, 74; total, 184.

1. Externally, the schoolhouse and its surroundings present a bare, cheerless, and uninviting appearance. The fences and outhouses are in disrepair, and the latter are not cleanly kept. Internally, the schoolroom is more cheerful-looking, and is amply furnished. 2. Little exception can be taken to the regularity with which the children attend school; they are also fairly punctual. Their demeanour is tolerably becoming, and their behaviour, although marked by an occasional unsteadiness, is on the whole satisfactory. 3. As regards vigor of application, accompanied by searching and intelligent questioning, the methods are susceptible of improvement. This remark applies more particularly to the younger teachers. 4. The proficiency ranges from moderate to fair. Recent alterations in the classes have tended to lower the general attainments. The pupils, although fairly attentive, are inclined to be restless and indolent.

PADDINGTON (Infants):—Visited, 27th July.

Numbers present at examination:—Boys, 63; girls, 65; total, 118.

1. The schoolroom is totally unsuitable to present requirements. To render class teaching at all possible, the small lavatory adjoining has to be used. A suitable schoolhouse is urgently needed. 2. The attendance has greatly increased under the present teacher. It was lower than usual on the day of examination, owing to the prevalence of juvenile sickness. In general, the pupils are tolerably regular and punctual. Fair order is maintained, and the government is of a mild, judicious, kind. 3. The instruction embraces the usual subjects, and is appropriately regulated. The methods are applied with zeal, energy, and skill. 4. The attainments are very fair. The pupils are attentive, evince fair mental effort, and answer with promptness and accuracy. The teacher displays tact, energy, and fidelity in the discharge of her duties.

PITT-STREET:—Visited, 30th July.

Numbers present at examination:—Boys, 37; girls, 30; total, 67.

1. The want of a playground and of suitable desks are the more striking defects in the material condition of this school. In other respects the schoolroom is fairly suitable, and is reasonably well-equipped. 2. The attendance is less than usual, owing, it is said, to temporary and accidental causes. The pupils

pupils appear to be tolerably regular and punctual. An improvement is desirable in the order. Restlessness is very prevalent, a good deal of talking is indulged in, and the marching is loose and slovenly. The government would seem to be not sufficiently strict. 3. The classification is tolerably appropriate, and the lesson documents are fairly arranged. The methods, although seemingly painstaking, are owing either to defective discipline, or to want of skill, or to both, but partially effective. 4. The attainments range from very fair in the lowest class to moderate in the highest. Prompting is very general throughout the school, and a good deal of the answering is mere guesswork.

PITT-STREET (Infants):—Visited, 30th July.

Numbers present at examination:—Boys, 44; girls, 29; total, 73.

1. The pupils are taught in the same room as those of the primary department. There is a fair supply of working materials. 2. The pupils are punctual, regular, and neatly attired. The order is susceptible of improvement, and the attention of the pupils needs careful cultivation. 3. The instruction is fairly regulated, and the teaching is tolerably skilful and effective. 4. The proficiency is indifferent in the lower class, and fair in the upper.

PITT-STREET, SOUTH:—Visited, 7th July.

Numbers present at examination:—Boys, 19; girls, 16; total, 35.

1. The interior of the school has been recently coloured, and now presents a cheerful appearance. The furniture is of but indifferent quality, but the school is in other respects amply found in necessary appliances. 2. The order and general discipline continue to be satisfactory, and the moral tone of the school is healthy. 3. A judicious classification obtains: the lesson documents are arranged with reasonable judgment, and the teaching is vigorous, intelligent, and effective. 4. The attainments are satisfactory.

PITT-STREET, SOUTH (Infants):—Visited, 7th July.

Numbers present at examination:—Boys, 39; girls, 21; total, 60.

1. The schoolroom is spacious but poorly furnished. 2. The discipline is good. 3. The instruction accords with the prescribed course. The methods are modern and are applied with diligence and a fair degree of skill. 4. In all subjects, except singing, the proficiency is satisfactory. The teacher has evidently worked hard and successfully during the year.

PYRMONT:—Visited, 22nd July.

Numbers present at examination:—Boys, 81; girls, 43; total, 124.

1. The material condition of the school is in most respects unsatisfactory, but the supply of working appliances is good. 2. Instances of unpunctuality are too numerous, but in other respects the discipline is good. 3. The instruction is intelligently regulated, and the teaching is marked by a fair degree of earnestness, diligence, and skill. 4. The proficiency ranks from fair to very fair. The mental powers of the pupils are well developed.

PYRMONT (Infants):—Visited, 22nd July.

Numbers present at examination:—Boys, 46; girls, 34; total, 80

1. The schoolroom is much too small and is unprovided with desks. The playground is a small unfenced yard, rather steep, very rugged, and provided only with ill-looking outhouses in an exposed position. There is a fair supply of suitable apparatus, neatly arranged, and in a good state of preservation. 2. A substantial increase in the attendance is noticeable. The pupils are regular, punctual, clean, and in fair order. 3. The usual documents regulate the instruction, which is that ordinarily included within the limits of infant-school teaching. The methods are appropriate and are applied with earnestness, zeal, and intelligence. 4. The progress in reading has been very satisfactory, and in other subjects the teaching has been equally painstaking and nearly as effective. The teacher improves in efficiency, and has given proof of a faithful discharge of the duties of her office.

SUSSEX-STREET:—Visited, 7th July.

Numbers present at examination:—Boys, 64; girls, 46; total, 110.

1. The want of a playground militates seriously against the organization of this school. In other respects its material condition and equipment are fairly satisfactory. 2. The attendance seems pretty stationary. A large proportion of the pupils are of the infant-school age. With few exceptions the pupils are clean and punctual. Fair order is maintained, and the moral tone of the school is tolerably pleasing. 3. The classification is injudicious; the lesson documents are moderately suitable; the methods are careful but formal and wanting in vigor and spirit. 4. The attainments range from moderate to fair; the average approaching tolerable. The intelligence of the pupils is but partially developed.

WATSON'S BAY:—Visited, 6th July.

Numbers present:—Boys, 17; girls, 4; total, 21.

1. The interior of the schoolroom is extremely dingy-looking, and the appearance of the premises, generally, is cheerless and neglected. 2. The attendance is very irregular, the order is lax, and the government feeble and ineffective. 3. The classification is hardly intelligible, the programmes are absurd and misleading, and the lesson registers have fallen into disuse. The methods are worthless. 4. The attainments are a blank. The teaching may be regarded as a complete failure. [The teacher has since been removed.]

WILLIAM-STREET (Boys):—Visited, 4th, 5th, and 6th August.

Number present at examination:—222.

1. The ventilation is defective; the interior of the building requires whitewashing, and the playground levelling and draining. 2. The punctuality is not satisfactory, and the order and general discipline are susceptible of much improvement. The pupils are inattentive under instruction, and the demeanour of many in the higher classes is sullen and unsubdued. 3. The classification is on the whole appropriate, and the instruction is fairly regulated. The methods are of tolerable average skill, but are applied in a formal and feeble manner. 4. The proficiency ranges from moderate to fair.

WILLIAM-STREET (Girls):—Visited, 4th and 5th August.

Number present at examination :—189.

1. The schoolroom does not afford adequate accommodation to the number of children in attendance, and requires to be re-whitewashed. It is well found in the requisite appliances. 2. The attendance has considerably increased under the present teacher, and is still increasing. The punctuality of the pupils, although not quite satisfactory, has improved. In point of regularity there is little to complain of, and the order and general behaviour are good. The moral tone of the school is pleasing, and the prevailing spirit healthy. 3. The classification is the best under existing circumstances. The lesson documents are judiciously arranged, the methods are modern, and are applied with vigour, skill, and intelligence. 4. The proficiency ranges from tolerable to good, the average approaching very fair. The answering of the pupils is thoughtful and intelligent, and evidences careful mental cultivation.

WILLIAM-STREET (Infants):—Visited, 6th and 9th August.

Numbers present at examination :—Boys, 152; girls, 138; total, 290.

1. The senior infant schoolroom requires to be white-washed internally, and the playground to be better drained. Otherwise the material condition is fairly satisfactory, and the school is reasonably well organized. 2. The attendance is suffering from a tolerably wide-spread sickness among young children. Some improvement is visible in the punctuality; the other features of the discipline are healthy and pleasing. The pupils present an animated appearance, manifest a ready attention, and afford unmistakable evidence of careful moral training. 3. The classification is good; the lesson documents are fairly arranged, and, so far as the senior infant department is concerned, are marked by intelligence and skill. 4. In the lower department the attainments range from moderate to tolerable, and in the higher from fair to very fair.

APPENDIX I.

COUNCIL OF EDUCATION.—EXAMINATION PAPERS FOR THIRD CLASS CERTIFICATE.

GRAMMAR.

Three hours allowed for this paper.

1. Punctuate the following passage :—

How often *have* I *blessed* the coming day
When *toil* remitting lent *its* turn to play
And *all* the *village* train from labour *free*
Led up their sports beneath the spreading *tree*
While many a *pastime* circled in the shade
The *young* contending *as* the old *surveyed*
And many a *gambol* frolicked o'er the ground
And *sleights* of art and feats of strength went *round*
And still as *each* repeated pleasure tired
Succeeding sports the mirthful *band* *inspired*

2. Arrange the above passage in simple prose order.
3. Paraphrase.
4. Parse the words in italic.
5. Analyse the first six lines.

GEOGRAPHY.

Three hours allowed for this paper.

1. Give a description of the surface of Africa.
2. Describe the river systems of Asia.
3. Describe or draw a map of the watershed of New South Wales.
4. Give as full an account as you can of France.

ARITHMETIC.

Three hours allowed for this paper. Female Teachers are expected to work the four first questions only,—Males, the last four.

1. The sum of 4,223 guineas is to be divided among a naval force—the Lieutenant commanding receives 175 guineas, two midshipmen each £65 6s. 8d., the sailors are to receive each £21 7s. 6d.: How many are there?
2. If one article costs 6s. 11½d., what should be given for $73,206\frac{2}{7}$ articles of the same kind?
3. Bought 3 cwt. 1 qr. 12 lbs. of tobacco for £24 1s. 6d., and paid a duty of 2s. 2½d. per lb.: What ought I to charge per packet of $3\frac{1}{2}$ pounds, in order to make a clear profit of £7 16s. 8d. on the whole?
4. If in nine months £60 gain 36 shillings, when will £590 gain £25 11s. 4d.?
5. Divide £48 17s. 6d. by 425, and reduce the quotient to the decimal of £20 sterling.

LESSON BOOKS.

Three hours allowed for this paper.

1. There are two compound words in the First Book, I. N. B.: What, and where are they?
2. What information is given under the head "Digitigrade Animals" in Sequel No. 2?
3. Enumerate all the lessons on "Travels" in Book 3rd; and write out one from memory, or give its substance.
4. Enumerate all the Poems of Book Second, and write out one from memory.

SCHOOL MANAGEMENT.

Three hours allowed for this paper.

1. In what points is the co-operation of parents essential, in order to secure an effective school discipline? Give reasons for your opinions.
2. Describe the essential features of a good first-class programme. Draw up a specimen, noting particularly the progression in writing.
3. Describe the various steps by which you would teach pupils notation, so as readily to set down, from dictation, an addition sum of two periods, with very unequal addends.
4. How would you give a lesson upon the "adjective" as to a junior class?

WRITING.

Two hours allowed for this subject.

1. Give specimens of copy-setting in three hands.
2. What measures would you adopt to make your pupils good writers?
3. Arrange the letters in the order in which you would teach children to form them.

DOMESTIC ECONOMY.

Two hours allowed for this paper.

Describe as explicitly as you can,—

1. The more serious difficulties which young, inexperienced females have to encounter, when commencing housekeeping.
2. What advice could you give as to meeting or removing those difficulties?

DRAWING.

Two hours allowed for this paper.

1. Describe the proper position of the pupil whilst drawing, and the mode of holding the pencil.
2. Of what use are construction lines?
3. What geometrical figures are most commonly used for construction?
4. What construction figures would you use to draw a tumbler, a funnel, a gothic arch, and a paper kite?
5. Draw in outline, from memory, a saucepan, a jug, a dish-cover, or a candlestick, using the proper construction lines.

VOCAL MUSIC.—TONIC-SOL-FA METHOD.

Two hours allowed for this paper.

1. The scales commencing on **doh** and **lay** are called respectively the major and minor scales, or modes. Why?
2. What are the *intervals* of the scale? Name all the intervals from **d** to **d'**, and their *inversions*.
3. Two and three pulse measures have one accent each. Write the *pulse-marks* for the correct musical expression of the following words; each syllable = one pulse :—

1. Beauty.
2. Admire.
3. Animal.
4. Affection.
5. Persevere.

Analyse the following time exercises :—

1. $\left| \begin{array}{c} : a | - : a | - : - | a : | a : - | - : a \end{array} \right\|$
2. $\left| \begin{array}{c} a : - : a | a : - : a : a | a : : a . a | a : - : | : a : - . a | a . , a : a : \end{array} \right\|$

EXAMINATION PAPERS FOR SECOND CLASS CERTIFICATE.

GRAMMAR.

*Three hours allowed for this paper.**"Should He again*

*As once at Gibeon interrupt the race
Of the undeviating and punctual sun
How would the world admire but speaks it less
An agency Divine to make him know
His moment when to sink and when to rise
Age after age than to arrest his course
All we behold is miracle but seen
So duly all is miracle in vain
Where now the vital energy that moved
While summer was the pure and subtle lymph
Through the imperceptible meandering veins
Of leaf and flower"*

- a. Punctuate the above passage.
- b. Arrange it in simple prose order.
- c. Paraphrase it.
- d. Parse the words in italics.
- e. Analyse the passage.

GEOGRAPHY.

Three hours allowed for this paper.

1. Compare the American Continents, and show fully in what respects they resemble, and differ from, each other.
2. Give a full description of Hindostan.
3. Describe the Mediterranean fully.
4. Compare those rivers and river valleys of New South Wales which are similar in form or position, and show in what features a parallelism exists.

ARITHMETIC.

Three hours allowed for this paper.

1. 10 oz. 4 dwts. 6 gras. Troy, at £2 14 $\frac{3}{4}$ s. per lb. Work in two ways—Practice to be one of them.
2. Bought 19 $\frac{3}{4}$ cwts. of tea for £576 $\frac{1}{2}$ d.; I sold half at an advance of 8 $\frac{3}{4}$ d. per lb., and two-thirds of the remainder at a loss of 15 $\frac{1}{2}$ d. per lb.; the balance I disposed of at an advance of 16 penny per oz. on cost price. Do I gain or lose by the transaction? How much per cent.; and how much on the whole?
3. Extract the third root of ninety-six *millionths*, to 5 decimal places.
4. Find the area of a trapezium, whose diagonal is 824 links, the perpendiculars raised upon it being 204 and 268 links.

ARITHMETIC.—(Female Teachers.)

Three hours allowed for this paper.

1. If 236 men consume 160 quarters of wheat in 108 days, how much will 76 men require for a year and 67 days?
2. 1234 $\frac{3}{4}$ yards, at £1 11s. 11 $\frac{1}{2}$ d. each.
3. 5 $\frac{3}{4}$ cwt. cost £16 4s. 9 $\frac{1}{2}$ d., what will 17 $\frac{1}{2}$ pounds cost?
4. $\frac{0.19\frac{7}{8} \frac{4}{128}}$ express the answer in two forms.

SCHOOL BOOKS.

Three hours allowed for this paper.

1. What differences do you perceive between the poetry of the two Sequel Books? Quote one poem of each.
2. Give a synopsis of the Scripture History contained in the Third Book.
3. What is stated in the Fourth Book as to the mechanical properties of air and water?
4. What writings from the works of Benjamin Franklin do we find in the Supplement to the Fourth Book? Describe one lesson in full.

ART OF TEACHING.

Three hours allowed for this paper.

1. Describe the virtues of common life, which may originate in, and be fostered by, a healthy school discipline.
2. State the plans you adopt for periodically regulating the instruction of your school. Give a synopsis, showing the appropriation of the thirty-five hours devoted to school duty weekly.
3. How should reading be taught, in order to be thoroughly effective as a means of future educational advancement to the pupil?
4. Give an object lesson upon one of the following:—
The mechanical properties of water.
Cochineal.

WRITING.

Two hours allowed for this paper.

1. What subject matter is most suitable for copy lines? Give specimens of those you employ.
2. What methods of teaching writing are advocated in Morrison's School Management?
3. Write an official letter to the Council on some subject connected with the discipline of your school.

DOMESTIC ECONOMY.

Three hours allowed for this paper.

1. In the case of a young inexperienced housekeeper, what advice would you give her as to
 1. Cleanliness,
 2. Attire,
 3. Food,
 4. Expenditure,
 5. Demeanour towards husband and children.

GEOMETRY AND ALGEBRA.

Four hours and a half allowed for this paper.

1. A line that bisects the vertical angle of an isosceles triangle, also bisects the base perpendicularly.
2. Any two angles of a triangle are together less than two right angles.
3. State those propositions which bear upon parallelism and the section of parallel lines in Book I. (Euclid), and demonstrate one of them.

4. Shew fully that the two oblique angles of a right-angled triangle must be together equal to a right angle—demonstrating the proposition upon which the proof depends.
State the axioms of Euclid.

$$5. \frac{6 - 5x}{15} - \frac{7 - 2x^2}{14(x-1)} = \frac{1 + 3x}{21} - \frac{2x - 2\frac{1}{2}}{6} + \frac{1}{105}$$

$$6. \left. \begin{array}{l} \frac{x}{b} + \frac{y}{c} = 1 \\ \frac{ax}{c} - \frac{by}{a} = 0 \end{array} \right\}$$

7. A and B give away £5 each. A relieves five persons more than B; but B has given to each person one shilling more than A allowed. How many did each relieve?

LATIN.

Three hours and a half allowed for this paper.

1. Translate into English the following passage :—

Qua re cognita, Caesar, quod tantum civitati Aeduae dignitatis tribuerat, coërcendum atque deterrendum, quibuscumque rebus posset, Dumnorigem statuebat, quod longius ejus amentiam, progredi videbat, prospiciendum, ne quid sibi ac republicae nocere posset. Itaque dies circiter xxv. in eo loco commoratus, quod corus ventus navigationem impediabat, qui magnam partem omnis temporis in his locis flare consuevit, dabat operam, ut in officio Dumnorigem contineret, nihilo tamen secius omnia ejus consilia cognosceret: tandem idoneam tempestatem nactus, milites equitesque conscendere in naves jubet. At omnium impeditis animis, Dumnorix cum equitibus Aeduorum a castris, insciente Caesare, domum discedere coepit. Qua re nunciata, Caesar, intermissa profectione atque omnibus rebus postpositis, magnam partem equitatus ad eum insequendum mittit retrahique imperat: si vim faciat neque pareat, interfici jubet: nihil hunc se absente pro sano facturum arbitratus, qui praesentis imperium neglexisset. Ille enim revocatus resistere ac se manu defendere suorumque fidem implorare coepit, saepe clamitans, liberum se liberaeque civitatis esse. Illi, ut erat imperatum, circumstant hominem atque interficiunt; ad Aedui equites ad Caesarem omnes revertuntur.

2. Translate into Latin the following passage :—

I caught a mantis on a mountain on the shores of the Black Sea, which was more curious and extraordinary in its appearance and movements than any I had before seen. I shut it up in a box, and forgot where I had laid it. Several months after I found the box; and when I opened it I saw the prisoner inside as vigorous and lively as when I enclosed him. He seemed even more sage and active than any of his tribe. I kept him for nearly a year in this state of abstinence and confinement, and frequently exhibited him for the amusement of my friends. I never let him out, for fear he should become invisible, like his predecessors; but within the precincts of his prison he displayed all his extraordinary talents, and never seemed to suffer from the seclusion of air, light, or food. I sent him to a friend in England as a curiosity, hoping that he would have an opportunity of exhibiting him alive in the same way. Whether the voyage was as ungenial to his feelings as to other animals, and he sank under the effects of seasickness, or whether the period of his natural life had arrived, I know not; but when my friend opened the box on its arrival, the poor, wise, immortal mantis was dead.

VOCAL MUSIC.—TONIC-SOL-FA METHOD.

Two hours allowed for this paper.

1. In the tonic-sol-fa method the syllables **soh, lay, te**, are used instead of the old forms **sol, la, si**. State the reasons for these alterations.
2. Translate the following passage into the established notation; one pulse = one crotchet.

KEY A.

$$\left| m : f . , r | d : - . r \right| \left| m . , r : m . , f | m : r \right| \left| f : s . , m | r : - . m \right|$$

$$\left| f . , m : f . , s | f : m \right| \parallel$$

3. Translate the following passage into the sol-fa notation; one crotchet = one pulse :—

4. What is a *clef*? Describe all the clefs used in modern music; give examples.
5. Give the rules for finding the place of **doh** on the staff from the key signatures.

DRAWING.—

DRAWING.—PERSPECTIVE.

1. What is the derivation of the term perspective ?
2. Give a definition of perspective.
3. What is aerial and what linear perspective ?
4. What is the difference between angular and parallel perspective ?
5. To what points do receding lines converge, both in angular and parallel perspective ?
6. Why do objects appear to diminish as they recede from us ?
7. What is meant by visual rays ?
8. What constitutes the visual angle ?
9. What is the limited extent of the visual angle ?
10. Construct the elementary figure, marking all the lines and points with their initial letters ; and draw a square superface in parallel perspective.

EXAMINATION PAPERS FOR FIRST CLASS CERTIFICATE.

GRAMMAR.

Four hours allowed for this paper.

1. *He deserved no such return
From me whom He created what I was
In that bright eminence and with His good
Upbraided none nor was His service hard
What could He less than to afford Him praise
The easiest recompense and pay Him thanks
How due—yet all His good proved ill in me
And wrought but malice lifted up so high
I 's'dained subjection and thought one step higher
Would set me highest and in a moment quit
The debt immense of endless gratitude
So burdensome still paying still to owe*

- a. Punctuate the above passage.
 - b. Arrange it in prose order.
 - c. Paraphrase it.
 - d. Parse the words in italic.
 - e. Analyse the whole.
2. How could you show that the English Alphabet is inconsistent, defective, and redundant.

ARITHMETIC.

Four hours allowed for this paper.

1. Prove as fully as possible that $\frac{1}{3}$ of 5 is equal to $\frac{5}{3}$ of 1.
2. Required the amount and compound interest of £142 for eight years, at 3 per cent. *half-yearly*.
3. A dockyard employs 300 men, works full time, and yields a profit of £10·1 per man per annum : What will be the total profit per annum, when one-fourth of the men are discharged, the rest work $\frac{1}{6}$ time, and prices have gone down so as to reduce the profits $4\frac{1}{4}$ per cent. ?
4. Two vessels passing the Sound pay toll. No. 1, containing 150 hhd., gives 1 hhd., and receives 12s. No. 2 gives 1 hhd. and £1·8 in addition. At how much was each hogshead valued ?
5. The diagonal of a field in the form of a trapezium is 1,660 links, and the perpendiculars 702 and 712 links respectively. State the area in acres, &c.

GEOGRAPHY—PHYSICAL.

Three hours allowed for this paper.

1. In what particulars, as regards outline, do great differences exist between the land masses of the Globe ?
2. What is Maury's theory of the "rotation of air currents?"
3. Account for the unequal distribution of the population of Asia.
4. Describe the Danish Peninsula and its surrounding seas.

GEOGRAPHY—DESCRIPTIVE, &C.

Three hours allowed for this paper.

1. What is meant by the overland route to Europe? Describe it.
2. Describe the eastern river valleys of New South Wales.
3. How do you prove the sphericity of the earth ?
4. How may latitude be determined by the position of the Polar Star ?

SCHOOL BOOKS.

Three hours allowed for this paper.

1. In what respects does the Second Book, I.N.B., differ from that of Constable ?
2. What lessons on arts and manufactures are given in the Fourth Book ?
3. What lessons on Eastern manners are furnished in the Supplement to the Fourth Book ?
4. Describe the literary class-book used by the pupil-teachers. What writings of Addison's have you met with in it ?

PRINCIPLES AND ART OF TEACHING.

Four hours allowed for this paper.

1. Give as to an advanced or fifth class, an object lesson on a *mirror*.
2. Describe your views as to the mental training necessary in an infant's school.
3. Describe fully how you would give an oral lesson, aided by illustration from the blackboard, on the simplification of the fraction ($\frac{3}{8}$ of $\frac{4}{7}$).
4. Show, by reference to the constitution of the human mind, that the faculties of pupils in Primary Schools may be, unless care is taken, paralyzed, overtaken, and wrongly developed by inappropriate work.
5. Describe fully the difference between the mere infusion of knowledge and the development of power, and discuss the saying—"Thought is the greatness of Men."

ENGLISH LITERATURE.

Three hours allowed for this paper.

1. Give an account of the Life and Works of Chaucer.
2. Describe briefly the more important Poets of the second period of English Literature.
3. Give an account of Milton and his writings.
4. What authors have endeavoured, since the Revolution, to give a high moral tone to English Literature?

WRITING.

Two hours allowed for this paper.

1. Write a letter as to the Council, describing the moral tone and character of your school, and how you form it.
2. What faults in writing are young pupils specially liable to fall into?
3. Describe the essential features of good writing.

DOMESTIC ECONOMY.

Three hours and a half allowed for this paper.

1. In a case of clothes catching fire, how would you act?
2. Describe those articles of food which are most economical and nutritious, and easily within reach of the working classes.
3. What uses may be made of maize and millet?
4. In the case of distance from medical aid, what remedies would you apply in a case of sun-stroke?

GEOMETRY.

1. Assuming Euclid's propositions, prove that every equilateral triangle is equiangular, and that every equiangular triangle is also equilateral.
2. By proposition 32, Book I., find in degrees an interior angle of the following regular figures, viz. :—
 - I. A pentagon.
 - II. A hexagon.
 - III. An octagon.
3. In obtuse angled triangles, if a perpendicular be drawn from either of the acute angles to the opposite side produced, the square of the side subtending the obtuse angle is greater than the squares of the sides which contain it, by twice the rectangle contained by the side upon which, when produced, the perpendicular falls, and the straight line intercepted without the triangle between the perpendicular and the obtuse angle.
4. In a parallelogram the sum of the squares of the sides is equal to the sum of the squares of the diagonals.
5. Describe a circle about a given equilateral and equiangular pentagon.
6. Describe an isosceles triangle having each of the angles at the base double of the third angle.

ALGEBRA.

1. Simplify the expression $3 \left\{ (a+b)^2 + (a-b)^2 \right\} - \left\{ (a-b)^2 - 2(a^2 - b^2) \right\}$.
2. Solve the equation $\frac{a}{x+a} + \frac{b}{x+b} = \frac{a+b}{x+2a}$.
3. Solve the equations $ax + by = c$;
 $a, x + b, y = c$;
And explain the result, when $\frac{a}{a} = \frac{b}{b} = \frac{c}{c}$.
4. Show that the value of—
 $\frac{\sqrt{a+x} + \sqrt{a-x}}{\sqrt{a+x} - \sqrt{a-x}}$ is $\sqrt{\frac{a}{b} - 1}$, when $x = 2\sqrt{ab - b^2}$.
5. Solve the equations $7x + \frac{9}{4} - x - \frac{2x-1}{9} = 9$;
 $\frac{x}{a} + \frac{x}{b-a} = \frac{a}{b+a}$.

6. Two packages, weighing 9 lbs. and 16 lbs., cost respectively 11s. 6d. and £1 0s. 4d. The charge for carriage was proportional to the square root of the weight. What was the cost per pound of the material?

FRENCH.

FRENCH.

Translate into English—

Molière—*Misanthrope*—Ah! ne plaisantez point, &c.—*Acte IV, Scène III.*

Translate into French—

“I have scarcely employed eight days in traversing a country which would require years of observation; but besides that, the snow drives me away. I wished to return before the mail, which is bringing me, I hope, one of your letters. In the meanwhile, before its arrival, I begin to write you this one, after which I shall write you a second, if necessary, to answer yours. I shall not detail to you here my journey and my remarks. I have written an account of them, which I count on bringing to you. We must reserve our correspondence for the things which concern each of us more nearly. I shall content myself with speaking of the condition of my mind.”

1. After verbs of *believing*, when is “que” followed by the indicative, and when by the subjunctive?
2. Distinguish between “quelque” declinable, “quelque” indeclinable, and “quel que.”
3. Write down the present and preterite tense, first person singular, and the past participle of *appeler*, *croire*, *courir*, *tendre*, *mouvoir*, *mourir*, *tondre*, *voir*.
4. Write down the French for “Had I not told it to you”—“He had promised it to himself.”

APPENDIX J.

RECEIPTS and DISBURSEMENTS of the Council of Education, from 1st January to 31st December, 1869.

RECEIPTS.		DISBURSEMENTS.			
	£ s. d.	GENERAL MANAGEMENT.	£ s. d.	£ s. d.

Sydney: Thomas Richards, Government Printer.—1870.

1870.

NEW SOUTH WALES.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

CERTIFIED DENOMINATIONAL SCHOOLS

FOR

1869.

Presented to both Houses of Parliament, in pursuance of Act 30 Vict., No. 22, sec. 27.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1870.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON DENOMINATIONAL SCHOOLS FOR 1869.

To His Excellency the Right Honorable SOMERSET RICHARD, Earl of Belmore, Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY,

In accordance with the provisions of the Public Schools Act of 1866, section 27, we, the Council of Education, beg to submit to your Excellency this our Third Annual Report upon the condition of the Certified Denominational Schools of the Colony.

In our Report upon the Public Schools we have fully described the general condition of the schools under our superintendence. The statements therein contained apply equally to Public and Denominational Schools, except in those instances where observations are limited to schools of one class.

The number of Certified Denominational Schools existing during the earlier portion of 1869 was 264; but 15 of these, ere the termination of the year, had either been closed or had changed their Denominational character. The number in existence at the close of the year was 249. A list of these schools will be found in Schedule A, annexed to this Report. Further information as regards attendance and school fees is supplied in a second return. Appendix A;
Appendix B.

Application for a Certified Roman Catholic Denominational School at Adelong was received, but declined by the Council on the ground that the conditions of the Act were not satisfied. Appendix C.

The only material addition to the number formerly existing has been an Infants' School at the Certified Denominational Church of England School, Darlinghurst, which was opened as a separate department in 1869.

The following Church of England Schools were converted into Public Schools, on application from the inhabitants of the respective localities, viz. :—

Dural,
Frederickton,
Guntawang,
O'Connell,
Rylstone,
Tirranna.

The following were, on account of insufficient attendance, reopened as, or converted into, Provisional Schools :—

Church of England—
Goonoo Goonoo,
Hunter's Hill,
Muscle Creek.

Presbyterian—
Wallaby Hill.

The Certified Denominational Church of England School at Adaminaby was, on account of its low attendance, worked as a Half-time School in conjunction with that at Boconnoc.

The Certified Denominational Church of England School at Paterson has been closed during the latter portion of the year, but the certificate has not been cancelled, and a movement is now on foot for its reopening.

The following were closed on the ground of insufficient attendance :—

Church of England—
Kiora,
Port Maitland.

Presbyterian—
Lane Cove.

In the case of the Certified Denominational Church of England School at Kiora, it was stated to be the desire of the residents that a large and efficient Public School should be established.

The Certified Denominational Roman Catholic School at Church Hill has received no aid from the Council since the 31st May, and further action is suspended waiting the nomination of a suitable Teacher by the Local Board.

These changes have, as has been already stated, reduced the number of existing Certified Denominational Schools to 249.

In the latter portion of 1869, the attention of the Council having been drawn to the low attendance at several of the Certified Denominational Schools, the Local Boards were in each case called upon to explain the reason, and, in some instances, to show cause, why the certificate should not be withdrawn. The replies, though not in all cases satisfactory, were considered sufficient to justify the Council in suspending action until fuller inquiries could be made.

As

Appendix D.

As regards organization, discipline, instruction, and progress, the Certified Denominational Schools are dealt with in conjunction with the Public Schools, and fuller details will be found in the reports of the Inspectors annexed. The Council believes that these schools have improved in general excellence, more especially in the Sydney District.

Some of the Inspectors appear to be of opinion that the parents as a body attach little value to denominational education as such; in short, that if left to themselves, parents would choose for their children those schools which are nearest and, in their opinion, most effective, irrespective altogether of their religious denomination. In Sydney, where perhaps the best judgment can be formed, the Inspectors adduce statistics to show "that denominational predilections are exceedingly weak, and that except to a partial extent in the case of Church of England and Roman Catholic Schools, Denominational Schools, *as such*, do not really exist."

As regards local supervision, this duty is to a great extent committed to one member of the Local Board. In the majority of instances the resident clergyman visits regularly, takes a warm interest in the working of the school, and attends the periodical examinations, even when no other visitor is present.

The remarks made under the head of Free Scholars in the Public Schools Report are applicable here, and need not be repeated.

The amount accruing to Certified Denominational Schools from the Church and School Estates was £713 4s. 6d., which was apportioned rateably among the various Denominations as follows, viz. :—

	£	s.	d.
Church of England Schools	359	6	2
Roman Catholic Schools.....	222	15	5
Presbyterian Schools	77	18	6
Wesleyan Schools	53	4	5

We submit this as our Report upon the Certified Denominational Schools for the year ending 31st December, 1869; and in testimony thereof we have caused our corporate seal to be affixed hereto, this 22nd day of March, one thousand eight hundred and seventy.

(L.S.)

HENRY PARKES, President.
 GEORGE ALLEN.
 W. M. ARNOLD.
 JAMES MARTIN.
 J. SMITH.

R. E. WEBSTER,
 Acting Secretary.

APPENDIX A.

RETURN of the Attendance of Children at the Certified Denominational Schools of New South Wales, as certified by the Local Boards, for the quarter ending 31st December of the year 1869, or for the last quarter in which the schools were in operation respectively.

 Inspector's Report on Certified Denominational Schools, Newcastle District.
 Inspectors' Report on Certified Denominational Schools, Sydney District.

ALBURY DISTRICT.

DETAILED statement of the condition of the Schools inspected.

CERTIFIED DENOMINATIONAL SCHOOLS.

The remarks under head 1 relate to the material condition of the schools.
 2 to their moral character.
 3 to the subjects and methods of instruction.
 4 to the proficiency of the pupils.

ALBURY (C.E.) :—Visited, 11th November.

Pupils enrolled :—Boys, 26 ; girls, 15 ; total, 41.

Pupils present :—Boys, 20 ; girls, 13 ; total, 33.

1. The organization has not been materially altered. It is still defective in the extent and distribution of the subjects of instruction as well as in the documents pertaining thereto. The enclosure of the grounds is very defective and is unsightly in its appearance. 2. The attendance has, of late, increased. The discipline is still too harsh in its tone. 3. Some improvement has been effected by the introduction of certain maps and books from the Council's list; but the course of instruction is yet very limited. 4. The proficiency of the pupils ranges from fair to very fair.

ALBURY (R.C.) :—Visited, 10th and 12th November.

Pupils enrolled :—Boys, 74.

Pupils present :—Boys, 56.

1. The space available for teaching is much too small for the present attendance, and the supply of furniture is not sufficient for proper accommodation. A schoolroom proper is much needed. 2. The discipline is too lax in every point, and the government is uneven and wanting in firmness. 3. The course of instruction is not quite complete, and the method, though fairly intelligent, is not sufficiently penetrative. More teaching power is, however, now necessary. 4. The attainments of the pupils vary from tolerable to fair.

COROWA (C.E.) :—Visited, 3rd August.

Pupils enrolled :—Boys, 44 ; girls, 17 ; total, 61.

Pupils present :—Boys, 38 ; girls, 15 ; total, 53.

1. The organization is now complete—suitable furniture having been provided. 2. The discipline is, in general, very fair; amongst the pupils, however, more life is wanted. 3. The method is not sufficiently thorough; the pupils are not sufficiently grounded in the elements, but the teaching is painstaking to a great degree. The spirit of emulation should be cultivated. 4. The proficiency of the pupils is, in general, fair.

GUNDAGAI SOUTH (C.E.) :—Visited, 22nd June.

Pupils enrolled :—Boys, 24 ; girls, 25 ; total, 49.

Pupils present :—Boys, 17 ; girls, 18 ; total, 35.

1. The organization is improved; but the furniture is hardly sufficient; and the interior walls need to be cleaned. 2. The discipline is mechanical in its tone; the pupils are irregular and very unpunctual; and the tone of the school is not a healthy one. Little or no local interest is shown in the school. 3. The method is tolerably intelligent, but the teaching seems to have but little penetrative and exciting power. 4. The state of the attainments is, on the whole, fair.

JUGIONG (R.C.) :—Visited, 24th June.

Pupils enrolled :—Boys, 28 ; girls, 21 ; total, 49.

Pupils present :—Boys, 17 ; girls, 11 ; total, 28.

1. No alteration has been made in the organization, at this date, although the Local Board had been appealed to for better furniture, &c. The teacher was on the point of leaving ; and since his successor arrived, some improvement has, I believe, been effected. 2. The state of the discipline was bad. 3. The method and general management were capable of great improvement. 4. The proficiency of the pupils ranged from moderate to tolerable. A change of teachers was greatly needed.

TUMUT (R.C.) :—Visited, 11th and 14th June.

Pupils enrolled :—Boys, 42 ; girls, 34 ; total, 76.

Pupils present :—Boys, 27 ; girls, 26 ; total, 53.

1. Some additional furniture has been provided since my last visit, but not in sufficient quantity to meet the wants of the present large attendance. The supply of books, &c., is also too limited. 2. The discipline is very fair. 3. The course of instruction is too limited. The teaching is very earnest and careful, but, from want of training, the method is not well adapted for the requirements of the place and pupils. The spirit of the school is, however, very pleasing. 4. The attainments of the pupils range from tolerable to fair.

WAGGA WAGGA (R.C.) :—Visited, 31st May.

Pupils enrolled :—Boys, 39 ; girls, 16 ; total, 55.

Pupils present :—Boys, 29 ; girls, 14 ; total, 43.

The classification of the pupils is more in accordance with the standard than formerly. The organization is, on the whole, very fair. 2. The discipline is much improved, but more drill with marching exercises should be introduced. 3. The course of instruction is not complete. The method, in general, is unsuggestive and wanting in force. The teacher is, however, painstaking and earnest in his work. 4. The proficiency of the pupils is uneven, but in general it may be said to be very fair.

SUMMARY of REPORTS on Certified Denominational Schools inspected in 1869.**ARMIDALE (C.E.) :—Visited, 4th and 9th August, 1869.**

Numbers at the examination :—Boys, 26 ; girls, 33 ; total, 59.

1. The material condition of this school has been much improved ; the organization is good. 2. The moral tone is fair. 3. The prescribed subjects are taught with fair efficiency, and the instruction is better regulated ; but the younger pupils still need more of the teacher's attention. 4. The mental culture and general proficiency of the pupils range from moderate to fair.

FREDERICTON (C.E.) :—Visited, 22nd October, 1869.

Numbers at the examination :—Boys, 21 ; girls, 19 ; total, 40.

1. The schoolhouse has been repaired, the condition of the playground improved ; the supply of furniture and apparatus is adequate ; the organization is fair ; more scrupulous attention should be paid to the preservation of the school materials. 2. The moral tone of the school is passable. 3. The prescribed subjects are taught with earnestness and diligence, but lack of liveliness and vigour ; the teaching is moderately skilful. 4. The average mental culture and proficiency of the pupils are moderate.

GLEN INNES (C.E.) :—Visited, 17th September, 1869.

Numbers at the examination :—Boys, 35 ; girls, 18 ; total, 53.

1. The schoolroom is small, ill-conditioned, and unsuitable for school purposes ; the condition of the fence is unsatisfactory ; there is neither lavatory nor water ; the supply of furniture and apparatus is fair—but the schoolroom being small, and encumbered with church furniture, renders the proper arrangement rather impracticable. 2. The moral tone of the school has slightly improved during the year ; the discipline, however, requires to be still more vigilant, firm, and judicious. 3. The prescribed subjects are taught, except singing ; the classification is passable, and the lesson documents are framed with fair judgment, but do not appear to be faithfully observed ; the teaching is fairly intelligent, but deficient in zeal, energy and painstaking. 4. The mental culture and general proficiency of the pupils are tolerable ; the younger pupils require more of the teacher's attention.

GUNNEDAH (C.E.) :—Visited, 4th June, 1869.

Numbers at the examination :—Boys, 12 ; girls, 14 ; total, 26.

1. This school is conducted in a church, the internal appearance of which has been improved in point of cleanliness and lighting ; the supply of working materials is defective, but faultily arranged ; lavatory, water, fence to playground, and out-offices, are still needed ; the organization is moderate. 2. The moral tone of the school is unsatisfactory. 3. The instruction is elementary and ill-regulated, and the teaching, though earnest and diligent, is empirical and ineffective. 4. The mental culture and general proficiency of the pupils are low.

KEMPSEY (C.E.) :—Visited, 18th October, 1869.

Numbers at the examination :—Boys, 18 ; girls, 24 ; total, 42.

1. This school is held in a spacious, airy, and well lighted church, and is supplied with adequate furniture and apparatus ; lavatory, water, out-offices, and fence to playground, are still needed. 2. The moral tone of the school has rather retrograded. 3. The prescribed subjects are taught with lack of energy and diligence, and only moderate skill. 4. The mental culture and general proficiency of the pupils are moderate.

NUNDLE (C.E.) :—Visited, 7th July, 1869.

Numbers at the examination :—Boys, 22 ; girls, 18 ; total, 40.

1. Repairs to the schoolhouse and residence are needed ; the furniture is defective in quantity, quality, and arrangement, and the stock of apparatus passable ; the organization is moderate. 2. The pupils are

are clean and decently dressed, fairly well-behaved, but not properly regulated in their movements. The moral tone is tolerable. 3. The prescribed subjects, omitting singing, are taught with moderate energy, industry, and intelligence, and the instruction is defectively regulated. 4. The general proficiency of the pupils is moderate.

TAMWORTH (C.E.) :—Visited, 16th June, 1869.

Numbers at the examination :—Boys, 37 ; girls, 21 ; total, 58.

1. The building is in good condition, but the schoolroom bare, dirty, and disorderly. The apparatus is tolerably adequate, but the furniture is insufficient, ill-arranged, and unsuitable. There is no lavatory, and the out-offices are not in good condition. There is a manifest carelessness in the preservation of the school property. 2. The school routine is conducted with moderate efficiency ; the pupils, though tolerably clean and tidy, are noisy, disorderly, and indiligent, and the appearance of the schoolroom shows obvious signs of neglect. 3. The prescribed subjects are taught in a mechanical and irregular manner ; the classification is defective ; there is no register of lessons, and but one programme. 4. The mental culture and general proficiency of the pupils are moderate.

ARMIDALE (R.C.) :—Visited, 3rd and 9th August, 1869.

Numbers at the examination :—Boys, 40 ; girls, 27 ; total, 67.

1. The schoolhouse and residence belong to the teacher, and are in excellent order. A playground, with adequate out-office accommodation and with lavatory, are still needed. There is a good supply of material appliances, but the desks are unsuitable in form and arrangement. The organization is passable. 2. The appearance of the schoolroom and pupils is pleasing ; but the latter are not sufficiently energetic, frank, or self-reliant in their demeanour. The moral tone is in general fair. 3. The prescribed subjects are taught, except singing ; the classification is rather defective, and the instruction is fairly well regulated. The teaching is painstaking but still too mechanical. 4. The mental culture and general proficiency of the pupils range from moderate to fair.

GUNNEDAH (R.C.) :—Visited, 4th June, 1869.

Numbers at the examination :—Boys, 12 ; girls, 20 ; total, 32.

1. This school is held in a temporary chapel of suitable size and form. Hat-pegs, book-press, and additional desks are needed, as also fence to playground, lavatory, water, and out-offices. The organization is moderate. 2. The moral tone of the school is passable. 3. The prescribed subjects are taught, except singing and drawing ; the instruction is tolerably well regulated ; but the teaching, though earnest and apparently diligent, is only moderately skilful. 4. The mental culture and general proficiency of the pupils are moderate.

GRAFTON (R.C.) :—Visited, 23rd November, 1869.

Numbers at the examination :—Boys, 21 ; girls, 21 ; total, 42.

1. This school is now held in a more suitable building, more centrally situated, and provided with playground and out-offices ; additional furniture has been provided. The supply of working materials is fair. The organization is fair. 2. The moral tone of the school is fair. 3. The prescribed subjects are taught, except sewing. The instruction is appropriately regulated, and the teaching is tolerably painstaking and intelligent. 4. The mental culture and general proficiency of the pupils are passable.

KEMPSEY (PRES.) :—Visited, 28th October, 1869.

Numbers at the examination :—Boys, 21 ; girls, 22 ; total, 43.

1. Additional out-office accommodation and a supply of water are needed ; otherwise, the organization is fair. 2. The moral tone is fair. 3. The prescribed subjects are taught, except sewing ; the classification and lesson documents are fairly satisfactory, and the teaching is fairly skilful. 4. The mental culture and general proficiency of the pupils are tolerable.

CARR'S CREEK (WES.) :—Visited, 22nd November, 1869.

Numbers at the examination :—Boys, 19 ; girls, 19 ; total, '38.

1. This school has been provided with additional furniture and a supply of water. The organization is fair. 2. The discipline is healthy, and the moral tone fair. 3. The prescribed subjects are taught with tolerable energy and diligence, but the teaching is empirical and moderately effective. 4. The attainments and mental culture of the pupils are moderate.

BATHURST DISTRICT.

DETAILED STATEMENT of the condition of Denominational Schools in the Bathurst District, visited in 1869.

BATHURST (C.E., Primary) :—Visited, 5th October, 1869.

Numbers enrolled :—Boys, 38 ; girls, 35 ; total, 73.

Numbers present :—Boys, 31 ; girls, 21 ; total, 52.

The material condition of the school is good. The discipline is not effective, and the instruction is tolerably regulated. The methods are modern, but fail, from want of disciplinary power, to produce good results. The proficiency is not satisfactory, and the prevailing spirit of the school is not pleasing.

BATHURST (C.E., Infants) :—Visited, 6th October, 1869.

Numbers enrolled :—Boys, 38 ; girls, 27 ; total, 65.

Numbers present :—Boys, 27 ; girls, 16 ; total, 43.

In its material aspect the school is satisfactory. The discipline is genial and firm, and the instruction is fairly regulated. The average attainments are creditable, and the general spirit of the school is pleasing. Owing to the inclemency of the weather, the attendance was considerably below the average.

BATHURST (PRES.) :—Visited, 12th October, 1869.

Numbers enrolled :—Boys, 52 ; girls, 42 ; total, 94.

Numbers present :—Boys, 43 ; girls, 36 ; total, 79.

The playground is too small ; otherwise, the material condition is fair. The discipline has improved in energy and vigilance, and the lesson documents are judiciously arranged. The proficiency is, on the whole, reasonably satisfactory, and the moral tone is healthy.

BATHURST (R.C.—Infants) :—Visited, 13th October, 1869.

Numbers enrolled :—Boys, 22 ; girls, 139 ; total, 161.

Numbers present :—Boys, 10 ; girls, 127 ; total, 137.

The material condition of the school is now good. It is conducted in a room belonging to the Convent, finished during the year. The usefulness of the gallery is marred by its peculiar construction, and the area of playground is too small. There are too many classes, and some pupils have been detained in school who should have been promoted to the primary schools. The discipline is passable, the instruction is tolerably regulated, and the teaching is industrious and earnest. The proficiency is unequal, ranging from moderate in some subjects to fair and very fair in others. The moral tone is fair.

BATHURST (R.C.—Girls) :—Visited, 14th October, 1869.

Number enrolled :—Girls, 95.

Number present :—Girls, 86.

The playground is too small ; otherwise, the material aspect of the school is good. The schoolroom, which is a good one, forms part of the Convent. The discipline is thoroughly effective, and the teaching is earnest, very industrious, and well regulated. The proficiency is satisfactory, ranging from fair to good, and the moral tone is good. Altogether, this school deserves commendation.

BATHURST (R.C.—Boys) :—Visited, 15th October, 1869.

Number enrolled :—Boys, 132.

Number present :—Boys, 107.

The material condition of the school has been improved since last inspection, and the entire room is now at the disposal of the master. There is still no proper playground belonging to the school. The discipline is fair, and the instruction is tolerably regulated. The attainments are only partially satisfactory, varying from moderate to very fair. The moral tone is fair.

BURROWA (R.C.) :—Visited, 15th April, 1869.

Numbers enrolled :—Boys, 39 ; girls, 32 ; total, 71.

Numbers present :—Boys, 34 ; girls, 31 ; total, 65.

The material condition is, on the whole, fair. The discipline is healthy, and the instruction is properly regulated. The attainments are reasonably satisfactory, and the prevailing spirit of the school is pleasing.

HARTLEY (R.C.) :—Visited, 31st August, 1869.

Numbers enrolled :—Boys, 18 ; girls, 23 ; total, 41.

Numbers present :—Boys, 16 ; girls, 18 ; total, 34.

The building, which is composed of slabs, needs plastering, and the playground is unfenced. The furniture is of a clumsy description. The discipline is tolerable, and the instructional documents are moderately framed. The average proficiency and the moral tone are tolerable.

KELSO (C.E.) :—Visited, 10th August, 1869.

Numbers enrolled :—Boys, 32 ; girls, 34 ; total, 66.

Numbers present :—Boys, 28 ; girls, 30 ; total, 58.

The material condition of the school is satisfactory. The building is in good repair, and adequately supplied with furniture and apparatus. The discipline is healthy, and the lesson documents are fairly constructed. The proficiency is on the whole fair, and the spirit of the school is pleasing.

LAMBING FLAT (R.C.) :—Visited, 8th April, 1869.

Numbers enrolled :—Boys, 38 ; girls, 34 ; total, 72.

Numbers present :—Boys, 37 ; girls, 24 ; total, 61.

The school is still conducted in the church, and the furniture is neither suitable nor sufficient. On the whole the material condition is only tolerable. The discipline is mild, but wanting in energy and promptness, and the instruction is tolerably arranged. The proficiency and moral tone are tolerable.

MUDGE (R.C.) :—Visited, 2nd December, 1869.

Numbers enrolled :—Boys, 45 ; girls, 31 ; total, 76.

Numbers present :—Boys, 36 ; girls, 28 ; total, 64.

The schoolroom has lately been renovated, and has a much more cheerful aspect than before. The closets have been repaired, and the teacher makes shift in the residence, but it is very uncomfortable, in fact scarcely tenable. The discipline is productive of reasonable results, but would be improved by more decisive energy. The teaching is earnest and painstaking, and, with a few exceptions, the proficiency varies from fair to good. The prevailing tone of the school is healthy. The more advanced pupils of the fourth class study elementary Algebra.

MUDGE (C.E., Primary) :—Visited, 7th December, 1869.

Numbers enrolled :—Boys, 42 ; girls, 30 ; total, 72.

Numbers present :—Boys, 38 ; girls, 26 ; total, 64.

The playground having been recently fenced, there is no particular defect in the material condition. Good order is maintained, and the government is prompt and energetic. The teaching is earnest, intelligent, and well regulated, and the answering is spirited. The proficiency varies from fair to good, with two exceptions in the second class. The moral tone is, on the whole, good. In addition to the subjects prescribed, Latin and Algebra are taught to the more advanced pupils of the fourth class. One boy deserves special mention for his proficiency in these subjects.

MUDGE (C.E.—Infants):—Visited, 8th December, 1869.

Numbers enrolled:—Boys, 35; girls, 40; total, 75.

Numbers present:—Boys, 26; girls, 30; total, 56.

Materially the condition of the school continues the same as at last inspection. The order and government have improved, and the instruction is earnest, more careful, and better regulated. The average proficiency is now reasonably satisfactory, and the spirit of the school manifests a more healthy tone.

ORANGE (R.C.):—Visited, 27th October, 1869.

Numbers enrolled:—Boys, 28; girls, 33; total, 61.

Numbers present:—Boys, 26; girls, 31; total, 57.

Hat pegs and additional furniture have been provided, but there is still no proper playground, and the site is not a good one. The building is, however, only rented for temporary use. The discipline is mild, but firm and vigilant, and the instruction is earnest, careful, and guided by the necessary documents. The proficiency varies from moderate to fair, and the moral tone is tolerable. The present teacher has only taken charge recently, and the school has suffered from being closed for a time.

WELLINGTON (R.C.):—Visited, 8th November, 1869.

Numbers enrolled:—Boys, 33; girls, 23; total, 56.

Numbers present:—Boys, 27; girls, 20; total, 47.

The furniture is insufficient, and the building itself needs replacing. I am informed that steps are being taken for the erection of new premises. The discipline is wanting in decision and vigilance, and the instruction is not properly regulated. The methods are indifferent. The attainments are very unequal, ranging from very small to fair; on the whole, they are not satisfactory. The moral tone is not healthy.

YOUNG (C.E.):—Visited, 6th April, 1869.

Numbers enrolled:—Boys, 48; girls, 42; total, 90.

Numbers present:—Boys, 48; girls, 39; total, 87.

The material condition of the school is good. The discipline is effective, and the instruction is fairly arranged. The proficiency is tolerably satisfactory, and the general spirit of the school is fairly pleasing.

J. M'CREIDIE,
Inspector, Bathurst District.

CAMDEN DISTRICT.—INSPECTOR'S REPORT.

APPENDIX B.

DETAILED STATEMENT of the condition of Certified Denominational Schools inspected in 1869.

The remarks under head 1 relate to the material condition of the schools.

2 to their moral condition.

3 to the subjects and methods of instruction.

4 to the proficiency of the pupils.

CHURCH OF ENGLAND.

ASHFIELD:—Visited, 9th December, 1869.

Numbers present:—Boys, 28; girls, 17; total, 45.

1. A teacher's residence and a classroom are needed; and the furniture should be rearranged. Otherwise the material condition is good. 2. The discipline is healthy. 3. The prescribed subjects are taught. The methods are fairly appropriate. 4. The proficiency ranges from fair to good.

CAMDEN (Primary):—Visited, 10th May, 1869.

Numbers present:—Boys, 12; girls, 20; total, 32.

1. The material condition is fairly satisfactory. 2. The discipline is healthy. At the time of inspection there was a flood in the locality, hence the attendance was small. 3. The prescribed subjects are taught with intelligence and much industry. 4. The proficiency is very fair.

CAMDEN (Infants):—Visited, 11th May, 1869.

Numbers present:—Boys, 15; girls, 15; total, 30.

1. The schoolroom is too small; otherwise, the material condition is fair. 2. The pupils are orderly and attentive. 3. The prescribed subjects are taught with earnestness and painstaking. 4. The proficiency is fair.

CANTERBURY:—Visited, 9th June, 1869.

Numbers present:—Boys, 43; girls, 29; total, 72.

1. There is no teacher's residence. A classroom is also needed. Otherwise, the material condition is good. 2. The discipline is healthy. 3. The prescribed subjects are taught. The methods are suitable and fairly well applied. 4. The proficiency ranges from fair to very fair.

DENHAM COURT:—Visited, 16th August, 1869.

Numbers present:—Boys, 18; girls, 17; total, 35.

1. The schoolroom needs repairs. The supply of requisites is not sufficient. 2. The discipline is only moderately satisfactory. 3. The teaching is carried on with industry, but the methods are very defective. 4. The proficiency is moderate.

ENFIELD:—

ENFIELD :—Visited, 10th December, 1869.

Numbers present :—Boys, 20 ; girls, 14 ; total, 34.

1. The furniture is unsuitable ; otherwise the material condition is fairly satisfactory. 2. The discipline is but moderately healthy. 3. The teacher is energetic and painstaking, but his work is mechanical and ineffective. 4. The proficiency is moderate.

JAMBEROO :—Visited, 3rd September, 1869.

Numbers present :—Boys, 30 ; girls, 21 ; total, 51.

1. When the improvements now being made are completed, the material condition will be fairly satisfactory. 2. The regularity is not good ; otherwise, the general discipline is tolerably healthy. 3. The instruction is carried on with industry and tolerable skill. 4. The proficiency ranges from tolerable to fair.

KIAMA :—Visited, 21st and 22nd June, 1869.

Numbers present :—Boys, 57 ; girls, 19 ; total, 76.

1. Furniture and requisites excepted, the material condition is unsatisfactory. 2. The pupils are regular and punctual, and the prevailing tone of the school is healthy. 3. The prescribed subjects are taught. The methods are fairly appropriate, and the school work is carried on with much earnestness. 4. The proficiency ranges from tolerable to very fair.

LIVERPOOL :—Visited, 23rd April, 1869.

Numbers present :—Boys, 57 ; girls, 58 ; total, 115.

1. The buildings are dilapidated and unsuitable for school purposes. The supply of furniture and other requisites is satisfactory. 2. The discipline is very fair. 3. The prescribed subjects are taught. The methods are appropriate. 4. The proficiency is fair.

MACQUARIE RIVER :—Visited, 9th August, 1869.

Numbers present :—Boys, 12 ; girls, 8 ; total, 20.

1. The schoolroom is much in need of repair, and the teacher's residence is too small. 2. The discipline is tolerably healthy. The attendance should be much larger than it is, but the teacher is not popular with a number of the parents ; hence they do not send their children to the school. 3. The instructional documents are not properly attended to by the teacher, but the schoolwork appears to be carried on with considerable energy. 4. The proficiency is moderate.

MENANGLE :—Visited, 17th August, 1869.

Numbers present :—Boys, 18 ; girls, 15 ; total, 33.

1. The material condition is moderate. 2. The discipline is healthy. 3. The instruction is carried on with earnestness and fair skill. 4. The proficiency is fair.

NARELLAN :—Visited, 5th May, 1869.

Numbers present :—Boys, 15 ; girls, 15 ; total, 30.

1. The material condition is fairly satisfactory. 2. The discipline is tolerably healthy. 3. The prescribed subjects are taught. The methods are tolerably appropriate. 4. The proficiency is tolerable. Grammar and geography are the subjects least known.

ROMAN CATHOLIC.

APPIN :—Visited, 13th August, 1869.

Numbers present :—Boys, 20 ; girls, 12 ; total, 32.

1. There is no teacher's residence ; and the schoolroom is much in need of repairs. 2. The pupils are neither regular nor punctual. The general discipline is only moderate. 3. The instruction is not effective. 4. The general proficiency is very moderate.

CAMDEN :—Visited, 4th May, 1869.

Numbers present :—Boys, 24 ; girls, 22 ; total, 46.

1. The material condition is unsatisfactory. 2. The discipline is moderately healthy. 3. The teaching is carried on with industry, but the lesson documents are not well arranged, and the school work is not effective. 4. The proficiency is very moderate.

COOK'S RIVER :—Visited, 14th December, 1869.

Numbers present :—Boys, 21 ; girls, 35 ; total, 56.

1. Furniture excepted, the material condition is fairly satisfactory. 2. The discipline is moderate. 3. The teacher is energetic and painstaking. 4. The proficiency is tolerable.

CABRAMATTA :—Visited, 16th December, 1869.

Numbers present :—Boys, 11 ; girls, 12 ; total, 23.

1. The material condition is only moderate. 2. The regularity is unsatisfactory. The general tone of the school is moderately healthy. 3. The teaching is carried on with earnestness and moderate skill. 4. The proficiency is moderate.

JAMBEROO :—

JAMBEROO :—Visited, 3rd September, 1869.

Numbers present :—Boys, 36 ; girls, 17 ; total, 53.

1. The material condition is tolerably satisfactory. 2. The pupils are moderately regular and punctual. The general tone of the school is tolerably healthy. 3. Singing is not taught. Otherwise, the usual instruction is carried on with industry, but the work is not effective. 4. The proficiency is only tolerable.

LIVERPOOL :—Visited, 22nd April, 1869.

Numbers present :—Boys, 18 ; girls, 12 ; total, 30.

1. The teacher's residence should be enlarged, and new closets are needed ; otherwise, the material condition is fair. 2. The discipline is healthy. 3. The teacher is energetic, industrious, and fairly skilful. 4. The proficiency is fairly satisfactory.

MENANGLE :—Visited, 24th August, 1869.

Numbers present :—Boys, 22 ; girls, 22 ; total, 44.

1. The furniture is unsuitable ; otherwise, the material condition is fair. 2. The discipline is very moderate. 3. The teaching is very weak and ineffective. 4. The proficiency is small.

THE OAKS :—Visited, 17th December, 1869.

Numbers present :—Boys, 4 ; girls, 5 ; total, 9.

1. There is no residence ; otherwise, the material condition is fair. 2. The discipline is moderate. It had been raining heavily on the day of my visit—hence the small attendance. 3. The instruction is weak. 4. The proficiency is very moderate.

ROCKY POINT :—Visited, 15th December, 1869.

Numbers present :—Boys, 13 ; girls, 18 ; total, 31.

1. The material condition is fair. 2. The discipline and general tone of the school are tolerable. 3. The teaching is carried on with great earnestness, and with fair skill. 4. The proficiency (under the present teacher) is fair.

SHOALHAVEN :—Visited, 21st September, 1869.

Numbers present :—Boys, 18 ; girls, 16 ; total, 34.

1. The desks are unsuitable ; otherwise, the material condition is fairly satisfactory. 2. The discipline is very moderate. 3. The teaching is mechanical and ineffective. 4. The results are very moderate.

PRESBYTERIAN.

CAMPBELLTOWN :—Visited, 25th August, 1869.

Numbers present :—Boys, 15 ; girls, 15 ; total, 30.

1. The material condition of the school is unsatisfactory. The buildings are too small ; they are in bad repair, and, in their present state, they are unsuitable for even a small school. 2. The discipline is healthy. 3. The instruction is carried on with industry and tolerable skill. 4. The proficiency of the pupils is fair.

WESLEYAN.

GEORGE'S RIVER :—Visited, 10th June, 1869.

Numbers present :—Boys, 16 ; girls, 16 ; total, 32.

1. The desks are unsuitable and badly arranged. A teacher's residence and school out-buildings have not been provided. 2. The discipline is moderate. 3. The prescribed subjects are taught. The methods are tolerably appropriate, and moderately well applied. 4. The proficiency ranges from tolerable to fair.

ROCKY POINT :—Visited, 15th December, 1869.

Numbers present :—Boys, 17 ; girls, 17 ; total, 34.

1. The furniture is unsuitable, and there is no residence for the teacher ; otherwise, the material condition is good. 2. The discipline is moderate. 3. The instruction is given with great earnestness and industry, but the methods used are not appropriate. 4. The proficiency ranges from moderate to tolerable.

J. HUFFER,
Inspector.

DETAILED STATEMENT of the Condition of Certified Denominational Schools in the Cumberland District, inspected during the year 1869.

1.—CHURCH OF ENGLAND SCHOOLS.

BURWOOD :—Visited, 24th June.

Present at examination :—Boys, 34 ; girls, 29 ; total, 63.

1. The material condition of the school is good, and the organization generally is tolerably satisfactory. 2. The character of the attendance has somewhat improved since last year. The pupils are fairly clean, but not sufficiently diligent and self-reliant. 3. The teaching is animated, careful, and tolerably profitable. 4. The range of attainments is from tolerable to very fair.

CABRAMATTA :—

CABRAMATTA :—Visited, 23rd February.

Present at examination :—Boys, 26 ; girls, 15 ; total, 41.

1. The premises are in tolerably good condition, but too small ; the organization in other respects is fairly satisfactory. 2. The attendance is regular and punctual, and the children are upon the whole clean, orderly, and diligent. 3. The instruction embraces the prescribed subjects, and is imparted with earnestness and energy. 4. The character of the proficiency may be regarded as ranging from tolerable to very fair.

CASTLE HILL :—Visited, 11th June.

Present at examination :—Boys, 38 ; girls, 19 ; total, 57.

1. The organization, as a whole, is fairly satisfactory. 2. The attendance is tolerably regular and punctual. The children are generally clean and orderly. 3. Instruction is imparted in the prescribed subjects with earnestness and care. 4. The attainments are nearly fair.

EMU PLAINS :—Visited, 19th February.

Present at examination :—Boys, 46 ; girls, 20 ; total, 66.

1. The schoolroom remains in its unfinished, uncomfortable-looking state. 2. The attendance is neither sufficiently regular nor punctual. There is likewise considerable room for improvement in cleanliness, order, and general behaviour, although a change for the better has taken place since last examination. 3. The instruction is almost limited to the more ordinary subjects. The lesson documents are not constructed with due judgment and care, and in communicating knowledge there is a want of clearness and penetrativeness. 4. The proficiency ranks from moderate to fair.

ENFIELD :—Visited, 17th March.

Present at examination :—Boys, 24 ; girls, 18 ; total, 42.

1. The building is good, and better and more suitable furniture has been provided. 2. The discipline is fairly effective. 3. Instruction in the ordinary subjects is imparted with diligence and fair skill. 4. The attainments, as a whole, do not exceed tolerable.

KURRAJONG, NORTH :—Visited, 4th March.

Present at examination :—Boys, 25 ; girls, 20 ; total, 45.

1. The condition of the schoolhouse is unsatisfactory. 2. The discipline is tolerably healthy, and the moral aspect of the school is, upon the whole, pleasing. 3. Greater conformity to the standard of proficiency is required in constructing the lesson documents and imparting instruction. 4. The answering in the second-class was specially indifferent. The attainments in the other classes, as exhibited by their answering, vary between tolerable and fair.

KURRAJONG, SOUTH :—Visited, 5th March.

Present at examination :—Boys, 12 ; girls, 16 ; total, 28.

1. The material condition of the schoolroom has been very considerably improved. 2. The discipline is improved, but it has not yet secured that regularity of attendance, and that propriety of deportment on the part of the pupils, which are desirable as marking moral health in a school. 3. The instruction is too mechanical, not exercising and developing the mental faculties of the pupils so regularly and fully as it ought. 4. The attainments rank between tolerable and fair.

MARSFIELD :—Visited, 28th May.

Present at examination :—Boys, 39 ; girls, 24 ; total, 63.

1. The organization generally is satisfactory. 2. The attendance is tolerably regular and punctual, and the pupils are upon the whole clean, orderly, and diligent. 3. The required course of instruction is followed, and the work of teaching is faithfully and earnestly performed. 4. The attainments reach to fair.

MULGOA :—Visited, 22nd February.

Present at examination :—Boys, 18 ; girls, 8 ; total, 26.

1. The school buildings stand much in need of extensive repairs. 2. The pupils give very indifferent attendance, and they are deficient in attention and self-reliance. 3. As regards the matter of the instruction, the prescribed course is followed ; but in the manner of imparting it there is a want of animation and energy, which operates against its effectiveness. 4. The attainments are very moderate.

PARRAMATTA :—Visited, 27th May.

Present at examination :—Boys, 40 ; girls, 30 ; total, 70.

1. The whole material condition of the school is good. 2. Attendance is irregular and unpunctual. The pupils are, with few exceptions, deficient in cleanliness, order, and diligence. 3. Instruction is given in all the prescribed subjects, except vocal music. The methods employed are not lively and penetrative, and the practical skill is but moderate. 4. The range of the proficiency is from moderate to tolerable.

PENNANT HILLS :—Visited, 4th August.

Present at examination :—Boys, 47 ; girls, 39 ; total, 86.

1. The material organization of the school is satisfactory. 2. The attendance is tolerably regular and punctual, and the pupils generally are clean and orderly, but deficient in perseverance and self-reliance. 3. The instruction is by programmes, but it wants vigour and penetrativeness. The thinking and reasoning faculties of the pupils are little cultivated. 4. The attainments vary from tolerable to fair.

PRRT TOWN :—Visited, 22nd July.

Present at examination :—Boys, 24 ; girls, 13 ; total, 37.

1. The schoolroom is in fair condition, and suitably furnished. 2. The attendance is irregular. Upon the whole the pupils are clean, orderly, and diligent. 3. The prescribed course of instruction is followed, and the methods employed are profitable and fairly effective. 4. The attainments approach to fair.

RICHMOND :—Visited, 31st May and 1st June.

Present at examination :—Boys, 50 ; girls, 36 ; total, 86.

1. A new and more suitable school building is very much wanted. 2. The discipline is fairly healthy, and the moral aspect of the school is generally pleasing. 3. Instruction in all the prescribed subjects is imparted with painstaking care and fair practical skill. 4. The proficiency, upon the whole, ranges from fair to very fair.

ROUSE HILL :—Visited, 22nd April.

Present at examination :—Boys, 22 ; girls, 20 ; total, 42.

1. The building is good, but very unsuitably furnished. 2. The attendance is tolerably regular and punctual. Improvement is required in matters of cleanliness and order. 3. The instruction is fairly regulated. 4. The attainments are fair.

RXDE :—Visited, 21st October.

Present at examination :—Boys, 13 ; girls, 21 ; total, 34.

1. The schoolhouse has received some repairs since the date of last inspection. 2. The attendance is regular and tolerably punctual. The pupils are moderately clean and orderly, but they do not evince much mental culture. 3. The instruction wants regularity and penetrativeness. 4. The proficiency ranges from moderate to tolerable.

SEVEN HILLS :—Visited, 13th April.

Present at examination :—Boys, 32 ; girls, 22 ; total, 54.

1. The material organization is fairly satisfactory. 2. Upon the whole, the attendance is regular and punctual, and the pupils generally are clean, orderly, and diligent. 3. The prescribed subjects are taught, and since the date of last inspection an improvement is apparent in the working of the school. 4. The proficiency is nearly fair.

SOUTH CREEK :—Visited, 27th August.

Present at examination :—Boys, 38 ; girls, 35 ; total, 73.

1. The schoolroom is too small and imperfectly furnished. 2. The attendance is regular and fairly punctual, the children generally are clean, but neither orderly nor diligent. 3. The instruction is not well regulated, nor profitably imparted. 4. The attainments are very little beyond tolerable.

WILBERFORCE :—Visited, 14th July.

Present at examination :—Boys, 19 ; girls, 28 ; total, 47.

1. The condition of the school materially, is, upon the whole, satisfactory. 2. The attendance is fairly regular and punctual. With a few exceptions the pupils are clean, orderly, and tolerably diligent. 3. Instruction in the prescribed subjects is communicated with steadiness and care. 4. The attainments make a close approach to fair.

WINDSOR :—Visited, 6th May.

Present at examination :—Boys, 34 ; girls, 24 ; total, 58.

1. The material condition of the school is reasonably good, and the organization as a whole is tolerably satisfactory. 2. The pupils do not attend so regularly and punctually as might be expected. They are fairly clean and attentive. 3. The prescribed course is followed as to the subjects of instruction, and the methods employed are tolerably appropriate. 4. The proficiency is nearly fair.

2.—ROMAN CATHOLIC SCHOOLS.

CONCORD :—Visited, 23rd June.

Present at examination :—Boys, 31 ; girls, 8 ; total, 39.

1. The organization is not satisfactory. The arrangement of the furniture is unsuitable, and the classification of the pupils is injudicious. 2. The attendance is irregular, and the order and diligence of the pupils are but indifferent. 3. The instruction is limited to the more ordinary subjects. The programmes are imperfect, and the methods employed in teaching are not effective. 4. The attainments are nearly tolerable.

ERMINGTON :—Visited, 26th August.

Present at examination :—Boys, 14 ; girls, 12 ; total, 26.

1. The schoolroom is good and fairly furnished. 2. The attendance is irregular. The children are moderately clean and orderly. 3. The instruction embraces all the prescribed subjects, except music. The classification is more appropriate, and the lesson documents are better arranged than at the date of last inspection. 4. The attainments vary from tolerable to fair.

GREENDALE :—Visited, 25th February.

Present at examination :—Boys, 14 ; girls, 15 ; total, 29.

1. Materially viewed, this school is tolerably well organized. 2. The discipline is feeble, as evidenced by the very unsatisfactory character of the attendance. 3. The instruction is tolerably regulated, and the work of the school is carried on with moderate skill. 4. The proficiency is nearly tolerable.

KURRAJONG :—

KURRAJONG:—Visited, 19th March.

Present at examination :—Boys, 11 ; girls, 20 ; total, 31.

1. As regards material appliances, the condition of the school is tolerably satisfactory. 2. The pupils are very irregular in their attendance, and they are generally wanting in cleanliness, order, and diligence. 3. The instruction is confined to the more ordinary subjects. The time and attention of the pupils are not fully or profitably occupied. 4. The progress is about moderate.

LANE COVE:—Visited, 2nd September.

Present at examination :—Boys, 16 ; girls, 14 ; total, 30.

1. The school is not well organized. The arrangement of the pupils is very unsatisfactory. 2. The attendance is bad, and the general appearance and demeanour of the children are not indicative of healthful training. 3. The more elementary subjects are introduced. The teaching is marked by little method or skill. 4. The proficiency attained ranks from very moderate to tolerable.

NELSON:—Visited, 14th April.

Present at examination :—Boys, 15 ; girls, 15 ; total, 30.

1. Better furniture has been provided, but in other particulars the organization is unimproved. 2. The children display little interest in their work ; they are neither orderly, thoughtful, nor industrious. 3. The instruction is of a mechanical and superficial kind. The children do not receive it. 4. The proficiency is, as a whole, little over moderate.

PARRAMATTA:—Visited, 4th June.

Present at examination :—Boys, 43 ; girls, 28 ; total, 71.

1. The organization is not satisfactory. The furniture, such as it is, is badly arranged, and a wooden partition, by which the schoolroom is divided into two, prevents the teacher from exercising proper supervision over the whole of the pupils. 2. The attendance is neither regular nor punctual ; effective discipline is not maintained. 3. The instruction is wanting in animation and energy. Methods are too mechanical. 4. The attainments rank from moderate to tolerable.

PENRITH:—Visited, 28th July.

Present at examination :—Boys, 40 ; girls, 42 ; total, 82.

1. The schoolroom is too small, in indifferent repair, and unsuitably furnished. 2. The attendance is tolerably regular. As a whole, the pupils are fairly clean, but neither orderly nor industrious. 3. The classification is irregular, and the teaching has developed but little self-reliance and mental culture even in the more advanced pupils. 4. The proficiency ranks from moderate to tolerable.

PETERSHAM:—Visited, 30th July.

Present at examination :—Boys, 19 ; girls, 16 ; total, 35.

1. The furniture of the schoolroom has been improved, but the organization as a whole, is not satisfactory. 2. The attendance is neither regular nor punctual, and the pupils generally are disorderly, noisy, and inattentive. 3. The methods of imparting instruction are obsolete and ineffective. 4. The attainments rank from indifferent to moderate.

RICHMOND:—Visited, 18th March.

Present at examination :—Boys, 28 ; girls, 23 ; total, 51.

1. The material organization of the school has been improved. 2. The discipline is weak. The pupils are neither regular nor punctual, and they are deficient in attention, industry, and self-reliance. 3. The methods employed in teaching are mechanical, and do not secure the reception of the lessons given. 4. The attainments are but moderate.

RYDE:—Visited, 22nd October.

Present at examination :—Boys, 18 ; girls, 8 ; total, 26.

1. The school is tolerably organized. 2. The pupils attend irregularly, and they are remarkable for neither cleanliness, order, nor industry. 3. Instruction is imparted with considerable earnestness and vigour. 4. The attainments are about tolerable. The present teacher has been but a short time in charge.

SOUTH CREEK:—Visited, 15th April.

Present at examination :—Boys, 13 ; girls, 17 ; total, 30.

1. The whole organization of this school is bad. 2. The attendance is very irregular. The pupils are tolerably clean, but noisy, disorderly, and negligent. 3. The more elementary subjects are professedly taught, but the work is carried on so irregularly as to produce little good effect. 4. The attainments are very indifferent.

VILLA MARIA:—Visited, 5th November.

Present at examination :—Boys, 16 ; girls, 13 ; total, 29.

1. The schoolroom is good and fairly furnished. 2. The discipline is feeble, not securing proper order and diligent working among the pupils. 3. The instruction is deficient in penetrativeness. Methods are mechanical, and applied with little life and energy. 4. The proficiency is, upon the whole, about tolerable. The present teacher is but in temporary charge.

WINDSOR:—Visited, 18th May.

Present at examination :—Boys, 45 ; girls, 42 ; total, 87.

1. The schoolroom is too small, and not well furnished. 2. The attendance is fair, and the pupils generally are clean, orderly, and fairly diligent. 3. The subjects of instruction are those prescribed, and the work of teaching is performed with energy and diligence. 4. The proficiency ranks from tolerable to very fair.

3.—PRESBYTERIAN SCHOOLS.

PARRAMATTA :—Visited, 20th May.

Present at examination :—Boys, 31 ; girls, 32 ; total, 63.

1. The material condition of this school is very unsatisfactory. The pupils are assembled in two small rooms, and proper supervision on the part of the teacher is impossible. 2. The attendance is tolerably satisfactory, and the pupils, as a whole, are clean, orderly, and fairly diligent. 3. The prescribed course is followed, and the instruction is imparted with care and earnestness. 4. The attainments range from tolerable to very fair.

PARRAMATTA JUNCTION :—Visited, 14th May.

Present at examination :—Boys, 26 ; girls, 28 ; total, 54.

1. The schoolroom is good, and fairly supplied with furniture and apparatus. 2. Discipline is feebly administered, and the pupils are noisy and not industrious. 3. The teaching produces little mental culture. 4. The attainments may be regarded as about tolerable.

PORTLAND HEAD :—Visited, 23rd July.

Present at examination :—Boys, 16 ; girls, 12 ; total, 28.

1. The schoolroom is good, but the furniture and classes are badly arranged. 2. The attendance is tolerably regular, and the pupils are clean, but neither orderly nor diligent. 3. The instruction is diligently but feebly imparted. 4. The attainments rank from moderate to tolerable.

WINDSOR :—Visited, 27th April.

Present at examination :—Boys, 16 ; girls, 12 ; total, 28.

1. The material state of the school is fairly satisfactory. 2. The pupils are fairly regular and punctual, and generally they are clean and well conducted. 3. Instruction is given in the prescribed subjects, and the methods employed are tolerably appropriate. 4. The proficiency reaches to fair.

4.—WESLEYAN SCHOOLS.

CASTLEREAGH :—Visited, 23rd April.

Present at examination :—Boys, 20 ; girls, 25 ; total, 45.

1. The schoolroom is good, but the furniture is much in need of repair. 2. The discipline is weak. The pupils are noisy, disorderly, and indolent. 3. The instruction is imparted with little energy and skill. 4. The proficiency is barely moderate.

HOENSBY :—Visited, 2nd September.

Present at examination :—Boys, 19 ; girls, 10 ; total, 29.

1. The schoolroom is a fairly suitable building, but the furniture is badly arranged. 2. The attendance is somewhat irregular. The pupils generally are clean, attentive, and diligent. 3. The business of the school is carried on with tolerable energy and earnestness. 4. The attainments rank from tolerable to fair.

LANE COVE :—Visited, 1st September.

Present at examination :—Boys, 13 ; girls, 26 ; total, 39.

1. The furniture is very unsuitably arranged, and the organization generally is not satisfactory. 2. The attendance is moderately regular, and the pupils are clean and orderly, but not industrious. 3. Appropriate methods, tact, and energy are to a considerable extent wanting in the management of the school. 4. The proficiency varies between moderate and fair.

PARRAMATTA :—Visited, 21st May.

Present at examination :—Boys, 30 ; girls, 3 ; total, 33.

1. The schoolroom requires considerable repairs. 2. The discipline is not effective. 3. Instruction is given in the prescribed subjects. Whilst the methods are tolerably appropriate, they are not applied with sufficient earnestness and vigour. 4. The proficiency ranges from tolerable to fair.

WINDSOR :—Visited, 4th May.

Present at examination :—Boys, 40 ; girls, 16 ; total, 56.

1. The whole organization is fairly satisfactory. 2. The discipline is firm, and on the whole effective. 3. The prescribed course of instruction is followed ; and the methods in use are appropriate. 4. The proficiency ranks from fair to very fair.

ALEXR. L. FORBES, A.M.,

Inspector.

GOULBURN DISTRICT—INSPECTOR'S GENERAL REPORT UPON DENOMINATIONAL SCHOOLS FOR 1869.

CERTIFIED DENOMINATIONAL SCHOOLS.

THE following remarks are abridged statements of my detailed reports upon the condition of the Denominational Schools inspected by me from 17th March to 31st December, 1869. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning.

CHURCH OF ENGLAND SCHOOLS.

MORUYA :—Visited, 17th March.

Numbers of pupils enrolled :—Boys, 47 ; girls, 49 ; total, 96.
Present at examination :—Boys, 40 ; girls, 43 ; total, 83.

This school is held in the English Church. The building is suitable, and the organization is good. The cleanliness, order, attention, and general discipline are fair. The course of instruction is judicious, and the attainments of the pupils are tolerably satisfactory. Many of the scholars have been recently admitted.

KIORA :—Visited, 18th March.

Numbers of pupils enrolled :—Boys, 20 ; girls, 32, total, 52.
Present at examination :—Boys, 15 ; girls, 24 ; total, 39.

The situation of this school is central, and the building is in fair repair, but the furniture, apparatus, and books, are insufficient and badly arranged. The pupils are inattentive and ill-behaved, and the general discipline is unsatisfactory. No pupils have been promoted during the year 1868, and their attainments are miserable. The organization, discipline, and instruction of this school are in a deplorable condition.

ARALUEN :—Visited, 27th July.

Numbers of pupils enrolled :—Boys, 29 ; girls, 22 ; total, 51.
Present at examination :—Boys, 25 ; girls, 17 ; total, 42.

The schoolroom is in bad repair ; the grounds are not fenced ; there are no closets fit for use ; and desks and hat-pegs are required. The cleanliness is very unsatisfactory ; the pupils are unpunctual and very ill-behaved. There are no programmes, nor time-tables to regulate the school work, and the pupils make very little or no progress in learning. The organization, discipline, and instruction of this school are very unsatisfactory. The teacher is incompetent for his office.

MARULAN :—Visited, 31st August.

Numbers of pupils enrolled :—Boys, 43 ; girls, 24 ; total, 67.
Present at examination :—Boys, 35 ; girls, 19 ; total, 54.

The school is held in the English Church. The building needs some repairs, and additional desks and hat-pegs are still wanting. The pupils are clean and orderly, and attentive to their work. The instruction is well regulated, and the attainments of the pupils are fairly satisfactory.

SUTTON FOREST :—Visited, 15th September.

Numbers of pupils enrolled :—Boys, 29 ; girls, 28 ; total, 57.
Present at examination :—Boys, 23 ; girls, 25 ; total, 48.

This school is held in the English Church. It is a spacious building, but the furniture is unsuitable and badly arranged. The general discipline admits of much improvement, and the attainments of the pupils are but moderately efficient. The teacher is industrious, but his methods of tuition are defective. He requires a course of training.

WINGECARRIBEE :—Visited, 23rd September.

Numbers of pupils enrolled :—Boys, 24 ; girls, 31 ; total, 55.
Present at examination :—Boys, 15 ; girls, 24 ; total, 39.

This school is held in the English Church. The building is suitable and well supplied with the necessary appliances, but out-buildings are much needed. The pupils are not punctual, but the discipline is passable in other respects. The attainments of the scholars are fair.

GOULBURN, NORTH :—Visited, 4th October.

Numbers of pupils enrolled :—Boys, 38 ; girls, 40 ; total, 78.
Present at examination :—Boys, 23 ; girls, 39 ; total, 62.

The material condition of this school is tolerably good. About three-fourths of the pupils enrolled are regular in attendance, and the order, attention, and cleanliness are passable. The time-table is informal in some respects, but all the usual subjects are taught. The attainments of the pupils are tolerable, and more satisfactory than last year.

GOULBURN :—Visited, 29th October.

Numbers of pupils enrolled :—Boys, 65 ; girls, 49 ; total, 114.
Present at examination :—Boys, 50 ; girls, 38 ; total, 88.

This school is situated in a central and picturesque position. The schoolroom is sufficient in size, and well furnished, and there is a good stock of apparatus and books. The playgrounds are not fenced. All the ordinary branches are taught, with algebra and geometry to the advanced boys. The general discipline is very fair, and the attainments of the pupils are good. The assistant teacher performs her duty with attention and care.

BOMBALA :—Visited, 29th November.

Numbers of pupils enrolled :—Boys, 19 ; girls, 23 ; total, 42.
Present at examination :—Boys, 15 ; girls, 16 ; total, 31.

The schoolroom is in fair repair and sufficient in size, but the furniture is unsuitable and badly arranged. The pupils are unpunctual in attendance ; the course of instruction is badly arranged, and the progress of the pupils in learning is very unsatisfactory. The general management of this school needs much improvement.

BEGA :—

BEGA :—Visited, 7th December.

Numbers of pupils enrolled :—Boys, 40 ; girls, 25 ; total, 65.
Present at examination :—Boys, 29 ; girls, 12 ; total, 41.

The material condition of the school is fairly satisfactory in most respects, but an additional closet, a book-press, and repairs to the fencing are required. The general discipline and progress of the scholars in learning are nearly tolerable in most respects.

ROMAN CATHOLIC SCHOOLS.

MORUYA (Girls' Department) :—Visited, 15th March.

Number of pupils enrolled :—71.
Present at examination :—65.

The schoolroom is rather small, but it is in good repair. The furniture is not quite sufficient, but there is a good stock of apparatus and books. The order, cleanliness, and attention of the pupils are satisfactory. The teacher is skilful, diligent, and painstaking in the discharge of her duty. The instruction is well arranged, and the general attainments of the scholars are fair.

MORUYA (Boys' Department) :—Visited, 16th March.

Number of pupils enrolled :—57.
Present at examination :—52.

The schoolroom is too small, and the out-buildings are not suitably situated, but in other respects the material condition of the school is passable. The general discipline and instruction of the pupils are tolerably satisfactory.

NERRIGUNDAH :—Visited, 22nd March.

Numbers of pupils enrolled :—Boys, 38 ; girls, 24 ; total, 62.
Present at examination :—Boys, 37 ; girls, 21 ; total, 58.

The roof of the schoolroom needs some repairs ; and a more suitable playground, a book-press, and a supply of slates are required. The cleanliness is passable, but the children are rather talkative, and the general discipline admits of some improvement. The teaching is conducted with earnestness and intelligence, and the attainments of the pupils are tolerably satisfactory.

BRAIDWOOD :—Visited, 21st September.

Numbers of pupils enrolled :—Boys, 37 ; girls, 46 ; total, 83.
Present at examination :—Boys, 25 ; girls, 35 ; total, 60.

The schoolroom is an old building, but it is in habitable repair, and the material condition is in other respects passable. About three-fourths of the pupils are regular in attendance ; many of them are not sufficiently punctual, but the cleanliness and order are tolerable. The occupations of the pupils are not well arranged, and the attainments are barely tolerable.

ABALUEN :—Visited, 29th July.

Numbers of pupils enrolled :—Boys, 61 ; girls, 69 ; total, 130.
Present at examination :—Boys, 47 ; girls, 53 ; total, 100.

The school is held in the Roman Catholic Chapel. It is suitable, well furnished, and there is a good stock of apparatus and books. The clock is not a good time-keeper. The pupils are in most cases clean, punctual, and attentive to their work. Vocal music and drawing are not taught ; but considering the limited amount of teaching power and the ages of the pupils, the progress in the other branches is fairly satisfactory in most respects.

JEMBAICUMBENE :—Visited, 4th August.

Numbers of pupils enrolled :—Boys, 31 ; girls, 40 ; total, 71.
Present at examination :—Boys, 26 ; girls, 27 ; total, 53.

The grounds need fencing, but the schoolroom has been repaired and some additional furniture supplied since my last inspection. There is a sufficient stock of working materials. About half the pupils are regular in attendance, and many of them are still very unpunctual. The cleanliness and order, although more satisfactory than last year, still admit of great improvement. The attainments of the pupils range from moderate to tolerable.

REIDSDALE :—Visited, 5th August.

Numbers of pupils enrolled :—Boys, 26 ; girls, 34 ; total, 60.
Present at examination :—Boys, 17 ; girls, 18 ; total, 35.

The grounds are fenced, and there are suitable closets, but the schoolroom still needs some repairs. New desks have been supplied since my last inspection, but a bell, a book-press, and hat-pegs are needed. Many of the pupils are unpunctual. In some cases they are not sufficiently clean, but the order and attention are passable. The teaching appears to be conducted with considerable intelligence and skill, and the attainments of the pupils are fair.

GOULBURN (Boys' Department) :—Visited, 21st October.

Number of pupils enrolled :—104.
Present at examination :—81.

The material condition of this school is good. The playground has been enlarged, and some new furniture supplied since my last inspection. The general discipline has been improved during the year. All the usual subjects are taught with the elements of geometry, and the average proficiency of the pupils is tolerably satisfactory. The *special religious instruction* is not confined to the time specified in Article 73 of the Council's Regulations, but the teacher has promised to correct this irregularity. The assistant teacher is attentive to his duty.

GOULBURN (Girls' and Infants' Departments) :—Visited, 3rd and 4th November.

Numbers of pupils enrolled :—Boys, 24 ; girls, 104 ; total, 128.
Present at examination :—Boys, 11 ; girls, 81 ; total, 92.

This school is held in a building attached to the Convent of the Sisters of Mercy. The schoolroom is rather small, and the furniture and infant gallery are not very suitable, nor conveniently arranged for teaching. A new schoolroom is in course of erection. The playground is too small, but there is a fair stock of working materials. All the usual subjects are taught, and the teachers are much interested in the education and moral training of the pupils, but with all many of the scholars are not punctual, and the order needs improvement. The writing is fair, but the reading is indistinct ; the arithmetic is not well taught, but the attainments in the other branches are tolerable. The scholars are not properly classified, and the instruction does not accord with the "Standards of Proficiency." The *special religious instruction* is not confined to the proper time, but the teacher has promised to correct this irregularity.

MITTAGONG :—

MITTAGONG :—Visited, 6th September.

Numbers of pupils enrolled :—Boys, 23 ; girls, 30 ; total, 53.

Present at examination :—Boys, 15 ; girls, 23 ; total, 38.

The material condition of this school is passable, but the discipline and instruction are very unsatisfactory. Reading books not sanctioned by the Council are in use, and the special religious instruction is not confined to the proper time. The most objectionable feature in the management of this school is, that the religious teaching is given to all the pupils—twenty-one of the fifty-three enrolled being Protestants—but the teacher has promised to correct this irregularity, and conform to the Council's Regulations.

BERRIMA :—Visited, 9th September.

Numbers of pupils enrolled :—Boys, 22 ; girls, 31 ; total, 53.

Present at examination :—Boys, 8 ; girls, 16 ; total, 24.

The schoolroom is not of sufficient width and the play-ground needs fencing. The general discipline and progress of the pupils in learning are tolerably satisfactory. All the usual subjects are taught, except vocal music. The teacher is industrious and painstaking in the discharge of his duty. The small attendance of scholars on the day of my visit was caused by a heavy fall of snow.

SUTTON FOREST :—Visited, 16th September.

Numbers of pupils enrolled :—Boys, 19 ; girls, 11 ; total, 30.

Present at examination :—Boys, 17, girls, 9 ; total, 26.

The schoolroom is sufficient in size and in fair repair, but the walls are in much need of white-washing. The working materials are sufficient, but the furniture is not well arranged. The pupils are restless and talkative, and the attention and cleanliness admit of improvement. I estimate the proficiency of the pupils as nearly passable.

PRESBYTERIAN SCHOOLS.**ARALUEN :—Visited, 28th July.**

Numbers of pupils enrolled :—Boys, 69 ; girls, 50 ; total, 119.

Present at examination :—Boys, 64 ; girls, 48 ; total, 112.

The material condition of this school is bad, but excellent buildings are in course of erection, and when complete this school will be closed, and a Public School established. The discipline is efficient, the instruction is well regulated, and the attainments of the pupils are fairly satisfactory.

W. MCINTYRE,

Inspector of Schools.

Goulburn, 12 February, 1870.

MAITLAND DISTRICT.

DETAILED STATEMENT, showing the condition of the Certified Denominational Schools inspected as regards—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

CHURCH OF ENGLAND SCHOOLS.**BISHOP'S BRIDGE :—Visited, 22nd December.**

Numbers present at examination :—Boys, 14 ; girls, 21 ; total, 35.

1. The premises are in good condition, and the schoolroom is moderately well organized, but deficient in ventilation. 2. The moral aspect of the school is pretty fair. 3. The classification is judicious, the occupation appropriate, the instruction intelligent and tolerably effective. 4. The general proficiency ranges from moderate to tolerable.

BLANDFORD :—Visited, 9th August.

Numbers present at examination :—Boys, 7 ; girls, 7 ; total, 14.

1. The premises are in a bad state, and the organization of the school is very defective. 2. The pupils are docile and well-behaved, but poorly attentive and ignorant of order. 3. The classification is unsuitable, the occupation injudicious, the instruction weak, wandering, and ineffectual. 4. The pupils know almost nothing.

BROKE :—Visited, 4th May.

Numbers present at examination :—Boys, 16 ; girls, 24 ; total, 40.

1. The schoolroom is in good repair, and fairly supplied with furniture, apparatus, and books. 2. The younger children are noisy ; but otherwise the discipline has much improved. 3. The classification is judicious, the occupation appropriate, the instruction intelligent and tolerably effective. 4. The general proficiency ranges from moderate to tolerable.

CASSILES :—Visited, 25th August.

Numbers present at examination :—Boys, 19 ; girls, 10 ; total, 29.

1. The schoolroom is in good repair, but very unsuitably organized. The out-offices are insufficient and in bad condition. 2. The manners and attention of the pupils have improved a little, but their order, as a whole, is decidedly bad, and the entire discipline very ineffective. 3. The standard is not observed, the regulations are unheeded, the occupation is desultory and undefined, and the instruction proceeds entirely by rote. 4. In reading and writing a few pupils evince a passable knowledge ; but the general proficiency is bad.

DENMAN :—Visited, 21st September.

Numbers present at examination :—Boys, 19 ; girls, 23 ; total, 42.

1. The schoolroom is now fairly suitable and sufficient, and provided with a reasonable supply of furniture, apparatus, and books. 2. The pupils are deficient in regularity, tidiness, and order, but the moral aspect of the school is tolerable. 3. The occupation is suitable, but carelessly arranged ; the teaching is conscientious, but poorly effectual. 4. The general proficiency is moderate.

HINTON :—

HINTON :—Visited, 13th December.

Numbers present at examination :—Boys, 22 ; girls, 19 ; total, 41.

1. The condition of the premises and the organization of the school are in all respects tolerable.
2. The moral tone of the school is pretty fair.
3. The occupation is fairly appropriate and judiciously regulated ; the instruction is earnest but unskilful.
4. The general proficiency ranges from tolerable to indifferent.

JERRY'S PLAINS :—Visited, 22nd September.

Numbers present at examination :—Boys, 27 ; girls, 23 ; total, 50.

1. The material condition of the school is now fair.
2. The moral tone of the school is tolerable and manifests considerable improvement.
3. The occupation is suitable, but not precisely set forth ; the methods are fairly intelligent and vigorous.
4. The average proficiency ranges from moderate to tolerable.

LAGUNA :—Visited, 14th May.

1. The building is tolerable, but the organization very defective.
2. The moral aspect of the school is tolerable.
3. The pupils are properly classed and suitably employed ; the instruction, though mechanical, is tolerably intelligent and interesting.
4. The knowledge and mental culture are, for the most part, tolerable.

MAITLAND, EAST :—Visited, 20th and 21st October.

Numbers present at examination :—Boys, 58 ; girls, 32 ; total, 90.

1. The building is suitable, in excellent condition, and fairly organized.
2. The pupils are unsteady, inattentive, and noisy in their habits, but pretty orderly in their movements. The discipline, as a whole, wants vigor and influence.
3. The occupation is appropriate and pretty well arranged, and the methods in themselves are tolerably intelligent.
4. The general proficiency ranges from moderate to tolerable.

MAITLAND, WEST (St. Mary's) :—Visited, 16th and 17th November.

Numbers present at examination :—Boys, 69 ; girls, 66 ; total, 135.

1. The premises are in good condition, and the school is well provided with requisites, books excepted.
2. The moral aspect of the school is good.
3. The instruction is appropriate, and arranged with fair judgment ; the methods are intelligent, judicious, and fairly effective.
4. In numerous instances the proficiency ranges from fair to good ; upon the whole it is tolerable.

MAITLAND, WEST (St. Paul's) :—Visited, 2nd November.

Numbers present at examination :—Boys, 38 ; girls, 34 ; total, 72.

1. The premises are in fair condition, and the organization of the school is tolerable.
2. Many of the children are untidy and inattentive ; but, in general, their conduct and order are tolerable, and evince a considerable improvement.
3. The occupation is, for the most part, suitable, but rather injudiciously arranged ; the instruction is tolerably intelligent, but not effectual.
4. The proficiency and mental culture are, upon the whole, poor.

MORPETH (Primary) :—Visited, 2nd December.

Numbers present at examination :—Boys, 20 ; girls, 18 ; total, 38.

1. The fencing and out-buildings need repairs ; otherwise, the premises are in good condition, and the school is fairly organized.
2. The moral character of the school is fair.
3. The occupation is suitable, and for the most part judiciously regulated ; the instruction is intelligent and reasonably effective.
4. The general proficiency ranges from tolerable to fair.

MORPETH (Infants) :—Visited, 3rd December.

Numbers present at examination :—Boys, 20 ; girls, 29 ; total, 49.

1. The building is in good order, and the supply of furniture and apparatus tolerable.
2. The appearance, attention, and order of the pupils have somewhat improved. The moral tone is tolerable.
3. The occupation is fairly appropriate ; but the instruction, though earnest, is very monotonous.
4. The general proficiency is tolerable.

MUSCLEBROOK :—Visited, 21st and 22nd July.

Numbers present at examination :—Boys, 50 ; girls, 42 ; total, 92.

1. The premises are in good order, and the organization of the school is fair.
2. The demeanour of the pupils is not satisfactorily respectful, steady, and subdued ; otherwise, their moral bearing is tolerable.
3. The occupation is fairly suitable and well arranged ; the methods vary in value from tolerable to bad.
4. A few of the elder pupils answer well ; but the general proficiency is much below the standard.

SCONE :—Visited, 5th and 6th August.

Numbers present at examination :—Boys, 32 ; girls, 43 ; total, 75.

1. The buildings are in fair condition, but the organization of the school is only tolerable ; new desks in course of preparation.
2. The moral aspect of the school is pretty fair ; but the general deportment of the pupils is rather bustling.
3. The occupation is appropriate and fairly well arranged ; the instruction is intelligent, earnest, and impressive, but not sufficiently individual.
4. A few children answer with tolerable intelligence and ease, but the average proficiency is small for the enrolment of the pupils.

SINGLETON :—Visited, 29th and 30th November.

Numbers present at examination :—Boys, 92 ; girls, 54 ; total, 146.

1. The premises are in excellent condition, suitable, and abundantly provided with requisites.
2. The discipline is effective, and the moral tone high.
3. The pupils are skilfully classed and appropriately occupied. The instruction is intelligent, animated, and zealous, but, in some points, not judicious.
4. In several instances the proficiency ranges from fair to good, but, on the average, from moderate to tolerable.

WOODVILLE :—

WOODVILLE :—Visited, 24th March.

Numbers present at examination :—Boys, 12 ; girls, 14 ; total, 26.

1. The buildings are good, and the school is fairly organized. 2. The children are noisy, inattentive, and disorderly ; and the discipline is very ineffective. 3. The prescribed subjects are taught, but carelessly arranged. The methods are feeble and ineffectual. 4. To a partial extent the proficiency is very moderate, but, for the most part, bad.

ROMAN CATHOLIC SCHOOLS.

BLANDFORD :—Visited, 10th August.

Numbers present at examination :—Boys, 30 ; girls, 20 ; total, 50.

1. The school is in good condition, and tolerably well organized. 2. The appearance, attention, and order of the pupils are tolerable. 3. The occupation is constant, appropriate, and fairly regulated. The methods are tolerably intelligent and effectual. 4. The general proficiency ranges from moderate to fair.

LOCHINVAR :—Visited, 15th December.

Numbers present at examination :—Boys, 24 ; girls, 17 ; total, 41.

1. The state of the building continues satisfactory, and the organization tolerable. 2. The moral tone of the school is fair. 3. The subjects are appropriate, and arranged with fair judgment. The methods are earnest and intelligent, but too diffuse. 4. The proficiency is, for the most part, moderate.

MAITLAND, EAST (Boys):—Visited, 13th and 14th October.

Number present at examination :—Boys, 59.

1. In essential respects the building is good ; but a verandah and minor repairs are much needed. The organization is tolerable. 2. The moral character of the school is fairly satisfactory. 3. The subjects are suitable and arranged with fair judgment. The instruction is fairly skilful and effective. 4. Reading, writing, and arithmetic are taught with some success ; but the general proficiency does not exceed moderate.

MAITLAND, EAST (Girls):—Visited, 14th and 15th October.

Number present at examination :—Girls, 55.

1. A verandah is required ; otherwise, the accommodation is sufficient and suitable, and the organization fair. 2. The pupils are clean, attentive, and orderly. 3. The occupation is suitable and tolerably well arranged. The instruction is tolerably intelligent, impressive, and effectual. 4. To a partial extent the answering ranged from fair to good ; upon the whole, from moderate to tolerable.

MAITLAND, WEST (Boys):—Visited, 27th to 29th October.

Number present at examination :—Boys, 130.

1. The room is inadequate to the requirements ; but in good repair, fairly furnished, and well stocked with appliances. 2. The discipline needs precision ; but the moral aspect of the school is fair. 3. The subjects are appropriate, regulated with fair judgment, and taught with energy and skill. 4. The average proficiency ranges from moderate to tolerable.

MAITLAND, WEST (Girls):—Visited, 3rd to 5th November.

Number present at examination :—Girls, 100.

1. The room is rather small, but very suitable and well organized. 2. The discipline is excellent, and the moral tone very high. 3. The occupation is suitable and well regulated ; the instruction skilful, intelligent, and effective. 4. Satisfactory progress has been made, but the average proficiency does not exceed moderate.

MAITLAND, WEST (Infants) :—Visited, 8th November.

Numbers present at examination :—Boys, 27 ; girls, 73 ; total, 100.

1. The room is too small, and the supply of furniture insufficient ; otherwise, the material state of the school is fair. 2. The discipline is effective, and the moral character of the school very fair. 3. The subjects are appropriate and well arranged ; the methods, intelligent, skilful, and well applied. 4. The average proficiency ranges from moderate to fair, and manifests a satisfactory degree of mental culture.

MOBFETH :—Visited, 9th and 10th December.

Numbers present at examination :—Boys, 53 ; girls, 46 ; total, 99.

1. The schoolroom is in good repair and tolerably well organized. The playground is suitable and pretty well appointed. 2. The general order of the school is very fair, but regularity is not well observed. 3. The occupation accords with the standard. The instruction is fairly intelligent and skilful. 4. The general proficiency is tolerable.

MUSCLEBROOK :—Visited, 20th July.

Numbers present at examination :—Boys, 28 ; girls, 25 ; total, 53.

1. The building is in good repair, and provided with a fair supply of suitable requisites. 2. The moral aspect of the school is fair. 3. Most of the prescribed subjects are taught, and, on the whole, pretty well arranged ; the instruction is intelligent and fairly effective. 4. For their time of enrolment the pupils evince a creditable knowledge of the principal subjects.

PHOENIX PARK :—Visited, 14th December.

1. The state of the premises, the accommodation, and supply of materials, are tolerable for the place. 2. The pupils are, for the most part, untidy and irregular, but in other respects their discipline is moderate and shows improvement. 3. The classification and occupation are moderately judicious ; the instruction is tolerably intelligent, but not sufficiently collected and to the point. 4. The general proficiency varies from moderate to tolerable.

SINGLETON :—

SINGLETON :—Visited, 24th and 25th November.

Numbers present at examination :—Boys, 68 ; girls, 76 ; total, 144.

1. The schoolroom is an excellent building, suitable, sufficient, and fairly equipped. 2. The discipline and moral character of the school maintain their previous high standing. 3. The classification and occupation continue satisfactory, and the instruction is fairly intelligent, skilful, and zealous. 4. The general proficiency ranges from moderate to fair.

PRESBYTERIAN SCHOOL.

MAITLAND, WEST :—Visited, 18th November.

Numbers present at examination :—Boys, 38 ; girls, 22 ; total, 60.

1. A very good schoolroom, suitable and well organized. 2. The discipline has considerably improved, and the moral tone of the school is fairly satisfactory. 3. The subjects accord with the standard, are regulated with fair judgment, and carefully imparted ; but the methods are rather slow and diffident. 4. The general proficiency is about tolerable.

WESLEYAN SCHOOL.

MAITLAND, WEST :—Visited, 11th to 15th November.

Numbers present at examination :—Boys, 61 ; girls, 45 ; total, 106.

1. The school accommodation is suitable and abundant ; but the furniture is old and unserviceable. The apparatus and books are in fair supply. 2. Noisy and talkative habits are to some extent prevalent ; but the general demeanour, attention, and order of the pupils are good. 3. The occupation which accords with the standard, is constant and well arranged ; and the instruction careful, vigorous, and effective. 4. The general proficiency ranges from moderate to fair.

SYDNEY DISTRICT.

DETAILED STATEMENT of the condition of Certified Denominational Schools in the Sydney District, inspected during the year 1869.

The remarks under head 1 relate to the material condition of schools.
2 to their moral character.
3 to the subjects and methods of instruction.
4 to the proficiency of the pupils.

BALMAIN (C.E.) :—Visited, 12th August.

Numbers present at examination :—Boys, 69 ; girls, 38 ; total, 107.

1. Substantial improvements have been made in the material condition of this school during the year. 2. The pupils are fairly punctual and regular, but in other respects the discipline is barely moderate. 3. The classification is unnecessarily minute. The teaching is painstaking and tolerably skilful, but lacks vigor. 4. The proficiency ranks from moderate to tolerable.

BALMAIN (R.C.—Boys) :—Visited, 7th October.

Number present at examination :—54.

1. The material state of the school is fair, and the supply of furniture and apparatus ample. 2. The order, attention, and demeanour of the pupils are below mediocrity in the higher classes ; in the lowest class the discipline is more healthy. 3. The prescribed subjects are taught. The lesson documents are carefully arranged, the teaching is earnest and tolerably effective. 4. The proficiency varies from tolerable to fair.

BALMAIN (R.C.—Girls) :—Visited, 7th October.

Number present at examination :—54.

1. The schoolhouse is in good repair, is fairly supplied with furniture, and, with the exception of diagrams, is tolerably well found in apparatus. 2. The pupils are irregular and unpunctual ; but moderate order is maintained ; restlessness is very prevalent ; a good deal of talking is indulged in, and the "changes" are noisily conducted. The government is feeble and but partially effective. 3. The classification is on the whole passable. The instructional documents are comparatively worthless ; the methods are haphazard and mechanical ; and the teaching is to a large extent a failure. 4. The attainments are very low.

BALMAIN (R.C.—Infants) :—Visited, 7th October.

Numbers present at examination :—Boys, 12 ; girls, 25 ; total, 37.

1. The schoolroom is small but passably suitable notwithstanding. It is very scantily furnished. 2. The order and discipline are poor. 3. The instruction is regulated by neither time-table nor programme. The methods are mechanical and worthless. 4. The proficiency is little more than a blank.

CAMPERDOWN (R.C.) :—Visited, 27th October.

Numbers present at examination :—Boys, 27 ; girls, 28 ; total, 55.

1. The fencing needs repair, additional out-buildings are required, the schoolroom wants coloring and flooring, and the supply of furniture is meagre. The school is liberally provided with apparatus and books. 2. On the whole the discipline may be regarded as satisfactory, and the moral tone healthy. 3. The instruction accords with the prescribed course. The teaching is characterized by reasonable intelligence, and conducted with zeal and industry. 4. The average proficiency approaches tolerable, and is due to the labors of the present teacher, who has been about six months in charge.

CHIPPENDALE (WES.) :—Visited, 25th August.

Numbers present at examination :—Boys, 74 ; girls, 78 ; total, 152.

1. New out-buildings are urgently needed ; otherwise, the organization is passably good.
2. The discipline is very fair.
3. The instruction is tolerably well regulated, and teaching is marked by like skill.
4. The attainments are tolerable in the highest class and fair in the two lower.

CHRIST CHURCH (C.E.) :—Visited, 17th and 18th August.

Numbers present at examination :—Boys, 145 ; girls, 88 ; total, 233.

1. The inside of the schoolroom requires to be re-whitewashed ; otherwise, the premises are in fair repair ; and the supply of working materials is ample.
2. An improvement is noticeable in the order. Much of the boisterousness that marked the demeanour of the children has disappeared, and their behaviour is consequently less open to objection. There is still, however, room for amendment in these respects.
3. The classification is defective ; promotions are made too rapidly. The number of classes too might be conveniently reduced. The lesson documents are poorly drawn up, and are not well understood. The methods are in some respects old-fashioned, but are applied with earnestness and zeal.
4. The attainments vary from moderate to tolerable.

CHRIST CHURCH (C.E.—Infants) :—Visited, 18th August.

Numbers present at examination :—Boys, 71 ; girls, 61 ; total, 132.

1. The schoolroom badly needs whitewashing, and the out-offices and windows require repairs. The desks are old, otherwise, the school is well equipped.
2. As regards punctuality and regularity the discipline has sensibly improved. The order is but indifferent, and the government is wanting in firmness and tact.
3. The prescribed subjects are taught ; the instruction is fairly regulated ; the teaching is painstaking, but marked by indifferent skill.
4. The results are barely tolerable.

DARLINGHURST (C.E.) :—Visited, 25th August.

Numbers present at examination :—Boys, 82 ; girls, 62 ; total, 144.

1. A lavatory is needed, and there is a deficiency of hat-pegs. An infant schoolroom is in course of erection. There is a sufficiency of working materials, and the whole property is carefully kept.
2. The attendance has been improving for some time. The pupils are fairly regular and punctual. Fair order is maintained, and the moral tone of the school is sound.
3. The classification is appropriate, the lesson documents are fairly compiled, the methods are modern, and are applied with earnestness, diligence, and very fair effect.
4. The proficiency ranges from tolerable to very fair. Creditable work has been done during the year.

DOUBLE BAY (C.E.) :—Visited, 11th August.

Numbers present at examination :—Boys, 46 ; girls, 39 ; total, 85.

1. The playground is not divided for the sexes, the approach thereto is steep and a lavatory for the boys is needed. Interiorly, the school presents a neat and well-ordered appearance. The walls have been recently cleaned and the woodwork painted.
2. The discipline is on the whole good and the moral tone healthy.
3. The instruction is well regulated, and the teaching is marked by vigor and very fair skill.
4. The average proficiency approaches very fair.

DOUBLE BAY (C.E.—Infants) :—Visited, 10th August.

Numbers present at examination :—Boys, 34 ; girls, 32 ; total, 66.

1. The schoolroom is in very good repair, and is abundantly furnished in furniture, apparatus, and books.
2. The discipline is, on the whole, satisfactory, and the moral tone is high.
3. A fair classification obtains. The instruction is well regulated, and the teaching is passably skilful and fairly effective.
4. The proficiency ranges from tolerable to very fair.

DOUBLE BAY (R.C.) :—Visited, 16th September.

Numbers present at examination :—Boys, 38 ; girls, 10 ; total, 48.

1. The school is held in the Roman Catholic Church. The accommodation is ample, although not precisely of the required kind. A lavatory and book-press are badly needed.
2. The discipline is, on the whole, fair, and the prevailing tone of the school is healthy.
3. The instruction is well regulated, and the teaching is fairly skilful.
4. The proficiency varies from tolerable to fair.

ERSKINE-STREET (PRES.) :—Visited, 7th September.

Numbers present at examination :—Boys, 47 ; girls, 47 ; total, 94.

1. The school is held in the upper room of a produce store. The playground is so small as scarcely to deserve the name. The school is reasonably well furnished, but is not very clean.
2. The pupils are unpunctual ; several are not clean. Their conduct is marked by considerable boisterousness. Playground duty would appear to be much neglected. The government is wanting in intelligent aim, and is for the most part feeble and ineffective.
3. The classification is bad, and the teacher has no settled ideas about the matter. The methods are in the main empirical, and need to be applied with greater earnestness and industry.
4. The attainments are very moderate. The pupils think slowly, and answer only after repeated questioning. They are unused to mental exertion, and display little intelligence. The teaching is ineffective.

GLEBE (C.E.) :—Visited, 5th and 12th October.

Numbers present at examination :—Boys, 64 ; girls, 45 ; total, 109.

1. Several defects in the material state of this school still exist. These the Local Board contemplate remedying at their earliest convenience. The schoolroom is tolerably clean, but more neatness is required in the arrangement of the maps and diagrams.
2. The attendance is on the increase. The pupils are tolerably regular and punctual. A few are disposed to appear untidy. The order is susceptible of improvement. Restlessness and whispering are generally prevalent, and the movements are awkwardly conducted. The government is deficient in firmness and requires to be more strict.
3. Viewed generally, the

the classification may be regarded as moderately judicious; the instructional documents are poorly arranged; the methods are formal and somewhat mechanical, and need to be applied with greater vigor, energy, and intelligence. 4. The proficiency ranks from indifferent to moderate. The pupils yield a passive attention, evince little effort to answer, and their intelligence is only very partially developed.

HAYMARKET (R.C.) :—Visited, 12th October.

Number present at examination :—Boys, 152.

1. The accommodation is rather limited. The furniture is of indifferent quality, and the want of a lavatory and a playshed is urgent. There is a fair supply of working materials. 2. The discipline is barely moderate, and the moral aspect of the school is not satisfactory. 3. The classification is passable. The lesson documents need revision. The teaching is in the main mechanical and unproductive. 4. The proficiency is very moderate, and the mental powers of the pupils are but partially developed.

KENT-STREET, NORTH (R.C.—Boys) :—Visited, 23rd September.

Number present at examination :—187.

1. The playground is small and the accommodation afforded by the schoolroom is exceedingly limited. There is a very fair supply of working materials. 2. The pupils are regular, fairly punctual, and, on the whole, neat in dress. In other respects the discipline is less satisfactory. 3. The course of instruction is complete, the lesson documents are judiciously compiled, and the teaching is in the main painstaking, and ranges in point of skill from indifferent to very fair. 4. The attainments are small in the lowest class, and exceed fair in the others.

KENT-STREET, NORTH (Girls) :—Visited, 22nd September.

Number present at examination :—121.

1. The schoolroom is a good weatherboard building with a classroom attached. There is a fair supply of furniture, and the school is well equipped in other respects. 2. The discipline has in most respects been improved. The moral tone of the school is pleasing. 3. The instruction is fairly regulated; the teaching is earnest and tolerably skilful. 4. The proficiency ranges from very fair in the lower to tolerable in the higher classes.

KENT-STREET, SOUTH (R.C.—Boys) :—Visited, 13th October.

Number present at examination :—74.

1. A mean dilapidated schoolhouse, scantily furnished, and destitute of proper outbuildings. 2. The pupils are fairly punctual and regular. In other respects the discipline is tolerable. 3. A sound classification obtains; the instruction is fairly regulated, and the teaching is tolerably skilful. 4. The proficiency ranges from tolerable to fair.

KENT-STREET, SOUTH (R.C.—Girls) :—Visited, 13th October.

Numbers present at examination :—Girls, 72; infants, 97; total, 169.

1. The school is held in a church, and desks and seats are so constructed as to serve the twofold purpose. A portion of the room is divided off for the use of the infants. A lavatory, mapstand, and additional desks are needed. A narrow side passage is the only playground. The whole property is tidily kept. 2. The attendance has largely increased under the present teacher. The pupils are reasonably regular and punctual, clean, and in fair order. The moral aspect of the school has undergone a decided reformation. 3. The classification is appropriate, the lesson documents are compiled with judgment, the methods are intelligent and are applied with diligence and skill. 4. All things considered, the proficiency of the pupils is satisfactory.

NEWTOWN (C.E.) :—Visited, 1st September.

Numbers present at examination :—Boys, 31; girls, 17; total, 48.

1. The school is destitute of proper furniture, but is fairly supplied with other working materials. 2. There is a large falling off in the attendance. The order is very fair, but the government savours of harshness, and is not calculated to win the sympathy of those governed. 3. The pupils are fairly classified, the instruction is tolerably well regulated, and the teaching is earnest, painstaking, and moderately skilful. 4. The results vary from indifferent in the lower class to tolerable in the higher.

NEWTOWN (C.E.—Infants) :—Visited, 1st September.

Numbers present at examination :—Boys, 33; girls, 34; total, 67.

1. The material condition of this school is good. There is an ample supply of educational appliances in a fair state of preservation. 2. The attendance has fallen off since last regular inspection, and is marked by much irregularity. The punctuality is moderate. The pupils are with few exceptions clean and becomingly attired. The order has slightly improved, but is still unsatisfactory. 3. The classification is in some respects objectionable. Middling judgment is evinced in the compilation of the lesson documents. The methods are not very suitable, and need to be applied with greater vigor and intelligence. 4. The attainments are very moderate. The pupils are restless under instruction, and manifest a feeble attention. The answering is limited to two or three pupils in each class.

NEWTOWN (R.C.) :—Visited, 27th October.

Numbers present at examination :—Boys, 63; girls, 65; total, 128.

1. A play-shed is required, and the out-offices are not sufficiently private, otherwise, the material condition of the property is satisfactory. 2. The pupils are clean, punctual, and tolerably regular. With the exception of the younger children, who are disposed to be restless and noisy, their behaviour is good. Very fair order is maintained, and the government is on the whole reasonably effective. 3. Fair judgment is shown in the classification of the children and in the compilation of the instructional documents. The methods are appropriate and are applied with earnestness and intelligence. 4. The attainments range from moderate to very fair, the average being fair.

NEWTOWN

NEWTOWN (WES.) :—Visited, 20th September.

Numbers present at examination :—Boys, 99 ; girls, 60 ; total, 159.

1. The material condition of this school is very fair, the supply of working materials adequate, and the general organization fairly satisfactory. 2. The majority of the pupils are regular and punctual ; the order is fair, the government tolerably judicious, and the moral tone healthy. 3. The instruction is fairly regulated, the teacher is earnest and energetic, but the methods are of only moderate skill. 4. The attainments are on the whole tolerable.

PADDINGTON (C.E.) :—Visited, 6th October.

Numbers present at examination :—Boys, 42 ; girls, 30 ; total, 72.

1. A lavatory and a shed are urgently needed, and the desks are in bad condition. Otherwise the school is fairly furnished, and is amply found in educational appliances. The teacher complains of the damage done to the desks by the children of the Sunday School, and by others who use the schoolroom on occasional evenings. 2. The attendance has improved, and is marked by tolerable regularity. The pupils are however unpunctual. Their demeanour is marked by forwardness, their behaviour is bad, and their movements are noisy and disorderly. The government appears of a vacillating character, and is wanting in tact and judgment. 3. Considering the number of pupils in attendance, the classification is low. The instructional documents are arranged with moderate judgment. The methods are apparently suitable, but owing to the unskilful manner in which they are applied and to the bad order that obtains in the school, they fail to produce adequate results. 4. The proficiency ranges from indifferent to tolerable. The pupils are restless under examination, yield but a fitful attention, and manifest little effort to answer.

PADDINGTON (R.C.) :—Visited, 6th October.

Numbers present at examination :—Boys, 17 ; girls, 55 ; total, 72.

1. The out-offices are objectionably placed, the playground is unprovided with shed and lavatory, the furniture is scanty in supply, and a book-press is badly needed. There is a fair amount of working materials. 2. The pupils are fairly punctual, the order is tolerable, and the government mild. 3. The usual subjects are taught, the lesson documents are passably compiled, and the teaching, both as regards skill and effectiveness, is of moderate quality. 4. The results are moderate.

PARRAMATTA-STREET (R.C.—Boys) :—Visited, 23rd November.

Number present at examination :—90.

1. The school has since last regular inspection been put into a good state of repair ; the playground has been levelled, and its condition otherwise improved, and the school-furniture has received important additions. A lavatory and a playshed have to be added to render the material condition of the school fully satisfactory. 2. The attendance is about stationary. The pupils are reasonably regular and punctual, clean in person, and tolerably well-behaved. The government is fairly effective, and the moral tone of the school has much changed for the better. 3. The classification is suitable ; the instructional documents are carefully compiled ; the methods are moderate, and are applied with much earnestness and industry. 4. The proficiency in all the classes is fair. In point of general efficiency and usefulness, the present condition of the school affords ground for satisfaction.

PARRAMATTA-STREET (R.C.—Girls) :—Visited, 24th and 25th November.

Number present at examination :—102.

1. The school-building has been put in repair within the year. At present, the chief defects in the organization are the insufficiency of the accommodation and the presence of infant pupils in the same room with the girls. 2. In point of punctuality and order the discipline has improved, but more judgment and firmness in governing need to be exercised before it can be regarded as satisfactory. 3. The classification is, on the whole, judicious, but the compilation of the lesson documents is faulty, and the teaching, though painstaking, is not very skilful. 4. The attainments are moderate in the lower classes, and tolerable in the higher.

PARRAMATTA-STREET (R.C.—Infants) :—Visited, 25th November.

Numbers present at examination :—Boys, 66 ; girls, 58 ; total, 124.

1. A new and suitable schoolroom is needed, and its erection is said to be contemplated by the Local Board. 2. The pupils are rather unpunctual and irregular in attendance ; the order is unsatisfactory, the bulk of the pupils being restless and inattentive under instruction. 3. The instruction is poorly regulated, and the teaching, although painstaking for the most part, is neither skilful nor effective. 4. The average proficiency is moderate.

PYRMONT (C.E.) :—Visited, 8th September.

Numbers present at examination :—Boys, 55 ; girls, 32 ; total, 87.

A shed and a urinal have yet to be provided ; otherwise, the material state of the school is fairly satisfactory. The organization is passable. 2. The attendance improves. The pupils are tolerably regular but unpunctual. They are clean and in fair order. The moral tone of the school is tolerably pleasing. 3. The classification is, in the case of individual pupils, ill-judged. The instruction is regulated by the usual documents which are compiled with middling care. The methods are of modern cast, but require to be applied with greater energy, intelligence, and skill. 4. The proficiency ranges from indifferent to moderate.

RANDWICK (C.E.) :—Visited, 2nd September.

Numbers present at examination :—Boys, 34 ; girls, 13 ; total, 47.

1. The schoolroom is in good repair, suitable, and fairly furnished. 2. The pupils are regular, fairly punctual, clean, and becomingly attired. The order however is susceptible of improvement. 3. All the subjects prescribed by the secular course of instruction are taught. The classification is uselessly minute. The lesson documents need to be more judiciously compiled. The teaching is earnest and painstaking, but not very skilful. 4. The results are moderate.

REDFERN (C.E.) :—Visited, 19th and 20th August.

Numbers present at examination :—Boys, 125 ; girls, 89 ; total, 214.

1. The school buildings are suitable and in excellent repair. There is a liberal supply of educational appliances. The school records need to be kept with greater accuracy. 2. The pupils are neat in dress, fairly punctual, and regular. The order is unsatisfactory. The movements are awkwardly and tediously performed. The pupils are inclined to be restless and inattentive under instruction ; and the government is wanting in firmness and judgment. 3. The classification appears, in some instances, to be regulated by the age and stature, rather than by the attainments of the children. The instructional documents are unskillfully arranged, and too much time is devoted to needlework. The teaching is conducted with earnestness, but is marked by very indifferent skill. 4. The attainments are very moderate, and the absence of mental activity is most apparent in the highest class of the school.

REDFERN (C.E.—Infants) :—Visited, 19th August.

Numbers present at examination :—Boys, 89 ; girls, 71 ; total, 160.

1. The schoolroom is in good repair and suitably furnished. The playground is tolerably roomy, but is covered with loose sand. The school records are incomplete in certain particulars. 2. The pupils are reasonably regular but unpunctual. Their demeanour is somewhat boisterous, and their play outside the schoolroom is marked by a good deal of unnecessary noise and roughness. The government is wanting in tact and firmness. 3. Tolerable judgment is shown in the classification. The lesson documents are poorly compiled, and the course of instruction needs extension. The methods are for the most part mechanical. A want of intelligence and professional discernment is observable in their application. 4. In all subjects, except reading, writing, and scripture, the attainments of the pupils are below moderate. The pupils are tolerably attentive under examination, and manifest some anxiety to answer, but they afford evidence in their partial, thoughtless, and confused replies that the teaching is ineffective.

ST. ANDREW'S (C.E.) :—Visited, 31st August.

Numbers present at examination :—Boys, 62 ; girls, 34 ; total, 96.

1. The new schoolroom is lofty, well ventilated, and abundantly supplied with working materials. The playground is reasonably large at present, but it is intended to sell a portion of it. A shed, to protect the children from the weather, is urgently needed. 2. The attendance has suffered to some extent by the removal of the school to its present site. The pupils are regular, punctual, clean, and in good order. The government is mild but firm, and the moral tone of the school is pleasing. 3. An appropriate classification obtains. The instruction is judiciously regulated. The methods are suitable, and are applied with earnestness, diligence, and fair average skill. 4. The proficiency is fair in the first and second classes, and approaches good in the third.

ST. ANDREW'S (C.E.—Infants) :—Visited, 31st August.

Numbers present at examination :—Boys, 46 ; girls, 63 ; total, 109.

1. A new schoolroom, well equipped. The partition between it and the mixed department is badly constructed, and the erection of a separate compartment for the "babies" was ill-advised. 2. The order and general discipline have sensibly improved and are now very fair. 3. The instruction is properly regulated and the methods are marked by reasonable skill and applied with fair industry. 4. The attainments are tolerable. The present teacher has only been a short time in charge.

ST. ANDREW'S (PRES.) :—Visited, 9th June.

Numbers present at examination :—Boys, 58 ; girls, 48 ; total, 106.

1. Important improvements have been effected in the material condition of this school since last inspection. Certain serious defects still exist. 2. Except that the younger portion of the pupils are disposed to be restless, very fair order is maintained. Other features of the discipline are equally satisfactory. 3. The existing classification seems tentative. The lesson documents are compiled with considerable care and tolerable judgment. The methods are painstaking, but wanting in vigour, originality, and skill. 4. The proficiency ranges from moderate to tolerable. The majority of the pupils evince little mental effort, and the answering as a whole is partial.

ST. BARNABAS' (C.E.) :—Visited, 15th and 16th September.

Numbers present at examination :—Boys, 112 ; girls, 75 ; total, 187.

1. The material state of this school is probably as good as is possible under the circumstances. There is a slight deficiency in the books of one class, owing to the influx of new scholars, and one of the blackboards is next to useless ; in all other respects the supply of working materials is good. 2. The pupils are punctual, regular, clean, and in good order. The government is intelligent and effective. The moral tone of the school is high. 3. The instruction accords with the standard course, and is judiciously regulated. The methods are suitable and are applied with zeal and industry. 4. The proficiency ranges from tolerable to very fair—the average being about fair. On the whole, the school is in a healthy condition, and is doing much good in the neighbourhood.

ST. BARNABAS' (C.E.—Infants) :—Visited, 9th September.

Numbers present at examination :—Boys, 74 ; girls, 60 ; total, 134.

1. The gallery has been enlarged since last regular inspection and is now capable of accommodating 130 pupils. The material state and organization of the school may be regarded as satisfactory. 2. As a whole, the discipline is sound. Reasonable attention appears to be devoted by the teacher to the appearance and general behaviour of the pupils. 3. The arrangements for carrying on the teaching are tolerably complete. The methods are appropriate and are applied with fair industry and passable skill. 4. The pupils are attentive under examination, but their answering is in most subjects limited and partial, and the teaching would appear to be somewhat superficial and mechanical in its application.

ST. JAMES (C.E.) :—Visited, 10th and 11th June.

Numbers present at examination :—Boys, 90 ; girls, 70 ; total, 160.

1. The schoolroom has been recently re-coloured, and the woodwork repainted. There is no lack of the necessary educational appliances. 2. The pupils are tolerably punctual and regular. Except that the children of the lower classes are disposed to be troublesome, the order may be regarded as satisfactory. 3. The children unduly preponderate in the lower classes. The instruction is on the whole properly regulated, and the methods are fairly appropriate. 4. Except in Euclid and Latin, the attainments are satisfactory.

ST. JAMES' (C.E.—Infants) :—Visited, 10th June.

Numbers present at examination :—Boys, 97 ; girls, 69 ; total, 166.

1. The lavatory needs some slight repairs, and the interior of the schoolroom requires to be coloured ; otherwise, the organization is very good. 2. Negligence in dress is to some extent noticeable, and the attention of the pupils requires careful cultivation. In most other points the discipline is unexceptionable. 3. The pupils are properly classified, the instruction is skilfully regulated, and the methods are suitable and reasonably effective. 4. The proficiency ranks from moderate to fair. The average is tolerable.

ST. LEONARDS (C.E.—Boys) :—Visited, 21st October.

Number present at examination :—87.

1. The schoolroom is altogether too small, and a lavatory, playshed, and book-press are wanted. 2. A substantial increase has been made to the attendance since last regular inspection. The order and general discipline of the school are good. 3. Little exception can be taken to the classification, or to the manner in which the instruction is regulated. The methods are painstaking, and the teaching is marked by earnestness and vigor. 4. The proficiency ranges from tolerable to very fair, the average being fair. The answering of the pupils is prompt, thoughtful, and accurate.

ST. LEONARDS (C.E.—Girls) :—Visited, 21st October.

Number present at examination :—25.

1. The schoolroom is in good repair, but the furniture is both insufficient and unsuitable. 2. The attendance has decreased during the year. The pupils are neat in dress, and on the whole punctual and orderly. The prevailing tone of the school is pleasing. 3. The prescribed subjects are taught ; the instruction is arranged with moderate judgment, and the teaching is painstaking but unskilful. 4. The average proficiency is moderate.

ST. LEONARDS (R.C.) :—Visited, 19th October.

Numbers present at examination :—Boys, 48 ; girls, 35 ; total, 83.

1. The playground is not divided for the sexes, and a lavatory and playshed have yet to be provided. The accommodation is insufficient. 2. The pupils are regular and punctual. The order is sensibly improved, and the moral tone of the school is pleasing. 3. The bulk of the pupils are in the lower classes. The instruction is fairly arranged. The teaching is earnest, of fair average skill, and reasonably effective. 4. The proficiency approaches fair.

ST. LEONARDS (PRES.) :—Visited, 19 October.

Numbers present at examination :—Boys, 50 ; girls, 19 ; total, 69.

1. Since last year the playground has been fenced in and divided for the sexes. A lavatory, supply of water, and a playshed have yet to be provided. 2. The pupils are regular, punctual, clean, and in very fair order. The government is inclined to be harsh, and is wanting in tact. The moral tone is to that extent unhealthy. 3. The classification is intelligent, the instructional documents are compiled with judgment, the methods are appropriate, and are effectively applied. 4. The average proficiency is very fair. In point of discipline and attainment the school contrasts favorably with its condition in these respects under the former teacher.

ST. MARY'S (R.C.—Boys) :—Visited, 15th, 16th, 18th, and 23rd June.

Number present at examination :—156.

1. The drainage of the premises is defective ; the fencing is incomplete, the playground is littered with loose stones and other lumber, and a shed and lavatory have yet to be erected. The interior of the schoolroom presents an uninviting appearance, the walls and floor being very dirty. The furniture is old, cumbrous, and in disrepair. The school records are incomplete, inaccurate, and slovenly kept. 2. The discipline is on the whole tolerable ; unpunctuality, untidiness of dress, and the want of sustained order and attention, are its most noticeable defects. 3. The actual classification of the pupils differs from that indicated on the rolls. Many of the pupils were depressed, and one of the classes was broken up during the year. The teaching has been productive of only partial results. 4. The average proficiency is barely moderate, ranging from tolerable in the highest class to indifferent in the others.

ST. MARY'S (R.C.—Girls) :—Visited, 15th, 16th, and 18th June.

Number present at examination :—107.

1. A new and commodious schoolhouse, well lighted and ventilated, and presenting internally a neat and cheerful appearance. It is liberally supplied with working materials. A lavatory and a shed, to protect the children from the weather, have yet to be provided. 2. The pupils are passably punctual and clean, and the discipline is in other respects healthy. 3. The instruction is properly regulated. The methods vary in point of skill from tolerable to indifferent. In their application greater vigour and versatility are required. 4. The attainments rank from indifferent to moderate. The teaching power is, and has been, for some time quite insufficient, and to this cause may largely be ascribed the comparatively small attainments of the pupils.

ST. MARY'S (R.C.—Infants) :—Visited, 15th June.

Numbers present at examination :—Boys, 58 ; girls, 83 ; total, 141.

1. The desk accommodation is not only insufficient, but the desks are altogether too high, and are cumbersome and otherwise unsuitable. 2. The pupils are irregular, but tolerably punctual and reasonably clean. Indifferent order is maintained. The government is deficient in tact and firmness. 3. The lesson documents are incomplete and of little use. Collective teaching is imperfectly understood. The subjects of instruction are limited in range, and the methods are crude and mechanical. 4. The attainments are poor, and barely appreciable in most subjects.

ST. PHILLIPS' (C.E.) :—Visited

Numbers present at examination :—Boys, 77 ; girls, 72 ; total, 149.

1. The playground is not divided for the sexes ; otherwise, the organization is good. 2. The discipline is on the whole very fair, and the moral tone of the school is healthy. Playground supervision would require to be more rigorously and efficiently performed. 3. The classification is tolerably judicious, its chief defect being the needlessly minute subdivision for reading. The lesson documents are carefully compiled, and the teaching is marked by fair average skill. 4. The proficiency ranges from moderate to very fair.

ST. PHILLIPS' (C.E.—Infants) :—Visited, 26th August.

Numbers present at examination :—Boys, 94 ; girls, 107 ; total, 201.

1. The schoolroom is too small, and is in need of a gallery ; otherwise, it is adequately found in working materials. 2. The order and discipline are very good. 3. The classification is moderately judicious. The true meaning of collective teaching is imperfectly understood. Defects are observable in the arrangement of the lesson documents. The methods are formal, and wanting in intelligent aim. They appear to be diligently applied. 4. The average proficiency is moderate, but the pupils of the fourth or highest class acquit themselves fairly.

SURREY HILLS (C.E.) :—Visited, 20th October.

Numbers present at examination :—Boys, 49 ; girls, 44 ; total, 93.

1. The school buildings are in good repair, and fully equipped. 2. The discipline is on the whole fair. 3. The classification is to some extent injudicious. The compilation of the lesson documents is passable. The methods are of fair skill, but want to be more vigorously applied. 4. The proficiency varies from moderate to tolerable.

SURREY HILLS (C.E.) :—Visited, 20th October.

Numbers present at examination :—Boys, 71 ; girls, 55 ; total, 126.

1. A group of desks has been provided since the regular inspection of last year. The school is fairly equipped in other respects. 2. The pupils are tolerably regular and punctual, and present a clean and cheerful appearance. Fair order is maintained. 3. The instruction is moderately well regulated ; the methods are tolerably appropriate, but require to be applied with increased skill and effect. 4. The proficiency ranks from moderate to tolerable.

SURREY HILLS (R.C.—Boys) :—Visited, 14th October.

Number present at examination :—176.

1. The situation is low, the ventilation and light are defective, the accommodation is insufficient, and a lavatory and playshed have yet to be erected. The organization is in other respects fairly satisfactory. 2. The pupils are regular, neat in dress, and of pleasing demeanour. The order is very fair in the higher classes, and indifferent in the lower. 3. The classification is judicious ; the instruction is in other respects satisfactorily arranged. The methods are tolerably skilful and are vigorously applied. 4. The proficiency ranges from indifferent in the lower classes to fair in the higher.

SURREY HILLS (C.E.—Girls) :—Visited, 14th October.

Number present at examination :—114.

1. Three desks have been added to the furniture since last inspection. A lavatory and playshed are still wanted. The organization of the school is tolerably satisfactory as a whole, and the interior of the schoolroom begins to wear a clean, neat, and cheerful appearance. 2. The pupils are less irregular than formerly, and are fairly punctual. Their demeanour is becoming, and their behaviour satisfactory. Very fair order is maintained, and the prevailing spirit of the school is healthy. 3. The classification is generally appropriate. The lesson documents are to some extent defective. The methods are in the main modern, and are applied with fair industry. 4. The proficiency ranges from tolerable to fair. The school improves in usefulness.

SURREY HILLS (WES.) :—Visited, 22nd and 23rd June.

Numbers present at examination :—Boys, 59 ; girls, 33 ; total, 92.

1. The want of a spacious playground is the chief defect in the material condition of this school. The interior arrangements are good, and the supply of working materials is ample. 2. The means adopted to secure punctuality are not successful, the order is but moderate and the government wants to be more firm. 3. All the prescribed subjects are taught. A sound classification obtains, and the teaching is marked by fair skill and efficiency. 4. The average proficiency is fair.

SURREY HILLS (WES.—Infants) :—Visited, 22nd June.

Numbers present at examination :—Boys, 35 ; girls, 18 ; total, 53.

1. The interior of the schoolroom needs colouring, the clock is out of repair, and the forms are too high ; otherwise, the school is well equipped. 2. The pupils are but moderately punctual ; many are irregular ; the order is indifferent, and the government feeble. 3. The instruction is on the whole tolerably regulated, the teaching is painstaking, but, owing to the indifferent order prevailing, is but partially effective. 4. The average proficiency is moderate.

SUSSEX-STREET (Hebrew) :—Visited, 23rd November.

Numbers present at examination :—Boys, 48 ; girls, 35 ; total, 83.

1. The situation is not central, and in other respects the premises are not suitable. Separate closets are required. 2. The pupils are reasonably punctual and regular, and, on the whole, neat in dress. The order is fair in the higher classes, but susceptible of much improvement in the lower, and the government needs to be more uniform and effective. 3. The classification is low. The lesson documents are carefully compiled. The teaching is earnest, fairly intelligent, and reasonably effective. 4. The average proficiency is fair.

TRINITY (C.E.) :—Visited, 28th October.

Numbers present at examination :—Boys, 62 ; girls, 50 ; total, 112.

1. The schoolroom is too small, and a classroom and playshed are necessary to render the organization complete. In other respects the school is well appointed. 2. As regards regularity and punctuality, the discipline is fair. The order however is susceptible of much improvement, and the demeanour of the elder pupils is not sufficiently subdued. 3. The course of instruction is observed. The lesson documents are fairly suitable, and the teaching varies in point of skill from moderate to fair. 4. The attainments are on the whole fair.

TRINITY (C.E.—Infants) :—Visited, 28th October.

Numbers present at examination :—Boys, 71 ; girls, 65 ; total, 136.

1. Most of the defects formerly existing in the material state of this school have been remedied. A playshed and a supply of more suitable desks have yet to be provided. 2. The discipline is fairly satisfactory. 3. Little objection can be urged against the classification ; reasonable pains are bestowed upon the arrangement of the lesson documents ; the methods are too suggestive in their application, and the pupils are as a consequence apt to become listless and inattentive. 4. The proficiency varies from moderate to tolerable.

VICTORIA-STREET (R.C.—Girls) :—Visited, 3rd November.

Number present at examination :—71.

1. A suitable schoolroom, fully found in the necessary educational appliances, and presenting a neat and well ordered appearance. 2. The pupils are regular, reasonably punctual, and very neat in dress. The order is very good, and the moral tone of the school satisfactory. 3. The course of instruction is observed, the necessary lesson documents are carefully compiled, and the teaching is marked by zeal and intelligence. 4. The average proficiency approaches good, and the mental powers of the pupils are well developed.

VICTORIA-STREET (R.C.—Infants) :—Visited, 3rd November.

Numbers present at examination :—Boys, 44 ; girls, 43 ; total, 87.

1. The desks are old and not very suitable ; otherwise, the school is reasonably well furnished. The school premises are in fair condition. 2. The attendance was much smaller than usual on the day of examination on account of the rain. In general the pupils are regular, although somewhat unpunctual. Good order is maintained, and the government is appropriate and intelligent. 3. The usual branches are taught. The classification is suitable ; the instructional documents are sensibly constructed, and the methods continue to be of a painstaking character. 4. The attainments in all the subjects are pretty uniform, and may be estimated as very fair. The pupils are attentive, fairly self reliant, and answer with commendable spirit and accuracy.

WAVERLEY (C.E.) :—Visited, 4th November.

Numbers present at examination :—Boys, 42 ; girls, 43 ; total, 85.

1. A supply of water, a lavatory, and a playshed have yet to be provided. The schoolhouse is in good repair and is fairly found in working materials. 2. The pupils are punctual, regular, and in fair order. Some unsteadiness is visible among the younger children, but the conduct of the general body is unexceptionable. The government is mild and in most other respects judicious. 3. On the whole, the classification may be regarded as satisfactory. The instructional documents admit of improvement in minor details, but otherwise fairly answer the ends in view. The methods need to be applied with greater energy. 4. The proficiency ranks from tolerable to fair.

WAVERLEY (R.C.) :—Visited, 10th November.

Numbers present at examination :—Boys, 42 ; girls, 34 ; total, 76.

1. The schoolroom is in very fair repair, but the supply of furniture is meagre, and a wash-house and playshed are required. The supply of books and apparatus is reasonably good. 2. The order and discipline approach fair. 3. The prescribed subjects are taught, the instruction is tolerably well regulated, and the teaching is conducted with zeal, earnestness, and moderate skill. 4. The proficiency is moderate.

WAVERLEY (PRES.) :—Visited, 19th November.

Numbers present at examination :—Boys, 36 ; girls, 39 ; total, 75.

1. The schoolroom has recently been enlarged. The playground is still unfenced and without a lavatory, urinal, and playshed. The out-offices are insufficient, and lack privacy. The furniture of the school is of rough make and much the worse for wear. Altogether, the material condition of the school is very unsatisfactory. 2. The attendance is tolerably steady and is kept up by the pupils with fair regularity. Other features of the discipline are not less satisfactory. 3. In the main, the classification is appropriate. The lesson documents are compiled with care, and in the case of the two higher classes with middling judgment. The methods are of a practical kind, and are diligently applied. 4. The attainments vary from moderate to tolerable.

WATERLOO (C.E.) :—Visited, 17th November.

Numbers present at examination :—Boys, 61 ; girls, 47 ; total, 108.

1. The organization of this school is defective. 2. The pupils are regular but unpunctual in attendance. Their demeanor is modest and subdued, and their conduct fairly satisfactory. 3. The classification is reasonably judicious ; the instruction is tolerably well regulated ; the methods are of modern cast, and are applied with diligence and zeal. 4. The proficiency varies from tolerable to fair.

WATERLOO

WATERLOO (C.E.—Infants) :—Visited, 11th November.

Numbers present at examination :—Boys, 57 ; girls, 50 ; total, 107.

1. A lavatory and hat-pegs have been provided since last inspection. Desks, gallery, forms, and a shed are among the most pressing wants. The school is very fairly found in working materials. 2. Punctuality excepted ; the discipline has been sensibly improved, and the moral aspect of the school is healthy. 3. The teaching is carried on with zeal, assiduity, and passable skill. 4. The average proficiency is fair, and there is evidence to show that substantial work has been done during the year.

WATERLOO (R.C.) :—Visited, 17th November.

Numbers present at examination :—Boys, 63 ; girls, 49 ; total, 112.

1. The playground is rugged and undivided for the sexes ; the closets are dilapidated and objectionably situated ; and a playshed and some means of storing water are much needed ; the supply of working materials is in some items insufficient. 2. The pupils are neither punctual nor regular, and in other respects the character of the discipline is indifferent. 3. The classification is open to many objections ; the school records and lesson documents are incomplete, and the teaching has been productive of very poor results. 4. The proficiency is tolerable in the junior and small in the higher classes ; the teacher has been just appointed.

WOOLLOOMOOLOO (PRES.) :—Visited, 10th and 11th November.

Numbers present at examination :—Boys, 114 ; girls, 79 ; total, 193.

1. The schoolroom is in bad repair. 2. The attendance has largely increased ; the pupils are tolerably regular, but unpunctual ; a good deal of restlessness prevails in the lower classes ; otherwise, the order has improved ; the prevailing tone of the school is healthy. 3. Except that the pupils in the first class unduly preponderate, the classification is passable ; some of the instructional documents admit of a better arrangement ; the methods vary in point of skill, their average quality approaches tolerable. 4. The proficiency is tolerable on the whole ; the school has improved in efficiency.

YORK-STREET (WES.) :—Visited, 19th November.

Numbers present at examination :—Boys, 42 ; girls, 29 ; total, 71.

1. New furniture, hat-pegs, and a lavatory have been provided within the year ; the interior of the schoolroom has also been whitewashed ; there is no lack of working materials. 2. The pupils are in many cases unpunctual ; but in other respects the discipline has improved. 3. The classification is faulty ; the bulk of the pupils are not only in the lowest class, but in the lowest section of that class ; the instruction appears to be fairly regulated, and the methods are characterized by tolerable skill. 4. The proficiency is tolerable, and in the highest class approaches fair.

ANNEX B.**NEWCASTLE DISTRICT.—TABULATED REPORTS FOR 1869.****DENOMINATIONAL SCHOOLS.****CHURCH OF ENGLAND.****DUNGOG :—Ordinary inspection, 31st May ; examination of pupils, 5th November.**

Pupils enrolled :—Boys, 26 ; girls, 28 ; total, 54.

Pupils present at ordinary inspection :—Boys, 22 ; girls, 20 ; total, 42.

Pupils present at examination :—Boys, 25 ; girls, 23 ; total, 48.

Ordinary average :—35 pupils.

The schoolhouse is in very fair condition, and its furniture is tolerably fair in quality, and sufficient for the requirements. The organization is correct, so far as the number of classes is concerned, but due regard has not been had to the advancement of the pupils. The order is unsatisfactory, and the mental activity of the pupils is small ; the children are clean and fairly punctual. The teacher's manner is earnest, but his methods are superficial, and his matter crude and frequently inappropriate. The results of the examination were unsatisfactory.

ERINA :—Ordinary inspection, 21st April ; examination of pupils, 10th December.

Pupils enrolled :—Boys, 21 ; girls, 40 ; total, 61.

Pupils present at ordinary inspection :—Boys, 25 ; girls, 30 ; total, 55.

Pupils present at examination :—Boys, 8 ; girls, 19 ; total, 27.

Ordinary average :—40 pupils.

Since my last visit this schoolhouse has been floored and otherwise put into good condition ; there is however a sad want of furniture. The organization is correct ; the pupils are clean, cheerful, and fairly self-reliant ; satisfactory progress has been made by the pupils. The small attendance was caused by tempestuous weather. The Rev. John Shaw was present at the examination.

GOSFORD :—Ordinary inspection, 15th April ; examination of pupils, 9th December.

Pupils enrolled :—Boys, 28 ; girls, 20 ; total, 48.

Pupils present at the ordinary inspection :—Boys, 24 ; girls, 16 ; total, 40.

Pupils present at examination :—Boys, 17 ; girls, 18 ; total, 35.

Ordinary average :—34 pupils.

The schoolhouse is in tolerable repair, but it is badly furnished. The organization is correct, and the discipline is effective in some respects, but fails to ensure habits of self-reliance in the elder children. The teaching is fairly methodical, but by no means thorough ; it requires to be imparted with greater earnestness, and frequently tested as to its results. The Rev. John Shaw was present at the examination.

HEXHAM :—

HEXHAM :—Ordinary inspection, 8th February ; examination of pupils, 24th August.

Pupils enrolled :—Boys, 22 ; girls, 31 ; total, 53.
 Pupils present at ordinary inspection :—Boys, 16 ; girls, 22 ; total, 38.
 Pupils present at examination :—Boys, 18 ; girls, 25 ; total, 43.
 Ordinary average :—35 pupils.

The schoolhouse, although small and very badly furnished, is substantially in good condition, but the teacher's house is very dilapidated. The organization is satisfactory ; there is an improvement in the tone of the school as regards order, but the pupils are not remarkable for mental energy, nor is the teaching effective. The Rev. J. S. Wood was present at the examination.

KINCUMBER :—Ordinary inspection, 19th April ; examination of pupils, 7th December.

Pupils enrolled :—Boys, 17 ; girls, 14 ; total, 31.
 Pupils present at ordinary inspection :—Boys, 10 ; girls, 5 ; total, 15.
 Pupils present at examination :—Boys, 13 ; girls, 10 ; total, 23.
 Ordinary average :—22 pupils.

The building is a small one, but large enough for the present attendance. Since my last visit it has been put into a fair state of repair. The school is badly equipped. The organization is defective, the discipline weak, and the instruction is methodless and ineffective.

MILLER'S FOREST :—Ordinary inspection, 21st June ; examination of pupils, 30th November.

Pupils enrolled :—Boys, 43 ; girls, 36 ; total, 79.
 Pupils present at ordinary inspection :—Boys, 28 ; girls, 33 ; total, 61.
 Pupils present at examination :—Boys, 38 ; girls, 19 ; total, 57.
 Ordinary average :—55 pupils.

The schoolhouse, which is also used as a church, has recently been put into proper repair. It is airy, commodious, and well lighted, but altogether inadequately furnished. There are out-offices, but the ground is unenclosed. The school is satisfactorily organized, the pupils are clean, well-behaved, fairly industrious, but by no means regular ; this, however, is caused by "home demands." The teaching is earnest and faithful, and the progress of the pupils is reasonably satisfactory. The Rev. S. Simm was present during the examination.

NEWCASTLE (Christ Church) :—Ordinary inspection, 14th January ; examination of pupils, 20th and 21st July.

Pupils enrolled :—Boys, 99 ; girls, 87 ; total, 186.
 Pupils present at ordinary inspection :—Boys, 85 ; girls, 51 ; total, 136.
 Pupils present at examination :—Boys, 84 ; girls, 60 ; total, 144.
 Ordinary average :—165 pupils.

The material condition of this school is very satisfactory. The organization is correct, the discipline is effective, and the instruction gives results ranging from very fair to good. The tone of the school is healthy and pleasing. The Rev. A. E. Selwyn was present occasionally during the examination. Latterly this school has increased greatly ; instead of 186 on the rolls there are now 242.

NEWCASTLE (St. John's) :—Ordinary inspection, 25th January ; examination of pupils, 28th July.

Pupils enrolled :—Boys, 44 ; girls, 38 ; total, 82.
 Pupils present at ordinary inspection :—Boys, 47 ; girls, 27 ; total, 74.
 Pupils present at examination :—Boys, 37 ; girls, 28 ; total, 65.
 Ordinary average :—82 pupils.

The schoolhouse is a good structure, and the furniture and other appointments are good and sufficient also. The organization and discipline are satisfactory, and the teaching is methodical and effective to a very fair degree. This school is subjected to great fluctuations and changes which hinder the general progress. I perceive that the return for December quarter shows an increase of thirty nearly instead of eighty-two ; the number given is 110.

RAYMOND TERRACE :—Ordinary inspection, 15th June ; examination of pupils, 27th October.

Pupils enrolled :—Boys, 54 ; girls, 31 ; total, 85.
 Pupils present at ordinary inspection :—Boys, 35 ; girls, 24 ; total, 59.
 Pupils present at examination :—Boys, 43 ; girls, 25 ; total, 68.
 Ordinary average :—61 pupils.

The schoolhouse is a commodious and substantial building ; it is well furnished and is properly supplied with working material. The organization is correct ; the discipline has improved upon what I last witnessed ; the teaching is earnest, but not so thorough as might be. The tone of the school is pleasing. The Rev. S. Simm and the lay members of the Board were present at the examination.

STROUD :—Ordinary inspection, 25th May ; examination of pupils, 18th November.

Pupils enrolled :—Boys, 23 ; girls, 23 ; total, 46.
 Pupils present at ordinary inspection :—Boys, 10 ; girls, 7 ; total, 17.
 Pupils present at examination :—Boys, 17 ; girls, 21 ; total, 38.
 Ordinary average :—36 pupils.

The school premises have recently undergone repair, and are now in very fair condition. The schoolroom is spacious, well lighted, and properly ventilated. The furniture is sufficient, but badly arranged. The organization is correct, and the discipline is satisfactory. The mental tone of the school is improved, and although the methods of teaching are not modern, they are fairly effective. The Rev. A. Shaw and a lay member of the Board were present at the examination.

UPPER BENDOLBA :—Ordinary inspection, 3rd June ; examination of pupils, 9th November.

Pupils enrolled :—Boys, 33 ; girls, 30 ; total, 63.
Pupils present at ordinary inspection :—Boys, 21 ; girls, 17 ; total, 38.
Pupils present at examination :—Boys, 18 ; girls, 25 ; total, 43.
Ordinary average :—35 pupils.

The school building, which is also used for church purposes, is substantially in good condition, but the furniture is bad in supply, quality, and arrangement. The ground is properly enclosed, and out-offices are provided. The organization is correct, and the discipline, all its aspects considered, may be rated as fair. The instruction is not sufficiently exacting in its demands upon the pupils, but it is earnest and methodical. The Rev. E. Huband-Smith and a lay member of the Board were present.

WALLSEND :—Ordinary inspection, 3rd February ; examination of pupils, 18th and 19th August.

Pupils enrolled :—Boys, 124 ; girls, 82 ; total, 206.
Pupils present at ordinary inspection :—Boys, 64 ; girls, 55 ; total, 119.
Pupils present at examination :—Boys, 101 ; girls, 68 ; total, 169.
Ordinary average :—169 pupils.

Excepting a need for more furniture this schoolhouse and its appointments are good. The organization is correct, the discipline is fair, and the instruction gives results which range from tolerable to fair in most of the subjects taught. The present teacher has held the appointment but four months, and much of his time has necessarily been devoted to reorganizing. The Rev. J. S. Wood was present at the examination.

ROMAN CATHOLIC.

CLARENCE TOWN :—Ordinary inspection, 9th June ; examination of pupils, 2nd November.

Pupils enrolled :—Boys, 19 ; girls, 14 ; total, 33.
Pupils present at ordinary inspection :—Boys, 18 ; girls, 14 ; total, 32.
Pupils present at examination :—Boys, 16 ; girls, 10 ; total, 26.
Ordinary average :—23 pupils.

The schoolhouse, which is also used as a church, is in very fair condition, and is now supplied with suitable and sufficient furniture. By some miscarriage the annual requisition for "supply" has not reached the office, and the school is consequently insufficiently supplied with material. The organization is correct, the discipline is fairly effective, and the results of the instruction range from fair to very fair.

KINCUMBER :—Ordinary inspection, 20th April ; examination of pupils, 14th November.

Pupils enrolled :—Boys, 17 ; girls, 30 ; total, 47.
Pupils present at ordinary inspection :—Boys, 23 ; girls, 14 ; total, 37.
Pupils present at the examination :—Boys, 14 ; girls, 26 ; total, 40.
Ordinary average :—33 pupils.

The schoolhouse is in a suitable condition, but it is much too small. There is an ample supply of furniture, and it is arranged in as appropriate a manner as the confined space will permit. The organization is satisfactory, the discipline is fair, the teaching is earnest and fairly methodical, but wanting in thoroughness. A lay member of the Board was present.

MILLER'S FOREST :—Ordinary inspection, 18th June ; examination of pupils, 1st December.

Pupils enrolled :—Boys, 32 ; girls, 28 ; total, 60.
Pupils present at the ordinary inspection :—Boys, 8 ; girls, 12 ; total, 20.
Pupils present at examination :—Boys, 23 ; girls, 25 ; total, 48.
Ordinary average :—33 pupils.

The schoolhouse is in a fair state of repair, and the supply of furniture is suitable and sufficient. The discipline and organization are satisfactory, and the results of the teaching range from tolerable to fair.

NEWCASTLE :—Ordinary inspection, 22nd January ; examination of pupils, 26th and 27th July.

Pupils enrolled :—Boys, 92 ; girls, 105 ; total, 197.
Pupils present at ordinary inspection :—Boys, 58 ; girls, 55 ; total, 113.
Pupils present at examination :—Boys, 78 ; girls, 63 ; total, 141.
Ordinary average :—120 pupils.

The schoolroom, which is under the church, is fairly suitable for its uses, but requires additional furniture. The playground and out-offices are good. The organization is satisfactory, but the discipline is ineffective, the pupils being noisy, disobedient, and very unpunctual. The moral tone of the pupils is low, and my vigilance was taxed to the utmost when endeavouring to prevent them from copying or prompting. The prescribed subjects, excepting singing and drawing, are taught with results which vary between moderate and tolerable.

RAYMOND TERRACE :—Ordinary inspection, 18th May ; examination of pupils, 19th January.

Pupils enrolled :—Boys, 15 ; girls, 22 ; total, 37.
Pupils present at ordinary inspection :—Boys, 15 ; girls, 20 ; total, 35.
Pupils present at examination :—Boys, 14 ; girls, 21 ; total, 35.
Ordinary average :—44 pupils.

This school, after suffering from the effects of frequent change of teachers, is undergoing a very satisfactory reorganization, and since the last inspection the numbers on the roll have increased from thirty-seven to fifty-six. The schoolhouse is in but a moderate state of repair ; the furniture is insufficient, but it is judiciously arranged, and the room is kept very clean. The order is very satisfactory and the methods of instruction are judicious and tolerably searching.

PRESBYTERIAN SCHOOLS.

DINGO CREEK :—Ordinary inspection, 12th March ; examination of pupils, 22nd September.

Pupils enrolled :—Boys, 21 ; girls, 23 ; total, 44.

Pupils present at ordinary inspection :—Boys, 16 ; girls, 18 ; total, 34.

Pupils present at examination :—Boys, 14 ; girls, 19 ; total, 34.

Ordinary average :—31 pupils.

The schoolhouse has been recently put in good repair. It is a suitable building, is tolerably furnished, and is also properly supplied with material. The school is now supplied with good out-offices. The organization is moderately correct ; the discipline is fair ; the instruction is mechanical and uneducative. The moral tone of the school is pleasing. The Rev. J. S. Laing and two lay members of the Board were present.

NEWCASTLE :—Ordinary inspection, 27th January ; examination of pupils, 22nd and 23rd July.

Pupils enrolled :—Boys, 115 ; girls, 103 ; total, 218.

Pupils present at ordinary inspection :—Boys, 79 ; girls, 54 ; total, 133.

Pupils present at examination :—Boys, 85 ; girls, 68 ; total, 153.

Ordinary average :—155 pupils.

The material state of this school is from tolerable to fair, the defects being the want of additional furniture and a better playground. The discipline and organization are very good, and the moral tone of the school is highly satisfactory. The instruction is marked by earnestness and intelligent methods, and the results range from moderate to tolerable in the first and second classes, and from fair to good in the third and fourth. The Rev. J. Coutts was present.

1870.

NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT FOR 1869.)

Presented to Parliament, pursuant to Act 18 Victoria.

THE SECRETARY TO THE TRUSTEES, SYDNEY GRAMMAR SCHOOL, to THE COLONIAL SECRETARY.

Sydney Grammar School,
7 February, 1870.

SIR,

I have the honor, by direction of the Trustees of the Sydney Grammar School, to transmit to you, for the purpose of being laid before the Parliament, the following Report of their proceedings and the progress of the school, during the year 1869.

At the January meeting of the Trustees, Professor Pell was re-elected Chairman of the Board for the current year. At the same meeting a joint certificate was received from the Examining Board for Foundation Scholarships, recommending Springthorpe and Scarr to the Trustees for the Foundation Scholarships. In consequence however of Messrs. Springthorpe and Scarr not being able to comply with the rules under which the Foundation Scholarships were offered, no Scholarships were awarded.

At the February meeting Mr. Ord was appointed as an Assistant Master at a salary at the rate of £200 per annum.

The Trustees, at a meeting held on the 1st March, adopted the following regulations for their meetings and rules of procedure:—

1. The Trustees shall meet on the first Monday in every month, or on the nearest convenient day, should such first Monday be a public holiday, and may adjourn from time to time to conclude any unfinished business.

2. At any time in the interval between such monthly meetings, it shall be competent for the Chairman, or in his absence the Vice-Chairman, in any case of emergency, to call a special meeting of the Trustees to be held as soon as conveniently may be, for the consideration of any business which he may wish to submit to them.

3. Upon the written requisition of any three members, the Chairman, or in his absence the Vice-Chairman, or in the absence of both, the Secretary, shall convene a special meeting of the Trustees to be held so soon as conveniently may be after the expiration of three days from the receipt of such requisition.

4. Except in any case of emergency as aforesaid, no motion initiating a subject for discussion shall be made, but in pursuance of notice given at least four days previously; and every such notice shall be entered in a book to be kept by the Secretary for that purpose.

5. The Secretary shall issue to each Trustee a summons with a written specification of the various matters to be considered at the next meeting of the Trustees, whether such meeting be an ordinary or a special one; and such summons, except in any case of emergency as aforesaid, shall be posted in Sydney at least four days previously to such meeting.

6. That at the ordinary meeting of the Trustees in the month of February in each year, the Trustees shall elect a Vice-Chairman, who shall hold office for one year, and shall act for the Chairman during his absence. In case of there not being a quorum present at the meeting held in the month of February, the election shall be made at the next ordinary meeting at which a quorum shall be present; and in such case the Vice-Chairman then elected shall hold office until the February next following.

The Trustees at the same meeting revised and adopted the following Rules for the admission of Free Scholars, viz.:—

Rules for the admission of Foundation Pupils to the Sydney Grammar School:—

1. That every year a number of boys, not exceeding three, be admitted by the Trustees to a free education in the Sydney Grammar School—such boys to be entitled Foundation Pupils.

2. That the Head Master, the Mathematical Master, and two Examiners, appointed by the Trustees, form a Board, to be called the Examining Board, of which the Head Master shall be Chairman, and who shall examine candidates, and report the result to the Trustees.

3. That the subjects for examination shall be—
The English Language and History, Geography, Arithmetic, Latin Grammar, Cæsar de Bello Gallico, book 1, Euclid, book 1.
- 4 That no candidate shall be appointed a Foundation Pupil, except upon the report of the Examining Board that he is possessed of more than ordinary abilities or attainments.
- 5 That at the conclusion of every examination the Examining Board shall forward to the Trustees a list of the names of those candidates whom they consider eligible, arranged in order of merit, taking into consideration not only the attainments of candidates, but their ages and abilities also, and the probabilities of their deriving advantage from a liberal education.
- 6 No candidate recommended by the Board shall be considered eligible unless the Trustees shall be satisfied that the circumstances of his parents or guardians are such as to justify the remission of the fee. A certificate from the Council of Education shall be held conclusive on these points
7. Foundation Pupils shall be appointed for one year, the appointments to be renewable from year to year upon the recommendation of the Examining Board
8. The Head Master shall have the power of dismissing Foundation Pupils for bad conduct, or for irregular attendance
- 9 An examination shall be held annually in the month of December, or such other time as the Trustees may direct.

The Trustees also resolved to recommend to the Senate of the University that the "Salting Exhibition" then vacant be conferred upon Mr. C. A. Coghlan, late captain of the Grammar School. Upon this recommendation Mr. C. A. Coghlan was appointed to that exhibition.

At this meeting Mr. H. S. Hawkins was temporarily appointed as an Assistant Master, at a salary at the rate of £150 per annum; higher duties having been subsequently assigned to Mr Hawkins, his salary was in the course of the year raised to £300.

At a special meeting in July, Mr. W J. Vanes was, on the recommendation of the Head Master, appointed to the office of Assistant English Master, at the rate of £150 per annum.

It was decided at this meeting that the Christmas vacations should be reduced to five weeks, and Mr. Weigall was authorized to employ Mr. Norris as a Writing Master for the remainder of the quarter.

On the 6th December a report was received from the Examining Board for Free Pupils, stating that seven candidates had been examined in the subjects specified, and that they considered that none of them were possessed of more than the ordinary abilities or attainments; and that under these circumstances they were unable to recommend any of the candidates for admission as Foundation Pupils.

The number of pupils in attendance during the year averaged 196½, and the number for the last December quarter was 215, being the maximum attendance since the foundation of the school.

The Trustees have the honor to report that they are quite satisfied with the state of discipline and efficiency of the school.

The amount of the whole income and expenditure of the school during the year will be found in the annexed Appendix.

I have, &c,

W. H. CATLETT,

Secretary.

APPENDIX.

RETURN of the Receipts and Disbursements of the Sydney Grammar School, for the Year 1869.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MATRIMONIAL CAUSES BILL.

(PETITION—ROMAN CATHOLIC BISHOP OF MAITLAND.)

Ordered by the Legislative Assembly to be Printed, 16 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned James Murray, Roman Catholic Bishop of Maitland,—

SHOWETH :—

1. That your Petitioner has seen with regret and alarm a renewed attempt to pass through your Honorable House a Bill, under the title “Matrimonial Causes Bill,” proposing to grant facilities for Divorce.

2. That the sacredness of the bond of Matrimony lies at the foundation of all civilized society, and that to diminish that sacredness is to bring (sooner or later) ruin on all human civilization and progress.

3. That Catholics hold the indissolubility of the bond of Matrimony as a matter of Christian faith.

4. That the said Bill now before your Honorable House would press with peculiar severity on Catholics. In any Matrimonial Cause the conscientious Catholic would remain bound by his matrimonial vows, whilst the unconscientious Catholic, moved by caprice or licentiousness, or in a mixed Marriage the non-Catholic party, deterred by no religious belief in the matter, would be set at liberty from all penalty of human laws.

5. That the said Bill is unnecessary, because the existing facilities for separation “*a mensa et thoro*,” without relaxation of the “*vinculum matrimonii*,” are sufficient to afford all the relief that Christianity and the safety of society permit.

Your Petitioner, therefore, for himself and on behalf of all the Catholic Clergy and Laity of New South Wales, humbly prays that the said Bill may not receive the assent of your Honorable House.

And your Petitioner will ever pray, &c., &c.

Dated at Maitland, this 14th day of March, A.D. 1870.

+ JAMES MURRAY,
Bishop of Maitland.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MATRIMONIAL CAUSES BILL.

(PETITION—ROMAN CATHOLIC BISHOP OF BATHURST.)

Ordered by the Legislative Assembly to be Printed, 16 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Mathew Quinn, Roman Catholic Bishop of Bathurst,—

SHOWETH :—

1. That your Petitioner has seen with regret and alarm a renewed attempt to pass through your Honorable House a Bill, under the title “ Matrimonial Causes Bill,” proposing to grant facilities for Divorce.

2. That the sacredness of the bond of Matrimony lies at the foundation of all civilized society, and that to diminish that sacredness is to bring (sooner or later) ruin on all human civilization and progress.

3. That Catholics hold the indissolubility of the bond of Matrimony as a matter of Christian faith.

4. That the said Bill now before your Honorable House would press with peculiar severity on Catholics. In any “ Matrimonial Cause” the conscientious Catholic would remain bound by his matrimonial vows, whilst the unconscientious Catholic, moved by caprice or licentiousness, or in a mixed marriage the non-Catholic party, deterred by no religious belief in the matter, would be set at liberty from all penalty of human laws.

5. That the said Bill is unnecessary, because the existing facilities for separation *a mensa et thoro*, without relaxation of the *vinculum matrimonii*, are sufficient to afford all the relief that Christianity and the safety of society permit.

Your Petitioner, therefore, for himself and on behalf of all the Catholic Clergy and Laity of New South Wales, humbly prays that the said Bill may not receive the assent of your Honorable House.

And your Petitioner will ever pray, &c.

Dated at Bathurst, this twelfth day of March, A.D. 1870.

—————
MATRIMONIAL CAUSES BILL.

(PETITION—ROMAN CATHOLIC ARCHBISHOP OF SYDNEY.)

—————
Ordered by the Legislative Assembly to be Printed, 18 March, 1870.
 —————

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Roman Catholic Archbishop of Sydney,—

SHOWETH :—

(1.) That your Petitioner has seen with regret and alarm a renewed attempt to pass through your Honorable House a Bill, under the title "Matrimonial Causes Bill," proposing to grant facilities for Divorce.

(2.) That the sacredness of the bond of Matrimony lies at the foundation of all civilized society, and that to diminish that sacredness is to bring (sooner or later) ruin on all human civilization and progress.

(3.) That Catholics hold the indissolubility of the bond of Matrimony as a matter of Christian faith.

(4.) That the said Bill now before your Honorable House would press with peculiar severity on Catholics. In a "Matrimonial Cause," the conscientious Catholic would remain bound by his matrimonial vows; whilst the unconscientious Catholic, moved by caprice or licentiousness, or, in a mixed marriage the non-Catholic party, deterred by no religious belief in the matter, would be set at liberty from all penalty of human law.

(5.) That the said Bill is unnecessary, because the existing facilities for separation "*a mensa et thoro*," without relaxation of the "*vinculum matrimonii*," are sufficient to afford all the relief that Christianity and the safety of society permit.

Your Petitioner therefore, for himself, and on behalf of all the Catholic Clergy and Laity of New South Wales, humbly prays that the said Bill may not receive the assent of your Honorable House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

IMPERIAL ACT AMENDING THE LAW RELATING TO
DIVORCE AND MATRIMONIAL CAUSES.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 30 March, 1870.

THE GOVERNOR GENERAL TO THE SECRETARY OF STATE FOR THE COLONIES.

30 November, 1858.

Sir,

I have the honor to acknowledge the receipt of a Circular Despatch, dated 12th April, 1858, enclosing a copy of the Act of the Imperial Parliament, 20 and 21 Vict., cap. 85, and directing me to consult my Council as to the expediency of introducing into this Colony a measure based upon similar principles.

I forward herewith a Minute of the Proceedings of the Executive Council with reference to this subject, by which it will be seen that the Members, though recognizing the importance of the subject, were not of opinion that it would be at present desirable to enter upon its consideration.

I have, &c.,
W. DENISON.

MINUTE OF THE EXECUTIVE COUNCIL.—(58-45.)

His Excellency the Governor General lays before the Council a Despatch from the Right Honorable the Secretary of State for the Colonies, forwarding a copy of the Act of the Imperial Parliament, 20 and 21 Victoria, cap. 85, "To amend the law relating to Divorce and Matrimonial Causes in England," and conveying the wish of Her Majesty's Government that His Excellency should consult the Council as to the expediency of introducing into this Colony a measure based upon similar principles.

2. His Excellency at the same time lays before the Council a letter from the Secretary to the Law Officers, enclosing an opinion upon the subject by the Honorable the late Attorney General.

3. The Council fully recognize the importance of the subject to which their attention has been directed, but bearing in mind that a dissolution of the local Parliament is impending, they are of opinion that the further consideration of it may with propriety be deferred to some future more opportune period.

A. ORPEN MORIARTY,
Clerk of the Council.

22 Nov., 1858.

THE UNDER SECRETARY TO THE LAW DEPARTMENT TO THE PRINCIPAL UNDER SECRETARY.

Crown Law Offices,
Sydney, 8 November, 1858.

Sir,

In returning you the enclosed copy of an Act of the Imperial Parliament, 20 and 21 Vict., cap. 85, "To amend the law relating to Divorce and Matrimonial Causes in England," I am directed by Mr. Attorney General Martin to state, that his opinion is opposed to the introduction into this Colony of an Act similar in principle to the above. It does not appear to the Attorney General to be giving satisfaction in England, where the means of working it are far superior to any which we can at present hope to possess; and the more prudent course therefore would be, he thinks, to let the matter stand over for a year at least, when the Government of this Colony will be in a much better position than now to determine whether or not we should follow the example set by the Imperial Parliament.

I have, &c.,
W. E. PLUNKETT.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CEMETERIES REGULATION BILL, N^o. 2.(PETITION—STANDING COMMITTEE OF THE SYNOD OF THE CHURCH OF ENGLAND
FOR THE DIOCESE OF SYDNEY.)*Ordered by the Legislative Assembly to be Printed, 22 February, 1870.*

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the Standing Committee of the Synod of the Church of England for the
Diocese of Sydney,—

HUMBLY SHOWETH :—

1. That your Petitioners feel deeply interested in the matter of the regulation of Cemeteries, and especially of that at Haslem's Creek, as such regulation is intended to be affected by the Bill to regulate Cemeteries, now before your Honorable House.

2. That your Petitioners are of opinion that the change proposed by the said Bill to be introduced into the management of the Haslem's Creek Cemetery, as the same is at present regulated under the Necropolis Act of 1867, by transferring the management from separate bodies of Trustees for the different religious denominations to one body of Trustees appointed by the Government, is undesirable, and that it is not rendered necessary on the ground of economy or otherwise by any well founded cause of complaint against the existing system of management.

3. That your Petitioners are of opinion that it is not desirable as proposed by the said Bill to extend the system of management which may be adopted for the Haslem's Creek Cemetery to all other lands set apart by the Government as Cemeteries, or for the purposes thereof, without regard to the peculiar circumstances of each individual case.

4. That your Petitioners consider as open to serious objection the power proposed to be given by the said Bill to the Trustees of any Cemetery, or to the Minister for Lands for the time-being, to permit other persons than duly recognized Ministers of the denomination, for whose use any ground may have been set apart for burying the dead, to exercise within such ground religious or professional functions in connection with the burial of the dead.

5. That your Petitioners consider as open to serious objection, the absolute control given by the said Bill to the Trustees of any Cemetery over the monuments and inscriptions placed therein, your Petitioners being of opinion that such modification of that control is essential as will effectually prevent the placing within ground set apart for any religious denomination, monuments and inscriptions repugnant to or inconsistent with the religious feelings of that denomination.

6. That your Petitioners consider as very objectionable, the power given by the said Bill to any person appointed by those in charge of a corpse to perform rites of burial over such corpse within ground set apart for the use of a denomination, in any case where no duly recognized Minister of that denomination has been appointed by the Trustees to perform the burial service of that denomination within the said ground.

7. That your Petitioners are decidedly opposed to, and consider as very objectionable, the power conferred by the Bill on the Government to prohibit burials in any Cemetery or burial place, on the written application of twenty householders, or upon the written certificate of three duly qualified medical practitioners.

Your Petitioners therefore pray that your Honorable House will not pass the aforesaid Bill.

And your Petitioners will ever pray, &c., &c.

Signed on behalf of the Standing Committee of the Synod of the Diocese of Sydney.

WILLIAM M. COWPER,
Chairman.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GEORGE SWINNERTON YARNTON.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 22 February, 1870.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of George Swinnerton Yarnton, of Sydney, Solicitor,—

SHOWETH :—

That, on the first day of February, one thousand eight hundred and fifty-nine, your Petitioner relinquished his position as a practising Solicitor in the City of Sydney, and accepted the office of Registrar of the Metropolitan District Court.

That, on the twenty-eighth day of January, one thousand eight hundred and sixty-nine, your Petitioner received a communication from the Secretary to the Crown Law Officers, intimating that your Petitioner had been removed from his said office, provisions for his salary having ceased.

That your Petitioner has made repeated applications for compensation for the loss of office, but without success, your Petitioner being advised that it has, for many years past, been the invariable practice, on the removal from office of a Public Servant, to grant a compensation proportionate to the length of his service and the amount of salary received by him.

Your Petitioner therefore prays that your Honorable House will take his case into your favourable consideration, and grant your Petitioner such relief as the justice of the case shall require, and as to your Honorable House shall seem meet.

And your Petitioner shall ever pray, &c., &c.

GEORGE S. YARNTON.

Sydney, 10 Feb., 1870.

1870.

 PETITION OF GEORGE SWINNERTON YARNTON.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 1st March, 1870,—“with power to send for persons and papers”—“to consider and report upon the allegations contained in the Petition of George Swinnerton Yarnton, presented to your Honorable House on 18th February, 1870,”—have agreed to the following Report:—

Your Committee, having taken the evidence hereunto appended, find—That Petitioner, Mr. G. S. Yarnton, was appointed Assistant Registrar of the Metropolitan District Court on the 1st of February, 1859.

That on the 31st of December, 1868, the office of Assistant Registrar was abolished, and Petitioner received notice that his services were not further required, and was requested to make his claim for compensation for loss of office.

That Petitioner did, during his tenure of office, contribute to the Superannuation Fund, and upon ceasing to hold office such contribution was refunded to him. That Petitioner had been in the Public Service, without intermission, for a period of nine years and eleven months.

Your Committee also find that (by a Minute of the Executive Council, bearing date 6th day of February, 1857), upon the abolition of any office, the holder of such office is entitled to be paid one month's pay for every year's service. Such pay, if calculated at the rate of salary which the Petitioner had been receiving, would amount to the sum of £330 11s. 1½d.

Your Committee beg, therefore, to recommend the claims of Mr. G. S. Yarnton to the favourable consideration of the Government.

JAMES S. FARNELL,
Chairman.

No. 2 Committee Room,
Sydney, 23 March, 1870.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF GEORGE SWINNERTON YARNTON.

THURSDAY, 17 MARCH, 1870.

Present:—

MR. BAKER,
MR. FARNELL,

MR. WEAVER.

MR. KING,
MR. LLOYD,

JAMES SQUIRE FARNELL, ESQ., IN THE CHAIR.

George Swinnerton Yarnton, Esq., called in and examined:—

1. *Chairman.*] You are a solicitor of the Supreme Court? I am.
2. You have presented a petition to the Legislature complaining of a grievance? Yes.
3. Did you receive any appointment at any time under the Government? I did. I was first appointed as Second Registrar of the Metropolitan District Court; but a new Attorney General having taken office, he was of opinion that no such appointment could be made under the District Court Act, and I was then appointed with Mr. Maxwell jointly to execute the office of Registrar.
4. Were you appointed by the Governor with the advice of the Executive Council? I was.
5. At what salary? At £400 per annum; and I was required to give security at first to the extent of £300, and afterwards £500.
6. Were any deductions made from your salary on account of the Superannuation Fund? Yes, but they have since been refunded to me.
7. When did you cease to hold office as Joint Registrar? In January last year.
8. How many years did you hold that office? It wanted a month of ten years.
9. Upon what grounds were you removed from office? No provision having been made for my salary.
10. Your office was abolished? The office was not abolished—it is still in existence. Mr. Maxwell performs all the duties which before my removal were divided between us.
11. Have you received any compensation for loss of office? None.
12. Have you made any application for it? I have.
13. To whom? To the Governor and Executive Council, and to the Colonial Secretary.
14. What reply did you receive? The reply to my last application was that the Colonial Secretary could not advise the Government to accede to my request.
15. What was the nature of that request? I asked for compensation for loss of office.
16. Upon what principle did you ground your claim for compensation? That I had given up the practice of my profession, which was netting me between £500 and £600 a year, to go into the Government Service, thinking I should be allowed to continue there, and that by length of service I should get promotion; that during the time I had been in the Service it was notorious to every one that I did by far the greater portion of the work in the office; that the two persons who were appointed to execute the office of Registrar had the same official status; that when it was found that I could not be appointed Second Registrar, and I was appointed jointly with Mr. Maxwell, the amount of security required from me was increased from £300 to £500, but no difference was made in the salary, Mr. Maxwell receiving £500 a year and I £400, although I was performing the larger portion of the duty.
17. Were you not entitled to compensation under the Superannuation Act? No, I believe not; that Act does not provide for compensation for abolition of office.
18. Under what regulation, rule, or law do you make a claim now for compensation? Under a Minute of the Executive which was in force at the time I joined the Service.
- 19.

G. S. Yarnton,
Esq.
17 Mar., 1870.

G. S. Yarnton,
Esq.
17 Mar., 1870.

19. *Mr. Weaver.*] What is the date of that Minute? 6th February, 1857.
20. *Chairman.*] Do you wish to hand in a copy of that Minute? I do. (*Handed in. Vide Appendix A 1.*)
21. Did you make any application to the Executive Government in conformity with this Minute? I referred to these regulations, but I made my claim on a larger basis. I was advised by counsel, and it appeared to me that it was so, that the Government having deducted from my salary a certain annual payment, entered into a contract with me that I should be allowed to continue in the Service until I had been there a sufficient time to be entitled to a retiring allowance under the Superannuation Act; and that by removing me—the Superannuation Act not providing for abolition or loss of office—I was entitled to damages. I sent in a claim on that ground; it was a very large one, but it was based on a calculation made by Mr. Thomson, the Actuary of one of the Provident Societies.
22. How much did you receive back? I received back exactly the amount I had contributed to the Superannuation Fund, without interest.
23. And the Government do not recognize your present claim? They do not.
24. I understood you to say you were practising as a solicitor before you took this situation. Yes.
25. The fact of your taking that situation I presume destroyed your practice? Yes, it is completely destroyed; the connection is entirely gone; and the Committee will bear in mind that in ten years two races of young attorneys spring up, and that it is well known now that the number of attorneys in Sydney is far in excess of the requirements of the inhabitants.
26. After you lost your office you commenced again the business of a solicitor, and you found it difficult to get practice? I endeavoured to make a commencement, but with very little success. My earnings for last year amounted to not more than £200, and one-fourth of that I shall never get, through insolvencies and other causes.
27. Has it been the practice of the Government to compensate public servants for loss of office? I believe it has; I believe several Gold Commissioners were compensated.
28. In accordance with the Minute of the Executive which you have handed in? Yes, on the basis of one month's salary for each year of service.
29. *Mr. Lloyd.*] Do you mean to say that at the time you were employed the cost of the office of Registrar was your salary and Mr. Maxwell's—£900 a year—£500 and £400? Yes.
30. Has Mr. Maxwell's salary been increased? No.
31. He has the same salary as before—£500? Yes.
32. On which clause of this Minute do you base your claim, because I see there is one clause here under which the Government can give an officer notice by paying him three months' salary? They may pay him three months' salary on account of the compensation—not as full compensation; and then the officer, as I read this Minute, has at the expiration of three months the option of accepting the further amount of compensation to which he is entitled or taking another office. I have never had any offer of another office, or of compensation.
33. Had the Government any reason to be dissatisfied with you? I believe not.
34. Did they express any? No; the reason for my removal is given in a letter which I beg to hand in; that is the first notification I had of it. (*Handed in. Vide Appendix A 2.*) I beg also to hand in a copy of the letter of the Judges referred to in that. (*Handed in. Vide Appendix A 3.*)
35. Did the Government increase the salaries of the officers referred to in this letter? No; the Assembly refused to vote the money.
36. You say there was no charge against you of any kind? No.
37. On whose recommendation was it that one of these officers was dispensed with—what influenced the Judges to come to this decision? The matter arose in this way. At the beginning of 1865 there was a circular sent by the Colonial Secretary to the heads of all departments, with a view to a general retrenchment; among others the Judges of the Sydney District Court had a circular sent to them; they replied to that circular, and the fourth paragraph of their reply is to the following effect—"With reference to the officers attached to the District Court holden at Sydney, we are of opinion that one (1) of the present two (2) Registrars, may be dispensed with." Subsequently the Attorney General wrote again to the Judges, and they replied to the same effect.
38. How did the Judges arrive at the conclusion that only one Registrar was required? Because they thought one could do the work.
39. It must have been suggested to them by somebody? I do not know whether it was.
40. You did not suggest it yourself? No.
41. You never suggested that the work performed by you and Mr. Maxwell could be done by one officer? I cannot say that I never did suggest anything of the kind to any one, because, when Mr. Darvall was Attorney General the appointment of Commissioner of Stamps was offered by Mr. Smart to Mr. Maxwell, and accepted with an increase of salary on what Mr. Maxwell was then getting, but the arrangement was afterwards set aside by Mr. Cowper, and Mr. Barton was appointed. If Mr. Maxwell's appointment to that office had been carried out, I was to have performed the whole duties of Registrar.
42. You suggested that if a better appointment could have been found for Mr. Maxwell you could do the duties of the two? Yes, Mr. Darvall told me I could.
43. And you thought you could? Yes; in fact I was doing the greater part of the work. Nothing further was done in it until there was this question of retrenchment.
44. How long was it after your suggestion about Mr. Maxwell's appointment to another office which seemed available that you were dismissed? That was in 1865. I was removed in 1869, four years later. But you will allow me to state that another matter occurred in the meantime. This recommendation of the Judges as to getting rid of one Registrar was in January, 1866; in March of the same year I found that there was a very good opening for me in Queensland, and I applied to the Attorney General then to abolish my office and to give me the compensation I was entitled to, but he declined to do so; I was kept on, and I complain that I was dismissed at the worst possible time when a man could be dismissed, when everything was depressed, and my chance was gone in Queensland.
45. *Mr. King.*] What would be the amount of your pension? Supposing the Superannuation Act were applicable to the case of loss of office, I should only be entitled to the same compensation as under the Executive Minute—one month's salary for each year of service—something like £330. My salary was £33 6s. 8d. per month, and I served ten years, less one month.
46. £330 in one sum? Yes.

47. *Mr. Lloyd.*] What was the compensation you claimed from the Government? Something like £2,000. Here is a copy of the letter making the claim, which was based on Mr. Thomson's calculation. (*Produced.*)
48. Do you still think you are entitled to £2,000? No; for this reason,—it seems there is not a legal claim against the Government. I was advised that I had a legal claim against the Government, and when the Government refused me compensation, I then applied to be allowed to sue them, which was granted. I presented a petition of right, and the Attorney General resisted the claim, paying into Court the amount deducted from my salary under the Superannuation Act, and also one month's salary which was due to me, but meeting the remaining cause of action by demurrer, alleging that the Crown had a perfect right to dismiss a public servant without assigning any reason or being called upon to justify such dismissal.
49. After all the correspondence between the Government and yourself, what do you consider you are now entitled to? I say on the lowest basis I ought to get a month's salary for each year of service—ten years at £33 6s. 8d.
50. *Chairman.*] If that is the extent of your claim, what is the use of putting in this document (*referring to the letter claiming £2,000*)? I was asked on what basis I made the claim; I have stated the lowest basis, but I have not stated the claim which I conceive I am entitled to make. I was going to state to the Committee the basis on which I think they ought to calculate compensation in my case, and at starting I say that the lowest basis is this Minute of the Executive; that is the least the Government ought to give me.
51. *Mr. Weaver.*] If I understand you rightly, you did suggest to the Attorney General that one of the Registrars should be done away with altogether, when you thought Mr. Maxwell could get another appointment? No, I do not say that; I say that Mr. Darvall offered to give me the appointment of sole Registrar (if Mr. Maxwell got this other appointment) with a salary of £600 a year.
52. I understood you to say you proposed to do away with the office you held when you had an offer of employment in Queensland? In March, 1866, I wrote proposing the abolition of my office and asking for the usual compensation. My reason was that I had an opening in Queensland. On the 14th April I received a reply declining to abolish the office.
53. *Mr. Baker.*] Is this Minute of the Executive Council still in force? I believe so.
54. When you accepted this office in 1859, did you know of the existence of this Minute? I cannot say that I knew of the existence of that Minute, but I knew there was a regulation in the Service that an officer was entitled to a month's salary for each year of service on the abolition of his office. It is only lately I have become aware of that Minute.
55. You knew the regulation was in force? Yes.
56. There is an alternative presented to you by clause 2—either to take one month's pay for each year of service or to wait for some other situation—Which did you accept? That is the grievance I complain of. I contend that when I left the Service I ought to have had £100 tendered to me, being three months' pay, and then I should have had the option of taking the remainder of the compensation or of taking another office. Neither of these offers was made to me. What I complain of is that this Minute has not been carried out with regard to myself.
57. Did you get three months' salary? No, I received no compensation whatever; I merely had returned to me the money I had contributed to the Superannuation Fund.
58. *Chairman.*] Did you get a verdict against the Government? No; they paid an amount into Court, which I took out—that amount being, as I have stated, the deductions from my salary under the Superannuation Act, and one month's pay which was due to me.
59. You did not go on with the action? No; the Government met me with a demurrer; they would not let me go before a jury. It was set down for trial pursuant to an order of Mr. Justice Hargrave, but they went to another Judge who set it aside.
60. *Mr. King.*] Was the demurrer ever argued? No; the objection taken was a good one legally, and therefore I did not go on with the matter.
61. *Mr. Baker.*] I see by clause 3 of this Minute that the payment of compensation in these cases is contingent on the assent of the Legislative Assembly. Has it been intimated to you that the Legislative Assembly refused to vote this amount in your case? No, they have never been asked.
62. Do we understand that you are satisfied to accept £330? No, I do not say that. I was going on to say that I think there are special circumstances in my case to take it out of the general rule.
63. *Chairman.*] Will you state these circumstances? The first is the fact of my having given up a profession, and that my connexion is gone entirely and can never come back again. In the next place, in consequence of accepting office, I disposed of my library of some 230 volumes for something like £60, by auction, which I could not replace for three times the amount. Then there is another circumstance, that in consequence of the delay of the Government to give me compensation, I was necessitated within the last month to sacrifice my policy in the Australian Mutual Provident Society. In 7½ years I have contributed £180 to that Society, and I was necessitated for the support of my family to sacrifice that policy, and I did not receive back, even with bonus added, anything like the money I had contributed. If I had had the amount of compensation when I first left office, it would not have been necessary for me to have done that. Besides, that amount of compensation would have given me the opportunity of making a business again and creating a connection. But here was I thrown on the world penniless, with a large family dependent on me for support, and within a few days after I had lost my wife. I may mention that before I was appointed, the attorneys of Sydney signed a paper pointing out that it was desirable that a professional man should be appointed. That paper I have here. (*Produced.*) It must be evident that in establishing a new office of this kind, it was necessary that a professional man should be appointed as Registrar, and nobody but a professional man could have set the thing going properly, because, although there was a Judge at the head of the department, he was here, there, and everywhere, and could not be constantly in the office. A layman could not have set that office in motion properly.
64. Is Mr. Maxwell not a professional man? No. There were many things to do in that office that a layman could not have done. My office hours were longer than those of any one else in the establishment. When the Court was sitting, I had to be there very early in the morning to tax the costs of the day before, because at 10 o'clock I had to go into Court, and I was there occasionally till very late in the evening, sometimes till midnight.
65. When the Government intimated to you that they did not require your services, did they offer you any other employment? No.

G. S. Yarnton,
Esq.

17 Mar., 1870.

- G. S. Yarnton, Esq. 66. Did you apply for other employment? I did. I heard that there was likely to be a vacancy in the Police Magistracy, either at Maitland or Newcastle, and I applied for it.
- 17 Mar., 1870. 67. The Government intimated to you that you might put in an application for compensation for loss of office? That was all.
68. *Mr. Lloyd.*] Did you put in such an application? Yes, I memorialized the Governor and the Executive Council, and I received a reply to the effect that the matter had been remitted to the Colonial Secretary for further action; but I never could find that any further action was taken.
69. *Chairman.*] How soon after you left the office of Registrar did you put in this claim to compensation under the Executive Minute? My first claim for compensation was the memorial I have just spoken of, and here is a letter from the Clerk of the Executive Council, dated 18th February, 1869, acknowledging its receipt.
70. *Mr. Lloyd.*] When were you dismissed? On the 28th January, 1869. After my memorial had been remitted to the Colonial Secretary I heard nothing further of it; and in April, 1869, I addressed to the Colonial Secretary the letter which I have produced, transmitting the calculation of the actuary, and also a proposition to the Government to refer the matter to arbitration.
71. *Chairman.*] What reply did you get to that? The reply was to the effect that the Colonial Secretary could not recommend the Government to comply with my request.
72. *Mr. Baker.*] When you found that of no avail, did you memorialize the Government to grant you the compensation you thought yourself entitled to under the Minute of the Executive Council? No. I waited on Mr. Sutherland, saw him several times, asking him to see Mr. Robertson. He at last said it would be better for me to sue, and I sued; thinking I was serving the Government by doing so—that it would relieve them of the responsibility, more particularly as my dismissal was not altogether their act, although in one sense it was their act, as they removed me; but the previous Government had determined on it. I thought I was rather serving them than otherwise by taking the responsibility off their shoulders and transferring it to a jury.
73. *Mr. King.*] When did you see them? It was directly after this letter in April, 1869.
74. *Mr. Lloyd.*] Have you taken any steps since the result of that action? No.
75. Nothing has been done on either side? No, with the exception of the presentation of a petition to the last Parliament. Of course that fell through in consequence of the dissolution, and I presented it again to this Parliament.
76. *Chairman.*] Do you know whether there is a second or assistant Registrar now in the District Court? No.
77. The business is now carried on by the same number of officers —? There is one less—myself being away.
78. *Mr. Weaver.*] In this petition you merely claim one month's pay for each year of service. "It has for many years past been the invariable practice, on removal from office of a public servant, to grant a compensation proportionate to the length of his service and the amount of salary received by him"—? I state that to have been the practice, but I apprehend that when I get before the Committee I am pretty much in the same position as a suitor going before a jury. It is entirely a matter for the Committee to take into consideration all the circumstances of the case.
79. *Mr. Baker.*] Can you adduce any instance in which the Government or Legislature has gone beyond that minute and awarded more than one month's pay for each year of service to any officer similarly situated? I recollect that when the City Commissioners were abolished there was a claim made by Mr. Elliott for abolition of office and a sum of money received by him, but I do not know on what basis it was calculated. I believe it was a compromise. Mr. Elliott insisted on his legal right to compensation for loss of office, and the present Attorney General advised him that he had that legal right. The Government however resisted it, and there was a compromise. I have tried to get the papers, but Mr. Consett Stephen, who was acting for Mr. Elliott, has had his office looked through, and they cannot be found.
80. *Chairman.*] Did Mr. Darvall get compensation? Mr. Darvall and Mr. Rae got other appointments.
81. *Mr. Weaver.*] Under the Act the City Commissioners were appointed during good behaviour, were they not? I think so.
82. *Chairman.*] Is there anything further you wish to state? I have one or two other documents I would like the Committee to see. I have a copy of an opinion of the Crown Law Officers—Sir William Manning and Mr. Josephson—in the recent case of Mr. Laurence Curr, a gentleman in Mr. Forster's department who had been guilty of some irregularity; I do not know what it was, but he was called on by Mr. Forster to show cause why he should not be dismissed; his explanation was not satisfactory, and Mr. Forster claimed the right to dismiss him. The question was whether the Minister could do it, or whether it must be the Governor and Executive Council.
83. That is not a parallel case—you lost your office through the action of the Governor and Executive Council? It is a parallel case so far that it deals with the course that ought to be adopted before an officer should be dismissed; and if opportunity to show cause is given to an officer who has committed an offence, *a fortiori* it should be given to one who has committed no offence. The concluding paragraph of this document is as follows:—
- "We ought however to state that, in strict law the Governor and Council are not compelled to hear an accused officer before he is dismissed, but that they may, on the contrary, act arbitrarily if they think fit; but we assume that the fundamental principle of hearing an accused person before he is condemned is intended to be followed, and this being assumed, we consider that the body authorized to condemn should themselves challenge the accused by stating the charge and inviting him to make his defence."
- I have here also the original letter offering me the appointment, and the letter notifying my removal. (*Produced.*)
84. Have you any further statement to make? I wish to mention to the Committee the fact of the difference in the salaries of Mr. Maxwell and myself, and the refusal to increase my salary although the amount of security I had to give was increased. The amount of security was at first £300, but when the Government found that they could not make the appointment as originally intended, and that they were obliged to appoint two persons to execute the office, they said I must give security to the extent of £500. I said then that they ought to give me the same salary as Mr. Maxwell, and I made repeated applications for an increase, but they did not give it me.

William Edmond Plunkett, Esq., called in and examined :—

85. *Chairman.*] You are Under Secretary to the Law Department? I am.
86. Was Mr. Yarnton at any time appointed to the office of Registrar of the District Court? He was appointed to execute jointly with the Registrar the office of Registrar under the District Courts Act of 1858.
87. Do you know how long he performed those duties? He was appointed in the early part of 1859, and was removed from office at the end of January, 1869.
88. Was his office abolished? Yes.
89. Do you know whether Mr. Yarnton has received any compensation for the abolition of his office? There was a sum voted in the Legislative Assembly last night, £166 18s. 10d., which I believe included Mr. Yarnton's contributions to the Superannuation Fund and his salary for January, 1869. It was intended that he should cease duty at the end of 1868, but through some inadvertence the notice was not given in time, and his salary for January was allowed at the rate of £400 a year.
90. That was not compensation for loss of office? No. This matter is *sub judice* I believe at present; it is in the hands of the Crown Solicitor; I cannot speak positively as to its present state.
91. Are you aware whether Mr. Yarnton got permission to bring an action against the Government? I cannot say positively, but I believe he did.
92. Mr. Yarnton was not dismissed from office on account of any misconduct? There were at the time some matters of complaint against Mr. Yarnton. The Judges of the Sydney District Court considered also that one Registrar would be sufficient, and the late Attorney General, Sir James Martin, thought that for economy's sake it would be as well to dispense with Mr. Yarnton's services. The decision arose out of some correspondence which took place.
93. The abolition of the office would hardly imply that Mr. Yarnton had not conducted himself properly and performed his duties, as he was told it would be open to him to apply for compensation? It was, I understood, on the score of economy that the office was abolished.
94. Have any other offices of a similar character been abolished in your department? I am not aware of any just now.
95. Is it usual to give compensation to officers when their offices are abolished? I think the recognized rule has been to give a month's pay for each year of service.
96. Did you know Mr. Yarnton previous to his receiving the appointment of Joint Registrar? He was a practising solicitor for many years before.
97. Would not his accepting the appointment necessitate his giving up his practice? It is generally understood that a public officer does not carry on private business, but there are exceptions; for instance, Crown Prosecutors are not debarred from practising. As Registrar of the District Court I think it would be necessary for Mr. Yarnton to give up his private practice.
98. After having occupied that position for ten years it would be difficult for Mr. Yarnton to re-establish his practice? I should think so.
99. *Mr. Lloyd.*] Could an unprofessional man have started the office—Mr. Yarnton and Mr. Maxwell, I understand, started the office? Mr. Maxwell was Registrar of the old Court of Requests for many years, and the duties are in some measure analogous. He would, from his experience, be cognizant of the nature of the duties to be performed.
100. Was it not the opinion of a large number of solicitors that it was desirable that a professional man should be appointed? There was such an impression at the time, and I think some representation was made on the subject, but I have not been able to find it on record. I have however some recollection of the circumstance. I believe it was addressed to Mr. Lutwyche, who was then Attorney General, and he conferred on Mr. Yarnton the appointment, being influenced, I think, by this representation.
101. *Mr. Baker.*] Can you inform us whether the Minute of the Executive Council, dated in 1857, with respect to compensation for loss of office, has been superseded by any subsequent Minute, or whether it still remains in force? I am not in a position to speak positively, but for many years Parliament has been applied to under special circumstances to provide such compensation, on the principle of one month's pay for each year of service.
102. *Chairman.*] Do you know anything of an opinion having been given by the Attorney General and Solicitor General (Mr. Josephson) as to the powers of individual Ministers in dismissing officers? I think there was an opinion given in the case of Mr. Curr, of the Lands Department.
103. Was Mr. Yarnton appointed separately or jointly with Mr. Maxwell? I believe separately in the first instance; but afterwards some alteration was I think made in terms of the District Court Act, and he was appointed to execute, jointly with Mr. Maxwell, the duties of Registrar.
104. Do you know whether the amount of security that Mr. Yarnton gave was increased? I believe Mr. Yarnton gave the same amount of security as Mr. Maxwell. Both Mr. Maxwell and Mr. Yarnton were required to give security to the amount of £500, jointly and severally.

W. E.
Plunkett, Esq.
17 Mar., 1870.

PETITION OF GEORGE SWINNERTON YARNTON.

APPENDIX.

[To Evidence given by G. S. Yarnton, Esq., 17 March, 1870.]

A 1.

1857.

NEW SOUTH WALES.

COMPENSATION TO PUBLIC OFFICERS.

Ordered by the Legislative Assembly to be Printed, 6 February, 1857.

Message No. 29.

W. DENISON,
Governor General.

The Governor General transmits to the Legislative Assembly an Extract from a Minute of the Executive Council, defining the rate of compensation which, in the opinion of the Council, may be afforded to Public Servants on their reduction from employment by Votes of the Assembly; and His Excellency invites the concurrence of the Assembly in the scheme of compensation indicated in the Minute of the Executive Council.

Government House,
Sydney, 6 February, 1857.

Proceedings of the Executive Council on the 2nd February, 1857, with respect to the rules for granting compensation.

(Minute No. 57-6.)

Referring to the proceedings on the 12th ultimo, with respect to granting compensation to those officers whose services have been or may be suddenly dispensed with in consequence of the revision of the Estimates for 1857, His Excellency the Governor General again invites the attention of the Council to this subject, as for reasons which have been pointed out by the Auditor General in a Memorandum which His Excellency lays before the Council, it may be expedient to revise the general rules laid down on that date.

2. Having again deliberated on this subject, the Council advise that this recommendation on the 12th instant be cancelled, and that the following rules be approved in lieu thereof, viz. :—

(1st.) That all officers who have received or may receive less than three months' notice of the abolition of their offices, should be paid salary for three months after they have been released from duty by the head of their department, unless in the meantime an opportunity should occur of re-employing them in the Public Service, such salary to be computed according to the rates proposed for the respective offices in the Estimates for 1857.

(2nd.) That at the expiration of the three months, the option should be afforded to those for whom it may have been found impossible to provide employment, of either accepting compensation, computed in accordance with existing regulations, i.e., at the rate of one month's pay for each year of service, or of waiting until some other situation in the Public Service should present itself.

(3.) That in cases where the service of the officer to be compensated is less than three years, the three months' salary should be regarded as full compensation; and in cases where the service exceeds three years, that the three months' salary should be deducted from the amount of compensation to which the officer would be entitled from his length of service.

3. It is however to be clearly understood, that the ability of the Government to carry out these rules is contingent upon the assent of the Legislative Assembly, who the Council further advise, should be invited to make the necessary provision.

EDWARD C. MEREWETHER,
Clerk of the Council.

Sydney, 6 February, 1857.

A 2.

The Secretary to the Crown Law Officers to G. S. Yarnton, Esq.

No. 47.

Crown Law Offices,
Sydney, 26 October, 1868.

Sir,

In transmitting to you the enclosed copy of letter lately addressed from this office to the Judges of the Metropolitan and Coast District Courts, with copy of their reply to same, I am directed by the Honorable the Attorney General to state that your services will not be required after the end of this year; but I am to observe that it will be open to you to apply for such compensation as you may be entitled to for loss of office.

I have, &c.,
W. E. PLUNKETT.

A 3.

Judges Dowling and M'Farland to The Attorney General.

68/1729.

Sydney District Court,
24 October, 1868.

Sir,

In acknowledging the receipt of your letter of yesterday's date, we beg to state that we remain of the opinion expressed on a former occasion, that one Registrar of the Sydney District Court would be and is sufficient; and we can so distribute the business of the department, and duties of Mr. Maxwell the Senior Registrar, and four Clerks, as will carry out the views of the Attorney General, without any detriment to the Public Service.

But as this arrangement will entail extra labour upon some of those gentlemen, we respectfully recommend that an increase of £50 a year be made to the salary of Mr. Maxwell, £50 a year to that of Mr. Redman (who has already been recommended by us for such an increase upon independent grounds), £50 a year to that of Mr. Lucas, who will become Clerk in Court.

By this arrangement £250 a year will be saved to the public, the salary of the unnecessary Registrar being £400 a year.

We have, &c.,
JAMES DOWLING, J.
ALFRED M'FARLAND, J.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

—
FREDERICK DUNBAR.

(PETITION OF.)

—
Ordered by the Legislative Assembly to be Printed, 24 February, 1870.
—

To the Honorable the Speaker and gentlemen of the Legislative Assembly, Sydney, New South Wales.

The Petition of Frederick Dunbar, late Captain in H.M. 39th Regiment, and Clerk of Petty Sessions, at Wellingrove, New England,—

HUMBLY SHOWETH :—

That at the period of time to which the transactions referred to in the following Petition relate, the peculiarities of very many of the Courts of Petty Sessions throughout the Colony tended to create discontent, and cast a shade over the administration of justice, which demanded of every individual interested in the welfare of the Colony to lend his exertions in checking abuses of the kind. The press, together with the grant of Responsible Government, at length brought about some reformation, but not to the extent of relieving those who were sufferers under the old regime.

That your Petitioner would respectfully submit that after upwards of a quarter of a century of his best days, passed creditably in the service of Her Majesty and of this country, he had been wrongfully deprived of his situation as Clerk of Petty Sessions at Wellingrove, in the year 1853, through misrepresentation, and in defiance of that great principle, which is the very essence of all English law, viz., "That no man shall be condemned without a hearing," which most wise constitutional enactment was not only totally set aside in his case, but further, the copy of the correspondence upon which his dismissal was effected was (*credat Judæus*) absolutely refused him by the Government.

That Petitioner, after a delay of three years, caused by the unseemly process of counting out, when a measure distasteful to the Government was before the House, did at length, through your Honorable House, obtain the said correspondence, which was found to confirm the obnoxious fact that had excited this ill-feeling conveyed in a letter of Petitioner's to the Government, viz. :—That two Magistrates had drunk and bought and sold brandy on the Bench, in open Court, while adjudicating in an alleged and maliciously planned case of breach of the Licensing Act—which it must be allowed was a breach of that Act, time and place considered, infinitely more reprehensible than that before them. What would be the result if one of their Honors the Judges should act in like manner on the Bench? This may be comparing small things with greater, but it will be acceded that a Court of Justice, of even the humblest pretensions, should be free from desecration of every kind. Petitioner, perhaps imprudently in a worldly sense, felt it to be his duty to place the matter before the Government for investigation. No investigation, beyond a one-sided affair, was allowed; but after the lapse of some weeks these two Magistrates handed a letter to Petitioner for perusal, addressed to them by the Colonial Secretary, in which it was stated that their explanation (in which Petitioner would with deference observe that the acts of drinking and selling the brandy in open Court, qualified by certain misstatements, were admitted) of Mr. Dunbar's report was perfectly satisfactory, and, in conclusion, that as Mr. Dunbar had been twice before removed from other Benches for insubordinate conduct (which is a grievous calumny), his services would in future be dispensed with.

That before the correspondence on the subject was obtained by the Parliament in the last Session of 1856, or beginning of 1857, one of the two Magistrates in question had unfortunately met a watery grave, and the other had left the Colony for Europe. Petitioner had therefore no means of getting redress at law for the many calumnies contained in their vindictive letter of explanation, or for that set forth in the Colonial Secretary's letter.

That the true statement is—as verified by the official correspondence on the subject in 1849 and 1850—that Petitioner at his own request obtained leave from the Governor-General to remove from Tabulam to Tenterfield Bench, the Clerk of Petty Sessions having vacated the office and left the Colony on the discovery of some irregularities between his wife and one of the J.P.'s.

That Petitioner's removal from Tenterfield to Wellingrove in 1851, followed at the anxious solicitation of Mr. Thomas Wright, Clerk of Petty Sessions of that district, who, on account of some opprobrious terms used towards him by Hugh Gordon, Esq., J.P., had an action against him in the Supreme Court, and cast him in heavy damages. He must therefore exchange. Petitioner, willing to oblige him, consented to the exchange, and it was approved of by the Governor-General. It was therefore excessively hard that these removals should be malevolently misconstrued to the ruin of Petitioner's prospects; and the question will naturally arise, would either of these removals have been acceded to if Petitioner had committed any act worthy of censure.

That your Petitioner has for the past sixteen years suffered much in mind, body, and estate, from the extreme severity of his punishment, having been visited with greater and never ceasing rigour than if he had been guilty of some capital offence against the laws of his country—every endeavour to obtain inquiry having been frustrated by some secret influence. Petitioner only acted as he conceived it to be his duty, and that of every faithful servant of the Government to act, in aiding to check abuses which at the worst could only be deemed an error of judgment, if error at all.

Petitioner would therefore entreat the gracious consideration of your Honorable House to award him redress in his very advanced and declining years, suffering from distress and destitution.

And your Petitioner will, as in duty bound, ever pray.

FREDERICK DUNBAR.

Kingsgate, Glen Innes, New England,
2nd February, 1870.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JOHN HUNT GROGAN,
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 11 March, 1870.

To the Honorable Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Hunt Grogan, Licensed Surveyor,—

MOST HUMBLY SHOWETH :—

That your Petitioner was engaged and appointed in London, on the 27th June, 1855, as one of the Surveyors for New South Wales, by Edward Barnard, Esquire, Agent General for the Colonies, to survey by contract for a period of three years from the date of his arrival in the Colony; full work being guaranteed for those three years at a certain scale of fees, as mentioned in the Enclosure of His Excellency the Governor General's Despatch of the 20th June, 1854 (No. 80, Executive).

2. That on your Petitioner's arrival in Sydney, on the 26th November, 1855, he, at the request of the Government, accepted an appointment as Assistant Railway Surveyor, at a salary of £400 per annum, and £400 a year allowance, on perfect understanding of being employed for three years as per engagement, otherwise he would not have accepted it.

3. That your Petitioner was ordered to Moreton Bay, and remained in that district from 28th January, 1856, until the 12th October, 1857, during which time he surveyed 76½ miles longitudinal and of an extended width, of an area about 30,000 acres of very intricate work, as his section crossed the Great Dividing Range, as per Progress Report addressed to the Chief Commissioner for Railways, on the 5th November, 1857.

4. That your Petitioner received orders (on the 12th October, 1857) to proceed to Sydney to receive instructions and have his work examined.

5. That on the 2nd December, 1857, your Petitioner received notice that his salary was to be reduced to £250 per annum, with expenses in the field, to commence on the 1st January, 1858.

6. That your Petitioner objected to a reduction in salary or allowance, and requested to be transferred to his original agreement as Licensed Surveyor.

7. That your Petitioner's request was acceded to, examined in the Surveyor General's Office, and gazetted on the 12th March, 1858, as Licensed Surveyor.

8. That your Petitioner was instructed to leave his address, and that he would be sent for when required.

9. That your Petitioner left his address, and remained in readiness, receiving circulars occasionally from the Surveyor General, until the term of three years, as agreed for, terminated.

10. That, on the expiration of the three years contracted for, your Petitioner tendered bill of accounts, claiming salary and allowance, as per railway engagement, for the period from the 1st January to 24th of November, 1858, which would complete payment for the three years agreed for.

11. That your Petitioner was referred from the Lands Department to the Railway Department, and repeatedly instructed to attend at the offices of the said departments, pending payment during the period from the 1st January, 1859, to the 4th January, 1860.

12. That, on the 4th January, 1860, your Petitioner was paid salary at the rate of £250 per annum for the months January and February, 1858, for which your Petitioner was obliged to give a receipt in full of all demands; the same amount of money for the same time and service was offered to him, and refused by him, in or about the month of March, 1859; therefore it is quite evident that he was coerced in giving the receipt which caused his papers (purporting to the claim) to be retained in the Government Offices until recently.

13. That consequent, your Petitioner not receiving salary, allowance, or licensed fees, from the 1st January, 1858, to the 4th of January, 1860, and under orders as heretofore stated, he was depressed in privation at the time of signing the receipt, and consequent the signing of it continued in privation up to the present time.

14. Your Petitioner therefore prays your Honorable House to take the premises into your favourable consideration, and accord him that justice which upon the merit of the case he may appear entitled to. And your Petitioner, as in duty bound, will ever pray, &c., &c.

JOHN HUNT GROGAN,
Licensed Surveyor.

121, Princes-street,
2nd March, 1870.

1870.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

—
THOMAS THROWER.
 (PETITION OF.)

—
Ordered by the Legislative Assembly to be Printed, 17 February, 1870.
 —

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Thomas Thrower, resident in Jamberoo, in the District of Kiama,—

HUMBLY SHOWETH :—

That your Petitioner occupied a house situated at Greenhills, Shoalhaven, for a period of seven years, during five of which he carried on the business of a licensed victualler; and whereas, in consequence of a certain Petition, addressed to your Honorable House, praying for the proclamation of a new road through the Greenhills, a new road has been opened, to the great injury of your Petitioner, he humbly begs to submit the following considerations to your Honorable House :—

1. That your Petitioner, in the year 1862, rented a house, situated on the southern bank of the River Shoalhaven. This bank formed at that time portion of the Main Southern Road. The house had been previously occupied for many years as an inn.
2. That your Petitioner, in consequence of the prominent business site of the said premises, the Southern Road passing by the door, became a licensed victualler, and ultimately the purchaser of said property.
3. That when the new road was opened the property of your Petitioner became useless, and himself and family were reduced to poverty.
4. That your Petitioner's property is situated on what was considered a Government road, Government having long recognized it as such by receiving license money from innkeepers along the same; whereas since the formation of the new road certain parties have extended their fences across the road to the edge of the bank, thus depriving your Petitioner of access to his property. Not only is your Petitioner's property destroyed as a place of business, but, according to a decision of the Shoalhaven Bench, he cannot even enter his premises without trespassing.
5. That your Petitioner, through advancing years, feels his loss heavily. Having purchased the above-mentioned premises he cherished the hope of ending his days in the district; whereas by the action of Government he is compelled to seek an arduous livelihood elsewhere, while the property, which should have been his rest in his old age, falls to ruins.
6. That your Petitioner, while admitting the general benefit of the new road, respectfully contends that he has greatly suffered for the general good.

Your Petitioner therefore humbly prays your Honorable House will take the premises into your early and merciful consideration, and afford him such relief as to your Honorable House seems fit.

And your Petitioner will ever pray.

THOMAS THROWER.

1870.

—
 LEGISLATIVE ASSEMBLY.
 NEW SOUTH WALES.

—
HUGH MAGUIRE.
 (PETITION OF.)

—
Ordered by the Legislative Assembly to be Printed, 18 March, 1870.
 —

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of Hugh Maguire, at present of Sydney, shepherd,—

SHOWETH :—

That while Sir Thomas Brisbane was Governor and Vice-Admiral of the Colony of New South Wales, your Petitioner was appointed (having previously held the office of) Superintendent and Inspector of Roads and Clearing Parties of upwards a thousand men—from eighty to ninety gangs—between Liverpool, Cowpasture, Myrtle Creek, and Parramatta.

That the records of that period of the Sydney Police Court will show Petitioner's services to the Government, and also the Chief Engineer's Office (Major Ovens) for the monthly estimates of labour performed by the men over whom your Petitioner was in charge.

That in consequence of the valuable services rendered to the then Government of this country by your Petitioner, a grant of 500 acres of land, situate in or near the District of Liverpool or the Cowpasture, was promised to your Petitioner, which (although repeated applications have been made therefor) have never yet been issued to your Petitioner, who conceives he is fairly entitled thereto by virtue of such promise at the time, and having reference to his said services and the then condition of the Colony.

That grants were issued under similar promises by the same Government; amongst others, to Mr. Joseph Peters, of Emu Plains, who was only overseer of one farm there.

Your Petitioner, therefore, prays that your Honorable House will take this claim for the grant into your favourable consideration, make such inquiries, and grant your Petitioner such relief as the justice of the case shall require, and as to your Honorable House shall seem meet.

And your Petitioner shall ever pray, &c.

HUGH McGUIRE.

Sydney, 16 March, 1870.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MRS. MARIA CHARLOTTE PLUNKETT.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 22 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Maria Charlotte Plunkett, of Sydney,—

RESPECTFULLY SHOWETH:—

1. That your Petitioner is the widow of the late Honorable John Hubert Plunkett, who from the year one thousand eight hundred and thirty-one held the office of Solicitor General, and from the year one thousand eight hundred and thirty-six that of Attorney General of New South Wales, until the passing of the new Constitution Act of the Colony in one thousand eight hundred and fifty-six, when he retired on a pension according to the provisions of that Act.

2. That in the year one thousand eight hundred and thirty-five, Mr. Plunkett performed in Norfolk Island the duties of a Judge of the Supreme Court under a special Commission.

3. That again in the year one thousand eight hundred and sixty-five Mr. Plunkett discharged temporarily the duties of a Judge of the Supreme Court, during the last illness of the late Mr. Justice Milford.

4. That for very many years Mr. Plunkett, as Chairman of the National Board, gave his gratuitous services in the promotion of Public Education, at a time when his official duties were most onerous and multifarious.

5. That in the year one thousand eight hundred and fifty-seven he was appointed to a seat in the Legislative Council of New South Wales, and discharged the duties of President of that body until the month of February in the year one thousand eight hundred and fifty-eight, during which time his pension was in abeyance.

6. That in the year one thousand eight hundred and sixty-three he became Vice-President of the Executive Council and Representative of the Government in the Upper House, and discharged the duties of these high offices without remuneration.

7. That in the month of August, one thousand eight hundred and sixty-five, at the special request of Sir John Young, he accepted office as Attorney General, and represented the Government in the Legislative Council, and continued to discharge the functions of this responsible office until the month of March in the year one thousand eight hundred and sixty-six, during which time his pension was again in abeyance. On this occasion Sir John Young addressed a letter to Mr. Plunkett, thanking him for the very important services he had rendered to the Governor personally, to the country, and to the cause of law and order generally, by consenting to act as Attorney General at the time; also stating that, by coming forward as he did without any selfish or interested thought, he brought relief "under a great stress," and prevented the possibility of a violence to the Constitution. In concluding this letter His Excellency moreover said—"I appreciate most highly your public spirit and disinterestedness, and beg to acknowledge them, as well as the whole tenor of your exertions while in office during my government."

8. That it is within the knowledge of your Petitioner that her late husband believed his pension should have been three hundred pounds a year more than he actually received since his retirement under the Constitution Act, and that he made a formal claim for this amount to the Government.

9. That Mr. Plunkett died on the ninth day of May, one thousand eight hundred and sixty-nine, leaving his pecuniary affairs in considerable embarrassment, his pension being almost the only property he possessed; so that your Petitioner, who has spent nearly her whole life in this country, is certain that when the liabilities of her late husband are discharged she will remain unprovided for during her declining and helpless years.

Your Petitioner therefore humbly prays that the arduous and important services of her late husband in the interest and welfare of the Colony, which he so long and faithfully served, and her own distressing position, may be taken into consideration, and such steps adopted as may commend themselves to the sympathy and justice of your Honorable House.

And your Petitioner, as in duty bound, will ever pray.

Dated this eighteenth day of March, A.D. 1870.

MARIA CHARLOTTE PLUNKETT.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WILLIAM CRONIN.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 22 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of William Cronin, of Sydney,—

SHOWETH :—

That your Petitioner, in or about the month of April, 1863, being then a digger at Lambing Flat Diggings, and about to remove from thence, was possessed of gold to the value of two hundred and eighteen pounds (£218), which he desired to place in the custody of the Gold Commissioners at that place.

That your Petitioner accordingly waited upon the Gold Commissioners and offered the whole of his gold to them for safe custody, but they refused to accept it, stating that they were too much otherwise engaged to attend upon him.

That on the following day your Petitioner was assailed by highway robbers on the road between Murrumbah and the Yass Road, and robbed of all he possessed, including the gold above mentioned, and that such robbery became at the time a well known and notorious fact throughout that district.

That shortly after such robbery your Petitioner became afflicted with almost total blindness, and has remained in that condition with scarcely any hope of recovery up to the present time; and through being thereby unable to earn his living, either by resuming his previous occupation as a gold digger or by following any other pursuit, he has become reduced to a state of most miserable destitution, having no other means of obtaining food and clothing than of availing himself of the assistance of those who, being moved by the wretchedness of his condition, testify their sympathy by temporarily relieving his most urgent wants.

That your Petitioner humbly desires to beg the attention of your Honorable House to the foregoing facts, and also humbly desires to submit—

- (1st.) That it was the bounden duty of the Gold Commissioners to accept the charge and custody of his gold when requested to do so.
- (2nd.) That if the Gold Commissioners had not refused to perform their duty, the robbery before mentioned could not have been effected, and your Petitioner would not have been reduced to the state of utter destitution in which he is now placed.
- (3rd.) That your Petitioner, as a loyal subject of Her Most Gracious Majesty, was entitled to the protection of his property in the manner provided by law; and having been refused such protection by the officers of the law, and in consequence of that refusal utterly ruined, he humbly implores the consideration of his case by your Honorable House.

Your Petitioner therefore humbly prays that your Honorable House will take this his Petition into your favourable consideration, and will do as your Honorable House may consider fit, and as the equity of the case may seem to require.

And your Petitioner, as in duty bound, will ever pray.

—
 LEGISLATIVE ASSEMBLY.
 NEW SOUTH WALES.

—
JAMES TWADDELL.
 (PETITION OF.)

—
Ordered by the Legislative Assembly to be Printed, 22 March, 1870.
 —

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of James Twaddell, of Droubalgie, near Forbes, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

That your Petitioner is, and has been for the last fourteen years, the lessee of the run known as Droubalgie, on the Lachlan River, in the pastoral district of Wellington, in the said Colony, and also for the greater portion of that time, of the adjoining run, known as Back Droubalgie.

That in May, 1861, gold was discovered at a point on the boundary line dividing the said run from the adjoining Bugabagil Run.

That in consequence of this and the succeeding gold discoveries which resulted in the formation of the town of Forbes and the Lachlan Gold Field, a population of several thousand souls was located within a few weeks on the spot, by far the largest portion being settled on the Droubalgie Run.

That by reason of this, and also from the fact of fifty square miles of the said Droubalgie Runs being withdrawn from lease, your Petitioner found it necessary to remove all his cattle, on which he was principally dependent, from the said run; this he did, making a forced sale of the same to the number of about a thousand, at great loss to himself.

That afterwards, in consequence of the extension of the gold discoveries into the run Back Droubalgie, and the workings known as King's Lead, Queen's Lead, and others, attracting a large population which settled on the said run, it became worthless to your Petitioner, who forfeited it, in which condition it remained for two years, when your Petitioner had to pay a sum of two hundred and twenty pounds at auction to recover it.

That your Petitioner did, in the year 1862, apply to the then Minister for Lands, Mr. Robertson, and afterwards, in 1863, did petition Parliament for compensation, but owing to the fact of his Petition being mislaid, as his solicitors were informed by the then Clerk of the Executive Council, the matter was not taken into consideration, although a Petition, forwarded by Mr. Ranken, the holder of the adjoining Bugabagil Run was considered, and a large amount awarded to him as compensation.

That before the gold discoveries referred to, the runs Droubalgie and Back Droubalgie formed one of the finest pastoral properties on the Lachlan River, the value of which your Petitioner had been at great labour and expense in increasing, but in consequence of the total loss of the latter and of two-thirds of the former, your Petitioner suffered very great loss and became greatly reduced in his circumstances.

Your Petitioner would therefore again pray your Honorable House to take his case into consideration, and award such relief as may seem fit.

And your Petitioner, as in duty bound, will ever pray, &c.

JAMES TWADDELL.

1870.

—

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JOHN BUSBY.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 29 March, 1870.

To the Honorable the Legislative Assembly, in Parliament assembled.

The Petition of John Busby, of Sydney,—

HUMBLY SHOWETH :—

That your Petitioner emigrated to this Colony from the Mother Country, in the year 1824, with his father the late Mr. John Busby, Civil Engineer, under the inducement of a promise of the Imperial Government that any of the sons of the said late Mr. John Busby who so emigrated should have grants of land.

That although the brothers of your Petitioner, who settled in this Colony as your Petitioner did, upon the understanding aforesaid, obtained grants of land in virtue thereof, your Petitioner's protracted efforts to obtain a similar grant have hitherto failed.

That your Petitioner fulfilled the same conditions of settlement and expenditure that entitled the brothers of your Petitioner to obtain, and under which they did obtain, the grants of land promised as aforesaid.

That being employed in the Government service upon arrival in the Colony your Petitioner could not whilst so employed make application for a grant of land; but that upon resigning from the said employment your Petitioner did, as did other retired officials, make such application.

That whilst all such applications other than your Petitioner's were admitted, and grants bestowed, your Petitioner's claim was not so dealt with.

That your Petitioner is not aware of any circumstances peculiar to his case that could or can now be held to justify this exceptional hardship.

That upon the revenues of New South Wales being vested in that Colony it was conditioned that all contracts and promises of the Imperial Government chargeable against the estate so vested should be satisfied by the said Colony.

That whilst your Petitioner is well informed that satisfaction of such compacts and promises in cases parallel with that of your Petitioner has never been withheld, your Petitioner would humbly represent that the Imperial promise in his case has been set aside.

That your Petitioner is in no way to blame for the long period which has elapsed without a satisfactory settlement of his claim.

For these reasons your Petitioner earnestly prays that your Honorable House will take his case into their favourable consideration, and afford your Petitioner such relief as in the wisdom of your Honorable House shall seem meet.

And your Petitioner, as in duty bound, will ever pray.

JOHN BUSBY.

Sydney, 23 March, 1870.

1870.

—

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JOHN MURRAY BATE.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 30 March, 1870.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled, &c., &c., &c.

The humble Petition of John Murray Bate,—

RESPECTFULLY SHOWETH :—

That your Petitioner was appointed a Clerk in the Harbours and Rivers Branch of the Public Works Department in May, 1867, and had the duties of Accountant imposed on him at first joining, and has had to discharge Accountant's duties ever since, although the situation of Accountant of the office was filled by and the salary paid to another person, but who never afforded your Petitioner the least guidance, direction, or assistance, in keeping the office accounts connected with an expenditure of from seventy to eighty thousand pounds per annum.

That your Petitioner, to the best of his ability, discharged the duties imposed on him faithfully and diligently, and never heard of any act of carelessness or neglect being imputed to him.

That your Petitioner has recently received intimation that he is removed from the Public Service.

That your Petitioner was called on to explain why he should not be dismissed from the Public Service on a charge of carelessness and neglect, but without any instance of carelessness or neglect being named to your Petitioner, and no other opportunity of defending himself has been afforded your Petitioner to reply to so vague a charge.

That various impediments were, apparently with design, placed in the way of your Petitioner, tending to obstruct him in the discharge of the duties imposed on your Petitioner.

That your Petitioner has been seventeen years in the Public Service, and the loss of his situation will entail serious injury on your Petitioner, particularly in the present state of the country, when the difficulty is so great in obtaining private employment; besides, your Petitioner losing his claim on the Superannuation Fund.

Your Petitioner therefore humbly prays your Honorable House will graciously consider his case, and grant him such redress as you may in your wisdom on the premises deem meet.

For which your Petitioner will ever pray.

JNO. M. BATE.

Sydney, 24th March, 1870.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

JOHN BLACKSHAW.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 14 April, 1870.

To the Honorable the Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of John Blackshaw, of the City of Goulburn, Brewer,—

SHOWETH:—

That your Petitioner is the owner of a parcel of land and premises,—situation, the east bank of the Mulwarree Ponds, immediately opposite the centre of the City of Goulburn.

That, in addition to the business of brewer, your Petitioner and previous proprietors of the premises have sunk wells and erected pumps, and bridged the ponds, and from such wells the City has been mainly, for over twenty-five years, supplied with water.

That during all those years the wells were reached from different parts of the City by three roads, starting from different points, crossing a reserve, and converging at the bridge aforesaid.

That the reserve before-mentioned was marked on the maps of Goulburn as reserved for travelling stock, and afterwards dedicated for public recreation, and the whole of it has lately been taken possession of by the Commissioner for Railways for railway purposes.

That on the section of the railway plan for the town of Goulburn, the three roads leading to your Petitioner's premises are clearly shown, as they have existed for more than twenty years,—the road from the northern point being twenty chains, from the southern point being twenty chains, that from the centre of the City but twelve chains. The centre one was the most used and afforded the greatest convenience to citizens for the supply of water, not only for domestic purposes but in case of fire.

That the said roads have been all closed.

That instead of the three roads in use, two others have been set out by the Commissioner of Railways, which imposes on persons who used the centre road from the northern side of the City, a distance of fifty-two chains instead of twenty chains, and on the southern side fifty-six chains, instead of twenty.

That the closing up of this centre road has resulted in great inconvenience to the citizens and great pecuniary loss to your Petitioner, occasioned principally by parties preferring to use the hard water of the wells in the City to going the increased distances they are subjected to by reason of the closing the shortest road, and which, if left open, might have been crossed by a level crossing.

That your Petitioner has frequently applied to the Commissioner for Railways and to the Honorable Minister for Works for redress, but without effect.

Your Petitioner therefore submits his complaint for the consideration of your Honorable House, and prays that his case may be enquired into, and that such relief in the premises, as to your Honorable House may seem fit, may be afforded to your Petitioner.

And your Petitioner will ever pray, &c.

Dated the sixth day of April, A.D. 1870.

JOHN BLACKSHAW.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MR. PERCY SIMPSON.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 20 April, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Percy Simpson, of Sydney, in the said Colony, gentleman,—

HUMBLY SHOWETH:—

In the month of November, one thousand eight hundred and twenty-two (1822) your Petitioner arrived as an emigrant in Sydney, and obtained, according to his money capital, an order for a grant of land, two thousand acres (2,000), six months' Government rations for himself and family, twenty cows, and twenty convicts, if he required them.

In addition to these advantages he was offered by the late Sir John Jamison, a herd of between seven and eight hundred head of breeding cows, on agistment of one-third of their increase or otherwise, at the rate of ten shillings per head. While your Petitioner was about to avail himself of the foregoing advantage, the then Governor, Sir Thomas Brisbane, and the Colonial Secretary, Major Goulbourn, had influence enough to prevail on your Petitioner to relinquish the above advantages, and to undertake the formation of an agricultural establishment at Wellington Valley, one hundred miles beyond Bathurst, with a view to lessen the expense of maintaining a large number of convicts *then rationed* by the Government, representing that it would be to Petitioner's advantage, as well as that of the Government, to abandon his intention of becoming a settler. Your Petitioner, after great persuasion, consented to their solicitations, and finally entered into an agreement, as set forth in his instructions, dated first January, one thousand eight hundred and twenty-three. The terms of that agreement are as follows, namely:—"Your salary for the first year will be paid you in advance, after which you will be paid £4 for every convict you *are able to maintain* for the next year on the wheat produce of the settlement."

On the fourth April, one thousand eight hundred and twenty-six, General Darling submitted to the Executive Council your Petitioner's account with the Government, claiming a balance of money due to him, according to the terms of his agreement with Governor Sir Thomas Brisbane, which claim Governor Darling should have forwarded to the Board of Claims, previously instituted by His Excellency, or otherwise to the Law Officers of the Crown. The Executive Council, whether legally or otherwise, assumed to itself to adjudicate upon a matter of law, and gave an opinion that your Petitioner could only claim payment of four pounds for as many convicts as had been actually and *bonâ fide* rationed at Wellington Valley during the year one thousand eight hundred and twenty-four, instead of per-centage on the whole quantity of wheat raised at Wellington under your Petitioner's superintendence, in opposition to the conditions of his agreement with Governor Brisbane, and which is further proved by payment of money on warrants issued by Governor Brisbane up to (as late as) November, one thousand eight hundred and twenty-five, as a per-centage on the wheat crops raised by your Petitioner at Wellington Valley. Your Petitioner, being officially informed as to part of the decision of the Council, the whole of which was not communicated to him, demurred, and prayed that the case might be investigated by the Board of Claims then in existence, before which he might be called, and give evidence. This demand brought on his head the "indignation" of His Excellency, and threats of ultimate dismissal, calling on your Petitioner to state distinctly—"Did he mean to imply that the Council was not properly constituted because the Chief Justice Sir Francis Forbes was not present thereat (whereas His Excellency states he was, but this was not the case, as shown in the Proceedings of the Council)?" Your Petitioner's reply in his letter, not only mollified His Excellency's high displeasure, but also must have satisfied his mind that your Petitioner's claim was a just one, for he afterwards offered to stock and improve your Petitioner's grant of land if he would send in the number of men *bonâ fide* rationed at Wellington Valley, in which he should receive four pounds per man so rationed during the year one thousand eight hundred and twenty-four, one thousand eight hundred and twenty-five, and up to the date of the Colonial Secretary's letter, tenth of April, one thousand eight hundred and twenty-six. Your Petitioner refused to make any terms that would alter his agreement with Governor Brisbane, or give any receipt in full of all demands, or agree to be paid on the number of men, instead of per-centage on the wheat crops raised by him there.

It has been contended by Governor Darling, that your Petitioner could only claim payment on his agreement for the number of convicts actually and *bonâ fide* rationed at Wellington Valley, during the year one thousand eight hundred and twenty-four, instead of on the wheat reaped there in the latter end of 1823. This evidently was not the intention of Governor Brisbane, nor would your Petitioner have entered into such an agreement, depending upon the number of convicts that might be sent to Wellington, either fortuitously or by favor by the Principal Superintendent of Convicts or other intermediate authority. If your Petitioner's emoluments depended upon the number of men yearly rationed at Wellington, as insisted on by General Darling, your Petitioner must have been kept out of his payment from January, one thousand eight hundred and twenty-three, until an early part of one thousand eight hundred and twenty-five. This construction, evidently an erroneous one, is proved by your Petitioner having drawn money in the month of March and October, one thousand eight hundred and twenty-four, in one thousand eight hundred and twenty-five, and one thousand eight hundred and twenty-six, without reference to any number of men that would be rationed in those years. Your Petitioner drew it as his per-centage of the wheat in stock; not that your Petitioner drew all the money that he was entitled to, but sufficient to procure necessary supplies from Sydney, leaving the balance of his per-centage both for that year and succeeding years in the hands of the Government, which your Petitioner did until he could get to Sydney for a settlement.

It will not be disputed that your Petitioner's agreement, in undertaking the formation of a new agricultural settlement at Wellington Valley, was yearly and not for any broken period of a year, yet Governor Darling, on the fifteenth of June, one thousand eight hundred and twenty-six, under the plea of reducing the establishment, cancelled your Petitioner's agreement on the thirtieth of June of that year, that is to say, fifteen days after the Colonial Secretary's letter to that effect, a step most unprecedented, as the crop of wheat then growing on the settlement was put in the ground while your Petitioner held the appointment of Commandant, the produce of which crop he had a right to claim per-centage on. If Governor Darling really intended to reduce the, or break up the, establishment, he would not have sent more men up there, and Captain Christie as Commandant; and as your Petitioner's agreement with Governor Brisbane was still in force, he was on every principle of justice entitled to receive payment on that year's crop when reaped. On the tenth of June, one thousand eight hundred and twenty-six, Mr. William Charles Wentworth (barrister), wrote to His Excellency, General Darling, giving his legal opinion upon the matter, at which His Excellency was so incensed, that he caused a letter to be written on the fifteenth of June, one thousand eight hundred and twenty-six, "that it was the intention of the Government to reduce the establishment at Wellington Valley," and that consequently your Petitioner's appointment would cease on the thirtieth of the same month; but this intention, as regards reducing the establishment, was not carried out for upwards of two years after.

Your Petitioner rests his claim on the fact, which was not disputed by the Government, that he grew and left in stock at Wellington Valley, five thousand eight hundred and eighty-three bushels of wheat, which, at sixty pounds to the bushel, amounted to five hundred and fifty-two thousand nine hundred and eighty pounds; this, divided into rations of eight hundred and thirty-two pounds a man, would be able to feed four hundred and twenty-four men, which, at four pounds per head, amounts to the sum of one thousand six hundred and ninety-seven pounds sterling.

The following are extracts in favour of your Petitioner's claim:—

The Chancellor of the Exchequer, in his place in the House of Commons, on the reading of the register of the "Madras Bill" said, "Upon every principle of justice and on reference to former precedents, the Government is bound to make good the loss of claimants upon the principle that a Government which shrinks from satisfying even the doubtful claim of persons who suffered a loss by the negligence of a public officer, does not sustain its character for justice and liberality if it relies on any technical objection in opposition to the claim of the parties."

Sir James Macintosh on the same occasion stated, that men who suffered by the misconduct of a public officer should be relieved by the Government, a doctrine maintained (he added) by very high authorities.

Mr. Charles William Wynn also added, "The Legislature is bound to see that a public officer does his duty, and to guard individuals from loss by his misconduct."

Your Petitioner wishes also to state that he has presented a Petition for leave to proceed against the Crown, an action in the Supreme Court, which leave has been refused.

Your Petitioner therefore humbly prays that your Honorable House will be pleased to cause an enquiry to be made into his case, and grant him such relief as your Honorable House may deem meet; and as in duty bound, your Petitioner will ever pray.

Sydney, 12 April, 1870.

PERCY SIMPSON.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WAITERS.

(PETITION—FROM CERTAIN WAITERS IN SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 5 May, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Waiters of Sydney, in the said Colony,—

RESPECTFULLY SHOWETH :—

- (1.) That your Petitioners are Waiters by profession, having no other employment or calling.
 - (2.) That for some time your Petitioners have had to contend against a ruinous competition, in consequence of certain servants in the employment of the Government being permitted to perform the duties of waiters for hire at public entertainments, &c.
 - (3.) That the servants alluded to are principally the Messengers of Government Departments.
 - (4.) That many of your Petitioners have been unable to obtain employment in consequence of such competition.
 - (5.) Your Petitioners think it unfair that they should be any longer compelled to compete in their calling with persons enjoying the emoluments of permanent Government situations, and they are of opinion that all such persons should be rendered ineligible for any such employment.
 - (6.) Your Petitioners have learnt that the chief officers of the Departments are unable to mitigate the grievance of which they complain.
 - (7.) Your Petitioners therefore beg to lay this heavy grievance before your Honorable House, and they earnestly pray for such redress as it may deem meet.
- And your Petitioners, as in duty bound, will ever pray.

 MRS. MARY FOGG.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 22nd March, 1870,—with power to send for persons and papers,—to inquire into and report upon the Petition of Mrs. Mary Fogg—presented to your Honorable House on the 5th day of March, 1869—and to whom was referred on the same date the Evidence taken before the Committee of last Session,—have agreed to the following Report :—

That it appears to your Committee there is now in the hands of the Government the sum of £1,444 19s. 10d., being the balance of amount ordered to be confiscated upon the finding of the Jury on a Commission appointed to inquire as to whom certain moneys belonged.

That notwithstanding the finding of such Jury your Committee are of opinion that the moneys in question were not the moneys of William Fogg, but formed part of the separate estate of Mary Fogg, to whom the same lawfully belonged.

Your Committee therefore beg to recommend the case of the Petitioner to the favourable consideration of the Government.

RD. DRIVER,
Chairman.

No. 2 Committee Room,
Sydney, 29 April, 1870.

SESSION 1869.

PROCEEDINGS OF THE COMMITTEE.

MR. J. STEWART,

RICHARD DRIVER, Esq., IN THE CHAIR.

John Williams, Esq., Crown Solicitor, called in and examined:—

1. *Chairman.*] Are you aware of the object of this Committee? Yes; I see it from the Petition. J. Williams,
Esq.
2. Are you aware of the facts of the case, as stated by the Petitioner? I am aware of the facts connected with the holding of the inquisition of office respecting the sum of money referred to. 3 Nov., 1869.
3. What was the result of that inquisition? The result was that a debt, due from the representatives of a person named Jamieson to William Fogg, was found to have become forfeited to the Crown, and was sued for, and recovered by me on behalf of the Crown.
4. Do you recollect the amount? The amount recovered was £1,621 13s. 2d.
5. Was that amount actually paid in by you to the Treasury? Not the whole of it. The expenses of the Commission, jury, and witnesses, came to £127 3s. 4d., leaving a balance of £1,444 19s. 10d., which sum was afterwards paid into the Treasury by me.
6. Do you recollect when these proceedings were instituted? The inquisition bears date 12th December, 1864, and was held at the Court House, Darlinghurst, I think, on the 27th February, 1865; Fogg himself being a principal witness.
7. The husband of the petitioner? Yes.
8. Have you a copy of the evidence taken at that inquisition? No.
9. Is it possible to procure a copy? I think not. I can make inquiry and let you know.
10. Before whom was the inquisition held? Before three Commissioners—William Charles Windeyer, William Hattam Wilkinson, and George Rowley—and a jury of thirteen persons.
11. And the result of the inquisition was a finding that this money was due to Fogg? The finding that this money was due to Fogg, and was forfeited to the Crown by reason of his conviction for cattle-stealing, as well as some other personal property which, upon the petition of either Mrs. Fogg or William Fogg, was given up by the Crown to them. The property so given up consisted of horses, cattle, and household furniture.
12. Do you know what reasons were assigned for giving up this property? No, I do not. It was out of consideration for Mrs. Fogg, I think; I am not sure. There was some petition from her, but that, of course, did not come to me.
13. Was it sent to you for your report? No.
14. Can you say whether Mrs. Fogg was present at this inquisition? To the best of my recollection she was not.
15. What was Fogg at the time of the inquisition—was he a prisoner of the Crown under sentence? I think not; he had served his sentence; his sentence was over in some way; he was not a prisoner under sentence, for he claimed his expenses for attending as a witness, and I paid him £10 17s.; I have the voucher here.

- J. Williams,
Esq.
3 Nov., 1869.
16. Was either Fogg or Mrs. Fogg represented by counsel at this inquisition? I think not.
 17. They were unrepresented? Mr. Manby, solicitor, was there, but he I think represented Jamieson's people. They were unrepresented by counsel I am sure.
 18. Can you state from memory whether any evidence was gone into as to how Fogg became entitled to this money? To the best of my recollection the evidence given by Fogg was to the effect that he had sold a station to the late Mr. Jamieson, in payment for which he received from him a promissory note, and subsequently a cheque for a portion of the interest due on the promissory note. The cheque was dishonoured, and Fogg handed to me the promissory note, and I think the cheque.
 19. Had he not before then taken or threatened proceedings against the representatives of Jamieson for compelling payment of the cheque and promissory note? I believe he had.
 20. And this was after his release from gaol? No, the proceedings must have been threatened whilst he was in gaol. Some person wrote to me to know whether the representatives of Jamieson would be justified in paying this amount to Fogg, he having been convicted of felony, and, as the writer supposed, his property forfeited to the Crown.
 21. Have you that letter with you? No, it was a private note.
 22. I suppose Fogg was merely examined for the purpose of showing that at the time of his conviction this promissory note and cheque were in his possession? That was it—that the amount was due to him from Jamieson's representatives.
 23. On the sale of a station by him to Jamieson? Yes. My principal reason for examining Fogg was that the amount said to be due was only some seven or eight hundred pounds—
 24. By whom? On behalf of Mrs. Jamieson. I had reason to believe it was very much more than that, and I subpoenaed Fogg as a witness; he then told me the exact amount that was due, and gave evidence to that effect.
 25. He was not examined in any way as to how he became possessed of the station sold by him to Jamieson? No; nothing was said at that time as to its having belonged to anybody but himself.
 26. Have you a record of the conviction of Fogg with you? I have a certificate from the Clerk of the Peace for the Southern District.
 27. Does that give the date of his conviction? 19th February, 1864—"receiving one cow."
 28. Receiving one cow, or stealing one cow? Felonious receiving was what he was convicted of.
 29. He was sentenced to one year's imprisonment? Yes, at the gaol at Goulburn.
 30. It is true that proceedings were instituted by the Crown, and this money forfeited? Yes, the money was obtained, and the amount I have mentioned was paid into the Treasury.
 31. Is that a practice very frequently resorted to in this Colony? Not so far as I am aware.
 32. Were there any special reasons for doing so in this case? Yes.
 33. What were they? I cannot say I really know there were any special reasons, though I believe they existed; I have heard, as matter of rumour, what they were.
 34. No special reasons were furnished to you by any officer of the Government; no special instructions? No reason was given to me specially for taking this step.
 35. From whom did you receive your instructions? I myself brought the matter under the notice of the Attorney General, and from him I received my instructions. So far as I believe, the reasons were that Fogg was supposed to have accumulated this property from the proceeds of robberies committed by bush-rangers then at large in the country.
 36. These were, you believe, the reasons for adopting that course? I cannot say these were the reasons, but they were the reasons that rumour assigned. No reason was given to me officially.
 37. *Mr. Dignam.*] You say that from certain private knowledge on your own part, you were induced to speak to the Attorney General in reference to this matter? To report the fact to him that this man had money coming to him which he could not recover.
 38. Were you at Goulburn at the time? No, at Sydney.
 39. Did you receive that information from Goulburn? No.
 40. Did it originally come from Goulburn—did it come from a solicitor—a legal gentleman? It came from a legal gentleman; a legal gentleman wrote to me—as far as my memory serves me—to know whether this man, being convicted, could recover the amount due for the station sold. He could not; and therefore if the Crown had not stepped in, Jamieson's representatives would have kept the money. I so explained it to Fogg when I made him a witness. I told him why I wanted him—that the amount said to be due was less than the actual amount that appeared to me to be due, on looking into the matter. After the finding of the inquisition Mrs. Jamieson still neglected to pay, and I sued her and recovered the amount.
 41. During the proceedings taken by the Government did any conversation take place, or did any information come to the Government, with reference to Mrs. Fogg's claim to that property? I did not hear of any. I know, upon some application made by her, the Crown allowed her to take possession of, or gave back to her, all the property found to belong to Fogg, excepting that debt. I explained to Fogg, when I told him he was to be a witness, that I could not help asking him as to all the property he had got. He said it was very hard to have it all taken from him, and I said I would represent the matter to the Attorney General, which I did, and said that, as far as I knew, he had made no concealment.
 42. Have you any letter from that legal gentleman, giving any detail of his knowledge of the matter? I do not think I have.
 43. *Chairman.*] No confiscation took place until after Fogg was released from custody? I think not.
 44. Then during the time he was undergoing his sentence Mrs. Fogg had possession of the household furniture and other property of which you have spoken? Yes. Fogg had a large quantity of purchased land at the station he resided on, which was not forfeited to the Crown by his conviction. We could not interfere with that; nor was Mrs. Fogg disturbed in the possession of the horses, cattle, and household furniture, afterwards relinquished to her by the Crown: they were never taken from her possession.
 45. Although the result of the inquisition was to find that it belonged to the Crown, that property was never taken out of her possession? No.
 46. Could not the cheque and promissory note have been disposed of by Fogg, or by Mrs. Fogg? No.
 47. Were they due at the date of the conviction? Whether due or not they could not have been disposed of.
 48. They might have been paid away to somebody else? That might have been done, no doubt, if they had thought of it. I suppose it was payable in the usual way, to order or bearer.

49. Can you tell the Committee where a copy of the proceedings connected with the inquisition can be obtained? I do not think there were any records, except of the result.
50. Who was the principal Commissioner? Mr. Windeyer; he would not have them. They may have been returned to the Supreme Court. The finding of the Jury must have been returned to the Supreme Court. The Petition of Mrs. Fogg must be at the Colonial Secretary's Office, because I reported on the matter on the 28th July, 1865, and I received a letter on 28th August of the same year, informing me that the Government had allowed Mrs. Fogg to retain the cattle, horses, and furniture forfeited to the Crown at the date of Fogg's conviction. They were never in fact taken possession of on behalf of the Crown.

J. Williams,
Esq.

3 Nov., 1869.

FRIDAY, 5 NOVEMBER, 1869.

Present:—

MR. BURNS,
MR. DIGNAM,

MR. STIMPSON.

MR. DRIVER,
MR. FARNELL.

RICHARD DRIVER, ESQ., IN THE CHAIR.

Mrs. Mary Fogg examined:—

51. *Chairman.*] You are the wife of William Fogg? Yes.
52. Who was once convicted of cattle-stealing, and who received a sentence of twelve months' imprisonment? Yes.
53. Where do you reside? At the Fish River.
54. How long have you been residing in that part of the country? About one and twenty years.
55. How long had you been married before your husband got into trouble? Twenty years nearly. I have been there ever since I have been married.
56. What business or occupation did he follow during that period? Farming at our own place.
57. You had a property of your own there? Yes.
58. How was that property acquired? It was bought land; what we had bought ourselves when we first married.
59. From what source was the money obtained? My husband had it when he married me.
60. Do you recollect the sale of some property to a Mr. Jamieson? Yes.
61. What property was that? Property that was bought.
62. What did it consist of? A station and some cattle.
63. Out of what moneys, or from what moneys were that station and cattle purchased? From my money.
64. How was that obtained? Part of it was left me by my father when he died, and part of it was from my own industry; me and my children were dairying.
65. How long had you been so engaged in making that money? Nineteen years, I dare say; I did not keep any account.
66. Did you keep a banking account? Yes.
67. Where? At the Bank of New South Wales, Goulburn.
68. In whose name? My own.
69. How long have you kept an account there? Many years; ever since I have been married, on and off.
70. Was that an account of your own separate moneys? Yes.
71. Moneys acquired in the twenty-one years as you have described without any reference to your husband's property at all? Yes; he had his own bank account and I had mine.
72. Did you pay for this station and these cattle out of those moneys? Yes.
73. From whom was the station purchased? From Mr. Wass.
74. Do you remember in what year you purchased from him? I do not know, I forget.
75. But the station was purchased and paid for by yourself? By myself.
76. Did you afterwards reside upon the station? No.
77. Who managed it? Mr. Dignam.
78. Did you afterwards sell the station? Yes.
79. To whom? Mr. Jamieson.
80. Did you receive payment? No.
81. Did you receive a promissory note and cheque? Yes.
82. Were you ever paid? Never.
83. Do you know what became of this promissory note and cheque? Yes; Government took it when I put it in the Court at the time my property was confiscated.
84. In whose name was the station purchased? It was purchased in my husband's name.
85. Why was that? Because it was a mistake. It was bought for one of my sons, William, and he did not wish to go and live on it, and it was sold again.
86. It was intended for your son William, and the purchase was made in his name? Yes.
87. How long was the station in your possession? Not many months; I do not rightly know.
88. The promissory note became due, did it not, while your husband was in trouble? Yes.
89. Upon his release from custody you set the law in motion to obtain payment? Yes.
90. Who completed the transfer of the station from yourself to Mr. Jamieson? I think Mr. Dignam.
91. Did you instruct the attorney to sue for payment of the money? Yes.
92. Who was he? Mr. Walsh, of Goulburn.
93. Who made out the promissory note do you know, who filled up the form; who drew it out? I do not know.
94. Do you recollect where the transfer was completed? I was not present when the business was closed.
95. Was your husband? He was.

Mrs. Mary
Fogg.

5 Nov., 1869.

- Mrs. Mary Fogg.
5 Nov., 1869.
96. At all events you sold, and the Government afterwards obtained possession of the promissory note and cheque? Yes.
97. Have you received any portion of the proceeds? No, I never got a shilling; I got £10 for my expenses when I had to come down. I do not know whether that was a part of it.
98. You came down to give evidence at an inquisition? Yes.
99. You say you have never been paid a shilling of the proceeds? Yes.
100. Are you quite certain that no portion of this station or of these cattle were purchased with the proceeds of your husband's earnings? None; it was all my own money.
101. What was the name of your father? Adam Taylor.
102. What was he? A farmer.
103. And had been long resident in that part of the country? Yes, many years.
104. He was a man of some property—was he not? Yes.
105. Part of the money you say you received from him, and the other you say was the earnings of yourself and sons in the management of a dairy? Yes.
106. *Mr. Farnell.*] Did your husband and yourself reside on the same farm? Yes.
107. You managed the dairy business, and he carried on the other? Yes.
108. The proceeds of the dairy were your own, and kept separately by you? Yes.
109. With your savings, together with the money left you by your father, you purchased this station? Yes, I purchased it for one of my children, and then sold it again.
110. Finding the boy for whom it was intended did not wish to live on it? He did not feel satisfied to live so far away from home, and I sold it again.
111. Was any other property confiscated by Government? Yes, all the property—cattle, horses, furniture, and things.
112. Were they taken by the Government? Yes.
113. Were they never returned to you? Yes.
114. Then the Government returned the property that was on the farm? Yes.
115. But the amount of this cheque and promissory note was never returned to you? No.
116. *Mr. Burns.*] Was there much other property besides the value of this stock and station taken by the Government? No; what cattle and furniture and things we had, that was all.
117. You are speaking of other cattle besides these on the station? I had no cattle on the station; the cattle belonged to the station.
118. Did the Government seize any other cattle? Yes, what I had on my own farm.
119. This place is some distance from where you live? Yes, a great way—a hundred miles.
120. Were you in the habit of banking the proceeds of what you made on the farm yourself, to your own credit? Yes.
121. You did not draw cheques? Yes, I did.
122. Did the Banks allow you to keep a separate account? Yes.
123. Of course they knew you were a married woman? —
124. You were not present when they arranged to transfer the station from your husband or yourself to this purchaser? Yes.
125. All you know is that it was sold? Yes, I do not know whether it was ever transferred. I do not think it was; it was not to be transferred till such time as the money was paid.
126. That was what you understood? Yes.
127. You were not present yourself? I was present when the station was bought from Mr. Wass, but not when it was sold.
128. You were not present when the bills were filled up for the station? No.
129. Is it a matter of fact that when this station was sold to Mr. Jamieson, and the stock, that they could not conclude the bargain till you gave your consent? Yes.
130. *Mr. Farnell.*] What amount was it sold for? £1,100 I sold it for.
131. *Mr. Dignam.*] £1,100 was the purchase money of the station; was there any other arrangement when they agreed to give the £1,100? Yes, about the cattle.
132. Was there interest to be paid until the money was paid? Yes, I think it was 10 per cent.
133. What was the amount that was arranged on both sides as the sum due at the time you were coming for a settlement? £1,777; that was the money understood by Mr. Jamieson and ourselves to be paid finally.
134. *Chairman.*] You have no doubt of the truth of the statements made by you? No; it is all true.
135. If statements are made of an entirely opposite character as to your means, they are false? Yes; what I have said is the truth.
136. More especially as to the means by which you obtained this money? Yes.
137. You have no doubt about this whatever? No doubt.
138. *Mr. Dignam.*] When the station was bought by you, how was it paid for? By a £700 cheque on the Bank, signed by me.
139. On the Bank of New South Wales, Goulburn? Yes.
140. *Mr. Burns.*] All the time this station and these stock were in your possession, you exercised all the rights of the owner of the property; your husband did not interfere with it, or anybody else? I did.
141. It was entirely your own property? Yes.
142. The only reason of your disposing of it was, that your son did not care to reside there? He did not care to leave home, it being so far away.
143. *Chairman.*] Have you heard any reports as to how you and your husband obtained the money employed by you in the purchase of this stock and station? No.
144. You have never heard that it has been stated that it was money acquired by you, the proceeds of robberies? No.
145. You never heard anything of that kind? Yes, I did hear it when I spoke to Mr. Parkes once: he told me he had heard it was, and I contradicted it.
146. Is that the only intimation you ever received of such a suspicion? That is all.
147. Is such statement true or false? It is false.
148. You never heard it before it was mentioned by Mr. Parkes? No.
149. You never heard it even hinted at? No, not till Mr. Parkes mentioned it, and I then contradicted it.

150. You have been some time engaged in endeavouring to obtain this money, have you not? Yes.
151. And have made many journeys to Sydney with the view of asserting your rights? Yes.
152. Have you called more than once at the office of the Colonial Secretary? Only once, when Mr. Parkes told me it was money got by Gardiner; I said it was not; he wanted me to sign a paper to the effect that I thought there was no money due to me from the Government, and I said I would not.
153. Was that the only reason Mr. Parkes assigned? He never gave me any reason, more than that I said as they gave me back my cattle and things they ought to give me back my money.
154. You sent a Petition to the Legislative Assembly? Yes.

Mrs. Mary
Fogg.

5 Nov., 1869.

Philip Dignam, Esq., M.P., a Member of the Committee, examined in his place:—

155. *Chairman.*] You are a Member of the Legislative Assembly for the electorate of Argyle? Yes.
156. Do you know the Petitioner, Mrs. Fogg? Yes, and have known her many years.
157. You have heard her statement before the Committee to-day? Yes.
158. From your previous knowledge of Mrs. Fogg, are you in a position to say whether the statements made by her are true? From my previous knowledge of Mrs. Fogg's business and monetary affairs I have every reason to believe so. I have frequently had sums of money in my hand, which have been clearly the result of dairy produce and cattle which I have sold for her as auctioneer. I have sold both for her and for her husband, and I have kept one portion for her and one for her husband, and I know that the accounts were kept as separate and distinct as possible to a shilling. The father had certain cattle, and the children had others.
159. Do you know anything of the purchase of a station on behalf of Mrs. Fogg? Yes; I first sold the station to William Wass; it was an overlap of country between W. Symms's station and another, and this man Wass applied for and got it. Wass was stockkeeper for Symms. Mrs. Fogg had money in my hands—some £300 odd, and I advised her to put it in the Bank, and she did so. Afterwards she came to me and said she wanted to purchase Wass's station, and I sold it for him to Mrs. Fogg. I was the agent employed in selling the station.
160. It was sold to Mrs. Fogg? Yes, and paid for by her cheque.
161. Did you act as agent for either of the parties on the sale by Mrs. Fogg to Mr. Jamieson? The property was in my hand in the first instance by Wass to sell for him, and Fogg's people came to me and asked my opinion about it, and I told Mrs. Fogg, as she wanted to invest the money, she could not do better, and I made the agreement between the two parties; she was to give £700 cash for the station, which she did by her cheque. She afterwards came to me and said she was not disposed to keep the station; that Billy, her son, did not like to go there. In fact, she did not like him to be away from home, and at last she consented to part with the property to Mr. Jamieson, who was a distant relative of Mrs. Fogg by marriage.
162. And the property was sold, as already described, by Mrs. Fogg? Yes. There were more cattle on the station than when it was bought from Wass, because some had been drafted off from her station, and that accounts for the increase of price. My impression is that no money passed for the station, but merely the promissory note and cheque, as an acknowledgment of the sale, to avoid dispute in case of accidents; and it did so happen that Jamieson, in riding, sometime after, was thrown from his horse and killed.
163. Jamieson was killed while Fogg was in custody? Yes, I think it was about that time.
164. *Mr. Burns.*] The proceeds of the sale were given by Jamieson's heirs or representatives to the Government? The money was stopped before it got into Fogg's possession; realized out of Jamieson's estate.
165. *Mr. Farnell.*] I suppose you have known Mrs. Fogg for a number of years? Yes, I have done business with them for many years. I have had upwards of £300 or £400 in my hands at a time, and they have left it there and drawn against it for supplies from my store. They have sent in tallow, wool, hides, cheese, butter, and so on, to me, and I disposed of it and kept the money in my hands; and they would give orders upon me for any money they required.
166. So far as you know, she is a person of good character? Yes, I have known her for many years to be a hard-working woman; and that she has brought up her children in the same industrious habits. I know every bit of butter, bacon, and cheese, sent by her to market, was prepared by her own hands or the hands of her children, with perhaps one man to assist them.
167. *Mr. Burns.*] Was it the practice of the Goulburn banks to allow married women to keep separate accounts with them? I do not think they troubled their heads about the matter, so long as they kept sufficient in their hands to meet the cheques and drafts upon them.
168. You know of your own knowledge that she did keep a separate account at the Bank? Yes, I know that the cheque paid for the station was signed by Mary Fogg.
169. *Mr. Stimpson.*] How long, to the best of your belief, was it that this transaction between you and Mrs. Fogg took place previous to Gardiner's apprehension? A long time.
170. Are you aware where Gardiner was for some time previously to that? I believe it was some time before that that he was on our side of the country.
171. It was known that Mrs. Fogg had this money in her own right? To my knowledge she had it some considerable time before there was the least hint or report of Gardiner or Peisley being in the country, or near to Fogg's.
172. How many years? I cannot tell, but my impression is strong that Mrs. Fogg was possessed of this money, and had it in the Bank long before Gardiner's name was mentioned.
173. Are you aware that Gardiner was a butcher on Lambing Flat? Yes.
174. Are you aware that he got into some trouble some time previous to this? Yes.
175. It was sometime previous to this that Mrs. Fogg had this station transaction? Yes, she had bought the property from Wass. My impression is that the mother sold this station because she was afraid that the son might be induced to weed the station, and go to Lambing Flat.
176. *Chairman.*] What is the name of the station? Nobby's Lagoon.

P. Dignam,
Esq., M.P.

5 Nov., 1869.

WEDNESDAY, 10 NOVEMBER, 1869.

Present:—

MR. BURNS, | MR. DIGNAM,
MR. J. STEWART.

RICHARD DRIVER, ESQ., IN THE CHAIR.

David Bruce Hutchinson, Esq., examined:—

- D.B. Hutchin- 177. *Chairman.*] You are Prothonotary of the Supreme Court of New South Wales? Yes.
son, Esq. 178. Do you produce an inquisition in the matter of William Fogg? I produce a Commission, issued
10 Nov., 1869. from the Supreme Court on the 12th of December, 1864, in the matter of William Fogg, directed to
William Charles Windeyer and William Hattam Wilkinson, Esquires, Barristers-at-law, and to George,
Rowley, Esquire, Attorney of the Court, to inquire what property Fogg had at the time of his conviction
the 19th February, 1864.
179. Can you state the result of that inquisition? The result is that a return was filed and certified under
their hands and seals and that of the jurymen, that he, Fogg, was "possessed of, or entitled to, a debt due
from William Jamieson for the sum of £1,300, and interest for one year and ten months, at £8 per centum
per annum, amounting to and of the value of £190 13s. 4d., cattle of the value of £100, furniture of the
value of £100 in the house of the said William Fogg, at Fish River, and six horses of the value of £20."
180. You are unable to state what witnesses were examined? Yes, the inquisition was under the
Commissioners not connected with the Court, and sat at Darlinghurst, who took down the evidence
themselves.

SESSION 1870.

FRIDAY, 8 APRIL, 1870.

Present:—

MR. COWPER, | MR. DRIVER,
MR. FARNELL.

RICHARD DRIVER, ESQ., IN THE CHAIR.

Charles M. Palmer, Esq., examined:—

- Charles M. 181. *Chairman.*] What are you? Assistant Secretary to the Bank of New South Wales.
Palmer, Esq. 182. Do you know whether a person named Mary Fogg had an account at the Bank of New South
8 April, 1870. Wales at any time? At the Bank of New South Wales in Goulburn she had.
183. In her own name? In her own name.
184. Do you produce any cheques drawn by her? I produce the cheques formerly charged to her account,
drawn by her; I have also her pass-book with me, showing her account. (*The witness produced the same.*)
I have also here the slips or vouchers of sums paid in. The whole of the transactions are included in the
account. (*The witness produced the same.*)

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC-HOUSES.

(PETITION—DELEGATES OF SUBURBAN AND OTHER MUNICIPAL BOROUGHS.)

Ordered by the Legislative Assembly to be Printed, 23 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Delegates of Suburban and other Municipal Boroughs met in conference,—

MOST RESPECTFULLY SHOWETH:—

That your Petitioners, being fully convinced of the evils arising from an indiscriminate licensing of houses for public entertainment and amusement, are of opinion that some check should be imposed upon the present system.

That in the opinion of your Petitioners, the inhabitants residing within any Municipal Borough or District ought to have some voice in the licensing of houses within their respective localities.

That the most direct and legitimate way of exercising this influence would be through their representatives in the Municipal Council, who from their position may be justly supposed to have the best knowledge as to the accommodation of this kind required in their respective neighbourhoods.

That your Petitioners respectfully suggest that a short Act of Parliament be at once passed, enabling the Mayor of any Municipality in Council assembled to sign the application of any applicant for a license for a new public-house, dancing saloon, or concert room in connection with a public-house, and that no application for such license from any person in such Municipality shall be entertained by the Bench of Magistrates to whom it is made unless so signed.

That your Petitioners would further respectfully suggest that a clause might be inserted in such Act empowering each Municipal Council, if it thought proper, to appoint an officer of its own, whose duty it should be to prosecute, on behalf and by order of the Council, any proprietor of a public-house, dancing saloon, or concert room in connection with such public-house, who might permit any disorderly or riotous conduct on his premises.

That your Petitioners believe were such an enactment passed into law a great check would be given to intemperance, and that public-houses generally would be in many respects better conducted.

Your Petitioners therefore pray that your Honorable House will be pleased to take this matter into consideration, and pass such law as may meet the exigencies of the case.

And your Petitioners will ever pray.

On behalf of the Conference—

E. J. HAWKSLEY,
Chairman.

DONALD BEATSON,
Secretary.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SALE OF LIQUORS LICENSING ACT AMENDMENT BILL.

(PETITION—CERTAIN LICENSED VICTUALLERS OF SYDNEY AND ENVIRONS.)

Ordered by the Legislative Assembly to be Printed, 30 March, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Licensed Victuallers of the City of Sydney and its environs,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners have ascertained that a Bill has been introduced into your Honorable House, intituled "A Bill to limit in certain districts the number of Licensed Public Houses and to amend in other respects the Licensing Act of the year 1862."

2. That your Petitioners having had the said Bill under their consideration, are of opinion that its provisions are arbitrary, unjust, and impolitic, and if passed into law would be the means of entailing loss and ruin upon many who have directly or indirectly embarked large amounts of capital on the faith and security of the existing law.

3. That the said Bill, if passed into law, would subject your Petitioners to an amount of police surveillance which would not be tolerated or endured by any other class of tradesmen in any free country, and which, if carried into effect, could only be the means of bringing your Petitioners and others engaged in the trade of licensed victuallers into constant collision with the police—a thing neither desirable in itself nor conducive to the public weal.

4. That while your Petitioners readily admit that the number of licensed houses in some districts is greater than the necessities of the population may require, they are strongly of opinion that the existing law would, if properly administered by the Magistrates, be amply sufficient to repress this evil, without resorting to such unjust and oppressive measures as are contemplated by the Bill now before your Honorable House.

5. That your Petitioners feel bound to object in the strongest possible manner against the enactments contemplated by the first and second clauses of the said Bill, as being both unnecessary and impolitic, and merely a revival of the old law of the year 1849, when the social status of the population of the Colony was vastly different from what it is at the present day.

6. That your Petitioners, viewing the said Bill as a whole, are of opinion that it is altogether unnecessary, and calculated to interfere materially with their rights and liberties as subjects of the British Crown.

7. Your Petitioners therefore most respectfully pray that your Honorable House, taking the premises into consideration, and having regard to the varied and important interests involved in the question, will not pass the said Bill into law, but reject it altogether.

And your Petitioners, as in duty bound, will ever pray.

Committee Room,
Licensed Victuallers' Association,
"Commercial Hotel,"
King-street, Sydney,

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 38. FRIDAY, 1 APRIL, 1870.

9. Sale of Liquors Licensing Act Amendment Bill :—Mr. Wilson moved, That this Bill “be” now read a second time.

Debate ensued.

Mr. Wearne moved, That the Question be amended by omitting all the words after the word “be,” with a view to inserting in their place the words “referred to a Select Committee.

“(2.) That such Committee consist of Mr. Cowper, Mr. Brookes, Mr. Dodds, Mr. Farnell, Mr. Flood, Mr. Garrett, Mr. Lackey, Mr. Neale, Mr. Wilson, and the Mover.”

Debate continued.

Question put,—That the words proposed to be omitted stand part of the Question.

The House divided.

Ayes, 8.

Mr. Cowper,
Mr. Forster,
Mr. Sutherland,
Mr. Egan,
Mr. Driver,
Mr. Robertson,

Tellers.

Mr. Fitzpatrick,
Mr. Baker.

Noes, 19.

Mr. Webb,
Mr. Parkes,
Mr. Butler,
Mr. Flood,
Mr. M. C. Stephen,
Mr. M. H. Stephen,
Mr. Dodds,
Mr. Lord,
Mr. Byrnes,
Mr. Piddington,
Mr. Lackey,

Mr. Garrett,
Mr. Wilson,
Mr. Farnell,
Mr. Weaver,
Mr. Hoskins,
Mr. King,

Tellers.

Mr. Wearne,
Mr. Neale.

Question put,—That the words proposed to be inserted in the place of the words omitted, be so inserted,—

The House divided.

Ayes, 19.

Mr. Byrnes,
Mr. Butler,
Mr. M. H. Stephen,
Mr. Wilson,
Mr. Garrett,
Mr. Webb,
Mr. Wearne,
Mr. Neale,
Mr. Parkes,
Mr. Piddington,
Mr. Dodds,

Mr. Lord,
Mr. Nowlan,
Mr. M. C. Stephen,
Mr. Flood,
Mr. King,
Mr. Lackey,

Tellers.

Mr. Farnell,
Mr. Fitzpatrick.

Noes, 9.

Mr. Cowper,
Mr. Forster,
Mr. Sutherland,
Mr. Egan,
Mr. Weaver,
Mr. Hoskins,
Mr. Robertson,

Tellers.

Mr. Driver,
Mr. Baker.

And Mr. Driver requiring that the said Committee be appointed by Ballot,—

Question,—That the Sale of Liquors Licensing Act Amendment Bill be referred to a Select Committee,—put and passed.

Whereupon the House proceeded to the Ballot, and the Speaker declared the following to be the Committee duly appointed :—Mr. Cowper, Mr. Farnell, Mr. Neale, Mr. Brookes, Mr. Dodds, Mr. Garrett, Mr. Wilson, Mr. Lackey, Mr. Flood, and Mr. Wearne.

VOTES No. 39. TUESDAY, 5 APRIL, 1870.

9. Sale of Liquors Licensing Act Amendment Bill :—Mr. Wilson (*with the concurrence of the House*) moved, without Notice, That the Select Committee on “Sale of Liquors Licensing Act Amendment Bill,” have power to send for persons and papers, and to report.
Question put and passed.

VOTES

VOTES No. 49. TUESDAY, 26 APRIL, 1870.

5. Public Houses ("Formal" Motion):—*Mr. Lackey*, on behalf of *Mr. M. C. Stephen*, moved, pursuant to Notice No. 2, That the Petition presented by *Mr. M. C. Stephen* on 22nd March, on behalf of the Municipal Conference, relative to "Public Houses," be referred to the Select Committee now sitting on the Sale of Liquors Licensing Act Amendment Bill.
Question put and passed.
-

VOTES No. 53. TUESDAY, 3 MAY, 1870.

3. Sale of Liquors Licensing Act Amendment Bill :—*Mr. Wilson*, as Chairman, brought up a Progress Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and Report this Bill was referred on 1st April, 1870,—together with Appendix.
Ordered to be printed.
-

1870.

SALE OF LIQUORS LICENSING ACT AMENDMENT BILL.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, to whom was referred, on the 1st April, 1870, the "*Sale of Liquors Licensing Act Amendment Bill*,"—and to whom was given, on the 5th April, *power to send for persons and papers, and to report*; and to whom was also referred, on the 26th April, *the Petition presented by Mr. M. C. Stephen, on 22nd March, on behalf of the Municipal Conference relative to Public Houses*,"—have agreed to the following Progress Report :—

The importance of the inquiry referred to this Committee, the magnitude of the interest involved, and the late period of the Session at which the Committee was appointed, have prevented your Committee carrying the investigation to a satisfactory conclusion; they therefore respectfully recommend that a Select Committee be appointed, at an early period of next Session, to further prosecute the inquiry.

J. BOWIE WILSON,
Chairman.

No. 3 Committee Room,
Sydney, 3 May, 1870.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 5 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Wilson,		Mr. Wearne,
Mr. Neale,		Mr. Dodds.

Mr. Neale moved, That Mr. Wearne do take the Chair. Mr. Wearne declining, and expressing a wish that Mr. Wilson should be the Chairman,—Mr. Wilson then called to the Chair.

Entry in Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Committee deliberated.

Clerk directed to prepare motion, to be moved in the House by the Chairman, to obtain for the Committee power to send for persons and papers, and to report.

[Adjourned until Thursday next, at *Eleven* o'clock.]

THURSDAY, 7 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Wilson in the Chair.		
Mr. Flood,		Mr. Farnell,
Mr. Brookes,		Mr. Neale,
Mr. Wearne.		

Entry in Votes and Proceedings, giving the Committee “power to send for persons and papers, and to report”—*read* by the Clerk.

Captain Scott (*Police Magistrate, Sydney*), called in and examined.

Witness withdrew.

Charles J. P. Lydiard, Esq. (*Superintendent of Police, Western District*), called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Captain McLerie, E. Fosbery, Esq., and H. Lane, Esq., be summoned to give evidence at the next Meeting,—Mr. Lane to produce a return showing the number of licensed Public-houses in New South Wales—distinguishing those in the Police District of Sydney.

[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 12 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Wilson in the Chair.		
Mr. Flood,		Mr. Farnell,
Mr. Neale,		Mr. Garrett,
Mr. Wearne.		

Henry Lane, Esq. (*Under Secretary for Finance and Trade*), called in and examined.

Witness handed in Return, showing the number of licensed Public-houses in the Colony, &c.

Ordered to be appended. (*Vide Appendix B 1.*)

Witness withdrew.

Captain McLerie (*Inspector General of Police*), called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That E. Fosbery, Esq., and John Garrett, Esq. (*P.M., Upper Hunter*), be summoned to give evidence at the next Meeting.

[Adjourned until Wednesday week, at *half-past Ten* o'clock.]

WEDNESDAY, 20 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Wilson in the Chair.		
Mr. Brookes,		Mr. Neale.

Edmund Fosbery, Esq. (*Secretary and Superintendent of Police*), called in and examined.

Witness withdrew.

John Garrett, Esq. (*Police Magistrate, Upper Hunter*), called in and examined.

Witness handed in a statement respecting the subject under consideration.

Ordered to be appended. (*Vide Appendix D.*)

Witness withdrew.

Committee deliberated.

Ordered,—That Inspector Read be summoned to give evidence at the next Meeting.

Motion made (*Mr. Brookes*) and Question put,—That the Secretaries to the “Sons of Temperance,” “Political Association for the Suppression of Intemperance,” and “Licensed Victuallers’ Association,” be written to, requesting them to suggest the names of any gentlemen who may be able to give any valuable information on the subject under consideration,—*agreed to.*

[Adjourned until Tuesday next, at *half-past Ten* o'clock.]

TUESDAY,

TUESDAY, 26 APRIL, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Wearne,		Mr. Neale,
Mr. Brookes,		Mr. Farnell.

The Clerk laid before the Committee a letter from Mr. S. Goold, Secretary to the "Political Association for the Suppression of Intemperance"; also, a letter from Mr. H. Sykes, Secretary to the "Licensed Victuallers' Association," suggesting the names of certain gentlemen who could give information on the subject under consideration.

Mr. Wearne laid before the Committee a letter from Mr. E. J. Hawksley, Chairman of the Conference of Municipal Delegates, also suggesting certain witnesses.

Inspector Read called in and examined.

Witness withdrew.

Committee deliberated.

Ordered.—That the following gentlemen, suggested by the Secretary to the "Licensed Victuallers' Association," be summoned to give evidence at the next Meeting, viz., Mr. Alderman Steel, Mr. J. Perry, and Mr. F. Riley.

[Adjourned until Tuesday next, at half-past Ten o'clock.]

TUESDAY, 3 MAY, 1870.

MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Lackey,		Mr. Brookes.
-------------	--	--------------

The Clerk laid before the Committee a letter from Mr. W. J. Clarke, Secretary to the "Sons of Temperance," suggesting the names of certain gentlemen who could give information on the subject under consideration.

Mr. Alderman Steel called in and examined.

Witness withdrew.

Mr. J. Perry called in and examined.

Witness withdrew.

Chairman submitted Progress Report.

Same read and agreed to.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

SALE OF LIQUORS LICENSING BILL.

THURSDAY, 7 APRIL, 1870.

Present:—

MR. BROOKES,
MR. FARNELL,
MR. FLOOD,MR. NEALE,
MR. WEARNE,
MR. WILSON.

THE HON. JOHN BOWIE WILSON, Esq., IN THE CHAIR.

David Charles Frederick Scott, Esq., called in and examined:—

1. *Chairman.*] You are Police Magistrate of Sydney? Yes.
2. This is a Committee to whom has been referred "a Bill to limit in certain districts the number of Licensed Public-houses, and to amend in other respects the Licensing Act of 1862." We wish to have the benefit of your experience in the matter, by obtaining some information from you. Can you inform the Committee how many public-houses there are in the City of Sydney? That I am not in a position to do, because some of these public-houses are licensed by the year, and others for three, four, or five years; but as far as I can guess there are from 500 to 600 in Sydney and the suburbs. That information could be obtained accurately from the Treasury, where the license fees are received. In our office we do not know how many of the licenses are renewed from year to year; we only know the number of licenses we actually grant in the year. The licenses are granted in the first instance at the Police Office, but renewed annually at the Treasury, on payment of £30.
3. From your knowledge of the City do you consider that the public-houses are more numerous than the requirements of the City? Certainly they are.
4. Do you think the large number of public-houses has anything to do with crime? I have no doubt myself that it increases drunkenness, which leads to most crimes in this country. The late Act of 1862 makes it all but imperative on the Magistrates to grant a license as long as the house applied for is in accordance with the Act, and the applicant a man of good character. They have no right to refuse a license in such a case, although they are aware at the time that the house will be one too many or ten too many.
5. Do you think that if greater powers had been given to the Magistrates they would have exercised them in curtailing the number of public-houses? I have not the slightest doubt that if they had more power they could do so.
6. Do you approve of the present system of licensing by the Bench of Magistrates? I do not think I could suggest anything better.
7. Do you think it would be any improvement if the responsibility were thrown upon a particular officer—for instance, upon the Police Magistrate? I think that would be rather severe upon him; I think it is better left to the Bench of Magistrates in Petty Sessions assembled.
8. Do you find, on licensing days, the same class of Magistrates sit on the Bench, as perform the usual duties? There are a certain number of Magistrates summoned on the roster every day; some of these will sit and others refuse to sit; but we send out for the neighbouring Magistrates and get as many together on the licensing day as we can. If there is any case of disputed license we very often send a circular to a great number of Magistrates.
9. *Mr. Farnell.*] Is it not the duty of the Clerk of Petty Sessions to summon Magistrates for a licensing meeting? It is his duty and he does it.
10. *Chairman.*] Do you find the Magistrates attend on these licensing days? They do attend, but they do not seem to like it.

D. C. F. Scott,
Esq.

7 April, 1870.

- D. C. F. Scott, Esq. 11. Do the general public in many cases, or in any, object to the licensing of particular houses? Sometimes they muster strong and give evidence against the licensing of a house, if they take an interest in the matter.
- 7 April, 1870. 12. Do the Magistrates always weigh the objections and take evidence? They are very careful in doing so. I know no case to the contrary. I have been there ten years next July, and cannot recall a case to which they have not given full consideration.
13. Have many licenses been refused on grounds of objection taken by the public? None. I may say I only received the notice to attend here this morning, and I am not so fully prepared as I otherwise would have been.
14. *Mr. Neale.*] Have any licenses been refused by the Bench of Magistrates and subsequently granted by other Magistrates, or by the Governor on petition? I think a few—very few. The Magistrates are very careful not to interfere with each other.
15. *Chairman.*] What are the grounds of objection generally taken by the public? Perhaps the applicant may be a man of bad character, and may have been brought before the Bench, and been fined for particular offences.
16. Do the Magistrates take into consideration any objection the public may raise as to there being no necessity for such a house? No, we think ourselves all but bound to grant a license if the accommodation is sufficient, and the applicant a person of good character.
17. Even where it can be shown that there is no necessity for the house? Yes. For instance, if there were fifty public-houses in George-street, and application was made for another license, on its being shown that the house had the required accommodation, and that the person applying bore a good character, I do not think we have any power to refuse the license.
18. Do you think a discretionary power ought to be in the hands of the Magistrates? I think it ought, most decidedly, under certain conditions.
19. Have you heard any complaints by the police as to their not having proper supervision over the public-houses? Yes; I think they want a power to enter a public-house in uniform, being answerable to the Inspector General for doing so, and of course being punished if they have not sufficient cause.
20. Would you allow any ordinary constable to do so? I would, in uniform.
21. Have you ever heard rumours to the effect that there are public-houses in the City of Sydney that are kept in a very disreputable state, on account of the police being prohibited from examining them? I have heard that there are public-houses that men can take women to.
22. Have you ever heard of public-houses which have places fitted up as regular brothels? That is what I mean.
23. That could not take place if the police had power to enter and examine them? It might take place, but not so frequently as it does now.
24. Then you are of opinion, from your experience, it is necessary the police should have the power of entering public-houses? Yes; or any Magistrate stating his name.
25. Do you get any report from the police as to the state of the public-houses in their particular district, and how they are kept? When the senior-sergeant or the sergeant in charge has any complaint to make, he sends in a written statement, stating the complaint and objecting to the license.
26. You get no written general report? No.
27. Do you think it would be advisable that the police should send in such a report to the Bench of Magistrates? I think it would be better to do so. I rather think they do send in a report to the Inspector General.
28. The licensing Magistrates have no cognizance of it? No.
29. Do you consider that the present accommodation required by the law in a public-house is sufficient? No, I think it might be raised, we will say, to two sitting-rooms, and at least six bed-rooms.
30. Would you increase the size of these rooms? The rooms ought to be large, and all the bed-rooms should be on the first story. There ought also to be two necessaries at least. When I was acting as Coroner I had to go to some of these places, and I saw that the out-door accommodation was very bad.
31. The police take no cognizance of the out-door accommodation? No; if it was a nuisance they would, of course.
32. But they make no report with respect to it to the Licensing Bench? No.
33. Do you think they ought to be instructed to do so? I think more power ought to be given to the police.
34. Do you think it beneficial to the public or otherwise that there should be licensing days so frequently as once a month? No; at the very most once a quarter would answer, or even less. Once in six months would be ample.
35. Of course transfers might be applied for at other times. I suppose you would give certain discretionary powers to Magistrates to give transfers? I would. Transferring a public-house from one person to another gives a good deal of trouble, and I would suggest that a fee of one guinea should be paid; at present they pay nothing.
36. I suppose you have a good many applications from publicans in your district to have music and dancing allowed in their public-houses? We have for about two years refused all dancing licenses, and from the 15th of February this year we have refused all music licenses also. None have since been granted in my office.
37. Will you be kind enough to state what caused the Bench to take that particular action? They all came to the conclusion that this sort of thing led to seductions, drinking, and so on.
38. I should gather from your evidence that you think it would be an improvement if the power of granting such licenses were taken away from the Magistrates altogether? Yes.
39. What is your opinion as to keeping public-houses open till 12 o'clock at night? That is a rather difficult question. People arriving by steamer from the Hunter, we will say, very often arrive much later than 10 o'clock, and parties coming down by railway also, and they require accommodation for the night.
40. Do they not now arrive after 12 o'clock as well as after 10? No doubt.
41. Even if public-houses were closed at 10 they would have the same opportunity of getting a bed as those who now arrive after 12? Yes, if the publican were allowed to open his door.
42. Is there not a class of publicans who do not accommodate travellers? I think most of them do. There are a good number of public-houses round the theatre where people go to take supper after 10 o'clock.

43. Would not that difficulty be met if power were given to grant extra licenses in situations where they were required? Decidedly; many houses do not require to be open after 10 o'clock.
44. With such a proviso as that do you not think it would be prudent to close public-houses at 10 o'clock? Yes, and give the Magistrates power to grant licenses to keep open till 12.
45. Have any complaints been made to the Bench of Magistrates as to publicans supplying drink to parties already intoxicated? Very often a wife complains that her drunken husband is supplied.
46. I was alluding to publicans supplying men already intoxicated? They ought to be punished for it.
47. If such a complaint is made against a man by the police, is it brought up against him at the next licensing meeting? Very seldom.
48. Do you not think the law should be made more strict in that respect? I do.
49. Could you suggest any improvement in the present law, so as to prevent publicans giving drink to parties, by habit and repute drunkards? We sometimes give a circular, to parties who come to our office, to send to all the publicans to refuse a certain person drink on application, but it is no good at all. When a man is a confirmed drunkard he will get drink somehow.
50. I am aware of the difficulty;—I was asking if you could make any suggestion to the Committee? You might inflict a fine if drink were supplied to the confirmed drunkard himself.
51. Could you not make a law inflicting a penalty on the publican? Yes, but the man himself would then send a friend, or get it somehow.
52. *Mr. Flood.*] Are they not prohibited from supplying drunkards at the present time? Yes, but there is no penalty attached. I think there ought to be a penalty; and if a publican should be convicted a certain number of times his license should be taken from him.
53. *Chairman.*] Do you think publicans should be allowed to sell intoxicating drink to infants and children? I think they ought not to be allowed to sell to children under a certain age, nor to the aborigines.
54. Do you think that under any circumstances publicans are justified in selling intoxicating drink to children under 12 years of age? Certainly not for their own use; but supposing a child says his parents are ill in bed, and he is sent to purchase drink for them —
55. Supposing they are ill in bed, do you not think they could get some other person to obtain drink for them besides a child? They might.
56. Sometime ago a case was reported in the papers, where a party had applied for a license for a public-house in Castlereagh-street, who was stated by the police to have been a short time previously the keeper of a common brothel —? I recollect the case.
57. Do you think the Bench of Magistrates were justified in licensing such a man? I was one of them. The man had been forty years in the country and had never been brought before a Bench for any offence; he had left that business of his for more than a year, and during the time he was engaged in it the police had never brought him before a Bench of Magistrates, and never lodged a single complaint against him, and we thought it would be a very hard case that having deserted his evil practices he should not have an opportunity of behaving better. Moreover, his landlord and neighbours never complained against him.
58. Still there was sufficient proof that he was actually a bawdy-house keeper for a year? Yes; a year or two before the application, but the police never performed their duty by bringing him before the Bench; they never got him punished once.
59. Do you not think that was rather a reason for censuring the police for not doing their duty. Did the Magistrates go into proof? Senior-sergeant Waters gave evidence to the effect stated.
60. And I think he stated that he had a number of witnesses to show the character of the house? We were quite satisfied that he did keep such a house, without calling for witnesses.
61. Do you think that a man who has kept a brothel for a number of years can under any circumstances be a fit person to hold a license for a public-house? I think not; and on consideration, after we had granted it, I was sorry for it, and I think other Magistrates were so also; but I have given the reason why it was granted—to give the man a chance of redeeming his character.
62. Are you in a position to give the Committee any information as to the amount of crime directly traceable to the use of intoxicating drink, which comes before your Bench? From our records I could give you a pretty accurate idea of it.
63. Could you append such a statement to your evidence? Yes. (*Vide Appendix A.*)
64. *Mr. Flood.*] I think you stated that there were between five and six hundred public-houses in the city and suburbs? Yes.
65. And that you think they are too many? Yes.
66. Upon what do you found that opinion? If you go up William-street, for instance, you will see more public-houses than butchers, bakers, or any other trade; the South Head Road the same. All these public-houses would not seem to be necessary.
67. How do you arrive at the conclusion that they are unnecessary? Simply from observation. I see public-house after public-house with not a soul in.
68. How would you obviate the difficulty, say in William-street, as regards number? I would not grant some of them a license.
69. What would be the rule on which you would act as to how many of these houses should be licensed? A thing like that cannot be done in a hurry; but if a publican has been punished for breaches of the law a certain number of times I would deprive him of his license, and so decrease the number.
70. Then you would only decrease the number as persons became convicted under the Licensing Act? Yes, or if they wished to leave the business, or perhaps on the recommendation of two-thirds of the inhabitants of the street.
71. If two-thirds of the inhabitants of any street recommended to the Bench that it was not necessary to license more than a certain number of houses, you think the Magistrates should act on that recommendation? I think they ought to hold an inquiry, and let the parties appealed against have an opportunity of defending themselves.
72. After the receipt of such a recommendation would you give the Magistrates discretionary power? I would give them discretionary power to enter into the case, and, if it were proved, to refuse the license.
73. You stated that the Magistrates did not attend as regularly as they ought to do or might do, in reference to granting licenses to publicans. I did not clearly understand what you meant by that? We have certain days—twice a week, Tuesdays and Fridays—for entering into all licensing business, but many of the Magistrates who attend for other business, having finished their work go away. I do not think it is a very popular thing among them to adjudicate in these matters.

D. C. F. Scott,
Esq.

7 April, 1870.

- D. C. F. Scott, Esq. 74. Did you not state that there was another licensing meeting also—a meeting once a month? Once a month they send in applications, which are given to the police for their report, and the cases come on either on Tuesdays or Fridays.
- 7 April, 1870. 75. What are these cases to which you allude, as being adjudicated on Tuesdays and Fridays? All applications for licenses, for transfers, removals, and for billiard or bagatelle tables.
76. Then in point of fact you take into consideration at any time the granting, transfer, or removal of a license? I think the time is fourteen days' notice.
77. What did you mean by stating that applications for publicans' licenses were considered once a month, in addition to the annual meeting? That is what I mean. They give a certain notice, and we take all their applications into consideration.
78. But you have just stated, as I understand you, that you meet eight times a month, on Tuesdays and Fridays, for that purpose? Twice a week.
79. Does the law allow you to meet oftener than once a month? Yes. All applications are taken, due notice having been given to the police, and we receive any objections.
80. I understood you to say, in answer to the Chairman, that in addition to the annual licensing meeting, the Magistrates met once a month? That is by circular, but the Courts are opened twice a week.
81. What is the object of the circular at all if the Magistrates can meet every day in the week for the purpose of granting licenses? The object of the circular is to get a larger attendance in any particular case, where the police raise objections.
82. Do you not think that a most objectionable course, that any particular case should be selected for summoning Magistrates? If applications are put into the hands of the police, and they say there is no objection, it is scarcely necessary to summon Magistrates.
83. Whose duty is it to summon the Magistrates? The Clerk of Petty Sessions.
84. Is every Magistrate in the City summoned? No. Only those who are constant attendants at the Bench.
85. Does not that savour of packing the Bench? There are many of the Magistrates who have never entered the Court.
86. That has nothing to do with the Clerk of Petty Sessions. Has he any discretionary power? The general rule is to summon all those whose names are on our roster. When Magistrates are newly made they are asked if they will attend the Court and take their turn of duty; and, if they say they will, their names are put on our roster. It would be a waste of time to summon those who never attend.
87. I think you also stated, in answer to the Chairman, that if a house possessed certain accommodation, the Magistrates were bound to grant a license? I think we are all but bound, if the person applying is of good character.
88. Am I to understand that the Magistrates have no discretionary powers whatever if the house possesses the necessary qualifications, and the applicant is a person of good character? I do not know what may be other Magistrates' opinions, but I do not consider that I have any power to refuse a license if everything is perfect according to the law—the Act of 1862.
89. If three houses were licensed in any locality, notwithstanding the public requirements did not call for a fourth, you conceive the Magistrates would have no power to refuse a license? I do not think they would, but I say the Magistrates ought to have that power upon the statement of a certain proportion of the inhabitants of the neighbourhood that they did not consider another public-house necessary.
90. If a publican who has held a license applies for a renewal of his license, are police reports used for the purpose of preventing him obtaining it? If the police see that any publican is irregularly conducting his business, and that he is an unfit person, from some cause or other, they make an official complaint against him, which complaint is read when the case comes on, and the policeman making it put upon his oath and obliged to prove every word he has said in that report; and the defendant also has an opportunity of calling his witnesses.
91. Am I to understand that cases of the kind to which you allude are allowed to remain in abeyance until the applicant applies for a renewal of his license, and that then these reports are used against him? No, the police can bring him up at any time they like, twice a week. Every charge is inquired into and adjudicated upon, but when he applies for a renewal of his license these charges are again mentioned against him.
92. You state that you consider that for all transfers a fee of one guinea should be paid. Do you not think that publicans are already very highly taxed by the payment of an annual license fee of £30? I think that if they are deprived of two hours in the evening and of their music and dancing licenses and billiard and bagatelle tables, the tax will be very heavy.
93. Do you know what accommodation is required for every house for which a license is applied for? I think two sitting-rooms and three or four bed-rooms. I think that accommodation ought to be increased. Some of the rooms are very small, close, and unhealthy.
94. Do you not think the Licensing Act is very often infringed upon by granting licenses to improper houses, not possessing the accommodation required by law? The question is always put—have the police any objection? They are the people to inspect the houses. If they say the accommodation is sufficient, then we grant the license.
95. Then the law is in all cases complied with? I think so. I do not recollect sitting in a case where it has not been so.
96. The law being silent as to any penalty for supplying habitual drunkards with spirits, do you not think it would be advisable to inflict such a penalty? Certainly.
97. With reference to the case which has been mentioned, where a license was granted to a man that had been a brothel-keeper, I think you stated that he had never been brought before the Bench charged with such an offence? My information is derived from his attorney, who stated that he had never been punished for any offence for, I think, twenty years.
98. In that case it could be only a rumour, as far as your knowledge as a Magistrate was concerned, that this man was a brothel-keeper? No; it was sworn to positively by Senior-sergeant Waters, that he had sometime before been keeping a brothel, but he had never been brought up for that or any other offence.
99. Is there not some law which punishes brothel-keepers? Yes, no doubt. If this man had been brought up for keeping a disorderly house, he would have been punished, or sent to take his trial at Darlinghurst.

100. Do you conceive that the police did their duty in not having previously brought him before the Court, and endeavoured to obtain a conviction against him? I should not like to interfere with the police duties. If they had brought him before the Magistrates and proved that he was keeping a brothel, he would have been sent to the Quarter Sessions for trial.

D. C. F. Scott,
Esq.

7 April, 1870.

101. Do you think it was right to allow these charges to lie dormant, and then bring them against the man when he was applying for a publican's license for the purpose of bettering his condition? That was one of the lights in which we viewed it—that the charges ought to have been brought before.

102. Suppose we were to reduce the number of public-houses in Sydney by one-fourth or one-half, would not the persons deprived of their licenses be entitled to some compensation, if there was nothing against their characters or the accommodation provided in their houses? I dare say it would be a hard case. It could not be done unless the Act was altered. I believe that if you reduce the number of public-houses too much, so far from suppressing drinking, it will lead to it. If in one street there are eight public-houses a person wishing for a single glass may go into one of them, and not finding anybody there may take his glass and come away; but if there were only two public-houses, he would find plenty of people in them, and be tempted to drink more than he otherwise would.

103. Do you not think also it would introduce a number of slygrog-shops? It might. There are plenty of them about the country.

104. With reference to your proposal to give the Magistrates power to refuse a license, if two-thirds of the neighbours were against it, do you not think it possible that some other publican might be the instigator in getting up such a requisition? I think it very probable, as they come in competition with one another.

105. Would not that be a very dangerous state of things for the public to have to submit to? Yes. Still there is the investigation; they must prove every thing they state, and the party petitioned against would have an opportunity of bringing forward witnesses to show the contrary.

106. Do you not think the best mode of closing public-houses would be to induce persons to become teetotallers and cease to drink? There is not the slightest doubt of that. If the public all became teetotallers there would be no use for public-houses.

107. *Mr. Farnell.*] Is the Central Police Court the Licensing Bench of the district? The City is divided into two districts, one of which is attached to the Central Police Office, and the other to the Water Police Office.

108. Under the present Publicans' Act, where it provides for annual licensing meetings, it states that a meeting is to be called of the Justices residing in the immediate district or reputed district, in which there shall be a Court of Petty Sessions, "which shall be holden at the Court House, or usual place of meeting, at noon on the third Tuesday in every year." Which is the usual place of meeting for the Court of Petty Sessions in Sydney? Both the Central Police Court and the Water Police Court.

109. How long has that been the case? Ever since I have been here.

110. You said something about the Court sitting twice a week for the disposal of publicans' business? Of all the charges against them.

111. Is other business done on these days? Yes, we are obliged to open three Courts, sometimes four or even five, every day.

112. Under the law a publican can apply for a transfer of his license on any day on which a Court is held? Yes, by giving the requisite notice, I think, fourteen days.

113. You have monthly meetings for granting licenses or transfers or any other business that may be brought before the Court? Yes. We have seven clerks in the office, and we divide their duties; one has all the publicans' business and all applications for licenses—for auctioneers, hawkers, and so forth.

114. Do you not think that under the fourteenth clause, where it says the Justices may hear and determine all such objections, and may examine on oath any witnesses, and may grant licenses to such persons as may be approved of, the Justices, or a majority of them, may refuse a license, notwithstanding that the house applied for may possess the necessary accommodation and the applicant be a person of good character, if they think the house unnecessary? I think not. I think it would be an interference with trade. If a man having the Act before him fulfils it in every particular, and then claims a license, I do not think it would be just to refuse it.

115. Do you remember anything of the provisions of the Act which was repealed by the Act of 1862? No.

116. Do you know whether the Magistrates used under that law to visit the public-houses themselves, to see that they were proper places? Yes, we used to have a meeting and depute two Magistrates to examine the houses in a certain street and two others in another street, and so on. It was the custom to visit all the houses and report upon them.

117. Are you aware that there are many public-houses in the City of Sydney and the suburbs which are totally unfit for the purpose? Not personally.

118. Are you aware that there are many houses that are licensed that have not the accommodation required by the present Act? I am not. If I were aware of it of course I would mention it to the police. I have no authority to go and look over a man's premises.

119. Your duties are of too multifarious a character to permit of your devoting particular attention to this matter? Yes; my duties are so very severe that there is not a day that I do not act as a clerk in taking depositions. Our office is so reduced in strength, for economical purposes, that every day I am taking depositions in my own room, the clerks being all occupied.

120. Has the efficiency of your office been impaired? I can only tell you that I am every day of my life taking depositions, not having a clerk to do it.

121. That does not properly belong to your duty? No, I ought to be hearing cases—not taking depositions.

122. Do not publicans pay extra for billiard and bagatelle licenses? Yes; £10 for a billiard-table, and £5 for a bagatelle-table. From the 3rd July, 1868, to this date, twenty-nine billiard-tables and fifty-two bagatelle-tables have been sanctioned.

123. Do you think it would be wise to entrust the granting of publicans' licenses to the various Municipalities or districts where the population is much concentrated? No, they are too much interested among their own set round them. I think it far better it should be done in a public police-court, before Magistrates who do not know the parties interested.

124. You think it would be too local? Yes, decidedly.

125. Do you know, in your capacity as Police Magistrate, whether there are any places in Sydney where they

D. C. F. Scott, they sell liquor after the public-houses are shut up? No; if there were they would be brought up and punished for sly grog-selling.

Esq.
7 April, 1870. 126. Are you aware whether there are many brothels in Sydney? Yes, a great number—600 prostitutes, and about 100 brothels.

127. It follows, as a matter of course, that there is a good deal of drink in these places? They send out to the neighbouring public-houses to get drink, and that commences the riotous and disorderly conduct.

128. You referred to some person, who had kept a brothel, having been allowed a license for a public-house in Castlereagh-street—Is not Castlereagh-street rather notorious for brothels? I think there are a few there, but there are more in quieter streets—Woolloomooloo, Hunter-street, and other places.

129. Do you know whether the drinking habits of the people of Sydney have increased or diminished of late? I think we have on the average from seven to ten drunk and disorderly persons before the Court every day, but a great number of these are parties who have been very often before us for similar offences. There is one woman in gaol now whom I think I myself have convicted nearly eighty times.

130. After you send these persons to gaol as a punishment for drunkenness, they are no sooner out than they are back again? Very often the next day.

131. Do you not think there ought to be some institution to put these people into? The Workhouse Act, which was never worked, and is now repealed, gave the Magistrates power to send these parties to gaol for an indefinite period, where they would have remained for life unless released by the Governor and Executive Council. That was too severe.

132. Do you not think it would be better to keep them in a place like that instead of sending them backwards and forwards to gaol? I think it would be well to treat them as lunatics; they are nothing more than lunatics.

133. A lunatic is confined for life, unless he recovers his senses? Yes. If a man is brought before the Bench by his friends for insanity arising from drink, we do not send him to Darlinghurst Receiving House or to Tarban Creek; we remand him for a week or a fortnight, and if he comes out perfectly sober we return him to his friends; but in other cases of insanity they are sent on to Tarban Creek at once.

134. Where are drunkards remanded to under such circumstances? To Darlinghurst Gaol—to the hospital—not as a punishment, but for medical treatment. On the warrant is written, "Remanded for seven days—medical treatment recommended." At the end of the seven days the man is visited by the Police Surgeon, who certifies whether or not he has quite recovered, and if he has he is then delivered over to his friends.

135. Do you, under the Lunacy Law, send many persons to the Reception House at Darlinghurst? Yes; about two every week.

136. Do you remember whether any of these persons have ever come before you previously as drunkards? I do not know that; but I know many of the most serious cases arise from drink. There was a clergyman brought in the other day lashed to a bed, who was taken up there and died, all from drink.

137. He was a lunatic? When brought before me he was a lunatic.

138. Are girls of the town often brought before you for drunkenness? Yes, two or three every day—quite young girls some of them.

139. Do you not think it would be a good thing if you had the power to send these girls to a reformatory instead of a gaol? There are two asylums at Newcastle for girls under sixteen. One is a Reformatory School for those who have committed crime, and the other for those who are merely taken up for wandering about the streets with prostitutes and bad characters. There is a Female Refuge in Sydney, where any of these girls may go, of any age, but there is no power to detain them.

140. Do you think the present Publicans' Act works well? I would only suggest what I have done now, that the police and the Magistrates should have more power; that the number of houses should be lessened; and that billiard and bagatelle tables in connection with public-houses, dancing saloons, and music halls, should be abolished.

141. Would you allow persons to have billiard-tables at other than public-houses? You could not prevent them.

142. Do you think people would gamble for money in a private house? No doubt they would.

143. *Mr. Brookes.*] Would there be any objection to licensing bagatelle and billiard tables at other than public-houses? I see no objection so long as they cannot have drink on the premises. There is no doubt that when the tables are kept in public-houses parties play for drink, which is consumed on the premises.

144. Would not an institution for inebriates be, in your opinion, a great advantage? I think it would be far better than remanding them to gaol. They consider it a degradation to be sent to gaol; but we cannot send them to the Receiving House opposite the gaol, although it would be far better. I think it preys on the mind of a lunatic, or a man who is half a lunatic from drink, to be sent to a common gaol.

145. I mean such an institution as might be established for their permanent treatment. I understood you to say you remand them for a week or a fortnight. Would it not be well if the Magistrates had authority to remand certain cases for longer periods? When a case is brought before two Magistrates, and two medical men give evidence, according to the Act, that such a person is dangerous to be at large, and likely to commit an indictable offence, we have then the power to send him to the Receiving House.

146. I am speaking of an institution for the reception and treatment of inebriates—would it not be better for the Magistrates to have authority to order a longer detention? Yes, but it would be an expensive institution.

147. Not necessarily so. I ask the question, having regard to the permanent cure of drunkenness? No doubt an institution of that kind would be very desirable.

148. I think I understood you to make a remark to the effect that to refuse a license for a public-house would be to interfere with trade? I think when a man complies with the Act in every respect, it would be an injustice to refuse him a license. According to the present Act we are all but compelled to grant licenses in such cases.

149. Even when the houses are unnecessary? Yes.

150. You would do so in compliance with the provisions of the Act? Exactly.

151. In your opinion would it not be better if the Act was altered? Most decidedly.

152. Giving Magistrates discretionary power to refuse licenses? Yes.

153. I understood you to say, in reply to Mr. Flood, that to reduce the number of public-houses too much would have a tendency to increase the evil of drinking, on account of the greater amount of temptation that would be encountered when the houses were fewer in number and therefore more frequented—
does

does it not follow, on that principle, that the greater congregation of public-houses in a given locality must be attended with the opposite effect? No I do not see that.

154. Do you not think the establishment of water fountains in many places, where there are public-houses now, might operate beneficially? No doubt; the more the better I should think.

155. In reference to the license granted to a man who had been a brothel-keeper, I think it was stated that the license was granted with a view to afford the man an opportunity of redeeming his character? That was the principal motive.

156. Would you not consider that rather a dangerous experiment? I have heard no complaints since he has had the license.

157. Seeing that he is a man already familiar with prostitutes, and the life of prostitution, and that he is placed in a licensed house to which prostitutes would probably resort, is he not exposed to great additional temptation? No doubt he is not a proper man to have a license; but I know some publicans in Sydney who have been convicted and have now redeemed their character, and are behaving themselves remarkably well.

158. *Mr. Wearne.*] What would you suggest in alteration of the present licensing Act to make it a good Act? If you will permit me to consider the whole subject—the Act of 1862 and the proposed Bill—I will give you a written report, and take a little time to do it.

159. Just as I came into the room you were stating that the inhabitants of the different localities should have a voice in the granting of new licenses? I think so.

160. Anything else besides new licenses? No, I do not think I would interfere with parties at present holding licenses, unless they behaved ill.

161. Have you seen anything of the Permissive Bill? I have it at home, but I have not read it very attentively.

162. Many persons think the people should not only be heard in the matter, but that if two-thirds of them are opposed to it no one should have power to grant a license? I think they ought to have a voice in the matter.

163. Should they have a decision in the matter? I think not—not altogether. Their feeling ought to have great weight, but I would not leave it to them altogether. I think that if a certain number of the people of a neighbourhood objected to a license, on account of there being numerous other public-houses, no Magistrate would grant it if he had the discretion.

164. Do you approve of the present system of Magistrates granting licenses? I do.

165. Do you not think there is sometimes a great deal of corruption in the matter—that persons interested sit on the Bench? Not in my Court. If they do they are liable to a fine of £100. We have many Magistrates who are interested in public-houses, but they do not sit on the Bench.

166. *Chairman.*] When there is undue competition from the great number of public-houses, are not the owners tempted to adopt illegitimate means to induce parties to drink with a view to making money? I can scarcely answer that question. I do not know it as a fact, but I believe they have other means of making money.

Charles J. P. Lydiard, Esquire, called in and examined:—

167. *Chairman.*] You are Superintendent of Police for the Western District? Yes.

168. Will you be kind enough to inform the Committee what is the state of the public-houses in your district generally, and whether, as a rule, they are in localities where they are absolutely required, or whether they are more numerous than is necessary? The public-houses generally in the country districts are not good, and there are more than are necessary in many parts.

169. Are the proprietors of these houses, as a rule, parties that you think ought to have public-houses? Many are not.

170. Do you approve of the present system of licensing adopted, that is to say, what I believe to be the rule, that the Magistrates license all applicants, unless they can be proved to be men of bad character, if the houses contain the requisite amount of accommodation? I do not approve of the present way of licensing. I do not think the present Act is as good as the old Act.

171. Can you suggest any improvement? The Bench of Magistrates ought to be able to refuse a license if they think proper;—they cannot do so now.

172. You think it would be beneficial to give them power to take all the circumstances into consideration as to the propriety of licensing a particular house? Yes, I think it should be taken into consideration whether the house is required or not.

173. Do you think if that discretionary power were given to Magistrates it would be exercised to any great extent in country districts? Certainly, I think so.

174. Do you think the accommodation required by the present Act is sufficient? No.

175. From your experience in travelling through the country do you find, as a rule, that the necessary accommodations for people outside the house are satisfactory? No, not by any means.

176. Some means ought to be taken to improve the condition of public-houses in that respect? Yes.

177. Do you find at country public-houses sufficient and good accommodation for horses? Not always; the stables in some parts are very bad, and so is the accommodation.

178. In fact some houses have a character for having good stables and others very bad? Yes.

179. In some districts publicans pay no attention whatever to accommodation for the public in that respect? Not at all; they are just houses for drinking.

180. Do you think it would be beneficial if the police had more power as to these houses? Yes; I think a police report ought to be made every year as to the state of these houses.

181. Have many of the public-houses in your district got bagatelle and billiard licenses? Yes.

182. Do you approve of giving these licenses? I do not see any harm in it.

183. Has it not been shown that it induces young men to get into debt and dissipated habits? I do not think so; I do not think young men play at these games much.

184. Do they not play for drinks? Yes.

185. And so far inducement to drink is held out to them, when otherwise they would not? They would drink, whether at the table or not.

186. Does it not keep them hanging about the public-house? Yes.

D. C. F. Scott,
Esq.

7 April, 1870.

C. J. P.
Lydiard, Esq.

7 April, 1870.

- C. J. P. Lydiard, Esq. 187. I suppose you have seen a good deal of music and dancing at public-houses on the gold fields? Yes.
- 7 April, 1870. 188. What is your opinion of that? The Magistrates ought to show great discretion in granting such licenses.
189. Are you aware that many of those young men who have ultimately taken to the bush have commenced their career at these dancing saloons? No, I am not aware of that.
190. Is there not a good deal of irregularity attendant on these dancing saloons? Yes.
191. Are you aware whether the publicans who have these dancing saloons are in the habit of procuring girls, nominally as servants, but in reality as decoys? Yes, they do on the gold fields sometimes; but I think that has dropped off now.
192. If there were a new rush, the same evil would be likely to arise? Yes, certainly.
193. Is there any suggestion you would like to make to us as to the requirements of any new Act? No. I have read the proposed Bill, and I think it a very good one.
194. *Mr. Brookes.*] You stated, in reply to a question of the Chairman just now, that the police ought to be required to report on public-houses every year? Yes.
195. Not only as to the condition of the house, but the character of the publican? Yes.
196. Would it be desirable to have such reports made matters of record in the Police Office? I do not think that is necessary.
197. I mean with this view: that whenever a transfer or renewal of a license was applied for this report might be referred to? Yes, that might be done.
198. Is there any such record now? No.

TUESDAY, 12 APRIL, 1870.

Present:—

MR. FARNELL,
MR. FLOOD,
MR. GARRETT,

MR. NEALE,
MR. WEARNE,
MR. WILSON.

THE HON. JOHN BOWIE WILSON, Esq., IN THE CHAIR.

Henry Lane, Esq., Under Secretary for Finance and Trade, called in and examined:—

- H. Lane, Esq. 199. *Chairman.*] Can you tell the Committee the number of licensed public-houses in the Colony? I hand in a return, showing that information. (*Vide Appendix B 1.*)
- 12 April, 1870. 200. Can you also give the number of billiard licenses and bagatelle licenses? Yes, I will supply that information also. (*Vide Appendix B 2.*)
201. Are applications ever made direct to the Government for licenses that have been refused by the Benches of Magistrates? In some cases applications have been made, but they are invariably refused.
202. You know of no instance where a license so applied for has been granted? No. We grant no license without the production of the Magistrate's certificate.
203. The 58th clause of the present Publicans' Act, 25 Vic., No. 14, provides for the renewal of licenses, once granted, on payment of the yearly license fee. These cases do not go before the Bench of Magistrates? No.
204. The parties apply at the Treasury, pay the fee, and the license is issued? The issue of the license follows as a matter of course, unless we get a notification from the Bench to the effect that an objection has been lodged and entertained.
205. Have you looked at the 4th clause of the Bill referred to this Committee? Yes.
206. Do you see whether that would interfere with the operation of the 58th clause in any way? I think it would clash with the 58th clause of the existing Act. It refers to the refusal of a certificate which really does not exist.
207. And it does not prevent the renewal of the license on application at the Treasury? No. I should consider myself bound, by the 58th clause of the existing Act, to issue the license.
208. Unless it was repealed? Yes.

John McLerie, Esquire, Inspector General of Police, called in and examined:—

- J. McLerie, Esq. 209. *Chairman.*] From your position as Inspector General of Police I should suppose you are pretty well conversant with the working of the present Publicans' Act? I am.
- 12 April, 1870. 210. Have you paid any attention to that Act, with the view of seeing in what respects it might be amended? I am of opinion that it might be amended in many respects for the public good.
211. Will you be kind enough to tell the Committee, in your own way, in what way you think it might be amended? As to the number of houses licensed, as to the description of houses licensed, the character of the licensee, and the restrictions that under the present Act are put upon the Police with respect to visiting these houses.
212. Are you of opinion, from any observations you have made, that drunkenness and consequently crime have increased, with the increasing number of public-houses? I think from what I see of Sydney that the increase of drunkenness may be attributed more to the low description of houses than to their increase.
213. If the houses were all of a better description, of course it would not pay to keep so many public-houses open? Exactly so. It is to be assumed that the primary object of the Legislature in licensing public-houses, places of amusement, and other places frequented by the public, is to exercise a check over these places for the benefit of the public; but with respect to public-houses, I am of opinion, from the working of the Licensing Act, as it now exists, that that object of the Legislature has, to a very great extent, been rendered nugatory by the action of the Licensing Benches.
214. With regard to the number of public-houses, how would you regulate that? I think the licensing body should have a discretionary power as to the number they should license, having regard to the requirements of each neighbourhood.

215. Would you leave that discretionary power in the hands of the general Bench, or put it in the hands of the Police Magistrate, where there is one? I think it would be better if a Licensing Board were either appointed by the Government or selected by the Magistrates themselves every year; and if there were a paid Magistrate in the district he should be *ex officio* a member of the Board, and the others should be unpaid Magistrates.

J. McLerie,
Esq.
12 April, 1870.

216. I gather from your statements that many licensed houses are very unsuitable for public-houses? Very unsuitable as regards accommodation. A public-house is supposed to be licensed to accommodate the public in more respects than serving out liquors.

217. But many of them are really for no other purpose? For no other purpose.

218. Have you heard any complaints made of the description of drink sold at these public-houses, as to its being adulterated? It is almost rank poison in many cases. I get in my office, from the police throughout the Colony, a return of every death in which a Coroner's inquest or Magisterial inquiry has been held, and a very large proportion of these deaths is to be attributed either directly or indirectly to drunkenness, and a large portion of even that proportion to drinking adulterated liquors.

219. Could you give the Committee any clearer view of what that proportion is? At this moment I could.

220. Will you be good enough to send it in as an appendix to your evidence? Yes. (*Vide Appendix C.*) For nine months of the year 1855 I did the duty of Coroner for the district of Sydney; during those nine months I held ninety-three or ninety-four inquiries, and more than three-fourths of the deaths that I held inquiries on were either directly or indirectly the result of drunkenness.

221. Do you think it would be advisable to have a Government Analyst to analyse the drinks sold at the various public-houses? I recommended that in my evidence before a Committee of this House some years ago. The late Mr. Plunkett was a member of that Committee, and he at the time thought it could be done without having a Government Analytical Chemist—that I, as head of the police, should, where suspicions arose of bad liquors being sold, get samples and have them analysed, and the persons selling them prosecuted if they were injurious. In reply to Mr. Plunkett's observation I said at the time that I had upwards of a hundred specimens of what were considered deleterious spirits and malt liquors in my office, which the police had collected by my directions, with a view to have them analysed, but that the practical chemists of Sydney, though they had no objection to analyse them, did object to be made witnesses for the police, that is to say, they thought they had no right to give evidence against their neighbours without they were paid officers.

222. Under these circumstances the only way that valuable information could be procured would be through a paid officer of the Government? Yes.

223. You have stated also that the Act ought to be amended in so far as regards the restrictions on the police visiting public-houses. The police have no power at present to enter unless they see a breach of the peace taking place, or unless they are called in by the landlord? No; a peace officer at common law has a right to enter any house where there is a riot going on, or if he believes murder is being committed, to break open the door; but by this enactment, protecting the publican, that right is taken entirely away as regards public-houses.

224. Have the police received any information of certain public-houses in Sydney being converted into brothels? There was one instance, after the passing of the present Act; by some means or other the police got in and inspected the house, and they found it fitted up for the purpose on the upper floors.

225. What was done? Of course we could not prove it, but the landlord was changed afterwards, and the thing was dropped.

226. Do you think many public-houses of the lower class in Sydney are kept in a disreputable way? I believe there are a great many low public-houses in which accommodation of that kind can be obtained.

227. Do you think it would be prudent, in any amended Publicans' Act, to give the neighbours a voice in the propriety or impropriety, or necessity, of licensing a particular house? I think it would.

228. *Mr. Garrett.*] Could not that be done under the old system by presenting a petition against any application? Yes, but in a great many instances these petitions are not attended to by the Magistrates.

229. *Chairman.*] Do you not think the Bench ought to be compelled to attend to these objections? So long as discretionary power is left in their hands it is impossible to compel them.

230. They can be compelled to take the objections into consideration? They do that now where objections have been made against houses being licensed near places of worship and schools. I have never known a Licensing Bench to decide against an objection of that kind.

231. If such an objection as this were taken by the inhabitants, that there were already sufficient facilities, sufficient accommodation for the public, would the Bench be likely to take that into consideration at the present time? They do not at the present time.

232. Have you paid any attention to the effects of dancing and singing saloons on the good conduct of the people of the City? Dancing saloons have been to a great extent objected to by the Bench of late. I do not think there is so much objection to be taken to the singing saloons, where there is only singing; but when facilities were given by the Bench to have dancing places in public-houses great evils arose from them.

233. I think in one case, where an application was made for a singing saloon in King-street, some of the officers of police gave very strong evidence of the disorderly conduct that attended these singing saloons? Yes, I recollect the case.

234. Have there not been other cases in the City where like practices have been carried on? Yes.

235. It has not a tendency to improve the morals of the people? Certainly not.

236. Do you think it would be judicious or otherwise to shorten the hours for keeping public-houses open at night, say 10 o'clock instead of 12? I think 11 o'clock is quite long enough,—not beyond 11.

237. Do you not think that by 10 o'clock at night all the people have had their legitimate requirements supplied? It might have the contrary effect to that intended; if people were driven out of the house at 10 o'clock they might take drink home with them, which I object to more than to their drinking in the public-houses.

238. Do not many persons go in after 10 o'clock now—you do not apply the remark to these? No.

239. Do you not think that the respectable publicans in the City would be very well pleased if there were further restrictions placed upon improprieties in the trade? A great many of them would. Some of them have expressed themselves to that effect to me. All the respectable publicans, for instance, are opposed to Sunday selling.

- J. McLerie, Esq.
12 April, 1870.
240. *Mr. Garrett.*] A great many do not open on Sunday at all? They do not.
241. *Chairman.*] Do you think it would be possible to pass an Act to prevent the sale of liquors altogether on Sunday? It would, if the provisions of the Act were not defeated by obstacles thrown in the way of the police going into the houses.
242. They are allowed on Sundays to give drink to travellers? Yes.
243. How would you define a traveller in the City of Sydney? It would be impossible; a man may say he is a traveller, and the police are not to know what he is, unless they know he is a resident of the neighbourhood.
244. Supposing there were an enactment prohibiting the sale of liquors on Sundays, except to travellers, would that shut up the houses at Manly Beach? No, they would be travellers down there.
245. *Mr. Flood.*] Can you inform the Committee what is the mode of procedure after an application has been made for granting a publican's license to any particular house? So many days' notice must be given, and in the meantime if the police have any objection to the applicant or the house, they must file their objection.
246. Does any other party examine the house of the applicant, except the police? Not now. At one time a very good rule was established by the Sydney Bench, but has fallen into desuetude within the last few years, and I am very sorry for it. On the first day of the general licensing meeting, the Magistrates, by arrangement amongst themselves, divided the city and the suburbs into districts, and two Magistrates were appointed to visit and report upon the state of the houses in each of these districts; and their reports were received and considered before the Bench decided upon the licenses.
247. That was the old system? Yes. Before the introduction of that system, I, as Superintendent of Police, was expected to go round and report upon the houses; but the Bench saw that it took up so much of my time, that might be employed to more profit, that they decided upon doing it amongst themselves.
248. Do you know whether that system has been pursued under the present Licensing Act, 25 Vic., No. 14? I will not say positively, but my impression is that it has not.
249. Do you know why that system has been abandoned? I do not.
250. Do you not know that under this Act, 25 Vic., the Annual Licensing Meeting is to be held in Court of Petty Sessions, and all matters under the Act are to be judicial, and all parties complaining against a house must do so on oath? Yes.
251. Would it be competent for a Magistrate, after he had been examined on oath, to take his seat on the Bench with reference to the case in Court? I cannot say; but I will tell you the effect it had before. When two Magistrates visited a house and saw that it was not kept with that degree of cleanliness it ought to be, or that the accommodation had been curtailed so as to make it less than required by law, they used to say, if this is not altered before licensing day an objection will be filed.
252. Have you never heard that an objection was taken to this course at one of the Annual Licensing Meetings? It is not within my knowledge.
253. You do not know the reason why the system of visiting by the Bench of Magistrates was discontinued? No. I know it had a very good effect, and I was sorry when it was dropped.
254. Will you be good enough to look at the 14th section of the present Act, and, having read it, state whether you consider that the Magistrates could take their seats upon the Bench after having examined a particular house, or whether they would be compelled to make any statement they had to make upon oath? Under this clause it would be incompetent for the Magistrates to give evidence, but that difficulty may be got over by the Magistrates directing the police to see to the matter, and file an objection.
255. What I wish to know is, if the Magistrates visit a house can they take their seats and say anything for or against the applicant, except they do it upon oath? Of course they cannot be examined as witnesses in the case.
256. Can they say anything for or against the publican, except upon oath, the Court being a Court of Petty Sessions? If I was a Magistrate acting under this clause I would feel myself perfectly justified in saying that I, with Mr. So-and-So, visited this house and found the accommodation defective in such a respect, but from the report of the police the cause of objection has been removed. I cannot see what objection there can be to a Magistrate going that length.
257. Can a Magistrate say anything in reference to the granting of a publican's license unless his statement is upon oath? Certainly not under this clause.
258. And therefore it would be of no use for Magistrates to visit the houses to see whether they had the accommodation required by law, inasmuch as, after they had so examined them, they could not make any statement as to what they had seen, if they took their seats upon the Bench as Magistrates? I may observe that when this system was in operation the two Magistrates were always accompanied by a police officer, a sergeant or inspector, and that officer received his instructions from the two Magistrates to see that an objection was filed unless defects were amended.
259. And these Magistrates took their seats on the Bench afterwards? Yes.
260. Do you not consider it very objectionable for Magistrates to visit a house in this way, and in all probability prejudice the case? I think they would have a far better opportunity of forming their judgment on the merits of the case than any other Magistrate.
261. Still the fact is the same, that having visited the house they would have prejudged the case? I do not see any moral or legal objection to it.
262. Do you think the ordinary Magistrates are better than the police to examine the various houses for which licenses have been applied for? I think so. I think the Magistrates with the police, are better than leaving it to the police alone.
263. Why? There are not a sufficient number of officers of police to visit all the houses, and the Magistrates are of higher social standing than the ordinary members of the police force.
264. Do you think it is in accordance with the position and duty of a Magistrate to go round about the various districts and examine public-houses? I see no objection to it if it is done voluntarily. It is never forced upon them. I have known Magistrates who would not do it.
265. Is it not in point of fact more a police duty than the duty of gentlemen sitting judiciously in a Court of Petty Sessions? I know, as regards places of public amusement in London, the Magistrates frequently visit them, and I have observed that they have given expression to their opinion from the Bench as to what they had seen.
266. You think then that it is correct that Magistrates should go and visit a place, and then deal with an application respecting it judicially? I cannot see anything incorrect in it.

267. And decide without any evidence but their own? I never knew an instance of that kind. I never knew an instance of a Magistrate on the Bench voting against a license being granted to a public-house on his own mere observation. J. McLerie,
Esq.
268. Have you not known many instances where several Magistrates have visited houses together and have refused licenses after having visited these houses? That may have been the case, but I cannot call to mind any particular instance. 12 April, 1870.
269. During your career as Police Magistrate at the Central Police Court, has not that very often occurred? No doubt it has. I have not taken any part in licensing business for fourteen years, therefore I cannot say much about it.
270. You have stated you thought a Board might be advantageously appointed for granting licenses? Yes, a Licensing Board.
271. What should be the composition of that Board? It should be selected from among the Magistrates of the district, and if there were a paid Magistrate he should be a member of the Board *ex officio*.
272. I think you stated that these Magistrates should be elected or selected from the general body of the Magistrates? Yes, either elected by the inhabitants of the district, or appointed by the Government, or selected from amongst themselves.
273. Do you think the accommodation required by the 33rd section of the present Act is a sufficient guarantee to the public for good houses? Two sitting-rooms and two bed-rooms, if of proper size, would be quite sufficient for a roadside public-house, but this clause is evaded at present by having rooms without reference to size; a room six feet by four is a room in law, and they think that is enough.
274. There is no accommodation insisted upon for the landlord and his family in addition to that required by law for the public? No.
275. So that an applicant is not compelled to have a house of more than four rooms? All that the Licensing Bench have a right to know is that it possesses two moderately-sized sitting-rooms and two moderately-sized bed-rooms.
276. Do you not think the present Act is defective in that particular—that they should be compelled to have reasonable accommodation for the family as well? Yes. In many cases what are called rooms are mere holes.
277. Are there many cases where licensed houses do not possess stabling? There is an exception under the Act in Sydney. I believe in all country places they have it.
278. Can you assign any cause why the Act has been so abused in respect to the accommodation required? No; except that the Licensing Benches look more to the interest of the licensee than the accommodation of the public.
279. In your opinion is the accommodation in public-houses generally defective? I would not say generally.
280. How many public-houses are there in Sydney? Upwards of 500 I believe.
281. What proportion of that number do you think are defective in the particulars on which I have been examining you? One-fifth probably.
282. Are the country public-houses any better, as far as your experience carries you? I have travelled a good deal, and I must say that on some of the roads the houses of accommodation are equal to those in any part of the world I have been in; but some are wretched hovels, unfit for a human being to go into from filth and want of accommodation.
283. Whose fault is that? I presume it must be the fault of the Licensing Bench.
284. That is, supposing these defects to have been faithfully represented to the Licensing Bench? Yes; if not, it is the fault of the police. I know within my own knowledge that a very great number of objections have been made by the police against houses for want of accommodation, and yet they have been licensed.
285. We have had some evidence as to the propriety of reducing the number of licensed houses in the City as well as the Colony generally—What mode would you recommend to the Committee to carry out such an object? If a Licensing Board were appointed they should have power under the law to reduce the number either by taking population as a basis, or the trade of the place, or any other ground.
286. Take the existing public-houses at the corner of King and Castlereagh streets for instance—what course would you pursue in reducing them? These are special cases; I do not think you could reduce the number of houses there, near the theatres and places of amusement. As a rule, I think the Licensing Board should have the power of withholding a license from those houses which have the least convenience for the public, in streets away from the ordinary traffic. By that means a better description of house would be encouraged.
287. If there were less houses near places of amusement, do you think there would be less wines and spirits drank there? A number of people congregate near these places every night when the theatres are open.
288. Do you think the number of houses causes more wines and spirits to be drunk than if the number was limited? I think so. I think the number of public-house doors open there is an inducement to people to go in and drink.
289. If there were less public-houses do you think the number of sly grog-shops would increase? I do not.
290. *Mr. Garrett.*] With regard to bush public-houses—have not their numbers largely increased of late years by the opening of public-houses near head squatting stations? Yes.
291. Have not these houses been opened with the view of relieving the head stations of entertaining travellers? Yes, and in my travels through the Colony I have generally found these houses possessing very good accommodation.
292. Are there not other houses in large squatting districts which attract large numbers of swagsmen, who would otherwise go to the stations for food? Yes of course, but they are a very bad description of house generally.
293. How would you propose to deal with houses of that character—would you refuse them a license altogether? I should not refuse them a license, but I should insist upon them having better accommodation for the public. In some of these houses a traveller cannot get anything to eat, and what he gets to drink is almost rank poison.
294. Do not the employés on stations generally “sweat” their cheques there, as it is termed? Yes, a great many of them, and “sweat” themselves too unfortunately. 295.

- J. McLerie, Esq.
12 April, 1870.
295. And do not many of them lose their senses through the bad character of the liquors sold? Yes. Only a few days ago I furnished the Colonial Secretary with an account of the cases of persons found dead in a portion of the Darling District, names unknown; and I think there were five or six within a very short distance of public-houses. I have no doubt, if the truth were known, that though they are supposed to have died from want of water, some of them really died from drinking poisonous liquors in a public-house.
296. Have you not found that there have been a large number of deaths of this character; that many have rambled away from these low dens in a state of *delirium tremens*, and been found at a short distance dead? Yes.
297. Have you any suggestions to offer how to deal with that class of public-house? If the law demanded a superior description of house, and better accommodation for travellers, the inference is that we should have a superior description of person applying for a license. These houses at present are open for no other purpose than to sell liquors of the most poisonous kind to the shepherds, shearers, swagsmen, and others who come with their cheques. In my travels through the country, at some of these places I could scarcely get a morsel of food fit to eat, and what was offered in the way of drink was of the most villainous kind.
298. How would you apply the examination and testing of liquors, with regard to such houses as these? At present in every police district there are certain officers of police who hold the position of inspectors of distilleries under the Revenue department. These officers, if they suspected that certain houses sold inferior or deleterious drinks, could get samples, seal them with their own seal, and send them to Sydney, and I would have them analysed. The fact of the sample reaching me intact, with the seal of the officer unbroken, and the report of the analytical chemist, should be quite sufficient to prosecute the parties in Court.
299. With regard to cases where dead bodies have been found, and it is made apparent that the men have died from excessive drinking at any of these places, would you empower a Coroner's jury to return a verdict with regard to the character of these houses, or what effect would you give to such verdict if returned? It would be difficult of proof; but I may say most of the dead bodies found on the Darling were buried by the police, no inquiry being held because there was no Magistrate near. In all these cases I require the police officer of the district to send me a statement of the police constables by whom the body was buried, and the reason why no inquiry was held, and I forward that to the Attorney General.
300. Who grants the licenses for these bush houses? It ought to be done by the Licensing Bench of the Police district; but the detached Benches, at some of the outlying places, assume the right to grant licenses, and they do so.
301. Who generally compose these Benches? Generally parties who have stations in the neighbourhood, or their superintendents.
302. Are the Benches you refer to in some cases presided over by Police Magistrates? Yes, in most cases. In the particular district I have alluded to, there is a Police Magistrate at Wentworth, one at Hay who takes the Booligal duty, and one at Deniliquin. In fact there are Police Magistrates who attend at nearly all the Benches when required.
303. If these Benches are composed of squatters and their superintendents, they would have an interest to some extent in establishing public-houses near their head stations in order to relieve themselves of the imposition these swagsmen have put upon them hitherto, of keeping them for a night or two, and the heavy tax on their stations? I question whether the benefit they may derive in that way is not more than counterbalanced by the evils of having a public-house near their stations.
304. Could you suggest any authority other than the Benches of Magistrates in these distant districts for the purpose of licensing? If the Licensing Bench for each district sat annually at the Police Office where the Police Magistrate resides, that would be the better way.
305. You would not allow these outside Benches to grant licenses at all? No; every license should be granted at the principal Police Office of the district, presided over by the Police Magistrate.
306. Do you not think the difficulty with regard to swagsmen and others could be met by licensing a class of accommodation houses unauthorized to sell liquors? That is the case now in some parts of the Colony, up in the north particularly, about New England, where such houses exist unlicensed.
307. Do you not think a system of licensing such houses could be introduced so as to encourage respectable people to keep them, by making them more profitable by reducing their numbers? I would license them merely as a check upon the accommodation. The license fee should be merely nominal.
308. With regard to the number of public-houses to be licensed, you stated that they should be in proportion to population? In proportion to the population, trade, and circumstances of the locality.
309. How would you apply that principle to the distant districts? They should not be nearer than twenty miles to each other as a rule—a day's journey for a man carrying a swag.
310. Do you not think that by increasing the license fee for public-houses, and encouraging the establishment, under some system of supervision, of these accommodation houses, the lowest class of public-houses might be exterminated? Yes.
311. Are you in favour of such a system in these distant districts? Yes, off the main roads.
312. With regard to the lower class of public-houses in Sydney, do the Sydney Bench under the present system practically exercise any supervision over the character of the accommodation, or over the quality of the liquors sold? I do not think they do.
313. Are you of opinion that some system should be adopted whereby the accommodation provided for the public, the quality of the liquors, and the character of the occupants, should be brought under review and checked periodically? Yes.
314. Then you are not in favour of the present system, which admits of renewal, by annual payment into the Treasury, when a license has once been granted? No; I would not make it imperative that the applicant should attend at the Police Court every year, but his application should come under the review of the Bench every year, and if the police intended to make any objection he should have notice. Only those persons against whom objections were intended to be made should be required to attend.
315. Could you suggest any practical mode, in Sydney, by which the number of houses could be apportioned according to the population and the accommodation necessary for the public? It ought to be easy to find out where there is no occasion for a public-house or additional public-houses. For instance, there were at one time eight public-houses at the Haymarket, within a stone's throw of each other, but since a
great

great part of the business of the Haymarket has gone to the railway terminus, the number is reduced to three.

J. McLerie,
Esq.

316. Take Woolloomooloo—is it not the fact that nearly every corner house is a public-house? Yes.

317. Of your own knowledge can you state whether the ordinary accommodation required for the public, over and above that required by the publican and his family, is provided? I cannot say from my own knowledge, but judging from the exterior of many of the houses I should say it is not provided.

12 April, 1870.

318. Do you not think there are a great deal too many public-houses there? Yes.

319. Do you not think the people of each district should have some control over the number of public-houses? Yes.

320. Are you aware that by the conditions of sale of the land on Sir Daniel Cooper's estate, public-houses are not allowed to be erected? Yes.

321. You know something of the locality? Yes.

322. Are you aware of any injurious consequence whatever to the inhabitants arising from that restriction? I am aware of quite the reverse. In the Municipalities of Woollahra, Paddington, and Waverley, containing about 10,000 people, there are only three policemen, and they have very little to do. That shows that the police are not much required, except where there are public-houses.

323. You know the corner of the road going down to Double Bay, from the New South Head Road—At the top of that road there is a public-house? Yes; there were formerly two.

324. Is not the fact of one of them having been abandoned a proof that there is no necessity for more than one? Yes.

325. Still there is no necessity for others on the estate? No. From that corner, by way of the Edgecliff Road, up to the Tea Gardens at Waverley (which is not on that estate), there is no other public-house.

326. With regard to night houses in Sydney, do you not think that in a large City like this, where travellers are constantly arriving at all hours of the night, it is absolutely necessary there should be some night houses? Yes, I have been long of that opinion respecting public-houses licensed near the Steam-boat wharves.

327. You would not apply the ordinary rule in these special cases? I would allow them a special license, and only give them to publicans of high character.

328. With regard to people who have come to Sydney for amusement—do you not think it would be judicious to have one or two houses of high character licensed to keep open to a much later hour than 11 o'clock? It is the case to a certain extent now; the Royal Hotel is open all night, and a porter sits up to let people in who are lodging there.

329. Do you know of your own knowledge whether they sell liquors late at night? No. I believe they do not.

330. Are you not aware that there are a number of public-houses, in the vicinity of the theatres and restaurants, that keep open to late hours at night and sell liquors, but into which the police cannot enter? I have no doubt that is the case at present.

331. Do you not think it would be better to substitute for that state of circumstances a system under which houses might be allowed to keep open, and into which the police can have access? My opinion is that the police should have access to all licensed houses, but I see no necessity for licensing these houses, except for travellers.

332. Has your attention been called to the consequences of allowing a large number of bagatelle licenses in low public-houses? Yes, and I think it ought to be abolished.

333. Abolished altogether? Yes, in public-houses. I would license billiard-rooms in private houses. I see great objections to having billiard-tables and bagatelle-boards in public-houses.

334. With regard to the license fee, what is your opinion upon a graduated scale of fees according to the position and size of the house? I think in my examination before a Committee of this House some time ago, I recommended a graduated scale according to the quality of the house.

335. For instance, you would charge a much higher license fee for Cohen's or Petty's Hotel than for one of the smaller public-houses? Yes. Why, for instance, should the Royal Hotel pay only £30, the same as one of the smallest. I do not advocate a reduction in any case, but I think it might be increased in many cases. £30 might be the minimum, and rising by a graduated scale up to £100 the maximum. I think for instance that the Royal Hotel and Petty's might well afford to pay £100 a year when the smallest house pays £30.

336. *Mr. Garrett.*] Has it not struck you when travelling in the country, that there are some houses that are a positive convenience and necessity, but which cannot afford to pay £30? I have no doubt of that, and therefore in order to make the business pay they have had accommodation and sell inferior liquors.

337. Have you not frequently come across abandoned houses, which you have found on inquiry have been abandoned because they did not pay? Yes.

338. Do you think the reduction of the license fee would enable such houses to keep on? Yes. I think the Magistrates in the country should have the power to recommend a lower scale for certain cases—such cases as you allude to—where there is a necessity for the establishment of a public-house for the convenience and accommodation of travellers on some comparatively unfrequented road, where a house paying the full fee would not pay.

339. Such as the crossing-place of a river, where people would not ordinarily stop, but where they might be detained for days perhaps by flood? Yes, where there are not likely to be many travellers at other times.

340. *Chairman.*] Are you aware whether there is much dissipation among stevedores, sailors, and other people working on the wharves? My attention has never been particularly drawn to it. I have looked upon stevedores as a very respectable class of men.

341. Are there not apparently a great many more public-houses than are necessary on our wharves? Yes, I think that is an evil; it holds out inducements to sailors to run ashore and get drinks. I see that one was opened the other day on the Circular Quay, so close that the men may almost run from the bowsprit of a vessel into the window of the house, and, I am sorry to say, very close to the Sailors' Home.

WEDNESDAY, 20 APRIL, 1870.

Present:—

MR. BROOKES,

MR. NEALE.

THE HON. JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Edmund Fosbery, Esq., J.P., Secretary and Superintendent of Police, called in and examined:—

- E. Fosbery,
Esq., J.P.
20 April, 1870.
342. *Chairman.*] From your connection with the Police Force you must be pretty conversant with the working of the Licensing Act, at least in the City of Sydney? I am tolerably acquainted with the working of the present Act.
343. Are there any points in which you think it ought to be amended? Yes, I consider there are four points in which a great improvement might be effected in the management of public-houses.
344. Will you state what they are? In the first place, I think there should be greater discrimination shown in regard to the granting of licenses, as regards the number of houses licensed, the accommodation contained, and the character of the applicant. As the Act is at present worked, it is generally understood that if the requirements of the Act are complied with, the Licensing Bench have no alternative but to grant a certificate for a license. In the second place, I think that means should be devised for preventing the sale of deleterious drugs in licensed houses. At the present time there is I believe a very large amount of very deleterious liquors sold in the country, and a vast amount of lunacy and other injurious effects are engendered by it. The third point I should refer to, would be the necessity for increased supervision, on the part of the police, over licensed houses. And the fourth point would be the limitation—within very narrow limits—of all amusements in licensed houses, which are of course, means for inducing people to frequent such places and drink, whereas they should be merely for providing entertainment for man and beast.
345. I suppose you include in these amusements music and dancing? Music and dancing, billiard-tables, and bagatelle-boards. I think bagatelle-boards do more mischief amongst the working class than almost any other entertainment at public-houses.
346. Would you give the power of supervision to all constables at all times? I think public-houses in Sydney and public-houses in country places should not be considered as on the same basis in that respect. At a country village, where there may be only one constable stationed, it appears monstrous that he should have no power, or insufficient power, over licensed houses in the place where he does his duty. I therefore think that in country places larger powers should be given to ordinary constables, than are necessary at a place where the higher ranks of the police are stationed.
347. In the City of Sydney would you allow all constables to enter public-houses, or would you restrict it to the grades down to the sergeants? I should allow a sergeant, or anyone above that rank, to enter a public-house whenever he thought fit, and an ordinary constable on himself observing any disturbance.
348. Do you think it would be advisable to divide the public-houses of the City, and the other large towns, into two classes, one of which might be called “hotels,” and the other “taverns”; at the same time causing the hotel-keeper to have a higher scale of accommodation, and to pay an increased fee for license? I scarcely think it would be desirable; but I have not given the matter sufficient consideration to be able to give such a decided answer as I should wish.
349. Are you aware whether that system is adopted in Victoria? There are various kinds of licenses there. Beer-shops are licensed. I think, as regards supervision by the police, that respectable license holders would rather prefer increased supervision than otherwise.
350. As long as that supervision was not made vexatious? It could not be made vexatious, because there is nothing more easily remedied than over-officiousness on the part of a Government officer. A complaint is easily made, and we are all aware that a remedy is at hand. In fact, I have spoken to many of the superior class of licensed publicans, and the more supervision public-houses generally get the better pleased they would be.
351. With regard to the Licensing Bench—do you think it would be prudent to make any alteration in it, that is, to have the Licensing Bench composed of the Police Magistrates, and one or two others appointed by the Government; or would you leave it as it is, to the Bench generally? I consider that any alteration of that kind would be impracticable. I have thought it over carefully, and my own impression is that if a Magistrate is fit for the high functions he is called upon to perform, he can be trusted to do this duty. I think it would be unfair towards a portion of the Magistrates to exclude their voices from the decision in a matter of such local interest.
352. You have already stated that you think the accommodation required is not sufficient? No, I did not say so.
353. I understood you to say you thought the Act required amending in that respect? I think the accommodation which may be necessary in a large town is of a wholly different character to that required in a country inn; for instance, a large number of bed-rooms and extensive stabling are not requisite for a City hotel, but are indispensable for a country inn.
354. Do you think six rooms are too many for a public-house in a town? I can see no objection myself to licensing a saloon simply for the purpose of the sale of liquor in a City. I cannot see what additional advantage is to be obtained by having a number of back rooms in a City hotel. But where the house is professedly for the accommodation of travellers it should be of a much more extensive character.
355. In all large public-houses do they not profess to give accommodation to travellers? They are bound to provide it.
356. Do you not think it would be, to some extent, a guarantee for the respectability of the house, if a certain amount of accommodation were required? I think the scale of accommodation, so to speak, should be scheduled; that is to say, that the accommodation should be different in a country inn and a town hotel.
357. Do you think it advantageous to give the Magistrates power to grant licenses every month, or would you confine it to a certain specified times? I think there should be regular licensing meetings.
358. Would you have them as frequently as once a month? I think it unnecessary; once a quarter or

once

once in six months should be sufficient for all requirements; and that would prevent the chance of a Bench being got together hastily and granting licenses without due deliberation.

E. Fosbery,
Esq., J.P.

359. Do you think the community would be benefited or otherwise, by the closing of public-houses earlier than they are closed at present—12 o'clock at night? I think the public would be benefited if you could be sure no liquor would be sold after 10 o'clock; but it is a difficult thing to control.

20 April, 1870.

360. Do you not think that the public-houses, standing with their doors open and gas lighted, offer temptation to men on their way home to go in and drink, when they would not otherwise do so? I may be peculiar in my views, but I think that if you attempt to restrict the liberty of the subject too much in matters of this kind, you may drive men to worse places.

361. Would not that argument hold good against closing at 12 o'clock as well as against closing at 10? It would apply to a certain extent; but you would have saturnalia in the City if the public-houses were open all night.

362. Then I am to understand that you do not think any great benefit would be derived from closing public-houses at 10 o'clock? I should prefer to see them closed at an earlier hour than at present.

363. Do you think it proper for publicans to be allowed to sell intoxicating drink to infants under fourteen years of age—minors, I should say? I certainly think that as the prohibition extends to supplying liquor to an aboriginal it should apply with at least equal force to a child of tender years.

364. Are you aware whether it is frequently the case that children are sent by dissolute parents for drink? Yes, that is a matter that comes under everyone's observation constantly.

365. You would advise that that should be remedied by Legislation? It might be met by forbidding the sale of liquor to any child.

366. Are there any other points in connection with the Publicans' Act that you would recommend to the attention of the Committee? I do not know how far any of your questions have touched upon the limiting of the number of licensed houses in country places; but as regards the residents in a locality having a voice in the number of public-houses in the district, I am very much inclined to think that dangerous monopolies would grow up under such circumstances, and that the lower orders would be driven, even more than at present, to resort to sly grog-shops.

367. In the first place, with regard to dangerous monopolies, would not that rectify itself in time by having a tendency to put down all public-houses? To give an example I know that in many country places publicans have a vast amount of influence and control over shearers, sawyers, and others of the labouring classes, who resort to their inns, and I think they would have no difficulty in getting a majority of signatures to any application that would be the means of improving their own business position.

368. If that was restricted to rate-payers in Municipalities, publicans would not have the same influence? Their influence would be less, but unfortunately we know that it would not be removed entirely.

369. Would not even the classes you allude to, in many cases, if they had the opportunity, banish the sale of drink altogether from amongst them? There would always be people ready to sell drink, either licensed or unlicensed. The temptation is always open, even in the most remote portions of the country.

370. Is not the detection of sly grog-selling more difficult, the greater the number of public-houses in any particular district? The detection of sly grog-selling is a very important matter, and very difficult to be managed at the present time.

371. My question was this—You stated that you thought that if public-houses were done away with in a great measure, it would induce sly grog-selling to a greater extent;—I ask, do you not think that where there are a great number of public-houses the detection of sly grog-selling becomes more difficult? Practically we do not find it so, because the publicans band together to suppress these illicit traders. In fact that is almost the only way at present that we can meet the difficulty. We have to get the publicans to employ an informer, as the police are not allowed to do so, and thus, with the assistance of the police, they bring home breaches of the law to these sly grog-sellers.

372. Is there much sly grog-selling in the City? I do not think so; there does not seem to be any necessity for it. At all houses where drink is improperly sold it is fetched from the nearest public-house.

373. Are you aware, from information you may have received, whether, owing to the non-supervision of the police, any public-houses in Sydney are literally turned into bawdy-houses? I think some public-houses in Sydney are grossly conducted in the absence of a proper amount of inspection and supervision; for example, I think drinking goes on all day on Sunday with closed doors.

374. Are you in favour of any measure prohibiting the sale of liquors on Sunday? As I remarked before, if you trench too much on the liberty of the subject—if you deny him the opportunity to get liquor, when he considers it necessary to get it—he will have recourse to other improper means of obtaining it. I would not prevent the sale of liquors on Sundays altogether.

375. Do you think there are too many public-houses? I think there are greatly too many, especially on the Gold Fields. Araluen and such places are ruined by public-houses.

376. *Mr. Brookes.*] Do you not think public-houses are too numerous in the City? Yes, I think so.

377. Could you give us any idea what proportion of population to each house might be considered sufficient in the metropolis. I do not think I could give an opinion that would be worth much; it would be merely a passing opinion.

378. In England that is always a matter of inquiry before granting a license? I think it is a very wise provision.

379. There is no such provision in the licensing law here? No.

380. You observed just now that publicans possess a great power in the country over sawyers, shearers, and that class of men—In these districts is there a great deal of sly grog-selling? I think sly grog-selling is prevalent throughout the country, but worst on railway lines in course of construction.

381. I think I understood you to state also that the police generally get the publicans to employ an informer? I say that is one of the few means we have the opportunity of employing for the detection of sly grog-sellers.

382. But I understood you that the police were not empowered to inform? It is considered, and I think wisely, that a constable disguising himself to entrap a man into the commission of an offence against the law, and then to inform against him for a money penalty, would place him in a position in which he never could hope for assistance from the community in the discharge of his more legitimate duties.

383. You say that on Sundays grog is sold all day with closed doors? I believe it is in some houses.

- E. Fosbery,
Esq., J.P.
20 April, 1870.
384. Not generally? I think it is pretty generally sold, but, I by no means consider that there are not some highly respectable men carrying on the trade who would not countenance anything of the kind.
385. I think you stated you had reason to believe that there is a large amount of poisonous liquor sold? I think there is good reason to believe it; no one can take a chance drink while travelling in the interior, without being aware that he has taken something that may play the mischief with him before the day is out.
386. Do you think the same thing is carried on in the metropolis? I think there is a good deal of illicitly distilled and inferior liquor sold in Sydney. I believe there is hardly a spirit merchant in Sydney but would state, if he were examined, that he is constantly having offers made to him of quantities of white spirit at a price less than the Government duty.
387. Could you suggest any mode of dealing with an evil of that kind? That is a matter that pertains entirely to the duty of the Chief Inspector of Distilleries, who should have officers to detect any breach of the revenue law. It is scarcely limited indeed to a breach of the law; it does a great social injury.
388. Have you reason to believe that the competition in the metropolis, from the great number of licensed houses, would tempt to adulteration? I am satisfied it would.
389. In order to render the trade profitable? In order to get as high a profit as they could make.
390. Would you entirely prohibit billiard-tables and bagatelle-boards in public-houses? No. There again you must not be too strict. A public billiard-table is a place that people will have access to; but I think that the common granting of licenses for bagatelle-tables, to be used in a public-house bar, or in a room adjacent to the bar, is an evil; it forms an attraction to a certain class of people, who are thereby induced to resort to the public-house and probably drink to excess.
391. What good reason can you give for a distinction between bagatelle-tables at some houses and billiard-tables at others? I think you will find that the most frequented billiard-rooms are known for the tables being good, and they are generally placed in some retired portion of the larger kind of inns or hotels, where the pursuit of the game, as far as my observation goes, does not entail a very large consumption of liquor.
392. Are you not aware that there are games played upon billiard-tables for liquors as well as for money? Of course I am aware of that, but I do not think a person fond of the game is likely to become a great gambler or drinker in consequence.
393. Is it not within your experience that the temptations of the billiard-table are equally as dangerous to one class of people as those of the bagatelle-table to another class? Yes, I am aware that many young men of respectable parentage are ruined in Sydney by resorting constantly to billiard-rooms in public-houses.
394. Is it your opinion that the countenance and encouragement given to drinking customs encourages crime? Certainly drunken habits are the forerunners of every other kind of misdeed.
395. So that whatever pecuniary advantage the State derives from licensing the sale of liquors, must be to a great extent expended in the detection and suppression of these crimes? Certainly.
396. As prevention is better than cure, would it not be well if we could suppress this liquor-selling system altogether? If you mean to introduce the Maine Liquor Law, there again I fall back on my previously expressed opinion—that you must not attempt too much control, or persons will be driven to more objectionable means of supplying their wants.
397. If drinking is such a source of crime, would not a total suppression of the system be an immense advantage to society? If you could totally abolish intoxicating liquors it would be a good thing; but if you merely suppressed public-houses, people would keep liquor in their own houses and drink at home, and no drunkards are so bad as those who are sly drunkards at home. You cannot suppress intoxication by suppressing public-houses.
398. Do you not think the number of houses is an inducement to drink? It is very much to be regretted that there are so many inducements to drink. One thing hinges upon another; and I think a great deal of evil might be avoided by providing some means for the hard-working labouring man to enjoy himself innocently and respectably, and to place his funds where they would be properly taken care of. I believe myself that if there were easily accessible savings' banks at the various country places, where a labouring man could put his cheque, it would prevent a very large amount of intoxication.
399. Something like the post office savings' banks at Home? Yes. It would be of vast importance to the community. The first £5 a labouring man puts away in some safe investment is, in a great many instances, the foundation of the prosperity of that man and his family.

John Garrett, Esq., called in and examined:—

- John Garrett,
Esq., P.M.
20 April, 1870.
400. *Chairman.*] You are Police Magistrate of Scone? I am P.M. for the Upper Hunter.
401. Before you were appointed to that situation I believe you were Police Magistrate of Bourke? I was, for seven years.
402. Consequently in connection with your duties as Police Magistrate the present Licensing Act must have come under your observation? Frequently.
403. Would you be kind enough to give the Committee any suggestions that arise in your mind as to the points in which that Act might be improved? Upon the receipt of information that I was required to attend this Committee, I placed my views on paper, and perhaps it may be best for me to read from it, and then answer any questions afterwards. (*Witness read from a written statement. Vide Appendix D.*)
404. From your experience with regard to public-houses, are you satisfied with the amount of accommodation required at present—four rooms altogether? I do not think that is sufficient.
405. Do you think six moderate-sized rooms would be too great an amount of accommodation to require? By no means.
406. Do you not think it would have a tendency to increase the respectability of publicans if better accommodation was required? It would.
407. With regard to the composition of the Licensing Bench, I should gather from the paper you have read to the Committee that you think it would be an improvement, as throwing the duty upon responsible parties, if the power of licensing were handed over to Police Magistrates, where they exist, and where Police Magistrates do not exist, to Magistrates specially nominated for that purpose? Yes.
408. Would you have that nomination made annually, or would you allow them to retain their positions during

during the pleasure of the Government? I think that if permanently appointed they would be more valued. John Garrett,
Esq.

409. Do you consider that if a person applies for a license for a public-house, and no objection is taken to it, the Justices of themselves have any discretion as to granting the license under the present law? No. 20 April, 1870.

410. But you think that in all cases, especially where there is a Police Magistrate, there ought to be discretionary power? Yes, the law ought to be so altered. I might say, in reference to the right of the Bench to refuse, in the absence of any direct opposition, that the proceedings are judicial. The Act says they must examine witnesses upon oath, and it scarcely appears to me reasonable that if it is necessary to sustain the proceedings upon the oath of witnesses, the Magistrate should, from his own mind, have the power to refuse. He gives no evidence; but according to some people's views he may reject the application without giving a reason at all. That appears to be an extraordinary power to convey to anyone in a judicial proceeding.

411. In your experience have objections often been made to applications for licenses? No, very rarely.

412. Does not that arise in great measure from the impression that has gone abroad, that the Bench in all cases grant licenses when applied for, almost as a matter of course? I think that may have something to do with it.

413. If an applicant for a license were proved to a Bench of Magistrates to be a man of generally bad character, do you think under the present law the Magistrates would act on that proof, and refuse him a license? Some would.

414. On country Benches generally? I should have no great confidence in it. I hope there are many gentlemen who would feel bound to reject it; but the influences are so various that are brought to bear in little communities upon applications of that kind.

415. With regard to closing on Sundays—do you see any very great difficulty in defining what is a traveller, so as to make provision for travellers in any clause for closing public-houses on Sundays? We have decisions of the Supreme Court on record wherein that is pretty clearly defined. The Chief Justice in substance has declared this to be the law, that for instance a person going from here across your harbour to one of the usual places of recreation is not a traveller. I speak from recollection; I think that was his ruling in a case brought before him.

416. In a country district, if a person lived five miles from a public-house, do you not think that person would be justified in going into a public-house and saying he was a traveller? I do not think he is a traveller.

417. Is there not great difficulty in defining a traveller? No doubt; opinions may differ very widely.

418. I suppose you are aware that although the Forbes-Mackenzie Act has worked very beneficially in some towns in Scotland, they have found this to be a great difficulty in the way of carrying it out? Yes, I have seen that stated in the papers.

419. You have already informed the Committee that music and dancing in public-houses are very detrimental to the morals of the community? There cannot be two opinions about it. In the country districts it is most abhorrent. I may state, for the information of the Committee, some little matters connected with this at Bourke. The present law empowers the Police Magistrate, or two Justices in Petty Sessions, to grant permission for music and dancing. I was frequently applied to at my private residence for permissions of this kind. For some time I granted these applications, but I found it an annoyance, and I laid down a rule that I would only grant them on two days a week; that application should be made in open Court at proper hours; and that none of them should have more than two permissions in one week. This practice was carried on for a couple of years, but whenever there was more than the ordinary number of Magistrates present there was a rush to the Court for an increase in the number of times. Sometimes the Justices overruled me and granted them, but generally I was permitted to have my own way. On one occasion, after I had refused an application, two Justices went up in the afternoon, at 4 o'clock, called the Court-keeper to open the Court, called in the Clerk of Petty Sessions, and granted the application I had refused in Court hours. I have referred in the paper I have read to dancing and music on the race-course. In December, 1868, there were races at Bourke, and publicans were permitted to have booths and to exercise the privileges of their licenses from 10 o'clock until 6. They had music and dancing in these places, and the officer in charge of the police applied to me as to whether it was not a breach of the law. I said certainly it was; he warned them, but they kept at it for the three days, and he laid informations against two of them, and I fined them £21 each. On the very last day that they had the right of applying, they got a rule granted by the Supreme Court, and it was declared no breach of the law. It cost me and the constable some £60.

420. Have you had any experience of the sort of persons who frequent these music and dancing saloons in the country districts? Bourke was an outlying district, and in its early days all the worst characters, I dare say, of the three Colonies, congregated there, and the few women they had were not generally of good reputation. There were many decent women in the place, but there were many of a different sort, and these, with the drunken shepherds, shearers, bullock-drivers, and so forth, were the frequenters of these dancing places.

421. Are you aware that the Magistrates of the City of Sydney have made up their minds to refuse all music and dancing licenses in public-houses? I have seen some notice of it in the paper.

422. Is it general in the district over which you have charge as Police Magistrate? I have been at Scone nine months, and there was only one application last week, and that was for a private ball; I granted it, but the chief constable informed me that they had not had any permissions granted for a long time, and I do not intend, if it rests with me, to grant them.

423. If respectable parties were giving a concert, and there was only one room in it, say attached to a public-house, considered sufficiently large for the purpose, would you under such circumstances feel inclined to refuse a license for the night? I should scarcely think myself justified in refusing, for such persons must have, in the first instance, a license from the Colonial Secretary—persons who travel and make it their business;—and in every town they go to, before they can hold one of their meetings they must have the endorsement of a Magistrate sanctioning the entertainment.

424. With regard to wine licenses—in the Northern District there are a great many of them issued? Yes.

425. For places where the accommodation is of the very worst description? Yes.

426. Are there not some of these shanties on the roadside, in the Northern District, that are not fit for habitation of any kind? There are some that are merely bark sheds.

427. Are you aware that it is often alleged that spirits, as well as Colonial wine, are sold in these places? They have had five or six convictions in the Scone Court; but not during my time. 428.

- John Garrett, Esq. 428. The probability is that there are a great many more cases in which they are not detected? Very likely.
429. Do the publicans generally object to it? I am not aware.
- 20 April, 1870. 430. Do you think it fair or just to allow these parties to sell Colonial wine, and under the guise of Colonial wine to sell spirits, for a £2 license,* while the publicans are charged £30? Certainly not; it is one of the glaring injustices of the Act. There are two matters I would wish to name; both the Publicans' Act and the Wine Act make it an offence to adulterate liquors, but it is a perfect dead letter who is to enforce it.
431. I suppose you would advise that there should be a public analyst? Yes, that would do; in the towns it would work beneficially, but how it would work in remote places I do not know.
432. The samples of liquor might be sealed up by the Bench of Magistrates, and forwarded to the Government analyst for analysis? Yes. I may relate a case showing how extensively deleterious substances are introduced by the publicans. A short time before I left Bourke, the Sheep Inspector, Mr. Horsfall, told me that in passing down one of the streets he had seen a man lying under a tree, and he asked him what he was doing there; with some difficulty he told him that he could not move—that he was thoroughly paralysed; the man said he went into a public-house just opposite where he was lying, and had one or two glasses, upon taking which he became thoroughly prostrated; that two or three men had carried him out, and though he was quite conscious of all they were doing, they robbed him of all the money he had, and he could not help himself.
433. *Mr. Neale.*] Were any proceedings taken? No.
434. Why not? He had no means of sustaining the charge.
435. *Mr. Brookes.*] Have you reason to believe that the drink sold in country places is generally adulterated? I think so; it is very extensively done. It is a very inferior article that is sold at the best.
436. You have given us a case, illustrating the effects of adulterated drink—do you think the practice obtains to a very considerable extent? The practice that obtains in these remote places appears to be something like this: A man comes in with his cheque, as they call it, and with a very few glasses he is prostrated. I am led to the conclusion that if the drink—supposing alcoholic drinks are good under any circumstances—were of ordinarily good quality it would not produce the effect it does.
437. *Chairman.*] Is it not customary for the men to hand their cheques to the publican when they go in? Quite so. The extent to which that was carried in the early days was astonishing.
438. *Mr. Brookes.*] Do you think that if the license fee were raised to £100 it would render the trade more respectable? I have sometimes thought there ought to be a sliding scale or graduated scale for licenses. Some are so situated that they can afford to pay a large license fee; others may not be in that position; but no doubt, as a rule, where anything costs largely we have a right to look for increased respectability.
439. In your opinion would an increase of the license fee tend to reduce the number of public-houses? No doubt of it.
440. Upon the principle that the very small license fee under the Beer Act in England has created a large number? Yes, on the same principle.
441. You are aware that a publican under the old law in England was not allowed to hold any parochial office? I believe that was the practice. There are limitations here; a publican cannot be an auctioneer.
442. Can he be an Alderman? Yes.
443. In your opinion would not the total suppression of the liquor trade be an advantage to the community? Every lover of his kind would wish it.
444. At present I suppose you are enabled to say, from your experience, that it generates crime to a great extent? To an enormous extent—every phase of crime.
445. So that any sum the State may derive from licensing the sale of spirituous liquors, must be expended in the detection and suppression of crime? Yes, more than it receives.
446. Is it in accordance with your experience that the infirmity of drunkenness is one very difficult to deal with under any circumstances? It is. When the habit gets formed I believe all the usual restraints that operate with men are destroyed, or at all events seriously weakened.
447. Are you of opinion that a reduction of the number of public-houses would tend to modify the influence of drinking customs upon the community to any extent? Persons that are given to drunken habits would go any distance to obtain drink, but of course reducing the facilities for indulging the habit would be productive of good in some cases where it was not quite confirmed.
448. It has been stated by other witnesses that if you reduce the number of public-houses, you to a certain extent establish a monopoly, and that if persons were deprived of ready means of getting drink they would seek illicit means—would not that, in your opinion, go to show that the total suppression of the liquor traffic is the only satisfactory remedy? No doubt that is the only satisfactory remedy, but I look upon it as impracticable.
449. But you think all legislation on the subject should be restrictive and have a tendency towards the total suppression of the traffic? Yes. Restrictive legislation is all we can adopt. The interests of the trade are so enormous.

TUESDAY, 26 APRIL, 1870.

Present:—

MR. BROOKES,
MR. FARNELL,

MR. NEALE,
MR. WEARNE,

THE HON. JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Inspector George Read called in and examined:—

Inspector G. Read. 450. *Chairman.*] You are Inspector of Police in the Metropolitan District? Yes.

451. You have had considerable experience both in England and in this Colony in matters connected with the Police? I have.

26 April, 1870.

452.

* NOTE (on revision) :—I understood the question to be £1 as license, for in fact that is the case.

452. Your attention must have been pointedly drawn to the state of our licensing system in this Colony? Inspector G. Read.

453. Do you see many glaring faults in connection with our Licensing Bill? I see several in connection with the present Licensing Act.

26 April, 1870.

454. Will you be kind enough to state to the Committee, in your own way, wherein you think amendment ought to be made in the working of the Act? In the first place, I think the law should give the police a more effective supervision over public-houses. Under the present Act the police have no authority to enter a public-house, except on view of a disturbance, or when called in by the landlord.

455. You think greater latitude ought to be allowed to the police? I think so.

456. Would you extend that power of supervision to every police constable? I would. Every police constable has that authority in England, but it is not exercised in towns, where there are a number of inspectors and sergeants of police. Here I would give all the police that power. In a Colony like this it is absolutely necessary, because frequent transfers of the police are taking place from the towns to country places where there are neither inspectors nor sergeants, and in those places it is absolutely necessary that ordinary constables should have authority to enter a public-house.

457. Do you think great irregularities are going on in many of our public-houses in Sydney? I think there are. I have no moral doubt that a very considerable number of public-houses in Sydney are virtually open all day on Sunday, and frequently all night during the week.

458. Do you suppose there are any gross immoralities going on in any of the public-houses in Sydney at night, in the shape of being converted into brothels? I have received reliable information that public-houses have been used as common brothels in Sydney. I do not remember the exact number of instances; but three occur to me now, in which it was stated that the houses were no better than common brothels.

459. And in these cases the police have no power of interfering? We obtained entrance into one house, and we found a large room in it partitioned off—in the manner of a model lodging-house in London—into small boxes; and we obtained sufficient evidence to satisfy us that this house had been altered in this manner for the purpose of a common brothel. The publican absconded, and no proceedings were taken against him.

460. I suppose you must have heard complaints made as to the quality, or rather as to the adulteration, of spirits sold in public-houses? Yes, numerous complaints.

461. Is it your impression that they are adulterated to a great extent? Yes, I believe they are in low class public-houses in the back streets. I have observed in this Colony that a state of *delirium tremens* much sooner supervenes on a course of excessive drinking than it does in England; and I attribute it to the bad quality of the drinks.

462. Have cases come under your knowledge where men have been brought to a state of unconsciousness by an apparently small quantity of spirits? Yes, frequently; and I could not account for it, except upon the supposition that the drink was considerably adulterated.

463. Do you think the number and description of public-houses in this Colony tend materially to increase crime; or have you been able in many instances to trace the crime that comes under your notice, to the use of intoxicating drink? Yes, frequently. I should say that excessive drinking is the cause of at least 70 per cent. of the crimes that are committed in this Colony.

464. Are the public-houses of the lower description generally the resort of people of bad character? Not generally; but they select a few houses where they assemble; they have particular houses where they meet.

465. That is with regard to what may be called the thieving portion of the community? Yes.

466. Does the same thing hold good with regard to prostitutes? There are with prostitutes particular houses of resort.

467. You are aware that the law provides that all public-houses may, at the present time, be kept open till 12 o'clock at night? Yes.

468. What is your opinion of the suggestion that these houses should be all closed at 10 o'clock at night? Perhaps it would be desirable, in a town like Sydney, where a number of persons arrive late by steamboat, that a number of houses should be open after 10 o'clock; but as a rule I think it would be an advantage if the majority of them were closed at that hour.

469. Supposing the law provided that houses were to be closed at 10 o'clock, and enlarged powers of supervision were given to the police to see that the law was enforced, do you not think it would have a very great tendency to put down drunkenness and immorality? Undoubtedly it would.

470. You have stated that it is necessary to keep some houses open for the reception of travellers after 10 o'clock at night? Yes.

471. That might be met by imposing a pretty heavy night license? Yes.

472. Would you allow them to remain open all night? No.

473. When would you propose to close them? At midnight.

474. Steamers often arrive after 12 o'clock at night? The greater number arrive before midnight.

475. Even where they arrived after 10 or 12 there would be no difficulty in rousing up the people at an hotel? No, not very much difficulty perhaps; but persons coming strange into the town like to know where they can get respectable accommodation.

476. Your object would be met even by closing the bar at 10 o'clock? Yes.

477. That is to say, it would be a benefit if the sale of spirits to others than travellers were put a stop to at 10 o'clock? Yes.

478. You must have seen a good deal of the effect of music and dancing saloons? Yes.

479. What is your opinion of them? I think they have tended largely to the encouragement of immorality and crime.

480. Consequently I should imagine you think they should be entirely prohibited? Most decidedly. I have not the slightest doubt on the subject. In corroboration of my view I might mention that in some cases of affiliation, heard at the Central Police Office, it has transpired that the acquaintance of the parties was first made at these dancing saloons.

481. What class of people frequent them; they are not frequented by respectable tradesmen, I suppose? No, certainly not. I do not know that I ever saw a respectable tradesman in a dancing saloon in Sydney. They are patronised principally by the lowest order of men, and by young girls on the verge of prostitution.

Inspector G. 482. Do the class of servant girls in Sydney attend them frequently? A few attend them occasionally, but not very many.

Read.

26 April, 1870.

483. Do you consider the accommodation provided by the present Act, four rooms, is sufficient for a public-house? At present it is; but if the number of public-houses were reduced it would not be sufficient, and I think the present Act requires amending in that particular. It is not sufficiently explicit as to the amount of accommodation a publican is required to provide. The old Act was very much more explicit; it said that a publican should have two moderate-sized sitting-rooms and two bed-rooms, in addition to those required for his family; the present Act simply says he should have two sitting-rooms and two bed-rooms ready for the accommodation of the public; and in cases where the publican was a single man or a single woman, it has been decided that if there were two sitting-rooms, two bed-rooms, a bar, and a kitchen, that was sufficient.

484. In the Bill introduced this session, to amend the Licensing Act of 1862, it was proposed that the accommodation should be six rooms, not less than 12 feet by 10 feet—Do you think that too much to require? I do not think so. My opinion is that the rooms should be larger. I think the number is not too large, but the rooms are too small; 12 feet by 10 feet is scarcely large enough.

485. With regard to the number of public-houses, do you think they are too numerous? Very much so.

486. Could you offer any suggestions as to the best means of curtailing the number? That appears to me to be a very difficult question.

487. Do you approve of the present system of licensing public-houses? I do not.

488. Would you take it out of the hands of the general Bench and give it into the hands of Police Magistrates where they exist? I would not recommend it to be given to one Police Magistrate, but I think in Sydney and the country the Police Magistrates should form a Board.

489. Would you approve of two or more persons being appointed along with the Police Magistrate to act as a Licensing Board? Yes.

490. And make them responsible? Yes. There are so many different opinions among the Justices that it would be very difficult to secure uniformity in the working of any Act under the present arrangement.

491. Have you ever read a Bill introduced in England, called the Permissive Bill? I have read its main provisions.

492. Do you think such a Bill would suit this Colony? I think the success of a Bill of that kind depends very much on the moral character of the community in which it is introduced. I think it would be very difficult to work a Bill like that satisfactorily where drinking customs largely prevail. It would be difficult to get two-thirds of the people to object to the granting of a license, and it is in these neighbourhoods where it is most desirable to remove temptations to drink.

493. Do you not think many persons who are almost habitual drunkards would willingly sign away their privilege to drink? I dare say if a little persuasion were brought to bear they might be induced to do so.

494. Are you aware of the number of public-houses in the city and suburbs? 568 is the number at present licensed.

495. You have already stated that the number is greatly in excess of requirements? Yes; but I think that even under the present Act, if it were well administered, the number might be reduced.

496. Do you find that where the police raise objections, those objections are sufficiently considered by the Licensing Bench? They do not, I think, very frequently receive that serious attention their importance demands. I do not attach any blame to the Magistrates in the matter; perhaps they are not always aware of all the facts.

497. Do you think the sale of drink to children does much harm in Sydney—sending children to public-houses? I think it does a vast amount of harm. A child can certainly derive no benefit from going into a low public-house, where there are people in various stages of intoxication, and using bad language.

498. Are not children apt to taste the drink as they go home with it? Yes, no doubt.

499. I suppose it is generally to the lower class of houses these children go? Yes, it is usually in low neighbourhoods that the practice prevails; respectable persons would not send their children to public-houses.

500. Do you think sufficient publicity is given to applications for publicans' licenses? I think not. The old Act was better in that respect than the present one. It required that a notice should be posted up at the house proposed to be licensed for a certain number of days before a transfer or removal or new license could be granted.

501. Do you think it would be advantageous to give the people of the neighbourhood further facilities for raising objections? Yes. Persons come here from the other Colonies, Victoria, Queensland, and Adelaide, and make applications for licenses, and we perhaps have never seen them before. We make inquiries among the few persons to whom they state they are known, and if we hear nothing against them we are obliged to state to the Bench that we know of no objection.

502. There have been instances in which the police have made objections to the character of the applicant, and the Bench has refused to sustain those objections, and granted the license? Yes, frequently.

503. One came under notice, I think, where the man was proved to have been the keeper of a common brothel? Yes, a man named Perry. It was not proved, but we were prepared to prove it. He admitted by his counsel that the police objection was true.

504. And yet that man was licensed to keep a public-house in what may be looked upon as a respectable thoroughfare? Yes, opposite the Prince of Wales Theatre.

505. *Mr. Wearne.*] You think some of the clauses of the old Act are better than the present Act? Yes.

506. And that in framing a new Bill it will be well to consult the old Act? I think some of its provisions might be consulted with advantage.

507. In framing a new Bill you think more authority should be granted to the police than at present? Yes.

508. Is it indispensable that we should state in the new Bill that there should be better accommodation? Any section of a new Act cannot be too explicit in defining the accommodation required, if it is considered desirable to have an improved class of public-houses.

509. What should we do with the present houses. Would it be possible to frame a clause dealing with the present houses, such as would be likely to become law? That is a question I cannot answer. No doubt it is most desirable the number of public-houses in Sydney should be reduced by at least one half, but how that is to be effected is with me a difficult question. I have heard persons express an opinion that

that where a publican commits frequent breaches of the law, and is punished for them, he should be deprived of his license and his house closed; but that does not appear to be a right principle, because it might have the effect of closing really commodious houses which it is desirable to keep open. Of course it would involve a large expenditure of money, but I do not know whether it would not be in some cases desirable to give compensation in order to get rid of some houses. Inspector G.
Read.

510. You think the mode of issuing licenses should be altered? Any two Police Magistrates, or one Police Magistrate, with two Justices, selected for their fitness, should be constituted a Board for that purpose. Or it has occurred to me that perhaps it would not be a bad arrangement if the duties of the various Benches were restricted to receiving applications and taking evidence in objected cases, and sending them to a Licensing Board in Sydney, which should have the sole power of granting licenses throughout the Colony.

511. Appointed by the Government? Yes.

512. At present all licenses are not granted by the Bench—some publicans go to the Treasury? Renewals of licenses are granted at the Treasury upon payment of the fee.

513. What you suggested just now would include renewals? Yes. The whole licensing business should be transacted by one Board, which would secure greater uniformity in the working of the Act.

514. You would not have publicans go to the Treasury as at present to renew their licenses? No, I think it objectionable.

515. How long are public-houses open on Sundays? Four hours.

516. Do you think they could be closed altogether on Sundays? No doubt they could, if the people would submit to it, but there are many different opinions upon the subject.

517. Would you suggest that public-houses should be closed on Sundays? I think it would be desirable if it could be carried out.

518. You have seen the Permissive Bill? Yes. I do not think there are many neighbourhoods where drinking customs largely prevail in which it would be possible to get two-thirds of the people to object to the granting of a publican's license, taking into consideration the class of persons you would have to operate upon, and the amount of influence persons anxious to obtain licenses would possess.

519. Do you not think that if a house was kept respectably and was required, there would always be one-third of the people who would wish it to be kept on? I should imagine so.

520. Therefore a respectable publican need not fear the effect of such a Bill? No doubt it would have the effect of purging the trade of a great many undesirable persons. But my opinion of the 14th section of the present Act is, that even now the Magistrates are not obliged to grant a license when there is no objection to the house or the applicant, although I know that the great majority of them think to the contrary. The Act simply says they "may" grant a certificate, and the Act 22 Victoria, No. 12, says that where the word "may" is used, it shall be discretionary whether the power is exercised or not.

521. You disapprove of music and dancing in public-houses? I have never heard a single respectable person speak in favour of them, and I have complaints without number from persons whose children have resorted to these places.

522. What is your opinion about granting billiard and bagatelle licenses in public-houses? Billiard and bagatelle tables are intended simply to attract custom, and if it is desirable to diminish drinking customs these things should be done away with. If people want bagatelle and billiard tables they can have them in other places.

523. *Mr. Farnell.*] Do you think, if the number of public-houses were reduced one-half, as you have suggested they might be, it would give rise to any sly grog-selling? I do not think it would in Sydney.

524. Have you had much experience in the country districts? I have not.

525. Is it your opinion that if the public-houses in the country districts were altogether shut up, sly grog-selling would not arise? No doubt it would if they were all closed.

526. You say you would give two Police Magistrates the power of granting licenses—how would you do in the country districts where there are no Police Magistrates? I presume there are not many police districts in which there are not two Police Magistrates. The police districts are very extensive.

527. It would necessitate a Police Magistrate being in every police district? Yes.

528. Do you not think the Magistrates could now exercise sufficient authority in refusing licenses where they believed they were unnecessary, if they were to administer the law according to the interpretation you put upon it? No doubt it could be done, but taking into consideration the composition of the various Benches, there is no probability of its being done.

529. Are there not a great many Magistrates who are owners of public-houses? There are a good many.

530. And who are wholesale spirit dealers? Yes.

531. Of course they do not sit on the Bench in these cases? They do not in their own cases, but in other cases they do.

532. Do they sit where publicans are to be fined, and so on? Yes. There is a great variety of opinion upon the subject of fining publicans.

533. I suppose they have many friends among their brother Magistrates? The Magistrates, as a rule, are pretty friendly together.

534. It is rather a delicate thing for one Magistrate to oppose another? I presume it would be considered so. Probably there would be some feeling of delicacy.

535. Under the old law, which preceded the present law, a great deal of discretion was used by the Magistrates in regard to granting licenses? There was. That law was much better administered than the present Act.

536. And there were fewer disreputable public-houses under that Act than under the present law? Yes. Under that Act we succeeded frequently in getting licenses forfeited where publicans had been several times convicted of breaches of the law; but we have not been able to do that under the present Act. We have opposed publicans in consequence of their having been several times convicted, but the majority of the Magistrates seem to be of opinion that when a man has suffered the punishment for a violation of the law, he ought not to be further punished by losing his license.

537. What do you think would be the effect of allowing everyone to sell liquors without a license? It would have the effect of vastly increasing the amount of drunkenness. Where there were balances of sixpence or threepence in accounts, they would be settled over the liquor bottle.

538. Supposing they were not allowed to drink on the premises, but must buy and take it away? A law to

26 April, 1870.

- Inspector G. Read.
 26 April, 1870.
- to that effect would be very largely evaded, unless you increased the police force very much. You would want a policeman at every shop-door almost, and then he would want the right to enter and to go into back rooms to see what was going on there.
539. Is there much improper conduct in the back rooms of public-houses? No doubt there is, but we cannot get in to see it.
540. You could go in, could you not? No, unless there is some disturbance, or the publican called me in; and publicans do not generally call in the police when they are breaking the law in back rooms.
541. You have stated that there are many dancing and singing saloons? There are not now; their licenses have been refused.
542. Do you know whether any improper conduct was carried on in the dancing and singing saloons themselves? I do not think there was, but the mischief was begun there by giving young people the opportunity of making their arrangements. No doubt a great deal of moral mischief was done by dancing saloons.
543. It is a fact that they had retiring rooms attached to these places? There were some places where there were retiring-rooms, but they were accessible to everybody, and it was scarcely possible for any immorality to take place there.
544. Do you know whether many young women have been led astray through being introduced to these places? Yes; I have stated to-day that in several cases of affiliation it transpired that the acquaintance of the parties was first made at public-house dancing saloons.
545. Do you often proceed against publicans at the Police Court? We do. Last year there were 184 publicans convicted of breaches of the Act in the Metropolitan district.
546. Was the highest penalty inflicted in these cases, or the minimum? The penalties varied from the minimum to the maximum, according to the views of the Magistrates who heard the cases. Some Magistrates would fine a publican 5s. for keeping his house open, and another Magistrate for a less aggravated offence would impose a fine of £2. That is what I object to in the working of the Act, that there should be this want of uniformity in the decisions of the Magistrates.
547. Do you know whether a large number of the more respectable publicans in Sydney, and throughout the Colony, are desirous of a change in the law? I know that some are.
548. If the number of low public-houses were reduced, that would enable the remaining publicans to keep their houses more respectably? No doubt the competition is too severe at present; it leads to adulteration, and also induces publicans to keep their houses open when they would otherwise close them.
549. Does anyone ever examine the liquor sold by publicans? Not that I am aware of. I think there should be an officer appointed for the purpose.
550. Do you think the Board you propose for granting licenses, should be a paid Board? I would leave that to the discretion of the Government. I do not think it would be a bad plan that the heads of certain departments should constitute a Board, for the purpose of administering the Licensing Act.
551. Do you not think political influence might be brought to bear upon the heads of departments by the Government for the time-being? No doubt it is possible.
552. Do you not think persons outside might influence the Government to exercise an influence over these officers? They might do so. I am not prepared to give an opinion upon a subject of that kind. A man of honour ought not to be accessible to influence in such a matter.
553. Do you think any further restriction, than is at present provided by law, is necessary to regulate wholesale spirit dealers? No; I think it is not desirable to interfere with the law, in regard to wholesale dealers.
554. *Mr. Brookes.*] With reference to the proposal to give a veto to a two-thirds majority of the inhabitants of any neighbourhood, on the granting of a license—do you not think that the effort to obtain a majority of that kind would so bring the matter under discussion, as ultimately to create a public opinion which would render the movement successful? I think it might have a salutary effect upon public opinion.
555. And that that public opinion might ultimately obtain what at present is not obtainable? It is quite possible.
556. Have the publicans—as far as you are aware—great influence in Sydney in political circles? There is no question but they have. There are 568 publicans in the Metropolitan Police District, and they have not only their own votes, but they are in a position to influence a very large number of persons.
557. You said that in your opinion the present law is not so well administered as the previous law. May not the discrepancy arise from the nature of the Act rather than its administration? I do not think so. I think if the present Act were administered by two Police Magistrates in the Metropolitan District—two really competent men—the state of the licensing question would be much more satisfactory than it is now.
558. Are we to infer that the Bench, as at present constituted, is not so efficient as it used to be? It is more numerous and represents a greater variety of opinion. Some Magistrates, I believe, are in favour of free trade in public-houses; others think there are about two-thirds too many. There is every variety of opinion upon the subject among the Magistrates.
559. With respect to free trade in the sale of intoxicating liquors, would it not be possible that the extension of the evil of drunkenness, which you think would ensue, would have such a repulsive effect as to arouse public indignation? I think public indignation has been sufficiently evoked already with reference to matters connected with the present licensing system. I think it would be an exceedingly dangerous experiment to allow every person to sell liquor that chose to do so. It is one of the last experiments I should think of recommending.
560. Are there many casinos in Sydney? Not now in connection with public-houses. The public outcry against them was such that the Magistrates discontinued granting licenses.
561. Have you any recollection of the passing of the present Act? Yes, I remember its being introduced into the Legislature.
562. Have you any remembrance of the fact that after the Act had passed a second reading, the publicans of Sydney called an aggregate meeting, proposed certain amendments, the Bill was withdrawn, and these amendments of the publicans introduced? I believe something of the kind took place, but I do not remember all the particulars of the matter.
563. Therefore the law may be said to be a law of the publicans' own making to a considerable extent? I believe it is. I know it is only the more respectable publicans that are dissatisfied with it. The publicans as a body are not dissatisfied with the present Act; it is only the really respectable men—men who

who would not serve a prostitute at their bar, or allow a drunken person to remain in their houses. There are some such persons, but they are in a minority I am sorry to say. Inspector G. Read.

564. Would the prohibition of sports and amusements in public-houses render it necessary to provide substitutes under better auspices? I think it very objectionable to have amusements in connection with public-houses; but I think in the matter of amusements we might leave them to be provided by private enterprise; people are pretty enterprising in providing public amusements. 26 April, 1870.

565. I mean something in connection with institutions like Schools of Arts—games of different kinds, billiards, bagatelle, dominoes, and other games. Might they not be introduced in that way, as a means of amusement for the people, where they would be away from temptation? I think it might be left to the enterprise of persons who get their living in that way; and, if it were found necessary, amusements could be regulated by Act of Parliament. There is one matter I should like to mention. I think the present Act is defective in not providing for the forfeiture of a publican's license in cases where he has been convicted of gross misconduct—aggravated assault for instance, or of repeated violations of the Publicans' Act, or where he is known to keep a notoriously disorderly house. I think in such cases the law should provide for the cancellation of the license; it should not be discretionary with the Magistrates. I wish also to mention, in corroboration of my view, that the Magistrates now have discretion to refuse a certificate for a license under the 14th section, that the 60th section distinctly states that there shall be no appeal against the decision of the Magistrates in refusing to renew a license, or to grant a transfer or removal. I believe it was clearly the intention of the Legislature to give discretionary power to the Magistrates.

566. *Mr. Farnell.*] Do you think it would be wise to introduce a clause into an Amended Publicans' Act, giving publicans power to sue persons for liquor supplied to them? It ought to be surrounded with very great safeguards, because many persons of intemperate habits go into public-houses on a Saturday evening and remain there till their money is all gone; and no doubt if the publican had power to sue, it would involve such person's wives and children in still greater distress. It is bad enough as it is.

567. Do you not think that in passing any new law it would be well to define not only the number of rooms required in a public-house, but also the number of cubic feet a room should contain? I think so. Due regard to the public health requires something of the kind. There should also be some better provision with regard to the cleanliness of public-houses. Under the old system the Magistrates visited the houses in the Metropolitan district annually, and made a careful inspection of the back yards and bed-rooms; and no doubt it had a most salutary effect; it led to a general cleaning up, painting, papering, and so on, and the public derived the benefit—in fact the whole town derived the benefit in a sanitary point of view.

568. *Chairman.*] Do you think it would be advisable to make it the duty of the police to give an annual report as to the state of the licensed houses? It would all depend upon the composition of the licensing authority.

569. Supposing it were constituted as you have suggested? Then I think it would be desirable.

570. *Mr. Farnell.*] Is there any great objection to granting licenses to single females or single men? I have a very strong objection to granting them to single females myself. I do not say I would object to widows. There are some three or four houses in Sydney, kept by widows, which are very respectably conducted. Where women are really respectable they are much more careful than men; but I do not think a publican's license should be granted to a young single girl.

571. Are there many spinsters now holding licenses in Sydney? Not many.

572. There is a Licensed Victuallers' Association in Sydney—Do you know whether the majority of the publicans belong to it? I believe not.

573. Their numbers are very small comparatively? Very small, compared with the whole number of publicans in Sydney.

TUESDAY, 3 MAY, 1870.

Present:—

MR. BROOKES,

MR. LACKEY.

THE HON. JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Mr. Alexander Steel called in and examined:—

574. *Chairman.*] You are an Alderman of the City of Sydney? I am.

575. And also a publican in the City? Yes.

576. How long have you been a publican? About twelve years.

577. Have you studied the Bill which has been referred to this Committee? I have.

578. Will you be kind enough to give the Committee your views upon the provisions of the Bill, in your own way? There are certain portions of this Bill that I think are very nearly all provided for in the Bill of 1862—to a certain extent.

579. Are there penalties provided for in the Act of 1862? There are the usual penalties for selling after hours, and keeping houses open after hours, and so on.

580. That is not referred to in the present amending Bill? I believe it is requisite there should be some penalties attached to the violation of the Act, whatever the Act may be.

581. What is your opinion about the advisability or propriety of limiting the number of public-houses—for instance in the City of Sydney? If I was to give my own candid opinion, being a publican and a party concerned, you might think it would be to my advantage to act dishonestly in trying to reduce the number of houses in my neighbourhood.

582. From your position in this City we look upon you as far above anything of the sort? I believe there are too many of them.

583. Have you ever considered by what means the granting of licenses could be restricted? I think myself that to a certain extent licenses are granted to houses that ought not to be licensed, and also to parties that ought not to hold licenses. At the present time there are single females holding licenses that I believe ought not to do so; and there are licenses granted to houses which I stated to Mr. Cowper, when he

Mr. A. Steel.

3 May, 1870.

Mr. A. Steel. he was drawing up the Bill of 1862, must be regarded as necessary evils; for instance, the house at the corner of Elizabeth-street and Park-street "Bush Tavern,"—and another one, not far from there, of something the same class, and another a little further on—almost as bad. These houses are necessary as a resort for bad characters, rogues, and thieves. It is not likely the police would come to my house, or yours, were you a publican, to look after such characters, but it is requisite, for the ends of justice, that there should be some place where these parties can congregate, and where the police can get the characters they want. I believe in England, Ireland, and Scotland, there are certain houses which the police are aware are of bad character, but they look upon them as necessary evils. If a robbery has been committed, the police, knowing these parties are not in the habit of working to earn an honest livelihood, are able to go there, and see who has money, and they are thus able to trace out the robbery. They find that a man has plenty of money, and then the question is, how did he get it?—and the police soon come to know that, for these parties invariably split upon one another to curry favour with the police. Therefore I say these houses are necessary evils—although the whole publican class gets the blame.

3 May, 1870. 584. Have you thought of any means that would have the effect of limiting the number of public-houses, where, in your opinion, they are excessive? The only way would be, if the parties were to die out, or to leave, and not to grant fresh licenses to parties not eligible to hold them. It would be very hard to take away a license from a respectable man established for a series of years. There should be no injustice done; that is what I am looking at. It is a most difficult question. Even in England, at the present time, agitation meetings are going on, and they are puzzled themselves where to draw the line. You can never make people sober by any Act of Parliament. The only way I know of is, to allow no liquor to be made in the Colony, and none to enter the Heads, because I believe that there is as much drunkenness amongst the upper classes as amongst the lower, but the upper classes drink in their own houses, out of the public gaze, and the poorer people go to the public-house.

585. If any equitable measure could be devised and passed by Parliament, having for its object the limiting of the number of public-houses, and thereby increasing the respectability of the publican, do you think it would receive the sanction of publicans generally? I think so—the respectable portion.

586. I should imagine that excessive competition must have the effect of lowering the status of the publican? I believe so. It drives many a man to do what he would not do, in the shape of adulteration. Our Society try and make our body as respectable as possible, but we cannot get all publicans to join us. I may state that at a meeting we had last night, we were given to understand that at a new place, which has been opened in George-street, called "Greville's Commercial Room," they have erected a beer-engine and everything else, and are selling liquor. We sent our secretary to inquire whether a license had been granted for it, or whether an extension of a license had been granted, but there is nothing of the sort, although they are selling liquor. We have all these things to contend with.

587. You mean to say it is a sly grog-shop? It is a public grog-shop.

588. Have they made it into a Club? If that is to be the way I could get two or three friends to join with me and make my house a Club-house, and bid defiance to the Act. We intend to take action in the matter to show that we are willing to assist the Government in putting down all violations of the Act. The law of 1862 is a good one if it were properly carried out.

589. Are you not aware that there is a general impression among Magistrates that they have not sufficient discretionary power to refuse licenses under the Act of 1862? I believe so.

590. Do you not think it would be better to make the power of the Magistrates in that particular more distinct? I should think so, if it was possible, where there are so many conflicting interests. You may be a licensing Magistrate, and I may be a strong supporter of yours, or a very intimate acquaintance, and I may use my interest with you for my friend outside.

591. Suppose the granting of licenses were left to Police Magistrates? Still there would be the same objection. Suppose you were Captain Scott, and I was a Magistrate attending the Police Office, and I assisted you to carry out your duties, perhaps in your absence, well, when you sat in judgment for the purpose of granting licenses, I might say—"Here is a friend of mine, a very respectable man; I believe there is some objection to him, but I have always known him to be a respectable man,"—you would not like to fly in my face.

592. Do you not think that might be remedied in these cases by making all the proceedings a record of Court—Supposing the Magistrate were compelled to give his decision in open Court, and upon evidence written down? He might do so, but still interest might be used, because it is very well known that any gentleman on the Bench has a large amount of influence.

593. Do you not think that the possibility of the evidence being called for, for instance by the Assembly, would have the effect of keeping paid Magistrates up to the mark? The reason I am so fast in my opinion is this, that it is well known that under the old licensing system a certain Magistrate, if you bought a piece of land from him, would always give you a license, but if you did not, there was a great objection to it. Now I was thinking that if the Government would appoint some gentlemen, irrespective of the Magistrates, to sit upon any case of that sort, they would not come in contact with the general public. That would be for the whole Colony as well as for the City of Sydney.

594. With regard to police inspection of public-houses—do you think the powers of the police ought to be extended? I believe it is good, and I believe it is bad. I believe it is good, because in many cases you can see, from the appearance of the people themselves, and the house outside, and the bar being dirty, that the house requires inspection; but on the other hand it is bad, for in going through the City how often does one see a policeman come out of his house dressed up, but his children dirty and his house too, and to think that that man should come to my house and inspect it—the very idea of seeing the man coming and saying, "I am going through your house to see if it is properly kept," when I know his own house is as dirty as a pig-stye.

595. You will see that the provision of the Bill is to restrict this power to Police Magistrates, Inspectors, and Sergeants? No doubt.

596. You admit it would be necessary with a great many public-houses? Yes.

597. Do you not think the respectable portion of the trade will have to give way a little for the general good? Yes, it is only a feeling I have. I have no objection myself, but I am speaking for the body. If it was my own case I would say, certainly, I am agreeable.

598. What is your opinion with regard to the accommodation at present required of publicans—is it sufficient or not? I believe it is sufficient in the City of Sydney. In former years there were no boarding-houses and very few lodging-houses, and very few Club-houses, so therefore people coming down the country

country always went to public-houses—people with teams and so on. But now the facilities given by railway enable them to bring down their produce, do their business, and go away the same night; and therefore the requirements of former years are not needed now. People who stay in Sydney for a time invariably go to private boarding-houses; very few stay at public-houses.

Mr. A. Steel.

3 May, 1870.

599. Is there not a certain class of people who invariably go to public-houses—teamsters and men belonging to the labouring class. When coming to Sydney for a few days, do they not go to public-houses invariably? No, they generally go to lodging-houses.

600. The remarks you have made apply to the City of Sydney, but what is your opinion as to the country districts? In certain portions of the country the accommodation wants to be more than it was in former years. For instance, in Goulburn and Bathurst there are a large number of people going up by rail, and it is requisite there should be convenience for them. It is very well known that even between here and Parramatta there are very few houses open now at all. What would be the use of compelling a roadside public-house to have a great amount of accommodation.

601. Perhaps there is no use for a public-house at all in such localities? Yes, it is requisite for the refreshment of travellers along the road, who only stop for a few minutes or a few hours, but not all night.

602. Do you not think it would tend to improve the position and status of the publican, if persons were prevented from getting licenses for nothing but miserable shanties—would not men of better position become publicans? No doubt a person would be more likely to stop for refreshment, and perhaps stay a night at a respectable public-house, than at a dirty place, hardly fit to put a horse in.

603. You would not interfere with the accommodation required by the present Act? Not in the City of Sydney. I have never been asked for a bed for years. One man came one night, and I was very glad I did not allow him to stay, for the next house he went to he committed a robbery.

604. What is your opinion as to allowing dancing and music in public-houses? My opinion is that neither should be allowed in a public-house, for the public, but there should be a special clause to permit them in the family of the publican. Mr. Smith, of George-street, was fined because his daughter was playing the piano up-stairs.

605. You will see that the provision is that it shall not be in any part of the house that is open to public resort? I have no objection to that. (*Mr. Steel here handed to the Chairman the printed list of houses in which music and dancing was allowed, showing that only eight had been fined for a series of years.*)

606. Would you object to closing all public-houses at 10 o'clock instead of 12? Yes. In former years houses used to be closed at 10 o'clock, and yet for £10 a publican could get a license to keep open till 12 o'clock. I always paid £40 a year, so that I could have it in my power to shut up if I thought proper, rather than violate the law. According to the proposed Bill you can get an extension every six months by paying so much. Now, why not charge the extra money to all, and give the liberty, rather than induce us to violate the law?

607. The object, I suppose, was to leave it to the Magistrates to say whether a particular house should be open until 12 o'clock? It would be very inconvenient and unpleasant to be obliged to close always at 10 o'clock. For instance, a number of gentlemen often come to my house and sit and chat, but they do not care to go away at 10 o'clock, and I do not care to have to say to them, "Come, gentlemen, it is 10 o'clock; out you go."

608. What is your opinion about the propriety of having bagatelle-boards in public-houses—do you think they ought to be allowed in bars, or in the vicinity of bars, where people are induced to play for drinks alone? I gave it as my opinion formerly to Mr. Cowper, when the Act of 1862 was preparing, that neither billiards nor bagatelle ought to be allowed in a public-house, because they would be the means of inducing men to go and spend their money, and so the public-house gets a bad repute. But I can assure you, from the observations I have made lately, that many of these bagatelle-boards might as well be shut up; the people have got tired of them.

609. Are you not aware that in some houses in Sydney they are the cause of a good number of not very reputable characters meeting together? In such places as the bush tavern you must give them some inducement to pass away the time. If they were not occupying their time in playing bagatelle, they would be drinking, because they could not stop there talking without employing their time in something or other. Now I believe a large portion of their time is occupied in playing bagatelle instead of drinking. In the City of Sydney it is different from the country; here they have got the School of Arts, concerts, lectures, and other amusements; but in the country they have nothing of the sort. The mind must be occupied in some way—if not with good, it must be with evil; and if you take away from the natives of the country parts the opportunity of some amusement, you will drive them into playing cards; therefore I do not see that bagatelle-boards do much harm. It is mostly sweet liquors and syrups that are used in these places. If you do not give them some sort of amusement you will run them wild.

610. Do you think there ought to be any restriction on the sale of intoxicating drink to children? I cannot see how you can do it. You do not sell to children for the purpose of drinking. If you were a labouring man, and you came home wet and tired, you would think it very hard that you could not send your child for a glass of ale, or a glass of spirits.

611. Do you not think dissolute parents often send their children for drink when the publicans would not serve it to themselves? If they do not come themselves they will get somebody else to come for it. What possibility is there of stopping them from drinking when the channel is open in various ways.

612. Would you have any stricter regulations about publicans supplying drink to habitual drunkards? I would; but the question would be—What is an habitual drunkard?

613. Supposing two Magistrates were to notify to publicans that they were not to supply drink to a particular individual, for the reason that he was a drunkard—would you impose a heavy penalty if that man was supplied knowingly? Yes, knowingly.

614. Would you make the law more severe with respect to selling to people in an actual state of drunkenness? Certainly, if the party was drunk and anyone was to serve him with drink. But supposing a man comes along, who has got drunk elsewhere—comes into my house on his way home, asking for more liquor, and through my refusing him and endeavouring to induce him to go home, he begins making a noise, I am liable to be fined for having a man drunk on my premises, although he may not have had a single glass from me. I do not think that is fair.

615. You think publicans generally in the Colony would be very well pleased if measures were taken to increase

- Mr. A. Steel.** increase the status and respectability of publicans as a class, throughout the Colony? I believe so. There is a portion of the Bill, the second clause, which leaves it to the Mayor of a Municipality, and two Aldermen, to give a certificate recommending that a license should be granted or refused. I think that would lead to great evil in some cases where the Mayors and Aldermen are not fit to have such a power—for instance, a Mayor who can neither read nor write. Besides, the publicans generally take an active interest in municipal elections; and supposing two men were up for a ward, and each of them were supported by different publicans who had large influence, the successful man would feel some *animus* against the publican who opposed him, though he might be a more eligible person than the other; and in this way the powers would be much abused by the Mayors and Aldermen.
- 3 May, 1870.**
616. *Mr. Brookes.*] You made some reference to houses of notoriously bad character, where thieves and prostitutes resort—I think I understood you to say that the police winked at what transpired in these places, for convenience sake? It is a necessary evil. The police are more ready to go where a congregation of these parties meet, than through the whole City to find them, and they very often obtain information they would not otherwise be able to get.
617. Do you not think such places are a manufactory for thieves, as well as a rendezvous for them? I do.
618. Does it not appear extraordinary that the Government should license depôts for thieves? In France they license houses of a worse character, viz., bawdy-houses. The Millennium has not come yet. You cannot make a law to make every one good.
619. You referred to methods of adulteration practised by publicans—are you of opinion that competition has a tendency to lead to adulteration? Yes, I believe so.
620. Have you reason to believe that adulteration is practised to a large extent in Sydney? I cannot tell you; but I believe it is very well known that the men who frequent a certain class of public-houses, such as those at the Haymarket, the wharves, and out by the Soldiers' Barracks, do not care so much for the liquor; they want something that will tickle their throats, and tell them it is good. In former years, when men used to come down with cattle and sheep, they had a large amount of dust on their palates, and if you gave them a glass of spirits such as you or I would drink they would not thank you for it; they wanted something sharp. What they use for adulteration I cannot say; I have heard of things, but I do not know of my own knowledge.
621. Aqua fortis perhaps? I cannot say. I have heard of tobacco and cigars. My opinion on the subject is this, that if there were a possibility of detecting a party doing it I should put a placard on the front of him and another at the back, and horsewhip him through the streets.
622. Have you reason to believe that ends of cigars are collected here? I do not know it. I was thinking some time ago that it would be a good thing for the Government to appoint an inspector of liquors to detect these practices.
623. Would you be in favour of the appointment of a Government analyst? Certainly.
624. Who should be allowed to test the liquors sold by the publican? Yes. That is a subject I have had before me for years, off and on. But the adulteration is often done by the wine merchant, who perhaps has a decoction for the purpose, which he puts in the liquor. Would it not be very hard on the publican to punish him if he knew nothing about it.
625. Are you aware whether there are what are called publicans' druggists in Sydney—men who make compounds and sell them to publicans for adulterating liquor? Not that I am aware of; if there were I think I should be likely to hear of it.
626. Are you of opinion that the appointment of such an officer as a public analyst would have the effect of deterring people from much of this adulteration? I believe it would be the means of stopping those who would do it themselves, that is putting tobacco or any other ingredient in the drink they sell that would be detrimental to health. I believe a glass or two of spirits will not hurt a man; in fact, a tumbler full would not hurt him to such an extent as a small quantity of that doctored stuff.
627. If a man were found guilty of having done this, would you cancel his license? I would do more than that. I certainly should take his license away from him, but, as I stated before, because he was assisting to drive people into the mad-house, I should put a board in front of him and another on his back, and horsewhip him through the streets.
628. You referred to drunkenness at election times? No, I never saw much drunkenness at election time; I merely said that the different parties get excited.
629. Is it the fact that publicans are great electioneers in Sydney? They are, because their houses are houses of call.
630. Is it not a fact that a large quantity of drink is consumed during elections in Sydney? Not a great deal.
631. Are not election committees usually held in public-houses? They are.
632. In your opinion would it be desirable to close public-houses on the day of polling, in the same way as they withdraw the military within five miles? No; I do not think so. I never saw any disturbance at such times near a public-house. It is a publican's interest to keep people from quarrelling and causing a disturbance in his house; he never makes anything by having a disturbance.
633. *Mr. Lackey.*] I suppose you think the difficulties arising from this cause rather take place during the progress of an election than on the day of polling? Yes. If you noticed the great election we had lately there was not much drunkenness, and even at the races lately, I attended on Thursday and Saturday and I never saw one drunken man.
634. Is it your opinion that public-houses generally are more used as places for refreshment than for drunkenness? Yes.
635. You think it would be an inconvenience to the middle class population if they had not the means of getting a pint of beer if they wanted it. For instance, a working man coming home to supper—you think he ought to be able to get what he wanted to drink with it? Certainly.
636. With reference to adulteration, is it your opinion that adulteration is carried on by the publicans, or by the spirit merchants? From what I have heard I have been given to understand that there are men that do use these things. A gentleman (Alderman Jas. Merriman) told me the other day that he was getting some hogsheads to send on shipboard, and in knocking the head out of one of them he found a lot of tobacco and cigars. Whether he got them from a publican or from a spirit merchant I cannot say.
637. With reference to the consumption of Colonial wine—are you aware whether Australian wine is becoming an article of consumption? I believe it is used less than it used to be. At first it was something

something new, and a great many used to go and get a tumbler of Colonial wine as an experiment; but now the people say it is too watery—not strong enough. People here are mostly given to drinking English ale, but there is a better class of Colonial ale made by the brewers than there used to be in former years. Mr. A. Steel.
3 Mar., 1870.

638. The consumption of wine is not increasing? No, rather decreasing.

639. Have you had much experience of the sale of Colonial wine, or seen it sold? I have seen a good deal of it sold.

640. Is it a tolerably good description of wine that is sold in the public-houses? The people say it is not strong enough. The Scotch and Irish like something strong. A foreigner wants something light; he goes in for the purpose of having a drink. There are some people who go to a public-house to get drunk, and they will say—"What is the use of going to Steel's, he will not let you get drunk."

641. How long have you been resident in Sydney? Upwards of thirty years.

642. How long have you been in the hotel business? About twelve years.

643. What is your opinion as to the amount of drunkenness—has it increased or decreased of late? I think it has rather decreased. When I first came here it was a penal Colony, and the prisoners and ticket-of-leave-holders were a class that were rather fast, but that class is dying out, and immigrants are taking their place. I do not think, considering the facilities they have, that there is as much drunkenness as there used to be.

644. *Chairman.*] What is your opinion about legislating on the question of Sunday-selling? No doubt in the country provision must be made for travellers, and I think in the City the English law might be allowed. This being a warm climate people often go out for a walk on a Sunday afternoon and let their fires go out, and they want something to drink in the evening. It is of no use telling you we do not sell; I tell you honestly we do sell, or at any rate I do, because my neighbours do, for if I would not serve my customers on Sunday they would go elsewhere through the week, and to meet that the law should allow houses to be open between 8 and 10 o'clock on a Sunday evening, the same as between 1 and 3, as in London. If that cannot be done it would be better to shut them up altogether from 12 o'clock on Saturday night until Monday morning.

645. Do you think publicans generally would object to that? The respectable portion of them would not. The difficulty is how to carry it out. The only way that I see would be on the same plan as the Government adopted in former years, by punishing the receiver worse than the thief—punish the purchaser of drink on a Sunday more severely than the seller. If that were done it would put a stop to it, because if there were no purchasers there would be no inducement to sell.

ADDENDUM.

LAMPS.—Another hardship on the publicans as a class is the clause compelling them to keep a light burning in front of their houses all night. I think it should be optional with the licensed victualler whether he burns a lamp in front of his house or not, just the same as any other tradesman or man of business. This would work its own remedy, for where there are country or roadside public-houses the keepers thereof would burn lights as a matter of prudence or policy, to indicate to travellers that there was a place of public convenience; but it is totally unnecessary in Sydney, because there are few wayfarers after the hour for shutting up, and even they are on their road home. As confirmatory evidence of the absurdity of this requirement, independent of its being a hardship on a particular class, I may mention that it is so much money thrown away, as even the City Council have their lamps extinguished five nights during every month, viz., two nights before the full moon, one night during the full moon, and two nights afterwards.

HOLY-DAYS.—There is another anomaly in compelling the innkeepers to close their houses on certain church fasts or holy-days. Though in England one abides by the English law, and an Englishman in Scotland abides by the Scottish law, still we are in this Colony a part and parcel of both, and it seems to me to be a great hardship to compel an innkeeper to conform to the rules of any particular church by closing his house on certain holy-days, although he does not belong to that church and has no knowledge of her rules. It is well known too that many men work at their usual avocations on those days, and those that do not usually devote a large portion of their time to feasting and holiday-making. I do not say that I should open my house on those days, but I complain that I should be compelled to close rather than leaving it to my option. If the new Bill raises the status of the publicans as it proposes, I believe nothing would be further from their thoughts than to irritate the religious prejudices of any class, but it should certainly be left to themselves, and thus relieve them of what is considered a grievous hardship.

ALEXANDER STEEL.

Mr. John Perry called in and examined:—

646. *Chairman.*] You are President of the Association of Licensed Victuallers? I am.

647. You are aware that a Bill has been introduced into Parliament, with a view of amending the Licensing Act of 1862? Yes.

648. Have you seen that Bill? I have.

649. Do you think public-houses in the Colony are too numerous? I do.

650. Have you thought of any way of remedying the evil? I have thought of it. I think the Magistrates should have power to refuse to grant licenses if they thought them not necessary.

651. The general impression at the present time is, that the Magistrates have not that power—you think it would be well to give them more definite powers in that regard? I do.

652. Are you of opinion that the great number of public-houses, by causing undue competition, has an injurious effect not only upon the publicans themselves but on the community, by holding out the temptation to supply inferior or deleterious drink? I do not consider that the number of public-houses increases drunkenness, but certainly a bad article is very injurious to the person who will drink it.

653. Do you not think the great competition that exists in the trade has the effect of inducing some publicans to sell adulterated liquor? The publican is like everybody else in that respect—the better the article he sells the more custom he will get.

654. Have not a certain portion of the community become so accustomed to inferior spirits that they do not care for drink of a better quality? I have not found it so. I have heard people say, "Last night I was at such a house, and this morning I have a headache; I will not go there again." I have always found that those who keep the best article have the most custom.

655.

Mr. J. Perry.

3 May, 1870.

- Mr. J. Perry. 655. Have you ever thought of altering the mode of granting licenses, by placing the power in the hands of the Police Magistrates, and making them responsible? I have never considered that matter, but I think the licensing is as safe in the hands of the unpaid Magistrates as in those of paid Magistrates.
- 3 May, 1870. 656. What is your opinion as to the propriety of giving the police increased power of supervision over public-houses? As regards myself I strongly object to it. All that I have conversed with in the trade think that constables, like many others, are easily bought; if a publican were mean enough to bribe them they would do anything he thought proper.
657. It is proposed to restrict the power to Police Magistrates, Inspectors, and Sergeants? And constables as well, I think.
658. Only constables in charge of a district? Where I reside now, at Mount Victoria, there is an ordinary constable in charge.
659. Do you not think a great many public-houses are kept in a disreputable way? I think there are.
660. Do you not think there ought to be some check upon them? Yes.
661. For instance, we have evidence that certain public-houses have been fitted up as brothels? No doubt of it.
662. How would you supply the necessary check? It is a very difficult matter to handle. The only way I can see is by investigation made by two Magistrates; but I do not think any Magistrate ought to have anything to do with licensing if he owns a public-house, or is connected in any way with it. I have known instances where licenses have been refused by some Magistrates, who had no interest in the matter, and the application of the same party has been granted by others who were interested. You must be aware that when a house is let for a public-house they get a larger rent than for a private house, and therefore its value is enhanced to the owner.
663. In the City of Sydney and other large towns do you think there would be any impropriety in allowing Police Magistrates or Inspectors of Police to have the power of inspecting public-houses? I do not think there would be any impropriety in their being inspected by a Police Magistrate, or some person appointed by him.
664. Do you think the accommodation required at the present time by the Act of 1862 is sufficient? No; some houses even in the City have not got sufficient accommodation; merely a bar as an attraction, and no place for people to board and lodge.
665. Do you think six rooms would be too many to ask a publican to have? No, I do not think six rooms would be any too many, but I consider it very injurious to state the size of the rooms or the height of the ceiling. A man may have a very nice convenient house, but it may not come within this Bill of yours.
666. The size of the rooms is only required to be 10 feet by 12? The whole of them must come within the meaning of the Act.
667. They must be 10 by 12, even the smallest of them? I had a house built the other day with bed-rooms only 8 by 10, and they are plenty big enough for a single bed-room. Even where I live now I question whether there are six rooms that will come within your Bill. In my opinion it would be unjust to require the rooms to be of such dimensions. Many people have their houses built and are paying a heavy rent; but they do not come within the meaning of your Bill.
668. Would you object if the Act insisted upon four rooms, of which the smallest should be 10 by 12? No.
669. What is your opinion of having music and dancing? I object to it, except for a particular purpose; I always did object to making a trade of it, because it entices a lot of young men to drink and keep late hours, and I cannot see any benefit the community derive from it. With regard to bagatelle and billiard tables, if you attempt to pass a law to this effect, people will open plenty of private houses for the purpose, and the Government will receive no revenue from it, and they will not be under the surveillance of the police. I cannot see what injury bagatelle-tables are to the poorer class, or billiard-tables to those who move in a different sphere. I certainly do say and think that in taking away bagatelle and billiard tables from the publican you are doing no benefit to the community, while you are doing injury to the individual.
670. Is it not a fact that they play for drinks? They do not drink more by playing for it than they would if they sat down drinking and conversing. I have a bagatelle-table now at Mount Victoria, and people come and amuse themselves, but I have not known one to leave the table drunk. They generally make a long game of it; perhaps it lasts half an hour. To speak candidly, I do not think it increases drunkenness.
671. Do you think the public would be benefited in any way by closing public-houses at 10 o'clock instead of 12? No, I cannot see what injury there is in keeping a house open until 12 o'clock. If a publican has lodgers, he must open the door to let them in; for gentlemen from the country will not come in before 10 o'clock, and immediately he opens the door somebody else may come in; it may happen to be a customer of his, and he does not like to turn him out. I do not see why the power to keep open to 12 o'clock should be confined to those who are willing to pay a certain extra sum for a license. I think it should be open to all; and I do not see that it entices people to stop beyond the usual time drinking.
672. Would you place any restrictions upon the sale of intoxicating drink to children under 14 years of age? That is hard to define. A lad may come to my house who is not 14, but he may seem to be 20. It is impossible to tell his age, but you are summoned to Court, and you have to prove that he is not under 14.
673. You are labouring under a mistake—the Bill refers to children under 14, or apparently under 14—so that you would be exempted if he appeared to be more than 14. The thing must be done knowingly? You cannot be always at the counter yourself, and one of your family may sell to children, and you will be prosecuted. Mothers of families often send their sons or daughters out for tea, sugar, and bread, and tell them to call and bring a pint of beer as they come back. Now, I cannot see that there is any crime in selling that pint of beer to the child; it is nourishment as well as tea and sugar. A great many people do not drink tea for their dinner—they drink beer; and I think it would be very inconvenient to them if they could not send their children for it. I can see no benefit whatever to the community by preventing them.
674. Would you make the law any more stringent as to selling drink to habitual drunkards, where they are known to be such, and where publicans have been warned? There is a clause to that effect in the old Act.

675. But no penalty? I always considered that there was. Magistrates have the power of sending an order not to serve them. Mr. J. Perry.

676. But as far as I can understand, these orders are dead letters—You would have no objection to such a restriction being made effectual? Not the slightest. 3 May, 1870.

677. Would you have any objection to further restriction on selling drink to people in a state of drunkenness? No.

678. Do you think it would be advisable to appoint a Government analyst to analyse the spirits sold in public-houses? I think so. But I have the opportunity of knowing that more adulterated spirits come from the spirit merchant than from the publican. A great number of the publicans are in the hands of the spirit merchants, and they send them what they please. If the spirits were analysed and found to be bad the publican could be fined, but he should be able to fall back upon the spirit merchant.

679. Do you think such a provision would give satisfaction to publicans generally? Yes, I think so; and I speak the wishes of a great number of respectable publicans. It is their wish to sell nothing but pure spirits.

SALE OF LIQUORS LICENSING ACT AMENDMENT BILL.

APPENDIX.

A.

[*To Evidence given by Captain Scott, 7th April, 1870.*]

[To Evidence given by John Garrett, Esq., P.M., 20 April, 1870.]

IN practical subjects the experience of the past is the best guide to an opinion for the future. If the Committee will permit me, I will briefly notice the legislation of England as affecting the regulation of alehouses. By the Common Law of England it was as lawful for a person to open a house for the sale of beer and ale as to keep a shop in which anything else was sold, subject only to a criminal prosecution for a nuisance if his house was kept in a disorderly manner by permitting tipping or excessive drinking, &c., to the disturbance of the neighbourhood; but this being found deficient, in the reign of Henry VII the first Act of Parliament was passed, in which Justices were empowered to grant licenses. In the reign of Edward VI another Act was passed, and in 1604 (James I), a Statute obtained Parliamentary sanction, which recites "That the ancient, true, and principal use of such houses, was for the lodging of wayfaring people, and not for entertaining lewd and idle people to spend their money and their time in a lewd and drunken manner." In the reign of Charles I the complaints against alehouses were loud and frequent, and the same during the Commonwealth. No legislation took place during the reign of the second Charles, excepting in 1682, it was ordered by the London Sessions that no license should be granted in future to alehouse-keepers frequenting Conventicles. The next Act of Parliament on the subject was passed in 1729, the first in which spirituous liquors were brought under the same regulations as to licenses as alehouse-keepers, and these regulations were now embarrassed by the arrangements which were necessary for the facility and certainty of collecting the excise duty.

In 1808 a different mode of granting licenses came into operation, not with a view to the internal regulation of alehouses, but for the purposes connected with collection of the revenue. The officers of excise were empowered to grant licenses, and such continued to be the law, I believe, until 1823, when a general Statute was passed, restoring to the Magistrates the authority to grant licenses at Special Session, a power which they had possessed, with the exception of the above period, for nearly 300 years. In the first of William IV, an Act was passed, to permit the general sale of beer and cider by retail in England, by which any person might obtain a license from the excise upon the payment of forty-two shillings.

The consequences of the facility of obtaining a license upon a small pecuniary payment was the rapid and enormous multiplication of alehouses throughout the country, and a considerable increase of idleness and crime, and increasing demoralization among the labouring classes. The Committee will observe a likeness between this Statute and our own Act for the sale of Colonial wine, and I am afraid like results may be experienced from its operation. In the preambles of the laws I have enumerated, we always find the same evils complained of, and the necessity of additional restrictions being imposed. These evils continue to the present time and are felt, and the use, or abuse if you will, of alcoholic liquors are so interwoven with the habits and customs of society, and the enormous trade interests involved, that it would be idle to attempt to suppress their use.

All that can be looked for will be means to mitigate the evils so wide spread and justly complained of. In my opinion there are only two ways in which this can be done—by the efforts of Temperance Societies and restrictive legislation; the latter, I take it, is what this Committee have in view.

I now propose to notice the licensing system now in use. To procure a license under the existing law, three things are necessary:—1. Certain notice to be given. 2. The house to contain certain accommodation. 3. That the applicant be a person of good character. Upon the required notice being given and the two latter conditions being answered in the affirmative, it is open to the Justices to grant the license. The 14th section provides "That any person may oppose such application upon giving four days' notice in writing to the applicant, and may examine on oath any witness," and I take it, that it is not open for the Justices to refuse such application if there be no objections lodged as required by this section. It must be observed that the Act does not impose any duty on the police on the application for a license in the first instance, and unless they may be included in the terms "any person" as above-named, they have no duties to discharge. In the case of transfers, or the removal of the license to other premises, they are required to report as to the character of the transferee, on the new premises, but not in relation to new applications, and unless in the case of an application wherein the party is notoriously an improper character, or reasonable objections sustained by others, I have invariably granted the license, and I believe this is pretty generally the practice. In the present Act there are eleven special meetings in the year, beside the annual meeting in the month of April; thus we have twelve in the year. Having noticed the leading features of the Publicans' Act, as regards the licensing, I will now name the amendments that to me appear to be desirable, premising that the question as to whom the power should be given to grant licenses, is one of great practical difficulty. In this Colony the power has always been in the Bench of Magistrates, and as we have seen the same practice obtained in England, with the exception of about twenty years, for upwards of 300 years, and I believe continues, it has always struck me that many of the Justices do not feel the responsibility of their position in deciding questions of this kind, and who is to bring them to account for their want of due discretion. I see great difficulty in this question, and I can see no way out of it, unless by lodging the power in the hands of Police Magistrates; and in districts where there are no P.M.'s., special Justices should be nominated by the Executive, or perhaps, what would be better, by the Judges of the Supreme Court. Illustrative of the non-responsibility of unpaid Justices, I may state a case: A man made an application for a license, who had been living for years with another man's wife, and whose husband was occasionally working in the same town; indeed the parties had been several times before the Court for assault, &c. This woman had two children by this man, and several by the husband. These facts were as well known as it was that I was P.M. When the application came before the Court there were three Justices present. The whole of them were cognizant of the facts as I have stated, yet in the face of them a majority granted the license. Some resident wrote to Dr. Lang on the subject, and the matter was laid before the Treasurer, who called upon me for a report, which report, with the minutes of proceedings, and names of the Justices, sustained the above statement—was sent.

What became of it? Why, just nothing; the license was granted, and there was the end of it. Had it been the P.M. the Executive could have reached him and brought him to book. This, although an extreme case, illustrates the working and defects of the present system.

Licensing Meeting.—I think it would be desirable that the licenses should be for the year only. Such would operate as a great check upon the holders, and it would furnish the Justices an opportunity of correcting any improvident grant during the year, and it would be well if provision was made for the forfeiture of the license upon, say three convictions of breaches of the law in the preceding twelve months. There is a precedent for both the above courses in English legislation:—"The recognizance was estreated and the party disqualified for holding a license for three years," and in all the old Colonial statutes the licenses were annual, and as there would be no recognizance to enter into as formerly, the complaint of the trouble would be avoided to that extent, and only the licensee would be required to attend.

Hours of selling is the next point I would refer to: The present Act allows from 4 in the morning until 12 at night. This I consider altogether unnecessary; there can be no good reason given for such extended hours. From 6 in the morning until 10 at night, would, I conceive, meet all legitimate requirements, as it was under the old law, and to be closed altogether on Sunday, Good Friday, and Christmas Day. In outlying districts I believe there is more drunkenness on Sundays than any other day in the week. The case of travellers might be provided for as at present.

Music and Dancing.—I need only observe, in reference to music and dancing, that I would abolish those practices altogether, for they are an unmixed evil. I think this is generally admitted. There is one point to which I would wish to call the attention of the Committee and that is, music and dancing in publicans' booths at races, for at the present time the law will not prevent them. The Committee will be aware that the Justices must grant permission for the erection of booths at places of public entertainment, during such hours as they may fix, in which they are to exercise the privileges of their license; although that permission contains no authority for music and dancing they may have both, and the Supreme Court has declared that they break no law by so doing.

It may not be within the scope of this Committee's duties to inquire into the operation of the Colonial Wine Act, otherwise I would wish to say something about its working, for it appears to me to be an Act calculated to interfere materially with any legislation to suppress the evils of drunkenness, unless altered to harmonize with such legislation.

The following reasons may be given:—

The Act provides that any shop or store keeper who occupy premises of the annual value of £10, but it does not say who is to fix the value; hence in all parts of the country you find miserable shanties, many simply bark structures, as wine shops, and all their privileges obtained upon registering his place with the C.P.S., and paying 20s. yearly to the Treasury. The Legislature no doubt intended that wine should only be sold in quart or pint bottles, but it nowhere says so in the Act, nor is there

there any penalty named if it did ; but whatever might have been the intention of the framer of the Act, as to bottles of pints and quarts, in practice it is not observed, for it is sold on draught by the glass, and there is no provision in the Act to prevent them, and many know this ; while a penalty is imposed by the 5th section, if they allow wine and cider to be carried out of their premises, and sold in any other for their benefit, but none for selling in their own.

A case is recorded in the proceedings in the Scone Court, wherein a man was proceeded against for selling on draught on his premises. He was defended by a legal gentleman sent by a large wine-grower on the Hunter ; the case was dismissed on the above grounds, and I am told the legal gentleman told the defendant to sell the wine any way he liked, and that they could not touch him. From these and such like facts it is clear that an incalculable amount of mischief will follow the establishment of wine-shops throughout the Colony under this Act.

NEW SOUTH WALES.

METEOROLOGICAL INSTRUMENTS.

(LIST OF STATIONS SUPPLIED WITH, &c.)

Ordered by the Legislative Assembly to be Printed, 23 March, 1870.

[Laid on Table in reply to Question No. 2, Votes and Proceedings No. 32, of Wednesday, 23 March, 1870.]

2. MR. WILSON to ask the COLONIAL SECRETARY,—

- (1.) The names of the stations to which meteorological instruments have been supplied in accordance with the request of the Agricultural Society?
- (2.) What instruments have been supplied to each station, and when will the Government begin to publish the results?

MEMO.

1. List of stations appended.
2. The instruments, which are all constructed and ready packed for transmission to each of the stations, comprise—

- (1.) Rain gauge.
- (2.) Evaporation gauge.
- (3.) Scales and weights (as a check upon the above).
- (4.) Self-registering maximum thermometer.
- (5.) Self-registering minimum thermometer.

Some of the stations are already supplied, and the rest will be supplied very shortly.

Where there is a Telegraph Station the results will be reduced and published in the daily papers, commencing probably in the course of next month. It is not likely that the results of all the observations made at the other stations can be reduced and published officially for at least three months.

THE GOVERNMENT ASTRONOMER to THE PRINCIPAL UNDER SECRETARY.

Royal Observatory,
5 May, 1870.

SIR,

In reference to your communication this morning, of this date, in reference to Commander Onslow's inquiry to be made in the House this night, as to the Stations where Meteorological Observations are to be made in the Colony, I beg to enclose a printed official document, which has already been published, of those Stations.

The Stations already in operation are shown in the enclosed document. There are very good and sufficient reasons why the remaining Stations are not in operation: they are all prepared and ready to be transmitted, but for the want of the supplementary grant of £50, which up to the present time does not appear to be finally authorized.

I have, &c.,

GEORGE R. SMALLEY,
Government Astronomer.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ALEXANDER WALKER SCOTT.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 18 February, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Alexander Walker Scott, formerly of the City of Newcastle, in the Colony of New South Wales, presently of the City of Sydney, Esquire, one of the Trustees of the Newcastle Proprietary Grammar School,—

RESPECTFULLY SHOWETH:—

That in or about the month of January, one thousand eight hundred and sixty-nine, your Petitioner presented to your Honorable House his Petition praying for redress, under the circumstances therein detailed.

That such Petition set forth, among other things, the following facts, namely:—

That in the year one thousand eight hundred and forty, funds amounting to one thousand one hundred and fifty pounds were raised by subscription and otherwise, for the purpose of founding at Newcastle a School in conformity with the Established Church of England and Ireland; and in the same year James Mitchell, of Sydney, Esquire, acting as the agent of the subscribers, purchased at auction, for the sum of eight hundred and three pounds fifteen shillings, certain waste lands of the Crown, situate at Honeysuckle Point, near Newcastle aforesaid, comprising twenty-one acres three roods twenty perches, which lands were afterwards in due form granted by the Crown to the said James Mitchell, who in the year one thousand eight hundred and forty-four, by the direction of the said subscribers, duly conveyed the said land to William Croasdill and your Petitioner, who thereupon acknowledged themselves Trustees for the said proposed School.

That in the year one thousand eight hundred and fifty-four, the Hunter River Railway Company took and appropriated, for the purposes of their Railway, the whole of the said lands: That before any agreement in respect of the compensation for the said land so taken could be come to between the said Company and the said William Croasdill and your Petitioner, the Government of New South Wales became the purchasers of the whole of the said Company's property, which property became vested in the Commissioner for Railways as a Corporation sole: That the said Commissioner having declined to pay to the said William Croasdill and your Petitioner the price per acre claimed by them, the said William Croasdill and your Petitioner, in pursuance of the provisions of the Act twenty-second Victoria, number nineteen, appointed George Vindin, of West Maitland, Esquire, to be an arbitrator on their part, for the purpose of determining the amount of compensation payable to them; and the said Commissioner appointed William Downing Biden, of Singleton, surveyor, to be an arbitrator on his behalf, for the purpose of determining the amount of compensation payable by him in respect of the land described in a plan attached to his appointment, and thereon coloured red: That the said arbitrators, and an umpire duly appointed, met at Newcastle on the eighth day of June, one thousand eight hundred and sixty-eight, and on that and the two following days took certain evidence in the matter referred to them, in the course of which evidence it was proved that the parcel of land described in the appointment made by the Commissioner for Railways, and to which, in fact, the inquiry was then limited, contained fourteen acres three roods and seventeen perches, only a deduction of seven acres and three perches having been made in respect of so much of said lands so purchased as aforesaid, as was situate within one hundred feet of high-water-mark of the Harbour of Newcastle, which last-mentioned lands the said Commissioner then deposited before the said arbitrators, had been about two years previously taken from him by the Department of Public Lands, in pursuance of the general reservation contained in the grants to the said James Mitchell: That on the twenty-fourth day of June in the same year, the said arbitrators declared their award in respect of the said fourteen acres three roods and seventeen perches, and found the sum of nine thousand eight hundred and twenty-two pounds eight shillings payable to the said William Croasdill and your Petitioner in that behalf, but that the said William Croasdill and your Petitioner were by the terms of the said submission excluded from, and were still left without any compensation in respect of the residue and most valuable portion of their land purchased as aforesaid: That on the twelfth day of August in the same year, the said William Croasdill

Croasdill and your Petitioner presented to His Excellency the Governor-in-Chief their respectful Memorials, setting forth among other things the facts above detailed, and submitting their right to the payment of compensation for the value of the land of which they had been deprived—the receipt of which Memorial was acknowledged on the twenty-eighth day of that month by letter from the Honorable the then Colonial Secretary, in which letter the said William Croasdill and your Petitioner were informed that “the land alluded to in the Memorial had been resumed by the Government for public purposes in terms of the deed, and that the Government did not consider the Memorialists entitled to any consideration in consequence of such resumption”: That by reason of the premises the said William Croasdill and your Petitioner had been injured in respect of the loss of their land without any equivalent, and that they were without redress in the premises, and were therefore obliged to pray the consideration of your Honorable House.

That the said Petition was received by your Honorable House, and the prayer thereof referred to a Select Committee.

That such proceedings were had, and such evidence taken in the matter of the said Petition that on or about the eleventh day of November, 1869, the said Select Committee brought up a Progress Report, which Report was ordered to be printed.

That the late dissolution of Parliament prevented the further consideration of the said Petition by the said Committee.

That the said William Croasdill and your Petitioner have not yet received any compensation for the loss of the third and most valuable part of their estate so taken away from them as aforesaid, and that they are altogether without redress in the premises.

Your Petitioner therefore humbly prays that your Honorable House will make such inquiries in the premises as to your Honorable House may seem meet, and that your Petitioner may have appropriate relief in the premises.

And your Petitioner will ever pray, &c.

A. W. SCOTT.

MR. ALEXANDER WALKER SCOTT—LAND TAKEN BY HUNTER RIVER RAILWAY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 18th February, 1870,—with power to send for persons and papers—to whom was referred, for consideration and report, on the same date, the *Petition of Mr. Alexander Walker Scott, presented to your Honorable House on the 17th February, 1870—* and the *Progress Report from the Select Committee of last Session, together with the Evidence,*—and to whom was also referred, on the 8th March, 1870, a *Petition from Mr. Alexander Walker Scott, praying that he may be heard either in person or by his Counsel or Solicitor before such Committee,*—have agreed to the following Report :—

It appears to your Committee that about 30 years ago, the late Honorable James Mitchell, acting on behalf of certain subscribers, now represented by the Petitioner, Mr. Scott, and his co-trustee, purchased at an auction of Crown Lands, 21 acres 3 roods 20 perches of land, situate at Honeysuckle Point, Newcastle, comprised in four allotments, the dividing-lines and the boundaries of which were shewn on a plan exhibited at the sale, to extend from the public road to the Harbour of Newcastle; and that the same were paid for at a price per acre of each allotment comprising the whole area of the same between the road and the Harbour.

That by the Government notice, dated 1st August, 1831, then in force, it was proclaimed that “No land within 100 feet of high-water-mark on the sea-coast, harbours, bays, or inlets, is to be considered open to purchase, unless for the purposes of commerce or navigation.”

That shortly after such sale the same lands were granted to Mr. Mitchell, by the common form of instrument then in use for grants upon sales by auction, and with the ordinary reservations of land within 100 feet of high-water-mark, without any reference to the fact that so large a proportion as one-third of these lands was in terms of the Government notice of 1st August, 1831, “lands within 100 feet of high-water-mark,” and that the sale had in fact given effect to the exception contained in that notice, and treated the land as “open to purchase for the purposes of commerce or navigation.”

That in 1854 the whole area of these allotments was taken by the Hunter River Railway Company, under the compulsory provisions of an Act of the Legislature of the Colony, and appropriated for the purposes of the Company, who thereby became liable to pay to the Petitioner and his co-trustee the value of the land taken, and the damages sustained by them by reason of the same.

That

That in the same year the Government of the Colony became the purchasers from the Company of their undertaking, and became responsible for the obligations attending its acquisition.

That in 1867 the Petitioner and his co-trustee having sought to obtain from the Commissioner for Railways the compensation payable to them for the 21 acres 3 roods 20 perches of land forming the water-side allotments purchased by them from the Crown in 1840, were met by the objection that, inasmuch as a large portion of the land which they had purchased came within the description of lands within 100 feet of high-water-mark, they could only recover for the residue of their land, and the arbitration and award were made thereupon.

That it appears by the evidence of Mr. Maitland, the surveyor, that 7 acres and 7 perches of land were included in the reservation in the grants, or are within 100 feet of high-water-mark.

That the value of such land, at the time of the taking by the Hunter River Railway Company, was about £2,000 per acre.

That since the taking by the Railway Company in 1854 the Petitioner and his co-trustee have been wholly deprived of all benefit of their land.

Your Committee having taken all the facts and circumstances into consideration are of opinion that the Petitioner's case for relief has been completely established, and therefore recommend it to the immediate and favourable consideration of the Government.

*No. 1 Committee Room,
Sydney, 25 March, 1870.*

BENJAMIN LEE,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 24 FEBRUARY, 1870.

MEMBER PRESENT :—

Mr. Weaver.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 3 MARCH, 1870.

MEMBERS PRESENT :—

MEMBERS PRESENT :—

Mr. Lee in the Chair.

Commander Onslow, | Mr. W. Suttor.

Present :—H. B. Bradley, Esq. (*Solicitor for the Petitioner*), who addressed the Committee and withdrew.

Chairman submitted *Draft Report*; same read and considered.

Motion made (*Commander Onslow*) and Question put,—That the *Draft Report* submitted by the Chairman be the Report of this Committee,—*agreed to*.

Chairman to report to the House.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PROGRESS REPORT OF THE COMMISSION

APPOINTED TO INQUIRE INTO THE

FLOODS IN THE HUNTER RIVER
DISTRICT.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,

4 February, 1870.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1870.

PROGRESS REPORT.

THE COMMISSION *to* THE COLONIAL SECRETARY.

Public Works Office,
Sydney, 20 January, 1870.

SIR,

As the extended Commission to inquire into and report respecting the Floods in the Hunter River District will expire on the 31st instant, we have now the honor to submit, for the consideration of His Excellency the Governor, the following Progress Report of our proceedings, and respectfully to solicit a further extension of the Commission for a period of six months, to enable us to have the plans and sections required to accompany and illustrate our Final Report drawn and photo-lithographed.

Since the renewal of the Commission on the 12th August, 1869, some of our number have visited the Hunter River District, and made a careful personal survey of the flooded lands in and about West Maitland, East Maitland, and Morpeth, Dalwood, and Singleton. We have held meetings at each of the above-named places, and have examined numerous witnesses as to the extent and effects of the floods which have devastated the districts, and as to the amount of injury they have occasioned. We have caused notices to be inserted in the local papers, inviting persons competent to afford us information on the subject of the inquiry to favour us with their views; and much valuable information on these points will be found in the evidence. Some of the projects for mitigating the floods were advanced with such confident belief in their efficiency that, in order to judge of their practicability or otherwise, we have considered it advisable to have a section of the country from Wallis Creek to Hexham and along the Paterson made, and some additional levels have been taken to show the relative heights of some of the old floods as compared with those of 1857 and 1867. These plans are now being prepared for photo-lithography, along with the former plans and surveys, in the office of the Engineer-in-Chief for Harbours and Rivers.

We have, &c.,

E. O. MORIARTY.

JOHN WHITTON.

WILLIAM C. BENNETT.

1870.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

—
OYSTER BEDS ACT OF 1868.

(PETITION—CERTAIN RESIDENTS, MANNING RIVER.)

—
Ordered by the Legislative Assembly to be Printed, 4 February, 1870.

To the Honorable the Speaker and Gentlemen of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the undersigned residents of the Manning River,—

MOST RESPECTFULLY SHOWETH :—

That a large and lucrative trade in oysters is at the present time carried on between the different rivers and Sydney, that such trade is of great importance and benefit to the surrounding districts, and that hundreds of families are dependent on it for support.

That the leasing of the Oyster Beds would be ruinous to the best interests of your Petitioners engaged in oyster-catching, inasmuch as the oyster agent in Sydney would become lessees of the beds, would employ a few boats and men at low prices, and those now engaged in the fisheries would be thrown out of employment, and great suffering and distress entailed upon their wives and families; further, the money now circulated on the rivers would remain in Sydney, to the injury and loss of the tradesmen and settlers of the respective districts.

Your Petitioners would therefore respectfully submit for the consideration of your Honorable House, that a system of licensing would be more profitable to the Government, that a larger revenue would be derived, that hundreds of persons would be benefited and none injured, and that with a rapidly growing trade the income from it would be an ever increasing one.

To prevent injury to the Oyster Fisheries it would be advisable for Government to close each river in its turn.

May it therefore please your Honorable House to repeal so much of the existing law as relates to the leasing of the Oyster Beds, and to introduce in lieu thereof clauses for licensing each person engaged in oyster-catching.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 83 Signatures.]

 UNITARIAN CHURCH LAND BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on 17th February, 1870, the "*Unitarian Church Land Bill*,"—beg to report to your Honorable House,—

That they have examined the Solicitor* for the Bill and the witness named *T. Icton, Esq. in the margin* (whose evidence will be found appended hereto); and that the *A. M. A'Beckett, Esq. Preamble having been satisfactorily proved by the evidence of these gentlemen, your Committee proceeded to consider the several Clauses of the Bill, in which it was not deemed necessary to make any Amendment.

And your Committee now beg to lay before your Honorable House the Bill, without Amendment.

HENRY PARKES,
Chairman.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

UNITARIAN CHURCH LAND BILL.

FRIDAY, 4 MARCH, 1870.

Present:—

MR. LEE,		MR. NEALE,
		MR. PARKES.

HENRY PARKES, ESQ., IN THE CHAIR.

Thomas Iceton, Esq., called in and examined:—

1. *Chairman.*] You are Solicitor for the Bill, shortly described as the Unitarian Church Land Bill? I am.
2. You attend here on behalf of the Petitioners? I attend on behalf of the promoters of the Bill, who are put in motion by the Unitarian body. The trustees of the land in question are members of that body.
3. The object of the promoters of the Bill is to be enabled to sell certain lands situated on Church Hill, and to invest the proceeds in the purchase of other land, or, at their option, I presume, in the improvement of the Unitarian Church in Macquarie-street? Yes, that is the principal object. Another object is to make better provision for the appointment of future trustees, if the purchase money should be laid out in procuring other land.
4. What is the land that is held in trust? The land held in trust is that comprised in the deed of grant mentioned in the preamble of the Bill. I produce the grant, which is dated 19 July, 1858, and is to James Williamson, Frederick Piper, William Smail Friend, Henry Freeman, and Isaac Aaron; it is of the land firstly and secondly described in the preamble. The grant conveys the land to these persons as trustees, in trust for the erection thereon of a chapel or school, or both of them, "to the use of the people called Unitarians and for no other purpose whatsoever." (*Deed produced.*)
5. Are there any special conditions in the grant? There is a special condition with reference to the appointing of new trustees, by which the grantees, when thereunto required by the Governor of the Colony, shall convey the land to the use of such other person or persons as may be appointed by the Governor, with the advice of the Executive Council, as trustees in the place and stead of the grantees.
6. By the Bill before Parliament you seek to have new trustees appointed, without reference to the Governor? Yes. That power of appointment seems to be very awkward and impracticable. It seems to the persons interested that the power of appointment should be of the ordinary nature, that is, that it should be vested either in the continuing trustees, in the case of vacancies, or in the body substantially interested in the subject matter. Therefore one of the objects of the Bill is to alter the mode of appointing trustees in case the proceeds of the proposed sale should be invested in the purchase of other land. Of course there will be no new appointment of trustees necessary, unless the proceeds are to be invested in the purchase of other land, because the office of trustee, so far as this land is concerned, will of course cease upon the sale of the land, and if no other land is purchased there will be no occasion to continue the trustees in office.
7. How is it proposed to appoint new trustees? It is proposed by the fourth section of this Bill that the present trustees shall have the power of filling up vacancies, and that the appointment to future vacancies shall be vested in the trustees for the time-being. I may state that that is now the almost universal mode adopted, in trust deeds of every description, for keeping up the continuance of the proper number of trustees.

T. Iceton,
Esq.

4 Mar., 1870.

- T. Iceton,
Esq.
4 Mar., 1870.
8. Is there any definite purpose now of selling the land if power is given to the trustees to do so? I have not sufficient information to enable me to answer that question. I produce the trust deed, dated 19th July, 1866, mentioned in the preamble, being the present trust deed of the existing chapel in Macquarie-street. (*Deed produced.*) I may say shortly that that deed is correctly described in the preamble. I also produce the resignation or refusal of Mr. Friend, dated 10th October, 1866, of his office of trustee under the grant. (*Produced.*) I hand in the minutes of a meeting of Unitarians, held on the 21st October, 1867, in the Unitarian Chapel in Macquarie-street, at which a resolution was come to, directing the necessary steps to be taken to obtain the present Bill. (*Handed in. Vide Appendix.*) I produce three copies of the Sydney Morning Herald of the 5th, 19th, and 21st October, 1867, containing the advertisement calling that meeting. (*Produced.*) I may say this Bill is being prosecuted on behalf of the body of Unitarians. Of course, without their concurrence, the Legislature would not think of interfering. The legal trustees are the promoters, at the instance of the body whom I represent. I may say also that Mr. Frederick Piper and Mr. Henry Freeman, two of the original grantees, have been dead for some years. I have with me title deeds showing that the land in Macquarie-street is properly vested in the trustees of the Unitarian Chapel, as stated in the preamble.
9. *Mr. Lee.*] I see by the second clause of this Bill it is proposed to pay the proceeds of the sale of this land, if sold, into the Colonial Treasury—Is that in accordance with the deed? It is in accordance with the practice that has prevailed in similar cases in the colony, when leave has been given to the trustees of public buildings to dispose of them—I suppose with the idea that the money would be taken care of, pending its ultimate disposal. This seems to have been the invariable practice in similar cases.

Arthur M. a'Beckett, Esq., called in and examined:—

- A. M.
a'Beckett,
Esq.
4 Mar., 1870.
10. *Chairman.*] You are interested in the proposed Bill now before this Committee? I am.
11. Are you one of the promoters of the Bill? I am, in so far as I wish it to pass.
12. Are you one of the trustees of the land? No, their names are contained in the preamble of the Bill.
13. Were you Chairman of a meeting held in the Unitarian Chapel in Macquarie-street on the 21st October, 1867? I probably was; I think I have been the President since my return from England; but I do not recollect that particular meeting.
14. Is this paper (*handed in by Mr. Iceton*) a correct minute of the proceedings of a meeting held on that date? Yes.
15. Will you look at the resolution at the bottom of that paper? Yes, I remember that.
16. The Bill now before this Committee is the result of the adoption of that resolution? So I believe.
17. Are you personally acquainted with the land referred to in the preamble of the Bill, situated on Church Hill? I know where it is; I am not very minutely acquainted with it.
18. Is it suitable for the purposes for which it was granted? I do not think the situation is suitable; I did not at the time.
19. Where is the land? It is in Clarence-street, at the back of St. Phillip's Church, I think. It is used as a mason's yard.
20. Do you consider it expedient to give the trustees power to sell it? I do.
21. Do you know whether it is the intention to purchase other land—the petition states, I think, that the proceeds are to be invested in the purchase of other land for the same purpose, or in repairing and extending the present Unitarian Church in Macquarie-street? Either the one or other. I am not aware that any decision has been come to.
22. Do you know that the congregation desire to have the power to sell the land and apply the proceeds in one or other of these two ways? Yes, quite certain of that.
23. The minutes of the meeting held on 21st October, 1867, is signed by you? It is.

UNITARIAN CHURCH LAND BILL.

APPENDIX.

[*To Evidence given by Thos. Iceton, Esq., 4 March, 1870.*]

A.

MINUTES of a Meeting held in the Unitarian Chapel, Macquarie-street, Sydney, on Monday, the 21st of October, 1867.

Mr. A. M. a'Beckett having, at the request of the Meeting, taken the chair, read the following advertisement from the Sydney Morning Herald of that day:—

"TO UNITARIANS.—At the request of the Committee of the Unitarian Church, Sydney, I, the undersigned, hereby convene a meeting of Unitarians, to be held in the Unitarian Chapel, Macquarie-street, Sydney, this evening, the 21st of October instant, at half-past 7 o'clock, to consider the expediency of applying to the Legislature for an Act to authorize the Trustees of certain land in Clarence-street, Sydney, granted, upon trust, for the erection thereon of a chapel and schoolhouse for the use of Unitarians, to sell the said land, and to apply the proceeds thereof in or towards the purchase of other land more eligibly situated, or in or towards the erection or completion of a chapel and schoolhouse upon some more convenient site.

"Dated this 4th day of October, 1867.

"ISAAC AARON,
"One of the said Trustees."

Whereupon it was moved by Mr. Aaron, and seconded by Mr. Hugh Gilchrist, and carried unanimously,—

"That the necessary steps be at once taken to obtain an Act of the Legislature for the purposes mentioned in the advertisement just read to the meeting."

GOULBURN SCHOOL TRUST BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 3rd March, 1870, “*The Goulburn School Trust Bill*”,—beg to report to your Honorable House:—

That they have examined the witnesses* named in the margin (whose evidence will be found appended hereto), and that the Preamble as *verbally* amended, † having been satisfactorily proved to your Committee, they proceeded to consider the Clauses of the Bill, in which it was deemed necessary to make certain Amendments.

*C. H. Walsh,
Esq.
W. Chatfield,
Esq.
†Vide Schedule
of Amendments.

And your Committee now beg to lay before your Honorable House the Bill as amended by them.

HENRY PARKES,
Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

GOULBURN SCHOOL TRUST BILL.

WEDNESDAY, 9 MARCH, 1870.

Present:—

MR. FARNELL, | MR. PARKES,
MR. WILSON.

HENRY PARKES, ESQ., IN THE CHAIR.

Charles Hamilton Walsh, Esq., called in and examined:—

1. *Chairman.*] Are you the solicitor for this Bill? No, I am one of the Trustees—one of the applicants. C. H. Walsh, Esq.
 2. Have you the papers? Yes. The first statement of the preamble is that, on the 8th of February, 1858, a fund was created by contributions for the establishment of a Classical and Commercial Day and Boarding School in the City of Goulburn, to be called "The Goulburn School." I have a minute of a meeting of 9 Mar., 1870.
 3. Is that a correct minute? It is.
 4. Is it signed? No, but it was taken down at the time in my own hand-writing.
 5. Who was the Chairman? Mr. James Chisholm. I was elected Secretary. It was resolved that William Chatfield, Robert Waugh, Charles Hamilton Walsh, Moss Marks, and Philip Dignam, be Trustees of a fund created by the contributors. Then it was resolved that the subscribers be required to give to the Trustees promissory notes, payable at three, six, nine, and twelve months, for the amount of their respective subscriptions; and it was further resolved that the school be called The Goulburn School. At that meeting, and subsequently, thirty-two contributors subscribed from time to time, £3,325.
 6. Were all these subscriptions actually paid? They were.
 7. Was the number of thirty-two subscribers the utmost number? That was the maximum number. The lowest subscription was £50—the highest £240.
 8. Is there a trust deed? No; a draft of a trust deed was prepared, declaring the trusts upon which the school was to be carried out, but before it was completed Mr. Weekes, who was then Colonial Treasurer, put £5,000 on the Estimates for the establishment of a Grammar School at Goulburn, and in the face of that we suspended operations for a time. I have the draft of the deed which was approved of at the meeting of contributors. Pending Mr. Weekes' proposal we were anxious to proceed, and at the same time we were under the impression that, if his proposal were carried, the Government would take the matter off our hands.
 9. The Trustees appointed proceeded to buy land and erect a building? Yes, the Trustees purchased an acre of land in Goulburn—two allotments; in fact the purchase was made in anticipation of the matter. Mr. Chatfield purchased and conveyed to me, as Secretary of the Trust, the acre of land on which the school building stands.
 10. Have you the deed? I have it here. There is a declaration endorsed upon the deed by me, declaring that I hold the land in trust for the school.
 11. What is the date of the deed? 28th February, 1859.
 12. The school building was erected under the direction and supervision of the Trustees? Yes, and a master was appointed.

C. H. Walsh,
Esq.
9 Mar., 1870.

13. What the promoters of this Bill desire is for the Trustees to have power to sell the property? Yes. By the contemplated deed, which was approved by the contributors, but not executed, it was provided that the Trustees, after the expiration of ten years, might sell, with the consent in writing of those representing two-thirds of the shares; otherwise, they were not to sell in less than twenty years. There are thirty-two shareholders representing fifty-seven shares, and I have the consent of all but three who represent five shares; and, as a matter of fact, although I have not their consent in writing, I know personally that they are quite willing that it should be sold.
14. You know all the contributors are willing to sell? Yes.
15. Have you got the consent of this number of contributors in one document? No, there are several documents.
16. Do any number of them give their consent in one document? No, they have all signed separate documents. Circulars were sent to them.
17. The power sought from Parliament is in accordance with the provision in the trust deed, and also with the wishes of the contributors? Yes.
18. I believe you wish to sell the school building and land still for the purposes of a school? Yes; in fact there has been a resolution passed at a meeting, attended by more than two-thirds of the contributors, that we should sell it to the Council of Education.
19. The property has been sold, in fact, with the exception of the completion of the title and the payment of the money? Yes, and the Council has been put in possession. We want this Bill to enable us to complete.
20. Are all the Trustees still living? No, Mr. Marks died in August, 1869; all the others are living.

William Chatfield, Esq., called in and examined:—

W. Chatfield,
Esq.
9 Mar., 1870.

21. *Chairman.*] Are you one of the Trustees of the Goulburn School? Yes.
22. You are aware that a meeting was held on the 8th February, 1858, for the purpose of raising a fund for the establishment of the school? I cannot exactly recollect the date, but there was a meeting.
23. Are you aware whether the subscribers to the Goulburn School Fund, or a majority of them, are willing that the property should be sold? I have every reason to believe that the subscribers are willing and anxious that it should be sold.
24. As a Trustee, you are desirous to sell? All the Trustees are anxious.
25. As a Trustee, you are yourself desirous to sell? Decidedly.
26. The Trustees wish to sell the school, to be continued for educational purposes? Yes.
27. The trust deed was never executed? I am not lawyer enough to know exactly how that stands. I do not remember any deed of settlement being executed.
28. As one of the Trustees, you are desirous of obtaining from Parliament a power to sell, in accordance with the draft trust deed? Yes.
29. You fully concur in the object of the Bill now before the Committee? I do.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AGRICULTURAL SOCIETY OF NEW SOUTH WALES.

(LETTER FROM THE SECRETARY FORWARDING PRELIMINARY NOTICE OF PROPOSED EXHIBITION, &c.)

Ordered by the Legislative Assembly to be Printed, 8 March, 1870.

THE SECRETARY OF THE AGRICULTURAL SOCIETY OF NEW SOUTH WALES to THE COLONIAL SECRETARY.

Sydney, 26 February, 1870.

SIR,

I have been instructed by the Council of the Agricultural Society of New South Wales to forward you a copy of the preliminary notice of the Exhibition which is to be held in August, in the new building now being erected by the Corporation in the Prince Alfred Park.

A glance at the above referred notice will show the magnitude of the undertaking.

1870 happens to be the centenary anniversary of the discovery of Australia. An Exhibition of the select products of the Colonies will be held in London in 1871. The accommodation at the Exhibition held in Sydney last year was so meagre, and the notice so short, that the show gave a very inadequate expression of the resources of this Colony; another display is demanded this year for the purpose of showing what our powers and objects of production really are.

We have invited Victoria, Queensland, South and West Australia, Tasmania, New Zealand, and the neighbouring French Colony, to join in a friendly contest.

From here the prize exhibits may be forwarded to London, and there give the World an opportunity of judging the progress we have made in a century.

In order to carry out so large an undertaking the Agricultural Society will incur heavy liabilities. The prize schedules in the agricultural department alone are not far short of £1,500, medals and other rewards of merit in the non-agricultural classes about half that amount; the expenses of rent of buildings, advertising, and agencies throughout this and other Colonies, cannot be computed at less than £2,000. If we have charge of the goods for the London Exhibition, the packing, forwarding, and custody of these will entail a further expense on the Society.

I am requested to apply to you to ask the Government to place a sum of money on the Estimates as a subsidy, to enable the Society to carry out creditably this unusual Exhibition.

Last year the Government granted us £1,000 towards the Exhibition, and £100 towards the publication of the journal of the Society.

In order to ascertain your views on the subject, a deputation has been appointed, consisting of the following gentlemen, viz. :—

Sir W. Macarthur,
Hon. J. Hay,
Hon. A. Campbell,
Hon. S. D. Gordon,
Commander Onslow,
J. Lackey, Esq.,
J. Nowlan, Esq.,

M. Lowe, Esq.,
J. Calvert, Esq.,
R. N. Trebeck, Esq.,
W. Renny, Esq.,
H. Reid, Esq.,
H. Beit, Esq.

I shall feel obliged if you will let me know what day and at what hour you will be pleased to receive the above-named deputation.

I have, &c.,

JOULES JOUBERT.

PUBLIC VEHICLES AND BOATS.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 8th February, 1870,—to inquire into and report upon the efficiency, general management, and control of all kinds of public vehicles and boats carrying passengers and goods for hire in the City and Suburbs of Sydney as well as within the harbour of Port Jackson,—have agreed to the following Report:—

Your Committee have taken the evidence of several witnesses (*Vide list of witnesses*) whose names were submitted simply by reason of their official position and their practical knowledge of the subject of the present inquiry.

The efficiency and proper control of all kinds of vehicles plying for hire, including boats, is admitted on all hands to be of great and increasing importance to the public, which has been recognized by the Legislature by empowering the Municipal Council of Sydney by law to regulate and license all kinds of vehicles plying for hire within the City of Sydney and within eight miles of the corporate limits thereof. (11 *Victoria*, No. 21, and *Amending Act*). The Municipalities Act of 1867 enables Borough Councils to make by-laws for regulating public vehicles; but this power is understood not to extend to those Boroughs situated within eight miles of the City of Sydney (*clause* 200), although the Councils of such Boroughs may impose a fixed annual, half-yearly, or quarterly charge upon vehicles plying for hire within such Municipalities (*clause* 129).

The Sydney Police Act, 4 William IV., No. 7, passed so far back as the 6th August, 1833, was intended amongst other things to regulate and license boats and boatmen, but which Act, in the opinion of your Committee, is altogether unsuited to the present circumstances of the City, Suburbs, and Port of Sydney,—especially as steam ferry-boats were scarcely known in the Colony in those days, and which are fast superseding the old ferry-boats, and which steam ferry-boats are under no regulation whatever to secure proper attention to time and regulated scale of fares. Cabs and carters appear to satisfy generally the requirements of the public, as each hiring may be a special engagement under regulated fares, and the hirer is at liberty to select the vehicle to suit his purpose; and therefore, in all probability, no serious complaint of the inefficiency of these vehicles has been brought under the notice of your Committee, although occasional overcharges by cabmen have been alluded to by the Inspector General of Police. (Question 1127).

Omnibuses.

All the witnesses who have been asked the question agree, that the “buses which ply between Sydney and the Suburbs cannot be conducted to the satisfaction of the public or to the persons immediately engaged in working them without regulations.” (Questions 458-462, 567, 662, 657, 759, 848, 849). Although it is not quite so clear to your Committee, but that if the owners of them thought fit to do so they might claim to be placed under the Stage Carriage Act, 6 William 4, No. 2, and thereby evade the City By-laws and license fee altogether, as stage carriages are exempted from the operation of the Hackney Carriage Act, 11 *Victoria*, No. 21.

Great

Great dissatisfaction now prevails with the public, the suburban Municipalities, and with many of the more respectable 'bus proprietors as to the present mode of regulating and consequently the general efficiency of omnibuses.

The Mayor of Sydney "who has the whole and sole control of men and omnibuses" (Question 6) states, in answer to question 7, "that the 'buses are more efficient now than they have been for a number of years past"; but nearly all the other witnesses agree that great cause for complaint exists notwithstanding. (Questions 180, 236, 312, 485, 542, 570, 627, 730, 773, 856, 924, 1024, 1076.)

The inefficiency and mismanagement of the 'bus traffic seems to originate in some inherent defect in the City Council as a controlling body—there is, in the opinion of several witnesses, a difficulty in impartially administering the by-laws the Council themselves have made, in consequence of the pressure that can be brought to bear upon the election of Mayor annually, and upon the election of Aldermen biennially, by the large number of persons interested in one way and another in licensed vehicles. (Questions 45, 201, 390, 419, 420, 748, 1123, 1124, 1125, 1126.)

The immense power confided to the Mayor for the time being (Questions 5 and 6), is in the opinion of your Committee injudicious and inexpedient, and deprives the professional inspector of his proper functions. This officer is also under the complete control of the Mayor (Question 387), which with the entire absence of properly authorized time-keepers independent of the 'bus proprietors, is the origin of the principal cause of discontent in the suburban Municipalities. (Questions 131, 156, 378, 387, 388) and of the general inefficiency of the service.

The deficiency of inspectors and authorized time-keepers is probably occasioned from motives of economy by the City Council (Question 158), or with a view to revenue (Question 184), as the fees in connection with this service amount annually to £2,509 18s. 6d., while the amount expended on it amounts approximately to £395 a year (Question 311), leaving a balance to credit amounting to, say, £2,114 18s. 6d.

When the Hackney Carriage Act was passed, in the year 1847, empowering the Municipal Council of Sydney to license and regulate hackney carriages and other vehicles to the distance of eight miles from the City boundary, the population of the Suburbs was small relatively to the City, which appears from the Census of 1851, the year of the gold discovery.

The population was then as under—

City of Sydney	44,240
Suburbs	9,648

being say 1 to $4\frac{1}{2}$.

The population now is as under (Question 1092)—

Sydney	71,286
Suburbs	55,237

being say 1 to $1\frac{1}{4}$.

The number of persons incorporated in the Suburbs, under the Act of 1867, is 44,785, a larger number than in the City of Sydney in 1851. There are also in the suburbs 11,952 persons not under municipal incorporation. It may therefore be anticipated, from the relatively greater increase of the suburban population, that they will at no distant day outnumber the inhabitants of the City.

No attention or not sufficient consideration is paid to the requirements of the Suburban Municipalities by the City Municipality (Questions 183, 245, 580, 735), although the Mayor states (Question 59) that "we have made it a point to comply with the requests of the Suburban Municipalities."

By a recent arrangement with the Inspector General of Police by the City Council, loitering and some minor irregularities by 'bus-men may be diminished, with respect principally to City traffic, but which is not calculated to effect any material improvement in the more important particulars of complaint in the suburbs. (Questions 1078-1080.)

Boys.

There are 180 omnibuses and 23 omnibus cars now licensed in Sydney (Question 299). Under the by-laws these 203 vehicles require the services constantly of as many "conductors." Some of the boys thus occupied are apparently not more than

than seven years old. (Question 1088.) "They have no education at all in many cases, and they acquire habits that do not improve their morals." "Some that have been employed as 'bus conductors are now on board the 'Vernon,'" (Question 1089.) "They are in some instances kept at work very long hours" (Question 47), and are also many hours idle on the stands without legitimate occupation (Questions 48, 51, 397, 398, 399, 750, 798). "Some of these boys sleep in the omnibuses, and they go to the stand for days and days together without being washed." (Question 940.) One 'bus-owner employs as conductors his sons who cannot tell the time of day (Question 948). Mr. W. Farrar, lately a time-keeper, thinks these boys while not actually employed as conductors should receive some education, and he tried as an experiment, to instruct them, but was laughed at. (Questions 950, 951.) Some of the 'buses are in a most filthy and apparently in a verminous condition. (Questions 227, 241, 623.)

These boys do not appear to be under specific engagement to their employers and from their unhappy life and condition are most probably frequently changing their occupation; so that to comply with the by-laws there must be in the City and Suburbs considerably more than 203 of them, many of whom are doubtless being reared in such a way as to occasion your Committee much concern for their lamentable condition and future welfare, as well as for the effect this state of things must have on the community.

Licensed Watermen and Ferry Boats.

These vehicles, so necessary to the people of the Suburbs of Sydney and the Harbour of Port Jackson, appear to be under very little or no control. The Inspector General of Police states (Question 1077)—"I have thought that the licensing of boats, as it has been hitherto conducted, a farce"; "and that all marine vehicles should be placed under the Marine Board." (Questions 1100, 1101.) Other witnesses state, that in their opinion, both ferry-steamers and watermen should be placed under regulations by some central authority. (Questions 190, 240, 891, 899, 1013, 1019, 1056.) At present there are on the books of the Water Police Office the names of 750 registered watermen, some of whom have been licensed for many years (Question 997); and "there are no rules or regulations guiding them, and no supervision over them, and the watermen themselves are desirous that they should be under some regulations." (Question 1002).

Licensed watermen have no summary way of recovering fares. (Questions 1003, 1039.) This appears a hardship.

The boatmen and boats are, under the present practice, licensed once and for ever. Men may leave the Colony for ten years, and return and ply again. (Question 1006.) In the meantime, or in the course of time, both men and boats become old and unsafe for ferrying passengers. (Questions 1006, 1007, 1059.)

Notwithstanding the great number of men licensed, the ferries are occasionally entirely deserted by the boatmen (Question 1013), to the great inconvenience of the public. Many of the persons now licensed do not attend to the business of watermen at night, or on windy or wet weather (Question 1043), some of whom are incapable of managing a boat and ought not to be intrusted with the lives of passengers. (Question 1066.)

After fully considering the question involved in this inquiry, your Committee are of opinion that the omnibus traffic between the City and Suburbs is very inefficient and badly conducted, and that extending the power of the City Council to eight miles beyond the City boundaries is a source of much annoyance to some of the Suburban Municipalities; leaving them powerless in this, to them, important matter. This applies especially to the Suburbs separated from the City by water, which, with the almost entire absence of regulations for ferry-boats and watermen, constrains your Committee to recommend that some legislative action be as early as possible taken to place all vehicles plying for hire both by land and by water under some central authority, the cost of managing which should be borne by fees and other income, and paying any surplus money *pro rata* to the Corporations in charge of the roads or streets used by the vehicles.

WILLIAM TUNKS,
Chairman.

No. 1 Committee Room,
Sydney, 29 April, 1870.

PROCEEDINGS OF THE COMMITTEE.

 THURSDAY, 10 FEBRUARY, 1870.

MEMBERS PRESENT :—

ON

PUBLIC VEHICLES AND BOATS.

THURSDAY, 17 FEBRUARY, 1870.

Present:—

MR. ALLEN,
MR. CLARKE,
MR. TUNKS,MR. FARNELL,
MR. KING,
MR. M. C. STEPHEN.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Walter Renny, Esq., the Mayor of Sydney, was called in and examined:—

1. *Chairman.*] Your designation is the Right Worshipful the Mayor of Sydney? I believe so.
2. You are aware of the object of the present inquiry, Mr. Mayor? Yes; I am aware of it. I see that, in the terms of the resolution, it is to inquire into and report upon the efficiency, general management, and control of all kinds of public vehicles and boats, carrying passengers and goods, for hire in the city and suburbs of Sydney, as well as within the harbour of Port Jackson.
3. You have been Mayor, and Alderman a number of years, and have paid considerable attention to this subject? Yes, I have. In fact I have made it a matter which I wished to improve before I left my office.
4. Perhaps you will state to the Committee the number of licensed vehicles plying for hire in the City of Sydney? I can give you the amount received by the Municipal Council from them, but I cannot give you the number of vehicles.
5. You, as Mayor, exercise a direct control over these vehicles, both as to their efficiency and management? Yes, entire control.
6. Is it under the by-laws that the Mayor and two Aldermen exercise entire control over the whole of these vehicles? Yes; that is to say, the Mayor and two Aldermen pass or condemn the whole of the omnibuses and cabs. They examine the omnibuses and cabs, and see that they are in a fit condition to be licensed. The Mayor has power to refuse or cancel the license of any 'busman or cabman, providing that there is anything against his character that would warrant such refusal or cancellation. A man's license, for instance, is not granted, unless he is recommended by two respectable and known householders. If any man to whom a license has been granted commits a breach of the by-laws a second time, he is brought before the Mayor and his license is cancelled. In fact, the Mayor has whole and sole control over the men and omnibuses.
7. Is it your opinion that the whole of the cabs and 'buses plying for hire are now—say to day—in an efficient condition? They are to day better than ever they were; when I say better than ever they were, that is going a long way back; perhaps I may say better than they have been for a number of years past.
8. The number of them and the income derived by the Municipal Council from them in fees and fines will perhaps be furnished to the Committee by you or by one of your officers? Yes. I find that I can give you now the number of the omnibuses and the amount of revenue received. There are 178 omnibuses, which at £7 10s. each, give £1,335; 23 omnibus cars, at £5 12s. 6d. each, give £129 8s. 6d.; 226 omnibus drivers, at 10s. each, give £113; 140 omnibus conductors, at 5s. each, give £35; 40 hackney carriages, at £3 each, give £120; 180 cabs, at £2 5s. each, give £405; 250 cab drivers, at 10s. each, give £125;

W. Renny,
Esq.
17 Feb., 1870.

- W. Renny, Esq.
17 Feb., 1870.
- 110 drays, at £2 each, give £220; 110 dray drivers, at 5s. each, give £27 10s. The whole yielding a total revenue of £2,509 18s. 6d. I may say that in reference to these fees a bill was passed about the year 1867, empowering the suburban Municipalities to levy a tax on omnibuses running in and over their Municipalities. The Municipal Council of Sydney then reduced their fee from £10 to £7 10s., with a view to enable the suburban Municipalities to collect the difference. The distance, however, which is run in some of the suburban Municipalities is so small as scarcely to be worth speaking of.
9. *Mr. Clarke.*] You have control over licensed vehicles plying for hire to within a distance of 8 miles of the City of Sydney? We have control over them to that distance, but the distance actually run is very trifling.
10. *Chairman.*] Was any intimation made to the suburban Municipalities of your reducing the charge on omnibuses for the object you have stated? I think that it was pretty well known, and in some cases they have collected the amount. Omnibuses plying to Waverley, besides the £7 10s. which they pay to the city, also pay £24 per annum for tolls to the road trust, and £5 to the Waverley Municipality; so that, in fact, the charge of the city is merely nominal compared to the amount which the omnibuses have to pay outside the city.
11. *Mr. M. C. Stephen.*] On that particular line? Yes; and on most of them.
12. *Mr. Allen.*] In any other case are charges made by suburban Municipalities? They have not been enforced, excepting in Waverley. The omnibuses run a very little distance in the Waverley Municipality, because the trust road runs right down from the South Head Road to the Cherry-tree Inn, and I believe beyond it.
13. *Chairman.*] Can you furnish the Committee with a statement of the distances? The length of road run in Waverley is 600 yards, and yet the Waverley Council collect £5 for that short distance.
14. *Mr. Allen.*] That is in addition to the road trust? In addition to the road trust, to which they pay £24. In the five journeys daily they run 49 miles over the Sydney streets, while the distance for the same five journeys within the Municipality of Waverley is under 2 miles.
15. *Chairman.*] Would it be convenient to furnish the Committee with the particulars? I will give you the whole of the particulars: The Waverley omnibuses travel over the streets of Sydney 14,875 miles in the course of the twelve months, and yet the charge made by the Waverley people to the omnibus proprietors is only £2 10s. less than that made by Sydney.
16. *Mr. Farnell.*] When you say the Waverley people, you mean the Waverley Municipality? Yes.
17. *Mr. Allen.*] But the Waverley Municipality is an exception? I think not.
18. Is there any other Municipality that makes a similar charge? The same toll has been paid at the Woollahra and the Double Bay omnibuses.
19. But the distance run must be greater? The Woollahra omnibuses run 1,000 yards on their Municipality.
20. *Mr. Clarke.*] Have you got information before you as to Randwick? I do not see that. Omnibuses from Newtown pay £18 6s. per annum for tolls, and they run a distance of 400 yards on the roads of the Municipality. They pay £7 10s. to the City Council. The suburban Municipalities have little reason to complain.
21. *Mr. Allen.*] The omnibuses then use a certain portion of the Newtown Municipality's roads for which they pay nothing? Yes; 400 yards.
22. How much do they use of the Glebe? One mile.
23. And pay nothing? And pay nothing.
24. How much of Bondi? One mile.
25. Marrickville? Of Marrickville they use 800 yards and pay nothing.
26. Of Woollahra? 1,000 yards.
27. Of Redfern? One mile, and of Balmain 300 yards. But you must bear in mind that in all these cases they are heavily taxed by tolls.
28. In all of them? Balmain 1s.
29. Not in the case of the Glebe? No; Newtown pays toll, Redfern does not, Woollahra pays toll, the Glebe does not, Marrickville and Bondi pay toll.
30. *Chairman.*] May I ask whether the statement you propose handing in to the Committee is a full account of all the suburbs, or only of a portion prepared for the Council? The statement before me was not prepared in any way for this Committee. I did not know that I should be summoned to this Committee until yesterday morning. It is merely a rough statement prepared the other day for a meeting which I called, and with a view to enable me to answer any question which might arise.
31. It is not the whole case? No, it is nearly correct.
32. Can we have a statement of the whole case? Yes; I will have a correct statement prepared.
33. Has the Municipal Council of Sydney exercised control over these vehicles for 8 miles, and is any action taken to secure the regular daily performance of the journeys—to see that the omnibuses start regularly and keep proper time? Well, that would be a matter almost impossible of accomplishment, unless at a very great cost for time-keepers at all the ends. For instance, from Burwood and Enfield and from Burwood and Five Dock there are only three journeys a day, but if you wished to ensure punctuality you would have to have time-keepers stationed at these places. At this end we have time-keepers to ensure punctuality of starting, and we have officers in the streets to check the omnibuses whenever they find them loitering on their journey. It would be an enormous cost to have time-keepers at Burwood and Five Dock for so few omnibuses.
34. Will you give your opinion of this question—whether it would not be more beneficial to the public to make these people keep correct time, even though you had to apply 25 per cent. of the amount you are able to collect according to law, instead of giving up that amount in the reduction you have spoken of? I think that the only remedy you could suggest would be to appoint time-keepers, because the matter of keeping time would be of more consequence to the public than the money.
35. Can you direct the attention of the Committee to the law under which you collect these licenses? We have a general by-law.
36. I mean what Act of Parliament enables you to collect them? I think that is stated in the by-laws you have before you.
37. The 20th Victoria, No. 36, is the Corporation Restoration Act, under schedule C of which Act you are enabled to apply certain other Acts, one of which is the Hackney Carriage Act, which enables you to charge on omnibuses £10 a year? That empowers us to charge £10 a year; I think that it was originally more.

38. After charging the maximum amount you reduced the charge 25 per cent. ? The suburban Municipal Councils have power to collect a rate or levy a tax on these people, and we thought to meet their views by reducing the fee 25 per cent., so that they could charge that 25 per cent. themselves, if they considered that sufficient. The Waverley Council did not consider that sufficient, for they charged £5 instead of £2 10s. It was only that the tax should not come quite so heavy on the cab and 'bus proprietors that we reduced it.

W. Renny,
Esq.

17 Feb., 1870.

39. Have you any by-law to compel these keepers of vehicles to attend daily on the stand ? No ; there is none.

40. Then persons coming on at a certain time might so manage as to bring their turn round so that they would start at a particular hour when they might expect to secure a larger number of passengers, and might by this practice prejudice other drivers who came on the stand at the usual time and kept on longer hours ? They are not allowed to take their turn as they think proper. If they came on in that way they would have to take the rear.

41. If some came on at 9 o'clock and others at 6 o'clock, how would the turns be decided ? The 6 o'clock omnibus would leave the stand first, and the man who came on at 9 o'clock would have to take his position at the rear. The last who came to the stand would be the last off.

42. By a little management a driver might come on at such a time as would bring his omnibus to the turn for starting when a number of passengers were going into town ? It is possible that that might be done, but I can scarcely see how it could be done. If an omnibus came on at 9 o'clock in the morning, and if it took two hours to reach its turn, and at the expiration of that two hours it took more passengers than usual, then it might be done.

43. Do the drivers subscribe any amount among themselves to have a time-keeper ? Yes.

44. And they appoint the time-keepers ? Yes.

45. Seeing that the municipal elections take place every two years—is it, in your opinion, desirable that the Mayor should exercise this immense power of control over all these cabs, omnibuses, and carters—would it not be desirable that the Mayor should be relieved of so direct an influence as that ? I think it is desirable that these men should come before some person who could deal with them. Whether that authority should be the Mayor, or any other person, I cannot say. There is a great deal of trickery and dodgery among these men, who are up to every possible move, and who are sure to take you in unless you are well up to them. You may refuse to grant them a license to day, and they will so disguise themselves to-morrow that you would not know them. The same thing would perhaps work if the licensing power were placed in the hands of another body. They would ultimately know these people, the same as the Mayor and Aldermen know them now. The Mayor and Aldermen are now thoroughly used to the men, know their trickery, and are able to meet it. I have been in the Corporation seven or eight years, and as to dealing with these men I have never known that any of the Aldermen have shrank from their duty. I have known them meet with a great deal of abuse and annoyance, but never a single instance in which they have shrank from the discharge of their duty.

46. As a body, are not the owners and drivers of these omnibuses respectable ? Yes, yes. They are a dirty lot, but respectable enough. There are black sheep amongst them, but as I said before they have been terribly weeded out this last year.

47. Can you inform the Committee what hours the boys are kept at work on some of these conveyances ? They are kept at work very long hours.

48. And they are many hours idle on the stand ? In some cases. I believe in the case of the Glebe omnibuses more particularly, it is some hours before the turn comes to start.

49. There is a great number of them ? Yes.

50. Then these boys have no occupation during that time ? They find it.

51. They have no legitimate occupation ? No.

52. *Mr. Allen.*] When you speak of the Glebe omnibuses, you mean the omnibuses which stand off the corner of the Glebe Point Road and Parramatta-street ? Yes.

53. Not the Glebe Point omnibuses ? No.

54. You were speaking just now as to the complaints made by the Councils of suburban Municipalities—are not the complaints, many of them, as to the conduct of the drivers and boys ? No, I think the general complaint is that they fancy the Sydney Corporation collect a large amount of fees from the omnibuses which run over their roads, without their receiving any benefit.

55. And they also complain that they have no control over the omnibuses, nor over the drivers ? Yes.

56. Nor in the appointment of the stands ? No. For some years past the Aldermen of the city have endeavoured in every case to comply with the requests made by suburban Municipal Councils with regard to the appointment of the stands ; for the last two years at all events we have made it a point to comply with such requests.

57. Before appointing a stand has it been the practice of the City Council to ask the opinion of the suburban Council on the subject ? I don't think that for the last two years we have ever appointed a stand without the proposition came from the Municipality.

58. Was the stand at the Glebe Point appointed with the approval, or after taking the opinion of the Council of that Municipality ? I think the Glebe Point omnibuses were appointed before the Municipality was in existence—in 1859.

59. No. The Council was in existence in 1859, and the stand was formed four or five years ago ? We have made it a point to comply with the requests of suburban Municipalities. When any petition has been sent in to the Council we have referred it to the suburban Municipal Council, asking their consent. With regard to Marrickville, for instance, there has lately been some little annoyance, but it has only been a matter of time. We have a large amount of business to transact, and the delay has arisen from pressure of business, and not from any reluctance to comply with their request. The business has come before the Council in due form, and as soon as the matter could be dealt with by the Council their request was complied with. Mr. Stephen sent in a petition, from Woollahra I think it was, and another petition from the Paddington Municipal Council, asking for a stand. The petitions have always been complied with, although there has been some delay in regard to by-laws. I am quite aware that the City Council has paid attention to petitions from inhabitants in different places.

60. But my question applies to the Council itself ? As to the Glebe I believe that no communication has been made to the Council in reference to the stand, or to the management of omnibuses in any way. As far as I recollect, the Glebe Point 'bus-stand was appointed before the matter was gone into so minutely

as

- W. Renny, Esq.
17 Feb., 1870.
- as now. It has only been within the last two or three years that we have paid the attention to the subject which it ought to receive.
61. Is there a time-keeper there? I think so.
62. Frequent complaints have been made of the conduct of drivers and omnibus conductors on that stand? I am sure that there is a time-keeper at the Glebe, but whether there is a time-keeper at Glebe Point I am not certain.
63. What arrangements have the Council with reference to the progression of omnibuses on the road,—with reference to loitering, standing at the corners of streets, or across the streets? There are two officers appointed, who make it their business to go about the streets and summon these men whenever they see any breaches of the regulations in these matters.
64. Are there many complaints of that kind? There must be, because we have so many cases at the Police Court.
65. Is it not a daily practice of the omnibuses to stand across some of the main thoroughfares of the city and block them up. I allude more particularly to stopping in George-street, across King-street, and across Market-street, where there is the largest amount of traffic? I think that it is the exception for them to stand across the street, but it is the daily and hourly practice for them to stand at the corners of the streets.
66. What power has the City Council to compel them not to do that? The power given by the by-laws.
67. Do the police assist at all? The police do not; but if the police were to carry out the Police Act the loitering, shouting, and the greater part of the annoyances of which the citizens complain would be remedied. The Police Act also gives power over the drays to prevent the drivers from allowing them to stand a longer time than is necessary for loading and unloading. The police also have power to summon to the Police Office any driver who stops a longer time than is necessary to take up or set down. They have a great deal of power in their hands, which they rarely exercise.
68. Has not the Inspector General of Police suggested remedies at times for this? The City Council has several times made suggestions to the Inspector General of Police.
69. And has he refused to co-operate? He has not refused to co-operate. Captain M'Lerie agreed on one occasion that if I had these by-laws printed in a small form he would issue a copy to each of the police constables stationed in George and Pitt streets, and that the police should act in the matter. Captain M'Lerie says that if the police take this matter up they ought to receive one-half of the fines. I think that that is the whole matter in dispute. But independently of any arrangement which the Corporation might enter into with the police, the Police Act empowers the police to remedy the matter, and to receive the fines. It requires no arrangement with the Municipal Council. On two or three occasions I have asked the co-operation of the police.
70. You say that the Council has an income of £2,500 a year from these vehicles? Yes.
71. What expenditure is the city put to in the management of them? I cannot say exactly.
72. In round numbers? There are incidental expenses appertaining to this matter—I could not say.
73. Perhaps you will direct one of your officers to furnish the information? Yes.
74. *Mr. M. C. Stephen.*] Is the expenditure on account of these vehicles considerably less or more than the revenue derived from them? It is less.
75. *Mr. Clarke.*] Does that document, which you have had before the Committee, relate to all the different suburban Municipalities, or only to a portion of them? To nearly the whole of them.
76. According to that statement the omnibuses do not run more than a mile over the roads of any one of them? The longest journey run is a mile.
77. I live at Randwick, and I am confident that it is more than two miles from the Racecourse gate to Coogee Bay. How far have the City Corporation got control of the Randwick Road? To the toll-house.
78. How far has the Randwick Corporation got control? The Sydney Corporation have taken over a portion of the road trust; the Randwick Council takes from beyond the toll-bar to Coogee, as trustees.
79. Out of what fund are the time-keepers paid? Paid from the omnibus proprietors themselves.
80. As a general rule have you time-keepers at any other than the Sydney end? Where there is a sufficient number of omnibuses the proprietors themselves find it desirable to have time-keepers to keep order and regulate the time.
81. In cases where there are two or three different omnibus proprietors, who sometimes disagree, what arrangement would you suggest with regard to time-keepers? I think, and have thought for a long time, that there should be many more time-keepers, and that they should be appointed by the Council, and be under the control of the Council.
82. *Mr. King.*] If the vehicles and harness are not in proper repair, and the horses not in good condition, you withhold the license? We withhold the license; and if the omnibus or harness gets out of repair during the currency of the license, we summon the parties before the Mayor, who suspends the license.
83. Have suburban Municipalities any authority to interfere in matters of that kind? None; excepting it is to report to the Sydney Municipal authorities.
84. *Mr. Farnell.*] Are those persons you spoke of, who look after the omnibuses in the streets, officers of the Corporation? Yes.
85. But the time-keepers at the stands are paid by the omnibus proprietors themselves? Yes; I may say that since granting the licenses this year, and since I have seen the trickery with which persons have tried to impose on the Mayor and Aldermen, I have appointed an extra man, who has nothing else to do but to go about and see that the by-laws are carried out. I have had from sixty to one hundred persons brought up at the Police Court in a week, and I think that we have eighty cases on at the Police Court to-day. You will now find that the whole of the conductors have at all events a coat to hide their dirty or ragged appearance.
86. Who examines the omnibuses and cabs to see that they are in proper order? For some years past it has been done by two Aldermen and the Mayor for the time-being; the same two Aldermen have now done the work for some four or five years. The reason that the same two Aldermen have had this duty is because they have become accustomed to the men, and have gained an amount of experience which can only be acquired by time; and of course, from their past experience, the thing has been done much better than heretofore.
87. You say that these Aldermen are good judges of the men, but are they good judges as to the vehicles being in proper order? They examine the vehicles. Twenty omnibuses have been totally condemned, and perhaps the same number of cabs; a large number has also been sent back for repairs.

88. Are these two Aldermen coachbuilders? No.

89. Do you think it would be well for the Corporation to have some officer to perform the duty? As well as the two Aldermen we have the two inspectors, who are always present when every cab and omnibus is examined.

90. The examination then is conducted by four persons instead of by two? By five. The Mayor and two Aldermen must be present, and the two inspectors are there to take down the particulars, and to state any objection they may have to make against the men and omnibuses.

91. What is the test or the qualification required for drivers who apply for a license? They must be recommended by two respectable known householders as being steady, sober, well-conducted young men, and able to drive. No license is granted without a printed form is first filled up and signed by those persons. I have sent a great many back lately, whose applications were properly signed, but who had no certificate as to their being capable of driving; in every such case I have sent them back, and I have withheld the license until the proper requisition has been signed. If they commit breaches of the by-laws on more than two occasions they are brought up, and their licenses are suspended or cancelled.

92. Have any of these persons engaged as drivers on these omnibuses had much experience in driving? Of course where there are so many discharged or dismissed from the service by the Corporation it is necessary that new men should take their place. I have found that the most of those who have applied to be licensed as drivers of cabs and omnibuses have been gentlemen's servants, or doctor's servants, who have been accustomed to drive from perhaps one to five years. In some cases we have men apply who have been drivers in Melbourne or London, but the majority of the applicants are men who have been gentlemen's servants, known in the city.

93. Are the horses also examined? Yes.

94. And is the examination continued or renewed after the license is granted? Yes, at any time they can be summoned to the Town Hall to have horses, harness, or omnibus examined. In some cases we have refused the license where the horses have been in very bad condition; but there is so much trickery attempted to be practised that we are apt to be deceived; men will sometimes take the horse out and borrow one from round the corner.

95. *Chairman.*] You examine periodically? Yes.

96. *Mr. Farnell.*] I think I understood you to say that the omnibuses do not block up the streets? It is quite an exceptional case where omnibuses stand right across the streets. It is a very serious breach of the by-laws, and one that ought to be punished very severely. I don't say that it is not done, because I have been on omnibuses when it has been done, but I don't think that it is the rule.

97. Supposing an omnibus going up George-street to pull up in the centre of Market-street, that omnibus certainly obstructs Market-street, although it may not obstruct George-street? Yes, it does. It ought not to be allowed to do so.

98. How do you regulate patent safetys? The licenses are granted in the same manner—on the recommendation of two householders—and the cabs, horses, and harness are examined in the same way as are omnibuses.

99. Are they restricted to plying for hire to any particular hours of the day or night? No.

100. Is it not a fact that some of them ply all night? Yes.

101. Well, is there no one to look after these people at night—is there nothing to prevent them from taking improper characters, or allowing improper conduct, in their vehicles? The same officers that are on duty in the day-time can take a turn out at night, but there is no special officer for night duty, excepting when one or other of the two inspectors take a turn out at night.

102. Are you aware whether it is a fact that some of these persons wholly live by this night-work, by attending upon improper characters about the theatres? I know that there is a number of cab-drivers who get their living only by night-work; but whom they carry I do not know.

103. Have any complaints been made to the Corporation respecting the annoyance of these people in particular neighbourhoods? On one or two occasions there have been complaints made of the noise of the cabs in King-street.

104. Any complaints as to the use of bad language? The complaints have I believe generally been of the noise and shouting of the cab-drivers plying for hire, of driving round the corners of streets, and of general disturbance.

105. Is it not a fact that those cabmen who ply for hire at night are continually moving about from corner to corner in particular streets about the theatres? I believe they do; but if the police were to carry out the Act all that would be altered. The police have power under the Act to take them up, and they do so in many cases. If the police did their duty in all cases of this kind there would be no complaint.

106. You said something in reference to the fines—have the Corporation claimed any of the fines when the police have prosecuted? I have never heard of the Corporation doing so.

107. Have the Corporation anything to do with the licensing of boats? No.

108. They have something to do with private wharfs and landing-places—have they not? That is just a matter left with the Aldermen. I do not know any case in which they have ever built a wharf. They have been building baths and steps for a landing-place down in Lower George-street.

109. Have you not a landing-place at the foot of Erskine-street? Yes.

110. And at King-street? Yes; but we have no control whatever of boats.

111. But you have control over the wharfs—the landing-places? Yes, of those which are the property of the Corporation.

112. You receive the rent of some of them—do you not? Yes.

113. Therefore you have control over them? We lease the wharf the same as we should a store, or the markets, or the baths.

114. *Chairman.*] That is to the exclusive use of some person? Yes; but the Government, in granting the landings at the end of these streets and on the wharfs, have provided that we leave a certain portion for the use of boats. In that one at the bottom of King-street we had to leave steps for boats.

115. You said something about the boys—the conductors—being filthy and dirty, and that you compelled them to put on coats? Yes; that is the way to make them at least apparently clean.

116. Would it not be well to make them clean altogether? In every case where these boys came before me in a dirty state I made them go and wash their hands and faces, comb their hair, clean their boots, and put on a coat. I insisted that they should be clean once in their lives at any rate. Every boy has appeared before me clean and respectable in his appearance before I have granted him a license.

W. Renny,
Esq.

17 Feb., 1870.

- W. Renny, Esq.
17 Feb., 1870.
117. *Mr. M. C. Stephen.*] What arrangements are made as to the continuance of the supervision over omnibuses, with regard to their cleanliness, their general fitness, their durability during the year, and the same with regard to horses? The supervision takes place every day. If either of the inspectors going along the streets saw any breaches of the by-laws—saw, for instance, that the harness was bad—he would take he number and summon the driver to the Police Court, and he would be fined for having bad harness. If the bad harness were not replaced by good, the man would be summoned before the Mayor, and his license would be cancelled. There must be two convictions, according to the by-laws, before the license can be cancelled. The same course is pursued in reference to any other breach of the by-laws.
118. Is there not a systematic or periodical supervision? There is the supervision which takes place every day, as breaches of the by-laws occur.
119. As you state that, is it not a very cursory sort of examination. Is there a deliberate inspection of each and every vehicle or horse at any time—is there any system at all? Yes. Three or four times in the course of the year every omnibus and cab is brought to the Town Hall to be examined. An inspection can be ordered to take place at the Town Hall at any time, and be continued until the whole of the vehicles are examined. Besides this general inspection the two inspectors may go into George-street on any day—one say standing at the corner of King-street and the other at the Glebe, and in this way they try to enforce the by-laws.
120. Upon what system are the fares regulated? There has been great competition among the 'busmen lately, and many of them have reduced their fares. They are now generally running at half price. We have no control, as far as the prices are concerned, excepting that we have interfered to ensure uniformity in regard to the time of the evening at which the fare may be doubled. In every case where the prices have been say 6d. until 10 o'clock p.m., and after that hour 1s., we have sanctioned the increase of the fare at that hour; but in every case where 9 o'clock has been fixed as the hour for increasing the fare, we have sent the omnibuses back, and have compelled the adoption of 10 o'clock as the uniform time for raising the fares.
121. Who ordinarily fixes the fares. By arrangement the Woollahra omnibuses have agreed to charge 3d.; but suppose that one of the proprietors does not choose to submit to that arrangement, but insists on charging 6d., or a shilling, is there anything to prevent him from doing so—is there any maximum charge fixed by the Corporation? I believe that if they like to post up on their omnibus that the fare will be 1s., they can demand it, or they can come down as low as a penny if they like (with consent of Council).
122. Or half-a-crown? No.
123. *Chairman.*] But for cabs? We have a scale of charges fixed for cabs.
124. *Mr. M. C. Stephen.*] Does the Act give you power to make a by-law to fix the prices to be paid by omnibuses as well? Yes, I think the by-laws would empower us to do that. We have power to make a by-law.
125. I suppose you have not found it necessary to interfere in the matter, on account of the competition? No, the competition regulates itself. If it were known that one omnibus was running for a shilling and that another was only charging 3d., persons would not go by the shilling omnibus.
126. *Mr. Allen.*] The price charged must be affixed to the omnibus in some conspicuous place? Yes; the price must be fixed in some conspicuous place, and the letters must be a certain size.
127. *Mr. M. C. Stephen.*] By what process are the time-keepers appointed—by the omnibus men themselves? They each give a certain amount to the time-keeper.
128. That is how he is paid? Yes.
129. But how is he appointed—is it by a majority of votes, or how? I do not know.
130. To what extent are the time-keepers recognized by the Corporation? We do not recognize them; we do not know them.
131. Then so far as the Corporation are concerned there are no time-keepers at all? No.
132. *Mr. Allen.*] In the case where the omnibuses on a particular stand belong to one owner, such an officer is useless? Yes.
133. Because he is but the servant of that one omnibus proprietor? Yes.
134. *Chairman.*] How do you regulate the distance as to 8 miles from the city—do you consider the North Shore to come within the regulation as to 8 miles from the city? Well, I should think not. Of course we do not interfere in any way with the North Shore.
135. Have you ever paid any attention to the question as to whether it would not be desirable to prohibit heavy traffic in certain portions of the city, such as parts of George-street for instance, within certain hours of the day—traffic such as that carried on by carters and draymen? I think that George-street requires relieving of the heavy traffic at certain hours of the day; and I may say the same thing with regard to Pitt-street, which is often to a great extent blocked up with large drayloads of wool, the loads being piled so high as to make it necessary that the drays should be kept in the middle of the street.
136. Would it in your opinion be practicable to divert that kind of heavy traffic from the main thorough-fares of the city during the day? With some amount of trouble and by extra labour and expense it might be done. It is certainly desirable that something should be done. The city has relieved George-street to some extent by diverting from it some of the omnibus traffic, but it requires further relief.
137. You have turned the route of some of the omnibuses into King-street, and have appointed a stand at Miller's Point? Yes.
138. Is there any traffic from Miller's Point? There must be, or the omnibuses would not continue to run. Would it not be more convenient to the general public if that traffic were diverted to the Circular Quay? I could not say. We have a number of omnibuses running from the Circular Quay. All the South Head Road omnibuses run from that quarter.
139. You spoke of calling the attention of the police to the irregularities of the omnibus drivers—have you done so in an official way, by letter from your department? I have not drawn the attention of the Inspector General of Police to the non-fulfilment of duty on the part of the police. I have only asked for the assistance of the police.
140. That is verbally? No; officially, in writing.
141. Could you give us copies of the letters? I think so. The result of one was the preparation of the by-laws in this form, to be handed to the police.
142. When you spoke of the revenue from the vehicles, did the amount you named include the fines? No.
143. What, approximately, is the amount of fines? I have no idea.

144. You say that you have eighty cases at the Court to day? Yes; from sixty to eighty. We have had that number for some weeks. W. Renny,
Esq.
145. They would continue to give you a certain amount? No. If that number of cases were continued they would; but it is not likely that these omnibus men will repeat the infraction of the by-laws if they are summoned once or twice for that. If a man is summoned for not being in uniform, for instance, the cost of one summons would pay for four coats. 17 Feb., 1870.
146. Have you any means of compelling the owners of private carriages to use lights in the city at night? There is power in the Police Act, but I do not think that the Council has power to deal with private carriages at all.
147. *Mr. M. C. Stephen.*] How is the lapse of time between the starting of each omnibus regulated at any particular terminus? They are started from the stand in Sydney at a certain time.
148. Who starts them—their own time-keeper? The time-keeper from their own body. The loitering all takes place between the journeys. The omnibuses arrive, no doubt, within a fraction of the proper time at the other end, where their time is checked.
149. Has the time-keeper absolute control over the time of starting? Yes.
150. How is the proper time regulated—do the Glebe omnibuses go every minute or every five minutes? Every five minutes.
151. Who says that the time of starting shall not be every three minutes, or every two minutes? The Council sees that there are so many omnibuses on the stand.
152. It is the Corporation then that regulates the time? Yes.
153. I want to find out whether or not some routes do not get overcrowded. How do you distribute the omnibuses on the different routes—Is that done by the choice of the omnibus men themselves, or can they change about from one route to another? No doubt the routes have been very much overcrowded, but this year there has been an entirely new arrangement, and only so many omnibuses are licensed for each route—some to start every five minutes and some every ten minutes, according to the number of omnibuses on the route. No more omnibuses are allowed to be placed on a particular route, excepting by petition from the inhabitants. An increase of the number of omnibuses necessitates an alteration in the intervals of time at which they start.
154. So that if an omnibus proprietor applies for a license to ply on a particular route which is full, you refuse the application? Yes.
155. They must take some other route where you have not got your full complement? Yes, or they may make a new route. I believe that the overcrowding of the routes was the cause of the reduction of the fares.
156. *Mr. Allen.*] Have you felt any difficulty for want of legislation on the subject, or does the Council feel that they have sufficient control and are able to make all necessary by-laws? Difficulty has been felt, but I never heard any complaint as to the want of more legislation in the matter. The principal thing needed to remedy the evils complained of, is the want of more assistants in the Town Hall to look after the drivers. We want more time-keepers, and more inspectors to see that the by-laws are carried out. The by-laws are sufficient to have the vehicles under perfect control, if carried out.
157. Is not your revenue from the omnibuses themselves sufficient to enable you to appoint the time-keepers, inspectors, or any other officers you may require? Yes, if we paid the whole away in salaries; but then there would be nothing to pay for the wear and tear on the streets.
158. But have you not sufficient revenue to justify you in appointing these extra officers which you say are requisite? No. Not if we take into account the wear and tear of the roads. If we have an increased staff we must increase the license fees. The omnibus proprietors pay a certain amount of money for time-keepers, which they would be willing to pay to the Corporation for the same purpose. They are anxious that the Corporation should appoint them.
159. *Mr. Farnell.*] The revenue received from these omnibus fees does not keep the streets in order? It does not keep them in order, but it assists to do so.
160. *Mr. M. C. Stephen.*] Do you think, considering the fares payable, that the omnibus proprietors can afford a heavier license fee? I do not think so, while they pay so heavily for tolls. It is a tremendous tax for them to pay £20 and £26 a year for tolls, as well as £7 10s. a year to the City Council, and their contribution for the time-keepers.
161. If any of the omnibus proprietors refuse to pay their share towards the wages of the time-keeper, is there any remedy for that? I think that we have no remedy, but Mr. Oram can tell you.
162. *Chairman.*] Have you any suggestions to make, with a view to further the object of this inquiry? No. I believe that the Municipal Council have sufficient powers in their by-laws, if they carry them out, by the appointment of more inspectors. There are two inspectors, and these men have to go about the streets to detect cases of loitering, furious driving, bad harness, and any other breaches of the by-laws. Perhaps the inspectors meet with from twenty to fifty cases. They have then to go to the Town Hall and write three summonses and subpoenas for each case, one paper to be served on the omnibus man, one upon a witness, and the third—a copy to be retained in the office. Then the inspectors have to go out and deliver these summonses and subpoenas, which is a work of great difficulty. The next day the inspectors have to be at the Police Court, and for the two or three days following they have to be gathering in the fines, or issuing warrants, so that there is a tremendous amount of work.
163. *Mr. M. C. Stephen.*] But it brings you in revenue sufficient to pay for it? I appointed an extra man this year, thinking that he would pay himself over and over again. I believe that after a time this system would result in great improvement, more particularly if the Municipal Council insisted on the by-laws being carried out.
164. *Mr. Allen.*] But could not the police render very efficient service in the inspection of public vehicles, in seeing that the by-laws were carried out—in preventing loitering—without very little extra labour to them? It is the duty of every policeman, who sees omnibuses standing across the streets and blocking up the thoroughfares—as is so often the case at the corners of King-street and Market-street, in George-street, where they wait for passengers—to summon the drivers to the Police Court.
165. Is that done? Never, or rarely done.
166. *Mr. M. C. Stephen.*] Is there any jealousy between the Corporation and the police authorities? I think not.
167. Is it from the absence of instructions to the police that they do not act? The Inspector General of Police seemed quite willing to assist, and promised to furnish the police with these by-laws, and said that they should report these cases every morning to Inspector Read, at the Police Office; but it was never done. 168.

- W. Renny, Esq.
17 Feb., 1870.
168. *Mr. Allen.*] Simply owing to the misunderstanding about the fees? Yes. But if the police prosecute they can get the fees.
169. *Chairman.*] If they applied for a summons, who would pay the costs in the first instance? The police would have the summons issued from their own office without expense, and the same would be the case with us.
170. *Mr. King.*] The fact is that you have not sufficient inspectors for the work required to be done? We have not sufficient inspectors or time-keepers.
171. *Chairman.*] You will furnish the Committee with a statement, showing the number of cabs, omnibuses, and other vehicles licensed by the Corporation, the distances traversed by the omnibuses, particulars of the tolls and the fees paid to suburban Municipalities, the income received from licenses and other fees, and the correspondence with the police in this matter? Yes.
172. *Mr. Allen.*] Or with any other information you may think likely to be of service in this inquiry? Yes.
173. *Chairman.*] Are you aware how licensed vehicles are managed in other places—say Melbourne or London? I believe that the omnibuses in Melbourne are well managed just now; they all belong to one company, and there is therefore nothing to induce them to loiter or to make noises in the streets; it is immaterial whether a passenger gets into one omnibus or another, for the proceeds all go to the company.
174. But they are licensed by the Council? Yes.
175. *Mr. Clarke.*] Are all the omnibuses in Melbourne under one company? Yes.
176. *Mr. M. C. Stephen.*] There is no competition then to ensure low fares? No; but I believe that the fares are very low.
177. *Chairman.*] Is it within your knowledge that the regulation of licensed vehicles in London is under the control of the Commissioners of the Police? I am not aware how it is managed; but I feel confident that it is very much better managed there than here.

TUESDAY, 22 FEBRUARY, 1870.

Present:—

MR. ALLEN, | MR. FARNELL,
MR. M. C. STEPHEN.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Charles St. Julian, Esq., J.P., called in and examined:—

- C. St. Julian, Esq.
22 Feb., 1870.
178. *Chairman.*] You have been Mayor of one or two suburban Municipalities? Of two.
179. You are aware of the nature of this inquiry? I think so.
180. Is it within your experience that considerable dissatisfaction prevails in the suburban Municipalities, as to the management and efficiency of public vehicles? Universal dissatisfaction, I think.
181. Would you be pleased to state to the Committee the complaints that are common amongst the Municipalities in this matter, or in your own Municipality, as you know more about that? They are innumerable. The general opinion is—and it has been for some time past gaining ground more rapidly—that the time has come when the whole management should be taken out of the present hands and placed in other hands.
182. That is, out of the hands of the City Council? Out of the hands of the City Council. Many persons are disposed to advocate that the City Council should manage the vehicles wholly within the city, and that the boroughs should manage vehicles wholly within the boroughs, each making its own by-laws. But it strikes me, and it has struck others, that that would lead to very great confusion. There would be a number of codes of by-laws, conflicting one with the other possibly, and a number of charges for license fees, also conflicting,—so that the 'busmen would not know where they were. I think that is objectionable for that reason. The present system being a total failure, I think the only remedy for the evil is to place the entire controlling power in the hands of some central body—a paid Commission, I think—who shall license vehicles, receive the fees, divide them rateably among the city and the boroughs, according to a fair scale, and make by-laws, leaving the City Council within the city, and the Borough Councils within each borough, to fix the lines of route and the stands, and to lay informations to punish infractions of the regulations—to watch—in fact, to inspect.
183. You state that the present system is a total failure—would you be kind enough to give the Committee particulars, in some respects, as to the short-comings of the present system? In the first place, improper 'buses are licensed continually—'buses that are unfit to run at all; they are also licensed to carry a larger number of passengers than they are fit to carry. A 'bus I ride in myself sometimes, licensed to carry ten, will only hold eight with anything like comfort. Then they have improper conductors—dirty little ragged boys, picked up anywhere. The drivers get drunk, smoke, loiter, race, quarrel sometimes, fight, and commit all manner of irregularities with impunity—loitering and racing especially. They keep no regular time; they start sometimes before the time, but seldom—very often after it—loiter, and make up lost time by racing afterwards. They have a practice—a very dangerous one, by which lives were nearly lost the other day—a very common practice of breaking in young horses in 'buses; they make money by it I suppose. On one occasion, when I was travelling in a 'bus, a young horse kicked the front of the 'bus in; on another occasion one got his leg over the bar. I have heard of many such cases, but these are two within my own knowledge. There are by-laws now, but they are continually broken with impunity, not only in the ways I have mentioned but in other ways. For example: 'buses licensed to carry ten will barely hold eight. I have been in one of these that has had in it fifteen young and old within the last twenty-four hours; I have been before in the same 'bus with eighteen. Another practice is, that whenever there is a public holiday of any kind, the 'buses are taken off the stands in the suburbs, and are allowed to come to King-street; and we, four or five miles off, who support them all the year round, are left to walk in and out without warning of any kind. We have no remedy for this. Touching the matter of fixing the stands and lines of route, which often are very objectionable, stands

are

are often fixed in places which people in the suburbs dislike considerably; but we may apply to the City Council again and again and again, and get no attention paid to us. Recently I had myself occasion to write, at the request of the people in my borough, to ask the City Council to change the stand. I wrote three times without getting any reply; the thing was left unattended to entirely, and a change was made when we did not want it. Attention, in fact, is impossible to be got. Recently they appear to have become a little alarmed, and are more disposed to listen to complaints; but until quite lately no deference was paid to any representation at all, not even the common courtesy of stating that the letter had been received. I at one time thought, and others have thought, that the management of the omnibuses might be committed to a mixed Commission, consisting of some Aldermen of the city and some Aldermen of the suburbs; but I doubt, myself, whether that would work well. I think they would quarrel among themselves; that the conflict of interests would occasion quarrelling and squabbling; and that the city, with its larger share of interest, and therefore larger representation, would have so great an influence on such a Commission, coupled with the non-attendance of the others, that things would remain as they are. I think, and I believe the opinion is becoming general, that the only safe plan will be to remit the matter to a Commission, leaving, as I said before, the enforcement of the by-laws to the city and the suburban authorities, each within their own boundaries. The expenses of the Commission might be paid out of the receipts, and the remainder divided rateably among the city and the boroughs, according to the number of omnibuses, the number of miles of road, and so on.

C. St. Julian,
Esq., J.P.

22 Feb., 1870.

184. By the receipts you mean the revenue arising from licenses, fines, &c.? I think the fines should go to the persons who lay the informations, as now; that is to say, that if the offence was committed within the city the fine should go to the city, and if within a borough to the borough; otherwise you would have no inspection. It will be seen at once that the revenue arising from licensing omnibuses, drivers, and so forth, would be quite large enough to pay all necessary expenses. The object, I apprehend, is rather the good management of the public vehicles than revenue. At present the city sicks all—the suburbs get nothing; they will, in any case, be no worse off. In 1861, I may mention, there was an effort made to bring about some arrangement with the city, but it failed. An effort was made by myself, in conjunction with the present Minister for Works, Mr. Sutherland, who was then Mayor of Sydney; but the City Council listened to nothing, kept the management in its own hands, and the matter was dropped. There is one objection I have heard started that at first startled me, but on reflection I do not see anything in it—that the omnibuses, besides paying licenses to the city, have in some cases to travel on trust roads, and pay heavily for tolls. On reflection I think that is beside the question. They pay, like other vehicles, for the use of those roads, just as they pay, in the way of license fees, for the use of the city and suburban roads, and for inspection, not as a tax.

185. Would not the proper regulation of the 'buses, to enable people in the suburbs to get to their business regularly as to time, be of more consequence to them than the amount of revenue? Yes, much more consequence.

186. That is the great defect of the present system? Yes, the utter absence of all regularity as to time.

187. Can you suggest any reason why the present by-laws should be broken with impunity daily? Bad inspection.

188. Is there any other cause within your knowledge? Bad superintendence by the City Council.

189. Have you looked over the Act by which the City Council are enabled to take these tolls and to regulate these 'buses? Not lately; I was pretty familiar with it when I did so years ago; I have a general notion of what the law is. I think there is an error in principle in committing the management of such a matter as this to such a body as the City Council, or such bodies as the suburban Councils—that is to say, the revenue and licensing ought not to be in the same hands. I think the licensing power should be apart from the money-receiving power.

190. Have you paid any attention to the licensing of water-vehicles? I have not thought so much about it. I think they should be in the same hands as the omnibuses—a central power managing the whole matter. The management should be in the hands of the same paid Commission. I speak with less confidence about boats; but I apprehend that the same principle that applies to stands for omnibuses would apply to landing-places for boats—they should be fixed by the local Councils.

191. Have you any knowledge of any system for regulating the departure of 'buses? I think there is no system in the suburbs, except that in some places there is a time-keeper paid by the 'busmen themselves; it is a very bad system. I think the time-keeper should be an independent officer—should in fact be the inspector. I think, too, the police might be made larger use of than they are now.

192. *Mr. Allen.*] You say the City Council have paid no attention to the recommendations of the Borough Councils? None whatever.

193. Do you know that the City Council have reduced the license fee on 'buses, to enable the Borough Councils to charge a fee? I heard the Mayor of Sydney say so the other day; but I know that on a former occasion they resisted it strongly. I speak of 1861, when the Council of Waverley endeavoured to impose a charge of the kind, and it was fought hard against by the City Council, and successfully.

194. You were Mayor of Marrickville last year? Yes, and the year before.

195. Was any communication made to you as to the reduction? None whatever. I do not think it was so understood, even by the 'busmen themselves.

196. Do you believe it is generally known by the Borough Councils that the reduction was made for that purpose? Certainly not.

197. As regards the appointment of stands, do you know that the City Council have paid but little attention to the recommendations of the Borough Councils in that respect? Comparatively none—no real attention.

198. Would you consider it correct if you were told that the Council always, or almost invariably, communicated with the Borough Councils before appointing the stands? The statement would be untrue, so far as my knowledge extends.

199. Have you any knowledge of the kind of supervision which the City Council has over these public vehicles? There are two or three inspectors I think, who go about—there used to be two; I am told there is a third now. There is very little inspection.

200. I presume it is mainly in the hands of the Mayor and two Aldermen? I believe it is practically in the hands of a few, as it must be in so large a body. There is a kind of committee I think.

201. Do you consider it objectionable that an elected body should have charge of the licensing of these vehicles? Not so much so as that they should be the body that receives the fees. I think that is vicious

- C. St. Julian, Esq., J.P.
 22 Feb., 1870.
- in principle. As I have said before, I think it objectionable that the same body of gentlemen who are receiving the revenue should also license the vehicles; there is an inducement to license unfit vehicles and unfit men for the sake of revenue.
202. How would you suggest that the by-laws should be better enforced than at present? I would have one code of by-laws enforced in the city by city officers, and in the suburbs by suburban officers; and I would use the police more largely.
203. The police could be of much more service than they are now? Yes.
204. *Mr. Farnell.*] How many persons would you have on the proposed Commission? I think probably three would be necessary. Perhaps one might suffice. Possibly you would want one person who understood boats, another who understood the management of passenger vehicles, and another who understood the management of carters.
205. Do you think if the matter was in the hands of one Commissioner, with proper officers under him, your idea would be carried out? It might be. A single Commissioner, with proper subordinates, might do as well as three. My chief reason for recommending three is, that I think there would be a better chance of good administration with three than with one. There would be too much power in the hands of one.
206. To whom would you give the power of appointing these Commissioners? To the Government.
207. You have spoken of allowing the suburban Municipalities and the Municipality of the City of Sydney to regulate the bus stands, and to conduct the prosecutions against busmen—would you not give the Commissioner or Commissioners power to prosecute also? Certainly.
208. Have you given any attention to the cabs? Some.
209. Do you know how they are regulated? I know less about them than I do about the buses. There is a freer trade in cabs. If you see a badly managed cab and another better managed, you take the better managed one and leave the other. I have not given that matter so much consideration as the other.
210. I believe there is no by-law to compel these buses to go on the stands and ply for hire, although they may take out a license? I cannot say.
211. You mentioned that on holidays some of these buses run to places of amusement instead of on their regular route? Yes, the whole lot of buses leave the place to which they belong, and where they get their living all the year round, and come into Sydney leaving their regular passengers to walk.
212. Is there any way of punishing them for leaving their usual route? Not that I am aware of.
213. Are you aware that buses sometimes leave their ordinary routes and go round to the theatres at night to pick up passengers? Often.
214. Do you think the present system of inspection, that is, by the Mayor and two Aldermen, is a good one? No, I do not.
215. *Chairman.*] Will you look at by-law 31? That does not apply to one day. They may all go off for one day, notwithstanding the inconvenience to their regular passengers.
216. *Mr. Farnell.*] Do you think these buses should be occasionally inspected by a mechanic—a coach-builder? There should be an inspection of the kind.
217. Do not these buses often break down? They do not often break down actually, but various minor accidents frequently occur, and they sometimes capsize.
218. A great many of them are in a dilapidated state? A very bad state; utterly unfit to run. Some of them are defective in every possible way.
219. Do you know whether any of the drivers are inexperienced persons? They are very often very inexperienced.
220. *Mr. M. C. Stephen.*] Mere boys, sometimes? Very commonly the lad drives when he is out of town; the driver stops and takes his drink, and the boy conductor drives on to his destination.
221. I was speaking of mere boys being appointed as drivers—I do not mean conductors taking the reins occasionally? It is so. The drivers of the Marrickville buses, with which I am best acquainted, are pretty good.
222. With reference to buses keeping to particular routes, and limiting the number—one passed quite recently? I have heard of such a thing. The City Council makes by-laws, but no one knows anything of them.
223. *Chairman.*] With reference to the statement made here the other day, that the City Council had reduced the charges, in order to enable suburban Councils to make a charge—do you not think that was unnecessary, because the suburban Councils are enabled to make such a charge, independently of the City Council? They have the power.
224. Under the 129th section of the Municipalities Act? Yes. My own opinion was that they also had the power under the old Act.
225. You have spoken of dirty boys being employed as conductors—would it not be impossible to keep these boys very clean, in consequence of the nature of their pursuit, being always on the dusty road, from morning till night? Perhaps so, but they might be a little better than they are.
226. Have you heard or seen that some of the buses are very filthy indeed? Yes, I have heard so.
227. Have you heard that some of them are infested with insects, classed by naturalists under the order *aptera*? I have heard of such things, the insects being designated by less scientific names.
228. Do you know how this particular business is managed in other places—centres of large population—in the neighbouring colonies, or the mother country? I do not. I believe in Melbourne much good has been effected by a public company.
229. To the company or the public? To both, I believe. I do not know anything about it of my own knowledge.
230. Have you any notion what the population of the suburbs now is? No, I cannot say at this moment; but it can be easily estimated. It is very large.
231. The efficiency and proper control of these vehicles is absolutely necessary for the public good? Quite necessary.
232. Have you anything further to suggest? A good reason for having three Commissioners is this: With three Commissioners—good practical men—there might be constant general superintendence. With a single Commissioner this would be impossible. His time would be wholly taken up by the internal work of his department. It is indispensable to efficiency that there should be such inspections by practical mechanics, as are alluded to by Mr. Farnell, not only as to vehicles but as to harness; and also, doubtless as to boats. And this inspection ought not only to be made at given times and places, but whenever occasion

occasion required it, and, so far as possible, when it was not expected. It is equally indispensable that there should be a general and constant supervision of the whole service, such as only persons in the position of Commissioners could exercise. The judicial power—that is to say, the power of inflicting punishment for breaches of the regulations—ought, I conceive, to be distinct from the executive power of the Commissioners; therefore I would leave all such matters to be dealt with, as at present, by the magistracy. A share of the fine should go to the informer, except in cases where such informer was a corporate officer, or an officer of the Commission. In such cases the whole fine should go to the corporation represented by such officer, or to the Commission, as the case might be. When informations were laid by the police the informer's share would of course go to the Police Reward Fund. The code of regulations should be based upon those now existing, with such modification as experience may have shown to be necessary, and these should be embodied in the statute appointing the Commission. The power to make further and subsidiary regulations, although a necessary one, would be one which the Commissioners would seldom have to exercise. It is of more importance that the Commissioners should be persons of good general ability and experience than that they have any mechanical skill as to vehicles or vessels. One Commissioner should be a good accountant. I do not see that the civic authorities could have any fair cause of complaint against the transference to a Commission of so much of their present powers. They would lose the patronage and prestige of licensing, but they would lose nothing else which they ought to retain. They would have the same power as at present of inspection, and of fixing stands and routes within the limits of the city, and they would have their full and fair share of the income derivable from public conveyances. For many years past they have had a large revenue to which they had no equitable claim. In my own borough, for instance, the lines of road maintained from corporate funds, which are traversed by 'buses licensed in the city, is greater than the lines within the city boundary which are traversed by the same vehicles; and there is a great deal more need for inspection within the borough than within the city.

C. St. Julian,
Esq., J.P.

22 Feb., 1870.

Simeon Henry Pearce, Esq., J.P., called in and examined:—

233. *Chairman.*] You reside at Randwick? I do.

234. You have been Mayor of the Randwick Municipality for several years? Yes, I have been Mayor five times, I believe, out of ten.

235. You are aware of the nature of the present inquiry? Yes.

236. From your knowledge of Randwick and its vicinity, are you of opinion that the public vehicles plying from Sydney to Randwick are mismanaged, or inefficient, or badly conducted, or, on the contrary, well conducted? I think they are altogether mismanaged, and very badly conducted. It is, in fact, the ruin of the neighbourhood, and detrimental to all the property in it. We are in the hands of two persons, brothers-in-law, who have quarrelled with each other, and they have put the people of the neighbourhood to very great inconvenience through their irregularities. We cannot get in or out at proper times; neither can the public generally, as they should. If we had the local control of the vehicles placed in our hands we should be able to manage the matter to our satisfaction, and the public generally.

237. Can you suggest any course that would be likely to be beneficial to both city and suburbs by a different mode of management? If we had the management ourselves we could work the matter very properly and efficiently for our people; but for the suburbs and city generally I think one comprehensive system ought to be adopted with reference to the management and regulation of all vehicles plying for hire.

238. Do not some of the 'buses pass through several Municipalities on their lines of route? In several instances I believe they do. Those going to Randwick do not, the boundaries of the City of Sydney and Randwick being the same.

239. Have you given any attention to the question of conveying passengers by water? I have often been on board steam-boats which have been very much over-crowded, and evidently required some regulation; and the boats in the harbour require better management than at present.

240. In your opinion would one central authority manage these matters better than at present? I certainly think they ought to be under one central authority. I believe the Water Police Magistrate regulates the boats now, but I do not know whether the steamers are under any regulations or not. I certainly think they should be, not only with reference to times of starting, &c., but also as to the number of passengers they ought to carry, for on various occasions I have seen them very dangerously over-crowded. I think a central management for all these matters would be better for omnibuses, drays, carts, and vehicles of every description, steamers and boats. I think it would be advantageous to the city, the suburbs, and the public generally, if they were all placed under one central control.

241. *Mr. Allen.*] Are there any other instances of complaint against omnibuses besides want of keeping time? Yes, there are many complaints. Many of the suburban 'buses are improper vehicles for passengers, unsafe to ride in, and beastly dirty; in fact, I am afraid some of them contain vermin. I have been informed that many of the drivers and 'bus boys sleep in some of these suburban 'buses at night, and according to information I have no doubt that many of them are the nightly abodes of something which is worse. The horses, too, are generally such inferior animals and in such bad condition that they cannot properly draw a loaded 'bus. Only yesterday I saw two miserable horses attempting to pull a load up Brickfield Hill, and the more the driver whipped them the more they backed, until they nearly backed into some man's window.

242. Have you seen incompetent persons acting as drivers? I have seen incompetent persons driving on the Randwick and other roads, very dirty, and not fit for any one to sit by them.

243. What is the state of the conductors generally? On our road there are scarcely any conductors at all; it is the exception, if such is the case, and then it is only a very little, sometimes dirty and ragged boy. There are two proprietors who have the management of our 'buses, and they do as they like; there appears to be no control over them; they keep the 'buses, and serve the people as they think proper.

S. H. Pearce,
Esq., J.P.

22 Feb., 1870.

- S. H. Pearce, Esq., J.P. 244. You think sufficient supervision is not exercised by the City Council? No, not at all. It is impossible for them to exercise the necessary control. Local control must be given, or the matter placed under one central board.
- 22 Feb., 1870. 245. Have you found the City Council willing to pay attention to the recommendations of the Borough Council? No, we never could get them to pay the slightest attention to any recommendation made by us, until about two months ago; they treated us with the greatest contempt by refusing to answer our letters, or granting our requests.
246. Have you any charge on public vehicles in your Municipality? No; we have not enforced our by-laws, considering that the charge made by the two Councils would be unfair to the proprietors.
247. Are you aware that the City Council have reduced their former charge of £10, to enable the Municipalities to impose a charge? I am aware they have reduced it from £10 to £7 10s.; but I do not believe for a moment that it was reduced for the purpose of giving the local Municipalities a chance. We all know that the prices and charges of everything have fallen, and 'bus fares have fallen from 1s. to 6d., and from 6d. to 3d. in most cases.
248. Was intimation of this reduction given to your Municipality? None whatever that I know of. I cannot for a moment believe it was intended to assist the suburban Councils at all,—for in such case they would have been notified accordingly.
249. Have you noticed the way in which the omnibuses travel through the streets, particularly the loitering and stopping at the cross streets? Yes, that is one cause of complaint. Our Randwick omnibuses, belonging to one proprietor, will wait on the city stand until driven off by the 'bus of the other proprietor. Sometimes our passengers have to wait one or two hours, because these two men, being antagonistic to one another, will not run regularly, nor start from the stands until another 'bus comes in to start them.
250. Is it not a common practice to stop at the cross streets where there is great traffic, such as King-street and Market-street? Yes, sometimes they will stop for five minutes at a time, and then go slowly until they have collected all the passengers they can.
251. The city inspectors take little heed of these things? It would require a hundred inspectors to watch at all the places they go to, and along the routes connecting the city and suburbs.
252. I am alluding particularly to Sydney streets? I do not think they take much notice of them as long as they pay their license fee to the City Council. There does not appear to me to be any proper control or any supervision whatever in the management of vehicles. I know that property has fallen in our neighbourhood at least 25 per cent., on account of the irregular and uncertain traffic of the omnibuses. People are leaving the place; they will not stop there because they cannot get in and out. I was about suggesting to our Council the propriety of giving a bonus to some one to come in opposition to these two men, but I fear that would have no beneficial effect, because they the present proprietors would then probably put their heads together, and hunt the opposition 'buses off the road.
253. *Mr. Farnell.*] You say that the people of Randwick are at the mercy of these two men—how would it be if they took the 'buses off altogether? That would be better than the present system, because then people would provide vehicles for themselves; several have bought buggies and some horses, to ride in themselves, because they could place no dependence upon the 'bus traffic. A gentleman who has taken a house of mine for three years says that if he could get out of the lease he would leave the place.
254. You have spoken of vermin infesting these omnibuses; they might be carried into them by persons going in, independently of these people sleeping in them? No doubt such may be the case.
255. *Chairman.*] Any person, however dirty he may be, seems to find a passage in the 'buses? Yes; there is no regulation at all that I am aware of as to that. I have often seen dirty men sitting beside ladies in 'buses.
256. What is the language generally used by these 'busmen? It is sometimes most filthy and foul. Not more than one in ten of them ought to be licensed at all. There are, of course, exceptions; I know 'busmen who are very respectable, but the majority are apparently of a very low order.
257. Do you think many of these drivers have been brought up to the driving business? I do not think they have; they may have been able to drive a baker's or butcher's cart, and when they can get nothing else to do, it appears that they go as 'bus drivers.
258. Have you ever noticed that they break in young horses in these 'buses? I believe that it is a very common practice. They put what they call the kicking gear upon them, put them into a 'bus, and break them in in that way.
259. They put a young horse alongside a steady old one? Yes.
260. That is very dangerous? Yes; but profitable to the proprietor.
261. You have said some regulations are required with reference to steamers carrying passengers—Are you aware that there is a law in force that regulates the number of passengers? I know there is a law, but who is there to look after its enforcement, unless any policeman happens to see them? "What is everybody's business is nobody's." If the attention of the police is not drawn to them they scarcely ever trouble themselves to convict the offending parties.
262. It is their duty to do so? No doubt; but none of these matters that are placed as general duties under the surveillance of the police are carried out as strictly as they should be, being too numerous and difficult.
263. Have you any policeman stationed at your Municipality? Yes, one.
264. Is he in the employment of the Corporation in any way? No.
265. Could not an application be made to the Inspector General of Police, to allow this constable to do the duty of inspector of public vehicles? They will not, I believe, allow him to do anything under the Council, unless he is paid some small sum per annum; they have offered us to do that; but I never could see the justice of a policeman being appointed and paid by the Government to carry out the law, and then the Municipal authorities having to pay him to do the same work.
266. *Mr. Farnell.*] Do you know whether this salary would be in addition to the salary the policeman receives from the Government? I believe it would. It is not the amount I object to, but the principle of paying twice for the performance of one duty.
267. *Mr. M. C. Stephen.*] When you talk of a body of central control I gather from what you say that there should be some other body than the City Council? Just so; a special Commission of three, I would suggest, to manage the whole matter—three practical men, who could understand the duties they were entrusted to carry out.

268. Why do you consider the City Council inefficient? Because they have so many prejudices connected with their management, and also their own interests to attend to. I think the license fees could be so arranged as to pay all the expenses of management, and do justice to the City of Sydney and all the suburban Municipalities.

S. H. Pearce,
Esq., J.P.
22 Feb., 1870.

269. How would you have the license money disposed of? I think if they were to charge £7 10s., as they do now, for a four-wheeled vehicle, a certain sum should be set apart for general expenses of the Commissioners, and the remaining portion should be divided between the City of Sydney and the suburban Municipalities; for instance, between Sydney and Randwick it should be divided equally, one moiety to each, and so with all Municipalities directly connected with the city; but where the omnibuses run through three or four Municipalities the city ought to have perhaps one-third, and the Municipality to which they run—the further one—one-third, leaving the other third to be divided, if there were two others, say—such as Newtown and Marrickville—according to mileage. That could be easily arranged on some equitable principle. Where they run on trust roads only the intervening Municipalities should have nothing.

270. Do you not think it would be well to regulate the amount of the license fee so as nearly as possible to pay expenses only, without leaving anything for division amongst the Municipalities? I think it would be right that these omnibuses which cut up the streets so dreadfully should pay something towards mending them. They are more destructive to the roads than all other vehicles put together—more destructive even than heavy carts drawing stone. They go at a rapid pace, and their wheels are so narrow that they cut deep into the roads, whereas cart-wheels are broader, and do not make so much impression. I think they ought to contribute something towards the damage they do. I think if the maximum fee were fixed at £7 10s. per annum for four-wheeled omnibuses, and £5 for two-wheeled ones, and divided, as I have suggested, it would give general satisfaction to the omnibus drivers, and to the various localities interested.

271. How would you have the fares regulated—by competition among the omnibus men, or by the Commissioners? If the Commission is appointed I would suggest that they should have the power to make by-laws to regulate the fares, &c., and the number of 'buses on each line of road. I think we ought to encourage legitimate traffic in all cases. For instance, if there were twenty 'bus-drivers going to Randwick they would starve one another; therefore I think the fares ought to be regulated by the Commissioners as well as the number of 'buses for each stand in each locality.

272. How would you have the inspection of omnibuses carried out, as to their continuing suited for the purpose after being licensed—Would you have them inspected half-yearly or quarterly, or let the inspectors take them unawares? They should be examined and approved by the Commissioners quarterly. I would let the inspectors go round occasionally, and if they saw anything going on wrong, let them bring the offenders before a Court at once, and if the fine was heavy the proprietors and drivers would very soon keep their vehicles in order, and perform their duties in a proper and regular manner.

273. You would have them subjected to a sort of perpetual inspection? Just so—that would be necessary. I would allow any person to become a common informer of any impropriety, and that would soon rectify all the evils attending the present system.

274. *Chairman.*] Would you let the inspectors travel free by the 'bus when on duty? No; because then they would be known to all the drivers. I would let them go about like detectives, and pay their way the same as other passengers.

275. Are you aware how many inspectors the City Council employ? I believe there is one chief inspector and one or two under him. How many time-keepers they have I do not know.

276. Do you know how the time-keepers are paid? I think they are paid by the 'bus-men themselves.

277. Then the 'bus-men, being their employers, they are not likely to be very troublesome to them? No, I think it a bad principle for servants to pay those placed over them.

278. *Mr. M. C. Stephen.*] Is there any punishment if they do not start at the proper time? I think when that occurs they have to go at the lower end of the rank. Perhaps they do not care about starting at the proper time, and that is no punishment. I have heard of passengers having to sit in a 'bus at Wynyard-square for nearly a whole hour, because the driver was dodging the time and would not go till the other 'bus came to force him off.

279. *Chairman.*] Have you any idea of the number of 'bus-men, cabmen, carters, and others, employed in connection with licensed vehicles? I have not, but it must be a great number.

280. Their influence would be material in an election? No doubt of it.

281. Would not that account for a lax system on the part of those who have to go to election every second year? Yes, I should say it is a very great lever to be used on those occasions.

282. So that if an inspector makes himself troublesome to certain persons he is likely to be visited? Yes, no doubt there is something done at all these elections by which political services are rewarded.

283. Have you come across any such conduct as that in your experience? No, I cannot say I have; it is only a common observation, formed on general opinion.

284. Have you paid any attention to the crowded state of the streets in certain parts of the city lately? Yes, they are sometimes so much crowded as to be highly dangerous.

285. Would it, in your opinion, be expedient and practicable to divert the traffic from some portions of the main thoroughfares at certain hours of the day? Yes. The City Council have lately done something in that way. Some of the 'buses are made to go up Pitt-street instead of George-street, as they all used to do.

286. Do you think it would be desirable to compel boats plying for hire to carry grappling-irons and other life-preserving implements? I think it highly necessary, because in our harbour we often hear of accidents occurring through sudden squalls, and from the want of ballast and other appliances. I think they should carry small cork life-buoys, or some of those articles generally used in life-boats for such purposes.

287. Does anything else occur to you to suggest to the Committee? No, I think I have stated nearly all I have to say.

288. Considering the number of persons engaged in this kind of traffic altogether, is it, in your opinion, desirable that any system of licensing should be resorted to at all in the matter, or that it should be left to free trade? I do not think you could get proper control over them unless they were licensed and placed under proper supervision.

289. Competition would not do? I think not.

S. H. Pearce, Esq., J.P.
22 Feb., 1870.

290. If there were no license fee to pay, would not the public have the advantage in low fares? No. The 'bus proprietors could scarcely charge less than they do at present—3d. for travelling in the city, and 6d. for such a distance as that to Randwick. All who ride ought to pay for it. It would not be fair to make the ratepayers of the Municipalities keep the roads in order for those who ride in vehicles, and charge them nothing for doing so.

Mr. Edward Oram examined:—

Mr. Edward Oram.
22 Feb., 1870.

291. *Chairman.*] What are you? Inspector of Licensed Vehicles.
292. You were appointed to that office by the City Council? Yes.
293. Can you state to the Committee by what authority the City Council exercises control over omnibuses and other vehicles plying for hire? By the Act 20 Victoria, No. 36.
294. That is the Corporation Restoration Act, by which certain powers are restored to the City Council, one of them being to regulate carts and other vehicles employed for hire? Yes.
295. Will you explain to the Committee the nature of your duties under your appointment? In the first place, to see that the by-laws are carried out—that the vehicles are kept in a proper condition—to maintain a general supervision over the licensed vehicles in the city and its suburbs, within a distance of eight miles—and to prosecute all offences against the regulations.
296. Have you any assistant? One.
297. What is his designation? He is senior-constable of police, and is detached from the police to serve summonses and warrants.
298. Then the whole supervision of this omnibus business is in your hands individually? Yes.
299. Can you state to the Committee how many licensed vehicles of all sorts are under your control? The numbers for the present quarter are—180 omnibuses; 23 omnibus cars, or four-wheeled vehicles, drawn by one horse; 40 hackney carriages; 184 cabs; 120 drays.
300. Then there are the drivers of those vehicles? Yes.
301. And there must be a number of persons in the shape of owners connected with them? Yes; they are classed as proprietors and drivers. In some cases the proprietor is his own driver.
302. You are aware of the nature of the inquiry of the Committee? Yes.
303. Is it within your knowledge that this kind of business is in many respects conducted very unsatisfactorily to the public? I read the reports in the newspapers.
304. What does your own personal experience teach you? There is one thing in which it materially fails,—that is, in the carrying out of that particular regulation which relates to the performing of a journey in the time specified by the by-laws. There is no provision made by the Council to enforce it. The only mode we have of doing it is one which very casually occurs, and that is by sending the man I have as an assistant to one end of the line while I remain at the other.
305. The net income arising from licenses and fines amounts to a very considerable annual sum—does it not? Yes.
306. What are the charges against it, beyond your own salary? £60 a year for this assistant, and the same amount for a lad who is employed writing in the office.
307. Your salary is how much? £275.
308. The £60 paid to the policeman is in addition to the policeman's pay? Yes.
309. Is that as far as you know the cost of the management of this business to the City Council? No; you will find by the by-laws that the Town Clerk has duties to perform—the licenses are issued by him; the City Solicitor also attends at the Police Office, and conducts all cases connected with the breach of the by-laws.
310. Then a portion of each of these officer's salaries should be in proportion to the amount of work performed by them charged against this fund? Yes.
311. Then you know of no other charges against it, beyond the proportion of these officer's salaries, and the £395 a year you have mentioned? No.
312. Did I understand you to say that it is within your knowledge that much dissatisfaction prevails among the public as to the efficiency and general control of these vehicles? Yes.
313. Are you able to suggest any alteration with a view to improvement? I should certainly suggest that the men now acting as time-keepers should be the Corporation's servants, or the servants of the authorities who have the management of the matter.
314. Are they not in the service of the Corporation now? —
315. How are they provided? The proprietors pay them.
316. That is wherever they are voluntarily appointed? Yes, they are appointed by themselves, for the benefit of good order.
317. Are time-keepers provided in all the suburbs, or will you state to the Committee where time-keepers are kept in the way you speak of? At Newtown, Waverley, Woollahra, and the Glebe. These are the only places where there are time-keepers.
318. The time-keepers only know the time at which they arrive at their journey's end; they have no knowledge of their intermediate conduct? They do not even know the time of their arrival. They only keep the time of starting. The way they manage this business is very different from what it would be if it were in other hands. There is no check upon the time the 'buses are on the road.
319. What is the character of the persons engaged in this service generally? I should say the majority of them are respectable men.
320. That is rather more than half? More than half.
321. What are the others? There are men who have no capacity for business in any way, and who are very untidy.
322. What kind of vehicles are in use generally? I should say the cabs and carriages are as good as are in use in any part of the world.
323. The omnibuses? The majority of them are in good condition.
324. Are many of them unfit for the purpose? The construction clause in the by-laws passed by the Council has not been sufficiently enforced, as it was intended. The old vehicles have been altered so as to come within the provisions of the by-laws, and there are many of them not good; but the vehicles which have been built since the construction clause was passed, are good vehicles.

325. Has not much dissatisfaction prevailed in the suburban Municipalities as to the control of these 'buses? There have been complaints as to their not having the right to appoint stands where they choose, without reference to the City Council. Mr. Edward Oram.
326. *Mr. Farnell.*] You said something just now about the "construction clause"—what do I understand you to mean by that; is that a clause that construes these by-laws? No, the construction clause prescribes the size which the 'buses shall be built. 22 Feb., 1870.
327. Were these by-laws made by the Aldermen? Yes, and assented to by the Executive Council.
328. I suppose the Aldermen are not all coachbuilders? No, only one of them is.
329. Did you, the Corporation, or those persons who inspect the 'buses, ever order the proprietors to make alterations in their 'buses? Yes.
330. Is there a certain space allowed between the seats? Yes, 2 feet.
331. Is that provided for in that clause? Yes.
332. That insists upon there being 2 feet between the seats, irrespective of the width of the seat itself? Yes, that is what I allude to when I speak of the fact of the vehicles built before the passing of these by-laws not being so comfortable.
333. For instance, a 'bus may be 2 feet 6 inches wide; there would be no objection to license that if there were 2 feet between the seats? That would be an extreme case.
334. Would not that come within the by-law? They would not license it.
335. Do they not grant licenses according to their own by-laws? Yes; under the 24th and 25th by-laws.
336. Then these persons who inspect the 'buses have no discretionary power? I am not aware what discretion they have.
337. You say they would not grant a license to a 'bus that was 2 feet 6 inches wide altogether inside, if there were 2 feet clear between the seats? The same by-law that provides for a 'bus being 2 feet between the seat, also provides for the length of the axle, and naturally infers the width of the 'bus to be proportionate.
338. Your duty I believe is to see that these persons do not loiter along the street, and so on? Yes.
339. Can you perform this duty efficiently without assistance? No.
340. Have you sufficient assistance? No.
341. What is the character of the persons who are generally employed in driving 'buses? The majority of them are decent men.
342. Have they all been trained to driving, or the majority of them? I should say so.
343. Do you inspect the 'buses as to their capability? Yes.
344. And see if they are clean and so on? Yes.
345. Are you a coachbuilder? No.
346. You could not tell whether a 'bus was properly constructed or not? Yes, I could.
347. Not being a coachbuilder? Yes.
348. Could you tell whether it was properly made? Yes.
349. And properly put together? Yes; I have been brought up to work in wood all my life.
350. Sawyers' work in wood? Yes; but I can construct as well as most men—I earned my living for six years as a joiner, and two as a millwright.
351. You think that gives you a sufficient qualification to enable you to examine these 'buses? Yes, I think so; as far as the construction is concerned.
352. There are 'buses that ply about at night to the theatres and other places of amusement? Yes.
353. Are they under any regulation? They are simply allowed by consent of the Mayor.
354. Specially? Yes.
355. How do they get permission from the Mayor; do they go and ask him? Yes.
356. Personally? Yes.
357. These cabs or hansoms that ply about the town—are they under your supervision? Yes.
358. Do they not ply for hire at night—at all hours of the night? Yes.
359. Are they under your eye of a night? I am generally out about three nights of a week late, occasionally till 1 or 2 o'clock in the morning, and when I am out late at night I stop in in the afternoon.
360. What kind of passengers do these people pick up in these short hours of a morning generally speaking—I mean those who are about the theatres and who keep moving about? Such persons as visit ——— eating-house in Pitt-street—a house that keeps open late, nearly all night; they seem to be chiefly prostitutes.
361. *Mr. M. C. Stephen.*] Have these men separate night-licenses as distinguished from day-licenses, or do they ply day and night? There is no distinction; very often a cab that is used during the day by one driver has another horse and driver at night.
362. Do I understand you to attribute the principal grievance of the public, with reference to licensed vehicles, to the insufficiency of the inspection? Yes.
363. You in fact cannot be in two places at once? That is the difficulty.
364. There is only one man to attend to this duty? Yes; the other man is out of doors serving summonses, and if he sees anything irregular he takes note of it; but it is only occasionally that he can render me any material assistance in the performance of my duties.
365. *Mr. Clarke.*] Do I understand you to say that omnibuses coming in to the theatres at night must have licenses from the Mayor? Permission to leave their lines of road.
366. After 7 at night is it not understood by them that they may have this permission? One from each stand; and it is done on this understanding, that the omnibus which obtains such permission shall be the last to leave the stand on the following morning.
367. Where there is no time-keeper in the suburbs, what means are there of compelling the omnibuses to start at the regular time in rotation? Each man looks after the others, to see that he gets his own.
368. Do you not think it would be advisable to keep time-keepers at both ends? Most decidedly; and during the time that Mr. Moore was Mayor, the matter was brought before the Council. The Mayor was very anxious about it, and he arranged that I should test the matter by having time-keepers, and an engagement was made with the proprietors to pay to me a certain sum, leaving me to pay the time-keepers; and during the six months that it was tested upon the road to Surry Hills, that was found to be the best conducted road in Sydney.

- Mr. Edward Oram. 369. You think if time-keepers were appointed at all the suburbs, more regular time would be kept? I do not think it would be necessary on all, but I think a few tables might be constructed, and a person might be stationed at a certain point upon a line of road.
- 22 Feb., 1870. 370. *Mr. M. C. Stephen.*] For instance, a person put upon the Paddington Road might supervise the omnibuses to Waverley and Woollahra? Yes.
371. At present, if a man chooses to start before his time, there is no means of punishing him? No, unless by a person who rides with him—he may prosecute him.
372. There is no by-law compelling an omnibus to start at a certain time? No, but he can be punished for starting out of his turn, or for loitering along the road. Each omnibus is required to start so many minutes after the previous one.
373. *Mr. Clarke.*] That cannot be carried out without a time-keeper? No; but the law might easily be altered, so as to compel the omnibus to complete the journey within a certain time from starting, and this would render unnecessary more than one time-keeper to each stand, as the time would be kept at the starting place.
374. *Chairman.*] It is your duty to report quarterly to the Council, under the by-laws, the state of efficiency of the omnibuses? Yes.
375. Is that regularly done? Yes, the report is made up and sent to the Mayor; those that are out of condition are sent up to the Town Clerk, and are inspected at once.
376. They are inspected by the Mayor and two Aldermen? Yes.
377. Have you no power to inspect them? I bring them before the Mayor to see whether he will condemn them.
378. Is it possible for one person to have efficient control over all these 'buses, cars, and vehicles you have spoken about? I think not.
379. Is there any rule for providing certain suburbs with the necessary accommodation for getting in and out on holidays, when a large number of persons go to particular places of resort? There is no distinct rule.
380. Is there anything to prevent the inhabitants of any suburb from being left entirely without the means of getting into and out of Sydney—as in the case of the fête at Botany? Yes, by prosecuting the proprietors when they leave their particular line of road.
381. Then all are liable? Yes.
382. How is it that some of them go off? Because the Mayor gives them permission.
383. Is that provided in the by-laws—is this power delegated to the Mayor? No.
384. Then it appears to be an assumption on his part? The object is to accommodate the public.
385. Do you regard the North Shore as within eight miles of Sydney? Yes, it decidedly is.
386. For the purposes of the by-law? I made inquiry when I took office whether I was to go to the North Shore, and I was told I was not.
387. You are completely under the control of the Mayor? I am.
388. You have no independent position for carrying out the law? No.
389. You are daily under the direction of somebody in the Corporation? Yes.
390. *Mr. M. C. Stephen.*] Supposing you were about to prosecute a man and the Mayor told you you were not to do so, what would you do then? I would obey my orders and would not do it.
391. *Chairman.*] Can you suggest to the Committee any means by which the condition of this public service could be improved—I mean having also regard to your being a public officer in the employ of the Corporation? I think not. If the by-laws were strictly enforced, and the present provisions were carried out, a great deal more might be done.
392. *Mr. Farnell.*] Do you not think it would be better to have an officer, independent of the Mayor and Aldermen, to manage this business? I think if there were an independent officer, and he got rid of a bad man, he would not be ready to admit him again so readily as is the case at present.
393. After several complaints a 'bus driver or proprietor is deprived of his license? Yes.
394. Is there any set time within which he cannot again receive a license? The provision of the by-law is that the Mayor can suspend or cancel a license; but it sometimes happens that if a man has had his license cancelled, he can have it renewed within a shorter time than if he were merely suspended. In the case of suspension the time is say three months, or more or less; but when a license has been cancelled it has sometimes been renewed within that period.
395. We may assume, I suppose, that the influence of an aldermanic friend is brought to bear in such a case? I do not know whether it is owing to the influence of an Alderman or not—I think the present system would be improved by a greater amount of inspection. When the Mayor gave me a man to assist me the benefit derived from the additional man was perceptible. In less than ten days 300 drays have to be licensed, and while these are being attended to I am of course obliged to neglect other duties.
396. *Mr. Clarke.*] Have not the police the power to interfere with 'buses? If they see them loitering in George-street, but they do not prosecute under the by-laws. The difficulty seems to be this: That under the police a certain moiety of the fines under the Police Act goes to the Police Reward Fund; but if they prosecute under the by-laws the fines are paid into the City Treasury, and no portion goes to the Police Reward Fund.
397. *Chairman.*] Is it true that a large number of boys are kept for a long time idling upon the stands waiting for their turns? On the Glebe stand they are idle about eight hours, and work about four hours a day.
398. These boys only loiter about and do mischief? Yes, they learn mischief.
399. *Mr. M. C. Stephen.*] They are perfectly idle at all events? Yes; they have no means of employing themselves. The provision made by the Council to abolish that state of things is to limit the number of omnibuses on a line, by dividing the time occupied on the journey by the interval between each omnibus on the road, and leaving one omnibus at each end.
400. On the Glebe stand there are thirty or forty 'buses? The reason they have not been interfered with is that these men consider that they have a kind of vested right in the line, and the question to be solved has been, who should be moved off. The plan now adopted is to refuse to renew the licenses as they fall in.
401. *Chairman.*] It has been given in evidence that a number of horses are broken in in 'buses, while plying with passengers? I think it is done in some cases; but generally I think they are partially broken in before; and they are made to work with other horses to break them in to double harness.
402. It has been given in evidence that some of the 'buses are very filthy indeed, and are infested by noxious insects? I never saw any.

WEDNESDAY, 23 FEBRUARY, 1870.

Present:—

MR. CLARKE, | MR. FARNELL,
MR. M. C. STEPHEN.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Mr. Matthew Clark examined:—

403. *Chairman.*] You are aware of the nature of the present inquiry? Yes. Mr. M. Clark.
404. You are the owner of several vehicles plying for hire? Yes, seven omnibuses, three licensed carriages, a licensed safety; and four private carriages, for which I do not pay licenses, and which do not come under the Act. 23 Feb., 1870.
405. To what places do your omnibuses ply? To Double Bay.
406. Are you aware that there is much discontent on the part of the public as to the general management and control of vehicles of this description? As far as I am concerned, to speak individually, I think there is a very great want of management.
407. That they are neither efficient nor well conducted? Nor well conducted.
408. Can you assign any reason for the present unsatisfactory state of things? Yes.
409. Will you be kind enough to state your views to the Committee? My present license extends to the end of December, and no doubt what I state will come before the Mayor and Aldermen, and if it is in their power during that time perhaps they may try to crush me, but if I comply with the rules, and I have as good horses and as good 'buses as any of the 'bus proprietors, and I pay 5s. a week more to my drivers and conductors, as I wish to have respectable men —
410. You have just made that statement as preparatory to some other to show why the public were dissatisfied with the present management of public vehicles? Yes. If I comply with the rules I need not care for the Mayor or any one else, and what I say I can prove.
411. Will you favour the Committee with your views? Our license extends—and I believe Mr. Stephen will bear me out in that—to the 31st December of each year; and during the time the license has to run, vehicles may be inspected to see that they are in a fit state. At the commencement of the year they are required to be inspected before a license is granted. Last year an advertisement was put into the paper, saying that all 'buses were to be examined and passed before the end of the year, but as I was very busy I did not see the advertisement, and as it is a thing that has never been done before, I did not send up my 'buses. New Year's Day fell upon a Saturday (that was a holiday), Sunday was a holiday, and Monday also; and it was not 'till Tuesday that I sent my vehicles to be licensed. When I went up to Wynyard-square, Mr. Alderman Bradford and the Mayor told me that they would not license my vehicles, that I had broken the law, that the vehicles should be examined before the end of the year. I said I was sorry for I had not seen the advertisement. Mr. Alderman Bradford, who is a publican, said there was a party in his house who said, "Clark said he would pass his 'buses when he liked." Mr. Alderman Oatley was with me at the time, and I said I had never said anything of the kind; he then turned round to me and said he would not believe anything I said upon my oath; I replied that my oath was as good as his, for I did not know at that time that he was an Alderman. The upshot was that he went to the Mayor and told him not to license any of my 'buses.
412. Do you know that of your own knowledge? Yes; he told me he would not pass my carriages at that time, and that I had forfeited my road. I then went to Mr. Stephen, and he wrote a letter the same day, showing that my last year's license had nothing to do with this year's license, or their inspection either, that it would only have to do with the year after. Mr. Oatley took the letter that Mr. Stephen had written to the Mayor, and he said he thought they were bound to pass my vehicles. After consultation, Mr. Oatley said he would not sit if they did not pass them; that I had expended £2,000 or £3,000 upon the road to the satisfaction of the inhabitants, and had kept good horses and 'buses and respectable drivers, and if that was the way they treated people they could not expect to get proper convenience for the public. After that the Mayor sent word to me that he would grant the license.
413. You cite that as an instance of the partial administration of the law? Yes; and to show the Committee how absurdly these things are managed. I may mention that by a recent by-law it is provided that there shall be 2 feet clear between the seats; so that in the case of old 'buses, in order to comply with this by-law, 4 inches have been cut off from each seat, and the passengers have had to sit upon a mere rail instead of a comfortable seat. The width of the seat is not provided for. In forty 'buses the width of the seat was thus diminished at the commencement of the present year. Thus blunders arise from the want of competent men to inspect the vehicles. Mr. Alderman Bradford and Alderman Chapman passed all the 'buses this year.
414. *Mr. M. C. Stephen.*] You have said something about forfeiting your road—what do you mean by that? The Mayor said to the 'bus proprietors, "You can go on Clark's road." I was told that he said to the 'bus proprietors who had passed —
415. *Chairman.*] Confine yourself to what you know of your own knowledge? Mr. Bradford and the Mayor told me to my face that I had forfeited my road, and that they would not pass my 'buses; and four or five men came to me and said that they had told Pugsley and others that they could run upon my road.
416. Will you, as shortly as you can, state to the Committee anything that is within your own knowledge, to prove the mismanagement of the 'buses by the authority of the Municipal Council of the City of Sydney? I have not seen the new rules, but they have limited the number of 'buses to run on each road in the new rules. Eight 'buses are now allowed to run upon my road; so that if eight proprietors, with one 'bus each, or one proprietor with eight 'buses, which had been passed at the end of 1869, had applied for licenses to run upon that road before I had obtained mine, I should not have been able to run at all on that road, after building stabling at the cost of £600 or £800, and buying the right to run from three different companies.
417. Is it your opinion that the Mayor and two Aldermen are an improper board or tribunal to manage these matters? Yes.
418. What would you suggest in lieu thereof? I would suggest that there ought to be either three or five men—one of them a practical man—a coachbuilder.

- Mr. M. Clark. 419. Is it within your knowledge that a large number of omnibuses and vehicles, plying in the city, are inefficient and badly conducted? I am sure of it; there are plenty who do not comply with the rules, but
- 23 Feb., 1870. which are passed through the influence of one of the Aldermen. 'Buses and horses belonging to one man are passed by one Alderman, however bad, and another man is hunted from the door with a better turn-out.
420. Mr. M. C. Stephen.] You think there is a little favouritism? I am sure of it; many of the Aldermen are publicans, and if a man visits a certain house pretty regularly his 'buses and horses will be passed. I see it every day.
421. Chairman.] What means are taken to secure the proper arrival and departure at the stands? So many 'busmen pay 6d. a day, or so much a week, to a man to keep time. In the city there are time-keepers, but in the suburbs there is no time-keeper.
422. You mean in your suburb? I do not know any suburb where there is a time-keeper. There is none in my suburb.
423. If there were, you would be the payee of the time-keeper? I have seven of my own 'buses there, and there is one other.
424. Then you would be the payee of the time-keeper, if you had a time-keeper there, or at least of seven-eighths of his pay? Yes.
425. Then he would be pretty much under your control? Yes; but they are not so much wanted in the suburbs as in the town.
426. Will you explain that? Because the men themselves keep the time, and they must be in Sydney by a certain time to take their turn on the stand.
427. Mr. M. C. Stephen.] That would not apply to a place like the Glebe, where there are thirty or forty 'buses on the stand? There are two time-keepers there—one at each end. In other places there are not more than two or three 'buses running, and then they will take care to be in Sydney in time to take their turn.
428. Chairman.] You were proceeding to state the causes of the general inefficiency of the omnibuses, and you mentioned partial management as one thing? Yes, it is partial and inefficient, because, although the inspector is a very respectable man, he must do what the Aldermen directs. If an Alderman sends up word to him to summon a 'bus, or not to pass a 'bus, he is bound to comply with his instructions; but I can point out a dozen or two dozen 'buses that are not fit to run in Sydney, and which are not complying with the rules; the 'buses are bad, the horses are bad, the boys are dirty, and often have not a bit of shoe to their foot.
429. The official permission being given to the running of such 'buses would have the effect of demoralising the whole affair? I should think so.
430. No person would take care to have his 'bus in good order while a number of such persons as you have referred to were allowed to enter into competition with him? If a man has good 'buses he will keep them so, and will take a pride in them, but it is not fair to them that others should be allowed to obtain a license who know nothing about the business, who have wretched horses, bad 'buses, and boys of sixteen or seventeen who are not fit to drive. There are lots of drivers who are not above sixteen or seventeen, and the conductors, who should be fifteen, are often not above ten or eleven, and have not a shoe to their foot.
431. Is it within your knowledge that some of the 'buses are very filthy in themselves? So far as I can judge from seeing them in the street I should say they are; of course I do not like to go to them to examine them.
432. It would be a difficult thing to keep boys and men, who are from morning till night driving along a dusty road, perfectly clean? Yes, very difficult; but still it is very easy to see whether a person washes every morning, or whether he does not wash once a week. At Double Bay we always make a point of taking out our cushions and dusting them.
433. Has it come within your knowledge that some of these drivers, who have been punished for breaches of the by-laws, and who have lost their licenses, have been restored without any apparently sufficient reason? No, I think they have not been restored until after a certain time. After a certain number of fines have been imposed the license is cancelled, and I think the party must remain for three months without a license.
434. Mr. M. C. Stephen.] Who pays the fines? The party who is fined.
435. Supposing a boy to be brought up, does the fine fall upon the boy, or upon the master of the 'bus? It comes upon the master. Last week I was fined by Mr. Birrell, because one of my boys did not wear his livery, although I proved that he had it on when he left the yard. They are required to wear a blue coat, with red binding, and to have the word "conductor" on their cap.
436. Mr. Farnell.] Do you know whether these 'busmen generally break in young horses themselves? They do frequently.
437. Do you know whether any of these boys or drivers make a kind of bed-room of their 'buses at night? I believe they do—plenty of them.
438. Do they not sometimes go off their regular line of road for a day? Yes, they have had that liberty. If engaged by a private party they can go anywhere with it—I have some engaged at the election to-day.
439. On holidays are they not sometimes taken off the line altogether? At holidays they have the privilege to go where there is likely to be the most traffic, for instance, to the races, or to the sports at Botany, or any other place.
440. Is there any regulation with reference to 'buses going to the theatres, or places of amusement at night, or standing in the street? There is no regulation.
441. Are you aware that the 'buses do so? Yes, but none of mine do; but there are plenty that go and stop till 2 or 3 in the morning.
442. Do you keep hackney carriages? Yes.
443. And hansom cabs? I have only one of these on the stand.
444. Do not some of these hansom cabs ply during the night? All night; some of them do not come on till 8 or 9 at night, and they ply all night; I believe there are some plying now without a license; they cannot get a license, and they do not come out now until it is dark.
445. Do they go to any particular stand at night? I do not think they do, but they go to the theatres, and move about where they like to pick up a job.
446. What class of persons are they likely to pick up about the streets at 2 or 3 o'clock in the morning? I should say not very respectable—sometimes they might pick up a respectable gentleman, who had been out

out to a party, but I should say there are a dozen men in Sydney who live entirely by carrying about prostitutes all night, and people the worse for drink; these do not come out till after dark; these cabs go down to the steam wharves at night and wait for their arrival, and many of them would never be hired by a gentleman in the day-time. Mr. M. Clark.
23 Feb., 1870.

447. The 'bus fares are not regulated by the Corporation? No; but you are bound to have the fare painted on the 'bus—so much before 10 o'clock and double fare after 10.

448. The proprietor fixes the fare? Yes; for instance, the fare to Double Bay used to be 1s., but now it is 6d., and the Woollahra 'buses—some of them run for three-pence; but that is a matter regulated by the proprietors themselves, and the fares are brought down by opposition. To prevent an undue opposition, and the racing and annoyance which arises from it, Mr. Alderman Mackintosh brought in a by-law to limit the number of 'buses running on any line of road. Sometime ago there were thirteen running on the Double Bay road, and there was not sufficient traffic for them, and there was constant racing and danger to passengers. Now the number is limited to eight. If there is not a sufficient number for the accommodation of the public they can petition the Corporation for an increase in the number.

449. Do you think this matter ought to be taken out of the hands of the Corporation? I think so. We have to pay a heavy license—£7 10s. for each 'bus; and besides this I pay £200 a year to the Rushcutter's Bay toll for the 'buses alone.

450. *Mr. M. C. Stephen.*] What is the usual length of time per day that the 'buses run? From 8 in the morning till 8 at night. Those are the usual hours; of course some run later, but when they do they do not go on so early in the morning, and those that run until 11 at night take the last turn in the morning.

451. On holidays, when omnibuses have an opportunity of going to places of amusement, are the inhabitants of the line of road where they usually run deprived of their ordinary accommodation? No; the proprietors of 'buses running along a particular line of road generally leave a certain number to run as usual, excepting that instead of every quarter they run every half hour.

452. Might they not be left entirely without this convenience? The proprietors might leave them if they chose, but there are generally only a certain number of tickets issued at the Town Hall giving 'bus proprietors permission to run their vehicles to certain places for the holiday, and therefore a number are left to carry on the ordinary traffic.

453. What sort of inspection is carried out from day to day as to boys wearing coats and shoes? None, excepting when the inspector comes across them, and he then takes down the number of the 'bus and summons the proprietor.

454. Is the proprietor bound to find the boy in decent clothing? No; but the proprietor is bound to see that he is decently clothed.

455. *Mr. Clarke.*] Do I understand you to say that the 'bus proprietors have the power of making their own charges? Yes, they can charge what they like.

456. But they are obliged to have a printed list of fares on their 'buses? Yes.

457. Can you charge more than the fare so printed? Not more than is stated on the ticket. The charge to Double Bay is 6d., and we could not charge more than that unless we gave notice to the public that on or after a certain day the fare would be raised.

458. *Chairman.*] Is it, in your opinion, desirable that the 'buses of this city and suburbs should be placed under regulation? I think it must be under some control. There would be no end of opposition if there were no proper management or control. If there were none, things would be in a worse state than they are.

459. There would be more opposition? Yes, and the whole thing would be in a more degraded state if there were no control.

460. If there were more opposition would not the public have the benefit of it? No, they would not, for fares could not be cheaper than they are to any part, and it would not pay any one. The vehicles would not be better than they are now; there would be more galloping, racing, and danger to life.

461. Would it not be probable that the public would patronise those which were the best, and the best conducted? I think not; if a person were in a hurry to go to a certain place and a bad 'bus were to come up, he would get into it at once rather than wait for a good one.

462. It is decidedly your opinion that some regulations are necessary? Yes, I do not think the business could be properly carried on without some supervision.

463. What control would you substitute for the present? That would be for you gentlemen to suggest. I think it should be under some Government control.

464. *Mr. M. C. Stephen.*] You mean that it should be under the supervision and control of men who are perfectly independent? Yes.

465. *Chairman.*] Would it not be practicable to give the police larger powers of supervision? No, I think there should be a distinct Board.

466. I am asking you now as to the carrying out of the regulations? The police have now the power to take a man into custody for improperly flogging his horse, or for loitering, and any other person may do the same to a driver loitering or using bad language.

467. Is it not generally the case that what is everybody's business is nobody's? Yes, but the police have orders, I believe, from the Mayor at the present.

468. Has not what is technically termed "trotting traffic" become very thick on some portions of the principal thoroughfares of late? It has been divided from the commencement of the present year between George-street, Pitt-street, Clarence and Kent streets.

469. Is it practicable do you think to divert the heavy traffic of carts and waggons from certain streets into others, at certain hours of the day? No, I do not think it is, for this kind of traffic would be sure to go by the best and shortest roads to the wharves and other places of business.

470. Many of the boys on the stand are a long time without any occupation, are they not? I think they are, and some of them are very badly clothed; if they have an old blue coat with red binding, and a cap, with the word "conductor" on it, they have perhaps scarcely a shirt or a pair of trousers.

471. Does the inspector ever ride on a bus to perform his duties, without paying his fare? I cannot tell you whether he has the privilege of riding without paying.

472. Does he ride about as inspector? Yes, I have seen him.

473. Does he pay? I do not consider that any proprietor would take his fare; I know one of the inspectors goes up and down in the 'bus, but he never pays a fare. 474.

- Mr. M. Clark. 474. How long is it since the license was reduced from £10 to £7 10s. ? About four years ago.
 475. Do you know what led to that reduction—was it upon a petition of the omnibus proprietors? Yes, they petitioned and it was reduced, and the carriage license was reduced from £4 to £3.
 23 Feb., 1870. 476. It was in consideration of the petition that the reduction was made? Yes, I think Mr. Moore made the reduction.
 477. Does the Mayor himself exercise all the powers you attribute to him? Yes, the Mayor and two Aldermen; and the Mayor must give his sanction to all these things. If the two Aldermen ask the Mayor to do anything, and he puts his name to it, of course it is passed.
 478. It has been stated before this Committee that racing, fighting, and gross irregularities are practised almost daily, not on your line but on other lines—is that so? Yes, on other lines; it is so now on the Waterloo line; formerly there were only six 'buses on this line; now there are ten, and this causes a great deal of opposition, racing, and fighting.
 479. Have you anything further to suggest to the Committee? No.

TUESDAY, 1 MARCH, 1870.

Present:—

MR. FARNELL, | MR. HOSKINS,
 MR. M. C. STEPHEN.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Mr. Jasper Holder called in and examined:—

- Mr. J. Holder. 480. *Chairman.*] You are an omnibus proprietor? Yes.
 481. Where do you live? At Redfern.
 1 Mar., 1870. 482. Is it fair for me to ask how many 'buses you run? Three.
 483. On what line or lines of road? From Redfern to Miller's Point.
 484. These 'buses are licensed by the City Council? Yes.
 485. Is it within your knowledge that very considerable dissatisfaction prevails among the public as to the general efficiency and management of this kind of vehicles? It is.
 486. Has it existed for sometime, or merely arisen lately? There has always been some dissatisfaction, but not so much till this year.
 487. There has been more dissatisfaction lately than previously? Yes, this year especially.
 488. You have been running 'buses for sometime? Yes; seven or eight years.
 489. Then you have had experience in the management of them? Yes.
 490. Will you be kind enough to state to the Committee, if you can, the cause of the dissatisfaction just alluded to? The first thing is, that we have now to turn up King-street to go to Miller's Point; and consequently the inhabitants of Redfern, if they want to go to the Circular Quay or Queen's Wharf, have to get down at King-street and walk, or else get into another 'bus, and pay another fare.
 491. That is one of the reasons why the people of Redfern have cause to grumble? Yes.
 492. Is that a new arrangement? Yes, this year.
 493. Some of the Aldermen are owners of 'buses, are they not? Mr. Woods owns the Railway 'buses.
 494. Do they run right through? Yes, they go to Bridge-street.
 495. *Mr. Hoskins.*] Are no other 'buses permitted to run down George-street, by Bridge-street, except Mr. Woods'? Only those that run between the Queen's Wharf and Glebe.
 496. *Chairman.*] Do you think that arrangement was made from some undue influence in the City Council? I do.
 497. Is Redfern incorporated? Yes.
 498. Have the Municipal Council of Redfern made any regulations respecting, or charges upon, 'buses? No, but they have it under consideration now.
 499. Can you suggest anything else? With respect to the thirteenth clause of the by-laws I do suggest that the proprietors should not be responsible for the conduct of the drivers and conductors. I think that is very hard on the proprietors.
 500. What is the amount of the license fee? £7 10s.
 501. Do you go through any road trust and pay toll? No, not to Redfern.
 502. It has been stated by previous witnesses that the 'buses themselves are not very clean, or comfortable, or secure? No doubt there are plenty that way.
 503. It is anything but comfortable to go into some of them? No doubt of it.
 504. In that view of the matter the by-laws could not have been enforced with the necessary rigour? In certain ways they are enforced too much—in others not enough.
 505. Could you suggest anything instead of the present mode of management? No, I could not. I think the management is better now than it has been.
 506. *Mr. Farnell.*] Who inspects the 'buses previous to their being licensed? The Aldermen and Mayor.
 507. Do you think they are competent persons to inspect 'buses? No, I do not.
 508. You have time-keepers, have you not? On some roads.
 509. In Sydney? Only for some roads.
 510. By whom are these time-keepers appointed? By the proprietors.
 511. And paid by them? Yes.
 512. Have you ever heard of any complaint of 'buses loitering on the journey? Yes.
 513. Whose duty is it to look after the loitering? The inspector's.
 514. Is he an officer of the Corporation? Yes.
 515. Does he take any part in inspecting the 'buses, horses, and harness? He is there when the inspection is made, and anyone he sees is not right, he can haul them up to the Town Hall by giving a few days notice.

516. Does it not require a person to inspect 'buses to be a coach-builder or tradesman? Yes, I think so. Mr. J. Holder.
517. Have the Aldermen and Mayor ever refused licenses to 'buses that were properly entitled to licenses? I think so. 1 Mar., 1870.
518. Have they licensed others on the same road that were not better or more entitled to licenses? Yes.
519. I think you stated that Alderman Woods is a 'bus proprietor? Yes, he runs 'buses from the Railway down Pitt-street to the Circular Quay, and down George-street to Bridge-street.
520. Are you aware whether any of the 'busmen ever break-in horses in the 'buses that are carrying passengers? Yes, after they have been in once or twice they work them.
521. Is there any law to regulate the fares? Yes.
522. Cannot the 'busmen charge pretty much what they like? No.
523. How is it then that some 'buses run for 6d. when others run for 3d.? The three-penny fare is not in the by-law.
524. Are you not aware that some of Mr. Woods' 'buses run for a penny? Yes, on certain runs in the day.
525. *Mr. Hoskins.*] When did this arrangement of running the Redfern 'buses up King-street to Miller's Point commence? In January.
526. How long had you been in the habit of running down George-street? We only went as far as Margaret-street before, and up that street to Wynyard-square.
527. Did you find, that in the number of passengers you brought from Redfern to the city, there were a good number of persons who used to be conveyed by your 'buses from King-street North to Margaret-street? Yes, one-half.
528. And therefore half the passengers have now to alight at King-street? Yes, and walk down.
529. Or otherwise take another 'bus? Yes.
530. Then in point of fact such an arrangement occasions considerable inconvenience to passengers? Yes.
531. *Chairman.*] And no gain to the 'buses? It is a deal out of our pockets.
532. *Mr. Hoskins.*] What 'buses now run down George-street to Margaret-street, or further? Those that run between the Glebe and the Queen's Wharf, and the Railway 'buses to Bridge-street.
533. Did you ever hear any reason assigned for the diversion of the route by King-street instead of Margaret-street? Only that it was to keep the streets from being blockaded.
534. *Chairman.*] On holidays do all the 'buses leave the stands to go with holiday folk, or do they leave a certain number to do the regular work? There are always coaches enough left on the stand to do the regular work; so many are allowed to go to the races for instance, so many to Botany, and so on.
535. Still leaving a certain number on the stand? Yes.
536. *Mr. Hoskins.*] In your opinion are there not a great many omnibuses licensed, of an improper description? Not now—not a great many; there are some.

Mr. Thomas Hales called in and examined:—

537. *Chairman.*] You reside where? At the Glebe.
538. You are an omnibus proprietor? Yes.
539. Is it fair to ask how many you own? I own ten; nine I have licensed.
540. You have been a 'bus owner for some time? Yes.
541. And have therefore experience in the management of 'buses? Yes.
542. Is it within your knowledge that very considerable dissatisfaction prevails among the public as to the management of the 'buses and other public vehicles generally, that is, as to their efficiency and regulation? As far as the regulations and by-laws go I think they are all very fair, except that they make the proprietors responsible for the good conduct of the drivers and conductors. We have no authority at all over the boys; they do as they like with us. When they go up to the Town Hall to get licensed they have a coat on, but they never wear it afterwards. They go away from us when they like; perhaps a boy may jump off the coach when you have a load of passengers, and if you go down without a boy you are summoned.
543. Where do your 'buses ply? From Glebe Point to Wynyard-square.
544. Have you any tolls to pay on that road? No.
545. Is it not notorious that many of the 'buses licensed now are unfit for the traffic? A great many bad vehicles are running.
546. Some 'buses are filthy and unfit for passengers to go into? There are some on the line that are not the very best.
547. Could you suggest anything to place them on a better footing? All that I would suggest is that more care should be taken in licensing the men and boys. The proprietors are finable if they have not a licensed man; but some of the men licensed do not know how to take the reins. I should propose that the inspector, or somebody well-known in the town, should recommend a man. It does not do to let every man drive a pair of horses. I have suffered myself pretty heavily from bad drivers and conductors.
548. Is there any regulation to compel 'buses to come on the stand of a morning and take their regular turn? There is no mentioned time to come on. It is according to where you start from—8 o'clock or half-past 7; 8 o'clock is my first run in the morning.
549. *Mr. Farnell.*] Do the Corporation license drivers? They license drivers and conductors.
550. And you are compelled to hire only such drivers as are licensed by the Corporation? Yes.
551. And your experience is that many of the drivers that are licensed are persons totally incompetent to drive? Yes, not at all fit for it; some of them perhaps never saw a pair of horses go together in a vehicle before. I myself advertised for a couple of drivers, and when I set them to put on the harness they did not know which end to put it on; of course I soon turned them out of the yard.
552. If you hired a competent driver would not the Corporation license him? Yes, you can take him before the inspector, and get the form, and fill it up, and when you get it signed by two householders he gets a license. I should propose to have no men licensed, except those who are recommended by persons who understand driving, and can tell whether a man is competent or not. A great many accidents happen through bad drivers.

Mr. T. Hales.
1 Mar., 1870.

- Mr. T. Hales. 553. What is the fare from Glebe Point to Wynyard-square? 3d.
 554. It is used to be more? 6d.
 1 Mar., 1870. 555. Can you charge what you like? No, you must have it printed up in large figures in the 'bus. You cannot raise the fare, but you may lower it. It was I put it down to 3d. until 10 o'clock, and after 10, 6d.
 556. Do any of your omnibuses run to the theatre? There is one from the Prince of Wales nearly every night.
 557. Have you to get permission to do that? Yes, from the Mayor.
 558. Then a good deal with respect to these 'buses is left to the caprice of the Mayor for the time-being? Yes, but I cannot say there is any unfairness. Every man on the line takes his turn to the theatre.
 559. How many omnibuses are allowed to run on your line of road? Eight.
 560. How many have you running there? Nine.
 561. Where there are only eight allowed? It stands this way:—All the 'buses that were on the road when the regulation was made may continue to run, but if I take one off I cannot put it back, but as long as I leave it on it can stay.
 562. Has anybody else got 'buses running on the same line of road? No.
 563. Then you have the line all to yourself? Yes, to Glebe Point.
 564. There is a 'bus that plies from Bridge-street to the Redfern Railway Station for a penny? Yes, about three times a day; one of Mr. Woods'.
 565. Could he not raise the fare from a penny? Yes, 3d. is his fare. I do not know what is his move for that; whether it is to injure the poor 'busmen I cannot say.
 566. *Chairman.*] Are regulations of some kind necessary for the trade, in your opinion? As far as the regulations go I think they are very good; they suit the public.
 567. If the 'busmen were left to do as they liked, and let the public judge of the service by those who performed it best, do you think the business would be as well conducted as now? No, I do not think it would. Unless you have some regulations to make the 'busmen run to time you could not get along the streets at all; they would run every way they liked, and would be turning round in the streets wherever they chose.
 568. Then leaving them free, to let competition regulate it, would not answer? No, it would never do. If they were all under one company it might do, but not as they are now. This is a very bad law about the boys and men—that we should be responsible for all of them. If a man does not act fair, and knows he is going to get the sack, he may put you into £500 damages in a day.

Mr. James Kingston called in and examined:—

- Mr. J. Kingston.
 1 Mar., 1870. 569. *Chairman.*] You reside at Woollahra, and are the owner of considerable property there? Yes.
 570. Is it within your knowledge that very considerable dissatisfaction prevails among the public as to the efficiency and general conduct of the 'buses and vehicles plying for hire? It is a general complaint in our neighbourhood, and has been for some considerable time past.
 571. You have paid some attention to this matter? Yes, more particularly within the last eighteen months.
 572. Will you be kind enough to state to the Committee the cause of complaint you and others similarly situated have? One great objection was the loitering about the streets in the way they were in the habit of doing. They were supposed to take a certain time for the journey from stand to stand; about thirty minutes was the time allowed to Woollahra, but as a general rule they were nearer the hour. The loitering principally took place in starting from the streets of Sydney, where, had there been any kind of supervision, there would have been plenty of opportunities for the inspector to have seen them, and started them on their journey. Another great complaint was the thoroughly bad condition in which almost all the 'buses were—broken down, shaky things, that it was really not safe for a person to ride in, and thoroughly dirty. I have known, personally, three or four different parties that have got out of the 'buses with vermin upon them. I have known persons that have refused to ride in our 'buses—the Woollahra 'buses—especially on account of the dirty state they were in. The cattle, harness, and everything, were in the same state. I know of one instance where a man paid half-a-crown for the loan of a set of harness to go and be inspected, and after the inspection he took his old harness in use again.
 573. Does anything else occur to you? I think, perhaps, these are the principal grievances. It appears to me they are very important ones.
 574. The loitering and disregard of proper time renders it inconvenient for persons to live in the suburbs? Decidedly so, because at any time one could walk in quicker than one could ride. I would undertake to say, that nineteen times out of twenty I could walk home quicker than the 'bus would get there; that was formerly; it is not so bad within the last few weeks, because they have made some alteration; on my recommendation they have decided to run right through without loitering so much, and they find it answers their purpose very much better.
 575. Are you aware whether any time-keeper is kept to see that these men start at regulated times? There is a time-keeper at our end, but it appears to me they might as well be without one at all, because the men pay him themselves, and it is hardly likely he would fall out with his own bread and cheese. I do not think, in the middle of the day especially, they are at all particular as to their time of starting. I have occasionally been that way and there has not been a 'bus on the stand.
 576. Do they leave their line of route on holidays, to the inconvenience of the people in the neighbourhood? I have heard at times considerable complaints that way on race-days and so on. Most of the 'buses go to the races, or various sports that may be taking place, and of course the inhabitants, as a general rule, have to walk.
 577. Have the local municipal authorities done anything in the way of regulation in your neighbourhood? I do not think they have any power in any way to do it.
 578. It is incorporated, is it not? Yes, the Borough of Woollahra; but I do not think they can interfere with the 'buses in any way. In fact what is called the Woollahra stand is really not in Woollahra, but it is on the Paddington side of the Point Piper Road.

579. These stands are appointed by the City Council? Yes.

580. Is it within your knowledge or experience that they consult the convenience of the inhabitants of these districts? They profess to do so, but in point of fact I do not think they do. There was some considerable agitation our way in reference to a stand at Paddington. The Paddington Council wanted a stand appointed, and they applied to the City Council for it, and for several months they got no reply; then, I believe, the Mayor and one or two of the Aldermen of Paddington, waited on the Mayor of Sydney, and he sent out the inspector to see whether the stand they proposed was required; the inspector reported unfavourably, and the stand was not appointed, and has not been up to the present time.

Mr. J.
Kingston.

1 Mar., 1870.

581. Would it in your opinion be desirable that the suburban municipal authorities should have some kind of control over the 'buses in the various Municipalities? It appears to me that there would be some difficulty attending that, because there would be two bodies clashing.

582. What would you suggest in lieu of the present arrangement? It has struck me that there might be an independent body to have the sole control; perhaps one part of it consisting of representatives from the city and one part from the suburbs—at all events it should be one independent body to have the sole control. At the present time the city gets the whole of the license fees, and the suburbs get none of them.

583. Have the 'busmen to pay toll on any trust road in the neighbourhood you have been speaking of? On the Upper South Head Road they have; that is something like £20 a year to each 'bus; but the distance they run on that road is not much, only from the Ice-house to St. Matthias' Church; they then turn off to the borough road.

584. Have you ever paid any attention to the water conveyances that ply about the harbour? No, I have not had much experience about that.

585. At all events, if any central management were instituted, such as that you speak of, it should comprise the whole of that kind of business in the city and suburbs? Yes, I think so.

586. *Mr. Farnell.*] Are the 'buses generally in good order? At the present time they are better, but for several years past they have been very bad indeed—disgracefully so. This year, I think, as a general rule, there is not so much reason to complain, although some of them now are very bad. The cushions generally are stuffed with straw, and very uneven to sit upon.

587. Are the 'buses watertight in wet weather? Most of them are, I think.

588. Are they well horsed? No, as a general rule the horses are very bad; of course there are exceptions.

589. Are the drivers qualified to drive? Some of them are very indifferent. It appears to me that the City Council are very lax in their method of granting licenses; I know of two men, one on the Waverley Road and one on ours, who are thoroughly disreputable drunken men; one of them I am surprised at their granting a license to, for it is a well-known fact that he is constantly drunk.

590. Do you know on what principle they grant licenses to these drivers? I do not think on any principle at all; it seems as though they granted them to almost anyone that applies. Their by-laws are very strict in that way, but they are not carried out. If the regulations were carried out the management would be right, but they are not. They provide for conductors and so on being properly dressed; but I suppose not one 'bus in twenty has a conductor, and if it has, it is some dirty little urchin, without shoe or stocking, and his clothes almost falling off his back.

591. Are the drivers generally civil and well-behaved? There is not much reason to complain of that; some of them are rather indifferent, but taking them altogether there is not much to complain of on that score.

592. Have you ever heard drivers curse and swear at their horses while driving them? I have at times, but not as a general rule.

593. Do you know whether they are in the habit of breaking-in horses in these 'buses? Yes, that is a constant practice.

594. Do you think the practice is dangerous? Most decidedly so. They go to the sale yards at Camperdown, and buy horses at from 10s. to 30s., take them out on the sand hills and run them round a few times, and then put them into a 'bus. I suppose hardly a week passes but they have fresh horses in their 'buses.

595. Have you ever noticed many break-downs of these 'buses on the road? I have seen them occasionally, but it does not often occur.

596. *Mr. Hoskins.*] Do you not think the horses generally put in the 'buses running to the suburbs are of a very inferior description, badly fed, and not capable of doing their work properly, travelling at a sufficient speed, or drawing a sufficient load? That is generally the case; there are some exceptions, but the horses they buy are, as a general rule, of inferior quality.

597. Are the horses used in these 'buses ever inspected by any authority, or any person representing the Corporation? I do not think so. The 'buses are inspected once a year, or something of that sort.

598. Only the horses harnessed to the 'bus at the time are inspected? That is all. There is only one inspection in the year; there is no sort of supervision beyond that from what I can see.

599. Do you not think the omnibuses generally are ill adapted to their purpose, narrow, and ill ventilated? There is scarcely any ventilation as a general rule. The City Council passed a resolution to have them a certain width, 2 feet clear, between the seats, and I think they gave notice that those that were not that width would not be passed. I know that some 'buses that were not the necessary width were taken back to the coachmaker's, and a piece was taken off the seats, so that the seats were made narrower and the space between them greater, but the 'bus was no wider—there was no more room in the 'bus, but the seats were inconveniently narrow, and the cushions not being altered it was a case of sliding scale, as it were.

600. Have not these 'buses tin plates fixed inside, specifying the number of passengers they are licensed to carry? Yes, but as a general rule that is carefully smudged out.

601. Do you not think they are licensed to carry more passengers than such vehicles ought to carry? Some of them are licensed to carry, say six inside, but the 'busmen, as a general rule, put in eight. They are supposed to allow 18 inches for each passenger, but they smear out the number they are licensed to carry and put in more.

602. Are not all these practices you have related, in your opinion, a proof that there is a very inefficient supervision exercised over public vehicles? There is none at all, comparatively speaking. There is one inspector, and he is supposed to have an assistant; but the inspector has no assistance at all in the shape of time-keepers. From the fees they obtain, which are very large, they might pay some time-keepers at different

Mr. J.
Kingston.

1 Mar., 1870.

different points, for instance, a time-keeper at the Glebe Road might keep a check on all the omnibuses running to the Glebe, Newtown, Petersham, and other places in that direction; he would know when the 'buses ought to start from Sydney, and that they should pass his post of observation at a certain time. Another at the South Head Road might check those running in that direction, and another at Woolloomooloo might do the same for all the 'buses passing that point. That would be a valuable check, and the expense would not be very great.

603. In your opinion the inefficiency of the supervision over public vehicles is noticeable in the absence of proper time-keepers, the inferior description of horses, the excessive crowding of vehicles, and the inadequacy and general ill-condition of the vehicles? Yes.

604. *Mr. M. C. Stephen.*] And in their racing? That occurs to a certain extent on account of the want of proper time-keepers. For instance, the Waverley 'buses will stop at the top of Piper-street till they see a Woollahra 'bus coming, and when it is close to them they will start off, and one will chase the other all down the road.

605. *Mr. Hoskins.*] Have you seen the omnibuses in use in London or Paris? No; it is a good many years since I left London; but when I left they were all very much larger and better appointed than ours. That arose perhaps from their being principally owned by companies on particular routes.

606. *Mr. M. C. Stephen.*] When racing takes place does the omnibus that gets to the stand first obtain any advantage by being there first—or do they take their turns according to the turn in which they started from the other terminus? It is not so much the 'buses on the same stand that race; they start at certain intervals—on our line seven minutes—but on most of them ten minutes; it is the 'buses that come from different points on to a road common to more than one terminus that usually race.

607. Are you aware of any sort of supervision by the Sydney Corporation, beyond the annual inspection and the fact that there is an inspector who watches the 'buses occasionally as they pass by in the streets? That is the only supervision.

608. Is there any way of finding out such things as that you mentioned at the beginning of your evidence—changing the harness after it has passed inspection? If a man properly did his duty he could not avoid seeing it. A man comes up to the Town Hall to-day with a good set of harness, to-morrow you see him with an old worn-out set, tied up with string in all directions; if there were anything like proper inspection that must be observed.

609. Are there sufficient inspectors to afford the opportunity of seeing them? There is only one with an assistant; and as he says it is impossible for him to see everything, especially as he has many office duties to perform, drawing informations, attending the Police Office to prosecute, and all that sort of thing.

610. You think a great deal could be accomplished by additional supervision; I think all could be accomplished by more strict supervision, and time-keepers.

611. *Chairman.*] You think the by-laws are sufficient if they were carried out? Yes.

612. Have you any idea of the number of licensed vehicles of different kinds? I have been told, but I do not remember.

613. The revenue at any rate is considerable? Yes, it amounts to some thousands.

614. Have you any idea of the number of persons engaged about the city in this kind of business, directly or indirectly—in 'buses, cabs, carts, and other vehicles? Licensed, do you mean?

615. Either licensed, or in direct connection with the trade? I should think five or six thousand at the very least.

616. How often do the Mayor and Aldermen come before the citizens for re-election? Every two years.

617. Under our popular forms of election would it be likely these people would exercise a large influence? No doubt about that.

618. To place these gentlemen beyond suspicion of being influenced by such a consideration, would it appear necessary to relieve them of this particular duty, and delegate it to some independent officer? I think it would be a very desirable thing to take it out of the hands of the Corporation altogether.

619. Have you ever considered whether the police could be made useful for keeping time? I have thought it would be a very good arrangement if the police should order them on, if they saw 'buses loitering, just the same as they do when there is a crowd in a street. I was told by the inspector that the Corporation had applied to the police authorities to assist them in that way, but they have never done so.

620. Are you of opinion that free and unrestricted trade in this matter would in time correct all the evils you have spoken of? Anyone can go into it now.

621. Can they place as many 'buses as they like on any particular line of road? That has been so, but I believe they are making some alteration so as to have only a certain number on particular lines.

622. Do you think the by-laws might be restricted to the suitability of the vehicles, and let competition regulate the traffic? It would do so to a certain extent; but people do not care to let a bad 'bus pass them, and wait till a good one comes, especially if they are in a hurry. I know the present state of matters makes a vast difference to the value of suburban properties; the inconvenience which attends getting into town depreciates them a good deal. If a person has to be in town at 9 o'clock in the morning, and starts from home at a certain time with the hope of getting there, it makes a good deal of difference to him if, through the loitering of the 'bus, he is ten minutes behind his time.

623. Has it ever come to your knowledge that 'buses are used as sleeping-places for dirty people? I have been told so frequently. On our road it has frequently been the case that the boys have been sleeping in the 'buses all night; in fact the policeman has told me he has on several occasions seen them.

FRIDAY, 11 MARCH, 1870.

Present:—

MR. ALLEN,

MR. FARNELL.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Mr. James Richardson called in and examined:—

624. *Chairman.*] What is your present occupation? A time-keeper.
625. For what? For omnibuses.
626. Where? At the Enmore 'bus-stand.
627. Are you aware that there is considerable dissatisfaction prevailing in the public mind, both with regard to the efficiency and to the general management of the public vehicles of the City? Yes, I am aware of it.
628. Can you attribute any cause for this dissatisfaction? I cannot exactly say what the cause is; but I think the restrictions are not sufficient;—that is the cause of a good deal of it. The management is not what it ought to be. There are not sufficient officers to look after the vehicles in a proper manner.
629. You have made yourself acquainted with the City by-laws? I have.
630. Supposing they were carried out, do they meet all the cases well enough? Yes, if there were officers enough to see them carried out.
631. Then your objection is that the by-laws are not carried out as strictly as they ought to be? I certainly think the vehicles are not looked after strictly enough.
632. Will you state to the Committee the nature of your occupation, and the duties in which you are occupied? My duty is to start the 'buses from the Enmore-stand in accordance with the City by-laws, to put down each 'bus as it arrives at the stand, and to take a note of the time when they start and when they arrive. I am paid by the proprietors, and that I consider is the great difficulty. There is no time-keeper paid by the Corporation and independent of the proprietors. If there were, things would be very different.
633. How many 'buses are there starting from your stand? Twenty-seven.
634. And how many persons own these 'buses? Twenty-six. There are only two 'buses owned by the one proprietor.
635. These twenty-six proprietors contribute so much each to pay your salary? Yes.
636. Are you considered to be an officer of the Corporation? No; not at all.
637. Then your appointment is entirely a private one, and is made merely as a matter of convenience to the proprietors? Yes, exactly.
638. I suppose we may presume then, that if in your occupation you made yourself troublesome to the proprietors they would be likely to dispense with your services? Yes, if they like they can. Though I am not an officer of the Corporation, any advice I want I can always get at the Town Hall. If I want any information as to what I am to do about any of the by-laws, I have only to go to the Town Hall and they give it me at once.
639. Is it any part of your business to report these men to the inspector for breaches of the by-laws? Yes, I have to interfere in that way sometimes, when misunderstandings arise, just for the sake of the weaker party. If I was not to do so the strong would soon over-ride the weak and have it all their own way, and that would not be a proper thing.
640. Have you anything to do with the condition of the horses and vehicles, to see that they are in a proper state to start? No, I have nothing to do with them but to start them in their regular order.
641. Then you have only to start them in regular succession, and to take the time of each arrival? That is all.
642. Is there any rule upon that stand as to the regular attendance there of persons plying on it? No, there is no rule, except the city by-laws. There is a rule made amongst the men themselves that they shall run in regular order and take their regular turns; these turns change every day—the man who is first to-day is last to-morrow. Then the other 'buses go in regular turns. It used to be every ten minutes at one time, but now they have come to the agreement amongst themselves to start every seven minutes. This they do from 8 o'clock in the morning, when they first begin running, up to 8 o'clock in the evening, when I leave.
643. Is that the hour at which the last 'bus starts for town? Yes.
644. Is there anything to prevent the 'bus proprietors from deserting the stand altogether, or from taking their 'buses off on holidays? No. It is a privilege allowed them by the Mayor upon holidays or on race-days. They are not supposed to run upon any other line of road than that which they are licensed for at the Town Hall. But on holidays or races they get the privilege from the Mayor of running their 'buses to where there are sports, or races, or such like. They get permission to go to Randwick, or Botany, or Homebush.
645. When they get permission in this way, are the requirements of the public attended to on the line of road from which they are taken off? Yes, generally. They all take their regular turns in the morning, when people are most anxious to get into town, and then they are mostly all back in the afternoon to take the people home again. But they are never all off the line of road together. There is always a good many of them left; and on the line of road I am on, only very few are taken off, because the 'buses are all small vehicles and not fit to carry large numbers of persons.
646. If in answer to questions put to you by this Committee, you were to give opinions unfavourable to the 'bus proprietors, would that be likely to risk your employment? No, I think not.
647. Let me ask you then what is the condition of these 'buses which you have the looking after? Very good condition. They are all first-class.
648. And the horses—are they first-class? Yes.
649. And the vehicles are kept clean, and run regularly? Yes.
650. Then it is not with the 'buses running from your stand at Enmore that the public are dissatisfied? I should say not. I do not see that they have anything to be dissatisfied with.
651. As I understand it from you, the cause of the dissatisfaction of the general public is not so much to the vehicles and horses as to the want of some more perfect system of managing and controlling the drivers? That is the only thing. It is all owing to the want of appointed time-keepers—men who should be paid by the City Council, and have power in every respect the same as the inspectors.

Mr. J.
Richardson.
11 Mar., 1870.

- Mr. J. Richardson. 652. But where the vehicles and horses are bad, as we are told they are in some places, would their appointment be able to make good 'buses out of bad ones, or make horses capable of pulling, which were not so before? No; but they would have the power of interfering when they saw a 'bus in a dirty or an improper condition, or when they saw horses galled or injured. They cannot do this at present.
- 11 Mar., 1870. 653. Then I gather from your evidence that you are of opinion that the time-keepers should be officers of the Corporation? Yes. That is my meaning. We should be independent of the 'bus proprietors, so as to be able to deter them and the drivers from acting improperly.
654. With regard to the boys—have you as many boys on your line of road as are required to meet the exigencies of the public? Yes, there are quite sufficient.
655. Now if these 'buses were left to themselves, and the whole 'bus traffic was allowed to conduct itself on the simple principle of free trade, and of allowing the public to judge who served them best, do you think the vehicles and horses would be of better quality, and the men better conducted than they are now? No, I certainly do not think so.
656. You think there is a probability that the whole thing might be worse than it is at present? I do.
657. In your opinion some control is necessary? Yes. If left to themselves you would never see them start regularly. You would have one waiting for another, or two or three going together, and then none going again for an hour. That would not suit the public, and would be a great deal worse than the present system. I have been a time-keeper now seven years the last 17th of January, and I have had a good deal of experience amongst 'buses, and I do not think there is any particular grievance—nothing worth complaining about, except on those stands where there is no time-keeper—out-of-the-way places, where there are not sufficient coaches to pay a time-keeper. It is only in these places that there are any complaints.
658. How would the appointment of these time-keepers stop the loitering and racing, seeing that the time-keeper has to remain on the stand? The time when the driver leaves is taken, and the time when he arrives.
659. Yes, but he may loiter the first half of the way, and then may overtake his time by racing the remainder of the distance? After the 'buses leave the stand I would leave them in the hands of the police. The constables should be authorized to order the 'buses on if they see them loitering, or to take their number if they are found racing, or committing any misdemeanour.
660. You think that the ordinary police of the city might receive instructions to see that the 'buses did not loiter? Yes, the same as they do now; but they have not got the full power now that they ought to have.
661. Have you heard any dissatisfaction expressed by any of the suburban Municipalities as to the present state of things with regard to these 'buses? Yes. There is the Marrickville Municipality has been grumbling a good deal lately. They are complaining because one of the two coaches which run through Marrickville has been taken off, without some previous notice having been first given. The reason it was taken off was that it did not pay to run it, and they could not expect the man to run a coach if it did not pay him.
662. Mr. Allen.] You are appointed solely by the omnibus proprietors? Yes.
663. And are subject to dismissal by them at any moment? Yes.
664. Without any reference being first made to the City Council? Yes.
665. You think the time-keeper should have the same power and authority as an inspector of public vehicles? Yes, that is my opinion. There are only two of them now, the inspector and his assistant; and two men are not sufficient to do all the work they have to do, in overhauling drays, cabs, and omnibuses. Even the 'buses are too much for two men, and the inspector and his assistant have to look after the drays and cabs as well.
666. Mr. Farnell.] Do these 'bus proprietors ever break in horses in their 'buses? Yes, occasionally.
667. Have you ever known any accidents to occur from this cause? No, I could not mention any that I recollect just now. Sometimes trifling accidents have occurred by the horses shying off before they get used to the work, but they have never been of any consequence.
668. Do the passengers ever complain at these unbroken horses being put into the 'buses? No, I do not think so. I have never heard it.
669. Who regulates the fares which are charged on this line of road? The proprietors; they fix the fare amongst themselves.
670. Have you ever heard of their demanding a fare beyond what is painted on the 'bus? No.
671. Or beyond what is fixed by the by-laws? There is no stated fare in the by-laws. The proprietors fix the fare, and the by-laws only say that the fare shall be painted up in the 'bus.
672. Then it is fixed altogether by the proprietors, and not by the by-laws? The by-laws only require that the fare shall be painted in legible figures inside the 'bus.
673. Do the 'bus proprietors frequently alter the rate of fare? No. Only the line of road where I am; there has been no alteration for the last seven years, only this, that they made a reduction by charging half fare to Parramatta-street, and half fare from there to Wynyard-square, making it half the fare for half the distance; but that is not painted up inside the 'buses.
674. Are the drivers of these 'buses all men, competent to have the charge of horses? Yes; most of them are.
675. Are they men who have been brought up to driving? Yes.
676. Are they men who are employed to drive by the proprietors, or are they the proprietors driving their own 'buses? There are only three employed men on that line of road where I am. Twenty-four drivers are the proprietors of the 'buses, and three are employed drivers.
677. Do they all start from Enmore in the morning and come into town? Yes, every one.
678. None start from town in the first instance? No.
679. I suppose there is a good number of boys employed as conductors? Yes, a good many.
680. Are they well behaved boys? Yes, some of them are. Sometimes there is a mistake among some of them, just as there will be with boys, but generally they are pretty fair.
681. Do you know of any of these boys sleeping in the 'buses? No. They are not allowed to stop on the stand at night. All the 'buses have to be taken off.
682. Where do these boys sleep? At their employers.
683. Do you know anything of the conduct of drivers on other lines of road but the one you are on? No. I have not had the time to make inquiries about them. I have been a time-keeper seven years the 17th of last January, and the only time I have ever been away has been when I have had to go to the Police Office to summon some of them for misdemeanour, and once or twice to go to Randwick.

684. Have you heard any dissatisfaction at the mode of conducting the examination and inspection of vehicles on the part of the City authorities? Yes, I have heard a good many complaints about it. I have heard the proprietors complain that the Council lets them run sometimes for months, and then comes down upon them all of a sudden, and pulls them up all at once about some frivolous thing or other that they have had no notice of.

Mr. J.
Richardson.

11 Mar., 1870.

685. Who inspects them? Mr. Oram in the first instance, and then the Mayor and two Aldermen. Mr. Oram reports on them to the City Council every three months.

686. They are inspected before they are licensed? Yes. You have first to get a requisition signed by two respectable housekeepers, setting forth that you are a respectable and trustworthy man, that your vehicle is in proper condition, and that you have a competent man to drive and a boy to conduct it. Then the vehicle is inspected.

687. The Mayor and two Aldermen inspect it? Yes.

688. Previous to granting the license? Yes.

689. Do you think that the Mayor and two Aldermen are the most proper persons to charge with the duty of inspecting vehicles? Yes; I believe they are.

690. Could they form any opinion as to whether the vehicle was properly constructed or not? That I cannot say.

691. Are they coachmakers? No; I think not.

692. And do you not think that it requires a competent tradesman to inspect the vehicles, so as to say whether they are properly and safely built or not? I have always said so. I have always said that only a tradesman could say whether a 'bus was in proper order or not.

693. Then if the Mayor and Aldermen are not tradesmen, they are not in a position to say whether a vehicle is in a fit state to be licensed or not? No. They are not competent to form an opinion on the subject. Only a good tradesman can say whether the 'bus is fit to be licensed. I believe that any old coachman, who has been used to 'buses, would know more about them than the Mayor and Aldermen.

694. Are the horses generally in good order on your line of road? Yes; every one of them. There were some losses last year by some of the horses getting worn out and catching the distemper; but now they are all very good horses on the line I am on—as good horses and as good 'buses as on any line of road in Sydney or out of Sydney.

695. You think, however, that there is considerable dissatisfaction amongst the public generally upon the subject of our licensed vehicles, more especially the 'buses? Yes, I do; but it is mostly owing to the want of time-keepers; the grumbling all comes from those places where there are no time-keepers. There is the Cook's River line as an example. There are only seven 'buses running there, and they cannot afford to pay a time-keeper. They have got to that state that they are like a lot of cannibals for want of one. They start as they like and they carry on in their own way with nobody to check them, and there is a nice state of things altogether. I was over there the other day, and I went to the stand just for the purpose of listening to the kind of conduct that was going on. They were just like a parcel of savages.

696. And to remedy this you think the Corporation should appoint the time-keepers, and give them full powers of inspection? Yes, that is my opinion.

697. *Chairman.*] You said that you went to Cook's River recently, and that you then had some experience of the conduct of the drivers on that line? Yes.

698. What kind of conduct was it that you witnessed? Why one would not go till another was just ready to start, and then the two would go off together, and sometimes there would be three starting all at once. There was no regulation at all, only just one regulating the other.

699. What kind of conversation was there amongst the drivers? Not the very best you may depend, especially when they warmed up a bit.

700. Have you paid any attention to the management of cabs? No. I do not see many cabs pass my stand—not above one every four hours.

701. Where do the 'buses go to which start from your stand? To Wynyard-square, and round to Erskine-street.

702. What is the distance? About three miles and a half.

703. And to Parramatta-street the fare is three-pence? Yes.

704. Although the fare painted on the 'bus is sixpence? Yes, that is the fare; but it is a rule made by the proprietors themselves to charge only three-pence for the half distance.

705. What is the amount of license fee which they have to pay? £7 10s. for a four-wheeled vehicle drawn by a pair of horses. No two-wheeled vehicles are allowed to run now; they have been done away with lately.

706. A portion of the road on which these 'buses travel is a trust road? Yes, the whole of it is a trust road after you leave Sydney, except a little bit of the road up to Enmore, from the railway bridge.

707. And what do they have to pay for the toll? For a four-wheeled vehicle 1s. a day.

708. For four horses or two? For two horses. Drawn by four horses, the toll is 1s. 6d. a day, and for three horses 1s. 3d. a day. They used formerly to have to pay 6d. a journey, until they petitioned, and then the trustees changed it to 1s. a day for four wheels, drawn by two horses.

709. Have you ever considered the question as to whether or not some greater attention should be paid to the wants and wishes of the suburban Municipalities in this matter? Yes, I have; but I cannot see that upon our line the Municipalities can have much claim to being considered—nearly the whole road, after leaving Sydney, is a trust road, and the proprietors have to pay the toll upon it, and that is quite enough tax upon them. And then besides that the men are all rate-payers to a man, and so give their share to the revenue of the Municipality.

710. That is only in so far as regards their claim to a share in the revenue derived from 'buses? Yes.

711. But as regards the control and supervision of the vehicles, and the control and appointment of the stands? They have had a good deal to do with the control and appointment of stands, one way and another, these last two or three years. They shifted us about from one place to another, moving us away and taking us back again, until we were fairly tired of it. Once they put us in a place which was not fit for a dray to stand in. And where they have put us now is not at all a fit place for 'buses to stand. The road is in such a state with mud that a driver cannot get a gentleman or lady into his 'bus without pulling over the road to let them get in.

712. Where is that? On the top of the road at Enmore, near the corner of Mr. Josephson's fence. He

gave

- Mr. J. Richardson. gave a piece of ground to the Newtown Municipality to widen the road there ; and all that the Council has done has been to put back the fence and to leave the road just as it is, without a bit of metal on it.
- 11 Mar., 1870. 713. And you say your stand was shifted about unnecessarily, through the meddling interference of the suburban Municipality there ? Yes ; and besides that they would not have a sufficient distance for them to claim anything worth while, if you go upon mileage. It is only about a quarter of a mile that the 'buses run over the road of the Municipality, from the top of the Enmore Road to the Cook's River Road, and then all the rest of the road is a trust road till you come to the City, so that they would only have this quarter of a mile that they would have any control over.
714. But would you not consider that the obtaining some control over these vehicles, so as to ensure that they should be maintained in good condition, be drawn by good horses, and be started at regular intervals, would be of more importance to the Municipality than any share of the money derived from the fees paid by them ? Yes, I think it would.
715. I suppose you have not paid any attention to boats as a means of public conveyance ? No ; I have not had anything to do with boats for many years past.
716. *Mr. Farnell.*] Do they ever overcrowd these vehicles which run from your stand ? No, the time is too short. They start so close upon each other that there is no opportunity for overcrowding. Formerly a 'bus used to start every ten minutes. Now they start every seven minutes. There is no chance of overcrowding in that time.
717. *Mr. Allen.*] You allude to the time of their leaving the stand only ? No, to the journey. They follow each other too close to allow of passengers enough being taken up to overcrowd the 'bus.
718. But you cannot say what takes place after the 'bus leaves the stand ? No, certainly not. There may be particular occasions when more than the number is taken up ; but that is not often, for the public themselves will not allow it.
719. *Mr. Farnell.*] If such a thing occurred after leaving the stand, you of course would not know anything about it ? No.
720. Do they take the 'buses off your line at holiday-times ? No, there have always been sufficient 'buses on that line to take the traffic on it ; at least for the last three years there have been. And then on these particular times, when the 'buses go to sports or races, the people generally go themselves, and do not require conveyance on the road ; the people do not return till the evening, and then the 'buses have returned too, and take the people home ; there are always sufficient left on the line for the traffic of the day.
721. *Chairman.*] Do your 'buses run to the theatre at night ? Yes, one goes every night ; I have the regulation of that ; there is only one allowed every night, and I have to give him his order ; the man who goes to-night does not go again for a month.
722. Can they demand that as a right—to run to the theatre ? No ; it is only a privilege granted to them by the Mayor, and under the regulation I have said.
723. You attended here upon a former occasion, when there was no meeting of the Committee ? I did.
724. Has your attendance in answer to the summons of this Committee put you to any expense ? Yes, I have had to pay a man to take my place.
725. What have you paid him ? I gave him five shillings the other day, and he will be looking for something more to-day.
726. Have you anything to suggest to the Committee, or anything to say upon any points that the Committee has failed to notice ? No, I think not.

Joseph Graham, Esq., called in and examined :—

- J. Graham, Esq. 727. *Chairman.*] You are Mayor of the Borough of Marrickville ? I am.
- 11 Mar., 1870. 728. You are aware of the nature of the inquiry entrusted to this Committee ? Yes.
729. You have been an Alderman of the Borough some time ? Yes, two years.
730. Have you paid any attention to the state of the law as it regards the efficiency and the general management of 'buses in your Municipality ? As regards our own Municipality we have only one 'bus running through it, and as we have not had that long there has been hardly time to form any opinion as to the way it is conducted ; but I have seen a great deal of other 'buses, especially of those running between Newtown and Sydney, from the way in which they are managed it does not look as if there was any law at all to regulate them ; they are all past management or regulation. The reckless manner in which they are conducted and driven, and the slovenly state in which they are kept, show me that the City Council has no power whatever over them, nor will it ever have any control over them, until a proper system of time-keepers is adopted, by which the time-keepers shall be the officers of the Corporation. At present the mode in which the management of these vehicles is conducted seems to be pretty much after this style :—The 'bus comes on to the stand, the inspector finds fault with something or other. The driver says it is no harm, that it does not affect the 'bus, and that he will get it done when he goes home, and there the matter rests. The inspector does not see him again for three or four months, and of course what has been pointed out is not done. To remedy this the time-keepers should be officers of the Corporation, and should be held responsible for a proper and careful supervision and inspection when they come on to the stand. He should see that the 'buses are clean, that the horses have been looked after, and are in a fit state to do the work, and that the men are in a decent and proper state ; such a system as that would meet the evil in a very great measure ; then when a 'bus comes to the stand, if he is not up to time, the reason for the delay should be asked, and if no reasonable excuse could be furnished the man should be punished. The thing is very simple and could be easily managed if we could only get the City Council to move in the matter. But instead of that they go peddling on in the old system, take no notice of anything, and never interfere, and yet a good deal of the mischief would be met by having the time-keepers appointed inspectors, and giving them full authority to regulate the traffic, and to look after the men, the vehicles, and the horses. Then a man should be stationed at the Haymarket to take the time and to see that there is no racing, for that is the place where it always occurs. The men loiter so long on the first part of the road, trying to get passengers, that to make up their lost time they begin racing when they get to Brickfield Hill. Now a man stationed at the Haymarket to time them as they came up, would put a stop to that. That is what I should recommend to meet the difficulty. The present inspection is next to useless, for the inspector and one assistant cannot do all the work, and thus the 'bus drivers have got beyond all control. The inspector is well known, and when he is seen coming along the street a boy is sent to watch him to see which way he is going, and if he is out of the way the men know they can do as they like.

731. You are speaking now of the drivers and conductors? Yes.

732. But with regard to the 'buses themselves? With regard to them, as I said before, the time-keeper should be appointed an inspector, whose duty should be to see that the driver, the horses, and the 'bus were in a clean and decent state; that the harness was all right, and that the horses had been properly cleaned and looked to before beginning the work of the day. Any offence committed by the men in the first instance, such as coming on the stand in a dirty state, or bringing their horses, 'bus, or harness on to the stand, in an improper state, should be recorded against the men, to be subsequently dealt with. Then with regard to the management, I think that should be entrusted to a board of independent gentlemen; there are many such to be found, who would willingly undertake the duty on public grounds, by whom you would get the management done for a mere nominal sum. By this Board all complaints against the men should be heard and dealt with.

733. You believe then that a proper system of inspection would have the effect of removing the greater number of the causes of complaint? The greater part of them, but not all. Of course inspection of any kind must be an improvement on the present system, where there is no inspection at all, at least nothing of the sort which I recommend. You would be astonished if you knew how things were carried on now. Many of the drivers do not so much as wash themselves from one week's end to another; and as to the boys, all they possess in the world is generally a shirt and a pair of trousers; then they have a coat, which is the common property of some three or four of them, and they hand it over to each other to be worn as one comes in and the other goes out. The time-keeper sees all this, but of course he does not interfere, for he is the servant of the owners of the 'buses instead of an officer of the Corporation, and so he takes the side of the men rather than being a protector of the public interest. I believe that there will be considerably less trouble with the men, and very much less fining than there is now, if you keep the men under strict rules, and carry out those rules as rigidly as possible. The great mischief now is that the City by-laws are carried out so laxly that the men chance it and break through them. They have escaped so often that they chance doing so every day. This not only demoralises the men but puts them to serious loss and inconvenience. They are sure to be caught and fined some day, and then what with the loss of time and the loss of money, it costs them far more than it would have done had they complied with the provisions of the by-law. That is how I say it would be better for the men themselves, for with strict rules, and strict supervision to see them carried out, they would know that they would be sure to be caught if they offended, and would not be inclined to chance it as they do now.

734. Have you attempted to regulate the 'buses in your Municipality? No; we have no control over them, even if we desired to interfere. But we have only one 'bus running through our Municipality, the great traffic being to Newtown, the stand not coming into our district, although it is on the edge of it. Although that stand requires regulating, the Newtown Municipal Council has no power to interfere. As the law now stands, anything that the Newtown Council requires to be done has to be done through the City Council.

735. Would you recommend any alteration of the law? There can be no question about an alteration of the law being necessary, for I do not see upon what grounds the Mayor and Aldermen of Sydney should have the control of vehicles beyond their own boundaries, especially within other municipal districts. Nor do I see how the City Council can ever have the men under proper control when they are beyond the city boundary. They could only do this by having one of their officers stationed in these other Municipalities through which the 'buses run, and that would hardly seem to be a proper state of things. Under these circumstances, the only way I see of getting over the matter would be to have a Board of Management, under whom the 'buses should be placed absolutely; this Board could give authority to the police along the line of streets and roads to take notice of any cases of misconduct, and to report them to the Board—such as loitering, racing, using improper language, or abusing their horses. The scenes of this description are sometimes painful to witness, so much do the men maltreat the poor beasts they drive. Only the other day I saw a man flogging a horse most brutally; there was a young horse in the 'bus, and because he would not pull, there were three men belabouring him most unmercifully—not lashing him with the thong of the whip, but beating him with the thick handle. The young horse would not pull, and the other horse, which was too starved and poor to take the whole weight himself, had to give up, though he tried his best. And there they were, the three men beating and driving at the two beasts, one of which could not pull, and the other would not. As an opposite picture to this, I may say that I came upon a Bourke-street 'bus a few days back, and I found everything in the best order. There was a fine, clean, well-ventilated 'bus, nicely fitted up with well-made cushions, and drawn by beautiful horses with their coats shining from the way they had been cared for. The Newtown 'buses are generally as dirty as they can be, splashed with mud, or smothered with dust, and as to the cushions, there is usually a handful of straw in one end and nothing in the other. Then as to the horses, they are ragged looking, half-starved animals, that never have a hand put to them to clean them. The drivers do not seem to care a bit about anything but themselves, neither for the 'buses, nor the horses, nor the convenience of the passengers. They are a lot of Irishmen, who are as careless as they well can be about everything; when they come home after their journey, instead of cleaning their horses, washing their legs, and rubbing them down, they just turn them out of the 'bus into the stable, give them a miserable feed, and there leave them until they are wanted again. Then they put them back into the 'bus without cleaning them, and without touching them in any way. Of course the consequence is that the poor beasts are galled all over with the harness, and are never properly fit for their work. When I got to town I spoke to some of the Aldermen of Sydney about the scene of ill-usage I had witnessed on the road, and all they said was why did I not summon the man. That is just where it is—there is no use for anyone to interfere unless he is prepared to lose his time by going to the Police Court to summon the man, and this very few are inclined to do. All this might be remedied by the appointment of a Board, and making Captain M'Lerie Chairman of it. If he had that office he would be able to place his police officers on the lines of road where they were most required, in order to have a supervision of these men. I would rather that they should be called Commissioners, only that I know there is an objection to the name, because people always imagine that there's expense connected with them. Then the 'bus stands are most inconveniently fixed, and the Municipalities have no power to alter them. It is all in the hands of the City Council, and it is not to be expected that the Aldermen should know anything about the matter. They are led by one or two interested individuals to fix a stand in a particular place to suit these individuals, but most inconvenient for the general public, who are not regarded in any manner. However that is a mere minor matter compared with the management and supervision of the 'buses themselves, and I certainly should like to see something done in that respect. Even in the hands of the City Council a very great improvement could be made on the present want of system, if we could only get the City Council to move in the matter. But they seem dead to all complaints and remonstrances.

J. Graham,
Esq.
11 Mar., 1870.

J. Graham,
Esq.
11 Mar., 1870.

736. They want a Bishop to be killed by a 'bus accident before they will wake up to the importance of interfering? Yes, something of that kind; and I only wonder that we have not had more accidents than we have had. At present, 'bus proprietors get men to drive because they are cheap, and without any reference to their ability to manage horses. They know that they are responsible for any damage done by the men they employ to drive, and yet they take no trouble to inquire whether the man they are engaging is capable of driving or not; all they think of is what wages he requires. The drivers, not knowing or caring about horses, or the way to treat them, loiter away the time for half the road, and then race the other half. They loiter so much for the first part of the road that if anybody wants to go anywhere in a hurry it is much better for them to walk than to ride in a 'bus, for he will get there quicker. Now this is a thing that ought not to be, and one that is very easily prevented if there was only a time-keeper on Brickfield Hill authorized to pull the men up, and to ask them to explain how it was they had been so long coming from the Square; the men would soon understand that a different system was at work, and knowing that they had to account for their time would take good care to keep it. Where there was no good reason for delay given, then of course they would be reported to the inspector, who would proceed against them.

737. Then you would still require an inspector the same as there is at present? Yes, certainly. There are many things which he would be wanted for, and therefore I would not do away with him. The greater part of the complaints, however, would be met by having the time-keepers made officers of the Commission or Board, or whatever else you might choose to call it. The general impression is, I know, in favour of a Board, and there have been a good many suggestions as to how it might be constituted. It has been proposed that it should consist of delegates from the various suburban Municipalities, but these are now so numerous that a delegate from each would make a larger Board than would be necessary.

738. Have you paid any attention to the North Shore, and to the means of providing for its traffic? No. I do not know much about the North Shore, except that one day I was over there with my horse, and had no means of getting back in the evening. But that was some time ago, and all that is now altered. I have been given to understand that the means of communication are very good at present.

739. *Mr. Farnell.*] Do you think it would be desirable to compel 'busmen to pull up and walk at all the crossings of the streets? In some places it would, but then there are many exceptions where this is not necessary. Where the streets are wide and there is plenty of room it is hardly requisite to make such a regulation. I scarcely think that is the thing complained of, for as it is now these 'buses have a bad habit of stopping just at the crossing of the streets, and of pulling in to the kerb-stones, and right in the way of foot passengers. It would entirely depend upon the state of the street whether this regulation was necessary or not. Sometimes the traffic in streets is very thin, at other times it is very crowded, and it would all depend upon that. I look on this however as altogether a matter of detail, which could be regulated by order from the Board, or whatever body is fixed upon for the management. From Wynyard-square up to Bathurst-street there would be no very great difficulty about their crossing at a walk, for up to there there is too much stopping already. That is one of the things which is now complained of. If they went past the cross streets at a walk, people would not grumble; it is because they stop altogether and cannot be got even to walk that there are so many complaints.

740. What I mean is this: Supposing a 'bus to be coming along George-street, across King-street, and another coming along King-street, across George-street, if they are being driven at a quick pace is there not likely to be a collision? No; not so long as they are coming at such a pace as to have their horses under control. Then the men are pretty high up on their boxes, and can see ahead of them better than if they were seated in a lower vehicle.

741. Do you know that in Melbourne they have a regulation compelling 'buses to pull up and walk across the intersection of two streets? We want something of that kind as a protection against private vehicles; they are far more dangerous than the public ones. For instance, a boy sitting down in a cart comes at a sharp pace round the corner of George-street from King-street; the driver of another such cart, being seated equally low, does not see him till he comes round the corner, and when it is too late to pull off and avoid a collision. The driver of a 'bus, from his high seat, can see the cart before it turns the corner, and can so avoid it. Market-street is about the worst place I know of for collisions of this kind, and I think it is about the only place where such a regulation would be required for 'buses. If there were such a regulation it should be applied to all vehicles, private as well as public.

742. You say that the greater part of the 'buses which start from Enmore are in the hands of Irishmen? Yes, chiefly they are.

743. Do you think that Irishmen do not understand the management of horses so well as the natives of other countries? If they do they do not show it then. It is just sheer carelessness and laziness. It seems almost improbable, for one would think that for their own interest sake they would not illuse the poor animals from which they get their living; but so far from that they take no care whatever of them. Then the one 'bus that goes through Marrickville is no very great credit to the Municipality. The horses are very often unable to take the 'bus along, except at a walk, and the excuse the driver makes is that his horses are not used to the work.

744. Do you know if the drivers of these 'buses are trained men—men who have been brought up to driving? No, not one of them is a trained man; you may see that in a very short time by a comparison between these drivers and the drivers of the railway 'buses. Those who drive the railway 'buses have good horses, and they are compelled to drive fast in order to keep time and catch the trains; so that if they were not good hands at the work they would soon get their vehicles into trouble. The horses that the Newtown men drive are of a very different kind, and there is hardly any trouble about driving them. After they have been a short time in the 'bus there is not much fear of their running away, and with a little attention and caution they do not require much management.

745. Do the men have good steady quiet horses to drive? There is no fear about their being quiet; a week or two in the 'bus soon makes them quiet. That is one of the things that I complain of, that the men do not treat the horses properly—the horses are taken out of the 'bus and left just as they come out of it, and are put into it again without so much as a rub down. They are never cleaned or attended to, and are only very poorly fed. The consequence is that they are miserable, neglected-looking, broken-down things, before they are fairly broken-in.

746. Do you think that the Mayor and two Aldermen are the proper parties to judge of the fitness of these vehicles before they are licensed? I should think not. Very often a man may be an Alderman who knows nothing about vehicles, and perhaps has never seen a 'bus before in his life.

747. Not seen one? I mean not to examine it; not to know how it is constructed.

748. Do you know whether these 'bus proprietors exercise any large influence at elections? There is no doubt about it, and I will mention an anecdote to show how the thing is done: Some time back a safety proprietor wanted a license for his vehicle but was refused it by the Mayor, who did not think the safety a fit one to be licensed. Shortly after there was an election in the City, and this safety proprietor went about in his safety working as hard as he could for the Mayor's return, and with his safety stuck all over with that gentleman's election bills. When the election was over and the Mayor was returned, this same safety proprietor applied for a license for the same vehicle which had been previously condemned, and this time he got it. The Mayor could not do anything else for a man who had worked so hard for him in the election, as this safety proprietor had done. That is the sort of thing which we see every day, and that is why I recommend that these vehicles should be dealt with only by an independent Board, not likely to be influenced by party feeling, or to give rewards for election services. I have told you how the thing acted in one case, and there is no doubt whatever but that a 'bus proprietor exercising any amount of influence in a ward of the City would be able to do the same. But it is not in the 'buses alone that this system is worked, for all the offices under the Corporation are filled in exactly the same way; they are all filled by persons who are friends of electioneering agents, or who have an interest in elections in some way or the other.

749. Would you wish to see an elected Board entrusted with the management of these vehicles? I would not; I would rather see independent men selected by the Government, men free from party feelings, who would have no other thought than to protect the public. 'Buses are now an absolute necessity to the public; they must have them, and they will become a nuisance or a benefit just as they are well or ill regulated. Now they are a nuisance—there are no two opinions about that; but there is no reason why they should be so; they are now largely patronised, and they would be much more so if they were well conducted; thus the men themselves would make more money if there were proper regulations for them, properly carried out. It is only by strictly carrying out good regulations that they can be made a benefit, and that is why I should like to see a Board appointed to manage them. There is no knowing how much the omnibus traffic may extend during the next ten years; we know that the traffic has increased and the number of 'buses has been multiplied during the past ten years to a wonderful extent; and we may expect the increase to be something very much greater during the next ten years; on that account it is necessary that something should be done before it is too late.

750. People who travel in them often complain of the amount of fare? It is not so much the complaints of the fare as the complaints which are made of mismanagement; there is hardly one of the persons who are accustomed to travel in these 'buses who has not a complaint to make. But they sometimes lower the fares and then take advantage of persons travelling with them—ladies or strangers—and charge the old fare. Then another is, that whenever there are races, or if sports are got up anywhere, such as the sports at Botany some time back, all the 'buses are taken off from the suburban road to run to these races or sports. Waverley, Paddington, and Newtown, are left without 'buses. You may walk into town and walk home again whilst the 'buses go off elsewhere where they can make more money. This allowing them to leave the line of road for which they are licensed is an evil that requires the application of a remedy. Then during holiday-time, though the fare is only 3d., they insist on having 6d. from females or any others whom they think they can impose upon; and then they resort to all manner of manoeuvres to save themselves from the punishment of their extortion. On one occasion there was a boy, quite a youngster in years, who had taken more than the fare from a gentleman who had ridden with him. To prevent this gentleman from taking his number he kept the door of the 'bus open, so that, as the number was painted on the outside of the door, the gentleman should not see it; the door was kept open until the 'bus had got so far that it was impossible for the gentleman to make out the number, and then the boy triumphantly closed it. All these are things which a private individual will notice, and which he would report to a Board or a Commission, but which he would not take to a Police Court to waste any amount of his time. Then another thing is, that if a Commission were appointed something might be done for these boys; they are now growing up only as fit subjects for Cockatoo, or for the gaol; whereas if there were a Commission, some scheme might be hit upon for taking them by the hand and giving them a little learning, instead of allowing them to go to ruin as they now are. The way they are left and neglected now, the boys are never of any use for anything after they have been a few months at this work; what they learn on the stand and behind the 'bus they never forget; and they never learn anything likely to improve them. It is a great pity, for they are mostly very sharp boys, and some of them really very intelligent-looking little fellows. The incident I have mentioned will show how ready they are in expedients.

751. *Chairman.*] Has it come to your knowledge that any stand has been absolutely deserted by 'buses on these race-days and holidays? Yes, frequently; I have heard persons say that it was no use to go to Waverley, for instance, because all the 'buses were off.

752. That is what you have been told—but of your own knowledge? I cannot say that I know it of my own knowledge, because I drive my own vehicle and do not ride in 'buses.

753. Then your remarks as to the entire desertion of a stand at holiday-time are based upon what you have heard from others? Yes; upon any holiday, or upon occasions like the Randwick races, the stands are deserted. The stands at all the suburban Municipalities are all very much alike in this respect. Then the Sunday traffic is becoming a nuisance and requires regulating. I should recommend that one-half the 'buses on a stand should be allowed to ply one Sunday, and the other half be told off to ply on the other Sunday. There certainly cannot be so many 'buses required on Sunday as there are in the week days, and therefore one-half the number would do. I should be inclined to put a stop to it, but I know the public would not stand it. They would insist upon having some convenience, and therefore I say give them half the number—one-half one Sunday and the other half the other. Then I believe that the drivers are not fairly dealt with by the proprietors. They never by any chance get a day to themselves, but are continually on the box of the 'bus, from Monday morning until Sunday night, with no day of rest intervening. And let me tell you that it is no child's-play sitting there on the box of the 'bus, exposed to all weathers, from 8 o'clock in the morning till 8 at night. And then they go to the theatres, returning home between 1 and 2 o'clock in the morning, and having to be up and out again by 8 o'clock. It is anything but a life of idleness for the drivers, and one can hardly blame them under the circumstances, if they do get off to sleep as quick as they can without cleaning their horses. If there were a Commission it would be able to regulate all that. There could be some arrangements by which so many men should go out one night and so many another. It would be a real benefit to the men themselves, and it would

J. Graham,
Esq.

J. Graham,
Esq.

11 Mar., 1870.

would at the same time benefit the public, because the men from being well rested after their day's work would be better able to give their attention to the horses.

754. You spoke just now about an Alderman never having seen a 'bus—does that remark apply to the Sydney or to the suburban Municipalities? Rather to the City. It is hardly likely that a merchant, for instance, would have any much notion about 'buses and horses.

755. Do you know the number of vehicles licensed by the Sydney Corporation? I do not.

756. It is a large number? Yes. It must be a large number for the Mayor said the other day that the Corporation received £2,500 a-year for licenses alone.

757. Then being such a large body of men, they are numerous enough to influence an election? There is no doubt about that; just as I have mentioned to the Committee previously.

758. Did you ever consider whether entire free trade in the matter of 'buses would be of service to the public? I do not understand you. Do you mean that the 'buses should go on or off, just as they think fit?

759. Yes? I do not think it would answer at all. It would never do for every Tom, Dick, or Harry to be up at one stand to-day and away to-morrow. Such a mode of carrying on would lead to very serious inconvenience. I should not like to see a monopoly, but I certainly should not like to see any such system adopted as that you allude to. Every man who can get a certificate of good character, and who has the means of purchasing a good 'bus and suitable horses, should have the right of going upon any stand he pleases to select. He might be allowed to go to the Town Hall for information as to which was the most suitable, and every information ought to be given to him. But when once he selected his stand he should be made to continue on it, until he got permission in the regular way to alter it. Then there should be weekly reports sent in by the time-keeper of the stand, showing the state of the traffic, the hours at which the 'buses started, and those which were not running, the state of the 'buses, the condition of the horses, and the cleanly or untidy appearance of the drivers. All these would be so many checks upon the men and keep them up to the mark; but as to the free trade style, anything of the kind would be very dangerous.

760. Then your opinion is that the 'bus service is at present very badly conducted, and that some alteration should be made in it as soon as possible? That is my idea, but I would more particularly recommend that the management of these vehicles should be entrusted to some distinct body entirely independent of the Aldermen either of the City or of the Boroughs. At the same time if such a body were appointed, the Mayor for the time-being in each Municipality might be the authority through whom complaints might be made to the Commission. It would not do to leave it in the power of anyone and everyone to pull the men, or there would be no end of persecution and annoyance. But still there ought to be some one to keep them in check, and so the complaint might be lodged with the Mayor, who might inquire in the first instance to see that it was neither frivolous nor spiteful, and could then forward it on to the Commission, who would deal with it. I believe that the whole affair rests with the time-keepers. If we had thoroughly honest, intelligent, and responsible time-keepers, very much of the difficulty would be got over even now as things are. This is what the Corporation ought to have done long ago. They ought to have adopted this system of time-keepers, and there would not have been this outcry which has now been raised, and which demands a complete change. But instead of this, the City Council has kept on upon the old system, until the mismanagement has become so great that the public, which will bear a great deal, will bear it no longer. Speaking of the Newtown 'buses, I know that they are in a most filthy state, dirty and muddy outside, dusty within; in fact they are in such a state that they are unfit for any well-dressed female to enter; then on the stands there are gambling, and all sorts of language, and if there were a responsible time-keeper on the ground he would at all events make them civil with their tongues and decent in their persons, which they certainly are not at present.

761. On several of these lines there is a great number of boys employed? Yes.

762. Can you suggest any mode by which their spare time might be profitably filled up? No; the time is too brief for anything effectual to be done in the way of schooling, unless, perhaps, an evening school; but then that would be useless, for the boys are all dispersed as soon as the day's work is over.

763. Even if there were evening schools, do you think that these boys would be able to give their attention to scholastic instruction, after having been engaged in their occupation of conductor from 8 o'clock in the morning till 8 at night, in the open air? No, certainly not; it would be too much for them. I have often said that the hours these boys are engaged are too long; there ought to be relays of these boys, so that half should be on one-half the day, and the other half should be on the other half; there would be some chance for them to get a little schooling then. Now they are kept to work behind the 'bus from 8 in the morning till 8 at night, and very often until after midnight; when they go to the theatre it is even later than that, and you see the little fellows often tumbling off to sleep as they stand behind the 'bus; they go into any corner they can find and drop off to sleep, to be up again and ready for work at 8 o'clock; I have myself frequently seen the boys coming out of the 'buses where they have been sleeping all night; they go where they can to sleep, for nobody seems to look after them, or to care for them. Something might be done for them if we had a Commission, for though they could not go to school, some little premium might be offered to those who chose to learn; they are sharp intelligent lads, and if some inducement were held out to them I believe that they would do it—that they would get up lessons; they could not go to school, but they know very well what is for their own good, and if they only saw that some interest was taken in them they would readily learn short tasks, more especially if some small prizes were offered them for doing it.

764. *Mr. Farnell.*] You do not mean that they would learn their tasks or lessons whilst travelling on the 'bus? No; but when they were stopping on the stand—from the time of arriving there until they started again; it would be a great thing gained if the boys could be led to do this, instead of amusing themselves as they now do by playing pitch-and-toss; and they would do it too, particularly if there was a good time-keeper on the stand, to act as inspector and to look after them a bit.

765. *Chairman.*] Would it be possible, do you think, by any system of co-operation, to carry on the work with a less number of boys than they now have—by one boy for instance doing the work on two 'buses? I do not see how it is to be done.

766. Do not the Newtown 'bus-men depend for conductors on the boys they get from the Glebe? No; I think not—very few of them have regular conductors; they mostly chance it, the same as they do many other things; they start off without a boy and take the chance of picking one up upon the road. Still something

something of what you suggest might be done where one proprietor had three or four 'buses running from the same stand; then the boy from the 'bus which came in might be transferred to the one which was going out.

J. Graham,
Esq.

767. Then if there were a Company established, owning several 'buses, such a thing could be done? Yes; they could do with less conductors in that case; but it would not suit a man to do this unless he had three or four 'buses; but these are all details that might be left for the Commission to settle; let us get the Commission and all the rest will soon follow. Under any circumstances these boys ought to be looked after, for they are being ruined now; their sole ambition in life is to become drivers of 'buses, and that is what they do come to, if they contrive to keep out of the hands of the police.

11 Mar., 1870.

768. Have you any further suggestions to offer? No; nothing beyond what I have already stated. I may however add, that we have talked this matter over several times in our Municipal Council, and we are all pretty well agreed upon what I have already said about having some separate and independent body to manage the public vehicles. I consider it a disgrace to the City Council that these vehicles should have been left so long without some check upon them, and without some proper system of management to protect the public against the nuisance they have become.

TUESDAY, 15 MARCH, 1870.

Present:—

MR. ALLEN,

MR. BUCHANAN,

MR. FARNELL.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Joseph Kingsbury, Esq., was called in and examined:—

769. *Chairman.*] You are the Mayor of Newtown? Yes.

770. You have been an Alderman for some years in one of the suburban Municipalities? Yes, for five or six years, I think.

J. Kingsbury,
Esq.

771. You are, I suppose, aware of the nature of the present inquiry? I am.

15 Mar., 1870.

772. Have the public vehicles plying from Sydney through your Municipality come under your notice in your official capacity or in any other way? Yes, for a long time past.

773. Are you enabled to state whether or not a large amount of dissatisfaction exists in the public mind as to the efficiency and general conduct of public vehicles plying for hire? Yes; a very large amount of dissatisfaction pretty generally exists.

774. Would you state to the Committee what, in your opinion, are the causes of the dissatisfaction which prevails? Well, it appears to me to arise from insufficient or incompetent supervision.

775. Do you mean on the part of the City Council? On the part of those whose duty it is to see that the law is carried into effect; on the part of the Council, I presume, and its officers.

776. I suppose that it is within your knowledge that the Municipal Council of Sydney have the control of licensed vehicles in the City of Sydney, and within eight miles of the boundaries thereof? Yes.

777. And that the Council has power to make by-laws? Yes.

778. And that their by-laws prevent the suburban Municipalities from making any by-laws to be operative? Yes, I understand that.

779. Have you read the City by-laws? I think I am thoroughly conversant with them.

780. You think that inefficient control over the licensed vehicles is the primary cause of the dissatisfaction which prevails? Yes; I think the by-laws are quite sufficient; but that clause in the Act, which gives the Municipal Council of Sydney control over all licensed vehicles within eight miles of the City, prevents all the suburban Municipalities from regulating anything which may be wrong at their ends.

781. Have any particular results, arising from inefficient control, come under your notice? It appears to me that they do not see that the drivers are competent men, morally competent men mostly, that they are sober men. Many of them are men who are unfit to have charge of horses at all, still less are they fit to have the lives of the public in their charge. One apparent cause of the complaints of the people is a want of sobriety in many of the drivers, and a consequent want of civility in many cases. I do not think that a want of sobriety is to be charged against the drivers as a rule; but in cases where there is a want of sobriety there is generally a want of civility.

782. A large number of omnibuses run to the Borough of Newtown and beyond it? Yes, a very large number now.

783. Are you aware whether the drivers of these omnibuses are compelled to keep regular time in starting from the stands and in running on each of the lines of road? They are compelled by the time-keepers to start from the stand at a proper time; but excepting by the supervision of the police through the Council, they are not compelled to go on their journey without stopping, and they do stop very much when there are no passengers to take up.

784. They loiter on the way? They loiter until the next omnibus comes into sight, and they then drive on. The next omnibus waits in the same way, as a rule, until the following omnibus comes in sight to push it on.

785. Could you suggest to the Committee any course which could be pursued, which would be likely to remedy the evils complained of—either in enforcing the by-laws, or in substituting some other governing body? I should suggest the repeal of so much of the Act as gives the power to the City Municipal Council to regulate omnibuses within eight miles of the City, and the appointment of a time-keeper, who should also be an inspector, and be paid partly by the suburban Municipalities and partly by the drivers, as at present, or the inspector and time-keeper might be wholly paid by the suburban Municipalities. I think that that would be the case. I am of opinion that it is unadvisable and almost inadmissible to appoint another power to supervise and oversee. In the first place there would be a great deal of expense incident to such a course as that, and it would involve a great deal of detail in the way of clerical labour, offices, books, and accounts, which would have to be kept.

- J. Kingsbury, Esq.
15 Mar., 1870.
786. Would not a large amount of confusion arise sooner or later by various suburban Municipalities having conflicting by-laws? I do not think that it is necessary that the by-laws of any suburban Council should conflict with any by-law of the City Council; of course there might be some difficulty, but I think that the lesser difficulty would exist in the case where the Municipal bodies had the control. I think that is rather their work than to create an independent or distinct body to have the control. I know it has been suggested that Commissioners be appointed; but the very name of a Government Commission is synonymous with a highly paid functionary and all the concomitant expenses of an office. I am very certain that the whole income would not meet the expenses which would have to be incurred; and any probable increase of the income would only meet the increased expenditure, leaving nothing for the repair of the roads.
787. Have you any idea how many omnibuses there are running out of Sydney to the various suburbs? No, not numerically, I could not say.
788. Do you know the amount of the license-fee which they pay to the City Council? I think that it has been reduced to £7 10s., but I am not exactly sure.
789. In the event of omnibuses having to pass through two or three suburban Municipalities on their way to the City, would not the plan which you suggest, necessarily lead to a want of control as to the time, at one end or other? I think not, if the time-keeper were an inspector as well.
790. But if the inspector were the inspector for the City of Sydney, as soon as the omnibus passed out of the City, it would be beyond his control? But the time-keeper in each Municipality would be an inspector likewise; and all the by-laws of the Municipalities could be an exact counterpart of one another, and perhaps should be so to be effective.
791. But would that be likely to be the case with independent Municipalities? There can hardly be any doubt about it. I think it would argue want of wisdom in any Council making different by-laws.
792. Have you looked over other by-laws than your own for the management of vehicles? No; not that I could speak definitely upon them.
793. You would be unable therefore to say whether they would present that degree of uniformity that would be desirable in the management of omnibuses? I could not say now.
794. Have you taken notice whether the omnibuses are kept clean, and whether the harness and trappings are kept in decent order? I have for a long time past. Some of them are kept so by very attentive conductors and proprietors, but some are not. In bad weather they are of course not kept so clean as in fine weather, though very many of them are washed every day. But a great many omnibuses, and more especially the harness of the horses and the clothing of the conductors and drivers, are such as certainly ought not to be allowed in those vehicles licensed for the use of the public.
795. Have you observed that there is a very large number of omnibuses plying for hire on some of the stands, as compared with the number running in connection with others? I have frequently noticed the large number of omnibuses when they have been on the stand.
796. Each of these omnibuses is provided with a boy, called a conductor? It should be.
797. If it be several hours before the turn of one of these 'buses comes to start, the boys are unemployed during the interval. Can you suggest any means of keeping these youths out of mischief whilst waiting so many hours on these stands? No, perhaps not; unless they could be influenced by the inspector or time-keeper. They generally have a portion of work to do in taking care of their horses. Sometimes they feed their horses on the stand, though they have not done so so much lately, and water them. Sometimes they take the horses home and feed them, and at others they do not bring their omnibuses on to the stand but to some other convenient place, bringing them on to the stand at the time appointed for starting. Sometimes three or four hours elapse before the turn of an omnibus comes round for starting, and during that interval the conductors are sometimes occupied in attending to the horses either at home or on the stand.
798. In your opinion then the boys have occupation? They should have occupation if they are industrious lads. There is no necessity for them to idle away their time, although many of them do idle away their time when they meet together on the stands, in playing marbles or other games.
799. Have you paid any attention to boats and other vehicles plying for hire on the harbour? No, I have not; I live too far away from the harbour to enable me to speak of them, and I am very seldom a passenger by any of them.
800. Would it in your opinion be desirable that for the sake of persons living in the suburbs, compelled to use that kind of vehicle, the boats and ferry-steamers should be under control also? Not I think by the Corporations. I think that the control of them might be left to the Municipal Council of Sydney, or to such persons as they might appoint, which would be in effect the same thing. They would, of course, be under the supervision of the Water Police, rather than of the Land Police.
801. *Mr. Farnell.*] Who licenses the omnibuses now, and other public vehicles plying for hire? The City Council.
802. Do you know who inspects these vehicles before they are licensed? I presume that Mr. Oram, or some other person, is appointed by the Municipal Council to do so, but I do not know the inspector personally or by name.
803. Do you know that the Mayor and two Aldermen inspect these vehicles prior to the licensing of them? I know that there are days appointed on which some persons connected with the Municipal Council inspect them. I have heard that the Mayor and others do so, but it does not strike me at the time that they are specially appointed by law to do it.
804. If you look at the by-laws you will find that the Mayor and two Aldermen are selected to pass these vehicles—is not that so? Very likely it is so.
805. Do you think that they would be proper persons, competent persons, to inspect omnibuses and other vehicles, before licensing them to ply for hire? I do not think that the Mayor and Aldermen, as such, are competent to inspect omnibuses and horses. Possibly they may be so, but not officially; it is not because they are Mayor and Aldermen that they are in a position to become qualified to inspect them.
806. In a competent inspector of vehicles, a person qualified to ascertain that they are safe for travelling in, is it not implied that that inspector should be a mechanic, a coach-builder, or something of that kind? No doubt he should have those qualifications to enable him to inspect the omnibuses properly, and to pronounce them safe and convenient for the use of the public; there is no doubt about it.
807. I believe that Mr. Oram inspects the omnibuses, and looks after them, after they have been licensed? I believe that that is his work—that it is his duty to inspect them daily, to see that they carry out the by-laws in their time of starting, in their not loitering on the journey, and in a hundred other ways. 808.

808. You are of opinion that the duties of time-keeper and inspector should be combined in one officer? J. Kingsbury, Esq.
I am, in the suburban Municipalities; and if there be a time-keeper in the City of Sydney he should be an inspector likewise; he should be thoroughly acquainted with the by-laws, and see that they are carried out.

15 Mar., 1870.

809. That would require a person of some intelligence, would it not? Of course it would. The time-keeper and inspector should be a man of intelligence and capacity, and he should be sufficiently well paid to ensure the efficient performance of the duties of his office.

810. That would require a time-keeper for each Municipality? Certainly, or for each of the principal Municipalities.

811. For each Municipality to which a line of omnibuses runs? Certainly, where there is a line of omnibuses. At every end where there is a time-keeper there ought, in my opinion, to be an inspector.

812. How would you prevent loitering between a stand in the City of Sydney and the stands in the suburban Municipalities? Well you could not provide for that in the office of the time-keeper, because he would be stationed at the end; nor could you make any such provision perfect unless some one were to follow every omnibus. The provision that is now made is by the Police Act, and the power which every one has to set it in motion.

813. Do the police interfere now with the 'busmen? The police inspector at Newtown is an inspector of nuisances under the Corporation, and he, when instructed, brings it under the notice of the authorities when a person loiters on the way. There has been a good deal of loitering, but now there is not, because a good many of the drivers have been fined within a very short time.

814. But is it not the fact that while drivers keep their time at the point of departure and the point of arrival, they loiter between those points? There are some days they do not, and there are many days on which they do. If the drivers agree among themselves in the morning there is no loitering for the day, unless one of them chooses to fall out from the arrangement and say, "I will wait as long as I like." In the case where one driver waits, the next omnibus that comes up drives him on. Sometimes it happens that for days and weeks an omnibus does not stop at all, excepting to take up or set down passengers on the journey between Sydney and Newtown. I am of opinion that it is because the by-laws are not enforced that the loitering takes place at all.

815. How much a year would you consider a sufficient salary for the time-keepers? I could not say.

816. About what would be a fair salary? I think that £150 a year would be sufficient for such men.

817. And how many Municipalities would there be requiring the services of such an officer? Well, I could not exactly say. I should think about five or six; but perhaps not so many. A time-keeper would be required at Newtown, Waverley, Paddington, and at every important line of traffic from the City to the suburbs.

818. Did I understand you to say that you would repeal the law which gives power to the Corporation of the City of Sydney to license vehicles within eight miles of the City? Yes; so much of the law as relates to that; I think that they should only have power to license to their own boundaries.

819. That is, to license for the City of Sydney? To license for the City of Sydney.

820. Then you would allow other Municipalities to issue licenses for omnibuses or other vehicles plying for hire through those Municipalities to the boundary of the City of Sydney? Yes.

821. How would you do in the case where one of these lines of road passes through two or more Municipalities before it arrives at the boundary of the City of Sydney? That would be subject to arrangement between them. There would be no necessity for issuing separate licenses in a case of that kind, for the question could be settled by an honest and equitable partition of the license fees among the different Municipalities. This matter might be settled as other matters are settled, by arrangement. No doubt there would be some difficulty, but not an insurmountable difficulty, I think.

822. Do you think that the licenses are issued for the purpose of obtaining a revenue with which to repair the streets and roads? Perhaps that was not their object; but there is no doubt that the revenue derived from this source is used by the Municipalities for general purposes. The object was perhaps the same object which the Government had in view in licensing public-houses which was not to fee the Government but to take care of the public interests. The licenses, however, do fee the Government, and they make good use of them.

823. Do any of the suburban Municipalities now receive any fees from the licensing of vehicles? Not as a rule. I think there is one. I have heard that the Paddington Municipal Council receives some small amount. It was intended by the lowering of the Sydney license fee that the suburban Municipalities should put in so much as the City Council took off.

824. It has been given in evidence that a large number of the omnibus proprietors are ratepayers in the suburban Municipalities—is that so? I presume they are, and I suppose that the persons who generally travel in the omnibuses are also ratepayers. I think there can be no doubt of it.

825. In that case they would contribute by their rates to the keeping of the streets and roads in repair? No doubt of that; and so do the ratepayers who pay toll. They pay both rates and tolls.

826. Do you think that it would not be better to license these vehicles, more for the convenience of persons residing in the suburbs than for the purpose of deriving revenue from the license fees? No doubt about that. That was and should be the primary object of the license.

827. Are you aware whether there is sufficient revenue derivable from the licensing of these vehicles in the gross to establish and support a Commission which might be established for their management? I think not. I do not think that the whole gross revenue would pay the expenses of a Commission, or support the staff of Commissioners, clerks, and all the other paraphernalia attendant upon a Commission.

828. Are you aware what the gross revenue amounts to? I could not give it to you in numbers. The matter was very largely discussed at the Town Hall the other day. It did appear to us that there would not be sufficient to support a Commission; that there would be nothing left to divide between any of the Municipalities if the persons connected with the Commission were moderately well paid.

829. *Chairman.*] You are speaking now as to omnibuses? Of omnibuses alone. I did hear and took down the gross amount of revenue derivable from the omnibuses, boats, and everything.

830. Of the fines? Yes.

831. Of the carriages? Yes; of everything. It is simply a question of the expense of a separate Commission, which in my opinion must be very large. I know it is assumed that these men need be paid very little, and that the office would be almost a sinecure. But it does not so strike me, and I know something about Commissions which have been appointed before.

J. Kingsbury, Esq.
15 Mar., 1870.

832. Suppose that the power of licensing were exercised in the different Municipalities, how could you ensure any uniformity in the amount of the license? Well if it did not secure uniformity it would regulate itself in acting as a preventive to 'busmen driving omnibuses; and if there were any deficiency in that way the public would soon complain. It would be self-adjusting; but I do not think that uniformity is so necessary as efficiency. There may be some difficulty to be overcome, but I think that the difficulty is one which would easily be overcome, and that the mind of the suburban Municipalities is in such a state on this question that all these difficulties would be met and smoothed down in a single week.

833. *Mr. Farnell.*] Are you aware that on occasions of public holidays that many of the omnibuses licensed to a particular line of road, leave that line of road and ply elsewhere? I am aware that, as a rule, they do that. So much is that the case that on a holiday you cannot get an omnibus to do your regular journey; in fact, no omnibuses are supposed to do regular journeys on occasions of that kind.

834. On what authority do they leave the routes to which they are licensed? I suppose that they do it against the law—that they have no authority, excepting usage and self-interest; but at the same time they cater for the public benefit and convenience. On occasions of holidays so much is this the case that you cannot hire an omnibus for love or money, unless you hire it some two or three days before.

835. It has been given in evidence that the Mayor of Sydney gives that permission—Do you know whether that is the case? It may be so, but I never heard of it.

836. Do you think that that is a proper power to be vested in the Mayor of Sydney? Well, I think that he should have a large amount of discretionary power for the good of the public; but still it is a power which might be used injuriously as well as otherwise. I do not hardly know whether I should be prepared to limit the power of the Mayor in that matter, seeing that he exercises his judgment for the benefit of the public on those days. There would be a great outcry, I think, on the part of the public, if the omnibuses were not to be allowed to leave their ordinary routes on public holidays; but this is a matter on which I am not prepared to express a definite opinion.

837. Have you ever noticed the drivers and conductors taking their meals in the omnibuses? Yes; frequently. The omnibus is their house when on the stand, and when their meal is brought they go inside and make use of the vehicle as their dining-room.

838. Do they ever make a bed-room of it? From my own knowledge I could not say; but I have heard that in some cases the boys are supposed to sleep there.

839. Do you know anything of the hansom cabs that ply about town? I do not know enough to give evidence about them. My knowledge is based upon what I have heard only, and I therefore should not like to speak of them.

840. Who regulates the fares charged on the omnibuses plying between the City and suburbs? If anyone but the proprietors of the omnibuses themselves, I presume that it is the City Council. But I have never heard that the fares are regulated by the Council absolutely, so that a man cannot take less. It may be that a driver cannot take more than a certain amount, but I believe that it is quite competent for the whole of the drivers to lower their fares to a penny for any distance to-morrow, if disposed to do it. I do not know that they have power to charge more than the usual fare of six-pence.

841. Do you know whether they ever carry more passengers than their omnibuses are licensed to carry? I never knew an omnibus to be what I may call officially full. In twenty years I never knew a driver to acknowledge that his omnibus was full. They carry more passengers than they are entitled to carry as a rule; but the drivers never appear to consider that the omnibus is full.

842. Although there may be more than the licensed number of passengers in at the time? Yes. On the occasion of holidays, or school excursions, it is almost invariably the case that there are more passengers in the omnibuses than they are licensed to carry. So much is that the case that usually the springs are pressed right down, to the great danger of the passengers. I never in my experience knew a driver who would say, "I am full, I can't take you up." I have known the passengers to grumble about the omnibus being too full; and tell the driver to go on for there was no room.

843. *Chairman.*] In the event of the suburban Municipalities being charged with the management of the omnibus traffic—would not the placing of time-keepers in the suburbs be a considerable charge upon them? Well it would be an increase of the charge upon the present state of things.

844. Would you propose to charge the omnibus proprietors or the Corporation with the payment of these time-keepers? So far as the matter at present appears to me I think that both should be charged; but if either of them were to be charged exclusively I certainly think that it should be the Corporation, for in the present state of things the time-keeper is the servant of the men who drive the omnibuses, and cannot be expected to act so independently of them as he should be able to do. I should prefer that the time-keepers be paid by the Municipalities; but of course it would come upon the proprietors and drivers in the shape of an increase of the license fee. The fee might be raised so as to be equal to the amount which they now pay as license and for the time-keeper, and that would not be at all oppressive.

845. I think you said that you had lately noticed some improvement in the omnibuses? There has been a vast improvement lately.

846. How long would you define "lately" to mean? Within the last three months there has been a great improvement in the dress of the conductors. I may say, if it is necessary to the evidence, that I think there certainly should be some power to constrain the conductors to remain with the omnibus proprietor for a certain length of time. The present practice of not fixing the time for engagements has led to very great hardship, and I think has occasioned a great deal of slovenliness in dress and manners. An employer now has to supply the conductor with a proper uniform, but there is nothing to prevent the boy from leaving his service before the dress is paid for, and there is little inducement for the boy to keep himself clean and respectable. The conductor may leave almost without notice, and go on to another omnibus, leaving his employer to go into town without a conductor, and run the risk of being fined for doing so. I think that the conductor should be licensed for a certain definite time, and that his leaving should be subject to notice. It would then be to the interest of the employer to see that the conductor was properly clothed, according to the by-laws, and that the clothing should be the conductor's own property. The uniform now is sometimes the property of the proprietor, and the conductor just puts it on and off as so much livery in which he has no interest, and he thinks that he can wet and spoil it because it belongs to his master.

847. Having regard to the great number of omnibuses, has it ever occurred to you that it would be well to leave them to regulate matters by their own action, the public being left to judge as to who served them best? No.

848. It is necessary that control should be exercised over them on behalf of the public? Decidedly; and I think that the drivers would admit that themselves. I was speaking to a driver this morning; and with reference to a Cook's River omnibus, which was loitering all the way in front of him, he said that if he passed that omnibus it would be contrary to the regulations, and there would be sure to be a race for the next fare; he could only pass the omnibus in front of him when it stopped to take up or set down a passenger. The man however admitted that without strict regulations the omnibus traffic could not be worked for a month.

J. Kingsbury,
Esq.
15 Mar., 1870.

849. Have you any suggestions to offer to the Committee with a view to further the objects of the inquiry? No. It strikes me that the alteration of the law, which empowers the Municipal Council of Sydney to have control and to license beyond its own boundaries, is the principal thing.

Josiah Mullens, Esq., was called in and examined:—

850. *Chairman.*] You are the Mayor of Balmain? Yes.

J. Mullens,
Esq.

851. Were you an Alderman for some time before you became Mayor? Yes, about fifteen months.

852. You are aware of the nature of the present inquiry? No, I am not.

853. Perhaps you will look at this paper (*Resolution of the Legislative Assembly, appointing this Committee, handed to witness*)? Yes, I see that.

15 Mar., 1870.

854. Have you paid any attention to the subject there referred to? No more than from having gone backwards and forwards to Balmain in the ferry-boats and omnibuses for many years past.

855. Is it within your knowledge that considerable dissatisfaction prevails with the public as to the management and general efficiency of the omnibuses and other vehicles plying for hire in the City and suburbs? I have heard complaints about the City Municipal Council having the sole control in such matters.

856. To the injury of the public? Yes; I think so.

857. There are several omnibuses running to Balmain? Yes.

858. In your opinion are these efficiently and properly conducted? Yes.

859. Then as far as Balmain is concerned you have nothing to complain of? Yes; if we want an omnibus to go anywhere away from their regular route, the proprietor has to go to the City Municipal Council to get permission. And besides that, we are not able to charge them any money for using the roads of our Municipality. We think that the City charges them quite enough; and we decline to tax them any more than they are taxed already.

860. You have the power under the Municipalities Act to do so? We have the power, but we think that it would be oppressive to exercise it.

861. Can you regulate the time for the omnibuses to start in the Municipality? I am not sure; I do not think that we can.

862. You are aware that the City Council has power to regulate omnibuses and other licensed vehicles, within eight miles of the City. That being the law, I suppose you could not pass any other law to override that? I think not.

863. Do you look upon the power of preventing the drivers from leaving the stand at Balmain, without first obtaining permission, as injurious to the public? No, I cannot say that, for we have so few omnibuses running to Balmain that we do not feel the grievance as some other Municipalities do.

864. But is it not a protection to the public that the drivers should not be allowed to leave the stand from which they regularly ply, without permission? I think so. It would ensure punctuality; but we of course know our own local wants better than the City Council can possibly know them.

865. Have you paid any attention to the conveyances by water? Yes.

866. Have you anything to complain of in that particular? I think that our accommodation might be improved, and I especially think that we might have better accommodation provided for us on the City side of the water.

867. Are there not stairs in Darling Harbour, or that neighbourhood, for your convenience? No.

868. None whatever? None, excepting such as the proprietors of ferries hire themselves. Public stairs there are none.

869. Then the ends of the streets where there were public stairs are taken up for other purposes? They are simply used for a few paltry rowing boats.

870. Could you suggest anything in reference to this matter, with a view to an alteration that would be more beneficial to the whole public? I could make a suggestion (*diagram pencilled by witness and shown to the Committee*). Supposing this to be the end of Erskine-street, where our ferries run to. The end of the street is now finished off square, and there are small steps here running down to the water. No steamer can possibly come alongside those steps. I would suggest that a cutting be made in the jetty, in the middle of the roadway, where there is plenty of room for the purpose. The steam ferry-boats could come in here, and the watermen's stairs be there. The steamers are now obliged to seek accommodation elsewhere, and the landing is exceedingly inconvenient.

871. Have you considered that the water could be deepened, and thus get rid of the apparent necessity of building a jetty—would not that answer the same purpose? I have not considered the matter; I think that that belongs rather to Captain Hixson's department. There is no doubt that the whole of the line of the harbour has shoaled up considerably within my own knowledge, and I think that great injury is thereby inflicted on the whole of the City. The question is whether it would not be better to dredge it out, and keep it dredged.

872. Upon whom would you place the expense? The City Council—leaving them to make a small charge to the ferry-boats.

873. What means have you of getting over to Balmain after the steam ferry-boats cease running? By the small boats of the watermen.

874. Is there anything to ensure regular attendance? Nothing beyond the concert of the watermen themselves. They make their own regulations among themselves, by which they arrange that the boat-house shall never be left without a waterman up till 12 o'clock.

875. What arrangement is there after that hour? You must know where one or other of the watermen live, and fetch him, if you want to cross after that hour; but up to 12 o'clock at night the wharves are always attended.

876. Have you any idea of the number of watermen plying from Sydney to Balmain? I have not. They ply from two separate points.

877.

- J. Mullens, Esq.
15 Mar., 1870.
877. Your difficulties are less in this respect since you have had the bridges to Balmain by way of Pyrmont? Very much less; and a great deal of the inconvenience can be obviated in that way. Arriving in Sydney late by the train, I jump into a cab and drive round. Formerly I used to have to knock at the doors of the watermen, and sometimes had to wait half an hour before I could get one.
878. But other suburbs not having that facility must feel the want of proper communication by water very much? I should think so.
879. At St. Leonards, for instance? Yes; unless the watermen at the Circular Quay do the same as our watermen do, persons must be put to great inconvenience.
880. What fares are charged by the watermen plying to Balmain? Between 10 and 12 o'clock at night the fare is one shilling for each passenger. After 12 o'clock, if there were only one passenger, I think that they would charge according to the weather; if a quiet passage, two shillings; if a rough passage, five.
881. Are there any licensed stairs at Balmain? Yes, two.
882. Does your Municipal Council regulate them? Yes.
883. The boatmen ply from these stairs to where? To two points on the Sydney side; one by the Grafton Wharf, and the other at the foot of Erskine-street—the places being the same as those to which the steamers ply.
884. Are they appointed under your by-laws? No; I think that they are appointed by the authorities of the Water Police, who also license the watermen. We have no control over them on the Sydney side at all.
885. Are you sure that they are not all licensed from Sydney? I am sure that they are all licensed from Sydney. No application has ever been made within my knowledge to the Municipal Council of Balmain to license watermen, and I do not think that we have any authority at all to license them.
886. Is it, in your opinion, desirable that some new arrangement should be made to regulate these vehicles? I think that the officers appointed by law in each locality are the best judges of the wants of that locality. We have men there utterly unfit to be trusted with their own lives in a boat, and much less are they fit to be trusted with the lives of others. One is a notorious drunkard, who spends half his time in gaol; and as to the boats some of them are as rotten as tinder, and utterly unfit to leave the wharf. The Water Police appear to know nothing of this; and I believe that the license is given to anyone who asks for it.
887. Have you ever paid any attention to the regulations for the Harbour of Port Jackson, published by authority? No, I have not.
888. If the regulations in existence provide that all licensing shall be from Sydney to the various suburbs with an arrangement that one-half fare shall be charged for the return passage, including a detention of fifteen minutes—do you think that that is a provision suitable to the requirements of the present day? Yes; but if I go from Balmain to Sydney and wait fifteen minutes, I think that I should have the right to go back for half fare also.
889. I suppose that now-a-days there would be as many passengers from Balmain to Sydney as from Sydney to Balmain? Decidedly, more.
890. You think that the arrangement should be made to take effect from the point of starting—from Balmain as well as from Sydney? I think so, decidedly.
891. Have you ever considered the question as to whether steamers plying for hire should be placed under some regulations? I think they ought. At present they can go whenever they like, come when they like, and charge what they like. I am not certain that the fares are fixed; I do not think they are; I believe that that is more a matter of convenience and competition between them.
892. Having regard to all these matters, could you suggest any mode for regulating vehicles by land or water, which would be an improvement on the present system? I think that at all the places where steamers ply there should be waiting-rooms—there are none at present; both where the traffic is by small boats as well as by steamers I think that there should be convenient waiting-rooms.
893. The traffic is very great from Balmain to Sydney? Very great indeed.
894. Have you any idea what is the number of the population of Balmain? About 5,000.
895. Who mostly get their living from Sydney? I could not say that. There is a vast interchange in that respect between Sydney and Balmain. A great many people go from Balmain to business in Sydney, and a great many workmen go from Sydney to their work at the Dry Dock and other places at Balmain.
896. Any want of punctuality then in the steamers running backwards and forwards would be a great drawback to these people? It would be a grievous wrong, because they would lose their time.
897. And I suppose lose their employment in some cases? The owners of the steamers are so much alive to this that they are very particular that the boats for the workmen shall run early, and I believe that they begin to ply as early as 5 o'clock in the morning.
898. You have more than one Company? Not at present; there is a threat of opposition.
899. I think I asked you whether you could suggest any mode of regulating vehicles plying for hire by land or water, which would place the matter on a better footing as regards the whole public? Yes, I think there ought to be control over the size of the vehicles licensed for the use of the public, over the way in which they are kept and ordered, and the amount of shelter provided from the weather or otherwise. I think that they sadly want regulating in that respect. Some of the ferry-boats are very defective in accommodation for ladies.
900. Would you consider the Municipal Council of Sydney as the most efficient ruling body for the management of the whole of the traffic, including the suburbs as well as the City? No; I think that the whole system is now outgrown, and wants reorganizing altogether. The suburbs are getting very large communities, and should not be treated any longer as children; and, as I said before, we know the wants of our own locality better than persons who never enter our omnibuses and never go near our ferry-boats.
901. *Mr. Farnell.*] I think I understood you to say that there are only two places appointed as landing-places on the Sydney side from Balmain? I think there are only two. I am not sure whether there is one from the Dock; but I fancy the ferry is too far away for any watermen to be appointed. I do not think that there are any licensed watermen plying from the Dock.
902. Do you know whether the steamers or boats ever carry more passengers than they are licensed to carry? I have a strong suspicion that they sometimes do, but I have never counted heads.
903. Are the engineers employed on these small ferry-steamers generally competent men? I think so.

904. Are they engineers, or are they merely drivers? I cannot say. They appear to be steady Scotchmen, and I imagine that they have been promoted. I have known some of our drivers on the line these fifteen years. J. Mullens, Esq.
905. *Chairman.*] Can you suggest anything further to the Committee? I think that the most important suggestion which I have made is that of having a decent wharf at which to land in Sydney. 15 Mar., 1870.
906. That is as regards Balmain? Yes.
907. Can you suggest any further as to general management, or in other respects? I think that the Municipalities in the suburbs should have the power of licensing those men who ply from the suburbs to the City of Sydney, and that the City Council should have the power of licensing the men who ply from Sydney to the suburbs.
908. Would not that necessarily embarrass them when they passed the boundaries—the City Council only having control in the City, and the men being free from control when out of the City—there would be no uniformity of action? Yes, I see that my suggestion is a raw one. The matter might be arranged by a concurrent license.
909. Would it not be more feasible to put the whole matter under one management, both for the City and suburbs? Yes, I think so; under the management of the Police, or some other competent body. In France the whole thing is done by the police.
910. Does it occur to you that vehicles coming from some of the suburbs have to pass through two Municipalities? Yes.
911. And each Municipal body having the power to make by-laws would there not almost of necessity be a large amount of conflict as to by-laws? Yes.
912. And these omnibus people would be eaten up with licenses and other charges? Yes.
913. And you think that this kind of traffic would be better met by some central authority? Yes; say by a Commission appointed from each of the Municipalities according to the number of their inhabitants.
914. And by that means you think that we might get rid of any conflicting interests, and divide any revenue which might accrue *pro rata*? Yes.

Mr. William Farrar was called in and examined:—

915. *Chairman.*] You have been a number of years employed as time-keeper on some of the omnibus stands? Yes; on the Glebe stand in Parramatta-street, connected with the Fort-street line. Mr. William Farrar.
916. For how long? Over twelve years.
917. Then, of necessity, you have had considerable experience in the management of these omnibuses? Yes; I did try to carry out the by-laws as best I could. 15 Mar., 1870.
918. By whom were you employed? By the proprietors.
919. In what way? By paying me one-and-sixpence a week. When I first went on I received sixpence a day; but afterwards, when the omnibuses became more numerous, they kept on lowering it until it got to one-and-sixpence for each coach.
920. How many were there? On one occasion for some few weeks I had as many as forty-two, and when I left there were forty-two.
921. Was there any organization among the 'busmen who employed you, or was every 'busman allowed to give instructions? They used to try that; they used to come and try to domineer.
922. Individually? Yes.
923. Then, you had forty masters? Yes; excepting that one proprietor sometimes owned three or four coaches.
924. Are you aware that any dissatisfaction prevails with the public as to the management and efficiency of the omnibuses? Yes; I have had a number of complaints at the time that I was there. I have often been without coaches on a wet morning, when the drivers would not turn out. They would say that they would suit themselves; and there was nothing to bind them to come out. There is a law which says that they shall not keep in two days in succession; but they can keep in one day if they like, and they often do it.
925. Your duties would be simply to regulate their departure? Simply to regulate their departure.
926. You had nothing to do with examining the omnibuses and reporting on their condition? Nothing at all.
927. From your experience in the capacity of time-keeper, could you suggest to the Committee any course of action that would have the effect of placing these omnibuses on a better footing? Yes; by appointing proper time-keepers. One man should see that the omnibuses were cleanly, in proper appearance, and good. He should be provided with a time-table, which he could draw out to meet the wishes of the public.
928. Do you mean one man at each stand? Yes; a man should be stationed wherever there was a number of omnibuses.
929. How would you prevent omnibuses from loitering on the road? A man should look after the vehicles, the horses, and the harness, and he should have a time-table so that he might know at what time any omnibus was due.
930. That is intermediate, between the stands? Likewise he should be at the stands some time or other during every day.
931. Could that part of the duty be performed by the policemen? They will not do it. I have spoken to policemen on different occasions, and they have said, "I am not going to lose my rest."
932. But if instructed to do it they would be in a position to do it? They would all have to have time-tables, but I do not see how they could very well work it. It would cause a power of trouble to provide every policeman with time-tables.
933. I understood that, being employed by the 'bus drivers, you were to a certain extent in their power, and that your duties were performed with forty masters? Yes; in fact I left because they said, "We don't wish to have the present laws carried out so strictly."
934. Because you endeavoured to carry out the laws you were dismissed? Yes.
935. As a rule, are the omnibuses in a proper condition? No, they are not in a proper condition. I dare say that about half the number running at the present time would be condemned as no good, if properly investigated.

- Mr. William Farrar.
15 Mar., 1870.
936. Do you know of any favouritism in the granting of licenses, any winking at defects? I think not. I believe that there should be a less number of omnibuses licensed, and then the public would be protected. On the Glebe Point line the master says to his men, "You shall do such and such a thing," and they do it; but where the owner drives his own vehicle he does very much as he likes. I think that there should be a stipulated number of coaches on each road.
937. Do they ever break in horses in these omnibuses? Yes, they break in horses as they are plying for hire.
938. Are the omnibuses kept clean? No, they are not generally clean.
939. Have you ever seen them infested with vermin? No, I have not gone that close to them; but I have seen them so dirty that I should be ashamed to get into them.
940. Do the boys sleep in the omnibuses? They have slept in them on several occasions. I have known them to go on the stand for days and days together without being washed.
941. With these forty omnibuses, what is the interval allowed between the time of starting of each? Five minutes.
942. Then two hundred minutes elapse before it comes to the turn of the last omnibus to start? Yes, I have known the last coach start at twenty minutes past 11 o'clock for its first turn.
943. When would that omnibus come on to the stand? Under a better system, which I got them to adopt, they take turn and turn about, so that they have no need to come out on to the stand until just about the time for starting.
944. You have more than forty omnibuses, and with five minutes between the starting of each, more than three hours elapse before the second turn of any omnibus comes round? Yes.
945. What do the conductors do during all that time? They are allowed to run about the streets, and do what they like.
946. How old are these boys as a rule? I have known them to be not more than eight years old.
947. From eight years to what age? I have never known them to exceed fourteen or sixteen on the line on which I was. Mr. Harrison, on the Surry Hills, has very respectable drivers and conductors, all of a certain age, according to the by-laws.
948. Speaking of the place that you served at, can you say whether the boys are able to read and write? I know a proprietor who has four vehicles. His sons are employed as conductors, and they cannot tell the time of day.
949. If the boys come on at so early an age as eight years, they must be almost entirely uneducated? No doubt of it. I did wish to try some kind of schooling in my time. I think that there should be a receptacle for the vehicle as it comes to the stand, and that the boys should go a certain number of hours a day to school.
950. Did you attempt to carry out that idea? It was laughed at.
951. Are you under the impression that it could be carried out? I am.
952. Could you carry it out if charged with that duty? With a certain force I could. There is time enough for it, but it would require a man stationed at the stand.
953. Is there any way of doing with less boys practically—by making one attend to two or more vehicles? I think that it would be very wrong to do it.
954. In what way would it be wrong? The boy would have to change from one coach to another so often that a passenger might be insulted, and he would hardly know the boy or his number. The driver and conductor should be forced to stop with the vehicle.
955. And if anything were left by a passenger in a vehicle it would be difficult to get it again? I think so.
956. Does it often happen that property is left in the omnibuses? Yes; it is supposed to be taken to the Town Hall.
957. Supposed to be? Yes; but I don't know one case in a hundred where it is done. I have known things go into the Town Hall even, and not come out according to the regulations. You will find a clause in the by-laws where they are supposed to give it in within a certain number of hours; and after a certain time, if not claimed, some of it goes to the driver, and some to some institution.
958. And you say that even at the Town Hall they do not carry out the rules strictly? No; not strictly.
959. Would it place the time-keeper in a much better position if he were to be employed by the Corporation? Yes. It was the hope of most of the time-keepers to be placed in that position. Our present inspector of vehicles has sympathized with them, and through the sympathy which he has shown has caused an amount of misery among them.
960. The inspector? The inspector of vehicles.
961. Do you mean that he has shown a want of firmness? A want of firmness and determination. He is a very good officer in doors, but out of doors I do not think that he is quite up to the mark.
962. I think you said that they break in horses whilst driving? It is of common occurrence. As far as the stands are concerned I think that they do very wrong in appointing too many stands.
963. Mr. Farnell.] Are there too many stands in the City? A few people living in a place think they ought to have a stand and they apply for one, but I think that the proprietors of the omnibuses ought to be more considered. They applied for a stand at Camperdown, which would only draw off the people from Newtown, and thus injure the bus proprietors already on that stand. If people live within ten minutes of an omnibus stand they ought not, in my opinion, to grumble much.
964. By reducing the number of stands you would thereby reduce the cost of supervision? Yes; and you would also have double the number of vehicles running. Now there is double the number running to what are needed.
965. By having one general stand at the Circular Quay the omnibuses could start from that point, some going up George-street, some up Pitt-street, others going up Castlereagh-street, but all on their return assembling at the one place? Yes, but I don't believe in having intermediate stands, and I think that there are stands which ought to be abolished. I think that the Glebe stand ought to be done away with.
966. Mr. Allen.] Do I understand you to mean that as there is a stand at the Glebe Point, a stand at Camperdown, and another at Newtown, there is no necessity for the intermediate stand at the corner of the Newtown Road and of the Parramatta Road? I believe not.
967. Is there not a stand on the Parramatta Road, near Camperdown? There was sometime ago; but that has been abolished. It used to encourage people to come from Newtown, and the omnibuses to do a kind of dodging one upon the other. The Act now specifies that omnibuses cannot go upon a different line without a certain notice having been previously given.
- 968.

968. *Chairman.*] A less number of intermediate stands would be better? Yes.

969. And would imply as a result the employment of one time-keeper instead of two or three? Yes; for if there are a number of omnibuses at any place they require a time-keeper. I think that the whole number of omnibuses required to Fort-street ought to ply from the Glebe Point stand, and so get rid of the Glebe stand altogether. I have seen collisions occur at starting; and when I have said that a man must not go he has insisted upon going.

Mr. William
Farrar.

15 Mar., 1870.

970. *Mr. Allen.*] Would not the residents at a particular place object to having a large number of omnibuses on the stand there? I consider that the inhabitants should rule.

971. Do you remember that sometime ago there was a very much larger number of omnibuses on the Glebe Point stand than now? Yes; there were more than were wanted.

972. And the residents objecting to them, there was only a fixed number left? Yes, that is what I believe in.

973. But by your proposal to do away with the other stand at the Glebe, would you not bring a much larger number of omnibuses to the stand at the Point? I would double the number, but I would only allow three coaches to be on the stand at a time—three at one end and three at the other.

974. So that there would not be a larger number actually waiting on the stand than there is now? No; I would keep the omnibuses constantly moving. Out of the forty-two or forty-three coaches on the Glebe stand I have known only ten of them to be on the road, while all the rest were waiting to go on their journey. I have known thirty omnibuses to be standing at the Glebe, the men and boys loitering about waiting for their turn.

975. By your arrangement there would not be a larger number of omnibuses on the stand, but there would be more frequent means of communication? Yes. I would start them every five minutes instead of ten, as now; and leaving at five minutes' intervals would give them just as good a chance on the street.

976. *Mr. Farnell.*] Are you now employed as a time-keeper? No, I am not. I left from trying to carry out the by-laws. The men got rather refractory, and I left after having been there twelve years.

977. How are the omnibuses generally provided as to horses? That is a matter that ought to be looked into very strictly; some are very well horsed, but the majority very badly. I consider that every man should be compelled to have a certain number of horses for every vehicle, and that the horses should only be allowed to run a certain distance before they were changed. That is a matter which should be regulated by a man walking or riding about.

978. Are the drivers of the omnibuses men who have been taught to drive before they are licensed? I have known them to come and learn driving on the public vehicles. They can get anyone to sign the requisition that they are competent to drive, though all the while they may be quite incompetent until they have learnt on the vehicle. And as to the conductors, I certainly think that they should be made to wear a band on their caps, with their number on it. As to the badge on their arm I don't think that that is of much use, for they turn it about any way.

979. *Mr. Allen.*] Are the conductors licensed? Yes; and the proprietor is made responsible for their acts.

980. *Mr. Farnell.*] Do the conductors gamble on the stands? Yes; gambling is of common occurrence, but it is largely the fault of the drivers, who are generally persons of no principle. There are some good men among the drivers, who do their utmost for the good of the public.

981. *Chairman.*] Did I understand you to say that you were not dismissed? I left. The proprietors did not seem to be satisfied for me to carry out the by-laws, and I told them they had better get somebody else. There was a little contention with the proprietors, and I went to the Town Hall, and from the information I got from the Town Clerk I did certain things. There was a resolution passed by the Council that the 'buses should start every five minutes, but it was never gazetted. One of the proprietors put a 'bus on and was determined that he would start at the ten minutes, according to the by-law. I went to the Town Hall and was then told to abide by the ten minute time. I do not believe that the time should be altered, excepting from action by the public, and I think that the Council should give fourteen days notice of any alteration of time.

982. *Mr. Farnell.*] Do you know anything about the cabs that run for hire? Very trifling; but there is a Sunday matter that I have often thought of. I think that the omnibus people should be compelled to be half in and half out on the Sunday. I introduced that and got it carried out, with the exception of one man who opposed it, and the same man had children of his own behind the omnibuses.

983. Half the number that run on a week day should run on Sunday? Yes; half the number that run on that road during the week would be quite sufficient to run on Sundays.

984. *Chairman.*] Half one Sunday and the other half the next? Yes. That would give a man a chance of going to a place of worship if he felt inclined, and I think that the public would be just as well served.

985. *Mr. Farnell.*] Would it be inconvenient to the public if the omnibuses were all taken off the road on the Sunday? I believe it would.

986. *Chairman.*] How is the business managed when omnibuses leave the stands on holidays? On race-days they have to go to the Town Hall and give notice of how many are going off the stand. Twelve coaches at five minutes time would be sufficient for the road, and I think that two over the number required should be compelled to keep to the stand. On no account should the road be left without the number required. I think that our present system of having the men brought before the Magistrates is not altogether right. A man may go and lay an information before the Magistrates, but there is nothing to force him to appear. Summonses are issued, but the matter is made up and there is no more about it. When once an information is laid I think that the man should be compelled to prosecute.

987. *Mr. Farnell.*] They arrange the matter after the summons is issued? Yes.

988. Who takes the summons out against a party? I, for instance, lay an information, and the party goes and says he is willing to pay the costs of Court, and the inspector has no option.

989. Then the inspector, on behalf of the Corporation, compromises the case? Yes, it is often done; I believe that a man should be compelled to stand his trial, particularly when the information is laid for absence, where a man is away on a wet morning. If a man is absent twice from the stand I think that his license ought to be cancelled. There is a great deal of dodging going on about it.

990. *Chairman.*] Do the Aldermen interfere in the matter? I never knew them to do so. It is left in the hands of the inspector, who may not show out oftener than once a week. I believe that the inspector is overworked, and that he is not able to leave his office.

FRIDAY, 25 MARCH, 1870.

Present:—

MR. BUCHANAN, | MR. FARNELL,
MR. TUNKS.

W. TUNKS, ESQ., IN THE CHAIR.

William Crane, Esq., Chief Clerk of the Water Police Office, examined:—

- W. Crane,
Esq.
25 Mar., 1870.
991. *Chairman.*] You are aware of the nature of the present inquiry? I am.
992. Boatmen plying for hire in the harbour of Port Jackson are licensed from the Water Police Office? They are.
993. Will you explain to the Committee, as shortly as possible, the mode of procedure with reference to the issue of licenses? In the first instance the boats are licensed at the Customs; afterwards the party whose boat is licensed makes application to the Superintendent of the Water Police, as the law is now, enclosing testimonials as to character, and as to his ability to manage a boat.
994. Watermen's boats are licensed by the Customs? The boat is licensed in the first instance by the Customs; the party who is licensed enters into a bond not to carry contraband goods, &c. Afterwards the party applies to the office, makes a written application, and when the Superintendent is satisfied as to his ability the license is granted, for which, or rather for his badge, he pays the sum of 5s.
995. I presume this takes place under some law? Under 4th William IV, No. 7, section 58, that is in the first instance made to apply to Sydney Cove; but under the 4th Victoria, No. 17, section 27, it is extended to the harbour of Port Jackson.
996. Then when a license has once been issued does the boatman ever come up to be examined again? No; it is to be regretted that there is scarcely any supervision over them.
997. Some of the persons who are now licensed have been licensed for many years? Yes; on our books we have 750 who have registered their names at the office, and only about 130 are now plying.
998. When these people once receive the badge it seems to be for ever, unless for some misconduct their license is taken from them? —
999. Have you any by-laws defining what you mean by misconduct? No; it is inserted in one of the clauses of the Act. From 58 to 63 apply to boatmen. Drunkenness, I think, or other similar conduct—dishonest conduct—would be sufficient to deprive a man of his license.
1000. "Any person guilty of dishonest or improper conduct is liable to be deprived of his license?" Yes.
1001. What is the "improper conduct" alluded to in the clause? Of course that would remain within the interpretation of the Bench. I may add that the Water Police Magistrate has considered the law so very unsatisfactory with reference to boatmen plying for hire, that he purposed, if he had not been prevented by illness, to bring the matter forward, and to have the whole thing considered.
1002. In that view of the matter it is notorious then that some alteration is necessary? I think it is absolutely necessary; there are no rules or regulations guiding them, and no supervision over them, and I am persuaded the watermen themselves are very desirous they should be under some regulation.
1003. Is there any means by which a waterman can recover his fare than by suing for it? No other way; they can be brought before Court for not plying within hours, but have no summary remedy to recover, provided the persons employing them do not pay? I have myself often wished them to move in the matter and have some regulation about that, for they find it very hard, and sooner than apply to the other Court they allowed the matter to pass.
1004. When a man comes up to be licensed does he receive a license for a particular boat? He registers his name, place of abode, and boat, at the office.
1005. Are there 700 boats licensed as well as 700 men? There are only 130 plying now; but it is competent for anyone who has obtained a license to ply.
1006. A man may go to Europe, stay away for ten years, and come back? Yes, and ply again.
1007. In the meantime he may have become a very old man, and incompetent to manage a boat, having regard to the safety of passengers? Yes.
1008. The Superintendent having once satisfied himself of his competency, there is no further inquiry during the man's lifetime? No, except for dishonesty or improper conduct.
1009. Some regulations have been made as to the rate of fares from different stairs—How long is it since these have been revised (*Handing to the witness "Regulations to be observed in the Harbour of Port Jackson, 1862"*)? I think within the last four years, I think we have some later. It is competent to every Court of Quarter Sessions to alter and arrange the rates and fares in the harbour regulations. I think some places have been struck out and others have been inserted; but there has been no material difference in them.
1010. Are you aware of any alteration in the rates of fares since 1862? I do not think any alteration has been made with reference to the rates of fares, only as to other places being inserted whence boats may ply, while some have been struck out. This part of the subject does not come particularly under my notice.
1011. Do you see that half fares are to be charged back from certain places in Sydney to the North Shore and to Balmain? Yes.
1012. Do you think, looking to the increased populations in these places, that it is necessary to retain this practice of charging half fares back—Would it not be better to have a uniform fare from and to Balmain and the North Shore, and to abolish the half fare back? I think it would be better to have a uniform fare without charging back fare.
1013. Having regard to the increased population of the suburbs, would it be desirable, in your opinion, to have the power to make regulations to secure the attendance of these people at their ferries, so as to afford the public the means of getting to and from the suburbs? I think it is very necessary there should be a controlling power to make them remain, and to make by-laws. I will mention an instance the senior-sergeant of the Water Police reported to me when one of the ships of war was here, that a boat could not be obtained to Balmain—that the stairs were deserted by the boatmen.
1014. While there are so many boatmen licensed, there are occasions when they desert their ordinary ferries—on fêtes, regatta days, and so on? That does not come under my notice, but this one case was reported to me.

me. Another reason why I think they should be compelled to remain at their different stairs is this: I have stated that we have a great number of boatmen plying; the facility for obtaining a license is very great, a sum of 5s. being all that is necessary to enable them to ply; a great number of men who usually follow other avocations occasionally take to boating, and perhaps during a whole year they may not be engaged as boatmen three months; when a ship of war comes in these people take to this occupation, as one by which they can make a profit, to the disadvantage of the regular boatmen, who keep on throughout the year.

W. Crane,
Esq.
25 Mar., 1870.

1015. Is there any regulation within your knowledge to compel the attendance of boatmen on these ferries at night—between sunset and sunrise? No, I think not, not actually to compel them; but if they do not employ their boats when required between sunset and sunrise they are liable to a penalty.

1016. You do not know whether there is a rule compelling them to be at their stairs after sunset? I think not.

1017. Do you think it would be an advantage to compel licensed boatmen to carry handy light grappling-irons, to pull up persons who might fall overboard? A buoy, or something of that kind, would be better.

1018. Do you think it would be desirable to charge an annual licensing fee upon boatmen? I think it would be very desirable, and the boatmen themselves are of that opinion. I think there should be a license fee of £2 or £3, and that by the imposition of such a fee we should have a better class of boatmen, who would be under better supervision, as they would have to attend the office yearly.

1019. Have you any further suggestions to make? Not having reference to watermen's boats plying for hire, but I think a similar fee should be required from the small steamers plying for hire. At present they pay 10s., and are under no regulations whatever. The same remarks will apply to them as to the boatmen, and I think if the fee were raised to £2 or £3 we should have a better class of men; that it would be more satisfactory to the men who are engaged in the work, and greatly conducive to the comfort of the public.

1020. What kind of controlling body would be most suitable to undertake the supervision of these boats in your opinion? I think an inspector or acting inspector ought to be appointed.

1021. And the fee you speak of would be applied in the payment of the cost of that officer? No doubt it would be, although it was not with that object I suggested it. I think we should have a better class of men employed, though fewer in number.

WEDNESDAY, 30 MARCH, 1870.

Present:—

MR. ALLEN,

MR. FARNELL,

MR. HOSKINS.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Mr. George William Barker called in and examined:—

1022. *Chairman.*] You are an Alderman of one of the suburban Municipalities? Yes, of the united Municipalities of Cook and Camperdown, now called Camperdown.

G. W.
Barker, Esq.
30 Mar., 1870.

1023. You are aware of the nature of the present inquiry? Yes.

1024. Is it within your knowledge that considerable dissatisfaction prevails as to the efficiency and general control of omnibuses plying to the suburbs? Yes.

1025. You have given the matter some consideration? Yes.

1026. Will you be kind enough to state your views upon it? I embodied my views in a letter to yourself, as Chairman of this Committee, some fortnight or three weeks ago. Probably that might answer the purpose. I do not know that I have anything material to add. (*Letter and accompanying statement handed in. *Vide Appendix A.*)

1027. Does it come within your knowledge that the City Council have taken some steps to obtain more efficient inspection of omnibuses lately? I am not aware of it, except that they have convened the suburban Municipalities to confer with them as to the better regulation and working of the 'buses. We have had two or three meetings, but nothing has resulted; and an adjournment has been moved and carried until after this Select Committee's report shall be known.

1028. Have you considered whether the police may not be used, to prevent loitering and other irregularities? I think there is no special necessity for the police to interfere, if there are time-keepers appointed by the controlling power at each end to regulate the departure and arrival of 'buses at proper intervals.

1029. Have you any idea of the number of 'buses in the City? I believe there are about 250.

1030. The revenue arising from licenses and fines must be considerable? Yes.

1031. If the Act of Parliament, vesting the power of control over public vehicles in the City Council, provides that the fines shall be handed over to the City Treasurer for the general advancement of the City—would it, in your opinion, be right that this money should be handed over to the police, apparently as payment for the supervision of these 'buses? I do not think there is any necessity for the police to have any supervision, nor should they have any revenue derivable therefrom. You will perceive from the paper I have handed in, that in my opinion the power might be vested in the City Council on certain conditions, and that the suburban Municipalities might receive a portion of the revenue.

Mr. Thomas Mulhall called in and examined:—

1032. *Chairman.*] You are a licensed waterman for Sydney? Yes.

1033. How long have you held a license? Twenty-three years.

1034. Have you been working continuously all the time? Yes.

1035. You have never had any renewal of your license during that time? None.

1036. What is the fee paid for a license at the commencement? 5s., and 5s. in addition at the Water Police Office for a badge.

Mr.
T. Mulhall.
30 Mar., 1870.

1037.

* NOTE (on revision):—Special attention requested to sixth clause of statement handed in.

Mr.
T. Mulhall.
30 Mar., 1870.

1037. You are aware of the nature of this inquiry? Yes.
1038. Is it within your knowledge that considerable dissatisfaction prevails among the public as to the efficiency and control of boats plying for hire generally in Port Jackson? Yes.
1039. What in your opinion is the cause of this dissatisfaction? First and foremost a waterman has got nowhere to apply to if anyone comes and takes him off with a fare; he can give him anything or nothing if he thinks proper. If the waterman goes to the Water Police Office he cannot get a summons, and it is more than the fare is worth to look after it.
1040. There is no summary mode of recovering fares? No. But if a waterman only opens his mouth to such people they can summon him and get him fined, and perhaps have his license taken from him, which I think is a very proper thing, for if a man insults anyone he should be punished for it. Then there are lots of men in boats who do not know how to manage them—stonemasons, bricklayers, and other people, who get licenses if there is any scarcity of work in their own line; three parts of them are not boatmen at all; in fact, we do not know who are boatmen, for they get fares wherever they can.
1041. *Mr. Hoskins.*] At holiday-times do not many persons, who have no licenses, take people as passengers up and down the harbour? I believe they do.
1042. Do you know whether they do or not? No, I cannot say; but I know I see plenty of this kind of work with men round the Point and elsewhere, that I suspect are not waterman at all, or if they are they do not ply for years. If a man leaves off being a waterman I do not think he ought to be allowed to come back without a fresh license. If something were paid annually it would do away with all this kind of thing.
1043. *Chairman.*] You mean to say that a number of persons obtain licenses who never attend to the drudgery of a waterman's life? Just so.
1044. They are not to be found at the stairs at night, or in windy or wet weather? No.
1045. *Mr. Hoskins.*] Do you think these persons generally have sufficient skill and knowledge of managing a boat, to be entrusted with the lives of persons in the harbour? No, I do not. I think many of them are not capable of handling a boat. Anyone at the present time may go and get a license if he can get a couple of bondsmen.
1046. *Chairman.*] Could you suggest anything to place the business of a licensed boatman on a better footing? I think they ought each to pay something annually, say a pound a year, and those that do not pay should be scratched off the books, and then we will know who is a licensed boatman and who is not; and let every one ply from the place he has his license for. I think too, in regard to bad weather, the watermen at all stairs ought have the privilege of hoisting a flag in bad weather for double fare. At the present time let the weather be ever so bad a man who does not know how to handle a boat may take passengers.
1047. In your opinion who would be a proper authority to regulate these matters? It has always been left to the Water Police, but they never take any notice of it at all. They have frequently come round and looked at the boats to see that the name and number was on them, and if not they would fine you.
1048. How long is it since any alteration was made in the scale of fares? Not for the last ten years; and then I think it was something about Neutral Bay.
1049. Is it within your knowledge that the fares are regulated wholly from different places in Sydney to the North Shore and other places, with half fare back again? Yes. If you take passengers there you charge them the full fare there and half fare back, but if a strange person comes in from the other side you charge him full fare.
1050. Would it not be well to license boatmen from Balmain or the North Shore to Sydney? Yes.
1051. The regulations should be altered in that particular? Yes.
1052. Do you think it necessary to compel boatmen to carry a light and handy grappling-iron, to save life? A grappling-iron would be a very awkward thing in a boat; but I should certainly force them to carry some fathoms of line.
1053. In what way would a grappling-iron be awkward in a boat? It would be in the way, unless it could be put away in the head.
1054. Would it not be practicable to make a small locker for it in the head or stern? Yes, that could be done.
1055. Supposing anybody drops overboard now, what more than a common paddle have you got to assist him with? Only a boat-hook. I always carry a boat-hook, with a nine-foot staff, and 25 fathoms of line, wherever I go.
1056. Upon the whole I gather from you that some controlling body, and some more complete by-laws should be established for the regulation of boats plying for hire in the harbour? Yes; to protect the boatmen and the public as well. It ought to be seen that every licensed waterman has a boat fit to carry passengers; there are plenty of boats that are not fit for people to go into.
1057. The watermen sometimes desert the stairs altogether on holidays? Yes.
1058. *Mr. Farnell.*] Does anybody ever examine the boats? No.
1059. Never from the time they are licensed? No; not as long as they will float.
1060. *Mr. Allen.*] Are licensed watermen compellable to ply from any particular place? Yes; they get their license for a certain place.
1061. Can they change at their own option? They have to go to the Water Police to get it changed.
1062. *Chairman.*] Boatmen have been prosecuted and had their licenses suspended for leaving the places for which they were licensed? Yes; the Water Police take that in hand, but the last case they tried for it they could not do anything with him at all.
1063. *Mr. Allen.*] Do you know if any fares are fixed from Balmain or North Shore to Sydney? Yes, a shilling from the North Shore to Sydney or from Sydney to the North Shore.
1064. Does that appear in the regulations—Is there any fare fixed from the North Shore or Balmain to Sydney? No; we charge half fare back, and if we take any person in at the North Shore or Balmain he pays the same as from Sydney.
1065. *Mr. Hoskins.*] Do you happen to know whether the persons who, you say, carry passengers about the harbour in boats on holidays, take out licenses? There may be some of them who do, but a great many do not. When the Squadron was here there were hundreds of boats round the Point working; more than could have been licensed.
1066. And you think that many of the persons who are conveying passengers about the harbour are incapable of managing a boat, and ought not to be entrusted with the lives of passengers? I do. They ought

ought to be very particular in giving licenses ; they ought to know whether a man is capable of managing a boat, and whether he is a sober man or not.

Mr.
T. Mulhall.

1067. Would you suggest that the Water Police or the municipal authorities should inspect watermen's boats periodically, say two or three times a year? One or the other should do it. The Water Police are the handiest, and there are a good many of them there that understand boats. 30 Mar., 1870.

1068. Would you also suggest that every person taking passengers for profit in any boat in the harbour should be compelled to take out a license? Yes.

1069. Are any inquiries made as to the fitness of a party applying for one to hold a license—whether he is a sober man, and whether he understands managing a boat? I never heard of any, as long as he has got a couple of bondsmen.

1070. What do these bondsmen make themselves responsible for? In regard to smuggling, or anything of that kind.

1071. Not as regards the fitness of the individual to hold a license? No; I do not think the question is ever asked.

1072. *Chairman.*] You are about the harbour pretty much of a night—what is the course of conduct with the steamers going up and down, as to the rate of speed? They are supposed to go at half-speed, but I think they generally go as fast as they can.

1073. The speed they go at is not safe? No.

1074. One of the regulations says the steam-whistle is to be sounded every minute within certain points in the harbour—is that carried out? I do not think it is. It ought to be kept going all the time; a steamer may go a long way in a minute.

1075. Some boats go as fast at half-speed as others at full-speed? Yes. Even in the daytime they will run over you if you do not get out of the way.

John McLerie, Esq., Inspector General of Police, called in and examined:—

1076. *Chairman.*] Is it within your knowledge that considerable dissatisfaction prevails generally among the public as to the management of vehicles plying for hire in the City of Sydney and neighbourhood? It is. J. McLerie, Esq.

1077. Has your attention been called to the water service, that kind of vehicles plying on the water? Ever since I have been connected with the police I have thought the licensing of boats, as it has been hitherto conducted, a farce. 30 Mar., 1870.

1078. As regards the land vehicles, very considerable dissatisfaction prevails? Yes. They have been managed by the Municipality of Sydney, but with the officers they have had to carry it out it was impossible they could exercise efficient control over such a number of vehicles plying on such a length of roads and streets; it was quite impossible that two or three men could have done it. In all the large towns of England, licensed vehicles are under the supervision and control of the police, but here the police have no control. In order to meet that to a certain extent, I have arranged with the Mayor of Sydney to assist with the police, that is, that my police should file informations under their by-laws for offences under the Licensed Vehicles Act, and that one moiety of the fine, if a conviction should follow, should go to the benefit of the Police Superannuation Fund. At present the Corporation of Sydney get the whole fine, but I have suggested and the Mayor has agreed to this arrangement, and it will commence on the first of next month. They have supplied me with copies of the by-laws, one for every constable in the City; but the only improvement effected in this way will be as relates to the conduct of the drivers and conductors in the street, that is to say, my police cannot see to the cleanliness and proper accommodation of the vehicles; that must still be left to the municipal officers.

1079. Do you propose under this arrangement to place these people under control as to keeping time in the suburbs? No, I cannot do that; I have nothing to do with the time.

1080. That is a matter of great importance to people who live in the suburbs, who wish to get to their business regularly? Yes, certainly. As far as the by-laws of the City extend beyond the boundaries, that is within eight miles, my police will act in the matters I have mentioned, as well as within the City, but they will have nothing to do with keeping time.

1081. Have you examined the law that enables you to prosecute these people for infringement of the by-laws? I have copies of the by-laws now.

1082. Have you seen the Act that enables the City Council to make by-laws? I have not, but I presume these by-laws were made in accordance with the power given by the Act of Parliament.

1083. Supposing the Act of Parliament says that the proceeds of these fines shall be handed over for the general advancement of the City of Sydney, would that be for the advancement of the City to pay a moiety over to the Police Superannuation Fund? If by the action of the police the system of licensed vehicles is improved it would be for the advancement of the City. Anything that improves the comfort and accommodation of the citizens is, in my opinion, an advancement of the interests of the City; and an improvement in the mode of conducting licensed vehicles is one of these things.

1084. Did I understand you to say this arrangement would be effective beyond the boundaries of the City? Yes, within eight miles. It is not perhaps for me to suggest such a thing, but if the whole matter were placed under the control of some paid responsible body, or the police, I have no doubt it would be properly carried out. The great question is about the division of the revenue; but that could be easily settled by dividing it among the Municipalities according to the extent of ground passed over, or according to the population. I think it should be according to the population of each Municipality, because the traffic between the City and the Suburban Municipalities, depends upon the population. Every officer of police would then be an officer for the enforcement of the Act, and it would only be necessary to have an inspector to examine the vehicles.

1085. That would include vehicles on the water, as well as on land? I have a suggestion to make with respect to vehicles by water, which, in my opinion, would be an improvement. With respect to the 'buses I think there is great objection to having stands at all in the City. In the large towns at Home there are no such things as 'bus stands. They are a great nuisance, particularly in Sydney, where the streets are so narrow. Where there are no stands the 'bus time is so regulated that a 'bus arrives at its terminus and returns

J. McLerie, Esq. returns in so many minutes, so that there is a continuous succession of 'buses. That arrangement could be easily carried out here.

30 Mar., 1870. 1086. You are alluding to the large number of 'buses to be seen on the stands idling their time? Yes.

1087. Have you seen on each of these 'buses a boy? Yes.

1088. What is generally the age of these boys? Some of them seem not to be more than 7 years old.

1089. Has anything come to your knowledge about the education of these boys? They have no education at all in very many cases, and they acquire habits that do not improve their morals. Some boys that have been 'bus-conductors are now on board the "Vernon." As I have said, I think there should be no omnibus-stands; they are a constant source of annoyance; and as many of the omnibuses remain for a length of time on the stands, the drivers and conductors having nothing to do, many of them are in the habit of dissipating their means, and their wives and families suffer accordingly.

1090. If I understand you, you do not propose, under your arrangement with the Mayor, to regulate the times of starting, either in the City or in the suburbs? No, I could not do that unless the whole matter was placed under my control; then I could do it. In London, I may observe, there is a policeman on duty on every cab-stand, and if there is any dispute as to fare it is referred to the policeman.

1091. The arrangement you have entered into applies only to 'buses? To all licensed vehicles. One thing I hope to put a stop to by this arrangement, that is, cabmen crawling at a snail's pace along the streets to pick up any stray passenger. Sometimes George-street is almost blocked up with them.

1092. Have you any notion of the number of persons now resident in the suburbs? I can give you returns of the population in the City and suburbs, comprising the Metropolitan Police District, which have been compiled by the police, and which I may say are very much in excess of what it is estimated to be.

ESTIMATED population of the City and District of Sydney:—

Locality.	Population.	Locality.	Population.
City of Sydney	71,286	Incorporated Suburban Boroughs— <i>continued.</i>	
Incorporated Suburban Boroughs:—		Woollahra	4,340
Newtown	4,167	Randwick	1,549
Redfern	6,094	Waverley	1,371
Waterloo	2,589	Balmain	5,564
Alexandria	1,819	St. Leonards	2,019
Darlington	1,269	East St. Leonards	865
Glebe	5,093	North Willoughby	523
Cook	1,340	Suburbs not incorporated	11,952
Camperdown	480		
Marrickville	1,283		
Paddington	3,520	Total	127,123

1093. Do you consider the North Shore within 8 miles of the boundary of the City of Sydney? Certainly it must be within 1 mile.

1094. That is your opinion? That is my opinion.

1095. Then you would control the 'buses on the North Shore, notwithstanding that they never come into Sydney? No, I do not think the City Council should do that. Of course the control of other suburban 'buses has been taken by the Corporation of Sydney, because they ply into the City; but that would not apply to the North Shore, and certainly could not have been contemplated by the Acts.

1096. That is your opinion, at any rate? Yes. I do not see what control the Corporation of Sydney should have over the 'buses at the North Shore, which never enter the City.

1097. Do you think any arrangement that does not provide for proper times of starting for the 'buses will satisfy the people in the suburbs? Certainly not. People residing in the suburbs are more interested in time being kept correctly than people residing in the town.

1098. Are you aware whether or not there are any carriages plying into Sydney licensed under the Stage Coach Act, which is now in force? I do not think there are at present. When I was Superintendent of Police for Sydney we used to license some at the Central Office, but I have not seen any there for years.

1099. Would these 'buses come under the denomination of stage coaches? No, because they come within the meaning of the Licensed Vehicles Act. At the time I did duty as a Magistrate at the Central Police Office, we only licensed carriages as far as Parramatta.

1100. Will you state the suggestion you said you had to make about licensed vehicles on the water—boats? I think the system of licensing boats on the water could be better carried out if they were placed under the Marine Board; in fact, all marine vehicles—steamboats, watermen's boats, and every description of boats used by the public.

1101. Have we any Marine Board in existence? It is about to be established: a Bill is before the House for the purpose now. I would make it imperative none should be licensed watermen unless passed by the Marine Board as capable of managing boats under sail and otherwise. I think also that each steamer plying within the harbour, and every waterman holding a license, should be compelled to have an apprentice between 17 and 21 years of age; and these apprentices, having served satisfactorily for the four years, should have a kind of prior claim on the Marine Board for appointments under that Board in lightships, light-houses, steam dredges, and so on. The Board will have many such appointments to give.

1102. That is the practice on the Thames? Yes.

1103. Can you give us any information as to what the Trinity House does in regulating boats? The boats are under what is called the Conservators of the Thames, a Board consisting of members of the Corporation of the City of London.

1104. *Mr. Allen.*] How long is it since this arrangement has been made between the City Council and the Police Department? Only within the last few days.

1105. Have you not attempted for a considerable time past to obtain such an arrangement? I suggested it some time ago, not officially, but it was not adopted. Recently, however, the Mayor and Town Clerk called and proposed it, and of course I was quite willing to enter into it.

1106. You think it will be productive of good by preventing omnibuses from loitering in the streets, standing at the street corners, and blocking up the thoroughfares? Yes, I look for more good effect in that way than

than in any other. I will not allow any altercation between a constable and a driver, but if a constable sees an omnibus loitering after taking up a fare, he is to take the number, and these reports will be left at the Central Police Office for the information of the corporation officers every morning.

1107. Have you ever thought whether the omnibuses might be more efficiently managed by a Commission, or any other body than by the City Council? It may be considered egotistical if I should say so, but I have no doubt the police would manage them much better and much more satisfactorily to the public, and with less trouble than at present.

1108. They would have better means of controlling them, having so many more employés? Exactly. In fact if the licensed vehicles were placed under the police it would necessitate the employment of only one man beyond my present establishment, an inspector of licensed vehicles. There is another matter I should wish to mention in connection with the public conveyances of Sydney. It may not be pertinent to the inquiry of this Committee, but I have long observed that there is a great want of a system of licensed porters, as in large towns in England, in a City subject to a constant influx of travellers with luggage, parcels, and bundles.

1109. *Chairman.*] There is power under the Corporation Act to license them? They have not done it. In all large towns at Home, and particularly in sea-ports where steamers are arriving nearly every hour of the day, there are a class of licensed porters who pay a small annual fee of half-a-crown for a license, and each porter is numbered and carries his number on a metal badge on his breast. At present here, if a person lands from a steamboat there is a rush of all kinds of people on board, and in many instances within my own knowledge an unfortunate traveller has been deprived of everything belonging to him. People hoist trunks upon their shoulders, and the owners never see them again. If licensed porters were employed, any other persons could be prevented going on board for the purpose of carrying passengers' luggage ashore. In Edinburgh, at the corner of every street, in the centres of business, you will see two or three of these porters waiting to be employed. They will carry a letter or anything else; or if a tradesman wants to employ one of them temporarily in his shop or cellar for an hour or so, he calls him in. Thus a means is afforded of employing a number of idle men, on whom there is no check at present.

1110. Are the suburban parcels delivery vans licensed? Yes.

1111. Would it not be an improvement if depôts were established in certain of the business parts of the City, where parcels could be left for these conveyances? That might be done.

1112. *Mr. Hoskins.*] Would you have these depôts established by the Municipal Council? No.

1113. Leave it to private enterprise? Yes, there are several such places already established.

1114. If your proposal to do away with omnibus stands were carried out, do you not think it would eventuate in dispensing with half the omnibuses we have now? Yes; I think we have half too many now.

1115. Do you not think a number of the omnibuses plying through the streets are ill adapted for the purpose, very small, badly-ventilated, and very dirty? Yes, in very many cases.

1116. Will the arrangement you have come to with the City Council have the effect of preventing the licensing of omnibuses of such a description as I have named? No; the police will have nothing to do with the licensing of omnibuses.

1117. Do you not think the omnibuses are a disgrace to the City? Yes, a large proportion are.

1118. Do you not think the Municipal Council should be more particular in the description of both vehicles and horses that they license? Yes, I am really very much surprised often to see such vehicles plying. The vehicles are very often bad, the horses are bad, the drivers filthy in their persons and dress, and the conductors the same.

1119. *Chairman.*] Would it not be necessary to provide for that in the by-laws, that these people should wear the kind of dresses they come to be licensed in? I was talking to the Mayor about that. The boys that come for licenses require to be well dressed, and he found that four boys had come into his office for licenses with the same coat on, having changed on the stairs.

1120. *Mr. Hoskins.*] As a matter of fact the omnibuses plying here are, as a rule, very much inferior, and the horses are very much inferior, to similar description of vehicles plying in London, Glasgow, and other towns at Home? The majority are of that class; but there are some good and well-horsed omnibuses.

1121. Could you suggest any means to remedy such a state of things? The only means I could suggest would be placing them under a body more responsible to the public.

1122. As regards cab-stands, are you aware that cabs are in the habit of standing at many other places besides the stands licensed? There are so many places licensed that it is almost impossible for the police to know which are the public stands. They loiter about hotels, too, and if a policeman goes and says, "What are you doing here?" the cabman says, "Oh, I have a fare inside," and of course the policeman cannot go inside to inquire.

1123. *Chairman.*] Will you state what you mean by a body more responsible to the public? A body not appointed by election, but paid by the public to protect the public interest.

1124. Either the police or a Commission? Yes; in London the police have the sole control.

1125. May I ask whether in this view of the matter you have in your mind the annual election of the Mayor and Aldermen, and the influence of these hundreds of 'bus men and their connections in the election? No doubt.

1126. The biennial election necessarily brings accommodating people into this matter? Yes, that is exactly coming to what I say—that if it were placed in the hands of a paid body instead of an elective body, such influence could not be brought to bear.

1127. Can you suggest anything further with regard to the question before the Committee? The system of check upon other licensed vehicles is bad. There is no check at present, as regards overcharge of fares to strangers. An unfortunate stranger arrives by steamer, calls a cab, and is driven to a spot where the proper fare would be probably a couple of shillings, but he is frequently charged as much as seven shillings.

1128. Are not the by-laws to be exhibited in the cab, or do you think they are to be found under the cushions? Exactly. I would suggest that every cab-driver should be provided with a number of small cards issued by the Corporation corresponding with the number of the vehicle. They might be supplied with a hundred for a shilling or sixpence; then, if a person thinks he has been charged more than he ought to be, he might ask for a card, which he could send to the Police Office, or show to a constable, and upon which the man could be prosecuted for demanding an illegal fare.

1129. *Mr. Hoskins.*] Are you aware that in London the drivers of 'buses and cabs, though not the owners

J. McLerie, Esq.
30 Mar., 1870.

owners, have to get licenses from the Commissioner of Police? Yes, but the conductor there is the responsible man; he is an adult, and is responsible for the conduct of the driver, and everything else connected with the vehicle. An information is never filed against the driver, but against the conductor. There is another thing with respect to watermen's boats in the harbour. I would make each licensed boat have fixed in the bow a painted tin ticket, with the number of the boat—a thing about eight inches high—so that a person standing on the wharf could see it. At present one does not know whether a boat is licensed or not.

1130. Would it not be desirable also to specify the number of passengers she might carry? Yes, that might be in the stern.

Mr. George Webber called in and examined:—

Mr. G. Webber.
30 Mar., 1870.

1131. *Chairman.*] You are aware of the nature of the present inquiry? You.

1132. What is your profession or trade? I am a coachmaker.

1133. In that capacity you have become acquainted with the construction and general state of repair of many of the licensed vehicles in Sydney? Yes. Our business is to a very great extent with the omnibuses.

1134. Has it come within your knowledge that much dissatisfaction prevails among the public as to the control and management of omnibuses? Yes, and with their construction as well.

1135. Are you able to state generally the reason of this dissatisfaction? The whole piece is rotten, to my mind, from beginning to end—the whole system of construction and management. I think it requires a radical transformation.

1136. Would you favour the Committee with the particulars of your views? I think the object of the inspection should be to provide a first-class vehicle, both as to construction and as to horses and harness, as well as driving and conducting. It is impossible for a man who has never done anything in the trade of a coachmaker to know when a vehicle is properly constructed; and I think it is a piece of nonsense to appoint a gentleman who has spent his life as a publican to inspect a vehicle. You might as well put a teetotaller to inspect his drink.

1137. Who is the inspector now? I am not speaking of the inspector, but of the Aldermen appointed to license the vehicles. The two Aldermen appointed are neither of them in the trade, and it is impossible for them to know when a vehicle is properly constructed. Mr. Oram, the inspector, is absolutely powerless in the hands of the Aldermen.

1138. There are some by-laws to regulate the size of these vehicles—Do you know how they apply? By-law No. 34 requires that no omnibus—the roof of which shall be more than 8 ft. 9 in. from the ground, or the bearings of which on the ground shall be less than 4 ft. 6 in. from wheel to wheel—shall be allowed to carry more than a certain number of passengers specified. That is manifestly absurd, because, in the first place, we are required to build our omnibuses not less than 2 ft. between the seats, and no omnibus should be constructed with less than 13 inches of seat. The framing and panel will take 5 inches, and the nave of each wheel $3\frac{1}{2}$ in.; then the width of the tire will make up the whole to 5 ft. $3\frac{1}{2}$ in.—So that 4 ft. 6 in. is altogether too narrow.

1139. Any width beyond that you mentioned would be an additional convenience to the public? Yes, and additional security also; but the present omnibuses are made considerably narrower. At the commencement of the year the Mayor and Aldermen made up their minds that they would pass no 'bus not of the prescribed width between the seats. The result was that the proprietors went and had a portion of the coach removed and the seats placed further back, really giving no more accommodation to the public, because the difficulty was not the space between the seats, but in the whole width of the coach. It made the seats not more than 10 in. wide when they should have been 13 in. I think a coach should be constructed wide enough to let people pass up the centre of the 'bus without inconvenience to the passengers; but that can hardly be the case even with the width I have named, 5 feet $3\frac{1}{2}$ inches. The by-laws too are evaded by the omnibus proprietors in many different ways. For instance, after getting a 'bus licensed to carry eight persons they will get the number on the ticket altered to ten, and the result is the coach appears to be licensed for ten, when in fact it was only licensed for 8.

1140. Have you taken any notice of the appointments of these 'buses—horses, harness, boys, and drivers? I have known proprietors of 'buses to borrow cushions in order to go up for inspection, and afterwards return the cushions to the owners. They do the same with harness—borrow a good set of harness and after the inspection replace their own defective harness.

1141. *Mr. Farnell.*] Do you repair 'buses for the proprietors? Yes, continually.

1142. Do they give you any particular instructions, or are the 'buses left to you to put them in order? The larger proprietors leave us to our own discretion, but the small proprietors specify what they want done.

1143. Are the vehicles safe when that work is completed? As far as the work itself goes they are, but we frequently find portions of the coach we have no instructions about unsafe, but the proprietor refuses to have them repaired; he says he cannot afford it. The horses, too, are often in wretched condition; they are worse now than they have been for some time. On the Newtown road, where there are a great many 'buses, and they find it difficult to live, the horses are very ill-fed and badly driven.

1144. Are any of these 'buses got up to look well to the eye when they are in fact ill-constructed and in improper condition to be licensed? Yes; generally they study the look rather than the real utility and safety of the omnibuses.

1145. How long would a 'bus run, under ordinary circumstances, without requiring repair? A properly constructed omnibus would last twelve months perhaps before anything would give way; but of course a good deal would depend upon the length of journey, the speed at which it travelled, and the weight of passengers carried.

1146. *Chairman.*] Would it be fair for me to ask you the value of a faithfully built omnibus, say to carry twenty-five passengers? A coach properly constructed, to carry twenty-five passengers, is worth £110, but an omnibus car could be built, properly constructed and padded inside, as I conceive they all ought to be, for about £90 or £95.

1147. Do you think it would be better to place the management of these vehicles in the hands of the police or the City Council? I think they should not be in the hands of the City Council, because the Aldermen

Aldermen are open to be influenced by their personal friends, and where two Aldermen can set aside the action of the inspector it is impossible to get the thing carried out as it should be. I certainly would not trust the Municipality of Newtown to carry out the regulation of omnibuses, although many of them are my personal friends. I think it is something quite outside of ordinary municipal work. I should approve of entrusting it to a Commission rather than trust it to any men who are elected.

Mr.
G. Webber.
30 Mar., 1870.

1148. *Chairman.*] Have you any other suggestion to make? There is a new by-law in force, or if it is not a by-law it is carried out as if it were, restricting the number of 'buses on each road. Now I think that if, instead of doing that, they were to restrict the size and quality of omnibuses, it would be a less glaring interference with free trade. There might be a pattern omnibus and let every proprietor have his vehicle made after that pattern; he might have it any size he liked, provided he allowed each passenger 18 inches sitting-room.

1149. Have you ever heard a 'bus conductor admit that his 'bus was full? It is a standing jest that an omnibus is never full.

1150. Have you anything else to suggest? I think all the boys should be turned out of the office of conductors, and that both conductors and drivers should be compelled to wear some kind of dress—not to drive in their shirt sleeves or with their trowsers turned up half-way up the knee. I think also that they should have a light inside at night, and that the police should have authority to interfere if they had not. The 'buses are now without any interference from the police. They can pick up any little ragged urchin to act as conductor, and both drivers and conductors may be dressed anyhow, or almost undressed. At present the inspection is most defective. It is impossible that one inspector and two assistants can properly look after 230 omnibuses coming from all points of the compass, and covering a radius of 24 miles.

1151. It has been suggested they should be placed under the control of the police? I scarcely think that should be. I have not much faith myself in the impartiality of the police.

THURSDAY, 14 APRIL, 1870.

Present:—

MR. ALLEN,	MR. FARNELL,
MR. BUCHANAN,	MR. TUNKS.

WILLIAM TUNKS, ESQ., IN THE CHAIR.

Mr. John Carr called in and examined:—

1152. *Chairman.*] You are aware of the nature of the inquiry upon which this Committee is engaged? I am. Mr. Jno. Carr.

1153. You are an Alderman of the Municipality of St. Leonards? I am.

14 April, 1870.

1154. You have resided on the North Shore for many years? Yes, many years.

1155. You are conversant with the ferry system between Sydney and the North Shore? Yes, I have had a good deal of experience about it one way and another.

1156. Will you state to the Committee your opinion as to whether that kind of service is satisfactorily performed in the interest of the public? I should say that it had not been satisfactory to the public for many years past. For instance, one great cause of dissatisfaction is the neglect of the boatman in attending at the landing-places for fares. I myself have frequently to go over the water in the middle of the day. I might go at 1 o'clock, and three days in the week at that hour I should find no boatman there at all. When you want to cross from Dawes' Point, this is a great inconvenience and a serious loss of time, for you have either to wait the arrival of a boatman, or else to walk round to Windmill-street, or the Circular Quay.

1157. And yet there are a large number of persons licensed to ply as boatmen there? Yes, there are always seven or eight boats there belonging to licensed watermen.

1158. The boats are there, but the men do not attend? No; it seems as if they did not want a fare. They have no energy, and only want to get out of the way of having anything to do. I will give you a case in point: I went down one afternoon to the stairs; there was only one man there, and he had no boat, for he had lent it to another man; I asked him to take me over, but he said he could not as he had not a boat; I asked him how it was he had not one, and he told me he had lent it to his mate, who was round at the baths and would be back again shortly; I waited a few minutes, and after a time the man from the baths made his appearance; I went down to the steps, but he pulled past me; I called to him to pull in for me, but he said he could not; when I questioned him as to why he could not, he said that it was not his turn, it was—mentioning some other man's name—turn; I remonstrated with him, told him there was no other man at the steps, and insisted that he should take me; he would not pull in however, and then I threatened to take him to the police office for refusing a fare; he only laughed at me; another man was coming down, and he asked him if he wanted a boat, and he took him over and left me.

1159. This kind of service is not very well conducted? Not at all.

1160. And must consequently be very injurious to the place? Yes, and it is all owing to the circumstance that there is nobody there with authority to enforce the regulations. Besides that, I think there are many men who receive licenses who are actually not fit to be trusted to manage a boat. I noticed an instance of this kind some two months ago—in January last,—when we had those strong north-easters,—what we call the black north-easters. I went down to the wharf, and I had to wait a considerable time before a boat came up; at last a waterman named Wedge came and took me in; I asked him how it was that the wharf had been left so long without a boat, and he told me that it was—he had to go over to Miller's Point to pick up a boat with two ladies; the waterman who had taken the ladies aboard and had undertaken to pull them across, was unable to do so, and the boat was fast drifting away towards Miller's Point in spite of all the efforts of the boatman, when Wedge had to go off to his assistance, and had to be very quick about it in order to catch him before they got into a difficulty; whilst he was gone the wharf was left without a boatman to my great inconvenience. This I consider to be an evil that ought to be remedied. This man, who had obtained a license as a boatman, was actually unable to manage his boat in a moment of difficulty, and so imperilled the lives of these two ladies. Men like these, who are not to be trusted to go over in heavy weather, ought not to be licensed.

- Mr. Jno. Carr. 1161. When the men are once licensed they are licensed for good—they do not have to apply again? No. Some of these licenses have been in existence since Captain Brown's time.
- 14 April, 1870. 1162. There is no periodical examination of the men or of their boats? No. I do not believe there is. I have never heard of such a thing.
1163. Is it within your knowledge how the fares are regulated from the different wharves and stairs in Sydney to the suburbs? There used to be a printed form some 14 or 16 years ago, containing the regulations for the boatmen and the fares they were authorized to charge. I believe I have got one of those printed lists. It was framed by Captain Brown when he was Water Police Magistrate, but since then nothing has been done, and both the fares and the regulations remain unaltered although they are in many cases quite inapplicable.
1164. The traffic between Sydney and the North Shore consisted at that time almost entirely of visitors who crossed over and returned by the same boat? Yes. There were not many residents then.
1165. And the regulations were consequently framed in that view? Yes.
1166. That being the case, do not the present circumstances justify a change in the regulations and in the fares, seeing that the traffic now is as great from the North Shore to Sydney, as from Sydney to the North Shore? Ought we not to insist that there should always be a certain number of boatmen on one side as well as on the other? There certainly ought to be a regulation of that sort. There is nothing at present to prevent a man from going to ply at any place he likes. If a man gets a license for one place he ought to be made to keep there and not be allowed to shift to any other.
1167. If these irregularities go on at day within every body's sight, it is to be presumed that they are much worse at night? I do not trouble them much at night; but from what I have seen of them in the day I can say they are most irregular. I have no doubt however that they are very much worse at night.
1168. Could you suggest anything which in your opinion would remedy the present state of things? I could only suggest that there should be some rule by which the men should be bound to attend at the stairs in regular order during certain hours of the day, and then again a smaller number to take turns during the night. After sundown there are not so many passengers, but then there is an extra fare, so that makes up for it. However there should be rules and regulations compelling the men to attend by turns in such a way as always to have a waterman on the stand, and never to leave the wharf without a boat ready to take a passenger. All the men who take licenses for a particular wharf should be made to attend in this way. At present the custom is for a man to take out a license, and then to attend at the wharf only when it is a holiday, or when it chances to suit him. This is a very great evil that requires to be remedied more than any other; for there may perhaps be ten or a dozen men licensed for some particular wharf, and out of that number only some three or four attend. The truth is that there are more men licensed for the wharf than there is traffic for, and so a large number of them stop away and the public suffers. Now a regulation compelling them to attend in certain order at the wharf would cure this, whilst only a certain number of watermen, according to the traffic, ought to be licensed for the several wharves.
1169. The population of the suburbs on the northern side of the harbour has greatly increased of late years? Yes. The increase has been fairly wonderful.
1170. And the regulations which were framed for the traffic of thirty years ago, are not suitable for the traffic of the present day? Not at all. The change has been most astonishing. When I first went to live on the North Shore there were not more than three or four persons living near me; since then the population has been increasing more and more every day, especially since the Milsom's Point steam-ferry has been established, and more so since it kept up running up to midnight. This ferry however goes over to the Circular Quay and does not suit persons who wish to start from Dawes' Point.
1171. Do you think that the steam-ferries ought to be regulated as well as the boatmen? Yes; if they were licensed to ply from any particular wharf as ferry-boats, they ought to be compelled to attend, and not be permitted to go away towing vessels or taking out picnic parties. That is the great inconvenience we have with these boats, though it is certainly not so bad latterly as it used to be formerly. The steamers instead of being there to take passengers over would be away half the day towing some vessel out to sea, or going upon some excursion, or taking out a picnic party. If a steamboat is licensed for a ferry, the proprietor should be bound to have it there or be subjected to a fine if he removed it without due notice. It is quite as necessary that they should be restricted equally with the boatmen.
1172. Mr. Farnell.] Without such restrictions the ferry-boats are likely to leave you altogether without the means of crossing? Yes. They would be necessary for the protection of those who make use of the ferry.
1173. You have spoken about night licenses for the men? Yes; but that is done by arrangement amongst the men themselves. They take it in turns to do the night work. If there are twelve boatmen at the wharf, two of the number stop all night, and the others all go off at sundown. In the day-time they ought to be all on, but this is very seldom the case; for it is only in the event of fine weather or of some accident that you get all the men to come on to the wharf.
1174. The night turns are fixed by arrangement amongst the men themselves? Yes; but there ought to be some rule by which a certain number of the men ought to be compelled to attend at night. Now, if it is bad weather, or if it is blowing hard, the men, instead of being on the wharf, are comfortably housed in at home and do not attend to the ferry at home. A passenger cannot get a boat at all now if it is anything of a bad night. If there were some rule to compel a certain number of men to attend every night, foul or fair, that would get rid of this difficulty.
1175. Would you approve of an arrangement by which the licenses should be renewed annually, by paying a nominal fee by way of registration? Yes; they ought to be overhauled every year at least. If they had to renew their licenses every year they could then be made to bring up their boats for inspection. Now a man applies for a license, and if he gets it his boat undergoes an inspection, and after that nobody seems to have anything to do either with the men or their boats. These boats, which were good enough a few years ago when the men were licensed, are anything but good now, and they ought to be overhauled regularly every year. There are lots of ricketty boats amongst those plying in the harbour and many of them that are not safe. A yearly inspection would secure us proper boats and proper men to work them, and these are what we want.
1176. Do you know whether the steamers which ply in the Harbour on excursions and during holidays are in the habit of carrying more passengers than they are licensed for? I do not know if they do so now. There is a Government Inspector who looks more after that. I know this is done, for Mr. Dalgleish used to inspect them when they were leaving to see that they had not more passengers than it was safe to carry. I believe it is the duty of the Government Inspector of Steam-boats to do this. 1177.

1177. You are aware that Mr. Dalgleish is dead? Yes; but there is another man appointed in his place, Mr. Jno. Carr. and I suppose that he does the duty of looking after these steamers the same as Mr. Dalgleish did; I know that he looked after it very closely. For instance, I was on the steamer going down to the picnic given at Clontarf to the officers of the Flying Squadron. I saw him come on board and I asked him if he was going down with us. He said no, and told me that he had only come to see that there were not too many persons crowded on board. However, if you remember, it was a very wet day, and there were so few persons that Mr. Dalgleish's interference was not needed. 14 April, 1870.

1178. Have you seen the steamers which have been engaged to carry spectators to the boat races which sometimes take place up the river? No; I never attend them; but they are not particular boats for the purpose. They are just any boats that happen to be in the Harbour at the time. I see the Vesta advertised for this purpose and sometimes the Illawarra boats. They are engaged by persons as a speculation. You can hire any of these boats for a day or a half day for any particular purpose, when they happen to be in harbour.

1179. You have not seen them when they have been loaded with spectators for these races? No. I never attend any of these races.

1180. *Chairman.*] Do you think it would be advantageous, in the event of these men being brought under regulations, to compel them to carry grappling-irons, or some other instrument of the same kind, which would serve to fetch people out of the water in the event of their falling overboard? No doubt grappling-irons would be very useful at times, but the water police keep by them all the apparatus required for fetching up bodies in the event of dragging being necessary.

1181. That is when a person has been drowned, or has been reported to be drowned; but what I mean is, in the event of an accident, when a person falls into the water, and before he is drowned, would it not be an additional security if every boatman was furnished with grappling-irons? They might be useful occasionally but they would be cumbersome in the boat.

1182. *Mr. Buchanan.*] Would not a life-buoy better answer the purpose—that would not be cumbersome? That would certainly be useful, and might be stowed out of the way under the thwarts.

1183. If the man floated at all, would not the buoy keep him up until assistance reached him? It would be cumbersome in a small boat.

1184. What—a life-buoy? Yes, a life-buoy even.

1185. *Mr. Farnell.*] Do you think the watermen ought to be made to carry lights in their boats after dark? Yes; I think that would be a good rule. If the boats carried a lantern in their bows the steamers passing by at the time could not help seeing them, and there would be an additional security against accident. I have been pulled over sometimes when it has really been very dangerous from the steamers coming in from the Hunter. They are down upon you almost before you know where they are, and a light in the waterman's boat would be a great advantage, because the steamer's people would see it. Yes. I think it quite necessary that there should be such a rule.

1186. *Chairman.*] Have you any idea of the rate of speed at which steamers are bound by the Harbour Regulations to go, when proceeding up or down the harbour? They profess to go at half speed only, but I do not know if they keep to that. I know, however, that they seem to come very quick upon you when you are pulling over in a small boat. I have never paid much attention to the rate at which they were going, only that they seem to come down upon you very quick. That is why I think that a light in the bow of the boat would be a good arrangement on a dark night; the waterman's boats are so low in the water that there are no means of their being seen from a steamer's deck unless they carry a light.

1187. *Mr. Farnell.*] Do you know how the men employ themselves at the stairs when they are not engaged in their duties? They do all sorts of things, and are up to all sorts of things to pass the time—tossing and gambling sometimes. They play at anything to get over the day. They sometimes sit at the hut on the wharf for hours and hours without getting a fare, and they are sure to get hold of something to amuse them in some way. I have seen them at all sorts of things, pitching with coppers, and playing at cards. They can't sit there doing nothing, and one cannot blame them very much for trying to pass the time.

1188. *Chairman.*] Then if there were regulations for the boatmen the same as there are for hackney carriages, it would, in your opinion, be a great advantage to the people in the suburbs of Balmain, Pyrmont, and the North Shore? Yes, I think so. You did not mention hackney carriages before, but they certainly require some regulation. We have hackney carriages on the North Shore, but we have no control over them whatever. They do exactly as they like, come when they like, and go when they like. They come down to the stand, and there they stop, and will not go on until they have a load. That ought not to be allowed. If there is only one or two passengers offering to go by them, they will not move, and there is no means of compelling them. If there are two passengers they must wait until the steamer comes in, and if there are no passengers then they must wait for the next turn of the boat. They ought to be made to go every quarter of an hour, when the steamer comes in; passengers would know this, and would not care about waiting, and it would be a fair thing for the drivers.

1189. Are you aware why these hackney carriages are not under regulations? I am not.

1190. But you think it desirable they should be so? Yes. All these things ought to be under regular and known rules; until they are you can have no control over them. It is no use to license a vehicle to ply for public accommodation unless you have some authority by which you can compel them to be what you license them for, and that is an accommodation, and not a nuisance.

1191. Have you any other remarks to make, or any suggestions you would desire to make, on the subject referred to the Committee? I have not.

Mr. Edward Davey called in and examined:—

1192. *Chairman.*] You are an Alderman of the Municipality of St. Leonards? I am.

1193. You have lived on the North Shore for many years? Yes, for the last fifteen years.

1194. And during that time you have been in the habit of daily coming over to Sydney to business? Yes. 14 April, 1870.

1195. In the course of that number of years you have become well acquainted with the modes of crossing to Sydney? I have.

1196. Has it come within your knowledge that considerable dissatisfaction prevails with regard to the ferry arrangements? Yes, I am aware that they give very great dissatisfaction.

Mr. E. Davey. 1197. Will you, in order to save time, describe to the Committee what has been your experience in this matter? It seems to me to be a great pity that a large number of men should be allowed to take out licenses as boatmen, many of whom should only attend when there is fine weather, or upon special occasions. I know, for it comes within my knowledge, that a large number of them have licenses for Blue's Point. At 5 or 6 in the morning the men who have been on all night go round and call the men up to their turns; perhaps the man who is called is the sixth or the seventh, or perhaps the tenth. When he goes down he lounges about until 10 or 11 o'clock before he gets a fare, and then perhaps he gets only one man to take across, and for this he is only entitled to charge three-pence. This very often leads to unpleasantness, for after waiting so long the boatman does not care about taking so small a fare. The consequence is that if there is only one passenger that passenger will have to submit to some grumbling, and often to bad language. If there are any others behind, the boatman will abuse his one passenger for coming along so quick and not allowing the others to come up with him so as to form part of the boatman's load. Or if the others loiter, they get a growl for not hurrying on a little smarter. Then if he happens to be a stranger who has come over, he is likely to be subjected to extortion, especially if he does not know the fares, and is unacquainted with the mode in which these men do business. All this, as you can well conceive, is not at all pleasant for females, so that if a gentleman is in company with ladies he is sure to be extorted upon, because the men know that he will not raise a difficulty. The men are obliged to resort to all these schemes to get as much as they can for their turn after they have waited so long for it; and it all arises from there being too many men on the ferry for the work that is to be done.

14 April, 1870.

1198. Then leaving this matter to adjust itself by the laws of supply and demand, according to the principles of free trade, would not answer? I think not. The number at each wharf should be limited, and the watermen should be placed under some recognized authority, and not be left to themselves as they now are. I would also suggest that there should be a yearly inspection of the men and the boats, when both men and boats, after having undergone examination, might be licensed for another year, paying a small sum for every renewal, just sufficient to pay the salary of an inspector or some other officer appointed to keep them constantly under his eye, to recommend the rules and regulations by which they should be bound, and to see that these rules and regulations were properly carried out. At present these men are bound by no rules whatever, except such as they choose to make among themselves, and I need not say that these are not made for the public benefit, but merely to suit themselves. Amongst these rules there is one with regard to the night hut, which is put up on each side of the ferry. As soon as any waterman gets his license he has to pay 30s. or 40s. for his share of the hut; this goes into a fund for no particular purpose, and which nobody knows anything about. The rule says he shall pay this money before he shall be entitled to any shelter in the hut, which is built on public ground. Only when he has done this is he admitted as a night waterman, and allowed to shelter himself in the hut. This duty of night waterman is taken in turns by the men. The last time I saw the list of the men plying from Blue's Point, it had the names of no less than thirty watermen; of these one is appointed every night as night waterman, so that each man gets a night in the month in his turn, just as his name stands on the list. He goes on duty at sundown, and stops till daylight in the morning. If he is a disagreeable chap, he will have to stop there all night by himself, for nobody will join him, for none of the others are allowed to put in an appearance without his permission; the rules give him everything he can make during the time he is on, without interference from anybody else. So if he is a disagreeable man, disliked by the others, he will be alone, and then if he should chance to get drunk, which is no unfrequent case, a passenger may go down to the wharf and have the satisfaction of finding that there is neither boat nor boatman available for him. It is no use calling any other boatman for he will not come, for no one dares to interfere when it is another's night. If anyone should chance to do so he would be made to suffer, and when it came to be his night on all the others would come down and rush him, and prevent him from getting a fare. The only chance of getting on with them that a sober steady man has is to submit quietly to all these sorts of things, and to see, without saying a word, a good ferry that would afford a competent living to several men, fairly spoiled by being entrusted to the hands of improper and incompetent persons. All these are things which could only be remedied by the appointment of an inspector, who should make the rules for the management of the watermen instead of the watermen making them for themselves, and who should have the means of fully enforcing them whenever he found it necessary.

1199. All these disagreeable and improper things are highly injurious to the prosperity of this suburb? Yes, strangers get disgusted with the way in which they are treated by the men, and take good care never to cross again if they can avoid it. As to us, who reside there, we have suffered from it so long that we have got used to it.

1200. Some of these boatmen are also in a very filthy condition occasionally? Yes, very. There are some of them who are as lousy as can be, and yet if ladies come down to the wharf they are compelled to take that man, and his boat, for it is his turn. Then there are other men, who only turn out and come to the wharf on holidays and particular occasions, and though he does not attend regularly yet it is understood that any man who comes down is entitled to his way, and you are obliged to take him if it is his turn, no matter what unpleasantness may have occurred between you and that man upon some former occasion. Then another thing is that the fare fixed by law and that fixed by usage is different. Supposing anything to have occurred between you and the man he will not take you without you pay him his legal fare before you get into the boat. The legal fare authorized by the rules is a shilling, but the customary fare on taking a boat is only sixpence. It then happens this way, that sometimes I have interfered in order to abate some of the nuisance of these men; when I come down to the wharf I hail a boat; the man is perhaps one that I have given some trouble to. He says he will not take me without the legal fare of a shilling, and that I must pay him before I enter the boat. If I am in a hurry I am obliged to pay him. I can generally find a means of getting at them in some other way, such as summoning them for plying without a badge, or for some other breach of the rules, and in that way I contrive to keep them tolerably civil. But still it is a very great inconvenience, and one which ought not to be. It would be very easily remedied if the fare now charged by usage were legalized.

1201. Some of the places for which these fares were fixed have now got into disuse? Yes.

1202. And other places are now much frequented which are not in the list at all? Yes.

1203. So that practically the boatmen are at liberty to charge what they like? Yes. In the good times when the boatmen could earn their £5 or £6 a day, it was all right, and the men gave no trouble, but now when you go down to the Circular Quay for a boat to go across to St. Leonards at night, they charge you two or three shillings, and even then they grumble. It takes them away from the wharf, and when it is their

their night turn—their right is considered very valuable—because it might happen that a party would be coming down to the wharf to go down to some vessel lying at Watson's Bay, and that would be a pound at the least; so that when they get a small fare they growl because they are afraid it will lose them the chance of the large one. It ought to be understood that a person should be able to cross over to the North Shore from any ferry on the Battery side of the Quay for a shilling at any time.

1204. Are the boatmen entitled by law to charge the price you mentioned? Yes; that is the fare under the rules. They were certified during the gold times when everything was very high, and they have not been revised since.

1205. That was in Captain Brown's time? Yes.

1206. And these rules were framed for regulating the traffic from Sydney? Yes.

1207. There was no very great traffic then to Sydney from the suburbs? Very little.

1208. And now that that traffic has sprung up there is no way of regulating it from the suburbs? None whatever.

1209. *Mr. Farnell.*] What do you consider would be about the average earnings of these men? I could not venture to say how much, but they must be very small indeed. For a real right down lazy man I do not think that anything could be found to suit him better than the life of a waterman. He has to sit doing nothing or amusing himself the best way he can for three or four hours, and then he gets a little gentle relaxation, in the shape of a pull for ten minutes, then he gets a spell for another three or four hours. With the exception of these short pulls all they have to do is to sit and yarn, discuss politics, play at pitch and toss, or go into any other game. I have no doubt but that a much smaller fare would pay if there were not such a large number of men seeking to get a living out of the ferries. I believe that a man would make a good day's wages if he were continually pulling backwards and forwards from Blue's Point to Dawes' Battery at a penny a head. Now there are so many that the men cannot get work enough, and the passengers have therefore to pay for all the time the men are sitting still waiting for their turn.

1210. *Chairman.*] Would it in your opinion be practicable to lease the ferries to certain persons? I think so; and in proof of it I will tell you my experience of a similar proposal which was made in Queensland, and which would apply far better to Milsom's Point than to the river at Brisbane. The river there is about the same width as it is across to Dawes' Point, and the fare used to be sixpence for crossing. There were some thirty or forty licensed boatmen plying there, and there was just the same difficulty and annoyance that we have here, and arising from the same cause. At last the Government took the matter in hand, and did away with the then existing state of things. They established two regular ferries, reduced the fare to one penny, and then advertised the lease of the ferry for sale. The result was that the Government, although the fare was reduced to one penny, received something like £800 a year for the privilege of taking passengers across.

1211. At a penny fare? Yes; and the arrangement seemed to give satisfaction to all parties. The passengers are satisfied, because the boats leave every ten minutes whether there is a passenger or not; and the lessees are satisfied because they have regular and constant work. By this change four men now do all the work which was formerly shared between thirty or forty.

1212. And the public are better attended to? Yes, no other persons being allowed to ply.

1213. Will you look at the regulations for boats and boatmen? Yes.

1214. You see one portion of them in which it is made imperative on any person taking a boat from Sydney to pay for the back passage? Yes.

1215. Does that apply now between Sydney and the North Shore? Not at all. It was all very well when there was little or no population at St. Leonard's, but it does not apply now. It would be right enough if you were taking a boat to go down the harbour, to Garden Island, or some other spot; but it does not happen once in twelve months now that a passenger crossing to the North Shore requires to come back by the same boat.

1216. Then I understand you to say in the first instance that unrestricted trade on these ferries is not likely to succeed, neither as regards the men nor the public? That is my opinion.

1217. And next, that you recommend that there should be regulations for the control of the watermen, and a periodical inspection of the men and their boats? Yes. An inspector ought certainly to be appointed, and all regulations should either be made or certified by him. This ought more especially to be done with regard to the night work, so that instead of a single man monopolizing a whole night to himself, a certain number should be told off to do the work between them. If there were thirty men on the ferry, then I would divide the number by five, and leave six on every night. There should also be a provision, that in case any one of the six should fail to put in an appearance that he should lose his turn, and that the next man should take his place. This would be quite as fair to the men, and would prevent the public from being inconvenienced.

1218. Under the existing state of the law can a boatman claim his fare from a passenger—if payment is refused has he any means of recovering it? I believe not.

1219. That must act very unjustly towards the men? Yes; but he can always protect himself by demanding his fare before he starts.

1220. Then you think an inspector should be provided, so as to regulate the nights in such a way as that it should be shared amongst a certain number proportioned to the total employed on the wharf, rather than be given to one man? Yes; and the men whose turn it was to take the night work should be made to keep their turns, or else to forfeit their license. The license might be suspended for a time for this or any other offence. Besides this, I would have them come up yearly for inspection and for the renewal of their license, when they could be charged a small fee, sufficient to make a fund to pay an inspector. Now, when a man is licensed once he is licensed for ever, and both men and boats are in many instances quite unfit to trust human life to.

1221. Some of these men are working on licenses granted to them thirty years ago? Yes, quite that.

1222. *Mr. Farnell.*] There are a great many more men licensed than ply ordinarily? Yes, a great many; and the remedy I have suggested would rectify this, at least I believe so. A man now takes out a license and never thinks of plying at the wharf, unless upon particular occasions. The result is that there are not the number of men at the wharf which there ought to be; and no matter how urgent your business may be, you will have to wait; for when you come down to the stairs you find every boat away, perhaps off to the mail boat, or perhaps in some other direction. By suspending their license you would punish them and prevent this. Then again, on holidays, the men have the custom of charging double fares, and you have

Mr. E. Davey. have to pay twice as much as usual, besides the inconvenience of having to wait about to suit the pleasure of the men. In fact there are so many on the ferry that they have to resort to all manner of schemes in order to make out a living.

14 April, 1870.

1223. There is not a living for all the men? There is not; but then things are done so easy that it is a great inducement to them to keep on at it.

1224. *Chairman.*] There are so many men, and they have so long to wait that they expect to get some windfall when their turn comes? Exactly.

1225. And to pay for their loss of time the public are extorted upon whenever an opportunity offers? Yes; and are put to great inconvenience at the same time.

1226. The suburban Municipalities are altogether powerless in the matter? Quite powerless. It was said that by-laws might be made for the regulation of the men; but I do not think there is any power to reach them in that way.

1227. Their avocations are carried on outside the limits of the Municipality? Yes, altogether.

1228. The only way in which the case could be met would be to give the Municipality the control of the wharves, so as to put the landing-places in the hands of the Corporation? Yes; either into the hands of the Corporation or under the control of an Inspector. It has been suggested that the Water Police might take cognizance of them, but they have not the time to attend to this business, and never interfere unless in some very special case.

1229. *Mr. Furnell.*] Would you think it wise to give the power of licensing watermen to the Municipalities from which they ply; or would this be objectionable, seeing that the regulations, which must be framed for their management, must extend to the City, and would be likely to clash with any regulations which the Civic authorities might adopt? I think the appointment of an Inspector is the only way in which the difficulty can be met—an Inspector with general powers for all ferries.

1230. *Chairman.*] Have you paid any attention to the manner in which the 'bus business is conducted in Sydney? Yes; I have seen a good bit of it.

1231. If hackney carriages and 'buses were placed under some central authority, would not that authority be able to undertake the control of the boats as well? I think so. If such an authority were created, the whole of the traffic in Sydney and for ten miles round the City might be placed under its control.

1232. Would you consider it desirable to place ferry steamers under the control of such authority? Yes. If these steamers ply from public wharves they ought to be subject to the same control as other vehicles plying for hire.

1233. If these ferry steamers, which are supposed to ply regularly, suddenly discontinue running, they put the public to very serious inconvenience? Yes; they have the public quite at their mercy.

1234. There are a number of 'buses plying on the North Shore? There are.

1235. Are the regulations under which they run considered to be satisfactory? No, very unsatisfactory; they have no regulations at all.

1236. Could you give any opinion as to whether St. Leonard's is within eight miles of the City, for licensing purposes? I could not undertake to say.

1237. Has not a difficulty started up in the way of regulating these vehicles, owing to their having to pass through two of the North Shore Municipalities? Yes; that has been the chief difficulty in the way. Many of them have to go through these Municipalities before they complete their journey.

1238. So that if either of these made by-laws for regulating these vehicles, they might probably clash with the by-laws of the others? Yes, very likely.

1239. Then taking this into consideration would it appear desirable to you to place all these vehicles plying for hire under some central power? Yes; that seems to me to be the only way of meeting the difficulty.

1240. You think such a scheme as that would be practicable? I think that is the only way in which the difficulty can be met.

1241. As things now are it would be in the power of St. Leonard's proper to shut out all 'bus traffic with the other Municipalities, by the adoption of stringent by-laws? Yes; they must go through our Municipality, and we might levy black mail on them if we were foolish enough to do so.

1242. And it has been this conflict of powers that has prevented anything from being done? Yes; that is the only reason why things have remained in their present state.

1243. And that is why the drivers are left to do pretty much as they like? Yes. They have it all their own way. In fine weather it is all right enough, but in wet weather the women and children have to submit to all manner of annoyance.

1244. At holiday times they often have to pay extortionate fares? Yes. At holiday times and in wet weather. I think that the inspector, or whoever it is that is placed at the head of the business, should have unlimited power, not only in making regulations but in fixing the prices to be charged. There should be some regular fare fixed, and it ought to be that charged in fine weather. The men ought not to be allowed the privilege which they now claim of doubling the fare in wet weather.

1245. There is no regulation now by which steamers are compelled to keep on the ferry—they are often away for a day together? Yes; they take them away without any notice on a holiday, or to tow out a vessel.

1246. People on the north side of the harbour are thus put to great inconvenience? Yes, very serious inconvenience; sometimes I might have a vehicle which I want to take over, and when I get down to the wharf I find that the steamer has been let out to a pic-nic party, and that there is no means of taking my horse and vehicle over.

1247. They have been known to be knocked off for electioneering purposes? Yes, at times.

1248. Should you consider it necessary for safety that boatmen should be compelled to carry, at night, a lantern in the bow of their boat? I do not think so. If the steamers carry out the harbour regulations there is no danger from them. I have been fifteen years crossing the harbour backwards and forwards and I have never but once failed to get across. If the steamers go at half-speed, ring their bell, and show their lights, there is nothing whatever to be apprehended with ordinary care. You can always hear the steamer's bell five minutes at least before you can see her lights, and that gives you plenty of time to get out of the way.

1249. You have paid attention to the management of 'buses and other vehicles in Sydney? Yes; just the same as other citizens have done.

1250. Some difficulty appears to have arisen between the City and the Suburban Municipalities on the score of management? Yes. The difficulties appear to be more on the side of the Suburbs than of the City. Mr. E. Davey.

14 April, 1870.

1251. Do you think that these vehicles might be controlled by the police? I am afraid that the police are not the best people to entrust with this business. It will be no use giving them the control, unless they follow it up by proceeding against any 'bus driver who offends against the by-laws. If a police constable is on duty and sees an offence committed, he lays an information against the 'busman, and then the next day, when he is off duty he has to go up and prosecute the charge at the Police Office. But as this is his off day, it interferes materially with his own spare time; and on this account it will always be to the interest of the policeman to see no more than he can help.

1252. I suppose the police get no part of the fine? There is an alteration within the last fortnight. Since then half the fine goes to the Police Reward Fund; but the constable's interest in that is very small, and not sufficient to lead him to give up his off day.

1253. Your opinion is that some central authority would manage these vehicles better than the police? Yes; and it should be some authority that should be held responsible for the vehicles being in a proper condition. It is notorious that during the late bad weather not an hour of the day passed by during the last three weeks without a 'bus being stuck in George-street. The horses, poor and worn-out and sore, and galled all over, were fairly unable to drag the vehicle. The duty of the authority, whatever it may be, should be not only to inform against drivers who commit a breach of the by-laws, but also to be responsible that the horses are in a fit state to draw the 'bus, as well as the 'bus in a fit condition to carry passengers.

1254. The police might give a certain amount of attention to the 'buses when in the streets, to see that they did not loiter, or that a breach of the by-laws was not committed; but they would have no effect upon the starting of the vehicles, or upon the condition of the vehicle or the horses? None, whatever.

1255. And keeping the proper time in starting from their stands in the suburbs is the most material part of the matter to the persons who reside there? Yes. The great thing that we should look to is to see that the law is administered for the good of the public, and not for the good of a few boatmen or 'busmen. As it is now, the interest of these men is considered more than that of the public—the few are looked to more than the many. This should not be. For instance, it may perhaps seem a hard thing to say that a 'bus or a boat should not be allowed to ply when it becomes old and worn-out; and that a man should be deprived of his means of living by a refusal to license it; but then the safety of the public at large has to be considered before the interest of the individual.

1256. *Mr. Allen.*] It has been suggested that the proposed Marine Board should have charge of the licensed boats—do you think that body would be a sufficient check upon them? I am afraid that a body like that would consider the licensed boatmen too much beneath them; and that as there would be a great deal of detail to be gone into, these men would be neglected, and the evils would continue.

1257. Though they might not do this themselves they might do it by their officers? They would require a large number of officers. There are a great many wharves and stairs which would require to be looked after. There are three or four between Battery Point and Miller's Point, and these would give employment sufficient for one officer.

1258. But still that officer might be under the Marine Board? I am not prepared to give an answer to that question. I do not know who the Board is to consist of, nor do I know the mode of its working. This, however, I may say, that some persons ought to be responsible to the public for the good management of the harbour traffic, for the good conduct of the men, and the worthiness of the boats.

1259. You seem also to object to omnibuses and public vehicles being placed under the police? Yes; because I think the police will shirk the duty. I do not say that I altogether object to it, but it is not the best arrangement that could be made.

1260. Yet if it were made part of the police duty do you not think that it would be better managed than by being in the hands of the central power you speak of? I think not. No doubt they would manage well enough, but you would never get the police to take that interest in the matter that a special inspector would do. There are a great many things which it is the duty of the police to do, and which they do not do. For instance, it is their duty to lock a man up when he is drunk and disorderly in the street; but if they can shirk doing it they will.

1261. Then you do not think the police would perform the work? I do not think that the heads of their department would care about their doing it. We have some three or four hundred cabs and 'buses in the City, and to keep them in anything like order it will be necessary to lay several informations every day. This would take the police too much from their legitimate duties, and I do not think the police authorities would care about their men spending their time in this way. The main police duties are to watch over the safety of the people, and to mind their property; and this hackney-carriage business is altogether a secondary matter.

1262. *Chairman.*] Do you not think that as far as has been yet shown, the present arrangement has worked well? New things usually do work well for a week or two; but, for the reasons I have already given, I do not think it will do permanently.

1263. It is not necessary that the information should be laid for the following day, so as to deprive the men of their rest? I only tell you what I have myself heard from the police. From what they have told me, the opinion I have formed is, that the police will not lay these informations unless they are moved to do so by some one else.

1264. Laying these informations must trench more or less on their private time; and they regard that as an encroachment upon their hours of rest? Yes; certainly. And then they have so many more important duties to perform, that the greater part of the men will look upon this unfavourably, as being an addition to their work. The 'busmen know this as well as the police do; and that the men will not pull them if they can help it. The 'bus-drivers were far more afraid of old Stubbs, when he was alive, than they are now of all the police in the City.

1265. *Mr. Allen.*] The police had no control over the 'buses before the present arrangements? Yes, they always had the power of informing against and fining them when they did wrong.

1266. But they had no inducement to go out of their way to do it? I do not see any great inducement now. Half the fine goes to the Police Reward Fund, but that does not help the men. If the men had half the fine for themselves then I could understand their taking an interest in it.

1267.

- Mr. E. Davey. 1267. It forms, however, an inducement to those in charge of the police, sufficient to make them require that the duty shall be attended to? Yes, perhaps so. In that case they would have nothing else to do than keep fining the men. The 'busmen are breaking loose every hour of the day; there is not a driver who does not infringe the by-laws. They are bound by the by-laws to start at a particular time, and then to keep moving on till they have done their journey, never stopping, except to take up or put down a passenger. Now there is no 'busman who does not infringe this by-law, for if he were ever so willing to go on, the horses have got so accustomed to stopping that they would pull up of themselves at the corner of every street just from force of habit.
1268. *Chairman.*] So long as the 'buses are under the control of the City Council the police interference will not remedy any of the evils connected with the 'buses themselves? No; and I think it a piece of very bad policy to place the Aldermen of the City in such a position as that they should have to go and inspect 'buses. Some of them have feeling hearts, and they would not like to condemn a 'bus from which some man was getting his living; certainly not like an inspector would do, who would be held liable for the 'buses which he passed being safe to run for a year.
1269. Then, besides that, the elections come round very quickly? Yes, and the 'busmen have votes, and on that account alone there are many 'buses passed which are not in accordance with the rules now in force with regard to height, and such like.
1270. A system under which the City Council does one half the duty, and the police the other, must necessarily be defective? I think so. Besides, the cab and 'bus proprietors can use too much influence. Some two years ago they brought influence to bear upon the Council, in order to get the cab fares altered. Previous to that cabs were paid for by mileage in the City, and you could get into a cab and go half a mile for 9d., the fare being 1s. 6d. per mile. This was repealed for the benefit of the cabmen, and to the loss of the public. Now you have to pay for a cab by the hour, if within the City, but when you get beyond the City boundary then the mileage comes in. Just the very opposite ought to be the case, and mileage should be paid in the City, and beyond it payment should be made by time. This change was effected by the influence of the cabmen upon the City Aldermen. I am not prepared to say whether 9d. a half mile was sufficient, but at all events the jump to 1s. 6d. was rather too great.
1271. The copy of the by-laws furnished to me by the City Council shows the charge to be only 6d.? I only know this, that for the last two years, since the change has been made, you cannot call a cab under 1s. 6d. Before that you had only to pay 9d.; now it is 1s. 6d., and the men will take no less. And yet, when going out of Sydney you have to pay by the mile, although it would be much more reasonable to charge by time when going straight ahead distance. You have to pay out and home going out of town, but in the City you pay by time. These changes and many other evils of the cab and 'bus system I trace to the voting influence which is brought to bear upon Aldermen, since these 'bus and cab men, and their friends and hangers-on, form a very large section of the community.
1272. Including owners and drivers, their relations and friends, and the votes they can influence? Yes; and considering too that these very men take an exceeding active part in elections.

PUBLIC VEHICLES AND BOATS.

APPENDIX.

[To Evidence given by Mr. G. W. Barker, 30 March, 1870.]

A.

Alderman Barker to William Tunks, Esq., M.L.A.

Corner of York and Market streets,
Sydney, 23 March, 1870.

Dear Sir,

Re matter of omnibuses, &c. Enclosed please find result of my thoughts on the subject, which are at your service. You will note that I think the central and controlling power might be vested in the City Council of Sydney, on the subjoined conditions therein named.

Nos. 2, 3, 4, and 5 clauses refer to matters of detail to some extent, but not sufficiently provided for by City Council by-laws. The No. 6 clause, allow me to say, merits special attention by whomsoever the regulating power may be, and one which I trust, in purport, will be carried into effect.

I am, &c.,

GEO. WM. BARKER,

Alderman, Municipality of Camperdown.

1st. That the licensing, regulating, and controlling of all omnibuses, cars, hackney carriages, cabs, drays, or any other vehicles, plying for hire in the Municipality of Sydney and surrounding Municipalities (to be named), shall remain vested in the Municipal Council of Sydney, who shall receive all moneys derivable therefrom, and pay all expenses incurred thereby, on the following conditions, viz. :—

That after deducting the expenses incurred, one-half of the net amount derived from omnibuses and cars be retained by the Council of Sydney, and the other half amongst the suburban Municipalities aforesaid, in proportion to the number of such omnibuses and cars running to or through such Municipalities; but that only one-fourth of the net amount derived from hackney carriages, cabs, drays, or any other vehicles other than omnibuses and cars plying for hire, be divided amongst suburban Municipalities aforesaid.

2nd. That in addition to an inspector, the Council of Sydney appoint sufficient number of time-keepers, whose duties shall be :—

1. To see that each omnibus or car, with horses and harness, on coming on to the stand, shall be clean, in good order, and condition, and in safe and fit condition to carry out that for which they are licensed.
2. To see that each driver and conductor appear on the stand clean, properly and suitably clothed.
3. To see that each omnibus and car depart and arrive at proper and appointed intervals; and in case of any complaint, such complaint be made to the inspector, and if such complaint be, in the estimation of the inspector, sufficiently grounded, it shall be the duty of such inspector to report same to the Mayor of the Town Council, Sydney, who shall take such action as he may deem best to remove such causes of complaint, by fines, suspension of license, or withdrawal thereof.

3rd. That in consideration of the Council of Sydney appointing and paying the time-keeper, the license-fee for 'buses be £10 per annum, and for cars £7; such fees to include drivers and conductors' fee.

4th. In those Municipalities where stands exist, should any of the Municipalities aforesaid wish for an alteration, or additional number of stands, on applying to the Town Council of Sydney such alterations or additional numbers shall be made accordingly; and where no stands exist, should any Municipality apply for same, the same shall be appointed accordingly, provided that such stands be the extreme place from which and to which such 'buses or cars shall travel or go.

5th. That no loitering be allowed on the road, or stoppage, until the journey is completed, save for the purpose of taking up or letting down passengers.

6th. That for the better observance of the Sabbath, horses may have more rest, drivers and conductors have opportunity of attending their respective places of worship, only one-half of the usual number of omnibuses and cars running on the week-day shall run on the Sabbath day,—say odd numbers one Sabbath, and even numbers on the alternate Sabbath. That same rule apply to hackney carriages and cabs.

7th. That subject to time-keepers providing approved substitutes at their own expense, they be exempt from duty on Sabbaths.

[To Evidence given by Walter Renny, Esq., Mayor of Sydney, 17 February, 1870.]

A 1.

REVENUE received by the City of Sydney, 1870 :—

	£	s.	d.
178 omnibuses, at £7 10s.	1,335	0	0
28 omnibus cars, at £5 12s. 6d.	129	8	6
226 omnibus drivers, at 10s.	113	0	0
140 " conductors, at 5s.	35	0	0
40 hackney carriages, at £3	120	0	0
180 cabs, at £2 5s.	405	0	0
250 cab drivers, at 10s.	125	0	0
110 drays, at £2	220	0	0
110 dray drivers, at 5s.	27	10	0
	£2,509 18 6		

The license fee for omnibuses, hackney carriages, and cabs, was reduced 25 per cent. in 1867.

Omnibuses plying to Waverley pay, beside the above fee, about £24 per annum each to the South Head Road Trust and £5 to the Waverley Municipality,—the length of road in Waverley being about 600 yards. The same toll is paid by the Woollahra and Double Bay omnibuses. Omnibuses to Newtown pay £18 6s. each per annum for tolls.

The length of road in each Municipality kept by the Councils, for which toll is not collected, is about as follows :—

Newtown	600 yards	Bondi	1 mile
Redfern	1 mile	Marrickville	800 yards
Woollahra	1,000 yards	Balmain	300 "
Glebe	1 mile	Waverley	600 "

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DREDGING MACHINES.

(COST OF, AND OF WORK DONE BY, IN PORT JACKSON.)

Ordered by the Legislative Assembly to be Printed, 3 May, 1870.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 1 March, 1870,—That there be laid upon the Table of this House,—

- (1.) The names, number, and prime cost of the Dredging Machines and other vessels employed in removing silt in the Harbour of Port Jackson; their dimensions, capacity, and power of performing the several kinds of work for which they were constructed.
- (2.) The particulars of the working expenses and cost of repairs of the above, the sites of their operations, the quantity of silt removed weekly,—distinguishing the quantity used in each reclamation from the quantity carried out to sea,—from 1st January, 1869, to 21st February, 1870, inclusive.
- (3.) The cube yards of filling-in originally required in the several reclamations in hand, the quantity of silt used in each, and the cost of the same per yard for landing.
- (4.) A copy of the last specification and contract for landing silt at each reclamation respectively.

(*Mr Tunks.*)

DREDGING MACHINES.

No. 1.

RETURN showing the names, number, and prime cost of the Dredging Machines and other vessels employed in removing silt in the Harbour of Port Jackson; their dimensions, capacity, and power of performing the several kinds of work for which they were constructed.

Names.	Number.	Prime Cost.	Dimensions.			Capacity, Tonnage.	Engine-power, H.P.	Power of performing the several kinds of work for which they were constructed.
			Length.	Beam.	Depth.			
Dredge "Hercules"	1	£ s. d. Not known.	100 feet.	30 feet.	9 feet.	250	25	The "Hercules" and a punt were absent from Sydney during the time for which these Returns are required. Has loaded the 400-ton punt in 1½ hour. When the small punts containing the silt for Farm Cove are being discharged in the shallow water, considerable delay is caused by reason of time occupied in handling them. Iron vessels discharging at sea. The use of these small punts is rendered necessary for depositing silt in the shallow water at Farm Cove, but their employment greatly retards the operations of the dredge. Has towed the large hopper barges 4 miles to sea, from the head of Darling Harbour, and returned within 3 hours; average time, 3½ hours.

SPECIFICATION AND CONTRACT FOR DEPOSITING SILT.

THE work to be executed under this Contract will consist in discharging, landing, and wheeling back to such distance as may be from time to time required, the sand, mud, gravel, or other material dredged by the Steam Dredge "Hercules," within the Harbour of Port Jackson; the Contractor providing all requisite labour. The Government will supply the Contractor with such plant—such as barrows, shovels, planks—as may, in the opinion of the Engineer-in-Chief for Harbours and Rivers, be requisite for the work, for the safety and good condition of which (reasonable wear to be excepted) the Contractor will be held strictly responsible; and he will be required to pay to the Government the full value of any article of the kinds above mentioned which may have been lost or injured while in his charge.

The Contractor shall find all the labour requisite to discharge the punts, within such reasonable times after they have been brought to the place where the silt, sand, &c., is to be landed, as shall be required by the Engineer-in-Chief before mentioned, or the Master of the steam dredge for the time being.

Payments

Payments will be made monthly, on the certificate of the Master of the steam dredge, at the rate of 5d. per ton, for such number of tons of sand, mud, gravel, or other materials as he shall certify to have been satisfactorily discharged, wheeled back, and levelled, in the place or places pointed out by him to the Contractor.*

The tenders of two parties having been accepted for the above-mentioned work, each shall receive such fair proportion thereof as may be convenient, having regard to the apportionment of the parts between them.

The Engineer-in-Chief shall have full power to terminate this Contract at such time as he may deem fit, and on giving to the Contractors one week's notice in writing of his intention so to do.

E. O. MORIARTY.

1870.

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.**

VOTES No. 11. TUESDAY, 15 FEBRUARY, 1870.

8. Mr. Thomas Scott—Sugar Cultivation (“*Formal*” *Motion*) :—Mr. Brookes moved, pursuant to Notice No. 5,—
- (1.) That a Select Committee, with power to send for persons and papers, be appointed to inquire into and report upon the services alleged to have been rendered to the Colony by Mr. Thomas Scott, of Brisbane Water, in naturalizing the Sugar-cane and in the manufacture of Sugar.
- (2.) That the said Committee consist of the following Members, viz. :—Mr. Bawden, Mr. Dean, Mr. Farnell, Mr. Neale, Mr. Parkes, Mr. Speer, Mr. Dodds, Mr. Sutherland, Mr. Hoskins, and the Mover.
- (3.) That the Progress Report, brought up 24th March, 1869, on the same subject, together with the Minutes of Proceedings and of Evidence, be referred to this Committee.
- Question put and passed.
-

VOTES No. 54. WEDNESDAY, 4 MAY, 1870.

6. Mr. Thomas Scott—Sugar Cultivation :—Mr. Brookes, as Chairman, brought up a Second Progress Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before the Select Committee for whose consideration and Report this subject was referred on 15th February, 1870.
- Ordered to be printed.

MR. THOMAS SCOTT—SUGAR CULTIVATION.

SECOND PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 15th of February, 1870, with power to send for persons and papers,—*to inquire into and report upon the services alleged to have been rendered to the Colony by Mr. Thomas Scott, of Brisbane Water, in naturalizing the Sugar-cane, and in the manufacture of Sugar,—and to whom was referred, on the same date, the Progress Report brought up 24th March, 1869, on the same subject, together with the Minutes of Proceedings and of Evidence,—*have agreed to the following Second Progress Report :—

Your Committee have examined several witnesses (*Vide list of witnesses*), but in consequence of the close of the present Session have resolved to bring up a Second Progress Report, together with the Evidence taken, and recommend that the inquiry be resumed next Session.

WILLIAM BROOKES,
Chairman.

No. 1 Committee Room,
Sydney, 4th May, 1870.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 24 FEBRUARY, 1870.

MEMBERS PRESENT :—

Mr. Brookes,		Mr. Farnell,
	Mr. Neale.	

Mr. Brookes called to the Chair.

Entry in Votes and Proceedings, appointing Committee, *read* by the Clerk.
Committee deliberated.*Ordered*,—That the Rev. Dr. Lang and Mr. Thomas Scott be summoned to give evidence at the next meeting.[Adjourned until Wednesday next, at *half-past Ten* o'clock.]

WEDNESDAY, 2 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Brookes in the Chair.

Mr. Farnell,		Mr. Dean,
	Mr. Neale.	

Progress Report from the Select Committee of Session 1868-9, relative to the claim of Mr. Thos. Scott, *referred* on the 15th February, 1870, before the Committee.

The Rev. J. D. Lang, D.D., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Thomas Scott and Edward Knox, Esq., be summoned to give evidence at the next meeting.[Adjourned until Tuesday next, at *half-past Ten* o'clock.]

TUESDAY, 8 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Brookes in the Chair.

Mr. Bawden,		Mr. Dean,
Mr. Hoskins,		Mr. Dodds.

Edward Knox, Esq., called in and examined.

Witness withdrew.

Mr. Thomas Scott called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That the Rev. E. Holland and Mr. Peter Fagan be summoned to give evidence at the next meeting.[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 11 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Brookes in the Chair.

Mr. Hoskins,		Mr. Bawden.
--------------	--	-------------

The Rev. E. Holland called in and examined.

Witness withdrew.

Mr. Peter Fagan called in and examined.

Witness withdrew.

Committee deliberated.

[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 18 MARCH, 1870.

MEMBER PRESENT :—

Mr. Bawden.

In the absence of a Quorum, the meeting called for this day lapsed.

FRIDAY,

FRIDAY, 22 APRIL, 1870.

MEMBER PRESENT :—

Mr. Brookes.

In the absence of a Quorum the meeting called for this day lapsed.

WEDNESDAY, 27 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Brookes in the Chair.

Mr. Dodds,

|

Mr. Neale.

Committee deliberated.

[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 29 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Brookes in the Chair.

Mr. Dodds,

|

Mr. Farnell.

T. S. Mort, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

[Adjourned until Tuesday next, at *Ten* o'clock.]

TUESDAY, 3 MAY, 1870.

MEMBER PRESENT :—

Mr. Brookes.

In the absence of a Quorum the meeting called for this day lapsed.

WEDNESDAY, 4 MAY, 1870.

MEMBERS PRESENT :—

Mr. Brookes in the Chair.

Mr. Farnell,

|

Mr. Hoskings.

Chairman submitted Second Progress Report.

Same read and *agreed to*.

Chairman to report to the House.

LIST OF WITNESSES.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

MR. THOMAS SCOTT—SUGAR CULTIVATION.

WEDNESDAY, 2 MARCH, 1870.

Present :—

MR. BROOKES,
MR. DEAN,

MR. FARNELL,
MR. NEALE.

WILLIAM BROOKES, Esq., IN THE CHAIR.

The Rev. John Dunmore Lang, D.D., called in and examined :—

1. *Chairman.*] You were formerly a Member of the Legislative Assembly? I was.
2. Have you given any attention to the subject of sugar production in this Colony? I have.
3. Do you know Mr. Thomas Scott, of Brisbane Water? I have been well acquainted with him for forty years past.
4. Can you afford us any specific information as to his pursuits during the time you have known him? He had been employed under the government of Sir Thomas Brisbane, to superintend the cultivation of the sugar-cane at Port Macquarie, which it was believed was quite practicable in that settlement. I did not become acquainted with him personally till 1827, after the establishment for the cultivation of the cane at Port Macquarie had been broken up; but I have been well acquainted with him ever since. I have been at his place at Point Clare, Brisbane Water.
5. During the period you have known him, has he been engaged in promoting the naturalization and cultivation of the sugar-cane in this Colony? He has, during the whole period that has elapsed since his settlement at Point Clare. He devoted about 5 acres of land to experimenting on the cultivation of the cane, having been satisfied, as I have understood, of the practicability of its introduction into this Colony from his experience at Port Macquarie.
6. Had any one, to your knowledge, prior to his efforts been so engaged in sugar cultivation? No. The local Government had employed some person, whose name I forget (who had used influence with the Government at home in favour of the object), at Port Macquarie; but his engagement was of very short duration; I do not know what brought it to a termination, but Mr. Scott was then employed by the local Government.
7. Do you consider Mr. Scott the pioneer in the promotion of this matter in this Colony? Decidedly he is—unquestionably. His own experience was matured from what he had seen at Port Macquarie, where he was successful in the cultivation of the cane to a very considerable extent. How much sugar he succeeded in manufacturing from the cane at Port Macquarie I do not know; but of this I am quite confident, from my own recollection, and from what I saw, that he had succeeded in making a very considerable quantity of sugar, which I also know was sold by auction at the Commissariat Stores in Sydney. A member of my congregation at the time—a respectable grocer in Sydney—showed me, when I happened to be visiting at his house, a quantity of sugar which he had purchased in the way of his business at the Commissariat sale.
8. Do you consider that these efforts and this service entitle Mr. Scott to public recognition and consideration? Decidedly so. It has been an acknowledged principle in all Governments that those who originate the forms of industry that prove valuable to the State should have their services recognized in some way or other. I conceive that Mr. Scott, from his long-continued efforts through the Press, and his experiments on his small estate at Brisbane Water, did satisfy a portion at least—a very considerable portion—of the farmers

Rev. J. D.

Rev. J. D.
Lang, D.D.

2 Mar., 1870.

farmers of the Colony that the cultivation of the sugar-cane in this Colony was quite practicable; and I am aware that persons who had even been in the West Indies for many years before, and were settled to the northward, were totally sceptical on the subject, until they had read Mr. Scott's communications through the colonial papers, and seen the actual results of his experiments. I may mention, in connection with this subject, the Reverend Edward Holland, who was long a Presbyterian Minister at Port Macquarie, and who is now settled in that capacity at Campbelltown. Mr. Holland had been sixteen years, I think, in Jamaica, when he came to this Colony, and was settled at Port Macquarie. He could not believe, when he was told the circumstance, that the cultivation of the sugar-cane was practicable in New South Wales; and he ascribes his own efforts in the matter exclusively to the information and suggestions he had received through the Press from Mr. Scott. He has since been doing much to extend the cultivation of the cane in the Colony.

9. About what year did Mr. Holland arrive in the Colony? 1852.

10. Subsequent to the experiments of Mr. Scott? Quite so. It was long after he came to the Colony before he took up the idea at all, believing at first that the thing was impracticable.

11. Can you afford the Committee any information with respect to the nature of the engagement with Mr. Scott at Port Macquarie? I can only testify to the fact that he was engaged at the instance and under the cognizance of the Colonial Secretary of the period, and in the expectation of a suitable reward for his services on the satisfactory result of the experiments. I believe Mr. Scott declined taking a specific salary on going to Port Macquarie, and left the allowance to be made him by the Government to depend upon the success of his efforts there. This was in the time of Sir Thomas Brisbane; for it was under that administration that the Government of the day were impressed with the idea that the cultivation of the sugar-cane might be naturalized in the Colony, and become useful as a mode of employing convict labour.

12. Can you afford us any information as to how and why Mr. Scott's engagement at Port Macquarie was terminated? I believe it was chiefly through the change of Government. I have observed during my own residence in the Colony that schemes that have been cordially entertained and set on foot by any one Governor have not unfrequently been thrown aside and neglected by his successor. That was the case in regard to the cultivation of the sugar-cane at Port Macquarie. Sir Ralph Darling, who was the successor of Sir Thomas Brisbane, under whom the engagement with Mr. Scott was made, seemed to think that the thing was quite impracticable—that it was a chimerical attempt to introduce the cultivation of the sugar-cane into this Colony at all; and without due consideration, perhaps, the establishment was prematurely broken up. There was another reason also which no doubt operated strongly in leading to this change of policy, but which I did not advert to in the first instance. The demand for convict labour was so great during the government of Sir Ralph Darling that the Government establishments of an earlier period for the employment of the convicts were successively broken up. This took place at Emu Plains, and doubtless also at Port Macquarie. Mr. Scott was employed at Port Macquarie to a considerable extent also in the cultivation of tobacco, and had brought with him to the Commissariat Store in Sydney a large quantity of that commodity, the extent of which, as well as the quantity of sugar he had grown, he will be able to tell himself when examined by the Committee. As an illustration, I may add, of the fact that the experiments made or the schemes undertaken by any one Governor in the olden times were not unfrequently thrown aside or neglected by his successor, I may mention that the Colonial Secretary of that period, Major Frederick Goulburn, took a great interest in the reformation of the juvenile convicts of the day, and had a plantation of the castor-oil tree in that part of Sydney now known as the Haymarket, for the employment of these juvenile convicts; but when General Darling arrived, that experiment, like the establishment at Port Macquarie, was discontinued.

13. Do you consider Mr. Scott's claim to public recognition at all based on anything he did at Port Macquarie? Not at all; his claim upon the Government at that time for his services there was recognized and satisfied I believe; but it was the experience that he had gained in the cultivation of the cane at Port Macquarie that induced him to take the matter up, both in letters in the Press of the day, which have been almost innumerable during the period of thirty-five years past, and also in experimenting on the cane on his own property at Point Clare, Brisbane Water. It is on these efforts—through the Press on the one hand, and in experimenting on the other—that I consider his claim on the Government based entirely and exclusively.

14. As a statesman, could you favour the Committee with an opinion as to the nature of the influence the cultivation of the sugar-cane is likely to have on the future of the Colony? I have no doubt that the cultivation of the sugar-cane will be one of the greatest sources of wealth in the future of this Colony. The market for that description of produce is almost of indefinite extent; we have all the southern Colonies to supply, and when we have supplied *them*, there is the home market. It has been sufficiently shown that both in this Colony and Queensland the cultivation of the cane can be successfully carried out, and profitably also to those engaged in it, when conducted prudently. I consider (having visited both Colonies and seen the cultivation in both) that we are more favourably situated for this branch of cultivation in New South Wales even than our fellow-colonists in Queensland; for the heat of the climate is there so very great that you can scarcely expect European labour to prove available for the cultivation of such an article as the sugar-cane. The heat between the rows of the cane is excessive, and more than the European labourer can stand; but with the lower temperature of this Colony, even in the northern parts of it—the Clarence and Richmond Rivers—European labour is quite practicable in connection with that branch of cultivation; and the difficulty now experienced in Queensland in getting coloured labour is an additional encouragement to us to engage in the cultivation with European labour, as being quite practicable in the case. I have no doubt that the cultivation of the sugar-cane will be a source of far greater wealth to this Colony in future than all its gold mines, and far more beneficial in a moral respect to the Colony at large. It will tend to keep people at home, and give them an adequate reward for their labour, whether they manufacture the cane on their own small properties themselves, or sell it when grown to the manufacturer.

15. Then you consider that the cultivation and manufacture of sugar will not only have a material but a moral influence, to a considerable extent, on the Colony? Unquestionably. It is the happiest circumstance, I think, that has been experienced in our history for many years past, that that branch of cultivation has now been naturalized, both from its material and probable moral effects upon the Colony at large.

Rev. J. D.
Lang, D.D.

2 Mar., 1870.

16. In attaching the people to the soil, and giving them fixed habits and homes? Quite so. I recollect more than forty years ago the late proprietor of the estate at Bowenfels—known as Wallerawang—James Walker, Esq., a Lieutenant in the Marines, lamenting to me, in Sydney, on one of his visits, the unfortunate circumstance of the cultivators in this Colony having no article of produce that they could turn to account in the European market. There was no market at that time in the Colonies. Now the cultivation of the sugar-cane will unquestionably meet that desideratum and supply it entirely.

17. *Mr. Farnell.*] Do you know whether any persons have been rewarded, pecuniarily or otherwise, for having introduced new industries into the Colony? I was the means of obtaining an enactment in the Colony myself that ensured a *bonus* on the cultivation of cotton, which is a precisely similar case to the present one.

18. Have the Government, by any action of the Legislature, by recommendation or by any means, rewarded any person for the introduction of a new industry? I do not at this moment recollect any case of the kind.

19. Do you think that sugar plantations would have been established in this Colony, supposing Mr. Scott had never been here at all? I do not think they would.

20. You think then that sugar-growing in this Colony is owing to Mr. Scott's efforts? I do—to his perseverance, unquestionably. Till a very late period the idea was received with universal scepticism; and although I recommended it in the first edition of my Historical Account of the Colony, I was induced to withdraw it from one of the subsequent editions, on account of the apparent hopelessness of the case, and from the idea that I might have been mistaken.

21. Do you think all persons should be rewarded for having introduced some new industry? It depends upon the importance of the particular industry as a source of future wealth. The case of the sugar-cane is somewhat similar to that of the discovery of gold in this territory; and there was, no doubt, a handsome reward given to the gentleman who succeeded in proving the existence of gold in this territory.

22. Do you know who it was that proved the existence of gold here? Mr. Hargraves was the discoverer, in common estimation at least.

23. Do you think that was correct—that Mr. Hargraves was the discoverer? He was certainly the person who brought the matter under the notice of the public, and induced a general search for gold; for although the Rev. W. B. Clarke alleges, and I believe truly, that he had previously ascertained the existence of gold in the Colony, he never brought it forward prominently—never submitted it to experiment, and no notice was therefore taken of his discovery by the public.

24. You have stated that the growth of sugar would have a moral effect—I do not quite understand what you mean by that—in what sense do you use the words? My idea is that when the cultivation of the cane becomes more general than it is at present, it will be grown just as flax is in the Mother Country—in small portions on each farm—and that the cultivators will not attempt to manufacture the sugar, but will sell the canes to the manufacturer at the nearest mill, and either receive payment for the canes in money or a proportion of the produce. That is the mode of action in regard to the cultivation of flax in Scotland and the north of Ireland. I recollect, on my father's small property in the west of Scotland, we had always a plot of flax, in addition to the usual grains and roots that are cultivated in that district, and there was a mill in the parish for the manufacture of the flax. The farmer himself did not undertake the process. The growing of the flax was totally distinct and separate from the manufacture. Now I conceive that the same practice will be general in this Colony in regard to the cane. The small farmer will have his plot of cane, and he will either sell the cane to the nearest mill—and we know there are mills arising in various parts of the Colony already—or he will receive a portion of the produce.

25. The growth or cultivation of sugar, I believe, necessitates the establishment of a still for distilling rum from the refuse, to make it pay? That is the general idea. It is believed that the spirit that is extracted from the refuse pays all the expenses of the process. That is the usual calculation. There is no doubt that if the cultivation of the cane becomes general, as I believe it will, on all the northern rivers, distillation will accompany the process necessarily; otherwise unlimited means would be afforded for illicit distillation.

26. Do you think the drinking of rum will become more general in the north, from the fact of the distillation of it there? I can scarcely give an opinion upon the subject. I should be very sorry to see anything that would increase the tendency to spirit-drinking in the Colony, which I believe the cultivation of the vine will tend to prevent; but I believe that if the sugar-cane is cultivated extensively, sufficient influence will be brought to bear upon the Legislature to induce the Parliament to give facilities for the production of rum.

27. Consequently that rum will have to be drunk by some persons? Or exported, no doubt.

28. Do you think it is likely we could export rum in competition with other places that now send us rum? I do not doubt but we could. Mr. Scott has ascertained that the produce of the cane per acre is greater in this Colony than even in the West Indies—that four tons of sugar have been realized from an acre of ground in this Colony, which is greater very considerably than the average produce in the West Indies; and if the cultivation were becoming general, and distillation accompanying it, I see no reason why the produce of that distillation should not be exportable, as well as the sugar itself.

29. The production of sugar and the distillation of rum would of course put the imported sugar and spirits out of the market? No doubt.

30. If the distillation of rum became very great, do you not think it would be likely to come more into general consumption than it is at present, by cheapening the spirit itself? Well, I fear that result might be expected.

31. Would not that have an injurious effect upon society—if rum became a common beverage among the people? No doubt it would.

32. Then the introduction of the growth of sugar would be an injury, on that hypothesis? To a certain extent; but the same danger is likely to arise from the cultivation of the vine, and is not held to be an objection to that industry; for if the vine is cultivated extensively, it must be accompanied with the distillation of brandy from the grape; and the use of brandy is just as detrimental to the morals of the community as that of rum.

33. Have any persons in this Colony been rewarded by grants of land for having introduced sheep or cattle or anything of that kind? Yes; Mr. John Macarthur, who was the principal party, not the sole one, in the introduction of sheep and the growth of Merino wool, got 10,000 acres of land from the Government at an early period in the present century—the estate of Camden, for instance.

- Rev. J. D. Lang, D.D.
2 Mar., 1870.
34. *Mr. Dean.*] Can you tell the Committee where the plantation spoken of as at Port Macquarie was—whether at Rolland's Plains, the Hastings, or where? I think there were two plantations at the time, one of them at Rolland's Plains, and the other nearer the coast.
35. Have you ever heard that the plantation at Rolland's Plains was broken up in consequence of the establishment and the plantation machinery having been burned? No, I cannot say I have ever heard that; but I am quite aware of the fact that the Government that succeeded that of Sir Thomas Brisbane threw cold water on the whole affair. It was not originated by them, and they therefore discarded it.
36. I understand you have seen some of the sugar made there? Yes, and tasted it too.
37. What kind of sugar was it? It was comparable with the usual produce of the West Indies; it was rather moist, from my recollection of it; but the person who showed it to me, having bought it at the Commissariat Stores, was a Mr. Beveridge, a Scotchman and a member of my congregation, who had a shop in one of the streets parallel to the Racecourse.
38. Was it such sugar as people would use now-a-days? Yes, it was better than the ration sugar of the early times. It was of a brownish colour.
39. You have no idea what quantity was made at Port Macquarie? I have not. I recollect being told by Mr. Scott, and I think it is in his evidence appended to the Progress Report of a former Session of Parliament.
40. Have you any idea how much sugar Mr. Scott has since made at Brisbane Water? I have not; but he has been experimenting for thirty-five years on his small estate of five acres of sugar-cane. I have seen it fifty times, and have been instrumental in showing specimens of it to a great many persons. I did so on one occasion at one of the ministerial picnics of the late Administration. A quantity was sent me by Mr. Scott, and I volunteered in showing it to Sir James Martin, Mr. Eagar, and the other gentlemen who were there.
41. Have you ever heard any of the persons engaged in lecturing with a view of pushing forward this industry, say that the greatest difficulty they experienced in inducing persons to take hold of it grew out of Mr. Scott's having completely failed to demonstrate that sugar would pay? I never heard that; but such allegations are always sure to be made in such cases as that of Mr. Scott.
42. Do you know Mr. Meares of Port Macquarie? I have met with him, but I cannot say I am personally acquainted with him.
43. Are you aware that Mr. Meares was the first person who ever sent sugar away in large quantities from the Port Macquarie District? I believe he was.
44. Have you seen a letter from Mr. Meares, in which he states that he was a long time kept from going into sugar-planting in consequence of Mr. Scott's failure to do any good at it? I never saw that letter; but it is quite possible, for Mr. Scott had only a very limited extent of ground to experiment upon; and the successful cultivation of sugar can only be effected when there is a large extent of land under cultivation in that way.
45. If I understand the state of the case, you believe that Mr. Scott was amply paid for all he did at Port Macquarie at the time, and you think his claim now is based on the number of letters he has since written, and his continuing to experiment in sugar-growing, although he has not produced any practical result? Although he has not produced any large quantity of sugar, which he could not do from the limited extent of his property, I am quite satisfied that the present position of the industry and the very favourable prospect which it holds out for the future are entirely owing to Mr. Scott's efforts, and that he has therefore a strong claim upon the Colony.
46. You alluded just now to the idea of small farmers growing sugar-cane and selling it to some neighbouring mill, or getting shares in the produce—Have you considered the difficulty growing out of what is called in our district the freight question, that is, the difficulty experienced in carrying cane any considerable distance to a mill. It has been shown by a number of experiments, that if a sugar plantation is two or three miles from a mill, it will not pay to cart cane that distance—that the cost of carriage will take the whole value of it, leaving nothing to the grower? I have always considered the case of this Colony having such rivers as the Clarence and the Richmond peculiarly favourable for the cultivation of the cane, because it can be carried along these rivers by water.
47. I mean the land carriage of course? Quite so. Mr. Raff of Queensland, who has a plantation on the Cabulture River, about thirty miles from Brisbane, felt that difficulty so pressing that he has actually constructed a railroad on his plantation, near two miles long, to carry the cane to the mill. But it has always appeared to me that the extent of water communication we have on our rivers to the northward—the Hastings, the Manning, the Macleay, the Bellinger, the Clarence, and the Richmond—would afford the greatest facility to the small farmer to carry his cane to the mill. On the Richmond River there is an extent of water communication of not less than 300 miles.
48. Are you aware that up to the present time, notwithstanding the employment of extensive machinery in various places on the Clarence, the Macleay, the Hastings, and the Manning, not a pound of sugar has been made at a less cost than 9d. a pound? I am not at all aware of that; but I know that in the initiation of all great undertakings you may expect frequent and considerable failures before success is ultimately attained. The manufacture of sugar is a matter which requires great chemical knowledge and experience, and a failure in any part of the process may involve much eventual loss; but these difficulties are only to be got over by time and experience.
49. *Chairman.*] Is there anything more you would like to say? Nothing further.

TUESDAY, 8 MARCH, 1870.

Present:—

MR. BAWDEN, MR. DEAN,		MR. DODDS, MR. HOSKINS,
MR. PARKES.		

WILLIAM BROOKES, Esq., IN THE CHAIR.

Edward Knox, Esq., called in and examined:—

50. *Chairman.*] I believe you have had many years' experience in connection with the refining of sugar in this Colony? I have, for nearly thirty years. E. Knox, Esq.
8 Mar., 1870.
51. From whence has the raw material been chiefly imported? From the Phillipine Islands, the Mauritius, Java, and to a small extent from Calcutta.
52. Can you state to what extent the importations have been annually made to this Colony? The present consumption of New South Wales is about 17,000 tons a year; it has grown up gradually from a very small amount to the present figure; that of Victoria is about 25,000 tons; of the Australasian Colonies generally, I dare say about 60,000 tons, including New Zealand.
53. Have you had any experience in connection with the growing of cane and the production of sugar therefrom? Only within the last twelve months. I had some experience on the Clarence River in the month of October last, and on the Macleay in the month of December.
54. From what you have observed, is it your opinion that the growth of the cane will be attended with success? I believe it will be attended with perfect success. I can give no better earnest of my belief than that I have advised the laying out of £50,000 by the Colonial Sugar Company in the erection of machinery.
55. Is the yield of cane and the quality of the product equal to that imported? I believe with proper machinery it will be quite equal to anything imported. The yield of cane—the weight per acre—will be far larger than it is in the older countries, where the soil is very much exhausted; but that I attribute entirely to the very fine soil planters have to work upon at the present time.
56. Have you formed any opinion as to whether the production of sugar from colonial cane will be ultimately sufficient to meet our own consumption? I believe it will entirely supersede the imported article in time.
57. Can the cane, as far as you are aware, be grown successfully in Victoria, South Australia, Tasmania, or New Zealand? No. I myself was very sceptical about the cane growing so near Sydney as Brisbane Water; but I am quite sure no cane can be grown advantageously to the southward—the climate is unsuitable.
58. Is it your opinion that at no distant date we will be able to export, and supply other Colonies with our surplus product? I think it is very likely indeed.
59. This industry must give rise to and open up a large field for labour, not only for those employed in the growth of the cane, but also for mechanics and others? It will give employment to a great number of people, no doubt, and will be, generally speaking, very advantageous to the Colony. The farmers on the northern rivers have hitherto been almost entirely dependent upon one crop—the maize crop; they will now have the opportunity of growing partly maize and partly sugar-cane.
60. Can you fix a period—say within five, ten, or any number of years—within which we shall be able to supply our neighbours? That depends entirely upon the farmers; if they like to put in the cane, we might begin to do this within five or six years. Sugar might be grown extensively by large Companies like our own; but under the present Land Regulations we cannot get land for the purpose, in large blocks, in any suitable locality. The only way to accomplish this would be by having land surveyed and put up to auction, and then the free selectors could step in the day before the auction. There seem to be insuperable difficulties. We were anxious to secure an area of 2,000 acres, but were unable to do so. At the same time I think the cane will be grown quite as (if not more) successfully by the small farmers than by large planters, because they are much less dependent upon hired labour than the planters would be.
61. It has been stated by Mr. Travers that the consumption of sugar per head per annum in the Australian Colonies is 104 lbs. I think it is, as near as possible, 2 lbs. per head a week.
62. While the consumption at home is only 29½ lbs. Yes.
63. Taking this consumption as the basis of calculation, and looking to the increase of population, the interest now growing up must be enormous? It is. The consumption will naturally increase every year. In the same way, in 1842, the Company I am connected with used to refine 7 tons a week, and now we refine 360 tons a week (180 tons in Melbourne and 180 tons in Sydney), to meet the increase in the consumption.
64. You are aware that Mr. Thomas Scott, of Brisbane Water, has been engaged in this pursuit for a series of years? I am aware he has been writing on the subject, and urging the cultivation of the cane for a series of years. I have not personally known Mr. Scott until within the last few months.
65. You have no personal knowledge of his experimental farm? No, none, except what I have gathered from the papers.
66. Do you consider that his experiments in the culture of cane, and his efforts otherwise, have been highly beneficial in promoting this industry? I think it is very likely that we should not have heard of the culture of the sugar-cane here, but for Mr. Scott's persistent efforts to induce people to cultivate it in the Colony.
67. In your opinion he has been a pioneer in the matter, and a consistent promoter of it? He has undoubtedly.
68. *Mr. Dean.*] Are you of opinion, from anything that has come under your own observation, that sugar can be manufactured in this Colony on terms that will enable us to compete with foreign-grown sugar? I have not the slightest doubt of it; I have manufactured it myself.

E. Knox, Esq. 69. Do you know of any instance in the Colony, up to the present date, in which sugar has been actually produced at a price that will compete with foreign-grown? I do not believe it has, except in my own instance; but that is solely to be attributed to the difficulties that have to be overcome in commencing an enterprise of this kind, partly from want of means, partly from want of experience and knowledge of the business parties engage in, and partly from want of that organization which is imperatively necessary to make such a business succeed. I see no reason why sugar should not be produced as cheaply here as in the Mauritius, and particularly during the next eight or ten years, while the yield of cane per acre is so heavy. There is no doubt in my mind that the industry can and will be made profitable.

Thomas Scott, Esq., called in and examined:—

T. Scott, Esq. 70. *Chairman.*] You claim some consideration as having been the pioneer and promoter of the culture and manufacture of sugar in this Colony? I deem myself to have effected that object.

8 Mar., 1870. 71. Do you refer to your servitude as a public man at Port Macquarie, as the basis of your present appeal? Decidedly not. I agreed to accept a salary which for three years I had declined; I had been giving my services without any salary, but ultimately, in consequence of circumstances that had transpired, I accepted a salary. Therefore the Government fully acquitted itself for all my services at Port Macquarie.

72. What are your present and prospective views as to the value of the sugar industry? At present, all being novices, it is reasonable to expect that errors and failures will occur. It is the case in all new industries, and particularly so with regard to the one in question; for here the conduct of it differs entirely from that which has proved for centuries to be applicable to the tropics. I may add that there is but one guide pioneers have here,—the history of it as conducted in the West Indies; but that is fallacious, and would certainly result in failure more or less. Some gentlemen who have adopted my advice and instructions contained in my various letters have been able to succeed, but others have been led astray by following the practice applicable to other countries.

73. Then you do not consider that the planter who may have acquired his experience in the West Indies and other sugar-growing countries is altogether adapted to this country? A tropical planter is entirely out of his element in this country. Here there is a different treatment. For instance, when I first made my experimental plantation at Port Macquarie, as a prelude to the object of my engagement there, I was about to crop my cane at twelve months. Fortunately the works were not at hand, and I could not do it; but I watched and tried the cane from time to time, and I found it growing and improving in saccharine juices until it attained to the age of twenty-two months, and I then found it superior to that grown in the West Indies.

74. Then you claim by this experience and these experiments to have discovered a mode of treatment suited to the growth of sugar in the Colony? I have, for these thirty-five years at Brisbane Water.

75. From your experience, can you give us an idea of the actual profit derivable from an acre of sugar-cane in this Colony? Skilfully conducted on suitable land, it will yield for the first five crops three tons of sugar to the acre. Heretofore the planters have been cropping at twelve months; but the cane is not more mature for cropping at that age in this Colony than canes in the West Indies are at six or seven months. In the winter the plant has only a vegetable existence, and the saccharine juices deteriorate; they require two summers to attain to a profitable growth.

76. Can the cane be eligibly worked by European labour in this Colony? Most decidedly; I have practically proved it. I have never written upon the subject but from practical proofs, and I have calculated labour at £70 per annum on an estate that will make from 50 to 200 tons of sugar per annum. It will yield a net profit of £60 for every crop, with European labour at £70.

77. Then there will be no necessity here for the introduction of coolie or other labour of that kind? No. Had I conceived that there would, I would not have been so deeply engaged in the object, and I have proved to the contrary. This I have to be a reliable fact.

78. Have you ever visited the sugar estates in New Orleans? I have; and I intimately acquainted myself with all their details and character. It was that only that induced me to remain in this Colony. Had I come direct from the West Indies here, I should have denounced any one promulgating what I have done as to the possibility of growing the cane at all, much less at a profit.

79. You acquired some experience at New Orleans as to the mode of treatment best suited to this Colony? Yes. In New Orleans they have very severe winters, which necessitate their cropping at ten months' growth—two months prior to the required period. Were they not to do so they would lose their crops. It was that fact that induced me to look upon this Colony as so much more suitable to this industry than New Orleans.

80. Did you manufacture a small quantity of sugar that was sent to the Paris Exhibition? I did—twenty-eight pounds.

81. Where was that sample grown? At my model plantation, Point Clare, Brisbane Water.

82. Have you received any recognition from the Commissioners of the Paris Exhibition in respect to that? I have.

83. What was it? A medal.

84. Have you that medal? I have. (*Silver medal produced.*)

85. Have you paid a visit to the Clarence or Richmond Rivers since the people there commenced the growth of the cane? I have.

86. Did you receive any public recognition there? I did: a testimonial, with a presentation of a purse of £100, and a public dinner. The same recognition was extended to me at Kiama several years ago.

87. You are decidedly of opinion that this branch of industry can be carried out effectually with European labour? There is not a scintilla of question about it, and it has been proved by every party whom I have put in motion.

88. *Mr. Dean.*] How much sugar have you ever made in any one year in this Colony since you left Port Macquarie? Not more than 500 pounds, with very diminutive works, simply and only to practically demonstrate the fact which I have promulgated to the colonists.

89. Will you account for the fact that, if sugar is so profitable a crop, you have not gone into it more extensively yourself—that you have not made it profitable to yourself? To prosecute it requires efficient works. These are very expensive; my means have been exceedingly limited, and I have not been able to do

do more than keep up a model plantation. Every pound of sugar I made with that model plantation cost T. Scott, Esq. me 2s. or 2s. 6d. a pound; it is so very expensive on a diminutive scale.

90. Then I infer, from your opinion, that persons ought not to go into the cultivation of sugar without 8 Mar., 1870. considerable capital? By no means.

91. It is not an industry suitable to small farmers? It is not, except that the cost of their works would not exceed £50 or £60. They can make sugar cheaper with such works than they could buy it, but to make it for a market on that very diminutive principle would not do. They can grow the cane at great profit, provided efficient works be within a reasonable distance to convert it into sugar. I may add that the introduction of the industry in every part of the world has originally commenced by the farmers growing the cane and selling it to capitalists who had works, and it gradually comes about, as in the West Indies and other sugar-growing countries, that the grower is the manufacturer. It will be so here in a great measure.

92. What quantity of land is the minimum that may be profitably cultivated? 50 acres.

93. What would be the value of the plant that 50 acres would require in order to conduct the operation profitably? The minimum cost would be about £450;* it would then just give a fair margin of profit.

94. Do you think it would be more profitable to cultivate 50 acres of cane, and to employ machinery costing £450, than to devote these 50 acres to the growth of maize? The culture of the cane would excel that of maize infinitely.

95. Will you give us some idea of the difference of value? 50 acres of land, which I mentioned just now, was for an estate that would return a handsome profit. The latter question I replied to on the limited scale applicable to small farmers. It would take £2,500 for machinery for 50 acres of land. Less than £2,500 would not be sufficient for an estate of 50 acres, but £450 would be sufficient to provide plant for farmers on a very diminutive scale.

96. Do you think that with machinery costing £450 a farmer would find it more profitable to grow sugar than to grow maize? Most decidedly.

97. Do I understand that there has been no time since you left the Government employ at Port Macquarie, when you could have commanded capital to the extent of £450 to obtain machinery? Exactly.

98. And that is the only reason why you have not done so? That is the only reason why I have not embarked in it. At the same time I had a personal interest in it till 1851. I thought from the practical proofs that I afforded at Brisbane Water that I would have been employed as manager of a larger estate, but after 1851 I abandoned all idea of personal interest in it.

99. Upon what part of Rolland's Plains was your Port Macquarie plantation? To the westward of the agricultural establishment; Mr. Parker and I divided the plain between us.

100. What became of that plantation? It was discontinued from circumstances that occurred immediately prior to the settlement being declared free. I had also resigned, owing to events that took place.

101. Was the plantation burned, and the crop destroyed by fire? Some time after, the coppers—the only portions of the works that I received from the Government—gave way; there was a bush fire, and the canes accidentally took fire. I may add that even if that event had not occurred, the cane would have been of no value, as there were no works to take it off. I took as much off as I could until the coppers gave way.

102. Speaking of the plantations you examined at New Orleans—of course you mean in Louisiana—what part of Louisiana do you allude to? About seven miles up the river, on the levée. I went through a number of the plantations, for I had an interest in it—it was my hobby in the West Indies.

103. How high did you ascend the river? To Natchez; but the sugar plantations in my time were not more than twelve miles above New Orleans, after which the climate became too severe. I have since learned that they have extended them higher.

104. Did you see the plantations in the neighbourhood of Baton Rouge? No.

105. That is the centre of what is at present the sugar-growing region? They have extended their plantations since I left; there are, I believe, upwards of ten times the number of plantations that there were when I left New Orleans. It was not very long after the battle of New Orleans and the conclusion of peace that I went there.

106. Do you know the peculiar characteristics of the soil in those plantations you examined north of New Orleans? The whole of the soil is as rich as in any part of the known globe; it consists entirely of alluvial deposit from the overflow of the Mississippi; it is all humus—there is not even a grit in the soil.

107. Do you know what the present yield of cane in Louisiana is? One ton and a half of sugar to the acre, if I am not misinformed.

108. What is the ordinary density of the juice? Six degrees and seven degrees.

109. What is the average density at Brisbane Water? From the mature cane I have had it is as high as 13 degrees; but that was cane two years and a half old, and under very favourable circumstances. Medium cane is 10 to 10½ degrees. That would be the average of mature cane. Twelve months' cane in this Colony will never mark beyond 7½ or 8 degrees.

110. Do you find any difference in the density at Brisbane Water and on the Clarence? The difference is in favour of Brisbane Water, but that difference arises from my canes being matured; those at the Clarence, on which I operated, were immature—unfit to crop; they were only twelve months' cane. Mr. Knox had cane at the Macleay—mature cane—of two years' growth, which marked 13 degrees. Our West Indian cane marked 9 or 10 degrees. We never had cane at the West Indies which marked so high a density as the matured cane does here.

111. What is the ordinary average length of the crushing season on the Macleay or the Clarence—how many months may you crush? The crushing season ought to commence here in October and terminate in November, and commence again in April and May. These are points which none of the pioneers in this Colony have yet become acquainted with. They must not crop from late December or January till April; if they do, they commit a great error. That is a fact that the whole of the pioneers are at a loss for in this Colony. I convinced Mr. Knox, when I was at the Clarence, that he was doing wrong to crop at twelve months, and that he ought to wait till June, and he adopted my advice. He wanted practical proofs, and I gave him practical proofs, showing the difference between the twelve months' cane and the twenty-two months.

112. You state that all the sugar you have made at Brisbane Water has cost 2s. to 2s. 6d. a pound — ? On so small a scale —

113.

NOTE (on revision):—This is an error: it ought to have been £2,500, subsequently explained.

T. Scott, Esq. 113. Do you know of any instance in this Colony in which sugar has been made as cheaply as it could have been imported on any scale? I have done that at the Government establishment at Port Macquarie.

8 Mar., 1870.

114. Thirty years ago? Forty years ago.

115. Did you take an account of the Government labour employed at the ordinary average rate? I reckoned that $3\frac{1}{2}$ acres of land would require one labourer, and that labour at that time was worth £50 per annum.

116. What I mean is this,—that if you had that same sugar now in equal quantity to that you made at Port Macquarie, and made it with labour which cost just what labour costs at present, would that sugar have been cheaper than it could be imported now? Infinitely cheaper.

117. Then I infer from that, that machinery is not necessary to make sugar cheaply? Decidedly; it requires very expensive machinery to obtain a profitable return; most clearly so. I contrived machinery of my own there—wooden machinery; and that wooden mill was very expensive to repair; almost every day or every second or third day it needed repair. I made a ton or a ton and a half of sugar a day.

118. I understand you to say that the sugar you made at Port Macquarie was made more cheaply than it could be imported now, and that notwithstanding this, you were labouring all the time with very imperfect machinery? Very imperfect machinery as regarded its capacity, and also the inefficiency of the coppers and the general arrangement of the works, as the Government had failed to supply me with any other works, save and except only coppers.

119. What was the total value of the plant you employed at Port Macquarie—what could such plant be procured for now? Provided they had been efficient works, they would have cost £5,000.

120. What I want to know is the value of the works you did employ? The coppers only, and then the value of the convict labour making the mill and performing other work, in erecting buildings, and so on—I should say, as it was convict labour, the whole expense that the Government incurred for these works did not exceed £800.

121. What would such works as you had at Port Macquarie cost to build now? Inefficient as they were?

122. An exact model of what you had there? I should say they would cost upwards of £3,000.*

123. And with these works, what was the yield per acre? Not more than a ton and a half; but that arose from circumstances.

124. What was the quality of the sugar? Indifferent; sugar of the same kind in the market at present would not bring more than £29 or £30 a ton. This event arose from the immature state of the cane, and my being obligated to crop them under somewhat similar circumstances which attend the planters at New Orleans.

125. Then in order to get more than a ton and a half of sugar per acre, worth more than £29 or £30 a ton, you would require machinery worth £3,000? The cause of the inferiority of that sugar, and also the paucity of the yield per acre, arose from my being necessitated to crop these canes at eight months' growth; I was placed in the same position that the planters are at New Orleans.

126. *Mr. Bowden.*] Do you think that the manufacture of sugar, without the privilege to distil spirits, can be profitably conducted in this Colony, at the present price of labour in the country districts? Planters ought to be allowed to convert their refuse into rum. At the same time, so great are the profits derivable from the industry when skilfully conducted, that they do not require it. And I believe an event will very soon occur, that they will make sugar without any molasses; therefore they would only require distillation for the conversion of the washings of their coppers into rum. At the same time there ought to be an extension of the distillation laws, under peculiarly stringent conditions.†

127. You named two periods during which crushing might be conducted—Which of the two periods do you think most desirable? From October to the latter end of December, but not afterwards until May and June. The cane must have two summers. There will be a failure more or less unless the crops have two summers for their growth, or one summer and part of another. These periods can be slightly deviated from, according to surrounding circumstances.

128. Do you know the price that is paid at present for labour in the country districts? I pay myself £65 a year; £35 the wage, and the rations about £30 more.

129. For yearly servants? Yes.

130. I speak more particularly of the labour you would employ in the manufacturing season, when you would be at the mercy of labourers that would move about from one place to another? Casual labour would be higher, but steady labour would be what I have stated.

131. Have you any knowledge of what would have to be paid under such circumstances? I dare say you would be obliged to give at the rate of £80 a year. But an able planter, on a large plantation, who would economize his work, would not have occasion to get casual labourers on a large plantation; the labourers he would require constantly would be sufficient to take off the crop; but a small planter would have to hire labour.

132. Do you remember the rate of wages that was paid at the Belmore works when you were there? 6s. a day, and they found themselves; there were no rations.

133. *Chairman.*] Would it not be better at present that the farmer should grow his cane and sell it to the manufacturer than that he should attempt to manufacture sugar himself? Clearly.

134. To such a Company as the existing Sugar Company, who would manufacture it to much greater advantage? Yes, much more profitable to the grower.

135. What was the largest quantity of sugar you ever produced in any one season? At Port Macquarie about 70 tons. The rate paid by the Sugar Company for cane gives the farmer nearly double as much per acre as he could make by growing corn.

136. *Mr. Dean.*] What must be the greatest distance within which the manufacturer can afford to take the cane from the grower? I should say about eight miles.‡

137.

* NOTE (on revision) :—In giving this reply, I included every improvement—mill, mill-dam, mill-race, buildings, &c., &c.

† NOTE (on revision) :—It certainly would be a wise policy if the Government were to permit the early sugar-planters to distil their refuse matter into rum. It would give an early impetus to the introduction of the industry, encourage capitalists to invest in it, and be an act of justice towards them. At the same time, the permission ought to be accompanied with stringent conditions.

‡ NOTE (on revision) :—In replying to this question, at the moment, I deemed that it applied to water carriage. Upon ordinary roads, canes could not be profitably carted eight miles.

137. And then he must have water carriage? I speak of land carriage. Water carriage of twenty or thirty miles would cost less than eight miles of land carriage. Cane is a very heavy article, and it takes ten tons of cane to make one ton of sugar.

138. The hire of a bullock dray costs about £1 a day in the country; and as such a dray would not make more than one journey, carrying about two tons of cane such a distance as eight miles in a day, would not the cost of carriage eat up the value of the cane at such a distance from the mill? On the Clarence all the available land is within four miles of the river, and most of it on the margin of the river; and the same is the case at the Macleay, the Richmond, and other places. I think the localities eligible for the growth of the cane are removed but a very small distance from the river-side.

139. Is it not true that in Louisiana they find it absolutely necessary to lay down railways from the centre of the plantations where the works are to the extremities, although not more than a distance of a quarter of a mile—Does not the experience of Louisiana show that it will not do to cart cane a quarter of a mile; much less eight miles? The tramway reduces the cost of transit so greatly that it is economical to lay it down. For instance, Mr. Raff, who has an estate in Queensland, has a railway laid down to carry his cane to the mill, although it is not more than a mile distant. He has no water carriage for his canes, but he purchases none. It certainly will pay, and very highly so, to cart canes one, two, or even three miles. In this Colony the purchaser of the canes pays the cost of their carriage to the mill. In all my experience, I never, until lately, knew the planter to buy his canes, neither have I ever known him to have a longer carriage than one mile to convey the canes to the works.

T. Scott, Esq.
8 Mar., 1870.

FRIDAY, 11 MARCH, 1870.

Present:—

MR. BAWDEN, | MR. HOSKINS,
MR. NEALE.

WILLIAM BROOKES, ESQ., IN THE CHAIR.

The Rev. Edward Holland called in and examined:—

140. *Chairman.*] You are aware that the object of this Committee is to ascertain how far Mr. Thomas Scott may be considered the pioneer in the cultivation and manufacture of sugar, and whether he is, under the circumstances, entitled to any consideration from the Legislature on that account. I believe you have been identified for some years with the promotion of the same object? For about seventeen years.

Rev. E.
Holland.

11 Mar., 1870.

141. Were you put in motion in any way, in the practical attempt to grow and manufacture sugar, by Mr. Scott? No.

142. Had you any knowledge of his efforts at the time you commenced? When I first started, none whatever. I had only been three months in the Colony when I first began to grow cane.

143. You have been engaged in experiments in the growth as well as the manufacture of sugar? Yes, both.

144. What were the results of your experiments as to the amount of success in the cultivation of the cane and production of sugar? Perfectly satisfactory—far superior to anything I ever experienced in the West Indies.

145. When you first attempted to grow the cane in the Colony, it was before you had had any knowledge of Mr. Scott's experiments in any way? Yes, long before. I can give you the history of it, if you desire it. I came to the country in 1853, and settled at Port Macquarie. Shortly after my arrival the late Major Innes and family called on me, and on my paying a return call at Lake Innes I saw some cane of the ribbon variety in the Major's garden. I asked Mrs. Innes to allow me to take some to see if it would grow at Port Macquarie. It was agreed to, and fortunately I took some away and planted it, for shortly after the rest was burned down. That is the cane, I believe, which is now known and cultivated over the Colony as the ribbon variety.

146. At that time you had no knowledge whatever of Mr. Scott's experiments? No.

147. Did you, about the year 1866, write a letter, addressed to the *Empire*, respecting the experiments of Mr. Scott? I think it was to the *Herald*, but I cannot remember which; I have written so many. I did write about Mr. Scott, commending him to the public esteem.

148. I understand you have been resident in the island of Jamaica? Yes, for eleven years.

149. Can you afford the Committee any information as to the comparative value of the sugar made in Jamaica and in this Colony? As regards its market price, I believe sugar is selling there now at 20s. per cwt., and the same sugar here would be worth at least 34s. I know it from recent papers I have had from Jamaica. I have seen it sold at 15s. and 18s. per cwt. in the public markets of Kingston.

150. Do you believe that the sugar-cane can be permanently grown here with the same chance of profit as in the West Indies? Yes; there is nothing to prevent it if a judicious selection is made at the time of planting. If you put the plant into a climate or atmosphere that is not congenial to it, of course you cannot expect it to grow; but if you select a suitable soil and climate, to use a colonial phrase, it is "bound" to grow.

151. Why is it that sugar that would sell for £20 in Jamaica would be worth £34 here? It is difficult to ascertain that; I can hardly form an opinion on that point without giving it more thought. That sugar is destined for the English market, and there is a heavy duty on it when it arrives there; that, in one sense, might account for the relative difference.

152. Have you formed any opinion on the question of the services of Mr. Scott in this matter? Yes.

153. Will you be good enough to give the Committee the benefit of it? I think that if Mr. Scott had done only one-fourth of what I have done to develop this industry he is worthy of what I recommended in the public Press—that the present of a sum of £1,000 should be given him by the Legislature. I must say, at the same time, that when I wrote that letter I was under the impression that Mr. Scott had never received any encouragement in the shape of money from the Government; but I believe he did from a former Government receive some six or eight hundred pounds; still that was for services performed then.

Rev. E.
Holland.

11 Mar., 1870.

then. He has since been writing and calling the attention of the country to the matter, and for that latter service I think he is entitled to the consideration of the Legislature.

154. Looking to its prospective value, both as a means of affording employment to the people and as a source of revenue, what is your opinion of this sugar question? I believe it will be equal to the golden fleece of ancient times to this country—the source of undoubted and unbounded wealth to the Colony.

155. *Mr. Hoskings.*] What did Mr. Scott receive £600 for? The Government of the day, I believe, established a sugar factory at Rolland's Plains, near Port Macquarie, and he had the superintendence of it. When the penal establishment was broken up at Port Macquarie that went to the wall; and I think for superintending that plantation Mr. Scott received that amount.

156. How long did that sugar factory started by the Government exist? That I do not know. It is some forty-two or forty-three years ago.

157. Can you say whether it was demonstrated that sugar could be profitably grown at this establishment at Port Macquarie? From what I have heard—and I have heard it from those who were on the spot—it was a failure. But to meet that, I think other things are to be taken into consideration. People may cry down a thing and say it is a failure, without knowing the real merits of the case; and probably Mr. Scott was not supplied with proper machinery; in fact he has told me so in letters, for I have never seen him.

158. The establishment you believe existed some years and was abandoned? Yes.

159. Would you not think that if the Government, having a large amount of prison labour available, could have demonstrated that the sugar-cane could be grown and manufactured at a profit, the establishment would not have been broken up? I believe it was a failure, from all I have heard about it; but I do not look upon Governments as the best parties to interfere in these matters; they do not manage economically.

160. The money received by Mr. Scott was salary for supervising this establishment? Yes, if not a salary, a bonus. I have an impression that he declined a salary; but this money was given him in return for his services.

161. Would you be kind enough to tell me on what grounds you consider Mr. Scott is entitled to any remuneration, or any sum of money, for any services he has rendered to the Colony in relation to the growth of sugar? He has written a great deal on the subject, kept it before the public mind, directed attention to it continually, sent samples of sugar to various editors of newspapers and other persons, and in many ways endeavoured to induce people to give it a fair trial.

162. Have you not done the same? Certainly I have, and to a very large extent too. I have sent sugar all over New South Wales; I could count the letters I have written by thousands; and I have lectured on the subject fourteen different times.

163. I presume Mr. Scott has not demonstrated that sugar could be grown profitably on any plantation of his own? I believe his plantation at Brisbane Water is very limited, but I have never been there.

164. So limited that it would be impossible for him to furnish the community with any reliable data based upon what he has done there? He could not do that very well from what he has done there; he could, however, from his West Indian experience.

165. Still I apprehend you could do the same? Certainly.

166. And you have done the same—you have demonstrated, or attempted to demonstrate that sugar could be grown profitably here? Partly that; but in addition to that I went into it like a practical man; I bought machinery and made sugar. The plantation I had is now the property of Lord Somerville.

167. Did you demonstrate that sugar could be profitably grown? Certainly.

168. Then you were in fact the first successful grower of sugar in the Colony? I do not like to speak of my own services.

169. I should like to hear them? It is an object dear to my mind. I should like to see the cane profitably cultivated. I believe it will greatly enrich the country.

170. Then I may say you were the first person that demonstrated that sugar could be profitably grown in this Colony? I believe so, without at all interfering with the claims of Mr. Scott. I should be very sorry to say a single word to affect his claims injuriously.

171. You have written letters to the Press, calling the attention of the colonists to the adaptability of this country to the growth of sugar, as well as Mr. Scott? Yes.

172. And you have done still more, for you have demonstrated that it can be grown profitably? Yes; and I have lectured over the country. Some of these lectures were of a practical character, over the boiling-pot, by means of which three or four hundred people have been taught to make sugar in the course of a single lecture.

173. It cannot be alleged then that Mr. Scott's services are more distinguished than those of other persons? That is not for me to say.

174. Do you really believe sugar can be grown here to a profit? I do; I am as fully convinced of it as that we are sitting at this table; and with a very large profit too.

175. To what extent have you cultivated sugar at Port Macquarie? My farm consisted of fifteen acres, six of which were under cane at the time I sold it. I had a small mill with which I made sugar. Some of that sugar I sent all over the Colony. I sent $\frac{1}{2}$ cwt. to the Intercolonial Exhibition, and afterwards to Paris, for which I got a gold medal. I supplied my own family with sugar, and sold a good deal. I believe in that way I have made more sugar than Mr. Scott.

176. Have you made any calculations to show that sugar can be grown at a profit, having in view the cost of the land, of fencing the land, of the cultivation of the land, of planting the cane, and its conversion into sugar? Yes; but I could not give you figures now on the spur of the moment. From calculations which I entered into very closely—for I was my own workman as far as I could be so—the conclusion left on my mind is that nothing will give so large a profit as the growth of sugar, if judiciously managed—that must be understood—it must be judiciously managed; for it is easy, from want of care or from ignorance, to make mistakes that will do away with the chance of profit.

177. Did you charge your own labour against expenses? I cannot say I did not, because I used to have a good deal of the sugar for my own labour. By my own labour I mean the superintending of the making of the sugar.

178. Can you say whether you know of your own knowledge that sugar has been grown here on anything like a large scale at a profit to the cultivator? I can give you an instance:—A gentleman came to the Hastings and bought three sections of land, very poor inferior land, with the exception of about 400 acres

on

on the bank of the river, which was rich and well adapted for the growth of the cane; he got three plants that originally came from my stock, put them in the ground, and when they were about as high as this table he cut them down and replanted them and other kinds; he did this for several years, until he had a large quantity of growing cane. I asked him on one occasion what he was going to do with it; he said he did not know. I told him I calculated he had cane enough to make £2,000 worth of sugar, and advised him to expend about £1,500 in machinery; he said he did not know how to make the sugar; I told him I would show him. I went up to his farm; we boiled all night, and after he had learned the process he went on and made a great deal of sugar, which he sold in Sydney; and lately he has sold the whole concern for £10,000. I asked him how he felt on the matter with regard to the sale of the sugar, and he said, perfectly satisfied.

Rev. E.
Holland.

11 Mar., 1870.

179. You are aware they are growing sugar-cane very extensively in Queensland? Yes.

180. And that there is very great scope for the growth of it on the northern rivers and in Queensland? Yes.

181. It is a fair presumption that if a large number of persons engage in the enterprise in this Colony and in Queensland the price of sugar will fall? Not for many years. We must first keep the foreign imports out of the market, which a few years ago amounted to £887,000 worth of sugar. They are fully that now, if not more. We consume about £500,000 worth annually in this Colony. Before the price can come down we must supersede the foreign sugar in the market. Then we have all the neighbouring Colonies as markets.

182. How long do you anticipate it will be before we are able to supply ourselves with sugar? If the Government of the day had followed up Mr. Scott's efforts we might have been independent now. We are only skimming the surface at present.

183. Do you think we shall be able to supply the local demand in (say) five years? You could do it in three, if the capital of the country went into it as it ought. It only wants capital. There is plenty of good land, and we know that the cane will grow luxuriantly, and that it is rich in saccharine properties.

184. Do you believe cane will grow as luxuriantly here as in any part of the world? I do, and better. I have a case under my eye at present where 70 tons of cane were taken from an acre of land, and where the owner of it got 10s. a ton for it as it stood on the ground, the miller cutting it down and carting it away to make sugar.

185. How much sugar do you think could be made from that quantity of cane? That depends upon the strength of the juice. If that juice would show, by saccharometer, say 10°, I would engage to make over four tons of sugar to the acre from it, and more than that.

186. You are aware, I presume, that the Australian Colonies are supplied from the Mauritius? Not altogether; a good deal of sugar comes from Java, Manilla, and Madras.

187. Labour is an important element in the production of sugar? Yes.

188. In Mauritius, Java, and Madras, the fields are cultivated and sugar manufactured by coolie labour? Yes, chiefly.

189. What are the wages paid to coolies? I have never been in India.

190. You know they are very low? Yes.

191. About two-pence a day? More than that. In Jamaica the field labourers get 1s. 6d. a day.

192. Having in view the low price of the labour employed in the growth of the sugar-cane and the manufacture of sugar, do you think we should be ever able to compete successfully in the production of sugar, even for the local market, with those countries? I have not the slightest doubt of it. We can do a great deal of work by machinery that is done there by hand labour. In the next place, our canes are richer and the return per acre is higher. Then again, the cane in these hot countries is forced into early maturity and has not time to develop its full strength. That will be the fault in Queensland. Here it takes longer to come to maturity, and like most things that take long to mature, it is richer and better.

193. How do you account for employing machinery here better than they can in other countries? I suppose labour is cheaper there than machinery. That may be the reason. Perhaps some people have not capital enough to go into machinery. But the great advantage here is the extra yield per acre.

194. This extra yield, of course, is from cane grown on virgin land—alluvial land? Yes. That is from the cane. There are other plants that will produce sugar from inferior land; for instance, the plant I introduced myself—the planter's friend.

195. Is not sugar a very exhausting crop? Yes, it is, very.

196. If so, I apprehend we may fairly presume that the yield will diminish in time? Not if the land is kept in good heart by manuring and deep ploughing. The cane provides itself with a large proportion of the best manure for its reproduction—the megass, trash, and leaves; they ought to be ploughed into the ground, giving back to the soil, to a great extent, the elements taken away from it.

197. Supposing that in consequence of the over-production of sugar in the Colony, or from other causes, the price of sugar should become as low here as you say it was in Jamaica, would it pay at that rate to cultivate it? Yes, it would; no doubt of it.

198. Better than crops of maize? They are not to be mentioned in the same breath. But that is looking too far into the future. It will be many years, according to the snail's pace at which we have been going hitherto, before we drive out the foreign sugar.

199. *Mr. Bawden.*] Do you know of any persons who have been induced to cultivate sugar through Mr. Scott's advocacy? I do not know for certain; but no doubt parties have been induced to do so by his efforts.

200. Can you name any persons? I do not know that I can. I know the people on the Macleay, the Hastings, the Manning, the Richmond, and other places—I do not say it egotistically—have been induced to cultivate the cane through my writings, lectures, and so forth.

201. Was Mr. Meares induced to enter into the cultivation of the cane by you or Mr. Scott? I will tell you what Mr. Meares said when Mr. Scott published in the papers that he had written fifty or a hundred letters to Mr. Meares,—that he had never received a scratch from Mr. Scott, and he published a statement to that effect in the newspaper. I took the sting out of it with Mr. Meares, who was very sore about it, by suggesting that Mr. Scott was an old man, and had very probably forgotten it, and his memory had failed upon the point.

202. Do you think cane can be grown more profitably here on large plantations or on small farms—Some people advocate the farmers growing the cane in small quantities and selling it to the millers; others advocate

Rev. E.
Holland.

11 Mar., 1870.

advocate the growing of the cane on plantations attached to the mills—Which do you think the likeliest to succeed? I advocate both. Farmers can grow cane cheaper than a Company.

203. I speak of individuals having more means at their disposal than others? I would encourage them too. I have all along advocated the farmers growing it and selling it to millers, because the manufacture is so complicated.

204. Can you give the Committee any idea of the cost per mile per ton, of conveying cane by land carriage? I do not believe in land carriage. Cane is very heavy, especially when you get from 40 to 70 tons to the acre; the less of land carriage the better.

205. Can you give any idea? No. I know in the West Indies they carry cane some 3 or 4 miles to the mills, but there the planter grows and manufactures his own cane.

206. Can you give an idea of the cost per ton for water carriage? Various prices are demanded. It could be done for a very small sum by Steam Companies. I have been trying to induce the Clarence and Richmond River Company to do something in the matter, and I believe they have taken some steps in it.

207. What is your opinion of the value of average cane, showing 10° on the ground cut—the price per ton? 10s. a ton has been paid for it. It has been sold in one case I was referring to for 10s. a ton as it stood on the ground.

208. How far had that to be conveyed? Not very far—about a mile. It had to be carried across the river, lifted in and lifted out.

209. It had to be loaded on drays, taken to the river, unloaded, put on board the boat, lifted out on the other side, put on drays again, and unloaded again at the mill—Can you give any idea of the cost of that? No, I cannot.

210. Where cane has to be conveyed by water, in most cases the same amount of handling will be necessary? Yes.

211. Am I to understand that in the case you mention the mill-owner cut the cane himself? He sent his men and cut it and carried it to the mill. He gave 10s. a ton for it standing in the field. If the farmer had cut it himself it would have been worth 15s. a ton or more.

212. Do you think it would be profitable if he did not get 15s. for it? It would, but it would not be the value of it. The Sugar Company are offering 8s. a ton; but I do not think that is the value of the cane if well grown and properly attended to.

213. What is the furthest place south in this Colony where cane could be grown successfully? Not much below the Manning. I thought it could be grown at the Hunter, but I believe the frost has nipped it up there.

214. What is the present price of day labour in the country districts where cane can be grown? Speaking from experience, I think 15s. a week.

215. Would you find them in food? No. I had one man for several years to whom I paid 15s. a week; he is now at Lord Somerville's, and I got him 2s. 6d. a week extra, because I looked upon him as a skilled hand.

216. He was permanently engaged? Yes.

217. These were his wages, 15s. a week, and he found himself? Yes, I provided a hut for him.

218. Is it not the practice for mill-owners to employ extra hands at the crushing season? Yes.

219. What rate of wages do they pay to these? I think Mr. Meares was paying 12s. a week and rations. I suppose that would be equivalent to £1 a week—hardly that. 12s. to 14s. a week is the general run of wages.

220. Having in view the advance that is being made in Queensland in the cultivation of sugar, do you not think that by the time this Colony has advanced to the same stage we shall have a strong competition in the colonial markets? Yes, but you do not mean to say we are going to stand still with our present population—we will have more mouths to fill.

221. You state there are other markets to supply—? Yes, the other Colonies.

222. Shall we not have the same competition from Queensland with these other Colonies? No doubt, but I hope in a few years to see two or three millions of people here.

223. Do you not think the present duty upon imported sugar is the means of keeping the price up here, as compared with what it is in Jamaica? The duty is £5 a ton I think. The duty here is a sort of bonus to the grower—£5 a ton in his pocket.

224. Do you not think that, when the time comes when our own market is supplied with local produce, sugar will be less valuable by the price of the duty? It may be in time.

225. Sugar that is now bringing £34 per ton, with a duty of £5 per ton on imported sugar, will fall at least to £29 per ton, when we are supplying our own market and there is no longer any sugar imported? It may, but there is this to be said, that we have then the markets of the world.

226. *Mr. Hoskins.*] The production of sugar from beetroot is increasing? That would never pay in this country. It is increasing in France and on the Continent, on account of the high bonus that is given.

227. *Mr. Bawden.*] What do you think would be an adequate return per acre from sugar? That of course involves other questions. You must have the ground thoroughly prepared.

228. Taking all things into consideration? I should think the average yield would be over three tons to the acre. Dr. Neild of Port Macquarie is now getting three tons of sugar to the acre, and would have got more but for the stupidity of the farmers, who would not take my advice and plant the canes as deep and as far apart as they ought to do.

229. Have you found the proportion of molasses produced in this Colony greater than that produced in Jamaica? According to my views of the matter there need to be no molasses at all. I look upon molasses as sugar destroyed. When I say none at all, of course I do not speak absolutely, because there will be always a little; but on a crop of 50 acres there need not be more than a puncheon of molasses, if the boiling be properly conducted.

230. Have you found the proportion in this Colony greater than in Jamaica, according to actual experience? No, unless I went to work in a slovenly way and spoiled it. That is one reason why we have so much now.

231. That is to say, the want of success is owing to the want of experience? Yes, unskilful working. There is another advantage in which this country is superior to all other countries, and which I discovered by accident. It is a fact of very great importance. You can keep your cane longer when cut. In the West Indies it must be converted into sugar in twenty-four hours, or it begins to ferment; here I have

kept

Rev. E.
Holland.

11 Mar., 1870.

kept it sixteen days and it did not ferment. I got Nichols in Sydney to make me a large mill, and the first day I set to work I broke one of the wheels, and it was sixteen days before I could get it repaired and go to work again. At the time I had three cart-loads of cane on the ground. I tested the juice when it was cut, and I tested it when we recommenced work, and I found it just the same.

232. *Chairman.*] Being questioned by Mr. Hoskins in reference to what Mr. Scott had been able to do at Port Macquarie, you stated that you were not aware that he had done anything practically there—that it was a failure? I did not say he had not done anything practically, because he made sugar there; but looking at the affair as a whole it was a failure.

233. Are you aware what quantity of sugar was manufactured? A good many tons I believe. The Government doubtless have records showing the quantity.

234. Seventy tons? I am not sure, but there must have been a good quantity, from the quantity of land that was under cultivation.

235. Are you aware that Mr. Scott sent a specimen of sugar of his own growing to the Paris Exhibition, and received a medal for it? Yes, I saw it—that is the sample of sugar.

236. Are you aware how many years it is since Mr. Scott was practically engaged in the manufacture of sugar? I believe it is forty-two.

237. Some reference was made to Mr. Meares—Can you say how long Mr. Meares has been engaged in this pursuit, whether as a grower or manufacturer? Altogether I should think about five or six years; perhaps it may be a little more, but not much.

238. If Mr. Scott produced 70 tons of sugar forty years ago at Port Macquarie, would you not consider that a practical demonstration not only that the Colony could produce sugar, but that he was the first to prove it? I would. I have heard that that sugar was very inferior, but I believe Mr. Scott was supplied with very bad apparatus. Then again the frosts set in there very early, and I think destroyed his canes one year. Rolland's Plains are some twenty-five or thirty miles from the coast.

239. Are you aware that the establishment there was abandoned in consequence of a change of Government? The abolition of the penal establishment was I think the cause of it.

240. Not on the ground of its being a failure? No, on no account.

241. What amount of sugar do you estimate you have been enabled to produce up to the present time? I never made any estimate of it; I have made a good deal.

242. From computations you have made, are you able to say what quantity of sugar is likely to be produced in this Colony by the end of 1870? No, I am not in possession of facts to justify a calculation on that point. I do not know the number of acres under cultivation. The returns published in the *Herald* some time ago were only an approximation.

243. If it were stated at £100,000 worth of sugar, would you think that likely to be correct? I hope it may be as much, but I hardly think it.

244. Are you aware what we paid for imported sugar last year? No, I am not; but I should think it was fully the amount I named before.

245. At the time when Mr. Meares commenced his sugar-growing, do you not think it is likely he was aware both of the practical experiments and of the writings of Mr. Scott? I cannot say. As a reader of the public prints, it is likely he may have been; he must have seen some of Mr. Scott's letters; but probably Mr. Meares will tell you he had no faith in Mr. Scott. I have, because I believe he is a thorough sugar-planter.

246. You believe the time may arrive when we may be able to manufacture sugar in this Colony with little or no molasses? I think it can be done; in fact, I have seen it done, and have done it myself. I have had molasses, but I converted it into sugar—reboiled it.

247. In that event the production of sugar will be rendered more profitable, without distillation? There is no necessity for distillation to any great extent when the sugar-cane is used; but there are other plants coming into public notice that will be used for the purpose of distillation—imphee, sorghum, planter's friend. Until people know how to make sugar thoroughly, there will be always a good deal of molasses, skimmings, and other refuse, that must be converted into rum; but with proper manipulation there need be very little molasses. Fryer's Concretor converts the whole of the juice into sugar.

248. *Mr. Hoskins.*] Is it not a fair presumption that sugar could not be profitably produced at the penal establishment at Port Macquarie, where Mr. Scott was engaged, seeing that it was abandoned by the Government? I do not think it was abandoned because of the non-success of the thing, but because the penal establishment itself was broken up, and the sugar plantation went with it; the Government withdrew the labour.

249. For the last ten or fifteen years the Government has been at its wits' end to provide safe places for the safe keeping of the criminal population; and supposing the same difficulty to have existed at the time this plantation was given up, do you not think the Government of the day would have continued it if it had been proved that sugar could have been profitably grown by penal labour? I cannot account for the action of the Government in the matter. I would rather see it carried on by free labour. Prisoners never work well, and I know from some of the old hands—men who were under Mr. Scott—that they did everything they could to "dodge" him.

250. Can you say how long an interval of time elapsed between the abandonment of the sugar plantation at Port Macquarie, over which Mr. Scott exercised supervision, and the growth of sugar on anything like a large scale in the Colony—not mere patches in gardens? It is only within the last ten years, perhaps less, that the thing has been gone into with any degree of spirit. It is forty years since Mr. Scott was at Port Macquarie, I think. What I was doing—and I was the first after Mr. Scott—was very limited. I had no means, and I had to make it pay its way as it went along; I had nothing but my salary, and I could not afford much out of that.

251. You believe you were the first person that commenced the cultivation of sugar after the breaking-up of the establishment at Port Macquarie? Yes; and by that means I was enabled to corroborate the statements of Mr. Scott with regard to the relative value of the production of sugar here and in the West Indies. Hence I felt it my duty to write the letter I have before referred to.

252. There are persons, I believe, who doubt the profitableness of the enterprise? People told me I was a madman when I first started; they would not even believe that the cane could be grown.

253. Now nobody disputes that sugar can be grown? No.

254. Still is it not generally considered that the problem whether it can be profitably grown has not yet been

Rev. E.
Holland.
11 Mar., 1870.

been solved? I have given you one instance in which it has been successfully grown; I will give you another. A gentleman at Port Macquarie who used to laugh at me a good deal at first, saying that I had sugar on the head, and making other remarks of the same kind, was induced to buy a lot of cane cuttings and distribute them to the farmers on conditions, and afterwards to take a share in Dr. Neild's machinery to the amount of £500, and he has since told me that he got £1,200 for his interest in the machinery, and £600 for his interest in the cane, which Dr. Neild is now converting into sugar. These are facts.

255. Do you think that in the event of our being able to produce more sugar than we require for the use of the colonists, in the course of a few years we shall be able to compete in the Victorian and South Australian markets with sugar grown in other countries? Yes, and even with Queensland, because Queensland will never produce so much sugar to the acre as we can in this Colony. That is a fact.

256. Then I infer that you consider we should monopolize the Australian markets? I believe so. In Queensland the warmer climate forces the cane into earlier maturity—it has not time to develop itself; hence the returns will be less per acre.

257. I suppose you are aware of the object for which this Committee is appointed. I will read it to you. (*The Honorable Member read the resolution appointing the Committee.*) Are you of opinion that Parliament would be justified in specially selecting Mr. Scott, as a gentleman whose services entitle him to public recognition or pecuniary reward, for his alleged services in the cultivation of the sugar-cane in the Colony? Yes.

258. Pre-eminently? He was first in the matter. Now, if I am to speak about myself, I think I have a claim on the Government too; but I have put forward no claim. I believe any person who seeks to benefit the Colony in the way we have both done has a claim on the Government.

259. Do you consider Mr. Scott's claim superior to all others? It is prior to mine, I believe; but had I not gone into the matter and made sugar Mr. Scott's letters would have had little effect. People had confidence in my character as a minister of religion; I moved about among them and talked to them; I put up machinery and made sugar in a practical way; hundreds came to see what I was doing, and I lectured to them in different places, and gave them practical instruction. All this gave them confidence in the new industry. But it was Mr. Scott that first drew attention to it.

260. However, you are not aware of anybody having engaged in the cultivation of sugar in consequence of the letters Mr. Scott wrote? I could not say positively; but I believe it is very likely that some parties have been induced to take the matter into consideration in consequence of having read Mr. Scott's letters. I believe Mr. Scott was always making samples at his own place, but I believe I was the first to go into it, and put up machinery.

261. Mr. Scott's were simply experiments to demonstrate that sugar could be produced, but he did not go into it commercially? I do not think he did.

262. *Mr. Bowden.*] You state that by using Fryer's Concretor no molasses is produced, the whole of the juice being turned into sugar? Nearly the whole.

263. Is not molasses produced from the concrete when subjected to the refining process? The refining ought to be left to other parties.

264. Is not the molasses left in the sugar in such a state that it is not marketable? There is no molasses—it is a solid concrete. Molasses is simply sugar destroyed by over-boiling. If the sugar is boiled off in an hour and a half there will be no molasses, but if you keep it boiling for four or five hours you are continually destroying sugar and producing molasses.

265. Is not molasses produced when muscovado sugar is refined? No doubt there is some. But that is a distinct branch of the business. I think the refiner had better be left to look after that. There is no molasses in the sugar-cane.

266. The concrete is, in your opinion, marketable sugar? Yes.

267. At what price? It is worth £25 a ton in Sydney; a refiner told me so a few days ago. By that means you get a larger quantity of sugar per acre. An acre of good river land will give from 5,000 to 6,000 gallons of juice, which, if of the ribbon variety, and marking 10·13, would produce, within a fraction, 2 lbs. of concrete to the gallon.

268. That concrete before it can be used by the general public must undergo the refining process? Yes; but with the Concretor you can make muscovado sugar by arresting the process before it becomes too solid. Dr. Neild is doing it now.

269. Do you think Dr. Neild's manufacture of sugar is a profitable one? I have no reason to doubt it; I had a letter from him last week, and he stated so.

270. Have you any idea at what cost per pound he is making sugar? He has made no calculation to that effect that I am aware of.

271. Do you think it costs him eight-pence per pound to make his sugar? I should hope not.

272. It is said to do so? Report does not always speak the truth. He does not say so himself, and he ought to know best. There is a very strong prejudice in the minds of some parties against the Concretor, and they have done everything they can to run it down; but Dr. Neild says he is perfectly satisfied with the results of the Concretor.

In addition to the foregoing evidence, I beg to submit the following:—

1st. As to the profitable character of sugar production—It is but fair to infer that so sagacious and wealthy a corporation as the Sydney Refining Company would hardly embark so much capital in this industry, in the shape of machinery, both on the Clarence and the Macleay Rivers, if they were not pretty certain of success. Some years back I brought the subject under the notice of the Directors, and I am very glad they are now taking action in the matter. With their experience, intelligent management, and skilled labour, I am confident they will produce results of the most satisfactory character, which will astonish both themselves and the public generally, provided the cane-growers do full justice to the cultivation.

2nd. To give an impetus to the production, I suggested to the Martin Ministry, some few years ago, the desirability of granting a bonus on every ton of sugar produced in the Colony for a certain number of years, to be equally divided between the cane-grower and the manufacturer, but nothing came of it. It is a matter worthy of the consideration of the present Ministry.

3rd. Although I have not asked the Legislature for any recognition of my labours in this matter, yet large numbers of my friends on all the northern rivers and elsewhere, have suggested that application should be made, and they are now, I am given to understand, preparing memorials to Parliament, having this object in view; and it has been proposed by some of them

them that Mr. Scott and myself should be allowed an annuity of £50 for life, in consideration of what we have done to develop the sugar industry; but as Mr. Scott is now far advanced on the road of life, and, humanly speaking, drawing near the termination of his earthly career, I have suggested that it would be better to grant a lump sum. For myself, I can truly say that if the Legislature choose to overlook my arduous labours and decline any recognition of them I shall not take it very much to heart, as hitherto I have simply sought to benefit my adopted country, and have the inward satisfaction of knowing that I have struggled through many difficulties, without the slightest help from any quarter, often denying my family the necessaries of life through having to pay high interest on borrowed money to do my duty to my fellow-colonists and in order to ensure the success of this industry. At the same time, I am not unconscious of the fact that public appreciation and reward are pleasing and soothing to the man who endeavours to promote the independence and material prosperity of those around him.

Rev. E.
Holland.

11 Mar., 1870.

EDWARD HOLLAND.

Mr. Peter Fagan called in and examined:—

273. *Chairman.*] I believe you have been for a long time resident at Brisbane Water? Yes.
274. Near Mr. Scott? I lived on the next farm to him.
275. How long did you reside near him? I have been there since about 1835 or 1836.
276. During that period has Mr. Scott been engaged in the cultivation of the sugar-cane? Yes, he was growing sugar there when I went there in 1835 or 1836.
277. He had a small plantation? He had.
278. How many acres? I never took notice particularly what size it was, but he had a good deal of sugar-cane growing—very good strong cane, the strongest cane I have seen.
279. Are you aware that he manufactured sugar from that cane? Yes. I had a small boiler there, with which I was going to make soap, and Mr. Scott asked me to lend it to him to make some sugar. I lent it to him, and I saw him making the sugar. He had a machine made that he worked with a bullock. I saw the sugar he made. Twice since then he has made sugar. He made some not very long ago—from two to four years ago.
280. You have seen and tasted the sugar? Yes, three different times.
281. What, in your estimation, was the quality of the sugar? That I had from him was very good—as good brown sugar as I could see in Sydney at any time. There were two samples: one was a very bright and free sugar, the other was rather darker.
282. Are you aware whether Mr. Scott was in the habit of sending samples of this sugar away? Yes, he told me he sent a sample of the first sugar he made to the Governor. He wanted some one to assist him in making the sugar.
283. At the time Mr. Scott borrowed your boiler to make sugar I suppose he had none of his own? He had some small boilers of his own, but mine was the largest he could get.
284. As far as you know, he was poor at the time? He was.
285. You say he employed a bullock to work his machine? Yes, he had a bullock going round turning the machine that he had to crush the cane. It was only a make-shift.
286. Are you residing at Brisbane Water at present? Yes.
287. Do you consider, from what you have known Mr. Scott to have done in this respect, that he is entitled to public consideration? I should think he ought to get something, for he has been constantly writing; I know he has lost a great deal of time with writing. Whether he was always writing about sugar I do not know, but I know he has been often writing.
288. Was he also engaged pretty continuously in the growth and manufacture of sugar? Yes.
289. His plantation has existed since 1835 to your knowledge? Yes. On one occasion a fire ran through it, and he said he was ruined; but he carried it on after that.

Mr. P. Fagan.

11 Mar., 1870.

FRIDAY, 29 APRIL, 1870.

Present:—

MR. DODDS,

MR. FARNELL.

WILLIAM BROOKES, ESQ., IN THE CHAIR.

Thomas Sutcliffe Mort, Esq., examined:—

290. *Chairman.*] You are aware that this inquiry is with respect to the cultivation of the sugar-cane and the manufacture of sugar in this Colony, and also as to the claim of Mr. Thomas Scott of Brisbane Water to the consideration of Parliament, as having been the chief promoter of this interest? I am.
291. I believe you have resided in this Colony for many years? I have.
292. And have been more or less intimately connected with most of the interests of the Colony? I have.
293. In mining, manufacturing, pastoral, and agricultural? I have.
294. During that period I presume you have had ample opportunities of acquiring experience of the requirements of the Colony generally? I think so.
295. From your experience have you found agriculture a more than ordinarily precarious pursuit? I think it is most precarious; flood or drought being the rule, and a good season the exception.
296. Such, in your opinion, as to render it desirable the utmost encouragement should be extended to sugar-growing? Yes, because the sugar-cane is not liable to the same injury from flood or from drought, in New South Wales at any rate, as other crops; and I believe that that during the late floods has very prominently shown itself, the sugar-cane having scarcely suffered at all, in fact not at all, except by the high winds which prevailed after the flood, whilst the maize and other crops have been absolutely destroyed.
297. You are aware that Mr. Thomas Scott of Brisbane Water has devoted many years of his life to the promotion of this industry in this Colony? Unquestionably; he has written hundreds of letters upon it, from first to last, I imagine.
298. Do you believe it to be of paramount importance to foster colonial industry generally, not only as a source of wealth, but as providing legitimate occupation for the colonial youth? I do, provided the industries are such as our climate and soil specially fit us for—most important.

T. S. Mort,
Esq.

29 April, 1870.

- T. S. Mort,
Esq.
29 April, 1870.
299. Should the Government, as a measure of policy, hold out inducements and encourage the promotion of this industry, in your opinion? I think so most decidedly, and not only in respect of the sugar industry but in respect of others, provided the Government is careful to encourage only such industries as would after a little time become independent of such encouragement.
300. Has not the success of that industry really stimulated other industries, such as the manufacture of plant, steam-boilers, and machinery for the manufacture of sugar? I scarcely consider the sugar industry in New South Wales an absolute success.
301. I mean judging by the measure of success which has so far attended it? I think it is on a fair way to success, but like all new industries it has to go through much tribulation to arrive at a profitable issue. So far as the industry has gone it has very materially stimulated other industries. In that respect of course it is not singular. Every industry established in a country is the immediate forerunner of a great many other industries which spring out of it. We have the Waterview Dry Dock and other engineering works in the Colony, at which a large amount of machinery has been made, the manufacture of which has given employment to a large number of our work-people.
302. Have you given sufficient attention to the sugar consumption of the Colony to be able to inform the Committee of its importance as an article of general consumption? It is of immense importance to the Colony to produce its own sugar, our consumption being so very large. Whether this is from the tea-drinking habits of the people, or whether it is from the fact of the people not consuming fat, which I believe is the case generally with the native population, and who consequently seek food which supplies the same kind of want as is supplied by fat—or from whatever cause it may arise, certainly the consumption of sugar in—I think I may say the Australias, is fully three times in excess of what it is in Great Britain. It may be that the power of the people to pay for sugar here is greater than it is at home, but from whatever cause it may arise, the consumption of sugar in these Colonies is very large, and it is therefore highly important that we should if possible produce the article amongst ourselves.
303. Seeing the importance of this interest, are you of opinion that such efforts as those of Mr. Scott, in laying the foundation of such an enterprise, are worthy of national recognition? I think so, in his case particularly, and I think in all cases where a spirit is manifested such as that shown by Mr. Scott, where a man has no end to serve save the interest of his country. Such efforts, I think it will be generally conceded, are worthy of the recognition of the people for whose good he has laboured.
304. Then, besides this interest becoming a source of colonial wealth, do you regard it as important as an additional means of affording employment for colonial youth? Of course it is, and a great attraction to capital, which has little value except it be exchanged for labour.
305. You are connected with an establishment here where a very high class of labour is employed of the mechanical class—Do you find there is, generally speaking, a desire to place youths to that occupation in the Colony? Yes, there is no lack of lads coming forward to be apprenticed.
306. Is it within your experience that there is great difficulty on the part of parents to find legitimate occupation for their children? It is to my certain knowledge a matter of very great difficulty, and I look with the greatest anxiety and alarm to the future, to know what our rising generation are to do if we do not endeavour to foster industries for which the Colony is especially adapted, and we only require a very small beginning to end in a certain success. But, Mr. Chairman, you are inducing me to enter upon a very wide question, and unless time were permitted to go into it very fully I would prefer confining myself to a simple answer to your question.
307. You are of opinion that the production of sugar in the Colony would, in a number of ways, influence other industries? Yes.
308. In the production of spirits, I presume? I am sanguine enough to hope that the days of distillation from the residuum of sugar are numbered. I believe that the improvement which has taken place in the principle of manufacture will do away with the molasses which is the consequence of the present plan, and so the making of spirits may be avoided; but of course, as at present, the manufacture of spirits would be a very large result.
309. The preservation of fruits, the manufacture of glass and earthenware for the purpose of containing, and a number of other industries would, I presume, arise? Yes. I may just say a word with reference to the special matter of Mr. Scott's claim upon this country. I can speak from very positive information of what he has done. I had copies of his correspondence in my possession some years ago, and without any reference to this present object I have in my small way encouraged him to persevere in what I conceived to be his special mission, and I am aware that he has most untiringly, and with a zeal that in a man of his years is most astonishing, carried on his warfare in favour of this great industry, and I think the happiest termination which could attend his labours would be such a recognition on the part of the people through the Government as would show that he has not laboured in vain, and which would act as an encouragement to other men to follow in his track in the advocacy of industries which they might conceive to be adaptable to the country of their adoption. I have had a great deal of correspondence with Mr. Scott, and I have from time to time perused, I think I may safely say, some scores of the mass of letters which he has written upon this subject.
310. *Mr. Farnell.*] Have you read the evidence given before the previous Committee in reference to Mr. Scott's claim? I have not.
311. Are you aware that he was employed by the Government to superintend a sugar plantation at Port Macquarie? Yes, I have heard something of the kind, but I was under the impression that it was at Brisbane Water that he had laboured chiefly.
312. And that he was paid a salary? I have heard that he received a salary.
313. Are you aware whether Mr. Scott ever produced any sugar of any consequence? I really cannot say, but I am not aware that he ever did.
314. Then his claim for any compensation would be founded merely upon the letters he has written from time to time upon the subject? No doubt his claim would rest upon his advocacy of the matter through his letters, and the information he has given in those letters, which I believe is now acknowledged to have been pretty correct.
315. Do you not think that Mr. Scott ought to have succeeded at Port Macquarie, when you consider that he was a salaried officer of Government and had a sufficient number of hired servants to work the farm? I have heard it stated that he did produce some 70 or 80 tons of sugar at that time, and that the reason he did not produce more was the inadequacy of his machinery, and the want of the wherewithal to carry on his operations.

316. That is since he went into the matter himself privately, on his estate at Brisbane Water? Perhaps I ought not to have stated what I have, as the facts are not very clear in my mind. I was under the impression that he was at Brisbane Water the whole time. It is now some years since I read his correspondence, except his recent letters.

T. S. Mort,
Esq.

29 April, 1870.

317. I believe it is acknowledged that New South Wales is more suitable for the cultivation of sugar than Queensland? In the opinion of many it is so; at the same time there are others who prefer the tropical climate of northern Queensland. The difference is this,—that in New South Wales the cane does not arrow, owing to our more temperate climate, and consequently the dry season would not cause the loss of the crop, whilst in the northern part of Queensland it would, as the crop would be lost if not gathered at the right time. On the other hand, they have periodical rains, and I have heard it maintained that the advantage is pretty well balanced by that circumstance.* I had the opportunity a short time ago of making a very close comparison of the production of cane at Mr. Davidson's establishment at Port Mackay, and of Mr. Morrison's establishment at Port Macquarie, and I was very pleased to find that the quantity of juice produced from a like quantity of cane from Queensland and from this Colony was about the same, that the density of the juice, and the quantity of sugar produced per acre, was about the same in both cases, and the conclusions I drew were that there was no reason for supposing that the manufacture of sugar in our temperate climate would not be quite as profitable as in their tropical one; whilst there were many advantages in our favour, in the shape of more abundant labour, a more temperate climate, and consequently a more desirable place to live in, and above all is the fact that we have a very much larger consumption for sugar. On the whole, the investigation was to my mind in favour of New South Wales.

318. Are you aware that Mr. Holland has written a great deal in reference to the cultivation of sugar? Yes.

319. Do you think anything he has written or done, has influenced people here to commence the cultivation of sugar? I think it has—I think the very highest credit is due to Mr. Holland, and I hope that his labour in this very important matter will not be forgotten.

320. Do you not think the impulse given to sugar cultivation is attributable more to what Mr. Holland has written than to Mr. Scott's labours? I think Mr. Holland has clenched the nail that Mr. Scott drove.

321. That is, that Mr. Holland has revived the matter? Yes.

322. *Mr. Dodds.*] Do you consider that the original introduction of sugar cultivation in this country belongs exclusively to Mr. Scott? From the very first?

323. Through the interest he has taken and the efforts he has made in its promotion? Yes; I think he is entitled to the credit for the establishment of the present or of the original industry.

324. The original industry in this Colony? I am not sufficiently acquainted with the early history of the Colony to speak positively upon the point.

325. He has been upwards of forty years here? Yes. He made, I believe, 70 or 80 tons of sugar in his early life.

326. I gather from your remarks that you consider the soil and climate of this Colony suitable for sugar-growing? I do.

327. Do you think, in the present state of the labour market, sugar could be grown to advantage on the northern rivers, or any of them? I think so. A large first expenditure will have to be incurred in preparing the proper machinery and appliances, but after that expenditure, I believe even with the present charge for labour a very good interest will be returned for the outlay.

328. Have you considered what parts of the Colony are suitable for the cultivation of sugar? I have given the results of my own investigations in reference to Port Macquarie as compared with Port Mackay, and I have a great deal of information from one source or another, relative to the rivers to the north of the Hastings, the Tweed being especially pointed out as the most available of any country we have for the growth of sugar, and of which there is a very large extent.

329. Are you aware that it has been tried on the Hunter to a pretty considerable extent? I am aware that the experiment has been made there, but I scarcely consider that anything which has been done on the Hunter can properly be considered a trial.

* NOTE (on revision):—In addition to which they can grow closer in the North, and so have less ground to keep clear from weeds.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DAM ACROSS GEORGE'S RIVER AT LIVERPOOL.

(PETITION—CERTAIN INHABITANTS, LIVERPOOL.)

Ordered by the Legislative Assembly to be Printed, 8 April, 1870.

The humble Petition of the Inhabitants of the Town of Liverpool, New South Wales, in Public Meeting assembled.

To the Honorable the Legislative Assembly of New South Wales,—

HUMBLY SHOWETH :—

That the Dam at Liverpool was inspected several months back by the Chief Engineer of Harbours, &c., and that it has since suffered in its structure from floods.

Your Petitioners are not aware of the estimated expense of repairs as computed by said officer, but believe that repairs are essentially necessary for its security.

Your Petitioners therefore pray your Honorable House may be pleased to take the same under your consideration, and will, as in duty bound, every pray.

April 4th, 1870.

RICHD. SADLIER,
Chairman.

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.**

VOTES No. 18. FRIDAY, 25 FEBRUARY, 1870.

4. Bathurst-burr and Thistle plants (*“Formal” Motion*):—Commander Onslow moved, pursuant to Notice No. 2,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the best mode of eradicating the Bathurst-burr, certain Thistle plants, and other noxious weeds, in the Counties of Cumberland and Camden.
 - (2.) That such Committee consist of Mr. Forster, Mr. Lackey, Mr. Morrice, Mr. Hoskins, Mr. Farnell, Mr. Tunks, Mr. Dight, Mr. Fraser, Mr. Osborne, and the Mover.
 - (3.) That the Progress Report, Evidence, &c., of the Select Committee appointed last Session, be referred to such Committee.
- Question put and passed.
-

VOTES No. 40. WEDNESDAY, 6 APRIL, 1870.

4. Bathurst-burr and Thistle plants:—Commander Onslow, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 25th February, 1870. Ordered to be printed.

BATHURST-BURR AND THISTLE PLANTS.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 25th February, 1870,—with power to send for persons and papers,—to inquire into and report upon the best mode of eradicating the Bathurst-burr, certain Thistle plants, and other noxious weeds, in the Counties of Cumberland and Camden,—to whom was referred on the same date the *Progress Report, Evidence, &c.*, of the Select Committee appointed last Session,—have agreed to the following Report:—

- 1st. That the common milk thistle (*Carduus marianus*) with large, broad, wavy, and spiny leaves, pale green, mottled with white, is a weed of robust and rapid growth, which especially in fertile open pastures, if not checked, will occupy the entire surface in dense impenetrable thickets, sometimes six or eight feet high, to the almost total extinction of the grass; but that being only an annual, dying off after seeding, and reproduced from seed only, such seed being heavy and not susceptible of being borne to a distance by winds, it is of the most easy extirpation. That this weed is eaten by stock, but only in the absence of grass.
- 2nd. That the hairy or black thistle (*Cnicus arvensis* or *Carduus lanceolatus*) with dark green hairy or downy leaves is, on the contrary, a plant with perennial roots, the stems and leaves dying down each season after the production of seed, the latter being light and downy, and subject to be carried long distances by the wind, the plant being also capable of extending itself rapidly by means of suckers proceeding from its widely ramifying roots; that this most formidable weed is found inextricably intermixed with the former thistle (*Carduus marianus*), and is most difficult to destroy, unless with the assistance of common salt. That it does not appear to be ever touched by stock.
- 3rd. That the Bathurst-burr (*Xanthium spinosum*) is another noxious weed, of rapid, tall, and branching growth, but dying annually, and being renewed only from seeds, which are susceptible of being conveyed long distances, attached to the coats, manes, and tails of animals; that it is exceedingly injurious to pasture lands, of no use, and easy to extirpate.

4th.

4th. That the common sweet-brier (*Rosa rubiginosa*), though used as an inferior sort of hedge-plant, has in some localities become a serious nuisance, propagating itself rapidly from seeds often carried by birds; that it is of little or no use, has become a formidable weed, and is difficult to eradicate.

5th. That the common Dock (*Rumex obtusifolius*) has become a noxious weed in some of the open low-lying enclosures, and is of serious injury, especially in cultivated lands; that it yearly produces an immense number of minute seeds, susceptible of being carried about with other flood wreck, but is easily killed by the application of common salt.

That none of the before-mentioned weeds being indigenous (all being natives of Europe), their naturalization and rapidly progressive extension over the country, to the displacement of valuable natural and introduced grasses, is very alarming, and renders their general and simultaneous extirpation not simply expedient, but of urgent necessity.

Taking into consideration these facts, that the whole of these weeds have originated in very small beginnings, and as regards the black thistle very recently, that their extension could have been prevented at little or no cost by the individuals under whose immediate observation such extension was suffered to proceed, your Committee cannot attach great weight to the objection made to compulsory extirpation. On the other hand, the evidence before them, that extensive areas, though in juxtaposition to tracts much infested with thistles, have by vigilance and care been kept almost free from them, though at a very rapidly increasing cost, is an additional argument in favour of the necessity for legislation on this matter.

ARTHUR ONSLOW,
Chairman.

No. 1 Committee Room,
Sydney, 6 April, 1870.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 3 MARCH, 1870.

MEMBERS PRESENT :—

Commander Onslow,		Mr. Fraser,
Mr. Osborne,		Mr. Lackey,
Mr. Morrice,		Mr. Hoskins.

Commander Onslow called to the Chair.

Entry in Votes and Proceedings appointing the Committee,—*read* by the Clerk.

Committee deliberated.

Ordered,—That W. R. Antill, Esq., and R. H. Roberts, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 9 MARCH, 1870.

MEMBERS PRESENT :—

Commander Onslow in the Chair.

Mr. Morrice,		Mr. Hoskins,
Mr. Farnell,		Mr. Fraser,
		Mr. Osborne.

Clerk read letter from W. R. Antill, Esq., one of the witnesses summoned for this day, stating his inability to attend.

Committee deliberated.

Ordered,—That W. R. Antill, Esq., and R. H. Roberts, Esq., be summoned to give evidence at the next meeting.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 16 MARCH, 1870.

MEMBERS PRESENT :—

Commander Onslow in the Chair.

Mr. Fraser,		Mr. Farnell,
Mr. Osborne,		Mr. Dight.

The witnesses summoned for this day not attending.

Committee deliberated, and—

Ordered,—That W. R. Antill, Esq., R. H. Roberts, Esq., and Charles Moore, Esq., be summoned give evidence at the next meeting.

[Adjourned until Thursday week, at *Eleven* o'clock.]

THURSDAY, 24 MARCH, 1870.

MEMBERS PRESENT :—

Commander Onslow in the Chair.

Mr. Farnell,		Mr. Lackey,
Mr. Fraser,		Mr. Osborne.

Charles Moore, Esq., (*Director of the Botanic Gardens*), called in and examined.

Witness withdrew.

W. R. Antill, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY,

WEDNESDAY, 30 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Lackey,		Mr. Farnell,
Mr. Morrice,		Mr. Hoskins.

In the absence of the Chairman, Mr. Lackey called to the Chair.
Committee deliberated.

[Adjourned until to-morrow at *Eleven* o'clock.]

THURSDAY, 31 MARCH, 1870.

MEMBERS PRESENT :—

Mr. Lackey,		Mr. Fraser,
Mr. Hoskins,		Mr. Morrice.

In the absence of the Chairman, Mr. Lackey called to the Chair.
Committee deliberated.

[Adjourned until Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 6 APRIL, 1870.

MEMBERS PRESENT :—

Commander Onslow in the Chair.

Mr. Farnell,		Mr. Morrice,
		Mr. Lackey.

Chairman submitted Draft Report, which had been previously distributed to Members of the Committee. Same read, *verbally* amended, and *agreed to*.

Motion made (*Mr. Farnell*), and Question put,—That the Draft Report of the Chairman, as *amended*, be the Report of this Committee,—*agreed to*.

Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Antill, W. R., Esq.	10
Moore, C., Esq.	7

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

BATHURST-BURR AND THISTLE PLANTS.

THURSDAY, 24 MARCH, 1870.

Present:—

MR. FARNELL,
MR. FRASER,MR. LACKEY,
COMMANDER ONSLOW, R.N.,

MR. OSBORNE.

ARTHUR A. W. ONSLOW, ESQ., COMMANDER, R.N., IN THE CHAIR.

Charles Moore, Esq., Director of the Botanic Gardens, called in and examined:—

1. *Chairman.*] Have you been much over the counties of Camden and Cumberland within the last few years? Within the last few years I have, but not latterly.
2. Have you noticed whether the thistle is spreading much? I am not capable of judging of the extent to which it has spread within the last two years, because I have not been so much in the country as before.
3. Was it very common prior to that? Yes, so much so that in some districts, particularly to the south, I have known large tracts of ground totally overrun with it. About ten years ago, in the Maneroo district, I recollect seeing hundreds of acres covered with it. I know many districts, even in these counties, in which there is a great quantity of it; but the ground is not so much overrun as in Maneroo, because it is more taken care of, being in the hands of private parties. It is only on extensive runs that I have seen it spread to a very large extent.
4. The usual tendency of growing any one crop is to exhaust the soil? Certainly.
5. But if that crop is continually returned to the soil it has not that effect? Not so much so. In many parts of Europe they plough in crops to produce other crops of the same kind.
6. If the crop is not removed the ground is not materially injured? Not if the crop were ploughed into it. If the crop were even allowed to rot on the ground it would not be deteriorated; but if eaten off or taken off in any way no doubt it would be deteriorated, because with the crop are taken from the ground certain constituents requisite for the growth of that crop.
7. In a case where the crop is left continually on the ground do you not think the tendency is to improve it? I think it is.
8. As a rule, these thistles are not taken off—may we not therefore expect larger and larger crops and finer crops every year? It is quite possible; but I think we must rather look to the spread of the thistle from its being allowed to seed.
9. In a place where it has been growing before, and where it springs up again, would you expect finer crops every year of improved thistles, so to speak? They might not be in greater abundance, but perhaps more luxuriant thistles.
10. You do not think the ground is likely to sicken of them? No.
11. There has been some evidence given about the Bathurst-burr, which they say is spreading very much in New England—a cold climate; but still in the neighbourhood of Sutton Forest it does not spread? The Bathurst-burr, as it is called, is truly a Chilian plant, and therefore it is rather surprising that it should spread in colder countries; but it is now spreading in the south of Europe, where it has become a great weed. In this country it decreases in quantity as you go to the south. I heard yesterday that it was spreading again to a very great extent in the Bathurst district, where it was first observed here.

C. Moore,
Esq.

24 Mar., 1870.

C. Moore,
Esq.
24 Mar., 1870.

12. Do you think the soil is likely to sicken of the burr? No.
13. We have been told that, where the burr plants have been very numerous, if they are fenced off so as to prevent the cattle from spreading the seeds, they will die off in two or three years? That is experience; and possibly those who say so are right, but arguing from supposition I would think not.
14. The seeds of the Bathurst-burr are not very destructible—they may lie in the ground uninjured for some considerable time? Yes; in my opinion the only way to extirpate that and the other noxious plants will be to prevent their seeding. So far as I understand the Bathurst-burr it is strictly an annual, whereas the thistles are biennial. As an annual it could be easily extirpated, by being prevented from seeding; but in no other way, because I believe the seeds will lie in the ground for years.
15. Did you say thistles were biennial? Yes.
16. I thought they were perennial? No. I have a thistle with me here which is likely to become a greater pest than any one of them, and which is a perennial. It is a common thistle in Great Britain, botanically called *Carduus lanceolatus*. The other thistles are the milk or spotted thistle, *Carduus marianus*, and what is called the Scotch thistle, *Onopordon acanthium*, which by the way is not a native of Scotland at all, but of the south of Europe.
17. Does the *Carduus lanceolatus* seed in the same way as the others? Yes, but the plant remains as a perennial; at all events I have known it to continue for some years. The first plant I noticed in the Domain about five years ago is still there. All through Victoria and Tasmania this thistle is a great pest; whereas the Scotch thistle and milk thistle are rarely seen.
18. Does the seed of that thistle blow about readily? Yes.
19. Far more so than that of the *Carduus marianus*? No, not more so.
20. Do you think it likely the seeds could be carried about in the tails of cattle? I think it very possible. I know on a warm day with a slight breeze I have seen the air almost darkened with them.
21. No doubt they are chiefly distributed by the wind; but I fancy they are not so likely to be carried about in the tails of cattle? If not carried about in the tails of cattle, they may be in their hoofs.
22. The seeds are not liable to rot? No; if they fall into any ground suitable for their growth no doubt they will be certain to germinate.
23. Do you think the seeds are liable to remain undeveloped for two or three years? Yes, except in very wet situations.
24. Do you think merely hoeing them up would be sufficient to kill them? Hoeing them up when they are starting, or cutting them down after they have started, and before they seed. In my opinion, and I have thought frequently on the subject, there are no other means of extirpating these weeds. On no account should they be allowed to seed.
25. Will not annual plants, if cut down, shoot again until they seed? If taken when flowering they will not start again, but if they be cut down too soon they will start again. The plant is sufficiently exhausted by the time it has begun to flower to prevent its repeating itself.
26. In favourable seasons I suppose there might be two crops in a year, autumn and spring? Yes.
27. But plants which spring in autumn would not seed during the winter? No, those that start in autumn grow very slowly during the winter.
28. The proper time, then, for cutting down these plants would be in spring and autumn? Yes; but I would say cut them down at any time when they are coming into flower, or hoe them up when they are quite young. They get so strong after a time that it takes a good spade to knock them up: it is only when they are very young that the hoe can be used.
29. Will you show the Committee the specimens of thistle plants which you have brought with you? This [*specimen produced*] is the *Carduus lanceolatus*, the true English thistle. I never saw this thistle near Sydney until about five years ago.
30. That is what I call the Scotch thistle? No, it is not the Scotch thistle. This thistle is covered over with small spines, but this [*another specimen produced*], the milk thistle, is perfectly smooth. I do not think the Scotch thistle has extended further south than Berrima, where I saw it growing many years ago. It may be in the Camden district, but I have not observed it. There can be no mistaking the true Scotch heraldic thistle, because it is covered with a whitish cottony down; it looks at a distance as if covered with flour.
31. These thistles could in bad seasons be used as food for cattle? Yes.
32. Would it not be far better to have nutritious grasses? Yes, because they would not become a weed.
33. Where this thistle has been growing does the ground remain bare, or does the grass grow again? After the plant has perished the grass would grow again.
34. Before the young thistles spring up? No, unless it were couch grass. None of the other grasses we have here are stoloniferous, that is, a grass which runs and roots along the ground.
35. This perennial thistle could only be killed by cutting up the roots? Quite so.
36. Would salt kill it? No doubt it would.
37. In your opinion is the spread of this thistle becoming so great that it is necessary to take some steps to prevent it? If the plant spreads as fast as I saw it in Victoria and Tasmania, I think it would be most desirable to take steps to prevent its increasing.
38. Have you heard that in England lately the canals and rivers have become choked up by a weed imported from the Levant? Yes; it is *Anacharis alsinistrum*.
39. Do you know whether any legislation has taken place upon the subject? I am not aware, but I know it has become a very troublesome weed.
40. *Mr. Farnell.*] I think you stated that salt would kill these thistles after they were cut down? Yes, salt would do it, but then it would be a very tedious and expensive process, because wherever you apply salt you prevent the growth of other plants. The only way to do it would be to take a pinch of salt and put it in the heart of the plant after it had been cut down. I repeat again that if these plants are prevented from seeding, in course of time the country will be cleared of them. As a proof of that, I may mention that in order to get the thistles now before you I have had two men looking for them all this morning, in consequence of their having been kept down in the Domain. They were increasing very rapidly at the time, but by attention to keeping them down it is now a rare thing to see one of them.
41. In the event of any legislation being resorted to for the extirpation of the burr and thistle, would you include any other weed, such as the dock, for instance? The dock is a great nuisance, and it would be a very good thing to include it. But some of these plants are useful. What they call the plantain, a common weed, is really a useful plant, and I find that the seedsmen are now mixing it with the seeds of
grasses

grasses for pasture land. If I had further time for consideration, perhaps I might mention some other plants, but I should not hesitate to include the dock.

C. Moore,
Esq.

42. There is a grass I think called knot grass commonly—is that spreading very much? It is not a grass, it is a sedge, *Cyperus*. It is one of the greatest pests we have; it is spreading all over the south of Europe and India, and has been the means of a great many plantations being abandoned; but it is confined to the warmer districts; I do not think it will be found very much beyond Parramatta.

24 Mar., 1870.

43. Have you noticed much of it at Parramatta? There is some in Parramatta, but I think not much. In Sydney it is an awful pest.

44. There is a great deal in the Domain? Yes; the buffalo grass keeps it down.

45. This knot grass has a fine root? It has a tuber—not a very large one—it is about the size of a nut; and if you cut that tuber into the smallest possible pieces each portion will grow. The root runs along underground, and at short intervals a new bulb is produced which has again so many eyes, and which again spreads in different directions, the whole forming a perfect network of roots. The only way I have succeeded in keeping it down has been to clear the ground of all plants and keep it open for a season, and as the plant appears take it up. The road between the Gardens—Mrs. Macquarie's Road—which for years was the rubbish heap of the Gardens, was one mass of it when I commenced, but by leaving a man in charge to take it up the moment it appeared I have almost completely cleared it out, but it has been with immense labour.

46. The roots ran an immense distance? Yes; I have found them four or five feet deep, and they will lie in the ground for years.

47. Have you noticed any thistle plants on the railway lines? A good deal of the milk thistle, but as I have mentioned to the Committee, I have not been much in the county of Camden for the last two years, and very possibly this thistle may be more abundant than I am aware of. I remember making a note in 1859 that I had not found the Scotch thistle beyond Berrima.

48. Do you think briers should be included in any legislation on this subject? That is only a partial weed. I am told it is very bad in some situations. I should think, at the first blush of the thing, that any plant that is likely to spread and be injurious to the farmer would be a proper plant to include in such an Act. Curiously enough I tried to make a hedge of the sweet-brier at the Haslem Creek Cemetery, and failed, although the ground had been carefully prepared and trenched. I renewed the plants three or four times, but the greater part died.

49. *Chairman.*] From the dry weather perhaps? No, they grew at first. I fancy there is a salt in the ground. I know the only water in the Cemetery, when it was first taken up, was so impregnated with salt that it could not be used. It appears, therefore, that it is not in every situation that the brier will grow, but I know some abandoned farms that are absolutely covered with it.

50. *Mr. Lackey.*] You say you have not been in the south country lately? Not lately.

51. Then you would not have had an opportunity of observing the spread of this particular thistle that objection is taken to, *Carduus lanceolatus*, or of the brier either? No.

52. You have seen this thistle growing? Yes, but not near Sydney until within the last four or five years.

53. We have it in evidence that from the peculiar lightness of the seed of this thistle compared to any other it is much more likely to spread—is that the case? I do not think so, so far as I know. The *pappus* or down which is attached to the seed of one is just as light as that of the other, and I fancy one is just as likely to spread as the other.

54. We have the evidence of a witness from Camden, a Mr. Balch, who said that he considered this plant very injurious to the district—that they came first in ones and twos, but that now acres and acres were covered with it, and that it was spreading all over the country? I can easily understand it from what I saw both in Victoria and Tasmania last December. In Tasmania I saw whole districts covered with it.

55. Believing this to be the case, you have no doubt on your mind that some legislation is necessary to put a stop to it? I think it is. I am sure without some such compulsory measure no private means will prevent its spreading. The old saying is a very true one, that what is everybody's business is nobody's business.

56. From your knowledge of this plant, do you think it is of any use for a farmer or occupier of land to give his attention to the agricultural cultivation of his land or the growth of annual or perennial grasses, if he is surrounded by careless farmers who allow this weed to spread in all directions? I think it is a very great hardship for such a man to be surrounded by persons of this description. I think such parties ought to be compelled to keep their ground clear from this and other noxious weeds. Where ground is neglected it must necessarily give much more labour to the person who has the adjoining ground.

57. I suppose you are aware that even the seed of the couch grass is blown about by the wind? I do not think it is likely to be spread much by the wind; I think it spreads much more by being taken up by animals.

58. But where it is growing luxuriantly, would not that seed be blown about by the wind? I think not.

59. Have you ever seen couch grass grown from seed? Yes.

60. You are tolerably well acquainted with the climate of the Berrima district, its altitude and humidity—Do you think it is likely this thistle would spread to a very great extent there? I think it is exactly the country where it will spread; it is sufficiently elevated to be cool enough for the growth of this plant. I do not think the plant likely to spread far to the north.

61. *Mr. Farnell.*] Might it not be acclimatized gradually? My own impression is that there is no such thing as acclimatizing. My experience is that if a plant will grow in any country it will grow at once.

62. *Mr. Lackey.*] Has your attention been drawn to the proposed Bill before the Assembly? I have only seen it through the public papers.

63. Your attention has not been directed to it from any particular cause? No.

64. You cannot say whether the clauses are such as would meet the necessities of a case such as this? No.

65. I think I understood you to say, a few moments ago, that you thought the most desirable plan of getting rid of this thistle would be by preventing it from seeding? That is my opinion.

66. Suppose it were cut down annually or twice a year, before it seeded, would it eventually die out? An annual will produce laterals if cut down too early; in point of fact, by cutting down an annual continually, before it comes into flower, you can almost make it perennial, or at least make it last several years. A familiar instance of that is known in England, where the mignonette, which is annual in England, is made biennial by being prevented from flowering the first year. If it is desired to destroy an annual plant, it should be cut down when in flower, and then it will not produce laterals.

- C. Moore, Esq.
24 Mar., 1870.
67. Did it ever occur to you that by allowing the thistle, as is done with the Bathurst-burr in many parts of the country, to seed and get thoroughly dry, and then setting it on fire, both the seeds and the plant in the ground might be got rid of? No doubt that would kill a great number of the seeds, and also clear the ground, but it would only destroy a portion of them. I have seen in places where there have been fires this very plant start up in great abundance, showing that all the seed has not been destroyed.
68. We have it in evidence that what is commonly called the sweet-brier is becoming very destructive in some districts—Do you think it desirable that there should be some means of putting it down? Yes, most desirable.
69. That might be done without preventing the cultivation of the brier for hedges? There might be some difficulty unless the hedge were kept from seeding. If it were allowed to seed, the birds would doubtless carry about the seeds.
70. The brier hedge to which you alluded at Haslem's Creek, which failed to grow, was surrounded by scrub where the ground was trenched? It was.
71. Is it not likely that the roots of the tea-tree and other scrub sought the newly-worked ground and destroyed the brier? No, I had the ground examined and found it was not so. In some parts there would be patches for a few yards, where the plants lived, then patches of ground in which they died, and then living patches again, and so on.
72. *Chairman.*] Was the soil similar? Yes, to all appearance.
73. *Mr. Lackey.*] Were they cuttings or rooted plants? Rooted plants.
74. Old or young? Not too old nor too young. I have no doubt there is something in the soil which is unfavourable to the plant's growth.
75. Has your attention been at all directed to the evil effects likely to accrue to cultivated lands along the railway lines from the growth of noxious weeds not being checked in any way on them? No doubt if noxious weeds are allowed to seed, whether on the railway line or any other place, they must spread to the neighbourhood.
76. You have travelled on the railway line? Yes.
77. Have you ever observed the luxuriant way in which these plants grow on the line, in places adjoining cultivated ground? My attention has been called to the fact that such plants do exist in some places.
78. *Mr. Osborne.*] Do you not think the cactus ought to be prevented spreading—I have observed that it is spreading all over the country in some districts? I think the spreading of that plant is attributable to the same cause as that of the sweet-brier. In passing through the stomachs of birds the seed is not destroyed.
79. Do you think it necessary to mention it as a noxious weed? No; except at Scone and Merriwa, I do not know any parts where it is spreading much. There is no difficulty in destroying that plant.
80. *Chairman.*] Do you know if cattle eat the dock? I do not think they do.
81. *Mr. Farnell.*] At what time of the year do these thistles seed? About December in the warmer districts, and later in the colder parts.
82. Would they seed a little later about Berrima and Sutton Forest than about Sydney and Parramatta? Yes, at least a month.

William Redfern Antill, Esq., called in and examined:—

- W. R. Antill, Esq.
24 Mar., 1870.
83. *Chairman.*] You have been a long time in the Picton district? Yes.
84. Do you know if the thistles have increased very much lately? One sort has increased—this sort (*Carduus lanceolatus*, left on the table by Mr. Moore). I do not think the spotted or milk thistle has increased very much lately.
85. When did you first notice this black thistle (*Carduus lanceolatus*)? About ten years ago, at Picton. I saw it at Boro before that, but it was some years before, and although like it I am not sure it was the same thistle.
86. You think it came from the south? No, the way it came to Picton was by a party who came from the Bathurst side, the Western district, with a dray, and brought the seed with him.
87. How long ago? About ten years ago.
88. And it is increasing largely? Very fast indeed.
89. Is there any difference in the weight of the seeds of the two thistles? Yes. I have some of the seeds of both in my pocket (*produced*).
90. Are there any other thistle plants which are troublesome besides these? Not in these counties.
91. Have you taken any steps to keep this weed down? I did at first. When I first saw it I tried to keep it down, but it got such a strong hold in so many places that are seldom visited that the seeds spread all over the place.
92. Do you think if your neighbours had made the same efforts that you did there would have been any perceptible difference? I am certain there would if they had commenced very soon after they first showed. I believe the black thistle is more easily eradicated than the milk thistle; I do not fancy the seed lies so long without growing.
93. Do you make any use whatever of these plants as food for stock? No.
94. Do the cattle eat them at any time? The cattle eat them when feed is short. Cattle from the Murrumbidgee, working bullocks and so on, prefer them; but cattle bred about the district will not eat them when growing.
95. They would sooner have grass? Yes. I have put a clause in the leases of my tenants that they should keep them down, but it only includes the cultivated land. I have never attempted to compel them to cut them down in the bush, because I know it is impossible for them to do so and pay any rent.
96. These plants die down after seeding, do they not? Yes, the spotted thistles are all dead now, but the seeds spring again immediately. They are as thick now as they can possibly grow, although they seeded only immediately before the rain. They are growing as thickly as they can grow under every bush.
97. Would you think it desirable to have a neighbour who never took any care to extirpate noxious weeds, while you yourself did all in your power to keep them down? Certainly not.
98. He might do you a great deal of injury? Yes.
99. Do you think the value of land is becoming depreciated in your neighbourhood by the prevalence of these weeds? When I bought my land I tried to prove it, but I could not get an acknowledgment from the party who sold it, to that effect.

100. What is your own opinion? There is no doubt of it.
101. And the weeds are still spreading? Yes.
102. Therefore the land is likely to be still more depreciated? Yes.
103. Is the Bathurst-burr troublesome in your part of the country? There are very few of them.
104. You think they can be kept down without difficulty? Yes.
105. Is the sweet-brier troublesome at all? In one particular place it is very bad—one farm that has been deserted for many years, and which was formerly surrounded by a sweet-brier hedge; it is impossible for a rabbit to cross it now.
106. That does not spread so much as the thistle? Not so much as the black thistle. Nothing that I know of spreads like this thistle. The brier spreads gradually, not to any distance.
107. Have you been much over the Church and School Lands about Razorback? Yes.
108. Are they thickly studded with the thistle? Yes, near the road, and in the creeks and watercourses, and in some of the back gullies. On the Church and School Lands occupied by the Dunns, at the Oaks, there is a good deal of this black thistle.
109. They take no means to extirpate it? No, they are only tenants; their time will be up shortly.
110. *Mr. Farnell.*] What time of the year does this black thistle seed? It is in flower about a month or six weeks. The seeds I have brought were very difficult to find, and were, I imagine, prematurely ripened in consequence of the wet. In about a month from this time is the usual time to find them—about the latter end of April.
111. Are they later some seasons than others? Yes.
112. Do they seed more than once a year? No, I think not; but they do not seed all at once. The seed of the black thistle ripens at different times, extending over some considerable period; the seed of the milk thistle ripens and sheds almost all together.
113. Have you ever noticed any of them in flower or in seed in December or January? They are in flower in December and January, but I never noticed any hard seed in them.
114. Do they ever shoot again after being cut down? Not if you cut them just below the surface of the ground. If in flower they will not shoot again; but if not, I believe they will. The spotted thistle will not shoot again, whether in seed or not; but I think the black thistle must be in seed or it will shoot again.
115. Have you noticed much of this thistle growing on the railway line? No, very little.
116. Do you think legislation is necessary to provide for the extirpation of noxious weeds? I do not think it will be effective; it may be necessary, but I do not think it will carry out the object intended.
117. *Chairman.*] Would you mind reading this (*Mr. Clement Lester's letter, Appendix A*) and giving your opinion on it? The main difficulty of this would be that a person might cut them up, and by the time the Inspector came to see them they may have grown again. There are places that a white man never sees, and these thistles accumulate there for years, without anybody knowing they are there—inaccessible creeks and gullies. I believe it will be utterly impossible to eradicate them by any plan that may be devised. The seeds will lie in the ground for years and years till they are brought to the surface again by any means. I know a place where they have never seeded for ten years, and which has never had any seed washed on to it, and yet there are plants growing there now.
118. You could not tell that the seeds had not been blown on to it? I am alluding to the milk thistle, the seeds of which never blow about—at least I never saw them.
119. *Mr. Lackey.*] You say the black thistle is spreading very rapidly in your part? Yes.
120. You do not think it is likely to become useful as an article of food for stock? No.
121. I believe in many parts of the country the milk or spotted thistle is rather regarded as a desirable article? On the Murrumbidgee the people would prefer to see it.
122. Is it true that in dry seasons the cattle will eat this spotted thistle readily, if felled with an axe or tomahawk? Yes; on the Murrumbidgee they will eat it without its being cut down; but anywhere they will eat it if it has been felled, and had a few hours' sun on it.
123. *Mr. Osborne.*] I suppose if the black thistle is cut the cattle will not eat it? I cannot say. I saw some yesterday, for the first time in my life, where they had been eating it standing.
124. *Mr. Fraser.*] There is not much Bathurst-burr in your part of the country? No, but it is a thing which will extend.
125. What is the character of the soil in your part of the country? Very good.
126. Black soil? No, it is a whinstone country; the soil is dark, but not black. The worst place for Bathurst-burr is at the top of Razorback, on the Church and School Lands, where Mr. — lives. Very few can be found in the bush; they are always about homesteads.
127. Supposing a Bill were brought in to eradicate noxious weeds, do you think the expense to individuals would be ruinous? In our part of the country I am certain it would.
128. No tenant could stand the expense? The tenants could not; it would be utterly impossible; they would abandon their farms rather than go to the expense? It would be a question with myself whether I should give up my place altogether if a Bill were passed. It would be utterly impossible I could afford to do it; and my tenants, in the same way, I am certain they would go away. It would be impossible too that the holders of Church and Schools lands could do it, and it is just about there the stronghold of the thistle is.
129. *Mr. Farnell.*] Will not these weeds eventually ruin the land if they are left to grow? If they are cleared off they will only make way for some other noxious weed, unless the Bill is passed against all noxious weeds. The American rose, *stramonium*, or something else, will take their places. All lands that have been cultivated and left to lie idle will be covered with some noxious weed.
130. *Mr. Fraser.*] Does the thistle die out in time—supposing it were allowed to grow for a succession of years on the same spot, would it work itself out? That I cannot say. It is generally supposed they do, but I do not think they have been long enough in this country to try the experiment. It is generally supposed that one weed is driven out by another. People say that the black thistle will eventually drive out the milk thistle, but I do not think they die out unless something else drives them out.
131. *Chairman.*] You stated that the value of land is being greatly depreciated by these weeds? Yes.
132. And you think it would ruin some people to clear the land of them? Yes, I am sure it would.
133. Do you not think it would be far better that one or two should be ruined than that the whole country should be ruined? That is a question I cannot answer in the affirmative, seeing that I myself would be one of the two or three ruined.

W. R. Antill,
Esq.

24 Mar., 1870.

W. R. Antill, 134. Putting yourself out of the question? I cannot put myself out of the question.

Esq.

24 Mar., 1870.

135. If these weeds were taken in time they could be kept down? If they were; but where there are tenants, especially Government tenants, they will not do it.

136. You would let matters alone and let the country be slowly ruined, instead of making any effort to avert the evil? No; I believe that as population increases the land will be divided into smaller portions, so that each person will be able to keep his land clear.

137. Has the population about Picton increased considerably within the last five years? No. I am not talking of any short time of course, but I suppose the population will increase in time, and every person will now keep what land he requires for his own use clear.

138. Do you think if the land is very thickly weeded people will be induced to settle down on it more readily than if it is kept clear? No, but they must settle down if they come out to the country.

139. *Mr. Fraser.*] You think it will be unwise to legislate on the matter at all? I do not think it will answer the purpose—it would be evaded in so many ways.

140. *Chairman.*] Do you remember when the Scab Act was introduced? Yes.

141. Was there not a great outcry then that people would be ruined? Yes.

142. But the effect was generally beneficial? Yes; but all the flockowners contributed to eradicate the scab; all the landowners would not in this case.

143. *Mr. Farnell.*] Suppose the land in certain districts were assessed for this particular purpose, and the money applied to the destruction of the weed? It might be done in that way, though the assessment in this case would fall very heavily on the Government, as owners of the Church and School Lands in our district.

144. *Chairman.* Do you think the rent given for the Church and School Lands would suffice to keep the weeds down? Yes, more than suffice.

145. *Mr. Farnell.*] It would be necessary, in legislating for this matter, to include all lands—Crown as well as private lands? Yes. What I meant was, that the great objection to assessment would be that the Government would have the largest part of it to pay, consequently the whole Colony would be assessed indirectly, as well as the owners of the land.

146. Do you not think it would be proper for the public to contribute their fair quota? Yes, but the people in other districts would think they were unjustly dealt with if they were assessed to clear our land.

147. I suppose you are aware you contribute to the support of the Free Library in Sydney, but you do not use the books? Yes. I may be wrong, of course. It would fall very heavily on the Church and School Lands; it would take almost the whole rent to clear them, for some years—not for one, or two, or three years, but for many years. My brother was Commissioner of Crown Lands there, and he applied to the Government for money to clear the Church and School Lands, and they gave him £150 for the purpose the first year, then £100, then £50, then £20, and after that they would not give any more, and the thistles spread again.* He brought them so low that a few pounds a year would have kept them down, and then the Government refused to expend any more money, and he was obliged to abandon the undertaking and let them grow again.

148. *Mr. Fraser.*] Had he succeeded in nearly eradicating the thistle? Yes. It was the spotted thistle; the black thistle had not appeared then.

149. *Mr. Lackey.*] Do you think it could be kept down by the same means? Yes.†

150. The money you speak of was only expended on the Church and School Lands? Yes.

* NOTE (on revision):—I spoke only to the best of my recollection of this matter. I find that the highest sum was £50, then £35, £25—so reducing to £5, when any further sum was refused.

† NOTE (on revision):—The black thistle.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THISTLE PLANTS.

(CORRESPONDENCE RELATIVE TO SPREAD OF, IN THE MONARO DISTRICT.)

Ordered by the Legislative Assembly to be Printed, 12 April, 1870.

JUDGE MCFARLAND TO THE MINISTER FOR LANDS.

MY DEAR SIR,

1 March, 1870.

The Monaro squatters, who have signed the accompanying paper, have requested me to submit it to you as Minister of Lands. It refers to the rapid spread of the Scotch and South American Thistles over great portions of that district, and to the consequent deterioration in value, both to the Crown and them, of squattages there. From personal observation I am aware that the evil is a serious and growing one, and unless it be checked by some such means as the paper alludes to, parts of Monaro will soon be impassable. Perhaps the Bathurst Burr Prevention Bill might be extended in its provisions (with certain modifications), so as to deal with the Monaro thistles as well; but modifications of that measure would be required, because they are more difficult to eradicate than the burr, and it would cost as much to clear some portions of the Monaro stations of the thistles now upon them as the fee simple of the land is worth; and yet if the attempt be not soon made still larger tracts will very quickly be brought to the same plight.

Would it be desirable to request the Crown Lands Commissioner of the District to report to you upon the subject, and to collect the opinions of all the principal squatters, before determining upon legislation.

I have, &c.,
ALFRED MCFARLAND.

MEMORANDA of information furnished by the undersigned Pastoral Occupants and Land-owners in the District of Bombala.

To His Honor Mr. Judge M'Farland,—

Relative to the rapid spreading of the Scotch and South American Thistles, and the immense deterioration of the whole of the lands in the Monaro District from the above cause,—

1st.—We consider that if immediate steps are not taken to render the cutting of thistles compulsory, under certain conditions, that the whole of the richest lands in this district will be rendered comparatively valueless, insomuch that the cost of clearing such land of thistles would exceed 20s. per acre.

2nd.—To such an extent have thistles already spread, that many thousands of acres of the richest lands, the flats, and water frontages, are rendered quite valueless; in fact they are perfect forests of thistles, and impassable.

3rd.—When the thistles first began to spread in this district, we did not think that they would increase to any serious extent, and that they would grow only about the water-courses and river banks; but we now find that they are spreading rapidly all over the hills; in fact the whole country will soon be covered.

4th.—That we consider that several of the richest pastoral properties in this district are already depreciated (by the spread of Scotch Thistles) to the amount of many hundreds of pounds.

5th.—That this matter calls for the immediate and serious consideration of the Legislature, for if active steps are not taken to arrest the spread of this weed, in the course of a few years the evil will have increased to such an enormous extent as to render it impossible to grapple with it.

6th.—That a Bill (for the destruction of the Scotch Thistle) similar to in most respects to that now in force in the neighbouring Colony of Victoria, be initiated here, and, if passed, to be extended to the whole of the settled and intermediate districts of this Colony.

7th.—That if such a Bill be introduced, great care be taken in its construction, so as to render it not oppressive, as on many of the runs the thistles have already spread to such an extent, that if the owners of such runs were compelled to clear them it would be utterly ruinous; but that they be compelled to keep clear of thistles, their lands near and adjoining, so that their neighbours might not suffer from their carelessness and neglect.

H. M. JOSEPH, J.P., Maharatta.

D. RYRIE, Barmina.

H. S. EDWARDS, J.P., Bibbenluke.

For the representatives of the late W. Bradley.

E. JONES, Dundundra.

H. T. EDWARDS, } and Mila.

THE UNDER SECRETARY FOR LANDS TO JUDGE MCFARLAND.

Department of Lands,
Sydney, 23 March, 1870.

SIR,

Referring to your letter of the 1st instant, enclosing a Petition from certain Land-owners in the District of Bombala, respecting the spreading of the Scotch and South American Thistles, and the deterioration of the lands in the Monaro District from that cause, I am directed to inform you that the Government are not disposed to undertake the advocacy of the views therein expressed by the Petitioners, who should be recommended to apply to the Member of the Legislative Assembly for their District.

I have, &c.

A. O. MORIARTY.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON THE

MAITLAND PRESBYTERIAN CHURCH LAND BILL ;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE

AND

MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,

12 *April*, 1870.

SYDNEY : THOMAS RICHARDS, GOVERNMENT PRINTER.

1870.

1870.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 40. WEDNESDAY, 6 APRIL, 1870.

6. Maitland Presbyterian Church Land Bill (*"Formal" Motion*):—Mr. Dodds moved, pursuant to Notice No. 3,—
- (1.) That the Bill to enable the Trustees of certain Church Lands at Maitland to appropriate the income derivable from the same for the benefit of the Presbyterian Congregations of Maitland East and Maitland West, and to confer extended powers of leasing on the Trustees, and for other purposes, be referred to a Select Committee for consideration and report.
- (2.) That such Committee consist of the following Members, viz:—Mr. Clarke, Mr. Farnell, Mr. Frazer, Mr. Garrett, Mr. Lee, Mr. Nowlan, Mr. Weaver, Mr. Neale, and the Mover.
- Question put and passed.
-

VOTES NO. 41. THURSDAY, 7 APRIL, 1870.

4. Maitland Presbyterian Church Land Bill:—Mr. Dodds presented a Petition from the Office-bearers and Adherents of the Presbyterian Churches at East and West Maitland, praying that this Bill may receive the favourable consideration of the House.
- Petition received, and referred to the Select Committee now sitting on the Bill.
-

VOTES NO. 43. TUESDAY, 12 APRIL, 1870.

2. Maitland Presbyterian Church Land Bill:—Mr. Dodds, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee, for whose consideration and report this Bill was referred on 6th April, 1870.
- Ordered to be printed.

 MAITLAND PRESBYTERIAN CHURCH LAND BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 6th April, 1870, the "*Maitland Presbyterian Church Land Bill*," and to whom was referred, on the 7th April, "*a Petition from the Office-bearers and Adherents of the Presbyterian Churches at East and West Maitland*,"—beg to report to your Honorable House :—

That they have examined the witnesses named in the margin (whose evidence will be found appended thereto), and that the Preamble having been satisfactorily proved by the evidence of these gentlemen, your Committee proceeded to consider the Clauses of the Bill, in which it was not deemed necessary to make any Amendment.

William Barker,
Esq.
The Rev. J. D.
Lang, D.D.
Henry Halloran,
Esq.

And your Committee now beg to lay before your Honorable House the Bill without Amendment.

ALEXANDER DODDS,
Chairman.

No. 1 Committee Room,
Sydney, 12 April, 1870.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 12 APRIL, 1870.

MEMBERS PRESENT :—

Mr. Dodds,		Mr. Neale,
Mr. Clarke,		Mr. Farnell.

Mr. Dodds called to the Chair.

Entry in Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of Bill *referred*, and the original Petition from the office-bearers and adherents of the Presbyterian Churches at East and West Maitland *referred* on the 7th April,—on the Table.

Present—William Barker, Esq. (*Solicitor for the Bill*), who produced the deeds referred to in the preamble of the Bill.

The Rev. J. D. Lang, D.D., called in and examined.

Witness withdrew.

Henry Halloran, Esq. (*Under Secretary*), called in and examined.

Room cleared.

Preamble *read*.

Question put from the Chair,—“That this Preamble stand part of the Bill”—*agreed to*.

Solicitor called in and informed.

Clauses 1 to 5 read and *agreed to*.

Motion made (*Mr. Farnell*) and Question put,—“That the Chairman report the Bill to the House without amendment,”—*agreed to*.

LIST OF WITNESSES.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MAITLAND PRESBYTERIAN CHURCH LAND BILL.

TUESDAY, 12 APRIL, 1870.

Present:—

MR. CLARKE,
MR. DODDS,

MR. FARNELL,
MR. NEALE,

MR. WEAVER.

ALEXANDER DODDS, Esq., IN THE CHAIR.

William Barker, Esq., appeared as Solicitor for the promoters, and produced four deeds of grant, dated respectively the 24th of April, 1844, referred to in the preamble.

The Rev. John Dunmore Lang, D.D., examined:—

1. *Mr. Barker.*] Do you remember that, in the year 1833, five acres of land, situated in the county of Northumberland and parish of Maitland, at Wallis Plains, were set apart and appropriated by the then Governor of the Colony as a site for a church, school, and burial-ground for the Scots Presbyterian community of Maitland? I do.
2. I believe the five acres of land were set apart upon your own application? They were. I think that application was made so early as the year 1829, and my application stated that the reason for applying was that, as the minister of the congregation at Maitland would have extensive suburban districts under his ecclesiastical supervision, it would be necessary for him to keep a horse, and that it was equally necessary that there should be provision for the maintenance of a horse, in the shape of pasture in the locality in which the church was to be situated.
3. Are you aware that that land was subsequently divided into four separate grants, upon the application of the Reverend William Hamilton, who was then, I think, Moderator of the Synod of Australia? I do not recollect the subsequent proceedings in regard to the land. I only remember perfectly its being conceded, on my application, for the benefit of the minister of the Presbyterian Church at Maitland.
4. I presume you do know the fact that the Rev. William Hamilton was at one time Moderator of the Synod of Australia? Yes. I think I was in England at the time, and that may render my recollection indistinct.
5. You are aware that at the time the land was granted for the purposes mentioned there was but one Presbyterian congregation under the superintendence of the Synod of Australia in Maitland? Quite so; and with a view to accommodate the people, a temporary church was erected, and the land for it was purchased by myself and brother, so as to accommodate the people on both sides of the district.
6. So that there was but one church and one minister for the Presbyterian community residing in East and West Maitland? Quite so.
7. Are you aware that there are now two Presbyterian congregations in East and West Maitland? I am.
8. Under the superintendence of the General Assembly of the Presbyterian Church as at present constituted? Quite so.
9. The church now known as the Presbyterian Church of New South Wales? Quite so.
10. You are a minister of that church? I am, the senior minister.
11. Are you aware of the localities of the two churches—one is in Free Church-street, in West Maitland, and I believe that was erected through the instrumentality of the Rev. Mr. McIntyre? Yes. I have preached in it.

Rev. J. D.
Lang, D.D.

12 April, 1870.

- Rev. J. D. Lang, D.D.
12 April, 1870.
12. The other congregation assemble in the church in East Maitland? Yes.
13. Are you able to state whether the propriety of applying to Parliament for such a Bill as that now before the Committee has been under the consideration of the General Assembly of the Presbyterian Church? I have a perfect recollection of the fact that it was before the General Assembly, and it was supposed the Bill could have been passed during the last Session of the Legislative Assembly. Dr. Liddell was present, and gave a statement before the General Assembly antagonistic to the views of the parties charged with the Bill, and I then made the statement that I have virtually made now,—that the people of West Maitland could have no exclusive claim to the ground, as the allotment was given by the Government for the use of the Presbyterians of Maitland before there was any division into two towns, and that the people could not now, as Dr. Liddell wished, appropriate the whole—they had no right to more than half.
14. The land, I presume, was really intended for the Presbyterians of the district? Quite so.
15. You are now able to inform the Committee that the General Assembly of the Presbyterian Church consider it to be for the interest of the Presbyterian community in East and West Maitland that the land should be appropriated in the manner contemplated by this Bill? Quite so. The General Assembly considered it a favourable circumstance that the only party who could have moved in opposition to the matter by appropriating the whole—I mean the Rev. Mr. Purves, the late minister—was the party asking for the Bill.
16. I presume you are of opinion that to make the land available for the two congregations, as proposed by this Bill, is the only equitable mode of disposing of it? Decidedly so.
17. You are aware that the land is situated near or in the town of West Maitland? It is in the town of West Maitland.
18. And in order to make it available to the utmost extent, it is desirable the Trustees should have the power of letting it? Yes.
19. And that you consider would be met by giving them power to lease it for a term of forty years? Yes.
20. That would be sufficient for building purposes? Quite so.
21. Are you able to inform the Committee whether the persons named in the several grants as Trustees of the land have ceased to be Trustees by death or resignation? I believe they have.
22. Andrew Lang is at present in England, I believe? He is.
23. John Morrison Saunders, John Stewart, James Douglas, and James Stewart, are the present acting Trustees of the land? They are.
24. I presume you are aware, from your experience in these matters, that very often gross irregularities take place in the election of Trustees—that the terms of the Church Act are not very rigidly adhered to in their nomination? Quite so.
25. And that it would be doubtful in any given case to say whether the terms of the Act had been complied with or not? Quite so.
26. It would be therefore desirable, as it is contemplated to make this land available for building purposes, that any doubt as to the title of Trustees, arising from the mode of their election, should be removed by the Act? Quite so.
27. Speaking for yourself, and from your knowledge of the opinions entertained by the General Assembly of the Presbyterian Church, and your knowledge of the Presbyterian community at Maitland, you believe that the Bill now before the Committee will afford general satisfaction? I do, entirely.
28. *Chairman.*] There is power under the Church Temporalities Act to give leases for the long period of twenty years? I am aware of that.
29. It is proposed in this Bill to extend that power—to give the power to grant longer leases? I think decidedly in the case of land to be devoted to building in or near town, it is desirable that a longer lease than twenty-eight years should be given.
30. To induce the putting up of a better class of building? Yes.
31. *Mr. Barker.*] There can be no objection to forty years for building leases? No, certainly not.
32. *Mr. Farnell.*] Is Dr. Liddell opposed to the division of this land between the two Maitlands? He was opposed. I do not know what he says or thinks upon the subject now, but he maintained that the land being situated in West Maitland belonged to the West Maitland congregation entirely and exclusively.
33. He opposed it only as a member of the congregation? Quite so. He appeared before the Assembly and spoke to the subject, and I replied to him. I showed that the ground was originally given for the Presbyterian minister when there was only one minister and congregation in the place, and provision was made that they should meet together in the half-way temporary church.
34. *Mr. Clarke.*] That was previous to the disruption and the establishment of the Free Church? Yes.
35. *Mr. Weaver.*] This land was originally granted for the purposes of a church, minister's dwelling-house, glebe, and school-house? Yes, and for pasture ground for the minister's horse.
36. I see in this Bill a proposition that the Trustees shall pay £150 to the Minister of East Maitland church, and £150 to the Minister of West Maitland Church; that is I presume as a salary? Yes, from the revenue to be derived from the ground.
37. *Mr. Barker.*] Are you aware whether the Presbyterians in East and West Maitland have expended large sums of money in the purchase of lands as sites for churches, and in the erection of their churches? I am: the sites which they have got both in East and West Maitland for the erection of their churches, and in one of those cases I believe for the manse for the minister, being more suitable than any portion of the five acres would have been; so that the arrangement may be considered, in so far, as an exchange of the original grant of the five acres for the localities that are more suited to the wants of the community in both of those towns.
38. So that you regard the appropriation of the lands in the manner contemplated by this Bill as practically an exchange of lands? Yes, so far.
39. The Presbyterians have expended their own money in purchasing sites more eligible for the purpose? Yes.
40. *Chairman.*] Are you aware that buildings have been erected on a portion of the five acres? Yes.
41. And that a building so erected was occasionally used as a church? Yes.
42. So that the intention has been carried out, in so far as a building was erected on the land? Yes; but for the permanent purposes of both towns other localities were found to be more convenient.

43. Are you aware whether the ministers in East and West Maitland have dwellings provided for them by their congregations? They have.

Rev. J. D.
Lang, D.D.

44. *Mr. Weaver.*] Are those dwellings on those lands that were granted for the purpose? Not those in East Maitland; but in West Maitland, the house erected on the ground for a manse was actually inhabited by the minister, until I believe he found a more eligible site at a subsequent period.

12 April, 1870.

45. *Mr. Barker.*] It is part of the present arrangement that that house shall be let, and the income derived from it be divided between the two congregations? Yes.

46. *Mr. Clarke.*] To pay for the rents of the ministers elsewhere? Yes.

Henry Halloran, Esq., Principal Under Secretary, examined:—

47. *Mr. Barker.*] Do you produce an application made for five acres of land at Maitland, for the purposes of the Presbyterians residing there? I have here a letter dated 25th May, 1833, addressed by John Dunmore Lang to the Surveyor General, notifying the selection of five acres of land at Maitland. (*The witness produced the same.*)

H. Halloran,
Esq.

12 April, 1870.

48. Have you a record of what was done in consequence of Dr. Lang's application? As was usual in those days, the selection was made by the Surveyor General; it was reported to the Colonial Secretary, between the 15th and 31st May, 1833; possession was given by a letter dated 22nd July, 1833, and Dr. Lang was requested to call a meeting of the Presbyterians at Maitland to elect Trustees. The Surveyor General at the same date was called upon to furnish a description, and I find that he did furnish a description as stated in this letter. (*The witness produced a letter from the Surveyor General's Office, dated 26th October, 1833.*)

49. It appears from the records you produce from the Colonial Secretary's Office that, on the 22nd July, 1833, five acres of land, situated in the county of Northumberland and parish of Maitland, at Wallis Plains, were set apart and appropriated by the then Governor of the Colony as a site for a church, school, and burial-ground for the Scots Presbyterian community at Maitland? Yes.

50. Does it appear from the correspondence in your hands that the land was subsequently divided into four separate parts? Yes, upon the application of the Rev. William Hamilton, who was Moderator of the Synod of Australia in 1843.

51. And the four grants have been issued in conformity with that application? Yes.

1870.

CORONER AT WAGGA WAGGA.

NEW SOUTH WALES, }
TO WIT. }

INQUISITION held at the Wagga Wagga Hospital, know as the sign of the Wagga Wagga Hospital, at Wagga Wagga, in the County of Wynyard, in the Colony of New South Wales, this tenth day of March, one thousand eight hundred and seventy, before me, Robert Clark Robinson, one of the Coroners of our Sovereign Lady the Queen, for the Colony aforesaid, on view of the body of Eliza Rush, then and there lying dead.

Upon the oaths of Jonathan Boon, Frederick Oelsen, Thomas Connolly, John Doran, William Dover, Nicholas Prendergast, Henry Wilmott, Richard Lynch, James Robbins, William Carpenter, Henry Gaffney, Frederick Downey,—twelve good and lawful men of Wagga Wagga aforesaid, who, having been sworn and charged to inquire (on the part of our said Lady the Queen) when, where, how, and by what means the said Eliza Rush came to her death, do, upon their oaths, say that she died by the visitation of God, caused by a fit.

In witness whereof, as well the said Coroner as the Jurors aforesaid, have to this Inquisition set their hands and seals this day and year aforesaid.

NEW SOUTH WALES.—

INFORMATION and depositions of witnesses, taken on oath, before me, Robert Clark Robinson, one of the Coroners of our Sovereign Lady the Queen, for the Colony of New South Wales, this tenth day of March, one thousand eight hundred and seventy, at the Wagga Wagga Hospital, known as the sign of the Hospital at Wagga Wagga, in the said Colony, on view of the body of Eliza Rush, then and there lying dead.

George Rush, having been sworn, states: About half-past 1 o'clock on Tuesday, the 8th, she came for a bucket of water to assist with her washing, and I told her when I wet the tea I would call her to dinner, in about one quarter of an hour; instead of calling her I went round for her, when the first thing I saw was her lying stretched on her back, and her hands by her side, and no sign of a struggle on face or hands; I am not sure then whether I picked her up or not, but I know I cooeyed, as Mr. Vincent heard the cooey, and I ran over to Vincent, and he came with me and rendered me all the assistance in his power; he had vinegar and water, and brandy and water, striving to force it down her throat, but she never breathed; I am married to her nine years—been seven years out in this Colony—while she was at home with her father and mother, until they died—for the seven years; she came out here about four months ago; she did not like this climate, and complained a good deal when those fits attacked her; I had only seen her once in them; she breathed very heavily when under the attack, but since the weather became cooler she said she liked the place a great deal better.

GEORGE RUSH.

About half-past 1 o'clock I was going for a bucket of water, when I heard some one cooeying, but took no notice of, and on my returning home, Rush came in a great hurry and said, I believe, "My wife is dead"; he turned round and ran straight back to where the woman was lying; I ran with him; there I saw the woman; she was seated up against the post; I assisted to carry her into the house; I placed her in a bed, and loosened her clothes, and tried to give her some brandy and water, but could not give her any; I believe she was dead when I got up to her.

JOHN WM. VINCENT.

William Large: I am a legally qualified medical practitioner, living in Wagga Wagga; to-day, at your request, I examined the body of Eliza Rush, and, upon oath, say,—no appearance of marks upon her person, or any marks of violence—not the slightest mark or scrape; there is blood oozing from her nose; I come to the conclusion she died from this fit.

WILLIAM LARGE.

R.

3

R. J. Gilman: About 9 A.M. I left the station on horseback for the back paddock, and about 3 o'clock I was found by the boundary-rider and told that Mrs. Rush was dead in a fit; I at once rode in and found it the case; she was a sickly-looking woman.

R. J. GILMAN, JUNR.

No. 2.

TELEGRAM FROM SUB-INSPECTOR MEARES, WAGGA WAGGA, TO THE INSPECTOR GENERAL OF POLICE.

31 March, 1870.

Mrs. Rush died suddenly at Mittagong, thirty-five miles from here. Coroner would not go so far to hold inquest. No Magistrate in the neighbourhood. Body was brought into Wagga Wagga in a cart by Rush, at request of Coroner. Rush sent to gaol for a week, suffering from *delirium tremens*. Full report by "first mail." Mr. Gilman, owner of the station, wrote the order for Rush to bring in the body. I sent constable with the letter, at the request of the Coroner.

No. 3.

TELEGRAM FROM THE COLONIAL SECRETARY, TO DR. R. C. ROBINSON, CORONER, WAGGA WAGGA.

31 March, 1870.

REPORT fully by post immediately, on statement in *Wagga Wagga Advertiser*, as to inquest on Mrs. Rush. Explain also, by telegram to-day, whether you refused to go to Mittagong to hold inquest on body of Mrs. Rush, and sent trooper to order Mr. Rush to bring dead body of his wife to Wagga Wagga, that you might hold inquest.

Reply at once.

No. 4.

TELEGRAM FROM DR. R. C. ROBINSON, CORONER, WAGGA WAGGA, TO THE COLONIAL SECRETARY.

31 March, 1870.

It being thirty-five (35) miles out,—five (5) miles out of my district,—I requested her to be buried there. Mr. Gilman, the owner of the station, wrote the order to have her brought in.

Will write by Saturday's mail.—

No. 5.

THE CORONER, WAGGA WAGGA, TO THE COLONIAL SECRETARY.

Wagga Wagga, 2 April, 1870.

SIR,

I have the honor to report (as requested by telegram) that Mr. Gilman, the owner of Mittagong, came into town on the 10th ultimo, and informed me that a Mrs. Rush had died suddenly at his station, and wished to know what he would do in the matter. He handed me the depositions of two witnesses which he had examined, but not on oath, as he was not a Magistrate. I read the depositions, and could see no inferences that would lead me to suspect any foul play having to do with her death. Mittagong station being thirty-five miles from here, therefore five miles beyond the distance I am expected to go, I asked Mr. Meares, Sub-Inspector of Police, if there were any Magistrates in the neighbourhood, but was informed in the negative.

I then said I considered it advisable to have the body buried at Mittagong without an inquest, owing to the peculiar and unsuspecting circumstances of the case. Mr. Gilman suggested, in the presence of Mr. Meares, to have the body brought into town and have an inquest held, which I assented to.

Mr. Gilman wrote a letter and sent it out to the station, and the body was brought into town next day, and I held an inquest.

I had no idea how many men were out at the station, or who was to drive the body into town. I certainly never thought Mr. Rush would do so.

On the 26th ultimo Rush was brought before the Bench here suffering from *delirium tremens*, and discharged cured on the 30th.

I learn from Rush's sisters that he had been fifteen years in the navy, and during that time, and up to the present, he has been addicted to intemperance.

These are the plain facts. With regard to the statements in the *Wagga Wagga Advertiser*, it is a well-known fact in this district that the attacks made upon me for the last twelve months are so malicious, and at times so utterly void of foundation, that very little notice is taken of them.

I have, &c.,

ROBERT CLARK ROBINSON,

Coroner.

No. 6.

THE INSPECTOR GENERAL OF POLICE TO THE PRINCIPAL UNDER SECRETARY.

Police Department, Inspector General's Office,
Sydney, 4 April, 1870.

SIR,

I have the honor to forward herewith, copy of a report from the Sub-Inspector of Police at Wagga Wagga, enclosing memoranda of statements taken by Mr. Gilman, touching the death of Mrs. Eliza Rush, in connection with a former report upon the subject, furnished to afford information in reply to questions in Parliament.

I have, &c.,
JNO. McCLERIE,
Inspector General of Police.

[Enclosure in No. 6.]

Mittagong Station, 8 March, 1870.

STATEMENT respecting the death of Mrs. Geo. Rush, at the abovenamed station, at half-past 1 o'clock on the 8th day of March, 1870:—

George Rush, husband of the deceased woman, deposed:—That at 1 o'clock on the day mentioned, his wife was washing clothes at the back of the store, which is distant from the kitchen about 30 yards; he took her a bucket of water on her asking for it; he then commenced preparing dinner, and at half-past 1 o'clock, being half an hour after fetching the water to his wife, went to tell her dinner was ready, when he found her lying on the ground, face up, her hands straight down by her side; thought she was in a fit, as she had been subject to them; sat her up against a post, and bathed her face and hands with cold water; seeing that she did not revive, cooeeyed for Mr. John Vincent, who has a cattle-station, and lives opposite; on his not coming, went to see if he (Mr. Vincent) was at home, and to fetch him; Mr. J. Vincent's house is about 150 yards from the Mittagong store.

Mr. J. Vincent deposed:—That at about 2 o'clock on Tuesday, 8th March, 1870, Geo. Rush came over from Mittagong Station, saying that his wife was dead, and ran back from where he had come; followed him immediately, and found Mrs. G. Rush still sitting against the post at the back of the store, in the position she had been left by her husband; assisted Geo. Rush to carry her into her room, loosened her dress about the neck, rubbed vinegar and water on her temples and hands, and tried to give her a little brandy, but she was quite dead, and showed no signs of life.

Mr. George Ellis deposed:—That he had been out on the run since 9 o'clock in the morning; returned at about five minutes after 2 o'clock; found Mrs. G. Rush in the condition mentioned; assisted in trying to revive her.

Lewis, boundary-rider, deposed:—Rode up to the Mittagong home-station about a quarter of an hour after last deponent; assisted in chafing the hands of Mrs. G. Rush for a quarter of an hour; then, seeing that life was extinct, rode out to the back paddock of Mittagong Station to try and find Mr. Gilman, owner of the station; found him at about 3 o'clock, and told what had happened.

Mr. Gilman deposed:—Was told of the occurrence by the boundary-rider at the time mentioned, 3 o'clock; at once rode into the station, found Mrs. G. Rush dead and Mr. Arthur G. Ellis and Geo. Rush on the place.

Geo. Rush, husband of the deceased woman, states:—That his wife according to her own account has been subject to fits for the last three or four years; she had only landed in the Colony from England four months, and had evidently felt the heat of the summer very much.

No. 7.

MR. A. G. JONES TO THE COLONIAL SECRETARY.

Wagga Wagga, 16 April, 1870.

SIR,

I have the honor, as one of the proprietors of the *Wagga Wagga Advertiser*, to forward, for your information, the enclosed declarations. They relate to the letter of the District Coroner, Dr. Robinson, addressed to you on the 2nd instant, in explanation of his conduct in the case of Rush, lately brought before the Assembly.

In that letter occurs the following paragraph:—"I learn from Rush's sisters that he had been fifteen years in the navy, and during that time, up to the present, he has been addicted to intemperance."

Feeling convinced from other circumstances, that this was untrue, I took steps to have the depositions of Rush's sisters taken before a Magistrate, as also that of his brother-in-law.

The result is, that they one and all declare Dr. Robinson's assertion to be "absolutely false"—that not only did they never tell him that Rush was a drunkard, but that one of them, the brother-in-law, told him precisely the reverse.

Under these circumstances, and seeing that the *Advertiser* has been falsely charged by this official with "maliciously attacking him without foundation," I beg to request that a full and searching inquiry may be instituted into the charges made by the *Advertiser* against Dr. Robinson as Coroner, including the present one, viz., that in an official letter to the head of his department he has written a deliberate falsehood, with the view of screening himself from the serious charges alleged against him.

I have, &c.,
A. G. JONES.

[Enclosures in No. 7.]

Wagga Wagga, 14 April, 1870.

I, *Mary Murphy*, solemnly declare:—That I am the sister of George Rush, and he has but one other. The statement made in a letter signed by Robert Clark Robinson, addressed to the Honorable the Colonial Secretary to the effect,—“I learn from Rush's sisters that he had been fifteen years in the navy, and during that time, up to the present, he has been addicted to intemperance.”

This statement is absolutely false; I never made such to Dr. Robinson, or to any other person, nor did I ever utter anything which could possibly lead any person to infer that my brother was ever a drunkard.

her
MARY x MURPHY.
mark.

Declared before me, at North Wagga Wagga, this 14th day of April, 1870,—JOHN GORDON, J.P.

Wagga

Wagga Wagga, 14 April, 1870.

I HAVE this day seen published in the *Wagga Wagga Advertiser* a letter signed by Robert Clark Robinson, addressed to the Honorable the Colonial Secretary, wherein is stated,—“I learn from Rush's sisters that he had been fifteen years in the navy, and during that time, up to the present, he has been addicted to intemperance.”

I solemnly declare that this statement is absolutely false. George Rush, the man referred to, has only two sisters; I am one of them; I never but once spoke to Dr. Robinson with reference to my brother, and that was at the Court House on the occasion of my brother being charged with being of unsound mind; Dr. Robinson, then, in my presence, said, “Mittagong is outside my district”; I then said, “Dr. Robinson, if the Government pay you for going thirty miles, if you had been a gentleman you would not have scrupled to have gone two or three miles further, to have relieved a poor unfortunate fellow, situated as my brother was”; Dr. Robinson replied, “Thank you.”

This conversation was the only one, and comprises all that I ever said to, or heard from, Dr. Robinson, with reference to my brother.

I never, in my life, said to any person that my brother was fifteen years in the navy, and during that time, and up to the present, was addicted to intemperance; I could not have said so without stating a falsehood, as I always knew my brother to be a temperate, sober, well-conducted man.

her
AGNES × DUFFY.

Declared before me, at North Wagga Wagga, this 14th day of April, 1870,—JOHN GORDON, J.P.

Wagga Wagga, 15 April, 1870.

I, *Owen Duffy*, solemnly declare that George Rush is the brother of my wife; Rush brought the body of his deceased wife into Wagga Wagga on a Thursday, and returned to the station on Saturday; on Friday, the day after Rush's wife was buried, my son brought a message to me from Rush of such a nature as to lead me to believe that Rush was going wrong in his head; on the Monday I went out to the station, and found Rush certainly not right in his mind; I stayed with him that night, and he was crying mostly all the night; he told me that he was afraid “he should never get over the grief of it,” for if she had only spoken one word to him before she died he would have been content; he asked me to go and bring his sister (my wife) out to him, and take him to Wagga, for he would not stop any longer at that place; I did as he asked me, and took him to Wagga; on the road his whole conversation was about the horrible journey he had made with his dead wife; that she had been dead three days, and the body smelled fearfully, and before he would go through the like again he would sooner take his own life; on the road when he came to a place where his cart had got bogged, he went and stood over it and cried like a child; he said after the constable had left him, and he was by himself, he did not know what he was doing, he lost himself several times, and he did not know how ever he had got to Wagga with the body; when he came to Wagga he mostly stayed with me; I attended to him, and he was most temperate, and showed no disposition to drink; he became so bad in his mind that I became afraid he would do himself harm, and to secure him I gave him in charge to Sergeant Carroll, and went to the gaol with him, and during the time he was there I often visited him; Dr. Robinson wanted to shave his head; I objected, and said I thought it would injure him; the Dr. left orders for his head to be shaved, but his orders were not obeyed; the day before, or two days before Rush was released, Dr. Robinson spoke to me again about shaving his head; I said, “Don't do it, Dr.; I think he is getting better”; he said, “I'm damned if I have made up my mind, but I'll do it yet”; his head was not shaved; I went next morning to the gaol, and met Mr. Bayliss, the Police Magistrate, who told me that he had had a long talk with Rush, and that he spoke quite sensibly to him, and had applied to him to get him out of gaol; Mr. Bayliss said he appeared all right, but had a wild look about his eyes; that he would release him if Dr. Robinson went into the box and recommended it; I then went to Dr. Robinson, who went with me to see him; we saw Rush, and the Dr. said, “I think he is all right, I will release him”; when he was released he came to my house, and stayed with me two days; he told me he had not suffered from drink, that he had taken very little, but that for “five nights he had never slept, and that the fright and grief he had suffered would drive any man mad”; I have known Rush since he was eleven years old, and never knew him but once under the influence of drink, and then he was not drunk; I told Dr. Robinson that Rush was not a drunkard, that he was not suffering from drink, but it was from nothing but grief after his wife, and that the man's mind was affected before he had touched spirits.
