1870.

NEW SOUTH WALES.

POST OFFICE.

FIFTEENTH ANNUAL REPORT,

BEING THAT FOR THE YEAR

1869.

Presented to both Houses of Parliament, by Command.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1870.

THE POSTMASTER GENERAL to HIS EXCELLENCY THE GOVERNOR,

TRANSMITTING THE

FIFTEENTH ANNUAL REPORT ON THE POST OFFICE DEPARTMENT, BEING THAT FOR THE YEAR 1869.

General Post Office,
Sydney, 13 June, 1870.

MY LORD,

I do myself the honor to transmit, for the information of your Excellency, the Fifteenth Annual Report on the Post Office Department, being that for the year 1869.

INLAND SERVICE.

Year.	Extent of Postal Route on 31st December.	Number of Miles travelled.	Cost of Conveyance of Mails.	Average Cost per Mile.	Number of Post Offices.
	Miles.		£ s. d.	d.	
1868	12,724	2,777,197	49,969 9 8	4½	487
1869	13,238	2,879,659	50,158 17 8	4½	621
Increase	514	102,462	195 8 0	34
Decrease	½d.

In the Appendix will be found returns showing the length of new lines established during 1869 to be 621 miles, and the length of postal lines abolished during the same period to be 107 miles; the actual increase in the postal route in the year 1869, as compared with that of the year 1868 being 514 miles, as shown in the above return. Statements of the increased and decreased communication on existing lines will be found in the Appendix. Appendices A & B.
C & D.

The extension of the railway from Mooloolah to Goulburn, on the Southern Line, from One-tree Hill to Bowenfels (Lithgow), on the Western Line, and from Singleton to Muswellbrook, on the Northern Line, enabled the mails to be conveyed by train a total distance of 316 miles in the year 1869.

The extent of postal lines by horse, stage, and rail, may be stated as follows:—

Horse.....	9,630
Stage	3,292
Rail	316
Total.....	<u>13,238 miles.</u>

The number of post offices established during 1869 was 37, the number re-established 3, and the number discontinued 6, making an actual increase of 34 in the number of post offices in the Colony.

85 changes of postmasters were effected during 1869.

A list of post offices on the 31st December, 1869, will be found in the Appendix.

Appendix E.

Two additional iron letter-receivers were erected in 1869; one for the accommodation of the residents near the junction of the Marrickville and Newtown Roads, and the other for the convenience of those persons residing in the proximity of the Newtown and the Missenden Roads.

On the 31st December, 1869, the number of iron letter-receivers erected in the Colony was 57, and the number of newspaper-receivers was 8.

40 licenses for the sale of postage stamps were granted during 1869.

A return of the licensed vendors of postage stamps (exclusive of postmasters) will be found in the Appendix.

FOREIGN

FOREIGN SERVICE.

The following is a return of the specified and actual days of arrival and departure of the contract steamers of the Peninsular and Oriental Steam Navigation Company during 1869, showing the number of days taken in the passage from and to London, *viâ* Suez and Marseilles, and *viâ* Suez and Southampton.

ARRIVAL AT SYDNEY.					DEPARTURE FROM SYDNEY.				
Name of Vessel.	Specified date.	Actual date.	Actual number of days via Marseilles.	Actual number of days via Southampton.	Name of Vessel.	Specified date.	Actual date.	Actual number of days via Marseilles.	Actual number of days via Southampton.

It will be seen that on no occasion during the year 1869 was the mail packet late in its arrival at Sydney; on the contrary, the mails have generally been delivered before the contract time—in some instances two, three, and four days earlier.

There is great praise due to the Peninsular and Oriental Steam Navigation Company for the increased efficiency of this mail service; and the residents, almost throughout the Colony, have derived much advantage from the extra time allowed for replies to correspondence, which has been gained by the earlier arrival at Sydney of the contract packets.

The opening of the route for the conveyance of mails *viâ* Brindisi has enabled considerable expedition to be gained in the transmission of correspondence to the United Kingdom; and there is no doubt, if arrangements can be made to lessen the postage by this route, that it will become a very popular one. The first mail from the United Kingdom by the Brindisi route reached Sydney on the 28th November, and the first mail to the United Kingdom by this route was dispatched from Sydney on the 4th December.

The following statement will show the proportion of the subsidy paid by each Colony for the conveyance of mails *viâ* Suez during the year 1869.

Colonies.	Number of Letters Inwards and Outwards in 1868.	Service to Point-de-Galle.	Service between Point-de-Galle and King George's Sound.	Service between King George's Sound and Melbourne.	Service between Melbourne and Sydney.	Molety of Cost of Mail Boxes and Mail Bags.	Molety of Expense of Naval Agents in charge of Mails.	Proportion of Cost of Special Packets between Dover and Calais.	Estimated Number of Newspapers Inwards and Outwards in 1868.	Egyptian Transit of Newspapers <i>viâ</i> Southampton.	Totals.

I may here make a passing allusion to the advantage which would probably accrue to the people of New South Wales by the establishment of a well organized mail service to the United Kingdom *viâ* San Francisco; but until it has been ascertained for a fact that the expedition, which has been estimated at forty-five days for the whole journey from Sydney to the United Kingdom, can be attained, it were vain to enlarge upon the desirableness of opening such a mail route. I may however state that steps are at the present time being taken by the Colony of New Zealand to test this route, and no doubt if successful some negotiations will very shortly be made to secure to this Colony whatever advantages can be obtained from it.

REVENUE

REVENUE AND EXPENDITURE.

The following return shows the Revenue of the Post Office Department, collected during the year 1869, compared with the Revenue of 1868 :—

Year.	Sale of Stamps.	Fees for Private Boxes.	Postage on Unpaid Letters, &c.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1868	79,482 14 0	337 11 6	3,381 17 7	83,202 3 1
1869	83,720 14 11	219 5 6	3,715 1 4	87,655 1 9
Increase	4,238 0 11	333 3 9	4,452 18 8
Decrease	118 6 0

The amount, £4,452 18s. 8d., given above as the total increase of revenue in 1869, includes a sum of £1,269 6s. 1d. paid in that year by the Treasury Department for arrears of postage due by public offices for the years 1864, 1865, and 1866, which sum should properly be apportioned as an increase to the revenue collected in those respective years. The actual increase of revenue in 1869 properly chargeable to that year is therefore £3,183 12s. 7d., which goes to prove the steady progress of the Postal Service; and it is satisfactory to state, that while there has been this large increase of revenue, the expenditure of the department has only increased by the sum of £1,813 4s. 3d.

The reduction of the fee for private boxes, from £2 2s. to £1 1s., which took effect from the 1st January, 1869, will account for the decrease shown under the head "Fees for private boxes."

The expenditure of the department during 1869, compared with that for the year 1868, may be stated as follows :—

Year.	Salaries.	Contingencies.	Conveyance of Mails.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1868	31,412 11 1	3,151 4 10	54,371 0 8	88,934 16 7
1869	33,141 8 0	2,914 8 11	54,692 3 11	90,748 0 10
Increase	1,728 16 11	321 3 3	1,813 4 3
Decrease	236 15 11

It will be seen that notwithstanding the large extension of the Postal Service during 1869, as regards the establishment of new post offices and the opening of new mail routes, before alluded to in this Report, the total expenditure of the department has only very slightly increased. Every effort has been made, as opportunities have offered, to effect retrenchment in this branch of the Public Service; and it is satisfactory to point to this slight increase of expenditure, in a large and naturally progressive department, in proof of the exertions which have been made to carry on its business with as little expense as possible.

The increase under the head "salaries" was occasioned by the appointment of two new officers, viz., a Chief Clerk to the Post Office, and an officer to take charge of the "Inquiry Office," which was opened in 1869, as well as to the appointment of extra letter-carriers for Sydney and the country, and by the salaries of thirty-four additional postmasters. It was also necessary in 1869 to appoint a groom to attend to the horses attached to the head office, and to provide two extra stampers and sorters to meet the increased business of the department :—

The item conveyance of mails may be particularized as follows :—

	£	s.	d.
Mail conveyance by horse and stage	46,783	2	4
Do. rail	3,375	15	4
Do. steam and sailing vessels	3,658	5	7
Do. to and from railway stations, and portorage	755	0	8
Gratuities for sorting Hunter River and other mails	120	0	0
	<u>£54,692</u>	<u>3</u>	<u>11</u>

The amount voted for mail conveyance during 1869 was £57,120, irrespective of the subsidy paid to the Peninsular and Oriental Steam Navigation Company towards the English mail contract, which is not included in the above returns.

In 1869 there were 296 distinct mail contracts, of which fifteen were transferred at the request of the original contractors, and nine were cancelled during the year.

Particulars of contracts entered into for the conveyance of inland mails are given in the Appendix. Appendix G.

POSTAL INSPECTION.

During the year 1869, the Postal Inspectors travelled over 9,102 miles of mail route, and inspected 112 post offices, viz. :—Albury, Apple-tree Flat, Armidale, Balranald, Baradine, Bathurst, Berrima, Binalong, Bowenfells, Bowrall, Branxton, Brownlow Hill, Burrawang, Burwood, Canberra, Camberwell, Camden, Campbelltown, Cobbitty, Cobbora, Conargo, Coonabarabran, Coolah, Coonamble, Coramundra, Croki, Cudgegong, Cullen Bullen, Cundletown, Deniliquin, Denison Town, Douglass Park, Dubbo, East Maitland,

Maitland, Emu, Emu Ferry, Five Dock, Forbes, Ghinni Ghinni, Gilgandra, Gloucester, Goulburn, Gundagai, Gundaroo, Hartley, Haslem's Creek, Hay, Hexham, Ilford, Jereelderie, Junee, Kelso, Langworthy's, Lanyon, Limeburner's Creek, Lithgow, Little Hartley, Liverpool, Lochinvar, Manly, Marulan, Maude, Meadow Flat, Millamurra, Molong, Montefiores, Moorooloolen, Morangaroo, Moss Vale, Morpeth, Moulamein, Mudgee, Mundooran, Murrumburrah, Murrurundi, Muswellbrook, Myall River, Nattai, Newcastle, Obley, One-tree Hill, Ophir, Orange, Paddington, Parramatta, Penrith, Picton, Port Macquarie, Queanbeyan, Raymond Terrace, Richmond, Rydal, Singleton, Smithfield, St. Mark's, Stroud, Tambaroora, Tamworth, Taralga, Tarcutta, Taree, Tinonee, Tocumwal, Urana, Wagga Wagga, Wanganella, Watson's Bay, Wellington, West Maitland, Windsor, Wingham, Yetholme.

The extension of the Railway to Goulburn on the Southern side and to Bowenfels on the Western side enabled the Department to afford considerable accelerations in the time-tables for mail conveyance in both districts during the year 1869. It is a matter of great congratulation that the city of Goulburn is now within seven hours communication by post with Sydney.

The mail contracts have generally been well performed during the year, although in some instances, from the low price of the contracts, the contractors in severe weather have had considerable difficulty in fulfilling their agreements.

INQUIRY OFFICE.

In the year 1869, in order to meet what was conceived to be a very important requirement of the Sydney public, I appointed a qualified officer to give information as to the postage chargeable on, and as to the weight of letters, &c., and also to afford such other information as might lead inexperienced persons aright in their efforts to secure the correct transmission of their correspondence. A large amount of postal knowledge has been communicated to the public through this office, and the number of persons who apply for information has convinced me of the necessity and usefulness of the Inquiry Office, while it more than justifies the small expense which its maintenance entails upon the department.

AMALGAMATION OF POSTAL AND TELEGRAPH DUTIES.

I may allude in this Report to the steps taken towards the end of the year 1869, in order to introduce, on the 1st January, 1870, a general scheme for the amalgamation of the post and telegraph offices in various parts of the Colony; it having been considered that a large saving in the expenditure of the department could be effected by the appointment of the telegraph station master as postmaster wherever the duties would permit of such a combination; and moreover it was deemed that the postal duties would be more efficiently performed by officers entirely under the control of the Government, than by storekeepers and others, who necessarily make the performance of these duties subservient to the interest of their private business. Arrangements were made to introduce this scheme at about thirty-five offices, in various parts of the Colony, and its practical working can be properly tested in time to be reported upon in the next Annual Report; but I may state that I have every confidence that it will be found to work satisfactorily. I take this opportunity to mention that great credit is due to the officers of both the General Post Office and the Chief Telegraph Office, for the zealous exertions displayed by them (without any extra clerical assistance being afforded) in order to bring this scheme into operation on the 1st January, 1870, the date fixed by me, seeing that a very large amount of extra correspondence was imposed upon them,—in the case of the Post Office officials, at the most busy period of the year, which necessitated not only the sacrifice of the usual holidays allowed by the Government, but a very large amount of labour after office hours.

NEW POST OFFICE BUILDING.

Considerable progress has been made in the erection of the new General Post Office, in George-street, and great exertions should be made to complete it as speedily as possible, as the present temporary building is found exceedingly inconvenient for the efficient transaction of the increasing business of the department, while, in point of health, it is anything but desirable that the officials employed should be compelled to work in the present ill-ventilated and unwholesome building any longer than is absolutely necessary. During the year 1869, I regret that a large amount of sickness prevailed amongst the officials, which is attributable to a large extent to the cause I have just mentioned.

I append a Report from the Superintendent of the Money Order Department, and also a Report ^{Appendices H & I} from the Superintendent of Telegraphs, showing the progress during the year 1869, of the business of the departments under their management.

I have the honor to be,

My Lord,

Your most obedient servant,

DAN^l EGAN,

Postmaster General.

APPENDIX.

A.

RETURN of Postal Lines established in 1869.

Road.	Postal Line.	Frequency of Communication.	Miles.
Western	Cullen Bullen and Glen Alice	Once a week	25
	Caloola and Tea-pot Swamp	Once a week	6
	Rydal and Sodwalls	Three times a week	5
	Guyong and Icely	Three times a week	7
	Bathurst and Eglinton	Twice a week	4
	Gilgumbone and Merri Merri	Once a week	52
	Tambaroora and Hill End	Twice a week	3
	Long Swamp and Trunkey Creek	Twice a week	8
	Railway Station and Post Offices, One-tree Hill, Little Hartley and Hartley	Six times a week	6
	Mundooran and Coomabarabran	Once a week	50
Southern	Lithgow and Bowenfalls	Six times a week	3
	Sutton Forest and Cross Roads	Four times a week	4
	Yass and Taemas <i>via</i> Warroo ..	Twice a week	12
	Berrima and Moss Vale Post Office and Railway Station	Twelve times a week	5
	Wingecarribee and Robertson	Twice a week	5
	Howlong and Moorwatla	Twice a week	6
	Narcllan and Cobbitty	Six times a week	5
	Pyree and Numba	Six times a week	3
	Mooroowoolen and Marulan	Six times a week	2
	Narrandera and Coramundra	Twice a week	154
Northern	Bungonia and Jacqua	Once a week	17
	Long Reach and Big Hill	Twice a week	6
	Bandon Grove and Underbank	Once a week	9
	Codrington and Wyrallah	Once a week	4
	Falconer and Oban	Once a week	15
	Railway Station and Post Office, Camberwell	Three times a week	3
	Warialda and Goondawindi, <i>via</i> Oragon, Gunyerwaraldi, Yalaroi, Tooloona, &c.	Once a week	130
	Dungowan and Tamworth, <i>via</i> Nemingha Flat	Once a week	20
	Ebor and Armidale	Once a week	50
	St. Peter's and Cook's River	Twelve times a week ..	2
	Total		621

B.

RETURN of Postal Lines discontinued in 1869.

Road.	Postal Line.	Frequency of Communication.	Miles.
Western	Orange and The Meadows	Once a week	6
Southern	Braidwood and Queanbeyan, <i>via</i> Molonglo Gap	Twice a week	36
	Gundagai and Clarendon	Once a week	25
Northern	Berrima and Nattai	Twelve times a week	8
	Goulburn and Bungonia	Three times a week	16
	Barraba and Wood's Reef	Once a week	16
	Total		107

C.

RETURN of Increased Postal Accommodation afforded during 1869 on existing Lines.

Road.	Postal Line.	Additional Communication afforded.	Miles.
Western	Wellington and Dubbo	Twice a week	54
	O'Connell and Mutton's Falls	Once a week	10
	Bourke and Belalie	Once a fortnight	100
Southern	Rydal and Sodwalls	Three times a week	5
	Murrumburrah, Coramundra, Junee, and Wagga Wagga	Once a week	100
	Crown Flat, Lower Araluen, Mullenderree, and Moruya	Four times a week	31
	Braidwood, Upper Araluen, Redbank, and Crown Flat	Three times a week	18
	Mooroowoolen and Goulburn	Six times a week	19
	Ten-mile Creek and Piney Range	Once a week	30
	Marulan and Bungonia	Three times a week	10
Northern	Wallgett, Brewarrina, and Bourke	Once a week	190
	Casino and Kynnumboon	Once a fortnight	60
	Railway Station and Post Office, Singleton	Seven times a week	1
	Mount Vincent and Cooranbong	Once a week	9
	Cassilis, Turco, and Coolah	Once a week	20
	Total		657

9

D.

RETURN of Decreased Postal Accommodation during 1869 on existing Lines.

Road.	Postal Line.	Frequency of Communication.		Miles.
		1868.	1869.

H.

REPORT ON THE MONEY ORDER OFFICE.

(31ST DECEMBER, 1869.)

Money Order Office,
Sydney, 1 June, 1870.

Sir,

I have the honor to furnish my Report upon the Money Order Department for the year 1869.

2. The following tabular statement will show the increase in the business of the department under my charge during the year 1869:—

Year.	Number of Offices on 31st December.	Number of Orders issued during the Year.	Amount.	Number of Orders paid during the Year.	Amount.
1868	158	56,492	£ s. d. 247,488 19 10	50,437	£ s. d. 222,570 11 8
1869	164	66,062	288,476 1 9	59,129	263,297 18 2
Increase for 1869..	6	9,570	40,987 1 11	8,692	40,727 6 6

3. Although only six additional offices were established during the past year, the increase in the amount of Money Orders issued and paid amounted to £81,714 8s. 5d., as shown by the foregoing table.

4. From the large addition to the Revenue of the Department which has invariably resulted from every extension of the Money Order System, I shall recommend the establishment of additional agencies whenever desirable opportunities occur.

5. The new agencies established in 1869 were at the following places:—Broughton Creek, Cargo, Dovedale, Gladesville, Lismore, and Milton.

6. The usual statistical tables are annexed, from which the transactions will be seen in detail.

7. The Revenue and Expenditure of the Money Order Department during the same period is shown by the following return:—

Revenue.		Expenditure.	
Commission for issuing orders	£ s. d. 2,863 19 0	Salaries	£ s. d. 1,695 6 8
Commission on duplicates, &c., &c.	18 10 0	Extra clerical	26 0 0
Interest from Bank of New South Wales	165 14 4	Postmasters' commission	633 4 6
		Intercolonial and United Kingdom (balance) commission	242 7 1
		Travelling expenses.....	19 8 3
		Incidental	7 17 7
		Balance of revenue over expenditure	423 19 3
	£ 3,048 3 4		£ 3,048 3 4

I have the honor to be,

Sir,

Your most obedient servant,

F. W. HILL.

No. 1.

COMPARATIVE RETURN, showing the number and amount of Money Orders issued, with the amount of Commission thereon, and the number and amount of Money Orders paid, in New South Wales, each year, since the commencement of the system, to 31st December, 1869.

Year.	Number of Offices.	Orders Issued.			Orders Paid.	
		Number.	Amount.	Commission.	Number.	Amount.
1863	18	11,473	£ 53,861 14 4	£ 614 19 6	8,425	£ 40,871 19 9
1864	68	21,912	105,899 13 10	1,203 12 6	16,683	84,139 3 2
1865	73	28,469	130,716 12 0	1,439 1 0	23,556	112,367 0 0
1866	113	41,968	196,071 5 4	2,055 13 0	35,398	168,241 13 4
1867	120	60,846	240,062 1 8	2,656 11 0	53,619	210,321 4 1
1868	158	56,492	247,458 19 10	2,526 9 6	50,437	222,570 11 8
1869	164	66,062	238,476 1 9	2,863 19 0	59,129	263,297 18 2

No. 2.

I.

Report of the Superintendent of Telegraphs on the progress of Electric Telegraphs in New South Wales to 31st December, 1869.

Sir,

I have the honor, since the date of my last Report, for the year 1868, to state that the following Telegraph extensions have been made, viz. :-

	£	s.	d.
From Kiandra to Cooma, 60 miles—Cost of construction	1,718	1	4
„ Armidale to Port Macquarie, 125 miles	5,172	15	0
„ Araluen to Moruya, 26½ miles	2,405	0	10
„ *Newcastle to Waratah Colliery, 5 miles	54	18	6
„ Parramatta to Wiseman's Ferry, 35¼ miles	1,304	8	4

Those now in course of construction are as follows, viz. :-

Kiama to Jervis Bay; Grafton to Clarence River Heads; Eden to Gabo Island; Picton to Goulburn; Castle Hill to Barranjuan; Penrith to Bathurst.

New Stations have been opened on the dates mentioned, as follows, viz. :-

At Rydal, on 12th April; Bowenfells, 23rd December; * Narrabri, 8th June; * Gunnedah, 7th June; Port Macquarie, 6th August; Nelson's Bay, 22nd October; and Marulan, 5th January.

* Guaranteed lines and stations marked thus *

The following statement will show the number of Messages sent from, and amount of business done at, each Station during the past year.

	Messages.	Amount.			Messages.	Amount.

	£32,774	15	11
Expenditure during 1869	28,128	12	0
Net profit	£4,646	3	0

The total length of line at present erected is 5,053 miles.
Cost of construction, £189,145 Os. 11d.

I have the honor to be,

Sir,

Your most obedient servant,

E. C. CRACKNELL,

Superintendent of Telegraphs.

The Secretary,
General Post Office.

1870-71.

NEW SOUTH WALES.

POST OFFICE.

SIXTEENTH ANNUAL REPORT,

BEING THAT FOR THE YEAR

1870,

TO WHICH ARE APPENDED THE REPORTS FROM THE OTHER DEPARTMENTS
UNDER THE CONTROL OF THE POSTMASTER GENERAL.

Presented to both Houses of Parliament, by Command.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1871.

THE POSTMASTER GENERAL to HIS EXCELLENCY THE GOVERNOR,

TRANSMITTING THE

SIXTEENTH ANNUAL REPORT ON THE POST OFFICE DEPARTMENT, BEING THAT FOR THE YEAR 1870.

General Post Office,
Sydney, 16th May, 1871.

My Lord,

I have the honor to transmit, for the information of your Excellency, the Sixteenth Annual Report on the Post Office Department, being that for the year 1870.

INLAND SERVICE.

Year.	Extent of Postal Routes on 31st December.	Number of Miles travelled.	Cost of Conveyance of Mails.	Average Cost per Mile.	Number of Post Offices.
	Miles.		£ s. d.	d.	
1869.....	13,238	2,879,659	50,158 17 8	4½	521
1870.....	14,242	3,062,458	48,648 11 10	3½	562
Increase	1,004	182,799	41
Decrease	1,510 5 10	½d.

In the Appendix will be found returns shewing the length of new lines during 1870 to be 1,136 miles, and the length of postal lines abolished during the same period to be 132 miles,—the actual increase in the postal route in the year 1870, as compared with that of the year 1869, being 1,004 miles, as shewn in the above return. A statement of the increased communication on existing lines will be found in the Appendix. Appendices A & B.
Appendix C.

The extent of postal lines by horse, stage, and rail may be stated as follows:—

Horse	10,038
Stage	3,865
Rail	339
Total.....	<u>14,242 miles.</u>

The extension of the railway to Rydal in the west and to Aberdeen in the north, during the year 1870, caused an increase in the railway mileage; and the conveyance of the mails the extra distance by train enabled the department to effect some acceleration in the transit of correspondence to and from these districts.

While alluding to the conveyance of mails by railway, I may mention that during the year 1870 special mail-vans were introduced on the southern line of railway; these vans have been fitted up expressly for the more efficient performance of this portion of the postal service. They contain drop-boxes for the reception of letters at the various stations at which the train may stop, which letters are sorted by the guard who accompanies the mails, and is specially charged with the transaction of the postal business.

At the present time, on the western, and to some extent also on the northern, line, the conveyance of mails by railway is not so satisfactory as it should be, owing to the insufficient appliances provided; but measures are being taken to secure for the mail transit on these lines the same advantages which are at present in force upon the southern line. When the whole of the vans required are completed it is intended to devise some plan which will secure to the public all the advantages of a travelling post office.

It will be seen from the return of postal lines established that some lengthy postal routes were opened up during 1870. Amongst these may be enumerated the lines between Wilcannia and Hoodville, 200 miles; Cannonbar and Brewarrina, 117 miles; Menindee and Mount Gipps, 85 miles; Wagga Wagga and Albury, 88 miles; Bowna and Welaregang, 72 miles; Braidwood and Queanbeyan, 50 miles; Casino

Casino and Unumgar, 50 miles ; Clarence River Heads and Ballina, 57 miles ; and Brewarrina and Brenda, 100 miles. It is a matter for congratulation that, although the actual extent of additional route opened in the year 1870 was 1,004 miles, the total cost of the conveyance of the inland mails throughout the Colony during that year shows a reduction of £1,510 5s. 10d., as compared with the cost of the inland mail conveyance in the year 1869.

The number of post offices established during the year 1870 was 46, the number re-established, 1, and the number discontinued, 6,—making an actual increase of 41 in the number of post offices in the Colony, as is shown in the above tabular return.

Appendix D.

A list of post offices on the 31st December, 1870, will be found in the Appendix.

It may not be uninteresting here to mention that, for the convenience of the persons who visited the Intercolonial Exhibition, which was opened at the Prince Alfred Park on the 30th August, 1870, a temporary post office was established in the vicinity of the Exhibition Building. This branch office was kept open daily (except Sundays) from 9 A.M. to 5 P.M., and an officer attached to the head office was in attendance to deliver letters, sell postage stamps, and afford information to the public.

The letter-box at this branch office was cleared daily (except Sundays) at 6.15 A.M., at noon, and at 3 P.M. ; and during the time it was open (viz., from 30th August to 30th September, about one month) the—

Number of letters posted at branch post office was	1,245
Number of letters delivered to persons at the branch post office...	663
Total	<u>1,908</u>

Postage stamps to the value of £3 4s. 4d. were disposed of.

The building in which the branch post office was established was also connected by electric telegraph with the head office in Sydney, and no less than 183 messages were transmitted from the Exhibition Building to various parts of the Colony, returning a revenue of £25 1s. 8d.

During the year 1870 there were no less than 131 changes of postmasters. I may here remark, that changes of postmasters militate against the efficiency of the service to a larger extent than may be imagined by persons unacquainted with postal routine. It has been found that it is only by experience gained through length of service that all the details of postal duties are acquired even by persons possessing more than average ability ; and therefore the oftener a change of postmaster takes place the less efficiency is displayed in the transaction of postal business affected by such changes. It not unfrequently happens at some places that postmasters are changed every two or three months, and the consequence is, that the department has no sooner instructed one person in the proper performance of his duties than the same ground has to be gone over again in reference to his successor.

I dwell at this length on this matter for the reason that to some extent this difficulty might be removed by a proper selection in the first instance by the residents (who generally nominate, and whose recommendation is for the most part adopted) of an eligible person who would at the same time regard the office of postmaster as a permanent appointment, and not (as is in experience found to be the case) to give their recommendation in favour of a person who may be the most popular and perhaps the most eligible but the least likely to hold the office for any length of time. It is impossible for the head office, at its great distance from most of the country post offices, to exercise any check upon this matter, but I feel sure the residents themselves, on their attention being directed to the difficulties which attend the existing practice, will see the necessity for not overlooking the likelihood of permanency as a qualification of the person they may in future recommend for the office of postmaster.

The offices in various parts of the Colony, at which, on the 31st December, 1870, the postal duties were combined with those of the electric telegraph or railway, were as follows, viz. :—

POSTAL AND TELEGRAPHIC DUTIES COMBINED AT

Adelong	Euston	Muswellbrook
Araluen	Forbes	Mudgee
Armidale	Glen Innes	Moruya
Balranald	Grafton	Merimbula
Bega	Grenfell	One-trec Hill
Bendemeer	Gundagai	Orange
Braidwood	Hay	Parramatta
Burrowa	Inverell	Port Macquarie
Campbelltown	Kiandra	Queanbeyan
Cassilis	Kiama	Richmond
Cooma	Liverpool	Rydal
Deniliquin	Merriwa	Raymond Terrace
Dubbo	Moorooloolen	Rocky Mouth
Denman	Morpeth	Scone
East Maitland	Moulamein	Singleton
Eden	Murrurundi	Sofala

Tambaroora

Tambarooma	Urana	West Kempsey
Tamut	Uralla	Wollombi
Tamworth	Wagga Wagga	Windsor
Tenterfield	Wentworth	Young
Terrara	Wollongong	

POSTAL AND RAILWAY DUTIES COMBINED AT

Ashfield	Haslem's Creek	Norwood
Burwood	Lithgow	Seven Hills
Bowral	Menangle	Waratah
Blacktown	Nattai	

In my report on the progress of the Post Office Department during the year 1865, I alluded to certain advantages which would be likely to accrue from the formation of postal districts throughout the Colony, each to be governed, to a certain extent, by an official postmaster, who would inspect the various smaller offices in his district. The carrying out of this proposal would doubtless be more expensive than the present system, but I am convinced that its operation would be found more generally beneficial than the scheme of amalgamation of several distinct and widely different duties, which was somewhat extensively carried out during the year 1870. No doubt the combination of several duties at small townships has been attended with success as regards the performance of the duties, as well as by effecting a saving of the public expenditure; but in my opinion this combination of duties should in future be restricted to the smaller townships where there is no possibility of the separate duties clashing in emergency, arising from the necessity of a prompt performance of both duties at the same moment, while the assistance provided is only adequate to the discharge of each of the combined duties at distinct periods of time.

Three additional iron letter-receivers were erected during 1870, viz.,—two at Mudgee and one at Tamworth. On the 31st December, 1870, the number of iron letter-receivers erected in the Colony was sixty, and the number of newspaper-receivers eight.

Thirty-nine licenses for the sale of postage stamps were granted during 1870, and seventy-one were cancelled.

A return of the licensed vendors of postage stamps (exclusive of postmasters) on the 31st December, 1870, will be found in the Appendix, showing the number of such persons to be 196, viz.,—113 in Sydney and 83 in various other parts of the Colony. Appendix E.

The cause of so large a number of these licenses having been cancelled is this: That hitherto, year by year, the list of vendors has received considerable additions to its number, while in consequence of those vendors who had ceased to sell stamps having omitted to intimate this fact to the head office their names were not erased from the list; but steps were taken during the year 1870 to ascertain which of these vendors had discontinued the sale of stamps, and the result was that the abovementioned number of licenses were withdrawn.

The residents at Woollahra and Tamworth were afforded the advantages of a delivery by letter-carrier during the past year, and further facilities of this nature were also provided for the residents of Newcastle and Parramatta by the appointment during 1870 of an additional letter-carrier at each of these places.

The number of letter-carriers employed on the 31st December last was 54, these being distributed in various parts of the Colony as follows, viz. :—

Sydney and suburbs	37
Armidale	1
Bathurst	1
East Maitland	1
Goulburn	1
Grafton	1
Morpeth	1
Mudgee	1
Newcastle	3
Parramatta	2
Singleton	1
Tamworth	1
West Maitland	2
Windsor	1

The number of persons employed in connection with the Postal Department during 1870, exclusive of mail contractors, may be stated as follows, viz. :—

Postmaster General	1
Secretary	1
Accountant	1
Superintendent, Mail Branch	1
Chief Clerk of Post Office	1
Cashier	1
Clerks	37
Postal Inspectors	2
Mail Guards	6
Stampers, letter-carriers, &c.	76
Country postmasters	562
Assistant postmaster	1
Total	690

The fee chargeable on letters posted within fifteen minutes after the hour fixed for closing the inland and intercolonial mails was reduced on the 15th December, 1870, from 6d. to 3d.

During the year 1870 postal inspection was extended to ninety-three post offices, viz. :—

Appin	Dungog	Muswellbrook
Ashfield	Dubbo	Morpeth
Armidale	East Maitland	Morangaroo
Apple-tree Flat	Emu Ferry	Mudgee
Avisford	Emu	Merrondee
Albion Park	Gap Range	Molong
Bandon Grove	Goulburn	Nattai
Bowral	Gundaroo	Newcastle
Bungonia	Gundagai	One-tree Hill
Burrowa	Glen Alice	Orange
Bathurst	Guntawang	Penrith
Bowenfels	Grafton	Queanbeyan
Barragon	Gongolgan	Rylstone
Burrendong	Hartley	Rydal
Black Rock	Ironbarks	Seaham
Ballina	Ilford	Singleton
Bourke	Jercelderie	Two-mile Flat
Campbelltown	Junea	Terrara
Canberra	Kiama	Tamworth
Clarence Town	Liverpool	Urana
Collector	Little Hartley	Wagga Wagga
Conargo	Lithgow	Windellama
Cullen Bullen	Louisa Creek	West Maitland
Cudgegong	Long Creek	Windeyer
Cobbora	Lawrence	Wellington
Casino	Lismore	Wallsend
Clarence River Heads	Marulan	Woodburn
Coraki	Moama	Wardell
Codrington	Moorooloolen	Wyrallah
Cannonbar	Moss Vale	Warren
Deniliquin	Murrurundi	Yass

The Postal Inspectors during 1870 travelled over 8,630 miles of postal route.

FOREIGN SERVICE.

The following is a return of the specified and actual days of arrival and departure of the contract steamers of the Peninsular and Oriental Steam Navigation Company during the year 1870, showing the number of days taken in the passage from and to London *via* Suez and Brindisi, *via* Suez and Marseilles, and *via* Suez and Southampton :—

Arrival at Sydney.					Departure from Sydney.						
Name of Vessel.	Specified date.	Actual date.	Actual number of days.			Name of Vessel.	Specified date.	Actual date.	Actual number of days.

It will be seen that the contract of the Peninsular and Oriental Steam Navigation Company during the year 1870 was satisfactorily performed, having in the case of the inward mail arrived at Sydney before the stipulated time on every occasion, except one, viz., in January, when the steam packet reached Sydney on the contract day.

The only remark in reference to the homeward mail, which appears necessary, is in explanation of the delay which occurred in the mail despatched from Sydney on the 16th of June, per "Malta," which occupied no less than 71 days in its passage *viâ* Southampton, 65 days *viâ* Marscilles, and 63 days *viâ* Brindisi. This delay was owing to the break-down of the steamship "Malta," and the consequent transfer of the mails to the "Avoca" at King George's Sound, which latter vessel did not reach Point de Galle in time to catch the homeward Indian mail.

In the Appendix is given a return showing the apportionment of the subsidy paid for the mail service *viâ* Suez during the years 1866, 1867, 1868, 1869, and 1870, which affords some useful information in reference to the cost of mail conveyance by contract packet. Appendix F.

In consequence of the difficulties which attended the transmission of mails through France *viâ* Marscilles, occasioned by the Franco-Prussian war, the Imperial postal authorities completed arrangements for the conveyance of mails to the United Kingdom by way of Brindisi, the Brønner, Prussia, and Belgium. These arrangements commenced with the mails despatched from London on the 21st October, and with those for London, which reached Alexandria on the 23rd October, 1870.

The working of the Brindisi route, as regards expedition in the transit of mails, has justified all expectations of its value, and no doubt when it can be used at less expense the bulk of Australian correspondence will be forwarded by this route.

The following return shows the dates of arrival at and departure from Sydney, of the steamers of the Californian, New Zealand, and Australian line of Mail-steamers, and the number of days occupied in the transit of the mails to and from London *viâ* San Francisco.

Arrival at Sydney.			Departure from Sydney.

			Wonga Wonga	30 September	59
			City of Melbourne.....	31 October	57
			Wonga Wonga	30 November	Receipt of Mail not acknowledged
			City of Melbourne.....	31 December	

As I have in a minute upon the Ocean Postal Service with Europe, dated the 31st January, 1871 (called forth by the approaching termination of the agreement with New Zealand for the subsidising the Californian route), which has already been laid before Parliament, at some length dwelt upon the advantages and disadvantages of the route *viâ* San Francisco as compared with other postal routes, I shall not enter further into the subject in this Report.

During the year 1870 arrangements were made between the Governments of Victoria, South Australia, Tasmania, Western Australia, New Zealand, and this Colony, to reduce the intercolonial rate of postage on letters conveyed by sea between any of these Colonies from 6d. to 3d. per half-ounce, and it was also arranged between South Australia, Victoria, and this Colony, that letters passing across the border of either of these three Colonies into the adjoining one would be chargeable with the inland rate only, viz., 2d. per half-ounce.

The Queensland Government was not able during 1870 to agree to similar reductions of postage; but I am glad to state that it has since been enabled to join the other Colonies in carrying into effect this important matter.

REVENUE AND EXPENDITURE.

The following return shows the revenue of the Post Office Department, collected during the year 1870, compared with the revenue of 1869:—

Year.	Sale of Stamps.	Fees for Private Boxes.	Postage on Unpaid Letters, &c.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1869	83,720 14 11	219 5 6	3,715 1 4	87,655 1 9
1870	80,763 10 11	196 7 0	3,480 17 11	84,440 15 10
Increase
Decrease	2,957 4 0	22 18 6	234 3 5	3,214 5 11

The expenditure of the department during 1870, compared with the year 1869, may be stated as follows:—

Year.	Salaries.	Contingencies.	Conveyance of Mails.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1869	33,141 8 0	2,914 8 11	54,692 3 11	90,748 0 10
1870	31,108 14 5	2,503 11 8	53,109 9 8	86,721 15 9
Increase
Decrease	2,032 13 7	410 17 3	1,582 14 3	4,026 5 1

The item conveyance of mails may be particularized as follows:—

Mail conveyance by horse and stage	£44,900 15 7
Do. rail	3,747 16 3
Do. steam and sailing vessels... ..	3,656 7 7
Do. to and from railway stations, and portorage	684 10 3
Gratuities for sorting Hunter River and other mails	120 0 0
Total... ..	£53,109 9 8

The amount voted for mail conveyance during 1870 was £56,020, irrespective of the subsidy paid to the Peninsular and Oriental Steam Navigation Company towards the English mail contract, which is not included in the above returns.

In 1870 there were 314 distinct mail contracts, of which eighteen were transferred at the request of the original contractors, and eight were cancelled during the year.

Appendix G.

Particulars of contracts entered into for the conveyance of inland mails are given in the Appendix.

It is a matter of regret that the revenue collected during 1870 shows a decrease as compared with that of the year 1869, which can only be accounted for by the reduction of the intercolonial postage rate, which was brought into operation in the year 1870, and by the general depression which has been felt in commercial circles, owing mainly to the almost unprecedented bad season through which the Colony passed during last year. It is, however, gratifying to find that, with this decrease of revenue, a larger decrease of expenditure was effected in the year 1870; for while the revenue shows a diminution of £3,214, the expenditure of the department (notwithstanding the largely extended facilities provided in 1870, which I have before alluded to) has been lessened by the sum of £4,026.

It will be seen by the above return, showing the expenditure of the department, that an effort was made in the year 1870 to lessen the amount paid for salaries, which resulted in a saving of upwards of £2,000.

In order to meet still further the necessity for retrenchment in the public expenditure, certain reductions were made in the salaries placed upon the Estimates for 1871.

Although, upon comparison with the salaries paid to the officials in various other departments of the Government, those apportioned to employes in the Post Office (especially in the higher grades) will be found to be considerably below the average, while the work exacted is considerably in excess of that required in other offices; yet as the scheme of reduction was a general measure, it was found impossible, on this occasion, to adopt that discrimination in awarding remuneration to labour and responsibility which is desirable, and in fact both just and necessary for the efficiency of the department.

A searching examination into the requirements of the Public Service, to ascertain what duties should be required from every individual official,—what qualifications for the performance of these duties should be considered as essential to appointment,—and what amount of salary should be apportioned as a fair remuneration for the faithful discharge of such services, is a subject which will be imperatively forced upon the Government, and will demand the most serious consideration of the heads of departments.

LETTERS, NEWSPAPERS, AND PARCELS, POSTED THROUGHOUT THE COLONY.

Decrease	757	31	15	48	532	133	713

REGISTRATION BRANCH.

Year.	Number of Registered Letters which passed through the General Post Office.	Number of ounces of Gold which passed through the General Post Office.
1869.....	110,409	1,100½
1870.....	102,915	1,851½
Increase	751½
Decrease	7,494

I may here mention that the postage on gold transmitted through the post was reduced on the 27th August, 1870, to 4d. per ounce.

NUMBER OF MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at and despatched from the General Post Office during the years 1869 and 1870:—

Year.	Received.		Despatched.		Total number of Mails which passed through the Office.
	Inland.	Foreign.	Inland.	Foreign.	
1869.....	47,845	5,015	48,892	4,110	105,862
1870.....	48,982	4,535	52,277	3,800	109,594

MISCELLANEOUS.

I regret to state that no less than four or five instances occurred during the past year (an unprecedented number) in which postmasters have failed to account for registered letters which had come into their charge, but in each of these cases the department has been able by means of the registration system to fix the responsibility upon the proper officer, and so to require him to make good the value of the enclosures, although the Post Office is by law exempt from liability for the loss of any letter. In one case a sum of £30 was paid by a postmaster to meet the loss of a registered letter; in a second case a sum of £10 was paid; in another instance a sum of £5; and in a fourth case £2 was made good by the postmaster to whom the missing registered letter was traced.

Notwithstanding the advice frequently given to the contrary, many persons are constantly sending money and other valuable enclosures through the post in unregistered letters.

Considering the small amount which is levied for the registration of letters, it appears extraordinary that any individual should prefer to risk any valuable enclosure by the omission of so obvious a precaution. The temptation to theft is largely increased in the case of a letter unregistered, and it should therefore be the desire of every person who posts a letter to reduce as much as possible this temptation, by adopting the preventive means afforded by the department.

Complaints as to missing unregistered letters are frequently made, and receive the most careful investigation. As a rule, where a letter has failed to reach its destination, the persons interested at once blame the postal department, and in many instances are so positive in their statements of their own infallibility, that when they have afterwards been informed that the irregularity has arisen through some laches of their own, they have displayed great astonishment. As an instance of this kind, I may mention that two persons—one residing at Sydney, the other at Bathurst—called at the General Post Office, and made a representation that the one in Sydney posted a letter, unregistered, containing £50 in Bank notes, addressed to the other, George-street, Bathurst, which was stated not to have reached its destination. The sender most positively and emphatically denied the possibility of his having erroneously addressed the letter, and gave reasons which seemed conclusive for his being so positive about the matter, yet the letter with its contents intact was discovered misdirected to George-street, Sydney.

A Chinaman on one occasion picked up in the bush three unopened letters, addressed to various parts of the Colony, which had no doubt been given to some one to post, but which had been dropped on the road. Instances have been reported of letters picked up outside the General Post Office, which had evidently been dropped by the persons to whom they had been delivered.

At West Maitland a Manager of a Bank reported that he had posted a packet containing a large amount of money, addressed to a Bank in Sydney, which had not reached its destination. He had ample evidence to prove the correct posting of this packet; it was however subsequently found to have been erroneously addressed to a Bank in Singleton.

Many

Many other instances could be described in which the Post Office officials have been blamed for irregularities, which have subsequently been discovered to be owing to some mistake on the part of persons unconnected with the department.

The completion of the new Post Office is earnestly desired. It is a matter of surprise, considering the inflammable nature of the materials with which the temporary office in Wynyard-square is constructed, that the public property has not been destroyed by fire; and it is no doubt only owing to the watchful attention of the officers, and the strict rules on the subject which have been observed, that this has not been the case.

I append reports showing the progress of the Money Order and Electric Telegraph Departments ^{Appendices H & I} during the year 1870.

I have the honor to be,
Your Lordship's most obedient Servant,
JOSEPH DOCKER,
Postmaster General.

APPENDIX.

A.

RETURN of Postal Lines established in 1870.

Postal Line.	Frequency of Communication.	Miles.
Yetholme and Dirty Swamp	Six times a week	8
Carcoar and Mount Macquarie	Once a week	9
Wilcannia and Hoodsville	Once a fortnight	200
Guntawang and Gulgong	Twice a week	5
Cannonbar and Brewarrina	Once a week	117
Cadia and Forest Reefs	Once a week	6
Oberon and Black Springs	Once a week	16
Albury and Dight's Forest	Once a week	10
Moss Vale and Cambewarra	Three times a week	25
Cambewarra and Nowra	Three times a week	6
Braidwood and Windellama	Once a week	30
Menindee and Mount Gipps	Once a fortnight	85
Kameruka and Candelo	Twice a week	3
Junee and Sebastopol	Once a week	20
Wagga Wagga and Albury, <i>via Cocksindiah</i>	Twice a week	88
Dalton and Wheeo	Twice a week	21
Yass and Woolgarlo	Twice a week	15
Bowna and Welaregang	Twice a week	72
Burrowa and Rye Park	Once a week	14
Braidwood and Queanbeyan	Once a week	50
Eden and Towamba	Once a week	16
Ballalaba and Adjanbella	Once a week	35
Casino and Unungar	Once a week	50
Clarence River Heads and Ballina	Once a week	57
Scott's Flat and Westbrook	Twice a week	6
Denman and Kerrahee	Three times a week	30
Nyall River and Clarkin's Crossing	Once a week	41
Brewarrina and Brenda	Once a week	100
Randwick and Coogee	Daily	1
	Total	1,136

B.

RETURN of Postal Lines discontinued in 1870.

Postal Line.	Frequency of Communication.	Miles.
Railway Station and Post Office, Nattai	Daily	$\frac{1}{2}$
Tenterfield and Maryland	Twice a week	60
Railway Station and Post Office, Liverpool	Daily	$\frac{3}{4}$
Casino and Brisbane	Once a week	55
Singleton and Scott's Flat	Twice a week	6
Corrections of distances as stated in mileage of year 1869, amounting to	10
	Total	132

C.

RETURN of Increased Postal Accommodation afforded during 1870 on existing Lines.

Postal Line.	Additional Communication afforded.	Miles.
Bathurst, Caloola, Long Swamp, and Trunkey Creek	Once a week	38
Cullen Bullen and Glen Alice	Once a week	25
Cowra and Wood's Flat	Once a week	13
Cooma and Bobundarrah	Once a week	25
Cooma and Kiandra, <i>via</i> Middling Bank	Once a week	50
Railway Station and Post Office, Caumberwell	Three times a week	3
	Total	154

H.

Money Order Office,
Sydney, 3 May, 1871.

Sir,

I do myself the honor to inform you that the following tabular statement will show the business transacted in the Money Order Department during the year 1870, as compared with that of the year 1869, viz. :—

Year.	Number of Offices on 31st Dec.	Orders issued.		Orders paid.	
		Number.	Amount.	Number.	Amount.
1869.....	164	66,062	£ 288,476 1 9 s. d.	59,129	£ 263,297 13 2 s. d.
1870.....	176	65,743	289,325 0 4	58,386	258,321 12 4

2. It will be seen that twelve additional agencies were established during last year. These were at the following places, viz. :—Brewarrina, Coorabong, Euston, Glanmire, Jacqua, Jereelderie, Rocky Mouth, St. Leonards, Taralga, Trunkey Creek, Warren, and Wingham.

3. The usual statistical tables are annexed, from which the transactions will be seen in detail.

4. The Revenue and Expenditure of the Money Order Department during the same period will be seen from the following return :—

Revenue.	Expenditure.
£3,139 14 2	£2,952 16 3

5. Notwithstanding the depression in business during the year 1870, owing to the floods, which were prevalent almost throughout the Colony, I am happy to state that the expenditure of the department in that year was covered by its revenue.

6. On reference to the annexed return, No. 3, it will be seen that there was a large increase, in 1870, in the issue of Orders on the United Kingdom, probably accounted for by the unsettled state of Europe through the Franco-Prussian war. Large sums of money were frequently tendered for Money Orders on the United Kingdom, with offers of an increased rate of commission, which sums of money were declined, being largely in excess of the amount fixed by the regulations of the department. These offers were no doubt made owing to the increased rate of exchange at the various Banks, and to the fact that there was a manifest disposition on the part of the public to prefer the security of the Government.

7. There is every desire to largely extend the money order system, but the office accommodation provided in the temporary building, for the transaction of the money order business of the head office, is already found to be too limited, and this must operate against my recommending, at the present time, the establishment of agencies at many places, which I am persuaded would add to the money order business. It is hoped that, in the new Post Office, which I observe is approaching its completion, ample accommodation will be afforded to the Money Order Department, and that the apportionment of space may not be calculated upon the present business of the Department, but that it may be allotted with every regard to a largely increased business, which is almost certain to take place within a very few years.

I have, &c.,

F. W. HILL,
Superintendent.

No. 1.

COMPARATIVE RETURN, showing the number and amount of Money Orders issued, with the amount of Commission thereon, and the number and amount of Money Orders paid, in New South Wales, each year since the commencement of the system, to 31st December, 1870.

Year.	Number of Offices.	Orders Issued.			Orders Paid.	
		Number.	Amount.	Commission.	Number.	Amount.
			£ s. d.	£ s. d.		£ s. d.
1863.....	18	11,478	53,861 14 4	614 19 6	8,425	40,871 19 9
1864.....	68	21,912	105,899 13 10	1,203 12 6	16,683	84,139 3 2
1865.....	73	28,469	130,746 12 0	1,439 1 0	23,556	112,367 0 0
1866.....	113	41,968	196,071 5 4	2,055 13 0	35,398	168,241 13 4
1867.....	120	60,846	240,062 1 8	2,656 11 0	53,619	210,321 4 1
1868.....	158	56,492	247,488 19 10	2,526 9 6	50,437	222,570 11 8
1869.....	164	66,062	288,476 1 9	2,863 19 0	59,129	263,297 13 2
1870.....	176	65,743	289,325 0 4	2,923 15 6	58,386	258,321 12 4

RETURN, showing the total number and amount of Money Orders issued, and the total number and amount of Money Orders paid, at the several Money Order Offices in New South Wales, during the year 1870.

I.

REPORT of the Superintendent of Telegraphs on the progress of Telegraphic construction in New South Wales, for the year 1870.

Sir,

In forwarding my annual Report for the year 1870, I have the honor to give the following statement of Telegraph extensions for that period, viz. :—

From Picton to Goulburn, double wire; 81 miles—Cost	£4,000 7 10
„ Castle Hill to Barranjuoy..... 30 „ „	1,116 12 4
„ Eden to Gabo Island..... 374 „ „	2,048 13 6
„ Grafton to Clarence River Heads 48 „ „	2,048 10 5
„ Kiama to Jervis Bay 54 „ „	2,776 10 0
„ Sydney to Randwick Racecourse 4 „ „	99 4 5

The unfinished lines, but near completion, were,—

From Wyandah to Casino } both guaranteed.
„ Bathurst to Carcoar }

The second wire along the Railway to Bathurst, and which when completed will greatly facilitate despatch with the Western Districts.

The following new Stations have been opened at the undermentioned dates, viz. :—

At Barranjuoy, 1st January; Rockymouth and Clarence Heads, 1st March; Ullmarra, 9th June; Terrara (guaranteed) and Jervis Bay, 18th April; West Kempsey, on the Armidale and Port Macquarie line (guaranteed), 28th May.

STATEMENT showing number of Messages sent from each Telegraph Station during the year ending 31st December, 1870 :—

Stations.	Number of Messages.	Amount.	Stations.	Number of Messages.	Amount.
Sydney	52,304	£ 12,452 2 4	Marulan	438	£ 59 16 10

RETURN showing the number of Messages transmitted and the amount of Revenue collected during the half-year ended 31st December, 1870, as compared with the corresponding period in 1869.

Month of	1869.		1870.	
	Number of Messages.	Amount.	Number of Messages.	Amount.
July	12,489	£ 2,658 3 4	14,934	£ 2,086 18 5
August	11,807	2,491 10 4	16,289	2,175 1 10
September	13,029	2,668 10 3	18,428	2,374 0 4
October	11,995	2,567 0 4	16,929	2,392 10 5
November	12,250	2,532 16 11	16,682	2,358 7 8
December	14,446	2,996 7 2	17,869	2,361 15 1
	76,016	15,914 8 4	101,131	13,748 13 9

Decrease in the Revenue on the half-year, as compared with the corresponding period in 1869,—£2,165 14s. 7d.
Increase in the number of Messages for the same period,—25,115.

Statement of Revenue from all sources and of Departmental Expenditure, from 1st January to 31st December, 1870:—

Revenue from 86 stations	£28,550 4 8
Balance on Intercolonial business	2,225 10 11
Do. on Guaranteed lines	1,262 3 3
	£32,037 18 10
Expenditure	29,830 8 5
Net profit	£2,207 10 5

Total extent of lines,—5,247 miles.

Cost of construction,—£195,544 15s. 7d.

Reduced charges for telegraphic messages came into operation on the 1st July, 1870, since which date a considerable increase in the number of messages has resulted; for the last six months in 1869 the total number of telegrams was 76,016, and the amount received £15,914 8s. 4d., and for the same period in 1870 the number of messages was 101,131, yielding only £13,748 13s. 9d., showing an increase in the number of messages of 25,115, being fully equal to 25 per cent., and a decrease in the revenue on the half-year, as compared with the corresponding period in 1869, of £2,165 14s. 7d.

I have, &c.,

E. C. CRACKNELL,
Superintendent of Telegraphs.

1870-71.

NEW SOUTH WALES.

STEAM POSTAL COMMUNICATION.
(TIME-TABLE.)

Presented to both Houses of Parliament, by Command.

THE SECRETARY OF STATE FOR THE COLONIES TO THE OFFICER ADMINISTERING THE GOVERNMENT OF
NEW SOUTH WALES.

(Circular.)

Downing-street,
1 November, 1870.

My LORD,

I transmit to you, for your information, copies of the Time-table issued by the Peninsular and Oriental Steam Navigation Company, showing the movements of their steamers during the year 1871.

I have, &c.,
KIMBERLEY.

1870-71.

STEAM POSTAL SERVICE *via* SAN FRANCISCO.

Correspondence relating to existing Service.

No. 1.

THE POSTMASTER GENERAL, N.S.W., to THE POSTMASTER GENERAL, N.Z.

General Post Office,
Sydney, 3 March, 1870.

SIR,

Referring to the contract which is understood to have been entered into between Mr. Hall, of Sydney, and the New Zealand Government, for a mail packet service between Sydney and San Francisco, the first steamer under which contract is advertised to leave Sydney on the 26th instant, I beg to inform you that the Government of this Colony has been applied to for authority to pay to New Zealand the sum of twenty shillings per lb. (the same amount as was charged to the non-contracting Colonies during the existence of the Panama contract) on all correspondence forwarded or received by this Colony by the steamers performing the contract in question.

This sum of twenty shillings per lb. will of course be exclusive of the charge for territorial transit through America, and any other charges that the mails forwarded by this route may be subject to.

If hereafter the Government of this Colony should become a contributor to the cost of the service between Sydney and San Francisco, and its contribution take effect from the commencement of the service, it will of course be understood that any payments at the rate of twenty shillings per lb. that may have been made by this Colony to New Zealand will be refunded by the latter Colony.

I shall be glad to be informed, as early as possible, whether this Colony is at liberty to forward mails on the terms specified herein; and should a reply not be received from you prior to the departure of the first steam-packet, the concurrence of the New Zealand Government will be anticipated, and mails from New South Wales will be forwarded.

I have, &c.,
DANL. EGAN,
Postmaster General.

No. 2.

THE POSTMASTER GENERAL, N.S.W., to THE POSTMASTER GENERAL, N.Z.

General Post Office,
Sydney, 4 March, 1870.

SIR,

Adverting to my letter of yesterday, intimating the intention of this Colony to forward mails by the line of steam-packets it is proposed to establish between Sydney and San Francisco, on the understanding therein particularized, I have the honor to inform you that, until this department is made acquainted with the details of the arrangements which may be entered into for the transmission of correspondence, it is proposed to make up mails only for London and San Francisco, in the former of which mails will be placed correspondence for the United Kingdom, the Continent of Europe, &c., and in the latter that addressed to America, &c.

2. As it is understood that it is the intention of the New Zealand Government to send an officer by the first mail packet to make the necessary arrangements for the due transmission of correspondence *via* San Francisco, I shall feel much obliged if you will instruct such officer to make whatever arrangements may be needful for the forwarding of the New South Wales portion of the mails, and beg to state that any expense in addition to the territorial transit rate through America which may be incurred therefor will be paid by this department, on its being made acquainted with the amount.

3. At the present time there is no information in my possession which would enable me to arrange for any rate which may be levied for postage or for transit on mails from this Colony, nor am I aware with whom to enter into negotiations in the matter. If, therefore, on the return of the officer sent from New Zealand by the first packet, you will communicate to me all the information on the subject which he will have obtained, and which you may think will be useful for the guidance of this office, I shall feel much obliged.

I have, &c.,
DANL. EGAN,
Postmaster General.

No. 3.

THE POSTMASTER GENERAL, N.S.W., to THE POSTMASTER GENERAL, N.Z.

General Post Office,
Sydney, 24 March, 1870.

SIR,

I have the honor to inform you that it has been suggested to me that, if mails were received and dispatched by the line of packets it is proposed to establish between Australasia and San Francisco, once in every four weeks instead of once a month, a time-table could be arranged to alternate with that of the Suez line of packets, so as to afford the advantage of a fortnightly mail; and I have been informed that Mr. H. H. Hall is in a position to arrange with the Government of New Zealand for thirteen instead of twelve mails annually (which would be necessary to secure this advantage).

It

3

It has moreover been pointed out that, under the proposed arrangement for a monthly instead of a four-weekly mail, the correspondence from this Colony would frequently be dispatched *viâ* Suez and *viâ* San Francisco simultaneously.

These points having been suggested to me, I give them for your consideration, as you will doubtless concur in the opinion that if the co-operation of any or all of the adjacent Colonies in the maintenance of the new line is desired, it will be necessary to frame such a time-table as would enable them to make use of the line to advantage.

I have, &c.,
DANL. EGAN,
Postmaster General.

No. 4.

THE POSTMASTER GENERAL, N.Z., to THE POSTMASTER GENERAL, N.S.W.

General Government Offices,
Auckland, 10 May, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter of the 24th March ultimo, with reference to despatching mails by the Australasian and San Francisco line of steamers once in every four weeks instead of once a month, and in reply have to point out that a fortnightly service by the Suez and Californian routes would only give equal fortnightly intervals to one particular place. This arises from the fact that the two services proceed in opposite directions, and therefore overlap each other. Suppose the steamers were made to depart at intervals of a fortnight from Sydney, the intervals would be very different in Melbourne and in New Zealand. Let us, for example, suppose a Suez steamer was to leave Sydney on the 1st of the month, and a Californian steamer fourteen days afterwards, say on the 15th, the Melbourne times to correspond would be—Suez steamer 4th of the month, Californian 12th, or an interval of eight days. The result with New Zealand would be yet more singular. Suppose the same dates at Sydney, the corresponding dates in Auckland would be—Californian boat 22nd of the month, boat to catch Suez steamer 24th of the month. It is therefore evident that the advantages of a fortnightly service alternately by the two routes would be principally confined to one place, and it would follow that the place enjoying the advantage should largely contribute towards the extra cost.

I will confer with the contractor on the subject as soon as he returns from San Francisco, and if he is willing to vary the agreement will let you know.

I have, &c.,
JULIUS VOGEL.

No. 5.

THE POSTMASTER GENERAL, N.Z., to THE POSTMASTER GENERAL, N.S.W.

General Government Offices,
Auckland, 10 May, 1870.

SIR,

I have the honor to acknowledge receipt of your two letters of the 3rd and 4th March respectively.

In reply, I must refer you to past correspondence with the Colonial Secretary, New South Wales, as also to a letter of even date with this. You will observe by the correspondence and the contract, that the only payment which can be admitted from New South Wales is at the rate of ten thousand pounds (£10,000) a year, which payment will also cover the transit of mails for Queensland.

I may observe that this £10,000 passes to the contractor, to whom New Zealand pays considerably more. I should also point out to you that it does not cover the cost of Victorian and other mails; and I have to request that any mails or letters from Victoria and the other Colonies, except Queensland, passing through your office to be despatched by the Californian service, be forwarded on as such, and not be included in your own.

An officer has been despatched to America to obtain all the information you seek, and immediately on his return I will furnish you with it.

I have, &c.,
JULIUS VOGEL.

No. 6.

THE COLONIAL SECRETARY, N.Z., to THE COLONIAL SECRETARY, N.S.W.

General Government Offices,
Auckland, 10 May, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter, No. 73, of the 27th April ultimo, and to express my regret that you have not had time to look into the matter, or you would see that the money received from New South Wales is to be paid to the contractor, and that the only sum authorized to be received is at the rate of ten thousand pounds a year. I have also to point out to you that the £10,000 covers the cost of transmitting the Queensland mails, but not those of any other Colony.

I

I shall be glad if you will let me know at your earliest convenience whether you are prepared to pay a subsidy at the rate of £10,000 a year, commencing from the beginning of the service, for the carriage of Queensland and New South Wales mails, and also to agree to forward the mails of other Colonies only as distinct mails.

You will excuse my pressing you for an answer, but the time is rapidly approaching when other arrangements will require to be made if New South Wales does not see its way to pay the very moderate subsidy asked for, and which secures to her the terminus of the service.

I may add that, relying on the assistance of other Colonies, and the contractor being in need of the money, I am authorizing an advance to be made to him of five hundred pounds beyond the New Zealand subsidy, on account of money to be recovered from other Colonies.

I have, &c.,
JULIUS VOGEL.
(For Colonial Secretary.)

No. 7.

MINUTE OF THE POSTMASTER GENERAL, N.S.W.

General Post Office,
Sydney, 27 July, 1870.

THE Postmaster General submits, for consideration of the Cabinet, the desirability of making provision on the Supplementary Estimates for the current year, and on the General Estimates for the year 1871, for the subsidy to be paid to the Government of New Zealand, on account of the mail service *viâ* San Francisco.

Under the arrangement provisionally made with New Zealand, the amount required to be placed on the Supplementary Estimates will be £7,500 (the service having commenced on the 27th March last), and on the Estimates for 1871 the sum of £10,000.

DANL. EGAN.

The Cabinet concur.—C.C., 27 July, 1870.

No. 8.

THE POSTMASTER GENERAL, N.Z., to THE POSTMASTER GENERAL, N.S.W.

(F. 70/136.)

New Zealand.
General Post Office,
Wellington, 2 August, 1870.

SIR,

Being in expectation of a further communication, I have delayed acknowledging the letter from the Hon. Mr. Cowper, addressed to the Hon. the Colonial Secretary, Wellington, of the 5th May last, on the subject of the mail service *viâ* California.

In reply to that letter, I have the honor again to point out that it was understood that the provisional agreement, applicable to the supposition that the three Colonies would establish the two services, should not stand in the way of assistance being rendered to the service *viâ* California already established.

The provisional agreement has, it appears, quite fallen through, but the California service has continued, and New South Wales has taken advantage of it, Sydney being the terminus.

I regret to learn that your Government hesitate to make so small a contribution to so important an undertaking, and am of opinion that, until they sufficiently appreciate the value of the service to be willing to make that contribution, your department should abstain from using it.

I hope, on consideration, your Government will recognize that it is in no unfriendly spirit that this Government is constrained to come to the conclusion that it cannot agree to convey mails or correspondence by this route to or from non-contracting Colonies on such arrangement as is proposed in the enclosure to your letter of the 26th April last.

I have, &c.,
JULIUS VOGEL,
Postmaster General.

Minute of the Cabinet of New South Wales:—

The amount to be put upon the Supplementary Estimates for 1870 and Estimates for 1871.
C.C., 22 Aug.

No. 9.

THE POSTMASTER GENERAL, N.Z., to THE POSTMASTER GENERAL, N.S.W.

General Post Office,
Wellington, 18 August, 1870.

SIR,

With reference to your letter of the 4th March last, in which you request that, on the return of the officer despatched by this department to America with the first mails *viâ* San Francisco, you may be furnished with the necessary information respecting the transit of mails by this route through the United States territory,—that officer having now returned, I have the honor herewith to transmit, for your information,

information, a statement of the arrangements made with the Washington Department for the exchange of international correspondence between the two countries, and for the transit of closed mails through the United States territory to destination, and the rates chargeable thereon.

I have, &c.,
JULIUS VOGEL,
 Postmaster General.

ARRANGEMENTS.

1.—Correspondence for the United States of America to be made up into mails addressed to San Francisco.

2.—Correspondence for places other than the United States to be made up into closed mails and addressed accordingly.

3.—Correspondence for the Canadian Dominion and other British North American Provinces in the East to be charged transit rates as follows:—

Letters, 6 cents per ounce.

Printed matter of all kinds, 16 cents per pound.

4.—Correspondence for British Columbia, Mexico, Central and South America, and the West Indies, to be charged transit rates for land and sea carriage as follows:—

Letters, 25 cents per ounce.

Printed matter of all kinds, 20 cents per pound.

5.—On the letter bills accompanying the mails for San Francisco will be rendered an account of the weight of the letters, and also of the printed matter, contained in such closed mails forwarded for transmission to either of the above-named countries and colonies; and the accounts arising between the two offices on this class of correspondence to be stated, adjusted, and settled quarterly.

6.—Correspondence between the Colony and the United States to be prepaid; insufficiently paid letters, on which a single rate or more has been prepaid, to be forwarded. Each department to retain the prepaid postage on the outward correspondence and the deficient postage on the inward. No account to be kept between the departments of the two countries upon the international correspondence exchanged between them.

7.—Mails for England to be conveyed from San Francisco to New York, and thence by steamer to Queenstown and Liverpool, as the case may be, in terms of a postal convention between the United Kingdom and the United States Department.

Submitted.—If such rates are levied upon correspondence posted in this Colony as will enable the Post Office here to account to the United States Post Office for the sums mentioned in the 3rd and 4th paragraphs of the enclosure in this letter, it will be necessary to obtain the authority of the Executive Council for the collection of postage in accordance with the attached scale. Looking however at the 10th and 42nd clauses of the Postage Act, it may be considered doubtful whether the Government has power to levy these increased rates before making arrangements in reference thereto with the United States postal authorities.—S.H.L., 5 Jan., 1871.

I think the deduction of the Secretary from these clauses of the Postal Act is correct. As the whole question of a mail service *via* California will shortly be determined by the Cabinet, it would not be worth while to take any steps in this matter until such determination is arrived at. Charges upon despatches by this route may remain as at present until the termination of the arrangement now in force. Let these papers be placed with those bearing upon the contracts.—J.D., 7/1/71.

No. 10.

THE POSTMASTER GENERAL, N.S.W., to THE POSTMASTER GENERAL, N.Z.

(B. 70/4870.)

New South Wales.

General Post Office,

Sydney, 29 August, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter, dated the 2nd instant (F. 70/136), having reference to a communication dated the 5th May last, which was addressed by the Colonial Secretary of this Colony to the Government of New Zealand, on the subject of the mail service *via* California.

2. In reply, I have much pleasure in informing you that the Government of this Colony has placed on the Supplementary Estimates of Expenditure for this year an amount at the rate of £10,000 per annum, and on the General Estimates of Expenditure for the year 1871 the sum of £10,000, as the contribution of New South Wales towards the maintenance of the mail service *via* California from the date of its commencement.

The

The Estimates referred to will shortly be submitted, and there is little doubt that Parliament will sanction the payment of the contribution mentioned therein.

3. It will of course be understood that the payment of the amount in question by New South Wales shall be conditional on the observance of the provisional agreement dated 6th January last.

4. Under the circumstances just explained, this Colony will, in anticipation of your approval, continue to forward mails by the steamers leaving Sydney every month.

5. I may add, that the Government of New Zealand will no doubt receive a similar communication to this one by the out-going mail, from the Honorable the Colonial Secretary of this Colony.

I have, &c.,
DANL. EGAN,
Postmaster General.

THE COLONIAL SECRETARY, N.S.W., to THE COLONIAL SECRETARY, N.Z.

Sydney, 29 August, 1870.

SIR,

The Postmaster General of this Colony having communicated to me a letter, received by him from the Postmaster General of New Zealand, under date the 2nd instant, having reference to my letter of the 5th May last, on the subject of the mail service *via* California,—I have now the honor to inform you that this Government has placed on the Supplementary Estimates of Expenditure for this year an amount at the rate of £10,000 per annum, and on the General Estimates of Expenditure for the year 1871 the sum of £10,000, as the contribution of New South Wales towards the maintenance of the mail service *via* California from the date of its commencement.

2. The Estimates referred to will shortly be submitted, and there is little doubt that Parliament will sanction the payment of the contribution therein.

3. It will of course be understood that the payment of the amount in question by New South Wales will be conditional on the observance of the provisional agreement dated 6th January last.

4. I have the honor to add that, under the circumstances just explained, this Colony will, in anticipation of your approval, continue to forward mails by the steamers leaving Sydney every month.

5. A communication to the above effect, has, I understand, been addressed by the Postmaster General of this Colony to the Postmaster General of New Zealand, for despatch by the outgoing mail.

I have, &c.,
CHAS. COWPER.

No. 12.

THE COLONIAL SECRETARY, N.Z., to THE COLONIAL SECRETARY, N.S.W.

Wellington, 17 September, 1870.

(70/4.)

SIR,

I have the honor, on behalf of the Colonial Secretary, to acknowledge the receipt of your letter of August 29th, in which you inform him, that your Government have placed on the Supplementary Estimates for this year an amount at the rate of ten thousand pounds per annum and on the General Estimates for 1871 the sum of ten thousand pounds, as the contribution of New South Wales towards the maintenance of the mail service *via* California from the date of its commencement; and you add, that it will of course be understood that payment of the amount in question by New South Wales will be conditional on the observance of the provisional agreement dated January 6th, 1870.

In reply, I have the honor to point out to you that circumstances have now rendered it beyond the power of this Government to abide by that provisional agreement.

You will, I hope, acquit this Government of anything but an anxious desire to give effect to the arrangement entered into in January last; but we have found it difficult even to obtain replies from your Government to our communications on the subject, and there has been nothing to warrant us in submitting to the Assembly the question of approving the provisional agreement. On the other hand, the Californian service has been continued, and you did not even propose to this Government to make the current contribution towards it—as asked by my letter of the 10th January last, and which, before I left Sydney, it was understood you would do, under any circumstances. Instead of making a current contribution, you offered a payment of 20s. per lb. for mails carried for New South Wales—a payment which would have been of very little use indeed towards aiding the contract.

The Assembly of New Zealand met after your Parliament had been adjourned; and it appeared very evident to us that we should have to make our own arrangements.

I have the honor to enclose to you a copy of Resolutions on the subject which were adopted by our Assembly.

You will understand that these Resolutions contemplate a possible change of the service, so that I am not now at liberty to make any arrangement with you, beyond that you should, as was originally understood, contribute towards the service, at the rate of ten thousand pounds a year from its commencement.

I have to add, that, should any modification of the service be effected, the intention is to arrange for thirteen services during the year, and—if your Government is willing to contribute—to so regulate the voyages as to make the service alternate in Sydney with that *via* Suez. I hope, therefore, you will have no difficulty in agreeing to postpone any final arrangements until we have had an opportunity of further discussion—probably a personal one, as may be arranged; and that, meanwhile, your Government will agree to pay at the rate of ten thousand pounds a year from the commencement of the service. £10,000.

Should this be agreed to, I shall be obliged by your remitting to me the amount due up to the present time, in order that I may pay it to the contractor, less about a thousand pounds, which I have had £1,000. to pay him on your account; I having, in Sydney, guaranteed to him two thousand pounds as a contribution £2,000. from New South Wales during the first six months of his contract period.

I have, &c.,
JULIUS VOGEL.

[Enclosure.]

POSTAL SERVICE TO SAN FRANCISCO.

RESOLUTIONS adopted by the House of Representatives, New Zealand, on 23rd August, 1870.

"SREING that neither of the Australian Colonies has become a party to the San Francisco steam contract, and that New Zealand has been left single-handed to initiate this line, the Committee is of opinion that in the future conduct of the service this Colony should look to its own interests exclusively; with which view it is expedient that the steamers arriving at Auckland from Honolulu should proceed to Port Chalmers instead of to Sydney, calling again at Auckland on the return voyage to Honolulu.

"The Committee is further of opinion that the time to be allowed between Auckland and Port Chalmers, inclusive of stoppages at the Ports of Wellington and Lyttleton, should not exceed 100 hours.

"That with a view to carrying the foregoing proposal into effect, the Government be empowered to increase the present mail subsidy so that it shall not exceed £40,000 a year."

No. 13.

THE POSTMASTER GENERAL, N.Z., to THE POSTMASTER GENERAL, N.S.W.

70/3.

Auckland, 22 September, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter of the 29th August, 1870, containing information as to the course proposed to be adopted by your Government with reference to the Californian mail service.

A letter of similar tenor and even date was received from the Hon. the Colonial Secretary of New South Wales, and to that gentleman I have addressed a reply at length, to which, if you will allow me, I will refer you, and copy of which I attach hereto.

I trust that you will have no difficulty in at once agreeing to contribute on the terms stated in my letter to the Hon. the Colonial Secretary. I confess that I do not see how we can arrange to carry your mails upon any other terms.

I hope that we shall be shortly able to make the Californian service a fully satisfactory one—a service such as, having regard to the advantages which it will secure to you, will be undeniably economical.

I have, &c.,
JULIUS VOGEL.

[Enclosure.]

The Postmaster General, N.Z., to The Colonial Secretary, N.S.W.

Wellington, 17 September, 1870.

Sir,

I have the honor, on behalf of the Colonial Secretary, to acknowledge the receipt of your letter of August 29th, in which you inform him that your Government have placed on the Supplementary Estimates for this year an amount at the rate of £10,000 per annum, and on the General Estimates for 1871 the sum of £10,000, as the contribution of New South Wales towards the maintenance of the mail service *via* California, from the date of its commencement; and you add that of course it will be understood that payment of the amount in question by New South Wales will be conditional on the observance of the provisional agreement dated January 6, 1870.

In reply, I have the honor to point out to you that circumstances have now rendered it beyond the power of this Government to abide by that provisional agreement.

You will, I hope, acquit this Government of anything but an anxious desire to give effect to the arrangement entered into in January last; but we have found it difficult even to obtain replies from your Government to our communications on the subject, and there has been nothing to warrant us in submitting to the Assembly the question of approving the provisional agreement. On the other hand, the Californian service has been continued, and you did not even propose to this Government to make the current contribution towards it—as asked by my letter of the 10th January last, and which, before I left Sydney, it was understood you would do under any circumstances. Instead of making a current contribution, you offered a payment of 20/- per lb. for mails carried for New South Wales—a payment which would have been of very little use indeed towards aiding the contract.

The Assembly of New Zealand met after your Parliament had been adjourned, and it appeared very evident to us that we should have to make our own arrangements.

I have the honor to enclose to you a copy of resolutions on the subject which were adopted by our Assembly.

You will understand that these resolutions contemplate a possible change of the service, so that I am not now at liberty to make any arrangement with you, beyond that you should, as was originally understood, contribute towards the service at the rate of ten thousand pounds a year from its commencement.

I have to add that, should any modification of the service be effected, the intention is to arrange for thirteen services during the year, and—if your Government is willing to contribute, to so regulate the voyages as to make the service alternate in Sydney with that *via* Suez. I hope therefore you will have no difficulty in agreeing to postpone any final arrangements, until we have had an opportunity of further discussion—probably a personal one, as may be arranged; and that meanwhile your Government will agree to pay at the rate of ten thousand pounds a year from the commencement of the service.

Should this be agreed to, I shall be obliged by your remitting to me the amount due up to the present time, in order that I may pay it to the contractor, less about a thousand pounds, which I have had to pay him on your account, I having in Sydney guaranteed to him two thousand pounds as a contribution from New South Wales, during the first six months of his contract period.

I have, &c.,
JULIUS VOGEL.

POSTAL SERVICE TO SAN FRANCISCO.

RESOLUTIONS adopted by the House of Representatives, New Zealand, on 23rd August, 1870.

"SEEING that neither of the Australian Colonies has become a party to the San Francisco Steam Contract, and that New Zealand has been left single-handed to initiate this line, the Committee is of opinion that, in the future conduct of the service, this Colony should look to its own interests exclusively; with which view it is expedient that the steamers arriving at Auckland from Honolulu should proceed to Port Chalmers instead of to Sydney, calling again at Auckland on the return voyage to Honolulu.

The Committee is further of opinion that the time to be allowed between Auckland and Port Chalmers, inclusive of stoppages at the ports of Wellington and Lyttleton, should not exceed 100 hours.

That with a view to carrying the foregoing proposal into effect, the Government be empowered to increase the present mail subsidy, so that it shall not exceed £40,000 a year."

No. 14.

THE COLONIAL SECRETARY, N.S.W., to THE COLONIAL SECRETARY, N.Z.

New South Wales.

Colonial Secretary's Office,
Sydney, 10 October, 1870.

(70-8046.)

SIR,

I have the honor to acknowledge the receipt, on the 29th ultimo, of your letter of the 17th ultimo, in reply to mine of the 29th of August last, on the subject of the intended contribution by New South Wales towards the Californian Postal Service.

2. Without desiring to discuss how far the delay of this Government to provide the funds which it was fully intended in connection with Queensland to provide for this service, or the grounds which such delay may be considered fairly to have furnished your Government for adopting the course referred to in your letter as regards the provisional agreement, I can only express my regret that various circumstances, now needless to explain, made it impracticable for me to propose an earlier provision.

3. The provisional agreement was entered into by this Government in good faith, and it was intended that it should be carried through; and we still desire that, in any arrangements which present circumstances render necessary, the responsibilities of New South Wales should be fairly met, as soon as the sanction of Parliament can be obtained. How soon that may be I am unable to say, but you may rest assured that it shall not be delayed unnecessarily.

4. You are aware that the withdrawal of Queensland caused embarrassment and delay; that although such withdrawal was pronounced final and absolute, our desire that the arrangements should be completed led me to endeavour to reopen the correspondence, in the hope of final rearrangement. In this, however, I have not yet been successful.

5. Without her co-operation, however, this Government has determined to ask Parliament to vote the full amount to which both Colonies were to have contributed; and it is intended, should Parliament grant the moneys asked for, to pay to your Government, at the stipulated rate per annum, for such time as the Californian mails may be carried, and Sydney, as is indispensable to the continuance of the payment, remain the terminus of the line.

6. It was never intended that the payment of twenty shillings per pound should be even in temporary substitution of the payment as provisionally agreed upon; but it was all that was available at the time, owing to the absence of voted funds, and to the inability which decisions arrived at since the beginning of the year had created of making any payments which Parliament had not previously sanctioned.

7. I am not unwilling to concur in your request to postpone any final arrangements until further discussion, personal or otherwise, may be determined upon.

I have, &c.,
CHARLES COWPER.

No. 15.

THE COLONIAL SECRETARY, N.Z., to THE COLONIAL SECRETARY, N.S.W.
New Zealand.

General Government Offices,
Auckland, 13 October, 1870.

SIR,

I have not yet received an answer to my letter of the 17th September, 1870, respecting the contribution to be made by your Government towards the cost of the Californian mail service.

R.M.A.
70/4.

As, however, mails from New South Wales were despatched by this month's steamer, I am happy to believe that it is the intention of your Government to make regular payments on behalf of the service, in terms of my letter of the 17th September.

I shall be glad therefore if your Government will cause to be paid into the Oriental Bank, Sydney; to the credit of the New Zealand Government, the sum of five thousand pounds, being the amount due on account of the six monthly services which will be completed on the return of the "City of Melbourne," by which steamer this letter will be forwarded; and thereafter, I shall be obliged by your paying monthly, to the Oriental Banking Company, on the return of each steamer from Honolulu, the one-twelfth part of ten thousand pounds.

£5,000.

£10,000.

I have, &c.,
JULIUS VOGEL.

No. 16.

H. H. HALL, Esq., to THE POSTMASTER GENERAL, N.S.W.

U. S. Consulate, Grafton Wharf,
Sydney, 7 November, 1870.

SIR,

I have the honor to apply to you for the payment of seven thousand five hundred pounds (£7,500), being the amount due to me, as stated below, for nine months' services in connection with the Californian, New Zealand, and Australian mail service.

Trusting that this very important matter to me will have your immediate attention,—

I have, &c.,
H. H. HALL.

£6,666 13s. 4d., due 26th November, 1870, and
833 6s. 8d., due 26th instant,—being nine months' services, ending 26th instant.

MINUTE OF THE SECRETARY TO THE POST OFFICE, N.S.W.

THE sum of £7,500 has been placed upon the Supplementary Estimates of Expenditure for 1870, to meet the expense of the steam postal communication with Great Britain *via* San Francisco, for the nine months ending 31st instant, in connection with the contract entered into by the Government of New Zealand with Mr. H. H. Hall.—S.H.L., 9/12/70.

The Cabinet regret that it is not in their power to anticipate the payment. The agreement originally made stipulated that the payment was subject to parliamentary sanction, which the Cabinet trust will be obtained.—C.C., 12 Dec.

No. 17.

MINUTE OF THE POSTMASTER GENERAL, N.S.W.

MEMORANDUM on agreements and correspondence relating to postal communication *via* New Zealand and California.

In a memorandum of agreement drawn up on the 6th January, 1870 (and sanctioned by the Cabinet on the 7th of the same month), signed by the representatives of New South Wales, New Zealand, and Queensland, it was provided that, in the event of New Zealand being able to contract for a postal service between San Francisco, Auckland, and Sydney,—New South Wales and Queensland should be liable to the extent of £10,000 per annum as payment for the carriage of their mails. The memorandum was subject to the approval of the Parliament in this Colony, and to be null and void if such approval was withheld; but it contained a provision that if such service should be commenced before the proposal should be submitted to Parliament,—pending the decision of that body, such payment should be made for the carriage of the mails (of New South Wales and Queensland) as might be agreed upon. The Queensland Government only gave a conditional approval.

Memo., 6 Jan., 1870.

Telegram 25 Jan., and letter 3 Feb.

In pursuance of this agreement, the New Zealand Government entered into a contract with Mr. Hall, U. S. Consul, for a mail service between Sydney, Auckland, Honolulu, and San Francisco.

This contract contained a provision that the service, as far as Sydney was concerned, should cease at the expiration of six months from the 26th March, 1870, unless the Government of New South Wales should within that time agree to pay the Postmaster General of New Zealand the sum of £10,000 on behalf of the contractor, which amount should include the charge for carriage for Queensland mails,—New South Wales arranging with Queensland for such carriage.

This contract was for twelve months from date thereof, 11th January, with power to contractor, upon six months' notice from commencement of service, to extend the agreement for a further period of four years.

In transmitting copy of this contract, New Zealand Government suggested that payment monthly at the rate contained in the agreement (£10,000 per annum) should be adopted, as this provisional arrangement pending the permanent subsidy sanctioned by Parliament. In reply, they were informed that Government possessed no authority for complying with this suggestion, but that the Postmaster General should give by departmental arrangement whatever allowance he could fairly and legally make for the transmission of mails.

12 Jan.

Letter Col. Sec. 13 Jan.

In fulfilment of this assurance, on the 3rd March a departmental communication was addressed to the Postmaster General, Wellington, stating that the Government of this Colony has been applied to for authority to pay to New Zealand the sum of 20s. per lb. (the same amount which was paid by non-contracting Colonies to the Panama Service), on all correspondence forwarded by these mails. This letter also contained this important provision:—"I should be glad to be informed, as early as possible, whether this Colony is at liberty to forward mails on the terms specified herein; and should a reply not be received from you prior to the departure of the first steam-packet, the concurrence of the New Zealand Government will be anticipated, and mails from New South Wales will be forwarded."

To this no reply appears to have been forwarded until the 10th of May, and on the 26th March the service commenced by the departure from Sydney of the first vessel, by which a mail from Sydney was despatched.

On the 10th March, Queensland had by letter entirely and conclusively withdrawn from all the arrangements.

On the 5th April, Mr. Vogel writes to complain that he has not yet been informed whether the Government of New South Wales has made provision for contributing month by month at the rate of £10,000 per annum, but he makes no allusion to the provisional mode of payment proposed in the departmental letter of the 3rd of March.

This provisional arrangement was again proposed, in a letter from the Colonial Secretary of New South Wales, dated the 27th April, concluding with an intimation that, in anticipation of the acquiescence of the New Zealand Government in such arrangement, this Colony will continue to despatch mails by this service.

Mr. Vogel to
Postmaster
General, 10 May;
Mr. Vogel to
Colonial Secre-
tary, 10 May.

On the 10th May, replies were forwarded stating that the only sum authorized to be received by New Zealand was at the rate of £10,000 per annum, covering Queensland mails, and requesting an immediate answer as to whether we were prepared to pay this subsidy.

On the 27th July, the Postmaster General submitted to the Cabinet the expediency of making provision for the payment to New Zealand of the amounts fixed in the provisional agreement of the 6th January, for the carriage of mails from this Colony by the Californian mail service.

The Cabinet concurred in his recommendation, and directed the sum of £7,500 to be placed on the Supplementary Estimates for 1870, and £10,000 for the year 1871.

On the 2nd August a letter was addressed to the Postmaster General of Sydney, by the Postmaster General of New Zealand, repeating the rejection by the Government of that Colony of the proposition conveyed in the letter of the Colonial Secretary of the 27th April, and requesting this office, in the event of the Government declining to contribute in the manner stipulated by New Zealand, to abstain from forwarding mails to be conveyed by this route.

On the 29th August, the Postmaster General, New Zealand, was informed by letter from the Postmaster General of New South Wales of the determination arrived at by the Cabinet on the 27th July, and that these sums had been placed upon the Estimates "*as the contribution of New South Wales towards the maintenance of the mail service via California, from the date of its commencement.*"

A letter to the same effect, and bearing the same date, was forwarded from the Colonial Secretary to the Colonial Secretary of New Zealand; and adding that this Colony will, in anticipation of his approval, continue to forward mails by the steamers leaving Sydney every month, conditional of course on the observance of the provisional agreement of the 6th January.

This letter was acknowledged by the Colonial Secretary, New Zealand, on the 17th September, in a letter in which he stated that circumstances chiefly arising from action of the New South Wales Government had rendered it beyond the power of the New Zealand Government to abide by the provisional agreement. He requested this Government to postpone all final arrangements, but in the meantime to agree to pay at the rate agreed upon from the commencement of the service. The letter also covered resolutions of the House of Representatives, New Zealand, which recommended a total change of the service, confining its advantages exclusively to that Colony.

This letter was replied to by the Colonial Secretary on the 10th October, in which, after explaining that the withdrawal of Queensland from the provisional agreement had caused embarrassment and delay not fairly attributable to this Colony, he states that, *without waiting for the co-operation of Queensland, this Government has determined to ask Parliament to vote the full amount to which both Colonies were to have contributed; and it is intended, should Parliament grant the monies asked for, to pay to your Government at the stipulated rate per annum for such time as the Californian mails may be carried, and Sydney, as is indispensable to the continuance of the payment, remain the terminus of the line.* On the 13th October the Government of New Zealand request that the Government of this Colony will cause to be paid in to their credit the sum of £5,000, being the amount due on account of six monthly services which will be completed on the return of the steamer due in Sydney in October, and afterwards to continue monthly payments to their credit, on the return of each steamer from Honolulu, of the one-twelfth part of £10,000. This does not appear to have been replied to.

On the 7th November, Mr. Hall, the contractor for this mail service with the New Zealand Government, made application to this Government for the payment to him of £7,500, being, as he states, the amount due to him for nine months' services in connection with this line.

He was informed in reply, by the Colonial Secretary, by direction of the Cabinet, that it was not in the power of the Government to anticipate any payment under the provisional agreement, without parliamentary sanction.

By a memorandum of the Postmaster General of New Zealand (which has not been officially communicated to this Colony, but which has been extensively published), the public are informed that he has succeeded in arranging the terms of a new contract for a mail service between New Zealand and San Francisco, of which the terminus in New Zealand was to be at Port Chalmers, thus excluding New South Wales. By an advertisement in the Auckland papers, this service was to commence on the 1st of April, 1871.

The contractor for the present line, Mr. Hall, has also submitted a tender to this Government for a new line between Sydney and San Francisco *via* the Fijis, thus excluding New Zealand.

It may therefore be concluded that the notice placed by the contract at the option of the contractor to continue the agreement for a further term of four years has not been given, and that the present service will terminate on the completion of twelve services to and from Sydney and San Francisco, the first service having commenced on the 26th of March last.

From

From a careful consideration of the provisional agreement and the correspondence arising therefrom, I am of opinion that, up to the 29th of August last, this Colony had incurred no liability for payments for mails transmitted by this mail service, beyond the proposition of the Postmaster General, sanctioned by the Cabinet and transmitted to the New Zealand Government on the 3rd of March, viz. 20s. per lb. on the weight of mails despatched by these steamers.

But the decision of the Cabinet to place the amount due for services in 1870 on the Supplementary Estimates for that year, and to place the full amount provided by the provisional agreement for services during 1871 on the Estimates for that year, which decision was communicated to the New Zealand Government by the Colonial Secretary, in his letter of the 29th August, I conceive binds this Government to the proposition of the New Zealand Government; and the intimation that New South Wales would continue to forward mails by this route was an acceptance of the terms proposed by New Zealand, as the only ones on which they would carry our mails.

I think therefore the Colony is liable for these monthly payments, until the termination of the agreement in April next, subject of course to the due fulfilment of the terms of the contract.

At the same time, I am of opinion that New South Wales has the power at any time to withdraw from all further liability, by declining to send mails by this mail service; and as the amount placed upon the Supplementary Estimates for this year will cover all liabilities for the same period, it will be for the Cabinet to determine whether further liabilities shall be incurred, and an amount placed upon the Estimates for 1871 to cover them.

JOSEPH DOCKER,
30 Decr., 1870.

No. 18.

THE COLONIAL SECRETARY, N.Z., to THE COLONIAL SECRETARY, N.S.W.
Colonial Secretary's Office,
Wellington, 3 December, 1870.

SIR,

I have the honor to inform you that the Government of New Zealand has succeeded in making arrangements for placing the San Francisco Mail Service on a permanent basis, large boats running at a high rate of speed being employed.

The connection with New South Wales will at first probably be made by boats of the Australian Steam Navigation Company and by the S. S. "Hero," but I anticipate I shall soon be enabled to propose to you to contribute towards the subsidy payable for thirteen services a year, with a boat of not less than 1,000 tons register to run to Sydney direct; the mails being delivered in Sydney in thirty days from San Francisco, which will be equal to about forty-five days from England.

Until certain details shall have been settled with the contractors, I cannot make to you any specific offer; but I have the honor to propose to you that, meanwhile, you should agree to continue to pay a subsidy at the rate of £10,000 a year, or that any arrangement which may hereafter be completed between us shall be held to date back to the commencement of the new service, and that payment shall be made by you accordingly.

I take for granted that, for the conveyance of your mails under the existing contract—which will terminate when twelve complete services have been performed—you will make the contribution which it has been understood you were ready to make, and for which I trust the necessary authority has already been given by your Legislature.

I have, &c.,
W. GISBORNE.

I do not think it expedient for this Colony to make any arrangement with New Zealand for a mail service which under this proposal would be only a *branch line*; but that it should be clearly intimated to the Government of New Zealand that this Government will not recommend to Parliament the payment of any contribution for the mail service in connection with New Zealand beyond that for the period when twelve complete services will have been performed.—J.D., 4/1/71.

After consultation, approved by the Cabinet.—J.M., A.G., 5 Jan., 1871.

No. 19.

THE COLONIAL SECRETARY, N.S.W., to THE COLONIAL SECRETARY, N.Z.
Colonial Secretary's Office,
Sydney, 6 January, 1871.

SIR,

I have the honor to acknowledge the receipt of your letter of the 3rd ultimo, in which you intimate that the Government of New Zealand has succeeded in making arrangements for placing the San Francisco Mail Service on a permanent basis, large boats running at a high rate of speed being employed, and that you anticipate that you will soon be enabled to propose to this Government to contribute towards the subsidy payable for thirteen services a year, with a boat of not less than 1,000 tons register to run to Sydney direct; the mails being delivered in Sydney in thirty days from San Francisco, or about forty-five days from England. You also propose that, pending the settlement of certain details with the contractors, this Government shall agree to continue to pay a subsidy at the rate of £10,000 a year, or that any arrangement which may hereafter be completed between the two Governments shall be held to date back to the commencement of the new service, and that payment shall be made by this Colony accordingly.

2. In reply, I have the honor to inform you that it is not considered expedient that this Colony should make any arrangements with New Zealand for a mail service which, under the above proposal, would be only a branch line, and to add that it must be clearly understood that this Government will not recommend to Parliament the payment of any contribution for the mail service in connection with New Zealand beyond that for the period when twelve complete services will have been performed.

I have, &c.,
JOHN ROBERTSON.

THE POSTMASTER GENERAL, N.Z., to THE POSTMASTER GENERAL, N.S.W.

Auckland, New Zealand,
7 January, 1871.

SIR,

Referring to previous correspondence on the subject of the steam mail service between Sydney and San Francisco, I have the honor to request that you will be good enough to pay to the contractor, Mr. H. H. Hall, of Sydney, or his order, all moneys now due by your Government, or which may become due, on account of your contribution towards the subsidy to that service.

I have, &c.,
JULIUS VOGEL.

Correspondence relating to future Postal Communication.

No. 1.

THE COLONIAL SECRETARY, N.S.W., to MESSRS. CUMMINS & Co., LONDON.

Colonial Secretary's Office,
Sydney, 28 January, 1870.

GENTLEMEN,

I have the honor to acknowledge the receipt of your letter of the 3rd ultimo, relative to the proposed establishment of a new route between Europe and Australia, through America, by means of a line of steamers from Milford Haven to Portland, and another line in correspondence from San Francisco to Sydney.

2. In reply, I have the honor to inform you that the subject is one of too much importance to be determined upon in haste, or without the fullest consideration, for which time is not afforded before the outgoing of the present mail.

3. The question, which is one of the deepest interest to this Government, shall however be considered without loss of time, and an early decision thereon communicated to you.

4. The project, I have the honor to add, is one which has my ardent wishes for its success.

I have, &c.,
CHARLES COWPER.

No. 2.

MESSRS. CUMMINS & Co., LONDON, to THE COLONIAL SECRETARY, N.S.W.

Rectory House, Martin's-lane, Cannon-street,
London, 28 January, 1870.

SIR,

By this mail you will have copies of pamphlet having reference to the proposed Atlantic and Pacific Steam Service, the arrangements for which are rapidly approaching completion.

A meeting was held at the "London Tavern," on the 25th instant, for the purpose of eliciting the opinions of the leading capitalists and London merchants, which was found to be unanimously favourable to the project.

The following was carried *nem. con.*:—"That this meeting highly approves of the proposed route to Australia and New Zealand, *via* Milford Haven, Portland, and San Francisco, and recommends that steps be forthwith taken to establish a Company to carry the same into effect."

Immediate steps have been consequently taken, and, in the short time that has since elapsed, several gentlemen of great influence and high position have expressed their willingness to form the Board, amongst whom the gentleman who presided at the meeting will probably take a leading position. A list will be published, the officers elected, and the Company introduced in a few days into the London market.

Should we in due course receive an intimation from your Government of their willingness to enter into postal arrangements, on the basis of the terms proposed in our letter of 3rd December, the prompt establishment of the service, so important to your Colony, will be greatly facilitated, and its ultimate success secured.

With regard, however, to the proposed terms for conveyance of passengers, we think it necessary to state that, acting on the advice of several gentlemen of great experience, we have felt it advisable to modify the rates to £80 first class, £50 second class, and £30 third class,—terms which will secure to passengers much greater comfort and better accommodation than we had at first contemplated.

Waiting your esteemed communication,—

We have, &c.,
CUMMINS & CO.

P.S.—Sir Geo. Grey, K.C.B., occupied the chair at the meeting on the 25th instant.

No. 3.

THE COLONIAL AGENT GENERAL, LONDON, to THE COLONIAL SECRETARY, N.S.W.
(No. 136.) Agency of the Government of New South Wales,
8, Adam-street, Adelphi, London, W.C., 26 January, 1870.

SIR,

Referring to the enclosed extract from the *Times* of this morning, I have the honor to state, for the information of the Hon. the Principal Secretary, that I considered it my duty to attend the meeting, having been requested to do so, and knowing the interest felt by the Government and community of New South Wales in any project which holds out reasonable prospect of affording rapid and economical mail and passenger communication with Europe, especially when such project involves the making of Sydney the port of first arrival and last departure of the mails.

2. I am not in a position to give an opinion as to the prospect of the project being taken up by capitalists ; but there was at the meeting a general concurrence that the time estimated for the transit was over-estimated, and this was distinctly stated by more than one of the speakers, from personal experience.

3. By book-post, I forward copies of the printed Explanatory Statement and Proposal.

I have, &c.,
W. C. MAYNE,
Agent General for New South Wales.

[Enclosure.]

"A private meeting of influential merchants and others was held to-day at the 'London Tavern,' to discuss the projected steam communication with Australia and New Zealand, *via* Milford Haven, Portland, and San Francisco, within 40 days, Sir George Grey in the chair. It was numerously attended, and after lengthened explanations of the details, the following resolution was unanimously adopted :—'That this meeting highly approves the proposed route to Australia and New Zealand, *via* Milford Haven, Portland, and San Francisco, and recommends that steps be forthwith taken to establish a Company to carry the same into effect.'"

No. 4.

THE COLONIAL SECRETARY, N.S.W., to MESSRS. CUMMINS & Co., LONDON.
Sydney, 25 March, 1870.

GENTLEMEN,

I have the honor to acknowledge the receipt of your letter of the 28th January last, and to thank you for the information therein conveyed respecting the arrangements for the proposed Atlantic and Pacific Steam Service.

2. I take this opportunity of stating that the question of the revival of immigration is now being seriously entertained by the Legislature of this Colony, and I am sanguine that decided steps will ere long be taken to introduce population under a system not less liberal than those of the adjoining Colonies.

I have, &c.,
CHAS. COWPER.

No. 5.

THE COLONIAL SECRETARY, N.S.W., to THE COLONIAL AGENT GENERAL, LONDON.
Sydney, 25 March, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter of the 26th January last, and the enclosed extract from the *Times* newspaper, together with the printed proposal and explanatory statement respecting the projected Atlantic and Pacific Steam Service.

I have, &c.,
CHARLES COWPER.

No. 6.

THE SECRETARY, ATLANTIC AND PACIFIC STEAMSHIP CORPORATION, LONDON, to THE COLONIAL SECRETARY, N.S.W.
The Atlantic and Pacific Steam-ship Corporation, Limited,
(Temporary Offices),
40 & 41, Palmerston-buildings, Bishopsgate-street, E.C.,
London, 25 February, 1870.

HONORABLE SIR,

Referring to Messrs. Cummins & Co's. letter of the 3rd of December, I have the honor to enclose you an official tender on behalf of the above Company, and, in explanation of the general advantages presented by the route, send by book-post a pamphlet entering fully into the subject.

I may mention that the Company possesses an influential direction, and is well supported, with a capital of £1,000,000 sterling, and power to issue £500,000 debenture bonds. Arrangements have been made to facilitate the early commencement of the service by purchasing boats already built, while the building of the remainder will be pushed forward with all convenient speed.

Believing that this Company can do the service in a manner not to be rivalled, and hoping to receive satisfactory replies from your Government,—

I have, &c.,
EDMUND WM. WHEELER,
Honorary Secretary.

[Enclosure.]

[Enclosure.]

The Secretary, Atlantic and Pacific Steam-ship Corporation, London, to The Colonial Secretary, N.S.W.

The Atlantic and Pacific Steam-ship Corporation, Limited,
(Temporary Offices),
40 & 41, Palmerston-buildings, Bishopsgate-street, E.C.,
London, 25 February, 1870.

Hon. Sir,

I am instructed on behalf of the above Company to tender for the conveyances of the mails between England and Sydney, New South Wales.

This Company will undertake, in consideration of a subsidy of £26,000 per annum, payable as usual, or in such other manner as may hereafter be arranged, to carry the outward and homeward mails by a monthly through service to be performed as follows, viz. :—

1. From England to Portland, Halifax, or other suitable American port, in large and powerful steamers.
2. By express train across the continent of America to San Francisco.
3. By steamers of adequate size and power running between San Francisco and Sydney, calling at Fiji Islands.
4. The service to be performed in forty days from time of leaving England, subject to premium or penalties of £50 per diem.

Security for the due performance of the contract to be given to the satisfaction of your Government.

Contract to be for ten years, with option to the Company to terminate upon giving twelve months' notice.

I am, &c.,

[Sub-enclosure.]

The new, cheap, rapid, and improved Communication between Europe, Australia, and New Zealand, through America, in less than forty days.

A MORE frequent and rapid communication between England and her important and growing Colonies in Australia has become a matter of acknowledged and urgent necessity. Loud and reiterated complaints are made of the insufficiency of a monthly postal service for their commercial wants; while the length, tediousness, and expense of a journey to or from the antipodes is patent to all who have tried it, and debars many from making the attempt. These evils require an immediate remedy; and the completion of the great railway system uniting the Atlantic and Pacific Oceans has afforded an opportunity which must not be neglected or delayed, if we are to retain our Australian traffic, and not let it pass into the hands of the Americans. The entirely new route to Australia thus opened up will, when properly supplemented, combine advantages which no other line of communication has hitherto possessed.

It is proposed to form a Company, to render this route available, by running, fortnightly, large and powerful steamships, fitted with the latest improvements, between Milford Haven and Portland, U.S.; the passengers, &c., being carried thence over the Grand Trunk of Canada and Union Pacific Railways to San Francisco, where equally suitable steamers will be employed to complete the journey to Sydney.

The reasons which, after mature and careful consideration, have determined the selection of the stations of the route, may be thus briefly stated :—

Milford Haven is, without comparison, the most desirable port of departure, being one of the finest harbours in the world, accessible at all times, and the nearest in England to the continent of America. By its adoption, the dangers and delays incident to the English and Irish Channels are avoided (a fact beneficially affecting insurance on ships and freight), a saving from thirty-six to forty-eight hours on the voyage to America secured, and port charges reduced to a minimum. The proximity of Milford Haven to the great coal-fields of South Wales insures an ample supply of coal at the lowest possible rate; and its nearness to Ireland will give great facilities for obtaining cheap provisions, and will attract the bulk of the emigrants and traffic from that country. Special arrangements with the Great Western Railway provide cheap and unrivalled means of transit to and from London, Liverpool, and other great towns.

Portland, the nearest American port, will be reached in eight or nine days. It is free from ice, fog, and other obstacles to navigation, is less expensive than most others, and is in close railway communication with the principal cities of the United States and with Canada. From hence the Grand Trunk, in connection with the Union Pacific Railway, leads direct to San Francisco.

The railway communication across America is admirably conducted,—splendid carriages, sleeping and eating cars, and every possible convenience provided by the American railways, transform what would be otherwise a tedious journey into a most agreeable trip. Further remark on this point is needless, after the various accounts and correspondents' letters published by the *Times* and other leading journals during the past few months, respecting the magnificent and ever-varying scenery of the country, its invigorating climate, and the points of interest arising at the different stations claiming the attention of those who seek them either for business or recreation.

The land portion of the journey ends at San Francisco, the New York of the Pacific, the capital of California, a country whose agricultural and mineral resources are now enormous, and are rapidly increasing in extent and importance. This port has the advantage of a most excellent harbour, is the western outlet for the commerce of America, is within reach of the coal-mines of Vancouver's Island, and is the principal granary for supplying Australia with corn, in seasons of drought or deficient harvests.

From San Francisco the traveller enters on the Pacific voyage; and the climate and other characteristics of this ocean are in remarkably favourable contrast to that portion of the Atlantic in which St. Thomas and the Western Indies are situated.

At the commencement of the proposed service one steamer per month may be found sufficient; but so large a local traffic is likely to be developed as will warrant, hereafter, fortnightly communication between San Francisco, Australia, and New Zealand. The Sandwich, Fiji, and other islands lying in the direct route, furnish, in case of need, useful coaling stations; and when the rapidly extending cotton production of the Fiji Islands, and the importance of New Caledonia as a French colony are considered, more substantial benefits may be anticipated. It is also proposed that a branch line of steamers shall correspond with the main line at Viti Levu, Fiji Islands, by which passengers and mails will be conveyed to and from New Zealand; and, should a postal subsidy be obtained from the French Government, to and from New Caledonia.

Sydney has, on many grounds, been chosen as the terminal point and head-quarters of the enterprise in Australia. It possesses unrivalled advantages as a harbour, cheap coals, and every convenience for the repair and outfit of ships; it is in proximity to Queensland, which is fast becoming a most prosperous Colony, and is likely to receive a large proportion of the passengers designing to settle in Australia; and it has frequent and regular steam communication with the chief ports of other neighbouring Colonies.

The whole service as thus laid down, presents, amongst others, the following obvious advantages :—

A rapid, efficient, and reliable mail and passenger service to the Australian Colonies is secured.

Great Britain, America, Canada, Australia, and New Zealand, are brought into intimate connection, and the scattered members of the Anglo-Saxon race drawn together by a bond of friendly inter-communication.

The two great gold-producing countries are placed within easy reach of each other, remedying a want severely felt by the mining and commercial interests of both districts.

A further provision is made for the emigration now so urgently demanded by the overcrowded population of Europe.

A considerable part of the journey will pass through the widest and most temperate portion of the American continent, at a speed greatly in excess of that attained at sea, thereby enabling the whole to be performed within forty days,—a result never before accomplished. Where rapidity is not so much an object, facilities will be afforded to the tourist, invalid, or merchant, for visiting and resting at the various points of interest or centres of commercial activity embraced in this route.

The

The many objections to existing routes are entirely avoided. They may be specified as—

- I. The protracted and monotonous character of the voyage by sailing vessel, *vid* the Cape of Good Hope; and the extremes of temperature and proverbial discomforts and perils of the homeward passage round the Horn; objections which apply in a modified form to auxiliary steamers taking the same course.
- II. The expense of the overland route, the inconvenience of transshipments in countries where English is not generally spoken, and of crowded vessels in a hot climate, the well-known dangers of the Red Sea, and the absence of places of great commercial importance or general interest at which it is possible to break the journey.

This brief glance demonstrates the numerous and paramount advantages of the proposed service—a service which must command the cream of the passenger trade to Australia, while the whole of the American traffic thitherwards must be monopolized; nor should it be lost sight of that to America itself this line is the most direct and expeditious. The passenger traffic alone would thus be sufficient to render the undertaking remunerative, without taking into consideration the subsidies for conveyance of mails, already applied for, and which will probably be obtained; or the income to be derived from the carriage of bullion and valuable cargo. Owing to the important concessions and facilities secured from the Great Western of England, the Grand Trunk of Canada, and various other railways, passengers can be conveyed between England, America, and the Australian Colonies at remarkably moderate rates. The Company will also be enabled to book passengers from England to all the more important places on the route, and to issue through tickets extending over a reasonable time, with power to break the journey, and negotiations are pending to extend these advantages to the principal cities on the Continent of Europe.

From calculations carefully compiled and tested, the details of which are open to examination, the following estimate of expenditure, receipts, and probable profits has been prepared:—

ESTIMATE of Expenditure, Receipts, and Profit for one year, with apportionment of Profit, showing that a Dividend of 15 per cent. can be paid, the entire Debenture capital returned, and a large Reserve Fund accumulated.

EXPENDITURE.			RECEIPTS.

To Reserve Fund	35,000	0 0			
Total.....	£207,844	0 0	Total	£207,844	0 0

Since the foregoing has been in print, the calculations have been submitted to Captain Vine Hall, and the estimates amended in compliance with his suggestions.

Copy of Captain Vine Hall's letter.

To E. W. Wheeler, Esq.

London, 20 January, 1870.

Dear Sir,

I have looked through the estimates of expenditure and receipts of the proposed new route to Australia *vid* America, and consider them generally very fairly made. I have suggested an increase in the price of coals at San Francisco, and the cost of the Pacific passengers. As a scheme I think it one which contains the elements of success,—being, as it were, the natural and shortest route to Australia. There being no unhealthy region to pass through, this route is free from that which was the ruin of the Panama line. I think that, with proper management, the proposed line should command a great success.

I am, &c.,
JOHN VINE HALL.

AMENDED STATEMENT.

ESTIMATE of Expenditure, Receipts, and Profit for one year, with apportionment of Profit, showing that a Dividend of 15 per cent. can be paid, the entire Debenture capital returned, and a large Reserve Fund accumulated.

PROFIT

Under all these circumstances, I must again urge the importance of empowering your Agent General, or some other plenipotentiary here, to conclude such arrangements with the Corporation as will warrant them in incurring the large outlay required for purchasing an efficient fleet.

The arrangements of the Corporation contemplate a fortnightly service as soon as the traffic anticipated has been proved to be sufficient to render such an addition remunerative. The contract might give the option for a fortnightly service after the expiration of the first twelve months, and for which an annual subsidy of £50,000 would be required.

I beg sincerely to thank you for the kind wishes you have expressed for the success of the enterprise, which, backed as it is by powerful and influential support at home, conferring as it will unparalleled benefits on the Colonies, now only requires the countenance and assistance of the Australasian Governments to become the greatest and most important steamship undertaking ever established.

I have, &c.,

EDMUND WM. WHEELER,
Secretary *pro tem.*

Secretary, pro tem. :—Edmund William Wheeler, Esq.

Temporary Offices :—40 and 41, Palmerston Buildings, Old Broad-street, and Bishopsgate-street Within, E.C.

THE object of this Company is to found a steam service uniting England with her most distant Colonies by an entirely new route, for the conveyance of mails, passengers, bullion, &c.

The service will be performed by powerful steamers (fitted with the latest improvements), from Milford Haven to Portland, U.S., in nine days; by rail in seven days to San Francisco; and thence by steam in twenty-three days to Australia and New Zealand, being in all under forty days.

Arrangements have been made with various Railway Companies, especially the Great Western of England and the Grand Trunk of Canada, for the booking and conveyance of mails, passengers, and goods between the chief towns and cities of Great Britain, the United States, Canada, and Australia, at reduced rates, and for running trains in connection with the steamships. With a view to assist in carrying these arrangements into effect, and as an earnest of their interest in the undertaking, the Great Western Railway Company have requested two of their Directors, C. R. M. Talbot, Esq., M.P., and Richard Bassett, Esq., to represent them on the Board of this Company.

To avoid delay in commencing the service, negotiations are in progress for securing an efficient fleet. Communications have been addressed to the Australian, Canadian, French, and British Governments, with a view to the conveyance of mails; and arrangements are in progress under which it is hoped that subsidies from the New Zealand, New South Wales, Victorian, Tasmanian, Queensland, and French Governments may be secured.

The growing importance and requirements of Canada, Australia, and New Zealand,—the demand for improved postal arrangements,—the development of commerce, calling for more rapid and frequent communication,—and the vast stream of emigration now requiring increased means of transport,—have rendered the establishment of such a service an absolute necessity.

The prominent advantages which this route possesses are,—

- I. Rapidity and economy,—the voyage being performed in less time and at less expense than by any existing service.
- II. Healthiness, comfort, and pleasure of the land journey.
- III. Direct and intimate communication between England, Canada, and Australia, her two largest and most important possessions; and the union of the two greatest gold-producing countries of the world, California and Australia, by a line throughout which the English language is spoken.
- IV. The terminal ports, which are safe, commodious, and accessible at all seasons, and at which coals can be obtained at the cheapest possible rates, and port charges reduced to a minimum.
- V. The opening out and working of a new route through important districts and centres of commerce at present unoccupied by any existing service, thus developing a traffic hardly to be over-estimated.

The considerable revenue from freight and passengers (supplemented by the subsidies expected from mail contracts) will tend to insure large profits and handsome dividends on the capital employed. Calculations have been made as to the probable profits of the undertaking, the details of which may be seen at the Company's office, showing that, without calculating the subsidies, and after making a liberal allowance for depreciation of ships, insurance, &c., in addition to the ordinary working expenses, a handsome dividend may be confidently anticipated.

Power is taken in the articles of association to issue debenture bonds for a sum not exceeding £500,000.

The operations of the Company will be greatly facilitated by the beneficial arrangements made with, and the valuable support afforded by, the important Railway Companies who are largely interested in the success of the undertaking.

The memorandum and articles of association, and copies of the various agreements entered into, can be seen on application to the solicitors, Messrs. Bischoff, Bompas, and Bischoff, 3 and 4, Winchester-buildings, Great Winchester-street, and at the Company's Offices, where also copies of an explanatory pamphlet can be obtained.

Applications for shares on the accompanying form should be left at the Company's bankers, together with the necessary deposit, which will be returned in the event of no allotment being made. If an allotment is made, the deposit will be applied towards the amount payable on the shares allotted.

— — — — —
The following is a copy of the Memorandum of Association :—

1. The name of the Company is "The Atlantic and Pacific Steamship Corporation (Limited)."
2. The registered office of the Company is to be in England.
3. The objects for which the Company is established are,—

Firstly.—The conveyance of mails, passengers, and merchandise, in steam and other vessels, to, from, and between any port in the United Kingdom or the Continent of Europe and any port on the east side of the Continent of America; across such Continent from any point of departure to any port, station, or place on the western side of the said Continent of America; and from such port, station, or place, to Her Majesty's Colonies in Australia, New Zealand, and elsewhere; or to any other port or place to which it may be desired to despatch such vessels from the said western side of America, for the conveyance of passengers, mails, and cargo.

Secondly.—The purchasing and holding of lands, of any tenure, in any part of Her Majesty's possessions or dominions, or elsewhere, and with or without building thereon, for the purposes of the Company, and the allotment and resale of such lands or of any part or parts thereof, and the purchase, construction, and renting of such docks, dockyards, wharves, factories, patent or other slips, warehouses, and other works and erections necessary or convenient for the docking, building, and repairing of vessels, and the loading, unloading, reception, preservation, and safe keeping thereof, and of goods and merchandise, and the embarkation and landing of passengers, as the Company may from time to time determine.

Thirdly.—The carrying on of the trades or business of shipbuilders, shipowners, merchants and shippers, and of common carriers, and also of emigration agents.

Fourthly.—The purchase of the stock-in-trade and goodwill of any Company or Corporation, person or persons, carrying on the trades and businesses, or any of them, hereinbefore mentioned.

Fifthly.—The doing all such other things as are incidental or conducive to the attainment of the above objects.

4. The liability of the members is limited.
5. The capital of the Company is £500,000, in 50,000 shares of £10 each.

— — — — —

The following contract has been entered into :—An agreement, dated 15th March, 1870, between Benjamin Weston Wells of the one part, and John Honor Croucher of the other part.

— — — — —
THE ATLANTIC AND PACIFIC STEAMSHIP CORPORATION (LIMITED).

No.

Form of Application.—(To be retained by the Bankers.)

Gentlemen,

Having paid to your Bankers the sum of £ , being a deposit of £1 per share, I request that you will allot me shares, of £10 each, in your Company, upon the terms of the prospectus and memorandum, and articles of association; and I hereby agree to accept the said shares, or any smaller number which you may allot to me, and to make the payment of £1 10s. per share on allotment, and to become a member of the Company; and I request you to place my name on the register of members in respect of the shares which may be allotted to me.

I am, gentlemen,
Your obedient Servant,

Name in full—

No. 10.

MESSRS. GILCHRIST, WATT, & Co., to THE COLONIAL TREASURER.

Sydney, 13 June, 1870.

SIR,

Observing that the Agent of Mr. Webb, the American shipowner, is agitating in Melbourne for a mail route from San Francisco, and as the Intercolonial Conference will shortly be held in Melbourne, we feel it our duty to state that, by a late mail from London, we had letters from the North Pacific Transportation Company, in which it is stated,—

"We are running a line of steamers monthly to Honolulu from this city, under a contract and subsidy from our own Government; and Mr. Benjamin Holladay, the President of the Company, is now in Washington negotiating with the Government for a further mail contract and subsidy, to enable us, with the aid we hope to obtain from Australia, to extend our line to Sydney and such other points as may be deemed desirable. To put such a line in successful operation for monthly mail service would require at least four steamers, say 1,500 tons each. "The

“The regular freighting and passenger business would not justify the outlay of capital necessary to carry it on. If we succeed in obtaining from the United States Government a fair subsidy, with some assurance that the Colonies would also contribute sufficient to guarantee us that there would be no great loss in the enterprise, we are prepared within a reasonable time to initiate the line.”

and we would respectfully urge that no arrangement be completed with any other party until a fair opportunity be offered to the N.P.T. Co. to compete; the more so as this, we believe, is the Company with which Mr. Hall, the U.S. Consul, relies on making arrangements to enable him to carry out the contract he has now made with the New Zealand Government.

A mail service by this route ought to be performed on moderate terms, and as expeditiously as the route *viâ* Suez.

There is very frequent communication from Great Britain to New York by some of the finest steamers in the world, running, most of them, without any subsidies, but bound to carry letters at a fixed rate. An arrangement with one of these lines ought to be made on very reasonable terms: the transit would occupy 9 days. Then, as regards the railway across the American continent, there is little doubt that the U.S. Government, from their desire to make their territory the pathway of the commerce of the east, would afford every facility for the transit of mails and passengers to Australia, and the time occupied would not exceed 6 days.

From San Francisco, eastwards, the U.S. Government have already a subsidized line as far as Honolulu. It is probable that the negotiation of the N.P.T. Co. for a further subsidy to enable them to extend their operations to Australia will be successful. If this be so arranged, then a moderate subsidy from the Australian Colonies should suffice.

The distance from San Francisco to Honolulu is 2,091 miles, which, at the moderate speed of 9 knots, would take 9 days 16 hours; from Honolulu to Levuka, the most desirable port of the Fiji Islands, the distance is 2,650 miles, which, at 9 knots, would take 12 days 6 hours; from Fiji a branch boat could take the New Zealand mails to Auckland, the distance being 1,140 miles, which, at 9 knots per hour, would take 5 days 7 hours. The mail boat could then proceed from Fiji to Sydney direct, a distance of 1,740 miles, which, at 9 knots, would take 8 days 1 hour; a branch boat might start from the Fiji to Brisbane, calling at New Caledonia (if the French Government were willing to contribute). The distance from Fiji to Brisbane is 1,524 miles, which would take 7 days 1 hour—thus making Brisbane the first port in possession of the latest intelligence, an advantage which should make the Queensland Government to contribute liberally to the line.

As Brisbane and Sydney are connected by telegraphic wire, and by steam communication twice a week, probably the branch steamer could be dispensed with, and the mail boat could proceed direct to Sydney or Brisbane as might be arranged; if to Brisbane, then the mails could be landed in the Bay, and the steamer at once proceed to Sydney; and allowing 48 hours to Sydney, the time from Fiji to Sydney, *viâ* Brisbane, would be 9 days 1 hour; but telegraphic advices would of course be 48 hours earlier.

It is unnecessary to expatiate on the advantages which would accrue to the Eastern Colonies from thus having in direct steam communication the valuable islands of the Pacific.

It is sufficient to look at the question as one of a mail route only, alternating with the Suez route; and in this it will stand comparison, and will place the Australian Colonies in speedy and direct communication with North and South America on the one hand, as well as with Europe, Asia, and Africa on the other.

The time calculated for conveyance of mails from England to New York is 9 days, from New York to San Francisco (by railway) 6 days, and allowing 2 days for stoppages at Honolulu and Fiji, the total time occupied in transmission of letters by this route would be—

To Sydney direct, 47 days. A gain of 2 days on the contract time *viâ* Marseilles and Suez.

Brisbane direct, 46 days. A gain of 5 days.

Auckland, 45 days 5 hours.

and by increasing the speed of the steamers beyond the moderate rate of 9 knots a considerable further saving in time may be effected.

The communication betwixt Sydney and China would be as expeditiously carried on *viâ* Honolulu as *viâ* Galle.

If Victoria, with South Australia, Western Australia, and Tasmania, would then undertake the burden of the Suez route, and Sydney, in conjunction with Queensland and New Zealand, that of the San Francisco route, in alternate fortnights, it is probable the interests of all the Colonies would be most effectually and economically served.

We have, &c.,
GILCHRIST, WATT, & Co.

No. 11.

THE COLONIAL SECRETARY, QUEENSLAND, to THE COLONIAL SECRETARY, N.S.W.

Queensland.

Colonial Secretary's Office,
Brisbane, 15 October, 1870.

SIR,

I do myself the honor to call your attention to the proposed steam communication between England and Australia *viâ* San Francisco.

Some correspondence has taken place between this Government and Mr. Collie, of the firm of Collie, Stewart, & Co., the San Francisco agents of Mr. W. H. Webb of New York, with reference thereto; but as Mr. Collie informs me that he has also addressed your Government on the same subject, it will not be necessary to enter into the details of the proposed route, with which you have been already made acquainted.

It will be sufficient to state, that it is in contemplation to establish a line of powerful steamers, to run monthly between San Francisco and Sydney direct, avoiding any part of New Zealand, and calling at Honolulu, the Fijis, New Caledonia, and the pilot-station at Moreton Island, in Queensland, where it is proposed only to land passengers and the mails.

For

For this monthly service a subsidy of £120,000 was required; but upon my making it a condition for further negotiation that the service should comprise thirteen instead of twelve trips per annum, alternating with the Suez route, no objection was raised on the part of Mr. Collie.

Of this sum of £120,000, it is anticipated that one moiety will be provided by the United States Government; and it is proposed that the second moiety shall be contributed by the Sandwich Islands, New Caledonia, New South Wales, and Queensland, in the following proportions—

Sandwich Islands...	£ 6,000
New Caledonia	12,000
New South Wales	32,000
Queensland	10,000

There are many reasons which would tend to render this line more advantageous to New South Wales and Queensland than one which would place New Zealand in the main line of traffic between Honolulu and San Francisco, as contended for by the Government of that Colony. There would be a great saving of time effected by adopting the direct line, which may be estimated as a clear gain of five or six days to Sydney (the average voyage between that place and Auckland); and, by avoiding the stormy coast of New Zealand the voyage would be performed with greater regularity and despatch, while a direct communication would be opened at once with the Fijis, tending to the commercial development of this group, the importance of which is every day becoming more apparent.

If your Government coincide with our views, we shall be prepared to ask Parliament, as soon as it meets, to agree to certain resolutions which will enable this Government to negotiate with Messrs. Collie, Stewart, & Co., or with any other firm willing to enter into a contract for establishing a line of steamers on the proposed route.

We are given to understand that the New Zealand Government, without waiting for parliamentary action on the part of New South Wales and Queensland, have decided upon carrying out their own line, and making one of their own ports the terminus. If this is the case, it will not be necessary to submit to Parliament the arrangements formerly contemplated.

I shall be glad to learn your views in connection with the subject of steam communication between San Francisco and the Australian Colonies, at your earliest convenience.

I have, &c.,
A. H. PALMER.

No. 12.

THE NORTH PACIFIC TRANSPORTATION CO., SAN FRANCISCO, to THE COLONIAL SECRETARY, N.S.W.
Auckland, New Zealand,
29 November, 1870.

SIR,

We feel it incumbent upon us, as an act of courtesy to your Government, to send to you at the earliest possible moment the enclosed memoranda by the Postmaster General of New Zealand, which fairly enough indicates the main features of a postal contract we have just negotiated with him.

It is a source of much regret to the people of America that proposals heretofore made to you for a San Francisco Service were so coldly received, which coldness we can only attribute to the fact that the thorough determination of the Government and people of the United States to assist such Australasian Colonies as desired to co-operate in obtaining first-class steam communication by way of our Continent to the Old World, was not better understood. We cannot avoid the conclusion that, when your people come to better realize the advantages they are losing, the non-co-operation of their Government will cause them regret.

We have to inform you that a convention has been ratified between the Governments of the United States and New Zealand, by which the former agrees not to permit the transit of any mail matter across the American Continent from the Australias without the consent of the latter.

You will observe by the terms of the contract that, under certain circumstances, a line to your Colony by way of Fiji may be run by us. The advantages of such a line to the whole of Australia and your Colony especially would seem to be incalculable. By it we should be able to contract to deliver letters in Sydney within forty-two days from London, and full and exact telegraphic news from all parts of the world within twenty-six days. If you care to express your views in respect of that line, which we very much desire to see carried out, we shall be glad to receive the same addressed to us at the office of our Agents, Messrs. Cruickshank, Smart, & Co., Auckland, by the 12th of March next, on which date our first vessel will arrive.

We have, &c.,
HOLLADY & BRENHAM,
Per WM. NEILSON.

[Enclosure.]

THE UNITED STATES, NEW ZEALAND, AND AUSTRALASIAN STEAM-PACKET LINE.
(From the *Daily Southern Cross*, 28th November, 1870.)
Memorandum of the Postmaster General.

THE following is published for general information:—

The Postmaster General records with much gratification that, after considerable difficulty and protracted negotiation, he has succeeded in arranging the terms of a new contract for a mail service between New Zealand and San Francisco, with Mr. W. Neilson, the confidential representative of the North Pacific Transportation Company (Messrs. Holladay and Brenham, San Francisco), between which Company and Mr. Webb, of New York, there has been an amalgamation of interests, and an arrangement entered into by which Mr. Webb's ships are to perform the service.

The following is an outline of the arrangement entered into:—

The contractors are to establish a line of mail steamers, under the style and title of "The United States, New Zealand, and Australian Line." The steamers to be employed are the "Nevada," the "Nebraska," and the "Dakota"; with the proviso that the "Moscs Taylor" may be temporarily used, in the event of accident to any of the three vessels named; and further that, should any of the three become unserviceable, others are to be substituted, to be approved by the Postmaster General. The contract vessels are to be, in every respect, first-class mail and passenger steamers, and to be maintained as such.

The

The contract is to be for ten years, subject to the condition that, within six months from the arrival of the first boat at Wellington (say about the beginning of September), the Assembly may decide that the duration of the contract shall be for three years only; but the Government are to use their best endeavours to secure that the ten years' period be accepted by the Assembly.

The service first commenced is to be a temporary one; and in the contract it is described as "Line No. 1." Three alternative lines are provided for, one of which will have to be finally adopted, under conditions set forth in the contract, and which the Postmaster General proposes now to indicate. To all the four lines one feature is common,—that the main boat runs from San Francisco to Port Chalmers, calling at Auckland, Wellington, and Lyttelton.

Line No. 1.—A steamer to leave San Francisco once in every calendar month, commencing on the 16th February next, and to proceed to Port Chalmers, calling at Auckland, Wellington, and Lyttelton; and to return from Port Chalmers to San Francisco once in every calendar month, calling at Lyttelton, Wellington and Auckland. Between San Francisco and Auckland two ports may be visited; those ports to be selected by Mr. Neilson, but to be within the Hawaiian, Society, Navigator, or Fijian groups. The ports so selected are to be visited for coaling purposes only; and there is an express prohibition against any connection being effected between either of the coaling ports in New Caledonia or in Australia. For this line the payment is to be £40,000 for twelve complete services; and any subsidies received from Australia or New Caledonia are to be equally divided between the New Zealand Government and the contractors.

Within six months of the date of the arrival at Wellington of the first contract vessel, the Postmaster General may give to the contractors notice that he adopts, as the alternative of the initiatory line (No. 1), the line described in the contract as—

Line No. 2.—This line is for a service precisely as described under the heading, "Line No. 1"; but thirteen complete services are to be performed within the year, instead of twelve, and the contractors are to establish a branch steamer between Auckland and Sydney, and any other branches they please, from New Zealand ports, but they are not to be at liberty to run any branch steamers except from New Zealand ports. For Line No. 2, the payment is to be £60,000 for thirteen complete services, including the branch line; and all subsidies received, whether from the Australian Colonies or from New Caledonia, are to belong wholly to the New Zealand Government.

If, within six months of the arrival of the first contract boat at Wellington, the Postmaster General does not give notice to adopt Line No. 2, the contractors may elect to carry out Line No. 3 or Line No. 4.

Line No. 3 is similar to Line No. 1, only that the contractors are to receive the subsidies from the other Colonies, less 10 per cent. to the New Zealand Government. They are to be at liberty to establish branches to any Australian Colony, or to New Caledonia, from New Zealand; but they are not to run any branch boats except from New Zealand ports. The payment for Line No. 3 is to be £40,000; the contractors receiving all subsidies paid by other Colonies, and retaining the amount, less 10 per cent., which they are to pay to the New Zealand Government.

Line No. 4 is the same as the others, in regard to the main boats running to Auckland, Wellington, Lyttelton, and Port Chalmers; but the contractors are to be at liberty to run branches from the Fiji Islands to Australia, and to make such arrangements as they please respecting subsidies from Colonies other than New Zealand. The payment for this line to be £30,000 per annum.

Time: In each of the four cases described, the contract time between San Francisco and Auckland is to be twenty-four days; and the contractors are to use all diligence to perform the distance between Auckland and Port Chalmers within one hundred hours, subject to a penalty of £2 per hour for unnecessary delay. If the Government adopt Line No. 2, the contract time between San Francisco and Sydney is to be thirty days. If the contract time is exceeded, the contractors are to pay a penalty of £2 per hour for such excess, unless a reasonable cause can be shown for it; and they are to receive a bonus of £2 for each hour less than contract time within which any service is performed between San Francisco and Auckland, or San Francisco and Sydney.

The Postmaster General is to have power to make and to vary time-tables. The vessels may be detained twenty-four hours in New Zealand, and twenty-four hours in Sydney. They may also be detained forty-eight hours in San Francisco, whenever it may be necessary so long to await the arrival there of the mails from Europe.

The contract vessels are to be exempt from all port, light, or wharfage dues or charges in New Zealand. On board each vessel, first-cabin passengers are to be provided, without charge, for a mail agent and his assistants.

The contractors are to enter into bonds, to the amount of £25,000, for the due performance of their contract.

The contractors agree, subject to a penalty of £1,000 per annum, to procure from the United States an exemption from all the charges for mails between San Francisco and London, and between New York and San Francisco, which are now imposed under the Convention between the United States and Great Britain. The contractors also agree to use their best endeavours to secure a concession under which wool, the produce of any Colony contributing to the mail subsidy, and the fibre of the *phormium tenax* produced in New Zealand, shall be admitted into the United States duty free.

These are the principal features of the contract. Some details still have to be settled between the contractors and the Postmaster General. Until it is known what the United States Government may decide to do in respect to some of the open questions, it may not be desirable that specific offers should be made to the Australian Colonies. The contract contains ample provision for securing payment of subsidies from other Colonies. It may be observed that the Post Office Act No. 2, passed last Session, and the terms of the Convention proposed to the United States (which Mr. Neilson announces that the authorities of that country have agreed to), have been signally useful in smoothing over one of the most difficult features of the contract—that of dealing with non-subsidizing Colonies.

The Postmaster General, in accordance with the Resolutions of the Assembly, made it a condition in every case that the main-line steamers should come on to New Zealand, and should call at Auckland, Wellington, Lyttelton, and Port Chalmers. There was a great difficulty in procuring the consent of the contractors' representative to the main-line boats visiting so many New Zealand ports; and the arrangement in respect to time between Auckland and Port Chalmers, with penalty for delay, is the very best that the Postmaster General could succeed in effecting. The representative of the contractors declined to make any arrangement as to Napier, and whether the contract vessels will call at that port must depend upon future negotiations.

Every one of the lines will substantially comply with the conditions laid down by the Assembly in the Resolutions of last Session; but Line No. 4, in permitting the diversion of the Australian traffic at the Fijis, will be least in accordance with the spirit of the Resolutions. Unfortunately, it may be taken for granted that, if the Colony does not adopt Line No. 2, the contractors will adopt Line No. 4. They would, by it, in all probability, obtain much larger subsidies from the Australian Colonies than by the New Zealand route. In the case of the other lines, if the vessels call at the Fijis, they are to do so for coaling purposes only. The main steamer is to proceed to New Zealand, and no branches are to be run except from New Zealand ports.

A subsidy of £60,000 may seem to be a large one—and especially so as compared with the amount indicated in the Resolutions of the Assembly. Care has, therefore, been taken to give the Assembly time to decide whether the Colony shall adopt Line No. 2, or leave the contractors their choice between Line No. 3 and Line No. 4. But as the point is certain to be immediately discussed, the Postmaster General takes the opportunity of remarking upon it, without, however, committing himself to a conclusion as to which choice will be recommended to the Assembly.

Line No. 2 is, in effect, not widely different from the service contemplated by the Resolutions. It is true that the amount named in the Resolutions is £40,000; and that the Assembly understood that subsidies from other Colonies would go in reduction of that sum. But it must be remembered that, for the £60,000, thirteen complete services a year will be secured, and also a branch line to Sydney; while the line for which the Assembly approved of paying £40,000 would have been merely a line to New Zealand. The Australian Colonies would have had to arrange for branch services, and would have contributed to the line only as far as New Zealand. Under Line No. 2, the Colony will be able to offer to lay down the mails in Sydney. If Line No. 2 is adopted, the £60,000 a year will be reduced by the amount of all subsidies received from Australian Colonies; and if the concession as regards the Convention between the United States and Great Britain be secured—(the contractors binding themselves in a penalty of £1,000 per year to obtain it)—the postages in England and Australia would alone amount to a very handsome contribution from the Australian Colonies for the carriage of their mails.

In any case, the Australian Colonies should, unitedly, pay not less than from twenty-five to thirty thousand pounds a year; and, supposing the concession above mentioned to be secured, New Zealand would save a very large sum per annum in regard to her own mails, for the Imperial Government would hand over to the Colony the postages collected on the other side, but which are now detained to defray the charges payable by Great Britain to the United States, under the Convention.

It must be added, that the adoption of Line No. 2, by placing the whole service in the hands of New Zealand, would secure that the traffic between Great Britain and the United States on the one hand, and the Australian Colonies on the other, should permanently pass through New Zealand, instead of passing by it, as would be the case were the contractors enabled to adopt Line No. 4, and to run branch boats from Fiji to Australia. Still further, if the Colony should adopt Line No. 2, not only will it include connection with Sydney, from Auckland, but, by lines of steamers already existing, there would practically be direct communication between Melbourne and the Main Line, at Dunedin, Lyttelton, and Wellington.

The Postmaster General believes that the contract times are such that it would be impossible for the Australian Colonies not to come in and to contribute fairly in reduction of the £60,000 subsidy. The contractors have assisted in maturing arrangements by which the journey between San Francisco and New York, and from New York to San Francisco, will be performed in five days instead of seven; and a steamer is always to be ready at New York to start with the mails for England as soon as they arrive. The transit from San Francisco to London will thus be effected in fifteen days; while from Sydney to San Francisco the time will be thirty days. Thus mails from London to Sydney, or from Sydney to London, would be delivered in forty-five days, and mails to or from Melbourne would be received and delivered in forty-seven days. Those times, indeed, would probably be materially reduced; for the contractors state that they would be able to save two days, should it be worth their while to do so.

Supposing New Zealand adopts Line No. 2, the Government would be able to choose, under the thirteen-services condition, either Sydney or Melbourne as the port at which to make the times correspond with those of the boats of the Peninsular and Oriental Company; or the Government would be able to give to either Sydney or Melbourne an absolute fortnightly service to England. Whichever of those courses might be adopted, it is impossible to avoid the conclusion that there would be a mail service to which public opinion in the Australian Colonies would demand that contribution should be made; whilst it is also impossible not to conclude that, as a passenger route, the service would be unequalled.

There are many other considerations to be taken into account in choosing between the services. Line No. 2, with contributions from the other Colonies, and with the English postages which would be set free by the United States foregoing the transit charges, should not cost much, if any, more than £25,000; whilst, under similar circumstances, Line No. 4 would cost about the same amount, with far less advantages. Line No. 3, with nearly equal advantages, would cost about the same, but with less risk of costing more through the Colonies not contributing. But the contractors have the option, if Line No. 2 is not adopted, of choosing between Line No. 3 and Line No. 4, so that No. 3 cannot be counted on. It will be for the Assembly to decide whether Line No. 2 involves so much risk as to make it desirable to be prepared for the substitution of Line No. 4, which, after all, would be a very good service. It, or any of the other lines, would give New Zealand a service which would cost much less than the Panama service, or than the Suez service (with intercolonial and interprovincial distributing boats) has cost; whilst, as compared with either, it would confer immeasurably greater advantages, direct and indirect.

The contractors propose to charge £85 for the through passage to England, including railway fare across the American Continent; and to leave to each passenger the option of proceeding direct, or delaying at different places as long as may be desired. The Postmaster General is informed—although it is not a condition of the contract—that a uniform rate to England is to be charged from all ports of New Zealand.

Should effect be given to the provision for the admission duty-free into the United States of New Zealand flax, and of wool, the produce of New Zealand or of any Colony contributing towards the service, another inducement to the Australian Colonies to contribute will be supplied.

It can scarcely be doubted that the establishment of the line will lead to the development of the New Zealand coal-fields; in which case it would be no exaggeration to regard the subsidy as being more than recouped to the Colony, by the money-payments for its coal, and by the employment to labour and capital which would be afforded.

The time-table fixed for the commencement of the service is as follows:—To leave Port Chalmers, Sydney (if required), and London, on the 1st of each month; Auckland on the 7th; and San Francisco on the 16th. This will enable letters despatched from London on the 1st of the month to be delivered in Port Chalmers on the 15th, and in Sydney on the 16th, of the following month. There will be about a fortnight for answering; and replies leaving Port Chalmers or Sydney on the 1st will reach London on the 15th of the following month, thus giving a "course of post" of about 105 days, or three months and a half. The same will apply to answers to letters sent from Port Chalmers or Sydney. In the case of Wellington or Auckland, the time here stated would be reduced by several days.

In conclusion, the Postmaster General would observe that the contract appears to be one of an eminently satisfactory nature. It will stand the test of meeting the requirements of the whole Colony, as a first-class mail, passenger, and commercial service; and if tested as regards its effect upon the much discussed separate interests of the different parts of the Colony, the conclusion must be that no service more likely to do justice to those interests could be obtained, even if one could be devised.

Auckland, 24 November, 1870.

JULIUS VOGEL.

The following description of the vessels to be employed is taken from the American Lloyds for 1870:—

"NEBRASKA."—The steam-ship "Nebraska," 2,143 tons register, built in 1865, under official supervision, specially surveyed, and classed as extra A1 in 1869. Built of oak and hackmatack, on iron frame, three decks and beams; 15 feet draft. Half brig rig. Dimensions—370 feet length; breadth, 39 feet; depth, 26 feet; beam engines, 81-inch cylinder; stroke of piston, 12 feet. Double-planked with 4-in. oak. Made 15½ knots on her trial trip.

"NEVADA."—The steam-ship "Nevada" was built at the same time as the "Nebraska." Her tonnage is the same, and she is in every respect a similar vessel, except that her cylinder is 4 in. larger.

"DAKOTA."—The steam-ship "Dakota," 2,153 tons register, was built in 1865, and specially surveyed and classed in 1869 as extra A1. She is similar in every respect to the "Nebraska." At present she is employed in the trade between New York and the West Indies.

"MOSES TAYLOR."—The "Moses Taylor" is 1,354 tons register, was built in 1857, and was resurveyed and classed as extra A1 in 1869.

No. 13.

H. H. HALL, ESQ., U.S. CONSUL, to THE HON. SIR JAMES MARTIN.

U.S. Consulate, Sydney,
21 December, 1870.

SIR,

I have the honor to inform you that my present contract with the New Zealand Government, for the conveyance of Her Majesty's mails to San Francisco, *via* Auckland and Honolulu, will terminate in April next, the New Zealand Government having entered into a contract with the North Pacific Transportation Company for a monthly service, having Otago for a terminus, making the main line entirely a New Zealand one, and leaving the more important Australian Colonies dependent upon an inferior branch service.

This contract was offered to me, but I declined accepting it, as I have found during the last (10) ten months, that a loss of from four to five days has been incurred through deviating from the direct route in order to call at Auckland. The heavier weather so prevalent on the New Zealand coast has also thereby been encountered.

I am also of opinion that by running only twelve services in the year the commercial interests of these Colonies are not sufficiently advanced. The line that I now propose to establish will give a fortnightly service, and will open up the trade of the Pacific, on which too great a commercial value can hardly be set by these Colonies. As the telegraphic communication between England and the Australian Colonies will

will very soon be completed, it is highly desirable that the proposed route should be supported, from the very fact that by it we shall have from three to four days earlier news, and this route will then complete the postal conveyance round the world. I would now most respectfully submit the following considerations in favour of the adoption of my proposal:—

- 1st. In maintaining the line having Sydney for its terminus, and carried on by colonial capital, there will be expended in Sydney alone from £90,000 to £100,000 annually.
- 2nd. A large trade between these Colonies and San Francisco will also be opened up, and will no doubt be of great advantage to these Colonies in the re-exchange of the raw materials of both countries.
- 3rd. The subsidy of (£45,000) forty-five thousand pounds sterling, which I now ask this Colony to guarantee, is nearly one-half less than the P. and O. Co. ask from the various Colonies to establish a fortnightly service, which would assign a very small contribution to each of them, and by such a service forming a close alliance with that immense continent of America, as well as Canada, which will tend to develop not only the trade of the entire Pacific, but also the natural resources of the Australian Colonies, and establish to them a permanent mail service that will prove second to none now established in the world.

As this is purely an Australian service, and pre-eminently advantageous to these Colonies, I respectfully submit that it deserves the most earnest consideration and support of your Government.

Apart from the great desirability of having more than one mail line to Europe—most clearly shown by the present complicated state of affairs there—the establishment of the proposed service would do much to raise New South Wales to her proper position among the Australian Colonies; for while Victoria has been arranging for a service by the Cape, and New Zealand has been monopolizing the benefits to be derived from the late contract with the American Company, New South Wales, with greater natural advantages than either Colony, has been standing idly by doing nothing.

Awaiting your favourable consideration,—

I have, &c.,
H. H. HALL,
U.S. Consul.

[Enclosure.]

TENDER for the conveyance of Her Majesty's mails between Sydney and San Francisco, *via* Fiji and Honolulu.

Sir,

I hereby offer to convey Her Majesty's mails by steam-vessels between Sydney and San Francisco, touching at Fiji and Honolulu, and also at the Isle of Pines if required, for the sum of (£45,000) forty-five thousand pounds sterling, for thirteen (13) complete services each year, the contract to be subject to the usual conditions of steam postal service.

The steam-ships to be employed in opening the service will be the "Wonga Wonga," "City of Melbourne," and "City of Adelaide." If a fourth vessel is necessary, one of a similar class to be provided, and when the trade warrants it vessels of a larger tonnage to be employed. In every case the steamers are to be subject to the approval of the Postmaster General and the Marine Steam Navigation Board. The Colony of New South Wales guaranteeing to me the said subsidy. All subsidies received, whether from the other Australian Colonies or from Great Britain, to belong to the New South Wales Government.

The contract to be for (10) ten years, subject to the condition that any period after the expiration of (6) six months from the departure of the first steamer, the Postmaster General shall have the option of discontinuing the service on his giving (2) years' notice of his intention to do so.

To leave Sydney every (28) twenty-eight days, commencing on the 8th April, 1871. Time occupied between Sydney and San Francisco and *vice versa*, including stoppages, (30) thirty days.

Premium or penalties to be on the basis of (£50) fifty pounds sterling per diem.

Estimated time between San Francisco and Liverpool (15) fifteen days, being a saving of (4) four days over the present mail service *via* Suez.

The Postmaster General to fix the time-table alternating at regular intervals of (14) fourteen days with the existing four-weekly service *via* Point de Galle.

The service to be designated the "Australian South Pacific and California Line of Steam-packets."

To the Hon. Sir James Martin,
Premier, &c., &c.,
New South Wales.

I have, &c.,
H. H. HALL,
U.S. Consul.
U. S. Consulate, Sydney,
21 December, 1870.

No. 14.

H. H. HALL, ESQ., U.S. CONSUL, to THE POSTMASTER GENERAL, N.S.W.

U. S. Consulate, Grafton Wharf,
Sydney, 31 December, 1870.

SIR,

I have the honor to inform you that I have had an interview this morning with Mr. Palmer, the Colonial Secretary of Queensland, and informed him that I had tendered to the Government of New South Wales for the conveyance of mails, leaving this Government to arrange with the Government of Queensland for the conveyance of their mails.

Judging from the tenor of your former negotiations in similar matters, it would only be presumption on my part to offer any suggestions.

I have, &c.,
H. H. HALL,
U.S.C.

No. 15.

No. 15.

MINUTE UPON THE OCEAN POSTAL SERVICES WITH EUROPE.

For the consideration of the Cabinet.

1. The contract of the New Zealand Government for the conveyance of mails *via* San Francisco (to which this Colony is in some sense a party) terminating in April next, renders it necessary for the Government to determine what course it will adopt in regard to any future service by this route.

To arrive at a due determination in this matter, it will be necessary to bring under consideration what are the advantages which the Colony has derived from previous services to and from Europe, or is likely to derive in the future, from the continuation of one or more ocean services.

With this view, I propose to consider, as briefly as possible, what are the essential requisites of a mail ocean service, and how far these requisites are met by the contracts which have existed, are at present carried on, or are proposed for adoption.

These essential requisites, as far as the Colony is concerned, I conceive are comprised under the following heads:—

- (1.) Rapidity of communication.
- (2.) The expense of the service.
- (3.) Degree of control which the Colonial Governments are able to exercise over the contracts.
- (4.) Disadvantages, including liability to interruption from extraneous causes.

2. By examining the conditions of past and existing services under these heads, we shall be able to form a comparative value of the two routes—that *via* Galle, and that *via* San Francisco; and will be in a position to decide as to the course which it will be expedient for the Colony to adopt, with regard to the tenders which have been submitted for the continuation of the latter service.

Previously to the year 1866, the whole of the correspondence of the Colony with Europe was conveyed under the various contracts with the Peninsular and Oriental Steam Navigation Company, entered into by the Imperial Government, to which the several Australian Colonies were made parties.

The average period required for the transit was 57 days from Southampton, giving a course of post between London and Sydney of 104 days *via* Marseilles, and 116 days *via* Southampton.

3. But, as the period of service and the amount of subsidy were subjected to continual alteration, and under every variation the service was very inefficiently performed, I propose, for the purpose of this comparative examination, to confine my remarks to the contract entered into in the year 1865, and commenced in February, 1866, being that under which the service is now performed.

By the terms of this contract, letters *via* Southampton are to be delivered in Sydney in 57 days, and in London, from Sydney, in 56 days, for six months in the year, and 58 days for the remainder.

But the period of transit is shortened, with regard to letters sent *via* Marseilles (at an additional cost), to 50 days from London to Sydney; and from Sydney to London, for six months in the year, to 50 days, and for the remaining months to 52 days. And, by a later subsequent alteration, letters going *via* Brindisi gain a day each way in the period of transit.

4. The expense to the Colony of this service, including the portion of the contract for the Indian mail service chargeable against the Colony for the conveyance of the Australian mails to Galle, and the various expenses connected with the transit through Egypt, &c., amounted to £93,081, giving an average of £18,600 per annum.

This gross amount must be diminished by the revenue derived from correspondence transmitted by this route, amounting to £33,235, reducing the average of real expense to £12,000 per annum.

5. With regard to the control which this Colony can exercise over the performance of the contract, it only possesses a negative voice. The Imperial Government reserves to itself the right of entering into and varying the terms of such contracts; and it also fixes the amount to be contributed by each of the Australian Colonies. This amount, being calculated on the use which the respective Colonies make of the service, varies from year to year, and has this further disadvantage,—that, as the moiety of the fixed sum under the contract must be provided by the various Colonies, if one Colony withdraws from the use of the line the share which such Colony formerly contributed is divided rateably between the remainder, although such Colonies have not increased the benefits which they derive from the service.

This service is further open to objection, on the ground of the indefinite amount which the Colonies may be called upon to pay; because the contract for the Indian Mail Service of 1867 (under which Australian mails are conveyed to Galle, and the Colonies charged with a rateable share of the subsidy) contains a provision that the amount of such subsidy may be increased at the discretion of the Postmaster General of Great Britain to the extent of £100,000, dependent upon the amount of dividend derived from all sources at the disposal of the Peninsular and Oriental Steam Navigation Company, the other party to the contract.

The respective Colonies can only withdraw from being parties to the contract by giving two years and three months' notice of their intention to do so.

6. The interruptions to which the service may be liable from extraneous causes chiefly affect that portion of the route *via* Marseilles and Brindisi from the use of which we might be debarred by the action of Foreign Powers. Any European convulsion which might affect the transit of the mails through Egypt would put an end to the service altogether.

Under the provisions of this contract (modified as it was in 1867 by the new contract for the conveyance of the India and China mails), the service has been most punctually and efficiently performed; the vessels employed being generally from two to four days in advance of their contract time.

7. In 1865 a contract was entered into by the New Zealand Government (to which the Government of this Colony was made a joint party, by articles of agreement, 9th October, 1867) for the conveyance of mails from these Colonies, between England and Sydney, *via* Panama.

Under this contract the time allowed for the conveyance of mails was, outward from Panama to Sydney 36 days, and homewards from Sydney to Panama 35 days. The time estimated for the transit of the Isthmus and conveyance to London by the vessels of the Royal Mail Company was 23 days, making a complete service of 58 and 59 days.

The

The average time in which the service was performed for the first 7 months of the contract was, outwards 62½ days, and homewards 60½ days; but in several instances the excess over the contract time arose on the Atlantic side of the Isthmus; rather a singular circumstance, as the contract of the Royal Mail Company, which had been previously almost proverbial for punctuality from the commencement of the Australian service, fell into irregularity and met with constant disaster.

This contract *viâ* Panama continued in force until December 1868, when it came to an end, in consequence of the collapse of the Company, and its inability to continue the service.

To supply the loss, the Colony of New Zealand in 1869 entered into a new contract to convey the mails to England *viâ* San Francisco; in the advantages of which this Colony was allowed to participate, and to some extent control its working, on certain conditions. This contract is by mutual consent of all parties to terminate on the 1st of April, 1871.

The time required for the performance of the contract was 30 days each way, to and from Sydney and San Francisco. The average time actually occupied from England has been, outwards 62 days, and homewards 57½ days.

8. The expense to the Colony of the first of these services during the period of its existence was £141,254, being at the rate of £2,291 13s. 4d. per voyage, the balance being the expenses of transit across the Isthmus and of carriage to England therefrom. But the Imperial Government assisted this service by conveying the mails free of charge to and from Colon, under their contract with the Royal Mail Company. They also accounted to the Colony for the following rates, viz.—letters 1s. 4d. per ounce, books 1s. 1d. per pound, newspapers 6½d. per pound,—upon correspondence posted in England. The gross charge against the Colony must therefore be diminished by £8,735 received from this service, and the amount of £7,342 received from non-contracting Colonies. There must also be taken into account the revenue derived from correspondence to New Zealand, estimated at £915.

The expense of the second contract (that *viâ* San Francisco) is limited to a contribution of £10,000 per annum from this Colony, subject to any diminution obtainable by charging the Colony of Queensland for any use they may have made of this line, and the revenue derivable from letters posted in the Colony.

9. The control over the performance of these contracts was, as far as the Pacific service is concerned, vested solely in the two Colonies which were parties to the agreement; and as the latter service has been exclusively performed (as far as Honolulu) by vessels belonging to parties in the Colony, an additional inducement for the due performance of the contract was secured.

10. The disadvantages of the first of these American routes were, the absence of any control over the Isthmus transit or the service from Colon to England. The right of transit across the Isthmus being conceded to the subjects of a Foreign Power, placed in their hands the imposition of a scale of charges which might have prohibited the traffic; and the transit might have been interrupted by the occurrence of a war between England and the United States. The service *viâ* San Francisco is open to the same objections, with the addition that the long transit across the Continent of America is entirely through the territories of the United States, and in the event of war would be completely cut off.

11. This, therefore, is the position of the Ocean Postal Service, viz. :—A four-weekly service *viâ* Point de Galle, costing on an average £12,000 per annum; and a monthly service by way of America, costing (formerly) *viâ* Panama, £49,713 per annum; and at present *viâ* San Francisco, costing £8,800 per annum.

The use which has been made by the Colony of these respective lines is shown in the table A annexed; but it must be borne in mind that the one service had been for some years familiar to the public, and the other was, and still is in a great measure, an experiment.

12. But the desire of this Colony, in common with the rest of the Australian group, has been for some years in favour of a fortnightly service. Under all former contracts, it has been impossible so to arrange the services as to cause the service each way to be an alternate one, with regard to the despatch of mails from each terminus. In fact, so inefficient for such an arrangement have been the periods of despatch, that frequently it has happened mails by the two routes have left the harbour of Sydney on the same day, and the same thing has occurred with regard to their arrival.

But several propositions for the establishment of a fortnightly service have been submitted to the Government; and I shall proceed to show the details of these respective proposals for the consideration of the Cabinet, accompanying them with such comments as occur to me, with regard to their cost and comparative advantage or disadvantage to the Colony.

13. By the existing contract with the Peninsular and Oriental Steam Navigation Company, for the 4-weekly service *viâ* Point de Galle, power is vested in the Postmaster General of England, by notification, to substitute a fortnightly service by the same route. There is no probability of the period of transit being accelerated on this line; it will therefore remain as formerly stated. The subsidy for the present 4-weekly service, being £130,000 per annum (the moiety of which is borne by the Colonies), the Company are bound to perform the double service for £184,166 per annum. But to this must be added the additional amount to be thrown upon the Colonies for the additional mail under the Indian and China contract, and the increased charges for transit and other duties now chargeable for the single service.

14. The cost to the Colony for the fortnightly service, if the other Colonies of the Australian group continued their contributions as at present, may be estimated at £28,000. But there is the probability of Queensland and New Zealand withdrawing altogether as contributors to this route, because under no circumstances could they derive the advantage of a fortnightly service from the proposed arrangement. Assuming this withdrawal as a possibility, the contribution of this Colony to the subsidy will be increased by a rateable share of the amounts which have hitherto been paid by these Colonies, which must be added to its liability for the expense of the service.

15. The inability of the Colony to interfere in the event of any default in the performance of the service (excepting through the circuitous and inefficient manner already alluded to) would be a great disadvantage; and it must be borne in mind that, whether the service to be performed under this contract is four-weekly or fortnightly, it cannot be terminated by the Imperial Government without twenty-four calendar months' notice, excepting for breach of contract.

16. The liabilities to derangement from extraneous causes of course will remain the same, but will be greatly aggravated if the adoption of this service should lead to the abandonment of all others, which would probably be the case.

17. The proposals for the performance of an alternate service *viâ* America which have been received are :—

1st. A communication from the Government of New Zealand to the Colonial Secretary of New South Wales, stating that they had entered into an agreement with an American Company for the conveyance of their mails to London *viâ* San Francisco. The colonial terminus of the line was to be at Port Chalmers in that Colony; but the Government proposed a branch line to Sydney, to be carried out by colonial vessels. The letters to be conveyed to and from Sydney and San Francisco in 30 days; the period of transit between Sydney and London being estimated at 45 days. The amount to be paid for the service to England is not stated in this letter; but the suggestion of the New Zealand Government is, that this Colony should (as a temporary arrangement) continue to contribute at the rate of £10,000 per annum for the use of the line for twelve complete services, subject to future adjustment, to take effect when agreed to from the commencement of the service in April next. But, by a memo. of the Postmaster General of New Zealand, published in the New Zealand papers (which has not been officially communicated to this Government from that of New Zealand, but which has been officially transmitted to the Government by the confidential agent of the North Pacific Transportation Company—the other party to the New Zealand contract), I find that this line in which New Zealand invites our participation by paying £10,000 for a branch line from that Colony (this sum being one-fourth of the whole amount contracted to be paid for the service to San Francisco) is only intended to be an initiatory line; the Postmaster General of that Colony being required to elect, within six months of the arrival of the first contract vessel, whether he accepts an alternative line described in this agreement as line No. 2. Failing this election, the contractors have the power to adopt another line, described as No. 4. Line No. 2 differs from the provisional line by providing for thirteen complete services annually instead of twelve, the amount of subsidy being fixed at £60,000. But the contractors are to establish the branch line to Sydney, from *any port in New Zealand*, and the subsidy from New South Wales is to belong wholly to the New Zealand Government; whereas, under line No. 1, such subsidy was to be equally divided between that Government and the contractors.

18. The disadvantages to this Colony of the proposed arrangement are so manifest that this Government at once declined to accede to it. These disadvantages are, the impossibility of making such a service in any manner to alternate with the route *viâ* Suez,—the entire absence of control by this Colony over the performance of the contract,—and the delay in the transit of New South Wales correspondence by the circuitous route of New Zealand, estimated by the present contractor at from 4 to 5 days.

But this line and its alternative No. 2 are clogged with conditions seriously injurious to the interests of New South Wales. Both provide that no branch line shall proceed from any other than a New Zealand port; and further, there is an express prohibition against any connection being effected between coaling ports on the line between San Francisco and Auckland (of which there may be two) and any port in Australia; and it would also appear that it is in contemplation to exclude the use of Australian coal in the performance of the main service; and a final objection is, that the contract is entered into with the subjects of a Foreign Power.

19. This disposes of the proposition of the New Zealand Government, and I shall proceed to examine line No. 4 of this contract, which, although its coming into force depends upon the action of New Zealand, yet presents features totally distinct from those last under consideration. The effect of this will be that, although the main line as far as the Fiji group would be under the sole control of the New Zealand Government, and the terminus of such line would still be in that Colony, yet the contractors are at liberty to make independent arrangements with the Australian Colonies. No specific details with regard to this service, or of the amount the contractors would require for a connecting line between Sydney and the Fijis, have been submitted to this Government; but I find in a letter addressed to it by the confidential agent of the contractors, he states that the latter “would be able to contract to deliver letters in Sydney within 42 days from London, and telegraphic news from all parts of the world within 26 days.” The latter part of this paragraph I construe as denoting the passage from San Francisco to Sydney.

20. The objection to such an arrangement is, that we should be unable to arrange any time-table which would make this an alternate service with that *viâ* Suez, without previously obtaining the consent of New Zealand and the contractors.

21. This communication from the agent of the contractors, dated 29th November, 1870, does not appear to have been acknowledged; although it contains a request to be informed of the views of this Government before the 12th March next, on which date it is stated their first vessel will arrive in Auckland.

22. With regard to the contract itself, I have been informed that it has fallen through, in consequence of the refusal of a Mr. Webb (whose vessels were to be employed in the performance thereof) to allow them to come down to New Zealand; but I am unable to discover what degree of truth is contained in this statement.

23. Some correspondence between the Government of this Colony and a Company proposed to be established in London, under the title of “The Atlantic and Pacific Steam-ship Corporation,” has been submitted to me. This correspondence extends from the 3rd December, 1869, to 22nd of April last, has not been finally dealt with, being initialled in December by the Colonial Secretary, for the “consideration of his successor.”

This correspondence comprises a tender from this Corporation to convey mails between Sydney and England,—starting from Milford Haven, *viâ* Portland or Halifax, by express train; thence to San Francisco, the Fijis, to Sydney, for the sum of £26,000. The service to be monthly, and performed in 40 days from the time of leaving England or Sydney respectively. The tender does not include any provision for the conveyance of mails to and from other Australian Colonies; but it may be presumed that the Corporation intended to limit its proposal to the carriage of mails belonging to New South Wales, leaving it open to the Company to negotiate with other Colonies for participation.

There are no data upon which any conclusion can be formed whether this Corporation is still in a position to carry out its proposal; but such a service could be made to harmonize with the existing mail service by causing its days of departure to alternate with those of the Peninsular and Oriental Steam Navigation Company.

24. A tender has lately been sent in by Mr. Hall, United States Consul, offering to convey the Australian mails by thirteen complete services, yearly, between Sydney and San Francisco, *viâ* Fiji, Honolulu, and (if required) the Isle of Pines, for the sum of £45,000 per annum, to be guaranteed by this Colony; the time occupied between Sydney and San Francisco, and *vice versâ*, including stoppages, to be 30 days. If it should be decided not to call at the Isle of Pines, this period would be shortened by 12 hours.

The

The contract to be in force for 10 years, terminable at the option of this Government by 2 years' notice. The Government could negotiate with Great Britain and the other Australian Colonies for the terms of participation in the benefits of the service; any contributions obtained from them going in diminution of the guaranteed amount.

25. The vessels to be employed in opening the service are the property of residents in this Colony. The absolute control over the performance of the contract would rest with this Colony; and the mails from San Francisco to England would be conveyed under the provisions of the postal convention between Great Britain and the United States of 1868. But it would be in the power of this Colony to obtain the diminution of the charges authorized by this convention, as far as the United States is concerned, by entering into a convention with that Power similar to those already concluded by it,—with New Zealand, British Columbia, and Salvador.

26. The concurrence of Queensland with this arrangement may I believe be confidently anticipated. If this service should be established, and the one projected by New Zealand fall through, it is probable that Colony would gladly avail itself of the opportunity of joining in what would be to it a main postal line; as in that case, the only charge to be borne by it exclusively would be the branch line to the Fijis. There could be no doubt that the southern Colonies would also contribute in proportion to the use they might make of this service.

27. I have thus placed, as accurately as was in my power from the documents before me, the present position of the ocean mail services, with the advantages and disadvantages they respectively possess. It will be seen that, as a means of communication with Europe, I do not attach much value to the American route under the present arrangements for a monthly service. It has a certain value for the transmission of correspondence to the United States, the Dominion of Canada, the West Indies, and the Coasts of America; but certainly not to the extent which the Colony has been called upon to pay for the benefit it has derived from it. Its sole value as a European service would be as an alternating service with one *viâ* Point de Galle. But I think there is little doubt that considerable pressure will be brought to bear upon the Government for the continuance of some service of this kind *viâ* California. If it should be considered expedient to yield to this pressure, and make provision for the continuance of some service, I conceive that the question should be considered on the broader ground of making it an alternating service with that *viâ* Suez, and thus complying with the wider desire for a fortnightly communication with Europe.

28. I have shown that the expense of a fortnightly mail by Point de Galle must be estimated at £28,000, and probably (by the secession from the contract of those Colonies which could not derive any benefit from the extension) to £36,000; and this would be for a service of 49 days by the route *viâ* Brindisi, and 57 and 58 *viâ* Southampton.

29. By continuing the present 4-weekly service by this route, now costing £19,000 per annum, and, for the purpose of comparison, adopting the colonial tender now under consideration for the 4-weekly service which shall be made to alternate with it to give a fortnightly mail to all the Colonies, the expense to the Colonies would amount to £64,000, of which the share of New South Wales may be reasonably taken at £42,000, for a service occupying the same time as above, *viâ* Suez, and a contract time of 45 days *viâ* California; but it must be taken into consideration that the comparative economy of this fortnightly mail *viâ* Suez arises from the fact that Great Britain pays a moiety of the expenses. If the same policy were pursued towards the route *viâ* California, the contributions to the subsidy required from the Colonies would be comparatively small. It will be observed that the calculations for both of these services have been made irrespectively of the revenue derivable in the Colony from postage fees.

30. If the mail service *viâ* Suez were supported entirely by Great Britain and the southern Colonies of Australia, and the service *viâ* California by the northern ones and New Zealand, the use of the lines being extended reciprocally to the non-contracting Colonies respectively, which I believe would be the policy most conducive to the advantage of all, I do not think it could be conceived that Great Britain would confine the assistance she might be expected to give (on account of British interests) to the one group of Colonies only. It could not be imagined that the Imperial Government would assist the one to the extent of one-half of the expenditure, and leave the other to sustain the whole burden of the service; especially when this expenditure on either part was incurred as much for British as for Colonial interests, and the revenue recouped to the British Post Office was derived from the same sources in each. I think, therefore, that assistance from Great Britain would be equally extended to both services. If, on the other hand, the Government should be of opinion that the financial condition of the Colony would not justify it at the present time in meeting the desire for a fortnightly mail service, the present 4-weekly service *viâ* Point de Galle must remain as it is, and the service *viâ* America must be developed by private enterprise.

13th January, 1871.

JOSEPH DOCKER.

MINUTE OF THE CABINET OF N.S.W.

THE Cabinet, having had the matter submitted to them by the Postmaster General, have arrived at the conclusion that it is not expedient at the present time to enter into any new contract for a mail service by way of San Francisco.—J.M., A.G., 30 Jan., 1871.

Sydney: Thomas Richards, Government Printer.—1871.

STEAM POSTAL SERVICE.

No. 1.

THE COLONIAL SECRETARY, NEW ZEALAND, to THE COLONIAL SECRETARY, NEW SOUTH WALES.

Colonial Secretary's Office,
Wellington, 4 February, 1871.

SIR,

I have the honor to acknowledge the receipt of your letter, No. 70,149, of the 6th ultimo, on the subject of the new Mail Service between San Francisco and Australia.

I have, &c.,
W. GISBORNE.

No. 2.

H. H. HALL, ESQ., to THE POSTMASTER GENERAL.

U.S. Consulate,
Sydney, 7 February, 1871.

SIR,

Referring to my tender of the 21st December, 1870, for the conveyance of H.M. mails every twenty-eight days to England, *via* San Francisco, and the interview the Directors of the A.S.N. Co. and myself had with you yesterday, and having in view the apparent objection of your Government to incur the whole responsibility of the subsidy I ask—say £45,000,—I beg to be informed if, in lieu of the above proposition, would your Government contribute, and to what amount? leaving Mr. Hall to obtain subsidies from the other Colonies.

As it is necessary that the service should commence in April next, you will perceive that it is of the utmost importance that I should be favoured with as early a reply as possible, in order that I may at once proceed to make arrangements for carrying it out satisfactorily.

Any provisional arrangements you may make with me to be subject to the approval of the Parliament, as well as Mr. Hall, whose return I shortly expect.

I may state, in reference to the remark made by you as to the conveyance of the mails from San Francisco to England, that I will undertake to secure to this Colony and the other Colonies that may contribute to the service, the same advantages from the United States as have been conceded to New Zealand, British Columbia, and Salvador.

I have, &c.,
WM. BUYERS,
Attorney for H. H. HALL.

No. 3.

THE POSTMASTER GENERAL to W. BUYERS, ESQ., ATTORNEY FOR H. H. HALL, ESQ.

General Post Office,
Sydney, 9 February, 1871.

SIR,

I have the honor to acknowledge the receipt of your letter of the 7th instant, referring to a tender from Mr. H. H. Hall, dated the 21st December, 1870, for the conveyance of Her Majesty's mails every twenty-eight days to England, *via* San Francisco, and also to an interview held by me with yourself and the Directors of the Australasian Steam Navigation Company. You proceed to state, "and having in view the apparent objection of your Government to incur the whole responsibility of the subsidy I ask, say £45,000, I beg to be informed if, in lieu of the above proposition, would your Government contribute, and to what amount? leaving Mr. Hall to obtain subsidies from the other Colonies."

In reply, I desire to inform you that you appear to have misconceived the purport of my reply. What I wished to convey to you and the other gentlemen constituting the deputation was, that the objection of the Government was not to the terms of the tender, or to the conditions of guarantee contained therein; but solely to its indisposition, until the finances of the Colony were placed upon a more satisfactory basis, to enter into any liability for the support of a mail service which (so far as the experimental voyages had shown) had not by its results justified the large expenditure in which it had involved the Colony. I further added, that the arrangement for the details of the proposed service were necessarily in an incomplete state, and that the Government would not feel justified in entertaining this proposal until the return of Mr. Hall from America might place him in a position to lay before it more definite information with regard to these points.

The question you wish to be answered is still more vague. You ask if, in lieu of the former proposition, would the Government contribute, and to what amount?

To what is the Government asked to contribute? The only proposition which has been submitted to the Government is a request from the Government of New Zealand that this Colony should continue its present contribution of £10,000 per annum, as a provisional subsidy to a contract lately entered into by that Government with an American Company. This has been distinctly declined.

It is impossible that this Government can enter into any engagement to contribute to any service without knowing who are the other parties to the contract who are to be held responsible for the due performance of its provisions. The Government cannot promise any contribution to a contract which is not in existence, especially as any provisional arrangement you might propose is to be reserved for the approval of Mr. Hall, on whose behalf you are acting.

I have, &c.,
JOSEPH DOCKER,
Postmaster General.

No. 4.

WM. BUYERS, ESQ., ATTORNEY FOR H. H. HALL, ESQ., to THE POSTMASTER GENERAL.

U. S. Consulate, Sydney,
13 February, 1871.

SIR,

I have the honor to acknowledge receipt of yours of the 9th instant, B 71/531.

I now beg to offer an explanation of that portion of my letter which you consider vague.

The impression left upon myself and the other members of the deputation after our interview with you was, that your Government objected to becoming responsible for the whole amount of the subsidy asked in Mr. Hall's tender; and I wished to know whether, in lieu of guaranteeing the whole £45,000, you would be willing to place an amount,

amount, and if so, to what extent, upon the Estimates, to be contributed by this Colony alone, leaving Mr. Hall to make what arrangements he could with the other Governments interested in the proposed mail service.

You state that your Government objected to "enter into any liabilities for the support of a mail service which (so far as the experimental voyages have shown) had not by its results justified the large expenditure in which it had involved the Colony."

No doubt the present service as a mere mail service has not, in consequence of its approximating so closely with the P. & O. Co's. time, been of paramount importance to the Colony—though the large mails which have gone by the last two or three steamers prove that it has been of considerable importance; but when you consider the large amount of money which it has caused to be expended in the Colony, the increase given by it to the coal trade, the number of men to whom it has given employment, and its opening up of an entirely new and increasing import and export trade with the Hawaiian Islands, the former of which has already largely contributed to the revenue, I think I may fairly assert that even the present service has been well worth the subsidy to be granted by this Colony.

I may mention that the boats hitherto employed in Sydney have maintained an average speed of ten miles per hour, which is greater than has been performed by any other mail service.

You will however pardon me for drawing your attention to the fact that it is not to this service you are asked to contribute, but to a service alternating fortnightly with the P. & O. Company, thereby doing away with the only objection to the present service, and giving the Colonies the long and earnestly desired benefit of fortnightly mail communication with Europe; one which will foster and develop our growing trade with the Fijis and Hawaiian Islands, and which may be the means of opening up the American market for our colonial produce.

It is not however necessary for me to enlarge upon the advantages to the Colony of a mail service carried on by our local marine, and having all its interests centred in the Colony, nor to point out the prominence that will thereby be given to this Colony in the eyes of Europe and America,—advantages so great that if it is determined to subsidize only one service, they would justify the Government in withdrawing from the contract with the P. & O. Company in order to support this.

Trusting that your Government, should it have resolved not to guarantee the whole subsidy asked by Mr. Hall, will not refuse to place a liberal sum upon the Estimates for the proposed service,—

I have, &c.,

WM. BUYERS,

Attorney for H. H. Hall.

No. 5.

THE POSTMASTER GENERAL to H. H. HALL, Esq.

General Post Office,

Sydney, 15 February, 1871.

SIR,

I have the honor to acknowledge the receipt of your further letter dated 13th instant; but the question contained in the communication I addressed to you on the 9th instant, viz.,—"to what is the Government asked to contribute?" remains unanswered by you. If a line of steamers was established, sailing at regular intervals, between Sydney and San Francisco, *via* the Fijis, the Government might then be fairly asked whether it would be disposed to recommend an annual subsidy for the carriage of its European mails. Until however such a service is in operation, there exist no data upon which the Government can arrive at any conclusion in the matter you have brought under its notice.

I have, &c.,

JOSEPH DOCKER.

No. 6.

W. BUYERS, Esq., ATTORNEY FOR H. H. HALL, Esq., to THE POSTMASTER GENERAL.

U.S. Consulate, Sydney,

Grafton Wharf, 17 February, 1871.

SIR,

I have the honor to acknowledge the receipt of your letter of the 15th instant, marked B 71/587, and in reply beg to state that the service to which your Government is asked to contribute is for the conveyance of Her Majesty's mails, every twenty-eight days, between Sydney and San Francisco, *via* the Fijis and Honolulu, as per Mr. Hall's tender of the 21st December, 1870, alternating every fourteen days with the mail *via* Suez, thus giving the Colony the advantage of a fortnightly communication with Europe.

For the purpose of carrying on this service, Mr. Hall has chartered for five years the Australian Steam Navigation Company's steamers "Wonga Wonga," "City of Melbourne," and "City of Adelaide," which boats are to be fitted with spar decks, &c., for the comfort of passengers; and I beg to enclose a copy of the charter.

As the first steamer is appointed to leave Sydney on the 8th April next, it is very desirable that no time be lost in ascertaining what amount of support your Government will give to this service.

I have, &c.,

WM. BUYERS,

Attorney for H. H. HALL.

[Enclosures.]

ARTICLES OF AGREEMENT made the 30th day of December, one thousand eight hundred and seventy, between the Corporation of the Australasian Steam Navigation Company, carrying on business in Sydney and elsewhere, in the Australian Colonies (and hereinafter called owners), of the one part, and Hayden Hezekiah Hall, of Sydney aforesaid, merchant, Consul for the United States of America (and hereinafter called charterer), of the other part, whereby it is agreed as follows:—

That the said owners will let, and the said charterer will hire, the steamships "Wonga Wonga," "City of Adelaide," and "City of Melbourne," and that the said vessels shall be seaworthy, and furnished with all such stores, equipments, tackle, apparel, and furniture, and shall be provided with usual certificates for such vessels from the Steam Navigation Board of New South Wales, required by the laws of the said Colony; and that one of such vessels, to be selected by the owners, with such equipment and certificate, shall be handed over to the said charterer on the fourth day of April, one thousand eight hundred and seventy-one; the second, also selected by the owners, twenty-eight days thereafter; and the third, twenty-eight days after the second; unless such ships, or any or either of them, shall in the meantime be lost or disabled, or shall fail to return to Port Jackson, in either of which cases the owners shall be under no liability for not handing over the vessel or vessels so lost or disabled, or failing to return.

2. That such charter shall continue for a term of five years from the date when the first of the said steamships shall be handed over to the said charterer, subject nevertheless to the conditions hereinafter appearing.

3. The charterer shall not dispose of or sublet the service or contract in which the said three vessels are to be employed, without the consent in writing of the said owners first had and obtained.

4. The said vessels are to be employed on a line between Sydney, the Fiji Islands, and Honolulu; but the charterer shall have the right at his discretion to send them on from the port of Honolulu to San Francisco when he shall think fit.

5. The said charterer agrees to pay for the hire of the said vessels as follows:—The sum of eight hundred and seventy-six pounds eighteen shillings and sixpence is to be paid to the said owners in cash ten days at the least before the first sailing from Sydney of the first of the said three vessels, one thousand seven hundred and fifty-three pounds seventeen shillings ten days at the least before the first sailing from Sydney of the second of such vessels, and two thousand six hundred and thirty pounds fifteen shillings and sixpence ten days at least before the first sailing of the third of such vessels, and the like sum of two thousand six hundred and thirty pounds fifteen shillings and sixpence every twenty-eight days after such last-mentioned payment, so long as this charter shall continue.

6. The said owners agree to accept in payment or part payment of the moneys hereby agreed to be paid, orders on the Government of any Colony which shall subsidize the postal service in which the said vessels are to be employed, and which shall accept such orders; provided that such payment shall not be considered complete until such orders shall have been actually paid.

7. That all repairs required for the said ships, and not rendered necessary by the wilful neglect or default of the charterer or his servants or agents, while such ships shall be at any time in the port of Sydney, shall be executed by the owners at their own expense, and that the charterer shall allow the said ships to remain in the said port after each voyage a sufficient time to allow of overhauling and repairing the said vessels, such time to be never less than ten days; and that all repairs which shall be effected by the said charterer while the said ships shall be absent from the port of Sydney shall be done at his own costs, and the owners shall not be liable to repay the same. All coals, oils, tallow, and waste which may be required for the said vessels are to be provided by the charterer at his own expense.

8. The charterer shall provide and pay for the masters, engineers, and crews of the said vessels, and all port charges, wages, provisions, and fuel, and all other necessary ordinary expenses of working and navigating the said chartered vessels; but the Board of Directors or Manager of the said Company shall have the approval of the masters and engineers of the same; and if any master or engineer shall be appointed without such approval, he shall be forthwith removed, if his removal be requested by the Board of Directors or Manager. The masters, engineers, and crew, to be considered the servants of the charterer and not of the owners, the said charterer being responsible for all their actions.

9. That an inventory of the said ships shall be made, and shall at the time of handing same over, be signed by the charterer, together with a receipt for the articles named therein; and that all articles contained in the said inventory shall be returned in good order and condition, reasonable wear and tear excepted, by the charterer, on the said ships being respectively returned to the said owners.

10. The owners or their agents shall have power to seize and take possession of any of the vessels hereby chartered, which may be left at any intermediate ports, or not dispatched from the port of Sydney in accordance with this agreement.

11. To prevent the said ships from being arrested at any port, or charged, or made liable for the payment of wages, or any other expenses, the charterer agrees to lodge, within ten days after the sailing of each vessel, during the continuance of the charter, the amount of one calendar month's wages or pay of the master, engineers, and crews, with the owners, or to give to them such security as the Board of Directors may approve, for protecting the vessels chartered against any claim for wages.

12. The charterers shall, on or before the twenty-sixth day of March, one thousand eight hundred and seventy-one, give security to the satisfaction of the Board of Directors of the said Company, for the due performance on his part of this charter-party, either by procuring and giving the said owners the benefit of subsidies from one or more of the Australian Colonies, or by such other mode as the Board may approve; and in the event of his not giving such security by the date aforesaid, this charter-party shall be considered as cancelled.

13. If the charterer shall commit any breach of or fail to observe any of the provisions of this charter-party it shall be lawful for the owners to put an end to the same, by giving to the charterer not less than thirty days' notice of their intention so to do; and after the expiration of such notice, this charter-party shall be considered, as cancelled, without prejudice however to the remedy of the party giving such notice against the other for any breach or breaches committed previously to such cancellation.

14. The said charterer shall, at the expiration of or sooner determination of this charter-party, redeliver the said vessels to the said owners, in the port of Sydney, in good condition and repair, reasonable wear and tear excepted, and shall pay a rateable proportion of the charter money for any time during which such vessels respectively shall be detained after the determination of this charter. In witness whereof, the seal of the Australasian Steam Navigation Company has been affixed, and the said Hayden Hezekiah Hall hath hereunto set his hand and seal the day and year first above written.

The seal of the Australasian Steam Navigation Company was duly affixed to this deed, at a meeting of the Board of Directors, held at the said Company's Wharf, the thirtieth day of December, one thousand eight hundred and seventy—

Present—Messieurs. METCALFE, BREWSTER, NEALE, and PIDDINGTON,
in the presence of

FRED. H. TROUTON,

Manager.

Signed, sealed, and delivered by the said Hayden Hezekiah Hall, in the presence of—
EDWIN DAINTRY.

H. H. HALL.

The Secretary, A. S. N. Co., to H. H. Hall, Esq., U. S. Consul.

Australasian Steam Navigation Company,
Sydney, 30 December, 1870.

Dear Sir,

In reply to your letter of the 27th instant, I beg to inform you that my Board are willing to engage to put spar decks on the "City of Adelaide," "City of Melbourne," and "Wonga Wonga," within eighteen months from commencement of the charter, provided the boats are handed over to us for that purpose, and the requisite time to complete them is allowed. The new boilers and surface condensers for the "City of Adelaide" I may inform you are in hand, and partly finished.

Yours faithfully,

FRED. PHILLIPS,
Secretary.

No. 7.

MINUTE OF THE CABINET.

In the present state of the public finances, with the proposals for new taxation and retrenchment still under the consideration of Parliament, the Government do not think that it would be expedient to recommend any additional expenditure in aid of a new postal service. The question however is one which they think may be taken up at some future period when the finances are in their opinion placed on a satisfactory basis.—J.M., A.G., 22 Feb., 1871.

No. 8.

THE SECRETARY TO THE POST OFFICE TO W. BUYERS, ESQ., ATTORNEY FOR H. H. HALL, ESQ.

General Post Office,
Sydney, 22 February, 1871.

SIR,

I am directed by the Honorable the Postmaster General to inform you, in reply to your letter, dated the 17th instant, on the subject of Mr. Hall's tender of the 21st December last, for a mail service between Sydney and San Francisco, *via* the Fijis and Honolulu, that the Government, having fully considered the matter, has determined

determined that in the present state of the public finances, with the proposal for new taxation and retrenchment still under the consideration of Parliament, it would not be expedient to recommend any additional expenditure on account of a new postal service. I am, however, to state that the question is one which the Government is of opinion may be taken up at some future time, when it may be considered that the finances of the Colony are placed on a satisfactory basis.

I have, &c.,
S. H. LAMBTON.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE COLONIAL SECRETARY, NEW ZEALAND.

Colonial Secretary's Office,
Sydney, 7 March, 1871.

SIR,

I have the honor to forward to you, under separate cover, a copy of correspondence relating to steam postal service *via* San Francisco, recently laid before the Parliament of this Colony.

I have, &c.,
HENRY HALLORAN,
For the Col. Secy.

No. 10.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE COLONIAL SECRETARY, QUEENSLAND.

Colonial Secretary's Office,
Sydney, 7 March, 1871.

SIR,

I have the honor to acknowledge the receipt of your letter of the 15th October last, inviting my attention to the proposed steam communication between England and Australia, *via* San Francisco, the arrangements for which, so as to avoid any part of New Zealand, your letter discusses; and, with an expression of my regret that it has not been found practicable to reply to your letter at once, I beg to say that it has been determined, after due consideration, that it is not expedient at the present time to enter into any new contract for a mail service by way of San Francisco.

2. I beg at the same time to inform you that a copy of correspondence on the subject of steam postal service *via* San Francisco, lately laid before Parliament, is forwarded to you by this post under separate cover.

I have, &c.,
JOHN ROBERTSON.

No. 11.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to MESSRS. HOLLIDAY & BRENHAM, NORTH PACIFIC TRANSPORTATION COMPANY OF SAN FRANCISCO, AUCKLAND.

Colonial Secretary's Office,
Sydney, 7 March, 1871.

GENTLEMEN,

I have the honor to acknowledge the receipt of your letter of the 29th November last, in which you forwarded to me a copy of memoranda of particulars of a postal contract negotiated by you with the Government of New Zealand, and explained how arrangements might be made for a postal line by way of the Fijis, connecting with this Colony, and avoiding New Zealand.

2. In reply, I beg to thank you for your communication, and to say that, while the Government fully appreciates the advantages—as our postal expenditure by way of Panama and San Francisco testifies—of communication with England by way of the American continent, it has not, after the maturest deliberation, been deemed expedient at present to enter into any new contract for a mail service by way of San Francisco.

3. I regret that this letter could not be dispatched in time to reach your hands by the 12th instant.

I have, &c.,
HENRY HALLORAN,
For the Col. Secy.

No. 12.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, VICTORIA.

Colonial Secretary's Office,
Sydney, 9 March, 1871.

SIR,

I have the honor to forward herewith, for the information of your Government, a copy of printed correspondence relating to steam postal service *via* San Francisco, recently laid before the Parliament of the Colony. Under separate cover.

I have, &c.,
HENRY HALLORAN,
For the Col. Secy.

THE COLONIAL SECRETARY, QUEENSLAND, to THE COLONIAL SECRETARY, NEW SOUTH WALES.

Queensland.
Colonial Secretary's Office,
Brisbane, 18 March, 1871.

SIR,

I have the honor to acknowledge the receipt of your letter of the 7th instant, in reply to my communication of 15th October last, relative to proposed steam communication between England and Australia *via* San Francisco, intimating that your Government do not consider it expedient at the present time to enter into any new contract for a mail service by way of San Francisco.

I have also to acknowledge with thanks a copy of correspondence on the subject of steam postal service by the route named, lately laid before the Parliament of New South Wales, and forwarded for the information of this Government.

I have, &c.,
H. H. MASSIE,
For the Colonial Secretary.

No. 14.

No. 14.

H. H. HALL, Esq., to THE POSTMASTER GENERAL.

U.S. Consulate, Sydney,
25 March, 1871.

SIR,

I have the honor to inform you that at the urgent request of the New Zealand Government the mail Steamer "Wonga Wonga" will sail on the 1st proximo, at 9 o'clock a.m., for San Francisco, *via* Auckland and Honolulu.

I have, &c.,
H. H. HALL, U.S.C.

Superintendent, Mail Branch.—S.H.L., 27/3/71.

It would appear from this letter that Mr. Hall has altered the route and date of sailing of the "Wonga Wonga,"* but I presume in absence of other instructions that I am to treat her as a private ship, and tender *id.* per letter for all correspondence sent by her.—W.B., 27/3/71.

* Was advertised
to go *via* Fiji on
8th April.

Do you advise that correspondence marked per "Wonga Wonga," and addressed to places other than those mentioned herein—the United Kingdom for instance—shall be forwarded per "Wonga Wonga"?—S.H.L., 27/3/71.

There is some difficulty in advising in this matter. We can insist upon a vessel taking mails for all ports to which she is bound, but it is not clear to me that we can make her take mails for places beyond her destination unless enclosed. A mail for London for all correspondence marked per "Wonga," could be made up and enclosed in San Francisco, but we have no knowledge as to how it would be forwarded.—W.B., 27/3/71.

The difficulty appears to me to be this: I think it is clear that we cannot compel this vessel to take mails for any port other than those for which she clears. There is little doubt that the owners would be glad to take letters for the United Kingdom at the customary rate of ship postage, but there is no information which we could give to the public how these letters would be forwarded. If we make a closed mail addressed to England, I think there is a possibility of our being held by New Zealand as parties to any contract that Colony may have entered into, which would not be desirable. With these precautions in giving the information, the public might be informed that letters specially marked to go by this vessel will be forwarded. But before any notice is given I will take the opinion of the Cabinet upon the question.—J.D.—27/3/71.

Notice to the public as arranged by the Cabinet.—J.D., 27/3/71.

MAILS *via* SAN FRANCISCO.

It is hereby notified that, as no contract exists for the conveyance of mails to the United Kingdom by way of California, the transmission from San Francisco of letters, &c., sent by the "Wonga Wonga" on her outgoing trip, addressed to or through the United Kingdom, cannot be guaranteed.

Letters addressed to the United Kingdom, or which would pass through the London Post Office, will not therefore be sent by the "Wonga Wonga" *via* San Francisco, unless specially marked for that route.

JOSEPH DOCKER.

No. 15.

DUGD. LITTLE, Esq., to THE COLONIAL SECRETARY.

3, Bridge-street,
Sydney, 6 April, 1871.

SIR,

I notice that efforts have recently been made to secure, in name of Mr. Hall, for the use of certain of the Australasian Steam Navigation Company's boats, a *ten years'* subsidy for the carriage of mails across the Pacific.

The offer made was not accepted, and I hardly suppose that any other offer made in any other way than in open competition with the World will be looked at. But in case your Government may have any idea of entering into a *private* arrangement, I am in a position to assure you that steamers more suitable than those now offered can easily be got from England to do the same service, for about half the subsidy asked on account of the A.S.N. Co.'s boats.

The new system of compound engines is rapidly revolutionizing the ocean carrying trade. The working expenses are so reduced that there is no longer necessity to subsidize on the former scale.

My home friends, some time ago, proposed to put on a line of such steamers, *via* the Cape of Good Hope, on very easy terms indeed; and although they have certainly not authorized me as to this Pacific line, that is only because it had not been timeously brought under their notice. I am now in communication on the subject.

I am not of course in the position to compete for the instant commencement of such a service, but if you will give £25,000 (twenty-five thousand pounds) per annum for a monthly (28-day) service for five years, I will at once proceed to or communicate with England, and have no hesitation in saying will be able to arrange the service to commence in little over twelve months from this date; and in the interval (should the necessity be considered so very pressing), you could no doubt make temporary arrangements to meet the New Zealand boats at Fiji, or to employ the through steamers of the A.S.N. Co.

Should the above not suit your views—should you prefer rather to adopt the more usual course of calling for tenders, you will pardon my taking the liberty of suggesting that your advertisement should allow time for home owners to come forward, in which case you may rely upon obtaining offers at very moderate rates.

I will do myself the honor of waiting on you with plans and sketches of the steamers proposed for the Cape route, which are in all respects equal to the "Queen of the Thames" recently arrived in Melbourne.

Meantime,—

I have, &c.,
DUGD. LITTLE.

The Postmaster General—JOHN R., 19 April, /71.

The Secretary to the Post Office.—B.C., 19 April, /71. H.H.

Acknowledge. Seen. Place with other correspondence.—J.D., 21/7/71.

No. 16.

H. H. HALL, Esq., to SIR JAMES MARTIN, M.P.

Sydney, 11 April, 1871.

SIR,

I have the honor to submit for the consideration of your Government an outline sketch of the ocean mail service which I am now endeavouring to establish between the port of Sydney and the port of Liverpool. I have been induced to take this step at the present time from the circumstance that the large number of citizens of Sydney who recently petitioned Parliament in favour of this service selected you to present their petition, and from the desire which I am informed you expressed to the deputation on that occasion to ascertain the probable amount of postal revenue which the service, when in full working order, would yield to the Colony.

2. I respectfully submit that having already opened this line, although by the indirect route of New Zealand, I am in a better position to ask consideration than any person or number of persons moving in so large an undertaking for the first time.

I have given a practical earnest of my resolution and ability to do what I undertake, and I am prepared to give any reasonable security for the due performance of any future contract which may be made.

3. The line which I now seek to establish will reduce the postal delivery in both directions between Australia and England to a time much shorter than the time which it has hitherto taken in the most favourable cases for its performance. Besides this great advantage, so essential in the nature of a postal contract, my line will employ steamships belonging to the port of Sydney, and, by making Sydney the Australian terminus, will give employment to a large number of persons and add very considerably to the trade of the port by its direct expenditure.

But these will be its smallest collateral advantages. It will undoubtedly secure to this Colony a priority of interest, and all the facilities of direct and regular communication in the commerce of the three most important settlements in the Pacific—New Caledonia, Fiji, and the Sandwich Islands.

4. My steamships on the Pacific will perform the through passage to San Francisco, touching at the Isle of Pines (New Caledonia), Levuka (Fiji), and at Honolulu (Sandwich Islands); the time allowed for the journey being 29½ days.

The mails will be forwarded under special arrangement by the trans-continental railway within six hours of their arrival, and will be delivered in Liverpool in forty-five days.

5. I respectfully invite the attention of the Government to this guaranteed reduction of time on which I am prepared to base my contract, and which I believe with the utmost confidence would be combined with reduced cost to the Colony.

Taking the Post Office returns, I find that the following was the financial result of the service *via* Suez for the year 1870:—

Expenditure	£17,470	0	0
Receipts—										
449,280 letters, 15,730 packets, 771,060 newspapers	...							7,024	0	0
								£10,446	0	0

6. I will now give an estimate of the net cost to New South Wales of the service through America, based upon the same Post Office data, and the rates of postal transit established by the last postal conventions between the Governments of Great Britain and the United States, calculating the Colonial subsidy at £20,000.

Expenditure—										
Subsidy from Government of New South Wales, say	£20,000	0	0
Territorial and Ocean cost from San Francisco to England—										
449,280 letters, at 1½d.	£2,808	0	0
15,730 packets, at 3d.	196	12	6
771,060 newspapers, at ½ of 1d.	1,070	18	4
								4,075	10	10
								24,075	10	10
Receipts—

7. It will thus be seen that the European mail service *via* San Francisco and New York would be performed in shorter time and at a lower cost than any other. The following figures, also taken from the Post Office returns, will show that the example of the Suez line for 1870 was more favourable to New South Wales than would be given by the returns of the two previous years.

Results of the service *via* Suez for 1868 and 1869:—

1868—Expenditure	21,063
Receipts	5,325
Net cost	£15,738
1869—Expenditure	19,418
Receipts	7,187
Net cost	£12,231

The saving to the Colony by the American route as shown by these figures would have been £7,643 14s. 2d. in 1868, and £4,136 14s. 2d. in 1869.

8. As the departures in the postal service through America may be arranged to alternate at both ends with the departures *via* Suez, the long desired advantages of a fortnightly mail may be secured, combined with the double security of uninterrupted communication in the event of Great Britain being involved in war.

9. The foregoing statistics of postal revenue *via* San Francisco are necessarily mere estimates, but they are justified by reasonable probability, and the other parts of this statement are supported by indisputable facts.

I hope I may be permitted to say that the line of communication which, with very moderate assistance from the Government, I am prepared to establish, is recommended on its own merits by reasons of sound policy as well as by the positive advantages which it offers to the Colony.

10. I may add, that the regular and unavoidable expenditure of the steamships in Sydney will be, at the lowest estimate—

Wages per annum	21,600
Coals per annum, 18,000 tons at 20s.	18,000
Victualling per annum	14,950
	£54,550

In addition to this yearly outlay, there must necessarily be costly repairs to the steamers, and the building of new vessels, a large expenditure by passengers in Sydney, the purchase of marine stores, the interest on colonial capital, and many other incidental benefits, without one accompanying disadvantage.

I have, &c.,

H. H. HALL,
U. S. Consul.

Postmaster General, J.M., A.G., 11 April, 1871.

The Secretary, General Post Office.—B.C., 11/4/71, W.E.P.

Inform that this letter will be taken into consideration when the subject next comes under the consideration of the Government.—J.D., 14/4/71.

No. 17.

THE SECRETARY TO THE POST OFFICE to H. H. HALL, Esq.

General Post Office,
Sydney, 14 April, 1871.

SIR,

Your letter dated the 11th instant, addressed to the Honorable the Premier, on the subject of mail communication between Sydney and San Francisco, has been forwarded to the Postmaster General, who directs me to inform you that the matter of such letter will receive due attention when the subject above referred to next comes under the consideration of the Government.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 18.

THE AGENT OF THE PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY to THE POSTMASTER GENERAL.

Peninsular and Oriental Steam Navigation Company,
Sydney, 12 April, 1871.

SIR,

Having observed a report in the *Sydney Morning Herald* of 1st instant, of an interview which a deputation from the Chamber of Commerce had with the Honorable the Premier, respecting the desirability of a subsidy being granted by the Government to a line of mail steamers from Sydney to San Francisco, which it was stated would have the effect of establishing fortnightly communication with Europe, I do myself the honor of addressing you on the subject, as well as in reference to your Minute, dated 13th January, 1871, upon the Ocean Postal Services with Europe, and also other projected lines, believing that the interests of the Australian Colonies can, as a whole, be most effectually promoted by the extension of this Company's operations.

I assume that on two points there seems to be universal agreement among the different Colonies. The first is, that for some years past the existing mail service has been most faithfully performed by the Company; and the second, that a more frequent communication with Europe is absolutely necessary, and must sooner or later be arranged. It is needless to enlarge upon the latter point, because the late critical events in Europe have sufficiently shown that the interests of Australia, both in politics and in business, are liable to be seriously compromised by the dearth of intelligence from Europe; but it may be observed that the remedy against this, which will shortly be provided by the submarine telegraph, will also entail the necessity of more constant and enlarged facilities for correspondence than exists at present.

Unfortunately the jealousies which prevail among the various Colonies up to the present time have been an effectual stumbling-block against real progress in this direction, while the regularity of the Company's service has rendered the Colonies so far independent of other resources that they have wasted both time and money upon experiments which, in the main objects of a mail service, viz., speed and regularity, could not succeed. It is however now becoming apparent that if the Colonies are ever to possess an efficient fortnightly mail service, the idea must be abandoned that each Colony is to be the first and last terminus of a special line, and that therefore some central point must be fixed upon from which the various lines must radiate so as to give each place, as far as distance will permit, an equal share of the benefits of rapid and cheap communication.

It appears that Sydney ought to be this central point, and that the route by which the mails should be conveyed should be chiefly determined by one consideration, viz.,—distance and time.

Taking the Colonies as a whole, the shortest route which can be practically established is that which ought to carry the mail service with it; and though other considerations may overrule this principle for a time (as in the case of the late Panama Service, and in the line to San Francisco at present proposed by New South Wales), they can never be accepted as a satisfactory or final solution of the question by the public at large. Starting then from this basis, there can be no doubt that the shortest, most practicable, and cheapest mail route for the majority of the Colonies, and for the most important of them, is *via* Egypt and Ceylon, which I beg to urge with the following remarks:—

Routes.

Assuming Sydney as the terminus in every case of the mail line, the enclosed table has been prepared, showing the comparative distance to be traversed by land and sea from London, on each of the routes favoured by the various Colonies, and the time which must in each case be occupied for the purpose. The land portion of the journey is of course taken from the actual railway tables, and the sea voyage has been averaged at the rate of ten knots for the sake

sake of a correct comparison. The stoppages in each case have been also carefully considered, as you will perceive from the remarks at the end of the table. It will be seen from this comparison that the shortest time in which the mails may be regularly delivered in Sydney will be as follows:—

<i>Via</i> Brindisi and Suez.....	45 days
New York, San Francisco, and Auckland	51 do.
Torres Straits and Queensland	51 do.
Cape of Good Hope.....	58 do.

From this you will at once perceive that any strictly alternating line by separate routes is impossible; for while one line would only convey a week's news, the other would have a three weeks' mail; and so lame an arrangement for Sydney could only end in disappointment and failure.

I now adduce some further observations on the practicability and advantage of each route.

Via Brindisi and Suez.

The mails have been delivered in Sydney on an average of forty-nine days from London *via* Marseilles during the last three years, but on some occasions the time occupied has been from forty-six to forty-seven days. On the completion of the Mont Cenis Railway, the departure from Brindisi will eventually accelerate the mails by two days as compared with the Marseilles route, and an improvement in time to that extent may be reasonably looked forward to. Experience is therefore as much in favour of the dependence to be placed on this route as its undoubted geographical superiority must be conceded for saving of distance and time.

Torres Straits and Queensland.

Nearly a week longer would be required for the mails to reach Sydney, and ten days longer to arrive at Melbourne *via* Torres Straits than *via* King George's Sound, while the difference in favour of the arrival of the mails at Brisbane by the Straits would not exceed three days.

Via San Francisco and New Zealand.

As far as Sydney and Melbourne are concerned the disadvantages of this route would equal that of Torres Straits, even supposing the voyage could be accomplished at the rate of 10 knots across the Pacific. Experience has however shown, both in the case of the Panama Company (which cost Sydney such an expenditure) and in that of the present temporary service, that an average of 10 knots cannot be depended upon for such a distance as that from San Francisco to Sydney, which is nearly 7,000 miles. By the temporary line now in existence the eight mails delivered in London have occupied an average of fifty-eight days. We have also the experience of long navigation across the Pacific by the highly subsidized American line now running to and from Japan. That voyage is performed with the most powerful steam-vessels ever built in America, and the mails during the year 1870 were delivered in an average of not less than forty-three to forty-four days from Yokohama. But the voyage from Yokohama to San Francisco is 2,300 miles shorter than from Sydney, and therefore ten days less; so that even with powerful vessels, highly subsidized, mails *via* California could not be depended upon reaching Sydney for a week or ten days longer than the time in which they would reach Sydney *via* Suez.

This is a fair comparison, deduced from experience, of the relative performances on the Indian and Pacific route; and, without questioning that if a successful line can be established by the latter, it may save a little time as far as New Zealand is concerned, it assuredly would not do so for the Australian Colonies. Even for Auckland itself the advantages of both routes in point of time would be very nearly balanced; for the mails may be delivered there *via* Suez in less than 50 days (with quick dispatch from Sydney), while it is doubtful if they will reach more quickly by America. It would at all events be a waste of money and time for Australia to establish a tedious mail service *via* the Pacific; and if it is ever done by America and New Zealand, the subsidy will be a very costly one to them.

Via the Cape of Good Hope.

The proposals for a service by this route seem to emanate exclusively from Victoria, and to obtain little or no sympathy from the people of New South Wales. With the extra length of this voyage compared with the Suez service, a fortnightly alternate mail service also becomes physically impossible, even if the voyage should be performed at the rate of 10 knots. In reality, however, an average speed of 10 knots from year to year, for a continued run of 13,000 miles, could not be obtained from any steam-vessels now existing; and to build and subsidize such vessels (either by direct postal subsidy or by grants for the conveyance of emigrants) would involve a capital and annual expenditure, not only disproportionate to its public advantages, but ruinous to all concerned except the promoters. Some stress should be laid upon this question of average speed, because the public have a faint idea of the difficulty of keeping a vessel that will steam 14 knots on trial, at an average speed of 10 knots through all weathers, even on comparatively short voyages; and the lavish promises occasionally made in the Melbourne papers of working a service backwards and forwards upon a round voyage of nearly 30,000 miles, at even a higher rate of speed, for a series of years and for a moderate subsidy, are simply impossible of fulfilment by the very finest vessels now employed for commercial purposes.

Via Fiji to San Francisco.

The remarks already made apply generally to this route also beyond Fiji; but it remains to be proved how far the calls at Brisbane, New Caledonia, and Fiji, in place of Auckland, will affect the course of post. I do not think, however, they will improve it as a fortnightly line to alternate with that *via* Suez, the geographical distance being about the same.

I may here be permitted to allude to the stress which was laid by the deputation on an expenditure of £90,000 per annum in Sydney, which it is stated would attend establishment of this route. I cannot from my experience understand how such a sum is arrived at, but can state that a very large amount is disbursed here by the P. & O. Co. for docking and repairs, coals, provisions, and wages of crews, which would be almost doubled were a fortnightly line *via* Suez established.

Cost and Advantages of Suez Mail Route.

Having thus referred to the geographical features of the various routes, I may now point out the cheapness of the proposed fortnightly service by this Company's vessels. As you are aware, the Company are under contract to double their line for an addition of something like 42 per cent. to the present subsidy, which would make the mileage rate for the entire service between Galle and Sydney 14s. 4d. per mile, while the mails may be said to be carried to and from Galle, 6,000 miles, almost at a nominal cost as far as the Colonies are concerned. The last account made up in the Imperial Post Office showed that Sydney, for instance, was charged, for the year 1870, with the sum of £17,470 for the conveyance of mails to and from Europe, including all charges, (such as transit through Egypt, letter-bags, mail officers, &c.; against this Sydney would have a credit of £7,000 or upwards, so that altogether the net cost of the mail service to her will probably not much exceed £10,000, the other Colonies being charged in like proportion, according to the quantity of postal matter belonging to them.

Now if the mail service were doubled, the debit would only be about 42 per cent. in addition to the above, or say total cost about £25,000, while the credit for postage received would probably be considerably more than this proportion of the previous receipts, so that the double service in all probability would not cost Sydney more than about £3,000 beyond what she is actually paying for the single line, while the importance of the object to be gained would warrant a far heavier public expenditure. Added to the advantage of superior speed and cheapness, this Company proffers the utmost security for the efficient performance of the work, in the extent of its resources, more particularly for remedying accidents which inevitably occur in lines of distant navigation; while on the other hand, a serious break-down in the Pacific or off the Cape of Good Hope would have small prospect of being remedied. I need not refer to the advantages of increased business with Europe, with India, or to the local advantage to Sydney in becoming the chief depôt for mails, but must refer to one point relied on by the deputation to the Premier, by reminding you that our telegraphic communication with Europe is now reduced to an average of about twenty-one days, and has been received in eighteen; showing that, in case of need, advices might be forwarded by the Suez route to San Francisco with as great rapidity as they could be by any line to that port.

I may add that the Company, in view of a desire to meet the wishes of Australia, have reduced their passage money to England to £85, exclusive of wines and transit through Egypt, and proportionally to all ports within the sphere of their operations.

Duration of Mail Contract.

It must of course be apparent that the uncertain tenure of the Company's contract places not only them but the Colonies at a disadvantage. It is impossible for the Directors of the Company to consider the Australian Service as they would wish in their arrangements for ship-building, and in their general policy involving the outlay of capital. Should a fortnightly contract be negotiated for a number of years sufficient to enable the Directors to see their way clearly before them, they could ensure larger vessels, and increased efficiency for the work, which, with their anxious desire to accelerate the course of post between England and Sydney by every possible means, would probably result in an appreciable gain of time.

I have, &c.,
H. MOORE,
Agent.

No. 19.

D. LITTLE, Esq., to THE COLONIAL SECRETARY.

Sydney, 24 April, 1871.

SIR,

Referring to my recent communication in reference to the Pacific Mail Service, I take the liberty of addressing you further with details in support of my statements and proposal.

I may mention that I have been for many years, as managing owner of steam shipping property in an adjoining Colony, familiar with the steam trade; and, through my home connections, who are extensively engaged in the same business, I have been kept closely posted up in all the details of modern improvements.

Very

Very recently I have received plans and specifications and tenders for sundry steamers. These are intended for other purposes; but in most respects they happen to be suitable for above service—having airy spar deck accommodations for about 100 passengers, with coal capacity in bunks and holds for the complete round voyage to and from San Francisco.

They, like the "Queen of the Thames," have engines on the now thoroughly tested and approved compound principle, and are absolutely guaranteed by their builders—an eminent Clyde engineering firm—in all respects, viz., in small coal consumption, good speed, the accommodations above quoted, very light working expenses, and moderate first cost.

Steamers of similar tonnage at home, in the Mediterranean trade for instance, calling too at seven ports, which of course adds to expenses, cost each about £5,000 per annum of working expenses.

Allowing liberally for the difference of wages, &c., the working expenses of *three* such steamers in the Pacific trade would be under £20,000 per annum. So that, with the proposed Government subsidy of £45,000, such steamers as I refer to would pocket a net Government bonus of £25,000, besides all the receipts of the trade, assuredly quite as much more—say at least £50,000 per annum, as returns for the £45,000 they would cost.

It is true that the above steamers are only guaranteed nine knots an hour, while the A.S.N. Co.'s boats are said to be up to ten,—a rate of steaming, however, which they have certainly not hitherto averaged. The difference in the length of voyage would be a little over a couple of days; but if ten knots are insisted on, the additional cost of the extra power to secure it need not seriously alter above calculation.

I hold proofs of all I have advanced, and will be glad to satisfy any Member of your Government, or other interested party, at any time, by going over them.

I give you these details in order to convince you that I would have no difficulty in getting taken up at home a contract for the service, at the £25,000 I formerly quoted. But if a private arrangement is unsuitable, as I presume is the case, I hope at any rate I have shown you, or will be able to show you, that in open market, allowing time for home competition, there can be no doubt whatever that you will obtain very much better offers than any that can be had in the Colonies, besides the incidental advantages of introducing a new Company, fresh foreign capital, and additional steamers, to add to the trade and wealth of the port.

I have, &c.,

DUGD. LITTLE.

1870-71.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

STEAM COMMUNICATION WITH EUROPE *viá* SAN
FRANCISCO.

(PETITION—CERTAIN MERCHANTS AND OTHER CITIZENS OF SYDNEY.)

—
Ordered by the Legislative Assembly to be Printed, 12 April, 1871.
—

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned Merchants, Bankers, Shopkeepers, Mechanics, and other Citizens of Sydney,—

RESPECTFULLY SHOWETH :—

1. That the line of communication between Australia and England, making Sydney the terminus for these Colonies, and Liverpool the terminus for Europe, and including the Fijis, the Sandwich Islands, San Francisco, and New York as intermediate stations, is the shortest and most advantageous of all that have yet been practically tried.

2. That the commerce carried on between New South Wales and the several communities embraced by this route amounted in the year 1869 to an import trade of £242,402, and an export trade of £274,546, and that it would secure to the port of Sydney nearly the whole of the Australian trade with the Fijis and the Sandwich Islands.

3. That for the last twelve months, steamships belonging to the port of Sydney have been employed in opening this route, and that, although they have suffered in the element of time by going round by New Zealand, and from other obstacles incidental to a new undertaking, the monthly trips of these vessels have been so far satisfactory as to prove conclusively the practicability and great value of the line of communication.

4. That your Petitioners have learned with much concern and regret that the contract under which these steamships have been employed in opening the line has expired, and that it has been communicated to the charterer that no new contract will be entered into at the present time.

5. That an interruption to the line of communication would probably result in diverting a large amount of trade from the port of Sydney, and giving to one of the neighbouring Colonies a new field of prosperous rivalry, and would inevitably be attended by serious inconveniences and losses.

6. That the port of Sydney being made the Australian terminus of so important a line of communication with America and Europe secures to this community, in addition to the advantages already enumerated, the principal disbursements of the service, affording employment to large numbers of workmen, and stimulating through various channels all branches of trade.

7. That the steamship line *viá* San Francisco and New York as a mail service, might be made to alternate at intervals of fourteen days with the steamers carrying the mails *viá* Suez, and thus establish, without delay, regular fortnightly postal communication between this Colony and England.

Your Petitioners humbly pray that your Honorable House will take the premises into favourable consideration, and adopt measures to prevent the closing of a line of communication which offers so many and such great advantages to the Colony.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 3,650 Signatures.]

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. JAMES FORD.
(PETITION.)

Ordered by the Legislative Assembly to be Printed, 15 November, 1870.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of James Ford, of Bathurst, in the Colony of New South Wales, gentleman,—
MOST RESPECTFULLY SHOWETH:—

That your Petitioner is the owner of the racehorse known as "Joe Miller."

That the entries for a certain race, called "the Prince of Wales Stakes," ran for at a race meeting held at Randwick, in the Colony of New South Wales, under the auspices of the Australian Jockey Club, on the ninth day of September instant, were duly advertised in several of the newspapers of the said Colony, to close on the second day of August last past, after which date no entry for the same could be received.

That your Petitioner, on the first day of August aforesaid, at Bathurst, in the said Colony, caused to be posted a certain envelope, containing the form usually sent to the Secretary of the Australian Jockey Club, to enter the said racehorse "Joe Miller" for the said race, which said envelope bears the Sydney post-mark of the second day of August, 1870, but from some cause, to your Petitioner unknown, the said envelope was not delivered at the office of the said Secretary of the Australian Jockey Club, to which place it was directed, until the third day of August aforesaid, and in consequence of which the said entry could not be, and was not accepted, and the said racehorse was not allowed to run for the stakes or prize in the said race.

That your Petitioner incurred great expense in and about the training and preparing the said racehorse for the said race, and has no doubt whatever, from a knowledge of the speed and endurance of the said racehorse "Joe Miller," and of the racehorses who did actually run for the said race, that had the said envelope been delivered on the said second day of August last the entry of the said racehorse for the said race would have been accepted, and the said racehorse "Joe Miller" would have won the said race and the prize for the same.

Your Petitioner therefore humbly prays your Honorable House will take the circumstances of his case into your most favorable consideration, and afford him such relief in the premises as to your Honorable House may seem meet.

And your Petitioner, as in duty bound, will ever pray.

JAMES FORD.

1870.

 PETITION OF JOHN FULLER FOSTER.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 4th November, 1870,—with power to send for persons and papers, to consider and report upon the allegations, complaints, and requests contained in the Petition of John Fuller Foster, mail contractor, presented to your Honorable House on the 21st April, 1870,—have agreed to the following Report:—

Your Committee having examined the witnesses named in the list,* with respect to the allegations contained in the Petition of John Fuller Foster, find that the Petitioner was contractor for the conveyance of the mails between East Maitland, Mount Vincent, and Cooranbang. They also find that the contract was carried out to the satisfaction of the Government and the inhabitants of the district for a number of years. That in the month of August, 1868, on the recommendation of the Postal Inspector, certain alterations were made in the then existing time-table, no request to make this alteration having been made by the inhabitants of the district.

*Vide List of
Witnesses,
page 4.

That this alteration continued in operation for a period of nine weeks. That the Petitioner was in consequence of this alteration put to much extra expense and labour, without any apparent advantage to the inhabitants, who afterwards petitioned the Honorable the Postmaster General to have the time-table altered back to its original plan—a request which was granted.

That the Petitioner is now carrying on the mail contract according to the old time-table.

Your Committee, therefore, taking all the circumstances of the case into consideration, beg to recommend the Petitioner's claim to the favourable consideration of the Government.

ALEXANDER DODDS,
Chairman.

No. 3 Committee Room,
Legislative Assembly,
Sydney, 1 December, 1870.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 17 NOVEMBER, 1870.

MEMBERS PRESENT :—

Mr. Dodds, | Mr. Dillon,
Mr. Farnell.

Mr. Dodds called to the Chair.

Entry in Votes and Proceedings, appointing the Committee, *read* by the Clerk.
Committee deliberated.

Mr. John Fuller Foster (*the Petitioner*) called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That S. H. Lambton, Esq., be summoned to give evidence at the next meeting, and to produce all papers respecting Mr. John Fuller Foster's contract.

[Adjourned until Thursday next, at *Eleven* o'clock.]

THURSDAY, 24 NOVEMBER, 1870.

MEMBERS PRESENT :—

Mr. Farnell, | Mr. Bell,
Mr. Dodds in the Chair.
Mr. Dillon.

Mr. John Fuller Foster (*the Petitioner*) called in and further examined.

Witness *handed in* a letter, with time-table, and copy of a Petition referring to his contract.

Ordered to be appended. (*Vide Appendix A 1 and A 2.*)

Witness withdrew.

S. H. Lambton, Esq. (*Secretary to the General Post Office*) called in and examined.

Witness *handed in* the Bond, and other documents respecting the contract, of Mr. John Fuller Foster.

Ordered to be appended. (*Vide Appendix B 1 to B 5.*)

Witness withdrew.

Mr. John Fuller Foster recalled and examined.

Witness witness.

Committee deliberated, and decided to meet at *Eleven* o'clock on Thursday next, to consider Report.

[Adjourned accordingly.]

THURSDAY, 1 DECEMBER, 1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF JOHN FULLER FOSTER.

THURSDAY, 17 NOVEMBER, 1870.

Present:—

MR. DILLON,

MR. DODDS,

MR. FARNELL.

ALEXANDER DODDS, Esq., IN THE CHAIR.

Mr. John Fuller Foster examined:—

1. *Chairman.*] You are the mail contractor from Mount Vincent to Maitland? Yes, and between Maitland and Coorobong.
2. Did you cause a petition to be forwarded some time ago for presentation to the Legislative Assembly? Yes.
3. The statements made in that petition are true, I presume? Yes, quite true.
4. When did you enter into a contract with the Government to convey the mail? Three years back; on the 28th September, 1867.
5. Have you a copy of the contract with you? No.
6. Will you state to the Committee what you did under the contract? My contract was to leave Mount Vincent at 6 o'clock a.m. on Tuesday, Thursday, and Saturday, to arrive at East Maitland at 9 a.m., to leave East Maitland at 10, and to arrive at Mount Vincent at 1 p.m.
7. *Mr. Dillon.*] Three days in the week? Three days in the week for Mount Vincent, and for Coorabong on Mondays.
8. *Chairman.*] You started from Mount Vincent three days in each week? Yes, and on Monday I start for Coorabong at 7 a.m., arrive at Coorabong at 10 a.m., leave Coorabong at 3 p.m. of the same day, and arrive at Mount Vincent at 6.
9. Altogether you have to travel during the week 134 miles backward and forward? Yes.
10. Then certain alterations were made? Yes.
11. Will you state how these alterations were brought about? I do not know. When the inspector was asked about it, he said it was not his business to know the parties' names who suggested the alteration.
12. Were they asked for by the inhabitants? No, because the inhabitants signed a petition without a dissentient, asking for the old time-table to be restored. Delay and inconvenience were caused by the alteration.
13. It appears then that the alteration was made without any solicitation on the part of the people residing there? Yes.
14. What additional work did that alteration entail upon you? I had to go into Maitland on Monday at 3 p.m., in the place of Tuesday morning, stop there all night, come out on Tuesday, go in again on Wednesday, come out on Thursday, go in on Saturday morning empty to fetch the mail from East Maitland to Mount Vincent, and then return with the mail, and come home empty at night after dark.
15. Then this alteration necessitated your travelling 269 miles? Yes.
16. Instead of 134 miles a week? Yes.
17. Was there any advantage gained by the residents by that alteration? No; but loss and inconvenience, as they had no mail from Wednesday till Saturday at 3 p.m.
18. How long did this alteration continue? Nine weeks and five days before it was altered back again. We tried to get it altered by means of writing to the Postmaster General; but as that did not succeed, the people were so dissatisfied that at last they petitioned, and the old time-table was then restored.

Mr. J. F. Foster.
17 Nov., 1870.

- Mr. J. F. Foster.
17 Nov., 1870.
19. You were travelling backward and forward without any advantage to the public? Yes; and at great expense and labour to myself. I had to provide men and horses to do the extra work. If the change had been advantageous to the public I should have required additional pay.
20. How long have you been contractor for this line? Since 1862.
21. The people were satisfied with the arrangements under the old time-table? Not one complained either of the time-table or of my running the mail, as the Secretary can attest, I think.
22. Have you applied to the Postmaster General for some satisfaction under the loss you have been put to? Yes; I sent in a bill for £20.
23. And you have failed to get satisfaction? Yes. The last letter I received partly admitted my claim; but stated that the reason it could not be considered was that there was no sum upon the Estimates to meet such demands, that it was unprecedented, that no such thing was known in the records of the Post Office. I had the same trouble with regard to the Cooranbong mail.
24. Under the contract is there not a provision enabling the Postmaster General to make any alteration? To make any alteration to suit the public. I saw that in the printed paper. It was quite uncalled for. I do not know who could suggest it; and the inspector could not name any one when we asked him; he said he forgot, or was not supposed to know, or something of that kind.
25. *Mr. Dillon.*] But there is a condition in your contract that any alteration may be made if necessary? Yes.
26. *Mr. Farnell.*] Did you sustain a loss of £20 on account of the alteration in the time-table? Yes, I did; I had to stop at an inn at Maitland, Mr. Williamson's, at an expense of 5s. a night for myself and horse, or else to return home after dark and come in again next morning.
27. Did you contract to carry the mail at per mile or at so much per annum? At so much per annum.
28. *Mr. Dillon.*] And there was no mention in your contract of the number of journeys you were to make to these places? Yes, three times a week, as I have stated, to Mount Vincent and East Maitland, and once a week to Cooranbong.
29. This alteration did not compel you to make more journeys than you had done under the old time-table? No, but it forced me to stop in Maitland all night, or to make my journey home in the dark.
30. You still continued to carry the mail only three times a week? Yes, but I had to make four journeys for the Saturday's mail, on one of which I returned empty, and four journeys for the Cooranbong mail, on two of which I returned also empty.
31. As regards the actual carriage of the mail, you had not to carry a mail more than you had done previously? No.
32. *Mr. Farnell.*] I understand you to say that the alteration in the time-table compelled you to go to a certain place, at a distance from your residence, for the mail, and that you had then to deliver it at another place, where you did not reside? Yes; if I had lived at East Maitland, it would have been equally inconvenient.
33. The Post Office authorities have again altered the time-table? Yes, they have restored the old time-table.
34. After receiving the petition you have referred to? Yes.
35. *Mr. Dillon.*] Did you make any application to the Government as soon as you found out that this alteration had been made? Yes, I at once wrote about it.
36. Did you write about it yourself? No, Mr. Child wrote for me, and they refused to alter it back again.
37. On what grounds? They said they had the power to make the alteration, and that the inspector had recommended it.
38. Do you know as a fact whether any representations had been made to induce this alteration? Not to my knowledge.
39. Have you heard of any? No. There has been an alteration made since—very lately—which I believe is what they aimed at.
40. Do you not think some representations must have been made to induce them to make this alteration? I do not think so.
41. *Mr. Farnell.*] Did you not say it was on the report of the inspector? Of course the inspector suggested that the alteration would be beneficial to the people.
42. The inhabitants did not move in the matter? No; but they all signed the petition against the alteration; it injured them greatly, and was a loss to the Revenue. Mr. Brown the postmaster and Mr. Child will bear witness to what I say.
43. Are you the contractor now? Yes.
44. When does your contract terminate? It ends with this year.
45. *Mr. Dillon.*] On what date did you enter into the contract? On the 28th September, 1867.
46. How long had you been carrying out the contract before this change was made in the postal arrangement? Till the 14th August, 1868.
47. *Chairman.*] Before this alteration was made did the inhabitants receive their letters and communications as regularly as afterwards? Yes, oftener, because there was no mail from Wednesday at 3 p.m. until Saturday at 1. Under my original contract it was oftener. Then it was on Tuesdays, Thursdays, and Saturdays.
48. *Chairman.*] Supposing you lived in Maitland instead of where you do reside, at Mount Vincent, would the alteration have entailed the same loss? Yes, or even more so. I live about midway between Maitland and Cooranbong.
49. How far is Mount Vincent from East Maitland? Seventeen miles.
50. *Mr. Dillon.*] Is there no place where you could live so as to make the journeys just as easy as they were before? No, if I were to live in East Maitland the same inconvenience would be felt by the public.
51. What do you consider you have lost by this alteration? Up to the time I sent in my bill to the Post Office, £20; but I have had two journeys to Sydney since with reference to this matter, and the expenses of train, steamboat, and staying in Sydney, are not less than £6.
52. Had you no other business to call you to Sydney? No.
53. Do you include the drawing of the petition in that amount? No. I paid for that 30s. 6d. to Mr. Chambers.

THURSDAY, 24 NOVEMBER, 1870.

Present:—

Mr. BELL, | Mr. DILLON,
Mr. FARNELL.

ALEXANDER DODDS, Esq., IN THE CHAIR.

Mr. John Fuller Foster further examined:—

54. *Chairman.*] You were examined here last week respecting a petition which had been sent to the Assembly? Yes. Mr. J. F. Foster.
55. You wish to give the Committee some further information with reference to your claim against the Government? I wish to hand in a letter addressed by me to the Postmaster General upon the subject. 24 Nov., 1870.
(*The witness handed in the same. Vide Appendix A 1.*)
56. You also stated that the inhabitants had not petitioned for the alteration that was made, but that the contract had been going on for a number of years? Yes. I have here a draft of the petition that was sent to the Postmaster General from the inhabitants asking that the old time-table might be restored.
(*The witness handed in the same. Vide Appendix A 2.*)
57. Do you wish to make any other statement to the Committee? No.

Stephen Harbord Lambton, Esq., examined:—

58. *Chairman.*] You are Secretary to the Post Office? Yes. S. H. Lambton, Esq.
59. Mr. John Fuller Foster has sent a petition to the Legislative Assembly respecting an alleged claim upon the Post Office—You are aware, I presume, that he entered into a contract with the Postmaster General for the conveyance of the mail from East Maitland to Mount Vincent? Yes, and from Mount Vincent to Cooranbong. 24 Nov., 1870.
60. He had been contractor for a number of years? He had.
61. For how many? I think about six.
62. The contract, I presume, was carried out satisfactorily? Yes, it was.
63. Have you a copy of that contract? Yes. (*The witness handed in the same. Vide Appendix B 1.*)
64. Have you a copy with you of the original time-table on which he carried out his contract? Am I to understand the authorized or the unauthorized time-table?—there were two. Prior to 1st September, 1868, the contractor carried out a time-table which was not authorized by the Postmaster General.
65. He acted upon that time-table for a number of years? He did. I have here a copy of the time-table which was in operation when the tenders were called in October, 1867, for the contracts now held by Mr. Foster. It is as follows:—

26 Leave East Maitland	Tues.	Thurs.	Sat.	10 a.m.
Arrive Mount Vincent	do.	do.	do.	1 p.m.
27 Leave do.	Mon.	7 a.m.
Arrive Cooranbong	do.	10 "
27 Leave Cooranbong	Mon.	3 p.m.
Arrive Mount Vincent	do.	6 "
26 Leave do.	Sat.	Tues.	Thurs.	4 "
Arrive East Maitland	do.	do.	do.	7 "

66. Was the contractor supplied with a copy of this time-table? I believe it was sent to him every quarter. It is the practice of the office to send a copy of the time-table every quarter to each postmaster and contractor.
67. Can you state how many miles he was required to travel under this authorized time-table? I can only give the mileage as recorded in our office. Our records give it as sixteen miles between East Maitland and Mount Vincent, and nine miles from Mount Vincent to Cooranbong. He was expected to perform the journey to and from East Maitland and Mount Vincent three times a week, and to and from Mount Vincent and Cooranbong once a week; they were two separate contracts.
68. The total number of miles he had to travel would be about —? About 114 miles.
69. Then, after the alteration was made at the instance of the inspector, can you state what he had to do? According to my impression, he had to do precisely the same work to carry the mails between these places three times and once a week respectively.
70. *Mr. Farnell.*] Then the order of travelling was reversed? Are we speaking of the time-table he should have carried out, or of the unauthorized time-table?—In consequence of some irregular arrangement made with the East Maitland postmaster, he was enabled to do the work of the two contracts with one man and a horse. The time-table he should have carried out would have given him much more work to do than the table brought into operation on the 1st of September, on the inspector's recommendation.
71. *Mr. Dillon.*] Was this the time-table he was understood to carry out when he entered into the contract? Yes. The extract to which I have referred is from the time-table in existence when he sent his tenders in.
72. *Mr. Farnell.*] How long was he carrying the mail under this unauthorized time-table? I do not think we made inquiry; indeed, we had no official knowledge of it prior to the time of the alteration made on the inspector's recommendation. It is the duty of the country postmasters to send in a report every month, to the effect that the time-table is accurately kept; and this departure from the ordinary practice was in consequence of some private understanding between the postmaster at East Maitland and the contractor.
73. *Mr. Dillon.*] Then there was in fact no change in the time-table after the 1st September at all? Yes; the inspector made a change. There were in fact three time-tables,—the one adopted by the contractor and unauthorized, one authorized, and one recommended by the inspector. The change was made because the mail for Cooranbong was detained at Mount Vincent from Saturday until Monday; and the inspector having visited the place, and spoken to several of the inhabitants on the subject, advised the alteration by which the mail would be conveyed on to Cooranbong on the Saturday. He stated that he had spoken to several persons about it, and that they were delighted with the proposed alteration.
74. That is, the people of Cooranbong? Yes. 75.

- S. H. Lambton, Esq.
24 Nov., 1870.
75. *Mr. Farnell.*] Would that be an inconvenience to other persons? No; the people at Mount Vincent received their letters at the proper time; but the Cooranbong letters lay at Mount Vincent from Saturday 1 p.m., and did not arrive at Cooranbong till Monday at 10 a.m.,—nearly two days.
76. You say it would not be an inconvenience to other parties—Was there not a petition presented to the Postmaster General against the proposed alteration of the inspector? A petition was presented, but I forget the substance of it. (*Appendix A 2 handed to witness.*) It is not shown in what way this is objectionable. It says here—“The postal arrangements were disorganized”; but it could not affect the Mount Vincent people, for the time of arrival at that office was not interfered with.
77. The paper before you is the draft of a petition from the inhabitants in this particular district against the proposed alterations? Yes; but no specific objection is raised in that petition.
78. Still, when that petition was received by the Post Office authorities, it was determined not to carry out the recommendation of the inspector, but to go back to the old method of carrying out the contract? Yes, as it was shown that the people did not care about the alteration which was made for their benefit.
79. It is stated that it was in no way for their benefit? It must have been, for the letters for Cooranbong had previously stayed at Mount Vincent from Saturday until Monday, and by this arrangement they would have been sent on at once.
80. Is it not the fact that after that petition was received by the Post Office authorities they allowed the contractor to carry out this unauthorized time-table? They made it an authorized time-table.
81. *Mr. Dillon.*] This man had been carrying out an unauthorized time-table? Yes; and we, upon receipt of that petition, authorized it.
82. *Chairman.*] Having acted upon a certain time-table which did entail only so much work, was not another substituted which required more work? No, he departed from the original time-table for his own convenience. With regard to the proper time of starting, the conditions of the tender are very clearly stated here. It says—“The present hours of starting from each post office or stage, and other particulars, may be ascertained at the General Post Office, where parties proposing to tender are invited to seek information.” In the 6th clause it says—“The mails are to be despatched from any post office on the days and hours to be fixed by the Postmaster General,” showing distinctly that the Postmaster General has the power of altering the time-table.
83. Then he was required to travel to East Maitland on Monday, remain there all night, and to go back to Mount Vincent on the following day? That was a matter of private arrangement on the part of the contractor. It would not be possible to work the service if these matters were to be taken into consideration by the Post Office. The parties when they enter into these contracts know what they are liable to, and it is their business to tender accordingly. Some years ago, in consequence of the extension of the railway, Cobb & Co. had to put on an extra coach and horses beyond what they had calculated upon. We endeavour as far as we can, without injury to the public interest, to study the convenience of the contractors, but it is their duty to provide against probable contingencies. This appeared to be a serious defect in the time-table, and the inspector considered it to be his duty to call attention to it.
84. Still the plan appears to have been abandoned? Yes. I have here the inspector’s letter making the recommendation. (*The witness handed in the same. Vide Appendix B 2.*)
85. *Mr. Dillon.*] Did that alteration make it necessary for the petitioner to travel a greater number of miles than he would have travelled if he had carried out his contract according to the original time-table? No, the authorized time-table would have given him more work than the inspector’s.
86. *Chairman.*] The Postmaster General, in a letter sent to the petitioner, I believe admits that there is some reason for his application? I have that letter here. (*The witness handed in the same. Vide Appendix B 3.*)
87. *Mr. Dillon.*] Did he adopt this time-table of his own without the knowledge of the Post Office authorities? So far as I am able to ascertain, he did; but perhaps in justice to him I should read a letter from Mr. Brown, the postmaster at East Maitland, with reference to this matter. (*The witness handed in the same. Vide Appendix B 4.*) I have searched the records of the office and cannot find that any such permission were given; if it were, of course Mr. Foster can produce it.
88. *Mr. Farnell.*] Is it necessary to provide these time-tables every quarter? No doubt it is necessary, as many new lines are established, and alterations are thereby and otherwise required. I have here a copy of the several time-tables,—that originally in existence, that adopted by the contractor, and that proposed by the postal inspector. (*The witness handed in the same. Vide Appendix B 5.*)

Mr. John Fuller Foster still further examined:—

- Mr. J. F. Foster.
24 Nov., 1870.
89. *Chairman.*] You wish, I believe, to make some further statement to the Committee? Yes, with reference to the alteration of the time-table. All the principal people at Cooranbong signed the petition, which proves it did not suit them.
90. *Mr. Dillon.*] Did you know the time-table that existed at the time you entered into this contract? Yes, I did.
91. Did you act on that time-table up to the 14th August, 1868? No.
92. Why? The people said it would suit them as well, if not better, to have the mail start from Mount Vincent instead of from East Maitland.
93. Did the time-table which you were supposed to carry out entail more travelling upon you than the time-table you adopted? Yes.
94. Much more? Yes.
95. *Mr. Farnell.*] On account of your living between East Maitland and Cooranbong? Yes.
96. *Mr. Dillon.*] So that you actually saved a great deal of time and expense by adopting the time-table which was not authorized? Yes, and it suited the people.
97. Did you receive any notification from the Postmaster General empowering you to act according to this unauthorized time-table? Not till some time after, when it was altered in the time-table sent to me. I had no order not to take it in the way I contracted for.
98. On the recommendation of the inspector, the original time-table, which was authorized, was altered—Did that entail more travelling and more expense upon you than the time-table for which you originally contracted? Yes, it did; it gave me four journeys to East Maitland on Saturday. 99.

99. It gave you four journeys instead of three? Yes.

100. *Chairman.*] It appears that the alteration was made chiefly because the Cooranbong mail was detained at Mount Vincent from Saturday to Monday? I went to Cooranbong on Monday, and returned to Mount Vincent on Tuesday.

Mr. J. F.
Foster.

24 Nov., 1870.

101. Did the people have time to answer the letters by the return mail? Yes.

102. And therefore they suffered nothing by the delay? Nothing; but the Mount Vincent people suffered by the alteration, for they had then no mail from Wednesday at 3 o'clock till Saturday.

PETITION OF JOHN FULLER FOSTER.

APPENDIX.

[To Evidence given by Mr. J. F. Foster, 24 November, 1870.]

A 1.

Mr. J. F. Foster to The Postmaster General.

Mount Vincent, Sept. 17, 1868.

Sir,

I have the honor to acknowledge the receipt of your letter of the 14th, requesting that I will give my opinion on the postal inspector's report therein enclosed.

I beg respectfully to give you, in a tabular form, on the other side, the duty I had to perform under my contract time-table, the work proposed under the time-table of the 14th August, and the alteration since suggested by your letter of the 14th, on which you ask my opinion.

Mount Vincent is my residence, as you acknowledge, which is half-way between East Maitland and Coorambong, and were I to alter this to either place the extra duty would still be the same. As I have worked the new time-table since the 1st instant (requiring two extra horses and one man to assist me) I can give you exactly the effect of it. You will therefore see by the annexed table that I used to travel 136 miles during four days of the week, and was put to no expense. By the time-table now in operation, I have had to travel 204 miles during five days of the week, and was put to the expense of a man, and 10s. each week at an inn for two nights for self and horse. And by the proposed alteration of the inspector you will see that I shall still have 204 miles to travel during six days of the week, and be put to the expense of a man, and of 15s. each week at an inn, for three nights, for self and horse. This expense might be saved, but then I must travel three times seventeen miles and back to my home, and have an extra horse. This is almost an impossibility, and unreasonable to expect for my pay of 17s. a week; nor do I feel that I ought to be required to do more than has been done by the old time-table, which has worked so satisfactorily for ten years, as certified by the postmaster here, unless the Post Office is willing to increase my remuneration with the additional work forced on me.

My letters of the 17th August and 9th instant so thoroughly explain to you my situation and grievance that I have only to ask one of the following three things—

- 1st. Continue the old time-table to the end of my contract.
- 2nd. If the new time-table is to be insisted upon, that I may be reasonably remunerated.
- 3rd. Or allow me to give up my contract.

I have, &c.,

J. F. FOSTER,
Mail Contractor.

TIME-TABLES between Mount Vincent, East Maitland, and Coorambong.

Under Old Contract.	Miles.	Now in operation.	Miles.	As proposed by letter, September 14.	Miles.

A 2.

To the Honorable the Postmaster General, Sydney.

22 October, 1868.

We, the undersigned, being interested in the postal arrangements between Maitland, Buchanan, Richmond Vale, Mulbring, Mount Vincent, Quarrybylong, Sandy Creek, Coorambong, and Lake Macquarie, having been inconvenienced by the alteration of the time-table on the 1st September last, whereby the postal arrangements were disorganized, beg respectfully to request that the old time-table (which has worked so well for the last ten years) may be immediately resumed, viz. :—To leave Mount Vincent Tuesday, Thursday, and Saturday mornings at 6, for East Maitland, and return the same day at 10; and to leave Mount Vincent Monday morning at 7 for Coorambong, and return same day at 3.

This old arrangement is so well known and understood by the district, particularly the distant parts, and is far more convenient than the unnecessary change now in operation, made by the Post Office Inspector, without consulting us, and which is believed to have caused considerable loss to the Government.

[To

[To Evidence given by S. H. Lambton, Esq., 24 November, 1870.]

B 1.

Know all men by these presents, that we, John Fuller Foster, of Mount Vincent, in the Colony of New South Wales, hereinafter styled the contractor,—Peter Foster, of the same place, in the said Colony, farmer,—and Frederick Frisby Hubbard, of the same place, in the said Colony, storkeeper,—are jointly and severally held and firmly bound unto our Sovereign Lady Queen Victoria in the sum of (£90) ninety pounds of lawful money of Great Britain and Ireland, the said sum to be paid to our said Lady the Queen, Her Heirs and Successors; for which payment to be well and truly made, we bind ourselves jointly and severally, and our and each and every of our heirs, executors, and administrators, firmly by these presents. Sealed with our seals. Dated the first day of November, in the year of our Lord one thousand eight hundred and sixty-seven.

WHEREAS the above-bounden contractor hath contracted and agreed with the Postmaster General of the said Colony, for and on behalf of Her said Majesty, to convey, in manner hereinafter mentioned, the post office mails, mail-bags, letter-bags, letters, newspapers, and packets, from and to East Maitland and Mount Vincent, three times a week, Mount Vincent and Cooranbong once a week, in the said Colony, and such other post office or post offices as may hereafter be established on the same line of road during the continuance of this contract, for the term of three years, commencing on the first day of January, one thousand eight hundred and sixty-eight; and for that purpose to find and provide horses, with saddles, bridles, and other necessary accoutrements, and careful, honest, and steady postmen, for the purpose of conveying the said post office mails, mail-bags, letter-bags, letters, newspapers, and packets, at the times and manner hereinafter mentioned or referred to; and that the said contractor shall cause such postmen and horses to be, on the days and at the hours that may hereafter be mentioned or referred to, at the post offices or places appointed or to be appointed for that purpose by such Postmaster General, there to receive and take in charge all post office mails, mail-bags, letter-bags, letters, newspapers, and packets, which shall, under the authority or by the direction of such Postmaster General or any postmaster of the said Colony, be delivered to and placed under their charge for conveyance to and from the places aforesaid; and while under charge shall keep and convey and deliver the same at such places, on such days and at such hours as such Postmaster General shall appoint, in such and the same condition as received, free from damage or loss: Provided always, that the said contractor shall not be required to travel at a quicker rate than eight miles an hour, including all stoppages: And further, that upon arrival at any of such places, the said postmen shall ride direct to the door of the post office or place appointed for that purpose, there to deliver the said mails, mail-bags, letter-bags, letters, newspapers, and packets, before stopping at any other place whatsoever in any township or place where such post office or place appointed for that purpose shall be; and that the said contractor shall not assign or part with his contract, except with the special license and consent in writing of such Postmaster General for that purpose first obtained; and that the horses to be employed as aforesaid shall, at all times during the said term, be subject to the inspection and be liable to the approval or rejection of such Postmaster General, or such person as he shall appoint for that purpose; and that the said contractor shall also provide good and secure waterproof covering to protect the said mails, mail-bags, letter-bags, letters, newspapers, and packets, from the weather; and further, that the postmen shall each be provided with a horn, which they shall sound, to give notice of the approach of the mail to the different stations; and that he, the said contractor, or the postman, or other person or persons employed in the conveyance of the mails, mail-bags, letter-bags, letters, newspapers, and packets as aforesaid, shall and do, when thereunto required by any postmaster, carry and deliver private letter-bags, and also carry and deliver loose letters and newspapers and parcels to and at all places situated on the line of road aforesaid: and also, that he, the said contractor, or the postman, or the person or persons so employed in the conveyance of the mails, mail-bags, letter-bags, letters, newspapers, and packets as aforesaid, shall and do, when thereunto required by any person on the road, take in charge, receive, and deliver over to the postmaster, at the post office at which he, the said contractor, or the postman, or the person or persons employed in the conveyance of the mails as aforesaid, shall first arrive, all private bags, both letters and newspapers, which may be tendered to the said contractor, or the postman, or the person or persons so employed as aforesaid to receive and deliver as aforesaid: Provided that the said contractor, or the postman, or the person or persons so employed as aforesaid, shall not be required to deviate or depart from the direct line of road, for the purpose of receiving or delivering any private letters, bags, and newspapers as aforesaid, or receive or collect any charges or postages for the same: And further, that the said contractor shall forfeit and pay the sum of five shillings when and as often as, and in every case when he, the said contractor or the postman, or the person or persons so employed as aforesaid, shall neglect or refuse to carry, receive, or deliver any loose letter, newspaper, or parcel as aforesaid, either given by the postmaster as aforesaid, or any other person or persons whatsoever; and also, that the said contractor shall forfeit and pay the sum of five shillings for every five minutes' delay after the first five minutes from the appointed time of starting (no penalty being imposed for the first five minutes' delay); and also shall forfeit and pay the sum of five shillings for every ten minutes' delay after the first ten minutes from the appointed time for the delivery of the said mails at the places of their respective destinations, unavoidable accidents, and such delays as may be occasioned by the postmasters in delivering the mails, mail-bags, letter-bags, letters, newspapers, and packets, always excepted; and also that the said contractor shall not receive or convey, or permit to be received or conveyed, either by himself or any of his agents, postmen, or servants, directly or indirectly, any letters or packet containing any letters, except such as shall have been delivered to him, or any of his agents, postmen, or servants, under authority or by the direction of such Postmaster General or his deputies, and except as hereinbefore is excepted; and that the said contractor shall become and be answerable for himself, his agents, postmen, and servants, and on neglect or breach of his said agreement or engagement to forfeit and pay the sum of five pounds for each letter or packet of letters so received or conveyed, either by himself or his agents, postmen, or servants, contrary to these presents; and further, that all or any of the penalties or forfeits and sums of money, although arising from the neglect or misconduct or breach by postmen or servants shall and may be imposed, declared forfeit and levied by such Postmaster General upon his sole authority; and all such sums of money so imposed and declared forfeit shall and may be by such Postmaster General deducted and received from all or any of the payments to be made to the said contractor under and in pursuance of this contract; and it shall and may be lawful for such Postmaster General—and the said contractor hereby declares that he is hereby authorized and empowered to deduct the same, or to proceed for the recovery thereof hereunder or in any way he may be advised in any Court of competent jurisdiction in the said Colony; and that all fines and forfeitures hereinbefore mentioned are to be paid over and above all or any penalties or penalty imposed by Acts of the Legislative Council of the said Colony; and further, that in case the said contractor shall fail to perform his said contract and agreement according to the terms thereof, as herein set forth, it shall be lawful for such Postmaster General, and he is empowered by the said contractor to advertise for and accept fresh tenders for the conveyance of the same mails, mail-bags, letter-bags, letters, newspapers, and packets, and to withhold payment of any money then due to the said contractor under the contract herein mentioned, without prejudice, nevertheless, to all rights of action and other remedies of such Postmaster General or such contractor, in respect of any breach or breaches of the same contract; and, for the considerations aforesaid, the said Postmaster General, for and on behalf of Her said Majesty, doth hereby agree that if the said contractor shall in all respects perform the said agreement on his part, the Government of New South Wales shall and will pay unto the said contractor the sum of one hundred and thirty-five pounds, for the conveyance of the said mails for the said term, by quarterly payments; and whereas previously to and at the time of entering into the said contract or agreement, it was agreed between the contractor and the said Postmaster General, that the contractor, with two sufficient sureties, should enter into a bond with Her Majesty the Queen, Her Heirs and Successors, in the penalty above mentioned, for the due performance of the said contract or agreement, and for the payment of all penalties or sums of money which thereunder shall or may at any time hereafter become payable to the said Postmaster General; and the said Peter Foster and Frederick Frisby Hubbard, have proposed to become such sureties as aforesaid: Now the condition of the above-written obligation is such, that if the said contract or agreement shall be well and truly performed, observed, and kept in all things by the said contractor, and by all postmen and others employed in or about the conveyance of the said mails, mail-bags, letter-bags, letters, newspapers, and packets, as aforesaid, according to the terms of the said contract and agreement, as

hereinbefore

hereinbefore set out, and if the said contractor do and shall well and truly pay or cause to be paid to the Postmaster General of the said Colony, all fines, forfeitures, sum or sums of money which, under the said contract or agreement shall be or become payable to the said Postmaster General, without deduction or abatement on any account whatsoever,—then this obligation shall be void, otherwise to be and remain in full force and virtue.

B 2.

G. de Milhau, Esq., to The Secretary, G.P.O., Sydney.

Maitland, 8 August, 1868.

Sir,

I have the honor to report, for the consideration of the Honorable the Postmaster General, that a change in the mail line from Cooranbong to Mount Vincent is in my opinion necessary. The mail for Cooranbong, which leaves East Maitland on Saturday, 10 a.m., and arrives at Mount Vincent at 1 p.m., is detained there till Monday, 7 a.m., arriving at Cooranbong same day, 10 a.m. Considering that they have only one mail weekly, and the letters which have accumulated in the Mount Vincent Post Office since the previous Tuesday only starts on Monday, and that the time (5 hours) allowed to the public to answer their correspondence by the same post is rather short for persons living at a certain distance, like Mr. Hargraves (16 miles), I think a correction of the time-table is advisable: it would give satisfaction, and perhaps would prevent the idea of applying for a second mail.

I beg to recommend the following Time-table:—

Leave East Maitland, Tuesday, Thursday, Saturday,	10 a.m.
Arrive Mount Vincent, do. do. do.	1 p.m.
Leave do. Saturday,	1.30 p.m.
Arrive Cooranbong, Saturday,	6.30 p.m.
Leave Cooranbong, Monday,	10 a.m.
Arrive Mount Vincent, Monday,	3 p.m.
Leave do. Saturday, Wednesday, Monday,	3.30 p.m.
Arrive East Maitland, do. do. do.	6.30 p.m.

I could have accelerated the departure from East Maitland by half an hour; but after taking the opinion of the postmaster of East Maitland in this matter, I see it is not advisable, because agents in Maitland for Sydney firms have often to forward orders by the same mail. The Sydney bags only arrive at the East Maitland Post Office at 8.25 a.m.

I have, &c.,
G. DE MILHAU.

Submitted. I see no objection to the alteration. S.H.L., 11/8/68.

Approved. J.D., 12/8/68.

M. C. Foster, G. de Milhau, P.M. Mount Vincent, Cooranbong, East Maitland, T-t. Book. J.D., 14/8/68.

B 3.

The Secretary, G.P.O., Sydney, to Mr. J. F. Foster.

69/1840.

General Post Office,
Sydney, 16 March, 1869.

Sir,

I have to acknowledge the receipt of your memorial praying for payment on account of extra services rendered in conveying the mails between Mount Vincent and Cooranbong.

In reply, I am directed to inform you, that the Honorable the Postmaster General regrets to find that you were put to so much extra expense in consequence of the Time-table imposed upon you on the 14th August last; but there can be no question that the Postmaster General had full power, under your agreement, to make the alteration complained of, or any other that he might think necessary.

After a careful consideration of the whole case, Mr. Egan feels that he is unable to comply with your request; first, because there are no funds voted by Parliament for such purposes; and secondly, because there is no precedent to be found in the records of the office for the entertainment of such a claim.

I have, &c.,
S. H. LAMBTON,
Secretary.

B 4.

Mr. Browne to The Secretary, G.P.O., Sydney.

Post Office, East Maitland,
13 November, 1868.

Sir,

Referring to the memorandum attached to the enclosed communication, I do myself the honor to explain the circumstances which occasioned the departure from the prescribed time of despatching and receiving the Mount Vincent mails. In former years the mails were conveyed by parties resident in this locality. During Major Christie's term of office, the tender of Mr. Foster, of Mount Vincent, was accepted, and upon the first day he conveyed the mails, informed me that the Postmaster General, in consequence of the low rate he had agreed to undertake the contract, had sanctioned his leaving at the hours complained of, and which upon reference to my time-bills, have been correctly stated, and are those named in my report as strictly adhered to. Not having any complaint as to the hours written in my time-bills, and believing I was acting in compliance with the wishes of the Postmaster General, was the cause of my seeming disregard, and not from any want of respect, or adherence to the prescribed rules laid down for my guidance.

I am, &c.,
ROBERT BROWNE,
Postmaster.

Read.—S.H.L., 17/11/63.

B 5.

Time-table adopted by Contractor, up to 1st August, 1868.

Leave Mount Vincent	Tuesday, Thursday, Saturday,	6 a.m.

1870-71.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

POSTAL.

(CORRESPONDENCE RESPECTING CONVEYANCE OF MAILS *vid*—AND PROPOSED REMOVAL OF POST OFFICE AT—GUNDAROO.)

Ordered by the Legislative Assembly to be Printed, 2 June, 1871.

RETURN to an *Order*, made by the Honorable the Legislative Assembly of New South Wales, dated 30th May, 1871, That there be laid upon the Table of this House,—

“ Copies of all Correspondence during the present year between the Postmaster General and any other person or persons ; also, of every Petition, Memorial, or other Document having reference to the conveyance of Mails by way of Gundaroo, and the proposed or contemplated removal of the Post Office from its present site to another site within the said Township.”

(*Mr. W. Forster.*)

POSTAL.

MR. WM. AFFLECK TO THE POSTMASTER GENERAL.

Gundaroo, 3 April, 1871.

HON. SIR,

I perceive by the *Gazette* of the 31st March that you have called for tenders for the conveyance of mails between Goulburn and Queanbeyan, *viâ* Collector, Gundaroo, Gininderra, and Canberra.*

As the impassable state of Lake George has of late interfered considerably with the conveyance of the mails, and as it is now impassable, unless for a single horse to walk, and in all likelihood will be so for the next twelve months, even if we have no more rain, and as we have now got a new road from Collector to Gundaroo, known as "Thompson's Marked-tree-line," which is a good road and much shorter than Lake George Road,—I would desire to bring this fact under your notice, and ask you to insert in the advertisement that the mail should run *viâ* the said new road, between Collector and Gundaroo. As to the character of the new road I would beg to refer you to the Hon. Charles Campbell, who passed over it a week or two ago. I would also desire to suggest to you as an improvement, that the mail contract might or should be let out in two portions, say, from Goulburn to Gundaroo, and from Gundaroo to Queanbeyan. I believe by the adoption of this plan there would be more chance of the contract being carried out well, and also at a cheaper rate.

Trusting these suggestions may receive your earnest attention, and that they may be adopted,

I have, &c.,

WILLIAM AFFLECK.

The new contract might be advertised both ways, *viz.*, as at present, and by the Marked-tree-line, as suggested by Messrs. Affleck and Davis; and the postmasters' reports as to which should be adopted obtained in the meantime. The whole length of the line is only 60 miles, and I would not recommend its being taken in two contracts as suggested by Mr. Affleck.—S.H.L., 5/4/71. Approved.—J.D., 5/4/71.

ADVERTISEMENT calling for tenders altered to meet the case as follows, *viz.* :—

To and from Goulburn, Collector, Gundaroo, Gininderra, Canberra, and Queanbeyan, three times a week; or,

To and from Goulburn, Collector, Gundaroo, Gininderra, Canberra, and Queanbeyan, *viâ* Thompson's Marked-tree-line, three times a week.

THE SECRETARY, GENERAL POST OFFICE, to MR. WM. AFFLECK.

General Post Office,

Sydney, 11 April, 1871.

SIR,

With reference to your letter of the 3rd instant, I am directed to inform you that it has been decided to invite tenders for the Goulburn and Queanbeyan mail service by the present route, and also *viâ* "Thompson's Marked-tree-line," and in the meantime to obtain further information as to which route should be adopted.

I am also to state that as the mail line in question is only 60 miles in length, it is not considered desirable to divide the contract into two portions.

I have, &c.,

S. H. LAMBTON,

Secretary.

THE SECRETARY, GENERAL POST OFFICE, to THE POSTMASTER, GOULBURN.

General Post Office, Sydney,

11 April, 1871.

It having been decided to invite tenders for the Goulburn and Queanbeyan mail service, by the present route, and also *viâ* Thompson's Marked-tree-line, I have to request your report as to the which route should be adopted.

You will afterwards forward this paper to the postmasters at Collector, Gundaroo, Gininderra, Canberra, and Queanbeyan, for their reports,—the latter postmaster returning the paper to this office.

S. H. LAMBTON,

Secretary.

Post Office, Goulburn,

19 April, 1871.

I AM not personally acquainted with the proposed line, but from inquiries made I hear it is the best in wet weather. It is about 17 miles from the Collector post office to the present Gundaroo post office, but rather farther round to Queanbeyan than the present Lake Road.

JAMES SOWCROFT.

Post

* NOTE.—Tenders were called for the mail service between Goulburn and Queanbeyan in consequence of irregularities on the part of the late contractor, whose contract has been cancelled, and the tender of Mr. W. Roohan accepted.

Post Office, Collector,
21 April, 1871.

WITH reference to the roads abovenamed, the Lake Road, when the water subsides, is by far the best route. At present, by Thompson's Marked-tree-line.

PATK. DAVOREN.

Post Office, Gundaroo,
24 April, 1871.

I BELIEVE that the present route would be more satisfactory. A better road than the Marked-tree-line can be made when the water subsides.

J. B. BOATE,
Postmaster.

Post Office, Gininderra,
26 April, 1871.

I BELIEVE that Thompson's Marked-tree-line is by far the best, as the Lake George Road is generally very bad in winter.

GEORGE HARCOURT.

Post Office, Canberra,
29 April, 1871.

HAVING just returned from Goulburn, *via* Thompson's Marked-tree-line, I think the mails could be carried that way better than by the Lake George route, as the lake is now full of water, and not passable for a vehicle. The only drawback I see to the proposed route, is, that when the Gundaroo River is in flood the mails will be delayed longer than the present road causes, because the river is deeper and more difficult to cross at the so-called township of Gundaroo.

FRANCIS WILLIAMS,
Postmaster.

Post Office, Queanbeyan,
4 April, 1871.

I BELIEVE Thompson's Marked-tree-line route is the best at present, as the Lake Road is flooded, and likely to be so for some months.

J. KINSELA.

MR. HUGH VALLANCE, JUNR., to THE POSTMASTER GENERAL.

Gundaroo, 13 April, 1871.

SIR,

Some time since a Petition was presented to you from the inhabitants of Gundaroo, praying for a removal of the Gundaroo post office from where it is to the township, and that I should be the postmaster.

The reply to it was, that as the mail was still to travel from Collector to Gundaroo, *via* Lake George, it was not expedient to change the site of the post office at that time.

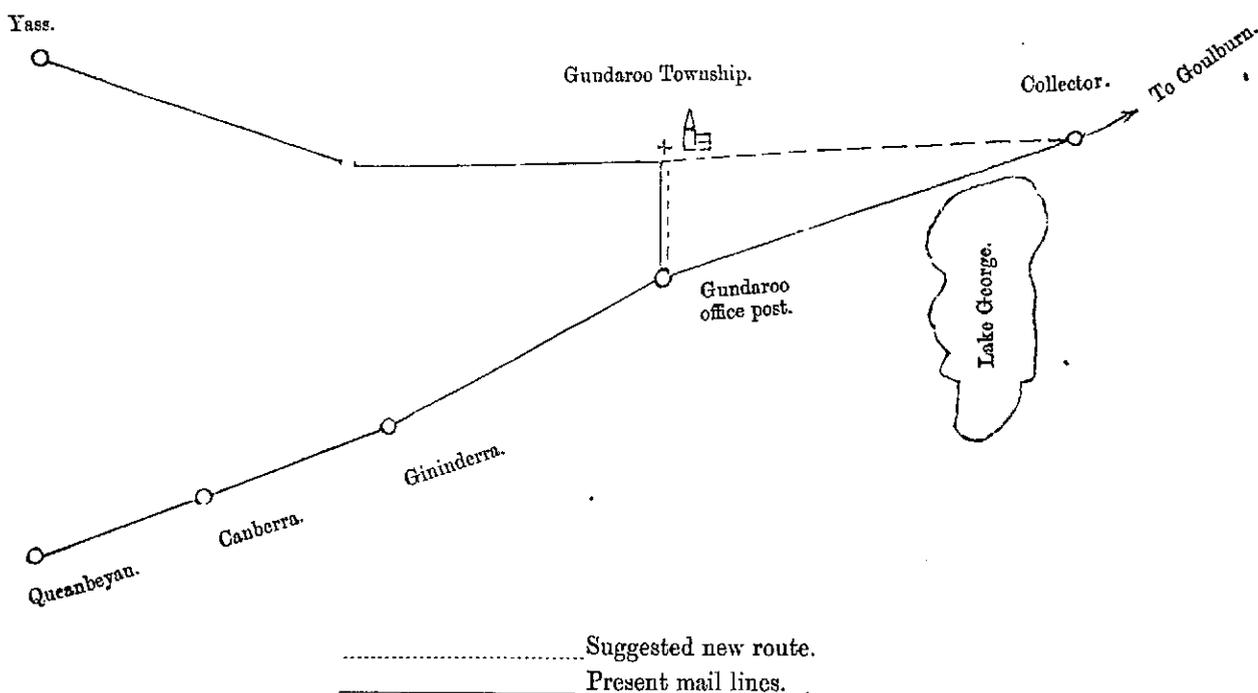

But from the impassable state of the Lake Road these twelve months past, and from the new road, near the Marked-tree-line, from here to Collector, being so far repaired as to enable all the traffic to pass over it, the general impression is that you will also cause the mail to go that way, instead of by the Lake, seeing that the new road is much nearer and will enable the mail contractor to travel with a vehicle instead of carrying the mails on horseback, as at present, to the great injury sometimes to both letters and newspapers.

In the event therefore of your deciding to shift the Gundaroo post office to the township here, I beg to remind you respectfully that my premises are the best situated in the township for a post office, and that I still hope you will appoint me postmaster of Gundaroo when you think proper to shift the office to the township.

I may also add that my appointment will give almost unanimous satisfaction to the people here.

I have, &c.,
HUGH VALLANCE, JUNR.

Mr. Moyses,—If the Marked-tree-line route be adopted would this involve the removal of the Gundaroo post office?—S.H.L., 17/4/71. I am not aware whether the adoption of the Marked-tree-line would necessitate the removal of the Gundaroo post office. P.M., Gundaroo, in his report of 27th August last, does not give any information on that point. He should be asked before any decision is arrived at, as, if it is the case, the mail line would be from Collector to the Gundaroo township, and then to the present road from Collector, to where the Gundaroo post office is at present situated, 4 miles from the township. This is one of the changes the residents of the Gundaroo township have been agitating for since 1865.—V. MOYSE, 17/4/71.

Postmaster, Gundaroo, should be asked whether in the event of the Marked-tree-line being adopted it would be necessary to remove the Gundaroo post office to the township.—V. MOYSE, 18/4/71.

Ask accordingly.—S.H.L., 18/4/71. Postmaster, Gundaroo.—V.M., 19/4/71.

THE POSTMASTER, GUNDAROO, to THE POSTMASTER GENERAL.

Post Office, Gundaroo,
21 April, 1871.

SIR,

The Inspector, Mr. Moyse, had decided, during one of his visits to Gundaroo, that the present position of the post office was central; therefore any deviation in the mail route involves no necessity for removal.

The post office has been in this neighbourhood for the last eighteen years. If Thompson's Marked-tree-line is adopted as the mail-line the mailman must of necessity pass through the township, which is 4 miles north of the present post office, the township being the extreme end of the district.

I have, &c.,
J. B. BOATE,
P.M., Gundaroo.

Bring forward with tenders.*—S.H.L., 25/4/71.

* NOTE.—Tenders for mail service between Goulburn and Queanbeyan to be opened on 3rd May, 1871.

MR. WILLIAM AFFLECK to THE POSTMASTER GENERAL.

Gundaroo, 24 April, 1871.

HON. SIR,

In the event of the mail running over Thompson's Marked-tree-line it will run then right through the township; and as you will perceive by the enclosed list of the heads of families, who receive letters and papers from Gundaroo post office, that were a bag made up in Goulburn and left in the township as the mail passes through it would be a very great convenience for fifty of them.

Therefore I beg to suggest for your approval that you authorize the Goulburn postmaster to make up two bags (if the mail should run *via* Thompson's Marked-tree-line) for Gundaroo, one for the post office and one for the township,—the latter to contain only the correspondence for the fifty persons named, besides any addressed to their care; the others to go to the post office.

If you should agree to this proposal I have no objection, while Mr. Boate holds the post office, to take charge of the township bag, if approved by you, free of expense, thereby allowing the salary to go to Mr. Boate as postmaster.

I make the foregoing propositions for two reasons. First. The adoption of this plan, leaving a bag on the township, will not involve the department in any extra expense, and be a decided convenience to the public, and likewise fulfilling the design which ought to guide all Governments doing the greatest good to the greatest number. Second. If the plan be adopted, a notification of the same might be gazetted so as to give the persons notice to have their communications directed with the word "Branch" or "Township," for the guidance of the Goulburn postmaster.

I hope you will pardon the liberty I have taken in addressing you on this subject, and that it will appear to you of sufficient importance as my apology. If you will let me know when you decide if you will carry out my suggestion I will let as many know as I see.

I have, &c.,
WILLIAM AFFLECK.

Heads

Heads of families who would save 8 miles journey—4 miles to post office and back,—were a special bag made up at the Goulburn post office, and a place appointed on the township to receive and dispatch the same.

THE SECRETARY, GENERAL POST OFFICE, to MR. WILLIAM AFFLECK.

General Post Office,
Sydney, 2 May, 1871.

SIR,

In reply to your letter, dated the 24th ultimo, suggesting, in the event of the acceptance of a tender for the service between Goulburn and Queanbeyan, *via* Thompson's Marked-tree-line, that a bag may be made up in the Goulburn office, to contain correspondence for the Gundaroo township, I am directed to inform you that this department enters into no arrangements regarding private bags; but that in the event referred to the persons requiring the proposed accommodation will no doubt be able to arrange the matter with the postmaster at Goulburn.

I have, &c.,
S. H. LAMBTON.

MR. A. FRASER TO THE POSTMASTER GENERAL.

Gundaroo, 26 April, 1871.

SIR,

In consequence of a movement now being set on foot by interested parties to remove the post office from its present site, and also to adopt another mail route, viz., that known as the Marked-tree-line, I take the liberty to write to you, in order to put you in possession of a few facts. First. Ever since a post office has been established at Gundaroo (with the exception of some 18 months) it has always been within 500 yards of its present site, I am informed, something like 30 years. The 18 months mentioned, it was held by Mr. Styles some 2 miles from its present site, the reason being that when Mr. Edgar, the then postmaster resigned, there was no person but Mr. Styles to accept office. On the recommendation of Sir Terence Aubrey Murray the office was removed back to its present locality by the then Postmaster General, Major Christie, for no other reason than that its present locality, being the centre of the population.

tion. Second. In reference to the mail route, I admit that a coach could not run the Lake route during the past year, but you will bear in mind that W. J. Packer, who has known Lake George the last 40 years, has never known it in all that time to be as it is at present; in fact till now could always travel it with a team. It is not hard to account for the water being so high at present, when we remember the continuation of heavy rains we have had for something like 12 months. At present there is every prospect of a dry winter, and perhaps summer also, and if it should be so, Lake George will be as fit to travel as ever it was; and it may be 40 years till it will be in its present condition. I have travelled Thompson's Marked-tree-line, and think that any disinterested person will admit that from the soft nature of the ranges a permanent road could not be made that way. If the Roads Department were only to apply the money they are wasting on the Marked-tree-line, on the edge of Lake George, for only about 7 miles, a good and permanent road could be easily made. I have no doubt Mr. Moyse, the Postal Inspector, can bear me out in many of the above remarks.

Your obedient servant,
A. FRASER.

THE SECRETARY, GENERAL POST OFFICE, to MR. A. FRASER.

General Post Office, Sydney,
2 May, 1871.

SIR,

In reply to your letter, dated the 26th ultimo, submitting objections to the removal of the post office at Gundaroo, and to the adoption of the route between Goulburn and Queanbeyan *via* Thompson's Marked-tree-line, I am directed to inform you that there is no intention to remove the post office at Gundaroo. The subject of the mail route is under consideration, but it is not intended that any change therein shall affect the Gundaroo residents or the Gundaroo post office.

I have, &c.,
S. H. LAMBTON,
Secretary.

MR. THOMAS BOOTH TO THE POSTMASTER GENERAL.

Gundaroo, May 2, 1871.

HON. SIR,

I have the honor to enclose for your information a Petition, with the Resolutions, passed at a public meeting held this day at the Royal Hotel.

The meeting (the largest held in Gundaroo for some years) was called, owing to a clandestine meeting being held last Tuesday by a few persons around the post office, who got up, and have now been obtaining signatures to the same under false pretences.

Trusting you will give the enclosed Petition and list of heads of families, with particulars, your serious consideration, and grant the request of the inhabitants,

I have, &c.,
THOMAS BOOTH.

[Enclosures.]

Gundaroo, May 1, 1871.

To the Honorable Joseph Docker, Postmaster General,—

HON. SIR,

We, the inhabitants of the postal district of Gundaroo, in public meeting assembled on the 1st day of May, 1871,—
Humbly Showeth,

1st.—That for months past the Lake George Road has been impassable for either vehicles or packhorse, and will be so for many months to come; and further, that the road known as Thompson's Marked-tree-line is the only practicable road between Collector and Gundaroo for the mail.

2nd.—This meeting regrets that a few residents around the post office on Tuesday last met and adopted a memorial to you, stating that the present position of the post office was the centre of the postal district, while the public knew nothing of their meeting, and therefore anything done could not be considered as a public expression of opinion.

3rd.—From facts laid before this meeting, and from what we know personally, and as you will perceive from the list accompanying this Petition, which we certify as a correct statement, the *township* is the centre of the postal district of Gundaroo, both with the regard to distance of residences and population.

4th.—Seeing that the Township of Gundaroo is in the centre of the postal district, and that the Government Township is the proper place for all Government offices, and as the post office is the only Government office not now on the township, this meeting is of opinion that the Postmaster General ought to cause the post office to be removed so soon as the mail is carried over Thompson's Marked-tree-line of road.

5th.—In accordance with the fifth resolution, passed at this large and influential meeting, we authorize the chairman to affix his signature as our representative, and trust you will take the foregoing Petition into your favourable consideration, and do this large and scattered district justice.

We have, &c.,

ARTHUR AFFLECK, J.P., Chairman,
For the inhabitants in public meeting assembled.

NOTICE.

A PUBLIC Meeting of the inhabitants of Gundaroo will be held at the Royal Hotel, on Monday, 1st May, at half-past 3 o'clock, to consider the matter of the mail route, as well as the proceedings of the hole-and-corner meeting of Tuesday last.

1st.—This meeting desires to draw the attention of the Postmaster General to the fact that the road known as Thompson's Marked-tree-line is the only practicable line of road for the mail to travel between Collector and Gundaroo, as the Lake George Road has been and is now impassable for either vehicles or packhorse.

2nd.—This meeting regrets that a few individuals, meeting at the Traveller's Home on Tuesday last, should have put themselves in so false a position as to sign a document to the Postmaster General, intimating that where the post office is at present is the most central, without calling a public meeting to have the public opinion on the subject.

3rd.—That this meeting is of opinion, from the facts that have been placed before them, that the township of Gundaroo is in the centre of the postal district of Gundaroo, both as regards numbers of population and distance of residences.

4th.—This meeting is strongly of the opinion that if the Postmaster General decides on the mail being carried between Collector and Gundaroo, along Thompson's Marked-tree-line, the proper place for the Gundaroo post office is on the Township of Gundaroo.

5th,—

5th.—That the foregoing resolutions be embodied in a petition to the Postmaster General, and signed by the chairman of this meeting, on behalf of the inhabitants, and with the same a list of heads of families who receive communications through the post office, with the distance of their residences from the post office, as well as the distance from the township, specifying the north and south sides of the post office separately.

Names of heads of families on Post Office side of township.	Distance of residence from Post Office.	Distance of residence from township.	Names of heads of families on Post Office side of township.	Distance of residence from Post Office.	Distance of residence from township.

21. Thomas Reynolds	4 "	"	50. John Lawton	14 "	10 "
22. C. A. Massy	4 "	"	51. Donald Fitzgerald	14 "	10 "
23. John Edwards	$5\frac{1}{2}$ "	1 mile.	52. George Lanham	15 "	11 "
24. John Geary	7 "	$2\frac{1}{2}$ "	53. John Lees.....	15 "	11 "
25. Charles Masters, senr.	7 "	6 "	54. Henry Lanham	15 "	11 "
26. John Noocks	7 "	6 "	55. Richard Howell	16 "	12 "
27. Charles Masters, junr.	7 "	6 "	56. George Croacker	16 "	12 "
28. Owen Elliott	6 "	$1\frac{1}{2}$ "	57. Arthur Leary	18 "	14 "
29. John Clarke	10 "	$5\frac{1}{2}$ "			

The above names are all heads of families residing at the distances mentioned, both from the post office and from the township; and the list shows that were the post office on the township it would divide the distance equal between the persons residing furthest on each side of the township, while there are twenty-five on the township side more than on the post office side.

Bring forward when tenders are opened.—J.D., 3/5/71.

Mr.

MR. J. EDGAR to THE POSTMASTER GENERAL.

Gundaroo, 1 May, 1871.

HON. SIR,

In reference to the present position of the Gundaroo post office, I most respectfully beg to forward you the names in the enclosed memorial of the landholders of this neighbourhood, all, except the few residents in the township.

The township is situated at the end of the district, and is full 4 miles away from the centre of the neighbourhood, and the junction of the main roads.

The cause of the river remaining high so long at the crossing-place of the township, is in consequence of the tributary of Brook's Creek, which prevents persons crossing for many days at a time.

The extra flow of water does not interfere with the crossing-place where the mails now and always have crossed; consequently, there is seldom any detention of the mails.

When the mails travel over the Marked-tree-line, the mail bags will have to remain on the other side of the river for days at a time, which will confuse the line to Gininderra, Canberra, and Queanbeyan.

I have, &c.,

JOSEPH EDGAR.

Place with other papers.—J.D., 4/5/71.

[Enclosure.]

To the Honorable Joseph Docker, Postmaster General, Sydney,—

HON. SIR,

We, the undersigned inhabitants of Gundaroo and its neighbourhood, most respectfully beg to state that the post office is situated in the best possible situation to afford public accommodation to this widely spread neighbourhood. It is situated at the junction of the Queanbeyan, Gininderra, and Yass Roads, and can be approached without crossing the river, which frequently rises and remains impassable for many days during wet weather.

THE

THE SECRETARY GENERAL POST OFFICE, to MR. J. EDGAR.

General Post Office,
Sydney, 12 May, 1871.

SIR,

In reply to your letter, dated the 1st instant, forwarding a memorial from the inhabitants of Gundaroo and its neighbourhood, approving of the present situation of the post office at Gundaroo, I am directed to inform you that it is not in contemplation to make any change in the site of the office referred to.

I have, &c.,
S. H. LAMBTON,
Secretary.

LIST of Tenders for the Goulburn and Queanbeyan mail service, opened on the 3rd May, 1871.

Thos. Moran, Goulburn and Queanbeyan, <i>via</i> Lake or Marked-tree-line, thrice a week, coach ;	£300 per annum.
Wm. Roohan, " " " " " " " " " "	horse ; £300 "
Wm. Roohan, " " " " " " " " " "	coach ; £348 "
Wm. Roohan, " " <i>via</i> Marked-tree-line, " " " " " "	; £348 "
Wm. Roohan, " " " Lake, " " " " " "	; £348 "

Accept Roohan's tender for horse-carriage, with the understanding that if at any future time he is called upon by the Postmaster General to perform the service by coach, he shall do it at the price named in his second tender. Inform Moran he will be released from his contract, provided other arrangements are completed by the 1st of June.—J.D., 10/5/71. Telegram to Roohan; letter to Moran.—C.T.C., 10/5/71. No reply from Roohan.—W.J.D., 15/. Telegraph again.—S.H.L., 15/. W. Roohan.—C.T.C., 15/5/71. I am informed that Roohan, whose tender has been accepted for the Goulburn and Queanbeyan mail line, is prepared to take the contract on the conditions stated in telegram of the 10th instant. Pending his reply (he being absent from Queanbeyan) it may be desirable to determine at once which route shall be adopted. So long as the Lake Road is practicable, and the mails are carried in a satisfactory manner, it would not appear expedient to make any change.—S.H.L., 17/5/71. Approved.—J.D., 17/5/71. Contractor Roohan informed by telegram.—N.C. O'N., 17/5/71.

THE SECRETARY, GENERAL POST OFFICE, to MR. T. BOOTH.

General Post Office,
Sydney, 17 May, 1871.

SIR,

I am directed to acknowledge the receipt of your letter, dated the 2nd instant, forwarding a Petition from certain residents of the district of Gundaroo, in favor of the removal of the post office to the township, and of the adoption of the Marked-tree-line as the mail route.

In reply, I am to inform you that the representations of the Petitioners have been duly considered, but that it is not intended to remove the post office in question; and that from the 1st proximo contractor Roohan will convey the mails between Goulburn and Queanbeyan, who has been informed that, so long as the Lake Road is practicable, and the mails are carried in a satisfactory manner by that route, it is not deemed expedient to make any alteration.

I have, &c.
S. H. LAMBTON,
Secretary.

1870-71.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.
(PETITION—JAMES FLORENCE McCARTHY, NEWSPAPER-PROPRIETOR.)

Ordered by the Legislative Assembly to be Printed, 22 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned, Newspaper-proprietor,—

RESPECTFULLY SHOWETH:—

That while your Petitioner recognizes the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be unadvisable, he submits that the pressure of the charge is unequal and unfair in its operation; and he believes that, by a graduated scale, varying, as in the case of letters and book packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioner ventures to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage. But weight could properly be attached to this argument only if the charge was based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers, the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioner, therefore, respectfully prays that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioner, as in duty bound, will ever pray.

JAMES FLORENCE McCARTHY,
Proprietor, *Macleay Independent*.

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.

(PETITION—MESSRS. BALMER & HOBSON, NEWSPAPER-PROPRIETORS.)

Ordered by the Legislative Assembly to be Printed, 29 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned, Newspaper-proprietors,—

RESPECTFULLY SHOWETH :—

That while your Petitioners recognize the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be unadvisable, they submit that the pressure of the charge is unequal and unfair in its operation; and they believe that, by a graduated scale, varying, as in the case of letters and book packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioners venture to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage. But weight could properly be attached to this argument only if the charge was based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers, the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioners, therefore, respectfully pray that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioners, as in duty bound, will ever pray.

ROBERT GORDON BALMER.
ROBERT HOBSON.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.

(PETITION--JOHN GALE, OF QUEANBEXAN, NEWSPAPER-PROPRIETOR.)

Ordered by the Legislative Assembly to be Printed, 2 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned, Newspaper-proprietor,—

RESPECTFULLY SHOWETH :—

That while your Petitioner recognizes the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be inadvisable, he submits that the pressure of the charge is unequal and unfair in its operation ; and he believes that, by a graduated scale, varying, as in the case of letters and book packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioner ventures to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage. But weight could properly be attached to this argument only if the charge was based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office except newspapers, the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioner, therefore, respectfully prays that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioner, as in duty bound, will ever pray.

JOHN GALE,
Proprietor, *Queanbeyan Age*,
Queanbeyan.

1870-71.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.

(PETITION—FREDERICK LAWRENCE.)

Ordered by the Legislative Assembly to be Printed, 7 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Newspaper-proprietor,--

RESPECTFULLY SHOWETH :—

That while your Petitioner recognizes the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be unadvisable, he submits that the pressure of the charge is unequal and unfair in its operation, and he believes that by a graduated scale, varying as in the case of letters and book-packets according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioner ventures to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage; but weight could properly be attached to this argument only if the charge were based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers, the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioner, therefore, respectfully prays that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioner, as in duty bound, will ever pray.

FREDERICK LAWRENCE,
Proprietor of the *Western Post and Mudgee Newspaper*.

1870-71.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.

(PETITION—GEORGE EDWIN SHETTLE.)

Ordered by the Legislative Assembly to be Printed, 7 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Newspaper-proprietor,—

RESPECTFULLY SHOWETH :—

That while your Petitioner recognizes the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be unadvisable, he submits that the pressure of the charge is unequal and unfair in its operation; and he believes that by a graduated scale, varying, as in the case of letters and book-packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioner ventures to remind your Honorable House, that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage; but weight could properly be attached to this argument only if the charge were based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers, the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioner, therefore, respectfully prays that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioner, as in duty bound, will ever pray.

GEORGE EDWIN SHETTLE,
Proprietor, *Mudgee Liberal*,
Mudgee, N. S. Wales.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.

(PETITION—MESSRS. HINES AND DORNEY, NEWSPAPER-PROPRIETORS.)

Ordered by the Legislative Assembly to be Printed, 8 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Newspaper-proprietors,—

RESPECTFULLY SHOWETH:—

That while your Petitioners recognize the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be unadvisable, we submit that the pressure of the charge is unequal and unfair in its operation; and we believe that, by a graduated scale, varying, as in the case of letters and book-packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioners venture to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage. But weight could properly be attached to this argument only if the charge was based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers,—the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioners, therefore, respectfully pray that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioners, as in duty bound, will ever pray.

POSTAGE ON NEWSPAPERS.

(PETITION—THOMAS TALBOT WILTON, NEWSPAPER-PROPRIETOR.)

Ordered by the Legislative Assembly to be Printed, 16 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned, Newspaper-proprietor,—

RESPECTFULLY SHOWETH:—

That while your Petitioner recognizes the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be unadvisable, he submits that the pressure of the charge is unequal and unfair in its operation; and he believes that, by a graduated scale, varying, as in the case of letters and book-packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioner ventures to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage. But weight could properly be attached to this argument only if the charge was based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers,—the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioner, therefore, respectfully prays that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioner, as in duty bound, will ever pray.

THOMAS TALBOT WILTON.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POSTAGE ON NEWSPAPERS.

(PETITION—JOSEPH WESTON, NEWSPAPER-PROPRIETOR.)

Ordered by the Legislative Assembly to be Printed, 22 March, 1871.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned, Newspaper-proprietor,—

RESPECTFULLY SHOWETH:—

That while your Petitioner recognizes the fact that, from financial considerations, the abandonment of the postage on newspapers may at the present time be inadvisable, he submits that the pressure of the charge is unequal and unfair in its operation; and he believes that, by a graduated scale, varying, as in the case of letters and book-packets, according to the weight of the article carried, the unfairness of the operation would be removed, and the revenue receipts might be maintained undiminished.

Your Petitioner ventures to remind your Honorable House that the retention of the postage on newspapers has been defended principally on the ground that it is but a charge for carriage. But weight could properly be attached to this argument only if the charge was based on the same principle that rules every other charge for carriage, and which is acted on in the case of everything passing through the Post Office, except newspapers,—the principle, namely, of proportioning the charge to the weight of the article carried.

Your Petitioner, therefore, respectfully prays that your Honorable House will be pleased to take into consideration the propriety of adapting to the case of newspapers the same principle that applies to letters.

And your Petitioner, as in duty bound, will ever pray.

JOSEPH WESTON.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TELEGRAPHIC COMMUNICATION WITH THE
MANNING RIVER DISTRICT.

(PETITION—CERTAIN ELECTORS, MANNING RIVER DISTRICT.)

Ordered by the Legislative Assembly to be Printed, 22 March, 1871.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Electors of the Manning River District,—

HUMBLY SHOWETH :—

That the district is without telegraphic communication, notwithstanding that a sum of £2,000 was voted for that purpose upwards of twelve months since.

That your Petitioners, in the month of November, 1870, offered to the Government a guarantee, in accordance with the usual bond, for the formation of a line of Telegraph from Port Macquarie to Tarce,—a distance of less than 60 miles.

That in reply thereto, the Superintendent of the Electric Telegraph Department declined to entertain the above proposal, and affirms that the line can only be had *viâ* Maitland—a distance exceeding 110 miles—on your Petitioners paying interest for the cost of the whole length of the line, even should intermediate stations be formed at Paterson, Dungog, and Stroud.

That your Petitioners humbly pray that your Honorable House will be pleased to take into consideration the hardships under which your Petitioners suffer in being denied a line of Telegraph from Port Macquarie, a distance of less than (60) sixty miles, by a route practicable for drays, over the entire distance of which horsemen frequently travel in one day,—a route free from any impediment of large streams; whereas the construction of a line *viâ* Maitland would involve the crossing two wide navigable rivers and three other considerable streams, through an extremely rugged and precipitous country, portions of which are impassable for horsemen, and twice the distance of the line from Port Macquarie.

Your Petitioners therefore humbly pray that your Honorable House may be pleased to take the above matter into consideration, and afford them such relief in the premises as your Honorable House may deem fit.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 210 Signatures.*]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROADS.

(REPORT FROM COMMISSIONER, ON WORKS EXECUTED DURING THE YEAR 1870.)

Ordered by the Legislative Assembly to be Printed, 16 February, 1871.

THE COMMISSIONER FOR ROADS TO THE SECRETARY FOR PUBLIC WORKS.

Road Office, 9 February, 1871.

SIR,

In accordance with instructions conveyed in the letter of the Under Secretary for Public Works, dated 28th January, to forward report on the works executed by the department during the year, and the subsequent intimation that such report was required before the resumption of the debate on internal communication on 10th February, I have the honor to inform you that it will be impossible for me to furnish such report in any detail at such short notice, and without previous communication with the officers of the department in the field.

I now furnish a concise approximate statement of the works done on the Main and Mudgee Roads to 1st January last, with such memoranda as to the mode of carrying out the works in detail, and the reasons for same, as seem called for, and as the pressing nature of my current duties will admit of.

My last general report was dated March, 1865. There were then in charge of the department 900 miles of main (including the Mudgee) road, 2,720 miles of minor road, 34 toll-bars, 9 punts, and 1 boat ferry. At present there are in the immediate charge of the department nearly 8,000 miles of road, as follows:—550 miles of main road beyond the railway termini, 310 miles of do. inside do. do., 180 miles of actual though not legal main road, 109 miles of first-class minor road, 2,659 miles of 2nd, 3rd, 4th, and 5th class minor roads, 30 toll-bars, and 30 punts or ferries; and since June last the distribution of the votes for roads under trustees (4,000 miles) has been placed in charge of the department, and it is intended that a certain guiding control and surveillance shall in future be exercised over the expenditure of trustees by the local officers.

The total expenditure of the department, exclusive of grants to trustees, in 1870 amounted to £157,813; the receipts of tolls to £18,000. The cost of superintendence, including all travelling expenses, and the salary of every one but the actual mechanics and labourers, and deducting the salaries of officers employed on other duties, as the Water and Hunter Flood Commissions, roads under trustees, and the percentage cost of collecting tolls (4 per cent.), amounting in all to £10,731, or 6½ per cent. on the expenditure.

The maximum number of officials of all grades in office and field, during the year 1870, was 25, exclusive of toll-collectors; the maximum number of men employed directly under the department being 2,000; the minimum number being 800. The system of appropriation of votes and of carrying out works, introduced by Capt. (now Lieut.-Colonel) Martindale, is still continued with few alterations.

The gravest and most general charge made against the department is that of putting down expensive metal on soft formation. This is wholly without adequate foundation. In the printed specifications, under the head "formation," is as follows:—"The formation is to be in the solid, or made up with approved hard material, as the nature of the ground may require, and be consolidated by the traffic before the metal is spread."

It has been frequently urged that the roads should be ballasted with inferior stone, or pitched, and that it is only wasting good metal to put it on earthen formation. In my report of 1865 I state that "there can be no question that pitching, properly done and well metalled, is the best possible road," but in all cases where it has been done here, with the exception of one, it has signally failed. The Telford pitching was composed of large stones laid on a bed of concrete with 12 inches of metal over. Such a road here would cost more than a railway, and, except in very few places, would be impossible on account of the difficulty of obtaining material. One good piece of pitching was done near the University, on the Western Road, and though the traffic, which is large, is by no means so heavy as on the other roads, the blue-metal is ground down very quickly. Pitching being out of the question, the only other alternative to the present system is ballasting with large or inferior stone. In either case it is almost impossible to get the substrata of ballast so consolidated that the dray wheels will not cut into it when first taking to the metal, when the large or inferior stone becomes mixed with the fine top metal, and the whole becomes only equal to a road made of the inferior material.

The system of the department is practically to ballast with a large quantity of the very best stone to be obtained, broken to a 3-inch gauge, and then to maintain same until consolidated with 2½-inch metal of the same material, by which the whole is made homogeneous, and will wear and be elastic to the last. It is difficult to make the traffic, on which we rely for consolidation, take to this road until the winter, when the wheels go into the substrata, softened by the rain percolating through the unconsolidated metal; and if maintenance metal is not provided at once to fill the ruts so made, traction becomes difficult. A general outcry is then raised that the metal has been wasted, and the roads are impassable, forgetting that this is absolutely part of the process of consolidation, rendered necessary by the small means at the command of the department, and that the road, after a very short time, will become consolidated, and remain so until worn out. In very few instances have the consolidated metal roads broken up, and then only from causes which I will describe, and under the most trying circumstances.

It has been suggested to put on much larger quantities of material in the first instance. This has not been adopted, as the seasons are so uncertain that in a wet year a large quantity of material *might* be successful and get consolidated, but in a reasonably dry series of years the draught would be so heavy that the traffic would never

take to it. The system is a tentative one, depending on the nature of the ground, the season, and the traffic, and the possibility of confining it; and therefore the quantity of metal likely to make a good road in a favourable season is contracted for in the first instance, and whatever additional material may be wanted from time to time is put on as maintenance metal, when the funds at the disposal of the department admit of its being provided in time.

Steam road-rollers and stone-crackers have also been suggested. The latter have been employed by contractors when a large quantity of metal was required in one place, as at Maitland, and when there was a railway to distribute it, as at Prospect, but with no very great success in either case, as the metal is not broken into cubes, but into laminae and long spiculae. To work a stone-breaking machine to advantage it should be set to a large gauge, and the metal be hand-broken afterwards. Though four large horse-rollers have been provided, except in very special cases it has not been found advantageous to work them. A steam road-roller is entirely out of the question with the funds at our disposal; on the rougher parts of the roads they would have to be hauled by bullocks; and there are many long lengths of road where, except in very wet weather, it would be impossible to provide water for the engine; water would also be required in the dry seasons to assist in consolidating the metal, so that it should be carted, or the roller worked in wet weather only. All these disadvantages, together with the difficulty and expense of making repairs to the machinery, have deterred me from recommending the use of the steam road-roller, which, under more favourable circumstances, could be used with great advantage.

Almost the only locality where the old consolidated metal broke up to any extent was on the Bathurst Road, between Rydal and Bathurst; this has been a fair metal road for some years, but was lately rather stunted in maintenance material, in anticipation of the proximate opening of railway to Bathurst. The opening of the rail to Rydal brought the traffic beyond the bad gradients and heavy roads of the Blue Mountains and Junction Hill; and the drays and waggons, as they invariably do, increased their loading proportionally—8 to 11 tons being no uncommon load on a waggon, reducing at the same time the tyres to semicircles of $2\frac{1}{2}$ inches diameter, which would cut into any road like knives, in fact, grinding the hardest blue-metal to powder. Combined with these causes, the want of maintenance material, owing to the Estimates not having been voted until May, when it was utterly impossible to cart it through the bush from the quarries to the road, made the destruction of the weaker parts of the road inevitable; and near the Rydal Station, at Redbank, and at Glanmire, the metalled road became very bad indeed in June, July, and August; but the partially dry weather in October permitted the contractors to draw the stone on to the road, which is now reported to me as generally in good order, especially from the Fryingpan to Rydal; the portion at Glanmire is an exception, as it lies very flat and low, and is remote from good material.

In the north great complaints were made of the metalled roads beyond the Willow-tree; this was also entirely owing to the want of a timely supply of maintenance material. Though the department exceeded its powers in calling for tenders for full supply of maintenance metal in January, tenders were not accepted until end of February, and the contractors for this supply, who ought to have been at work in January, could not commence until the beginning of March, after which time it was for six months almost impossible to cart material through the bush. The lengths referred to beyond the Willow-tree had been recently made and partially consolidated, and the natural roads through this boggy country having become impassable, the whole of the traffic which usually came by Breeza was concentrated with the ordinary traffic on this line, and cut up the newly made roads, which are now under the influence of a good supply of maintenance material fast consolidating. With those exceptions no serious injury has been done to any macadamized road. The complaints have been against the portions of road which have not yet been metalled, or were being metalled, and for which the department can hardly be held responsible; and however comparatively short these lengths, a few bad pieces serve to characterize the whole road. On the Mudgee Road, for instance, where there are $32\frac{1}{2}$ miles of good metalled road, done in every instance over the very worst places. I have seen it stated in print that the whole road was an impassable bog, though at the same time the local officer has reported that no portion of the metalled road forming more than a third of the whole length in question was allowed to get out of order. The longer time taken to pass over the bad portions deceives the traveller as to their length. The very general restriction of traffic to the defined width of road, by the extended fencing of runs and free selections, has caused a great deterioration of the roads, where formerly the teams could take their own tracks through the bush, to avoid the ruts made by their predecessors—ruts which would be filled up by the next rain; they are now confined to a chain or two in width, the surface of which becomes so cut up as to render metalling and culverts indispensable; at other places long lengths of naturally good road, which had been left untouched as not requiring metal, have become worn out and cut up so badly as to need metalling throughout. I would instance the length Bathurst to Evans' Plains Creek, so much complained of last season, but now nearly all metalled. It will therefore be seen that the injuries to the metalled road arise from causes beyond the control of the department,—causes which I pointed out in my previous report, in 1865, and then recommended that legislation be applied to their removal, as far as possible. Nothing having been done in reference to the prevention of excessive weights, the Government were absolutely compelled to avail themselves of the powers given by the 12th clause of the Main Roads Act, and to put cumulative tolls on weights carried, and to establish weighbridges on all the main roads. This will to some extent prevent the injury; but as the law only allows of those rates being charged on the three Main Roads, the measure is rendered to some extent inoperative by the carriers diverging from the roads to avoid the toll-bars, or taking a different route, as in the west they now use the Mudgee Road as much as possible. A draft Bill, suggested by me with a view to admit of the levying of equal tolls on all the roads, has been in print since 1866, but owing to pressure of other business has not been brought before Parliament. This Bill proposes to give the Governor and Executive Council power to bring any road under the operation of the Main Roads Act, so as to allow them to put clause 12 in force, and levy higher tolls than they otherwise could, on account of the Act altering Broad Gauge Act. A better and less expensive arrangement would be to prohibit, under severe penalties, the carrying of certain weights on certain widths of tyre, as in South Australia. The whole of the legislation relating to the making of roads and the collection of tolls is now obsolete and defective. The powers given to enter on lands and to take materials are almost inoperative, and very great trouble, delay, and expense has been incurred by the opposition of proprietors to our operations, though in many instances those gentlemen are the loudest in their complaints of the bad roads. Pending the introduction of a more comprehensive local Government Act, no steps have been taken to amend the Acts relating to road-making. The Bill now before the House chiefly relates to the operations of the Lands Department, and has no provision as to the levying of tolls or restricting weights. The provision for permitting the proclamation of roads by officers other than the Surveyor General will prove very useful, and save considerable delay in the adoption of such ameliorations of the direction of roads as may be necessary.

The other difficulty—the want of timely supply of metal—it is out of the power of the department in any way to obviate. When the Estimates are not voted before the commencement of the year, it has been usual to obtain a vote of one or two months' supply, which is almost useless—the money should be available in December. This year we have the same difficulty to contend with, with an additional one caused by the Audit Act. The money will probably not be available until late in the season; and, on the other hand, the Audit Act makes it imperative that it should be expended or written off before the following March, so that we are obliged to spend the money in the very worst time of the year for getting any value from it. I have had to submit a suggestion that the Road Estimates be dealt with before any others this year, as we are in the greatest want of supplies of metal. It may be asked why not reserve a supply of maintenance metal from one year to another. The utterly inadequate amount of the sums at the disposal of the department necessitates the immediate expenditure of every penny available, so that it is quite impossible to do this. The uncertainty of the supply of funds has prevented contracts for the maintenance of lengths of metalled road for a term of years being entered into, so that the supply of metal is contracted for, and the maintenance men—1 to 3 to 6 miles—are still continued.

There

There is another evil connected with the carrying of through traffic on common roads which should be obviated by legislation as soon as possible, and which has been the cause of diverting much of the traffic from the Colony, namely, want of control over the carriers. It has frequently been represented to me that, for instance, at Wagga Wagga, the merchants much preferred getting their goods from Melbourne, as they could depend so much on the speed and regularity of the Victorian carriers, who are all regularly licensed and under proper control. On the contrary, in New South Wales, after getting their loading at the railway, they often go home for a week or more to attend to other business, and when delivering the goods attribute the delay to the bad state of the roads.

Having dwelt at some length on the road construction, the bridges and culverts should now be referred to. It has been suggested that, in lieu of bridges and culverts, causeways should be constructed. Like many other panaceas, they are very well in suitable localities; but when the river is rapid and crosses an important road, or when it is narrow and deep, or the bottom very boggy, causeways are inapplicable; they have been used in many instances, and I would point out three on the Southern Road, two near Goulburn, and one near Gunning. The unprecedented floods of last year have done considerable damage to the bridges and culverts throughout the Colony. The most serious loss has been that of the iron lattice girders for the Yass Bridge, on which I made a separate report at the time. The flood of April 26th, above the bridge was $8\frac{1}{2}$ feet higher than any previous known flood, and much more rapid. The flood also carried away the bridge at Marsden's Crossing-place over the Wollondilly, having raised 4 feet on the girders. This bridge was built to replace a lower structure constructed below flood-level in 1857-8, with hand-rails arranged to let down. This precaution was neglected, and the bridge was injured and approaches swept away. It is right to state that, before anything was done towards the construction of this low-level bridge, I pointed out that it was a risk, and requested that I might not be held responsible for its success. For the success of the late high-level bridge I was responsible, but it is utterly impossible to anticipate such floods as then occurred. While on this subject, I would point out that at Gundagai the bridge and approaches were built to clear the highest level given of the flood of 1853—a foot higher than the disastrous flood of 1852,—and that the flood of April last was within 1 foot 6 inches of that height at Gundagai, though the Tumut River, which unwaters about one-fourth of the catchment above Gundagai, was not quite half-flood. Had the floods in both rivers come down together it is impossible to say what the result would have been. Great blame has been attached to the department for not taking care to ascertain the maximum flood-level, and when an accident occurred the flood-heights pointed out by the blacks are referred to. I can only state that if such vague information was acted on, the construction of bridges in the Colony would be at an end, as at Gundagai the blacks pointed out to me a flood-level 50 feet over that of 1853, which, if attained, would have submerged the whole of that portion of the Colony.

With reference to the other bridges in the vicinity of Goulburn, where the department has been particularly unfortunate, I would point out that the Baw Baw Bridge was designed and tenders invited during my absence from the department in 1862, and that the Bungonia Bridge was designed and built during my absence from the Colony in 1861,—that the bridge over the Mulwarree Ponds was designed and constructed before I even saw the locality, which I first visited when the bridge was completed, in 1857, so that I am only directly responsible for the failure of one of these structures—the high-level bridge at Marsden's Crossing, which was destroyed by the overwhelming and unprecedented flood of April 26th, which also carried away the scaffolding of the bridge being constructed at Reedy Creek. This flood was most violent in the vicinity of Goulburn, and in the rivers flowing to the west from the table-land Goulburn to Cooma, and was followed by others of more or less local violence; that of May which carried away the iron lattice foot-bridge at Bombala, and damaged the approaches to some of the bridges in the Albury district, succeeded at intervals up to last week by a succession of floods all over the Colony; the latest having been most violent in the north, that in December being fortunately in time to point out the necessity for raising the Nimboi Bridge 6 feet; the last, in addition to some damage to the road, removing the platform of a 40 ft. span bridge off the piers, and depositing it intact some chains down stream. Much of the damage done was caused by the accumulation of timber against the bridges; and in many instances when the destruction of a bridge was reported, the approaches only were injured so as to make the bridge inaccessible for a few days. Much of this partial damage was caused by the scouring out and widening of the river courses where the water-way was contracted, and the repairs, consisting of extensions, can hardly be classed as repairs, but as additions, which will provide ample water-way for the discharge of future floods without injury to the structures. At Murrurundi the foot-bridge was uninjured, but the river made a new channel, and the bridge is now on dry land, and its length will have to be duplicated, and the river bank protected, to prevent further scour and the washing away of the Telegraph Office. In many instances, when increased water-way was necessary, additional bays have been added to the bridges, and with the exception of the Jugiong Bridge—built under the Colonial Architect's Department before the establishment of the Roads Department—the Yass new iron girders, the Bombala and Murrurundi foot bridges, and the river bank at Murrurundi, most of the flood damages have been repaired from the ordinary funds at the disposal of the department, and without asking for any additional flood vote. Amid all this loss, this is a consolatory fact, as in Victoria, notwithstanding their wide-spread system of local government and smaller territory, the Parliament have voted £100,000 to supplement the outlay of the local bodies in repairing the flood damages of this season.

It is right to observe that much publicity is given to all complaints, with or without foundation, as to the state of the roads or injury to bridges, but very little is said or written where—as in the majority of cases—those works answer the purposes for which they were intended. Out of the (I may now say) hundreds of bridges built by the department, I would mention the iron bridges at Gundagai and Bathurst, the iron foot-bridges at Peel and Fish Rivers, the timber bridge at Cowra (the largest timber bridge in the Australian Colonies, of three spans of 130 ft.—the approach on the western side was damaged by the accumulation of drift timber, but has since been reconstructed in three spans of 70 ft. each),—the large timber bridges at Albury, Forbes, Dubbo, Narrabri, Bendemeer, Tamworth, Murrurundi, Blick's River, Waleha, O'Brien's, Nundle, Tenterfield, Saltwater River, Christmas Creek, Glenroy, Picton, Camden.

Since the date of my last report, independent of minor bridges and culverts, about 160 new bridges have been constructed. I will submit a full tabular statement to the Minister, of the works done by the Department, when time permits, and I regret the short time now at my disposal precludes any statement of this sort accompanying this paper.

Of the iron bridges constructed by the department, the three lattice foot-bridges were all manufactured in the Colony. The cylinder piers of the Gundagai Bridge were cast in the Colony, chiefly from Australian iron from the Fitzroy mines. The Bathurst Bridge of three spans of 110 ft. on iron cylinder piers, and the Yass Bridge, one span of 180 ft., were both made throughout in the Colony. The iron-work of the Nimboi Bridge, of three spans of 150 ft. wrought iron piers, is being proceeded with at Newcastle; and the Urara Bridge, of two spans of 125 ft. each, at the Waterview Dock Works. A large part of the castings and machinery for the Hay Bridge, of two swing spans of 59 ft. each and two side spans of 60 ft. each, all lattice girders, was made at Messrs. P. N. Russell & Co.'s; the iron for the remainder is being imported *via* Melbourne, and will be put together at Hay.

I may now be permitted to point out the reasons for my conviction that the present road system (under local administration) should be adhered to, when there are not funds to construct good permanent railways of the gauge already established.

In the first place, common roads must be provided and maintained for the local and general traffic, unless the proposed tram or rail way can be made at once to permeate the whole system of local conveyance from the field to the barn and thence to the market, and that all private conveyances are given up, and the whole system of the transport of the Colony falls into the hands of the Government or Government contractors. The common roads being therefore indispensable, is it not better at a moderate cost to make them serve for the general traffic until a railway is required, after which the road will be available for local wants and for a feeder to such railway, than to
make

make alongside, or on the road, a tramway, on which I very much question if the carriage can be done cheaper? This tramway would, when a better means of communication was required, be worn out and useless, and it is not improbable that the spirit of false economy would lead to its gradual replacement on the imperfect line of the present roads by heavy permanent way, so that the ultimate railway, instead of being on the line selected for that purpose at once, to be made use of when its time arrives, would be on the circuitous and in many instances badly selected route of the present roads.

Further: the proposed tramway would be useless on any part until the whole was completed, so that the £1,500 per mile should at once be expended. This would entail a permanent annual expense per mile for interest of 50 per cent. higher than the highest annual amount at present granted for construction and maintenance of roads. The maintenance, exclusive of replacement of depreciated rails and sleepers, would amount to the sum at present granted for making and constructing roads. The depreciation of such light rails would be very rapid; the sapling sleepers should be renewed every two or three years, and I doubt very much whether any contractors would be found to do the haulage and supply rolling-stock at a less rate than is now paid for the carriage of goods, say from Goulburn to Queanbeyan, 6d. to 7½d. per ton per mile—Bathurst to Orange 6d. to 7d. per ton per mile—Goulburn to Yass, 4½d. to 8d. per ton per mile; so that the State would lose the interest, and the cost of maintenance, and depreciation, without gaining any adequate advantage. Perhaps the greatest of all objections to the substitution of tramways for common roads is, that the whole haulage of the country would necessarily fall into the hands of the Government or of Government contractors, which is not at all to be desired; and I am of opinion that it would be found that tramways of any gauge would require as many officials as locomotive railways of the standard gauge, economically managed; so that any trifling saving in first cost, not being supplemented by a saving in working expenses, would be more than absorbed by the heavy additional maintenance inseparable from all lightly constructed works.

By the present system, the long lengths of naturally good road existing in the Colony are utilized in the bad seasons by the bridging (so to say) of the bad lengths; and in fine weather—which I think may be considered to last two-thirds of average seasons—the whole length of road is available, and I doubt very much if more would be attained by the proposed tramways, which would be just as liable to impediments from flood as the present roads, if not more so; and I am sure that unless the conveyance of freight on the ordinary roads was absolutely prohibited, that the present mode of carriage would compete successfully with the tramway both for goods and passengers during fine weather, so that the rates would have to be regulated to prevent this.

In addition: if an intermediate system of transport is introduced and constructed generally as proposed, long lengths of metalled road will be superseded as far as the through traffic is concerned, except when used to compete with the tramway.

I have shown in the return herewith the amount necessary to complete the metalling required between the proposed termini of the railways now being constructed, and Armidale, Mudgee, Wellington, and Tarcutta, amounting in all to £186,000. To connect the same points by the proposed tramway, it is *estimated* by the advocates of that scheme, would cost £675,000, and this for an avowedly temporary measure, and only an estimate, not based on surveys or data gained in the execution of similar works.

I am far from wishing it to be understood that the macadamized roads made by the department are perfect, but I do think they are as good as can be made for the money, and under the many adverse circumstances with which the department has to contend, and that it is the best application of the amount at the disposal of the department, and that with the restrictions proposed by me as to regulation of traffic, as to weight carried, width of tyre, and with timely supply of maintenance metal, they would carry the traffic until funds could be obtained for the construction of railways. Neither do I assert that Macadam roads can be made throughout the whole Colony; on the contrary, I point out in my report of 1865, that in the flat country in the interior a railway would be as cheap, on account of the absence of material for a Macadam road; and I have never failed to urge the paramount importance of the extension of the Southern Railway, in order that the required system of railways in the flat country should be connected with Sydney, and the traffic prevented going *via* Melbourne.

Five years ago, before the Deniliquin Railway Committee, I pointed out the great importance of the extension of the Southern Line; and I then, and have since stated, that a line at an average cost of £6,000 per mile would be the cheapest it would be desirable to make on that route. I think it will be found that the detailed estimates for by far the most expensive portion—Yass to Goulburn—taken with the cheaper and most easily estimated portion south of Yass, will not very much exceed that average. I then reported that in the north a metalled road could not be made towards the Namoi; I am still of that opinion, and think that it is worthy of consideration as to whether the first extension of the Northern Line from Murrurundi should not be in this direction, rather than to the range country where the works would be so expensive, and where a considerable length of Macadam road and facilities for its further extension exist. The extension towards the Namoi would intercept a large amount of traffic gravitating in wet seasons by the rivers to Melbourne and Adelaide, and in the dry to the Queensland Railways.

In conclusion, I feel it my duty again to repeat my recommendation of 1865,—that some local administration similar to the Irish Grand Jury system be at once adopted, with the modifications then recommended by me. Each day strengthens my conviction on this point, and I cannot too strongly urge its adoption, for every reason. The Census about to be taken might be made a means of partially introducing this system, by refusing to expend money on such works in any district when the population exceeded a certain number per square mile, unless through the medium of a municipality.

Pending the introduction of such system, it is absolutely necessary that the Act amending the Main Roads Act should be made law.

I have, &c.,

WILLIAM C. BENNETT.

APPROXIMATE Statement of Works on Main and Mudgee Roads, to 1st January, 1871.

8. Trustees to Under Secretary for Lands, in reply. 29 April, 1870	4

ROADS.

No. 1.

WM. CUMMINGS, Esq., M.L.A., to THE SECRETARY FOR LANDS.

Sydney, 4 October, 1869.

SIR,

When the late Government were in office Mr. Secretary Wilson did promise £300 for the repairs of that portion of the Tambaroora Road from Winburndale Creek to the crossing of Lower Turon; the papers in connection with application will fully explain the matter.

Trusting you will be good enough to expedite the issue of this money,

I have, &c.,

WM. CUMMINGS.

Surveyor General, B.C., 7 October, 1869.—M.F.

I recommended this in February, 1868, and have no reason to alter it.—P.F.A., 13 Oct.

The sum of £300 was promised by the late Secretary for Lands for this road on the report of the Surveyor General, and that item was noted for the Estimates. It was not however included in any Estimate; I cannot remember why.—15.

This matter should have been submitted in sufficient time for Estimates now before Parliament. As it now stands the item may be placed on next Estimates, whenever that may be; but I cannot recommend Estimates for this special purpose only.—W.F., 20 Oct., /69.

The money has now been voted on Supplementary Estimates.—H.F.

If there be funds available the sum may be advanced.—W.F., 27 October, 1869.

Mr. Cummings suggests the following parties as trustees:—

Thomas Ford,
J. S. Cummings,
James Howarth.

28th.

WM. CUMMINGS.

No. 2.

THE UNDER SECRETARY FOR LANDS to THE UNDER SECRETARY FOR FINANCE AND TRADE.

Department of Lands,

Sydney, 30 October, 1869.

SIR,

I am directed by the Secretary for Lands to request that you will be good enough to cause the sum of three hundred pounds to be placed to the credit of Messrs. Thomas Ford, J. S. Cummings, and James Howarth, in the Bank of New South Wales, for the repair of the road from Kelso to Tambaroora, *viâ* Kelloshiel and Lower Turon.

2. This expense will be charged against the vote for Main Roads not classified for 1869, to be afterwards provided on Estimates.

I have, &c.,

MICHL. FITZPATRICK.

No. 3.

THE UNDER SECRETARY FOR LANDS to WM. CUMMINGS, Esq., M.L.A.

Department of Lands,

Sydney, 30 October, 1869.

SIR,

I am directed to inform you that, in accordance with your recommendation of the 28th instant, the Secretary for Lands has approved of the appointment of the parties named in the margin as Trustees for the expenditure of the sum of three hundred pounds for the repair of the road from Kelso to Tambaroora, *viâ* Kelloshiel and Lower Turon, and that the Under Secretary for Finance and Trade has been requested to cause the money to be placed to the credit of those parties, in the Bank of New South Wales, accordingly.

Messrs. Thomas
Ford, J. S.
Cummings,
and James
Howarth.

I have, &c.,

MICHL. FITZPATRICK.

No. 4.

No. 4.

ORDER OF THE LEGISLATIVE ASSEMBLY.

ORDER made by the Legislative Assembly on 22nd March, 1870.

20. Road from Kelso to Tambaroora.—Mr. J. Suttor moved, pursuant to Notice No. 4, That there be laid upon the Table of this House,—

(1.) A detailed account of the expenditure of the special sum of £300 placed by the Government at the disposal of Messrs. Ford, Cummings, and Howarth, as Trustees for the repairing of the road from Kelso to Tambaroora.

(2.) Copies of any advertisements, notices, agreements, or contracts, published or made by said Trustees with any person in reference to the above road.

(3.) A statement of the balance remaining in hand of such sum of £300; of the Bank, if any, at which such money is deposited; and the names of the persons to whose credit it is placed.

Debate ensued.

Question put and passed.

Perhaps the Under Secretary for Finance and Trade will be able to furnish the required information?—B.C., 28th March, 1870.—A.O.M.

£300 advanced to Messrs. Ford, Cummings, and Howarth, on 4th November, 1869, for repair of road from Kelso to Tambaroora, *viz* Kelloshiel and Lower Turon. The six months which were allowed for the adjustment of this advance have not yet expired and the accounts have not been furnished; the information required by Mr. Suttor cannot therefore be supplied by this office. The Trustees might be requested to furnish without delay a detailed statement of the expenditure, and any advertisements, notices, and agreements, or contracts in reference to the road; they might also state the balance unexpended, or whether it is in their hands, or in what Bank.—T.K., 30/3/70.

Apply to the Trustees for the information required in accordance with the order of the Legislative Assembly.—S.S., 30/3/70.

The Under Secretary for Lands, B.C., 31/3/70.—H.L.

Trustees, 6 April, 1870.

No. 5.

THE UNDER SECRETARY FOR LANDS TO THE TRUSTEES.

Department of Lands,
Sydney, 6 April, 1870.

GENTLEMEN,

I am directed by the Secretary for Lands to transmit herewith, a copy of an order from the Legislative Assembly, and to request that you will answer the questions therein contained as far as it lays in your power, with as little delay as possible. Dated 22 March, 1870.

I have, &c.,
A. O. MORIARTY.

No. 6.

THE TRUSTEES TO THE SECRETARY FOR LANDS.

Kelso, 11 April, 1870.

SIR,

In accordance with a communication, dated 6 April, 1870, having reference to the road from Kelso to Tambaroora, we beg to state, in answer to the questions constituting an order of the Legislative Assembly:—

1st.—That we advertised for tenders for a portion of the repairs to be sent in by noon on Thursday, 27th January, 1870.

2nd.—That we received five tenders, which are hereto annexed in due time, and that we accepted the tender of Patrick Fogarty for the building of bridge, £75—forming, and draining, and clearing 1,000 yards of roadway on Box Ridge, at 2s. 6d. per yard. That up to the time specified for receiving tenders we received no tender lower than that of Patrick Fogarty. That two others were rejected in consequence of being presented after the tenders hereto annexed were opened, and the parties were informed that their tenders were too late.

3rd.—That the remaining portion of the repairs was let by private contract to George Seymour, *viz*, 800 yards, at 2s. 6d. per yard; that the copy of advertisement calling for tenders is hereto annexed; that we attach hereto also the original tenders accepted and agreements for the performance of the work, and beg to request that the same be returned to us. That we have advanced the two contractors, Fogarty and Seymour, on account of work done up to the present time, the sum of £111, leaving a balance now to the credit of the Trustees in the Bank of New South Wales, Sydney, of £189; the works are progressing favourably and to the satisfaction of the Trustees up to the present time, and we have no doubt the works will be completed within the specified time.

We have, &c.,
T. D. FORD,
J. S. CUMMINGS,
Trustees.

Advertisement

Advertisement calling for Tenders.

TENDERS will be received by the undersigned up to noon on Thursday next, for the following works on the Tambaroora Road, viz. :—

No. 1.—1,000 yards of forming (more or less) on the Bathurst side of the Box Ridge; the roadway to be formed 24 feet wide; water-tables to be 18 inches high in the centre; water-drains where required to be 18 inches deep, 18 inches wide at top, and 12 inches wide at bottom.

No. 2.—One bridge over creek between Dog Trap Hill and Millmurra, span about 40 feet, piles or uprights will be about 15 feet long; timber to be either box or red-gum.

The two separate tenders will be opened at the residence of the undersigned on the above day.

(For the Trustees),

T. D. FORD.

MEMORANDUM of agreement made this 5th day of February, A.D. 1870, between the Trustees of the Tambaroora Road of the one part and George Seymour of the other part. The said George Seymour agrees to form, clear, and drain about 800 yards of roadway on the Turon side of the Box Ridge, as marked out by the Trustees; and for such work being duly and faithfully performed, the said Trustees do hereby agree to pay him at the rate of 2s. 6d. per yard—the roadway to be 24 feet wide.

(For the Trustees),

T. D. FORD.

GEORGE SEYMOUR.

MEMORANDUM of agreement made and entered into this 27th day of January, A.D. 1870, between Patrick Fogarty and party of the one part, and the Trustees of the Tambaroora Road of the other part, viz. :— That the said Patrick Fogarty and party doth agree to build a bridge over Deep Creek, on the Tambaroora Road, viz. :—Span to be about 40 feet; timber to be of box or red-gum; foundation logs to be embedded on the rock; the logs to be all securely keyed into the height of 11 feet; flooring to be 6 inches thick, securely fastened;—and for such services being duly and faithfully performed the Trustees agree on their part to pay the said Patrick Fogarty and party the sum of £75 sterling.

(For the Trustees),

T. D. FORD.

PATRICK FOGARTY.

MEMORANDUM of agreement made and entered into this 29th day of January, A.D. 1870, between the Trustees of the Tambaroora Road of the one part and Patrick Fogarty and party of the other part, viz. :— That the said Patrick Fogarty and party doth agree to form, cut, and clear about 1,000 yards of roadway on the Box Ridge, the same to be 24 feet wide, water-tables and drains where required, the drains to be 18 inches wide on top, 18 inches deep, and 12 inches wide in the bottom, the whole to be done to the satisfaction of the Trustees;—and for such services being duly and faithfully performed the Trustees on their part agree to pay the said Patrick Fogarty and party at the rate of 2s. 6d. per yard; the work to be completed in three months from this date.

(For the Trustees),

T. D. FORD.

PATRICK FOGARTY.

No. 7.

THE UNDER SECRETARY FOR LANDS TO THE TRUSTEES.

Department of Lands,

Sydney, 26 April, 1870.

GENTLEMEN,

In acknowledging the receipt of your letter of the 11th instant, enclosing certain documents relating to your accounts for expenditure on the road from Kelso to Tambaroora, I am directed to point out to you that you have not fully complied with the requirements of the letter addressed to you from this office on the 6th instant, inasmuch as the detailed statement of your expenditure has not been supplied.

I have, &c.,

A. O. MORIARTY.

No. 8.

THE TRUSTEES TO THE SECRETARY FOR LANDS.

Kelso, 29 April, 1870.

SIR,

Referring to your communication of the 26th, we beg to say that we thought we had given all the information that could be necessary in our last.

We beg now to state that with regard to the *actual expenditure* out of the £300 placed to our credit, we have expended the sum of £151, of which £91 has been paid to Fogarty, one of the Contractors, and £60 to another (George Seymour); £40 of the latter sum has been paid since our last communication with you, which leaves a balance to the credit of the Trustees of £149 in the Bank of New South Wales.

One of the contracts is finished, the other not quite,—the inclemency of the weather being the cause of delay.

We really cannot understand the information sought, other than we have given.

We have, &c.,

JOHN CUMMINGS.

T. D. FORD.

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROADS.

(CORRESPONDENCE, &c., RELATIVE TO PROPOSED ROAD FROM OSBORNE'S LAND TO OLD SOUTH ROAD.)

ROADS.

No. 1.

GAZETTE NOTICE.

Department of Lands,
Sydney, 27 March, 1860.

ROAD.

HIS Excellency the Governor General, with the advice of the Executive Council, having deemed it expedient to open and make a parish road (to be maintained at the expense of the parishes through which it passes) from the eastern boundary of William M'Williams' (now Henry Badgery's) 640 acres at Sutton Forest to the Old Argyle Road $3\frac{1}{2}$ miles southerly of Sutton Forest, running through the lands granted to, or now occupied by, Messrs. Henry Badgery, William Johnson, John Adam Hirtel, and John Morrice: Notice is hereby given that, in conformity with the provisions of the Act of the Governor and Council 4 Wm. IV, No. 11, a plan and book of reference showing the intended line of the road above mentioned, are now deposited at the office of the Surveyor General in Sydney, and at the Police Office, Berrima; and all persons interested therein are requested to transmit, in writing, to the Clerk of the Executive Council, within one month from this date, any well-grounded objections which may exist to the formation of the road in question.

By His Excellency's Command,
JOHN ROBERTSON.

No. 2.

PETITION.

To the Surveyor General, Sydney.

S.G. 9980, 10 Sept., 1863.

SIR,

We, the undersigned, residents near the Barren Ground, having now no road to the township of Sutton Forest, nor to any road leading to Sutton Forest or elsewhere, humbly beg that you will cause a road to be opened for us, in as direct a line as possible, to the above township.

We beg to suggest—as Mr. R. J. Campbell has lately marked out a road leading from the north-east boundary-pin of Johnson's 805 acres at Reedy Creek to the Old South Road—that a road be carried across aforesaid Johnson's 805 acres, from the road leading past portion No. 1 (J. Lorterton's) to Johnson's north-east pin before mentioned. Awaiting your consideration, we beg to subscribe ourselves your humble servants,—

Edward Jennings.	James Jordan.
Stephen Butt.	Henry Butt.
Alfred Morley.	John Dimmock.
James Widgery.	Charles Butt.
Charles Jordon.	David Jeffery.
John Lorterton.	Charles Hammiste.
Fred. Jordon.	William Morley.
John Jordon.	Jessey Butt.
Charles Lorterton.	T. P. Dovey.
Joseph Banks.	Edward Staff.

MR. DISTRICT SURVEYOR TWYNAM may report on the necessity of this road. It appears that along the east boundary of Roberts' 805 acres a road may be necessary, but further than that it appears very doubtful. In cases of this kind it must be borne in mind that unless the roads are of an undoubted advantage to the general travelling public, they cannot be recommended to be formed at the public expense; and much unnecessary disappointment would often be spared if the surveyor explained the state of the practice of the department in such cases. A knowledge that the road could not be opened except at the expense of fencing by parties interested would often lead to an amicable arrangement of difficulties.—P.F.A., Sur. Genl., 5 Nov.

No. 3.

MR. DISTRICT SURVEYOR TWYNAM TO THE SURVEYOR GENERAL.

Goulburn, 15 March, 1864.

SIR,

In accordance with your instructions, B.C., No. 63-3,624, of November 5, accompanying a petition by inhabitants for a road from a locality known as the Barren Grounds, near Sutton Forest, in the county of Camden, I have fully inspected all the roads in the vicinity, and have seen many of the parties interested. See No. 2.
Papers herewith.

1. I have the honor to report to you that there are fifteen settlers located at the Barren Grounds, all residing on and improving their respective conditional purchases. Twelve of these settlers have families; and the extent of improvements, comprising substantial fencing, clearing, and dwellings, is a guarantee of the *bona fide* settlement of the land, and entitles their claim for a road to favourable consideration.

2. There is a line of road, recently surveyed by Mr. R. J. Campbell, licensed surveyor, as shown on the accompanying sketch* by a given line, passing through the property of Mr. Badgery for about 3 miles, to which that gentleman objects, on the grounds that the severance of his property is injurious; that no commensurate benefit will accrue to the public by the adoption of that particular line to compensate for that injury and the cost of fencing; and that there are other and equally practicable roads to be found, the adoption of either of which will divide the cost of fencing and loss of land amongst several individuals, instead of throwing the burden on one. * Appendix A.

3. I have inspected a road surveyed along the boundary between Badgery's 1,920 acres and Roberts' 805 acres; thence in a diagonal direction across Morrice's 226 acres to a reserved road leading into the Old Argyle Road. It is alleged by the petitioners that this road is impassable. I have to report that it is a practicable road, and can be rendered passable with a little labour, requiring only a culvert over Reedy Creek. From the south-east corner of Morrice's 226 acres, this road ascends a spur of firm strong soil, the gradient not being difficult; thence it follows nearly the direction of an old track along the top of the range to a reserved road leading into the Old Argyle Road, as shown on accompanying sketch by the red line. The road as reserved on the northern and eastern sides of Morrice's 226 acres is useless, being too steep for any draught traffic.

4. There is a track used at present by the residents at the Barren Grounds, which passes through the portion of 1,190 acres not sold, near Reedy Creek. It is in a very bad state for about a mile, being very boggy; thence to the Old Argyle Road it passes over firm sandy soil, and may be considered to be a good bush road. This track is rather circuitous for communication with Sutton Forest, but can be much shortened and improved.

5. There is no probability of a road to the Barren Grounds becoming a thoroughfare of importance; the road applied for is required only for the use of the settlers in that locality, and it is submitted that their claims would hardly warrant the adoption of the road surveyed by Mr. Campbell, involving the expenditure for fencing about 4 miles of road on both sides, through Mr. Badgery's enclosed lands.

6. I have the honor to recommend the survey and opening of a road to be fenced at the cost of the proprietors, from the south-east to the north-east corner of Roberts' 805 acres; thence through Morrice's 226 acres to the Old Argyle Road. The fencing on the north boundary of Roberts' 805 acres is in a very dilapidated state; along the eastern boundary it is very old, and of indifferent quality; around Morrice's 226 acres it is new and good, and I think that the cancellation of the old reserved road would compensate for the severance of the portion and the re-erection of fencing.

7. I have to suggest the advisability of the immediate withdrawal from sale of all measured lands on the road mentioned in paragraph 4 above, and the survey of the best line of road which can be found in that direction, approximately indicated by a yellow line on the tracing herewith transmitted.

I have, &c.,
EDWARD TWYNAM.

Mr. D. Surveyor Twynam may be instructed to cause the survey of the line recommended by him, and requested to show the position of the level crossing at the corner of Alston's 395 acres, and described as N.E., meaning probably N.W. The report is an able one, evincing great care and attention in the examination of the country, and as such should be acknowledged.

P.F.A., 14 June.

No. 4.

J. MORRICE, Esq., M.P., to THE SURVEYOR GENERAL.

Sydney, 24 March, 1864.

SIR,

I beg to have the honor to inform you that I object *in toto* to the report of Mr. Surveyor Twynam, to the road as recommended by him to be opened. As I had previously been informed by you that he was to give me notice before inspecting such roads, I consider that I have been very much ill-used in this matter. There can be no excuse for him not giving the notice to me. I was at my home, Sutton Forest, from the 5th to the 15th, from the 19th to the night of the 21st instant, and never got any information; besides, when I am not there, I am to be found at the Legislative Assembly. Mr. Osborne and I, with others, were the first applicants for a road out, since which a number of others have also applied for the same, and this road now recommended is entirely in opposition to the one we require, and in wet weather the greater portion is impassable and bad, is a roundaway route leading towards Goulburn instead of to the village of Sutton Forest, and the railway station about to be erected on the old line at Sutton Forest. The road now recommended is one having been objected to, and brought before the notice of the Executive Council, objections considered, and road disallowed. Mr. Surveyor Gordon was sent up by the Government, examined the different roads, and reported in favour of the one then applied for. A decision of the Minister for Lands, Mr. Robertson, was given that Mr. Surveyor Campbell was to get instruction to mark the road now applied for (which was done and marked), and if Mr. Badgery objected to the people travelling on such marked road, it was then to be proclaimed. This is a road that has been travelled on by the people for upwards of twenty years. This road now recommended is entirely useless to us, and will be of very great inconvenience to all concerned, and another will have to be applied for by us, and if not obtained, will have to be sought for in another quarter.

I have, &c.,
JOHN MORRICE.

Mr. Twynam is requested to report what steps he took to communicate with Mr. Morrice, he having been repeatedly urged to the necessity of seeing the owners of lands through which intended roads pass, and Mr. Morrice resided in the vicinity.

P.F.A., B.C., 31 March, 1864.

No. 5.

MR. DISTRICT SURVEYOR TWYNAM to THE SURVEYOR GENERAL.

Goulburn, 22 May, 1864.

SIR,

In accordance with your request I have again visited Sutton Forest, to determine on the road which it is expedient to open through the property of Mr. Henry Badgery.

Papers and plan
herewith.

On reference to my report, No. 64/119, the necessity is shown for a public road from the locality known as the Barren Grounds to a main thoroughfare leading towards Sutton Forest; and I do not see any reason to alter my opinion that the road surveyed by Licensed Surveyor Evans is the better road, taking all the circumstances of the case into consideration.

Accompanied by Mr. John Morrice, I re-examined the road existing and proposed about his 226 acres. This portion of land is fenced with a substantial fence, and the timber is all ringbarked. There is no doubt that the severance thereof will materially affect its value. On examination of the ground, I found that nearly as good a road is to be obtained as shown by the strong red line on accompanying sketch,* thus avoiding interference with that enclosure.

* Appendix B.

At the suggestion of Mr. Morrice, I inspected several other routes pointed out by him; and I have to report to you that a very good road can be obtained from the reserved road at the N.W. corner of J. Alston's (now Morrice's) 395 acres along the eastern side of the Southern Railway to about the middle of Badgery's 300 acres; and

and thence crossing the railway to the south-east corner of Joseph Underwood's (now Lord's) 500 acres; thence following the eastern boundary of that portion of land to the public road leading from Sutton Forest to Shoalhaven, as shown on the accompanying sketch by blue dotted line.

It will be observed that this road, which passes over sound ground with easy gradients, passes entirely through private property, and that about 1,400 rods of fencing will be required to prevent trespass, even after taking advantage of the railway fence and other existing fences; necessitating also a second crossing of the railway. As it is frequently proposed to take advantage of the railway fence for a road, it is not inopportune to remark here that it is questionable whether the saving thereby effected would justify the danger incurred to the public by frightened cattle in draught or otherwise.

Another line, to which there are no natural obstacles, but which involves the same amount of fencing, is from the n.w. corner of Wm. M'Williams' (now Badgery's) 640 acres to the s.e. corner of Gooding's (now Elsmore's) 60 acres; thence along the boundary between Elsmore and Badgery to the Old Argyle Road.

Under the existing law and practice of the department, I cannot advise the adoption of either of the last two described routes, nor the road surveyed by Mr. Campbell; but assuming that the applicants are entitled to the nearest access to a public road, I have to recommend the survey and opening of the road from the n.w. corner of John Alston's 395 acres along the northern boundary of M'Williams' 640 acres; and thence to the n.e. corner of Morrice's 226 acres, where such road would meet the reserved road leading into the Old Argyle Road. It appears to me that this route would meet the requirements of the applicants, and would divide the injury or loss (if any) amongst several proprietors, instead of throwing all the burden upon one. The amount of fencing required to prevent trespass for the opening of this road (making use of the existing fences) is about 520 rods. There must be a crossing of the railway to afford access to Alston's (now Morrice's) 395 acres, and there appears to be a suitable place for a level-crossing near the n.e. [*qy.* n.w.] corner of that land; but before any survey be carried out, it is advisable to ascertain the views and intentions of the Commissioner for Railways with regard to level-crossings or bridges in this locality.

It is urged by Mr. Morrice that the road which I recommend will be of little or no use to the parties interested, because the Old Argyle Road is in such a bad state of repair as to be nearly impassable during or after heavy rain; but being a public road, an important thoroughfare, and maintained by annual grant (see Schedule, Road No. 46), I submit that such objections cannot be allowed.

I have, &c.,

EDWARD TWYNAM,
District Surveyor.

No. 6.

THE SURVEYOR GENERAL TO DISTRICT SURVEYOR TWYNAM.

24 June, 1864.

SIR,

In reference to your letter of the 22nd ultimo, reporting further upon the road from the Barren Grounds to Sutton Forest, I have the honor to request that you will be good enough to direct the survey of the road which you therein recommend should be opened, and that you will show the position of the spot at which you think a level-crossing of the railway may be obtained. This you state may be probably had at the n.e. corner, intending doubtless the n.w. corner, of Alston's 395 acres.

2. I take this opportunity of expressing my satisfaction at the completeness of your report in this matter, from which it is apparent that considerable care and attention were bestowed in the examination of the country.

I have, &c.,

W. R. DAVIDSON,
Surveyor General.

No. 7.

JOHN MORRICE, Esq., to THE SURVEYOR GENERAL.

Browley, Berrima,
17 October, 1864.

SIR,

Application having been made, some months back, by a number of landed proprietors and others, to the District Surveyor, Mr. Twynam, for a road through Mr. Henry Badgery's property, to connect them with the main road leading to the proposed railway station at Sutton Forest,—in compliance with such application, I am given to understand, Mr. Twynam caused a survey to be made, and reported in favour of a road which will give little if any benefit to the parties applying, and, moreover, cause the greater portion of the inhabitants much loss and inconvenience, by having to make a circuit of nearly five miles over a road, one part of which in winter time is impassable, from the boggy nature of the country and an almost inaccessible hill on another portion, thereby preventing them from getting to any portion of the railway works now in progress. Having carefully examined the country, I find a much more direct and sound road can be made, by starting from a new marked road which intersects the railway line, by following such line for about one and a quarter mile, then bearing across Mr. Badgery's property for half a mile to the boundaries of J. Elsmore's and J. Badgery's land (who at present have no outlet), and by a straight line along the boundary of Underwood's grant to the Shoalhaven Road, within half a mile of the Sutton Forest Post-office, at the village. By referring to the map you will perceive that this proposal will not deprive Mr. Badgery of more land than the one proposed by Mr. Twynam. The parties chiefly interested have lately purchased and improved their property, varying in area from 40 to 200 acres, besides old proprietors (one holding a publican's license), who at present have to travel through Mr. Badgery's land on sufferance. I believe I can state, without fear of contradiction, that nearly the whole of the inhabitants of this portion of the district would advocate the line I suggest. I have therefore the honor to request that you will give this matter your early and favourable consideration. This line would meet the means of all parties interested.

I have, &c.,

JOHN MORRICE.

No. 8.

MR. LICENSED SURVEYOR HAUGHTON TO THE SURVEYOR GENERAL.

Sutton Forest,
27 October, 1864.

SIR,

* Appendix C.
Book of refer-
ence and plan
herewith.
Plan received,
15 Dec., '64.

I have the honor herewith to transmit a plan* and book of reference of a road commencing at a point on the western boundary of James Osborne's 640 acres, at the Barren Grounds, to the south-western corner of Henry Badgery's 404 acres 2 roods, surveyed in accordance with your letter of instructions, No. 64/1378, of the 24th June.

From a point on the western boundary of James Osborne's 640 acres to the boundary between James Osborne's and Alston's 395 acres, the road goes over level land, swampy in places, requiring drainage. Thence to the boundary between John Alston and Henry Badgery's 1,920 acres the road goes over gently undulating ground, offering no difficulty, except one swampy place requiring drainage. Thence to the boundary between William M'Williams' (now Henry Badgery's) 640 acres and John Morrice's 805 acres, the road goes over a suitable course, offering no difficulty; thence to Reedy Creek, the boundary between John Morrice and John Adam Hertel, the proposed course of the road is still level and dry. A bridge will be required over Reedy Creek, the width of which at this place is about 6 feet wide and 4 feet deep, with sound clay banks. Thence to the boundary between John Adam Hertel and James Nye's 60 acres the ground is slightly swampy in wet weather, and will require drainage in places. Thence to the boundary between James Nye and Henry Badgery's 1,920 acres the proposed road rises a long spur, with a uniform incline of about 1 in 20. Thence to the boundary between Henry Badgery's 1,920 acres and Henry Badgery's 404 acres 2 roods the road still rises the spur, with a gradient of about 1 in 25 to the bend in the road, from which the ground is quite level and firm. Thence to the south-west corner of Henry Badgery's 404 acres 2 roods, where it joins the Old Argyle Road at Jones' hut, the road follows a level and suitable course, crossing two slight swamps and one small creek, which will require a culvert.

I have, &c.,

J. B. HAUGHTON.

BOOK of Reference of Road from the south-east corner of Wm. M'Williams' (now Henry Badgery's) 640 acres, at the Barren Grounds, to the Old Argyle Road, $3\frac{1}{4}$ miles southerly from Sutton Forest, to be opened as a parish road, under the Act of Council 4 William IV, No. 11, in lieu of the road preliminarily notified in the *Government Gazette* of 27th March, 1860, folio 621.

J. B. HAUGHTON,
Licensed Surveyor.

MEMORANDUM

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of road from the western boundary of James Osborne's 640 acres, at the "Barren Grounds," to the south-west corner of Henry Badgery's 404 acres 2 roods, transmitted by Mr. Licensed Surveyor Haughton, in his letter No. 64/145, of the 27th October, 1864, and on which Mr. Haughton's report in explanation is requested.

Subject.

Report.

The bearing of line No. 3 by traverse table is stated as 198 degrees 42 minutes; Mr. Haughton has plotted it 202 degrees 10 minutes.—Which is correct?

The bearing as stated in traverse table, viz., 198 degrees 42 minutes, is correct.

J. B. HAUGHTON.

And to explain discrepancy existing with respect to length in rods of fencing required to enclose a portion of road running through James Nye's land, length 18 chains 38 links, equal to 147 rods of fencing, instead of 73 rods as stated by Mr. Haughton; also through H. Badgery's 38 chains 10 links, equal to nearly 305 rods of fencing, instead of 152 rods as stated by him; also to explain the reason why he has placed in his book of reference J. Osborne as occupier instead of J. Morrice as mentioned by Mr. District Surveyor Twynam; and J. Alston instead of John Morrice, owner.

The rods of fencing required through James Nye's land should be 147 instead of 73 rods as stated by me.

J. B. HAUGHTON.

The rods of fencing required through H. Badgery's land should be 305 instead of 152 rods as stated by me.

J. B. HAUGHTON.

J. Morrice is the nominal occupier of J. Osborne's 640 acres, although as far as I ascertain he pays no rent to J. Osborne, who is the owner.

J. B. HAUGHTON.

John Morrice is the owner and occupier of the 395 acres mentioned by me as belonging to John Alston.

J. B. HAUGHTON.

For the Surveyor General,

P. F. ADAMS.

To be returned.

There being an error in plot, is a new plan requisite?—E.T., 14/2/65.

MEMORANDUM of information as to enclosures, works required, &c., on the road from a point on the western boundary of James Osborne's 640 acres to the south-west corner of Henry Badgery's 404 acres 2 roods, the distance being 4 miles and 33.21 chains.

Owner or occupier.	Cultivated land.	Enclosed lands.		Description of existing fence.	Rods of fencing requiring to be erected, or removed to enclosed road.	Probable cost per rod of required fencing.	Cost of clearing line.	Amount of necessary expenditure.	Culverts or bridges.	Objections, apparent or specific.
		Cleared.	Un-cleared.							
Henry Badgery	Uncultivated..	Uncleared.....		Old 2-rail	315	4s.	£ 63 0 0

Total amount	£ 253	4	0

J. B. HAUGHTON, L.S.

No. 9.

MEMO. BY SURVEYOR GENERAL.

REFERRING to instructions given to Mr. District Surveyor Twynam, for the survey of a road from the Barren Ground to Sutton Forest, Mr. John Morrice has stated that he considers it would be a preferable course to delay the survey of the road in question until further legislation provides another means of opening roads than by fencing. It is doubtful if this is a road of sufficient importance to be fenced at the public cost, and there appears to be grounds for considering Mr. Morrice's recommendation that the road pointed out by him would, if opened, be the most useful line to the greater number of inhabitants, and supersede the line for which instructions have been issued. Should Mr. Twynam concur in this, he will stay further proceedings, and cause the survey of the line recommended by Mr. Morrice's, which has several undoubted advantages, and will avoid using the Old South Road, which is in a very bad state.—P.F.A., 4 November, 64-2369.

No. 10.

THE SURVEYOR GENERAL TO DISTRICT SURVEYOR TWYNAM.

12 November, 1864.

SIR,

Referring to the instructions issued to you on the 14th June last, No. 1,378, for the survey of a road from the Barren Ground to Sutton Forest, I have the honor to request that, as it is doubtful whether the road in question is of sufficient importance to warrant the fencing being erected at the public cost, and that as there appear to be grounds for considering that the line suggested by Mr. John Morrice would be the most useful to the greater number of the inhabitants, and otherwise supersede the line for the measurement of which instructions have been issued, you will, should you concur in the desirability of the substitution, stay further proceedings, and cause the line recommended by Mr. Morrice to be surveyed, which, among other advantages it possesses, will avoid the necessity of the Old South Road (which at present is in a very bad state) being used.

I have, &c.,
W. R. DAVIDSON.

No. 11.

MR. DISTRICT SURVEYOR TWYNAM TO THE SURVEYOR GENERAL.

Goulburn, 28 December, 1864.

SIR,

I have the honor to acknowledge the receipt of your letter, No. 64-2369, of the 12th November ultimo, requesting me to stay further proceedings in the survey of the road from a locality known as the Barren Grounds to the Old South Road, near Sutton Forest, in the county of Camden.

2. In reply, I have to inform you that the survey of this road was completed by Mr. Licensed Surveyor Haughton previous to the receipt of your letter, and that the plan was transmitted to your office on the 10th instant.

3. With regard to the argument advanced for the adoption of another road, on the grounds that such alteration will avoid the necessity of using the Old South Road, I would beg to draw your attention to the fact that the Old South Road must be maintained; that it affords access to much alienated land; that it is a main line of communication, being common to the several branch roads; that there is much traffic upon it, particularly the carriage of railway plant; and that this traffic will certainly not decrease for two or three years; that the course of this road is generally good, with easy gradients over firm soil, but that for want of more surface drainage in places and ordinary repairs it becomes nearly impassable during the winter season; therefore, as it appears that it would be necessary to expend a sum of public money in the opening of the more direct road sought to be obtained by petitioners and Mr. John Morrice, it is worthy of consideration whether it would not be more advisable to supplement the present route to the Old South Road, and thus secure one good road, instead of two roads in their natural state, and impassable in the winter season.

Requesting the favour of a written communication from you before proceeding with the survey of the road proposed by Mr. Morrice,—

I have, &c.,
EDWARD TWYNAM.

The plan is catalogued, so a tracing is forwarded, which Mr. Twynam will be good enough to return with the papers.—P. F. ADAMS, B.C., 20 March, 1865.

No. 12.

MEMO. FOR DEPUTY SURVEYOR GENERAL.

THE road herein referred to, viz., from the south-east corner of William M'Williams' (now Henry Badgery's) 640 acres, at the Barren Grounds, to the Old Argyle Road, $3\frac{1}{2}$ miles southerly from Sutton Forest, requires consideration before recommending it to be opened as a parish road, preliminarily notified in the *Gazette* of 27th March, 1860, fol. 621.

The road previously notified was not confirmed, in consequence of the objections raised by ———; and the Executive Council, on the ———, considered it inexpedient at present to open the road. Similar objections will probably be raised to this. See Mr. Morrice's letter, No. 64-12430, recommending another line.

* 62-6707 Survey
No.
62-2347 Lands
No.

As the papers* are missing in connection with the above-mentioned notified road and its continuation, a plan of that continuation was approved of by the Executive Council, but not gazetted. Action may therefore be taken, I presume, upon the present road without them, as a road in the neighbourhood of the Barren Ground is urgently required.

The amount of cost of fencing the portion of road which passes through the enclosed lands will amount, according to my estimate, to £182 8s. Mr. Haughton has only allowed for a single line passing through James Nye's land and Badgery's 1,920 acres. It should be a double line. A printed memo. is herewith to be forwarded to him, to learn the reason why he allowed only for a single instead of a double line.—T.H.L., 18/1/65.

Send the memo. to Mr. Haughton, and return papers.—P.F.A., 20th.
Forwarded to Mr. Haughton. 21st Jany., 1865.

No. 13.

MR. DISTRICT SURVEYOR TWYNAM TO THE SURVEYOR GENERAL.

Sutton Forest, 8 March, 1865.

SIR,

With reference to a proposed road from the Barren Grounds to the Old Southern Road, near Sutton Forest, in the county of Camden, lately surveyed by Mr. Licensed Surveyor Haughton,—I have now the honor to state that, in consequence of the formation of the railway, certain alterations in said road appear to be desirable; and I would beg to suggest that further proceedings in the opening of the same be stayed until I can communicate with you again on the subject. Should it not be inconvenient, the plan and book of reference might be returned to me for amendment.

I have, &c.,
EDWARD TWYNAM.

No. 14.

MR. DISTRICT SURVEYOR TWYNAM TO THE SURVEYOR GENERAL.

Goulburn, 26 April, 1865.

SIR,

With reference to your letter of the 12th November (No. 64/2369), returning to me for further consideration and report the papers connected with a road applied for to be opened from the Barren Grounds to Sutton Forest, in the county of Camden,—I have the honor to inform you that I have surveyed the line of road which you indicated as being most adapted to meet the requirements of the inhabitants; and I transmit herewith a *plan of the same, together with a book of reference, showing also on the plan, for the more convenient consideration of the question, the other roads which have been surveyed at different times with the same object in view.

* Appendix D.

A road from the Barren Grounds to Sutton Forest is applied for by the proprietors of land in the former locality, comprising six freeholders (two non-resident), who have no immediate access to Sutton Forest, which is the nearest post office, village, and railway station, except on sufferance by passing through alienated and enclosed lands.

Of

Of the three roads shown on plan,—the road now surveyed is coloured red, is the more direct, and in its natural state presents least difficulties to communication. The road shown by black dotted line, proclaimed in 1860, but not confirmed, is the nearest practicable access for inhabitants to a main road; the road shown by red dotted line, as an alternative line to the last-mentioned road, avoiding the severance of John Morrice's 226 acres, but involving the ascent of a rather steep range.

It has hitherto been the practice of the Government to fence roads passing through enclosed alienated lands. The cost of fencing required for the three roads above mentioned would be respectively,—by the road through Morrice's 226 acres, £204; by the road from Jas. Osborne's 640 acres, along the northern boundary of Wm. M'Williams' 640 acres, and along the northern boundary of John Morrice's 226 acres, £156: by the road now surveyed, through W. Roberts' 805 acres, Badgery's 1,920 acres, and Underwood's 500 acres, £343.

It would appear desirable to adopt the road now surveyed, being the more direct and the better road under all conditions; but the cost for fencing is £187 more than by the other road (red dotted line).

As this road cannot be considered as a thoroughfare of public importance, but is merely required to afford communication between the above-mentioned inhabitants and Sutton Forest, I cannot recommend it to be opened as a parish road under the Act now in force, which would involve the expenditure of at least £156 for fencing to prevent trespass, and a further sum for clearing away timber, say about £20.

I have to draw your attention to the fact that the enclosures intersected are not under cultivation, but are with one exception bush paddocks used for pasture; therefore it would appear that this is a road to which the contemplated alteration in the law relating to roads is peculiarly adapted.

I have, &c.,
EDWARD TWYNAM.

Under existing legislation it is impossible to recommend the opening of the road. From the surveyor's report it is evidently one of those cases for which special legislation is contemplated; it is therefore recommended that the case should stand over for the present.

Under Secretary for Lands.

For the Surveyor General,
P. F. ADAMS,
13 November.

BOOK of Reference of part of the Road from the Barren Grounds to Sutton Forest, viz.:—from the south-west corner of William M'Williams' (now Henry Badgery's) 640 acres, to the road from Sutton Forest to Shoalhaven, at a point within Mary Larkin's 100 acres (now Henry Badgery's), to be opened as a Parish Road, under the Act of Council 4 William IV, No. 11, in lieu of the road preliminarily notified in the Government Gazette of the 27th March, 1860, folio 621.

No. 15A.

H. BADGERY, Esq., to THE MINISTER FOR LANDS.

Vine Lodge, Berrima,
12 September, 1865.

SIR,

Having been given to understand that it is desirable to alter the road from the free selectors, south of my property, to Sutton Forest, I beg to state that I shall offer no objection to the last line marked by Mr. Twynam through my property, provided that it is fenced off without delay, or that I am allowed a sum equivalent to the expense of fencing; notwithstanding I have upwards of three miles of road through my land without any compensation, besides the railway running across it.

I have, &c.,

HENRY BADGERY.

Surveyor General.—B.C., 13 September, 1865, M.F.

See No. 14.

See my report on 65-6435. That paper was accidentally put away, awaiting the Road Bill then before Parliament.—P.F.A., 13 Novr., 1865.

No. 15B.

MR. DISTRICT ENGINEER MACKENZIE to MR. DISTRICT SURVEYOR TWYNAM.

Great Southern Railway,
Engineer's Department,
Sutton Forest, 27 October, 1865.

MEMO. to E. Twynam, Esq., District Surveyor.

I have the honor to apply to you for information respecting a road which our plan shows as crossing the railway, by an over-bridge at about two miles south of Mr. Badgery's. Mr. Badgery informs me that the road is required for an outlet from Messrs. Morrice and Osborne's property, but that the one as mentioned above has been superseded. Will you be kind enough to inform me if such is the case, as I am delaying the construction of the bridge until I know whether it is required.

I have, &c.,

KENNETH MACKENZIE,
District Engineer.

MEMO.—It is presumed that the road referred to herein is a parish road, lately proposed to be opened from the N.W. corner of Alston's (now Morrice's) 395 acres. Proceedings for the opening of this road have been stopped, and I believe that another road will be adopted in lieu thereof. Communication across the railway, at the point indicated, is not necessary, as access may be obtained to Osborne's 640 acres, and Alston's 395 acres, by the bridge under the railway, erected near the south-eastern corner of the last-named grant.—E. TWYNAM, District Surveyor. Qucanbeyan, 28 Oct., 1865.

No. 16.

THE UNDER SECRETARY FOR LANDS to H. BADGERY, Esq.

Department of Lands,
Sydney, 22 November, 1865.

SIR,

Referring to your letter of the 12th September last, on the subject of the opening of a line of road from Barren Ground to Sutton Forest through your lands, I am directed to state, for your information, that in the present state of the law on the subject of roads of this character, it is not the intention of the Government to take steps for the opening of the line in question.

I have, &c.,

M. FITZPATRICK.

No. 17A.

J. MORRICE, Esq., to THE MINISTER FOR LANDS.

Beverley, 4 May, 1866,
Sutton Forest.

SIR,

I have the honor to forward you herewith a petition from a number of landholders, free selectors, and residents of the Barren Ground, Berrima District, hoping that you will give the matter your earliest consideration, that the bridge over the railway cutting at Beverley Park (now Mr. H. Badgery's estate), a proclaimed road, may be erected without delay.

I have, &c.,

JOHN MORRICE.

[Enclosure.]

Barren Grounds,
County of Camden, 27 April, 1866.

To the Honorable the Minister for Lands.

Sir,

We, the undersigned occupiers of freehold and other lands, at Barren Grounds, near Sutton Forest, county of Camden, having no road out, humbly petition that the following be proclaimed and opened, as being the best route both to Sutton Forest and Station, which is to be at Moss Vale, viz.:—From the free selectors, adjoining the railway at Barren Grounds, by the western boundary of Lorterton's 83 acres; thence along the northern boundary of Lorterton's 83 acres, S. Butt's 249 acres, and Freeman's 83 acres 3 perches, along the railway line to a bridge under the railway line, to the continuation of

11

of a Government marked road, along Alston's western boundary 394 acres, now John Morrice's; thence by the northern boundary line of MacWilliams' grant, now H. Badgery's, and named Beverley Park, across the railway line, where a bridge is to be erected; then by the railway line to near Mr. Hy. Badgery's house; thence by a line to the south-west corner pin of John Elsmore's land with John Badgery's south-east corner pin; thence by Elsmore's southern boundary to Underwood's land; then by the south boundary of Underwood's farm to the Shoalhaven Road, on to the village of Sutton Forest.

And your petitioners will ever pray, &c.

George W. Osborne.

No. 17B.

J. MORRICE, ESQ., to THE COMMISSIONER FOR RAILWAYS.

Sutton Forest, 12 March, 1866.

SIR,

The road leading from the north-east corner of John Alston's 395 acres (now J. Morrice), running along the north boundary of M'Williams' 640 acres (now H. Badgery's) having been destroyed by the railway works (Robert and Forster's contract), I beg to request that you will be good enough to cause a bridge to be erected over the line, in order to restore the road to as good a condition as it was at the time when the same was first interfered with by the Commissioner for Railways, according to section 91, 22 Vict., No. 19.

I have, &c.,
JOHN MORRICE.

This matter is with the Lands Department, and nothing can be done until the road is finally decided upon by that department.—J.W., 14/3/67.

No. 17c.

J. MORRICE, ESQ., to THE SECRETARY FOR PUBLIC WORKS.

Browley, 22 June, 1866.

SIR,

I have the honor to say that you will have the goodness to inform me what has been done in regard to the erection of a bridge over the crossing of the railway line by a proclaimed road which you inspected on Mr. H. Badgery's land leading from my land at No. 6 contract. As this is the only road I have of getting out, and also a road in which the public are very much concerned, I am anxious that the bridge is attended to.

I have, &c.,
JOHN MORRICE.

Mr. Whitton, for report.—B.C., 27/6/66.

I have seen the Deputy Surveyor General on this matter, but he is not in a position to give a final reply at present. He will, however, make inquiry into the matter and let me know.—J.W., 11/7/66.

Resubmit when reply received.—J.R., 18/7/66.

Mr. Whitton.—B.C., 18/7/66.

No reply received.—J.W., 9/10/66.

Submitted, 9/10/66.—J.R.

Inform Mr. Morrice how the delay has arisen in replying to his letter.—J.R.

Wrote, 15/10/66.

Can the Under Secretary for Lands cause the matter to be expedited?—B.C., 15/10/66.—J.R.

Surveyor General.—17 Oct., M.F.

No. 18.

MEMO. OF SURVEYOR GENERAL.

REFERENCE has been made from the Department of Public Works as to the necessity of a second bridge over the railway at the n.w. corner of Alston's 395 acres; and in order to save some fencing and make the road more convenient to certain parties, it has been represented that a line of road, in lieu of that passing through Wm. Roberts' 800 acres could be got from the existing bridge, by following the railway a short distance and then going in a north-westerly direction to the line last surveyed.

On this subject Mr. D. S. Twynam's report is desired, as well as the necessity of the proposed bridge.

P. F. ADAMS.

P. F. ADAMS.

No. 20.

REPORT OF MR. DISTRICT SURVEYOR TWYNAM.

Sutton Forest,
30 September, 1866.

SIR,

I have the honor to acknowledge the receipt of a petition by John Morrice and others for a certain road therein described from the Barren Grounds towards Sutton Forest, forwarded for my investigation under cover of your B.C. memorandum dated the 20th July; and having again inspected the locality and the various roads proposed, I have now the honor to report.

See large tracing
at the end.
* Appendix E.

2. With regard to the road applied for in the petition, shown on the accompanying plan* by the green colour, such road would involve the erection of another bridge over the railway (costing not less than £300 or £350), would sever Mr. Badgery's estate by a line in front of his homestead and dwelling-house, and for about $1\frac{1}{2}$ mile along and near railway passes over ground most unsuitable to resist traffic, and which, when enclosed by fences, would soon be rendered impassable by traffic, and to be maintained as a practicable roadway would require constant care and expenditure. To the majority of the inhabitants interested this road presents no special advantage, whilst to the largest landed proprietor it is most objectionable, and inflicts very considerable injury on his estate. I have no hesitation in stating that to Mr. John Morrice only, who is the owner of Alston's 395 acres, does this road offer peculiar convenience; to the other petitioners there is a more direct and a far better road to be obtained through William Roberts' 805 acres.

3. It is frequently represented to the Surveyor General that a roadway might be opened along the railway line from the Barren Grounds to the Shoalhaven Road. Such a road would be very circuitous, would involve a large expenditure for fences, and would pass over ground which would very soon become impassable by the traffic, besides requiring a further outlay for the removal of large fallen timber with which such line is very much encumbered, and for the erection of culverts and corduroy road, without which works the road would be impracticable.

4. With regard to Mr. John Morrice's claim for a road or for another bridge, I would point out that access is provided to his 395 acres, to James Osborne's 640 acres (occupied by John Morrice), and to the severed portion of W. M. Williams' 640 acres, by the bridge under the railway, and further access to James Osborne's 640 acres by the bridge over the railway; also that Alston's and Osborne's grants are not occupied by resident tenants, or improved in such a manner as to warrant any claim for direct or more convenient access. The land in question comprises dense forest with undergrowth, is enclosed, and much of the timber killed, and is used occasionally for stock. Further, as it appears to be impossible to meet Mr. John Morrice's views, except by large expenditure and the sacrifice of his neighbours' land and interests, I would submit that his claim for a road may be fully decided by an appeal to Quarter Sessions. Lest it should be supposed that the other petitioners earnestly desire to secure this road, I would remark that owing to their being debarred from all convenient access to their lands their signatures are to be obtained to any application for a road, and will be found subscribed to previous petitions for widely different roads in this same locality.

5. Further consideration and investigation convince me that the road last surveyed (coloured red on plan) is the road best adapted to meet the requirements of the case. It affords access to all inhabitants interested,—passes over ground best suited to resist the action of traffic,—would be the cheapest road to maintain in repair,—requires but comparatively insignificant expenditure for immediate use,—inflicts the least injury on private estate,—and will cost the least sum to open in respect of fencing and necessary works; and therefore I submit that proceedings for the opening of the same under the Act of Council should be continued.

I would here draw attention to the fact that this road affords access to Elsmore's lands and Wm. Roberts' 805 acres, which are partly improved and under cultivation, occupied by several families, and to which at present there is no road; and it must be admitted that the occupants of these lands have an equal claim for consideration with Mr. John Morrice.

6. With reference to the road indicated in your memorandum, I have to inform you that I have examined the ground, and find that a road is certainly possible; but the natural difficulties are of considerable magnitude, and would render the formation of the road costly and its regular maintenance absolutely necessary; and it would not afford such complete and convenient access as the road recommended in the preceding paragraph.

See large tracing
at the end.

I have prepared a plan of the locality, which is herewith transmitted, showing thereon all the roads which have been surveyed and proposed, and which I think will fully illustrate all the requirements and conditions of the case.

I have, &c.,

EDWARD TWYNAM.

No. 21.

THE SURVEYOR GENERAL TO THE UNDER SECRETARY FOR LANDS.

FROM the report of Mr. District Surveyor Twynam it appears that the road petitioned for is objectionable, as also the one proposed by myself, and that the road proposed by him is sufficient for the requirements of the neighbourhood, and will save the erection of the second bridge. I am therefore inclined to recommend its adoption in preference to any other.

The opening of this road would have taken place ere this, had it not been for the cost of fencing it through enclosed lands. If the Road Bill, now in course of submission to Parliament, passes into law, the opening of the road may be carried out at once; and if not, I should be inclined to recommend the expenditure of £300 (or thereabouts) in fencing it through enclosures; the full amount having been saved to the Government in the non-erection of the bridge.

Approved.—J.B.W., 22 Oct.

For the Surveyor General,

P. F. ADAMS,

22 October, 1866.

THE UNDER SECRETARY FOR LANDS TO J. MORRICE, Esq., M.L.A.

Department of Lands,
Sydney, 7 November, 1866.

SIR,

Referring to the petition forwarded by you from certain occupiers of land at the Barren Grounds, praying for a road to be opened from the Barren Grounds to Sutton Forest village,—I am directed by the Secretary for Lands to inform you that it is considered advisable to defer the opening of a road in the locality in question pending further legislation with regard to roads; but should the Bill now in course of preparation not pass into law, steps will be taken for the opening of the line of road coloured red on the enclosed sketch, which appears, after mature consideration, to be most desirable.

Large sketch.
No tracing or sketch.

I have, &c.,
M. FITZPATRICK.

No. 23.

THE SURVEYOR GENERAL TO THE UNDER SECRETARY FOR LANDS.

The accompanying plan and book of reference of part of the road from the Barren Grounds to Sutton Forest, viz., from the south-west corner of William M'Williams' (now H. Badgery's) 640 acres, to the road from Sutton Forest to Shoalhaven, at a point situated within Mary Larkin's (now Henry Badgery's) 100 acres, are forwarded with the view to the opening of the line as a parish road, under the Act of Council 4 William IV, No. 11, in lieu of the road preliminarily notified in the Government Gazette of the 27th March, 1860, folio 621. See enclosures to No. 14.

For the Surveyor General,
P. F. ADAMS.

B.C., 5 June, 1867.

By minute 67-25, confirmed 20th June, 1867, the Executive Council has authorized the proclamation of this line of road. (See Roads, 67-1216.)

Copy of plan, &c., sent to Bench of Magistrates, Berrima, on 9th July, 1867.

No. 24.

Department of Lands,
Sydney, 12 July, 1867.

ROAD NOTICE.

His Excellency the Governor, with the advice of the Executive Council, having deemed it expedient to open and make a parish road (to be maintained at the expense of the parishes through which it passes), being part of the road from the Barren Grounds to Sutton Forest, namely, from the south-west corner of William M'Williams' (now Henry Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point within Mary Larkin's 100 acres (now Henry Badgery's), in lieu of the road preliminarily notified in Government Gazette of 27th March, 1860, running through the lands supposed to be the property of the representatives of James Johnson, deceased, Henry Badgery, and Joseph Underwood: Notice is hereby given, that in conformity with the provisions of the Act of the Governor and Council, 4th William IV, No. 11, a plan and book of reference, showing the intended line of the road above named, are now deposited at the office of the Surveyor General, in Sydney, and at the Police Office, Berrima; and all persons interested therein are requested to transmit, in writing, to the Clerk of the Executive Council, within one month from this date, any well-grounded objections which may exist to the formation of the road in question.

By His Excellency's Command,
J. BOWIE WILSON.

No. 25A.

THE UNDER SECRETARY FOR LANDS TO THE CLERK OF THE EXECUTIVE COUNCIL.

Department of Lands,
Sydney, 16 July, 1867.

SIR,

In drawing your attention to the notice in the Government Gazette of the 12th July, respecting the intended formation of a parish road, being part of the road from the Barren Grounds to Sutton Forest from the south-west corner of Wm. M'Williams (now Hy. Badgery's) 640 acres, to the road from Sutton Forest to Shoalhaven, at a point within Mary Larkin's 100 acres, I am directed to request that you will have the goodness, at the end of one month from the date thereof, to inform me whether any objections have been received by you in respect of the said road, in pursuance of the notice alluded to.

I have, &c.,
M. FITZPATRICK.

No. 25B.

THE UNDER SECRETARY FOR LANDS TO THE BENCH OF MAGISTRATES, BERRIMA.

Department of Lands,
Sydney, 19 July, 1867.

GENTLEMEN,

I have the honor to forward, for deposit in the Police Office, Berrima, for public inspection and information, copies of a plan and book of reference of a road which is about to be opened as a parish road under the Act of Council 4th William IV, No. 11, from the Barren Grounds to Sutton Forest, viz., from the s.w. corner of W. M'Williams' (now H. Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point situated within Mary Larkin's (now H. Badgery's) 100 acres, in lieu of the road preliminarily notified in the Government Gazette of 27th March, 1860, the receipt of which documents you will be good enough to acknowledge. No. 26.

H. BADGERY, Esq., to THE CLERK OF THE EXECUTIVE COUNCIL.

Vine Lodge, Sutton Forest,
2 August, 1867.

SIR,
With reference to a road through my property, gazetted 12th July, from the south-west corner of W. M'Williams' (now my) 640 acres to the Shoalhaven Road, at a point within Mary Larkin's (now my) land, I have the honor to state that I have no objection to the road being proclaimed, provided that it is fenced off forthwith.

I have, &c.,
HENRY BADGERY.

Forwarded to the Honorable the Secretary for Lands, with reference to my letter of this date, forwarding objection to road.—A. C. BUDGE, Clerk of the Council, B.C., 13 August, 1867.

No. 27.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Sutton Forest,
5 August, 1867.

SIR,
With reference to the proposed parish road, as notified in the Government Gazette of 12th July, 1867, being part of the road from the Barren Grounds to Sutton Forest, in lieu of the road preliminarily notified in Government Gazette of 27th March, 1860, I beg leave to urge the following well-grounded objections:—

1st. If the proposed road is confirmed, in lieu of that portion running along M'Williams' northern boundary, now in existence, I shall be compelled to travel $2\frac{1}{2}$ miles extra to reach Sutton Forest, and that too over ground which, in the winter season and wet weather, is absolutely impassable.

2nd. In the above notification no proclaimed outlet is allowed me in lieu of the one I have been in the habit of using for many years, which was proclaimed when the land was unfenced, and never objected to by any person.

I would respectfully suggest that a road which would suit both myself and all interested parties could be made, commencing at a bridge already erected over the railway, near s.w. corner of James Osborne's 640 acres, along the east side of the railway, to a Government road between Alston's (now J. Morrice's) 394 acres, and M'Williams' 640 acres to M'Williams' n.e. corner-pin and Alston's (now J. Morrice's) n.w. corner-pin, thence along the railway to where a bridge is to be erected by the Government for the accommodation of Mr. H. Badgery, thence across the bridge and Badgery's land into the proposed road.

Or, an equally convenient road could be made running parallel with the railway the whole distance to the Shoalhaven Road. A great saving of expense would accrue from the railway fencing forming half the necessary fencing. Moreover, the route would be shorter than the one proposed, the land firmer, and therefore better for road-making, far more level, and altogether offering fewer obstacles than the proposed route.

In either case I have mentioned, no railway bridge would be necessary for my accommodation.

I have, &c.,
JOHN MORRICE.

The report of District Surveyor Twynam of 30 September last, 66/18104, deals fully with this case; and upon it, it was decided not to open the road advocated by Mr. Morrice, which would be very injurious to private property. The property referred to by Mr. Morrice is a bush paddock only; and as he leases the adjoining land (Osborne's 640 acres) he is not without access to a road, and should he desire a road through that land the same might be proclaimed and objections heard.

(For the Surveyor General),
P. F. ADAMS.

Approved.—J.B.W., 17 Augt.

No. 28.

J. MORRIS, Esq., to THE CLERK OF THE EXECUTIVE COUNCIL.

Sutton Forest,
8 August, 1867.

SIR,
As one of the representatives of the late James Johnstone, I have the honor to state that I have no objection to the line of road from the south-west corner of W. M'Williams' 640 acres to the Shoalhaven Road, provided the said road be fenced off, or I am allowed an equivalent for the same.

I have, &c.,
JOHN MORRIS.

Forwarded to the Honorable the Secretary for Lands, with reference to my letter of this date, forwarding objections.—A. C. BUDGE, Clerk of the Council, B.C., 13 Augt., 1867.

No. 29.

15

No. 29.

THE CLERK OF THE EXECUTIVE COUNCIL TO THE SECRETARY FOR LANDS,

Executive Council Office,
13 August, 1867.

SIR,

From the south-west corner of M'Williams' (now Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point within Mary Larkin's 100 acres.

In compliance with the request contained in Mr. Under Secretary Fitzpatrick's letter of the 16th ultimo, No. 72, I do myself the honor to forward to you the objection lodged with me to the formation of the proposed parish road noted in the margin.

A. C. BUDGE,
Clerk of the Council.

No. 30.

THE UNDER SECRETARY FOR LANDS TO J. MORRICE, ESQ., M.L.A.

Department of Lands,
Sydney, 4 September, 1867.

SIR,

Referring to your letter of the 5th ultimo, objecting to the opening of the proposed road from the south-west corner of M'Williams' (now Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, on the ground that you will have to travel a longer distance to reach Sutton Forest, and also that no outlet from your land is afforded you,—I am directed by the Secretary for Lands to inform you that it is considered that the property owned by you is not injuriously affected by this line, being merely a bush paddock; and as the adjoining property is also in your occupation, the want of means of access complained of by you will not be experienced as you anticipate.

2. I am to add, however, that should you desire a road through the latter property, steps might be taken for the proclamation of such a line, subject of course to reasonable objections that might be lodged.

I have, &c.,
M. FITZPATRICK.

No. 31A.

J. MORRICE, ESQ., TO THE UNDER SECRETARY FOR LANDS.

Sutton Forest,
10 September, 1869.

SIR,

With reference to your letter of the 4th instant, in which you state that the Secretary for Lands considers that my property being merely a bush paddock is not injuriously affected by my having to travel a longer distance to reach Sutton Forest, and that as the adjoining property "is in my occupation," the want of means of access complained of by me will not be experienced,—I beg to state, in reply, that the whole of my land is fenced and improved for grazing purposes, and is equal in value to any and superior to most of the land through which the proposed road is to pass; and that the adjoining land mentioned, being the property of Mr. James Osborne, may be let to another tenant at any time. If a road was proclaimed through Mr. Osborne's property, I should still be put in a position in which in justice I ought not to be placed, by my being compelled to travel in a s.w. direction, instead of n.e., in order to reach the road to Sutton Forest.

I have no objection to the proposed road being proclaimed, but I do protest against it being proclaimed in lieu of the one previously proclaimed along M'Williams' boundary into the proposed road, affording me a convenient access to my land, and used by me for many years, unless I am allowed as convenient an access.

The objection raised by the Secretary for Lands is owing to the expense of erecting a bridge over the line. This course may be obviated by carrying the road across a level crossing which may be made about 100 yards to the south, and then into the old road; or I am willing to take a road along the east side of the line to a bridge to be allowed. H. Badgery to pass into the proposed road.

If neither of these propositions meet the views of the Secretary for Lands, then I beg leave most respectfully to request that the Surveyor General may be instructed to inspect the various routes and report on the matter.

I have, &c.,
JOHN MORRICE.

Surveyor General, 13 Sept.—M.F.

16 September, 1867.

This is a case of required access from lands lying more remote through lands lying adjacent to the high road. It is clear that an injury must be done to some one; and after due consideration, it appears that the claim lies between causing inconvenience to the party seeking the road, or inflicting a positive injury on the party owning the land through which the road would pass. I have recommended the former.—For the Surveyor General,—P. F. ADAMS, 16 Sept., 1867.

B.C., 20 September, 1867.

I understand from Mr. Morrice that the Acting Engineer-in-Chief for Railways desires to see this letter, as bearing on the action being taken in that department.—M.F., B.C., 20 Sept., 1867.

Under Secretary for Works.

No. 31B.

MR. W. MASON TO MR. W. MACKENZIE.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 7 October, 1867.

MEMO. to Mr. Mackenzie.

Please inform me, as early as convenient, whether an over-bridge has been built at 80 miles 32 chains, and one at 79 miles 22 chains, and whether there is good and easy access to Mr. Morrice's land from the road passing under the railway at 79 miles 73 chains; also mark on the enclosed tracing the public road now used by Mr. Morrice to and from his property.

Return.

WILLIAM MASON.

Au

An over-bridge has been built at 80 miles 32 chains. No bridge has been built at 79 miles 22 chains, in consequence of Mr. Twynam reporting that the road was superseded; the timber for it is on the ground, and has been paid for by the Commissioner for Railways. In wet weather the crossing under-bridge at 79 miles 73 chains is very bad, and would have to be metalled to make a passable road to Mr. Morrice's land.

Mr. Morrice has not, as far as I can learn, any access to his land by a public road. Upon a previous occasion the Engineer-in-Chief sent me to the Lands Office to make inquiries about these roads, but I could not obtain any information on the subject. To enable me to answer your questions, I have endeavoured to gain local information in reference thereto, and have therefore seen Messrs. Morrice and Badgery respecting it. Mr. Badgery says,—he “does not believe that Mr. Morrice has any access to his 395 acres, except upon sufferance.”

Mr. Morrice says he “has no access to his lands except by trespassing, in consequence of railway at 79 miles 22 chains crossing the road he was accustomed to use for some years.” (According to Mr. Twynam's report this road is superseded.) Mr. Morrice further says he claims use of this road as far as Reedy Creek, because no objection was entered against that portion of it after proclamation of road some time during years from 1859 to 1861.—K.M., 10/10/67.

* Appendix F.

A bridge being built over the railway at 80 miles 32 chains, and another under the railway at 79 miles 73 chains for public roads. On referring to the accompanying plan* it will be seen that access to Mr. Morrice's property is amply provided for, and I cannot therefore recommend a level crossing be given to Mr. Morrice as applied for between the points A and C. The repairs to the public road outside the railway fences do not belong to this department.—W.M., 23/10/67.

Under Secretary for Lands.—B.C., 26/10/67., J.R.

No. 32.

H. BADGERY, Esq., to THE SECRETARY FOR LANDS.

Vine Lodge, Sutton Forest,
16 October, 1867.

SIR,

Having been given to understand that the Government contemplate the erection of a bridge across the railway line 79-22, near M'Williams' (now my) 640 acres, and to mark a mile of road through that grant for the accommodation of one individual,—I have the honor, with very great respect, to submit that 30 chains of road from the south-west corner of J. Morrice's 395 acres (where there is an under-bridge) be proclaimed, if not already done, to give Mr. Morrice a right of way to a proclaimed road, rather than put the country to a great expense and do me a great injustice. The Government have already taken 250 chains of road through my property without giving any equivalent by fencing or otherwise. Diagram enclosed.

I have, &c.,
HENRY BADGERY.

No. 33.

H. BADGERY, Esq., to THE SECRETARY FOR LANDS.

Vine Lodge, Sutton Forest,
19 October, 1867.

SIR,

Having been given to understand that the Government contemplate the erection of a bridge across the railway line at 79-22, on M'Williams' (now my) 640 acres, and to mark a line of road through that grant for the accommodation of one individual,—I have the honor, with very great respect, to submit that 30 chains of road from the south-west corner of Morrice's 395 acres (where there is an under-bridge) be proclaimed, if not already done, to afford Mr. Morrice a right of way to a proclaimed road, rather than put the country to a great expense and do me a great injustice. The Government have already taken 250 chains of road through my property without any equivalent by fencing or otherwise. Diagram† enclosed.

I have, &c.,
HENRY BADGERY.

† Appendix G.

The papers 64/4841, Cat. R. 458/1603, are not necessary at present, as the application will have to be referred to Mr. Twynam, D.S.—T. H. LEWIS, 21 October, 1867.

19 October, 1867.

I am not aware of any intention of the Government to erect an under-bridge at the point mentioned; access has been provided by the underway bridge nearer to Sydney, and the road from it recommended to be fenced at the public cost. An argument used in the recommendation was that the opening of the road as proposed would save the erection of a second bridge. Perhaps the Commissioner for Railways might be asked if any intention exists of erecting the second bridge, which would also involve a second road through Mr. Badgery's land.—For the Surveyor General, P. F. ADAMS, 28 Oct.

Under Secretary for Works.—B.C., 29 Oct., M.F.

Since the above I have observed the memos. on 67/1853, and, in addition, have only to observe that Mr. Morrice can pass to and from the points A and B without trespass, the land being leased by himself, and a road has been offered him and will be proclaimed. The important point for the consideration of the Honorable the Minister for Lands appears to me to be in the fact of the second bridge, requiring the proclamation of a second road before it can be of use to Mr. Morrice.—For the Surveyor General, P. F. ADAMS, 31 Oct.

No. 34.

PETITION.

Red Hill, Barren Ground,
14 April, 1868.

SIR,

We, the undersigned free selectors, landholders, and inhabitants of Red Hill, Barren Ground, and its vicinity, having no right of way to Sutton Forest or Berrima, humbly pray that you will cause a road to be marked and proclaimed.

The line pointed out by Mr. Surveyor Twynam from the s.w. corner of M'Williams' (now Badgery's) 640 acres, to the Shoalhaven Road, at a point on Mary Larkin's grant, is at once the most direct road as well as the most desirable for all parties, with a trifling deviation, as shown by the accompanying diagram,‡ which will cause a saving in the expense of fencing,

‡ Appendix H.

Having

Having neither egress nor ingress, we most respectfully press the urgency of our need on your early attention. And your Petitioners, as in duty bound, will ever pray, and

Have the honor, &c.,
MICHL. O'KEEFFE.
JOHN SEWELL.
And twenty-four others.

Surveyor General, for report.—B.C., 1 May, '68.—J.B.W.

In this case, before further action can be taken, it is necessary that it should be ascertained from the Works Department whether it is intended to erect a bridge at points marked on the sketch.—R. D. FITZGERALD, for Surveyor General, 22 May, /68.

Under Secretary for Works.—B.C., 23 May, /68, M.F.

Commissioner for Roads.—B.C., 27/5/68, J.R.

This is a matter to be dealt with by the Railway Department.—Under Secretary. B.C., W. C. BENNETT, 28/5/68.

Forward to Railways.—B.C., 29/5/68, J.R. Engineer-in-Chief.—30/5/68.

The enclosed sketch gives me no information as to *where* the bridge is required. If a proper plan be sent to me, or the mileage along the line given, I will attend to the matter at once.—J. WHITTON, 2/6/68.

No. 35A.

G. W. OSBORNE, Esq., to THE SECRETARY FOR LANDS.

Barren Ground, Sutton Forest,
18 July, 1868.

SIR,

On behalf of the settlers of Barren Ground and its vicinity, I beg to call your attention to our very urgent necessity for a road to be opened to the Sutton Forest Township, as soon as possible. We have sent in two petitions, the last of which is most convenient and also the most practicable, and was surveyed by Mr. Surveyor Twynam. At present we have no means of getting out without trespassing on private property, which causes much annoyance to all parties, and notices have been posted closing those roads from public thoroughfare, thereby completely shutting us in. Most of the settlers have been living here from five to six years, and we have seen several roads opened to places of not nearly so long standing; therefore we humbly beg that you will cause a road to be opened with as little delay as possible; and your Petitioners, as in duty bound, will ever pray, &c., &c.

I am, &c.,

G. W. OSBORNE,
On behalf of the Settlers at the Barren Ground.

Surveyor General.—B.C., 20 July, 1868.—J.G.A., for Un. Sec.

It is recommended that the road (as by preliminary Notice of 12th July, 1867) be confirmed.—R. D. FITZGERALD, for S. G., 31 July, /68.

The Executive Council has authorized the confirmation of this road.—Minute 68/35. Confirmed, 24/8/68.—See Roads, No. 68/1918.

The papers are now returned for the information of the Surveyor General.—M.F., B.C., 14 Sept., 1868.

No. 35B.

W. GRICE, Esq., to THE SURVEYOR GENERAL.

Barren Ground,
6 August, 1868.

SIR,

I am requested by the inhabitants of this locality to make an earnest appeal to you on their behalf, as well as my own, to have the road surveyed from this to Sutton Forest, or on to the road that leads from Sutton Forest to Shoalhaven. Two or three months ago a Petition was sent from this earnestly requesting that the road might without delay be surveyed. The desired object has not yet been attended to, and as the matter now stands we are liable any day to be completely blocked in by Mr. Keefe, Mr. John Morris (not the Member of Parliament), and also by Mr. Badgery. These have all been very forbearing, but they have told me their patience is almost exhausted, as they suffer great annoyance day and night, especially as they are often awoken out of their sleep by the dogs. You will please to understand that the private road passes through their yards, close to their houses. You will readily perceive, such being the case, it is a great annoyance, and I hope you will agree with me that the sooner it is removed the better. I know for a certainty that Mr. Badgery and Mr. Morris are very anxious that the road should be surveyed at once, although the road is desired to pass through their land, also through Mrs. Gough's. I am not aware that this lady makes any objection, so you will see that every difficulty is removed out of the way, and what we want is the road surveyed at once. I can say with confidence that people here are in earnest in the matter, as it is a work of great necessity. Mr. Morris has already had notices stuck up, forbidding people to go through his property; and I myself had to go, in a very supplicatory manner, to him, to get the favour to go through his property—he has the power any day to stop me. I have tried to lay before you plain facts. I hope I may venture to say Mr. Badgery would kindly give any information that might be required to the surveyor, as to where we wanted the road to go.

I have, &c.,

WALTER GRICE.

No. 36.

GAZETTE NOTICE.

Department of Lands,
Sydney, 8 September, 1868.

WITH reference to the notice in the Government Gazette of the 12th July, 1867, relative to the opening and making of a parish road, being part of the road from the Barren Grounds to Sutton Forest, namely, from the south-west corner of William M'Williams (now H. Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point

point situated within Mary Larkin's (now Henry Badgery's) 100 acres,—Notice is hereby given, in accordance with the Act of Council 4th William IV, No. 11, that notwithstanding the objections which have been made to the proposed road, in conformity with the said Act, His Excellency the Governor, with the advice of the Executive Council, has been pleased to confirm the said road; and it is therefore hereby declared expedient to open and make the road referred to, according to the Plan and Book of Reference, to be seen at the Office of the Surveyor General, at Sydney, and at the Police Office, Berrima; and all persons intending to claim compensation in respect of the said line are hereby reminded that notice must be served upon the Colonial Secretary within forty days from the date hereof, in such manner and form as are provided by the sixth section of the Act above referred to, or they will be for ever foreclosed from such claim.

By His Excellency's Command,
J. BOWIE WILSON.

No. 37.

THE UNDER SECRETARY FOR LANDS TO UNDER COLONIAL SECRETARY.

Department of Lands,
Sydney, 10 September, 1868.

SIR,

In drawing your attention to the Notice in the Government Gazette of the 8th September, respecting the confirmation of the line of road, being part of the road from the Barren Grounds to Sutton Forest, viz., from the s.w. corner of W. M'Williams' (now H. Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point situated within Mary Larkin's (now Hy. Badgery's) 100 acres,—I am directed to request that you will have the goodness, at the end of forty days from the date thereof, to state whether any claims to compensation have been made in respect of the said road, in pursuance of the notice referred to.

I have, &c.,
M. FITZPATRICK.

No. 38.

H. BADGERY, Esq., to THE CLERK OF THE EXECUTIVE COUNCIL.

Vine Lodge, Sutton Forest,
2 October, 1868.

SIR,

With regard to a road through my property from the south-west corner of William M'Williams' (now my) 640 acres to the Shoalhaven Road, at a point on Mary Larkin's (now my) land,—I have the honor to renew my statement of the 2nd of August, 1867, that I have no objection to the said road being proclaimed, provided it is fenced off forthwith.

I have, &c.,
HENRY BADGERY.

Forwarded to the Honorable the Secretary for Lands.—ALEX. C. BUDGE, Clerk of the Council, B.C., 20/10/68.

No. 39.

THE UNDER COLONIAL SECRETARY TO THE UNDER SECRETARY FOR LANDS.

Colonial Secretary's Office,
Sydney, 22 October, 1868.

SIR,

In reply to your letter of the 10th ultimo, No. — I am directed to state, for the information of the Secretary for Lands, that no applications have been received in this office for compensation in respect of the line of road, being part of the road from Barren Grounds to Sutton Forest, namely, from the south-west corner of William M'Williams' (now H. Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point situated within Mary Larkin's (now Henry Badgery's) 100 acres.

I have, &c.,
HENRY HALLORAN.

It is recommended that cost of fencing be paid.—R. D. FITZGERALD, for Surveyor General, 4 December, 1868.

Approved., W.F., 31 Dec., /68.

Surveyor General, for opening.—B.C., 7 January, 1869.—M.F.

Mr. District Surveyor Twynam to formally open the road.

19

No. 40.

CATHERINE GOUGH to THE SECRETARY FOR LANDS.

Sutton Forest,
21 January, 1869.

SIR,

I beg most respectfully to address you on the subject of a public road being granted by the Government which goes through my cultivated land, situated at Willow Grove, near Sutton Forest. I was not even aware the road had been applied for, until to my great surprise I was told that I was required to fence in portion of the same road at my own expense, and on my own property, for the public benefit.

As a matter of justice I cannot think under the circumstances the Government would for a moment scruple to compensate me for the outlay I am unnecessarily put to, by fencing the said road, independently to my disadvantage of having the property divided into two portions.

Trusting you will do me the favour of giving me an early reply to the above,—

I have, &c.,

CATHERINE GOUGH.

Surveyor General.—B.C., 23 Jany.—M.F.

Mr. District Surveyor Twynam to report. (The road cannot be identified in the office.) P. F. ADAMS,
8 Feb., /69.

No. 41.

J. MORRIS, Esq., to THE SECRETARY FOR LANDS.

Willow Grove, Sutton Forest,
30 January, 1869.

SIR,

I understand that a road marked through the property of the late James Johnstone (now belonging to me) is to be opened at once. Now I beg most respectfully to state that I have not received any compensation in the shape of fencing. When the road was advertised I did not object, providing that a slight deviation was allowed, as shown in a plan left in the Survey Office some ten months ago. I asked for the line to be fenced. Would you please give this matter your early attention.

I have, &c.,

JOHN MORRIS.

P.S.—The road runs through the properties of Messrs. Badgery and Lord.—J.M.

Surveyor General.—B.C., 1 February, /69.—M.F.

The sum of £118 has been recommended to be paid to the representatives of the late James Johnston, but whether Mr. J. Morris is entitled to any portion of the money, either as one of such representatives or as purchaser of any part of the land, there is no information in this office to show. R. D. FITZGERALD, for the Surveyor General. 3 Feb., 1869.

M.F.

The writer may be asked for proof of his ownership in the land—inconsequent title—to receive the allowance for fencing.—16th. Yes.—19th.

No. 42.

THE SURVEYOR GENERAL to MR. DISTRICT SURVEYOR TWYNAM.

Surveyor General's Office,
Sydney, 11 February, 1869.

SIR,

The road from the south-west corner of William M'Williams' (now H. Badgery's) 640 acres to the road from Sutton Forest to Shoalhaven, at a point within Mary Larkin's (now H. Badgery's) 100 acres, being part of the road from Barren Grounds to Sutton Forest, having been confirmed as a parish road, by a notice dated ——— in the Government Gazette of ———, I have to request that you will, as early as may be convenient, proceed to formally open the road.

In carrying out this instruction, you will give notice, either verbally or in writing, to the proprietors of any enclosed lands through which the road passes, and suggest to them the desirability of their removing any fences or other obstructions which may exist; and you will then proceed along the road for the purpose of remarking it in those places where the previous marking may have become obliterated.

Should the parties to whom you may give notice not remove the fences or other obstructions, you will summarily remove them, and in doing so you will be guaranteed from loss by action by the Government.

You will be good enough to report the fulfilment of this instruction.

I have, &c.,

P. F. ADAMS,
Surveyor General.

No. 43.

No. 43.

MR. DISTRICT SURVEYOR TWYNAM TO THE SURVEYOR GENERAL.

Goulburn, 20 February, 1869.

SIR,

1st,—With reference to an application by Catherine Gough for compensation in respect to fencing a road, forwarded to me for consideration by your B.C. memo., No. 69/16, dated 8th February inst., I have now the honor to report.

2nd,—I am informed that the applicant, as one of the representatives of William Roberts, deceased, claims compensation in respect of the opening of the road from the s.w. corner of W. M'Williams' 640 acres to the road from Sutton Forest to Shoalhaven, within Mary Larkin's (now Henry Badgery's) 100 acres, being the road from the Barren Grounds to Sutton Forest, which severs Wm. Roberts' 805 acres in the parish of Sutton Forest, in the county of Camden.

3rd,—The land referred to was enclosed at the time of survey of the road, but since that time part of the fencing on the south boundary has been destroyed; nevertheless, I think that compensation, in respect of fencing all that part of the road through the land in question, should be paid to the proprietors.

4th,—Before paying any sum for the above-mentioned purpose, it would be advisable to have satisfactory evidence of the validity of applicant's claim, and also to ascertain whether there are any others who should participate in any compensation to be paid.

I have, &c.,

EDWARD TWYNAM.

The sum of £118 has been recommended to be paid to the representatives of the late James Johnson; but proof should, I think, be given that Catherine Gough is entitled to claim as one of them, and to what amount.—R. D. FITZGERALD, for Sur. Genl., 3 March, 1869.

I am given to understand by Mr. Morrice that the road he wishes opened is considered desirable, or is not objected to by the Railway authorities, and, that in anticipation of a bridge being built over the cutting, preparations have been made, and timber cut. I shall be glad, therefore, if a report can be obtained on the matter from the Works Department.—W.F., 3 June, 1869.

Under Secretary for Works. B.C., 3 June, 1869, M.F.

Railways, for report. B.C., 5/6/69, J.R.

Mr. Badgery strongly objects both to the building of the bridge and opening the road. If, however, the Survey Department consider the bridge requisite for the accommodation of the public, this department will not object to build it.—J.W., 17/6/69.

No. 44.

THE UNDER SECRETARY FOR LANDS TO J. MORRIS, ESQ.

Department of Lands,
Sydney, 27 February, 1869.

SIR,

In answer to your letter of the 30th ultimo, in which you ask for payment to you of an allowance for fencing road through your land (formerly the property of James Johnstone), I am directed by the Secretary for Lands to explain to you that the sum of £118 has already been authorized for payment to the representatives of the late James Johnstone; and I am to state that the allowance that may be due to you, either as one of such representatives or as a purchaser from Johnstone, will be made available to you on your giving proof of your ownership in the land.

I have, &c.,

M. FITZPATRICK.

No. 45.

MEMORANDUM OF SECRETARY FOR LANDS.

ROAD described by Mr. John Morrice, M.P., as a road between reserved road at the n.e. corner of John Alston's (now John Morrice's) 395 acres, near Southern Railway, along n. boundary of M'Williams' 640 acres (now Henry Badgery's) and road between Barren Ground and Shoalhaven Road at Sutton Forest. Mr. John Morrice, M.P., applies to have this road opened, alleging that it has been twice proclaimed, Mr. Badgery then not objecting, and the land being at the time unenclosed. As a bridge or viaduct over the railway would be required, in the event of the road being quite straight, Mr. Morrice would not object to a southerly deviation through his land so as to avoid the cutting. Mr. Morrice further alleges that this proposed road would render unnecessary a road lately opened or proclaimed through Mr. Osborne's land, along which a new bridge has been or is intended to be built. Papers for me, and whatever report may be necessary.—W.F., 11 March, /69.

For report of the Surveyor General.—B.C., 22 March, 1869, M.F.

All necessary access is, in my opinion, afforded by the road now confirmed, and it is the shortest to Sutton Forest. A large sum of money has been expended upon it in fencing, and a further sum of about £200 would be required before the road applied for by Mr. Morrice (which is almost identical with that reported on by Mr. Twynam, 6435/65, and, on that report, not adopted. I cannot recommend the reopening of this case.—R. D. FITZGERALD, for Sur. Genl., 13 April, 1869.

No. 46.

THE UNDER SECRETARY FOR LANDS TO MRS. C. GOUGH.

Department of Lands,
Sydney, 13 March, 1869.

MADAM,

In answer to your application of the 21st January last for an allowance by way of compensation for the opening through your land of the proposed road from M'Williams' 640 acres to the Sutton Forest and Shoalhaven Road, I am directed by the Secretary for Lands to inform you that a sum of £118 has been authorized for payment to the representatives of the late James Johnson, by way of an allowance for fencing purposes, where the road intersects the land vested in them.

2. As it is understood that you claim as a purchaser under those representatives, it will be necessary to prove your title and the extent of your holding.

I have, &c.,

M. FITZPATRICK.

21

No. 47.

J. MORRICE, ESQ., TO THE SECRETARY FOR WORKS.

Browley, Moss Vale,
2 April, 1868?9.

SIR,

I beg respectfully to call your attention to a proclamation dated 27th March, 1860, in the Government Gazette of 30th March, 1860, referring to the opening of a parish road leading from Wm. M'Williams' (now Henry Badgery's) 640 acres at Sutton Forest, and also to more recent proclamations in other Gazettes referring to the same matter, and to say, that this said road, by which access is obtained from John Alston's (now John Morrice's) 394 acres to a Government Road proclaimed and opened from the Barren Ground to the Shoalhaven Road, is *destroyed* in consequence of the railway crossing it, and no bridge having been built.

This road has been constantly used by myself and others, and I trust that you will be pleased to take steps in order to remedy the inconvenience resulting from the road being practically closed.

I may mention that a contract was taken by Foster and Roberts, railway contractors, to build a bridge, and materials were provided for the purpose, but the original intention was never carried out.

I have, &c.,
JOHN MORRICE.

The previous papers on this subject were forwarded to Lands on the 3rd inst.—5/4/69, J.R.

Under Secretary for Lands, for previous papers. B.C.

Surveyor General.—B.C., 6 April, M.F.

The papers are now with the Minister for Lands, and were reported on by me a short time since.—R. D. FITZGERALD, for Sur. Genl., 15 April, /69.

No. 48.

H. BADGERY, ESQ., TO THE SURVEYOR GENERAL.

Vine Lodge, Sutton Forest,
21 April, 1869.

SIR,

Having been given to understand that the Government Inspector has been sent to inspect timber for the erection of a bridge across the railway line, near Mr. Morrice's 395 acres, I take the opportunity most respectfully to state that no such bridge is required for public accommodation. It would not only incur the expense of the bridge, but an additional line of road, which I shall strenuously oppose, unless it can be shown that it is necessary for the public benefit; having already given several miles of roads for public use without having received compensation, except for fencing the road from Barren Ground to Mary Larkin's grant, near the village, which is the only road required for the grants south of my property.

I have, &c.,
HENRY BADGERY.

No. 49.

MR. JAMES NYE AND OTHERS TO THE SECRETARY FOR LANDS.

Sutton Forest, 20 May, 1869.

SIR,

We have the honor to request that you will take immediate steps to open the surveyed and proclaimed road (see Government Gazette, 30th March, 1860) commencing from the Reedy Creek at James Nye's s.e. corner pin, being portion of Hy. Badgery's 1,920 acres and Hirtel's n.e. corner pin, leading easterly to the newly opened and fenced road running to the Shoalhaven and Sutton Forest Road, as well as to the railway platform at Jordan's Crossing.

The said road was never objected to, and until it is opened we are deprived of access to the railway platform and to Sutton Forest.

The portion of road we request you to open is part of the road running along Wm. Roberts' 805 acres (now James Johnson's), and along the northern boundary of M'Williams' 640 acres (now H. Badgery's), to John Alston's (now John Morrice's) 395 acres.

We have, &c.,
JAMES NYE,
(And twenty-three others.)

Surveyor General.—B.C., 26 May, 1869, M.F.

I can add nothing to my report of 13 April, 1869, on which a reference was made by the Minister for Lands to the Works Department; Mr. Whitton's reply to which (now herewith) on 451-69, should I think be submitted to the Minister for Lands.—R. D. FITZGERALD, for Surveyor General, 23 June, 1869.

No. 50.

MEMORANDUM OF SECRETARY FOR LANDS.

MR. MORRICE still insists that when this road was first proclaimed, which by the letter from certain parties at Sutton Forest, dated 20 May, 1869, appears to have been as early as the 30th March, 1860, no objection was made by Mr. Badgery, and that his land was not then enclosed. I fail to find among these papers any information on these points, or having reference to the opening of the road at the period specified; certainly nothing shows any objection then from Mr. Badgery. Are there any papers going so far back? There must at least be a Gazette of that date; and if no other papers exist, there can be no proof of objection from Mr. Badgery at the time. With regard to the bridge, it has been already urged by Mr. Morrice that by crossing the railway line at a point further south, and only a few hundred yards in length, a level crossing might be obtained and the necessity for a bridge or viaduct entirely obviated. Further information on these various points is required.—14 July.

There

There is no record in this office showing objections by Mr. Badgery (and a search has been carefully made). The report of the Surveyor General on the latter points is sought.—B.C., 16 July, 1869, M.F.

The report should I think be sought from the Works Department.—R. D. FITZGERALD, for the Surveyor General, 19/7/69.

Under Secretary for Works.—B.C., 21 July, 1869, M.F.

Railways, for report of Engineer-in-Chief.—B.C., 23/7/69, J.R.

See Engineer-in-Chief's report herewith.—23/7/69.

No. 51.

MINUTE OF ENGINEER-IN-CHIEF.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 28 July, 1869.

Minute-paper.—Mr. Morrice's Bridge, near Sutton Forest, G.S.R.

WITH reference to the enclosed papers on the above matter, I have only to remark that the building of the bridge is solely a question to be decided by the Survey Department.

If a crossing is to be given, I would much prefer to build a bridge, as being *cheaper* and safer for the public than a level crossing.

Before the matter be finally decided, I think it would only be fair to Mr. Badgery to allow him to give his version of what took place originally, with reference to the proposal to open this road to the public.

J.W., 28/7/69.

I have seen Mr. Badgery. Under Secretary for Lands.—B.C., 5/8/69, J.R.
Surveyor General.—10 August, 1869, M.F.

No. 52.

MR. J. NYE TO THE SECRETARY FOR LANDS.

Sutton Forest, 7 August, 1869.

SIR,

I have the honor to call your attention to the circumstance that no reply has been sent to the petition forwarded by myself and neighbour, praying that you would order a certain proclaimed road to be opened, viz. :—The one commencing at James Nye and Adam Hurtel's corner pin, Reedy Creek, and running to the road leading from the Barren Ground and Jordan's Railway Platform to the Shoalhaven and Sutton Forest Road, being portion of the road to John Alston's 304 acres (now John Morrice's).

I have, &c.,
JAMES NYE.

If this case is identical with the Barren Ground and Sutton Forest Road case, on which Mr. Morrice and Mr. Badgery are at issue, the papers are at present at the Works for the erection of the bridge. Ask Mr. Fitzgerald.—H.F.

It is the same case.—R.D.F., 7 June, /70.

No. 53.

H. BADGERY, Esq., to THE SECRETARY FOR LANDS.

Vine Lodge, Sutton Forest,
9 August, 1869.

SIR,

I have the honor to enclose the statement of the resident landholders in the Barren Ground and that locality, which I trust will remove any doubts as to the necessity for such road as applied for by Mr. Morrice, independent of the expense it would incur and the opposition it would meet with. I have also the honor to forward a copy of two letters addressed by me to the authorities, of the respective dates, which will change your opinion as to no opposition having been offered to the road in question (as stated, if I recollect correctly, in your minute on the papers); but so far as I am personally concerned, if the Government will abandon the present road, and adopt the one marked by Mr. Surveyor Evans, I will refund the money received as compensation for fencing, notwithstanding it is useless where placed.

I have, &c.,
HENRY BADGERY.

Information on two points is required:—1st. Was the ground fenced or enclosed before proclamation of the road asked by Mr. Morrice and opposed by Mr. Badgery, so as to entitle the latter to cost of fencing? 2nd. If so, what will be the probable cost of opening the road, independent of the bridge over the railway?—W.F., 3 September, 1869.

Surveyor General.—4 Sept., 1869, M.F.

1st. The ground was not fenced at the date of the first survey. 2nd. The cost of fencing, as reported in my recommendation of 13 April (69/636), would be about £200.—R. D. FITZGERALD, for Surveyor General, 14 September, /69.

This matter has been long before the Government, and has involved much doubt and anxious consideration; but presuming that the materials for the bridge, which I understand have been long in readiness, were intended for use, and were taken to imply an opinion on the part of the railway authorities that the road asked for by Mr. Morrice, M.P., and certain residents in his own neighbourhood, is necessary, or at any rate would benefit the public,—and further, taking into consideration that Mr. Badgery, who now so strongly objects to this road, did not offer any objection at first, or within the legal period,—I recommend that the road be opened forthwith, and the necessary steps taken for that purpose, as far as the road marked pink on the map, which I understand to be about a mile in length. Mr. Morrice I trust will not object to its further extension across his own land if necessary. Railway authorities may be requested to construct the bridge without delay.—W.F., 29 Oct., 1869.

[Enclosure.]

[Enclosure.]

Barren Grounds, Sutton Forest,
9 August, 1869.

Sir,

We, the undersigned free selectors, landholders, and residents of the Barren Ground and that locality, having heard with surprise that the Government contemplate opening the road from J. Morrice's 395 acres (uninhabited) to the Old South Road, have the honor to state that such road is neither desirable nor necessary, being of no service except to one individual (to whom the present road is available), and if opened would not be used by us. The present road from Barren Grounds to Village of Sutton Forest being in every way the most suitable, any other is quite unnecessary.

We have, &c.,
THOMAS FAHEY, and 11 other names.

No. 54.

J. MORRIS, Esq., to THE SECRETARY FOR LANDS.

Willow Grove, Sutton Forest,
10 August, 1869.

Sir,

Having heard that Government intend opening a road through my property from John Morrice's 395 acres to the Old South Road, I have the honor to state that such road is not by any means necessary, nor is it desired by those persons who reside at and near the Barren Ground. The road lately fenced to the village of Sutton Forest is in every way the best. I further beg respectfully to state that the road in question would be a great injustice to persons through whose land it must pass, and heavy expense to the country, and not by any means a public benefit or accommodation.

JOHN MORRIS.

Surveyor General.—B.C., 12 August, /69, M.F.

No. 55.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Bromley, 12 August, 1869.

Sir,

Enclosed I have the honor to forward to you a petition from the inhabitants of the Barren Ground, Ploughed Ground, Cross Roads, and Sutton Forest, signed by upwards of ninety landholders, settlers, &c., and beg that you will do the petitioners the honor of giving it your immediate attention.

I have, &c.,
JOHN MORRICE.

P.S.—I can certify that the names to the petition are *bonâ fide*, but I doubt if any other petition referring to the same matter will bear the same scrutiny.—J.M.

Surveyor General. B.C., 14 August, /69.—M.F.

[Enclosure.]

Petition of John Morrice and others.

Sutton Forest,
9 August, 1869.

WE, the undersigned inhabitants of the Barren Ground, Ploughed Ground, Cross Roads, and Sutton Forest, have the honor humbly to petition that you will order the undermentioned roads to be opened with as little delay as possible, namely:—

1. The Government Road, commencing on the Old Argyle Road, at the western corner-pins of lands belonging to John Morrice and H. Badgery, and bounded on the north and east by lands belonging to Morrice, and on the south and west by lands belonging to Badgery and Nye, terminating at Morrice's south-east and Nye's south-west corner-pins.

2. The road commencing from the last-mentioned point, and running to the Reedy Creek, along Nye's and Hertel's boundaries.

3. From the last-mentioned point, the proclaimed and unobjected-to road, to a Government road, terminating at the north-west corner-pin of Alston's, (now Morrice) 394 acres, and bounded on the north by land belonging to H. Badgery, and on the south by W. Roberts' land (now Morris) and M. Williams' 640 acres (now Badgery). Your petitioners wish to point out that this line of road will connect the Great Southern Road, the Old Argyle Road, the Barren Ground Roads, and the Shoal-haven Road, at the same time giving ready access to Jordan's Railway Platform, at the Barren Ground, to the inhabitants of the whole neighbourhood.

JOHN MORRICE, and 90 other names.

No. 56.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Bromley, Moss Vale,
6 September, 1869.

Sir,

I have the honor to forward to you, enclosed with this, a declaration of my own, also one from A. Lansdown, who erected the first line of fencing on the land of M. Williams' 640 acres (now H. Badgery's).

I have, &c.,
JOHN MORRICE.

Surveyor General, 8 Sept., 1869, M.F.

[Enclosures.]

[Enclosures.]

I, ABRAHAM LANSDOWN, of Sutton Forest, in the district of Berima, and Colony of New South Wales, farmer, do solemnly and sincerely declare,—

That, in reference to a road on the north side of M'Williams' (now Badgery's) 640 acres of land, situated at Sutton Forest, I assisted to erect the first line of fencing at the eastern boundary of the said M'Williams' 640 acres (now H. Badgery's) in the year 1862, and that the land had never been previously enclosed. And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of Her present Majesty's reign, entitled "*An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales to substitute Declarations in lieu thereof and for the suppression of voluntary and extra-judicial Oaths and Affidavits.*"

ABRAHAM LANSDOWN.

Declared at Berima, the sixth day of

September, 1869, before me,—

G. H. ROWLEY,

A Commissioner for Affidavits.

I, John Morrice, of Browley, near Sutton Forest, in the District of Berrima and Colony of New South Wales, Justice of the Peace, do solemnly and sincerely declare that, in reference to a road on the north side of M'Williams' (now Badgery's) 640 acres of land, situated at Sutton Forest, the said road was not enclosed at date of proclamation of road in the Government Gazette of 27th March, 1860, nor has it been previously enclosed, nor was it enclosed till after the year 1862. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, entitled, "*An Act for the more effectual abolition of Oaths and Affidavits taken and made in various Departments of the Government of New South Wales to substitute Declarations in lieu thereof and for the suppression of voluntary and extra-judicial Oaths and Affidavits.*"

JOHN MORRICE.

Declared at Berrima, the sixth day of

September, 1869,—

G. H. ROWLEY,

A Commissioner for Affidavits.

No. 57.

H. BADGERY, ESQ., to THE SECRETARY FOR LANDS.

Vine Lodge, Sutton Forest,
11 October, 1869.

SIR.

I regret to learn that Mr. Morrice is still urging upon the Government the opening another road through my property. I have the honor to state, for your information, that when the road in question was applied for, it was at my suggestion to Gough and other residents of that locality that application should be made for a line of road to connect the road reserved on the western boundary of Morrice's 395 acres with the one leading from the south-west corner of my 1,920 acres to the Old South Road. That road was marked, but opposed by Mr. Morrice. Mr. Surveyor Evans was sent up to look out and mark a better road, which he did; but that passed through Mr. Morrice's 228 acres, which of course he opposed; also, Mr. Surveyor Campbell was then instructed to examine the locality for a better road; being unable to find one, reported in favour of the one Mr. Evans had marked. All this did not satisfy Mr. Morrice, and he had a Mr. Gordon sent up, who took a ride with Mr. Morrice, and subsequently Mr. Campbell marked a line across M'Williams' (now my) 640 acres, and then forming a complete semi-circle through my 1,920 and 201 acres, neither practicable nor desirable. This sort of agitation has been kept up by Mr. Morrice these nine years, during the whole of which time all the free selectors and others in that locality have passed through my land; to put a stop to which, I consented to a road from M'Williams' south-west corner to the Shoalhaven Road, on Mary Larkin's grant. I did not stipulate with the Government that the former road should be abandoned, but shall not quietly submit to their both being opened after the miles of roads I have already given.

I have, &c.,

HENRY BADGERY.

No. 58.

THE SECRETARY FOR LANDS to THE SECRETARY FOR WORKS.

DEAR SUTHERLAND,

I have this morning ordered the opening of the long contested road in which Morrice is interested. I was hurried by hearing a report that your railway people were about applying the materials for the bridge to some other bridge; and my object in now writing is to warn you of this report, and to beg that you will, without delay, order and insist on the bridge over the railway on Morrice's road being constructed, else some of Morrice's opponents may contrive to outwit you.

Yours, &c.,

WILLIAM FORSTER.

21 October.

Let me have the papers about the bridge over Mr. Morrice's road. The Lands have now ordered the opening of the road, and the materials intended for the bridge are being used for other purposes I understood.—J.R., 1/11/69.

These papers are with Lands. Under Secretary for Lands for previous papers.—B.C., 3/11/69.—J.R.

Surveyor General.—B.C., 4 November, 1869.—M.F.

Papers not with Surveyor General.—J.S.A., 10 Nov., /69.

The papers are now forwarded for the information of the Honorable the Secretary for Public Works. The Under Secretary for Public Works.—B.C., 18 November, 1869, M.F.

Engineer-in-Chief of Railways, for report.—B.C., 20/11/69.—J.R.

The timber originally provided for this bridge was rotting on the railway; and as timber was wanted to build another bridge, I ordered such portions as were sound to be used in building the bridge for Mr. Badgery.—J.W., 23/11/69.

Commissioner.—23/11/69.

Invite tenders, and inform Secretary for Lands.—J.S., 2/12/69.

Railways.—B.C., 3/12/69.

I have suggested to the Commissioner, and he has approved of, the bridge being erected by the department, without public tender.—J.W., 29/12/69.

Mr. Mason.

The bridge will be put in hand forthwith.—W.M., 29/12/69.

Mr. Whitton.—B.C., 8/12/69.

25

No. 59.

THE UNDER SECRETARY FOR WORKS TO THE UNDER SECRETARY FOR LANDS.

Department of Public Works,
Sydney, 3 December, 1869.

SIR,

I have the honor to inform you that instructions have been given to the Engineer-in-Chief for Railways to invite tenders for the construction of a bridge across the railway, near Sutton Forest, known as Mr. Morrice's bridge.

I have, &c.,
JOHN RAE.

Will the Under Secretary for Works be good enough to return the papers when the necessary action has been taken at Works.—B.C., 6 January, 1869, A.O.M.

Railways, for report, and with reference to previous letters on the subject sent to that department, 6th December last.—B.C., 7 January, 1870, J.R.

Mr. Whitton.—B.C., 11/1/70, J.R.

Under Secretary for Lands.—B.C., 13 Jan., /70, J.R.

Should now, I think, be referred to the Surveyor General as to the opening of the road.—B.C., 18 January, 1870, A.O.M.

This road cannot be confirmed without reclamation, as the present road (R 505) was proclaimed and confirmed *in lieu* of it.—R. D. FITZGERALD, for S.G., 18 Jan., 1870.

Is reclamation recommended?

Surveyor General.—B.C., 19 January, 1870, A.O.M.

A reclamation would not be made on my recommendation, as I have already reported against the opening of the road; but as the Honorable the Minister for Lands has directed the opening, I considered it necessary to point out that for that purpose a reclamation would be required.—R. D. FITZGERALD, for the Sur. Genl., 24 Jan., /70.

No. 60.

MEMORANDUM OF SECRETARY FOR LANDS.

ROAD from Alston's 394 acres, now Morrice's, crossing railway line.—Mr. Morrice presses for this road to be opened, and extended by way of Nyc's along Morrice's and Badgery's land, to the Old Argyle Road.—W.F., 28 Jan., 1870.

Will the Under Secretary for Public Works be good enough to return the above papers.—B.C., 16 February, 1870, A.O.M.

Returned herewith.

Under Secretary for Lands.—B.C., 22 February, /70, J.R.

The previous papers are with Mr. Whitton; will he be good enough to return them for transmission to Lands.—B.C., 21/2/70, J.R.

No. 61.

MEMO. OF UNDER SECRETARY FOR LANDS.

It is submitted by the Surveyor General that the road here in question cannot be confirmed or opened without *Sketch* reclamation. The Honorable the Minister's Minute of 29 October directed opening to be proceeded with, partly in consideration of the absence of timely objections to the former proclamation, and of claims to compensation, which will, it is probable, not be wanting in the event of reclamation.

The materials for a bridge over the railway originally provided are, it appears, used for other purposes, but the erection of a bridge by the Railway Department is just commenced (or about to be so); but the instructions have been so recently given that it is probable no expense has been incurred.

The question therefore seems to be whether the road is so far required for the convenience of the public as to warrant the expense of compensation for fencing (probably £200), in addition to the bridge over the railway. The Surveyor General (or rather M. Fitzgerald, acting for him) is of opinion that it is not.—27 Jan.

As reclamation is considered necessary, and it would be unsafe to omit any formalities, the road may be reclaimed as far as its junction with the road between Barren Ground and Sutton Forest, which has been confirmed.—W.F., 5th Feby., 1870.

It is recommended that the enclosed tracing* be forwarded to the Works Department, so as to preclude the possibility of the erection of the bridge other than on the road proposed (papers should then be returned for the *Appendix I. proclamation of the road).—R. D. FITZGERALD, for Sur. Genl., 8/2/70.

Under Secretary for Public Works.—B.C., 9 February, 1870.—A.O.M.

No. 62.

THE SURVEYOR GENERAL TO THE UNDER SECRETARY FOR LANDS.

THE accompanying plan and book of reference of road from the north boundary of James Osborne's 640 acres, near its n.w. corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres, county of Camden, are forwarded, with a view to the opening of the line as a parish road, under the Act of Council 4 William IV, No. 11.

THE UNDER SECRETARY FOR LANDS TO THE BENCH OF MAGISTRATES, BERRIMA.

Department of Lands,
Sydney, 2 April, 1870.

GENTLEMEN,

I have the honor to forward, for deposit in the Police Office, Berrima, for public inspection and information, copies of a plan and book of reference of a road which is about to be opened as a parish road, under the Act of Council 4th William IV, No. 11, from the north boundary of J. Osborne's 640 acres, near its n.w. corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of Henry Badgery's 1,920 acres, the receipt of which documents you will be good enough to acknowledge.

I have, &c.,
A. O. MORIARTY,
Under Secretary.

No. 64.

EXTRACT FROM VOTES AND PROCEEDINGS. 6 APRIL, 1870.

(1.) Railway Bridge, Southern Line:—Commander Onslow asked the Secretary for Lands, pursuant to Notice No. 1,—

- (1.) Is it the intention of the Government to build a bridge over the railway between Mr. Morrice's and Mr. Badgery's land, and to proclaim a road through the latter?
- (2.) What will be the cost of such bridge, including materials?
- (3.) How far will such bridge be from the two nearest bridges or railway crossings southward?
- (4.) Is there a single person residing between the railway and the broken country on the eastern side of the railway line, within two miles of the proposed bridge?
- (5.) Has the Minister for Lands, or the Minister for Works, received any petition or petitions relative to such proposed road and bridge?
- (6.) Is the Minister, to whom such petition or petitions have been addressed, aware whether the persons signing are residents in the neighbourhood of, or in any way interested in, the proposed bridge or road?

Mr. Forster answered,—

- (1.) Yes.
- (2.) I am given to understand by the Railway Department that the probable cost would be about £500; but the materials have been prepared for more than three years.
- (3.) From the first bridge (under railway), 1,100 yards; from the second bridge (over railway), 2,000 yards distant.
- (4.) The Government have no information upon the subject.
- (5.) Yes.
- (6.) The Government have no information upon the subject.

No. 65.

GAZETTE NOTICE.

Department of Lands
Sydney, 12 April, 1870.

PARISH ROAD.

His Excellency the Governor, with the advice of the Executive Council, having deemed it expedient to open and make the parish road mentioned in the Schedule appended hereto, to be maintained at the expense of the parishes through which it passes: Notice is hereby given, that in accordance with the provisions of the Act 4th William IV, No. 11, plans and books of reference, showing the intended line of the road in question, are now deposited at the Office of the Surveyor General in Sydney, and at the Police Offices mentioned.

It is requested that any well-grounded objections that may exist to the formation of the road in question may be transmitted in writing to the Clerk of the Executive Council, within one month from this date.

By His Excellency's Command,

SCHEDULE

SCHEDULE REFERRED TO.

Description of road.	Names of reputed owners or occupiers through whose property the road passes.	Police Office at which the plan and book of reference has been lodged.
Road from the north boundary of James Osborne's 640 acres (near its north-west corner) to the Barren Ground and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres.	John Morrice, Henry Badgery, representatives of the late James Johnson, and through a reserved road.	Berrima.

No. 66.

THE UNDER SECRETARY FOR LANDS TO THE CLERK OF THE EXECUTIVE COUNCIL.

Department of Lands,
Sydney, 13 April, 1870.

SIR,

In drawing your attention to the notice in the Government Gazette of the 12th April last, respecting the intended formation of a parish road from the north boundary of J. Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of Henry Badgery's 1,920 acres,—I am directed to request that you will have the goodness, at the end of one month from the date thereof, to inform me whether any objections have been received by you in respect of the said road, in pursuance of the notice alluded to.

I have, &c.,
A. O. MORIARTY.

No. 67.

J. MORRIS, ESQ., TO THE CLERK OF THE EXECUTIVE COUNCIL.

Sutton Forest,
20 April, 1870.

SIR,

With reference to the proposed road now advertised as leading from the north boundary of James Osborne's 640 acres to the Barren Ground and Sutton Forest Road, and through the lands of John Morrice, Henry Badgery, and James Johnston,—I beg respectfully, as the representative of the late James Johnston, to offer strong objections to the above-mentioned road, upon the following grounds, viz., that one road has just been opened through my land for the accommodation of the persons residing at the back, and *all of whom* now state that they do not require *any other road*; it would therefore not be any public benefit.

I have, &c.,
JOHN MORRIS.

No. 68.

H. J. MAIR, ESQ., TO THE MINISTER FOR LANDS.

Sutton Forest,
20 April, 1870.

SIR,

About July last I was induced to sign a petition praying that a public road may be opened from the north-west corner of James Osborne's 640 acres to the Barren Grounds and Sutton Forest Road, and passing through W. M. Williams' (now H. Badgery's 640 acres). I have the honor now to beg that you will erase my name from that petition; Mr. Morrice having represented to me, when asking me to sign the petition, that it was to give a road out to some free selectors who had no right of road to Sutton Forest. I have ascertained since that all the landholders, including Mr. Morrice, at Redhill and Barren Ground, have a very good road one chain wide to Sutton Forest, and that the road I signed for was entirely for the convenience of Mr. Morrice, instead of the public as he stated to me.

I have, &c.,
HENRY JAMES MAIR, J.P.

No. 69.

H. BADGERY, ESQ., TO THE CLERK OF THE EXECUTIVE COUNCIL.

Vine Lodge, Sutton Forest,
20 April, 1870.

SIR,

In reference to the opening of a parish road from the northern boundary of J. Osborne's 640 acres, near the north-west corner to the Barren Ground and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres,—I have the honor to state that I strongly object to that part of said road from the north-west corner of Morrice's 395 acres to the Sutton Forest Road, upon the grounds that it will be a considerable expense to the country, without being of any public benefit. There are sufficient roads and bridges for the accommodation of the only two grants that can be taken eastward of the railway line in that locality. I should not object to this road if it was not a great injustice, as is made manifest by the miles of road I have given on my private property.

I have, &c.,

No. 70.

No. 70.

RESIDENTS OF BARREN GROUND AND SUTTON FOREST TO THE SECRETARY FOR LANDS.

Sutton Forest,
20 April, 1870.

SIR,

We, the undersigned, land and householders, residing at Barren Grounds and Sutton Forest, having heard that a numerously signed petition has been presented to you, praying that a public road may be opened from the north-west corner of James Osborne's 640 acres to the Barren Grounds and Sutton Forest Road, at its intersection with H. Badgery's 1,920 acres, beg to state that the Barren Grounds and Sutton Forest Road at present existing is quite sufficient; and further, that the proposed road cannot be any advantage to any one resident at or near the Barren Grounds, there not being one single person residing in this locality who could go to Sutton Forest in so short a distance by the proposed road as by the one now in use.

We, have, &c.,

Alfred Phillips.
Joseph Banks.
G. W. Osborn.
Jabez Harriman.Walter Grice.
Charley Jordan.
William Penfold.
And 21 other names.

No. 71.

J. MORRICE, ESQ., TO THE SECRETARY FOR LANDS.

Bromley, 13 May, 1870.

SIR,

I have the honor to inform you that I have sent in to the Clerk of the Executive Council a full statement of the circumstances connected with the road now in question between Mr. H. Badgery and I, and beg that you will give it your attention.

I have, &c.,

JOHN MORRICE.

No. 72.

J. MORRICE, ESQ., TO THE CLERK OF THE EXECUTIVE COUNCIL.

Bromley, Moss Vale,
12 May, 1870.

GENTLEMEN,

Having observed in the Government Gazette of the 8th April that objections were called for to a road described as follows:—from the north boundary of James Osborne's 640 acres (near its north-west corner) to the Barren Ground and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres,—names of reputed owners through whose property the roads pass, John Morrice, H. Badgery, the representatives of the late James Johnson, and through a reserved road,—I beg to have the honor to inform your Honorable Executive Council that in a previous Government Gazette, dated 30th March, 1860, there is a notice dated 27th March, calling for objections to the same piece of road as described above. Mr. H. Badgery, senr., then wishing to have the road opened, did not make any objection until years after, nor any other person, to that portion now in question; therefore, all the Government had to do was to proclaim the road, call for claim for compensation, and open it. At that time, and for years after, until the completion of the Southern Railway line to Faviel's contract, the land through which the road passes in the northern boundary, M'Williams' 640 acres (now H. Badgery's), unenclosed, Mr. John Alston, my agent, purchased for me 395 acres of land at a Government land sale at Berrima, on the 20th June, 1859, and transferred by deed the same to me on the 2nd July, 1860; and from that time this road was always travelled to and fro by me and others, until a deep cutting was made by the railway contractor for the railway line across the eastern end of the same road, close to my land, which stopped all communication except by trespass; and that with Mr. Badgery's knowledge, and in fact consent, by him arranging with me to have a slip-panel at the east end of this road, leading into a Government road at the north-east corner of my land, where we fenced the boundary between his and my land previous to the railway-cutting. When the Government had measured the 395 acres of land which Mr. Alston purchased for me, a road was left on the western boundary between that land and M'Williams' (now H. Badgery's), leading from the north-west corner-pin of James Osborne's 640 acres to H. Badgery's land at my north-west corner-pin; and no doubt it was the intention of the Government to extend it to some road as an outlet for these farms, there being no outlet in any direction. Mr. James Osborne, myself, and I think Johnson, being the only purchasers of land in that locality in 1860 or thereabouts, jointly applied to the Government for a road out, commencing at the northern end of the Government road left between H. Badgery's (formerly M'Williams') and my land. We described two roads from that point through H. Badgery's land; the one leading to a place where one commonly known by the name of Galvin Jack lived, on the Old Argyle Road; the other passing nearer to Mr. Badgery's house, but still coming out on the Old Argyle Road, and were satisfied to take the former, being of the least inconvenience to Mr. Badgery. He then, knowing that we must have a road out, or being informed that we had applied for one, and not having a claim to ask for one himself, having an outlet to his land, went to Gough, who was then a tenant of a portion of Johnson's land, on the south-east corner, near M'Williams', and requested him to apply to the Government for a road out, since he (Gough) could not get out without trespassing, which letter Mr. Badgery wrote, of which I have a copy from Gough, and I have no doubt the original is in the Government office. The Government then sent up Mr. Surveyor Evans to survey and mark a road. I saw Mr. Evans the day before he went to measure; he gave me no information of this road, but went to Mr. Badgery the next day, who went with him and pointed out while he (Mr. Evans) surveyed and marked a road, a portion of which is the very road now in question, which is the one gazetted in 1860, and objected to neither by Mr. Badgery nor any other person, except a portion at the west end, commencing at the Reedy Creek, running westward, which we objected to, because it didn't suit us, and our objection was entertained by the Executive Council. Now, when the railway interfered, it then suited Mr. Badgery to take me nearly 3 miles out of my way (a bad road besides), and to do away with our road. We then stood to our former application. This is the present piece of road now in question, leading to Galvin Jack's, at the Old Argyle Road. Mr. Surveyor Campbell had some time after to measure some land south-west of that road; Mr. Badgery then got him to recommend the same road as Mr. Evans did; we again objected to that portion at the Reedy Creek as before. The then Surveyor General, who died shortly after, sent up Mr. District Surveyor Gordon to inspect the road and report on Mr. Surveyor Campbell's report; he (Mr. Gordon) reported to the Government that Mr. Campbell could not have seen the road, or otherwise he could not have sent in such a report, and recommended that we should have the road we asked for.

The

The Honorable John Robertson, who was then Minister for Lands, decided that orders should be sent to Mr. Surveyor Campbell to survey and mark the road we asked for, and that was to remain unproclaimed as long as Mr. Badgery did not object to the public travelling on it; but that as soon as he did, it was to be proclaimed and opened. Mr. Surveyor Campbell then surveyed and marked the road. The road in question is a part of the same up to the new Barren Ground Road as now gazetted. We of course took no further trouble, but travelled this road without any interruption until the railway interfered, when Mr. Badgery fenced across the road, and placed up a written notice which ran thus:—"Any person found trespassing on these premises will be prosecuted without respect to persons." You will perceive that, on the railway plan which was laid before Parliament and sanctioned, and a sum of money voted to carry out the railway line, this road was marked as a public road. This portion of the railway line was contracted for by Roberts & Forster, and when the Government Railway Engineer who had charge of that portion of the line was about to mark and peg out the spot for the erection of the bridge over the cutting at the crossing of the road, Mr. Badgery stopped him from so doing. The contractor had the materials on the ground for the erection of this bridge, which were removed for the purpose of building Mr. Badgery's, but since brought back. I then complained to the Government, and insisted on the bridge being built, or that we should have a road, the continuation of the first Government road along the railway line to where Mr. Badgery was to get a level crossing and a bridge near his house, within fifty rods of each other; from thence to the Shoalhaven Road, leading to Sutton Forest. Mr. Surveyor Twynam, the District Surveyor, then came up and inspected the road, and decided on the same road and bridge now in question; but from the Reedy Creek, at the west end of the road now in question, he marked a new route to the Argyle Road, and Mr. Surveyor Horton was ordered to measure and mark this, which was done. But a portion of this was hilly, and the Barren Ground settlers who recently settled there, objected to the hilly portion, and desired the road before applied for by us. Mr. Badgery then, unknown to some of us concerned, quietly got these few people to sign a petition for him for the road they now have from Barren Ground to Sutton Forest, and handed it to Mr. R. Roberts, then Member and colleague with me for this county, who secretly and unknown to me handed it to Mr. Wilson, at that time Minister for Lands, who ordered a road to be taken for me through *Mr. Osborne's* land, not *Mr. Badgery's*, and under and over bridge, where there is a steep embankment about half a mile long. This over-bridge was left as an outlet to conduct the water from the line, and is a watercourse in any damp season. Within half a mile of the east end of this road at my land, there are several settlers who have no road out; their names are—*M. Williams, Jno. M. Williams, Richard Rachel, Jno. Sampson, W. Bell, W. Clout, and Jordan*, with their wives and children. Some of the parents have applied to me as their Member to get them a road, and stated that they have timber and produce on their own lands which they could make good use of had they a road; that they have at present to go on sufferance across Mr. Badgery's land; that he will not allow them to take a dray any way heavy loaded, for fear of cutting up his land; and that they have now a contract for timber for the building of a Wesleyan Chapel at Goulburn, and have the timber ready, but cannot deliver it in consequence, and are therefore put to very great inconvenience. Now there can be no doubt that this road in question, according to the different surveys and notice calling for objections, must have been recommended by the present Surveyor General, the two preceding Surveyor Generals, the two District Surveyors, viz., Mr. District Surveyor Gordon, and Mr. District Surveyor Twynam, as well as three surveyors who surveyed the road, viz., Mr. Surveyor Evans, Mr. Surveyor Campbell, and Mr. Surveyor Horton.

I therefore pray that justice be done, the road proclaimed and opened, and the bridge erected without delay, to do away with the inconveniences.

I have, &c.,
JOHN MORRICE.

No. 73.

THE CLERK OF THE EXECUTIVE COUNCIL TO THE SECRETARY FOR LANDS.

Executive Council,
18 May, 1870.

SIR,

In compliance with the request contained in the Under Secretary's letter of the 13th ultimo, No. 25, I do myself the honor to forward you the objections lodged with me to the formation of the proposed parish road noted in the margin.

I have, &c.,
ALEX. BUDGE,
Clerk of the Executive Council.

From the north boundary of J. Osborne's 640 acres, near the north-west corner of the Barren Grounds and Sutton Forest Road.

As direction has been given, through memorandum of the Honorable the Minister for Lands, for the erection of the bridge, it is perhaps hardly necessary for me to report on the objections, further than to state that I am still of opinion that the road is unnecessary, that it will be an injury to Mr. Badgery, and that it is a road in lieu of which another was taken through his property. The cost of fencing is to Mr. Badgery, £80; to Mr. Morris (representative of the late James Johnson), £5.—ROBT. FITZGERALD, for Surveyor General, 19 May, 1870.

It has been ascertained by reference to the Railway Department, that nothing has yet been done in the erection of the bridge.—23 May.

No. 74.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Bromley, Moss Vale,
20 May, 1870.

SIR,

Understanding that objections have been made to the opening of the road from Osborne's north-west corner along a reserved road through my land, H. Badgery's, and that held by the representatives of the late James Johnston, to the Barren Ground Road, on the score of the expense to the public for fencing a portion of the said road, I hereby offer to undertake to defray the cost of such fencing as may be required on each road—that is, the unfenced portion passing through Henry Badgery's land.

I have, &c.,
JOHN MORRICE.

No. 75.

No. 75.

SURVEYOR GENERAL to THE MINISTER FOR LANDS.

Précis for information of the Hon. the Minister for Lands.

A ROAD was proclaimed on 27th March, 1860, through Mr. Badgery's land, and through Mr. Morrice's 226 acres, to afford access from the Barren Grounds to the Old Argyle Road, and by that road to Sutton Forest. It was objected to by Mr. Morrice, and another road more direct towards Sutton Forest through Mr. Roberts' and Mr. Badgery's land, was confirmed (8th September, 1868,) and opened in lieu of the first proposed road.

Access to the road confirmed was afforded to a 395 acres portion belonging to Mr. Morrice by a short road proclaimed 2nd June, 1868.

It is for a portion of the road preliminarily notified in March, 1860, that Mr. Morrice applies. It would afford better access to his 395 acres, and connect it with his 226 acres, but it has been objected to on the ground that Mr. Morrice has already been given access to his 395 acres; that the traffic would be next to none; that it would be taken principally from Mr. Badgery's land, out of which the greater part of the road confirmed in 1868 had been taken, and would cost £500 for bridge over the railway, and (if opened only to where it crosses the present road) £85 for fencing. By a letter just received, Mr. Morrice offers to fence the road; the cost to the Government may therefore be considered as reduced to £500 for bridge over the railway.—ROBT. FITZGERALD (for Surveyor General), 27 May, /70.

Recommend to Executive Council that the road as applied for in Mr. Morrice's letter, No. 1,120/70, be confirmed.—C.C., 14 July.

The Executive Council has authorized the confirmation of this road.

Minute 70/29.—Confirmed, 4 August, /70.

See Roads 70/1765; Government Gazette, 23 August, /70.

The Colonial Secretary, 31 August, /70.

Referred specially for the information of the Surveyor General.—B.C., 2 Sept., 1870, W.W.S.

No. 76.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Bromley, Moss Vale,
16 July, 1870.

SIR,

I have the honor to beg that you will favour me with a reply to say what has been done in regard to a petition handed in by me to the Minister for Lands from the inhabitants of Moore's Flats, Cross Roads, Ploughed Ground, Barren Ground, and Sutton Forest, signed by upwards of 90 landholders, leaseholders, and residents, praying for the opening of the road commencing at the Old Argyle and a Government road at J. Morrice's (now J. D. Jones') north-west corner pin; along that Government road on the north boundary of that land and J. Morrice's 226 acres; thence along the east boundary of the last-mentioned land and west of James Nye's and H. Badgery's 1,900 acres; from thence, on the south of James Nye's and H. Badgery's 1,900 acres; and on the north of Hurltel's and Robertson's (now Morris's) to the Barren Ground and Sutton Forest Road; from thence, running east across the railway line on the north of M. Williams' 640 acres and south of H. Badgery's land to a Government road at J. Alston's (now J. Morrice's) 396 acres.

I have, &c.,
JOHN MORRICE.

No. 77.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Moss Vale, Bromley,
16 July, 1870.

SIR,

I have the honor, on behalf of James Nye and others of the Barren Ground, inhabitants of Sutton Forest, numerously signing a petition for the opening of a road already surveyed; commencing at the south-east corner of James Nye's land, and on the south boundary of Henry Badgery's 1,900 acres, and north-west corner of A. Hurltel's 640 acres at the Recdy Creek, running east to the Barren Ground and Sutton Forest Road, and on the north of Robertson's now Morris's land, and south of H. Badgery's 1,900 acres.

I have, &c.,
JOHN MORRICE.

No. 78.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Moss Vale, Bromley,
16 July, 1870.

SIR,

I have the honor to request that you will be as kind as to inform me if anything had been done in my case towards opening the road at the crossing of the railway near Mr. H. Badgery's land, and J. Alston's (now John Morrice's), and along M. Williams' northern boundary, and if any steps had been taken towards erecting a bridge over that crossing; if not, what steps do the Government intend to take.

I have, &c.,
JOHN MORRICE.

P.S.—As it appears that the only objection the Government officers have to the opening of this road is the expense of fencing.—I have written already, and offer to do at my own cost the necessary fence required.—J.M.

No. 79.

THE UNDER SECRETARY FOR LANDS to THE UNDER SECRETARY FOR WORKS.

Department of Lands,
Sydney, 23 July, 1870.

SIR,

Referring to the correspondence which has taken place on the subject of the opening of the road through Mr. Badgery's land, to afford access from the Barren Grounds, *via* the Old Argyle Road, to Sutton Forest, I am directed by the Secretary for Lands to inform you that the confirmation of the line advocated by Mr. Morrice will be recommended for the approval of the Governor and the Executive Council.

I have, &c.,
A. O. MORIARTY.

No. 80.

J. MORRICE, Esq., to THE MINISTER FOR WORKS.

Browley, 26 July, 1870.

SIR,

Being informed that the Government have decided on the opening of the road, and in building of the bridge on the railway-crossing at M^cWilliams,—now H. Badgery and Alston's, now my land,—I have the honor to beg that you will urge on the Lands Department to at once instruct the surveyor to open the said road, and that you will at once cause the bridge to be built without delay, as great inconvenience is felt, and that for a long time, for the want of such.

I have, &c.,
JOHN MORRICE.

No. 81.

GAZETTE NOTICE.

Department of Lands,
Sydney, 23 August, 1870.

PARISH ROAD.

NOTICE is hereby given, in conformity with the provisions of the Act 4th William IV, No. 11, that no objections having been made to the proposed opening of the parish road mentioned in the annexed Schedule, His Excellency the Governor, with the advice of the Executive Council, has been pleased to confirm the said road; and it is hereby declared expedient to open and make the road referred to, according to the plans and books of reference, to be seen at the Police Offices mentioned.

Any persons intending to claim compensation in respect of the said lines are reminded that notice must be served on the Colonial Secretary within forty days from the date hereof, as are provided by the sixth section of the Act above referred to, or they will be for ever foreclosed from such claim.

By His Excellency's Command.

SCHEDULE REFERRED TO.

Description of Road.	Date of previous Notice of intended opening of Road.	Plan, &c., lodged at the Police Office at	Remarks.
Road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Ground and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres.	8th April, 1870.	Berrima.	Notwithstanding the objection.

No. 82.

J. MORRICE, Esq., to THE SECRETARY FOR WORKS.

Sydney, 26 August, 1870.

SIR,

I have the honor to draw your attention to the publication in the Government Gazette of the 23rd August (Tuesday), confirming the following road; commencing from the northern boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres; and beg to urge upon you the necessity of at once, without delay, the building of the bridge over the railway cutting across such road, which was laid before Parliament and sanctioned by Parliament. The inconvenience of the want of this bridge has been felt ever since such cutting has been made.

I have, &c.,
JOHN MORRICE.

I have no report to make; I have simply to ask if this bridge is to be built. The whole matter is so well known that I have nothing more to say upon the subject.—J. WHITTON, 5/9/70.

The previous papers are with the Lands—they should be obtained.—C.A.G., 7/9/70.

Under Secretary for Lands.—J.R., B.C., 9/9/70.

No. 83.

H. BADGERY, Esq., to THE CLERK OF THE EXECUTIVE COUNCIL.

Vine Lodge, Sutton Forest,
29 August, 1870.

SIR,

In reference to the opening of a parish road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres, dated 23rd August, 1870,—date of original notice, 8th April, 1870,—I have the honor to offer my strenuous objections to the said road as laid before the Minister for Lands twelve months since; first, upon the grounds that it is not required for public accommodation; secondly, because this road has been opposed for nine years by the only individual moving in the matter, until I consented to allow another road through my property in lieu thereof, at great inconvenience and loss, notwithstanding I have already given miles of road through my land without compensation.

I have, &c.,
HENRY BADGERY.

The Notice of 23rd August, herein referred to, emanated from the Colonial Secretary's Department, and this communication should have been addressed to the Colonial Secretary.

Forwarded to the Principal Under Secretary.—A. C. BUDGE, Clerk of the Council. B.C., 13/9/70.

No. 84.

THE UNDER SECRETARY FOR LANDS TO THE UNDER COLONIAL SECRETARY.

Department of Lands,
Sydney, 31 August, 1870.

SIR,

In drawing your attention to the notice in the Government Gazette of the 23rd August last, respecting the confirmation of the line of road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres,—I am directed to request that you will have the goodness, at the end of forty days from the date thereof, to state whether any claims to compensation have been made in respect of the said road, in pursuance of the notice referred to.

I have, &c.,
W. W. STEPHEN.

No. 85.

H. BADGERY, Esq., to THE COLONIAL SECRETARY.

Vine Lodge, Sutton Forest,
20 September, 1870.

SIR,

Observing in Government Notice of 23rd September, that notice of objection to, and claims for compensation for parish roads, are to be forwarded to you,—I have the honor to offer my decided objection to the road from the south boundary of J. Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres,—date of previous notice of intended opening of road, 8th April, 1870,—upon the grounds that said road is not necessary for public accommodation. But if the Government persist in opening it, I claim (£200) two hundred pounds compensation.

I have, &c.,
HENRY BADGERY.

Under Secretary for Lands.—B.C., 23 September, 1870, H.H.

No. 86.

J. MORRICE, Esq., to THE SECRETARY FOR PUBLIC WORKS.

Browley, Moss Vale,
29 September, 1870.

SIR,

I have the honor to request that you will take steps to cause the bridge over the railway, Great Southern, near H. Badgery's land, M'Williams' grant (640), Forster's contract, Sutton Forest, on a public road leading to Morrice's land, at Barren Ground Road, as the railway plan laid before Parliament and passed, money voted by the Parliament of New South Wales,—as much inconvenience is felt for the want of such bridge. I beg that you will give it your immediate attention.

I have, &c.,
JOHN MORRICE.

No. 87.

J. MORRICE, Esq., to THE SECRETARY FOR LANDS.

Sydney, 29 September, 1870.

SIR,

I have the honor to request that the parish road recently proclaimed, commencing at James Osborne's north-west corner pin, running through Morrice's and M'Williams' lands to the Barren Ground Road, be at once opened, as the inconvenience of the want of such road is much felt.

I have, &c.,
JOHN MORRICE.

No. 88.

THE PRINCIPAL UNDER SECRETARY TO THE UNDER SECRETARY FOR LANDS.

Colonial Secretary's Office,
Sydney, 12 October, 1870.

SIR,

In reply to your letter of the 31st August last, No. 70-78, I am directed to state, for the information of the Secretary for Lands, that no applications have been received in this office for compensation in respect to the line of road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres, excepting those from Henry Badgery, which are herewith forwarded.

I have, &c.,
HENRY HALLORAN.

The offer made by Mr. Morrice to fence the road through Mr. Badgery's land has not been referred to in the decision of the Honorable the Minister for Lands (Mr. Cowper), recommending to the Executive Council the confirmation of the road. It is therefore submitted, whether Mr. Morrice should now be requested to have the fencing erected, or instructions at once be given to the surveyor to open the road, and payment afterwards by the Government be made to Mr. Badgery and Mr. Morrice (representative of the late J. Johnston) for fencing.—R. D. FITZGERALD, for Surveyor General, 17 October, 1870.

Approved.—JOHN R.

No. 89.

THE UNDER SECRETARY FOR WORKS TO THE UNDER SECRETARY FOR LANDS.

Department of Public Works,
Sydney, 20 October, 1870.

SIR,

I am directed by the Honorable the Secretary for Public Works to request that you will return to this office the papers relating to Mr. Morrice's bridge over the Great Southern Railway, sent to you on the 5th instant.

I have, &c.,
JOHN RAE.

Mr. Freeman.—Papers are with you, I believe, for letters to Messrs. Badgery and J. Morris.—W. W. STEPHEN, 20 Oct., 1870.

No. 90.

MINUTE OF THE SECRETARY FOR LANDS.

WRITE Mr. Badgery and Mr. John Morris, and inform them of the desire of the Government Executive Council in the matter of the road through their property, at the Barren Grounds. Say that it will be necessary for Mr. Morrice to enter upon their land for the purpose of fencing, and that Mr. Morrice has engaged to fence from James Osborne's north-west corner to the Barren Grounds, Sutton Forest.

JOHN ROBERTSON.

Urgent. Surveyor General, for any further action that may now be required.—W. W. STEPHEN. B.C., 31 October, 1870.

No. 91.

THE UNDER SECRETARY FOR LANDS TO H. BADGERY, Esq.

Department of Lands,
Sydney, 31 October, 1870.

SIR,

I am directed by the Secretary for Lands to inform you, that the confirmation of the road from the north boundary of Mr. James Osborne's 640 acres to the Barren Grounds Road, has been determined on by the Governor and Council; but that Mr. John Morrice having engaged to fence the road from Mr Osborne's north-west corner to the Barren Grounds and Sutton Forest, it will be necessary, to enable him to do so, that you should allow him to enter upon your land.

I have, &c.,
W. W. STEPHEN.

No. 92.

THE UNDER SECRETARY FOR LANDS TO JOHN MORRIS, Esq.

Department of Lands,
Sydney, 31 October, 1870.

SIR,

I am directed by the Secretary for Lands to inform you, that the confirmation of the road from the north boundary of James Osborne's 640 acres to the Barren Grounds Road, has been determined on by the Governor and the Executive Council; but that Mr. John Morrice having engaged to fence the line from James Osborne's north-west corner to the Barren Grounds and Sutton Forest, it will be necessary, to enable him to do so, that you should allow him to enter upon your land.

I have, &c.,
W. W. STEPHEN.

34

No. 93.

J. MORRICE, Esq., to THE MINISTER FOR LANDS.

Sydney, 1 November, 1870.

SIR,

I have the honor to inform you that Henry Badgery, Esq., J.P., of Vine Lodge, refused to allow me to fence the road from James Osborne's north-west corner-pin (640 acres), along the boundary of M^r Williams' 640 to the Barren Grounds Road, of which I hereby enclose you a letter from that gentleman. I therefore pray that you will cause the opening of this road at once, so as I may be enabled to proceed with the fence, as I have entered into contract with men to complete the same.

I have, &c.,
JOHN MORRICE.

[Enclosure.]

H. Badgery, Esq., to J. Morrice, Esq.

Vine Lodge, Sutton Forest,
26 October, 1870.

Sir,

Lest you should misconstrue what took place at our last meeting into consenting to another road being opened through my property, I take the opportunity to inform you that it is my determination to oppose such a step, until proclaimed by the Government; and therefore caution you or your servants against trespassing upon any portion of my estate, until the said road is proclaimed by the Government, or I shall proceed as the law directs.

I remain, &c.,
HENRY BADGERY.

Let the road be opened without further delay, and inform Mr. Morrice when it is opened, so that he may go on with the fencing.—JOHN ROBERTSON.

No. 94.

THE SURVEYOR GENERAL to MR. SURVEYOR DALGLISH.

[Very urgent.]

Surveyor General's Office,
Sydney, 8 November, 1870.

SIR,

The road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres, having been confirmed as a parish road, by a notice dated 23rd August, 1870, folio 1821, in the Government Gazette of 23rd August, 1870, I have to request that you will, as early as may be convenient, proceed to formally open the road.

In carrying out this instruction, you will give notice, either verbally or in writing, to the proprietors of any enclosed lands through which the road passes, and suggest to them the desirability of their removing any fences or other obstructions which may exist; and you will then proceed along the road for the purpose of remarking it in those places where the previous marking may have become obliterated.

Should the parties to whom you may give notice not remove the fences or other obstructions, you will summarily remove them, and in doing so you will be guaranteed from loss by action by the Government.

You will be good enough to report the fulfilment of this instruction.

I have, &c.,
P. F. ADAMS,
Surveyor General.

Mr. Dalglish is requested to open this road in person.

No. 95.

J. MORRICE Esq., to THE SECRETARY FOR LANDS.

Sydney, 1 December, 1870.

SIR,

With reference to the tenor of the Executive Minute ordering the opening of the road from the north-west corner of James Osborne's land to the Barren Ground Road, through Mr. Badgery's land, and which Mr. Nye states that the said road is to be opened in accordance with my letter to the Government,—I presume the letter referred to in the Executive Minutes is my letter in reply to the objections offered to the opening of the road by Mr. Badgery, and has no reference to my letter as to fencing; for, on further consideration, I conceive it would be very unfair to require me to fence the road, which if necessary to the public, as it has been decided it is, the fencing ought to be done at the public expense as in other like cases.

I have made a very good arrangement for the fencing, which I will see carried out and give the Government the benefit of, relying on the Government, in fairness and as is usual in like cases, reimbursing me.

I have, &c.,
JOHN MORRICE.

My honorable colleague Mr. Cowper advised the Executive Council on the subject of the fencing. It would be well to forward this letter to him with the Executive Council papers, in order that I may have his views as to what was intended as to the payments for the fencing.—JOHN ROBERTSON.

I did not give the subject of the fencing any special consideration, and I suppose the Under Secretary considered that as Mr. Morrice was willing to fence the land his offer might as well be accepted; but I confess I do not see why, if the opening of the road is sanctioned, any conditions should be exacted from Mr. Morrice of an exceptional character.—CHARLES COWPER, 2 December, 1870.

To be treated as cases of the kind are usually treated.—JOHN ROBERTSON.

TELEGRAMS.

R. D. Fitzgerald (for Surveyor General), to S. Dalglish, Goulburn.

6 December, 1870.

Has Mr. S. Dalglish opened the road through Mr. Badgery's land, as instructed, at Sutton Forest?

R. D. Fitzgerald (for Surveyor General), to S. Dalglish, Picton.

7 December, 1870.

Has Mr. S. Dalglish opened the road through M. Badgery's land, as instructed, at Sutton Forest?

R. D. Fitzgerald (for Surveyor General), to S. Dalglish, Picton.

8 December, 1870.

Open Barren Grounds Road, and intimate to the nearest Station-master that the fence of the railway can be replaced for safety of the public.

P. F. Adams to S. Dalglish, Picton.

9 December, 1870.

I depend upon you opening the road on the 10th instant. Send telegram when opened.

No. 97.

MR. SURVEYOR DALGLISH to THE SURVEYOR GENERAL.

Picton, 7 December, 1870.

SIR,

1. Adverting to your letter of instructions, No. 70/66, requesting me to formally open the road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres, I have now the honor to report.

2. Along and within the north boundary of W. M'Williams' (now H. Badgery's) 640 acres, the line of road passes across the Great Southern Railway. The point of crossing is at a deep cutting, over which a bridge would require to be constructed, and without which the road is impracticable.

3. The railway property is enclosed by a substantial fence, the removal of which for the purpose of formally opening the road, would allow cattle and other stock from the adjoining paddocks and from the country generally to trespass on the railway.

4. Under these circumstances, I would respectfully submit that it is not advisable to formally open the road in question till a bridge has been erected over the railway, and approaches thereto provided.

I have, &c.,

J. C. DALGLISH,

Government Surveyor.

No. 98.

MR. SURVEYOR DALGLISH to THE SURVEYOR GENERAL.

Sutton Forest,

10 December, 1870.

SIR,

I have the honor to report to you that, in compliance with the instructions conveyed to me by your letter No. 70/66, I have formally opened the road from the north boundary of James Osborne's 640 acres, near its north-west corner, to the Barren Grounds and Sutton Forest Road, at its intersection with the south boundary of H. Badgery's 1,920 acres.

I have, &c.,

J. C. DALGLISH,

Govt. Sur.

Very urgent.—It is recommended that the customary notice of the formal opening of the road in question should now appear in the Government Gazette.—R. D. FITZGERALD, for Sur. Genl., 12 Dec., /70.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TUMUT-STREET, ADELONG.
(PETITION—CERTAIN INHABITANTS OF ADELONG.)

Ordered by the Legislative Assembly to be Printed, 24 August, 1870.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Inhabitants of Adelong,—

HUMBLY SHOWETH:—

That the present state of the main street (namely Tumut-street) in the Town of Adelong is almost impassable, being in places a perfect swamp, causing a great deal of loss and inconvenience to persons in business and others, and endangering life, limb, and property to a serious extent; and that considerable inconvenience and delay is experienced in the delivery of Her Majesty's mail, whereby business is retarded and the facilities which been extended to other towns in this district have been here unprovided.

Your Petitioners beg most respectfully to call your attention to the fact, that moneys expended on this street up to the present time have been subscribed for by the inhabitants, in reclaiming it from its wild state in the shape of clearing timber, stumps, &c.

We humbly submit that the Adelong Gold Field is one of the most important in the Colony, and that the street in question forms part of the main mail road to Tumut, Kiandra, Upper Adelong, and Tumberumba, and the revenue from this district is considerable; and we pray that your Honorable House will be pleased to take the premises into consideration, and afford such relief as your Honorable House will seem meet.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 82 Signatures.*]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GREAT NORTHERN AND WESTERN ROADS.

(PETITION—INHABITANTS OF WINDSOR, RICHMOND, AND KURRAJONG.)

Ordered by the Legislative Assembly to be Printed, 19 April, 1871.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of the Districts of Windsor, Richmond, and Kurrajong, and other persons interested in the traffic connected with the Great Northern and Western Roads, in the Colony of New South Wales,—

RESPECTFULLY SHOWETH :—

That your Petitioners, for the last twelve months, have sustained serious losses in consequence of the impassable state of that portion of the road called or known as "Bell's Line," which connects the Counties of Cumberland and Cook, and crossing the River Hawkesbury at a distance of about two miles from the Town of Richmond, and over which river a bridge was constructed some years since by a Company incorporated by Act of Parliament, under the name or style of "The Richmond Bridge Company."

That in the month of March, in the year 1870, a flood in the River Hawkesbury carried away a large portion of land, being part of the Government road and the eastern approach to the aforesaid bridge; and that the Company have not reconstructed the said approach, or extended the bridge to the present bank of the river, but have substituted a small punt, which is wholly inadequate to the traffic across the said river, and in times of freshets or floods is utterly useless, thereby causing a total suspension of the traffic for several successive days, and at times for a much longer period.

That the inconvenience and loss occasioned to the settlers at the Kurrajong, and other persons residing in the County of Cook, is very serious and ruinous, insomuch that they are neither able to obtain supplies for their daily subsistence or to take any kind of farm produce to the neighbouring towns for sale or for transit to Sydney by railway.

That a very considerable proportion of the traffic across the said river consists of large numbers of horned cattle, sheep, and horses, travelling from the Northern and Western Districts and other parts of the interior of the Colony to the Metropolitan Market; and that owners thereof are subjected to great and innumerable losses by reason of their not being able to travel stock to market as heretofore by way of Bell's Line and Richmond.

That accidents occur frequently at the said bridge in consequence of its present incomplete and dangerous state, which involve the loss of valuable property of all kinds, and in some cases narrow escapes of human life.

That a Petition from the inhabitants of the aforesaid districts was some time since presented to the late Minister for Works, and that shortly afterwards a deputation was sent to Sydney to confer with the late Colonial Secretary, with a view to procure some relief from the distress incurred by the present state of the aforesaid bridge, but neither of these have been of any avail.

That your Petitioners earnestly pray that inquiry be at once made, in such manner as your Honorable House may deem expedient, respecting the prayer of your humble Petitioners; and that your Honorable House will be pleased to take such steps as will remedy the great and serious injury occasioned by the present obstructions to traffic over the said river.

[Here follow 267 Signatures.]

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BROUGHTON PASS AND MOUNT KEIRA ROADS.

(PETITION—CERTAIN FREEHOLDERS AND LEASEHOLDERS RESIDING NEAR.)

Ordered by the Legislative Assembly to be Printed, 30 May, 1871.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Freeholders and Leaseholders residing on the Roads from "Broughton's Pass to Wilton," and on the "Appin and Mount Keira Road *viâ* Douglas Park Railway Station to Menangle Road",—

HUMBLY SHOWETH:—

That your Petitioners are interested in the expenditure of the moneys voted by your Honorable House for the repair of the roads named.

That your Petitioners know that the moneys are not properly expended by the present Trustees.

And they therefore humbly pray that your Honorable House will cause an inquiry to be made as to the expenditure of the moneys, for the purpose of removing the present Trustees, and appointing others who will better protect the public interest in such expenditure.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 27 Signatures.]

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TOLLS AT CAMPERDOWN TOLL-GATE.

(PETITION—CERTAIN RESIDENTS AT ASHFIELD, ENFIELD, &c.)

Ordered by the Legislative Assembly to be Printed, 28 March, 1871.

To the Honorable Legislative Assembly of New South Wales.

The Petition of the undersigned respectfully desire to call your attention to the unjust and exorbitant rates of toll levied at the Gate at Camperdown, on the Parramatta Road, and beg that your Honorable Assembly will reduce the same, for the reasons hereinafter mentioned :—

1. That the present charge for two-wheeled vehicles drawn by one horse is 6d., and that for four-wheeled vehicles is 9d.; and such charges press most heavily, in the first place, upon the poor earnings of a large class of woodmen, numbering upwards of 140, as also upon the earnings of many other persons who are employed in the city, and who travel daily in light two and four wheeled vehicles along the road.

2. That the average earnings of woodmen are 30s. per week,—a sum barely sufficient for their support, when it is considered that out of this amount they have to provide for the keep of two horses, beside other expenses, such as wear and tear of carts, &c.

3. That 6d. per day—amounting to 3s. per week, and 9d. per day—amounting to 4s. 6d. per week, is too large a proportion of the earnings of many persons who travel daily in two and four wheeled vehicles along this road.

4. That the greater proportion of this class bring their wood from the neighbourhood of Liverpool, and thereby have to meet the expense of the toll levied at the toll-gate on the Liverpool Road, beside the charge made at Camperdown, which two tolls amount to 1s. within a distance of nineteen miles.

5. That a large number of vehicles travel by the Missenden Road, through Newtown, at great inconvenience, being out of their direct road into Sydney, to escape the high toll at Camperdown, which, on two-wheeled vehicles, is 3d. in excess of the toll levied on the Missenden Road; and very many avoid the payment of the toll altogether by taking a short circuitous route.

6. That should the present rate of toll be continued, the large class of woodmen, many of whom are married men with families to support, will be reduced to great distress in consequence of the increasing scarceness of timber obtainable obliging them to pay a higher price on the spot where it is obtained; and also by having to travel miles for it through the bush, and the character of the country in which they live precluding the possibility of other means of occupation.

7. That the woodmen have to compete in the Sydney market with the increasing supplies brought by rail from the more distant parts of the country, where the wood is comparatively cheap.

8. That the amount annually paid in tolls by woodmen alone is about £900.

Your Petitioners therefore humbly pray that your Honorable House will remove a grievance felt to be unreasonable, and a heavy tax on their means of support.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 119 Signatures.]

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PICTON TOLL-BAR.

(PETITION—CERTAIN INHABITANTS OF PICTON AND ITS VICINITY.)

Ordered by the Legislative Assembly to be Printed, 2 May, 1871.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned inhabitants of Picton and its vicinity, in the County of Camden, New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners are residents in or near the village of Picton, on the Great Southern Road.

That prior to the extension of the Railway beyond Picton the traffic on the Great Southern Road was very extensive, and the revenue collected at the Picton Toll-bar, your Petitioners believe, must have amounted to a considerable sum; but since that extension, and the consequent cessation of the traffic, the said toll-bar has ceased to be sufficiently remunerative to be leased in the usual way, and the collection of tolls has been entrusted to the gatekeeper of the railway-crossing.

That the said toll-bar is at present exclusively local and partial in its exactions, affecting chiefly the residents in the Government township of Picton, now generally known as Upper Picton, whose only means of access to Railway, Post Office, Police Office, and stores, is by way of the said toll-bar, while the residents in the more extensive and populous districts of the Oaks, Menangle Road, &c., have free access to all without payment of toll.

Your Petitioners therefore humbly pray your Honorable House to take the premises into favourable consideration, and adopt such measures as in your wisdom shall be deemed necessary to relieve them from so partial an exaction, which your Petitioners feel to be a great injustice very injuriously affecting their interests.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 123 Signatures.]

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BRIDGE OVER BELUBULA RIVER, AT CANOWINDRA.
(PETITIONS IN FAVOR OF, AND CORRESPONDENCE.)

Ordered by the Legislative Assembly to be Printed, 19 August, 1870.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 27 April, 1870, praying that His Excellency the Governor would be pleased to cause to be laid upon the Table of this House,—

“Copies of all Petitions praying for the erection of a Bridge over the “Belubula River, at or near Canowindra, with copies of all letters, reports, “and documents connected therewith.”

(Mr. Driver.)

SCHEDULE.

NO.	PAGE.
1. Petition from Inhabitants, &c.	2
2. Statistical return of traffic	2
3. B. Stimpson, Esq., M.L.A., recommending Petition.....	3

BRIDGE OVER BELUBULA RIVER, AT CANOWINDRA.

No. 1.

To the Honorable the Minister for Lands and Works, &c., &c., &c., Sydney.

The Petition of the undersigned residents, proprietors of Forbes, Canowindra, Carcoar, and the circumjacent districts,

RESPECTFULLY SHOWETH:—

1. That a large traffic now exists, and has for some time existed, from Carcoar and the vicinity thereof to Forbes, across the Belubula River, at Canowindra, and along a line of Government Road.

2. That nevertheless and notwithstanding that is the only direct road from the places aforesaid to Forbes and the country beyond, the traffic is often diverted therefrom during periods of flood, when the Belubula River is not crossable, to the bridge at Cowra, a place situated about twenty-five miles out of the direct line of traffic, whereby much loss of time and expense and other serious inconveniences are occasioned to your Petitioners as well as to others having occasion to travel, or to drive, or take stock, or other merchandise to the town of Forbes, and the rich and populous district in the vicinity, as also the extensive pastoral districts beyond.

3. That a statistical account of the traffic over the said Belubula River, at Canowindra aforesaid, during the three months between the sixteenth of September, 1867, and the sixteenth of December, 1867, is hereunto appended, to which your Petitioners beg to draw your attention in corroboration of the statements above made.

Your Petitioners therefore pray that, taking the above facts into your consideration, you will be pleased to recommend that a sufficient sum be placed on the Estimates for the erection of a permanent Bridge over the Belubula River, at Canowindra, and that the same be laid before Parliament for its sanction at as early a date as possible.

And your Petitioners will ever pray, &c., &c., &c.

[Here follows 202 signatures.]

No. 2.

STATISTICAL Account of Traffic passing through Canowindra, and crossing the Belubula River at that place, during three months commencing 16th September, 1867, and ending 16th December, 1867.

No. 3.

B. STIMPSON, Esq., M.L.A., to THE SECRETARY FOR PUBLIC WORKS.

Blenheim Hall,
Carcoar, 27 July, 1868.

SIR,

I have the honor to present a petition from the inhabitants of Canowindra and the surrounding district, shewing the great necessity for a bridge over the Belubula River, at or near Canowindra, and as this road is of very great importance from the amount of traffic which you will see from the statistical account appended to the petition, the above road has been the main road to the Lachlan River for the last forty years; therefore I trust that you will see the great necessity for placing a sum of money upon the Estimates for the year 1869. I have forwarded a copy of the petition with the original, as it is in such a dilapidated condition.

Mr. Bennett is aware that a sum of money was voted by Parliament about nine years ago for a bridge over the Belubula River, at Canowindra, but owing to the Minister for Public Works at that time, Mr. Holroyd, he declined to carry out the object of the petitioners. Hoping that you will comply with the prayer of your petitioners,

I have, &c.,
B. STIMPSON.

Mr. Bennett, for report. B.C., 31/7/68.—J.R.

Mr. Dooner, for plan and section, with the usual information.—W.C.B., 3/8/68. Mr. Dooner, B.C. Report and section forwarded on the 1st of September, 1868.—P.D.

No. 4.

MR. SUPERINTENDENT DOONER TO THE COMMISSIONER FOR ROADS.

Cowra, 19 August, 1868.

SIR,

I am in receipt of your instructions of the 3rd instant, relative to a section, &c., required for a bridge over the Belubula River, at Canowindra.

I have to report that the township of Canowindra is laid out on the western bank of the river, and on the eastern bank opposite the township the land is purchased. I am unable to trace the streets or roads on the ground, and as some of the town allotments are said to be alienated I have to request a plan of the town to enable me to select a site for the proposed bridge.

I have, &c.,
P. DOONER.

Mr. Acheson to ask at Surveyor General's Office for lithograph, or get tracing if not lithographed.—W.C.B., 24/8/68.

Lithograph sent to Mr. Dooner.—F.W., 24/8/68.

No. 5.

SUPERINTENDENT DOONER'S REPORT.

Cowra, 1 September, 1868.

SIR,

In accordance with your instructions of the 3rd ultimo, relative to a bridge over the Belubula River, on the road from Carcoar to Forbes, I have to report that I have examined the neighbourhood, and herewith forward two sections of the river.

Appendix A.

There are two roads from Carcoar to the Lower Lachlan; the road sketched in red on the accompanying plan has been surveyed and opened for traffic by the officers of the Lands Department, and the road tinted in blue has also been opened for traffic as far as Canowindra. The petition asks for a bridge on the Carcoar to Forbes Road (which is tinted in red on plan). This is the most direct and best road, but if the bridge is built here it will be of little service to the people in the neighbourhood of Canowindra.

Appendix B.

The town of Canowindra is laid out on the southern bank of the river, and the post office is in the inn on this side. On the northern side there are two business houses, the police barracks, and two or three places of residence. Although the road from Carcoar to Forbes, *via* Canowindra, will be something the longest, and the road from the junction of the two roads (tinted in blue) is not quite as good as the more direct road—a bridge at Canowindra will answer all purposes.

The site selected at Canowindra will cross from the town on to a reserve and cross to the proclaimed road.

The Belubula River is very thickly timbered with oaks which grow on the verge of the stream; the banks are of alluvial deposit, and the bed of the stream and substratum under the banks is fine gravel and sand. The borings given on the sections are the deepest for which I had appliances, and an iron bar entered to the depth shown very freely; an extra depth will have to be allowed for in determining the length of the piles. The best timber in the district is flooded red-gum, which may be taken at a maximum length of 30 feet. Material for embankments and for metalling approaches can be easily procured.

Canowindra site.

The river banks and slopes at this place are well grassed, showing very little scour; but the banks are scouring considerably lower down stream, particularly so opposite Icely-street. The river overflows its banks above the site here proposed, and at high water the current sets in very rapidly along the foot of the ridge on the southern or Canowindra side; a first class culvert will be required in the approach on this side. A culvert will also be required in the approach on the northern side. Judging from the heaps of drift piled up against the trees, I am of opinion that this bridge will require to have a central span of at least 80 feet.

Carcoar to Forbes Road.

This road crosses the Belubula about three miles above Canowindra; the formation of the banks, &c., is the same as at Canowindra, except that the banks are crumbling away very rapidly from the action of the stream. On the southern side the river overflows its banks about a mile above the site for proposed bridge, and the approach to the bridge will be impassable long before the flood reaches its maximum level, and the drain shown on section has been formed to keep the river bank dry at ordinary floods. On the northern side the river overflows some four or five miles up, and the stream follows the base of the range and flows very rapidly; it will be necessary to provide for a culvert in each approach, otherwise the traffic will be stopped long before the flood reaches its maximum level.

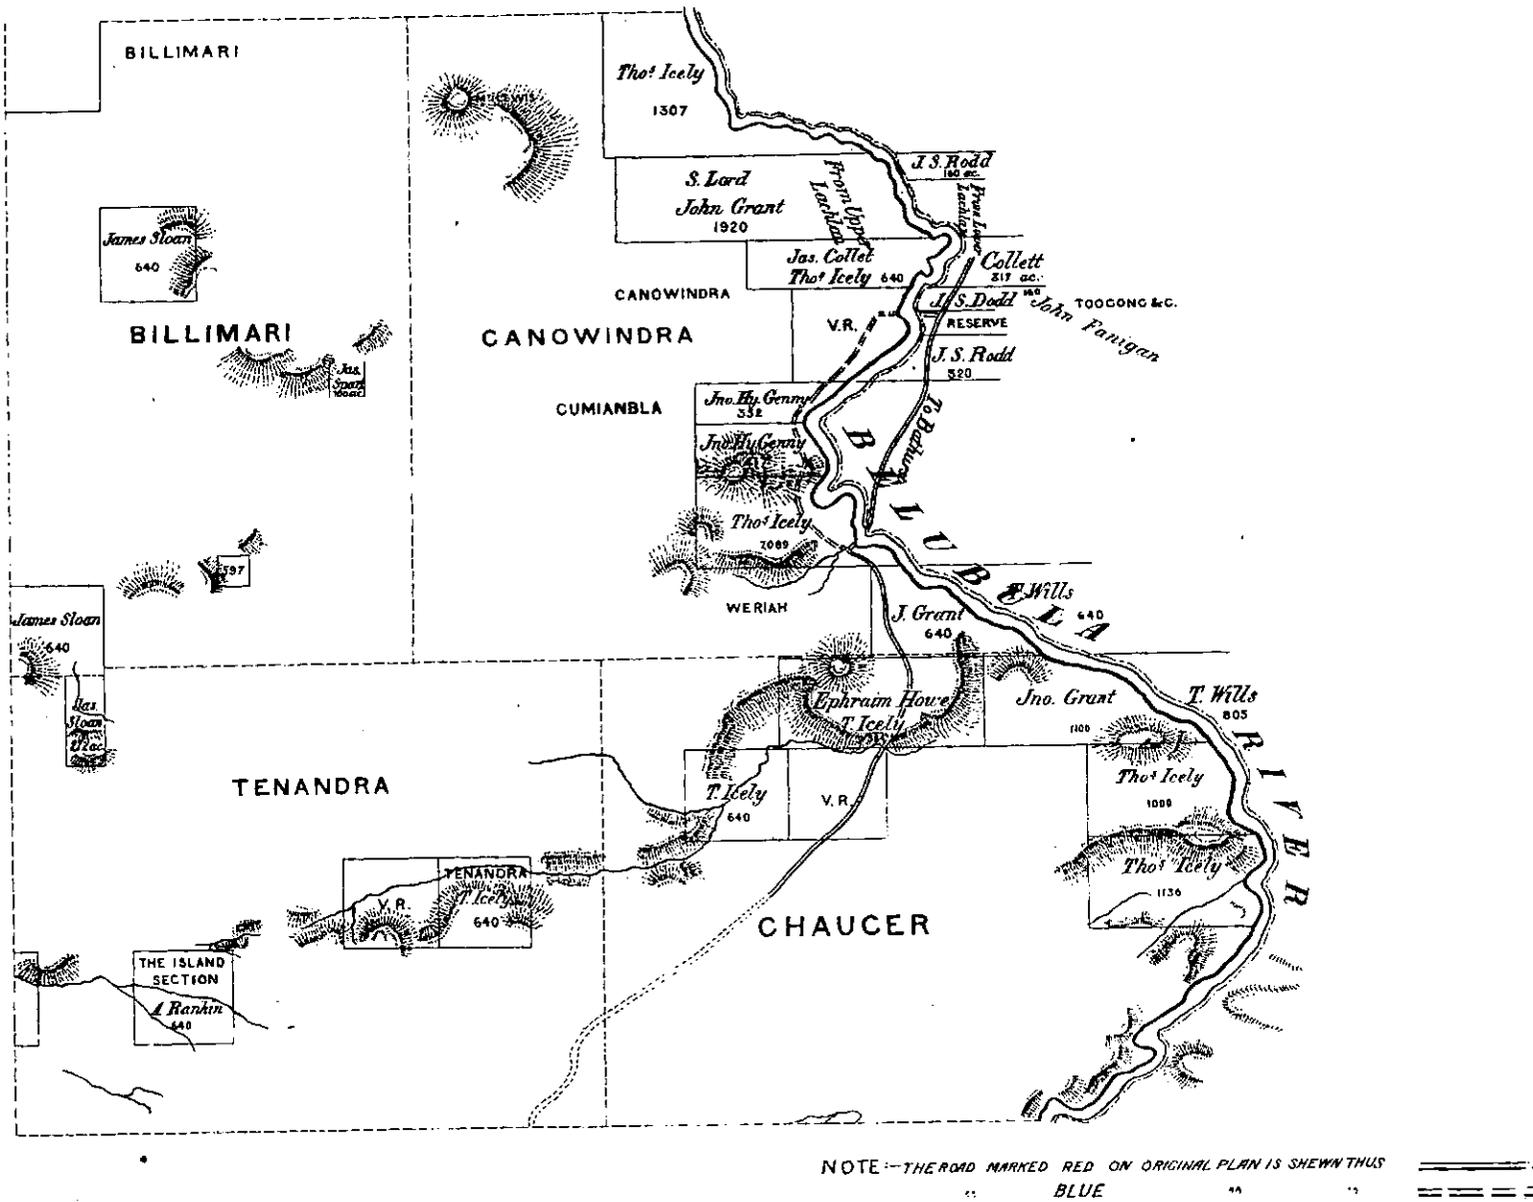

This site will require a bridge having a central span of 80 or 90 feet. The flood levels given have been taken from flood marks on trees, as no reliable information could be got from persons in the neighbourhood, as they contradict each other in their statements.

I have, &c.,
P. DOONER.

A sum recommended to be placed on the Estimates.—W.C.B., 4/9/69.

[Two Plans.]

APPENDIX A

(Sig. 55.)

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGE OVER THE HAWKESBURY, AT WINDSOR.

(PETITION—CERTAIN INHABITANTS OF WINDSOR, WILBERFORCE, AND THE ADJACENT DISTRICTS.)

Ordered by the Legislative Assembly to be Printed, 28 October, 1870.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of Windsor, Wilberforce, and the adjacent neighbourhood,—

RESPECTFULLY SHOWETH:—

That for a number of years past a ferry has been established over the River Hawkesbury, at Windsor, connecting Windsor with Wilberforce, at which a punt has been plied for the transmission of horses, carts, carriages, and other heavier traffic.

That great delays and other inconveniences have frequently arisen to the public in consequence of so slow a process as a punt only being available for the heavy traffic. Occasionally the punt has met with accidents (having been sunk twice during the past few years), and in times of freshes and floods it is wholly unworkable, to the great detriment and injury of the inhabitants of these parts.

During the recent heavy freshes and floods the punt has not been workable for more than one clear month for a period of five months, causing the loss of many thousands of tons of hay, straw, and potatoes, as well as many thousands of bushels of maize, oats, wheat, and other grain, which, in consequence of the farmers not having means of exit to market, were destroyed by a large flood before traffic could be resumed.

Further than this, the recent floods have caused extensive shoals of sand in the bed of the river, in consequence of which the punt has been unworkable for several hours every day (excepting at the swell of the tides), for teams laden with produce; and in several instances, where heavy loads have been taken on, the punt got aground and could not be moved till floated off by the tide, and in some instances the teams had to be unloaded; consequently during the intervals alluded to numbers of people were delayed for a considerable time. Two thousand sheep, which crossed on or about the 9th of August last, delayed the ordinary traffic for over a period of three hours.

That there being a large agricultural population at Wilberforce, Portland Head, Colo, and the Lower Hawkesbury, and an immense quantity of land under cultivation producing very large returns, as reference to the Statistical Register will show, the traffic of goods, cattle, and farm produce across the river at Windsor on the way to market is very considerable, as is evidenced by the fact that the dues derivable from the ferry have been let for the past ten years at an average of about £300 per annum, even at the present very low rates of toll; and the frequent occurrence of floods and freshes during that period has tended to prevent a higher revenue being derived therefrom. Your Petitioners can confidently assert that the rental would be considerably augmented if a Bridge were erected, for your Petitioners would gladly pay a higher rate of toll for the convenience of a Bridge.

That independent of the traffic of the inhabitants in the immediate neighbourhood, the ferry is used more or less by the residents in the police district of Windsor.

That from the foregoing, and other reasons too numerous to embody in a Petition, your Petitioners are of opinion that the time has arrived when it is most desirable and expedient that a Bridge should be erected across the Hawkesbury, at Windsor, to be under the control and responsibility of the Government.

Your Petitioners therefore humbly pray your Honorable House to take the premises into your favorable consideration, and to grant such relief to your Petitioners as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 221 Signatures.]

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGE OVER THE RICHMOND RIVER AT CASINO.

(CORRESPONDENCE, MINUTES, &c., RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 29 March, 1871.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 8th November, 1870,—praying that His Excellency will be pleased to cause to be laid upon the Table of this House,—

“Copies of all Petitions, Correspondence, Reports, Minutes of the Executive Council, and other Documents, relative to the proposed erection of a
“Bridge over the Richmond River at Casino.”

(Mr. Garrett, on behalf of Mr. Bawden.)

BRIDGE OVER THE RICHMOND RIVER AT CASINO.

MINUTE OF THE COLONIAL SECRETARY, AND MINUTES THEREON.

THE Minister for Works will oblige by taking into consideration the advisability of erecting a bridge over the Richmond River, at Casino.

My attention has been called to its necessity by Mr. Stocks, of that place, on behalf of himself and others.—

JOHN R., 8th February, 1869.

The Under Secretary for Public Works, B.C., 8th February, 1869.—H.H.

Mr. Bennett, for report, B.C., 9/2/69.—J.R.

Mr. Wood will on the first opportunity make a section of the most advisable site for a bridge at Casino, which I believe is some distance above Mrs. Manby's Inn.—W.C.B., 9/2/69.

Mr. Wood, B.C.

The Honorable the Chief Secretary.—J.S., 10/2/69.

Seen—JOHN R., 19 March, 1869. Await further communication.—19 March.

Has the Under Secretary for Public Works any further information to communicate? B.C., 5 Aug./69.—H.H.

Mr. Bennett, for report, B.C., 6/8/69.—J.R.

T. BAWDEN, Esq., M.L.A., to THE MINISTER FOR WORKS.

Grafton, 22 June, 1870.

SIR,

I do myself the honor to direct your attention to the great necessity existing for the erection of a bridge over the Richmond River, at Casino, in the hope that in the preparation of the Estimates for 1871 some provision may be made for the work.

I do not know that I need do more than refer you to Mr. Bennett, the Commissioner for Roads, who I believe is thoroughly aware of the necessity for the erection of a bridge at Casino, and the importance of the work, not only to the Richmond River people and district, but also to those on the Tweed River, besides being a means towards the settlement of the rich lands lying between the Richmond and Tweed Rivers.

Neither is it necessary for me to do more than refer to the fact that some time back a contract was taken for the erection of a bridge, and afterwards, as I understand, cancelled for some reason or other.

I trust that you will please inquire into this matter, and have a sum placed on the Estimates for the carrying out of the work, it being one of great importance and of urgent necessity.

I have, &c.,

T. BAWDEN.

Mr. Bennett, for report, B.C., 29/6/70.—J.R.

Submitted with Estimates.—W.C.B.

PETITION.

(Presented by T. Bawden, Esq., M.L.A.)

To the Honorable the Minister for Works.

The humble Petition of the undersigned residents on the Clarence, Richmond, and Tweed Rivers,—

HUMBLY SHOWETH:—

1. That the township of Casino is situated on the north and south banks of the Richmond River, but nearly all the inhabitants reside on the north side, which can be reached from the south only by crossing the river at a ford which even in dry weather is exceedingly unsafe.

2. That the Richmond River is frequently flooded to such a height that it is impossible to cross it, and that at such times communication with the southern and western parts of the Colony, and with many of the townships on the Richmond River, is entirely cut off.

3. That even when the river rises so little as one foot above its ordinary level, which has happened several times in every year, it cannot be crossed without extreme danger, and that attempts to cross it at such times for important and pressing purposes have on many occasions resulted in great destruction of property and loss of life.

4. That in consequence, your Petitioners have been put to very great inconvenience and have suffered much loss, inasmuch as the mails from and to Casino and the other townships on the Richmond River have been frequently delayed, and all traffic with other places suspended for many days.

5. That the Post Office at Casino is situated on the north side of the river, and through that office mails pass from the southern and western parts of the Colony, to and from the other postal towns on the Richmond River, Kynumboon on the Tweed River, and Brisbane and other towns in Queensland. That the Crown Lands Office for the Richmond River, the Office for the registration of Births, Deaths, and Marriages, and other Offices connected with the Government, are at Casino on the north side of the river, where also the District Court for that portion of the Colony is now held.

6. That from the want of a bridge at Casino, and the consequent uncertainty of communication with other places, the prosperous growth of the districts of the Richmond and Tweed Rivers have been greatly retarded.

7. That if a substantial bridge were erected at Casino, there is every reason to expect that a large trade would spring up between the Richmond River and the wheat-growing districts around Tenterfield, as each district would be a large and—but for the constant difficulty and danger and frequent impossibility of crossing the river—an easily accessible market for the products of the other.

8. That during the years 1862 to 1869, 611 conditional purchases of land were made on the Richmond River, comprising 60,816 acres, and that about 40,000 acres of land in that district were sold at auction during the same period.

9. That a very large quantity of land has been taken up on the Tweed River; and both on that river and on the Richmond an immense quantity of good agricultural land still remains unoccupied.

10.

10. That a large sum of money is annually paid to the Government for rent and assessment of runs in the districts before mentioned.

Your Petitioners therefore humbly pray that you will be pleased to take the premises into your favourable consideration, and cause such steps to be taken as may be necessary for the speedy erection of a substantial high-level bridge across the Richmond River at Casino. And your Petitioners, as in duty bound, will ever pray.

[Here follow 672 Signatures.]

Mr. Bennett, for report, B.C., 16/8/70.—J.R.

£5,000 has been put on the Loan Estimates for 1871 for a bridge here.—W.C.B., 18/8/70. Under Secretary, B.C. Inform.—18/8/70.

THE UNDER SECRETARY FOR PUBLIC WORKS to T. BAWDEN, Esq., M.P.

Department of Public Works,
Sydney, 22 August, 1870.

SIR,

In reference to a petition from the inhabitants of the Clarence, Richmond, and Tweed Rivers, praying for the erection of a bridge at Casino, and presented by you on the 15th instant,—I am directed by the Honorable the Secretary for Public Works to inform you that the sum of £5,000 has been placed on the Estimates for next year for the purpose referred to.

I have, &c.,
JOHN RAE.

[3d.]

Sydney : Thomas Richards, Government Printer.—1871.

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

YASS BRIDGE.

(CORRESPONDENCE RESPECTING INJURY TO SUPERSTRUCTURE BY FLOOD.)

Ordered by the Legislative Assembly to be Printed, 21 April, 1871.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 4th October, 1870, That there be laid upon the Table of this House,—

“Copies of all Correspondence between the Government and the Contractor
“for the Yass Bridge, which has taken place before and after the super-
“structure was swept away from the top of the piers into the river.”

(Mr. Buchanan.)

YASS BRIDGE.

YASS BRIDGE SUPERSTRUCTURE.

HEREWITH is forwarded, for the approval of the Hon. the Secretary for Public Works, and for insertion in the Gazette, an advertisement inviting tenders for the superstructure of Yass Bridge.

The estimated cost is—

For section 1.....	£5,731 14 0
2.....	1,820 0 0
	£7,551 14 0

to be defrayed from vote taken on Estimates 1868 for £10,000.—W.C.B., 27/8/68.

Tenders to be opened on the 29th proximo.—28/8/68.

Approved—J.B., 29/8/68.

Department of Public Works,
Sydney, 26 August, 1868.

YASS BRIDGE.

TENDERS will be received at this office until noon of Tuesday, the 29th day of September next, from persons willing to contract for the construction and delivery at Railway Station, Redfern, of wrought iron superstructure for Bridge at Yass, with separate tenders for the erection of same at Yass.

Plan, specification, and form of tender, may be seen at the office of the Commissioner for Roads, Sydney. Tenders to be addressed to the Under Secretary for Public Works, Sydney, and to be marked outside "Tender for Superstructure, Yass Bridge."

JAMES BYRNES.

Department of Public Works,
Sydney, 29 September, 1868.

Estimated cost.....	£7,551 14 0
Amount voted	10,000 0 0
Amount of tender	7,111 15 0

THE tenders for the undermentioned work, four in number, are referred to the Commissioner for Roads for report.

JOHN RAE.

Construction and erection of Iron Superstructure, Yass Bridge. B.C.

The tenders are—

1. Joseph Mather, for section one	£5,400 0 0
2. Hanright & Co., for section two	1,980 0 0
3. P. N. Russell & Co., for section one	5,131 15 0
" " for section one and two	7,731 15 0
4. Thos. M'Arthur & Co., for section one	6,209 12 0

For section one the tenders are—

1. Joseph Mather	£5,400 0 0
2. P. N. Russell & Co.	5,131 15 0
4. Thos. M'Arthur & Co.	6,209 12 0

For section two the tenders are—

2. Hanright & Co.	£1,980 0 0
3. Russell & Co.	2,600 0 0

It will be perceived that Russell & Co. are the lowest for section one by £268 5s., but their tender for section two is £620 more than Hanright & Co.

I recommend the acceptance of their tender for the construction in the ordinary course, being the lowest, but I have considerable doubt whether the lowest tender for section two should be accepted; the tenderer is an unknown man, lately come up from New Zealand; his sureties may be good for the amount required for section two, but should any accident occur from floods or other cause, there would be a difficulty in recovering the cost of the ironwork if seriously damaged. The combined tenders of Mather's and Hanright's would amount to £7,380, being £351 15s. less than Russell's; the combined tenders of Russell and Hanright would be £7,111 15s.—W.C.B., 29/9/68. Under Secretary, B.C.

Approved, P. N. Russell and Hanright & Co.—the latter to make deposit according to specification.—J.B., 2/10/68.

THE UNDER SECRETARY FOR PUBLIC WORKS to MESSRS. HANRIGHT & CO.

Department of Public Works,
Sydney, 3 October, 1868.

GENTLEMEN,

Your tender, not dated, for erection only of iron superstructure of Yass Bridge, for the sum of £1,980, having been accepted, I am directed to refer you to the Commissioner for Roads for further information, and also for the purpose of signing the necessary bond for the due observance of your contract.

I am, &c.,
JOHN RAE,
Under Secretary.

MESSRS.

MESSRS. HANRIGHT & Co. to THE UNDER SECRETARY FOR PUBLIC WORKS.

Care of Messrs. Ward & Co.,
3, Bridge-street,
Sydney, 13 October, 1868.

SIR,

With reference to your intimation of acceptance of our tender for erection of iron superstructure of Yass Bridge, which we received on the 5th instant, we have the honor to request that the condition requiring a cash deposit may be modified in so far as that the acceptance of approved sureties may be substituted.

We base this application on the fact that several months must necessarily elapse before we can enter on our contract, during which time the money, which in the course of our business would be repeatedly turned over, will be locked up; further, we shall have to expend a considerable sum on the construction of the staging, for which we will not be entitled to any draft on the Government.

We have, &c.,
HANRIGHT & CO.

Mr. Bennett, for report.—B.C., 16/10., J.R. Hanright and Co's. objection may be met by informing them that their tender will be accepted when the work is ready to be commenced, on the condition of his then depositing the £200.—W.C.B., 17/10/68. Under Secretary, B.C. Approved.—J.B., 21/10/68.

THE UNDER SECRETARY FOR PUBLIC WORKS to MESSRS. HANRIGHT & Co.

Department of Public Works,
Sydney, 22 October, 1868.

GENTLEMEN,

In reference to your letter of the 13th instant, pointing out that it will be some time yet before you are called upon to erect the superstructure of the Yass Bridge, and that therefore you should not be required to give cash security, as the money would be lying idle,—I am directed by the Honorable the Secretary for Public Works to inform you that the best way to meet your objection will be not to accept your tender until the work is ready for you to commence with, and then it will be accepted on condition of your depositing £200 as security for its due performance.

I have, &c.,
JOHN RAE.

MR. T. R. HANRIGHT to THE UNDER SECRETARY FOR PUBLIC WORKS.

Sydney, 22 December, 1868.

SIR,

Referring to my contract for the erection of the Yass Bridge, I have the honor to request that you will favour me with copies of all correspondence which has taken place between your office and myself (or Hanright & Co.)

My reason for making this request is that I have reason to believe that one letter at least has fallen into improper hands, never having reached me, and because other documents of mine have been acquired by a person who has no right to them, and who refuses to give them up.

I shall be glad to have timely notice as to when it will be necessary for me to commence work.

All communications for me may be addressed to No. 130, Pitt-street.

I have, &c.,
T. R. HANRIGHT.

Mr. Bennett for report, in the first instance.—B.C., 22/12/68., J.R.

MR. J. MUSSON to THE SECRETARY FOR PUBLIC WORKS.

3, Bridge-street,
Sydney, 23 December, 1868.

SIR,

In reference to the tender of Hanright & Co. for the erection of the Bridge at Yass, I have the honor to state that I represent the Company. Being S. I. Down, he was not in Sydney at the time the tender was sent in. I prepared and computed the tender in conjunction with Hanright. It was from my knowledge and experience that the value of the work was arrived at. It was the friends of Mr. Down and myself who were named as sureties, Hanright being quite a new arrival in the Colonies, and quite unacquainted with the value of work here.

It was myself who had the various interviews with the late the Honorable Secretary for Works, and it was on my representation that he conceded the point for our not paying the cash deposit of £200 until the work was ready to be commenced.

I claim, under the circumstances, that the name of Stewart I. Down may be inserted in the contract bond.

I have, &c.,
JOHN MUSSON.

As this letter appears to arise from some dispute between the persons representing themselves as Hanright & Co., I think that previous to giving any information they should be asked to name the members of the firm and produce deed of partnership. It will be seen by my original report on those tenders that I did not consider this man a very eligible person. It would be very desirable if the erection and manufacture of the bridge was in the same hands; the only reason for inviting separate tenders is to admit of iron manufacturers in the Colony who will not tender for erection having an opportunity of tendering for construction.—W.C.B., 23/12/68. Under Secretary, B.C. Submitted.—24/12/68., J.R. Approved.—J.S., 24/12/68.

THE

THE UNDER SECRETARY FOR PUBLIC WORKS to MESSRS. HANRIGHT & Co.

Department of Public Works,
Sydney, 24 December, 1868.

SIR,

In reference to your letter of 22nd instant, requesting to be furnished with copies of all correspondence which has taken place between yourself, or Hanright & Co., and this office, in connection with the contract for the erection of Yass Bridge, alleging as a reason for this request that you believe that letters intended for you have been intercepted by a person who has no right to them,—I am directed by the Honorable the Secretary for Public Works to inform you, that as it would appear that your application arises from some dispute between the members representing the firm of Hanright & Co., it will be necessary, before any information of the kind asked for can be afforded, that this department should be furnished with the names of the members of the firm, and also with the deed of partnership.

I have, &c.,
JOHN RAE.

ROBERT THOMSON, Esq., to THE UNDER SECRETARY FOR PUBLIC WORKS.

130, Pitt-street,
Sydney, 29 December, 1868.

SIR,

In reply to your letter of 24th instant, Mr. Hanright requests me to point out that nothing contained in his letter of 22nd instant implies that his application arises from some dispute between the members representing the firm of Hanright & Co., and that he is at a loss to know how the Honorable the Secretary for Public Works has arrived at that conclusion.

He further desires me to state that he, Thomas Rice Hanright, is the sole representative of the firm of Hanright & Co., and that there is therefore no deed of partnership between him and any other person in respect of the Yass Bridge Contract.

After he is informed when he will be expected to commence operations, it may be that he will form a partnership, of which due notice will be given. Meantime he repeats the request contained in his letter of 22nd instant. He also requests me to say that he will call upon you at any time after to-morrow which you may fix, in case you may desire any further information from him.

I am, &c.,
ROBERT THOMSON,
Agent for J. K. HANRIGHT.

MINUTE OF THE UNDER SECRETARY FOR PUBLIC WORKS.

Department of Public Works,
Sydney, 4 January, 1869.

Erection of Bridge at Yass.

THE lowest tender for this work was that of Hanright & Co. for £1,980. Mr. Bennett, however, had considerable doubt as to recommending it; but it was ultimately accepted, on condition of the deposit being made in accordance with the specification. The time allowed expired without the money being deposited, but on the representation of Mr. Musson, the Minister conceded the point of not requiring the money to be deposited until the work was ready to be commenced.

Mr. Musson now claims that Mr. Down's name may be inserted in the bond as one of the firm. Mr. Bennett thinks it will be most inconvenient for the construction of the bridge to be separated from the erection of the superstructure.

Probably the opinion of the Crown Solicitor might be obtained whether under the circumstances the Government can decline to accept the tender of Hanright & Co.

J.R., 4/1/69.

Approved.—J.S., 6/1/69. Crown Solicitor.—B.C., 6/1/69, J.R.

T. B. WATSON, Esq., to THE UNDER SECRETARY FOR PUBLIC WORKS.

Lloyd's Chambers,
11 January, 1869.

Re Hanright's Contract.

SIR,

In consequence of a Mr. John Musson having, as I am instructed, amongst other places, gone to your department and represented himself as a partner of my client, Mr. Thomas Rice Hanright, who is the contractor for the Yass Bridge, Mr. Hanright, on the 29th December last, instructed his agent, Mr. Thomson, of Pitt-street, to write you on the subject. No reply having been received by my client to Mr. Thomson's letter, I beg leave, as Mr. Hanright's solicitor, to inform you that he is not in partnership with any person, either in the contract for Yass Bridge or other contracts that he is now engaged in. Mr. Musson being an uncertificated insolvent, it is self-evident that he has not any legal existence, therefore he could not consistently enter into transactions like those in question without the intervention of his Official Assignee; thus it is not possible that I would permit my client to negotiate with Mr. Musson, after his having ascertained his (Mr. Musson's) position.

I remain, &c.,
T. B. WATSON.

Forwarded to Crown Solicitor, with reference to papers sent him on 7th instant.—B.C., 13/1/69, J.R.

THE

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 16 January, 1869.

SIR,

I have the honor to return the papers relating to the tenders for the Yass Bridge, and, in answer to the question in your memo., of date 4th instant—whether under the circumstances therein stated the Government can decline to receive the tender of Hanright & Co., to state that I think from the memo. indorsed upon their tender it will be found that a formal acceptance was sent on 3rd October last. Hanright and Co.'s letter of 13th October mentions the receipt of an acceptance of their tender, and requests that they may be allowed to substitute for the deposit which under the conditions they were required to make, on the ground that several months must elapse before they can enter upon the work. Your letter of 23rd October suggests that this inconvenience may be avoided by not accepting until the work is ready to be commenced, and that it should then be accepted on condition of the £200 being deposited; but I do not find anything with the papers that Hanright & Co. agreed to the acceptance already sent being considered as withdrawn, and it would therefore seem that a contract has been made with them, followed by a negotiation for a variance in one of the conditions which has not been finally agreed to. Until further informed upon this head, I cannot advise as to the power of the Government to withdraw the work from the contractors. I notice also that the letter from the contractor's solicitor, forwarded by you to me yesterday, refers to the tender as having been accepted, and not as still open to be accepted or refused.

I have, &c.,
JOHN WILLIAMS.

Submitted. Under the circumstances I presume the Government must carry out the arrangement with Hanright & Co., provided the deposit be made when demanded.—J.R. Approved.—J.S., 20/1/69. Mr. Bennett, for information.—B.C., 22/1/69, J.R. As it will be a very inconvenient arrangement to give this contract to Hanright, if it can possibly be avoided, I would point out that the original acceptance never reached Hanright, as it was received by Musson, then representing the firm, and it is a question as to the identity of this man now representing Hanright, as Musson has stated in this office that he was known as Rice, in New Zealand.—W.C.B., 27/1/69. Under Secty., B.C. Crown Solicitor might be able to suggest a means of carrying out Mr. Bennett's idea of calling for fresh tenders.—J.S., 29/1/69. B.C., 29/1/69., J.R.

MR. J. J. LEE TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 1 April, 1869.

SIR,

I have the honor to return herewith the papers relating to Messrs. Hanright & Co.'s contract for the erection of iron superstructure of Yass Bridge, and to state that I have submitted same to the Honorable the Solicitor General, who has been pleased to write an opinion thereon, a copy of which will be found on the other side herof.

I have, &c.,
(For the Crown Solicitor),
J. J. LEE.*Opinion of the Solicitor General.*

The Government is bound by its acceptance of Hanright & Co.'s tender, on the 3rd October last; and moreover, the Government has suggested, in the letter of 22nd October, a way by which Hanright & Co.'s request of 13th October might be met. It was unnecessary that Hanright & Co. should reply to this letter of 22nd October; it was for their convenience, and their acquiescence may be taken for granted. In whatever light this question is viewed, it shows a subsisting contract by the Government through the Minister for Works with Hanright & Co., for the erection of a bridge at Yass, and I see no way of avoiding the contract if H. & Co. fulfil the terms under which they tendered, with or without the modification suggested in Mr. Rea's letter of 22nd October. In fact, the Government has placed Hanright & Co. in a position to play fast and loose in this matter. They having suggested that when the time has arrived when the work shall be commenced, they will then call upon Hanright & Co. to pay the £200; Hanright & Co. will then have an opportunity, and if convenient to them, to withdraw from the contract. In the meantime the Government is bound by their contract. The Government can only transact this business with Hanright & Co., or their recognized agents.—J.F.J., S.G. Mr. Bennett, for information.—B.C., 2/4/69.—J.R. Mr. Hanright might now be called upon to deposit £198, and complete arrangements.—W.C.B., 14/4/69. Under Secretary, B.C. Approved.—J.S., 15/4/69.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. HANRIGHT & Co.

Department of Public Works,
Sydney, 16 April, 1869.

GENTLEMEN,

In reference to my letter of 22nd October last, I am now directed by the Honorable the Secretary for Public Works to request that you will at once deposit at the Colonial Treasury the sum of £198, as security for the due fulfilment of your contract for the erection of the iron superstructure of the Yass Bridge.

I have, &c.,
JOHN RAE.

THE UNDER SECRETARY FOR PUBLIC WORKS TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Department of Public Works,
Sydney, 16 April, 1869.

SIR,

I am directed to inform you that Messrs. Hanright & Co., whose tender has been accepted for the iron superstructure of the Yass Bridge, have been requested to deposit at the Treasury the sum of £198, as security for the due performance of their contract.

2. I am to request that you will have the goodness to say, within seven days from this date, whether the money has been paid in.

I have, &c.,
JOHN RAE.

Works Department to be informed. Amount has this day been paid by Wm. Chatfield, Esq., on behalf of the tenderers.—J.N. Under Secretary for Public Works, for information.—B.C., 24/4/69, H.L.

MR.

MR. T. R. HANRIGHT TO THE UNDER SECRETARY FOR PUBLIC WORKS.

130, Pitt-street,
Sydney, 20 April, 1869.

SIR,

Referring to my letter of December 22nd last, I have now the honor to repeat my request, that I may have timely notice as to when it will be necessary for me to commence work at the erection of Yass Bridge. I have just completed one contract, and I am now anxious to arrange my time for other operations. My address continues the same as I gave you in my letter above referred to.—130, Pitt-street.

I have, &c.,
T. R. HANRIGHT.

Mr. Hanright was requested, on the 16th instant, to deposit £198, and complete the arrangement. He might now probably be informed that if the amount is not deposited in the Treasury before Monday next his tender will be declined.—22/4/69, J.R. Approved.—J.S.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MESSRS. HANRIGHT & Co.

Department of Public Works,
Sydney, 23 April, 1869.

GENTLEMEN,

In reference to Mr. Hanright's letter of 20th instant, I am directed by the Honorable the Secretary for Public Works to call your attention to my letter of the 16th instant, requesting you to deposit in the Colonial Treasury the sum of £198, and to complete your agreement for the erection of the superstructure of Yass Bridge.

2. Mr. Secretary Sutherland desires me to inform you that if the amount in question is not deposited in the Treasury before Monday next, the 26th instant, the acceptance of your tender for this service will be cancelled.

I have, &c.,
JOHN RAE.

Sydney, 23 April, 1869.

With reference to the tender in the name of Hanright & Co., for the erection of the superstructure of the Yass Bridge, I beg to say that the firm of Hanright & Co. consists of John Musson and Stewart James Down.

T. R. HANRIGHT.

Witness—W. TRICKETT.

Mr. Bennett, for report.—B.C., 23/4/69., J.R. It seems to me Messrs. Hanright, Musson, and Down, are trifling with the Government. In the letter of Mr. Hanright's solicitor, of 11th January, he states that Hanright is not in partnership with Musson. I do not think this evident traffic in contracts should be allowed. I recommend that fresh tenders be invited, or Russell's tender accepted. Though £620 more than Hanright's, it would be a great advantage to have both contracts in one man's hands; in fact the contract would not have been divided in the first instance, but to give some Sydney firms who would not undertake work in the country an opportunity of tendering.—W.C.B., 23/4/69. Returned to Under Secretary with deposit receipt. Submitted.—23/4/69., J.R. As the money has been deposited by Hanright & Co., the contract may go on, but Mr. Hanright must sign as principal.—J.S., 24/4/69. The Crown Solicitor to prepare bond for Hanright, Musson, & Down.—J.R., B.C., 24/4/69.

THE CROWN SOLICITOR TO THE COMMISSIONER FOR ROADS.

Crown Solicitor's Office,
Sydney, 19 May, 1869.

SIR,

Referring to the instructions contained in your minute of the 24th April, on the accompanying letter from Mr. T. R. Hanright, I have the honor to transmit the necessary bond, executed by Messrs. Hanright, Musson, and Down, to erect a bridge at Yass.

The notice, specification, and general conditions herewith, and the plans in the office of the Commissioner for Roads, Sydney, have been signed and witnessed in the usual manner.

I enclose Treasury receipt for deposit as security.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Bond, &c., to Mr. Bennett, who is requested to acknowledge their receipt.—B.C., 21/5/69., J.R. Acknowledged, 26/5/69.

MESSRS. P. N. RUSSELL & Co. to THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney Foundry,
Sydney, 18 November, 1869.

SIR,

We understand a complaint has been made to you respecting a portion of Yass Bridge, and that a remark has been made at the station to the effect "that no wonder Russell & Co. did not wish the work to be seen before delivery," by certain parties who were refused admittance to our works. We have the honor to inform you that we wish to turn the work out in every way to your satisfaction and with credit to ourselves; and to prevent further remark, we should prefer that Mr. Whiteside inspect and pass every piece of the work before it leaves our works; we have therefore stopped the delivery until we hear from you.

We have, &c.,
P. N. RUSSELL & CO.

THE

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. P. N. RUSSELL & Co.

Department of Public Works, Roads Branch,
Sydney, 19 November, 1869.

GENTLEMEN,

In reply to your letter of yesterday's date, I have to inform you that no complaint has been made to me as to the Yass Bridge. Mr. Whiteside was in the present instance directed to inspect every piece before it left your establishment, and I have myself seen it when put together there.

In order, as far as in my power, to assist in clearing up what appears to me an unfounded statement, I have caused the enclosed communication to be made to Mr. Musson, and have also requested that pending his reply no further conveyance of the iron by railway will be made.

I am, &c.,

WILLIAM C. BENNETT,
Commissioner and Engineer.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MR. J. MUSSON.

Department of Public Works,
Roads Branch, Sydney, 19 November, 1869.

SIR,

Having been informed by Messrs. Russell & Co. that you have been complaining that some of the work of iron bridge for Yass delivered at the Railway Station is improperly done,—I have to request you will at once be good enough to state in writing what the defects are, in order that, in justice to Messrs. Russell and this department, the work may be inspected, and if really defective remedied. I have prohibited transport of any more material from the Railway Station until this is cleared up.

I am, &c.,

WILLIAM C. BENNETT,
Commissioner and Engineer.

THE COMMISSIONER AND ENGINEER FOR ROADS TO THE TRAFFIC MANAGER, SYDNEY STATION.

Department of Public Works,
Office of Engineer for Roads,
Sydney, 19 November, 1869.

SIR,

I request you will not, until the receipt of a communication from this office to that effect, forward by railway any more ironwork, &c., for Yass Bridge, from the works of P. N. Russell & Co.

I am, &c.,

WILLIAM C. BENNETT,
Commissioner and Engineer.

Ask Mr. Bennett for instructions as to disposal of a considerable quantity lying at this station (very much in the way), also for three trucks loaded up.—THOS. CARLISLE, 19/11/69. Will Mr. Bennett be good enough to say what is to be done, as we really want these trucks, as well as the space occupied by the material.—R.M., 20/11/69. Commissioner for Roads. Mr. Whiteside please inspect this work minutely and let it proceed, and arrange with the Railway Department to detain the portion not loaded.—W.C.B., 20/11/69. Inspected work and arranged with Railway Department.—E.T.W., 20/11/69. Will Mr. Moody have the goodness to forward the remainder of the work with as little delay as possible.—W.C.B., 22/11/69. Seen, and instructions given.—R.M., 22/11/70. File.—W.C.B., 23/11/70. Mr. Musson has called at this office to represent that a number of the bolts are missing in the lattice bars now at the Railway Station, and that several pieces of the booms are defective. Will Mr. Whiteside inspect and report at once.—W.C.B., 29/11/69. Mr. Whiteside. Called at Railway Station relative to above; found the bolts omitted were those I requested Messrs. Russell & Co. to leave out and pack in boxes in consequence of their having cast-iron brackets attached to carry hand-rail. The defects in booms can only refer to rivet holes, which Mr. Musson has very likely detected in temporary angle-irons and plates as not coinciding with those next to them. Should any defect exist that has escaped my notice, will be made good by Messrs. Russell & Co. for their own credit, apart from their being bound by a separate clause in their contract to that effect.—E.T.W., 29/11/70. Send copy to Mr. Musson.—W.C.B., 29/11/69. Copy sent to Mr. Musson.—F.W., 30/11/69.

THE CHIEF CLERK, ROADS BRANCH, TO MESSRS. HANRIGHT & Co.

Department of Public Works,
Roads Branch, Sydney, 30 November, 1869.

SIR,

Referring to your verbal communication complaining of defective material for Yass bridge, I am directed by the Commissioner to transmit herewith a copy of Mr. Whiteside's report on the same.

I have, &c.,

F. J. WICKHAM,
Chief Clerk.

MR.

MR. J. MUSSON to THE COMMISSIONER AND ENGINEER FOR ROADS.

Box 197, P.O., Sydney,
19 November, 1869.

SIR,

I beg to offer to execute the following work in connection with the Yass Iron Bridge to your entire satisfaction, viz. :—Fixing the floor in place, timber and iron being provided by Government, at per cubic foot 2s. 10d. Fixing all other timber work (if required) at per cubic foot 2s. 6d. Tarring timber with kerosene tar, 9d. per square yard. Setting four granite blocks in cylinders, £5 each—£20.

I have, &c.,
JOHN MUSSON,
(For HANRIGHT & Co.)

THE COMMISSIONER AND ENGINEER FOR ROADS to MR. J. MUSSON.

Department of Public Works,
Roads Branch,
Sydney, 22 November, 1869.

SIR,

In reply to your communication of 19th instant, tendering for the fixing of the floor and setting four granite blocks on the cylinders of Yass Bridge,—I have to inform you that your offer for the flooring is declined, and that for setting the granite blocks is accepted at (£5) five pounds each, including any additional cement required.

I have, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

TELEGRAM from THE ROAD SUPERINTENDENT, YASS, to THE COMMISSIONER FOR ROADS, SYDNEY.

Please inform Musson that superstructure is being forwarded, that he ought to have some one to receive it, as Williams will leave to-morrow.—22 Nov., 1869.

THE COMMISSIONER AND ENGINEER FOR ROADS to MESSRS. HANRIGHT & Co.

Department of Public Works,
Roads Branch,
Sydney, 22 November, 1869.

GENTLEMEN,

The Superintendent having reported that some of the ironwork for Yass Bridge superstructure is now being forwarded to the bridge site, I request you will at once despatch an authorized agent to receive same, as provided in your contract for erection.

I am, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON to THE COMMISSIONER AND ENGINEER FOR ROADS.

Box 197, P.O.,
22 November, 1869.

SIR,

I have the honor to acknowledge the receipt of your letter of the 19th instant on the afternoon of the 20th (Saturday), in which you state that you had been informed by Russell & Co. that I had been complaining that some of the work of the iron bridge for Yass, delivered at the Railway Station, is improperly done, and requesting that I would state in writing what the defects are, in order that, if really defective, they may be remedied, and that you had prohibited the transport of any more material from the Railway Station until this is cleared up.

In reply, I beg to state that on Thursday last I was at the Railway Station making arrangements for sending off plant to Goulburn, and seeing the sections of the booms loaded. I examined them and found that a large number of the rivet-holes (apart from the springing of the iron) were most imperfectly executed, and had not been rimered at all; in fact, I do not think the specified rivet would have fitted half the holes.

Mr. John Russell having a few days before disclaimed all responsibility for the work when delivered at the Railway Station, I, as one of the contractors for the erection of this bridge, informed Mr. Whiteside of this defect that had escaped his inspection.

Afterwards I met Mr. Whiteside, accompanied by Mr. Myers, of Russell & Co., at the Railway Station, when he pronounced the work imperfect, requested that the iron should not be sent on, and ordered Mr. Myers to at once remedy the defect. Mr. Myers, both to me and Mr. Whiteside, quite coincided that the work was improperly done, and expressed great regret and annoyance at the oversight, and sent up hands to remedy it.

On Thursday I wrote a private note to Mr. Murray, of Russell & Co., that had reference to the above complaint and a conversation that took place a few days previously at his office.

I may mention that on the Saturday afternoon previous to receiving your letter, I met Mr. Whiteside in the street, who informed me that the defects of the work at the Railway Station had been remedied, and that he had passed it.

I have, &c.,
JOHN MUSSON,
pro HANRIGHT & Co.,
1, Argyle-place, Argyle-street.

Mr. Whiteside for report, more particularly as to the nature of the omissions.—W.C.B., 22/11/69. The omissions alluded to consisted of a few rivet-holes not having been rimered out to the proper size; and the work arrived at the Railway Station with this defect on account of Messrs. Russell's foreman having despatched it from their premises before my final inspection. The springing of the plates mentioned in this letter is no defect, but merely arises from their ends slightly overhanging on the trucks.—E.T.W., 22/11/69. File.—W.C.B., 27/11/69.

MR.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Box 197, P.O.,
Sydney, 23 November, 1869.

SIR,

We beg to ask permission to use any plant or material that the Government may have at Yass for the erection of the new bridge.

I will of course be responsible for the same, and return it in good order.

I have, &c.,
JOHN MUSSON.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. HANRIGHT & Co.

Department of Public Works, Roads Branch,
Sydney, 23 November, 1869.

GENTLEMEN,

In reply to your Mr. Musson's letter of this date, I have to inform you that I cannot give general permission for the use by contractors, of plant the property of the Government. If however you choose to submit a special list of plant, &c., the loan of which you require, it will be considered, and a reply sent in due course.

I am, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON TO E. WHITESIDE, ESQ.

1, Argyle-place, Argyle-street,
29 November, 1869.

SIR,

I beg to draw your attention to the fact that several of the bolts through the tubes of the lattices of the Yass Bridge, lying at the Railway Station, are missing; also that many of the rivet-holes in the booms are not of the specified size.

I am, &c.,
JOHN MUSSON.

Mr. Musson having made the within complaint to the Commissioner and Engineer for Roads previous to my receiving this, I reported upon them to him.—E.T.W., 1/12/69.

MESSRS. HANRIGHT & Co. TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 8 December, 1869.

SIR,

At your own request, I beg in writing to draw your attention that Mr. Meldrum objects to our removing the gallows on the down stream roadway of the old Yass Bridge. Without its removal we cannot complete our arrangements for the erection of the iron bridge. I have pointed out its necessity to Mr. Whiteside.

Without instructions from you to the contrary, it is our intention to lay first coat red, second white, third paint of a shade which we shall submit for your approval.

We are all but ready to proceed with the booms; and as it will be a heavy expense to me to keep mechanics under pay at Yass without work, we will thank you to inform us when it is probable the down stream girder will be at Yass with the rivets. The section of the lower boom was at the station here this morning.

If we are to provide lead between bed-plate and stones, please inform as to size and quantity.

We have, &c.,
HANRIGHT & CO.,
p. JOHN MUSSON.

MR. J. B. MELDRUM TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Yass, 11 December, 1869.

SIR,

I beg to request information as to whether Hanright & Co. have received your permission to use any portion of the substructure of the Hume Bridge, for carrying out their contract. During my absence from Yass, and without acquainting me of their intention, they removed two braces from each of the river piers, for the purpose of underpropping the centre tie-beam; and as the timber was too short for the purpose, one of the braces was cut into short lengths for scarfing. On making inquiry why this was done, Mr. Down informed me that they had your permission to use any timber they might find necessary for carrying out the contract. They have also removed the top bracing or gallows from the north and centre down-stream spans, but I have prohibited their removing the third until I either hear from you or until after Mr.

Decidedly not. The specification gives them the right to use any of the old timber, but none likely to endanger the traffic. They will have to pay for the timber cut up.

Mr. Whiteside to note this.

Mr. Whiteside to decide.

Mr. Whiteside will consider attention to public safety his first duty; no possibility of an accident occurring to be allowed.

Attention to the security of the lattice girder will be the duty only second in importance to the above. The gallowes frames for the roadway in use must be retained; and as Hanright & Co. have no doubt taken down the long timbers, they must restore them at once to the roadway, to remain in use. Mr. Whiteside to be careful that the ironwork of the present bridge is not made away with or wasted by Hanright & Co.

W.C.B., 13/12/69.

Whiteside arrives, as I consider it too great a risk to allow traffic to cross over with all the top bracing disturbed, more especially as the south middle bow seems so much decayed. I think the most judicious plan would have been to have carried out the original design, and built the up-stream truss on the outside of the bridge, and then diverted the traffic; for by so doing the possibility of any accident occurring would have been lessened considerably, whereas now there is nothing so likely or more probable.

I have, &c.,

J. B. MELDRUM.

MEMO.—I was not aware that Hanright & Co. had taken any of M'Namara's timber, until after it had been worked up in the traveller, nor was M'Namara himself; in fact, Hanright & Co. helped themselves without asking any questions, and when I spoke to the foreman on the subject, understood him to say that Mr. Musson had arranged for it when he was at Yass. Mr. Down however afterwards informed me that they had arranged with the Commissioner for the use of all new and old timber on the ground.

In accordance with the Commissioner's minute, I have prohibited Hanright & Co. from taking any more timber.

J. B. MELDRUM, 13/12/69.

The Commissioner for Roads.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. HANRIGHT & CO.

Department of Public Works,
Roads Branch,
Sydney, 15 December, 1869.

GENTLEMEN,

In reply to your letter of 8th instant, I have to inform you first, that Mr. Whiteside, who is at present on the ground, will give the necessary directions as to the removal of old bridge.

2. The whole three coats of paint to be used must be according to sample approved of, and now in this office.

3. No time will be lost in transmission of ironwork, nearly the whole of which has been forwarded from Sydney.

4. Lead for between bed-plates will be provided by the contractor for superstructure.

I am, &c.,

WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Box 197, P.O., Sydney,
13 December, /69.

SIR,

I beg to ask permission to use some new timber now at Yass Bridge; we will either replace or pay for it; we require it for the purpose of running the traveller on it.

I had ordered some months ago timber from Mr. Macnamara, which he now says he cannot deliver in consequence of being behind time in supplying the Government.

If you cannot grant us this request it will cause us delay; but if you do, will you please intimate the same to Mr. Whiteside at Yass.

I have, &c.,

JOHN MUSSON.
(For HANRIGHT & Co.)

As this timber is seasoning and very difficult to obtain, I do not think this permission can be given; however, as Mr. Whiteside is on the ground he can act as he considers most advisable to forward the work.—W.C.B., 13/1/69. Mr. Whiteside, B.C. Noted.—E.T.W., 16/1/69.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. HANRIGHT & CO.

Department of Public Works,
Roads Branch,
Sydney, 17 December, 1869.

GENTLEMEN,

In reply to your communication of 13th instant, I have to inform you that you can use any timber at Yass the property of the Government, strictly upon condition that you replace or pay for same if injured. This will not however be taken to imply that you were in any way authorized to use timber hitherto taken by you on false pretence of my having given permission, for which you have rendered yourselves liable to an action at the instance of the contractor for supply of timber.

Your

Your firm must at once take steps to replace any timber likely to be injured by your use, as I shall hold you responsible for any delay in flooring, and send up from Sydney any timber required to replace it at your cost, this conditional permission being only given from a sense of duty and anxiety to forward the work. I regret being obliged to state I do not consider you entitled to any consideration from this department. Your representative Mr. Musson is continually hanging about this office, impeding business, complaining that the ironwork was not forwarded fast enough, and now that the greater part of it is at Yass you have not one stick of timber or anything else requisite to proceed with the work.

I am &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON to THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 21 December, 1869.

SIR,

I have delayed replying to your letter of the 17th instant until I had heard from Yass.

You state that we were not authorized to use timber on the false pretence that you had given us permission to do so. I regret that you should have made this libellous charge without first ascertaining its truth. On behalf of myself and partners I give it my most unqualified denial.

Did Mr. Whiteside give this permission, and if so, did he give it in writing.—W.C.B.

See report.—E.T.W., 29/12/69.

Mr. Musson talked in a general way as to what he proposed doing. I most decidedly did not approve or decide on anything.—W.C.B.

Quite right. Mr. Musson wanted to deviate from the specification without permission.

Some time ago Mr. Whiteside, to whom you referred me to on all matters of detail, gave me permission to use any new timber, on condition that I either replaced in good order or with new timber. From some cause my partner informed me that this permission had been withdrawn at Yass. Some months past I submitted to you my plan for the scaffolding of the new bridge, which you agreed to, and I think made some pencil marks on the plan of the old bridge. We made provision for carrying out that plan, and there was quite enough timber on the ground for the purpose, when we found ourselves constantly interrupted by Mr. Meldrum, who stated that he had no instructions from you, and was unwilling that we should use the traveller for unloading the teams, by forbidding us to remove the gallows in the old bridge.

You further state that I am not entitled to any consideration, in consequence of hanging about your office impeding business, complaining that the ironwork was not forwarded fast enough; and now that the greater part is at Yass, I have not one stick of timber or anything else requisite to proceed with the work.

Most decidedly. Mr. Musson not only complained, but represented that a portion of the fine should be paid to him for loss of time.

Mr. Whiteside, please state if this is the case.

See report.—E.T.W., 29/12/69.

I regret that you have been misinformed on this point as well as on others. I have never complained that the ironwork was not sent off fast enough—I have simply wished to know when the iron would be on the ground so that I could send up the riveters; and instead of the greater part of the iron being now on the ground, there is not much more than half of the lower boom at Yass, which portion is required first.

As to the stick of timber, we have not the supplying of timber for the bridge, and the plant for the erection of the bridge is at Yass, and we don't intend sending any more.

If in your remark—"my hanging about your office"—that I was there without proper business, I simply deny it; but I admit I have had to go there much oftener than I had any desire or there was any occasion for had I been furnished with proper information as contractor for the erection of Yass Bridge I think I was entitled to. I have to send all the mechanics from here, and it would be hard if I had to keep them in idleness at Yass. I have not yet been furnished with the quantity of rivets to be sent so that I could supply the deficiency, nor yet have I been informed as to whether you still intend using kerosene tar on the iron, or paint.

And further, I beg to remind you that the Government are now over six months behind time in providing us with the iron for this bridge, causing much loss of time and expense to us.

Again, as to being at your office, I must draw your attention to the practice of advertising for tenders long before the plans, &c., can be seen, and not being in the contractors' room the necessity of inquiring for them elsewhere, and the frequent postponements, which it is presumed is accompanied with some change. I refer more particularly to the Hay Bridge. Mr. Forde informed me that some of the contractors have copies of the specification sent to them.

I regret very much at having received such a letter from you, the result of misstatements of others, and I can say the first of the kind I have ever had as a contractor, and in justice to myself I have tried to explain.

I have, &c.,
JOHN MUSSON.

Mr. Whiteside.—B.C., 23/12/69, W.C.B. E.T.W., 29/12/69.

MEMO. OF MR. W. FORDE.

In reply to Mr. Musson's remark, that I informed him some of the contractors have copies of the specifications sent to them, I beg to say that in common with everything in which Mr. Musson has been connected with this office, it is a mischievous misrepresentation.

Mr. Musson's invariable practice was to stop me in the street and ask for a copy of any specification that he might know was in course of preparation, his intention to contract for it being quite another matter.

Before

Before Mr. Musson asked me for a copy of the Hay Bridge specification, one spare copy had been lent only to Messrs. M'Arthur, and one copy to Messrs. Bell and Franklin, two firms who had executed similar work for this department; and my reply was there was not a spare copy, and that he should speak to the Commissioner, whom he knows well is the proper officer to apply to, and without whose authority my wish to oblige Mr. Musson would be worth nothing.

Mr. Musson has always had every facility to obtain information much more than any other contractor has even expected.

WM. FORDE,
23/12/69.

MESSESS. HANRIGHT & Co. to THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 24 December, 1869.

SIR,

I find that the vibration caused by the traffic over the old Yass Bridge is very great; we therefore ask that the traffic on the old bridge may be stopped when we are ready to commence the fitting.

If you should grant this we do not ask an extension of time, but will still undertake to complete the whole within the time specified in our contract, viz., two months after delivery of iron, or perhaps in less time.

Would you have the goodness to let me have the sample paint approved of by you.

We have, &c.,

HANRIGHT & CO.

Per J. MUSSON,

1 Argyle-place, Argyle-street.

Mr. Whiteside for immediate report.—B.C., W.C.B., 28/12/69. E.T.W., 29/12/69. It would have been better if Mr. Whiteside had reported on this paper, so that each subject be self-contained.—W.C.B., 31/12/69. Mr. Whiteside.—B.C., E.T.W., 3/1/70.

MR. E. T. WHITESIDE to THE COMMISSIONER AND ENGINEER FOR ROADS.

Yass Bridge,
29 December, 1869.

SIR,

With regard to Mr. Musson's letter of 21st instant, I beg to state I never while in Sydney gave him permission to use any new timber, as I did not consider I had the power. Mr. Musson repeatedly asked me about timber, but I informed him he must obtain your consent. There is only about half of the lower boom on the ground; but were the whole of it here, none of it could be erected for some time on account of the neglect of contractor in obtaining timber for staging. I requested Mr. Scarr, when in Goulburn, to forward that portion first.

I am, &c.,

E. T. WHITESIDE.

THE COMMISSIONER AND ENGINEER FOR ROADS to MESSESS. HANRIGHT & Co.

Department of Public Works, Roads Branch,
Sydney, 31 December, 1869.

GENTLEMEN,

Your letter of 21st instant has remained unanswered, pending receipt of information from Mr. Whiteside.

With reference to your statement that Mr. Whiteside gave you permission to use the new timber, that gentleman reports,—

"I never while in Sydney gave permission to use any new timber, as I did not consider I had the power. Mr. Musson repeatedly asked me about timber, but I informed him he must obtain your consent."

In further reference to this, I would remind you that, *in limine*, and before any business was transacted between us, I informed you I would recognize nothing except in writing, so that it is unlikely any such permission would be given except in writing.

I have now disposed of your denial of this libellous charge as you are pleased to term it, and have to add, it is clear you or your representative stated to the timber contractor that you had permission to use this timber without having such permission, and I am at a loss how to characterize such a proceeding in other words than those used in my previous communication.

You state that some months past you submitted a plan for the scaffolding, which I agreed to. I did nothing of the sort; if I did, I presume you have the written agreement. I do not even recollect your submitting any definite plan; you talked in a general and indefinite way of how you proposed to carry out the work; but I have no recollection of any plan, nor is there in this office any record of the sort, nor have I yet had submitted for my approval any design for scaffolding.

With reference to your statement that there was enough timber for this alleged plan,—as far as I can learn there was no timber on the ground when Mr. Whiteside arrived, but I will obtain further information on this point.

Mr. Meldrum was quite right in preventing you removing the gallows frames, and he had no instructions, as you had not submitted any definite plan; and had you adhered to the *modus operandi* set forth in the specification, there would have been no indecision on his part.

In reference to your statement that I was misinformed that you complained the ironwork was not forwarded fast enough, I would remind you that not alone did you do so, but you suggested that a portion of the fine to be deducted from Messrs. P. N. Russell & Co. should be paid to you, and moreover I could not have been misinformed, as it was to myself both the complaint and suggestion were made.

You complain that the whole of the lower boom is not at Yass. I have only to say that even if the small portion yet undelivered was there, you would not be in a position to rivet it up for some time until timber for necessary scaffolding is obtained.

With

With reference to the list of rivets required by you, it was clearly your duty—not that of this office—to obtain. We might with equal reason be required to furnish you with a list of plant required. Moreover, Mr. Whiteside states that in order to prevent delay when the time for riveting comes, he has allowed Mr. Downes to copy the list given to him by Messrs. Russell.

With reference to the tar question, this is about the last thing you will be required to do; but that there may be no further complaint, I now inform you that paint as originally specified will be used.

With reference to your complaint that the drawings of Hay Bridge were not ready when advertised, I would inform you that there were quite enough drawings to keep your tracer going for weeks, until the completion of all; and if the exigencies of the service oblige the postponement of opening such tenders from time to time, it is no adequate reason for your intrusion into both the clerical and drawing offices, against which, remonstrance had to be made more than once.

With reference to your statement that copies of specifications of that bridge were supplied to other contractors, I have to inform you that it is necessary to have a certain number of copies of each specification for use; that copies were in this instance lent to Messrs. M'Arthur & Bell, as is the custom to contractors who have executed works for this department in a satisfactory manner.

You will therefore perceive, your regrets that I should have been misinformed were quite unnecessary, and that your explanation has not in any way set aside the statements in my letter; and I must conclude by requesting that you will devote more of your time to the carrying out of the work at Yass, and less to uncalled for explanations, which must in future remain unanswered, as I cannot afford time to reply to them.

I am, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 11 January, 1870.

SIR,

I beg to represent that all the lower DS boom is now at Yass, and that five hands leave for there this evening. The lead had not arrived when my letter was written; and as we cannot, I believe, commence laying the boom without, I shall be glad if you will allow my men to take it up with them, or if you will furnish me with the particulars I will procure it and send it up.

I am, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

P.S.—If you will be good enough to leave your reply with the messenger, I will call in an hour's time.—J.M.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. HANRIGHT & Co.

Department of Public Works,
Sydney, 11 January, 1870.

GENTLEMEN,

In reply to your letter of this date, I have to inform you that the lead in question is at Yass; you will therefore not have to wait for it, and there is plenty to do before this lead will be required.

I have, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 14 January, 1870.

SIR,

There must be some mistake about the lead for the Yass Bridge having arrived on the works; up to the time of the post closing there yesterday it had not got there, though in your letter of the 11th instant you stated that it was at Yass. We are only waiting for it to commence fitting the bridge.

I am sorry to trouble so often in this matter, but I am anxious to get the bridge well underweigh before I leave for Victoria, to tender for the railway works there.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

TELEGRAM FROM THE COMMISSIONER AND ENGINEER FOR ROADS TO E. T. WHITESIDE, ESQ., YASS.

17 January, 1870.

Has the lead arrived? Are Musson's people delayed for want of it?

WILLIAM C. BENNETT.

TELEGRAM FROM E. T. WHITESIDE, ESQ., YASS, TO THE COMMISSIONER AND ENGINEER FOR ROADS, SYDNEY.

13 January, 1870.

Musson used one barrel, for which I have receipt; he will require another for the other two stones, which probably you had better send with the two for filling up.—13/1/70.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 4 February, 1870.

SIR,

In reference to our conversation yesterday, and to avoid any misconception, I understand that we, as a matter of course, which I admit, are to drift the holes in bridge to such an extent as may be permitted by Mr. Whiteside; but if the rivets provided to us are then too large, we are to be paid for reducing them and for rimering any defective holes.

There

There can be no doubt but that the rivets are too large, which my partner informed me was admitted by Messrs. Russell, Mr. Downey, who appears to have left instructions with Mr. Whiteside to get both the swaging and riming done, and I am told by my partner to send up more hands for that purpose, and four more riveters.

Would you have the goodness to inform Mr. Whiteside as to your decision in regard to the unloading—that, as I understand you, both Egobeer and ourselves must jointly do it.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

Will Mr. Whiteside report at length on this letter, and let me have his reply by Monday without fail.—W.C.B., 4/2/70.

The information contained within, relative to the rivets for Yass Bridge, is correct; as I stated in my report of 2nd of February, I found many of the rivets too large to enter the holes after the contractors had done the necessary amount of drifting. Having informed Messrs. P. N. Russell & Co. of this fact, they sent Mr. Downing here on their behalf to inquire what would be the best mode to remedy the defect. The result has been that I now hold written instructions from Messrs. Russell to have all necessary riming done at their expense by Messrs. Hanright & Co., and at the rate stated in a written agreement given to me by the latter firm.—E.T.W., 7/2/70.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. HANRIGHT & Co.

Department of Public Works,
Sydney, 8 February, 1870.

GENTLEMEN,

With reference to the riveting of the Yass Bridge, I have to inform you that where possible to get the rivets in by doing so, the holes are to be drifted by you free of expense; where it is not possible to do so, the holes are to be rimmed to the extent required by Mr. Whiteside, at the expense of Messrs. P. N. Russell & Co., under an agreement by that firm with you under arrangement; is not in any way to prejudice the Government with reference to the time of completion of bridge.

I am, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 9 February, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter of yesterday's date, but only received by me this afternoon, in which you refer to the agreement entered into by my firm with Messrs. Russell & Co. for riming the defective holes in the Yass Bridge, and in which you also state "that the agreement with that firm is not in any way to prejudice the Government, with reference to the time of completion of bridge."

In reply, if I am to understand that the already short time allowed us for the completion of the bridge is not to be extended by the actual delay incurred in making good the defects of construction, that we must withdraw from the above arrangement, as I consider it a new condition not stated to my firm when the agreement was made.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

Inform Mr. Musson that this is a matter in which I cannot interfere—he must communicate with Messrs. Russell on it.—W.C.B., 11/2/70. Verbally informed by me.—J.M., 12/2/70.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 23 February, 1870.

SIR,

I beg to represent that Mr. Whiteside, on behalf of Messrs. Russell & Co., made a written agreement with my firm to rimer defective rivet holes in the Yass Bridge, to be paid for at the rate of 30s. per 100 holes, on his (Mr. W.'s) certificate. In conformity with that agreement, I received from Yass to-day a certificate for work done, and presented it to Messrs. Russell & Co. for payment, and which those gentlemen refuse to pay, on the plea that they only authorized Mr. Whiteside to pay for 500 holes.

To prevent delay and loss, we beg to ask that this agreement should be for the Government, and that we should be paid for it as an extra in the usual way.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

MR. J. MUSSON TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 28 February, 1870.

SIR,

I beg to inform you that Russell & Co. deny having authorized the resident inspector at the iron bridge at Yass to make any agreement to rimer holes in the Yass Bridge exceeding in number 500, and refuse to pay for those certified by him.

Some time since I informed Russell & Co., both in writing and verbally, of this agreement, and told them of the probable number of holes to be rimmed. They (through Mr. Murray) admitted the agreement; but now, having had some of the work done, they refuse to pay for it.

As we cannot proceed with the bridge under these circumstances, we shall have to stop work until some fresh arrangement is made.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

Send copy of this to Messrs. Russell & Co., and request that they will at once take the necessary steps to enable the work to be proceeded with.—W.C.B., 1/3/70.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. P. N. RUSSELL & Co.

Department of Public Works,
Roads Branch,
Sydney, 1 March, 1870.

GENTLEMEN,

I enclose for your information a copy of a letter received from Messrs. Hanright & Co., respecting rimering holes, Yass Bridge, and I have to request you will take the necessary steps in order that the work may be proceeded with.

I have, &c.,
WILLIAM C. BENNETT,
Commissioner and Engineer.

THE COMMISSIONER AND ENGINEER FOR ROADS TO MESSRS. HANRIGHT & Co.

Department of Public Works,
Office of Commissioner and Engineer for Roads,
Yass, 14 March, 1870.

GENTLEMEN,

I have to call your attention to the very slow progress made with the execution of your contract at Yass. Three weeks have now elapsed since the delivery of the last of the ironwork, during my late visit, and very little has since been done. Owing to the change made by you in the arrangements specified for the construction of the bridge, much greater risk in the work will be incurred in the event of a flood, and the inconvenience and danger to the public will be very great indeed. I have therefore to urge on you the necessity for at once employing more hands, and using greater exertion to get the second girder across and riveted up. If better progress has not been made by my return in about four weeks, I shall be obliged to employ people at your risk.

I am, &c.,
W. C. BENNETT.

THE COMMISSIONER AND ENGINEER FOR ROADS TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Yass, 3 May, 1870.

SIR,

You are already aware of the accident caused to the new iron bridge here by the late floods. I enclose photograph of its present state, for the information of the Honorable the Secretary for Public Works. The unfinished girder is much injured; the other is quite whole, but must be taken to pieces to straighten, and facilitate removal. I have left everything as it is, as Mr. Musson objected to Mr. Meldrum's removing some timber for the repair of the O'Brien's Bridge, as an infringement of contract. Whatever arrangement is made with him, I recommend that his connection with the work be at once terminated, and the removal of the girders from bed of the river be commenced by Mr. Whiteside, our officer. Another flood may cause greater damage in their present state. Would you be good enough to consult the Crown Solicitor as to the steps to be taken to get rid of Musson.

The clause in contract holding him liable to all flood damage can hardly be equitably applied to any damage caused by floods rising higher than the maximum level shown on drawing; but I am convinced had Mr. Musson pushed his work to completion when he might, the bridge would have had a much better chance of resisting the floods.

I am anxious for a prompt settlement of this matter, in order to employ Musson's men before they leave the ground. Will you telegraph instructions to Mr. Whiteside direct.

I should add that, though small pieces have been broken off the cylinders, and one is slightly changed in position, say five-eighths of an inch,—by bracing, which will be rendered necessary by the increased height, they are quite available when raised above flood-level.

As the post is about leaving I must conclude.
I have, &c.,
WILLIAM C. BENNETT.

The bonds of Messrs. Hanright & Co., and Messrs. P. N. Russell & Co., are now forwarded to the Crown Solicitor, with a request that he will advise what steps can be taken.—B.C., 4/5/70, J.R. 8 May, /70.—J.W.

MR. E. T. WHITESIDE TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Yass, 6/5/70.

SIR,

Herewith I forward you section and flood-level; the other information I hope to send to-morrow.

The cost of riveting up-stream girder would be about £50, cost of placing cross-girders and diagonal bracing I should estimate at the time taken and contractor's monthly payments, which amounted to about £120 per month.

Say for	£	s.	d.
Cross-girders	60	0	0
Diagonal bracing.....	90	0	0
Painting would have been done here for 1s. 3d. per yard, say 1,600 yards at 1s. 3d.	100	0	0
Removing old bridge	120	0	0

Which makes a total of £420. This amount, I am sure, would be within the cost.

Your obedient servant,
EDWD. T. WHITESIDE.

MR. J. MUSSON TO THE MINISTER FOR WORKS.

Sydney, 9 May, 1870.

SIR,

I have the honor to make the following representations in reference to Yass Iron Bridge.

The contract was accepted in October, 1868, with the request that cash should be paid as security for due performance. In reply, we wrote to the Honorable the then Secretary of Works (Mr. Byrnes), asking that, as a long period would elapse before the superstructure would be ready for erection, that we should not be required to pay up the deposit until such time. Our request was granted.

On

On the 16th April, 1869, we were requested at once to pay in the deposit, which was done.

The conditions provided that we could use the timber of the old bridge for scaffolding.

Before the iron left Sydney I represented that the workmanship was defective, and not according to contract, and would add much to our cost for erection. Mr. Whiteside, the officer in charge, admitted that such was the case, and requested the contractors for supply to remedy the defects, which was partially done. We were enabled to commence putting the bridge together in January, the lead for bed-plates arriving at Yass 17th January; we found however that we could make but slow progress, for want of proper rivets; those sent were bad, and too large. Mr. Whiteside, I believe, sent a telegram to that effect to Sydney.

We complained in writing (Jan. 25th) to Mr. Whiteside of this delay. The result was that the contractor for supply sent up a person to examine into the matter, the final result being that Mr. Whiteside made an agreement with my firm to rimer the holes instead of swedging the rivets. This of course caused delay, as we could not put on a second set of riveters.

Some time before this (Dec. 24th) we offered, if the traffic was stopped and we were permitted to commence the second girder at once, that we would finish the whole within two months of the delivery of the iron, as we found that the vibration caused by the traffic was very injurious to the work. Mr. Whiteside, I believe, recommended that the traffic should then be stopped. We received no reply to our communication. Had our request been granted, and the iron delivered, the bridge would have been finished before it was swept away by the floods.

The Engineer for Roads (Mr. Bennett) was at Yass on February 20th, and expressed himself pleased with the progress of the work, and ordered at once that the crossing in the river for teams should be repaired, and that the traffic over the old bridge should be stopped. As soon as that was done we commenced to pull down a portion of the old bridge, erected scaffolding, traveller, &c., and fitted the second girder complete, and $\frac{3}{4}$ riveted. We had commenced to put the cross or road girders into place when the flood put an end to our operations.

The frequency of rain and flood from the time traffic was stopped (Feb. 22nd) we had only thirty-eight working days, and I assert that such an amount of work of this description has never been done in the Colony before.

The contractors for supply ignored their agreement with us to rimer the holes, and sent up their own men for that purpose, using our scaffolding and staging, at Mr. Bennett's request, to put their work into proper condition, which should have been done in Sydney, and delivered to us in July, 1869, instead of several months afterwards. As this was not done, I beg to call your attention to the following in conditions for supply of material:—

“Should the contractor for supply fail to supply any portion in the specified time, he will be held liable for any loss sustained by the contractor for erection, for this or any other neglect in carrying out this section of contract, &c.”

I may add that portions of the iron were only delivered last month, and that other portions—the arched girders—had not arrived at Yass last week; I believe, however, they are an extra.

Our contract time was to finish two months after the last delivery of iron. If the iron had been delivered at the time stipulated, we would have had fine weather, and finished our contract long hence. I have no hesitation in saying—and I am borne out by the resident Engineer (Mr. Whiteside) and the Road Superintendent (Mr. Meldrum), and all the inhabitants of Yass—that the bridge, even if finished, could not have withstood such a pressure of water and debris, equal to hundreds of tons lateral pressure, caused by the lodging of timber and debris in the lattices of the girders, which were designed for vertical pressure only; and I beg to refer you to the testimonial sent to you by the inhabitants of Yass, of which the following is a copy:—

Yass, 2 May, 1870.

To the Hon. the Minister for Works.

Sir,

We, the undersigned, inhabitants of Yass and district, deem it an act of justice to the contractors, Messrs. Musson and Down, for the erection of the late iron bridge at Yass, respectfully to state for your information,—

- 1st. That great diligence and expedition was used by the contractors in the erection of the bridge from the time of the commencement of their work of such erection.
- 2nd. That having been eye-witnesses of the extent and force of the recent flood, we can safely say that the bridge, even if completed, could not possibly have withstood such a weight of water as was brought against it, exceeding in height, as such water did, by six feet, the lower portion of the girders.

[Signed by 100 names.]

And further, I beg to represent that the injuries to the bridge and piers would have been much greater had it been completed.

And I beg to represent that had it not been for the unprecedented wet weather, and floods in the river for the last two months, and which has delayed and destroyed public works throughout the Colony, that we would have finished the bridge within two months from the time that traffic was stopped at the old bridge, instead of two months from the last delivery of iron, which was our contract time.

From these statements of facts, every word of which I am prepared to prove, you will see that I am not to blame for the loss which the Government have sustained, and which no human foresight could have anticipated.

I have, &c.,

JOHN MUSSON,
Of HANRIGHT & Co.

In reply to Mr. Musson's letter, I have to state that the tender of Hanright & Co. was partly accepted in October, 1868, for this work; and after a long correspondence, in part of which Hanright disclaimed any knowledge of Musson, and after much recrimination between the parties, it was finally determined, contrary to my repeated objections, that Hanright, Musson, and Down should be the contractors, and the bond was signed on the 19th May, 1869.

During the construction of the ironwork in Sydney Mr. Musson had some quarrel with Russell & Co., and, from the time he was excluded from their yard, he was constantly making objections to the state in which the work was delivered at the Railway. On one occasion Messrs. Russell represented to me that Mr. Musson, in a public place, stated the work delivered at Railway Station was scamped, and not in accordance with contract. I at once prohibited the removal of the pieces in question; and, on examination by Mr. Whiteside, he reported that the rimering of a few holes had been omitted on a piece that had been sent from the yard contrary to his orders, and without final inspection. The work required was executed, and the iron forwarded. This was the only defect pointed out by Mr. Musson.

On the 24th Nov., 1869, Mr. Meldrum, the local officer at Yass, represented that two loads of the superstructure had arrived, and that there was no one to receive it, nor any preparation made for scaffolding. On the 23rd Mr. Musson wrote, asking for the loan of any plant the Government had at Yass, and applications were made to local officer for loan of screw-jack, small crab-chains, levers, and loose cordage. On the 7th Dec. I received some receipts for cartage from local officer, including receipts for Hanright's plant, which they tried to send up at the expense of the Government. I also received a letter from the contractor for flooring, stating that Musson & Co. had taken some of the new timber, and that they had informed him that I had instructed them to do so, which was not the case.

On

On 11th December, Mr. Meldrum wrote complaining that Musson's people had in his absence and without permission removed the gallows-frames from the bridge, and the diagonal bracing from the piers, thereby endangering public safety and inducing the vibration so much complained of. This was done to obtain timber to make a commencement with the staging. They also without permission removed the flooring from the down-stream roadway of the bridge, and commenced their staging under that roadway, in direct violation of the specification, which stated that the up-stream roadway was to be first removed and that girder constructed on a staging quite independent of the bridge. Had the mode of carrying out the work specified for been adhered to there would not have been any vibration, because it was arranged that the public should use the ford during the construction of the second girder; but Messrs. Hanright & Co., having neither plant or timber, were obliged to utilize the old bridge as much as possible; they having ripped up the floor and cut girders in the absence of our officers without permission, it was then impossible to compel them to proceed as specified, so they were allowed to go on in their own way, hence the delay from the vibration; they then wanted to stop the traffic, but made no mention whatever of any attempt to proceed with the second girder. I did not permit the traffic to be stopped, as I wished to limit the inconvenience to the public as much as possible. Mr. Musson states in his letter that had their request been granted and the iron delivered, the bridge would have been finished before it was swept away by the flood; but I maintain that if they had provided a reasonable quantity of timber and an independent staging for first girder as specified, the public would not have been inconvenienced by the stoppage of traffic; there would have been no vibration, and the girders with ordinary energy and appliances would have been completed before the flood, as all the iron for superstructure was on the ground long before it was required.

Mr. Musson states that I expressed myself pleased with the work when at Yass on the 20th February. On the contrary, when at Yass on the 18th, not 20th February, I expressed my disapproval of the mode of working adopted by Musson, and objected to the vibration caused by the traffic, and at once directed that the ford should be put in order and traffic over bridge stopped; thus putting the public to inconvenience of crossing the ford because Musson had deviated from the specification.

With reference to the dispute about rimering of the holes, Mr. Musson complained that many of the rivets were too large for the holes; the fact is, they did not go in with sufficient ease to please Mr. Musson's people to whom he had sublet the work; Musson wanted the rivets to be reduced in size, but I preferred that the holes should be rimered; and Mr. Russell, rather than delay the work and have any wrangling with Musson, authorized Mr. Whiteside to get Musson to rimer the holes at a certain price per hundred. Finding there were a much larger number of holes, Mr. Russell objected and sent up a man to do the rimering. It is obvious that the holes in those several pieces of iron when put together again after a long journey and much change of temperature would not correspond to a hair, and that the small amount of adjustment necessary was part of Musson's contract. It was only to save time and wrangling with Musson that Messrs. Russell agreed to pay for this work or get it done. When their man arrived Messrs. Musson & Down refused to allow him on the scaffolding, which they said was their property, and to which Russell had no right; so after some days' delay I was obliged to give a positive order to them to allow this man to do work which they themselves ought to have been obliged to do. On the 18th February, in my presence, the last piece of the girders arrived, and they were allowed to take down the second roadway of bridge. I gave notice to Mr. Down that their six weeks would count from that date. This six weeks expired on the 4th April. Though Messrs. Musson & Co. were allowed to stop the traffic completely on the 20th February, for want of timber they had not the staging ready to commence the second girder until the 24th March; and there was nothing to prevent their having this staging in position before the traffic was stopped, except that they were obliged to wait to get the timber out of the old bridge. On the 14th March, when at Yass, I wrote to them pointing out unsatisfactory progress, the danger of delay to the public and the bridge, and that the delay all arose from their deviating from the specification.

With reference to Messrs. Musson's statements that portions of the iron were only delivered last month,—I have to explain that the portions referred to were not part of the superstructure, but merely the pier-caps and rivets for same, and that a further portion of ironwork, the bracing arches, not included in either Musson's or Russell's contracts, only arrived about the 2nd or 3rd May, after the flood. Whether Messrs. Hanright & Co.'s time is counted from the delivery of the last of the ironwork or from the removal of the second roadway, they were in either case sufficiently long over their time as to justify cancellation of contract.

With reference to the testimonial from the inhabitants of Yass, I must say that if any credit is due to the progress made there, it is due to Mr. Whiteside, the officer in charge. Musson's partner there never saw a rivet put in in his life before, and Mr. Whiteside managed the matter entirely, and, as he reported to me, got on very well as long as Musson stayed away, and he was away all the time that any work was doing; but when he came on the ground, work ceased and all the time was spent in wrangling. As to Mr. Musson's opinion that the bridge would not have stood the flood if completed, I may be permitted to differ with him: the girders of the Cowra timber bridge, 130-ft. span, with not half such strong diagonal bracing, withstood quite as great a torrent. I believe had the old bridge and the staging not intercepted the drift timber, the flood would not have risen to anything like the height, and that the bridge would have had quite as good a chance of resisting the flood as the Cowra Bridge had—the leverage of the piers being much less in the short Yass piers than in those at Cowra. I ascribe the great additional rise after bridge was sent away to the damming up of the river by the ruins of the bridge.

W.C.B., 25/5/70.

NOTE.—I find that there was 1 cwt. of $\frac{5}{8}$ rivets for superstructure delivered after the 18th February. I have not you been informed the date, but I do not think this would affect the question, as we could have made them in Yass from rod-iron in half a day, and they were by no means essential to the completion of work.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 10 May, 1870.

SIR,

I have the honor to return herewith the papers relating to the contract with Messrs. Hanright & Co. for the erection of Yass Bridge, and to forward a notice, which I have prepared for service upon the contractors. This notice, and the three copies sent herewith, should be signed by Mr. Bennett, and a copy served on each contractor in the usual way.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Messrs. Musson and Down can be served at once; it will not be possible to serve Hanright, who has left the Colony.—W.C.B., 11/5/70.

THE COMMISSIONER FOR MAIN ROADS TO MESSRS. THOMAS RICE HANRIGHT, JOHN MUSSON, AND STEWART JAMES DOWN.

GENTLEMEN,

With reference to the contract entered into by you with the Government for the removal of the wooden bridge at Yass, and the entire completion of the riveting, fixing, and erection of an iron bridge, excepting the planking for floor, at Yass, I hereby give you notice, that as you have not proceeded with the work with all due expedition, and failed to complete the same within the time named in that behalf in and by the said contract, I do hereby, in pursuance of the terms of the said contract, cancel the said contract, so far as relates to the works remaining to be done; and I do hereby notify to you that all sums of money (if any) due to you under the said contract and all sums of money named as penalties for non-fulfilment of the same, are forfeited in accordance with the provisions of your said contract.

Dated this eleventh day of May, A.D. 1870.

WILLIAM C. BENNETT,
Commissioner for Main Roads.

Copy served on Mr. Musson by T. Collins.
Copy served on Mr. Down by E. T. Whiteside.

MR. J. MUSSON TO THE SECRETARY FOR PUBLIC WORKS.

Sydney, 18 May, 1870.

SIR,

I have received a notice from Mr. Bennett, the Commissioner for Roads, dated the 11th May instant, in which he gives me notice that he cancels our contract for the removal of the wooden bridge at Yass, and putting up an iron bridge there—on the grounds that we have not proceeded with our work with due expedition, and have failed to complete it within the time named in that behalf. I beg to say that no such grounds exist for cancelling our contract.

I can prove that the iron was not delivered, *i.e.*, the last that was delivered, until about the middle of April, and I believe the whole of it has not yet been delivered.

Had not hindrances been put in our way, we could have had the bridge finished and delivered to the Government before the floods came.

Up to the day of the bridge being carried away, the contractors for supplying the iron were engaged in putting the iron into proper condition.

I do not here go at large into our case, and only mentioned these matters to show that the Government have no right to cancel our contract.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

With reference to Mr. Musson's letter of 18th May, I have to say that Mr. Whiteside and myself can prove, in Court, that the last portions of the superstructure, except 1 cwt. of small rivets, arrived in Yass on Saturday the 18th February, and that Musson's contract time expired on the 18th of April, by the 1st clause of general conditions; and also that the second roadway was stopped on the 20th April, and that according to the specification Musson's work should have been completed in six weeks from that date. The iron referred to by Musson as having arrived on the 18th April was not properly part of the superstructure, but of the piers, and though included in Messrs. Russell's contract, I had instructed Mr. Whiteside not to consider it part of Musson's; it was not required until the whole of the other work was done, and Mr. Whiteside can prove that I instructed him to have it put on by our own men. The portions referred to by Mr. Musson as not having yet arrived are merely the iron bracing arches. I have no doubt Mr. Musson would have been equally anxious to disclaim either of these pieces as part of his contract, and charge for same as extras, had there no question arisen.

As to Mr. Musson's statement that hindrances were put in his way,—I have only to state that every possible facility was given to him, for he made himself so troublesome to every one connected with the department that we were in the greatest possible hurry to get rid of him, independent of my very natural anxiety to have a creditable piece of work put out of danger as soon as possible; and I do now say, that if it had not been for the consideration shown to Musson, and the facilities and assistance given him, he would never have got so far as he did.

I have already explained that Messrs. Russell's man was doing work that should have been done by Musson.

TELEGRAM from E. T. WHITESIDE, YASS, to COMMISSIONER FOR ROADS.

Sydney, 20 May, 1870.

There were rivets delivered after 18th of February, for small lattice work between pillar plates, but no delay caused.

Mr. Bennett to furnish the receipts for the delivery of the goods to the Crown Solicitor.—B.C., J.S., 20/5/70. Herewith, 25/5/70. Forward to Crown Solicitor.—B.C., 25/5/70, J.R.

MR. J. MUSSON TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Sydney, 27 May, 1870.

SIR,

In reference to the Yass Bridge—having been informed by yourself yesterday, and by the Honorable the Secretary for Works on the 20th instant, that my letters having reference to the above, dated the 9th and 18th instant, had been referred to the Crown Solicitor, I called on that gentleman, who informed me that he had not received them.

As there is likely to be some delay before this matter is settled, I beg to ask, without prejudice to any future action that may be taken, that the amount of our cash deposit (£196) for this contract may be at once returned to us; we have some pressing liabilities in connection with the bridge.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

Address, Box 197, P. O.

Crown Solicitor to advise whether the deposit should be paid to him.—B.C., J.S., 28/5/70. J.W.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 30 May, 1870.

SIR,

I have the honor to return herewith the papers relating to Messrs. Hanright & Co's. contract for Yass Bridge, which were received by me from your department on the 27th instant, and to state that, having brought the matter under the consideration of the Honorable the Solicitor General, he has been pleased to advise thereon, a copy of whose opinion is hereunder.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

COPY OPINION.

After a conference with the Attorney General and Mr. Bennett, I advise that the matter be allowed to remain as it is, and the contractors had better be so informed.

J. E. SALOMONS.

Mr. Bennett for information,—31/5/70, J.R. Seen, 2/6/70, W.C.B.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 31 May, 1870.

SIR,

I have the honor to return Mr. Musson's letter to you of date 27th instant, and to state that the question of whether the deposit made to secure the completion of Messrs. Hanright & Co's. contract shall be returned to them, must depend upon the action the Government propose to take with reference to this contract. If it is intended to make the contractors bear the whole of the loss occasioned to the Yass Bridge by the recent flood, it may be necessary to retain this money until the loss has been ascertained.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Mr. Bennett to see.—B.C., 1/6/70, J.R. Seen, W.C.B., 2/6/70.

MR. J. MUSSON TO THE SECRETARY FOR PUBLIC WORKS.

Without prejudice.

Sydney, 1 June, 1870.

SIR,

We have at Yass an up-stream girder of the iron bridge, now lying in the river, screwbolts, washers, drifts, &c., that cost us £55. We offer them to the Government at £40, to be paid at once.

If we remove these bolts it will cause additional injury to the now broken girder, and they will require to be replaced.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

Mr. Bennett.—B.C., 1/6/70, J.R. The bolts referred to are the temporary fastenings used to keep the work together while being riveted; they cannot be anything like the value, say £10 at the very outside. Musson takes advantage of there being no clause in the specification forfeiting plant. I think this paper should go to the Crown Solicitor. The sooner Musson is arranged with in some way the better.—W.C.B., 2/6/70. Under Secty., B.C. Crown Solicitor to advise.—B.C., 3/6/70, J.R. Recd., 7 June, /70.—J.W.

MR. J. MUSSON TO THE SECRETARY FOR PUBLIC WORKS.

Sydney, 3 June, 1870.

SIR,

I have the honor to ask a reply to my several letters, in reference to the Yass Bridge contract, dated respectively the 9th and 18th May, and the 1st of June.

I also beg to ask for a copy of Mr. Bennett's report in reference to the cancelling of this contract, so as to give me an opportunity of disproving his alleged reason—"That we had not proceeded with the work with all due expedition, &c., &c."

I also beg to ask for a copy of the contract, conditions, and specification, of this contract, as many of our papers were carried away with our premises by the flood at Yass.

I have, &c.,
JOHN MUSSON,
Of HANRIGHT & Co.

Address, Box, Post Office.

Crown Solicitor.—B.C., 3/6/70, J.S.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR WORKS.

Crown Solicitor's Office,
6 June, 1870.

SIR,

I have the honor to return Mr. Musson's letter to you of date 3rd instant, and to state that, as notice that the contract has been cancelled has been served upon the contractors, I do not think you can admit that the question of whether the contractors proceeded with the work with all due expedition is still open to discussion.

Upon Mr. Bennett's report that the time within which the work should have been completed, had expired, and further, that the work had not been properly proceeded with, the Hon. the Secretary for Works approved of Mr. Bennett's suggestion, that the notice before referred to should be served upon the contractors. That notice states

states the grounds upon which it is given, and this I think is all the contractors are entitled to be informed; as they must be aware whether the reasons so given are or are not well founded, irrespective of anything that may be stated in the report.

Mr. Musson must be mistaken in thinking that his copy of the conditions, specification, &c., have been lost with the papers, and to have been carried away by the flood, as an extract from the specification is given in a letter from him to your department, written since the destruction of the bridge; and there is therefore no reason why this portion of his application should be complied with.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Inform.—J.S., 8/6/70. Mr. Musson informed. Copy of letter annexed. Mr. Bennett, for information.—B.C., 10/6/70, J.R. I think that the Crown Solicitor should be authorized to arrange this matter.—W.C.B., 15/6/70. Under Secty., B.C. Approved. Forward statement of expenditure with papers.—16/6/70. Mr. Bennett.—B.C., 18/6/70, J.R.

In addition to the cash deposit.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 8 June, 1870.

SIR,

I have the honor to return the papers received by me yesterday, relating to the contract for the erection of the Yass Bridge, and to state that I cannot ascertain from the memo. of the Commissioner for Main Roads for what purpose the papers are sent to me. I agree with the Commissioner in thinking that the sooner Mr. Musson is arranged with the better; but I have not been instructed to endeavour to arrange with him, nor are the papers apparently now sent to me for that purpose. It rests I think with the Commissioner, under the instructions of the Minister, to negotiate with Mr. Musson in this matter. I may suggest, in so doing care must be taken that anything that may be said or written upon the subject is to be considered as written or stated without prejudice, so that if the negotiation should fail the Government may not be prejudiced.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 22 June, 1870.

Musson's Contract—Yass Bridge.

SIR,

I have the honor to forward to you herewith a letter that I have this day received from Messrs. Iceton & Son, and shall feel obliged by your returning it to me at your convenience, with such instructions as you may consider proper.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Mr. Bennett, for report.—B.C., 23/6/70, J.R. I append a fair and reasonable statement of how this matter stands. The valuation of work to be done is Mr. Whiteside's; the whole statement makes so much allowance to contractor that no further concession should be made, nor do I think the whole balance shown should be paid him; even had he completed contract there would have been fines incurred.—W.C.B., 27/6/70. Under Secretary, B.C. Crown Solicitor to make an offer without prejudice on these terms.—J.S., 29/6/70, B.C. Received, 1/7/70, J.W. Mr. Bennett's memo. still makes it doubtful whether I am to make any deduction for fines. I understood Mr. Bennett to state that the offer was to be without deductions for fines. Will the Under Secretary please say how this is to be.—J.W., 1/7/70. It is not intended to make any deduction for fines if settled out of Court.—J.S., 1/7/70. Crown Solicitor.

MESSRS.

MESSRS. ICETON & SON TO THE CROWN SOLICITOR.

Sydney, 22 June, 1870.

Musson—Yass Bridge.

DEAR SIR,

We propose without prejudice that the Government should pay us the contract price of the bridge, pay us for the extras done, and pay us the deposit—less the sums that have been paid on account and the amount it would have cost Messrs. Musson & Co. to complete the bridge; this last amount to be decided by arbitration in the usual way if necessary.

Yours truly,
ICETON & SON.

By deed, dated 5th May, 1869, Mr. Hanright's interest in the contract was assigned to Mr. Down.

THE CROWN SOLICITOR TO MR. T. ICETON.

Crown Solicitor's Office,
1 July, 1870.

Yass Bridge—Musson & Co.'s Contract.

DEAR SIR,

The Minister for Works has instructed me to reply to yours of the 22nd ultimo, to inform you that although he cannot admit that your clients have any legal claim upon the Government, he is willing to recommend to the Executive that your clients shall be dealt with in such manner as the Government would have been willing to deal with them if the whole of the work executed had been approved of, and it had been arranged that the contract should be taken off their hands, paying for all the work done up to the day that the bridge was thrown down by the flood, in which case the amount the Government would have been prepared to pay would have been £999 19s. Od. Thus arrived at—

Amount of original contract	£1,980 0 0	
Extras	39 14 0	
		2,019 14 0
From which deduct—		
Amount of value of the work required to complete bridge.....	422 0 0	
Value of old timber used as scaffolding by the contractors for which they were to pay	97 15 0	
Cash paid to the contractors	500 0 0	
		1,019 15 0
Leaving a balance of.....		£999 19 0

If your clients are willing to accept this last-mentioned amount in full satisfaction for all claims against the Government, or otherwise, under the contract for the erection of the bridge, and for the use that may have been made of any plant belonging to them, and generally in full settlement of all claims arising out of this contract, or anything that has been done in respect thereof, the Minister is prepared to recommend to the Executive that this sum be paid, and that the money deposited by your clients be returned to them.

You will please consider this letter as without prejudice, and that if the offer herein contained is not accepted, it is not at any time or in any manner howsoever to be read, used, or alluded to.

I am, &c.,
JOHN WILLIAMS,
Crown Solicitor.

MESSRS. ICETON & SON TO THE CROWN SOLICITOR.

Sydney, 6 July, 1870.

DEAR SIR,

Our clients will agree to settle on the principle contained in your letter of 1st instant, but at present they do not agree with your statement of details; for instance, should not the contract amount including that for the removal of the old bridge be £2,080?

Again, the item of £422 estimated cost of work to complete bridge is much too large. Will you favour us with the items of which this sum is composed. If we cannot agree with you (which we shall endeavour to do on receiving the items), we shall propose a reference to some competent person to settle this amount. As to the £97 15s. for timber, we must also beg to have items, as our clients cannot understand how so large a sum can be made up.

Perhaps a fair settlement of this item would be for the Roads Department to take all the contractors' timber about the place or in the river.

We of course agree that the correspondence between us is without prejudice.

Yours truly,
ICETON & SON.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 7 July, 1870.

Musson's Contract—Yass Bridge.

SIR,

I have the honor to return to you herewith the papers received by me from your department herein, together with a copy of a letter of date the 1st instant, addressed by me to Messrs. Icton & Son, and with copy of reply of those gentlemen thereto.

I shall be glad to receive your further instructions.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Hanright & Co's. tender and bond herewith, by which it will be seen their tender is £1,980; the details are shown in papers herewith; but I think it was understood with the Crown Solicitor that this offer on the part of the Government was so liberal that no question of detail would be entertained; and I think that if Musson & Co. do not accept this offer the matter should be taken into Court. There is little (if any) of their timber on the ground.—W.C.B., 8/7/70. Under Secretary, B.C. Approved. Inform Crown Solicitor.—J.S., 8/7/70. B.C., 11 July, 1870.—J.W.

THE CROWN SOLICITOR TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Crown Solicitor's Office,
Sydney, 14 July, 1870.

Musson's Contract—Yass Bridge.

SIR,

I have the honor to return to you herewith the papers received by me from your department, and to state that I have received a note from Mr. Iceton intimating that he is instructed to accept the offer contained in my letter to his firm of date the 1st instant, a copy of which letter is with the papers.

I send you copy of Mr. Iceton's letter above referred to.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

MR. T. ICETON TO THE CROWN SOLICITOR.

Sydney, 13 July, 1870.

Yass Bridge—Musson & Co.

SIR,

I am instructed to accept the offer contained in your letter of 1st instant.

Be so good as to facilitate the payment of the money as much as you can. Hanwright has no interest in the contract. Deed herewith for your inspection.

Yours truly,

THOS. ICETON.

MR. J. MUSSON TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Sydney, 27 July, 1870.

SIR,

Upon inquiry at the Roads Department, I find no steps have been taken to refund us the deposit money on the Yass Bridge Contract.

Will you have the goodness to attend to this matter.

I have, &c.,

JOHN MUSSON,
Of HANRIGHT & Co.

Mr. Bennett for report.—J.R., B.C., 27/7/70. As the matter has been arranged by the Crown Solicitor, this amount may now be repaid to Hanright & Co.—W.C.B., 28/7/70. Approved. The balance of contract to be paid through the Crown Solicitor.—J.S., 29/7/70. Inform Treasury.—J.R., 29/7/70. Deposit receipt sent to Treasury this day.—29/7/70. This amount—that is, the balance due under the contract—was paid to Mr. Musson and Mr. Gegan in my presence.—J.W., 1 Aug., 1870.

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(REPORTS FROM ENGINEER-IN-CHIEF, RELATIVE TO COST OF PROPOSED EXTENSIONS BEYOND GOULBURN, BATHURST, AND MURRURUNDI.)

Ordered by the Legislative Assembly to be Printed, 8 February, 1871.

THE ENGINEER-IN-CHIEF to THE COMMISSIONER.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 26 April, 1870.*Minute-paper.*—Proposed Extensions beyond Goulburn, Bathurst, and Murrurundi.

WITH a view of preparing careful estimates of the proposed extensions of the Railway from Goulburn, Bathurst, and Murrurundi, I propose to send out a competent staff (so far as the present balance on the Trial Survey Vote will permit) to improve the original trial surveys, so that most reliable information can be given as to the exact cost of each extension. I propose to commence with the Southern Railway, from Goulburn to Yass, and to prepare estimates for the gauges of 4 feet $8\frac{1}{2}$ inches, 3 feet, and 2 feet; to reduce the width of formation in cuttings, for the gauge of 4 feet $8\frac{1}{2}$ inches, from 18 feet (the width of the present lines) to 12 feet; to adopt curves of 20 chains radius, and inclines of 1 in 40 where any saving can be effected in earthworks, to reduce the depth of ballast, and to shorten the sleepers to 8 feet.

I propose to use rails of 75 lbs. per yard, the same as at present, but to dispense with the chairs (which will effect a saving of about £300 a mile), to have sleepers of an inferior quality to those now in use, and to construct as far as practicable the bridges and culverts of timber; to erect timber stations and timber platforms, and to reduce the cost of construction by every possible means.

For the gauge of 3 feet I propose to have a formation width in cuttings of 10 feet, and to use a rail without chairs of 60 lbs to the yard.

For the gauge of 2 feet, I propose a formation width of 9 feet, and to adopt a rail of 50 lbs. to the yard.

As little is known by this department of the country between Wagga Wagga and Albury, I think it would be advisable to have a trial section taken through that district, so as to complete the trial surveys to the boundary of this Colony.

If the Commissioner approve of this suggestion, I will despatch the surveyors in the early part of next month.

Approved,—J.S., 26/4/70.

JOHN WHITTON.

THE ENGINEER-IN-CHIEF to THE COMMISSIONER.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 5 August, 1870.*Minute-paper.*—Proposed Extensions of Southern, Western, and Northern Railways.

WITH reference to the proposed change of gauge for the extensions beyond Goulburn, Bathurst, and Murrurundi, I must express my decided opinion that any reduction would be attended with the most serious inconvenience, and cause great loss to the revenue.

It has been assumed that a very large traffic on all the lines will be derived from the carriage of live stock; and, setting aside the difficulty of changing wild cattle wherever the difference of gauge may exist, I assert that no traffic of this description can be carried economically on a less gauge than 4 ft. $8\frac{1}{2}$ in., and on a 2-ft. gauge it would be impossible to conduct such a traffic with safety.

It has been asserted by the advocates of the narrow gauges (3 ft. 6 in. and 2 ft.) that a 40-lb. rail can be used on such lines, and thus a great reduction on first cost of construction can be effected.

To this I say, that a rail weighing only 40 lbs. to the yard is utterly useless on any gauge where locomotives are employed.

The Cawnpore and Lucknow Branch Railway in India was laid with rails weighing 40 lbs. to the yard, with a gauge of 5 ft. 6 in., and was worked by locomotives; and although the traffic was light, the rails failed within twelve months of the opening of the line.

Many other examples could no doubt be found to show that what is termed a cheap railway is always the most costly, as the extra cost of working and maintenance is, by the advocates of this system, left entirely out of the calculation.

From Mr. Higinbotham's Report to the Commissioner of Railways in Victoria, on the subject of Railway Extension, I have taken the subjoined particulars, showing the estimated cost of the North-eastern Railway of that Colony, as compared with the cheapest known lines in the United Kingdom.

"I propose to take each of these cases, for the purpose of showing what each line would have cost if constructed by labour paid at Victorian rates; and, with a desire to understate rather than overstate the case that I am laying before you, I will assume that the price of labour here is one and a half times higher than in England and Scotland, and only twice as high as in Ireland. I will assume also that the weight of the rails on each line is the same as I propose for the North-eastern Railway—viz., 72 lbs. to the yard—this latter assumption being the least favourable that I can make for the purpose of my argument. You will observe that I have made allowance in the following calculations for the higher price paid for land in the United Kingdom than here, and also for the parliamentary and law expenses incurred there.

" Great Northern and Western Railway of Ireland.

" Cost per mile in Ireland.		Cost per mile in Victoria.

	£5,000			£6,054½"

It will be seen, however, that the rate of wages in the Colonies assumed by Mr. Higinbotham, with a view of not overstating his case, is considerably less than the actual difference known to exist; but even with the rates he has taken, the railways which are proposed to be constructed in the Colonies bear very favourable comparison with the cheap lines stated to have been constructed in the United Kingdom.

I have no hesitation in saying that thoroughly good lines on the 4 ft. 8½ in. gauge, with rails 70 lbs. to the yard, can be constructed to Yass, Orange, and Tamworth, for about £7,000 per mile.

Since preparing my last estimate, which amounted to £8,000 a mile, I have had additional trial sections taken, and I find that the earthworks shown on the original section can be considerably reduced by alterations in the direction of the lines.

As these revised trial surveys are still in progress, I am not yet able to forward a detailed estimate of the cost of these extensions.

JOHN WHITTON.

Department of Public Works,
Sydney, 20 September, 1870.

HAS the Engineer-in-Chief for Railways obtained sufficient information as to the extension of the lines from Goulburn to Yass, from Bathurst to Orange, and from Murrurundi to Tamworth, to enable him to state at what rate per mile these extensions can be constructed if they are to be worked by locomotive engines?

JOHN SUTHERLAND.

Mr. Whitton, B.C., 23/9/70.—J.R.

THE revised trial sections are not yet completed, but from the reports of the different surveyors I anticipate that the earthwork will be reduced nearly one-half; other works, tunnels, and bridges, will also be modified, and a saving be made in their construction. I consider that a good permanent-way is absolutely essential for the public safety, and I therefore propose to use a steel rail, 70 lbs. to the yard (single-headed); sapling sleepers, to reduce first cost, might be used, also a smaller quantity of ballast than that laid on the existing lines. The fencing might be erected with any description of timber the district would afford, and wooden station-buildings, platforms, &c., be erected in the first instance. If these suggestions be adopted, and all the bridges and culverts be constructed in the most economical manner with the timber in the district through which the lines pass, I believe a good railway for locomotive purposes may be made for £7,000 per mile.—J.W., 26/9/70.

Commissioner, 26/9/70.

Cabinet.—J.S., 27/9/70.

Sum placed on Estimates for extensions in accordance with this estimate.—J.S., 8/10/70.

1870-71.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(REPORT FROM ENGINEER-IN-CHIEF, WITH DETAILED ESTIMATE OF EXTENSIONS TO YASS AND ORANGE.)

Ordered by the Legislative Assembly to be Printed, 9 February, 1871.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch,
Engineer's Office, Sydney, 8 February, 1871.

SIR,

Referring to my previous reports on the cost of the proposed extensions from Goulburn to Yass, Bathurst to Orange, and Murrurundi to Tamworth, I have now the honor to lay before you a detailed estimate of the cost of the lines to Yass and to Orange; and although the surveys of the extension to Tamworth were stopped before the revised surveys were completed, sufficient was done to justify me in stating that the extension from Murrurundi to Tamworth will not cost more than the extensions to Yass and to Orange. I therefore propose to give detailed estimates of the two extensions last named.

Extension from Goulburn to Yass.

On leaving the Goulburn station, the line almost immediately crosses Slouane-street, and for about a mile runs parallel with the road to Braidwood, then follows for a short distance the course of the Mulwarree Ponds, and taking a westerly direction, follows generally the course of the Main Southern Road, across the first, second, and third Broadalbane Plains, and near the head of Mutbilly Creek or Boorangullen Chain of Ponds, reaching the summit of the Cullarin Range at an elevation of 2,388 feet above sea level, at a distance of 21 miles from Goulburn and 155 miles from Sydney.

Winding round the Cullarin Range, on the north side, the line again approaches the Southern Road, running nearly parallel with it, still keeping on the north side from 159 miles to 163 miles, passing at 161 miles about half a mile to the north of Frankfield Inn, and crossing the Fish River at 162½ miles, about 5 chains on the north side of the Main Southern Road.

The line now diverges to the north of Gunning Hill, and crossing Gunning Creek, passes about a quarter of a mile to the north of the town of Gunning, and then follows the course of the Southern Road up to 167 miles from Sydney.

From this point the line takes a more northerly direction, crossing Four-mile Creek, Oolong Creek, Sandy Creek, Jerrawa Creek nearly at its junction with Catherine Creek, and reaches the summit of Muddoonen Range at an elevation of 2,225 feet above sea level, and at a distance of 180 miles from Sydney or 46 miles from Goulburn.

From this point the line descends by tolerably easy gradients to a point about 190 miles from Sydney, on the Main Southern Road, about 2 miles on the north-west side of North Yass, crossing, in its course, Manton's Creek, Yellow Creek, and Bango Creek.

At that point, 190 miles from Sydney, I propose to erect a station for North and South Yass, as it would be impossible to take the railway through those towns without great cost and a considerable increase in the length of the line.

The earthworks on this length are light, and there are no bridges of importance.

The steepest gradient is 1 in 40, and the smallest radius of a curve is 20 chains.

The quantities for all the works have been most carefully taken out, and I am satisfied this extension can be completed for the amounts stated in the following detailed estimate, which shows an average cost of £6,786 5s. 4d. per mile.

Extension from Goulburn to Yass—Length 56 miles and 4 chains.

	£	s.	d.
Earthwork	110,473	5	6
Culverts	14,186	10	0
Brickwork in bridges	6,636	15	0
Timber bridges and flood-openings	14,674	8	0
Fencing	10,770	0	0
Level-crossings, gates, and gate-houses	2,400	0	0
Occupation level-crossings and gates	5,376	0	0
Permanent way, laid and ballasted complete, including all materials	168,150	0	0
Do. do. do. for sidings at stations	7,500	0	0
Station-buildings, platforms, &c. (including water supply)	15,000	0	0
Engineering and supervision	16,800	0	0
Land	8,064	0	0
	£380,030	18	6

At the rate of £6,786 5s. 4d. per mile.

Extension from Bathurst to Orange.

This extension commences at a point 144 miles 45 chains from Sydney, near to Mutton's Creek, and a short distance on the south-east side of the proposed station in the city of Bathurst.

For a distance of about 4 miles the line follows generally the direction of the Vale Road, passing to the west of the Hen and Chickens Inn; then diverging to the west, crosses a number of small spurs of the range between the Carcoar and Caloola Roads; closely approaches the Teapot Swamp Road, which it follows, and crosses several times for a distance of seven miles, reaching the main range at Fitzgerald's Mount, at an elevation of 3,021 feet above sea level, and at a distance of 162 miles from Sydney and 17 miles from Bathurst.

After passing Fitzgerald's Mount, the line runs in a southerly direction for a distance of a little more than a mile, when it takes a north-westerly direction, crossing the road from Bathurst to Carcoar, at 170 miles from Sydney; then Dungeon Creek, King's Plains, the main road from Bathurst to Orange, at 175½ miles, the Pretty Plains at 180½ miles, then Gosling Creek, and terminates in the town of Orange, at 191 miles from Sydney and 41½ miles from Bathurst.

The section accompanying this report has been taken over the red line on plan of second trial survey, but the alternative line shown in blue for about 5 miles from Orange is the line I propose to adopt, and which terminates in a Government reserve on the south side of the town.

The earthworks on this extension are light, and there are no bridges of importance, nor a single tunnel.

The steepest gradient is 1 in 40, and with the exception of one curve of 16 chains radius at Fitzgerald's Mount, there is no other curve on any part of the line of a less radius than 20 chains.

The quantities of all the works have been most carefully taken out, and they can be completed in the most substantial manner for the amounts stated in the subjoined estimate.

Extension from Bathurst to Orange—Length 46 miles and 35 chains—

	£	s.	d.
Earthworks	108,759	6	6
Culverts	9,421	11	0
Bridges and flood-openings	11,335	14	8
Fencing	9,000	0	0
Level-crossings, gates and gate-houses	6,880	0	0
Permanent way, laid and ballasted complete, including all materials	139,500	0	0
Do. do. for sidings	6,000	0	0
Station buildings and platforms (including water supply)	10,000	0	0
Engineering and supervision	14,000	0	0
Land	6,696	0	0
	<u>£321,592</u>	<u>12</u>	<u>2</u>

At the rate of £6,915 19s. 4d. per mile.

These estimates are based on the assumption that steel rails will be used, weighing 70 lbs. to the yard; but should it be deemed advisable to use the ordinary wrought-iron rails of the same weight, the cost would be reduced by about £220 per mile.

Should it be considered desirable to use lighter engines on these extensions, and to travel at a reduced speed, a wrought-iron rail weighing 60 lbs. to the yard might be used, which would reduce the present estimates by about £550 per mile.

The estimate for each line would therefore be as under:—

Comparative cost of Extensions, with the undermentioned weight of rail:—

	Steel Rails. 70 lbs. per yard.	Iron Rails. 70 lbs. per yard.	Iron Rails. 60 lbs. per yard.
	£	£	£
Goulburn to Yass	6,786	6,566	6,236
Bathurst to Orange	6,916	6,696	6,366

For the Southern Railway I would recommend the adoption of the heavier rail, as this line will at no distant day be the great highway to Melbourne, and speed will then be a matter of considerable importance.

The sleepers are to be the best the district will afford.

The fencing to have two rails only, and to be formed of saplings if other suitable timber be not obtainable in the district.

The stations, platforms, and gate-houses, to be of timber throughout, and constructed in the most economical manner possible.

From the detailed estimates it will be seen that the earthworks, bridges, and culverts cost nearly £3,000 per mile, or about the same as the cost of the permanent way with steel rails 70 lbs. to the yard; therefore, in a tolerably level country, where few culverts and bridges would be required, and where the earthworks would only amount to what is technically called "forming," the cost of a railway would be considerably below the amount stated in my estimate.

For branch railways, or feeders to the main line, rails 60 lbs. to the yard might be laid down, and worked by locomotive engines; but if such feeders be worked by horses, a rail weighing 40 lbs. to the yard might be adopted.

It is true that engines are now running on rails of 40 lbs. to the yard, but I am satisfied that there is no economy in using light rails where locomotives are employed.

A permanent way with 60-lb. rails might be constructed for about £2,450 per mile, including laying, ballasting, and sleepers, and with a 40 lbs. rail, for about £2,050 per mile.

I stated in my report dated 5th August, 1870, that on the Lucknow and Cawnpore Railway in India rails 40-lb. to the yard had been laid down, and the line worked by locomotives, but that these rails failed within twelve months of the opening of the line.

The Melbourne and Hobson's Bay Railway was laid, in the first instance, with rails weighing 55 lbs. per yard. The weight of the engines used on this line was under 25 tons, yet these rails failed in less than three years.

The line was relaid about fourteen years ago with rails weighing 75 lbs. per yard, and these were a year ago in good order.

The St. Kilda branch of the Hobson's Bay Railway was laid in 1857 with rails weighing 55 lbs. to the yard, on longitudinal sleepers, yet in less than two years these rails had to be taken up, and the line was relaid with rails weighing 75 lbs. and 80 lbs. per yard, which a year ago were in good condition.

I strongly advise that the standard gauge of 4 ft. 8½ in. be maintained throughout the whole railway system in this Colony, as the difference between the gauge and 3 ft. 6 in. is too small (14½ in.) to justify a break of gauge with all its attendant inconveniences.

I am aware that a gauge of 3 ft. 6 in. has been recommended for branch lines in India, but it must not be forgotten that the standard gauge of India is 5 ft. 6 in., and I have little doubt that had the 4 ft. 8½ in. gauge been laid down originally on the Indian lines no break of gauge would have been sanctioned.

The plans and sections of the second trial surveys of the extensions from Bathurst to Orange, and from Goulburn to Yass, on which these estimates are based, accompany this report.

I also append a table of the gradients and heights on each line.

I have, &c.,
JOHN WHITTON.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EXTENSION OF RAILWAY TO ORANGE.

(PETITION—CERTAIN INHABITANTS OF TOWN AND DISTRICT OF ORANGE.)

Ordered by the Legislative Assembly to be Printed, 16 February, 1871.

To the Honorable the Legislative Assembly of the Colony of New South Wales.

The humble Petition of the undersigned Inhabitants of the Town and District of Orange and its neighbourhood,—

SHOWETH :—

That your Petitioners are deeply impressed with the vast importance to their district of railway communication with Bathurst and the metropolis, for the purpose of the development of its mineral and agricultural resources, as well as to the trading and agricultural community resident in such districts, and to the west in general.

That the continuation of the Great Western Railway from Bathurst would greatly relieve the inhabitants of the western districts from the difficulty they are labouring under through the production of wheat and other cereals being in excess of the local demand, while the present cost of carriage prevents its transport to Sydney, except under peculiar circumstances.

That the throwing open, and consequent selection of a vast area of land in this district has induced a large number of persons to settle on and cultivate the land, whilst through the want of railway communication they are unable to dispose of their produce.

That the number of selections taken up in this district since 1862 has been 943, and the number of acres selected 50,026. That in addition to this there are a large number of freeholders, making a total of nearly 100,000 acres, from 30,000 to 40,000 of which are under cultivation for wheat.

That the crop of wheat in this district has never been known entirely to fail, the district being free from excessive drought, and from any fear of floods. That the ordinary average of the wheat crop is 25 bushels to the acre, and in extraordinary seasons, which are of frequent occurrence, considerably more.

That the amount of wheat produced in this district this season, made on careful computation, was 650,000 bushels; and, as the amount required for local consumption is only 200,000 bushels, 450,000 bushels are thus left for export, and the amount is annually increasing as land is cleared for crops.

That notwithstanding the drawback from want of proper means of transit, a large quantity of wheat and flour has this year been sent to Sydney.

That the amount of tonnage now annually received in the town, and which passes through to towns further west, is 8,000 tons.

That Orange, being the most available depot for the western district, a large quantity of wool from the interior passes through the town; the amount dispatched by local merchants, received on consignment for transmission, in addition to the large quantity passed through in owners' teams, being about 2,500 tons. This amount would be largely increased with a railway at Orange, being the main point of the far west.

That estimating the traffic to and from Sydney and Orange on the present basis, and including the wheat available for export, 25,000 tons per year could be estimated as the amount for conveyance.

That the numerous rich copper mines in the district are languishing from the same cause; whereas, were it removed, numerous mines, in addition to those now in operation, would be opened and worked with great success. The traffic from this source, even if no new mines were opened, would amount to 2,000 tons annually.

That the situation and climate of Orange renders it eminently adapted as a depot for stock of all kinds, it having been demonstrated that up to this town sheep and cattle can be brought in the same condition as they leave the station, whilst from this they begin to deteriorate—rendering it eminently adapted for meat-preserving.

That viewing the rapid strides made during the past nine years, it may be safely assumed that a proportionate increase could be depended upon during the time the railway works were in progress, and that in every respect the extension would be an amply remunerative one.

That your Petitioners respectfully submit, that the great superiority of the Orange mineral and agricultural district, and the certainty of a continuous and increasing traffic along its route, entitles it to consideration.

That at a meeting of the inhabitants of the town and district of Orange, held at the Court House, Orange, on Monday, August 1st, 1870, resolutions in support of the foregoing views upon the subject of the extension of the Railway to Orange, and the great necessity for its adoption, were passed, and it was resolved that a Petition should be prepared and presented accordingly.

Your Petitioners therefore humbly pray that your Honorable House will take the premises into consideration.

And your Petitioners will, as in duty bound, ever pray.

[Here follow 1,020 Signatures.]

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT ON PROPOSED TRAMWAY FROM GOULBURN TO BRAIDWOOD OR QUEANBEYAN; WITH GENERAL REMARKS ON RAILWAYS FOR NEW SOUTH WALES.)

Ordered by the Legislative Assembly to be Printed, 8 February, 1871.

J. H. THOMAS, ESQ., to THE HONORABLE THE MINISTER FOR PUBLIC WORKS.

Railway Department,
Sydney, 21 December, 1870.

SIR,

In compliance with the instructions conveyed in your Minute, No. 70/4188, I have made a careful inspection of the Roads to Braidwood and Queanbeyan, with special reference to the proposed laying down of a horse-tramway from Goulburn to one or the other of those townships, in accordance with the evidence given by me before a Select Committee of the House last Session; and I now have the honor to submit the following Report:—

2. The first thing I directed my attention to was the selection of a suitable site in Goulburn as a terminus for the proposed tramway; and I found there was a piece of ground admirably adapted for the purpose, which is the property of the Commissioner for Railways, although not at present used for railway purposes. It is situated at the southern end of the station-yard, immediately opposite Mandelson's Hotel, and has a frontage of about 8 chains to Sloane-street, with a depth of about 3 chains,—a space amply sufficient for all requirements. The tramway could be brought on to this spot in a direct line from the Braidwood Road, and parallel to the rails of the Great Southern Railway, a covered platform being constructed between the two lines, fitted with cranes, for the ready transmission of the goods from the trucks of one to the other.

3. In the event, however, of the Great Southern Railway being extended beyond Goulburn, it will necessarily have to cross the Braidwood Road; the junction of the tramroad will then have to be shifted some little distance further south, on what is now the Glebe (*see* plan). The mere cost of removing the platform and cranes, however, would be so trifling that I do not think it is a matter for consideration whether the station should at once be placed on the spot it would have to be on the extension of the Great Southern Railway, unless it is intended to proceed with that work immediately.

4. The route I would suggest the tramroad should take to Braidwood is along the surveyed line of road *viâ* Terranna, Tarago, Boro, and Warri, and if laid to Queanbeyan *viâ* Terranna and Tarago, thence along what is known as the Tarago deviation to Bungendore, continuing along the main road to Molonglo Creek; after crossing which, by the surveyed deviation into Queanbeyan.

5. From Goulburn to the Tarago deviation, a distance of 22 miles 65 chains from the railway station, the road is common for both Braidwood and Queanbeyan. It is for all practical purposes comparatively level; the land on either side is alienated, fenced in, improved, and occupied by numerous settlers, and a large area is under cultivation. The only two places requiring bridges of any importance (that is, that would cost some £1,500 each if made for road and rail) are to cross the Mulwaree Ponds, one at Garoorigang, some 3 miles, and the other at Inveralochy, 14 miles 70 chains from Goulburn. At the former place the Road Department is erecting a substantial structure which might be taken advantage of, while at Inveralochy another might be built suitable for both the road and tramway, each department paying a share of the expense.

From Tarago Junction to Braidwood, *viâ* Boro and Warri, is a distance of 28 miles 73 chains; a large portion of the land on either side is alienated; the natural obstructions of any consequence are Reedy Creek (where a bridge is being erected by the Road Department that could be made available for the tramway), and the Shoalhaven River. The crossing of the latter would require a work of some magnitude, at a cost probably of not less than £8,000; but as a bridge must under any circumstances be erected at Warri, a portion of the expense of its construction should be borne by the Road Department; indeed I believe a sum of money has already been placed on the Estimates for this work; and, if it is intended to carry the tramroad to Braidwood, the amount should be increased, as the bridge, to be made available for both the tramway and road, would have to be widened. Although the gradients generally on this portion of the surveyed road are not too difficult to work by horse traction profitably, there are two or three places where it will be necessary to make slight deviations, especially at Doughboy's Hill, where much easier gradients can be obtained. There is an ample supply of stone for ballast, and timber for sleepers, along the whole line of road, and the police paddocks at Braidwood would be an excellent site for a station.

6. From the junction of the Goulburn Road to Queanbeyan is about 36 miles, and a large proportion of the land on either side of the road is alienated. The gradients are for the most part favourable, although in one or two places deviations would have to be made. Several bridges would be required; but the only one of importance, costing perhaps £2,000, would be over the Molonglo Creek; but all these, as on the line to Braidwood, being equally necessary for the ordinary road, the cost of their erection should be equitably divided between the two departments. There is both stone for ballast and timber for sleepers to be found in abundance along the line of route.

7. From Bungendore, which is 15 miles 18 chains from Queanbeyan, roads radiate to the more or less agricultural districts of Yass, Gundaroo, Collector, Warri, Boro, &c., &c. A station and produce receiving-shed should therefore be established in this township.

8. With regard to the question as to whether the Government should carry the tramway to Braidwood or Queanbeyan, I should strongly recommend that it be taken to the latter township; and my reasons for arriving at that conclusion are independent of any consideration of the two routes from an engineering point of view, but solely as to which would serve the best interests of the Great Southern Railway, and at the same time benefit the largest amount of country.

9. Braidwood is not a producing district (except gold). It is within 30 miles of the port of Nelligen, upon the road to which the Government have expended large sums of money to improve; and against this water-carriage, with freight from 20s. to 25s. per ton to Sydney, and short line of road, the locomotive and horse railways would not be able to compete.

10. Queanbeyan, on the other hand, is a producing district, has not the advantage of water-carriage; and the line, if carried there, would not only benefit Queanbeyan, Bungendore, and the surrounding districts, but open up a cheaper and better means of communication with the finest pastoral and richest mineral country in the Colony—the Maneroo; and the line might at some future time be carried on to Cooma, or even to Bombala, although to the latter township water-carriage *via* Merrimula and Twofold Bay would perhaps successfully compete with the railway.

11. As I stated before the Committee, the horse-railway could be laid on the side of the line of surveyed road, only making deviations where found necessary. The gauge I would propose is that of 3 feet, employing rails of from 25 to 27 lbs. to the yard, and of the section shown in plan, secured to one another by fish-plates, and to the sleepers by spikes.

I propose adopting this class of rail because I think it has special advantages; it would have a firm seat upon the sleepers without cast-iron chairs, which, if broken, could not be readily replaced, while the dogs or spikes for securing it to the sleeper could be made by any country blacksmith. It is of a shape to give the greatest strength with the least sectional area, and can easily be bent to curves.

12. With regard to the sleepers, there is no occasion to confine them to any particular class of timber that might necessitate long haulage and consequently great expense, but take the best adapted for the purpose which is to be found in the immediate vicinity, as their small size and facility of obtaining them would make the cost of renewals but trifling. The same may be said regarding the ballast.

13. A horse-railway such as I have described could, I feel convinced, be laid to either Braidwood or Queanbeyan for £1,500 per mile.

14. The success of such an undertaking as this does not so much depend upon the laying down of the line itself as upon the selection of a class of rolling stock best adapted for working it; and it is on this point therefore that the greatest care should be taken, every possible contingency taken into consideration, and the special wants of the district considered.

The Windsor and Richmond line, with its light permanent way, works, and engines, has been made a failure by running over it a class of rolling stock of the heaviest description, such as it was never designed to carry.

15. It is perhaps premature to recommend in this report the leasing of the tramway, but I attach such great importance to it that I venture to do so, feeling convinced that its success as a commercial undertaking entirely depends upon its being in private hands, as no Government Department could possibly work it with economy and profit. The stabling—the purchase of horses best adapted for the work, and the arranging them in stages according to the nature of the country,—the purchase of forage, &c., &c.—are all matters that could be better and more cheaply done by such firms as Cobb & Co., Woods, Shortland, & Co., and others. A Government officer having charge of such line would have no discretionary power given him; a fixed scale of rates would be issued, from which he could not deviate; nor do I see how it could safely be otherwise; he would have to charge the same to a man sending a ton as to one sending a thousand; whereas, if in the hands of private firms such as I have mentioned, they would be free to make any arrangements, and offer inducements to parties sending goods by this means. They would also have a *direct personal interest* both in obtaining freight and working the line as economically as possible. The Government should, however, fix a maximum scale of charges.

16. I would also recommend that the Government offer to any parties having properties adjacent to the road to lay in sidings to them at the cost price of doing so.

17. One objection raised to horse railways being laid along the roads in this Colony, where, for the most part, they are not formed, or even cleared of the timber, but mere bush tracks, is that it would be impossible to prevent bullock-drays, to avoid bad spots, pulling across the line, and in doing so injure it; but it must be remembered that when the rails are once laid, the whole of the heavy traffic would be taken off the road, and vehicles of a lighter description would do no damage. The objection, however, would hardly hold good in carrying the tramway to either Braidwood or Queanbeyan, as three-parts of either line of road is fenced in; and I have no doubt in the course of a year or two the entire length throughout will be.

18. A short Act would have to be passed, to prevent injury to the line, and empower Government to take land where found necessary for making deviations, or for station purposes.

19. As I feel that my opinion was not clearly understood upon the matter when before the Committee for Railway Extension, I will avail myself of this opportunity to make a few remarks upon the subject of railways generally, as applicable to this Colony.

20. In projecting a system of railways for a country like this, twice the size of France, with a population scattered over it equal only to a large European city, the greater portion of which is engaged in either mining, pastoral, or agricultural pursuits, the questions one naturally asks are,—What are their requirements as regards internal communication? Do they require to bring their produce to market, or receive their stores from the capital, at the rate of 25 miles an hour? Are those engaged in such pursuits a travelling population? Is their time generally of such importance to them as to necessitate, when they do travel, rapid communication from one place to another? And can such a sparse population, spread over so great an area, afford to pay for such, even if it is required? If these questions can be answered in the affirmative, then arrangements should be made for supplying them with first-class locomotive railways throughout the length and breadth of the country, such as are now laid down to Goulburn, Bathurst, and Murrurundi.

21. I feel, however, convinced that the country neither wants nor can it afford to pay for such a system; that it is not necessary to carry agricultural produce, wool, and stores, at 25 miles an hour, and that there are very few colonists whose time is so precious that a third of that speed will not suffice; but what is wanted is a cheap and *certain* mode of communication, such as would be afforded by either horse-tramways or a light locomotive railway. “The carriage of merchandise and produce (says Mr. Corbett, on railway economy in Victoria) is much more important than that of passengers—that we should endeavour to make whatever capital we can afford to expend give us a great extent of goods-carriage, rather than a small amount of quick passenger-traffic—we want railways chiefly for the carriage of products, because we have no roads or inland navigation. The carriage of goods is the first necessity, inasmuch as travellers can move themselves, or ride, or go in light vehicles which are not much affected by minor obstacles.”

22. Yet at the present time on our existing lines of railway we are keeping up a costly plant of rolling stock, and expensive staff on the permanent way and traffic branches, to enable goods being carried at the rate I have named; for if we set aside the suburban traffic, the number of passengers that travel by rail is ridiculously small, and the result is that it does not pay, but is costing the country £514 a year for every mile of railway line open for traffic.

23. It is now I believe some twenty years since railways were commenced here; yet if we glance at a map of the Colony with the existing lines upon it, we shall be struck with astonishment to find, after an expenditure of nearly £7,000,000, to construct 402 miles of railway, S., W., and N., what a comparatively short distance we have penetrated into the interior. This it must be admitted is not a very satisfactory state of things; and if we are to wait for the country being “opened up” by this slow and expensive process, we shall not only have to wait a long time, but plunge the country into such a debt as it will be found difficult to extricate it from.

24. A horse tramway or light railway can not only be *constructed*, but *maintained* at a less cost than a common road. Indeed in some parts of the Colony, such as Riverina (a district as large as France), macadamized roads cannot be made at all, owing to the absence of blue metal or any kind of stone suitable for ballasting. The great advantage of the tram over the ordinary road will be best understood from the well known fact that a horse drawing on a railway, as compared with his execution on the best made English turnpike road, is as 7·5 to 1, or in other words, that as much may be transported by two horses on the former as with fifteen on the latter. If this is the gain on English-made roads, how much more so will it be on ours, which for the most part are incompletely formed?

25. Mr. E. O. Moriarty, in writing upon the relative advantages of horse railways and common roads, says:—

“The first cost of a light horse-railway is less than half that of a macadamized road, and when constructed the annual cost for maintenance on the former would not be one quarter as much as on the latter; and the cost for the conveyance of goods will not exceed one-tenth of the amount it would be on the road.

“Another advantage of this system is that, if the traffic on the line should increase as the country gets ‘opened up,’ and that afterwards it should become desirable to do so, the lower portions of the line, or those nearest the seaports, may be gradually improved, so as to fit them for locomotives; heavier rails may be laid down, and the light ones taken up and removed further into the interior, to be used there until they shall be again supplanted by the locomotive.

“By following this plan, I feel quite sure that the country might be intersected by hundreds of miles of horse-railways, in much less time and at less cost than it would take to construct thirty miles of locomotive line.”

26. It has often been said that in America and other places where cheap railways have been constructed, that after some years it was found necessary to take them all up again, and substitute more substantial works. This is to a certain extent true; but it is also true that before this was done their work had been accomplished, large centres of population established, and the country put in a position to pay for the more expensive lines. No one would advocate the erection of large and expensive buildings in the founding of a new colony, merely because in Sydney and other colonial cities the primitive structures are now giving way to buildings of more architectural pretensions; and, as a writer on this subject remarked, without its cheap railroads, America would not have stood in its present position in the race of progress. The great highway to the far West would not have been opened up as it is to the march of the immigrant population. These cheap railroads have been the means of creating, in many instances, the traffic which now necessitates their reconstruction. Had the Americans adopted the policy of contenting themselves with common roads till they could afford to make first-class railroads, they might in many localities have been waiting still.

27. Let those who will hear of nothing but first-class locomotive lines being made for this Colony, on the same principle as those constructed in England, and who fail to perceive the vast difference between the requirements of this Colony and the Mother Country—that the one has a dense mercantile manufacturing population of some 30,000,000 within an area of 122,000 square miles, while the other has but a small pastoral and agricultural population of about 400,000 scattered over an area more than twice the size of the United Kingdom of Great Britain—consider that even in England they are upon the threshold of quite a new era of engineering in this respect; that they feel even there that in many places a much cheaper class of railways would have been amply sufficient to meet all their requirements; and that during the Session of 1870 the number of Tramway Bills alone deposited in the House of Commons was

twenty-four;

twenty-four; and that at the present time, in several districts, a cheaper class of locomotive railways are being constructed; the share capital of these schemes being over £3,000,000, and the borrowed money more than £800,000. These Bills propose altogether about 450 miles of tramway to be laid in England, 58 miles in Scotland, and 11 miles in Ireland.

28. In a paper read before the Civil and Mechanical Engineers' Society, in London, on the 22nd March of this year, by the Vice-President, Mr. G. J. Crosbie Dawson, Asste. Ins. C.E., he says,—

"There are many outlying small towns, villages, and districts, spread over the country, now far removed from any railway station, where even very cheaply constructed surface light railways to connect them with the railway system of the country would not pay; but where tramways laid along the side of turnpike and public roads, with steam omnibuses, as proposed by Mr. Fairlie, Mr. Page, or Mr. Thompson, of Edinburgh, to ply on them, or with horse power, they would prove successful. Many turnpike roads, especially in populous districts and near towns, have houses built on each side more or less continuous—sometimes for miles together; and of course any railway in the neighbourhood would be carried across fields out of the road, and, however near together the stations might be, the population could not possibly be accommodated so well as by omnibuses running on tramways laid on the side of the turnpike road, which would take up passengers wherever required along the line of route.

"Our turnpike roads made by Telford, M'Adam, and other skilful engineers, which, throughout the country, are excellent, and on which vast sums of money have been expended by the last generation, would now again be thoroughly utilized, as they were in the old coaching days, forty years ago.

"I venture to prophecy that before many years are gone by we shall have tramways for horse-power, at any rate, laid along the greater part of our turnpike roads, and they undoubtedly will prove remunerative. In England alone there are 22,000 miles of turnpike road, saying nothing of highways and parish roads. The weight of the passengers, &c., carried will be as great as the vehicle, instead of the vehicle weighing many times as much as the load. Tramways will also be of the greatest convenience to a very large portion of our population, and prove extensive feeders to our railways."

If then horse tramways and light locomotive lines of railway are being projected in a country where there are good roads and population to use them, surely they would be found amply sufficient to meet all our requirements for years to come in this Colony, which is covered for the most part with but mere bush tracks.

29. In a pamphlet on Roads, Railways, and Canals in India, by Mr. T. Login, there are many useful suggestions connected with light railways. Mr. Login, writing upon roads, their construction and maintenance, states:—"Portions of the Grand Trunk Road are actually costing more to keep in repair than a line of railway; the latter being about 100 rupees a month per mile, while portions of the Grand Trunk Road are costing 120 rupees a month per mile. With such an enormous expenditure, therefore, increasing year after year, a time must soon be reached when all the available money will be swallowed up in repairs, unless some other means be devised for facilitating the traffic, which is daily increasing."

30. After collecting data and going carefully into the matter, Mr. Login arrived at the conclusion that it is cheaper for Government to send all the traffic by rail freight free than to keep up metalled roads for its transport.

31. In this Colony we are in a somewhat similar position. Yearly we are paying large sums for the forming and maintaining of our roads, which, if expended on light railways or horse tramways, would very soon cover the country with a cheap and expeditiously laid mode of conveyance, quite sufficient to meet all our requirements for years to come.

32. A reviewer of the pamphlet I have referred to, in a late number of the *Delhi Gazette*, says—"It is evident that light railways, as recommended by Sir Macdonald Stephenson, would be preferable to roads. These, and all district roads that may be made, should run at right angles to, and not parallel with, the great railways and canals; thus they would act as feeders for the great lines of communication, and should be as numerous as possible."

33. While I admit that horse-tramways would be a great improvement over the common roads, and hundreds of miles might be constructed that would act admirably as feeders to the existing railways, yet, as we now have some 400 miles of first-class locomotive lines, I am of opinion that, for our main arteries of communication, it would be better to adopt a light narrow-gauge locomotive line, similar to the Broelthal Valley Railway in Germany (2 ft. 7 in. gauge); the Festiniog Line in North Wales (1 ft. 11½ in. gauge); or that recently constructed in Norway, having a gauge of 3 feet, which I think is better than that of the former two.

34. The route that these main arteries should take ought at once to be decided upon; the land, which now for the most part belongs to the Crown, reserved from sale, and lithographic plans published with them, distinctly marked, in order that those seeking to purchase may select spots where they may be sure that, sooner or later, their improvements will be brought within the great railway system of the Colony.

35. In the surveys for these lines a route should be selected having in view the probability that at some future time (although I think it will not be for many years) they might be replaced gradually by railways such as we have at present, as the country increases in wealth and prosperity.

36. It will be asked, however, whether, seeing that it is ultimately intended to replace such a line, would it not be more economical to continue on at once with the same class of railway as at present? In an engineering sense it would be, but to a politician or financier it would not; as the present use of money may be of such importance that it would be much better to construct a line now at £3,000 that would be equal to all our requirements, but that would have to be replaced by one of £9,000 at the end (say) of twenty years, than to construct the more expensive line at once, and be paying interest that would more than double the capital in that time upon a line capable of doing ten times the work required. Besides, where so much is to be done—when all parts of the country are in want of means of transit—not to make the funds available go as far as possible is a great national detriment, and an injustice to the more distant places, which must necessarily receive railway communication so much later as the works are made more expensive; and, as a writer on this subject (Mr. Corbett) observes:—"Let us, therefore, while we adopt every mechanical improvement of an economical character in the construction and working of our railways, eschew the system of burying all our resources in a few model lines, but rather endeavour to afford every district a share of the great advantages which railways confer, by spreading them as widely as possible; and the economy of them will rapidly enrich each place, and so increase its wealth and power

of expenditure that the portion it will be called upon to contribute towards renewals and improvements will be a very trifling burden upon it. If we were to take away the entire of men's capital for the sake of making railways everlasting, we would deprive them of the means of turning the latter to account; but if we allow them to retain a portion of the capital and make the railways of no more than moderate durability, we not only leave them the power of renewal, but, owing to the benefits conferred by a good system of transit, we augment it."

37. The break of gauge that you would have is another objection that may be urged. The evils attending a break of gauge, as obstructive to the national traffic, in a country with a net-work of some 30,000 miles of line, like in England, would be intolerable; but here, where at most for years to come two or three trains a day will be sufficient to meet the requirements of the traffic, with proper mechanical contrivances for transshipping the goods, no inconvenience would be felt.

38. I have said, generally, in this report, that a system of cheap narrow-gauge locomotive lines, such as have been constructed in other countries, and can be here for from £3,000 to £3,500 per mile, would meet all the requirements of the traffic in this country for years to come, without entering into details regarding them; but as the success of such undertakings very often greatly depends upon some detail connected with their working, or the suitability of the rolling stock employed, I would submit that, should it be determined by the Government to carry out any such system, that, previous to doing so, an officer should be sent to inspect such lines of this description as have been lately constructed in Europe, with a view of selecting from each such portions as are best adapted to meet the wants of the Colony; and the officer charged with such an undertaking should be superior to any little feeling, and above patronizing one system above another, excepting on the grounds of its own merits, seeing that the best interests of the country depend upon his faithfully performing his duty in this respect.

I have, &c.,

JAS. HY. THOMAS.

NOTE.—I desire to acknowledge the great courtesy shown to me by the Surveyor General, Mr. Twynam, and other officers of the Survey Department, in placing at my service all the plans of the various roads, as well as rendering me all the information in their power regarding the district.

1870-71.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(VOUCHERS AND CORRESPONDENCE RELATIVE TO No. 6 CONTRACT, GREAT WESTERN LINE.)

Ordered by the Legislative Assembly to be Printed, 14 March, 1871.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 14th February, 1871, That there be laid upon the Table of this House,—

“Copies of all Vouchers and Correspondence between the Government and other persons relative to the performance and completion of, and payment for, No. 6 Contract, Great Western Railway Line, from 1st August, 1869.”

(Mr. Garrett.)

SCHEDULE.

Analysis of papers in reference to No. 6 Contract, Great Western Railway.

NO.	PAGE.
1. Engineer-in-Chief, reporting unsatisfactory progress of work, and recommending contract to be cancelled. 28/12/69.	2
2. Commissioner's Minute—to write G. M'Cauley to that effect. 30/12/69	2
3. Letter to G. M'Cauley. 31/12/69	2
4. Letter from G. M'Cauley in reply. 6/1/70	2
5. Minute of Commissioner forwarding M'Cauley's reply to the Engineer-in-Chief. 15/1/70	2
6-7. Engineer-in-Chief's Minutes thereon. 19/1/70	3
8. Commissioner to Crown Solicitor, respecting transfer of contract from G. M'Cauley to G. Forrester. 4/1/70	3
9. Crown Solicitor in reply, and forwarding copy of transfer deed. 13/1/70	3
9½. Transfer deed	3
10. Commissioner's Minute—that all notices be served on G. Forrester as well as G. M'Cauley. 15/1/70	6
11. Letter to G. Forrester—to explain cause of delay in completion of contract. 17/1/70	6
12. G. Forrester in reply, and forwarding report from Mr. H. Quodding. 20/1/70	6
13-14. Mr. H. Quodding's reports. 17/1/70	6, 7
15. Commissioner to G. Forrester—to state when contract will be completed. 22/1/70	7
16. G. Forrester in reply—completed in twelve weeks. 25/1/70	8
17. Commissioner's Minute, forgoing intention to cancel contract. 31/1/70	8
18. Letter to G. Forrester (as assignee) to that effect. 31/1/70	8
19. Letter to G. M'Cauley (as contractor) to that effect. 31/1/70	8
20. Letter from G. Forrester, asking for £5,000. 8/3/70	9
21. Commissioner, declining to grant £5,000. 1/4/70	9
22. District-Engineer's progress report on permanent way. 22/3/70	9
23. Deane & Deane, forwarding report from H. Quodding, and asking further extension of time. 20/4/70	9
24. Commissioner to Deane & Deane, in reply. 5/5/70	10
25. Deane & Deane, asking for £12,000—£10,000 granted. 4/7/70	11
26. Deane & Deane, for freight account to stand over until next payment to Forrester. 14/7/70	11
27-31. Sundry papers with reference to condemned ballast. 27th April to 24th November	11-13
32. Engineer-in-Chief to District Engineer—when he will be able to forward final certificate. 4/8/70	13
District Engineer, in reply thereto. 10/8/70	14
33. Deane & Deane, requesting final measurement to be made. 22/9/70	14
34. Commissioner, in reply thereto. 28/9/70	14
35. Geo. M'Cauley's caveat against payment of moneys to G. Forrester. 23/11/70	14
36. Geo. M'Cauley—that he has commenced an action against G. Forrester. 28/11/70	15
37. Crown Solicitor, forwarding bond entered into by Mr. Neale and Mr. G. Forrester, to indemnify the Commissioner. 5/12/70	15
38. Solicitor General's opinion as to transfer to G. Forrester. 25/11/70	15
39. Bond of indemnity	15
40. Certificate granted for £10,000	17
41. Final certificate granted for £5,065 8s. 9d.	17

Papers respecting R. Forster's claim against Geo. Forrester,—Contract 6, Great Northern Railway.

1A. Letter from R. Forster, solicitor, stating that Geo. Forrester owed R. Forster (sub-contractor) £408 8s. 21/11/70	19
2A. Letter from R. Forster, solicitor, enclosing copy of account due to R. Forster, contractor, and claiming protection. 24/11/70	19
Mr. Neale, agreeing to pay. 30/11/70	19
3A. Letter to R. Forster, solicitor, informing him of Mr. Neale's agreement. 3/12/70	19
4A. Account rendered—£408 16s.	20

RAILWAYS.

No. 1.

ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 28 December, 1869.

Minute-paper—Contracts Nos. 5 and 6, G.W.R.

THE progress of the works on Contracts Nos. 5 and 6 of the Western Railway is so unsatisfactory that I feel I have no course open to me but to recommend that both contracts be cancelled.

I have given repeated notices both to Mr. Higgins and Mr. M'Cauley, but have entirely failed in obtaining from them any satisfactory assurance that the works will be completed in a reasonable time; I am therefore compelled, and I do so with the greatest reluctance, to ask the Commissioner to cancel these contracts.

On Contract No. 6 no permanent-way has yet been laid, nor do I see any probability of this length being completed for some considerable time.

JOHN WHITTON.

No. 2.

COMMISSIONER'S MINUTE.

Department of Public Works,
Sydney, 30 December, 1869.

MY attention having been called to the unsatisfactory progress of the works on Contracts Nos. 5 and 6 of the Western Railway, inform Mr. Higgins and Mr. M'Cauley, the contractors, that I am considering the propriety of cancelling their contracts, under the 12th clause of the general conditions; but before coming to a final decision, I wish to afford them an opportunity of explaining the cause of the delay that has occurred.

J.S.

Letter to Mr. A. M'Cauley, 31/12/69.

No. 3.

THE COMMISSIONER FOR RAILWAYS TO MR. G. M'CAULEY.

Department of Public Works,
Railway Branch,
Sydney, 31 December, 1869.

SIR,

My attention having been called to the unsatisfactory progress of the works on your contract, No. 6, Great Western Railway, I have the honor to inform you that I am considering the propriety of cancelling the contract, under the 12th clause of the general conditions.

2. Before, however, coming to a final decision, I desire to afford you an opportunity of explaining the cause of the delay that has occurred.

I have, &c.,

JOHN SUTHERLAND,
Commissioner for Railways.

No. 4.

MR. G. M'CAULEY TO THE MINISTER FOR PUBLIC WORKS.

Sydney, 6 January, 1870.

SIR,

In reply to your letter dated 31st December, I do myself the honor to state, with regard to No. 6 section of the G. W. R., that with a slight exception all the bottom ballast is down, and all the top to the right gauge ready for spreading.

Inability to get good local timber for sleepers, and the scanty and peculiar character of the various bushes for iron-bark near to the Penrith district, has rendered it very difficult to get the said kind of material; but great exertions have, and are now being made, to make a satisfactory progress to the final completion of same.

I have, &c.,

GEORGE M'CAULEY.

No. 5.

MINUTE OF COMMISSIONER FOR RAILWAYS.

MR. M'Cauley's reply herewith to Commissioner's letter, requesting him to show cause why contract should not be cancelled, may be forwarded to Mr. Whitton for report.—B.C., 15/1/70, J.R.

No. 6.

3

No. 6.

ENGINEER-IN-CHIEF to THE COMMISSIONER.

My remarks on Mr. Higgins' letter on the same subject will apply to Mr. M'Cauley.

I believe that every exertion is now being made to procure sleepers; and probably the infliction of the penalties provided for this contract, and now amounting to £10,000, will be a better course than that of cancelling the contract.—J.W., 19/1/70.

No. 7.

ENGINEER-IN-CHIEF to COMMISSIONER.

THE sole difficulty in this matter has been sleepers, and Mr. Higgins' letter simply points out that he neglected to make proper provision for a continuous supply, although I believe that now he is using every exertion to procure them.

The Railway Department called for a supply of sleepers, which were urgently required for relaying the Parramatta line, but at a time when Mr. Higgins' contract should have been completed.

If proper arrangements had been made for sleepers, this contract might have been finished in June last; and although the difficulty of procuring sleepers might not have been foreseen, the delay which has taken place is not only extremely vexatious, but a great pecuniary loss to the Colony.

I do not know if the contract were cancelled that the permanent way could be finished in less time than stated by Mr. Higgins (five weeks); and the Commissioner may therefore consider whether the infliction of the penalties for the non-fulfilment of the contract, amounting at the present time to about £12,000, would not be a preferable course to that of cancelling the contract.—J.W., 19/1/70.

No. 8.

THE COMMISSIONER FOR RAILWAYS to THE CROWN SOLICITOR.

Department of Public Works,
Railway Branch,
Sydney, 4 January, 1870.

SIR,

On the 1st October last, Mr. Jackson, of your department, brought to this office, for my signature, a deed transferring Mr. G. M'Cauley's contract, No. 6, G.W. Railway, to Mr. George Forrester, and it is thought, to Mr. Andrew M'Kenzie.

2. The transfer was signed by me, and Mr. Jackson took the document away with him. A note of this fact was taken at the time by the Chief Clerk.

3. This deed is now required, as action is to be taken thereupon, and I shall feel obliged if you will forward it to me the first thing to-morrow morning.

I have, &c.,

JOHN SUTHERLAND,
Commissioner for Railways.

No. 9.

THE CROWN SOLICITOR to THE COMMISSIONER FOR RAILWAYS.

Crown Solicitor's Office,
Sydney, 13 January, 1870.

SIR,

I have the honor to acknowledge the receipt of your letter of the 4th instant, in which you request that I will forward to you the deed of assignment to Mr. George Forrester of Mr. M'Cauley's contract, No. 6, Great Western Railway, and to state that such deed is not in my possession, but in that of Mr. Deane, Mr. Forrester's solicitor. I, however, have had a copy of such deed made, and I now send it to you herewith.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

No. 9½.

ASSIGNMENT OF CONTRACT.

THIS Indenture made the first day of October in the year of our Lord one thousand eight hundred and sixty-nine between George M'Cauley of Darlinghurst near Sydney in the Colony of New South Wales contractor of the first part the Commissioner for Railways in the said Colony a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria number nineteen of the second part and George Forrester of Sydney aforesaid squatter and grazier of the third part Whereas one James M'Kenzie by certain articles of agreement under seal bearing date the day of one thousand eight hundred and sixty-seven contracted and agreed with the Commissioner for Railways aforesaid to provide all materials (except as in the specification to the said agreement annexed is mentioned) labour scaffolding and every other thing requisite and necessary for the full and proper completion of a single line of railway (as an extension of the Great Western Railway from Penrith to Bathurst) commencing at Piper's Flat at ninety-one miles and two chains marked on the working plan and section and terminating at ninety-seven miles eight chains at Rydal being a length of six miles

miles and six chains. And whereas the said James M'Kenzie entered upon the construction of the said works and performed a small portion thereof but made default in proceeding therewith and abandoned the same and his estate has since been placed under sequestration as insolvent. And whereas by articles of agreement bearing date the eleventh day of May one thousand eight hundred and sixty-eight and made between the said George M'Cauley of the one part and the Commissioner for Railways of the other part reciting as hereinbefore is recited and that the Commissioner for Railways had called for tenders for the completion of the said railway extension and of such other works as were set out in the specification to the now reciting articles of agreement annexed marked "A" or in the plans or drawings therein referred to and to the general conditions thereto annexed marked "B". And that the said George M'Cauley had forwarded to the Commissioner for Railways the tender thereto annexed marked with the letter "C" to execute the whole of the works and find all labour materials (excepting permanent-way materials) scaffolding and workmanship required in the construction and completion of the said works at and for the prices set out in the said tender. And that the Commissioner for Railways had accepted the said tender upon condition of the said George M'Cauley entering into the now reciting presents and giving the bond herein after recited. It was witnessed that the said George M'Cauley did thereby covenant promise and agree with and to the Commissioner for Railways aforesaid to find and provide all materials (excepting such as were in the said specification thereto annexed specified to be provided by the said Commissioner labour scaffolding tools implements and every other thing requisite and necessary for the full and proper completion of the several works required in the construction and completion of the said single line of railway hereinbefore particularly mentioned in accordance with the said specification marked "A". And it was thereby also agreed that the said works should be completed and finished in all things on or before the thirty-first day of March last. And whereas by a certain bond bearing date the eleventh day of May one thousand eight hundred and sixty-eight the said George M'Cauley and the said George Forrester and Andrew M'Kenzie therein described as his sureties became jointly and severally bound unto the Commissioner for Railways in the penal sum of three thousand pounds sterling with a condition thereunder written making void the same on the due completion and performance of the several works specified in the before recited articles of agreement of eleventh May one thousand eight hundred and sixty-eight. And whereas by memorandum of agreement bearing date the twenty-second day of April one thousand eight hundred and sixty-nine and made between the Commissioner for Railways of the one part and the said George M'Cauley George Forrester and Andrew M'Kenzie of the other part the time for the completion of the said works was extended until the thirty-first day of August last. And whereas the said George M'Cauley has only partly performed the said works and is now unable to proceed with and to complete the same. And whereas the said George M'Cauley is indebted to the said George Forrester in the sum of four thousand five hundred and fifty pounds for moneys advanced to the said George M'Cauley to carry on the said works and the said George M'Cauley is also indebted to several persons for wages in connection with the said work to the sum of one thousand two hundred pounds or thereabouts and the said George M'Cauley hath requested the said George Forrester to complete the said work and pay the said wages which he has agreed to do upon the said before recited articles of agreement of eleventh May one thousand eight hundred and sixty-eight and all moneys due and to become due thereunder and all railway and other plant materials and things used in connection therewith and all benefit and advantage derivable thereunder being assigned to him in consideration of the said debt or sum of four thousand five hundred and fifty pounds now due and owing by the said George M'Cauley to the said George Forrester which the said George M'Cauley doth hereby admit and also in consideration of the sum of one thousand two hundred pounds or thereabouts now to be advanced by the said George Forrester to the said George M'Cauley to pay the said wages due in connection with the said works. And whereas at the request of the said George M'Cauley and the said George Forrester the Commissioner for Railways hath consented to such assignment being made upon the express understanding and condition that this assignment and his consenting hereto shall not be considered as a waiver of any breach or breaches of contract heretofore committed by them or as in any way limiting or affecting the right of the Commissioner for Railways or his successors to proceed now or at any time hereafter should he or they in his or their discretion think fit so to do against the said George M'Cauley under the said articles of agreement or against the said George M'Cauley and George Forrester or either of them under the said recited bond for or by reason of any breach or breaches of the said articles of agreement or of the clauses provisoes stipulations or agreements in the specification and general conditions therein mentioned or to the Commissioner for Railways or his successors proceeding to take possession of the said works or to exercise all or any of the powers given to him by the said articles of agreement specification and general conditions or any of them. And upon the said George M'Cauley and George Forrester also agreeing in consideration of the Commissioner for Railways so consenting as aforesaid that their liability to the Commissioner for Railways under the said recited bond shall not be in any way released waived or in any way affected by these presents or anything herein contained or by the said Andrew M'Kenzie not consenting hereto. Now this Indenture witnesseth that in pursuance of the said agreement and in consideration of the said sum of four thousand five hundred and fifty pounds being so due and owing as aforesaid and of the present advance of one thousand two hundred pounds on the execution hereof paid by the said George Forrester to the said George M'Cauley (the receipt whereof is hereby acknowledged) and in consideration of the premises he the said George M'Cauley doth with the consent of the Commissioner for Railways (testified by the Commissioner for Railways being a party to and executing these presents) hereby assign transfer and set over unto the said George Forrester his executors administrators and assigns All those the said recited articles of agreement of eleventh May one thousand eight hundred and sixty-eight. And also all sum and sums of money debts and dues now due and payable or which may at any time hereafter become due and payable thereunder to the said George M'Cauley by the Commissioner for Railways or any other person or persons body or bodies corporate or politic whatsoever. And also all railways and other plant implements tools scaffolding materials and things now or at any time heretofore used by the said George M'Cauley in connection with the said works mentioned and specified in the said articles of agreement or now or at any time hereafter being at or upon the before-mentioned railway extension. And all the right title interest benefit advantage claim and demand of the said George M'Cauley of in and to the same respectively and every part thereof respectively. To have hold receive and take the said articles of agreement sum and sums of money debts dues railway and other plant implements tools scaffolding materials things and premises hereinbefore expressed to be hereby assigned unto the said George Forrester his executors administrators and assigns for his and their own proper use and benefit. And the said George M'Cauley for himself his heirs executors and administrators hereby covenants with the said George Forrester his executors administrators and assigns in manner following that is to say—That for and notwithstanding any matter or thing by him done or knowingly omitted or suffered to the contrary the said recited articles of agreement is a good and valid agreement and not in anywise forfeited surrendered or otherwise made void. And that he the said George M'Cauley now hath full power and lawful authority except as appears hereby to assign and assure the said recited articles of agreement and also the said hereby assigned sum and sums of money debts dues railway and other plant materials things and premises and every of them unto the said George Forrester his executors administrators and assigns in manner aforesaid free from all incumbrances whatsoever. And that the said George M'Cauley his executors or administrators shall not nor will receive compound incumber or prejudice the said articles of agreement sum and sums of money debts dues railway and other plant materials things and premises or any of them. And further that the said George M'Cauley his executors and administrators shall and will at the request of the said George Forrester his executors administrators or assigns but at the cost of the said George M'Cauley his heirs executors or administrators make do and execute all such further and other lawful acts deeds assignments and assurances in the law for the better enabling him the said George Forrester his executors administrators and assigns to perform carry out recover receive and take possession of the said articles of agreement sum and sums of money debts dues railway

railway and other plant materials things and premises hereby assigned respectively or any part or parts thereof respectively as by the said George Forrester his executors administrators or assigns shall be reasonably required And for the purpose of more effectually enabling the said George Forrester his executors administrators and assigns to carry into effect these presents the said George M'Cauley hereby constitutes the said George Forrester his executors administrators and assigns his attorney and attorneys irrevocable and doth give and grant to him his executors administrators and assigns full power and authority in his name or in the names of his executors or administrators or in the name or names of the said George Forrester his executors administrators or assigns but to the only proper use and behoof of the said George Forrester his executors administrators and assigns to ask demand sue for recover receive compound acquit release and discharge the said sum and sums of money debts and dues now or at any time hereafter to become due and payable to the said George M'Cauley his executors or administrators under or by virtue of the said hereby assigned articles of agreement from the Commissioner for Railways or any other person or persons body or bodies corporate or politic and upon receipt of the same or any part thereof acquittance or proper discharges to make and give And also to carry into effect and perform the said hereby assigned articles of agreement And to carry on do execute perform and finish the said several works and things therein particularly mentioned and specified And also to seize take retain and keep possession of the said railway and other plant materials and things hereby assigned And also one or more attorneys under the said George Forrester his executors administrators or assigns for all or any of the purposes aforesaid to appoint as occasion may serve And generally in his name or in the name of his executors or administrators or in the name or names of the said George Forrester his executors administrators or assigns to make do perform and execute all and every such further and other acts matters and things touching or concerning the premises as to the said George Forrester his executors administrators or assigns shall seem requisite and that as fully and effectually as the said George M'Cauley his executors or administrators could do And the said George Forrester for himself his heirs executors and administrators hereby covenants with the said George M'Cauley his heirs executors and administrators and the Commissioner for Railways his successors and assigns That he the said George Forrester shall and will well and truly perform observe and keep all and every the covenants agreements provisoes and conditions respectively which are mentioned and contained in the said hereby assigned articles of agreement which are capable of being performed or observed Provided always and the said George M'Cauley and George Forrester do and each of them doth hereby declare with and to the Commissioner for Railways that this assignment and his consenting hereto shall not be considered as a waiver of any breach or breaches of contract heretofore committed by them or as in any way limiting or affecting the right of the Commissioner for Railways or his successors to proceed now or at any time hereafter should he or they in his or their discretion think fit so to do against the said George M'Cauley under the said articles of agreement or against the said George M'Cauley and George Forrester or either of them under the said recited bond for or by reason of any breach or breaches of the said articles of agreement or of the clauses provisoes stipulations or agreements in the specification and general conditions therein mentioned or to the Commissioner for Railways or his successors proceeding to take possession of the said works or to exercise all or any of the powers given to him by the said articles of agreement specification and general conditions or any of them And that the liability of the said George M'Cauley and George Forrester and each of them to the Commissioner for Railways under the said recited bond shall not be in any way released waived or in any way affected by these presents or anything herein contained in any manner howsoever or by reason of the said Andrew M'Kenzie not consenting hereto.

In witness whereof the said parties to these presents have hereunto set their hands and affixed their seals the day and year first above written.

WILLIAM DEANE.

GEORGE FORRESTER.

In the Colony of New South Wales.

I, George Forrester, of Randwick, near Sydney, in the Colony of New South Wales, gentleman, do solemnly and sincerely declare that the value of the railway plant and other implements mentioned in a certain indenture of assignment bearing date the first day of October, A.D. 1869, and made between the parties thereto (viz., George M'Cauley of the first part, the Commissioner for Railways of the second part, and myself of the third part), was not more than four hundred pounds at the time of the date of the said deed.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "*An Act for the effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales and to substitute Declarations in lieu thereof and for the suppression of voluntary and extra-judicial Oaths and Affidavits.*"

GEORGE FORRESTER.

Made and signed before me, this 5th of }
December, 1870. }

WM. HEMMINGS,
Commissioner of Stamp Duties.

No. 10.

MINUTE.

It will be seen by the document now enclosed, that the Commissioner for Railways has consented to Mr. M'Cauley assigning the contract to George Forrester, but without waiver of the Commissioner's rights reserved in M'Cauley's agreement, and in the bond given by Forrester and M'Kenzie.

M'Cauley is therefore the contractor for the work, upon whom all notices must be served, but notice should also be served upon Forrester.—C.A.G., 15-1-70.

No. 11.

THE COMMISSIONER FOR RAILWAYS TO G. FORRESTER, Esq.

Department of Public Works,
Railway Branch,
Sydney, 17 January, 1870.

SIR,

My attention having been called to the unsatisfactory progress of the works on Contract No. 6, Great Western Railway, of which you hold an assignment from Mr. G. M'Cauley, the contractor, I have the honor to inform you that I am considering the propriety of cancelling the contract, under the 12th clause of the general conditions.

2. Before, however, coming to a final decision, I desire to afford you, as one interested in the contract, an opportunity of explaining the cause of the delay that has occurred.

3. I may say that Mr. M'Cauley has been afforded an opportunity of replying to a similar communication, which he has availed himself of; but I shall delay the consideration of his answer for a few days, to enable you to offer, should you desire to do so, any further explanation.

I have, &c.,
JOHN RAE,
For Commissioner of Railways.

No. 12.

G. FORRESTER, Esq., to THE COMMISSIONER FOR RAILWAYS.

100, Elizabeth-street,
Sydney, 20 January, 1870.

SIR,

In reply to your letter of 17th instant to Mr. George Forrester, respecting the progress of the works on Contract No. 6, Great Western Railway, we think it right, in the first instance, to call your attention to the circumstances under which Mr. Forrester became the assignee of such contract,—not with any expectation of profit, but being one of the sureties of the original contractor (to whom Mr. Forrester had made large advances), and therefore upon whom all the loss of failure would fall. The Government recognized his painful position, and, to assist him as much as possible in lessening an impending and very serious loss, sanctioned the assignment of the contract; so that when Mr. Forrester should have spent a large sum of money in completing the contract, no difficulty should arise with the Government in settling with Mr. Forrester.

Thus protected, Mr. Forrester immediately engaged the services of Mr. Henry Quodling, a gentleman of great experience, to superintend the works, giving him full power to carry the works to completion with the utmost despatch, regardless of cost; and we believe that this gentleman has brought an immense amount of energy to bear upon the duty thus undertaken; and though at first, from the change of management and a variety of other causes, some little time was necessarily lost, still he has now the work so well in hand that we cannot possibly think that the Government could make any change or other arrangement which would bring the works so speedily and well to an end; in fact, on the contrary, we think if there were another change the works would receive a further check, and much delay would take place in overcoming many of the difficulties which Mr. Quodling had to encounter.

To show what progress has been made, and the arrangements for carrying the work out, Mr. Quodling has been called upon for his report, which we have now the honor to enclose, by which it will be clearly seen that no further difficulties for the most rapid completion of the works can be in the least apprehended.

We trust that Mr. Forrester's position—having, in addition to the money previously advanced to the original contractor (£4,550) since he has taken the works in hand expended upwards of £7,000—will receive the most favourable consideration of the Government, more particularly as he is prepared to have the fullest inquiry made of his doings since he has accepted the assignment of the contract, to show that nothing has been omitted or neglected which could possibly interfere with the works being pressed on with vigour and rapidity.

We have, &c.,
DEANE & DEANE,
For GEORGE FORRESTER.

No. 13.

MR. H. QUODLING'S REPORT.

Sydney, 17 January, 1870.

SIR,

In reply to your inquiry respecting the progress that has been made with reference to Contract No. 6, G. W. Railway, I beg to offer the following remarks.

Having no desire to reflect on the manner in which the works were being carried on by Mr. G. M'Cauley, I have simply to state that, since you entrusted me with the management of the same, I have got the whole of the excavation completed, and a very large proportion of the border stones and bottom ballast laid down, a considerable portion of top ballast broken, road approaches and fencing nearly completed, and many of the embankments trimmed; also plant, tools, &c., provided for laying in the permanent way.

My

My greatest difficulty has been in providing sleepers, and to this very important matter I devoted all my spare time and energy, with such success as I can confidently assert that I am now in a fair way of getting them in suitable quantities to enable me to *at once commence* and carry on the permanent way without any further interruption.

I am sorry to say that you have been misled in regard to the bush purchased from Dr. Fullerton, which has not yielded such a supply as you were led to expect, added to which, from the bad treatment some of the men employed by Mr. M'Cauley had received, I found that your interests were for a time, till I have restored confidence, greatly prejudiced, and we have also had to contend with harvesting, elections, holidays, and hot weather, which has not helped us.

I may here remark, that I firmly believe that the number of really experienced men in this particular line is very limited; men wanting in judgment often spoil really good useful timber. Knowing this, I did not dare to offer prices in excess of those paid by Mr. Higgins; and for another reason too, that if I did so, Mr. Higgins would raise his prices, and thus the men might be kept itinerating from one part of the country to another, as they are so prone to do, consequently losing their time, and their services would be lost to us.

The fact that the Government is carrying on an extensive trade in this line is much against the interest of you and others, more particularly as an inferior article can be properly taken at a less price; but much of the timber that is converted into "Government sleepers" would be suitable for the contractors, and the men who work for sleepers cannot understand why sleepers for the Government are passed more easily than those for contractors, and prefer therefore working for the Government, though at a less price.

The exceedingly hot weather we have had of late has been a cause of retarding the work very much; it is trying in the extreme to timber, necessarily exposed, and cut at so bad a season.

The accompanying list shows the names and residences of the persons with whom I have engaged to supply sleepers, and the prices, showing that no delay has arisen from a desire to carry on the work cheaply at the expense of expedition.

I have, &c.,
HENRY QUODLING.

No. 14.

MR. H. QUODLING'S REPORT.

NAMES and residences of persons who have engaged to supply sleepers for No. 6 Contract, G. W. Railway.

Name and residence.	Particulars.	Result.
Patrick Martin, The Oaks	Offered to get 500 per week, or possibly more, at 4s. 6d. each, after end of 1869.	These are being got, but in much smaller quantities per week.
Edward Oxenbridge, Douglas Park	Will supply up to completion of contract from 250 to 300 per week, at 4s. 6d. each.	Has supplied 457 approved, and will probably have 500 more by the 27th instant, and will continue.
James Bell, Picton	Will supply as many as he can get men to work them, at 4s. 6d. each.	Has supplied 203, and is still getting more.
Robert Wild, The Oaks	Can supply 10,000, at 4s. 6d. each.	Has promised to commence to-day (17th January, 1870), and get a large quantity.
John Napier, Nattai	Will supply a few hundred, at 4s. 6d. each.	Is getting some drawn out.
John Booth, Sydney	Offered to furnish 1,000 to commence, and keep up the supply at 6s. 1d. each delivered at the Darling Harbour, or 6s. 4d. at Redfern.	Accepted. Mr. Taylor reports that he had 300 logs ready to commence sawing, when his machinery broke down, and promised a ship-load in a few days.
John M'Quail, Walgen; and two other persons.	Agreed to deliver, at 6s. each, at Piper's Flats.	Has supplied about 600, 84 of which have been accepted. Am not in a position at present to furnish minute particulars, but can do so in a day or two.
Grose Farm	Men getting price 2s. 6d. at the stump.	362 approved, many rejected, more getting out.

I am also treating with several other persons for the supply of sleepers.

HENRY QUODLING.

Mr. Forrester to state definitely when the contract will be completed.—J.S., 21/1/70.
George Forrester, Esq.—22/1/70.

No. 15.

THE COMMISSIONER FOR RAILWAYS TO G. FORRESTER, Esq.,

Department of Public Works,
Railway Branch,
Sydney, 22 January, 1870.

SIR,

In reference to Messrs. Deane & Deane's letter of the 20th instant, on your behalf, explaining the cause of the delay in the progress of Mr. M'Cauley's contract, No. 6, Great Western Railway, I have the honor to request that you will state definitely when the contract will be completed.

2. I shall be glad to receive your reply not later than Monday next, the 24th instant.

I have, &c.,
JOHN RAE,
For the Commissioner of Railways.

No. 16.

G. FORRESTER, ESQ., to THE COMMISSIONER FOR RAILWAYS.

100, Elizabeth-street,
Sydney, 25 January, 1870.

SIR,

In answer to your letter of the 22nd instant, requiring us to state definitely when Mr. M'Cauley's Contract, No. 6, Great Western Railway, will be complete,—we have the honor to inform you that on reference to Mr. Henry Quodling he confidently asserts that the line can be opened to Rydal for mail and passenger traffic in two months from this date, and that the whole will be complete in twelve weeks, to do which we have had to pay as high a price as 6s. 1d. (six shillings and one penny) per sleeper, and we fear before the contract is completed we shall have to pay a still higher sum.

We have, &c.,
DEANE & DEANE,
FOR GEORGE FORRESTER.

No. 17.

MINUTE-PAPER.—GOVERNMENT RAILWAYS.

Contract No. 6, Great Western Railway—G. M'Cauley, contractor, George Forrester, assignee.

I HAVE considered the reasons afforded for the delay in completing this contract, as given in Mr. M'Cauley's letter of the 6th instant and in Mr. Forrester's letter of the 20th instant; and I am quite of opinion that, until very recently, no adequate exertions have been made to have the work completed within the contract time, which has moreover been extended beyond the original date.

As however it would appear that every endeavour is being made to have the contract completed at the earliest possible date, viz., two months from the 25th instant, I am disposed to forego my intention of cancelling the contract.

This concession is however made with the distinct stipulation that not only must the work be completed by the time stated, but that its progress towards completion must be such as to satisfy the Engineer-in-Chief that it will be completed; otherwise he has instructions to enter upon the contract at any time, and to take steps for its being finished by the Government. This is without prejudice.—J.S., 31st January, 1870.

Mr. M'Cauley informed as contractor.

Mr. Forrester informed as assignee.—31 Jany., 1870.

Mr. Whitton.—B.C., 1/2/70.

J.W., 4/2/70.

Returned to Chief Clerk, 4/2/70.

No. 20.

G. FORRESTER, ESQ., TO THE COMMISSIONER FOR RAILWAYS.

100, Elizabeth-street,
Sydney, 8 March, 1870.

SIR,

We have the honor to make application for the sum of £5,000 (five thousand pounds), on account of No. 6 Contract, Great Western Railway.

Mr. Forrester has, since the assignment of Mr. M'Cauley's contract to himself, expended on the works upwards of £7,000 (seven thousand pounds); and, from the report of Mr. Quodling, we are able to state the contract is progressing most favourably and towards its completion, and we therefore crave the liberty of making the present application.

We have, &c.,
DEANE & DEANE,
FOR GEORGE FORRESTER.

Mr. Whitton, for report.—J.S., 9/3/70.

The extension of time to the 25th of March was given on the distinct stipulation that not only must the work be completed by the time stated, but that its progress towards completion must be such as to satisfy me that it would be completed at that date. The progress has not been satisfactory, nor will the work be completed at the time named. I therefore advise that the application for £5,000 be refused.—J.W., 22/3/70.

Commissioner.—22/3/70.

Inform.—J.S., 30/3/70.

No. 21.

THE COMMISSIONER FOR RAILWAYS TO MESSRS. DEANE & DEANE.

Department of Public Works,
Railway Branch,
Sydney, 1 April, 1870.

GENTLEMEN,

In reference to your letter of the 8th ultimo, applying, on behalf of Mr. George Forrester, for an advance of £5,000 on account of Contract No. 6, Great Western Railway, I have the honor to inform you that, under a report received from the Engineer-in-Chief, as to the unsatisfactory progress which is being made with this contract, I am unable to authorize the advance applied for.

I have, &c.,
JOHN RAE,
For the Commissioner of Railways.

No. 22.

MR. DISTRICT ENGINEER COWDERY TO THE ENGINEER-IN-CHIEF FOR RAILWAYS.

Great Western Railway—Contract No. 6,

22 March, 1870.

Report of progress of Permanent Way.

On this contract the permanent way is laid to 92 miles 35 chains. 15 chains of this was laid to-day.

The weather appears to be improving; we had only one heavy shower to-day.

GEORGE COWDERY,
District Engineer.

For information of the Commissioner.—J.W., 23/3/70.

Commissioner.—23/3/70.

Seen.—30/3/70, J.S.

No. 23.

MESSRS. DEANE & DEANE TO THE COMMISSIONER FOR RAILWAYS.

100, Elizabeth-street,
Sydney, 20 April, 1870.

SIR,

We have the honor to enclose a report from Mr. Quodling, who has charge, on behalf of our client, Mr. George Forrester, of No. 6 Contract, Great Western Railway.

In forwarding this report, we regret to say that it becomes necessary for us to apply for a further extension of the time for the completion of the contract to the 15th June next, although, by the report forwarded herewith, it could be opened (if required) for passenger traffic on the 1st of the same month.

The report is so full, pointing out the insurmountable causes of delay, that little is left for us to urge on Mr. Forrester's behalf,—the principal cause being that of the very inclement weather which has so recently prevailed for such a length of time preventing the works to any great extent from being proceeded with on the line, and greatly retarding the getting of material to the works, the same having to be taken over so great an extent of country, and the roads being cut up to such an extent as to be almost impassable.

Another cause of delay arises from the ballast which was brought on to the works and piled up along the line (prior to our client's taking over the assignment), having recently been opened up and rejected by the Inspector.

This misfortune could not for an instant have been anticipated by Mr. Forrester, as the piles looked perfectly good, and the rejection has surprised no one more than Mr. Quodling.

We need scarcely point out the amount of energy which has been brought to bear upon this contract since it was assigned to our client, because we believe it is well-known that no blame can be attached to him on this account, as everything which possibly could be done to complete the contract in due time has been done; which, we think, is amply evidenced by the fact that our client has expended upwards of £9,000 without receiving any return whatever to so large an expenditure; and we are assured that if the extension now asked for be granted there can be little doubt of the contract being completed.

We have, &c.,
DEANE & DEANE.

[Enclosure.]

Mr. H. Quodling to J. T. Neale, Esq.

532, Bourke-st., Surry Hills,
18 April, 1870.

Sir,

In obedience to your instructions, I beg to submit the following remarks with reference to the delay in the progress of No. 6 Contract.

The almost continuous rain during the whole of last month and a portion of the current one has nearly caused a complete stoppage of the works, more particularly that of carting out sleepers from the bush, and the felling and squaring the total number requisite for the completion of the contract.

During the first week in March, and in continuous heavy rain, I managed to get 2,228 sleepers inspected, loaded up, and forwarded on to the works; but since then I have only been able to send up 1,508, out of 3,000 that were ready for carting out on the 5th ultimo.

The fact that the plate-layers have never been delayed for sleepers, will afford you some idea of the state of the weather on the mountains, seeing that they were only able to work up about 4,000 in seven weeks.

I leave Sydney to-morrow for Bowral, and fully expect to be able to send up 2,200 sleepers during the present week, viz., from Bowral 500, Mittagong 500, Douglass Park 800, Picton 400; and having more at Richmond, South Creek, and Penrith ready for inspection, and being drawn out, I can confidently state that by the 14th proximo the whole number requisite to complete the contract will be on the works.

When the Government is made aware of the fact that sleepers are being procured at Bowral, on the Southern Railway, 67 miles from the Junction, and 92 from Wallerawang, a total of 159 miles, for which 2½d. per ton per mile has to be paid for trainage alone,—and that they have also been got from Lake Macquarie, and are now being procured from Mittagong, Picton, Douglass Park, Currajong, Richmond, Riverstone, and Penrith,—it should convince the authorities that no expense or labour has been spared to procure the necessary quantity, and in the shortest space of time. Repeated advertisements and handbills have invited all to supply them, and at the *highest price*.

Another cause of delay has been through indifferent ballast having been procured by Mr. M'Cauley, much of which has to be replaced by suitable material.

This has proved a more serious matter than was at first anticipated, as I find by a report received this morning that it is impossible at present to get stone carted out.

Again, some new works have been ordered recently—a long culvert, and an approach road.

With reference to the time by which the line might be opened to Rydal, I think it possible that the road might be packed sufficiently to admit of the passenger trains running, and using the turn-table on No. 7 Contract, by the 1st June next, and that by the 15th of the same month the whole of the work might be completed. This time is only a little more than equivalent to that which has, and still prevents our working.

It would be satisfactory to have the opinion of the Engineer (Mr. Cowdery) as to the probable time it will take to finish, and as well to inform that gentleman that there will be no lack of sleepers.

I am, &c.,
HENRY QUODLING.

Trucks kindly provided by the Traffic Manager.

Part of this is to be paid by the person supplying at Bowral.

I have written Mr. Cowdery and Mr. Reynolds also on this subject, and suggested a means of getting on with the work notwithstanding the bad state of the bush, and not to be too particular as to necessary expense that really must be incurred, in order to get the work forwarded.

I do not know if the Minister would desire to open for the passenger traffic alone, but think that he might, as the road from Bowenfels to Rydal is, to say the least, indifferent.

I have written Mr. Cowdery to send his candid opinion to the Engineer-in-Chief on this subject, and have informed him of this also.

H.Q.

Submitted.—21/4/70, J.R.

Mr. Whitton, for report.—B.C., 23/4/70., J.R.

In consequence of the extremely wet weather, it has no doubt been impossible to proceed with the works. I advise that no formal extension be given, but that the contractors be permitted to carry on the works.

This permission to be without prejudice.—J.W., 28/4/70.

Commissioner.—28/4/70.

Approved.—J.S., 30/4/70.

No. 24.

THE COMMISSIONER FOR RAILWAYS TO MESSRS. DEANE & DEANE.

Department of Public Works,
Railway Branch,
Sydney, 5 May, 1870.

GENTLEMEN,

In reference to your letter of the 20th ultimo, applying for an extension of time for the completion of Mr. M'Cauley's assigned contract, No. 6, Great Western Railway, I have the honor to inform you that by the terms of my letter of 31st January last, the Engineer-in-Chief would be justified in entering upon this contract and carrying it on for the Government; and the only concession I am able to make, without prejudice, is to allow the contractor to carry on the works.

I have, &c.,

JOHN SUTHERLAND,
Commissioner for Railways.

MESSRS. DEANE & DEANE TO THE COMMISSIONER FOR RAILWAYS.

75, Elizabeth-street,
14 July, 1870.

SIR,

We have the honor to request that you will allow the account for carriage of sleepers, &c., in connection with No. 6 Contract, Great Western Railway, to stand over until the next payment to Mr. Forrester on account of such contract.

We have, &c.,
DEANE & DEANE,
For GEORGE FORRESTER.

Approved.—J.S., 14/7/70.

Accountant.—B.C., 15/7/70, C.A.G.

Seen, and voucher 1,991 for £10,000 to Treasury for payment.—H.A.H., 15/7/70. The Chief Clerk.

No. 27.

MR. DISTRICT ENGINEER COWDERY TO THE ENGINEER-IN-CHIEF FOR RAILWAYS.

Great Western Railway,
27 April, 1870.

SIR,

In reply to your memo., No. 70/141, of the 25th instant, I beg to state that I do not remember your requesting me to report on the ballast on No. 6 Contract, or I should have done so. I remember the conversation I had with you respecting this ballast, and I think I showed you a note from Waring, in which he rejects the whole of the ballast as far as he is concerned. You told me I should know what was good ballast and what was not, and that you did not know when you could see it. However, I have left it an open question until you see it. I have had some of the worst of the bottom cast out and other put in its place, but I have not allowed the laying of the road to be stopped for it. Nothing but the want of sleepers and the bad weather has prevented us getting on faster. It has been raining ever since last Thursday, except yesterday, and it is now raining fast. I believe a large portion of the ballast towards the Rydal end is as good freestone as can be got in the district, and I believe it will stand; it is rather too fine in the grain, and the wet has made it rather soft. The contractors are trying to get more for what I have rejected, but they cannot cart it now.

I have, &c.,
GEORGE COWDERY.

Waring's note rejected the ballast, and I requested Mr. Cowdery to examine the whole of the ballast, and give me his opinion as to its general quality.—J.W., 28/4/70.

Mr. Cowdery—To be returned.—W.H.Q., 28/4/70.

Reply attached.—G.C., 2/5/70.

J. Whitton, Esq., C.E.

No. 28.

MR. DISTRICT ENGINEER COWDERY TO THE ENGINEER-IN-CHIEF.

Great Western Railway,
2 May, 1870.

SIR,

I beg to inform you of the state of the ballast on No. 6 Contract, and the quantities of each description as near as I can estimate them.

Bottom-ballast:—2 miles conglomerate rock, very full of pebbles; a good deal fallen to pieces with the weather, and not very good. $1\frac{1}{4}$ mile pale blue sandstone; some of this is tolerably firm, but has not stood so well as I expected, and some of it I have had thrown out. $1\frac{1}{2}$ mile white sandstone, clear and not fallen with the weather, and I think very fair ballast, but it is not quite so hard as I should like it. The remainder is metal.

Top-ballast:—Total broken, about 10,000 cubic yards; white sandstone, similar to bottom-ballast about 3,500 cubic yards; pale blue sandstone, not standing so well as I expected, about 5,000 cubic yards, 1,500 or 2,000 cubic yards of which I have condemned; white and brown sandstone mixed, about 1,200 cubic yards, about half condemned; gravel about 300 cubic yards. All the new ballast they are getting will be metal, from near Rydal, and a little gravel at different places, but it cannot be carted until the ground is stronger.

I have, &c.,
GEORGE COWDERY.

No. 29.

No. 29.

MR. DISTRICT ENGINEER COWDERY TO THE ENGINEER-IN-CHIEF.

Great Western Railway,
25 July, 1870.

SIR,

I beg to inform you that the contractor for No. 6 Contract is anxious to get the top-ballast on that portion of the line where the blue sandstone has been put on for bottom-ballast, which ballast you did not altogether approve of; but as all the boxing-up ballast over this portion will be gravel, I think it may do well together, as there is not sufficient binding qualities in the gravel to keep a good top on the road with, most of it being smooth and round; besides, wherever the road requires to be lifted after it is completed, the gravel would be packed under the sleepers.

A good deal of the worst of the bottom-ballast was thrown out before the road was laid. If you allow this bottom-ballast to remain (and it would be a difficult job to take it out and keep the road in order at the same time) no more of the blue sandstone shall be put in, and there is a great quantity of it still in the heaps.

I have, &c.,

GEORGE COWDERY.

As this length has been handed over for repairs to the Permanent Way Inspector, I will instruct him to examine this ballast and report. I also intend to look into this question myself at an early date.—J.W., 26/7/70.

Mr. Lewton instructed.—70/296.

Mr. Cowdery—To be returned.—W.H.Q., 26/7/70.

The ballast engine will be idle in a day or two, until this matter is settled.—G.C., 30/7/70. John Whitton, Esq.

I understand Mr. Lewton went to Rydal yesterday, to examine the ballast on No. 6 Contract.—W.H.Q., 2/8/70. Mr. Cowdery.

Mr. Lewton went through No. 6 Contract yesterday.—G.C., 3/8/70. Mr. Quodling.

I have examined the ballast on this contract, and find that on about 3 miles of the line on the Wallerawang end it is of a very inferior quality, being a kind of blue sandstone which will not stand the weather, as it is utterly useless for packing. Great numbers of the border stones are very soft and partly wearing away. In many places on the other end of the contract the ballast is very dirty.

J. LEWTON,

p. P.S., 4/8/70.

Mr. Lewton to arrange to meet Mr. Cowdery, and point out the defective ballast for Mr. Cowdery to measure.—J.W., 4/8/70.

Noted.—J.L., p. P.S., 5/8/70.

Mr. Lewton—To be returned early, in order that Mr. Cowdery may be informed.

For Mr. Cowdery's information.—W.H.Q., 5/8/70.

I have been through the ballast on No. 6 Contract, with Mr. Lewton, and the defective portion pointed out by him is about 270 chains of bottom-ballast between the border stones, the cubic contents being about 4140 yards.—G.C., 9/8/70. John Whitton, Esq.

P. Way Branch, 10 August, 1870.

Memo. to Engineer-in-Chief,
Ballast No. 6 Contract, G.W.R.

According to your instructions, I went over this contract with Mr. Cowdery, and pointed out to him the defective ballast and border stones.

The length of road on which they have been used is 270 chains, on the Wallerawang end of the contract.
J. LEWTON, p. P.S.

The quantity of ballast, according to your measurement, appears to be 4,140 cubic yards which has been condemned.

Give contractor notice to supply this quantity alongside the line (inside the fences); and should he not do so, a deduction will be made from the money due him.—J.W., 12/8/70.

Any border stones found defective must be replaced by contractor.—J.W., 12/8/70.

Mr. Cowdery—To be returned.—W.H.Q., 12/8/70.

I have instructed the contractor as you requested.—G.C., 15/8/70. John Whitton, Esq., C.E.

No. 30.

G. FORRESTER, Esq., to THE MINISTER FOR WORKS.

75, Elizabeth-street,
19 August, 1870.

SIR,

I have the honor to inform you that I received notice from Mr. Cowdery, on 15th August instant, that 4,140 cubic yards of bottom ballast had been condemned.

This condemnation of *bottom* ballast was wholly unexpected, as I always understood that the smaller or *top* ballast only had been objected to.

The ballast already on the line (much of which is composed of hard pebbles) is not valueless, for the rails have been packed to the proper level and are sustained by it; and in measuring the quantity of bottom ballast condemned, no allowance has been made for the width of the sleepers (10 inches), which ought to have been considered; that is, when taking a defined distance from point to point, there is only a space of 2 feet 2 inches to fill in, instead of 3 feet, to each lineal yard of road.

The rejected bottom ballast certainly presented an unfavourable appearance at the time the Engineer-in-Chief inspected it; this was chiefly owing to its having been trampled upon by the horses during the late continuous wet weather in drawing material over it, in consequence of my desire to complete the work without delay.

It is believed that by the improved appearance which the rejected stone now presents, a more favourable opinion would have been formed of it had the inspection taken place after the dry weather set in.

The

The ballast in the embankment generally is as serviceable as if a better quality, because the embankment must in a very short time subside, and the ballast will then become a part of it. Besides, much, if not the whole of the top ballast which has been condemned and now lies alongside the line, will be available, and will probably be used for repairs from time to time as the embankment subsides.

At the time of the failure of the late contractor to carry on the works to the satisfaction of the Government, I was under the impression that the whole of the ballast on the line had been passed, and a portion of the money drawn on it; otherwise I would have forfeited the amount for which I had made myself liable as surety, instead of carrying out the contract, which I have done under the most unfavourable circumstances.

I would also desire to point out that I have lost no time and spared no expense since I commenced, in having the work carried out to the satisfaction of the Government, and submit that it would be a great hardship to compel me to supply fresh ballast now; besides which, it would entirely ruin myself and family, having, as I can if necessary prove to the satisfaction of the Government, already lost about £9,000 in carrying out the work, and the country to that extent being benefited at my expense.

I therefore earnestly beg that you will take into your favourable consideration these matters, and, seeing that I have saved the Government so large a sum by taking upon myself the contract, which the Government would otherwise have had to expend, grant me every indulgence possible.

I have, &c.,

GEORGE FORRESTER,

By DEANE & DEANE.

Mr. Whitton, for report.—B.C., 19/8/70, J.R.

No. 31.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

As the maintenance of this length is now in Mr. Wakeford's care, I wish him to take the earliest opportunity to examine the length, and ascertain at what price the ballast stated to be deficient can be obtained and delivered upon the line.

The cost will have to be deducted from the contractor:—J.W., 15/9/70.

Mr. Wakeford—To be returned.—W.H.Q., 15/9/70.

This can be procured at 5s. per cubic yard.—W.W., 1/10/70.

The quantity of ballast deficient on this length to be deducted from the contractor's final certificate at the price per yard stated above (5s.)—J.W., 10/10/70.

Mr. Cowdery—To be returned.—W.H.Q., 10/10/70.

Ballast deducted at the price stated.—G.C., 15/10/70. Mr. Quodling.

Mr. Wakeford may examine the stone ballast now lying alongside the line, to ascertain if any portion of it can possibly be used for maintenance, so as to reduce the quantity for which the contractor is now liable to replace.—J.W., 19/10/70.

Mr. Wakeford—To be returned.—W.H.Q., 19/10/70.

Having examined the ballast on this section, I find that the following quantity may be used for repairs, viz.:—

Gravel ballast	62
Stone do.	26
Sandstone, 301 cubic yards, of which one-third can be used	100
Do. 119 do. one-half do.	59
Do. 1,084 do. do. do.	452

789 cubic yards.

I would beg to suggest, for the Engineer-in-Chief's consideration (that 270 chains of bottom ballast having been deducted, and no allowance made for any portion that would have been suitable had there been time for the contractors to have had it forked over and taken the inferior out), that one-third of the quantity deducted be allowed the contractors.—W.W., 2/11/70.

4,140 cubic yards deducted by Mr. Cowdery.
Less one-third ... 1,380 do. as recommended by Mr. Wakeford.

2,760
Less 789 do. do.
1,971 do. to be deducted.

At 5s.	£	s.	d.
190 lineal yards border-stones, at 2s.	492	15	0
	19	0	0

£511 15 0 deducted from final certificate.—

W.H.Q., 24/11/70.

Approved.—J.W., 24 Nov., 1870.

No. 32.

THE ENGINEER-IN-CHIEF TO THE DISTRICT ENGINEER.

Department of Public Works,

Railway Branch, Engineer's Office,

Sydney, 4 August, 1870.

Memo. to Mr. Cowdery.

THE contractors for No. 6 Contract are very desirous of settling up all matters in connection with this length. Will you please to let me know *when* you think you will be in a position to forward the final certificate.

Instead of taking out the inferior ballast on this section, I proposed to have measured the total quantity of ballast which may be condemned, and to allow the contractors to deposit alongside the railway inside the fences, an equal quantity of gravel ballast, which I believe can be easily obtained alongside or not far from the railway.

JOHN WHITTON.

I CAN send you the final certificate of this contract in three or four days after it is completed; but I was making inquiries yesterday as to when this was likely to be, and I was informed that it would be about two months. Most of the ballast is out for the boxing up, but the greater part of it has yet to be carted on to the line, and the ground is so rotten that I think it will take all the time stated.—G.C., 10/8/70.

John Whitton, Esq.

No. 33.

MESSRS. DEANE & DEANE TO THE MINISTER FOR WORKS.

75, Elizabeth-street,
22 September, 1870.

SIR,

We have just received intimation from Mr. Quodling, the manager of works for Mr. George Forrester, under No. 6 Contract, Great Western Railway, that the whole of the works will be complete on or before the 30th instant, and asking to have the necessary instructions for the final measuring up forwarded.

We have the honor therefore to request that such instructions may be sent at once, as the manager is now prepared to give up the whole of his time to this object, and after the works are completed any delay will be an extra expense to the contractor.

We have, &c.,
DEANE & DEANE.

Mr. Whitton.—B.C., 22/9/70, J.R.
Mr. Cowdery was some time ago instructed to measure up the works on this contract as early as practicable.—
J.W., 23/9/70.
Commissioner.—23/9/70.
Inform Deane & Deane.—J.S., 24/9/70.
Messrs. Deane & Deane informed.—28/9/70.

No. 34.

THE COMMISSIONER FOR RAILWAYS TO MESSRS. DEANE & DEANE.

Department of Public Works,
Railway Branch,
Sydney, 28 September, 1870.

GENTLEMEN,

In reply to your letter of the 22nd instant, stating that you have been informed that the whole of the works on Contract No. 6, Great Western Railway, will be complete on or before the 30th instant, and requesting that instructions may be forwarded for a final measurement of same to be made on completion of such work,—I have the honor to inform you that the Engineer-in-Chief reports that the District Engineer has already been instructed to measure up the work in question as early as practicable.

I have, &c.,
JOHN RAE,
For the Commissioner for Railways.

No. 35.

MR. G. M'CAULEY'S CAVEAT.

Sydney, 23 November, 1870.

The Honorable the Minister for Public Works, Sydney.

SIR,

As contractor for No. 6 Contract, Great Western Railway, I have the honor to bring under your notice the following facts.

To facilitate the completion of the aforesaid contract I assigned same to Mr. George Forrester, reserving to myself, by deed under the hand of the said Mr. George Forrester, the equity of redemption in such contract.

I have not been able to procure from the said Mr. George Forrester, during the progress of the works nor since their final completion, any satisfactory information or proper accounts in connection therewith, which wrongdoing leads me to infer that there may be a desire to ignore my equity in the matter altogether.

Referring to the deed of assignment first named, I am there still held responsible for the proper completion of the said contract, my bond being still in force.

I therefore do myself the honor to request that no more moneys be paid to the said Mr. George Forrester without my being personally present, and that this notice may be taken as a caveat against any payment to the said Mr. George Forrester.

I have, &c.,
GEORGE M'CAULEY,
No. 243, Fitzroy-street, Surry Hills.

Crown Law Officers to say if Mr. M'Cauley has any claim, and if I am to pay balance to Mr. Forrester.—
J.S., 28/11/70.

Crown Solicitor.—B.C., 28/11/70, J.R. With agreement, transfer, and all papers.

No. 36.

MR. G. M'CAULEY TO THE COMMISSIONER FOR RAILWAYS.

Fitzroy-street, Surry Hills,
Sydney, 28 November, 1870.

SIR,

I beg to give you notice that I have this day commenced an action in the Honorable the Supreme Court of New South Wales, against George Forrester, of Randwick, with respect to the moneys received by him in respect of the No. 6 Contract, Great Western Railway, and to the moneys in the hands of the Government in connection therewith, and of his right thereto, and against the payment of which to him I have lodged with you a caveat.

I have now the honor to give you formal notice of such action, and to request that you will retain all moneys connected with the said contract until the said action be determined.

I have, &c.,
GEORGE M'CAULEY,
Contractor.

Crown Law Officers to advise.—J.S., 29/11/70.
Crown Solicitor.—30/11/70, urgent, J.R.

No. 37.

THE CROWN SOLICITOR TO THE COMMISSIONER FOR RAILWAYS.

Crown Solicitor's Office,
Sydney, 5 December, 1870.

SIR,

I have the honor to return herewith the papers received by me from your department, relating to Mr. M'Cauley's contract for works on the Great Western Railway, and to forward at the same time the original indenture, bearing date 1st October, 1869—that is, the assignment from Mr. M'Cauley to Mr. Forrester, which I have obtained from Mr. Forrester. I also forward a bond which Mr. Forrester and Mr. Neale have entered into, to indemnify you from any claim by Mr. M'Cauley.

I notice with the papers, though not marked as recorded in your office, an opinion of Mr. Solicitor-General Salomons on this matter, which appears to have been obtained by Mr. Forrester's solicitors, and forwarded to you by them. It will be as well to retain this opinion.

I think there is now no objection to the balance of the money payable under the contract being now handed to Mr. Forrester, who is entitled to give receipt for same under the power of attorney contained in the assignment of 1st October, 1869.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

No. 38.

SOLICITOR GENERAL'S OPINION.

Ex parte Forrester.—*In re* M'Cauley's contract.

I HAVE read Mr. M'Cauley's assignment of the contract to Mr. Forrester; and I advise, on behalf of the latter, that he, and not M'Cauley, is entitled to receive the balance due under the contract, quite independently of any further consent on the part of M'Cauley. The terms of the assignment are absolute, and by it Mr. M'Cauley has appointed Mr. Forrester his irrevocable attorney in respect of this contract, and all rights arising out of it.

JULIAN E. SALOMONS.

Nov., 25/70.

No. 39.

BOND OF INDEMNITY.

KNOW all men by these presents that we George Forrester of Sydney in the Colony of New South Wales farmer and grazier and John Thomas Neale of Sydney aforesaid gentleman are jointly and severally held and firmly bound unto the Commissioner for Railways a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria number nineteen intituled "*An Act to make more effectual provisions for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*" in the penal sum of six thousand pounds sterling to be paid to the Commissioner for Railways aforesaid and his successors for which payment well and truly to be made we bind ourselves and each of us our and each and every of our heirs executors and administrators jointly and severally firmly by these presents—

Sealed with our seals dated the fifth day of December one thousand eight hundred and seventy.

WHEREAS one James M'Kenzie by certain articles of agreement under seal bearing date the _____ day of _____ one thousand eight hundred and sixty-seven contracted and agreed with the Commissioner for Railways aforesaid to provide all materials (except as in the specification to the said agreement annexed is mentioned) labour scaffolding and every other thing requisite and necessary for the full and proper completion of a single line of railway (as an extension of the Great Western Railway from Penrith to Bathurst commencing at Piper's Flat at ninety-one miles and two chains marked on the working plan and section and terminating at ninety-seven miles eight chains at Rydal being a length of six miles and six chains) And whereas the said James M'Kenzie entered upon the construction of the said works and performed a small portion thereof but made default in proceeding therewith and abandoned the same and his estate has since been placed under sequestration as insolvent And whereas by articles of agreement bearing date the eleventh day of May one thousand eight hundred and sixty-eight and made between one George M'Cauley of the one part and the Commissioner for Railways of the other part reciting as hereinbefore is recited and that the Commissioner for Railways had called for tenders for the completion of the said railway extension and of such other works as were set out in the specification to the now-reciting articles of agreement annexed marked "A"

"A" or in the plans or drawings therein referred to and to the general conditions therein referred to and thereto annexed marked "B" and that the said George M'Cauley had forwarded to the Commissioner for Railways the tender thereto annexed marked with the letter "C" to execute the whole of the works and find all labour materials (excepting permanent way materials) scaffolding and workmanship required in the construction and completion of the said works at and for the price set out in the said tender and that the Commissioner for Railways had accepted the said tender upon condition of the said George M'Cauley entering into the now-reciting presents and giving the bond hereinafter recited. It was witnessed that the said George M'Cauley did thereby covenant and agree with and to the Commissioner for Railways aforesaid to find and provide all materials (excepting such as were in the specification thereto annexed specified to be provided by the said Commissioner) labour scaffolding tools implements and every other thing requisite and necessary for the full and proper completion of the said works required in the construction and completion of the said single line of railway hereinbefore particularly mentioned in accordance with the said specification marked "A". And it was thereby also agreed that the said works should be completed and finished in all things on or before the thirty-first day of March then next ensuing. And whereas by a certain bond bearing date the eleventh day of May one thousand eight hundred and sixty-eight the said George M'Cauley and the said George Forrester and one Andrew M'Kenzie therein described as his sureties jointly and severally became bound unto the Commissioner for Railways in the penal sum of three thousand pounds sterling with a condition thereunder written making void the same on the due completion and performance of the several works specified in the before recited articles of agreement of eleventh May one thousand eight hundred and sixty-eight. And whereas by memorandum of agreement bearing date the twenty-second day of April one thousand eight hundred and sixty-nine and made between the Commissioner for Railways of the one part and the said George M'Cauley George Forrester and Andrew M'Kenzie of the other part the time for the completion of the said works was extended until the thirty-first day of August one thousand eight hundred and sixty-nine. And whereas by indenture bearing date the first day of October one thousand eight hundred and sixty-nine and made between the said George M'Cauley of the first part the Commissioner for Railways aforesaid of the second part and the said George Forrester of the third part the said George M'Cauley for the valuable consideration in the said indenture mentioned (with the consent of the Commissioner for Railways) did assign transfer and set over (*inter alia*) unto the said George Forrester his executors administrators and assigns all those the said recited articles of agreement of date eleventh May one thousand eight hundred and sixty-eight and also all sum and sums of money debts and dues then due and payable or which might at any time thereafter become due and payable thereunder to the said George M'Cauley by the Commissioner for Railways or any other person or persons body or bodies corporate. To hold the same unto the said George Forrester his executors administrators or assigns for his and their own proper use and benefit and the said George M'Cauley by the said indenture did constitute the said George Forrester his executors administrators and assigns his attorney and attorneys irrevocable with full power and authority in his name or the name of his executors or administrators or in the name of the said George Forrester his executors administrators or assigns but to the only proper use and behoof of the said George Forrester his executors administrators and assigns to ask demand recover and receive compound acquit release and discharge the said sum and sums of money debts and dues then or at any time thereafter to become due and payable to the said George M'Cauley his executors administrators or assigns under or by virtue of the said thereby assigned articles of agreement from the Commissioner for Railways and any other person or persons body or bodies corporate or politic and upon receipt of the same or any part thereof acquittances and proper discharges to make and give and also to carry out the said thereby assigned articles of agreement and to carry out execute do and perform and finish the said several works and things therein particularly mentioned and specified. And whereas under the said lastly recited indenture the said George Forrester has carried on and claims to have now completed the whole of the works which at the time of the execution of the said indenture remained uncompleted of the works which under the said recited articles of agreement bearing date the eleventh day of May one thousand eight hundred and sixty-eight the said George M'Cauley was to complete and finish and payments amounting in the whole to ten thousand pounds sterling have been made to the said George Forrester by the Commissioner for Railways on account of the said works and a balance or sum of five thousand and sixty-five pounds eight shillings and nine-pence is now claimed to be due to the said George Forrester in respect of such works and as the final payment for the same. And whereas the said George M'Cauley hath notwithstanding the said lastly recited indenture given notice to the Commissioner for Railways aforesaid requesting him not to pay to the said George Forrester any of the moneys now payable or claimed to be payable by the Commissioner for Railways aforesaid in respect of any of the works done under the said articles of agreement bearing date the eleventh May one thousand eight hundred and sixty-eight or by the said George Forrester under the said lastly recited indenture. And whereas there is now payable as the final payment for the works done under the said articles of agreement of date eleventh May one thousand eight hundred and sixty-eight and in full settlement of all claims and demands for works done thereunder the sum of five thousand and sixty-five pounds eight shillings and nine-pence. And whereas the said George Forrester has called upon and requested the Commissioner for Railways to pay to him the said George Forrester the said sum of five thousand and sixty-five pounds eight shillings and nine-pence and the said George Forrester and the said John James Neale have offered if the Commissioner for Railways will pay to the said George Forrester the said sum of five thousand and sixty-five pounds eight shillings and nine-pence to indemnify the Commissioner for Railways and his successors from being called upon by the said George M'Cauley to pay any portion of the said moneys which since the said first day of October one thousand eight hundred and sixty-nine have been paid by the Commissioner for Railways to the said George Forrester and from being called upon by the said George M'Cauley to pay the said sum of five thousand and sixty-five pounds eight shillings and nine-pence or any portion thereof. And also from all actions suits claims and other proceedings which at any time may be brought commenced prosecuted or made against or upon the Commissioner for Railways aforesaid or his successors by the said George M'Cauley or any other person claiming through or under him for or in respect of the said moneys so paid as aforesaid or for or in respect of the said sum of five thousand and sixty-five pounds eight shillings and nine-pence or any portion thereof or for or upon account of anything in the said articles of agreement of date eleventh May one thousand eight hundred and sixty-eight and the said indenture of October first one thousand eight hundred and sixty-nine or either of them or otherwise in respect of the premises as hereinafter mentioned. And the Commissioner for Railways hath therefore consented to pay the said sum of five thousand and sixty-five pounds eight shillings and nine-pence. Now the condition of the above written obligation is such that if the said George Forrester and John Thomas Neale their heirs executors and administrators do and shall from time to time and at all times hereafter save harmless and keep indemnified the Commissioner for Railways aforesaid and his successors his and their lands tenements goods and chattels of from and against all manner of action or actions suit or suits proceedings claims and demands whatsoever at law or in equity or otherwise which shall or may at any time hereafter be brought prosecuted or made against or upon the Commissioner for Railways aforesaid or his successors by the said George M'Cauley his executors administrators or assigns or any person or persons claiming through or under him for or in respect of all or any portion of the moneys which since the said first day of October one thousand eight hundred and sixty-nine have been paid by the Commissioner for Railways aforesaid to the said George Forrester or to his order for or on account of the works in the said articles of agreement of date eleventh May one thousand eight hundred and sixty-eight mentioned or for or on account of the said sum of five thousand and sixty-five pounds eight shillings and nine-pence being paid by the Commissioner for Railways aforesaid to the said George Forrester and for or on account of any matter or thing done under or in pursuance of the said articles of agreement of date the eleventh May one thousand eight hundred and sixty-eight or the said indenture of first October one thousand eight hundred and sixty-nine or either of them and from and against all actions suits claims or demands whether at law or in equity or otherwise which shall or may be brought against the Commissioner for Railways or his successors by the said George M'Cauley or by any person or persons claiming through or under him for or on account of anything in the said articles of agreement of date eleventh May one thousand eight hundred and sixty-eight or the said indenture of date first October one thousand eight hundred and sixty-nine contained or for anything which may have been done by the Commissioner for Railways aforesaid under the said articles of agreement and the said indenture or which the Commissioner for Railways should have done thereunder and has neglected or omitted to do. Then this obligation shall be void and of none effect otherwise to be and remain in full force and virtue.

GEORGE FORRESTER.
JOHN T. NEALE.

JOHN WHITTON.

RECEIVED,

19

RECEIVED, on the 6th day of December, 1870, from the Colonial Treasurer, the sum of five thousand and sixty-five pounds eight shillings and nine-pence, in full payment for the whole of the works mentioned in the above account; the sum now paid including the percentage retained until the final completion of the works; the quantities stated above having been finally agreed upon, and settled to be the whole quantities for which payment is to be made in respect of the excavations, culverts, road diversions, fencing permanent ways, ballasting, turn-tables, and other works on Contract No. 6 of the Great Western Railway extension from Penrith to Bathurst, and all extra works in connection with the said contract. And we declare that the sum hereby acknowledged to be received by us is in full payment and satisfaction of all our claims, for or in respect of, or arising out of, our contract for the said work, and for everything in connection therewith in respect whereof we have any claim to whatsoever.

GEORGE FORRESTER,
Assignee of Geo. M'Cauley.

1 A.

R. FORSTER, Esq., to THE ENGINEER-IN-CHIEF FOR RAILWAYS.

203, York-street, Sydney,
21 November, 1870.

SIR,

I have the honor, by direction of my client, Mr. Robert Forster, a sub-contractor on the Great Western Railway, to inform you that there is a balance due to him for work done and performed on this line of railway for Mr. Forrester, to the amount of £408 8s. I expect to be in possession of the contractor's statement of the work done by Tuesday, when I shall submit a copy thereof for your inspection; but if I do not get the contractor's account I shall obtain one from my client for your perusal. In the meantime I have the honor to request that you will protect my client's interest until he is in a position to show you that the amount stated is fairly and honestly due.

I have, &c.,
ROBT. FORSTER,
Attorney.

Forwarded for consideration of Commissioner.—J.W., 23/11/70.

Commissioner, 23/11/70.

Approved.—J.S., 24/11/70.

See subsequent decision of Commissioner on 70/4386. Mr. Neale has agreed to pay claim if certified by proper officer.—C.A.G., 3/12/70.

203, York-street, Sydney,
24 November, 1870.

Re R. Forster v. Forrester.

DEAR SIR,

As Mr. Whitton will sign the certificate (of the work having been done) to-day, unless you direct that Mr. Robert Forster's money be paid for the work he has done, he will lose all chance of protection at the hands of the Government if the money is allowed to go to Mr. Neale.

I presume there can be no objection to now insisting on the contractor paying those who have done the work, before he draws the balance from the Government.

I am, &c.,
ROBERT FORSTER.

P.S. I enclose Forster's account.—R.F.

Mr. Neale has agreed to pay this account if certified by the proper officer.—J.S., 30/11/70.
Inform.—2/12/70, J.R.

3 A.

THE COMMISSIONER FOR RAILWAYS to R. FORSTER, Esq., M.P.

Department of Public Works,
Railway Branch,
Sydney, 3 December, 1870.

SIR,

In reference to your letter of the 24th ultimo, respecting Mr. Forster's claim against the contractors for Contract No. 6, Great Western Railway, which you request that the Government will see settled before making the final payment,—I have the honor to inform you that Mr. Neale, on behalf of the contractor, has agreed to pay Mr. Forster's account if certified as correct by the proper officer.

I have, &c.,
JOHN RAE,
For the Commissioner for Railways.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(CORRESPONDENCE RESPECTING QUALITY OF IRON USED IN MANUFACTURE OF RAILS FOR THIS COLONY.)

Ordered by the Legislative Assembly to be Printed, 6 September, 1870.

No. 1.

THE UNDER SECRETARY FOR FINANCE AND TRADE TO THE COLONIAL AGENT GENERAL.

The Treasury, New South Wales,
20 April, 1870.

SIR,

I had the honor, by direction of the Colonial Treasurer, to forward to your address, by book post, *via Marseilles*, a copy of the Report of a Select Committee of the Legislative Assembly of this Colony upon "Railway Extension"; and I am now to invite your earnest attention to paragraph 14 of that Report, in which the Committee deem it their duty to call the attention of Parliament to disclosures as to the quality of the iron used in our Railways, in the evidence given before them (references thereto quoted), which have led the Committee to believe that the Colony "has been for years largely and constantly defrauded to an enormous extent in the article of rails."

It having been represented to Mr. Samuel that the specification for the supply of such rails is of the most stringent kind, and invariably for rails of the best quality, it becomes necessary that the Government should be furnished with an immediate explanation of the fact that it was not discovered in England, that the rails referred to in the evidence were not manufactured in accordance with that specification.

I have, &c.,
HENRY LANE.

No. 2.

THE COLONIAL AGENT GENERAL TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Agency of the Government of New South Wales,
8, Adam-street, Adelphi,
London, W.C., 15 July, 1870.

SIR,

Referring to my letter of the 17th of last month (No. 286), I have the honor to transmit herewith, for the information of the Honorable the Treasurer, the enclosed copy of a letter I have just now received (3.20 p.m.) from Mr. Fowler, together with copies of its enclosures.

2. While I do not doubt that the particular rails reported by the Engineer-in-Chief, forming a part of those supplied by Messrs. Bolckow & Vaughan, and the Weardale Company, respectively, did prove defective in wear, I regard it as so very desirable in every case of complaint that both sides, especially that against which the complaint is directed, shall be thoroughly satisfied that every possible justice has been done them in the matter, that I do not hesitate to recommend that the applications for information severally made by the Firm and Company in question shall be complied with; and that the proposal of the one to send out to the Colony an Agent of their own, specially charged to investigate the whole matter, and the request of the other to have all their damaged rails sent home at their own expense, to be examined, in conjunction with themselves, by an Inspector appointed by Mr. Fowler, shall be assented to and complied with.

3. The whole tone of their letters, and the fact that the courses they propose will involve considerable expense to themselves, evidence good faith, and their adoption will, on the defective quality of their several rails being proved in the way they themselves propose, preclude contest against the right of the Government to have, in such case, their value refunded.

4. I have received the Inspector's reports, forwarded for my perusal by the consulting Engineer, but their number and volume render impossible their examination before the mail closes. I shall, however, as early as possible, carefully go through them, and report the result when forwarding the further reply which Mr. Fowler states his intention of making.

I have, &c.,
W. C. MAYNE,
Agent for the Colony of New South Wales.

[Enclosure.]

[John Fowler, Esq., to The Colonial Agent General.

2, Queen-square-place,
Westminster, S.W.,
15 July, 1870.

Sir,

I beg to acknowledge receipt of your communication dated the 13th day of June, enclosing a letter from the Under Secretary for Finance and Trade of the 20th April, and also a Report of the Select Committee of the New South Wales Parliament on the subject of Railway Extension, in which occurs (paragraph 14) allusion to evidence given before the Committee, by officers of the Government, on the subject of the permanent way materials exported from England and inspected by me.

I have carefully read through the evidence alluded to, and particularly that which was given by Mr. Thomas and by Mr. Mason.

I find that the only portion of Mr. Thomas's statements which are corroborated by Mr. Mason is, as to the wear of the rails; and on this subject a report was received from the Colony in the early part of the year, in which complaints were made by the Engineer-in-Chief of the bad wear of the rails laid down on the railway between Marulan and Goulburn, and requesting that in future tenders be not invited from the firms who supplied rails so complained of, viz., those of Messrs. Bolckow & Vaughan and the Weardale Iron Company; and you thereupon instructed me not to apply to these firms for any future tenders.

These instructions have been carried out, but I have felt it right not to permit the question to rest there, and I accordingly communicated at the time with Messrs. Bolckow & Vaughan, whose rails had failed to the greatest extent, and have received the enclosed letter from those gentlemen.

In the case of the Weardale Company I did not write to them at the time, as I understood their works had changed owners since the period when the rails were supplied, but I have since found that this is not the case, and have therefore written to them on the subject, and enclose their reply.

With respect to these replies I think you will consider they have fairly met the case, as far as they possibly could with the information before them, and you will probably suggest that the further particulars they have asked for should be given to them.

With regard to these firms, Messrs. Bolckow & Vaughan are the largest rail manufacturers in the Cleveland District of Yorkshire, and the Weardale Iron Company are one of the oldest and most respectable firms in the South Yorkshire District.

The characteristic of the iron manufactured by Messrs. Bolckow & Vaughan is hardness and great wear; on the other hand, the characteristic of South Yorkshire iron is great toughness, and it is somewhat softer than that manufactured by Messrs. Bolckow & Vaughan. Both firms have an excellent reputation, and have always evinced a desire to turn out rails of a satisfactory character; and I am at a loss to understand why these particular rails should exhibit wear so rapidly as is described in the Report; and I would suggest that the Government should ascertain if the lines have been properly maintained, and kept at a proper level by careful packing.

I can certainly undertake to say that the defects have not arisen from the want of sufficient supervision during the course of manufacture; that supervision was close and constant, as you will perceive by my Inspector's voluminous reports made from time to time during the execution of the orders; and these are now sent for your perusal, together with the instructions given to them.

I will reply further on some other portions of the evidence contained in the Report in a few days.

I am, &c.,
JOHN FOWLER.

[Sub-enclosures.]

Messrs. Bolckow, Vaughan, & Co. to John Fowler, Esq.

Bolckow, Vaughan, & Co. (Limited),
General Manager's Office,
Middlesbro-on-Tees, 6 January, 1870.

Dear Sir,

In reply to your communication on the subject of the rails supplied by us for the New South Wales Railways, we can only state our great regret that you have to complain of them in any way.

We hope you will excuse us saying that, as we never before in our long experience knew any considerable number of our rails to fail within moderate time under reasonable work, and as the rails we supplied for New South Wales were, we believe, in every respect at least equal to those we generally make, we feel convinced that those now under consideration must have met with exceptional treatment.

We would like to have particulars of the defects complained of, and we hope you will oblige us by obtaining a list of the rails in detail, with the nature of the defects set against each, and, as well, information as to the position in the line in which each was placed, whether at or near stations, watering-places, or other extremely worked portions of the Railway.

Rather than rest under the imputation of having supplied to you rails of bad quality, we will send out to New South Wales an agent of our own specially charged to investigate the whole matter.

We confidently assert that there is not in Great Britain any railmaker whose character stands higher than our own, and we know how readily you may test this assertion if you consider it needs testing.

During the last three or four years we have supplied to the Great Northern Railway, the North-eastern Railway, the London and North-western Railway, and sundry other of the chief of the English railways, enormous quantities of rails, which have always given the greatest satisfaction. To the three Companies named we sent about 30,000 tons within four or five years, and we shall feel much satisfaction if you will make application to any of those Companies as to the manner in which our contracts have been executed.

We are, &c.,

BOLCKOW, VAUGHAN, & Co. (Limited),
P. EDW. WILLIAMS,
General Manager.2, Queen-square-place, Westminster,
London, S.W.

John Rogerson, Esq., to John Fowler, Esq.

The Weardale Iron and Coal Co. (Limited),
Judhoe Iron Works, Newcastle-upon-Tyne,
12 July, 1870.

Dear Sir,

We have received your letter of the 23rd ultimo, from which we see with great concern that a complaint has been made of the quality of the rails supplied by us to the New South Wales Railway, between the years 1862 and 1864, and that upon a length of 20 miles, which has been opened only two and a half years, sixty-eight of our rails have been taken up.

We deem it necessary to ask what proportion of the 20 miles were laid with the rails supplied by us, and had they been previously used in the construction of the railway before being laid down in the permanent way, or laid at stations,—were they crushed or laminated, or did they break when in use? For the distance named the quantity is small under ordinary circumstances, and below the average on lines in the north of England, while ordinarily a larger number fail from insufficient ballasting, bad sleepers, and accidental wear.

As

As this is a charge seriously affecting our reputation as makers of the highest class rails only, we request that all the damaged rails be sent home at our expense, and we trust you will appoint an Inspector to examine the same with us in order that the charge may be properly investigated, and at the same time supply us with the information of the amount of work the rails have undergone.

You are no doubt fully aware that we make our rails and iron from a uniform quality of minerals, and the iron supplied by us stands the highest tests and wear, and that we supply the principal English and Indian Railways, from whom we have no complaints. The high quality of the iron is such that besides the Cumberland hæmatite it is the only iron in England that can be converted into steel by the Bessemer process.

2, Queen-square-place,
Westminster.

We remain, &c.,
(For the Weardale Iron & Coal Co.),
JOHN ROGERSON.

1870.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(FURTHER CORRESPONDENCE RESPECTING QUALITY OF IRON USED IN MANUFACTURE OF RAILS FOR THIS COLONY.)

Ordered by the Legislative Assembly to be Printed, 19 October, 1870.

Laid upon the Table of the Legislative Assembly in continuation of the Correspondence already laid upon the Table, and ordered to be printed 6th September, 1870.

THE AGENT-GENERAL FOR NEW SOUTH WALES TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Agency of the Government of New South Wales,
8, Adam-street, Adelphi,
London, W.C., 11 August, 1870.

SIR,

Referring to my letter No. 299, of 15th July last, I have the honor to enclose, for the information of the Honorable the Treasurer, copies of communications I have this day received from Mr. Baldry, in Mr. Fowler's unavoidable absence from England.

2. Time does not admit of my having copies *in extenso* made of the documents forwarded to me from Mr. Fowler, but I have examined these, and have found that they show the results set forth in the letter of yesterday giving the annual cost of maintenance of several single lines of Railway in England and Ireland, and their general average per annum under that head.

I have, &c.,
W. C. MAYNE,
Agent-General for New South Wales.

J. D. BALDRY, Esq., to THE AGENT-GENERAL FOR NEW SOUTH WALES.

2, Queen-square-place, Westminster, S.W.,
10 August, 1870.

SIR,

Mr. Fowler being engaged as a member of the Commission appointed by the Indian Government (who are about to carry out small gauge railways in India) in the inspection of the 3 ft. 6 in. gauge railways of Norway, will not return to England in time to continue his answer on the subject of the Report of the Select Committee of the Legislative Assembly of New South Wales, by this mail.

I beg therefore that you will kindly consider that he has by no means exhausted his reply, or that he does not intend to say anything further on the subject, but that by the engagements I have referred to he is detained from England.

I am, &c.,
J. D. BALDRY.

J. D. BALDRY, Esq., to THE AGENT-GENERAL FOR NEW SOUTH WALES.

2, Queen-square-place, Westminster, S.W.,
10 August, 1870.

SIR,

With regard to the maintenance of permanent-way in the Colony, respecting which some evidence was given before the Select Committee on Railway Extension, it has occurred to me that so far from the cost being in excess of what it should be, that really it was smaller than might be expected.

To ascertain this in some measure by comparison, I have procured some returns of the cost of maintaining similar lines here; the single line system although now increasing has been little used, and it is not easy to find cases that may be cited as parallel, but the following are perhaps nearly so:—

	£	s.	d.
Single line in the Isle of Wight	173	12	3
Single branch tributary-line to the Great Northern Railway	144	17	9
Severn Valley Railway tributary to the Great Western Railway, average of five years	152	12	8
Average of five railways in Ireland... ..	146	7	2
	4)617 9 10		
General average per annum... ..	154	7	5½

I enclose the documents.

From these cases, which I think are fair averages of cost of single lines, you will notice that the maintenance is but little below that of the lines in New South Wales; and considering the large extra rate of labour in the Colony, which constitutes the greater part of the cost, the inference is that either some element of expense is left out of the return given at page 4 of the appendix, which shows the average cost of maintenance for five years to be £162 12s., or that the lines in New South Wales have not sufficient labour bestowed upon them, and the permanent-way materials would of necessity deteriorate in more rapid manner than should fairly be attributable to them.

Without attaching too much importance to these comparisons you may perhaps think it worth while to draw attention to this subject in the Colony.

I am, &c.,
JOHN FOWLER.
per J. D. BALDREY.

THE COLONIAL TREASURER to THE SECRETARY FOR PUBLIC WORKS.

This correspondence should be printed and laid before Parliament in continuation of that already submitted.

S.S., 29/7/70.

The average cost in five years in New South Wales was £162 12s.; in 1869 it was £127.

MAINTENANCE and renewal of Permanent-way on the lines of Railway in the United Kingdom, for the year 1867.

Name of Company.	Length in Miles.			Maintenance of Permanent-way per Mile.	Remarks.
	Double.	Single.	Total.		
All railways in the United Kingdom	7,834	6,403	14,247	£ 264	
England and Wales	6,378	3,659	10,037	302	
Great Northern	419	105	524	366*	See note below. do. Average, £207 14s. 3d. { Total working expenditure, £571 per mile; proportion of expenses to receipts, £43.
Great Western	845	513	1,358	311*	
Somerset and Dorset	66	66	121	
South Devon	34	78	112	245	
Rhymney	3	22	25	289	
Swansea Vale	20	20	156

NO.		PAGE.
1.	The Colonial Agent General to the Under Secretary for Finance and Trade. Enclosure	1
2.	John Fowler, Esq., Consulting Engineer, London, to the Colonial Agent General. Enclosures	2

No. 1.

THE COLONIAL AGENT GENERAL TO THE UNDER SECRETARY FOR FINANCE AND TRADE.
Agency of the Government of New South Wales,
8, Adam-street, Adelphi,
London, W.C., 31 August, 1870.

SIR,

I have the honor now to enclose, for the information of the Honorable the Treasurer, Mr. Fowler's explanation with reference to the allegations on which paragraph 14 of the "Report from the Select Committee on Railway Extension" was based.

2. That explanation appears to me so clear and satisfactory that, confining myself to corroboration on some points, I shall not weaken its force by, nor encumber it with, comment.

3. I have had the data in this office as to the prices of rails examined, and I am consequently in a position to testify to the correctness of the averages given by Mr. Fowler in paragraph 3 of his letter and its enclosure No. 1.

4. I have gone through the original reports made from time to time to Mr. Fowler by his inspectors charged with the supervision of the engines under construction, which place it beyond doubt that these "were not only erected in England, but tried in steam, and also in shunting on the line."

I shall return those reports to Mr. Fowler, they being records of his office. I do not forward copies of them, because to make such would occupy much time to no good purpose, and their transmission would involve very largely increased and unnecessary postage.

5. As regards the steps taken by Mr. Fowler to secure good quality of rails, I would refer the Treasurer to the specifications under which they have been supplied. These are in possession of the Railway Department, and will speak for themselves.

The enclosed copy of Mr. Fowler's instructions to his inspectors at the works will show the Treasurer that these gentlemen have carefully considered, and stringent orders calculated to secure watchful supervision, the application of proper tests, and the faithful performance generally of the contracts.

6. Mr. Fowler having placed unreservedly in my hands for perusal, the reports, references, and communications addressed to him by the inspectors at the several works charged with the supervision of the contracts for permanent way material, and his replies and communications, I have carefully gone through those connected with Messrs. Bolekow & Vaughan's contracts for rails, &c. These range, in connection with the material for the Southern Line, over the period from the 20th of April, 1866, to 31st August, 1867, are included in thirty-four separate reports and letters, containing 101 pages of manuscript; in connection with that for the Western Line, extend from the 4th of September, 1867, to the 26th of November, 1867, are fifteen in number, and contain thirty-one pages of manuscript.

Mr. Fowler's communications to the inspectors and contractors in connection with both range through both periods, are twenty-nine in number, and contain forty-six pages of manuscript. I have given these details to prove that strict attention to the instructions given them is exacted by Mr. Fowler from his inspectors.

The perusal of all the documents referred to has left no doubt in my mind,—would leave, I consider no room for doubt in any candid mind,—that the supervision at the works during the execution of the contracts was closely and constantly directed to the faithful carrying out of the specifications, that the application of proper tests was full and repeated, and that no undue leaning whatever was shown towards the contractors.

7. I should be wanting in mere justice to Mr. Fowler, did I not, in forwarding his explanation, emphatically state my absolute conviction that, in no case coming within the range of his duties as Consulting Engineer, have the interests of the Colony been otherwise than jealously and faithfully guarded by him. That this should be so the Colony had full right to expect; that it has been so, Mr. Fowler's unblemished reputation, his high character, and his professional position, all guarantee.

I have, &c.,
W. C. MAYNE,
Agent General for New South Wales.

[Enclosure.]

New South Wales Railways—Instructions for Rail Inspector.

- 1st. The Rail Inspector is to be supplied, before the work of this contract is commenced, with—
 - A copy of the specification.
 - A template of the rail contracted for.
 - Gauges for measuring exactly the position of the holes to be punched in the ends of each rail.
 - A measure to determine the exact length of each rail.
- 2nd. The Inspector is to see that there is a lever machine placed near the rolling mill, which will admit of 20, 30, and 35 tons, or any intermediate number of tons, being put on the centre of a length of rail placed on bearings 3 feet 6 inches apart, and is to send up a sketch of this machine, and his calculations proving that it will weigh correctly.
- 3rd. He is to see that the mode of manufacture specified is exactly carried out, unless he shall receive, in writing, an authority from Mr. Fowler to allow a deviation from this mode of manufacture.
- 4th. He is to apply the templates to the rails rolled at each mill, to prove the rails are perfectly true to the templates.
- 5th. He is to weigh and measure ten separate rails, and report the exact length and weight thereof. This is to be done at the commencement of the contract, and repeated as he may be instructed.
- 6th. He is to select certain rails and see that the length of each is within a quarter of an inch of that specified, and also to take care that the method employed in placing the rail when it is cut insures regularity and exactness in the required lengths.
- 7th. He is frequently to apply his gauges to each end of rails to prove that the holes are correctly punched, and see that the gauge used is correct.
- 8th. He is to select for himself two or more 4-foot lengths of rails which fairly represent the bulk then made, and to test their deflection; and if the deflection be more than $\frac{1}{4}$ inch under a 20-ton load, or more than 2 inches under a 30-ton load, he is to make further tests and have the stack of rails so placed and marked as to ensure its not being delivered as a part of the contract, unless with the written authority of Mr. Fowler, to whom he shall in meantime have made his report in detail with the result of such tests.
- 9th. He is to have one of these lengths slightly nicked all round and laid on its side under a tilt hammer with a piece of say $\frac{1}{2}$ -inch iron put on it and broken with one blow of the hammer. One end of this broken piece he is to send to the London office; and if in his opinion it is not of good quality, he is to report this fact to Mr. Fowler at the time of forwarding the sample.
- 10th. He is to keep all his original tests, measurements, and remarks, in order in one note-book, which Mr. Fowler will examine from time to time.
- 11th. His reasons for rejection will be, unsoundness, flaws, and bad welding of the pile, irregular lengths, bad punching, not square or not straight, not bearing tests, fracture showing bad quality, or any other imperfection detracting from the wear or strength of the rail; and his note-book must contain a careful register of these.
- 12th. He is to make a weekly return of rails made, examined, tested, and passed.

No. 2.

JOHN FOWLER, ESQ., TO THE COLONIAL AGENT GENERAL.

2, Queen-square-place,
Westminster, S.W.,
23 August, 1870.

SIR,

In continuation of my letter of the 15th July, replying to your communication enclosing letter from the Secretary of Finance and Trade of the 20th April, I will now beg to make one or two observations as to the evidence given before the Select Committee of the Legislative Assembly upon which the paragraph No. 14 in the Report was based; and in doing so, I will endeavour to confine myself to such portions as refer to the duties performed by me on behalf of the Colonial Government.

With regard to the evidence of Mr. Whitton, the Engineer-in-Chief, I have already replied to the specific complaint as to the wear of the rails between Marulan and Goulburn. I may, however, draw attention to the fact that, in Mr. Whitton's evidence, page 45, though the wear of the rails over the worst portion is shown to be 2½ per cent. in five months,—in the total quantity as enumerated by that gentleman, including this worst portion, the quantity is less than 1 per cent. in forty months, and, excluding the worst portion (Marulan to Goulburn), it is but little more than ½ per cent. ('56), or one rail in 176, in an average wear of forty-seven months, or nearly four years; which I venture to say is really proof of most excellent quality.

With regard to Mr. Mason's evidence, he must have been misinformed as to the price paid for rails. Enclosure No. 1. You will perceive by the enclosed statement that the average price paid for rails in 1866 and 1867 was £7 12s. 9d. per ton, instead of £8 19s. per ton, as stated by Mr. Mason (at page 27 of the Report), and (at page 29) the average price said by Mr. Mason to have been paid for rails during the years 1859 to 1863 was £8 0s. 8d. During the portion of that period in which I was concerned in the purchase of rails for the Colony, viz., 1861 to 1863, the average price is shown to be £7 11s. 4d. per ton. I believe you have data in your office by which you can corroborate these facts.

As regards the suggestions offered by Mr. Mason with a view of ensuring better quality of rails, it is obvious at once that the mode recommended in his evidence (page 29, question 735), viz., that of inspection and test subject to rejection on arrival of the materials in the Colony, would not by any means afford a better security of good rails, and it would materially increase the cost without ensuring the only test not applied in England, viz., that of wear.

I have for years considered the question of the best method of obtaining really good wearing rails, and in England I now adopt the system of guarantee for a certain number of years, in addition to inspection during manufacture, and this I find to be the best plan, because here the substitution of new rails for those that fail is a matter of comparatively small expense, and adds but little to the first cost; but it would so much increase the cost of the rails if a similar plan were adopted for those sent to the Colony, that it is cheaper to rely on inspection in England, and take the risk of a few failures, than to have them guaranteed for, say five or seven years, which would add greatly to the price without anything like equivalent advantage.

As regards the mode of purchasing the rails, I think that under the system of open competition you get somewhat lower prices, but inspection becomes more difficult, and in spite of every care you are more liable to get inferior rails; whereas in a limited competition from selected manufacturers of high reputation, you get a much smaller percentage of inferior rails, but perhaps pay a little higher price.

The best method to be adopted in the selection of manufacturers is, I still venture to think, what was done when rails were first purchased for the Colony, and what has been again resorted to lately, viz., the selection of firms of the very highest reputation only (but in sufficient numbers to ensure a wholesome competition), so that with the attention we give the inspection here in England, you secure materials of the best possible quality, and at a reasonable price.

As regards the evidence given by another of the officers of the Colonial Government (Mr. Thomas), of the charges brought against myself, and the inferences drawn by him, I will say as little as possible. The statements are fortunately corrected for the most part by the evidence of the Engineer-in-Chief, and I will therefore only reply to a few of the salient points in the evidence which were not corrected, in order to show the weight that should be attached to that evidence.

Mr. Thomas (at page 3) says that the cost of maintenance on the Great Western Railway and Great Northern Railway, in England, is £90 or £100 per mile (here Mr. Thomas clearly refers to the main lines of these two railways, because he speaks of the enormous day and night traffic). I enclose letters from the Engineers of those Companies, by which it will be seen that during the years 1867-8-9, the cost of maintenance of permanent way on those railways in one case was three times that sum, and in the other is £528, or more than five times that sum! Enclosures Nos. 2 and 3.

Mr. Thomas says (at page 23) that "engines have come out that had not been put together in England, and could not be put together in the Colony."

Enclosed are my inspectors' reports, which will show that the engines were not only erected in England, but tried in steam, and also in shunting on the line; and I enclose affidavits which Messrs. Stephenson and Messrs. Beyer & Peacock have forwarded in reply to my letter, in which I enclosed a copy of that portion of Mr. Thomas' evidence referring to these engines. Enclosure No. 4. (Not forwarded.) Enclosures Nos. 5 and 6.

I will only instance one or two other cases in Mr. Thomas' evidence, not otherwise referred to, in further illustration of its inaccuracy.

In referring to locomotives, Mr. Thomas states (at page 20) that the power exerted by a powerful engine is 60-horse power. This is certainly less than one-fourth of the power exerted by ordinary locomotives. I enclose details and figures to show this, as relates to two classes of engines we have sent out to the Colony. Enclosure No. 7.

At page 7, Mr. Thomas states that he is familiar with the process of kyanizing timber, and that it is by means of kresote. Mr. Thomas cannot possibly have had any familiarity with this process as he states, for it is effected by means of chloride of mercury (corrosive sublimate), and not by kresote. The name given to it was from Kyan, the person who first introduced it.

The animus that suggested a complaint as to the falling of a stone (pages 4 and 23) which broke a rail, is self-evident, and, but for the explanatory evidence of the Engineer-in-Chief, would not have been made known to the Committee. This stone or rock must have fallen with a force of more than 100 tons!

Many other inaccuracies occur in Mr. Thomas' statements, but they have been either already dealt with or corrected by subsequent evidence.

As regards the prices paid by the Colonial Government, and the statements made by Mr. Thomas (page 4), that they are greatly in excess of those paid by Companies in England,—I may say that comparison as to cost is exceedingly difficult to arrive at. The market, specification, urgency of delivery, time of year, and other causes, all in one way or other tend to affect the price, and therefore comparisons are fallacious; but the enclosed letters from engineers of two of the largest English Railways, viz., the London and North-western, and the Lancashire and Yorkshire, show that the price is much about the same as paid by those Companies, although in the case of English Railways they take delivery generally on any portion of their line, whereas our delivery is free on board in London or Liverpool; in fact, the prices paid by the Colony have been fair and just without fear or favour to any man, and of the market value for the quality of rail supplied. Enclosure No. 8.

As regards the personal portions of Mr. Thomas' evidence, I am able to say, and that most emphatically, that any charges of neglect or carelessness in carrying out the orders for the Colony are unjust and totally without foundation.

With respect to the duties themselves which I perform,—having had to carry out very large works of construction throughout Great Britain and elsewhere during the last thirty years, and having always paid the greatest attention to the quality of materials used in construction,—I am convinced that there is no system of supervision and inspection established in this country for similar purposes which is more efficient and complete than my own, nor is more care taken in examination and testing of materials; but of course it may possibly happen that sometimes and under some conditions an article passes which it would be better should not pass; absolute perfection is unattainable, and where materials are manufactured in many parts, some portions may escape the most vigilant; but if on the whole the materials delivered are in accordance with the spirit and conditions of the specification, and at least equal to the standard of similar materials supplied to first-class railways in England, the object of inspection is effected; and I have no hesitation in saying that such has been the case with materials sent to Sydney, and inspected by me.

I repeat, therefore, what is a patent and provable fact, that every article supplied from England for the Government of New South Wales is obtained from the manufacturers on the best terms that are possible, that a large staff of competent and experienced inspectors are employed and liberally paid by me, and that every means are used to prevent anything being sent out that does not comply with the requirements of the Colonial Government; and I believe that on the whole I have succeeded in procuring for the Government an honest fulfilment of the contracts entered into for them.

I trust it will not be understood that I am claiming here an undue preference for my services, or depreciating the proper right of the Colonial Government to ask explanations from their Agent or officers whenever they see fit occasion to do so; but I think that occupying the position I do in England, my public character claims for me some consideration and weight in the replies that I make from time to time in these explanations, and that it should be considered I would not descend to make excuses untruthfully for any omissions of duties either by myself or my employes; and I must be permitted to express my regret that censure should have been based upon evidence so obviously exaggerated, and which I fear was influenced by some personal feeling.

I am, &c.,
JOHN FOWLER.

or

[Enclosure No. 3.]

W. G. Owen, Esq., to J. Baldry, Esq.

Great Western Railway,
Engineer's Office, Paddington, W.,
2 July, 1870.

Dear Sir,

The average cost of maintenance and renewals in—

1867	was	£305	9	0	per mile per annum.
1868	"	280	13	1	" "
1869	"	273	8	9	" "

We have no record made up of the cost of *single* lines, or of mixed gauge lines; but if you will let me know what you require I shall be very glad to pick up the results from our returns.

It is necessary to know the particular circumstances connected with each class of maintenance, before we are able to draw safe conclusions; as for instance, most of our single lines are very modern, and the maintenance is therefore *lower* than it will be when they attain an average life.

The opening of every new piece of single line with light traffic materially reduces the general average of the whole system, and might if unexplained lead to the impression that we are spending too little on the line.

Yours truly,
W. G. OWEN.

2, Queen-square-place, Westminster.

We shall be happy to send you any detail Mr. Fowler wishes for.

[Enclosure No. 5.]

Charles Manby, Esq., to John Fowler, Esq.

24, Great George-street, Westminster, S.W.,
26 July, 1870.*New South Wales Railway.*

Dear Sir,

In reply to your letter, enclosing an extract from evidence given by an officer of the Government, before the Legislative Assembly, in respect of engines supplied for the New South Wales Government, we beg to transmit to you the affidavit of Mr. G. K. Douglas, the engineering manager of our works, corroborated by that of Mr. Crow, the general foreman of construction, and Mr. Anderson, the foreman of the erecting shop, as to the fitting, erection, and trial of our engines Nos. 1541 to 1549 inclusive, before we delivered them for shipment; and this statement can be corroborated in every respect by your own inspector, who was at our works during the construction and the whole time of the trials of these engines.

We are, &c.,
pro ROBERT STEPHENSON & Co.,
CHARLES MANBY.

A.

AFFIDAVIT OF MR. G. K. DOUGLAS.

New South Wales Railways.

WHEREAS it has come to the knowledge of Messrs. R. Stephenson & Co., of the borough and county of Newcastle-upon-Tyne, engine manufacturers, that certain statements have been made in the Colony of New South Wales, reflecting on the manner in which certain locomotive engines, numbered by them 1541 to 1549, both inclusive, were constructed, packed, and sent out to such Colony: Now I, George Katz Douglas, of Newcastle-upon-Tyne aforesaid, engineering manager of the manufactory of the said firm, do hereby make oath and say as follows:—

1. I well remember the said engines, numbered respectively 1541 to 1549, both inclusive, having seen them continually in course of their construction.
2. That the said engines were manufactured of the best materials, and in a thoroughly workmanlike manner; that after their construction they were carefully fitted and properly tried under steam, with every part attached, that everything was done which could be done to ascertain that every part had been perfectly fitted and was in thorough working order, before the said engines were taken to pieces, numbered, figured, lettered, and packed for shipment to the said Colony.
3. That the said engines were carefully inspected during the progress of their manufacture, trial under steam, and packing, by a competent independent inspector, appointed by Mr. John Fowler, civil engineer, London.
4. That the said engines were so distinctly marked and lettered that they could have been erected, on their arrival in the said Colony, by any ordinarily intelligent engine-fitter conversant with the construction of locomotive engines; all the parts having been, as before stated, carefully figured, numbered, and lettered, as is the consistent practice of the said Robert Stephenson & Co.
5. That I have been engineering manager of the said firm of Robert Stephenson & Co. for a period of nine years, and during that time no locomotive engine has ever been allowed to be sent out from the said works without its having been first entirely and completely erected, perfectly fitted, and thoroughly tried under steam; and in order to insure the utmost efficiency, the boilers have been invariably subjected to two severe trials,—first under steam, with a pressure of two hundred pounds per square inch, and secondly with cold water under hydraulic pressure, prior to the erection of the engines and their trial under steam, in the presence of the inspector appointed by the engineer acting for the purchaser.
6. That in every particular, the usual practice of the said firm of Robert Stephenson & Co. was carried out in regard to the said engines, numbered 1541 to 1549, both inclusive; and generally, that the said engines were constructed and fitted in such a perfect manner as would with justice have been perfectly satisfactory to any practical locomotive engineer of experience.

GEORGE KATZ DOUGLAS.

Sworn at Newcastle-upon-Tyne aforesaid, this 18th day of July, 1870, before me,—

R. R. DEES,

A Commissioner to administer Oaths in Chancery in England.

This is the affidavit of George Katz Douglas, marked A, referred to in the affidavit of George Crow and Robert Anderson.

Sworn before me, the 18th day of July, 1870,—
R. R. DEES.

AFFIDAVIT OF MR. G. CROW AND MR. R. ANDERSON.

New South Wales Railways.

We, George Crow, of the borough and county of Newcastle-upon-Tyne, general foreman for the firm of Messieurs Robert Stephenson & Company, and Robert Anderson, of Newcastle-upon-Tyne aforesaid, foreman of the erecting shop in the manufactory of the said Messieurs Robert Stephenson & Company, jointly and severally make oath and say as follows:—

1. That each of us has read the affidavit of Mr. George Katz Douglas, dated the eighteenth day of July, one thousand eight hundred and seventy, herewith annexed, marked A, relating to the construction, fitting, numbering, lettering, trials, and proving of the engines numbers 1541 to 1549 inclusive, and which said engines were sent out to the Colony of New South Wales.
2. That the statements made in the said affidavit by the said George Katz Douglas are all correct and true in every respect.

3. That all the precautions for obtaining the best class of work and of precision in fitting and adjustment, as detailed in the affidavit of the aforesaid George Katz Douglas, are and have been invariably taken in all the work entrusted to our supervision by Messieurs Robert Stephenson & Company.

And I, the said George Crow, for myself say that I have during the period of thirty years had the personal superintendence of the construction, putting, and fitting together of all engines manufactured by the said firm of Robert Stephenson & Company.

And I, the said Robert Anderson, for myself say that I have for ten years been foreman of the erecting shop of the said firm of Robert Stephenson & Company.

GEO. CROW.
R. ANDERSON.

Sworn by the said George Crow and Robert Anderson, at Newcastle-upon-Tyne aforesaid, this 18th day of July, one thousand eight hundred and seventy, before me,—

R. R. DEES,

A Commissioner to administer Oaths in Chancery in England.

[Enclosure No. 6.]

I, Richard Peacock, of the firm of Beyer, Peacock, & Company, engineers, Gorton Foundry, near Manchester, in the county of Lancaster, England, do hereby solemnly and sincerely declare that, as locomotive engine-builders, my firm have constructed up to this date, for use in the Australian Colonies, the following locomotive engines, namely, sixteen engines for the New South Wales Railways, twenty-nine for the Victorian Railways, and two for the South Australian Railway; and that, in accordance with our invariable practice, each of the said engines, before it left our works, was erected, the boiler tested by hydraulic pressure, and the engine tried in steam; and I further declare that in no case have we ever delivered a locomotive engine from our works without having it first erected, the boiler tested by hydraulic pressure, and the engine tried in steam, whether such engine was to be used in Great Britain, Ireland, the Colonies, or in foreign parts: And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the fifth and sixth years of the reign of his late Majesty King William the Fourth, intituled "An Act to repeal an Act of the present Session of Parliament intituled "An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the State and to substitute Declarations in lieu thereof and for the more entire suppression of voluntary and extra-judicial Oaths and Affidavits, and to make other provisions for the Abolition of unnecessary Oaths."

R. PEACOCK.

Voluntarily made and subscribed before, and taken and received by }
me, at the city of Manchester, in the county of Lancaster, this }
second day of August, 1870, before me,—

RICHD. RADFORD,

A Commissioner to administer Oaths in Chancery in England.

[Enclosure No. 7.]

Mr. Fowler's Memorandum as to Locomotives.

2 Queen-square-place, Westminster, S.W.,
23 August, 1870.

Stephenson's engines (1541 to 1549) :—

18-inch cylinders.
24-inch stroke.
4-feet wheels (six-coupled).
Working pressure, 120 lbs.

The weight of these engines is, I believe, about 30 tons each = 67,200 lbs. weight, which divided by 6 gives about 10,200 lbs. adhesion.

The tractive power of such an engine—

$$= T = \frac{D^2 \times P \times L}{W} = \frac{324 \times 60 \times 24}{48} =$$

Where D = diam. of cylinder in inches

P = mean pressure $1\frac{2}{3}^2$

L = stroke in inches

W = diam. of driving-wheel in inches

T = tractive force in lbs.

$$= 9,720 \text{ lbs.} = T$$

The power exerted in running—

$$= \frac{\text{Train resistance in lbs.} \times \text{Speed in feet per minute.}}{33,000} = \text{H.P.}$$

The ordinary duty of such an engine is, say a train of 400 tons on the level at 20 miles per hour,—

$$400 \times 10 = 4,000 \text{ traction of wagons.}$$

$$45 \times 20 = 900 \text{ traction of engine and tender.}$$

$$\text{Then } \dots \frac{4,900 \times 1,760}{33,000} = 261 \text{ H.P. exerted.}$$

With regard to Beyer and Peacock's engines—

18-inch cylinders.
24-inch stroke.
5'-9" wheels (four-coupled).

Here the adhesion, by reason of there being less weight on the coupled wheels, would be less, and the tractive power would be also less, say 6,760 lbs.; but at least an equal power would be developed by the engine, by reason of the higher speed that would be attained with the larger wheels.

With an ordinary load 35 to 40 miles could with ease be run, say 150 tons at 40 miles per hour,—

$$\begin{array}{r} \text{Tons.} \\ 150 \times 10 = 1,500 \\ 45 \times 20 = 900 \end{array}$$

$$2,400$$

$$\text{then } \frac{2,400 \times 3,520}{33,000} = 256 \text{ H.P. exerted while running.}$$

This statement, both as regards this engine and Stephenson's engine, is considerably below the actual power, all the results given are within the mark; and the accompanying letter from Mr. Beyer, one of the first practical engineers in Europe, to whom I wrote on the subject, quite coincides with this view.

[With

[With Enclosure No. 7.]

C. F. Beyer, Esq., to John Fowler, Esq.

Gorton Foundry,
Manchester, 3 August, 1870.

Dear Sir,

I have collected, during a great many years, performances of locomotive engines on various railways, and under almost every variety of circumstances, and find that in their ordinary working 1 square foot of fire-grate will supply steam to move 600 lbs. resistance at 12½ miles per hour, or is equal to 20-horse power.

My concern has been making for your New South Wales Railways in all sixteen engines.

Thirteen outside cylinder engines, four-coupled wheels, and three inside cylinder single engines; and as the former have a fire-grate area of 14½ square feet, and the latter 14 square feet, their power would be represented by 295 and 280 horse-power respectively.

Believe me, &c.,

C. F. BEYER.

[Enclosure No. 8.]

William Baker, Esq., to John Fowler, Esq.

London & North-western Railway,
Engineer's Office, Euston Station,
London, N.W., 25 June, 1870.

My dear Sir,

I have pleasure in sending you, on the other side, the prices we have paid for rails, asked for in your note of the 21st instant.

Yours truly,

WILLIAM BAKER.

VICTORIAN RAILWAYS.

(CORRESPONDENCE RESPECTING PURCHASE OF MATERIAL.)

Ordered by the Legislative Assembly to be Printed, 18 August, 1870.

THE AGENT GENERAL FOR VICTORIA, LONDON, to THE CHIEF SECRETARY, MELBOURNE.

8, Victoria Chambers, Victoria-street,
Westminster, S.W., 25 March, 1870.

SIR,

With reference to your despatches enumerated in the margin, having regard to the purchase of material for the Railway Department, I have the honor to enclose herewith a communication, received from the Inspecting Engineers, forwarding the report of their consultations with Messrs. Bidder and Clark.

I have, &c.,
GEO. VERDON,
Agent General.

[Enclosures in the foregoing.]

18, Duke-street, Westminster,
25 March, 1870.*Victorian Railways.*

SIR,

In accordance with your minute of the 26th ultimo, covering despatches from the Honorable the Commissioner of Railways and Roads, requesting us to confer with Mr. Bidder and Mr. Edwin Clark, and obtain their opinion on certain questions submitted in a memorandum of the Engineer-in-Chief, dated 28th December, 1869, we have had repeated conferences with those gentlemen, and after full discussion have agreed upon the enclosed joint report.

We have, &c.,
R. P. BRERETON.
W. H. LEWIS.

The Agent General for Victoria.

Westminster, 23 March, 1870.

Victorian Railways.—Proposed North-eastern Railway.

SIR,

In accordance with your minute of the 26th February last, we have in conference carefully considered the questions put by the Engineer-in-Chief, in his memorandum dated 28th December, 1869, relative to the character of permanent way and rolling stock that should be adopted on the proposed North-eastern Railway, and beg to submit the following joint report:—

We have had before us the sections of the proposed line, the Report of the Select Committee on Railway Extension, 1869, with the evidence and the reports of the Engineer-in-Chief; also the traffic and other returns published by the Board of Land and Works, for the year ending 31st December, 1868, and the drawings, specifications, and specimens of the permanent-way materials and rolling stock on the existing Government railways; and we have further availed ourselves of Mr. Elsdon's knowledge and experience of the special circumstances of the country.

We are requested to advise on (a) the kind of rail and fastening, (b) the weight of rail, and (c) the description of engine and rolling stock generally that should be adopted for the new line; but before doing so, it may be well to refer to the general conditions of the proposed undertaking.

The contemplated North-eastern Railway is not to be simply a line into the interior, designed to open up a new country and create traffic for itself, but it is intended to follow the course of a main highway, upon which a considerable traffic already exists, and to be ultimately the chief means of communication between Melbourne and Sydney, to two most important centres of population and trade in Australia. It is to be constructed by a Government whose resources enable them to meet whatever present outlay may be necessary or prudent, and who will probably retain the line in their own hands, and would therefore suffer any evil consequences that might result from an improper reduction in first cost; and, lastly, it is to be formed in connection with a very important existing system of railways.

It further appears that the country, while admitting of favourable curves, necessitates the adoption of the severe gradient of 1 in 50, for a very considerable portion of the 60 miles now proposed to be constructed.

Having regard to the above considerations, and to the traffic that may reasonably be expected, and which should be provided for, we are of opinion that experience does not warrant the expectation of satisfactorily and economically working the proposed line with locomotives of materially less weight and power than those at present adopted by the Railway Department.

The introduction of a new class of rolling stock would entail considerable increase in the working expenses, besides being attended with much inconvenience; and, apart from such considerations, we are of opinion that no advantage is to be obtained by a change.

The returns published by the Board of Land and Works show the existing State Railways to be, on the whole, efficiently and economically worked, and we are unaware of any experience that would lead to the belief that more satisfactory results would be obtained from an altered system.

We therefore have no hesitation in recommending that the North-eastern Railway be laid with such a permanent way as will admit of its being worked continuously with, and by the same rolling stock as, the existing State Railways.

The Melbourne and Sandhurst and the Geelong and Ballarat lines, which resemble the proposed line as to gradients, are laid with 80lbs. rails, and we are of opinion that this weight is not excessive, and will prove more economical in the end, but the traffic anticipated between Essendon and Belvoir is not equal to that on these lines, and no doubt the 72lb. double-headed rail recommended by the Engineer-in-Chief (who speaks with the advantage of local experience) might be adopted with perfect safety, although it is the lightest section in iron of which we could approve.

It is possible, however, by adopting a superior material and a modified form, to obtain a rail of greater strength with a slightly decreased weight.

The use of steel rails within the last few years has been attended with such satisfactory results, their manufacture has become so much more certain, and owing to the expiration of Bessemer's patent, and from other causes their price has quite recently been so greatly reduced, that they are being generally employed in England in situations exposed to specially heavy traffic, and still more commonly in America, Russia, and other countries where a considerable sum for carriage has to be added to the original price of the rail. We think that they are particularly suited to the proposed North-eastern Railway of Victoria, and by the adoption of a form not requiring chairs they may at present prices be used without increasing the cost of the permanent way as compared with a 72lb. double-headed iron rail with chairs.

A flat-bottomed steel rail of good section, weighing from 65lbs. to 67lbs. per yard would be stronger than a 72lb. double-headed iron rail, while it would be much more durable, and the saving effected by the abandonment of chairs would go far to cover the increase of cost in the rail at present prices.

It is impossible to speak of the life of a steel rail under ordinary traffic from actual experience, but under extraordinary traffic the wear of the steel has been found to be at least five times that of the iron, and it is reasonable to expect that a steel rail under extraordinary circumstances would last for more than thirty years without turning; it therefore becomes unnecessary to invest capital in a second head with a view to so remote a contingency.

We are informed that the sleepers that will be used will be of red gum, about 10 inches by 5 inches, sawn on all sides; that the red gum is a hardwood timber and therefore well suited to carry a flat-bottomed rail.

With a rail of this form, and sleepers of the above character, the fastenings we should recommend would be what are called "fang bolts"; that is, bolts passing through the sleepers and having flat nuts or washers and nuts on the other side.

Therefore, having regard both to first cost and particularly to cost of maintenance, the description of permanent way we recommend for the line in question, is as follows:—

Rails of steel weighing from 65lbs. to 67lbs. per yard and of flat-bottomed section, having about 5 inches width of base, fished at the ends, and fastened by fang bolts to transverse sleepers of hardwood, sawn on all sides, and of 10 in. x 5 in. scantling laid at distances of 2 feet from centre to centre at the ends of the rails, and 2 ft. 6 in. elsewhere.

Passing on to the subject of rolling stock, we have already stated our opinion to be that no great reductions could be made in the weight of the locomotives now in use; the present English practice does not point in this direction, and having regard to the great importance of uniformity of stock, we recommend that the type of engine, as designed by Messrs. Gooch & Sturrock (which appear to be working satisfactorily) be adhered to with only such improvements in detail as recent practise dictates. And that all future engines be made to the exact gauges, so as to secure the similar parts in each being identical and capable of being interchanged one with another, and, if possible, with the engines at present in use. But looking to the gradients of the line, the character of the traffic as described to us, the mode of working, and the speeds contemplated, we are of opinion that the engine with six 5-foot wheels coupled, will be best suited to the circumstances of the case, and that it will not be requisite to provide any of the heavier engines with large driving wheels designed for higher speeds. It will be time enough to supply these when through communication has been established, and the necessity for express trains has arisen.

From the foregoing observations it will be gathered that we do not believe any radical change in the character of the rolling stock now in possession of the Government is called for, or would be beneficial; we therefore think it unnecessary to offer any remarks upon the subject of the carriage and waggon stock, the details of which must be determined according to the special requirements of the country and traffic, and can best be settled by those who have obtained experience of both. We may mention that the climate of India has been found to seriously affect the under frames and to draw them out of shape, and the substitution of iron has led to economy of working. It may be worthy of consideration whether this would be desirable in Victoria.

We are, &c.,
GEO. P. BIDDER.
R. P. BRERETON.
EDWIN CLARK.
W. B. LEWIS.

The Agent General for Victoria.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(RELATIVE STATISTICS OF GREAT NORTHERN AND GREAT WESTERN RAILWAYS.)

Ordered by the Legislative Assembly to be Printed, 19 August, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 4th March, 1870, That there be laid upon the Table of this House,—

“ A Return showing,—

- “ (1.) The maximum load the engines in use can draw, in average weather, on the Great Northern Railway, from Wallsend Junction to Newcastle.
- “ (2.) The maximum load engines in use can draw, in average weather, from Bowenfels to Penrith.
- “ (3.) Cost of the Great Northern Railway from Wallsend Junction to Newcastle, exclusive of Stations, but inclusive of sidings on Wharf.
- “ (4.) Cost of Cranes, and of the wharf frontage available for the Cranes.
- “ (5.) Amount of gross receipts on the Great Northern Railway from the Coal Companies for 1869.
- “ (6.) Estimated actual cost to the Government of the carriage of coal on the Great Northern Railway for 1869, exclusive of interest on line, but inclusive of all fair charges for wear and tear.
- “ (7.) The estimated durability of the present permanent way on the Great Northern Railway, between Wallsend Junction and Newcastle.
- “ (8.) The estimated durability of the present permanent way on the Great Western Railway, from Penrith to Bowenfels.
- “ (9.) The estimated difference between the durability of an engine hauling full loads of coal from Bowenfels to Penrith and that of an engine hauling full loads from Wallsend Junction to Newcastle.
- “ (10.) Estimated annual cost of repairs to each such engine as aforesaid.”

(*Mr. G. A. Lloyd.*)

RAILWAYS.

1. The maximum load the engines can draw in average weather on the Great Northern Railway, from Wallsend Junction to Newcastle—880 tons.
2. The maximum load engines in use can draw in average weather from Bowenfels to Penrith—147 tons.
3. Total cost of Line, Newcastle to West Maitland (20 miles) is for—

	£	s.	d.
Engineering... ..	4,408	4	1
Land... ..	39,008	9	4
Main Line, Bridges, Siding, &c.	255,393	11	8
Permanent way	73,129	15	10
	£ 371,940	0	11 or
	£ 18,597	0	0 per mile.

The actual cost of the section from Newcastle to Wallsend Junction cannot be ascertained, as the returns have not been furnished to enable the line to be divided at this point.

4. Cost of Cranes—£13,054 12s. 8d. ; Wharf frontage—2,400 feet.
5. £25,123 11s. 7d.
6. The cost of the coal traffic cannot be given separately, but the cost for all traffic was 3/7½d. per mile.
7. The estimated durability of the present permanent way on the Great Northern Railway, between Wallsend Junction and Newcastle—Seven years.
8. The estimated durability of the present permanent way on the Great Western Railway, from Penrith to Bowenfels—Ten years.
9. The estimated difference between the durability of an engine hauling full loads of coal from Bowenfels to Penrith and that of an engine hauling full loads from Wallsend Junction to Newcastle—No difference.
10. Estimated annual cost of repairs of each such engine as aforesaid—North, £332 ; West, £415.

(RETURN SHOWING PARTICULARS OF RAILWAY CONTRACTS.)

Ordered by the Legislative Assembly to be Printed, 19 October, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 3rd February, 1870, That there be laid upon the Table of this House,—

“ A Return showing,—

“ (1.) The names of all Railway Contractors, the Contract or Contracts
“ taken by each Contractor, inclusive of Extensions, Station-houses, Goods-
“ sheds, Gate-houses, and other Railway expenditure.

“ (2.) The amount paid on account of each Contract, whether under
“ Tender or Schedule of Prices, the number of miles of Railway in progress,
“ and the amount payable on completion of existing Contracts, together
“ with costs of Station accommodation and Gate-houses.

“ (3.) The total amount to the credit of the Government applicable to
“ Railway construction.”

(Mr. Byrnes.)

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(RETURN SHOWING PARTICULARS OF LAND TAKEN FOR RAILWAY PURPOSES.)

Ordered by the Legislative Assembly to be Printed, 19 October, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 22nd September, 1870, That there be laid upon the Table of this House,—

“ A Return showing the extent of land taken for Railway purposes for the
 “ Southern, Northern, Western, Richmond, and Windsor, and the Morpeth,
 “ Lines of Railway, together with the names and amounts demanded by
 “ claimants, and the sums paid to them; the costs in cases where legal
 “ proceedings have been resorted to, and the costs in cases settled by arbi-
 “ tration; likewise the names of the arbitrators appointed by the Govern-
 “ ment; the sums paid for such services,—and noting instances where
 “ Members of Parliament have acted in such capacity.”

(Mr. Clarke.)

RAILWAYS.

RETURN showing the extent of land taken for Railway purposes for the Southern, Northern, Western, Richmond, and Windsor, and the Morpeth Lines of Railway, together with the names and amounts demanded by claimants, and the sums paid to them; the costs in cases where legal proceedings have been resorted to; and the costs in cases settled by arbitration or Petty Sessions; likewise the names of arbitrators and umpires appointed by Petty Sessions, Commissioner, or Claimants; the sums paid to each for such services,—and noting instances where Members of Parliament have acted in such capacity.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CARRIAGE BY RAILWAY OF COAL AND OTHER MINERALS.

(PETITION—PERSONS INTERESTED IN THE DEVELOPMENT OF THE MINERAL RESOURCES OF THE COLONY.)

Ordered by the Legislative Assembly to be Printed, 20 June, 1871.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned persons interested in the development of the mineral resources of the Country,—

HUMBLY SHOWETH :—

That it is highly desirable that your Honorable House should take into its immediate consideration the justice and policy of reducing the present high charge for cartage for coals and other minerals by the Government Railways, with a view to the permanent reduction of the same.

Your Petitioners are of opinion that a permanent reduction would give great relief to those now engaged in developing the mineral resources of the Country, and encourage others to enter into similar undertakings,—would tend to make the Railways permanently profitable,—and, by giving employment to labour, would promote the settlement of the Country, and confer many other general advantages on this Country.

Therefore your Petitioners humbly pray your Honorable House to take the premises of this Petition into your immediate favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 15 Signatures.*]

(REPORT OF BOARD APPOINTED TO INQUIRE INTO THE SYSTEM OF RAILWAY ACCOUNTS, &c.)

Ordered by the Legislative Assembly to be Printed, 31 January, 1871.

[*Laid on Table in compliance with reply to Question No. 2, Votes and Proceedings No. 56, of Friday, 18 November, 1870.*]

REPORT of the Board appointed to inquire into the system of Railway Accounts, &c., with Minutes thereon by the Commissioner for Railways, and other papers ; laid upon the Table of the Legislative Assembly, in pursuance of the answer given by Mr. Secretary Sutherland to Commander Onslow, Question No. 2 on the Business Paper of 18th November last.

THE AUDITOR GENERAL TO THE COMMISSIONER FOR RAILWAYS.

70-1879.
26/5/70.
SIR,

Audit Office, Sydney,
18 May, 1870.

In accordance with your Commission forwarded to me in the Honorable the Colonial Secretary's letter Dated 31 March, of 6th ultimo, I do myself the honor to transmit the Report of the Board appointed to inquire into and examine the 1870. previous and present mode of keeping the Railway Accounts, &c., &c.

I have, &c.,
C. ROLLESTON.

Report of the Board appointed to inquire into and examine the system of Accounts and Book-keeping in the Railway Department.

AFTER as careful an investigation of the past and present system of accounts and book-keeping as they have been able to undertake, the Board have agreed to the following Report :—

It appears that in the year 1867, upon the discovery of Eastwood's defalcations, it was thought expedient to remove the then Accountant, Mr. Walker, and to introduce an Accountant from outside the Public Service, with the view, as it was thought, of securing a more efficient performance of the duties appertaining to the office.

The attention of the Board has been particularly directed to the system of accounts and book-keeping introduced and carried on by Mr. Ashdown, and they have been unable to discover that the objects contemplated in making the appointment have been attained ; on the contrary, the system originally inaugurated by Mr. Rae, and carried on by Mr. Walker, appears not only not to have been improved upon, but rather to have been encumbered with unnecessary and impracticable subdivisions of the working expenses, whilst the most important object connected with book-keeping, namely, the being able to show at any moment the exact state of the accounts both on the revenue and expenditure side, would seem to have been almost disregarded.

The Board were informed by the Engineer-in-Chief, and by Mr. Quodling, that although constant applications had been made to the Accountant for a Statement of the Balances at the credit of Votes, he had never succeeded in getting one; and that, in so far as any information from the Accountant was concerned, the Engineer-in-Chief was working entirely in the dark as to the amounts at his disposal for carrying on the several railway works under his control.

Thus much in general.

The Board will now proceed to notice in order the points which have struck them in the course of their investigation, and to make such recommendations as have suggested themselves for simplifying and improving the system in both the Accounting and Store Branches of the Department.

1. Accountant Branch.

Whilst it is desirable that the Accountant should hold a proper position in the department, it is very undesirable that he should be placed in a position where he can set at nought the directions of an officer charged with such important duties as the Engineer-in-Chief—duties at the same time so intimately connected with the expenditure of the votes. So long as the office of Commissioner for Railways is in the hands of the Minister, the Accountant ought to be made amenable to the Engineer-in-Chief in all such matters as affect his branch of the Service.

It is utterly impossible, no matter what may be the abilities or industry of the Minister, that he can give that attention which is necessary to the proper administration of the Railway Branch of his department to the neglect of all the others; and it would seem that there is no officer in the department to whom his authority could be so properly delegated as to the Engineer-in-Chief, who is charged with such important duties, and with the expenditure of by far the largest proportion of the Railway Votes.

The Board do not consider that they are exceeding the limits of their Commission in making these observations, because the position of the Accountant has an important bearing upon the question submitted to their inquiry; and they are of opinion that much of the disorder and difficulty which have occurred with reference to the accounts are attributable to the wrong position in which the late Accountant was placed with regard to the superior officers of the department; and they would strongly recommend that in any new arrangement that may be projected, the subordination of the Accountant to the Engineer-in-Chief, as well as to the Commissioner, should be borne in mind.

The subdivisions of the Working Expenses of the Railway Lines, introduced by Mr. Ashdown, having been abandoned, the Board need only, in passing, state their opinion that no ingenuity and no amount of labour could have secured accuracy in accounts kept upon this plan, and that they approve of the plan upon which the working expenses are now distributed.

It is considered that the books of account are encumbered with too much detail, and that they should be freed from all information of a purely statistical nature.

If it is necessary, for the information of the Commissioner or of Parliament, to maintain a register of minute statistics to show the comparative cost and working of lines or portion of lines, let it be done, but it should not be permitted to encumber and confuse the principal account books of the department.

These account books should consist of,—

1. Revenue Cash Book,
2. Expenditure ditto,
3. Journal, and
4. Ledger, for showing the expenditure under votes or appropriations of Parliament.

The Revenue Cash Book should show the daily receipts and their disposal.

The Expenditure Cash Book should show the advances from the Treasury to the Commissioner, the accounts forwarded for liquidation by the Treasurer, and the expenditure of the same under votes of Parliament.

The Journal is necessary for recording the particulars of entries of a miscellaneous nature, transfers and store accounts.

The Ledger should be modelled on the principle of the Treasury Appropriation Ledgers, so that the exact balance on any vote may be ascertained at a moment's notice.

To secure this important result payments must be posted against the votes *at once*, and daily checked with the entries in the Cash Book.

Monthly balance sheets should be prepared and submitted, *after verification at the Treasury*, to the Commissioner, for the information of himself and the Engineer-in-Chief.

This system of accounts should come into operation on the 1st of July next.

A Register, or subsidiary Ledger, should be opened on the same date for detailing the expenditure in such form as may be directed by the Engineer-in-Chief, with the Commissioner's approval.

In order to secure uniformity of system and correctness of accounts in the future, the balances of railway appropriations, as exhibited in the books of the Treasury on the 1st of July next, should be adopted as the basis of the new books.

Then, when the old books are written up to the end of June, the balances should be compared with the balances given by the Treasury, and an explanation of any discrepancies that may be found should be afforded as soon as possible.

The Cash Books before referred to should be kept by the Cashier, and they should be checked *daily* by the Accountant.

With reference to the traffic receipts, the Board are of opinion that an improvement would be effected were the Cashier required to take the Station Masters' daily collections direct to the Bank.

The Bank authorities should be invited to tell off one of their officers to assist the Cashier in opening the bags and counting the money, and there and then give him a receipt for it.

Under the present system there are two countings—firstly in the Railway Office by the Cashier alone, and secondly in the Bank; and this further advantage would be secured by the plan proposed, namely,—the check of a Bank official in support and confirmation of the tally made by the Cashier.

At the present time, were a dispute to arise as to the contents of a particular bag, the Commissioner would be very much puzzled to know upon whom to lay the blame for any deficiency—whether upon the Cashier or the Station Master. Supposing the Bank authorities should object to the proposed arrangement, the Board are of opinion that the responsibility of opening the bags and counting the money should be shared by the Accountant.

In connection with the Station Masters' receipts there is a class of payments coming through them which requires placing on a better footing, that is, the accounts known as "Station Traffic Accounts," which are prepared and rendered by the Station Masters to the railway customers.

The Board think it very desirable that these payments should be made to the Station Masters, and not to the Cashier as has been the practice; and if in the case of the Coal Companies it is deemed expedient to allow them to pay the amount of their accounts at the head office, such cases should be made exceptional, and notice of payments should at once be given to the Station Masters.

Before closing this branch of the inquiry the following suggestions may be added, namely:—That all letters received by post should go through the Chief Clerk, and not to the Accountant direct; and that all securities in the shape of cheques, cash, or debentures, should be lodged in the Treasury.

It is considered important, moreover, that the Accountant should be required to furnish, monthly, reports to the Commissioner as to the state of the accounts, and of his branch generally; in which he should bring under notice everything that occurs to him as desirable that the Commissioner or Engineer-in-Chief should be made acquainted with.

This should be accompanied by a comparative statement of the past month's revenue, and by a statement showing the sums that have been received for the same period through the Chief Clerk, as well as from miscellaneous sources.

As intimately connected with the Account Branch, perhaps this may be the proper place to notice the question of the payment of wages.

It appears that this is done bi-monthly; and that it involves a very considerable amount of labour, not only in the preparation, but in the paying of the accounts.

The Board do not see why the regular railway employés, like all other public servants, should not be paid monthly. It would be a great relief to the department, and ought not to be regarded as a hardship by the railway servants.

2. Stores.

The examination of the Store Branch did not afford to the Board satisfactory evidence of intelligent or effective administration.

There would seem to be a want of method and system in this department.

The Ledger is many months behind in its postings. Stock-taking has been neglected, and the balances as shown by the books of the Storekeeper are irreconcilable with the balances in the books of the Railway Accountant.

As the basis of a new system, the Board would recommend that stock should be taken on the 1st July next; and to secure this being done properly and effectually, they recommend that the stores should be rigidly closed, and that no issues should be allowed during the first week of that month, or longer if necessary; and that from thenceforth there should be a semi-annual stock-taking, the first weeks in January and July respectively.

The stock-taking should be under the control and management of the Traffic Auditor; and a new Stock Ledger should be opened, and all accounts commenced with the quantities and values of goods actually in store at such stock-taking.

It is further recommended that the stores should be open for the issue of stores *two days in the week only*. It has been ascertained that this will meet all the reasonable requirements of the Service, and the arrangement will leave no excuse to the clerical staff on the score of interruption, for the books not being regularly posted up to the day.

It would conduce very much to the diminution of labour in the office were merchants and others supplying goods to the Railway, required to fill up their own vouchers for payment, upon the proper Government forms, instead of throwing this labour upon the officers of the department, which is a very unnecessary addition to their duties.

As some difficulty is experienced in fixing the prices of goods, owing partly to the inconvenient manner in which tenders for stores are invited (to which reference will be made by and by), the Board would recommend that the prices at which goods are to be valued should be determined by the average cost of those last invoiced; and that in future, all stores issued should be charged at the average price of every month's balance of quantities.

The Stock Ledger should be balanced monthly, and a balance-sheet of the quantities on hand, and their values, should be prepared at the expiration of each month, and forwarded for the information of the Traffic Auditor.

As a check upon issues, all requisitions for stores should be approved by the Commissioner or Engineer-in-Chief, and the Storekeeper should not have the power of ordering stores of any description without the sanction of the Commissioner.

The Board have ascertained that the practice of ordering stores not in contract, without reference to the Commissioner or Engineer-in-Chief, has prevailed to the extent of many thousand pounds in the year; and they cannot too strongly condemn the practice, as opening the door to bribery and corruption.

It is right here to draw attention to the fact that the keys of the stores are committed to the custody of the watchman only, who has access to the stores at all hours of the day or night; and that no security is taken for his faithfulness. The public property is thus exposed to unnecessary risk, which should no longer be permitted.

Access to the stores without the knowledge of the Storekeeper or of a responsible clerk ought to be prohibited, and the Storekeeper should be held strictly responsible in this matter.

Another evil practice appears to have sprung up in the Store Branch, and has extended, it is believed, in other directions, and that is, the practice of paying officers permanently employed, out of the Vote for Working Expenses. It is conceived that all officers permanently engaged on clerical duties should be specially provided for upon the Estimates.

They now come to the mode of inviting tenders for railway contracts. Some improvement has lately been introduced in the classification; but the principle of fixing the prices upon classes of articles and inviting a percentage reduction over the whole is very inconvenient, and, the Board think, very objectionable.

The inconvenience is felt very seriously in the Store Department in determining the prices to affix to the different kinds of stores; and the objection seems to be that it discourages competition—throwing the contracts into the hands of a few persons; and so enhancing the cost of the supplies to the Government.

The Board would strongly recommend that this system should be abandoned, and that one based upon estimated quantities should be substituted.

This plan has been found to work admirably in obtaining the supplies for the Government Asylums, and no reason is seen why the principle should not act equally well with the Railway Contracts.

The Board have not deemed it necessary to visit the stores at Newcastle. They conceive that the same principles should regulate the system there as are applied to the stores in Sydney.

It might be well however, on account of the distance from head-quarters, and the consequent difficulty of exercising so watchful a supervision, that the Storekeeper should be placed under the control of Mr. Beeston, the Traffic Manager. He should be required to furnish periodical returns of the state of his stores, and to send in requisitions for authority to purchase fresh supplies, as the exigencies of the service may require, when the stocks are getting low; and these requisitions should be countersigned by the Traffic Manager.

Under this branch of their inquiry, it only remains for the Board to state that it will be well that the examination of the old store accounts be proceeded with energetically; but the result must in no way be allowed to interfere with the stock-taking on the 1st July, which is to be the basis of the new system.

The discrepancies found to exist between the value of the stock actually on hand on the 1st July and the value worked out from the old books may be carried to a suspense account, and the authority of the Executive Council obtained for the final disposal of them.

A more energetic and a more intelligent administration of this branch of the Service would seem to be very desirable; and the Board have reason to think that the supervision of the Traffic Auditor, which has lately been established, will effect a very beneficial change in the management of this, apparently, much neglected department.

The practice of charging the invoices of all stores purchased to the Loans' Votes in the first instance, and crediting these votes with the value of stores issued for the working expenses of the lines, having been brought under their notice,—the Board, before leaving this branch of the inquiry, desire to record their approval of the practice; having been given to understand that it has worked conveniently, and that by far the largest proportion of the invoices is chargeable to the construction of the lines, and therefore properly debited to Loans' Account.

3. Traffic Auditor.

The Board are glad to be able to notice with commendation the efforts of the Traffic Auditor to introduce an effective check upon the revenue. As regards the traffic receipts, the system which has been established by him seems to be of the most thorough kind; but hitherto he has exercised no check upon the miscellaneous receipts of the department.

This defect has recently been cured by the "Amended Instructions to the Traffic Auditor," issued on the 8th ultimo.

The Board recommend that the check of the Auditor should extend to the entire receipts from all sources, and that his position and authority should be carefully maintained, and strengthened where it may be found weak. A more suitable set of offices, and in a more suitable position, is urgently required; convenient office accommodation being very essential to the proper conduct of the duties of this officer.

4. Appropriation of Votes and Supplementary Votes by the sale of materials, stores, &c.

Under the first of these heads the Board think that there ought to be no difficulty, if the votes, as they ought to do, clearly define the objects for which they were taken; yet it seems that between the late Accountant and the late Engineer for Existing Lines much confusion has arisen; indeed the necessity for regarding Votes of Parliament does not seem in any very strict sense to have presented itself to their minds. Probably the confused state of the accounts caused difficulties in distributing the expenditure with accuracy. However this may have been, it appears that appropriations were made in a very loose manner, and generally without reference either to the Commissioner or to the Engineer-in-Chief; at all events, if the Commissioner's sanction was sought, it was "*pro forma*," and seems to have been given as a matter of course upon the recommendation of the Accountant.

The Board recommend that the approval of the Commissioner or Engineer-in-Chief should be obtained to every appropriation in future.

As to the question of "Supplementary Votes by the sale of materials, stores, &c.," the practice is, in the opinion of the Board, highly objectionable, unless under parliamentary sanction. Some of the instances brought forward by the late Accountant in a parliamentary paper recently published, are merely replacements of moneys taken from the votes, and are very properly carried to the credit of the votes from which they were originally taken.

If the following rule is observed there can be no difficulty in this matter, namely, that wherever a vote has been debited with an expenditure for land, or material, or stores purchased for carrying out the object of the vote, and any portion of such land, material, or stores, is sold, it is quite legitimate to replace the proceeds to the credit of the vote; but it is not a legitimate transaction to supplement a vote from sources foreign to that vote; for instance, to supplement the vote for relaying the Parramatta Line by the sale of old materials on that line was wrong; it was improperly spending money without parliamentary sanction, because the cost of the old material had never formed a charge upon the vote. Had it been so, the propriety of the transaction could not have been impeached.

The intelligent application of this principle will obviate any future difficulty, and may be left very safely in the hands of the Engineer-in-Chief.

5. Misappropriations.

The Board have not deemed it necessary to search the books of the department for instances of misappropriation of votes of Parliament. They have alluded to the apparent disregard of parliamentary votes by the late Accountant and Engineer of Existing Lines, of which a notable example has come under their observation with reference to a vote of £12,000 taken in 1865 for railway shed, over one-third of which sum was expended on works utterly foreign to the object for which the vote was taken.

The misappropriation would seem to have escaped detection until the Engineer-in-Chief took charge of the lines, and even as late as last year a misappropriation of over £400 was discovered in connection with a vote of £20,000 for the Morpeth Line.

It is obvious that these and many other irregularities are traceable to the want of an efficient permanent head to the Railway Department.

As they have before said, it is impossible that the Minister can efficiently discharge the duties of Commissioner; and the Board cannot withhold the expression of their opinion that it would be greatly for the advantage of the department, and of the public interests generally, could the Engineer-in-Chief be induced to assume the responsibilities of the office.

The Board, in conclusion, desire to acknowledge the readiness with which their inquiries were met by all the officers of the department.

Audit Office, Sydney,
13 May, 1870.

C. ROLLESTON.
JAMES THOMSON.
W. H. MACKENZIE, JUN.

MINUTE OF THE COMMISSIONER FOR RAILWAYS, on the Report of the Board appointed to inquire into and examine the system of Accounts and Book-keeping in the Railway Department.

THE Report of the Board was received by me on the 14th May last, and, so soon as the pressing nature of other public business would admit it, received my careful consideration.

Those recommendations of the Board which appeared to me of the greatest importance, and which could be adopted without question as to their desirability, I gave verbal directions to the Accountant to carry out at once; and subsequently, by minutes of the 12th July, I called upon the several heads of the branches, the duties of whose respective offices were affected by the Report, to offer any suggestions and explanations which they might consider it desirable to make in reference to the recommendations and proposals contained therein. The last of these minutes was not returned to me till the 17th September.

It is proper that I should mention here the causes which led to the appointment of the Board, and the object sought to be gained from their inquiry.

Upon the discovery of Eastwood's defalcations in 1867, it was thought expedient to introduce an Accountant from outside the Public Service, with a view of securing a more efficient performance of the duties of the office. Accordingly, Mr. Ashdown was appointed in the place of Mr. Walker, and the system under which the accounts had been previously kept was placed, as was supposed, upon a more secure basis, and under more strict surveillance.

Upon my accession to office, however, I was much surprised to find that there was in reality no effective check upon the Accountant's department, and that there was nothing to preclude the possibility of defalcations similar to those of Eastwood's.

The Traffic Auditor, who was then styled the Audit Clerk, had no recognized position; he was still, as in the time of Eastwood, wholly dependent upon the statements of the Accountant as to the revenue received and banked. I found, further, that it was the practice of the Commissioner to sign the attested statements of revenue receipts for the Auditor General, wholly upon the authority or testimony of the Accountant, without any reference to the Audit Clerk, who was the only officer in a position to know what ought to have been deposited in the Bank as

Railway

Railway Revenue. These statements I refused to sign when called upon to do so, until I had personally examined the books, and compared the figures there with those in the vouchers. Upon the whole system, in accordance with my request, being explained to me, I at once saw that there was no effective check upon the Accountant, who in effect was both Accountant and Cashier, and controlled and directed the Audit Clerk, the Storekeepers, Traffic Managers, the Engineer for Existing Lines—in fact, every officer in the department, except the Engineer-in-Chief.

Mr. Ashdown pointed out to me that it was my duty to make a declaration before a Justice of the Peace as to the correctness of the Monthly Abstracts of Receipts, and produced a minute signed by my predecessor, relieving the Commissioner from all responsibility if the Accountant's initials were on the face of the document. I immediately gave directions to the Audit Clerk, pending a more complete consideration of the necessities of the case, to examine and certify these statements before I was called upon to sign them; and, furthermore, I lost no time in issuing a code of instructions for the guidance of the Audit Clerk in the performance of his duties. See Instructions of 9th December, 1868.

See paper marked A.

It is sufficient here to state that by these he was placed in a proper and recognized position, made responsible directly to the Commissioner, and had the effective check by him of the Railway Traffic Receipts properly provided for.

About this time, also, it appeared to me that the accounts in connection with the Store Branch were in a most unsatisfactory and confused state; the complaints of the Auditor General that he was then two years without any statement of the stock in store (amounting at that time to upwards of £150,000) convinced me of the necessity of having this branch of the department placed under more direct supervision; and on the 9th December, 1868, I instructed the Traffic Auditor to make the necessary arrangements for taking a complete inventory of the stores in stock, holding him thereafter responsible for a correct audit of the books and accounts of the Storekeeper.

The Engineer-in-Chief asserted, so soon as the Accountant's new system became known to him, that the subdivision of the working expenses introduced by Mr. Ashdown was unnecessary and impracticable; and further, that, whether from the manner in which the accounts were kept or from the disinclination of the Accountant to afford him information, he was unable to obtain, notwithstanding numerous applications, a statement of the balances at the credit of the various votes.

It was not till July, 1869, that I became aware that the plan of accounts adopted by Mr. Ashdown in this respect was considered to be unreliable. So soon however as this fact became clear, I brought the matter under the attention of my colleagues, and the appointment of a Board to investigate the system was approved of. This Board consisted of the gentlemen named in the margin. The instrument under which they were to act was dated 6th September, 1869. It is sufficient here to say that this Board did not even attempt to carry out the object of their commission, and that I am to this time unaware of the reason.

Christopher Rolleston, Esq. (Auditor General).
James Thomson, Esq. (Inspector of Public Accounts).
Joseph Carroll, Esq. (Accountant).

In the absence of any proceedings of the Board, and believing from personal investigation that Mr. Ashdown's system of subdividing the working expenses was confusing and unreliable, I issued instructions, on the 5th March last, for the abandonment of these subdivisions, and for the adoption of a more simple system.

The Board in their Report confirm the propriety of this course: they say,—

“The subdivision of the working expenses of the Railway Lines introduced by Mr. Ashdown having been abandoned, the Board need only, in passing, state their opinion that no ingenuity and no amount of labour could have secured accuracy in accounts kept upon this plan, and that they approve of the plan upon which the working expenses are now distributed.”

About a month previous to this time I gave directions for the preparation of amended instructions which, while they were to provide for the effective check already established upon the Traffic Receipts, should also be made to embrace a check upon all miscellaneous sources of revenue, which check up to that time the Traffic Auditor had not the means of accomplishing.

These instructions, after revision and amendment by the Inspector of Public Accounts, were completed in the beginning of March last, printed and issued on the 8th April following; and it will be perceived from the Report that the Board admit that these instructions provide for a complete check upon the whole of the railway revenue, &c.

Copy enclosed.

It was during the preparation of these amended instructions that the defalcations of the Accountant, Mr. Ashdown, were discovered; and it was found that the miscellaneous revenue, to check which was one of the objects of these instructions, was the very fund upon which Ashdown had operated.

The discovery of these defalcations led to the revival of the subject of the appointment of a Board of Investigation; and, on the 31st March, 1870, the gentlemen named in the margin were appointed a Board to examine the system of accounts and book-keeping in the Railway Department.

Christopher Rolleston, Esq. (Auditor General).
James Thomson, Esq. (Inspector of Public Accounts).
W. H. Mackenzie, Esq. (Accountant).

It was considered desirable that the basis of the inquiry should in no way be limited, that full power should be given to the Board, and that every facility which the ready access to the books and documents of the office might give, as also the examination of the officers of the department, should be afforded, with a view of making the inquiry of the Board as complete and exhaustive as possible.

The Board, however, in the opening paragraph of their Report, suggest a doubt as to the complete nature of their investigation; and this fact must be taken into consideration in deciding upon some of their recommendations, which are open to question, and which I believe would not have been made, or would have been made in a modified form, had they given that full and complete attention to the subject which it was in contemplation they should give when they were appointed.

It must also be remembered that the labours of the Board were in a large degree anticipated by the steps that had been taken previous to their appointment, to perfect the system of railway accounts, as evidenced by the instructions to the Traffic Auditor, and by the decision arrived at in March last, as to the manner in which the working expenditure was to be distributed and the earnings apportioned to the different lines.

I will now proceed to discuss the recommendations of the Board.

Account Branch.

With reference to the opinion expressed by the Board that it is very undesirable that the Accountant should be placed in a position where he can set at nought the directions of the Engineer-in-Chief, I have to observe that, while the position of the Accountant should certainly not be antagonistic to that of the Engineer-in-Chief, it is desirable that he should not be directly under the control of that officer; and I cannot agree with the view of the Board that, so long as the office of Commissioner for Railways is in the hands of the Minister the Accountant ought to be made amenable to the Engineer-in-Chief in all such matters as affect his branch of the Service.

There is no doubt that, for the purpose of facilitating the business, and for obtaining information, the Engineer-in-Chief, through his officers, should have direct communication with the Accountant, and this he will have for the future; but as regards the mode of keeping the accounts, I am clearly of opinion that the Accountant should be amenable to, and should receive his instructions from, the Commissioner alone.

See paper marked B.

From the accompanying report which I have received from the Accountant, it will be seen that, as regards the system of accounts, the suggestions of the Board have to a great extent been carried out, and may be stated to be as follows:—

- 1st. Detail in Cash Book and Journal curtailed.
- 2nd. Revenue and Expenditure Cash Book kept by Cashier. This officer, it may be mentioned, was styled Clerk only, and performed the duties of Cashier under Mr. Ashdown, without any responsibility. He was relieved of this anomalous position, and appointed Cashier, on the 6th November, 1869, and gives security for £1,000.
- 3rd. Appropriation Ledger adopted.
- 4th. Statistical Register.

The

The Board recommend that, in lieu of the details entered in the general Ledger, a subsidiary Ledger or Register should be opened for this purpose.

The Accountant, however, recommends very strongly that the entry of details in the general Ledger should not be abandoned; and, for the reasons given by Mr. Hall, I am of opinion, now that an Appropriation Ledger has been adopted from which the balance of votes can be ascertained at a glance, the general Ledger should be continued as heretofore; it will in effect supply the place of the Statistical Register recommended by the Board.

5. Commissioner furnished with monthly reports.

6. Monthly comparison of balances with the Treasury.

There is one matter connected with the railway accounts which I regret to say the Board has left wholly undebated; the importance of the subject is undoubted, and the inconvenience arising from the present practice is very great. I allude to the difficulty experienced in ascertaining, in any reasonable time, the financial transactions of the year, owing to the unadjustment of outstanding accounts, and the consequent impossibility of closing the books. The Accountant has in his report brought this matter specially under attention, and recommends that all accounts which cannot be settled within three months after the close of the year shall be charged to the revenue vote of the year in which the claim is settled. Thus, if a claim incurred in 1870 and chargeable to the working expenses vote of that year cannot be settled, owing to the law's delay, or otherwise, till after 31st March, 1871, it shall form a charge on the working expenses vote of 1871, if settled in that year. The adoption of this principle would enable the books of any year to be closed three months after its termination; and though the item would be charged to the vote of the succeeding year, the entry could be made to show that it was a liability of the preceding one.

This plan is open to the objection that it might lead to abuse; but if its adoption were accompanied with the direction that a list of all items so charged should be laid before Parliament, I think the objection would be fairly met.

The proposal of the Board that the daily receipts should be taken by the Cashier to the Bank, and be counted there by him in the presence of a Bank officer, has not proved to be practicable, as the accompanying correspondence on the subject will show; but the difficulty raised by the Board as to the settlement of conflicting statements (should such arise) between the Station Masters and the Cashier, has been met by instructions given to the assistant to the Cashier to be present when the Cashier opens the bags, and to count the money with him.

See paper marked C.

Station Traffic Accounts.

The Board, it is clear, has misunderstood the practice in force with regard to these accounts; the supposition that after the account is rendered by the Station Master to the railway customer the amount is as a rule paid at the head office is a mistake. The money is paid to the Station Master, in the manner recommended by the Board; and in the one or two exceptional cases where the money, for the convenience of the customer, is received at the head office, the station at which the amount was incurred is at once informed. That such must be the practice is inevitable, otherwise the books of the Station Master could not be adjusted by the Traffic Auditor, which he is bound to do monthly.

Payment of Wages.

It is admitted, as stated by the Board, that the payment of wages twice a month involves a considerable amount of labour; but I am not prepared to say, however troublesome the labour may be, that it is altogether unnecessary. Notice was given to the men that it was proposed to adopt monthly payments, and several petitions were received praying for a reconsideration of the question. Inquiries accordingly were made, and it was found that, as the practice of paying bi-monthly was one of long standing, its abandonment would prove a very great inconvenience and loss to the men. I have therefore decided to withdraw the system of monthly payments which had been partially adopted, and to revert to the practice previously in force.

Stores.

I am not surprised that the examination of the Store Branch failed to afford the Board satisfactory evidence of intelligent and effective administration. I was aware, as before stated, previous to the appointment of the Board, that there was a great want of method and system in that branch; and, by the instructions before referred to, issued to the Traffic Auditor, I endeavoured to introduce a system which, while it would remove many objectionable features connected with the establishment, would also be the means of providing a complete and satisfactory administration of its affairs. These instructions, augmented by the recommendations of the Board, are believed to contain everything that can be required under proper management for conducting the business; and my views as regards the future management of the stores I shall submit to the Cabinet in a separate paper.

I may add that the stock-taking, under my previous instructions, and as recommended by the Board, has been carried out, and the result is now under consideration.

With regard to the practice to which the Board take exception—of paying the minor officers out of the vote for working expenses, without their engagements being shown on the Estimates, I have to observe that this is a practice which has been in force in the Railway Department since its establishment, and extends to many other departments of the Public Service in which minor and temporary officers are engaged.

It is unnecessary for me here to discuss the propriety or otherwise of this practice, as the Auditor General has brought the question under the attention of the Government (see his letter to the Honorable the Colonial Secretary of 6th July, 1870), and has proposed with reference to minor appointments generally, "that all minor officers, although virtually permanent, be transferred to the contingent section of Departmental Estimates, or be shown as a second part of the Salary Estimates, not requiring the direct approval of the Governor and the Executive Council."

Copy enclosed, marked D.

The question is therefore one for the Government to deal with, and is not confined to the Railway Department.

Mode of inviting Tenders for annual Railway supplies.

The Board admit that some improvement has lately been introduced in the classification of the goods required, but they take exception to the principle of fixing the prices upon the classes of articles, and inviting a percentage reduction over the whole.

A revised classification will be made before inviting tenders for the supplies of next year, and the recommendations of the Board will then be acted upon as far as may be considered to be profitable and advantageous.

Traffic Auditor.

The Board speak in highly favourable terms of the efforts of the Traffic Auditor to carry out his duties in an effective manner,—testimony which I am happy to be able cordially to indorse. The Board states that any defect that existed in the system of check which it is the Traffic Auditor's duty to carry out has been remedied by the amended instructions previously given to that officer.

In attention to the recommendation of the Board, a more suitable set of offices has been provided for the Traffic Auditor.

I now have to refer to that portion of the Report of the Board in which it is proposed that the Minister should be relieved of the duties of Commissioner, and that the Engineer-in-Chief should be induced to assume the responsibilities of the office. In the first place I must take exception to the conclusion arrived at by the Board

as to the utter impossibility of the Minister being able, without neglecting the other divisions of his department, to give the necessary attention to the conduct of the business of the Railway Branch. This has not been the case during the time I have held the dual position. No branch of my department has been neglected, and the measures I had adopted (previous to the appointment of the Board, as already pointed out) to correct the irregularities and absence of check which prevailed in the Railway Department under former management, demonstrates, I think, that I have also been able to devote much required attention to that branch of my administration.

The proposal of the Board as it affects the administrative arrangements of the Ministry is one for the consideration of the Government, as a whole; and, for the purpose of enabling the Cabinet to entertain it should they think proper to do so, I have invited the Engineer-in-Chief for Railways to express his views on the subject, and at the same time to state the conditions upon which he would consent to accept the appointment.

Mr. Whitton's reply is enclosed.

I think that I have now gone through all the most important suggestions and recommendations of the Board. I may say that in nearly every case where it has been found practicable to do so, the course which the Board has considered best has been adopted; and in those few instances where it has been considered expedient to deviate from their recommendation, that step has not been taken without serious and anxious consideration.

See paper marked E.

5th November, 1870.

JOHN SUTHERLAND,
Commissioner for Railways.

Department of Public Works,
Railway Branch,
Sydney, 8 April, 1870.

AMENDED INSTRUCTIONS to Traffic Auditor, issued for his guidance, and for the information and guidance of the officers of the branches affected thereby.

JOHN SUTHERLAND,
Commissioner for Railways.

THE Traffic Audit Branch will for the future be a separate and distinct branch of the Railway Department, and the Traffic Auditor will communicate, on all official business connected with the discharge of the several duties entrusted or that may be entrusted to him from time to time, directly with the Commissioner, to whom he will be solely responsible.

2. All books, accounts, tickets, and forms, kept by Station Masters, are placed under the direct supervision of the Traffic Auditor, who will be held responsible for the proper keeping of all such station books and accounts, and for the due preparation of all returns, &c., required for the Audit Office.

3. Station Masters are therefore hereby enjoined to pay the strictest attention to the Traffic Auditor's instructions and suggestions for the more efficient keeping of their books, accounts, and returns. All queries on accounts must be replied to by Station Masters without reserve or evasion, and authorities supplied, whenever required, without demur or delay.

4. The Traffic Audit Office shall be furnished with the following returns, &c., *daily* :—

From every Station Master—

- (1.) A return showing the total amounts of each day's receipts, under the several headings of coaching traffic, and the total amount of money remitted to the Accountant for Railways.
- (2.) A similar return for goods traffic.
- (3.) A "Ticket Collector's Return, &c.," accompanied by each day's collection of passengers' tickets or passes.

From the Accountant for Railways—

- (1.) A statement of all moneys received by him from Station Masters.
- (2.) A statement showing particulars of all moneys received by him from other sources, distinguishing those on account of Revenue from those on account of Loan Services.

From the Bank of New South Wales, statements of the amounts deposited by the Accountant for Railways on account of Revenue and Loan Services to the credit of the Colonial Treasurer.

The Chief Clerk of the Railway Department will also furnish the Traffic Auditor, as circumstances require, with copies of all minutes and authorities of the Commissioner for Railways relative to the sale by auction, or otherwise, of railway materials, stores, &c., together with full particulars of the conditions of all such sales, and also, at the termination of each quarter, with a list of all fines that have been inflicted on officers or servants.

5. At the end of each calendar month, the Traffic Auditor will see that all station books and accounts are closed and balanced, and that abstracts of the month's traffic (under the several divisions of coaching and of goods traffic), *inwards* and *outwards*, are forwarded by the several Station Masters to the Audit Office, together with accounts current for coaching and for goods traffic.

6. The various returns and accounts, &c., before mentioned, must, without delay, be carefully checked, compared, and adjusted in the Traffic Audit Office, after which the Traffic Ledgers and other records of the Audit Office must be written up therefrom.

7. The monthly earnings for traffic will be divided among the several lines of railways, in the Traffic Audit Office; the divisions to be calculated and apportioned according to a mileage rate. The monthly statement of such divisions of earnings to be forwarded to the Accountant for Railways.

8. A general monthly balance statement for the traffic on the whole of the Government Railways, and also for the revenue derived from other sources on account of railways, is to be furnished by the Traffic Auditor to the Commissioner for Railways, as soon after the close of each month as may be possible, accompanied with such remarks as he may think necessary.

9. The Traffic Auditor will be required to certify the monthly attested statement of receipts prepared by the Accountant, for the signature of the Commissioner for Railways and transmission to the Auditor General.

10. The Traffic Auditor must see that all stations are visited either by himself or his officers at least once a month, that the books and accounts of each are duly inspected, and that the balances of cash in hand are examined and compared with such books and accounts at such times.

11. Requisitions for tickets must be forwarded in the first instance to the Traffic Auditor, who will, after comparison with the books of his office, and on being satisfied that such supplies are actually required, transmit the same to the Chief Clerk of the Railway Department, or to such other officer as may be duly charged for the time being with the custody and issue of railway tickets. Immediately after such requisitions have been fulfilled, the Chief Clerk or other proper officer will furnish the Traffic Auditor with a detailed statement of the tickets so furnished.

12. The Traffic Auditor must report at once to the Commissioner all irregularities, whether of remissness, inefficiency, or otherwise, in which the proper collection of and accounting for the revenue may not appear to him to be properly provided for.

Railway Store Accounts.

1. The books and accounts of the Railway Storekeepers are also placed under the supervision of the Traffic Auditor, who will make the necessary arrangements for taking a complete inventory of all goods (not including rolling stock) on hand at the Redfern and Newcastle Stores at the 30th June and 31st December respectively in each year.

2. The Storekeepers at Redfern and Newcastle will furnish to the Traffic Auditor, by the 20th of each month, abstracts of the previous month's imports and colonial purchases, and of all goods otherwise received into store. As early in the months of January, April, July, and October, as practicable, they will also furnish to that officer balance sheets for the previous quarter, showing therein, under the several heads of account in their respective "Stock Ledgers," the value of stores on hand at the beginning of the quarter, the value of goods received into and the value of goods issued out of store during the quarter, and the value of the goods in hand at the end of the quarter. The Traffic Auditor will furnish the Storekeepers with the form of balance sheets to be used in supplying such information.

3. Monthly abstracts of the quantities and values of stores issued for consumption must be furnished by the Storekeepers, on or before the 15th of every month, to the Engineer-in-Chief, the Traffic Manager, and all other officers to whom stores have been supplied. These officers will at once check, or cause to be checked, such monthly abstracts, and, after the same have been duly verified, forward them, before the close of the month, to the Traffic Auditor. On receipt of such statements, the Traffic Auditor will examine the same, and apply such tests to the values of the issues therein shown as will, in his opinion, prevent any misappropriation of stores, and secure the correct keeping of the Store Accounts at Redfern and Newcastle.

4. Monthly abstracts of all imports and payments for colonial purchases debited to the "Store Advance Account" in the books of the head office, will be furnished by the Accountant for Railways to the Traffic Auditor, on or before the 20th of the month following that for which such abstracts are furnished. The Accountant will also furnish with the abstracts for January, April, July, and October, quarterly balance sheets of such "Store Advance Account," which must in every case agree with the books of his office.

5. Heads of Departments requiring stores will, whenever practicable, order one month's supply at a time, so as to reduce the clerical duties of the Storekeepers as much as possible.

6. The abstracts and balance sheets above referred to are to be examined and adjusted in the Railway Audit Office; and a report on the state of the Store Accounts generally must be furnished by the Traffic Auditor to the Commissioner for Railways as soon after the termination of every quarter as practicable.

A.

The Commissioner for Railways to The Officer in charge, Railway Auditing Branch.

68-764.

Department of Public Works,
Railway Branch,
Sydney, 9 December, 1868.

Sir,

With reference to my letter to you of this date (No. 68-762), conveying to you instructions on the subject of the formation of the Traffic Audit Branch, I have now the honor to request that you will, on receipt hereof, make the necessary arrangements for taking a complete inventory of the stores, stock, &c. (not including rolling stock), belonging to the Government, and on hand for the purpose of supply to this department, and that you will be held responsible for auditing the accounts and books of the Storekeeper.

I have, &c.,
JOHN SUTHERLAND,
Commissioner for Railways.

68-765.

Railway Department,
Commissioner's Office,
Sydney, 9 December, 1868.

Memo. Instructions—Traffic Audit Branch, Southern, Western, Windsor and Richmond, and Great Northern Railways.

HAVING had under my consideration the mode in which the traffic returns and audit of railway accounts connected therewith has hitherto been carried on, I have come to the decision that it will be the more conducive to the public interest, and place the audit and examination of the traffic returns, &c., on a more satisfactory footing, by the adoption of the following arrangement.

The Traffic Audit Branch will for the future be a separate and distinct branch of this department, communicating on all official business connected with the execution or discharge of the duties entrusted to it directly with the Commissioner, and to whom it will be solely responsible.

The duties of the Audit Branch will consist at present, and until future and more definite instructions are issued, of the following:—

- 1st.—The reception of the daily traffic and other returns from all stations, accompanied by a certified statement from the Accountant of the Railway Department, of all moneys received by him and lodged in the Bank to the credit of the Colonial Treasurer.
- 2nd.—The reception from all stations of the monthly abstracts and accounts of the traffic for examination and adjustment.
- 3rd.—The daily returns from stations, and the regular monthly abstracts and accounts of traffic for examination and adjustment, are immediately thereafter to be forwarded to the Accountant of the department, with a statement showing the division of the earnings on the several lines.
- 4th.—A monthly general summary of the traffic and cash receipts made up at the end of the month, are to be forwarded to the Commissioner as early thereafter as possible.
- 5th.—The officer in charge of the Audit Branch will periodically inspect the books at all stations at least once a month, auditing and comparing the same with the returns sent in.
- 6th.—The certification by the officer in charge of the Audit Branch, of the monthly attested statement required by the Auditor General, as prepared by the Accountant of the department for the Commissioner.
- 7th.—The officer in charge of the Audit Branch will report direct to the Commissioner on all matters connected with his office, and all irregularities of any description, whether of remissness, inefficiency, or otherwise, coming under his notice in the discharge of his duties; and also, in all instances in which the secure collection of the revenue may not appear properly provided for.

JOHN SUTHERLAND,
Commissioner for Railways.

B.

The Accountant for Railways to The Commissioner for Railways.

Railway Department,
Sydney, 13 August, 1870.

Sir,

In compliance with your minute of the 12th ultimo, 70/2514, respecting the Report of the Commission appointed to inquire into the railway accounts, in which you request to be informed as to the steps I propose to adopt in carrying out, or otherwise, the suggestions contained in that document, I do myself the honor to submit the following report.

With your permission I propose to give, in the first place, a brief summary of what appears to me, after carefully reading over the Report in question, the main features in it, and then to take up the various points raised therein, adding thereto a few observations and suggestions which I think pertinent to the subject.

The

The following *resumé* will, I think, embrace the principal subjects of the Report :—

- 1st. The curtailment of detail in the Account Books of this office.
- 2nd. The keeping of Revenue and Expenditure Cash Books by the Cashier.
- 3rd. The keeping of an Appropriation Ledger similar to that kept at Treasury, for the purpose of showing at a glance the balance to the credit of Votes.
- 4th. The keeping of a subsidiary Ledger or Register for showing the details of expenditure.
- 5th. The monthly comparison of our balances with the Treasury.
- 6th. The furnishing to the Commissioner monthly reports on the state of the accounts generally.

For convenience I will take up these points *seriatim*; and I think I shall be able to show that, while in some minor matters alterations and additions may be desirable, yet, on the whole, the suggestions of the Board are just those which the circumstances of the case demand, and which, in accordance with your verbal directions, and in anticipation of your formal approval, I have already to a great extent put into practice. And 1st, as to curtailment of detail in Cash Book and Journal, I agree that, as far as possible, this should be done; in fact, the Book-keeper has already been directed to omit entering the vouchers in detail in the Cash Book, except so far as may be necessary for reference. I shall, perhaps, in the course of my remarks have to recur to this point again. 2nd, the keeping of Revenue and Expenditure Cash Books by the Cashier.

The necessity for this was so apparent that, under the direction of Mr. Thomson, during the few days he was Acting Accountant of the Department, a Cash Book was opened by the Cashier. I have now, however, made some modification in this arrangement, which I think will work well.

For one Cash Book I have substituted two—Revenue and Expenditure—in accordance with the recommendation of the Board. In the Revenue Cash Book are shown the amounts received by the Cashier from the several Station Masters, &c., and the disposal of such receipts. The Expenditure Cash Book shows the amounts received by the Cashier for the payment of salaries, wages, &c., together with their disposal. This book is also so arranged as to show at a glance the vouchers which are at any time outstanding, or, in other words, the vouchers which have not been sent to the Treasury receipted in adjustment of the moneys placed to the credit of the Commissioner in the Bank of New South Wales for the payment of them.

These books are carefully checked by myself, by the aid of the Commissioner's pass-book, the Station Masters' remittance notes, and other documents.

With respect to the revenue proper entered in Cash Book No. 1, the Traffic Auditor has a complete and final check on this; with respect to the expenditure (entered in Cash Book No. 2) the Treasury have a check on it, as they can at any time compare the amount of outstanding vouchers as shown in their books with that shown in ours, and call for the production of the vouchers, or an explanation why they are not forthcoming.

It must not be supposed, however, from this that no Cash Book has been kept in this office previous to the introduction of the above system. A Cash Book has always been kept by the Book-keeper showing the whole cash transactions of the Department both *revenue* and *expenditure*, including vouchers sent to Treasury for payment there. These latter represent by far the largest amount of money paid, the Treasury in this case being as it were our *Bankers*, and the vouchers our cheques; and such a Cash Book I submit must still be kept, it being very necessary that we should have one Cash Book showing the total transactions of the office. From this book the Journal must be compiled, for the purpose of posting into the general Ledger the whole accounts of the department, whether revenue receipts, or expenditure of any kind, arranged for monthly comparison and statistics. The Cashier could not keep such a book, as the duties he has to perform would not permit of his devoting the time which would be required to keep it properly, neither do I think it to be at all necessary for him to keep it, as the money representing the larger portion of the transactions it records does not pass through his hands, and the books he keeps are quite sufficient to facilitate the check upon him.

3rdly. The keeping an Appropriation Ledger.

This I have already opened and kept myself on the model of the Treasury Appropriation Ledgers, as recommended by the Board. The want of such a Ledger has long been felt, so that, as in a Bank Ledger, we might be able to ascertain at once the state of any account, which we cannot so easily do with our general Ledger, as it is only posted monthly. This Appropriation Ledger will of course merely show the expenditure under the votes and appropriations of Parliament; the revenue and miscellaneous accounts still appearing only in the general Ledger.

4thly. The keeping of a subsidiary Ledger or Register, for the purpose of showing the details of expenditure.

The keeping of such detail as is here indicated is an urgent necessity, and to carry this out I propose to adhere still to the general Ledger as we at present keep it. After an experience of over ten years, I can safely say that it has answered admirably all the purposes of a statistical character.

The various subdivisions of accounts have been arranged principally by the Engineer-in-Chief, with a design to afford that information which is absolutely necessary to ensure the profitable working of the lines, and for parliamentary returns; and I do not hesitate to assert—my long experience in the office justifying me, I think, in doing so—that so far from having *too much* detail in our books, whenever we are at fault it is from not having *enough*; and I feel sure that had the gentlemen forming the Board of Inquiry more time at their command to examine into the matter, their opinion on the subject of detail would have undergone considerable modification.

While it is very necessary to keep an Appropriation Ledger showing at any moment the balances on the votes, it is even, if possible, *more necessary* to keep an account showing a *properly classified detail of expenditure*.

The Railways may be considered as a large commercial undertaking, and it is surely as important to show *how* we spend as *what we have* to spend. The new Ledger shows only the latter, while the present Ledger shows both how we spend and what we have to spend, though the balances are not so readily obtained.

The Treasurer may be considered in the light of our Banker, and the Appropriation Ledger will show how we stand with respect to him; and our general Ledger will show, as a company's or merchant's would, that information in detail which is necessary to be known in order to carry on safely any commercial undertaking.

On reference to the Report of the Board, it will be seen that no mention is made of any Ledger which will embrace our *revenue*. This we must have; and our general *Ledger* is so arranged as to show in detail every source of revenue, and is another reason why we should continue it. In fact, our present general Cash Book, Journal, and Ledger, with the modifications suggested by the Board as to some of the detail, are absolutely necessary; without them we should indeed be puzzled to answer the questions which are daily asked of us. I therefore trust that the Commissioner will permit us to continue them, as it is to them to which every question as to the expenditure must ultimately be referred.

5th. Monthly comparison of our balances with the Treasury.

This is most desirable, and I am preparing the Appropriation Ledger so as to accomplish this as soon as possible. The want of this comparison has been the cause of an endless amount of complication and confusion, and I shall gladly, if permitted, carry it out.

6th. Furnishing to the Commissioner monthly reports, &c.

This of course can be done at any time the Commissioner may direct. I may, however, remark that a statement of all the railway receipts from every source, checked by the Traffic Auditor, is submitted monthly to the Commissioner in the attested statement. Reports are also furnished monthly to the Engineer-in-Chief as to the expenditure.

In summing up the whole of my remarks on these heads, it will be seen that I recommend that the whole of the suggestions of the Board be carried out, the only modification being that the general Cash Book, Journal, and Ledger, be kept in lieu of the subsidiary or Statistical Register; and this arrangement will not, I am sure, in the end, increase the work of the office, but rather facilitate it.

In conclusion, I would point out to the Commissioner the great inconvenience which arises from the vouchers chargeable to the *revenue votes* of one year not being paid for until some years after—compensation cases, for example; thus practically keeping the revenue votes open for years, and rendering the return in the Statistical Register—which shows the comparison of earnings with the working expenses and the net revenue from Railways—so far as they are affected thereby, utterly fallacious.

The 17th clause of the Audit Act 33 Vic. No. 18, does not, so far as I can see, provide for this difficulty, because such expenditure would probably come within the term of the exception contained in the latter part of that clause.

Perhaps the Commissioner will pardon me if, with all respect, I suggest that the former part of the clause, so far as annual votes are concerned, be made absolute. Nearly the whole expenditure of any year ought, and doubtless would be, charged to its proper votes by the expiration of the time mentioned in that clause; and any voucher unavoidably rendered after that time might, I think, fairly be made chargeable to the votes for the current year, thus permitting all revenue votes to be absolutely closed three months after the expiration of any year; and in the long-run this would be as fair to one year as another.

I have, &c.,

H. A. HALL,
Accountant for Railways.

C.

The Commissioner for Railways to The Manager of the Bank of New South Wales.

70/1873. 70/527.

Department of Public Works,
Railway Branch,
Sydney, 31 May, 1870.

Sir,

I have the honor to enclose herein an extract from the Report of the Board appointed to investigate the system of Railway Accounts, and to request that you will have the goodness to inform me whether you have any objection to make arrangements for the carrying out of the suggestion of the Board, in regard to the counting, &c., of the traffic receipts.

I have, &c.,

JOHN SUTHERLAND,
Commissioner for Railways.

The Assistant Secretary, Bank of New South Wales, to The Commissioner for Railways.

70/2066.

Bank of New South Wales,
Sydney, 7 June, 1870.

Sir,

I do myself the honor to acknowledge your letter of the 31st ultimo, and to inform you in reply that the suggestion of the Board appointed to investigate the system of Railway Accounts has been submitted to our own Directors, and they have expressed their perfect willingness to aid in carrying it into effect.

One of our officers will accordingly be prepared, at such time as you may think fit to commence the system, to assist in counting the traffic receipts as they come to us from your department.

I have, &c.,

CHAS. M. PALMER,
Assistant Secretary.

Acknowledge receipt, and thank the Directors for their compliance with this arrangement; say that it will come into operation on Monday next, and that the Cashier will place himself in communication with the Secretary of the Bank for this purpose.—J.S., 8/6/70.

Before acting upon above decision, the report of the Accountant upon this question is requested.—B.C., 14/6/70, Ch. A. G.

The object of the Board in recommending this course was doubtless to more effectually secure the checking the daily revenue receipts, by obtaining the services of an independent person, and one totally unconnected with the department as a Bank clerk would be, to count the cash with the Cashier. The Accountant, while fully recognizing the advantages of such a check, still thinks that, in the present case, they would be more than counterbalanced by the inconvenience and great loss of time which would result should the suggestions of the Board in this particular be carried into effect.

In the first place, the Cashier would be absent from the office the whole of every morning; he would thus be prevented from receiving the miscellaneous cash payments which at various times are paid here, and which he alone is empowered to receive; he would also be unable to pay the amounts for unclaimed wages which may be in his possession. It might also occasion delay in paying wages, on account of the Treasury abstracts not being prepared in proper time. His assistant could not be depended upon to perform these duties for him, as, independent of the constant supervision it is desirable the Cashier should have over him, he also would be absent some days in each month paying wages on the lines; the office would therefore be without either the Cashier or his assistant, thereby virtually closing this branch of the Accountant's department for a considerable portion of each day.

The Accountant would further observe, that at the time of the inquiry the Cashier performed his work alone; since then an assistant has been granted to him, who helps to check the money, thus securing the testimony of two witnesses in case of dispute, and removing in all probability one of the grounds which induced the Board to make this proposal.

In the absence of the assistant, another officer might be temporarily detached to secure this check.

I have requested the Cashier to report on this subject, which I append herewith.

The Commissioner.

H. A. HALL, Accountant.
15/6/70.

Having read the Accountant's report, it is unnecessary for me to say anything in reference to the objections raised by him, but would simply draw the attention of the Commissioner to the insecure position in which I should be placed, were the suggestions of the Board carried into effect.

The clerk appointed by the Bank authorities to examine the cash with me most probably would be a stranger, therefore I should have no opportunity of judging of his honesty, and it would not be a very difficult matter for him to abstract some of the money after it had been checked, and before it was finally checked by the Bank Teller; and supposing the clerk was equally responsible with myself, and abstracted (say) £5, I should have to pay £2 10s. while he would gain £2 10s.

The checking of the money at the Bank would not, as supposed, take less time than the present system, but on the contrary more time would be required, as the contents of every bag after being checked by myself would have to be handed over to the clerk for him to check; and after all the bags had been gone through in this manner, the total amount of money would have to be summarized for the Bank Teller, as at present.

The accommodation also provided by the Bank is not sufficiently secure from the intrusion of the public.

The Accountant.

JOHN T. BRYANT, Cashier.
15/6/70.

It would appear from the Report of the Board, that their chief object in recommending this change was to secure reliable testimony in the event of a dispute arising between the Cashier and a Station Master as to the contents of a bag. This testimony is now secured, as the bags are opened by the Cashier in the presence of his assistant.

In view therefore of the great inconvenience that would be caused by the bags being opened and the money counted at the Bank, I approve of the money being counted at this office as at present, the Cashier to be assisted by Mr. Neild, and in Mr. Neild's absence by one of the officers of the Account Branch.

Inform Bank that proposal is abandoned, and thank Directors for their action in the matter.

J.S., 15/6/70.

Secretary to Bank.—22/6/70.

Accountant to note. Cashier to note.—22/6/70, CHAS. A. G.

Noted.—J.W.B., 23/6/70.

Seen.—H.A.H., 23/6/70.

Chief Clerk.—27/6/70.

D.

The Auditor General to The Principal Under Secretary.

Audit Office,
Sydney, 6 July, 1870.

Sir,

As frequent questions arise respecting the sufficiency of the authorities furnished for the appointment or employment of persons in the Public Service, more especially in the case of temporary services, or of services paid for out of votes for contingencies which do not at first sight appear to involve permanent engagements on the staff of a department, and as it often happens that a contingent employment is transferred to a staff appointment, and when not so transferred the services are continued nominally for temporary purposes for some years, it may be, and at a considerable rate of remuneration,—and whereas the authority of the Governor and the Executive Council is sometimes obtained for such temporary appointments, and at other times the authority of a Minister of the Crown is claimed to be sufficient,—as promotions and increases of pay to staff officers are moreover sometimes sanctioned by a Minister alone, and sometimes by the authority of the Governor and Executive Council,—I do myself the honor to make the following recommendations for the consideration of the Government, with the view to establish uniformity of practice in the appointment and promotion of officers in the Public Service, and of facilitating the Audit of Accounts under the Audit Act of 1870:—

1. That the Estimates of Expenditure should show distinctly the permanent staff of each department, excluding minor offices, the appointment to which is vested in Heads of Departments.
2. That all first appointments, without exception, to the permanent staff so shown on the Estimates, be supported by the authority of His Excellency the Governor and the Executive Council.
3. That all promotions and increases of pay within the permanent staff of any department may be allowed on the authority of the Minister under whose control such departments may be placed, on the scale of salary sanctioned by Parliament.
4. That all existing minor officers, although virtually permanent, be transferred to the contingent section of Departmental Estimates, or be shown as a second part of the Salary Estimate, not requiring the direct appointment of the Governor and Executive Council.
5. That the Auditor General be furnished with a schedule of all existing minor offices, the appointment to which has been vested in Heads of Departments, or their officers, or persons under clause 37 of the Constitution Act.
6. That all employment other than that in minor offices, paid for by a regular allowance out of contingencies, on part second of the Salary Estimates, be held sufficiently authorized if authorized by a Minister of the Crown; but such employment and such authority to be held as temporary only, and not to extend beyond the 31st December in any year, unless otherwise expressly directed by the Governor and the Executive Council.

As it is presumed that the Estimates of Expenditure for 1871 will shortly be prepared, I take leave to urge that the above suggestions be taken into the early consideration of the Government, so that, if approved, the form of Estimate in regard to salaries may be adopted thereto.

I have, &c.,
C. ROLLESTON.

E.

The Engineer-in-Chief to The Commissioner for Railways.

Sydney, 4 November, 1870.

Report upon proposed amalgamation of duties of Commissioner and Engineer-in-Chief.

I HAVE to acknowledge the receipt of the Commissioner's minute, dated the 1st instant, asking for an expression of my views on the recommendation of the Board recently appointed to inquire into the manner of keeping the Railway Accounts that the duties of the Commissioner for Railways should be undertaken by me in addition to those of Engineer-in-Chief, and inquiring on what conditions I would accept such appointment should the Government determine to carry out the proposal.

The office of Commissioner for Railways is one of great responsibility, anxiety, and labour, and is not a position I have any desire to occupy.

If, however, the Government decide that my services can be useful to the Colony in that capacity, I would accept the office on the following conditions:—

1. That the rates for passengers and goods be increased, and the classification of goods raised.
2. That I have complete control of all subordinates.
3. That a revised Time-table be adopted.
4. That a commission of 1 per cent. be paid to me for undertaking the additional duties, on all net receipts above £100,000 per annum. (The net receipts for 1869 having been £89,000.)
5. That the office of Commissioner be distinct from that of Engineer-in-Chief for Railways, and that I shall be at liberty to resign the Commissionership without interfering with my present office.
6. That an agreement be entered into between myself and the Government that the arrangement proposed shall be in force for a term of five years.

JOHN WHITTON.

MINUTE OF THE COMMISSIONER FOR RAILWAYS with reference to the management of the Railway Store Branch.

In my Minute to the Cabinet on the Report of the Board appointed to inquire into the system of Railway Accounts, I propose to submit in a separate paper my views as to the future management of the Store Branch.

The recent "stock-taking" has proved very conclusively that a most lax and careless system has prevailed in the administration of the business of the store.

The discrepancies between the actual quantities of stock on hand and the quantities which the books of the office call for are very numerous; and although the Storekeeper has been able to account satisfactorily for some of these discrepancies, there are others which he cannot account for, except by the assertion that the goods must have been issued without requisition and without the issues being entered in the books.

There is reason to believe that this is actually the state of the case, and that the deficiencies mean nothing worse than gross carelessness on the part of the Storekeeper. I may mention, in support of this view of the case, that the stock returns showed a deficiency, *inter alia*, of 250 springs, the value of which is £245. It transpired that these springs had been sold to P. N. Russell & Co., for the construction of railway waggons. That firm had not, however, been charged with the cost, no entry in the books of the transaction had been made, and the value of these springs would doubtless have been lost but for the half-yearly stock-taking carried out in accordance with my instructions. This service was the means of bringing the discrepancy to light, and of enabling the Storekeeper to discover the nature of the error which had been made.

In accordance with instructions issued by me in the month of December, 1868, an examination into and comparison with the Accountant's and the Storekeeper's books was made with a view to their adjustment.

It was ascertained and reported by the Traffic Auditor, in September, 1869, that the books of the Railway Accountant were not in correspondence with the value of the goods in stock at the store in Sydney and at Newcastle. In accordance with the Accountant's statement, there should have been goods at Redfern Store to the value of £37,287 12s. 11d., and at Newcastle Store to the value of £19,447 6s. 1d.—in all, £56,734 19s.

The value of the stock actually in hand at Redfern, according to the Storekeeper's books, was £53,250 11s. 11d., being a surplus of £15,962 19s., and at Newcastle £9,046 17s., being a deficiency of £10,400 9s. 1d., leaving on the whole a discrepancy surplus between the Accountant's and Storekeeper's books of £5,562 9s. 11d.

In what way this surplus at the one place and this deficit at the other has come about, no person, it is believed, can with any certitude explain; but it is very probable that the Storekeeper in Sydney has advised the Accountant of the shipment of goods to the north, which however were afterwards not forwarded, or forwarded in smaller quantities.

In the Accountant's books the northern store would be debited with these goods, and the store in Sydney credited with them—hence the discrepancy.

It is, however, proper here to point out that these discrepancies are not the result of errors and omissions in any particular goods nor of any particular time; the growth has been gradual, and the result represents the accumulations of years.

In order that these discrepancies, now duly ascertained, may be adjusted, I have appointed a Board of officers to inquire into and report upon the best means of effecting this object; they have also been instructed to effect an adjustment between the Treasury books and the Railway Accountant's books, which in some respects are at variance, and to recommend for adoption a plan under which their relative balances may be kept in accord.

It is probable that the authority of the Governor and the Executive Council will have to be obtained for writing off the deficiency and providing for the surplus; and when this has been done, and the goods in stock properly valued, fresh balances will be struck, and a correspondence obtained between the Treasury books and the Railway Accountant's books, and the Accountant's books and those of the Storekeeper.

The instructions issued to the Traffic Auditor before referred to have been the means of securing a correspondence between the store books and those of the Accountant since September, 1869, when the discrepancies were ascertained; and these instructions, as afterwards amended (see copy of amended instructions herewith) will, it is considered, be the means of preventing future discrepancies arising, and will, under adequate management, provide for the proper administration of the business of the Store Branch.

The conduct of Mr. Fielding, the Railway Storekeeper, Redfern, has been very reprehensible, and I have grave doubts as to whether it is not my duty to recommend his removal from the Service.

Having regard, however, to the length of time Mr. Fielding has been in the Public Service, and believing also that the unsatisfactory manner in which he has performed the duties entrusted to him has arisen more from want of capacity than want of zeal, although he has been largely deficient in the latter, and has displayed moreover gross carelessness, I am disposed to take the more lenient course of disrating him to the position of a 2nd Class Station Master. His salary as Storekeeper is £300 a year; in the position proposed for him it will be £200 a year with a house, or £50 a year in lieu thereof.

The office of Storekeeper I propose to confer on Mr. William V. Read: from inquiries made I believe he possesses the necessary qualifications for the office.

Mr. Read is now Station Master at Goulburn, with a salary of £250 a year and a house; he has been in the Railway Department since September, 1856, and previously was employed by the Sydney and Goulburn Railway Company.

JOHN SUTHERLAND,
Commissioner for Railways.

Department of Public Works,
Railway Branch,
Sydney, 8 April, 1870.

AMENDED INSTRUCTIONS to Traffic Auditor, issued for his guidance, and for the information and guidance of the officers of the branches affected thereby.

JOHN SUTHERLAND,
Commissioner for Railways.

THE Traffic Audit Branch will for the future be a separate and distinct branch of the Railway Department, and the Traffic Auditor will communicate, on all official business connected with the discharge of the several duties entrusted or that may be entrusted to him from time to time, directly with the Commissioner, to whom he will be solely responsible.

2. All books, accounts, tickets, and forms, kept by Station Masters, are placed under the direct supervision of the Traffic Auditor, who will be held responsible for the proper keeping of all such station books and accounts, and for the due preparation of all returns, &c., required for the Audit Office.

3. Station Masters are therefore hereby enjoined to pay the strictest attention to the Traffic Auditor's instructions and suggestions for the more efficient keeping of their books, accounts, and returns. All queries on accounts must be replied to by Station Masters without reserve or evasion, and authorities supplied whenever required, without demur or delay.

4. The Traffic Audit Office shall be furnished with the following returns, &c., *daily* :—

From every Station Master—

- (1.) A return showing the total amount of each day's receipts, under the several headings of coaching traffic, and the total amount of money remitted to the Accountant for Railways.
- (2.) A similar return for Goods Traffic.
- (3.) A "Ticket Collector's Return, &c.," accompanied by each day's collection of passengers' tickets or passes.

From the Accountant for Railways—

- (1.) A statement of all moneys received by him from Station Masters.
- (2.) A statement showing particulars of all moneys received by him from other sources, distinguishing those on account of Revenue from those on account of Loan Services.

From the Bank of New South Wales, statements of the amounts deposited by the Accountant for Railways, on account of Revenue and Loan Services, to the credit of the Colonial Treasurer.

The Chief Clerk of the Railway Department will also furnish the Traffic Auditor, as circumstances require, with copies of all minutes and authorities of the Commissioner for Railways, relative to the sale by auction, or otherwise, of railway materials, stores, &c., together with full particulars of the conditions of all such sales; and also, at the termination of each quarter, with a list of all fines that have been inflicted on officers or servants.

5. At the end of each calendar month, the Traffic Auditor will see that all station books and accounts are closed and balanced, and that abstracts of the month's traffic (under the several divisions of coaching and of goods traffic), *inwards* and *outwards*, are forwarded by the several Station Masters to the Audit Office, together with accounts current for coaching and for goods traffic.

6. The various returns and accounts, &c., before mentioned, must, without delay, be carefully checked, compared, and adjusted in the Traffic Audit Office, after which the Traffic Ledgers and other records of the Audit Office must be written up therefrom.

7. The monthly earnings for traffic will be divided among the several lines of Railways, in the Traffic Audit Office; the divisions to be calculated and apportioned according to a mileage rate. The monthly statement of such divisions of earnings to be forwarded to the Accountant for Railways.

8. A general monthly balance statement for the traffic on the whole of the Government Railways, and also for the revenue derived from other sources on account of Railways, is to be furnished by the Traffic Auditor to the Commissioner for Railways, as soon after the close of each month as may be possible, accompanied with such remarks as he may think necessary.

9. The Traffic Auditor will be required to certify the monthly attested statement of receipts prepared by the Accountant, for the signature of the Commissioner for Railways and transmission to the Auditor General.

10. The Traffic Auditor must see that all stations are visited either by himself or his officers at least once a month, that the books and accounts of each are duly inspected, and that the balances of cash in hand are examined and compared with such books and accounts at such times.

11. Requisitions for tickets must be forwarded in the first instance to the Traffic Auditor, who will, after comparison with the books of his office, and on being satisfied that such supplies are actually required, transmit the same to the Chief Clerk of the Railway Department, or to such other officer as may be duly charged for the time being with the custody and issue of railway tickets. Immediately after such requisitions have been fulfilled, the Chief Clerk or other proper officer will furnish the Traffic Auditor with a detailed statement of the tickets so furnished.

12. The Traffic Auditor must report at once to the Commissioner all irregularities, whether of remissness, inefficiency, or otherwise, in which the proper collection of and accounting for the revenue may not appear to him to be properly provided for.

Railway Store Accounts.

1. The books and accounts of the Railway Storekeepers are also placed under the supervision of the Traffic Auditor, who will make the necessary arrangements for taking a complete inventory of all goods (not including rolling stock) on hand at the Redfern and Newcastle Stores, at the 30th June and 31st December respectively in each year.

2. The Storekeepers at Redfern and Newcastle will furnish to the Traffic Auditor, by the 20th of each month, abstracts of the previous month's imports and colonial purchases, and of all goods otherwise received into store. As early in the months of January, April, July, and October as practicable, they will also furnish to that officer balance sheets for the previous quarter, showing therein, under the several heads of account in their respective "Stock Ledgers," the value of stores on hand at the beginning of the quarter, the value of goods received into and the value of goods issued out of store during the quarter, and the value of the goods in hand at the end of the quarter. The Traffic Auditor will furnish the Storekeepers with the form of balance sheets to be used in supplying such information.

3. Monthly abstracts of the quantities and values of stores issued for consumption must be furnished by the Storekeepers, on or before the 15th of every month, to the Engineer-in-Chief, the Traffic Manager, and all other officers to whom stores have been supplied. These officers will at once check, or cause to be checked, such monthly abstracts, and, after the same have been duly verified, forward them, before the close of the month, to the Traffic Auditor. On receipt of such statements, the Traffic Auditor will examine the same, and apply such tests to the values of the issues therein shown as will, in his opinion, prevent any misappropriation of stores, and secure the correct keeping of the Store Accounts at Redfern and Newcastle.

4. Monthly abstracts of all imports and payments for colonial purchases debited to the "Store Advance Account," in the books of the head office, will be furnished by the Accountant for Railways to the Traffic Auditor, on or before the 20th of the month following that for which such abstracts are furnished. The Accountant will also furnish, with the abstracts for January, April, July, and October, quarterly balance sheets of such "Store Advance Account," which must in every case agree with the books of his office.

5. Heads of Departments requiring stores will, whenever practicable, order one month's supply at a time, so as to reduce the clerical duties of the Storekeepers as much as possible.

6. The abstracts and balance sheets above referred to are to be examined and adjusted in the Railway Audit Office; and a report on the state of the Store Accounts generally must be furnished by the Traffic Auditor to the Commissioner for Railways, as soon after the termination of every quarter as practicable.

1870-71.

NEW SOUTH WALES.

RAILWAY RECEIPTS.

(EXEMPTION FROM DETAILED AUDIT.)

Presented to Parliament, pursuant to Act 33 Vict. No. 8, sec. 35.

In accordance with the requirement of the 35th clause of the Audit Act of 1870, the Secretary for Public Works hereby reports, for the information of the Legislative Assembly, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to exempt the accounts of receipts of the Railway Department from detailed audit by the Auditor General.

Department of Public Works,
Sydney, 23 May, 1871.

1870.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(CORRESPONDENCE RESPECTING THE CHIEF ASSISTANT ENGINEER FOR RAILWAYS, &c.)

Ordered by the Legislative Assembly to be Printed, 15 November, 1870.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 4th October, 1870,—

“ That there be laid upon the Table of this House,—

“ (1.) Copies of all Letters, Memoranda, and Reports forwarded to the
“ Engineer-in-Chief for Railways, by the Chief Assistant Engineer for
“ Railways, upon the defective and inferior quality of the Rails laid down
“ on the Permanent Way of the Great Southern and Western Railway.

“ (2.) Copies of all Letters, Reports, and Minutes, connected with the
“ appointment of the Chief Assistant Engineer for Railways to the charge
“ of the Permanent Way and Works of the Great Southern and Western
“ Railways; together with Copies of all Letters, Reports, and Minutes, in
“ reference to that officer's removal from such charge.

“ (3.) Copies of all subsequent Correspondence which may have passed
“ between the Minister for Works and any Officer or Officers of the Govern-
“ ment, in reference to the employment of the Chief Assistant Engineer
“ in the Public Service, since he was relieved from attending to the duties
“ connected with the Permanent Way and Works.

“ (4.) Copies of all Letters, Reports, and Minutes, connected with the
“ appointment of Mr. Wakeford to perform the duties from which the
“ Chief Assistant Engineer for Railways has been relieved.”

(*Mr. Byrnes.*)

SCHEDULE.

RAILWAYS.

No. 1.

EXTRACT from Mr. Mason's Report to Engineer-in-Chief on condition of permanent way and works,
dated 3 September, 1869.

* * * * *

From Penrith to Mount Victoria the permanent way is in first-class order; the rails in the eight and ten chain curves are wearing very rapidly, several rails having already been "turned," the metal apparently being of very ordinary quality. I am of opinion that the use of steel rails would be more economical where the gradients are steep and the curves of small radii, and would recommend that when they require renewing that it be done with steel rails.

The other portion of the report, having no reference to the quality of rails, has been omitted.

No. 2.

W. MASON, Esq., to THE ENGINEER-IN-CHIEF.

69/1567. 69/34.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 7 October, 1869.

MINUTE-PAPER.—Defective permanent-way rails.

IN accordance with your request, I have obtained and forward herewith a list of the brands, as far as they are legible, of the rails on the Western and Southern Lines, which I reported to you were defective and of very inferior metal.

I also enclose a tabulated statement of the number of rails which have been turned.

WILLM. MASON.

See Memo., 69/558.—W.H.Q., 4/11/69.

[Enclosure.]

No. 1.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

70/2312. 70/132.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 14 April, 1870.

SIR,

I wish to draw your particular attention to a letter written by Mr. Mason, with reference to my evidence given before the Select Committee on Railway Extension, and read by Mr. Macleay last evening in the Legislative Assembly.

The following is a portion of my evidence referred to:—

"1092. Witness continued:—The evidence which has been given as to bad rails can only have reference to the rails laid between Marulan and Goulburn, for I consider the whole of the other rails are of very fair quality. I don't think that better rails could be used than those between Liverpool and Parramatta, and the rails all the way up to Picton are a very fair sample indeed. There is no doubt that in a long line you must have some rails defective; but there was certainly a greater proportion defective between Marulan and Goulburn than on any other portion of the line. Immediately I heard of it, I had a return made, and reported to the Commissioner, with a view to prevent any more rails being sent out by the parties who had supplied the rails referred to. It seems to me perfectly clear that if we have competition, and always accept the lowest tender, we must get an inferior article.

"1093. *Commander Onslow.*] Do you think that monopoly would be better than competition? I think that it would be better to pay a few pounds a ton more for rails of a really good description than to have an inferior article at a lower price.

"1094. *Mr. Hoskins.*] Mr. Mason has given in evidence that the rails sent out are positively bad? Mr. Mason can have no knowledge of the rails, excepting from the wear of a few between Marulan and Goulburn.

"1095. He speaks of the rails from Campbelltown? If he does, I can only say that he did not understand the question."

It is quite clear from the preceding that in my reply to question 1094 I was referring to the fact that Mr. Mason knew of no generally *bad* rails excepting between Marulan and Goulburn, and this is made quite plain by question 1095 from Mr. Hoskins.

All that my reply to question 1094 required to make it correct (though it was understood by Mr. Hoskins) was to have had inserted the word "*bad*" (which I believe I used, and this impression is strongly borne out by question 1095) inserted instead of "*the*," so as to have read,—Mr. Mason can have no knowledge of "*bad*" rails, &c.

The whole matter is made abundantly clear by my answer to question 1100, where I give the "defective" (showing signs of wear) rails on the whole of the Southern Line from Campbelltown to Goulburn; and as this information was supplied to me through Mr. Mason and by my orders, he must have known perfectly well to what I referred.

Mr. Thomas in his evidence stated that he had frequently reported on the bad quality of the rails on these lines during the time he had charge, and that some of these reports were in writing.

I firmly believe that Mr. Thomas never did anything of the kind, as no reports from him can be found on such a subject, nor do I think that Mr. Thomas believed the rails to be bad until he was told by Mr. Mason, who had obtained the information for me by my orders, as to the condition generally of the rails on the Southern and Western Railways.

This information, obtained especially for me, was given by Mr. Mason, without my knowledge, to Mr. Thomas,—with what object may easily be imagined.

This no doubt accounts for Mr. Mason's corroboration of Mr. Thomas' evidence.

Mr. Thomas makes no secret of the matter, as he states that his evidence can be corroborated by Mr. Mason. This he would hardly have done unless by pre-arrangement.

The returns of the defective rails were *not* furnished by Mr. Mason, but by the sub-inspectors on the various lengths, which returns are now in the office.

Mr. Mason stated to the Committee that steel-faced rails had been imported several years ago; to which I made no reply; but, in reply to Mr. Thomas' statement that we have steel rails now that cannot be used on the main lines, they are so bad (see question 78), I informed the Committee that no steel rails had been imported, and that consequently Mr. Thomas' information was not correct.

Mr. Mason writes in a very injured tone on this question; but as he owns himself he did know what the rails were, it would have been wiser had he said nothing about them. It matters not to me what they are called "in official or printed documents," nor what Mr. Mason believed them to be. If Mr. Mason or Mr. Thomas had said they were made of *gold* it would not have altered the fact, nor would it have altered the fact that their evidence would have misled the Committee had it remained uncontradicted.

Mr. Mason's moral perceptibilities must be at a very low ebb when he considers the difference between truth and untruth a "mere quibble."

The word "quibble" is no doubt intended to be offensive, but from such a source it is simply impertinent.

Mr. Mason is again incorrect as to the weight of the rails referred to by me. 300 tons of *steeled* rails were ordered, and 300 tons 15 cwt. 0 qrs. 10 lbs. were sent out, viz. :—

							Tons	cwt.	qrs.	lbs.
Indent VII.	12	151	1	0	26
Do.	17	149	13	3	12
							300	15	0	10

Mr. Mason's absurdities as to the widths of formation required for different gauges of railway are very amusing.

The

The difference in gauge between 4' 8½" and 3' 6" is 14½"; and if the formation width of the latter be 13', there is no absolute necessity for making the formation width of a 4' 8½" gauge more than 14' 2½". A greater width has been given to the railways in this Colony, to allow for border stones and more perfect drainage, and they are no doubt better for this extra width.

As a matter of fact, there is no necessity for the formation width, either in cuttings or embankments, being greater than just sufficient to allow for the slopes of the ballast beyond the ends of the sleepers, and in cuttings even the width for slopes might be dispensed with.

It does not follow that, because I have adopted 18' for formation width in this Colony for a gauge of 4' 8½", or that 13' having been adopted in Queensland, it is imperatively necessary always to adhere to these widths; on the contrary, if cheaper lines are absolutely necessary, and the question of maintenance set aside, cuttings for the two gauges might be made of the following widths:—

' "	' "
4 8½ gauge, formation width... ..	12 0
3 6 do. do.	10 9½
The widths of formation on embankments might be as under:—	
' "	' "
4 8½ gauge	13 6
3 6 do.	12 3½

It must be quite clear that a certain width only is required outside the rail of either (or any) gauge, sufficient to allow of the engines and other vehicles to pass through the cuttings; and so long as this object is effected, the widening of the cuttings beyond this necessary width is simply a question of maintenance hereafter.

The embankments may also be reduced to the width actually necessary to keep up the slopes of the ballast.

The widths of formation named by Mr. Mason are simply those which have been used, and have nothing to do with the question as to the actual difference of cost between the gauges of 4' 8½" and 3' 6".

The extra width in gauge is quite sufficient to support the extra weight to be carried; and it must be apparent to any one that the weight upon any portion of a railway is conveyed to the formation by the length of sleeper, which in the 4' 8½" gauge is 9 feet; therefore, on embankments all that is required, in addition to this length of 9 feet, is to make the embankment sufficiently wide to support the slopes of the ballast.

Embankments are always formed wider than actually required, to provide for settlement; but when they are properly consolidated, the width I have stated (13' 6") is quite sufficient.

If first cost be all-important, there is no reason why the sleepers for a 4' 8½" gauge should be 9' in length; sleepers 7' long might be used, and the whole formation width made less even than I have named.

Mr. Mason's last paragraph shows that he has got but one idea with reference to the formation width required for different gauges of railway; and even that, unfortunately, is not his own, for he is indebted to his "personal knowledge" of what others have done to enable him to arrive at any conclusion on this subject.

It is hardly necessary for me to assure you that I made no rash statements in my evidence (as stated by Mr. Macleay) "against people in the department"; but very rash statements—to use a mild term—were made by the witness whose recommendations have been adopted by the Committee.

I have, &c.,
JOHN WHITTON.

No. 2.

W. MASON, Esq., to THE ENGINEER-IN-CHIEF.

1386. 21/4/70.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 21 April, 1870.

SIR,

Will you do me the favour to forward the accompanying letter to the Honorable the Minister for Public Works.

I am, &c.,
WILLM. MASON.

MINUTE BY THE ENGINEER-IN-CHIEF.

The document forwarded by Mr. Mason for the Minister being sealed, it might have been forwarded direct by himself. It has however been sent on as requested.—J.W., 21/4/70.

Letter forwarded accordingly.—W.H.Q.

Forwarded for information of Commissioner.—J.W., *pr.* W.H.Q., 21/4/70.

Forward Mr. Mason's letter to Mr. Whitton, for his information and report.—J.S., 25/4/70.

Mr. Whitton's report of 25th April herewith, and letter from Mr. Whitton to the Commissioner, of date 14th April, 1870.—J.R.

MINUTE BY THE SECRETARY FOR PUBLIC WORKS.

After a careful consideration of the whole circumstances, I consider that there was nothing in the evidence of the Engineer-in-Chief for Railways to justify the letter of Mr. Mason to the Chairman of the Committee, written without the knowledge of myself, who was a Member of the Committee, or of Mr. Whitton, his superior officer.

The course pursued by Mr. Mason was contrary to the regulations of the Service, and disrespectful to me as head of the department; and the tone of his letter shows a spirit of insubordination which I regret to notice, as it must lead, unless checked, to disorganization in the department, and be prejudicial to the Public Service.

A

A pressure of other business has somewhat retarded the consideration of this matter; but the papers may now be forwarded to Mr. Mason, for any observations he may wish to make.—J.S., 11/7/70.

Railways.—B.C., 11/7/70., G.H.

In the absence of Mr. Whitton, may be forwarded direct to Mr. Mason.—B.C., 11/7/70, J.R.

Reply to Minister's Minute and Mr. Whitton's letters, dated 14th and 25th April, 1870, herewith.—WILLM. MASON, 20/7/70.

Submitted.—20/7/70, J.R.

No. 3.

W. MASON, Esq., to THE SECRETARY FOR PUBLIC WORKS.

70/2312.

Railway Department,
Sydney, 21 April, 1870.

SIR,

I have the honor to state that, in the beginning of June last Mr. Whitton proposed to me that I should undertake the superintendence of the maintenance of the existing lines of railway, *in addition* to my other duties. To this I demurred; but on his representing to me that you desired this proposal to be carried out, I immediately laid aside all objections, and undertook those extra duties, which I have faithfully performed up to the 14th instant, on which date I received a letter, written by Mr. Whitton's directions, of which the following is a copy:—

Railway Branch,
Sydney, 14 April, 1870.

Sir,

I am directed by the Engineer-in-Chief to inform you, that he has instructed Mr. Lewton to communicate directly with himself, on all matters relating to the maintenance of the existing lines, and that your responsibility with reference to them will cease after this date.

William Mason, Esq.

I am, &c.,
W. H. QUODLING.

To this letter I sent the following reply:—

14 April, 1870.

Sir,

About 9 o'clock this evening a letter was handed to me by Mr. Lewton, who was *especially requested to deliver it to me the same night*.

This letter was written by Mr. Quodling, stating that he had been directed by you to inform me that you had instructed Mr. Lewton to communicate directly with yourself on all matters relating to the maintenance of the existing lines, and that my responsibility with reference to them will cease after this date.

In reply, I beg to say I have communicated this request to Mr. Lewton, and directed him to act in accordance therewith.

You are aware that it was at your particular request I undertook those *extra* duties of the superintendence of the maintenance of the existing lines, and therefore cannot but express great surprise and regret at the extraordinary course you have now taken.

It seems to me the more inexplicable that you should have done so at a moment when you were *confined to the house by illness, and at a time above all others when it required some responsible person to attend to those particular duties*.

I therefore ask—not only as a matter of justice, but as a matter of common courtesy—the reason of this *express* and *extremely indecorous* haste of action.

John Whitton, Esq.,
Engineer-in-Chief for Railways.

I am, &c.,
WILLM. MASON.

To this letter I received no reply; but knowing that Mr. Whitton at the time was confined to the house by illness, I thought it possible that might be the reason of his not replying thereto.

Mr. Whitton came to the office yesterday, and I took the first opportunity to ask from him personally an explanation, and for a reply to my letter.

Mr. Whitton said he had no reply to give, and that he was not compelled to give me any explanation, and that all he intended to do was merely to acknowledge the receipt of my letter.

I therefore made no further reference to that subject, but merely asked for instructions respecting the work to be done in the department. He replied—"I don't know that you will do any more work in the department"; and he positively refused to give me any instructions relating thereto.

Under these circumstances, I have no alternative but to bring the matter under your immediate notice, and to request that you will do me the honor to cause a full inquiry to be made therein, to ascertain the reason of Mr. Whitton's harsh and arbitrary conduct towards me.

I have the honor also to observe that I was engaged by the Home Government, in June, 1856, to come out to this Colony, to assist in laying out and constructing railways, and have held the appointment of Chief Assistant Engineer in this department ever since my arrival here, in January, 1857, and have been engaged in those duties without intermission.

I may also mention that during the absence of the Engineer-in-Chief in England for eight months, I held the position of Acting Engineer-in-Chief for that time, and during the whole of these years there has not been one single word of complaint against me.

I therefore most respectfully submit that Mr. Whitton's conduct in this matter has been most marked and unjustifiable; first, in taking the superintendence of the maintenance of the existing lines out of my charge with such *express haste*, and, as far as I am aware, sir, without your knowledge or consent; and more especially when he knew that the trial surveys and estimates were all completed, and that I was more at liberty to attend to those extra duties; and second, in refusing me any explanation, or giving me any reason whatever for such conduct.

I have, &c.,
WILLM. MASON.

No. 4.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

70/2372. 70/142.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 25 April, 1870.

MINUTE-PAPER.—Reply to Mr. Mason's letter of 21st April, to Minister for Works.

In the first paragraph of Mr. Mason's letter, dated 21st April, 1870, he states "that, in the beginning of June last, Mr. Whitton proposed to me that I should undertake the superintendence of the maintenance of the existing lines of railway in addition to my other duties. To this I demurred; but on his representing to me that you desired this proposal to be carried out, I immediately laid aside all objections and undertook those extra duties," &c.

These are the facts :—

On my being requested by the Government to undertake the maintenance of the existing lines and locomotive department, in addition to my other duties as Engineer-in-Chief for Railways, I sent for Mr. Mason and asked him to take charge of the maintenance of the permanent way, as at that time there was very little work for him to do in connection with the extensions.

Mr. Mason *did* demur to taking the duties, not in consequence of his time being fully occupied, but simply with reference to the amount to be paid to him for expenses for the time he was employed on the existing lines.

I pointed out to him that, in the event of Parliament not voting any more money for railway extensions he would have nothing to do, and I therefore advised him to take it until such time as his services might be wanted on the further extension of railways. In fact it was an act of kindness on my part, to prevent him being thrown out of employment.

Mr. Mason is not correct in saying that I represented to him that you desired him to take this office, and that his objections were immediately laid aside, for as a matter of fact I had not spoken to you at that time on the subject.

Mr. Mason's sole objection being to take extra duties without extra payment, I arranged with him eventually to undertake the duties on my recommending that £150 a year should be allowed to him for expenses, for the superintendence of the three lines, North, West, and South.

This proposition was not sanctioned by the Government, nor refused. The matter has therefore been in abeyance, and in consequence Mr. Mason has not taken the superintendence of the Northern Line, nor have I asked him to do so.

With reference to Mr. Mason's letter asking for an explanation why he was relieved from his duties connected with the maintenance of the existing lines I have little to say, but I am surprised that he should have considered it necessary to ask such a question.

I did not relieve him from his duties, as has been stated, for giving evidence before the Select Committee on Railway Extension, but for the grossly insubordinate and insolent letter addressed by him to the Chairman of the Committee, without my knowledge, and without having the decency to forward the communication through you as the head of the department.

I have, however, for some time considered Mr. Mason of no use in that office; and on the 11th February last (Mr. Mason's evidence not having been given until the 17th), I addressed a communication to you recommending that Mr. Mason's services should be dispensed with as Engineer in charge of the maintenance of existing lines.

This recommendation not having been acted upon, Mr. Mason's remaining to discharge those duties was simply a departmental arrangement of my own, and it rested entirely with me to relieve him from those duties whenever I thought it desirable to do so.

Mr. Mason states, in his letter addressed to me :—"It seems to me the more inexplicable that you should have done so at a moment when you were confined to the house by illness, and at a time above all others when it required some responsible person to attend to those particular duties."

As Mr. Mason's superintendence was chiefly confined to the office, and the time of the Inspector in a great measure wasted in coming to report to him and ask for instructions, I saw no difficulty in dispensing with the "responsible person," but the reverse; as, by so doing, the Inspector had a better opportunity of discharging his own immediate duties, and could report to me when he considered it desirable to do so.

Mr. Mason's statement as to what took place at his interview with me is not strictly correct, particularly the word "compelled," which it is not likely I should use to him in the sense he uses it; but I did decline to give him any instructions until after his conduct had been brought under your notice.

Mr. Mason states, in page 5 of his letter :—"I have the honor also to observe that I was engaged by the Home Government, in June, 1856, to come out to this Colony to assist in laying out and constructing railways, &c."

Mr. Mason forgets to say that I was engaged by the Home Government to come out for the purpose he states; and his engagement was sanctioned, as one of my assistants, by the Home Government, on my recommendation.

JOHN WHITTON.

No. 5.

REPLY to Mr. Whitton's letter to Commissioner, dated 14 April, 1870.

Extracts from Mr. Whitton's letter.

Mr. Mason's reply.

Page 5. It is quite clear from the preceding [here Mr. Whitton is referring to the answers given in his evidence to questions Nos. 1092, 1093, 1094, and 1095, which he has quoted] that, in my reply to question 1094, I was referring to the fact that Mr.

I regret to observe that Mr. Whitton's explanation of his answer to question 1094 makes the matter no better; for, if I understand his explanation aright, the corrected answer would read thus :—Mr. Mason can have no knowledge of *bad* rails, excepting from the wear of a few between Marulan and Goulburn.

Mason knew of no generally *bad* rails, excepting between Marulan and Goulburn; and this is made quite plain by question 1093, from Mr. Hoskins.

All that my reply to question 1094 required to make it correct (though it was understood by Mr. Hoskins) was to have had inserted the word "bad" (which I believe I used; and this impression is strongly borne out by question 1095) inserted instead of "the," so as to have read,—Mr. Mason can have no knowledge of "*bad*" rails, &c.

The whole matter is made abundantly clear by my answer to question 1100, where I give the "defective" (showing signs of wear) rails on the whole of the Southern Line from Campbelltown to Goulburn; and as this information was supplied to me through Mr. Mason and by my orders, he must have known perfectly well to what I referred.

The fact and impression remain just the same; for it clearly conveys to me the impression—and I cannot see how any one could interpret it otherwise—that I knew nothing about the rails on any other portion of the lines.

Whatever Mr. Whitton *intended* to say I cannot tell; I can only judge of what he has said. There are the words he used, which speak for themselves; and his explanation does not make them mean anything else than what they say, viz., that I knew nothing about any of the rails, either good or bad, excepting a few on the Goulburn Line.

I am puzzled to know how Mr. Whitton had arrived at the conclusion that I should only have a knowledge of those on the Goulburn Line and not on the other portions of the lines, even assuming them to be either good or bad. At the time Mr. Whitton made this statement he was fully aware that I had examined the *whole* of the lines, and reported to him their condition, August 31st, 1869 (six months previous to his making this statement), and that I must therefore necessarily have a knowledge of all the rails on every portion of them.

He also knew that we had had at various times conversations about the quality of the rails on *all* the extensions, having often discussed the subject; and he was also aware I suggested to him the necessity there existed for putting a stop to any more rails being sent out such as those used on the Goulburn Line. I do not see what the last paragraph has to do with the answer to question 1094; for instead of rendering the matter "abundantly clear," it appears to me to confuse it.

Had Mr. Whitton said I was mistaken about the quality of the rails, instead of "I could have no knowledge of them," then I could easily have understood that it was only a matter of opinion between us; but to say that I could have no knowledge of them, just as if I had never seen them, was, I submit, under the circumstances, unjustifiable; for considering our relative positions in the department, it was probable that such an expression would convey to the Committee, unless corrected, the impression that I was making statements about the quality of articles which I had never seen. Such was my impression on reading the evidence, and hence in justice to myself I considered it necessary to correct it.

I can have nothing whatever to do with what Mr. Whitton thinks or "firmly believes" about Mr. Thomas; I have only to deal with facts; and it is a fact that I never gave Mr. Thomas as much as one figure of the information obtained for Mr. Whitton about the rails on the Goulburn Line. It was next to impossible that I could have done so; for when I received the information from the Inspectors, I took it directly to Mr. Whitton, and I have never seen it since.

It would seem very strange that Mr. Thomas, who had had charge of the lines for several years previously, should come to me, who had only had charge of them at that time for about nine months, to obtain information about the quality of the rails!

I append copy of a letter I wrote to Mr. Thomas on the subject, with copy of his reply, which will fully explain the subject.

25 March, 1870.

My dear Sir,

Mr. Whitton accused me this morning of giving information to you, respecting the bad quality of the rails on the Goulburn Line.

Will you do me the favour to say whether such is the fact, and whether I ever gave you information about the rails—either on the Goulburn or any other lines. From your knowledge of the facts, you will be able to say whether there is any foundation for such an accusation.

I am, &c.,

To J. H. Thomas, Esq., C. E.

WILLM. MASON.

Mr. Thomas replied to my letter as follows:—

25 March, 1870.

My dear Sir,

In reply to your letter of this date, I have to state that the only time I can remember the subject of the quality of the rails being mentioned by you was when upon one occasion we were standing together on the platform at the Sydney Station, and you were looking down at the rails, and incidentally made the remark to me that the old "Barlow" metals had worn well. "Yes," I replied, "they have; much better than those on the Goulburn length are likely to wear, for I

believe they are as bad or worse than those on the Mountain Line." You made no remark whatever about the Goulburn length in particular, but merely remarked that you were surprised to find the rails generally wearing so rapidly.

The idea that after my being in charge of the existing lines for some six years that I should not have observed the quality of the rails is in itself absurd, more especially when my attention and that of the public generally had been pointedly called to it by Mr. Dalgleish.

As regards the Goulburn length in particular, I may state that the day after the opening I walked some ten miles along the line, and was picked up by I think a ballast train in charge of Lewton; and I remember telling Mr. Sutherland on my return to Goulburn the state I found the permanent way in.

The reports of the sub-inspectors themselves would have been sufficient to call my attention to the matter.

In conclusion, I may state that upon all matters concerning the branch of the Service you are in, you have invariably exhibited a decided disinclination even to speak regarding them; and I am therefore very sorry you should have been suspected of giving me any information by Mr. Whitton, as there is not the slightest grounds for such a suspicion.

I am, &c.,

J. H. THOMAS.

I cannot conceive what Mr. Whitton means at the conclusion of the last paragraph, by the expression "with what object may easily be imagined."

Page 8. This no doubt accounts for Mr. Mason's corroboration of Mr. Thomas' evidence.

Page 8. Mr. Thomas makes no secret of the matter, as he states that his evidence can be corroborated by Mr. Mason; this he would hardly have done unless by pre-arrangement.

How can this account for my corroboration of Mr. Thomas' evidence, when it is not a fact, but merely an assumption based on suspicion?

I deeply regret to observe that Mr. Whitton should have used such an extremely offensive expression as that contained in his paragraph; to say that I corroborated Mr. Thomas' evidence by *pre-arrangement* is in no way justifiable.

It does not prove, because Mr. Thomas states his evidence can be corroborated by me, that such was done by pre-arrangement.

Was it not possible to suppose that, as Mr. Thomas knew I had charge of the lines, he would naturally conclude, as I had made an inspection of them, that I should observe the general condition of the whole of the works, and amongst others, the wearing qualities of the rails? And from whatever source Mr. Thomas may have drawn his conclusions as to my being able to corroborate his evidence about the rails I cannot tell; but this I do know, that it was decidedly not by any pre-arrangement with me, as I had never exchanged one word with Mr. Thomas, either about the Committee or his evidence on that subject, previously to his giving evidence, and I was not even aware that he was going to give evidence until I was told by another person that he had been summoned by the Committee to do so. And the only remark that Mr. Thomas ever made to me about what he had said in his evidence was this,—“I have recommended cheap railways to the Committee.” I replied—“Have you?” This was all the conversation I ever had with Mr. Thomas (if such an incidental remark may be termed a conversation) on the subject of his evidence before the Committee; and I was not even aware that the subject of the rails had been named by any one until told of it by Mr. Whitton.

I therefore give the assertion that I corroborated Mr. Thomas' evidence by pre-arrangement the most pointed and decided denial; and I most emphatically protest against such an expression, as being in no way justifiable, but founded on a mere suspicion, because, and for the reason, as Mr. Whitton himself told me, I had been seen in conversation with Mr. Thomas, and which he remarked under the circumstances (he and Mr. Thomas having quarrelled) was, at the least, “highly indecent”!

Mr. Whitton cannot say that I have ever been guilty of committing one act of indiscretion in making public what could properly be termed the secrets of the department; and surely I might be trusted to converse with another officer of the department, notwithstanding Mr. Whitton having quarrelled with him.

I have neither sought Mr. Thomas' company nor avoided it. I have known him for several years, and have always received from him the greatest courtesy, and I know of no reason why I should treat him with discourtesy; and it cannot be surprising to any one that I should have done that which any other gentleman, under the circumstances, would have done—resent the indignity of having a restraint put upon me, as to with whom I should converse, or on what subject.

Page 8. The returns of the defective rails were *not* furnished by Mr. Mason, but by the sub-inspectors on the various lengths, which returns are now in the office.

Page 9. Mr. Mason stated to the Committee that steel-faced rails had been imported several years ago; to which I made no reply; but, in reply to Mr. Thomas' statement that "we have steel rails now that cannot be used on the main lines, they are so bad" (see question 78), I informed the Committee that no steel rails had been imported, and that consequently Mr. Thomas' information was not correct.

Mr. Mason writes in a very injured tone on this question; but as he owns himself he did not know what the rails were, it would have been wiser had he said nothing about them. It matters not to me what they are called in official or printed documents, nor what Mr. Mason believed them to be. If Mr. Mason or Mr. Thomas had said they were made of *gold*, it would not have altered the fact, nor would it have altered the fact that their evidence would have misled the Committee had it remained uncontradicted.

Mr. Whitton says, at page 7, that I obtained the information for him; and, in this paragraph, says the returns were not furnished by me.

With reference to the steel rails, Mr. Whitton says it would have been wiser if I had said nothing about them. To have acted on such advice as this would have involved the necessity of my refusing to answer the questions on the subject put to me by the Committee, which, with all respect and deference to Mr. Whitton's opinion, I think would have been very unwise; besides, I have said nothing about them but what the following facts will fully justify.

In answer to question 725, whether there were not some steel rails imported lately, I reply—"Not recently; some 'steel-faced' rails were imported some considerable time ago—several years ago." And under question 727 I state "they are not suitable for the main line; they were, I understand, obtained only for sidings." And under question 762, I state the "steel-faced" rails appear to me not to be of "first-class material"; and under question 78, Mr. Thomas says "we have steel rails now that cannot be used on the main line, they are so bad."

Mr. Whitton says in reply, under question 1055—"There has never been a steel rail imported into the Colony. There are some rails made of common Welsh iron, and hardened on the surface by Dodds' process, but we have no steel rails." And under question 1056, he says, with reference to these rails—"About eight years ago some of them were laid down in sidings in the station-yard at Sydney. They are in the yard, where some of the heaviest traffic passes over them; they are there yet, and there is not the slightest appearance of wear upon them; none of them have been taken up or changed in any shape, and there is no fracture of the iron." And under question 1059 he continues—"I repeat, they are the best wearing rails we have ever had."

Such an explanation of the subject as this, would clearly tend to lead the Committee to suppose that my assertions and Mr. Thomas' also, with reference to these rails, were entirely incorrect—that it was all a mistake, and that no such rails as those referred to had ever been imported; for Mr. Whitton confuses the facts with the simple technical difference between "steel" and "steel-faced" rails. Now whether these rails were "steel" or "steel-faced" is irrelevant to the question, for the question is this: did Mr. Whitton, Mr. Thomas, and myself, all refer to the *same* rails? That we did do so is, I think, indisputable; and were they so bad they could not be used on the main line? These are the points for consideration.

The Committee, on hearing Mr. Whitton's description of the incomparable wearing quality of these rails, naturally ask the pertinent question—"Would you recommend that more of them should be imported?" To which Mr. Whitton replies *no*, I would recommend steel rails.

Now this *no* of Mr. Whitton's must have, I imagine, considerably puzzled and astonished the Committee; for after having first told them that these rails were made of *common Welsh iron*, he then proceeds to describe their good wearing quality, and says—"I repeat, they are the *best wearing rails we have ever had*"; and yet, after this laudatory description of their incomparable wearing qualities, actually recommends that no more of them should be imported. Had Mr. Whitton given an exhaustive description, and told the Committee *all* that he knew about their quality, viz., that some of them were put upon the Menangle Line and they *all broke*, and in consequence of this he ordered them not to be used on the main line,—then the Committee might have understood the reason of his "*no*," in reply to the question whether he would recommend any more of them to be imported. If these rails were of the excellent wearing quality as described by Mr. Whitton, why have they been allowed to lie rusting in stock for so many years, when he knew that the rails were so urgently required, and so much difficulty experienced in obtaining rails with which to relay the Sydney and Parramatta Line? The Inspector reported to me that one of these rails broke and that others cracked by merely loading and unloading from the trucks; and I went specially to inspect those cracked rails, as can readily be verified by the Inspector.

Page 11. Mr. Mason's moral perceptibilities must be at a very low ebb, when he considers the difference between truth and untruth a "mere quibble."

Page 11. The word "quibble" is no doubt intended to be offensive, but from such a source it is simply impertinent.

Page 11. Mr. Mason is again incorrect as to the weight of the rails referred to by me.

300 tons of steeled rails were ordered, and 300 tons 15 cwt. were sent out, viz. :—

			Tons cwt. qrs. lbs.		
Indent VII.	12	...	151	1	0 26
Do.	17	...	149	13	3 12
			300 15 0 0		

This is my reason for saying in my evidence that "they appeared to me not to be of first-class material"; and this is my reply to Mr. Whitton's statement that "he owns himself he did not know what the rails were."

This paragraph is unworthy of notice.

I can assure Mr. Whitton that I never intended the word "quibble" to be offensive to him, and would readily withdraw it if another word could be substituted which he might not consider offensive, and which equally expressed my meaning.

The latter part of the paragraph is unworthy of notice.

I have only stated the weight of the rails *once*, therefore cannot be *again* incorrect as to their weight.

Mr. Whitton says in his evidence, in reply to question 1056, that 150 tons were ordered, but believes 300 tons were sent out; he now states 300 tons were ordered, therefore either one or the other of his statements must be incorrect.

According to the printed document referred to, it is at variance with both his statements.

The following is the weight according to that document:—

Quantity.	Date of Receipt.	Date of Invoice.
Tons cwt. qrs. lbs.		
74 19 0 5	20 May, 1860	9 December, 1859.
149 13 3 12	19 August, 1860	20 April, 1860.
102 3 1 0	28 December, 1862	18 August, 1862.
125 3 3 0	28 January, 1863.....	15 October, 1862.
45 3 0 0	18 January, 1863.....	15 October, 1862.
141 4 0 0	No date.....	18 November, 1862.
638 6 3 17	Total steel rails.	

Such a document as the one referred to I should consider is perfectly reliable. I cannot conceive it possible that such a return prepared expressly for Parliament should be so incorrect as Mr. Whitton's account of the rails appears to make it.

Perhaps Mr. Whitton can explain the matter.

I am glad Mr. Whitton has found what he terms my "absurdities as to width of formations for different gauges, amusing"; and it would appear from the remarks he has here made respecting them, that he has also found them instructive, for in the very first paragraph he disproves his own assertion.

Page 12. Mr. Mason's absurdities as to the widths of formation required for different gauges of railways are very amusing.

The difference in gauge between 4' 8 $\frac{1}{2}$ " and 3' 6" is 14 $\frac{1}{2}$ "; and if the formation width of the latter be 13', there is no absolute necessity for making the formation width of a 4' 8 $\frac{1}{2}$ " gauge more than 14' 2 $\frac{1}{2}$ ".

A greater width has been given to the railways in this Colony, to allow for border stones and more perfect drainage, and they are no doubt better for this extra width.

Page 13. As a matter of fact, there is no necessity for the formation width, either in cuttings or embankments, being greater than just sufficient to allow for the slopes of the ballast beyond the ends of the sleepers, and in cuttings even the width for slopes might be dispensed with.

It does not follow that, because I have adopted 18' for formation width in this Colony, for a gauge of 4' 8 $\frac{1}{2}$ ", or that 13' having been adopted in Queensland, it is imperatively necessary always to adhere to these widths; on the contrary, if cheaper lines are absolutely necessary, and the question of maintenance set aside, cuttings for the two gauges might be made of the following widths:—

4' 8" gauge, formation width 12' 0"

3' 6" " " " 10' 9 $\frac{1}{2}$ "

The widths of formation on embankments might be as under:—

4' 8 $\frac{1}{2}$ " gauge 13' 6"

3' 6" " " " 12' 3 $\frac{1}{2}$ "

At page 42, where Mr. Whitton replies to Mr. Thomas' evidence on the subject, he says—"At question 110, Mr. Thomas is asked whether narrowing the width of the existing formation would not relatively very much reduce the cost of formation. And to that he (Mr. Thomas) replies—"If you make a sketch of an embankment for the two different systems, it will be readily seen that there is a very great difference."

Mr. Whitton, in reply to this, says—"The only difference that there can possibly be must be the difference in the gauges, and that can only apply to the width of the centre. The two slopes are precisely the same; the difference between the gauges (3' 6" and 4' 8 $\frac{1}{2}$ ") is simply 14 $\frac{1}{2}$ "."

Had Mr. Whitton made a sketch, as suggested by Mr. Thomas, he would have seen the truth of Mr. Thomas' statement, "that there is a very great difference."

Mr. Whitton in his remarks appears to have left the question and gone into generalities about formations. The question is this,—Would not the cost of earthworks be considerably reduced in relatively altering the width of the existing formation by narrowing the gauge?

Mr. Whitton says the only possible difference there can be is the difference between the gauges. This is the point in which I respectfully submit Mr. Whitton is in error. He makes the formation width dependent upon the actual *difference* between the dimensions of the gauges, instead of in *proportion* to the gauges.

He says, in the first paragraph, if the formation width of a 3' 6" gauge be 13', there is no absolute necessity for making the formation width of a 4' 8½" gauge more than 14' 2½".

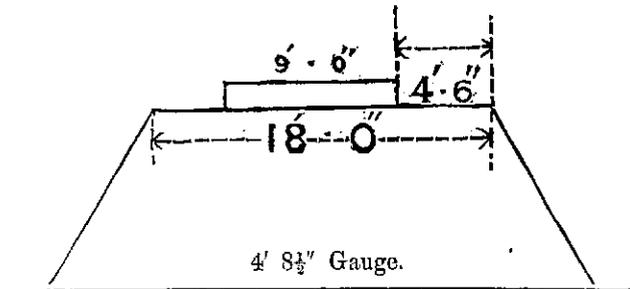

Here he admits at once that a saving may be made in the width of the formation of 3' 9½" *without even altering the gauges.*

If he can manage to do this, and save 3' 9½" in the width of the earthwork *without altering the gauges*, surely he can save more than 14½" by *altering the gauges* from 4' 8" to 3' 6". And in another paragraph he says, the formation width for a 4' 8½" gauge might be reduced even to 12' in cuttings, and 13' 6" in embankments.

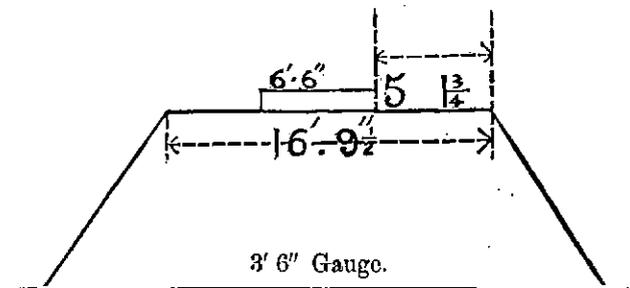

Here again he has made matters worse, for then there would be a difference of 6' in the width of the cuttings without altering the gauges. He says (page 14 of his letter) that the formation width of a 3' 6" gauge might be in the cuttings 10' 9½", and 12' 3½" in the embankments. Thus we have $18 - 10' 9\frac{1}{2}'' = 7' 2\frac{1}{2}''$ the difference in width in the cuttings, according to Mr. Whitton's own showing, instead of 14½". He has here shown by his own figures, that a saving could be made in the width of the cuttings of 6 feet *more* than that which he states in his evidence, or a total saving of 7' 2½" instead of 14½"! I can easily show that, by Mr. Whitton's theory, the bearing width of the embankments would be *increased* instead of *decreased* as you narrowed the gauge. You would have proportionately the widest and strongest embankment to carry the lesser weight, and the narrowest and weakest to carry the greater weight.

The sketches of embankments here given, and formed according to Mr. Whitton's theory, will explain the subject at a glance.

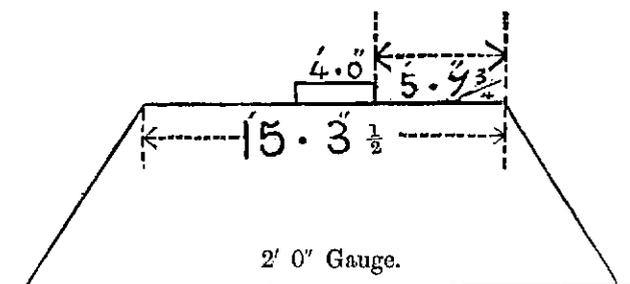

18' 0" formation width for 4' 8½" gauge on existing lines.

18' 0" — 1' 2½" = 16' 9½" formation width for 3' 6" gauge.

18' 0" — 2' 8½" = 15' 3½" formation width for 2' 0" gauge.

Thus showing that in a 2' gauge, where the weight to be carried is only about one-half that on a 4' 8½" gauge, we have a bearing width beyond the end of the sleeper of 5' 7¾"; and on a 4' 8½" gauge, where the weight to be carried is double that on a 2' gauge, we have only a bearing surface beyond the end of the sleeper of 4' 6". The same would also apply to the cuttings.

Mr. Whitton says, at page 13 of his letter (see page 16 on these remarks), that "a greater width has been given to the railways in this Colony, to allow for border stones and more perfect drainage, and they are no doubt better for this extra width."

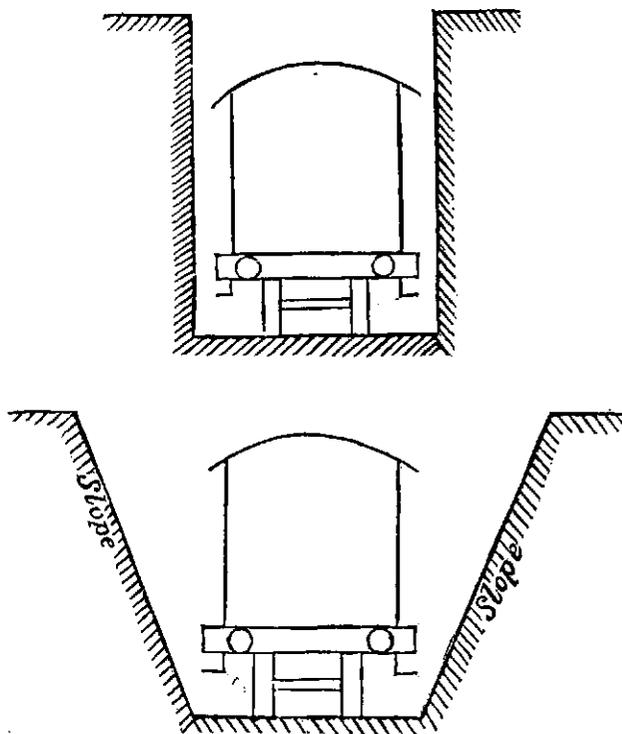

They would possibly be better if made still wider; but that is not the question. The question is this,—Is this extra width necessary, and, if so, why does Mr. Whitton say they can be made less; for if they can be made less, as he states, why have they not been made so, as the same amount of drainage—setting aside the extra width of the formation—would be required in both cases?

It would not be an easy matter to maintain the permanent way on embankments made as here described; and if the width for slopes of the ballast in the cuttings are dispensed with, this would make a still greater saving than what I have stated.

Page 13. As a matter of fact, there is no necessity for the formation width, either in the cuttings or embankments, being greater than just sufficient to allow for the slopes of the ballast beyond the ends of the sleepers; and in cuttings even the width for slopes might be dispensed with.

Page 15. It must be quite clear that a certain width only is required outside the rail of either (or any) gauge, sufficient to allow of the engines and other vehicles to pass through the cuttings; and so long as this object is effected, the widening of the cuttings beyond this necessary width is simply a question of maintenance hereafter. The embankments may also be reduced to the width actually necessary to keep up the slopes of the ballast.

It must be very plain and clear to any one that a certain amount of standing room must be provided on each side for the workman to get out of the way of the trains, and to provide for drainage; and unless sanctuaries were provided in the rock cuttings, which are taken out perpendicular, or nearly so, similar to those in a tunnel, it would be impossible for the men to get out of the way, and consequently dangerous to work the traffic. And again, where the cuttings were taken out to a slope, the men would be compelled to throw themselves down flat on to the slopes, to keep clear of the trains. The following sketches will show my meaning at a glance.

Page 15. The widths of formation named by Mr. Mason are simply those which have been used, and have nothing to do with the question as to the actual difference of cost between the gauges of 4' 8½" and 3' 6".

Page 16. Embankments are always formed wider than actually required, to provide for settlement; but when they are properly consolidated, the width I have named (13' 6") is quite sufficient.

I beg Mr. Whitton's pardon, but they have everything to do with it, as I have already proved, and it is not necessary to repeat it.

It is a well-known fact that embankments are always formed wider, to provide for subsidence.

Page 16. The extra width in gauge is quite sufficient to support the extra weight to be carried; and it must be apparent to any one that the weight upon any portion of a railway is conveyed to the formation by the length of sleeper, which in the 4' 8" gauge is 9 feet; therefore, on embankments all that is required in addition to this length of 9 feet is, to make the embankment sufficiently wide to support the slopes of the ballast.

Page 17. If first cost be all-important, there is no reason why the sleepers for a 4' 8½" gauge should be 9 feet in length; sleepers 7 feet long might be used, and the whole formation width made less than I have named.

Page 17. Mr. Mason's last paragraph shows that he has got but one idea with reference to the formation width required for different gauges of railways, and even that, unfortunately, is not his own, for he is indebted to his "personal knowledge" of what others have done, to enable him to arrive at any conclusion.

Page 18. It is hardly necessary for me to assure you that I made no rash statements in my evidence (as stated by Mr. Macleay) "against people in the department"; but very rash statements—to use a mild term—were made by the witness whose recommendations have been adopted by the Committee.

No one, I should think, ever doubted about the weight being conveyed to the formation by the sleeper. But as you reduce the gauge, you can also reduce the quantity of ballast, consequently you have less ballast to support; but to support this lesser quantity Mr. Whitton, by his theory, makes the embankments proportionately wider—he makes proportionately the widest bank to support the least quantity of ballast, and *vice versa*. (See sketch of embankments, page 12.)

The conclusion of this paragraph is another proof of my statements with reference to the saving in the cuttings.

I think Mr. Whitton might have avoided writing this offensive paragraph: it comes with bad grace from one whom, it is notorious, I have faithfully assisted for the last fourteen years.

I may say, supposing it were true that I had but one idea, I certainly did not obtain it from Mr. Whitton, for I was well acquainted with the subject many years before hearing his name mentioned.

He says I am indebted to my personal knowledge of what others have done. It is a very fortunate thing that I have a personal knowledge of what others have done. I have met with those who have been sadly deficient in that particular.

Mr. Whitton, I trust, will pardon me when I say, perhaps it is possible that he himself may be indebted to what others have done, for I can hardly imagine him to have originated everything he has done himself; indeed there is one little matter in which I remember he was indebted to what others had done, and that was in this very question of formation.

At the commencement of preparing the first contracts of extensions in this Colony, we had a conversation about the width of formation to be adopted. I reminded him that Mr. Fowler had constructed the Chipping Norton Branch Railway (single line) with a 19-foot formation; and Mr. Whitton adopted that width, and executed the extensions to it from Liverpool to Campbelltown and Picton, Parramatta to Penrith, and Maitland to Singleton.

As I have no knowledge of the circumstance, I cannot of course deny this statement of Mr. Whitton's; but I cannot for one moment suppose the Chairman of the Committee would have made it unless founded on fact.

Although some of Mr. Whitton's remarks are exceedingly personal and offensive, and calculated to provoke resentment, I trust that I have not been guilty of using any expression which could in any way, and under the circumstances, reasonably give offence, as such was not my intention. I have only said, in the best possible spirit, and in the best way I could say it, that which I considered was necessary to justify and defend myself.

WILLM. MASON.

12/7/70.

No. 6.

REPLY to Mr. Whitton's letter to Commissioner, dated 25 April, 1870.

Extracts from Mr. Whitton's letter.

Page 1. On my being requested by the Government to undertake the maintenance of the existing lines and locomotive department in addition to my other duties as Engineer-in-Chief for Railways, I sent for Mr. Mason and asked him to take charge of the maintenance of the permanent way, as at that time there was very little work for him to do in connection with the extensions.

Mr. Mason's reply.

There has always been, and always would be abundance of work for me to do in the department as long as ever any of the extensions were being laid out or constructed, provided I were allowed to be employed, as the Chief Assistant Engineer ought to be, in the proper duties appertaining to that office.

Page 2. Mr. Mason *did* demur to taking the duties, not in consequence of his time being fully occupied, but simply with reference to the amount to be paid to him for expenses for the time he was employed on the existing lines.

I regret the necessity there exists for my contradicting any of Mr. Whitton's statements, but the statement that I demurred to taking those duties simply with reference to the amount to be paid to me for expenses is incorrect.

What I said was this,—I asked Mr. Whitton whether I should be allowed anything for expenses, as in case I took charge of these lines I should have a good deal of extra expense, and that it would not be fair to expect me to take extra work and pay my own expenses as well. Mr. Whitton said—"No, it would not; but I will see the Minister about it and see what can be arranged." He subsequently said—"I think you ought to have an allowance of £150, and myself £100 per annum, to cover expenses."

When Mr. Whitton mentioned the subject again, he said—"I have seen the Minister and told him what arrangements I proposed to make, and he is quite agreeable to it; he thinks the amount asked for expenses very reasonable, and thinks the arrangement a good one, and will be glad to have it carried out." So the matter was settled, and I cannot understand how Mr. Whitton could construe *this* into my making the amount to be paid for expenses the chief objection to my taking this duty; and I may here mention that during the whole time I had this extra duty to perform I have hitherto received nothing on account of expenses. I merely mention this to show how perfectly reasonable and prudent it was for me to make the inquiry about my expenses.

Mr. Whitton must surely recollect that my sole objection was to take the serious responsibility it involved without the certainty of the power which would be given to me. I mentioned this, and he replied—"You will have the management of the whole of the lines under me, with full power to act; besides, Mr. Sutherland seems very desirous that this arrangement should be carried out." Under these circumstances I made no further objection, but immediately undertook the duty.

This is quite correct, and I will take the opportunity to thank Mr. Whitton for this "act of kindness" on his part, but I fear I shall be compelled to show that it was not unalloyed with self-consideration.

These are the facts:—When Mr. Whitton found that I objected to take this extra duty, he said what has already been stated by me; and also said that if I did not take it he hardly knew what he should do with it, for he was sure that the Government would not sanction any separate appointment at present.

I replied—"That is quite true; if no further extensions are to be made, there will be nothing probably for any of us to do"; and that I was quite willing to assist him in any way that I possibly could, but at the same time I should like to know exactly in what position I was to be placed and what power I should have to act; when he replied, in the manner I have already stated, viz., that I should have the management of all the lines under him, with full power to act, &c.

The matter stood in abeyance simply for the reason of the press of other and more important business—so I was told whenever I made any inquiry about it; and although the recommendation or proposition was neither sanctioned or refused by the Government, it was sanctioned and had the special approval of the Minister, awaiting only the decision of the Government; and under this sanction and approval I acted upwards of ten months, and until Mr. Whitton undertook the responsibility of relieving me of those duties, in the manner I have already stated in my letter to the Minister, dated 21st April, 1870.

I am not surprised that Mr. Whitton should have "little to say" in reply to my letter; indeed I do not see what he could say, or what excuse he could offer for assuming the power of taking away an appointment that had been specially made by the Minister, and under which I had acted for ten months, without first recommending it in the usual way, in due official form, and obtaining first the sanction of the Minister who made the appointment, and who alone had the power to remove me; and I shall be able clearly to show, in my reply to the second following paragraph, that Mr. Whitton proves by his own statement in that paragraph that he must have known he had not the power to remove me without the sanction of the Minister.

Page 2. I pointed out to him that in the event of Parliament not voting any more money for railway extensions he would have nothing to do, and I therefore advised him to take it until such time as his services might be wanted on the further extensions of railways. In fact it was an act of kindness on my part, to prevent him from being thrown out of employment.

Mr. Mason is not correct in saying that I represented to him that you desired him to take this office and that his objections were immediately laid aside; for, as a matter of fact, I had not spoken to you at that time on the subject. Mr. Mason's sole objection being to take extra duties without extra payment.

Page 3. I arranged with him eventually to undertake the duties, on my recommending that £150 a year should be allowed to him for expenses for the superintendence of the three lines, North, West, and South. This proposition was not sanctioned by the Government, nor refused; the matter has therefore been in abeyance, and in consequence Mr. Mason has not take the superintendence of the Northern Line, nor have I asked him to do so.

Page 4. With reference to Mr. Mason's letter asking for an explanation why he was relieved from his duties connected with the maintenance of the existing lines, I have little to say; but I am surprised that he should have considered it necessary to ask such a question.

Page 4. I did not relieve him from his duties, as has been stated, for giving evidence before the Select Committee on Railway Extension, but for the grossly insubordinate and insolent letter addressed by him to the Chairman of the Committee, without my knowledge, and without having the decency to forward the communication through you as the head of the department.

Page 5. I have however for some time considered Mr. Mason of no use in that office; and on the 11th February last (Mr. Mason's evidence not having been given until the 17th), I addressed a communication to you recommending that Mr. Mason's services should be dispensed with as Engineer in charge of the maintenance of existing lines. This recommendation not having been acted upon, Mr. Mason's remaining to discharge these duties was simply a departmental arrangement of my own, and it rested entirely with me to relieve him from those duties whenever I thought it desirable to do so.

As my reply to the Minister's minute contains a full answer to this paragraph, it is not necessary to further notice it, than merely to observe that Mr. Whitton is hardly entitled to make such a remark about my want of decency in the matter. It is possible I may be wrong in my opinion, but I think, and submit with all respect, that Mr. Whitton was equally to blame in not having the decency to await the decision of the Minister as head of the department, upon his recommendation.

I should have been glad to have heard Mr. Whitton's reason for having for some time considered me of no use in that office. If such were really the case, why did he not mention the matter when he first made the discovery, and remove me *then*, as he states my remaining to discharge those duties was simply a "departmental arrangement" of his own, and it rested entirely with himself to relieve me from those duties whenever he thought it desirable to do so?

Mr. Whitton must bear in mind that, if he considered me of no use in that office, he had, according to his own showing, a very easy remedy.

However, in consequence of this discovery, he says he recommended, on the 11th February last, that my services should be dispensed with as Engineer for Existing Lines, but that his recommendation was not acted upon.

Now, in the first place, Mr. Whitton recommends to the Minister that my services should be dispensed with, and when, after waiting some time for a reply, he finds that the Minister does not act on his recommendation, he undertakes to do it himself without the Minister's authority, and calls it a "departmental arrangement."

Mr. Whitton surely cannot have forgotten that he told me himself he had recommended to the Minister that I should be relieved from that extra duty; and when I spoke to him again on the subject, some time after he had made the recommendation, he told me that he could do *nothing further in the matter until he received the Minister's reply*. And Mr. Whitton must also remember, when he told me about this recommendation, there was not the most remote allusion made to that being the cause which Mr. Whitton has stated; and, much as I regret the necessity there exists to contradict Mr. Whitton, I am compelled, in justice to myself, to say that it was certainly understood between us to be for a very different cause, which is unnecessary here to mention.

It is very clear, if Mr. Whitton had considered it a mere departmental arrangement, he would never have referred the matter to the Minister at all; but the very fact of Mr. Whitton in the first place, officially and in due form, recommending to the Minister that I should be appointed (and on that recommendation I was appointed), and then again recommending that my services should be dispensed with, proves indisputably he was aware he had not the power to remove me without the sanction of the Minister. I repeat, if he considered it rested with himself alone to relieve me from those duties whenever he thought it desirable to do so, why did he make any recommendation at all to the Minister, and *wait* for his sanction from the 11th February to the 14th March?

And I respectfully submit that an appointment once sanctioned by the Minister as head of the department, no one but that Minister has the power or right to annul it; for if such were not the case any one might be removed, without the authority of the Minister, by such "departmental arrangement."

I presume that Mr. Whitton's superintendence would have been chiefly confined to the office under the arrangement he names; for it could not well be otherwise, in undertaking a duty which he acknowledged to me at first he had not time to attend to. However this may be, that which he has stated in this last paragraph clearly implies that my appointment to that duty was unnecessary, and that I neglected the superintendence of the lines, and consequently wasted the time of the Inspector.

Such assertions and insinuations as these are not in the least degree justified by the facts, and I am surprised that Mr. Whitton should have made them, as he is fully aware that I have never on any occasion neglected my duty, neither have I wasted the time of the Inspector or any one else.

Page 6. Mr. Mason states, in his letter addressed to me,—“It seems to me the more inexplicable that you should have done so at a moment when you were confined to the house by illness, and at a time above all others when it required some responsible person to attend to those particular duties.”

As Mr. Mason's superintendence was chiefly confined to the office, and the time of the Inspector in a greater measure wasted in coming to report to him and ask for instructions, I saw no difficulty in dispensing with the "responsible person," but the reverse; as by so doing the Inspector had a better opportunity of discharging his own

immediate duties, and could report to me when he considered it desirable to do so.

It is notorious amongst the Inspectors and other officials on the railway that I have paid the greatest possible attention to the inspection of the works on all occasions; the Chief Inspector has told me repeatedly how pleased he was that I went out so much on the works, and that he had never yet had any one placed over him that had paid such strict attention to the inspection and superintendence as I had done.

Previous to my taking charge of the maintenance of the lines they had been in charge of an engineer, whose sole duty it was to attend to their maintenance, consequently he had a separate office at the Redfern terminus, and was at liberty to devote the whole of his time to that service; whereas with me the case was different, their maintenance was given to me as an *extra* duty to those I had to perform in connection with the trial surveys, &c., &c., and which involved the necessity of my remaining in the same office where I had always been; and Mr. Whitton is aware that this arrangement was made as being the most convenient under the circumstances that could be devised, for he was a party to it himself. The whole arrangement of my taking this *extra* duty was made by Mr. Whitton himself; and if it involved inconveniences, surely I cannot be to blame for that.

If Mr. Whitton thought the time of the Inspector was being wasted by this arrangement, why did he not mention it to me and suggest or order an alteration; but he never once named such a thing, and it does appear to me very strange that he should have allowed it to exist for ten months before saying anything about it.

I say, without fear of contradiction from any one, that I never neglected going on to the works to inspect them whenever it was necessary; and a reference to my diary will show that my superintendence was not chiefly confined to the office, as I find that during the ten months I had charge of the lines I was sixty-eight times on the works.

With reference to the time of the Inspector being wasted, it is simply this—Whether was it better for the Inspector to come to my office without any inconvenience to himself or chance of neglecting his duty, or that I should leave my duties to run after the Inspector?

The Inspector has told me repeatedly that it was no inconvenience to him whatever coming to the office to see me, as it did not in any way interfere with the execution of his duty.

If Mr. Whitton saw no difficulty in dispensing with the "responsible person," but on the contrary could manage the matter himself by the Inspector occasionally reporting to him, why, may I ask, did he not try that plan ten months before? And why, I will also ask, after taking the lines out of my hands, did he recommend, as I have been informed he did do, another "responsible person" to undertake those duties, knowing, as he has already stated, that this was the only way in which I could find employment in the event of Parliament not voting any more money for further extensions? If after being fourteen years in the Service, to recommend that my services should be dispensed with and another person put in my place, if this be the "act of kindness on his part" I confess that I cannot fully appreciate it.

Page 7. Mr. Mason's statement as to what took place at his interview with me is not strictly correct, particularly the word "compelled," which it is not likely I should use to him in the sense he uses it, but I did decline to give him any instructions until after his conduct had been brought under your notice.

Page 8. Mr. Mason states, in page 5 of his letter—"I have the honor also to observe that I was engaged by the Home Government to come out to this Colony to assist in laying out and constructing railways, &c."

I am sorry that I have again to contradict Mr. Whitton, but that which I have stated in my letter to the Minister is strictly correct in every particular.

Mr. Whitton did use the word *compelled*, whether it was likely he should have used it or not.

I cannot see why Mr. Whitton refers to this subject at all. I say that I was engaged by the Home Government to come out to this Colony to *assist* in laying out and constructing railways, and Mr. Whitton says that I forgot to say that *he* was engaged by the Home Government to

Mr. Mason forgets to say that I was engaged by the Home Government to come out for the purpose he states, and his engagement was sanctioned as one of my assistants by the Home Government on my recommendation.

JOHN WHITTON.

come out for the purpose I state. I think Mr. Whitton will see that if I had said what he says I forgot to say, I should have made a mistake, for it would then have represented himself as having come out to assist, &c.

I referred to this matter in my letter to the Minister merely because I thought it expedient to do so, and not with the intention of misrepresenting anything with regard either to Mr. Whitton's appointment or my own. I did not think it necessary for me to mention a matter which is so well known, that Mr. Whitton came out here as Engineer-in-Chief, nor did I intend to deny that I was engaged as one of his assistants on his nomination and recommendation.

WILLM. MASON.

12/7/70.

No. 7.

W. MASON, Esq., to THE SECRETARY FOR PUBLIC WORKS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 12 July, 1870.

MINUTE-PAPER.—Letter to Chairman of Committee on Railway Extension.

I REGRET to learn from the Minute of the Honorable the Minister for Public Works, dated 11/7/70, that he considers there was nothing in the evidence of the Engineer-in-Chief to justify my letter to the Chairman of the Committee.

The Minister will no doubt remember, when he granted me an interview on this subject, on the 6th ultimo, I then explained to him several circumstances connected with the case which I thought fully justified me in the course I had taken.

Fearing, however, that as those communications were made verbally, some of them might possibly have escaped from the memory of the Minister, or that from my manner of expressing them I might not have made myself understood, I therefore venture to recapitulate the chief facts in the case.

On the 17th of February last I gave evidence before the Select Committee on Railway Extension. On the 2nd of March I saw Mr. Whitton in his office with a printed copy of the evidence before him which had been taken before the Committee. I asked him if my evidence was printed. He said—"Yes." I then asked—"Have you read it?" He replied—"Yes." I said—"Do you see anything objectionable in it?" He said—"No, I don't know that I do."

This conversation took place in the morning, as near as I can remember about 10 or half-past 10 o'clock, and I find on referring to the date on which Mr. Whitton gave his evidence, it was on that same day, and only about half an hour or an hour after I had had this conversation with him.

Now if Mr. Whitton had any fault to find with, or objections to make to my evidence,—if he saw, or thought that I had made any misstatements or represented anything contrary to facts, I submit that he ought there and then to have named it and pointed out anything which he considered was objectionable or in error. Had he done this, and convinced me that I had really made a mistake, or in any way committed an error, or stated anything contrary to facts, I should have immediately, as a matter of duty, corrected it, and consequently prevented any misunderstanding on the subject; but instead of adopting this course, which I respectfully submit was the proper one to have taken, he went direct to the Committee and made some remarks on my evidence which appeared to me to impugn the veracity of some of my statements before that Committee.

Of this fact there can be no doubt, for I was present in the Legislative Assembly and heard the Chairman of the Committee state, in his speech on Railway Extension—and which was reported in the public Press—that "Mr. Whitton made in his evidence some rash charges against people in the department, particularly against Mr. Mason," proving indisputably that I was not mistaken in the opinion I had formed of the import of Mr. Whitton's remarks.

Nothing of moment occurred again in this matter until the morning of the 25th of March, when I saw Mr. Whitton in his office, and he attacked me in a very offensive manner with reference to my evidence given before the Committee corroborating that of Mr. Thomas; and to prevent any misconception of his meaning, I will give the words he used as nearly as I can remember. He said—"The Committee have brought up their Report, and nearly the first paragraph at the top of the page they mention your evidence as corroborating that of Thomas about the bad quality of the rails." I replied that I could not help that; I did not know whose evidence mine corroborated, as I had not read one word of the evidence, neither did I know one word of the evidence that had been given before the Committee either by Mr. Thomas or any one else, as I had no conversation with any one on the subject.

I assured him that I had said nothing but what I was conscientiously in duty bound to say in reply to the questions put to me by the Committee. He then said—"I would not have cared; you could have said what you liked, if you had not given Thomas the information about the bad rails on the Goulburn Line." I replied that I had done nothing of the kind—that I had never given Mr. Thomas as much as one figure of the information about the rails either on the Goulburn or any other line. But as Mr. Whitton refers specially to this subject in his letter to the Commissioner, dated 14th April, 1870, I beg to refer the Minister to my reply to it. Mr. Whitton then said, in a very defiant and offensive manner, that I might do as I liked, and say what I liked, when I liked and where I liked.

After thus being set at defiance for nothing else that I could conceive than that of an unfounded suspicion, and of having done my duty in answering the questions of the Committee conscientiously and truly, to the best of my knowledge and ability, it would have been of little avail to have asked Mr. Whitton for any explanation of his remarks made before the Committee affecting my evidence; and I therefore submit that I had no alternative but to take the course I did, to get the matter corrected; or otherwise remain silent under the stigma of having made statements to the Committee which were entirely unfounded.

I have to express deep regret that the Honorable the Minister for Works should think that I have been disrespectful to him, in addressing my communication direct to the Chairman of the Committee, instead of through himself.

The fact is this:—I considered that, from the circumstance of the nature of the communication I had to make to the Chairman of the Committee being merely to correct any misapprehension with respect to my evidence, it never occurred to me that I was acting contrary to the rules of the Service, or that it was necessary to trouble the Minister by sending such a communication through him or Mr. Whitton; otherwise, had such a thought or doubt occurred to me, I should, as a matter of course, without one moment's hesitation, have taken that course as the safest and the best. But I desire to assure the Honorable the Minister for Works that, in doing so, no disrespect of any form or kind whatever was intended by me, either to himself or Mr. Whitton; and if I have thus inadvertently committed any breach of official etiquette, or unknowingly or unintentionally transgressed the rules of the Service, I beg most respectfully to apologize for it.

I am constrained to remark that, on reading Mr. Whitton's evidence, I was both surprised and pained to find that he should have gone, in the manner he did, before a Select Committee of the Legislative Assembly, and make statements which were calculated to throw discredit upon my evidence, only an hour after telling me that he saw nothing objectionable in that evidence.

After such conduct as this, it cannot be a matter of surprise that I took the only means at my command to defend myself; for it must be borne in mind that I was not the aggressor. I neither criticised Mr. Whitton's evidence nor made an attack upon him, but simply defended myself against his accusations, and this he terms an act of gross insubordination!

It would be a fearful thing indeed if every subordinate officer in the Government Service, when called upon to give evidence before a Select Committee of the Legislative Assembly, were to be subjected to the chances of such treatment from their superior officer, because they might have expressed opinions adverse to his own.

I wish to observe that, in the communication which I addressed to the Chairman of the Committee I made no request to him of any kind whatever respecting it, but left it to his own judgment to deal with as he thought proper; and in making such communication I disavow all intention of any ill feeling towards Mr. Whitton; it was simply written—being the only means I had—to correct any erroneous impression which Mr. Whitton's remarks on my evidence might have made on the Committee.

I have now stated truly and impartially all the principal facts in the case simply as they occurred; and in doing so I have withheld nothing that might militate against myself, nor have I used any expressions which could reasonably give offence, for I wish to observe that from the first I had no other object in view than to defend my character and reputation from the suspicions which I conceived had been cast upon me.

I am fully aware of the absolute necessity there exists for maintaining complete subordination in all departments of the Government Service; and I am also fully aware that to obtain such subordination it is equally necessary that a proper degree of courtesy should be observed by any superior to his subordinate, as well as from the subordinate to the superior; and that the latter, from his position, is not entitled to treat his subordinate in such a manner as to provoke in him a spirit of rebellion and insubordination.

I have occupied a position next to Mr. Whitton in the service of this Government and in this department for about fourteen years; and I think Mr. Whitton will admit that during the whole of that time I have never on any occasion shown him disrespect; and had he treated me on this occasion with the same degree of courtesy which I have invariably observed towards him, this matter could not have occurred.

In conclusion, I may observe I have endeavoured to render the subject as intelligible and plain as I possibly could; and I now leave the matter for the consideration of the Honorable the Minister for Public Works.

To Mr. Whitton's remarks under dates of April 14th and 25th respectively I have made and send herewith a separate reply.

WILLM. MASON. 12/7/70.

THE SECRETARY FOR PUBLIC WORKS TO W. MASON, ESQ.

70/2609. 70/767.

Department of Public Works,
Railway Branch,
Sydney, 2 August, 1870.

SIR,

I have the honor to acknowledge the receipt of your reply to my Minute of the 11th ultimo, in which I expressed my opinion of the course pursued by you in reference to the evidence given by the Engineer-in-Chief for Railways, before the Select Committee of the Legislative Assembly on the subject of Railway Extension.

2. In reply, I have to state that I accept your apology, and your expression of deep regret that you should have done anything that appeared disrespectful to me, as head of the department, coupled with your assurance that no disrespect of any form or kind whatever was intended by you, either to myself or Mr. Whitton.

3. I observe that you distinctly disavow all intention of any ill-feeling towards Mr. Whitton; but I regret to find this disavowal accompanied with certain remarks written in a tone and style which are unseemly in a subordinate, to the Chief Officer of the Railway Branch, his immediate superior.

MR. WHITTON'S MINUTE ON MR. MASON'S REPLIES OF 12 JULY, 1870.

The Honorable the Minister for Public Works having accepted Mr. Mason's apology for a gross act of insubordination, I have only to observe that I have neither time nor inclination to reply to his pamphlet written in his defence.

I have not even read the document, nor do I intend to do so, unless the papers be called for by Parliament.

If this be done, I reserve to myself the right of replying to Mr. Mason's paper; and I shall ask that my reply be laid on the Table of the Assembly with the other papers belonging to this matter.

J.W., 3/8/70.

Commissioner, 3/8/70. Seen.—J.S., 4/8/70.

No. 11.

MINUTE OF THE COMMISSIONER FOR RAILWAYS TO MR. WHITTON.

As this correspondence has now been called for by Parliament, Mr. Mason's communications of 12 July last may be forwarded to Mr. Whitton for reply, as requested by that gentleman in his Minute of 3rd August last.—J.S., 10/10/70.

MR. WHITTON'S REPLY.

I have to acknowledge the courtesy of the Commissioner in forwarding to me, as requested in my Memo., 3/8/70, Mr. Mason's replies to my letters. I have now cursorily glanced over them, but I see nothing in them which would justify the waste of time a reply would necessitate. The facts relating to the matters in dispute are all given in my letters, and I have no desire to revise Mr. Mason's opinions.—J.W., 28/10/70.

Commissioner, 28/10/70.

Seen. Proceed with the copying for Parliament.—J.S., 1/11/70.

No. 12.

THE ENGINEER-IN-CHIEF TO W. MASON, ESQ.

70/320.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 4 August, 1870.

Memorandum to Mr. Mason.

ACTING upon instructions I have received from the Honorable the Minister for Public Works, I have to direct Mr. Mason to make immediate arrangements for leaving Sydney and taking charge of the trial surveys between Wagga Wagga and Albury.

Mr. Mason's first duty will be to explore the country, and determine upon a line to be surveyed and levelled. This must be done before any surveyors are sent into the field; and on Mr. Mason reporting to me that the exploration of this length is completed, I will send up a staff of surveyors to proceed with the work.

Having completed the examination of this portion of the line, Mr. Mason must connect it, at the most convenient point, with the former trial survey which was made from Goulburn to the Murrumbidgee, and also examine the whole of the country through which this survey was made, as far north as Yass, with a view to improving the section. This length will also have to be relevelled after the necessary deviations have been decided upon. The plans to be plotted to a scale of 10 chains to an inch, and the sections to scales of 10 chains to an inch and 100 feet.

The flood-levels to be accurately ascertained, and every inquiry made as to quality of the timber in the neighbourhood, its suitability for railway purposes, and cost. Similar information must be obtained with reference to stone, bricks, and ballast.

Progress reports to be forwarded fortnightly to this office.

JOHN WHITTON.

No. 13.

W. MASON, Esq., to THE ENGINEER-IN-CHIEF FOR RAILWAYS.

70/5.

Government Railways,
Engineer-in-Chief's Branch,
6 August, 1870.

Memorandum to Engineer-in-Chief.

I HAVE to acknowledge the receipt of memorandum dated 4th instant, directing me to proceed immediately to explore the country between Wagga Wagga and Albury, for the purposes of railway extension.

I wish to remind the Engineer-in-Chief that in July, 1867, I was directed to undertake a similar duty in exploring the country between Goulburn and the Murrumbidgee, and at that time I expressed great doubt as to my physical ability to undertake a duty so severe and laborious; but the work at that time being urgent, and no one else to undertake the duty, I undertook it, at great risk to the injury of my health; and the Engineer-in-Chief will no doubt remember that it nearly proved fatal to me; having been compelled to return home in consequence of severe illness, which was caused by the severe and laborious nature of the duties I had to perform.

At the present time I feel fully conscious of my physical incapacity to perform the laborious duties in connection with the exploration of the country; but notwithstanding this, and being desirous to carry out the wishes of the Honorable the Minister for Public Works and those of the Engineer-in-Chief, I consulted my medical adviser as to the prudence of my attempting to undertake this duty, and he has advised me not to attempt it, as it would be highly injurious to my health. I enclose a certificate to that effect from the medical gentleman referred to.

Under these circumstances, I therefore most respectfully ask that the subject may be reconsidered; and, if I may be allowed to do so, I can point out another way in which my services would be equally available and efficient in carrying out this work, and without the same risk of injury to my health which the present proposal involves.

I am engaged at present collecting and preparing the maps, sections, &c., which might be required for this work.

WILLM. MASON.

[Enclosure.]

THIS is to certify that Mr. Wm. Mason, Chief Assistant Engineer, is under my professional care, and has been so for some months past. He has suffered much from derangement of the digestive organs, and therefore requires to be very particular in the kind of food which he takes.

In my opinion his health would be much injured by a rough out-door life, where of course it would be impossible to pay that attention to his diet which the nature of the case demands.

Hyde Park, Sydney,
August 6th, 1870.P. SYDNEY JONES,
M.D. (London).

As Mr. Mason has forwarded a medical certificate stating that he is physically incapable of discharging his duties in this department, I have no other course left than to advise that his case be laid before the Civil Service Superannuation Commissioners, with a view to his retirement from the Public Service.—J.W., 9/8/70.

Commissioner, 9/8/70.

No. 1.

THE UNDER SECRETARY FOR PUBLIC WORKS TO THE ENGINEER-IN-CHIEF FOR RAILWAYS.

Department of Public Works,
Sydney, 1 June, 1869.

SIR,

I am directed by the Honorable the Secretary for Public Works to inform you that, upon his recommendation, made with a view to a rearrangement of the Existing Lines Branch of the Railway Department, His Excellency the Governor, with the advice of the Executive Council, has approved of Mr. J. H. Thomas being relieved of the duties pertaining to the office of the Engineer for Existing Lines and Locomotive Superintendent, and Mr. Thomas has been apprised that his appointment in that capacity ceases from to-day.

He has been instructed to hand over to you all papers and documents relating to this office.

2. I am further to inform you that His Excellency and the Council have requested you to undertake the duties connected with these branches, in addition to your present duties as Engineer-in-Chief for Railways.

I have, &c.,
JOHN RAE.

No. 2.

THE ENGINEER-IN-CHIEF TO THE UNDER SECRETARY FOR PUBLIC WORKS.

69/2129. 69/215.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 4 June, 1869.

SIR,

I have the honor to acknowledge the receipt of your letter of the 1st instant, informing me that His Excellency the Governor, with the advice of the Executive Council, has requested me to undertake the duties pertaining to the office of Engineer for Existing Lines and Locomotive Superintendent, in addition to my present duties as Engineer-in-Chief for Railways.

In compliance with this request, I have to state that I accept these additional duties; and, with a view to carry out the expressed wishes of the Honorable the Minister for Public Works for retrenchment, it is my intention to discharge them without increasing the present staff of this department.

I propose that Mr. Mason take charge of the maintenance of the permanent way and works on all the lines, North, West, and South. The locomotive departments I will superintend myself.

As the supervision of these departments will involve a large amount of responsibility and extra labour, which are undertaken without any increase in salary, I propose that an allowance of £150 per annum be made to Mr. Mason, and £100 to myself, to meet the expenses which will necessarily be incurred in the discharge of these additional duties.

Great inconvenience has already been caused by the limited office accommodation, and, to carry out the increased duties of this department, additional rooms are absolutely necessary.

I have, &c.,
JOHN WHITTON.

No. 3.

THE ENGINEER-IN-CHIEF TO THE COMMISSIONER FOR RAILWAYS.

70/490. 11-2-70. 70/50.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 11 February, 1870.

MINUTE-PAPER.—Superintendence of permanent way and works.

ON the 1st June last I had the honor to receive a communication informing me that His Excellency the Governor, with the advice of the Executive Council, had requested me to undertake the duties pertaining to the office of the Engineer for Existing Lines and Locomotive Superintendent, in addition to my duties as Engineer-in-Chief for Railways.

In reply to this request, I accepted the additional duties, and made certain recommendations, in my letter of the 4th June, for the purpose of carrying out the wishes of the Government.

Up to the present time no action, so far as I know, has been taken on this letter, and I now ask to withdraw it and substitute the following recommendations:—

- 1st. That Mr. Mason be relieved from the duties relating to the superintendence of the permanent way and works, which occupy a considerable portion of his time, so that his attention may be entirely devoted to the trial surveys for the proposed extensions.
- 2nd. That Mr. Bewick, who has now charge of the works and permanent way on the Northern Line, take charge of the maintenance of permanent way and works on the Southern, Western, and Richmond Railways, in addition to his present duties.
- 3rd. That in consequence of taking these additional duties his salary be increased from £400 to £600 per annum; the latter sum to include all expenses he may incur in travelling to and from the north, and in attending to his duties generally.
- 4th. That as no allowance has been made to Mr. Mason for expenses incurred since June last, whilst superintending the maintenance of the permanent way and works on the Southern and Western Railways, I advise that an allowance, at the rate of £6 per month, be paid him for expenses incurred on the two lines, instead of the amount recommended by me for the three lines—North, West, and South.

I propose that Mr. Bewick take charge of these lines on the 1st March next.

JOHN WHITTON.

No. 4.

THE ENGINEER-IN-CHIEF to THE COMMISSIONER FOR RAILWAYS.

Department of Public Works,
Railway Branch, Engineer's Office,
Sydney, 26 April, 1870.

70/1460.

MINUTE-PAPER.—Superintendence of permanent way and works, G. S. W. & R. Railways.

I DESIRE to draw the Commissioner's attention to the absolute necessity of appointing a thoroughly efficient officer to superintend, under my direction, the maintenance of the permanent way and works on the Southern, Western, and Richmond Railways.

The length of line now opened for traffic is 244 miles, upon which there are many important structures requiring constant inspection, in addition to the inspection of the permanent way, station buildings, road approaches, &c.

The officer in charge of this department should give his whole time to the duties of the office, and be daily over some portion of the line,—not only to see that the works are in good order, but that no more men are employed than absolutely necessary for the maintenance of the lines.

The amount yearly expended in repairs is about £40,000; and with such an expenditure the best possible supervision should be obtained, and every exertion used, to combine the greatest efficiency with the most rigid economy.

I know only one man at present disengaged in this Colony who I believe to be specially fitted for this appointment; but whether he would accept the office at such a salary as the Government might feel disposed to give I cannot say.

I allude to Mr. Wakeford, who has not only had great experience on railways and in the construction of public works generally, but combines in an eminent degree great decision of character, sound judgment, and indomitable energy.

I make this recommendation with the most solemn conviction that such an appointment is absolutely necessary, not only to provide to the fullest possible extent for the public safety, but for the economical maintenance of the lines I have named.

I have written this without consulting Mr. Wakeford, but I think it possible he might accept the office, at a salary of from £600 to £700 per annum.

JOHN WHITTON.

P.S.—I omitted to explain, with reference to my recommendation of the 11th February last, for the appointment of Mr. Bewick to this office, that before making that suggestion I saw Mr. Bewick, and he agreed to take the duties. About a week ago I sent for him from Newcastle, and requested him to undertake the maintenance of these lines in addition to those in the north. He expressed his perfect willingness to do so, but at the same time informed me that he was afraid that he would find himself physically incapable of performing them. I had therefore no alternative but to make another recommendation.—J.W.

No. 5.

MINUTE OF THE SECRETARY FOR PUBLIC WORKS.

Mr. Wakeford to be appointed, at a salary of five hundred pounds per annum, and paid from the Contingent Vote, and salary placed on the Estimates for next year.—J.S., 11/8/70.

Mr. Whitton to note and return.—B.C., 19/8/70. C.A.G., *pro* Commissioner.

No. 6.

MINUTE OF THE ENGINEER-IN-CHIEF.

Mr. Wakeford has been verbally informed of his appointment, and he will commence his duties on the 1st September.

I suggest that his salary be paid out of the Vote for Working Expenses, instead of the Contingent Vote for extra assistance.—J.W., 22/8/70.

Commissioner.—22/8/70.

Approved.—J.S., 2/9/70.

A.D. 1866, 14th May. No. 123.

AN IMPROVED COMPOSITION FOR THE PURPOSE OF PRESERVING SHIPS' BOTTOMS, AND FOR OTHER ANALOGOUS PURPOSES.

LETTERS OF REGISTRATION to James Charlesworth and Charles Cooling Sharp, for an Improved Composition for the purpose of Preserving Ships' Bottoms, and for other analogous purposes.

[Registered on the 14th day of May, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain-General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS JAMES CHARLESWORTH, of Sandridge, in the Colony of Victoria, boatman, and CHARLES COOLING SHARP, of the same place, licensed victualler, have by their Petition humbly represented to me that they are the authors or designers of a certain invention or improvement in manufactures, that is to say, of an invention for "An improved composition for the purpose of preserving ships' bottoms, and for other analogous purposes," which is more particularly described in the specification hereunto annexed; and that they, the said Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteen Victoria, number twenty-four, and have humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said James Charlesworth and Charles Cooling Sharp, their executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said James Charlesworth and Charles Cooling Sharp, their executors, administrators, and assigns, the exclusive enjoyment and advantage thereof for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said James Charlesworth and Charles Cooling Sharp shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fourteenth day of May, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

An Improved Composition for the purpose of Preserving Ships' Bottoms, &c.

SPECIFICATION of JAMES CHARLESWORTH, boatman, and CHARLES COOLING SHARP, licensed victualler, both of Sandridge, in the Colony of Victoria, for an invention intituled "An improved composition for the purpose of preserving ships' bottoms, and for other analogous purposes."

Our invention is designed for the purpose of providing a more effective and economical preservative for metal or wood than any already known, and although principally adapted for the purpose of preserving ships' bottoms from the effects of exposure, in either salt or fresh water, is equally applicable as a preservative from the effects of exposure to the atmosphere, earth, or insects—thus, the inside of a vessel might be coated with our composition as a preservative in the case of iron from rust, and in the case of wood from insects; and a telegraph post might also be preserved by means of our invention.

Our composition consists of the following materials in substantially the following proportions:—One hundredweight of tallow, seventeen pounds of resin, and one hundredweight of new white lime. We first provide an iron pot or vessel of sufficient size, and put in the tallow first and then apply heat; when the tallow is melted we add the resin and stir up until it is dissolved, and we then add the new white lime (which must be crushed fine), and stir the whole up for about ten or fifteen minutes until the whole has become intimately admixed, when it is immediately ready for use.

The metal or wood to which it is to be applied should be cleansed from all foreign matter, and the brush used should have the hairs wide apart, to prevent the composition from clogging upon it; what is known as an ordinary whitewash brush would answer the purpose.

If our composition was required to be removed for the purpose of giving it a coat of fresh composition, or for any other purpose, it might be so removed by scraping in the ordinary way; but we should prefer to use heat either by a pan or otherwise passing over the surface, and then sweeping it with a stiff broom, after which a new coat could be put on.

We do not of course confine ourselves to the precise details here stated, such as the proportions of the different component parts of our composition, which might be varied without departing from the nature of our invention, although the proportions stated are those which we believe to be the most beneficial; neither do we confine ourselves to the thickness or number of the coats of our composition which are to be used, but we consider one coat of about the thickness of a sixteenth of an inch to be sufficient for all ordinary purposes.

What we claim is, the combination of tallow, resin, and new white lime in the manner and for the purposes substantially as herein described and explained.

In witness whereof we the said James Charlesworth and Charles Cooling Sharp have hereto set our hands and seals this twenty-fifth day of January, one thousand eight hundred and sixty-six.

This is the mark of

X
JAMES CHARLESWORTH.
CHAS. C. SHARP.

The said James Charlesworth, being unable to write, set his }
mark and seal to this specification (after the same was }
truly read over to him by me) in my presence,—

EDWD. WATERS, Melbourne, Patent Agent.

This is the specification referred to in the annexed Letters of Registration, granted to James Charlesworth and Charles Cooling Sharp this fourteenth day of May, 1866.

JOHN YOUNG.

REPORT.

Sydney, 20 March, 1866.

SIR,

In compliance with your request we have examined the specification of Messrs. Charlesworth and Sharp, for an "Improved composition for the purpose of preserving ships' bottoms, and for other analogous purposes"; and we have the honor to report that we see no objection to Letters of Registration being granted, as desired.

We have, &c.,

J. SMITH.
E. O. MORIARTY.

THE HONORABLE
THE COLONIAL SECRETARY.

A.D. 1866, 14th May. No. 124.

IMPROVEMENTS IN STAMPING MACHINERY FOR CRUSHING PURPOSES.

LETTERS OF REGISTRATION to Arthur Hope, for Improvements in Stamping Machinery for Crushing Purposes.

[Registered on the 14th day of May, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS ARTHUR HOPE, of Prahran, near Melbourne, in the Colony of Victoria, engineer, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, "Of an invention for improvements in stamping machinery for crushing purposes," which is more particularly described in the specification and paper of drawings hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said Arthur Hope, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said Arthur Hope, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Arthur Hope shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fourteenth day of May, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

Improvements in Stamping Machinery for Crushing Purposes.

SPECIFICATION of Arthur Hope, of Prahran, near Melbourne, in the Colony of Victoria, engineer, for an Invention intituled "Improvements in stamping machinery for crushing purposes."
My invention consists in such an arrangement of stamps that some shall act as preparatory crushers before the material passes under the crushers proper, and also in the disposing of machinery necessary to carry out such arrangement.

I propose in the first instance to make the stamp boxes of sufficient width to allow of a double row of stamps being worked in them; the front row (or crushers proper), as ordinarily used, having conjointly a larger bearing surface than the back (or preparatory) crushers. This may be accomplished either by making the front stamps of a larger diameter than the others, or by increasing their number; and consequently the front or discharge side of the stamp boxes would require to be longer than the back or feeding side.

There may be more than two rows of stamps if so desired (in which case the boxes would have to be made as wide as necessary), and those in one row might vary in size or weight from those in the others, and may be driven quicker or slower, one than the other, as might be found beneficial; and my invention is adapted for either round or square stamps, rotatory or otherwise.

When rotatory stamps are used I think it preferable that the front row of stamps should rotate in an opposite direction to those immediately behind them.

In the accompanying drawings, figure 1 represents a cross sectional elevation of a battery of rotatory stamps; figure 2 shows a front view of the stamp heads (in their respective positions when at work) in the stamp box, with the front of the stamp box removed to show them; and figure 3 shows a plan of the stamp box.

Figure 4 shows a cross sectional elevation of a battery of square stamps, showing the method of driving same; and figure 5 is a plan of the stamp box.

A are the front stamps of a rotatory battery, and B are the back ones, C is the false bottom, D the feed, E the cam for driving the front stamps fastened on to shaft *e*, and E' the cam for driving the back ones fastened on to shaft *e'*; F are the ordinary discs, and the two circular lines G H indicate the position and size of two wheels gearing into one another for the purpose of driving the back row of stamps in an opposite direction to those in front, that marked H being connected to the main driving shaft, from which the motive power is communicated by an ordinary clutch, or any other approved means. I is the stamp box.

Figures 4 and 5 refer to square stamps; J are the front stamps; K the back ones; L the false bottom; M the feed; N the stamp box.

There are various details, which it is evident might be varied without departing from the nature of my invention; for instance, the back and front stamps might be made varying in weight, and driven at different rates of speed; the false bottoms under the back stamps might be made higher than those under the front ones; and the stamp boxes might discharge on as many sides as might be preferred, therefore I do not confine myself to the precise details here set forth, although I prefer to use the arrangement shown in figures 1, 2, and 3.

What I claim as my invention is,—

- 1st. The working of two or more rows of stamps in one box, so that some shall act as preparatory crushers; and
- 2ndly. The arrangement for working a double row of stamps substantially as herein described and explained.

In witness whereof I, the said Arthur Hope, have hereto set my hand and seal this twenty-sixth day of January, one thousand eight hundred and sixty-six.

ARTHEUR HOPE.

This is the specification referred to in the annexed Letters of Registration, granted to Arthur Hope this fourteenth day of May, 1866.

JOHN YOUNG.

REPORT.

Sydney, 26 March, 1866.

SIR,

We have the honor to report, for the information of the Honorable the Chief Secretary, that we see no objection to Letters of Registration being issued to Mr. Arthur Hope for his invention "For improvements in stamping machinery for crushing purposes," as set forth in his specification and plans forwarded to us under B.C. by the Under Secretary for Works, 23rd instant.

We have, &c.,

THE UNDER SECRETARY
FOR PUBLIC WORKS.

JOHN WHITTON.
E. O. MORIARTY.

**AN INVENTION FOR SEPARATING QUICKSILVER FROM GOLD AND SILVER
AND OTHER AMALGAM.**

LETTERS OF REGISTRATION to Charles James Stevens, for an Invention for
Separating Quicksilver from Gold and Silver and other Amalgam.

[Registered on the 14th day of June, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS CHARLES JAMES STEVENS, of Waverley, in the Colony of New South Wales, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention for "Separating quicksilver from gold and silver and other amalgam," which is more particularly described in the specification and paper of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said Charles James Stevens, his

Invention for Separating Quicksilver from Gold and Silver and other Amalgam.

executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said Charles James Stevens, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Charles James Stevens shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twelfth day of June, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

SPECIFICATION of an invention for separating quicksilver from gold and silver and other amalgam, as represented by the drawings hereunto annexed.

THE particulars of such invention are as follows:—An iron tube (figure *a*), which may be of any length to suit the pressure required, securely fixed to a horizontal receiver (figure *b*), which may be of any size required for the quantity of amalgam to be operated upon. There is an opening on one or both sides of the receiver, of about three inches in diameter (figure *c*), which is covered with soft leather or other porous material, through which the mercury is forced, and the leather is fastened to the receiver by doors (*dd*) screwed on by bolts and nuts. And that which is claimed is, the invention of the application of the pressure obtained by means of a column of mercury, vertical or otherwise, for the purpose of forcing the same through leather or any other porous substance, and thereby separating any metals or other foreign substance held either in mechanical or chemical suspension therein.

This is the specification referred to in the annexed Letters of Registration, granted to Charles James Stevens this twelfth day of June, 1866.

JOHN YOUNG.

REPORT.

Sydney, 12 April, 1866.

SIR,

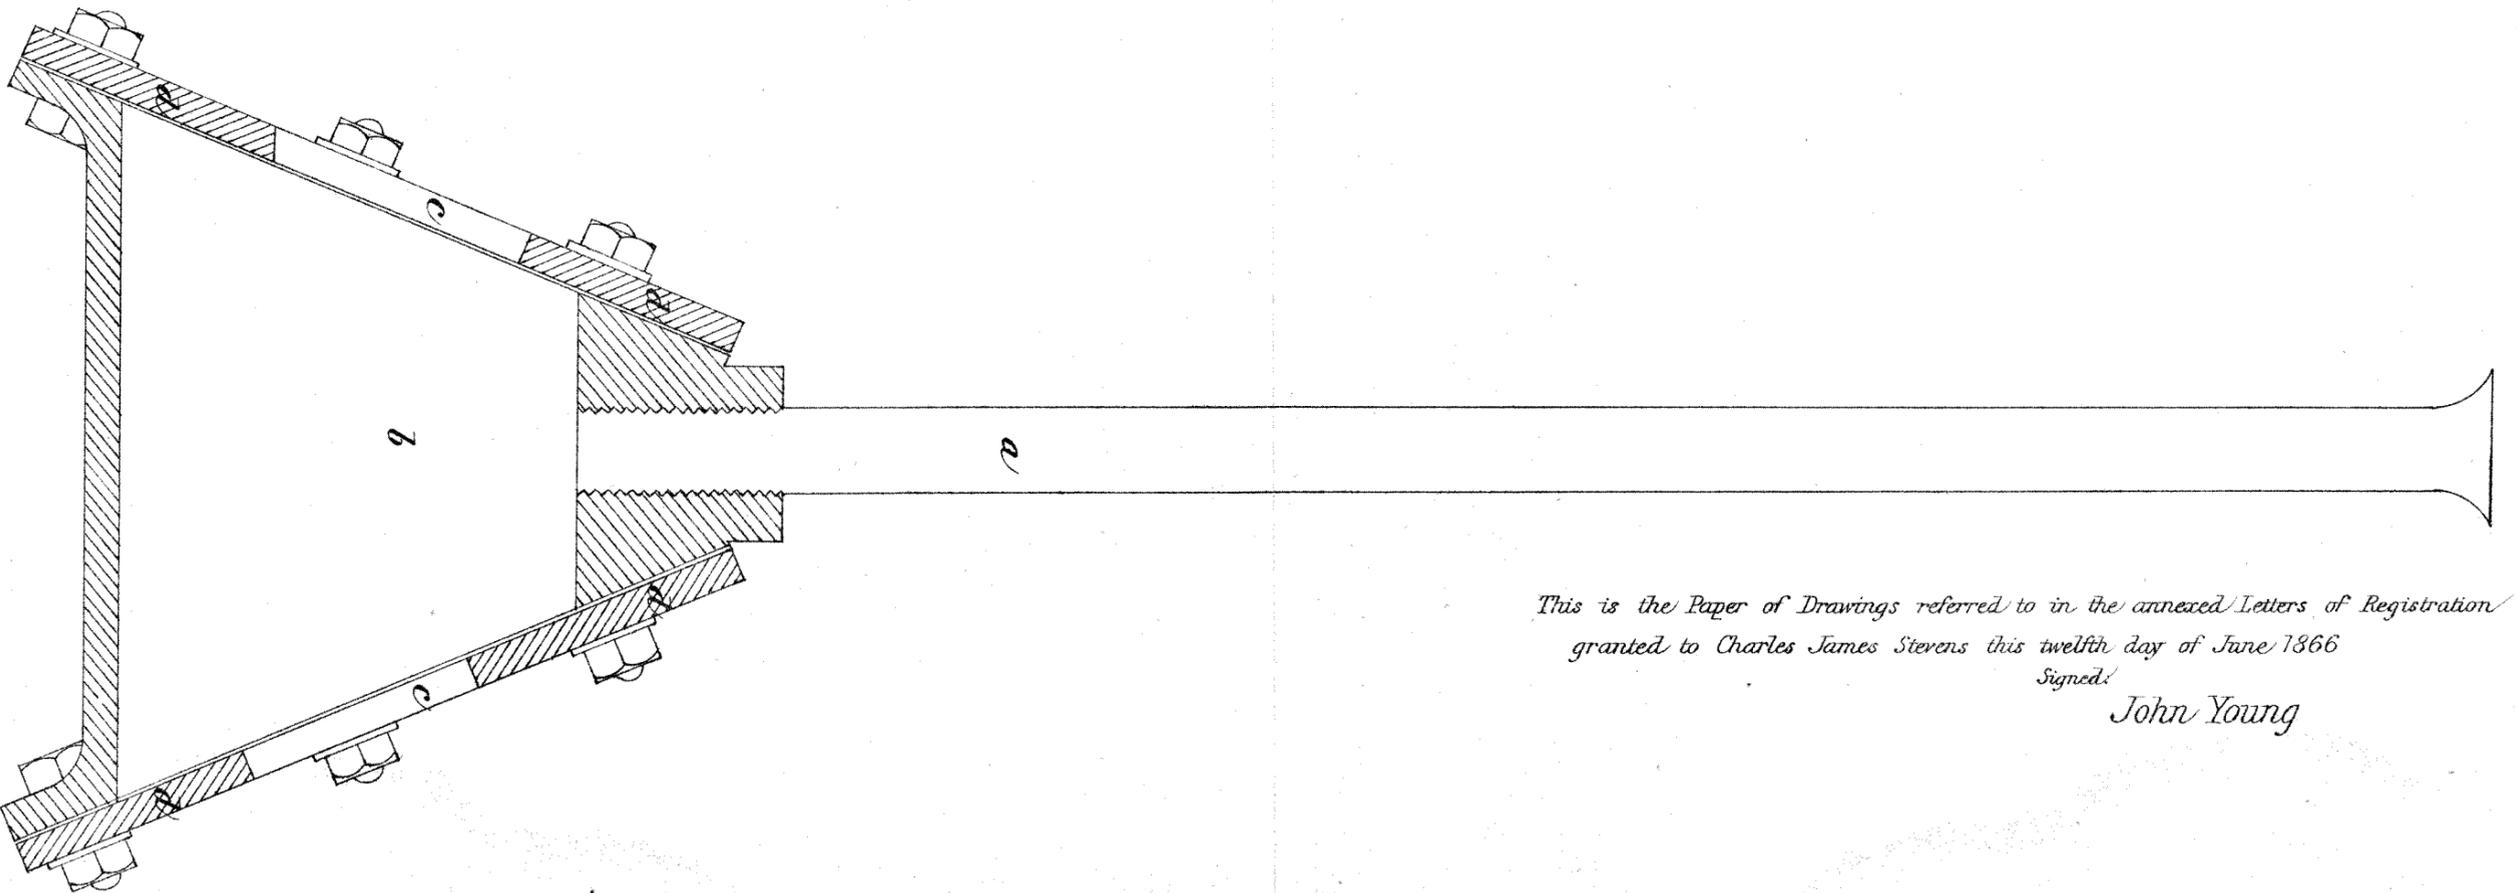

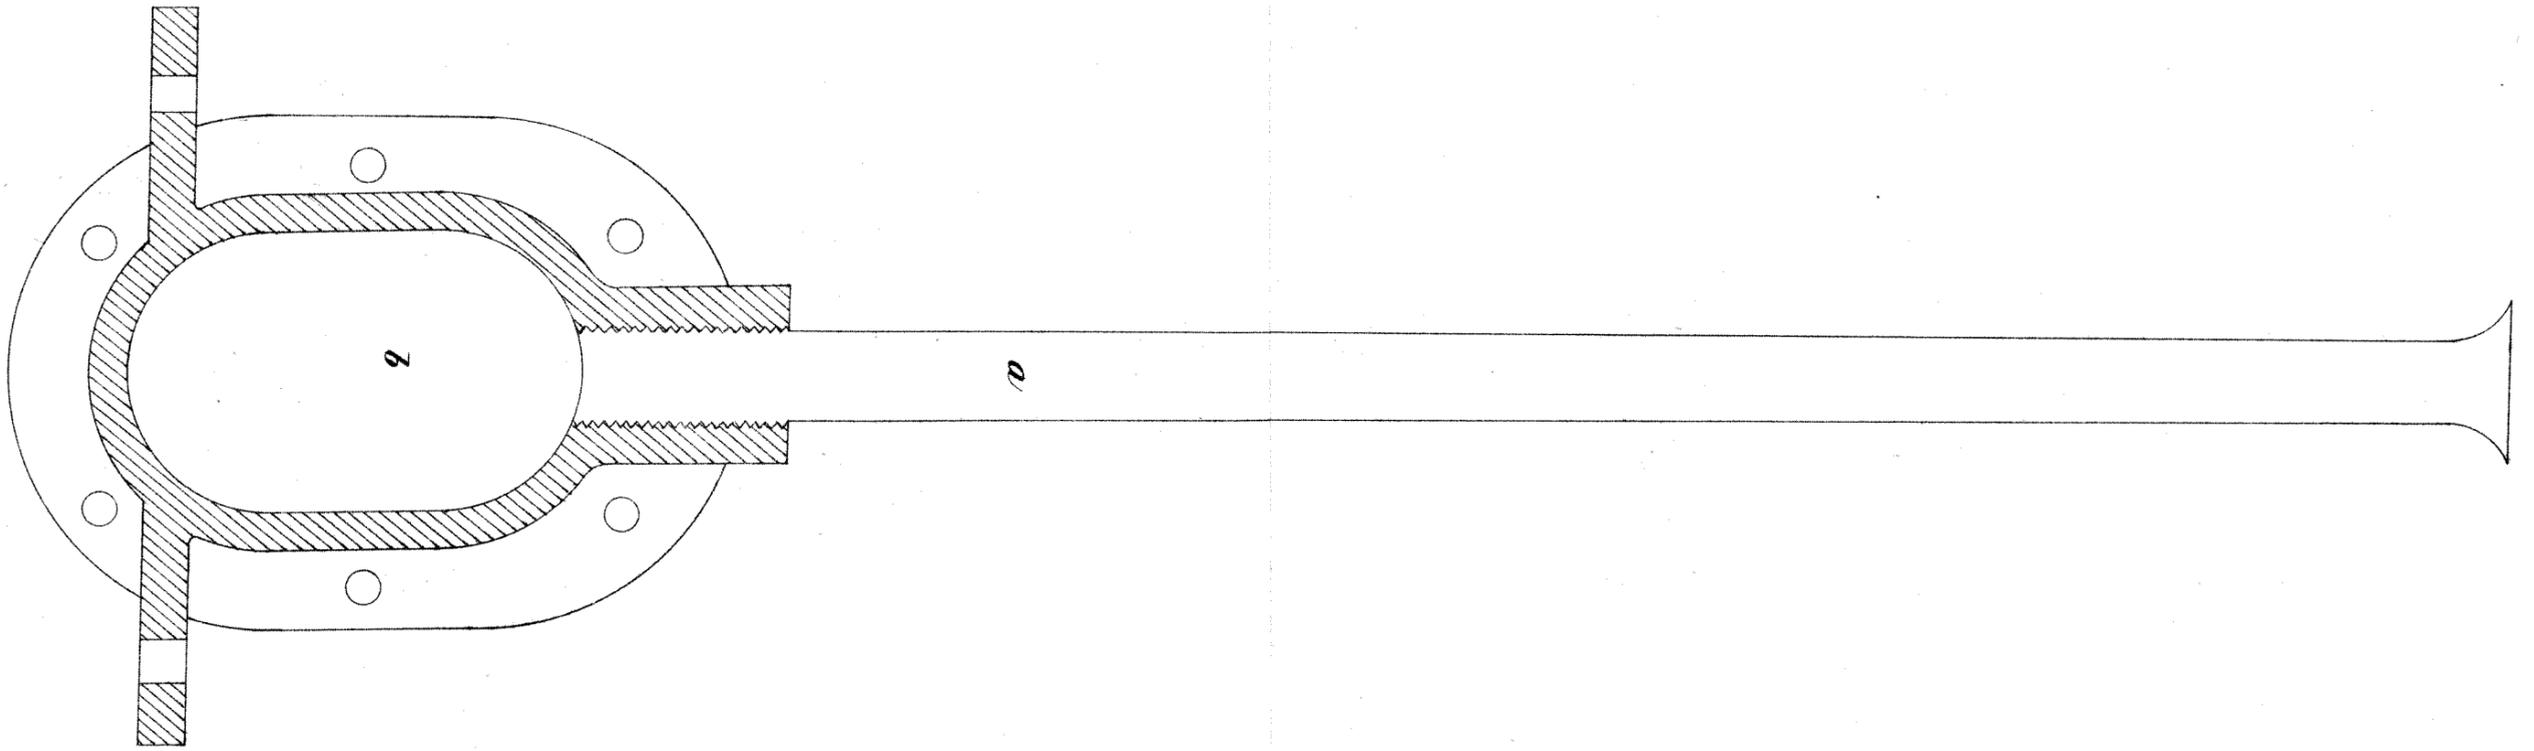

In compliance with your request we have examined the specification, drawing, and model accompanying Mr. Charles James Stevens' application for Letters of Registration for an "Invention for separating quicksilver from gold and silver and other amalgam;" and we have now the honor to report that we see no objection to Letters of Registration being granted, as desired.

We have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY.

JOHN WHITTON.
EDWARD BELL.

A.D. 1866, 18th June. No. 126.

**AN INVENTION OF A CERTAIN ARRANGEMENT OF MIRRORS OR
REFLECTORS.**

LETTERS OF REGISTRATION to George Case, for an Invention of a certain arrangement of Mirrors or Reflectors.

[Registered on the 20th day of June, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS GEORGE CASE, of Bourke-street, Melbourne, in the Colony of Victoria, musical composer, hath by his Petition humbly represented to me that he is the assignee of the author or designer of a certain invention or improvement in manufactures, that is to say, of an "Invention of a certain arrangement of mirrors or reflectors, whereby new and important results and effects are produced" which is more particularly described in the specification hereunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, 16th Victoria, No. 24 ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years : And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said George Case, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said George Case, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended : Provided always, that if the said George Case shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony, at Government House, Sydney, in New South Wales, this eighteenth day of June, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

Arrangement of Mirrors or Reflectors.

SPECIFICATION.

CONSTRUCT a cabinet, chamber, or box of any size or dimensions, and of any material such as wood, zinc, iron, &c., having an aperture at the top or roof for the admission of lights, and supported on legs or wheels, so as to enable persons to see beneath the floor of the box, cabinet, apartment, or chamber, and that there is no communication or connexion between the same and the floor or ground on which it stands, save the said legs, wheels, or support. The entrance or door of the box, cabinet, or apartment, to consist of doors of wood or glass, or both combined, and hung on hinges. In the interior of the chamber and affixed to back wall or side thereof, and reaching from the floor to the ceiling, place two mirrors of glass, or any other substance capable of reflecting light, placing them in a vertical position within the box or chamber at an angle of forty-five degrees, or at any other angle, and one or both of these mirrors to be hung on movable hinges. The illumination of the interior of the box, chamber, or apartment, is obtained by the use of kerosene, paraffine oil, tallow, or any other illuminating substance burned in any appropriate lamp or other instrument, or by the use of gas or any other illuminating material, or by the ordinary sunlight. The interior of the box, cabinet, or chamber, then presents the appearance of being a square empty room, the angular projection of the mirrors not being perceivable from the front, nor are the mirrors themselves to be perceived, inasmuch as they merely reflect the side walls of the box, cabinet, or chamber, as the case may be, and seem to form a solid wall or side or back of the box, cabinet, or chamber. A person or lay figure is then placed in the box, cabinet, or chamber, in front of the projection and point of junction of the two mirrors or reflectors, and after being viewed by the spectators in front, the door of the box, cabinet, or chamber is closed, and the person, figure, or object in the same moves one or both of the mirrors, and goes in behind them, and the person or object previously concealed is then introduced in front of the mirrors; and on the door of the box or chamber being again opened, the illusion is produced of one person or object having apparently changed to another person or object.

This is the specification referred to in the annexed Letters of Registration, granted to George Case this eighteenth day of June, 1866.

JOHN YOUNG.

REPORT.

Sydney, 27 March, 1866.

SIR,

In compliance with your request we have examined the specification submitted by Mr. Geo. Case, "Of a certain arrangement of mirrors or reflectors, whereby new and important results and effects are produced, hitherto unknown," and we have the honor to report that we see no reason why Letters of Registration should not be granted as desired; but at the same time we would suggest that Mr. Case should be called upon to produce documentary evidence that he has obtained from the inventor the sole right to use the invention in this Colony.

THE HONORABLE
THE COLONIAL SECRETARY.

PATENT ROLLER AND ICE SKATE.

LETTERS OF REGISTRATION to George Selth Coppin, for a Patent Roller and Ice Skate.

[Registered on the 29th day of June, A.D. 1866, in pursuance of Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS GEORGE SELTH COPPIN, of Melbourne, in the Colony of Victoria, comedian, hath by his humble Petition represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention for "A patent roller and ice skate," which is more particularly described in the specification which is hereunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years : And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said George Selth Coppin, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said George Selth Coppin, his executors, administrators, and assigns, the exclusive enjoyment, and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended : Provided always, that if the said George Selth Coppin shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-ninth day of June, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

Patent Roller and Ice Skate.

SPECIFICATION.

TO ALL TO WHOM THESE PRESENTS SHALL COME, I, GEORGE SELTH COPPIN, of the Haymarket Theatre, in the City of Melbourne, send, greeting:

* Attached.

Know YE that the following is a specification of my invention intitled "A patent roller and ice skate," that is to say, the plan in the margin* hereof shows both the construction of the skate and the method of attaching the same to the foot. The skate is made upon a plate the shape of the foot, which acts upon a centre attached to an axle of cast iron, brass, or other suitable material, to which four box-wood wheels of about the proportion shown in the plan are fixed. The skates are guided to a mechanical certainty, by simply turning the foot-plate of the skate; and the skater is able to make a long or short curve by simply inclining the foot to the right or the left. An ordinary floor of wood, laid level and smoothed, may be the surface on which my skate can be used. The arrangement of fastening the skate to the foot is shown in the plan; there is a leather guard to the heel, with a strap to buckle across the upper part of the instep, and two other straps to cross the fore part of the foot, so that the skate may be made perfectly secure. I do not confine myself to the materials for the floor, upon which my skate may be used, but I claim as my invention the particular construction of the skate as herein described, and the method of using it as herein explained. My skate might also be adapted to real or to artificial ice.

And I do hereby declare the above to be a true description of my invention. In witness whereof I have hereunto set my hand and seal this ninth day of May, in the year of our Lord one thousand eight hundred and sixty-six.

GEO. COPPIN.

Declared at Melbourne, in the Colony }
of Victoria, this ninth day of May, }
in the year of our Lord one }
thousand eight hundred and sixty- }
six, before me,—

JOHNSON HICKS,

A Commissioner of the Supreme Court of the Colony of New South Wales, for taking Affidavits, &c.

This is the specification referred to in the annexed Letters of Registration, granted to George Selth Coppin this twenty-ninth day of June, 1866.

JOHN YOUNG.

[1 plan.]

REPORT.

Sydney, 22 May, 1866.

SIR,

In compliance with your request we have examined the specification of Mr. George Selth Coppin, for "A patent roller and ice skate"; and we have now the honor to report that we see no objection to Letters of Registration being granted for the same, as desired.

We have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY.

**INVENTION OR IMPROVEMENT IN MACHINERY FOR THE MANUFACTURE
AND IN THE MODE OF MANUFACTURING BOOTS AND SHOES.**

LETTERS OF REGISTRATION to James Vickery, for an Invention or Improvement in Machinery for the manufacture and in the mode of manufacturing Boots and Shoes.

[Registered on the 2nd day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS JAMES VICKERY, of Sydney, in the Colony of New South Wales, boot and shoe manufacturer, hath by his Petition humbly represented to me that he is the assignee of Albert Delfosse, of Sydney aforesaid, who is the author or designer of a certain invention or improvement in manufactures, that is to say, of an "Invention or improvement in machinery for the manufacture and in the mode of manufacturing boots and shoes," which is more particularly described in the specification and paper of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said James Vickery, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention

Invention or Improvement in the manufacture of Boots and Shoes.

invention or improvement, for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said James Vickery, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said James Vickery shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this thirty-first day of July, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

SPECIFICATION of certain inventions and improvements in machinery for the manufacture and in the mode of manufacturing boots and shoes.

1. An improved knife for cutting lifts for heels:—The improvement in the knife consisting in forming the bevel edges inside of the knife instead of outside, as heretofore practised, and also in using a regular set of knives to form the various thicknesses composing the heel of a boot or shoe. By reference to the annexed drawing it will be seen that the pieces of leather called lifts and top-pieces, cut with the improved knives (coloured pink, No. 1), will be of the same shape and bevel as the heel itself; and by using a regular set of knives, such lifts and top-pieces can be cut to form the heel of whatever shape or thickness may be required. It is also intended to use knives of any shape required, made on the same principle.

2. An improved method of forming heels by the use of metal moulds and dies:—The invention consists in constructing metal moulds and dies shaped to the exact form of the intended heel into these moulds, the lifts and top pieces cut with the knives abovementioned are placed, having been previously wetted and pasted. The mould is then placed in an eccentric or any other description of press fitted for the purpose; in the moving-table of the press are fitted the dies, fixed so as to fit into the moulds with a little clearance; the contents of the moulds are then submitted to the requisite amount of pressure to cause it to assume the proper shape and solidity. The bottom sides of the dies are curved, or otherwise shaped to the form intended to be given to the heel-leathers, on which the sole has to be fixed,—these leathers having been previously thinned or cut in the middle on a table of the description next hereinafter specified. The heels thus pressed into shape are of the proper size to be fixed on the boot or shoe, and are fastened on with wire nails riveted through the sole. The moulds and dies are shown in the annexed drawing, colored pink, No. 2.

3. A table for cutting heel leathers:—This invention consists of a table, fitted with an inclined arm, curved on the top, on which the heel leather is fixed by means of a claw worked by a foot-spring, and is shown in the annexed drawing, colored pink, No. 3.

4. Metal vices for finishing heels and soles:—This invention consists of vices fitted with powerful springs and jaws, the movable jaw being worked with a foot-lever. The vices can be varied in form to take in a shoe or a Napoleon boot, or any intermediate kind; the jaws are provided with pin centres, in which the heel revolves, as shown in annexed drawing, colored pink, No. 4. The vices for dressing and finishing soles are of similar construction, with long flat jaws, as shown in the annexed drawing, colored pink, No. 5.

5. An improved method of shaping, curving, and pressing soles and middle soles for boots and shoes:—The improvement consists in the use of moulds and dies, in which soles and middle soles are pressed into the required shape and curve to fit on the last. The moulds and dies are worked on a press in the same manner as the heel-moulds and dies, and are shown in the annexed drawing No. 6. One set of moulds for either soles or heels will do for all sizes, the bottom of the mould being smaller than the top. Whenever a larger size is required than the bottom of the mould will form, one or more pieces of flat iron, of the shape of the heel-pieces, is put in the bottom of the mould, thus raising the leather for the intended heel to a larger part of the mould, and giving the size required.

6. Improvements in the press:—

- (1.) In the mode of fixing the dies to the moving-table and the slide arrangements of the moulds, as shown in the annexed drawing, coloured pink, figure 8, letters AAA.

The first improvement is in the mode of fixing the heel-dies to the moving-table of the press, and in the arrangement of the slides for keeping the heel-moulds in their proper positions, shown on figures 2, 7, 8, distinguished by the letters A, marked on the drawing. The dies, provided with screw-studs with square shoulders, fitting into corresponding square holes in the lower plate of the moving-table, are secured in place with nuts with long T heads, marked A, as shown in the vertical section on the line A.B; the moulds, also marked A, are cast with projecting flanges to work into slide-bars or plates screwed to the fixed table or press, also distinguished by the letter A.

- (2.) The second improvement is the application of hand-levers, marked B, working in fulcrum screwed into the side-plates of the fixed table of press, for loosening the heels from the moulds; the moulds, by means of iron handles, having been placed over the slotted holes in the table, are kept in place by stops, also working in slotted holes, adjustable with nuts and screws, according to the size of heels under consideration. The manner of loosening the heels from the moulds is exhibited on the right hand side of vertical section, where one of the levers is shown as full down on the stop, fixed in such position as to allow the bent arm of the lever to loosen the heel in the mould; both levers are supplied with springs to keep them up when not in use.

(3.)

Invention or Improvement in the manufacture of Boots and Shoes.

(3.) The third improvement is an arrangement of spring lever-lifters for raising the heels from the moulds after having been loosened by the bent levers, BB, as above described. The spring lever-lifters, marked CC, work in fixed fulcra screwed into the moving-table of the press, the ends fitted with handles; the lifting rods, with sharp steel pointers, work in guides bolted to the moving-table, are depressed when required to remove the heels from the moulds, and when the pressure is removed from the handles the long springs lift up the heels in a finished state.

(4.) In attaching a sorting table,—

The above improvements are shown in the annexed drawing, coloured pink, figure 9.

Under this invention the soles and heels, cut as above described and pressed in the moulds, require very little finishing, the use of a hand knife being altogether unnecessary, and therefore all danger of cutting the upper leathers is avoided.

It is intended that both heels and soles shall be dressed in the vices before being put on the boots or shoes. The metal vices are also intended to be used for the final finishing.

7. Description of the boot and shoe rest:—The iron or brass rest for supporting the boots or shoes in the finishers will consist of a forked lever, whose arms are of unequal lengths; the boot or shoe rests on the short arm when it is intended to dress off, rasp, or otherwise finish the edges of the soles; but on the long arm, to finish off the toes. The rest is made adjustable to work on a screw-bolt, the bolt fitting into the finisher, as shown on figure 4; to secure the rest in the position required, it is screwed up tight by the lever-nut. The extremities of the arms are curved to fit the shape of the boot or shoe.

This is the specification referred to in the annexed Letters of Registration, granted to James Vickery this thirty-first day of July, 1866.

JOHN YOUNG.

REPORT.

Sydney, 22 June, 1866.

SIR,

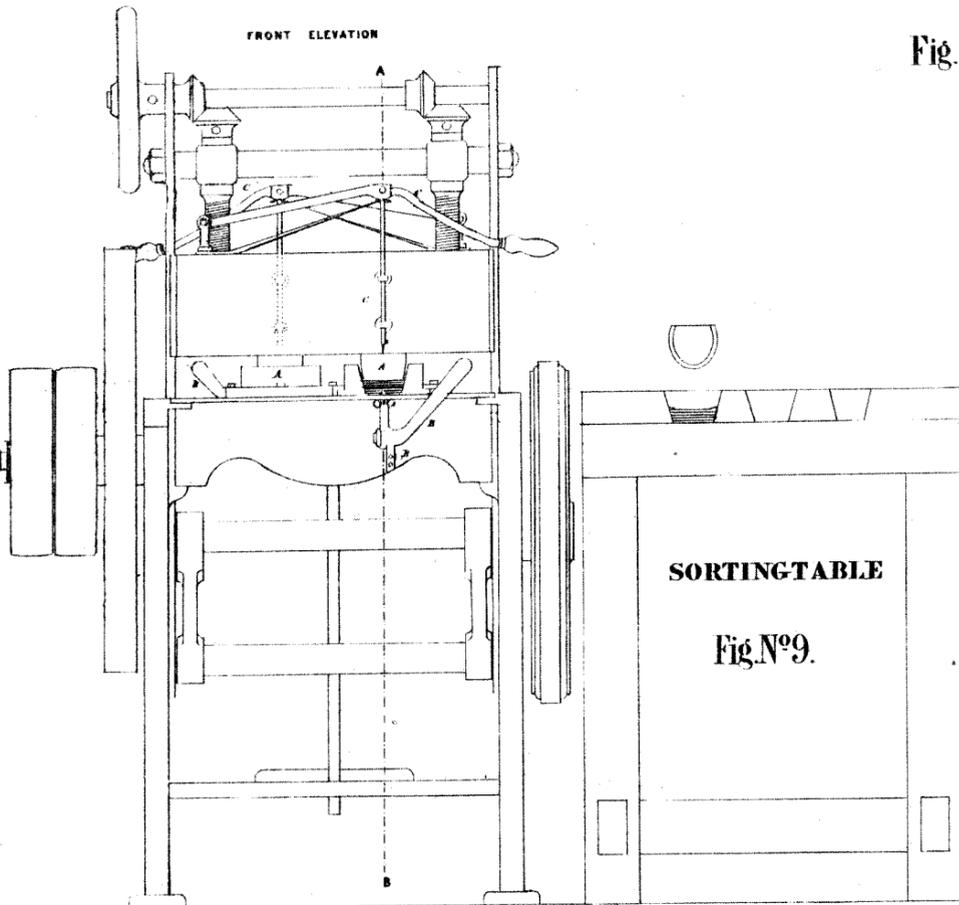

Having examined the application of the Petitioner, we have the honor to state, for the information of the Honorable the Colonial Secretary, that we see no reason why Letters of Registration should not be granted to Mr. James Vickery, as assignee of Albert Delfoss, "For inventions or improvements in machinery for the manufacture and in the mode of manufacturing boots and shoes."

**IMPROVEMENTS IN THE CONSTRUCTION OF MACHINES FOR DRESSING
AND CLEANSING ORES, &c.**

LETTERS OF REGISTRATION to Samuel Levy Bensusan, for Improvements
in the construction of Machines for dressing and cleansing Ores, &c.

[Registered on the 17th day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain-General and Governor-in-Chief of the Colony of New South Wales.

• TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS SAMUEL LEVY BENSUSAN, of Sydney, in the Colony of New South Wales, merchant, hath by his Petition humbly represented to me that he is the agent of Newell Vicary Squarey, of Sydney aforesaid, who is the author or designer of a certain invention or improvement in manufactures, that is to say, of an "Invention of certain improvements in the construction of machines for dressing and cleansing ores," and separating the heavier portion from the lighter by the combination and joint use of two parts previously in use, and by means of the employment of a constant stream of water for cleansing the ore and clearing the machine, and by a new process of skimming it, which is more particularly described in the specification, marked A, and the papers of drawings, marked B and C respectively, which are hereunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four, and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years : And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said Samuel Levy Bensusan, as such agent as aforesaid, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said Samuel Levy Bensusan, as such agent as aforesaid, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years

Improvements in the construction of Machines for dressing and cleansing Ores.

years from the date of these presents, next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Samuel Levy Bensusan, as such agent as aforesaid, shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fifteenth day of August, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

SPECIFICATION.

Bridge-street, Sydney,
12th February, 1866.

I CLAIM to be the author of a certain invention in the arts and manufactures, that is to say,—

For certain improvements in the construction of machines for dressing and cleaning ores, and separating the heavier portions from the lighter, by the combination and joint use of two machines, and by means of the employment of a constant stream of water for cleaning the ores, and clearing the machine, and by a new process of skimming it.

REFERENCE TO PLATES.

Plate 1.

A—Sketch of a table of iron or wood, having any required inclination, on the upper part of which the ore to be dressed is placed.

B—Wheels, as shown in side view, carrying a series of knives or rakes, C, which are drawn up the table, the knives being at an angle with the table. The ore is turned over, and removed further across the table at each stroke of the knife or rake. A continuous stream of water, passing down the table, washes away the lighter portions of the substances dressed into a machine, shown in plate 2; the heavier portion, having by each successive stroke been brought nearer to the side, is at length driven off the table into a cistern ready to receive it.

D, E, and F—Wheels and catches for elevating the knives.

G—Iron framework, in which the wheels travel.

H—Iron framework of machine.

Plate 2.

J represents table, as shown in plate 1.

K—table to convey the waste down into the jiggling hatches, LL.

LL—Jiggling hatches, into which a constant stream of water and waste ore is falling from the machine A.

MM—Troughs for conveying away the lighter portions of the ore not saved in LL.

NN—Tanks for catching the light and slime ore.

O—Plunger.

P—Power for driving the machine.

NEWELL VICARY SQUAREY.

By his irrevocable Attorney and sole Agent,

S. L. BENSUSAN.

This is the specification A, referred to in the annexed Letters of Registration, granted to Samuel Levy Bensusan this fifteenth day of August, 1866.

JOHN YOUNG.

REPORT.

Sydney, 23 June, 1866.

SIR,

In compliance with your request we have examined the application of Mr. S. L. Bensusan, for Letters of Registration for "Improvements in the construction of machines for dressing and cleaning ores." We have also obtained further explanations thereon from Mr. Bensusan, and we have now the honor to report that we see no objection to Letters of Registration being granted, as desired.

The delay in making this report has arisen from the necessity of seeing Mr. Bensusan on the subject, and from his absence from Sydney.

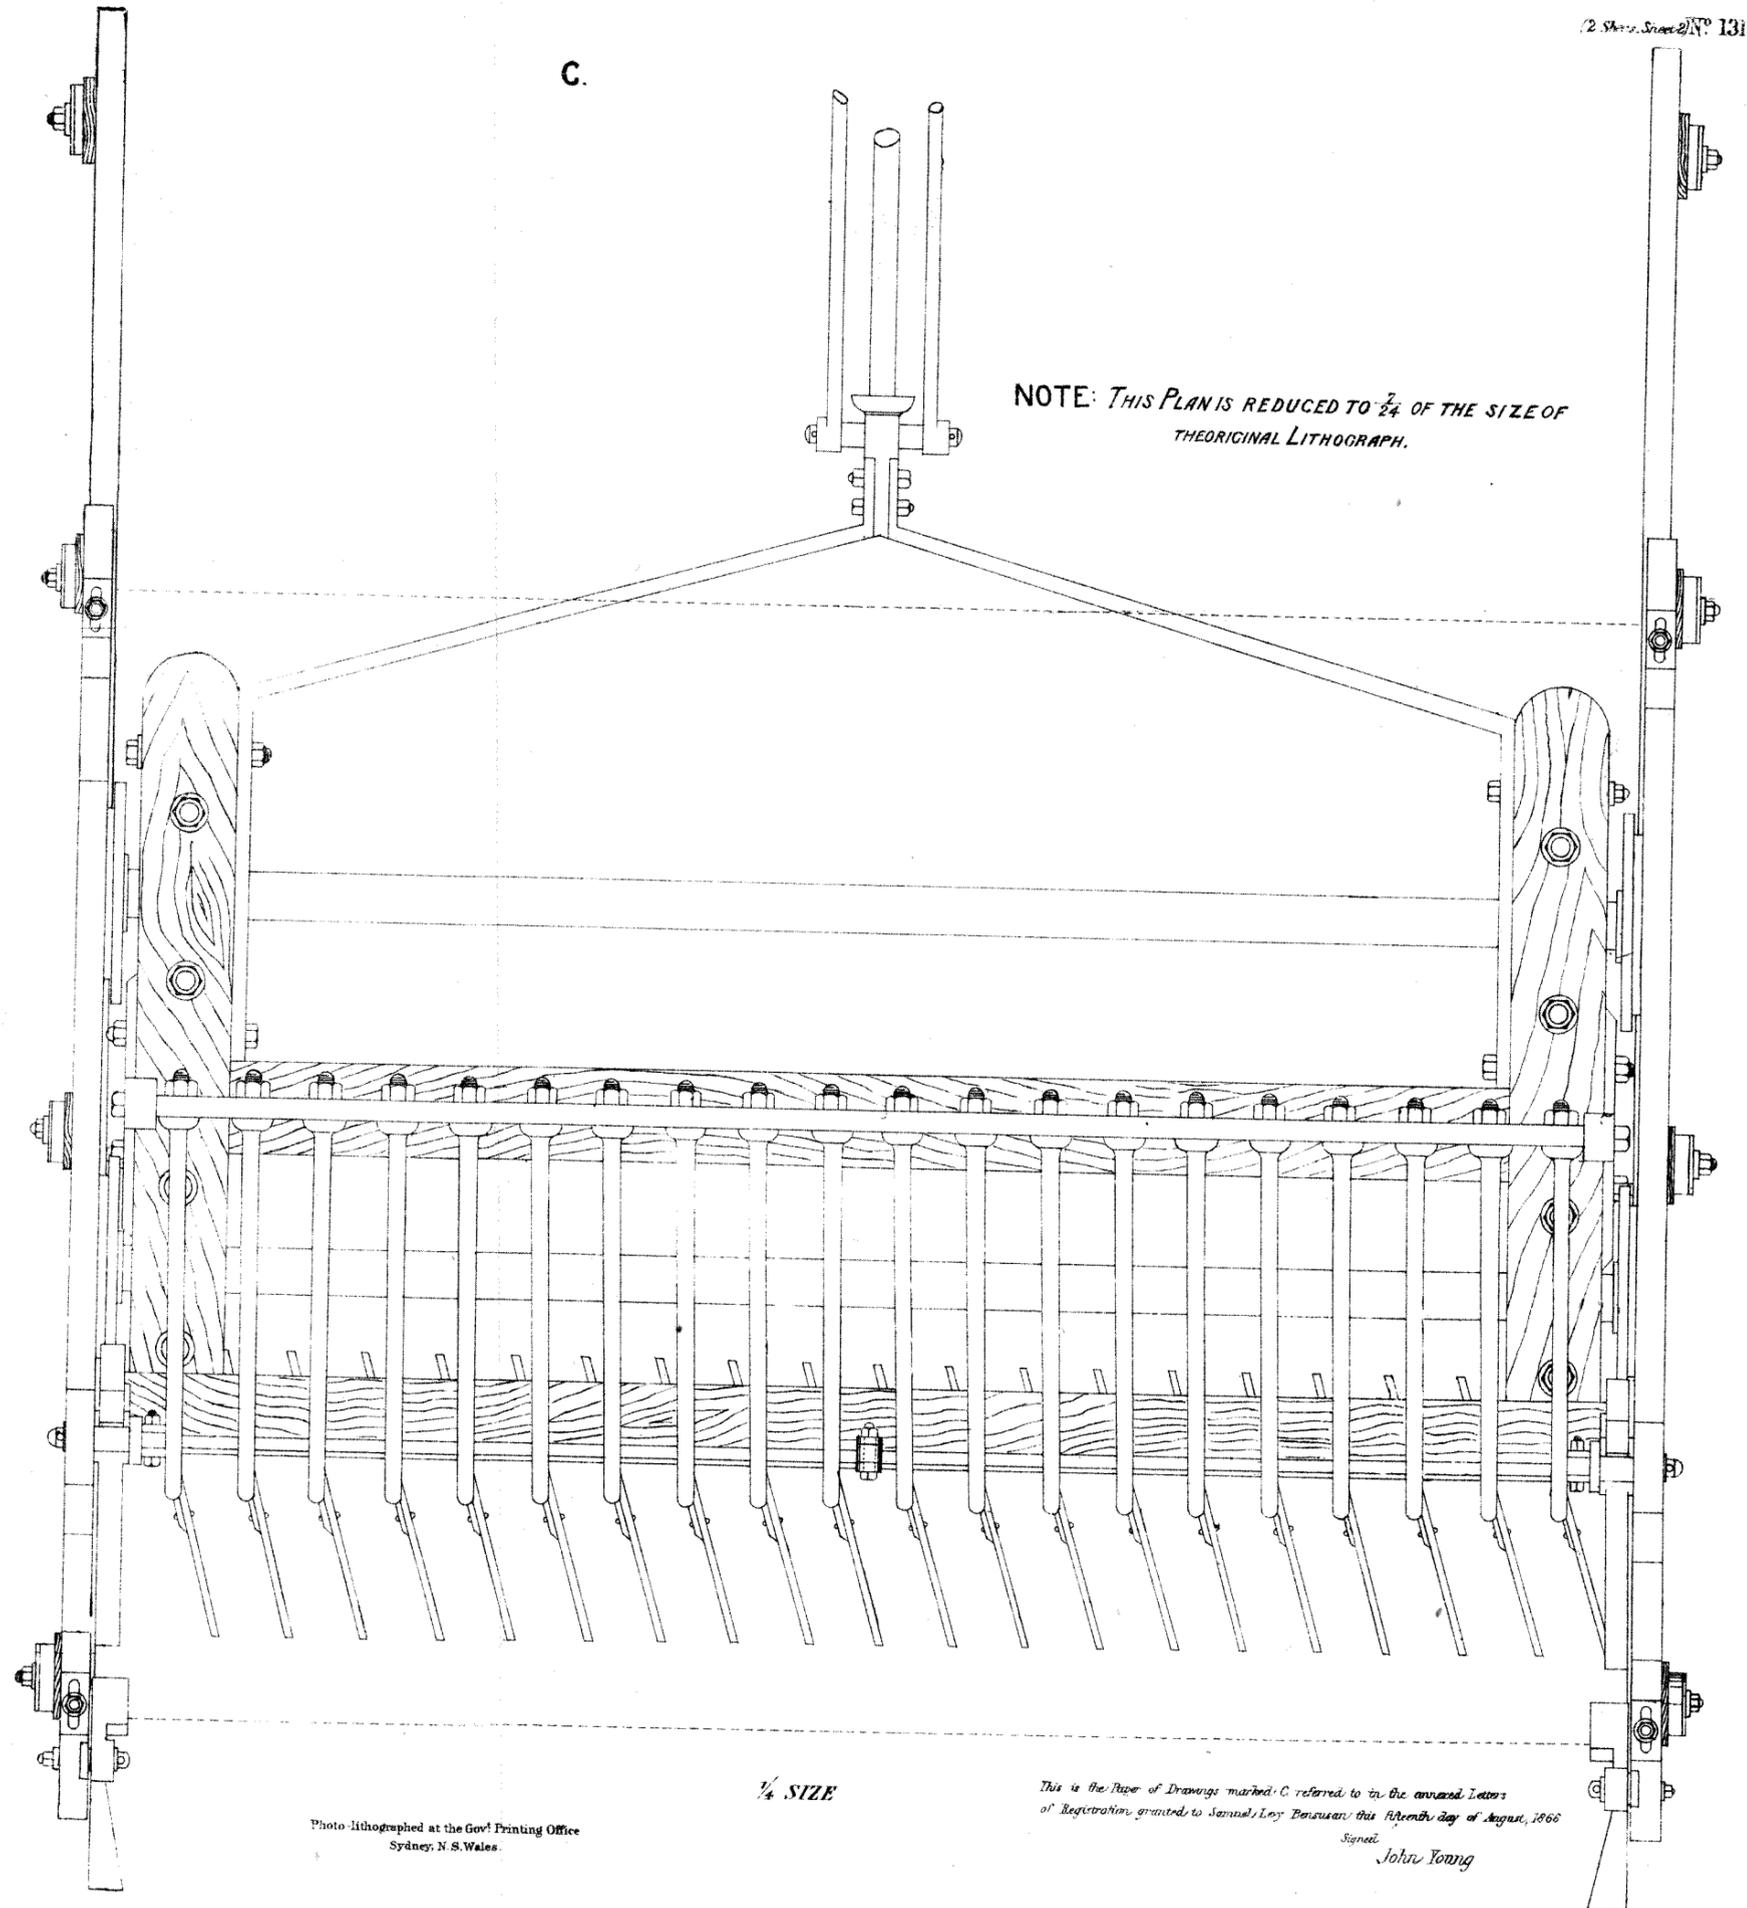

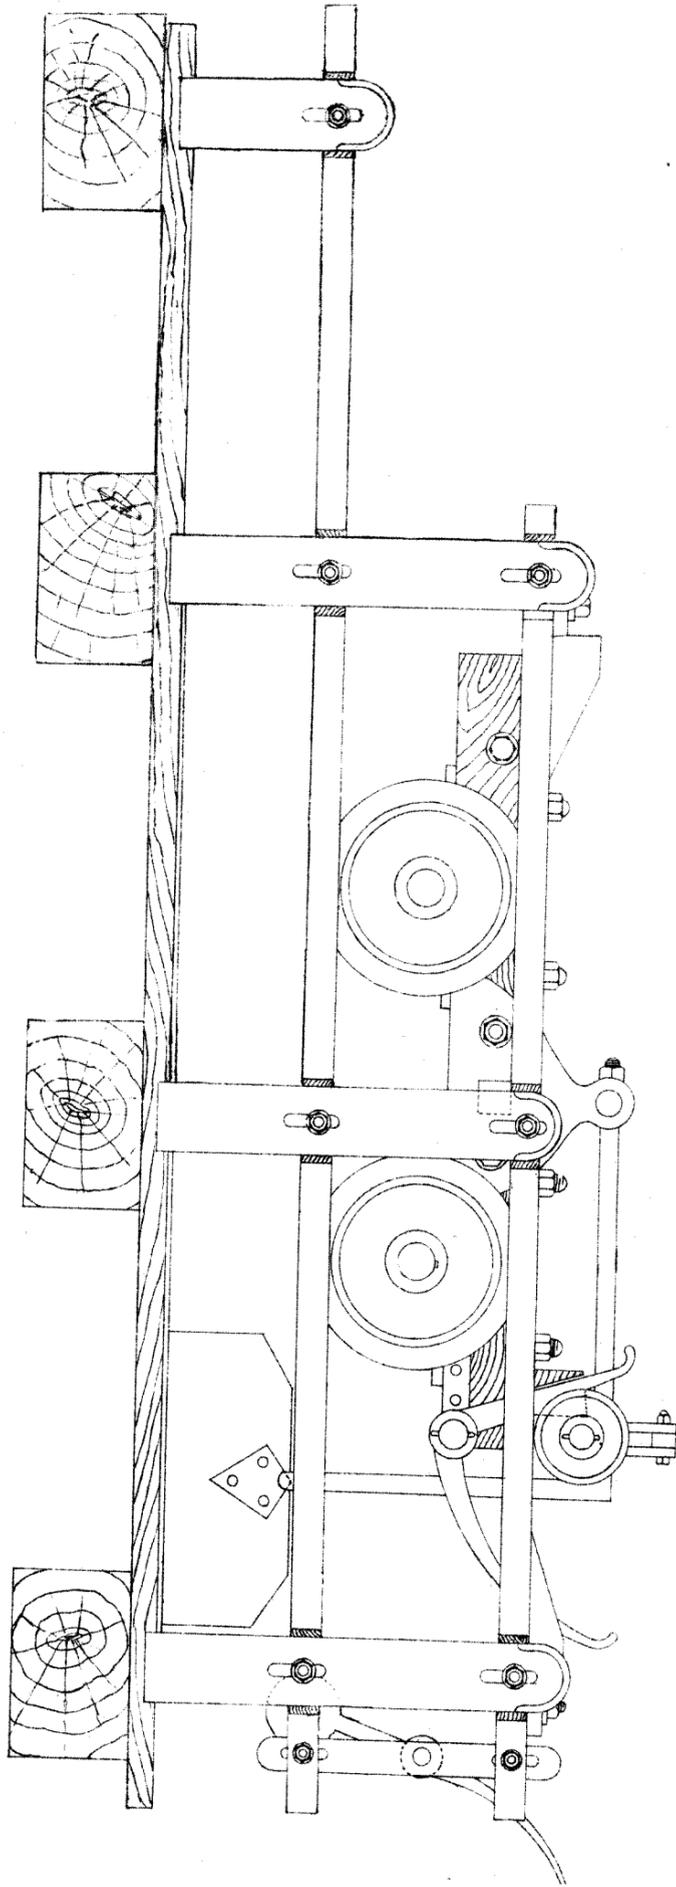

We have, &c.,

J. SMITH.

JOHN WHITTON.

THE HONORABLE
THE COLONIAL SECRETARY.

IMPROVEMENTS IN MACHINERY EMPLOYED WHEN GETTING COAL, &c.

LETTERS OF REGISTRATION to James Grafton Jones, for Improvements in Machinery employed when getting coal, stone, and other minerals, and in machinery for condensing or compressing atmospheric air.

[Registered on the 21st day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

WHEREAS JAMES GRAFTON JONES, of the Blairston Ironworks, Monmouth, England, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in machinery employed when getting coal, stone, and other minerals, and in machinery for condensing or compressing atmospheric air," which is more particularly described in the specification marked A, and the papers of drawings marked B and C respectively, all of which are hereunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years : And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said James Grafton Jones, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and

Improvements in Machinery employed when getting Coal, &c.

and exercise unto the said James Grafton Jones, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said James Grafton Jones shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twentieth day of August, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

(A.)

TO ALL TO WHOM THESE PRESENTS SHALL COME:

BE it known, that I, James Grafton Jones, of the Blaina Ironworks, Monmouth, England, have invented or discovered certain new and useful improvements in machinery employed when getting coal, stone, and other minerals, and in machinery for condensing or compressing atmospheric air; and I, the said James Grafton Jones, do hereby declare the nature of the said invention, and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statements thereof, that is to say:—

This invention has for its object improvements in machinery employed when getting coal, stone, and other mineral, and relates to that class of machine in which a pick or cutting tool, turning on an axis, is employed for cutting grooves in the coal or mineral, the machine being for this purpose caused to move progressively along a rail or tramway fixed in front of the face of the coal or mineral during the time that the cutting tool is at work.

The first improvement consists in mounting the axis of the pick, or it may be picks, on a cylinder, which is capable of being turned in suitable bearings, carried by the bed of a truck or carriage; on this carriage is also a compressed air-engine. The connecting rod of the engine, where it is attached to the piston, is arranged to turn, so that when the crank axis carrying the pick is turned to a different position in respect to the bed of the carriage, the connecting rod may follow the crank and at all times be in a position to work correctly therewith. On the cylinder, which carries the axis of the pick, there is a toothed wheel, which is driven by a pinion or screw on a shaft having on it a hand-wheel, by which the position and proper angle, at which the pick shall for a time work, can readily be adjusted. The point or cutting edge of the lever pick is caused to commence to cut at the back of a groove in the coal or mineral and move outwards, so that when a pick has completed a cut it shall be out of the groove, and require to be moved back into the groove before it makes its next cut; by this means lever picks will be less liable to be held in the grooves than heretofore, when the point or cutting edge penetrated more and more into the solid mass till it arrived at the end of its stroke.

In order to prevent the machine when at work from swerving or vibrating on the rail or tramway, and so injuring the way, I apply to the opposite end of the carriage to that which carries the axis of the pick a rolling weight or roller. This roller or weight runs on the rails and is formed with flanges to keep it correctly on the rails. The roller or rolling weight is connected with the under part of the carriage by a bar in a central position between the rails of the way on which the carriage runs. The end of this bar is securely fixed by screw-bolts and nuts to the under part of the carriage.

In some cases the pick or cutter is unable at one blow to complete its stroke; in order therefore to actuate the valves of the air-engine I employ a weight or instrument, capable of moving freely on a rod moving with the piston of the engine, in order that if the piston is not able to complete its stroke by reason of its not being able to force the cutter through the coal, the valve of the engine may be reversed by means of the weight or instrument from its momentum, continuing to move forward until it acts on the valve, and thus causes the piston of the engine to move back or perform its return stroke.

For the purpose of condensing atmospheric air the piston rod of a reciprocating steam cylinder is connected to, and works the piston of, the air-pump, the length of stroke of each piston being the same. The two cylinders (the steam cylinder and air-pump cylinder) are both fixed on the same bed-plate, by which they are readily retained true to each other. The two end covers of the two cylinders, where the stuffing-boxes are constructed, and through which the piston-rod works, are as close as may be together, simply allowing room to get at the two stuffing-boxes. The piston-rod does not pass through either of the covers at the other end of the two cylinders. The air-pump cylinder is contained in a trough or vessel, so that such cylinder may be constantly surrounded by cold water, continuously supplied to the trough or vessel. The relative diameters of the two cylinders will depend on the pressure of the steam used in the steam cylinder, and the pressure to which the air is desired to be compressed. The use of a fly-wheel and shaft are dispensed with, and the change of motion of the piston in the steam cylinder is obtained by tappets or spindles which pass through stuffing-boxes formed in the two end covers of the steam cylinder.

The tappet at each end of the steam cylinder is at its outer end pin jointed to the shorter end of a lever, which, by its other end, by means of a connecting rod, gives motion to a slide-valve. By this arrangement as the piston arrives nearly to the end of its stroke, it pushes out the spindle or tappet at that end of the cylinder, and the position of the slide-valve is quickly reversed. At each end of the air-pump cylinder are valve-boxes, in each of which is an induction and an eduction valve, which it is preferred should be circular spindle valves resting by their outer edges on rings of soft elastic matter as valve seats. A starting and stopping hand-lever is applied to one of the axes of the levers which work the slide-valve of the steam cylinder. The outlets of the two valve-boxes of the air-pump cylinder are connected together by a pipe, to which is connected the supply-pipe to the engines or machines worked by compressed air. When the

the

Improvements in Machinery employed when getting Coal, &c.

the engine or machines are necessarily distant from the air-pump, two, three, or more air vessels are employed in connection on the supply-main, and for this purpose cylinders or other forms of vessels are introduced at intervals along the supply-main or pipe, of such dimensions as may be desired and depending on the size and speed of working of the compressed air-engine or machine which is actuating the picks or instruments used in getting coal, or stone, or mineral; by these means the supply of compressed air to the engine or machine will be more advantageously made than when a long length of supply-pipe or main intervenes between the pumping machinery and the compressed air-engine, without such enlargements or air vessels or reservoirs.

On sheet 1 of the drawings hereunto annexed, I have shown a machine for cutting grooves in coal; in this machine each of the improvements above described are embodied. Figure 1 shows a longitudinal section, figure 2 a plan view, figure 3 a front end view, and figure 4 a back end view, of the machine. In each of these figures the same letters indicate similar parts. *a* is the bed of the truck or carriage mounted on wheels *bb*, which run on the rails of a tramway laid in front of the face of coal or mineral to be worked; at the fore end of the machine is a platform *c*, upon which the man working the machine is carried; in front of this platform are the heavy rollers, *dd*, which are for steadying the machine when at work, the axis of the rollers turns in a bearing *e*, carried by a bar that is bolted to the underside of the platform *c*. In order to move the machine forward along the rail or tramway, the axis of one pair of the wheels, *b*, has fixed upon it a bevelled-toothed wheel, *f*, into which a bevelled pinion, *f*¹, gears; on the axis, *f*², of this pinion is a hand-wheel, *f*³, by which the workman on the platform can turn the axis, and so turn the pair of wheels, *b*, and move forward the machine. The axis of each pair of wheels, *b*, has also upon it a bevelled wheel, *g*, into each of which a bevelled wheel, *g*¹, gears, the two wheels, *g*¹, are both fixed on the axis, *g*²; thus when one pair of wheels, *b*, is turned, the other pair is caused to turn with it, and so both pair of wheels assist in moving forward the machine. At the back end of the machine is the axis, *h*, of the pick or cutter. The form of cutter preferred to be employed is shown on a reduced scale at figure 5 (sheet 2), which shows the machine forming a groove in the coal or mineral to be worked. It is preferred to cause the machine to travel in the direction shown by the arrow in this figure; the cutter will then be caused to cut outwards and to finish its cut as it leaves the groove; the machine may, however, be caused to travel in the opposite direction. The pick is then arranged to cut further and further into the groove to the end of its stroke; when the machine is caused to travel in the direction shown by the arrow at figure 5, a guard is placed at the side of the platform, *c*, to protect the man working the machine from the pieces removed by the cutters. The bearings, *k*, in which the axis, *h*, turns, are carried by a cylinder, *k*¹; this cylinder turns in bearings, *k*², carried by the bed of the carriage; on the exterior of the cylinder is a toothed wheel into which gears a pinion carried by an axis, *l*, on which is a hand-wheel, *l*¹, so that by turning this hand-wheel the cylinder, *k*, can be turned round to bring the axis of the pick to any desired angle; on the hand-wheel is a disc having a number of holes formed through it as shown; these holes are made to allow of the hand-wheel being locked or prevented from rotating by a pin, *m*, being passed through one of them and into a hole in the framing of the machine. The cylinder, *n*, of the engine, which gives motion to the axis, *h*, is fixed to the bed of the carriage; the piston-rod, *o*, at its outer end, has a slot formed in it, through which a pin passes; this pin also passes through a hole in the end of an arm, *h*¹, fixed on the axis, *h*; thus, when the piston of the engine moves to and fro from one end of the cylinder to the other, an alternating rotary motion is communicated to the pick or cutter; *p* is the slide-valve for admitting compressed air or steam or other fluid to and from the opposite ends of the cylinder; this valve receives its motion by its rod, *p*¹, being connected to one arm of a lever, *r*, another arm of which lever is connected to a rod, *s*; a third arm, *r*¹, is for moving the valve by hand; the rod, *s*, passes through a stuffing-box in the end of the cylinder, and is received into the interior of the piston-rod, which is made hollow to receive it; on the rod is a weight, *s*¹, capable of sliding along it; on the rod are also two fixed collars, *s*² *s*³, against one of which, viz., the collar, *s*², the weight, *s*¹, strikes when the piston completes its motion in one direction, and the piston itself strikes against the other collar, *s*³, when it completes its motion in the opposite direction. In the position in which the valve is shown at figure 1, compressed air or steam is just being admitted to the cylinder to act on the larger area of the piston; the piston, in moving forward, gives motion, as above explained, to the pick, and causes it to make its stroke; if the piston is able to impart sufficient force to the pick to cause it to complete its stroke, then the weight, *s*¹ (which I prefer to be of lead, lined or bushed with brass), is carried forward with the piston and its end is caused to strike against the collar, *s*², of the rod, *s*, so pushing forward the rod, and consequently shifting the valve so that it will admit air or steam to the opposite end of the cylinder to cause the piston to make its return stroke; the weight, *s*¹, is then carried back with the piston by reason of the friction of its sides against the hollow piston-rod; as the piston comes to the end of its stroke it comes against the collar, *s*³, so pushing back the rod, *s*, and causing it again to shift the valve in order that the piston may make another forward stroke. If the piston, in its forward movement, is unable to make the pick complete its stroke, the weight, *s*¹, being carried forward with the piston, will, as soon as the piston ceases to move, be carried forward by its momentum and caused to strike against the collar, *s*², and so shift the valve that the piston may be moved back to make another forward stroke. It is not essential that the rod, upon which slides the weight or instrument which actuates the valve, should be contained within a hollow piston-rod, as this rod may be on the exterior of the engine. It is also not essential that the weight or instrument that acts on the valve of the engine should be carried on a bar; on the contrary, a weight or instrument on an axis put in motion by the piston of the engine may be used, such weight or instrument being arranged to continue its rotation by momentum after the piston has stopped. It is preferred that the engine which gives motion to the pick should be worked with compressed air when used in coal mines and other confined places, but steam may be employed in open places where the heat will not be an objection.

I will now proceed to describe the drawings of the apparatus for compressing or condensing atmospheric air. This apparatus is shown on sheet 2 of the drawings. Figure 1 shows a side elevation, and figure 2 a longitudinal section of an engine and air-pump, constructed and combined according to my invention. *aa* is the steam cylinder, having within it a piston, *a*¹, the piston-rod, *b*, of which gives motion to the piston, *c*¹, in the air-pump cylinder, *cc*; these two pistons are shown to be of nearly the same diameter, but the relative diameters of the pistons of the steam-cylinder and air-pump will be varied according to the requirements of each case. The air-pump cylinder is contained within the trough or cistern, *dd*, in order that it may be subjected to the action of cold water supplied to such trough or cistern. The air-pump cylinder has

Improvements in Machinery employed when getting Coal, &c.

has a valve-box, *ee*, at each end, connected together by a pipe, *ff*. In the arrangement shown, the two tappets, *gg*, are arranged to be, one actuated by the steam-cylinder piston *a'*, whilst the other is arranged to be acted on by the air-pump piston, *c'*, which is the arrangement preferred; but if desired, both tappets, *gg*, may be arranged to be acted on by the steam piston, *a'*, or both may be arranged to be acted on by the air-pump piston, *c'*. The tappets, *gg*, have a hand-lever, *g'*, by which the tappets may be moved when required, and such hand-lever, *g'*, gives motion to the slide-valve of a small steam-engine, *h*, by the rod, *i*, which at one end is pin-jointed to the lever, *g'*, and at the other end it is pin-jointed to the cranked lever, *i'*, which gives motion to the slide-valve of the small engine, *h*. The hand lever, *g'*, has also a stud on it, which works in slotted links connected to the end of the spindle or stem, *j*, of the slide-valve, *k*, of the steam-cylinder, *aa*, by which, in the event of the valve of the small steam-cylinder, *h*, not acting correctly, the slide-valve, *k*, of the engine, *aa*, will be moved by the hand-lever, *g'*. The piston of the small steam-cylinder, *h*, is on the spindle or stem of the slide-valve, *k*, and there are stops, *ll*, on the other end of the valve spindle which act against elastic packings in the standard, *m*.

In witness whereof I, the said James Grafton Jones, have hereunto set my hand and seal, this sixth day of February, in the year of our Lord one thousand eight hundred and sixty-six.

J. GRAFTON JONES.

This is the specification marked A, referred to in the annexed Letters of Registration, granted to James Grafton Jones this twentieth day of August, 1866.

JOHN YOUNG.

REPORT.

Department of Public Works,
Sydney, 13 July, 1866.

SIR,

Having examined and considered the application of Mr. James Grafton Jones, for Letters of Registration for "New and useful improvements in machinery employed when getting coal, stone, and other minerals, and in machinery for condensing or compressing atmospheric air,"—We have now the honor to report, for the information of the Honorable the Colonial Secretary, that we see no objection to the protection sought for being granted.

THE UNDER SECRETARY
FOR PUBLIC WORKS.

We have, &c.,
JOHN WHITTON.
E. O. MORIARTY.

SMOKE-CONSUMING FURNACE.

LETTERS OF REGISTRATION to Edward Carr Fortescue, for an Invention of a Smoke-consuming Furnace.

[Registered on the 21st day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS EDWARD CARR FORTESCUE, of the Glebe Road, near Sydney, in the Colony of New South Wales, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "A smoke-consuming furnace," which is more particularly described in the specification and paper of drawings, which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said Edward Carr Fortescue, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said Edward Carr

Smoke-consuming Furnace.

Carr Fortescue, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Edward Carr Fortescue shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twentieth day of August, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

SPECIFICATION.

THE principle upon which the smoke-consuming furnace is made, will be seen in those parts of the plan marked A and B. The part marked A consists in two inner half doors divided horizontally, the upper half perforated to admit air; the said door can be opened or closed, as may be found necessary, to regulate the quantity of air.

That part marked B consists of a stout iron plate (half the size of the end of the furnace), called the smoke plate; when the fire is lighted, the air entering through door A forces the smoke through the fire under the smoke plate B, and is consumed.

EDWARD CARR FORTESCUE.

P.S.—I claim as my invention the particular arrangement of doors and the smoke plate, as shown in the plan.

EDWARD CARR FORTESCUE.

This is the specification referred to in the annexed Letters of Registration, granted to Edward Carr Fortescue this twentieth day of August, 1866.

JOHN YOUNG.

REPORT.

Sydney, 22 June, 1866.

SIR,

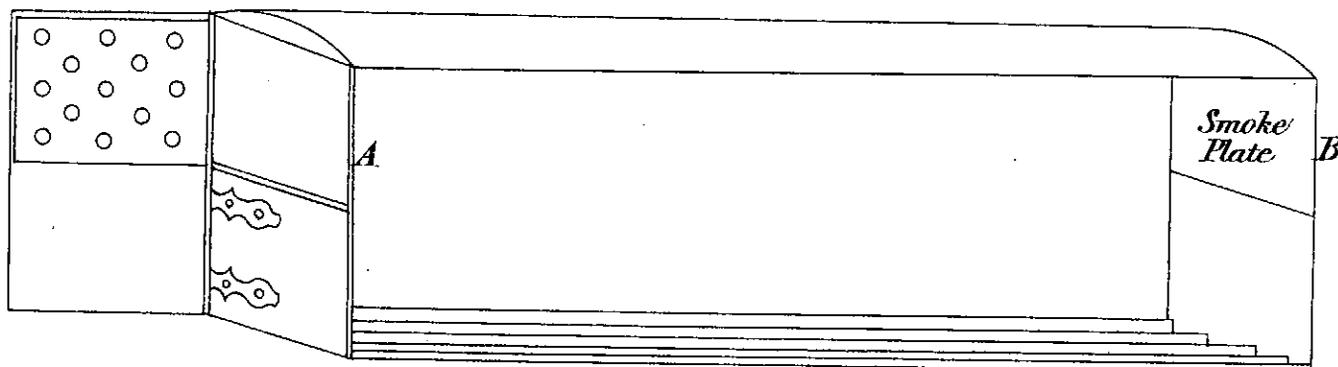

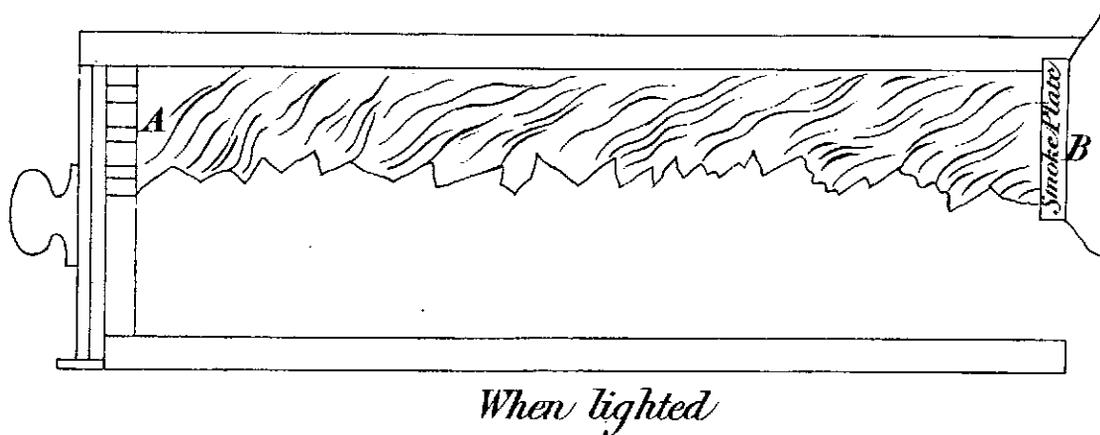

In compliance with your request, we have examined the specification of Mr. Edd. Carr Fortescue, for "A smoke-consuming furnace." We have also had further explanations from Mr. Fortescue himself, and we have now the honor to report that we see no objection to Letters of Registration being granted, as desired.

We have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY.

J. SMITH.
JAMES BARNET,
Col. Archt.

IMPROVEMENTS IN DISTILLING APPARATUS.

LETTERS OF REGISTRATION to John Ambrose Coffey, for Improvements in Distilling Apparatus.

[Registered on the 24th day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS JOHN AMBROSE COFFEY, of 17, Gracechurch-street, in the City of London, England, consulting engineer, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of improvements in "Distilling apparatus," which is more particularly described in the specification and the paper of drawings hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said John Ambrose Coffey, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said John Ambrose Coffey, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said John Ambrose Coffey shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-second day of August, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

Improvements in Distilling Apparatus.

TO ALL TO WHOM THESE PRESENTS SHALL COME :

BE it known that I, John Ambrose Coffey, of 17, Gracechurch-street, in the City of London, England, consulting engineer, have invented or discovered new and useful "Improvements in distilling apparatus," and I, the said John Ambrose Coffey, do hereby declare the nature of the said invention, and in what manner the same is to be performed to be particularly described and ascertained in and by the following statement thereof, that is to say:—The object and purpose of my said invention is to improve the construction and arrangement of distilling apparatus for effecting what is known as fractional distillation in such manner that in one and the same apparatus (when supplied with the substance or substances or thing to be distilled) different products or different qualities of the same product or products arising at different stages of distillation may be drawn off at given points of the apparatus, and this without interfering with the progress of distillation, or the arrangement of the apparatus for any other product or products at any other stage or stages, whereby I am enabled to effect fractional distillation in a safe and continuous manner in one and the same apparatus; and such my invention is specially applicable and valuable in the distillation of petroleum, which consists of several volatile oils and unctuous substances differing in degrees of volatility, and which, for certain purposes to which they are applied, are required to be more or less separated from each other, and from a substance of the nature of pitch.

In the usual mode of conducting the distillation of petroleum it is put into an ordinary still, to which the heat of a fire is applied; and when the temperature of the liquid in the still rises to about 180° Fahrenheit, a volatile oil or spirit comes over, this being the most volatile constituent of the petroleum, or that which has the lowest point of boiling; and as the distillation proceeds the temperature at which the distillation occurs gradually rises, and distilled products are obtained which are less and less volatile, until at last it reaches 500° or 600°, or more, at which the least volatile products are those having the highest boiling points are obtained, but when these heavy oils, as they are called, have been brought over by the application of a high temperature, there remains a residue of which tar, or pitch, or coke in the still, which must be removed before a fresh portion of the petroleum can be operated upon.

Now my invention provides efficient means by which the distillation can be continued without the interruption caused by the removal of the residual tar, pitch, and coke from the still, and by which the several fractional products can be obtained simultaneously and continuously. The apparatus and arrangement by which I obtain these results are also applicable and valuable in the distillation of other substances besides petroleum, where several products are required to be obtained by what is called fractional distillation. As regards the nature of my said invention, whereby I effectuate the objects and purposes aforesaid, I have a boiler provided with a furnace or fire to heat the same, or (in lieu thereof) I can adopt gas or other heat generator, and if it be desired to provide for the conduct of the process of distillation, with extreme regard to safety from explosion, I can place the furnace or fire in a field or open ground at a distance, and convey the heat through pipes or ducts to the apparatus. For keeping up the supply of the crude or raw material or thing to be distilled, I make use of a tank or reservoir placed at such altitude and position that the crude material to be distilled may, upon acting upon a stop-cock or valve, descend by its own gravity into a coil in the boiler, or it may be conveyed to be circulating, operating, or be operated upon in the apparatus, when it is so arranged. This coil I either pass through a pyrometer of great accuracy, or I use such a pyrometer in connexion with the said coil in the manner shown by the drawing and hereafter described in reference thereto. By the means of the pyrometer so placed in connexion as aforesaid, I am enabled to "read off" the exact degree of heat in the boiler with readiness and precision. From or near the pyrometer the coil is produced or continued, and passes into a continuous fractional distilling chamber, or system of chambers, in direct communication with the boiler. This chamber, or system of chambers, is made up of an arrangement of trays or partitions, in which the coil laid flat thereon is supported. The coil is continued from one tray or partition to another tray or partition, throughout the whole series or system, till it reaches the topmost, and there it discharges its contents, and as each tray or compartment is in communication with the one beneath by means of a duct in the centre or other part thereof, should there be any accumulation of residuary material or substance not volatilized, and passing off by the still-head, it will pass on to the trays or partitions in succession, and either be evaporated or volatilized on the partitions or partition of some or one of them, or finally pass into the boiler. Waste material or residuum is discharged from the boiler by a waste pipe or syphon. It should be observed that the material undergoing distillation is contained not only inside the coil but outside it also. The volatilized material or spirit, not drawn off at intermediate points, passes off by the still-head to the refrigerator or condenser, and from each of the sections or chambers between the trays or partitions aforesaid. I have a pipe carried into the lower part of the refrigerator or condenser or other suitable receptacle for condensing or refrigeration, and this pipe is coiled therein and surrounded with water or cooling liquid, by which means I can draw off different products or qualities at each of the stages of the said sections, thus effecting continuous fractional distillation.

That the details of my apparatus may be readily understood, I have annexed to this specification a sheet of drawings.

DESCRIPTION OF THE DRAWINGS.

Figure 1 is a sectional elevation of the apparatus. A, denotes the boiler with furnace or fire beneath; the same A¹, stirrer or agitator to be used therein.

Figure 2 shewing a plan view thereof. B, pipe conveying crude material into a coil C in the boiler. The material either descending by its own gravity as aforesaid, or being forced by means of an ordinary force-pump, as shown in the drawing. D, pyrometer, one end of which is in the boiler, the dial being outside thereof. E, distilling chamber or system of chambers proceeding from the top of the boiler; a denotes the coil pipes, and b small pipes for discharging refuse from one tray to another. F, denoting the trays or partitions on which a flat part of the coil is supported. The section of this part of the coil being shown by the small circles. G, the still-head. H, pipe leading to a refrigerator or condenser, which is dischargeable at the point H¹. I, another condenser or refrigerator. K, denotes pipes for the distilling chambers or compartments leading to condensing worms in connection with said pipes K; the said worms being

Improvements in Distilling Apparatus.

being situate in the condenser or refrigerator I aforesaid, and being surrounded with cold water or cooling media. L, drawing-off pipes with stop-cocks. M, pipe proceeding from the bottom of the boiler, the crude stuff or material therein rising in the upright transparent portion thereof, so as to show the level thereof in the boiler. Figure 2, horizontal section or plan on line GH of boiler (Figure 1). Figure 3, plan or horizontal section on line EF of figure 1. Figure 4, plan or horizontal section on line CD of figure 1. Figure 5, plan or horizontal section on line AB of figure 1. If it should be thought desirable the following modifications may be adopted for the distillation of petroleum or other such like substances:— I have a boiler or heating bath charged with some of the least volatile of the heavy oils, obtained in the distillation of petroleum; or, in place of this, it may contain a fusible salt or metal, or any substance which remains liquid at the temperature required to be applied. In the distillation of petroleum the temperature will be between 500° and 600° Fahrenheit. In the boiler or heating bath, and suspended a few inches from the bottom, there is a coil of iron pipe, which by an extension communicates with a force-pump and a tank, and another extension of it passes through the distilling chambers. The distilling chambers, which are most conveniently and economically made of cast-iron, are all similarly formed, and upon each there is a channel through which the liquid to be distilled runs in a zig-zag direction, and the said extension of pipe produced lies in the bottom of this channel, and after running the entire length of it passes upwards to another, and thus through the whole series. The liquid running through the channel passes through an opening and a tube into the chamber beneath, where it enters below the surface of the liquid there, and it thus passes through the whole series of chambers, or through any number of chambers that may be required. In each of these chambers there is a ledge projecting from the sides, a few inches above the surface of the liquid contained in the zig-zag channel, and any condensed vapour collected in the groove formed by the ledge passes together with uncondensed vapour into a pipe communicating with a refrigerator. The extension pipe, after passing through the channels of the distilling chambers, which are those nearest to the boiler or heating bath, passes into the uppermost chamber of the series, and here it discharges its contents into the zig-zag channel of that chamber; and the liquid thus discharged, after running through the channels, or heating chambers (or such others as may be made to correspond with these), passes through a pipe into the tank. The crude liquid to be distilled is contained in another tank, and is allowed to run by its own gravity through the pipe which passes to, and lies in the channels of, the upper or heating chambers, and it is then discharged into the zig-zag channels of the distilling chambers below, where it undergoes distillation. The boiler or heating bath is to be charged with the liquid which is to be the medium for communicating heat to the heating pipe, and this being heated by the furnace to a temperature of 550° or 600°, the liquid contained in the first-mentioned tank is to be sent by means of a force-pump through the coil in the boiler, where it will become heated also through the heating pipes in the distilling chambers, until after passing through the open channels in which the flat coils are placed in the upper or heating chambers it is finally conveyed back into the tank to be used over again. This liquid serves as a carrier of heat to the distilling chambers and to the heating chambers. It passes into the lowest of these chambers at its highest temperature, and losing heat as it travels onwards it enters each succeeding chamber at a lower temperature than that at which it entered the preceding one; when it has thus been reduced to a temperature at which it is no longer capable of volatilizing any of the constituents of the petroleum, it should be made to pass into the heating chambers, and be transferred there to the open channels, where its remaining heat will serve to heat the petroleum running from the tank through the pipe. This petroleum thus heated will enter the zig-zag channels of the distilling chambers, where by contact with the hot pipe it will give off its most volatile parts, which will pass through the tube to the refrigerator. After passing over the whole length of the hot pipe lying on the zig-zag channel of the upper distilling chamber, that which remains of the petroleum will pass through the tube into the chamber beneath, where it will be subjected to the action of a higher temperature, and will give off such of its constituents as volatilize at this temperature, which as in the previous instance will pass to the condenser of this chamber, and will constitute the second fractional product of the process. In this way the petroleum will pass from chamber to chamber and be exposed to a gradually increased temperature as it proceeds, until it is so far deprived of its volatile parts that it may be allowed to escape into a suitable receptacle in the form of thick tar or fluid pitch. The number of chambers to be used as distilling chambers and as heating chambers, and the rapidity with which the liquid from the tank is made to circulate through the coil and the heating pipe, as well as the quantity of liquid passing from the tank, must be so adjusted that the lowest distilling chamber shall have a temperature of not less than 500°, and the highest distilling chamber a temperature of not less than 190°. In the distillation of other liquids besides petroleum, it may be necessary to vary the arrangement so that the upper distilling chamber shall have the temperature required for the volatilization of the most volatile constituents, and the lowest the temperature required for volatilizing the least volatile of the required products, and these results can be regulated in the manner already indicated. It will be readily understood that by increasing, within certain limits, the rapidity with which the liquid from the tank is forced through the coil in the heating bath, and made to circulate in the distilling chambers, the amount of heat carried into these will be increased, while by increasing the flow of the liquid from the tank through the apparatus, the heat will be more rapidly absorbed, and the temperature of the chambers reduced. The number of chambers used both as distilling chambers and as heating chambers may be varied according to the nature of the liquid submitted to distillation and the nature of the required products, the object being to adjust the arrangement so that the liquid to be distilled shall be heated up to near the lowest point of volatilization in passing through the heating chambers. In the distillation of petroleum and other analogous substances, such as coal tar, I prefer to use some of the least volatile of the distilled products of these substances for charging the heating bath, and also for circulating through the coil and heating pipes. These oils while used for the latter purpose will be deprived of any of the more volatile oils they may retain, and while used for the former purpose they will give off some of the less volatile of the oils or unctuous products for the collection of which provision is made. But while in the cases referred to I prefer to operate in the manner indicated, there are other cases in which, as already stated, it may be found advantageous to use a fusible salt or both together in the heating bath, and in which either water or steam used under pressure or superheated steam may be made to circulate through the coil and heating pipes. If water or steam be thus used as the heat

carrier,

Improvements in Distilling Apparatus.

carrier, it will be necessary to modify the arrangement to omit the heating chambers at the top of the column, and to let the water or steam pass out from the heating pipe through a valve, by which the pressure and thereby the heat may be regulated. In the event of steam being thus used, the force pump may be omitted, and the steam supplied directly from a steam boiler, either under pressure or otherwise. When heavy oil of petroleum or other analogous substance is used in the hot bath, and the same liquid is made to circulate through the coil and pipes, the arrangement may be modified in the following way:—The coil may be omitted and the force pump may be made to force the liquid from the upper part of the contents of the hot bath through the heating pipes,—this liquid returning to the bath and entering in its partially cooled state through a pipe at the bottom.

The *modus operandi* just described applies generally, as far as differences of construction will allow, to the apparatus shown by the drawing as well as to the modifications of the apparatus lastly described.

What I claim in regard to the above described invention of improvements in distilling apparatus, are the improved constructions and arrangements set forth in regard to the distillatory portions of such apparatus,—it being understood that I do not claim any of the mechanical details thereof *per se* and apart from the purposes of my said invention.

In witness whereof I, the said John Ambrose Coffey, have hereunto set my hand and seal, this twenty-third day of March, in the year of our Lord one thousand eight hundred and sixty-six.

REPORT.

Sydney, 23 July, 1866.

SIR,

In compliance with your request we have examined the specification and drawings of Mr. John Ambrose Coffey's "Improvements in distilling apparatus"; and we have now the honor to report that we see no objection to the granting of Letters of Registration, as desired.

We have, &c.,

IMPROVEMENTS IN THE PRESERVATION OF ANIMAL SUBSTANCES.

LETTERS OF REGISTRATION to Theophilus Redwood, for Improvements in the Preservation of Animal Substances.

[Registered on the 24th day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain-General and Governor-in-Chief of the Colony of New South Wales.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :—

WHEREAS THEOPHILUS REDWOOD, of Montague-street, Russell-square, London, England, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in the preservation of animal substances, such improvements being especially useful when those substances are intended for use as food," which is more particularly described in the specification hereunto annexed; and that he, the said Petitioner, has deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, 16th Victoria, No. 24; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon, for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said Theophilus Redwood, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said Theophilus Redwood, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Theophilus Redwood shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-third day of August, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

Improvements in the Preservation of Animal Substances.

TO ALL TO WHOM THESE PRESENTS SHALL COME:

BE it known that I, Theophilus Redwood, of 19, Montague-street, Russell-square, London, England, have invented or discovered new and useful improvements in the preservation of animal substances, such improvements being especially useful when those substances are intended for use as food; and I, the said Theophilus Redwood, do hereby declare the nature of the said invention, and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement thereof, that is to say:—The object of my invention is to provide for the prevention of putrefaction, decomposition, and other changes which render animal substances unfit for use as food. It is well known that these changes may be prevented by excluding atmospheric air or gases containing uncombined oxygen from contact with animal matter after it has been exposed to a temperature of about 100 degrees centigrade; and my invention consists in my improved method and means of accomplishing the object aforesaid. I effect the preservation of meat by immersing it for some time in a substance kept liquid by heat; which substance exerts no injurious effect on the meat, but affords the means of heating it to 100 degrees centigrade or higher, and at the same time causes the expulsion or exclusion of air from it; and as this substance becomes a tenacious solid on cooling, the meat after having been heated in it to a sufficient extent, on being taken out, carries a film of liquid over its surface, which forms a solid coating that continues to exclude the air. This coating, in which the meat is hermetically sealed, may be increased in thickness to any required extent, by repeatedly dipping the meat into the hot liquid and allowing each successive layer of liquid to be congealed by exposure to the air or otherwise. The substance which I have found most successfully to fulfil this office is paraffine, but wax, spermaceti, or stearic acid, used separately or added to paraffine, or a mixture of any or either of these substances, in the proportion of (say) 5 or 10 per cent. (but I do not confine myself to such proportions) may be employed, although not, I believe, so advantageously as paraffine alone. When fresh meat is operated upon, the juices are concentrated during the immersion of the meat in the hot paraffine by the evaporation of water, and this may be carried to any required extent, so that the meat may be thus condensed, and if desired it may be rendered hard and dry. In conducting this part of the process I keep the paraffine at a temperature between 100 degrees and 120 degrees centigrade, by which means a more or less rapid evaporation and concentration of the juices are effected. The meat is afterwards cooled by exposure to the air, or by transferring it to another part of the vessel, or to another vessel in which the process is performed, where the temperature is sufficiently low to cool the meat, so that on afterwards passing it through, or putting it into the liquid paraffine, some of the latter will be congealed on its surface, or will congeal when brought into contact with the air. The cooling of the meat for this purpose may be sometimes advantageously effected by immersing it in a cold saline solution, consisting of one part of nitre and sixteen parts of common salt to 160 parts of water, such solution being contained in the lower part of the vessel containing the melted paraffine, and forming a stratum beneath the latter. The coating of paraffine formed, as above described, over the surface of the meat, may be increased in thickness by repeatedly dipping the coated meat into liquid paraffine at a temperature a few degrees above its melting point, and allowing each successive layer to harden by exposure to the air. The meat may also be further protected after having been thus coated by putting it into a suitable vessel or receptacle, and then pouring melted paraffine over it so as to envelope the meat, or by wrapping the coated meat in some coarse fabric, and then dipping it, together with the wrapper, into melted paraffine.

The most simple arrangement for conducting the process in the preservation of fresh meat consists in having two vessels in which melted paraffine can be kept at the required temperature, either by fires placed beneath them, or by coils of steam-pipe fixed against their inner surfaces, or by steam-jackets, such as are usually provided to jacketed steam-pans. One of these two vessels should contain melted paraffine at a temperature of from 115 degrees to 120 degrees centigrade, and should be provided with efficient means for maintaining this temperature when the meat to be operated upon is introduced into the paraffine. The other vessel should contain melted paraffine at a temperature only a few degrees above its melting point; and as this varies in different samples of paraffine, it may be stated to range from 43 degrees to 56 degrees centigrade. This vessel should also be provided with means for keeping the temperature of the paraffine it contains as nearly as possible at one fixed point. Before putting the meat into the paraffine, each joint or separate mass should have an iron wire attached to it, by means of which it may be suspended either in this or a subsequent part of the process, and it is then to be immersed in paraffine contained in the first described vessel, either suspended by the wire or placed in a suspended dish, and subjected to the temperature of from 115 degrees to 120 degrees centigrade, for such a length of time as shall cause every part of the meat to be heated to at least 100 degrees centigrade.

To ensure the accomplishment of this object a piece of meat weighing about 10 lbs. should be kept in the hot paraffine for about one hour; this period being shortened if the mass of meat operated upon be less than 10 lbs. and lengthened if it be greater.

Several pieces of meat may however be put together and closely packed in a metallic vessel of the form of a pail, so as to fill it; and this vessel, with its contents, may be immersed in the hot paraffine for the required time. This arrangement, as well as that of suspending the meat in a dish, presents the advantage of its keeping the juices that may escape from the meat in contact with it, so that most of these juices will be reabsorbed in a concentrated form during the process of heating. After having subjected the meat to the temperature specified for the required length of time, it is to be removed from the vessel in which this part of the process has been conducted. If the pieces of meat were separately suspended by the wires or in the suspended dish they must be quickly transferred to the vessel containing the cooler paraffine, where they are to be immersed, so as to be excluded from the air, and they must be left in this position until they have cooled down to the temperature of the paraffine in contact with them; they may then be taken out and exposed to the air when a film of paraffine will congeal over the surfaces of them, and this may be increased in thickness by repeatedly dipping them into the paraffine, and allowing each successive film to harden in the air. When a sufficiently thick coating has been formed over the meat, the wire by which it is suspended must be removed, and the hole through which it passed filled with melted paraffine, which latter result may be effected by applying the warm blade of a knife to the part of the paraffine through which the wire passed, so as to melt the paraffine and thus fill up the hole. This part of the coated meat may then be dipped into melted paraffine so as to form an additional coating that will secure the exclusion of air.

If,

Improvements in the Preservation of Animal Substances.

If, as already described, several pieces of meat were put together into a containing vessel, and thus immersed, this vessel, with its contents, including the melted paraffine which surrounds and covers the meat, may after the heating process is concluded be put into any suitable place where it may be most conveniently cooled. When it has become cold and the paraffine congealed, the contents of the vessel should be turned out, and this will be easily effected if the vessel have the slightly conical form of an ordinary pail. It must now be suspended by a wire passed through it, and the whole mass must be dipped several times in the melted paraffine so as to cover those parts of the meat that were in contact with the vessel and thus to exclude the air, after which the wire must be removed and the hole through which it passed stopped, as already described. This will be found to be a suitable method of preparing meat for exportation, as large quantities can be operated upon at once; and the masses of meat thus cemented together by the intervening paraffine may be advantageously packed in vessels similar in form and size to those used in their preparation.

This latter method of operating with slight variation may be adopted when the meat is required to be dried by the evaporation of its juices; but in this case the meat should be cut into slices and placed in a shallow vessel, which is to be suspended in the hot paraffine and kept there until the required amount of evaporation is effected. At the end of the operation the meat in its containing vessel is to be transferred to the cooler paraffine, where it is to be allowed to cool until on taking it out it will retain a film of paraffine that will congeal on its surface. In proportion to the extent to which the meat is dried and hardened in the first process of heating it, the thickness of the subsequent coating of paraffine that has to be applied to it to adapt it for the use for which it is intended may be reduced. The coating must be sufficiently thick to exclude the air and to bear without fracture the treatment to which it will be subjected as an article of commerce. When prepared in the manner herein described the meat will be fit for use as food even after it has been kept for several months, providing the coating of paraffine has remained unbroken, and has continued to exclude air from contact with the meat. The coating may be easily removed when the meat is required for use as food, by breaking and peeling off the greater part of the paraffine, and then putting the meat into hot water so as to melt the remaining part of the paraffine and cause its entire separation from the meat. The melted paraffine will rise to the surface of the water, and may, together with that otherwise removed from the meat, be kept for subsequent use.

Although in the operations I have described I prefer to use paraffine as the preservative agent, yet wax, spermaceti, or stearic acid, used separately, or mixed in various proportions, or a mixture of one or more of these with paraffine, may be substituted for paraffine, the methods of operating remaining in other respects the same as herein described.

In witness whereof I, the said Theophilus Rodwood, have hereunto set my hand and seal, this twentieth day of February, in the year of our Lord one thousand eight hundred and sixty-six.

This is the specification referred to in the annexed Letters of Registration, granted to Theophilus Redwood this twenty-third day of August, 1866.

JOHN YOUNG.

REPORT.

Sydney, 29 June, 1866.

SIR,

In compliance with your request we have examined the specification of Mr. Theophilus Redwood, for "Improvements in the preservation of animal substances, especially such as are intended for use as food"; and we have now the honor to report that we see no objection to Letters of Registration being granted, as desired.

THE HONORABLE
THE COLONIAL SECRETARY.

We have, &c.,
J. SMITH.
GERARD KREFFT.

A.D. 1866, 22nd August. No. 136.

IMPROVED CONSTRUCTION OF GIFFARD INJECTOR.

LETTERS OF REGISTRATION to William Sellers for an improved construction of Giffard Injector.

[Registered on the 24th day of August, A.D. 1866, in pursuance of the Act 16 Vic., No. 24.]

BY HIS EXCELLENCY THE RIGHT HONORABLE SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :—

WHEREAS WILLIAM SELLERS, of Philadelphia, in the State of Pennsylvania, in the United States of America, civil engineer, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "An improved construction of Giffard injector," which is more particularly described in the specification and paper of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant, unto the said William Sellers, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof,—to have, hold, and exercise unto the said William Sellers, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if

Improved Construction of Giffard Injector.

the said William Sellers shall not within three days after the granting of these Letters of Registration register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-second day of August, in the year of our Lord one thousand eight hundred and sixty-six.

(L.S.)

JOHN YOUNG.

TO ALL TO WHOM THESE PRESENTS SHALL COME:—I, WILLIAM SELLERS, of Philadelphia, in the State of Pennsylvania, United States of America, civil engineer, send greeting: Whereas I am in possession of an invention for "An improved construction of Giffard injector," and have petitioned His Excellency the Governor General of New South Wales to grant unto me, my executors, administrators, and assigns, Letters of Registration for the same: Now know ye that I, the said William Sellers, do hereby declare that the following specification fully describes and ascertains the nature of the said invention, and the manner in which the same is to be performed (that is to say):—

THIS invention relates to an improvement upon that well-known instrument, "the Giffard injector," the object being to make it self-regulating.

In this instrument, as heretofore constructed, the supply of water and steam has been regulated by means of screws, levers, or other devices controlled by hand, so that whenever the tension or pressure of the steam varies, the attendant is obliged to readjust the supply of water in order that the instrument may work to the best advantage, and whenever the pressure falls below the point to which the instrument has been adjusted, a readjustment becomes necessary to prevent a waste of water at the overflow.

In many boilers, such as the locomotive and others, having a small water and steam capacity compared to their heating surface, and where the demand for steam is very irregular, the variations of the steam pressure are considerable and very frequent, and the amount of attention required for regulating the injector becomes a serious inconvenience.
