NEW SOUTH WALES.

NEW POSTAL SERVICE *via* SUEZ.
(CIRCULAR DESPATCH RESPECTING.)

Presented to both Houses of Parliament, by Command.

THE SECRETARY OF STATE FOR THE COLONIES TO THE OFFICER ADMINISTERING THE GOVERNMENT
OF NEW SOUTH WALES.

(Circular.)

Downing-street,
4 September, 1872.

SIR,

I transmit to you a copy of a letter from the Lords Commissioners of the Treasury, containing proposals for a New Postal Service with the Australasian Colonies on the termination of the present contract with the Peninsular and Oriental Steam Navigation Company at the end of the year 1873. ^{14th August, 1872, 8246.}

I request that you will inform me of the views of your Government on their Lordship's proposals.

I have, &c.,
KIMBERLEY.

Charles W. Stronge, Esq., to R. G. W. Herbert, Esq., Colonial Office.

Treasury Chambers,
14 August, 1872.

Sir,

I am commanded by the Lords Commissioners of Her Majesty's Treasury to request that you will state to the Earl of Kimberley, with reference to the correspondence that has recently taken place relative to the Packet Service between this country and the Australian Colonies and New Zealand, that my Lords have given this subject their attentive consideration.

My Lords would observe that the several Colonies (with the exception of West Australia) having requested that an end should be put to the contract under which the Peninsular and Oriental Steam Navigation Company now convey the Australian Mails between Point de Galle and Sydney, the necessary notice has been given to the Company, and the contract will expire at the end of next year (1873).

It therefore becomes necessary to determine in what manner and by what route the postal communication should be maintained when the contract in question comes to an end.

The several routes which have been suggested are—

- 1st.—The present route *via* Suez and Point de Galle;
- 2nd.—As an alternative route, the route *via* San Francisco; and
- 3rd.—(Incidentally) the route *via* the Cape of Good Hope.

The advantages, however, attendant upon the present route appear to my Lords to be so conclusive that they are decidedly of opinion that it should not be changed.

The advantages are, first, that it is the shortest, and secondly, that, by making use of the vessels under contract with Her Majesty's Government for the India and China Service as far as Point de Galle, the carriage of the Australian Mails is provided for a considerable portion of the distance over which they have to be conveyed.

As several of the Australian Colonies have, on repeated occasions, complained of the manner in which the service between Point de Galle and Australia has been performed, and so much difficulty has hitherto been experienced by the Home Government in providing a service satisfactory to the Colonies, my Lords have come to the conclusion that it is not advisable that the Imperial Government should any longer be parties to any contract for the service between Point de Galle and Australia, but that it would be better that the Colonies should, at the expiration of the present contract, themselves, in combination, provide such service, leaving it to the Imperial Government to provide for the conveyance of the mails between England and Point de Galle.

A considerable sum has hitherto been contributed by the Australian Colonies and New Zealand towards the expense of the conveyance of their mails between this country and Point de Galle; my Lords propose, at the termination of the present Point de Galle and Australian contract, to relieve the Colonies from any payment on this account, and to undertake, on the part of the Imperial Government, so long as the present contract for the India and China Mail Service is in existence, that is, until the 31st January, 1880, to convey the Colonial mails between England and Point de Galle and *vice versa*, free of all charge to the

the Colonies, on the Colonies, in combination, providing an efficient line of packets, fitted at Point de Galle to the Suez and China Packets, to run once every four weeks (or once every fortnight, whichever the Colonies may deem most essential to their own interests) between Point de Galle and whatever port or ports in Australia the Colonies may themselves consider most expedient, and *vice versa*, and my Lords will be prepared to contribute a sum not exceeding one-half of the expense of a four-weekly service between Point de Galle and the Australian Colonies and New Zealand (in the event of the latter Colony becoming a party to the arrangement), subject, however, to the *distinct limitation* that the contribution to be made on the part of the Imperial Government in any one year shall in no case exceed £40,000, and on the understanding that the Packets shall call at King George's Sound to land and embark the West Australian Mails; that Colony being, however, called upon to pay her share, in proportion to her correspondence, towards the expense of the Packet Service between Point de Galle and Australia, and, in the event of the Colonies arranging conjointly or by a substantial majority for a fortnightly service, my Lords will be prepared to entertain the question of a further contribution.

But this undertaking is given upon the express condition that any second service towards which the Imperial Government may render assistance is alternative with the other, *i.e.*, that there shall be sufficient interval between the arrival and departure of the steamers for the purposes of correspondence.

38-7143 Queens-
land.

As it appears from the letter from the Colonial Office, dated the 24th ultimo, and its enclosures, that it is the wish of the Government of Queensland that the correspondence of that Colony shall be conveyed once every four weeks *via* Torres Straits, my Lords have no objection, on the part of the Imperial Government, to conveying such correspondence between England and Singapore free of all charge, but they are not prepared to make any contribution towards a service between Singapore and Brisbane, which must be left to the Colony to provide.

My Lords have only to state in conclusion that the arrangement at present in force as regards the division of the postage on the mail matter conveyed between this country and the Australian Colonies should not be disturbed.

I am, &c.,
CHARLES W. STRONGE,
pro Sec.

1872.

NEW SOUTH WALES.

NEW POSTAL SERVICE *viâ* SUEZ.

(RESPECTING ACTION OF GOVERNMENT OF VICTORIA RELATIVE TO.)

Presented to both Houses of Parliament, by Command.

TELEGRAM FROM THE CHIEF SECRETARY, SOUTH AUSTRALIA, TO THE COLONIAL SECRETARY, NEW SOUTH WALES.

Adelaide, 24 September, 1872.

WE received the following telegram from our Agent General last mail, viz. :—" Government propose new Mail contract—convey Australian Mails to Galle free—service Galle Australia to be undertaken by Australian Colonies—Government will contribute not exceeding forty thousand annually for four-weekly service, with further contribution if fortnightly service is arranged—advantage, Suez route considered conclusive."

THE CHIEF SECRETARY, VICTORIA, TO THE COLONIAL SECRETARY, NEW SOUTH WALES.

(No. 4,105.)

Victoria,

Chief Secretary's Office,

Melbourne, 26 October, 1872.

SIR,

With reference to a proposal for a new Postal Service with the Australian Colonies, on the termination of the existing contract with the Peninsular and Oriental Steam Navigation Company, contained in Treasury letter of 14th August, 1872, covered by despatch from the Secretary of State for the Colonies, under date 4th September, 1872, I take the earliest opportunity of informing you that this Government—availing itself of the telegraphic line now in communication with England—has already intimated its willingness to accept the proposal of the Imperial Government, and its desire to co-operate with the other Governments of the several Australian Colonies and New Zealand in making the necessary arrangements.

Immediate action is necessary in order that sufficient time may be given to Colonial and other Steamship Companies that may be desirous of entering into competition for the performance of the service. It is therefore indispensable that immediate steps should be taken for agreeing upon, and making known as extensively as possible, the conditions of contract; and with this object in view, the Government of Victoria is prepared to submit to you, on your expressing a desire for co-operation, the terms on which it is proposed to call for tenders for the required service (monthly and fortnightly) as early as possible; and to forward instructions on the subject, if practicable, to the Agent General for Victoria by the next mail, which leaves Melbourne on the 8th of next month.

The opinion of the Lords Commissioners of Her Majesty's Treasury in favour of at least a four-weekly service by the Suez route is so forcibly expressed, and it is so plainly stated that the aid of the Imperial Government will only be extended in support of a mail service to the Australian Colonies on condition that the mails are conveyed at least once a month to Point de Galle in connection with the Suez and China packets, that this Government does not anticipate unwillingness on the part of the other Colonies in adopting the proposed arrangement, and feels confident that the strong desire to act in cordial co-operation with the other Colonies, which is felt by the Government of Victoria, will be duly reciprocated.

That you may be fully informed of the views of this Government on the whole question of postal communication with Europe, I enclose copy of the *Argus* of the 23rd instant, showing the statements made in the Legislative Assembly on the 22nd, by the Minister of the Post and Telegraph Department.

I have the honor to request your attentive consideration of this subject, and the favour of your views thereon, at your earliest possible convenience.

A copy of this letter has been forwarded to the Governments of Queensland, South Australia, New Zealand, Tasmania, and Western Australia.

I have, &c.,

J. G. FRANCIS.

APPENDIX.

[Extract from the Argus, October 23, referred to.]

THE NEW POSTAL SERVICE.

Mr. Langton presented a message from His Excellency the Governor, transmitting copy of a despatch from the Secretary of State, forwarding a copy of a letter from the Lords Commissioners of the Treasury, containing proposals for a new postal service on the termination of the present contract with the P. and O. Steam Navigation Company at the end of the year 1873.

The documents were read by the Clerk at the Table, and are as follow:—

“(Circular.)

“4th September, 1872.

“Sir, “I transmit to you a copy of a letter from the Lords Commissioners of the Treasury, containing proposals for a new postal service with the Australasian Colonies, on the termination of the present contract with the Peninsular and Oriental Steam Navigation Company at the end of the year 1873.

“I request that you will inform me of the views of your Government on their Lordship’s proposals.

“I have, &c.,

“KIMBERLEY.”

“Treasury Chambers, 14 August, 1872.

“Sir,

“I am commanded by the Lords Commissioners of Her Majesty’s Treasury to request that you will state to the Earl of Kimberley, with reference to the correspondence that has recently taken place relative to the packet service between this Country and the Australian Colonies and New Zealand, that my Lords have given this subject their attentive consideration.

“My Lords would observe that the several Colonies (with the exception of West Australia) having requested that an end should be put to the contract under which the Peninsular and Oriental Steam Navigation Company now convey the Australian mails between Point de Galle and Sydney; the necessary notice has been given to the Company, and the contract will expire at the end of next year (1873).

“It therefore becomes necessary to determine in what manner, and by what route, the postal communication should be maintained when the contract in question comes to an end.

“The several routes which have been suggested are—

“1st. The present route *via* Suez and Point de Galle.

“2nd. As an alternative route, the route *via* San Francisco; and

“3rd. Incidentally, the route *via* the Cape of Good Hope.

“The advantages, however, attendant upon the present route appear to my Lords to be so conclusive that they are decidedly of opinion that it should not be changed.

“The advantages are—first, that it is the shortest; and secondly, that by making use of the vessels under contract with Her Majesty’s Government for the India and China service as far as Point de Galle, the carriage of the Australian mails is provided for a considerable portion of the distance over which they have to be conveyed.

“As several of the Australian Colonies have on repeated occasions complained of the manner in which the service between Point de Galle and Australia has been performed, and so much difficulty has hitherto been experienced by the Home Government in providing a service satisfactory to the Colonies, my Lords have come to the conclusion that it is not advisable that the Imperial Government should any longer be parties to any contract for the service between Point de Galle and Australia, but that it would be better that the Colonies should, at the expiration of the present contract, themselves, in combination, provide such service, leaving it to the Imperial Government to provide for the conveyance of the mails between England and Point de Galle.

“A considerable sum has hitherto been contributed by the Australian Colonies and New Zealand towards the expense of the conveyance of their mails between this Country and Point de Galle; my Lords propose at the termination of the present Point de Galle and Australian contract to relieve the Colonies from any payment on this account, and to undertake, on the part of the Imperial Government, so long as the present contract for the India and China mail service is in existence—that is, until the 31st January, 1880—to convey the Colonial mails between England and Point de Galle, and *vice versa*, free of all charge to the Colonies, on the Colonies in combination providing an efficient line of packets, fitted at Point de Galle to the Suez and China packets, to run once every four weeks (or once every fortnight, whichever the Colonies may deem most essential to their own interests) between Point de Galle and whatever port or ports in Australia the Colonies may themselves consider most expedient, and *vice versa*; and my Lords will be prepared to contribute a sum not exceeding one-half of the expense of a four-weekly service between Point de Galle and the Australian Colonies and New Zealand (in the event of the latter Colony becoming a party to the arrangement), subject, however, to the *distinct limitation* that the contribution to be made on the part of the Imperial Government in any one year shall in no case exceed £40,000, and on the understanding that the packets shall call at King George’s Sound to land and embark the West Australian mails, that Colony being, however, called upon to pay her share, in proportion to her correspondence, towards the expense of the packet service between Point de Galle and Australia; and in the event of the Colonies arranging conjointly or by a substantial majority for a fortnightly service, my Lords will be prepared to entertain the question of a further contribution.

“But this undertaking is given upon the express condition that any second service towards which the Imperial Government may render assistance is alternative with the other, *i.e.*, that there shall be sufficient interval between the arrival and departure of the steamers for the purposes of correspondence.

“As it appears from the letter from the Colonial Office, dated the 24th ultimo, and its enclosures, that it is the wish of the Government of Queensland that the correspondence of that Colony shall be conveyed once every four weeks *via* Torres Straits, my Lords have no objection on the part of the Imperial Government to conveying such correspondence between England and Singapore free of all charge, but they are not prepared to make any contribution towards a service between Singapore and Brisbane, which must be left to the Colony to provide.

“My Lords have only to state, in conclusion, that the arrangement at present in force as regards the division of the postage on the mail matter conveyed between this Country and the Australian Colonies should not be disturbed.

“R. G. W. Herbert, Esq., Colonial Office.”

“I am, &c.,

“CHARLES W. STRONGE,

“*Pro* Secretary.”

Mr. Langton thought it would perhaps be convenient if he took this opportunity of fulfilling a promise which he made some time ago, that before the Session was over, the Government would intimate the course they intended to take in regard to the Postal Service. The House would gather from the communication which had just been read, that the Home Government had offered—and he thought every one must admit that it was a very liberal offer—to carry the Australian mails free of charge as far as Galle. That service had been costing the Colonies £28,000 per annum, and of that charge the Colonies would be at once relieved. The Home Government offered further, if the Colonies would undertake to enter into a contract for carrying the mails between Galle and the Australian continent, to contribute a sum not exceeding £40,000 towards a four-weekly service, and also if the Colonies combined in the way suggested, to contribute a still larger sum towards a fortnightly service. After giving careful consideration to the subject, the Government of this Colony had come to the conclusion that the Colonies would be able to obtain a fortnightly service in this direction for rather a smaller sum of money than they were at present paying for the four-weekly service. It would be quite out of place, even if it were not impossible, for him to attempt to submit to the House any estimate of the exact cost the Government thought would be incurred in carrying out this arrangement. Not only would it be impossible, it would be imprudent, simply because it would prejudice the arrangements to be entered into with the neighbouring Colonies, and those with whom this Government had to contract for the carrying out of the service. He should therefore content himself with stating the opinion that for a smaller sum than the Colonies were at present paying for a four-weekly service, a fortnightly service could be secured. The Government contemplated at once intimating their willingness to accept the offer. They anticipated the ready acquiescence of the other Colonies, and were also willing that Victoria should take the responsibility of entering into the contract, and of conducting the business and distributing the mails at this end, for of course Melbourne would be the terminus of the route. It would therefore be apparent to the House that inasmuch as our existing contract terminated in December, 1873, there was no time to be lost if we desired to give both local tenderers and tenderers in other parts of the world ample opportunity to send in their tenders and make their arrangements for carrying

carrying out the service when their contracts were accepted. Under these circumstances, the Government desired to inform the House that they proposed to acquaint the Imperial Government and the neighbouring Colonies, without delay, that as far as this Colony was concerned, the Victorian Government were willing to accept the offer made by the Imperial authorities, and that they hoped to receive the assistance of all the neighbouring Colonies in giving effect to it; but should any of the neighbouring Colonies hold back, thinking the offer might not be as favourable to them as to this Colony, the Government would still advise the Victorian Parliament to take upon itself the responsibility of entering into the arrangement, the Government believing it to be the best that could be made under the circumstances. Of course the House would naturally expect to hear the views of the Government with respect to the San Francisco route. It had been announced that a Conference was to be held in Sydney in the course of the next few weeks to consider the proposal of New South Wales to enter into a contract for carrying mails *via* San Francisco. In regard to that proposal, though, as a matter of course, it would not be nearly so convenient for this Colony as the route the Imperial Government offered to subsidise, yet at the same time, looking at the desirability of maintaining regular and frequent communication with the islands of the Pacific and the coast of America, this Government would be willing to contribute a reasonable proportion to the subsidy which might be required for such a service, and that reasonable proportion would of course have some reasonable relation to the proportion of the cost of a fortnightly service *via* Suez which the Government of New South Wales would be willing to bear. With regard to the Cape route, there had been numerous communications made to the Government of this Colony on this subject, but this difficulty stood in the way: it had been represented to the Government—and the representations had been borne out by facts, which must have come under the notice of every one—that there were several competing Companies already on that route, and that probably, without payment of any subsidy, first-class steamers would in a few months be regularly running by way of the Cape, and that the advantages afforded by these steamers would be enjoyed by these Colonies just as much as if they had undertaken to subsidise them. In this state of things the Government did not feel justified in contemplating committing this Colony to any liability on account of that route at the present time. He might be permitted to add that the Government had under consideration a proposal to be submitted to the Governments of the neighbouring Colonies, and that of South Australia in particular, whose enterprise in completing telegraphic communication with Europe he thought deserved all praise. (Hear, hear.) The Government contemplated making overtures to the neighbouring Colonies with the view of subsidising the telegraph line, so that messages might be delivered in Melbourne at a very much lower scale of charges than that in use at the present time. In conjunction with the neighbouring Colonies, this Government hoped to be able to accomplish that. He had hoped, before sitting down, to have been in a position to inform the House of the exact hour and minute at which one or two telegrams received here from London had been despatched, and perhaps in a short time he should be able to do so.

Mr. Macbain.—Is it the intention of the Government to enter into arrangements for a fortnightly mail from Galle?

Mr. Langton.—It is.

Mr. Macbain.—And is it not intended to do anything towards subsidising the Cape route?

Mr. Langton.—Not at present.

Mr. Macbain thought it was only right that the House should know the arrangements to be made for mail communication between this Country and Europe. It must not be forgotten that successive Governments had pledged themselves to the establishment of a service *via* the Cape. The necessity for this route existed now as much as ever, and a subsidy would be required to accelerate the speed of those vessels which the Treasurer said would shortly be placed on that route by competing Companies.

The Speaker reminded the Hon. Member that he was not in order.

Mr. Macbain asked the indulgence of the House for a few minutes. It would be a great advantage to have a steam service *via* the Cape, establishing communication within two or three days of the overland route time. If this Colony could, by giving a subsidy to the Cape route, induce a great number of people to come out here as immigrants who would not otherwise be inclined to come at all, because of the length of the passage, that was an excellent reason why such a course should be adopted. He trusted the Government would not lose sight of the importance of the Cape route.

Mr. Grant asked if the Government intended to call for alternative tenders for a fortnightly or monthly service, and also for a service *via* the Cape. He remarked that it might be found that the extra amount paid for fortnightly communication would go a great way towards paying a subsidy for the Cape route, and suggested that if care was taken in arranging the services in connection with the Cape, Suez, and San Francisco, a weekly service might practically be obtained.

Mr. Langton said he did not intend to indicate that the Government were going to call for tenders on their own responsibility. The terms of the despatch simply pointed to combined action on the part of the Colonies. Evidently the Imperial Government made the offer with that view, and as the Victorian Government did not wish to do anything apart from that, they would communicate their view to the neighbouring Colonies, and see if the Governments of those Colonies could be induced to enter into some common arrangement. As to the terms in which the tenders would be called for, individually he thought it would be desirable to have as many alternative routes or alternative tenders, if that were the right expression, as possible, so as to afford the widest possible range of choice. He was anxious to have large steamers running regularly by way of the Cape; but with regard to postal communication, he was afraid there was no hope of being able to compete with the Postal Service *via* Galle. Seeing that we were to have all letters supplied weekly or fortnightly to Galle, gratis, leaving us only about 4,000 miles to cover, it would not be economical to go to the expense of a service over 16,000 miles, when all that was necessary was a service covering 4,000 miles.

Mr. G. V. Smith asked if the House would have an opportunity of expressing an opinion on the subject before the Government was committed to a fortnightly mail *via* Suez. Did the Treasurer intend to imply that the Imperial Government would be bound by the Suez route?

Mr. Langton.—The Government is not in a position to submit any resolution, because to do so under present circumstances would be to show our hand. We cannot do that. We can name neither date, nor time, nor amount, and therefore we cannot submit a resolution; but if there is any feature in the scheme sketched out in the statement I have made to the House which Hon. Members would like to discuss, ample opportunity will be afforded, either on the motion for going into Committee of Supply, or at any other time, to have the whole question discussed, and, if the House thinks fit, to come to some specific resolution on some specific point of the scheme.

Mr. Harker said it struck him that the present was a very inopportune time for discussion, because the facts of the case were only known to the Government. So far as he could gather, the arrangement proposed by the Government was a very desirable one indeed; but if it was to extend over a long period of time, it should not be entered into until Hon. Members had had an opportunity of expressing an opinion about it. We knew that Postal Services were much more expensive now than formerly. One element of the increased expense was the price of coal. He thought that it would have been better if the Treasurer had laid the despatch on the Table, and caused it to be distributed, and afterwards made remarks upon it.

Mr. Richardson thought they had to thank the Treasurer; for the remarks he had made. The first step, he considered, was to communicate with the neighbouring Colonies, and when that had been done no doubt the House would be consulted.

Mr. Francis said he had nothing to add to the explanation of the Treasurer; but so that there should be no misunderstanding, he might state that while the Government intended to convey to the House its determination to recognize to the full what they regarded as the liberal proposition of the British Government, they did not desire or intend to take any step until they had invited and obtained the replies of the neighbouring Colonies to the proposal to adopt a scheme in which their assistance and co-operation could be expected. At the same time prompt action was expedient, because the present postal contract expired at the end of 1873—some fifteen months hence. Under these circumstances, the longer the time afforded to firms, both in the Colonies and abroad, to make preparations for carrying out the service, the better prospect was there of obtaining an acceptable offer. The first duty of the Government was to inform Parliament, not only of the communication, but its intention to reciprocate, in the same spirit, the generous recognition on the part of the Imperial Government of the relations between the Colonies and the Mother Country, and to show the determination of Victoria not to treat with indifference or negligence an offer in which our interests were so manifestly consulted. The Government did not intend to preclude itself from the consideration of the advantages which might be afforded by communication *via* the Cape; but the question had been asked on various hands whether subsidising one particular line of steamers in the maintenance of a service for commercial purposes,—since clearly it would be of no particular value for postal purposes,—would not prevent wealthy and capable firms from employing or building suitable vessels of large power and tonnage and entering into the trade, because if one firm received a subsidy other firms would be placed at a disadvantage.

TELEGRAM FROM THE GOVERNOR OF NEW SOUTH WALES TO THE SECRETARY OF STATE FOR THE COLONIES.

Sydney, 31 October, 1872.

A LETTER was received yesterday by this Government from the Government of Victoria, stating that a telegram had been sent to England intimating the willingness of Victoria to accept the proposal made in the letter of the Lords Commissioners of the Treasury, dated 14th August, for a new contract for the Mail Service between Galle and Australia in connection with the India and China lines. The letter of the Lords Commissioners invites the whole of these Colonies in combination to provide the Australian service on certain conditions, and the object of the service is to meet the interest of all alike. The Ministers of this Colony therefore do not consider that the Victorian Government were in a position to undertake the service behind the backs of the other Australian Governments invited to join in it, and when sufficient time had not elapsed for the despatch of the Secretary of State even to have reached Queensland and New Zealand. The Lords Commissioners clearly intend that the Colonies should act "conjointly or by a substantial majority"; and my Advisers, while protesting against the precipitate action of Victoria in order to gain an undue advantage, respectfully urge, and I concur in urging, that the necessary time be allowed for the Colonies to act in conference and combination.

THE COLONIAL SECRETARY, NEW SOUTH WALES, TO THE CHIEF SECRETARY, VICTORIA.

Colonial Secretary's Office,
Sydney, 31 October, 1872.

SIR,

I am directed by His Excellency Sir Hercules Robinson to acknowledge the receipt of your letter of the 26th instant, inviting attention to Lord Kimberley's circular despatch of the 4th September, covering a letter from the Lords Commissioners of Her Majesty's Treasury, dated the 14th August, by which it is proposed that the Australasian Colonies in combination should provide the Mail Service "between Point de Galle and whatever port or ports in Australia *the Colonies may themselves consider most expedient*." In further reference to this subject, you inform me that the Government of Victoria, availing itself of the Electric Telegraph now in communication with England, "had already intimated its willingness to accept the proposal of the Imperial Government."

2. The character of the extraordinary step taken by your Government in this matter is further explained by your intimating to New South Wales that "you are prepared to submit to us, on our expressing a desire for co-operation, the terms on which it is proposed to call for tenders for the required service."

3. In reply, I have to express the surprise of this Government at the nature of the communication I have had the honor to receive. The proposal of the Imperial Government is made, not to the Colony of Victoria but to the Australian Colonies in common,—not in the interest of Victoria but in the interest of the whole Empire. It is sufficiently apparent that the Imperial Government, in undertaking to carry the Australian mails between England and Point de Galle free of all expense, and in offering to contribute a part of the Australian subsidy for a four-weekly or fortnightly service, is desirous of meeting the wants and serving the interests of all the Australasian Colonies equally; and it is equally clear that, unless this general object were accomplished, the Mail Service would not be of equal advantage to Great Britain. This object is placed beyond doubt by the expressed wish of the Lords of the Treasury that the Colonies should enter into the new arrangement in combination or by a substantial majority.

4. This Government therefore cannot but believe that your precipitate course of action has been adopted without due consideration, and it feels confident that, in order to afford time and opportunity for the Colonies to act conjointly—the course to which they are invited by the Imperial Government—you will readily retire from the position you have mistakenly assumed.

I have, &c.,

HENRY PARKES.

P.S.—The views of this Government have been communicated by telegram to the Secretary of State.—H.P.

TELEGRAM FROM THE COLONIAL SECRETARY, NEW SOUTH WALES, TO THE CHIEF SECRETARY, SOUTH AUSTRALIA.

Sydney, 31 October, 1872.

I CONSIDER it my duty to inform you that the following letter on the Suez Mail Service has been this day addressed to the Government of Victoria. (*See preceding letter.*)

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE COLONIAL SECRETARY, QUEENSLAND.
Colonial Secretary's Office,
Sydney, 31 October, 1872.

SIR,

In reference to the circular despatch from the Secretary of State, September 4th, covering the proposal of the Imperial Government for a new contract for the conveyance of the mails between Point de Galle and Australia, and to the precipitate and extraordinary course pursued by the Government of Victoria on receipt of this despatch, to the prejudice, as it is conceived, of the other Colonies,—I have the honor to transmit for your information copy of a letter which has been addressed by this Government to Mr. Francis on the subject.

I have, &c.,
HENRY PARKES.

[N.B.—A similar communication was also addressed at the same time to the Colonial Secretaries of New Zealand and Tasmania respectively.]

TELEGRAM FROM THE CHIEF SECRETARY, SOUTH AUSTRALIA, to THE COLONIAL SECRETARY, NEW SOUTH WALES.

Adelaide, 31 October, 1872.

YOUR telegram received. This Government concurs in the view taken by you,—that the offer was made by the Imperial Government to the Colonies in combination, and not to any one in particular.

TELEGRAM FROM THE CHIEF SECRETARY, SOUTH AUSTRALIA, to THE COLONIAL SECRETARY, NEW SOUTH WALES.

Adelaide, 4 November, 1872.

I HAVE this day transmitted the following telegram to the Chief Secretary of Victoria:—Your letter, 29th ultimo, received, and reply to following effect has been despatched, namely,—Secretary of State informed that we are prepared to join other Colonies, or such as desire to combine, in making provision for Postal Service between Galle and Australia, on indispensable stipulation, however, that Glenelg or some other port in South Australia should be made a port of call for receipt and delivery of South Australian mails, and will give immediate consideration to times of call for tenders. With regard to your Government's views on the general question, as set forth in copy of the *Argus* enclosed in your letter, and to which you refer me, I must take exception to position assumed by the Minister representing Postal Department, namely, that Victoria should take the responsibility of entering into the contract, conducting the business, and distributing the mails at this end, for of course Melbourne would be the terminus of the route; and would call your attention to the fact that the offer of the Imperial Government is not made to any Colony in particular, but to the Colonies combined, or a substantial majority thereof. I further point out that unless the several Governments confer together on this subject harmonious action can scarcely be expected, and this Government therefore strongly urges upon that of Victoria the desirability of Victoria being represented at the proposed Conference at Sydney early next month, when Postal and the kindred matter of Telegraph communication, together with other important affairs of common interest, can be discussed. I have communicated with Chief Secretary of New South Wales to same effect.

TELEGRAM FROM HIS EXCELLENCY SIR JAMES FERGUSSON, SOUTH AUSTRALIA, to HIS EXCELLENCY SIR HERCULES ROBINSON, NEW SOUTH WALES.

4 November, 1872.

SECRETARY of State hopes that the Colonies will confer immediately upon the Suez Mail Service. I am directed to forward this.

1872-3.

NEW SOUTH WALES.

MAIL SERVICE TO EUROPE BY WAY OF SAN FRANCISCO.

(DESPATCHES.)

Presented to Parliament, by Command.

GOVERNOR SIR HERCULES ROBINSON to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 36.)

Government House,
Sydney, 10 August, 1872.

MY LORD,

I have the honor to forward a minute of the Cabinet, explaining the course about to be taken by this Government to establish a Mail Service across the Pacific, and through America to Europe, and the assistance towards this object which is desired from the Imperial Government.

2. This paper has only just reached me, with a request that it may be transmitted to your Lordship by the English mail, which is on the point of closing.

I have, &c.,

HERCULES ROBINSON.

[Enclosure.]

MINUTE OF CABINET.

On behalf of myself and colleagues, I desire to submit to your Excellency the following explanation of the course about to be taken by this Government to establish an efficient Mail Service across the Pacific, and through America to Europe, with the hope that you will communicate this minute by the out-going mail to the Right Honorable the Secretary of State.

As is known to your Excellency, New South Wales has always taken the leading part among the Australian Colonies, in the efforts which have been made to open the Pacific route. Many years ago the Parliament adopted Resolutions in favour of it. In 1865 the Colony engaged itself to a subsidy of £55,000 a year in support of a line of steamers between Sydney and Panama, which was paid for more than two years until the Company failed; and, in 1870 and 1871, it again agreed to subsidize the line of steamers then running between Sydney and San Francisco. The Services which have hitherto come into existence have from various causes ultimately broken down, but the practicability and the advantages of the route have at the same time been fully established.

On the 26th July the Legislative Assembly adopted the following Resolution on the subject:—

Resolved,—

(1.) That it is desirable that the Government should arrange for the establishment of a monthly line of mail steamers between Sydney and San Francisco, securing the delivery of mails at those ports within thirty days, and between Sydney and Liverpool within forty-eight days—such arrangement not to be carried into effect until ratified by Parliament.

(2.) That the foregoing Resolution be transmitted by Address to His Excellency the Governor.

The Government understand that, under the authority of this Resolution, they are required to make all preliminary arrangements to enable a contract to be entered into on such conditions as shall ensure success, embracing the construction, speed, and capacity of ships for the Pacific connection with the mails through United States territory, and across the Atlantic, and the consent of other Governments to contribute to the required subsidy.

It is believed by Ministers that the Imperial Government will readily undertake to effect arrangements, in the interest of this and other Australian Colonies, with the Government of the United States, for the regular transmission of the Australian mails, under the provisions of any Conventions existing between the two Governments. It is also respectfully urged that, in our efforts to carry out a Service of so much importance to the Empire, this and the other contracting Colonies will have a fair claim to assistance from the Imperial Government.

We have reason to believe that contributions to the general subsidy could be obtained from the Government of the Hawaiian Islands, from the State Government of California, and from the United States Government. In the case of the line of steamers lately running, a subsidy was in fact received from the Hawaiian Government, but in that case the subsidies were negotiated by the contractors for the Service without the intervention of any Colonial Government. It is assumed that the Government of this Colony, possessing no treaty-making powers, cannot open negotiations with independent Governments unless the sanction of the Imperial Authorities can be obtained for the purpose limited by the above remarks; but it does not appear to us that, in regard to this difficulty, there can exist any valid reason against our being authorized to act in the matter.

There is at present a line of American steamers running between New Zealand and California, known as Webb's Line, under a contract with New Zealand alone; but it is generally supposed that that line will not be long continued, and it is thought that very probably New Zealand will ultimately join in the Service now projected, uniting with it by a branch line at Fiji.

Colonial Secretary's Office,
Sydney, 10 August, 1872.

HENRY PARKES.

THE SECRETARY OF STATE FOR THE COLONIES TO GOVERNOR SIR HERCULES ROBINSON.

(No. 88.)

Downing-street,
29 November, 1872.

SIR,

I have to acknowledge your despatch (No. 36) of 10th August, upon the subject of the proposed establishment, by the Government of New South Wales, of a Mail Service to Europe by way of San Francisco.

As regards the question of an Imperial subsidy to the proposed line, I have to observe that the offer made to the Australian Colonies, in my circular despatch of 4th September, was intended to relieve the Imperial Government from considering separately whether each of the various schemes from time to time proposed by each Colonial Government should receive pecuniary aid from the Treasury; and, subject to the decision that one Monthly Service *via* Galle shall be maintained, to leave it to the Colonies to suggest (after consultation among themselves upon their Lordships' proposals) whether any and what second and alternative Service should be subsidized.

Her Majesty's Government are not therefore at present in a position to entertain an application from any one Colony for a contribution to a new Mail Service.

With respect to the question raised in your Ministers' minute as to their receiving authority to make arrangements with the United States Government in connection with this Service, I have to inform you that Her Majesty's Government will be willing to give their assistance in effecting arrangements for the regular transmission of mails to and from Australasia, through the United States, and that no objection will be raised to the Colonies entering into direct Postal Conventions with the United States, provided that such Conventions are submitted to Her Majesty's Government for final sanction.

I have, &c.,
KIMBERLEY.

1872-3.

NEW SOUTH WALES.

POSTAL SERVICE *viâ* NEW ZEALAND AND SAN FRANCISCO.

(CORRESPONDENCE RELATIVE TO SUGGESTED.)

Presented to Parliament, by Command.

No. 1.

THE HONORABLE JULIUS VOGEL AND THE HONORABLE WILLIAM REYNOLDS TO THE COLONIAL SECRETARY
OF NEW SOUTH WALES.

Sydney, New South Wales,
30 January, 1873.

SIR,

In order that you may be at liberty to use the information outside the Conference, we now beg to make proposals respecting the Californian Service, in the form which we have already described to you.

Subject to its being found practicable to arrange with the Contractors—as to which we have no doubt—we are willing that the Steamers employed in the Californian Service shall run in the manner provided for by the provisional Contract, which was last year entered into between Mr. Duffy, Mr. Vogel, and Mr. Webb, except that “New South Wales” and “Sydney” shall, in any agreement that may be completed, be substituted for “Victoria” and “Melbourne,” respectively.

We believe that such a Service could be obtained for a payment of from Forty-five thousand pounds to Fifty thousand pounds. In such case, provided that Twenty thousand pounds of the cost was met by an Imperial Subsidy to that amount, New Zealand would be willing to pay the balance.

£45,000.
£50,000.
£20,000.

The only payment we would propose to exact from New South Wales would be the Postages received by the Colony for Mail matter carried for it by the Service, it being understood that if the amount of such Postages should exceed Five thousand pounds, the excess should be retained by the Colony. We should also propose that the other Colonies should pay to New Zealand the total amount of the Postages received for Mail matter carried for them respectively by the Service.

£5,000.

We should make it a condition that the Postal Rates should remain as at present, namely,—Sixpence per half-ounce on letters, and One penny each for newspapers.

6d.
1d.

We thus, in effect, offer to New South Wales a Mail Service without requiring any payment whatever. The boat from Sydney would always proceed to San Francisco, calling at Auckland; whilst the boat from San Francisco (after transhipping at Auckland, into a boat waiting there, the mails for Sydney) would proceed along the New Zealand Coast as far as Port Chalmers. The boat into which the mails for Sydney had been transhipped would be the next to proceed to San Francisco. In fact, a division of the terminus of the Service between Sydney and Port Chalmers would be effected; the boat from Sydney always performing the up-Service, and all the main-boats visiting Sydney in their turn.

In arranging the new Contract, we should be willing to give to New South Wales a fair share in the decision of all questions affecting the service; and the times should be so fixed as to give to Sydney the benefit of a Fortnightly Service.

We admit that for some time the Contract with New Zealand has not been satisfactorily performed; but this has arisen from too few boats having been employed. In the new Contract we would take care that there should be ample provision for securing the use of a sufficient number of proper boats, and for compelling a satisfactory substitution to be made, in case any of the boats employed should become unfit for the efficient performance of the service.

\$500,000.

The offer now made is, beyond doubt, a very liberal one. We do not desire to disguise from you that our object in making it is to induce your Government to refrain from entering into a separate Contract for a Californian Service—a course which would entail wholly unnecessary competition, and which would probably embitter the relations between the two Colonies. A Bill is now passing through Congress to subsidize the present line, and we are informed that it will undoubtedly become law this Session. The amount proposed by the Bill is Five hundred thousand dollars, or One hundred thousand pounds. In effect, the present boats would be so subsidised as to make it easy for them to carry cargo and passengers without charge, for the purpose of running off opposition. But whilst we feel that the New Zealand Line has this vantage ground, we desire to prevent such an opposition as would necessarily cause the Imperial Government to refrain from subsidising either of the lines to the amount they otherwise would do. We do not doubt that if New South Wales and New Zealand agree upon the subject, an imperial subsidy of Twenty thousand pounds would be at once granted.

We must leave your Government to consider whether they will accept this offer of a Service which will really cost your Colony nothing, and which will give you the advantages of a large expenditure in your port, or whether they will prefer a costly competition, in which New South Wales, as well as the Contractors with her, must inevitably suffer.

We shall be glad to receive an early answer from you.

We have, &c.,
JULIUS VOGEL.
WILLIAM H. REYNOLDS.

No. 2.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE HONORABLE JULIUS VOGEL.

Colonial Secretary's Office,
Sydney, 17 February, 1873.

SIR,

I have the honor to inform you that the Members of this Government will be prepared to see you and Mr. Reynolds at this office at 10 a.m. to-morrow, on the subject of a Steam Mail Service between these Colonies and California.

I have, &c.,
HENRY PARKES.

No. 3.

MINUTE OF COLONIAL SECRETARY.

SEVERAL interviews between the Delegates from New Zealand and Members of the Government of New South Wales took place, at which Mr. Vogel and Mr. Reynolds explained more in detail the terms (as put forth in the letter of 30th January) on which they invited New South Wales to become a party to the Webb contract. In one of these interviews it was stated that New Zealand would not object to such alterations in the existing contract as would admit of the main line branching off at the Navigators' Islands—one boat running direct to and from Sydney, and another to and from New Zealand; New South Wales in this case to pay an adequate subsidy. But the proposal, however varied, was limited to the Webb line. Finally, the Government of New South Wales retired from the negotiations by the following letter.

No. 4.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE HONORABLE JULIUS VOGEL AND THE HONORABLE WILLIAM H. REYNOLDS.

Colonial Secretary's Office,
Sydney, 22 February, 1873.

GENTLEMEN,

This Government has had under its consideration your letter of the 30th January, on the subject of the Ocean Mail Service established by contract between Mr. Webb, of New York, and the Government of New Zealand, and it has examined the proposals therein contained, with the advantage of the further information communicated by you personally. I desire to explain that your letter was not considered during the sittings of the Intercolonial Conference, because it did not appear to me desirable that the Representatives of two of the Colonies should enter into separate negotiations on a branch of one of the questions, namely,—“A scheme of Ocean Mail Services which would meet the demands of all the Australian Colonies and New Zealand,”—for the consideration of which the Conference was expressly convened.

2. In your letter of the 30th ultimo you propose to vary the New Zealand contract so as to extend the existing Service to the Australian Colonies, and make Sydney the port of connection, "the boat from Sydney always performing the up Service, and all the main boats visiting Sydney in their turn." You state that "in arranging the new contract you should be willing to give to New South Wales a fair share in the decision of all questions affecting the Service." For these advantages you ask no subsidy whatever from this Colony, and only the postages on the mail matter carried for the Colony to the extent of five thousand pounds.

3. This "very liberal offer," as you characterize it, is made, however, subject to the conditions that the Government of New South Wales shall "refrain from entering into a separate contract for a Californian Service," and agree with the New Zealand Government in obtaining, or endeavouring to obtain, "an Imperial subsidy of twenty thousand pounds."

4. In considering your proposal, supposing that there were no causes of disagreement apart from the merits of the Service, the objection at once presents itself that the vessels of this Service have not hitherto performed the voyages to and from San Francisco within such periods as would justify the expectation of punctual mail deliveries in England and Australia within the stipulated number of days, which must be an absolute condition in any contract to which this Colony is a party. Recent occurrences make it more than ever necessary that the contract time of any new Service subsidized by this Colony should be as short as possible. But this Government feels constrained to decline your offer, on grounds which do not admit of considering the value of its alleged advantages. If it is admitted that the Mail Service established under the New Zealand contract is of the valuable character which you have represented it to be, it follows that you offer New South Wales a substantial interest in that Service, free of cost, in consideration of the assistance to be given by this Colony in obtaining from the Imperial Government in its support an annual grant of £20,000. It does not appear to the Government of New South Wales that this is a transaction in which this Colony ought to engage in view of any monetary or other substantial consideration whatever. A broad distinction is drawn between the position in which you propose to place New South Wales and the part she might be asked to take in co-operation with one or more of the other Colonies in any undertaking of a national character in which the Mother Country was believed to be interested, and towards the cost of which each Colony and the Mother Country might be honorably expected to contribute in equitable proportion.

5. Besides this grave ground of objection in the nature of your proposal, this Government cannot dissociate from your present offer the adverse attitude assumed by the Representatives of New Zealand against the just interests of New South Wales, in the proceedings of the late Conference on the question of the terminus of the Suez Mail Service. In your interview with several of my colleagues and myself, on the 18th instant, Mr. Vogel openly avowed that, if the New South Wales Delegates, at the commencement of the Conference, had come to an understanding with you, as the Delegates of New Zealand, on the Webb Mail Service, he would not have interfered in the question of the terminus of the Suez Line. In the face of this admission, your persistent hostility to New South Wales in the consideration of the proposals of the Lords of the Treasury by the Conference can only be regarded as an attempt to force this Colony to become a party to the New Zealand contract. It is difficult to suppose that you seriously entertain the belief that any offers which New Zealand could make would induce the Government of New South Wales to fall in with this design, even if the Colony were not required for a consideration to assist in obtaining a money grant from the British Government.

6. In declining your proposals, this Government deeply regrets that, under present circumstances, there is so slight a prospect that it will be able to co-operate with New Zealand in organizing an efficient and economical Mail Service between these Colonies and England by way of America. In former years New South Wales bore an equal share with New Zealand, for a lengthened period, in establishing the first line of Mail Steamers across the Pacific; and up to the present time the other Australian Colonies have all refused to grant aid to the Trans-Pacific lines of communication which have been opened. It was hoped that the knowledge of this co-operation in the past might have served to promote a cordial desire for united action in the future; and this Government still looks forward to the time when the two Colonies may join in good faith and on equal terms in supporting the Trans-Pacific Mail Service. Should such time arrive when a Service can be proposed in the interest of the two Colonies with satisfactory guarantees for the regular delivery of its mails, and on conditions honorable alike to both, it will be gratifying to this Government to be enabled to co-operate with the Government of New Zealand. No Mail Service across the Pacific, however, will now be satisfactory to this Colony unless the English and Australian Mails in both directions are delivered within forty-five days.

I have, &c.,
HENRY PARKES.

No. 5.

THE HONORABLE JULIUS VOGEL AND THE HONORABLE WILLIAM REYNOLDS TO THE COLONIAL SECRETARY
OF NEW SOUTH WALES.

Sydney, 22 February, 1873.

SIR,

We have the honor to acknowledge the receipt of your letter of this day's date, in which you explain why you have not hitherto replied to our letter of the 30th January, on the subject of the Californian Service,—in which you state what you understand our offer to have been, and why you are unable to accept it,—and in which you complain of the course taken by the New Zealand Delegates at the late Conference, and you hold out the hope of some future united action between the Colonies, with respect to the Californian Mail Service.

73-1449, No. 64.

2. In reply, we have to state that, at the interviews you have been so good as to accord to us, we understood the reason of your not previously answering our letter; and we also understood that you contemplated making an answer entirely different from that now under consideration. So late as yesterday you informed us, in the presence of other Members of the Ministry, that the Government had decided to write to us to the effect that they were willing, in concert with New Zealand, to arrange the details of a Californian Mail Service, leaving on one side the question whether or not the Service known as "Webb's"

"Webb's" could be made use of for the purpose; and you further informed us that your letter would contain a statement of the views of the Government as to the details of the Service. Our verbal reply to you was, that we should be willing to arrange with your Government the details of a Service in the way you proposed, on the understanding that, in doing so, we were not repudiating the liability of New Zealand under the existing Contract. In that proposition you acquiesced. We refer to this interview, not for the purpose of complaining of your having changed your intention, but with the hope that you may see your way to revert to your previous decision.

3. In the third paragraph of your letter, you fall into an error which is apparently slight, but is important, since it seems to colour your subsequent opinions. You state that our offer of the 30th January was made "subject to the conditions that the Government of New South Wales shall abstain from entering into a separate Contract for a Californian Service, and agree with the New Zealand Government in obtaining, or endeavouring to obtain, an Imperial subsidy of twenty thousand pounds." If you will examine the letter from which you quote, you will see that we did not lay down any conditions of the kind. We stated that our object in making the offer was "to induce your Government to refrain from entering into a separate Contract for a Californian Service." It may be said that this inaccuracy is not important, for that if the first of the conditions was not expressed, it was implied; but of more importance is the latter part of the statement,—that we made it a condition you should "agree with the New Zealand Government in obtaining, or endeavouring to obtain, an Imperial subsidy." We did not lay down such a condition, nor did we even ask New South Wales to join in the application. We merely expressed the opinion that, if New South Wales and New Zealand agreed as to the nature of a Service suitable to both, an Imperial subsidy would be at once granted. Our offer was no doubt based on the contingency of an Imperial subsidy being obtained; but we explained in our letter that we desired "to prevent such an opposition as would necessarily cause the Imperial Government to refrain from subsidizing either of the lines to the amount they otherwise would do." The distinction is of some importance, since you, in a subsequent part of your letter, endeavour to make out that we invited New South Wales to enter into a bargain unfair to the Imperial Government.

4. In the fourth paragraph of your letter, you raise the objection that the "vessels of this Service" have not hitherto performed the voyages within periods which would meet the stipulations you would require to be inserted in a Contract to which you were a party. In reply to this, we have to point out that in our letter we admitted that the Contract had not hitherto been satisfactorily performed, and stated that, "in the new Contract we would take care that there should be ample provision for securing the use of a sufficient number of proper boats, and for compelling a satisfactory substitution to be made in case any of the boats employed should become unfit for the efficient performance of the Service." Our Contract provides for the vessels running at a speed of over ten knots per hour; and the "Nebraska" lately performed the through voyage from San Francisco to Auckland at an average speed of eleven knots. If you bear in mind those facts, you will, we think, recognize that, unless at the cost of an enormous subsidy, a more rapid Service could not be obtained. We are aware that offers have been sent from New York to Sydney to perform a more rapid Service; but the information we have received by cable leads us to conclude that there is no probability of that offer being carried out. In a subsequent part of your letter, you state that nothing will be satisfactory to your Colony unless the English and Australian mails are delivered within forty-five days. If, instead of negotiating with us for the Service proposed in our letter, you were willing to pay what would be required for making the connections at the Navigator Islands, instead of at Auckland, we are under the impression that New South Wales could be secured a Service of twenty-eight days and a half between Sydney and San Francisco; which would, under ordinary circumstances, give to New South Wales a delivery in the time specified by you, and in a shorter time when the direct Railway is completed (as it soon will be) which will connect Halifax with Chicago.

5. You further state, in the fourth paragraph of your letter, that you feel constrained to decline the offer we have made you, "on grounds which do not admit of considering the value of its alleged advantages." Those grounds, as stated in the fourth and fifth paragraphs of your letter, appear to be, that you consider New Zealand is offering you a Service upon very liberal terms, in order to induce you to assist in obtaining from the Imperial Government a subsidy for the line, which that Government ought not to pay. We cannot but lament that you should do yourself and us the injustice of supposing that we could make to you an offer which you could not honorably accept. The process of reasoning by which you arrive at your conclusion is not very clear; but that is not strange, since it has cost you much time to work it out; for your letter of this day's date conveys the first intimation of an objection of that nature. Such an objection was not even hinted at in Conference by any Member; though, I think, that not one Member of the Conference would have listened for a moment to a proposal which, by any legitimate process of reasoning, might be open to the implication of dishonor. I think that your error arises from your failing to see that we do not propose to ask from the Imperial Government one sixpence in consideration of New Zealand relieving New South Wales from making a money payment towards the cost of the Service. The twenty thousand pounds which we proposed should be asked from the Imperial Government is the sum which it was understood the Imperial Government entertained the idea of giving last year, when an arrangement between Victoria and New Zealand was being considered. It is the amount which the Conference named as a Subsidy; and it is an amount which we are of opinion will be, at least in great part, covered by the postages which the Imperial Government receive. In the course of time those postages will no doubt amount to much more than twenty thousand pounds. New Zealand, in effect, proposed to bear so much of the cost of the Service as it would not be proper to ask the Imperial Government to bear. We have not concealed from you that, in undertaking that New Zealand should be liable for thirty thousand pounds a year, we trusted to the postages from other Colonies to recoup us to some extent, nor have we concealed from you our belief that the offer we made was a very liberal one. Still further, since you have raised the question, we admit that we think it is a very proper feeling on your part to prefer that New South Wales should contribute towards the Subsidy, instead of leaving New Zealand to bear the whole risk. We shall be quite prepared to deal with you on that basis, and we recognize the spirit of independence which has led you to indicate it.

6. When you incline to blame New Zealand for offering to relieve you of any pecuniary risk in connection with the Service, you must forget that New Zealand has had to carry on the Service, unaided by either Colonial or Imperial contributions. For nearly two years New Zealand has carried the mails for New South Wales without any payment whatever. She has carried all the mails despatched from Great Britain

Britain by the route, without receiving even the postages; and therefore, as a simple matter of business, if we are not able to obtain better terms, it suits us that New South Wales should withdraw her opposition, in which case we would give her the proposed Service in return for the postages, and would expect to receive a Subsidy from the Imperial Government. We do not ask New South Wales to enter into any alliance for the purpose of obtaining improperly a Subsidy from the Imperial Government. If New South Wales had for two years made the payments which New Zealand has made, and performed the Californian Service for all the Colonies and Great Britain, without receiving in consideration anything but abuse of the Service, she would fail to see anything improper in the offer which has been made. 2

7. We are sorry to find, from the fifth paragraph of your letter, that you allow your feelings as to what you consider the adverse attitude assumed by the Representatives of New Zealand in the late Conference to influence your decision on this question. We cannot enter at length upon the questions relating to the Conference, but we must say that the course we took was forced upon us by New South Wales. Had New South Wales been ready to co-operate with us upon the question of the Californian Service, we should certainly—even at the risk of some injury to the Postal Services required by New Zealand—have been averse to doing anything which New South Wales might have considered injurious to her interests. But you must not suppose that in the course which we did take, we overlooked the interests of New Zealand, or were in any way influenced by a spirit of retaliation. The Suez Service is of use to the southern part of New Zealand, but it is of use only in connection with a Melbourne Service. In short, for the purposes of the Suez Service, the interests of New Zealand are intimately identified with those of Victoria. The conditions to which the Conference agreed respecting the Suez Service exactly suit New Zealand. They give to that Colony the use of the main line, and provide for a Branch Service at the least possible cost and with the least possible risk. Had we taken a course which might have forced Victoria to secede from the Suez Service, it is probable that New Zealand would not have been able to use the line at all. Therefore, whether or not you consider the results of the Conference in relation to the Suez Service to be satisfactory to New South Wales, you must bear in mind that, as far as New Zealand is concerned, those results are entirely satisfactory. What Mr. Vogel meant you to understand, at the interview to which you refer, was that had we been able to make satisfactory arrangements with New South Wales in connection with the Californian Service, we should have been willing to forego some advantages in connection with the Suez Service, to the extent of not interfering about the terminus question. But as we could not come to any understanding with New South Wales respecting the Californian Service, we took the course with respect to the Suez Service most suited to New Zealand's wants. As to forcing New South Wales to become a party to the New Zealand Contract, such a course did not present itself to our minds. We found ourselves compelled to act independently of, and without concert with, New South Wales, and so we took our own course as to the Suez Service; and we offered to New South Wales terms as to the Californian Service which we considered, unless she were otherwise bound, she could not fail to accept, and which we still do not understand why she has refused. Had New South Wales been disposed to enter with New Zealand upon the discussion of the question on its merits, we do not pretend that we should have made an offer of so liberal a nature as that which we did make. Indeed, we plainly had to make such an offer as we thought would disarm the opposition of New South Wales. We did not dream, as you imply we did, of exercising any coercion.

8. We share with you the feelings of regret expressed in the sixth paragraph of your letter, that you are unable to see your way, in the present circumstances, to co-operate with New Zealand in organizing an efficient Service to San Francisco. We recognize the cordial manner in which New South Wales joined with New Zealand in maintaining the unfortunate Panama Service; and we have pleasure in expressing, on behalf of our Colony, our acknowledgments of your own personal exertions in that matter. We should be glad that the misunderstanding which you now set up should be at once ended; and we think that if you would divest the subject of extraneous considerations, you might still see your way to co-operate with us. New Zealand is at present under engagement for a Service which, though it has hitherto been conducted imperfectly, we have every reason to think can be made most efficient; and we ask your co-operation for the purpose of establishing its efficiency. We are willing to agree that if the Service cannot be made efficient, it should be abandoned. But, as at present advised, we believe that in the course of a very few days the Service will receive an immense subsidy from the American Government, and therefore, that it will be placed on a basis which will defy opposition, unless at a most extravagant cost.

9. To show the good faith in which we have dealt with you, we may state that on the arrival of Mr. Webb's representative in Sydney, two days ago, we found that that gentleman was not at all pleased with the offer we had made to New South Wales. He thought at first of declining altogether to entertain it. Subsequently, under the great pressure we put upon him, he consented to do so, but only on the condition that one-half of the total postages received by New Zealand from the Colonies, for mail matter carried by the line, should revert to Mr. Webb, in addition to the fifty thousand pounds we proposed. £50,000. We assented to that condition, without even informing you that it had been demanded, so desirous were we not to interpose any obstacle to the prospect of an arrangement.

10. We ask you to consider these facts. We desire to act with New South Wales; both Colonies urgently want a Californian Service; New Zealand is inclined to make a considerable payment for it; though we should gladly accept, in lieu of the arrangement we have proposed, a more direct responsibility on the part of New South Wales. We invite you then to reconsider the question, with the view of at once entering into negotiations upon the matter, as we understood you to propose to do at the interview we had with you on the day before the date of your letter. We are very much pressed for time; and we hope you will not consider that there is anything of a disrespectful disregard of your convenience involved in our asking you for a speedy decision.

11. In conclusion, we beg to assure you that our action throughout this matter has been that which we believed the position and the interests of New Zealand imposed upon us as a duty.

We have, &c.,

JULIUS VOGEL.
WILLIAM H. REYNOLDS.

No. 6.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE HONORABLE JULIUS VOGEL AND THE
HONORABLE WILLIAM H. REYNOLDS.

Colonial Secretary's Office,
Sydney, 25 February, 1873.

GENTLEMEN,

Your letter of the 22nd, received yesterday, has been considered by this Government. Those portions of it which are devoted to an elucidation of the meaning of your previous communication, or which refer more expressly to the terms of your proposals to New South Wales, do not call for any present notice at my hands; nor do I see that any useful object would be gained by entering further upon the grounds of the objections of this Government to your proposal, or by any examination of your views on the points of difference which have been raised.

As you appear to have put too wide an interpretation on the remarks made by me in your last interview with Ministers at this Office, I desire to explain (what indeed is sufficiently clear in my letter of the 22nd) that the Government of New South Wales would have been glad to co-operate with New Zealand in organizing a thoroughly efficient Mail Service between Australia, New Zealand, and Great Britain, by way of America, if New Zealand herself had been in a position to entertain any such proposal, and if special obstacles to co-operation had not unfortunately been raised by the Representatives of New Zealand now in this Colony. This Government is desirous of assisting in the establishment of a Trans-Pacific Mail Service of the character I have described, but it cannot commit itself to the existing Webb Contract, which is regarded as costly and disadvantageous to New Zealand, and presenting no prospect of meeting the postal wants of this Colony.

I have, &c.,
HENRY PARKES.

THE HONORABLE JULIUS VOGEL AND THE HONORABLE WILLIAM H. REYNOLDS to THE COLONIAL
SECRETARY, NEW SOUTH WALES.

Sydney, 26 February, 1873.

SIR,

No. 66.

We have the honor to acknowledge the receipt of your letter of yesterday's date, on the subject of the Californian Service.

We agree with you that, in the present circumstances, no useful object can be gained by entering further upon the grounds of your objections to the offer we have made to your Government.

We hope that you will be able to recognize that, throughout this correspondence, our course has been most conciliatory; and that we have avoided references to passages in your letters which might have caused irritation.

We have, &c.,
JULIUS VOGEL.
WILLIAM H. REYNOLDS

No. 1.

RESOLUTION PASSED BY THE LEGISLATIVE ASSEMBLY, 2 AUGUST, 1872.

Steam Postal Service *via* San Francisco :—The Chairman of Committees reported from a Committee of the Whole, the following Resolution :—

Resolved,—

(1.) That it is desirable that the Government should arrange for the establishment of a monthly line of Mail Steamers between Sydney and San Francisco, securing the delivery of mails at those ports within thirty days, and between Sydney and Liverpool within forty-eight days,—such arrangement not to be carried into effect until ratified by Parliament.

(2.) That the foregoing Resolution be transmitted by Address to His Excellency the Governor.

Mr. Stephen Brown moved, That the resolution be now received.

Question put.

The House divided.

Ayes, 21.

No. 2.

THE POSTMASTER GENERAL TO THE COLONIAL SECRETARY:

General Post Office,
Sydney, 8 August, 1872.

SIR,

The resolutions passed by the Legislative Assembly on the 2nd August, copy of which is attached, having placed the Government in a position to invite tenders for a mail service with England *via* San Francisco, I have the honor to enclose for your approval forms of advertisement and tender, with conditions of agreement, which I have had prepared, and which I would suggest might be advertised in these Colonies, and sent to the Agent General in England by the outgoing mail, in order that tenders may be invited there.

2. You will see that I have provided for ships of large carrying capacity, both as regards passengers and cargo, to perform the service with San Francisco within thirty (30) days, including stoppages, which can be done without difficulty if the vessels have an average speed of ten (10) knots.

3. Sir Charles Cowper might be instructed to place himself in communication with the Imperial authorities to invite their co-operation in this important undertaking, by contributing a portion of the subsidy required, by arranging with the United States' Government to convey the mails across the Continent, and by giving the advantage of their mail contracts to convey them across the Atlantic.

4. The advantages to be derived from such a service can hardly be over-estimated, bringing us into contact, as it would, with the population, trade, and commerce of the United States and Canada, and forming an additional chain of communication with the Mother Country, which, in the event of any convulsion on the Continent of Europe, might be of immense importance both to Great Britain and the Australasian Colonies.

5. The value of such a connection has already been realized by the imperfect service lately performed. Merchants from the United States were induced to come here as customers for our wool, which they purchased to the extent of over half a million pounds sterling.

6. Sir Charles Cowper will, no doubt, see from these facts the necessity of encouraging tenders of vessels with much larger capacity than the limit fixed by this Government. All the steamships that have left here for San Francisco during the last few months have had more cargo offered than they could carry, comprising wool, tallow, fruit, and other merchandise; and there is no reason to doubt that the trade would increase materially with a more reliable line.

7. The Agent General should pay particular attention to the position of the parties tendering, so that there may be no doubt whatever of their ability to perform any contract they undertake.

8. The tenders will have to be submitted to Parliament here before one can be accepted, and the time for any service to commence must be arranged to meet this necessity. If our telegraphic communication is complete it may not require many days; but if the line is interrupted, as at present, a delay might occur of probably six weeks. Time will also have to be allowed for the construction of suitable ships, if there are no tenders from Companies like the Peninsular and Oriental Company, the West India Mail Company, or other Companies having ships already in commission which might be made immediately available.

9. It will be seen that the tenders specify the route to be by Fiji and Honolulu. The reason is, that these places appear to be in the direct line between Sydney and San Francisco, and they are the Islands with which the largest trade exists.

10. The Agent General will however, see, from the conditions of tender, that the Government has no objection to receive and consider tenders specifying some other Islands than Fiji at which to call, should it appear to him that intending tenderers evince an indisposition to send their steamers by way of Fiji.

11. The present intention is, that the route should be *via* Fiji and Honolulu (or by any other island more suitable to the tenderers); but, as will be seen by the tender and conditions, I propose that the Government shall have the power to alter the route so as to provide for the steamers calling either at Cape Moreton or New Caledonia, or both, should it at any time be deemed desirable to do so.

12. The service should be made to alternate as nearly as possible with the mails now running by the Peninsular and Oriental Company, *via* Suez, and this can be accomplished by having thirteen (13) services in each year, and letting one service start fourteen (14) days after the other.

13. The Agent General should be requested to open the tenders, and transmit them to this Colony by the first mail leaving London after the 20th November next, for consideration, accompanied by any remarks or recommendations he may think fit to make, telegraphing at once, either direct or *via* Galle, the particulars of the most eligible ones.

14. I would further recommend that a copy of your letter to the Agent General, and of its enclosures, be transmitted by the out-going mail to the Secretary of State for the Colonies, which will fully explain the steps about to be taken by this Government for the establishment of a mail service *via* California.

15. In the event of the Imperial Government consenting to pay a fixed subsidy, an arrangement could doubtless be made by which this Colony would retain the postage collected here on all correspondence forwarded to the United Kingdom, and the Imperial Government retain the postage on correspondence forwarded from the United Kingdom to New South Wales, thus obviating the keeping of accounts between the two countries.

16. I further recommend that an early opportunity be taken of apprising the adjoining Colonies of the intention of this Government, and of inquiring whether they will be prepared to contribute a portion of the subsidy to be paid for the maintenance of the proposed service.

17. In order that the earliest possible publicity may be given in London to an advertisement for tenders, I enclose a telegram which might be sent to the Agent General from Galle, and which would reach him on the 7th September, twenty-two days in advance of the mail. This would give capitalists and steam companies an opportunity of making their calculations, and preparing to send in tenders when the conditions arrived.

I have, &c.,
GEO. A. LLOYD.

[Enclosures

[Enclosures in No. 2.]

Resolutions passed by Legislative Assembly on 2nd August, 1872. (Vide No. 1.)

General Post Office, Sydney,
New South Wales, 8 August, 1872.

MAIL CONVEYANCE BETWEEN SYDNEY AND SAN FRANCISCO.

TENDERS will be received at this Office, and at the Office of the Agent General for the Colony in London, up to noon on Wednesday, the 20th November next, for the conveyance of Mails between Sydney and San Francisco, once in every four weeks.

Forms of tender and conditions of agreement are hereunto annexed, copies of which and all other information can be obtained on application at this Office, and at the Office of the Agent General in London.

GEO. A. LLOYD.

TENDER FOR CONVEYING HER MAJESTY'S MAILS BETWEEN SYDNEY AND SAN FRANCISCO.*

Sir,

We hereby offer to convey Her Majesty's Mails by steam vessels between Sydney (New South Wales) and San Francisco, and on the conditions hereto annexed, marked "A," once each way in each month of four weeks, for the sum of per annum.

We propose as our sureties, in the penalty of £10,000, Mr. , of , and Mr. , of , and we refer you to as persons of whom inquiry can be made as to the responsibility of such sureties.

We agree to commence the service on the , and in the event of such service not being commenced on such day, or on the first day thereafter which the Postmaster General may fix as the day of sailing, we agree to pay to Her Majesty the sum of one hundred pounds for every day from that time until the said service shall be begun by us, but so that the whole amount of penalties for such failure shall not exceed £10,000.

And we agree to execute a contract for the performance of the said service according to the said conditions marked "A."

We are, Sir,
Your obedient servants,
(Signature.)
(Address.)

* All tenders must be addressed to the Agent General for the Colony of New South Wales, London, or to the Secretary, Post Office, Sydney, with the words "Tender for the Conveyance of Mails between Sydney and San Francisco," in the left-hand corner of the envelope. Other things equal, a preference will be given to a tender made upon this printed form and in exact accordance therewith. Even, however, when this form is used, the parties tendering may, in a separate letter, to be forwarded with the tender, suggest for consideration any alteration in the conditions or otherwise. The Postmaster General does not engage, irrespective of other considerations, to accept the lowest tender, or even to accept any tender.

† It is desirable that the service should commence in July, 1873, but as the Tenders received in London will have to be sent to Sydney for acceptance, the parties tendering are at liberty to name a later day for the commencement, should they be unable to begin the service at the time named.

CONDITIONS.

Referred to as marked "A."

1. Every vessel employed in this service must call on the voyage, in both directions at Honolulu and at Fiji, or any other Island on the direct line from Sydney to Honolulu—such other Island to be specified in the tender. Other things equal, a preference will however be given to tenders in which the route of Fiji is specified.

2. The Postmaster General of New South Wales to have the power of altering the route in respect to ports of call, should it at any time appear expedient to make such alterations, the contractors in such case receiving extra remuneration for every additional mile run, such remuneration to be calculated at the same rate per mile as they will be entitled to receive for the service between Sydney and San Francisco *via* Fiji and Honolulu, and extension of time according to the extra mileage to be run.

3. The mails must be conveyed from Sydney to San Francisco, and from San Francisco to Sydney, in seven hundred and twenty hours, inclusive of stoppages, the duration of which will be fixed by the Postmaster General of New South Wales.

4. Under the term "Her Majesty's Mails," are comprehended all boxes, bags, or packets of letters, newspapers, books, or printed papers, and all other articles transmissible by the post, without regard either to the place to which they may be addressed, or to that in which they may have originated; also all empty bags, empty boxes, and other stores and articles used or to be used in carrying on the Post Office service, which shall be sent by or to or from the Post Office.

5. A penalty of three hundred pounds to be incurred on each occasion when the contractors fail in providing a vessel, in accordance with their contract, ready to put to sea at the appointed time, and a further penalty of one hundred pounds for every day's failure in providing such a vessel after such appointed time; the contractors also to be subject to a penalty of fifty pounds for every complete period of twenty-four hours consumed on any voyage, from whatever cause arising, beyond the number of hours allowed for the voyage. The payment by the contractors of any penalties shall in no way prejudice the right of the Postmaster General of New South Wales to treat the failure to provide a proper vessel at the appointed time, or to perform a voyage at or within the appointed period, as a breach of the contract.

6. A premium of £50 to be given for every complete period of twenty-four hours by which the time occupied in any voyage from San Francisco to Sydney may be less than that allowed under the contract.

7. The contractors to supply, during the continuance of the contract, and to the satisfaction of the Postmaster General of New South Wales, a sufficient number of steam-vessels, of adequate power, and in all respects suited for the performance of the service within the time stipulated in the tender, such vessels to be built of iron, propelled by screws, and of not less than 1,500 tons register, classed A1 at Lloyd's, with spar decks, having large capacity for passengers and cargo, with ample ventilation for passing through tropical latitudes; to have steaming and sailing power of the latest and most approved principle. A preference will be given to vessels having spacious saloon accommodation amidships. The vessels to be subject, in the first instance, to the approval of the Agent General for the Colony of New South Wales in England, or of the Officers of the Marine Board of the Colony of New South Wales.

8. The vessels to be always supplied with all necessary and proper machinery, engines, apparel, furniture, stores, tackle, boats, fuel, lamps, oil, tallow, provisions, anchors, cables, fire-pumps, and other proper means for extinguishing fire, lightning-conductors, charts, chronometers, proper nautical instruments, and whatsoever else may be necessary for equipping the said vessels and rendering them constantly efficient for the service to be performed. The vessels to be manned by legally qualified and competent officers, and a sufficient crew of engineers, able seamen, and other men.

9. The vessels to be subject at all times to survey by officers in the employment of the Marine Board of the Colony of New South Wales, and any defect discovered on such survey to be immediately made good by the contractors; failing which, the vessel to be considered unfit for use, and the contractors to become liable to the penalties named in the 5th condition. The survey to extend not only to the vessels themselves, but also to the officers, engineers, crew, machinery, and everything which the contractors are bound to provide.

10. The days and hours of departure and arrival at each port to be fixed by the Postmaster-General of New South Wales, and to be subject to alteration, from time to time, by him, on a notice to the contractors of three months. The Postmaster General of New South Wales also to have power, by an order to the Commander, to delay the departure of any vessel from any port, for a period not exceeding twenty-four hours, and to delegate this power to any person to whom he may think fit to entrust it.

11. The contractors to provide, to the satisfaction of the Postmaster General of New South Wales, a separate and convenient place of deposit for the mails on board each vessel.

12. Should the Postmaster General of New South Wales require it, a room for the purpose of sorting and making up the mails to be also provided to the satisfaction of such Postmaster General on board each vessel. The actual cost of erecting this sorting-room, and of providing the necessary furniture, lamps, &c., to be defrayed by such Postmaster General; but the furniture and lamps to be cleansed and kept in repair, and oil for the lamps to be supplied, at the cost of the contractors. The services of the crew to be given in the conveyance of the mails between the mail-room and the sorting-room.

13. Proper accommodation and mess to be provided, if required, for an officer of the Post Office in charge of the mail,—such officer to be victualled and otherwise treated as a chief cabin passenger; and whilst the packet stays at any port to or from which the mails are conveyed, to be allowed to remain on board.

14. At each port where the mails are to be delivered or received, the officer having charge of them shall, whenever he may deem it necessary, be conveyed to and from the shore, with or without the mails (as he may desire), in a suitable boat, of not less than four oars, to be furnished with effectual covering for the mails, and to be properly manned and equipped.

15. The contractors and all commanding and other officers of the vessels which may be employed in the performance of the contract, and all agents, seamen, and servants of the contractors, shall, at all times during the continuance of the contract, punctually attend to the orders of the Postmaster General of New South Wales, or of any of his officers or agents, as to the mode, time, and place of embarking and disembarking mails.

16. Should the Postmaster General of New South Wales at any time deem it expedient to place the mails, or any part thereof, in the care of the Commander of any vessel, such Commander shall take charge of them and be responsible for their due receipt and delivery. The Commander shall also make the usual Post Office declaration, and furnish such journal, returns, and other information, and perform such other services as the Postmaster General of New South Wales or his officers may from time to time require.

17. Except such letters as are not required by law to pass through the Post Office, the contractors not to receive, or permit to be received, for conveyance on board any of the vessels employed under the contract, any letters other than those contained in Her Majesty's mails. No mails must be conveyed on behalf of any Colony or foreign country without permission of the Postmaster General of New South Wales; and the whole postage of every mail shall, under all circumstances, be at his disposal.

18. Every vessel which may have started, or which should have started before the termination of the contract, must complete its voyage in like manner as if the contract remained in force.

19. Every sum of money forfeited by the contractors to be considered as stipulated or ascertained or liquidated damages and to be payable whether any damage shall or shall not have been sustained by reason of the breach for which the penalty may be levied,—the amount to be deducted by the Postmaster General out of any moneys then payable or which may thereafter become payable to the contractors; or, at his discretion, the payment thereof may be enforced with full costs of suit.

20. The contract to continue in force for three years and thereafter until the expiration of a twenty-four calendar months' notice, to be given in writing at any time by either party.

21. The contract will not be binding until it has lain upon the Table of the Legislative Assembly of New South Wales for fourteen days without disapproval; unless, previous to the lapse of that period, it has been approved of by a Resolution of that Assembly.

22. Subject to deductions for penalties or otherwise, payments to be made quarterly at the General Post Office, Sydney, out of moneys to be provided by Parliament.

23. All notices which the Postmaster General of New South Wales, or any of his Officers or Agents, are authorized to give, either to be delivered to the Commander of any vessel of the contractors, or to any officer or agent of the contractors in charge of any of such vessels, or to be left at the office or last known place of business of the contractors.

24. The contractors not to assign, underlet, or dispose of the contract, or any part thereof, without the consent, in writing, of the Postmaster General.

25. In case of the breach of the 24th condition, or in case of a great or habitual breach of the contract of any other kind, the Postmaster General to have power, and that without previous notice, to terminate the contract; such termination not to give the contractors any claim to compensation.

26. For the due fulfilment of the contract, the contractors to enter into a bond, with two responsible sureties, to be named in their tenders, in the penalty of £10,000,—such penalty to be considered and recoverable as liquidated damages.

27. Should any dispute arise respecting the interpretation of any part of the contract to be framed on the basis of these conditions, the same to be settled by arbitration in the usual manner; and a submission to arbitration may be made a Rule of Court.

[Enclosure in No. 2.]

TELEGRAM.

THIS Government is prepared to receive tenders for a mail service with England, *via* Fiji, Honolulu, and San Francisco, by steamships of not less than 1,500 tons. Advertise that forms of tender may be obtained from you on arrival of this mail.

No. 3.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE AGENT GENERAL FOR THE COLONY, LONDON.

Sydney, 10 August, 1872.

SIR,

I have the honor to inclose copy of letter from the Postmaster General, with form of tender and conditions of contract for the projected Pacific mail service, of which you will be advised by telegram from Galle in anticipation of this communication. I have at the same time to inform you that the views of this Government on this matter will be communicated by His Excellency Sir Hercules Robinson to the Right Honorable the Secretary of State, urging a contribution to the required general subsidy from the British Government, and that the necessary arrangements may be made with the Government of the United States to secure the regular transmission of the Australian mails through American territory, and by the Atlantic mail-steamers.

2. You will be good enough to put yourself in communication with the Secretary of State, and urge the claims of this Colony to support in its efforts to permanently open the Pacific route by a class of steamers fully capable of successfully performing the service. You are acquainted with the circumstances and history of the measures which have been taken at different times in this matter, and can scarcely require to be supplied with information. The papers* now transmitted will however assist you in estimating its importance, and the steps we propose to take in regard to it at the present time.

3. It will be desirable to pay particular attention to the ships being expressly adapted for the navigation of the Pacific and for the specialities of the traffic likely to arise. Much comfort to the passengers might be secured by stipulating that the saloon accommodation shall be amidship, and combine the latest improved conveniences. Much importance is attached to this arrangement; and as we desire to have vessels built expressly for the service, it is not supposed that any difficulty can stand in the way of the plan suggested.

4. You will be further advised on this subject by next mail.

I have, &c.,
HENRY PARKES.

Sydney: Thomas Richards, Government Printer.—1873.

[3d.]

* NOTE.—Various printed papers already laid before Parliament.

NEW SOUTH WALES.

EIGHTEENTH ANNUAL REPORT

OF THE

POSTMASTER GENERAL,

ON THE DEPARTMENTS UNDER HIS MINISTERIAL CONTROL,

BEING THAT FOR THE YEAR

1872.

Presented to both Houses of Parliament, by Command.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1873.

THE POSTMASTER GENERAL TO HIS EXCELLENCY THE GOVERNOR,
TRANSMITTING THE
**ANNUAL REPORT FOR THE YEAR 1872, ON THE POST OFFICE, MONEY ORDER,
GOVERNMENT SAVINGS' BANK, AND ELECTRIC TELEGRAPH DEPARTMENTS.**

General Post Office,
Sydney, 17th April, 1873.

SIR,

I have the honor to transmit, for the information of your Excellency, the Annual Report, for the year 1872, on the Departments which are under the Ministerial control of the Postmaster General.

I.—POST OFFICE DEPARTMENT.

INLAND SERVICE.

Year.	Extent of Postal Route on 31st December.	Number of Miles travelled.	Cost of Conveyance of Mails.	Average Cost per Mile.	Number of Post Offices.
1871.....	Miles. 14,470	3,167,165	£ s. d. 46,418 4 2	d. 3 $\frac{3}{8}$	570
1872.....	14,764	3,252,888	46,252 1 7	3 $\frac{3}{8}$	622
Increase	294	85,723	52
Decrease	166 2 7	$\frac{1}{16}$

In the Appendix will be found returns showing that 574 miles of postal lines were established during 1872, and that 280 miles of postal lines were abolished during the same period. The actual increase in the extent of postal route for the year 1872 is 294 miles. Appendices A and B.

A statement of the increased and decreased communication on existing lines is given in the Appendix. Appendices C and D.

The extent of postal lines by horse, stage, and rail, is as follows:—

Horse.....	10,427
Stage.....	3,941
Rail.....	396

Total..... 14,764 miles.

During the year 1872 the Railway was extended a distance of 24 miles to Macquarie Plains in the Western District; and to Murrurundi, a distance of 13 miles in the Northern District. By the opening of this extra distance of Railway mileage, this department was enabled to afford some acceleration in the delivery of the mails in the districts in question.

Notwithstanding the increased accommodation afforded in the year 1872, the cost of the inland mail conveyance was less than in the year 1871. It is gratifying that the mail services generally have been well performed, considering the low rate at which many of the contracts have been undertaken.

The number of post offices established during the year 1872 was 56—the number re-established 2, and the number discontinued 6—making an actual increase of 52 in the number of post offices in the Colony, as shown in the above tabular return.

A list of post offices on the 31st December, 1872, will be found in the Appendix. Appendix E.

During the year 1872 there were 99 changes of postmasters.

Five additional iron letter-receivers were erected during 1872, viz.:—

- One opposite to the Fish Market, Woolloomooloo.
- One at Wagga Wagga.
- One at Yass.
- One at Singleton.
- One at Newcastle.

Receiving-boxes were also erected during 1872 to meet the convenience of the public at the Custom House, Newcastle, and at Richie's store, North Yass. It was found necessary during the same year to withdraw the iron letter-receiver situated at the junction of Ocean and Piper streets, Woollahra, and also that situated at the junction of Mort and John streets, Balmain.

On the 31st December the number of iron letter-receivers erected in the Colony was 67; the number of receiving-boxes, 2; and the number of iron newspaper-receivers, 8.

Appendix F.

23 licenses for the sale of postage-stamps (exclusive of postmasters) were granted during 1872. A return, showing the number of persons on the 31st December, 1872, licensed to sell postage-stamps, will be found in the Appendix.

The number of letter-carriers employed on the 31st December last was 58, these being distributed in various parts of the Colony as follows, viz. :—

Sydney and Suburbs	39
Armidale...	1
Albury	1
Bathurst...	1
East Maitland	1
Goulburn	1
Grafton	1
Morpeth...	1
Mudgee	1
Newcastle	3
Parramatta	2
Singleton	1
Tamworth	1
West Maitland	2
Windsor...	1
Wagga Wagga	1

The number of persons employed in connection with the Postal Department during 1872, exclusive of mail contractors, may be stated as follows, viz. :—

Postmaster General	1
Secretary	1
Accountant	1
Superintendent, Mail Branch	1
Chief Clerk of Post Office	1
Cashier	1
Clerks	37
Postal Inspector...	1
Mail Guards	6
Assistant „	4
Stampers, letter-carriers, &c.	82
Country postmasters	622
Assistant postmasters	3
Total	<u>761</u>

During the year 1872 the Postal Inspector travelled over 4,426 miles of mail route, and inspected the undermentioned post offices, viz. :—

Appletree Flat	Collector	Lunatic Reefs	Stroud
Ashford	Canberra	Louisa Creek	Shellharbor
Avisford	Coolac	Lambton	South Gundagai
Aberdeen	Dapto	Laguna	Tarentia
Appin	Dundee	Limeburner's Creek	Teamas
Albion Park	Deepwater	Millfield	Tuena
Adelong Crossing-place	East Maitland	Mudgee	Terrara
Bonshaw	East Kangaloon	Meadow Flat	Tomago
Bundarra	Falconer	Morpeth	Tambaroora
Bingera	Fig Tree	Miller's Forest	Tenterfield
Blandford	Gulgong	Mossvale	Tabulam
Bishop's Bridge	Gerringong	Mummell	Timbarra
Balmain	Goulburn	Muttbilly	Uralla
Bourke-street	Gullen	Mundarlo	Walcha
Bathurst	Gundaroo	Newcastle	Wailabadah
Bolong	Gundaroo Township	Numba	Wingin
Broughton's Creek	Ginninderra	Nowra	Wollombi
Bulli	Gunning	Oban	Wiseman's Ferry
Burrawang	Gundagai	Peelwood	Wallerawang
Bowral	Garryowen	Picton	Wallerawang Railway Station
Binda	Hill End	Pyrie	Watson's Bay
Bargo	Hexham	Pyramul	Waratah
Bookham	Iford	Queanbeyan	Wallsend
Cessnock	Junction Point	Rocky River	Wollongong
Cullen Bullen	Jamberoo	Robertson	Woonona
Cudgegong	Jugiong	Rydal	Wild's Meadows
Cassilis	Kelso	Raymond Terrace	Woodhouselee
Charcoal Creek	Kiama	St. Leonards	Woore
Campbelltown	Kangaloon	Sodwalls	Wheeo
Crookwell	Laggan	Singleton	Walbundrie

Arrangements

Arrangements were completed in the month of October, 1872, by which letters can be posted up to 9:30 p.m. for despatch by the Hunter River steamers, and up to 8 p.m. for despatch by the Grafton steamers. Hitherto, the principal mails for the Northern Districts were closed at 5 p.m., and supplementary mails were made up, enclosing the correspondence posted after 5 p.m. This change has enabled the Department to secure a more satisfactory transmission of the correspondence for the whole Northern District.

During the year 1872 the late fee chargeable on letters, &c., posted in the Railway mail-vans was abolished, owing to representations having been made that the public—especially in the vicinity of the Northern Railway line—suffered some inconvenience through the imposition of this fee.

My predecessor and colleague (Mr. G. A. Lloyd) during the latter part of the year 1872 arranged that the Town rate of postage, viz., 1d. the $\frac{1}{2}$ ounce, should be levied upon all correspondence posted in the City of Sydney, for delivery within those Suburban Municipalities any portion of which does not exceed ten (10) miles from the City of Sydney, or for delivery at any post office not exceeding that distance from the City boundary, and also upon correspondence posted in any of such boroughs or post offices for the said City, or for any of such boroughs or post offices.

The following is a list of the Municipalities and post offices which participate in the advantage afforded by the reduced postage, viz. :—

MUNICIPALITIES.

Alexandria	Leichardt	Ryde
Ashfield	Marrickville	St. Leonards
Balmain	Macdonald Town	St. Peter's
Camperdown	Newtown	Victoria
Darlington	North Willoughby	Waterloo
East St. Leonards	Paddington	Waverley
Five Dock	Petersham	West Botany
Glebe	Randwick	Woollahra
Hunter's Hill	Redfern	

POST OFFICES.

Annandale	Gladesville	Petersham
Ashfield	Glebe	Pymont
Balmain	Hunter's Hill	Randwick
Bilccla	Haslem's Creek	Redfern
Botany	Kogarah	Ryde
Bourke-street	Lane Cove	St. Leonards
Burwood	Longbottom (Concord)	St. Mark's
Camperdown	Manly	St. Peter's
Canterbury	Marrickville	Tempe
Coogee	Macdonald Town	Waterloo
Enfield	Newtown	Watson's Bay
Five Dock	North Willoughby	Waverley
Gannon's Forest	Paddington	Woollahra

This reduction took effect from the 1st January, 1873. It is expected that the lower rate of postage will induce an increased correspondence, and in this manner make up for the decrease in the revenue, which must necessarily take place by the reduced rate of postage. Up to the present time, however, it is estimated that this class of correspondence has only increased to the extent of about 25 per cent.

NEWSPAPER POSTAGE ABOLITION BILL.

I may here mention, in order to place the matter on record, that the Government (during the Parliamentary Session of 1872) with a view of affording additional facilities for the dissemination of knowledge throughout the Colony, introduced a Bill for the purpose of enabling newspapers to be conveyed by post free of charge. The Bill was passed in the Legislative Assembly by a large majority of votes, but it was rejected by the Legislative Council.

FOREIGN

FOREIGN SERVICE.

The following is a return of the specified and actual days of arrival and departure of the contract steamers of the Peninsular and Oriental Steam Navigation Company during the year 1872, showing the number of days taken in the passage from and to London, *via* Suez and Brindisi, and *via* Suez and Southampton:—

Arrival at Sydney.					Departure from Sydney.				
Name of Vessel.	Specified date.	Actual date.	Actual number of days.		Name of Vessel.	Specified date.	Actual date.	Actual number of days.

					Bangalore	31 Dec.	31 Dec.	47	†—

* An extra mail.

† Receipt of mail not yet acknowledged by London Postal authorities.

On two occasions during the year 1872 the contract packet was behind time in arrival at Sydney, viz., in March and in November. On nine occasions the steamer arrived before the contract time, and twice at the specified time. The service between Galle and Sydney has been performed by the Peninsular and Oriental Company in a very satisfactory manner during the past year.

On the 13th February an extra mail was dispatched by the "Bangalore," which vessel, under orders of the Peninsular and Oriental Company, returned to Point de Galle instead of remaining to take on the regular mail of the 27th February.

Commencing with the arrival of the "Baroda" on the 18th February, the incoming packet has almost immediately returned with the outgoing mail instead of remaining at Sydney for a period of upwards of one month, as was the practice hitherto. This arrangement was made by the Peninsular and Oriental Company entirely to meet its own convenience.

Appendix G.

In the Appendix is given a statement, showing the amounts chargeable on the Australasian Colonies on account of the Mail Packet Service, *via* Suez, for the year ending 31st December, 1872. The cost of the service to the Colony of New South Wales is given as £23,631 12s. 6d.

The estimated receipts on account of the Mail Packet Service *via* Suez for the year 1872, are as follows, viz.:—

Postage on letters (including registration fee)	£7,656	0	0
Do. Newspapers	1,198	0	0
Do. Packets	88	0	0
	<hr/>		
	£8,942	0	0
	<hr/>		

showing a deficiency in the year of about £14,689.

It having been considered necessary (for reasons mentioned in previous reports of the Postmaster General) by this, as well as by others of the Australasian Colonies, to terminate at the end of the year 1873 the contract of the Peninsular and Oriental Company between Galle and Sydney, the question of Steam Postal communication with Australasia received consideration by the Imperial authorities, and the

Secretary

Secretary of State for the Colonies, in a despatch dated 4th September, 1872, communicated the views of the Home Government on the matter. The following extract from an enclosure in the despatch of the Secretary of State for the Colonies, above alluded to, will explain what these views are, viz. :—

The several routes which have been suggested are—

- 1st.—The present route *via* Suez and Point de Galle ;
- 2nd.—As an alternative route, the route *via* San Francisco ; and
- 3rd.—(Incidentally) the route *via* the Cape of Good Hope.

The advantages, however, attendant upon the present route appear to my Lords to be so conclusive that they are decidedly of opinion that it should not be changed.

The advantages are, first, that it is the shortest, and secondly, that, by making use of the vessels under contract with Her Majesty's Government for the India and China Service as far as Point de Galle, the carriage of the Australian Mails is provided for a considerable portion of the distance over which they have to be conveyed.

As several of the Australian Colonies have, on repeated occasions, complained of the manner in which the service between Point de Galle and Australia has been performed, and so much difficulty has hitherto been experienced by the Home Government in providing a service satisfactory to the Colonies, my Lords have come to the conclusion that it is not advisable that the Imperial Government should any longer be parties to any contract for the service between Point de Galle and Australia, but that it would be better that the Colonies should, at the expiration of the present contract, themselves, in combination, provide such service, leaving it to the Imperial Government to provide for the conveyance of the mails between England and Point de Galle.

A considerable sum has hitherto been contributed by the Australian Colonies and New Zealand towards the expense of the conveyance of their mails between this country and Point de Galle. My Lords propose, at the termination of the present Point de Galle and Australian contract, to relieve the Colonies from any payment on this account, and to undertake, on the part of the Imperial Government, so long as the present contract for the India and China Mail Service is in existence, that is, until the 31st January, 1880, to convey the Colonial mails between England and Point de Galle and *vice versa*, free of all charge to the Colonies, on the Colonies, in combination, providing an efficient line of packets, fitted at Point de Galle to the Suez and China Packets, to run once every four weeks (or once every fortnight, whichever the Colonies may deem most essential to their own interests) between Point de Galle and whatever port or ports in Australia the Colonies may themselves consider most expedient, and *vice versa*, and my Lords will be prepared to contribute a sum not exceeding one-half of the expense of a four-weekly service between Point de Galle and the Australian Colonies and New Zealand (in the event of the latter Colony becoming a party to the arrangement), subject, however, to the *distinct limitation* that the contribution to be made on the part of the Imperial Government in any one year shall in no case exceed £40,000, and on the understanding that the Packets shall call at King George's Sound to land and embark the West Australian Mails ; that Colony being, however, called upon to pay her share, in proportion to her correspondence, towards the expense of the Packet Service between Point de Galle and Australia, and, in the event of the Colonies arranging conjointly or by a substantial majority for a fortnightly service, my Lords will be prepared to entertain the question of a further contribution.

But this undertaking is given upon the express condition that any second service towards which the Imperial Government may render assistance is alternative with the other, *i.e.*, that there shall be sufficient interval between the arrival and departure of the steamers for the purposes of correspondence.

As it appears from the letter from the Colonial Office, dated the 24th ultimo, and its enclosures, that it is the wish of the Government of Queensland that the correspondence of that Colony shall be conveyed once every four weeks *via* Torres Straits, my Lords have no objection, on the part of the Imperial Government, to conveying such correspondence between England and Singapore free of all charge, but they are not prepared to make any contribution towards a service between Singapore and Brisbane, which must be left to the Colony to provide.

My Lords have only to state in conclusion that the arrangement at present in force as regards the division of the postage on the mail matter conveyed between this country and the Australian Colonies should not be disturbed.

On receipt of the despatch of the Secretary of State for the Colonies it was deemed expedient, in order if possible to secure combined and uniform action, that the subject of future Steam Postal communication should be considered at a conference consisting of Delegates from each of the Colonies. A Conference was accordingly held at Sydney, in the month of February, 1873. As the papers containing the proceedings of this Conference and the particulars of the special action taken by the New South Wales representatives in reference thereto have already been laid before Parliament, it is not necessary for me in this Report to allude to the difference of opinion between the Colonies which exists, as regards the Australian terminus of the proposed new Mail Service to and from Point de Galle.

On the 26th July, 1872, a resolution was passed in the Legislative Assembly, to the effect that it was desirable that arrangements should be made for the establishment of a monthly line of steamers between Sydney and San Francisco, securing the delivery of mails at those ports within thirty days, and between Sydney and Liverpool within forty-eight days.

With a view of giving effect to this resolution, the Government at once decided to invite tenders for a Mail Service between Sydney and San Francisco, and accordingly instructed the Agent General for the Colony in London to call for tenders, while tenders were also invited by an advertisement, which was published in the leading newspapers of the various Australasian Colonies. A communication was forwarded on the 10th August, 1872, to the Secretary of State for the Colonies, explaining the course which was taken by this Government for the purpose of establishing a Mail Service across the Pacific and through America to Europe, and requesting that the Imperial authorities would assist in the carrying out of the proposed Service.

In

In answer to the invitation for tenders, four were received, but the Government have not yet determined upon the acceptance of any. I shall be glad to see a satisfactory mail service established across the Pacific, and trust that in the course of a few months, the Government of New South Wales may be able to accomplish the service, the initiatory steps for which have already been taken.

REVENUE AND EXPENDITURE.

The following return shows the revenue of the Post Office Department, collected during the year, 1872, compared with the revenue of 1871:—

Year.	Sale of Stamps.	Fees for Private Boxes.	Postage on Unpaid Letters, &c.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1871	81,646 11 2	198 19 6	3,045 2 10	84,890 13 6
1872	93,143 5 5	237 6 0	3,096 11 11	96,477 3 4
Increase.....	11,496 14 3	38 6 6	51 9 1	11,586 9 10

The expenditure of the Department during 1872, compared with the year 1871, may be stated as follows:—

Year.	Salaries.	Contingencies.	Conveyance of Mails.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1871	31,235 19 4	2,708 18 8	51,453 19 5	85,398 17 5
1872	32,284 9 6	3,163 12 5	51,861 11 5	87,309 13 4
Increase	1,048 10 2	454 13 9	407 12 0	1,910 15 11

The item conveyance of mails may be particularized as follows:—

Mail conveyance by horse and stage	£41,873 14 5
Do. rail	4,378 7 2
Do. steam and sailing vessels	4,813 17 4
Do. to and from railway stations, and portorage	705 12 6
Gratuities for sorting Hunter River and other mails	90 0 0
	<hr/>
	£51,861 11 5
	<hr/>

The amount voted for mail conveyance during 1872 was £53,400, irrespective of the subsidy paid towards the English mail contract, which is not included in the above returns.

The average annual increase in the revenue of the Postal Department for ten years, *i.e.*, up to the year 1871, is £2,859. Contrasting this with the increase of £11,586, which the revenue for the year 1872 shows over that for the year 1871, it will be apparent that a very large augmentation of postal business took place in the year 1872—an augmentation which it is gratifying to ascribe to the increased prosperity of the Colony, to a large extent consequent on the development of its mineral as well as its various other resources.

The expenditure of the Postal Department for the year 1862, *i.e.*, ten years ago, was £81,514. At this time there were 11,211 miles of postal route opened up, and 368 post offices established in the Colony. In the year 1872 there were 3,553 miles of postal route and 254 post offices more than in the year 1862, while the expenditure for the year 1872 only shows an increase of £5,795 over the year 1862. The inference to be drawn from these figures is that the postal branch of the Public Service has been managed with a due regard to economy in its expenditure.

Appendix H.

In 1872 there were 338 distinct mail contracts for the conveyance of mails inland, of which 24 were transferred at the request of the original contractors, and nine were cancelled during the year. Particulars of these contracts are given in the Appendix. I give the following estimated return, for the purpose

purpose of showing to what extent the revenue of the department has been affected by the reduction of the postage from 6d. to 3d. per half-ounce on Intercolonial letters, which reduction was brought into operation during the latter part of the year 1870:—

Year.	No. of Letters posted.	At per ½-oz.	Revenue.
1869.....	305,000	6d.	£ 8,387
1870.....	303,800	6d.	8,354
1871.....	334,000	3d.	4,592
1872.....	380,500	3d.	5,225

The following return shows the number, description, and value of postage stamps issued at the General Post Office during the year 1872:—

NUMBER OF MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at and despatched from the General Post Office during the years 1871 and 1872:—

Year.	Received.		Despatched.		Total number of Mails which passed through the Office.
	Inland.	Foreign.	Inland.	Foreign.	
1871	49,082	4,733	52,662	3,790	110,267
1872	51,374	5,460	55,164	3,868	115,866
Increase	2,292	727	2,502	78	5,599

The number of written communications received from the public during 1872, intimating changes of address or requesting letters, etc., to be forwarded, was 5,676, being an increase of 543 on the number received in the previous year.

MISSING LETTERS, &c.

Complaints of the miscarriage of letters have continued to be received, where the neglect on the part of the sender to make use of the registration system has rendered it a matter of great difficulty to obtain any trace whatever of the missing letters, a result which is unsatisfactory both to the loser and to the Department.

I give the following particulars of letters reported as missing, which came under the notice of the Department during the year 1872, viz. :—

A letter believed to be addressed to *Ironbarbs* was posted at Orange by a Banking establishment and was missing for some days. It was, however, found to have been mis-directed to Cargo, and was subsequently safely delivered at its intended destination. The letter contained £100 in Bank notes.

A letter containing a quantity of gold-dust was posted at Wattle Flat addressed, it was alleged, to Mr. — Kent-street, Sydney. The letter did not reach its destination in due course, and the circumstance was reported to the head office. On search being made it was found that the letter had been mis-directed to King-street, Sydney.

A gentleman at Mudgee represented to the Department that he had himself posted a letter containing a cheque addressed to Mr. — George-street, Bathurst, and that this letter had not reached its destination. He expressed his regret that he had not taken the precaution to register, but was confident that the letter had been correctly posted. It was discovered that this gentleman had misdirected the letter to George-street, *Sydney*, instead of to George-street, Bathurst.

Another gentleman stated that he had posted, in an iron pillar receiver, a letter containing a cheque for a considerable amount, addressed to Mr. — Clinton-street, Goulburn, and that this letter had miscarried. It was found that "Clinton-street, Sydney," was the address on the letter instead of the intended direction.

A report was received at the head office that a letter addressed to "Mr. — *King-street*, Sydney," containing a cheque, had gone astray. In this case it was ascertained that *George-street* had been substituted for *King-street* in the address.

I might give many instances in which complaints against the Department have resulted in the discovery of irregularities on the part of the public, but the few cases mentioned will show that although the postal officers may occasionally be to blame yet irregularities do occur from causes beyond the control of the Department.

MONEY ORDER DEPARTMENT.

This Department, which has steadily progressed since its formation in the year 1863, continues to increase in public favour. The augmentation in the transactions of the year 1872 amounts to no less a sum than £194,845 5s. 7d. ; the value of orders issued and paid in that year being £760,058 2s. 8d.

The following return shows the increase in the number and amount of Money Order transactions during the year 1872, as compared with the year 1871 :—

Year.	Number of Offices.	Orders Issued.		Orders Paid.		Total Transactions.	
		Number.	Amount.	Number.	Amount.	Number.	Amount.
1871	184	69,750	£ s. d. 293,370 9 11	63,629	£ s. d. 271,842 7 2	133,379	£ s. d. 565,212 17 1
1872	197	87,435	393,882 2 0	79,895	366,176 0 8	167,330	760,058 2 8
Increase	13	17,685	100 511 12 1	16,266	94,333 13 6	33,951	194,845 5 7

20 new agencies were established during the year at the following places, viz. :—

- | | |
|-----------------|---------------|
| Avisford | Manly |
| Burwood | Maryland |
| Bushman's Lead | Oberon |
| Chamber's Creek | Pilliga |
| Coolah | Solferino |
| Currawang | Trunkey Creek |
| Home Rule | Tuena |
| Lambton | Tumbarumba |
| Lionsville | Wattle Flat |
| Lunatic Reefs | Woollahra |

It

It was also deemed necessary to close seven of the existing agencies, viz. :—

At Ashford	Jerilderie
Fish River Creek	Jerry's Plains
Hunter's Hill	Wheeo.
Jacqua	

Appendix I.

In the Appendix will be found a Return showing the number and amount of the Money Orders issued and paid at each office in the Colony during the year 1872.

I give the following returns for the purpose of showing the relative amount of business transacted between this Colony and the United Kingdom, and between this Colony and the various Australasian Colonies, viz. :—

RETURN showing the various places where Money Orders issued in New South Wales during 1872 were made payable, together with a statement showing the increase and decrease in the year 1872 as compared with the year 1871.

I shall be glad when arrangements can be completed for the extension of the Money Order System to the Continent of Europe, America, India, and other places, as there is no doubt that the advantages it affords are highly appreciated by the public. Until, however, more office accommodation can be procured than is at present available at the temporary head office in Wynyrd-square it is not considered practicable to transact the very largely extended business which would certainly follow the introduction of the system in the countries I have named.

The

13.

The revenue derived in the shape of commission, &c., on Money Orders during the year 1872 amounted to £3,873 9s. 10d., while the expenditure during the same period was £3,293 1s. 7d.; showing a balance of revenue over expenditure of £580 8s. 3d.

The following return will show the revenue and expenditure of the Money Order Department for the year 1872, as compared with the year 1871:—

Year.	Revenue.	Expenditure.	Balance of Revenue.
	£ s. d.	£ s. d.	£ s. d.
1871	3,145 15 5	2,954 9 11	191 5 6
1872	3,873 9 10	3,293 1 7	580 8 3
Increase for 1872.....	727 14 5	338 11 8	389 2 9

GOVERNMENT SAVINGS' BANKS.

It is gratifying to report that the expectations which were held on the introduction of the Government Savings' Bank system in the year 1871 have been fully realized by the largely increased business of the year 1872, as is shown by the following statistical return, viz. :—

Year.	Number of Government Savings' Banks in the Colony.	Number of Accounts opened.	Number of Accounts closed.	Number of Accounts remaining open on 31st Dec.	Total Deposits, including Interest.		Total Withdrawals.		Balance at credit of Depositors on 31st Dec., 1871.
					Number.	Amount.	Number.	Amount.	
						£ s. d.		£ s. d.	£ s. d.
1871 (four months)...	53	1,039	87	953	2,103	15,782 10 4	205	1,555 17 5	14,226 12 11
1872	70	2,271	633	2,591	8,415	95,167 2 7	2,049	28,450 7 11	80,913 7 7
Increase.....	17	1,232	546	1,638	6,312	79,384 12 3	1,844	26,894 10 6	66,716 14 8

During the year 1872 the system was extended to the following places, viz. :—

Arnhuen	Cowra	Raymond Terrace
Ballina	Fernmount	Terara
Bega	Gladstone	Ulladulla
Burwood	Grenfell	Woollahra
Carcoar	Gulgong	Yass
Cassilis	Nattai	

In the Appendix will be found a return showing the amount of business transacted during the year 1872 at each Government Savings' Bank in the Colony. Appendix J.

The total amount of interest placed to the credit of depositors during the year was £1,633'6s. 3d.

The average amount standing to the credit of each depositor is £31.

It is necessary, under the section of the Government Savings' Bank Act of 1871, to submit to Parliament before the 31st March in each year a statement of account. The statement for the year 1872 has, in compliance with law, already been duly audited and laid before Parliament. I, however, append a copy of the statement. Appendix K.

The expenditure of the Department for salaries during the year 1872 was £556.

ELECTRIC TELEGRAPH DEPARTMENT.

The following Return shows the extent of and the business transacted on the Electric Telegraph Lines of this Colony, in the year 1872, as compared with the year 1871:—

Year.	Extent of Electric Telegraph Wire in actual use in the Colony on 31st December.	Number of Electric Telegraph Stations on 31st December.	Number of Messages transmitted during the Year.	Total Revenue of Electric Telegraph Department.	Total Expenditure of Electric Telegraph Department, exclusive of interest on cost of construction of Lines.
	Miles.			£ s. d.	£ s. d.
1871	5,579	87	218,530	32,664 12 11	30,903 19 4
1872	5,907 $\frac{3}{4}$	91	335,822	46,924 6 7	31,523 8 0
Increase...	328 $\frac{3}{4}$	4	117,292	14,259 13 8	614 8 8

During the year additional wires (*i. e.*, wires fixed on posts already erected) were erected as follows, viz. :—

	Miles.	Cost.
Between Maitland and Armidale	97	£3,659 19 0
„ Parramatta and Campbelltown	21½	438 18 0
„ Bathurst and Hill End	50	574 16 0
„ Sydney and Maitland	127	2,243 0 0

The new lines (*i. e.*, lines across country not hitherto telegraphically opened up) established were from Grafton to Lawrence, 10¾ miles, at a cost of £458 6s. 6d.; and from Cassilis to Coolah, 22½ miles, at a cost of £787 1s.

The total cost of the construction of the extra mileage of the year 1872, is £8,162 0s. 6d.

The cost of construction of the whole extent of telegraphic lines in the Colony, viz., 5,907¾ miles, is £207,405 5s.

In addition to the lines already mentioned, an extra wire between Armidale and Tenterfield, and a new line from Narrabri to Fort Bourke were in course of construction in the year 1872, but were not completed on the 31st December of that year.

Four new Telegraph Stations were opened during the year, viz. :—

At Coolah,
Lawrence,
Pilliga,
Wee Waa.

The large amount of business transacted during 1872 can be gathered from the fact that no less than 117,292 messages were received more than were transmitted in the year 1871, being an increase of nearly 54 per centum.

It is gratifying to observe that the revenue of this Department shows so large an increase as £14,259 13s. 8d., while the working expenditure is only augmented by the sum of £614 8s. 8d.

The expenditure of the Department may be classified as follows, viz. :—

Salaries	£20,195 15 6
Contingencies	11,327 12 6

I may here mention, although the allusion may more properly belong to the annual report for the year 1873, that it is the intention of the Government to reduce the charge for telegraphic messages within the Colony to one shilling for ten words (exclusive of address and signature) and one penny for every additional word after the 1st of October next. In order to accomplish the expeditious transaction of the increased business which it is anticipated will follow upon the reduction of rates, it will be necessary to provide additional wires on the principal lines of telegraph, and with this object in view Parliament has appropriated the necessary sum required to meet the cost of construction.

The following is a Return showing the number and value of Telegrams sent from each Station in the Colony during the year 1872 :—

Stations.	Messages.	Amount.	Stations.	Messages.	Amount.
		£ s. d.			£ s. d.
Sydney	103,547	19,587 10 1	Kyamba.....	198	25 9 3

The most important feature of the year 1872, as regards Electric Telegraphy, is the opening of communication *via* Port Darwin with Europe. This was commenced in June, but the construction of the line through the South Australian Territory not being finished by that time, a portion of the distance was performed by horse express.

On the 21st of October, complete communication was established, to the gratification of the inhabitants of the whole of the Australian Colonies.

Up to the 31st December, 1872, 243 messages were sent from this Colony for transmission by the Port Darwin and British-Australian Telegraph Company's Lines.

NEW BUILDING.

It is a matter of regret that the business of such important Departments as the Post Office, Money Order Office, and Electric Telegraphs has still to be conducted in temporary and inconvenient buildings. It is hoped that before many months shall have passed the new building will be ready for occupation.

The health of the officers employed in these Departments is far from satisfactory, many of them during the year having been compelled to absent themselves from duty, owing to the unhealthy atmosphere in which they have been required to work. But, apart from the serious consideration of the health of the officials, the present ill adapted buildings have prevented the introduction of many changes which could be made with benefit to the Public Service.

The Government has, however, adopted measures for the expeditious completion of the new offices, and I trust before the end of the present year they will be ready for occupation.

I have the honor to be,

Sir,

Your Excellency's most obedient servant,

SAUL SAMUEL,

Postmaster General.

APPENDIX.

A.

RETURN of Postal Lines established in 1872.

Postal Line.	Frequency of Communication.	Miles.
Corowa and Jereelderie	Once a week	75
Singleton and Goorangoola	Once a week	22
Marsdens and Wollongough	Once a week	40
Telegraph Point and Rolland's Plains	Twice a week	10
Quirindi and Pine Ridge	Twice a week	25
Kynnumboon and Tweed Junction	Once a week	12
Collie and Quambone	Once a week	79
Taralga, Curraweela, and Oberon	Once a week	54
Dubbo and Obley	Once a week	35
Gosford and Wamberal	Twice a week	8
Delegate and Corrowong	Once a week	16
Oban and Paddy's Gully	Twice a week	2
Douglass Park and Wilton	Three times a week	8
Hill End and Lower Turon	Six times a week	3
Bathurst and Chamber's Creek	Three times a week	28
Grafton and Solferino	Twice a week	51
Waratah and Tighe's Hill	Six times a week	2
Canadian Lead and Home Rule	Six times a week	2
Maryland and Ruby Creek	Twice a week	7
Sofala and Upper Turon	Twice a week	14
Myall River and Forster	Once a week	50
Waratah, Lambton, and Wallsend, including the delivery to the residents of letters, &c. (daily), of the Waratah, Lambton, and Wallsend Post Offices.	Six times a week	3
Sofala and Box Ridge	Twice a week	8
Aberdeen and Rouchell Brook	Once a week	14
Morpeth and Miller's Forest	Six times a week	6
	Total	574

B.

RETURN of Postal Lines discontinued in 1872.

Postal Line.	Frequency of Communication.	Miles.
Breeza and Pine Ridge	Twice a week	18
Singleton and Darlington	Six times a week	1 $\frac{1}{4}$
Ballalaba and Adjanbella	Once a week	35
Gulargambone and Quambone	Once a week	52
Walbundrie and Urana	Once a week	70
Jacqua and Windellama	Once a week	8
Mileage to deduct in consequence of changes in mail route, corrections in distances, &c.	96
	Total	280

C.

RETURN of Increased Postal Accommodation afforded during 1872 on existing Lines.

Postal Line.	Additional Communication afforded.	Miles.
Ilford and Hill End (from 1st January to 14th April)	Twice a week	36
Ilford and Hill End (from 15th April to 31st October)	Three times a week	36
Bathurst and Carcoar	Three times a week	35
Braidwood, Jembaicumbene, and Major's Creek	Three times a week	15
Bathurst and Sofala	Three times a week	29
Mudgee and Barragon	Once a week	35
Sofala, Tambaroora, and Hill End	Four times a week	25
Mitchell's Creek and Palmer's Oakey	Once a week	15
Laggan and Peelwood	Once a week	20
Gegedzerick and Jindabyne	Once a week	15
Bendemeer and Inverell	Once a week	106
Moree and Barraba (Line extended from Cobbadah to Barraba, 20 miles)	Once a week	123
Falconer and Oban	Once a week	15
Eurobodalla and Bega	Once a week	51
Scone and Moonan Brook	Once a week	30
Brewarrina and Brenda	Once a week	120

D.

RETURN of Decreased Postal Accommodation during 1872 on existing Lines.

Postal Line.	Frequency of Communication in 1871.	Frequency of Communication in 1872.
Rydal, Meadow Flat, and Yetholme	Six times a week	Three times a week.
Bathurst and Glanmire	Six times a week	Three times a week.

G.

REPORT from the Receiver and Accountant General of the Post Office, explanatory of the account against the Australian Colonies and New Zealand, for Post Office Packet Service, during the year ending 31st December, 1872.

THE account of the amount chargeable on the Australian Colonies and New Zealand, for Mail Packet Service, during the year 1872, is annexed.

The amount of Subsidy payable to the Peninsular and Oriental Steam Navigation Company for the Service between Point de Galle and Sydney having been reduced by £500 from 1st August, 1871, in consideration of the withdrawal of Naval Agents from that line, the Colonial moiety of the cost of the service for the current year has been reduced from £64,750 to £64,500; and an allowance has been made to the Colonies on account of the sum deducted from the subsidy for the period from 1st August to 31st December, 1871.

Three of the Colonies, viz., South Australia, Tasmania, and Western Australia, have remitted in full the amount of the balances due upon the previous accounts.

The arrears due from the other Colonies have been carried to their debit in the present account.

In the case of Victoria, the arrears amount to £26,117 10s. 1d., being one-half of the balance due to 31st December, 1871. The attention of the Government of the Colony should, I submit, be called to this arrear.

General Post Office, London,
12th April, 1872.

GEO. CHETWYND,
Receiver and Accountant General.

An Account showing the Amounts chargeable on the Australian Colonies and New Zealand, on account of the Mail Packet Service, for the year ending 31st December, 1872.

General Post Office, London,
12th April, 1872.

GEO. CHETWYND,
Receiver and Accountant General.

POST OFFICE PACKET SERVICE, 1872.

An Account showing the amounts chargeable on the Australian Colonies and New Zealand, on account of Post Office Packet Service, for the year ending 31st December, 1872.

A Statement showing the amounts credited to the Australian Colonies in 1872, on account of the year 1871.

Colonies.	Amount overcharged in 1871.*	Sums allowed to the Colonies on account of Penalties on the Mail Packet Service between Point de Galle and Sydney, year 1871.†	Total sums credited to the Colonies.
Victoria	£ 50 9 4	£ 60 11 3	£ 111 0 7
New South Wales	20 2 11	24 3 6	44 6 5
South Australia	10 7 11	12 9 6	22 17 5
New Zealand	9 2 11	10 19 6	20 2 5
Tasmania	3 10 5	4 4 6	7 14 11
Queensland	8 15 8	10 10 9	19 6 5
Western Australia	1 14 2	2 1 0	3 15 2
	104 3 4	125 0 0	229 3 4

* The amount of subsidy payable for the Service between Point de Galle and Sydney was reduced by £500 per annum, from 1st August, 1871, in consideration of the withdrawal of the Naval Agents. The sum of £208 6s. 8d. was accordingly deducted for the five months to 31st December, 1871; one-half of this sum is credited to the Colonies.

† Amount of Penalties inflicted	£ 600
„ Premiums earned	350
Excess of Penalties over Premiums	250
One-half to be credited to the Colonies	125

H.

PARTICULARS of Contracts entered into for the conveyance of Post Office Mails, from the 1st January, 1872.

REPORT FROM THE SELECT COMMITTEE

ON

TELEGRAPHIC COMMUNICATION ;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE.

AND

APPENDIX.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
24 April, 1873.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1872-3.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 24. TUESDAY, 17 DECEMBER, 1872.

11. TELEGRAPHIC COMMUNICATION:—Mr. Robertson moved, pursuant to Notice,—

(1.) That a Select Committee be appointed to consider and report as to the advisability of this Colony endeavouring to make arrangements for greater facility of telegraphic communication between the Australian Colonies and the rest of the World, and generally as to the working of our Telegraphic system.

(2.) That such Committee consist of Mr. G. A. Lloyd, Mr. Lackey, Mr. Macleay, Mr. Forster, Mr. Sutherland, Mr. Garrett, Mr. Raphael, Mr. Buchanan, Mr. Bawden, and the Mover.

Debate ensued.

And Mr. Parkes requiring that the said Committee be appointed by Ballot,—

Question,—(1.) That a Select Committee be appointed to consider and report as to the advisability of this Colony endeavouring to make arrangements for greater facility of Telegraphic Communication between the Australian Colonies and the rest of the World, and generally as to the working of our Telegraphic system,—put and passed.

Whereupon the House proceeded to the Ballot, and the Speaker declared the following to be the Committee duly appointed:—Mr. Robertson, Mr. Burns, Mr. Parkes, Mr. Tunks, Mr. Wearne, Mr. Rodd, Mr. Garrett, Mr. Lackey, Mr. Macleay, and Mr. Stewart.

VOTES No. 92. THURSDAY, 24 APRIL, 1873.

20. TELEGRAPHIC COMMUNICATION:—Mr. John Robertson, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 17th December, 1872, together with Appendix.
Ordered to be printed.

TELEGRAPHIC COMMUNICATION.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 17th December, 1872, to consider and report as to the advisability of this Colony endeavouring to make arrangements for greater facilities of Telegraphic Communication between the Australian Colonies and the rest of the World, and generally as to the working of our Telegraphic System,—have agreed to the following Report,—

1. Your Committee having examined a considerable number of witnesses, consisting of gentlemen professionally connected with telegraphy in this and certain of the neighbouring Colonies; of gentlemen engaged in mercantile pursuits; and of gentlemen connected with the newspaper press,—have, after careful consideration, arrived at the following conclusions:—

2. That the advancement of Electric Telegraphy in New South Wales compares favourably with that of any other part of Australia. Our wires are more than one-third longer than those of any other of these Colonies; they have been well and substantially constructed; are in good order and repair; have cost very much less per mile; and our revenue from telegraphy is greater than that of any other of the Australian Colonies. The lines are well worked, and the officers employed here are not surpassed in expertness by any throughout the world.

3. The charges brought against the Telegraph Department of favouritism in reference to Press messages from Adelaide on the arrival of the European Mails, appear to have arisen almost wholly from misconception on the part of the gentlemen making them. Those gentlemen had been under the impression that some law, regulation, or custom had been in operation in Adelaide, limiting the number of words for each Press message sent to Sydney to fifteen hundred. The evidence of Mr. Todd, C.M.G., the gentleman in charge of the Telegraph Department in Adelaide, and that of Mr. James, the gentleman holding the same position in Melbourne, shows that such was not the case. The matter, however, is one of the past and need not be further referred to. Cable messages, which come now from Europe almost daily, have completely annihilated inconvenient competition with regard to messages from Adelaide on the arrival of the European Mails.

4. Your Committee have not been able, owing to the sudden close of the present Session, to give attention to the correspondence on the subject of alleged improper delay in transmission of several cable messages, submitted by Mr. Raphael, M.P., on the 22nd of April instant. This matter, however, with some other similar cases wherein direct contradictions occur, appearing to be wholly departmental, may well be left for the attention and decision of the Minister in charge of the Telegraph Department.

5. All the witnesses examined recommended reduction in the charges for telegraphic messages, and concurred generally in opinion that very considerably lower rates might be charged without injury to the revenue. Your Committee believe that a uniform charge of one shilling for each message of ten words throughout this Colony would be found in every regard satisfactory. The rates for intercolonial messages, your Committee believe from the evidence taken, could also be with great advantage very much reduced.

6. Some valuable evidence was received by your Committee in reference to the conduct of Post Office business, and that of telegraphy at the same offices, and by the same officers. From the statements of Mr. James, and of Mr. Todd, whose experience in Victoria, and in Adelaide, respectively, with regard to this question, is very considerable, and from other evidence your Committee are of opinion that except at minor stations such combination is undesirable, and only commendable for any station on the ground of economy.

7. The office accommodation provided in Sydney and in many of the country towns is quite inadequate even for carrying on the present Telegraphic business. The great probability, if not absolute certainty, of greatly extended business, should the charges be reduced, makes it desirable that attention should be given to the subject, as well as to that of additional wires where required, and of more operators and messengers.

8. Your Committee think it advisable also that consideration should be given to the rate of emolument now paid to the officers throughout the Department, as it is alleged that their scale of remuneration is not equal to that of the officers of other branches of the Public Service, while their period of labour per diem is much more severe.

9. With regard to Telegraphic Communication with places beyond the Australias, every witness whose testimony was given on the subject condemned the charges for messages at present fixed as being almost prohibitory, and therefore injurious, not only to the utility of the lines, but to their success as a dividend paying speculation. Your Committee recommend the Government of this Colony to endeavour to obtain the co-operation of the rest of the Australian Colonies, with the view of negotiating with the proper authorities in the case of each Telegraphic Company interested, for greatly reduced rates between Australia and Europe and the rest of the World, and that a reduction of at least one-half of the cost of such messages should be obtained even if it be necessary that a considerable subsidy be paid proportionally to population by each of the Colonies to obtain the consummation of so desirable a result.

10. Your Committee are strongly impressed by the testimony given in favour of a second line of Telegraph from Australia to the rest of the World. It appears from the evidence of merchants and professional gentlemen, who have given great attention to the subject of Telegraphy, that its use is very much limited on lines between places very far apart, unless comparative certainty of communication is guaranteed by the existence of more than one line. For example, no merchant or other person would dare to conduct his financial business with the Mother Country, as a rule, by means of Telegraphy, if depending alone on so unreliable a means of communication as a single line. This uncertainty (to say nothing of its generally depreciating effect upon the value of Telegraphy as a means of communication), it is alleged, greatly reduces the class of business alluded to, and in a variety of ways limits the number of messages along the lines.

11. Your Committee recommend that the Government of this Colony should endeavour to obtain the co-operation of all the other Australian Governments in obtaining by means of subsidy or otherwise a Telegraphic cable from Normantown, in Queensland, to Singapore, to be connected there with a line other than that through which the messages from Port Darwin pass. The evidence exhibited to your Committee makes it apparent that the cost of such a cable would not exceed (£800,000) eight hundred thousand pounds.

12. Your Committee are of opinion that the net cost of the second cable, and the reduction of the cost of Telegraphic messages to and from the rest of the World, and the cost of free public telegrams as hereinafter recommended, would not, if carefully negotiated in Java, India, and Europe, by a thoroughly competent and well selected officer, exceed an annual expenditure that could be borne with ease, and would be borne (considering the advantages to be gained) with satisfaction by the people of Australia.

13. It will be found on examination of the evidence taken by your Committee, on the subject of the desirability or otherwise of endeavouring to obtain the concurrence of the other Australian Colonies in having transmitted public telegrams from Europe periodically, exhibiting the prices current of leading Australian productions, and other information of interest and value to colonists generally, to be posted without charge at every Telegraph Office throughout Australia, that much difference

of

of opinion was elicited. The greater weight of testimony was however given in favour of such telegrams. From the evidence of Mr. James and Mr. Cracknell, it appears that messages of one hundred words each could be transmitted from England three times a week, and posted at every Telegraph station in Australia at a net cost of ten thousand pounds a year—that sum covering all charges, including necessary agencies. Should the whole of the Australian Colonies co-operate in the undertaking, and contribute rateably according to their population, the share to be paid by New South Wales would be but three thousand pounds a year, an insignificant expenditure, having regard to the great benefit secured.

14. Even under present circumstances, it appears to your Committee that the great mass of the tax payers of the Colonies can never receive back by direct use of the lines their fair proportion of the cost to the public that Telegraphy has occasioned. Such direct advantage can only, as a rule, be received by the classes that are in a position to pay for sending telegrams, and if the recommendations of your Committee involving still larger expenditure are carried out, without some provision for free telegrams of the kind indicated, the disadvantage under which the non-Telegraphing portions of the community are placed will be increased. Influenced by these and other reasons, your Committee recommend for favourable consideration, that a system providing free public telegrams from Europe to Australia be established.

JOHN ROBERTSON,
Chairman.

*No. 2 Committee Room,
Sydney, 24 April, 1873.*

1872-3.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 16 JANUARY, 1873.

MEMBERS PRESENT:—

Mr. John Robertson,		Mr. Parkes,
Mr. Wearne,		Mr. Rodd.

Mr. John Robertson called to the Chair.

Entry in Votes and Proceedings appointing the Committee, read by the Clerk.

Committee deliberated.

Ordered,—That E. C. Cracknell, Esq., be summoned to give evidence next meeting.

[Adjourned until To-morrow, at half-past Two o'clock.]

FRIDAY, 17 JANUARY, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.		
Mr. Burns,		Mr. Rodd,
		Mr. Lackey.

E. C. Cracknell, Esq., (*Superintendent of Telegraphs*), called in and examined.Witness handed in Comparative Statement showing the amount received for Telegrams during the years 1863 to 1871. (*Vide Appendix A 1.*)

Witness withdrew.

Committee deliberated.

Ordered,—That E. C. Cracknell, Esq., be summoned to give evidence next meeting.

[Adjourned until Monday next, at half-past Two o'clock.]

MONDAY, 20 JANUARY, 1873.

MEMBERS PRESENT:—

Mr. Burns,		Mr. Stewart,
Mr. Wearne,		Mr. Rodd.

In the absence of the Chairman, Mr. Burns called to the Chair.

E. C. Cracknell, Esq., called in and further examined.

Witness withdrew.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

FRIDAY, 24 JANUARY, 1873.

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY, 29 JANUARY, 1873.

MEMBERS PRESENT:—

Mr. Burns,		Mr. Stewart,
Mr. Rodd,		Mr. John Robertson,
		Mr. Wearne.

In the absence of the Chairman, Mr. Burns called to the Chair.

E. C. Cracknell, Esq., called in and further examined.

The Chairman (*Mr. John Robertson*) entered the room and took the Chair.

Witness withdrew.

Committee deliberated.

Ordered,—That S. Bennett, Esq., be summoned to give evidence next meeting.

[Adjourned to Friday next, at half-past Two o'clock.]

FRIDAY,

FRIDAY, 31 JANUARY, 1873.

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY, 5 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.
Mr. Wearne, | Mr. Burns,
Mr. Rodd.

S. Bennett, Esq., (*Proprietor of the Empire Newspaper*), called in and examined.
Witness handed in document relative to the subject under consideration. (*Vide Appendix B 1.*)
Witness withdrew.

Committee deliberated.
Ordered,—That S. Bennett, Esq., be summoned to give further evidence next meeting.
[Adjourned to Friday next at *half-past Two* o'clock.]

FRIDAY, 7 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.
Mr. Burns, | Mr. Stewart,
Mr. Wearne.

S. Bennett, Esq., called in and further examined.
Witness handed in copy of Memorial addressed by him to the Intercolonial Conference Delegates.
(*Vide Appendix B 2.*)
Committee deliberated.

Ordered,—That S. Bennett, Esq., be summoned to give further evidence next meeting.
[Adjourned to Tuesday next, at *half-past Two* o'clock.]

TUESDAY, 11 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.
Mr. Stewart, | Mr. Wearne,
Mr. Garrett, | Mr. Rodd.

S. Bennett, Esq., called in and further examined.
Witness produced two copies of the *Sydney Morning Herald*, and several Telegrams, in confirmation of his evidence.

Witness withdrew.
Committee deliberated.
Re-assembling of the Committee to be arranged by Chairman.
[Adjourned.]

WEDNESDAY, 12 MARCH, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.
Mr. Burns, | Mr. Rodd,
Mr. Stewart, | Mr. Wearne.

E. C. Cracknell, Esq., called in and further examined.
Witness withdrew.
Committee deliberated.

Ordered,—That Messrs. John Fairfax, P. B. Walker, J. Miles, and J. H. Heaton be summoned to give evidence at the next meeting.—Mr. Fairfax to be supplied with the evidence given by Mr. S. Bennett before this Committee.
[Adjourned to Friday next, at *half-past Two* o'clock.]

FRIDAY, 14 MARCH, 1873.

MEMBERS PRESENT:—

Mr. Burns, | Mr. Lackey,
Mr. Tunks, | Mr. John Robertson.

In the absence of the Chairman, Mr. Burns called to the Chair.
J. H. Heaton, Esq., called in and examined.
The Chairman (*Mr. John Robertson*), entered the room, but declined to take the Chair at this meeting.
Witness withdrew.

P. B. Walker, Esq., (*Assistant Superintendent of Electric Telegraphs*), called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That John Fairfax, Esq., and Mr. J. Miles be summoned to give evidence next meeting.
 [Adjourned until Tuesday next, at *half-past Two o'clock*.]

TUESDAY, 18 MARCH, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.
 Mr. Burns, | Mr. Tunks,
 Mr. Wearne.

John Fairfax, Esq., (*Proprietor of the Sydney Morning Herald Newspaper*), called in and examined.
 Witness withdrew.
 Committee deliberated.
 Motion made (*Chairman*), and *Question*,—That the Superintendents of Telegraphs from Victoria, South Australia, and Queensland, be summoned for the purposes of this inquiry,—*put and passed*.
Ordered,—That E. Wrench, Esq., and Mr. J. R. Miles be summoned to give evidence next meeting.
 [Adjourned until Thursday next, at *half-past Two o'clock*.]

THURSDAY, 20 MARCH, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.
 Mr. Tunks, | Mr. Rodd.

Mr. J. R. Miles, (*Receiving Clerk in the Telegraph Department*), called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That E. Wrench, Esq., be summoned to give evidence next meeting.
 [Adjourned until To-morrow, at *half-past Two o'clock*.]

FRIDAY, 21 MARCH, 1873.

MEMBER PRESENT :—

Mr. John Robertson.

In the absence of a quorum, the meeting called for this day lapsed.

TUESDAY, 25 MARCH, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.

Mr. Garrett, | Mr. Tunks.

Alexander Stuart, Esq., (*Messrs. Towns & Co.*), called in and examined.
 Witness withdrew.
 Edward Wrench, Esq., called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That S. Murray, Esq., and S. A. Joseph, Esq., be summoned to give evidence next meeting.
 [Adjourned until Friday next, at *half-past Two o'clock*.]

FRIDAY, 28 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Burns, | Mr. Tunks,
 Mr. Rodd.

In the absence of the Chairman, Mr. Burns called to the Chair.
 Clerk *read* letter stating that Mr. Joseph was absent from the Colony, therefore could not attend the Committee for at least a fortnight; the other witness summoned not being present.
 Committee deliberated.
 Clerk also *read* a telegram from Mr. Todd, (*Superintendent of Telegraphs, South Australia*), stating that the Government had sanctioned his attending this Committee to give evidence, presuming his expenses be paid by the Government of New South Wales. And the Clerk having informed the Committee that there was no money available for paying such expenses,—

Motion

Motion made (*Mr. Burns*), and *Question*,—That the Chairman be requested to take such steps as he may consider desirable for obtaining for this Committee authority to pay the expenses of witnesses that may be summoned and examined by it,—*put* and *passed*.

Ordered,—That C. H. Hayes, Esq., J. Mullins, Esq., and Henry Prince, Esq., be summoned to give evidence next meeting.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 2 APRIL, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.

Mr. Wearne, | Mr. Burns.

Henry Prince, Esq., called in and examined.

Witness withdrew.

C. H. Hayes, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That T. R. James, Esq., be summoned to give evidence next meeting.

[Adjourned until To-morrow, at *half-past Two* o'clock.]

THURSDAY, 3 APRIL, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.

Mr. Burns, | Mr. Wearne.

Thomas R. James, Esq., (*Manager of the Telegraph Department, Victoria*), called in and examined.

Witness handed in Statement of Business, Victorian Telegraph Department. (*See Appendices, D 1 and D 2.*)

Witness withdrew.

Committee deliberated.

Ordered,—That W. Lacy, Esq., and Mr. John Fyfe be summoned to give evidence next meeting.

[Adjourned until To-morrow, at *half-past Two* o'clock.]

FRIDAY, 4 APRIL, 1873.

MEMBERS PRESENT:—

Mr. John Robertson in the Chair.

Mr. Burns, | Mr. Wearne,
Mr. Tunks.

Mr. John Fyfe, (*Engineer*), called in and examined.

Witness withdrew.

Mr. W. Lacy, (*Messrs. Vale & Lacy*), called in and examined.

Witness withdrew.

Committee deliberated.

Chairman handed in Letter from Mr. Cracknell, relative to the evidence given by Mr. Heaton before this Committee, with twelve Enclosures. Ordered to be printed in the Appendix. (*Vide Appendix, E and Enclosures 1 to 12.*)

Ordered,—That Mr. Jarrett be summoned to give evidence next meeting.

[Adjourned until Tuesday next, at *half-past Two* o'clock.]

TUESDAY, 8 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Burns, | Mr. Tunks,
Mr. Wearne, | Mr. John Robertson.

In the absence of the Chairman, Mr. Burns called to the Chair.

Mr. F. C. Jarrett called in and examined.

The Chairman (*Mr. John Robertson*) entered the room, but declined to take the Chair at this meeting.

Witness withdrew.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 16 APRIL, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.

Mr. Burns, | Mr. Tunks,
Mr. Wearne.

Charles Todd, C.M.G., (*Superintendent of Telegraphs, South Australia*), called in and examined.
Witness withdrew.
Committee deliberated.

[Adjourned until To-morrow, at *Eleven* o'clock.]

THURSDAY, 17 APRIL, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.

Mr. Burns, | Mr. Macleay,
Mr. Wearne.

Charles Todd, C.M.G., called in and further examined.
Thomas R. James, Esq., further examined.
E. C. Cracknell, Esq., further examined.
Witnesses withdrew.
Committee deliberated.

Ordered,—That E. Greville, Esq., M.P., and Mr. W. E. Langley, be summoned to give evidence next meeting.

[Adjourned until To-morrow, at *half-past Two* o'clock.]

FRIDAY, 18 APRIL, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.

Mr. Wearne, | Mr. Burns.

Committee deliberated.

[Adjourned until Tuesday next, at *half-past Two* o'clock.]

TUESDAY, 22 APRIL, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.

Mr. Burns, | Mr. Wearne.

J. G. Raphael, Esq., M.P., called in and examined.

Witness *handed in* Correspondence respecting delay in Cable Messages. (*Vide Appendix F*.)

Witness withdrew.

Mr. W. E. Langley called in and examined.

Witness withdrew.

Committee deliberated.

Clerk directed to forward a copy of the Correspondence handed in by Mr. Raphael this day, to Messrs. Todd, Cracknell, and James, for perusal, with a view to their making any remarks thereon they may desire.

Clerk laid before the Committee accounts received from Mr. Todd and Mr. James, for expenses incurred in visiting this Colony to give evidence before this Committee.

Resolved :—That the sum of £79 10s. be awarded to Mr. Charles Todd, for expenses incurred in attending and giving evidence before this Committee.

Resolved :—That the sum of £56 10s. be awarded to Mr. Thomas R. James, for expenses incurred in attending and giving evidence before this Committee.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 24 APRIL, 1873.

MEMBERS PRESENT :—

Mr. John Robertson in the Chair.

Mr. Stewart, | Mr. Wearne,
Mr. Burns, | Mr. Rodd.

Clerk laid before the Committee a report and plan furnished by Mr. Todd; also, Memoranda from Mr. Todd and Mr. Cracknell, relative to the Correspondence *handed in* to the Committee by Mr. Raphael, M.P., last meeting. (*Vide Appendices G 1 to G 4, and Separate Appendix.*)

Chairman submitted Draft Report. Same *read*, verbally amended, and *agreed to*.
Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Bennett, S., Esq.	14, 18, 20
Cracknell, E. C., Esq.	1, 8, 10, 23, 66
Fairfax, J., Esq.	34
Fyfe, J., Esq.	54
Hayes, C. H., Esq.	47
Heaton, J. H., Esq.	28
James, T. R., Esq.	50, 66
Jarrett, F. C., Esq.	57
Lacy, W., Esq.	55
Langley, W. E., Esq.	67
Miles, J. R., Esq.	39
Prince, H., Esq.	45
Raphael, J. G., Esq., M.P.	66
Stuart, A., Esq.	41
Todd, Charles, C.M.G.	59, 64
Walker, P. B., Esq.	31
Wrench, E., Esq.	43

1872-3.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

TELEGRAPHIC COMMUNICATION.

FRIDAY, 17 JANUARY, 1873.

Present:—

MR. BURNS,
MR. RODD,

MR. ROBERTSON,
MR. LACKEY.

JOHN ROBERTSON, Esq., IN THE CHAIR.

E. C. Cracknell, Esq., called in and examined:—

1. *Chairman.*] Will you be good enough to state to the Committee what position you hold in the service of the Government? I hold the office of Superintendent of Electric Telegraphs.
2. How long have you held that office? About thirteen years. I have been altogether about fifteen years in the service of this Government.
3. You have no doubt observed, from the proceedings of Parliament, the objects for which this Committee has been appointed, and I shall now proceed to make inquiries of you upon the various branches of the subject on which it may seem to me that we shall require your evidence; and the first question I shall ask you is, what are the present rates for the minimum number of words for telegrams from New South Wales to England? The minimum rate at present is £9 11s. 6d. for twenty words.
4. What are the rates from Ceylon to England? The last rate fixed was £4 5s. for twenty words; but the rate has varied considerably; it has been altered three or four times.
5. You say it has varied considerably: what has been the average of those variations? The average I should say has been about £4 for twenty words. The rate has been as high as £5 15s. for twenty words.
6. Can you state how the charge of £9 11s. 6d. is divided, and in what proportion it is allotted to each of the Telegraph Companies or Governments between here and the United Kingdom? Yes. New South Wales receives 5s.; South Australia, 20s.; the British Australian Company, £3 15s. 2d.; the Dutch Government, 4s.; the Extension Company, £1 13s. 2d.; the Indian Government, 8s. 6d.; and the Eastern Telegraph Company, £2 5s. 8d.; making together the sum I have named,—£9 11s. 6d.
7. Are you in a position to tell us what is the length of each of these lines? The length of the line from Adelaide to Port Darwin is 2,000 miles; from there to Java, by the British Australian Company's Cable, is 1,098 knots; the land line through Java is 700 miles; the Batavia Cable to Singapore is 556½ knots; the cable from Singapore to Madras is 1,809 knots; the Indian land lines are 850 miles; from Bombay to Aden the cable is 1,817 knots; from Aden to Suez the cable is 1,465 knots; the land line by the Isthmus of Suez is 225 miles; the cable from Alexandria to Malta is 927 knots; that from Malta to Gibraltar 1,025 knots; from Gibraltar to Penzance the cable is 1,431 knots; and the land line to London from Penzance is 240 miles; making in all 11,690 knots or nautical miles of cable, and 4,215 miles of land line. The cable lines are all reckoned by knots and the land lines by miles, and for that reason I have thought it better to retain the designation.
8. Will you be good enough to say whether, in your opinion, the rates charged by the various Companies or Governments throughout the different lines represent the mileage in each case? No, they do not.
9. Each Company or Government does not take its share of the total in proportion to its mileage? No, the British Australian Company gets the largest portion by far.
10. That Company, you think, gets the lion's share? They receive more for their distance than is received on any other part of the line.

E. C.
Cracknell,
Esq.

17 Jan., 1873.

E. C.
Cracknell,
Esq.
17 Jan., 1873.

11. What is your view of this matter—how is it that this Company manages to get so large a share? I believe it to be simply owing to the fact that there is no competition on that line.

12. That being the reason why they get this large portion of the total amount, how, in your opinion, might this state of things be remedied? It seems to me that the remedy would be to induce competition. Having no competition, this Company now gets £3 15s. 2d. for a line only 1,098 knots in length, whilst the Eastern Telegraph Company only receives £2 5s. 8d. for the use of a line which is more than three times the distance.

13. Is there anything in that—might it not be that this British Australian line having very little business on it, is compelled to charge these high rates in order to make it pay; whilst the Indian line has so much business that it may be fairly able to do the work cheaper—in that regard, and looking at the difference of charge from that point of view, do you see anything to warrant so extreme a difference of charge? Nothing that I can see.

14. Are there any other of these lines besides that of the British Australian Company which receive more than their share, computing by mileage? No, I think not.

15. The other lines are comparatively reasonable in their charges? Yes.

16. And it is only in the case of the British Australian Company that there is anything objectionable in the charge? Yes, their proportion is certainly far too high.

17. Can you suggest any mode by which this Company might be induced to reconsider their tariff of charges upon their line; or rather what, in your opinion, would be the best mode of obtaining a reduction of the present high rates? In my opinion, the best mode would be to subsidize the line, so that the Government would have a voice in fixing the tariff of charges; or there is another alternative, and that is to construct a competing line from Normantown.

18. To subsidize the line would be not so much to reduce the charge in so far as the Company was concerned, as to throw a large proportion of it upon the Government; so that I presume your opinion is that the real remedy for the present state of things would be the construction of a line to Normantown? Yes, if it were not considered too expensive.

19. And the distance by way of Normantown would not be so great as that by way of Port Darwin? The distance would not be very much shorter, as you would have to go very nearly over the same ground,—it would be about 2,600 miles. The line should be taken from Normantown, *via* Macassar and Borneo, to Singapore.

20. Apart from all this, and putting aside these means of coercion which the Colony has in its hands, might there not be devised some plan by which the British Australian Company might be induced to reduce its charge to a much lower rate, and yet be able to give to its shareholders or proprietors the same return upon their outlay as they now receive? Yes. I believe that this Company would be very willing to accept a subsidy, and to reduce its rates one-half.

21. But apart also from the subsidy—is it not likely that a reduction of the present high tariff would so increase the number of messages between these Colonies and England that practically the Company would receive as much money as they now do at the higher rates? I think there would be an increase in the number of messages if the price were reduced; but whether there would be the same amount of revenue derived from the line I am not prepared to say.

22. But the number of messages would be increased? Most undoubtedly.

23. I presume then that the only course to be taken in order to obtain a reduction of the present high rate of charge would be for our Government to put itself into communication with the Directors of the British Australian Company? Yes, it would of course be necessary to do that.

24. And you think also that the real difficulty which exists in the way of a general reduction of the charges between here and England is to be found in the fact that the lines now in existence might not, under a reduced rate, return so much money to their shareholders as they now do? Yes, I think that they might not turn in the same revenue at first, if there were a large reduction, but they would do so after a bit. Another difficulty, however, might perhaps be found in the way, and that is that the lines nearer to Europe are now all fully occupied, so much so as not to be able to undertake additional business. If their business were very much increased they would have to lay duplicate cables in order to keep up with it.

25. If these lines are so much occupied as to require a second line to meet any additional business, that would imply that the present lines are fully employed, and being so, it may fairly be assumed that they pay. Assuming this to be the case, and that there is work offering for another cable, would it not appear reasonable that such a cable would bear its own charges? I certainly think that the Companies, if they have good business-men at their head, when they see that their line will not carry the number of messages coming to them, would not hesitate about increasing their carrying capacity.

26. You have given a good deal of thought to this matter, I believe? I have.

27. Having thought over the matter, are you in a position to suggest any course by which a reduction of the charge between this Colony and England may be secured, and secured in such a way as that the directors or shareholders of these lines shall join willingly in the reduction? Yes, I think it might be done by negotiation; by sending some competent person, representing this Government or representing the several Governments of the Australian Colonies, I think some arrangements might be made satisfactory to all parties.

28. Suppose then that the whole of the Australian Colonies were, through their Governments, to unite to take action in order to obtain this reduction, and that they selected a competent man—one fully able to deal with the question, and one who fully understood the Australian interests in relation to the question—if such a man were sent to negotiate with the different Governments and Companies, do you think it likely that some arrangements would be made, by which might be brought about a considerable reduction upon the present charges, and in such a way as not seriously to interfere with the immediate income derivable from the lines? Yes, I believe that the Companies would be very glad to come to some arrangement of the kind.

29. Then suppose the whole of the Australian Colonies—New South Wales, Victoria, South Australia, Queensland, Western Australia, and New Zealand—though I presume we ought not to expect very much from New Zealand at the present time; but suppose these Colonies were all to unite in giving a subsidy to these lines, in the same way as they join in giving a subsidy to the P. and O. Company, for the Ocean Mail Service, what amount of subsidy do you think would be required? I think it could be done for £30,000 a year, and have the present rates reduced one-half. 30.

E. C.
Cracknell,
Esq.

17 Jan., 1873.

30. So that instead of paying £9 11s. 6d. for the twenty words, what would the charge be? About £4 15s., or perhaps as low as £4 10s. for twenty words.
31. Have you taken into consideration, in making this calculation, that there would be a greatly increased business on the lines under the reduced tariff as compared with what there is under the present rates? There can be no doubt but that the reduction would increase the business considerably; under the present rates, messages to England are much too expensive to become general.
32. Then the initiation of such a system might be made by at once reducing the rate for twenty words to £4 10s. if the Australian Colonies would only unite in giving a subsidy of £30,000? Yes.
33. And supposing such an arrangement to be made, how would you apportion the several portions of the subsidy to be paid by the respective Colonies? That might be arranged upon the same basis as that of the Ocean Mail subsidy; or, what would perhaps be fairer, it might be apportioned in accordance with the number of messages sent by each Colony during some given period of (say) six months.
34. And it might be arranged every six months in accordance with the number of messages forwarded from each Colony during the six months preceding? Yes, that would no doubt be the fairest way of settling the amount after the plan had been worked for a while; but at going off there must be something to start with, and some given period (say six months) would have to be taken as a basis.
35. Then, as I understand you, you are of opinion that the best mode of proceeding would be to send some competent person to negotiate with the various Companies—Now, how would you propose that he should proceed? I think that the Intercolonial Conference, now about to meet, would be the best body to deal with this portion of the question. I see no difficulty in the way of dealing with the Governments of the several Australian Colonies; the difficulty would be in dealing with the Indian Government, and with the several Telegraph Companies.
36. Suppose that even the reduced charge of £4 10s. for twenty words were higher than the people generally would feel disposed to pay for a message to England; or, assuming that an arrangement could not be made with these Companies for reducing the tariff, or that the Colonies would not all join in effecting this arrangement, do you think any arrangement could be made by which a Governmental message might be sent from London daily, and posted at every telegraph office throughout the Colony as soon as received,—in the same way as shipwrecks, arrivals of vessels, and changes in the weather, are posted at these offices at the present time:—do you think that you could carry out a system by which a press message of (say) 150 words of general information, interesting to the public at large, might be posted daily at every telegraph office in the Colony? Yes, this might be done by appointing some responsible person in London to prepare the messages to be sent, and by stipulating that such person should be held responsible for the information forwarded by him.
37. What responsibility would you expect from him—of course he would be expected to act honestly, but then his message would not be so much an indication of the actual fact, as a notice to call the attention of the public to it; thus, in telegraphing the prices of shares or produce, the message would not be regarded as an absolute notification of the price, but would be for the purpose of calling the attention of those interested, and of inducing them to communicate with England in order to ascertain what the prices really were? What I mean is, that he should be well paid, and should be a responsible man who would not be likely to mislead the public by false information.
38. Suppose that it should turn out that this compiler of messages should be a man who would mislead the public by his quotations, would not his chance of doing this be very small, and would not the harm he would be likely to do be very small as compared with the every-day advantage of the information to all persons connected with the buying and selling of goods, seeing that they would have the opportunity, when their attention was once called to the change in prices at Home, of referring to their friends for information on the subject? Yes, that would no doubt be the effect of it.
39. You think then that if a competent officer were appointed in London, to furnish by telegraph information of a kind to be indicated to him—I mean, of course, that the class of information should be indicated to him—that the plan I have alluded to might be carried out? Yes, I think so.
40. And of course the office of this person would be open to the Agent General of the Colony, or to the Agents General of the Australian Colonies, should they join in the scheme, so that they could arrange for sending any further telegrams to their respective Governments on subjects which might be of a political character,—such for instance, as the likelihood of a war, or any other matter in which they might concur in sending a joint telegram to all the Colonies? Yes, I think the Agent General should have some control over this office, at all events to the extent of sending confirmatory messages in relation to any great public event.
41. How many words do you imagine that this message would require to consist of, supposing it to be sent daily, on alternate days, or weekly, as the case may be, in order to convey a fair day's news, consisting of such matters only as would be of interest to the Colony? I think 100 words would give all the information required, if sent two or three times a week.
42. Suppose the Governments of the Australian Colonies were to devote (say) £3,000 a year to the payment of these messages, would that be sufficient, do you think? That would be under the reduced rates you speak of?
43. Yes? I have made a calculation by which I find that under the present rates £4,800 a year would furnish a message of 100 words bi-weekly, that is, without the agent's charges for compilation.
44. Which would probably be £1,500 a year more? Yes, they would come to that, as he would have to pay for the collection of information.
45. So that a sum of about £6,000 a year would pay for all that is required, even at the present high rates? Yes.
46. And the expenditure of that sum would enable us to have this information posted every day at every telegraph office throughout the Colony? It would.
47. You now, as I understand it, publish, or rather post at your telegraph office in Sydney, the arrival of any ship at Brisbane? We do.
48. Or at Melbourne? Yes.
49. And you post also information as to the weather, or when rain falls on the Namoi, or Liverpool Plains, or Riverina? Yes.
50. I suppose you are aware that the posting of this information has a very material effect upon prices—that the reports of the arrival of a vessel must naturally affect insurance, whilst the intelligence that there is

E. C.
Cracknell,
Esq.

17 Jan., 1873.

is rain on the road naturally affects the price of stock, so that all these things which you now do have a tendency to interfere with trade? I would not say "interfere"—I would rather say "assist."

51. That is my meaning. I say interfere—in the light of assisting? Yes, that is the case.

52. But the effect is this—a person seeing a message posted at your office that rain has fallen at Fort Bourke has his attention drawn to the circumstance, though he has no claim upon your department if your information is erroneous; but his attention is drawn to it, and if he is interested in the matter, and wants to know accurately what has taken place, he has only to telegraph to his agent to learn all particulars? Yes, that is the effect of it.

53. The Government is not held responsible for these messages, any more than it is held responsible for hoisting the storm signals? It is not.

54. When the Government raise those signals, they are not supposed to pledge themselves to the certainty that there will be a storm, but they merely do it to warn persons that there is a probability of a storm occurring? That is the object with which they are raised, and they have been found of very great advantage to the shipping.

55. So with the posting of the arrivals and departures of vessels,—any person seeing the arrival of a vessel notified by telegraph, if he is interested in the vessel, will at once telegraph to his agent for information? Yes. The posting not only gives information to the public, but also brings business to the office, by means of the messages which it causes to be transmitted for the sake of learning fuller particulars.

56. In the same way any person buying or selling 200 or 300 bales of wool would not conclude his bargain if he saw a telegram of a rise or fall in the London market, but would send a message to England to inquire further into the matter? Yes. Such information would doubtless have the effect of regulating business transactions to a very great extent.

57. The reason I have asked you all these questions is, that many persons are under the impression that the Government, if it entered into this public telegraphing, would be bound by the information it made public. Now, what I want to know from you is, whether the Government, or you as the head of this department, consider yourself responsible for the entire accuracy of every piece of information you now publish, whether it be that rain is falling on the Darling, or that a ship has arrived at Port Denison? No, certainly not. We give the information as nearly correct as we possibly can, and, coming from our own officers, we assume it to be so; but, having given the information, we leave it to those interested to make further inquiries if they think fit.

58. You merely call their attention to the circumstances? Yes, and leave them to do the rest.

59. So that as regards the price of shares, or of tin, copper, or wool, or the promulgation of any matter of great public interest, you would merely publish particulars as the best information in your power to obtain, whilst individuals who invested in these matters might either act upon your information, or, if they saw any reason for doubting it, might telegraph for themselves? Yes; or this question of the responsibility of the department might be met by the insertion of a special clause in the Regulations, setting forth that we did not hold ourselves responsible for the correctness of the information, or liable for any damage that might ensue from its being incorrect.

60. Have you not that immunity now; for instance, if I am an underwriter of a ship which is on its way to Batavia, and I see posted in your office a telegram stating that she is lying off Cape York, when I know, from being an underwriter, and having full information of her movements, that she is in Torres' Straits, I do not hold your department responsible for the statement, but what I do is to telegraph to Cape York to discover the correctness of the information? Yes. The Government do not hold themselves responsible for the correctness of the intelligence; all they do is to take proper precautions to make the information as accurate as possible.

61. I suppose you are aware that as the line is now worked the small man is placed in an unfavourable position as regards the large man, as thus: I am a miner, and I have a parcel of tin ore which I desire to sell. I offer it to a merchant in a large way of trade, but in making our deal he has an advantage over me, for he has his telegram informing him of the latest prices in England, whilst I know nothing about English prices. The man who deals largely can afford to pay these high rates for telegrams, whilst the man who has only one transaction cannot? That is no doubt the case.

62. It has been asserted that telegrams sent from London do not come here in the order of their date—in the order in which they are lodged in the London office—that, in fact, there is favouritism shown—that some telegrams lodged in the London office come here earlier than those which have been lodged in the same office long antecedent to them. Do you know anything of this? I do not know of any case of the kind; I do not think that such is really the case.

63. What is the practice with regard to these telegrams—to the mode of forwarding them? In this Colony?

64. We want to know, as far as it is in your power to tell us, what becomes of these telegrams from the time they are handed in at the London office to the time they reach here; if you cannot tell us about what is the course in the London office, tell us about that portion of the line which you do know about? I can answer most unmistakeably as to the course pursued within the Colony. Messages are sent in the order in which they are received, and under the regulations framed for our guidance, one of which regulations is that messages shall be forwarded in the order in which they are received.

65. When you say the Colony, do you mean the Colony of New South Wales or the Colonies generally? I allude to the whole of the Australian Colonies.

66. And is that rule strictly carried out by the operators in the several offices? It is, unless in the case of messages relating to the business of the State, or to the arrest of criminals,—these take precedence of all other messages. Under the Act the operators are liable to a penalty of £20 if they should infringe this rule. The 8th clause of the Act provides "that all messages shall be transmitted and delivered in the order in which they are received by the manager or other officer in charge of the station at which they shall be received; except that messages relating to the arrest of criminals, the discovery or prevention of crime, or any other matter connected with the Administration of Justice, and all Government despatches, when so required, shall have priority over all other messages; and every officer offending against this section shall be liable to a penalty not exceeding £20, to be recovered before any two Justices."

67. Then if a message is delivered to the London office at a particular time, and is not sent on until after those which have been lodged in that office long anterior to it, it is a matter out of your jurisdiction, and you can give us no information as to the circumstances? No, I do not know how they come between London and Port Darwin; but I have written to ask for information relative to the delay in some cases which has been brought under my notice.

68.

E. C.
Cracknell,
Esq.

17 Jan., 1873.

68. Would it not be a right thing for you or for the Government to do, to communicate with all these Companies, so as to bring out the cause of this very improper conduct, and to show how the delay has arisen and where? Yes. As I say, steps have been taken for the purpose. In all these matters we can only be guided by the rules laid down in the Rome Convention, and which they are bound by and work under; and upon this point I would say that we ought to send an accredited agent to the next Telegraphic Convention, so as to get our lines placed under the rules of the Convention.

69. Their Convention then does not relate to these lines in Australia? No, not at all; but we ought to be under the Convention.

70. Then if anything is wrong, you think that to remedy it, the best course would be to send an envoy to represent the Colony at the next Telegraphic Convention? I do. The next Convention is to be held at St. Petersburg.

71. When? In 1875.

72. It has been alleged that messages for the Press coming here from other Colonies are in certain instances treated with somewhat of favouritism;—that, in point of fact, facilities are given for the transmission of messages sent to one or more newspapers, in a way that is not shared by the newspaper press generally? That is not true—most certainly not true as regards the working of the lines under my charge.

73. What do you do with regard to the order of transmission of messages between Colony and Colony? Precisely what I have already stated,—messages are sent on in the order in which they have been received; but the news by the mail *via* Suez being the most important, has had precedence over ordinary intercolonial messages. For the news received by the Suez mail precedence is given, in the order in which the news is lodged, to the amount of 1,500 words.

74. Suppose a firm to consist of three or four persons, partners in it,—could each one of them claim to send 1,500 words? No, they certainly could not.

75. Or suppose a newspaper office to publish three or four different papers, could the proprietors of that office claim 1,500 words for each paper? No. The messages do not come through to any but one paper—if you are alluding to the *Herald* newspaper.

76. Yes, that is what I mean. There is no use beating about the bush, as you have heard as well as I have, the allegations which have been made against the department? The fact is, as regards the *Herald*, that on the arrival of the Suez mail, two messages are lodged—one is sent to the *Herald*, and the other to Gordon & Gotch.

77. Gordon & Gotch are not newspaper proprietors? No; but they are telegraphic agents, and supply telegraphic news to country papers. I should have thought that your department would not have given to these telegraphic agents the opportunity of shutting out another paper from receiving information which had been forwarded to its rivals, and that the messages being regarded as Press messages would be sent only to those who would print them? No; the telegraphic agents, as they supply news to the country papers, are entitled to receive Press messages. Greville & Co. receive these messages equally with Gordon & Gotch.

78. Neither have they any newspaper? No; but, as I say, they are telegraphic agents, and furnish news to the country Press. Besides, you have only to look at Reuter to see that these agents are recognized elsewhere.

79. But these messages, being Press messages, ought to go into some paper? So they do. These telegraphic agents belong to the Press; they are the agents by which the news received by them is distributed to newspapers in the country to be published.

80. So that it comes to this: if the *Herald* is five minutes at the office sooner than any other paper, it takes 1,500 words for itself and 1,500 words for Gordon & Gotch, and these words have to be put through before any other paper can receive a message, and, as a matter of fact, the *Herald* generally does contrive to be first? I can explain that. The *Herald's* message is compiled on ship-board, on the passage between King George's Sound and Adelaide; so that, on the arrival of the branch steamer at Adelaide, it is ready for transmission at once. The message for the *Empire* is not compiled till the steamer reaches Adelaide; consequently it is sure to be considerably after the *Herald's*.

81. I am not talking about the *Empire*, but about Gordon & Gotch's message, which is made to take precedence of Press messages? Their message is compiled on board the steamer, in the same way as the *Herald's*, and they are both brought ashore by the same messenger.

82. Then does it not seem to you that this assumes very much the appearance of a monopoly; because if the *Herald* messenger is allowed to bring ashore a message for Gordon & Gotch, might he not, if the *Herald* people so directed him, bring ashore twenty messages for transmission, and so shut out another paper from getting any message at all? That is a matter for the South Australian Government to deal with.

83. I am only asking you these questions to see if there are really any grounds for the allegation which has been made that these lines are virtually monopolized by one firm in this city, who take not only 1,500 words for themselves, but also 1,500 words for a newspaper agent. What is the use of limiting the length of the message to 1,500 words if the limit can be got over in this way? The only thing I can see is to establish a third line. There are now two wires available for the transmission of messages; but there is no additional line available, or they might all be sent through.

84. So that if you had three lines available, you would have no difficulty in sending on a third message, so that all might be delivered at the same time? The *Empire* could have the third line so long as there was no other message to precede it; but the real cause of delay is that the *Empire* message is compiled in Adelaide, so that the *Herald* message being compiled on board the steamer is sure to be first received, and of course first sent. I have known instances where the *Herald* message has been put through before the *Empire* message has been received at the Adelaide Office.

85. It is no matter about the time, for if they are only five minutes, or two minutes behind the *Herald*, the *Herald* message goes first? Of course; but that is the law. The message that comes first must be sent first.

86. You have spoken about two lines which are available, but I understand there is a third line. Why could not the third message go along that line? Because it is kept for local business, and for the transmission of news to the local Press of the interior.

87. But if there were an arrangement by which the third line could be used, the *Herald* people would only have to send three copies of their message instead of two; and then the *Empire*, if it were only one minute behind the other, would be kept out quite as much as it is at present? I am not aware that the third line has ever been used for this purpose; it is kept, as I have said, for local business. 88.

E. C.
Cracknell,
Esq.

17 Jan., 1873.

88. But suppose we had six lines instead of three, what is there to prevent a great and wealthy paper like the *Herald* from monopolizing the use of the whole of them, merely by the employment of other names, as the name of Gordon & Gotch is used? I do not think that anything of that kind would be done.

89. Yet, let us look if that is not virtually the case at present. You say that the same message comes to the *Herald* for one and to Gordon & Gotch for another, and that one message comes to Greville & Company;—you are aware that this message gets into the *Herald*? I am aware that the message to Gordon & Gotch does.

90. Then this regulation of yours —? It is not a regulation of ours, but of the South Australian Government.

91. No matter whose it is, the regulation restricting the message to 1,500 words is mere waste paper, owing to these means of taking up the lines? It is hardly to be expected that the South Australian Government will keep a line waiting for the *Empire* message, whilst they have one in their office ready to go.

92. But what is the use of this limit, when the regulation can be evaded so easily,—why retain it? I really see no advantage in doing so.

93. The number of words is really unlimited by the system adopted, whereas there is a pretence of limiting the length of the message to 1,500 words? Yes, that is the case in South Australia; we have no limit here.

94. I suppose that in the event of the Government going in for a daily telegram from England, such as we have been speaking about, there would be no difficulty about arranging that their message should have precedence of all others on the line? I should imagine not; but that would be a suitable subject for the decision of the Conference.

95. What I want to know is this—Have the South Australian Government a regulation by which the length of any one message for any one newspaper is limited to 1,500 words? Yes, that is one of their rules.

96. But this rule is so far overridden, that one great firm in this city not only takes the 1,500 words allowed it, but also gets through another 1,500 words by using the name of another firm? Yes, that is the case as regards the *Herald*.

97. Then is it really any limit at all, seeing that it is so easily got over? There is no law, I believe, to limit the number of words which may be sent in one message.

98. But there is a regulation, and even as a regulation it is nothing more than a pretence? It does not prevent the *Herald* from getting more than 1,500 words.

99. It is a dead letter so long as they can get some other firm to take their message on for them? Yes, if the line is available they can do so.

100. And you think a third line would prevent this monopoly? A third line would give the *Empire* a greater chance of competing.

101. You say there is a third line, but that cannot be used for the Suez mail telegram, because it is required for local messages? Yes.

102. Is there anything in the law or the regulations which permits press messages to take precedence of all others? There is not.

103. Are you sure of that? Yes; except on the arrival of the Suez mail, and that is a regulation made by the South Australian Government.

104. There is an impression that there is some such regulation, I know; but beyond this, it is asserted that Reuter & Co. have so much influence with certain Telegraphic Companies that it enables them to push aside all messages which do not come through their agency—Can you give any idea how this idea has got abroad? I was certainly not aware of it; if it exists I cannot account for it; I can only say that Reuter & Co. have no such influence over these lines.

105. Have you ever had any reason for thinking that this influence exists, and is used upon any of these lines which connect us with England? No, and my opinion is that these Companies are managed by gentlemen who would be quite incapable of wilfully allowing any message to be detained or sent out of order. I do not believe that such practices exist. I know that the time on the messages is not to be depended upon, and mistakes often occur in the transmission of a.m. for p.m., which would account for a difference of 12 hours; besides this, the *Herald's* European messages are sometimes compiled in Bombay, and are timed from that place; in my opinion no dependence can be placed on the time of receipt of the telegrams said to be from London.

106. Are you aware that in England the Government have taken over the whole of the Telegraph lines in the Kingdom, and that the main reason for their doing so was that Reuter & Co. had become so strong that they had virtually got all the lines into their own hands? I know, of course, that the British Government have purchased all the telegraph lines in England, but I have never heard what you have stated given as the reason for their doing so.

107. Are you not aware that this was stated in the course of the debate upon the subject,—that that was the avowed and published opinion of the Home Ministry, and that was the main ground on which the Government recommended that the lines should be taken over and be made the property of the State? I have never seen any such statement as that in print, nor have I ever heard of it before this moment.

108. Can you tell us what are the rules and regulations which are supposed to govern the working of the Companies' lines between England and Port Darwin? They are worked under the rules of the Rome Convention, which was held in 1872.

109. Those rules would then apply to that portion of the line on which you say there is the highest amount of charge? Yes, the Convention applies to the whole line as far as Port Darwin, but not to the Colony.

110. Can you give us any information with regard to this Convention? I have here the published rules as agreed to.

111. Perhaps you will be good enough to read to us such portions of it as you think will be of interest to us? I will with pleasure:—The first, under Article 12:—"Messages of the same rank are transmitted by the original sending stations in the order of their deposit by the senders, and in the intermediate offices in the order of their reception." The next is Article 15:—"When an interruption to communication occurs during the transmission of a message, the office beyond which the interruption exists immediately despatches the message by post (as a prepaid registered letter) or by quicker means if available. It is addressed, according to circumstances, either to the nearest telegraph station able to continue its transmission

mission by telegraph, or to the receiver direct. As soon as communication is re-established it is transmitted afresh by telegraph, unless its receipt has been previously acknowledged, or unless, in consequence of an exceptional pressure of messages, its retransmission would be manifestly injurious to the general traffic." The next is Article 39:—"Every rectifying or completing message, and generally every communication exchanged with a telegraph office relative to a despatch already transmitted or in transit, is charged for in accordance with the rules of the present Convention, except such communication shall have been necessitated by an error of the Service." Article 41 is to the following effect:—"The charge for collecting is equal to half the charge for the message, each fraction of a quarter of a franc being equal to a quarter of a franc." Article 42 declares that "The charge for an acknowledgment of a receipt is equal to that of a single message (one rate)." And Article 43 says—"The charge for prepaid replies and acknowledgments of receipt, to be transmitted elsewhere than to the original sending station, is calculated according to the rate applicable between the points from which the reply or acknowledgment of receipt is to be transmitted, and the place to which it is addressed." I do not think that there are any other matters in the Convention that I need trouble the Committee by reading.

E. C.
Cracknell,
Esq.
17 Jan., 1873.

112. It has been alleged that, from 1863 to the present time, or to the end of last year, there has been substantially no increase in the revenue of our Telegraph Department, whilst there has been at the same time a large increase in the mileage of wire, and a large increase in the population of the Colony—Can you give us any idea of how this has come about? That is easily explained, and it in no way affects the management of the lines. Each year since 1863 has been a year of depression; every branch of the Public Service, every public institution, and every private firm suffered in the same manner as our department, and consequently business did not increase. I have brought with me a return showing the telegraphic receipts for each Colony, in each year, from 1863 inclusive to the end of 1871, and this I beg to hand in. (*Appendix A 1.*)

113. Was there any particular prosperity in the year 1863 that could account for the telegraphic revenue being so much higher in that year than in any subsequent year? Yes, I think the Colony was more than usually prosperous in that year. But we are not alone in this falling off in the telegraph receipts, for the Victorian Telegraphic Department shows it in even a more marked way than ours does. We have not much of a falling off, but in Victoria the falling off has been very great. By a reference to the paper I have put in, you will see that I have drawn a comparison between our telegraph revenue and that of Victoria during the first six months of last year; and as their population is one-third larger than ours, whilst our telegraph receipts were actually larger than theirs, I think the fact speaks strongly in favour of our lines.

114. Then, having put in that return, you desire further to state that, with a less population than Victoria, the telegraph receipts of New South Wales have been greater than those of that Colony? Yes. The population of Victoria is 731,528, whilst that of New South Wales is 503,981; and yet the telegraph revenue of the latter, from January to June, 1872, was £25,512, whilst that of Victoria was £24,521.

115. An impression exists that the charges in the Colony for messages passing through stations within the four corners of our own Colony are unwisely high, and that if we reduce the price to some charge more within reach of all, we shall induce a more general use of our lines for the purpose of correspondence—Have you thought over this matter, or are you prepared to give any opinion upon it? Yes; I shall be prepared to propose a reduction of the present charge to a uniform rate of 1s. for ten words, so soon as we have lines sufficient to carry the messages.

116. What extent of lines will you require to enable you to do this? We shall require about 1,300 miles of extra wire.

117. No additional posts? No.

118. Any more insulators? Yes. All we shall require will be brackets, insulators, and wire.

119. And what would these 1,300 miles of additional wire cost? I have estimated that they will cost £23,400 at the present rate of wire. The price of wire is very high just now.

120. If the reduction were made, would the revenue from the Telegraph Department be greater or smaller than it is now? I do not think the revenue would fall off, except, perhaps, just at first. It would be just about the same, I imagine, but with a largely increased business.

121. So that there would be virtually a sacrifice of £23,000 on the part of the State, in order to give greater convenience to the public? Yes, that would be the position.

122. *Mr. Rodd.*] Does it not seem to you that the convenience of the public is more to be considered than mere profit, in such a department as yours? Yes, I look upon it in exactly the same light as I do the postage rate.

123. *Chairman.*] There have been some reductions made already in the charge for telegrams in the Colony? Yes, there was a reduction made in 1870 to a uniform rate of 2s. to all stations beyond a certain distance.

124. Was there any falling off in the receipts in consequence of that reduction? Yes, at first there was; but owing to the activity in mining matters which set in shortly after, the falling off was soon made up.

125. To what extent were the reductions made? To some stations the reduction amounted from 4s., to others there was a reduction from 3s., whilst some were not reduced at all. For a certain distance round Sydney the uniform rate was fixed at 1s.

126. Seeing then that there has been no falling off in the revenue consequent upon the first reduction, would you now be prepared to recommend a further reduction? It would be useless to do so, because our lines would not be able to carry the business which we should have to do to keep up the revenue; we have great difficulty in keeping pace with the business already.

127. You have generally as much work as you can do? Yes, quite as much as we can do; we can do no more unless we worked all night.

128. Then why not work all night, and so increase the business? Because of the expense it would entail. Besides that, people might not be satisfied to have their messages detained all day in the office in order to be sent on at night. Then again, there would be a difficulty in the way of delivering the messages at night; it would necessitate an extra operating staff.

129. In what way would working at night cause any great additional expense? It would entail the necessity of appointing a double staff.

130. If you increase the wires as you propose, you would, in addition to the expenditure of £23,000, have to employ an additional staff? Yes.

131. What would be the cost of that additional staff? I have made that calculation in view of this alteration, and I estimate the additional cost at £3,000 a year.

E. C.
Cracknell,
Esq.
17 Jan., 1873.

132. That would be in addition to the capital which would be sunk? Yes.
133. But if you retained your present wires only, and put on an additional staff so as to work all night, what would be the cost under that arrangement? For thirty stations, being the most important, £4,500 per annum would be required for a night operator at each; if all the stations are opened day and night, the annual expenses would be about £12,000 above the present estimate.
134. And assuming that we had the additional wires which you have recommended, would you be in favour of a uniform rate of 1s. to all stations throughout the Colony? Yes.

MONDAY, 20 JANUARY, 1873.

Present:—

MR. RODD, | MR. STEWART,
MR. WEARNE.

JOHN FITZGERALD BURNS, Esq., IN THE CHAIR.

E. C. Cracknell, Esq., called in and further examined:—

E. C.
Cracknell,
Esq.
20 Jan., 1873.

135. *Chairman.*] You have stated that you consider the charges made by the British Australian Company to be too high? Yes.
136. What course would you recommend the Government to take to try and get these charges reduced? I think the only plan would be by negotiation; either by the Agent-General of the Colony waiting on the Directors of the Company, or by the Government sending Home some accredited agent to undertake the matter.
137. Do these charges appear to you to be excessive? Yes, I think they are; that is, according to the rate charged on other lines.
138. With regard to the telegrams of news received from England, by way of Adelaide:—Mr. Robertson has asked you a number of questions relative to some supposed favouritism on that line, by which some particular journal is allowed to obtain a message indirectly as well as another directly—in fact, that they get through 1,500 words for themselves, and another 1,500 words through Gordon & Gotch,—and you have given a reason why the *Herald's* message is always before that of the *Empire*;—now I want to know how it is that you know that the *Herald* message is prepared on board the branch steamer? I know it from my own personal knowledge. I came up on one occasion in the branch steamer from King George's Sound, in company with the gentleman who was employed to prepare the message, and I saw him actually engaged in getting ready his message against the arrival of the steamer at Adelaide.
139. And it is owing to this that the *Herald* is able to get an advantage over the *Empire*? Yes, because the *Empire's* message is prepared in Adelaide after the arrival of the steamer.
140. With regard to Gordon & Gotch—I understood, from the tone of Mr. Robertson's questions, that that honorable gentleman took exception to the practice by which private firms are allowed to receive telegrams as Press messages: now, is it not the case, within your own knowledge, that we have telegraphic firms established here for the special purpose of distributing news for publication? Yes, it is a regular business.
141. Gordon & Gotch are engaged in that particular business? Yes, and have been for years.
142. Has it been their habit to retransmit to the different newspapers in the interior, the telegraphic information which they themselves received? It has.
143. Can you see any reason why Gordon & Gotch should not receive telegrams as Press messages, the same as others do who are in the same line of business? There can be no possible reason why they should not. Any person who lays himself out for that business ought to be entitled to precisely the same privileges as are possessed by others in the same line of business.
144. Then if Greville & Co. were to receive a message and to supply it to the *Empire*, I suppose they would be entitled to do so, quite as much as Gordon & Gotch are entitled to supply the *Herald*? Yes, quite as much.
145. Or any other firm engaged in the telegraphic business would be equally at liberty to make terms with the *Empire*? Certainly.
146. I believe that most of the telegraphic business in the United States is done through telegraphic agencies? Yes, nearly the whole of it. There is also a Press Association there, for the collection and distribution of telegraphic news; and I believe there is something of the same kind in Great Britain.
147. An allusion has been made to the firm of Reuter & Co.—Do you think that that firm has any advantage in the transmission of messages, in so far as this Colony is concerned? None at all; it could not possibly have a chance of advantage here.
148. If the firm has no advantage here, has it any on any of the other lines between this and England? I know the firm has no such chance here, and I do not think they have any on the other lines.
149. Are you aware that a complaint has been made that a message lodged in the London office for the *Empire* was not received until after a message forwarded by Reuter & Co. to the *Herald*, although Reuter's message was lodged after that of the *Empire*? Yes, I know that such a statement was made in the House.
150. Can you tell how a thing of that kind is likely to arise? Yes; I believe it arises from the fact that, in the case of the *Herald's* message, the time was taken from its forwarding from Bombay, and the writer who prepared this for the Press makes it appear as if the time was from London; in fact, the time is given as from London, when it should have been from Bombay. That might account for the matter; at the same time, as I do not know the circumstances, I am not prepared to say that such is the case.
151. Do you know whether the *Herald* is in the habit of receiving their London message from Adelaide by the same line of wire as the *Empire* receives their message? It is only occasionally that the two messages come by the same wire. The *Herald* always receives its telegram through Melbourne, having some arrangement with the *Argus*, by which the message goes first to the *Argus* and then comes on to the *Herald*. On the other hand, the *Empire* message always comes by the direct line, except upon occasions when there may be an interruption on it, and then, of course, the message would have to come round by Melbourne. This has been the case on several occasions.

E. C.
Cracknell,
Esq.

20 Jan., 1873.

152. Which of these two lines is the speediest for the delivery of news? The direct route, of course.
153. And you say that the *Empire* messages are received by the direct route? Not all of them. Sometimes they are sent by one line, sometimes by the other. It all depends upon whether there is any interruption to the circuit on the direct line; in that event, the message would be sent round.
154. I believe that in one case a message for the *Empire* was detained on the line between Wentworth and Sydney, through the line being interrupted? Yes, and on one occasion a message of theirs was detained at Wentworth.
155. How did that happen? The message was received by the Adelaide operator at his end of the line on the boundary of the Colony, and was handed by him to our operator to retransmit on to Sydney; but some interruption occurred on the line between Wentworth and Sydney, and our operator was unable to get the message off until the following morning.
156. When messages are received by you, are they sent out from your office in the same order as that in which they have been received? Yes, as nearly as we can possibly do it. We have, of course, to regulate the rounds of the boys engaged in delivering, but they are sent out as nearly as possible in their order of receipt.
157. Mr. Robertson has suggested to have a public telegram published twice or three times a week, and this, according to your estimate, would entail an expenditure of something like £6,000 a year; but if the public are to be taxed for telegraphic purposes, would it not, in your opinion, be better to subsidize the service right through, so as to give the whole public the benefit of the expenditure? Yes; and I think I said as much in my previous evidence, in answer to Mr. Robertson's questions. You might subsidize the existing lines, or what would be far better, offer a subsidy for a new line altogether.
158. In what direction would you recommend a new line to go? From Normantown to Singapore, by way of Macassar.
159. Have you estimated what such a line would cost? Yes; somewhere about £800,000.
160. What Governments would join us in incurring so large an expenditure? Queensland would be only too ready to do it. But if the two Colonies joined, they would not have to bear the outlay of this large sum of money; all that would be required of them would be to guarantee an interest of 5 per cent. on the outlay for a certain number of years. If we had a second line, there would then be constant communication either by one line or the other. With one line you are never safe, and without a moment's warning you may find the communication cut off by some accident for six or eight months.
161. However, you are of opinion that it would be better to subsidize even the present lines, than to have a public message? I would certainly very strongly recommend, in the first place, to endeavour to reduce the present rates, either by competition or by subsidizing the present lines; but a second cable will be required.
162. Do you not think that the public are already sufficiently informed by the telegraphic news which appears in the public papers? I do not; I think the public are very badly informed of what is going on; judging from the telegrams which appear in the daily journals.
163. In what way do you think that the newspapers fail to give information? Taking the markets as an instance, we are sometimes a fortnight without receiving any intelligence of the English markets, or the prices of stocks, minerals, and produce.
164. You think that the information telegraphed to the Press is not sufficiently full to satisfy the public? Yes, I have heard very many complaints to that effect.
165. But do you not think that that is a complaint which will cure itself? Yes, after a time it may; when the agents who supply the news get well settled to their work, and begin to find out what it is that the Colony really requires.
166. Would it, however, be deemed advisable for the Government to interfere and go to the expense of a public telegram, merely because the newspaper agents do not understand their work? No, certainly not; I think the first thing is to cheapen the rates.
167. Suppose the Government to contract to supply these public telegrams in the way suggested, and that they get the Governments of the other Colonies to join them, would not that involve them in some difficulty, in the event of their agents supplying false information, and causing loss to individuals? Not if the plan was adopted I have already recommended, which is for the Government to declare at the outset that they take no responsibility in the matter, that they do not guarantee the accuracy of the information, and that the public must take it only for what it is worth.
168. But if you give information by which an individual may suffer severe pecuniary loss, would not the Government be held responsible for that loss? No, I do not think they would. We are not held responsible for what we publish now, arrivals, shipwrecks, weather; we say, in effect, that these are matters which have been reported to us, and after that we leave people interested to deal with the matter as they may think proper.
169. However, in preference to this public telegram, you had rather see a subsidy of the line? That or the construction of an additional line. I would very strongly urge upon the attention of the Committee the desirability of having an additional means of telegraphic communication with England, as I am perfectly convinced that is our weakest point, and that we shall suffer for it some day.
170. Then you would strongly recommend another line? Yes; one line is certainly not sufficient for such an important line of communication.
171. Is it your opinion that the receipts from the Telegraphic Department are on the increase? Yes, during the last year they have increased considerably.

WEDNESDAY, 29 JANUARY, 1873.

Present:—

MR. STEWART,
MR. WEARNE,MR. RODD,
MR. BURNS.

JOHN ROBERTSON, Esq., IN THE CHAIR.

E. C. Cracknell, Esq., called in and examined:—

E. C.
Cracknell,
Esq.
29 Jan., 1873.

172. *Mr. Burns.*] I want to know particularly what you think about the amalgamation of the post offices and the telegraph offices—are you of opinion that the amalgamation is to the advantage of the public? No, on the contrary, I find that it works very prejudicially to the interests of the Telegraphic Department.

173. Do you know how it was that the offices first came to be amalgamated? They were amalgamated on the score of economy more than anything else, but I fail to see that that object was effected.

174. Is it found more economical? I think not.

175. Has it been less so? I can hardly say. I don't think it has been more economical, but I should not like to say that it has been more expensive.

176. But speaking from your own experience, is it disadvantageous to the working of the offices? Yes, decidedly so.

177. I want you to state how the inconvenience arises? There are various causes; first, there is not sufficient control over the officers; when engaged with post office business, the officer is not available for telegraphic business. In many cases this causes vexatious delay in the transmission of messages, and that works to the disadvantage of the public.

178. How do you mean there is not sufficient control? If, for instance, we want to send an officer on line duty, he is not available for that purpose, because the post office cannot be left. It very often happens that a line is interrupted a short distance from an office, and if the officer could go out he could effect the repairs in a very short time; but he cannot leave the post office, and a stranger has to be employed if one can be got.

179. You don't object to the Telegraphic Department being placed under the control of the Postmaster General, but you object to the amalgamation of the offices in the country districts? Yes. There is no objection to the control of the Post Office Department—not the slightest—but the great objection is to the two offices being amalgamated in the country districts.

180. Is it not a fact that in a good many country districts the operators are only partially employed? Yes, in some offices that is the case.

181. Their whole time is not occupied? No, but they must be in attendance to perform their telegraphic duties.

182. And when you want them they are engaged in the post office? Yes, and the telegraph has to wait. When the mails are being made up in these places, it is often the case that the entire circuit is thrown out for an hour, or perhaps more.

183. Would the expense be much increased by the separation of these offices? No, I think not. I don't see that the additional expense would be very great, as the same number of men have to be employed as it is to do the work properly.

184. I want to know what is the practice in England with regard to the telegraphs and post offices—are they amalgamated there? Partially. The Telegraph there is at present under the control of Mr. Scudamore, who was one of the Under Secretaries of the Post Office. The small towns are worked under the sub-office system—that is, they have separate wires for themselves, and have sub-circuits which have nothing to do with the main circuits. They found the old system so prejudicial to the main lines that they had to establish separate circuits.

185. Have you been called upon to report on the practice of amalgamating the offices here? Yes, I submitted a report on the subject not long since.

186. Is your report against the practice? Yes, it is against it as far as these Colonies are concerned, and I gave my reasons in the report for coming to such a conclusion.

187. Can you give us a copy of that report? Yes, I think so.

188. Have you got it with you now? Yes. I hand it in if the Committee wishes it. (*See Appendix A 2.*)

189. And this is your report on the utility or advantage of combining the two offices in the country districts? Yes, it is.

190. We have been told that there has been no increase in the revenue from telegraphs for several years up to the year 1872—how does that arise? I think it arises from the general depression since the panic of 1866.

191. You think there has been a general depression of business since 1866, and that that has prevented any increase whatever? Yes, I think so, up to 1871.

192. You would think then that the cause of the increase in 1872 has been owing to the large mining developments? I think that the excitement in reference to mining pursuits, and the general progress of the Colony, have caused the increase. At some stations the receipts have increased from £17 a month to £170 per month.

193. When did this increase commence? It commenced early in the year.

194. Did it commence at once, with the commencement of the year? I don't think January shows much increase, but it commenced early in the year.

195. Departing from that matter—can you tell us anything about the comparative cost of the lines in the neighbouring Colonies and the lines in this Colony—are we paying more than the other Colonies are paying? The capital invested would afford the best criterion. The capital invested in New South Wales at the end of the year was £212,000; that would give a rate of £34 14s. per mile. In Victoria the capital invested is £330,000, giving a rate of £82 10s. per mile.

196. South Australia? I have not been able to learn.

197. Queensland? Nor in the case of Queensland either.

198. Then, comparing New South Wales with Victoria, what is the number of miles of wire in operation in each Colony? In New South Wales, 6,117 miles of wire; Victoria has 4,000 miles; Queensland has 3,368 miles; and South Australia, 3,691 miles.

E. C.
Cracknell,
Esq.
29 Jan., 1873.

199. Have you sufficient knowledge of the Queensland lines, without stating absolute facts, to say whether those lines are carried out cheaper than ours? No, they are not.
200. Nor in South Australia? No, they are not. We have cheaper lines and more of them, and they are well and substantially built lines; in fact, quite as much so as the lines in the other Colonies. But there is one thing to be said,—we are favoured with timber in this Colony as a rule.
201. What have they in New Zealand? I have little knowledge of the New Zealand lines; we are not in direct communication with them.
202. I think I asked this question before, but I see it here again—I think I inquired whether or not you are aware that certain telegraph-masters are employed as newspaper agents? No, I am not aware of it.
203. Is it permitted? Certainly not.
204. Such a thing would not be allowed? No, it would be stopped at once; it would be contrary to the rules of the department.
205. During 1872 you say there was an increase of business, and therefore an increase of work—Can you give some idea of the work done by the operators? During 1872 they were overworked at most of the mining stations—at Inverell, Glen Innes, Tenterfield, Hill End, and Tambaroora. In fact, in some places the staff have been worked fourteen or sixteen hours a day, including Sundays.
206. Do they receive any additional pay? Yes, they are allowed 2s. per hour for overtime; but that scarcely pays a man for injuring his health.
207. From what time does their overtime commence? From 6 o'clock at night.
208. And they are allowed 2s. per hour? Yes.
209. And you think that is insufficient, considering the unreasonable hours they are kept up to? I think so, because many of them are broken down in health, owing to the continual pressure of business.
210. Did you apply for aid? Yes, I did.
211. What was the answer? That the matter should be taken into consideration when the Estimates were passed, and that has been done; we shall be able to carry on now.
212. But no assistance was given then? Yes, as far as was available without money being voted. The Ministry are anxious to carry on the department properly.
213. Were additional people employed? No funds were available.
214. Would you be good enough now to depart from that matter, and offer (if you can) to the Committee any suggestion, or any recommendation you can make, to bring about the use of the Telegraph by the people, by which the Telegraph can be made more popular and more extensively used? Yes, I think giving additional wires, and of course appointing additional operators to work them, would meet the requirements; and then we could make a reduction in the charges—which must come sooner or later.
215. Then if you had additional wires and additional assistance at the more important stations, you would have such an increased amount of work as would enable you to considerably decrease the charges without loss to the Revenue? I think so. We may require additional accommodation in the chief office, which is quite unsuitable at present.
216. Is there not adequate provision made in the new Post Office? Yes, it will be adequate for our present requirements, but I anticipate such an increase of business that the accommodation there will in a short time be quite inadequate.
217. You think that in a few years the business will increase so much that you will have to ask for another telegraphic office? I think so.
218. Assuming you had more wires, more assistants, and the Government lent itself to a greater amount of telegraphing, with an increased staff, then you would require a sufficient office in the city to carry out these improvements? Yes, it must come to that in time.
219. I don't know whether I have asked you the question before, but I wish to know how it happens that when you send telegrams after the usual hour for receiving them, you charge 50 per cent. more for them: if you can send the messages, is there any necessity for this tremendous increase? The system has been in force for many years, and it was done to keep the business as much as possible in the day-time, because a night business would not pay for a double staff; it does not pay to keep a staff on all night.
220. If there were enough business to allow of your having a division of hours, you would be able to send the night telegrams much cheaper? I don't think the night business would pay even then for a double staff. The intercolonial lines might pay, because they are long lines, connecting important centres of population.
221. But do you know that in all instances where messages have to be sent to Newcastle, or the Hunter, the steamboat carries them almost as soon as the telegraph, unless you allow night business? That will not be the case now, because there is a new line, and you can exchange messages with Newcastle now in five minutes. Of course, if the night business would pay, I would recommend that the 50 per cent. charge should be taken off.
222. But if the staff were increased? The additional staff, if appointed, would be in Sydney, and you would require an additional clerk at the country stations only.
223. Would that greatly increase the cost? It would be a large charge when you came to deal with all places throughout the Colony.
224. What would the cost amount to? Newcastle alone would cost about £150 per year, and then you would require a messenger besides.
225. And what would you pay him? About £50 per year.
226. But you get paid for carriage of messages? No, we deliver messages free within a radius of a mile; we make no extra charge for messages delivered within a mile of the office.
227. Going away again to another branch of this matter, I would like to have your opinion as to the communication with the Mother Country by cable: what is your view with regard to the necessity for laying another cable from Normantown to Singapore—I don't fix any particular place, but the most convenient place? My opinion is that we should arrange for a cable at once.
228. What would be the cost? The cost of a cable to Singapore would be about £800,000.
229. I think you have already given evidence on this point? Yes, I have already made some statements relative to this matter.
230. With regard to this cable; you think it is required—for what reasons? It would not only produce competition, and thus lead to the reduction of the rates, but it would give us increased facilities of communication with the rest of the world.

E. C.
Cracknell,
Esq.
29 Jan., 1873.

231. I am sure you must have given considerable thought to the question of the overland line from Port Darwin to Adelaide. It seems to me, when once you leave the Roper, you may have a line to Carpentaria—the real difficulty is at the Roper, because there you enter Central Australia? There are not only difficulties there, but there are also difficulties between the Roper and Port Darwin, for there they catch the full force of the north-west monsoon, and there are severe floods too, and when the country is under water the lines cannot be repaired; that, I fear, will be the case soon, but the floods are rather late this year.

232. Are you aware of an intention to carry out a line from Normantown to the head of the practical navigation, contemplating that a wire might be carried with comparative safety to near that point on the Roper, and that we might continue the line by way of Queensland, leaving one line to go across, through Central Australia to Adelaide, and the other line to come by way of the Roper, and thence join the Queensland line—that was proposed, was it not? Yes, by the last Government.

233. Tell us what you think would be the cost of a line from the head of the navigation on the Roper, continued down and crossing the soft parts of the gulf, going up to Normantown and continuing the system—what would be the cost of that cable? That cable would cost about £120,000; but an extra cable will be preferable.

234. As against £800,000 the other way? Yes.

235. Then by that means we should have two lines to rely upon in Australia, and the only portion of the line that would be single would be the portion between Port Darwin and the Roper? The land line would be single there, but still there would be only a single cable from Port Darwin to Java; and it would cost £120,000 for a cable to cross the gulf.

236. Then against that scheme you think that while it might do away with the difficulties of crossing Central Australia, it would not do away with the difficulty of having only one cable; and you think there are difficulties in the overland line between the Roper and Port Darwin? Yes, there are dangers there.

237. There are two kinds of dangers—there is great danger from monsoons and also from floods? Yes.

238. And probably from the natives also? Yes, there is danger from the blacks, and from the droughts also in dry weather.

239. How would these difficulties be obviated by having a cable direct to Singapore at a cost of £800,000? My opinion is that, by carrying the line to the Roper, you would not provide that competition which is necessary to reduce the rates; but by providing another cable throughout, you would gain that object.

240. But have not these people, who are supposed to have power over the Australian cable, power beyond Singapore? Not if the system is completed as I believe it will be—that is, if the line is brought down from Calcutta to Singapore, as proposed. That will give us direct communication with Europe, without going over these people's line at all, or being under any obligation to them.

241. Would the cost of messages be decreased or increased? I believe it would decrease the cost.

242. And enable this Singapore cable to live? It would be a governmental cable, guaranteed by the Colonies interested.

243. From all the Colonies? Yes, with the exception of South Australia; you could not expect South Australia to join. It would be between New South Wales and Queensland, and perhaps Victoria, if they would come in; they would of course be invited to join.

244. These Colonies would have then to pay the interest on £800,000? Yes.

245. What would that amount to? That would be about £40,000 a year, divided among the Colonies.

246. Then you think that is the true solution of the difficulty, if all the Colonies will do that? I think that is the best way of bringing about an entire change of tariff.

247. Have any promises been made that the Governments of Australia will not go into a competitive line? No, there was no concession made whatever; the cable was landed without any concession being made.

248. Did not some of the Colonies think that they were jockeyed in that matter? I have no doubt they were, for it seems that Captain Noel Osborn suddenly decided to stay in Adelaide and bind the bargain there.

249. And the Queensland people were wroth about the matter, and the New South Wales people tried to pacify the parties and come to an adjustment? Yes, that was attempted to be brought about by the late Government.

250. Then if New South Wales, Victoria, and Queensland desire to get rid of this monopoly of which so many people complain, they can do so by guaranteeing £40,000 a year for a cable direct to Singapore, and going away thence to join the proposed Calcutta line? Yes.

251. And to have nothing whatever to do with this other line at all? No.

252. Do both lines go to Calcutta? No, the other line goes to Madras.

253. But there is communication between the two places? Oh yes. The new line would cut out the present line altogether.

254. Would it be more speedy? It is more direct; but there would be more land line, and there would be about the same speed. Messages would be sent as speedily one way as the other.

255. I want you now to tell us what condition the lines throughout the Colony are in? The lines, with few exceptions, are in a very good condition, the poles are in good order, the insulators are good, and the instruments are the very best. The instruments are the same as those ordered by the Post Office Telegraph Department in Great Britain; they are from the same firm.

256. Has proper precaution been taken to secure the durability of the poles? Yes, they are tarred and charred. There is one thing I should like, and that is to have the poles seasoned; but of course that cannot be done without increasing the cost of the lines.

257. I remember that we were carrying out certain telegraph lines when I was first in office, and I observe lately that the poles have been pulled down and others put up—Is not that a short time for these poles to last? No; that is fifteen years.

258. I have observed that the poles on the South Head line have been renewed, and I believe those on the western line also? Yes, in the case of the western line the poles have been replaced by iron ones, and placed along the railway line; they have not been removed on account of their decay.

259. Do you put the poles in the fire? Oh yes, they are always charred to get rid of the sap.

260. I was up the country a short time ago, and saw the pulling down of a fence that was put up fifty years ago, and that fence was as sound as a bell? Yes, but then it was made of the best split timber, and these poles are merely saplings.

E. C.
Cracknell,
Esq.

29 Jan., 1873.

261. But the posts of this fence were not charred? But they were of split timber, which the telegraph-poles are not.

262. Will they not stand for a considerable time if you do not char them? No, my experience is that if you leave the sap in, a fermentation takes place, and causes decay; but if you drive the sap out you prevent that fermentation to a certain extent, though you cannot prevent it altogether. That is the object of charring the poles.

263. You are of opinion that our telegraph works have been carried on judiciously, having care for the public interest from the first? I think, from the time the poles have stood, the timber has been well selected. The life of a Baltic pole in England is only seven or eight years.

264. But our timber is of a different kind? No doubt.

265. It should last forty or fifty years? Not saplings.

266. *Mr. Rodd.*] Can you say whether there are any offices in this Colony not paying interest on the outlay? Yes, several. Many of them are kept up for line-repairing purposes; for instance, that at Kyamba is kept up more for maintenance than for anything else.

267. Are you aware that females are employed in the telegraph offices in the Old Country? Yes, very largely.

268. Have any facilities for the employment of females been given here? There is no room in the present building for the purpose, but in the new building there will be rooms for teaching both men and women. I propose to recommend to the Government that the suburban lines—those between Sydney and the suburbs—be worked entirely by females.

269. You are in favour then of employing females? Yes, where you can do so judiciously; but it is not right to mix up males and females together.

270. How many suburban offices are there? Three at present; but there will be one at every principal suburb when the Estimates are passed.

271. Is there an office to the south of the city? Yes, there is one at Redfern.

272. Can you say whether messages are ever detained through the insufficiency of the staff at the head office in Sydney? Yes, sometimes unavoidably detained. Sometimes an immense number of messages come in at the same time, and the boys are all out delivering them, and thus delays are caused. They are not frequent, but they do occur sometimes. At other times, when the lines are all sending messages, you will find the messengers all sitting in the room doing nothing.

273. Can you say whether any European or American Government give any subsidy to the Telegraph, for the purpose of giving gratuitous information to the public? I don't think it is done in America or Europe,—not by paying a direct subsidy. In America the lines all belong to Companies. These Colonies are so differently situated that the case is totally different.

274. I think I understood you to say that the amalgamation of the post offices and telegraph offices was not a success? I don't think it has been a success in any part of the world.

275. Are all the country offices amalgamated with us? No, not all; only a few.

276. Were there special reasons for the amalgamations that did take place? I think not. As vacancies occurred it was tried as an experiment to see whether any saving could be effected.

277. Do you know what buildings were erected with the post office and the telegraph office all in one? Yes; they built a room for the telegraph office,—that's all.

278. The offices are not amalgamated in Bathurst, Goulburn, and those places? No.

279. You don't think they should be? I think not; I think it would be prejudicial to the service.

280. Do you know whether any mining district has lately petitioned the Government for a telegraph line to be given them, offering to guarantee the outlay? Yes, I believe the inhabitants of Solferino wanted a line to be constructed on that principle.

281. Are you aware of anything of the kind in the Western District? No; I believe the Western District is well supplied with lines except Cowra, and that is not an important place.

282. Are you aware that Trunkey Creek has asked for a line? Yes, some time ago, but not lately. When I say lately, I mean not within the last few weeks.

283. *Mr. Burns.*] Speaking about the returns from telegraph lines in the Colonies, do you know what the return has been in Victoria and the other Colonies in proportion to the capital? At what time?

284. Say in 1871? In Victoria they have always made a loss, but in this Colony they have always made a surplus.

285. *Chairman.*] Including the interest? No, not including the interest. This year we have a surplus of about £13,000.

286. *Mr. Burns.*] The income has always exceeded the expenditure? Yes.

287. What is the interest returned on the capital invested? It is hard to say. I can tell you what the receipts were. In 1871 the receipts were £2,000 over the expenditure, and that gives about 1 per cent. on the capital invested.

288. With reference to the non-increase of the revenue up to 1871, it appears that we have 6,000 miles of lines, and that Victoria has only 4,000 miles. Is not the scattered population here one reason for not getting such good returns here as in Victoria? The receipts here are better than in Victoria. I think it is more a question of population than length of line. In Victoria they have a larger population and more centred, but still we have done better than Victoria.

289. Have you not had many extensions to districts with a sparse population, without any large immediate return? Yes.

290. Would that account for the revenue not having increased in 1871? Yes, that would to some extent.

291. Has it not been the policy of the Government to extend telegraph lines without much reference to the immediate returns? Yes, and that is a principle I have always advocated,—that we should give the public as much accommodation as possible, so long as the line was not a burden on the public.

292. That is one reason why our lines did not show a large return for the years preceding 1872? Yes, that was one reason for there being no large increase.

293. Last year the revenue was far in excess of the expenditure? Yes, about £15,000, without the intercolonial balances, which will probably bring it to £2,000 more.

294. How much interest would that be on the capital invested? I think somewhere about seven and a half per cent.

295. And this policy of extension is still being pursued by the Government? Yes.

E. C.
Cracknell,
Esq.
29 Jan., 1873.

296. I believe you have always advocated the extension of a line to all parts of the Colony where you saw that the expense would not exceed the income? Yes, I think that appears in some of my reports.
297. With regard to the 50 per cent. on late messages: after what hour is this 50 per cent. charged? After 6 o'clock at night.
298. On Press messages? No, not on Press messages.
299. The object is to make people send their messages in the day-time? Yes, when there is a sufficient staff to transmit them.
300. I believe the lines all through have been constructed as substantially here as anywhere? Yes, that may be seen from the time they have lasted, and the small expenditure for repairs.

WEDNESDAY, 5 FEBRUARY, 1873.

Present:—

MR. WEARNE,

MR. BURNS.

MR. RODD,

JOHN ROBERTSON, Esq., IN THE CHAIR.

Samuel Bennett, Esq., called in and examined:—

S. Bennett,
Esq.
5 Feb., 1873.

301. *Chairman.*] Your name is Samuel Bennett? Yes.
302. You are the proprietor of the *Empire* and *Evening News* newspapers, and of the *Town and Country Journal*? Yes.
303. I think you have been for a long time connected with the Press of the Colony? Yes, for more than thirty years.
304. And therefore, you must have been cognizant of the working of our telegraphic system in the Colony from the first? Yes, I have seen the working of it from the first.
305. The line which this Committee has taken up to the present time, with regard to the witnesses, has been to take up the different branches of the matter referred to them by the Assembly, and we first wish you to deal with the question of the telegraphic communication with England. Will you be good enough to say what is the minimum cost of a message between New South Wales and England? The cost is £9 14s. for a single word, or for any number of words up to twenty, including the addresses of the sender and receiver.
306. There is no distinction made between the Press and the public? No distinction. That fee is payable in London.
307. We have certain evidence with regard to this matter, as to this amount of £9 14s. being divided among several Companies? Yes, this £9 14s. is divided in these proportions:—Sydney to Port Darwin, 24s. (This is generally correct—I quote from what has been published in Sydney by the Postmaster General some months since, when it was said the cable was near completion, as to how these sums were divided.)
308. *Mr. Burns.*] How long ago was that? Some months since.
309. *Chairman.*] How was it divided? I will state generally:—Sydney to Port Darwin, 3,000 miles, 24s. I will then go from Madras to London, omitting the cables between Australia and Madras, because Madras is the great centre; from Madras to London, 7,500 miles, £2 4s., that is £3 8s. for these two portions of the line; and the balance of the £9 14s. goes to the line from Port Darwin to Madras.
310. Have you given any consideration to the question as to whether or not one of these lines has the lion's share of the money? We will come to that. You see that the two series of lines, amounting to 10,500 miles, cost only £3 8s.; while on the intermediate portion of the line, between Port Darwin and Madras, some 3,000 miles, including divergencies, and including the cables of the British and Australian Company, the charge is upwards of £6. I am not certain as to a shilling or so. The Port Darwin section is somewhere about 1,000 miles, and the charge there is between £3 and £4.
311. How does it happen that the excessive charge is upon a small portion of the line—have you formed any opinion on that point? Yes, I have formed opinions from facts which came to my knowledge when the overland line from Port Darwin was approaching completion. It was then proposed to me by the Associated Press, through a gentleman who is employed by Mr. Fairfax, to join this Associated Press, and one of the statements made to induce me to do so was, that Reuter's Company was so influential that no one else could hope to compete with him, and I afterwards learnt that the Associated Press had paid Reuter £4,000 a year for his influence.
312. What was the £4,000 for? This £4,000 a year was paid, as I suppose, so that the tariff of telegraph rates might be put at so high a figure to the general public that the line would be a practical monopoly to those who were able to command it. Their paying £4,000 a year to the Company (which is the interest of £100,000 at 4 per cent.) would enable the Company to meet any loss to be caused by the raising of the rates to a prohibitory sum.
313. Then you think it was the influence of this great news firm which caused the high rates on this portion of the European line? Yes, that is my opinion. The charges are higher than were ever heard of before in any part of the World.
314. Would you be good enough to say whether you have ever given any consideration to the question as to whether the whole of the rates might not be reduced, without greatly interfering with the income? I believe that if the rates were reduced to one quarter of their present amount, the line would pay. As it is, the cost of sending messages is too great. I believe I am the only newspaper proprietor in the Colony that has ever received a cable message, owing to the prohibitory rate. I believe if the rates were reduced to one quarter, the receipts of the line would be much greater.
315. Have you given consideration to the question as to whether or not the public is safe in having a system of telegraphy at such high charges that only a few people can use it—might this not lead to great advantages being taken by wealthy people? My opinion is, that as the thing is at present, with these enormous rates, it is injurious to the public rather than otherwise, because it enables people to interfere with market prices. This has taken place with regard to copper, and may take place in many ways.

316. In what way, with regard to copper? Telegrams were published in Sydney, stating that the price of copper in London was much lower than it really was. This had the effect of lowering the price of Peak Downs shares. In one case copper was represented as worth only £76, instead of some much higher sum, and Peak Downs shares came down from £9 to £4. That represented the distinction of capital to the extent of half a million of money.

S. Bennett,
Esq.
5 Feb., 1873.

317. Did the shares rise again? They did to some extent; but the correction of the mistake never was made through the same source which published it.

318. Assuming that we cannot obtain a reduction of these charges, say, for example, down to one-fourth of the present rate, would there be any very great difficulty in the way of the Australian Colonies uniting for the purpose of subsidizing the line and supply telegraphic information of a kind relating to matters of public importance to the whole of the Colonies—subsidizing these lines by a sum of money, and obtaining information that may be posted up at every telegraph station throughout the Colony? I don't think there would be. Do you mean a message free to the public?

319. Yes? Yes, there are two ways that it might be done; by reducing the prices so as to allow competition to take place, or posting a free message.

320. Either of these modes is practicable? Yes. I don't think the objections of some people as to the difficulty of getting the proper market prices are sound, for you can get the prices in London from standard authorities; but I think public opinion would be in favour of subsidizing the line so as to reduce the price of all messages.

321. Would you give the Press any special consideration? All the world over the Press messages are one-half or one-third lower than any others in price; and I think they should be, because they give the information to the public, while private messages are only operated upon for the personal advantage of the receiver.

322. Assuming now that the various Governments of Australia determined to take such a course as I have mentioned, and give the Press foreign news of importance, all news affecting largely the important interests of the Colonies—what number of words do you suppose would be required daily, or weekly? I think about 250 or 300 words per day would do, but that would depend on whether you used a code which substitutes one word for many words. I think the best way would be to have the words in full. A Press message of 20 words would be equal to a full message of perhaps 100 words. I think 300 words would answer all purposes. I think an average of 250 words would be quite as much as would be required.

323. Will you be good enough to tell us what are your views with regard to telegraphic messages throughout the Colony, or the Colonies—we have heard of complaints of favouritism, for example, with regard to the Press intercolonial messages? Yes, I confine myself to the Press messages, and I say that the Telegraph Department here has been conducted as a branch of the *Sydney Morning Herald* Office.

324. How is that? On the arrival of the English mail at Adelaide, Press messages, by the regulations which are agreed on by the different Colonies, are to have precedence—they are supposed to have, and only 1,500 words are allowed to be sent to any one newspaper as a single message. This rule has been constantly violated by the department here. The *Sydney Morning Herald* has been allowed to have from 5,000 to 7,000 words, and to keep possession of the line for hours. My agent at Adelaide has not been allowed to send on his message, while this message to the *Herald* has been sent; and while the *Herald* supplement is being published. Never until that supplement is sold have I been allowed to have a word, and the other lines are used for private messages. I have never got a message through until after the *Herald* supplement is issued and sold. I have kept an agent in Adelaide for a number of years, and he is there to put in a message the moment the mail arrives, and at no time has his message ever been allowed to come on within less than seven hours after the arrival of the mail.

325. *Mr. Wearne.*] Was it delayed here? I cannot say; I can only deal with the people to whom I pay the money.

326. *Chairman.*] How can the *Herald* get more than the 1,500 words? First, 1,500 words are sent to the *Herald*, then 1,500 words to Gordon & Gotch, then 1,500 to some one else, and so on; and then it goes on keeping the lines during the whole time this supplement is being set up and printed.

327. Does the *Herald* get the whole 5,000 to 7,000 words forming one message? Yes.

328. Are these separate telegrams all parts of one message? Yes.

329. Then, in fact, the rule as to the 1,500 words is simply nugatory in the case of a firm choosing to use the names of several persons? Quite so.

330. How does all this happen—is your message and the *Herald* message put into the Adelaide office at the same time? Within two minutes of each other.

331. How are you shut out then? Because the *Herald's* message is sent on complete—the first 1,500 to the *Herald*, the next to Gordon & Gotch, and the next to somebody else, until the whole message is complete.

332. Then these people being on, you are left out in the cold—is that so? Yes, and I am refused the use of the other line.

333. We are told that the other line is used for local purposes, and that the Government of South Australia would object to its being used as a through line; but you say that private messages are sent by it, and that would seem to override the statement as to its being a local line merely? My message is kept back until the *Herald's* message and the private messages are through, and so the regulation is broken. I cannot judge about the other line, but the *Herald's* message comes through. They can only publish part of it in a second edition, but the line is kept working to bring through their message, which they cannot publish, and to prevent me getting mine. I should have paid many thousands of pounds more to the Telegraph Department if I could have got the news through; but, as it is, the news when it comes is of no use to me.

334. I believe the public has been informed that you have taken the *Herald's* messages, but the fact is you have been prevented from getting your own messages by the Telegraph Department and the practice of the *Herald*, and your own messages therefore were rendered worthless? I have always had a message of my own, but I should have had much longer messages if I could get them in time. On the last time I remonstrated with Mr. Cracknell; I said "There is to be another line about to be completed," and I said "Surely I can have my message by that?" He said "If there were a dozen lines, you should not have a word until Mr. Fairfax gets his message."

335. *Mr. Wearne.*] Mr. Cracknell said that? He said "If there were a dozen lines, you shall not have a word until Mr. Fairfax gets his message." Mr. Cracknell has been the servant of Mr. Fairfax, and nothing else—

- S. Bennett, Esq.
5 Feb., 1873.
- else—a very good servant too. If you ask me how the department is conducted in other respects, that is, as a branch of the *Herald* Office, I say it has been conducted well, but that Mr. Cracknell has always acted as the servant of Mr. Fairfax.
336. *Mr. Wearne.*] Did he say that publicly? He said it in my office, and he has said many similar things. Others in his office have also said insulting things to my people. One person said that Mr. Fairfax said he would not have his message at all unless it was first.
337. Who said that? It was an answer given by Mr. Walker to my clerk.
338. Are you sure Mr. Cracknell said what you have repeated? Yes.
339. Was anybody present? There were some persons in the office. It is several years ago.
340. How many years ago? Towards the latter part of the year when the war between France and Austria broke out. When the war between France and Prussia broke out there was great anxiety and alarm prevailing in Sydney. On the second arrival of the mail at Adelaide, Mr. Cowper (I have this from Mr. Cowper himself) wrote to Mr. Cracknell and said that he wished the Government messages to have precedence on the arrival of the mail news—desired, in fact, that no news should come through until the Government message came through. Mr. Cracknell wrote back and said that he would be perfectly willing that should be the case if Mr. Fairfax would permit it.
341. *Chairman.*] What date is that? About October, 1870; about September or October I know I took some steps about the matter, but Mr. Cowper went to England, and the thing fell through, or otherwise some serious steps would have been taken. I suppose these letters are now in the Colonial Secretary's Office. I have a good deal more to say with regard to Mr. Cracknell.
342. Well go on? Many years ago there was an arrangement made between Mr. Fairfax and myself to receive a message jointly. The agent in South Australia was to write the message and send it on, and it was to amount to the first 2,000 words after the arrival of the mail. Mr. Cracknell was informed by official letter from the Minister for Works of this, and he was to deliver duplicate copies of this message on the arrival of the mail to each of us; and if either of us desired a longer message that was a separate matter. The duplicate copies of the first 2,000 words were to be delivered to each of us. Mr. Holroyd was Minister for Works at that time, and he wrote a letter of instructions, and Mr. Cracknell acted on those instructions for three months. At the end of that time I got a telegram from my agent, Mr. Sinett, in South Australia, saying "Look out—there is treachery afoot." I went down to the office, and Mr. Cracknell refused to give me the copy of the message. Now, the wording of the agreement was that we were each to have duplicate copies of the first message that came through—the first 2,000 words. Mr. Cracknell refused to give me this. I could not tell what was up; but on the arrival of the mail Mr. Sinett told me that Mr. Fairfax had made an arrangement with the Melbourne *Argus* to charter the fastest steamer in the Colonies, board the mail steamer, and bring up this message before our message could come to hand; and this was the message refused to me by Mr. Cracknell, on Mr. Fairfax's order. Mr. Cracknell had no right to do that. If I had gone to him to give such an order, he would not have listened to me for a moment, and he had no right to do it for Mr. Fairfax.
343. *Mr. Rodd.*] How long did that continue? I stopped the arrangement then, for of course the message was of no use to me. The duplicate message ceased to be of any value, and of course I would not pay for a useless thing.
344. How long ago was this? It was in 1863 or 1864, when Mr. Holroyd was Minister for Works. It is quite as long ago as that. There are other facts too in relation to Mr. Cracknell's department which I can mention—the difficulty of getting my messages—the absence of anything like civility or attention. The incivility I experienced was so great that I was driven to employ an agent instead of having my messages direct from the Telegraph Office. I was obliged to employ an agent, and I paid him high sums—between £60 and £70 a month. When I went up to the Telegraph Office myself I could never get any civility. I was insulted whenever I went into the place, and that drove me to employ Messrs. Greville & Bird. I did so partly because there had been quarrels between Mr. Hanson, who was then my partner, and Mr. Cracknell, and we thought to get over the matter peaceably. On remonstrating about the matter when Mr. Byrnes was Minister, Mr. Byrnes referred the matter to Mr. Cracknell for his report, and Mr. Cracknell said he could not recognize my right to question his conduct, because I did not pay the Telegraph Office anything. So that we were actually driven by incivility and annoyance to pay more money than we should have paid, and then we were met by such a rebuff as that.
345. *Chairman.*] Before going into other matters, you had better finish the case of Mr. Cracknell? I have nothing more to state, unless in answer to questions.
346. *Mr. Wearne.*] How are you treated now? I have no complaint to make. Since this Committee was asked for there has been a change for the better.
347. Before the Committee was moved for how were you treated? Nothing could have been worse.
348. Up to within the last three months? Yes, my messages were kept back in quite the same way. I have never had a message from Adelaide on arrival of the mail within seven hours of the *Herald* for the last ten years, until this Committee was moved for.
349. How did you receive your message the last mail? There has been a great improvement. I have received my messages quicker the last twice, and I should always have had long messages through but for the treatment of the department. I now get longer messages than I ever did, because I can use them. The last message I had through was, as you may have seen in the *Empire*, three or four columns long, and I should always have messages of that length if I could get them through.
350. Do you now receive your messages by the same wire as the *Herald*? I cannot say that.
351. Do they receive their whole message first? I don't think they do.
352. If you receive your message now, and have no complaint to make, do you get it by some other line than theirs? I think that the alarm of this Committee has caused Mr. Cracknell to restrict them to the proper amount of 1,500 words, and so I am enabled to get my message—that is my opinion. I don't believe the second line has been used.
353. Might it not be that the *Herald* having now a daily message, do not require a long monthly message? It may be so; but knowing that Mr. Walker said Mr. Fairfax would not have his message unless he could get it before me, I think that when Mr. Cracknell, under fear of this Committee, reduced the message to the proper limit of 1,500 words, and then gave me my message, Mr. Fairfax refused to have his message at all.

S. Bennett,
Esq.

Feb., 1873.

354. *Mr. Rodd.*] Is not the public interest in the arrival of the mail less now than it used to be? I do not think so. Anybody looking at the telegraphic news by the mail will see that it contains items of equal importance to any we have had before, except in war time. I was informed that the *Melbourne Argus* sent through to Sydney and had my message sent back to them. I shall have messages sent through every month, and long messages too, if I can get them fairly.
355. *Chairman.*] It has been alleged that messages do not come here from England in the order in which they are entered at the station in England? Yes, and here is a list showing the delays that have taken place. [See Appendix B1.] In several instances messages have been delayed for twenty-four or forty-eight hours after subsequent messages have been published.
356. What is the £4,000 a year paid for? The opinion I have come to is that this £4,000 a year is not paid for the transmission of messages, but for the influence Reuter exercises on the Company; and as it was threatened that unless I joined the Associated Press I could not have messages through of a satisfactory character, it seems to me tolerably conclusive that this money is paid to Reuter to get for the Associated Press that amount of favour which is denied to me and to the general public.
357. *Mr. Wearne.*] Who pays this £4,000? The *Sydney Morning Herald* and the *Melbourne Argus*—they are the Associated Press.
358. This does not pay for the messages? Oh no.
359. Do they pay the same price for their messages as you do? I do not know about that.
360. *Mr. Burns.*] But does not Reuter act as agent? No; he has a great office, and all he does is to send his message to the World, and the agent of the *Argus* has to underscore any item he wants to send through from Madras. He has no right to insert anything in the message.
361. Then this £4,000 is paid to Reuter for acting as agent? No, he does not act as agent.
362. Is it not stated that Reuter is agent for the Associated Press? He is not agent for them—how can it be said that he is agent?
363. He sells his services to the Associated Press? Yes, I suppose so; they pay him £4,000 a year for his influence to control this Company.
364. Is nothing paid then for the information supplied? No, the information is what comes to the World.
365. How can Reuter control the wires between Port Darwin and Madras? I don't pretend to know the ins and outs of the case, but it was told me that Reuter had such control over this line that nobody could compete with him.
366. Is there any arrangement that some persons should have messages cheaper? I do not know, but I will read a letter which will throw some light on the matter. My agent in London sent this letter, which concludes as follows:—"I shall be glad to learn if your Company is open to make arrangements with other than the alleged leading journals of the Colony or Colonies, and regret that I was so uninformed that I was not aware until to-day that the Australian Cable Agency would become exclusively controlled by the action of your Company." In answer to this, Mr. Griffiths says—"I believe it to be open to any newspaper in the Colonies to receive the telegrams upon contributing to the expenses of the service." That is not the case. I have put these facts in a memorial addressed to the Intercolonial Conference, and I should like to put a copy of this memorial in as evidence to this Committee. (See Appendix B 2.)
367. Do you know of any means of having these charges reduced? It seems to me that is a proper thing for the Intercolonial Conference to deal with—that one Colony can not do much by itself—and I believe some steps may be taken.
368. Do you know of any means by which we could get access to the persons who control the wires, and by remonstrating with them get the charges reduced? I believe Mr. Pender is the Secretary and Manager of the Company.*
369. It has been stated by Mr. Cracknell that the messages which have arrived by the mail steamer for the *Empire* have been always an hour behind the messages for the *Herald*? It is untrue.
370. If Mr. Cracknell has stated that, he has stated what is not correct? It is not correct. The thing has been a question of moments—not of hours.
371. *Mr. Rodd.*] Did it ever happen that your message came through first? It has happened on previous occasions.
372. *Mr. Burns.*] Is it not a fact that the *Herald* had their message prepared on board the mail steamer, and thus were able to be first at the office? I do not know.
373. Do you know the names of any persons who have received messages for the *Herald* besides the *Herald* themselves? I only know from what I have been informed.
374. Would you be surprised to hear that they have only received messages for themselves, and through Gordon & Gotch? I don't know whether it is so or not. It was all a farce. I am sure the names of Gordon & Gotch do not appear on the books of the Telegraph Department for a penny for such messages. The messages were never sent to them, nor were they ever called upon to pay a penny for them.
375. Well, but under the regulation, the *Herald* and Gordon & Gotch were only entitled to 3,000 words between them? Yes, but perhaps they went from one to the other, and back again.
376. Has your agent said that his messages have not been sent? He has given me messages, alleging so and so, and that's how I know. I am not saying that my message, if first, has been put back and the *Herald's* sent on—I don't say that.
377. Do you know of any cases where your messages were not at once forwarded to your office? I am sure they never were for six or seven hours.
378. I want to find out when the different messages are lodged in Adelaide, to show whether any favouritism has been shown? My agent always sends on, immediately the mail steamer comes in, "Look out—message coming on," and the first words in his message are those giving the time.
379. Then you get that message first before the *Herald*? Yes, I do.
380. *Mr. Wearne.*] You know of the arrival of the mail before the *Herald's* telegram is up? Yes; and I know, too, when I get my message announcing arrival of the mail, that it will be seven and a half hours before I get another word.

381.

* NOTE (on revision):—The witness states that he is in error in describing Mr. Pender as Secretary of the Company. Mr. Pender represented the Company at the dinner which was given, but he was there as the representative of Lord Moncton, who was Chairman.

- S. Bennett, Esq.
5 Feb., 1873.
381. *Mr. Burns.*] There is a long message lodged for the *Herald*, but is there not some means of ascertaining the time when that long message would be lodged, and when your message would be lodged? I know the time of the arrival of the steamer, and the time my message is stated to be sent.
382. All messages lodged in the office are timed? No, all messages are not. I had this done for my own protection.
383. Can a record be obtained of the time when the messages are lodged for Messrs. Gordon & Gotch? That is quite immaterial. It is nothing but a swindle.
384. Is Gordon & Gotch's name used in the messages at all? How can I tell? If you want to cross-examine me, we must have some more sittings besides this one.

FRIDAY, 7 FEBRUARY, 1873.

Present:—

MR. BURNS, | MR. STEWART,
MR. WEARNE.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

Samuel Bennett, Esq., called in and further examined:—

- S. Bennett, Esq.
7 Feb., 1873.
385. *Chairman.*] Returning to the matter of the telegraphic line between Port Darwin and Madras: you have given us evidence tending to show that Reuter & Co. and the *Sydney Herald* and *Melbourne Argus*, under the name of the Associated Press, have exercised undue influence in obtaining priority for their messages on the British Australian Telegraph Line. Will you be good enough to give us any information that may be in your possession to justify that statement? Of course it is principally inference that I have to rely upon in a matter of the kind, but I may mention the following facts:—When the Associated Press, as the *Sydney Morning Herald* and *Argus* call themselves, made application to me to join them after they had secured this practical monopoly, it was intimated to me that by no other means except Reuter's Agency would any papers get satisfactory telegrams, such as would enable them to compete with the *Herald* and *Argus*, because Reuter's influence was such in connection with the British Australian Telegraph Company that he could command the lines. Looking at that fact, which was mentioned to me as an inducement to join with them, in connection with another,—that my agent, despatched to London, after they had made their arrangement and refused to allow me to join on what I considered fair terms, states to me that he found on his arrival in London that what had been said relative to the power of Reuter's Company to control the transmission of cable messages was not a mere empty boast, but that there were facts to countenance it,—I think I am justified in drawing the inference I have done. My agent wrote, just after his arrival in London, that he had had several interviews with Reuter's Manager, and in a letter he addressed to that gentleman the following passage occurs:—"I shall be glad to learn if your Company is open to make arrangements with other than the alleged leading journals of the Colony or Colonies, and regret that I was so uninformed that I was not aware until to-day that the Australian Cable Agency would become exclusively controlled by the action of your Company." He received a letter from Mr. Griffiths, the Manager, which did not in any way contradict anything he had stated in that respect, and at several interviews he was confirmed in his opinion. I have already put in a memorial I have addressed to the Members of the Intercolonial Conference now sitting, which gives the correspondence in relation to this matter. (*Memorial referred to handed in. Appendix B 2.*) Everything that my agent could learn went to support the supposition that Reuter's Company was omnipotent in the control of the British Australian line. This was followed by these facts,—that messages sent to me from London were delayed for various times, twenty-four, thirty-six, and forty-eight hours, as I was led to believe they would be, in favour of messages sent by Reuter's Agency, which were put in subsequently, but arrived here and were published sometimes one day, sometimes two days, before mine arrived. I handed in at my last examination a paper showing the dates of half a dozen telegrams referring to matters of very great importance. Of course I am not in a position to produce any documentary evidence that the British Australian Telegraph Company are under the control of Reuter; I am only able to infer from facts that have taken place that such is the case.

386. Have you any ground for supposing that the Associated Press has undue influence in anything connected with the transmission of messages? I have. I will state why. When the overland telegraph from Adelaide to Port Darwin was on the point of completion, or was supposed to be on the point of completion, the journalists in the Colonies were naturally anxious to see what was to be done to make arrangements to enable them to sustain the cost of the telegrams. I had been in communication with Mr. Syme, of the *Melbourne Age*, and we were carrying out arrangements by which he would receive a telegram from London daily, if it was not too costly, and send it on to me and other parties who were intending to join us. While this was pending, I received a letter, dated Bombay, 10th May, 1871, from Reuter's agent, Mr. Collins, who had been sent out to India, and from there was to come on to Australia to make arrangements for establishing a central agency in Melbourne for the whole of the Australian Colonies. This letter will be found appended to the Memorial I have just handed in, but I would like to read two or three passages from it. It says:—"The interests of the Australian Press will be most carefully respected, and in order to ensure the efficient representation of the Company, it has been resolved to open a branch on an early date at Melbourne, under the management of a gentleman thoroughly conversant with the system adopted at the numerous agencies in Europe and the East between which telegraphic communication has already been established." Further on it says:—"It is confidently believed, that the facilities enjoyed by the Company for the speedy collection and rapid despatch of news from England, the Continent, and America, are such as will enable them to conduct a comprehensive telegraphic service, whose efficiency will be found to compare favourably with that of any similar organization; and I am authorized to state, that it is the intention of the Directors to avail themselves of those facilities to the utmost. It is their earnest desire to supply, on a complete, yet economical system, telegrams interesting and important to every class of newspaper readers. Perfect impartiality will be displayed towards all subscribing journals, and no paper will be excluded from the right of joining the service." And again:—
"The

"The preliminary organization of the Australian service having been entrusted to myself, I shall leave by an early mail for Melbourne, accompanied by the permanent agent, and on my arrival I trust to have the pleasure of supplying you with further detailed information as to the Company's intentions, into which it would now be premature to enter."

S. Bennett,
Esq.

7 Feb., 1873.

387. *Mr. Stewart.*] When did that letter reach you? At the end of May or the beginning of June, 1871: it came by that mail, at all events. This information that this agent for Reuter was coming out to establish a general agency made me and the other gentlemen who were trying to make arrangements conclude that we had better defer concluding them until he came, and with the view of waiting for him we abandoned the negotiations then pending. Shortly afterwards, Mr. Syme, of the *Age*, heard some rumours that there was some movement on foot on the part of the *Herald* and *Argus* to stop this gentleman from coming to Australia, and to get hold of Reuter's agency for themselves. Not having heard anything more except in communication with Mr. Syme, I did not take any step, and thought I would wait until Mr. Collins arrived in Melbourne. It seems the steps taken by the *Herald* and *Argus* intercepted Mr. Collins, and he never came any further than Bombay. Reuter's agency accepted the offer that they made for the sale and exclusive right, and recalled Mr. Collins. We heard no more about it, but went on waiting for several months, in fact until the beginning of the following year. In the meantime, immediately upon the acceptance of their offer of £4,000 a year, as I was afterwards informed was the fact, for this monopoly of their influence on the telegraph line, Mr. Collins sent the circular, printed with the Memorial I have handed in, and dated "Bombay, 22nd August, 1871," to the whole of the newspapers he had communicated with in the Australian Colonies. He had written to every paper of any note. This circular will show that the *Herald* and *Argus*, calling themselves the Associated Press, had represented to Reuter that they were authorized to act as agents for the whole of the Australian Press, and it was that misrepresentation that stopped Mr. Collins from coming to Sydney and procured for them this monopoly. They suppressed this circular, and it was never published or came into my possession, nor was I able to know what it was for twelve months afterwards. This circular states that the Directors of Reuter's Telegram Company had concluded arrangements with the proprietors of the Melbourne *Argus* and *Sydney Morning Herald*, "in the full assurance that they were acting in accordance with the wishes of a majority of the Colonial Press. (*Circular read.*) I have not got their letters that they sent to intercept this gentleman, but I have his reply to the effect that they were offering to treat as the representatives of the Colonial Press. I will read a letter from my London agent, dated "London, Oct. 4, 1872," which will also be found appended to the Memorial I have handed in. (*Letter read.*)

388. *Chairman.*] It has been stated that certain newspapers employed persons connected with the telegraph lines as their telegraphic agents—Are you aware whether that is the case? I have no actual personal knowledge of it, but I have had repeated letters from my correspondents in different parts of the Colony making complaints that these clerks do so act.

389. What is necessary, in your opinion, to bring about the more general usefulness of the telegraph lines—not only those belonging to this Colony, but the Intercolonial and European lines—to popularize the lines, in fact—Is there any suggestion you could make? I believe a considerable reduction in the price of telegrams in the Colony and on the intercolonial telegraphs throughout Australia would lead to a considerably increased revenue. We have seen this fact, that except the exceptional increase which took place in consequence of exceptional circumstances connected with the extraordinary mining mania, there has been no increase in the revenue of the telegraphic lines in New South Wales from 1862 to 1872, but rather a decrease, though our lines have been extended thousands of miles, and the expenses of the Telegraph Department enormously increased.

390. *Mr. Burns.*] Are you aware that in Victoria they have lowered the charges for telegrams—I think in 1870—and that though at first there was a decline in the revenue, the business has since gone on increasing until the revenue now shows a very large increase? I have seen statements in the Victorian papers to that effect.

391. Do you not think that if there were a similar reduction here the business would increase enormously, and eventually repay the Government? No doubt it would.

392. Of course we all understand that it is the interest of the Country to get the telegraph charges to England reduced, and we want to get gentlemen directly interested in the matter to make suggestions to bring about a reduction right through—What is your opinion—do you think it would be preferable to have a message sent daily at the public expense, or to subsidize the telegraph line? I think a subsidy would be preferable.

393. What course would you recommend the Government to take with a view of getting any changes made, particularly with regard to the British Australian line? That could only be done by agreement between the different Colonies, unless New South Wales is prepared to offer a subsidy for telegrams coming to New South Wales only.

394. The charges on the British Australian line between Port Darwin and Madras are much higher than on other portions of the line to England—How would it be possible to make an agreement with that Company to reduce the cost of messages? The only way would be to open negotiations with the Secretary or Manager of the Company in London.

395. You would be in favour of such a course? I fancy a subsidy, arranged for in that way, would meet the public opinion better than any other system. A free message would only apply to a particular class of news—it would not assist the general public who receive private telegrams. Subsidizing the lines would have a very much wider bearing than a free message published to the whole Country and relating only to public matters, which would assist the newspaper Press without assisting the public.

396. Is it not the rule all over the World to let the Press have their messages at 25 per cent. less than the usual charge? In some cases for 50 per cent. less, but on this line there is nothing of the kind.

397. Has Reuter any interest in the British Australian line? I can only state what was said to me by the gentleman who came to me to make the offer,—that Reuter's Company was so powerful that no newspaper not connected with them could have any chance of getting satisfactory telegrams.

398. Have you seen any published regulations with respect to the British Australian line? No; the thing has been kept in profound secrecy.

399. Could not your agent in London ascertain whether there are any? He spent months in correspondence, without being able to ascertain how the matter really stands.

MINUTES OF EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE

S. Bennett,
Esq.

7 Feb., 1873.

400. Do you think it would be for the public interest for the different Colonies to unite and purchase up this line? Decidedly. What they would require to purchase would be the submarine line from Port Darwin to Java, and from the other end of Java to Madras.

401. Was not one of the reasons why the Government of England bought up the telegraph lines there, the dissatisfaction expressed at their being in the hands of private Companies? The great complaint was that Reuter was doing the same in England as he is doing with this line. The outcry by the newspapers was that they could not get news unless they took his telegrams.

402. Have you or your agent ever written to the Manager of the telegraph line complaining of the state of things you have described? I have sent the facts to my agent in London, but sufficient time has not elapsed to hear the result.

403. You have been informed that it was stated by Mr. Cracknell that the reason why the English messages for the *Empire* were delivered usually much later in Sydney than those for the *Herald* was, that the *Herald's* message was prepared on board the mail steamer, and lodged in the Adelaide office in advance of the *Empire's*—I think he said an hour? Some years ago—I do not know how long, nor when it was discontinued—the *Herald* had a telegram prepared, and we had a telegram prepared also, on board the mail steamer, and the contest was in landing the messages. We had boats' crews ready, and it was a question of moments and the quickest horse—not a question of an hour, or anything of the kind. If you refer back to the *Herald's*, or *Argus's*, or my telegrams, you will see that they were merely taken *verbatim* from the telegraphic summary of the *Home News* or *European Mail*, and they only require a pair of scissors to cut them out. They were nearly word for word, except that they were shortened. The latest telegrams were taken from a paper called the *Galle Telegraph*, published on the departure of the steamer, and contained a summary of all news that arrived after the mail steamer had left Southampton up to the date of her leaving Suez. There was therefore no time required in the preparation of the telegram; it only required a pair of scissors to cut it out. But that explanation of Mr. Cracknell's—supposing it were true—would not be satisfactory, because the regulations are that only 1,500 words could be sent in any one telegram. My agent there, knowing that once the *Herald's* telegram was lodged, and that he could not have his sent on for some hours, would naturally not be in such a hurry. He generally heads his message with the exact time he puts it in, and that time must be correct, or they would not send it on. I never had a message in less than seven to seven and a half hours after the arrival of the mail, and even much longer. Telegrams sent in the names of Gordon & Gotch have been really for the use of the *Herald*, and should have been charged as private telegrams.

404. What time would your message take in wiring through? That would depend upon how the lines were working; sometimes it takes five times as long as others.

405. What is the general time? It would come through in an hour or two as a rule; but the delay is caused by the enormous length of the message allowed to be sent through for the *Herald*.

406. Mr. Cracknell has stated that the *Herald* only gets 3,000 words, according to my recollection—1,500 for its own message, and 1,500 for Gordon & Gotch. Would you be surprised to hear that Mr. Cracknell has made that statement? I would. If he has said that the *Herald* only got 3,000 words, the statement is not true. I should say they have had from five to seven thousand words at a time; but that could be easily ascertained from their published telegrams.

407. Will you put in one? I will.

TUESDAY, 11 FEBRUARY, 1873.

Present:—

MR. WEARNE,
MR. STEWART,

MR. GARRETT,
MR. RODD.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

S. Bennett, Esq., called in and examined:—

S. Bennett,
Esq.

11 Feb., 1873.

408. *Chairman.*] When you were here last, Mr. Bennett, you expressed a wish to answer certain questions, and for that purpose the Committee determined to invite you to come again to-day; will you, therefore, be good enough to proceed with your statement? When we left off, the question mooted was whether Mr. Cracknell was correct in stating that the *Herald* was not allowed more than 3,000 words; I said the *Herald* had been allowed from 5,000 to 7,000 words, and you asked me if I could bring papers in proof of that statement. I have got the papers here. The date I first put my hand on—there are some longer and some shorter, of course—but in this paper there is a telegram of over 7,000 words. This paper is dated 3rd July, 1871.

409. *Mr. Garrett.*] Is that a European telegram? Yes, and there are 7,000 words in it.

410. What is the other one? The other paper is of October, 1872, and contains about 6,500 words. You must understand that the Telegraph Department charges as a word every figure, so that the date "1872" is four words. That I think is peculiar to New South Wales; it is not the case with the cable telegrams to England; they would not charge each figure separately, but the whole group of figures would be one word.

411. *Chairman.*] Do you put in these papers? Yes, I do. (*Papers put in, but not appended.*) If there are no other questions to be asked with regard to European telegrams, I should like to state something with regard to the Intercolonial telegrams.

412. We shall be glad to hear what you have to say? I have a telegram put in at Melbourne every day about mid-day for the *Evening News*. The orders in Melbourne are that this telegram shall be sent on at once, and in preference to any other message—that they shall even break off a private message to send it. I have a return from the Melbourne Telegraph Office for the month of October last, which shows that this telegram is always despatched in time, while it does not arrive here in time to be of service to me, or sometimes until after the paper is published. By this return I find that, in October last, there were eleven times in which it did not arrive in time, and that is an exceptionally good month. I got the telegrams

more

more frequently in that month than in any other; that is, out of the twenty-six days I only missed eleven times. Of course in these cases I had to pay for telegrams which were utterly useless. In the July previous, out of messages during the month amounting to twenty-six or twenty-seven, only thirteen were in time, and fourteen were too late. This other return shows the time at which these messages were put into the Melbourne Office; they were put in at 11:55, 12:7, 12:20, and so on, and they frequently did not reach me in time to be used in my paper. Since this Committee was moved for, and I have had occasion to make certain statements in the paper, the evil has been remedied, and I have had every civility and attention I could wish for, but up to October it was otherwise. This paper will show what telegrams I received, and when they were sent.

S. Bennett,
Esq.
11 Feb., 1873.

413. You may put that paper in for the use of the Committee, but it will not be appended to their Report? There is also a lengthy correspondence about the matter, but that would encumber the Committee too much. It is from officers of the Melbourne Telegraph Department, showing that the delay took place here. Sometimes the delay arises here from the telegrams not being delivered; sometimes the boys keep them in their pockets until the next day. Up to October last they never paid any attention to my messages. Sometimes it has happened that I got the intelligence sooner by mail than by telegram.

414. *Mr. Stewart.*] Then the delay takes place in Sydney? On the Sydney side, but I cannot say where, whether in Sydney or at the repeating stations.

415. *Mr. Garrett.*] Have you anything to show the time of arrival here? Yes, I have. Here is a telegram that came through, and is marked as being received here at 2:25. I did not receive it from the Telegraph Office until 4 o'clock, and that was too late for me to use it, of course.

416. This telegram was received in Sydney at 2:25? Yes. I should like to state that, on the arrival of the English mail at Melbourne, when it does arrive there before the branch steamer arrives at Adelaide, I have experienced the same difficulty in getting messages through from Melbourne as from Adelaide. I have documents to show that. On the arrival of the mail in June last, it reached Melbourne about the same time that it reached Adelaide. I have an agent at both places, and I instruct them to send on messages, but fearing that both should send on, and I should have the expense of the same message from both places, I send down a message from here directing one of them to send. This mail arrived early in the morning, and I sent down a message to Melbourne to send on the telegram promptly. That telegram of mine was kept back until after 5 o'clock in the evening. When my agent had been waiting all day, he sent me a message as to whether he should send a message through or not. I had said "Send on promptly." He waited until 12 o'clock, and then sent a telegram to know whether he should send on or not. My message was kept from going down; his message was kept from reaching me. I did not get my message until a late hour at night, and he did not get his message until the next day. I applied to Mr. Walker to explain this, and the reply was that the telegram was received at Albury on Saturday, but that owing to press of business it could not be transmitted to Sydney before 5 p.m. My telegram was sent through at 5 p.m., after my paper had been published. My telegram to Melbourne did not reach my agent there until after 5 o'clock, and so I had no message, and so, besides the injury done to myself, the Government were deprived of the payment for a long message. My agent said, in reference to this matter, that he had made arrangements for all telegrams for my afternoon edition to take precedence of all other telegrams, even to the operator being instructed to break off any message he may be sending. He adds—"The fault was not at this office." It is very much the same with regard to messages from the other Colonies. An instance of a very provoking character occurred in connection with the Expedition sent to observe the Eclipse of the Sun at Cape York. I had made arrangements with a gentleman who accompanied the Expedition to write me a report and send it from the first place at which the steamer touched. The steamer touched at Cardwell. This message was important, because the gentleman's wife was not in good health, and being anxious to hear from her husband, I had promised that when the telegram came to me—which being a Press message would come cheaper than a message to her—I would let her know that all was well. When the steamer touched at Cardwell, Mr. M— rushed ashore, and his was the first or second telegram put in that day, for they reached Cardwell early in the morning, and his telegram to me was put in before any of the others. At 11 o'clock that day I was told that messages were coming through. I sent round to the Telegraph Office, and the answer was that no message had been posted for me. Mrs. M— was anxious about her husband, and sent to me, thinking that something was wrong. Messages went through to the *Herald* and private messages were sent through to Melbourne, but I had no message up to a late hour. Mrs. M— was so anxious about her husband that I sent a telegram to Melbourne to inquire about the matter, and my agent in Melbourne had no means of getting information except from a person in a newspaper office. This person to whom he applied, thinking no doubt to have a good joke, told him that the Expedition had come back, that they had seen the eclipse, and that everything had been successful—that the eclipse had been observed beautifully. I published this telegram, and of course I was sold. The eclipse had not been observed, and the Expedition was a failure. I did not get my telegram from Cardwell until the following Monday—or rather I could not use it until Monday, though I got it late on Saturday night. I thought it was right to inquire into this matter, and so I wrote this letter to the head of the Telegraph Department, the Postmaster General:—"Sir,—I address you as the head of the Telegraph Department. On Saturday, 16th instant, Mr. B. M—, in consequence of previous arrangement with me, put into the Telegraph Office at Cardwell, Queensland, a message addressed to the *Empire*, Sydney. This was about 9 a.m. Mr. M— had just reached Cardwell with the return party from the Eclipse Expedition, and the message was to me and others of special and urgent importance. It was either the first or the second message placed in the office that morning, and Mr. M— took particular pains to ascertain that it was promptly despatched. For reasons which I need not specify, I was exceedingly anxious to receive this message, and between 9:30 and 3 p.m. I sent a special messenger to the Sydney Telegraph Office either five or six times, but I could get no satisfactory answer from the officer in charge (Mr. Wilson I believe), beyond the statement that there was no message for me, and that all the Cardwell messages had come through. As there were several messages received from Cardwell that morning which must have been placed in the office there and despatched after my message—if the ordinary rule was adhered to—it is evident that Mr. Wilson's statement could not be correct. After repeated applications and many hours worrying about it, as I could not get the message I gave the matter up, pending Mr. M.'s arrival in Sydney. At 10 o'clock at night, however, long after I had left my office, a message was brought there by one of the telegraph messengers, having the time of its reception from Cardwell marked 9h. 6m., p.m.—many hours after the steamer with the gentlemen of the Eclipse Expedition had left the place. That this message was purposely delayed somewhere there cannot, I think, be a reasonable doubt; and I ask you, sir, as the head of the Telegraph Department,

S. Bennett,
Esq.

11 Feb., 1873.

Department, for a full inquiry into the matter. Should you desire any further information to enable you to prosecute the necessary inquiries, I will, with your permission, wait upon you personally in company with Mr. M— at any time you may appoint." In reply to that letter I got this answer:—"Sir,—In reply to your letter dated the 29th ultimo, respecting the receipt of a telegram addressed to the *Empire*, Sydney, from Cardwell, on the 16th idem, at a much later hour than you expected,—I am directed to subjoin, for your information, a copy of a report which has been obtained from the Superintendent of Telegraphs on the subject, and to state that it appears therefrom the delay complained of did not occur upon the telegraph lines in this Colony." The report referred to in this letter states—"This message was not received on the New South Wales lines until 8.5 p.m. on the 16th December last, and it was transmitted to Sydney shortly afterwards. It will therefore be seen that Mr. Bennett's accusations are groundless, so far as this department is concerned. Mr. Wilson was perfectly correct in his replies. He merely spoke of the New South Wales lines, mentioning to the person who called from the *Empire* office that the line was clear to Tenterfield, the Northern Border Station. I have no doubt that, upon application to the Queensland Department, a satisfactory explanation can be given as to the delay complained of." (Signed) E. C. CRACKNELL." I believe that the delay was caused by some jealousy on the part of the reporters, Mr. M— not being connected with the Press—though he had been an old pressman—they thought it would be a good joke to sell him. It is said in this report that "our department is not answerable" for the delay, but of course I cannot deal with the Queensland Department.

417. *Mr. Wearne.*] Do you think that the blame rests with the Queensland Department? I cannot say. It is like the answer from Albury in the other case, that owing to the pressure of business it could not be transmitted before. There is an agreement with all the Governments that all mail messages shall have precedence. It has not been so in my case, for all the private messages have come through before mine have been sent. I should like also to mention some facts with regard to the exactions of the Sydney Telegraph Office. When the Mail arrives at Adelaide, for instance. I will take this case:—On the 18th of January (last month) the Mail arrived late on the Saturday evening, and when it was signalled my agent was afraid it would be too late to send a message through that night, and that unless special arrangements were made it could not be sent through on Sunday; he therefore sent me a message to the effect that I must personally see to the line being kept open on Sunday to get the messages through. For that I was charged 13s. 4d., though it was a Mail message. I had to reply, and was charged 7s. 8d. (21s. altogether) for a mere request that these gentlemen would attend to their duty. Here is another instance: "Tuesday evening, 7 o'clock. English Mail in sight. Do you want news? If so, reply." This was charged 7s. 4d. I took it to Mr. Lloyd, and he said it was one of the most infamous exactions he ever heard of. It is, however, a common thing with the Sydney office, but not the case in other places. This message, with my reply to it, cost over 15s. I don't see why messages of that kind should be treated as private messages. The exactions of these people are perfectly ruinous. Here is another instance of a somewhat similar kind. A Mr. Galloway, who is connected with racing in Melbourne, sent me a telegram about the Geelong Handicap. He took this message to the office, and because he was not a telegraphic agent it was treated as a private message, though you will see it was intended entirely for publication. I don't see what right they have to distinguish in this way.

418. Who fixed the charges? It was done in Melbourne.

419. Who fixed the charges in the other cases? That was done here, and paid here. In this message of Mr. Galloway's there is not a syllable of private information; it was intended for publication.

420. *Mr. Garrett.*] You had better read the message? It is from Mr. John Galloway to the *Town and Country Journal*: "Geelong Handicap, hundred to thirty offered Valentine, six Count Handicap and Cup; hundred to six Valentine, Misty, taken; hundred to five Valentine, Quack; hundred to fifteen Clodhopper, Quack." This message was charge 7s. 9d. I made inquiry, stating I was at a loss to understand why this was charged as a private message, and in reply I received the following explanation:—"In reply to your inquiry respecting the charge made upon your Melbourne message, the following is the explanation of Mr. James, the Manager of the Melbourne Office, viz.: 'Galloway to *T. and C. Journal*, sender not a recognized correspondent on Press service, therefore charged full rate.'"

421. Then the Melbourne Office was in fault in that case? I cannot do anything with the Melbourne people. Our department here should see to these matters, and they themselves have made over-charges as in the cases I before referred to.

422. They charged your replies to your agent as private messages? Yes. My agent asked "Shall I send on the message?" and they charged full rate for that, and also for my reply. They charged both ways full rates. This list that I have here, and that I wish to put in, shows the number of times I have received messages in time for publication from Melbourne, and the instances in which I have not received them in time for publication. There was one three weeks—eighteen days—in which I only received three messages in time for publication. They would have been in time up to 3 o'clock in the afternoon, and they are usually put into the Melbourne Office before 12 o'clock, always before 1, and the orders from the Melbourne Office are that they are to be sent on at once, as they are useless if not sent on in time for the afternoon paper. The order is, that they shall be sent on instantly on being lodged.

423. Then the delay is in Sydney — ? In these cases it is conclusively proved that the delay is entirely on the Sydney side. Might I, Mr. Chairman, be allowed to refer again to Mr. Cracknell's statement that only 3,000 words were allowed to the *Herald* in mail messages. I want to know if it cannot be ascertained who were charged with these messages that came to Gordon & Gotch,—who were they sent to,—who paid for them; also, the number of words these messages contained on these two dates I have put in.

424. You think there are more persons besides Gordon & Gotch who receive messages for the *Herald*? No, I am not of opinion there are more persons, but that they have gone on with this thing so carelessly that they don't know how many words they have allowed. The messages going to Gordon & Gotch is a mere pretence. I want to know whether they are charged to Gordon & Gotch, whether they are sent to Gordon & Gotch, and whether Gordon & Gotch pay for them. The fact that Mr. Cracknell allows the *Herald* 3,000 words is as much against him as if he were to allow them 50,000; the rule being to allow only 1,500.

WEDNESDAY, 12 MARCH, 1873.

Present:—

MR. BURNS,
MR. RODD,MR. WEARNE,
MR. STEWART.

JOHN ROBERTSON, Esq., IN THE CHAIR.

E. C. Cracknell, Esq., recalled and examined:—

425. *Chairman.*] The Committee thought it desirable to let Mr. Bennett have a knowledge of some portions of your evidence, and it now seems but fair that we should ask you a few questions which may throw some light upon parts of Mr. Bennett's evidence. He states in his evidence that the Telegraph Department here has been conducted as a branch of the *Sydney Morning Herald*: will you inform the Committee whether there is any truth in this statement? It is perfectly incorrect. The *Herald* has on no occasion received the slightest advantage over any other paper, unless it was entitled to such by law; that is, being first to deposit messages for transmission. This can be proved by the books and records of the department.

E. C.
Cracknell,
Esq.

12 Mar., 1873

426. Is it true that the rule of sending only 1,500 words to each paper has been violated here; the *Sydney Morning Herald* being allowed to have from 5,000 to 7,000 words? The *Herald's* messages have generally been limited by the South Australian Government to about 1,500 words each. They are generally sent on one line, and about the same number for Gordon & Gotch on the other, if both lines are working. When either of these is finished, the *Empire's* message is sent on. There is no wilful detention of the *Empire's* message, which the officers of the department can and are willing to swear to. In no instance have the *Herald* and Gordon & Gotch together reached 7,000 words. The average is not more than 3,000 to 4,000 words in all. The line journals will show that on one occasion Mr. Bennett had his message sent through after six sheets of the *Herald's* from Melbourne, in consequence of the *Argus* not being ready to send on more. The *Empire's* message was then sent on, which at that time came through Messrs. Greville & Co. This happened in June, 1868. That does not look like favouritism. I produce a Return showing the number of words in each telegram received as English Mail news, from January 11th, 1868, to 31st December, 1870, for the *Herald* and Gordon & Gotch. (*See Appendix C 1.*)

427. When you say that the South Australian Government limited these messages to 1,500 words, do you mean that they have some regulation limiting these messages; or, that it is by some uncalled for interference on their part that it is done? Their limit of Press messages to 1,500 words arises in this way: An arrangement was made between Victoria and South Australia that, on the arrival of the Mail, Press messages should be limited to 1,500 words; and, as the *Herald's* message comes through Victoria, it is necessarily limited to 1,500 words.

428. Then, when you say that the South Australian Government did it, you mean that, having determined that no newspaper should receive more than 1,500 words until other newspapers are served, they applied the same rule to the *Herald*? It was by a mere accident that it is applied to the *Herald*, on account of their receiving the message through Melbourne; because there is no rule that we have endorsed and no arrangement that we have entered into for any limit to Press messages to New South Wales.

429. When you say that you send on 1,500 words to the *Herald* on one line, and 1,500 words to Gordon & Gotch on the other, do you mean that you do this whether other messages intervene or not? No; if the two lines are working, and these messages come in first, they are sent on. Immediately upon one of them being completed, the *Empire's* message is sent on.

430. Suppose the *Empire* message was in before one or the other of these messages to the *Herald* and to Gordon & Gotch, would you take it to the second wire, or would you leave it to take its turn on the first wire? If it came in between the two messages, it would be entitled to go on by the second wire.

431. Is there not, in one of your answers on a previous occasion, confirmation of Mr. Bennett's view that 1,500 words were to be the maximum? If so, it is incorrect; 1,500 words messages have not been recognized here. This I have stated in my previous evidence (*vide question 93*), and it is confirmed by Mr. Todd's telegram, which I now lay before the Committee. (*See Appendix C 2.*)

432. It is scarcely necessary to ask you, but I put the question in order to clear up the points as we go on: Has it been the practice of your department to keep back the *Empire's* Mail messages until the *Herald's* supplement has been printed and sold? I deny that the *Empire's* messages are detained in Sydney or on the lines in this Colony, when the lines are available. I am perfectly satisfied that the law has not been violated in this respect. 1,500 words are sent to the *Herald*, and then about 1,500 words to Gordon & Gotch—these messages being sent from Adelaide in the order in which they are deposited; and if the *Herald* has printed more than 7,000 words, it has been dressed out by adding a number of small words which do not appear in the telegram,—a process often adopted by journalists; nor do I hold myself responsible that messages should contain only 1,500 words, or over that number, as there is no rule or instructions, in the department upon the subject; neither is there anything in the Act to warrant me in refusing messages containing any number of words. No such rule was made with this Colony, and I think I should have been to blame if I had refused messages containing over 1,500 words. I have no power to mutilate any person's message by reducing the number of words, without making myself liable to the penalties imposed by the Telegraph Act.

433. Then, it amounts to this,—that although a copy of the *Herald* may have been put in exhibiting a greater number of words than they would have been entitled to under the South Australian arrangement, yet you say that if they have been so, they have not gone through your department, but they arise from the telegram having been dressed out? Yes, by putting into it a number of small words which do not come through our office, and which are not paid for.

434. Are the reports for the *Herald* and the *Empire* deposited for transmission in the Adelaide office within a few minutes of each other: Mr. Bennett says, in fact, this,—“My message may come into the Adelaide office a minute, or a few minutes later than the *Herald* message, but then there comes a message for the *Herald* from Gordon & Gotch, or from some one of the various partners of the *Herald*, and this message is sent on before mine.” That is the reason why I ask you whether, as a matter of fact, they are deposited within a few minutes of each other? By the following statement from the Superintendent of Telegraphs, Adelaide, it will be seen that this is incorrect. My previous evidence, that the *Empire's* messages are deposited in the Adelaide office, on an average, one hour after the *Herald's*, is fully verified. (*Witness reads letter. Appendix C 3.*)

E. C.
Cracknell,
Esq.
12 Mar., 1873.

435. Is it your practice to refuse, or have you ever refused the use of other lines for the *Empire's* message on the arrival of the Mail in Adelaide? Never. If the *Empire* is refused the third wire, it is done by South Australia and Victoria, who, I presume, require it for their own local Press. If the *Empire's* message comes to our border station on the third wire, it would be taken on that line. Two lines are invariably used for the Press messages on the arrival of the Mail in Adelaide, one *viâ* Wentworth and the other *viâ* Melbourne.

436. Suppose, instead of coming on the third wire, it came on the first? It would be just the same; it would come on in the order received.

437. You would not shunt it, so to say, from one wire on to the other? No, we could not stop any message *in transitu*; we are bound to send it on.

438. So that, however it came, if it reached Albury, you would send it on? Yes, if our lines were available.

439. Then, what I gather from your answers is, that it is not the fact that the *Empire's* message is kept back until the *Herald's* and the private Mail messages are sent through? Certainly not. The message for the *Empire* is not kept back until the private messages are sent through, if it is in the Adelaide office in time, which sometimes has not been the case, it not having been deposited until the whole of the Mail business has been sent through. The Press messages are always sent on before the private telegrams.

440. Mr. Bennett says that you have stated to him that if there were a dozen lines, he should not have a word until Mr. Fairfax got his message through—Have you ever said anything of the kind to him? This statement is without the slightest foundation. I never in my life made such a statement to Mr. Bennett, nor to any other person. A similar complaint was made lately to the Postmaster-General by Mr. Bennett, and replied to by me. Now, it appears that this happened in 1859—fourteen years since, according to Mr. Bennett's statement—during the time of the French and Austrian War.

441. Mr. Bennett stated in his evidence that you were practically—in fact, it amounts to this, that he says you have acted as a servant to Mr. Fairfax—What do you reply to that? This is a most unwarrantable and wicked assertion, and could have been made only with a view to injure me in the eyes of the Committee.

442. That is rather hard language? It is; but I considered myself justified in using it, for I feel this charge very acutely, as it is so gross and wanton. Not only is it calculated to injure me in the eyes of the Committee, but to bring my department into contempt with the public. As I have already stated, no favours have been shown to Mr. Fairfax, by me or by my subordinates. I can confidently assert, without fear of truthful contradiction, that I have performed my duties faithfully to the public; and Mr. Bennett's messages have, in all cases, been forwarded without the slightest unnecessary delay over the lines in the Colony. In fact, I know that the officers of the department have taken considerable trouble to get the Press messages for the *Empire* through, and I have, time after time, issued instructions to spare no pains to force Mr. Bennett's messages through. I know Mr. Walker has repeatedly worked the lines when the instruments were in great danger of being damaged by lightning, and has remained on for hours during the night, endeavouring to hurry through the *Empire's* report in time for publication, which would have been done for any other paper. All this can be verified by the officers of the department, if necessary, on oath.

443. Do you consider that to have been discharging your duty to the public, when you had this man on at work when there was danger of injuring the public property by lightning? That may be a question. I believe I have conducted my department faithfully to the public; and as far as Mr. Bennett is concerned, I have always been anxious to accommodate him in every shape and form.

444. Which you would have done for the proprietor of any other newspaper? Of course.

445. Did Mr. Walker ever state to you that Mr. Fairfax would not take his message unless he had it first? He never said so to me, and he denies having ever made this statement.

446. Then, practically, you say that you did not make such a statement to Mr. Bennett as that his message should not be sent before the *Herald's*, under any circumstances? I give it my most unqualified denial. I produce a copy of a paper sent on to me by the late Postmaster-General, and my reply thereto. (*See Appendix C 4.*) According to Mr. Bennett's statement, this must have happened thirteen or fourteen years since, during the Austrian and French War, which broke out in 1859, and it certainly seems strange that it should have laid dormant and not used against the department for so long a time. There is, however, no trace of foundation for it. To carry out such an assertion, I must have issued instructions to my subordinates, which is out of the question. I defy Mr. Bennett to prove this charge.

447. Mr. Bennett says that Mr. Cowper wrote you a letter, stating that he wished the Government messages sent on first, and that you replied you would be willing to do so, if Mr. Fairfax would permit it—was that the case? Mr. Cowper wrote no such letter, that I am aware of, and a letter of that kind would have been quite unnecessary, as Government messages in all cases have precedence. There are no records of such letters, either in the Colonial Secretary's Office or in the Telegraph Office. There were no Government messages received by the European Mails at or about the time mentioned. I can state most positively that no such communication as that alluded to was ever sent by me to Mr. Cowper. On this point I produce a letter received by me from Mr. Halloran, Principal Under Secretary. (*See Appendix C 5.*)

448. Can you give the Committee any information in reference to an arrangement between Mr. Fairfax and Messrs. Hanson & Bennett, to get a joint message up to 2,000 words, and the date of any letter upon the subject? There is no such letter from the Minister for Works in existence. The only correspondence on the subject was a minute of mine, written in February, 1860, of which I hand in a copy (*see Appendix C 6.*); and a letter from Mr. Rae, then Secretary for Railways, to Messrs. Fairfax & Sons, dated November 4th, 1859, stating that Messrs. Hanson & Bennett had cancelled their verbal instructions in reference to their joint message with the *Herald*. It will also be seen that the message refused was not the joint message at all, as Mr. Bennett wishes to imply, but a message from Melbourne, and not from Adelaide; and I think my action in the matter was perfectly straightforward. This was in 1860 (not in 1863 or 1864), thirteen years ago. There was no such letter forwarded to me from the Works Department, nor was Mr. Holroyd Minister at the time. There was no treachery, as far as the department was concerned, such as is implied by the manner in which Mr. Bennett's answer is worded.

449. It has been stated, also, that not only Mr. Bennett, but the clerks in his employ, have been treated uncivilly by yourself and by the officers of your department, but more particularly by yourself? I distinctly

E. C.
Cracknell,
Esq.

12 Mar., 1873.

distinctly deny the whole of this statement. Both Mr. Hanson and Mr. Bennett have been treated with every civility, not only by me, but, I am sure, by every one connected with the office, every courtesy having been shown to them. This can, if necessary, be proved by the officers of the department.

450. But his clerks—what about them? They have always been most civilly treated.

451. Is it the fact—and this is a thing which Mr. Bennett complains of—that the *Herald* clerks have been allowed to go into some favoured office or room, where they had opportunities of gaining information, whilst the *Empire's* clerks have been excluded from it? Never; I distinctly deny that anything of the kind has occurred. Wherever the *Herald* people have been allowed to go, there I have allowed the *Empire* people to go also.

452. Mr. Bennett is of opinion that, since this Committee has been appointed, there has been a change in the treatment of himself and his people by the officers of the Telegraph Department—Do you know anything of this? I can assure the Committee that no alteration whatever has been made in the style of doing business since the Committee sat, nor have any fresh instructions been issued by me. The Government have appointed extra clerks for the night duty at Albury and Wentworth, so that European messages can be received night and day; and instead of having any fear of this Committee, I have myself twice asked the Government to institute an inquiry, to satisfy the public that Mr. Bennett's complaints are groundless. On this point I hand in a letter addressed by me to the Postmaster-General. (*See Appendix C 7.*)

453. Has there been any change in regard to Mr. Bennett's messages within the last three months—has he received them earlier? I deny that Mr. Bennett's messages have ever been detained, or that any instructions were given by me to that effect, as implied by Mr. Bennett. I can challenge the whole staff of the Telegraph Department, as to whether I have not always urged them to use their best endeavours to get through the Press messages for both papers without delay.

454. Then you say, as a matter of fact, that the *Empire's* message does not come through quicker now than it did three months ago? If the *Empire* message is transmitted quicker, it is because the *Herald* takes only 300 or 400 words, the news being anticipated by the through telegraph line to Europe.

455. Are you aware whether any restrictions have been made in the length of the *Herald's* message since this Committee was called for? None whatever have been made. There are no restrictions now any more than before, nor have these restrictions anything to do with this department; and if messages containing more than 1,500 words are sent, our regulations do not prohibit us from taking them. But I find the system of having 1,500 words messages has been generally adhered to, except perhaps when a few additional words had to be added in order to complete a paragraph; and, as I have already stated, I have no fear and no favour to ask of this Committee. I only request that the truth may be separated from falsehood—a thing that can be easily done by means of the documentary evidence which can be placed before this Committee by officers of the department.

456. Have you any documents to show how long the *Empire's* messages were deposited after the *Herald's* in the Adelaide office? The *Empire* messages are compiled in Adelaide by their agent, and deposited in the Adelaide office, generally, an hour later than those for the *Herald* and for Gordon & Gotch, as shown by Mr. Todd's message and return, already before the Committee. (*Appendix C 3.*)

457. You stated, when you were last examined before this Committee, that you were convinced that one of the main reasons, or the main reason why the *Herald's* message was received before that of the *Empire* was, because it was prepared on board of the branch steamer—Are you still of that opinion? Yes, the *Herald's* messages are compiled on board ship, and Mr. Bennett's are not, hence the reason for his messages being always behind. I submit that Mr. Todd's telegram and return clearly prove that the *Empire* message is prepared in Adelaide, and sometimes cut out of the *South Australian Register's* mail slips, which must take some time to print.

458. Were not Messrs. Greville & Co.'s messages for the *Empire* similar to those for Gordon & Gotch for the *Herald*, and treated in the same way? Gordon & Gotch's messages are sent to the *Herald* by order of that firm; but Greville & Co. were in like manner many years agents for the *Empire*, and their messages were sent on, by their order, to the latter paper in the same way.

459. Were the messages to the *Empire* never delivered, as stated, in less than six or seven hours? The books will prove that, as far as our lines are concerned, this is not the case, except in a few instances when the lines have been interrupted.

460. How does it happen that it is so long after the arrival of the mail steamer is telegraphed, that the news by her is received in Sydney? It arises in this way: notification of the arrival of the branch steamer is telegraphed so soon as she is sighted in Gulf St. Vincent, miles below Glenelg; and this accounts for the time the messages are supposed to be coming from the time the steamer is first reported.

461. So that the vessel is sighted long anterior to its coming inside? Yes; when sighted her arrival is telegraphed, so that it appears a long time before the news is received in Sydney; whereas, in fact, the messages are not landed for some time after the vessel is sighted.

462. Long anterior to the messages leaving the ship's side, the arrival of the vessel is telegraphed? Yes, as soon as it is seen, it is at once signalled on here.

463. Is there a practice of timing messages, so as to show the exact moment at which they are received? All messages are timed when deposited, and have been for years.

464. It has been stated several times—and I am rather inclined to think that you have answered it before—that there has been no increase in the revenue of the Telegraph Department since 1862, but rather a decrease, and that in the meantime the expenses of the department have enormously increased—is that the case? I have documentary evidence to show that it is not the case. The expenditure has always been below the revenue; and although the lines have increased in length, the extensions have, as a rule, been to remote places with small populations. We can show more than any of the other Colonies as regards revenue—that is, a profit on each year over the expenditure. I have here a return (*see Appendix C 8*) which shows a net profit up to the end of last year of £82,165. There is a comparative statement attached showing some points of interest. Then again, the revenue of the Victorian Telegraph Department for 1872 is less than that for this Colony. In Victoria, last year, it reached £42,700, whilst in this Colony it was £46,924,—that is, for revenue proper—without taking into account the balances on the English line. Then again, we stand equally well in the cost of working the lines; for whilst in this Colony the expenditure was only £31,520, in Victoria it was upwards of £40,000, as shown by Mr. —'s telegram. (*Appendix C 9.*)

E. C.
Cracknell,
Esq.
12 Mar., 1873.

465. Is not this smallness of revenue on the Victorian lines due to the fact that the Telegraph revenue there is in somewhat of a transition state—have they not gradually reduced their charges, whilst we have maintained ours at the old high rate? The change has been made some time, and the lines ought to have come up to the proper revenue point by this.
466. But is it not the fact that we continue to maintain our old high rates, whilst they are in a kind of chrysalis state, with their low charges? They reduced their rates in 1868 or '69, and by that time the revenue ought to have recovered itself. Last year was the largest amount of revenue we have yet received, and still we reduced our rates also, not very long before.
467. Still we charge more than they do? Yes.
468. Do they not charge 1s. whilst we charge 2s.? Yes; but then you must bear in mind that their lines are very much shorter than ours, whilst they are carried through thickly populated places; whilst our lines are not only very long, but, as a rule, pass through sparsely populated places.
469. What is the difference in the length of lines? It is given in the document I have just handed in (*Appendix C 8*). We have 6,000 miles of wire to maintain, whilst they have only 4,000.
470. But their rate is only half ours? Yes; but with less length of line they can afford to do it.
471. Is it not the case that their messages are more numerous in consequence of the lowness of the rate? Yes, in consequence of the lowness of the rate and the larger population.
472. *Mr. Burns.*] Their business has doubled since the reduction? It has increased very considerably.
473. *Chairman.*] You believe that the business has doubled? Yes, I believe it has, very nearly.
474. So that they have doubled the amount of utilization of the line? Certainly.
475. With what loss of revenue? I can hardly say what loss, but I should imagine that the messages have been doubled only on account of the reduction.
476. Would we not also increase our business if we decreased the cost of messages? Yes, I have said so, and have recommended it.
477. Suppose we reduced our rate to a uniform one of 1s., that would actually be a lower rate than the same price in Melbourne, because our lines are longer than the Victorian lines? Undoubtedly.
478. The construction of our lines costs infinitely less than the construction of the Victorian lines? Yes. The difference is given in the return (*Appendix C 8*); and, in addition to this, our working expenses are much less, for, with a larger number of stations than they have in Victoria, our expenses are something like £10,000 a year less than theirs.
479. What do you suppose will be our loss of revenue if we reduce the price of transmission one-half? The loss at first will be some £8,000 to £10,000 a year; but I believe that we shall soon pick that up.
480. So that even with the reduced rate, we shall soon arrive at what we have been receiving at the present rates? No, I think not—at least not with our present population.
481. But if we do not obtain the same revenue, the public will have a greater amount of convenience? Certainly; it may not be a profitable arrangement as far as the revenue is concerned, but it will be a success as regards the public convenience.
482. Do you think we shall be able to obtain sufficient to cover the expense of working the line? Yes, I think so.
483. And what percentage beyond that upon the outlay? Probably the revenue may reach to 2 or 3 per cent., but that is not of much importance.
484. How much do you think we obtain beyond the expenditure on the lines? I believe the revenue will cover the expenses; but I would rather not give an opinion as to how far it will go beyond that.
485. What percentage on the outlay do our lines pay now, at the present rate? About $7\frac{1}{2}$ per cent. for last year.
486. And you think we are likely to lose that if we reduce the rates? I should not like to give an opinion on that point; I am not prepared to fix any amount.
487. But speaking off hand, is it not your opinion that we shall lose it? We shall very nearly lose it.
488. *Mr. Burns.*] Has not your answer with respect to the percentage of profit, now made, reference to the revenue received during the last year, which we all know has been an exceptional year? Yes; to last year and this year, as far as we can judge.
489. Is it not the fact that the revenue of the Telegraph Department increased enormously during last year? It is.
490. And it is looking at the revenue of last year that you come to the opinion that we shall lose this $7\frac{1}{2}$ per cent. if we reduce the rates one-half? Yes; I was speaking with reference to the revenue of last year.
491. And with reference to the present year? Yes, the revenue is still keeping up.
492. Has there been any falling off this year upon the revenue of last year? No very great falling off. The revenue may have decreased in a trifling degree, but not to any great extent.
493. However, it has not increased in the same ratio as last year? It has not.
494. And this arises from the smaller number of mineral selections made this year? Yes, nearly all the mineral selections were made by telegraph.
495. *Chairman.*] Referring to the question from which we have diverged; can you inform the Committee what detention, if any, has taken place in the lines of this Colony in reference to messages from Melbourne for the *Evening News*, and whether they are sent from Melbourne immediately upon receipt, to the prejudice of any other messages, either private or Press? If they are transmitted by the Melbourne office immediately they are received, without reference to messages put in before them, I consider that the officers in Melbourne do so at their own risk, and in violation of their Act of Parliament—their Act is similar to ours, viz., that all messages shall be sent in order of receipt, except Government messages, arrest of criminals, and administration of justice—and in so doing rendered themselves liable to a penalty of £50. But I have no power, of course, over these officers, and if they contravene the law we are not to blame for it. The times of the receipts and transmission of messages, during the period mentioned, from Albury are contained in the list herewith, for the month of October, 1872.
496. Have you any reason to believe that this is done? I do not think they would be so foolish. Here is the clause of their Act (*Witness reads*). That is their law, and it is exactly the same as ours, so that if they do as described, they do it in contravention of their own Act of Parliament.
497. Is there any delay in the delivery of the *Empire* messages when received in Sydney? As a rule the messages are sent out immediately they are received; but during 1872 there was an unusual augmentation of business, and with a limited staff of messengers it may have happened at times that none were available,

available, but in the ordinary course of business this would happen very rarely. Since the Estimates have been passed there have been additional messengers appointed, and delays are not so frequent. I have made inquiries, and cannot hear of a single instance of the messengers having kept any of the *Empire* messages in their pockets until the following day, as stated by Mr. Bennett. I also append a statement from the principal booking-clerk, who not only denies the charge, but states that the *Empire* messages have been invariably sent out by special messengers. (See Appendix C 10.)

498. Can you inform the Committee what caused the detention of Mr. Bennett's message, asking for a Mail message on the arrival of the June Mail in Melbourne? On this date the Mail arrived in Melbourne, and there were 180 private telegrams, in addition to 4,000 words for the Press, which rendered it difficult to work off the business on the Melbourne line without considerable delay, more especially as the other line was not available in consequence of its being out of order. The *Empire* message to "Quarril" was handed in after Press reports were commenced; and was sent on in regular course.

499. Was there any reason for the length of time occupied by Mr. Bennett's message from Cardwell with reference to the Eclipse Expedition, on the 16th December, 1871, and was the message for the *Herald* delivered, as stated, in the morning, and Mr. Bennett's not till 10 p.m.? The cause of the delay was the unsatisfactory way the Queensland lines were working during the day. It is not a fact that the *Herald* received these messages in the morning. The *Herald* message came through after that of the *Empire*, and is timed 9.35 p.m., and was not published until the Monday following.

500. Then, it is a fact that the *Empire* message came through first? Yes, it was the case. It came to this station first, and was received at Cardwell first. The *Herald* message came through here at 9.35. Mr. Bourne sends me the following report on the subject. (*Witness reads. See Appendix C 11.*) I believe that the complaint arose from the Victorian Government Astronomer having telegraphed down to Melbourne prior to the interruption of the line, and the news getting abroad there, was telegraphed back to Sydney.

501. So that, in your opinion, this complaint has been caused by the Government having transmitted the news to Melbourne, by the news having got abroad there, and by its being telegraphed back to Sydney and made public before the direct message came on? Yes, I believe that to have been the case.

502. Then the *Empire's* message was lodged at Cardwell before that of the *Herald*, and was delivered here before that of the *Herald*; but owing to the regulation allowing Government messages to have precedence, the news was sent on to the Melbourne Government, and thus got into the Melbourne papers, and afterwards came on here in an indirect way from Melbourne? Yes; it is quite clear to me that it is to be accounted for in that way only.

503. Is it true that private messages have ever been sent before the *Empire's* report, on the arrival of the Mail? In no single instance, except when the message for the *Empire* has not been deposited until all the Mail business has been disposed of.

504. Can you give us any information in reference to some overcharge said to have been made in January last? These charges were made in Adelaide, and this Department checked for the amount; they were not for publication, and were therefore charged at full rates. These charges are of course made where the messages originate; and if not collected, the officers here would have had to pay the amount themselves. These messages were occasioned by the officiousness of Mr. Bennett's agent, Mr. Longson, for which he apologized; and the Adelaide Office required that payment should be made, I presume, in consequence of his want of judgment. I hand in copy of memos. referring to this matter. (*See Appendix C 12.*)

505. Do you not consider that the message from Galloway to the *Town and Country Journal* was an overcharge? Mr. Galloway's message to the *Town and Country Journal* appeared at the time an overcharge, and Mr. Walker remonstrated with the Melbourne Office about it; but they would not reduce the charge to Press rates. This Office did all it could in the matter, but the Melbourne Manager telegraphed back the following: "Sender not a recognized correspondent on Press service, therefore charged full rates." (*See Appendix C 13.*) There is no doubt that in this case Mr. Bennett was overcharged, but we had no power to reduce it unless we paid the difference ourselves, as this office would have been surcharged with the amount.

506. Are the messages for Gordon & Gotch delivered to them, and do they pay for the same? They appear in the books of the department as addressed to Gordon & Gotch, but delivered to the *Herald*, in the same way as Greville & Co.'s and Javiett's used to be sent to the *Empire*. The payments are made by the *Herald*, but this is a matter of very small moment, so long as the Government obtains payment for their transmission; that is all our department has to look to.

507. Then, in your opinion, the charges brought against your department by Mr. Bennett are not borne out generally by facts? I think I have satisfactorily proved they are not; but, with your permission, I will sum up the charges brought against the department by Mr. Bennett, and replies thereto. 1st. That there has been any undue considerations in favour of the *Herald* I most distinctly deny, in which I am supported by the documentary evidence produced; and the officers of the department can give evidence in verification of this statement if necessary. 2nd. That the Press messages for the *Empire* have not been wilfully detained on the lines in this Colony, nor have they occupied a much longer time in transmission than was absolutely necessary. 3rd. That there have been no arrangements that the Press messages from Adelaide should contain only 1,500 words, which will be seen by a telegram from Mr. Todd, Superintendent of Telegraphs, Adelaide, marked C 2, under which circumstances this department cannot be held responsible for messages containing a greater number of words being sent over the lines in this Colony from the Colony at which they originate. 4th. That the messages for the *Herald* and *Empire* are not deposited in the Adelaide Office within a few minutes of each other, but on the contrary there is an average difference of nearly one hour. 5th. That the private telegrams by the mail are not sent before the *Empire's* message, when the messages for that paper are deposited in time, and that the private messages have only been sent when the line is clear, and the *Empire* message has not been there to send on. 6th. No such statement was ever made by me, that if there were a dozen lines Mr. Bennett should not have a word until Mr. Fairfax obtained his messages. 7th. That the statement of Mr. Bennett that I acted as a servant to Mr. Fairfax is a gross fabrication, for which there is not the slightest foundation. 8th. That I did not, as alleged, refuse to give Messrs. Hanson & Bennett a copy of a joint message to them and the *Herald*, but the message in question was from Melbourne, and not from Adelaide, nor was it from their joint correspondent, neither was the message refused until directed to do so by the Messrs. Fairfax. 9th. That neither Mr. Bennett nor his clerks have been treated with incivility by myself or officers; but on the contrary every courtesy shown them. 10th. No alteration has been made in the method

of

E. C.
Cracknell,
Esq.

12 Mar., 1873.

E. C.
Cracknell,
Esq.

12 Mar., 1873.

of conducting the business of the department since this Committee was called for. 11th. That the non-increase in the receipts is not a fair criterion as to the management of the department, as the comparatively small increase arises from other causes which have affected the Telegraph Departments in the whole of the Colonies, as may be seen by Appendix A.

508. *Mr. Burns.*] How did it come about that there was this understanding that there was to be a limit to the number of words each paper was to receive? It originated through an agreement between the Adelaide and the Melbourne Departments; and the *Herald's* message coming through to the *Argus* at Melbourne, the regulation or understanding came to be established as far as Victoria is concerned.

509. Has there been any convention on the subject? No, we are not parties to any agreement of the kind, and we have not even had any correspondence on the subject.

510. Supposing 5,000 words to be sent through to one paper, would you be bound to receive them, under the existing law? Yes; under the law we must take every word.

511. Since there has been direct communication between England, there has been a falling off in the competition on the arrival of the Mail? Yes, they take no trouble over it now. The *Herald* still continues to send an agent to collect the news on board the branch steamer, but they attach no importance to it.

512. And the messages are much shorter? Yes; the *Herald* only takes some 300 or 400 words now, in place of 3,000 or 4,000.

FRIDAY, 14 MARCH, 1873.

Present:—

MR. LACKEY, | MR. TUNKS,
MR. ROBERTSON.

JOHN FITZGERALD BURNS, ESQ., IN THE CHAIR.

Mr. J. H. Heaton called in and examined:—

Mr. J. H.
Heaton.

14 Mar., 1873.

513. *Chairman.*] You have some evidence to give with regard to the matter referred to this Committee? Yes.

514. Would you be good enough to state what the matter is about which you wish to give evidence? I have had a great deal of travelling in connection with the *Town and Country Journal*, in the country, as special correspondent of that paper.

515. Your business has brought you into communication with the Telegraph Department? Yes.

516. Have any special matters occurred in your experience calling for remark or inquiry? The first complaint I have to make is that there is no confidence felt in the Telegraph Department.

517. You mean in the country districts? Yes; I refer particularly to the Gold Fields.

518. Have you resided at any one Gold Field, or had any means of eliciting the opinions of the people? I have been brought into contact with a large number of diggers and others connected with gold-mining.

519. What reason did they assign for having no confidence in the Telegraph Department? The chief reason was that the officers of the department were connected with gold-mining.

520. Have you heard many persons say they had no confidence in the department on that account? Yes, a great number of persons.

521. What Gold Fields have you been on? I refer to the Tumut and Adelong Gold Fields as the last.

522. Does the business of the people there bring them much in communication with the Telegraph Department? I understand a good deal of business is done, as many of the shareholders reside in Sydney. Of course, in referring to the Tumut and Adelong Gold Fields, I include Gundagai.

523. Was it in course of conversation that you elicited opinions adverse to the department, or did people complain of it? Both.

524. Did they allege they had no confidence in the department because some of the officials had dealings in mining matters and were concerned in mines? Yes, deeply concerned.

525. Did they make specific complaints of anything having been done wrong by the officials? They never could fix upon anything exactly, but they knew that the chief officer in the department had large numbers of shares in certain mines.

526. But did you hear any specific complaints of anything having been done wrong by the officers of the department, in mining or anything else? They knew that they could not achieve certain objects by telegraphing. Suppose an officer is interested in a certain mine, and a telegram goes through that gold has been struck; he can buy up in a few hours all the shares that are for sale.

527. Have you heard of anything of this kind having been done? Yes, I have.

528. About what time were you on these Gold Fields? About twelve months ago—rather less than twelve months ago.

529. Were any complaints ever made to the Government about these matters? I am not aware. I know that since then the head of the Telegraph and Postal Departments has issued a notice forbidding officers to deal in mining shares, on pain of dismissal.

530. That is recent? Yes.

531. Do you know of any malpractices of the officers? Yes; I know that free telegraphic memos. have been sent to officers of the department, and messages have been kept back while they were going through.

532. You mean that information has been communicated between telegraph officials, and the messages have been kept back? No; private persons have been communicating with officials, and messages have been kept back.

533. What office has this occurred in? In the Adelong Office.

534. Messages have been sent through to the officials or by officials? I know a message was sent, on one occasion, by a private person to a high official in the Telegraph Department.

535. And other messages were kept back while that one was sent through? Yes, and sent through free.

536. It was sent through in priority to private telegrams which were paid for? Yes.

537. How long ago was that? About twelve months ago.

Mr. J. H.
Heaton.

14 Mar., 1873.

538. From the Adelong office? Yes. This was done publicly—it was done in the office.
539. How do you know that this occurred? I was present.
540. Did you see the message go through? Yes.
541. Do they allow persons in the office in that way? I was allowed.
542. Can you fix the month that this occurred in? I can by reference.
543. What had the telegram reference to? Some mining matter, in which, I presume, the head of the department was interested.
544. But I thought you said at first that this had reference to some mining matter in which a high official had an interest? Yes.
545. Was it in reference to a gold lease? A gold lease, as I understood. I know it was in reference to matters connected with gold-mining.
546. How do you know it was not charged for? Because the sender told the operator it was an arrangement that all messages for Mr. Cracknell should go as memos, free. I did not complain of that so much as of my message being kept back.
547. What is the name of the officer? I can give the name, if you like.
548. You have made a serious charge against the officer of the Adelong office—what is his name? I think his name is Casperson.
549. *Mr. Lackey.*] Was that the man who sent the message? No; he merely acted upon his instructions—he was the Station-master.
550. *Mr. Robertson.*] Who was the person who sent the message? A commercial traveller named Bradford.
551. *Chairman.*] The Station-master said there would be no charge for it? No; but it was handed in by the commercial traveller, who said—“These messages for me go as free service memos.”
552. How do you know it was about a mining matter? Because it was made public.
553. Was it read out? It was, to several persons there present. I was one of those. It had reference to a mining matter, and the sender read it out before he gave it to the operator.
554. Do you know of any other instances of mismanagement in the department? I may say that there is a general dissatisfaction up there, and the miners as a body and several shareholders told me that they had no confidence in the department, because these high officials had large shares in mining. One was said to be interested to the extent of £20,000.
555. In mines in that locality? Not all in that locality. The officer's name is often mentioned in the Government Gazette.
556. *Mr. Robertson.*] What is his name? It is Mr. Cracknell.
557. *Chairman.*] Was it generally known among the miners that this thing was done? Yes, it was generally known.
558. This particular instance? I don't know. This instance was spoken of, and with dissatisfaction.
559. But there was a want of confidence in the department, because the head of the department was concerned in gold-mining? Yes.
560. You have travelled a good deal in different parts of the country? Yes, a good deal.
561. Did you hear any other persons express this want of confidence in the department? Yes; it is so general. In almost every Government Gazette that comes out, they find in it the name of Mr. Cracknell, either as a shareholder, or worse still, as a promoter.
562. And do people assume that on that account the department is badly managed? No; but from such circumstances as I have mentioned, and knowing that Mr. Cracknell has these memos sent to him, and that he has also command of the wires, he could buy up all the shares in a mine when gold was struck, if he had any man outside to work with him. I don't say that he has done this, but that he could do it if he liked, and people say so.
563. Do you know of any other instances of wrong-doing in connection with the department, beyond mere general statements or complaints—have you travelled on any other Gold Fields? Throughout Gundagai and towards Albury and Tumberumba. I have spoken to those interested in mines, and those who are largely interested make the greatest complaints of want of confidence.
564. *Mr. Lackey.*] You say you are connected with the *Town and Country Journal*? Yes.
565. You correspond with the office in Sydney from different parts of the country? Yes.
566. You are acquainted with many of the telegraph offices? I go to almost every office to send telegrams on matters of pressing importance in the places I visit.
567. And these are long messages occasionally? Yes.
568. Have you found any inconvenience in the management of these offices when you have had to send a message? Yes; there are grave complaints—first as to the delay in forwarding messages, and secondly that many of the operators are in the employ of the *Herald*.
569. The operators are employed by the *Herald*? Yes, they are in the service of the *Herald*.
570. What evidence have you of that? I can fix upon one case very distinctly, and others I can only judge of from circumstances which I will relate. The first I can fix on occurred fourteen months ago. Mr. Bennett sent me to Eden, Twofold Bay, with the Earl of Belmore, to report his tour through the district. On my arrival at Eden, I waited on the Telegraph-master, as it was notorious that he was the *Herald* correspondent. I asked him if he would now abstain. As the *Empire* had gone to great expense in sending me there to report, and the *Herald* had sent no one, it would be unfair to Mr. Bennett, who had gone to this expense, to allow the *Herald* to have messages. I asked him to abstain from sending messages to the *Herald* on that occasion, and he said it would not hurt me. I said it most decidedly would; that the object was to get the news first, and as Mr. Bennett had gone to great expense it was unfair to him.
571. Who was the operator? Mr. Kebbie.
572. You say that he was telegraphing to the *Herald*? Yes, it was notorious.
573. Have you any direct evidence that he did carry out what you say—that he did correspond regularly with the *Herald*? His assistant told me so, and on that occasion that I refer to, telegrams appeared in the *Herald* simultaneously with mine in the *Empire*, that I had reason to believe were got from my telegrams. He should have been in his office attending to his duties, instead of collecting the information contained in my telegrams, and so I believed he must have used my telegrams, or else he must have neglected his duty in order to act as correspondent of the *Herald*.
574. Have you any reason to know that he received any remuneration for that? I do not believe that he did it gratuitously.
575. You have no evidence of that? I have no evidence.

- Mr. J. H. Heaton.
14 Mar., 1873.
576. Do you know whether there was any correspondent of the *Herald* there? No; it is such a small place that there could not have been one without my knowing it.
577. It is a place in frequent communication with Sydney? Yes; ships are sighted passing there, and if there is a storm the news is telegraphed.
578. Does this man correspond with the *Herald*, and send news in this way of storms or anything of that kind? No, in that case the information is given outside the Sydney Telegraph Office; but in the case of vessels being dismasted or anything of that kind, the news would only come to those interested, if the telegraph operator did not send a message to the *Herald*.
579. The message you heard read out by the commercial traveller in the office at Adelong—was that message sent by the operator to the *Herald*? No, that was sent to an official in the Telegraph Department.
580. Not to the *Herald*? No, not to the *Herald*.
581. To Mr. Cracknell? Yes.
582. You presume that the message was sent? I am confident of that. I saw it sent off. The telegraph operator was not to blame. I should have done the same as he did, if I had received the same instructions as he received from the commercial traveller, who said that he was acting under Mr. Cracknell's order.
583. Would you send a message free simply because a private person ordered you to do it? He did not do it in that way.
584. In what way then? In a very friendly way. The sender used the words, but said them in a more friendly way.
585. Would it be effective throughout the country, do you think, if a person went to a telegraph operator and said a message was to go free? No, excepting they knew the person.
586. Are they on sufficiently good terms to send messages free? Yes, when they are sent to the head of the department.
587. Do you know of any other instances of telegraph operators sending messages to the *Herald*? I cannot say directly that they have been sent, but I know when I have sent information that I believe only myself could have obtained, it has appeared simultaneously in the *Herald*.
588. You believe that is in consequence of the favour shown by the telegraph operators to the *Herald*? Yes, I do.
589. You don't think that the information could be conveyed by people who were accredited by the *Herald* in the district? I do not; I believe it was sent from the office.
590. *Mr. Tunks.*] Have you any knowledge of the mode of conveying messages by telegraph—the operation? Yes, I have some knowledge of it.
591. Do you think it possible that every operator between the termini of the line could receive a message simultaneously with those in Sydney? Yes, in cases where the lines are connected.
592. So that if a message came from Albury, every station would receive it as it passed through? Yes, if they were connected.
593. Is it not possible for a person whose ear is trained to this kind of thing, and who may listen, to know a message that is going through? Yes.
594. Is it not possible then that a person not at the extreme end of the line could obtain the information about which you complain, and transmit it? Yes, it might be so, but in that case other operators would be implicated, so that it does not take off the sting of the charge.
595. You say that these men were in the pay of the *Herald*? Yes.
596. Do you distinguish between favouring and receiving pay? Yes.
597. They would, you think, just as soon favour the *Empire* as the *Herald*, unless they were paid by the latter? I cannot say. I consider that those who pay for it in this case get the information.
598. There is a continuous rivalry between your paper and the *Herald*? Yes, and that is the reason why we are so jealous of any undue advantage being given to the *Herald*.
599. What is the name of the telegraph operator at Adelong? Casperson.
600. And the commercial traveller? His name is Bradford. He is largely interested in mines, and it was understood that Mr. Cracknell was concerned to the extent of £20,000 in mining speculations. Of course the Government Gazette will go to a certain extent to confirm what I say, and that can be produced.
601. Have you made any complaint of these matters to the Government or the head of your department? Yes, I have repeatedly complained to the proprietor of the journal.
602. What kind of a place have they at Adelong? A very inconvenient place—not at all suitable. It is a Telegraph and Post Office combined.
603. Is there any arrangement for keeping the Telegraph Office separate from the Post Office? No, none.
604. Is that the reason you were present when messages were being sent through? Yes, that is the reason I was present.
605. In your opinion, would it be desirable to connect the Telegraph with the Post Office Service, with a view to economy? Yes, most decidedly.
606. That is, I presume, you mean if there were proper accommodation? Yes. I wish again to state that the Postmaster of Adelong was not at all to blame in that matter. It was done openly, with the consent of the sender of the message.
607. *Mr. Robertson.*] If anything occurs to you that you think comes within the scope of this inquiry, give us the benefit of your knowledge? There is one thing I should like to say with regard to the delays in the Telegraph Department in sending messages, and I contrast it with the expedition in the offices of the other Colonies.
608. *Chairman.*] You mean that the delays in sending messages are greater here than there? Yes.
609. Have you had reason to complain? Yes.
610. Have you complained to the Department? Repeatedly to the Office, and I believe they have complained to the Department.
611. *Mr. Tunks.*] Have we not got a longer length of line than any of the other Colonies? Yes, we have.
612. *Mr. Robertson.*] Have we longer than Queensland? Yes, longer than Queensland.
613. *Mr. Lackey.*] Or the Port Darwin line? No, not so long as that. That is South Australia.
614. *Mr. Tunks.*] Has any Colony a longer length of line than we have? Yes, of course, South Australia.

615. *Chairman.*] The complaint is, that the time occupied in sending a message here is too long? The length of line could not affect the line in the case of such a place as Parramatta, and I have sent messages from there which have been much delayed.

Mr. J. H.
Heaton.

14 Mar., 1873.

616. You have compared the time sometimes? Yes, repeatedly.

617. And you have found the time between the sending and the delivery unreasonably long? Yes.

618. You have sent messages from different parts of the Colony? Yes, and from Victoria.

619. *Mr. Tunks.*] Do you mean to say that the other Colonies have a longer line in the aggregate, or a greater number of offices than we have? I think the Colonies mentioned have a longer line in the aggregate, but I don't know that they have a greater number of offices.

620. Do you mean that a message takes longer on a line here than to go an equal distance elsewhere? Yes, far longer.

621. It takes longer to go 100 miles here than to go 100 miles in Victoria? Yes, it does.

622. But would not that arise from a greater number of offices being connected with the capital? Yes, that might affect it.

623. Have any of the other Colonies an equal number of offices and an equal quantity of line with this Colony? I should think that Victoria has a far larger number of offices; I don't know about the length of line.

624. That is only your impression, I suppose? Yes.

625. *Chairman.*] Have you anything further to say? I spent some time in Melbourne, and had some conversation with the officials there about the delays, and in all cases they attributed the blame to New South Wales.

626. Where did they say the delays occurred? The blame in all cases was on the Sydney side of the border.

627. *Mr. Robertson.*] And the Sydney Office put the blame on Melbourne? I said so, to the Victorian officials, and they proved quite the reverse. In Albury there are two officers, one for New South Wales and one for Victoria, and I presume that from the officials there the true causes would be found out.

628. *Chairman.*] Do you think any check could be kept on the time of the delivery and lodging of messages? Yes. It is carelessly done at present.

629. Do you think the time of delivery and lodgment should be on the paper? I think that is very necessary, to check the delays. The Victorian operators say that a more extraordinary system of mismanagement there could not be than there is here. It is a by-word; and, in order to clear themselves, it was arranged that one of the officers would give evidence here, but I think that his duties prevented him.

P. B. Walker, Esq., called in and examined:—

630. *Chairman.*] You have the management of the operating branch of the Telegraph Office in Sydney? Yes, the operating and the booking branches.

P. B. Walker,
Esq.

14 Mar., 1873.

631. What is your official title? Assistant Superintendent of Telegraphs.

632. How many operators have you in the head office, and what are their hours of attendance? There are twelve operators; five of these are on duty from 8:30 a.m. to 6 p.m., three on duty from 8:30 a.m. to 3 p.m., and three on duty until the business is finished. There is also a night operator, who comes on duty at 6 p.m., and stays until the following morning.

633. Are you aware of any favouritism being shown to the proprietors of the *Sydney Morning Herald* by any of the operators? I am not aware of any favouritism being shown by any of the officers to any journal throughout the Country.

634. It has not been their practice to show any favour to any paper more than another? Certainly not.

635. The rules of the department are pretty clear and distinct? Yes, they are very clear and distinct.

636. Will you state to the Committee what has been the rule with regard to the transmission of Mail reports, prior to the opening of the Cable line? The rule is, that all telegrams shall be transmitted to Sydney in the order in which they are received at the Border Station—that is the rule.

637. Do you know of any rule in the office at Adelaide as to limiting the number of words for each journal? I am not aware of any rule to that effect in this Colony, but it has been the practice of the Adelaide Department to send 1,500 words to each paper.

638. Would you be bound to receive a larger number of words? Yes, any number of words sent.

639. But there has been a rule? On the part of the South Australian Government there is such a rule; but we have had no orders on the subject.

640. What is your opinion as to the practice of limiting the number of words? I think it would be a good rule as a local rule, but it would be unfair to limit any journal to a certain number of words, when the proprietors go to great expense to get the information; but of course, as a local rule, it would do very well to limit them to 1,500 words, or even a lower standard than that.

641. What good would it do? It would enable us to send more messages.

642. Would it not be well for the Colonies to have a general agreement on the matter? I think it would.

643. Since the Cable line has been opened, has there been any fresh rule limiting the number of words for Press messages? None whatever.

644. I imagine the competition for the Suez line has greatly declined since we have had the direct line? Yes, it has declined.

645. So that any paper getting messages, would get them more rapidly now by Suez than they did before? Yes; for instance, the *Herald*, instead of receiving between 2,000 and 3,000 words, only receives 200 or 300 now.

646. That would account for the transmission of messages to other papers more rapidly? Yes.

647. Has there been any preference shown in Adelaide or anywhere, to any papers, in sending through these English messages? No, certainly not, no preference has been shown to any Press agencies, or any journals in this Colony.

648. Can you tell us from memory whether the *Herald* has, as a rule, been first to lodge telegrams in Adelaide, or whether the *Empire* has not sometimes been first? That is a question I cannot answer.

649. You don't know how they are lodged in Adelaide? No.

650. You can only tell the order in which they are received here? That is all.

651.

- P. B. Walker, Esq.
14 Mar., 1873.
651. Has there been any delay in sending out messages to the respective offices? None that I am aware of.
652. Do you give a preference to any messages in transmission? No.
653. Would you send Press messages in priority to private telegrams? No, we send them in the order in which they are received; the same regulation applies to Press messages as applies to other messages, except the English Mail telegrams *via* Suez.
654. What course do telegrams take over the Australian lines? They are sent to Wentworth, thence to Adelaide, and thence to Port Darwin. On the Port Darwin line there are two or three repeats; one at the Peak I think, and there is a station further on where they repeat to, and sometimes they work direct to Port Darwin. English messages are all received by the route I name. Some messages may be repeated at Adelaide and come *via* Melbourne; it is just possible that they are repeated from an agency there.
655. Are they charged at London rates? No, treated as intercolonial telegrams.
656. Which way do the English telegrams come? Some come by the direct line from Adelaide *via* Bathurst and Wagga Wagga, and others *via* Melbourne.
657. But when they were receiving such a large number of words; did the *Herald's* message always come through first? Invariably on arrival of Suez Mail at Adelaide.
658. Although the *Empire* telegrams came by the direct line? I thought you were speaking of the Suez line. Then the *Herald's* message always came first, because the message was in first at the Adelaide office.
659. You don't know how the agencies of these papers are conducted, so that one may be in advance of the other? No, I am not acquainted with their arrangements.
660. You have not been there when the Mail has arrived? No.
661. I want to know how it was that the *Empire* messages have been delayed at Wentworth? I am not aware that any delays have occurred there, except in two cases,—one case in November, and the other in December last.
662. Had any explanation of the delays been given—I think there was one telegram for the *Empire* delayed at Wentworth for three days in December last? No, there was no telegram delayed there three days. That was a telegram which came here three days later than the telegram published in the *Herald*, and it was said to have been delayed at Wentworth; but such was not the case, because that message was only twenty-eight minutes passing over our lines. From the time it reached our officer at Wentworth, to the time it was delivered in Sydney, only twenty-three minutes elapsed.
663. Do you know when it was lodged in Adelaide? No, I do not know that. We can only deal with our own department.
664. You have had complaints as to the delays of messages? Yes, we have had some.
665. I suppose you have made inquiries at the Adelaide office? Yes, and received explanations.
666. Have you ever heard it alleged that Reuter exercises an undue influence over the English line? I have heard it alleged, but I don't think it is true.
667. Your department has no control over it? No, we could not have any control over it.
668. But do you see how Reuter could have an undue control? I don't see how it is possible he could exercise any undue influence, because I don't think the English Companies would allow such a thing, or the Indian Government either.
669. For how many years has the operating and booking offices been under your control? For fifteen years.
670. Has it been the rule to send out all messages, irrespective of persons, with the utmost despatch? Yes.
671. Did you ever receive from Mr. Cracknell, or any one else, directions to give the *Herald* priority in the delivery of messages? Never.
672. Have you had complaints from Mr. Bennett of the *Empire*, on occasions of delays happening in your office? Yes, Mr. Bennett has complained; and whenever he has made a complaint, he always had an explanation.
673. What has generally been the cause of the delay? There has always been some good reason, either a thunder-storm, or an accident, or an interruption of the line, arising from the line being broken down. In no case has the delay been caused wilfully.
674. Is it the practice of the office to endeavour to accommodate all parties who have business with the office alike? We do all we can to accommodate the public, and every civility is shown.
675. Do you know that Mr. Bennett has made complaints of incivility? I am told that he has, but I am at a loss to know who the officers are. Certainly it cannot have been myself, or any officer I am acquainted with. I am not aware of any incivility. So far as I am concerned, I have always endeavoured to carry out the Superintendent's wishes in this respect, and I am sure every one will say that I have treated them with the utmost courtesy in everything connected with business.
676. How many words per hour is a fair average for an operator to receive? From 1,300 to 1,400 is a fair average.
677. What is the average time per thousand words, for the transmission of a message from Adelaide to Sydney? An operator would do from 1,300 to 1,400 per hour, and I myself have taken from 1,400 to 1,500 per hour, when the line is in good working order.
678. How long would it take to get through 7,000 words? About six hours.
679. Do you know of any instance in which the *Herald* has received so large a number of words as 7,000 in an English message? I am not aware of any instance in which the *Herald* has received so large a number as that.
680. *Mr. Robertson.*] Have you seen the operation of the Telegraph in any other Colony than this? I have seen the operation of the Telegraph Department in Victoria, and been all through the department there.
681. Do you believe there is greater expertness there than here? I think messages are quite as quickly disposed of here as in any other Colony.
682. And as accurately? Quite as accurately.
683. If the department here is looked upon as being asleep, there is no ground for it? I don't think there is any ground for it. I consider that the officers in this Colony are quite equal to the officers in any of the other Colonies.
684. And telegrams are dealt with as quickly here as there? Quite as quickly.
685. Any difference in the length of line would not materially affect it? It would not materially affect it, except where there is a defect on the line. If the line were working badly, delay would be caused.

686. Do you think if we reduced the charges there would be a greatly increased business? Yes, I think P. B. Walker, Esq.

687. What reduction? If the Government reduced messages to 1s. all over the Colony, and 2s. to the other Colonies, there would be a large increase in the business.

14 Mar., 1873.

688. Do you think the reduction would be advantageous in a pecuniary point of view? I do not think, looking at it for revenue, that it would answer at first, but in course of time it would pay.

689. Supposing we went on for ten years at the present rate, or at the reduced rate you recommend, what would be the state of matters from a pecuniary point of view? Taking into consideration the reduction in 1870, if we were to reduce the rate now to 1s. we should double the number of messages, and, by doing that, of course accommodate the public accordingly.

690. True; but I wish to know about the revenue? I don't think the revenue would come up to the present standard.

691. What would be the additional expenditure, supposing you had double the work, and assuming you make the reduction of which you speak? It would take an expenditure of about £25,000 or £26,000 more for new lines.

692. On a gross income of what? About £46,000.

693. I meant what would be the expense of additional employés, and so on? I meant the additional expense of increasing the lines.

694. What I meant was the additional working expenses? The additional working expenses would be about £3,000.

695. Not more than that? Not more.

696. Then, if we double the work, it will be a great success? Yes, of course, looking at it in that light; but then we should have to double the present lines.

697. I don't say anything about doubling the lines. You assume that it will only cost £3,000 more for the additional employés, and that the return will be nearly double? The cost of the additional staff would be £3,000, and the number of messages would be doubled, but I don't anticipate any increase of the revenue at present.

698. Then you would simply get more work? Yes.

699. *Mr. Tunks.*] But you think it would recoup itself? Yes, in the course of two years.

700. What new lines would be required? An additional line to Tenterfield, to Wentworth, and Albury, and also additional lines to Maitland and Newcastle.

701. *Mr. Robertson.*] Would not you carry the additional line to Tenterfield right on to the Border? Certainly, but we consider Tenterfield as our Border station. We take our line to Maryland, in Queensland, and call Tenterfield the Border station.

702. Have you an establishment at Maryland? No, we have no establishment there, but one at Tenterfield.

703. Have the Queensland people officers there? Yes, and that is our Border station.

704. Have you given consideration to a matter that has been some time before the public—the idea of having messages from Europe giving information of general value to the Australian communities; would it be desirable, or not, to have Government messages paid for by the whole of the Colonies, with a view of having accurate and reliable information of colonial importance? I have given some consideration to the matter.

705. Are you of opinion that that would be practicable. The idea would be that, at every station throughout the Australias, these general messages to come through cable should be posted up. The whole of the offices in Australia should receive the same message to come by cable, and be paid for by all the Colonies, and the information would be published at all the offices. That is the idea we are desirous of inquiring into? It would be practicable, but I don't think it would answer well, because it would take up a great deal of time to get that information, and post it at all the offices.

706. How would it take up time; it would come by cable? It would take a deal of time to transmit that information throughout the Colony and post it up at all the offices.

707. How long would it take? That depends on the length of the message.

708. Suppose 100 words? About ten minutes. If it were posted throughout the Colonies, it would clash with Press messages.

709. It would take precedence, being a Government message, and the Press could take it from wherever it was posted? It is quite practicable for such a thing to be done.

710. And would that involve any great additional expense to the department? It would involve a very heavy expense, if it was intended to be taken as a daily telegram.

711. No; say once a week; of course the wires we have got would carry the message, but would it require more employés? If the telegram were taken from London daily or weekly, it would have to be paid for in London.

712. No doubt about that? It would cost about £50 per week.

713. To be divided among all the Australian Colonies? Yes, supposing the message to be only 100 words.

714. *Mr. Tunks.*] That is 10s. per word? Yes.

715. *Mr. Robertson.*] Well, amongst all the Colonies £50 per week would not be very much? Not if it were divided amongst them all.

716. That is the idea—to have one Australian message to come here, and lead off to the various places and stations, and be posted at all the most convenient places? Yes.

717. What I want to know now is, whether it would cost a great deal to have this message copied and posted? I don't think it would make much difference oncé a week, but I considered the matter as a daily telegram; as a weekly telegram it would make little difference to the officers in the country.

718. Is there not some chance of making some arrangement with the proprietors of the cable to have these messages come through at a lower rate? I don't think it is practicable at present, but I believe there is some movement on foot in England to reduce the rates.

719. Suppose the Colonies of Australia were to subsidize this line, on condition that they sent messages at a very much lower rate—say at half the present rate—would there not be a great many messages come? Yes.

720. What proportion more? I think there would be double the number.

- P. B. Walker, Esq.
14 Mar., 1873.
721. Then in that case the Cable Company should be content with a low subsidy, if they had double the number of messages? They would merely look at it as a monetary speculation, and if the Colonies subsidized the cable they might feel disposed to reduce the rates in proportion.
722. The Telegraph Companies looking upon the cable as a source of income, would consider it from that point of view, and if they got double the work they could lower the rate for a very small subsidy indeed? I should think they would entertain a suggestion of that kind.
723. What should be the subsidy— $\frac{1}{4}$ for the $\frac{1}{2}$ reduction—do you think that would be fair? No, I don't think that would be fair.
724. Not in view of their getting double the work? No, I don't think so.
725. What do you think would be fair? I think if you gave them $\frac{1}{3}$.
726. That is to say, instead of a man paying 9d., you would give $\frac{1}{3}$, and the man would have to pay 4 $\frac{1}{2}$ d. Yes.
727. *Mr. Tunks.*] What is the cable capable of doing? About 300 or 400 messages per day.
728. *Mr. Robertson.*] How many do they do now? Not more than sixty or seventy. There is no difficulty so far as the cable is concerned. There are not more than twelve messages per day sent from this Colony.
729. Does the cable pay? Yes, it must be paying—the price is so high.
730. Have you thought of our having another cable from Normantown—an additional cable? Yes, I have.
731. I think the bed of the ocean has been surveyed, and found much more suitable than that over which the Port Darwin line passes? Yes, it is very favourable—a good mud bottom. Of course the coral will have to be avoided. There is some coral there, but there is a good bottom in the gulf.
732. *Mr. Tunks.*] It is when the cable rubs against it that the coral cuts? The coral grows round it sometimes.
733. *Mr. Robertson.*] Have you considered the importance of having a line there? Yes, I consider it very important. I would take it from the Norman mouth across to Timor, and to Bangoewangie. To Singapore would be a good line, and it would be desirable to carry out such a line.
734. At that place you mentioned—Bangoewangie—would you not then come into the hands of this Company? Yes, that is the difficulty.
735. Well, then you would have no competition? No doubt the best route would be by Bangoewangie, but then you would fall into the hands of the other Company.
736. Well, that line would be of no use. Do you think these two lines would pay? I don't think that they would pay at first without a subsidy, but after a year or two the two lines would answer very well.
737. Do you think, considering the importance of having a second line, it would be well for New South Wales to subsidize the second line? I certainly think so.
738. Has it come to your knowledge that in the country districts there is a complete want of confidence in the Telegraph Department, and particularly on the Gold Fields? No, I have not heard of it.

TUESDAY, 18 MARCH, 1873.

Present:—

MR. TUNKS,

MR. BURNS,

MR. WEARNE.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

John Fairfax, Esq., called in and examined:—

- John Fairfax, Esq.
18 Mar., 1873.
739. *Chairman.*] I dare say, Mr. Fairfax, you are aware of the objects for which the Legislative Assembly appointed this Committee. It was the desire of the Assembly that we should seek for information from gentlemen likely to be able to give it, on several points, with reference to our system of telegraphy, and report our conclusions after taking that evidence. The Committee have sought, first of all, to obtain the best information they can with reference to the line of telegraph to Europe. Will you be good enough to say what your opinion is as to the present rates charged for messages transmitted from England to New South Wales? I think the rates are too high. In fact, they are so high that it is quite impossible for any newspapers to continue to pay the charges, unless assisted by the Governments of the Australian Colonies.
740. I would rather begin with the general matter of telegrams, and we will deal with the newspapers afterwards, if you please. Is it your opinion that if the Government, by negotiation with the various proprietors of these lines, can obtain a considerable reduction of the telegraphic charges for messages, there will be anything like the same amount of money realized by the line as is realized now—would the increased number of messages be likely to realize the same amount of money? Do you refer to cable messages?
741. Yes? I have no doubt there would be a large increase in the number of messages. I myself would once a week send a cable message to England if the charge were reduced. I have only received one cable message from my son since he has been at Home, simply because the message costs £10.
742. You think if the Governments of Australia could bring some influence to bear upon the Companies holding these wires—could be induced to pay a subsidy, so as to induce these Companies to reduce their rates—you think that the money would not be all lost, but that there would be a considerable amount of increase in the business? Yes; I think if the price were to be reduced one-half, there would be perhaps double the number of messages, and there would be no loss to the proprietors of the cable line.
743. Supposing that the Australian Governments were to make some allowance—to offer the cable proprietors some subsidy—I presume that such subsidy need not be the full amount of the reduction. The subsidy offered to induce the lower rate of charge might be something between the present charge and the reduced charge; that is—supposing, for example, that those lines are earning £20,000 from the Australias, and supposing we were to obtain, by giving them a subsidy, a reduction in their rates of one-half, would not a subsidy of £5,000 (considering the probable increase of their business consequent on the reduction of the rates) be likely to tempt them to make the reduction? I think so, but I know so little of the Company that has established the cable that I cannot say what they would be likely to do. I have never paid attention to the subject.

744. Have you given your attention at all to the question of publishing in Australia a general message paid for by all the Colonies—I mean the whole of the Australias uniting to have a message sent—to have some kind of guarantee, not exactly of the accuracy of the messages, but of the rectitude of the persons sending them—that the various Australian Governments may unite in conveying information of that kind, forwarded in one message sent through the cable and distributed throughout Australia? I think if all the Governments unite and subsidize the line, there might be a very perfect message received every night—or morning rather. The messages usually come in about 2 o'clock in the morning.

John Fairfax,
Esq.
18 Mar., 1873.

745. Do you mean that we should give a general subsidy for all messages? Not all messages—not inter-colonial messages, for instance.

746. Do you mean that we should pay a subsidy on all messages from Europe? I mean that you might pay a subsidy on news in general for publication; and as to the mode of publication, that would depend on the arrangements to be made. The Government in each Colony may sell the message to the newspapers, or may give it to them gratuitously. They might do either. I should not object to a charge.

747. To-day, we have it announced by telegram in the paper that wool is 25 per cent. lower than it was in February last—that is a tremendous reduction? But the wording of that message is so constructed that I confess I do not understand it.

748. It might be that that message was so constructed as to be unintelligible—it might be that the message was sent with some object other than a desire to give the best news; and what I want to know is, could we not have some good authority on the other side of the water—some high officer—to telegraph daily, or weekly, or bi-weekly, news of that kind, such as the prices of wool, tin, copper, oil, all our great commodities of export; and also the prices of the leading articles of commerce that we import, and especially the fluctuations of our own funds—might we not have a message sent by some high and reliable officer, through the cable, at the expense of the whole of the Colonies; and when it landed in Australia, have it distributed to every station in the Colony, and posted up there, and then, of course, the newspapers could get it? Your Agent-General might arrange that. He is the man to do it for you; or a man in his department.

749. Do you think the thing would be practicable? Yes, I think so.

750. You see it could not be done by our Agent-General, because it must be done in concert with the whole of the Colonies, and the officer must act as the Agent of all the Colonies in this matter? A man of that sort would be easily found, I think.

751. What would be the cost? I cannot judge.

752. Would a salary of £1,500 a year be sufficient? That would be ample, I should think. Any man employed by the Agent-General, and living on 'Change, could do it. I have been on 'Change, and ascertained the prices of everything in the market, in ten minutes; but that is seven years ago.

753. You think it could be done? Yes, easily.

754. Then one general message would come through the wires to the Australias? Yes.

755. It would be paid for by the Governments of all the Colonies—that is the economical view of the matter: then, it would come to us from a person whose interest would be to send true messages? Yes. There is a question here, we shall come to presently—question 316—that I shall be glad to explain.

756. You incline to think, then, that these things are practicable—that there are two changes we might obtain with regard to our telegraphic connection with Europe: first, that we might, by paying a comparatively small subsidy, arrange for lower prices for messages generally; and the other is, that we might have a Government message sent to all the Australias, that might, as a rule, be regarded as thoroughly reliable? Yes; each Government paying its own expenses.

757. Yes, as we have had from Mr. Cracknell what the probable expense would be, I think we need not ask your opinion on that point—he would be more likely to know that than you? It would cost £10,000 a year.

758. But you think there would be no difficulty in carrying it out? No, I do not think so.

759. You must have thought upon the question of the charges for intercolonial telegraphy—I am not now speaking of the cable, but of intercolonial telegraphy—Can you suggest any improvement on that system? I can only say that, if the prices were reduced one-half, we should double the information published every day. We did do so when the reduction was made, some two years ago—or rather three or four years ago. Telegraphy is a very serious expense. We have paid the Telegraph Office, from 1859 to the end of last year, £14,989 6s.

760. You mean your newspaper establishment has paid that? Yes; and these telegrams were entirely from the Colonies, because our European telegrams were paid in London.

761. And you include in that the New South Wales telegrams—that is, messages received from different places within the Colony—such as the Hunter, Bathurst, and so on? Yes.

762. But I was inquiring of you with reference to the intercolonial telegrams—from South Australia, for instance? We have, for thirteen or fourteen years—until the late alteration—paid large sums for messages through from Adelaide to Sydney. Our information has been collected in Bombay and Galle, a reporter meeting the steamer at Galle, preparing a message on board the vessel, and sending it on by wire from South Australia here.

763. And you will include the expense of the Brisbane messages too? But there is not much expense in that.

764. But you sometimes have long messages from there? Yes.

765. I remember when that vessel was wrecked—I forget the name—you had telegrams about it from Rockingham Bay? Yes, from as far as the line reached.

766. You are of opinion that the intercolonial telegraphic charges are too high? Yes.

767. And that they might be reduced without any great sacrifice of revenue? I think private messages should be reduced by one-half, and Press messages by another half. We are your best customers.

768. With regard to Press messages: Supposing a paper belonged to Mr. A, and he had a message which was first lodged in the Telegraph Office, would you permit him to send as many words as he pleased, or would you limit him to a certain number? I think the Act of Parliament provides for that. "All messages shall be transmitted and delivered in the order in which they are received by the manager or other officer in charge of the station at which they shall be received. Except that messages relating to the arrest of criminals the discovery or prevention of crime or any matter connected with the administration of justice and all Government despatches when so required shall have priority over all other messages. And every officer offending against this section shall be liable to a penalty not exceeding £20 to be recovered before any two Justices." There is nothing in that about limiting the number of words.

John Fairfax, Esq. 769. But do you think there should be? No, I think there should not be, and according to your own Act—

18 Mar., 1873. 770. We don't want you to read us the Act. Do you think it is good—that's what we want to know? Yes, I do. I think the man who spends £300 or £400 per month in getting information, and who has his message placed first in the Telegraph Office, should get his message through first, as a matter of justice, rather than a man whose message does not cost 5s., and whose message is not placed in the office first. That is according to your Act, and your Act is just the same as the Victorian Act, save that the fine there is lower,—it is £20 here.

771. We don't want to know what the Act is, but what your opinion is? Well, your question refers to the past, and not to the present. The system is changed. We have daily messages now, and we therefore have no long messages now from Adelaide. We used to have an immense number of words prepared on board ship, and placed in the office at Adelaide, long before another message that had to be prepared in Adelaide, after the arrival of the steamer, could be prepared. That is as plain as possible.

772. It is your opinion that it is not necessary to limit the number of words to any person who first obtains possession of the wires? No, it is not necessary.

773. Would it have been necessary in the old state of things? It is entirely altered now.

774. Was it necessary then? We carried on a warfare with Greville & Company for thirteen years, and were only beaten three times, I think.

775. Then you say it was not an undesirable method of allowing the first come to be first served? I do not say that, but I say it was a system of competition. We had a perfect right to compete, and to get for our customers the best news we could, and the earliest news.

776. But the lines being Government lines, is it, in your opinion, right for the Government to permit the first person who obtains possession of the lines to keep possession of them by such an unbounded number of words as to prevent any other message coming through? I don't think we have ever had a message, short or long, that was not placed in the office earlier than any other message. If any other message had been placed in the office earlier than ours, it should have come.

777. But do you hold that—these lines being Government lines—a person who first obtains possession of the line may go on to all eternity, sending words through? I don't say eternity—that is a long time.

778. Well, for a day? Nor a day; but I will tell you what was done in New York. The reporters boarded ships, and made up their reports partly on board the vessels and partly on shore, and there was a keen competition. One person was preparing his message, but fearing that he should be disturbed and lose possession of the line, he gave them the 119th Psalm, and told them to go on with that; and then came his message.

779. And was that right, in your opinion? I don't give any opinion about it. It was competition.

780. Then as you are silent on the subject, I shall suppose you think it is wrong? You cannot allow it in future. The thing is changed.

781. With regard to the New South Wales messages, are you of opinion that the rates are too high in our own Colony? Yes, I think that they might be reduced with advantage to the Revenue, and, of course, to public.

782. Have you considered the question of the desirability of having another cable from Australia, for the purpose of being connected with one or other of the European lines? I think it is important that there should be another line. For instance, this question 316 refers to a case in which copper was quoted in the *Herald* at £79. Well, we did not believe it at the time, and we put a paragraph in the paper on the same day, cautioning the public not to trust the telegram, but to wait for further advices. We telegraphed to Melbourne and Adelaide about it, and the reply was that it was according to cable; and in the *London Times* of the same date copper was quoted at £82. We had no means of correcting our telegram, as the line was down for five days after it came through. That was the fact, and I have the papers here to show you.

783. You are of opinion that it is desirable our Colony should endeavour to influence the other Colonies to join in obtaining another line, say from Port Norman to where? Singapore I think. It is very important indeed. In the case I have just referred to the line was down for five days. It might be down for a month—we can't tell. Information I had from a gentleman who assisted in constructing the line to Port Darwin all the way through, was of such a character that it made me doubt of its being perfect.

784. In going to Singapore, instead of going by way of the Dutch settlement of Java, we should then come into another system of telegraphy, where we should not be at all dependent on the same Company? I think you must join the Company at Bombay or Galle,—I am not sure which.

785. We should have nothing to do with this Australian Company? I have not paid much attention to the matter; I can't say.

786. This would be quite a distinct line: at Singapore we should get into another system of telegraphs altogether? I can't say.

787. You are of opinion that our telegraphic business with the Mother Country, and our foreign telegraphy, is becoming sufficiently large to require that consideration should be given to obtaining the influence of the other Colonies towards getting another cable? I am sure we cannot be certain of getting correct information until we have another cable—two lines, in fact.

788. The Committee finding that, in some evidence (that they would much rather not have received), there were many matters you might like to have an opportunity of alluding to in your evidence, forwarded to you the evidence of Mr. Bennett. Is there anything relating to that evidence that you feel inclined to offer any observations upon? I will answer any questions; I had rather not touch at all the evidence of Mr. Bennett, but I will answer any questions upon it. Take, for instance, the 316th question.

789. I see that I asked Mr. Bennett—"Have you given consideration to the question as to whether or not the public is safe in having a system of telegraphy at such high charges that only a few people can use it—might this not lead to great advantages being taken by wealthy people? My opinion is, that as the thing is at present, with these enormous rates, it is injurious to the public rather than otherwise, because it enables people to interfere with market prices. This has taken place with regard to copper, and may take place in many ways." Then I asked—"In what way with regard to copper? Telegrams were published in Sydney, stating that the price of copper was much lower than it really was. This had the effect of lowering Peak Downs Shares. In one case copper was represented as worth only £76, instead of some much higher sum, and Peak Downs Shares came down from £9 to £4. That represented the destruction to capital to the extent of half a million of money." That was the statement of Mr. Bennett. Have you any proof of that being true?

790. It is only the testimony of the gentleman who said so; we know no more of it? I cannot con- John Fairfax, Esq.

791. If you have any wish to contradict it? I am not going to contradict the evidence of Mr. Bennett; I shall put in my own evidence, and that is all. In our English telegram, on November the 25th, Wallaroo Copper is quoted at £79. In the same paper we say: "It is stated in our London telegram of Saturday that the price of copper was £79; our last quotations, dated London, 16th November, gave the price at £88; the fall therefore is considerable. While we see no reason to doubt the accuracy of the quotation given by Reuter, we yet would counsel holders of shares to act with caution, and await a confirmation of the report, which we intend to obtain to-day, if possible." On that same day, the 25th November, we sent the following telegram:—"From John Fairfax & Sons, to Register, Adelaide.—Is seventy-nine pounds (£79), London price for Wallaroo Copper, correct? Reply immediately. Sent 9:50 a.m. November 25th. To the Officer in charge of the Telegraph Department, please send this telegram through immediately.—F. C. BREWER." The answer to that was—"From Andrews, Thomas & Clark (the proprietors of the *Adelaide Register*) to J. Fairfax & Sons.—Our telegram distinctly says seventy-nine (£79)." After that the wire was down for five days. Our next message was published on 2nd December, in which it states: Wallaroo Copper, £90." We had no means of ascertaining the correctness of the first telegram. Melbourne and Adelaide both replied that the quotation was £79, and we had no means of ascertaining its correctness. If you had a file of the *Times* here, and looked at the issue of the 23rd November—the day our telegram was sent—you would see Chilian Copper quoted at £83.

792. *Mr. Tunks.*] When you say the line was down for five days, do you mean the land line? I mean the cable.

793. The cable ceased to act for five days? Yes, for five days.

794. *Chairman.*] Is there any other matter that you wish to explain? No, that is the only thing. On the 25th November, the *Melbourne Argus* quotes "wool, oil, tallow, steady; hemp firm; Wallaroo copper, £79; tin drooping." The *Argus* has this on the same day that we published it, and there is no contradiction or caution of any kind in the *Argus* as we had in the *Herald*.

795. Is there any other part of the evidence you have seen on which you wish to speak? I would like to make some observations. My name occurs a good many times in this evidence, but it is not worth while referring to except in one case, in which Mr. Bennett says that Mr. Cracknell was the servant of the *Sydney Morning Herald*. Now, I can only say this, that I never asked a favour of Mr. Cracknell in my life; I have never asked a favour of Mr. Walker; I have not been fourteen times into the telegraph office; I am not an intimate friend of Mr. Cracknell's; I have never asked him to dine with me; and if he had been an intimate friend, I think I should. I have treated him as a Government officer, and have never asked a favour of him. There is a good deal in this evidence respecting some arrangements that were made for sharing telegrams, but these things occurred thirteen or fourteen years ago, and I have the whole of the correspondence which took place with Messrs. Hanson & Bennett on the subject. There was a dispute arose, because we chose to have a second message, giving greater detail, than they thought they could pay for. They were very angry at this, and I agreed that the whole matter should be settled by laying it before Mr. Charles Kemp; but they declined that, and the whole matter passed out of my mind. I forgot the whole thing until I saw it here; and I don't think it is worth raking up again here.

796. Have you nothing more to say with regard to Mr. Bennett's evidence? Well, I think it is a very fine piece of fiction.

797. *Mr. Burns.*] Since you have had the direct telegrams from Europe by the cable, any necessity that might be supposed to exist for limiting the number of words obtained from Adelaide on the arrival of the Mail has been removed? Yes; when the Mail arrives in Adelaide—or in Melbourne, as it did last time—we don't care about getting more than 500 words. All the great facts are anticipated by the daily message.

798. Do you wish to put in that statement of the amounts you have paid to the Telegraph Office? I don't think this is quite correct as to the first three years. It so happens that we did not open an account with the Telegraph Office for the first three years, and so I have not got the amounts for those years.

799. If you like to hand that in, you can do so, or you can get a correct statement and hand in to the Committee? Mr. Cracknell can supply it. From the beginning of telegraphy here up to the present time, we have paid to the department over £15,000.

800. *Mr. Tunks.*] You have stated, in answer to a previous question, that the charges for messages sent through the cable are too high? I think that they are high, because the institution of telegraphy is to a certain extent injured by the high charges.

801. Is it not a fact that great risk exists of the destruction of the cable, it being laid in unknown seas? No doubt of that—2,000 miles from Adelaide to Port Darwin.

802. Would it not be right for the Company to endeavour to recoup themselves in the beginning for their outlay? That depends on circumstances. A man may build a house that costs £50,000 instead of one that costs only £10,000.

803. You think that they would repay themselves better by reducing the charge? I think that the South Australian Government have got a white elephant, and I think that they know it. I think the Delegates knew it who were up here the other day.

804. Would it not be cheaper to telegraph by cypher? We have 3,000 cyphers. Thus, in to-day's paper there is upwards of half a column; for instance, "oil and tallow steady"—that is in one word; "hides and leather high" or so much per pound—that is one word; "flax is deficient," or abundant, as the case may be. By this arrangement we get the news cheaper, of course, but even then the charges are high.

805. Can others read the cypher? Nobody else knows the meaning of the cyphers but Reuter and ourselves, and of course the *Argus*, who get them also.

806. Would it be better for the Government to get a good telegram? I think the whole of the Colonies should unite, and get a daily telegram of political and commercial news.

807. Would this not entail upon the Colonies a large expense? You don't mind entailing it upon the newspapers.

808. I had rather you would answer the question? Yes, it would entail considerable expense.

809. Would it not be a thing likely to increase in expense? I think not, though we might some day have the Queen's speech spoken, say this afternoon, in our papers to-morrow morning. This would be very expensive.

John Fairfax,
Esq.
18 Mar., 1873.

810. Would not lengthy telegrams become necessary to us if we found the public paying for them? Yes, they would.

811. Having regard to the influence which newspapers possess, is it not likely that the expense will increase? Yes; I don't think you should subsidize newspapers.

812. What should we do with these telegrams? Stick them up in the Exchange, and let them be copied by any one.

813. As a matter of opinion, would the question as to a large reduction in the cost of telegrams depend to some extent on whether the lines were capable of doing a larger amount of work than they now do? Yes, when you have two lines you will be safe. If you had a line to the north as well as to the south you would be safe.

814. That is not the question. If the cable is capable of sending 100 messages a day, could the price be reduced, and the increased work be done? You must have extra lines. One cable would not be sufficient to bring and take all the messages to and from these Colonies, when it becomes popular and cheaper.

815. Then, with two cables we shall have a reduction in price, and a greater certainty of receiving messages? Yes.

816. And we should be furnished with more reliable information? Telegraphy is in its infancy. We don't quite comprehend it yet, but we shall know more about it a few years hence. There are difficulties as to agencies and so on. We had agents in Suez, Bombay, Ceylon, and the Sound, for many years, and messages were sent from one to the other. All this has now been done away with, but then the expense of the present arrangement is far greater than the other was.

817. Is not that inevitable from a first effort of this kind,—that the Government, having invested in this venture, should be anxious to secure a return? Yes, the South Australian Government. It is the South Australian Government. It will no doubt be a benefit to them having this cable. They are cultivating the land, and bringing population there, and in course of time that Colony will be twice the size of New South Wales. It must become populous, for they are populating at both ends.

818. But then it is probable that the Colony will be separated? Perhaps so.

819. *Mr. Wearne.*] Of the two modes—the Government subsidizing the line, so that we might get messages cheaper; or the Government having a message sent every day: of the two, which would you prefer? The cheapest, as far as we were concerned.

820. But which would be the best? I think, if the Governments were to unite and have a message every day, it would be better than trusting to private individuals. The message would be more likely to be correct; as the Chairman said, it would be a more reliable message.

821. You think the message should be sent by some officer appointed for that purpose? Yes, it should be a Government appointment. Mr. Reuter has the wires of the World in his hands, and there is no doubt he has the control of a large amount. The wires of Europe, India, and everywhere, in fact.

822. Did you ever get to know why this £79 was given as the price of copper? You see the *Times* of the same day shows that copper was about the same price in London. There was only £3 difference.

823. Was the telegram correct then? It was correct within £3. Every one connected with the trade knows that the market in London is higher or lowered—by some methods about which no one knows much. Take, for instance, the Wolverhampton iron market. The fluctuations are sometimes very rapid. The market, I suppose, is “bulled” and “beared” in that as in other things.

824. I am not speaking of what would be best for you as the proprietor of a newspaper, but what would you recommend for this Colony? I would recommend having a message every day, the expense to be shared by each Government; and, as I said before, either make it common property, or let the newspapers pay a certain price per word for it, but I don't think that would be satisfactory.

825. It is contemplated to reduce the charge for colonial telegrams to one shilling for ten words? Yes, so I understand.

826. Do you think Press messages should be one-half of that—6d. for ten words? Yes, I think so. If it were 6d. instead of 1s. for ten words; instead of having that number of words we should have double the number. Our object is to give news at once, and first if possible, and to give the best we can, and as much as we can afford.

827. Do you think the wires we have now would be able to supply these increased messages? Yes, I think so. You have two wires now from Adelaide; one from Wentworth, direct to us, and two from Adelaide, through Melbourne, direct to us; and I heard there was another coming from South Australia, through Melbourne, and that it had got a good part of the way.

828. The Government intend to adopt the reduction from the 1st of October, and it seems that the sum of £3,000 will be ample to enable the department to keep up with the increased work? Yes.

829. I think there was an arrangement that no one firm could send more than 1,500 words in one message—was there such a regulation? There was some attempt made in Melbourne at such a limitation, but it was not carried out. When we first began telegraphing we employed Gordon & Gotch, and we continue to employ them occasionally, and for some years I fancy that a portion of our message came through to them, and a portion to ourselves, but there was no limit of 1,500 words. We generally had from 4,000 to 5,000 words, and anything else very important we had next morning. We left it to our reporter to send through what he thought necessary. He used to go to the Sound every month, and we left the matter entirely to him.

830. Then there was no regulation in Adelaide preventing your sending more than 1,500 words at one time? I never heard of it—or rather, I have heard of it, but it was never done.

831. Why then did you employ Gordon & Gotch? Well, we were afraid it might be carried out, but it never was carried out, as our account with Mr. Cracknell will show.

832. You paid all the bills for these telegrams? Yes.

833. You feared this regulation might be carried out? Yes, but we could have managed it in any way. We could have said “Send 1,500 words to the *Herald* and send 1,500 words to the *Mail*.”

834. *Mr. Burns.*] Do you think, Mr. Fairfax, if we had this public telegram, that the newspapers would go to larger expense for telegrams for themselves in addition? I can't say until the time comes. If the public telegrams were sufficient for the public they would be sufficient for us. The *Times* gets its own telegrams as well as Reuter's.

835. Would any other papers do the same? The *Times* has correspondents in every large city, and gets its own telegrams, for greater accuracy.

836. The receipts from the wires would not decline much,—the papers would still have their own messages? I think so, but I cannot say at present. John Fairfax,
Esq.
837. It is a mere matter of conjecture? Yes.
838. Has your attention been turned to the fact of the reduction of the rates in Melbourne? No, it has not. 18 Mar., 1873.
839. Are you aware that the business there has been doubled? How long has the charge been reduced?
840. Since 1869? Yes, I believe the business has increased, but no doubt the expenses also have largely increased.
841. Don't you think, if the charges were reduced here, the business would be doubled? I think so. You would want a large establishment for your clerks.
842. But at present the clerks in the country are only partly employed? So I suppose.
843. The principal additional expense would be in the city of Sydney, and in the provincial towns? So I suppose.
844. Do you think that the Press in Melbourne took more advantage of the telegrams than they do here? Do you mean steal them?
845. No, use the wires more? Yes, I believe so, in consequence of the rates being so low.
846. *Chairman.*] One point I would like to have your opinion upon. Do you not think our Colony is a considerable loser by not sending Home any authentic telegram of news to England? Yes. I cut out of a file of the *Times* two telegrams, which appeared in the *Times*, and the whole of the news in those telegrams was Sydney news, but the heading of the telegrams was "Australia, Melbourne." I cannot tell how it is done, whether by the Government or by anybody else, but our Government ought to send a message.
847. I think it must be sent by the Government? I should think so. Excepting the message we send every month, and the letters of the *Times* correspondent in Sydney, there is no news goes to England from this Colony. Pamphlets and messages about Victoria are sent everywhere, and we do nothing. There is a matter about Mr. Cracknell, to which I should be glad to refer. I wish just to say that, of course, there have been sometimes delays occurring in a large department like the Telegraph Department, but I must say this for Mr. Cracknell and Mr. Walker,—we have never complained of any error without having the thing rectified at once, if it could be rectified. Sometimes the mistake has occurred yonder. One night a long message was coming through, and there was a delay, about which we were angry. We asked Melbourne to speak, and it was said that the telegraph-master, at some place on the line, was gone to his supper. I think, in the department here, all mistakes are corrected as soon as possible.

THURSDAY, 20 MARCH, 1873.

Present:—

MR. RODD, | MR. TUNKS.

JOHN ROBERTSON, Esq., IN THE CHAIR.

Mr. John Roxburgh Miles called in and examined:—

848. *Mr. Tunks.*] You are employed in the Telegraphic Department? I am.
849. How long have you been employed in that department? Twelve years.
850. Will you state to the Committee what are your particular duties? I am the chief receiving-clerk of the department. Mr. J. R.
Miles.
20 Mar., 1873.
851. And what are your duties? I receive all the messages which come through the office.
852. What do you do with them? After they leave my hands they go upstairs to the operators, to be forwarded on to their destination.
853. What is the mode of procedure: are they passed on in the order in which they are received? I receive them at the window, mark them with the price paid, and the hour of lodging. They are then sent up the elevator, where they are received, and go on the file in their regular order.
854. You send them up to the operators: do you send them by some one else? No; they are sent up by a tube or basket made for the purpose. There is a kind of box that fits into grooves in this flue. The messages are put in the box, and the box is taken up when I give the signal. They are taken out of the box upstairs, and are put on the files in the order they are received.
855. Who puts them on the files? A probationer upstairs.
856. Then, as far as you know, they may be put on the file in a different order to that in which they have been received? There might by accident be one such case in a thousand, but I never knew of any case of the kind.
857. But they are out of your sight? Yes.
858. Then how can you say that they are filed in regular order? Because I know the routine of the office, and I know that this duty is performed regularly.
859. Have you got any written instructions to guide you in the duties you have to perform? No, I never had any.
860. Is it specially a part of your business to pass these messages on in the order in which they are received? It is.
861. And the instructions are to despatch them in the same way—in the order in which they are received? Certainly.
862. Is the time at which it is received marked on each message? It is. I time them all myself.
863. Are you in a position to say whether the time on which a message is received from the country is also marked on it? Yes. The time a message is received is always marked on it.
864. By whom? By another booking clerk in my department, who attends to this branch.
865. That is a matter then with which Mr. Cracknell or Mr. Walker do not interfere? Not at all. When a message is received from any up-country station, it is put on the file, and comes downstairs to be entered by the booking clerk. It is then sent away in its regular order.

- Mr. J. R. Miles.
20 Mar., 1873.
866. The messages are sent up in a box—is that worked by machinery? No; just simply by a rope. It is hauled up and let down by a rope.
867. Do you know of any case where a message has been delayed? There may, as I say, be a case in a thousand, from accident; but such a thing is of very rare occurrence.
868. What would be the cause of such a delay? It might happen from some new hand, in taking out the messages, leaving one behind in the box and sending it down again. In that way it would get into its wrong place, and would suffer some slight delay.
869. That is not what I mean. Has anything ever been said to you about passing messages on out of their order? Never—most certainly not—never such a thing.
870. Is any person allowed to remain in your office when messages are being received, except yourself? No; no strangers.
871. Are you acquainted with the mode of operation on the various lines of the Colony? No. I have nothing at all to do with that. I am only receiving clerk, and not an operator.
872. *Mr. Rodd.*] You say you have been twelve years in the department? Yes, twelve years.
873. Has the business of the department increased very much during the last twelve months? Yes, very much increased.
874. How many hours a day are you on duty? I have to be at the office in the morning at 8 o'clock sharp, and then my time for leaving in the evening is 6 o'clock; but I have to stop till 10 o'clock, in order to finish up my work. The business has so increased that I have been fourteen hours at the office daily for the last six months.
875. Has this ever been represented to the head of your department? He knows very well that owing to the increase of business I have been obliged to stop. This increase has been so great that I am obliged to stop every night in order to get my work through.
876. Have you any duties to do on Sunday? At home I have. I take work home with me to do on Sunday.
877. Have you any extra pay for this? Not for the Sunday work, but for the extra hours I am employed after 6 o'clock I receive 2s. an hour. I receive a salary of £250 per annum, and for that I have to attend from 8 in the morning till 6 in the evening, and then for the extra time I receive 2s. per hour.
878. Then, for the four hours after 6 o'clock you receive 2s. per hour? Yes; but I would rather not have it. I would much prefer if I could get away at 6 or 7 o'clock. 6 o'clock is the time the business ceases; no messages are taken in after that hour, so that even with the regular time, I could not get back home before 7 o'clock. Then to get to the office by 8 o'clock, I have to leave home at 7; and surely from 7 in the morning to 7 at night are quite hours enough. But unfortunately, I cannot, with the present rush of business, get the work done in time—it is utterly impossible. All my time till 6 o'clock is taken up at the window receiving messages, and I have no chance of making up my accounts until all this is over, and that is not till the window is closed at 6 o'clock.
879. *Mr. Tunks.*] Have you any holidays? No. Holidays are not known in our department. I have now got leave of absence, but I cannot get away until I have my back work brought up.
880. *Mr. Rodd.*] Are there any other officers of your department in the same position as yourself? All the others come at half-past 8 o'clock; but my situation is the most difficult, as well as the most responsible, for I have to do with all the cash received for messages.
881. Can you suggest any means by which you could be relieved from some portion of your work. No, not without the appointment of an extra staff of booking clerks; we certainly require something of the kind, for I am on my feet from the time I open my window to receive messages to the time I close it at 6 o'clock. This is too long a time for a man to be on his feet, and it is beginning to affect my health very much indeed. I find that my legs are giving way altogether.
882. *Chairman.*] You mentioned something just now about a basket, or a box: is there more than one? Yes, a second one has been added since we have opened the second office.
883. In this basket, by which you send up the messages, how many go up at a time? We send them up just as fast as we can take them.
884. But how many—a dozen, six, eight—how many? About six or eight at a time, just as they happen to come in.
885. Is there anything on the message to indicate which has been the first lodged by you? Yes, every one is marked. As fast as I can, I mark them; then, whatever there may be—eight or ten perhaps—I fold them up together, put them in the box, and call out to those above to haul up; they haul the box up, take out the messages, and then send the box down for the next lot.
886. You just fold them over, and do not tie them? No, they do not require to be tied, for the box is so protected that the messages cannot fall out.
887. But it seems to me that, by the plan you pursue in laying the messages one on the other, and then folding them over and sending them up, the message last received by you would be the one that came first to hand upstairs; whereas, if they were tied together in the order in which they were received by you, nothing but a wilful disarrangement would put them out of their places? I do not think that, for there can be no disarrangement if you take half a dozen messages, one immediately after the other, fold them up together, put them in the basket, and call out to haul up. When they get up, they are exactly in the order in which they have been taken.
888. But in regard to messages themselves, would it not indicate which was first received if they were tied up carefully in order? I do not think so, because of each lot sent up, the messages have all been received at the same time—within a few minutes of each other—two or three minutes, and all times in order of receipt, so no disarrangement can take place.
889. After it has come down, the box does not remain more than two or three minutes before it is sent up again? No, not more than that; generally about two minutes.
890. Will you say that in no case the time has extended to an hour or an hour and a half? I will. It is never more than three minutes, and more often two minutes, that the box is taken up. It is only kept long enough to give me time to mark them, and I am not very slow about it, and they are then sent up at once. It is part of my business to see them sent up at once.
891. The messages are all timed? Yes. I time them all myself.
892. In the case of a message coming here from Melbourne, say, is there any time marked on it here, so as to show the hour at which it was lodged in the Melbourne office? No.

893. Upon every message as you take it in at your window, you mark the time at which it reaches your hands? Yes.

894. You put them one on the other before you? Yes.

895. Then you fold them over and put them in the basket? Yes.

896. So that the first one that reaches you will be at the bottom, the next one will be above that, the next above that again, and so on until you come to the one last received, which will be on the top? Yes; but they are turned over and are sent up in regular order as timed on receipt. Each batch is received at the same time—that is, within a couple of minutes of each other. They are all marked together, and all marked with the time received. There are barely two minutes elapse between the receipt of the messages sent up in each batch.

897. The plan of having the lines subdivided gives you facilities for counting? Yes, but I never trust to that; I always count the words.

Mr. J. R.
Miles.

20 Mar., 1873.

TUESDAY, 23 MARCH, 1873.

Present:—

MR. GARRETT,

MR. TUNKS.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

A. Stuart, Esq., called in and examined:—

898. *Chairman.*] You have been for a long time connected with the commercial interests of this Colony? For upwards of twenty years.

899. I presume, therefore, that you have given some attention to the question of the telegraphic arrangements? I have.

900. We have desired, in dealing with the matters before this Committee, to keep apart the different phases of the telegraphic arrangements; and we therefore desire, first, to lead your attention to the larger and more important telegraphic business, namely, that of the communication with Europe. Have you considered the rates charged for messages, and whether, if a reduction could be made in those charges, there would be any considerable increase in the business of the European line? I think the rate of charges is rather high, and that a reduction to a more moderate rate would be followed by a large increase of business; but I don't know sufficient of the arrangements of the different Telegraph Companies through which the telegrams between this and Europe pass to know how they could arrange for a reduction. I know on some lines, even with the high tariff, they are so occupied that they cannot get through the work that they have to do. That, however, does not apply to the Australian line.

901. You know that the high rates are charged on the Australian line, which has little to do? I suppose the larger portion of them are.

902. Then, do you think there would be any difficulty with regard to the capability of that line for the work? I should think it could be done. I have no doubt whatever as to the effect of a considerable reduction in the rate largely increasing the business, but I am not personally acquainted with the Company, or rather Companies—for there are several Companies connected even with the Australian portion of the line—and whether the increase of business would not involve a large outlay among the Companies on the other side. It might put them to great inconvenience, and I think it is probable that they would keep up a high rate to choke us off.

903. But it is on the Australian line that the high rate is charged? Well, I fancy all the lines from Australia homewards have an interest in this one; but it is only a matter of conjecture.

904. Do you suppose a reduction of 25 per cent. would have the effect you speak of? I don't think so. I think the charges would have to be reduced 40 or 50 per cent.

905. And what then do you fancy would be the increase of the work? I should think it would increase fourfold.

906. Then a small subsidy would be necessary to obtain this reduction of 50 per cent.? I think if the Government, by subsidizing the line, could carry out a reduction of 50 per cent., it would be enormously productive to the line, but I don't see how the money would get back to the Government. The reduction would be immensely beneficial to the public.

907. It would be in the nature of a subsidy for a postal line; the Government does not expect to see it back directly? Just so.

908. Have you given attention to the advisability of the Australian Colonies going in for another cable, say from Normantown to Singapore, or to join in another way the European telegraph system? I don't think, at present, it is at all necessary. Of course there would be a certain amount of convenience, in the event of a break-down on one line, to have a second open, but I don't think the advantage would be sufficient to counterbalance the cost until some means were taken to reduce the charges. At present there are comparatively few cases in business which justify one in going to the heavy expense of a telegram to Europe. You can hardly send a telegram and get back an answer for less than from £12 to £20. You can get them cheaper than the Government rate, but even then the charge is heavy.

909. How can you get them cheaper? It is managed by the Companies, who undertake to transmit telegraphic information, having large codes, by which one word means a sentence. There are several copies of that code in Sydney.

910. Is that reliable? Oh, perfectly reliable. I will try and get you a code if you like to see one. I dare say I can have it here in five minutes.

911. Perhaps you will send it to us? I will write a note and get it for you now. It is well worth your seeing. We had a circular from the Amalgamated Company (the Oriental Company and Reuter's Telegram Company), in which they informed us that a certain word had been appropriated to mean a message from us to our agents in London, mentioning our agents. You will observe, in that way the saving is considerable. Instead of sending "Towns, Sydney, to Brookes, Cornhill, London,"—which is the shortest address you can give—the one word indicates the whole of that. They then offer to transmit messages of four words for £2 10s., and 5s. for every additional word. We could not send the same

A. Stuart,
Esq.

23 Mar., 1873.

A. Stuart,
Esq.

23 Mar., 1873.

message, extending over twenty words, for £10, by the Government rate. Their charge is therefore just about one-half the ordinary charge.

912. But the general public have not the means of availing themselves of that agency in the same way a large firm would do? It is equally open to them, but it would not be the same saving to them, because words could not be appropriated to them—the chief saving is in having one word to signify the address in both places.

913. And does one word mean both addresses? Yes, one word means from "R. Towns & Co., Sydney, to Robert Brookes & Co., Cornhill, London." Then this Company has an additional profit by using the telegraphic code. It might not be available in every instance. For instance, my message might be such as would not fit into their telegraphic code, but an immense number of messages would do so.

914. And this is as reliable as an ordinary mode of telegraphy? Yes, it is more reliable. The less words you have, the less room for mistakes there will be.

915. Have you given any attention to the telegraphic news as published every day here, in regard to the prices of the leading commodities, such as wool, tin, and copper,—and the leading articles of export from these Colonies; and also matters such as war, which would be likely to affect prices;—have you given any attention to these messages as published, as to whether they are usually reliable? You mean the messages published in the Press?

916. Yes? I think in the main they are tolerably reliable, but they sometimes are not.

917. Has there been any fair ground of suspicion that any intentional misrepresentation has occurred,—I don't want specific cases? I don't think there has been any intentional misrepresentation, but it is difficult for one to say. There has been misrepresentation I believe.

918. Has the misrepresentation continued for any considerable time, or has it been at once corrected? I think it is not generally of long duration. It cannot very well be, for if it is anything very startling its confirmation or correction is quickly obtained.

919. By what means? By some one's attention being called to the matter, and sending a message to ascertain the truth.

920. But that message would not become public—it would be known to one person only? Quite so.

921. An idea has prevailed that if the Governments of the whole of the Australian Colonies were to join in having a cable message relating to matters of the kind I have spoken of, it would come cheaply; it would be the only message through the lines; there would be some tolerably fair expectation of its being accurate, as it would be in charge of a man well paid for his work on the other side. It would be well spread throughout the Australias, because it might be posted at every Telegraph Office, at very little cost. The idea is that there would be a great saving, and more reliability in getting this message for the benefit of the general public, and we want to know what you think of a system of the kind, which would cost the Government something, but be of great benefit to the public? I don't think such a plan would be found to answer well. I think that the difficulty of any one person getting hold of all the information that it would be desirable to have communicated under such circumstances would be very great—almost insurmountable; and I think that there would be great danger of that one person being influenced by interested parties, or advantage taken of his ignorance on many matters—his necessary ignorance, allow him to be of as great ability as you could get. Probably while people here would look upon it that his telegrams would be exceedingly authentic, they would be more calculated to mislead than those subject to the correction of an opposition Press. I think far the best way of preventing any continuous wrong information would be by cheapening the charges for conveying telegraphic communication. The cheapening of the rate would enable the newspapers to have more reliable telegrams, and would also lead many persons to have information regularly on their own account, which would make it impossible for the newspapers to be parties to any wrong action in the publication of wrong information—that is, intentionally wrong information.

922. Then, the only thing to be gained by such a mode would be cheapness, inasmuch as one message would do for the whole? At present that is the case. I understand some of the newspapers combine together to get their information in the same way, and that one message transmitted is published simultaneously in each of the Colonies.

923. That is only in the case of certain papers, and a considerable number of newspapers have no messages? If you could get the tariff lowered, it would enable the same amount of information to be disseminated from many centres, instead of coming as it now does through one centre. By appointing a Government officer for the purpose of sending the telegrams, the information would still come through one centre, and be equally liable to be tainted—probably more so; but if the tariff were lowered, instead of the Press combining together we should get the information coming to many journals, and the one would correct the other.

924. Generally, your evidence then amounts to this—that if the Government do anything, it would be better to do it in the way of reducing the tariff of charges, rather than by any interference with the messages by any agent on the other side of the water? Yes, very decidedly.

925. What is your opinion about the intercolonial telegraphy—is there anything you can suggest as an improvement with regard to that? I think the tariff might well be lowered.

926. Do you think a reduction would cause much loss to the Revenue? No, I believe it would increase the Revenue.

927. Departing again from that matter, and referring to the Telegraph within the four corners of New South Wales—have you any suggestions as to alterations which it is desirable to make in relation to that? I suppose if the intercolonial tariff were reduced, the New South Wales tariff would be reduced also.

928. You think if the whole were reduced there would not be much loss to the Revenue? I do not think so.

929. Have you in your business had any occasion to find fault with the telegraph officers, on the score of discourtesy? No, not upon the whole. I have heard complaints, but I think, on the whole, the service, so far as it comes under my observation, is well managed.

930. Have you ever heard that telegraphic messages, put in prior to others, have only gone away subsequently to those others which were not put in first—has that kind of complaint been made? I have heard people sometimes complain, but I don't know of any case of the kind myself.

931. What is that book you have there? It is Bolton's "Telegraphic Code," compiled by Major Frank Bolton, Engineer at Chatham. It is published in London, by Longmans, in 1871.

932. And this is the code you have been referring to? Yes. For instance, the first word that has caught my eye here is "Belbin." That signifies "Assuming all you say to be correct." Take a word here, "Endeavour to obtain good freight."

933. What word expresses that? The word "Forlands." You observe how much this enables one to shorten a message. If I had a ship in London and wished to send home a message, I would use the word indicating our firm, and our agent's address, then the word indicating "Endeavour to obtain good freight," then the name of the ship.

A. Stuart,
Esq.

23 Mar., 1873.

934. *Mr. Tunks.*] But you see that this book being sold, every one can read your message? No doubt.
935. *Mr. Garrett.*] But you can adopt a number as well as a word? That would not be so short, and people would know in precisely the same way. We have a private code between us and our agent in London, and each word of that code signifies much more than what is here, because it is adapted to our own particular business. For instance: we have one word which, our agents sending to us, expresses by our code the following sentence with reference to wool:—"We have not offered your wools which arrived in time for these sales, having deemed it better to hold them over for the next series"; and other words are similarly adapted.

Edward Wrench, Esq., called in and examined:—

936. *Chairman.*] You have been a long time connected with mercantile business in Sydney? Yes, a long time—twenty years.

E. Wrench,
Esq.

23 Mar., 1873.

937. In the conduct of your business has your attention been directed to our telegraphic system? Of late years, yes.

938. The Committee are desirous of asking you some questions bearing upon the several points relating to telegraphy, and we first desire to have your views relating to the European telegraphic messages, and we should like to know whether, in your opinion, the charges are as low as is consistent with the revenue obtainable, or whether you can make any suggestion that the Government may endeavour to negotiate for a reduction of the rates? I should not like to pass any opinion on that matter without giving the subject more consideration. I have not considered the matter as to whether the business pays at a rate of £10 per message, or whether that charge could not be greatly reduced. That is a point on which I should not like to speak.

939. Do you think we should have more messages if there were any considerable reduction made in the charges? I think there would be a great many more messages; I think the messages would increase in number in proportion to the decrease in price.

940. Suppose the charges were reduced one-half? I think there would be three times as many messages.

941. *Mr. Tunks.*] Do you think the line could take them? I know nothing of the working capabilities of the line. I am speaking of the effect of a reduction upon the business. I should hesitate to send a message for £10, but I would send three £5 messages.

942. *Chairman.*] The Australian line is not fully worked, so there will not be much difficulty if we get over that: the great charge is upon the Australian cable? Yes, I have been informed that the great charge is upon the line from Java downwards.

943. You have perhaps had your attention called to the telegraphic messages which are published almost daily in Sydney by the newspapers, giving the prices and the news affecting the prices of commodities at Home—Have you any reason to think that these telegraphic messages are incorrect? I have known of instances, even in our short experience, of figures in messages having been wrongly stated.

944. Do you think that any great inconvenience has sprung from that? I think there might be great inconvenience. The transposition of figures, say 89 to 98, in the quotation of copper, for instance, might have a great effect here upon nervous people who would not take the trouble to satisfy themselves as to the correctness of the figures.

945. Some Members of the Committee have thought it might be advisable for the Governments of the Colonies to unite in having frequent messages sent over, giving important information with respect to commerce, as well as important information relating to war, or political events, or great loans, or anything likely to affect prices. Certain Members of the Committee are under the impression that if the Governments were to unite and have one message, to be posted at every telegraph station in the Colonies, at an inconsiderable expense, economy would be ensured, and we should thus have a more reliable telegraphic message at a low cost. What is your opinion of a scheme of this kind? I think if you could get the assistance of a gentleman who could combine large commercial information with such political matters as would be of interest, it would be a great institution, and well worthy of consideration by all the Governments. We should get the prices of consols, money, and of our principal exports, and such political information as would be of interest here; any startling information of any kind should come forward, and any circumstance affecting the Colony in any way should also be included.

946. What kind of man would do to conduct that business? You would want a very first-rate man to do it, and he should be paid very highly. I should think he should be a man whose commercial position stands as high as a bank manager, and he should be liberally paid, to place him above temptation.

947. What rate of pay would secure such a man? He should have £1,500 per year at the very least.

948. Would you have him in any way in co-operation with the Agents-General of the Colonies, or should he have a distinct office? If he were acting for one Colony he should belong to the department of the Agent of that Colony, but if for the Colonies associated he should be independent, as references to all the Agents-General would only hamper his movements and cause delay.

949. Suppose all the Governments joined in sending an Agent Home, and there was among the Colonial Agents at Home a difference of opinion as to what message should be sent,—should the Telegraphic Agent yield to such authority, and let a message he did not approve of be a part of his own cable message? He should collect his information from the best sources, and be responsible for it, but of course all information requested to be sent forward by any of the respective Agents should be included in his message.

950. *Mr. Tunks.*] He would be a kind of Reuter for us? Well, hardly. Reuter is a wonderful man; he appears to know all the ins and outs of European politics directly any move is made; but he pays too much attention to political matters to be useful to the Colonies, and if he sends the daily telegrams to the *Herald*, he certainly gives very meagre commercial information. Colonists do not feel much interest in the doings of the French "Committee of Thirty," so continually referred to in the messages.

951. *Chairman.*] We want the prices of wool and tin, and matters of that kind? Yes, and the state of the money market, and the price of consols. Consols is the barometer of finance, by which you may be safely guided in judging the course of the money market, and even important European politics.

E. Wrench,
Esq.
23 Mar., 1873.

politics. If there is a material fall in the price of consols, it is a sure sign that something unusual is happening. The price of consols furnishes one of the most extraordinary indicators the World knows, with regard to the price of money. We don't want to know here that "money is scarce" in London. That does not give us any useful information, for money may be difficult to get, and yet be only 4 per cent. That does not affect us. There are certain staple commodities we ought to get the prices of—such as wool, tallow, copper, tin, and so on, and half a dozen lines would express all we want to know.

952. Which we do not get by the present system? We do not get it by the present system. The message in the *Herald* of this morning was rather a good practical message. There was a little more information in it than usual. We want a person to send us a message whenever any circumstances occur that would be of interest to us.

953. *Mr. Tunks.*] Would not the competition for the news by the newspapers supply us with better information? It has not proved so yet, but it might do so if we were a large community, with a number of large newspapers.

954. You think we should get better information by adopting the plan shadowed forth by the Chairman? Yes.

955. Have we ever tried such a plan? No.

956. Then how can we judge? If we were a large community, with a dozen large newspapers, there would be competition; but between our present newspapers competition can hardly be expected.

957. *Chairman.*] They have such a system in Canada, have they not—an official telegram? I was not aware of it.

958. *Mr. Tunks.*] If we were to adopt such a system, and pay an Agent such a salary as you suggest, do you not think, considering the influence which the newspapers would bring to bear in order to enlarge the telegrams provided by the Government, that the system would become very expensive? No doubt it is a measure attended with a considerable expense.

959. Would the expense not be likely to increase much beyond what we now expect? Well, I think the Colony would get a return in the greater use of the wires. We should be creating a necessity of what is now used only as a luxury.

960. Do the newspapers not furnish us with such information as the people generally care about? No.

961. You speak in the interests of commercial men? Not at all; I speak in the interests of the community generally. We should get more reliable information, and as our business increased so would our revenue from telegraphic communication increase. For every pound you take off the cost, you would put on a large percentage of messages.

962. *Chairman.*] We have it in evidence that Government messages, or what are called so—that is, messages charged the regular rates—are much more expensive (more than 50 per cent. dearer) than the messages sent by commercial men. It is said that commercial men obtain information at a lower rate than ordinary men, by means of cypher? Such is the case; we economize as much as possible, as well as hide the meaning of our message. Even our London agent's name and address is known by a single word.

963. I suppose any person can do the same? Yes, all large houses use the cypher.

964. You think then that it would be a good thing to reduce the rates charged for cable messages—that, as far as cable communication with Europe is concerned, a great increase of work will result from the reduction of the charge? I undoubtedly do think so.

965. Are you of opinion, having regard to the intercolonial communication—that is, our communication with Adelaide, Melbourne, and Brisbane—that there is any need for a large reduction in the rates charged upon those lines? No, I do not think there is any necessity for a reduction, but I believe that the lower you reduce the rates the larger will be the amount of business done. The revenue would not suffer, though the instruments might.

966. How about telegraphy within the limits of New South Wales—would the rates here bear reduction? I think so, though the charge is not heavy now; it is moderate, I think, the rate for intercolonial telegraphy.

967. Would you be good enough to tell us whether you have had any occasion to complain of a want of courtesy or attention at the Telegraph Office? No; on the contrary, I have to pass the highest opinion in favour of the officials there. I have always experienced the greatest courtesy, and business has been performed with as much dispatch as possible. I was once placed in a very awkward position in regard to a very heavy matter, and on that occasion received very great assistance from the gentlemen in the department. I had some heavy sales effected for a person in the country. My message stating that the sale had been effected could hardly have gone, when I received a message stopping the sale. I replied—"Too late; message gone by wire." My friend in the country rather doubted this, and I went to the Telegraph Office for a certificate that the message had gone at the time stated, and it was given me that day in the most business-like way I ever saw, and with great promptness. It saved me from some disagreeable remarks which might have been made had I not been able to obtain such evidence. On every occasion when I have been to the office I have received every consideration.

968. Then the changes you would like to see would be the obtaining of a message from Europe, and the reduction of the charges; and you are satisfied with the courtesy and attention of the Telegraph officials—there is no difficulty about that? That is the sum and substance of my evidence.

969. *Mr. Tunks.*] I suppose, in addition to the courtesy and attention of the department to you, it is looked upon as honest by commercial men—as keeping information secret? It is; I have never heard a doubt expressed to the contrary—not a hint of such a thing.

970. And you mix a good deal among people who speculate and who use the wire freely? Yes, and I have never heard anything of the kind; I have never heard a hint of any person's telegraphic messages having been tampered with in any way.

971. *Mr. Garrett.*] You remember a telegram respecting the price of copper in London, which appeared in the *Herald*, and was supposed to be erroneous? Yes, I do, and it was never cleared up by the *Herald*.

972. It was a mistake? Yes, it must have been, but still it had a certain effect on the market. The *Herald*, in a note which appeared on the same day, said they would ask for a confirmation of the message, but if they got one it was never published.

973. Had it a bad effect on the market? Yes, it had for a time, though some people thought it must be a mistake.

974. *Mr. Tunks.*] On whose part was the mistake? On the part of the operators, I fancy. I once saw a message

message which was sent to Prince, Ogg, & Co., from their London House, in reference to two commodities. It was "one sold 74, wool from." We puzzled over it for some time, and at last made it out. It meant this,—“Ore sold 74, wool firm”—instead of “from.” The mere alteration of these vowels gave us the meaning. It was merely a change of vowels that made the difference.

975. *Mr. Garrett.*] But the error in the price of copper could have been easily rectified? Yes, and it was a wonder that it never was rectified.

976. *Chairman.*] Mr. Fairfax says that it was rectified some time afterwards, but that the line was down for some days? The next time the market price of copper was given, the proper rate was quoted, but I am certain that when the next quotation came there was no memorandum stating that that was the earliest opportunity they had of correcting the error that had been published, and which was probably an operator's error.

977. *Mr. Fairfax* put in a *Times* newspaper in which the same price for copper was quoted at the same time? That might be an error of type.

978. *Mr. Tunks.*] Or it would show that the person who sent the telegram took it from the *Times*? Yes, and it must have been taken by a person who was unintelligent, and knew nothing of the market.

979. *Chairman.*] The price given in the *Times* was not the same; it was the same within about £3 as the price published here by the *Herald*? Well, that shows that the error was not founded on the error in the *Times*. I have been very fortunate in my messages—they always come very clear.

980. *Mr. Tunks.*] But from the complicated nature of the business, some mistakes will occur? Yes; the mistakes generally occur in Java, and are made by the Dutch operators.

981. But still mistakes may naturally be expected? Of course.

982. *Chairman.*] No doubt mistakes are made in translating our language into Dutch? Yes; that is the way the mistakes are made; the messages, I am informed, are translated and retranslated.

983. Have you thought of the desirability or otherwise of having another cable from Normantown to Singapore, to connect there with the European telegraphic system? I think it would be of tremendous advantage to the Colonies to avoid the extreme Dutch ports, and then it would be an advantage to have a second line by way of Northern Queensland. That part of the present line across the Continent is liable to great danger from fires and blacks.

984. Should we have business enough for two lines? Well, I hardly think we should, at present prices; £10 is quite a prohibitory price, but the line subsidized by the Government, and arrangements made to reduce rates, would bring about a large business, which I think would pay.

985. *Mr. Tunks.*] But it would pay better if the charge were less? Exactly so. It is the same in all matters—railways—penny postage; people said the penny postage would not pay, but now it pays millions.

986. Then you think the present prohibitory price will not pay? Of course; a prohibitory price is a settler.

987. *Mr. Garrett.*] Comparatively prohibitory? The present price is comparatively prohibitory.

WEDNESDAY, 2 APRIL, 1873.

Present:—

MR. WEARNE,

MR. BURNS.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

Henry Prince, Esq., called in and examined:—

988. *Chairman.*] You have, I believe, been very largely connected with the trade and commerce of this city? Yes.

989. And must therefore, I presume, have had considerable opportunities of observing the working of our Telegraph system? In New South Wales?

990. Of all kinds that we have had? Yes.

991. Will you be good enough to tell the Committee whether you have had reason to find fault with the treatment you have received at the Telegraph Office—whether the officers have been deficient in civility, or have acted improperly in the conduct of the telegraphic business? Not at all.

992. You have no reason to suppose that they do anything unfair with regard to holding back a message, or pushing forward some messages before others which have a right to priority? No. Perhaps I have answered the question rather too curtly, as to whether I had any fault to find with the staff at the Telegraph Office. I have merely said “No.” I have no grounds of complaint, and I wish to add that the conduct of the officials of the department has always been most satisfactory. Our staff has received every attention from them; and a simple negative, or statement that I have received no obstruction, is not sufficient to do justice to the officers of the department. Both myself and all our people have received from them every civility and attention.

993. You have no doubt, in your large commercial arrangements, extending throughout the Colony, a good deal of telegraphing to the country districts of New South Wales? Yes; and I think few firms have more.

994. Are you of opinion that there would be a large increase of telegraphic business if the rates were lowered—do you think there is any complaint that the rates and charges are too high? No, there are no complaints; but, no doubt, if the charges were still further reduced, there would be much larger communication.

995. I am speaking of telegraphy within the Colony? Yes, within the Colony; the telegrams would be more elaborate.

996. And there would be more telegrams? No doubt.

997. Do you think the increase would make up for the loss of revenue caused by the reduction of the charge? That is quite theoretical; but if the reduction of the postage charges may be instanced as a precedent, I should say that a reduction of charges in the Telegraph system would lead to such an increase of business, that any reduction in the charge would be fully made up.

E. Wrench,
Esq.
23 Mar., 1873.

H. Prince,
Esq.
2 April, 1873.

H. Prince,
Esq.
2 April, 1873.

998. Then leaving that branch of the subject—Telegraphy within the Colony—do you think there is any thing to complain of as regards the intercolonial rates? Yes; I think there would be much larger Intercolonial telegraphy if the rates were lowered.

999. How much do you think they could be lowered? Probably about 33½ per cent.—about one-third.

1000. Now, going to the larger question of the European Telegraph. You have no doubt given the question of the Telegraph to Europe a great deal of consideration. Will you be good enough to say what your views are with regard to changes in that matter; if you think any changes would be beneficial, and, if so, what they should be? In the Telegraph system between this Colony and Europe?

1001. Yes, what we call our European line? You have finished with the question of Intercolonial Telegraphy?

1002. Yes, we have done with that subject. Will you now give us your views as to the European Telegraph line? No doubt the present line of Telegraph through Adelaide is of great importance to the mercantile community, but it is not by any means so serviceable as it would be if we had a second line, so that we might always depend on the communication being kept up. As it is, great loss and damage might be caused to business men by the line breaking down, and there being no second line. If we had a second line of telegraphic communication with Home, it would be of immense value to us as compared with our having but one line. In such a case, a large portion of the financial arrangements of the Colony would be made by wire, in the shape of arranging bank credits, &c.; whereas at present, having only one wire, we are afraid to depend on it, because an accident may happen just at a time when we want to use the line, and then would come a hitch. Having only one line, it would be necessary for a firm to provide against an accident to the line, and the only provision would be a large credit in London, available for such a contingency. You understand?

1003. I understand; they would lose the interest of the money? Yes, you see what I mean; and according to my view—and I think most commercial men are of the same opinion—the second line should be quite distinct from the present one. I have heard it mooted as being desirable; the construction of a line from the termination of the Queensland line, Normantown, to the head of the Roper River, and from there to Port Darwin. I should not suggest this route, but to go from Normantown direct to Singapore, where there is already one line to Europe, and a second would be arranged for if the Normantown and Singapore line is constructed. Of course that would be a very long distance, but there are two islands about half-way between these points—Borneo or Macassar—Borneo being the more distant one. Macassar is about equi-distant from each end, and it would be an excellent place for landing a cable. If we could have two distinct lines, and if such a route were established, there would be every confidence in the communication between Europe and Australia, and I think it would make wonderful alterations in the trade and commerce of the place, especially with regard to financial arrangements.

1004. In that case, would it be desirable to maintain the present prices, or, if a lower rate could be obtained, would that bring about such an increase of work as would make up for the deficiency caused by the reduction? There is no doubt that the present charge for telegraphic communication between Europe and Australia is too high for any great traffic, but there is an understanding between the several Companies—there are agencies appointed who pass messages by wire through the Government telegraphic medium, and there is an understanding by which these messages are always done in cypher. You send a message in cypher, and one of five or six words would be a paragraph. And, as a rule, it is impossible for the officials to understand whether it is cypher or not, because the word sent forms sentences containing sense. One word, for instance, will contain the names and addresses of the sender and consignee of a message. This is all according to a system now in force, and therefore I don't object to the charges made.

1005. You do not object? No. I should if I had to pay the regular charges. I think the prices to the general public are much too high—more than double what they should be.

1006. Are there not many persons outside the charmed circle, and quite unable to take advantage of the system you have referred to? Yes. A great many persons have these facilities for sending their messages at a cheap rate, but they are few compared to the public.

1007. Then you think the charges might be lowered? Yes, to the public; they are much too high.

1008. Have you given much consideration to the question of the published telegrams from the Mother Country, or to put it more correctly, the cable telegrams coming to the papers. Suppose one message were to come through from Europe giving the prices of staple commodities, informing us of things of a kind likely to influence commercial matters—giving us the prices of wool, tin, preserved meat, copper, &c., the prices of tallow, the prospects of war, and other matters likely to affect commerce. Supposing a telegraphic message of that kind were sent through as one message from Europe, and on its being landed in Australia that it should thenceforth become a public message and be posted at every telegraph station throughout the Australias, would that be a protection to the public against any attempts at misleading them by means of telegrams otherwise published? I don't think it would answer any purpose. I think the public journals as they publish the messages now, offer every information that is necessary. It would be better, perhaps, if the messages were more elaborate in their information.

1009. You think that they are reliable? Yes, I think so. There may be errors in manipulation, but I don't think there can be any misleading of the public. I don't complain, but I think that these telegrams would be more acceptable if they were more elaborate.

1010. As a matter of economy, could they not be more elaborate if the whole of the Colonies united in having one message sent out, and made it free to the public on its landing here. There would be only the one message through the cable from Europe? Do you mean to the Press?

1011. No, not to the Press, but to the Government? Of course the Government could get us a more elaborate message, and it would be more serviceable to the Colony. The Associated Press combine to get one telegram through.

1012. But the Associated Press cannot combine the whole Press. If the Governments could make an arrangement to have one officer charged with the business in London, one message would come through to Australia, and would be distributed here, and it would be posted here for the benefit of the whole people of the Colony? It would be but one message, and, as the Associated Press is now constituted, we have more than one message.

1013. How? I understand that there is more than one direct telegraphic communication from London to the Australian Press.

1014. Not to the Associated Press? The Associated Press, and the private Press.

1015. *Mr. Burns.* | There is the Associated Press and another? Yes; there are two sources of communication, and the one checks the other—we have had instances of their not agreeing, whereas if there were but one telegram, there would be no check upon it—we could not know that it was correct. The second telegram would be much more acceptable as a check upon the single telegram.

H. Prince,
Esq.

2 April, 1873.

1016. Then you think more reliance can be placed on the Press telegrams than upon a single telegram sent to the Governments of the Colonies, and you think we are pretty well off as we are? I think there is more reliance to be placed upon information furnished from two sources, if the two sources agree, than upon information coming from only one source. That stands to reason, I think.

1017. *Mr. Wearne.* | In reference to the working of the Telegraph system in our own Colony of New South Wales, you cannot give us any suggestions for its improvement? Yes, I think I can suggest some improvements in the detail of the Telegraph Office within the Colony. I would have a larger staff of messengers, and have the messages more promptly delivered. Whether there is a sufficient staff or not I cannot tell, but it is a fact that messages accumulate, and sometimes a message remains too long in the office before it is delivered.

1018. *Chairman.* | How long? I cannot tell, but a considerable time; not from any want of promptness, but from the want of a sufficient number of messengers to deliver them.

1019. *Mr. Wearne.* | Have you any other suggestion? I don't think so.

1020. You think, if we were to reduce the price of messages within the Colony the business would be better? Yes. People would enlarge their telegrams. Sometimes people cut their messages so short that it is difficult to understand the telegrams.

1021. Do you notice in the messages many mistakes that you have to have rectified? No. It is wonderful the few mistakes there are in the number of messages we receive. It is very rarely that there are any mistakes; and when there is one, it is easily adjusted. The message can be repeated, and when it is, in almost every case it is just the same as the first one.

1022. In reference to the intercolonial telegrams, you think that the price is too high? I think there would be more business if the price were reduced.

1023. As to the other line, you think it should be from Normantown to Singapore? Yes, *via* Borneo or Macassar—whichever you please.

1024. You think it would not be wise for the Governments to co-operate and get one message through? I think it would be very acceptable for the Governments to have one message through, leaving the Associated Press to have theirs. The one would check the other.

1025. Would it be well for the Governments to do that? As a large tax-payer, I should not object.

1026. *Mr. Burns.* | Do you not from your experience think that, if the charges were reduced fifty per cent., the business would be double what it now is? The more you reduce the price, of course the greater communication there would be, but whether it would bring in more revenue or not would be a matter of experiment.

1027. The revenue would increase in time? I have no doubt it would, but not immediately. The less the cost, of course the more disposed one is to elaborate a message.

1028. Do you not think that if a public telegram were got through, the Press would themselves get telegrams, which would in some degree be a check upon the public telegram? No doubt; it would be corrected by the Press, or *vice versa*.

1029. Have you not found that, in addition to the Press telegrams, a great many mercantile men get messages through on their own account? Yes; I get them myself.

1030. Don't you think it would be as well for the Government to get messages through giving the prices of the leading articles of commerce? I don't think a mere commercial telegram of that kind would do much good, but it would be on political matters that we should receive the best information.

1031. *Chairman.* | Would it not be better for a man with a small parcel of wool or tin to sell, to rely upon the Government telegram. The merchants can take care of themselves; but would it not be for the benefit of the small man? I think the information we receive from the Press as to the prices of our produce is fully relied upon, and deservedly so. It has proved itself to be as correct as possible, there being two mediums of communication, and one being a check upon the other; and where both agree, there cannot be a doubt as to their correctness.

1032. Supposing a Government telegram were posted at every station throughout Australia, would it not be likely to have a tendency to create more telegraphic business in these places—to cause people to make use of the telegraph more freely? It could only be of use in such a case as this—where a grower is sending produce to market, and sends a telegram to instruct his agent, in consequence of some information he has seen, to do otherwise with that produce than he had previously advised. It would do no good in the city, or where the public journals are readily accessible.

Charles Hayes, Esq., called in and examined:—

1033. *Chairman.* | I understand, Mr. Hayes, that you are connected with the Exchange? Yes, I am C. Hayes, Esq. Manager.

1034. And no doubt, in your position in the mercantile world, you have given considerable attention to the telegraphic system as far as it relates to this Colony? I have.

1035. I will put as briefly as I can the questions I wish you to answer, and I will first direct your attention to telegraphy between the four corners of New South Wales. Have you any reason to complain of the manner in which you are dealt with, as a matter of civility? I have not.

1036. Have you any reason to complain, or do you know of any complaints of unfair play with regard to the delivery of telegraphic messages—that is, of those coming in last being delivered first, or those coming first being kept back? No. I may say that I have had occasion to complain of delays on the Queensland line, but that was some time ago, and that led me to see Mr. Walsh, the Minister for Works in Queensland (who happened to be in Sydney at the time), to find out, if possible, if the delay occurred on the Queensland line, and I found it was attributed to the pressure of work on that line, as it passes through our tin country, and at the time land was being taken up the pressure upon it was enormous; there was but a single line, and a great increase of business.

1037.

- C. Hayes, Esq. 1037. That is over now. I spoke of delays in the delivery of messages, or favouritism—have you heard any complaints on that score? No, never.
- 2 April, 1873. 1038. Are you of opinion that the rates are unnecessarily high? Of course you must have revenue from the lines, but if more messages can be carried through and nearly the same money can be obtained, that would of course be a better state of things. I think that the rates now proposed are low enough. I don't know whether they are in operation.
1039. You had better speak of those now in operation? I think that a reduction might be made in the intercolonial rates.
1040. I am speaking of the rates within the Colony? You mean the inland communication?
1041. I want to deal with that first? Do I understand you to mean a reduction of the rates charged for messages within this Colony?
1042. Yes; would a reduction largely increase the business, without much interfering with the revenue? I think that at present is very doubtful.*
1043. You think if we reduced the rates that the revenue would be reduced? I think so.*
1044. Would there be a greatly increased communication? I don't know whether if the rates were reduced the business would be so considerably increased as to cause a considerable increase in the work of the department, and I do not think the revenue would be increased.*
1045. While you would like to see the rates reduced, you think it would decrease the revenue—you are in favour of a reduction of the rates? I speak only of the intercolonial rates.
1046. But of the rates within the Colony? I should like to see them reduced.
1047. But you think a reduction would be a loss to the revenue? It is a matter I should like to think a little over—it is an open question.
1048. With regard to the intercolonial communication, are you of opinion that we would have a largely increased business on the intercolonial lines if we reduced the rates? I think so.
1049. And are you of opinion that the reduction would be at the cost of the revenue, or that we should lose nothing? I think we should have an increased revenue.
1050. An absolutely increased revenue? Yes.
1051. Then, going away to the greater question of the cable messages to Europe, do you think the present rates are excessive, or that they are reasonable? I think that they are rather high.
1052. To what extent would you reduce them—I mean having regard to their paying? Are we dealing now with the rates from here to London?
1053. That is the question? Of course we could only reduce the rates on our own lines.
1054. I am speaking of the rates to London—do you think that they should be reduced? Yes, I think they should be.
1055. Do you think a reduction would cause a large increase of business, and would not cause much loss to the Companies? I think a reduction would be of advantage to the Companies.
1056. And if the Government were to offer some subsidy in the event of a loss to the Companies, you think the Government would never be called upon for the subsidy—is that what you mean? That is what I mean.
1057. Have you given any attention to the manner in which the telegraphic news is published in New South Wales—are you satisfied with its general reliability; I mean as to prices, and in all matters relating to commerce? I think they have been pretty correct so far.
1058. Do you think there has been on any occasion a misrepresentation for the purpose of profit? I do not think so.
1059. Do you think the news has ever been held back, while business has been done after the news has arrived? No. Of course we are all aware of the rivalry between the *Herald* and the *Evening News*; and I am aware that when the *Herald* received telegrams from Adelaide on the arrival of the mail, they were held over, to prevent piracy on the part of the *Evening News*.
1060. Has it ever struck you that telegrams of prices have been withheld, while certain persons have been well informed as to their contents, and other people have not? Not to my knowledge.
1061. Then you are of opinion that the telegrams as published in the Colonial Press are generally reliable, and that if any errors have occurred it has not been of an intentional or of an objectionable kind? I think so.
1062. I mean objectionable having regard to honesty and a desire to act fairly to all parties? I think that they have acted fairly.
1063. The Committee have had recommended to them by many witnesses a project to have a message from Europe by the cable, giving prices of commodities, and all matters relating to commerce, and likely to be of immediate use—likely to affect prices—information as to war and other important events. It is suggested that we should have a message landed in Australia, paid for by the various Australian Governments, and transmitted to every telegraph station in the Country, and there posted. The Committee have had the opinions of several witnesses to the effect that that one message, being a single message paid for by the whole of the Colonies, and then freely distributed everywhere throughout the Colonies, would be a means of making the Telegraph generally popular and used by the people. What is your opinion? I think that would be a very difficult project to carry out. I will tell you the reason. From whom is it proposed to obtain the information?
1064. A public officer—a man of high class,—paid a high salary to conduct the business in London? It would necessitate the employment of a staff in London to attend all sales of colonial produce, and you would have to arrange beforehand as to the articles to be dealt with.
1065. That would not be difficult? I think it would be a very difficult project to carry out—for instance, what would suit the mercantile community of Sydney would not suit Adelaide or Melbourne.
1066. Where is the difference? We are more interested in metals than they are.
1067. They have tin and gold? Well, they are slightly interested. I think the state of the metal market would be of far more importance to New South Wales and Queensland than to the other Australian Colonies.
1068. The Victorian people are largely interested in our tin and coal mines—shares are very extensively held in Melbourne? It is not a question of shares; it is the price of the metal; that is altogether outside of the share market.

1069.

* NOTE (on revision) :—When I gave this evidence, I was under the impression that the shilling rate for messages not exceeding ten words had been agreed to, and would shortly come into force, which is as far as I would go in reducing the rate for messages within the Colony.

1069. I am speaking of their interest because they have shares—they have an interest in the prices of C. Hayes, Esq. these things because they have shares? I don't think it is a project that could be carried out to the advantage of all the Colonies—not by one office, at any rate; there are so many questions outside of the market on which we should like to be informed. 2 April, 1873.

1070. Then you think the Associated Press telegraphy is a mistake? No, I think not.

1071. How is that? Because they have instructions from the various contributors what items of news to forward.

1072. But they send one message through the cable to all the Colonies, do they not? I believe so.

1073. And cannot the Government message be forwarded in the same way? There are many items sent in our telegrams which are quite useless to Sydney—I suppose you are aware of that.

1074. What is there—I should like to hear of one? Well, there are many. There is sometimes political information that is quite useless to us. It is money wasted to send it, in my opinion.

1075. We are not speaking of political information? You are speaking only of commerce—the markets.

1076. Or of things that will affect the markets. Suppose the Gladstone Government fell, and the other party came into power, that would be equally interesting to all the Australias, would it not?—Will you tell us something that would not be interesting to all the Australias, in your opinion? There are political events that may be interesting, but they may not be of sufficient interest to us, worth the expense of telegraphing.

1077. You mean to the Colonial Telegraph? No, I am speaking of the English Telegraph.

1078. I am afraid I have not made myself understood. It would be one cable message—it would be sent as one message from London here, and the project is that this Governmental telegram should be posted free in all the Colonies? I want to point out the difficulties. It would not only necessitate the employment of a staff in London, but of agents in different parts of the World. You must have an agent in Paris, and another in New York, and other cities, subject to the control of a London department, from whom they must receive their instructions.

1079. *Mr. Wearne.*] Go on? I am of opinion that these are matters best left to private competition.

1080. You think it is better to rely on the Press? Yes, I think it is better.

1081. *Chairman.*] You think that as we have one or more newspapers receiving telegrams, and the same in Melbourne, one is a check upon the other,—I presume that is your view? Plainly speaking, I think the information supplied, if this suggestion were carried out, would not be so reliable as the telegrams we receive now.

1082. And the reason is that we have now different messages to compare with each other, and that it would be impossible for the united Governments to make such arrangements as to have a staff large enough, throughout the different markets of the World, where it would be important to have telegrams from,—that is what you mean? Yes.

1083. *Mr. Wearne.*] Of course we want to improve our telegraph line. What would you consider the best means of improving the telegraphic communication within our own Colony? I only received my notice yesterday morning, and am quite unprepared to give an answer to that question. If I had been informed as to the nature of the questions I should have to answer, I should have posted myself up.

1084. I only want your impressions; and if you know of anything that should be suggested to the Committee they are willing to accept your suggestions? I cannot suggest anything at the present moment.

1085. Would a reduction in the rates be a benefit to the Colony? I think so. I think the Intercolonial rates especially should be reduced.

1086. *Mr. Burns.*] Your own telegraphic business has been confined chiefly to messages direct to England, or between the Colonies, has it not? Messages between the Colonies.

1087. Your attention then has been more particularly drawn to them? Yes.

1088. More than to the others? Yes.

1089. And your opinion therefore is that, if there were a reduction in the charges upon those messages, there would not be any loss of revenue? I think not.

1090. Do you think there would be any gain? There would, I believe. I should not like to say there would be double the present business, but there would be a very considerable increase.

1091. Your attention has not been so much turned to messages within the Colony? No, not so much.

1092. You cannot say so much of the reduction there then? No.

1093. In the Exchange you meet most of the leading merchants of Sydney? I do.

1094. And you hear discussions among them on commercial matters? Yes.

1095. Having reference to what you have heard, do you think that the Telegraph Department here is managed in such a way as to give satisfaction to the mercantile community? I have never heard of any complaints.

1096. Do you think that more messengers are wanted? I think that the department is rather short of messengers.

1097. Do you think the department on the whole gives satisfaction? Yes.

1098. Supposing an Agent were appointed in London to send out information in the way already described, would he require a large staff to collect the information? I am sure he would.

1099. He could not send out the information unless he had a large staff? No, he must have a large staff, not only in London, but out of London.

1100. That is one of the great difficulties you see in the way of getting a public telegram? Yes, that is the greatest difficulty.

1101. *Mr. Wearne.*] The newspapers have not that difficulty? No, they have Agents all over the World.

1102. *Mr. Burns.*] Reuter, I believe, has thirty or forty clerks in London? Yes, a very large staff. An Agent would have to be in a dozen places at the same time, to send his telegram with despatch.

1103. And then the telegram would not be so reliable as the Press telegrams now are? I don't think so. It would not be an improvement.

THURSDAY, 3 APRIL, 1873.

Present:—

MR. BURNS,

MR. WEARNE.

JOHN ROBERTSON, Esq., IN THE CHAIR.

Thomas Reynolds James, Esquire, Manager of the Telegraphic Department in Victoria, called in and examined:—

- T. R. James, Esq.
3 April, 1873.
1104. *Chairman.*] In your position in charge of the lines of telegraph in Victoria, I presume you must have had opportunities of knowing something of the working of our lines in New South Wales? Yes.
1105. In conducting the business between Victoria and New South Wales, have you found reason to believe that our lines are worked satisfactorily? Yes.
1106. Have you not had occasion to complain of their management or working? No, I have had no reason to complain, neither are there any grounds for supposing that the lines are mismanaged.
1107. Before we enter upon more general matter, could you, so far as your knowledge of them enables you, make any suggestion that would be of advantage with regard to the working of our lines, by way of improving their working? I may say, from what I have seen of the working of the New South Wales Telegraph Department, that you have not sufficient wires and hands.
1108. What kind of hands? Operators, clerks, and messengers.
1109. What do you think we lose by that insufficiency of hands in Sydney? The business is not conducted with the despatch it would be had you additional wires, but I understand that provision has now been made to meet this requirement.
1110. As it is in Victoria probably? As it is in Victoria—on circuits where there is sufficient wire accommodation.
1111. What is the difference between our staff here and that in Victoria? In Victoria, in the Melbourne office alone, we have seventy-six operators, clerks, and messengers; here I believe you have about forty-eight altogether.
1112. We have not so much business to do perhaps? No.
1113. You think on the whole we have not made sufficient provision for the business we have to do? Yes.
1114. *Mr. Wearne.*] Is there anything else you can suggest besides the insufficiency of hands? You require more wires. I observed, while in the office here, that where you have one hand to do certain work we have two in Melbourne, and consequently we can do it with greater despatch. In fact, you are altogether too cramped in the office accommodation as well as the number of hands. The main secret of success in telegraphic business is despatch, and without sufficient appliances you cannot have quick despatch. The office accommodation you have is totally unfit for the business you do. Your revenue is about equal to ours; certainly we have cheaper rates, and a larger number of messages pass over our lines.
1115. *Chairman.*] Are you of opinion that the employment of a greater number of hands would make such an improvement in the amount of business as would reimburse us for the extra expense? Certainly. It is so in Victoria. I have noticed that with regard to our principal stations in Victoria, that the quicker the despatch the greater the increase of business.
1116. This quickness of despatch is only to be obtained by strengthening the number of hands at the principal office? Yes; and provided there are more wires, I do not say you require it so much throughout the country, but in Sydney and the principal stations.
1117. Is there any other suggestion you can make with regard to New South Wales? I do not know that there is. Your system of management is the same as ours, and I believe some of your operators are just as expert as most of ours.
1118. With regard to intercolonial telegraphy, has your attention been drawn to the manner in which the Press messages have been forwarded on the arrival of the English mail at Adelaide: it has been alleged that favouritism has been shown to one newspaper over another newspaper? I am convinced there is not the slightest foundation for such a complaint. I am sure no favouritism has been shown.
1119. Was there not some kind of arrangement, or implied arrangement, or regulation, or understanding, that no message of more than 1,500 words should be sent for any one agent or newspaper? That rule applied to South Australia and Victoria only. As South Australia sent messages, so we were bound to receive them. I believe, in respect to English messages, before we had direct cable communication, South Australia limited each newspaper to 1,500 words; but that could be easily evaded by addressing each message of 1,500 words to different news agents.
1120. It was so evaded? It could be so.
1121. I presume, however desirable such a rule might have been at that time, it is scarcely necessary now, when we have a direct telegram almost every day? No.
1122. The number of words in each direct telegram do not reach more than about a hundred? A hundred or a hundred and fifty. I think it only right to say that when the New South Wales newspapers received their English messages from Adelaide, before direct communication was established, we had frequently, owing to the direct line between Adelaide and Sydney being interrupted, to receive their messages by way of Melbourne; and, as proof that there was no favouritism shown by the department here, I have often received memoranda from Mr. Cracknell and Mr. Walker, urging on me the necessity of facilitating the transmission of the *Herald* and *Empire* messages—more frequently the latter.
1123. There was no favouritism, one against the other? No.
1124. In your opinion, it is a mistake to suppose that there has been any favouritism? Most decidedly.
1125. Of course it is a matter of little consequence now, except as to the character of our officers? It would be impossible without forging the records of the office, which will show that as messages are received so they are sent. It is impossible to do it without altering the time at which the messages were received and sent.
1126. Have you had similar complaints in your Colony? Yes.
1127. Complaints of some messages going away sooner than others? Yes.
1128. Have you had inquiries on the subject? We have had departmental inquiries.
1129. What has been the result? We have always satisfied the complainant that there were no grounds for any suspicion.

T. R. James,
Esq.
3 April, 1873.

1130. If there was anything of the kind, it was accidental? There was never anything of the kind.
1131. Will you be good enough to say how, in Melbourne, you transmit messages from the gentleman who receives them to the operator—by means of a lift, as we have here? No; we have different arrangements. Our operating-rooms and receiving-rooms are on the ground floor. The messages are received from the public by the receiving clerk, and the time of receipt being noted they are dropped through a small opening at the side of the receiving-room into the operating-room. They are taken from there by a collector, who places them on files for transmission, and sent to their respective stations in the order in which they were received over the counter. As they are received from the public so they are transmitted, and each message is timed when received and when transmitted.
1132. In all probability, unless by some accident, they are sent in the order in which they are received? Yes.
1133. How do you send out your messages? Some on horseback and some on foot. The distant messages are sent on horseback.
1134. You must have given much consideration to the question of charges? Yes.
1135. What is your opinion as to the present rate of charges for messages, having reference to the number of messages, the utilization of the lines, and the probability of revenue? I will give you the business between Victorian stations only, exclusive of intercolonial messages, in 1869 under the old rate, and in 1872 under the shilling rate. I must tell you this is exclusive of the value of messages on Her Majesty's Service. Here the Telegraph Department receives payment for Government business: in Victoria we do not; we merely value them and pass them free; we receive no consideration at all for our Government business.
1136. *Mr. Burns.*] Does the value of Government messages appear in any way in the accounts? No, we treat them as free messages. In 1869, the number of private messages between Victorian stations was 194,991, under the old rate; the revenue, £24,154 7s. 8d. In 1872, the number of private messages, under the reduced rate, was £493,537; revenue, £31,544 14s. 3d.
1137. What was the increased cost of the staff necessary to carry on this great increase of work? There was an increase of over £7,000 in the revenue between 1869 and 1872, and the increased expenditure for the additional staff, &c., amounted to about £5,000.
1138. In fact there was a profit to the department, though the public had the advantage of this great accommodation? Yes. I have here a statement, which shows not only the information I have just given, but also the returns for the intervening years, and the amount of intercolonial business during the same period. (*Handed in. Appendix D 1.*) The reduced rate for intercolonial messages from 6s. to 3s. for ten words, came into operation on the 8th August, 1870. You will see from the return, that since that time there has not only been a very great increase in the number of messages between Victoria and New South Wales, but also a considerable increase in the revenue during last year. The number of messages from New South Wales to Victoria, in 1869, under the old rate, was 13,540, and the revenue £5,750 2s. 5d.; from Victoria to New South Wales, 13,949 messages, revenue £5,840 1s. 3d. In 1872, under the reduced rate, the number of messages from New South Wales to Victoria was 29,393, the revenue £6,769 0s. 8d.; from Victoria to New South Wales, 29,148 messages, revenue £6,693 8s. 3d.
1139. *Mr. Wearne.*] What has been the extra expense? There has been no increase of expense here, I believe.
1140. *Chairman.*] Are you of opinion that we might go further in the way of reduction? Certainly I am.
1141. With anything like the same result? Yes; I believe that if you reduce the intercolonial rate from 3s. to 2s., with a shilling rate throughout your Colony, you would in a short time show a large increase.
1142. You think, in fact, that we could utilize the lines a great deal more, and that the revenue would not suffer if it did not increase? Just so.
1143. And that the increased revenue would be nearly if not quite equal to the increased expense? Yes. When the reduced rate became generally known.
1144. Are you of opinion that it would be more? I am of opinion, judging from experience in Victoria, and from the fact that your population is increasing, that it would be more.
1145. *Mr. Wearne.*] What ought we to charge to Adelaide, if we charge 2s. to Victoria? 3s. I believe in a uniform rate and equal division, irrespective of length of wire, except in extreme cases, such as the Port Darwin, and the line from Wentworth to Tenterfield in this Colony.
1146. *Chairman.*] We should like now to have some information as to the cable lines of communication. No doubt you have given your consideration as to the advisability of having a second line of cable. Of course it must be advisable; but as to the necessity for it and the probability of its working so as not to be a great loss, what is your impression? I think we should have two cables, but I am rather doubtful whether the second would pay. If you take the returns so far, since the opening of direct communication as a guide, I do not think there would be sufficient business to pay for a second cable unsubsidized.
1147. Probably, if there is another cable, a subsidy will be required from the Colonies? Yes, I think so.
1148. Have you given any consideration as to what the amount of that subsidy should be? I have given it some consideration. I think it need not be more than £25,000 a year; I refer to the present cable. If you reduce the charges at all you must make the rate sufficiently low to bring it within the reach of the public generally.
1149. If there were two lines, a subsidy of £25,000 a year would bring the charges down to what rate? I think to one-half the present rates.
1150. Of course you are aware that the present line to Europe is in the hands of several Companies, but that one Company bags greatly more than half of the present charge? The present Company receives a little over one-third.
1151. Do you think that if there were another cable to Singapore that Company might be brought to reason? I think so; the charges are very excessive at the present time.
1152. Do you think, as a commercial matter, it is prudent for this Company itself to keep up the charges so high? There is no opposition, and that being the case there is no inducement to reduce the charges.
1153. Would they not receive more money at a lower rate? I think so. I am sure they would do more business if they were to lower the rates.
1154. We have been told by a merchant here, of very considerable financial experience, and who uses the telegraph line very much, that if there were two lines there would be greatly more business, because people would send messages by the cables which they are now afraid to do for fear the line might be down; but if there were two lines, so that they would always be able to have communication, they would make their financial arrangements by telegraph, and in that way greatly increase the amount of business done by the cables?

T. R. James,
Esq.
3 April, 1873.

cables? I quite agree with that. I consider a second line indispensable. It would compel the present Company to reduce their charges. I believe that if a Company were formed to erect a line between Normanton and Singapore, the charges would be low; and then the present Company would be bound to reduce their charges accordingly.

1155. Irrespective of lowering the charges, this gentleman says that business men dare not rely now for their payments in Europe by telegraphic communication, lest the one and only line might be down; but if there were two lines, they would take the risk of both being down, and would do a vast amount of financial business through the telegraph? Yes, I think his views are correct.

1156. Have you given any consideration to the publication of telegraphic news in the Colonies after its arrival, as to whether there is reason to believe that the information forwarded here is faithfully given, not on the part of the telegraph officials but on the part of the agents who forward and publish it. Are you of opinion that the news is as full and well intentioned as it well can be? I think the news we have received so far has been most unsuitable to the Colonies generally; it is quite foreign to our interests; in many cases we have received news that we take no interest in at all. The agent who has had the compiling of the news appears to me to be unacquainted with our wants.

1157. Are you of opinion that, however he may have misconceived the kind of news we want, the thing has been honestly worked, and that no advantage has been taken by misrepresentation purposely? I have no reason to suppose that there has been any intentional misrepresentation.

1158. Have you considered the possibility of there being established, if the Australian Governments would unite, periodical cable messages, one message for the whole of the Australias, to be forwarded by some person employed in that behalf in the Mother Country, or elsewhere: have you considered whether it would be possible to carry out a system such as that—I mean that it should be a free message, freely spread throughout the Australias, and posted at every one of the telegraph offices? Yes, I am in favour of that, but I am not in favour of supplying the Press with free messages. I believe that if a free message is to be received at all, it should be sent to all the telegraph stations in the Colonies, and posted at once, just as the wind and weather reports are at present. The Press could copy and publish it just as they might think proper; but let this general message be received at Adelaide and sent free to the chief cities in the different Colonies, and from them retransmitted to all the local stations, to be posted for the information of the public generally. I believe that would have a great effect in popularizing telegraphy, and it would give every person the benefit of direct European news. Every man would have the opportunity of reading the message, without being obliged to buy a paper containing it. If the charges were reduced, I would leave the furnishing of public news to private enterprise; but if there is to be a free message, it should be posted everywhere and not be confined to publication in the newspapers.

1159. Have you given any consideration to the question of the expense of such a message? Yes; I believe a good daily message of (say) forty words could be procured and generally distributed among the telegraph stations, for from £8,000 to £10,000 a year, including the cost of the agency in London, which I would put down at £1,500 or £2,000 a year.

1160. What, in your opinion, would be the effect of such a message as this, sent daily, or two or three times a week, upon the habits of the people with regard to telegraphy? I think telegraphy would become more generally known, and it would tend to increase the business.

1161. Popularising telegraphy by these means would, you think, largely increase the telegraphic business, and in some degree reimburse the outlay of £8,000 or £10,000 for the free messages? Yes; I think each Colony would receive an equivalent indirectly for the amount expended in receiving this cable message, or would be reimbursed to some extent at any rate.

1162. *Mr. Wearne.*] If we were to subsidize the lines, I presume it would be on condition that this free message came through? If you did that it would be better still; you would then reduce the charges for the benefit of all.

1163. *Chairman.*] You are of opinion that by having a free message coming through daily we should not reduce the use of the lines, but on the contrary popularize them? Yes; the time occupied in forwarding a message of fifty or a hundred words would not be worth considering.

1164. Would there be any local expense? No.

1165. Would we not be likely to require some means of information from other parts of the World as well as from London? The Agent in London would compile a message, giving information from all parts of the World.

1166. London is the proper place to get the whole thing from? Yes.

1167. Reuter's messages do not seem to give us what we want? I have noticed that the messages recently have been much better than they were. It appeared to me that Reuter was not informed as to our requirements.

1168. *Mr. Wearne.*] We might make arrangements with Reuter, telling him the kind of message we require for all the Colonies? Yes.

1169. Do you think we could so arrange it that the message would be suitable for all the Colonies? I am sure you could.

1170. And that all the Colonies would join with New South Wales in subsidizing the line? Yes, no doubt they would.

1171. *Chairman.*] Might not South Australia make some difficulty about sending these free messages to all the other Colonies? I would suggest that South Australia should be paid her proportion from Port Darwin to Adelaide.

1172. You would treat that as a cable? Yes, to Adelaide.

1173. And then it would be all fair? Yes.

1174. Messages going through to Queensland would probably create business which would in some way compensate for the expense? Yes, I think so.

1175. On the whole it would not be worth while cavilling at the amount? No; I would suggest that each Colony should contribute according to its importance and population.

1176. *Mr. Burns.*] Have you in Victoria the system of amalgamating telegraph offices and post offices in operation? Yes.

1177. Do you approve of that system? No, not at important offices.

1178. What has been your experience as to the working of it: have you found that it has led to difficulty in getting the business done—telegraph officers stating that their time has in some degree been taken up in attending to postal business? Yes; and *vice versa*, if there is any delay in the Post Office business they throw it upon the telegraph, and other departmental difficulties which are only known to those engaged in working the lines.

1179. Do you think there is really in the end any saving of expense to compensate for the inconvenience? T. R. James, Esq.
I do not think so—not at the principal offices. At small offices, where messages are few in number, the telegraph master's time is not fully occupied, and I think it is just as well that he should attend to the postal duties, in which cases such stations should be placed in sub-circuits. 3 April, 1873.

1180. Has the practice of appointing local telegraph officers to be postmasters been discontinued in Victoria? No. There have been a few exceptions; but as a rule, telegraph officers are invariably appointed in charge of the combined offices.

1181. When the telegraph rate was reduced, in 1870, did you find that the departmental expenses were increased? The expenditure was met by increased revenue.

1182. On the whole, the increase of departmental expenditure was slight? Yes.

1183. Did you find that the additional expenditure was principally necessary at the head office? Yes.

1184. In the country the operators were not fully employed? No, except at the important offices.

1185. *Mr. Wearne.*] Supposing two lines of cable were laid, would you recommend the subsidizing of the two, or only the one? I think if we had two, there would be such competition that the charges would be lowered without any subsidy.

1186. If the second line was a Government line, of course we would have to subsidize it? Yes.

1187. Do you think the whole of the Colonies would be willing to subsidize the second line? That I could hardly say. It appears to me that New South Wales and Queensland are more interested in the second line than Victoria. South Australia, I am sure, would not contribute. That is my private opinion.

1188. *Chairman.*] Assuming that business could be done with two lines which is not done now with only one, would not that be useful to the Melbourne people also? Yes. They would send it by the most expeditious and cheapest line, and that, I am inclined to think, would be the new line.

1189. Do you think mercantile men in Melbourne, as we are told mercantile men here would do, would transact financial business by telegraph if there were two lines—business which they are now afraid to do in that way when there is only one? Yes, I am sure they would. If there were two lines more care would be exercised in the transmission of messages. At present there are a great many mistakes. Merchants in Melbourne have often said that if the transmission of messages were more accurate they would send more; but very often many messages sent in cypher are quite unintelligible when they reach their destination.

1190. *Mr. Wearne.*] Is not that in consequence of using the cypher? No; it is owing to carelessness in transmission from one station to the other, chiefly, I believe, over the Dutch lines, for want of having expert and intelligent operators throughout the lines. If we had an opposition line, the present Company would take care to have this defect remedied.

1191. There are two propositions before us: one to subsidize a second line, and the other to get a public message for about £8,000 or £10,000 a year. Which would you recommend us to adopt? Unless you subsidize the line so as to make a decided reduction in the charges, it would be far better to receive a free message. If the cost of a message be merely reduced from £9 to £8, it would make very little difference; but if you can bring the charges down one-half or one-third, then I say subsidize the line, but it would be more satisfactory to establish a second cable, as it would give two distinct lines of communication to Europe.

1192. *Chairman.*] Do you charge a mileage rate for delivering messages in Melbourne? Yes; over one mile, sufficient to cover cab-fare.

1193. Have not your messengers their own ponies? We deliver messages within a mile on our own ponies, but not beyond a mile.

1194. What do you charge beyond a mile? One shilling per mile, according to the Corporation regulations for cab-fares.

1195. You make no provision for it yourselves? No; we send our messenger with a cab, and charge sufficient to pay the cab-fare. We do not charge for the messenger's services.

1196. *Mr. Burns.*] You have some arrangements for night messages and Press messages? Yes. Between 8:30 a.m. and 6 p.m. we charge 6d. for ten words and under, and one half-penny for every additional word. Those are the charges for ordinary Press messages. But in order to induce the Press to send their messages after the ordinary business is over, we charge, between 6 p.m. and 8 p.m., 1s. 6d. for 100 words, throughout the Colony, and 6d. for every additional fifty words.

1197. You receive Press messages chiefly between 6 and 8 o'clock? Yes, when the lines are clear. The wires are in fact idle between 6 and 8 p.m. Between 8 and 11 p.m., that is, after office-hours, our officers receive an allowance for overtime, so much per hour, according to their rank. The charges then are for 100 words and under, 2s. 6d., and for every additional fifty words and under, 1s. Between 11 p.m. and 8:30 a.m. any person can send a private message for a minimum charge of 5s.

1198. *Mr. Wearne.*] Have you operators always in the office? Yes, at the Melbourne office.

1199. *Mr. Burns.*] Have you not found that the business you receive from the Press has enormously increased by reason of these facilities being afforded? Yes, very much so. We also send messages on Sunday, under certain conditions.

1200. *Mr. Wearne.*] Have you any other suggestion to offer to improve our Telegraph Department? No.

1201. Have you inquired as to the salaries paid here? Your salaries are much lower than ours—they are very low; in fact, they are too low. Telegraphy is skilled labour, and consequently the officers must be men of character and intelligence.

1202. *Mr. Burns.*] How long would it take a person to learn? An operator, to be of any use in the Sydney office, or in Melbourne, requires at least five years to become expert; there are exceptions; from three to five years.

1203. They should be tolerably well educated and intelligent? Yes.

1204. *Mr. Wearne.*] I have heard that persons have read messages from the noise of the instruments? Yes; all expert operators can do so.

1205. I mean strangers outside? The sound would be unintelligible to strangers. To show how low our charges are, I may say that I find they are lower than in any other part of the World. Over a length of line of 508 miles, we send a message of twenty words for 2s., whereas over the land lines in India they charge 8s. 6d. for 600 miles. I will put a "Comparative Statement of Overland and Cable Telegraph Rates," showing the working of the Victorian lines, and of the different sections of the land and cable lines between here and London. (*Handed in. Vide Appendix D 2.*)

1206.

- T. R. James, Esq. 1206. *Mr. Wearne.*] In your opinion, now that telegraphic communication is so prompt, is it so necessary to subsidize the mail as it was before? No, certainly not.
- 3 April, 1873. 1207. In your opinion, would it be more profitable for the Australias to subsidize the telegraph lines, and not to pay so large a subsidy for the mail route as they do now? Yes. I may state that some months ago I sent in a report upon that matter; and I suggested then that it would be far better to subsidize the telegraph, and let the mails be brought out by the swiftest steamers, giving a premium for so many days—paying by results, in fact; there is now little interest manifested in the arrival of the European mail, all important news being received by telegraph.
1208. What is the usual time now occupied in sending a message Home? From fifteen to twenty hours. The shortest on record is two and a half hours from Melbourne to London.
1209. And from London to Melbourne? About the same. The average speed is from fifteen to twenty hours, which is very good.
1210. Do you think the public generally could avail themselves of any system of cypher. It appears that a select few use a cypher, and it does not cost so much? Yes. That is one thing I thought of. If you had a free message, you could have a cypher arranged, and let each chief office have a key, and translate and forward to each station.
1211. Forty words would then stand for two hundred? Yes.
1212. Could there be a cypher invented for the general public, so that there need not be so many words sent? It could be done; but merchants, as a rule, in Melbourne—and I believe it is the same here—use their own cypher. I do not think the general public would use cypher.

FRIDAY, 4 APRIL, 1873.

Present:—

MR. BURNS, | MR. TUNKS,
MR. WEARNE.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

Mr. John Fyfe called in and examined:—

- Mr. J. Fyfe. 1213. *Chairman.*] Will you be good enough to state your business? I have been in business as an engineer.
- 4 April, 1873. 1214. I presume you must have given some attention to the matter of Telegraphy in the Colony? I really have not given much attention to the question, nor to the different opinions upon it. I have no experience of it myself, not being in business now; but I have an impression, derived from the opinions which I hear, that the charges are too high for the general weal.
1215. You are aware that we have now telegrams from Europe published in the daily papers? Yes.
1216. Do you think there is any general reliance upon the accuracy of these telegrams, or is there an opinion that they are not as accurate as they might be? The only thing I can speak of is that I have seen in the public prints a complaint from the *Empire* newspaper, respecting a monopoly, as they call it, between the *Sydney Morning Herald* and the *Argus*.
1217. Have you felt confidence that the telegrams from Europe have been published in good faith; or, on the other hand, have you thought they were not reliable? I dare not venture to say that they have not been in good faith.
1218. It has been recommended by some of the witnesses before the Committee that the Governments of all the Australian Colonies should unite in having one cable message daily or bi-weekly, as the case may be, direct to Australia from England, and that on its arrival here it should be distributed throughout the whole of the Australias, and posted at all the telegraph stations without cost, the Governments of Australia paying for the cable message. What would be your opinion as to the suitability of such a course as that? My opinion is that that could hardly be mended—that that is the proper way.
1219. *Mr. Burns.*] Have you heard, in your experience, any complaints against the Telegraph Department of Sydney? I have not, that I could rely upon.
1220. Have you heard observations about the price of telegrams to England being too high? I have repeatedly heard it as a complaint from people in business in the middle walks of life. The fluctuations in my own line of business have been so great recently that reliable news has been of great importance, and there have been considerable complaints of the expense of getting English telegrams.
1221. In your experience as an engineer you come in contact with a good many engaged in business in metals: have you heard them say that if the telegrams were reduced in price, they would have far more of them? I have not the least hesitation in saying yes, I have heard them say so.
1222. Is that one of the reasons why you think it would be well to have a public telegram of prices posted at the different telegraph stations? Yes, it entered my mind very forcibly that that would be a cure for the evil, immediately the question was asked of me.
1223. The persons you have heard complain of the cost of telegrams being too high between here and England are chiefly persons in a moderate way of business, who would do more in the way of telegraphy if the charges were moderate? Yes, that is the class of people I have been mixed up with. I have heard even a large house complain. Now is the time that direct telegrams are of great value, when there is such a great fluctuation in the prices of metals at Home. Pig iron was never known to be at the price it is at present.
1224. Do you think that if the charges for telegrams between here and England were reduced about one-half, the business would be doubled? I believe it would—speaking without premeditation.
1225. *Mr. Tunks.*] Are the persons you allude to as being desirous of increasing their business in this way, persons who have a regular trade with England? Yes.
1226. Has it ever struck you that people can get a large amount of information by a system of cypher—one word meaning a whole lot of words? I do not know what you mean by cypher; but my impression is that it would be very satisfactory to them to be able to communicate directly with England at a moderate cost, in preference to believing the merchants here who are in possession of the information they require.

1227.

1227. As regards the Government telegram that has been spoken of, what guarantee could we have of its correctness? I would look upon it as correct, as a matter of course. If the thing were well organized there would be very little doubt about its correctness—a public thing of that kind. Mr. J. Fyfe.
1228. To collect information of that character, so reliable as to be useful, should we not need an establishment in England? No doubt there should be an establishment at both ends. All these things cost money. 4 April, 1873.
1229. Would it not be an interference with ordinary newspaper competition for the Government to supply news? I think myself that the Government is bound to act for the general weal.
1230. Would not the mass of the people pay for it, and the few be the gainers? I think the mass of the people would have opportunities of knowing the truth of these things, if the matter were carried out in the way proposed.

Mr. William Lacy called in and examined:—

1231. *Chairman.*] You are engaged in trade in the city, we understand? Yes, in engineering business— Mr. W. Lacy.
the firm of Vale & Lacy.
1232. In your business do you use the Telegraph much? We do considerably; more particularly in the Colony—between here and Victoria. 4 April, 1873.
1233. Do you find the charges restrict your use of the telegraph line much? Certainly if it was cheaper we should use it more frequently.
1234. Have you any reason to complain of the conduct of the telegraph business in Sydney, as to favouritism—sending forward one man's telegram before another's—are there any suspicions of that kind on your mind? No, none; we have always met with the greatest courtesy and attention.
1235. And a fair amount of promptitude? Yes.
1236. You must have noticed the publication in the newspapers frequently of information from Europe affecting prices: have you usually been satisfied that these telegrams are moderately accurate, or have you been misled by them at all? I have frequently thought that some of these telegrams were not correct. As an instance which I have remarked in my own line of business, we have frequently seen telegrams—"pig iron advancing," "pig iron advancing." If iron had advanced as much as has been reported, it would have been two or three hundred per cent. higher than it was originally. So I conclude from that, that these telegrams have not been as correct as they should be. I know iron has not advanced so much as to warrant these telegrams.
1237. Is there an impression among people in business in a moderate way, that by the present telegraphic system the large importers have an advantage over the smaller, inasmuch as they can afford to telegraph Home and get accurate information, while the smaller importers cannot? No doubt that is the case.
1238. Do you think there is a widely-spread feeling of that kind? I would not say how widely-spread it is, but no doubt such is the case, inasmuch as it is the interest of these people to keep themselves well posted in the news from Europe—more particularly of people holding large stocks.
1239. Their transactions are large enough to warrant the outlay? Yes.
1240. It has been recommended by certain witnesses who have come before this Committee that the Governments of Australia should unite in getting a cable message daily or bi-weekly, as the case may be, from Europe, and that on its landing in Australia it should be sent free, not to the newspapers, but to the different telegraph stations, and there posted up for general information. What would be your opinion of a system such as that? The question is a wide one in many respects, inasmuch as what might be interesting to me in Europe might be of no interest to you. What would these telegrams comprise?
1241. Prices of articles of trade, of Colonial products, of money in England—prospects of war—and things of that kind, which largely affect prices here. It has been the opinion of certain witnesses that this would give to the people of the Country the benefit of the Telegraph, which is now, in their opinion, mainly in the hands either of newspapers who can afford to pay for it, or of the wealthier inhabitants of the Country. Have you thought of that much? No, I have not thought much of it. I have seen the matter advocated in the newspapers a few times, but I have not thought it out for myself very much. No doubt it would be a very great benefit to have reliable information procured by the Government, which we could rely upon much better than on information in the newspapers.
1242. Have you been much in the interior of the country? I have merely travelled round; I have not lived in the interior much.
1243. Has it occurred to you that in the interior of the country the people everywhere would have better opportunities of knowing the sort of news that would be of use to them if these telegraphic messages were posted at every telegraph office? Yes, no doubt of it.
1244. Have you any acquaintance with the mode of carrying on telegraphic agencies in Europe? No. We have sent a few telegrams to England lately, in reference to materials we require, but I know nothing of it further.
1245. *Mr. Burns.*] You have made considerable use of the telegraph between Sydney and the other Colonies? Yes, Melbourne more particularly.
1246. Do you think, if the charges were reduced, say fifty per cent., you would be likely to pay the department quite as much as you are doing at the present time for telegrams? I think it is very likely. If the cost of a message were reduced from 6s. or 8s. to 3s. or 4s., we might think it advisable to telegraph instead of waiting to write.
1247. Do you think people in business generally would give almost double the amount of business to the Telegraph Office, if the charges were reduced one-half? That is a large estimate, but I think it would increase the business very much.
1248. With regard to telegrams to England, do you think you would be likely to send double the number of telegrams to England if the charges were half what they are at present? We look upon the charges now as almost prohibitory.
1249. Do you think people generally would send perhaps twice as many telegrams if the rates were reduced to what they would consider a reasonable amount? Yes, I think so.
1250. You would in your own business? Yes, I am quite sure we would do so.
1251. Have you found that the telegrams we have had from England about commercial matters, published in the papers, having relation to your own business in particular, have been useful to you? I have partly explained

- Mr. W. Lacy explained that in answer to Mr. Robertson. I do not think much reliance is to be placed on them.
1252. Telegrams about the prices of metals are valuable to men in your line of business? Yes, no doubt; especially to a man taking a contract, reliable information is very valuable.
- 4 April, 1873. 1253. Supposing a public telegram was posted from time to time as suggested, do you think it likely that in consequence of information so supplied you would be sending to England for materials? I believe we should.
1254. Therefore the consequences of getting such a telegram would be to promote business? Yes. For instance, instead of sending to Melbourne, where I know the state of the market, I would telegraph Home, if I had correct information as to prices there, and send an order for materials.
1255. The expense of getting information now is one of the impediments to business? Yes.
1256. If the cost of telegrams to England were made more moderate, you would incur a much greater expense than you do now in order to get information? Yes; we should telegraph in a great many matters where we do not do so now.
1257. *Mr. Tunks.*] Is not a high price for telegrams almost unavoidable in a new adventure of this kind, involving great risk and expense at the outset? Decidedly. I have not taken it into account whether it would pay the Company to let us have telegrams at a reduced cost; I have no means of knowing whether it is a good paying speculation or otherwise.
1258. Would not the capacity to multiply telegrams depend upon the capacity of the wire to do the work? Certainly.
1259. Then would it not be better to encourage the construction of a different line, whereby there would be greater competition—have you considered that question? No, I have not.
1260. Have you an agent in England? We are in communication with gentlemen who do our business.
1261. Do you use cypher in sending telegrams? No. We have only sent two telegrams since the wire has been in existence, and they were sent recently, in reference to a large contract we have taken lately.
1262. You are aware that you can arrange a system of cypher by which you can get information more cheaply? Yes, I believe so.
1263. Have you tried that? No.
1264. If the Government were to authorize the receipt of public telegrams, would you, as men of business, rely upon them for business purposes? I think we would have reason to do so.
1265. How could we arrange to get news of so reliable a character? I should imagine the matter would be arranged by the Government, and they would see to the character of their Agent.
1266. Is not the Government about the worst agency you can have to do any work? It depends upon the kind of work.
1267. Having regard to the reputation the Government maintains for blundering, would you trust the Government in a matter so nearly concerning your business? I would look upon it this way,—that the Government would be less liable to be influenced than private individuals in rigging the market.
1268. What would their agents do? I say again that I think a man appointed by the Government should be more reliable than a man appointed by one of our Sydney merchants.
1269. To gather up news in a market like the London market? Yes, I think it fair to infer that he would give us more reliable news than a man appointed by a merchant who had a large stock in Sydney, and who wished to put a telegram in the paper to raise the value of that stock. I should think the Government Agent would have no such object.
1270. Would you not rather depend upon your own agents? I am speaking of telegrams coming through other houses. If I had an agent in England, certainly I should prefer his information.
1271. Considering the influence that newspapers exercise upon a community such as ours, if we began to furnish them with information where would it end? My impression is that the public ought to pay for all news of this kind.
1272. They do pay for it through the papers? They do indirectly—not directly.
1273. *Mr. Burns.*] Supposing these telegrams were given to the public in the way that has been suggested—not to the daily papers, but posted at all the telegraph offices—do you think that would be going beyond the province of the Government? No, I do not think so. The difficulty in my mind is how far you should go in giving information. There are certain national matters that we should be posted in; but whether the Government have a right to post us in the prices of pig iron, tea, sugar, and so on, I can hardly say.
1274. *Mr. Tunks.*] Would not free and unrestricted competition supply us with the news we want? Perhaps it would.
1275. *Chairman.*] Is it free and unrestricted competition to charge £10 for ten words? It is like everything else; it depends upon the value of the article. It may be worth my while to pay £10 for a telegram.
1276. *Mr. Tunks.*] If it pays well, will not other people go into the same line of business and bring down the price? Yes; no doubt there is lots of money to be invested in another cable if it will pay.
1277. *Mr. Burns.*] Do you not think it would be well for the Colony to contribute something towards getting a second cable, viewing it from a national point? I hardly think so.
1278. *Chairman.*] I presume you are against all mail subsidies? No, I am not.
1279. What is the distinction? It will pay private speculation to give us telegraphic information, but it will not pay private speculation to bring our letters here; consequently it is necessary that the Government should assist.
1280. *Mr. Burns.*] Has not the necessity for a mail service, for which we have been paying a subsidy all along, been greatly lessened by the establishment of direct telegraphic communication with England? It has, no doubt.
1281. Can you see any difference in principle between aiding a telegraph cable and aiding a mail service? I do; inasmuch as private enterprise has laid the cable without the assistance of the Government, but private enterprise would not bring our letters here without a subsidy. Where private enterprise steps forward and does the work, I do not see the necessity for the Government going out of their way to assist it.
1282. *Chairman.*] Are you not aware that the cable to Australia has a Government guarantee of 5 per cent. on the money expended? I believe it has.
1283. *Mr. Tunks.*] Although the wire has diminished the interest we have in the mail service, is it likely, in your opinion, to meet the service now performed by letters and papers? No, it is not.
1284. We shall still need the mail service? Yes.

TUESDAY, 8 APRIL, 1873.

Present :—

MR. ROBERTSON, | MR. TUNKS,
Mr. WEARNE.

JOHN FITZGERALD BURNS, ESQ., IN THE CHAIR.

Mr. Frederick Charles Jarrett called in and examined :—

1285. *Chairman.*] You are in business as a printer and publisher? Yes.
1286. I think three or four years ago you had a good deal of experience in connection with the Telegraph Department? Yes.
1287. Could you point out to the Committee any way in which you think the department might be improved in its management; or have any matters in connection with the department, in your experience, called for observation or remark? I do not think there is fairness given to all alike in the department, particularly in the transmission of Press messages.
1288. Will you tell us how unfairness is experienced? I have noticed it particularly with reference to English mail telegrams, that great favouritism has been shown to the proprietors of the *Sydney Morning Herald* in the transmission of messages.
1289. Are you speaking now of the English mail messages received by way of Adelaide? Yes.
1290. Will you tell us how the unfairness has been shown? When both lines have been available for the transmission of messages—both the direct line from Adelaide and the two lines by way of Melbourne—when a message has been coming through for the proprietors of the *Herald* on one line, messages for Greville & Co. have been detained in the Melbourne Office, on the excuse that the lines were occupied by private messages, both the lines being then unused between Melbourne and Sydney.
1291. Did you make any complaint about this? We continually remonstrated about it, but could never get any satisfaction. A great many things were promised, but I believe there is always sufficient influence at work there in favour of the *Sydney Morning Herald* to prevent other people from getting fair play.
1292. What were the reasons assigned for not doing what you suggested? It was stated at the time that the lines were occupied by the passage of private messages, or were down, when at the time these messages were coming through, I have known from clerks in the Telegraph Office that the lines were both available, and yet we could not get our messages.
1293. Two reasons were given for not sending them through; first that the lines were occupied by private messages, and next that they were interrupted? Yes.
1294. Did you often complain of the Department not sending the messages by way of Adelaide? Frequently; almost every mail. There was a restriction at one time on the number of words received by the *Herald*, limited to 1,500 words, and then they evaded it by having a portion of their message addressed, I think, to Gordon & Gotch. It was, in fact, a continuation of the same message, but addressed to other persons, and so the restriction was nullified.
1295. Do you know where the restriction was first imposed? In Melbourne, I believe.
1296. As the messages came from Adelaide, and might have come without coming by way of Melbourne, how could the restriction be applied to messages by way of Adelaide? I believe it applied to all the lines—the direct line from Adelaide as well as the others.
1297. Do you know of any convention or arrangement between the heads of the Telegraph Departments of all the Colonies to that effect? I take so little interest in the matter now that I have forgotten what the arrangement was, but I know there was some arrangement.
1298. If there was an arrangement, it was set aside by sending portions of the message through addressed to different firms? Yes. It was said that they could not prevent the extravagant length of messages, because they could always defeat us by this method.
1299. You are aware that competition for English news by way of Adelaide has greatly declined since the establishment of the direct cable? I imagine it has. I have nothing to do with the business now.
1300. Do you recollect any other way in which you had reason to complain of the management of the Telegraph Department? Yes; in the transmission of ordinary messages I do not think due care is exercised. During the time I was proprietor of a paper at Parramatta, I have sent messages when I have known the line was in proper working order, and I have left by the train and been in my office in Sydney before the telegram was delivered. I think there is great want of speed in the delivery of messages or in their transmission. This has occurred frequently.
1301. Has it appeared to you that there is not a sufficient supply of messengers? I cannot say what was the reason; I only know the delay has taken place. I have made complaints, and never had a satisfactory explanation given.
1302. How long ago is it since the messages you speak of from Parramatta were passed? About eighteen months or two years ago. Over a period of about twelve months it occurred frequently.
1303. You experienced what you thought unreasonable delay? Yes, decidedly. I was able to reach my destination by train quicker than the message by the wire.
1304. What explanation did you get? None that was satisfactory. On one occasion a messenger was sent to me, and stated that it was his fault, and that if I pressed the charge he would be dismissed.
1305. Did any of the officers attribute the delay in delivering messages to the want of sufficient messengers? No.
1306. Have you, in your experience, observed anything else that appeared to call for amendment in the management of this department? I think there is too great liberty allowed to employes of the *Sydney Morning Herald* in the department. I have seen a clerk employed in the *Herald Office* within the operating room alongside the instrument, at a time when messages were being received and in course of transmission on the line.
1307. Did you see that more than once? Yes. When I have gone up at night-time.
1308. Did you make any complaint of it? Yes.
1309. Was the practice discontinued? I did not see it afterwards.
1310. Were you connected with the business of telegraphing for any length of time after you made that complaint? No, I suppose not more than four or five months after.

Mr. F. C.
Jarrett.

April, 1873.

- Mr. F. C. Jarrett.
- 8 April, 1873.
1311. Within those four or five months did you again observe any employé of the *Herald* inside the Telegraph Office? No. I have reason to believe this kind of thing was allowed.
1312. By whom? By the officers of the department.
1313. Do you mean the head of the department or the subordinates? The subordinates.
1314. You threatened to complain to the head of the department? Yes.
1315. And then it was discontinued? Yes, so far as I know.
1316. Did you ever wish to obtain the same privilege of going inside? No.
1317. You have never asked for it? No.
1318. Could you make any suggestions for the improvement of the management of the department? I am under the impression that there is one of the officers of the department who is receiving pay from the *Sydney Morning Herald*. I believe Mr. Walker is the recognized chess correspondent of the *Sydney Morning Herald*, and receives regular pay for it. I was a member of the Chess Club for a long time, and I believe all the members of the club recognize him as the chess correspondent.
1319. Does he get paid for being chess correspondent? Yes, I believe so.
1320. Do you state this of your own knowledge? Yes.
1321. Is it a paid office, that of chess correspondent? I believe so. The *Empire* has been in the habit of paying for it. I was at one time chess correspondent of the *Empire*.
1322. How long has Mr. Walker been the *Herald's* chess correspondent? I could not say.
1323. How long have you been a member of the Chess Club? Nearly three years.
1324. Has Mr. Walker been chess correspondent all that time? I could not say.
1325. When did you first come to know that he was chess correspondent? Between two and three years ago. I am not now a member of the club; I was at that time.
1326. Is there much done in the way of chess to call for correspondence to any extent? It is done in connection with the *Sydney Mail*. I call it the *Herald* because the *Mail* is published at the *Herald* Office, by the same proprietors. A certain number of the subscribers to the *Mail* are interested in chess.
1327. Do the members of the club meet frequently? Nightly; and occasionally there are chess tournaments with members of Chess Clubs in other Colonies.
1328. Have you observed that Mr. Walker is in any way influenced by holding a position of that kind? No, I do not know that he is.
1329. What is your opinion as to what the effect would be, supposing we were to reduce the charges for Press messages in the Colony? I think the number of messages sent would be greatly increased.
1330. What do you think would be the effect of a similar reduction in respect to private messages? I have not had sufficient experience to be able to say.
1331. Have you heard any complaints about the charges for telegrams between here and England? No; I have had nothing to do with it since the cable was laid.
1332. *Mr. Tunks.*] You say you observed, when connected with the *Empire*, unfairness as regards the English Mail telegrams? I was not connected with the *Empire*. I did not say that.
1333. In what way then? One part of the time I was in partnership with Mr. Greville, and at another time I was interested on my own account.
1334. Could you fix upon any particular transaction as to date, so that it could be identified—exhibiting the unfairness you speak of? No, I could not.
1335. Did it occur frequently? Yes.
1336. In what year? It extended over about four or five years, from the end of 1868.
1337. Out of all these numerous instances, can you not fix upon any particular occasion when conduct of this description was exhibited? It occurred almost monthly.
1338. Can you state any month out of these four years in which something of this kind occurred? No.
1339. Could you identify any account by which it could be traced out? No, I do not suppose I could.
1340. I understood you to say that on one occasion when you objected to the delay, the message was detained in Melbourne? No; that the messages did not come on from Melbourne, although the two wires were unoccupied by any other Press messages.
1341. What control have we over messages detained in Melbourne—how do you connect that with want of attention in the department of New South Wales? I cannot connect it in any way. I only know the messages were not received, the wires being at the time unoccupied.
1342. In what way would the department here be answerable for delay in Melbourne? I cannot say, I am sure. I only know we did not receive messages when the wires were unoccupied. I know nothing about the Melbourne department.
1343. Can you give the Committee information as to any particular day when your messages from Parramatta were delayed? Not at present. I could by reference to my books.
1344. Will you furnish the Committee with it, as an addendum to your evidence? Yes. I shall have to refer to the Parramatta books to ascertain the date.
1345. You have seen liberty given to the officers of the *Herald* establishment to go in amongst the operators in the Telegraph Office? Yes; after nightfall.
1346. Did it occur frequently? Four or five times.
1347. Can you give the Committee any information to lead them, either by time or circumstances, to find out who these people were—what were the names of the employés of the *Herald*? I do not care about mentioning names.
1348. Who was the operator? I do not know his name.
1349. Do you know the date? No, I could not fix the date.
1350. Can you point the Committee to any circumstance by which the date, or time, or persons, can be fixed? No.
1351. *Chairman.*] Cannot you give the name of the telegraph officer? I do not know the name of the telegraph officer, and I do not think I should give the name of the *Herald's* employé.
1352. Decidedly, we should have it all out? I do not know the name of the officer.
1353. Do you know the name of the *Herald's* employé? I do not feel inclined to state the name.
1354. Why do you not wish to name the employé of the *Herald*—was it one or more persons? One person particularly.
1355. What objection have you to mentioning his name? I do not think I should be called upon to mention his name.

1356. *Mr. Tunks.*] Is it within your knowledge that Mr. Walker is chess correspondent, and receives pay for that service? I know that the service on the part of the *Herald* has been a paid service. I do not know that Mr. Walker has ever received anything for it.

Mr. F. C.
Jarrett.

1357. Have you any further reasons for believing that he is paid than that it is a paid service usually? 8 April, 1873.

No.

1358. Has it come to your knowledge that any information has been obtained from the department to the prejudice of the senders of messages? No, never.

1359. Do you think people in the interior have confidence in the secrecy of the department? I do not know; I have never been far away from Sydney.

1360. Have the public confidence in the secrecy of this department in Sydney, in your estimation? No, I do not think there is confidence in it, though I have no charge I could bring, or any positive statement I could make.

1361. How would that want of confidence arise? I could scarcely tell you.

WEDNESDAY, 16 APRIL, 1873.

Present:—

MR. BURNS,
MR. CUNNEEN,

MR. TUNKS,
MR. WEARNE.

JOHN ROBERTSON, Esq., IN THE CHAIR.

Charles Todd, Esq., C.M.G., Postmaster General, and Superintendent of Telegraphs, South Australia called in and examined:—

1362. *Chairman.*] I dare say you have heard that this Committee has been appointed to inquire as to the state of Telegraphic Communication in New South Wales, throughout the Australias, and with Europe. Commencing with telegraphy in New South Wales: it has been suggested to us by several witnesses that, if our rates were reduced, a largely increased business would be carried on, with little or no reduction of revenue. Have you given that subject any consideration? I have paid considerable attention to the question of telegraphic tariff, and am now perhaps in a position to speak from experience, having in the last two years reduced our charges in South Australia to a uniform rate of 1s. for ten words, and 1d. for every additional word, with one exception, between Adelaide and the Port, where our rates are 6d. for ten words. When we first opened the Telegraph in South Australia, our charge between Adelaide and Port Adelaide was 6d. for twenty words, and at that time I believe it was the cheapest telegraph line in the World. Speaking of the effect of the low rates, and from memory, I think that in the first twelve months after the line was opened, although we had a competing private line, we had a greater number of messages than they had in Victoria in something like two years, although they had at that time the Telegraph open between Melbourne and Sandridge, Williamstown, Geelong, and Queenscliffe. Since we have reduced our rates, although, as perhaps you are aware, we have telegraph stations opened at a number of very small townships which would probably be overlooked in this Colony, our business has very greatly increased. It is rather difficult, however, in the peculiar circumstances of South Australia, to say the precise effect which the reduction of the rates has had upon our revenue or upon the number of messages, because our business very much depends upon the harvest, and also upon the fluctuations in the prices of wheat, copper, shares, &c. We find in South Australia that the business of the Telegraph to a large extent depends upon sudden fluctuations, whether in mining shares or the price of flour, and also on the number of transactions. It is, therefore, hardly fair to compare one year with another, because one year may be unprecedentedly dull, and the next prosperous. It would not be fair, for instance, to contrast this year with last year, or with 1871. As a matter of fact, I suppose the number of messages at many stations in South Australia affected by the reduced rates will be very nearly two and a half times what they were two years ago.

C. Todd, Esq.,
C. M. G.

16 April, 1873.

1363. Will the revenue be greater? Yes, considerably.

1364. *Mr. Burns.*] When did you reduce the rates? Speaking from memory, it was in 1869 or 1870.

1365. And the business since then has been trebled? Very nearly; considerably more than doubled at some stations.

1366. *Chairman.*] The reduction has not only largely utilized your lines, but the revenue, if not increased, has suffered no loss? There has been no loss upon the revenue. That has been my experience.

1367. Has there been any extra expense? In a few of the offices there has, but not in the bulk of the offices, because they had not before, and even now have not, sufficient to occupy their time or the wires. One or two lines may be somewhat overcharged, but some have not nearly come up to their carrying capacity.

1368. The probability is that if we reduce our rates we would largely increase the use of our lines, and not suffer much in our revenue? I should say particularly so in New South Wales. I should say that having such an extent of country, you would find reduced rates tend largely to increase the number of messages, and probably there would be no loss of revenue at all. Besides which, the Telegraph being in the hands of the Government, you have not to consider the direct revenue produced in the same way that a Company would, but also the facilities afforded to the commerce of the Country, and the many indirect benefits arising from cheap means of intercommunication.

1369. Have you been to our Telegraph Office? I have.

1370. Will you be good enough to say whether you think it is conducted efficiently? So far as I have had the means of judging, I should say most efficiently. I have been very pleased indeed with the arrangements. Your office, I believe, is only a temporary one at present, and quite inadequate for the business.

1371. Do you consider our operators as expert as those you have seen in other places? Quite so.

1372. It has been advised by some of the witnesses that there should be more assistance in the office—Has it occurred to you that in our office we are short of hands? I can hardly say. At present your office seems to be somewhat crowded, and I should say there is scarcely accommodation for more officers. I have been frequently in the operating room; and judging from what I have seen there, I think that if there were any large increase of business you would require an increased staff of operators and more room.

1373. Then you think our men are pretty well worked? Yes, I think so; they always appear to be pretty busy.

1374.

- C. Todd, Esq., 1374. Will you be good enough to say whether you have heard any complaints as to favouritism against our officers—that one man's message has been sent before another's—or any favouritism of any kind? No, I have not. When I say I have not, I am of course aware that complaints have been made not only against New South Wales, but also against my own department and the Victorian department. The delays on certain Press messages have been matter of frequent reference to my own Government, and on one occasion came before Sir James Fergusson; but when I submitted an explanation, it was admitted that there was no help for it—that it was one of those things the department could not possibly control. With regard to favouritism, I may say most positively there has been none that I am aware of, neither in the department here nor in South Australia. It has been really a question of first come first served.
1375. It has been alleged that one portion of the Press here has had great favouritism shown to it, and that that has extended to the other Colonies? I have known of no favouritism at all. I may explain that we keep in the Adelaide Office a record-book, which shows, on the arrival of each English Mail, the time the mail messages are handed in, the time their transmission is commenced, the time the transmission is completed, the number of words the message contains; and, if there has been any delay, an explanation is entered in a column set apart for that purpose. I can only say that Press messages have been transmitted from Adelaide, and I believe from Wentworth also, on to Sydney, in the order in which they have been received.
1376. Was there not some understanding or rule by which no Press messages exceeding 1,500 words were allowed to pass before messages for other papers were sent on? When the line was opened between Adelaide and Melbourne in 1858, there was but one wire; and the Telegraph being then a new thing, there was a great deal of rivalry between the different newspapers in Sydney and Melbourne, and the quantity of Press matter put into our office completely shut out all other business. To meet this, a regulation was passed to the effect that each newspaper was to be allowed one message of 1,500 words, to be transmitted in the order in which they came in, and, these messages transmitted, the private messages were to be sent before any fresh Press matter. When we put up a second wire to Melbourne, we were able to give additional facilities to the Press, and gradually the regulation I speak of became obsolete. Repeated complaints were made by Messrs. Greville & Bird, in Melbourne, of the delay in the transmission of their messages, which operated, they said, very greatly to their injury; but I must tell you they were always considerably behind the *Argus* messages in bringing them to the office. When the Sydney line was put up, the regulation limiting the first Press messages to 1,500 words had become quite inoperative for some time, and it was hoped the additional line would get over all the difficulty. Before we had a direct Sydney line, messages for Sydney papers had to be sent *via* Melbourne. As it did not obviate the difficulty,—at the instance of the Victorian Government, in consequence of repeated complaints, the regulation limiting the first Press message to any one paper or news agency to 1,500 words was re-enforced, but only so far as messages to Melbourne were concerned, and not messages to Sydney. We were never asked to limit the number of words for Press messages to Sydney. I may mention that when a gentleman connected with the Melbourne Press was in Adelaide, with a view of getting the Government to limit Press messages to 1,500 words, I took the opportunity of pointing out what had been the experience not only of ourselves in Australia, but of private Companies in other parts of the World; that any regulation limiting the number of words was practically useless, because it could be so easily evaded; and I also pointed out that it would be unwise to leave it to the discretion of a clerk in the office to decide as to the *bonâ fides* of any telegram that might be put in.
1377. You found that this regulation was evaded? No doubt it was. Messages which we saw afterwards published in the *Argus* were, when put in, divided into three messages; one addressed to the *Argus*, another to a paper in Melbourne, and another to a paper in Geelong. These three papers each paid for messages addressed to them, and their messages could not, of course, be refused or set aside for other messages put in later.
1378. Is your law on this point the same as ours—By our law the first comer must be first served—Have you power to make such a regulation as you speak of, under the strict letter of your law? No person has a right to put in a message which will occupy the line more than half an hour. Our Regulations give us the power of limiting the number of words.
1379. Are these Regulations covered by the authority of the law? They are. We have the power to make such a Regulation. Clause 8 of our Regulations is as follows:—"Not more than half an hour at one time will be devoted to any message, and all messages that may have accumulated during that time will be despatched before the transmission of such message be resumed."
1380. You, of course, can give us very valuable information in regard to European Telegraphy. We have been told that if there were two cables there would be a large amount of messages to Europe relating to financial matters—that people would depend upon the telegraph for their financial arrangements if there were two cables, but they are afraid to trust to one cable. Will you be good enough to tell us your views with regard to a second cable? I think, in the present state of telegraphic communication east of India it is more a question of rates than immediate duplication. If you are to have duplicate cables, they should, I think, extend at least as far as Madras. You would not gain very much in point of carrying capacity by having two cables or two lines of communication between Australia and Java, or between Australia and Singapore, while west of Singapore you would still have to depend upon only one cable. I may mention, as a matter of fact, that the cable between Madras and Penang is only capable of doing a little more than four times the amount of business now passing through it; therefore while you depend upon that one cable you would not afford very great additional facilities by duplicating the lines east of Singapore. At the same time, I am certainly in favour—looking at the interest of the Australian Colonies generally—of duplicating the lines, because I see that when once we have telegraphic communication the stoppage of communication paralyzes trade very considerably; therefore I should say that if you can do it at a reasonable cost, you should duplicate the lines, and as extensively as you can. Personally I should very much like to see the international telegraphic system of Australia under the joint management of all the Colonies combined—each Colony paying its fair quota of the cost of management and maintenance of the special land lines within Australia as well as the cable subsidies. I think it would be more advantageous and more satisfactory to all the Colonies if one international telegraphic system were under the management of an Australian Convention for instance. But I think our immediate object is to reduce the rates, which could be done by paying a moderate subsidy to the existing Company.
1381. We will come to that presently. Will you be good enough to say where you think the second cable should reach to—where we should connect with—with what line—supposing it should be determined to have a second cable? If it were decided to have a second cable, I should take it to Normanton.

1382. Where then? Either to Java or Singapore. Between Singapore and Madras you would still depend upon one cable, and I would strongly recommend that the duplication should commence at Madras. I would prefer that very much to the proposed line to Calcutta. I think you would find, practically, that another cable laid to Madras would be far better for the Australian Colonies; that the messages would be transmitted more expeditiously, and with greater freedom from delays and interruptions from various causes, by going from Madras *viâ* Bombay, than by going by Calcutta. There would be a shorter length of land line.

1383. I presume that if we were to adopt the plan you recommend, the two lines would not join together in any way; there would be two independent lines to Europe, if we went by way of Madras? Yes.

1384. What would be the difference of expense between going from Normanton to Singapore and from Normanton to Madras? It would take another £400,000 to extend the cable to Madras, or about (say) £1,200,000 to connect Madras with Normanton—that is, speaking roughly. This is a low estimate.

1385. You have said you would like to see the several Colonies unite, and charge themselves with the duty of European telegraphy—Would you mean that to include your South Australian line as well as the cables? I would.

1386. You would call that a part of the European line? Yes; I would take certain lines in Queensland and certain lines in South Australia as forming part of the international system, the same as is done in other Countries, where they have certain wires set apart for international messages.

1387. You would set them apart? Yes; but while the wires were capable of doing more than the international business passing through them, I should have no objection to their taking up local messages.

1388. Supposing the Governments of the Australias were to go to the expense of £400,000 for the duplication of the cable between Madras and Singapore, would the business be sufficient to justify the expenditure? Oh, no; the amount of business would not be sufficient, considered in the light of revenue, to justify so large an expenditure. No Company would entertain it without large subsidies, but the cost should not wholly devolve upon the Australian Colonies, as it would afford extra accommodation to China, Java, and the Straits Settlements. It simply makes the communication as secure from interruption as it is possible to make it. Our overland line is really as free from interruptions, and is in every respect as reliable and as substantially built as any telegraph line in the Australian Colonies. We have only had two short interruptions between the Charlotte Waters Station and Port Darwin, or on 1,200 miles of the line, since it was opened, in August last year; and the Government of South Australia, on my recommendation, are going to a large expense in placing iron poles over 600 miles in the Northern Territory. We shall have 6,500 iron poles on that section by the end of the year. Indeed, I may say that my Government will spare no expense in maintaining the thorough efficiency of the line. For the information of the Committee, I hand in a report on and map of the line.

1389. That security from interruption would, I suppose, in your opinion, greatly increase the use of the cable between here and the Mother Country? No doubt it would; because if persons can depend upon getting replies, there would be a steady business. No doubt uninterrupted communication tends very much to the use of the telegraph; but the present line is as reliable as any single line can be—both land lines and cables.

1390. Are you of opinion that the charges now in force are beyond what are necessary to ensure revenue on the cable now in use? I think the charges are high; but it must be remembered that they must be at present regarded rather as tentative than as absolutely fixed. It is more easy to reduce charges than to increase them; therefore, a Company looking to dividends must commence with a high tariff, and reduce it when they have had some experience as to the amount of business likely to be done. At present the amount of business is, perhaps, scarcely sufficient to justify the British-Australian Company, or any other Company, reducing the rates without a subsidy.

1391. If they reduced the rate, might they not receive more revenue? I think they would; but I think they would require an inducement in the shape of a subsidy before doing so, and I think we might promise that subsidy without really having to pay it, or at all events only a portion of it.

1392. I think some portions of the line to Europe are conducted now on moderate scales of charges? Yes. The charge between Bombay and London, by both the Eastern Telegraph Company's line and the Indo-European line, are fixed absolutely by convention at £2 5s. 8d.; that is for nearly 7,000 miles of cable, and is the cheapest portion of the line. The British-Australian Company's charge of £3 15s. 2d. I do regard as exceedingly high; but, as I said before, it is only a tentative rate, and they will see their way, no doubt, to reduce it, especially if we hold out inducement in the shape of a subsidy. They offer to reduce their charges to £6 10s. from Port Darwin. That would make the whole charge £7 10s., supposing the South Australian rate to be maintained as now, but no doubt it would be reduced also. The Company propose to reduce the rate to £6 10s. for a subsidy of £20,000, or to make it £5 for a subsidy of £30,000, reducible by £400 for every 500 messages over 22,000; and that would lead, no doubt, to a very large increase of business. I may say that in that case the South Australian Government would be quite willing to reduce their present rate one-half. That would reduce the rate between London and Sydney to about £5 12s. for a subsidy of £30,000, which could be paid by all the Colonies contributing somewhat in the proportion they now contribute to the mail subsidy. The charge could be reduced from £9 7s. 6d. to about £5 12s. for twenty words.

1393. Are you of opinion that that is a reasonable proposal? I think it is, but I think further negotiation would lead them to make still more favourable terms. My own impression is, that the increase of business the reduced rates would lead to would go very considerably to the reduction of the subsidy. I think we might reckon on sixty messages a day at least—that is, double the number of messages now sent—at the rate of £5 10s., between Adelaide and London. The subsidy would be reducible by £400 for every 500 messages over 22,000.

1394. What do you suppose would be the actual subsidy the Colonies would have to pay? I imagine it would not exceed £20,000 a year. I think the practical working of it would be that the Colonies generally would not have to pay more than £20,000 a year to secure the reduction. The contributions might be taken on the basis of the number of messages. I have very strongly urged upon the Company the adoption of a word by word tariff, which would be still more in favour of the public. They are strongly in favour of the suggestion, I believe, and will introduce it as soon as possible, so that people will simply pay for the number of words they send.

1395. Have you thought of the advisability, or not, of making any arrangements whereby the Colonies of Australia might unite in having a periodical telegram, giving information of public importance as to prices

C. Todd, Esq.,

of wool and other colonial produce, and prominent matters of immediate interest to the Colonies—whether it would be wise, or not, for the Governments of the Australias to join in a message of that kind—some gentlemen have thought it would be wise to have a message of that kind, paid for by the united Governments, and posted at each telegraph station throughout the Australias—Have you thought of that? I have. I myself see some considerable difficulties in the way of its adoption. In the first place, you can hardly say what effect it would have upon the revenue of the line, which is a matter that must necessarily be considered by any Telegraph Company. I think it would modify the conditions as to the subsidy, in the Company's ignorance of the probable effect this public telegram would have upon the business of the line. It is, of course, just possible that telegrams such as you describe would really lead to an increase of business; they might provoke inquiry; but until experience has shown its effect, a public Company would, I think, rather shrink from it, and say that if this information is to be given gratuitously, they should require a higher subsidy, because it would possibly affect their revenue prejudicially. They might be wrong; but I think that is the way a Company would look at it. Then again, I fear that we could not altogether clear ourselves of responsibility. It does not seem to me to be exactly the same as shipping telegrams. It is hardly possible for any telegraph station to announce incorrectly the arrival or departure of a vessel; but a person in London, having to telegraph the prices of wool, copper, Government securities, and a number of other things, and give commercial information of importance, might easily make grave mistakes which would lead to complications and frequent complaints. Of course the Governments would let it be known that they were not responsible; but I mention it as one of the objections that occur to me. I think we should be much more likely to have frequent mistakes in a message of that character than in shipping or weather reports; and errors in these telegrams might be of serious consequence. I myself would strongly advise a subsidy with reduced rates, in preference to the Government taking upon themselves the province of news agents in any shape. At the same time, if done at all, I would say the message must be posted outside all the telegraph offices throughout the Colonies; not at a few selected places, but made known generally. And it should be understood that the Government had no responsibility.

1396. The only effect such a public telegram could have upon the business of the Company would be in perhaps reducing the number of Press messages, because in its absence the newspapers would give the same information; so that the subsidy would only have to be increased in proportion to the reduction in the number of Press messages? I take it, this public telegram would be far more comprehensive than what is now supplied by the Press; and when you once commence it you will hardly know where to draw the line. There will be continual pressure from without for more information; and you scarcely know where it will end. I know we found it so when at one time it was suggested, and on one or two occasions it was done. A telegram was posted outside the Adelaide office, giving general news in advance of anything published by the newspapers, and we were immediately applied to by all telegraph stations throughout the Colony for the same telegram. But the newspapers naturally cried out that it injured their business.

1397. Does it not strike you that if the Government are to give a subsidy of £20,000 from the general revenue raised from the people, the people will be apt to say, of what use is all this?—A squatter, for instance, may say, When I come to Sydney to sell my wool, the gentleman with whom I am dealing has a telegram while I am in the dark, and I am paying towards the £20,000 a year which is helping to bring him this news? I think that anything that tends to facilitate and increase the commerce of the Country benefits all classes, and that the small sellers derive an equal advantage, and very frequently, perhaps, obtain an advantage over the buyer or larger man, from the very fact of the latter acting on his telegraphic information, and taking the risk of the markets altering before he can realize on his purchases.

1398. That would imply that the man who gets the information loses by it? No; I say in the long run it equalizes itself. I do not think the farmers of South Australia, for instance, would gain very much by a telegram, announcing the price of wheat in Mark-lane, being posted outside the telegraph offices. They are not likely to be taken in by a large wheat buyer who gets the information direct, because there is so much rivalry amongst buyers that the seller, as a rule, derives all the advantage of a rise in price, and the buyer takes the risk.

1399. Are you of opinion that we have ever had news sent to these Colonies for the purpose of what is called rigging the market—false news? I am not aware of any particular instance.

1400. You have not suspected it? I have had no reason to suspect it.

1401. You have not suspected it? No.

1402. *Mr. Burns.*] Supposing there were a public telegram, do you think the person charged with the duty of preparing it could supply the necessary information unless he had a large staff at his disposal? I do not know that he would require a large staff. The information is so accessible that I imagine his report would be based mainly upon what would be contained in the newspapers of the day. The commercial information would, as a rule, be given in the London daily papers.

1403. Could he prepare a telegram of this kind, unless he had an office and a number of assistants to collect information reliably? He would require to have an office; and it would also be necessary that he should be a man of some commercial standing, in order to secure the reliability of his information. Therefore, his charge would no doubt be somewhat high. He should be well paid, at all events.

1404. Would it not diminish the value of this telegram, unless he could obtain the information himself from day to day, without extracting it from the Press? He should have means of verifying what he found in the Press.

1405. Supposing there were a large sale of wool or tallow? He would have to employ paid agents who would supply information to him.

1406. Do you think telegrams supplied in that way would be regarded with more confidence by the public than telegrams supplied by the Press? I think they would, because they would be supplied under the auspices of the Government. And that is one objection to it, that people might rely upon it for that reason, when it might be incorrect.

1407. Is it the practice in your Colony to post outside the telegraph offices the arrival and departure of shipping? Yes.

1408. Do the public rely upon that? Yes; and we have complaints, if from any cause there are mistakes or omissions. People will not allow that we are not responsible. They say we are bound to be correct or not to give the information at all, and they are right.

C. Todd, Esq.,
C.M.G.

16 April, 1873.

1409. You think the risk of supplying public intelligence would be greater? Yes.
1410. Do you not think public telegrams like that suggested, so far from being objected to by the parties having charge of the cable, should rather be encouraged by them, as having a tendency to increase the business in other respects? I think they would object to it until experience had shown what the effect of it would be.
1411. What is your experience with regard to shipping news—do you think its publication has the effect of bringing additional business? I do not think so. In fact, at some of our outports it decreases the business, but between Melbourne and Adelaide it may increase it.
1412. Is it the practice in your Colony to have the Postal and Telegraph Services combined in the country towns? The two departments are wholly amalgamated now, and with one or two exceptions the Post and Telegraph Offices in the country are combined.
1413. All under one responsible head? Yes.
1414. Do you approve of the amalgamation? I do; especially in small towns. There are some objections where the amount of business is great, and where the two duties occasionally clash—that is where the business is not sufficient to justify additional assistance.
1415. Do you find that when complaints are made, the postal duties are made an excuse for delay in the discharge of telegraph duties? Yes, frequently.
1416. Have you found any great economy to the Public Service from this amalgamation? On the whole, yes.
1417. Supposing the population of your Colony were doubled, would you be in favour of a continued amalgamation? There might be some places where it would be advantageous to separate the two offices, where there would be no economy in keeping them together; but at small country offices it is economical to have them combined.
1418. Have you any knowledge of the salaries paid to the officers in the Postal Service and Telegraph Department here? Yes.
1419. Have you considered whether they are under or over paid? I think the salaries are fair in New South Wales, with the exception of your best class of operators; they are not adequately paid in relation to their responsibility.
1420. How long does it take a person to learn the business? Very much depends upon the aptitude of the individual, but you cannot expect any person of ordinary intelligence to become expert under two or three years.
1421. He requires to be a person of some education, intelligence, and good character? Yes; and, to be a really good operator, he should have a thorough knowledge of the laws of electricity and of the construction of the instrument he is using.
1422. You have seen the operators here at work? Yes.
1423. Do they do their work quite as well as operators elsewhere? Yes.
1424. You think the salaries of the operators are as a rule too low for men who are efficient? Yes.
1425. The salaries here are higher than in your Colony, the cost of living being higher? Yes, I think they are higher.
1426. Do you find that the salaries in the Telegraph Department at Melbourne are higher than ours? Yes. My impression, from what I saw of your Estimates two or three years ago, was that your Telegraph Service more nearly approximates to ours.
1427. What is about the average salary given to Station-masters in the principal provincial towns in South Australia? From £160 to £350.
1428. *Chairman.*] With quarters? Yes.
1429. And fuel? No, only fuel for the office.
1430. *Mr. Burns.*] Has it occurred to you at all since you have been here that we require some additional hands or more messengers? I should say there are several of your offices under-manned at the present time, the Sydney office especially. But at the same time, you have no accommodation for an increased number.
1431. *Mr. Wearne.*] You stated that the Government of Victoria had requested you to limit Press messages to 1,500 words, and you did so; but as this Government did not interfere, the limitation was not applied to messages to Sydney. Had you no complaints from Sydney? No, I do not remember any from Sydney.
1432. Had you complaints from Melbourne in reference to Sydney? No, I do not remember any special complaint with regard to Sydney. I know that complaints have been made, but they have not been made officially to me; and, so far as I know, no complaints of the detention of Sydney Press messages have ever been made to the South Australian Government.
1433. Has there been no correspondence with Mr. Bennett, of the *Empire* newspaper here, in reference to delay in sending forward his messages? No, not to me. Inquiries have been made by the Sydney Office, but no request has been made by the Sydney Government to limit the length of Press telegrams.
1434. Of your own knowledge you do not know that the *Empire's* messages have been kept back? I know they have followed messages addressed to the *Herald* and Gordon & Gotch; but that was because they were handed in later.
1435. There are two lines, are there not, between Adelaide and Sydney? There is only one direct line; the other is by way of Melbourne. Finding that there was delay, in order to relieve the lines as much as possible, I suggested that we should avail ourselves of the line to Melbourne, for Sydney Press messages which were also addressed to the *Argus* or some Melbourne paper, and by way of Deniliquin. Every facility was afforded by the Victorian Department, and the messages for the *Argus* and *Herald* being sent by Deniliquin, a second message addressed to Gordon & Gotch, Sydney, would follow by the line *via* Mount Gambier; so that that gave Sydney the advantage of two lines. I would point out, though no doubt Mr. Cracknell will have already taken steps to provide it, that you very badly require another wire on the Sydney and Adelaide line, or at least as far as Deniliquin. You have now, I believe, eleven stations in New South Wales connected with the Adelaide wire between Wentworth and Sydney—formerly you had eighteen; and it frequently happens, when there is a press of business, or when there is an interruption on the Melbourne circuit *via* Albury, that Victorian business is sent *via* Deniliquin, to the exclusion, for several hours, of messages between Sydney and Adelaide. This is the more serious now that you have communication with Europe, &c. You ought to provide, without delay, for a special wire for South Australian messages.
1436. Mr. Bennett says he could not pay your Telegraph Office the amount of money he would have paid, because his messages were always delayed until the other messages were completed? The delay would have been

C. Todd, Esq.,
C.M.G.] been much greater had the Department not adopted the arrangement just explained,—making use of the lines through Victoria for the transmission of Sydney messages.

16 April, 1873. 1437. The messages for the *Empire* were never kept back purposely? Never; they simply took their turn with the others in the order in which they were handed in. They were often handed in to the office from an hour to two hours after the message for the *Herald* and *Argus*. The minimum interval was sixteen minutes; but these sixteen minutes would really be quite as bad as an hour, supposing a message of 1,500 words to be sent by the direct line, and another of the same length to be put in five minutes later to follow it.

1438. You might have used the other line for the *Empire*? So we should, directly it was available, but, as I mentioned, the messages for Sydney were longer than 1,500 words; there were always two messages, one being received immediately after the other. Say there were 3,000 words; one-half would go by way of Melbourne by the Victorian lines, and the other by the direct line. Had we not adopted that arrangement, the *Empire* messages would have had to wait till the whole 3,000 words had passed over the direct line. I may say it is the practice to recognize news agents as the same as newspapers, and the regulation was made to apply to them.

THURSDAY, 17 APRIL, 1873.

Present:—

MR. MACLEAY, | MR. WEARNE,
MR. BURNS.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

C. Todd, Esq., called in and further examined:—

C. Todd, Esq.,
C.M.G.] 1439. *Mr. Wearne.*] You stated, Mr. Todd, that there were two propositions from the Indian, Australian, and China Telegraph Company—one was that by paying them £20,000 we should obtain a reduction of the charges for messages to £6 10s., and the other was that by paying them £30,000 we could reduce the charge to £5—and you said you thought that the increased business on the line would soon reduce the subsidy from £30,000 to £20,000? I think that would be the result attained—that it would be reducible to that amount. The proposition is that the amount should be reduced by £400 for 500 messages over a certain number, and of course the increase of business resulting from the reduced tariff would practically reduce the amount we should have to pay in the shape of a subsidy.

17 April, 1873.

1440. But you stated you thought that the business might be increased two-fold? At the very least. I think the immediate effect of the reduction would be to increase the business two-fold.

1441. And you said that we now sent—how many messages? We now send between 10,000 and 11,000 messages a year, perhaps equal to 12,000 single rate messages. I would explain that these propositions were made some months prior to the amalgamation was effected between the three Companies, and my opinion is that the Company will now be in a position to offer better terms than the British-Australian Telegraph Company could, standing alone.

1442. You say that the average number of messages sent through now is thirty per day; that would be, taking 365 days in the year, 10,950 per year. Their offer is, that for every 500 messages over 22,000 they will reduce the subsidy by £400? Yes.

1443. Then we must more than double our present traffic before we can derive a penny of advantage from the increase? Yes.

1444. Then, again, you stated yesterday you thought we should have two lines—one from Normantown, in connection with your own South Australian line? It would add of course to the security of the communication with Europe, and would perhaps make both lines more effective. I would wish to point out, as the Colonies would have to go to a considerable expense in duplicating their lines, that the object being to secure continuous communication, that object would be more likely to be secured by the Colonies subsidizing both the cables, rather than by their subsidizing one only.

1445. You said the expense of a line from Madras to Singapore would be about £400,000? Yes.

1446. What would be the cost of the line from Singapore to Normantown? I should say about £800,000.

1447. That would be £1,200,000 altogether? Yes; but there is a project for the construction of a line between Calcutta and Singapore. I believe, if I am correctly informed, that the line between Singapore and Normantown will only be made in the event of the other cable being laid between Calcutta and Singapore, so that one is contingent upon the other. The object I had in view was, that if you wish to duplicate the lines, it should be done throughout. It can be done by a line from Calcutta to Singapore, but I prefer the Madras route, as it would employ less land line where the atmospheric conditions are not favourable for working land lines.

1448. Seeing the amalgamation is on one line, what would the Colonies have to pay as a subsidy on the two lines, so as to reduce the tariff to such a rate as would induce the public to avail themselves of the lines? I should think that a subsidy of some £60,000 a year, at least, divided between the two Companies in proportion to their length of cable, would effect the object. I think that would be sufficient. You see that one Company—the Indian, Australian, and China Company—would require from £20,000 to £30,000 to reduce their rates, and a similar sum to the other Company would perhaps be sufficient to induce them to have rates equally low.

1449. And supposing the rates were reduced to £5 per message, would that be low enough for the general public? I think so. I don't think the rate could be lower than that, to be remunerative. Of course the lower the rate the better. If we wish still further to reduce the rate we must increase the subsidy. I don't think the subsidy I have mentioned would enable either Company to charge a through rate of less than £5 10s. per message.

1450. In the event of this Committee recommending that a subsidy of £50,000 be paid, how would you propose that each Colony should pay its proportion? It might be proportioned in the same manner as the Mail subsidy.

1451.

1451. Supposing we recommended the payment of a subsidy, what would you suggest should be the proportion for each Colony to pay? I think they should pay according to the number of messages received and transmitted by each Colony, or you might commence with an apportionment like the present apportionment of the Mail Service; but to apportion the payment according to the messages sent would be the best. C. Todd, Esq.,
C.M.G.
17 April, 1873.

1452. The messages sent one year would be the basis for the payment for the next year? Yes.

1453. And you think if we were to recommend the payment of a subsidy of £50,000 that the line would be laid—there would be no difficulty in the Company constructing the line? That I can't say—it depends on what their ideas are. I would suggest that it is to the interest of the Colonies generally that both cables should be subsidized, so that they might always be kept in an efficient state. The projected Company, I understand, are willing to accept a subsidy of £50,000 for thirty-five years; that would be on a capital of a million, which they would have to expend in carrying out a part only of their scheme; including the Singapore and Rangoon section, it would be £1,800,000. I think £50,000 should be sufficient to attain your object. This provides, I understand, for a cable to New Zealand.

1454. And don't you think we could have these messages (say of 100 words) free, on condition of our paying this subsidy of £50,000—could we not have, on our paying our proportion of that £50,000, this message of (say) 100 words sent through as a Government message every day, to be posted up at the different places? If you required a message of that length, you would have to pay for it at current rates in addition to the subsidy. A bi-weekly message would, I think, cost about £6,000 a year—that is £4,500 for transmission, and £1,500 for collection; and I think you would have to pay that amount in addition to the subsidy. I think the Companies would require that.

1455. We were speaking yesterday about a misunderstanding between the *Empire* and the *Herald* about the English mail telegrams—Is it possible now for there to be any delay in sending the mail messages to the *Empire* and *Herald*—is there now the same cause for complaints as to the delaying of messages? The mail messages, since the opening of telegraphic communication with Europe, have been greatly reduced; so much so that there is no pressure on the lines, and therefore no delay is likely to occur, except in the case of an interruption of the European line, when we should, no doubt, have to revert to the old state of things.

1456. *Chairman.*] Mr. Todd, I understood you to state yesterday that there is only one means of communication provided for from Singapore to India? That is at present between Singapore and Madras. There is only one line at present westward of Singapore.

1457. Are you not aware of the arrangements made by Stephens Brothers, for a line through Siam to join the Indian lines? I am, but that is only a bare scheme at present.

1458. Is there not a scheme to carry a cable from Calcutta to Singapore, by Mr. Gisburne? Yes, I believe there is, but they are only projected lines, not carried out, and the capital is not yet raised.

1459. Can they not be carried out as quickly as we shall carry our cable from Normantown? I imagine so. It all depends on the inducements offered. I understand that the Australian Colonies do not offer to subsidize that section of the line. It will greatly hinge upon the state of the money market, and upon other things.

1460. *Mr. Burns.*] Has your attention been drawn to a complaint made by Mr. Raphael, in the Assembly last night, as to some delay in the transmission of messages from Adelaide to Sydney? Without knowing the dates referred to, and having some specific statement made, I cannot give any information on the subject. If the complaint were laid before me, I would give any explanation I could with respect to any delay that may or may not have occurred. I may say that, excepting when there has been some delay in the working of the line, I know of no delays between Adelaide and Sydney. As a rule, the messages are transmitted over our section of the line to Wentworth within a few minutes. There may have been occasions when, from atmospheric causes, a message has been delayed, but the Victorian Department has afforded every facility in keeping up the communication—they have given every facility for the transmission of Sydney and Adelaide messages over their lines.

1461. Have any complaints been made to you, since we have had direct cable communication, of delays in the forwarding of messages from Adelaide? I think there were two instances of complaints about messages forwarded to the *Empire*, but the delays occurred between Wentworth and Sydney.

1462. Was the delay explained? I do not know. That would be for Mr. Cracknell to say. We transmitted the message to Wentworth, and had nothing more to do with it. Any causes of delay eastward of that would be explained by this Department—the New South Wales Department.

1463. I presume there is a great decline in the competition in getting through mail telegrams since we have had the cable? I do not think there is any competition now.

1464. But telegrams are still sent through on the arrival of the mail? Yes; I believe on the occasion of the arrival of the last mail there were some lengthy messages, but, prior to that, the messages have been very short. There has been an alteration in the mail time-table, which brings the inward steamer to King George's Sound considerably in advance of the outward steamer from Melbourne, and our branch steamer has on many occasions arrived at Adelaide subsequently to the arrival of the mail at Melbourne. Of course we wish to close our mails on the latest day.

1465. Then you have had no complaints about the transmission of telegrams by the mail, since we have had the cable? No. There is one thing I would like to explain to the Committee.

1466. *Chairman.*] We shall be glad to hear any explanation or suggestion you have to make? It is with reference to the amalgamation of the country post offices and telegraph stations. I said the system was attended with economy, on the whole, in South Australia. I think it has been attended with economy there; but what I would wish to explain is this,—that, in the majority of our country towns, the amalgamation of the two offices has, so far as the post office is concerned, been attended with increased efficiency, but certainly to some extent it has been to the injury of the Telegraph Department. But, on the other hand, the amount of telegraph business in these country towns has been such that the Government could not afford to maintain separate offices, and the post office is, on the whole, better conducted by a paid Government official than by a storekeeper. We have, therefore, been content to bear any little inconvenience or delay occasioned to the telegraph branch. And if we consider the amount of business done at each individual station in South Australia, it is not such as to cause the two departments to clash so much as they would do in places where there was a great deal more business.

1467. *Mr. Burns.*] Suppose the population were much larger than that of South Australia—as the population of New South Wales is—would not the system of amalgamation have to be greatly curtailed?

C. Todd, Esq., C.M.G. Having amalgamated the offices we should increase the staff, and perhaps lessen the economy. Economy is gained by the amalgamation; but wherever the business is great, I say that you do not save much by amalgamating the offices—or very little; and if you do, you do it at the expense of the Telegraph Office, unless you provide an increased staff. It is done, you know, in England.

17 April, 1873.

1468. Rapidity in communication is essential? Yes.

1469. And that you cannot attain when the staff have to perform double duties? No; you must have an operator always ready to do the business.

1470. The postmasters in South Australia are under your control, as well as the telegraph offices? Yes, entirely under me. Before I was made Postmaster General the Telegraph Office was entirely under my control.

1471. So that a gentleman holding the combined offices was responsible to you for both departments? Yes.

1472. Do you think the inconvenience of the amalgamated system would be greatly increased if you had not the control of the postmasters in addition to the telegraph masters? I can hardly say. It would depend on the head of the other department. If he supported me there need be no inconvenience, but any inconvenience incidental to the amalgamation of offices would be slightly increased, no doubt.

1473. Have you met with complaints of delays caused by the telegraph operators having to do the duty of postmasters? Yes; but in many places, in reply to any objections being raised on account of the delays thus occasioned, we might fairly say that "you should be thankful to have a telegraph office at all."

1474. But these townships must be very small? They are all small, with the exception of Gawler, Moonta, Kapunda, and some others. Telegraph business in these places has suffered somewhat by the amalgamation of the offices at those places, but we are getting over the difficulty by appointing an assistant operator in some instances.

Thomas R. James, Esq., examined:—

T. R. James, Esq. 1475. *Chairman.*] You have had the advantage of hearing the opinion of Mr. Todd, with regard to the necessity, in the event of a second cable being carried out from Normantown to Singapore, of continuing the line to Calcutta or Madras. He seems to be of opinion that it would be wise to carry another line to Madras, at an expense of £400,000. What are your views with regard to this matter? I believe that arrangements have already been entered into to carry a line from Singapore to Calcutta; and that being the case, I think it would give a direct means of communicating with Europe.

17 April, 1873.

1476. You think that would be sufficient? That would be sufficient.

1477. You think it would not be necessary to expend money on the cable to Madras, however better the cable to Madras might be? Considering the probability of having a direct line from Normantown to Singapore, and the direct line to Calcutta altogether independent of the present line, would be far better than running an additional line from Singapore to Madras, as this would give two distinct lines throughout.

E. C. Cracknell, Esq., recalled and further examined:—

E. C. Cracknell, Esq. 1478. *Chairman.*] Having heard the opinion of Mr. Todd, who seems to think that in the event of a second line being carried from Normantown to Singapore, it would be wise to carry on another line to Madras, at an expense of £400,000—what are your views with regard to the matter? With reference to the line between Singapore and Madras, if there were two cables over that section, you would require another route through India; whereas by going to Calcutta, or through Siam to Rangoon, you get two distinct means of communication at a much cheaper rate. No cable will be laid between Singapore and Madras without its being subsidized; but Siemens Brothers will lay a line between Singapore and Calcutta, or provide a land line from Singapore through Siam to Moulmein or Rangoon.

17 April, 1873.

1479. You think it will be carried out quite as soon as our cable from Normantown? Yes, there will be no delay.

1480. You think it is better to go to Calcutta than to Madras? I think so, because it will give us two distinct means of communication right through.

TUESDAY, 22 APRIL, 1873.

Present:—

MR. BURNS,

MR. WEARNE.

JOHN ROBERTSON, ESQ., IN THE CHAIR.

J. G. Raphael, Esq., M.P., called in and examined:—

J. G. Raphael, Esq., M.P. 1481. *Chairman.*] You are aware of the object of the Committee? Yes.
1482. And you mentioned, we observed, the other day in Parliament, that you had some statement which you desired to make, and that you moved the adjournment of the House, in order that you might have an opportunity of bringing the matter forward. Would you be good enough to give us the information you desired to lay before Parliament, in order that we may be able to deal with it, the subject to which it relates having been referred to this Committee by the Parliament? I called the attention of the House, when I moved the adjournment, to a letter which has been received from the Eastern Telegraph Company (Limited), dated London, 1st February, 1873, and signed by the secretary, Mr. Ansell.

22 April, 1873.

1483.

1483. What is the purport of that letter? The letter has reference to the remarks which I made use of J. G. Raphael, Esq., M.P. in Parliament in November last.

1484. Have you the letter? I have a copy of the letter here, and also Mr. Powell's letter.

1485. Would you be good enough to read them? Yes. (*Vide Appendix F, with enclosure.*)

22 April, 1873.

1486. Will you be good enough to state to the Committee how it happened that these letters were not exhibited to the Committee while Mr. Todd, the telegraphic principal of South Australia, and Mr. James, a gentleman holding the same position in Victoria, were before the Committee—how was it that these things were kept back until now? I took an opportunity, as soon as I received the memorandum from Mr. Powell, to call upon Mr. Bennett with regard to it; and the same afternoon that I received the letters from Mr. Bennett I called attention to them in the House.

1487. Were you not aware that there was a Committee sitting? I brought them before the House. I saw Mr. Todd sitting behind the Bar, and I read the letter to him.

1488. Were you not aware that there was a Committee sitting? I was not aware the Committee was sitting until I came to the House. You advised me to move the adjournment of the House, and I did so. I was not aware but that was the proper course.

1489. You spoke to me about moving the adjournment of the House; and I, being a Member of the Opposition, said—"Pray do not move it on a private night—if you are going to move the adjournment, move it on a Government night;" and I said that, not knowing what it was about? The only excuse I can plead is my ignorance of a knowledge of the rules of the House, and that must be my excuse for not sending them at once to the Chairman of the Committee. But I saw Mr. Todd in the House on that afternoon with Mr. Cracknell, and I produced the letter and showed it to both those gentlemen.

1490. You did not mention to me that you were going to move the adjournment of the House, in my capacity as Chairman of this Committee, but as a Member of the House? No; I asked you what was the best course to adopt.

1491. Not saying anything as to what it was about? No.

1492. And I suggested that you should not do it on a private night? That was ignorance on my part.

1493. *Mr. Wearne.*] You showed these letters to Mr. Todd and Mr. Cracknell. What was Mr. Todd's answer to you? Mr. Todd said that he would be able to explain the matter very easily.

1494. *Mr. Burns.*] I think that in the afternoon following the day when the adjournment of the House was moved Mr. Todd was examined before this Committee, and I asked him if his attention had been called to telegrams about which Mr. Raphael had moved the adjournment of the House? I think he said he knew of it, and that he had not the particulars to explain. I gave him and Mr. Cracknell also the letter to read.

W. E. Langley, Esq., was called in and examined:—

1495. *Chairman.*] I think you have had a great deal of experience of our telegraphic system? I think W. E. Langley, Esq. there is nobody in Australia has had more.

1496. You were here before we had telegraphs? Yes. The first long report I sent was the opening of the Ballarat Railway.

22 April, 1873.

1497. You have had opportunities of becoming pretty well acquainted with the whole system? Yes; I represent the Sydney Branch of the Associated Press Agency.

1498. And you have asked to come here and be heard before this Committee. Will you be good enough to say what you desire to say? I shall be happy to give you any information for which you may ask me.

1499. Please state what you have to say? There have been certain matters which, as I have heard, have been stated to the Committee by persons examined before it with regard to the working of the Telegraph Department, and with regard to the operations of the Associated Press and their arrangements, which I know to be quite contrary to the fact; and there have been statements made in the Legislative Assembly, with regard to the way in which the Press telegrams have been used by the *Sydney Morning Herald*, which I wish to refer to.

1500. Will you say what you have to say? As regards the complaints which have been made in the Press by Mr. Bennett, with regard to any monopoly desired by the Associated Press, I wish to give that as strong a denial as I can. I may state this—that as far as the *Herald*, in Sydney, is concerned, the wish of the proprietors has been that all the telegraph work should be done by the Press without the employment of any outside agency—that the Press, as far as possible, should do its own work, and be responsible to the public for the truth of the news. When it was said that Reuter was coming to Australia to establish an agency, it was then decided by the proprietors of the *Herald*, and the *Argus*, and the *Brisbane Courier*, who also promised to join, that they should continue to oppose him.

1501. To oppose whom? To oppose Reuter, as they had done before. Mr. Syme, of the *Age*, for a time promised to join, but afterwards he got into communication with Reuter, and Mr. Bennett, and himself. I tell you Mr. Syme's statement to me in Melbourne after he came back. Mr. Syme went Home to secure a monopoly of Reuter's telegrams, and Mr. George went Home in the same steamer for the Associated Press. Mr. Syme had an offer of Reuter's telegrams made to him for a certain amount, which he considered absurd. The offer was afterwards made to Mr. George, and Mr. George accepted it. Mr. Syme told me that it was then his intention to join the Associated Press if he got in at anything like a fair price. I said that the proprietors of the *Herald* wished all to join, and shortly afterwards I came back to Sydney I spoke to Mr. James Fairfax, who was then publishing circulars to all the newspapers in the Colony, asking them all to join, and an offer was made at a very low rate, considering that £4,000 net had to be paid to Reuter—not for any monopoly of any line, but for conveying telegrams to Java for the Australian Associated Press; he was to send a daily telegram to there and bear all expenses of transmission to that point, but all other expenses from there to here were to be defrayed by the Australian Associated Press. I suggested to Mr. James Fairfax that although the *Empire* people had not joined us in the past, but on the contrary from what had been done since 1862, when they, to some extent, served a firm I was connected with as telegraphic agent, badly, I did not care to have anything more to do with them; that was when they went over to Greville & Bird in 1862.

1502. Who? Messrs. Hanson & Bennett. I came up from Melbourne expressly to inquire what was wrong with our arrangements here, and I found that they were in the hands of Greville & Bird, and I remained.

W.E. Langley, Esq. remained. I said to Mr. James Fairfax—"I think Bennett will join. If we are going to offer to the Country Press, and if Bennett will join, I think that it would be as well that we should offer it to him." He said—"We have had no communication with Mr. Bennett for twelve or thirteen years; but, if you wish, you can go and see Mr. Bennett." I waited upon Mr. Bennett and explain to him the arrangements that had been made, and expressed a wish that it should be general. He said—"I should have no objections to join, but can I have a voice in the management?" I told him that I could not say positively as to that; but I thought that there would be no difficulty about that if he bore an equal share. I told him that if he liked to pay an equal share of the costs with other papers that were in he could join; and I said—"I will give you an answer from Mr. Fairfax." He said—"If I can get in at anything like a fair price I will join." I said—"If that is so, I think the matter can be arranged." He said—"I do not like to go down to the *Herald*, for it will look like running after them. Will you name any place where I can meet Mr. Fairfax?" I told Mr. James Fairfax what had passed, and he went to Mr. Bennett's office and saw him. I understand that an arrangement was to be made, but Mr. Bennett required that the *Evening News* should be supplied in advance of anything else. I suggested to Mr. Fairfax that if that were so, he might do it on the same plan as the Associated Press of America, where if telegrams are published first in an evening paper, no matter who publishes them afterwards, they are charged to the papers which have the priority of publication—to the papers which receive them first. I thought that very fair; but Mr. Bennett wanted the same advantages for the *Evening News* as for the *Empire*, and if a telegram came through during the day he would require that it should be published in the *Evening News* first. That, I believe, terminated the negotiations.

1503. What do you mean by the Associated Press? The Associated Press is represented now by the two Adelaide papers.

1504. What two Adelaide papers? The *Register* and the *Advertiser*.

1505. *Mr. Burns.*] Are they all the daily papers? There are the two daily papers. Then there is the *Argus*, the *Sydney Morning Herald*, and the *Brisbane Courier*. The *Brisbane Courier* pays so much, and has the whole right for Queensland.

1506. *Chairman.*] What do you mean by the whole right? The whole right of supplying the telegrams to the other papers, at whatever rate they arrange, to recoup themselves part of the cost.

1507. Then the Associated Press is four or five newspapers? No. It also includes all the papers in New Zealand. Mr. Vogel, when up here, made an arrangement to join.

1508. Has Mr. Vogel power over all the newspapers in New Zealand? At the time that Mr. Vogel was up — I do not know whether you are aware of the fact, but the Government of New Zealand were in the habit of supplying telegrams themselves.

1509. To the whole of the Press of New Zealand? Until there was a row about it.

1510. What was the nature of the row? A telegram, if I remember rightly, which should not have gone at all to the Government, was supplied to a Member of the Government by one of the officials in the Telegraph Department. It was seen by a Member of the Government, who supplied it to a pet paper of his own at Wellington. The message was sent from the Bluff, and Mr. Barton, barrister-at-law, who was formerly a resident here, exposed the affair in the *Otago Times*, and had to defend a libel action about it.

1511. *Mr. Burns.*] You mean Mr. G. B. Barton? Yes.

1512. *Chairman.*] When you speak of the Associated Press, you mean two newspapers in South Australia, one in Victoria, and one in Sydney? No. All the daily papers in Melbourne have joined it.

1513. You did not say that before? You did not ask me about Victoria.

1514. You said the *Argus*? The *Argus* originally entered into the arrangement with Reuter. The *Age*, the *Argus*, the *Daily Telegraph*, and, I believe, nearly all the papers in the country; Geelong, Ballarat, Bendigo, and Castlemaine, I can speak positively about. As regards this Colony, the papers connected with the Associated Press for the supply of ordinary telegrams, irrespective of the English telegrams.

1515. We are talking about the English? There is the *Maitland Mercury*, the two Mudgee papers, and the *Herald* here.

1516. *Mr. Burns.*] How many papers altogether in the Colonies are in connection with the Associated Press? I believe I am speaking within bounds when I say that there are from sixty to seventy. If I had a list, I think it would be seen that there are more.

1517. *Chairman.*] You say that this contemplated arrangement with Mr. Bennett was broken off in consequence of the *Evening News*: had not the *Herald* at the same time an evening paper? No.

1518. It had not? It had not.

1519. You say that the proposal made to the *Empire* was, that if they used the news for the evening paper, they were to pay the whole expense of such news? No; but that is what I suggested to Mr. James Fairfax.

1520. Was that agreed to? No; Mr. Bennett would not agree to pay anything extra.

1521. Would Mr. Fairfax? Mr. Fairfax, I believe, suggested to Mr. Bennett that if he wanted a telegram of that kind he should pay for it irrespective of the morning papers' telegrams. I may tell you that prior to that time, two South Australian papers were publishing evening papers also; and it was then arranged, before any offer was made to Mr. Bennett, that no parties should take the telegrams for their evening papers,—for this reason, that any agent down there could do the same as Longston has been in the habit of doing.

1522. Who is Longston? He is the gentleman who makes up what are called the mail telegrams for the *Empire*—telegrams which are made up in Adelaide. If the telegrams were published in the evening papers, what advantage would it be for the morning daily papers to have them at all? It was to stop the publication of the telegrams in the evening papers at the first place at which they arrived that this arrangement was entered into.

1523. One of the objects of this Associated Press was to stop the news, after it had been brought to the Colony by public lines, from being published? Decidedly not. The object at which the Associated Press aimed was this,—that what they obtained at great cost should not be stolen by parties who did not intend to pay anything.

1524. I only ask you for information. You mean this,—that if the news arrived in Australia—some news of great importance, coming along Governmental lines of telegraph—if this news arrived in Australia, it might be at 8 o'clock in the morning, it would not be published until the next morning? That would be entirely a matter of arrangement between the parties interested themselves.

W.E. Langley,
Esq.
22 April, 1873.

1525. It should not be published in an evening paper? If the evening papers then being published liked to arrange to get a telegram up to a certain time of the day, and to pay the expenses of that telegram, they would have had it, and could have it still; but it would be unfair that the proprietors of the morning papers should have to pay for it.
1526. *Mr. Wearne.*] Is it not uncertain at what time a telegram would arrive? Most uncertain.
1527. *Chairman.*] Then if an evening paper joining in this arrangement would have to forego all these rights until the morning paper had published, no evening paper could join in this Associated Press? An evening paper can join by paying for what it would have the prior use of.
1528. But a morning paper would not pay for this priority? No, not for news previously published.
1529. Why should an evening paper be asked by a morning paper to pay for prior right: supposing that I have an evening paper, I could not join the Associated Press? You could if you liked to pay for the telegrams you got through.
1530. But I could not join with the morning papers with this Associated Press. It ought to be called the Associated Morning Press, as far as I can understand you? You wish —
1531. I do not wish anything. I do not care two-pence about it one way or other? Your ideas of an Associated Press are —
1532. My ideas are not in question; you have not come here to give evidence as to what my ideas are? From the questions which you ask me, I do not consider that it would be fair, and I do not think that any right-thinking man would consider it fair—merely for the sake of making your evening paper, of giving it a position, a better position than the other papers—that the great majority of the papers should pay for giving you a prior right.
1533. I am afraid you misconceive what I mean. I want to know this: If a man starts an evening newspaper here, could he join this Associated Press, so that he might publish these telegrams on their arrival, in the same way in which the morning papers can publish theirs? He could have the telegrams to publish at the same time that all the other papers published.
1534. How could he when he published in the evening and they in the morning—how could he? He would get them at the same time as the others.
1535. Then he might publish in the evening. Suppose a telegram arrived at 9 o'clock in the morning, would the Evening Press have an opportunity of publishing it? I do not think so.
1536. Then surely the designation of this Australian Associated Press is wrong? I do not say so.
1537. It is only an Associated Morning Press? At present it is.
1538. Could it be other than that? It could.
1539. The Evening Press could not publish the telegrams? It could if the Evening Press would bear half the expense of telegrams for the privilege of publishing in the evening, and the Morning Press the other half for the right of publishing in the morning.
1540. That is not done? The offer has not been made.
1541. Therefore it is clear that this is an Associated Morning Press;—how can it be an Associated Press when a message cannot be published in an evening paper? It can be what you would call an Associated Press if they like to pay their fair share—their fair proportion of the expense.
1542. What would be their fair proportion? Say one-half.
1543. With only one evening paper and fifty morning papers? If there is only one evening paper, I can scarcely imagine that the rights of all the other papers are to be set aside.
1544. I merely want to know whether an evening paper can associate with this Associated Press? Yes; but not to get rights which the morning papers do not possess.
1545. I wish you would show me how an evening paper could get anything whatever? I consider it only fair that the *Evening News* should pay their fair share.
1546. Never mind the *Evening News*? Or any evening paper that will republish in the evening what it did not pay for, and what other papers pay for, ought to pay their fair share.
1547. That is another question; it is not what I am asking you at all. Here is a message that arrives at 9 o'clock in the morning, to what you call the Associated Press; you say that that message cannot be published in the Evening Press? I do not say that.
1548. What did you say? I say that if they pay their fair quota of the expense it can.
1549. What would be their fair quota? I should think that if they got half the advantages —
1550. With fifty other morning papers? Precisely; if they got half the advantage, they ought to pay equally.
1551. *Mr. Burns.*] When you speak of evening papers coming into the Associated Press, what you mean, I think, is that the Association has to provide the expense of collecting this information, of getting it either from Reuter or his agents, and that this involves a large expenditure? It does.
1552. And if there is an evening paper which desires to come in, it may come in, but that an evening paper which desires an evening telegram must bear some additional expense, because of the priority it would obtain? Yes.
1553. What advantage would they get, if any, by association? An evening paper—presuming they were prepared to pay—that all things, as far as the charges were concerned, were satisfactorily arranged—would have this advantage: they would have all the news published in the United States, in England, and wherever Reuter had a line or an agency. But if the proprietor of an evening paper worked singly, he would have to collect his news by his own agents.
1554. *Chairman.*] He would have that, but would he have it to publish in the evening paper before the morning paper? I presume so, all other things being arranged, that is, providing he paid what they considered fair.
1555. Half of the whole? That is what I consider fair—half of the whole cost for half of the privileges.
1556. The arrangement would probably be that he would have to pay one-half of the whole? I cannot say as to that.
1557. It is what you have said? No. What I stated was what I considered fair.
1558. Would it not be better to stand off from this Associated Press, and take the telegrams from the Morning Press? That is as to whether he would consider it right to take what other people paid for.
1559. Is there a copyright in this case? It is believed so.
1560. Do you believe so? I believe the opinion of the best lawyers in England was taken on the subject.
1561. Do you believe so? There is a copyright as far as American Press telegrams are concerned.
1562. Is there one here? Not that I know of.

- W.E. Langley, 1563. You believe there is one? I believe there is a copyright.
Esq.
1564. Tell us on what you found your belief? I have heard that questions have been asked in England, and I believe there is a case reported in the law books which goes to show that newspaper matter is copy-right—that you have no more right to use it than a book of which I am the author.
- 22 April, 1873. 1565. How is it that the morning Press here who have complained so much have not used their common law right? That is another question. People may have rights, and not rush into a Court of law to vindicate them.
1566. Then there is really no ground of complaint—If these gentlemen who think they have a copyright chose to prosecute, they have the means of prosecuting themselves? That is a matter for them.
1567. Do you know of any monopoly exercised by Reuter in the transmission of telegrams from England? Decidedly not. Monopoly does not exist; and the best proof of that is in the fact that I remember on one occasion the *Empire* got news through ahead of Reuter's telegram.
1568. Only on one occasion? Once or twice; I know of one case, and I believe there have been more.
1569. *Mr. Burns.*] I believe that a considerable sum is paid to Reuter for acting as agent to the Associated Press? Not exactly for acting as agent, but for supplying telegrams delivered at Java.
1570. From all parts of the World? Yes; from all parts of the World, delivered at Java.
1571. And acting generally as telegraphic agents? Simply as telegraphic agents. Reuter's Company is paid for nothing but for work performed in the shape of supplying news.
1572. *Mr. Wearne.*] For sending the telegrams? Paid for sending and conveying the telegrams to Java.
1573. *Mr. Burns.*] Do you know whether they have any control over the lines at any point beyond their own? No. As far as Reuter is concerned, he has sold his rights, and the business is now in the hands of a public Company.
1574. Have they got any monopoly or any privilege in sending telegrams which gives their messages priority to the messages of anybody else? No.
1575. It is a matter of open competition and expenditure of money? Quite so.
1576. *Chairman.*] Have they not a large number of shares in one of these cables? I do not think so. I think, if you will look at the list of the directors of Reuter's Company and the list of the Java Company, you will not find a single name on the one list that you will find on the other. The undertakings are quite separate and distinct. Reuter had certain privileges for laying down one cable between the Hague and the coast of England, which I think he sold.
1577. *Mr. Burns.*] Was your attention drawn to the circumstance that Mr. Raphael moved the adjournment of the House some day last week, complaining of the delay in the transmission of telegrams between Adelaide and Sydney? I remember seeing something of it.
1578. Do you remember anything about it? I remember the circumstance of a complaint made by the *Empire* people of their message having been delayed. They boasted that they got their message direct from Adelaide, while we had to get ours second-hand from the *Argus*.
1579. *Chairman.*] Whom do you speak of when you say "ours"? The Associated Press.
1580. *Mr. Burns.*] Referring to those particular telegrams, have you heard any reason of the delay? The main line was interrupted. We did not get our telegram direct. Our telegram was repeated on from the Melbourne *Argus*.
1581. And you were earlier in consequence? Yes. Mr. Fairfax's instructions were that our message should come on direct.
1582. *Chairman.*] Mr. Fairfax—Is he the manager? No, he is not.
1583. How does he give instructions then? As the only person who pays for the news to this Colony.
1584. Is there any manager in Sydney? I do not know that there is. I am in charge of the agency in Sydney.
1585. How was it that you did not give the instructions, instead of Mr. Fairfax? I sent a telegram about it. Mr. Fairfax wished his telegrams to come on direct in that way.
1586. You are General Manager of the Associated Press Company? All the arrangements are in my hands here.
1587. *Mr. Burns.*] That is, for New South Wales? For New South Wales.
1588. Has your attention been turned to the question of having a public telegram at the expense of the Government—a telegram giving the price of all important commodities—posted at the different stations? Yes.
1589. What do you think of it? Irrespective of what might be done by subsidizing the cable, and thus reducing the cost of messages, I think it would be a most unwise thing for the Government to have anything to do with newspaper work.
1590. *Chairman.*] What do you mean by newspaper work? The getting of telegrams which newspapers could make use of.
1591. That question was not asked of you—you were asked about public telegrams posted at particular stations? But certain newspapers might get hold of them.
1592. *Mr. Burns.*] What is your opinion of having a public telegram at the expense of the different Governments, giving information about the prices of produce in which the Colonies are concerned, giving the changes in the markets—what is your opinion about such a telegram being supplied by the Government at all stations in common to everybody at the public expense—what do you think of a system of that kind? I think it is rather Quixotic. While it would be interfering with the business of the merchant, it would be reducing the income of the Telegraph Department.
1593. Would it lessen the income to the Telegraph Department? I think it would. If telegrams of that kind came through for a time and were known to be reliable, merchants would not need to have telegrams sent out to them; it would be stale news to them.
1594. But do you not think that merchants might act upon information of that kind, and give instructions for forwarding goods? All others would do the same.
1595. Would it not breed business? I do not think so.
1596. Do you think that the publication of the arrival and departure of ships has had the effect of lessening business in the Telegraph Department? To some extent.
1597. But is it not recouped? I do not think so. If these telegrams did not come out, most of the merchants and other persons interested would send and have a telegram sent out here.

1598. Would it be to the public interest if the Government were to discontinue giving that information about the arrival and departure of ships which they give at the offices now? No; that is a matter of convenience to the general public. W.E. Langley,
Esq.

1599. Do you not think that a telegram with regard to prices would be another matter of convenience to the public generally? I do not think that it would be to the same extent. In one case you are taking the news over your own lines, but here you would have three parties interested to deal with. 22 April, 1873

1600. Have you ever heard it stated that the publication of shipping information, as it is now published, has decreased the receipts of the Telegraph Department? I have not heard it stated, but I think it would.

1601. You think that a public telegram would have the same effect? I think it would. If the information did not come through about the arrival and departure of shipping, persons would send down special telegrams, perhaps six to one.

1602. Is it not a matter of immense public convenience? It is. But those having business transactions with England whom it would interest are a mere handful.

1603. Would it not be of interest to the mercantile community, as a whole, to know that wool has advanced a half-penny a lb? Only to those immediately interested.

1604. Would it not affect the whole interest of the Colony? I do not think so.

1605. How is it that you get information of that kind now? I do not think that the commercial news comes through to the *Herald* as often as would suit the interests of that paper now. The *Herald* has to supply news for all classes, but I look upon it that their principal customers are the mercantile community. I believe if the charge for telegraphic information from England were reduced, it would be for the benefit of the public generally as well as of the Press.

1606. Suppose the charges were reduced one-half, would the business be doubled from that? I do not think that it would be doubled, but I think that it would be largely increased; and I take as a proof that it would be so, the effect of the reductions which have been made on the telegraph lines in the Colonies.

1607. Within the Colony? Wherever it has taken place it has led to a largely increased business.

1608. Are you aware that it has doubled since the reduction of 50 per cent. in Victoria? It has.

1609. And the same in South Australia? Yes.

1610. And the same effects will follow here? I believe the reduction to a shilling, which you moved for, will largely increase the business.

1611. You are in favour of subsidizing the cable, in preference to getting telegrams through at the public expense? Yes.

1612. But a telegram at the public expense would in itself be a subsidy to the cable? Yes.

1613. But you would prefer a money subsidy? I should.

1614. With any condition as to the reduction of charges? Most decidedly.

1615. To what extent should a reduction of charges be made to affect the business? I should say that they ought to be reduced one-half.

1616. Have you heard mercantile men say that the reason they do not telegraph so much to England is the uncertainty of the communication? I have not heard any remark of that kind made. Those who have large business connections in England do, generally speaking, use the cable pretty freely.

1617. Do you think that if we had a duplicate cable and reduced charges we should have a larger business? Certainly. A single line like the Java cable, and laid where that cable is, over a coral bottom, can never be depended on for a great length of time.

1618. Is not that a reason why the business has not been so large? It has to some extent interfered with it, since the time telegrams came on here from Galle to Sydney.

1619. *Mr. Wearne.*] Have you anything else to communicate? I understand that there have been charges of unfairness made against the Telegraph Department here—that statements have been made that the officers of the department act prejudicially to the interests of the *Empire* and other papers, and in favour of the *Herald*. To this I can say positively no; and I think I have sent more telegrams than any person in Australia, and have had more to do with it. I have thought that if there has been a tendency in the Telegraph Department at all in favour of one paper more than another, it has been a tendency in favour of the *Empire*.*

1620. *Chairman.*] You think there is a tendency? No; I have found them strictly impartial. At one time I fought both against Greville & Bird, and the *Argus* and *Herald*, and I first sold to Mr. Fairfax in Sydney in 1862 the right to receive Gordon & Gotch's messages. Mr. Fairfax said—"You can go on in opposition to us if you like; and whenever you beat us we will pay you half the expenses, and leave you the free use of your telegrams for country papers. I remember about that time a telegram of Gordon & Gotch's was surreptitiously obtained from the mail steamer at Port Phillip Heads, and it came through to Sydney prior to the *Herald's* message. What became of that message of Gordon & Gotch's was not known until it was found to have been published by the *Empire* as Reuter's. I have sent messages to different papers both here and in Victoria, and if there had been any unfairness I should be likely to know of it.

1621. Why, you might be a favourite? If the officers of the Telegraph Department were paid servants of the *Herald*, it would not pay them to have two favourites.

1622. And you are inclined to think that they are paid servants of the *Empire*? Decidedly not. I believe there is the strictest impartiality.

1623. The strictest impartiality, inclining to the *Empire*? No; I said I once thought that if there was any tendency at all, it was to favour the *Empire* more than the *Herald*. As this question of telegrams has been so often brought before the House, I wish to state to this Committee that for eight years I have had to do with telegrams in the *Herald* office, and on no occasion has the publication of a telegram been stopped or suspended for a moment longer than was necessary to get the news through, for any purpose whatever; nor during that time, do I believe a member of the firm —

1624. A member of what firm? Messrs. Fairfax & Sons. Nor do I believe that a member of the firm ever received the telegrams or saw them until they saw them in type. Sometimes when persons have come into the office to inquire after their friends, questions have been asked. The telegrams never went into the proprietor's room at all. They were taken into the overseer's room, where I and he wrote them off.

Our

* NOTE (on revision) :—My reason for thinking so was that I heard that on several occasions Ministers were applied to interfere in the mail telegram arrangements of the department.

W.E. Langley, Esq. Our instructions were, as soon as the most important items came through to post them outside the office, and that was invariably done. If the messages came through during the day, I do not believe I ever left the room from the time they began to come through until they were finished; so that so far as anything leaking out was concerned, it could not come through either of the parties who had charge of the telegrams, and I do not think that any information could have been given by the proprietors of the *Herald* to any parties outside. As regards the changes in the English markets,—on one occasion Mr. James Fairfax came up to ask some question. I said—"If this news is true, there would be a capital chance to make more thousands than many would care to lose." He turned round and said—"Don't say a word about it. If the news is important post it outside at once; if not, let it go up-stairs, and do not let any person see it until it is published." If any information went to persons outside, it must have gone either through myself or Mr. Brewer, and on no occasion did we leave the office until the telegram was out of our hands and in type. Knowing all the facts, I am in a position to say that the charge of the proprietors of the telegrams using the telegrams to serve their private ends is not true. I can give a positive denial to it.

22 April, 1873.

1625. Did you ever hear that charge—I never did? I did, in the Assembly.

1626. *Mr. Burns.*] As to the fall of copper? There have been worse than charges—insinuations you cannot always publicly repudiate.

1627. *Mr. Wearne.*] Are there any other matters to which you would refer? I think that is the only matter. I do not know whether Mr. James spoke to you with regard to the importance of the Telegraph Department here having an additional staff, such as they have in Melbourne—one to begin the business early in the morning, and another to carry it on until night. It would obviate a good deal of delay and trouble if one staff began at 9 in the morning and left at 3, and another lot should go on at 3 and stay until 8, or until whatever time the line was clear.

1628. *Mr. Burns.*] They have not had a staff sufficiently large? They have not.

1629. They have had a sufficient number of messengers? Not at night. I have sometimes had to wait a long time at night while the boy was going round to all the Government Offices with messages. There is only one night messenger.

TELEGRAPHIC COMMUNICATION.

APPENDIX.

A 2.

Electric Telegraphs,
Sydney, 9 December, 1872.

Sir,

I am in receipt of your letter of the 26th ult., B/4474, having reference to certain proposed Postal and Telegraph arrangements at Mudgee, and am desirous of stating that the present Telegraph Station-master has had charge of that station for eleven years; and, as he has performed his duties satisfactorily, I think that, whatever alterations are made, the claims of this officer should not be overlooked.

The residence attached to the office is quite as necessary for a Telegraph Station-master as the Postmaster, the hours of attendance of the former being from 8-30 a.m. until sometimes 10 and 11 p.m.; and when the salaries were first arranged it was understood that the quarters should form part of the salary, which I consider a valid reason for not depriving Mr. Aldwell and his family of the privilege he has enjoyed for so many years.

The amalgamation of the Post and Telegraph Office at Mudgee will work very much to the prejudice of the Telegraph Service, and I strongly advise that, if the offices are under one roof, that they be so divided as to admit of the duties of the one being carried on so that they will not interfere with those of the other, as I find in cases where the instruments are placed in the same room as the Post Office they suffer from the dust, &c., brought in with the mail bags, and it is almost impossible to work a Telegraph Station satisfactorily when the attention of the operator is taken off from his instrument so repeatedly; for the sale of stamps, delivery of mails, and other postal requirements, to say nothing of the distraction caused during the stamping of letters, rendering it difficult to hear the station calls or to transcribe from the instrument with accuracy. These interruptions are very severely felt at Tamworth, Deniliquin, Wagga Wagga, Tenterfield, and other places.

In places where the amalgamation of the duties of Post and Telegraph Office has to be performed by the same officer, they never work well, as the operators are too much tied to the one to be able to give sufficient attention to the other; and the same complaint is universal throughout Victoria, where the amalgamation has been sufficiently tested to show that a radical change must be made with a view to the separation of the two offices. In our own Colony—take, for instance, the Tamworth Station—the officer there is also Line Repairer, and should be available for that work; but when the line is interrupted, Mr. Beckett cannot be sent out in consequence of postal duties, and a stranger has to be procured. The lines are, in consequence, down for hours longer than there is any necessity for, to the detriment of the Service and annoyance to the public; and when the lines have to be repaired by unskilled hands, they are liable, and do give great trouble in their daily working.

I have given this matter of late considerable attention, and as it is one which must prove and is daily becoming of grave public interest—*i.e.*, whether we are to have an efficient Telegraph system or one crippled by the exigencies of another public department for which it has no affinity, or whether it is to be carried on, as in England, America, and on the Continent of Europe, under administration of its own, and managed by professional officers who have been specially trained for the purpose, such as the late Mr. Cully and Mr. Preece, in England, and Messrs. Stager and Orton, in America; M. Ailhaud, in France, and Major-General Chauvin, in Prussia.

In support of these views upon this important matter, I cannot do better than refer to the fact that in Austria, Prussia, and several of the European States, the Telegraph has passed through the ordeal of being worked under the Postal Administration, but in every instance where it has been tried it has proved a failure, and each State has now a separate and distinct Telegraph Service. Reference to the Annual Report of the Director-General of Telegraphs in India (Colonel Robinson), dated July, 1871, will not be uninteresting.

The experiment of placing both Post and Telegraph Offices under the Postmasters at minor stations, which naturally commends itself at first sight, especially to those who are ignorant of the difficulties in practice, was tried at Mussorie and at Mynee Tul.

These stations presented marked facilities for the experiment. At each the Postmaster was of European birth, mature age, considerable experience of mankind, much respected, and apparently with plenty of leisure to devote to the small duties expected of him. They willingly accepted the trust, in the fulfilment of which they foresaw no difficulty. They had merely to maintain discipline, prepare and sign returns, and to take heed that the signallers were attentive to their duties.

Simple as this appeared to be, and well calculated to be economical, the experiment failed, and failed signally, as the Director-General of Post Offices had foreseen it would.

There is no economy, for the rent of houses large enough to contain both establishments was higher than the aggregate rents of the two smaller houses. There was no saving in Establishment. The postal duties of the Postmaster rarely left him leisure to spend an hour or two in the Signal Office. His lack of technical knowledge left him powerless to advise or assist in the adjustment of the instruments, and for the same reason he failed to secure the proper respect of the signallers under him.

The fact is, the two duties are totally dissimilar, and to endeavour to combine them is as extravagant as to yoke together a race-horse and a cart-horse. It is only at the very small offices that the work is so light that one man could attend to both. As a rule, the Telegraph and Post Office employés are everywhere fully employed, consequently if the two duties are combined under one head there must still be two men to perform them, and one, if not both, must be paid a higher salary than he would receive for performing the least important work in consideration of his extra knowledge and qualifications. It is obvious that under such conditions economy becomes impossible.

The good principle of division of labour is destroyed, and there is nothing as a set-off.

In almost every Country in Europe the commencement of the State Telegraph has been subordinate to the Post Office. In each case it has failed. It is now being tried in England; but although England is but a small place, where no line exceeds 500 miles, and where extraordinary resources are always available, it does not give satisfaction, and its early divorce from the Post Office is already foretold.

The rapid strides which telegraphy is making throughout the World, and the increasing wish of the public to make it universal, will in a few years result in wires being provided for every place of business, and electricity will be as common as the supply of water and gas; but this can scarcely be hoped for here if the department is made subservient to another which cannot be expected to foster so great and growing an opponent.

As regards the economy of combining the two duties at important stations, there is none; the same number of hands have to be employed as in the Telegraph Offices at such stations as Bathurst, West Maitland, Newcastle, Deniliquin, Goulburn, and many others, the Station-masters are fully occupied, and the amalgamation only increases the difficulties of management, without corresponding benefit; excuses for non-attendance to telegraph calls are frequently being made, and the Post Office is often made the scape-goat for many a delinquency which cannot be traced, so that the whole telegraph system is upset, and the business of the entire circuit detained sometimes an hour or more, without the slightest chance of punishing the offender.

At line-repairing stations, such as Wellington, Sofala, &c., where one man only is employed, matters are still worse. The duties are to keep the lines in repair, their stations extending from 60 to 80 miles; since the office of Postmaster has been thrust upon them they have not been able to keep the lines in order, and are not available as they ought to be when the lines are broken, but must trust to any one they can get to repair the damages. In many places no one can be hired at any price, and the wire is rendered useless for days, the man who is employed and paid for this work not being able to leave his station, as the Post Office must be attended to and cannot be entrusted to strangers.

The desire is becoming general for cheap telegrams, and the tendency in this Colony is in favour of a further reduction to one shilling; but this cannot be done unless additional wires and increased accommodation are provided, as the work at the present tariff is more than can be transmitted by the lines now in operation.

In conclusion, I would remark that, however much I may wish to work the amalgamation of the Post and Telegraph Offices where practicable, yet still I feel it my duty to lay the above reasons before the Honorable the Postmaster General, so that the efficiency of this department may not be impaired.

E. C. CRACKNELL.

The Secretary, General Post Office, B.C.

P.S.—No doubt the meaning of the expression in Colonel Robinson's report, in reference to the length of lines in Great Britain is, the shortness of the circuits. Sub-offices on separate lines can be inexpensively established, and Mr. Scudamore, the present Director General of Telegraphs in England, says:—"To put sub-offices in circuit with through lines could therefore have but the effect of clogging the lines, diminishing their carrying capacity, and delaying the work. Subordinate lines have consequently been provided in almost every case for the service of subordinate officers."

With this system the minor offices could be worked by our offices for the combined duties, as the delays through postal arrangements would not be so seriously felt, but in India and these Colonies the lines are too long, and the cost won't be too great to provide separate wires for this purpose.

If the proposed plan of combining the postal and telegraph systems is to be adopted, it must be quite clear that it will work much better by giving the telegraph officer the postal duties, with sufficient assistance, as a skilled head of the office must be of greater service in managing a station, than by placing a man in the position of manager who does not possess the class of information required for the proper arrangement of circuits, testing for faults, adjustment of instruments, and other technical knowledge so essential for maintaining discipline, and which knowledge cannot be expected from ordinary operators. Men who are possessed of professional knowledge will not submit to the dictation of those who are not their equals in that respect, and if urged will lead to insubordination, and increase the difficulty of management.

The increasing importance of telegraphy to every community demands professional skill to keep pace with it successfully; this cannot be attained except by encouraging the youth of the Country to make the science their study, which can scarcely be expected if the highest position is nothing but that of a mere operator placed under the direction of a country postmaster.

I also contend that it is quite as necessary for the Telegraph Service that its officers should reside on the premises, as for the Post Office. A telegraph officer should, if possible, be in call at all times, but where expense is an object, the next best step is to place the station-masters in such a position that they can be called at any moment by preconcerted signals, such as a bell circuit, which is only practicable by providing a residence; in fact, the increased work of late could not be carried on if the officers lived away from their stations.

The Mudjee Station has three lines leading into the office, from Wellington, Dubbo, Gulgong, Sydney, and Bathurst, and from Murrurundi, which requires two instruments in addition to the necessary switching apparatus, and the officer has to be in attendance for twelve hours and a half, and sometimes fourteen and fifteen hours, daily.

I find that in Victoria skilled operators are appointed as postmasters (with a few exceptions), and in these cases the ordinary postmasters had to serve a term of from three to six months' probation in the head office, but they were not able to perform the telegraphic duties, and experts had to be appointed in consequence.

The amalgamation of the post and telegraph offices has in very many instances worked to the injury of the department. The following case might be quoted as an example, where a delay of nearly an hour occurred between Coolah and Cassilis through the station-master at the latter place being engaged with the mails, and was thus unable to receive a very important telegram from a person at Coolah requiring medical aid, and in a very serious case, which nearly resulted in death, in which every moment was of the utmost importance; and this is but an isolated case out of the number daily occurring, causing very general dissatisfaction in the working of the Telegraph system.

As regards the rent now paid by the Post Office Department, the interest on the additional outlay for increasing the accommodation to the buildings would be nearly equivalent to the rent now paid in most places, and I do not think it should be considered a saving.

E. C. CRACKNELL.

[Handed in by S. Bennett, Esq., 5 February, 1873.]

B 1.

The following instances amongst others are complained of, as cases in which unfair preference has been shown to Reuter's messages:—

That on Monday the 9th November, at 11:30 a.m., message was lodged in London for *Empire*.

That on same day, but at a later hour, viz., 1:30 p.m., similar message was lodged in London for *Herald*.

That on November 11th *Herald* published said message, while *Empire's* message, although lodged before *Herald's*, was only delivered to that paper on following day, so that *Herald's* message was published twenty-four hours in advance of message for *Empire*, lodged two hours before it.

That on November 15, at 1:4 p.m., a message was lodged in London office for *Empire*.

That

That on November 16, at 6:30 p.m. (that is, about thirty hours after the *Empire's* message had been lodged), a similar message was lodged for *Herald*.

That the *Empire's* said message did not come to hand in time for publication, before the 18th, that is, three days after it was lodged in London, while the *Herald's* (lodged thirty hours later) was published on same day.

That on November 16, at 11:30 a.m., message was lodged in London for *Empire*.

That on same day, but at a later hour, viz., 3:45 (four hours and a quarter after *Empire's* message), similar message was lodged for *Herald*.

That the *Empire's* message was not received until the 18th at 9:50 a.m., and therefore could not be published until the 19th, while the *Herald's* message, lodged upwards of four hours afterwards, came to hand on the 17th, and was published on the 18th, thus anticipating the *Empire's* earlier message by twenty-four hours.

That on Thursday, December 26th, at 6:15 p.m., a message announcing Captain Gray's death was lodged in London for *Empire*, and that on same day a message of similar import was lodged for *Herald*.

The message for *Empire* did not come to hand until Monday, December 30, while that for *Herald* came to hand on Friday, December 27, and was published in that journal on Saturday 28th, thus giving papers employing Reuter's Agency, in this as in other cases, forty-eight hours precedence in publication of messages.

[Handed in by S. Bennett, Esq., 7 February, 1873.]

B 2.

Copy of Memorial addressed by Proprietor of *Empire* and *Evening News* to the Intercolonial Conference of Delegates from the several Australian Colonies now assembled in Sydney.

The Memorial of Samuel Bennett, Newspaper Proprietor and Publisher, Sydney, sheweth:—

That your memorialist, as proprietor of the *Empire*, *Evening News*, and the *Australian Town and Country Journal*, is, in common with many other newspaper proprietors in Australia, subjected to what he cannot but think that the subjoined statements prove to be vexatious delays, disappointments, and exorbitant charges, in obtaining cable messages from England; and, for the sake of justice, and of the public interest, as concerned in the transmission of telegraphic news from the Mother Country and from Europe generally, your memorialist requests the favour of your attention to the undermentioned facts:—

1. The cost of the transmission of a message of twenty words, including address, between Sydney and Port Darwin, a distance of three thousand miles, is 24s. From Madras to London, a distance of 7,500 miles, the cost is £2 4s., so that for 10,500 miles, the cost is only £3 8s.: while from Port Darwin via Singapore to Madras, being less than 3,000 miles, including divergences, the cost is over £6. And those sections between Port Darwin and Madras, or parts of them, are (or are represented to be) under the virtual control of Reuter's Company, exercising an influence on the British Australian Telegraph Company. This great disparity in the charges seems to be accounted for by the fact that Reuter & Company are receiving from the *Melbourne Argus* and the *Sydney Morning Herald*, calling themselves the Associated Press, the sum of £4,000 annually (equal to 4 per cent. on £100,000), apparently as a bonus paid to them for raising the charges on messages for the public and for other papers to what is virtually a prohibitory sum.

2. Not only are the charges exorbitant but messages are frequently delayed, to the great disadvantage of your memorialist and others, and for the benefit of the so-called Associated Press. Messages for your memorialist, lodged in London, are not delivered in Sydney, in many cases, until from twenty-four to forty-eight hours after messages lodged in London, at a later hour, for the so-called Associated Press, have been delivered. (For specified instances, please see Appendix A.)

3. In explanation of the course of proceedings by which this result has been brought about, your memorialist calls attention to the facts here stated:—

- (1.) Before the completion of the Port Darwin cable, Reuter & Co. sent an agent (Mr. Collins) to India, with instructions to proceed to Australia and make arrangements with the newspapers in this Country for supplying them with the news of the World. Mr. Collins, accordingly, on the 10th May, 1871, wrote from Bombay a circular letter to the newspaper proprietors of Australia, informing them of the purpose of Reuter's Company to establish a daily service of messages, declaring the resolution of the Company "to open a branch on an early date at Melbourne," and to maintain "perfect impartiality towards all subscribing journals"; and stating that "no paper will be excluded from the right of joining the service." Mr. Collins also said "I shall leave by an early mail for Melbourne." (See Appendix B.)
- (2.) Notwithstanding this letter, which induced the proprietors of papers to withdraw from other arrangements which they had entered upon with the view of securing messages from England on completion of the cable, Mr. Collins was suddenly recalled to England without visiting Australia.
- (3.) It transpired that certain steps taken by the proprietors of the *Melbourne Argus* and the *Sydney Morning Herald* had the effect of intercepting him, they improperly representing themselves as authorized to act for the Australian Press generally, and in that assumed capacity undertaking to enter into an arrangement for receiving Reuter's messages, which arrangement made it unnecessary for Mr. Collins to proceed on his intended mission to Australia.
- (4.) This is proved by Mr. Collins's circular letter—suppressed by those to whom it was entrusted for delivery—dated Bombay, 22nd August, 1871 (see Appendix C), in which he says—"I am instructed to inform you that the Directors of the Company in London have—in full assurance that they were acting in accordance with the wishes of a majority of the Colonial Press—concluded arrangements with the proprietors of the *Melbourne Argus* and *Sydney Morning Herald*." In proof that the *Herald* did not act as the representative of the New South Wales Press, it will be sufficient to state that your memorialist, the proprietor of the only other daily papers in this Colony, was entirely ignorant at that time, and for many months afterwards, of the steps taken by the *Herald* and the *Argus*. He has also the strongest reason for believing that all the other Australian journalists were kept in like ignorance. So that the representations which led Reuter & Co. to believe that, in dealing with the *Argus* and *Herald*, "they were acting in accordance with the wishes of a majority of the Colonial Press," were quite at variance with the truth.
- (5.) So far from fairly representing the wishes or the interests of the majority of the Australian Press, it is evident that the proprietors of the *Melbourne Argus* and of the *Sydney Herald* have been endeavouring to secure a monopoly of a great public institution, the Telegraph; and for this end have applied to the Legislatures of South Australia, Victoria, and of New South Wales, with temporary success in the first two instances, to enable them to reap the fruits of this monopoly. Prohibitory charges on messages between Port Darwin and Madras, to prevent other journals getting news for themselves from Europe, and Telegram Copyright Acts, to prevent those journals from using the messages sent to the two favoured papers, would enable the Associated Press to triumph in the secure enjoyment of their unjustly acquired monopoly. But looking on the Telegraph as a great national institution, it is hoped that the Legislatures of these Colonies will not consent to any measure for conferring exclusive use of that institution upon any particular journals.

4. To show the manner in which journals not included in the so-called "Associated Press" have been dealt with, your memorialist further submits the following facts:—

- (1.) It was stated to him, as an inducement for his joining the so-called Associated Press—or rather, to induce him to take their telegrams at their own price—that Reuter's power over the cable line was such that no other telegraphic agent could hope to compete with him.
- (2.) Your memorialist's agent, a gentleman promptly despatched to London on your memorialist being made acquainted with the agreement entered into by Reuter with the Associated Press, found on his arrival there that what had been said relative to the power of Reuter's Company to control the transmission of cable messages was not an empty boast. (See correspondence, &c., with Reuter's Secretary.—Appendix D.)
- (3.) Messages sent from London for your memorialist have been delayed, as threatened. (See Appendix A.)

(4.)

(4.) This (Reuter's control of the cable) was admitted, if not avowed, in letters, and at more than one interview between your memorialist's agent and Reuter & Co.'s manager, Mr. Griffiths.

5. The use which the favoured proprietors made of their exclusive arrangement with Reuter & Co. is seen in the correspondence between Messrs. Fairfax & Sons and your memorialist, of date 22nd March, 26th March, and 4th April, 1872. (See Appendix E.) First, Messrs. Fairfax & Sons make this offer:—"For the consideration of £600 per annum, payable monthly in advance, we offer you for the *Empire* all the advantages which will be possessed by the Australian Associated Press." In his reply, your memorialist said—"Will you kindly inform me if I am correct in supposing that, if I agree to pay the amount mentioned, I shall be entitled to receive the telegrams immediately on their reaching Sydney, direct from the Telegraph Office, and be at liberty to use them at once, in any way that I choose, that is, for publication in either the *Empire* or *Evening News*, according to the time of their reception. If this is so, I shall, so far as I can judge at present, be prepared to come to an arrangement such as you indicate." To this, Messrs. Fairfax & Sons replied—"It has been made a condition in the other Colonies that only morning papers can be dealt with. This being the case, we are precluded from entertaining any propositions respecting the *Evening News*." This is the manner in which the so-called Associated Press carry out the avowed intention of Reuter & Co., whom they had succeeded in leading to regard them as representing the Australian Press! Reuter & Co. assure us that "no paper will be excluded from the right of joining the service." The self-styled "representatives of the Australian Press," to whom Reuter & Co. had entrusted the carrying out of their agency, permit such papers only to participate in cable messages as they choose to select; while the journals excluded from participating are practically prevented by the influence of Reuter's Company in the management of the British Australian Telegraph Company from having messages by any other agency.

6. Your memorialist has at great expense made arrangements for receiving regular messages by cable. In several instances messages which he has every reason to believe were duly lodged in the proper office in London have never reached him, and many of those which have come to hand have been so long delayed in transmission as to be useless when received.

7. Your memorialist need not point out that great public injury and inconvenience, as well as private wrongs, are involved in the condition of things of which he complains, and he ventures to hope that you, gentlemen, as the duly authorized Representatives of the Governments of the several Colonies of Australasia, may be able to adopt such measures as will prevent the continuance of the evils which he has specified in this memorial.

APPENDICES.

(A.)

The following instances amongst others are complained of as cases in which unfair preference has been shown to Reuter's messages:—

On Monday, the 9th November, at 11:30 a.m., message was lodged in London for *Empire*. On same day, but at a later hour—viz., 1:30 p.m.—a similar message was lodged in London for *Herald*. On November 11th *Herald* published said message, while *Empire's* message, although lodged before *Herald's*, was not delivered until following day, so that *Herald's* message was published twenty-four hours in advance of message for *Empire*, lodged two hours before it.

On November 15th, at 1:4 p.m., a message was lodged in London office for *Empire*. On November 16th, at 6:30 p.m. (that is, about thirty hours after the *Empire's* message had been lodged), a similar message was lodged for *Herald*. The *Empire's* said message did not come to hand in time for publication before the 18th—that is, three days after it was lodged in London, while the *Herald's* message (lodged thirty hours later) was published same day.

On November 16th, at 11:30 a.m., message was lodged in London for *Empire*. On same day, but at a later hour, viz., 3:45 (four hours and a quarter after *Empire's* message), similar message was lodged for *Herald*. The *Empire's* message was not received until the 18th, at 9:50 a.m., and therefore could not be published until the 19th, while the *Herald's* message, lodged upwards of four hours afterwards, came to hand on the 17th, and was published on the 18th, thus anticipating the *Empire's* earlier message by twenty-four hours.

On Thursday, December 26th, at 6:15 p.m., a message announcing Captain Gray's death was lodged in London for *Empire*, and on same day a message of similar import was lodged for *Herald*. The message for *Empire* did not come to hand until Monday, December 30th, while that for *Herald* came to hand on Friday, December 27th, and was published in that journal on Saturday 28th, thus giving papers employing Reuter's agency, in this, as in other cases, forty-eight hours precedence in publication of messages.

(B.)

Reuter's Telegram Company (Limited), Eastern Branch.
Central Office, Elphinstone Circle,
Bombay, 10 May, 1871.

To the Proprietor of the *Empire*.
Sir,

Enquiries having been made by some of the leading colonial papers regarding the future telegraphic services of this Company, when the British Australian cable shall have been completed between Port Darwin and Java, and direct communication thus have been established between Great Britain and the Colonies, I take this early opportunity of notifying to you the intentions of the Directors.

I am authorized to inform you that, from the date of the line being made available for traffic, a daily service of messages will be commenced, whereby will be transmitted a *resumé* of all important European and American political, financial, and general information, special prominence being given to such news as may directly affect European residents in all parts of the Colonies.

The interests of the Australian Press will be most carefully respected, and in order to ensure the efficient representation of the Company, it has been resolved to open a branch on an early date at Melbourne, under the management of a gentleman thoroughly conversant with the system adopted at the numerous agencies in Europe and the East between which telegraphic communication has already been established.

It is confidently believed that the facilities enjoyed by the Company for the speedy collection and rapid despatch of news from England, the Continent, and America, are such as will enable them to conduct a comprehensive telegraphic service, whose efficiency will be found to compare favourably with that of any similar organization, and I am authorized to state that it is the intention of the Directors to avail themselves of those facilities to the utmost. It is their earnest desire to supply, on a complete, yet economical system, telegrams interesting and important to every class of newspaper readers. *Perfect impartiality will be displayed towards all subscribing journals, and no paper will be excluded from the right of joining the service.*

The well-known efficient management of the Company's business in Europe, during a long course of years, will, it is believed, be considered a guarantee for the fulfilment of their undertaking, the support of which I have now the honor to solicit.

The preliminary organization of the Australian service having been entrusted to myself, I shall leave by an early mail for Melbourne, accompanied by the permanent agent, and on my arrival I trust to have the pleasure of supplying you with further detailed information as to the Company's intentions, into which it would now be premature to enter. In the meantime, any communication from you to the above address shall receive my prompt attention.

I am, &c.,

HENRY M. COLLINS, Manager.

(C.)

APPENDIX.

5

(C.)

(The Suppressed Circular.)

Reuter's Telegram Company (Limited),
Bombay, 22 August, 1871.

To the Proprietors of the
Gentlemen,

With reference to my circular letter of the 10th May last, copy of which was forwarded to your address, I am now instructed to inform you that, since that date, the Directors of the Company in London have—in full assurance that they were acting in accordance with the wishes of a majority of the Colonial Press—concluded arrangements with the proprietors of the *Melbourne Argus* and *Sydney Morning Herald*, whereby the telegraphic service from Europe will, after direct communication has been established, be conducted on behalf of those journals as representatives of the *Australian Press*, instead of through the medium of a special agency at Melbourne, as was originally proposed.

I now, therefore, beg to withdraw my former letter on this subject, and have the honor to request that reference regarding terms of subscription, and the management of the service generally, may be made to the officers of the above-mentioned papers, from which every particular may be obtained.

Your most obedient servant,
HENRY H. COLLINS, Manager.

(D.)

To the Secretary of Reuter's Telegram Co.

London, 14 May, 1872.

Sir,

I notice, in a paragraph published in the *Standard*, that your Company has made an arrangement with the "leading Australian newspapers" for supplying them with telegraphic intelligence.

As the representative of a newspaper proprietor in one of the Australian Colonies, I beg to state that a circular reached us in the early part of last year, stating that your Company would be represented in the Colonies by a gentleman who, it was understood, would be prepared to make arrangements. Resting upon this assurance, nothing was done, and subsequently we have been led to believe that your Company has given an entire monopoly of your valuable agency to two or three of the leading newspapers of the Colonies.

I shall be glad to know if this is the case, because up to a certain point all other newspaper proprietors have been left out, and only very lately have been indirectly invited to join with those who report that they have secured the sole right to your telegrams, to the exclusion of any other newspaper.

I wish to point out that the establishment with which I am connected has been taking your English telegrams for years past, through your acknowledged colonial agent; and to pass us by, or to hand us over to rivals, is as unfair as I submit, that it is, from a business point of view, impolitic.

It is impolitic, because the monopoly of your telegrams is virtually in the hands of the leading journals representing each one Colony; whereas the other town and country journals would be your customers according to necessity. The sum claimed for participation in your telegram by this second-hand arrangement proves to the writer that the origin of the plan was to secure an undue and most improper advantage,—the offer, rather too tardily made, being accompanied by conditions which render acceptance next to an impossibility. I shall be glad to learn if your Company is open to make arrangements with other than the alleged leading journals of the Colony or Colonies, and regret that I was so uninformed that I was not aware until to-day that the *Australian Cable Agency* would become exclusively controlled by the action of your Company.

The favour of an early reply will oblige,

Yours, —

Reuter's Telegram Company (Limited),
24, Old Jewry, London, 16 May, 1872.

Sir,

In answer to your letter of the 14th instant, I beg to inform you that it was certainly contemplated by the Company to establish a regular branch office for the Australian Colonies, but it was afterwards, for various reasons, considered preferable to make an agreement with the leading papers represented by the *Melbourne Argus* and *Sydney Morning Herald*. This agreement does not constitute a monopoly, and I believe it to be open to any newspaper in the Colonies to receive the telegrams upon contributing to the expenses of the service; at the same time the Company, however, is necessarily precluded from entering into arrangements for supplying news direct to your paper.

Yours truly,
FREDERICK J. GRIFFITHS.

Reuter's Telegram Company (Limited),
24, Old Jewry, London, E.C.,
15 July, 1872.

Sir,

In reply to your letter of the 13th instant, I can only repeat the answer given to you formerly in regard to the arrangements made by this Company, for the supply of news to Australian papers. It was not intended that any paper should be excluded from the use of our news, but as the proprietors of the *Argus* of Melbourne, and the *Sydney Morning Herald*, have taken in hand the entire pecuniary responsibility of the service, it is but right, in our opinion, that they should make such subsidiary arrangements with the papers as will secure equally to themselves the usefulness of the news.

I shall be happy, however, to do all in my power to bring about an amicable and satisfactory arrangement.

Yours truly,
FREDERICK GRIFFITHS,
Secretary.

—, Esq.

Extract from letter from Memorialist's London Agent, relative to interviews with Manager of Reuter's Company.

London, 4 October, 1872.

S. Bennett, Esq.,
Dear Sir,

During the month I have kept at it with a desire to accomplish something certain. Fortune has favoured us, for so long as the line is silent we have time to work up a plan of operations, and I have had a heap of letters, besides interviews, &c. On the day the last mail left, I again called upon Griffiths of Reuter's, and had a long conversation with him. He contended that the Company had done all they could to get at the wishes of the colonial Press. I contended otherwise, and produced your printed circular pointing out that Mr. Collins had not communicated with you as to having conferred agency on *Argus* and *Herald* as representatives, and that you had been kept quite in the dark, until the *Herald* and *Argus* had concluded an arrangement securing a positive monopoly, inasmuch as it was left to them to make terms with those who had by a fiction been supposed to concur.

Mr. Collins, who was present working at a desk, and who had been silent, joined in the talk, and said that he had sent the circular to the leading journals. I asked him pointedly—"Did you send one to the *Empire*, *Evening News*, or *Town and Country Journal*?" I said, "Clearly understand me: I do not question anything you have done, or omitted to do, either as individuals or as a Company. Do as you please; but pray let us be truthful and exact; because, if you sent the circulars, indirect,

or

or upon the supposition that some one else would forward them, the blame is not with you, and must rest with some person who has either been neglectful or dishonest, and I incline to the latter view of the matter."

He said he sent them to some one in the Colonies, but could not say who. I therefore conclude that the circulars were suppressed.

This was my grievance with Reuter,—that they had lent themselves to monopoly, and indirectly to dishonesty.

Mr. Griffiths got rather stiff as he found he was slightly cornered, and asked me what complaint I had to make against his Company. I said "No complaint—I do not complain at all; but I wish you to see that you have been led to believe that you were making an arrangement with the Colonial Press, while in fact you have only arranged with two or three papers, and that the whole thing is a transparent sham."

He said "You (*Empire* and *Evening News*) could join if you liked." I showed him that you (proprietor of the *Empire* and *Evening News*) had expressed your willingness to join and pay, but that you had been refused for the *Evening News*. This he thought quite right. "Why," said he, "should an evening paper take the wind out of the sails of the morning papers?" I replied that he had served my point, because it was quite clear that the public were to be deprived of telegrams except at the option of an established London Company, and that the two together could effectually burk news for twenty-four hours; while if our plan had been followed of publication upon arrival, the morning papers could issue extras, and the public would have been, as the public must be, properly served, monopoly or no monopoly. I asked him what the *Echo* or the *Evening Standard* would be without afternoon telegrams, and why they (Reuter's) supplied those papers as rivals to the morning papers. I said—"Do you think the London public would stand being kept twenty-four hours without news to suit an interested combination, and why should the people of New South Wales stand it?" He denied the analogy, and talked of the *Herald's* circulation, until I told him that the *Evening News* enjoyed a circulation as large if not larger than the *Herald*.

He deprecated printing circulars such as yours, as being calculated to increase bad feeling, and said, "You know, Mr.—, an engagement is not made for ever, and we will do our best to bring about a better understanding." I left Mr. Griffiths with a notion that he intended to work every way against you and in favour of his colonial allies, but he was as respectful as so important a person could be to your representative. He was quite civil, and had he been a degree more stupid would have been almost dignified. I left Mr. Griffiths with my veneration for humbug considerably increased.

I am, &c.,

(E.)

22 March, 1872.

Samuel Bennett, Esq., *Empire* Office,—

Dear Sir,

Referring to a conversation our Mr. J. R. Fairfax had with you in January last, we beg now to lay before you a proposition which we think may be considered fair, taking into account the advantages to be derived from such an arrangement.

Our offer on behalf of the Australian Associated Press is to supply the *Empire* daily morning journal with telegraphic intelligence, in such a manner that the telegrams may appear simultaneously in both morning journals.

For the consideration of £600 per annum, payable monthly in advance, we offer you for the *Empire* all the advantages which will be possessed by the Australian Associated Press, viz., Reuter's Telegram Associated messages, colonial and inter-colonial telegrams, as published in the *S. M. Herald*.

We may mention that, after commencing operations with Reuter's Telegram Company, should there be any long interruption between the receipt of messages, say of weeks or months, a certain percentage will be allowed to the proprietors of the *Argus* and ourselves, and you with others subscribing would have a proportionate allowance.

Should you think favourably of our offer, we shall have pleasure in waiting upon you with respect to the delivery of messages and other matters of detail.

Yours faithfully,

JOHN FAIRFAX & SONS.

26 March, 1872.

Messrs. John Fairfax & Sons,—

Dear Sirs,

In reference to your offer on behalf of the Australian Associated Press, will you kindly inform me if I am correct in supposing that, if I agree to pay the amount mentioned, I shall be entitled to receive the telegrams immediately on their reaching Sydney, direct from the Telegraph Office, and be at liberty to use them at once in any way that I choose, that is, for publication in either the *Empire* or *Evening News*, according to the time of their reception. If this is so, shall, so far as I can judge at present, be prepared to come to an arrangement such as you indicate, without, however, binding myself to do so until fully informed on the above points, and other matters of detail, which latter can, I think, be best explained in a personal interview, as you suggest.

I may state, to prevent any possible misunderstanding, that if the telegrams are not to be available for the "*Evening News*" immediately on receipt, supposing they reach Sydney in time for that paper, I should decline the proposed agreement as wholly unsuitable to my interests.

I remain, &c.,

S. BENNETT.

Messrs. Fairfax & Sons replied as follows:—

4 April, 1872.

Dear Sir,

In reply to your favour of the 26th ultimo, we beg to say that the proposition we made to you on behalf of the Australian Associated Press was, to furnish you with telegrams for publication in the *Empire*. Our agreement with the proprietors of those journals who have already promised to subscribe in the neighbouring Colonies prevents our making any arrangement whereby they may be anticipated in the publication of telegraphic news from Reuter's Company; the main object of the Associated Press being that the news shall be published simultaneously as early as possible throughout the Colonies.

The offer we made to you is to put the *Empire* in as good a position as the *Herald* in the matter of telegraphic news. For the credit of the morning journals, it cannot be expected that their conductors would have them anticipated in their telegraphic intelligence by papers published in the evening.

It has been made a condition in the other Colonies that only morning papers can be dealt with. This being the case, we are precluded from entertaining any proposition respecting the "*Evening News*."

Possibly you may reconsider our letter of the 22nd ultimo. Should you do so, an interview on the subject may result in mutual advantage.

We remain, &c.,

JOHN FAIRFAX & SONS.

Samuel Bennett, Esq., *Empire* Office.

COPY OF TELEGRAM.

Memo.

Sydney.

From Adelaide Station at 7 hr., p.m., 28 February, 1873.

From C. Todd, Esq., South Australia, to E. C. Cracknell, Esq., Sydney.

Am not aware of any official correspondence restricting Press messages to Sydney to 1,500. Since it came into force with Melbourne, and as a matter of fact, no restriction has been placed upon Press messages to Sydney; but, for some time past, under arrangement with Melbourne, Press messages to Sydney have had the advantage of two wires.

C 3.

C. Todd, Esq., Adelaide, to E. C. Cracknell, Esq., Sydney.

24 February, 1873, 12:30.

I send you detailed statement showing times at which Mail Press messages have been handed into this office, for transmission to Sydney, since beginning of January, 1871. You will please observe that in all cases the *Empire's* message was handed in some time after the *Herald's*, the maximum interval being 2 hours and 50 minutes. In November, 1871, the *Herald's* messages were sent from King George's Sound ready prepared, landed at Glenelg by their special boat, and despatched to Adelaide by special messenger, whilst the *Empire* messages appear to have in nearly all cases been either written or printed after arrival of mail, being often cut out of Register. Their messages were always transmitted in order of reception.

C. TODD,
P.M.G. & Supt. E. Telegraphs,
Adelaide.

1871.

January 17.—*Empire's* message 1 h. 45 min. after *Herald's* message. Cut out of Register.
February 15.—*Empire's* message 1 h. 35 min. after *Herald's* message. Cut out of Register.
March 14.—*Empire's* first message, of 400 words, 45 min. after *Herald*. Second message, of 300 words, 1 h. 55 min. after *Herald*. Showing that the message was compiled in Adelaide; in fact, cut out of Register.
April 10.—Greville & Co's. message 46 min. after *Herald*. Cut out of Register.
May 11.—Greville & Co's. message 41 min. after *Herald*. Register Summary.
June 1.—*Empire* first message, of 228 words, 1 h. after *Herald*. Second message, of forty-five words, written by Longson, compiled in Adelaide, 1 h. 37 min. after *Herald*.
July 29.—*Empire* message 33 minutes after *Herald*. Summary Register.
August 25.—*Empire* message 35 minutes after *Herald*. Register Summary.
October 23.—*Empire* message 1 h. 20 min. after *Herald*. Written by Longson.
November 25.—*Empire* message 2 h. 50 min. after *Herald*. Register Summary.
December 21.—*Empire* message 1 h. 15 min. after *Herald*. Register Summary.

1872.

January 18.—*Empire* message 1 h. 10 min. after *Herald*. Register Summary.
February 13.—*Empire* message 44 min. after *Herald*. Register Summary.
March 12.—*Empire's* message 1 h. 18 min. after *Herald*. Register Summary.
April 6.—*Empire's* message 40 min. after *Herald*. Register Summary.
May.—*Empire's* first message, of 160 words, 1 h. after *Herald*. Second message, of sixty-seven words, 1 h. 13 min. after *Herald*. Third message, of eighty-two words, 1 h. 20 min. after *Herald*. Fourth message, 168 words, written by Longson, 1 h. 48 min. after *Herald*.
July 25.—*Empire's* first message, of 263 words, 1 h. 5. min. after *Herald*. Second message, of 320 words, 1 h. 30 min. after *Herald*. Register Summary.
August 23.—*Empire's* first message, 600 words, 1 h. 1 min. after *Herald*. Second message, 996 words, 1 h. 29 min. after *Herald*.
September 19.—*Empire's* first message, thirty-five words, 1 h. after *Herald*. Second message, 1,104 words, 2 h. 34 min. after *Herald*.
October 18.—*Empire* message 55 min. after *Herald*, 222 words. Register Summary.

C 4.

General Post Office.

Minute.

Mr. Bennett complains that Mr. Cracknell told him that, no matter what time his messages arrived, he should not have them before the *Herald*. Is there any truth in such a statement?—G.A.L., 23/11/72.
The Supt. E. Telegraphs.

Answer to above minute.

In reference to the last paragraph of this minute, Mr. Bennett must have known, when he made such a statement, that he was uttering a deliberate and premeditated untruth. I deny that I ever made such a statement to Mr. Bennett, or any other person, in or out of the department, and challenge him to prove it. This, however, is only on a par with his reckless and unwarrantable publications in reference to this office, which should be received with the greatest caution.—E. C. CRACKNELL, 26/11/72.

C 5.

Sydney, 6 March, 1873.

My dear Cracknell,

There appears to have been no official letter addressed to you from this office requesting that Government telegrams should be received before Press messages.

Yours faithfully,
HENRY HALLORAN.

E. C. Cracknell, Esq.

C 6.

Telegram per "Benaries" *Empire* and *Herald*.

Electric Telegraph Department, Sydney.

Minute Paper.

Messrs. Hanson & Bennett have applied to me for a written statement concerning a message from Melbourne to the *Herald* on the arrival of the "Benaries."

The message in question was from the *Herald's* Melbourne correspondent, and not their joint agent, and addressed to the *Herald* only; but, in case the *Herald* should give permission to the *Empire* to share in the telegram, I had a duplicate copy made, which I kept in the office; but during the time the message was coming through, I applied to one of the Messrs. Fairfax (but which one I cannot distinctly remember) whether I should give the duplicate copy to the *Empire*. The reply I received was, "No!!!"

As this is a communication intended for publication, I have considered it my duty to place the matter before you, previous to making any statement in writing.—E.C.C., 10/2/60.

I called on Messrs. Hanson & Bennett, and found they were both out, but I left a message with their clerk that I had seen you upon the above matter, and they must apply officially to the Commissioner for the information required.—E.C.C., 10/2/60.

Seen.—B.W.M., 10/2.

60/193. Hanson & Bennett requesting to know by whose authority the telegram news per "Benaries" was withheld from them, it being alleged to be the joint telegram of the *Herald* and *Empire*.—11/2/60.

Wrote Hanson & Bennett, 10/2/60.

APPENDIX.

9

C 7.

Electric Telegraphs,
Sydney, 25 November, 1872.

Sir,

The articles which have appeared in the *Empire* of late—more especially the leader in to-day's issue—being of a nature prejudicial to the interests of this department, and reflecting very severely on the officers engaged in working the lines, I deem it my duty to respectfully request that the Government will be pleased to cause an immediate inquiry into the working of the Telegraph Department, in order that an opportunity for refuting the charges made by the proprietors of that journal may be afforded.

I have, &c.,

E. C. CRACKNELL,

Supt. E. Telegraphs.

The Secretary, General Post Office.

C 8.

TABLE showing the amount of money received from the Telegraph Department in each year, from its commencement, up to the year 1872. The amount expended per year, during the same period, for working the establishment, exclusive of erecting new lines, but including repairs and renewals on each line.

	£82,165	0	9	Excess of Receipts over Expenditure.		

A. A.

Telegraph revenue for the year ending 1871, as compared with the same period in 1872, also showing number of messages.

Year.	No. of Messages.	Amounts.
1871	218,530	£32,664 12 11
1872	335,822	£46,924 6 7

COMPARATIVE Statement of Revenue for the first seven months, ending 31st July, 1872. Victoria and New South Wales.

Victoria	£24,521 17 10
New South Wales	£25,212 14 10
Population of Victoria	731,528. 2nd April, 1871.
Population of New South Wales	503,981. 2nd April, 1871.

COMPARATIVE Statement of Telegraphic Lines in Victoria and New South Wales, showing their extent in each Colony, and total cost, with relative cost per mile:—

In Victoria, 4,000 miles of wire cost £330,000, being at the rate of £82 10s. per mile.
In New South Wales, 6,034 miles of wire cost £210,000, being at the rate of £34 14s. per mile.

C 9.

Telegram from T. R. J., Adelaide, to E. C. C., Sydney.

Melbourne, 12 March, 1873.

TELEGRAPH Revenue, 1872, £42,700; expenditure, £40,570.

C 10.

Mr. J. R. Miles to The Superintendent of Electric Telegraphs.

Booking Department,
Electric Telegraph Department,
Sydney, 4 March, 1873.

Sir,

I beg respectfully to inform you, that I never knew an instance, in the many years I have had the honor to be connected with this department, that a message addressed to the *Empire* was ever delayed by being kept in the bag of the messenger all night. In fact, I may mention that the officers in my department have always used their best endeavours to have messages delivered to the *Empire* without a moment's delay; and I know of my own knowledge that this has been the case, as far as lay in their power, with the messengers at their disposal, for years past.

I have, &c.,

J. R. MILES,

B.C.

C 11.

Telegram from Mr. R. O. Bourne to The Superintendent of Electric Telegraphs.

Brisbane, 6 March, 1873.

THERE were several other messages lodged in Cardwell before Merlin to Bennett. Lines in North were working badly on that day—much repeating. Do you require any further information?

C 12.

Telegram from W. H. Burrell, South Australia, to P. B. W., Sydney.

Adelaide, 6h., 18 January, 1873.

Please see message Longson to *Empire*, and explain to *Empire* that Longson's statement is not correct; arrangements were made immediately for securing circuit to-morrow evening. Telegram sent to you requested similar arrangements to be made; not the slightest difficulty was raised by this office.

Telegram from P. B. W., Sydney, to Mr. W. H. Burrell, South Australia.

Empire much annoyed at Longson's message—says fault ours. What is meaning of this? Longson should explain that he meant his message to apply to your department, as all our arrangements perfect.

Telegram from J. Croft, Adelaide, to P. B. W., Esq., Sydney.

Adelaide, 10 p.m., 18 January, 1873.

See the heading of Longson's first message. I cannot see him to-night. Will give Mr. Burrell your mem. on Monday.

Telegram from Burrell, South Australia, to Mr. W., Sydney.

Adelaide, 3 h. 20 min., 20 January, 1873.

Longson's telegram does not apply to your department in any way whatever; his second telegram was an apology which I demanded of him for the misstatement respecting Adelaide arrangements, which he sent to *Empire* in first telegram. Sorry there should have been any misconception. Your arrangements were thoroughly satisfactory.

C 13.

Telegram from T. R. James, Melbourne, to P. B. W., Esq., Sydney.

30 January, 1873.

Re Galloway to Town and Country Journal. Sender not a recognized correspondent on Press service, therefore charged full rate—cannot well alter now—books closed.

[*Handed in by Thomas R. James, Esq., 3 April, 1873.*]

[*Handed in by the Chairman, 4 April, 1873.*]

E.

The Superintendent of Electric Telegraphs to The Chairman.

Sir,

The evidence given by a Mr. Heaton before your Committee is of such a character that, if allowed to be published without refutation, will not only seriously reflect on me personally, but will also tend to destroy public confidence in the management of my department.

I therefore respectfully request that the following statement may be taken as an appendix, together with the documents attached, and have no doubt they will satisfactorily refute the evidence of Mr. Heaton.

If it should be considered necessary, I shall only be too willing to answer any questions in reference to these unfounded statements.

Mr. Heaton states, in answer to questions Nos. 515 to 522, that there is a want of public confidence in the Telegraph Department in the gold-mining districts. In replying to this statement, I can confidently state that such an accusation is at variance with facts; in support of which, I hand in letters and telegrams, marked 1 to 10, from the several Police Magistrates, Gold Commissioners, Superintendents of Police, &c., &c., connected with the several Gold Fields throughout the Colony.

As regards the statement that I had arranged to receive free telegrams in reference to a gold lease in the mining district of Adelong, I can only say that a Mr. Bradford did send me a telegram in reference to a gold lease he was interested in, asking me to write to the Commissioner, Mr. G. O'Malley Clarke, which message I never acted upon, and neither did I write to the Commissioner as requested. I may further state that I have never held a share or an interest in any gold lease, land, or mine, in the District of Adelong, Tumut, or Gundagai, nor had Mr. Bradford any authority for sending me such a message, and it can be proved that I have often given instructions to refuse similar messages addressed to me.

The sending of free messages between the persons employed in the Telegraph Service is a privilege which it would be impossible altogether to prevent. It would be just as difficult to stop a *vivâ voce* conversation, as to attempt to prevent a conversation between operators at Telegraph Stations. This concession is, however, kept within bounds as far as it is possible. Mr. Heaton also states that a message of his was kept back to send this message to me. Such is not the case. He did not deposit a message on the day in question. This witness's statement that I am interested in mining shares to the amount of £20,000, is also a pure fabrication.

That any of the clerks or operators ever received a fraction from the *Sydney Morning Herald* I also distinctly deny, or that they are in any way employed by Messrs. Fairfax & Sons; and if messages were sent to the *Herald* by any of the country Station-masters, they would on discovery be immediately stopped. In reference to Mr. Heaton's charge against the Station-master at Eden, that messages were sent by him during Earl Belmore's visit to that district, I append that officer's reply, in which he fully contradicts the statement. (*See Enclosure No. 11, Appendix E.*)

The evidence of Mr. Heaton that the Victorian officers stated to him, when in Melbourne, that there is an extraordinary system of mismanagement in the Telegraph Department here, is also contradicted by Mr. James, the Manager in Melbourne, as will be seen by that gentleman's telegram (*see Enclosure No. 12, Appendix E*), and I have no doubt Mr. James will be able to satisfy the Committee personally that there is no foundation whatever for such a report. There have been delays through overcrowded lines, and interruptions, which happily will soon be remedied now that sufficient money has been voted for additional wires.

Mr. Heaton's other statements are equally erroneous, and they require no notice from me. I may, however, state, in reply to Mr. Heaton's statement, that the length of telegraph wire in this Colony at work is considerably greater than in any other in Australia, even including the line to Port Darwin; which may be seen from my reply to question No. 198, where the several lengths of line in each Colony are given, compiled from official returns to the end of 1872.

I have, &c.,

E. C. CRACKNELL.

(1.)

Superintendent Orridge to E. C. Cracknell, Esq.

Police Department, Braidwood,
26 March, 1873.

My dear Sir,

In reply to your letter, I beg to inform you that, for several years past, I have known personally most of the Telegraph Masters and Operators in the Southern Police District.

As Superintendent of Police, I have had occasion to send many and frequently most important telegrams, and I am happy to say that I have never had occasion to doubt the fidelity or secrecy of any officer of the department.

I have not heard, and do not think there is or has been any want of confidence on the part of the public.

I am, &c.,

J. W. ORRIDGE.

(2.)

Superintendent Morisset to E. C. Cracknell, Esq.

East Maitland,
24 March, 1873.

Dear Sir,

In reply to your note of the 22nd instant, informing me that it has been stated that there is a want of confidence in the Telegraph Department generally throughout the Colony, and asking for my opinion in reference to the Service in my district, I beg to inform you that, to the best of my knowledge and belief, the public in my district have every confidence in the department, as regards the faithful secrecy of messages sent through it, and their due despatch.

Yours truly,

E. V. MORISSET,

Superintendent of Police.

(3.)

C. T. P. Lydiard, Esq., to E. C. Cracknell, Esq.

Bathurst,
27 March, 1873.

My dear Sir,

In reply to your note of the 22nd instant, I can only say that, during my constant visits for the last ten years to the many towns in the district where Telegraph Stations are established, I have never heard a complaint of any want of public confidence in the Telegraph Department.

As far as the office at Bathurst is concerned, I have no hesitation in stating that it is conducted in a most creditable manner. Of course this station comes more immediately under my notice than those at a distance. I have on several occasions heard complaints of the delay in the transmission or receipt of messages, no doubt caused by the overcrowded work on the wires.

As far as my experience goes, I am bound to testify to the steady and conscientious manner the officers of the Telegraph Department in this district perform their duties.

I remain, &c.,

C. T. P. LYDIARD.

(4.)

(4)

Telegram from F. W. Vyner, P.M., Tumut, to E. C. Cracknell, Esq.

24 March, 1873.

IN reply to your question as to whether there is a want of public confidence as regards the Telegraph Department, in this district, I beg to say that I have never even heard it breathed. I believe the public have every confidence in the Tumut Office, and I have never heard a word against that of Adelong.

(5.)

Telegram from G. O. M. Clarke to E. C. Cracknell, Esq.

Young, 24 March, 1873.

I CAN confidently state that, as far as the Gold Fields in the Southern Districts are concerned, the allegation that there is a general want of public confidence in the mining districts as regards the Telegraph Department, has no foundation in truth. The telegraph has been extended to nearly every Gold Field. I am in constant use of this means of communication throughout the Southern Districts, and I have never once had reason to find the slightest fault with any of the officials of the department, whom I have always found willing, obliging, and efficient.

(6.)

Telegram from the Police Magistrate, Tenterfield and Glen Innes, to E. C. Cracknell, Esq.

Tenterfield, 22 March, 1873.

ALLUDING to the statement made by Heaton that there exists a want of public confidence in the mining districts with respect to the Telegraph Department, I can only say that for upwards of thirteen years I have held the appointments of Gold Commissioner and Police Magistrate in New England, and so have had constant opportunities (both in my official and private capacities) of observing the working of the telegraph offices—more especially at Armidale, Glen Innes, and Tenterfield—all mining districts; and the result of my experience is that I consider the Telegraph Department throughout New England is worked in the most creditable manner, and that the several officers in charge, all of whom I know intimately, enjoy the entire confidence of the public in the discharge of their duties. It is true that during the tin-mining fever of last year, when the business of the officers was suddenly and very largely increased, and, with only one wire in use, complaints were occasionally made by selectors of mineral lands that their applications were not wired to Sydney as soon as practicable, and that favouritism was shown in this respect; but I feel convinced that no ground whatever existed for such charges, and I believe they were in every instance completely refuted upon investigation. It is but right to add that I consider the telegraphic officials in this district, without exception, to be remarkably reticent in regard to the contents of messages passing through their hands, and such I am assured is the general opinion.

(7.)

Telegram from Sub-inspector Medley to E. C. Cracknell, Esq.

Gulgong, 27 March, 1873.

I HAVE been in Mudgee eight years; during that time I have never had one cause of complaint against the Telegraph Department, and since the establishment of an office at this place I can say the same. From general public opinion, which I have an opportunity of hearing, I have never heard a word mentioned with regard to want of confidence in the Telegraph Department at either Mudgee or Gulgong.

(8.)

Telegram from Inspector Singleton to E. C. Cracknell, Esq.

Albury, 25 March, 1873.

I HAVE never heard that there is a general want of public confidence in the mining districts as regards the Telegraph Department, having only just returned here from Tambarumba, Reedy Flat, Adelong, Tumut, Gundagai and Wagga. I have always heard your department spoken of with confidence.

(9.)

Telegram from J. W. Lees, Esq., P.M., Hill End and Tambaroora, to C. E. Cracknell, Esq.

25 March, 1873.

BOTH Reid and Johnson are personally known to me, and your telegram is the first intimation I ever received of an alleged want of confidence in regard to the working of the Telegraph Department at either Tambaroora or Hill End. I believe the character of both gentlemen, for probity and strict attention to their duties, to be quite beyond question. There cannot be any foundation for such a report as that referred to by Heaton.

(10.)

Telegram from W. Johnson, Esq., Commissioner, Western Gold Fields, to E. C. Cracknell, Esq.

Bathurst, 28 March, 1873.

AS far as I am aware, the public on the Western Gold Fields have every confidence in the management and the officers of the Telegraph Department, and I have never heard any rumour whatever to the contrary.

(11.)

Telegram from Mr. C. Kebby, Eden, to E. C. Cracknell, Esq.

20 March, 1873.

THERE is no truth whatever in statement that I am correspondent for the *Herald*, and I did not write any account of Lord Belmore's visit. I saw Heaton when he was here, but nothing ever transpired about my being correspondent for *Herald*, or otherwise, that I remember. I have sent telegrams to *Herald* about shipping, at the request of Mr. Flavelle, their agent and correspondent here, when he has been absent, but certainly never received any pay for it. Heaton wanted me to write a description of the country between here and Gabo, for the *Town and Country Journal*, and asked me, through Junior, to send messages to *Empire* when anything interesting, which I never did. That is, in fact, all that was ever spoken on the subject.

(12.)

Telegram from Mr. T. R. James, Melbourne, to E. C. Cracknell, Esq.

17 March, 1873.

THE statement made by a Mr. Heaton re extraordinary system of mismanagement in your department, and which statement, Mr. H. says, emanated from Victorian officers, is, so far as I am aware, totally unfounded, and I do not believe that any such remarks were made by any officer in this department.

[*Handed in by J. G. Raphael, Esq., M.P., 22 April, 1873.*]

F.

Delay in transmission of Cable Messages.

COPY of letter received by the proprietor of the *Empire* newspaper from his London agent, with enclosure of letter from Mr. Ansell, Traffic Manager of the Eastern Telegraph Company, in reference to delay in transmission of cable messages, as specified and complained of in the Legislative Assembly of New South Wales, on 22nd November, 1872.

S. Bennett, Esq.

London, 21 February, 1873.

Sir,

I made appointment to see the Secretary of the Australian line, in company with M'Lean, and when we went we were handed over to the Traffic Manager, Mr. Ansell.

Mr. Ansell was very warm in his condemnation, and spoke freely as to the rascality of the affair. He at once, and in my presence, called for the books of abstract, and traced the telegrams mentioned in your published statement, referred to by Mr. Raphael in the Assembly. Those books disclosed the facts that your telegrams—two quite certain—were in advance of Reuter, by register number, and of course by time—the repeat from Adelaide gives the receipt in advance—and in these instances your telegrams stuck between Adelaide and Sydney.

You will see that by Mr. Ansell's letter, which of course you may publish, that he is guarded in writing; but in his talk with me he broadly refused to take any blame, and put it on the Colonies. The telegrams are numbered in the order of receipt. He said—"Your agent is most indefatigable—he is not the man to lose a chance." I said—"Well, we shall see how we get on with the news of the Emperor's death." He replied—"M'Lean was far in advance of Reuter, and if your friends are not first it is an infamous shame, and we will do all we can; but we cannot deal with the telegrams after they reach Adelaide."*

I believe that you have been honestly served here. I have seen the books in the office, and every effort has been made to satisfy me. So far as I have seen, no one could do more; and if you are to be treated unfairly in the Colony, without redress, give it up and save your money.

I have given a great deal of time and thought to this matter, and have tried every way of testing the statements made, and I come to the conclusion that there is in the Colony a degree of corruption the more hateful because it is shielded under an outside affectation of honesty.

* The telegram thus referred to respecting the Emperor's death was delayed like the others, and did not reach me until after midnight on 10th January, and consequently could not be published until 11th January, having been despatched from London about 2 p.m. on the 9th.—S.B., 18473.

[*Enclosure.*]

J. P. Esq.,
Anderton's Hotel, Fleet-street.

The Eastern Telegraph Company (Limited),
66, Old Bond-street, E.C.,
London, 21 February, 1873.

Dear Sir,

I have read through the debates in your Legislative Assembly of Friday, 22 November last, and I am surprised to find so serious a charge brought of favouritism, as it is called, but I would like to characterize it by a very much stronger word.

If the facts that Mr. Raphael mentions with respect to the telegrams of 9th, 15th, and 16th November, sent by your agent on those dates, can be substantiated, the matter ought to be sifted to the bottom.

Any assistance that this Company can render you we will gladly afford; but I see a little difficulty about it without committing a breach of faith in affording information about another man's messages.

However, this much I may say, that I have traced *all the messages* of the 9th, 15th, and 16th, sent from London, into Adelaide, and it is beyond Adelaide that you must pursue your investigation, and not on the lines of this or associated Companies. The messages referred to by Mr. Raphael reached Adelaide in due course, and any detention, whether wilful or accidental, of the messages which were sent to the *Empire* must necessarily have been beyond Adelaide.

I am, &c.,
W. T. ANSELL,
Traffic Superintendent.

G 1.

SOUTH AUSTRALIA.—ADELAIDE AND PORT DARWIN TELEGRAPH.

REPORT by C. Todd, Esq., C.M.G., on the Construction and Completion of the Adelaide and Port Darwin Line of Telegraph.

Post Office and Telegraph Department,
Telegraph Branch, General Post Office,
Adelaide, 1 January, 1873.

Sir,

Having received the last of the sectional reports only a few days since, and as I still require some documents and maps, which will take some time to prepare, to complete the information I want, I am unable to furnish the Government with a general report on the Telegraph from Adelaide to Port Darwin, constructed under my superintendence, in time for the outgoing mail leaving on Friday next, the 3rd instant. As, however, statements disparaging the stability of the line have been very freely circulated, I think it undesirable that the mail should leave without an official and emphatic denial from me of the truth of the statements made, as, is alleged, on good authority. I have, therefore, drawn up a brief report on the whole of the line, which I have now the honor to furnish. Having personally inspected the line from the Daly Waters southwards in the course of my overland journey, as well as portions of the line at Port Darwin and Southport, I am able to speak from personal knowledge in confirmation of the reports of the chief officers employed, as to the substantial manner in which the line has been constructed.

This report being a very brief one, and intended only as preliminary to a general report which I hope shortly to be able to furnish you, I have not entered into any lengthy description of the country, nor is there time to collate all the reports from the different sections. As, however, Mr. Patterson's name has been mentioned as the chief authority for the disparaging statements referred to, I have thought it only just to that officer—he having both verbally and in writing denied that the statements were made on his authority—to enclose you his final report, that it may be published with this, should the Government deem it desirable. The other reports, as well as Mr. Patterson's, will of course be appended to my general report.

BAGOT'S CONTRACT.

On Bagot's contract, extending 509 miles from Port Augusta, or to latitude 26° 52' south, the poles are pine and gum, the latter being mostly considerably over the specified size. There are also about 1,500 iron poles, planted generally alternately with wooden poles, distributed over the line north of Chamber's Creek. Considerable delay occurred in completing this section, which was commenced in October, 1870, owing to the absence of suitable timber over 300 miles of the line; but by allowing the contractor to put in at first only ten poles to the mile, on the northern end of the contract, the wire was suspended by the beginning of January, 1872, and communication established with the MacDonnell Ranges on the 3rd of January. The full complement of twenty poles to the mile were filled in subsequently, and the contract was satisfactorily completed about the end of March. From personal inspection I am able to report it a most substantial line, which will stand for a number of years with very little attention. This section was constructed under the supervision of Messrs. Babbage and Abbott, the former having charge, till he left for England, of the northern half.

On

On this section, and throughout the whole of the line, a lightning-conductor has been placed on every alternate pole. It consists simply of a piece of ordinary line wire, stapled very securely on to the side of the pole, terminating in a coil beneath the butt, so that it cannot be withdrawn.

They have proved an effective protection from lightning; for although the line for many hundreds of miles passes over treeless plains, and is exposed to thunder-storms of great severity and extent, we have scarcely had a pole destroyed by lightning. The only interruptions caused by lightning have occurred where iron poles have been used. Since the line was opened, on August 22nd, we have had three interruptions, all of which have arisen from this cause, and have happened on the same section, and in the same locality, viz., on the iron poles north of the Hamilton, on the section between the Peake and Charlotte Waters. The lightning, in each instance, smashed several insulators, leaving the wire in contact with the iron pole, thus making "earth" and stopping the communication.

To obviate this in future, I have had a short length of stout wire led from the line wire down the face of the insulator, and brought within three-eighths ($\frac{3}{8}$) of an inch of the top of the iron pole. This has been done to every iron pole, and will I think protect the insulator. I am having the same done on the wooden poles furnished with lightning-rods between the Katherine and Port Darwin, where iron insulator-pins have been inserted during the last dry season.

CENTRAL SECTIONS.

The central sections—respectively designated A, B, C, D, & E, extending from 26° 52' to 19° 30', or 626 miles—were completed before the end of 1871, so that had our operations in the Northern Territory been equally successful, the line could easily have been opened by the 2nd or 3rd January, 1872.

Section A.

Constructed by Mr. R. R. Knuckey, extends from latitude 26° 52' to 25° 30', a distance of 120 miles. On the north end of Bagot's section, and on this as far as the Goyder, the line passes over a considerable extent of very rough, stony table-land, of slight elevation above the surrounding country, from which it rises in gradual slopes. This stony country is wholly destitute of trees, but is well grassed, though there are patches often met with of several acres in extent utterly bare of vegetation, thickly covered with a layer of stones. The stones, which are mostly quartzose sandstone, stained externally with iron, seem wholly confined to the surface, lying on or, if large, embedded in the loose friable loam, the latter being of a reddish colour, reduced to a very fine powder, and in some places (south of Section A) largely mixed with gypsum in various stages of decomposition. At the Hamilton and north of the Goyder, the line traverses well-grassed sandhills, covered with mulga and various kinds of acacias, many of which were in full flower when I passed. An abundance of fine water is to be found in large deep waterholes in the Stevenson, in the Goyder, close to the Charlotte Waters Station, and, I believe, in the Finke to the westward, and most of this country is well-grassed. The creeks are lined with stunted box, gum, and myall, but very little serviceable timber was obtainable till near the Finke, towards the north end of the section, where an abundant supply was found, which continues up the Finke and Hugh, as far as the MacDonnell Ranges. Iron and wood poles are planted alternately from the south end of the section to the angle south of the Stevenson, a distance of 30 miles. The wooden poles are stout gum saplings, of about 10 inches at butt, and 5 or 6 at the top. I did not see a single bad pole on the line. Twenty to the mile are planted throughout. The line has been laid out with judgment, crossing the creeks at the best places and at right angles, and carefully avoids low lands subject to inundation.

Section B.

Constructed by Mr. G. R. M'Minn, extends from latitude 25° 30' to 24° 0', or 142 miles 9 chains. It was commenced in February, 1871, and completed in every respect by the 15th November following, when, in accordance with instructions, Mr. M'Minn went north to complete Section C: Mr. Mills, the officer in charge of that section and his party going forward to the north end of Section E, to assist Mr. Harvey.

The line on Section B follows, within a short distance, the Finke to its junction with the Hugh, a little south of latitude 25°, and keeps a generally northerly direction to the junction of the Alice and Hugh, from whence it follows the Hugh, making a considerable detour to the north-west, passing through the Hugh gorges of the James and Waterhouse ranges, joining on to Section C at the latter. It crosses the Finke and Hugh several times, but is quite safe. At the first or Marchant's crossing of the Finke, immediately north of Section A, the line was carried away in January, 1872, but Mr. M'Minn has now planted a mast on either side at some distance from the bank. On the south side the mast is 52 feet long, planted 8 feet in the ground, and on the north side, which is higher, 39 feet. Both masts are securely strutted and stayed, and the longer one is built round with several tons of large stones. For about 60 miles along the Finke the line crosses heavy sandhills, covered for the most part with spinifex and low bushes, relieved in places by clusters of fine black oaks (*casuarinas*); but the country improves north of this, and is generally good and well grassed. Water is found in many places in the Finke, Hugh, and the smaller creeks running into them—at Marchant's Springs, Mount Musgrave, Polly's Springs (horseshoe-bend on the Finke), at St. Patrick's Camp, Whinham's Springs (near Mount Burrell), first crossing of Hugh, Krager's Creek, junction of Minnie Creek and Hugh, Stuart's Camp (in the James's Range), M'Clure's Springs, and Owen's Springs.

The poles throughout this section are sound good gum saplings, rather over than under the specified size. I did not see a bad pole on the line, which was substantially constructed throughout.

There are white ants on the sandhills and on the flats near the Finke, but they have made very little impression on the poles as yet. Some poles which had been in the ground for nineteen months were recently taken out by Mr. M'Minn, who found that the white ants had commenced at the foot of the pole, where they had eaten out a hole about the size of his finger.

I quite concur in Mr. M'Minn's recommendation that iron poles should be planted, when necessary to repole, alternately with wood on the sandhills, but on the other portion of the section no white ants have been seen; and, as timber is plentiful in the Finke and Hugh, there may be no occasion to use iron poles.

Section C.

Constructed by Mr. W. W. Mills, extends from latitude 24° to 22½°, or 131 miles, was commenced March 22, and finished December 29, 1871. The section starts from Lawrence's Gorge on the north side of the Waterhouse Range, from whence the line crosses a well-grassed mulga plain, following up the Hugh, and then the Jay, both of which are splendidly timbered, to the foot of the MacDonnell Ranges, where it crosses a low gap, and turns abruptly to the eastward, keeping between rugged parallel ridges for several miles, to Fenn's Gap, where a practical crossing was found, leading generally north-east to the Alice Springs (where a station has been built), and finally emerges from the range about 12 miles north. Leaving the MacDonnell Ranges, the line crosses the mulga plains to the Reynolds Ranges, keeping to the west of the Strangways Range, and crossing a low gap in the intervening Hann's Range: the plains are well grassed, but the mulga is very dense in places, and water is scarce, but can be obtained by sinking on the flat. A native well was opened 1 mile to the west of the line, near the Burt, 25 miles from the MacDonnell Ranges, which yields a permanent supply at a depth of only 10 feet. The next water is found 35 miles further on, at a native well in the gap, at Hann's Range. A well 50 feet deep was sunk in the Burt, but yielded only a small supply.

Mr. Mills discovered a running brook in the Strangways Ranges 9 miles N.E. of the line, which he believes to be permanent, as it was still running when he last saw it in July, 1871, the middle of the dry season. Owing to the scarcity of surface water between the MacDonnell and Reynolds Ranges for a distance of 70 miles, and the absence of suitable timber, the construction of this portion of the line was attended with considerable difficulties. With few exceptions, however, the line is equal to what we have in the settled districts. From the Waterhouse to the north side of the MacDonnell Ranges, the poles are all good full-sized gum poles. Between the MacDonnell and Reynolds Ranges they are not so good, but are quite sound; and in the mulga there are more white ants, the soil being a light red sandy loam, splendidly grassed.

Section D.

Constructed by Mr. A. T. Woods (who was also the Superintendent of the five Central Sections), extends from latitude 22° 30' to 21°, or 124½ miles. This section follows for a considerable distance the Woodforde, Hanson, Stirling, and Taylor Creeks, from which the poles have been got. The supply was not very abundant, and difficulty would I fear be experienced in getting more near the line. About 500, or 25 miles of poles, were obtained from the Woodforde, which was stripped of all its serviceable trees for a distance of 15 miles. The line follows the Woodforde for about 30 miles, where the creek ceases to have

have any defined channel, though it no doubt in high floods runs into the Hanson, which the line follows for nearly 20 miles. Leaving the Hanson, the line crosses the Taylor 10 miles on, and then passes over the Forster Range between Mounts Mann and Gwynne to Barrow's Creek, where we have a station, and again crosses the main channel of the Taylor, 22 miles beyond Barrow Creek Station.

The line throughout this section has been erected in a most creditable manner. The poles are straight, of the full size, and are a very hard description of gum timber, which should, I think, last a number of years. The flats into which some of the creeks run will yield a limited supply of gum saplings for repairs, and there is probably a reserve left in the Hanson below the line; but no doubt eventually we shall have to place iron poles on this and the adjoining section.

The country is generally well grassed, and admirably adapted for stock. Mr. Woods, in his report, remarks—"Adjacent to this part of the line is some very good stock country, not only open and attractive in appearance, but probably the most healthy country for stock north of the MacDonnell Ranges, perhaps on account of the prevalence of salt bush, which is deficient or altogether absent elsewhere. There is much good grazing country throughout the length of Section D. The grasses are not rank: they are varied and nutritious, our stock thriving well. By judicious burning, green grass can be secured throughout the year, many of the grasses being perennial." There is a large admixture of spinifex, but, after burning, other grasses spring up with it.

With regard to water, in ordinary seasons, there is probably an ample supply all the year round, and can generally be got by sinking in the sand in the creeks, which have an uneven clay bottom, covered with sand. Mr. Wood states that the clay is very tenacious, and that wherever from inequalities in the bed of the creek a hollow basin is formed, water can be obtained by sinking in the sand. There is at present a large supply at the Barrow Creek, where the spring has been running since it was first opened out; but as a precautionary measure I would advise two or three wells to be sunk in the most likely places, by which means I have not the slightest doubt that a permanent supply could be obtained in the driest seasons.

The white ants are not very numerous on this section, and up to the present time have done little or no damage.

Section E.

Constructed by Mr. W. Harvey, extends from latitude $21^{\circ} 30'$ to $19^{\circ} 30'$, or 107 miles 76 chains. Mr. Harvey also erected 82 miles 16 chains 41 links of the line north of Section E to latitude $18^{\circ} 26\frac{1}{2}'$, or in all over 190 miles of line, having the assistance of Mr. Mills for a few months.

Leaving Adelaide in August, 1870, he did not reach his work till the 24th May, 1871, the first poles being planted on the 1st June, and the wire was stretched to the end of his section (E) by the 1st November following, the last 34 miles having at first only ten poles to the mile, according to my instructions dispatched by special mail in July, or immediately I had reason to fear delay on the northern side. Mr. Harvey then pushed on north of Section E, and, as just stated, extended the line another 82 miles. The intermediate poles, making twenty to the mile throughout, were planted before he left the work.

The country in this section, and more so to the north of it, is rather poor, the soil being mostly an intermixture of sand and clay, covered with spinifex and low scrub, except immediately along the creeks, where the soil is richer and the flats are well grassed. Here and there are belts of mulga, where grass is generally plentiful. The ranges, which are mostly quartzose sandstone resting on granite, nowhere rising over 600 feet, seldom so high, are covered with spinifex. In some places vast boulders of granite are scattered on the surface, lying singly or piled up in curious fashion to a considerable height. Quartz reefs are frequently met with, and a soft micaceous clay slate, nearly vertical, and running north and south.

Mount Samuel, a quartzose sandstone hill, some 250 or 300 feet high, a little to the west of the line, is crowned with immense iron-stone rocks, highly magnetic—every fragment being polarized, rendering the compass-needle of the theodolite useless.

Timber of any size is wholly confined to the creeks; and there the description suitable for telegraph poles is by no means plentiful. Mr. Harvey had considerable difficulty in procuring the quantity required, having to cart poles long distances. Many of the poles on the northern end of Section E, and from there to the end of Mr. Harvey's work, are small, and very crooked; they were, however, the best he could procure. The bulk of the poles are full-sized, and good; the others, although unsightly and small, are sufficiently substantial, and will probably last as long as the rest. When this section is repoled, I would advise iron throughout; indeed, iron poles for the north end of the section have already been provided.

North of the Gilbert the white ants become more numerous, and a beetle, termed the borer, also becomes numerous, and destructive to the poles and insulator-pins.

The best watered creeks on Mr. Harvey's section are the Bonney, Tennant's Creek, and Attac Creek; the first and last being probably permanent. A well has been sunk at the station on Tennant's Creek. Water is found in most of the other creeks, lasting for some months, and two or three wells were sunk, which require timbering.

NORTHERN TERRITORY.

Patterson's Section.

This brings me to the section constructed by Mr. Patterson, extending from the north end of Mr. Harvey's work, lat. $18^{\circ} 26'$, or 533 miles from Port Darwin, to the King 225 miles, from Port Darwin 308 miles. Commencing at the north end, the line, after crossing the King, takes a general S.E. course, crossing the Elsey Creek at 281 miles, and thence follows the the Birdum to the Daly waters (where a station has been built), 368 miles from Port Darwin. The line then takes a more southerly course, passing to the east of King's and Frew's ironstone ponds, across Sturt's Plain to the north end of the Ashburton Range. Passing between the range and the Newcastle waters the line enters the range at the Watson, crossing Powell's Creek, where it passes over to the east side of the range.

With the exception of about 35 miles of line south of the Elsey, and a few miles north, where the poles are small, a better line could not have been erected. The first 17 miles south of the King, cypress pine (*Callitris*), which the white ants do not appear to touch, have been used throughout, and from 50 miles north of the Daly Waters, and for a long distance south, we have splendid poles—blood-wood, gum, and iron-bark, the majority of them much over the specified size.

From the Newcastle Waters southward, timber, which to the northwards was generally thick, involving heavy clearing, becomes scarce, the trees being too stunted; but by dint of searching, fair average-sized poles were found. The white ants are numerous, especially north of the Lawson, and most of the timber is stunted and piped, but with care good sound poles can always be picked out.

Between the Daly Waters and the Elsey Creek, it was supposed there was no water after the middle of the dry season; but the discovery of a fine waterhole, a few days since, at the very end of a long dry season, has removed one great difficulty, and it will probably be necessary to sink only one well between the waterhole and Elsey Creek. Even as it is, the newly discovered waterhole will make the whole of this piece of line easily accessible for repairing purposes at all seasons.

South of the Daly Waters I do not anticipate any difficulty, as heavy repairs will always be made at the most favourable season of the year, and the discovery of the fine springs called the Renner Springs, about 18 miles south by the line of Powell's Creek, makes the road quite safe as regards water at all times.

Darwent and Dalwood's Section.

I have now only to refer to the section constructed under Messrs. Darwent and Dalwood's contract, from Port Darwin to the King, 225 miles. This being the oldest piece of line (commenced in September, 1870), I was more anxious about it, especially as it was in a disabled state during a great part of the previous wet season.

I have had it thoroughly overhauled, every bad pole taken out, and between Port Darwin and the Katherine iron pins have been substituted for the iron-bark pins, which, although soaked in boiling petroleum, were found to attract the white ants and the boring beetle. The result after examination is, that out of 225 miles of line it has been necessary up to the present date to replace about 150 poles, destroyed by bush fires, white ants, and dry rot, which, I think, is sufficient to show that the line was faithfully built. I feel it only due to the overseers of the work, Messrs. W. M'Minn and R. G. Burton, to say that I am perfectly satisfied that they efficiently protected the interests of the Government, and were faithful to their trust; whilst the fact that since the opening of the line in August last there has not been a single interruption between the Charlotte Waters and Port Darwin, a distance of nearly 1,200 miles, although we have had frequent and severe thunder-storms raging over many hundreds of miles, and a cyclone which blew down several thousand trees on the line, should be sufficient to remove all anxiety for the future, and to prove that the line is strong and has been constructed in a proper manner.

In

In a country so abounding with white ants as the Northern Territory, it is not pretended that wooden poles will last as long as elsewhere. Had I thought so, I certainly should not have advised the Government to order 6,000 iron poles, in addition to the 500 previously sent to the Northern Territory (now at Southport), and the 2,500 on the southern portions of the line.

With regard, then, to the state of the line generally, I can faithfully and honestly assure the Government that it has been substantially built throughout, and that, with very few and unimportant exceptions, I have every reason to believe, from the reports of my officers as well as from my own personal observation, that the poles are sound, and of the full size specified. As explained in my letter of December 2nd, my principal reason for ordering the iron poles now was that they could be more expeditiously and economically carted now while we have a large number of acclimatized teams, both horses and bullocks, in the territory than we could do at any future period; besides which, I think it desirable to have the iron poles on the ground to take the place of the wooden ones as they decay, to the extent it is intended to use them.

My present idea is, that we should gradually introduce iron poles, planting them alternately with wood where suitable timber is plentiful and near at hand, and consecutively where timber is inferior and difficult to get.

In the Northern Territory it will probably be found desirable to have iron and wood alternately from Port Darwin or Southport to the Newcastle Waters, unless experience should show that the pine, blood-wood, paper-bark, and iron-bark poles escape the ravages of the white ants. From south of the Newcastle to the MacDonnell Ranges, it may be well to look forward to repoling with iron throughout. From the MacDonnell Ranges to some distance south of the Charlotte Waters timber is easily procurable, and, at most, alternate iron poles will be sufficient. From here to Leigh's Creek we have nearly 2,500 iron poles in already, and, as the wooden poles decay, we shall do well to substitute iron. Having 9,000 iron poles, either on the ground or provided for, it will be obvious that we shall only require to introduce the remainder gradually, spreading the expense over a series of years.

STATIONS.

We have the following stations on the line, commencing north from Port Augusta:—

	Distance from Adelaide.
Beltana.....	355 miles.
Strangways Springs	545 "
The Peake	636 "
Charlotte Waters	804 "
Alice Springs	1,036 "
Barrow Creek	1,207 "
Tennant's Creek	1,354 "
Powell's Creek.....	1,467 "
Daly Waters	1,605 "
The Katherine	1,771 "
Yam Creek	1,848 "
Palmerston, Port Darwin	1,973 "

The temporary stations have also been placed during the wet season at the Alberga, between the Peake and Charlotte Waters, and at the Elsey, between the Daly Waters and the Katherine.

At Beltana we have only a small iron hut as a temporary accommodation, and at the Strangways Springs the operator is lodged at Messrs. Warren and Hogarth's station. At both of these places we shall have to build a station. It may perhaps be desirable to remove the operator from Strangways Springs to Mount Hamilton, which would better divide the distance between Beltana and the Peake.

At the Peake, Charlotte Waters, Alice Springs, and Barrow Creek, we have built substantial stone stations of eight or nine rooms, roofed with galvanized iron.

At Tennant's Creek we have at present only a wooden hut of three rooms till it is finally decided whether the station shall be there or at Attack Creek; but the galvanized iron for roof and other materials are on the spot.

We have only a temporary hut at Powell's Creek, the building material being at the Roper.

At the Daly Waters, a large and substantial log house of six rooms, roofed with galvanized iron, has been built, building-stone and lime not being procurable.

A similar station is being built at the Katherine.

At Yam Creek we have put up a substantial three-roomed hut, built of cypress pine, and roofed with galvanized iron. It is nearly completed.

At Port Darwin it was necessary to provide offices and quarters for the staff of the British-Australian Telegraph Company, in addition to the offices and quarters for our own staff. We have therefore had to erect a very large building, consisting of a central building and two wings. The central building comprises three offices, one of which is used by the British-Australian Company. The other two are used by the Department, one for an operating-room, the other for the public on the business of the Telegraph, Post Office, and Customs. The South Australian quarters comprise a house of five large rooms, a detached kitchen and bath-room for the station-master, and two detached rooms for one assistant operator, the men being accommodated in adjoining huts of wattle and dab. The British-Australian quarters consist of a long range of buildings, containing ten rooms in all, being quarters for the resident Superintendent and five (5) assistants. The rooms are large, one being a billiard-room and library, a handsome billiard-table and a good collection of books being provided by the Company, who have also given their officers a light rowing gig.

The buildings are of stone, roofed with iron, and are surrounded by a broad verandah; the floors are concrete, to prevent the woodwork being destroyed by white ants. There are also out-buildings for stables, stores, workshops, &c., and two large underground tanks, each capable of holding 12,000 gallons of water. The buildings stand on four acres of ground, fenced in, and half of which has been conveyed to the Company, who, of course, pay for the cost of their portion of the building.

The site chosen is the one originally recommended by me, on the Esplanade, near the Government residence, facing the harbour, of which a fine view is obtained.

It may be well to remark, in connection with this portion of my report, that in the interior we have six persons at each station, viz.,—the station-master, assistant operator, and four men. There are also about twenty horses, draught and saddle, and in most cases a team of bullocks, besides spare bullocks for food. The stations are all well provisioned, most of them up to the end of 1874.

SURVEY OF ROPER.

Before leaving the Roper I gave Captain Lowrie instructions to take complete set of soundings in the Roper, from its mouth up to the landing, to buoy and beacon the bar and channel, placing substantial beacons on the north, and where required on the south bank, between the bar and the river entrance; to mark by beacons, lopped trees, or otherwise, the position of all rocks and shallows in the river; to plot, on a general plan of the river, the deep-water channel, and depth of water at low-water springs; and to keep a record of the rise and fall of the tide, a tide-board being fixed at the landing. This appeared to me to be the most profitable way in which I could employ the "Young Australian." I have not yet received Captain Lowrie's report, but I understand he has carried out my instructions with much intelligence and zeal. From a telegram received from him, dated August last, he says that the upper river had fallen considerably, but there was little or no difference in the depth of water below Garden Reach, and that there, on the bar, there was a foot more water than is shown on chart, so that the river, in the driest season, is navigable for vessels drawing twelve feet for forty miles; above that there are the two pinches I have before mentioned in the Omeo, and three island reaches, where there is not more than ten or eleven feet, which are the chief obstacles to navigation higher up the river. The channel, however, could be easily deepened by dredging at these points where there is any necessity for it.

STOCK LEFT AT THE ROPER.

The following quantity of stock and plant were left at the Roper landing by Mr. Patterson, most of which will be available for carting the iron poles next season, viz. :—

Stock	{ 174 horses.
						{ 325 bullocks.
						{ 16 horse-waggons.
						{ 4 spring-drays.
Plant and equipment	{ 17 bullock-waggons.
						{ 13 bullock-drays.
						{ 32 saddles, harness, &c.

In addition to these, forty-one horses and six bullocks have since been sent down to the landing from the Daly Waters; but four teams of horses and two teams of bullocks have been sent to the Katherine with balance of station loading and building materials since this return was compiled, and Mr. Patterson fears that 30 per cent. of the draught horses will be useless.

FINANCIAL RESULT.

Even a preliminary report, such as this, would not be complete without some statement as to the amount of business passing over the line; and the following tabular statement, showing the number of messages and gross receipts since cable communication was restored on October 21st up to the end of the year, is not without interest.

TABLE showing the number of Cable Messages, the gross Receipts thereon, and the net proportion due to South Australia, between October 21st and December 31st, 1872.

1872.	Number of Messages.		Cash receipts in Australia.	Cash receipts elsewhere.	Proportion of receipts due to S. Australia.
	From Australia.	To Australia.			
Week ending October 26	153	148	£ s. d. 1,662 17 5	£ s. d. 1,405 3 8	£ s. d. 353 5 0
" November 2	86	137	1,043 10 6	1,347 13 9	269 0 0
" " 9	86	98	985 7 3	1,023 2 6	226 10 0
" " 16	66	98	865 10 0	715 16 5	197 16 6
" " 23	58	75	566 12 9	920 10 9	166 10 0
" " 30	83	110	748 4 9	1,342 2 6	235 10 0
" December 7	96	91	1,093 1 0	969 15 9	229 0 0
" " 14	44	69	499 15 3	856 0 6	146 10 0
" " 21	74	69	820 14 9	790 14 9	181 0 0
" " 28	62	86	675 3 9	1,091 13 0	198 9 3
Three days ending December 31	30	27	271 10 0	358 10 3	70 10 3
Totals.....	835	1,008	9,232 7 5	10,821 3 10	2,274 1 0

So that the revenue accruing to South Australia on cable messages in the above period (October 21st to December 31st) was £2,274 1s. Od., or at the rate of nearly £12,000 a year; to which must be added the revenue on local messages, which, since the line has been opened, has averaged over £300 a month—the receipts from this source in October and November (which were less than the previous month of September) being £634 5s. 5d.; besides which, we find that the opening of the line has largely increased the intercolonial and general traffic on other lines.

JOURNEY OVERLAND.

With regard to my own movements, it may be well just formally to mention that I finally left the Roper, after having visited Port Darwin, on June 13th, and rode overland, arriving at Beltana on the 19th October. On my way I carefully examined the portions of the line in course of construction, and inspected it generally all through, completing the necessary organizations at the different stations. Having communication with Mr. Patterson and the several working parties, I was enabled to give final instructions with reference to the embarkation from the Roper, establishment of depôt, and many other matters which I need not specify.

CONCLUSION.

In conclusion, it affords me much pleasure to acknowledge my obligations to the energetic officers and men who have, with so much credit to themselves, and in the face of difficulties not easily realized, carried out their part of the work entrusted to them; and I cannot close without making special reference to Mr. R. C. Burton, by whom some of the best sections of the line in the Northern Territory were constructed. There are those, too, whose duties in the office have been most arduous, though their names have not had so much prominence, to whom my thanks are equally due and are here most cordially given.

I have, &c.,

CHARLES TODD,

Postmaster General and Superintendent of Telegraphs.

To the Honorable the Chief Secretary.

Adelaide, 30 November, 1872.

Sir,

I have the honor to submit herewith, my final report upon that portion of the Overland Telegraph constructed by the officers and men under my command. I purpose confining myself to a general statement of the route of the line, and a brief description of the country passed through, together with some remarks upon the question of water supply for maintenance purposes.

The line was surveyed to the King, by Mr. M'Minn previous to his return to Adelaide, and the country from Port Darwin to that point has doubtless been described by that officer. The line, after crossing the watershed of the King, 225 miles from Port Darwin, follows the general direction of the Roper Creek, S.E. by E., passing 2 miles to the westward of Bitter Springs, after which it takes a generally southerly direction, crossing the Elsey at 281 miles, and following the Birdum throughout its course for 112 miles, passing Stuart's Camp at Daly Waters at a distance of 370 miles from Palmerston. At 392 miles the watershed changes to the south, all the waters flowing towards the interior; up to this point the watershed had been to the north, towards the Roper. The line passes 6 miles to the eastward of King's Ponds, thence still in a southerly direction, passing 2 miles to the east of Frew's Ironstone Pond, across Sturt's Plains to the north end of the Ashburton Range, distant from Port Darwin 442 miles. The line then passes between the Ashburton Range and the Newcastle Waters, crossing the Lawson at 480 miles; the range is entered at the Watson Powell's Creek, crossed at 505 miles, and the creek followed up to the summit of the range, from which point the watershed again changes—all the waters now flowing to the eastward. The junction with Mr. Harvey's work was effected at a point 4 miles north of the North Tomkinson, and distant 533 miles from Port Darwin.

The country from the King to the Elsey is thickly timbered with gum and iron-bark, but the trees are stunted, and before attaining any size are invariably piped by white ants. In the first 17 miles from the King there are occasional copses of cypress pine, a tree which does not appear to be attacked by these insects, and Mr. Rutt accordingly used this timber exclusively for poles; the remainder of the poles between the King and the Elsey are of iron-bark and gum saplings, tolerably sound, but seldom having the specified diameter at the butt. The soil for the most part over this length is a sandy loam, hard in the dry season, but becoming impassable after the first heavy rains. The line is kept on the highest ground, and consequently passes over some very rough iron-stone ridges. After crossing the Elsey, the Birdum is followed, the line being kept out of the valley, and carried along parallel to its course through an iron-stone forest country, with scrubby stony rises. The Birdum, which is perfectly

perfectly dry towards the end of the dry season, although showing flood-marks 20 feet high in the trees, runs through a bay of Biscay Valley, which is quite impassable in the wet season. For the first 40 miles of the Birdum country good poles are very scarce; the poles are principally iron-bark or gum saplings, and, owing to the stunted nature of the timber and the abundance of the white ant, could seldom be obtained of the specified scantling. In the next 20 miles, the line still following the Birdum, the timber is larger and sounder, and the poles consequently much better; and for the remainder of the distance, to Daly Waters, they are amongst the best erected in the Northern Territory; they are principally of blood-wood and gray gum, perfectly sound, and, for the most part, in excess of the specified dimensions. The line enters broken country when within 21 miles of Daly Waters, the ground being full of deep holes, and portions of it very rotten. Three miles further on (353 miles from Port Darwin) the Birdum is crossed; it is $\frac{3}{4}$ of a mile wide, but, even when flooded, is only about 4 feet deep, with a current of 2 miles an hour; it has a good stiff clay bottom, and is safe for horsemen at any time. Some of the Biscay Flats, however, in this neighbourhood, presented well nigh insuperable obstacles to the passage of either horses or men during the middle of last wet season. If difficulty is experienced in maintaining the line, it would be well to corduroy a road along the line over the worst of these flats; they run in belts from east to west, and could not be avoided, and so were crossed in the narrowest parts.

From Daly Waters to Frew's Iron-stone Pond the poles are very sound; being mostly of blood-wood, and of the full size. The clearing over this length was exceedingly heavy; I believe by far the heaviest on the continent—the line being carried for the greater part of its length through a dense mulga scrub, which here attains a height of over 40 feet, and hedgetree, through which it was impossible to lead a horse. The scrub and hedgetree, which has been thoroughly cleared on, could not be avoided either side of the line without taking the line through the Biscay Flats to the westward, which are impassable in the wet season. The soil is a red loam for the most part, overlying an iron-stone conglomerate, which not unfrequently crops out on the surface. After leaving Frew's Pond the line traverses a portion of Sturt's Plains, and crossing the north end of the Newcastle Waters, follows the western slope of the Ashburton Range to the Lawson. On this length the poles on the northern portion are mostly of good blood-wood; but on the 25 miles north of the Lawson sound timber has not been obtained—the poles are pipey and otherwise defective. Between Frew's Pond and the Lawson there is a good deal of open country; what little timber there is being scrubby, poor, and stunted. Most of the poles were obtained from the range.

Soon after crossing Lawson's Creek the line enters the Ashburton Range, and traversing high undulating country crosses numerous rocky spurs, and generally passes through a most worthless country until it effects a junction with Mr. Harvey's work, 4 miles north of the North Tomkinson. The poles erected on this length are almost wholly of blood-wood and of gray gum, and were the best obtainable in the district. In some portions of the work Mr. Burton experienced great difficulty in obtaining sound poles, most of the timber south of Powell's Creek being piped with the ants.

My progress reports have been so full of detail that it is not necessary for me to recapitulate what I have written before, save in the most general manner. Mr. Rutt arrived at his first working camp (the King) on the 1st December, 1871, and had only succeeded in erecting 18 miles of line, when the country, which had been rapidly becoming boggy from the rains, was inundated—the floods coming so suddenly that, although measures were instantly taken to shift camp to a small rise $\frac{1}{2}$ a mile distant, the removal was only accomplished by carrying the whole of the stores and equipage on the men's shoulders, they working for four days up to their waists in water. From the 3rd January, 1872, to the 10th April, Mr. Rutt and his party remained at Providence Knoll, unable either to work or shift camp. Work was resumed on the 11th April, although the country was still boggy, and the shifting of camp attended with extreme difficulty. From this date the work progressed, without a break, until its completion on the 30th August.

Mr. MacLachlan arrived at his first working camp (Well No. 1 on the Birdum) on the 6th December, and only succeeded in erecting 18 miles of line before he was stopped by the floods, and compelled to retreat 8 miles, his men having to shift camp and carry their effects on their backs. Work was resumed by this party on the 15th April, and continued without interruption until the completion of the work. Mr. MacLachlan having been recalled to Palmerston, as Warden of the Gold Fields, was succeeded by Mr. Mitchell, who remained in charge to the last.

Mr. Burton did not succeed in reaching his first working camp until the 4th January, 1872. The troubles he experienced on the Birdum for want of water, and the still greater difficulties brought about by the floods, have already been described in previous reports. Mr. Burton commenced work poling on the Milne, a stream to the eastward of Daly Waters, but after constructing 4 miles of line, the country became so much flooded that he deemed it advisable to abandon the work done and search for a better route and a safer camp to the westward. On the 16th January, Mr. Burton resumed work on the west bank of Daly Waters (Stuart's camp) and continued until the 28th February, during which time he contrived, in spite of rain and floods, to erect 14 miles of line. Work had then to cease; the country was becoming worse, and the work and exposure had filled the camp with sick disabled men. Work was again resumed on the 15th April, and continued without a break, as with the other parties, until the completion of the line.

I cannot refrain here from expressing my admiration of the energy and perseverance with which Mr. Burton and his men pushed their work; they were the pioneers throughout, and they endured more privations and ran greater risks than any of the others. Mr. King, I am sorry to say, is still suffering from the effects of his long continued exertions and exposure to the weather.

My acknowledgments are also due to Messrs. Rutt and MacLachlan, the leaders of the other sections, for their loyalty to myself, in the midst of great troubles, and for the manner in which they continued faithful to their work throughout. Mr. Mitchell succeeded Mr. MacLachlan, and well sustained the charge laid upon him.

Special recognition is due to the overseers of transport; they all without exception, did their work well, and I could not wish to be associated with a better lot of officers.

Before concluding this report, I think it well to draw attention to the necessity of sinking one or two wells on the Birdum, between the Warlock Pond and Daly Waters, directly after the ensuing wet season. So far as my experience has gone, that was the only stretch of country that could not be traversed by horsemen last November, and it was then absolutely waterless. It would be advisable however, also to sink a well half-way between the King and Bitter Springs. Last year there was not more than a fortnight's supply left on that track when the rains set in.

I think it possible there might be some difficulty in travelling from Daly Waters to the Newcastle Waters in some seasons, but there has been ample water on this track for horsemen during the dry season, which is just now approaching its termination.

C. Todd, Esq., C.M.G., Postmaster General and
Superintendent Telegraphs.

I have, &c.,
ROBERT C. PATTERSON,
Commanding Expedition.

G 2.

MEMORANDUM.

Empire's message from London received at Wentworth on Sunday, November 10th, at 10.8 p.m.; sent to Sydney on the 11th November, at 8.23 a.m. Message on the 9th, from London.

NOTE.—10 hours 15 minutes delay at Wentworth, caused by heavy thunder-storm on line at Wentworth, and in Sydney; *vide* telegram from Government Astronomer attached.

Empire's message from London received at Wentworth, at 10.13 p.m., and sent on to Sydney, on November 16th, at 10.15 p.m. Message on the 15th, from London.

NOTE.—No delay. Sent out on night of the 16th instant, Saturday, but could not be delivered on account of no person being there to receive it; was delivered and signed for on Sunday night, the 17th instant, in time for publication.

Empire's message from London received at Wentworth, on the 17th November, at 10.30 p.m.; sent to Sydney on November 18th, at 9.2 a.m. Message on the 16th, from London.

NOTE.—A delay of 10½ hours at Wentworth—line being interrupted. Since this date additional officers have been appointed, so that messages from Europe can be received, *vid* Wentworth or Albury, during the night.

E. C. CRACKNELL,
24/4/73.

G 3.

Telegram from the Government Astronomer to E. C. Cracknell, Esq.

SUNDAY, 10th November, I did not get any telegrams; thunder-storm and rain all afternoon at Sydney. Mount Victoria, thunder-storm and rain afternoon. Kurradjong, thunder-storm came from west in the afternoon. Denliquin, strong S.W. wind in the afternoon, passed over south-western districts, with rain lasting all afternoon at several places. Bathurst, no observations on Sunday afternoon.

G 4.

WITH regard to the European messages addressed to the *Empire* on the 9th, 15th, and 16th of November last, I can only state that they were transmitted from Port Darwin to Wentworth without any delay. I have not the recorded times with me, but I gave them in a letter to Mr. Cracknell some weeks ago, when inquiry was made concerning them.

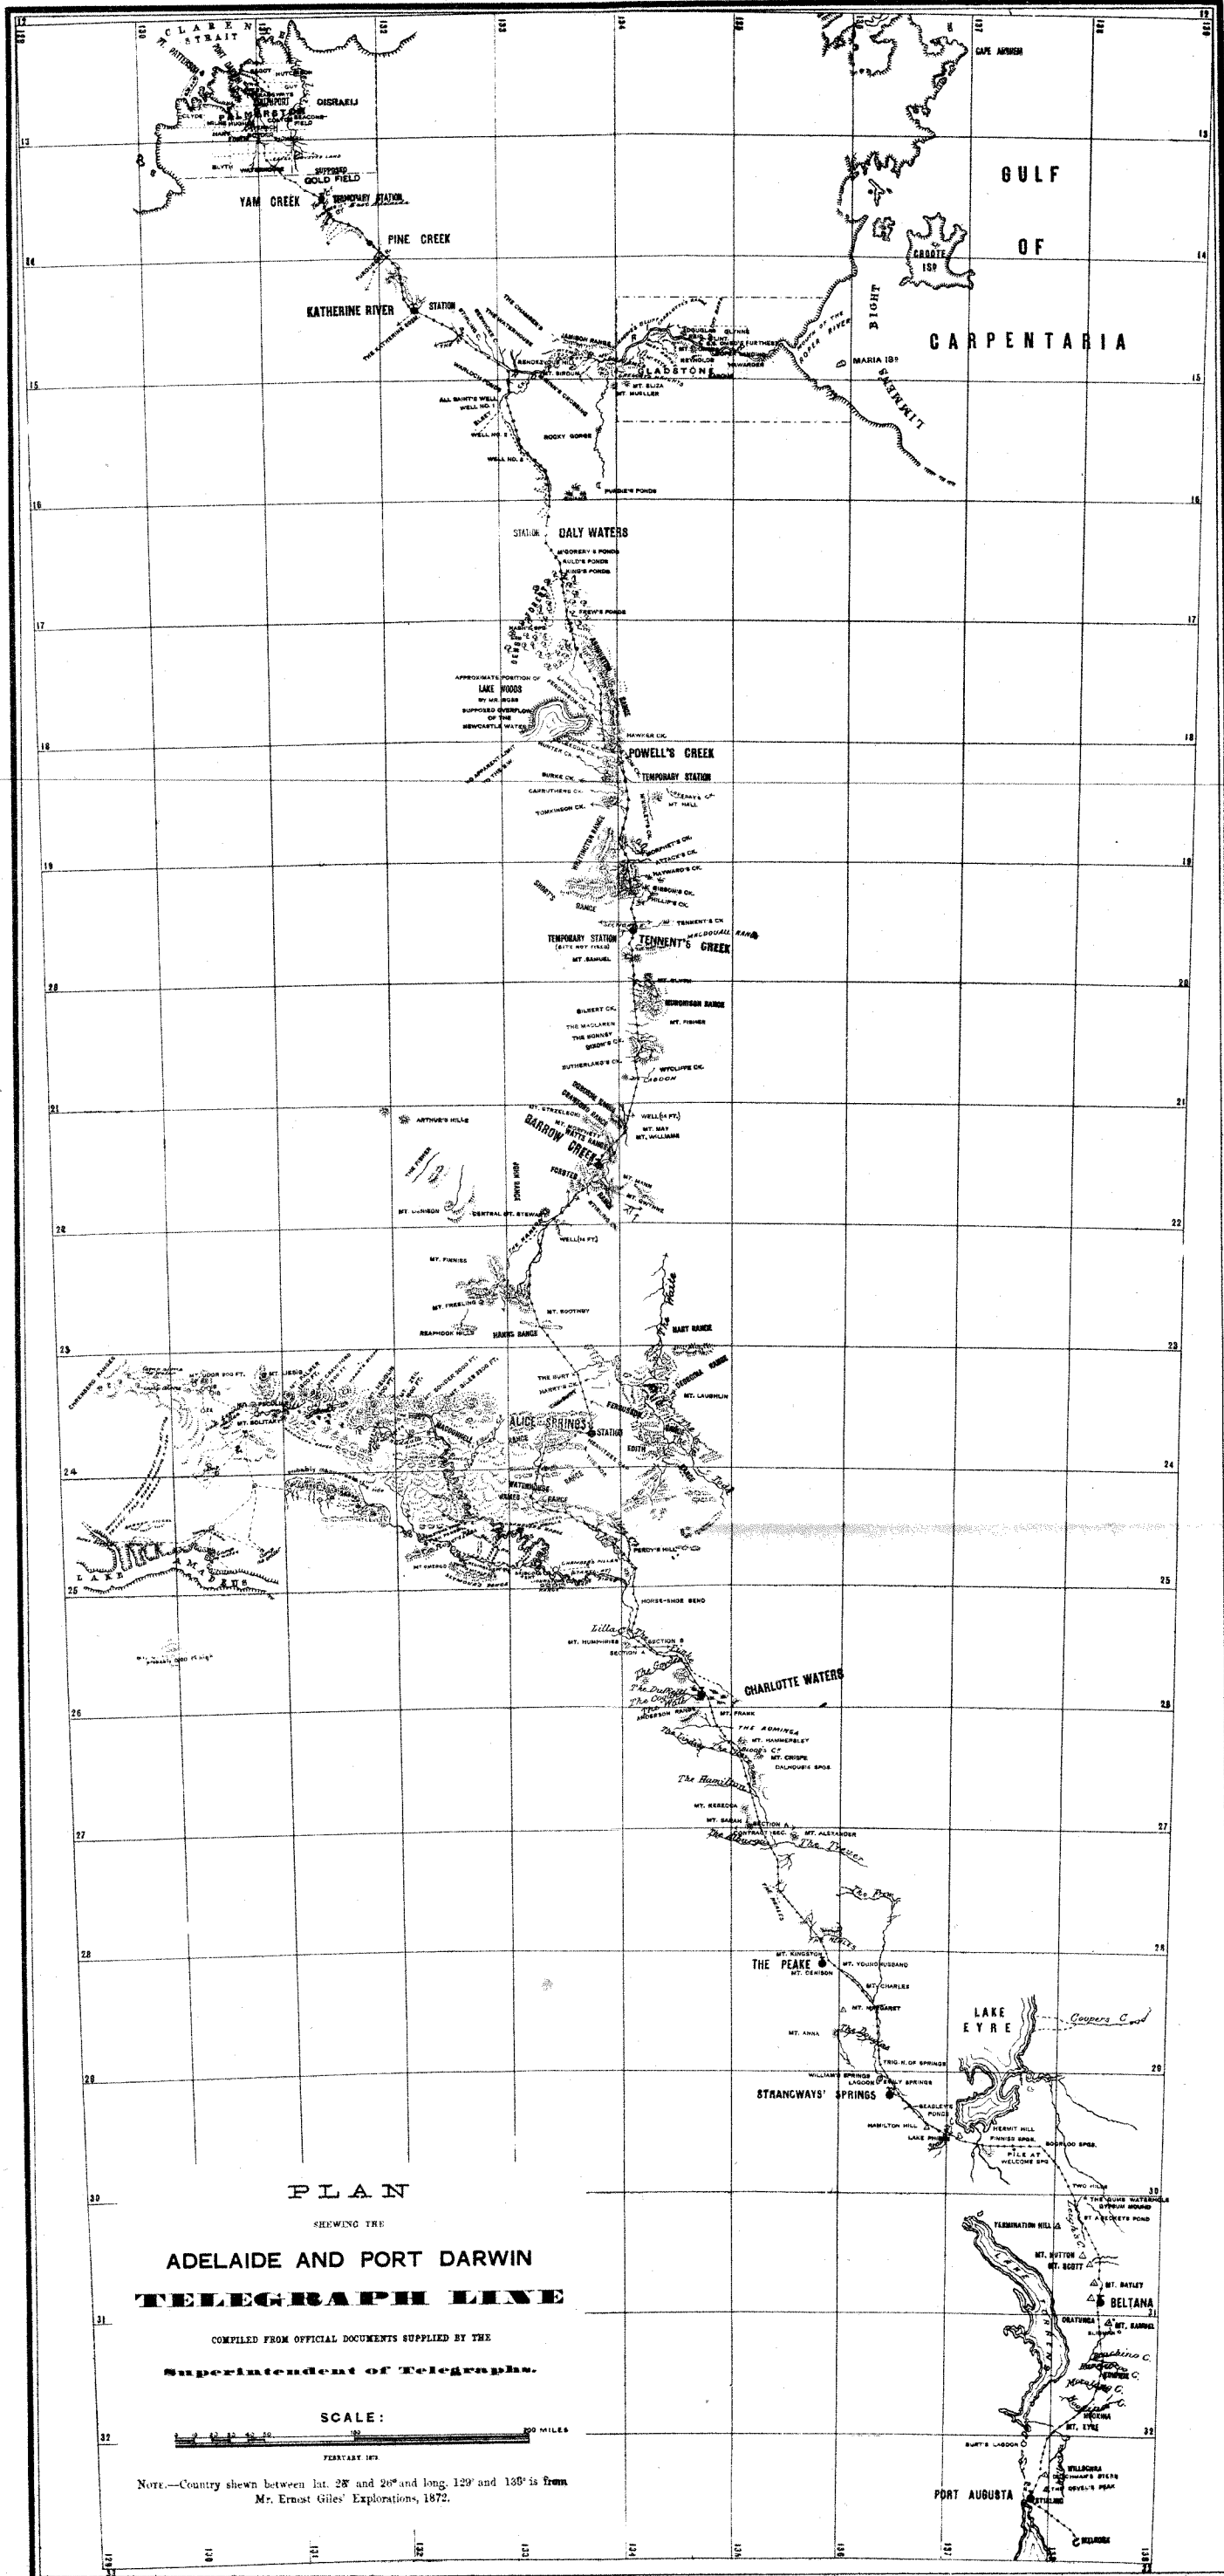

C. TODD,
Postmaster General and Superintendent of Telegraphs,
South Australia,
24/4/73.

H.

1873.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 6. WEDNESDAY, 13. NOVEMBER, 1872.

11. WHARF ACCOMMODATION, SYDNEY HARBOUR:—Mr. Parkes moved, pursuant to Notice,—
(1.) That a Select Committee be appointed, with power to send for persons and papers, to consider and report upon the best means of improving the Wharf Accommodation of "Sydney Harbour," and providing greater facilities for the loading and unloading of vessels.
(2.) That such Committee consist of Mr. Robertson, Mr. Allen, Mr. Clarke, Mr. Sutherland, Mr. G. A. Lloyd, Mr. Macintosh, Mr. Wearne, Mr. Hoskins, Mr. Watson, and the Mover.
Debate ensued.
Mr. Hannell moved, that the Question be amended by inserting between the words "Sydney" and "Harbour," the words "and Newcastle."
Debate continued.
Question put,—That the words proposed to be inserted be there inserted.
The House divided.

Ayes, 4.

Mr. R. B. Smith,
Mr. Nowlan,

Tellers.

Mr. Fitzpatrick,
Mr. Hannell.

Noes, 33.

<p>Mr. Parkes, Mr. Farnell, Mr. Butler, Mr. Sutherland, Mr. G. A. Lloyd, Mr. Innes, Mr. Hurley (<i>Central Cumberland</i>), Mr. Baker, Mr. Booth, Mr. Bennett, Mr. Cummings, Mr. Allen, Mr. Warden, Mr. Abbott, Mr. Grahame, Mr. Thomas Brown, Mr. Scholey,</p>	<p>Mr. Terry, Mr. Greville, Mr. Hoskins, Mr. Oakes, Mr. Cunneen, Mr. Lee, Mr. Webb, Mr. Clarke, Mr. Hill, Mr. Stewart, Mr. Burns, Mr. De Salis, Mr. W. C. Browne, Mr. Driver, <i>Tellers.</i> Mr. Single, Mr. Combes.</p>
---	---

And so it passed in the negative.
Original Question then put and passed.

VOTES No. 8. TUESDAY, 19 NOVEMBER, 1872.

4. WHARF ACCOMMODATION, SYDNEY HARBOUR:—Mr. Parkes (*with the concurrence of the House*) moved, without notice, That the Proceedings, Evidence, &c., taken before the Select Committee on "Circular Quay," during the Session of 1871-2, be laid upon the Table of this House, with a view to being referred to the Select Committee now sitting on "Wharf Accommodation, Sydney Harbour."
Question put and passed.
And the Clerk having laid the documents upon the Table,—
Mr. Parkes moved, That the papers laid upon the Table by the Clerk be referred to the Select Committee now sitting on "Wharf Accommodation, Sydney Harbour."
Question put and passed.

VOTES No. 92. THURSDAY, 24 APRIL, 1873.

25. WHARF ACCOMMODATION, SYDNEY HARBOUR:—Mr. Parkes, as Chairman, brought up a Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee, for whose consideration and report this subject was referred on 13th November, 1872, together with Appendix.
Ordered to be printed.

WHARF ACCOMMODATION—SYDNEY HARBOUR.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 13th November, 1872,—with power to send for persons and papers, to consider and report upon the best means of improving the Wharf Accommodation of Sydney Harbour, and providing greater facilities for the loading and unloading of Vessels, to whom was referred, on the 19th November, 1872, the Proceedings, Evidence, &c., taken before the Select Committee on “Circular Quay,” during the Session of 1871-2,—have agreed to the following Report:—

Your Committee have examined a number of witnesses, several of whom, from their intimate acquaintance with the shipping and trade of the Port, appeared to be specially qualified to give valuable evidence. They have also taken the evidence of the Engineer-in-Chief for Harbours and Rivers, and of Lieut. Gowlland, who has for some time past been engaged in the Coast Survey Service. Plans of several projected works for improving the Wharf Accommodation of Sydney have been laid before your Committee, lithographed copies of which are appended to the evidence. Of the plans submitted, two appears to your Committee to be deserving of special attention,—the plan marked B, prepared by Mr. Moriarty, and the plan marked F, prepared by Lieut. Gowlland.

Looking to the future increase of the shipping trade of the Port, your Committee are of opinion that Lieut. Gowlland’s plan offers the greater number of advantages; but they abstain from making any positive recommendation, as they consider that the Government must enter upon an independent examination of the plans and evidence with the assistance of those public officers whose professional knowledge is available in leading to a right conclusion.

Your Committee report the evidence and plans to your Honorable House without any further recommendation.

HENRY PARKES,
Chairman.

No. 3 Committee Room,
Sydney, 24th April, 1873.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 19 NOVEMBER, 1872.

MEMBERS PRESENT:—

Mr. Parkes,		Mr. G. A. Lloyd,
Mr. Sutherland,		Mr. Allen,
Mr. Wearne,		Mr. Watson.

Mr. Parkes called to the Chair.

Entry in Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Committee deliberated.

Clerk directed to prepare notice for the House,—to have the Proceedings, Evidence, &c., taken before the Select Committee on the "Circular Quay," during the Session of 1871-2, referred to this Committee.

Ordered,—That J. B. Watt, Esq., and E. Flood, Esq., be summoned to give evidence at next meeting.[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 22 NOVEMBER, 1872.

MEMBERS PRESENT:—

Mr. Parkes in the Chair.

Mr. Sutherland,		Mr. Allen,
		Mr. Wearne.

Extracts from the Votes and Proceedings, referring the Proceedings, Evidence, &c., taken before the Select Committee on "Circular Quay," Session 1871-2, to this Committee, *read* by the Clerk,—*Ordered*,—That the papers referred be printed as an Appendix. (*See Separate Appendix.*)

E. Flood, Esq., called in and examined.

Witness *handed in* plan of proposed Wharf Accommodation, Circular Quay. (*Vide Appendix A.*)

Witness withdrew.

J. B. Watt, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Captain Robertson, W. J. Green, Esq., and S. A. Joseph, Esq., be summoned to give evidence at the next meeting.[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 26 NOVEMBER, 1872.

MEMBERS PRESENT:—

Mr. Sutherland,		Mr. G. A. Lloyd,
Mr. Clarke,		Mr. Macintosh.

In the absence of the Chairman, Mr. Sutherland called to the Chair.

Captain Robertson (*ship "Abergeldie"*), called in and examined.

Witness withdrew.

W. J. Green, Esq. (*Messrs. Lassetter & Co.*), called in and examined.

Witness withdrew.

The Chairman (*Mr. Parkes*) entered the room and took the chair.

S. A. Joseph, Esq., called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That E. O. Moriarty, Esq., and John Keep, Esq., be summoned to give evidence at next meeting,—the former to produce plans of proposed improved accommodation for Circular Quay.[Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 29 NOVEMBER, 1872.

MEMBERS PRESENT:—

Mr. Parkes in the Chair.

Mr. Sutherland,		Mr. Clarke,
Mr. Watson,		Mr. Wearne,
		Mr. Macintosh.

E. O. Moriarty, Esq. (*Engineer-in-Chief for Harbours and Rivers*).

Called in and examined.

Witness *handed in* four plans of proposed improvements, Circular Quay. (*Vide Appendices B, C,*

D, E.)

Witness

Witness withdrew.
 John Keep, Esq., called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That B. Buchanan, Esq., S. Dickinson, Esq., and Captain Robertson, be summoned to give evidence at next meeting.
 [Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 3 DECEMBER, 1872.

MEMBER PRESENT :—
 Mr. G. A. Lloyd.
 In the absence of a quorum, the Meeting called for this day lapsed.

FRIDAY, 6 DECEMBER, 1872.

MEMBERS PRESENT :—
 Mr. Parkes in the Chair.
 Mr. G. A. Lloyd, | Mr. Watson,
 Mr. Wearne.
 S. Dickinson, Esq., called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That W. A. Duncan, Esq., and Mr. John Bell, be summoned to give evidence at next meeting.
 [Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 10 DECEMBER, 1872.

MEMBERS PRESENT :—
 Mr. Parkes in the Chair.
 Mr. G. A. Lloyd, | Mr. Watson,
 Mr. Macintosh.
 W. A. Duncan, Esq. (*Collector of Customs*), called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That C. Harrild, J. R. Myhill, and Mr. John Woods, be summoned to give evidence at next meeting.
 [Adjourned until Friday next, at *Eleven* o'clock.]

FRIDAY, 13 DECEMBER, 1872.

In the absence of a quorum, the Meeting called for this day lapsed.

FRIDAY, 20 DECEMBER, 1872.

MEMBERS PRESENT :—
 Mr. Parkes in the Chair.
 Mr. Watson, | Mr. G. A. Lloyd,
 Mr. Sutherland, | Mr. Wearne.
 Mr. Charles Harrild (*Assistant Harbour Master*) called in and examined.
 Witness withdrew.
 Mr. John R. Myhill (*Harbour Master*) called in and examined.
 Witness withdrew.
 Committee deliberated.
Ordered,—That T. S. Mort, Esq., be summoned to give evidence at next meeting.
 [Adjourned until Thursday, 16 January, 1873.]

THURSDAY,

THURSDAY, 16 JANUARY, 1873.

MEMBERS PRESENT :—

Mr. Parkes in the Chair.

Mr. Watson, | Mr. Sutherland,
Mr. G. A. Lloyd.

T. S. Mort, Esq., called in and examined.

Witness withdrew.

Committee deliberated, and adjourned.

Chairman to arrange next meeting.

THURSDAY, 30 JANUARY, 1873.

In the absence of a quorum, the Meeting called for this day lapsed.

TUESDAY, 11 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Parkes, | Mr. Sutherland.

In the absence of a quorum, the Meeting called for this day lapsed.

FRIDAY, 14 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Parkes in the Chair.

Mr. Clarke, | Mr. Wearne,
Mr. Macintosh.

Captain Burns called in and examined.

Witness withdrew.

Captain Hixson called in and examined.

Witness withdrew.

Lieut. John Gowlland called in and examined.

Witness handed in plan of proposed improvements, Circular Quay. (*See Appendix, F.*)

Witness withdrew.

Committee deliberated.

Ordered,—That E. Flood, Esq., be summoned to give evidence at next meeting.

[Adjourned to Tuesday next, at *Eleven* o'clock.]

TUESDAY, 18 MARCH, 1873.

MEMBERS PRESENT :—

Mr. G. A. Lloyd, | Mr. Wearne.

In the absence of a quorum, the Meeting called for this day lapsed.

WEDNESDAY, 9 APRIL, 1873.

MEMBERS PRESENT :—

Mr. G. A. Lloyd, | Mr. Wearne.

In the absence of a quorum, the Meeting called for this day lapsed.

THURSDAY, 17 APRIL, 1873.

MEMBERS PRESENT :—

Mr. Parkes in the Chair.

Mr. Watson, | Mr. Clarke,
Mr. Sutherland, | Mr. Wearne.

Edward Flood, Esq., called in and further examined.

Witness withdrew.

Committee deliberated.

[Adjourned to Monday next, at *Two* o'clock.]

MONDAY,

7

MONDAY, 21 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Parkes in the Chair.

Mr. Wearne, | Mr. Clarke,
Mr. Sutherland.

Lieutenant John Gowlland called in and further examined.

Witness withdrew.

E. O. Moriarty, Esq., called in and further examined.

Witness handed in plan of "Detail Sketch of Jetty" (*Vide Appendix G, 1*); also estimate of cost of Timber Jetties for Circular Quay. (*Vide Appendix H.*)

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Symons and Mr. Nancarrow be summoned to give evidence at next Meeting.

[Adjourned until to-morrow, at Two o'clock.]

TUESDAY, 22 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Parkes, | Mr. Wearne.

In the absence of a quorum, the Meeting called for this day lapsed.

WEDNESDAY, 23 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Parkes in the Chair.

Mr. Wearne, | Mr. Sutherland,
Mr. G. A. Lloyd, | Mr. Macintosh.

Mr. Richard Nancarrow called in and examined.

Witness withdrew.

Committee deliberated.

Chairman handed in a letter from Mr. Symons, a witness summoned for this day.

Ordered to be appended. (*Vide Appendix I.*)

[Adjourned until to-morrow, at Two o'clock.]

THURSDAY, 24 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Parkes in the Chair.

Mr. Clarke, | Mr. Macintosh,
Mr. G. A. Lloyd, | Mr. Sutherland.

Chairman submitted Draft Report; same read and agreed to.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

WHARF ACCOMMODATION, SYDNEY HARBOUR.

FRIDAY, 22 NOVEMBER, 1872.

Present:—

MR. ALLEN,
MR. PARKES,

MR. SUTHERLAND,
MR. WEARNE.

THE HON. HENRY PARKES, ESQ., IN THE CHAIR.

Edward Flood, Esq., examined:—

1. *Chairman.*] This Committee has been appointed to inquire into and report upon the best means of E. Flood, Esq. improving the wharf accommodation of Sydney Harbour, and to provide greater facilities for the loading and unloading of vessels. It has been thought by the Committee that from your experience of late years 22 Nov., 1872. in the large transactions you are understood to have had in your hands, in connection with the shipping of the port, you would be able to afford them valuable information, and they are desirous of learning, in the first instance, what are the wharfs at the present time, and what are the drawbacks to the expeditious discharge of ships, and the general accommodation to the shipping interest, and then they would be glad to receive from you any suggestions you may be disposed to offer for remedying this state of things. We should be glad to learn, in the first place, what you consider the existing obstacles and drawbacks; for instance, do you think the Circular Quay, at the present time, affords the accommodation for the loading and unloading of ships which a port like ours ought to afford? No, I do not. I think the Circular Quay in its present state, looking to the commercial importance of the port, is a disgrace to the country.
2. Perhaps you will be kind enough to point out some of the most prominent points of objection upon which you found your opinion that it is a disgrace to the country? Very little has been done by artificial means at the Circular Quay; with the exception of some costly but insignificant improvements, almost everything there now appears as it originally did at the first landing of Governor Phillip, 84 years ago. A quotation from his journal, when he surveyed the portion previous to his taking possession of this Colony, is appended hereto, which confirms this statement. By this it will be seen that ships could anchor close to the shore, which they can only do at the present time, at the eastern side of the quay.
3. That is, as I should gather from your remarks, the natural strand afforded a kind of wharf accommodation, and all that has been done has been to extend that a little into the water? Yes; I can recollect when a ship required to have her bottom examined, she was hove-down on the rocks, near where my stores are built, called the heaving-down place. I say, without fear of contradiction, that that part of the quay has been very little improved. A ship lying at the east side of the quay cannot approach anything like the landing-place within about 60 feet. There has been some slight improvement in the shape of a stone wall, but outside of the wall there are a considerable number of rocks projecting about 15 feet, and which are bare at low-water.
4. What time do you speak of when you say a ship was hove-down opposite your own stores? I should think it is about 40 years ago.
5. Could a ship as large as the "Ann Duthie" have come sufficiently near the shore to discharge with a long stage? Yes, I think so; quite as close as they can now.
6. A little longer than they have a necessity to use now? I have no doubt of it; just about the same spot, near the heaving-down place, any of our large ships could have been unloaded with the stages we have now in use.

E. Flood, Esq. 7. Then, as a matter of fact, I gather that the difference between the accommodation afforded now and the state of that side of the cove, before anything was done, is only in that a few feet of additional stage is necessary? That is all.

22 Nov., 1872.

8. Are there any other drawbacks or wants that strike you as prominent, to a proper system of accommodation for the shipping, as to the discharge of goods and their being put in places of security from the weather? I need not point out to the Committee the great drawback it is to those following the pursuits of mercantile business in having, first of all, to lift the cargo out of a ship's hold, to land it on a stage on the ship's deck, and then to pass it to another stage, which from the ship's rail will be about 70 feet, before the goods can be landed upon *terra firma*. It appears to me to be a great inconvenience. Goods are seriously knocked about and damaged by the rough usage they receive from the lumpers, in consequence of the want of a different mode of landing them, or of a different place to land.

9. Have you known any instances of valuable goods being damaged by being tumbled over these stages? It is a common occurrence for boxes of candles and other packages to be broken, by being tumbled over the stages.

10. Have you known instances of valuable packages of goods, such as large mirrors, having been broken? I do not know that I ever saw a case of glass broken, but I have no doubt scarcely a ship comes into port but damages of this kind take place, more or less, from the causes I have assigned.

11. Is there a deficiency of storage for the immediate protection of goods after their discharge from the ships? There are no stores on the Circular Quay—no public stores—or stores belonging to the Government.

12. How then, as a matter of fact, are the goods stored;—are they for the most part carted away to the respective stores of the consignees in town, or lodged in private stores in the neighbourhood of the quay? All goods upon which duty has been paid according to law, as soon as they go over the ship's side are in the charge and at the risk of the consignee.

13. But what is the usual practice;—are they taken away to the consignee's store, or to a great extent stored in private stores in the neighbourhood? I am not aware of there being such stores. No doubt the consignees make arrangement for the storage of their own goods, either in their own or some other stores, as almost all the goods are cleared away before night.

14. If they are not cleared away they are at the risk of the consignee? I have sometimes allowed friends of mine to put their goods in my stores to prevent the wet getting to them.

15. So far as the public accommodation is concerned, there are no means whatever of protecting these goods? None.

16. Have you visited the London Docks? Frequently.

17. There is no such accommodation in the London Docks? None of the kind. In the London Dock you have large sheds and stores immediately abutting on the docks, and you have every modern and most approved contrivance, by means of steam and otherwise, for the purpose of loading and discharging ships.

18. Have any other great deficiencies attracted your attention in any respect with regard to the general accommodation? I think a steam-crane is much wanted in some part of the Sydney Harbour, either afloat or at one of the landing-places, so that ships having heavy goods on board might easily be discharged.

19. Is there any difficulty arising out of the regulations of the port, or arising out of the deficiency of wharf accommodation? I have known ships to lie in the harbour some eight or ten days before they could get berths at the Circular Quay. The Circular Quay in its present state will accommodate only twelve ships at the outside.

20. Have you any acquaintance with persons engaged in the shipping trade, such as commanders of large ships or their agents? I know most of the regular traders here.

21. Have you heard any complaints made by that class of business men? I have heard many complaints made by shipmasters; I cannot say I have heard complaints from agents.

22. It has been stated, and very likely if it is the fact you have heard it, that large shipowners have objected to sending their ships to Sydney because there is not sufficient wharf accommodation? I have frequently heard that. I heard in London complaints as to the delay caused by getting berths for shipping to unload and load; and another difficulty that existed was that shippers or consignees did not get their entries passed till the time limited by law had expired.

23. What is the time? I think the time then was seven days; it is now forty-eight hours.

24. What has occurred to you as a good plan for affording the requisite accommodation? I have seen a plan proposed by the Government, or by the Engineer-in-Chief of Harbours and Rivers, which was produced before a Committee of the Assembly, of which I was a Member some two years ago, which I call the saw-tooth principle, and a suggestion to run a jetty down the centre of the cove. With every respect to the Government authorities, and to the parties to whom I have alluded, I do not agree with either of those plans. I approve of that plan which will be most economical and will give the largest amount of accommodation to the public; and to attain that object I should recommend what is known by the term of jetties or wharves, built at right angles or in such position as will be most suitable, looking to the curves in the Circular Quay.

25. Is that something like what you mean. (*Handing to the witness a sketch. Vide Appendix A*)? Yes, that is a somewhat similar plan which will give the greatest amount of accommodation at the Circular Quay. Some of the curves there will have to be straightened, and by doing that you will gain a large area for landing. I have gone into this matter in my own way, and I think at the east side we could have at least six capacious jetties, with sufficient room for two ships between each, and for ordinary coasters to go in if necessary for the purpose of taking goods out of the ship, or taking them out of the coasters and putting them into our London traders; and I think the kind of jetty that would answer such a purpose, after straightening and filling up certain parts of the Circular Quay to deep-water, should be carried out about 200 feet and be 80 feet broad, which would give ample accommodation for two ships.

26. You would have a railway down each jetty? If I had a jetty opposite my stores I think I should have a railway laid on to the quay, so that everything could go from my store to the ships' rails. If the jetty were 200 feet by 80 feet, and the basin or space between about 115 feet at the outside, that would give ample space to accommodate two ships at each jetty. While upon this subject I will point out my objection to the plan of the Government. We have at the present time lying at the Circular Quay, opposite the store, a ship called the "Abergeldie"; she is 240 feet in length, and we have sometimes ships even longer—for instance, the "Sobraon," which is about 300 feet. The "Abergeldie," being 240 feet,

takes

takes up the whole space, and I may say more space, because the bowsprit projects beyond the 240 feet; E. Flood, Esq. and if you take the basin at 115 feet, and two ships at 40 or 42 feet, which would be about the maximum beam of our London traders (say 82 feet), so that we get accommodation for two ships and 76 feet to spare. 22 Nov., 1872. We could accommodate from the ferry wharf, at the north-eastern side of the cove to the wharf, where the Manly Beach steamer leaves, at the western side, about twenty ships, and have ample space and convenience for taking goods to and removing them from these ships. Nothing could be more easy, and it would effect a great saving of time. It would not be necessary for any of these ships to drop anchor; they would haul up alongside the jetty, and make fast to bollards built into it for that purpose. In connection with this I would recommend, if this plan is adopted, that there should be about three moorings, to which buoys should be attached, at distances suitable, looking at the length of the harbour, so that ships could haul off to the buoys, be picked up by steamers, and taken off to sea. No danger then could arise to ships in moving.

27. What are your main objections to the proposed central jetty going out somewhere near the Princess Stairs to the mouth of the Cove? I look upon it as a novelty; and it has been suggested by the fact of there being something of the kind at Melbourne. There they were compelled to build such a jetty, but here, where we have a natural landing-place, which, with the jetties I have suggested, would accommodate twenty vessels, such a plan would not be advisable, inasmuch as it would not accommodate an equal number, and would be open to this further objection, that all the goods from the vessels at the northern end must pass every ship on the jetty. There are also private stores along nearly the whole site of the plan I propose. If you look at the plan I propose you will see that every ship is quite independent, has her own landing-place, and her own jetty, and lands her goods on *terra firma* as soon as they are out of the ship, where drays can take them away, if the use of drays is to be continued at Circular Quay. At Sandridge they are necessitated to have a railroad, and it runs down the centre of the pier, and no doubt is a very good arrangement, as it at once conveys their goods to the warehouses. We hear a good deal about the accommodation afforded to shipping in Melbourne, but it is to be borne in mind that their stores and warehouses are some two or three miles from the place of landing, and we do not need the arrangements here that are necessary with them; and I am satisfied that if half or a third of the amount were expended upon the Circular Quay that has been laid out upon the pier, and all the works connected with it at Sandridge, we should have one of the finest docks in the world—if the plan I have recommended was adopted. I would enclose the whole area connected with these improvements and erect open sheds all the way round. I would also erect sheds over the jetties, say to the extent of 60 feet, leaving 10 feet clear at each side. Gaugers will have ample space to gauge spirits under the shed between the jetties, and not as at present in the street, exposed to the broiling sun and in the public thoroughfare. Labourers have with bottles and other vessels been watching opportunities to walk off with grog and get drunk on the quay. Some gentlemen are of opinion that it is necessary to enclose each wharf separately, so that the owners of any particular ship may have the yard exclusively to themselves. I do not think that is at all necessary, as I would enclose these jetties entirely from one end to the other, and would have proper gates opposite each jetty, to be open during working hours, but to be closed at night. There should be three wicket-gates, each supplied with proper lamps and watchmen to prevent the passage of contraband goods, and the ingress or egress of any persons but those connected with the ships lying at the jetties. This is the practice at the London Docks.

28. *Mr. Allen.*] The place you have spoken of as the heaving-down place is on the east side of the quay, near the site of your own stores? Yes, on the east side; you may see the rocks now projecting into deep-water.

29. Do the objections you have made apply to the opposite side of the quay? No, that has been considerably improved, but it will only take three large ships.

30. Are there any public stores on the opposite side of the quay to which goods can be removed from the vessels? No.

31. These sheds which you propose to erect;—will they be for the purpose of storing goods liable to duty, and on which duty has not been paid? I do not propose that we should build stores for the public, but I think the public ought to have some part of the quay; it might retain some part of the quay where there would be sufficient space to erect a bonded warehouse, so that where the entries were not passed goods could be removed into them.

32. What advantage would it be to have these sheds if goods as they were landed, liable to duty, were not allowed to remain there? It would facilitate the landing of goods in wet or showery weather. At present, although the captain may do everything in his power to prevent damage to goods, he is liable for any injury done to goods by wet.

33. Still all goods must be removed on the day on which they are landed? All dutiable goods are landed within a certain time. I think spirits and tobacco cannot be landed after 1 o'clock, to give the authorities time to see them bonded.

34. Still very few goods are landed now that are not dutiable, subject to *ad valorem* duties? Nearly all; and nearly everything is taken away during the day.

35. Then this proposal of yours would still require them to be taken away during the day, and would give no facility for the storage of goods? I suggest the building of sheds as not of so much importance as the building of jetties, but as places beneath which goods could be examined as soon as landed. At present, much inconvenience arises both to the consignees and to the public from there being no place where the goods can be examined without carting them away to the merchant's office, when they are supposed to have been undervalued, or where false estimates have been passed, and some of the goods have been removed before examination.

36. How would it expedite the unloading of ships if goods could not be stored faster than they are now carted away? The goods would be discharged under the shed, and the consignee would have to take them away. They are at his risk as soon as landed; and if they were landed upon the wharf in wet weather, between showers, and there were no sheds to cover them, he would be liable to suffer loss.

37. You would not propose to put these goods on the wharf at the risk of the consignee, if the sheds were not under some control—if they were not enclosed or protected from pilfering? When the gates were open, everything could pass out of them by permit, and none of the goods would be put over the ship's rail without a Customs' entry had been passed. As soon as that had been passed, or the time had elapsed, the goods would be put over the rail, and be removed as fast as possible.

E. Flood, Esq. 38. Unless the Government take the responsibility while the goods remain in the shed, allowing a certain time for the consignees to remove them, would you allow vessels to put them out as quickly as they can, leaving them at the risk of the consignee? Yes; you have such a law already.

22 Nov., 1872. 39. But you must be aware that at the Circular Quay, if there were a dozen vessels discharging at those jetties you propose, it would be difficult, if not impossible, to take away the goods during the day? Not at all; the same rule applies now. And were it otherwise, and goods allowed to remain for an indefinite period, there would be nothing but confusion when you had a considerable number of ships discharging and loading at the same time.

40. But there are not the same number of vessels discharging? The complaint is that ships cannot discharge quickly enough; and I think we could discharge them as quickly in this port as in any in the world if we had the proper accommodation and appliances. When a captain passes an imperfect entry, the object is to get the goods out of his ship as fast as possible, and they are then taken charge of by the Government, and put in a place of safe keeping, until the duty has been paid.

41. Precisely; that is the point I am coming to. If facilities are given to vessels to discharge, should there not be some place where goods should be lodged until the consignee has the means of taking them away? If you had a law of that description, and consignees had a discretionary power, I do not know what time they would require for the removal of their goods; certainly not until they were sold; you would never get them out of the shed, or off the wharf, excepting in the case of those goods for which the captain had passed an imperfect entry. You would never be able to give accommodation with all the sheds and stores you could build, if you allowed the public *ad libitum* the use of these sheds.

42. Unless you made some charge for the use of them, and an increased charge beyond a fixed time? I am not in favour of building any stores for the accommodation of the public, except these sheds which I propose, such as you will see in America and in Liverpool. In Liverpool the docks are very extensive, and, as far as I recollect, all the accommodation there, with one or two exceptions, is by open sheds.

43. Have you heard any complaints against the Customs regulations as a cause of delay in the discharging of vessels? You may hear complaints daily.

44. Reasonable complaints? I am incompetent to go into the question as to whether there is reasonable cause of complaint or not, but we know that taxes are obnoxious to all, and where they have to be paid they are met with all sorts of objection.

45. I mean mainly as to the working over hours, or the jerking of vessels when no dutiable goods are on board? Yes; ships ought to be allowed to discharge from 6 o'clock in the morning till 6 in the evening, without paying any overtime or additional charge. At present they are only allowed to work from 9 o'clock till 4, which often causes great inconvenience. I know considerable inconvenience has been caused by the limited time allowed to work on board ship; sometimes very considerable time elapses before the goods are jerked, and much inconvenience is experienced, but I must say that when any objection has been made by a subordinate officer, an application has been made to the Collector, and, if in his power, he has invariably removed the difficulty at once.

46. Have you not heard frequent cases where the Collector himself has refused to allow even coals to be put on board ships as ballast, to keep them steady? I have heard of objections having been made to the shipment of coals, but cannot cite any particular case. I know that most of those with whom I am intimately acquainted have stated that whenever they have applied to the Collector he has been willing to give the facilities required, provided they were reasonable.

47. *Mr. Sutherland.*] You have mentioned the means of storage at the London Docks;—were these public or private? I think the London Docks are private property. In these docks, in addition to the sheds, there are immense warehouses for receiving and stowing away goods, the same as at Liverpool.

48. I think you said you proposed this plan, because you thereby secured the largest amount of accommodation with the least money expenditure? Yes, and no other plan that I have seen would so facilitate the moving of ships, bringing them to, and taking them from the jetties.

49. And you propose that your plan should include from the North Shore Ferry to the line of Pitt-street? Yes.

50. What did you mean when you said you wished some portion of the Circular Quay to be cut away? Not to be cut away, but some portion to be filled in; there is quite an elbow in one part—this I would fill in.

51. To make it straight from point to point? Yes. I do not know why the quays in our beautiful harbour should be circular. I would suggest that they should be made square. A ship is not circular, but five-sixths of it is straight, the bow only being circular, and therefore a square quay would afford greater accommodation. There is one other point with reference to this inquiry to which I should wish to allude—the silting up of the harbour. I think it most undesirable that the silt should be allowed to flow into our beautiful harbour, and that then it should be dredged up and conveyed away at an enormous expense. This might be prevented by means of proper silt-traps all round Circular Quay, and particularly at this part where it is at present unimproved. I would recommend that there should be a declivity from the water's edge to the surface culvert, and at intervals silt-traps sufficiently capacious, say 6 or 8 feet long and 4 feet broad, brought over so that they could be covered with the ordinary man-hole grating. From this there should be a drain-pipe, to take the water off a little below or about high-water mark. The silt-trap would retain all the silt, which should be removed whenever it was necessary, and the City authorities should be applied to to retain the silt in the various channels that now run to the Circular Quay, by proper silt-traps. It would be no difficult matter, but inexpensive, and an enormous public saving. I have seen, during a heavy rainfall, some 40 or 50 tons of silt carried down Macquarie-street, over Mr. Darvall's land, into the harbour; and this has to be taken up again by the expensive process of dredging. This expense might be avoided by making proper arrangements for detaining the silt in these silt reservoirs.

52. *Chairman.*] Is there any other observation you would desire to make to the Committee? Yes. I am of opinion that passenger steamers should not be allowed to come south of the present wharf at the north-east end of the Circular Quay, and ample accommodation could be made to provide for them below that wharf, along the Fort. These steamers are the greatest possible inconvenience to ships moving from one side of the cove to the other, and which can only be done by means of warps, over which the steamers pass.

ADDENDUM.

E. Flood, Esq.

Extract from Governor Phillip's Journal.

22 Nov., 1872.

"After touching at Santa Cruz, in the Island of Teneriffe, at Rio de Janeiro, and at the Cape of Good Hope, in order to procure refreshments, and lay in a proper quantity of the various kinds of live stock, at all of which places Captain Phillip and the officers of the squadron were treated with the most marked respect and kindness by the different Governors, the fleet all arrived safely at Botany Bay, in detached portions, on the 18th, 19th, and 20th January, 1788. After landing and carefully examining this Bay, it appeared that, though very extensive, it did not afford a sufficient shelter from the easterly winds; and as the soil in the vicinity of the harbour was likewise of a very indifferent quality, the Governor, previously to giving orders for a disembarkation, fortunately resolved to examine Port Jackson,—a bay mentioned by Captain Cook as lying a short distance to the northward. Captain Phillip, after making some necessary arrangements, in case he should be disappointed in his hopes of finding a fitter situation for the establishment of his new government, set out on this expedition on the 22nd January, taking with him three boats, in which were Captain Hunter and several other officers, in order that, by examining several parts of the harbour at once, greater dispatch might be made. Early in the afternoon of the same day they arrived at Port Jackson, which is only three leagues distant from Botany Bay, and had the satisfaction to find one of the finest harbours in the world, in which a thousand sail of the line might ride in perfect security. The different coves of this harbour were examined with all possible celerity, and the preference was judiciously given to one in which they foresaw that ships could anchor so close to the shore that quays might be constructed at an inconsiderable expense. This cove they found about half a mile in length, and a quarter of a mile across at the entrance; and in honor of Lord Sydney, the Governor gave it the name of Sydney Cove."

John B. Watt, Esq., examined:—

53. *Chairman.*] This Committee has been appointed to consider and report upon the best means of improving the wharf accommodation of Sydney Harbour, and for providing greater facilities for loading and unloading vessels. It was thought, from the extensive business of your firm in connection with the shipping interest, that you would be able to afford the Committee valuable information. We shall be glad to know from you whether you consider the wharf accommodation at present insufficient, and if you do, what are the most prominent points of objection to its present state? I need hardly say that the natural advantages of the port are superior to the natural advantages of almost any port I know, but partly owing to neglect these natural advantages have been largely neutralized. For instance, on the eastern side of the Circular Quay the water has silted up a good deal, and ships are now compelled to discharge with very long stages, of from 60 to 80 feet, which involves a great deal of breakage of goods, and considerable expense to the ships. Another great drawback is that when the goods are landed there is no place immediately accessible for putting them under cover, so that in wet weather ships are delayed discharging altogether, and as the ground is afterwards sometimes for a day or two saturated with wet, still further delay is occasioned, after the rain has ceased. Both these are disadvantages that could easily be remedied, either by extending from the present frontage of the Circular Quay, on the eastern side, or by deepening the water so as to allow ships to come alongside, and by the erection of sheds. I do not know whether it is in the power of the Government to erect sheds on the Circular Quay itself. The quay having been proclaimed a public thoroughfare I suppose the erection of sheds upon it would be considered an obstruction, but if short jetties were carried out from the quay there could be no objection to the erection of sheds upon them. (*The Chairman handed to the witness the sketch marked A.*) I have seen a plan of this sort, and I have also seen one prepared by Mr. Moriarty; I much prefer the latter to this.

J. B. Watt,
Esq.

22 Nov., 1872.

54. Have any instances come under your knowledge where ships have been detained a considerable time for want of a berth from the crowded state of the wharf at particular seasons? Yes, it occurs occasionally during the wool season. The ship that brought the subject most prominently before the public was the "Sobraon," a ship of heavy tonnage and draught of water. There is only one berth at the western side of the quay to which at present she could come close alongside. She had to wait eighteen days in consequence of another ship of almost equal tonnage occupying the berth. I have known other ships to have less or more detention from their desire to avoid unsuitable berths on the eastern side when the western berths were engaged. They have rather preferred waiting a few days in the hope of getting a berth where a shorter stage would be necessary.

55. What is the average tonnage of vessels trading between London and Sydney? From 1,000 to 1,200 tons.

56. What is the usual time occupied in discharging by a ship of 1,000 tons, after going alongside a wharf? From eight to ten days. The "Sobraon"—a ship of much heavier tonnage—discharged, on one occasion, in five days after going alongside the western quay, when she lay close to the wharf.

57. You said just now that you preferred the plan proposed by Mr. Moriarty? Yes.

58. That is on what some call the saw-tooth principle—one ship lying within another? Partly so. Mr. Moriarty's plan is to have jetties extending about 30 feet from the present quay, or so far as would take them out into deep water, each of these jetties being sufficient to accommodate one ship lengthwise; so that the ship should have that whole wharf to herself—that short jetty. This jetty would be covered over with a shed, so that the goods would be under cover immediately they were landed, and there would be no possibility of confusion arising from the mixing of goods by different ships. The sheds would be so constructed as to be thrown open entirely on both sides, and be 4 feet higher than the roadway, so that drays might back on a level with the jetty, thus avoiding breakage, delay, and confusion.

59. Do the present regulations of the port in any way interfere with the discharge of ships? The present regulations do not. We suffered a great delay for many years in consequence of the unnecessarily long period required for passing entries, but that is remedied.

60. The time now allowed you do not think unreasonable? No, it is not.

61. Supposing we had satisfactory accommodation for the discharge of goods from ships, what ought to be the period within which a ship should be discharged? There would be no difficulty in putting out 200 tons a day.

62. That would take about five days for the discharge of an ordinary vessel? Yes; of course it would depend upon the size of the vessel.

63. *Mr. Allen.*] Are you aware of the reasons assigned by the owners of large steamers for not sending them to this port? They have complained of the delay that has only recently been remedied.

64. Is it not mainly because the goods cannot be taken out of the ships in reasonable time, by quick despatch? Partly so; and that also may be remedied. I may say, in justice to the port, that a great deal has been said of the delay occurring here, which it has hardly been fair to say. With regard to the "Sobraon,"

J. B. Watt, Esq.
 22 Nov., 1872.

"Sobraon," I know that she was obliged to be lightened before she could go alongside Sandridge Pier; now, we, with this plan of Mr. Moriarty, or some other plan of the kind, could accommodate a dozen ships of the largest tonnage now brought into the port, and could discharge them without any delay whatever.

65. *Chairman.*] Do you not think the other plan would afford more wharf accommodation, while there would be only two ships at one jetty in any case? The objection, as it strikes me, to that plan is, that it would facilitate the silting up of the harbour. Each of these jetties would be a trap to gather accumulations of mud and debris. Besides the two ship's cargoes would be mixed, and you would have a very limited space for delivery. I do not see that it is the object to crowd a great many ships at the Circular Quay. There is a great deal of wharfage accommodation in the port, and I take it the object of the Government is to give the best accommodation they can at the Circular Quay, and not to monopolize the wharfage. I have no interest in private wharfs; but I do not think the object of the Government is to injure owners of wharf property; all they are called upon to do is to give the best accommodation possible, not to devise plans to concentrate the shipping at that point. I have always held a strong impression that the Government did wrong in holding this wharf at all. If they do retain it I think some plan of this kind should be carried out: The wharf should be divided into sections, and let for long periods. At present, by the combination of wharfingers the whole water-frontage of Port Jackson is locked up, so that what is intended for a public benefit becomes a public wrong. By letting for a short period a low rent only is obtained, and the lessees come into competition with the owners of private property.

66. *Mr. Allen.*] If six jetties such as these were built on the western side of the quay, and were occupied by twelve ships, do you think there would be space for the discharge of these ships? No; the wharf would not bear the weight of the goods; it would go bodily down.

67. Then unless stores were constructed to take the goods directly from this jetty it would not be any accommodation at all to these ships, and would not answer the purpose intended? I do not think it would.

68. But these jetties would be a vast improvement to private property on that side of the quay? On the western side. The property belongs to Government.

69. Would there be room on the eastern side of the quay for the taking away of goods from twelve vessels discharging at jetties such as these? It would be very crowded, and there would be great confusion. Indeed when three London ships are discharging together, you see the wharf covered with goods; make three a dozen, and you may imagine what the confusion would be; there is not space for the drays simply.

70. Particularly if a portion of the jetty were occupied with sheds? I assume that you cannot put a shed upon the Circular Quay.

71. If it were erected there? The Circular Quay is narrow enough as it is. Some arrangement ought to be made to prevent the silting up going on on the eastern side of the quay; at present the silting up is facilitated by the construction of the wharf; it slopes to the water. I think it ought to be raised, a foot at least, along the front. I do not think the construction of this jetty would affect the value of property at all on the eastern side.

72. But you have said that it would be very inconvenient to take goods away as they were discharged; therefore they would be obliged to remain somewhere? I do not think you will ever have twelve ships crowded in such a space at the same time.

73. *Chairman.*] Has it ever occurred to you that Sydney Cove might be made into a large dock? I have often heard it talked of, but I do not see that any advantage would be gained by it. You would have a great body of comparatively stagnant water in the heart of the city, and the great object is to keep the water as clear as possible. This is the great advantage of Mr. Moriarty's plan. There is no wind that blows from the north with such violence as to do damage to shipping here, and a large body of water is kept as clear as possible. The only advantage to be derived from a dock would be the shelter afforded from the north wind. If the Government were ever to entertain the idea of forming a dock they should take it up New Pitt-street to Bridge-street, into the centre of the city. If the trade and business increased, as no doubt it will, this may have to be done at some not far distant day.

74. Jetties of that construction (*referring to sketch A*) would narrow the water very much? Yes. I may be wrong in my theory, but I think it would help to accumulate silt, which would shelve off and prevent the approach of vessels. I would also point out that at present a vessel cannot come within 40 or 50 feet or more of the quay unless you deepen the water; if it were deepened she could just as well lie alongside the wharf at once.

75. If it were not deepened 200 feet would not be long enough? Deduct from the length the distance the ship must lay off from deficient depth of water, and the discharge would be very inconvenient. I do not think you could place ships in position shown on the plan as the quay is at present.

76. *Mr. Sutherland.*] How many vessels do you think the Government should make provision for at the Circular Quay? Just as many as the quay can conveniently accommodate lengthwise. I do not think the object of Government should be to take a certain number of ships.

77. How many vessels come to the port in a year of a class that would require to be accommodated at the Circular Quay that cannot be comfortably accommodated at private wharfs? That is a very awkward question. I believe the whole of the ships that come here could be accommodated at private wharfs, and a large number would be but for this mistaken system of the Government in keeping this wharf in their own hands. It is painful to go round Darling Harbour and to see some of the most magnificent wharfs without a single vessel, because the Government retains this property, and allow it to go into the hands of a combination of wharfingers, whom it will pay to rent it and to allow their own wharfs to stand idle. In this way the public convenience is lessened.

78. *Chairman.*] What I understand you to say is that you are in favor of improving the present berths at the Circular Quay, but not of extending them so as to attract the whole of the shipping to them? Exactly. I think the Government have simply to say let us make this wharf as convenient as possible.

79. In reference to your answer just now, is it not the case that the Circular Quay is the most convenient wharf for the cartage of goods from the quay to the city? It is decidedly; and that was met in olden time, when there was open competition, by the wharfs in Darling Harbour conceding some of the wharfage; and the matter adjusted itself in that way. Those who chose to go to the Circular Quay paid for the greater convenience, and those who desired the concession went to the other wharfs. Thus there was a healthy competition. I do not think it is the duty or the object of Government to endeavour to provide
 for

for all the ships that come into the port, but to improve the property they have in their hands to the utmost. That is to say, that a plan should be devised to give the greatest amount of accommodation to the ships that can conveniently be taken.

J. B. Watt,
Esq.

80. When you say "that can conveniently be taken," you mean lengthwise? Lengthwise. The great advantage that would give to the ships would be that each ship would have its own berth, its own compartment, and the goods of each would be entirely distinct from those of others. I think it would also be a great convenience to the Custom House as each ship would be under the eye of a Custom House officer.

22 Nov., 1872.

81. I suppose you will admit that if public money is expended in carrying out improvements in the port, the object should be to make the port attractive to shipowners, and to afford facilities for the commerce of the port—I do not think any other object would justify improvements of the kind? That is quite right, but I draw this distinction: The object is to give the greatest facilities to a certain number of ships, and not to give a less amount of facility to a greater number of ships. The facilities offered by the Government would be copied by the private wharfs, and then the whole accommodation of the port would be improved.

82. The object would be to offer facilities to anyone who desired to avail themselves of them? Yes, but if we could give greater facilities for ten ships I think we should make a mistake to give less facilities for twenty. I conceive that by this mode (Moriarty's plan) we should give greater facility for a smaller number, and that ought to be the object in view.

83. You have heard of a project which has been started by different parties of carrying out a large central jetty at the cove? Yes, I saw it some twelve months ago; but the objection to it is that it would interfere so much with the free water of the cove. There is also another objection to it, namely, that a large quantity of goods would be landed from ships to be delivered on a comparatively narrow space at the end of the jetty.

84. I suppose that idea was suggested by the jetty at Sandridge? Yes; but the delivery of goods does not take place at Sandridge but at the railway terminus at Melbourne, where they do with the goods what is done with them at the Circular Quay here.

85. But the goods are carried away to a large shed or store, which protects them from the weather? Yes, the delivery takes place in Melbourne, and not alongside the vessel.

86. I think the goods are landed from the ships, rolled into railway-trucks, and then run into a large store, where they remain until the consignee takes them away? Yes.

87. *Mr. Allen.*] Mr. Moriarty's suggestion would have the same effect, especially if these sheds were enclosed? Yes, exactly, but without the necessity of an intermediate delivery for the same thing here.

88. *Chairman.*] I should gather from your evidence that you are entirely in favour of Mr. Moriarty's plan? It is the best plan I have seen. Mr. Thomas Mort wrote to me from Bodalla, before any mention was made of the present inquiry, urging me to look at Mr. Moriarty's plan. I did so, and after discussing it with that gentleman, was of opinion that it was the best plan I had seen.

89. Is there any other suggestion you desire to offer? No.

90. Have any cases come within your knowledge of shipowners preferring to send their vessels to other Australian ports in consequence of the alleged want of wharf accommodation? No. I am not aware of any. The "Sobraon" has gone to Melbourne this year, but not on that score.

91. *Mr. Allen.*] Was it not said of the "Somersetshire" and that class of vessels? They never came here, and I imagine the large second-class passenger trade was the inducement to go to Melbourne.

92. Was it not reported that they had not come here in consequence of the want of wharf accommodation in the port? If they have said so I should attach very little credit to the statement. Formerly it was the case that a vessel might come here and lie in the cove eight days before entries could be passed, and farther have to stay several days waiting a suitable berth, or rigging a stage, before the goods could be discharged. It might have occurred at that time that goods could be sent to Melbourne, and thence to Sydney, where they could be delivered sooner than if sent to Sydney from London direct. In one case two ships started from Calcutta with rice; they left Calcutta and arrived in port—one in Melbourne, the other in Sydney—at the same time, yet the rice from the Melbourne ship was being sold in Sydney while the other ship was lying here waiting for entries to be passed.

93. *Chairman.*] Has it come within your knowledge, as a merchant, that persons in Sydney have actually ordered goods to be sent by Melbourne ships, and then transhipped to coasting-steamers, and brought on to Sydney, in order to obtain them more quickly than they could rely on obtaining them by ships coming direct to Sydney? I have heard of such things in general terms, but I cannot speak of any particular case. I have been inclined to look upon such statements as figures of rhetoric rather than as simple facts. But for the purpose of saving freight, it has at some periods of the year been an advantage to send goods to Melbourne for shipment to England.

94. Would not the freight by steamers equalize the cost of sending goods direct from Sydney? As a matter of fact, during the last few months tin-ore and copper have been sent from Sydney to Melbourne, not for despatch, but because of the saving of freight. There has been a great want of dead weight at Melbourne, and ships would take it for 1s. a ton, so that it paid to send it there, because of the superabundance of dead weight here.

95. What did the shippers pay for having it conveyed to Melbourne? About 14s. a ton, but that cannot be cited as a proof of the greater despatch obtained by sending copper or tin-ore by way of Melbourne. Probably the other stories of goods being sent here by way of Melbourne, to which reference has been made, may have a similar explanation.

TUESDAY, 26 NOVEMBER, 1872.

Present:—

MR. CLARKE, MR. LLOYD,
MR. MACINTOSH.

THE HON. JOHN SUTHERLAND, Esq., IN THE CHAIR.

Captain William Robertson examined:—

96. *Chairman.*] This Committee has been appointed to consider and report upon the best means of improving the wharf accommodation of Sydney harbour, and of facilitating the loading and unloading of vessels. Have you traded to this port for any number of years? For five years.

Capt. W.
Robertson.

97. 26 Nov., 1872.

- Capt. W. Robertson.
26 Nov., 1872.
97. Have you turned your attention to the wharfage accommodation of Sydney, and do you consider it ample for the vessels at present trading to it? My attention has been more especially turned to the accommodation at the Circular Quay than at any other portion of the harbour.
98. Do you think the accommodation at Circular Quay at present [ample for vessels trading here? No, I do not.
99. Will you state to the Committee what you think would be an improvement upon the present wharf accommodation? My idea is that jetties should be thrown out so that ships could lay alongside without having to let go their anchors, or without having to use the immense stage they are compelled to do at present, very much to the injury of the ships.
100. Have you seen this sketch of Mr. Flood's (*handing Appendix A to witness*)? Yes, that is my idea.
101. To what length do you think these jetties should be run out to accommodate vessels likely to come to this port? I should say 150 to 200 feet would be long enough to accommodate any vessels trading to this port—so long as to allow of three-fourths of the ship being alongside the jetty.
102. What width would you have between the two jetties? It would require at least from 120 to 150 feet to accommodate two ships, so that two lighters might pass in and out to load and unload.
103. What width would you have the jetties? From 80 to 100 feet I think would give ample space for two large ships to load.
104. Do you propose that as the plan which would give the most accommodation for the least amount of outlay? I think so.
105. Have you ever considered the advisability of having one jetty carried out in the centre of the cove? That idea struck me on my first visit to Sydney. Since then I have altered my opinion, as I think it would lead to a great amount of confusion, as the whole of the goods would have to be carted from the end of the jetty. It would also obstruct the navigation of the cove, and do away with the accommodation on both sides I fancy.
106. Is there any other recommendation you would make to the Committee with reference to this matter? I would suggest that the North Shore steam-ferry-boats should ply from the end of the Circular Quay. At present they are a great annoyance, and their going among the vessels to the present pier is attended with risk, as ships are compelled to be covered in with canvass, and the sparks flying from the steamers' funnels are liable to set them on fire. I make it a rule not to go into the berths on either side of the ferry-pier, unless I am compelled.
107. Do you allude to the jetty for the ferry-boats, nearly opposite Phillip-street? Yes. I think these boats should land their passengers clear away from the shipping.
108. Do I understand you that the jetties to which you have referred should be covered in? Yes, the centre of it. My idea is that a clear passage should be left on either side of the jetty of from 15 to 20 feet, the centre shedded in, so that goods might be kept dry in the event of wet weather setting in when a ship was unloading. It would not be necessary that they should be entirely enclosed. If there were merely a roof over I think that would be sufficient.
109. Have you any suggestions to make to the Committee with reference to the giving greater facilities to the loading and unloading of ships? I complain only of the Customs' regulations, by which the discharge of liquids after 12 o'clock is stopped. Ships from London invariably have liquids at the bottom of the hold shipped as dead weight; and after 12 o'clock they are compelled to stop discharging them, because the gaugers have not time to gauge them before getting them into bond. It is a practice I have never seen adopted in any port but Sydney. At Melbourne they are put upon the tramway, taken up to the sheds, and the gaugers gauge them at their leisure. The present system involves a great waste of time to the ship. If there were bonds round or near the ship, so that the spirits or wines could be taken there and the gauger were allowed to gauge them at his leisure, it would give great facilities for the discharge of shipping. Bonds might be put up on the east of the quay if a small portion were reclaimed from the edge of the present quay to the rocks.
110. Do you mean by extending the present quay to deep water? Yes, outside of the rocks.
111. Outside of the present wall or face of the quay, and build bonded warehouses on that? Yes.
112. *Mr. Lloyd.*] What depth of water have you where you are lying? About 22 or 23 feet.
113. How far are you lying from the present wharf? About 80 feet.
114. Then you have to send your goods down a stage 80 feet long? Yes.
115. If the Government were to put these jetties as proposed, would the bows of your vessel be able to come close to the present Circular Quay? Yes.
116. Is there sufficient depth of water now, without any further dredging, for the bows of your vessel to come in close? If the piers were carried out to the edge of the rocks her bows would come in within 20 feet of the edge of the quay.
117. You say you have 22 feet of water where you are now lying? Yes.
118. Does the harbour deepen very suddenly after it leaves that 23 feet? No, I think that is about the average depth for at least 160 feet off the rocks at present.
119. Would you suggest in addition to covering the jetties that the Circular Quay itself should be covered in? A portion of it, especially on the eastern side.
120. So that goods immediately they were landed from a ship could go under cover at once? Yes.
121. How long does it take you to discharge your ship now? We rarely get clear of our cargo entirely in less than nineteen days.
122. How much time do you consider you would save if you could discharge at these jetties instead of at the stage as at present? Half the time I think.
123. You think it would be a great advantage to you if bonds could be erected on the Circular Quay, immediately alongside where you discharge, so that your goods could go from your ship right into bond? No doubt it would be a great advantage to the ship.
124. Have you ever discharged in Melbourne? Yes, many times.
125. Is there any delay in discharging there? None whatever.
126. Do the merchants pass their entries there the same as they do here, or is one entry passed for the whole ship's cargo? You can pass an imperfect entry and send the goods up to the railway-sheds.
127. Do you ever have to wait in Melbourne for a merchant's entry? No.
128. So that from the moment you commence with your first package you can go on discharging until the last? Yes.

129. I suppose you consider that a great advantage over our system? Yes; as an instance I may state that I had a ship of 1,300 tons there, and I discharged 2,130 tons of cargo and took in 600 tons of ballast, and was ready for sea in eighteen days.

130. How long would you have been occupied in doing that same work here under the present system? I think six weeks at the very soonest.

131. Do you think the facilities Melbourne offers induces a larger number of vessels to go there than come here? No, I do not think that induces them; there are a certain number of ships that are regular traders here that would not go out of the trade.

132. They are built for the purpose? They are built for the trade. In fact most of the Aberdeen ships are built expressly for this trade.

133. *Mr. Clarke.*] Do you propose to have these pier jetties of wood or stone? Wooden jetties.

134. They would be quite sufficient? Yes. With the piles projecting above the jetty, to allow a ship as it were to have something to lie against.

135. Is there not delay sometimes in merchants passing entries for other goods independently of bonded goods? Yes, we have that advantage when we pass imperfect entries. We have the advantage of passing imperfect entries if the proper entries are not passed within 48 hours after the ship is entered in at the Customs.

136. Do you attribute any of the delay occasioned to ships discharging to merchants not passing entries at the proper time? To a certain extent that causes delay.

137. Has not the ship the power, if goods are not taken away by a certain hour, to store them at the expense of the importer? No, I think not; we are free of all responsibility after the goods are put over the ship's side; the Customs, in the case of dutiable goods, take possession of them if the duty is not paid.

138. You are of opinion that when goods are over the ship's side you are clear of them? In certain cases our responsibility may not cease, but in the majority of cases the ship's responsibility ceases when the goods are over her side.

139. You said just now that vessels do not go to Melbourne in preference to coming to Sydney, on account of the greater despatch in discharging? I think not. The regular traders would come to Sydney under any circumstances.

140. Are freights higher in Melbourne than here? No; on the whole they are generally about the same. They fluctuate there as here.

141. *Mr. Macintosh.*] In Melbourne you are aware that when goods are landed from a ship they never leave the custody of the Government until they are in the railway-sheds? Yes.

142. Therefore the circumstances of Sydney are not the same? Of course not.

143. There is a different state of circumstances altogether in Sydney from that in Melbourne;—the goods are in the custody of the Customs even in the railway-sheds? Yes.

144. Are you not aware that freights are considerably lower at all times at Melbourne than at Sydney? No, I think Melbourne freights fluctuate as much as Sydney; sometimes they are higher at Melbourne. Two years ago freights were much lower here than at Melbourne, but generally speaking there is very little difference—they are nearly on a par.

145. Do you not think floating-jetties would be an advantage for the discharge of goods—these could be moved about, and would not be open to the objection to which other jetties are liable: that they promote the accumulation of silt? I think they would hardly answer for heavy ships as they would not keep them steady in strong southerly winds.

146. Do you think strong southerly winds would do any damage to vessels at the Circular Quay? They are so strong there sometimes that I am afraid the weight of the stage will break all our stanchions.

William Jonathan Green, Esq., examined:—

147. *Chairman.*] I believe you represent some mercantile firm in Sydney? I am a partner in the firm of *W. J. Green, Lassetter & Co.* *Esq.*

148. You have some considerable transactions with the shipping of this port? We are large importers of goods.

149. This Committee has been appointed for the purpose of taking evidence as to the best means of improving the wharf accommodation of Sydney, and of facilitating the loading and unloading of vessels. Have you any suggestions to offer to the Committee with reference to these subjects? It has been much improved lately from what it was a short time since. There are not so many grounds of complaint now as formerly.

150. What were the grounds of complaint formerly; what portion of them have been remedied; or are there any remaining? One great complaint formerly was the length of time that elapsed before a ship could be discharged; but there is not so much reason for complaint on that head now.

151. State what the present complaints are; or if there is any inconvenience suffered which may be removed by the Legislature? I state only those things which come under my notice in connection with our firm; and one special matter is, that goods are discharged on the wharf without any cover; and, if rain comes on, they are exposed to all the elements—are liable to be, and sometimes are, damaged.

152. One of the witnesses has proposed the plan of a jetty, of which this is a sketch. (*Handing Appendix A to witness.*) What is your opinion with reference to that plan? I could hardly express an opinion off-hand. I think I should have a little more time; but my own idea is, that we should have one long jetty from the centre of the quay, similar to that at Sandridge.

153. You think that would be the cheapest and best mode of facilitating the discharge of goods? I think so.

154. Have you considered the matter with reference to the goods going to, or coming from, the ships moored there, having all to be taken in and discharged at one end of that jetty? No, I have not given that point consideration.

155. How many vessels would you propose to accommodate at each side of the jetty? That would depend upon the amount of accommodation required.

156. What do you think are the present requirements? As a general rule, I think the quay will accommodate all that require it; but occasionally, I understand, vessels cannot obtain accommodation when

- W. J. Green, Esq.
26 Nov., 1872.
- they want it, and if there were a much increased traffic to the port the accommodation would not be sufficient; but I do not think there is a very largely increased accommodation wanted at the present time. I think a jetty that would give room for three ships on each side would be sufficient for the present, but I could not say that that would meet the requirements of the port in five or ten years to come.
157. Do you think that would be a better plan than that suggested by a previous witness, of having jetties round the quay, each jetty to accommodate two vessels? I think so; but to such questions captains of vessels could give far better replies than I can, because they are practical men and understand the matter better.
158. Do you know anything of the private wharf accommodation of Sydney harbour? Not very specially; of course I know of it generally.
159. *Mr. Clarke.*] You say there is better accommodation in Sydney now than heretofore? Yes.
160. What are the causes of delay at present in getting goods from ships;—is it the fault of the ship or of the importer? I think as a rule it is the fault of the ship now; it was the fault of the importer formerly.
161. That is owing to the shorter time now allowed for passing entries? Yes; when I say it is the fault of the ship I mean the want of a better organization for landing goods.
162. You approve of a jetty or jetties in preference to the present mode of landing by stages? Yes.
163. The use of stages is one of the causes of delay? Decidedly.
164. Have you any knowledge of the mode of discharging at private wharfs? We have very little to do with them, excepting the steamers' wharfs; nearly all our goods go by steamers.
165. Your imported goods are chiefly landed at the Circular Quay? Yes, all, except those we get from Melbourne.
166. *Mr. Macintosh.*] Have you had goods kept on board ship for any length of time—a month or six weeks after arrival? Not lately; we have had formerly.
167. That is to say, you were ready to receive them, but could not get them from the ship? Yes; it has sometimes happened that six weeks have passed before we have got all our goods out from a London ship, but as a general rule ships are discharged in about three weeks.
168. Are you aware that at a certain season of the year London ships keep dead weight on board a very long time? Yes, they do.
169. Have you made complaints about it? No, I have never had occasion to make complaint.
170. You are aware of it? I have heard of such a thing, but I cannot speak from my own knowledge.
171. Are you aware whether London ships are in the habit of keeping heavy goods on board to steady them until they get their cargo in? I have heard such is the case, but we have never had to lodge a formal complaint on the subject ourselves.
172. *Mr. Lloyd.*] If this jetty were covered in, and the Circular Quay were covered in, do you think the merchants would be likely to use these covered sheds as stores, and not take their goods away until they wanted them? Merchants might; I cannot speak as to what merchants might do, but I speak as a tradesman. We want our goods in stock, and therefore should remove them as quickly as possible to our own stores.
173. There would be no inducement to you to allow your goods to remain there one moment after they were landed, even if they were at once placed under cover? No.
174. And it would be an advantage to get them much earlier than you do at present? It would be an advantage.
175. We have not the facilities for discharging ships here they have at Melbourne? No, ships are not discharged so quickly.

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

S. A. Joseph, Esq., examined:—

- S. A. Joseph, Esq.
26 Nov., 1872.
176. *Chairman.*] This Committee has been appointed to consider and report upon the best means of improving the wharf accommodation of Sydney Harbour, and of providing greater facilities for the loading and unloading of vessels. The Committee have thought, from the extensive transactions of your firm in the shipping interests, you would be able to afford us some valuable information, and we would be glad if you would state whether in your opinion there are serious drawbacks to the transaction of the shipping business of the port now? In regard to any particular wharfs?
177. I allude chiefly to the Circular Quay. Still the Committee will be glad to receive any information on the general question? The wharf accommodation of Circular Quay is very defective at the present time in my opinion.
178. In what particular respects? More particularly on account of vessels not being able to come close to the wharf; being compelled to discharge over a narrow stage; and consequently being able to discharge only in a limited space, and requiring therefore a longer period to discharge.
179. Is there any inconvenience in ships getting berths alongside the wharf after their arrival;—is there any injurious delay to vessels from this cause? I do not think there is any great delay as far as the arrangements of the wharf are concerned. A berth has to be booked at the wharf, and then I think there is no great delay, but a ship can get alongside the wharf as soon as the berth is arranged for.
180. Have you seen the plan of the improvement of Circular Quay, prepared by Mr. Moriarty, the Engineer for Harbours and Rivers? I have examined all the plans in the possession of Mr. Moriarty—I have seen various plans at his office.
181. There is one in particular which proposes to construct jetties along Circular Quay, each jetty to be occupied by one ship? That is the plan which he calls the échelon wharf, and that in my opinion is the best I have seen. I have also seen at Mr. Moriarty's office a plan with two jetties, something like the Victoria Docks in London, and another with a series of jetties round the quay. The advantage to my mind of the échelon plan is, that a vessel can lie broadside on to the wharf, and the quay along the whole broadside of the vessel is available for the discharge of goods, that is to say, it is available for drays taking away the goods. That is more on the principle on which vessels lie in the docks in London, where they have room. Wharfs of that description would admit of sheds being built over them very well with sliding-

sliding-doors on the outside. They could be nearly all open to the discharge of goods in the day-time, and allow a large number of drays at the same time to load, and then they could be conveniently shut up at night with this sort of door. One of the advantages of this plan is, that it is proposed to build the platform of these wharfs about 4 feet higher than the present wharf, so that it would be just the height of the drays, and this would do away with the great expense of loaders, as the goods could be rolled over on to the drays as they came from the ship, and one could even afford to pay a slightly higher charge for wharfage by avoiding the expense of loading.

S. A. Joseph,
Esq.
26 Nov., 1872.

182. What is the average time taken to discharge a vessel of 1,000 tons? At the present time I should fancy about three weeks.

183. Within what time ought a ship of that tonnage, with the requisite wharf accommodation, discharge? Much would depend on the number of hatches discharging, but I think a ship discharging from three hatches ought to discharge comfortably in from three to four days.

184. Have you at any time heard of complaints on the part of owners, of delay in the discharge of ships in Sydney? I have frequently heard complaints; and I have frequently heard complaints on behalf of consignees, at the same time, of not being able to get their goods from ships from their detaining them as dead weight for stiffening, because in the present state of the Circular Quay a vessel cannot lie right alongside the quay; she is obliged to keep in a certain amount of dead weight in consequence of the hanging of the stage on her side.

185. Allegations have been made that shipowners have preferred to send their ships to other ports in these colonies rather than to Sydney, on account of the facilities afforded in other ports? I think that is the fact. The owners of the line of ships I am intimately connected with did prefer sending their ships to other ports,—to Melbourne, for instance,—where they discharged very quickly alongside the harbour wharf, than to incur the delay they have been in the habit of incurring in Sydney. Much of that delay has been done away of late by shortening the time of allowing entries to be passed.

186. Do you think if Mr. Moriarty's plan were carried out it would afford sufficient accommodation for the large ships visiting the port? If it were carried out all round the Circular Quay.

187. Right round as far as the Government property extends? Right round as far as Campbell's Wharf.

188. I suppose you have heard that it has been proposed by some persons to construct a large central jetty, similar to Sandridge Pier, right from the centre of the Circular Quay, by the Prince's Stairs, to the mouth of the cove? Yes; I do not approve of that plan nearly as well as of the plan of Mr. Moriarty, because the terminus of this jetty would necessarily be very contracted; and supposing ten or twelve ships were lying at this jetty, five or six on either side, the whole of the goods from those ships would have a very contracted spot from which delivery would have to be taken. There is this difference between our position and that of Melbourne: the jetty here would be our delivery-point, but the railway-terminus at Melbourne is theirs.

189. Have you ever had your attention directed to the expediency of the Government holding in its own hands the Circular Quay, more especially in relation to private interests in other wharfs? I have had my attention called to it; I have often heard the matter discussed, but my opinion is that the Circular Quay being in the hands of the Government cannot in any way prejudice the interests of private wharfs. And, in fact, it is the best possible protection they can have, because private individuals are likely to compete more keenly, and look after their arrangements more keenly, I should imagine, than a wharf would be looked after were it in the hands of Government and carried on by the Government.

190. Then you do not think that in carrying out any improvements which might be deemed advisable in the Government wharfage that any attention need necessarily be paid to private interests? I do not think so at all. There is a certain quantity of trade that comes to this port that unless very convenient stores were built round the Circular Quay, which would necessarily go to other wharfs where the stores and wharf are in one hand, and where combined arrangements could be made for the two purposes of wharfage and storage, for instance tea, sugar, and grain cargoes. Generally the importers of these goods find that they can make better arrangements with the owners of both wharfs and stores than they could for the landing of their goods at Circular Quay, where they would have to incur the expense of wharfage, and also of cartage to convey their goods to other stores.

191. That applies mostly to Oriental cargoes? That applies mostly to cargoes consisting of small packages, upon which the wharfage is a very heavy item, and the cartage also a considerable one.

192. *Mr. Lloyd.*] Your firm are the agents for the White Star Line? George Thomson, junior, and Company.

193. The captains who come here in their vessels occasionally go to Melbourne? They frequently go to Melbourne.

194. So that you have the opportunity of comparing the course pursued here with that pursued in Melbourne. Is it not the fact there that the discharging of a vessel is continued from its commencement to its close, the goods being taken charge of by the Customs in Melbourne, and going into bond there? Yes.

195. Then everything is under the charge of the Customs' officers until the actual delivery takes place at Melbourne to the importers.

196. Do you think it would be a great advantage if some arrangement of that kind could be made here, by which a vessel could go alongside a wharf having covered warehouses connected with it belonging to the Customs, into which the goods could be discharged, and where they could remain under the control of the officers until they were delivered to the proprietors; do you think that would materially facilitate the discharge of cargoes here? I do not think it would materially facilitate the discharge of cargoes. A ship has the power at the present time, after the notice is up, to discharge without intermission during certain hours, and it is at the risk of the consignee of the goods whether the duty has been paid, or proper arrangements have been made for the duties.

197. What I mean is—would not that prevent any delay that arises from an entry not having been passed by the consignee? That would be prevented just as well by the time of passing entries being shortened to twenty-four hours, for after a notice has been given, in accordance with the present existing law, a ship has the power to discharge continually, and it is at the risk of the consignee whether the goods are taken charge of by the Customs or delivered under an imperfect entry.

198. We have it in evidence from Captain Robertson, of the "Abergeldie," that a vessel that would require sixteen days to discharge here could discharge in Melbourne in eight days? I think that is more on account of having better wharfage accommodation than of having better Customs' regulations. Now we cannot discharge the goods from the three hatches, but have to discharge them from one spot, by means of a long

- S. A. Joseph, long stage, whereas if we could bring the vessels alongside a wharf we could discharge from the three
Esq. hatches, and put the goods at once over the side to three different points, whence they could at once be
removed away.
- 26 Nov., 1872. 199. Do you suffer much inconvenience from the short hours within which you are allowed to discharge goods liable to be placed in bond. The ship is obliged to knock off discharging these goods at 2 or 3 o'clock? I do not think that materially affects us. It is a hardship on the ship in having to pay overtime to the Custom House officers, and it is occasionally considered a hardship on the consignee by having goods discharged on an open wharf at a period too late in the evening for them conveniently to cart them away to their own stores. This evil would be remedied by having a covered shed of some description, where goods could be locked-up over-night, as it would allow the ships to discharge as late in the evening as people are in the habit of working; the goods could then be safely stored for the night and carted away the following morning.
200. You have stated that you have to pay a considerable amount for loading, which you think might be saved by having raised platforms;—what is the amount you pay now? 6d. a load.
201. You think that payment of 6d. a load would be saved? No, not all; but a considerable portion would be saved.
202. *Mr. Macintosh.*] Are you aware whether there are any private wharfs in Melbourne, on the Yarra? I do not know whether there are any private wharfs there; there are at Williamstown.
203. I think most London ships come to Sandridge? Everything comes to Melbourne from Sandridge or Williamstown by railway, and therefore, as I said before, the railway terminus is the actual spot of delivery.
204. Do you remember some years ago when the Circular Quay was in the hands of the Government that the London ships generally went to private wharfs, and left the Circular Quay empty? I think I do. I was not very intimately connected with shipping at that time, but I recollect a period when a great many ships used to go to private wharfs on account of the large inducement offered to them by rebates of wharfage by private wharfingers.
205. You also remember when they were in the hands of a lessee of the name of Hoby that the same thing occurred? I remember the same difficulty at that period.
206. That was after the quay was let by the Government to a lessee? Yes, it was the man who demanded large rates for export.
207. I think he paid some £8,000 or £9,000 for the rent of the Circular Quay, basing his calculations, no doubt, on what was being taken at the time, but when he took it he found that the merchants had combined together so that all the vessels coming from London were taken to the back wharfs. If the Government were to go to the expense proposed in making this additional accommodation, what guarantee would they have that the same thing would not occur again? There is no doubt that the whole question of wharfage is a matter of supply and demand, the same as everything else. If the rates asked for the Circular Quay were much larger than those asked for private wharfs, and the extra accommodation offered was not considered commensurate with the increase of price, shippers would go to those wharfs where they considered they would get the work done cheaper, commensurately with the accommodation.
208. What does the Government receive for the rent? The last lease was £5,000; the lessees were the firms of Gilchrist, Watt, and Company, and of Montefiore, Joseph, and Company.
209. So that the present lessees of the Circular Quay are the gentlemen who have the largest number of ships coming in? The Circular Quay lease was subsequently assigned to an association of wharfingers, and actually there was no considerable opposition between them.
210. There can be no opposition? Except from some wharfs that were not in the association. There was no opposition between the owners of the principal wharfs and the lessees of the Circular Quay during the last three years.
211. Do you think the Government would be likely to be remunerated for the outlay that would be incurred by this increased accommodation, by the number of ships that would come to Circular Quay? I do not understand you. May I ask you if I rightly interpret your question?
212. Whether this combination or association of wharfingers would be likely to occur again, so that unless they got the quay at their own price they would send their ships to private wharfs? Opposition will occur so long as there are conflicting interests. I fancied your question to mean this: Whether the Circular Quay would yield an annual rent in proportion to the outlay that would have to be incurred in providing this increased accommodation.
213. Seeing that there is sufficient wharfage accommodation in Sydney independently of the Government wharf? I do not think there is, excepting in very inconvenient places.
214. They were taken to these inconvenient places when this association did not lease the Government wharf? I beg your pardon.
215. I think nearly all the vessels were taken away from the Circular Quay? I may say that my firm, independently of our position as consignees of large London ships, would always take our ships to the Circular Quay in preference to private wharfs, as a matter of convenience to the shipowners, and I think I may mention, as far as the public are concerned, and as the importers are concerned, the importer was not in the habit of getting his wharfage rates on his importations any cheaper than he was at the Circular Quay, while he underwent all the inconvenience of having to remove his goods from a more difficult place. The advantage for concession on wharfage rate offered was offered to the ship in most instances, and went into the pocket of the captains in a great many. I have little hesitation in saying that if there were two lines of ships laid on for this port from London,—one in the habit of discharging at Circular Quay, and the other at the private wharfs alluded to,—that shippers would order their goods by the line of ships unloading at Circular Quay.
216. *Mr. Clarke.*] You think that if the Circular Quay were again in the hands of the Government it would be an improvement upon the present plan of letting it annually? I do not. I think private enterprise is likely to work possibly for a larger amount of profit which can only be obtained by affording proper facilities to the public.
217. Are you aware that during the last eight or ten years that although ostensibly in the hands of one or two individuals who leased the wharf, that there was an arrangement made between the principal owners of wharfs, such as Campbell's, Botts', Walker's, and other private wharfs in the neighbourhood of the Circular Quay? I believe there has been some arrangement—an assessment of the various wharfs.

218. Do you not think if some person who would not combine with others, but would work the wharf on his own account, were to rent the Circular Quay, private proprietors would take away their portion of the trade, as in the case of Mr. Hoby, which has been alluded to? It would depend upon the rates of wharfage.

219. What I mean is, if the proprietors of private wharfs such as Campbell's, Botts', Walker's, and others, were not to work together in the one affair, that no private individual leasing the Circular Quay could make it pay? He would have to base his calculation of profit upon the rent he gave and the probable number of vessels to be accommodated. It is all a matter of calculation upon the price given and the respective inducements offered by the Circular Quay to private wharfs.

S. A. Joseph,
Esq.
26 Nov., 1872.

220. Are you aware that private wharfingers are obliged, in consequence of the competition that exists, to give a bonus to the captains of vessels in the way of a rebate of wharfage to the extent of 25 and even of 50 per cent.? I think I have heard of 75 per cent. as rebate, simply for this reason, that it suited the purpose of the wharfingers if they got their stores filled, even though they got nothing for wharfage. That is of course in cases where stores were on the wharf; but the supply of that sort of accommodation is limited, and would not materially interfere with the question. According to the plan I saw of Mr. Moriarty's, I think it would be quite possible, instead of letting the quay as a whole, to let it in part, say one, two, three, or four at a time, to different lessees; and it is possible that the owners of a line of London ships might instruct their agents to take two or three of these wharfs, in order to have berths at which their ships could load and unload.

221. Reference has been made to the facility of discharging ships in Melbourne, as compared with Sydney;—is it not the fact that at the former place goods are taken from the ship's hold, put on to railway-trucks, and conveyed right up to the terminus in Flinders-street? Yes.

222. The same plan could not be adopted here? In Melbourne the goods are taken to the railway-shed and sorted; here we should not need a tramway, but the goods would simply require to be landed under a shed, whence they could be carted away.

223. You simply propose a sorting-shed, something similar to the shed on the Circular Quay at present? I simply propose a shed, with the sides open, each ship to have a partition to herself, so that the goods could not be mixed. To this shed there could be sliding-doors, which could be closed on the outside at night and open in the day. There might also be a partition in which bonded goods could be placed.

224. As a general rule, do you think importers would take advantage of these sheds, and keep their goods there for an unreasonable time? That would easily be prevented by a charge per day, such a charge as would make it to their interest to remove them.

225. *Chairman.*] If they remained after a certain number of days they could be removed to some other place? If they remained over twenty-four hours the charge should be at such a rate that it would not pay them to let them remain. When a ship is loading in London, goods are sent to her shed, and she loads them at her convenience.

226. *Mr. Lloyd.*] You have stated that you are aware of the combination that exists between the wharfingers who took the Circular Quay;—can you state whether that combination has realised the expectations of the parties; whether they have made any profit? I believe they have incurred considerable loss by their arrangement during the last three years; still that loss may be attributable to the rate of assessment at which these private wharfs were assessed; it may be attributable to the high rate which was given for the Circular Quay, and to a combination of circumstances of which I am not quite aware.

227. *Mr. Macintosh.*] The arrangement of course took in all the other wharfs which have been lying idle, or comparatively so? Yes, the other wharfs which were included in this arrangement. I do not know whether the Committee are acquainted with the wharf at the head of Darling Harbour, but I should imagine that description of work would be suitable for the improvements on the Circular Quay.

228. *Chairman.*] Do vessels suffer any delay and inconvenience from the existing bonding system? I do not think the vessels suffer as much inconvenience as the importers, because, I have before stated, that after the time allowed by law has elapsed, a vessel can discharge without intermission, and it is at the risk of the consignee whether the goods have paid duty or not.

229. *Mr. Sutherland.*] It has been given in evidence that the owners of vessels suffer serious loss, by the Custom House authorities refusing to allow spirits to be landed after 12 o'clock? I think that is a great hardship on the ship.

230. Up to what time do you think dutiable goods should be allowed to be landed? I do not think there should be any distinction made as to the landing of goods, and that arrangements should be made by the Customs by which all classes of goods could be discharged under cover alongside the ship, and remain under proper supervision until the following morning if necessary.

231. Do I understand that by the plan you have referred to as having seen in Mr. Moriarty's office, spirits and other dutiable goods could be landed in safety, and left in one of these sheds as a temporary bonded store from one evening till the following morning? I think a portion of the shed could be a bonded store, and as the goods would be in only for a few hours it would not necessarily involve any great difference in the building on account of its being a receptacle for dutiable goods.

232. They would simply remain there to give the gauger time to gauge? Yes.

233. You think the kind of jetty which would give the most accommodation would be similar to that at Darling Harbour? I think it should be that kind of construction, but not the same kind of jetty; the jetties at Darling Harbour are I think almost square.

234. *Chairman.*] You are in favour of the plan drawn by Mr. Moriarty? Yes, only with cylinders of iron.

235. Have you seen any plan such as this with single jetties run out for the length of one vessel? (*Handing witness Appendix A.*) Yes.

236. And you prefer the plan you have referred to? Yes, I think it very superior to this. I think it would be very objectionable to have two ships discharging at one narrow jetty. I do not know whether it is intended to have a division in the centre of the jetty, to prevent the mixing of the two cargoes. If so, it would confine the space more than at present, and there would be a very narrow space indeed allowed for the delivery of goods, being simply the end of the jetty, where not more than two or three drays could conveniently load. If ships were lying broadside on, according to the plan of Mr. Moriarty it would enable drays to load along the whole length of the ship.

237. Then the same objection you have now stated to the single jetty would apply, but in a still greater degree to one central jetty? Yes.

FRIDAY, 29 NOVEMBER, 1872.

Present:—

MR. CLARKE,
MR. MACINTOSH,MR. SUTHERLAND,
MR. WATSON,

MR. WEARNE.

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

Edward Orpen Moriarty, Esq., examined:—

- E. O. Moriarty, Esq.
29 Nov., 1872.
238. *Chairman.*] You hold the Office of Engineer-in-Chief for Harbours and Rivers? Yes, that is the proper designation of my office.
239. How long have you held that office? I think for some twelve or fourteen years.
240. Have you at any time been instructed to examine the Government Wharf, Circular Quay, and Sydney Cove? I have.
241. By whom? Both by the present Minister for Works and also by the late Minister, Mr. Byrnes.
242. When did you direct your attention to this examination? I think it is about three years ago since I first took up the subject.
243. Will you be good enough to state to the Committee what you did in the case? I prepared a plan, showing the arrangement of wharfs, which it appeared to me would be the most suitable for the position, and the most convenient to shipping.
244. Before you entered upon the preparation of that plan you examined the position? I examined it, but I had been acquainted with it for many years.
245. Did you give any special examination to it at this time? Yes, I had been very careful to examine the whole place; I cannot tell you now any particular day on which I did it.
246. You went and looked at it? I went and looked at it very carefully.
247. Did you examine it from the water? Yes, and had borings and soundings made.
248. Did your examination extend from one side to the other? Yes.
249. The whole length of the Government property? The whole length of the Government property.
250. After you had made this examination you prepared a plan? Yes.
251. Have you that plan with you? Yes. (*The witness produced the same. Vide Appendix B.*)
252. Did you prepare more plans than one? Yes, I prepared some alternative sketch plans, in order to show what other arrangements might be proposed, what their convenience would be, and what their probable cost would be.
253. Is the one now before you the one which in your official capacity you recommend to the Government as the preferable one? Yes. (*The witness referred to plan B.*) This is the ground-plan, showing the arrangement of the wharfs. The ships intended to lie alongside are broadside on. It is an échelon arrangement, the object of which is to save space. It will be observed that the ship's bowsprit and figure-head, which occupy room at the wharf, project beyond the adjoining ship, and do not interfere in any way with other vessels.
254. Still it allows them to lie at the wharf so that all the hatches are available? Yes.
255. Of what materials are the parts marked black to be constructed? Of iron. I propose to adopt the same class of work as that employed at the Darling Harbour wharf, with the back part of the wharf resting on the present stone quay-wall. By that means we save the cylinders and back girders; it takes advantage of the present quay-wall as the support for one side.
256. Do vessels lie as far towards Fort Macquarie now as they are marked on that plan? No; they do not lie farther than this (*pointing out the position on the plan.*)
257. Does that take in the whole of the Government property available for wharfage in that direction? No, it might be taken up to Fort Macquarie.
258. The frontage is all in the hands of the Government? Yes.
259. Is there not some portion of the land alienated? On the eastern side of the street the land has been alienated, but all the land to Fort Macquarie is in the hands of the Government; all the water-frontage.
260. What are the most striking advantages which you consider justify you in recommending that plan as the best? In the first place it is the most economical; in the second, it is the most convenient for loading and unloading vessels; and, in the third place, it leaves unencumbered the available water space of the cove, which is rather restricted. There is not too much room there for mooring large vessels. By this arrangement you do not interfere with the central space for moving vessels in and out. These are the three principal advantages; it would be cheaper, more convenient, and would interfere less with the water than any of the other plans.
261. Is this plan framed on ascertained data, which would allow ships of the heaviest tonnage visiting the port to occupy the several berths there delineated? Yes; it has been designed with the view to accommodate the largest ships.
262. Any of the large ships that come here could go into any of these berths that were vacant? Yes. I have drawn to scale on the plan several vessels of the largest size that come here, as the "Sobraon," "La Hogue," the "Parramatta," "Abyssinia," and so on.
263. What is your estimate of the cost? £89,000.
264. Will you be good enough to show the alternative sketch plans you have spoken of? This is one. (*The witness produced the same. Vide Appendix C.*) This shows two jetties extending down the cove from its head. On this I have, as you see, sketched the vessels in the position they would occupy.
265. I should think at first sight that is not a desirable plan? I think it a very undesirable one.
266. *Mr. Watson.*] What space is there from the western edge of the western jetty to Queen's Wharf? 250 feet. There would not be room to swing a large vessel in there. I would like to point out some of the disadvantages of this system. They are apparent, but still it might be well to have them down in writing. One of the main disadvantages is that the whole of the traffic from the loading and unloading of goods must be concentrated at the narrow shore-end of the jetty. All goods to be landed—say from the "Parramatta"—must be run ashore by the tramway; and even if you allow two lines of tramway that simply means

means two trucks, which can supply loading for only two drays, so that only two drays can be loaded at a time from each of the ships along the jetty. By the other arrangement that I propose, the whole of the back space of each wharf is available for loading and unloading, and you might have forty or fifty drays backed up to the wharf, all loading at the same time.

E. O.
Moriarty, Esq.
29 Nov., 1872.

267. Do you contemplate having sheds on each of these wharfs? Yes. I propose that there should be an open and close shed to each ship, one to be merely covered with a roof, and the other to be more securely closed in as a bonded store, or a place in which the more valuable goods may be locked up.

268. *Mr. Watson.*] As a temporary bond? As a temporary bond. I do not propose that these sheds shall be of a character to interfere with the warehouses of merchants for the storage of goods.

269. *Mr. Wearne.*] If you could provide warehouse-room there, at a little additional cost, for those who have not bonded stores, would it not be well to do so? I do not think it would. I think the theory should be that the goods should be removed at once.

270. *Chairman.*] Have you prepared another plan? I have. (*The witness produced a plan. Vide Appendix D.*) This plan shows the arrangement of one jetty running down the centre of the cove. I think that still more objectionable than the others.

271. For the same reason, the concentration of goods, in loading and unloading vessels at a narrow point? Yes; and because it is more costly. The cost of exhibit C I estimate at £204,000, and of D at £295,000.

272. Have you ever had your attention turned to a projected improvement similar to that shown on this rough sketch? (*Handing Appendix A to witness.*) Yes. I have here another sketch, not exactly the same, but somewhat similar. (*The witness produced the same. Vide Appendix E.*) This shows six jetties, giving twelve berths.

273. *Mr. Watson.*] In none of the plans you have proposed do you interfere with the western side of the quay? Not for the present. It is useful now to a considerable extent, but we shall have to pull it down in the course of a few years.

274. *Chairman.*] I suppose you consider that the plan you specially recommend would supply wharf accommodation enough for the present? I think it would.

275. What are your own views as to the plan you have last produced? That it is very objectionable. The traffic of each of these ships is concentrated at the narrow shore-end of the jetty, and it would be almost impossible to discharge heavy machinery on this jetty, and leave the tramway unencumbered. It would be difficult to stow away any goods on the jetty at all. All the goods would have to be run on shore and deposited on the ground before they could be removed. It would also unnecessarily interfere with the water-way of the cove, and is more costly than the arrangement I have proposed; it would cost £229,000.

276. Of course you have paid some attention to the possibility of the harbour and cove silting up. Would this plan be more likely to cause silting? I do not think that question is affected by it. I do not think the jetty would affect the silting. The silt comes from the land and will continue to flow in until some remedy is applied for its detention.

277. I think some witness gave an opinion that a jetty of that kind would tend to the accumulation of silt, and that the dredge could not get in? Not so well if the berths were occupied by large ships, but that would be common to all plans. You must keep the berths open while dredging, but that would occupy only one berth.

278. *Mr. Watson.*] Is it proposed by all the plans to carry the jetties into deep water? In all cases, at least to 24 feet, so that the largest class of vessels may lie close to the wharf. I also propose to have proper steam appliances for loading and unloading.

279. In this plan B, where the "Maid of Judah" lies, how far does that come down? Near the Government boat-shed. There is not that depth of water there now. It would have to be dredged.

280. Is it your idea to keep the curve of the harbour as it is? I think so; I do not see any inconvenience in it. The curve was adopted to follow the line of the margin of rocks on which the present wall rests. The water deepens very quickly from that. The front line of this jetty is about where you get into deep water.

281. *Chairman.*] Would not the curve be an advantage? Yes.

282. It promotes this échelon arrangement? Yes, that is why we made it.

283. *Mr. Watson.*] Approaching the Government boat-shed the space is very narrow;—how far do you propose to carry it before you get into deep water? About 60 feet.

284. *Mr. Wearne.*] How much more accommodation would that give than there is at present? There are four ships lying here now; that is about the number I have always seen, and two here, opposite the Government wool store. We propose to have eleven, and leave the space at the foot of Phillip-street open for the North Shore traffic.

285. Do you mean to say that it would give room for five more vessels than at present? Yes.

286. *Mr. Clarke.*] What is the proposed height of the jetty as compared with the roadway? I propose that it should be about 4 feet above the level of the present stone wharf, so that it would be just on a level with the bed of a dray when backed up to it.

287. Would that obviate the use of stages? Yes, entirely; the vessel would lie close to the wharf.

288. I presume it would enable drays to back up to the jetty? Yes, drays might be backed along the whole length. There might be thirty or forty drays loaded at once, the cargo being taken from the ships, and run into the drays which would be on a level with the floor.

289. *Mr. Watson.*] This plan you propose to carry as far as the Prince's Stairs? That is all.

290. *Chairman.*] Having considered these four plans of improvement, and acting under the responsibility of the official adviser of the Government in the matter, you decidedly prefer the one marked B? Yes.

291. *Mr. Watson.*] Do you know of your own knowledge whether a vessel can go close to the wharf between Prince's Stairs and the western side of the Quay? Yes, I may tell you that there is a constant change going on there. From time to time the place silts up there from the outlet of the Tank Stream, and when the lessee notifies to me that he suffers inconvenience the dredge is employed to remove the shoal.

John Keep, Esq., examined:—

- John Keep, Esq.
29 Nov., 1872.
292. *Chairman.*] Have you for some years been largely engaged in importing goods? Yes.
293. Has your attention at any time been drawn to any inconvenience in the transaction of your business in connection with the shipping? Frequently; especially in bad weather.
294. Is there a deficiency in the wharf accommodation of the harbour which you have noticed most conspicuously? The complaint of our draymen is rather of the bad approaches to many of the private wharfs; of course that does not apply to the Circular Quay, but ships do not go to the Circular Quay as a rule.
295. Confining your observations to the Circular Quay, which is the only wharf with which the Government can deal with very well, are there any drawbacks to the expeditious and satisfactory transaction of shipping business at the Circular Quay? I think there is insufficient accommodation there; ships have frequently to wait their turns before they can come into a berth. We require some such accommodation as they have in Melbourne,—covered wharfs, a kind of bond, so that goods can be discharged from the ships, and be in bond for a time.
296. Is it within your knowledge that ships have to throw a narrow stage a distance of 60 feet or more to reach the wharf? Yes.
297. Is not that very objectionable? Yes; occasionally goods go overboard in consequence.
298. There are cases of that kind? Yes; not only of their going overboard but also of much damage from sliding them down the stage.
299. They tumble them over and over? Yes; they are rolled over and over down the stage.
300. Do any of the goods get damaged by the capsizing of cases? Yes, so much so that I have ordered many of my goods at great inconvenience to be packed in casks, so that they cannot be capsized but must be rolled down the stage.
301. You have been obliged to go to the trouble of having your goods packed in casks in consequence of the inconvenience caused by these long stages? Yes, entirely.
302. Will you direct your attention to the plan before you, marked B. That is a plan on which it is proposed to construct jetties on the Circular Quay, of iron framework, each jetty to be enclosed, so that the goods from a ship lying alongside would have protection from the weather the entire space of the jetty, one part of it being enclosed as a temporary bond? That is exactly what is required, until the goods can be removed to the regular bond.
303. What do you, as an extensive importer of goods, think of that proposed plan? It is a great improvement upon what I had in my own mind. I thought of a much longer jetty, similar to the railway jetty at Melbourne.
304. The special advantage is that whereas by any special jetty projecting into the cove, there would be only a narrow space for the removal of the goods landed from the various ships, and it would be almost impossible to prevent the admixture of packages by this arrangement; each ship would have a jetty of a length sufficient to allow the discharge of the cargo from each hatchway under cover? I think it would be a splendid arrangement.
305. There would be an enclosed shed for bonded goods and an open one for others? Yes.
306. *Mr. Watson.*] You have spoken of bonds similar to those at Melbourne;—did you mean them to be permanent or temporary? Temporary.
307. *Chairman.*] Has it come within your knowledge that any importers in Sydney have in cases where they have wished to have some special goods out speedily, given directions for them to be shipped to Melbourne, and then brought by steamer to Sydney? Frequently.
308. Is it the fact that they can get them at an earlier period, by having their goods out by sailing-ships direct to Melbourne, and thence by coasting-steamers to Sydney? I think so.
309. It is done? It is done; and I have thought sometimes of doing it myself.
310. You do know that it is done? I do know that it is done; but we also suffer from ships detaining our goods on board after they have discharged the rest of the cargo.
311. What length of time has a ship been known to wait to get alongside the wharf? As a positive fact I can scarcely state.
312. Is it three days, or has it ever been three weeks? I have heard it stated that a ship has been a fortnight waiting for a particular berth—one that suited better than others—but whether that is the fact I cannot say.
313. What do you suppose is the average length of time that a ship of a thousand tons takes to discharge after she gets alongside the wharf? I think you may say three weeks; sometimes longer than that. I have had goods kept in a ship three weeks after she has ceased to discharge her general cargo.
314. I gather from your evidence that unnecessary delay takes place in getting alongside; that unnecessary delay takes place in discharging; and that from the defective arrangements unnecessary damage is often done to goods in landing them? Yes.
315. *Mr. Macintosh.*] Does the detention of goods arise from defective arrangements or from private arrangements of the ship itself? I think from both.
316. Had you any goods by the “William Duthie”? Yes.
317. Have you landed them all yet? I cannot say; my attention has not been particularly called to that.
318. She has been in upwards of a month, and I know myself that her goods are not all discharged? That is not to be at all surprised at.
319. Not from defective arrangements, but from the ship wishing to keep the goods on board? Exactly.
320. You have stated that ships have to wait for berths;—is that from the want of wharf accommodation in Sydney as a whole? I think not.
321. There are other wharfs besides the Circular Quay, where ships may be accommodated? Yes, it has been not from want of wharf accommodation but because of bad approaches to other wharfs. They prefer to wait for a berth at the Circular Quay, to which there is a good approach, to going at once to another wharf with a bad approach.
322. Are you aware of any arrangement made between the wharfingers of Sydney? I have heard that there is an arrangement between them.
323. Are you aware that these wharfingers have entered into an association? I have heard that they have done so, but I know nothing of it of my own knowledge. I know there is something of the kind. I believe special advantages are given to ships going to private wharfs. I have had large discounts offered me on wharfage if I would allow my goods to be landed on other wharfs.
- 324.

- S. Dickinson, Esq.
6 Dec., 1872.
350. So that vessels can discharge in any weather? Yes. I should propose that the eastern side should also be covered in and reserved for London ships both loading and discharging. Of course it will require greater assistance from the Customs than we have at present if the plan proposed is carried out. If we are to drag along as we do now with so few landing-waiters, tide-waiters, and gaugers, we had better remain as we are. If this plan be carried out in its entirety we shall require more officers, the work will then be more efficiently performed, and merchants will have their goods, I should say, a fortnight or three weeks earlier. The plan as proposed will not interfere with private bonds, which, if it did, would be an insuperable objection in the minds of some. I would throw out a hint to the Committee whether it would not be desirable that these berths should be let by auction, so that merchants might rent one or more as they pleased, and thus prevent the combination that exists at present. I would also suggest that the Commissariat or Queen's Wharf might at a small cost, say some £2,000 or £3,000, be roofed over, and thus afford accommodation to vessels from California, the East India trade, China, and the Mauritius, to discharge in wet weather. There is a space now occupied by cannon, shot, shell, and Artillery stores, where a temporary bond might be erected if required, and the expense of these improvements would be met by the additional rent which the Government would receive. The present pier will probably last four or five years at least, and, as these improvements will be attended with but a small cost, within that time the amount expended would be repaid by additional rent. These alterations would in no way interfere with the natural beauty or convenience of the harbour, and might be made in a few months.
351. You are speaking now of covering over the eastern side? Yes. I would also have the western side covered. I would also suggest that there should also be a kind of jetty, similar to one of those marked on plan B, to which the mail-steamer should come alongside on its arrival. It must be borne in mind, that now from two to three hours elapse from the time of the mail-ship coming to her anchorage to the delivery of the letters at the Post Office, while at Victoria the letter-boxes arrive at the Post Office within forty or fifty minutes from the time of the ship's arrival at her anchorage. No doubt great improvements and alterations have been made lately with reference to the delivery of letters; still we might have them much more quickly than we have them now. Of course, I am not able to give an opinion as regards the lying of vessels at this jetty, whether they would interfere with or overlap each other; but I see from these plans that they would have the means of discharging their cargoes at each of the three hatchways. This would be a great advantage. I take it these sheds will be temporary bonds.
352. The larger sheds will be simply covered; the others will be enclosed as bonds? The bonds will be of no advantage unless we get corresponding assistance from the Customs, as without such aid the bonds would soon be filled with goods, and the vessel must then stop discharging. Under the present arrangement bonded goods have to be gauged and measured on the quay, which is a barbarous way of doing things. In hot summer weather spirits cannot be tested at their proper strength. All merchants will admit that spirits lose considerably if kept above ground. I have an instance now where spirits have been kept in bond some three years, and they have not only lost in strength but upwards of two gallons a year by evaporation. That is a loss to the Government as well as to the merchant, and would have been avoided had they been kept under ground.
353. *Mr. Watson.*] Supposing a ship to arrive here of 1,000 tons, carrying an ordinary cargo, as things are now, how long would she take to discharge? In ordinary fine weather—I have seen in the olden times a vessel discharge 2,000 tons in ten days, and I have known her take thirty-five.
354. What is the average? Much depends upon the state of the market, and the delay of the Customs. I should say 100 tons a day.
355. Delay in the passing of entries would not affect the matter much, as an imperfect entry could be passed? That is done sometimes.
356. What would be the average time occupied by a vessel of 1,000 tons? There are so many circumstances to be considered. A thousand-ton ship might carry 2,500, or say 2,000 tons—about 30 days.
357. You have been in Melbourne? Yes.
358. You know something of shipping there? Yes.
359. What is the average time there? I have known it to be done in five days.
360. Supposing we had the wharfs and sheds as shown on this plan, could we do the same here? Yes, if there were no obstacles thrown in the way by the Customs, and there were sufficient space left for the passage of drays to and from the wharf. I would suggest that there should be a roadway in the middle of the wharf, or at the end, to come down Macquarie-street.
361. Do you find the Customs throw any obstacle in the discharge of ships? You might ask me do I live in Sydney.
362. *Chairman.*] That is a question which should be answered distinctly; if obstacles are thrown in the way it is desirable the Parliament should know what those obstacles are? Perhaps it would be a little unseemly to bring forward the matter now that there is to be a change.
363. *Mr. Watson.*] I will put it another way;—do you know as a fact that ships have to cease discharging dutiable goods at 12 o'clock? I know this, that every obstacle,—not perhaps necessarily,—every obstacle that can be conceived is thrown in the way of the shipping interest.
364. *Chairman.*] Will you be kind enough to state one of these obstacles? They are so numerous I meet them at every turn.
365. The last that met you? The last case that occurs to me is that of a small vessel that came up from New Zealand to load for New Plymouth or Taranaki. She came up with a cargo, and brought a considerable order, both for free and bonded goods. Her cargo was sold, and, as usual, when the vessel was ready for sea the goods were purchased and sent down, and the bonds were signed—"Oh, this vessel cannot take these goods." "Why?" "She is not the proper tonnage." We were not aware that there was any proper tonnage for any particular place. We saw the officer on the wharf; he referred us to the Collector of Customs. We saw him—"It was impossible to be done." We then went to "the powers that be."
366. Who were "the powers"? *Mr. Eagar.* Then we hunted for Mr. Lord, and saw him. He thought it might be done; then there was the usual circumlocution. It was sent back for report to the Collector of Customs. The Collector of course voted dead against the whole thing—he could see smuggling in everything. It was referred then to Sir James Martin; that was fatal; it could not be done. It is in this way Sydney has lost the New Zealand trade, which at one time was entirely in its hands, and Victoria, by its energy and perseverance, has gained it.

367. In this particular instance you purchased cargo to ship in some vessel for New Zealand, and you were prevented from shipping that cargo because the ship was not of the requisite tonnage? Yes.
368. That decision must have been based upon some authority; what was the reason given for the refusal to allow you to ship these goods? Because the vessel was not of the requisite tonnage. I believe it was said if goods were shipped in small vessels of this kind they might cross such bar-harbours as the Richmond and Clarence, and carry on smuggling, but it is necessary for the trade to many parts of New Zealand that the draft of the vessels shall be very light, as otherwise they cannot enter or leave the harbours, and the possibility of smuggling might be guarded against by the parties certifying the Customs that there was no intention of defrauding the revenue. As another instance of the obstacles thrown in our way by the Customs, I may mention that vessels are not allowed to take in coal as stiffening until she has discharged all her dead-weight, although it may be attended with danger to the vessel, as some vessels will not stand upright unless they have two or three hundred tons of dead-weight in their hold. I have known coals to be actually alongside and permission to be withheld.
369. *Mr. Watson.*] You say you have known innumerable instances of obstacles having been thrown by the Customs in the way of discharging vessels;—can you give an instance of the kind in connection with a London ship? Yes, there are many such cases. We will take the case of the two ships now signalled. These have on board goods needed for the Christmas season; unless these goods are promptly discharged there will be an actual loss. We make arrangements to work by steam, and as late as possible, and perhaps at 10 o'clock the landing-waiter says "we cannot measure these goods to-day," and the ship is delayed.
370. Are you in the habit, when ships are consigned to you, to pay for taking the goods out overtime? Yes, working from 6 to 6.
371. Have you known the Custom House Officer to compel you to cease at 12 o'clock, notwithstanding your having had permission to work till 6? Yes.

S. Dickinson,
Esq.
6 Dec., 1872.

TUESDAY, 10 DECEMBER, 1872.

Present:—

MR. LLOYD,

MR. MACINTOSH,

MR. WATSON.

THE HON. HENRY PARKES, ESQ., IN THE CHAIR.

William Augustine Duncan, Esq., examined:—

372. *Chairman.*] You are the Collector of Customs? Yes.
373. How long have you held the office of the Collector of Customs? In Sydney, for more than thirteen years, and thirteen years more in Brisbane.
374. Have you had any experience at any other ports? No.
375. Has your attention been at any time directed to the facilities afforded for the transaction of shipping business—I mean more particularly the business of the ships putting out and taking in their cargoes? My attention is constantly directed to that subject.
376. What is the average tonnage of vessels employed in the trade between London and Sydney and Liverpool and Sydney? I have never attempted to take an average.* The ships are of a much larger tonnage and are of a better class than they were formerly.
377. I believe such a thing is unknown as for a small brig to arrive here from an English port now? It is, almost.
378. That was the case formerly? Yes.
379. All the ships that come here now are what may be considered as first-class ships? Yes, they are first-class—very fine ships indeed.
380. I believe some shipping houses have regular lines of vessels running here? Yes.
381. In fact I think the bulk of the ships are made up of lines of first-class vessels, built for the particular trade to this port? I believe they are among the best class of mercantile vessels in the world.
382. Are any of the vessels below a thousand tons? I think not lately; so far as I remember they are all over 1,000 tons.
383. What is the usual time that elapses from the entrance of a vessel into the harbour until she gets alongside the wharf and is ready to discharge? That varies very much by circumstances.
384. What should you suppose to be a short time? Sometimes they get alongside at once; in other cases they are not able to do so.
385. When you say "at once" do you mean to say that they get alongside on the day of arrival? There are cases in which they get alongside almost immediately on arrival; but that is not the general rule.
386. How long a time have you known to pass from the arrival of a vessel before she has been able to get alongside? I could not say exactly to a day; they are often days before they can get alongside.
387. What time does a vessel of 1,000 tons take to discharge her cargo, from the time she breaks bulk until she has wholly discharged? It varies very much—according to circumstances. I should say about a month.†
388. Would you think four weeks the average? I should think something about that; it varies very much by circumstances; it might be two months in some few cases.
389. Two months in discharging a ship of 1,000 tons? What are the causes of this slow rate of discharge? The difficulty of getting entries passed; the difficulty of gauging and warehousing goods as they come out; in fact, the chief difficulty is the want of proper means of storing goods when they are discharged. To these may be added delays in obtaining stiffening and ballast.
390. Is the wharf accommodation every thing that could be desired? Very far from that.

W. A. Duncan,
Esq.
10 Dec., 1872.

391.

* NOTE (on revision):—The average tonnage of our ships from London may be estimated at 1,160 tons.

† NOTE (on revision):—I find the average is twenty-six days.

- W. A. Duncan, Esq.
10 Dec., 1872.
391. Does any part of the obstacles to the expeditious discharge of ships arise from the want of wharf accommodation? There are very great obstacles; in fact I have always considered the Circular Quay a perfect disgrace to a large port like Sydney.
392. In what respects have you considered the Circular Quay a disgrace to a port like Sydney? It is kept in very bad order and does not afford sufficient accommodation for the ships that come there; there are no sheds or warehouses for stowing the goods; there is no machinery for weighing, or means of gauging them, except on the open wharf, exposed to the sun. Vessels are not and cannot be allowed to discharge for such a length of time each day as they might be if there were proper accommodation; in fact it is a perfect disgrace to the Colony. I have frequently mentioned the matter to different Ministers during the last thirteen years.
393. Do the vessels come alongside the wharf? Yes, generally speaking they do.
394. Close alongside? Generally speaking—not always.
395. There is no occasion for stages or anything of that kind? No.
396. Can you step off the wharf into the ship? Usually.
397. What remedy would you suggest for the state of things which you say is disgraceful? The principal remedy I have suggested at different times has been to run out piers, and to build sheds or warehouses for the stowing away of goods; but lately I have seen a plan by Mr. Moriarty which I think is very much better than any I could suggest.
398. Are complaints ever made of obstructions being put in the way in the transaction of shipping business by the Customs' officers? It is a very common complaint. We are obliged to stop the discharge of casks of spirits at a certain hour of the day so that we may not have more on the wharf than can be gauged and warehoused within the proper time. This is a subject of very common complaint and would be obviated by the suggestion I have made. Of course the Committee will see that I cannot allow goods to remain on the wharf all night.
399. Have you known instances of captains or owners of ships complaining of the detention of their vessels? Frequently.
400. Do the complaints proceed from the commanders of ships or from the owners? Sometimes from one and sometimes from the other. There is not a week in which I have not some complaint of that kind; I do the best I can to meet such complaints, but I have not the machinery for doing it properly.
401. *Mr. Macintosh.*] Are you aware that sometimes ships are lying in the stream for a fortnight after their arrival? I have known such cases, but not often.
402. Can you state what has been the cause? I suppose it has been that they could not be berthed.
403. At the particular spots they wished? Yes.
404. Are you aware that vessels frequently keep goods belonging to importers for five or six weeks after their arrival, in order to balance them at certain seasons of the year? I believe such cases have occurred.
405. Frequently? Such cases have not frequently come under my notice; I know they have occurred, and no doubt do occur occasionally.
406. You are aware that there are other wharfs in Sydney besides the Circular Quay? Yes.
407. Do you know if they are occupied? They are not always full, but they have the same want of accommodation as at the Circular Quay.
408. But there is wharf accommodation, and there are stores abutting on many wharfs, say from Smith's Wharf to Miller's Point? Perhaps there is scarcely a port in the world where there is so much or more wharf accommodation; what I complain of is the want of proper provision for the discharge of vessels, and that exists both at the Circular Quay and at private wharfs.
409. But more at Circular Quay than at private wharfs? Yes, rather more.
410. You think the plan of Mr. Moriarty the best? Yes. I had one of my own, but I think that the best.
411. With reference to spirits, have you not seen the wharf almost covered with casks of spirits? Yes.
412. And these must be removed during the day? Yes, they must be protected at night.
413. The officers have to gauge them in the sun? Yes; in no part of Sydney have we provision for gauging spirits anywhere but in the sun. The heat of the sun alters the temperature of the spirits to some extent, and often causes inaccuracies in the gauge which would not exist if proper provision were made.
414. The business of the Customs cannot be satisfactorily done as things are at present? No.
415. From what cause does the complaint of the shipowners and captains to which you have referred arise? No doubt the instructions given to the parties are to get as speedy discharge as they can, and they wish to work from 6 to 6; and even longer. When we had a great quantity of free goods that was easily managed, because they could be discharged overtime and dutiable goods in the middle of the day; but now that almost everything is dutiable that is impossible.
416. Then the complaints arise from short hours? No, not from short hours, for nearly all London ships discharge from 6 to 6; but it often happens that casks of spirits or other dutiable goods are the first to hand, and the discharging has to be stopped until these are gauged or removed.
417. You have been thirteen years in the Customs? Nearly twenty-seven years in the Customs, both here and in Brisbane.
418. Do you remember when the Circular Quay was in the hands of Hoby West? I am not certain who was the leaseholder when I came here.
419. What I want to bring to your recollection is this: The wharf at one time was let to an individual lessee and not to an association of merchants as at present. When the wharf was let to a person out of that circle was not the whole of the shipping taken away from the Circular Quay? It was in the hands of a single person, I think, when I returned to Sydney.
420. The private wharfs were more patronised than the Circular Quay? They were. Some wharfingers, I think, made no charges in order to draw ships.
421. Do you think if the Government were to lay out a sum of money, bordering on £100,000, in improving this quay, they would get a return for their outlay, as this association would not have the monopoly, and the Circular Quay would have to bear the rent of the whole of the wharfs to Miller's Point? I could not give an opinion on that point; but if the private wharfs were brought into competition they must afford the same facilities at private wharfs as at the Circular Quay. The very nature of things would force this upon them, but if it did this, even to the loss of some revenue from the Circular Quay, I think the money would be well expended. Of course we could, as we did before, collect a proportion of the wharfage at the private wharfs, and that would meet the difficulty. Formerly, when I entered the Customs, we collected for the Government a third of the wharfage that was paid at private wharfs.

422. *Mr. Lloyd.*] When you stated that there were no long stages from the ships to the Circular Quay, I presume you referred to the western side, near the Commissariat, and not to the eastern? Yes, principally. W. A. Duncan,
Esq.
423. Only at a portion of the quay can ships lie alongside? I had chiefly the western side and middle of the quay in my mind, as being more constantly under my eye. 10 Dec., 1872.
424. Along the whole of the eastern side very long stages are required? Yes.
425. What hours do you now allow for the discharge of spirits? The instruction I give on that subject is very general: to allow them to be landed as late as possible, to admit of their being gauged in time for removal. Sometimes they are landed until 12, sometimes until 1 o'clock.
426. At what time can they commence in the morning? At 6.
427. And they go on discharging as long as they can? As long as they can with safety, so that they may get the whole into bond within the day.
428. Have you made yourself acquainted with the mode of discharging ships in Melbourne? Yes; when I was in Melbourne I saw the whole of the Customs' arrangements.
429. Did you find that ships were discharged more rapidly there than here? Much more rapidly.
430. How do you account for that? They have there the accommodation which it is now proposed to have here.
431. Is it the fact that goods go into the Customs' charge at once? Yes.
432. That is what you recommend here? The same principle with such variation as the difference of places requires.
433. If we were to adopt the plan recommended by Mr. Moriarty, you would be able to allow bonded goods to be discharged from 6 to 6, as long as dutiable goods could go into bond? There would be no stoppage whatever.
434. In that case ships could discharge as rapidly as they could put out their goods? Yes. At present we must wait for entries, perfect or imperfect; but if this accommodation were given, I should allow the master of a vessel to discharge everything at once. The merchants now complain very much that the captains pass imperfect entries and warehouse goods contrary to their wishes. If this plan were carried out it would satisfy the master of the vessel and the owner of the goods at the same time. I may mention, with reference to these imperfect entries (though it is much better for the interests of the ship now than it was formerly), that the owners of goods have felt it to be a great grievance that captains of ships pass imperfect entries and send their goods into bond; and in that bond they are charged four, five, or six times the rent that would be paid upon goods put into bond in the usual way.
435. All that would be prevented if you were to adopt these covered wharfs? Yes.
436. In that case would you propose that the goods should be delivered to the importers by the Customs or by the agent of the ship? Of course we must have an understanding with the master of the vessel about the freight. By the present Customs law I should have to hold the goods subject to freight.
437. You would take charge of all bonded goods on their landing, and would deliver them to the importer? Yes.
438. In fact as you do now? Yes; practically speaking these places would be Queen's warehouses.
439. For the goods would be delivered straight from the ship? Yes.

FRIDAY, 19 DECEMBER, 1872.

Present:—

MR. LLOYD,
MR. SUTHERLAND,

MR. WATSON,
MR. WEARNE.

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

Captain Charles Harrild, examined:—

440. *Chairman.*] You hold some situation under Government? Assistant Harbour-master.
441. How long have you held that situation? Fourteen years.
442. How long have you been acquainted with the port of Sydney? About thirty-two years.
443. In what capacity did you make the acquaintance of the port? As master of a vessel.
444. Between Sydney and what other ports did you trade? Java, Manila, Mauritius, Cape of Good Hope, and different ports of New Zealand.
445. Before you accepted the situation of Assistant Harbour-master you had been in the habit of discharging ships at the wharfs in Sydney? Yes, at such wharfs as there were—small places.
446. You have, generally speaking, a good knowledge of Sydney as a port,—its accommodation, regulations, and so on? I think so.
447. Do you think the wharf accommodation and the other arrangements for the discharge and loading of ships all that is necessary? No, I do not; there is not room at the private wharfs for six more vessels of any tonnage—the wharfs are all full at the present time.
448. Has it come within your knowledge that delays sometimes occur in the discharge of goods on their arrival from England? I think only in consequence of ships waiting for particular berths.
449. How long have you known a ship from London to wait for a berth? The "Sobraon," I think, was detained the longest; I should say about a week or ten days; but she was waiting for one berth in particular,—the Commissariat.
450. That is an exceptional case? Yes.
451. And that arose from her draft of water? No, from wanting to go to a particular berth.
452. Could she have gone to another berth? She could, but she would have occupied two berths. The Commissariat Wharf is the only place where she occupies one ship's berth.
453. Is it part of your duty to berth vessels? Yes, to bring them up and lay them alongside.
454. Has your attention been directed to the time vessels take in discharging? No, I have nothing to do with that.

Captain C.
Harrild.

19 Dec., 1872.

- Captain C. Harrild.
19 Dec., 1872.
455. Still you might have noticed it? Perhaps they might discharge as quickly with a stage as if they were lying close alongside the wharf. The objection is that more damage is done to goods by the stage.
456. I gather from a previous remark that you consider the wharf accommodation defective? Yes.
457. In what respect? The time it takes to moor and unmoor vessels, and the way they lie alongside the wharf, not always in a safe position.
458. Did it ever occur to you that the accommodation might be improved in any particular manner? Yes, I think so, by running out wharfs.
459. What do you mean? By running out jetties from the cove.
460. Will you describe to the Committee what you mean? Along the eastern side of the cove there might be eight jetties run out, which would accommodate sixteen vessels—one ship on each side of a jetty.
461. What is your opinion of that plan (*Exhibit B.*)? This plan provides for the accommodation of eleven vessels, and there are now twelve lying at the various berths all round the cove, and there is not room to get a boat in between them.
462. *Mr. Wearne.*] How many vessels are there from the Government Stairs to Campbell's Wharf? Five.
463. From the Custom House to near the boat-sheds how many are there now? Six.
464. How far is that? To within a hundred feet of the North Shore Ferry.
465. *Chairman.*] You see the plan marked B, which is now before you? Yes.
466. It is proposed by that plan to construct jetties with sheds erected upon them, so that each vessel berthed alongside would have a wharf to itself, and a shed to itself, and be enabled to discharge at three hatchways if necessary; to discharge the goods under cover in all weathers; and to have a portion of the shed entirely enclosed, and made secure, where bonded goods could be left one day, two days, or three days;—what do you think of that plan? I think that would be a very good plan.
467. Your idea, if I caught it accurately, was, that jetties should project into the cove, each jetty to accommodate two vessels, one on each side? Yes.
468. A plan of a similar kind has already been submitted to the Committee, and it has been objected that the goods from the two vessels at the opposite sides of the jetty would be intermixed—that this would cause confusion; and also that there would be obstructions in taking away the goods from the end of a narrow jetty? It need not be a very narrow jetty, it might be at least 80 feet wide, and carts might go on to the jetties, as they do now at the Grafton and other private wharfs, and take the goods away as they are landed from the vessels.
469. Have you knowledge of other large sea-ports? I have been a good deal about the world in my time.
470. Are the facilities for discharging and loading vessels greater in most ports than here? In most ports now-a-day, I think.
471. Do you think we are backward in that respect? I think we are very much so in respect of accommodation.
472. Have you heard of a project to run out a strong broad pier from the centre of the cove, near the Custom House, to the mouth of the cove? I have, but I do not think that would accommodate so many ships as the other plan.
473. *Mr. Watson.*] I understand you to say that there are now twelve ships lying in Sydney Cove? Yes.
474. How many are there lying from Prince's Stairs to Flood's Wool Stores? Only four.
475. Look at this plan (*B.*);—there is Flood's Wool Store—this gives five ships to Flood's Wool Stores from the Prince's Stairs? Yes.
476. Can ships at present lie with safety below Flood's Stores in deep water? Just as safely as they can abreast of Flood's; just as safely at one part as at another.
477. No ship can now lie adjoining the Government boat-shed to the south? No—a long distance off.
478. What distance? About 100 feet—half a ship's length.
479. Will you look at that plan (*Exhibit A.*);—is that anything like your idea of what would improve the accommodation of Sydney Harbour? Yes; but I would have them run out more at an angle to the cove.
480. Will you also look at the plan marked E? (*The witness referred to the plan.*)
481. Having plan B and plan E before you, which do you think would give the best accommodation to ships in the cove? I think plan E.
482. Why? I think it would give more accommodation. If you were to go down as far as the Government boat-sheds you might run out eight jetties, and these would give accommodation to sixteen vessels.
483. Look at plan B;—would you have any difficulty in placing ships as they are shown on that plan? I think no difficulty at all.
484. Look at plan E;—would you have less or more difficulty in getting ships in if this plan were carried out? If the wharfs were carried out, as shown in the plan, to deep water, 24 feet; but now we have to put down the anchors it is sometimes six hours before I can get a ship into its berth.
485. If this plan E were carried out would you require anchors to be put down? No. I think the ship's head should be placed in shore instead of outward, as shown in the plan; her bowsprit would then be over the Quay and out of the way.
486. *Mr. Lloyd.*] You say that at present, on the eastern side of the Quay, you moor ships by their anchors? Yes, and all round.
487. At what distance do they now require to lie off the wharf? According to the depth of the water; but I think between the ship and the wharf it is between 50 and 60 feet.
488. At present you are obliged to use stages? Yes.
489. How long are these stages? I suppose 60 feet some of them—some of them are less; it depends upon the berth they are in.
490. If either of the plans before you were adopted there would be no use for stages? No.
491. Instead of taking a whole day to get a ship moored, you could bring her alongside and make her secure in how long? An hour or an hour and a half; we should require no anchor, the same as at the Commissariat berth.
492. The Commissariat berth is of the same character as this wharf would be if either of these plans were adopted? Yes.
493. Is the Commissariat berth now preferred to any other? Yes, they have a very short stage there; in fact, some ships have no stage at all there, but lower the goods on to the wharf at once.

494. *Mr. Sutherland.*] You say the jetties on the E plan would accommodate more vessels than on the B plan? Yes. The steam-ferry is now very much in the way of vessels.
495. Do you think there is any danger to vessels lying near there from fire from the steamers? There has been no instance of vessels taking fire; still their awnings are spread, and the sparks from steamers go near them very often.
496. You say this plan E would accommodate more vessels? I think so,—not as the wharfs are constructed here; but if they were made at a greater angle, and were carried down as far as the boat-shed, they would.
497. What would you say the width of the wharf ought to be? 80 feet.
498. What width would you allow between the two jetties, in order that ships might pass in and out? I should say 130 feet.
499. Would it not interfere considerably with vessels going in and out by contracting the width of the cove, if you carried these out 320 feet, which would make 640 feet taken off the width? If the jetty were made at a different angle, and the line were run out from the other side, there would still be room to move ships in.
500. Supposing both plans to be equal in cost of construction, you would prefer E to B? Yes.
501. In discharging or loading at one of these jetties you would have to remove the whole of the goods at one end, which would be 40 feet wide? I think that would be plenty of room if the drays were to come on to the jetty.
502. You intend the drays to go right alongside the vessel? Yes.
503. On the jetty? Yes, it is done on private jetties; the jetty might be shaded over.
504. Will you look at plan D. This is a jetty thrown out in the centre of the cove, to accommodate ten vessels; what objection have you to this plan? There would be no way of getting vessels on to the eastern side, unless plan B were combined with this; these together would form a good plan.
505. Would you prefer that to having single jetties run out round the wharf? I should not.

Captain C.
Harrild.

19 Dec., 1872.

Captain John Richardson Myhill examined:—

506. *Chairman.*] You hold some office in connection with this port? Yes; Harbour-master.
507. What are your duties? My duties are in removing ships as before, when I was Assistant Harbour-master, and to take cognizance of any business to be done about the harbour.
508. How long have you held this position? Deputy and Harbour Master nineteen years in January next.
509. Prior to your acceptance of these offices had you been in the habit of visiting the port or of residing here? Not residing here, but I have been visiting the port since 1833.
510. You consider you have a good knowledge of the port? A very good knowledge of the port.
511. Are you acquainted with other large sea-ports in different parts of the world? Yes, several.
512. What places do you know very well? London, Liverpool, the Tyne, and Bristol, in England.
513. This Committee has been appointed to take evidence, and to report upon the wharf accommodation of Sydney, with the view to suggesting improvements;—do you think the accommodation for loading and discharging ships, and the regulations and other arrangements of the port for regulating the traffic carried on from beyond seas, is all that is desirable? No, quite the reverse.
514. You think it is very defective? Very defective.
515. Would you be kind enough to point out to the Committee some of the defects which your experience proves to exist? In all other mercantile ports I have been into, where wharfs can be made or jetties formed, it is always done in such a way as that vessels can lie alongside and discharge their cargoes on the wharf or jetty.
516. Is there much delay in berthing and discharging vessels in Sydney? Yes; sometimes it cannot be done till the weather moderates or the wind changes.
517. Do vessels frequently lie some time before they get alongside the wharf? I have known them to lie some time frequently.
518. How long? From one to three weeks in the stream.
519. What are the chief obstacles to getting alongside? Want of accommodation, there not being a vacant berth of sufficient length or with sufficient depth of water for a ship to approach the wharf.
520. What is the average tonnage of regular traders between London and Sydney? At present about 1,000 tons.
521. How long would it take a thousand-ton ship to discharge, as an average? They put the cargoes out now much more quickly than they used to do; they have greater facilities as regards steam-engines instead of working by manual labour. I think a thousand-ton ship would be discharged in eight or ten days.
522. Do you think as a matter of fact ships generally do discharge in that time? Yes, but sometimes they are detained with a portion of dead weight, such as iron, till they get sufficient stiffening.
523. Have you seen plans for affording greater facilities for the accommodation of vessels at Circular Quay? I have seen Mr. Moriarty's plan.
524. That is the plan marked B, before you now? Yes.
525. You are acquainted with it? I have seen it but not examined it particularly.
526. You will observe the outline of the present wharf, marked blue, and the jetties marked a faint pink. It is proposed that each of these jetties should be set apart to one ship—that a ship while berthed should have a jetty to herself—and that lying alongside her whole length, she could, if she desired it, discharge from her three hatchways at one time, being protected from the weather by a shed erected over the jetty. It is also proposed that one portion of this shed should be made secure as a temporary Bond, so that bonded goods could be landed on the wharf at once, and put into a place of safety; also, that the floor of the jetty should be raised above the level of the present Quay, so that the jetty should be on a level with the bed of a dray when backed up to it. What do you think of that plan? It is a very good plan, but I gave my opinion to a Commission that sat in 1866, with reference to the silting up of the harbour, on the subject —
527. Perhaps it would be well at present to confine your attention to the plan before you? It is a very good plan indeed, and is very much required. It will do very well at present; but some addition will be required in a short time, as it will not berth all the ships I hope soon to see here.

Captain J. R.
Myhill.

19 Dec., 1872.

Capt. J. R.
Myhill.

19 Dec., 1872.

528. There is another plan, marked E, which proposes to carry out jetties to the length of a ship—each jetty to accommodate two ships, so that both can discharge on the jetty at once? I think the plan B is the best.

529. You were going to refer to some evidence you gave before a Commission? Yes; I was going to allude to what I stated before a Commission, on the condition of the Harbour of Port Jackson, on the 9th March, 1866. After giving my opinion as to the cause of the silting up of the harbour, I am asked what course I would recommend to remove the evil referred to, and I reply: Take up the sunken timber opposite Talbot's Store and other places along the east side of the cove. Remove the sunken rocks abreast the stairs, near the Mariner's Church, Campbell's Wharf, and opposite the long shed. Pile off from the south and east sides 60 feet from low-water-mark, leaving good mooring-posts, as on the west side; and let the Quay be made straight, not curved or serpentine, as at present. Run a jetty down the middle of the cove, with good mooring-posts, and tramways and turn-tables for trucks, or let the jetty be of sufficient width to admit of the passage of drays; let the end of the jetty be T-shaped, with stairs for the landing of passengers from boats and ferry-steamers. Raise the present stone-work two courses all round the Quay, and let the piles be left sufficiently long to admit of the planking of the proposed newly-formed Quay being 2 feet higher than the stonework; this would prevent the traffic of drays and other vehicles amongst the merchandize, would also greatly facilitate the loading of drays, and keep the packages out of the roadway and dirt. This also would give an immense amount of quay room, as the distance the ships lay off, to be in sufficient water (viz., from 50 to 70 feet) is all lost; this would be all reclaimed, and form a splendid Quay. It should also be well lighted, have posts fitted into sockets, to ship and unship, with a light chain running through them from one end of the Quay to the other, to be put up every evening at sunset; also, an iron water-pipe, completely round the Quay, and down each side of the jetty, with taps and hose to supply every ship with water, as required. Let the roadway be well metalled, and slope from the stonework at the present edge of the Quay when raised two courses, *inwards*, so that no water during heavy rains could possibly run over into the cove, carrying sand, &c., from the road into it; but let a gutter be formed a certain distance from the edge, and running completely round the Quay, with gratings at intervals, to carry the rain water into large covered cesspools, formed under the roadway to receive the water and silt, which silt would remain deposited in the bottom of the cesspool; and the overflowing water might be carried into the cove, free of silt, through a watercourse formed from the upper part of the cesspool, and running under the roadway,—the silt to be removed from the cesspools occasionally, and carted away. Take up the lately formed quay between the corner where the crane stands, opposite the "Paragon Hotel," and the reserve for the harbour steamers, opposite the Commissariat Stores, and have it repaired, replanked, and made straight, similar to the western side. This should be done as early as possible, as in its present state it is very dangerous, having large holes where the planking beneath the road metal has become rotten, and the whole fallen through into the water beneath. An empty case, or a plank placed on end in one of these holes, marks the spot for the drays to avoid at present. Fit up on the western quay, a heavy 20-ton crane, or a large set of double shears with a powerful winch, similar to those at the A. S. N. Company's Works at Pymont, for the purpose of landing steam-boilers, locomotives, &c., and let a charge be made for the use of it. Then, if the place were dredged out a little, a ship like the "Persia," 1759 tons, and drawing 24 feet of water, could come alongside and lie afloat; there was not a berth in the whole harbour for this ship when she arrived. To make a place of deposit for the sewerage, the stone quay round Fort Macquarie might be extended as far out as the red buoy, and carried round to the point near Mrs. Macquarie's bathing-house. This would enclose all the bay where the boats from the men-of-war come for fresh water, and form an immense reservoir, and could, I suppose, be covered in by running arched walls across it at intervals. The sewerage, chemically deodorized, could be removed from the reservoir, by a suction tube on the siphon principle, into covered punts, and taken to a branch railway station (say Pymont), and from thence where required to fertilize the land, and be made useful, instead of being a nuisance, causing illness, and tending to fill the harbour.

530. In your intercourse with shipowners, masters, and persons connected with shipping, has it come to your knowledge that owners of vessels object to sending their ships to Sydney on account of their bad accommodation and detention? It has several times, but I cannot mention any particular vessel.

531. Do you think the want of accommodation in the harbour of Sydney has created in London and other places a prejudice against sending vessels to this port? I am satisfied it has, from communications I have had with captains of ships. Some have told me they would not come again, and they have not. I may mention among others the case of the "Great Victoria," the captain of which vessel was very much annoyed by his detention.

532. *Mr. Lloyd.*] How long does it take you now to moor a vessel on the east side of the Circular Quay? Under favourable circumstances, six hours; I have been two days.

533. How long would it take you if this echelon plan were adopted? Half-an-hour.

534. *Chairman.*] Have you anything further to suggest to the Committee? I have here a copy of a letter I addressed to the Commission on the subject. (*The witness handed in the same. Vide Appendix J.*)

THURSDAY, 16 JANUARY, 1873.

Present:—

MR. LLOYD,

MR. SUTHERLAND,

MR. WATSON.

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

Thomas Sutcliffe Mort, Esq., called in and examined:—

T. S. Mort,
Esq.

16 Jan., 1873.

535. *Chairman.*] You have been engaged in the commerce of this port for a great number of years? Yes.

536. I presume you are aware of the subject of the inquiry conducted by this Committee—the state of the wharf accommodation for the port of Sydney? I am.

537. Has that subject attracted your attention at all? It has.

538. If you think the accommodation for the shipping business of the port is insufficient, and if, in your judgment, it is defective, would you be kind enough to state to the Committee some of the most prominent objections which strike you? It is so thoroughly defective that it requires a complete change—that is, if we are to compete with the sister colony of Victoria in cheap freights. In the first place, a ship on arrival here—especially during the summer months—if she has any considerable draught of water, has to remain sometimes not only days but weeks before she can get to a berth. When she does get there, her discharging is necessarily impeded by every wet day, and by the hindrances in the way of bonded goods being discharged during the later part of the day, as they have to be either left on board, or, perhaps, retaken on board, thus involving the ship in delay, and often placing her under considerable disadvantages in hindering her quick discharge. These and other causes operate so prejudicially that I have it upon the authority of many captains of ships with whom I have conversed that it is a matter of grave consideration with owners in England whether they will send their ships to this port, at any rate at the freights which they would take for Melbourne—the detention to which they are put not only involving the cost of the daily wages of the men, but, where a valuable ship is concerned, a very large amount in the way of interest and insurance, as well as wear and tear, which is going on more or less whether the ship is at rest or not; in fact in an iron ship the wear and tear is greater than if she were at sea, the damage being very considerable. I remember Captain Cooper, of the “Carlisle Castle,” telling me, he scarcely dared to face his owners with the charges to which he had been put by detention in this port, and he felt satisfied the line which Mr. Green contemplated to this port would be discontinued with his, the pioneer ship. The sequel has proved the truth of his statement. But it is not only the ship-owner who is injured by the present insufficient arrangements. The owner of the goods is very often considerably injured, especially in wet weather, and the whole community suffers to a very serious extent, in the way of increased freights to and from the Colony. In fact, I venture to say, that if proper accommodation be given here—I mean equal accommodation to that now afforded in Victoria, for quick despatch—the saving upon our freights would amount to a sum which would more than cover the interest upon the cost of the necessary works. And this saving affects, as I said before, the community at large, because the consumer has to pay the freight, and the cheaper the freight the less he has to pay for his goods.

T. S. Mort,
Esq.
16 Jan., 1873.

539. Do the Committee understand from your evidence, based upon your experience, that ships prefer going to Melbourne or other Australian ports at lower freights than they could get for coming to Sydney, because the detention and consequent expense to them more than counterbalances the superior freight? Yes. A vessel contemplating an eastern cargo would come to Sydney on a very low freight to load coal for the East, and there pick up a cargo for home. I know a case in point, where a ship—unfortunately I cannot give you the name of the ship, but I state it as a fact which came under my own knowledge at the time—that a ship having the special object of taking coal to the East, and then loading from the East for England, went to Melbourne in preference to Sydney, and the captain stated that it would have paid him better to have come to Sydney with a half freight, as he then discovered, than to have gone to Melbourne, could he have had the same facilities for discharging.

540. Is that long ago? Within the last year. I may instance also that in consequence of the cheaper freights in Melbourne it is no uncommon thing for us to ship for England by way of Melbourne—tallow very often indeed—simply in consequence of their being able to take a lower freight from there than they would take from here. It will be readily understood why it should be so, when it is considered that in the present day the ships sent out here, as a rule, are of a very costly character, and if interest of money and wear and tear be added to the cost of the large crews which are upon these large ships, it will be found the amount becomes a very serious item to a ship, and necessarily makes it a matter of consideration to that ship as to the time of loading and unloading. This applies specially to the large steamers which go to Melbourne, and which are often largely dependent upon their passengers from Sydney. On the other side of the water it is pretty well known that if a man wants to come to Sydney he is generally told he must go by way of Melbourne, and it is patent in fact that the best ships go there, and they go there for the best of reasons, that, owing to their quick despatch, it is a cheaper port to go to than Sydney. We see continually that ships which go to Melbourne discharge their cargoes there, and then come on to Sydney for coals.

541. Do you think this state of things—this want of facilities for the quick despatch of business connected with shipping—has had anything to do with the loss of intercolonial trade—I allude more especially to the New Zealand trade—which this port has certainly sustained within the last few years? I think it is a fact that a few years ago the whole of the New Zealand trade was connected with this port, but within the last few years a large portion of it has gone to the port of Melbourne.

542. Do you think the want of wharf accommodation, and other facilities for the discharge of shipping, has operated to diminish our intercolonial trade? I have very little doubt of it; and the reason is a very obvious one. Melbourne being made so large a port for receiving goods is naturally made a source of supply, and large quantities of goods are sent by way of Melbourne to Sydney, owing very largely indeed, I believe, to the great facilities that Melbourne affords to her shipping. Parties are thus induced to take that port in preference to the port of Sydney, the ships coming on, as I have said before, after discharging there to load coals at Newcastle. We know that traffic begets traffic and the loss of it the contrary. I do not mean to say that it is entirely owing to that, but I think it is very largely. Perhaps the want of that active enterprise which has shown itself more fully in Melbourne than here may have had something to do with it. For instance, had Melbourne men been here our port would not have been in its present condition. I mean to say had men of Melbourne mind been here matters would have been totally changed. Transplant Melbourne men to Sydney and the conditions would be quite different. But then you must have a Melbourne Legislature to back up the mercantile mind. It is quite clear they do not study the first cost; they look to future results; and the consequence is their enterprise has met with very large reward, a reward which will attend us if we exercise the same energy and forethought.

543. Speaking of the daily expenses of a ship lying in port, you said just now that iron ships suffered more at rest than in motion—could you state generally in what proportion they suffer more at anchor than in motion? There is a much more active corrosion of the plates going on in still water than at sea, especially in summer weather.

544. Supposing a calculation were made of the expenditure of a thousand ton ship, taking into account the wages paid to the men, interest upon the value of the ship, and so on;—have you any such exact information at hand at the moment that you could give an approximate estimate of the deterioration of the

T. S. Mort,
Esq.
16 Jan., 1873.

ship by lying at anchor or alongside a wharf, as against the ship being at sea? I can scarcely say that I have. But it must be remembered that the owners of ships knowing the existence of these conditions are very apt to exaggerate them, and hence we may suffer to a greater extent than there may be positive foundation for. I refer more especially to some of the large steam-ships which visit the port of Melbourne—the large passenger and goods ships. The estimated loss per day to such ships as these would in the mind of an owner and in fact be considerable.

545. You said just now that goods—I think you said a large quantity of goods—came by way of Melbourne to Sydney. Is it within your knowledge at all that goods have been ordered by Melbourne gentlemen to be transmitted by our coasting steamers, in order that the goods might be more speedily delivered than by coming out by ships coming direct to the port? It is not within my own knowledge, but I have been repeatedly told so. I am not very actively engaged in operations of this kind, but I have repeatedly heard it so stated. I know we make Melbourne a very large purchasing market for many descriptions of goods, especially iron.

546. Have any of the plans prepared in the Department of Public Works for improving the harbour come under your notice, or have you heard any explanation of them, or are you acquainted with any of the suggestions made by different persons for improving the port? I have seen a plan, which I call Mr. Moriarty's zigzag plan. I do not know what name is given to it, but in speaking of it that is what I have called it.

547. Will you have the kindness to look at the plan on the table, marked B, and see whether that is the plan to which you allude? Yes, this is the plan.

548. Has that plan been explained to you? I cannot say that it has fully.

549. You will observe that the white portion represents the stone wharf as it at present exists, the pink or tinted portions represent separate wooden wharfs which are intended to be covered in, and one division which you see marked there is intended to be built up so as to form a temporary Bond if necessary. These wooden platforms would be elevated above the stone wharf, about the height of a dray, so that a dray backing up to it would be level with the wharf itself. Then it is proposed that each wharf should be for the exclusive use of a ship, by its length affording the ship the opportunity to discharge from three hatchways at the same time. Thus all goods would be discharged under cover without any intervening stage between the ship and the wharf, and they would be discharged in such a way that they could be readily taken away in cases where it was desired to take them away, and bonded goods would be discharged where they could be at once received and placed under lock and key. There would be no possibility of mixing the goods out of other ships with them. That is the intention, I think. What do you think of this plan? I think the plan an admirable one.

550. Perhaps you would look at some other plans; will you have the kindness to look at the plan marked C. By that it is proposed to erect two jetties striking out from opposite the Custom House towards the mouth of the cove. You will see the ships marked alongside of each;—what do you think of that? I do not think well of it for more reasons than one. First of all, I think it would destroy the usefulness of the cove, which is a matter of immense importance, looking especially to the future, when we may anticipate large numbers of small steamers running in and out, as many do now. It would interrupt traffic in that respect very largely. It would impede the passage of discharged ships or laden ships going out, and the goods being landed at the extreme ends of these jetties would not be easily got at by drays—for I suppose it is intended to run these jetties out still farther to get the required accommodation. Even without that extension the goods which were discharged from one ship would be liable to be mixed with the goods from the opposite ship, and the facilities for getting the goods away would be very poor indeed. In fact I think we had better stop as we are than adopt that plan.

551. There is another plan before you, marked D, which shows one central jetty carried in the same direction, and which I apprehend is an idea copied from the Sandridge jetty, in the port of Melbourne;—what is your opinion of this plan? The other is evil number one, and I think this is evil number two. I do not think either of them can compare with the other plan you showed me.

552. Will you have the kindness to look at a fourth plan which is on the table, marked E;—it represents a number of short jetties striking out from the eastern side of the cove, which are intended to accommodate, each jetty two ships, one ship on each side. You will observe that the most striking difference between this plan and the other in respect to accommodation is, that ships have to discharge two cargoes on the same jetty, and then the goods have to be brought down to the narrow end of the jetty to be delivered to the persons receiving them at the wharf? I think this plan is a century behind the time altogether. It is not calculated to accomplish what we want. The drays could only approach one or two at a time, and the discharge would be as tedious as it is now. I do not see the advantage, except that perhaps each vessel would more quickly get a berth. I am strongly of opinion that if Parliament do sanction any expenditure it should be for some plan which would place us in a position to compete advantageously with Melbourne.

553. You have signified your approval of the first plan marked B: perhaps you will be kind enough to state your opinion of that plan more in detail? It appears to me that that plan affords all the facilities we want. The only objection I can see to it is the want of room upon the roadway passing the stores. But I presume the time is not distant when we shall have a branch of the railway to the cove, and then, perhaps, that objection might not be so serious as it appears to me it is now. It perhaps might be possible to increase the roadway a little by running the wharf out further, but that would diminish the water-space and also add very much to the cost. Still the plan, take it altogether, has enormous advantages to my mind over any of the others, and I think, notwithstanding all the disadvantages of want of roadway, will, to a very large extent, accomplish what we want.

554. *Mr. Watson.*] In your evidence you alluded to the slow discharge of bonded goods being a cause of detention to a ship; will you explain how that arises? If a ship brings up more bonded goods out of her hold than can be taken away within the bonded hours, of course the tide-waiter in charge will compel their being put into safe custody again, and these goods often come in positions in the ship where it is necessary for the easy discharge of other portions of the cargo, that they should come out first. In fact, a ship has to pick the cargo to be discharged in order to meet the necessity for keeping bonded goods down below until next morning.

555. Then if these temporary Bonds were erected as shown on this plan that would do away with all that objection? Certainly.

FRIDAY, 14 MARCH, 1873.

Present:—

MR. CLARKE, | MR. MACINTOSH,
MR. WEARNE.

HENRY PARKES, Esq., IN THE CHAIR.

Captain Henry Burns called in and examined:—

556. *Chairman.*] You have been acquainted with the shipping trade of this port for some years? Yes, Capt. Henry Burns. for many years.
557. Do you recollect the number of years? I have been coming and going to this port from my early boyhood, since I was 15 years of age. I was here first in 1829, as an apprentice on board a convict ship from London; that is about 44 years ago. 14 Mar., 1873.
558. You have resided for some time in this city? Yes, for the last 30 years.
559. You are still connected with the shipping interest of the port? Yes, I am a shipowner.
560. And am also a member of the Marine Board? Yes, I am one of the elected wardens.
561. Has your attention been directed to the want of proper wharf accommodation, and of the means for rapidly loading and unloading cargo in the port of Sydney? It has, frequently.
562. You are acquainted with other ports in the British dominions? Yes. I have visited most of the principal ports.
563. Is the accommodation here at all equal to what it is in ports of the same extent in other parts of the world? Not at all; there is no part of the world so wanting in accommodation as the port of Sydney.
564. In what way has this want of accommodation made itself apparent? In the want of proper wharfage accommodation for the shipping.
565. Can you give us any instance in which inconvenience has arisen, and of the form in which it has been felt? It has been felt in various ways. In the first place, at our public wharf at the Circular Quay there are only three or four berths that have proper accommodation for vessels. Only some three or four vessels can be properly accommodated; the rest have to lay off with stages 60 feet or 70 feet from the Quay—an unheard of thing at any port in the present day out of the Fijis. In the next place, you cannot discharge goods in bad weather; as there are no jetties for landing, and no sheds for sheltering the goods when landed. You know how variable our climate is. Very often you may have a fine morning, and then by noon you may have a southerly-burster with rain; so that ships commence discharging in the morning, and then at noon down comes the rain, and then there are neither sheds nor platforms to protect the goods. These are a great public want that is loudly demanded.
566. Your experience, I believe, is not so much of vessels trading between England and the Colony, as of vessels trading between intercolonial ports? I have had experience of both. I have sent my vessels to England.
567. How long does an English vessel take to discharge; I mean the average time? About ten or twelve days—sometimes more.
568. Does it come within your knowledge that goods are frequently injured by being capsized down these long stages which ships have to construct? Yes. Half the breakages which are complained of are caused by passing the goods along these stages. It not only causes trouble but often leads to expense.
569. Goods are often damaged this way? No doubt about it; there can be no other result, when you see goods slid down 60 or 70 feet along these stages.
570. Have you ever turned your attention to the conveniences which it would be necessary for us to adopt here in order to remedy the present state of things? I have.
571. And what, in your opinion, would be the most desirable plan for us to adopt, in order to secure these conveniences? I would suggest the construction of jetties running out from the Quay, and about a couple of hundred feet long.
572. Will you look at this plan marked B;—have you seen that before? I have.
573. What do you think of the improvements which it proposes? I do not think that it sufficiently utilises the room. Then again, it would be impossible to put a ship here (*pointing to plan*). You would never be able to moor her; the mooring-chains would have to go out in every direction.
574. If you will permit me, I will point out the alleged advantages of this plan? Certainly there may be some advantages in it that I do not see.
575. I will point out what the alleged advantages are said to be. You will notice that the wharf as it exists now is given in white; the pink behind the tinted parts are wooden projections raised above the stone wharf, about as high as the floor of an ordinary dray. Then it is proposed that one portion of the pink jetties should be enclosed, so as to be used as a temporary Bond. By this means a ship lying alongside can discharge from her three hatches at once. The whole would be roofed in, so that the goods would be always under cover from the time they left the ships; and dutiable goods could go into Bond without delay and without any practical obstacle. Then again, the whole of the cargo out of one ship would be discharged on to one wharf, and would be kept by itself, without any danger of being mixed with the cargo of other vessels. As there is a wide space at the bend end of the jetty, several drays might back up to it and take away the goods with every facility for loading and for drawing off when loaded. So that the facilities are these:—Goods can be discharged from three hatches at once; the goods would be under cover from the time of leaving the ship; goods could be taken at once into Bond; greater facilities are given for carting away; and every ship has a jetty to itself? Yes; I understand this; but I think we make a mistake in not reserving this length of wharf from the Commissariat Yard round to Talbot's stores for the accommodation of the public. I say this, because now on gala days the steamships to take away the holiday keepers are banked together four and five deep outside of each other, with every probability that some day there will be a serious accident. To prevent anything of the kind, I should recommend that the whole of this from the Commissariat should be reserved for public purposes. There is a growing want of accommodation for these steamers, and the harbour traffic is every day growing into more and more importance. Everybody now lives out of town and travel backwards and forwards either by rail or steamer. There is Mr. Heselton, who is now building two fine steamers that will cost him £16,000 each, for the purpose of conveniencing the public, and of course hoping to make some profits himself, and I think a man who shows so much enterprise as this ought to receive some consideration at the hands of the Government.

- Capt. Henry Burns.
14 Mar., 1873.
576. Will you state to the Committee what is your opinion of the proposal contained in this plan? It is a very good plan, but I would not go so far as Talbot's, but would leave all this for the public—(*indicates on map*.) The plan as I say is a good one, but it does not utilise the room so much as it might do. I think you might make more of the room you have by running out jetties.
577. Have you any plan of your own that you would like to submit to the Committee? My idea is pretty well carried out in a plan I have seen of Captain Gowlland's. (*Plan produced and marked plan F.*) This plan of Mr. Moriarty's is a very good one, but my objection is that it does not sufficiently utilise the room. Captain Gowlland's plan is something like this, but it is more what I should call ship-shape. Leaving out this part, as I said before, and you have by plan F room for fourteen ships, whilst the facilities for mooring are so much greater. Besides, there is a greater advantage to the ships from the jetties being so built that the vessels bear equally upon them at all parts, in the event of a strong wind. They are thus able to stand without any inconvenience in a strong north-easter, or in a southerly gale.
578. It has been alleged as an objection to this plan that the goods from vessels lying on either side of the jetty would be unavoidably mixed on coming on to a narrow jetty, whilst from the same cause—the narrowness of the jetty—only two drays could back up to it to load? Yes, it certainly cuts against it in that way.
579. Whilst the other plan affords facilities for a number of drays to load at one time, and prevents the possibility of mixing the cargo? Yes. The other plan (B) is the best in that way of looking at it. I was thinking myself more of the room for the shipping, and this plan (F) certainly gives more room; but then it is quite certain that it is a great advantage to get rid of the cargo speedily, and this could not be done so easily by this plan (F) as by the other (B.)
580. And you are of opinion that some improvement is urgently required? No doubt of it. Something must be done shortly if we want to keep our trade.
581. *Mr. Clarke.*] Have you any idea of the width of these jetties marked in plan F? I should make them out to be about 40 feet or 45 feet.
582. Having seen the two plans marked respectively F and B, and having carefully compared the two, and taken everything into consideration—the number of the berths, the facilities for berthing, for landing the cargo, and for carting it away—which of the two do you consider the better? I consider this is. (*Witness indicates plan B.*)
583. *Mr. Macintosh.*] With regard to these sheds, do you think that five or six drays would have room to come alongside and load up? Yes, certainly; they have only to back on to the stage.
584. Are you aware that when a vessel is being unloaded, the packages are not brought out altogether, and that perhaps only two or three at a time for one person are sent on shore; that it will require that these sheds would be very large in order to get together all the goods of one person, as the drays would have to wait until all of one particular mark were landed? No doubt of it.
585. Is that your only objection to this plan? My objection to the plan is, that it does not sufficiently utilise the room, but then, considering the accommodation it gives for discharging, I give it the preference.
586. You say there is not sufficient accommodation for shipping in our port? There is accommodation; but what we want is better accommodation. These 70 feet stages are very awkward to discharge by, besides the time it takes to construct them and the trouble there is in mooring.
587. You are aware that there are a number of private wharfs in Sydney? I am, and they have all superior accommodation to what there is at the Circular Quay. They are so arranged that the vessels can lay alongside the wharf and discharge; and are provided with sheds under which to place the goods.
588. Of these two plans which do you consider will accommodate the greatest number of vessels? The one marked F.
589. What is the difference between the two? The one marked B will accommodate ten vessels, and that marked F seventeen. With regard to the plan B, no one would ever think of mooring a ship here at this end, and counting that, it would make eleven vessels in all.
590. So that whilst Captain Gowlland's plan would give accommodation to seventeen vessels, that of Mr. Moriarty would give only eleven? Yes; but then again, Captain Gowlland's plan goes further round to the west than the other; there would be two ships that could be put in here.
591. If there were the same space allotted to the plan B as has been taken up in the plan F, how many ships would it accommodate? Thirteen.
592. Do you know what would be about the probable cost of carrying out this plan of Captain Gowlland's? I do not.
593. Would £60,000 be sufficient? I do not think that £60,000 would do it. I think it would take £100,000. And in saying this I go by what I am aware it has cost Captain Smith to improve his wharf. His works cost him about £2,000 for some 170 feet.
594. It is reckoned that this work will cost about £87,000? I am not prepared to go into figures, but I think it would cost more.
595. Which plan do you think would be the more expensive of the two? That of Captain Gowlland I should say.
596. If it would cost only the same money as Mr. Moriarty's would you still prefer Mr. Moriarty's? Yes, I think so.
597. *Chairman.*] Is the accommodation of a larger number of ships to be put in comparison with the superior accommodation that would be provided for them? I think not; not at all.
598. Would this plan before you, marked B, be sufficient to accommodate the number of English ships now trading to this port? I think it would. I believe it would meet all our requirements for some time to come.
599. *Mr. Clarke.*] In this plan F is the cost of sheds included in the £87,000? No; it is only for the construction of the jetties.
600. So that F would be very much more expensive than B when the cost of the sheds came to be added? Yes, much more so. But I still say that as far as the berthing of the vessels, and the making the most of the room, this plan F has the preference.

Francis Hixson, Esq., called in and examined:—

601. *Chairman.*] You hold some public office in this Colony? Yes, I am President of the Marine Board ; and Captain of the Naval Brigade. F. Hixson,
Esq.,
602. Anything else? I was formerly Superintendent of Lighthouses, Harbours, and Rivers, but now that office has merged into that of President of the Marine Board. 14 Mar., 1873.
603. How long have you held your present and former offices? A little over 10 years.
604. You have, during that period, been at the head of, the Harbour establishment of Sydney? I have.
605. It is part of the duties of your establishment, carried out by the Pilots, to berth all vessels coming to this port? Yes.
606. In your capacity as President of the Marine Board, as well as in the office which you held before, you are responsible for the proper ordering of the wharfage accommodation? I am.
607. Has it ever come under your notice that ships regularly engaged in the trade between England and this Colony have made complaints of the many impediments which stand in the way of the rapid discharge of their cargo? It has.
608. Will you state what has been your experience in this matter? My experience has been to receive complaints of masters of vessels, that our arrangements here were of the most primitive description; that ships have to be secured at some considerable distance from the wharf; that they are put to the expense and inconvenience of forming long stages for the landing of cargo; and that occasionally there is a want of wharf accommodation altogether, and ships have to lie out in the stream because there is no available wharf for them to haul in and discharge cargo.
609. What is the arrangement now for berthing English ships—ships from London or Liverpool? The ordinary process is this: The ship is brought into port by the sea pilot, and anchored in Neutral Bay. From Neutral Bay the master comes on shore to consult with his agent, and makes arrangements for procuring a berth for his ship at the Circular Quay, or at some private wharf. On having secured a berth, he comes to the Harbour Master's Office, and enters his ship as about to be berthed in a certain place; according to the routine, the ship is attended to in due course by the Harbour Master, or one of the Assistant Harbour Masters.
610. What is the mode pursued in berthing a vessel;—does the ship go close alongside the stone wharf? At some portions of the Circular Quay she does; where there is the convenience for coming alongside, and where the vessel can be secured in an easy manner, with a fair bearing fore and aft of every part of her upon the wharf. At other points, however, this cannot be done, and therefore a good deal of time is lost in securing the ship with tackling and chains at a distance of 40 or 50 feet from the wharf; and this is the objection that is raised by masters of vessels, that they are exposed to all this inconvenience and delay in berthing their ships securely. It frequently takes the whole day to berth the ship, so as to be secure from injury; and then it takes another day to construct and fix a stage for the landing of the cargo. All this causes delay, and consequently expense, and is the source of a great deal of dissatisfaction.
611. Have you ever thought about what would be the best mode of supplying, in a satisfactory manner, the necessary accommodation for shipping? The most satisfactory accommodation that could be provided would be jetties from the wharf, running out at nearly right angles from the stone-work of the Quay.
612. Have you had brought under your notice a plan for increased wharfage accommodation, prepared by Mr. Moriarty? Yes, I have seen it.
613. Is that the plan before you, marked B? It is.
614. Have you carefully examined that plan? I have not had an opportunity of carefully examining it, but I have looked over it cursorily.
615. And what opinion have you formed in respect of it? The only objectionable limits I see in it are these two walls here for the "Sobraon" and the "Underlay," being intended as a secure position for some very long vessel to lie, and discharge from her fore and main hatchways. Looking at the plan, I see no opportunities afforded for securing a vessel in such a position as is shewn here. To secure a vessel in either of these positions you would have to revert to the very system against which all the objections are being made.
616. You think there is not sufficient provision made for making these two ships securely fast? Yes. My objection, however, only goes to the berths for these two ships, the "Sobraon" and the "Underlay." To all the rest I see no objection.
617. Then, considering the immense loss of time to shipowners from the present system, this is an improvement? Yes, certainly. It is a vast improvement upon the present primitive mode of securing vessels.
618. You are aware that the objects of this plan has been to provide a means for discharging a vessel quickly, and at once, on to a wharf or jetty, where the cargo of each vessel would be kept by itself, and where it would be under cover? Yes, I perfectly understand that, and strongly advocate the proposal. I think it a most excellent plan.
619. There is another plan here which has been prepared by Lieutenant Gowlland (*plan F shown to witness*);—what is your opinion of that? I think it shows a very convenient system for the shipping. In fact it utilises Sydney Cove to its fullest extent as regards wharf accommodation.
620. It has been stated as an objection to this plan, that as they are only very narrow jetties of 40 feet wide, I think if two large ships were discharging at it—one on each side—the two cargoes would be likely to get mixed; and that when the goods had to be taken away at the narrow ends of the jetties, there would be more inconvenience in bringing the drays up to load than there would be under the other plan? Yes. If the width of the jetty was confined to 40 feet, that would certainly be an objection. I would have the jetties (say) 100 feet wide, as they would require to be all that width. These jetties here marked on the plan F, appear to me to be about 80 feet wide. (*Witness measures them.*) I find that, measuring by scale, the jetties are fully 80 feet wide.
621. I suppose you are of opinion that something of the kind is very necessary? Very necessary indeed.
622. Has it come to your knowledge that shipowners have objected to send their ships to this port on account of the want of proper wharf accommodation? I have heard threats of diverting the ships from the Sydney trade and sending them to Melbourne. It was very gratifying to my pride—being aware of these threats—to hear the account lately given by the captain of the "Sobraon." His ship was diverted from this port and sent to Melbourne, and he told me that he hoped he would never be sent there again,

F. Hixson,
Esq.
14 Mar., 1873.

again, as notwithstanding all the complaints, our accommodation was superior to theirs for very large ships. He found there was no wharf there that could take his ship as she arrived, and she had to be lightened by means of lighters in the bay before she could come up to the wharf.

623. Do you think that either of these plans will offer such an amount of accommodation as will be required for vessels visiting our port during the next 20 years;—I mean for the leading vessels running between here and England? I do not know that. I hope in the next 20 years that the Colony will make a great stride in advance. My objection to the plan B is, only that it does not give a sufficient amount of accommodation. But then again, there is this objection, that if you get up too large an amount of accommodation at the Circular Quay, you will draw all the shipping to Sydney Cove, and you would not find a sufficient amount of wharf and street room for the traffic. George-street is very narrow just about here; Pitt-street is the same; and I think you would be likely to cause very great confusion in these streets if you bring too large an amount of traffic to the Cove; thus, though this plan may not be extensive enough to satisfy our requirements 20 years hence, yet it will be sufficient for the time being, and will be a great improvement on the present primitive arrangements. As to the two plans, and speaking as a sailor, I have no doubt at all that jetties are the best and most convenient for shipping, whether as regards hauling in or out.

624. In what way? In this way: That when a vessel is brought from Neutral Bay by a tug-boat, they have only to make a slight curve to port to bring her up to one of the jetties, and these being placed at a convenient angle she can be hauled in to her berth and secured without loss of time. This done, she can commence discharging the moment her hatches are opened. Just the same in moving away. All that has to be done is to attach the tow rope, and the tug-boat draws the vessel out at once. In this other plan the ship has to be shifted and turned about to get into her place and then to get away from it, in a way that is always more or less awkward in dealing with large vessels. In fact it seems to me that engineers in drawing plans for harbor works always fancy that they can treat a ship just the same as they do a carriage on the railway-line, and without any reference either to wind or tide; whereas shifting a large vessel is always a delicate and often a dangerous operation.

625. *Mr. Clarke.*] You prefer plan F for the safety and convenience of ships getting alongside the jetties? Yes. By Mr. Moriarty's plan the ship would generally have to drop anchor before she could haul in to her berth. In the other plan, however, she would not have to anchor at all.

626. Have you taken into consideration the difference of the accommodation that will be given if drays have to be loaded at the end of these jetties instead of along the whole length of the platform? Yes, and that is why I say that, as a sailor, I strongly advocate the jetties. As President of the Marine Board, however, I am of opinion that the proposed plan of an echelon wharf will answer all our purposes for the present.

627. By the plan B there are 200 feet of space for the convenience of land carriage allotted to each ship, whilst by the plan F there are only 40 feet allowed for each ship? Yes.

628. Such a narrow space allotted to each vessel would be likely to cause too much confusion, both in unloading the vessel and loading the drays? Yes. For sailor-like purposes I should advocate the jetties; but I cannot help thinking that such a plan would lead to confusion and crushing up of vehicles employed in carting away, not only on the Quay itself but in the streets of Sydney. Besides, the time must come when the commerce of the port must expand from Sydney Cove, and I do not see why it should not do so now.

629. What is the difference between the accommodation afforded at the Circular Quay and that afforded at private wharfs? Along the west side the accommodation is quite equal to that at private wharfs; but along the east side it is much inferior.

630. As a rule, do not captains prefer coming to the Circular Quay rather than going to a private wharf? Yes. They all prefer the Circular Quay because it is more public. Their vessels are seen, and they are then able to get more passengers.

631. Is not the accommodation at the private wharfs quite equal to that at the Circular Quay? Yes. It is quite equal to that on the western portion of the Quay, but the road traffic from the wharf is not so convenient. There is always a steep hill from the wharf up to the streets, and that steep incline has always been regarded as an objection. The accommodation at the private wharfs has been greatly improved within the last year or so.

632. What wharfs do you allude to? To Parbury and Lamb's, to Alger's and to Smith's. These three have been very much improved of late.

633. *Chairman.*] Have you had your attention turned to the new wharfs at Darling Harbour? Yes; I have visited them.

634. What kind of accommodation will they afford? As far as the wharfs are concerned they will give good enough accommodation. There is only one objection to them, and that is that they present an angular surface in certain parts of them to the ship's side as she lays alongside. I, as a sailor, prefer to see a straight wharf where the ship's side will bear equally on the wharf all along her length, so that no part shall be away from it. When the vessel rests fair and even on the wharf in this way she is in the best position for encountering bad weather, or anything that may happen her.

635. Can you state what depth of water there is alongside the new wharf? I am not quite certain, but I believe about 24 feet—I think 24 feet is to be the depth. There will be no difficulty whatever about getting that depth by dredging; but the difficulty, at the present time, is in taking large ships up to this wharf. Some different arrangement will have to be made with the Pyrmont Bridge. The opening will have to be widened before a large ship can be taken up to the wharf.

636. *Mr. Macintosh.*] What amount of accommodation is required for the harbour steamers? That is a point upon which I am very glad that a question has been asked, as it is one upon which I should like to say a few words. I have great fear that we shall have some terrible accident upon some public holiday, solely through the want of wharf accommodation. The people crowd in thousands on to this corner from which the steamers ply, till it is quite dangerous for the crowds, and very unpleasant to the on lookers, to see the difficulty and trouble women and children are subjected to in getting on board.

637. It would almost answer, from the shape of the wharf, to have this jetty here for the use of the steamers;—would that be sufficient accommodation for the steamers? If you run it out a little longer it would. If it were run out some 100 feet beyond where it is now, it would be a great convenience. In reference to this point I have come to the conclusion that on this plan F the idea is an excellent one of making an esplanade and a wharf for harbour steamers round Dawes's Battery.

638. Would it not be a long way to walk round there from the Custom House? I don't exactly realize your question. I was referring to the crowds of persons who congregate on public holidays on this corner, and as a means of putting a stop to that and of preventing some accidents I mentioned that I thought this plan of an esplanade was an excellent one.

F. Hixson,
Esq.

14 Mar., 1873.

639. You would send them from there round to Fort Macquarie? No. To the other side of the Quay, at Dawes's Battery. The people would then only have to follow George-street along to the end. This they could do in the omnibuses, and they need not come on that portion of the wharf at all.

640. You stated a little while ago that the two streets, George and Pitt streets, would be inconveniently crowded with traffic if too much shipping were brought into Sydney Cove;—did it ever strike you that if the railway-line were continued down to Dawes's Battery that would be a convenience—that the line for instance might run from Campbell's Wharf round the edge of the Circular Quay, and then by a tunnel under Government House, Sir Richard Bourke's statue, and the Racecourse, to come out at Liverpool-street, and then on to the Redfern Terminus;—would not this liberate the streets from a great deal of the traffic? I have never thought of that scheme, but I am afraid that some parts of the Quay are so narrow and restricted that they would not admit of the room for a railway line.

641. *Chairman.*] There is one matter which is hardly connected with this inquiry, but on which from your official position your opinion is most likely to be valuable. Your attention must have been directed officially, and with reference to the duties of your office, to the discharge of sewerage and other matter into the harbour? It has.

642. Have you ever formed any opinion from observation, or from calculation, of the damage likely to be done to the navigable waters, or to Port Jackson as a harbour for shipping, by the discharge of matter from the sewers into the harbour? I have had some experience of that in my official capacity. I had the honor of being a member of a Commission appointed by a former Government to inquire into and report upon the alleged silting up of Port Jackson. The decision we came to was that no great damage was done by the discharge of refuse matter into the harbour from ships or other craft, but that serious damage was effected by the discharge from the sewers during floods and heavy rains; the washing from the streets, which slope towards and into the harbour, also does great injury.

643. Could you give the Committee any instance in which damage has been done in this way; any particular place where an appreciable amount of damage was done, such as could be measured by figures—for example, such as would show what the depth was ten years ago and what it is now? We had one instance where the evidence, as far as my memory serves me, went to show that there had been a silting up of 9 feet in three or four years.

644. Where was that? It was one particular portion of Darling Harbour.

645. In what position? I cannot remember the exact position, but it was from one of those streets which declines down rather steeply into the harbour.

646. *Mr. Macintosh.*] Have you seen the chart of the harbour which was prepared by Sir Thomas Mitchell? I have.

647. Have you contrasted the present depths with those laid down in Sir Thomas Mitchell's chart? I have; and I have endeavoured to do so very carefully. In 1857, when I was on H.M.S. "Herald," I was engaged in the survey of Port Jackson, and whilst on that work I put up a beach mark at Fort Denison, showing the exact heights reached in high spring tides. That was the first actually authenticated mark that was ever made in the harbour, so that the Commission of which I spoke just now had really no reliable data to work upon previous to this; they consequently found a great deal of difficulty in coming to a conclusion. It must be remembered that when soundings are taken they are not taken in so critical a manner as would throw any small silting up in the middle of the harbour. We were consequently in no position to say positively whether there had been any silting up so as to cause any difference in depth of water. When you come to measure a depth of over 20 feet, it is a most difficult thing to take soundings to inches, because of the motion and the drifts of the water; but I am satisfied that there has been no appreciable silting up of the fairway in Port Jackson.

Lieutenant John Gowlland called in and examined:—

648. *Chairman.*] You are an officer in H. M. Navy? I am.

649. Of what rank? I hold the rank of navigating lieutenant.

650. What command have you now? I am lent to the N. S. Wales Government, for the survey of the inland waters of the Colony, by the Admiralty.

651. What work are you now engaged upon? The survey of the inner waters of the Colony.

652. Where have you been engaged? On the survey of the waters of the Richmond, Clarence, Hunter, and Hawkesbury Rivers; of Port Hacking, Botany Bay, and George's River. These are the waters which I have completed up to the present time.

653. How long have you been acquainted with the port of Sydney? For the last eight years.

654. Have you been frequently in Sydney harbour? Yes, very frequently; have been attached to H. M. ships "Curaçoa," "Challenger," and "Clio."

655. Has your attention ever been directed to the necessity for increased accommodation for the mercantile shipping visiting Port Jackson? Only generally, until I heard that this Committee was sitting, and then I gave the matter my attention.

656. Without going into the extent of the shipping interest or the exigencies of trade, or into the various complaints which have been made, but taking the harbour as you find it, what would you suggest to improve the accommodation and to afford greater facilities than now exist for loading and unloading vessels which visit the port? Do you mean at the Circular Quay?

657. Yes? I have prepared a plan for a series of jetties (F) which I would recommend to the attention of the Committee, as I believe it will not only afford more accommodation but will be more convenient for getting ships into and out of their berths than any other I know of.

658. Have you seen the plan drawn by Mr. Moriarty? Yes, I have seen the plan of an echelon wharf, prepared by Mr. Moriarty, and also another drawn by Mr. Flood.

659. And in what do you consider your plan to be superior to that of Mr. Moriarty? I do not say that my plan is superior. That will be for others to decide. But the recommendations of my plan are:—That it gives greatest amount of wharf accommodation in a limited space; that it is much easier to get vessels into and out from their berths; and that it is the least expensive.

Lieut. John
Gowlland.

14 Mar., 1873.

Lieut. John
Gowlland.
14 Mar., 1873.

660. Do you think that you will get accommodation by jetties such as you propose, that would prevent the cargoes of the ships loading on each side from being inevitably mixed; and would not all the cargo, under your plan, have to be taken out on to the wharf by narrow entries at the end of the jetties; and would there be sufficient accommodation for loading drays for the speedy removal of the cargo, without causing a great deal of confusion and crushing of vehicles;—have you thought of all this? Yes, I have; and I have also made many inquiries on the subject, and I have never heard of any confusion in the way you describe from the mixing of goods, though the plan I propose is that followed in the various parts of the world, where a large import trade is carried on—such as San Francisco and the ports of the Baltic; and they never meet with any difficulty in that way. There is certainly a narrower space at end of jetty to discharge on to the wharf; but then you must consider that you have a great length of jetty to discharge on to from the ships, and this is given at each place. By this plan you are able to discharge three times the cargo (you being able to discharge by each of the three hatchways) to what can at present be done under the present plan of mooring the vessel off from the wharf and landing the goods by a long narrow stage but 10 feet wide, allowing only of discharging cargo at one hatchway at a time. By my plan, and by discharging by the three hatchways, a vessel could get her cargo out in three or four days at the outside.

661. What is the width of these jetties? The widths are all marked. These are 100 feet wide at the base, and they taper off somewhat towards the end; this is necessary in order to get the ships out clearly when they haul off. These others—the four northern ones—are carried out the whole way to a width of 80 feet.

662. Do you propose that these jetties should be roofed in? I have not provided for that, but it could very easily be done.

663. They are open as they now are? Yes; but I understood that they were not to be roofed in. My idea was to have two kinds of wharf—import and export wharfs. The import wharf would have a raised platform, so that when a ship was discharging, the goods could be taken on to a truck, run to the end of the platform, and loaded on to drays; the export wharf would have no raised platform. My reason for this was that it would be far easier to run a truck with wool or other produce out from the stores adjacent, on to a level to the ship into which it is to be loaded, than to have to raise it some 4 feet on to the staging of the jetty. Then there are certain casks, tallow, &c., which have to be re-coopered before they go into the hold. This has to be done here in this open space on the wharf, adjoining the jetty, and then the cask has to be raised about 4 feet on to the platform. By doing without the platform at the export wharf, this trouble is saved. The labour involved in raising such heavy weights would hardly compensate for the advantages received in other directions. I propose to have the jetties alternatively export and import wharfs, so that every other one would have a raised platform. The cost of these jetties would be about £3,000 each.

664. For the platform and sheds? No; I have not reckoned for the sheds or platform; they would have to be added on to the cost.

665. What do you estimate would be about the total cost of your plan? I estimate it at about £60,000.

666. Upon what basis do you fix this calculation? From inquiries I have made from various sources,—a gentleman who has recently made some large improvements to his wharf (Captain Smith), of 350 feet frontage by a width of 30 feet, and the cost of this was not quite £2,000. Then the Bulli Company has one of the finest jetties in Australia. A portion of it—280 feet long and 26 feet wide—was replaced some five years ago (having been washed away), and the entire cost was only £1,121. That jetty runs out into the open ocean, and stands the force of gales from all quarters. The piles are all of turpentine wood, and have been found to stand well, for they resist the action of the cobra better than any other description of hardwood, and it is calculated that jetties built of piles of this description will last at least thirty years.

667. *Mr. Wearne.*] Would you recommend wooden piles? Yes, hardwood piles, coppered, braced, and girded together; these would last a very long time.

668. *Chairman.*] You made inquiries as to the suitability of the timber? Yes; and as to the length of time it was calculated to last.

669. *Mr. Clarke.*] In referring to the cost of the jetty at Bulli, have you taken into account the fact that timber is more readily procurable there, and consequently much cheaper? It would not make the cost of these jetties more than the sum £3,000—even with timber at twice the amount paid by the Bulli Company.

670. Do you propose to have sheds on the wharf? I have given very little attention to the sheds, because my thoughts were mainly directed to berthing the shipping; but perhaps it would be better to have them on the wharf, because by sheltering the goods the ships might keep on discharging even on a wet day.

671. Would not this space which you have given be soon blocked up with goods if a vessel went on discharging rapidly? The goods would have to be removed before that came about. An area of 40 feet by 200 feet ought to be sufficient to keep a ship going all day in discharging.

672. Then besides the jetty you would have some space on the wharf? Yes; there would be 75 feet and 40 feet of jetty, or 115 feet in all, of wharf frontage for each ship, and some would have more than this. Then with regard to this land at the back (*indicates on plan*), [the whole of it would be reclaimed and become a very valuable property for the Government. It could readily be sold for sites for bonded stores or wool sheds.

673. It has been said that at the private wharfs there is never any delay in the removal of goods, or in unloading of cargo? Yes, I have heard that such is the case.

674. Are you not aware that in most of them the cargo is taken out of the hold and put at once on to drays, which go close alongside the ship, and taken at once into the stores? Yes, that is so.

675. That is not the case at the Circular Quay, where the cargo is all put out as it comes from the hold? Yes; but the packages have distinctive marks on them, and the persons engaged in this work are very quick over sorting them out.

676. Yes; but where there are so many marks, as there are in a vessel bringing a general assorted cargo, you will want a good deal of space to sort out the packages of each shipper in order to have them carted away? That is simply a matter for the discharging clerk. He is used to his business and will most likely keep his eyes open.

677. *Mr. Macintosh.*] You have not left any of your wharf for public accommodation? I propose to give this space from the Prince's Wharf to Queen's Steps for passenger steamers from North Shore, Watson's Bay, and Manly, and build them two small jetties. The larger steamers that on general holidays are in the habit

habit of crowding into a small space at the Circular Quay, to embark thousands of excursionists for pleasure trips down the harbour, to the risk of life and limb, I propose to take to Dawes's Point, and have prepared a scheme of accommodation by which they may all lay alongside a stone wharf and take in their great loads of excursionists without risk; it is by building a retaining-wall outside these rocks at Dawes's Battery, down to low-water-mark, then fill in and reclaim the space; an esplanade might thus be made for the public. By making a road from George-street, at the back of the Artillery Stables, the public would be able to drive right down to the steamers in the omnibuses.

Lieut. John
Gowlland.

14 Mar., 1873.

678. Will you give this plan in before the Committee? Certainly; I prepared it specially for them. I may point out here (*in the plan*) that a surface-drain, 6 feet wide and 2 feet deep, runs round the Quay, so placed as to intercept all silt, stones, particles of the street metals, &c., which are carried down the sloping streets and into the cove during heavy rains; and by giving this drain a slight gradient in the direction of the proposed reclamations for the new wharf, the whole might be discharged into the space so enclosed, and would gradually fill itself in without any additional expense. The outer kerbing of the new wharf should be raised 1 stone, or if piles, 18 inches higher than the drain, which would prevent any overflow into the cove from a too great rush of water, until it could get off.

679. Would there be any difficulty in removing and berthing ships under your plan? Not the slightest. Immediately the vessel is discharged the steamer can hook on and take her out of the way in half-an-hour.

680. *Chairman.*] You consider that your plan is more convenient for the berthing of ships than is that of Mr. Moriarty? Yes, I think so. The fault I find is, that at the ends of two narrow jetty heads he has berths for a large ship. Now I think it is not possible to berth a large ship in that position without reverting to the system which is now so much objected to. At the same time, I must confess that this plan of Mr. Moriarty's is a most ingenious one, and that I have never before either seen or heard of this echelon scheme of wharf in any port or dock-yard in the world. In fact, except that it only provides a very limited accommodation for shipping, I fancy I should prefer his plan to any I have seen.

681. As far as the accommodation goes you think yours is the best? Yes; and I look upon the amount of accommodation for the shipping as the most important part of the business, because I believe that in ten years' time you will have double the trade to this port that you have now. The Admiralty have sent out instructions for 11,000 tons of coal—for the China and Eastern fleets to be supplied with Australian coal. You will no doubt have the supply of the Pacific squadron also in time, and then you will find that your harbour will be full of ships, and will require all the wharf accommodation that can be found, for vessels coming here for a cargo of coal are hardly likely to be sent to the port in ballast.

682. *Mr. Wearne.*] Does your estimate of £60,000 embrace the whole of the cost? Yes, all, except the cost of the sheds and platforms. These would cost another £10,000.

683. *Chairman.*] What do you estimate will be the cost of the improvements at Dawes's Battery? I have not gone into that. I may say that with regard to the soundings marked on my plan they have all been taken by me last month very carefully. This dark line is a line of equal depth of 24 feet. Outside it is deeper. A ship requiring to be berthed in 24 feet of water would have to be put here. (*Witness indicates on plan.*)

THURSDAY, 17 APRIL, 1873.

Present:—

MR. CLARKE,		MR. WATSON,
MR. SUTHERLAND,		MR. WEARNE,

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

Edward Flood, Esq., called in and examined:—

684. *Chairman.*] The plan which you see before you (*plan marked B on the table*) is one prepared by the Engineer for Harbours and Rivers, and it proposes to give to each ship a separate wharf. The white portion represents the stone wharf as it at present exists; the portions tinted pink represent wooden jetties, which are supposed to be raised sufficiently high above the stone wall for a dray to back up to them, so that the bed of the dray may be level with the floor of the jetty. Then it will be observed that each of these separate jetties is divided and roofed over, and a space enclosed for the temporary reception of bonded goods. It is said that if necessary a ship might discharge from three hatchways at once. The advantages of this proposal are summed up by those who support it, by saying that each ship would have a jetty to herself, and therefore her cargo would be free from getting mixed with any other ships cargo, and would be landed under cover, and in bond if necessary, and that several drays could load at once to take the cargo away, there being a much broader space for drays to back in than would be allowed by any other means that could be devised. (*Lieutenant Gowlland's plan, marked F, laid on the table.*) The Committee, from some observations that dropped from you in your former evidence, have thought that you would like to see this plan, and we should be glad if you would give us any opinion you desire to offer on the plans as submitted? For the first time I have heard that it is intended to raise a platform along the whole of the eastern side of the Circular Quay, for the purpose of allowing drays to back up and take goods off the platform. We may possess more knowledge in this country than people in other parts of the world. I have been in all the London Docks—nearly all the docks on the Thames,—and in all the Liverpool Docks; I spent two or three days in the Liverpool Docks, and also all the docks in New York, and in all these places the platform is level with the roadway. There is no such thing as an elevated platform for the purpose of drays taking goods off the jetty. It appears to me that the projector of this plan has lost sight altogether of the fact that if we have, as I find from the Statistical Register we have, some 800,000 tons of goods received into the port, we have about the same quantity exported. Now, a large portion of the goods that are so exported are of a heavy character. I take, for example, wool. There are shipped from the Circular Quay from 110,000 to 120,000 bales of wool annually. This wool is put up in packages, which weigh from 5 cwt. to 25 cwt., and it is taken from the stores on trucks. By this plan (*plan B*), Mr. Moriarty's, the trucks will be stopped as soon as they get to the stage, and the wool will have to be lifted up by manual labour on to the

E. Flood, Esq.

17 April, 1873.

E. Flood, Esq. stage, and then have to be trucked again to the ship's hatchway, where it will be lifted up and put into the hold. The Committee will see that that will entail enormous expenses on the exporters, as well as to the owners of ships in that one single item. In reference to tallow, at least three-fourths of the tallow that leaves this Colony is brought to the Quay on drays, and the whole of it, when it arrives there, has to be coopered. It will never do to put this tallow upon the jetty for the purpose of coopering; it would take up the whole of the landing-place. The average weight of tallow is from 6 cwt. to 9 cwt. We have also a large quantity of meats which come from various parts of the Colony by our coasters, but are invariably carted and landed at the stage of the Circular Quay. That of course could be put on to the stage or platform, and taken on board at once; but even then it must be trollied from the edge of the stage. If the stage was level, the same as the London Docks, and other docks to which I have alluded, the drays could go right up opposite the ship's gangway, and deposit the goods in the ship's hold, and have them taken in without any inconvenience whatever. I have heard that that difficulty is to be got over—perhaps it is not a great breach of conversation to say that I have heard that most of the wool will be pressed away from the Circular Quay, and carted so that it can be deposited on the stages, just as any other goods; but how will it be in reference to tallow and various other goods, the whole of which, including wool, must be taken upon trucks to the gangway of the ship? But I think the time is very far away when wool to any great extent will be pressed away from the Circular Quay. The great conveniences we have at the Circular Quay must surpass anything that may be contemplated by pressing wool away from it. The expense of cartage will be so considerable that I think that time is very far distant. I object to this plan also, on the same ground, that I do not believe we possess in this Country more ability than is possessed in those countries to which I have alluded. I think those who recommend this plan appear to have lost sight altogether of one fact,—the value of this frontage. I value this frontage at the present time is worth from £60 to £80 per foot, the frontage to the Circular Quay, if it was used economically; and by this plan (B) it appears the value of the property is no consideration whatever. Now, by Lieutenant Gowlland's plan (F), the amount of wharf accommodation can be increased at a much less cost than by the other. For instance, I take the extreme north-eastern pier. That pier, without any inconvenience to the navigation of the harbour, can be doubled in its length, and four ships could lie at it—two on each side, if necessary. Some people would say the goods would be so mixed up that it would create all kinds of inconvenience; I do not believe anything of the kind. There are persons there to see the goods landed, and the goods are supposed to be taken away as soon as landed. I apprehend the Government do not intend to have this valuable property as a place to receive and store goods, which as soon as landed should be carted away to their owners' stores or warehouses. There is another advantage in favour of Lieutenant Gowlland's plan: that in case of fire a ship could be hooked on to and unmoored in less than half an hour and taken away. But I defy anyone to do that when ships are jammed in one behind the other, as in plan B. 685. I think they have given up that central berth? I should think so. I look upon the whole scheme as something that existed some two or three centuries ago.

686. You were going to describe the difficulty of unmooring a ship in case of fire? If a ship caught fire near the head of the cove there would be the greatest difficulty in getting her away from her moorings, while by plan F the whole of the ships can be taken away without any difficulty whatever, as if properly made fast with cordage the ship's carpenter could cut the moorings in five minutes. I do not know whether this is or is not overcrowded (*plan F*). There should be a space between these ships sufficiently capacious to receive two coasters, as well as two first-class ships—about 130 feet—not less than that, between the piers. Supposing the extreme breadth of each ship to be 40 feet, the two ships would take 80 feet, and the two coasters each 20 feet—that would make 120 feet; but I would rather have it a little more. By this plan (F) no anchors are necessary to be dropped at all. In one part of New York there were piers carried out something like these, and a buoy placed so that in very severe weather, ships could be made fast to that buoy. But there are all kinds of protection for vessels lying at these piers, because they can be made fast to other ships; or if there should not be a ship there they can be made fast to the bollard on the adjoining pier. If the roadway is kept level with the pier all goods can be taken from the stores immediately along the Circular Quay, right on to the landing-place, opposite the tackle, to be lifted into the ship. At present we can only get to the foot of the stage with a heavy package of wool, such as I have described. This roadway outside the jetty should be upon a slight incline, so that all the water that may fall upon the Circular Quay will rush towards the open culvert near the stores; and then there should be, as I have already stated on a previous occasion, large silt reservoirs for the purpose of collecting all solid matter, allowing only the fluids to pass into the cove by the drain. Those that are now in existence are too small; every shower they choke up. One at the foot of Phillip-street is, I think, stopped up now by the last rain. If you had proper silt reservoirs round the cove there is no reason why 20 tons in a year should go into this beautiful cove. It is only by gross blundering that large quantities of silt are allowed to go into the cove. There has been something said about the expense; of course I can say nothing about the expense, because you may construct works of this kind either of wood or iron; the mode of construction will determine the expense. If I could have got this plan, and have known the kind of erection the Government contemplated, I dare say I should have been able to have come as near the cost, according to the market value of labour and materials, as most persons in the Colony; but not having the particulars before me, of course I am not able to give the Committee any idea. But from my experience in reference to estimates, made by public officers, I place very little confidence in them as a rule; they are made without having detailed information before them, and that generally will form the basis of an excuse if the estimates are exceeded, as they very often have been some 50 per cent., as was the case with the improvements south-west side of the Circular Quay, the City sewers, the Railway works between Sydney and Parramatta; all these works cost, I think, from 1 to 300 per cent. more than the original estimates, without any reasonable cause for the increased charge. There are also many other works which, if I had the time to look through the Parliamentary Statistics, I think many others might be produced as evidence of the worthlessness of such estimates. I wish clearly to be understood that I do not intend to cast any imputation upon the Engineer-in-Chief, whom I consider a valuable public officer, but in my opinion has a great deal too much to attend to, and, in consequence, some of the works which he is expected to carry out are not in my opinion as satisfactory as they might be if he had less to do.

687. There are other plans. The Committee would be glad if you would look at them? Speaking of estimates, I do not like that a statement of the kind I have made should go forth without my being able to

to point to some evidence of the fact. During my Parliamentary career there was an estimate made for a portion of the Circular Quay, which was to cost £ , and it cost more than double the estimate. I stated in the House that before it was completed they would have to take up the platform they were putting down of foreign timber—Oregon—and what I then stated came to pass; the whole fabric of the platform began to decay before the work was finished. It seems to me that, comparing the cost of the two plans F and B with the accommodation offered to the public, the advantage is immeasurably in favor of plan F.

E. Flood, Esq.
17 April, 1873.

688. This is a plan (*plan D*) to show one main central jetty going out from where the Prince's steps are now? This plan I think I have spoken of before—or at least a plan of this kind. The objection I have to this plan is, that all the goods landed upon the pier must pass through one entrance. We have a plan something like it at Melbourne, but there they were compelled to adopt it; they have not our beautiful harbour, where you can build piers or jetties in any shape or form, nor have they warehouses contiguous to the pier. The railway runs right on to the pier and takes the goods away to some distance—3 or 4 miles, I think.

689. Into Melbourne? Yes. We do not require that; our conveniences are so much greater, and we can have them at so much less cost. I do not know what the pier at Melbourne cost, but it must have cost perhaps half a million of money; seeing the kind of quicksand they had to build it on, and knowing they sank many ships there for the purpose of getting a foundation, the cost must have been enormous. As far as I am concerned I do not consider this plan (*D*) at all eligible.

690. *Mr. Watson.*] Having seen plan B and plan F, I gather from your evidence that you consider plan F the most preferable, and the one which offers the greatest facilities to the port of Sydney? I do; and I may say I am borne out by all I have seen in various parts of the world; in England, in the docks in the Thames, and in Liverpool, and in New York, there are no such constructions as raised platforms for drays to take goods from.

691. *Chairman.*] You have been for some years now largely engaged in the shipping business? Yes, I have been actively engaged in it for about the last ten years.

692. You have loaded many ships carrying wool to London? Yes; I have put as many as 54,000 bales on board ship in a season.

693. How many ships did that quantity freight? About fourteen.

694. I merely ask these questions in order to elicit from you whether the circumstance of your having been engaged in this large business in connection with the shipping of this port led you to pay special attention to dock accommodation in England and America? It did. I was very anxious to know how the people in the old country carried out the various works in loading and discharging ships; and I took also particular notice—in connection with that kind of business—of the various tramways I saw. The greatest place in England for tramways is Liverpool; there are tramways in every part of the docks.

695. As far as your observation went, being expressly directed to the subject, it confirmed the advisability of the plan marked F? Yes. It appeared to me that in every place I visited, in the old country as well as in America, the great study they had in view—in addition to the public convenience—was the economy of labour. Plan B certainly creates a necessity for additional labour of a most expensive character by this elevated platform. I recollect being concerned with the Queensland Steam Navigation Company, and we had a jetty at Struth's Wharf, which we found to be too low. We built another with a platform, and we found the platform the greatest possible inconvenience; most of the goods had to be dropped outside the platform and lifted up at the greatest possible inconvenience, because it very often occurred that the place was jammed up and they could not get the drays to the platform.

696. *Mr. Clarke.*] Do you consider that these proposed open sheds and temporary bond are unnecessary? I think they are altogether unnecessary. I have already stated, in my former evidence, that I would enclose the whole place in the way the London docks are enclosed—I mean the whole of the docks about the Thames.

697. Not close to the water's edge? No. I would enclose the land up to the road. They are the same in Liverpool, in most of the docks, but some have open sheds. There are large entrance gates where drays, between certain hours, have ingress and egress; and there is a wicket gate where there is an officer stationed at all times. You can take anything into the dock without interference, but you cannot take anything out; if you are coming out with a parcel you are stopped by the officer. There might be as many gates as you think proper. I am opposed altogether to the public being put to the expense of separating these wharfs. If they are let separately to individuals, then for their own convenience these parties might put up temporary fences themselves, and whatever plan may be adopted these wharfs should let separately.

698. Have you not heard that ships are sometimes compelled to leave off discharging bonded goods at 12 o'clock in the day? Yes, they do complain.

699. Have you heard the reason? Because bonded goods have to be gauged or regauged, and then shifted to a bonded warehouse. But if the whole wharf were enclosed these goods could be left in an open shed, just the same as goods on board the ship.

700. Do you propose to have one open shed right round? Right round the whole place.

701. Would not that interfere with the private stores? No, not at all.

702. *Mr. Wearne.*] If there is to be one shed, surely it would be an advantage to have it off in compartments—it would be far better for each vessel to have a compartment to herself? That is matter of opinion.

703. Your great objection is to the raised platform? Yes; I object to the raised platform as inconvenient and expensive to shippers.

704. But it must be an advantage to all goods imported? I do not think so. The advantage is of a trifling character.

MONDAY, 21 APRIL, 1873.

Present:—

MR. CLARKE,
MR. PARKES,MR. SUTHERLAND,
MR. WEARNE.

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

Lieutenant John Gowlland, R.N., called in and further examined:—

- Lieut. John Gowlland.
21 April, 1873.
705. *Mr. Sutherland.*] Will you look at your proposed plan of the wharf at the Circular Quay (*plan F*). You have estimated the cost of carrying out that work at £60,000? Yes, that is about the estimate.
706. What weight per superficial foot do you propose that your wharf should be able to carry, and what should be the proper weight that a first-class wharf, such as the Government should construct, should bear? Before you go into these matters I must explain to you that I am not an engineer. I made this plan as a sailor for berthing ships, and having made the plan I did my best to obtain as near as possible an estimate from practical men competent to give an opinion as to what the cost would be without studying the subject. I could not go into the weight the wharf should bear per superficial foot, so that I am not prepared to answer the question. My information as to the probable cost has been derived from men who are in a position to give reliable information on the subject.
707. Could you give us the names of these men? One of them is Mr. Simmons, who has built a great many wharfs about Sydney.
708. What is his address? He lives at Balmain, near the Abattoirs.
709. Can you give us the name of any other? Mr. Nancarrow, the chief foreman for Mr. Young, the contractor. I may mention, with reference to Mr. Simmons's career and qualifications to give an opinion, that he built the Grafton Wharf, and he assisted, under Mr. Moriarty, in putting down the piles for the Pyrmont Bridge; he also built Captain Smith's Wharf at Miller's Point, Town's Wharf, and Struth's Wharf. He also built the Waratah Wharf at Newcastle. He gives me an estimate for doing the whole of this work in any way the Government may require, to any specification, for £80,000; that is, adding 25 per cent. for its being Government work, because there is so much rejected by the Government officers. He says that in doing Government work the superintending officers reject and alter things so much that the tenders are always 25 per cent. higher than for ordinary work. He told me that under the supervision of any one he knew he would do this work for £60,000, but it would cost £80,000 to the Government, and for that he would do it in any way the Government wished. I then saw Mr. Nancarrow, and he went into the calculation rather minutely, and his estimate for the whole work would be under £80,000. These are the authorities on which I base my estimate.
710. *Mr. Wearne.*] Has Mr. Nancarrow seen your plan? Not this plan before the Committee, but I showed him one which is very similar—a rough draft in fact. Mr. Nancarrow's estimate is for ten jetties only.
711. Is the drain shown on this plan included? No; but by leaving out the last pier, as I suggested in my former evidence, the money so saved would make that drain. The drain would in fact cost less than the pier,—about £2,000 against £5,000 or £6,000.

Edward Orpen Moriarty, Esq., Engineer-in-Chief for Harbours and Rivers, called in and further examined:—

- E. O. Moriarty, Esq.
21 April, 1873.
712. *Mr. Sutherland.*] Have you seen this plan of Lieutenant Gowlland's, marked F? Yes.
713. Mr. Gowlland states that he has had an estimate for that work from parties who would tender for it, but he cannot himself give us any practical information. We wish for your opinion as to the cost of a wharf such as that you see there, of wood, as represented by Mr. Gowlland, the piles being coppered and the ground filled in to the line shown in the plan, with a drain right round the harbour. We wish to have your estimate of the cost of the wharf as you see it there, complete, but with no buildings upon it, and level with the Circular Quay? I have made an estimate of the cost of the whole of these jetties to be constructed of wood.
714. *Chairman.*] What kind of wood? The best kinds of wood; that is to say, either ironbark or turpentine, which seems to be rather in favour at the present day for the piles; and the superstructure of ironbark, and blue gum for planking. In taking out the quantities I have done so as closely as my own experience of similar work enables me to do. I find the whole cost will amount to £264,654. I beg to hand in a paper containing details of this estimate (*Appendix H*), but I should like to explain how I have arrived at some of the particular items. The piles I have estimated to be 10 feet apart from centre to centre. That has been my own practice in timber structures; but in order that I should not seem to be guided entirely by my own practice, I telegraphed to Melbourne to get the distance apart of the piles of the Sandridge Jetty, to Mr. Wardill, the Inspector General of Public Works, and he sent me this telegram:—“10 feet from centre to centre, single rows, 22 inches diameter at top and 14 at bottom.” Supposing the piles to be 10 feet apart, it will take 1,902 piles; and the depth of water shows that they must average 60 feet in length. I have made a rough approximate sketch of one of these jetties, showing what it must be to carry the weight which a first-class jetty may be expected to have upon it at times. (*Plan produced. Appendix G.*) This shows plan, elevation, and section of one of the jetties. On the left hand side of it is represented the existing wharf front; outside that is the reclaimed ground, tinted pink; outside that again the retaining wall to keep the reclaimed ground up and prevent it tumbling into the harbour. It also shows the rock at the bottom of one of the jetties; it merely gives one, but the others vary but little. It shows also the number of piles longitudinally. This transverse section shows the number of piles transversely. The piles are supposed to be driven 25 feet into the mud at the bottom. I may say I do not think that is by any means excessive, because in the Woolloomooloo Bay Wharf we drove piles 70 feet long, at Glebe Island 75 feet, and in the Pyrmont Bridge from 60 to 75 feet in length.
715. *Mr. Wearne.*] You do not know how deep the rock is? We know it is at all events the depth shown here. The cost of the piles I estimate at 5s. per foot run. In order to show that that is about a fair estimate, I have brought up with me the tenders for the Woolloomooloo Bay Wharf, and also for the Glebe Island Bridge (*produced*). The first tender for the Woolloomooloo Bay Wharf was 7s. per foot run;

run; the next, Mark Faviell's tender, was 4s. 4d. per foot run. With reference to this discrepancy, I may say that the difference in the whole job is not so very great, because their prices vary for other portions of the work in the inverse ratio. We have had tenders varying 100 per cent. Joseph Sorry tenders at 5s. per foot run. This man's prices I have taken because they are about a fair average throughout.

E. O.
Moriarty,
Esq.

21 April, 1873.

716. *Mr. Sutherland.*] Can you get work of the same kind constructed for the same price now? No, certainly not. Piles are dearer now; however, I have put it down at 5s.

717. Are you estimating this work at the same price as the Woolloomooloo Bay Wharf was done for some years back when labour and materials were cheaper? The price we got the Woolloomooloo Bay work done for was 3s. 9d.; but I may tell you that the man was ruined by it; but at the same time his prices for other portions of the work were considerably higher.

718. *Chairman.*] How much do the piles come to at the price you name? 1,902 piles—£28,530. On the piles come a row of transverse caps; these caps I assume to be 14 in. by 14 in., which are the dimensions I have always used, and I have also estimated them at 5s., which I find to be the average price of these tenders. Sorry takes them at 6s. 8d. The caps amount to £5,262 10s. Then there are girders 12 in. by 12 in. Both caps and girders are necessary in order to distribute whatever weight is placed on the wharf over a certain number of piles. They come to £10,500. Guards round jetties, 6,453 cubic feet, £1,613 5s.; braces 14 in. by 7 in., 23,112 cubic feet at 5s.—£5,778. These horizontal and diagonal braces are always used; I have never seen a good wharf without them. Planking 4 in. thick, 1,597 squares—£8,224 11s. That is also the usual price for similar work. Muntz metal for 1,902 piles, at 2s. 3d. per foot superficial. Our prices vary from 2s. 2d. to 2s. 6d. I may tell you that Muntz metal is a very bad material; you can never tell when it will corrode; but we are obliged to use it to save expense.

719. What is the difference between Muntz metal and copper? Copper costs half as much again; Muntz metal is mixed with an inferior alloy. Muntz metal for 428 braces—£21,862 9s. 3d.; Muntz metal bolts for securing braces—£1,394 13s. 4d.; tarring—£2,000; cast-iron shoes for 1,902—£1,902; wrought iron, 34,000 lbs.—£8,500; masonry retaining wall, 19,059 yards—£57,177. This reclaimed ground is proposed, I presume, to be faced with some sort of wall, to prevent the filling in from falling into the harbour. Filling at the back of retaining wall with stone ballast or other approved material, 107,560 cubic yards, at 2s.—£10,756; ballasting, forming, and metalling this reclaimed space—£4,300; ten sheds, at £1,500 each—£15,000; twenty steam cranes, at £750—£15,000; making in all, £240,595 8s. 7d.; add 10 per cent. for contingencies, £24,059 10s. 10d.,—making the whole cost £264,654 19s. 5d. If you divide the whole cost by the number of berths, twenty, it will be £13,232 per berth; that is, supposing these piers to be constructed of timber. Now, I would like to point out a very important matter in reference to this. Probably most Members of the Committee know that the western side of the Circular Quay was constructed of timber between 1852 and 1856. Its first construction cost £47,000, and the cost of its maintenance since, taken from the books of my own Department, has been as follows:—In 1858 and 1859 it cost £2,000 for repairs; in 1860, £6,225; in 1861, £1,196; in 1862, £1,400; in 1863, £1,146; in 1864, nil; in 1865, £16; in 1866, £1,594; and it has cost altogether from 1858 up to the present time £14,000 to repair that timber structure.

720. *Mr. Sutherland.*] How long will it be before we require a new one altogether? It will have to be taken down within the next eight years. It is going rapidly to destruction.

721. *Mr. Clarke.*] It was never properly built? No. It was scandalously done, no doubt. But timber will not last. I have determined on never using timber for a wharf if I can help it. It is a fertile cause of expense.

722. *Mr. Wearne.*] In your estimate have you included the cost of the drain shown on the plan? No. I would put that further back. On this plan the work will cost, as I have said, £13,232 per berth. Some Members of the Committee inspected the Darling Harbour Wharf this morning. There are nine berths there for the largest class of ships visiting Sydney, and the total cost of that wharf, with all the iron in place and finished, as far as the ironwork is concerned, is £40,147. It will take £10,000 more to plank it all over and fill in in the rear, which will make the cost of the whole work £50,000 for nine berths, or £5,555 per berth. My estimate for the Circular Quay was £89,000, which gives £8,090 per berth, showing a considerable balance in favour of the Darling Harbour Wharf, or of my proposed plan for the Circular Quay, over that proposed by Mr. Gowlland.

723. *Mr. Clarke.*] Is that stonework necessary? Yes. I do not see how a lot of filling is to be kept up in 16 feet of water on a muddy bottom without a sort of wall.

724. *Mr. Wearne.*] You have nothing of that kind at Darling Harbour? Yes, there is a stone dyke at the back, and there will be a stone wall on the top of it, for which we have the sum of £10,000 voted. We contemplate spending £10,000 more, and then we shall have a wharf that will last for ever. I do not know that anybody can limit the endurance of a work of that kind. The subject of iron was gone into very carefully by the British Association, who appointed a committee to inquire into it, and they found that the rate of corrosion of cast-iron in sea-water is a quarter of an inch in a century. Now these cylinders at Darling Harbour are one inch and a quarter, which gives five centuries for the ironwork, and then there is a column of concrete inside which will last for I do not know how long.

725. *Mr. Clarke.*] What would be the expense of doing this work in iron instead of wood, on Lieutenant Gowlland's plan? I have not estimated for the whole of this, but I did for one of the other plans, and I think it came to about £290,000.*

726. Would it cost a great deal more to run out this distance with iron? I suppose it would cost half-a-million of money.

727. *Mr. Sutherland.*] Would there be room for the dredge to work between these piers if it became necessary? No, there is not room for the dredge and the punt. There is another very formidable objection to this plan, that in the event of a fire occurring at any of these wool stores there would be four or five ships in dangerous proximity to it, and if a fire occurred on board one of the ships at night there would be great risk of losing the whole tier. Supposing a southerly wind were blowing, and a vessel's fastenings were cast off, she would instantly drop down alongside the next vessel; their yards would get interlocked, and there would be no possibility of getting them extricated. In point of fact these vessel's yards would interlock at any time by 10 feet. There would be extreme difficulty in moving any of them at night with their yards and ropes interlocked. There is another great objection:

Many

* This was for ten berths, or £29,000 per berth.—E.O.M.

E. O.
Moriarty,
Esq.

21 April, 1873.

Many of the vessels that come here from England go on to China and India with coals; and if you go down to the Circular Quay now you will see a large steam vessel alongside discharging her cargo on one side, while she is taking in what they call stiffening and her coals from a steam collier on the other side. A vessel could not do this with this arrangement. You could not by any possibility get a coasting steamer in there between two of them. There is another great objection to these jetties: If the goods landed on the jetty are to be run on shore by tramways, there is no space left on which to stack them, and no space for a bonded store, or any kind of store. Another objection is, that vessels at these jetties have no windward fastenings. They would have to lay out their own anchors or buoys. I believe no vessel could lie in safety broadside on to these jetties in a southerly wind. Down Phillip-street there is a regular funnel. We find at Newcastle, where we are obliged to moor vessels broadside on to the westerly winds, that they sustain frequent injury, and our wharf is constantly sustaining damage. But it seems to me that one of the most formidable objections is the danger of fire. If the design were to concentrate all the trade, or as much of it as possible, opposite these wool stores, I could understand it; but if the design is to utilize the whole space, then it seems to me it is a mistake.

728. *Chairman.*] The jetties are not confined to the space opposite the wool stores—they go the whole length of the wharf frontage? Yes; but by this plan there is more of the business concentrated here than by the other.

729. Do you know a contractor named Simmons, who has built several wharfs about Sydney, Struth's Wharf, Smith's Wharf, and the Grafton Wharf? No, I cannot say I do. If he put up the Grafton Wharf I think he is a person to be avoided. Some of the Members of the Committee have seen what sort of a structure that is.

730. It has been stated to the Committee that a contractor named Simmons, who has put up several wharfs, would contract to do the work, according to that plan, for £80,000? That is mere folly. If his qualifications are that he put up the Grafton Wharf I think that ought to be sufficient.

731. *Chairman.*] Leaving out of sight any particular work that he has put up, if he undertook a contract and found security for its performance, would not the Government be quite safe? I do not think the Government could be safe in entering into a contract for work which is not described in a specification.

732. Supposing the work to be done were fully specified, the piles to be of certain descriptions of wood, subject to examination, coppered in a certain manner, driven a certain length, at certain distances apart, with girders and caps of specified strength, and all subject to supervision, with a power of rejection;—supposing he undertook, under all these specifications and conditions, to build the wharf for £80,000, with ample security for its performance, would not the Government be safe then? The Government is never safe in entering into wild bargains with private individuals. The man would do just as much work as he could make money by, and no more.

733. Does not the Government always enter into contracts with private individuals? They do; but they know whom they are dealing with. I should not give up my experience of the cost of this work for Mr. Simmons or any body else who has not had half the experience that I have. I have brought with me, and have already shown you, the practical proofs of what this work will cost.

734. *Mr. Clarke.*] Do you know Mr. Nancarrow, foreman for Mr. Young, the contractor for the Post Office? No.

735. *Chairman.*] Do you know Mr. Young? Yes.

736. It was given in evidence that his principal foreman would enter into the same contract for the same money? I should like to know what he proposed to do. To say that he will build these jetties for a certain sum is one thing; but to say he will do the whole work according to a specification he has not seen is what I do not expect from any sensible man.

737. Would you not advise the Government to accept Mr. Young's tender? I would, if Mr. Young knew what he was going to do.

738. Is he not a man who has shown that he knows what he has to do? Yes, certainly.

739. If all the requisite conditions for the construction of these jetties were reduced to a legal specification, and Mr. Young were to tender to build the jetties according to this specification, and bind himself to them, have you not sufficient confidence in him to believe that he would perform what he undertook? There is no specification as yet. No doubt if there were a specification, and Mr. Young tendered under it, he could be relied upon to perform the work. But that is not the case at present. As I understand the matter, we are going now not upon a specification but simply upon a vague statement that Mr. Young or his foreman will do certain work for a certain sum, with no specification whatever. He may consider that piles 15 feet apart will be sufficient, or metal of 15 ounces to the superficial foot—I should want it 24 ounces, and the piles 10 feet apart; there is a difference of £20,000 at once.

740. What you mean is that any estimate, roughly made now, would in all probability fall very short of an estimate made under proper specifications? Yes. It is not of the slightest value without specifications. That is what induced me to give a rough approximate sketch to show the quantity of work, and it is based upon ascertained data as regards the depth of the piles, their distance apart, thickness of copper, and so on.

741. You will be good enough, if on looking over the transcript of your evidence you think it necessary, to append any other information that may be of use to the Committee.

WEDNESDAY, 23 APRIL, 1873.

Present:—

MR. LLOYD,
MR. MACINTOSH,

MR. SUTHERLAND,
MR. WEARNE.

THE HONORABLE HENRY PARKES, ESQ., IN THE CHAIR.

Mr. Richard Nancarrow called in and examined:—

Mr. R.
Nancarrow.

742. *Chairman.*] What situation do you hold in Sydney? I am foreman for Mr. John Young, the contractor.

743. How long have you been foreman for Mr. Young? I have been with him somewhere about twelve years, one time and another; out of that twelve years I have been somewhere about ten years in his service.

744. All that time in Sydney? No, not in Sydney; in Victoria and in other parts of the Colonies.

745.

Mr. R.
Nancarrow.

23 April, 1873.

745. What other parts of the Colonies? I have been through his work in Victoria and here, and also upon the railways both in Victoria and here.
746. Have you been in any other Colony? I have been in South Australia, but not under Mr. Young.
747. During the time you have been engaged with Mr. Young what works have you been employed upon as his foreman? Almost every kind of work in the shape of building and heavy timber work.
748. Could you mention some of the principal public works? The Ballarat Gaol is one job I did for Mr. Young in Victoria. I then came over here and built St. John's College for him, and afterwards went back to Melbourne, and took charge of the Lunatic Asylum at Kew.
749. Were you engaged upon Mr. Young's contract for the Lunatic Asylum at Kew all the time, or only part of the time? Nearly all the time. There was another man over me there.
750. Have you been engaged on any other public works in Victoria or New South Wales? This Post Office I have done right through for them.
751. Had you anything to do with the Exhibition Building? Yes; I put up all the heavy timber work there for him, in the roof and so on.
752. Have you ever been engaged upon the construction of wharfs? I have done a good deal of heavy pile-driving for bridges, and that sort of work.
753. Where? In Victoria,—the approach going to the Asylum at Kew.
754. Did you do any other work of that description in Victoria? No.
755. Have you ever been engaged on railways? Yes, on the viaduct at Picton, after the first foreman left it.
756. Did Mr. Young contract for the Post Office in Melbourne? No.
757. Have you been engaged on any other works in this Colony besides those you have enumerated? No.
758. What were you engaged upon in South Australia? I built the Hospital on the Borders, at Mount Gambier, for the South Australian Government, or the first portion of it, under a contract for £11,900.
759. Were you the contractor? I was the agent for the work; I went up and took out the quantities, tendered for the job, and got it. I was then mixed up with Mr. James Mackenzie.
760. When were you in South Australia last? That was before I came away to this Post Office.
761. How many years ago? About five years ago.
762. Was your attention ever directed to the river wharf at Port Adelaide? No. I tendered for the wharf at Willunga, when I was in Adelaide.
763. Have you had any intercourse recently with Lieutenant Gowlland? Yes; he called on me the day before yesterday, about 12 o'clock, showing me some plans he had prepared for the wharf below here.
764. How many years have you been engaged in work of this description altogether? From my childhood.
765. I rather mean how long have you been engaged in a responsible position as overseer, or sub-overseer, or contractor? That is a position I may say I have filled from my childhood, because I was brought up with my father as a builder in the West of England.
766. We place before you a plan, marked F, prepared by Lieutenant Gowlland;—have you seen any plan of the same kind before? Yes; that is a similar plan to what he showed me.
767. You understand the work which it is proposed by that plan to construct? Yes, I understand the portion described to me by Mr. Gowlland. That is what I have gone into.
768. You understand that the jetties are to be run out a considerable distance into comparatively deep water, and to be supported by piles coated with Muntz metal? Yes.
769. And you have considered the necessary strength both for platform and supports for such jetties, I suppose? Yes.
770. How far apart do you suppose the piles ought to be to support a jetty of that kind? I have taken them at 8 feet from centre to centre.
771. That would not be much more than 7 feet actually between the piles? About 6 feet 6 inches or 6 feet 8 inches. These long piles, such as would be required for one of these jetties, would average 50 feet in length, and most likely would run 14 to 20 inches on the top; then the spaces would be less. I consider the piles in a work of this kind should not be more than 8 feet apart from centre to centre, but some people might say 10 feet.
772. Of what wood should they be? I cannot think anything is better than ironbark. In fact I do not know where you would get suitable timber other than ironbark.
773. And the floor of the jetty —? Should be ironbark also. Floor cap pieces and longitudinals I have taken as gum.
774. There is a new portion of the wharf to be made, independently of the jetties, as represented in the plan, tinted pink —? From Mr. Gowlland's information I have taken that at 1,600 feet in length by an average of 60 feet wide.
775. Of what would the retaining wall for that be? I would have nothing at all of that kind; it should be all pile work as described to me. The piles for that I have taken at an average of 40 feet in length and 10 feet from centre to centre in the cross section, for a length of 1,600 feet by 60 feet, not to include the piece beyond the end of the northern pier. The jetties I have estimated for are nine in number.
776. What is the intended length of these jetties? I have taken them at 200 feet by 80 feet inside and 60 feet outside.
777. Have you given sufficient attention to the subject, from the plan and the information supplied to you by Lieutenant Gowlland, to be able to form an approximate estimate of the cost of construction? Yes, I have gone into the quantities as near as possible.
778. We are to understand that there will be a row of piling, of an average width of 60 feet, along the face of the present wharf? Yes; these piles will be of an average length of 40 feet, 8 feet from centre to centre in the longitudinal section, and 10 feet in the cross section. The jetties will be 200 feet long by 80 feet wide inside and 60 feet outside, and the piles of an average length of 50 feet. The cap-pieces and longitudinal pieces might be of gum, but the piles and waling braces should be of ironbark.
779. With your view of the work required, what do you suppose it can be constructed for;—I only ask for an approximate estimate? I think the wharf would cost about £37,260—that is, taking it at 1,600 feet by 60 feet.
780. The extension of the wharf proper, marked pink on the plan, without the jetties? Yes. The jetties I have taken as nine in number, of the dimensions I have already specified—200 feet in length by 80 feet wide at one end, and 60 feet at the other, and with piles of an average length of 50 feet; each of these would cost £6,637. Nine times that would be £59,733; making a total of £96,993. I have no doubt

- Mr. R. Nancarrow. doubt many men would say I have placed these piles too thick, and that it might be done with piles 10 feet apart from centre to centre.
- 23 April, 1873. 781. Would you be prepared, under responsible sureties, to take a contract for the sum you have named? I think I might, as far as I see at present, unless they were to saddle me with heavier timbers than I have considered necessary.
782. With specifications based upon the information that has passed between the Committee and you as to the description of work? Yes, I should.
783. As to the character of the wood, the position of the piles, and so on? Yes, I think that is a safe estimate for the work according to the information I have received from Mr. Gowlland. I think it would be a first-class job, and would bear any weight that could be put on it in reason.
784. With what do you propose to coat the piles? With Muntz metal of 18 ounces.
785. *Mr. Wearne.*] What size of piles have you reckoned for? I have taken them of average lengths of 40 feet for the wharf and 50 feet for the jetties; perhaps some might be 14 inches in diameter, while others would run up to 20 inches; it depends upon how the timber would come.
786. *Mr. Macintosh.*] Does your estimate include all necessary mooring piles and all ironwork? Yes, everything attached to the work, as Lieutenant Gowlland described it to me.
787. Your estimate does not provide for any covering? Nothing but the surface work as you see it.
788. *Mr. Wearne.*] Does it provide for the drain shown in this plan? No, I have not included that drain.
789. *Mr. Sutherland.*] What thickness do you propose for the flooring? 4 inches. The cap-pieces 12 inches by 9 inches—the longitudinals 9 inches by 9 inches—and all the waling pieces 9 inches by 4 inches. I should wale this both on the longitudinal and cross sections.
790. You have taken the piles at an average of 50 feet in length. Suppose they should require to be 60 feet, what difference would that make in the estimate? Any extra length of piles to that extent would be worth, in driving, and taking one thing with another, not including Muntz metal, about 5s. a foot run. Of course these shorter piles can be done for a little less than that. It is only a rough estimate I have made according to Mr. Gowlland's description; and there are many things that might add to or reduce the estimate. He just called on me for a short time. I was only about an hour with him.
-

WHARF ACCOMMODATION, SYDNEY HARBOUR.

APPENDIX.

[A to G are Plans.]

[Handed in by E. O. Moriarty, Esq., 21st April, 1873.]

H.

ESTIMATE of Cost of Timber Jetties for Circular Quay.

No.	Materials.	Quantity.	Amount.
1,902	Piles, averaging 60 feet, 22" diameter at head	114,120 feet, at 5/-	£ 28,530 0 0
214	Caps, 14" × 14", from 80 feet and under	21,050 cubic feet, at 5/-	5,262 10 0
210	Girders, 12" × 12", the length of jetty	42,000 cubic feet, at 5/-	10,500 0 0
	Guards round jetties, 14" × 14"	6,453 cubic feet, at 5/-	1,613 5 0
428	Braces, about 80 feet, 14" × 7"	23,112 cubic feet, at 5/-	5,778 0 0
	Planking, 4" thick	1,597 squares, at 5/3/0	8,224 11 0
	Muntz metal sheathing on 1,902 piles	380,400 feet, at 2/3	42,795 0 0
	" " " 428 braces	194,333 feet, at 2/3	21,862 9 3
	Muntz metal bolts for securing braces	20,920 lbs., at 1/4	1,394 13 4
	Tarring	2,000 0 0
	Cast-iron shoes	1,902 cwt., at 20/-	1,902 0 0
	Wrought-iron	340,000 lbs., at -/6	8,500 0 0
	Masonry, retaining wall	19,059 yards, at 3/0/0	57,177 0 0
	Filling at the back of retaining wall with stone ballast or other approved material	107,560 cubic yards, at 2/0	10,756 0 0
	Ballasting, forming, and metalling reclaimed space	4,300 cubic yards, at 1/0/0	4,300 0 0
	10 sheds, at £1,500	15,000 0 0
	20 steam cranes, at £750	15,000 0 0
			£ 240,595 8 7
	Add 10 per cent. for contingencies	24,059 10 10
			£ 264,654 19 5

For 20 berths = say £13,232 per berth.
 Darling Harbour—9 berths, at £50,000 = £5,555 per berth.
 Echelon plan for Sydney Cove, £8,090 per berth.

[Handed in by the Chairman, 23 April, 1873.]

I.

Robert Symons, Esq., to The Chairman of the Select Committee on Wharf Accommodation.

Sydney, 23 April, 1873.

Sir,

I have the honor to acknowledge receipt of your summons to attend at the Committee Rooms on Tuesday next, but very much regret that an important business engagement will prevent the possibility of my complying with your request.

I may mention, that in a conversation on the subject with Lieut. Gowland, I stated that the probable expense of the proposed additions to the Circular Quay would be about £80,000; but since then, having gone into the matter in detail, I find that it may be done under £100,000.

In the event of tenders being called, I am prepared to tender for the contract.

I have, &c.,
 ROBERT SYMONS,
 p. D.M.S.

[To Evidence given by Capt. J. R. Myhill, 19 December, 1872.]

J.

Captain J. R. Myhill to The Colonial Treasurer.

Harbour Master's Office,
1 May, 1867.

Sir,

I respectfully beg to call your attention to a plan for the improvement of the Circular Quay, drawn in accordance with my views on the subject, which were expressed by me before the Commissioners appointed to inquire into the condition of Port Jackson, in December, 1865, with a hope that the same may be laid before the Honorable the Minister for Works and before the Legislative Assembly.

For an explanation of the plan shown, I beg to refer you to answers to queries pp. 98 and 99, in the Report of the above Commission, also to verbal evidence pp. 46 and 49 in the same report, where my ideas on this important subject are clearly shown, and which very shortly must be taken into serious consideration by the Legislature.

Commencing at the foot of New Pitt-street, where the tank stream empties itself, it will be seen that there, and also along the whole of the south side, the silt has been thrown off from the shore for a considerable distance. On the east side, where there are no streets, the silting is trifling, until you get to the harbour steamers' reserve, where large quantities of ballast have been and are now, with quantities of other loose matter, still allowed to lay on the very edge of the Quay for shipment and other purposes, where being much higher than the Quay it is washed into the cove by every shower.

The plan submitted plainly shows how the silt has been washed down the steep road-way opposite the Mariner's Church; also, how the water remains deeper off Campbell's Wharf, where there is a cess-pool to intercept the silt as it falls.

It is to be hoped that the Honorable the Minister for Works will take this most important matter into his serious consideration, so that something may speedily be done to prevent the further silting up of the cove, and that better accommodation may be afforded for the fine class of ships that now frequent our port, and greater facilities given them for discharging and loading, the berth opposite the Commissariat Stores being the only one in the harbour where a ship of heavy draught can lay alongside the Quay for that purpose. The manner in which the ships lay moored at the south and east sides of the Quay is injurious to the ship in having to hang the immense weight of an enormous stage on to the gunwale or rail, and dangerous in consequence of the inside bilge being brought so close to the rocky bottom that the shore may be reached by a stage 50 or 60 feet long, particularly during the heavy gales of winter, which blow from the west direct on to their broadside. Certainly the ships lying at the Circular Quay run more risk of receiving serious damage from the above cause than they encounter at any other time during their voyage, or in visiting any other port in the commercial World.

Although we have such a beautiful harbour, with steep bold shores, and abundance of material to make it all that a mercantile people could wish, it is the worst provided with accommodation for shipping of any port that shipping frequent.

I believe that a sum of money has been voted for improving the Circular Quay. Would not this sum, with the yearly rental added, go far in commencing more extensive improvements than contemplated, and a further sum granted yearly until those improvements were completed? And is it not as necessary that money should be expended on so desirable an object as the prevention of the silting up of the cove, and in providing good accommodation and facilities for shipping, as in furnishing a powerful steam-dredge, punts, tug, &c., to preserve a certain depth of water? Surely one is as necessary as the other, and I am confident that both must be done, or the cove through silting and sewerage will soon be rendered unapproachable to shipping of large tonnage.

I further beg to observe that should a jetty with shed be run down the middle of the cove, the shed should be a bonded Queen's Warehouse, so that cargoes might be landed as the goods came to hand, and not be tossed over and over again in the ship's hold, searching for marks for which entries have been passed. All entries should be passed for the shed, and rent charged for goods remaining there over a certain time.

I have, &c.,

JOHN RICHARDSON MYHILL.

N.B.—A plan of proposed improvements, according to the above, on a large scale, was left with the Honorable the Secretary for Finance and Trade, and a tracing copy left with the Engineer-in-Chief for Harbours, in May, 1867.

J.R.M.

SEPARATE

SEPARATE APPENDIX.

PROCEEDINGS, EVIDENCE, &c., TAKEN BEFORE THE SELECT
COMMITTEE ON "CIRCULAR QUAY."—SESSION 1871-2.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 25. TUESDAY, 23 JANUARY, 1872.

12. CIRCULAR QUAY (*"Formal" Motion*):—Mr. Flood moved, pursuant to Notice No. 5,—
(1.) That a Select Committee, with power to send for persons and papers, be appointed to inquire into and report upon the best means of improving the Circular Quay.
(2.) That such Committee consist of Mr. Byrnes, Mr. Tunks, Mr. Farnell, Mr. Hill, Mr. Speer, Mr. Sutherland, Mr. Alexander, Mr. G. A. Lloyd, and the Mover.
Question put and passed.

[Further proceedings stopped by prorogation of Parliament.]

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 25 JANUARY, 1872.

MEMBERS PRESENT:—

Mr. Flood,		Mr. Farnell,
Mr. Hill,		Mr. Speer.

Mr. Farnell called to the Chair.

Entry in Votes and Proceedings appointing the Committee, read by the Clerk.
Committee deliberated.

Ordered,—That the Under Secretary for Finance and Trade and E. O. Moriarty, Esq., be summoned to give evidence at the next meeting, the former to produce a return of the receipts and expenditure in connection with the Circular Quay, for the past five years.

[Adjourned until Tuesday next, at *Eleven* o'clock.]

TUESDAY, 30 JANUARY, 1872.

MEMBERS PRESENT:—

Mr. Farnell in the Chair.

Mr. Flood,		Mr. Hill,
		Mr. G. A. Lloyd.

James Thomson, Esq. (*Acting Under Secretary for Finance and Trade*), called in and examined.Witness *handed in* four returns relative to Circular Quay. (*Vide Appendices A 1 to A 4*)

Witness withdrew.

E. O. Moriarty, Esq. (*Engineer-in-Chief for Harbours and Rivers*), called in and examined.Witness *produced* proposed plan of Circular Quay, showing improved accommodation.

Witness withdrew.

Committee deliberated.

Ordered,—That Captain Hixson and Captain Bell be summoned to give evidence at the next meeting.

[Adjourned until *Friday* next, at *Eleven* o'clock.]

[Further proceedings stopped by prorogation of Parliament.]

MINUTES OF EVIDENCE.

TUESDAY, 30 JANUARY, 1872.

PRESENT:—

MR. FARNELL,		MR. HILL,
MR. FLOOD,		MR. G. A. LLOYD.

JAMES FARNELL, Esq., IN THE CHAIR.

James Thomson, Esq., examined:—

1. *Chairman.*] You are Acting Under Secretary for Finance and Trade? Yes.
2. Can you give us any information in reference to the leasing of Circular Quay? Yes. I have here a copy of the conditions of the last lease taken, which I can leave in the hands of the Committee. (*The witness handed in the same. Vide Appendix A 1.*) It was sold by auction on the 30th November, 1869, for a term of three years, commencing on the 1st of January, 1870.
3. Can you furnish us with the amount it brought at auction on the last occasion when it was sold? It was leased to A. H. K. Maxwell, for £5,000 a year.
4. Have there been any deductions from that rental since the lease was entered into? None that I am aware of.

Jas. Thomson,
Esq.

30 Jan., 1872.

- Jas. Thomson, Esq.
30 Jan., 1872.
5. Can you tell us how much it brought when it was sold previously? It was let to Mr. Henry Moore for the three previous years, 1867-68-69, at £3,900 per annum.
6. Can you inform the Committee what has been the cost for repairs to the Circular Quay, during the last (say) five years? Yes, I have a return, showing the cost of those repairs. (*The witness handed in the same. Vide Appendix A 2.*) Also, a return of the rents for the last five years. (*The witness handed in the same. Vide Appendix A 3.*)
7. Can you give us any information in reference to Wollongong and Kiama Harbour, as to the revenue derivable from tonnage duties? I could give you a rough idea of it, but I could append to my evidence more correct information both with reference to the duties collected at those places, and also at Newcastle. I have also here a return showing what the Circular Quay has been leased for from the 1st April, 1850, to the present time. (*The witness handed in the same. Vide Appendix A 4.*)

Edward Orpen Moriarty, Esq., examined:—

- E. O. Moriarty, Esq.
30 Jan., 1872.
8. *Chairman.*] You are the Engineer-in-Chief for Harbours and Rivers? Yes.
9. Do you know the nature of this inquiry? Yes; at least I have seen a notice of it in the daily papers.
10. It is to inquire and report upon the best means of improving the Circular Quay? Yes.
11. Have you recently made any examination of the Circular Quay, or of the waters adjacent? About two years ago I made a plan with a view to improve the facilities for loading and unloading ships at the Circular Quay, in accordance with the instructions of the then Minister for Works, Mr. Sutherland. A petition had been presented to the Government by some of the leading mercantile men of Sydney, requesting increased facilities for shipping accommodation at the Circular Quay. Upon that I was instructed to prepare a plan, which I now beg to submit to the Committee. (*The witness produced the plan.*)
12. What did you propose to do? I proposed to construct in front of the present stone wharf a series of iron wharfs generally, similar to that which is now being constructed at the head of Darling Harbour,—the arrangement to be, that each ship would have a distinct berth for itself, fenced off both from the public roadway and from the adjoining berths, and having a shed on it, so that the loading could be discharged with great rapidity, and might, pending its removal to other stores or places, be kept under the shed, which I propose to construct on the berths.
13. Was it proposed to extend the present Quay further out, or to construct a series of iron quays? A series of them, which would be continuous, and extend the present water frontage into deep water. I think you will form a more correct idea by referring to the plan. (*The Chairman referred to the plan.*) It was with reference to the eastern side that my proposal went; I did not propose to touch the western side. At present it seemed to me that this would give ample accommodation for some years to come. I proposed an arrangement by which the vessels would lie in echelon, overlapping each other; by that means there is very little if any room lost. The vessels project beyond each other, so that their bowsprits and jibbooms would not interfere with the adjacent vessels. I have shown on this plan some of the largest vessels that come into port, as the "Sobraon," the "Parramatta," the "Maid of Judah," drawn to scale. It will be seen that the arrangement will give berthing to eleven vessels of large size, that is from the Prince's Stairs round to the Government Boat-sheds.
14. What accommodation at the present time does the Circular Quay afford on the eastern side and within the extent proposed on this plan? At present there is room for about five ships, lying off as they do a considerable distance from the wharf, landing their goods and receiving cargo by means of long stages. These stages entail a considerable delay both in fixing and unfixing, and also a considerable breakage of goods, by their being trundled ashore over them. I propose that each berth should be distinct in itself, and fenced off from each other, and from the road-way, having a shed with trams leading to it, and trollies to run from the vessel to the shed.
15. How far westerly from the present Quay will these proposed wharfs extend—that is, into the water? It is a varying distance, according to position; but I have arranged so that there shall be at least 25 feet of water at the end of the wharf. I propose also that the height of the wharf shall be about 4 feet 6 inches above that of the present road-way, so as that it would be a mean of a large ship's load-water and light-water, and at high and low water-mark.
16. Would that afford greater accommodation for drays taking these goods from the wharf? Yes, the level of the proposed wharf would be just that of the bed of a dray, so that any number of drays might back up to each of these berths, and loading and unloading could go on from these wharfs continuously.
17. This system might be extended all round the cove? Yes.
18. What would be the cost of the present proposed addition to the wharfs? My estimate for it is £63,249.
19. The water along the eastern and western side of the Circular Quay has very much silted up of late;—has it not? Not that I am aware of. We keep the dredge employed there whenever we hear that a vessel grounds.
20. How is it, then, that these long stages are required? For two reasons: In one part of the Circular Quay a large vessel could not come close to the stone wall because the water was never deepened there, and there is a rocky ledge that projects. In parts where it is deep the long stage is used, because it is more easy to run goods along an inclined plane to the shore than it would be to hoist them up vertically and then to lower them.
21. By your proposed plan there would be no necessity for these stages? No necessity. I propose that on each berth there should be a steam winch fixed, and a proper tramway laid down, on which the trollies should run to the shed.
22. Do you include in your estimate the cost of these steam cranes? Everything.*
23. Is there any other means which could be adopted for the improvement of the Circular Quay, without resorting to the construction of these wharfs? It was proposed at one time to construct a jetty in the centre of the cove, but I think there are a great many objections to that. In the first place, it would seriously interfere with the available water-way for shifting large ships. In the second place, it would concentrate at the end of the jetty the whole of the business of four or five ships loading or unloading. All the goods must come out at the very narrow piece of wharf at the end of the jetty. By the present arrangement the whole of that business is distributed along the length of the Quay.
24. There was £100,000 placed on the Estimates for the construction of a wharf at Circular Quay;—was that such a one as you have spoken of running out the whole length? That includes the whole thing. Since then I have thought it better to carry out only half of the work ———
25. I was speaking of the jetty? I never contemplated any other jetty.
26. You are aware that there was a sum of £100,000 placed on the Estimates? That included the whole work, a similar arrangement on the western side to that which I now propose on the eastern.
27. Do you know whether there is very much silting up now taking place in the cove? There is a good deal of silting up going on all over the harbour, both in the cove and elsewhere.
28. Where does it come from at the Circular Quay? Most of it from the Tank-stream, but some of it from Phillip and the other streets leading downwards to the harbour.
29. You sat on a Commission at one time which took a large amount of evidence upon the silting up of the harbour of Port Jackson? Yes.
30. Has any interest been taken since that time by the Corporation of Sydney to avert the continuance of the silting up of the harbour by the washing down of sand from the streets? No steps of any importance have been taken. I believe they have constructed a few gully shafts, but they have not dealt with the subject as a whole, and I have frequently had occasion to report to the Government since upon the subject, urging upon them and upon the Corporation the serious injury to the harbour, caused by the discharge of silt into it.
31. It has been ascertained, I believe, that a bar or embankment has been for some time forming at the western entrance of Sydney Cove, to the west of the red buoy? My impression is that it is to the north-eastern side.
32. Yes, but it is extending westerly from that point? No doubt of it. I have not had recent surveys made, but from having had to send a dredge there constantly I know that a great deal of silt has been taken up there, though it is impossible to take up the whole, because the finer particles are spread over the harbour.
33. Do you think the sewer contributes, to any large extent, to that? I am sure the sewer is the entire cause of that; there can be no doubt about it.

* Note (on revision):—I find this was a mistake. The cost of the sheds was accidentally omitted.—E.O.M.

34. If there were sufficient precautions taken by the Corporation to prevent the sand washing off the streets into the harbour, would not that save a great deal of expense in using the dredge in the harbour? The main difficulty in dealing with the question is this, that although we can take up the heavy sediment deposited just at the mouth of the sewer, we cannot go over the whole area of the cove, which is being steadily shoaled, because the lighter particles are deposited all over the area of the cove, while the heavier particles are deposited at the outlet.
35. Is there any appreciable tide or current in the cove? There is none; simply the rise and fall.
36. Then anything that is brought into the cove by the sewers is sure to be deposited? Yes; and not only is that the case, but the balance of current, whatever there is flowing up and down the harbour, is upwards at this point from the peculiarity of the formation of the harbour. If you look at a general map of Sydney Harbour you will find that the tide flowing up has a long reach from the Heads to Bradley's.
37. I think you said that by using the dredge you could keep the bar that is forming pretty clear? Yes; but we find that the bar is always on the south side of Fort Macquarie, and that there is very little formation on the eastern side.
38. Have you sufficient dredging power now at your command? I think we have at present; I do not know that there is any urgent necessity to get more dredges for Sydney.
39. Have you a sufficient number of punts to enable the dredges to be kept going through the day? We have some money on the Estimates for two additional ones. A plan has been adopted lately of sending most of the stuff to sea, to get rid of it for ever.
40. Is that much more economical than sending it to the Botanical Gardens? Yes, much more; and it enables the dredge to do a greater quantity of work.
41. Do the persons who are entrusted to take it to sea convey it to a sufficient distance to prevent its return to the harbour? I think they do; they are ordered to do so, and they can have no interest in not doing it, as the work is not contracted for, but the punts are our own, and the men are paid by daily wages.
42. Is not a portion of the Circular Quay built on piles? Yes, a considerable portion; all the western part, from Queen's Wharf to Campbell's Wharf, is built on piles.
43. Covered with planking? Yes.
44. And then again covered with stone? I removed the whole of the stone and left the planking bare, as I found the stones kept the planking moist and made it liable to rot.
45. In what state of repair is that portion now? Only middling; we are repairing it from time to time; but I am unwilling to carry on very extensive repairs because the piles on which the whole thing rests will, I think, have to be removed and be replaced with iron ones in a few years more.
46. Contemplating in future the carrying out of a general plan? Yes, as soon as these piles are gone.
47. *Mr. Hill.*] If these contemplated improvements are carried out, what do you propose to construct to stop any further silting? This plan has no reference at all to silting, but is simply for the accommodation of shipping. The sewerage and silting of Sydney must be taken into consideration as a whole.
48. Would not some precautions be necessary if this were carried out to prevent further silting? That would be necessary in any case.
49. How long is it since the silt traps alongside the Quay were constructed? About three years.
50. Under whose supervision? Under my own, that is to say, three or four of them.
51. Can you give me any idea how often those traps have been emptied since they were constructed? I cannot tell you; there is a person in charge who has strict orders to attend to them after every heavy rain.
52. Whose duty is it to see that carried out? A man named Tuohy.
53. What becomes of this silt when the traps are emptied? It is carted away.
54. Do you know of your own knowledge that it is carted away? I know that it must be carted somewhere.
55. Will you undertake to say that some of these traps have not been left for upwards of fourteen months, and never touched? I do not know personally whether they have or not, but I do not think they can have been left for so long a time. I do not know that I am responsible for all the silt-traps. I know I constructed three of them.
56. The traps I more particularly allude to are those along the eastern side—one immediately opposite the Blackwall Stores? I know that I am responsible for three of them—one on each side of the Custom House, and one at the foot of Phillip-street. As far as I am aware they have been regularly emptied.
57. How long has the Cove, which includes the whole harbour, been under your supervision? I presume it was under my supervision when I was appointed to my present office—about eleven years.
58. Can you give us any idea of the difference in the depth of water in our cove now and when you took possession? I could not at this moment, off-hand; I have soundings, to which I could refer.
59. Have you observed whether the greater portion of the silting up has taken place on the eastern or western side? The bulk of the silting is on the south-western and north-eastern extremity of the Quay, from the main sewer.
60. Are you in a position to recommend anything to avert the silting up you complain of near the Battery Point;—has it ever occurred to you that some means should be taken at once to stop it? It has, and I have made recommendations to the Government on the subject, not only in reference to that but to the whole sewerage system of Sydney, and I have proposed to reverse the whole system.
61. Are you aware that some of the sewers at the southern end of the Circular Quay are absolutely filled up at low-water, so that a man can walk there? Yes.
62. When you took possession ships could lie where it is now dry land? It has been repeatedly dry there, and then deepened to 20 feet by the dredge; whenever it gets into that state we have the dredge taken round.*
63. Do you believe it is necessary along the eastern shore, where there is a continuous wash from the slightest rain, to raise that portion of the Quay, to prevent the silt going into the harbour? I think any raising would be a merely temporary matter, for the silt would continue to be deposited until it was raised to the level.
64. Have you noticed, the last five or six years, that the eastern side is in a very dilapidated state, immediately approaching the edge of the harbour? There are several parts where it is very dilapidated.
65. Has it ever been proposed to make any alterations there to avert the silting up? I do not think any alterations such as you refer to would have any great effect in preventing the silting. The silt must go somewhere; it must either remain on the road or go into the harbour.
66. Would it not be better to remain on the road than to go into the harbour, because it could then be carted away? I thought it better to have the question of sewerage treated as a whole—to have large deposit-tanks, into which the sewers should empty themselves.
67. Are you aware that a large quantity of ashes and cinders are laid near the Circular Quay by those who have steam-engines and wool-presses? I believe there are.
68. Whose duty is it to have them removed? The lessee is, I believe, bound by the Government to keep the wharf in proper order.
69. There are a large quantity lying near the Blackwall Stores ready to be washed into the harbour? If so, it is an abuse and ought to be removed. I may state that I am not responsible for the land part; I simply take cognizance of the water part.
70. *Mr. Flood.*] What is the distance from the east to the west side of the cove, where there is water deep enough for any ship you have mentioned? The width is about 720 feet.
71. How do you propose to moor such a vessel as the "Sobraon";—she is represented here as lying side-on to the pier? I should have proper screw-moorings at each extremity. I should screw the moorings into the mud. There is no difficulty about that.
72. Would there be one mooring at the head and one at the stern? Yes. By this arrangement each ship would come out readily without interfering with the others at all.
73. The moorings you speak of are not shown on the plan? No, we have not come to that yet. There would be no difficulty in fixing them.
74. Are not the moorings a matter of some importance? No doubt moorings are absolutely necessary, but we could fix them in a few days.

* NOTE.—This refers to the outlet of the Tank Stream.

E. O. Moriarty,
Esq.
30 Jan., 1872.

75. Is not one of the great objections shipowners have to the present Quay that they have hanging to the sides of their ships heavy ironbark stages, formed of poles some 70 or 80 feet long? This arrangement obviates that altogether—no doubt it is a great inconvenience.
76. Are they not compelled to drop two anchors? No doubt; they have one at the bow and another at the stern.
77. In addition to several large chains fast to the shore? That is the case.
78. Suppose a pier were run out so that ships could be on each side, is there not sufficient depth for a ship to turn in? It might be done in that way, but it appeared to me that this gave the advantage of having a larger shore-line for the discharge and loading of cargo, besides removing the objection of having the great bulk of the business collected at one end of the jetty. It also has this recommendation, that each berth would be converted into a perfectly enclosed yard, as I propose to have each fenced round, the gate of which could be locked at the close of the day.
79. That is in fact giving to each ship a separate entrance? Yes.
80. Did you ever see in any of the great docks of England, at London, Liverpool, or Bristol, such a contrivance as that? No, I have not; but the Liverpool and London Docks are wholly enclosed by walls and —
81. What is to prevent our running sheds all round the Quay, and having proper entrances to those sheds, so that persons desiring to go to the ships must pass in and out through gates, according to the regulations?—In Liverpool the sheds are continuous;—are they not? Yes.
82. Carts and drays can go under those sheds and take goods out whether it is raining or otherwise? Yes.
83. Ships are in a position to discharge whether it is wet or dry? Yes, that is what I have said we should have here. We might have sheds attached to each berth, into which goods could be run to and from the ships by means of trollies on a tramway. At Liverpool, London, and Bristol the docks are enclosed by a wall running round them, but I do not think that could be managed here, because the Quay is a public thoroughfare of which the public have had the use from time immemorial. The next best thing to that is to have each berth distinct in itself.
84. If you had piers run out to accommodate two ships lying at each side, could you not give more accommodation than by this plan? There is no doubt that by a series of jetties extending at right angles to the present shore you would have a greater amount of accommodation, but then you would have two ships at each jetty, and it would be difficult to divide their business so as to keep their goods separate.
85. Does the difficulty to which you allude, if it be a difficulty, exist on all the piers and wharfs round Darling Harbour, from ships lying at each side of a pier? The wharfs at Darling Harbour are each of them private property, and on the shore end you have walls and gates.
86. Do you not know that they are all sufferance wharfs, and that the public have a right to go wherever they can find a berth vacant, and that hence they become public wharfs? They have the right to go there, but that does not prevent the owner shutting his gates.
87. Still sufferance wharfs are in fact public wharfs where any one can go and discharge his ship by complying with the regulations under the Act of Parliament? All the wharfs in Darling Harbour are private wharfs, and in each case there is a boundary-wall with a gate leading to them; these gates can be closed when the day's work is over, and all the stores can be locked in.
88. Still you do not mean to say that persons having ships lying alongside of such wharfs can be prevented ingress and egress? No, but they have to go in and out through a postern gate where there is a wharfinger or other person to see that the goods are not stolen.
89. Is not that what you propose here? Yes.
90. Except that you have a separate entrance to each ship? Each ship's berth is separate from the rest.
91. Would not that be more expensive than if you had two ships lying at one pier? I do not see how, if you had two ships lying at one pier, you could arrange to prevent their cargoes being mixed.
92. Is not that a matter which concerns the owners of the cargoes rather than a matter with which the public have to do. I have referred to the piers in Darling Harbour, where a vessel can load and unload on each side—have you ever heard of any great difficulty arising in consequence of that mode of loading or unloading vessels? I do not think they would be parallel cases, because each of those wharfs at Darling Harbour has a shore end, upon which are sheds that may be used for stacking and storing goods, and for a variety of purposes.
93. I would direct your attention to the Grafton Wharf? I think there is a considerable area of land attached to Grafton Wharf, and that trams are laid down upon which trollies run to and from the vessels and sheds, to load or unload vessels. I have never seen any quantity of goods stacked on Grafton Wharf.
94. Do you contemplate these sheds being places where goods are to remain? No, they are to be merely places where goods may remain temporarily in case of rain, or of a large ship, such as the "La Hogue," having to be discharged with great expedition to prevent the accumulation of goods on the wharf, which might suffer by exposure. I would have this shed to put perishable goods into.
95. Do you not know as a matter of fact, that the Market Wharf and Grafton Wharf have no sheds to put goods into for the accommodation of the public, excepting the stores adjacent? I am aware of that, but they have those stores.
96. But persons landing goods have no right to those stores to put their goods into, in the way you contemplate persons putting goods under these sheds? I am not aware that they have any right to the stores.
97. Suppose piers were constructed, would it be necessary to put moorings down the centre, so that ships could be swung in safety? I think Sydney Cove is too contracted to extend jetties into available water.
98. I think you stated a short time since that there was plenty of room for the "Sobraon" to swing, supposing a jetty were run out? Yes.
99. Is it not much more easy to moor a ship to a jetty, and less expensive, than to moor her in the way you suggest, to have a screw mooring head and stern as you have proposed? I would have bollards on the wharf; that would, I think, be as convenient and safe a mode of mooring ships as any. There is this other advantage that you get the ship's end on to resist the wind when it blows strongly from the south, and would be less liable to damage than lying broadside on.
100. Would she not have the pier on the opposite side to make fast to? Undoubtedly; but considering the play that would have to be allowed for the rise and fall of the tide, there would be risk of injury to the vessel.
101. The sheds you have spoken of could be constructed upon these piers in the same way that you recommend in your plan, could they not, for the purpose of depositing goods taken out of or to be put into the ship? They could be, but it would in my opinion be necessary to divide each jetty into two distinct compartments, to keep one ship's business separate from the other's.
102. Why is that necessary? For the convenience of loading and unloading it is desirable that the goods should be brought down as fast as may be, but it may happen that the goods cannot be taken on board at once, and therefore it is necessary that there shall be some place where they may remain in safety for a day or two.
103. Can you give the Committee any instance, either in London, Liverpool, or elsewhere, analogous to that which you recommend? In London and Liverpool, as I have already stated, the docks are surrounded by boundary walls, and the public are not admitted to them at unreasonable times or without a permit.
104. You recommend that these places should be enclosed but that each should be enclosed separately;—would there be any difficulty in enclosing the whole of the wharfs you contemplate under this plan? None; they would be all enclosed; the only point of difference in my plan is that I would enclose one from another, so as to break off each wharf. The object I had in view was this: I think it not at all unlikely that if this plan were carried out, instead of the whole of the Circular Quay being let to one contractor or lessee or a number of lessees who unite together to prevent competition, the merchants of Sydney would take, one, two, or three berths as their business might require, and pay a distinct rent for each, and that by this means a much larger rent would be derived. It would be worth a merchant's while to pay £300 or £400 a year for one of these berths, as it would enable him so much better to arrange his own business.
105. Would not the division you speak of very much interfere with the space and convenience of the public? I do not see how it could—to this extent it would no doubt; it would bring a larger amount of business to the north-east side of the Circular Quay. There is no doubt that the width of the roadway opposite the Blackwall Stores is very restrictive, and probably the business from all those ships and wharfs would make that part very crowded. That I admit would be an objection.
106. Would not the building of jetties or piers still more crowd that part of the wharf, and at the same time give more accommodation to the public? I think that depends upon the amount of traffic you have to pass. If you have the same number of vessels discharging and receiving cargo, and the same number of tons passing this narrow piece of road, I do not think it matters in the slightest degree whether they go on to jetties, as suggested by you, or on such piers as proposed in my plan.

E. O. Moriarty,
Esq.
30 Jan., 1872.

107. Why do you contemplate that goods landed on the wharfs suggested by your plan should remain there any considerable time? I do not contemplate that they would remain there any considerable time; all I contemplate is, that the accommodation should be such as would enable the persons dealing with these goods to remove them at their own convenience, so that they might remain there a day or two days, or a week, according as they could arrange their business.
108. Would not that subject the public to great inconvenience, by persons making warehouses of these sheds instead of removing their goods as soon as landed. The object in the erection of sheds is, as I understand, to allow importers to land their goods in wet weather;—is not that the object? Yes.
109. Not to allow goods to be stored there for any length of time? I do not think that is the object, and I do not think it would pay anyone to convert these sheds into permanent stores at the rent that would probably be exacted for them.
110. What would the £63,000 you estimate cover? The whole of the works, wharfs, sheds, steam engines.
111. Have you a detailed estimate? I have. (*The witness handed in the same. Vide Appendix B 1.*)
112. The estimate you now produce, does it include the moorings? It includes everything.
113. Have you any specification, describing the way in which the work is to be performed, the material it is to be composed of, and so forth? No, I have not. I have not made the detailed drawings, but I am able to give a very close estimate, because I am now constructing a wharf at the head of Darling Harbour, and I propose that this should be of the same character. I have kept the prices in this estimate higher, because the price of iron has been going up of late. For instance, in our contract for the wharf at Darling Harbour, wrought iron girders are contracted for at £20 15s. per ton; they are put down here at £25 a ton; cast iron cylinders are charged £20 15s., but are put down here at £24, and so in proportion for all the other work.
114. Does that estimate take into consideration all the excavation and dredging? We have no excavation.
115. Will there be no masonry connected with that? Yes, a little; that is allowed for.
116. How did you make a calculation of the work without a specification? It is not necessary to make a detailed specification as would be done for a contractor; it is merely a preliminary estimate, and certain dimensions and a certain character of work are taken as the basis.
117. Supposing the Legislature thought proper to carry your recommendation into effect, and you were removed from office by death or otherwise, what would the public have to guide them? Somebody else would take up the work; and if he carried it out as I propose he would do it at the same expense.
118. But in the absence of a specification how could he determine what you intended to carry out? I do not see that he could very well, but he could go and see a wharf exactly similar to this; he would then make his detailed drawings, and having made these, would take out his quantities and put certain prices to them.
119. *Chairman.*] You have all these in the office? Yes, the whole of them. We never think of writing a specification of works until we have to carry them out; all we do is to make a preliminary sketch. We know exactly the weights of the girders, cylinders, and so on, and the prices at which we are getting the work done; and therefore we are able to form an estimate. Up to the present time I have received no instructions to prepare a specification, as the work has not been authorized by the Government, and it is not the practice in the Public Works Department to prepare detailed plans or specifications of works until it is known whether they are to be carried out or not, because it involves a great expenditure in making a set of detailed drawings for works which Parliament may never vote the money for.
120. *Mr. Flood.*] Is there not a difference between a detailed specification and a general specification? You may call this a specification, if you please, but it is simply a proximate estimate.
121. Do you not think the silt-traps that Mr. Hill called your attention to altogether too small for the purpose intended? I think they are too small.
122. Have you anything to recommend with reference to them? I would recommend that there should be a greater number; and I have always contended that the Corporation should construct a greater number of silt-traps in these streets.
123. You think the Corporation ought to have silt-traps all over Sydney, to prevent the harbour being silted up? Undoubtedly.
124. Is it not attended with great expense to allow the silt to flow into the harbour, and then to have it removed by dredging? I think the silt ought to be intercepted before it comes to the harbour, but being in the harbour it must be dealt with. The main objection is that you cannot remove the whole of it; for while the heavier particles are deposited near the mouths of the sewers, the finer portions spread around, and are in process of warping up the whole of the harbour.
125. You think the plan you have suggested is necessary, and would be an advantage to the public? I think it necessary, in order to keep this port in the position she ought to occupy. I believe goods are imported into Melbourne rather than into Sydney by reason of the increased facility they have in Melbourne in unloading and loading ships.
126. Have they any place in Melbourne which possesses the natural advantages of this port as a place for loading and unloading cargo? No, they have nothing like our natural advantages—they have simply a jetty extended into an open roadstead.
127. You look upon this as a natural dock? As a splendid natural dock.
128. Has it ever come under your consideration whether it would be an advantage to have the railroad continued to the harbour? I think I have never heard of an instance where there were both a railway and a harbour that the railway was not extended to the harbour.
129. Have you turned your attention to the consideration of the best line for the continuance of the railway from the present terminus to the harbour? No, I cannot say I have gone into that matter.
130. There is a large shed upon the Circular Quay;—do you think it desirable that it should remain there? No, I think it is a great nuisance where it is; it does not seem to me to be of the slightest use, as goods have to be carted to it from the ships to be unloaded, and then recarted and taken away.
131. You think it should be taken away? Yes, immediately.
132. There are several steamer wharfs at different parts of the Quay? Yes; I would leave these untouched. There is a reserve at the foot of Phillip-street, which I have left, and the same with all the others.
133. You do not suggest any improvements beyond the Government boat-sheds? No, not for the present, but ultimately; no doubt, the wharfs could be extended as far as Fort Macquarie.
134. Are you aware of the amount at which the Circular Quay is rented annually? I think it is £5,000.
135. Is it your opinion that if these improvements were carried out, the revenue would be considerably augmented? I believe they would pay more than 5 per cent. on the outlay. I believe each of these jetties would let at from £400 to £500 a year.
136. Have you considered the other part of the Circular Quay,—the south-western as well as the western? I do not propose going into that just yet, for it seems to me that the present proposed alterations would meet the present requirements; but it will be necessary to pull that portion down in a few years.
137. Ships are discharged there without stages? Yes.
138. *Chairman.*] You have said something in answer to a question by Mr. Flood as to the closing up of the streets leading to the Circular Quay;—would it not require an Act of Parliament to close up those streets? Yes.
139. If they were closed up the owners of property would be entitled to a large amount of compensation? I do not think an Act of Parliament could be obtained, and I do not see that any object would be gained by doing it, and greater security would be obtained by having each berth separate, as I have proposed.
140. The sheds you propose are intended merely for the temporary protection of goods? Merely temporary—for housing goods from bad weather.
141. At the present time a large quantity of goods, hides, and other things, lie upon the Circular Quay previous to shipping? Yes, sometimes for several days.
142. These could be put into sheds? Yes.
143. Some of these hides are very offensive? Yes.
144. Do you approve of leasing the Quay, or do you think the Government should keep it in their own hands? I do not see any other plan. If these berths were formed, I think each separate berth should be put up at public auction; and I believe a far better rent would be obtained than under the present plan, as I believe that the merchants now combine and agree to pay a certain price for the Quay.
145. Would you sell from year to year or for a term of years? For three years.
146. Would you bind the lessee to keep the buildings in repair? Yes; I would have all necessary clauses of that kind in the lease. I have shown an alternative arrangement here (*referring to the plan*), but I am in favor of the echelon arrangement.
147. *Mr. Flood.*] Do you not think it would be better for the Government to sell that property altogether and to get rid of it? That is a question I have never thought of.
148. To compel the purchaser to improve according to the plan submitted at the time of sale? I should like to think over that question before giving an opinion.

APPENDIX.

(A 1.)

[Appendix to Evidence given by James Thomson, Esq., 30th January, 1872.]

The Treasury, New South Wales,
1 November, 1869.

CIRCULAR QUAY, INCLUDING HARBOUR STEAMERS' WHARF, SYDNEY COVE.

AT noon of Tuesday, the 30th instant, the Lease, for three years, commencing on the 1st January, 1870, of the dues authorized to be collected at the Circular Quay, including the Harbour Steamers' Wharf, Sydney Cove, will be put up to auction for sale, in one lot, in the Hall of the Exchange, Bridge-street, Sydney.

ARTICLES AND CONDITIONS OF SALE, by public auction, in the Hall of the Exchange, Bridge-street, by Messrs. Harrison & Jones, on Tuesday, the 30th day of November, one thousand eight hundred and sixty-nine, at noon, by the HONORABLE SAUL SAMUEL, ESQUIRE, TREASURER AND SECRETARY FOR FINANCE AND TRADE, acting for and on behalf of HER MAJESTY THE QUEEN, of the Lease of the Wharfage and Tonnage Rates payable at the Circular Quay, and the newly-formed portion thereof, known as the Harbour Steamers' Wharf, situate at the north-east side of Sydney Cove, for the term or period of three years next after and commencing on the first day of January, one thousand eight hundred and seventy, under and subject to the provisions and enactments of the Acts of the Governor and Council, 10 Victoria, No. 11, and 14 Victoria, No. 15.

1st.—The highest bidder shall be Lessee, provided he himself, and the sureties he proposes, who shall be named and be present at the sale of the rates, be approved of by the said SAUL SAMUEL, and shall not come under the twenty-fourth article of these Conditions; but if otherwise, or if any dispute shall arise between the bidders, or between the seller and bidder, for the rates, before the names of the successful bidder and his sureties are entered in these presents, which entry is to be made as soon as it conveniently can be, then the said rates shall be put up again at the amount of the next undisputed bidding previous to that at which the same had been disposed of: Provided that if the party who shall be declared to be the purchaser of the said lease, shall decline or be unable to give the required security and render it necessary again to submit the lease to auction, such party shall be held responsible for all loss sustained on each re-sale; and in case of non-payment of such loss, the same shall be recovered as and for liquidated damages, and such party shall not be entitled to any profit which may arise from such re-sale.

2nd.—The Lessee and his approved sureties shall, at the time of letting, enter into a bond in double the amount of the rent for one year, in security for the regular payment of such rent during the continuance of the said lease, and for the due performance and observance of the following Conditions, and of all and every the provisions of the Acts of the Governor and Council aforesaid.

3rd.—The rent is to be paid monthly, in advance, to the Treasurer and Secretary for Finance and Trade,—the first month's rent on the first day of January next, or *within* seven days therefrom and subsequent payments within seven days after the commencement of each ensuing month; and if not then paid, interest, at the rate of eight pounds per cent. per annum, from the day of the default until paid, is to be charged in addition to the stipulated rent.

4th.—Upon the passing of a Bill empowering the Lessee to charge rates upon goods shipped or laden from the Circular Quay, he will be required to pay an *increased rent*, to the extent of *one-sixth* of his bid, for the dues as now levied.

5th.—The Lessee shall, at the time of or immediately after executing the bond, give a warrant of attorney to enter up judgment, as a collateral security for the due payment of the several monthly instalments.

6th.—The boundaries of the Circular Quay are as follows:—County of Cumberland, parishes of St. James and St. Phillip: Commencing at a point on the north-east shore of Sydney Cove, distance sixty-eight feet eight inches westerly from the northerly prolongation of the west side of Macquarie-street, and marked on a rock with broad-arrow, and bounded on the east by a line parallel to Macquarie-street, and at a distance of sixty-eight feet eight inches, and bearing southerly four hundred and five feet three inches, by a line at right angles to Macquarie-street, bearing easterly nineteen feet nine and a half inches by a line parallel to Macquarie-street, bearing southerly three hundred and forty-nine feet nine and a half inches, by a line bearing about south eight degrees west ninety-one feet nine inches, and by a line parallel to Macquarie-street, bearing southerly one hundred and sixty-two feet; on the south by a line parallel to Albert-street, bearing westerly one hundred and ninety-eight feet eleven inches to the west side of Phillip-street, by Phillip-street, bearing southerly seventy-six feet to Albert-street, by the westerly prolongation of the northern side of Albert-street, bearing westerly six hundred and twenty feet, by a line bearing north about twenty-five feet to a rail fence, and by that fence north-westerly to the east side of Pitt-street; thence on the west by a line bearing northerly to the north-east corner of Messrs. Morehead and Young's store, on the west side of Pitt-street, at the Queen's Wharf; thence by a line bearing northerly, dividing it from the Queen's Wharf, from the Commissariat and Ordnance property, from the Dockyard, from the Colonial Storekeeper's and the old Water Police premises, and thence produced northerly to a point on the wall of Messrs. Campbell's property, at a distance of ninety-nine links from the outer edge of the new portion of the quay; on the north by the southern boundary of Messrs. Campbell's property, and its easterly prolongation, in all ninety-nine links to the edge of the quay on the cove, and by the outer edge of the quay southerly, easterly, and northerly, to the point of commencement; excluding, however, that portion of the quay extending from the Commissariat and Ordnance property to the cove, and having a frontage of twenty-five feet on each side of the centre of the crane erected thereon; reserving also the portion required for the prolongation of Argyle, Pitt, Castlereagh, Elizabeth, and Phillip streets, and of the Queen's Wharf to the waters of the cove; and reserving also the right of entering upon, and making repairs, and placing materials in the vicinity of such portions of the quay as may from time to time require repair; and reserving also the right of making the tramway hereunder mentioned, and all tolls and dues to be collected thereat, free of charge to the Government or Contractors, or persons employed to make such repairs and construct such tramway: And provided also, that that portion of the quay, lying and situated to the northward of a line drawn at right angles to its eastern boundary-line, and bearing westerly to the waters of Port Jackson from a point on that boundary-line, distant two hundred feet southerly from its north-easternmost corner, be reserved exclusively for the use of ocean steamers when so required.

The boundaries of the Harbor Steamers' Wharf were published in *Government Gazette*, No. 194, of 1862. (A plan of the Quay, showing the portions to be leased and reserved, will be exhibited prior to the day of sale.)

7th.—No goods belonging to Her Majesty, Her Heirs, or Successors, or intended for the Public Service, nor any ship or vessel belonging to Her Majesty, or employed in the Public Service, shall be charged by the Lessee with the payment of any wharfage rates or tonnage dues.

8th.—The Lessee will be entitled to the entire use of the large shed and crane, but not of the other buildings or erections now on the wharfs, nor will he nor any other person be allowed to put up any other buildings, sheds, or erections of any kind whatsoever, without the express sanction of the Government. It is also to be understood that all other buildings, sheds, or erections, not expressly reserved by the Government, will be liable at any time to be removed.

9th.—A space of one hundred feet in length shall be reserved for the uninterrupted working of the Steam Dredge, opposite any portion of the wharfs where her employment may be rendered necessary to maintain the required depth of water.

10th.—The right of the Lessee shall extend only to the unobstructed use of the wharfs, which are, nevertheless, to be used by him as Public Wharfs and thoroughfares for landing, depositing, and embarking goods and passengers, and for no other purpose.

11th.—Ten feet of the wharf at the Old Dockyard will be reserved for the convenience of the water tanks, and also a frontage of fifty feet opposite the Commissariat Stores, with a right of further frontage on either wharf, should any ship or vessel belonging to Her Majesty, or employed in the Public Service, require such accommodation.

12th.—The space of one hundred and fifty-seven feet between the southern extremity of the Commissariat Reserve and the centre of the steps at the Old Queen's Wharf, is reserved for the use of the Watson's Bay and Manly Beach steamers, and such other harbor steamers as the Secretary for Finance and Trade may from time to time direct.

13th.—A frontage of thirty-five feet at the south-eastern steps is also reserved for the use of the North Shore Steam Ferry-boats.

14th.—A portion of one hundred and twenty-eight feet southerly from the north-eastern extremity of the Harbor Steamers' Wharf, is reserved for the exclusive use of Harbor steamers.

15th.—

15th.—The steps opposite to the Custom House, the southernmost half of the steps at the Old Queen's Wharf, and the steps nearest to Campbell's Wharf, are reserved for the convenience of boats.

16th.—The steps and other reserved spaces must be kept free from obstructions, in accordance with article 25 of these Conditions, and Government retain the right of entire control over such reserves.

17th.—The Government reserves the right, at any time during the term of the lease, to charge the *increased rent* mentioned in the 4th paragraph of these Conditions, in the event of the Bill therein referred to becoming law.

18th.—The Government reserves to itself the right of shutting off any portion of the said Wharfs for repair or alteration which may become necessary, in consideration of which a proportionate reduction in the rent will be made during the time occupied by such repairs, in the same ratio that the space so shut off may bear to the total extent of the Wharfs.

The Government also reserves to itself the right of taking, at any time or times during the term of the lease, any portion or portions of the Circular Quay or Harbor Steamers' Wharf that they may think fit, for the purpose of laying a tramway, railroad, or other road or way, for the conveyance of passengers or goods in or upon carriages drawn or impelled by horses, or by any other power; and for the purpose of erecting such a terminus and such a goods shed or goods sheds and other buildings, to be used in connexion with such tramway, railroad, or other road or way as aforesaid, as the Government shall think proper—in consideration of which a proportionate reduction in the rent will be made, in the same ratio that the space so appropriated may bear to the total extent of the Wharfs—with full right to the Commissioner for Railways, or any Lessee or Lessees from the Commissioner for Railways, or from Government, to the tolls and dues which may be authorized to be collected at the said tramway, to collect and receive the same for his and their own benefit.

19th.—The Lessee will be required to keep the Wharfs and their appurtenances in good and suitable repair during his tenancy,—reasonable wear and tear only excepted.

20th.—The Lessee will be required, at his own cost, to provide at all times during the continuance of the lease, all proper and necessary materials and articles for the weighing and taring of all dutiable goods that may be landed or deposited upon the said Quay or Harbour Steamers' Wharf.

21st.—The Lessee shall not be at liberty to assign or sub-let the Wharfs, or any portion thereof, nor to assign or sub-let the collection of the rates herein referred to, to any person whomsoever, without having previously obtained the consent of the Government, in writing, under the hand of the Treasurer and Secretary for Finance and Trade, to do so.

22nd.—The Lessee shall be responsible for any damage to the said Wharfs, buildings, ringbolts, &c., thereon, caused by any neglect or want of due care on the part of the said Lessee, his wharfinger, or servants, or of the officers or crews of ships or vessels lying at the Wharfs. Any such damage, or any repairs, other than such as may be rendered necessary by fair wear and tear, shall, at or before the termination of the lease, be made good, and effected at the expense and cost of the said Lessee, to be determined by the report of the Engineer for Harbours and Rivers, or any other qualified person appointed to inspect the same, under the authority of the Government, the amount of which expense or cost shall become and be a part of the rent agreed to be paid for the said rates, and shall be recoverable in like manner, by distress and sale of the goods and chattels of the said Lessee, under a warrant to be issued by the said Saul Samuel, the Treasurer and Secretary for Finance and Trade for the time being, or other proper officer.

23rd.—The Lessee is to be accountable for the proper conduct of his collectors, wharfingers, or servants, in the manner pointed out by the aforesaid Act.

24th.—No person who stands indebted to the Government for any sum or sums of money shall be permitted to become Lessee, unless with the consent of the Treasurer and Secretary for Finance and Trade.

25th.—The Lessee is also hereby bound by the Regulations published in the *New South Wales Government Gazette* of the 24th July, 1855, relating to the Circular Quay (and of which a copy is hereto annexed), so far as they are not inconsistent with the reservations mentioned in this notice.

26th.—Any vessel laden with cargo entering the Harbour shall be allowed to take any berth that may then be unoccupied, unless such berth shall have been previously engaged from the Lessee for another vessel then actually in harbour: Provided always that smaller vessels shall not be allowed to claim berths suitable for larger vessels, when accommodation can be afforded to the smaller vessels at any other part of the wharf; and any vessel having completed her discharge, or the time by law allowed for that purpose having expired, unless it be loading and paying tonnage dues, shall be compelled to give way to any laden vessel requiring a berth to discharge.

27th.—The Lessee will not be entitled to charge wharfage dues on any goods transhipped from vessels actually employed in the coasting trade of this Colony.

28th.—No rates, dues, or other charges whatsoever, shall be collected or made by the Lessee, excepting such only as are expressly authorized under the provisions of the aforesaid Acts of the Governor and Council; and in case any complaint of overcharge or illegal demand be made, and the recovery of any sum of money paid in consequence thereof shall be sued for in the Metropolitan District Court, the Lessee binds himself to submit to the jurisdiction of that Court.

29th.—The amount of duty imposed by the Stamp Duties' Act upon the lease, counterpart lease, bond, warrant of attorney, and on the foregoing conditions of sale, is to be borne by the Lessee.

30th.—Persons having affixed their signatures to these conditions, in token of their having become Lessee or sureties for Lessees, will be held to have previously obtained all necessary information, and will not be entitled to allege ignorance or any other cause for their not fulfilling all and every obligation incumbent on them by these conditions, or under the enactments of the Act of Council aforesaid.

SAUL SAMUEL.

(Regulations referred to.)

Colonial Secretary's Office,
Sydney, 23rd July, 1855.

CIRCULAR QUAY—SYDNEY COVE.

THE following Rules, for the regulation of the Circular Quay in Sydney Cove, Port Jackson, having been made by the Justices appointed to execute the duties of Police Magistrates within the City and Port of Sydney, and approved by His Excellency the Governor General, in the terms of the Act of the Governor and Council, 5th William IV, No. 13, are published for general information.

By His Excellency's command,
C. D. RIDDELL.

REGULATIONS FOR THE CIRCULAR QUAY IN SYDNEY COVE.

1. No vessel shall be moored off the Circular Quay, except in such position as shall be in conformity with these regulations.
2. No warp, hawser, or cable, shall be made fast within 15 feet of the top step of any of the landing-places; nor shall any such warp, hawser, or cable, pass within that distance of the top step; nor shall any warp, hawser, or cable be so placed as to impede the free access, by land or water, to such landing-places; nor shall any part of the hull of any vessel be placed or remain in front of the boundary-posts or pillars erected on either end of the landing-places, nor in front of the steps, nor in any manner to impede the access thereto.
3. No carriage, cart, dray, barrow, or other vehicle shall stand or remain (except for the purpose of loading or unloading), within 30 feet of the front of any of the public landing-places, nor within the same distance of that part of the Quay reserved in like manner for the steam ferry-boats.
4. No boat plying for hire shall remain at any of the landing-places after landing passengers, nor lie off either of the landing-places in such manner as to obstruct the passages to or from such landing-places.
5. No boat (excepting the boat of the waterman next in turn for a fare) shall remain nearer than 10 feet of the top step of any of the landing-places.
6. No boat shall ply for hire, except at the public landing-places.
7. No merchandise shall be landed or shipped at any of the public landing-places.

8. Any person who may commit a breach of these regulations, or any of them, shall, on conviction before any Justice or Justices, forfeit and pay a penalty not exceeding one pound, together with costs.

9. All penalties imposed under the foregoing rules and regulations, together with costs, shall be paid forthwith, or within such time as the convicting Justice or Justices shall direct; and in default of payment the offender shall be committed to the common gaol at Darlinghurst, for any period not exceeding one calendar month.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

STEAM DREDGE "FITZ ROY."
(PETITION FOR CONSIDERATION OF THEIR WAGES—EMPLOYEES ON BOARD.)

Ordered by the Legislative Assembly to be printed, 23 January, 1873.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned workmen and mechanics on board of the Government Dredge "Fitz Roy," now at work at Shark Island Flats, Macleay River,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners have been at work on board the dredge "Fitz Roy" since her being placed in commission, and during such time have received wages considerably less than what are allowed to the men in the Sydney dredges.

2. Your Petitioners have respectfully represented this to Mr. Moriarty, Engineer-in-Chief, but only two men have received an advance in their wages equivalent to the Sydney rate, viz., the mate and blacksmith.

3. That your Petitioners are labouring under great disadvantages compared with the Sydney dredgemen, in consequence of all stores and other necessaries required by them having to be carried from Sydney to the Macleay, thereby incurring expense in freight, commission, &c. Your Petitioners further have to provide their own boats to go and return to their daily work; and owing to the dredge constantly shifting her station your Petitioners are compelled to remove their houses and household effects very frequently, thus entailing an expense more than equal to house-rent were your Petitioners in a stationary situation.

Your Petitioners therefore humbly pray that your Honorable House will take these statements under your consideration, and grant them such relief as your Honorable House may deem expedient.

And your Petitioners will, as in duty bound, ever pray.

[Here follow 8 Signatures.]

1872-3.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CHANNELS NEAR SOW AND PIGS SHOAL.

(CORRESPONDENCE RESPECTING DEEPENING.)

Ordered by the Legislative Assembly to be printed, 24 April, 1873.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 12 March, 1873, That there be laid upon the Table of this House,—

“Copies of all Papers and Correspondence between the Admiralty Surveyor, Marine Board, and others, with the Government, respecting the deepening of the Channels near the Sow and Pigs Shoal.”

(*Captain Onslow.*)

CHANNELS NEAR SOW AND PIGS SHOAL.

LIEUT. GOWLLAND TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Sydney, 14 June, 1872.

SIR,

I have the honor to bring under your notice the following extract from a letter to me, from Rear-Admiral Richards, the Hydrographer of the Navy, with reference to the shoaling of the Sow and Pigs Channel, at the entrance to Sydney Harbour. Admiral Richards says:—

“I have been looking at the east channel of the Sow and Pigs reef, and think it would be worth the while of the Government to have the bottom tried by boring to the depth of 3 or 4 feet, which could be easily done by an iron rod with a weight attached. If it is a bottom which could be dredged, it would not be a very expensive process to make a channel of a cable wide, which would admit of an iron-clad entering. When we were thinking it possible that a line-of-battle ship might have been sent with the relief crews of the ships on the station, the difficulty of anything over 23 feet draught entering became a consideration.”

The “*Megara*,” a lighter draught ship, was consequently chosen and sent on this occasion.

I need scarcely urge on the Honorable the Treasurer the importance of having an entrance channel to this magnificent harbour deep enough to admit all classes of shipping.

The present channels are gradually silting up.

Such ships as H.M.S. “*Galatea*,” the Flying Squadron, the American ship, “*St. John*,” and one or two others, have been compelled to await a high tide to enter or leave.

By comparison of a late survey made by me in 1869, with one by Captain Denham in 1857, there is observed a diminution in the depth, during the interval, of from 1 to 2 feet in places on the Sow and Pigs flats. Indeed, the action on the harbour by the discharge of sewerage into it, the various reclamations, &c., have so seriously altered the contour of the bottom during late years, particularly in the bays, and around the commercial wharfs fringing the shores of the city, that I purpose, with the approval of the Honorable the Treasurer, to make a minute and comprehensive resound of the whole of the waters of Port Jackson, on a large scale; and likewise to extend the survey to the head of navigation, towards the Parramatta River, so as to have on record reliable data for past and future comparison.

I have, &c.,

JNO. J. GOWLLAND,
Admiralty Surveyor.

The President of the Marine Board.—W.R.P., 18/6/72. G.E., B.C., 18/6/72.

The Marine Board concurs in these suggestions of Lieut. Gowlland, and strongly recommend them to the favourable consideration of the Honorable the Treasurer.—FRANCIS HIXSON, 24/6/72.

The Under Secretary for Finance, &c.

Approved.—W.R.P., 26/6/72.—Let the work at the Sow and Pigs take precedence.

Letter to Lieut. Gowlland, 28.—G.H.R. Put away.—G.E., 28/6/72.

LIEUT. GOWLLAND TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Sydney, 29 July, 1872.

SIR,

I have the honor to forward herewith enclosed, a skeleton Plan* of the Sow and Pigs Flats at the entrance to the harbour; showing the borings of the bottom recently obtained in the west channel.

It will be observed that there is a thick deposit of sand and clay over the bed of rock underlying this ship-channel, through which a gutter or passage may be dredged without difficulty to any required depth.

Referring to my letter of the 14th June, with reference to resounding the harbour, I would now beg to suggest to the Hon. Treasurer that this duty may be delayed until the calmer days of summer come round; as it is indispensable that this work should be very carefully and accurately performed, which I find great difficulty in doing—accompanied with considerable loss of time—at this season of the year, during the prevalence of strong westerly winds.

In the meanwhile, not to lose time, I purpose, with the approval of the Hon. Treasurer, starting for the Hawkesbury River this week, to take up the survey of its waters from Broken Bay to the head of navigation; which will probably occupy me three months, by which time a change of season and winds will have come round, more favourable to the satisfactory continuation of the examination of this port.

I have, &c.,

JNO. J. GOWLLAND, Lieut. R.N.,
Admiralty Surveyor.

Will Lieut. Gowlland report upon what course he recommends in order that the passage may be commenced to be dredged at once.—W.R.P., 30/7/72. Lieut. Gowlland, R.N., G.E., B.C., 30/7/72. Please return.—G.E.

I beg to recommend that this letter, together with my former letter on the subject, with all papers, plans, &c., relating to the subject, should be forwarded to the Engineer-in-Chief of Harbours and Rivers, with instructions that the works should be proceeded with as soon as possible.—JNO. J. GOWLLAND, August 5, 1872.

I most earnestly recommend the proposal of Lieut. Gowlland to the immediate attention of the Engineer-in-Chief of Harbours and Rivers, so that no time may be lost in commencing to dredge the passage through the sand-bank at the Sow and Pigs Reef.—W.R.P., 6/8/72.—The Minister for Works.

The Under Secretary for Public Works, with plan and reports.—G.E., B.C., 6/8/72.

Mr. Moriarty, B.C., 9/8/72.—J.R.

I

* sketch
attached.

I shall have the borings in the *eastern* channel, as suggested by the Hydrographer, immediately made; and shall likewise obtain the set and velocity of the currents, to enable me to determine on the direction of the proposed channel.—E.O.M., 9/8/72.

See separate report herewith, m.p. 73-775, dated 25/3/73.—E.O.M. B.C., Under Secy., P. Works. Five plans also transmitted.

THE PRESIDENT OF THE MARINE BOARD TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

It being within the knowledge of the Marine Board that the detention of the Royal Mail steamship "Mooltan," from 11 a.m. until 4 p.m. of Tuesday, the 25th instant, was occasioned through insufficiency of depth of water in the channel at the Sow and Pigs Shoal (the vessel's draught being but 22 feet), the Board begs to invite the attention of the Honorable the Treasurer to the matter, and to their minute on Lieutenant Gowlland's letter of June last, upon the subject of deepening that channel.

The Board considers it to be a matter of extreme regret that, just at a time when the terminus of the European Mail route should be a subject of warm discussion and contest, it should be proved that there is not, at all times, a sufficient depth of water at the entrance to this port to meet the requirements of vessels of large tonnage and heavy draught of water, notwithstanding that a remedy by deepening the channel, as previously recommended, could be effected.

FRANCIS HIXSON,
President.

26 February, 1873.

The Minister for Works.—G.A.L., 28/2/73.

The Under Secretary for Public Works.—G.E., B.C., 28/2/73. Mr. Moriarty, for report, and with reference to previous papers.—G.H., for U.S., B.C., 1/3/73. See separate memorandum attached. Previous papers still retained for report.—E.O.M., B.C., 5/3/73.—Under Secretary for Public Works.

MEMORANDUM.

THE detention of the "Mooltan" was not occasioned through insufficiency of depth of water in the channel of the Sow and Pigs Shoal, as has been erroneously stated by the Marine Board; her detention was owing to the circumstance of some necessary repairs to her boilers not being completed in time to admit of starting at the advertised hour; and it is, I think, to be regretted that at the present critical conjuncture, as has been pointed out by the President of the Marine Board, that gentleman should have officially put on record a statement which is incorrect, and which is likely to be most damaging to the interests of the port. This is the more unaccountable when it is remembered that the Marine Board's Certificate, without which the vessel could not proceed to sea, was not delivered till the afternoon of the 25th—at least so I have been informed.

The Board invite the attention of the Honorable the Treasurer to Lieutenant Gowlland's letter, and their minute thereon, recommending that the *western* channel of the Sow and Pigs Shoal should be deepened, and express their regret that the work has not been entered upon.

It might have been entered upon, and the Government might now have been committed to a most difficult, expensive, and useless undertaking, had I devoted no more consideration to Mr. Gowlland's recommendation than appears to have been given to it by that gentleman himself and the President of the Marine Board.

I could not report fully on the subject submitted to the consideration of this Government by Admiral Richards, the Hydrographer, without making the borings suggested by that officer, to ascertain the nature of the bottom of the eastern channel, which had been neglected apparently by Lieutenant Gowlland,—and without ascertaining by careful survey the set and velocity of the currents, which had likewise been omitted. These have taken some time to complete; they are now, however, done, and I am preparing a full report on the whole subject.

Why Admiral Richards' recommendation, which is so obviously the most judicious one, should have been put aside, and that of Lieutenant Gowlland adopted, without one single reason being assigned against the one or in favour of the other, I have been quite at a loss to discover.

5 March, 1873.

E. O. MORIARTY,
Engineer-in-Chief for Harbours and Rivers.

"MOOLTAN."

I FIND on reference to the self-registering tide-gauge—recorded by the Astronomer—that there was 25 feet 4 inches in the east channel of the Sow and Pigs shoal, at 11:30 a.m. on Tuesday the 25th February, at which time the "Mooltan" should have passed out, had she started at her advertised hour. Her draught is said to have been 22 feet, so that she would have had 3 feet 4 inches to spare.

At 4:30 p.m. there was only 1 inch more water.

E.O.M.

RESPECTING THE DEEPENING OF CHANNEL AT SOW AND PIGS.

(Referred to in Minute Paper 72-1970.)

M.P. 73-775.

In attention to the minute of the late Hon. Treasurer, Mr. Piddington, I have caused a thorough examination to be made of the Sow and Pigs Shoal, with a view to the deepening of the *eastern* channel, as suggested by Admiral Richards; and I have now the honor to report thereon, for the information of Mr. Secretary Sutherland.

Owing

Owing to a press of work which could not be postponed, and the smallness of the staff of this department, some delay occurred in getting the necessary borings made in the eastern channel, as suggested by the Hydrographer, and in obtaining the necessary observations as to the velocity and direction of the currents in both eastern and western channels, without which no safe opinion could be offered as to the direction in which any cutting for a deep channel should be made. A very careful and elaborate series of observations has now been made of the direction and velocity of the currents at last of ebb and beginning of flood, as well as at half-flood and half-ebb, which are shown on the accompanying charts.

Additional soundings have also been made to determine the exact extent of the bar at the entrance of the eastern channel, which had not been done before with sufficient accuracy to admit of an estimate being formed of the cost of deepening it.

As there would seem to have been some mistake as to his instructions, on Mr. Gowlland's part, or some unexplained difference of opinion between him and the Hydrographer, as to which of the two channels presented the greatest facilities for deepening, it will be necessary, for a full understanding of the matter, that I should briefly summarize what has taken place:—

Admiral Richards, in his letter to Lieutenant Gowlland, directs that officer to bring under the notice of this Government the question of the practicability of deepening the *eastern* channel at the Sow and Pigs sufficiently to allow of the passage of an iron-clad, or a line-of-battle ship, and suggests with this view that borings should be made to ascertain if the nature of the bottom is such as to admit of its being dredged.

Mr. Gowlland having obtained the use of boring rods from this department, proceeded to make some borings, confining himself, however—for what reason is not stated—to the *western* channel, instead of the *eastern*, which had been indicated by Admiral Richards. The first boring showed rock at a depth of 23 feet from the surface of the water; the second and third borings, taken at intervals of about 600 and 1,200 feet, also showed a rocky bottom, under varying depths of from 7 to 4 feet of sand. Upon this, having made no observations as to the set of the currents of flood or ebb, and being consequently ignorant of their probable influence on the maintenance of such channel, or their effect on any large ship navigating it, he proceeded to mark out a channel which he recommended should be dredged on the *western* side of the Sow and Pigs Shoal.

Mr. Gowlland's recommendation, with the other papers, were transmitted to the President of the Marine Board, by whom it was approved, and the immediate commencement of the work strongly urged upon the Government. The papers were thereupon forwarded to me. Being well acquainted with both channels at the Sow and Pigs, knowing the eastern to be the deeper of the two, and observing that Admiral Richards' suggestion as to the borings referred solely to the eastern channel, it was with considerable surprise I noticed that his instructions had been wholly overlooked. I thereupon caused the necessary borings to be made in the eastern one, as had been requested by the Hydrographer; and I am happy to be able to state that they quite bear out that distinguished officer's views as to the advisability of dredging it.

Mr. Gowlland has not stated his reasons for recommending the Government to engage upon the formidable, difficult, and expensive operation of deepening the western channel in place of the eastern; which the most casual examination of the charts shows to be preferable, even if there had been no rock to be excavated in the other; and the President of the Marine Board is equally silent as to his reasons for concurring in the recommendation. If there be any reasons to be urged in favour of their view, they are not apparent, and I have been unable to discover them; while, on the other hand, the objections are obvious and fatal. This reticence is the more unaccountable as these officers must have been aware that the Hydrographer, when selecting the eastern channel, did so with a personal knowledge of the localities and of all the circumstances of the case—having, as is well known, twice visited these Colonies with surveying expeditions.

The first, and perhaps most formidable objection is the amount of rock excavation which Mr. Gowlland's proposal would necessitate.

At boring No. 1 there is 21 feet of water—2 feet only of sand and mud to rock in the centre of the proposed cutting. To obtain a depth of 27 feet at low water, therefore, at this spot, would involve dredging away the sand to lay bare the rock, and then blasting the rock for a depth of 6 or 7 feet. Borings 2 and 3 also come on rock at depths of 7 and 4 feet respectively. The borings are not taken sufficiently close to one another to admit of any exact computation being made as to the quantity of rock which it would be necessary to excavate, but supposing it to be confined within the limits shown, it would probably not fall much short of 120,000 yards, and I do not think the cost could be estimated at less than £120,000. I have had to do a good deal of under-water blasting, both at Newcastle and Wollongong, and have found it to be a most tedious and expensive operation—costing fully £1 per cubic yard.

Then as to the dredging.—The channel proposed by Mr. Gowlland, and marked on his plan, would be about 3,500 feet in length and 600 feet wide, and if deepened to a minimum depth of 27 feet at low water, would involve the removal of about 900,000 tons of silt. I have allowed in this estimate about one-third for the additional quantity of sand, which would probably be washed into the excavation from the adjoining bays and banks, by the currents which, it will be observed, run obliquely across the suggested cutting at a considerable angle. I have made the same allowance in regard to the eastern channel, although, as I shall hereafter show, the conditions are much more favourable to its maintenance.

Mr. Gowlland could scarcely, I think, have been aware of this oblique trend in the currents—at all events, there are no observations of his on the subject—or he would not have selected so very objectionable a direction for his proposed channel. The amount of dredging required in the first instance to clear this channel, supposing it not to fill up as fast as it was dredged, would occupy one dredge between four and five years; and its subsequent maintenance, composed, as the bottom is, of ever-shifting sand, would of itself be an operation of great difficulty, as well as continued and heavy expense.

An inspection of the current charts which I have had prepared will show that, at nearly every stage of the tide, the currents run with less velocity through the western than the eastern channel, thus at once explaining the cause of the greater depth of the latter, and will likewise show that, as there must always be a greater scour in the eastern than the western channel, arising from the greater velocity of the current in the former, there will be less tendency hereafter to silt up. This tendency to silt up in either case must always be looked for to a greater or less degree, but it would be certainly considerably less in the eastern channel than in the western.

Another

Another very serious objection to the channel proposed by Mr. Gowlland—not so much an engineering as a nautical one—is that, both during the flood and ebb tides, particularly at half-flood, the strength of the current flows obliquely across it, and would tend to sweep a ship of deep draught on to the rocks shown about the position of boring No. 1. During the ebb-tide the direction of the current is reversed, and a ship would be exposed to the risk of being stranded on the opposite side of the cutting. This is no imaginary objection, but has been pointed out by Commodore Stirling, to whom I have had the honor of submitting the plans; and I may state that he fully concurs with Admiral Richards and myself in thinking that any deepening operations which may be attempted should be carried out in the eastern channel.

The objections to Mr. Gowlland's proposed channel may therefore be shortly stated as follows:—

- 1st. Its faulty direction, being oblique to the set of the currents both of flood and ebb.
- 2nd. The large quantity of rock excavation which it would involve.
- 3rd. The large quantity of sand which would require to be dredged to form it.
- 4th. The tendency there would be to silting up, by reason of the cross currents, and
- 5th. The danger to vessels of heavy draught navigating it, arising from the last-named cause.

For these reasons, I cannot recommend that Messrs. Gowlland and Hixson's recommendation in regard to the deepening of the western channel should be assented to.

It will be seen, however, by reference to the accompanying plans, that on the eastern side there is a deep natural channel, extending from Green Point, where there is 52 feet of water, to nearly abreast of the Inner South Head, where it commences to shoal to 22½ and 23 feet for a very short distance, deepening immediately on the outer side to 27—35, and 47 feet, in a few yards; but throughout the greater part of its length there is at present nothing less than 25 feet of water. Numerous borings have been taken at this and other places where any dredging would be required, and in every instance a depth of from 28 to 32 feet was reached without finding anything but sand; there would therefore be no rock excavation, and no difficulty in dredging to the required depth of 27 feet.

I have shown the channel which I would recommend should be dredged, as keeping generally in the deepest water, and being parallel with the mean direction of the currents of both flood and ebb, which would thus run straight through the cutting; and, as they have considerable velocity, there is every prospect of their keeping the channel comparatively clear, although, as I have observed before, there is little doubt but that occasional dredging will be required to maintain it at its full depth, and remove deposits of sand which may take place after certain conditions of the weather. The quantity of sand required to be removed to form this channel throughout to a minimum depth of 27 feet, and 600 feet in width, allowing also, as in the former case, an increase of one-third over the neat measurement, would be about 160,000 tons, or about one-sixth of that required for the western channel, proposed by Mr. Gowlland.

The greatly reduced quantity of sand requiring to be dredged to form this channel in the first instance, the truer run which the currents would have through it, and their greater velocity, tending, as they would undoubtedly do, to diminish the tendency to silting up, and the absence of rock excavation, are advantages so patent, that of themselves they should be conclusive as in favour of the adoption of this channel, looking at it from an engineering point of view.

That it has the sanction of the Hydrographer and Commodore Stirling, as to its suitability in the nautical view of the question, will, I presume, be considered as sufficient.

If it should be determined by the Government to enter upon the work of deepening this channel at once, which I would beg most strongly to recommend, I would propose to detach the dredge "Samson" for the purpose, with the "Thetis" and the large punts; but before doing so, it will be necessary to lengthen the bucket-ladders of the dredge, to admit of her dredging to 30 feet; she can now only dredge to 27 feet, but that would not suffice to keep her fully employed at high as well as low water. This alteration, however, need involve but a trifling delay, and can be put in hand at once.

I estimate that this work may be completed within about twelve months, and that it will cost about £5,306, which is the amount of the annual vote taken for this dredge. Thus, the difference in the probable cost of the two projects would be as follows:—

Estimated cost of deepening the Western channel, as proposed by Lieutenant Gowlland:—

Rock excavation	£120,000
Dredging,—say	25,000

£145,000

Estimated cost of dredging Eastern channel.....	5,306
---	-------

Difference	£139,694
------------------	----------

E. O. MORIARTY,
Engineer-in-Chief for Harbours and Rivers.
25/3/73.

MINUTE FOR THE CABINET.

Eastern and Western Channels—Sow and Pigs.

THE reasoning of the Engineer-in-Chief for Harbours and Rivers in favour of deepening the eastern channel at the Sow and Pigs, in preference to the western channel, recommended by Lieutenant Gowlland and the President of the Marine Board, seems to me to be quite conclusive; but before finally adopting it, I think it would be desirable to obtain the opinion of the distinguished Officer commanding Her Majesty's Squadron on this Station on the nautical bearings of the question. I would therefore recommend that all the papers be forwarded for Commodore Stirling's perusal, and that he be asked to favour the Government with his views thereon.

JOHN SUTHERLAND.—27/3/73.

Approved by Cabinet—H.P., 27/3/73.

I shall be glad if His Excellency the Governor will bring this request under the notice of Commodore Stirling, submitting at the same time the accompanying papers.—H.P., 27/3/73.

Private Secretary—J.R. B.C., 27/3/73. G.K., 28/3/73.

Submit to Commodore Stirling—H.R., 28/3/73.

MINUTE BY COMMODORE STIRLING.

H. M. S. "Clio,"
Sydney, 31 March, 1873.

A VESSEL entering Port Jackson has, from a point midway between the heads, if intending to enter by the eastern channel, to alter course three points of the compass more than if she entered by the western channel. This is doubtless an objection, but I think it is more than compensated for by the advantages of getting into smooth water earlier, and having the weather shore inboard when the wind is from N.E. to south-south-east.

A vessel using the eastern channel going out with the wind to the southward of S.E. can haul close round the reefs off the Inner South Head, and is a less time under the influence of a decided set on to the North Head, which I have on more than one occasion experienced in going out under sail in H.M.S. "Clio."

My opinion is in favour of the eastern channel, if deepened as far west as the red-pencil line on the plan—that is, from half-way across the 17-foot patch opposite the Inner South Head to the letter "n" of the word "lines," opposite Green Point.

J. H. STIRLING,
Commodore.

The Under Secretary, Public Works Department.—G. H. DE ROBECK, 31/3/73. Noted, 1/4/73.

72/4347, received 15 June, 1872.—Lieutenant Gowlland. Forwarding extract from a letter received from Rear-Admiral Richards, the Hydrographer to the Navy, with reference to the shoaling of the water at the Sow and Pigs.—Sent to Marine Board, 18/6/72.

72/5478, received 30 July, 1872.—Lieutenant Gowlland. Forwarding skeleton plan of Sow and Pigs Flats, showing bearings, &c.

Pencilled Memo.—The Engineer-in-Chief for Harbours, &c., is preparing a report on the subject of this letter, which will be completed in a few days, when all the papers will be returned to the Treasury.—A.W.M., 17/3.

Papers 73/989, submitted 1/4/73.

The Under Secretary for Public Works,—Will you please cause to be returned to the Treasury the papers mentioned on the front page. With reference to the pencilled memo., I would observe that I do not read the resolution of the Assembly as covering documents of a date *later than that of the resolution*, or that have been prepared since.—G.E., B.C., 2/4/73.

I read the resolution differently. In complying with orders of the House for returns, I think all the information in our possession at the time the return is laid on the Table should be given. In the present case, I think the information asked for by Captain Onslow would be incomplete without the report of the Engineer-in-Chief for Harbours and Rivers, and the minute by Commodore Stirling.—J.R., 3/4/73.

What would it cost to carry out the deepening of the additional portion of the channel, suggested by Commodore Stirling?—J.S., 3/4/73.

The additional cost will be about £4,000.—E.O.M., 4/4/73.

I approve of the eastern channel being deepened, as suggested by Admiral Richards, Commodore Stirling, and Mr. Moriarty. Let the work be put in hand without delay.—J.S., 4/4/73.

CABINET MINUTE.

Department of Public Works,
Sydney, 23 April, 1873.

I HAVE the honor to recommend, for the approval of the Cabinet, that the deepening of the eastern channel at the Sow and Pigs, in the Harbour of Port Jackson, to 27 feet, be proceeded with without delay, as suggested by the Hydrographer, Admiral Richards, and recommended by Commodore Stirling and the Engineer-in-Chief for Harbours and Rivers.

JOHN SUTHERLAND.

The Cabinet concur.—H.P., 23/4/73.

The Engineer-in-Chief for Harbours and Rivers to carry out.—J.S., 24/4/73.

The work shall be put in hand immediately.—E.O.M., 24/4/73.

EXTRACT FROM VOYAGE OF
H.M.S. "RATTLESNAKE,"
CAPTAIN OWEN STANLEY.

"Survey of Entrance of Port Jackson," vol. 1, chap. 2, page 43.

"Measurements a minute survey was made by Lieutenants Dayman and Simpson, of the Inner Entrance to Port Jackson, where a Reef called the 'Sow and Pig' (distinguished by a Beacon and a Light-boat) in the middle of the passage, leaves only a narrow available Channel on either side. The exact boundaries of them, with the depth of water, were to be determined, especially to ascertain whether a Line-of-battle Ship, with her full armament, could pass into the harbour. The shallow part of the West Channel was found to have 21 feet, and of the East 24 feet at Low-water (the rise and fall of Tide being from 5 to 8 feet) consequently, at High-water, there would be room for a Three-decker to enter."—July, 1847.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD, BULLI PASS TO COAL CLIFF, ILLAWARRA.
(REPORT FROM SURVEYOR.)

Ordered by the Legislative Assembly to be printed, 8 November, 1872.

NORTH BULLI ROAD.

ACCORDING to instructions, I have examined the road referred to in the Petition, shown in a red line in accompanying sketch.

It is now, for a mere by-road, in very fair order from Bulli as far north as Goodrich's farm, leaving about a mile uncleared to the Coal Cliff. From this, northerly, the road is merely a very narrow bridle-track, along a natural burn, which traverses the face of the Cliff for about a quarter of a mile, and forms a barrier to any further extension of the road, northerly, for wheel traffic, unless a cost of about £1,000 was incurred to carry it to "Stanwell Park," the property of C. Mitchell, Esq. Thence there is a steep access for vehicles to Blue-gum Forest, shown in brown, cut by Mr. Hargraves, his tenant, running up the spur from the Coast Range that divides the "Stanwell Park" watershed from the Port Hacking Gully.

With regard to the prayer of the Petition for £300, to complete the portion shown in red on sketch, I would point out:—

- 1st. That the utmost extent of land that lies between the sea and the road on the top of the Coast Range, which is all that can be immediately benefited, does not exceed 6 square miles in area; and that a considerable portion of this is on the steep mountain side, and I believe principally taken up in consideration of the coal.
- 2nd. That the length of this piece of road is only some 6 miles, which has already received endowment to the amount of £300 from the Government, and that 5 miles thereof is in sufficiently good order for a by-road, terminating at the Coal Cliff.
- 3rd. With reference to the arguments adduced in favour of the Petition in Mr. Mitchell's letter of 24th August, 1871, he evidently anticipates the ultimate construction of a road round the Coal Cliff. To make such a road properly available for wheel traffic all round the loop line to Blue-gum Forest would necessitate an expenditure of over £2,000,—an amount totally disproportionate to the value of the interests now existing on the line, and not opening up any further land for selection. I have shown on the sketch, margined pink, the measured portions in Port Hacking Gully, amounting to 3,200 acres, surveyed as mineral leases in 320-acre portions.

Only a portion of this land is suitable for agriculture, and consequently not available for the general run of selectors.

To make a road into this valley would cost probably £1,500 to £2,000, the place being a small Burragorang; and supposing it were even found advisable to make a road into the valley, I believe, from cursory observations and the information of my guide, that a more suitable road could be made down a gully about halfway between Bottle Forest and Blue-gum Forest, as being a convenient outlet for either Sydney or Wollongong.

It is impossible to ride into the valley, except for a little way at the head, where Mr. Hargraves has cut a track into his selection, and access is best obtained by boat from Port Hacking, the river being navigable for some distance. In fact, Mr. Blake, who knows the whole country about there thoroughly, informs me that by water would always be the readiest communication.

Under these circumstances, as the North Bulli Road is never likely to be more than a local convenience, I still remain of opinion that it is not entitled to such a grant as £300, and that as the Government now maintain the Trunk Coast Line, *via* Bottle Forest and Westmacott's Pass, to the boundary of North Illawarra Municipality, any further subsidy given to this road should be contingent on a moiety being subscribed by the district, as although the number of residents on the line of road or north of it is not very great, it indirectly benefits to an equal extent the population and tradespeople of the Townships of Bulli and Wonona, whose signatures to the Petition are numerous.

Should the Government, however, determine to expend any further sum upon the road it ought to be limited to a grant commensurate with the fifth classification, say 6 miles at £7 per mile = £42.

F. WELLS, 31/7/72.

1872.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GEORGE BELL.

(PETITION AS TO MEASUREMENT OF HIS CONTRACT FOR METAL, G. S. ROAD.)

Ordered by the Legislative Assembly to be printed, 21 November, 1872.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of George Bell, of Picton, in the Colony of New South Wales, Contractor,—

SHOWETH:—

That in or about the month of July, one thousand eight hundred and sixty, your Petitioner entered into a contract with the Government of New South Wales, for the construction and metalling of a portion of the Southern Road, known as number 25 (West Bargo).

That, by the specifications of the contract, it was, amongst other things, provided, that on the road so formed or repaired, a coating of metal of a description approved of by the Superintendent, broken to a two and a half inch gauge, should be evenly spread over a width of fifteen feet on centre of road, and a thickness of nine inches on centre, gradually decreasing to a thickness of five inches at a distance of seven feet six inches from centre; and that by the general conditions of such contract it was also provided that, to secure the proper quantity of metal being spread on the road, it should be measured in heaps before being spread, as well as on the road when spread, and the contractor was to give notice to the Road Superintendent when a heap of metal was ready.

That Mr. Moggeridge was the Superintendent of Roads at the time when your Petitioner entered upon the said contract.

That during the period of Mr. Moggeridge's superintendence the metal was measured at the quarry, and twenty-four cubic feet, or one ton of metal at such quarry, was deemed as sufficient to cover one yard of road of the thickness and dimensions specified in such contract, such measurement at the quarries being, according to the testimony and experience of contractors and engineers, sufficient for such purpose.

That your Petitioner previous to taking said contract completed a task-job on Picton Bridge on the same conditions, which being passed and paid for on the terms and measurements above mentioned, became the basis of his calculation on taking the contract No. 25.

That contract No. 20, on the same road and under the same conditions, was, in fact, completed by Mr. Spencer Sivyver, contractor, or by Messrs. Thomas Larkin and Robert Pooley as his sureties, and paid for by the Government, upon the basis of such measurements and no other.

That to Mr. Moggeridge Mr. Quodling succeeded as Superintendent, and insisted upon a different principle of measurement, which was as follows:—He first took the measurement in cubic yards at the quarry; he subsequently measured, or proposed to measure, the stone in bulk on the line, insisting upon a cubic yard of metal for every yard forward on the road, instead of a ton of 24 feet as required by Mr. Moggeridge.

That one thousand seven hundred and seven tons of metal, on one thousand seven hundred and seven lineal yards of road were completed by your Petitioner during Mr. Moggeridge's term of office, and passed by that gentleman, but which was subsequently altered by Mr. Quodling, allowing only one thousand five hundred and seventeen yards 16 feet in lieu thereof.

That against this your Petitioner protested, but being wholly unable to answer the demands of sub-contractors without obtaining payments on account, and being unable to obtain the necessary certificates without succumbing to Mr. Quodling's requisitions, your Petitioner was compelled to submit to them, under protest.

That Petitioner is aggrieved and deeply injured by the course pursued by the Superintendent, Mr. Quodling, and humbly prays your Honorable House will take into consideration the facts above stated, and grant such relief as may appear to your Honorable House expedient.

And your Petitioner, as in duty bound, will ever pray.

GEORGE BELL.

1872-3.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MAIN SOUTHERN ROAD.

(PETITION FOR REPAIR OF PORTION—RESIDENTS OF BANKSTOWN, LANDSDOWN, BARKHUTS, &c.)

Ordered by the Legislative Assembly to be printed, 17 January, 1873.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of the Bark Huts, Liberty Plains, Bankstown, George's River, Landsdown Bridge, and Liverpool Road,—

HUMBLY SHOWETH :—

That your Petitioners beg to bring under the notice of your Honorable House the deplorable state of that portion of the Main Southern Road from Upper Bankstown, on the Liverpool Road, to Landsdown Bridge, and from thence to the town of Liverpool, a distance of six miles.

That for years past repeated representations have been made to the Government as to the urgent necessity of having this portion of the Main Southern Road repaired and metalled.

That so far back as 1863, Mr. Allan Macpherson, then representing Central Cumberland in your Honorable House, specially brought under the notice of the then Secretary for Public Works the almost impassable state of this road from Irishtown to Liverpool, a distance of eight miles, when a promise was given that the metalling of that portion of the road would be commenced and carried out as far as Landsdown Bridge, to meet the metalling there.

That this promise has not been fulfilled from 1863 to December, 1872, now nearly ten years, with the exception of extension of metalling to a distance of little more than a mile and a half.

That in 1868 Mr. John Lackey, the then and present Honorable Member for Central Cumberland, also brought under the notice of the Government the neglected state of this portion of the Main Southern Road, resulting in a similar promise.

That in 1869 a joint representation was made by Mr. Lackey and Mr. Samuel Lyons, then representing Central Cumberland in your Honorable House, as to the neglected state of this road, through whose zealous exertions a portion of the extension above alluded to was metalled in that year.

That for several years past the extension of metalling so performed extends from Irishtown for a distance of about a mile and a half, leaving nearly four miles to meet the metalling, at or near Landsdown Bridge, in a very bad state, almost impassable, causing your Petitioners and others great hardship, serious loss, inconvenience, and delay in endeavouring to carry on their ordinary traffic on this line of road from its long neglected state, and who have to pay a heavy tax for tolls levied and imposed by the Government whilst this portion of the Liverpool Road, so near the metropolis of New South Wales, and the principal outlet to the far interior, is sadly neglected.

Your Petitioners therefore humbly pray your Honorable House will be pleased to take their Petition into consideration, and look upon the long neglected state of this portion of the Main Southern Road as a subject deserving anxious and immediate consideration, and that your Honorable House will be pleased to recommend early attention thereto, and to grant such further and other relief to your Petitioners and the public as the nature and circumstances of the case may require, and as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 155 Signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CESSNOCK ROAD.

(EMPLOYMENT OF RELATIVES OF TRUSTEES ON.)

Ordered by the Legislative Assembly to be printed, 17 April, 1873.

RETURN to an *Order*, made by the Honorable the Legislative Assembly of New South Wales, dated 4th April, 1873, That there be laid upon the Table of this House,—

“Copies of all Correspondence, Minutes, and all other documents in possession of the Government, in reference to the employment of relatives of Trustees, or of other persons in authority, on the road from West Maitland to Cessnock, or from West Maitland *via* Cessnock, to the Dividing Range, from 1st September, 1871, to the present date.”

(Mr. Burns.)

SCHEDULE.

NO.		PAGE.
1.	Mr. T. O'Brien to Commissioner for Roads, complaining of Messrs. G. Carroll and S. Apthorpe (two Trustees) employing their own relatives on the road	2
2.	Under Secretary for Public Works to Mr. T. O'Brien, informing him that it is necessary for the gentlemen named to resign the office of Trustees for the road	2
3.	Mr. T. O'Brien to Under Secretary for Finance and Trade, informing him of Mr. S. Apthorpe's resignation	2
4.	Mr. S. Apthorpe to Mr. T. O'Brien, resigning the office of Trustee	2
5.	Under Secretary for Public Works to Mr. S. Apthorpe, accepting his resignation	2
6.	Under Secretary for Public Works to Under Secretary for Finance and Trade, informing him of Mr. S. Apthorpe's resignation from the office of Trustee	3
7.	Mr. T. O'Brien to Under Secretary for Finance and Trade, informing him of the resignation of Mr. George Carroll as Trustee for the road	3
8.	Mr. G. Carroll to Mr. T. O'Brien, resigning the office of Trustee for the road	3
9.	Under Secretary for Public Works, informing Under Secretary for Finance and Trade of the acceptance of Mr. G. Carroll's resignation as Trustee for the road	3
10.	Under Secretary for Public Works to Mr. G. Carroll, accepting his resignation as Trustee for the road	3
11.	Mr. W. Price to the Commissioner for Roads, complaining of Mr. Sheridan, an overseer of the Maitland District Council, employing his relatives to the exclusion of all others	4
12.	The Under Secretary for Public Works to the Secretary of Maitland District Council, inquiring if the charges made by Mr. W. Price are correct	4
13.	Mr. Hughes (Secretary for Maitland District Council) to Under Secretary for Public Works, explaining that J. Sheridan was engaged as overseer, but that he had no power to employ his son, who was engaged to work on the road by the Commissioners for the Road, and that Sheridan's nephew was not at work	4
14.	Under Secretary for Public Works to Mr. W. Price, informing him that the son of John Sheridan was employed by the Commissioners for the road, who alone had power to do so; and that Sheridan's nephew was not at work; and further, that the Department could not interfere, as the Council is a responsible body	4
15.	Mr. W. Price to Hon. Minister for Works, complaining of the improper expenditure of the money on the road	5

CESSNOCK ROAD.

No. 1.

MR. T. O'BRIEN TO THE COMMISSIONER FOR ROADS.

Bishop's Bridge,
15 September, 1871.

SIB,

I am in receipt of your circular; and in reply I beg to inform you, under the 10th paragraph of the circular, I think it necessary to point out to you there are two members of our Trust, namely, George Carroll and Samuel Apthorpe, have relatives at present working on the road. The former has his son-in-law, and the latter a stepson, both living apart from their relatives. Be so kind as to inform us what steps we are to take regarding the matter?

I have, &c.,
T. O'BRIEN,
Secretary to Trust.

There are six Trustees. I think these two gentlemen should be called on to resign, or not give any more work to their relatives.—W.C.B., 30/9/71. Under Sec., B.C. To resign, if true.—J.B., 3/10/71. Mr. T. O'Brien.—4/10/71.

No. 2.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MR. T. O'BRIEN.

Sydney, 4 October, 1871.

SIB,

In reference to your letter of the 15th ultimo, respecting the employment of relatives of two of the Trustees for Road from Main Northern Road, near West Maitland, *via* Cessnock, to the Dividing Chain, I am directed by the Hon. Secretary for Public Works to inform you, that under the circumstances it appears incumbent on the gentlemen named to forward their resignations as Trustees of the Road referred to.

I have, &c.,
JOHN RAE.

No. 3.

MR. T. O'BRIEN TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Bishop's Bridge,
24 October, 1871.

SIB,

Mr. Samuel Apthorpe has sent me his resignation as member of the Bishop's Bridge Road Trust. I enclose and forward herewith the same to you.

I have, &c.,
T. O'BRIEN,
Secretary to Trust.

The Under Secretary for Public Works, B.C., 27/10/71.—J.F. (for U.S.) Resignation might be accepted, and Treasury so informed. It is perhaps unnecessary, as there are still five Trustees, to take any steps to fill the vacancy.—W.C.B., 3/10/71. Under Sec., B.C. Not necessary to fill up. Inform Treasury.—J.R., 31/10/71. Mr. Samuel Apthorpe and Treasury.—1/11/71.

No. 4.

MR. S. APTHORPE TO MR. T. O'BRIEN.

Bishop's Bridge,
20 October, 1871.

SIB,

In compliance with printed circular, containing instructions for Road Trusts, and in reference to paragraph 10—having a relative at work under the Trust—I hereby consider it my duty to resign acting as a member of the Trust.

SAMUEL APTHORPE.

No. 5.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MR. S. APTHORPE.

Roads Branch,
Department of Public Works,
Sydney, 1 November, 1871.

SIB,

In acknowledging the receipt of your letter of the 20th October, 1871, I am directed by the Honorable the Secretary for Public Works to accept the resignation you therein tender as a Trustee for the road from Main Northern Road, near West Maitland, *via* Cessnock, to the Dividing Range.

I have, &c.,
JOHN RAE,
Under Secretary.

No. 6.

3

No. 6.

THE UNDER SECRETARY FOR PUBLIC WORKS to THE UNDER SECRETARY FOR FINANCE AND TRADE.
Roads Branch,
Department of Public Works,
Sydney, 1 November, 1871.

SIR,

Referring to my letter of the 13th July last, on the subject of the appointment of Trustees for the road from Main Northern Road, near West Maitland, *via* Cessnock, to Dividing Range, I am now directed to request that the name of Samuel Apthorpe may be omitted in connection with such Trust.

I have, &c.,
JOHN RAE.

No. 7.

MR. T. O'BRIEN to THE UNDER SECRETARY FOR FINANCE AND TRADE.
Bishop's Bridge,
1 November, 1871.

SIR,

In compliance with the 10th paragraph in a printed circular of instructions for Road Trustees, Mr. George Carroll has sent in his resignation as member of the Trust for that part of the Wollombi Road between Toll-bar, near Maitland, *via* Cessnock, to Dividing Range. I enclose and forward the same herewith to you.

I have, &c.,
T. O'BRIEN,
Secretary to Trust.

The Under Secretary for Public Works, B.C., 3/11/71.—H.L. Mr. Carroll's resignation might be accepted and Treasury so informed. There are now four Trustees left.—F. WICKHAM (for Com. and Eng.), 6/11/71. Under Sec., B.C. In absence of Minister approved, 6/11/71.—J.R., 28/11/71. Treasury and G. Carroll, 8/11/71.

No. 8.

MR. G. CARROLL to MR. T. O'BRIEN.

Cessnock, 25 October, 1871.

I, THE undersigned, do hereby resign being Trustee for the road from the toll-bar, West Maitland, to the Dividing Range, on the Wollombi Road.

Given under my hand as above.

GEORGE CARROLL.

No. 9.

THE UNDER SECRETARY FOR PUBLIC WORKS to THE UNDER SECRETARY FOR FINANCE AND TRADE.
Roads Branch,
Department of Public Works,
Sydney, 8 November, 1871.

SIR,

Referring to my letter of the 13th July last, on the subject of the appointment of Trustees for the road from Main Northern Road, near West Maitland, *via* Cessnock to Dividing Range, I am now directed to request that the name of George Carroll may be omitted in connection with such Trust.

I have, &c.,
JOHN RAE.

No. 10.

THE UNDER SECRETARY FOR PUBLIC WORKS to MR. G. CARROLL.

Roads Branch,
Department of Public Works,
Sydney, 8 November, 1871.

SIR,

In acknowledging the receipt of your letter of the 25th October, I am directed by the Honorable the Secretary for Public Works to accept the resignation you therein tender as a Trustee for the road from Main Northern Road, near West Maitland, *via* Cessnock, to the Dividing Chain.

I have, &c.,
JOHN RAE,
Under Secretary.

No. 11.

No. 11.

MR. W. PRICE TO THE COMMISSIONER FOR ROADS.

Mount Pleasant,
11 February, 1873.

SIR,

Having had occasion to travel on the Wollombi Road, facts came under my notice, according to my ideas contrary to justice. Mr. Sheridan is employed as an overseer by the District Council on that road. He (Sheridan) employs his own team and his own son and his nephew on the work. Now, sir, there are here men having twelve children, and cannot get a day's work, and those parties employed from the commencement. There is no justice in that, and contrary to the rules you laid down when I was a member of the Road Trust, wherein you sent to say no relative should be employed. I can see that the old grievances are carried out again, and greatly displeases the inhabitants of the district. The inhabitants are clamorous about holding a meeting to petition the Government to do away with this nuisance, but I got them to forbear until you acknowledge this.

I remain, &c.,
WILLIAM PRICE.

If Mr. Sheridan is an overseer employed by the Maitland Council he should not be allowed to employ his relatives or team, and I think the Council should be so instructed.—W.C.B., 7/2/73. Under Sec., B.C. Inform Council.—18/2/73. Approved.—J.S., 18/2/73. Mr. T. Hughes.—22/2/73.

No. 12.

THE UNDER SECRETARY FOR PUBLIC WORKS TO THE SECRETARY OF MAITLAND DISTRICT COUNCIL.

Sydney, 25 February, 1873.

SIR,

It having been reported to this office that the Maitland District Council employs a Mr. Sheridan as overseer on the Cessnock Road, who has his own team at work on the road, as well as his son and nephew, I am directed to inquire whether such report is correct?—and if so, to point out that a person in Mr. Sheridan's position should not be permitted by the Council to employ his relatives or team upon the road.

I have, &c.,
JOHN RAE.

No. 13.

THE SECRETARY OF MAITLAND DISTRICT COUNCIL TO THE UNDER SECRETARY FOR PUBLIC WORKS.

Maitland District Council,
East Maitland,
5 March, 1873.

SIR,

In reply to yours of 22nd ultimo, I am directed to inform you that John Sheridan has been employed as working overseer on the Cessnock Road, and that during a portion of the time the Commissioners in charge of the road employed his son also, who has a team. I am further directed to state that no person has been employed by any such overseer, the employment and removal of the men being the direct personal action of the Warden, and another Commissioner (Mr. Cracknell), who have endeavoured, as far as possible, to equalize the work amongst the labouring portion of the inhabitants. It is not true that a nephew of Sheridan's has been at work.

I have, &c.,
THOMAS HUGHES,
Secretary.

The matter is under the control of the Maitland District Council, and as they are a responsible body I do not think the Department can interfere.—W.C.B., 10/3/73. Under Sec., B.C. Inform complainant.—J.R., 11/3/73. Mr. W. Price.—12/3/73.

No. 14.

THE UNDER SECRETARY FOR PUBLIC WORKS TO MR. W. PRICE.

Sydney, 12 March, 1873.

SIR,

With reference to your letter of the 11th ultimo, making certain complaints against the employment of Mr. Sheridan on the Cessnock Road by the Maitland District Council, I am directed to state that the Commissioners in charge of the road report that they employed the son of John Sheridan for a time, but no such person has been employed by the overseer,—the employment and removal of the men being the direct personal action of the Warden and another Commissioner (Mr. Cracknell), who have endeavoured to equalize the work as far as possible amongst the labouring portion of the inhabitants; and that it is equally incorrect that a nephew of Sheridan's has been at work; but I am to add that as this matter is under the control of the Council, which is a responsible body, it does not appear desirable for the Department to interfere in the matter.

I have, &c.,
JOHN RAE.

No. 15.

No. 15.

MR. W. PRICE to THE SECRETARY FOR PUBLIC WORKS.

Mount Pleasant,
7 March, 1873.

SIR,

In reference to the expenditure of public money on the Wollombi Road, I must say that it might as well be given to the parties who work thereon, and let them do something at home for their families, for it is ridiculous to see some half a dozen men getting seven and six shillings a day, with wheelbarrows in their hands, putting mud into the ruts on the road, and plenty of horse teams to be had at 8s. a day. It is no wonder the road is getting into a dilapidated state when the District Council employs an overseer, and empowers him to employ his men. Now, Sir, he employs his own son and his own team of horses and his own friends, and picture to yourself how they work afterwards. Now there was some solid and costly works done on that road prior to the District Council getting charge of it, and are now falling into a ruined state for want of a little attention, but the Council do not seem to care, so long as this working party can pocket the money, what inconvenience the public has to put up with.

I have stated these facts before to Mr. Bennett, but I see no good result.

Perhaps he may think as the Council is an elected body we should not complain; but is it the Wollombi people that returned them, although they are the most interested. At any rate there would be more interest taken in a cockfight than in a Council election.

I have, &c.,
WILLIAM PRICE.

If you should acknowledge this, direct "William Price, Mount Pleasant, Bishop's Bridge."

The vote of 1873 has not yet been issued. It has been withheld at the request of Mr. Burns, M.P., who is understood to be making inquiry into past management, prior to making a recommendation. The writer has already been replied to in reference to the same matter, and nothing now appears necessary pending further action on the part of Mr. Burns.—W.C.B., 14/3/73. Under Sec., B.C. Seen.—J.R., 15/3/73.

1872-3.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 40. TUESDAY, 4 FEBRUARY, 1873.

19. CLAIM OF MR. STEPHEN SCHOLEY :—Mr. Cunneen moved, pursuant to Notice, (*as amended with the concurrence of the House*),—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the claim of Mr. Stephen Scholey, for losses alleged to have been sustained by him in the position of Warden of the Maitland District Council, in the case “Eckford v. Scholey.”
- (2.) That such Committee consist of Mr. Parkes, Mr. Wearne, Mr. Macintosh, Mr. Forster, Mr. Buchanan, Mr. Burns, Mr. R. B. Smith, Mr. Tunks, Mr. Webb, and the Mover.
- Debate ensued.
Question put and passed.

VOTES No. 50. FRIDAY, 21 FEBRUARY, 1873.

5. CLAIM OF MR. STEPHEN SCHOLEY (“*Formal*” *Motion*) :—Mr. Cunneen moved, pursuant to Notice, That the Return moved for by Mr. Wilson on the 29th September, 1869, and ordered by this House to be printed on the 19th October, 1869—“of all Correspondence, Documents, and Minutes which have passed between the Government and any person or persons respecting the expenditure of the grant for the repair of the Cessnock Road for the year 1868”; and also the Return moved for by Mr. Cunneen on the 5th July, 1872, and ordered to be printed on the 19th July, 1872—“of all Correspondence and other Papers in reference to the claim of Mr. S. Scholey, for losses sustained by him, through his position of Warden of the Maitland District Council, in the case Eckford v. Scholey,”—be referred to the Committee now sitting to inquire into and report upon the claim of Mr. Stephen Scholey, for losses alleged to have been sustained by him, in the position of Warden of the Maitland District Council, in the case Eckford v. Scholey.
- Question put and passed.

VOTES No. 89. MONDAY, 21 APRIL, 1873.

4. CLAIM OF MR. STEPHEN SCHOLEY :—Mr. Cunneen, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee, for whose consideration and report this subject was referred on 4th February, 1873, together with Appendix.
- Ordered to be printed.

1872-3.

CLAIM OF MR. STEPHEN SCHOLEY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 4th February, 1873, with power to send for persons and papers, to inquire into and report upon the claim of Mr. Stephen Scholey, for losses alleged to have been sustained by him in the position of Warden of the Maitland District Council, in the case "*Eckford v. Scholey*," to whom were referred on the 21st February, 1873, the Return moved for by Mr. Wilson, on the 29th September, 1869, and ordered by the House to be printed on the 19th October, 1869—"of all correspondence, documents, and minutes which have passed between the Government and any person or persons respecting the expenditure of the grant for the repair of the Cessnock Road for the year 1868;" and also the Return moved for by Mr. Cunneen, on the 5th July, 1872, and ordered to be printed on the 19th July, 1872,—"*of all correspondence and other papers in reference to the claim of Mr. S. Scholey, for losses sustained by him through his position of Warden of the Maitland District Council, in the case Eckford v. Scholey*,"—beg to report to your Honorable House:—

1. That Mr. Stephen Scholey was appointed Warden of the Maitland District Council in 1867, by Sir John Young, the Governor for the time being.

2. That certain Parliamentary grants of public money for the repair of roads in the Police District of Maitland were placed to the credit of the Council for expenditure.

3. That at a meeting of the Council, held on the 19th May, 1868, the expenditure of the grant for each road was placed under the immediate supervision of particular members of that body, and Mr. Joseph Eckford was the Commissioner entrusted with the expenditure of the grant of £350 for that year on Cessnock Road.

4. That the Warden, on account of information received, paid a visit of inspection to the repairs upon that road on the 12th October, 1868, and from what he saw and learned on the spot, suspected that all the money paid by the Council to Mr. Eckford had not been expended for repairs to it.

5. That the Warden brought the facts which came to his knowledge respecting the expenditure of the grant for Cessnock Road under the notice of the District Council, and that body, at a meeting on the 2nd November, 1868, appointed a committee "to investigate the expenditure of the grant on road from Maitland to Cessnock," and the said committee reported on the 17th of the same month that a mal-appropriation of public money had taken place, and the report was adopted by the Council.

6. That the committee directed the Warden to bring the whole facts of the case under the notice of the Secretary for Lands (Mr. Forster), and conceiving it to be his public duty, the Warden obtained an interview with that gentleman on the 4th December, 1868. After he had made his statement, the Minister requested him to furnish the Government with a written report of the facts of the case. In compliance with this request, the Warden had a report prepared (*See Appendix A 3*), which was adopted by the District Council on the 9th December, 1868, and delivered to the Secretary for Lands by the Warden on the 17th of that month.

7. That on the 24th December the report was returned to the District Council, by the direction of the Minister for Lands, requesting it to be signed; and in compliance with this request, Mr. Scholey and three Commissioners signed and returned it.

8. Mr. Forster, M.P., in his evidence before your Committee, states, that he has no recollection of Mr. Scholey asking him, at the interview on the 4th December, 1868, for a guarantee that would clear him from all responsibility on account of the report required from him. Mr. Scholey, however, asserts that such a guarantee was assented to at the interview, and that immediately after it he made a memorandum of what took place.

9. The Warden's assertion is confirmed by the minute-book of the Maitland District Council, in which it is recorded that on reporting his interview with the Secretary for Lands to that body he made the following statement:—

“4 December, 1868.—I waited upon the Hon. Minister for Lands, and showed him the vouchers respecting the payment of the money alluded to on the Cessnock Road; also the time-table kept by Sheridan, and the amounts said by him to be earned by the various men on the road. I also placed before him the balance-sheet produced by the Secretary of the Trust, and examined by the Committee, comparing the amount said by Mr. Eckford to have been paid, and that stated by Sheridan, whereby it was shown that something like £109 5s. 10d. was said by Sheridan, to be overpaid. After listening attentively to what I had to say, Mr. Forster asked me if I could not make a charge. I replied that I have already made one against Solomon Israel for attempting to obtain money under false pretences, but the Magistrates dismissed it.

“I further stated that I was prepared to assist the Government all I could in the matter, but must have a guarantee that would clear me from all responsibility.

“He said that was nothing but right, and advised me to have a complete report of the whole case prepared by Mr. Thompson (who had the case in hand as attorney in the prosecution of Israel), and let him (Mr. Forster) have the information as soon as possible, and he would see that the matter should be well examined.”

10. The *Maitland Mercury*, in publishing the proceedings of the Council, reports Mr. Scholey to the same effect. Mr. M. Fitzpatrick, M.P., formerly Under Secretary for Lands, who saw Mr. Scholey officially immediately before his interview with the Minister on the 4th December, 1868, gives in evidence:—

“I ought perhaps, in justice to Mr. Scholey to say that he stated to me that he thought he ought to be held harmless, because he was acting in his public capacity as Warden of the District Council.”

11. In 1870, Mr. Joseph Eckford brought an action in the Supreme Court, Sydney, against Mr. Scholey for slander, alleged to be contained in the report in question and also in a subsequent report, stating that three men named Thomas, Anderson, and Avery, entered in Mr. Eckford's pay sheets as labourers, to whom payments were alleged to have been made for work on the road, could not be found. After eleven days trial the jury unanimously gave a verdict for Mr. Scholey, because (as stated by them to your Committee) “they believed that the evidence proved beyond all doubt that he had only done his duty as a public man.”

12. Your Committee have learned that on account of this action Mr. Scholey was involved in heavy costs, which he paid.

13. That your Committee, after a lengthened and careful consideration of the evidence, and reviewing it in connection with all the facts and circumstances of the case, are of opinion,—

1. That Mr. Scholey in the course taken by him in the matter of the expenditure of the grant for the repair of Cessnock Road was actuated by a laudable desire to prevent or expose a misappropriation of public money.

2. That the reports upon which the action was entered against Mr. Scholey were furnished to the Government in the public interest, in his position as Warden of the Maitland District Council.

Your Committee beg therefore to recommend Mr. Stephen Scholey's case to the favourable consideration of the Government.

No. 3 Committee Room,
Sydney, 18th April, 1873.

J. A. CUNNEEN,
Chairman.

1872-3.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 7 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. Cunneen,		Mr. Wearne,
		Mr. Burns.

Mr. Cunneen called to the Chair.

Entry in Votes and Proceedings, appointing the Committee, *read* by the Clerk.
Committee deliberated.*Ordered*,—That Mr. Scholey, M.P., be requested to attend and give evidence next meeting.[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 12 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. Cunneen in the Chair.

Mr. Tunks,		Mr. Forster,
Mr. Webb,		Mr. Burns.

Stephen Scholey, Esq., M.P., called in and examined.

A 6.) Witness *handed in* documents relative to the subject under consideration. (*Vide Appendices A 1 to*

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Forster, M.P., be requested to attend and give evidence next meeting.[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 14 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. Cunneen in the Chair.

Mr. Burns,		Mr. Tunks.
------------	--	------------

Mr. Forster, M.P., who was requested to attend as a witness this day, did not attend.
Committee deliberated.*Ordered*,—That Mr. Joseph Eckford be summoned to give evidence next meeting.[Adjourned to Wednesday next, at *Two* o'clock.]

WEDNESDAY, 19 FEBRUARY, 1873.

MEMBERS PRESENT:—

Mr. Cunneen in the Chair.

Mr. Parkes,		Mr. Tunks,
Mr. Webb,		Mr. Burns,

Mr. Wearne.

Stephen Scholey, Esq., M.P., called in and further examined.

Witness *produced* Minute-book of the Maitland District Council.

Witness withdrew.

Mr. Joseph Eckford called in and examined. Witness referred to Minute book *produced* by Mr. Scholey, and *read* several extracts therefrom.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Joseph Eckford and Mr. Henry Fisher be summoned to give evidence at the next meeting.[Adjourned to To-morrow, at *half-past Ten* o'clock.]

THURSDAY,

THURSDAY, 20 FEBRUARY, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Wearne, | Mr. Webb,
Mr. Burns.

Mr. Joseph Eckford called in and further examined.

Witness withdrew.

Mr. Henry Fisher, (*one of the Jury in the case Eckford v. Scholey*) called in and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Fitzpatrick, M.P., and Mr. Thomas Hughes, of West Maitland, be summoned to give evidence on Wednesday, 26th February.

[Adjourned to Tuesday next, at *half-past Ten* o'clock.]

TUESDAY, 25 FEBRUARY, 1873.

In the absence of a Quorum the meeting called for this day lapsed.

WEDNESDAY, 26 FEBRUARY, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the chair.

Mr. Burns, | Mr. Webb,
Mr. Wearne.

Extract from the Votes and Proceedings, *referring* certain documents to the Committee, *read* by the Clerk. Also a telegram from Mr. Thompson, a witness summoned for this day, excusing his absence on the ground of illness.

M. Fitzpatrick, Esq., M.P., called in and examined.

Witness withdrew.

S. Scholey, Esq., M.P., further examined.

Witness *handed in* Commission under the Great Seal, appointing him Warden of the Maitland District Council. (*Vide Appendix B.*)

Mr. T. Hughes (*Secretary to the Maitland District Council*) called in and examined.

Witness withdrew.

Committee deliberated.

[Adjourned to To-morrow, at *Three* o'clock.]

THURSDAY, 27 FEBRUARY, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Tunks,
Mr. Webb.

R. W. Thompson, Esq. (*Solicitor*), called in and examined.

Witness withdrew.

W. Tunks, Esq., a Member of the Committee, examined in his place.

Committee deliberated.

Letter from Mr. Eckford, relative to his last examination before the Committee, *read* by the Clerk. No action taken.

Motion made (*Mr. Webb*) and *Question*,—"That Mr. Fisher's evidence, given before this Committee, be forwarded to Mr. Eckford, with an intimation that he would be examined thereon if he so wished,"—*put* and *passed*.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 6 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Wearne,
Mr. Forster.

William Forster, Esq., a Member of the Committee, examined in his place.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY,

THURSDAY, 20 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Tunks;
Mr. Webb.

Chairman read a letter from Mr. Eckford, suggesting the names of witnesses to be examined, and asking to be supplied with a copy of Mr. Scholey's evidence.

Chairman stated that on receipt of Mr. Eckford's letter he had caused the evidence asked for to be supplied.

Committee deliberated, and decided not to examine the witnesses suggested by Mr. Eckford, and to inform Mr. Eckford that the Committee wished to confine the inquiry to the "Claim of Mr. Scholey."

Stephen Scholey, Esq., M.P., called in and further examined.

Witness handed in certain receipts. (*Vide Appendix C.*)

Witness withdrew.

Mr. Joseph Eckford called in—informed that the Committee wished to confine the inquiry to the claim of Mr. Scholey—and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Eckford be summoned to give further evidence next meeting.

[Adjourned until To-morrow, at Two o'clock.]

FRIDAY, 21 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Webb,
Mr. Tunks.

Mr. Joseph Eckford called in and further examined.

Witness withdrew.

Committee deliberated.

Motion made (*Mr. Burns*) and Question,—“That the Jury in the case of *Eckford v. Scholey* be furnished with a copy of the Evidence given by Mr. Henry Fisher, before this Committee”,—*put* and *passed*.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

FRIDAY, 28 MARCH, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Tunks, | Mr. Burns,
Mr. Macintosh.

Mr. William Farmer (*one of the Jury in the case Eckford v. Scholey*) called in and examined.

Witness withdrew.

Mr. R. J. Fleetwood (*one of the Jury in the case Eckford v. Scholey*) called in and examined.

Witness withdrew.

S. Scholey, Esq., M.P., called in and further examined.

Witness withdrew.

Committee deliberated.

Clerk laid before the Committee Mr. Forster's evidence, as revised, and drew attention to the Addendum. Consideration postponed to next meeting.

Ordered,—That Mr. Frerichs be summoned to give evidence next meeting.

[Adjourned to Wednesday next, at half-past Two o'clock.]

WEDNESDAY, 2 APRIL, 1873.

MEMBERS PRESENT :—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Webb,
Mr. Wearne.

Mr. B. Frerichs (*one of the Jury in the case Eckford v. Scholey*) called in and examined.

Witness withdrew.

Stephen Scholey, Esq., M.P., called in and further examined.

Witness withdrew.

Committee further considered Addendum to Mr. Forster's evidence and decided to have it printed.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY,

WEDNESDAY, 16 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Wearne,
Mr. Tunks.

Chairman submitted Draft Report; same read 1^o, and further consideration postponed to next meeting; Draft Report to be printed in the meantime, and distributed to the Members of the Committee. Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

FRIDAY, 18 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Cunneen in the Chair.

Mr. Wearne, | Mr. Webb,
Mr. Burns, | Mr. Macintosh.

Chairman's Draft Report read 2^o paragraph by paragraph:

Paragraphs 1 to 7, inclusive, read and agreed to.

Paragraph 8 read. Amendment proposed (*Mr. Webb*) to omit the following sub-paragraph, viz.:—

"*Friday, 4th.*—At the Auditor's office at 10 o'clock; could not see him till half-past 12 o'clock; saw him; he examined the accounts and said it was as bad a case as they had in the office for years; sent me to Mr. Fitzpatrick; he said that it was a bad case, and thought there was a good deal of the money badly spent; not a pleasant man to do business with; he said Mr. Forster was the party I should see. Saw Mr. Forster; he heard the whole statement; he asked me if I could not make a charge; I stated that I had made one charge against Saul Israel for attempting to obtain money under false pretences; the Magistrates had dismissed the charge; he stated that, in his opinion, they were bound to hear it; I told him that I was prepared to assist the Government all I could, *but must have a guarantee that would clear me from all responsibility; he said that was nothing but right*, and that I had better have a complete report of the case prepared by Mr. Thompson, who had the case in hand as attorney, and let him have the information as quick as possible, and he should see that the matter was well examined into. Mr. Forster listened to the case, as stated, with much attention, and thanked me for my trouble."

Question,—That the words proposed to be omitted be so omitted,—*put*.

Committee divided.

Ayes, 3.

Mr. Burns.

Mr. Wearne.

Mr. Webb.

No, 1.

Mr. Macintosh.

So it was resolved in the affirmative.

Paragraphs 9 to 13 inclusive read and agreed to.

Motion made (*Mr. Webb*) and *Question*,—That the Draft Report, as amended, be the Report of this Committee,—*put* and *passed*.

[Adjourned until To-morrow, at Three o'clock.]

MONDAY, 21 APRIL, 1873.

MEMBERS PRESENT:—

Mr. Cunneen in the Chair.

Mr. Burns, | Mr. Wearne.

Clerk laid before the Committee an account for five pounds (£5), received from Mr. Hughes for expenses for attending and giving evidence before this Committee.

Chairman read a letter from Mr. R. W. Thompson, requesting that he may be allowed his expenses, but leaving the amount to the discretion of the Committee.

Resolved (on motion of Mr. Wearne),—"That Mr. Thompson be awarded the sum of five pounds (£5), and Mr. Hughes the sum of three pounds (£3), for expenses for attending and giving evidence before this Committee."

Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Eckford, Mr. J.	15, 22, 42, 47
Farmer, Mr. W.	51
Fisher, Mr. H.	27
Fitzpatrick, M., Esq., M.P.	30

Scholey, S., Esq., M.P.	1, 14, 31, 42, 53, 55.

1872-3.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CLAIM OF MR. STEPHEN SCHOLEY.

WEDNESDAY, 12 FEBRUARY, 1873.

Present:—

MR. BURNS,
MR. FORSTER,

MR. TUNKS.

MR. WEBB,
MR. CUNNEEN,

JAMES AUGUSTINE CUNNEEN, Esq., IN THE CHAIR.

Stephen Scholey, Esq., M.P., called in and examined:—

1. *Chairman.*] Did you at one time hold the position of Warden of the West Maitland District Council? I did. S. Scholey,
Esq., M.P.
2. When were you appointed to that position? In 1867. I was a Commissioner for two years before.
3. What do you consider to have been your duties as Warden? To see to the proper expenditure of the whole of the moneys granted by the Government for the different roads in the district. 12 Feb., 1873.
4. Who generally carried on the correspondence between the District Council and the Government;—was it through the Warden generally? It was usually through the secretary. The secretary kept the accounts, and carried on the correspondence with reference to the grants, asking for sums to be voted, and furnishing accounts to the Government.
5. He did this under the direction of the Commissioners? Yes; but there were times when the Warden would communicate direct with the Government.
6. What arrangement had the Council for the expenditure of the public money placed to its account, for the various roads under its control? The election to the Council is every May, and after the election the Council would meet, and would appoint two members of the Trust to look after the expenditure upon the roads in their neighbourhood or that they might happen to be acquainted with, and two members for other roads, and so on, dividing the roads amongst the members. These, however, were always subject at any time to the inspection of the whole of the Commissioners. If they got into any dispute or bother over the taking of gravel or timber for the road, or anything of that kind, they would come to the Council for instructions as to what they should do. The matter was then inquired into, and if the Council believed the Commissioners to be right, it would support them; and if not, it would tell them they were in the wrong.
7. How did the money pass into the hands of the various persons entitled to receive it? By orders from the Commissioners in charge of the particular road.
8. And by whom were the cheques signed? By myself.
9. Who certified to the expenditure? The Commissioners having charge of the roads on which the expenditure took place.
10. *Mr. Tunks.*] You existed as a Council under an Act of Parliament? We did.
11. Do you keep any official record of your proceedings as a Council? Yes.
12. Will you look at this paper (*Return handed to witness*);—that purports to be a return of the proceedings of the Maitland District Council on the 19th May, 1868? Yes. It commences—"The following Commissioners were appointed."
13. *Mr. Forster.*] I should like, before going further, to understand the precise position which Mr. Scholey occupied, and, with the permission of the Chairman, I will put a few questions, in order to ascertain it. You were the Warden of the Maitland District Council? Yes.

- S. Scholey,
Esq., M.P.
- 12 Feb., 1873.
14. And in that capacity of Warden were you at the head of the Maitland Road Trust? I was.
 15. But you were not called the Warden of the Maitland Road Trust? Yes, I was.
 16. Can you show us any Government document in which that title is used in addressing you? I cannot say that I can, without searching over my papers.
 17. Was your office of Warden separate from, or identical with, that of Commissioner of the Road Trust? I do not understand the question.
 18. When you acted as a Commissioner of the Road Trust, was that separate and distinct from your duty as Warden? They were both the one. If I acted as Commissioner I was at the same time acting as Warden. They were both the one office, and I acted at the same time in both capacities.
 19. Did your appointment as Warden make you, *ipso facto*, a Commissioner of the Road Trust? It did.
 20. Your appointment was as Warden? Yes.
 21. And then money being in the hands of the Government for expenditure on the roads, the Government appointed you and other persons, for convenience sake, to see to its proper expenditure? No, the six District Councillors were elected by the people.
 22. Exactly. There is this body, and the Government having them at hand appoint them, for convenience sake, to act as a Road Trust? The Government place the money at the disposal of the Council.
 23. Look at this meeting of the 19th May, which you have just referred to. It says—"Present: The Warden, Mr. Eckford"—and so on. These are Councillors—they are not Commissioners? We call them so.
 24. These Commissioners are apparently appointed by the Council? Yes, appointed to look after the various roads; but the whole of them are elected.
 25. Yes; but elected as Councillors, not as Commissioners? As Councillors and as Commissioners; they have no other appointment than their election.
 26. *Chairman.*] It is under an Act of Parliament that the West Maitland District Council is constituted? It is.
 27. And under that Act the Warden has to be appointed by the Government? Yes.
 28. It consists altogether of seven members? Yes.
 29. Of whom six are elected by the people, and one is appointed by the Government? Yes.
 30. And that constitutes the Council of which you were Warden? Yes.
 31. *Mr. Tunks.*] Under that Act the District Council possesses no power to levy rates, so that you have no income to work upon? We have none.
 32. And to enable you to make the roads in your district you received certain grants from the public Treasury? We did.
 33. To expend on the roads in the Schedule laid before this House, and in the way there directed? Yes; that was all we had to act upon.
 34. *Chairman.*] You had a certain amount placed at your disposal for 1868? We had.
 35. How much? I cannot say how much, but I can give you the particulars. There were £350 for the Cessnock Road —
 36. That is sufficient for the present;—let us confine our attention to that amount. You had a sum of money to expend on the Cessnock Road for the year 1868? We had.
 37. Did you hold a meeting in May to arrange which of the Commissioners should be selected to expend the money on these roads? We did; we had a meeting on the 19th May, 1868. (*Extract from Minutes contained in Return of, read by witness.*)
 38. The Commissioners there named are the parties who have the whole superintendence of the expenditure of the money on these several roads? Yes.
 39. Had you any occasion to doubt the correctness of any of the vouchers sent in for the expenditure on any of these roads? I had.
 40. On what road? On the Cessnock Road.
 41. What led you to suspect that the funds had not been expended legitimately? It arose in this way in the first instance: On the 6th October I was on the road on business, and I went to see how the men were getting on, as I had done before upon the whole of the roads; and we have between 70 and 80 miles of road under our superintendence; and it was from information I received from a person on the road that I was first led to entertain suspicions that something wrong was going on. I was told that the men on this road came when they liked and went when they liked. When I heard this I determined to go and see for myself whether this information was correct. I went there on Monday, the 12th, and got up there a few minutes before 6 o'clock I think, and then there was only one man at work; two men came at half-past 7, and the other did not come till after 8 o'clock; this confirmed me in the impression that something was up. The same man who had told me that the men were not working their time also told me that he had heard that Mr. Eckford had reported to the Council that the money was nearly all expended, but he said that he knew better than that, for that he had kept an account of the expenditure, and that that account showed that there must be still more than £100 to expend. I asked him how it was that he had come to keep an account of the expenditure, and whether he had had any words with Mr. Eckford; and I think he said that he was sure that last year only about half the money voted for the road had been expended upon it, and so to make sure this year he had kept an account, to see whether the money was spent or not. This man had been five or six years working on the road, and was able to form a good judgment of what ought to have been done for the money. He said, "I was determined to satisfy myself, so I kept a book, and I will let you have a copy of it." Eckford had the vouchers in at that time; and when I received the copy of the man's book I compared it with Mr. Eckford's vouchers, and I found that Mr. Eckford had received more than was shown by this man's statement to have been due.
 42. *Mr. Forster.*] This man that you speak of;—was he a labouring man? He was.
 43. What man was it? His name is John Sheridan. Mr. Eckford came to me on the 26th October with an order for £43 something, and I then told him that I would not pay any more money, and would sign no further cheque until I had seen and examined the men for myself. He said, "All right," and on the following Thursday the men came up to be examined as to the time they had made. With respect to Israel and Carnailly's time, I sent Mr. Hughes to Israel to inquire what time he had made, and he said he had made nine days. Carnailly would not tell him anything. I examined the whole of the men, but I could get nothing out of them—they would give me no information; and I was informed on the Thursday that Mr. Eckford had been training the man Doran to say something as to what he should say when examined.

examined. I may say here that this last circumstance has never before been mentioned by me. It appeared that there had not been made by Israel more than nine days, whilst Carnailly had only made a day, though he claimed for nine days. On that account I refused to pay the claim on Mr. Eckford's voucher. Ten months after this the whole amount of money claimed was paid in a way that I consider to have been most illegal, since the order for payment was made after the sitting of the Council had closed, and when I was on my way down to Sydney. When I found this, I represented the whole matter to the Government, and protested against the payment. I then got the vouchers, which Mr. Eckford had sent in, and examined into them more carefully than I had had an opportunity of doing previously, and the first thing that struck me was the payment to a man named William Thomas. He was said to have earned a month's wages on the 16th June. When I saw this I knew very well from my own knowledge that there had not been time to earn a month's wages, as we had only received notification of the money being available in June, and we never put on men to work until we know that the money is there at our disposal to pay them. When I found this I began to make some inquiry about the man; to learn how it was he had made a month's wages under the circumstances; and then I found, to my surprise, that none of the men knew him. Besides this, at the very time when he was said to have been at work, there were five or six men, whom we regularly employed, who were waiting for the receipt of the money to be set to work. As I said before, we never commenced expending the money until we were quite sure that we would get it. I had a notification from the Government that the sum was at our disposal. We had been waiting for some time for the money for this road, and I know that three men especially had been waiting to be put to work within 4 miles of where this man was said to have been set to work; and yet these men, as it seemed then, had been set on one side, and a stranger, whom nobody knew, had been put to do the work. When I came to inquire further, I found also that not only did nobody know him but that nobody had ever seen him, and I am positive now that the man never did live there where he was said to live, and that he never worked where he was said to have worked. I made repeated inquiries in all directions, until at last I came to the conclusion that altogether it was a most strange case, for the more I inquired into it the more complicated it seemed to become, for in inquiring into the case of this man Thomas, I found that it came out that there were two others who could not be found and were not known. Then the name of a fourth man appeared who was not known, and afterwards there was a fifth name turned up under the same circumstances. At all events I am quite positive that four of the men never did any work upon the road, although their names were given in by Mr. Eckford, with vouchers of his having paid them. This was very clearly proved in the Supreme Court as far as Avery, Anderson, and Thomas were concerned.

44. Will you state to the Committee how it was that this action in the Supreme Court originated? We summoned Israel to Court for obtaining money under false pretences—for sending in an account for more than he had earned. When the case came before the Police Court there were two attorneys employed against us, and the case was dismissed. The Council took the matter into consideration, and a committee was appointed to examine into the whole affair. This committee of the Council was appointed on the 2nd November, 1868, to investigate the whole circumstances connected with the expenditure on the Cessnock Road. After being defeated in the Police Court, we talked the matter over, and it was thought that the best way would be to lay the whole matter before the Government, and hear what their opinion was. I was desired to go down to Sydney, and to lay the whole matter before the Government. I did so, but before going, I took the advice of a professional man on the subject, and that advice was, that I should be very careful about what I said. The person who gave me this advice was Mr. Thompson, the solicitor, of West Maitland. What he said was, that I should be very careful, for, said he, this man Eckford is a Member of Parliament; he has got a vote in the House, and that vote is often very serviceable, so that you will have an uphill work to do, and will have to be very careful with the Government when you are speaking of Eckford. I went down to Sydney, and on the 23rd November I wrote the following letter to Mr. James Neale, a Member of Parliament, whom I had known for many years. (*Letter read. Appendix A 1.*) This letter, inviting Mr. Neale to procure me an interview with the Minister for Lands, was answered by Mr. Neale, on the 25th November, in the following terms. (*Letter read. Appendix A 2.*) After this I again communicated with Mr. Neale, personally. I told him the purpose for which I had come down to Sydney; in fact I entered into the whole circumstances of the case. He told me not to have any misgivings about the matter; that I was in safe hands when I had to deal with Mr. Forster. He spoke very highly of Mr. Forster, and said there was no fear of his being influenced in any way by the circumstance of Mr. Eckford being a Member of Parliament. I then waited upon Mr. Parkes, and told him all the circumstances of the case. I showed him the vouchers and the balance-sheet which had been prepared by the committee of the Council. He said, "Well, you are in good hands; Mr. Forster is a gentleman, and is not likely to be influenced by any of the motives you dread." For I had urged to him my fear that Mr. Eckford, being a Member of Parliament, might be able to obtain the ear of the Minister. He said, "You are all right as far as that is concerned; you will obtain justice from Mr. Forster. I have every confidence in his sense of right and justice; you can go to him with perfect safety." Soon after that Mr. James Byrnes came in and I told him all the particulars of the case, and he said precisely the same thing that Mr. Parkes had done. My solicitor had told me that my wisest course would be to get a written document from Mr. Forster, indemnifying me against all loss I might suffer, and that I was to obtain this before I said anything to him about the matter; but when I heard all this said, first by Mr. Neale, then Mr. Parkes, and then by Mr. Byrnes, I thought I might fairly trust the case in Mr. Forster's hands, and that if there was anything wrong he would ferret it out.

45. When you were told that you would be perfectly safe in Mr. Forster's hands, what did you understand by that? I understood that he would see justice done between me and Mr. Eckford, and that he would not allow me to be the sufferer; because I told Mr. Neale and Mr. Parkes both that I expected a guarantee from the Government to hold me harmless against any proceeding that might be taken against me.

46. You expected that as you were taking proceedings in your public character and in the public good, the Government should hold you harmless? Yes, that was the advice which I received from my attorney and from other friends whom I consulted before leaving for Sydney. But I was thrown off my guard by the remarks of Mr. Parkes, Mr. Neale, and Mr. Byrnes, relative to the trust that was to be placed in Mr. Forster's sense of justice, though I quite admit that this was not done intentionally by those gentlemen. However it had that effect on me. These gentlemen took the papers and went through them with me very carefully, and then they sent me to the Auditor General. It happened to be past office-hours on that day and nothing could be done, the office being closed. They then gave me a note to the Auditor General, and I went with it to his office on the following morning. He listened to what I had to say, and then sent me

12 Feb., 1873.

over to Mr. Forster, putting a memorandum in writing in the corner of the letter he had received and sending it on to Mr. Forster. He said that he could do nothing of himself, and that he required to be set in motion by one of the officers, so that I would have to see Mr. Forster. Taking this letter with me I went over to the Lands Office, and was received very kindly by Mr. Forster. I entered into the case with him and showed him the vouchers, the balance-sheet, and the statement I had drawn up. We had a long conversation together over the matter, and he said what could he do with these papers; he had already so much business on hands that he could hardly keep up with it, and it would be no use to leave the papers with him. He said, "You had better employ some one, or perhaps I had better send some one up from Sydney to inquire into the matter." And then he asked, "Have you attorneys amongst you that you have full confidence in?" And I replied that we had, and he answered, "Well then, employ them." I made a memorandum of this conversation, and I came to make it in this way: Immediately after the interview with Mr. Forster I went over to Mr. Parkes to tell him what had taken place. After he had heard me out, he asked if I had made any memorandum of what had occurred, and when I told him I had not, he said, "I would recommend you to make a note of your conversation in the event of its being required hereafter." This is the memorandum I made in Mr. Parkes's office. (*Memorandum produced.*)

47. *Mr. Webb.*] How long after the interview was this made? The same night.

48. *Chairman.*] I think you may refer to it to refresh your memory, but you must not read it? The only point I wish to refer to is that in which I stated to Mr. Forster, that before proceeding in the matter against Mr. Eckford, as the case against Israel had been dismissed, and there were strong influences against me, I must have a guarantee from the Government that would clear me from all responsibility. Mr. Forster's reply was that he must have a complete report from Mr. Thompson, who had the case in hand, and when he had that he would see that the case was clearly gone into. That same night I telegraphed down to Maitland for a meeting of the Council to be called for the following Wednesday. I then left for Maitland; and on the following Wednesday we had a meeting of the Council, and I reported to the Council what Mr. Forster had said as nearly as possible in the same words that I have down in the memorandum. I cannot state exactly what was said, but my report to the Council was entered briefly on the minutes, where it is to be seen. There was also a report of the meeting of the Council published in the *Mercury*, and that report corresponds very nearly, word for word, with what is given on the minutes. I thoroughly understood from the first that I should be guaranteed from all responsibility, or I certainly should not have taken the proceedings I did in the face of all the advice I had received before I left Maitland to go Sydney to lay the matter before the Government.

49. *Mr. Webb.*] When you came back what took place at the meeting you had called? A report was got up, or rather I was deputed to have a report of the whole proceedings drawn up for the Government. I employed Mr. Thompson to draw up the report, and that report was sent to the Government. Mr. Eckford obtained a copy of that report, and on that he took proceedings against me. There was a great deal of abuse however commenced before that. Mr. Eckford used a good deal of very strong language, and made a good many charges against me, and I defended my character in the Supreme Court. He stated that I had cooked the accounts, and a great deal of that sort of thing. However the Supreme Court decided all that in my favour, and Mr. Eckford did not dare to go into the matter. Out of all his charges that he made against me he did not dare to go into one.

50. Do you mean that he did not prosecute his suit? I mean that he did not defend what he had said, nor attempt to show in any way that I had cooked the accounts.

51. Was there a verdict in your favour? Yes.

52. Then it did go to a jury? It did, and I got a verdict.

53. You brought an action against him? Yes, an action of slander. He said a very great many things about me. He stated that I had been transported to Van Diemen's Land for a beastly offence.

54. *Chairman.*] You brought an action of slander against him and obtained a verdict? Yes.

55. But you do not come here to claim compensation for that? Not at all.

56. Now, to go to the other case, for which you do claim compensation;—what was that about? The report I sent in to the Government.

57. Was there any action entered against you on account of that report? Yes; but luckily, as it happened, I brought the report down myself, and Mr. Neale went with me to the Minister for Lands to present the report. Mr. Neale was there all the time, and Mr. Forster promised then to see into the matter.

58. Was this report which you took down adopted by the Council? It was.

59. It was drawn up at their direction? Yes.

60. And was presented by you to the Government at their request? It was. But this document which I took down was not signed, and it was sent back with a letter which I should like to have read to the Committee.

61. Have you this report which was sent in to the Government? Yes.

62. Do you produce a copy of it? I do. (*Report produced. Appendix A 3.*)

63. This is a copy of the report which was adopted by the Council? It is.

64. By whom was it afterwards signed? It was signed by myself, by Mr. John Bowden, Mr. O'Brien, and Mr. Noble.

65. They were District Councillors? Yes.

66. And you produced this report at the request of the Minister of the day? I did, at his special request.

67. And you did this in your capacity of Warden, and in the public interest? Yes.

68. And as custodian of the public funds entrusted to you to disburse? Yes.

69. And in order to the repression of what you considered to be a malversation of the public funds? Yes.

70. Was any action brought against you in consequence of this report? Yes. Mr. Eckford commenced an action in the Supreme Court against me. It came on for trial in Sydney, and the witnesses were down about three weeks, the trial being a very long one. The decision was given altogether in my favour. After the verdict, Mr. Eckford applied for a new trial, but the full Court refused his application. He did the same at the former trial. He applied for a new trial and it was refused him.

71. *Mr. Tunks.*] Did you receive any remuneration for your services as Warden? No. Instead of receiving money, I may say I have been scores of pounds out of pocket through holding this office.

72. And what were the consequences of this action? We took every means for obtaining our costs, but at last the Insolvent Court closed the matter.

73. What do you mean by that? I mean that Mr. Eckford went into the Insolvent Court, and then we could get nothing. It was only then that I went to the Government to refund me the money I was out of pocket. S. Scholey, Esq., M.P.
74. What was the result of Mr. Eckford's becoming insolvent—so far as you were concerned? I lost the whole of the costs I had incurred in the suit. 12 Feb., 1873.
75. What did they amount to? I think the amount was £1,327.
76. And then you applied to the Government? Yes. I applied to the Government on the 18th August, 1871.
77. What for? Because I believed that I had a just claim upon them, having throughout acted for the protection of the public.
78. On what grounds did you consider that you had a just claim upon them? Because of the official position I held; of having acted in the public interest; and of the promise made to me by Mr. Forster.
79. You say from your position;—what position? My position as Warden of the District Council.
80. And because the action you took was in your public capacity, and was in the public interest? That is exactly what I mean.
81. And do you consider that though there was no written promise given to you by Mr. Forster, yet that there was a distinct verbal understanding in the conversation you had with him that you were to be held harmless? I should never have written a line if I had not believed that I had such a promise, and that Mr. Forster would have carried out what I believed to be his promise.
82. Did you write this memorandum of your conversation with Mr. Forster whilst the facts were still fresh in your memory? Yes; it was written immediately afterwards, except these interlineations, which were made afterwards. But the part I allude to commences with the words—"Saw Mr. Forster." (*Memorandum read. Appendix A 4.*) There is another letter that I should like to have before the Committee. It is a letter from the Government, calling upon the Commissioners to authenticate the report which I handed in to Mr. Forster, and which was not signed.
83. Is that the letter which requested you to do that which made you liable to the action at law? Yes. (*Letter put in and read. Appendix A 5.*)
84. Have you anything further to add to what you have already stated to the Committee? I may say, in addition, that I have inquired for these four men in every direction; that I have employed men to search for them; and that I have myself ridden some hundreds of miles to find these four men, Avery, Anderson, Thomas, and M'Evoy.
85. You could not find these men though they were placed on the schedule as having received a certain amount of the public money for working on the road? No, though I have done all that was possible in order to find them.
86. You could never even ascertain that they existed? I could not.
87. Nor that they had ever worked on the road? I could never meet any one who saw them.
88. Mr. Eckford could not produce them in Court when he brought his action against you? He could not.
89. Had he done so he would have gained his suit? Yes, he would have got the best of it had he brought these men forward.
90. But he could not find them, and they have never been found by you or by anybody else? No.
91. Yet they were put down as having received public money? Yes; and the cheques prove that it was paid for them.
92. Who received those cheques? Mr. Eckford.
93. When you first had a suspicion that a malappropriation of the public money had taken place by men being paid for time when they had not been at work, and others being paid who had no existence, did you go and inspect the work? I did.
94. And what was the result of the inspection;—did it confirm your previous impression as to the malversation? In going over the road I found that the report made to me was confirmed in every way.
95. You were satisfied in your own mind that the report was true? Yes; I saw with my own eyes that no person had been working on that road.
96. Did you conceive it to be your duty to report this to the Council? I did; and I reported what I saw.
97. And did the Council take any action in the matter? Yes, they appointed a committee to inquire into it.
98. Did that committee report to the Council? They did.
99. Did they report that in their opinion there had been a misappropriation of the public money? They did.
100. And the Council instructed you to wait upon the Government on the subject? Not the Council, but the committee.
101. You complied with that instruction? I did.
102. And when you so complied, did the Minister request you to send in a written report? He did; and I went back to Maitland and informed the Council that he had done so. The Council requested me to frame a report, and I got Mr. Thompson to draw it up.
103. And then the Council instructed you to go again to Sydney, and to present this report to the Minister? Yes.
104. Did the Minister for Lands give you to understand that you would be held harmless of any of the consequences of sending in that report? Yes; on the first occasion he did.
105. *Mr. Forster.*] You stated that you had some suspicion of the manner in which the money was expended on the Cessnock Road by Mr. Eckford? Yes.
106. How did this suspicion first arise in your mind? Through the information I received from Sheridan.
107. You describe him, I think, as a labouring man, who kept a book? Yes.
108. Had you any authority, as Warden, over the expenditure on the Cessnock Road? Yes; I had authority over all the roads. I ought to have been appointed specially with Mr. Eckford for that road.
109. I do not ask what you ought to have been, but whether you had any authority over that road? Yes; as Warden of the district I had authority over that and all the other roads.
110. Was it the practice of the Warden to control or supervise the action of the Commissioners? Yes; on every road it was his business and his practice to supervise and to suggest anything that he thought desirable.

- S. Scholey,
Esq., M.P.
- 12 Feb., 1873.
111. Then the Warden is a part of the Commissioners? Yes.
 112. He is one of the Commissioners? He is part of the body.
 113. Were you a Commissioner of the Cessnock Road? No, I was Warden of that road.
 114. Have you had that appointment made in writing? Yes, under the seal of the Colony, as Warden.
 115. But of that road? Of all the roads in the district.
 116. Were you Warden of the Cessnock Road under that title? I was Warden of all the roads.
 117. But what I wish to know is, were you appointed Warden of the Cessnock Road? Certainly I was.
 118. Can you show that here? Not here. I have not my appointment with me.
 119. Was your appointment Gazetted? Yes, I believe so.
 120. Is the Cessnock Road mentioned at all, either in the appointment or in the *Gazette*? No; all the roads generally are alluded to.
 121. And not any one specially? No.
 122. Then what you mean is, that you are Warden for the whole district, and that this road is included in the district? Yes.
 123. And did that authorize you to supervise the expenditure on the Cessnock Road? It did.
 124. Did you supervise the works upon all the other roads? I did.
 125. When your attention was called to the possible impropriety of Mr. Eckford's conduct, did you get the book from Sheridan which he said he was keeping? Not then; but I got a copy of it soon after.
 126. Is it an attested copy? No; it was simply an unattested copy. But I not only got the copy, but I have since got the book itself, so that the two can be compared.
 127. Now you have the actual book and not the copy? Yes.
 128. When Sheridan kept this book was it with Mr. Eckford's knowledge? That I do not know.
 129. How do you know that what is stated in that book is true? I do not know. I simply take it for what it is worth.
 130. You have no evidence to show that it is correct? Yes, there is collateral evidence.
 131. Do you say that there is any evidence at all of the authenticity of the book, or of its containing true statements? Yes, there is.
 132. Will you state what evidence? Yes, about the time put in by Israel and Carnailly—that is evidence which supports the book.
 133. I am asking you about this book of Sheridan's, and not about the time of Israel and Carnailly? Yes; and I say that the book supports other evidence in the case of these two men. I consider that is something.
 134. What proof have you that the book contains authentic statements? That is one proof that I have just given. It is backed up by other evidence given in Israel's case.
 135. Is that all? There are other proofs besides this.
 136. Will you be good enough to state them? Sheridan has been a long time in the service of the Council, working on the roads.
 137. That has nothing to do with the matter. I ask you what evidence there is that Sheridan's book is correct;—you give one instance, and you say there are others, and I want to know what others there are? There is this fact, that Israel admitted that he only worked nine days, and that exactly tallies with Sheridan's account.
 138. Admitting that—what evidence is there that Israel is correct? I know nothing about it, except this, that it is carried out by the amounts paid to the men, who all say that they received nothing more than what is stated in Sheridan's book.
 139. You say that the amounts paid to the men are the same as those stated in the book;—what is there, then, to complain of? There is this:—That it is stated by Mr. Eckford that he paid one man £4 10s., whereas this book contradicts him.
 140. So that this book makes charges against Mr. Eckford, and then Sheridan supports them by word of mouth? Not by word of mouth only but by oath. He swore to the truth of his entries before the Supreme Court.
 141. Did he say that Mr. Eckford had made away with the money? He did not say that Mr. Eckford had anything to do with it—not till afterwards, when other matters came out.
 142. What is there in this book against Mr. Eckford? There is nothing against Mr. Eckford. There is only a regular time-table of the work of the men—that is all.
 143. Do you know Sheridan? Yes. I have known him for the last six years.
 144. Do you suppose him to be an honest, trustworthy man? I do.
 145. Would you prefer to take his book to Mr. Eckford's word? Yes, I would. His book led me to make inquiries which convinced me that he was right.
 146. His book led you to suspect Mr. Eckford, and then you made inquiries which confirmed those suspicions? Yes.
 147. I suppose you will not object to hand in that book of Sheridan's? Not at all.
 148. You say you made inquiries;—what was the nature of those inquiries? On the Saturday Mr. Eckford came to the office for a cheque for the men—this was on 26th October. I refused to give him the cheque, and said I would only pay the men in my office after I had seen and spoken to them. He brought the men up to the office, and I examined them, but I could get nothing out of them; they would give me no information. This was in the presence of Mr. Eckford, and the men knew nothing, and would know nothing.
 149. Do you think that they were not telling the truth? I do.
 150. Do you think they were in collusion with Mr. Eckford? I will not say that.
 151. You saw them in the presence of Mr. Eckford? Yes.
 152. Did he use any influence over them—to your knowledge? Yes, he did.
 153. In what way? As soon as the first witness was examined Mr. Eckford left the room, and went out, and began talking to a man in the yard, who was about to be examined. What he said of course I do not know.
 154. You infer then that it must necessarily have been something improper? Yes. I had a right to infer it. I said, when he came back, that he ought not to have done this. I told him so.
 155. I suppose you thought it looked suspicious? I did, and with reason.
 156. Did you charge him then with making away with the public money? No, I did not; only in the report.

S. Scholey,
Esq., M.P.

12 Feb., 1873.

157. Do you not think that the better way would have been to have told him what you suspected, and to have called upon him to defend himself? I did in the report. That document charges him with making away with the public money.

158. But you did not charge him with misappropriation when you had this inquiry? No, I did not.

159. Then again I ask you, do you not think it would have been better to have told him your suspicions, so that he might have been in a position to defend himself? I intended to do so. I went to him on the Friday, after I had held the examination on Thursday;—he had been abusing me ——

160. That is not to the point. You say you had suspicions of Mr. Eckford;—why did you not tell him of them when you had the inquiry? I had not suspicions of him then; but I was going to explain, that I was going to tell him what had occurred, and as he had been abusing me I went to him the day after the inquiry, and asked him what made him abuse me. He said he had done nothing of the kind, and wanted to know who had told me. I said that Mr. Price had informed me, and that I would call him up and bring him and Mr. Eckford face to face. Mr. Eckford said, "No thank you; save me from my friends; I want nothing of that kind." He then went away, and would not hear any more that I had to say.

161. Do you say that looking at this book alone you thought the public money had been improperly expended? From looking at the book I suspected that something was wrong; that was all.

162. Were your suspicions directed towards Mr. Eckford? I was not sure about it.

163. Did you suspect somebody? I did.

164. Whom did you suspect? Mr. Eckford.

165. Then you suspected him of having made away with the public money? Yes, I did.

166. When you entertained these suspicions did you at once go honestly to him and tell him what your suspicions were, and call upon him to defend himself? I went to him, and asked him to hear me in reference to the Cessnock Road, and he would not have anything to do with me.

167. Holding these suspicions, did you tell him of them and ask him what he had to say in defence? I have already said that I was going to tell him, and he would not hear me.

168. Did you never have an opportunity of telling him? Never. He refused to hear me when I wished to speak to him, and refused to allow a committee to sit to inquire into the matter.

169. Did you bring the matter of your suspicions under the notice of the Council? I did.

170. Did you, when you brought the matter before the Council, state your suspicions of Mr. Eckford? I do not think I did.

171. Did you make any charge at all against him? I do not think so.

172. What was the nature of the complaints you made when you brought the matter before the Council? I stated that there was something wrong with reference to the Cessnock Road accounts.

173. Did you think that something was wrong, and that nobody had done it? No; I knew pretty well who had done it.

174. Then why not, when you were making your statement to the Council, state the person against whom the charge was made? I preferred not to do so. I had my reasons for it.

175. For your own convenience? No, for my own protection.

176. But do you not think it was due to your position as Warden, and your duty towards Mr. Eckford, to give that gentleman an opportunity of defending himself? He had plenty of opportunities had he chosen to take them.

177. You say he had plenty of opportunities;—where had he opportunities? I gave him one opportunity when I asked him where the three men lived, who they were, or where they were to be found. His only answer to me was, asking me if I wanted to charge him with robbery. He became very violent, and seized a candlestick to throw at me. I have already suffered quite enough from what I had no right to do. I expected something of the kind, and I was cautious.

178. Are we to understand then that you are cautious in the answers that you give here? Yes.

179. Do you intend to tell the truth? I do.

180. You do not intend to keep anything back? No, nothing at all; you may depend that I will tell nothing but the truth.

181. I ask you again then—holding these suspicions of Mr. Eckford—did you go to that gentleman, or did you in any public way make charges against him in such a manner as would give him a chance of defending himself? I did not. I went to him with the object of telling him, but he would not hear me. He was very abusive, he told me to go to hell, and asked me if a Member of Parliament was to be dictated to by a fellow like me.

182. In what way was the matter brought before the Council;—was it in Mr. Eckford's absence? Yes, I think it was; but it was on an ordinary meeting night.

183. Then, holding these suspicions of Mr. Eckford, and having reason to suppose that the public money had been made away with, you not only did not state those suspicions to Mr. Eckford but you brought the matter before the Council in his absence? Yes, I did.*

184. What was the proceeding taken at this meeting? The Council appointed a committee to inquire into the matter.

185. Was the name of Mr. Eckford mentioned as that of the person who might probably have made away with the public money? I do not know that it was.

186. Then you mean to say that you brought an accusation of malappropriation of the public money; and did not say who had made away with it? Yes, I did; for I accused Israel and Carnailly of being implicated in the matter.

187. Did you accuse them of making away with the public money? No. I accused them of applying for more money than they had earned.

188. Then did you say that this had been done without the connivance of Mr. Eckford? That I could not say.

189.

* NOTE (on revision):—The Cessnock Road business was brought forward at different meetings of the Council, which were regularly advertised. Mr. Eckford knew the business would be brought forward, and he made a long speech in defence of himself on the 17th November. Mr. Eckford was also present in the month of January, when he again made a long speech. He knew all through the charges that were made against him in connection with Cessnock Road. Councillor Noble informed the Council Mr. Eckford told him he would, under the advice of his solicitor, remain away from three meetings, and he certainly did so, and part of the business had to be done when he was absent. When I asked Mr. Eckford at one meeting of the Council where the three missing men (Thomas, Anderson, and Avery) were, he threatened to throw the candlestick at me for charging him with robbery.

- S. Scholey,
Esq., M.P.
- 12 Feb., 1873.
189. Do you say that you stated your suspicions of Mr. Eckford to the Council? No; this was only the commencement of the matter, and until I got further evidence I did not like to think that Mr. Eckford would do such a thing.
190. Is there any record of what was said or done in the Council? No; only a minute of the fact that the committee was appointed.
191. What was the committee appointed for? The object is contained in the return laid on the Table, in the minute of the Council's proceedings on the 2nd November, 1868.
192. Was the committee appointed to inquire into the expenditure on the Cessnock Road? Yes.
193. And not into Mr. Eckford's conduct in any way? No.
194. Not to inquire into any malappropriation of the public money by Mr. Eckford? No.
195. But a malappropriation by these men? Yes; and after inquiry the committee decided to proceed against Israel.
196. Mr. Eckford was not a member of this committee? No, I should say not.
197. Did the committee inquire into the matter? Yes.
198. And they brought up a report? Yes.
199. Did they meet and examine witnesses? No, they did not.
200. You were a member of that committee? Yes, I was.
201. You are acquainted then with all the circumstances? I am.
202. When did they meet first? The first meeting was on the evening of the 2nd November.
203. When was the next meeting? They only met once after that.
204. Where did they meet? In the office of the Council.
205. Not in the streets? We did meet sometimes in the streets, and when we met we naturally talked the matter over.
206. As a committee? Yes, as a committee.
207. How did you hold the meeting;—I suppose you did not sit down on the ground? No, we stood in the streets and held a committee meeting.
208. Had you any clerk present to make a minute of your proceedings? No, we acted as clerk for ourselves. We do not go through all the preliminaries in the way you do here; we carried them in our heads.
209. You met in the streets? Yes.
210. And were your proceedings recorded in the streets? No, they were not.
211. Then in what way were your proceedings regular if they were not recorded? We did not require any record.
212. What was the subject discussed at these meetings? It was with reference to the summoning of Israel.
213. And all the time there was no record kept? There was not.
214. And still you were acting as a committee? Yes.
215. If you only met once in the office, was that when your report was drawn up? No; the report was a balance sheet,—that is all it was.
216. There was no other report than this balance sheet? No.
217. Does that balance sheet explain everything? No, it does not.
218. Who drew up this balance sheet? Mr. Hughes, the clerk to the Council.
219. Did he act as secretary to the committee? He did.
220. Did the committee order the balance sheet to be drawn up? They did; but there was another report drawn up by Mr. Thompson, and ordered to be prepared by the Council, and afterwards sanctioned by the Council.
221. But you said that the only report was a balance sheet? Yes, at that meeting of the committee.
222. Was this balance sheet submitted to the committee in the streets? No.
223. Was it submitted to them at that one meeting you speak of? Yes.
224. Where did you meet when you did not meet in the streets? In the office of the District Council.
225. And it was there that the balance sheet was submitted to the committee? Yes.
226. In due form, and with proper regularity? Yes.
227. Was there any minute of it made upon your proceedings? I do not know whether there was or not.
228. The balance sheet was submitted to the committee? Yes, on the night of meeting.
229. In the Council office and not in the street? Yes.
230. And was it submitted in due form by the chairman, and approved by the committee? It was.
231. In what sense was this balance sheet a report? In the sense that it was carrying out the instructions of the Council.
232. Was it put to the vote, paragraph by paragraph, like a report? No; it was sanctioned unanimously as a whole.
233. How do you know if it was not put to the vote? It was put to the vote as a whole, and agreed to.
234. Is that on record? No, I think not.
235. I suppose you carried that in your head? It was put to the vote and agreed to, and there could be no mistake about it.
236. Now, about this other report;—what was that? The other report was the one drawn up by Mr. Thompson. He was the solicitor appointed to conduct the case against Israel. Under the direction of the committee I employed him to draw up the report.
237. You were authorized to employ him? Yes.
238. Is that authority on record? No; it was a verbal authorization.
239. And you ordered it to be done? Yes, I ordered it, being instructed to do so by my fellow-Commissioners.
240. In the street, or in the Council? In the street.
241. Then you received your authority in the street, and then you ordered Mr. Thompson to draw up the report? Yes.
242. And did you submit this other report to the committee? No, to Mr. Thompson.
243. Do you understand my question? Yes; Mr. Thompson had all the documents in his hands, and it was submitted to him to draw up the report.
244. I understand that;—he drew up the report by your orders? Yes.
245. When you got it from him what did you do? I brought it into the Council; it was read and considered; some alterations were made in it, and then it was adopted.

S. Scholey,
Esq., M.P.

12 Feb., 1873.

246. Was that report adopted by the committee and then submitted to the Council? The committee was the Council when the report was received and adopted. The members of the Council examined and adopted the report, they being members of the committee also.
247. Then they were sitting in Council as a committee? No, as a Council; as a Council they considered and sanctioned the report.
248. Is that a regular course of proceeding do you think? It may not be for a Parliament, but that is the way we do business in Maitland; we are not so particular there.
249. Then you brought up the report to the Council without first submitting it to the committee, and then it was sanctioned by the committee sitting as a Council? Yes; I could not do it in any other way; I only got it from Mr. Thompson just immediately before the hour of meeting.
250. Is this the report which was afterwards sent to the Government? Yes.
251. By the Council? Yes; I took it down to Sydney by direction of the Council.
252. Did they state when they forwarded it that it was a report of a committee? That I am not sure about.
253. Did the Council send the report to the Government? They did.
254. This report, drawn by Mr. Thompson? Yes.
255. How did it happen that it was not signed when sent first? It was by a mistake, I believe.
256. Is that another of the ways in which you do business in Maitland? Yes.
257. To send important documents up to the Government without their being signed? Yes; and what is more, the Government received the document, and did not detect the error until sometime after.
258. And it was on this that the action was brought against you by Mr. Eckford? Yes.
259. What evidence have you of that;—was there no other evidence against you on the trial than that report? No, nothing more.
260. Was it your report? It was the report of the Council, and consequently mine as Warden of the Council.
261. But I thought it was the report of a committee? It was the report of the Council as well as of the committee.
262. The two acting together in a joint capacity? Yes. We are not so particular about these things as you are in Parliament; we do not understand them.
263. You say that three men have been charged for, who never worked or lived on the road, and that the money drawn for their wages had been appropriated by some one else;—was that statement made in this book you speak of? No.
264. How was it that this was omitted from the book? It was omitted because Sheridan knew nothing about it.
265. Did you ever charge Mr. Eckford with having drawn out accounts for which he had received the money, in which were included the names of men who never worked on the road, and who never existed? Yes; I implied it. I asked him at the meeting of the 19th if he could show us where these men lived, or where they had been working, or could tell us of any one who knew them; and he was going to throw a candlestick at my head as an answer.
266. That, I suppose, is another of the ways in which you do things in Maitland? Yes; but I do not think that that can be said to be altogether unparliamentary.
267. What were the names of these four men? Avery, Anderson, Thomas, and Macavoy.
268. And you say there are no such men? Yes, no such men ever worked on the road. If they had I should have discovered them, for wherever an Avery or an Anderson could be heard of within 40 or 50 miles, I have been and visited him to try and find out if these road men existed. I heard of one Avery, and wrote to him, but he wrote me back an answer in his own hand, and as the Avery who purported to sign the voucher could not write, the man who wrote me the letter could not be the man.
269. Was not your charge against Mr. Eckford that he had purported to pay wages to these men, when, in fact, there were no such men engaged? Yes.
270. Do you not consider that to be a charge of gross peculation? Most certainly I do.
271. And having this charge in your own mind, did you go to Mr. Eckford and tell him what you had against him? I have told you already that I went to tell him, and he would not hear me; he told me to go to hell.
272. Did you make this charge openly against Mr. Eckford? Yes; it is in the report.
273. You made efforts to find these men, and could not do so? Yes.
274. And is that the sum total of your charge against Mr. Eckford? No; in addition, there is the fact that there was stated to have been paid to the carters, Israel and Carnailly, more than they ought to have received; and if the Government had assisted me, as it ought to have done, I would have been able to prove this by evidence.
275. These two men did not earn the money? The four men —
276. Was the money never paid to them? Nothing at all. Thomas could not have earned the money charged for him in the time set down, because, as I said before, the money had not been received from the Government, and we never employ men until we have the money. Then again, these men, all perfect strangers in the district, whom nobody ever knew, and who cannot now be found, are employed on the road, whilst three men who were in the regular employ of the Council are kept idle within 4 miles of where the work was to be done.
277. If these men did not receive the money what became of it? It went into Mr. Eckford's pocket I presume.
278. How was it you never made these charges in such a form and in such a way as would have given him an opportunity of meeting them? He knew it all well enough from the beginning.
279. How was he to know it—by intuition? He might have known it very well when I first refused to pay the account he presented.
280. These accounts were refused to be paid by the Council? Yes—Israel's and Carnailly's.
281. But were afterwards paid? Yes.
282. Not by the same Council? Yes. After the Council meeting had broken up, and I had gone away to Sydney, a second meeting was held by some of the Councillors, and the accounts were passed; and these gentlemen took upon themselves to sign two cheques for the money, which nobody but myself is authorized to do. I sent a protest to the Government, and requested them to stop the cheque, but they did not interfere in the matter.

- S. Scholey,
Esq., M.P.
12 Feb., 1873.
283. Do you think that these actions were illegal? I have no doubt about it, and it was upon that account that I protested.
284. How was it that the cheques were paid when you alone were authorized to draw cheques? I do not know; the Government must have known something about it. Some influence must have been brought to bear on them, and they authorized the payment.
285. On what Bank were they drawn? On the Bank of New South Wales, Sydney.
286. Do you think that, in this instance, they paid cheques which were not authorized? I think so.
287. In that event would not the amount be recoverable at law? I believe it would be.
288. Did you take any steps to recover the money? No; I had had quite enough of it with Mr. Eckford without beginning at the Bank, especially as the Government would give me no assistance. I would have proceeded against another of the Commissioners if the Government had only stuck to me; but it would help me in no way.
289. How did it happen that the Council met after its proceedings had been brought to a close, as you say? It was a meeting on Tuesday night, and the business was over, and the Council closed, and I had to leave to catch the train to go down to Sydney. After I left Mr. Bowden left, and then Mr. Keating and two other Councillors re-opened the proceedings, elected a chairman, and had the vouchers for Israel and Carnailly's work looked up; they demanded them of the clerk, who in the first instance was unwilling to give them. Whilst I was away, waiting the decision of the Government on the case, these Councillors settled the matter by passing the accounts and giving cheques for the money.
290. What do you mean by the Council closing;—had they met? Yes.
291. Was there a quorum present? Yes.
292. Had you gone through and concluded your business? Yes; the meeting had closed and I left the chair. After I left the office these three Commissioners constituted themselves into a meeting and did this illegal thing I have mentioned.
293. Had they the means of doing this in so irregular a way? It seems they had for they did it. At the same time they had not legally the power of doing it. It was all the doing of the Government, or it might have been put a stop to.
294. How could it be the doings of the Government;—did they send orders to do it? I do not know about that.
295. Could the Government know that such a thing was going to be done? I dare say not; but then the Government ought to have assisted their servant, the Warden, and have prevented the consequences which followed.
296. About this report;—you say it was adopted by the Council? Yes.
297. Was Mr. Eckford present? He was not.
298. How came you to bring the matter before the Council in Mr. Eckford's absence? Because Mr. Eckford had told Mr. Noble, one of the Commissioners, that he intended to remain away from Council sittings for three meetings, so as to give me an opportunity of saying something that might criminate myself, and lead me into a difficulty.
299. Who told you this? Mr. Noble; and the evidence to that effect is on oath. He mentioned it in the Council, and said that Mr. Eckford told him that he would not come to the Council for three meetings, to give me a chance of saying something that he could lay hold of.
300. Did he state this at a meeting of the Council? He did, and swore to it afterwards in the Supreme Court.
301. And Mr. Eckford, as a matter of fact, did not come for three meetings? I do not think he did.
302. Was it in his power to be present at the meeting when you brought up your report? That I do not know.
303. Did anybody at that meeting vote against the adoption of the report? Mr. M'Mahon and Mr. Keating voted, not against the report but for an adjournment of the discussion.
304. Did you send it to the Government as Warden of the Council? I did not send it; I brought it down to Sydney myself.
305. As Warden? Yes, and by order of the Council.
306. You found your claim to compensation on the circumstance that you lost the costs of an action brought against you by Mr. Eckford on this report; and further, on the fact that the Government guaranteed you against all responsibility in the matter. Now, on what grounds did you assume to have received this guarantee? On your own words, spoken to me.
307. Was anyone present when I gave you this guarantee? No one.
308. Did you not say that your attorney had told you to get this guarantee in writing? I did.
309. Did you ask for a written guarantee? No I did not, and the reason why I did not was what I have already stated.
310. What was it? That Mr. Parkes, Mr. Neale, and Mr. Byrnes all assured me that I was safe in your hands, and that you would see that justice was done.
311. Did you ever speak to Mr. Fitzpatrick on this subject? I did, and he wished me to see you about it.
312. Was he ever present during the conversations between you and me? No, he only introduced me once, I think, as far as the door, and then he left before our conversation commenced.
313. Can you say the exact words in which you asked me for a guarantee, and in which I answered that I would give it? I could not now give you anything nearer than what I have already said—what is written down in my memorandum.
314. Did you make use of the word "guarantee" in any way? I believe I did.
315. You say that we had a long conversation, and that in the course of it this talk about a guarantee occurred? Yes. You told me that if I could put my finger on the men the Government would see and follow the matter up.
316. Is this conversation set out in your memorandum? No, it is not.
317. What did we talk about during this long conversation? Generally about the roads of the district.
318. Can you give any idea as to the length of time we were conversing? I could hardly say.
319. Was it an hour? No, not so long as that.
320. How long—about ———? I should say about twenty minutes.
321. In what terms did I give you this guarantee; did I say, "I will guarantee"? No, you said that if we had not a competent man to undertake the matter that you would send some one up.

322. What for? To look into this matter; and when I told you that we had a man in whom we had confidence, you told me to let you have the report as soon as possible, and that you would then take steps at once. S. Scholey,
Esq., M.P.
323. It was when you came up first that we had this conversation? Yes, I brought the balance sheet, the vouchers, and Sheridan's time-table with me. These I showed to you, and on them this conversation took place. 12 Feb., 1873.
324. Did you ever correspond with the Government in my time on this question of a guarantee? No, I did not.
325. Do you remember Mr. Fitzpatrick being present on one occasion when we had a conversation together? No, not to my knowledge. I recollect his once coming to the door with me, but only to the door.
326. In speaking of a guarantee, was one ever given to you upon any occasion besides this? No.
327. This was the only time? Yes.
328. And you are sure it was given? Yes, or I certainly should not have sent in the report.
329. Would you not have sent in the report without this guarantee? I would not.
330. Would not the Government have made you send it in? They might have done so; but if they had, my case for compensation for loss would have been very clear.
331. But was it not your duty to have sent it? Yes, of course it was.
332. And could you not have been compelled to send it without this guarantee? The Government might have done so, had they been disposed.
333. Then how does the sending in of this report affect you;—in what way does it place you in the position of a claimant? Because I signed it on the distinct understanding that I should be guaranteed against all responsibility.
334. But were you not bound to sign as the chairman of the committee, or as chairman of the Council? No, I think not.
335. Not after the Council had adopted it? No; and I did not sign it, but took it down to the Government unsigned, and they received it. With all the boasted wisdom of the Sydney officials they took the report from me unsigned, and it was only afterwards that they returned it for signature.
336. Was it left unsigned on purpose? No, I will not say that.
337. Was that part of your system, or of the way in which you do business in Maitland? No, it was not.
338. Then your claim is for having signed the report? Yes.
339. And if you had not signed you would not have had this claim? No, for if I had not signed, Mr. Eckford could not have sued me.
340. Was John Sheridan ever confronted with Mr. Eckford? He was.
341. Where—before the Council? Yes.
342. And what did Mr. Eckford say? He said nothing but a lot of abuse—abusing everybody.
343. Did Sheridan at that time charge him with irregularities in regard to the wages? He did. It was all in the report.
344. But what I want to know is: When Sheridan and Mr. Eckford were brought together, face to face, before the Council, did Sheridan make these charges against Mr. Eckford? No, not before the Council.
345. Then it always happened that these charges were made behind Mr. Eckford's back? Yes, it did.
346. And you did not bring them before the Council? Yes, I did; and it was on my bringing them before the Council that the committee was appointed. It was from what I said to the Council that they decided upon a committee to inquire into the matter.
347. You have not a very good memory, I believe? If you had been battered about as I have been over this and other matters, I do not think your memory would have been improved.
348. How is it if you have a bad memory that it happens to be so good in my case? Because I spoke of what occurred immediately afterwards to Mr. Parkes, and at his suggestion made a memorandum of what took place, whilst the conversation was fresh in my mind.
349. You say that on the occasion of your holding an inquiry, Mr. Eckford went out and prompted one of the men, and that you have never mentioned that till to-day;—how was that? I do not know—perhaps because I never had occasion to mention it—perhaps because I was never asked about it.
350. Then you have no other evidence of this guarantee than your recollection of the conversation with me;—that is the only evidence? That and the letter from the Government, asking for the report to be signed.
351. Do you recollect this occurring in the course of my conversation with you—my telling you to put everything into writing? Yes, I do.
352. How was it that that did not suggest to you the desirability of having this guarantee put into writing? I was a new chum then to Government business, I suppose, and took the opinion of Mr. Parkes and Mr. Neale that you would see justice done to me.
353. Did I assure you that the Government would inquire into the matter? You did, over and over again.
354. Did I not require you to put all your information, charges, evidence, and everything, before the Government in writing as a preliminary to any inquiry? You asked me to get up a report.
355. Did I ask you to "get up" a report, because that would imply something improper? No. I do not pretend to say those were the exact words, but what you asked me for was a report on the whole affair.
356. In asking you this, was it my intention to ask you, Stephen Scholey, personally to do this, or to ask you as Warden of the district? I never thought about how it was you asked me, but I know you did ask me.
357. *Mr. Burns.*] When you came to Sydney, and first saw Mr. Forster, then Secretary for Lands, you came as Warden of the district? Yes.
358. You came to submit to the Minister the balance sheet prepared by the committee, according to which the accounts sent in were in excess of the actual expenditure by £109? Yes.
359. When you returned to Maitland did you report what had occurred to a meeting of the Council? Yes, as soon as I possibly could.
360. You verbally reported? Yes.
361. You have had in your hand a copy of a Return moved for, in which some of the minutes of the proceedings of the Council are to be found? Yes.
362. Will you turn to the minute of the 4th December, 1868? Witness reads minute. (*Vide Appendix A 6.*) 363.

- S. Schioley,
Esq., M.P.
- 12 Feb., 1873.
363. You are aware of this entry having been made? I am.
364. Was that substantially what you reported to the Council? It was.
365. Then in sending in the report, which subsequently reached the Government, you were acting first in your capacity as Warden, and next under the influence of the statement made to you by Mr. Forster, that you would be borne harmless? I was.
366. Your appointment as Warden is one that you received from the Government? It is.
367. All the other members of the Council are elected by the electors of the district? They are.
368. You are in some degree, from your position, responsible to the Government for the proper administration of the affairs of the Council? I am.
369. When it was reported to you that there was something wrong in reference to the accounts of the Cessnock Road, you considered it to be your duty to inquire into the matter, as Government money was concerned? Exactly.
370. I believe the whole of the money to be expended on the Cessnock Road was a grant from the general Revenue? It was.
371. How came you in the first instance to receive this statement or time-table kept by Sheridan? He told me at the second interview I had with him that he was keeping a time-table to see how the money was expended this year, for that last year he believed that the money granted for the road was not spent upon it.
372. Not that the grant had been left unexpended? No, that the money though received had not been spent. He said, when he heard that the money was all gone for the year, that he was sure there was at least £100 to be expended.
373. Then he spoke at this interview of something being wrong in the expenditure of that year? Yes. He said that if Mr. Eckford spoke about the money being expended there must be a mistake, for at least £100 must be left.
374. How did he come to say this? He said he had heard that the money was nearly all gone, but that he knew better, that it was not by £100 at least.
375. Did he say that he would give you a copy of his time-table? He did, and brought it down to me on the following Tuesday night.
376. You had then no suspicion of Mr. Eckford? None whatever.
377. Did you compare Sheridan's account with that sent in as for money expended? I did.
378. Having done that, what did you do? I went out on the road and made inquiries for the men Avery, Anderson, and Thomas.
379. How came you first to have a suspicion in regard to these men? The first thing that struck me was that Thomas could not have earned the money which was set down as due to him from the time I told Mr. Eckford that the money had come. When I told him the money had come there were five or six men waiting for employment, and none had been then engaged.
380. These men's names were not on Sheridan's time-table? No.
381. Did you go and look for them? I did.
382. And got other persons to search for them? Yes.
383. How many? A good many. Six or seven, or perhaps more.
384. All these persons agreed that these men had not been then on the road, and that there were really no such persons? They did.
385. How did Mr. Eckford first come to learn that there was some inquiry going on? In the same way that I did.
386. In what way? He was told it. The night the committee was appointed his friends in the Council let him know about it.
387. *Mr. Webb.*] I do not quite understand about the constitution of the Council;—six members you say are elected? Yes.
388. And a seventh person, the Warden, is appointed by the Government? Yes.
389. Is there any instruction given to the Warden as to his duties? Yes. There is a charter under which he acts, and which explains his duties.
390. That you have? Yes.
391. Can you produce it to the Committee? I will do so.
392. Has it always been customary for the Warden to be chairman of the Council? Yes; no one else can take it whilst he is there.
393. Has it been customary for the Warden to sign all the cheques of the Council? That is varied. It is arranged according to a vote of the Council.
394. How do you mean varied? I mean that the Council appoints some person to sign cheques, and that this is sometimes changed. Previous to my being Warden three Commissioners had to sign the cheques. That was found to be very inconvenient, and then I was appointed.
395. In 1868 what arrangement was there for signing cheques? I signed them.
396. Any one else? Only Mr. Hughes, the secretary; he countersigned them.
397. Was the member to sign cheques appointed by resolution of the Council, or by the Government? By a resolution of the Council.
398. In 1868 you had £350 handed over to you by the Government for expenditure on the Cessnock Road? Yes.
399. Was the amount for that road alone? Yes; for 14 miles of it.
400. That came entirely from the Government? Altogether.
401. It did not include any rates or assessment? Nothing. It was a grant from the Parliament.
402. And you, as Warden, and representing the Government, were supposed to look after the proper expenditure of the money in the public interest? I was.
403. When the money was earned on the different roads, on whose voucher was the cheque issued? On the voucher of the Commissioner, who had charge of that particular road.
404. And as regarded this Cessnock Road, Mr. Eckford was the sole Commissioner entrusted with the charge of it? He was.
405. No one was connected with him in it? No. He ought to have had some one with him, but he did not.
406. Then you were called upon to sign cheques upon his giving vouchers? Yes. The cheques are given upon a written order, signed by the Commissioner in charge. We have a regular printed form for the purpose.

407. With reference to your power of interference, I wish to know whether you can tell me, from memory, whether you have been authorized by the Government, verbally or otherwise, to look after these Commissioners; or whether you are authorized by the Council to look after each district allotted to the various Commissioners? There is no special power, but then custom steps in, and it has always been the custom for the Warden to look after the expenditure on all the roads. S. Scholey,
Esq., M.P.
12 Feb., 1873.
408. Does the charter of the Government give you the power? That I do not know.
409. Whilst you have acted as Warden you have constantly inspected all the various roads entrusted to these Commissioners? I have.
410. Has any objection ever been made to your so doing? Never.
411. You left the Council to come to Sydney, and afterwards they had a meeting when you left? Yes.
412. How were these meetings called? We had two kinds of meetings—monthly and special meetings.
413. How are the monthly meetings called? By public advertisement.
414. Is there no circular notice sent to the Councillors? No. Only an advertisement in the newspaper.
415. An advertisement calling them together? Yes. We meet regularly on the third Tuesday in the month, so that the day of meeting is well known, and besides that an advertisement is published in the paper.
416. Can the meetings take place without this advertisement? No; they cannot. As Warden I publish the advertisement calling them together.
417. At all these meetings, when inquiry was made into these charges against Mr. Eckford, were they duly advertised? They were.
418. Now as to a special meeting;—how is that called? By advertisement, the same as the others.
419. Was it a special meeting when the committee was appointed to inquire into this expenditure on the Cessnock Road? I think it was.
420. Was that convened by advertisement in the usual way? It was.
421. Is there any specified time for giving the notice in the paper—so many days before the meeting of the Council? No, nothing of the sort.
422. Do you know, as a matter of fact, what notice was given—what time intervened between the publication of the advertisement and the meeting? It was published in the *Mercury* of Saturday before the Tuesday on which the meeting was held.
423. And these meetings were all duly advertised? They were.
424. In the way you had always been accustomed to advertise? Just the same.
425. And Mr. Eckford could have seen the advertisement had he looked for it in the usual way? Of course he could.
426. Do you know if Mr. Eckford was there in Maitland at the time, or whether he was away? I do not know.
427. Then it was a special meeting when the committee was appointed to inquire into the expenditure? Yes, I think it was.
428. And when your report was brought up was that a special meeting, or was it an ordinary monthly meeting? It was brought up on the 2nd November, and that would be a special meeting. Our regular monthly meeting would fall on the 17th November.
429. When the report that was sent to the Minister for Lands was adopted, was that a general or a special meeting? That was on the 9th December—that would be a special meeting.
430. When was your first meeting held on this subject? On the 2nd November, when the committee was appointed.
431. And the next? The other, when the report was adopted, was on the 9th December.
432. Do you know, as a matter of fact, whether Mr. Eckford was in Maitland, or in the neighbourhood, or had he been seen there between the 2nd November and the 9th December? Yes, he was at home between those dates, for I saw him and spoke to him.
433. Did he know of this meeting being about to take place? He must have known it, for he takes in the *Mercury*, and I suppose reads it.
434. Did you see him between those two dates? Yes, I have no doubt about having done so.
435. Had you any conversation with him? That I do not recollect.
436. Did he attend any meetings between those two dates? He attended the meeting of the 17th November, and protested then against the Council interfering with his road, or appointing a committee to inquire into the expenditure, or doing anything in the matter in any way.
437. Then he knew at that meeting that the Council had his case under consideration, and protested against their going into it? Yes, he did.
438. Therefore he must have known what was going on? Yes, he knew all about it the same night the committee was appointed. I am aware that he knew all about it, because Mr. Keating, one of the Councillors, went and told him after the meeting was over.
439. At the time these cheques were given to Israel and Carnailly were you the Warden of the district? I was.
440. Do you know how it was the men came to be paid? I do not. I was absent at the time; and as the Council had adjourned, and the whole thing was illegal, I reported the matter to the Government.
441. I do not understand you very clearly as to what time it was this meeting was held at which the money was paid—you went away you say at 5 o'clock? Yes.
442. Did you attend a meeting of the Council on that day? I did.
443. At what hour? We met at 2 o'clock.
444. And was all the business concluded and the Council dissolved before you left? Yes.
445. Was there any advertisement in the paper calling the Council together at a later hour? No.
446. Do you know, as a matter of fact and of your own knowledge, whether the Council had been adjourned or dissolved before these other proceedings were entered upon? No, I only know it from the report.
447. You were not there? I was there up to 5 o'clock, and then I left.
448. When did the Council separate to your knowledge? At half-past 4 o'clock.
449. And had you finished the business and adjourned the Council? I told them that the business was all completed, and that I had to go away.
450. Were they still sitting when you left? I think not. Part of them, I think, were sitting at the table talking.
451. Then they had not left the room when you left? No.

- S. Scholey, Esq., M.P.
12 Feb., 1873.
452. But if you left them they would be without a chairman? So they were, but they elected another by vote.
453. Was that a special or a general meeting? It was an ordinary monthly meeting; and there is no law about the business not going on in my absence.
454. Now, as a matter of fact, would you have sent in this report to the Government, and put your name to the foot of it, if you had not understood from Mr. Forster that you were to be held harmless? Most certainly I should not.
455. None of the other members of Council who signed the report were proceeded against except yourself? No; but they would have been had Mr. Eckford been successful in his action against me. He said repeatedly that he would make it the ruin of the whole of them.
456. And what you did was done in protection of the public purse? It was, and for nothing else.

WEDNESDAY, 19 FEBRUARY, 1873.

Present:—

MR. BURNS,
MR. PARKES,
MR. TUNKS,

MR. WEARNE,
MR. WEBB,
MR. CUNNEEN.

JAMES AUGUSTINE CUNNEEN, Esq., IN THE CHAIR.

Stephen Scholey, Esq., M.P., was called in and examined:—

- S. Scholey, Esq., M.P.
19 Feb., 1873.
457. *Mr. Burns.*] I want to know when you first communicated to Mr. Eckford or to the Maitland District Council that you had received information of a character to call for inquiry as to how the Cessnock Road business was being managed? On the 2nd of November I communicated that to the Commissioners.
458. At East Maitland? Yes.
459. Was that at a regular meeting of the Commissioners? It was at a regular meeting of the Commissioners.
460. The meetings of the District Council were previously advertised in the paper? They were always advertised, ever since I have known the Council.
461. *Mr. Parkes.*] You communicated to the Commissioners on the 2nd of November of what year? 1868.
462. *Mr. Burns.*] Was not Mr. Eckford present at that meeting? No; he was not.
463. Had you any communication with Mr. Eckford previous to that, either verbally or by correspondence? Yes; I was with him on the road on the 28th of October, on the Wednesday, and he was talking about the road and many other things; I said nothing to him but that there was something wrong on the road; I told him so on the Tuesday.
464. Did you say anything about any intention on your part to have the matter mentioned at the meeting of Commissioners? I did; I told him it was my intention to have it looked into and fully sifted.
465. Did you tell him that it was your intention to have it mentioned at the next meeting of the Council? I did.
466. Did you mean that you told him on the Cessnock Road? No, near the foot of the Long Bridge. He was driving into town; he asked me where I was going, and I told him that I was going to take delivery of some sheep.
467. How long after was the Commissioner's meeting held? About four days afterwards.
468. So that in addition to the notice of the regular advertisement, you had mentioned to him that it would be brought forward? Yes, that the matter would be inquired into.
469. What was done at that meeting? A committee was moved for by Mr. Noble, seconded and carried.
470. The committee was appointed in consequence of what? The committee was appointed in consequence of what I said to the Commissioners—that I believed that fraud had been committed on the Cessnock Road.
471. Did you see Mr. Eckford at any time after the appointment of that committee and before any report was furnished to the Council? No, I do not know that I did.
472. That committee brought up a report? That committee brought up a report.
473. Who drew up the report? Mr. Hughes, the secretary to the Trust.
474. Under the direction of the committee? Under the direction of the committee.
475. Did the committee make inquiries about the statements of Sheridan? I believe they did; I did, and Mr. Bowden stated that he had done so.
476. Did they make inquiries to see if they could find those men who were missing? They did.
477. The whole of the committee? I am not sure; I know Mr. Bowden did.
478. To what effect was the report? With reference to the statement of Sheridan and the statement of Mr. Eckford, by his vouchers we saw that there was a balance, £109 5s. 10d., which we believed had not been paid.
479. The report was to the effect that the committee believed that Mr. Eckford's accounts were in excess of those of Sheridan's by £109 odd? Yes.
480. And that Mr. Eckford had not paid this additional or extra sum? Yes; we knew that from Mr. Keating on the 2nd of November.
481. Was the next meeting of the Council advertised in the usual way? On the Saturday before.
482. Do you know whether Mr. Eckford was in town? Yes.
483. Did he attend the meeting? He did attend the meeting of the 17th November.
484. The meeting of the Council? Yes.
485. And was the report then read out to the meeting? The report was read out to the meeting, and I made a statement with reference to it, explaining the whole matter.
486. Mr. Eckford could understand from the report being read that this charge of malversation of the Trust lay against him? Undoubtedly,—it was quite clear.
487. Did Mr. Eckford then make any statement with reference to the matter himself? Yes, he argued that we had no right to appoint a committee to inquire into any moneys that had been spent, and he protested that the whole of the moneys had been totally expended.
- 488.

488. Did he enter into any explanation of the matter, or question your authority to interfere? He questioned our authority to interfere, and defied us. S. Scholey,
Esq., M.P.
489. Did he make any explanation as to the missing men? No, he never touched upon it.
490. Did he speak in any length at this meeting? He spoke for a long time, and after he found that we would not take any notice, he asked us to apply to him for information. He said, "I hope the committee will apply to me for any information they require." 19 Feb., 1873.
491. Had not the committee by this time reported? Yes.
492. What more information did he think they wanted from him? I do not know—perhaps about the missing men.
493. Did you ask him to explain those charges to the meeting? No, I did not.
494. What was done by the Commissioners with the report? They agreed to summon Israel, and then Carnailly after.
495. These men were charged with having demanded more than they had really earned on the road? Yes.
496. But with respect to the charges as against Mr. Eckford—what course did the Council agree to take on that occasion? They did not agree to take any course at that time.
497. After the proceedings against these men failed, as you have told us before, what further was done under the direction of the Council as to the charges respecting Mr. Eckford? The committee still continued making inquiries.
498. Were the committee reappointed? They were reappointed, with all the powers they formerly held.
499. What did they do? They decided to refer the matter to the Government.
500. Did the committee decide to refer matters to the Government, without first asking the concurrence of the Council in that course? Yes; their power was to take such a course as they thought proper. You will find it in the minutes on the 2nd of November.
501. Were the Council consulted about referring the matter to the Government at that time? No.
502. In referring the matter to the Government, were you requested to come to Sydney and see the Minister for Lands? I was.
503. Requested by the committee? I was.
504. And when you returned to Maitland, after seeing the Minister for Lands, you reported to the Council your recollection of what occurred between you and Mr. Forster? I did; I made a memorandum.
505. Have you got the minute-book with you, giving your report of that interview? I produce the minute-book of the Maitland District Council, showing the minutes of the 9th of December, 1868.
506. You produce this book? I do.
507. Containing an entry of your report to the District Council on your return from Sydney? Yes.
508. Was Mr. Eckford present at this meeting where you made this report of what you had done in Sydney? No.
509. He was not at that particular meeting? He was not at that particular meeting.
510. Had the Council received information in any way of Mr. Eckford not intending to be present at any meetings of the Council? Mr. Noble stated that Mr. Eckford did not intend to be present at any meetings of the Council for three meetings.
511. And these three meetings had not expired when you brought up that report? No.
512. I believe Mr. Noble was examined after in the Supreme Court? He was.
513. On this point? Yes.
514. Did he swear in the Supreme Court that, as he had told the Council, Mr. Eckford told him that he would not attend three meetings? He did.
515. Mr. Eckford remained away? He remained away.
516. Was that report agreed to by the members of the committee before you submitted it? No; we did not receive the report until about an hour before the Council met; and it was placed on the table and discussed on the table.
517. Did the sub-committee give directions to Mr. Thompson to state what the report was to contain? They did through me.
518. Did they agree beforehand as to the facts to be embodied in the report? They agreed beforehand as to the facts to be embodied in the report.
519. The report was prepared on the part of Mr. Thompson as a professional man? Yes, he put it together.
520. You knew beforehand what the report would be? Certainly; we furnished him with all the papers.
521. And the first time the report furnished by Mr. Thompson was seen by the Committee was when it was brought to the meeting of the Council? Yes.

Mr. Joseph Eckford was called in and examined:—

522. *Chairman.*] Were you a member of the Maitland District Council in 1868, Mr. Eckford? Before I answer any questions I want to know from this Committee whether I shall be allowed to give the circumstances surrounding any questions that may be put to me, and for various reasons. For instance, supposing that questions are going to be put to me in a dry manner, I decline to answer them, whatever the consequences may be. I should like to know from you whether I may give a full explanation to any question that you may put to me? Mr. J.
Eckford.
523. *Mr. Parkes.*] I presume Mr. Eckford will be allowed to answer any question in his own way.
524. *Chairman.*] You will be at liberty to make any explanation you choose, which may be necessary to make your answer explicit. Were you a member of the Maitland District Council in 1868? I was. 19 Feb., 1873.
525. Was the whole of the money granted for the repair of the roads in the Maitland District handed over to this body for expenditure? Yes.
526. Did the Council, by resolution, appoint particular Commissioners to superintend the expenditure on certain roads? Yes.
527. Were you appointed to superintend and overlook the expenditure on the road from West Maitland to Cessnock for the year 1868? Yes.
528. Do you remember the amount that was put to the credit of that road for that year? I think it was about £350; I am not sure.

- Mr. J. Eckford.
- 19 Feb., 1873.
529. Did the Warden, in 1868, make some complaint about the manner of the expenditure on this road? Not to me.
530. Are you aware that he made any such complaint? I am aware that he made such a complaint, and also that a committee was appointed to investigate into his complaint.
531. A committee of the Council? Of the Maitland Council. I am aware also that no committee ever took any action in the matter. I am aware also that Mr. Scholey also came down to Sydney, as he stated, under legal advice, to see Mr. Parkes, and not as you stated, when you moved for this Committee, to inquire into the matter. If you are reported correctly, you stated that a committee sent him down. No committee took any action in the matter. No committee ever made the slightest inquiry into the matter. The committee did nothing of the kind.
532. Are you not aware that on the 2nd of November a committee was appointed in the Maitland District Council to investigate this matter? Only by the records of the District Council office.
533. Are they not the proper records? Certainly. A committee was appointed.
534. To investigate into the representations made by the Warden? Yes.
535. Did it come to your knowledge that this committee brought up a report respecting the expenditure on the Cessnock Road? No; it came to my knowledge that they never took any action, and that can be proved if you bring the secretary here and the minutes. The committee never made any inquiry, as you will see if you refer to William Keating's letters. He was one of the committee, and he distinctly states that he never took any action whatever—that no action was taken. Mr. Keating, as one of the committee, states that no action was taken by the committee; that Mr. Scholey, of his own accord, got up this report.
536. Did I understand you to say that this committee, appointed by the Council, never brought up the report? The committee never brought up the report.
537. Have you the votes and proceedings before you of the Maitland District Council? I have got before me the correspondence ordered by the Legislative Assembly to be printed on the 19th October, 1869, which passed between myself and the Government, and between Scholey and the Government.
538. If it is stated in a minute of the District Council of 17th November, 1868, that such a report was brought up and adopted;—is it not likely to be a fact? It is not a fact. The report was brought up by Mr. Scholey. If you refer to the first page of this correspondence, you will there find that Mr. Scholey distinctly stated that, under legal advice, he had visited Sydney and seen the Minister for Lands, and in the concluding portion of this document it is stated that Mr. Keating moved a resolution that the editor of the *Maitland Mercury* should be requested not to report any of the proceedings until after the next meeting; and this report was the report that Scholey has stated over and over again on oath was drawn up by Thompson; and the authority was stated by him to have been given to him by Mr. Forster, which Mr. Forster denies. The report was submitted to the Council at their Board meeting. It was the report of Scholey, not of the committee, because the committee never took any action, which the secretary to the Council will prove by the minute-books. There is no minute that such a meeting ever took place; it was the action of Scholey in bringing up this report, which he got drawn up by Thompson, the lawyer. If you peruse the paper all through you will there find it as plain as possible.
539. Were you at a meeting of the Maitland District Council, which took place on the 17th November, 1868? Will you tell me what that meeting was?
540. On the votes and proceedings it appears? I was not at a meeting where a committee was appointed to investigate into this matter, if that is the meeting you allude to, but I was at a subsequent meeting, at which I distinctly asked the Commissioners, the Warden in particular, to apply to me for any information they required in the matter, and I should be happy to give it them.
541. At the meeting of the 17th, as officially reported, it is represented that a report was brought up from the committee appointed on the 2nd of November? I was there on that day.
542. It is represented there that a report was brought up from the committee;—is that a fact? It represents that, but at the same time Mr. Scholey at that time had a brute majority there that would vote on anything he thought fit to bring in. He had a majority that was bought by trust funds; that can be proved. If you look to the evidence you will there find that the Commissioners were dabbled with and tampered with in a most indecent manner.
543. After this report was brought up, you are aware that Mr. Scholey forwarded it to the Minister for Lands of the day? This is not the report that was sent in; that is a verbal statement, made by Scholey to the Commissioners on that occasion—a verbal statement and not a report. The report is not embodied in this document, but it is here. That report was never submitted, but it was a verbal statement, made by Scholey. If you look at the date of Scholey's report, submitted the 9th day of December, you will see that it is the date on which Mr. Parkes was going to move his vote of want of confidence against the late Parliament. That is the report that came here that was handed to Mr. Parkes in the Assembly to read, or rather in one of the ante-rooms.
544. You were not present when this report was brought up? No; I say it was a verbal statement of Scholey's; but the report, as embodied in these documents, was brought up and adopted on the 9th of December; I believe it was the 9th of December.
545. After the report was brought up are you aware that it was forwarded to the Minister for Lands? I wish to be clearly understood about this. The report that you have alluded to—the report that you are complicating with the report sent in on the 9th of December—was a verbal statement made by Scholey on the 17th of November,—I think it was the 9th December; I was then in Sydney.
546. The report that was sent in, signed by Stephen Scholey, Patrick O'Brien, John Bowden, and John Noble;—is that the report you refer to? That is the report, not submitted on the 17th November, that was the 9th December.
547. You are aware that the report signed by the gentlemen named was sent to the Minister for Lands of the day;—you are aware of that fact? I am aware that a report as embodied here was carried to the Minister for Lands by Scholey, not authenticated, but afterwards sent back for authentication; and when authenticated it was either sent or carried back again to the Minister of Lands, and I got the report to reply to.
548. By whom is that report signed? By four or five of the Councillors.
549. Did you take any action upon this report, or upon any statement contained in it? Certainly. I wrote a letter to the Minister for Lands, dated Sydney, the 11th of December, requesting the Minister for Lands, before he came to any decision, to let me have a copy of the report that was sent down against me.

My letter was dated Sydney, the 11th December. I do not know what date I got the report; but as soon as I got the report, the first meeting afterwards I attended the District Council.

Mr. J.
Eckford.

550. He states that the report was brought up on the 17th November? No report, I tell you again, was brought up on that date.

19 Feb., 1873.

551. Is it not so stated in the minutes of 17th November, 1868. (*The minute-book of the Maitland District Council was handed to the witness*)? Certainly not; it does not say anything of the kind.

552. Read what it states? "The secretary read the minutes of previous meeting, as usual. Considerable discussion arose as to their correctness——"

553. Is that on the 17th of November? These are the minutes of the 17th of November, 1868: "Considerable discussion arose as to their correctness, Mr. M'Mahon taking objection to that portion of Mr. Noble's resolution in reference to the expenditure on Cessnock Road, which gave the committee appointed for the purpose power to take such steps as they might deem advisable. Mr. Scholey moved that the minutes be confirmed. Mr. M'Mahon moved an amendment."

554. What was the amendment? "That the portion from the words 'and take' be omitted, seconded by Mr. O'Brien; the resolution was carried. Minutes confirmed. The Warden then proceeded to state"——

555. What date is this? The 17th of November, 1868: "The Warden then proceeded to state that he went to Bishop's Bridge on Tuesday, October the 6th, and saw a large quantity of stones across the road; he remonstrated with the men for thus placing them, and the same day mentioned the matter to Mr. Eckford. On Monday, 12th, he again went out and arrived there at 6 a.m., saw none of the workmen but Sheridan, and asked him if that was the usual time of going to work. Moylan and Hennessy arrived at 7-10. Asked Sheridan if Doran, the overseer, had come. He replied, no. Asked where was the carter. Moylan replied, he was not going to work until Wednesday. Mr. Eckford called at the office as usual for his payment, but he declined paying until all the men were present, suspecting something was wrong as to the time the men had been working. On the 29th, some of the men came to be paid, Mr. Eckford being present. He (the Warden) questioned Moylan (the first to be paid) as to Israel (the carter's) time; he said at first he did not know how long he had worked, but afterwards said eleven days. Hennessy said he did not know how long Israel had worked; only knew his own time. Sheridan said Israel worked nine days; and Carnailly (another carter) two days, whereas he demanded payment for nine days. Welsh at first did not know how long Israel had worked, but afterwards said he thought he was idle a week. Israel said he had made thirteen days, having commenced on a Monday and left off on that day fortnight. He might say that Sheridan was a man holding high testimonials of character from Capt. Russell and J. F. Burns, Esq., and any statement he made could be relied upon. Doran was not present. Considering all the circumstances, the committee appointed to investigate deemed it desirable to obtain legal advice. Mr. Thompson, solicitor, advised him to institute proceedings against Israel, and the result had that day been made known." Now I will explain this matter to you, for I presume the Committee wants nothing but what is correct and fair:—The committee that was appointed to investigate into this matter met opposite Smail's mill; they were to meet Scholey that morning, as I have understood from Keating; they were to meet at Thompson's office to do the needful. Scholey did not come in time. Mr. Keating and Mr. Bowden were going to East Maitland. You will find that embodied in my reply. What I am now stating is in the reply I sent in to the charge in the first instance. It was decided to summon one of the men (Israel) to the Court for attempting to defraud the public—for attempting to obtain money; that is the meeting, but there is no record of that from the committee at all. This is the statement made by Mr. Scholey:—They met in East Maitland, opposite Mr. Smail's old mill, and they then decided (the three of them) to summon this man (Israel) before the Court, for obtaining money under false pretences. The minutes go on to say: "Mr. Keating endorsed all that was said by the Warden, so far as his knowledge of the Warden's statement was correct. Mr. Bowden coincided with all that had been done by the Warden and committee, they having documents in possession to contradict the demands of the men, and hoped that the full particulars respecting the case would yet be made known. Mr. Eckford explained that on Monday afternoon, Doran called at his house with the account of the men's time, but, just going out on important business, was not sure whether he took the paper or not, or whether Doran put it on his desk—he could not remember; neither could he remember whether he wrote from Doran's dictation or not. He afterwards saw Israel and asked his time; he said thirteen days, out of which he (Israel) had received from Mr. Eckford payment for four days as an advance." I was in the habit, if the men were a fortnight or a little longer without their money, of making an advance; if they wanted a pound I gave it, and I sometimes went to the store and asked them to let the men have provisions, and I would see that the account was paid. The minutes go on to say: "He would have been present at the last special meeting, but was detained at home on account of ill health. Mr. M'Mahon considered that the Commissioners had overstepped their duty, and had treated Mr. Eckford discourteously. They could have instructed the secretary to write to Mr. Eckford, and wish him to be present. On the motion of Mr. M'Mahon, seconded by Mr. Noble, it was unanimously resolved that the report of Messrs. Scholey, Bowden, and Keating, as just read, be adopted." That was a verbal statement, and not this report, that brought about this litigation. "Mr. M'Mahon moved, that no further legal action in reference to the demands of the Cessnock Road workmen be taken. Not seconded. The Warden moved, that the committee retain the power given them by resolution of the 2nd November. Seconded by Mr. Bowden, and carried. Mr. Eckford hoped that the committee would apply to him for any information they required."

556. This was on the 17th of November? Yes, I will read it again: "Mr. Eckford hoped that the committee would apply to him for any information they required." The committee never applied to me for any information whatever. Scholey swore upon his oath in the Court, in the trial of the action for slander, on the 29th of October, that they believed the thing was so very bad that they should not ask me a question.

557. Would you turn to proceedings of the 9th December, 1868 (*Witness turned to the minutes recording the proceedings of the 9th December*)? This is it.

558. Do you find that there was a report from the committee on the Cessnock Road brought before that meeting, and adopted by a majority of four votes? I find that a report was brought in on the 9th December. There is not any necessity to look at the minute-book, because it is here on this document. (*Return respecting Cessnock Road, ordered by the Legislative Assembly to be printed, 19th of October, 1869.*)

559. Please read the proceedings of 9th December? I will read the proceedings. I see it stated here that, under legal advice, Scholey visited Sydney to see the Minister for Lands.

560. That would not be on the 9th of December? No; but this is what he stated.

561. But can you lay your hands on the proceedings of the 9th of December? These are the proceedings of the Council on the 9th of December. This is Scholey's opening address, when he moved the report.

Mr. J.
Eckford.

19 Feb., 1873.

562. Yes? Under legal advice he said he visited Sydney. He goes on to say a report of the circumstances of the case, in which the committee of investigation had made inquiries, had accordingly been drawn up by Mr. R. W. Thompson, and was now before the Council. This report was made up from the documents in the office, and from the result of the committee's inquiry. As I stated just now, this report was moved. Mr. Scholey had a majority in the Council, where he could carry anything, and do as he thought fit. I say it was carried by brute force by the Commissioners. If you will refer to Keating's letter of the 18th of February, addressed to me, you will find the particulars there.

563. After this report was sent in, did you take any legal proceedings against Mr. Scholey for any statement made in it? Yes.

564. What was the result? I proved the whole of his statements to be untrue.

565. What was the result of the legal proceedings;—did you get a verdict? No, Scholey got a verdict; he got the verdict by the exertions of certain gentlemen that I was astonished to see interesting themselves in the affair.

566. Had he to pay the costs? I do not know whether he paid them or not; he took a writ of *ca. sa.* to incarcerate me for those costs, and he kept me away from home for three months. That shows that at that time he did not think he had any claim upon the Government. He would have incarcerated me if he could.

567. It is very probable that he had to pay those costs? I do not know anything about his business; I only know my own. I know he wanted to put me in gaol for them.

568. The Government forwarded you a copy of this report when they received it? I got the report itself, and I replied to it.

569. In this report there were certain allegations which you thought were false? I do not think they were false, but I have proved them in a Court of Law to be false.

570. On those allegations you raised your action against Mr. Scholey? On those allegations I brought my action against Mr. Scholey. I proved them all to be false. There is Mr. Scholey writing a letter to the Government, dated August 24th, 1869, complaining of the District Council for having paid two sums of money which he charged me with stealing in 1868.

571. When you state that the report was carried by the East Maitland District Council by brute force —? I say it was carried by a majority that Scholey had packed. If you will only read over Keating and M'Mahon's report upon certain circumstances respecting the repairing of punts, you will there find something very dirty. There was a packed majority there. There was a man named O'Brien, whose brother-in-law, Lloyd, took a contract for repairing a punt; and if you read the circumstances of the case, I am sure you will see it is disgraceful.

572. Was there any particular part of this report that Mr. Scholey sent into the Government that you considered yourself libelled in? I considered myself libelled by Mr. Scholey having represented that I had been guilty of sixty-four capital offences, thirty-two forgeries, and thirty-two embezzlements. I considered myself libelled in that matter, and I myself proved unmistakably in a Court of Law that the moneys were paid. Two of these items were paid by resolution of the District Council, in August following—two items that he charged me with stealing ten months previously.

573. *Mr. Webb.*] You brought an action against Mr. Scholey? Yes, I said so just now.

574. You stated that Mr. Scholey obtained a verdict? Yes, I stated that he obtained the verdict.

575. Consequently, as the verdict went in Mr. Scholey's favour, I suppose he was entitled to costs from you? I do not know anything at all about it.

576. Do you not know it as a matter of fact? I know that there are many verdicts given that ought not to be given.

577. You need only answer me, yes or no; my questions will be straightforward. Did you pay the costs? No, I did not. I stated I did not. Did not I state that Scholey took out a *ca. sa.* writ to put me in gaol for them?

578. Although Mr. Scholey may have taken out a *ca. sa.* writ to put you in gaol, is it not possible that you may have paid them afterwards? I did not pay them, because I had not got it to pay them; and I stated so just now to the Chairman.

579. At the meeting of the 17th November, that you make a great deal about in reference to a report, you are aware that at that meeting the report that you have referred to was merely the report of the Warden to the Council—was it not? I say it was a verbal statement made by the Warden to the Council.

580. On that verbal statement the committee was appointed to inquire into the statements then made by Mr. Scholey? Certainly not. The committee was appointed previous to that, and the committee had never taken any action.

581. When was the committee appointed? At some meeting called by Scholey previous to that. You will find it in the minute-book.

582. *Chairman.*] The committee was appointed on the 2nd November, 1868? —

583. *Mr. Webb.*] On the 9th December the committee brought up the report? No; no committee brought up any report. I repeat it again, Scholey was in Sydney. On the Friday night, he telegraphed to the secretary to call a meeting of the Trust for the Wednesday following. He went himself—I give you his own words now—to Mr. Thompson on the Saturday, and got Mr. Thompson to draw up a report. Mr. Thompson drew up a report, and notwithstanding it may be embodied in the minute-book—

584. I do not want to know whether he brought it up in writing, but merely as a matter of fact whether the report is recorded? I say a report was brought up by Scholey, but was drawn up by Thompson at Scholey's dictation, and submitted to this Council, in which he had a majority, and carried. Members of the Council protested against it, and said it was indecent to do it.

585. At all events, that report was adopted by the Council? Scholey's own report was brought up and carried by a majority of the Council. I presume that this Committee, to-day, is a Committee to inquire into truth and justice, and not to have any legal and dry quibbling in it.

586. The report that Mr. Scholey brought up, which you call his own report—was not that approved of by a majority of the committee appointed? I say so. I wish it to be clearly understood, that although it is in that minute-book, that it was not the report of the committee, because there is Mr. Keating's letter, which says a report was drawn up on the 10th December. The Warden moved the adoption of it, and it was carried.

587. It appears that there were two or three of the Council who did not approve of the report, and that a majority carried it? A majority of them carried Scholey's report.

588.

Mr. J.
Eckford.

19 Feb., 1873.

588. This committee brought up to the Council a detailed statement of moneys said to have been paid, and also a statement setting forth amounts that should not have been paid;—have you ever seen that statement? Certainly; it is here in these papers. I see it now.

589. I see in that statement there is one amount said to have been paid to a man named Thomas? Yes.

590. William Thomas is put down for £7 4s. 8d.? Yes.

591. I think particular reference is made to this amount? Yes.

592. Did ever you prove, to the satisfaction of the committee, that that £7 4s. 8d. was paid to William Thomas? Dear me; if you will see the minutes, where it distinctly states I offered to give the committee any information they required. The committee never asked me for any information, and therefore it was impossible for me to give them any information.

593. Did you prove it in the Supreme Court? I proved it in the Courts of Law.

594. Did you produce the man? No, but I produced people who saw him, and swore to having seen him at work.

595. There is John Anderson put down for £7 4s.;—did you produce him? No; I proved in the Supreme Court that the man was there with the men at work: two parties who saw him receive his money.

596. There is another person named William Avery—£7 4s.? Which was proved in the Supreme Court.

597. Did you prove that all these other amounts were duly paid? I proved that all these other amounts were duly paid.

598. Do you not think, then, that it was a wonderful thing, after this, that Mr. Scholey got the verdict? I do not think it is at all a strange thing, after seeing the gentlemen that collared the jurymen every time they came out of the Court. Every time they came out of the Court Mr. Tunks would collar a spirit-merchant down the street, and Mr. Davies would collar another.

599. Did you produce any one of these men? Certainly not. If Scholey had made the inquiry at the proper time they would have been forthcoming.

600. That will not do; it is of no use. I do not care to hear any statement of yours against people who have nothing to do with the statement before us? I think Scholey has a great deal to do with it.

601. Your statement about those who you say attempted to interfere with the jury is quite gratuitous? I do not think it; and I stated to the Chairman, before I would give any evidence, that whatever circumstances surrounded a question I should be allowed to give them.

602. You did not produce any of these men? No.

603. You knew very well that this committee had charged you with having received this money and never having paid it to these men? What committee?

604. The committee appointed by the Cessnock Council? I say this, that if Scholey had investigated into the matter before he drew up this report——. You must have it, Mr. Webb, because I care no more for you than any man in this country. I have come here to stand upon my rights. Of course, I have no desire to be insulting.

605. I only want to know matters of fact? You must know it, or you will know nothing else.

606. I ask whether you do not know that these men—William Thomas, John Anderson, and William Avery—that it had been stated in the report that had been drawn up by the committee, and submitted to the Maitland Council, and sent to the Government,—I ask you whether that report did not distinctly imply that you had received this money and had never paid it to these men, and that these men were not in existence? ——

607. Just state whether you do not know it, and then make any explanation you like? I shall not answer such a question. I know as a matter of fact this:—That before ever there was an opportunity given me to make any explanation, Scholey had forwarded this report of his own to the Government—not signed, to the Government. I replied to that; and if you read it, I think you, or any other person who is disposed to do justice, will see that it is highly satisfactory.

608. But you have not answered my question? I say that on the 17th November I proffered to give any information the committee required. The committee never called upon me—never took any action; but Scholey came to Sydney on the 9th December, submitted this report, charging me with these defalcations. The report was then entirely out of his hands, and to that report I sent a reply to the Government.

609. I will ask my question again:—Did you not know that in that report it was implied that you had received this money and that you had never paid it to these people at all—that they were not in existence? Certainly, and I replied to the Government on the report.

610. Now make any explanation you like? Of course, I knew it was in the report, or else how could I have sent a reply to the Government? I did not know it until I got the report from the Government.

611. On that statement you brought an action in the Supreme Court? On that statement I brought an action in the Supreme Court.

612. Having brought an action in the Supreme Court, did you produce these men? Certainly not; the men might have been in London. I did all in my power.

613. You believe that you satisfied the jury that these men were in existence? Perhaps it is not so easy for me to satisfy a jury as it would be for you. You might satisfy the jury much easier than me. The Judge was satisfied if the jury was not.

614. At all events, you did not get a verdict? I did not get a verdict.

615. From that it may be inferred that you did not satisfy the Court? I will not answer such a trumpery question as that.

616. Did you satisfy the Court that these statements of Scholey's were not well founded? I shall not answer such a question—I shall not answer any such questions as that. That might do for a police office, but I do not think it ought to do for the highest court in the colony—the Parliament of the country. It is impossible for me to say what would satisfy.

I suppose there is no way of making the witness behave himself.

The *Chairman*: I would merely suggest that Mr. Eckford would answer the question first, and then explain it afterwards.

Witness: I am not going to answer any questions that are put to me as a trap, or that I consider are intended to entrap me. I will answer what is fair and honest. I have answered these questions fairly and honestly; and if the Committee will only get a copy of this report, and peruse

Mr. J.
Eckford.

19 Feb., 1873.

peruse it through, there will be no necessity for them to ask me any questions. If the Committee peruse it through, they must come to the conclusion that a more gross attempt was never made to injure any man in the world.

617. *Mr. Webb.* Were you aware that the Council decided to meet on the 9th December, 1868? Certainly. I saw the advertisement in the newspaper.
618. You were not present? No.
619. Were you aware that anything was to be done about the Cessnock Road? No. I was aware that Scholey was in Sydney. He telegraphed to the secretary to call a meeting, and I came to the conclusion that that meeting was called for the express purpose of keeping me away from Parliament when Mr. Parkes was to move his condemnation of the Robertson Government. On the Monday, the gentlemen forming the Opposition gave a pic-nic, and it was there stated that I would not be in my place in Parliament on the Wednesday. It was stated amongst the gentlemen that formed the pic-nic party. I heard of that the very night I got into Sydney.
620. At all events, you were not present? I was not.
621. You knew the meeting was to be held? I was in Sydney, at Parliament.
622. You knew that it would be held on the 9th of December? Of course. I saw the advertisement in the *Maitland Mercury*. I came down to Parliament on the Monday following. This meeting was called at an out-of-the-way time, such as no meeting was ever called before. The regular meeting was to be called on the Tuesday following, and I thought it was strange that it should be called on that day. It was rumoured throughout the Colony that Mr. Parkes was going to move a vote of want of confidence. Mr. Scholey telegraphed to have the meeting called for Wednesday. The meeting was not according to law. The report was adopted illegally. By the charter of the Maitland District Council, a special meeting must be called after giving ten days' notice in the *Government Gazette*; so that the whole meeting was illegal.
623. On the 15th December there was another meeting;—were you present? No, I do not think I was.
624. Did you intimate to any of the Councillors, or to any person, that you would not attend three meetings after the 17th of November? No; a statement was made to that effect, which was positively untrue. I think I attended at the January meeting, after I got the report.
625. Can you give me any information with regard to the Warden's position in reference to the District Council? To his position?
626. Yes? Well I know that he is a nominee of the Crown.
627. Has he power to inspect all the accounts? Every District Councillor has power to do that.
628. Has he special powers? No; every Councillor has power to do that.
629. Is he chairman, by virtue of being nominated by the Crown? Certainly.
630. Is he bound by his duty to look after the finances? Not more than others.
631. Is he not specially appointed by the Government to protect their interest in the matter? Not more than others.
632. Are the others appointed by the Government, or elected by the people? They are elected by the people.
633. And the Warden is nominated by the Government? The Warden is nominated by the Government.
634. And the Warden in 1868, when this affair took place, was Mr. Scholey? Yes.
635. The money which you expended on these roads, was it Government money;—did you receive it from the Consolidated Revenue? We got it from the Bank.
636. It was not the proceeds of a rate levied upon the people? Certainly not; it came from the Government.
637. Do you not know, as a matter of fact, that the Government in nominating the Warden nominated him to protect the interests of the Government? I cannot tell. You may know more about it than I do.
638. Does it not strike you that that was the case? No; it strikes me that he is merely nominated by the Government as head to the affair; but every Commissioner has equal powers with him.
639. Is the Warden at all times chairman? Yes.
640. And he has a perfect right to attend and look after these moneys? We have all the right—every man in the Council; it is the duty of every Commissioner.
641. You divide the district into wards, so to speak; that is, you appoint, or you did appoint, two Commissioners to look after particular roads in the district? Of course; you will find that by the minute-book.
642. Had any of the Commissioners for the other roads any right to interfere with you for the expenditure of the money that you received to be expended on the Cessnock Road? Certainly not.
643. Had the Warden? Certainly not.
644. Had not the Warden power to inspect all the accounts? Of course, we have all the power to inspect the accounts; but you stated to interfere.
645. Yes, to interfere? He had no right to interfere with the allotting of the work, or anything of the kind, but it was his duty—the duty of every Commissioner—to see that the money was properly expended. But they had no right to interfere in setting men to work on any particular part of the road. It is left entirely to the District Councillors, who may have charge of the road; but at the same time there is no law for it. The law distinctly states there shall be a superintendent, and the Commissioners have no right to do anything but office work.
646. Do you imply by your answer, that Mr. Scholey exceeded his duty in looking after the Cessnock Road, when it was placed under your control? I do not know that Scholey ever did. Scholey never interfered with the road, only on that one occasion, when he went out one morning, which he had no right to have done. When he found he was in the wrong box in that matter, he wanted to make it appear that his name was down as one to look after that road with me, and afterwards he said that it was an omission on the part of the secretary in not putting it in the minutes.
647. At all events, he was justified in seeing the work performed? Anyone riding along the road would have been justified as much as Scholey, if they saw work being done improperly.
648. Was Mr. Scholey perfectly justified in calling the Council's attention to what he believed a mal-appropriation of money? I think so, if he conscientiously believed it to be the case.
649. You think he did not exceed his duty in reporting the case if he conscientiously believed it? There is a great deal of difference about conscience. Scholey as well knew when he made that report that it was untrue as that I see you sitting there.
650. Well, supposing that he believed it to be truthful, was he justified in acting as he did? You may believe what you like of Scholey; I believe differently.

Mr. J.
Eckford.

19 Feb., 1873.

651. *Mr. Tunks.*] You stated, in answer to a question just now, that Mr. Tunks interfered with the jurors in the case of Scholey *versus* Eckford? I saw that Mr. Tunks —

652. That is, you saw me? Yes; when the jurymen came out of the Court, Mr. Tunks would meet Mr. Fisher and have a jaw with Mr. Fisher.

653. Was Mr. Fisher one of the jurors? Mr. Fisher was one of the jurors.

654. Do you wish thereby to make the Committee believe that I interfered in any way with the progress of the trial? I do not wish to make the Committee believe anything. You have got it now just as I gave it; I do not know what your conversations were with Fisher; all I know, is, that you several times met Fisher as he came out of the Court. The very last day of the trial, when they went out to dinner, you met Fisher, and you were standing with him in deep conversation at the corner, near Mr. Windeyer's office, and I stood at the corner with others, near Mr. Driver's, watching you.

655. You imply that? I cannot say. I saw Mr. Tunks collar the jurymen on leaving the Court; I saw you meet Mr. Fisher when he came out of the Court on more than one, two, or three occasions, and have conversations with him. What your conversations were I do not know.

656. Do you wish thereby to make the Committee believe that I interfered in any way with the progress of the trial? I do not wish to make the Committee believe anything. You have got it now just as I gave it; I do not know what your conversations were with Fisher; all I know, is, that you several times met Fisher as he came out of the Court. The very last day of the trial, when they went out to dinner, you met Fisher, and you were standing with him in deep conversation at the corner, near Mr. Windeyer's office, and I stood at the corner with others, near Mr. Driver's, watching you.

657. Was that the process by which you were worsted in the trial? I will not answer that question.

658. You noticed also several other persons, I understood you to say? I noticed Mr. Davies.

659. What Davies? President Davies.

660. John Davies? Yes.

661. Also waylaying the jury? Don't you put any constructions, Mr. Tunks.

662. They placed themselves in the way of the jury? I saw John Davies speak to one of the jurymen, when they came out of the Court, and there were some other jurymen whom I do not remember. I do not say what your business was; that would be impossible; you were on one side the street, and I on the other.

663. At what time did this trial take place? I think it was in July, the year before last.

664. In 1870? July, the year before last.

665. *Mr. Burns.*] Has not the practice of advertising the meetings of the District Council in the *Government Gazette* been discontinued for some years past? They have not done it; but still it is none the less the fact that the law is not done away with.

666. The custom has been to advertise the meetings in the *Maitland Mercury*? I think so—yes; but still it is illegal.

667. Were you not present at a meeting of the District Council before the Warden sent this report to the Government? No; only on the 17th of November, when I offered to give them any information they required. I requested them to come to me for any information they required.

668. What points do you refer to in your letter? This is the *Maitland Mercury* that I got from on board the steamer on Thursday, the day after the report was adopted—the report that Scholey got drawn up by Thompson.

669. On what date was the report adopted? The 9th of December.

670. What day is that? On the 11th I was in Sydney; that was on a Friday. On the Thursday evening I got the *Maitland* paper, and I cut the report out of the *Maitland* paper on the 11th of December, and forwarded it to the Minister for Lands with this letter.

671. On what day was that on which you made the long speech? I made no speech here.

672. There is some reference there to the effect that you made a long speech;—you state it in a letter to the Government? I got this report down from the Government some time early in January. I waited until the January meeting, and then I addressed the meeting, putting as far as I could the whole of the facts before them. Mr. Scholey then moved that the meeting be adjourned for a month; he said that he was going to the Clarence. In consequence of Scholey saying he was going—yet he never did go—the meeting adjourned, and I did not send a reply to the report until the whole matter, as I considered, was concluded. But in February I thought that the Government might think there was something strange in my not sending some reply, and I sent the reply that you see in these papers. In January I attacked Scholey for making statements against me.

673. Did you not make an explanation of some matters at some time?—After Mr. Scholey made a statement verbally, or in writing, about the Cessnock Road, you rose and made some explanation before the report was adopted? No, I was not there. On the 17th of November I was at the meeting; the only statement I made at that meeting was in about a dozen words. I requested them to apply to me for any information they wished, and I should be happy to give it to them. It was in January I made the speech referred to in the papers. In February, Scholey made his speech, and then I replied to him.

674. The minutes state: "Mr. Eckford explained that on Monday afternoon Mr. Doran called at his house, but just going out on important business was not sure whether he took the paper or not, or whether Doran put it on his desk; he could not remember. Neither could he remember whether he wrote from Doran's dictation or not. He afterwards saw Israel and asked his time; he said thirteen days, out of which he (Israel) had received from Mr. Eckford payment for four days as an advance. He would have been present at the last special meeting, but was detained at home on account of ill health."—Is this the only explanation you made at that meeting? You will find something afterwards.

675. "Mr. Eckford hoped the committee would apply to him for any information they required."—That is all at that meeting? That is all. I had been in Sydney three times in that three weeks, and that is why I asked the men about the time.

676. I suppose you were aware from the reports in the papers that an investigation was going on about the Cessnock Road? I was aware that a committee was appointed to inquire into the expenditure on the Cessnock Road, and I was expecting daily to be called upon by the Warden, Scholey, to give an explanation, more especially after I had requested the Council to apply to me for information. I knew nothing then of the matter until I got the *Maitland Mercury* of Thursday, the 10th of December; I then saw the report, a copy of which is here.

677. *Mr. Wearne.*] Were you a Member of Parliament at the time that this committee was appointed? I was a Member of Parliament at the time. It was appointed on the 2nd of November.

678. Who were the sub-committee appointed to investigate the matter? Mr. Bowden, Mr. Scholey, and Mr. Keating.

679. You stated just now that Mr. Scholey was in Sydney, and that Mr. Thompson prepared the report? I stated that Scholey was down in Sydney and telegraphed to the secretary to call a special meeting of the Trust for the Wednesday following.

680.

Mr. J.
Eckford.
19 Feb., 1873.

680. On the 9th of December? Yes, of course. I knew that Scholey was in Sydney, for when in Maitland he used to visit the sale yards close to our house. The buyers there used to like to see Scholey out of the road, and I heard them talking that he had gone to Sydney. On Friday night a telegram was received by the secretary from Scholey, to call a meeting of the Trust. The man that supplied our house with ginger-beer told me of it, and I saw a notice of it in the newspaper. It struck me at once this was some ruse to keep me away.

681. The Parliament met on the 8th of December? On Tuesday, December the 8th. I came down on the Monday.

682. You stated that the report submitted was Mr. Scholey's report, and not the report of the sub-committee? It was Scholey's report; the sub-committee had nothing to do with it.

683. How can you prove that Mr. Bowden and Mr. Keating had nothing to do with it? Because they have admitted it. This letter was addressed to me from Keating, one of the committee. He says: "As I was present at the district meeting held on the 16th instant."

684. What date is this? It is dated Morpeth, 18th of February, 1869. He says: "I beg to address the following remarks to you, solely in the cause of truth and justice, and my respect for yourself. As you are aware, I was one of the committee of *three*, appointed to investigate matters in connection with the Cessnock Road; but I was never consulted in any way as to the course the Warden intended to pursue; and I have since learned that he has been carrying out his action in this matter on his own account, as the above committee, of which I am a member, *never met* to draw up any report whatsoever. A report was drawn up and brought before the Council on the 10th of December, 1868. The Warden moved its adoption. It was carried. How strange that one of those who signed it has since acknowledged that he knew nothing of its contents. I have learned that this report, for the most part, was drawn up from the information of a man whom you discharged from the works, and on no account should be relied upon without careful investigation, as it is my opinion the information is unfounded from beginning to end. Although the statement was made that the Warden was connected with you in the supervision of the Cessnock Road, I am perfectly satisfied that such was not the case, and that you, and you only, had charge of the same. It was also stated that you had ample opportunity of explaining matters to the Council with regard to the report. To this I can certify, that you stated repeatedly that you were willing at any time to explain any of the statements made to the Warden by Sheridan and others, or to rebut any portion of the information of the Warden, and to render every satisfaction to your brother Councillors on all matters connected with the Cessnock Road. It is my opinion that the Warden was determined to follow up the statements of the report upon the mere word of the person referred to."

685. You stated that the Warden brought up a report, purporting to come from the sub-committee, which was not from the sub-committee? I say so.

686. And that Keating had had nothing to do with it, and that Bowden, whose name is also attached to it, also had nothing to do with it? Nothing to do with the bringing of it up.

687. Did they adopt it? Bowden adopted it. The committee never took any action at all; it was Mr. Scholey himself who got this report drawn up at Mr. Thompson's office. After having it drawn up at Thompson's office, Scholey then submitted it to the meeting. Bowden, who was one of the committee to investigate into this matter, voted for the adoption of that report, but it was nevertheless wrong, because the report stated that it was the report of the committee, and there was not a single meeting of the committee ever took place, which Keating's letter here goes to prove.

688. I merely want to know this: Was there a report from the sub-committee brought up? No, sir; no report from any sub-committee at all.

689. I want to know whether Mr. Scholey brought up a report from the sub-committee without the sub-committee having known what was in the report? Certainly he did. There is Mr. Keating's letter, which distinctly states so.

690. And Mr. Bowden knew nothing of it, although his name was to it? Mr. Bowden admitted at the meeting, I believe, in January or February, when I attacked him about it, that he knew nothing of the report. That is what Mr. Keating alludes to here.

691. I understand you to say Mr. Bowden's name was attached to it, and yet you say he knew nothing about it? This report was forwarded to Sydney and was not authenticated. Mr. Forster sent it back for authentication, and that was the reason of such great delay. Then the report was carried round to the different Commissioners by the secretary; some signed it and some refused. It was not signed by all.

THURSDAY, 20 FEBRUARY, 1873.

Present:—

MR. WEBB,

MR. WEARNE,

MR. BURNS.

JAMES AUGUSTINE CUNNEEN, Esq., IN THE CHAIR.

Mr. Joseph Eckford called in and further examined:—

Mr. J.
Eckford.
20 Feb., 1873.

692. *Mr. Wearne.*] We want to find out about the report with regard to which you have made some statements;—the report was that of a sub-committee? It was not; it was Mr. Scholey's report.

693. And Mr. Scholey, Mr. Bowden, and Mr. Keating formed that sub-committee? Yes.

694. Who was the secretary? Mr. Hughes.

695. You stated that Mr. Thompson had prepared that report? I stated that Mr. Scholey said so himself, and it was afterwards admitted in a Court of law that Mr. Thompson prepared the report.

696. Where does Mr. Thompson live? West Maitland. Mr. Thompson sued the District Council for drawing up the report, and the Judge decided against him, because it was the report of Mr. Scholey alone and not the report of the committee.

697. Did Mr. Thompson get paid for it? Not by the committee. Mr. Thompson sued the District Council, and it was clearly proved to the satisfaction of the District Court Judge that it was Scholey's own report, and not the report of the Council; and the Judge gave a verdict for the defendant with costs. But since then I have heard that the Council has had a resolution moved and carried, and that Mr. Thompson has been paid his money.*

Mr. J.
Eckford.

20 Feb., 1873.

698. But the law of the land refused it? Yes, the law of the land refused it.

699. You said that Mr. Bowden dissented from having his name attached to the report? No, sir. I said that Mr. Bowden admitted at the meeting held in January, that notwithstanding his name was attached to the report he knew nothing of its contents until it was submitted to the Council for their adoption—notwithstanding that he was one of the sub-committee appointed to inquire into the Cessnock Road question, and to prepare this report.

700. Then his name was signed without his authority? No. This is the way of it: The report was prepared by Mr. Thompson, the solicitor, and it was submitted afterwards to a meeting held on Wednesday, the 9th of December. That meeting, by a majority—not the sub-committee, but the meeting—adopted the report, and it was forwarded on by Mr. Scholey himself to Sydney, without authentication. It was not signed. It was afterwards sent back by the Minister for Lands for authentication, and the secretary carried it round to the different Councillors for signature. Mr. Bowden signed it at his own house, I think; three or four signed it, and some refused to sign it.

701. That is not the point with me. At this meeting, the report was brought up;—was that report signed by the sub-committee? Not then. Mr. Scholey, Mr. Bowden, and Mr. Keating were the sub-committee. Mr. Keating never signed it at all. The report was brought up by Mr. Scholey, who moved its adoption, and it was adopted by a majority of the full District Council, and it was not signed, when brought up, by anybody at all. When it was first brought down to Sydney it was not signed, but was sent back by the Minister for Lands to have it authenticated. Then the secretary, Mr. Hughes, carried the report round to the houses of the different members for their signatures, and it was then signed by some and refused by others. If I understand your questions, you want to know whether this report was brought up in legal proper form?—

702. That is it? It was not. The sub-committee never took any action; they never sat; you can see that by the minute-book. They never sat at all.

703. Well then, Mr. Eckford, the fact is, that the sub-committee appointed to investigate this matter of the Cessnock Road Trust never met at all, and that Mr. Scholey brought up a report of his own, which was not the report of the sub-committee? That is the fact.

704. That report was sent down to the Minister for Lands, not signed; it was returned, and it had then to be taken round to get the signatures? Yes.

705. Then if I see in this evidence here, referring to the minutes dated 2nd November, 1868, "The committee met the same day, and compared the statement with Sheridan's written balance sheet," that must be incorrect? No sir; the document Sheridan brought up was compared against the vouchers I sent in.

706. By the sub-committee? No; the sub-committee was appointed after that. This was the way of it: Mr. Scholey called a meeting on the 2nd November. Then this meeting took place, and Mr. Scholey then submitted my abstracts of the expenditure and this balance sheet of Sheridan's, and it was upon Scholey submitting that balance sheet of Sheridan's that the sub-committee was appointed to inquire.

707. But it says, here, that the committee met the same day? The committee was there, it was appointed, and it was then that they compared the balance sheet of this man Sheridan and my abstracts, and it was then that they were to have taken action. If you go on to the 17th November you will see—I don't know how matters are complicated in this manner, but they are really very much complicated, so much so that, notwithstanding my memory is good, I can't fish out what is correct. The committee was appointed the 2nd November, and the only thing they did was to look through this balance sheet, and the abstracts I had sent in. Subsequently to that—

708. *Mr. Burns.*] How do you know that? I know it from the sworn evidence of Mr. Scholey himself. Subsequently to that they met in the street, at Smith's mill, East Maitland, and decided to summon the man Israel to the Court for attempting to obtain money under false pretences.

709. Were you present at the meeting on the 9th December? No, I was in Sydney.

710. It is said that the report was drawn up, under Mr. Scholey's directions, by Mr. Thompson, at the request of the sub-committee? There is no doubt he may have said so, but here is the sub-committee's denial of it—here is Mr. Keating's denial. Mr. Scholey swore, in Maitland, on the trial, that the report was drawn up by Mr. Thompson, and that he had been authorized by Mr. Forster to go to him and get it drawn up.

711. Mr. Scholey says here that before the report was drawn up he had seen the Minister for Lands, but that the body of the report had been authorized by the sub-committee before it was drawn up by Mr. Thompson? Nothing of the kind. The Commissioners stated, Mr. Keating stated, and Mr. Scholey stated himself, that it was his report. Mr. Keating said that Mr. Scholey did it of his own accord, without consulting anyone; and Mr. Bowden admitted that, at that meeting, notwithstanding he signed the report, he did not know what were its contents.

712. Your denial of the committee having met is based upon Mr. Keating's letter? And upon the minute-book—that is the proper thing to refer to.

713. Was it usual for them to meet at the Council Chamber and have the minutes entered in the book? Yes, and to make inquiries as to whether these sums of money were received or not.

714. Then you based your statement of the committee not having met, upon their proceedings not being entered in the minutes? Yes; in fact, if you refer to the *Sydney Herald* of '69 or '70, you will find that Mr. Scholey swore the committee considered there was something very black in the matter—they determined not to ask me a single question. You will find it in print in Scholey's sworn evidence.

715. Are you aware of any notes of these proceedings being entered in the minute-book? Of course, all minutes are entered.

716. Of the Council? All proceedings on a matter of this serious import.

717.

* NOTE (on revision) :—A resolution has been passed by the Council, paying over to Mr. Scholey the money sued for by Thompson, notwithstanding a resolution passed previously that this money was not to be taken from the Trust funds.

Mr. J.
Eckford.

20 Feb., 1873.

717. But was it a condition, when the sub-committee was appointed, to have a secretary appointed, and to take minutes of the proceedings? Oh! This is like what you said on the hustings, and I protest against this quibbling.

[Mr. Webb appealed to the Chairman to call the Witness to order, and the Chairman requested the Witness to be more temperate in his demeanour.]

718. *Mr. Burns.*] I want to know why you assume that, because there is no entry in this book, the sub-committee could not have met? I believe, in a matter of importance, such as this was, the committee should have met the same as they did on the 2nd November. They met then, and a minute was taken, and, as it is said, the sub-committee met directly after.

719. If so, what did they meet for? My answer is, that Mr. Keating, who was one of the members of the committee, told me that they never met. Here is his letter to prove that; and he stated distinctly in this letter, that Scholey did all on his own responsibility. There is also a letter mentioned in the documents from Mr. M'Mahon, which will carry out what I state.

720. Have you not yourself stated that the committee met at Smith's mill? Yes, that was told me by Keating. And they decided to summon Israel for an attempt to defraud the Maitland Road Trust.

721. How then can you say they never met? They never met to draw up that report.

722. Did not the Warden say it was prepared with the concurrence of the committee? He is reported here to have said so, but Mr. Keating denies that it was so.

723. Denies what? That the report was drawn up with the sanction of the committee, or that he had signed it. I was not there at the time. I was in Sydney then.

724. When was that report submitted? On the 9th of December.

725. Were you at the meeting on the 15th December? No, I was not.

726. I would like to draw your attention to this entry:—"REPORT ON CESSNOCK ROAD.—Mr. Keating inquired if the report in the above case had been forwarded to the Minister for Lands; and, if not, what was the cause of the delay; and proposed, 'That it be forwarded to the Minister for Lands immediately.' Motion seconded by Mr. M'Mahon. Mr. O'Brien could not understand why Mr. Keating should urge the forwarding of the document referred to, after proposing at a previous meeting that it be deferred until the next meeting. Mr. Keating explained, that as it had been decided to send them he wished them sent at once. Mr. M'Mahon considered that if it were so urgent they ought to have been in Sydney long since. The Warden explained that he was desirous of having the minutes and the report correspond; in fact, to have the report embodied in the minutes, and consequently delayed the matters to have them sanctioned by the Council. No unnecessary delay had been occasioned; he had been at great trouble in ascertaining true particulars connected with the case. He had made inquiries as far as Cessnock, and could not find such a person as William Thomas, no one having any knowledge of such a person: such information could not be obtained in a short time. Mr. Bowden moved, as an amendment, that the Warden's explanation be accepted. Mr. Noble said he thought the Warden had lost no time in arranging the report. He also said that Mr. Eckford had informed him that Mr. Keating had told him (Mr. Eckford) that the Warden accused him of defrauding the trust. He relieved Mr. M'Mahon of all blame in the matter, and further stated that Mr. Eckford had signified his intention of absenting himself from the meetings for three sittings. He would second Mr. Bowden's amendment. For the amendment, Messrs. Bowden, Noble, O'Brien, and M'Mahon—four votes; for the resolution, Mr. Keating—one vote." Mr. Keating wrote you a letter;—what is the date of it? It was dated February 18th; that was after the second meeting.

727. Then according to this entry, Mr. Keating made an inquiry as to why the report had not been forwarded as was agreed at the meeting of the 9th of December? That is right; and now I will explain this: On the Thursday the *Maitland Mercury* is printed, as I suppose you know. On the Thursday evening I got a copy of the paper on board the steamer, and I saw there had been a meeting of the Council. I was then in Sydney, attending the House, to vote on the want of confidence motion, and I called at the Lands Office on the Saturday, and waited there while Mr. Fitzpatrick opened the official correspondence to see whether the report had come down, as I was desirous of getting it as quick as possible; but it did not come down. I went up to Maitland on Saturday night, and wrote a letter to Mr. Keating and Mr. M'Mahon, asking them to move resolutions to have the report sent down at once, so that I might have an opportunity of replying to it. And so it was at my instance that resolution was moved.

728. About this sub-committee;—you seem to think they could not have done anything unless they sat in the regular way, but yet you say that they met in the street? Yes.

729. You say they never sat, but met in the street, and decided to proceed against the man Israel? Yes, they did that.

730. Why could not the sub-committee meet in the street on a matter of this kind, and agree as to what course they should take, quite as well as if they met at the Council and had their proceedings entered on the minutes? The proceedings might have been entered on the minutes, but the committee never met but once—they never met to examine these men.

731. You make that statement on the authority of Mr. Keating? Yes, and on Mr. Scholey's sworn evidence.

732. Have you got his evidence with you? No, I have not. When I was away from home once, the cats got to the table where I kept my papers, and made them so disagreeable that a great many of them had to be burnt.

733. *Mr. Wearne.*] You state that the sub-committee never met, but I see from this evidence here that the committee brought up a report on the 17th November? That is wrong. They brought up no report whatever. Mr. Scholey made a verbal statement on the 17th of November, as to what inquiries he had made, and his statement is entered in the minutes.

734. It is said here:—"The Warden in the chair. Messrs. O'Brien, M'Mahon, Eckford, Keating, Noble, and Bowden," were present; and the Warden asked whether the Commissioners "were disposed to hear the report of the Cessnock Road Committee publicly or privately." If the members of the sub-committee were present then, and did not recognize the report as theirs, they would have refused to receive it. Then it says: "The Warden proceeded to state that he went to Bishop's Bridge on Tuesday, October 6th, and saw a large quantity of stones across the road," and so on. It is said here that this is the report of the sub-committee, brought up at a meeting at which Mr. Eckford was present? That is not the case, for you see this is not a report at all. If you read this, and read the report of the 9th December, you will find

Mr. J.
Eckford.

20 Feb., 1873.

find that they are two different matters entirely—"The Warden reported that he had been to Sydney and seen the heads of the various departments, who advised him to forward a complete review of the whole case to the Lands Department Office. Mr. R. W. Thompson, solicitor, had prepared the necessary document, which he submitted and moved—That the report embodied in such document be adopted."

735. I am speaking of before then, Mr. Eckford? Yes; well this is not a report—this is merely a statement, a verbal statement, as I said before, in answer to Mr. Cunneen. Here, on the 17th November, it says: "The Warden proceeded to state that he went to Bishop's Bridge on Tuesday, &c."

736. But it says also, the Warden asked whether the Commissioners were disposed to receive the report publicly or privately? This is not the report at all—this is Mr. Scholey's own statement.

737. That is not the question. At a meeting, at which you were present, it was asked whether this report should be received publicly or privately? Yes.

738. Then it must have been the report of the sub-committee? Yes; but I will show you that this is not the report at all: "The Warden then proceeded to state that he went to Bishop's Bridge on Tuesday, October 6th, and saw a large quantity of stones across the road. He remonstrated with the men for thus placing them, and the same day mentioned the matter to Mr. Eckford. On Monday, the 12th, he again went out, and arrived there at 6 a.m.; saw none of the workmen but Sheridan, and asked him if that was the usual time of going to work. Moylan and Henessy arrived at 7.10. Asked Sheridan if Doran, the overseer, had come. He answered no. Asked where was the carter; Moylan replied he was not going to work until Wednesday. Mr. Eckford called at the office as usual for his payment, but he declined paying until all the men were present, suspecting something was wrong as to the time the men had been working. On the 29th some of the men came to be paid, Mr. Eckford being present. He (the Warden) questioned Moylan, the first to be paid, as to Israel (the carter's) time; he said at first that he did not know how long he worked, but afterwards said eleven days. Henessy said he did not know how long Israel had worked, only knew his own time. Sheridan said Israel worked nine days, and Carnailly (another carter) two days, whereas he demanded payment for nine days. Welsh at first did not know how long Israel had worked, but afterwards said he thought he was idle a week. Israel said he had made thirteen days, having commenced on a Monday and left off that day fortnight. He might say that Sheridan was a man holding high testimonials of character from Capt. Russell and J. F. Burns, Esq., and any statement he made could be relied on. Doran was not present. Considering all the circumstances, the committee appointed to investigate deemed it advisable to obtain legal advice. Mr. Thompson, solicitor, advised him to institute proceedings against Israel, and the result had been that day made known. Such then were the particulars of the case. He had performed his duty fearlessly and conscientiously in reference to every person connected with the matter. Mr. Keating endorsed all that had been said by the Warden, so far as his knowledge of the Warden's statement was correct. Mr. Bowden coincided in all that had been done by the Warden and committee, they having documents in possession to contradict the demands of the men, and hoped that the full particulars respecting the case would yet be made known. Mr. Eckford explained that on Monday afternoon Doran called at his house with the account of the men's time, but just going out on important business was not sure whether he took the paper or not, or whether Doran put it on his desk; he could not remember, neither could he remember whether he wrote from Doran's dictation or not. He afterwards saw Israel." (I can't remember whether Doran gave me his time down or not.) "He afterwards saw Israel, and asked his time; he said thirteen days, out of which he (Israel) had received from Mr. Eckford payment for four days as an advance. He would have been present at the last special meeting but was detained at home on account of ill health. Mr. M'Mahon considered the Commissioners had over-stepped their duty, and had treated Mr. Eckford discourteously. They could have instructed the secretary to write to Mr. Eckford and wish him to be present. On the motion of Mr. M'Mahon, seconded by Mr. Noble, it was unanimously resolved that the report of Messrs. Scholey, Bowden, and Keating, as just read, be adopted. Mr. M'Mahon moved that no further legal action in reference to the demands be taken. Not seconded. The Warden moved that the committee retain the power given them by the resolution of the 2nd November; seconded by Mr. Bowden and carried." That has nothing to do with this report sent in to the Government at all. This goes on—"Mr. Eckford hoped that they would apply to him for any information that they required." You see I was present, and requested them to apply to me for any information that they wanted; and I was expecting daily to get a note from the Warden and committee, requesting information as to the expenditure of this money. But nothing was done until the Warden brought up this report, and had it adopted in my absence.

739. I am clear as to Mr. Scholey having said there was a report brought up, and now it seems that there was a report brought up? This was a mere verbal statement; it is not a report.

740. But the minutes say—? The minutes are not correct. It is a verbal statement. If there was a report where is it now?

741. Mr. Burns.] Did Mr. Scholey ever offer to have a conversation with you about the Cessnock Road before the report was sent in? No, never.

742. Did Mr. Price never speak to you about the matter? Which Price?

743. Mr. Price, of Buttai? Never.

744. Mr. Scholey says, that in consequence of a conversation with Mr. Price he went to speak to you about the matter, and you ordered him off? It is not true; and James Price will never state that he brought me any such message. He cannot state it. The only man who ever came to me was M'Ilhone—Scholey's friend.

745. What did he say? He asked me to make friends with Mr. Scholey, and I said no, I could not think of such a thing.

746. Mr. Webb.] In reference to the proceedings of the committees appointed by this Council;—were their proceedings ever entered in the minute-book? Yes, at all times.

747. Can you produce a minute of the proceedings of any other committee, which are entered in the minute-book? Well, I do not recollect. It is impossible for me to keep them all in my head. I know this much, whenever committees were appointed, and whenever their business was concluded, they always brought up a report to the Council.

748. That is not what I asked—I asked whether the proceedings of any committee appointed by the Council were entered in the minute-book? Well, for instance, a joint committee would be appointed, and would bring up a report of their proceedings to the Council.

749. I want to know whether any of the business of such a committee is ever entered in the minute-book of the Council—that question is clear enough? Well, if it is clear I cannot understand it; I really cannot understand it.

- Mr. J. Eckford.
20 Feb., 1873.
750. Was the business transacted at any meeting of a committee appointed by the Council entered in the minute-book of the Council? I think the business, after it was transacted, was always entered.
751. After it was transacted? I think so. But you see, until this time there was no important committee. They had simply to look after some bridge or punt, or to open tenders, and then report on what they did; but this was different. This committee was appointed to investigate a case in which £100 and odd was stolen, or said to be stolen.
752. Then you say that there was no record made of their proceedings or meetings? There has never been any meetings at the office. There has never been any committees that required to meet at the office, except this one. The committees have only been appointed to examine a few punts, and things of that kind.
753. You can easily answer me "yes" or "no";—were the minutes of the proceedings of any committee, appointed by the Council, ever recorded in the minute-book of the Council? My answer is, that no committee, to my knowledge, has ever been appointed to discharge a duty of this kind.
754. I am not talking about that? No committees of this kind have ever been appointed.
755. But there have been committees appointed? Yes, to decide as to the expenditure of perhaps £10 or so; but they did not require to meet in the office for that, and when they had done their work they gave in a return of what they had done.
756. I have here a case before me:—"On the 29th October, 1867, a committee was appointed, consisting of Mr. Bowden, Mr. M'Mahon, and the mover, to wait upon Mr. Haines, and remonstrate with him prior to taking legal proceedings against him";—do you know if that committee ever met? Was I present there?
757. No? Then I know nothing at all about it; but even that was only a trumpery matter.
758. Nor do you know if that committee ever brought up a report? I do not know; but it does not matter, for it is not a matter similar to this.
759. That is a mere matter of opinion. I find also on the 23rd December, 1869, a minute in the book to this effect: "In reference to the Falls Punt, which was partly sunk, Mr. Eckford proposed and Mr. M'Mahon seconded,—That Messrs. Eckford, Bowden, and M'Mahon be empowered to deal with the matter, and the lessee be written to, requesting him to raise the punt at his own expense";—you remember that? Yes; certainly.
760. Did that committee ever meet to deliberate? No; because the work was laid down for them to do.
761. Did they ever bring up a written report? I don't know. It was perfectly unnecessary if they did.
762. So far as you are concerned in this committee, you don't know that they formally wrote out a report to submit to the Council? What committee?
763. This in reference to the punt? I don't recollect.
764. I find on February 11th, 1868, a resolution was moved in the Council to this effect: "After a lengthy conversation and careful consideration of the subject, it was proposed by Mr. Bowden and seconded by Mr. O'Brien,—That the sum of £7 be allowed as compensation for his having to use a small punt";—well now, so far as that was concerned, was that done on the recommendation of the committee, or was it decided by the Council? I forget.
765. Again, on the same date I see "it was resolved, on the motion of Mr. Bowden, seconded by the Warden,—That the report referring to the raising of the Falls Punt be postponed until next meeting";—was that report made in writing to the Council? I don't recollect.
766. If it was made in writing would it be recorded in this minute-book? If it is not recorded it should have been, if it was made in writing.
767. But if it was not, I suppose that is the way in which these books were kept—and the other report is not recorded here either? Which one?
768. The one referred to in the first instance? I don't know.
769. On the 24th February, 1868, I see in the minute-book a minute to this effect, in reference to this same matter of the Falls Punt: "Raising of the Falls Punt—Messrs. Eckford and Bowden tendered their opinion in reference to the sinking of the Falls Punt, and stated that as they had not made a very minute examination of the punt they were scarcely able to state definitely what was the real cause of sinking. Mr. Bowden said he had previously seen her in a very leaky state when in use at Pitnacree. Mr. Eckford said he saw some timber in the ends of the Punt, which were very defective, and which Mr. Bell was of opinion was sufficient to cause the sinking—an opinion in which he concurred." Is it not a fact, that when these committees were appointed, instead of making a written report you came up and made a verbal statement? These committees were different to that important one.
770. Was it not really the case that you did so? I don't know. I shall know if my name is down there.
771. Did you make this report in writing? No; certainly not. That was given verbally.
772. Just the same as Mr. Scholey gave his report with reference to the Cessnock Road case? These committees are entirely different.
773. Never mind that;—did not Mr. Scholey give in his report verbally in the usual way? Yes. Mr. Scholey gave his statement verbally and I gave my statement verbally; but that has nothing to do with the report which was laid before the Government.
774. You said some time ago that the committees reported in writing;—are you of the same opinion still? I did not say so. I said that a matter like this they would report in writing. I said a matter of this kind was different to other matters. Don't double on me please; treat me as a gentleman sir, and I will treat you as one. I said reports of this importance should be made in writing.
775. At all events, now having seen these punt and other committees you find that there is no record of their proceedings made? I told you all along that they never made any. They went and discussed matters among themselves, and then just gave in a verbal report.
776. You find that there are no minutes of the proceedings of these committees in the minute-book? I never said there was any.
777. Then the reports of these committees were not brought up in writing? I believe they never were.
778. Are you in a position to say that the report of any committee was ever brought up in writing? I don't know. I am not in a position to say either for or against.
779. *Chairman.*] We have no further questions to ask, Mr. Eckford? I presume then, sir, you will allow me to make a statement. I shall bring up nothing new, but I shall just state to the Committee the witnesses I think it will be necessary to get in order to do justice to all parties in this case—justice to Mr. Scholey, justice to the Government, and justice to myself. In the first place, Mr. Chairman, there was a statement made

Mr. J.
Eckford.

20 Feb., 1873.

made by you in the House—I don't say intentionally—a statement to the effect that Mr. Scholey came to Sydney on this matter, and had an interview with Mr. Forster. Mr. Scholey's own statement was that he visited Sydney under legal advice, which was the fact, and after he had an interview with the Minister for Lands, who said the Government would protect him. Mr. Forster has sworn that statement is untrue, and Mr. Fitzpatrick too, and I think that these gentlemen should be brought before the Committee to say whether they ever did promise anything of the kind. I shall be brief, because you have the reports before you. I shall refer you to M'Mahon's letter, which you have not yet heard read. [*Witness was proceeding to read the letter, when the Chairman said it was unnecessary, as he (the Chairman) intended to move that all these documents be referred to the Committee.*] That will do, and I have no desire to go any further. These men were never examined until they were examined in the witness-box in Sydney. Here are two sums of £2 8s. and £4 4s. that I was charged with misappropriating. Now Mr. Scholey must have known that he was making a false statement when he said that. He states in a letter, dated 24th August, 1869, that the Council paid these two sums of money, notwithstanding he had charged me ten months previously with stealing them—and Mr. M'Mahon moved that the balance of the moneys due, as per order, drawn by Eckford, be paid at once. That is the money I am charged with misappropriating. Why the money was paid ten months afterwards by resolution of the Council. I presume, Mr. Chairman, when you get these documents, I shall be again examined as to the report I made with regard to Mr. Scholey. You will find correct notes here; and I wish to be again examined. Tarplee, the reporter of the *Maitland Mercury*, can prove that I offered to give the Council any information they required with regard to this money. Tarplee gives a letter certifying that I did so. Mr. William Keating, late committeeman, will prove, of course, that he never was consulted in any way as to the course Mr. Scholey intended to pursue. There is Mr. Price, a stonemason, out at Bishop's Bridge, who swore in the Court that Mr. Scholey offered him a bribe to make him an overseer of the road, provided he would swear there were no such men as Thomas and Avery at work; but instead of swearing that, he said that these men did work, and that they staid in his out-house some odd nights. That was his statement, as far as my memory serves me. Mr. Hughes, the secretary of the Council, will also prove that his minute is correct. The man Israel is on the Mehi River, and too far to fetch away. Patrick Carneilly, of West Maitland, will prove that he was employed as a carter. Fitzgerald, mail contractor, of West Maitland, will prove that Thomas was in existence, that he knew him, and that he brought tools in to him to be repaired. Moylan will swear that Sheridan went to him, and said if he would only swear what he said Scholey would give him work on Wollombi Road as long as he lived. The other men swore that they received the money. William Thorp delivered rubble-stone; he swore he was paid for it. Sherby swore that he delivered the rubble-stone, and received the money, as set against his name, and was never asked a question. Doran proved that he received all his money, and that the other men did the same. Then there is Mr. Forster and Mr. Fitzpatrick. Riley and Hinchcliffe prove to having seen men at work on the particular locality; and last, not least, is a witness I wish you to call, and that is the Honorable Colonial Secretary. I feel that that gentleman's evidence would be very important in this matter, and I will show you why: Mr. Scholey said he consulted Mr. Parkes, and Mr. Parkes admitted it on one occasion; but I will give you his own words here, which convinces me that his evidence will be highly important for the ends of justice. On the 31st January last year Mr. Parkes said in the Assembly: "The next gentleman who rallied round Sir James Martin was Mr. Eckford. He could, if he chose, tell a story which would show an amount of hostility on the part of Sir James Martin and the Solicitor General, which made him fairly reel back with astonishment, although he was then associated with these gentlemen in office, and which he thought utterly unworthy of gentlemen occupying their positions." Mr. Parkes must have felt that I must have been cruelly wronged when he made a speech like that in the Assembly. "But Mr. Joseph Eckford, under the magical influence of this combination, forgot all his wrongs and rushed to the rescue of the gentlemen who wished to track him to ruin and to death if necessary only a short time ago." That is the last gentleman I shall name, and I think it is highly important he should be examined on this matter, because he will be able to state what the wrongs were that would be done to me. That is all I think it necessary for me to say. As you state you intend to move for the correspondence for this, and these reports *pro* and *con* will be deliberated upon by you gentlemen. After this there are other charges I have made against Mr. Scholey, that I hope will be discussed in the same way that Mr. Scholey's charges against me have been discussed. I have only a few words to say with regard to Mr. Fisher. I said, when his name was mentioned, it was in this way, or intended to be in this way: Mr. Tunks, Mr. Davis, and Dr. Wilson, attended the Court every day when the trial was on; I do not think they missed a single sitting; and when the Court adjourned, these gentlemen would meet outside, and one of them would go on and meet Mr. Fisher. I do not know what passed between them; but not only that, Mr. Faucett, the Judge, said that he believed the principal witness for the plaintiff and disbelieved the principal witness for the defendant, though the jury might not. Of course, we do not all think alike. It is not for you to suppose that I thought Mr. Fisher had been tampered with. I had not for one moment any desire to cast the slightest reproach on Mr. Fisher; but when people take such interest in a thing as to attend the Court every day, and these people always seized opportunities of talking to Mr. Fisher, it is human nature to believe that they did it from bad feeling.

Henry Fisher, Esq., called in and examined:—

780. *Chairman.*] Do you remember, in 1871, being foreman of a jury before which a case was tried of Eckford v. Scholey, for slander? It was in 1870.

781. You remember being foreman of the jury on that case? I do.

782. Do you remember what the charge was—what was the cause of action;—slander was it? Yes.

783. Arising out of some report on the Cessnock Road? Yes; Eckford brought an action for damages against Scholey for slander, in charging him with malversation of some funds of the District Council.

784. Are you aware that these charges were made in a report laid before the Minister of the day? The trial lasted some nine days, if I remember right, and of course I have a very strong recollection of it, as it was not one of the ordinary cases, and the evidence brought forward clearly proved to our minds that Scholey had in his capacity of Warden charged Mr. Eckford, or rather called upon Mr. Eckford to explain some payments that did not appear to him satisfactory in the pay-sheets. It was also clearly proved to us that that charge was substantiated to the satisfaction of a majority of the Council that Scholey was proved

to be Warden of; that at a meeting of that Council the report was also sent forward through the Warden to the Minister for Lands of the day, who, I believe, was Mr. Forster. We had Mr. Forster examined before us on the occasion, so it must have been him. That report was also proved by Mr. Forster's examination to have reached his office through the hands of the Warden. I do not know that I should be travelling out of my course, but I only speak for myself, but still we were unanimous in our verdict. We gave a verdict for the defendant, believing that the evidence proved beyond all doubt that Mr. Scholey had only performed his duty, and we, as jurymen, of course, had nothing further to do with the case as regarded the Minister for Lands, though we could not help expressing our surprise that the matter was allowed to remain in the office so long without further proceedings being taken. The case lasted nine days, and we were unanimously of opinion that Mr. Scholey only performed his duty as a public officer; I did not know him by sight even, until I saw him in the Court.

785. Have you any further statement, Mr. Fisher? Well, of course, engaged as we were, in investigating a serious charge of this kind, it is impossible for any intelligent man to forget it, after being nine days sworn to examine into it; and it appeared to me that Mr. Scholey, or that the District Council would have been wanting in their duty as Councillors had they not sent forward that report; and I expressed my surprise and indignation too, as a colonist, that the matter had not been sifted by the Government of the day. We gave our verdict in accordance with the evidence. Had we found a tittle of evidence to show that Mr. Scholey had acted from malice in the matter—had we thought that, we should have given a different verdict; but the evidence preponderated in favour of Mr. Scholey, and showed that he had simply done his duty as a public man. Money was voted by Parliament for a particular purpose, the money was handed over to the Council, and Mr. Eckford, as one of the Council, had control over some portion of the expenditure. He was charged with putting down men on the pay-sheets and time-book, who did not work at all—three men, I believe,—and he never could produce those men.

786. Had he produced any of these men he would have vindicated himself? Decidedly; or if we had had the slightest doubt on our minds about the matter. But we had no doubt, after nine days' inquiry, that there were no such men ever in existence.

787. Who were the other jurors? Mr. Farmer was one of the jury, Mr. Fleetwood was another, Mr. Frerichs, and myself. Those were the four. Why I remember them so particularly is, that some few weeks or months afterwards some indiscreet writer in a paper said something reflecting upon the jury, and some of my brother jurors waited upon me about it, and so I am satisfied I am expressing their opinion as well as my own. We were going to take some action in the matter, but thought we would let it pass. We had Mr. Forster before us, and I forget exactly how he explained the matter, but it was clear that the report was allowed to drop in his office.

788. *Mr. Wearne.*] Can you remember anything more in reference to the case? Yes, there is one very important feature in it, that the plaintiff in the case through his counsel urged upon us that he had never had an opportunity given him before the District Council to purge himself of this charge. Now it was clearly proved by the evidence that he had repeated opportunities of clearing himself in the Council, and that he did not do so. That was one principal feature which determined the jury to give their verdict. And one feature was, that the jury felt it was the duty of the Minister for Lands to have gone into the matter. It appeared to me that Mr. Scholey did his duty when he sent in that report to the head of the Department. It was sent forward in the usual manner, and Mr. Scholey completely cleared himself of any malice which the counsel for the plaintiff tried to impress on the jury as actuating him. There was some slight evidence that the parties had a quarrel, but it was not substantiated.

789. *Chairman.*] Don't you think it of great importance in a country like this, where so much money is expended on Road Trusts, that the Government should stand by any public officer who vindicates the fair and just expenditure of this money, and exposes the malappropriation of it? Most certainly, Sir. That was what led me at the time to express my surprise that the Minister of the day had allowed the matter to drop.

790. During the time that this trial was proceeding, are you aware whether yourself or any other of your fellow jurors allowed persons outside to communicate with them in order to influence them in any way? None whatever. There was no communication with me or with any of my fellow jurymen—in fact, the respectability of the men would prevent anything of that kind. Mr. Farmer is a highly respectable man. We gave the case our best judgment. It was a painful case, and we tried in every way to ascertain whether Scholey was mistaken, or actuated by private feelings. We were anxious to find out and do justice in the matter.

791. *Mr. Wearne.*] You expressed yourselves in that way to each other? Yes, we did of course, where the case lasted for nine days; we were obliged to do so. It was only by doing so that we arrived at a satisfactory verdict.

792. *Chairman.*] Then if it has been said by Mr. Eckford before this Committee that you have been, as he termed it, "collared" in the street by Mr. Tunks, Dr. Wilson, or John Davies;—if it has been said that you were "collared," with the hope of influencing your decision;—is that true? If Mr. Eckford has said so it is false; and I am sorry he has said so, but it gives me the opportunity of explaining something that did happen: It was between 8 and 9 o'clock at night—Judge Faucett was the Judge,—and as we were retiring from the box, Mr. Dransfield came up and took me by the collar, and said what a fool I was to give such a verdict as that. So incensed was I that I walked back into the box, and if the Judge had not left his seat I would have had this person put where he ought to have been.

793. Who was the person? A Mr. Dransfield—a great political character,—and from what we saw I presume that he took the side of Mr. Eckford. We were all very angry at his conduct. That was the only time anything was said to us about the case. I was never spoken to on the subject by anyone else.

794. It is untrue that any of the persons mentioned ever tried to influence you in any way? It is utterly untrue if such a thing has been said. No one spoke to me before the trial or afterwards. The only man who did so was Mr. Dransfield, and he did so very grossly, and taking the part of Mr. Eckford.

795. *Mr. Burns.*] Were you at any time accosted by Mr. Tunks? No.

796. Do you know him? Very well; but I have not spoken to him for many years, except on the hustings at the West Sydney election. We have had no other communication, that I can remember, for the last thirty years.

797. Did you speak to him during the trial? No, I did not.

798. Do you recollect speaking to anyone outside the jury on the circumstances of the case during the trial? No, I did not. Both my brother jurors and myself were careful not to speak of it.

H. Fisher,
Esq.

20 Feb., 1873.

799. Did you observe anyone attempt to communicate with your brother jurors during the trial? No one could have done so. I have no hesitation in stating that it is a gross untruth, whoever said it. My political feelings at that time—if politics had anything to do with it, which I think they had not—my feelings were with the Government of the day at that time—with the very Government that Mr. Eckford voted for. This Dransfield was on that side, and this person would not have addressed me but for that. I was not a supporter of Sir James Martin, or any of that side. Why I felt so aggrieved at Dransfield addressing me was his fancying that he could tamper with the oath of a jurymen.

800. Some time after the trial was over something occurred which excited the indignation of yourself and your brother jurymen, and you had a meeting about it? Yes, some paragraph appeared in the *Empire* about the trial. It was some observation made by Judge Hargrave on the occasion of some proceeding in the case, either when Eckford became insolvent or on the motion for a new trial. It was on the motion for a new trial, I think. Judge Hargrave made an observation on a matter on which he had been misinformed, and the *Empire* published these remarks. We met, and took a week to consider the matter, and then we thought we would let the thing pass. We occupied a respectable position, and had a right to express our opinion.

801. *Mr. Webb.*] On leaving the Court at any time were you accosted by Mr. Tunks? No.

802. Or by Dr. Wilson? No, I never spoke to him in my life up to that time, and long afterwards. The first time I spoke to him was in East Sydney election.

803. Or by John Davies? I have not the pleasure and honor of his acquaintance. I saw him the other day, and he bowed to me, and I bowed to him, but I am not a friend of his.

804. Did you see any of these persons accost your brother jurors? Certainly not, and from the known character of the men had anyone done so they would have repelled them indignantly. Fleetwood and Farmer are very particular men, so much so that when they wanted to express an opinion to me they called me aside to do it. The case was all a matter of the credibility of the witnesses, and as to whether Mr. Scholey had been actuated by malice or not.

805. What arrangements had you for obtaining refreshment? We always lunched together, to the best of my recollection.

806. And if anyone had spoken to your brother jurors then you would have seen them? Yes. My brother jurors might perhaps on some occasions have been in the Court a few moments before me in the morning.

807. *Chairman.*] You remember Mr. Forster being examined during the trial? I do.

808. Do you remember when Mr. Forster left the witness-box, or was about to leave it, you asked him if he had not given some orders for the return to be furnished to him by the Warden, and he said he must have done so from the circumstances? Yes, that was the nature of his answer. We were anxious to understand whether the Minister afterwards received that report. We did not care who it was; and it was just before Mr. Forster left the box that we had from his own mouth his knowledge of the report being in his office. I turned round to my fellow jurymen, and said, "Very, very strange." It seemed to me so extraordinary, knowing what an honorable man Mr. Forster is in his public life, and it called my attention to it, because we considered that this Warden did his duty in forwarding the report, and then the case should have been taken up by Mr. Forster. But we were not there to try Mr. Forster, otherwise we should have found him guilty of a gross dereliction of duty.

809. *Mr. Wearne.*] Do you think that we should do right to pay Mr. Scholey his costs? I think you would only do what is right if you repaid him every shilling. He was a public man, and did his duty, and I think he is entitled to have his costs paid. I saw him under examination, and we believed that he was the witness of truth. I did not know him then, but I have a respect for him, simply from what came to our knowledge when we were on our oaths as jurymen.

810. Was there any expression fell from the Judge in favour of Mr. Eckford;—did the Judge seem to have a leaning towards Mr. Eckford? No; I considered that Judge Faucett's summing up was very fair. He is a timid Judge as you are aware, and he did not give any opinion, except on the law bearing on the case. He told us it was our province to ascertain whether the defendant was actuated by malicious motives, and whether he performed his duty as a public man. Then the remainder of his charge was as to the credibility of witnesses. For instance, Eckford brought forward several witnesses, who stated as facts matters which were quite contrary to the truth. There was one man,—Fitzpatrick I think, the driver of a mail-coach,—whom if I had been Judge I would have committed. The Judge had a painful duty, and his summing up was very fair. The Judge's charge was mainly as to the credibility of the witnesses, as to whether the defendant had been actuated by malice, or acted upon *bonâ fides*. The jury found that he acted in *bonâ fides*.

811. Then if Eckford has said that the Judge in his charge exonerated Eckford, that is not true? He certainly did not. He said in the usual way, "If you think Eckford's witnesses spoke the truth you will find for the plaintiff, but if you do not believe them you will do so and so"; and the "but" completely overwhelmed the "if." I forget now what expression of opinion the Judge gave when the verdict was given, but our impression was that it was clear beyond all doubt that the charge against Eckford was proved, that the report was sent to the proper quarter, and that Mr. Scholey acted, as I hope every public man will act in similar circumstances. Mr. Scholey is a stranger to me, but I have met him once or twice at West Sydney or East Sydney election, and I have said "good morning" to him, or something of that kind; but he gave the jury a favorable impression in this case. Mr. Eckford I have known slightly, and I forget whether I have had any business transactions with him or not. Of course, after his counsel's opening speech, the feelings of the jury were perfectly with poor Eckford, as the matter was described to us by his talented counsel; and we altered our opinion solely on the evidence, and on the evidence alone. We did not allow Sir James's great forensic abilities to influence us; we went solely by the evidence which was so clear. I enter largely into these matters, because I am told that Mr. Scholey claims to be compensated for loss sustained in performing his public duty, and because I wish always the right man to win.

WEDNESDAY;

WEDNESDAY, 26 FEBRUARY, 1873.

Present:—

MR. BURNS,

MR. WEARNE,

MR. WEBB.

JAMES AUGUSTINE CUNNEEN, ESQ., IN THE CHAIR.

Michael Fitzpatrick, Esq., M.P., called in and examined:—

M. Fitzpatrick, Esq.
26 Feb., 1873.

812. *Chairman.*] In 1868 you were Under Secretary for Lands? I was.

813. Do you remember at any time, about October, 1868, a representation being made to the Minister for Lands concerning the expenditure of money on the road from Maitland to Cessnock? I cannot fix the month, but I remember a communication, personal and written, on the subject.

814. By whom? My memory of the case is this; and I may say I have had no opportunity of refreshing my memory: One day—I cannot fix the date—Mr. Scholey called on me, saying, if I remember rightly, that he was sent to me by Mr. Parkes, as being the proper person to inquire into the matter which he had in hand. Mr. Scholey represented to me that there was reason to believe that some malversation in the accounts of the Cessnock Road had taken place, which I understood to amount to a charge that money was alleged to have been expended by the trustees which had not been expended. I told Mr. Scholey that I could not deal with a charge of that sort, except it were made in writing, so that the person making it would be responsible for the charge. I told him that that was the practice of the Government. He said in effect that he would appeal to the Minister for Lands, to which I said there was no objection; and, if I remember rightly, I directed a messenger to show Mr. Scholey to the Minister for Lands. The Minister at the time I think was Mr. Forster. I had a communication afterwards, on the same day, with Mr. Forster, who mentioned to me that he had given Mr. Scholey the same intimation that I had given him. I remember Mr. Forster remarking upon the fact that he had given Mr. Scholey the same intimation that this statement should be made in writing. Shortly after that a long and precise statement, with accounts appended, came into the office, purporting to come from the District Council of Maitland. In my official capacity I opened the documents, and found that they professed to be a statement of this alleged malversation, but the document was not signed by anybody—not by anybody at all—and although it professed to proceed from the District Council of Maitland it had not the corporate seal of the Council. I submitted the case at once to the Minister for Lands, and by his direction I returned these documents to the District Council of Maitland, with an intimation that they should be signed by somebody, or the corporate seal attached, so as to authenticate the statement. In a short time they were returned, either signed or with the corporate seal attached, so as to authenticate them. On that the Government commenced to investigate the charges. I cannot attempt from memory to pursue the case, because the papers went to various offices outside my own, and I had no hand, or scarcely any, in the investigation of the charges.

815. When you returned this statement which you received from the District Council to it again for signature or seal, do you remember its being sent back? I believe it came back either signed or sealed so as to authenticate it, because short of that the Government would not have entertained the case.

816. Were you present at any interview between Mr. Scholey and Mr. Forster? I was not.

817. You could not be aware then, whether at his interview with the Minister he was given to understand that he should be held harmless on account of this matter? I know nothing of that, for I was not present.

818. When Mr. Scholey had an interview with you, did you receive any letter from Mr. Parkes at that interview, introducing Mr. Scholey, or otherwise? I am not sure whether he had any letter, but I think Mr. Parkes directed him to come to me, the reason being that I had charge of the minor roads at the time. I ought perhaps, in justice to Mr. Scholey, to say, that he stated to me that he thought he ought to be held harmless, because he was acting in his public capacity as Warden of the District Council, and I told him it was not the practice of the Government to investigate any charge against anybody, except it were made in writing, so that the writer might be responsible.

819. It is probable that Mr. Forster made the same intimation to him? I remember remarking that both he and I had given the same advice to Mr. Scholey on that point, about putting it in writing.

820. Did you examine any of the documents or balance sheet that Mr. Scholey sent in? I did not; I had an accountant under me, and he so far examined them as to see what amount had been placed to the credit of the road trust.

821. *Mr. Burns.*] Do you recollect how long Mr. Scholey was in conversation with you about this matter? It might have been five minutes, or it might have been ten—not very long.

822. After the Government received this report, do you recollect whether any steps were taken to bring to account the person or persons against whom the charges of malversation were made? The Government, as soon as this charge came in signed, sent it, according to the usual practice, to Mr. Eckford for his report. A reply was received, which reply was dealt with in several offices by the Government at the time.

823. Do you recollect Mr. Eckford making some counter-charges against Mr. Scholey? I do not. I think there was something of the kind in Mr. Eckford's letter.

824. Do you recollect how they were dealt with by the Minister? I do not; I do not remember that the Minister dealt with any charge against Mr. Scholey.

825. You do not recollect the Minister writing in the usual official way to Mr. Scholey, to the effect that his explanation of these charges was satisfactory? No. There would, of course, be the letter among the papers, if it had been so.

826. Do you know of any steps being taken by the Government, beyond reference from department to department, to deal with this charge of malversation of public funds? I think there were steps, but I cannot say from memory what they were.

827. Do you recollect any instance, in your official experience, where a charge was made of malversation of the public funds, and the matter was allowed to rest on the part of the Government? I do not recollect why the case was allowed to rest. Whenever a charge was made, the practice was to send the charge to the party accused. That was done in the case of Mr. Eckford.

828.

828. Did the Government pronounce any opinion on Mr. Eckford's answer to the charges? I cannot from memory say they did.

829. Are you aware that an action was brought against Mr. Scholey for having sent in that report to the Government? Yes.

830. Do you recollect Mr. Forster being examined on the trial? No; I was not examined on the trial myself.

831. Were you not examined as a witness? No. As a matter of current report I believe Mr. Forster was examined.

832. *Mr. Webb.*] Do you know whether any steps were taken in reference to these charges, except referring to Mr. Eckford for his report? I cannot state how far the inquiry went, because it was not conducted by me, beyond this, that the accountant under me examined the statement as to the money put to the credit of the trust. Mr. Eckford sent in a number of statements tending to combat the charges made by Mr. Scholey, but I had nothing to do with any investigation.

833. You do not know whether there was any official investigation? I think the papers were sent to the Works Department, and to the Crown Solicitor. Why the inquiry was not concluded I cannot tell you.

834. I gather from your replies that there was no regular investigation? I think there was an investigation. How far it may be considered regular I do not know; but the ordinary course was taken, to hear the reply of the party accused. The ordinary official course was taken.

835. There was no decision arrived at? Not as far as I know. I have an impression that Mr. Eckford threatened legal proceedings, and that the Government were not indisposed to let the case wait the result of those legal proceedings.

836. From your position in the Lands Office are you able to state whether Mr. Scholey was an officer of the Government—whether he was appointed Warden by the Government? We did not look upon him as an officer of the Government, but as acting in a public capacity. He certainly made it clear, when he first came to me, that he was acting in his capacity as Warden, not as a private individual.

837. Is it not usual, when charges are made by public men, to thoroughly investigate the matter? Yes, certainly; but the Government very frequently stays its hand when the same issue is being tried in a Court; and the obvious reason is, that the Court offers better grounds, because the statements are made on oath. The statements made by Mr. Scholey and the opposite ones by Mr. Eckford could not be dealt with with the same confidence.

838. I suppose you are aware that the verdict was given for the defendant, Mr. Scholey? I believe it was.

839. Did the Government take any action as to that? Not that I am aware of. I think that shortly after there was another Government, if I remember rightly.

840. Are you aware of any mode by which Mr. Scholey could obtain redress, except by applying to a Committee of the House? I do not know that that is a question for me to answer; I think it is rather a legal question. With the consent of the Government, Mr. Scholey might sue the Government perhaps.

841. *Mr. Wearne.*] When Mr. Scholey asked if you would hold him harmless, I suppose he meant in the event of the charges he made being proved? My impression was simply this: That Mr. Scholey was making a statement that affected the character of Mr. Eckford, and that it was not becoming in me to accept a charge of that sort, unless somebody was responsible for it. I had no doubt Mr. Scholey was acting in his public capacity, but that did not alter the case, for whoever makes a charge is called upon to make it in writing, so that he may be responsible for its accuracy. Then the position arises, whether Mr. Scholey made this charge in his public capacity, and in good faith, or not; but the fact of his being a public functionary does not alter the case as regards the authenticity of the charge and the necessity for its being made in writing.

842. I want to get at the conditions on which Mr. Scholey wanted to be held harmless? The only condition I understood was this, that as Mr. Scholey was acting in his public capacity he thought he ought not to be personally liable.

843. In this case the verdict in a Court of Law showed that the charges were true, and yet Mr. Scholey is a sufferer? That may be inferred. The action was one for libel, and Mr. Scholey got a verdict. Now, if I understand rightly, Mr. Scholey is asking to be compensated for expenses out of pocket, the allegation being that what he did was done in his public capacity, and therefore he ought not to be personally liable. I believe that what he did was done in his public capacity, but whether he is to be compensated it is not for me to say.

844. After this case had been decided by the Court the Government did not give their verdict? So far as my memory serves, I do not think the Government ever gave a verdict upon it.

845. *Mr. Burns.*] In a case where a gentleman acting in a public capacity brings a defaulter to account, and is proved to have done so, do you think it material whether he had a promise or an implied promise of indemnity from the Minister or not? I say decidedly not. I have said already, that the proper footing on which matters of this kind should rest is, that the party making the charge should be held responsible for that charge, and that there should be no promise of indemnity, but that his vindication should depend upon the result. But I would add that if the Government, by its Minister, promised any man making such a charge that he would hold him harmless, in that case he ought to be held harmless of all costs, without reference to the vindication.

846. Where a duty of this kind has been discharged by a gentleman in a public capacity, and he has vindicated his charge, would you hold, as a matter of public policy, that he should be indemnified by the Government? That is a question I would rather answer in another place. As a general answer I would say yes.

Stephen Scholey, Esq., M.P., further examined:—

847. *Chairman.*] Do you remember when you were appointed Warden of the Maitland District Council? Yes, in May, 1868.

848. Do you know by whom you were appointed? By Sir John Young.

849. By what document or form were you appointed? The document which I now produce, under the hand of the Governor and seal of the Colony. (*See Appendix B.*)

M. Fitzpatrick, Esq.
26 Feb., 1873.

S. Scholey, Esq., M.P.
26 Feb., 1873.

Mr.

Mr. Thomas Hughes called in and examined:—

- Mr. T. Hughes.
26 Feb., 1873.
850. *Chairman.*] Are you at present secretary to the Maitland District Council? Yes.
851. When were you appointed to that position? I think in October, 1867.
852. What were your duties in connection with the District Council? To attend the various meetings, and take minutes of the proceedings.
853. Is this the minute-book (*handing a book to the witness*)? Yes.
854. Did you enter in this minute-book the proceedings of the Council always? Yes.
855. Whenever it met? Yes.
856. You entered the matter on which they deliberated and the decision at which they arrived? Yes.
857. Do you remember whether, on the 19th of May, 1868, the Council made an arrangement as to what particular Commissioners should expend the money on the various roads? Yes.
858. Could you state who was appointed to control the expenditure for that year on the road from Maitland to Cessnock? Mr. Eckford.
859. What amount of money was placed in his hands for expenditure? £350.
860. Do you remember who was then Warden of the district? Mr. Scholey.
861. Do you remember during the month of October, or about that time, Mr. Scholey making a representation to the Council of maladministration of this money? About November, I think.
862. What representation did he make to the Council? He moved a resolution in the Council, at one of the meetings, that a committee should be appointed to examine the expenditure of that particular branch. That was on the 2nd November.
863. What action was taken at this meeting on the 2nd November? A committee was appointed to examine into the expenditure on the Cessnock Road.
864. That committee was appointed in the ordinary way at a legally called meeting of the District Council? Yes.
865. Do you remember what action the committee took? Mr. Scholey produced some documents in reference to the expenditure on the road, and a balance sheet was prepared from it, which showed there was some deficiency in the accounts.
866. Did this committee bring up any report to the Council at any time as to the result of its investigation? Yes, on the 17th November.
867. What took place on the 17th November with regard to this committee;—did they bring up a report? The Warden did, on behalf of the committee.
868. You were present? Yes.
869. Was this a written report? I am not quite sure whether it was a written one; I rather think the Warden read it, but I am not quite sure.
870. Was that report adopted by the Council? Yes.
871. In the manner that reports usually are? Yes.
872. Do you remember whether the Council also at this meeting on the 17th, gave the Warden any instructions as to any proceedings he should take with regard to this report? Yes, I remember that the power originally given to the committee was to be retained by the committee.
873. Did the Council direct the Warden to bring the matter under the notice of the Minister for Lands;—after they adopted this report did they direct the Warden to bring the whole matter of it under the notice of the Minister for Lands? On the 9th December there is the following minute:—“The Warden reported that he had been to Sydney and had seen the heads of various Departments, who advised him to forward a complete review of the whole case to the Lands Department Office. Mr. R. W. Thompson had prepared the necessary documents, which he submitted, and moved, that the report embodied in such document be adopted; four votes; carried.”
874. That was done at the request of the Council? Yes.
875. Is the report which was forwarded entered there? Yes.
876. Are you aware that Mr. Scholey proceeded to Sydney for the purpose of presenting this report?—
877. Did he intimate that he had done so to the Council when he returned? Yes.
878. Do you remember personally from your own knowledge that he reported to the Council that he had an interview with the Secretary for Lands? Yes, I do.
879. Could you state, either from memory or from any entry in the minute-book, what he said was the result of his interview with the Minister for Lands;—what he reported to the Council respecting that interview? I do not know whether I have an entry here or not, but as far as my memory serves me he said he had seen Mr. Forster, who requested him to have the whole particulars of the case referred to him. Mr. Forster requested Mr. Scholey to have the particulars reported and sent to him.
880. Do you remember Mr. Scholey stating anything further respecting it;—did he mention to the Council that he was given to understand that he would be indemnified against any loss? Yes, that was the effect of it. Mr. Scholey, in a jocular way, referred to the cost of it, and I gathered from the tone of his remarks that Mr. Forster had given him to understand that he would suffer no loss by it.
881. Do you find anything respecting his report under the date of 4th December? I think that must refer to the date of the document which Mr. Scholey read. Mr. Scholey read that document to the Council at a meeting on the 9th December.
882. Do you remember the Government communicating to the Council that this report had been received, but stating that it was not signed by anybody or authenticated? Yes.
883. What steps were taken to authenticate the report? It was submitted to the Commissioners, and some of them signed it.
884. Who signed it? Mr. M'Mahon and Mr. William Keating declined signing it.
885. Do you remember whether the report, after it was returned, was altered in any respect? No, I think not.
886. Do you remember this report ever being altered in committee before it was sent to the Government? I am really not sure, but I think not.
887. Then, if it has been stated to this Committee by any witness, that this was not the report of the Council, but a mere statement of Mr. Scholey's, is that untrue;—is it true, or untrue, that Mr. Scholey merely made a verbal statement, and did not bring up a written report? I do not know whether there was a report submitted, signed by the committee. Mr. Scholey gave in a report.
888. Was it written? Yes. I do not think it was deposited in the office, but Mr. Scholey read from it.
- 889.

Mr. T.
Hughes.

26 Feb., 1873.

889. Was the report adopted by the Council a written report? Yes, the Council adopted a written report, prepared by Mr. Thompson.
890. When it was adopted by the Council whose report do you consider it was? It would evidently be the report of the Council.
891. Could you remember what was alleged in this report;—what was the effect of the report; did it confirm the Warden's statement or not? Yes, it confirmed it.
892. In respect to what? In respect to the deficiency of money on account of the Cessnock Road.
893. What was the deficiency represented to be? About £109.
894. They found and reported what? That this deficiency had taken place.
895. When you call it a deficiency, what do you mean by that;—will you explain what it means? There was a deficiency between the statement which Mr. Scholey produced as having received from some one, and the books of the office, as represented by orders which were drawn by Mr. Eckford for cash handed over by me.
896. The committee reported that, and the Council adopted that report? Yes.
897. And then the Council sent this report to the Minister for Lands? Yes.
898. Did the Minister for Lands send it back for authentication? Yes.
899. Did Mr. Scholey act in all these instances as Warden of the district, and in his public capacity? Yes.
900. Are you aware that an action was entered against Mr. Scholey for a statement put forward in this report? Yes.
901. Are you aware that he was mulcted in heavy costs? Yes.
902. If the Government had not sent this document back, and thus induced Mr. Scholey to sign it, he would not have been liable for what was contained in it. It was by his attaching his signature to it, when returned, that he made himself liable? Yes.
903. And this he did to your knowledge, at the request of the Lands Department? Yes.
904. And, according to your impression, on an understanding that he would be held harmless? Yes. I remember Mr. Scholey stating distinctly that he said to Mr. Forster that he did not care to bear the brunt of this affair, and that Mr. Forster said that would be all right.
905. This report was signed by four other councillors? Yes.
906. But Mr. Scholey, on account of his being Warden, was singled out, and an action entered against him? Yes; because he was chairman of the meeting, and conducted the business of the Council.
907. *Mr. Burns.*] Will you look at that document (*the document appointing Mr. Scholey, Warden of the Maitland District Council; handed in by Mr. Scholey this day*);—does that bear upon it the seal of the Colony, and the signature of the Governor? Yes.
908. Does it not state there, among other things, that Mr. Scholey was appointed to preside over the deliberations of the Maitland District Council? Yes.
909. Has it been the habit all through for the Warden to preside at all meetings of the Council? Yes.
910. The meetings of the Council have been advertised as a rule in the *Maitland Mercury*? Yes.
911. Do you ever recollect an instance of a meeting having been advertised in the *Government Gazette*? No.
912. Was Mr. Eckford present at the first meeting at which it was mentioned by the Warden that there were matters in connection with the Cessnock Road which called for inquiry? I think he was not.
913. Did you attend any meetings of the sub-committee appointed to make that investigation? Yes.
914. Do you know whether the Warden or any other member of the sub-committee made any inquiry for certain missing men before they made any report to the Council? I am not sure whether they made any report to the Council, but the Warden did state that he had made inquiries about some men.
915. Did the members of the sub-committee make any arrangement to make any inquiry with regard to missing men? I do not know that they did.
916. Were you present at a meeting held near Mr. Smith's mills, where it was resolved by this sub-committee to take proceedings against some of the men who were claiming for more work than they had done? No.
917. And you do not know whether the sub-committee made inquiries for these men before they brought up their report? I do not know.
918. Were you at a meeting of the sub-committee, when Mr. Thompson was present? Yes.
919. Did Mr. Thompson prepare this report under the direction of the sub-committee? I think the particulars were given him by the sub-committee.
920. Did you hear the members of the committee make any observation as to their having inquired for some men and they could not find them? I do not know whether it was on that occasion, but I heard Mr. Scholey frequently say so at meetings of the Council.
921. Mr. Thompson prepared a report from information supplied by the sub-committee? Yes, I think so.
922. Did the Warden bring the report of the sub-committee before the Council on the 9th December? Yes.
923. Do you know whether the sub-committee saw the report before it was actually brought before the meeting? I would not say whether they had seen it or not.
924. But you do know that the sub-committee had given directions for this report to be prepared? Yes.
925. That report was adopted by the Council, and ordered to be forwarded to the Government? Yes.
926. Has it been the practice for sub-committees to have the minutes of their proceedings entered in the minute-book? No. They used generally to give a verbal report of what they had done. The result of their deliberations would be entered when they brought up their report. They would usually bring up a verbal report, and the effect of it would be entered upon the minutes.
927. Did you ever know an instance where a written report was brought up by a sub-committee other than in this case? No.
928. Was Mr. Eckford present at the meetings from time to time where this matter of the Cessnock Road was discussed? Yes.
929. Did he make any statement or defence as to matters supposed to affect himself, at any meetings of the Council? He said the money had been spent as stated by himself—that the men had been there.
930. Did he make any explanation in the Council about matters affecting himself, contained in the report of

- Mr. T. Hughes.
26 Feb., 1873.
- of the Committee, at any meeting or meetings of the Council? No more than that the money had been lawfully expended, and that he could produce the men who had received it.
931. Had he opportunities from time to time to explain matters contained in the report which affected the administration of this road? Yes.
932. Do you recollect any instance where any Commissioner informed the Council that Mr. Eckford had resolved not to attend the meetings of the Council? Yes.
933. Have you made any entry of that in the minute-book? Yes.
934. Do you recollect Mr. Noble making that statement. Is there a written entry in the book in reference to it? Yes.
935. Do you recollect one instance in particular, where Mr. Eckford made a long speech with reference to this matter of the Cessnock Road? There were so many long speeches.
936. He spoke at length on different occasions? Yes.
937. Were all the meetings of the Council, held during the time this matter was pending, advertised in the usual way in the *Maitland Mercury*? Yes, every one of them.
938. Did you assist in preparing the balance-sheet, showing the amount alleged by Mr. Sheridan to have been paid and the amount entered in Mr. Eckford's accounts? Yes.
939. Do you recollect it being stated by the Warden at different times, or at any time, that he had made careful search for some missing men, and could not find them? Yes.
940. Did any other Commissioner make a statement of that kind, that he also had inquired? I think Mr. Noble did.
941. Did Mr. Bowden make any such statement? I am not quite sure.
942. You say Mr. Scholey, after his return from Sydney, said he had seen Mr. Forster, and that he was to be held harmless. You said that Mr. Scholey spoke of this jokingly;—do you mean that he had said so to Mr. Forster jokingly, or that he reported it to the Council jokingly? That Mr. Scholey had spoken to Mr. Forster jokingly, giving him to understand that he had done his duty and was not disposed to bear the brunt of any proceedings in reference to the matter.
943. Did Mr. Scholey use the word "joke"? No.
944. He said it in an off-hand manner? Yes.
945. Did you think it was a joking matter? No, I did not.
946. Did Mr. Scholey make it clear that he had had a conversation with the Minister, and that he had put it to him that he was to be held harmless? Yes.
947. *Mr. Webb.*] With reference to the report prepared by Mr. Thompson;—if anyone has said that the sub-committee did not meet to give instructions to have that report prepared, is it true or not? The statement would be incorrect.
948. They did meet? Yes.
949. Do you know how many times that committee met, of your own knowledge? I think only twice that I am aware of.
950. How were the meetings of the committee called? The committee arranged among themselves.
951. Were you generally present? No.
952. Were you present on two occasions? Yes; I am sure of one; and I think I was present on a second occasion, after one of the workmen had been summoned to Court for some matters in connection with it; I think on that afternoon the sub-committee met.
953. Do you know whether they had any other meetings? I heard that they had other meetings, but I was not present.
954. *Chairman.*] Will you look at this report, marked "No. 2," in the printed papers—the report sent in to the Government by the District Council of Maitland. Do you recognize that as the report? Yes.
955. Were you examined as a witness at the trial of Eckford *v.* Scholey in Sydney? Yes.
956. In what manner was it alleged that this money had been misappropriated? It was stated that it was shown in the vouchers or pay-sheets sent in by Mr. Eckford that certain money had been paid to certain individuals, but that those persons had never worked on the road, and after various inquiries could not be found.
957. What were the names of these individuals? Thomas, Anderson, and Avery. It was also stated that some of the men who had worked had been over-paid, or that more money had been drawn to pay them than they had earned.
958. More money was drawn by Mr. Eckford than they alleged they had received? I cannot say that.
959. They alleged they had never received it? It was shown that they never earned it; I do not know that they said they never received it.
960. *Mr. Webb.*] Did Mr. Eckford produce these three missing men at the trial? I think not; I did not see them; and I never heard that he did.

THURSDAY, 27 FEBRUARY, 1873.

Present:—

MR. BURNS,
MR. WEBB,

MR. TUNKS,
MR. MACINTOSH.

JAMES AUGUSTINE CUNNEEN, ESQ., IN THE CHAIR.

Mr. R. W. Thompson called in and examined:—

- Mr. R. W. Thompson.
27 Feb., 1873.
961. *Chairman.*] Do you remember in 1871—you will correct me if it was not in that year—that you acted as attorney for Mr. Scholey, the Warden of the Maitland District Council, in the case in which an action was entered against him by Mr. Eckford? Yes, I recollect the case perfectly well, but I cannot be certain as to whether it was in 1871 or not. I would not be quite sure about that, but I think it was in 1871. The case was tried in Sydney.
962. Can you state to the Committee how this case arose? Well—do you mean my own impression of the matter?

Mr. R. W.
Thompson.

27 Feb., 1873.

963. What came under your own knowledge—the reasons why Eckford entered the action? Well, it came about in this way: Mr. Scholey, from some information he received, was led to investigate the conduct of some men who were at that time working on a road between Cessnock and Maitland, and he came to me about the matter. After he made some investigations he asked my advice upon it. I gave him my advice, and in consequence of it he came to Sydney for the purpose of seeing the proper officials. After that he came back from Sydney and informed me that he had seen Mr. Forster, who was then Minister for Lands, and having jurisdiction over the Roads Department, and that Mr. Forster had instructed him to take a certain course, and that was, to get a report prepared and forward it to Mr. Forster's office, and he would see that it was duly attended to. Mr. Scholey then, with some others of the District Council, instructed me to prepare the report from the materials which he furnished to me. I accordingly drew up a report and submitted a draft of it to Mr. Scholey, and after being laid before the Council it was returned to me slightly altered in one or two particulars. It was then engrossed by me and, as I understood, forwarded in due course to Sydney. A short time afterwards it came back with a letter from the department, stating that the report not being signed was not sufficiently authenticated to be acted upon, and that it must be signed and sent in again. I understood that that was done. It then came to my knowledge that the original report was forwarded to Mr. Eckford for his answer, and shortly after that Mr. Eckford having attacked Mr. Scholey, both in the Council and outside of it, Mr. Scholey considered it due to his position to bring an action for slander against Mr. Eckford, which he accordingly did. In that case I was employed as Mr. Scholey's attorney, and we recovered damages against Mr. Eckford. The costs in that action were very heavy—upwards of £600, I think—and as Mr. Eckford did not pay the amount I took out a *ca. sa.* against him and —

964. I beg your pardon, but you are now entering into the case of Scholey against Eckford, with which we have nothing to do? I don't intend to enter into it at any length, but merely to show the foundation for the other case.

965. Proceed? The result of that case was that Eckford went into hiding, and after some time Mr. Eales gave us his cheque for £500 to cover everything. Some time after that action, the action of Eckford against Scholey, founded on this report, and upon another document that was afterwards sent in—a supplementary report—was commenced.

966. You received instructions from Mr. Scholey and others of the Council to draw up the report? Yes. It was in this way: *Four of the Council were appointed to investigate the matter. They met twice when I was present—

967. You were present at their meetings? Yes, I was present on two occasions, and Mr. Scholey was specially deputed to see me, and instruct me in what was necessary to be done.

968. After the report was sent in to the Council it was slightly altered? It was. There were, as far as I remember, some trifling verbal alterations made.

969. Are you aware whether this report, when brought up, was adopted by the Council? Only from what I heard. I was not present at any of their meetings.

970. You are aware that it was sent back from the Lands Office for authentication? Yes, and it was then signed by a majority of the Council, and among them by the Warden.

971. Then the action would not have laid against him but for his having signed the report? No, it would have been difficult to have identified him with it.

972. And he did this at the request of the Minister of the day? Yes; I saw the letter instructing him to do it.

973. Upon this report, or the allegations it contained, did Mr. Eckford enter his action? Yes, upon that and upon a subsequent report. There was a short subsequent report, referring principally to three men, who were alleged to have worked on the road. From the time of the sending in of the original report and the supplementary report, I made every effort to discover the existence of those men. I set agents to work, and I believe Mr. Scholey did too; in fact, every reasonable endeavour was made to discover whether these men were really working on the road or not, or had no existence, and we could find no trace of them. Nor could we find any trace of a man named Macilroy, or MacEvoy, who was said to have worked on another part of the road with a horse and cart. That was set out in the report.

974. Do you remember any other men being missing? Four men only I remember. They were Thomas, Anderson, and Avery as day labourers—pick and shovel men—and MacEvoy was said to be employed with a horse and cart.

975. Upon these reports, furnished to the Government at their own request, and by Mr. Scholey in his public position, Mr. Eckford entered the action? Yes.

976. What was the result of that to Mr. Scholey? Mr. Scholey having succeeded in the case Mr. Eckford went into the Insolvent Court.

977. The Court decided the case in his favour? The jury decided in Mr. Scholey's favour, after a retirement of about 20 minutes.

978. What was the result to Mr. Scholey? That he had to pay a large amount of costs which he could not obtain from Mr. Eckford, who became insolvent.

979. Then Mr. Scholey had not only to pay his own costs, as between attorney and client, but Eckford's costs also? Yes, exactly. He had to pay the whole of our costs in conducting the case, costs as between party and party, and as between attorney and client as well.

980. How long did the case last? I think that we were sitting 11 days.

981. There were a large number of witnesses on both sides? Yes, a great number. We examined twenty-six I think.

982. Most of them came long distances? Most of them came from the Wollombi and the neighbourhood.

983. *Mr. Burns.*] From Cessnock? Yes, and from beyond Cessnock. Persons passing along the road. They came from the Wollombi, from Millfield, and Illalong, the neighbourhood of Bishop's Bridge, and Cessnock.

984. *Chairman.*] What was the amount of the costs Mr. Scholey had to pay out of pocket? I cannot tell you without seeing the account; but it was over £1,000, I think. Mr. Scholey has the account.

985. Do you know this return which has been laid before Parliament;—can you refresh your memory with that? Yes, this is correct.

986. Is that document with your name attached a true copy of the receipt you gave to Mr. Scholey? Yes, it appears to be.

987.

- Mr. R. W. Thompson. 987. Will you read it please? "Scholey ats. Eckford: Received from Stephen Scholey, Esquire, the sum of one thousand two hundred and sixty-seven pounds seventeen shillings and seven-pence, amount of costs between attorney and client, in this action (not taxed). R. Thompson and Pigou, West Maitland, 21st August, 1871. £1,267 17s. 7d."
- 27 Feb., 1873. 988. Were there other costs? There were others that I am aware Mr. Scholey paid out of his own pocket. He paid a man named Ramsden £14 2s. 4d.
989. A witness? He was a witness, and a very important witness too.
990. I suppose there are occasions in important trials of this sort, where so much is at stake, persons must pay some witnesses almost anything rather than be without them? Undoubtedly. Of course if a witness did not come willingly his value as a witness would be destroyed, and he would come as an unwilling witness. Of course there is a certain scale of allowances to witnesses, but if a man says, "It will cost me so much to attend; you must pay me for loss of time," we must pay him. As far as these witnesses were concerned, however, none of them were paid at an extravagant rate. They were paid by me at a rate I believe the Prothonotary would allow on taxation, and the bill was submitted to the Prothonotary in the first instance.
991. And taxed? Yes, and we got out a *ca. sa.* to take Eckford's body again, and that was set aside and this money charged here. £14 7s. 8d. was paid to Mr. Hart in connection with that. There are some other expenses here, besides those of the witness Ramsden. The expenses at the hotel, for instance, which he paid, and which we allowed for; he paid £33 for the expenses of his witnesses at the hotel.
992. Is that in your bill? No, Mr. Scholey paid that besides, and I had a voucher for it. And then he was under some expenses himself, which he set down at £25. This makes the total of his claim up to £1,354 17s. 7d.
993. Do you think that all these charges are strictly reasonable? I do indeed. As far as our costs are concerned we cut them exceedingly close, and after they were made out in the first instance we deducted about £170, because I knew Mr. Scholey was a loser by the transaction, and could ill afford to lose the money.
994. Is it your opinion, from your knowledge of the facts, that Mr. Scholey acted throughout the whole of this case, in bringing improper expenditure under the notice of the Government, in his public capacity, and under the impression that it was his duty as Warden of the District Council to do so in defence of the public funds? Undoubtedly. I had not the slightest doubt about that. His conduct struck me as being very praiseworthy, and had he acted otherwise than he did I should consider him as blamable as the man into whose conduct he had to inquire.
995. You would consider him culpable to wink at any such expenditure? I should have thought him gravely culpable and utterly unfit to hold his position.
996. *Mr. Burns.*] Did Mr. Scholey lose any money in the first action in costs, as between attorney and client? Yes.
997. About how much? I cannot tell. In the first place, he lost the difference between the taxed costs and the interest on the judgment—he lost the difference between £500, and whatever the taxed costs were—something over £100 —
998. He has made no claim for loss sustained in that matter? No.
999. This report you drew up from information supplied by the sub-committee? Yes.
1000. Were you paid by the Council for drawing up that report? No, not for drawing up the report. A majority of the Council repudiated the action of Mr. Scholey and his co-committee-men in that matter.
1001. Were you not afterwards paid by the Council? I do not think so. It may have been so, but I would not be sure.
1002. Are you sure it was not paid afterwards by the Council? I can't say.
1003. There was some squabbling over the matter? Yes, Mr. Eckford had a majority in the Council at first, and those who were with him voted against the payment. The matter was tested in the District Court, and the Judge held that the Council was not liable.
1004. For what reason? I can't say.
1005. Did the other members of the sub-committee concur in the report? I can only say from what I heard. I understood that two of them certainly did—Mr. Keating and Mr. Bowden.
1006. And you prepared the report from information supplied to you by Mr. Scholey? Yes, on behalf of the committee.
1007. *Mr. Tunks.*] The first report bore the signatures of several of the Councillors? Yes.
1008. Would each of those who signed it have been liable to a similar action as was brought against Mr. Scholey? Undoubtedly. They were threatened; and no doubt if Mr. Eckford had succeeded in the case of Mr. Scholey, he would have brought actions against all who signed.
1009. Are you aware whether the Commissioners signed the second report? I do not think any of them did. I do not think they were asked. I prepared the report, and Mr. Scholey signed it, and I sent it on.
1010. Mr. Scholey acted under your advice? Yes.
1011. *Chairman.*] That report was adopted before being sent to the Council? I am not clear.
1012. The report signed by the four? Yes, that report was adopted by the Council.
1013. And being adopted, it became the report of the Council? Undoubtedly.
1014. *Mr. Webb.*] Could you not recover from the Council for having prepared the report? I endeavoured to do so unsuccessfully.
1015. Where? In the District Court at Maitland.
1016. The report you drew up was adopted by the Council, and yet the District Court Judge refused to give you a verdict against the Council? He did. I took it that he thought it was a matter to be paid for by the Government, as it was done at the instance of the Government.
1017. Did the Judge make any remark as to who ought to pay for the report? That I cannot take upon myself to say. We got a verdict for part of the amount—some part of what we sued for; but the whole of our claim was denied in the first instance.
1018. *Chairman.*] That charge is not included in Mr. Scholey's claim here put in? No, not in any way.
1019. *Mr. Macintosh.*] You have said that you prepared the report from information given you by Mr. Scholey;—was it given verbally or in documents? It was partly verbal and partly documentary. There were, amongst other matters, a copy of the pay-sheet and time-table kept by one of the men on the road.

1020. His verbal statement was embodied in this report? Yes, everything that he communicated to me was embodied in the report. I had before me copies of the pay-sheets, upon which the men were paid, and on which Eckford had said he had paid these four men, who could not be discovered, and receipts for cheques, and this time-sheet that was kept. I don't remember any other documents than these.

Mr. R. W. Thompson.
27 Feb., 1873.

1021. And Mr. Scholey filled up the remainder of the information verbally, as to what he himself had seen upon the road, and as to the information given to him by several persons? You will find from the report what it was that Mr. Scholey himself discovered. It is mentioned in the 5th paragraph amongst others.

1022. And that report, which you prepared from his information, was adopted by the Council? Yes; adopted and sent to the Lands Office, and then sent back again for the signature of the Warden of the Council.

1023. *Mr. Tunks.*] Do I understand you to say that you attended two meetings of the committee at which this matter was discussed? No; the report was not then discussed; it was not then drawn up; but when the matter was discussed, and Mr. Scholey informed them of what he had discovered, I was present. When it was decided, on my advice, that he should proceed to Sydney, and when having received the instructions of the Minister for Lands, Mr. Scholey was to give me all the information, and I was to draw up the report.

1024. Do you remember the Councillors who were present? I remember Mr. Keating, Mr. Bowden, Mr. Scholey, but do not recollect any other.

1025. *Mr. Burns.*] But all agreed that this report should be drawn up? No; I was present when they were receiving the information from Scholey, but the report was not drawn up until after he saw the Minister. Mr. Scholey saw me at my office, and detailed to me more particularly the matters I had to put into form.

1026. Did it appear that they had made inquiries before directions were given for the report? Yes, they did, but I did not hear of their inquiries until afterwards. They could not discover these men at all.

1027. *Chairman.*] How many counsel were employed for Mr. Scholey when the case was tried before the Supreme Court? Three.

1028. Who were they? Sir James Martin, Mr. Windeyer, and Mr. Wisdom.

1029. How many for Eckford? I think three also. I am quite sure he had two, and I believe there was a third. Sir William Manning and Mr. Darley he had I know.

1030. And Mr. Pilcher? Yes, Mr. Pilcher was the third.

1031. The case was tried before a special jury? Yes.

1032. *Mr. Webb.*] I think you said before that you had been paid these sums? Yes.

1033. *Chairman.*] And that is a copy of your receipt? Yes.

1034. *Mr. Burns.*] Did you come to Sydney specially to attend this Committee, or did you come on other business? Well, I should not have come but for being requested to give evidence before this Committee, but I have another matter in Sydney which claims my attention.

William Tunks, Esq., M.L.A., a Member of the Committee, examined in his place:—

1035. *Chairman.*] It has been stated before this Committee that during the trial, in 1871, of the case of Eckford v. Scholey, which lasted about eleven days, that you on several occasions "collared" the foreman of the jury, and the witness said he inferred from that that the jury was influenced by you and others into giving a verdict against Mr. Eckford. Is that the fact? That is not a fact. I may state that I never interfered with that jury, or any member of it, or with any other jury in my life.

W. Tunks, Esq., M.L.A.
27 Feb., 1873.

1036. *Mr. Burns.*] Were you in Court during the trial? I may have been there, but I don't particularly recollect it. It is quite possible that I may have gone in as I passed by.

1037. You have no recollection of speaking to any of the jury on the trial? I have no recollection of speaking to any of the jury. The statement that I did so is wholly untrue.

1038. *Mr. Macintosh.*] You took no interest whatever in the trial? I can't say that, but I had no direct interest in it. There was great excitement at the time. At that time I had never seen Mr. Scholey, or spoken to him in my life.

THURSDAY, 6 MARCH, 1873.

Present:—

MR. BURNS, | MR. WEARNE.

JAMES AUGUSTINE CUNNEEN, ESQ., IN THE CHAIR.

William Forster, Esq., M.L.A., a Member of the Committee, examined in his place:—

1039. *Chairman.*] I believe, Mr. Forster, that you were Minister for Lands in the latter end of the year 1868? Well, probably about that time; I don't speak positively as to the date; but I have no doubt that is correct.

W. Forster, Esq., M.L.A.
6 Mar., 1873.

1040. Do you remember, when you were in that position, Mr. Scholey, the Warden of the Maitland District Council, waiting upon you and bringing under your notice an alleged improper expenditure of money which had been granted for the repair of the Cessnock Road? Yes, I recollect that well. I recollect Mr. Scholey coming to me personally and making statements to me that implied a suspicion of money having been misappropriated, or not properly accounted for by Mr. Eckford.

1041. Was any inquiry made by the Government? I cannot remember any more than the impression produced on my mind that it was a proper thing to inquire into, but I don't see how the Government could have inquired into it. I told Mr. Scholey to place the matter in form before the Government—that would follow as a matter of course, and I presume I did so—as far as I know I did so; but I have no special recollection of anything that occurred afterwards. All I desired was that the matter should be placed before the Government in some form that would enable us to give an opinion.

1042. You probably asked Mr. Scholey to send in a written statement of the facts? I dare say I did. I do not recollect the exact facts, but that a case was made out, rendering inquiry necessary, and a case of at

W. Forster, at least suspicion against Mr. Eckford, I have no doubt whatever; and it is obvious that a person in my position could do nothing else than desire the matter to be placed before the Government in a proper way.

Esq., M.L.A.

6 Mar., 1873.

1043. It is likely that any Minister, when a verbal statement of this kind was made, would ask for a written statement? I do not think that any Minister could take any other course, and I believe that I did desire Mr. Scholey to do something of that kind.

1044. Do you remember Mr. Scholey saying that before he took any further action in the matter he would expect some guarantee that he should be held harmless for acting in his capacity as Warden? I don't recollect Mr. Scholey making any remark of the kind; and my impression—a very strong one—is, that he did not make any remark of the kind, because it would have produced such an impression upon me that I should remember it distinctly. I regarded Mr. Scholey's position as rendering it incumbent on him to put the whole case into a written form, and I should have expected him to do so whether the Government required it of him or not, and certainly without getting any guarantee, which I was not entitled to give, and which I don't believe the Government would have given.

1045. Do you remember his stating when you required him to send in a written statement that he was willing to give the Government every assistance in prosecuting the inquiry, but that he wished to be held harmless? I don't recollect his saying anything of the kind, and my impression of the whole case was that we would require, in examining such a case, to determine as a preliminary point whether it was possible for the Government to inquire into such a case at all, and I have never been satisfied that the Government could make such inquiry. I have never been satisfied on that point. I was of course bound to listen to Mr. Scholey; but I did not make up my mind at that time that it was the duty of the Government to inquire into the matter then, because I was far from being certain that it was possible for us to do so; and I am not satisfied yet that it was.

1046. Don't you think if it were represented to the Government that a malappropriation of public funds had taken place, it would be the duty of the Government to inquire into the matter? Really I don't feel called upon to give an opinion as to the duties of a Government; but, as far as I am concerned, I have never held that it was the business of the Government to inquire into a case of speculation by a person who was chosen by the people to fill a position of trust. In this case Mr. Eckford was a member of a public body; he was responsible to the people who elected him.

1047. Don't you think the Government ought, in every way in their power, to protect any public funds that they thought were not being appropriated to the purposes for which Parliament intended them, whether those funds were misapplied by district Councillors or not? I think everybody should prevent the public from being robbed, whether he is in the Government or not; there are certain special duties attaching to everybody, whether private individuals or public officers. It is the duty of every individual to protect the public if he can.

1048. Do you remember Mr. Scholey sending in his report? Yes. I recollect the report being sent in. I presume that was the report—there was a report sent in in consequence of a conversation with me. There was considerable delay over the matter, because that report was not signed, and it was sent back to be signed. I may tell the Committee that I am certain Mr. Fitzpatrick knows more about the course taken than I do, because he put it on record, and I did whatever I may have done, *vivâ voce*. Perhaps I may give that as a reason why I am not so well able to furnish information, that, having an Under Secretary who I knew would make a record of all that was necessary, I did no more than was necessary myself. I gave verbal directions. Sometimes Ministers give orders by minutes and sometimes verbally; there is no distinguishing rule.

1049. The report was sent back for authentication, and after its return to the Lands Office did you take any further action? My impression is (of course in all this I shall be corrected by the evidence of Mr. Fitzpatrick)—I am of opinion that the report was sent to some accountant, either to the Auditor General or some accountant in the Treasury, and I think there was some document lost in the transit. I don't know whether it was an important document, but it has never been accounted for since. It was distinctly proved in the Lands Office that we did not lose it, but that the papers went thence entire and correct.

1050. *Mr. Burns.*] We have had Mr. Fitzpatrick examined, and he says nothing of any document having been lost? I think there was, but I don't think it was a matter of any consequence. I am pretty sure there was a paper lost.

1051. You must be confounding some other case? I don't know that it was important, but I am under that impression.

1052. *Chairman.*] On Mr. Scholey's return to Maitland, at a meeting of the District Council, held on the 4th December, 1868, he reported to the Council, as I find by their minutes, his interview with the Minister for Lands, and he alleges, in so reporting (which is entered on the minutes and also published in the *Maitland Mercury*), that in this interview "I further stated I was prepared to assist the Government all I could in the matter, but must have a guarantee that will clear me from all responsibility;" and he further adds that the Minister said, "That was nothing but right";—do you remember anything respecting that? Of course you wish me to confirm that as far as I can recollect. Well, I don't recollect Mr. Scholey asking me for a guarantee, and still less do I recollect giving him one; and from my own knowledge of my views and my disposition to be cautious, I am positive that I cannot have given such a guarantee even if it were asked. If I had done so I should certainly remember it, and I don't think it possible that I could give one under such circumstances; and therefore, to the best of my belief, and with no wish to attach any charge of untruth to Mr. Scholey (he may have imagined something to have been done, or something to have been said which was not intended), I most positively contradict the statement that I made any pledge on my own behalf, or on the part of the Government.

1053. Do the Committee understand you to say that you positively deny that you ever made the guarantee, or that, to the best of your memory, you did not make it? I positively deny it as far as my recollection goes. If it did occur, I don't recollect it, and certainly, from what I know of myself, and from what I recollect of my talk with others, I don't think it is possible for me to have given such a guarantee; and my impression is, that Mr. Fitzpatrick, as far as he is able, would corroborate this contradiction.

1054. Do you remember anything concerning an action brought by Mr. Eckford against Mr. Scholey for libel in the Supreme Court? I believe there was a case of the kind, and I think I gave evidence. I don't think it was of much consequence. I was very slightly examined in the Court.

1055. I suppose you know nothing beyond giving your own evidence? I hardly recollect what I said—I suppose

suppose much the same as now; but I don't remember being asked in Court about the guarantee. I don't think I gave evidence on that point.

W. Forster,
Esq., M.L.A.

1056. *Mr. Burns.*] Why did you think this was a matter not to be inquired into by the Government? That is a matter of opinion; but I don't see how the Minister for Lands, supposing the Ministry to have resided in my person, was to have acted in the way a Judge or jury would act. Before I could come to a conclusion I must have examined witnesses and have gone through a number of forms of law. All this was unnecessary to determine the guilt or innocence of the person accused. How was it possible for me to have dealt with the case so as to have come to any conclusion upon it?

6 Mar., 1873.

1057. Supposing a report were made to you that some public funds had been misappropriated by a department under the control of your department, would it not be your duty to take the matter up? There is a wide distinction between indirect control and direct control; and in fact this matter was not even under the indirect control of the department. I deny that it was my duty to investigate charges against persons over whom I had only an indirect control. If I had had direct control, I should have ordered an inquiry; but you will recollect that if there were any indirect control it was very slight, and indeed I don't know that there was any. Even with regard to this money that Mr. Eckford was charged with peculating, he was still less accountable to the Government, because he was appointed by the Council to administer the money, and not by the Government.

1058. But if the money were from the general revenue, and the Council by whom he was appointed reported through their Warden that there was a misappropriation of the money, do you think the department should not cause an inquiry into it? As far as it could cause one; but I don't see how any further inquiry could be got on the statements made to me. A report comes up to me which is supposed to embody all the charges, and I suppose it did. What is done in regard to all Government officers was done in this case. Mr. Eckford was called upon to explain, to say what he liked in regard to the matter. He did so, and the two reports came before me in such a form, and with such a mixture of statements on one side and the other, that it was impossible for me to unravel them.

1059. Did you not, in sending this report to Mr. Eckford, in some degree affirm the principle that the Government thought it advisable to inquire? That is a matter of opinion. You may think so if you like, but I do not think so. It was my duty to get all the information I could. We got all the information in the shape of a report from Mr. Scholey, and from Mr. Eckford we got all the denials and contradictions. Well, it was there drawn from all the sources at our command, and could have been laid before the House or before a Select Committee, but, I confess, the case appeared to me utterly beyond my reach; I did not see how I could go into the matter. I admit there was a strong case against Mr. Eckford—some suspicion at any rate—but I was never able to convince myself that Mr. Eckford was in the wrong. I would be sorry to guarantee that he was wrongly charged. I cannot speak positively either way, but I could not see how I could come to any conclusion upon those documents, unless I could have examined witnesses and put them on their oath.

1060. You said it was a matter of duty on the part of Mr. Scholey to send in this report? I presume so; but these opinions of mine do not bind the Government or anyone else, I presume it, he being the Warden of the District Council. I presume that having appointed this person it would be his duty to send in the report.

1061. Why should he send in a report if the Lands Department was not bound to inquire into the matter? The object was to see whether the Government were bound to inquire or could inquire. Well, I say, that if the Government were bound to inquire, I did not see how I could have done so upon the evidence before me.

1062. What is the usual course in the case of a misappropriation of public money? It is easy enough in the case of a public officer; but how was I to ascertain if Eckford told the truth or Mr. Scholey told the truth?

1063. Supposing a Commissioner were sent to England, and it was reported that he had misappropriated public money? The Commissioner would be called to account.

1064. And supposing his explanation were not satisfactory? He would be prosecuted. If he could not explain he would probably be dismissed. I had no power to call Mr. Eckford to account. If Mr. Eckford had declined to account to us I don't know anything that the Government could have done. Suppose that now—that is a stronger case—supposing Mr. Eckford refused to give any account at all, what could we have done?

1065. I think we had better let that rest—we will let that matter rest for the present. Supposing your department was not called upon to inquire into this matter, what was the object of the department sending back the report for authentication? Because it was useless without authentication.

1066. Well, but what was the use of it when authenticated? I have already answered that.

1067. For what was it required? To see if the Government could act.

1068. Where was the difficulty of acting? It might not be a difficulty with somebody cleverer than myself, but it was beyond my powers. I don't see how I could investigate accounts of this kind. They were sent to the Treasury, and they didn't do anything there, and they were sent to accountants, and they never made anything of them; and besides, we were informed that the Council had taken a different action.

1069. Which Council? The Maitland District Council.

1070. In what way? By passing some accounts that they had before refused to pass. I don't know that positively. It was merely reported to me.

1071. Supposing a Government officer—(I want to know the practice);—suppose some gentleman in a public position reports that there has been some malversation of the public funds, and proceedings are taken against him for his report, and he proves to the satisfaction of a jury that he was warranted in making the report, and still happens to be a loser by the action;—has it been the custom of the Government to indemnify such an officer? What Government?

1072. Any Government? I am not here to give a history of all Governments.

1073. What are your own opinions? They are exemplified in this case. The only cases have been those of clerks embezzling money, and I don't remember any such case as this. This is a peculiar case.

1074. You have had no case like it? No, it is a peculiar case. I have known cases of clerks of Benches embezzling money, but they have generally been easily proved, but I don't know that I can recollect a case of this kind. The proper person to apply to would be the Under Secretary.

1075. I only ask what has been your own experience? I remember no such case as this all through Responsible Government. I remember none. I have known cases of clerks embezzling money, and I have known

W. Forster, known people dismissed for tampering with letters in the Post Office, and in all these cases the guilt of the parties was clear, and there was little attempt on the part of the persons charged to deny the charges; but in this case I believe Mr. Eckford denies everything.

6 Mar., 1873. 1076. Have you known many cases in which clerks accused of embezzling money have acknowledged their guilt at once? I don't know that they have. I remember the case of a Mr. Poole, the clerk of a Bench, because it was in consequence of his making some frivolous excuse, on being requested to furnish documents, that inquiry was made, and he at once gave the case up, and there was no difficulty in proving it against him.

1077. Did Eckford deny this matter? I don't know whether the case was gone into.

1078. Did Mr. Eckford assign any reason why the Government should not take action? I said the report contained enough to establish a grave suspicion against Mr. Eckford, but then he was asked to state his case, and both these cases came before me, and the matter was then far too complicated for me to unravel. You have asked why the statement was asked for. It was asked for in order that the matter might be explained if possible. Suppose some simple case of robbery had been charged against Mr. Eckford, that he might have denied or not. We might have dealt with that or not, but in this case the whole matter was so complicated I could not come to any conclusion, and I was not called upon to do so.

1079. Then if you were not called upon why did you send back the report? I have already said six times that it was done in order to get information.

1080. For whose information? For the public generally I suppose. If you want to know for whom the information was asked that would be stated in the letters.

1081. If this was a matter with which the Lands Department had nothing to do, why did they deal with it at all? I did not say that. I said it was one of those cases of indirect control with which the Department had little to do. The District Council got certain money that they entrusted Mr. Eckford to expend, and they being his immediate superiors should have taken action against him. They came to the Government to act instead of acting themselves; and the Government were still further away from the facts, and were in a position which prevented them estimating the value of the statements made, as well as the Council could have done.

1082. *Chairman.*] With regard to the members of the District Council being responsible to the electors who elected them, were they not responsible to the electors who elected them for any rates accruing under the Act; and are you aware whether they were not also trustees of the Government for sums of money granted from the Consolidated Revenue? The District Council were trustees of the Government, but they handed over the money to other trustees, who were not responsible to the Government.

1083. But Mr. Eckford was a district councillor? Yes, but he was not responsible to us as Mr. Eckford; he was responsible as a councillor. The money being handed over to him by the Council, he was responsible to them.

1084. But was he not one of the members of the Council? But he was not responsible to us individually. It was the body in the aggregate that was responsible.

1085. Were they not in a position of responsibility as expenders of money that came out of the public chest? Yes, the Council in the aggregate was responsible, but not any individual member of it.

1086. But the whole contains the parts? Exactly; but the parts are not responsible, though the whole may be.

1087. But Mr. Eckford was one of the parts? Yes, but the body in the whole was responsible.

1088. *Mr. Burns.*] Supposing it were reported that any person who had taken charge of public money had misappropriated it, would the Government not take action? I think some such cases have occurred. A case occurred lately in which, though a report was sent in, nothing was done. I don't suppose that in all such cases as you suppose, the Government could act.

1089. Then who could call them to account? I think it would be very difficult indeed, especially if the delinquents were defended by Members of Parliament.

1090. Do you suppose Members of Parliament would defend them? I have known some who would, but I don't suppose all would.

1091. Have you known Ministers who would do it? I should be sorry to think so.

1092. Who would bring Road Trustees to book? That is a more direct case; but I can easily imagine a case in which there would be no doing anything with them.

1093. If the charges made against them were proved? There would perhaps be a prosecution, but in all cases where charges are made, those who take action must first determine whether the proofs are sufficient. You will find that the Attorney General sometimes has a case submitted to him, but declines to prosecute, because the evidence is not sufficient,—much more must a Minister be allowed to state whether he can make anything of a case. It is a matter of discretion.

1094. Then in this case it was a matter of discretion with you to take action against Mr. Eckford or not? I don't think it was a matter of discretion.

1095. You used the word yourself? But not in the sense in which you use it.

1096. What is the meaning of the phrase "a matter of discretion" then? To see whether there was a case on which I could take any proceedings. I had not sufficient proof to justify me in taking proceedings.

1097. Was not that a matter of discretion? I say I did not take proceedings, because I did not think the evidence justified me. I would be sorry to say that Mr. Scholey did not act in good faith, and on the other hand I have never been convinced that Mr. Eckford was guilty.

1098. I am speaking of the discretion used by you in dealing with the case? I said it must be left to the Attorney General's discretion to judge whether evidence is sufficient or not, and in that sense of the word I judged that the evidence was not sufficient to satisfy me of Mr. Eckford's guilt, but if I had been satisfied I don't know in what way the Government could have proceeded.

1099. *Mr. Wearne.*] Mr. Scholey made his complaint and Mr. Eckford repudiated the charges; but of course, if Mr. Eckford said there was money paid away to certain men, the vouchers should have been forthcoming to show that the money was paid, and if they were not would not that be evidence that Mr. Scholey's charges were correct? I don't know, really. I never looked sufficiently into the case to be sure that vouchers were the points in question or not.

1100. If Mr. Scholey said the men were not paid, then Mr. Eckford should show the vouchers and the men who signed their names to them? I am not sure that vouchers were produced. Statements were made as to the supervision of these matters, which showed that the accounts were very irregularly kept. If the persons

persons employed had been men of business and had conducted the proceedings regularly, then, I suppose, there would have been less chance of a wrong being done, and better means of ascertaining it. But the whole business was irregularly conducted. One point I cannot help noticing, and that is, that the committee first appointed to inquire into the matter, as it appears from their own statements, never met, except in the streets. That is not the way in which we should act. Then again, the report was drawn up by a solicitor, and was not signed at all at first, and was never seen until it was brought before the Council. This was one of the facts that made me think that they had a loose way of conducting their business. I have never said that Mr. Eckford satisfied me of his innocence.

W. Forster,
Esq., M.L.A.
6 Mar., 1873.

1101. You believe that Mr. Scholey was perfectly justified in making the charge? I believe that Mr. Scholey did his duty, and I have never said he did more or less. I have never expressed any other opinion than that Scholey was acting in good faith, and under the notion that he was doing his duty.

1102. Do you not think a person such as Mr. Scholey was—making a charge like that,—should be protected by the Government if the charge was verified? Well, I suppose he may be protected so far as the Government are able to protect him, but I don't think it is implied in that, and I don't wish it to be inferred that to whatever expense he is put the Government are bound to reimburse him, because in all these cases there are what may be called consequential damages, which do not properly spring from the business, but are caused by negligence, or perhaps misfortune, on the part of the person who claims the damages.

1103. But if Mr. Scholey says he had some understanding with the Minister, that if he brought this action he would be protected? I don't think that is very material; and I have already said that I contradict flatly the statement that any guarantee was given by me; but if it was I don't think that would bind my colleagues. It may be that Mr. Scholey was entitled to protection without my guarantee.

1104. You are aware that Mr. Scholey was appointed by the Government? Yes, by the constitution of the Council.*

1105. And therefore he was responsible to the Government? Yes; but it strikes me that he did not give the money to Eckford as Warden—the Council as a body did that.

1106. But in his capacity as councillor? But he would have only his voice; he could have no more unless he had a casting vote, which he may have had. The chairman of such a body often has a power of that kind.

1107. But supposing he suspected any discrepancy in the accounts he would be the person to take action? Yes; but then he acted as representing the aggregate body, and not as an individual, and whatever he did he did for the Council.

1108. How could the Council take action in the matter? I don't know, upon my word. It is very difficult to solve that question. If the Council choose to select people to spend their money the Government have nothing to do with it. They give the money to the body in the aggregate, and if they set apart some of their body to spend it, the Government have nothing to do with it. And that is one of the weak points of the case against the Government. I am glad this matter has been mentioned, for I am perfectly aware that the Government have been charged, or suspected of having shielded Mr. Eckford, or having omitted to cause that investigation to be made into the case, which some persons think should have been made; and the reason† is given that Eckford was a supporter of the Government. I am quite aware that has been frequently said. It was, I believe, even hinted at in the House, and I may say that one reason why the charge was never noticed was, that there was a motion made for a Select Committee—by Mr. Wilson, I think, who was one of the persons who insinuated these charges. This Committee was moved for, and the impression was we should have an opportunity of defending ourselves before that Committee, but it was a long time on the Paper, and the Committee never came into operation so as to allow us to have an opportunity of saying anything in answer to the charge. My defence is confined to what I have already said: that whatever others may think I asked for all this information as a matter of right to Mr. Scholey, and also to Mr. Eckford, with a view of ascertaining whether the Government could do anything in the matter. What they should do was never considered at all, because I did not see what they could do. The case was so complicated that, without an investigation by somebody in the position of a Judge, I don't think a satisfactory conclusion could have been arrived at; and the Government for that reason took no further part than was taken by collection of the information. If a Select Committee had been appointed, that information could have been used, and some evidence might have been taken, but I am satisfied that no Select Committee would have come to a satisfactory conclusion on the case.

1109. But could the Warden have done anything else than go to the Minister for Lands? I don't blame the Warden, but one of these difficulties was, that it was a matter of public election, and we had to deal with a person who was elected by the people.

1110. But if the person had purloined money? Yes, but still I don't see how we could call him to account. I don't see how the Warden could have enforced his authority against Mr. Eckford. Mr. Eckford has denied the matter all through—not in such a way as to satisfy me—but still he has denied it, and I have no reason to convince me that he has acted dishonestly. I don't know whether these gentlemen are well versed in precise phraseology,‡ or whether they are not, but I don't think the case was well dealt with on either side. Mr. Eckford may have had a good reason for complicating it; I can't say; nor do I think I am justified in imputing that motive to him.

1111. *Chairman.*] Is it your opinion that if a person in the position of Mr. Scholey believed that a misappropriation of the public funds had taken place, it would be his duty to bring the matter under the notice of the authorities? I think so; but still it is only a matter of opinion.

1112. Don't you think he would be culpable to allow it to go on? Yes, certainly; I think I made some statement of that kind to Mr. Scholey; when he came to me I encouraged him to bring the matter before the public.

1113. Do you remember when Mr. Scholey had an interview with you, making him a promise that the charges should be inquired into? I have no recollection of promising more than that the Government would do what they could. I may have even promised to investigate the charges, but of course that only implied that I would act within the bounds of the possible.

1114. You say there is a distinction between the members of the District Council acting as the elected of the people who returned them and as Trustees for the Government in the expenditure of road grants from

NOTES (on revision):—* I deny having given this answer.

† I do not understand this word.

‡ These are not phrases of mine.

W. Forster, Esq., M.L.A. from the public funds? One distinction is, that the aggregate body of the Council are not elected in the aggregate but individually, but to the Government they present themselves in the aggregate form. We don't know anything of them individually. The Warden simply represents the aggregate Council and not individuals.

6 Mar., 1873.

1115. You say it was no part of their duty if not appointed by the Government to be trustees for the expenditure of these funds? I don't quite follow the question.

1116. Do you not think that in the expenditure of the funds said to be malappropriated they acted as Road Trustees of the Government? I don't think those who had the expenditure in their hands were trustees of the Government; they were trustees of the Council. The aggregate body were trustees, as a whole, but no section of them, or individual. These individuals were not responsible to the Government, because the Government did not select them, and they were not representing the Government. The whole were.

1117. You were examined at the trial which took place in Sydney? Yes, very briefly examined.

1118. Do you know what matters were in issue in that trial? No, indeed I don't know much about it.

1119. Do you know it was brought on the report brought to you? Yes, I have heard it stated so, but I don't know.

1120. You are aware that Mr. Scholey obtained a verdict? That is only a matter of hearsay with me.

1121. You don't know of your own knowledge? No, I don't; I have heard so, and I dare say it is true.

1122. Do you know that one of the charges against Eckford was, that certain men whose names were entered on the pay sheets were not in existence, and that the money had never been paid? That is a fact to be determined by the report. I have no doubt it is as you say, but I have not such a recollection of the report as to say whether it is so. I think there was some statement as to two or three men who had never worked and never received the money said to be paid them, and I think Mr. Scholey denied that these men existed at all.

1123. Have you heard of their having been discovered? I have not, but I know on the other hand Eckford says they did exist. They have not been found to my knowledge.

[*The Committee deliberated.*]

ADDENDUM.

I THINK it right to say, for information of the Committee and the House, that nearly all the questions asked me, and of course my answers, appear to me, on further consideration, immaterial to the subject submitted to the Committee. I was examined as to my opinions, with an apparent object of drawing me into admissions against the then Government. I answered, however, to avoid the imputation of refusing information, which I dare say would have been made against me. I consider the course of examination, so far as I witnessed it in my own case and others, one-sided and unfair,—too many leading questions. I think also that the shorthand writer has not exactly copied or understood my phraseology, though nothing important or material is altered. I have consequently found it difficult to correct the proof within.

WILLIAM FORSTER,

26 March, 1873.

To the Chairman, &c.

THURSDAY, 20 MARCH, 1873.

Present:—

MR. BURNS, | MR. TUNKS,
MR. WEBB.

JAMES AUGUSTINE CUNNEEN, Esq., IN THE CHAIR.

Stephen Scholey, Esquire, M.P., was called in and examined:—

Stephen Scholey, Esq., M.P.

20 Mar., 1873.

1124. *Chairman.*] Have you any receipt for the costs you paid in the action—Eckford *v.* yourself? Yes, I have the whole of the receipts.

1125. Whose receipts have you got? The first is Messrs. Thompson and Pigou's receipt.

1126. For what amount? For £1,263 7s. 11d. Then I have a receipt for £14 2s. 4d., money which I paid to James Ramsden.

1127. Your claim is for £1,354 14s. 7d.? Yes.

1128. Have you the receipts for the whole amount of that claim? I think I have.

1129. Will you hand them in? Yes. In addition to the receipts I have mentioned, I have a receipt from Mr. Ewen for £33 6s., accommodation for witnesses, and £14 17s. 8d., Mr. Hart's expenses for taking out a *ca. sa.* against Mr. Eckford, and I was less £25, a sum which I had in my pocket, and had to pay during the trial.

1130. Will you hand the receipts in? Yes. (*Vide Appendix C.*)

Mr. Joseph Eckford was called in and examined:—

Mr. J. Eckford.

20 Mar., 1873.

1131. *Chairman.*] I may inform you, Mr. Eckford, that I submitted your letter to the Committee, the letter in which you requested that certain witnesses should be examined? Yes.

1132. I took their decision upon it, and I am desired by the Committee to inform you that they sent you the evidence of Mr. Henry Fisher, the foreman of the Jury in the case of Eckford *v.* Scholey, as it contained statements affecting you personally, upon which you might like to be examined. The resolution of the House, under which this Committee was appointed, reads thus: "That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the claim of Mr. Stephen Scholey, for losses alleged to have been sustained by him in the position of Warden of the Maitland District Council, in the case Eckford *v.* Scholey." The Committee wish to keep strictly to the objects of that motion, and not to go beyond it if they can possibly avoid doing so. It appears to the Committee that you have all along misconceived the business of the Committee. The Committee was not appointed to investigate

Mr. J.
Eckford.

20 Mar., 1873.

investigate the charges against you of malversation of funds in connection with the Cessnock Road. It was appointed to inquire into Mr. Scholey's claim for the loss he is alleged to have sustained as Warden of the Maitland District Council, through the action you brought against him for delivering to the Minister for Lands, at his request, the report of the Council on your management of the Cessnock Road. The Committee have not wished to go into any matter respecting the Cessnock Road further than it bore upon Mr. Scholey's claim. You have been examined at your own request, and ——? I made no request to be examined. I felt astonished when I got the summons, and I did not know where it came from.

1133. Then with regard to that we must have been misinformed, for Mr. Forster gave in your name, and stated that he did it at your request. The Committee know nothing beyond that, and presumed that it was at your own request? Well, I did give Mr. Forster the names of several witnesses who ought to be examined.

1134. In the list handed in your own name was the first? I sent them to him.

1135. You have been examined at your own request, and in consequence of certain statements you made about the jury in *Eckford v. Scholey*, the Committee summoned Mr. Fisher, as foreman of the jury, and took his evidence, a copy of which you have had. I have consulted the Committee about your request, conveyed to me by letter, for other witnesses to be called, and they are of opinion,—1st. That the evidence of Mr. Keating, alleging that the committee appointed by the Council to examine into the Cessnock Road business is unnecessary, because the report was adopted by the Council, and the Council certainly became responsible for it; however, it may have been prepared, and the Council could, if it thought proper, adopt the report without the intervention of a committee. 2nd. The Committee do not see how the evidence which you say could be given by Moylan would help you or them in any way, as the charges against you did not rest upon the evidence of John Sheridan; and to call Moylan, or the mailman, Fitzgerald, would open up the whole case on both sides, which was gone into on the trial, and decided by the jury. The Committee do not think that the evidence of Mr. Levien, the lawyer's clerk, would be of any importance, because, even if he should prove that he saw Mr. Tunks in conversation with Mr. Fisher during the trial, it would not be right to assume that Mr. Tunks was endeavouring to prejudice Mr. Fisher against you, or that Mr. Fisher was so corrupt as to be tampered with. You can now make any statement you like; but I have to request that you will keep as closely as you can to the business before the Committee? Well, if that is the determination of the Committee, I should like to know why I was so rigidly examined on matters not at all connected with Mr. Forster's promise. You deliberated before I left at the last meeting. That was never entered upon the minutes of my evidence as I think it ought to have been, as it was part and parcel of my evidence. When Mr. Burns stated that it was not his intention to examine any witnesses other than those connected with Mr. Forster's promise, I never made any objection, and that Mr. Scholey had acted under the direction of Mr. Forster. Mr. Webb stated the same thing. You stated that that was your opinion from the beginning. On looking over Mr. Scholey's evidence, I find that there is a great deal of it that touches upon my character alone. I shall not attempt to make my statement in more than a very few words, because I dare say I shall find friends enough to take the whole matter into Parliament, and they will see the unjust treatment I have received at the hands of the Committee. You questioned Mr. Fisher in a way which implied that I had made use of expressions which I never made use of. Mr. Fisher is asked if he remembers being foreman of the jury in the case of *Eckford v. Scholey*, and he said, "I do." Then at question 792 the Chairman asks: "Then if it has been said by Mr. Eckford before this Committee that you have been, as he termed it, 'collared' in the street by Mr. Tunks, Dr. Wilson, or John Davies;—if it has been said that you were 'collared' with the hope of influencing your decision, is that true?" Now I never said anything of the kind. That was a most unfair question to put to Mr. Fisher. Mr. Fisher replied: "If Mr. Eckford has said so, it is false"; and he said something about Mr. Dransfield whom I did not know before the trial. At question 795 Mr. Burns asks: "Were you at any time accosted by Mr. Tunks?" And the answer was "No." I can bring twenty witnesses to prove it; and I think it is unfair if I am not allowed to prove that Mr. Tunks twice a day met Mr. Fisher in the street. I can bring thirty people from Maitland to prove it.

1136. Was this during the trial? Yes, during the trial.

1137. Was he with the other jurors? No, there were no other jurors; and that is where another mistake was made, because I never made mention of any of the other jurors in connection with Mr. Tunks. I said that Davies pulled up one and Dr. Wilson pulled up another. I did not mention them in conjunction at all.

1138. You did not mean to say that Mr. Davies or Dr. Wilson pulled up Mr. Fisher, but some other of the jurors? Certainly; that is what I said; and I distinctly stated at the close of my statement that I did not for one moment consider that there was anything wrong; but I certainly believe now that there must have been something wrong from the very fact of Mr. Fisher having denied that he spoke to Mr. Tunks. That is the only inference I can draw from the fact that Mr. Fisher so blankly denies it. At question 808, the Chairman asks: "You remember Mr. Forster being examined during the trial?—I do." Question 810: Was there any expression fell from the Judge in favour of Mr. Eckford;—did the Judge seem to have a leaning towards Mr. Eckford?—No, I consider that Judge Fawcett's summing up was very fair. He is a timid Judge, as you are aware, and he did not give any opinion, except on the law bearing on the case. He told us it was our province to ascertain whether the defendant was actuated by malicious motives, and whether he performed his duty as a public man. Then the remainder of his charge was as to the credibility of the witnesses. For instance, Eckford brought forward several witnesses, who stated as facts matters which were quite contrary to the truth. There was one man—Fitzpatrick, I think, the driver of a mail coach,—whom, if I had been the Judge, I would have committed. The Judge had a painful duty, and his summing up was very fair. The Judge's charge was mainly as to the credibility of the witnesses; as to whether the defendant had been actuated by malice, or acted upon *bonâ fides*. The jury found that he acted in *bonâ fides*. Question 811: "Then if Eckford has said that the Judge in his charge exonerated Eckford, that is not true?" I never made any such statement in this place or in any other. I will tell you directly what I really did say. What I said was this:—"Mr. Justice Fawcett added that he was disposed to place reliance upon the most material of the witnesses for the plaintiff, and he disbelieved the principal witnesses for the defence; but he could not say that the jury were not justified in discrediting the former and believing the latter. He was disposed to think that the defendant had not taken a course of action which could be styled honourable." That is what I said. I think you have declined to examine any witnesses contrary to Mr. Fisher?

1139.

Mr. J.
Eckford.

20 Mar., 1873.

1139. The Committee have come to the determination of which I informed you at the beginning, that is, they consider that the examination ought to be confined to the question about Mr. Scholey's claim for compensation, and they do not wish that it should be allowed to diverge any further than may be necessary into questions about the expenditure on Cessnock Road. They think that Mr. Scholey's case can stand quite independently of that? If people can be proved not to be the witnesses of truth?

1140. This Committee will not sit in judgment on the Supreme Court? You are sitting in judgment on me.

1141. You cannot be aware that this Committee will report anything at all about you. The Committee is not aware that they will report anything at all about your case; but it will report upon Mr. Scholey's claim. The Committee are not aware that they will go into the question of the expenditure on Cessnock Road in their report? I only hope you will.

1142. The Committee must first deliberate before it can arrive at any report at all? At question 32, Mr. Scholey was asked: "And to enable you to make roads in your district you received certain grants from the public Treasury?" and he answered, "We did." He was also asked whether they had any local funds. Of course there were local funds. There were local funds from the letting of the punts. I merely wish to correct that. They had power to establish tolls until the Act was passed; and after that the road money was given instead of tolls. There is another mistake here. He says, it was on the 26th of October when it was on the 27th, but I suppose that that was a clerical error. In answer to question 43, Mr. Scholey is made to say that I had been training the man Doran to say something as to what he should say when he was examined. I plumply deny it; and I think he certainly ought to have told this Committee where he got his information from. I leave it for the Committee to judge whether, if such a thing as that had occurred, it would not have come out on the trial. He says, I was informed on the Thursday that Mr. Eckford had been training the man Doran to say something as to what he should say when examined. I flatly deny it; and I ask, why did not Mr. Scholey bring up that man to shake the evidence of Doran? Then he goes on to say here: "Ten months after this the whole amount of money claimed was paid in a way that I consider to have been most illegal." Now, will you oblige me with the minute-book? (*The minute-book of the Maitland District Council was handed to witness.*) I wish to show you by these minutes the downright falsehood that must have been wilfully stated here by the Warden. He has stated in one part of his evidence here—I have looked it over, but I have really been so unwell that it was only to-day that I could pluck up just to look through it—he has distinctly stated that he had left some three of us in the meeting; that he had adjourned the meeting; and that we had constituted ourselves into a meeting after he had left. Now I should like to know what this means: "The Warden intimated that he had to leave for Sydney on business, and proposed that Mr. John Keating act as chairman. Mr. John Keating moved, as an amendment, that Mr. Eckford occupy the chair. He took this course because he considered that Mr. Eckford had claims for the honor superior to himself, being the senior councillor. The amendment was seconded by Mr. William Keating and carried. Mr. Eckford declined voting. Mr. Bowden explained that his reason for voting for Mr. Keating as chairman on a former occasion was that as the matter connected with the Cessnock Road expenditure was still unsettled, he could not vote for Mr. Eckford as chairman. Mr. M'Mahon asked if any reply had come to hand relative to the report sent down by the Warden, and *vice versa*. The Warden said there had, so far as was connected with the charge against himself, but not on the other side. Mr. Eckford here took the chair, and entered into a statement in reference to Cessnock Road matters. Mr. John Keating expressed himself perfectly satisfied with the statement."

1143. *Mr. Burns.*] Does the minute-book show that after there had been a meeting and the Warden had made an application, another Councillor was put into the chair and business was done? Decidedly. I was voted into the chair before the Warden left. The Warden has stated that he adjourned the meeting, and that we constituted ourselves into a meeting after he left; whereas the fact is, that the Warden himself proposed that Mr. John Keating take the chair, and Mr. Bowden seconded the motion before he left the room. Mr. M'Mahon asked him, before he vacated the chair, if any reply had come; and he said not upon the charges that he had made against me, but a reply had come upon the charges I had made against him. This was after the voting had taken place for me to take the chair. He stated "yes"; that there had as far as concerned himself but not as far as concerned me. This was on the 17th of August. Here is another matter that I must contradict. He says that after being defeated in the Police Court it was thought that the best way would be to lay the whole matter before the Government, and hear what their opinion was. There was no discussion that afternoon. It was the day that Israel was discharged from the Court; and I stayed in East Maitland until the meeting of the Council took place, so that they really had no meeting whatever. I wish to explain here, that Mr. Scholey stated, in reply to a question that was put to him by some member of the Committee, that he had authority to go to Mr. Thompson's. Now this has been flatly denied in a Court of Law upon oath, and I flatly deny it myself. Scholey arrived in Maitland on Saturday morning. This is from his own statement. He went up to Mr. Thompson's office, and gave Mr. Thompson an authority that morning to draw up a report. In proof that it was the report of Mr. Scholey, and not the report of the committee, Mr. Thompson sued the District Council in the Court at Maitland for the expense of drawing it up; and it was clearly proved beyond, all doubt, to the satisfaction of the Judge, that Mr. Scholey, and Mr. Scholey alone, was responsible for the drawing up of this report, and he gave a verdict for the defendant in that matter. It was clearly proved there in the District Court, quite to the satisfaction of the Judge; and if I recollect right, the Judge gave costs on the higher scale to the counsel retained. Mr. Scholey has stated here, in question 49, that I gave abusive language. I never gave any abusive language at this time. In the month of January—sometime in the beginning of January or the end of December—I got the report, and I waited until the meeting could be called together. Mr. Scholey has stated that I had every opportunity afforded me to explain this matter. Now I state that I never had any opportunity afforded me. I knew nothing whatever of Scholey's movements until I got the report in my hand; and when I got it I went over to the first meeting of the District Council that was held in January, and I got up several times to speak. Mr. Scholey said: "We will hear nothing from you now. I adjourn this meeting." Argument went on with different matters. Some said adjourn for a week; and Mr. Scholey said, "No; adjourn for a month, for I want to go to the Clarence." "It was proposed by the Warden and seconded by Mr. Bowden, that a special meeting be called for this day week—January the 26th. Mr. Eckford moved as an amendment, that he be heard at once;" and that was the only possible chance of bringing this case before the public, by moving an amendment on this resolution of Mr. Scholey's, which was at last, I believe, carried at the end of the meeting, that it should be for a month. And this is the day that Mr. Scholey says that I was abusive. I say that I

Mr. J.
Eckford.

20 Mar., 1873.

I was not in any way abusive; but I certainly spoke my mind pretty freely, because I could not credit that any man would have gone and made such base charges to the Government as Mr. Scholey had done without asking those parties concerned at the time, or who were supposed not to have received these moneys. But he never asked them a single question. If you will refer to the newspaper, somewhere about the 29th of October, you will find that Mr. Scholey said that the committee did not believe in asking me one single question; there was something so bad about it. I think I understood you to say that you would not take Mr. Keating's evidence. He was one of the committee. I stated at that meeting that the matter was now entirely out of their hands; and that I was desirous that the whole thing should be settled on that day, in order that I could give my reply to the Government. However, it was carried for a month, as Mr. Scholey stated that he wanted to go to the Clarence. Now Mr. Scholey has stated here something about the Insolvent Court settling this matter. Long after I became insolvent (I suppose nine or ten months), Mr. Scholey took a writ out against me, to incarcerate me in prison. He could not have thought that when he took such strong steps as that that he had any claim upon the Government for this. Question 85, Mr. Scholey is asked: "You could not find these men though they were placed in the schedule as having received a certain amount of the public money for working on the road?" and he answered, "No; though I have done all that was possible, in order to find them." Mr. Scholey also says that he has ridden 100 miles to find them; but if Mr. Scholey, on the 27th of October, when I presented the order for payment, had stated to me in a friendly way: "Eckford there is some mistake about the expenditure on the road; let us see that you have it cleared up," I should have been afforded an opportunity of doing so. Working men are here to-day, and they may be miles away to-morrow. If he had spoken to me about it I know I could have produced the whole of these men. Up to the time this report being circulated, there was not a single word about these men; and I never heard of it until about two months after. This question was asked him by Mr. Tunks (98): "Did that committee report?—They did." (99): "Did they report that in their opinion there had been a misappropriation of the public money?—They did." There was nothing reported to me; I never heard one word about it; and I know, moreover, that there never was any report given by the committee. At question 132, Mr. Forster asks: "Will you state what evidence?—Yes; about the time put in by Israel and Carnally, that is evidence which supports the book." In reply to that I say that Mr. Scholey knew well—he was told it by his secretary, when Mr. Scholey sent his secretary round the night that he had got these abstracts. He sent him round to see and find the different men, to know what was due to them. It was asked of Israel what was due to him. He said there were nine days due to him. His father was not at home, and he said, "You should have told him that Eckford had paid you four days." I stated at a meeting here before that if the men wanted a pound or two, I gave it them; and I am sure Mr. Burns, when he was District Councillor at West Maitland, did the same. If they have wanted for provisions I have gone to the stores and told them that I would see it paid. Israel swore in the Court that he had received for thirteen days, and worked for thirteen days, and this mistake was pointed out by Mr. Hughes, the secretary. Question 140 is put by Mr. Forster: "So that this book makes charges against Mr. Eckford, and then Sheridan supports them by word of mouth?—Not by word of mouth only but by oath. He swore to the truth of his entries before the Supreme Court." He did so, but he was contradicted, on oath, by several witnesses. One James Moylan swore that the very money he said he did not receive he saw him receive. The next, I suppose, is not a wilful mistake. He says it was on a Saturday, but it was on Tuesday, the 27th of October. Question 148: "You say you made inquiries;—what was the nature of those inquiries?—On the Saturday Mr. Eckford came to the office for a cheque for the men—this was on the 26th of October. I refused to give him the cheque, and said I would only pay the men in my office after I had seen and spoken to them. He brought the men up to the office, and I examined them, but I could get nothing out of them; they would give me no information. This was in the presence of Mr. Eckford, and the men knew nothing, and would know nothing." The fact of the matter is this:—Scholey, on the Tuesday, told me that there had been several abstracts lost, and these abstracts were the abstracts lost by Samuel Wallis, and were since found by Mr. Barnes, the Clerk of the Gaol, and given to Mr. Scholey. However, he said that Mr. Hughes should call upon me for the abstracts, and he would send the cheque. When Mr. Hughes came at night, I had a house full of people, and my wife was absent. I said, "Come in the morning as early as you like." He came next morning. I signed the abstracts, and he brought no cheque. Therefore that is not true. Then the next day I saw Mr. Hughes, and he told me that the Warden had determined not to pay any more money out of the office, and I said, "A very proper thing too." I was in hopes that I should have been able to lay before you twelve declarations that are in Mr. Icton's office, but I have just received a note to tell me that they have been searched for and cannot be found. Question 152: "Did he use any influence over them to your knowledge?—Yes, he did." Question 153: "In what way?—As soon as the first witness was examined, Mr. Eckford left the room and went out and began talking to a man in the yard, who was about to be examined; what he said of course I do not know." I give this a flat denial. It is positively untrue. I never left the office from the time I went into it until I went out of it after all the business was over. Mr. John Riley, of West Maitland, was with me at the time, and Mr. Scholey warned him to leave the office, saying that it was a private matter. Mr. Riley drove over with me in a dog-cart; he stayed outside, and he can prove that I never went out of the office. I flatly deny it as one of the most gross lies that any man can tell.

[Witness was directed to withdraw, and the Committee deliberated.]

Mr. Eckford was called in and further examined.]

1144. *Chairman.*] I have to inform you, Mr. Eckford, that while the Committee wish to give you full liberty to refute any of the statements contained in the evidence of Mr. Scholey, still they cannot sit here and hear any statement made by any witness described by you, as you have in this case, as a gross and deliberate lie? Well, I suppose if I say it is untrue that will satisfy me. Question 154: "You infer that it must necessarily have been something improper?—Yes, I had a right to infer it. I said when he came back that he ought not to have done this. I told him so." I say that nothing of the kind ever took place. Question 155: "I suppose you thought it looked suspicious?—I did, and with reason." Question 156: "Did you charge him then with making away with the public money?—No, I did not, only in the report." Now, it has been stated by Mr. Scholey in some of these documents—and, as I said just now, my head has been so bad that it was only to-day that I could run through them. It will be found somewhere that he stated he had done so from the first. Question 157: "Do you not think that the better way would have been to have told him what you suspected, and to have called upon him to defend himself?—I did, in the report. That document charges him with making away with the public money."

You

Mr. J.
Eckford.
20 Mar., 1873.

You will find in the evidence, Mr. Chairman, somewhere, that Mr. Scholey said that I had had an opportunity given me before that. Now I say that I never had any opportunity given me at all; and here are his own words. In reply to this question he says he charged me with it in the report. Question 167: "Holding these suspicions, did you tell him of them, and ask him what he had to say in defence?—I have already said that I was going to tell him, and he would not hear me." Now I say that this is not true. Question 168: "Did you never have an opportunity of telling him?—Never. He refused to hear me when I wished to speak to him, and refused to allow a committee to sit to inquire into the matter." This is untrue. Then again, at question 169: "Did you bring the matter of your suspicions under the notice of the Council?—I did." Question 170: "Did you, when you brought the matter before the Council, state your suspicions of Mr. Eckford?—I do not think I did." Question 171: "Did you make any charge at all against him?—I do not think so." Question 172: "What was the nature of the complaints you made when you brought the matter before the Council?—I stated that there was something wrong with reference to the Cessnock Road accounts." Now here he states that he never told me, and in other parts of his evidence he has stated quite differently. I may be going a little away from the matter; but in answer to a question put by Mr. Burns (No. 465): "Did you tell him that it was your intention to have it mentioned at the next meeting of the Council?" he says, "I did." Now surely this answer to question 168 is a contradiction to that entirely; because he says here that he never had an opportunity, and that I refused to hear him; but here he tells Mr. Burns that he did tell me that it was his intention to have it mentioned at the Council meeting. Then again, at question 467, he is asked: "How long after was the Commissioner's meeting held?" and he said, "About four days after." Mr. Scholey here states that he told me at the foot of the Long Bridge that he was going to examine into this matter. This is untrue; but I saw him on 28th October; that was before the committee was appointed at all, and the next morning—so much for the statements that have been made by Mr. Scholey—he sold me a sheep at cost price at my own door on the 29th, when he was bringing in a flock of sheep. Question 471: "Did you see Mr. Eckford at any time after the appointment of that committee, and before any report was furnished to the Council?—No; I do not know that I did." Why I was really at the meeting on the 17th, and he has stated here that Mr. Noble told him that I had said that I would not attend three meetings. I was at the monthly meeting in November, in January, and at the monthly meeting in February, so that I really missed no meetings, excepting through illness, on the 2nd of December,* when I was unable to attend, and at the meeting on the 9th of December I was in Sydney. All the other meetings I was at. In reply to Mr. Forster's question (No. 168) he says that he never had an opportunity of telling me; but he had an opportunity on the 17th of November, when it is shown by the minutes that I attended that meeting, and not one word was said about it. He says here, in reply to question No. 171, that he never made any charge at all against me; and he has also stated that there was no charge ever made against me until the report he sent to Sydney. Question 181: "I ask you again then—holding these suspicions of Mr. Eckford—did you go to that gentleman, or did you in any public way make charges against him in such a manner as would give him a chance of defending himself?—I did not; I went to him with the object of telling him, but he would not hear me. He was very abusive; he told me to go to hell, and asked me if a Member of Parliament was to be dictated to by a fellow like me." I say that is all untrue. Nothing of the kind ever took place, and what is more, I never opened my lips to Scholey, only on public matters, from, I think, the 9th of December up to the present time. What is stated here is untrue. There is a note here to Mr. Scholey's evidence:—"The Cessnock Road business was brought forward at different meetings of the Council, which were regularly advertised. Mr. Eckford knew the business would be brought forward, and he made a long speech in defence of himself on the 17th of November." That is not correct. I said very few words indeed. I think everything I said is embodied in these minutes. Then he says here: "He knew all through the charges which were made against him in connection with the Cessnock Road." He has stated in many of the questions put to him that he never told me—that I did not know anything about it. Neither did I know it. In this note he further states: "Councillor Noble informed the Council Mr. Eckford told him he would, under the advice of his solicitor, remain away from three meetings; and he certainly did so, and part of the business had to be done when he was absent." Now I defy anyone to find out where I was absent from the Council for three meetings. If Mr. Noble did say so, I deny it. Mr. Noble had to go back into the Supreme Court and retract three-fourths of what he had stated—so much so that the Judge said, "It seems to be all wrong." I knew nothing about what the charges were until the end of December, or the beginning of January, when I got the report from the Government. Question 204: "Where do they meet?—In the office of the Council." That is this committee; but there was no committee had any meeting in the office of the Council excepting one, and that was on the 2nd of November. It was a special meeting; and on that afternoon, after the committee was appointed, they went into the accounts. They took the amount of money that was down in my abstracts, and they took the amount of Sheridan's down, and they struck a balance, and they made out that there was £109 and something deficient. A portion of that was £5 Ss. that Mr. Scholey complains of having been paid away ten months afterwards.

1145. *Mr. Webb.*] What day was that? On the 2nd of November. They never met afterwards but once, and that was when they arranged to summons Israel to the Court. Question 220: "Did the committee order the balance-sheet to be drawn up?—They did; but there was another report drawn up by Mr. Thompson, and not ordered to be prepared by the Council, and was afterwards sanctioned by the Council." Question 221: "But you said the only report was a balance-sheet?—Yes, at that meeting (November 2) of the committee." That is not correct. The Council had not an opportunity of doing it, and I have stated that before. Mr. Scholey came home from Sydney on the Saturday, and there was no opportunity for doing it. I see what this meeting was called for on the 2nd November; it was a special meeting, called for the purpose of taking steps against some gentleman in Maitland who broke the office-door. This business was brought before the meeting, but I see that there was nothing mentioned here, only that a committee was appointed on the 2nd November, and I believe that committee did afterwards sit in the Council, and compare the abstracts; that is the only business that was done—just to compare the abstracts against the accounts of this Mr. Sheridan. There is another matter here, and I have been having the newspaper hunted for, and was in hopes that it would have been sent to me here: Mr. Scholey has stated to the committee that I stated that he had been transported for a beastly offence. This I deny. At the February meeting, I think it was, Mr. Scholey stated in the course of his address that I had circulated this

* Revised:—November.

this report. I denied it, and I demanded that he should name the author. He told me, "John Wilson, the town missionary." On my way home I invited Mr. Thomas Evans to take a seat in my dog-cart, and Mr. Riley, of West Maitland, was with me. When we got in front of Mr. Wilson's house, I sent Mr. Riley in to Wilson to tell him to come out—he was wanted. He came out, and I said, "Did you tell Mr. Scholey that I should say that he had been transported for a beastly offence?" He said, "No; I never in my life said so. If Mr. Scholey has said so he has stated what is untrue." Mr. Wilson, in reply to Sir William Manning, when in the witness-box at Maitland, swore that he never told Mr. Scholey any such thing. This is positively untrue, and Mr. Scholey knows that it is untrue, because he heard Mr. Wilson swear that he never said so.

Mr. J.
Eckford.
20 Mar., 1873.

1146. *Chairman.*] That is another case that is wide of this inquiry? But you see you have taken it as evidence to blast my character.

1147. You in the same way may make statements respecting any other witness, and the inquiry would never end? If this were not contradicted, what would the gentlemen of the Assembly think of me? If these allegations are made surely you will allow me fair play to put myself right. You will find it in the newspapers where Mr. Wilson swore that he never said anything of the kind. There is one other matter, while I think of it. Mr. Scholey has stated that I had very many opportunities. Well, now, I think that if you would examine the then Minister for Lands, he will tell you that I repeatedly wrote to him to dispose of this matter. He wrote me back a letter, telling me that the documents were away out of the office, and could not be found; and at the trial in Maitland, Sir James Martin made a great deal about this; and it was stated that some of my friends had abstracted these documents from Mr. Layton, at the "Northumberland Hotel." When the trial came on here between me and Mr. Scholey, I went to the Lands Office and to the Treasury, and at last to the Government Printing Office, where, with a great deal to do, I found the documents; and I have every reason to believe that the matter would have been disposed of if it had not been for that; but I repeatedly wrote to Mr. Forster, asking him to dispose of the matter.

FRIDAY, 21 MARCH, 1873.

Present:—

Mr. BURNS, | Mr. TUNKS,
Mr. WEBB.

JAMES AUGUSTINE CUNNEEN, ESQ., IN THE CHAIR.

Mr. Joseph Eckford called in and further examined:—

1148. *Chairman.*] You expressed a wish to continue the statement you have to make upon the evidence with which you have been furnished;—will you now be good enough to continue your remarks from the point at which you left off yesterday? I think that yesterday I left off at question 281. Question 282 is: "Not by the same Council?" to which Mr. Scholey answers, "Yes; after the Council meeting had broken up, and I had gone away to Sydney, a second meeting was held by some of the councillors, and the accounts were passed; and these gentlemen took upon themselves to sign two cheques for the money, which nobody but myself is authorized to do. I sent a protest to the Government, and requested them to stop the cheques, but they did not interfere in the matter." I think this has been already answered, inasmuch as I have shown from the minute of the 17th August that Mr. Scholey himself proposed a gentleman—a member of the District Council—to take the chair on his vacating it; that another member proposed that I should take the chair; that this motion was put and carried, I declining to vote; and that the business was regularly proceeded with. I will not repeat the minute, as I went through all that yesterday, and I only refer to it now in order to clear off as I go. The memoranda I have made upon the evidence. Question 283: "Do you think that these actions were illegal?—I have no doubt about it, and it was upon that account that I protested." Now, Mr. Scholey did nothing of the sort. What he protested against was this: Mr. Keating, or Mr. M'Mahon, moved, that the abstracts of expenditure upon Cessnock Road be laid on the table. Mr. Scholey protested against anything of the kind being done, and that was the only thing in the proceedings that he protested against, as will be found by a reference to the minute of proceedings. (See Enclosure in No. 11 of Return.) I merely mention this in proof of the statement I made yesterday. The minute I read relative to that point shows that Mr. Scholey was some time in the Council-room after I was voted to the chair. Mr. Scholey moved, and Mr. Bowden seconded, that Councillor John Keating take the chair. John Keating moved an amendment, and William Keating seconded, that Mr. Eckford take the chair, which was put to the vote and carried, Mr. Eckford declining to vote—and that he himself moved an amendment on a resolution proposed. In reference to this matter, Mr. Scholey has been asked a question (288): "Did you take any steps to recover the money?" To which he answers: "No; I had had quite enough of it with Mr. Eckford, without beginning at the Bank, especially as the Government would give me no assistance. I would have proceeded against another of the Commissioners if the Government had only stuck to me; but it would help me in no way." I have not heard of anything having been said against any Commissioner, with the exception of a charge made against one gentleman, who is now Warden of the District Council. This gentleman was charged by Mr. Scholey with abstracting a public document, being a paper connected with Callaghan's lease of the Falls' Punt. I stood by Mr. Scholey in that matter, and when the case was heard, myself and Scholey swore one way, and Bowden and Callaghan swore the other. Mr. Bowden was charged with abstracting a public document connected with this case by Mr. Scholey. Then question 292: "Had you gone through and concluded your business?—Yes; the meeting had closed, and I left the chair. After I left the office these three Commissioners constituted themselves into a meeting, and did this illegal thing I have mentioned"—has been answered by the minute of the 17th August, 1869, which I have just read. Question 301: "And Mr. Eckford, as a matter of fact, did not come for three meetings?—I do not think he did"—was answered by me yesterday, when I believe I proved to the satisfaction of any unprejudiced person that, though I was not present on the meeting of the 2nd of November, called for the purpose of considering what steps should be taken with regard to a charge against a gentleman of breaking the Council door, that was what the meeting was called for; but the statement of Scholey in regard to this was discussed that same evening. On the 17th November I was there.

Mr. J.
Eckford.
21 Mar., 1873.

Mr. J.
Eckford.
21 Mar., 1873.

there. I was absent on the 9th December, but I was present again at meetings held in January and February. All this could be clearly shown by the minute-book. On the 9th of December, as Mr. Scholey well knew, I was absent in Sydney, attending my place in Parliament. Questions 340: "Was John Sheridan ever confronted with Mr. Eckford?—He was"—and 341: "Where;—before the Council?—Yes." I state simply that this is not true. He was never confronted with me in his life upon any occasion, and no person can be found to come forward and say that he was. He was never in his life confronted with me, which, if his evidence was looked into, would be clearly seen. Question 342: "And what did Mr. Eckford say?—He said nothing but a lot of abuse—abusing everybody." Surely it was hardly likely that I should abuse everybody in the Council. This is utterly untrue. I say, further, that Scholey knew that I had Sheridan's ill-will through what I had done when he wanted me to make an arrangement with him about building a culvert. He promised if I would get him the contract that he would give me a portion of the proceeds. I told him then, in answer, that as soon as the men had completed their fortnight I would knock them off, and that he should never have another day's work on the roads as long as ever I had anything to do with them. Mr. Scholey knew of these circumstances, for I told him of them; and he said, when I told him, that he had been treated in the same way—who wanted a contract for building two culverts on the Newcastle road. This man Sheridan wanted me to give him the contract for two culverts, and he sent me a message by Doran that if the contract was given for a certain sum I should have a certain share of it. I told Doran that I would go out and talk to Sheridan about it. The next day I went out, and as soon as I met Sheridan, I said: "You scoundrel; how dare you make such a proposal to me?" I told him too that he should not have any more work on the roads. That is the reason of Sheridan's feeling against me, and Scholey knew it, for I mentioned these circumstances to him. As God is my Judge, he knew it. Here is another question (349): "You say that on the occasion of your holding an inquiry, Mr. Eckford went out and prompted one of the men, and that you have never mentioned that until to-day;—how was that?—I do not know—perhaps because I never had occasion to mention it—perhaps because I was never asked about it." This was a matter which I answered yesterday. I positively deny that I did anything of the kind; it is altogether untrue. Does it stand to reason that a matter of such importance as this—if it was true—would not have been brought out on the trial, especially when it lasted so many days. I can further state that John Riley, of West Maitland, went over with me to East Maitland, when I went to attend this meeting; he went into the Council, and Mr. Scholey told him that he would have to withdraw because the Council were engaged in private business. He can prove that I never left the room, therefore I could not have been talking to the witnesses, and no one can question his respectability. He is then asked (question 359): "When you returned to Maitland, did you report what had occurred to a meeting of the Council?—Yes, as soon as I possibly could." That may be true as far as as soon as he could is concerned; but when he returned to Maitland—on the Saturday—he went to Mr. Thompson's office, and gave him instructions to draw up a report. Mr. Keating swore in Court that Mr. Scholey took the action in this matter upon himself, and that he knew nothing about what had been done until the report was laid on the table, and the adoption of it was moved by Scholey; that is the true state of the case. Then (question 360): "You verbally reported?—Yes." He had no opportunity of verbally reporting, because the Commissioners lived a long distance out—some of them. Question 361: "You have had in your hand a copy of a return moved for, in which some of the minutes of the proceedings of the Council are to be found?—Yes." I do not understand this question, and I would like to have it explained, because I do not know who moved for this return. If what is meant is the return moved for by Mr. Wilson, then this is not correct; but I do not know which is the return meant. Here is another question (362): "Will you turn to the minute of 4th December, 1868?—(Witness reads minute.)" I should like to know what minute this is; there is no minute that I am aware of on that date; he was in Sydney, and telegraphed to the secretary to call a meeting of the Council—that is the only official or public business that I know of his having transacted on that date. Question 386 is: "In what way?—He was told it. The night the committee was appointed his friends in the Council let him know about it." I can only say that where I got my first information was from Darcy's public-house. This man Sheridan had been there, and he had been talking about this matter, and saying that I was to be brought up for embezzling £135 of the Council's money. I passed that over, for I never thought for one moment that anyone would ever say such a thing as that about me.

[Mr. Tunks objected to these hearsay statements. Strangers ordered to withdraw. Committee deliberated. Strangers re-admitted.]

1149. *Chairman.*] Mr. Eckford, the Committee are of opinion that you should keep as close as possible in your statement to what you know of your own knowledge, and not mix up with it what has been said in public-houses, or by persons not before the Committee. Confine your remarks solely to what you know of your own knowledge, and in as few words as possible.

1150. *Witness.*] There is so much against me that a few words are not sufficient for me to answer it.

1151. *Chairman.*] The Committee do not wish to limit you, but desire that you may have every opportunity of answering; but we desire to have your own statement and not statements of other persons. If such statements are necessary we will get them from the persons themselves.

1152. *Witness.*] There were two statements made,—one by Mr. Tunks, and one by Mr. Fisher,—and I am not allowed to bring witnesses to refute them.

1153. *Chairman.*] We will decide upon that hereafter. At present we must ask you to confine yourself to what you know of your own knowledge, or to such documentary evidence as you may consider necessary to your case.

1154. *Witness* continues: In question 395, Mr. Scholey is asked: "In 1868 what arrangement was there for signing cheques?—I signed them." This is not the case; the cheques were signed by one member of the Trust, and by the Warden; and that was an arrangement which was made by a resolution of the Council. It was not the law that this should be done; the law was very different from this; but in order to facilitate matters, there was a resolution passed to the effect that cheques should be signed by one member of the Trust and the Warden. Here is another question put by Mr. Webb (411): "You left the Council to come to Sydney, and afterwards they had a meeting when you left?—Yes." That I think I have very completely answered already. Question 417: At all these meetings, when inquiry was made into these charges against Mr. Eckford, were they duly advertized?—They were." Such is not the case. There were no meetings advertised—none whatever,—nothing of the kind can be shown; not such a thing as calling a meeting to make inquiries into this matter. I mentioned this matter yesterday, and showed that it was wrong, because by a question put by Mr. Forster and one put by Mr. Burns, Mr. Scholey contradicted himself—his two

answers

Mr. J.
Eckford.

21 Mar., 1873.

answers contradicted each other; it was not the case as stated here, for my name was never mentioned at any meeting in connection with this matter. No inquiry was ever made into these charges as affecting me. The matter was never mentioned even on the 17th December as being connected with any suspicion of me; the day I invited the committee to come to me for any information they thought fit; those were the words I used, I think. As to the question 422: "Do you know, as a matter of fact, what notice was given—what time intervened between the publication of the advertisement and the meeting?—It was published in the *Mercury* of Saturday before the Tuesday on which the meeting was held." This again, is wrong, for the special meeting here referred to was held on Monday, the 2nd of November, and called, not for the consideration of this matter, but to consider what steps should be taken with respect to breaking the Council door. Question 426: "Do you know if Mr. Eckford was there in Maitland at the time, or whether he was away?—I do not know. The minute-book will show, if it is referred to, whether I was in Maitland. The minute of the 17th November will show that I was in Maitland on that day, and that I was in Maitland on the 2nd November, and that ill health kept me from being at the meeting of that day. Mr. Scholey knew this as well as I did. Question 432: "Do you know as a matter of fact, whether Mr. Eckford was in Maitland or in the neighbourhood, or had he been seen there between the 2nd November and the 9th of December?—Yes, he was at home between those dates, for I saw him and spoke to him." I say positively that he never spoke to me between those two dates. I never spoke to him from the end of October to this moment, only on public matters in the District Council; so that I deny that he ever spoke to me as he says he did. Question 436: "Did he attend any meetings between these two dates?—He attended the meeting of the 17th November, and protested then against the Council interfering with his road, or appointing a committee to inquire into the expenditure; or doing anything in the matter in any way." This is not true, and no minute to that effect can be found. (*Witness read the minute of District Council proceedings on the 17th November.*) It is sufficient for me briefly to deny the truth of this answer, since there is nothing in the minute of the proceedings to show that I made any such protest. My protest in an important matter of this kind would surely have been entered in the minute-book, when such trifling things as those I have read have been put into it. Question 437: "Then he knew at that meeting that the Council had his case under consideration, and protested against their going into it?—Yes, he did." This is simply not correct. I did nothing of the kind, as my answer to the last question has proved. Question 438: "Therefore he must have known what was going on?—Yes, he knew all about it the same night the committee was appointed. I am aware that he knew all about it, because Mr. Keating, one of the Councillors, went and told him after the meeting was over." This is really not correct, for Mr. Keating never came near me on that evening. Then follow a number of questions which I have already answered in other places, till I come to question 457, asked by Mr. Burns: "I want to know when you first communicated to Mr. Eckford or to the Maitland District Council that you had received information of a character to call for inquiry as to how the Cessnock Road business was being managed?—On the 2nd November I communicated that to the Commissioners." That is not the case. The meeting of the 2nd November was, as I have already stated, held on a Monday, and was called specially to discuss what steps should be taken against some gentlemen in Maitland for injuring the door of the Council-room. Question 461 is asked by Mr. Parkes: "You communicated to the Commissioners on the 2nd November of what year?—1868." This question is something similar to the last, and my remarks on that question will apply equally to this. I now come to the following questions—469: "What was done at that meeting?—A committee was moved for by Mr. Noble, seconded and carried." 470: "The committee was appointed in consequence of what?—The committee was appointed in consequence of what I said to the Commissioners, that I believed that fraud had been committed on the Cessnock Road." 471: "Did you see Mr. Eckford at any time after the appointment of that committee, and before any report was furnished to the Council?—No, I do not know that I did." Now all these questions are answered and flatly contradicted by the answer given by Mr. Scholey himself to question 465. Mr. Burns asks him: "Did you tell him" (meaning me), "that it was your intention to have it mentioned at the next meeting of Council?—And he answers, "I did." Here he most completely contradicts himself—for first he says that he did not communicate with me, and then a few questions further on he says he did. Question 479: "The report was to the effect that the committee believed that Mr. Eckford's accounts were in excess of those of Sheridan by £109 odd?—Yes." Of course that statement is incorrect, and Mr. Scholey must have known it to be so, because he has stated that a sum of £5 8s. was kept back from Israel and Carnailly, for which of course I could not be held to be responsible, and yet he puts that down as having been misappropriated by me, being of a piece with everything else, and showing his feeling against me. Question 488 I have already answered. Question 502: "In referring the matter to the Government, were you requested to come to Sydney and see the Minister for Lands?—I was." That again is not true, and his own statement, made at the meeting of the Council, which will be found at page 1 of the printed correspondence, distinctly shows that he went to Sydney under legal advice; and I see by Mr. Thompson's evidence that he states that he advised Mr. Scholey to go, and that the committee themselves had nothing to do with it.

1155. *Chairman.*] Do you know that of your own knowledge? Certainly I do.

1156. *Mr. Burns.*] Where in Mr. Thompson's evidence do you find him say what you have just stated? I will show you directly, when I come to it. Question 514 refers to a statement of Noble's: "Did he swear in the Supreme Court that as he had told the Council, Mr. Eckford told him, that he would not attend three meetings?—He did." Now, with regard to Mr. Noble, I can only say that he swore a very great deal at the Supreme Court, so much so that he had to come back and withdraw nearly all the evidence he gave. Judge Faucett, who tried the case said, that so much had been withdrawn that he supposed the evidence must be all wrong. Question 515: "Mr. Eckford remained away?—He remained away." I altogether deny this, and there is the minute-book to prove that it was not the case. Question 517: "Did the sub-committee give directions to Mr. Thompson to state what the report was to contain?—They did, through me." I draw your attention to this in order to show you how Mr. Scholey contradicts himself. Here he says that the committee gave instructions, through him, whereas in a previous portion of his evidence he states that the committee went with him to Mr. Thompson; and I think you will find in Mr. Thompson's evidence that he says he received his instructions from the committee, though Mr. Scholey says that they came through him. In his evidence (question 966) Mr. Thompson is asked: "You received instructions from Mr. Scholey and others of the Council to draw up the report?—Yes; it was in this way:—Three of the Council were appointed to investigate the matter. They met twice when I was present." Now, with reference to what follows in Scholey's evidence, I can only say that the committee

Mr. J.
Eckford.

21 Mar., 1873.

never saw the report and never knew what it was to contain until it was brought up and laid before the Council by Mr. Scholey. Mr. Thompson says he was present at two meetings of the committee, but he does not say that he received any instructions; on the contrary, he says, in answer to question 967, that "Mr. Scholey was specially deputed to see me and instruct me in what was necessary to be done. In part of the statement I made on the last day I was examined before the committee, where I referred to Mr. Fisher towards the end of page 27, I intended my evidence on that point to show the influences which had been brought to bear against me, and not with any intention to reflect upon Mr. Fisher. That was not the object with which Mr. Fisher was afterwards examined; for the way in which the questions were put to him could not but be hurtful and irritating to any person's feelings, and they compel me to go into the matter in self-defence. I say now that influence was used against me with Mr. Fisher.

1157. *Chairman.*] Mr. Fisher has said here that he was never spoken to; do you affirm that when he says that he is stating what is not the fact? I say that he has stated what is untrue. That is why I say that you are not acting fairly by me when I have given you the names of two witnesses who are willing to come forward and contradict him. I can bring fifty witnesses if it is necessary to come forward and contradict him. There were half a dozen of us talking together at the time, and they are all prepared to say that they saw Mr. Fisher spoken to by Mr. Tunks. There was myself, Mr. Reilly, Mr. Levien, Mr. Collett, Mr. Dodds, and Mr. Dransfield. We were all standing opposite the Court House in King-street, up against Driver's wall, and we all saw Mr. Tunks speak to him in the way I have described. I wish these gentlemen to be called in order to make good my words. If you hear evidence for the prosecution, you certainly ought to hear evidence for the defence. I wish further to state to the Committee, that this Mr. Hughes, who was called here to give evidence against me, was a man that I moved a reduction of his salary from £75 to £25 a year. He had been receiving that salary of £75 for fifteen or sixteen months, and had nothing to do for it, so I moved its reduction. I mention this in order to say that I think it very strange that all the people who have come into antagonism with me should have been brought down here to give evidence against me.

1158. If that is the case do you think it at all strange that you yourself should have asked for Mr. Hughes to be summoned, and that Mr. Forster should have handed in his name at your request? I do not think that Mr. Forster called him.

1159. Do you remember giving Mr. Forster a list containing the names of the witnesses whom you desired to be called? Yes, I may have given him a list, but my head has been so bad that I do not recollect perfectly.

1160. Do you remember whether in the list you gave him the name of Mr. Hughes appears? Perhaps I did give him the name of Mr. Hughes, but if I did, it was only to have him here to produce the minute-book. I said I wanted the minute-book and wanted him to produce it.

1161. But having yourself asked for Mr. Hughes to be summoned, how do you reconcile it to yourself that you should object to his being called by some one else? If I gave the name, it was solely that he should bring the minute-book. I never for a moment expected that it would be brought down here, except by the proper custodian. I never dreamt that they would allow the minute-book to be away out of his custody.

1162. *Mr. Burns.*] Is he the custodian of the minute-book? He is.

1163. Apart from the minute-book, do you see any objection to his being examined? No. I wanted him to be examined on the minutes in his custody. There are a great many questions here which he was asked altogether apart from the minute-book. He is asked by the Chairman (question 887): "Then if it has been stated to this Committee by any witness that this was not the report of the Council, but a mere statement of Mr. Scholey's, is that untrue;—is it true or untrue that Mr. Scholey merely made a verbal statement and did not bring up a written report?—I do not know whether there was a report submitted, signed by the committee. Mr. Scholey gave in a report." And then (888): "Was it written?—Yes. I do not think it was deposited in the office, but Mr. Scholey read from it." It strikes me that these questions were meant to apply to the verbal statement, alluded to by Mr. Scholey, and Mr. Hughes has complicated it in his answer with the report of the 9th December. I have never said that that was a verbal report. The report of the 17th November was a verbal report, and Mr. Scholey states as much in his evidence. I cannot see what is meant by this endeavour to mix up the two meetings together. There is another matter that I should have liked to allude to, but I do not think I shall have time to find it in the minute-book. It is a motion which was moved by myself. In his evidence about his suing the District Council, Mr. Thompson has made some mistakes. Question 1016: "The report you drew up was adopted by the Council, and yet the District Court Judge refused to give you a verdict against the Council?—He did. I took it that he thought it was a matter to be paid for by the Government, as it was done at the instance of the Government"; and 1017: "Did the Judge make any remark as to who ought to pay for the report?—That I cannot take upon myself to say. We got a verdict for part of the amount—some part of what we sued for,—but the whole of our claim was denied in the first instance." He says that the Judge gave him a verdict for part of the amount, but the Judge never gave him a farthing. This is a mistake on Mr. Thompson's part, for after his account was sent in there was a resolution passed, and it will be found in the minute-book that the whole of Mr. Thompson's claim against the District Council should be paid, less the expenses incurred over the Cessnock Road matter. This was done, and then he sued the Council for his costs in the Cessnock Road business, and the Judge gave a verdict for the defendant.

1164. We have been given to understand that there has been an error here in taking the evidence? Then you see I am right. Then again, if it is stated that Mr. Thompson said that the Judge was of opinion that the Government ought to pay the amount, that was wrong, because the Judge could not have thought that as he gave a verdict for the defendant with costs in the highest scale. Then, notwithstanding that the case had been tried in a Court of Law and decided in our favour, Mr. Scholey * was always at me to pay Mr. Thompson this amount out of the local trust funds. In Mr. Hughes's evidence (question 928) he is asked: "Was Mr. Eckford present at the meetings from time to time when this matter of the Cessnock Road was discussed?—Yes." Now Mr. Scholey has said all through, no, that I was not present; and I state myself that I never was present at any time when this matter was discussed.

1165. Not on the 17th November? I was present then, but the matter was not brought forward in such

a

* Since I left Maitland has induced the Council to pay these costs to him, notwithstanding a Court of Law decided that Scholey only was responsible to Mr. Thompson, it having been clearly proved to be his own act and not that of the committee in giving instructions for report.

a way as that I say that it affected myself; and, with regard to Hughes, I do not deny that I gave Mr. Forster a list of names, and that Hughes's name was amongst them.

1166. *Chairman.*] We have your original list handed in by Mr. Forster? I do not deny it. No doubt I wanted Hughes to be examined with the minute-book.

1167. Your own name is also on that list? Yes, I daresay it is.

1168. Did you not give us to understand yesterday that it was not at your own request that you were called? No; what I said was—what had I been called here for.

1169. We understood you to deny that you had given any list to Mr. Forster? The moment I came to recollect it I stated that I had given a list to Mr. Forster, but I forgot it at first. I said that I had given a memorandum to Mr. Forster, but I had forgotten about the list until I came to think the matter over. I was not present at any other meeting than that of the 17th November, whilst these matters were going on, and then I asked the Council to call upon me for any information they required, and said I would be most happy to furnish it. If I attended this meeting, what becomes of Noble's statement that I intended to stop away for three meetings; and then here is Hughes, who says I was at all the meetings, so that you see they contradict each other; and I say, further, that until January the 19th I never heard anything from Scholey about what the suspicion was with regard to me. I did know it earlier, because I got a copy of the report from the Government some time at the end of December, or the beginning of January. I say that I was not present at any of these meetings, except that of the 17th November, and Mr. Scholey himself says I was not. Question 929: "Did he make any statement or defence as to matters supposed to affect himself at any meetings of the Council?—He said the money had been spent, as stated, by himself—that the men had been there. What I have to say of this is, that this was after the report had been sent in to the Government. Prior to that no information whatever had been given to me of any charge being pending against me. Question 930: "Did he make any explanation in the Council about matters affecting himself, contained in the report of the committee—at any meeting or meetings of the Council?—No more than that the money had been lawfully expended, and that he could produce the men who had received it." And question 931: "Had he opportunities, from time to time, to explain matters contained in the report which affected the administration of this road?—Yes." This is utterly untrue; but my answers to 928 and 929 form an answer to this statement in 930 and 931. I say again that I was not present at any meeting of the District Council when the Cessnock Road matter was under discussion, except the meeting of the 17th November, and then it was discussed in such a way as to leave me in the dark whether there was any charge against me. The statement referred to in answer to 929 alludes to what was said by me on the meeting of the 19th January, and the same answer refers to question 930. Both answers refer to my statement made to the Council on the 19th January. As to 931, it is simply untrue, for I never had any opportunity given to me to meet the charges, for I was not made acquainted with the fact that I was implicated in them until January.

1170. *Chairman.*] Had you not exclusive charge of the Cessnock Road? Certainly I had.

1171. Then, if matters were under discussion relating to the malversation of the public funds appropriated for that road, could they affect anybody but yourself? Yes, that is right so far, but then why was not the matter stated to me direct, instead of going to the Council? On the 17th November, when Mr. Scholey made his statement, he did so in general terms, and there were no charges made against anybody. When he reported the matter to the Council there was not a single word said against me.

1172. *Mr. Burns.*] All these matters were at issue before the jury on the trial of yourself against Scholey. Let me draw your attention to question 788 in Mr. Fisher's evidence:—"Can you remember anything more in reference to the case?—Yes, there is one very important feature in it—that the plaintiff in the case, through his counsel, urged upon us that he had never had an opportunity given him before the District Council to purge himself of this charge. Now, it was clearly proved by the evidence that he had repeated opportunities of clearing himself in the Council, and that he did not do so. That was one principal feature which determined the jury in giving their verdict." Now, was there evidence given on the trial of your having had opportunities of meeting these charges, and of your having failed to do so? I say that it was not the case. It was proved, on the contrary, that I had not had such opportunities afforded me. As a fact, no opportunity of clearing the matter up before the Council was ever given to me. Mr. Fisher's statement is not true. It is the Judge who tried the case who is the proper person to refer to on this matter, and not a witness who comes forward here in a state of excitement because he has been alluded to by me as having spoken to Mr. Tunks whilst engaged as a jurymen on the trial.

1173. *Mr. Webb.*] If Mr. Fisher denies that he was so spoken to, and his fellow jurymen deny it also, would you still say it was not true? I should still say that they were stating what was not true, and that the Judge who tried the case was the proper person to apply to.

1174. How can the Judge know whether the jurymen were spoken to outside the Court? I do not mean for the Judge to be asked about that, but about the evidence of opportunities I had. On the other points I want the Committee to call the parties who saw Mr. Fisher and Mr. Tunks speaking together. Before I leave I wish to give you the names of John Riley, of Maitland ———

1175. *Chairman.*] We have made up our minds that these witnesses are not requisite for the elucidation of the matter which we have been directed by the House to consider.

FRIDAY, 28 MARCH, 1873.

Present:—

MR. BURNS,

MR. MACINTOSH,

MR. TUNKS.

JAMES AUGUSTINE CUNNEEN, Esq., IN THE CHAIR.

William Farmer, Esq., called in and examined:—

1176. *Chairman.*] I believe you are a member of the firm of Farmer & Co., importers and silk merchants? Yes.

1177. Do you remember being on the jury in 1870, to try a case of slander—Eckford v. Scholey? Yes; it was an action arising out of some road trust business; Mr. Scholey was Warden of the Maitland District Council.

Mr. J.
Eckford.

21 Mar., 1873.

W. Farmer,
Esq.

28 Mar., 1873.

1178.

- W. Farmer, Esq.
28 Mar., 1873.
1178. In his evidence before this Committee the then plaintiff has made a statement to the following effect:—On being asked by Mr. Webb, “Do you not think then that it was a wonderful thing after this that Mr. Scholey got the verdict?”—he answered, “I do not think it is at all a strange thing, after seeing the gentlemen that collared the jurymen every time they came out of the Court. Every time they came out of the Court Mr. Tunks would collar a spirit merchant down the street, and Mr. Davies would collar another;” and he made a similar statement with respect to Mr. Wilson also;—is this a fact? No, I can state that it is not a fact.
1179. Is there any foundation at all for it? Not the slightest that I am aware of.
1180. Neither Mr. John Davies, Mr. Wilson, or Mr. Tunks, ever attempted to speak to you? Not a syllable during the whole time. I do not know Mr. Tunks even by sight.
1181. Neither did you see them speaking to your fellow jurymen when you came out of Court? No, not on any occasion during the trial; nor, I may say, before or since.
1182. Then, to your knowledge, this statement must be untrue? I think I am in a position to state that it is decidedly untrue. I could not answer for anything that may have been said to Mr. Fisher or Mr. Frerichs when I was not present, but certainly nothing of the kind took place in my presence.
1183. *Mr. Macintosh.*] Nor to your knowledge? Nor to my knowledge; and I think I should have heard of it from my brother jurors if it had taken place. The jury were very unanimous, and I think I should have known if anything of the kind had taken place; I feel certain it would have been mentioned to me.
1184. *Chairman.*] Mr. Eckford further stated, in answer to question 662: “I saw John Davies speak to one of the jurymen when they came out of Court, and there were some other jurymen whom I do not remember”? I did not see Mr. John Davies at or near the Court during the whole of the trial; he may have been there, but I did not see him, to the best of my recollection. When we left the Court I think Mr. Fisher and Mr. Frerichs usually walked with us as far as Elizabeth-street—I am under the impression that they took lunch at “Camb’s Hotel”—and Mr. Fleetwood and myself usually walked together to the corner of Pitt-street and then separated; he would go to George-street, and I would go to our place of business, as a rule.
1185. You found a verdict for Mr. Scholey in this case? Yes.
1186. Unanimously? Yes.
1187. Did you take into consideration, in arriving at your verdict, that Mr. Scholey acted in this case, in furnishing this report, in his position as Warden of the district and in a public capacity;—did you come to any conclusion that Mr. Scholey was justified in furnishing this report about this malappropriation? Yes; we found that he only discharged his duty as Warden of the Council in bringing the matter before the Government; otherwise, we must have found for the plaintiff.
1188. Did you take into consideration only that he acted in his public capacity as Warden? I think the case was put before us whether he acted for good and honest motives or from malicious motives. It is sometime ago, and my recollection is not very distinct, but I think it was put before us that we must find for the plaintiff if we found that Mr. Scholey was actuated by malicious motives.
1189. And you arrived at a conclusion from the whole of the facts that Mr. Scholey only performed his public duty as Warden in furnishing this report? Most decidedly.
1190. *Mr. Tunks.*] You have stated that you had no knowledge of me at the time this case was going on? I had not the pleasure of knowing you until this morning. I have no recollection of seeing you in Court.
1191. Or in any way interfering? No, nothing of the kind took place as far as I know.
1192. *Mr. Burns.*] I believe the evidence given by Mr. Fisher before this Committee was sent to you to be read? Yes.
1193. Have you read that evidence and considered it? I have.
1194. Do you concur in that evidence as given by Mr. Fisher? There are one or two slight discrepancies, but I almost entirely concur in the general tenor of the evidence he has given. I think there are one or two small matters of no moment wherein he is mistaken.
1195. You agree in his statement that the verdict was given substantially on the merits of the case—that is, that the defendant made out his case? Yes; we were quite unanimous on the point the moment we left the box; we were all of one mind as soon as we retired; but we found there were certain things to be taken into consideration, which the Judge asked us to consider.
1196. Did the Judge, in summing up, explain the law as to privileged communications? Yes, very amply, I think.
1197. In giving your verdict in this case it was in no way influenced by any question of privilege, but it was given on the ground that Mr. Scholey had made out his case? I will state my own opinion; I will not answer for my brother jurymen. I believed, from the evidence given at the time, and the whole case brought before us, that Mr. Scholey acted from *bonâ fide* and honest motives in sending in the report to the Government; that was really the question we had to consider.
1198. I want to know something more—whether in your opinion the defendant, Mr. Scholey—the action having been brought against him for having alleged that there had been some malversation of the public funds in connection with the Cessnock Road—made out his case to warrant his report? We certainly arrived at that conclusion.

Richard John Fleetwood, Esq., called in and examined:—

- R. J. Fleetwood, Esq.
28 Mar., 1873.
1199. *Chairman.*] Do you remember being on a jury in an action in the Supreme Court in 1870—Eckford v. Scholey? Yes.
1200. *Mr. Tunks.*] It lasted several days? Yes, about 11 days.
1201. *Chairman.*] It was an action for slander, on account of some statement made by Mr. Scholey in a report to the Government respecting the expenditure of public money on the Cessnock Road? Yes.
1202. What verdict did the jury come to? A verdict in favour of Mr. Scholey.
1203. Do you remember the principal grounds or reasons upon which they arrived at this verdict? It is so long ago that I hardly remember; there were many witnesses on both sides, and no doubt at the time we believed the witnesses on one side in preference to those on the other.
1204. In furnishing this report, Mr. Scholey acted, did he not, in his capacity as Warden of the Maitland District Council? Yes.

1205. Did you consider he was justified in sending in this report about the malappropriation? Yes; I understood he sent it in to the Minister of the day.

1206. Did the jury arrive at the conclusion that he only performed his duty in his public capacity in doing so? Yes.

1207. The then plaintiff in the case, Mr. Eckford, when examined before this Committee, was asked by Mr. Webb how it was that Mr. Scholey got the verdict, and in answer to that Mr. Eckford states, "I do not think it is at all a strange thing, after seeing the gentlemen that collared the jurymen every time they came out of the Court; every time they came out of the Court Mr. Tunks would collar a spirit merchant down the street, and Mr. Davies would collar another;"—were you "collared"? I never saw anything of it.

1208. There was no attempt to influence your decision? No; nobody spoke to me, nor to any jurymen in my presence. I remember a drunken man speaking to us after the case was over, but I cannot say whether it was to any one of us in particular, or to all of us.

1209. Neither Mr. Wilson, Mr. John Davies, nor Mr. Tunks spoke to any of you? I did not know any of them at the time. I think I have only spoken to one of them in my life.

1210. To your knowledge they did not speak to any of your brother jurymen? No; not in my presence.

1211. It was also stated by the then plaintiff in his evidence here that he saw Mr. John Davies speak to one of the jurymen when they came out of Court? He did not do so that I know of. I did not know Mr. John Davies at the time.

1212. This statement, as far as it concerns yourself and your brother jurymen, to the best of your knowledge, is untrue? Certainly.

1213. Have you read the evidence of Mr. Fisher, which was forwarded to you? I have read a portion of it.

1214. Do you agree with Mr. Fisher's views of the case? Yes. So far as the verdict was concerned we were unanimous.

1215. Did you deliberate much after you left the box? I think about an hour.

1216. *Mr. Tunks.*] Do you recollect seeing me in any way concerned in this matter? I do not.

1217. Had you any knowledge of me at the time? No, I do not think I ever spoke to you in my life. In fact, if I were not told, I should not know you were Mr. Tunks.

1218. *Mr. Burns.*] You say that after you retired your deliberations occupied about an hour;—might I ask what were the matters that occupied your attention;—you say you were unanimous in your verdict? It was as to the credibility of the witnesses as a body—the witnesses on each side; some were very positive, and others were not so positive.

1219. Did you give your verdict upon the principle that the defendant, Mr. Scholey, had established his right to send in this report to the Government, and that there was foundation for the report, and that he as a public man was doing his duty in sending it in.

1220. There was a good deal of evidence given on the trial about some men who were missing, who were alleged to have been working on the road? Yes, some two or three.

1221. Were any of these men produced at the trial? No; I am under the impression that the missing men were not produced. Some missing men were not produced.

1222. Did you hear the Judge at the close of the trial, in his charge, or otherwise, express any opinion in favour of the plaintiff, Mr. Eckford? To the best of my recollection his summing up was an ordinary summing up, leaving it to the jury as to the credibility of witnesses.

1223. You do not recollect his making any statement that he held an opinion in favour of the plaintiff and adverse to the defendant? No, I do not think he gave any opinion one way or the other.

1224. The Judge made some explanation to the jury of the law as to privileged communications? Yes.

1225. In giving your verdict for the defendant, Mr. Scholey, were you guided by the material facts of the case, or by any consideration as to privilege;—did you give a verdict upon the principle that the defendant, Mr. Scholey, was warranted in sending in the report, and had material grounds for sending in the report? We came to the conclusion that it was his duty to send it in.

1226. I want to know whether he made out a case to show that there were facts to warrant him in sending in this report? Yes, certainly there were.

1227. Were the jury satisfied that Mr. Eckford had opportunities of explaining the charges against him, if he thought fit, to the District Council? Yes.

1228. The jury thought he had not explained them? He had not explained them satisfactorily.

1229. Then if Mr. Eckford alleges that he had not an opportunity of explaining these charges that does not agree with your recollection of the evidence on the trial? Certainly not.

1230. Do you recollect noticing any one speaking to the jury at the time of the trial, or to any member of the jury? No.

Stephen Scholey, Esq., M.L.A., further examined:—

1231. *Mr. Burns.*] It appears from the evidence that the payments made on account of the Cessnock Road were made by cheques given by the Warden for orders drawn by Mr. Eckford? Yes.

1232. Were not these orders for round sums of money and not for payments to particular individuals or for specific services? For the number of men altogether.

1233. Were these orders drawn in favour of particular individuals for specific services, or were they drawn for lump sums, without naming who they were for and for what services? For lump sums.

1234. Who took the vouchers for these payments? Mr. Eckford.

1235. Do you recollect how many orders were drawn up to the time you refused to pay one of these orders? I think eleven.

1236. Up to the time a particular order was drawn by Mr. Eckford, which you refused to pay, he had drawn in all eleven orders, and these orders had been paid? Yes.

1237. Will you look at the Return laid upon the Table, on motion of Mr. Wilson, and ordered to be printed on the 29th September, 1869, pages 7 and 8;—do you observe that, except in one instance, these orders are drawn only in the name of "labourer"? Yes.

1238.

R. J.
Fleetwood,
Esq.

23 Mar., 1873.

S. Scholey,
Esq., M.L.A.

28 Mar., 1873.

- S. Scholey, Esq., M.L.A.
28 Mar., 1873.
1238. When you refused to pay the order for £43 4s. 6d. what was the reason you alleged to Mr. Eckford for doing so? I told him there was something wrong on the Cessnock Road, and that I must have an inquiry into it.
1239. Did any other Commissioner or Commissioners adopt the same practice of drawing orders upon you for lump sums and getting the money advanced to them in this particular way? I do not remember any other case.
1240. Did you request Mr. Eckford to produce the vouchers for payments made on that order for £43 4s. 6d. before you would make any further payments? Yes, the whole of the vouchers he had.
1241. You asked him for the whole of the vouchers for payments he had made up to that time before you would have this order paid? Yes.
1242. Did he produce these vouchers? Not for some time after.
1243. How long after? I think five or six days.
1244. Did he produce them at the next meeting of the District Council? No; Mr. Hughes, the secretary, went for them twice, and got them.
1245. When they were brought before the Council did the vouchers include a statement of the services for which the sum of £43 4s. 6d. was drawn, as well as vouchers for the previous orders? No.
1246. Did Mr. Eckford, when you asked for the vouchers, or at any time before your reporting to the Government about the Cessnock Road, explain for what purposes this sum of £43 4s. 6d. would be wanted? I think he gave a list of the items, but I am not sure.
1247. Did any discussion take place at the Council over these vouchers when they were produced there? Yes.
1248. When was that? On the 2nd November.
1249. I think Mr. Eckford was not present on that day? No.
1250. But he was present on the 17th? Yes.
1251. Was there any discussion on the 17th with regard to these accounts and vouchers? Yes.
1252. Mr. Eckford was present then? Yes.
1253. Was attention at all drawn to the circumstance that some of these vouchers for these payments were signed by marksmen, and that Mr. Eckford himself was the witness? No, I do not think it was.
1254. Was it mentioned at the meeting of the 17th November that some of the men could not be found? No.
1255. Was it mentioned at any meeting that some of the men could not be found? Yes.
1256. Before reporting to the Government? Yes; I think it was mentioned on the 9th December.
1257. Did you tell Mr. Eckford, or did the Council in any way inform him, that some of the men were missing, and could not be found? Mr. Bowden told him, and I told him in January; I asked him were these men were.
1258. Was Mr. Eckford told at any time before the report was sent to the Government, either at a meeting of the Council or by any of the Councillors, that there were some men for whom payments were set down on the pay sheets, who could not be found? Mr. Keating told me he told him; he told him every particular from the 2nd of November up to the end of the discussion. He told me he had given every information to Mr. Eckford.
1259. Did you understand, while these meetings were being held, that Mr. Eckford would not attend them? Yes.
1260. That was through what had been said by Mr. Noble? Yes. Betwixt the 17th November and 9th December a person was sent down to Mr. Noble to ask him not to go to the meetings before he saw Mr. Eckford.
1261. Did Mr. Eckford know that it was alleged these men could not be found, and that the accounts for the Cessnock Road were supposed to be incorrect, before the report was adopted by the Council? Yes, he was told by Mr. Keating, so Mr. Keating told me.
1262. Was there any publication in the newspapers from which he could be informed that at these meetings the matters of the Cessnock Road were being discussed? Yes.
1263. And he remained away from the meetings? Yes.
1264. Do you recollect Mr. Noble giving evidence in the Supreme Court? I do.
1265. Do you recollect his going back to get some portion of his evidence corrected? Yes.
1266. Do you recollect what portion it was? It had reference to dates.
1267. Do you recollect the Judge making any remark about his having his evidence corrected? I think he admired the conduct of the witness.
1268. The Judge approved of his coming back to have his evidence corrected when he found he had made a mistake as to date? He did.
1269. He made no remark uncomplimentary to Mr. Noble? No, he commended him.

WEDNESDAY, 2 APRIL, 1873.

Present:—

MR. BURNS, | MR. WEARNE,
MR. WEBB.

JAMES AUGUSTINE CUNNEEN, ESQ., IN THE CHAIR.

Burchart Frerichs, Esq., called in and examined:—

- B. Frerichs, Esq.
2 April, 1873.
1270. *Chairman.*] Do you remember in 1870 being on the jury in a trial in the Supreme Court, of Eckford v. Scholey? I do.
1271. You are aware that was an action of slander? Yes; Mr. Scholey gained it.
1272. It was brought against him on account of a report made by him to the Government on the subject of the expenditure on the Cessnock Road? It was.
1273. For whom did the jury give their verdict? For Mr. Scholey.
1274. Were the jury unanimous in their verdict in that case? Yes, quite unanimous.

1275.

1275. Do you remember the grounds upon which the jury returned their verdict for the defendant in that case? Yes. We considered that this report was made to the Government as a matter of duty by Mr. Scholey, as Warden of the district.

B. Frerichs,
Esq.

1276. You considered that he reported in a public capacity to a Minister of the Crown on an expenditure of public money? Exactly. 2 April, 1873.

1277. The plaintiff in the case, Mr. Eckford, has, in his evidence before this Committee, accounted for that verdict by stating that the jury were "collared" every time they came out of Court by persons friendly to the defendant, and that thus their verdict was influenced;—do you know anything of this? It is not true. It is certainly not true as far as I am concerned, and I can say that it is not true as far as my brother jurors were concerned, for we were nearly always together when we left the Court.

1278. When Mr. Eckford was examined he was asked (question 598): "Do you not think then that it was a wonderful thing, after this, that Mr. Scholey got the verdict?" He said, in answer to that: "I do not think it is at all a strange thing, after seeing the gentlemen that collared the jurymen every time they came out of the Court. Every time they came out of the Court Mr. Tunks would collar a spirit merchant down the street, and Mr. Davies would collar another";—As far as your observation went is this statement true or false? I have seen nothing of that. It is utterly untrue as far as I am concerned. I never saw it with the others, and we were always together.

1279. Then again, in answer to question 662, Mr. Eckford says: "I saw John Davies speak to one of the jurymen when they came out of the Court, and there were some other jurymen whom I do not remember";—do you know anything of that? I certainly do not. I am not aware of anything of the sort. No one certainly ever spoke to me, and, as far as I can remember, I do not think I saw John Davies.

1280. Nor Dr. Wilson? No.

1281. Nor Mr. Tunks? I do not remember seeing him.

1282. *Mr. Burns.* Did you know either the plaintiff or the defendant up to the time of your being summoned as a juror on the trial? No, I did not know either of them at all.

1283. Did you know Mr. Tunks? No. I think I might have known him by sight, but I did not know him to speak to him. I never knew him to speak to him in my life.

1284. Did you know Dr. Wilson? I know Dr. Wilson by sight, but not to speak to. I know John Davies, that is, if it is the ironmonger in York-street that you mean.

1285. Did either of these persons speak to the jury that you saw? No, certainly not.

1286. You have said that the jury considered that Mr. Scholey was only performing a public duty in sending in the report to the Government; did you also consider from the evidence adduced before you, that Mr. Scholey had reasonable or probable grounds for the statement contained in the report? We did.

1287. From the evidence brought before you on the trial, did you consider that the defendant, Mr. Scholey, showed that he was justified in sending in that report? We all thought so then, and I think so yet.

1288. You think so still—that the report was justified? I do.

1289. Do you recollect a Mr. Noble being examined on that trial who, after giving his evidence, came back to have a portion of it corrected? It is so long ago that I remember the name and the witness coming back, but I cannot remember the evidence he gave that he wished to correct.

1290. Was it not in connection with some dates? Yes, I think it was—the dates when the men came to work on the roads—that was it.

1291. Did the Judge commend this witness for amending his evidence, or did His Honor seem displeased at it? I think the Judge expressed rather displeasure than commendation for this alteration of statement—but I am not so certain about that.

1292. Do you recollect the witness? No, I do not.

1293. Perhaps you may call him to mind when I say that he was a very nervous man? Yes, I remember him now.

1294. Now you recollect the man, does that bring back to your memory what occurred? Yes, I remember now, he came back into Court to correct his evidence about some dates.

1295. And does that remind you of what the Judge remarked? Yes. I think the Judge praised him for coming back; when you mentioned about the nervousness, that made me remember the man, and then I recollected the circumstances.

Stephen Scholey, Esq., M.L.A., called in and examined:—

1296. *Chairman.*] It has been stated to this Committee that you were surety for Mr. Wallace, who was formerly Secretary to the Maitland District Council;—is that the case? It is not. I was never surety for him. S. Scholey,
Esq., M.L.A.

1297. Have you any further statement to make to the Committee? I can state this, that Mr. Wallace's sureties were Mr. Brunker, and Mr. Wallace, senior. I had nothing to do with it. There is another statement made by Mr. Eckford—that I obtained an appointment as station-master for James Wallace; now I never did anything of the kind. I would also like to mention that I had a letter from the Government, in reply to the charges made by Mr. Eckford against me; but what became of that letter I do not know, for I have made every possible search for it, and I have not been able to find it. 2 April, 1873.

1298. In what way were the charges made? By letter. Mr. Eckford wrote to the Government making a lot of charges against me. A copy was sent to me with an intimation that I was to answer them. I did reply to them, and then in about four days afterwards I got a letter back, either saying that I was exonerated from the charges, or that my conduct had been correct, or something to that effect. I will not be positive about the words, but the effect was to clear me of the charges.

1299. Was this by Eckford? No, by the Government; they sent me an answer, acknowledging the receipt of my letter, and then stated that they exonerated me from any charge of irregularity, or something to that effect. That letter I should have liked to have laid before the Committee, but I cannot put my hands on it. Whether it was put in evidence at the trial in Maitland and lost, or how it has got mislaid, I do not know.

1300. Is this matter involved in the question now before the Committee? No; I think not. It was just this: Mr. Eckford brought certain charges against me before the Government, and the Government on hearing my explanation altogether cleared me of them. I then brought an action against Eckford for slandering me in these charges. That action was tried in Maitland and I got damages against him.

1301.

S. Scholey, Esq., M.L.A.
 2 April, 1873. 1301. Damages for what? For the slander in the charges Eckford brought against me before the Government. By bringing this action I gave him an opportunity of making good his charges against me if he found himself in a position to do so. He stated that Mr. Wallace and myself had cooked the accounts of the Road Trust, and I gave him the chance of proving it in Court if we had done so. But instead of attempting to prove anything of the kind, all his defence was that he had never said so; that he had never used the words. The case was tried on the 26th October, 1869, at Maitland, and I got a verdict against him.

1302. *Mr. Burns.*] What were the words which formed the groundwork of the action against Mr. Eckford? The words which were chiefly complained of are thus quoted from the pleadings by the special reporter of the *Sydney Morning Herald*, in the issue of that paper for the 29th October, 1869:—"The deceitful wretch. That is only a blindfold. By G—— I'll have my revenge. I'll lag him as sure as his name is Scholey. Between him and Wallace they have cooked the Council accounts or books pretty well, entering moneys they have never paid, and I can prove it, for I have a copy of all the documents from head quarters, and I can shew from them that instead of me robbing the Government that it is himself and young Wallace that has done it. He is one of the damndest scoundrels in the Colony, and I will lag him before this day three months."

CLAIM OF MR. STEPHEN SCHOLEY.

APPENDIX.

[Handed in by Mr. Scholey on 12 February, 1873.]

A 1.

S. Scholey, Esq., M.L.A., to J. H. Neale, Esq., M.L.A.

East Maitland, 23 November, 1868.

Dear Sir,

You will oblige me by seeing Mr. Forster, Minister for Lands, and make an appointment for me to see him upon matters of fraud committed by men employed on the Cessnock Road; and let me know, at your earliest convenience, the day.

Yours, &c.,
S. SCHOLEY.

A 2.

J. H. Neale, Esq., M.L.A., to S. Scholey, Esq., M.L.A.

Sydney, 25 November, 1868.

My Dear Sir,

I am in receipt of yours of yesterday, and cannot arrange for the interview with Mr. Forster, as you desire, because he (Mr. F.) has not yet returned to Sydney from the Hastings.

I have arranged to go away on Friday morning for a few days, but on my return I shall be glad to accompany you to see Mr. F., if you do not see him before. I expect to be back on Tuesday, and should be glad to hear further from you on my return.

Yours, &c.
JAMES H. NEALE.

A 3.

No. 2.

[N.B.—This Report was originally received at the Lands Department, on 17th December, *unsigned*, and was returned again signed, on 5th January, 1869.]

S. SCHOLEY—REPORT OF MAITLAND DISTRICT COUNCIL.

REPORT of the Maitland District Council respecting the alleged expenditure of a portion of the sum of three hundred and fifty pounds, voted by the Legislative Assembly for the repairs of a portion of the Wollombi Road, between West Maitland and Cessnock, submitted for the information of the Honorable the Minister for Lands.

The Council does itself the honor to report that on or about the 4th day of June last the sum of £350 was placed by the Colonial Treasurer to the credit of the Council in the Bank of New South Wales, Sydney, for the purpose of enabling the Council to execute certain necessary repairs on the Wollombi Road, between West Maitland and Cessnock, a distance of 14 miles or thereabouts, and that six months was granted for the expenditure of that sum.

That, in the month of May last, the various roads within the Maitland District were allotted to the charge of various Councillors by vote of the Council, and amongst others the Wollombi Road was allotted to the charge of Mr. Joseph Eckford, assisted by the Warden, Mr. Stephen Scholey, but by some error of the Clerk of the Council the Warden's name was not inserted in the minutes.

2. That on the 6th of October last the Warden obtained certain information which induced him, on the 12th of October, before 6 o'clock a.m., to visit that part of the Wollombi Road which was then immediately under repair, for the purpose of ascertaining whether the men who were said to be working on the said road came to their work in due time, and as to how the work generally was being carried on. The Warden then found that nearly all the men were not at work in due time; that up to a quarter past 7, the overseer, Patrick Doran, whose duty it was to set the men to work, to keep their time, and to carry out the instructions of the directing Councillor, was not on the ground.

3. That at the time the said Patrick Doran was lodging on week-days at the house of Mr. Joseph Eckford, at the charge of 5s. per week.

4. That one Solomon Israel and one Patrick Kinneally were carters said to be employed on the said work, neither of whom were at work up to half-past 8 o'clock on the morning of the 12th of October; but the Warden ascertained from one of the labourers, named James Moylan, that Mr. Eckford had instructed the carter, Solomon Israel, not to come to work until Wednesday, the 14th of October.

5. That on Tuesday, the 27th of October, the usual pay-day, Mr. Eckford presented to the Warden, at the office of the Council, the order bearing that date, a copy of which is sent herewith, and on inquiry being made it was ascertained from Mr. Eckford that Solomon Israel, the carter, claimed for thirteen days' work with his horse and cart, at 12s. per day, and that Patrick Kinneally, the other carter, claimed for nine days' work, at the same rate. Mr. Eckford had at that time all the vouchers for the expenditure of the said sum in his possession, and on Mr. Eckford's requiring a cheque, in accordance with the order before mentioned, the Warden refused to give a cheque until all the vouchers were produced and in the office. The Warden believing, from information which had been previously furnished to him, that both Israel's and Kinneally's accounts of their work were false, sent the secretary of the Council to them to endeavour to obtain from them a written statement of these accounts, which, however, the secretary was unable to obtain from them; but the Warden the same evening obtained further information from John Sheridan, who had been keeping a book of the time of all the men, which at once confirmed the impression he had previously formed, that Israel's and Kinneally's accounts (as stated by Mr. Eckford) were both false, inasmuch as Israel had only worked nine days instead of thirteen, for which he claimed, and Kinneally had only worked two days instead of nine, for which he claimed.

6. That at the time of the Warden's refusing to give Mr. Eckford a cheque, he requested Mr. Eckford to have all the workmen down at the office on Thursday, the 29th of October, that he might examine them as to the work they had really done, and Mr. Eckford promised that the men should be there.

7. That on Thursday all the men, including Israel and Kinneally, but excepting Doran, the overseer, came to the office of the Council, and the Warden then examined all the labourers, particularly as to the time made by Israel and Kinneally. None of the men at first appeared willing to give any information, but at length Moylan and Sheridan made certain statements, copies of which are hereto annexed, marked A and B. Israel was afterwards brought in and examined by the Warden, in the presence of the secretary and of Mr. Eckford, and he then stated that he had worked thirteen days, commencing from Monday, the 12th of October; that he had worked that very day, and begun work at 6 o'clock, and had carried Doran, Sheridan, Hennessy, Moylan, and Walsh, out to work in his cart, this being the very day on which the Warden was on the work, and found that up to half-past 8 o'clock he was not on the work nor going to it; and that Sheridan, Moylan, and Hennessy were on the ground—the first at ten minutes past 6 and the two latter at ten minutes past 7; and that Doran and Walsh were not there at all. The Warden then declined to pay Israel for any more than nine days, which he at last accepted, but persisted to the last that he had worked thirteen days and was entitled to be paid for them. Kinneally also insisted that he had worked nine days, but he could not say when he begun work or when he finished, and he was only paid for two days.

8. The Warden being convinced, from what he had seen himself and from the information derived from Sheridan and Moylan, that Israel had attempted, by false pretences, to obtain payment from the Council for four days' work which he had never performed, caused proceedings to be taken against him for the attempt; but on the case being brought before the Bench at East Maitland, an objection was raised by Israel's attorneys, Messrs. Mullen & O'Meagher, that no offence had been committed in law. The Bench however dismissed the case, not upon the grounds so raised, but because, in their opinion, the Warden had the means within his power of ascertaining whether the statement made by Israel was true or false.

9. That a committee, consisting of the Warden and Councillors Keating and Bowden, was appointed to inquire into the whole matter relating to the expenditure of the said money; and from the inquiries which they have made, they believe that the sum of £109 5s. 10d., as shown by the account sent herewith, marked C, has been paid in excess of what has been really earned; that several amounts are entered in the vouchers, copies of which are also sent herewith, marked respectively D, E, F, G, H, I, J, K, and L, which were never paid, particularly a sum of £4 10s., said to have been paid to John Sheridan, whereas Sheridan declares that he only received £3 12s., and that he signed the voucher in blank, which shows that the sum of £4 10s. as paid to him, and his signature to which is witnessed by Mr. Eckford; and as far as the committee has been able to ascertain, no such person as William Thomas, who is said to have earned £7 4s. 8d. by the voucher of the 16th of June, and whose mark or cross to the said voucher is witnessed by Mr. Eckford, was ever known to any of the other men employed on the work, and, as it is believed, no such person was ever employed there.

10. That the document marked J, sent herewith, is a copy of a memorandum furnished by Mr. Eckford of the work said to have been done between the 6th and 26th days of October.

11. That the overseer, Patrick Doran, did not make his appearance before the Council until the 17th day of November, when he came for his wages earned up to the 26th of October, and he was then examined by several of the Councillors, and his examination was written down by the clerk, and a copy thereof is also sent herewith, marked M.

12. That a copy of the time-table kept by John Sheridan, marked N, is sent herewith, to be compared with the vouchers signed by the workmen and witnessed by Mr. Eckford.

STEPHEN SCHOLEY, Warden.
PATRICK O'BRIEN.
JOHN BOWDEN.
JOHN NOBLE.

Dated 15 December, 1868.

No. 3.

The Under Secretary for Lands to The Commissioners of the Maitland Road Trust.

Department of Lands,
Sydney, 24 December, 1868.

Gentlemen,

The enclosed document, purporting to be a report from the Maitland District Council, in connection with the expenditure of a sum of money on the Wollombi Road, has been handed to the Secretary for Lands by the Warden of your Council, but it is noticed that the communication in question bears no signature, nor is it otherwise authenticated, and I am directed by Mr. Secretary Forster to return the document to you for that purpose.

I have, &c.,
M. FITZPATRICK.

No. 4.

The Under Secretary for Lands to J. Eckford, Esq., M.L.A.

Sydney, 11 January, 1869.

Sir,

In forwarding for your perusal accompanying document (with enclosures), being a report of the Maitland District Council respecting expenditure on the Wollombi Road between West Maitland and Cessnock, I am directed by the Secretary for Lands to invite you to favour me with any observations you may desire to offer on the subject.

I have, &c.,
M. FITZPATRICK.

No. 5.

J. Eckford, Esq., M.L.A., to The Secretary for Lands.

West Maitland,
12 February, 1869.

Sir,

At the first meeting of the Maitland District Council, which was held after receiving your letter and report of the Warden of the Council, I attended there for the purpose of having the matter opened up, in order that I might be enabled to forward a proper reply, when, as I arose to speak, I was met by the Warden's moving a resolution, as though he anticipated me in the matter, that anything I had to say should be postponed until next meeting, or for a week. I at once moved as an amendment that I be heard at once, and spoke to the amendment, as being the only possible chance I had of opening up the (M'Mahon's) affair. After I had done, the Warden moved and carried a resolution the matter be postponed until the next monthly meeting, which will take place on Tuesday next, soon after which I will give you my reply, which, I am sure, must be satisfactory. It is a very good way for Mr. Scholey to try and get himself out of a difficulty, which he knows full well he has placed himself in, both by his treatment to me in this matter, and his collision with members of the Trust, to enable him to get their support, and making up accounts as he said himself was unsatisfactory at the death of the late secretary, Samuel Wallace, and who he was a bondsman for. His statement in the Council was that several documents were missing, full particulars of which will be given by other members of the Trust.

I have, &c.,
JOSEPH ECKFORD.

P.S.—You are aware the meeting was held and report adopted without me being present, notwithstanding an adjournment was asked and refused, to enable me to be present, a report of which I forwarded to you some time ago.—J.E.

A 4.

Sunday, November 29th, 1868.—I heard that Mr. Forster was in Sydney. Went to Sydney in the "Lady Young."

Monday, 30th.—Holiday.

Tuesday, December 1.—With Mr. Parkes and James Byrnes; they went through accounts and recommended me to the Auditor General, Mr. Rolleston, but was too late; he had left his office. Mr. Parkes gave me a note to him.

Wednesday, 2nd.—Came to Maitland.

Thursday, 3rd.—Left Maitland for Sydney.

Friday,

Friday, 4th.—At the Auditor's Office at 10 o'clock; could not see him till half past 12 o'clock; saw him; he examined the accounts and said it was as bad a case as they had in the office for years; sent me to Mr. Fitzpatrick; he said that it was a bad case, and thought there was a good deal of the money badly spent; not a pleasant man to do business with; he said Mr. Forster was the party I should see. Saw Mr. Forster; he heard the whole statement; he asked me if I could not make a charge; I stated that I had made one charge against Saul Israel for attempting to obtain money under false pretences; the magistrates had dismissed the charge; he stated that, in his opinion, they were bound to hear it; I told him that I was prepared to assist the Government all I could, but must have a guarantee that would clear me from all responsibility; he said that was nothing but right, and that I had better have a complete report of the case prepared by Mr. Thompson, who had the case in hand as attorney, and let him have the information as quick as possible, and he should see that the matter was well examined into. Mr. Forster listened to the case as stated with much attention and thanked me for my trouble.

A 5.

The Under Secretary for Lands to the Commissioners of the Maitland Road Trust.

Department of Lands,
Sydney, 24 December, 1868.

Gentlemen,

The enclosed document, purporting to be a Report of the Maitland District Council in connection with the expenditure of a sum of money on the Wollombi Road, has been handed to the Secretary for Lands by the Warden of your Council, but it is noticed that the communication in question bears no signature, nor is it otherwise authenticated, and I am directed by Mr. Secretary Forster to return the document to you for that purpose.

I have, &c.,
MICHL. FITZPATRICK.

A 6.

The Warden's statement respecting his interview with the Minister for Lands, Mr. Forster :—

4 December, 1868. I waited upon the Hon. the Minister for Lands, and showed him the vouchers respecting the payment of the money alluded to on the Cessnock Road; also the time-table kept by Sheridan, and the amounts said by him to be earned by the various men on the road. I also placed before him the balance-sheet produced by the Secretary of the Trust, and examined by the Committee, comparing the amount said by Mr. Eckford to have been paid, and that stated by Sheridan, whereby it was shown that something like £109 5s. 10d. was said by Sheridan to be overpaid. After listening attentively to what I had to say, Mr. Forster asked me if I could not make a charge. I replied that I have already made one against Solomon Israel for attempting to obtain money under false pretences, but the Magistrates dismissed it.

I further stated that I was prepared to assist the Government all I could in the matter, but must have a guarantee that would clear me from all responsibility.

He said that was nothing but right, and advised me to have a complete report of the whole case prepared by Mr. Thompson (who had the case in hand as attorney in the prosecution of Israel), and let him (Mr. Forster) have the information as soon as possible, and he would see that the matter should be well examined.

[*Note.*—The above interview took place under the instructions of the Committee,—Messrs. Bowden, Keating, and the Warden.]

[*Handed in by Mr. Scholey, 26 February, 1873.*]

B.

By His Excellency the Right Honorable Sir JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Captain General and Governor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

WHEREAS by an Act of the Imperial Parliament of Great Britain and Ireland, passed in the fifth and sixth years of Her Majesty Queen Victoria, intituled "An Act for the Government of New South Wales and Van Diemen's Land" it was amongst other things enacted that there should be within the Colony of New South Wales a Legislative Council to be constituted in the manner and for the purposes thereafter mentioned And whereas it was further enacted that it should be lawful for the Governor by Letters Patent under the Great Seal of the Colony of New South Wales to incorporate the inhabitants of every County within the said Colony or of such parts of Counties or other divisions as to him should seem fit to form districts for the purposes of the said recited Act and by such several Letters Patent to establish a Council in every such district for the local government thereof subject to certain provisions therein mentioned And whereas among other of the said provisions in the said Act mentioned it was therein provided that every such District Council should be presided over by a Warden to be appointed and be removable by Her Majesty or by the said Governor in the name of Her said Majesty And whereas His Excellency Sir George Gipps Governor of the said Colony did by Letters Patent under the Great Seal of the said Colony bearing date at Government House Sydney the twenty-first day of July one thousand eight hundred and forty-three incorporate the inhabitants of the District of Maitland in the Counties of Northumberland and Durham in the said Colony of New South Wales to be and form a District for the purposes of the said recited Act and by the said Letters Patent did establish a Council in the said District for the local government thereof Now know all men by these presents that I Sir JOHN YOUNG the Governor of the said Colony of New South Wales do with the advice of the Executive Council thereof hereby in exercise of the aforesaid power given to me as such Governor by the said recited Act and of all other powers enabling me so to do nominate and appoint in the name of Her Most Gracious Majesty Queen Victoria Stephen Scholey Esquire to be Warden of the said District Council of Maitland and to act as such President thereof as aforesaid In testimony whereof I have hereunto set my hand and caused the Great Seal of the said Colony to be affixed at Wagga Wagga in New South Wales aforesaid this second day of May in the year of our Lord one thousand eight hundred and sixty-seven.

JOHN YOUNG.

By His Excellency's Command,
HENRY PARKES.

Entered on record by me in Register of Patents No. 9, page 298, this 15th day of May, 1867,—

HENRY HALLOAN,
Under Secretary,

BRIDGE OVER LODDON RIVER OR AT KING'S FALLS.

No. 1.

PETITION.

To the Honorable the Minister for Public Works.

SIR,

The Memorial of the undersigned Residents of the South Coast and Illawarra District,—

RESPECTFULLY SHOWETH:—

1. That the South Coast District possesses a rich soil and healthy climate, and that consequently its population is rapidly increasing.

2. That the district already produces a large amount of dairy produce, which finds its way not only into the Sydney market but also to the market of England, an export trade having already sprung up which will soon add materially to the wealth of the Colony.

3. That notwithstanding the richness of the soil and the salubrity of the climate, the South Coast labours under the disadvantage of being hemmed in by a range of mountains that in wet weather are difficult of ascent.

4. That even when the ascent is accomplished, there are two places, known as the Loddon River and the King's Falls, which during wet weather, put a total stop to traffic between Illawarra and the Metropolis.

5. That those two places are of such a nature as frequently to endanger human life, and also to delay the delivery of the mail for many hours.

6. That although the sea-board is open to travellers, yet it invariably happens that during stormy weather the steamers and coasting vessels are unable to perform their usual trips.

7. That consequently, all communication is frequently cut off between the South Coast and the Metropolis, and inland towns, to the great loss to individuals, and also to the trade of the Colony at large.

8. That whilst the South Coast residents are as heavily taxed for Railway construction as the rest of the Colony, they cannot benefit by such Railway accommodation when it is most required.

9. That the inconveniences and losses which are now endured could be removed by the construction of a Bridge at the Loddon River, and also at the King's Falls, the cost of which, as compared with the benefit to be derived, would be very trifling.

Your Memorialists, therefore, humbly pray that such a sum of money may be placed upon the Estimates for the construction of the Bridges as may be required. And your Petitioners, as in duty bound, will ever pray, &c.

C. T. SMITH, J.P.
WILLIAM TURKINGTON.
HENRY GORDON, J.P.
JOSEPH WOOD WILSHIRE, J.P.,
and 389 others.

No. 2.

REPORT OF THE COMMISSIONER AND ENGINEER FOR ROADS.

Commissioner for Roads.—J.B., 13/6/71.

Roads, B.C.—J.R., 15/6/71.

Mr. Wells, for immediate report; he no doubt knows these places.—W.C.B., 16/6/71.

If sections are necessary, Mr. Statham could supply them. Will Mr. Statham make those sections; he can do them as he returns to Sydney, as I presume he will soon be able to leave; he will please acknowledge receipt, and report when I may expect him.—W.C.B., 19/6/71.

Mr. Statham, B.C.—E.J.S., 23/6/71.

No. 3.

ROAD SUPERINTENDENT STATHAM TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Broughton Village,
23 June, 1871.

SIR,

I am in receipt of your B.C. minute on Petition for Bridge over the Loddon River and King's Falls.

The pile-driving here will I expect be completed in eight or ten days. There is more than ordinary attention required in this instance, on account of difficulties in driving, so that it would be highly undesirable for me to be absent for the time necessary for completing the sections in question till after the piles are all in.

The completion of the Bridge will occupy from a month to six weeks from this time.

If, in the meantime, it may be considered necessary for me to take the sections, I will require a level and staff, which had better be sent by mail, and addressed "To be left at Mail Station, Loddon River."

I have, &c.,
E. J. STATHAM.

No. 4.

ROAD SUPERINTENDENT STATHAM TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 12 August, 1871.

SIR,

In accordance with your instructions, I have visited and taken sections* for Bridge at Loddon * Separate Appendix A.
River.

The traffic at present crosses the river by a ford, which is easy of access, and otherwise favourable in dry weather; but the mail is frequently delayed there for two or three days in flood-time, when the attempt to cross is most dangerous.

There is a fall of about four feet at about a chain below the crossing, and a reach of about 300 yards in length extends above the crossing to another fall of four or five feet in height.

No timber comes down in flood-time, as the source of the river is in swamps, distant about three miles from the ford.

The whole formation is sandstone rock, covered near creek by a thin deposit of drift sand.

No advantage as regards the banks is to be gained by adopting a site remote from the crossing-place, above or below; I have accordingly taken the section at a point about half a chain up stream from the ford, so as to come in well with the line of road at present formed, and to have uninterrupted access to the ford, which, in dry weather, will doubtless be taken in preference to going over the Bridge.

Four spans of forty feet will be sufficient to clear the current as far as requisite in flood-time. The difference on Sydney side is evidently dead water in flood, as the ground is covered with small drift.

From proposed abutment on Wollongong side no danger need be apprehended from flood, as a ridge runs from thence up stream in such a way as to protect it from any current, and leave still water.

Timber is abundant at a distance of two miles; on the mountain above Bulli there is excellent black-butt and abundance of turpentine. These are the only two timbers to be had. The trees run very large, and attain the best state of maturity when they are from 18" to 24" diameter, mean diameter. I would therefore recommend that only two piles should be used in a bay, these being 20" at small end, with 18" x 18" capsill.

The piles could be put four feet into rock, with holes increasing in size towards the bottom, and filled in with Portland cement concrete; the thick end of pile being down would be equivalent to lewising.

A bridge of this description, with 14 feet roadway, and similar to that at Mullet Creek, would cost, with approaches, about £500.

I have, &c.,

E. J. STATHAM.

No. 5.

ROAD SUPERINTENDENT STATHAM TO THE COMMISSIONER AND ENGINEER FOR ROADS.

Sydney, 12 August, 1871.

SIR,

I beg to transmit herewith section* taken at King's Falls.

In ordinary weather no difficulty is experienced in crossing at this place, but it is extremely dangerous in flood-time, and frequently causes a stoppage of mail communication. * Separate Appendix B.

For a considerable distance above the crossing, and to the fall, which is situated about 100 yards below it, the creek has a uniform and easy fall of about 3 inches in the chain. The strength of current in main channel is evidently considerable, but a 40-foot span will give sufficient opening there.

Provision has to be made for encroachment of bank on Sydney side, which is breaking away every flood. The whole formation is sandstone rock.

Two central spans of 40 feet, and two end spans of 25 feet, will be sufficient to clear the current as far as necessary in flood-time. Beyond the proposed abutment on Wollongong side, no danger need be apprehended to approaches, this part being embayed by a ridge of rocks. Up stream of it there is no indication of flood disturbance on surface or fallen timber.

The site selected for section is about half a chain below the present crossing-place, so as to leave access to ford during construction of bridge and afterwards.

The timber in the neighbourhood is ironbark, mahogany, and box. Great care will be necessary to guard against the introduction of white gum and spotted gum, which is abundant and of good growth. The timber is mostly on private ground, and proprietors are unwilling to part with it, except at high prices, and the work will in consequence be at a much more expensive rate than for that at the Loddon. I think the piles and capsills will have to come from the Wollongong mountains; they should be specified either ironbark or turpentine.

I would recommend two piles to a bay, and 18 in. x 18 in. caps, as suggested for Loddon River.

The cost of this bridge, with approaches, will be about £490, if done similarly to bridge at Mullet Creek.

I have, &c.,

E. J. STATHAM.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RANKIN'S BRIDGE.

(PETITION, RELATIVE TO LOSS OF WAGES—CERTAIN TRADESMEN.)

Ordered by the Legislative Assembly to be printed, 18 December, 1872.

To the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Tradesmen and others,—

HUMBLY SHOWETH:—

That your Petitioners were for a period of eight weeks engaged at work on Ranken's Bridge, now in course of construction over the Macquarie, and that the sub-contractor failed to pay them their wages, thereby causing great loss and inconvenience to your Petitioners.

That your Petitioners have applied to the Contractors and also to the Hon. the Minister for Public Works for payment of the wages due, but have failed in either case to elicit a promise of payment. Therefore your Petitioners humbly pray that your Honorable House will cause due inquiry to be made, so that your Petitioners may be relieved from their present loss.

And your Petitioners will ever pray.

[*Here follow 9 Signatures.*]

1872-3.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BRIDGE OVER THE M'INTYRE RIVER.

(PETITION FOR—INHABITANTS OF INVERELL.)

Ordered by the Legislative Assembly to be printed, 17 January, 1873.

To the Honorable the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Business-people, Miners, and Residents of Inverell,—

HUMBLY SHOWETH:—

That your Petitioners reside in a district peculiarly favoured by nature, as evidenced in the great fertility of the soil and the large area of land brought under profitable agriculture, in the well-known extensiveness of the wool-growing and stock-raising pursuits, and last but far from least, in the unparalleled richness of the Tin Mines lately discovered and being rapidly developed—which latter promises speedily to attract to the Colony a large proportion of the mining capital of the World; amongst all of which interests Inverell is generally recognized as the central township.
