1884	142	203	65	563	48	379

NOTE.—The Public Examinations are similar to the *Middle Class* Examinations of Oxford and Cambridge. They are held annually, in November, and are intended to test the qualifications of boys attending schools or being instructed privately. They are divided into Senior and Junior, and certificates of competency in the several subjects of examination are given to the successful candidates. These examinations are *distinct* from the examination for the Civil Service.

Act of Council under which levied.	SPECIFICATION OF TAXES, DUTIES, &c.— <i>continued.</i>	Authority under which originally established.	At what Period.
	<p style="text-align: center;">STAMP DUTIES—<i>continued.</i></p> <p style="text-align: center;">EXEMPTIONS.</p> <p>Any agreement or memorandum for the hire of any labourer, artificer, manufacturer, or menial servant.</p> <p>Any agreement or memorandum made for or relating to the sale of any goods, wares, or merchandise.</p> <p>Any agreement or memorandum made between a master and any mariner of any ship or vessel for wages, on any voyage coastwise from port to port, in the Colony of New South Wales.</p> <p>Any Debenture or Treasury Bill issued by the Government of New South Wales.</p> <p>Any draft or order for the payment of money issued by any duly authorized officer of the Government on account of the Public Service.</p> <p>Any draft or order for the payment of money, commonly called an advance note, issued by a master of a ship or vessel in favour of a seaman.</p> <p>Any instrument relating to the service of an apprentice, clerk, or servant.</p> <p>Any Customs bond.</p> <p>Any Administration bond.</p> <p>Any bail bond.</p> <p>Any bond to the Crown for the safe custody of an insane person.</p> <p>Any bond on appointment of a special bailiff.</p> <p>Any mortgage of real property, or mortgage given by way of bill of sale, or otherwise of live stock, goods, chattels, or effects, or personal estate generally, and any transfer, assignment, release, re-conveyance or discharge thereof, and every receipt indorsed on either or any of said documents for the consideration thereof.</p> <p>Any preferable lien under the Act 11 Victoria No. 4.</p> <p>Any lien on crops under the Act 26 Victoria No. 10.</p> <p>Any policy of insurance on life or on any public hospital or charitable institution.</p> <p>Any policy of insurance on the tools or implements of work or labour used by any working mechanic artificer handicraftsman or labourer by a separate policy in a distinct sum.</p> <p>Any policy whereby any Insurance Company or underwriter or association of underwriters may effect an insurance or transaction the original policy representing which may have already contributed to the stamp duty imposed on policies Provided that the fact of such policy being a re-insurance policy shall be expressed on the face thereof.</p> <p>Any receipt given for or upon the payment of money to or for the use of Her Majesty.</p> <p>Any acknowledgment by any banker of the receipt of any bill of exchange or promissory note for the purpose of being presented for acceptance or payment.</p> <p>Any acknowledgment by any person on receipt of money for the purchase of stock or shares in any Banking or Public Company.</p> <p>Any acknowledgment or receipt given by any labourer, artificer, or workman, for or on account of wages received by him.</p> <p>Any receipt written upon, or given for a bill of exchange or promissory-note duly stamped.</p> <p>Any receipt indorsed or otherwise written upon, or contained in any instrument liable to stamp duty, and duly stamped, acknowledging the receipt of the consideration-money therein expressed.</p> <p>Any receipt given by depositors on receiving deposits from any Savings Bank.</p> <p>Any acknowledgment given for money deposited in any Bank to be accounted for. Provided that this exemption shall not extend to acknowledgments for any sum carried to the credit of any depositor or shareholder in any Bank on any division of profits made by such Bank, or for or in respect of any dividend from any Joint Stock or other Company, on the same being deposited by any person to the credit of any other person in any Bank, or for or in respect of any sum paid to the credit of any person in any Bank for rent or interest by any other person, or for or in respect of any sum deposited, which would be liable to duty if paid directly by any person to any other person.</p> <p>Any receipt given in anticipation of a Bill of Lading, and not to be used in lieu thereof.</p> <p>Any instrument of appointment relating to any property in favour of persons specially named or described as the objects of a power of appointment, created by a previous settlement, duly stamped in respect of the same property, or by will, where probate duty has been paid in respect of the same property as personal estate.</p> <p>Any instrument for the sale, transfer, or other disposition of any ship or vessel, or any part, interest, share, or property of or in any ship or vessel.</p>	<p>44 Vict., No. 3..</p>	<p>25 June, 1880.</p>

Act of Council under which levied.	SPECIFICATION OF TAXES, DUTIES, &c.— <i>continued.</i>	Authority under which originally established.	At what Period.
	<p style="text-align: center;">STAMP DUTIES—<i>continued.</i></p> <p style="text-align: center;"><i>EXEMPTIONS—continued.</i></p> <p>And any copy of rules or power, warrant, or letter of attorney granted by any trustee of any Friendly Society within the meaning of Part III of the "Friendly Societies Act of 1873," for the transfer of any share in the Colonial Funds or Debentures, standing in the name of such trustee, or any order or receipt for money contributed to or received from the funds of any such Society, by any person liable or entitled to pay or receive the same by virtue of the rules thereof, or any bond to be given to, or on account of any such Society, or by the treasurer or any officer thereof, or any draft or order, or any form of policy, or any appointment of an agent, or any certificate or other instrument for the revocation of any such appointment, or any other document whatever required or authorized by the rules of any such Society, shall be exempt from all stamp duties.</p> <p style="text-align: center;">SCHEDULE II.</p> <p style="text-align: center;"><i>Duties on the Estates of Deceased Persons.</i></p> <p style="text-align: center;">Part I.</p> <p>1. Probate of Letters of Administration to be granted in respect of any such Estate on every £100 or part thereof, 1 per cent.</p> <p style="text-align: center;">Part II.</p> <p>2. Settlement of property taking effect after death of settlor. Same duties as under Part I.</p> <p style="text-align: center;">SYDNEY BRANCH OF THE ROYAL MINT.</p> <p style="text-align: center;">RECEIPT AND COINAGE OF GOLD.</p> <p>1. Gold for coinage will be received at the Mint daily, between the hours of 11 a.m., and 3 p.m., Saturdays and holidays excepted.</p> <p>2. Each parcel of gold for which a separate assay is required will be treated as a separate deposit.</p> <p>3. The value of each deposit will be determined upon the reports of the Mint Assayers on its assay after melting, and computed on decimal assay reports of gold to the 1000th part, and of silver to the 100th part.</p> <p>4. The whole of the gold contained in a deposit will be accounted for at the rate of £3 17s. 10d. the ounce, standard, and all silver in excess of two per cent. at the rate of four shillings the ounce, fine.</p> <p>5. The following will be the charges for melting, assaying, and coining, which will be deducted from the gross value of the deposit as above defined.</p> <p>A.—On gold raised in New South Wales—</p> <p>(1.) In deposits of less than five hundred ounces, standard, at the rate of sixpence per ounce,—six shillings being charged for a deposit under twelve ounces.</p> <p>(2.) In deposits of five hundred ounces and over, but less than five thousand ounces, standard, at the rate of four pence per ounce.</p> <p>(3.) In deposits of five thousand ounces, standard, and over, at the rate of two pence per ounce.</p> <p>B.—On gold certified to be the produce of any other country—</p> <p>A reduction of one penny per ounce in the above charges will be made,—five shillings being charged for a deposit under twelve ounces.</p> <p>6. Light Gold Coin of the Realm in parcels of £50 nominal value and upwards will be received for recoinage free of charge.</p> <p>7. Deposits received up to noon on Wednesdays will be payable by the following Tuesday. Deposits received after that time, by the following Tuesday week.</p> <p>8. Deposits which may be found to be unsuitable for coining will either be returned to the depositor, or be subjected to an extra charge for special treatment.</p> <p>9. Gold and silver bullion will be prepared for issue when required,—gold at £3 17s. 10d. the ounce, standard, and silver at five shillings the ounce, fine.</p>	44 Vict., No. 3.	25 June, 1880.
Governor and Executive Council. 1st Oct., 1879.		H. M. Order in Council of 19th August, 1853.	
42 Vict., No. 19 (1 July, 1879).	<p style="text-align: center;">BONDED WAREHOUSES.</p> <p>Occupier of any Warehouse not containing more than 50 tons £50 per annum</p> <p>And for every additional 10 tons, the further duty of £1 do. not exceeding £300.</p>	20 Vict., No. 21..	23 Feb., 1857

	<i>Press Messages.</i>		
	Press messages may now be sent to the United Kingdom at the rate of 6s. 7d. per word. By "Press messages" are meant messages addressed to newspapers duly published in accordance with the respective laws relating to the publication of newspapers in force in the United Kingdom, or the Colonies, or countries in which they are respectively published, and intended in good faith for publication in full in such newspapers, and shall include only such as are intelligible and written in English, in plain language, and without the use of cypher, code, groups of figures, or letters or words of concealed meaning.		
	<i>Government Messages.</i>		
20 Vict., No. 41	Government messages may be sent to the United Kingdom at the rate of 8s. per word. By "Government messages" is meant messages sent from or to Her Majesty, Her Majesty's Principal Secretary of State for the Colonies, or any Government Department in the United Kingdom, or the respective Agents-General for the Colonies of New South Wales, Victoria, South Australia, and Western Australia, on the one hand, and the Governors or Chief or Colonial Secretaries of or any Government Department of the various Governments on the other, or any of them, on matters relating to the administration of the Governments.

AGRICULTURE.

No. 123.—ABSTRACT RETURN OF AGRICULTURE for the Year ending 31st March, 1885, showing the Number of Holders of Land of 1 acre and upwards, the extent of Holdings, distinguishing Freeholds from Leaseholds (exclusive of lands leased from the Crown), together with the Acreage under the different kinds of Crops, and the Produce thereof in each Electoral District of the Colony.

Table with columns for Electoral District, Land Holdings (Freehold, Leasehold), Crops (Wheat, Maize, Barley, Oats, Rye, Millet, Potatoes, Tobacco, Sorghum & Lupines, Sugar-cane, Sown Grasses, Vineyards, Oranges), and Produce (Wheat, Maize, Barley, Oats, Rye, Millet, Potatoes, Tobacco, Sorghum & Lupines, Sugar-cane, Sugar produced at the Mill, Arrowroot, Hay, Wine-making, Table use, Vines unproductive, Fruit obtained). Rows list various districts like Albany, Argyle, Balmain, etc., and a General Total at the bottom.

AGRICULTURE—continued.

ANNUAL REPORT.

TO THE HONORABLE JOSEPH PALMER ABBOTT, ESQ., M.P., SECRETARY FOR MINES, &c., &c.

Sir,

I do myself the honor to submit to you the following Report upon the progress of Mining and the results of our Mining industry for the year 1884, together with some facts concerning the working of that branch of your Department charged with the administration of the Mining Acts and the Regulations thereunder.

Before proceeding with my report I may, however, be permitted to refer briefly to the Acts which have during the year been passed to amend the Mining Act of 1874.

During the year two Acts have been passed to further amend the Mining Act of 1874, the objects of the first of these Acts being to give power to the Governor to grant leases of Reserved Crown lands to remove doubts as to the power under the "Crown Lands Alienation Act of 1861" to make reserves for mining purposes, also to provide for the amalgamation of gold-mining leases, and the granting of special leases for gold-mining. This Act is likely to benefit the mining interest in regard to mining under Reserves by substituting a secure title for the very unsatisfactory title conferred by "permit" or "authority" under section 27 or 28 of the Mining Act; and the lease, while giving greater security of tenure to the lessees, enables the Government to insert such conditions as are necessary to protect the surfaces of the reserves for the purposes for which they are severally set apart, and at the same time to enforce the proper working of mineral deposits, and the due payment of the rents and royalties reserved. The power to amalgamate gold leases supplies a want long felt, and the power to grant special gold-mining leases will doubtless encourage the working on a large scale, and under the most approved conditions, areas of abandoned auriferous ground which will no longer yield profitable employment to the individual miner unaided by proper appliances.

The other Act is designed to enable the Governor by proclamation to cure defects which frequently occur through accident, insufficient information, or inadvertence in taking possession of or applying to lease lands for mining purposes, and will obviate the necessity for refusing applications which but for this Act could not have been granted owing to technical defects.

As I am on the subject of alterations of the Mining laws, I shall perhaps be pardoned for anticipating events so far as to refer to some alterations in the mode of applying for mineral leases which have been effected by Regulations passed in the early part of this year (1885). The most important of these has been made with the object of preventing the monopoly of mineral lands by the erection of pegs and fictitious notice-boards. And it is hoped that the regulation which requires any person who takes possession of mineral land under the Leasing Regulations to lodge forthwith in the Warden's office an application to lease such land, and to deposit therewith the first year's rent; having thus given evidence of his *bona fides* he is to be supplied by the Warden or other authorised officer with a notice duly verified, to be placed on the land indicating that it is the subject of an application to lease, and the absence of such a notice may be regarded as conclusive evidence that the land pegged out has not been lawfully taken possession of under the regulations relating to mineral leases. Another alteration has been made in regard to holdings under mineral license, whereby an area not exceeding 10 acres may be occupied for working minerals, and two or more such areas may be amalgamated, provided they be surveyed. These titles can be made locally and subject to conditions similar to those affecting claims, &c., held under miner's rights.

The number of applications to lease Crown Lands for mining purposes, made during 1884, viz., 1,777, exceeds the number of such applications in 1883 by 983.

Of the 1,777 applications so made, 481 were for auriferous land, 1,296 for mineral land.

The number of applications dealt with during 1884 was 1,423, which, as compared with the number dealt with in 1883, viz., 1,194, shows an improvement in the working of the branches engaged upon this part of the work of the Department. And though there is still room for further efforts on the part of the officers in charge of these branches, I have such confidence in their zeal that I quite believe they will not rest until they have cleared off all arrears, and introduced a system under which the delays in dealing with applications to lease shall be reduced to a minimum. It is only fair to these gentlemen (Mr. Pittman, Chief Mining Surveyor, and Mr. Binny, Registrar) to call attention to the fact that the number of applications dealt with in 1884 as compared with 1882 (Mr. Pittman having been appointed Chief Mining Surveyor in 1883) shows an increase for the year of 527.

Of

Of the 1,423 applications dealt with in 1884, 722 were for Gold-mining leases, comprising an aggregate area of 4,788 acres—the number dealt with exceeding the number made during the year by 241—and 701 were for mineral leases, comprising an area of 27,862 acres. This number unfortunately falls far short of the number of applications made during the year. Of course the past year has been an exceptional one as regards the quantity of land taken up for mining purposes; but it has been, and shall continue to be, my aim to bring the staff of the Department to such a state of efficiency that any such increase of work may be readily overtaken, and only in very exceptional cases shall more than two months be required to dispose of an application to lease.

The following table shows the quantity of land applied for to lease during the year 1884, and the minerals to be mined for therein:—

Minerals.	Area.	Minerals.	Area.
	Acres.		Acres.
Gold	3,084	Manganese	60
Antimony	268	Silver	12,655
Asbestos	20	Silver and bismuth	40
Coal	2,625	Silver, copper, and lead	520
Coal and shale	280	Silver and lead	19,519
Cobalt	40	Silver, lead, and tin	520
Copper	705	Silver, lead, tin, and copper	80
Copper and silver	700	Silver and tin	80
Diamonds	2,450	Slate	120
Galena	40	Tin	6,261
Lead	160	Minerals not specified	80
		Total	50,807

The aggregate area of land applied for to lease in 1884 exceeds the area applied for in 1883 by 28,760 acres. The increase is chiefly due to the large area of land applied for to mine for silver and silver and lead ore, also in a less degree to the increased area for gold and for diamonds.

The following table shows the area of land held under application to lease, 31st December, 1884:—

Minerals.	Area.	Minerals.	Area.
	Acres.		Acres.
Gold	2,579	Manganese	40
Antimony	170	Silver	9,955
Coal	1,965	Silver and bismuth	40
Coal and shale	420	Silver, copper, and lead	520
Cobalt	60	Silver and lead	19,584
Copper	640	Silver, lead, and tin	680
Copper and tin	20	Silver, lead, tin, and copper	80
Copper and silver	180	Silver and tin	80
Diamonds	1,110	Slate	60
Galena	40	Tin	4,387
Lead	160	Total	42,770

The aggregate area of land under application to lease at the end of 1884 exceeds the area so held at the end of 1883 by 17,657 acres.

The following table shows the area of land held under lease and the minerals to be mined:—

Mineral.	Mining Act, 1874.			Mining Act Further Amendment Act, 1884.			Gold-fields Act, 1866.			Crown Lands Occupation Act, 1861.			Total.		
	a.	r.	p.	a.	r.	p.	a.	r.	p.	a.	r.	p.	a.	r.	p.
Gold	2,847	3	11	44	0	4	2,891	3	15
Antimony	140	0	0	140	0	0
Bismuth	20	0	0	20	0	0
Coal	2,849	3	0	4,679	2	0	7,529	1	0
Coal shale and iron	100	0	0	100	0	0
Cobalt	40	0	0	40	0	0
Copper	1,006	2	0	160	0	0	1,166	2	0
Copper and silver	100	0	0	100	0	0
Diamonds	867	0	0	867	0	0
Kerosene shale	640	0	0	640	0	0
Limestone	40	0	0	40	0	0
Manganese	105	0	0	105	0	0
Slate	453	3	0	453	3	0
Shale, copper, &c.	40	0	0	40	0	0
Silver	300	0	0	240	0	0	540	0	0
Silver and lead	2,190	0	36	2,190	0	36
Silver, lead, and copper	40	0	0	40	0	0
Tin	11,221	2	14	1,200	0	0	12,421	2	14
Not specified	20	0	0	157	1	33	177	1	33
	23,021	2	21	240	0	0	44	0	4	6,196	3	33	29,502	2	18

2,684 yards river-bed.

The aggregate area under lease at the end of 1884 is less than the area so held at the end of 1883 by 8,857a. 2r. 5p. The number of applications under section 28 of the Mining Act, 1874, for permission to mine under reserves received during 1884 was 404, a slight increase upon the number for 1883. In view of the Act 48 Vic. No. 10, the number of such applications will probably diminish henceforth. The number of such applications dealt with during the year was 423, less by 95 than were disposed of in 1883. I trust soon to see the whole of the applications of this description now under consideration cleared off.

The following table shows the areas of Reserves, &c., comprised in authorities granted under section 28 during 1884, and the minerals to be mined thereunder :—

	acres.
Coal	15,158
Coal and shale	12,372
Coal, iron, &c.	640
Tin.....	1,378
Silver.....	2,028
Silver and lead.....	15
Copper	654
Gold	160
Diamonds.....	4
	<hr/>
	32,409

In the bulk of the cases the authorities in respect of the above areas had not actually issued prior to 31st December last.

The aggregate area comprised in the authorities granted in 1884 is less by 13,404 acres than in 1883.

The following table shows the areas comprised in authorities issued under section 28 prior to 1884, and still in force, and the minerals to be mined thereunder :—

	a.	r.	p.
Coal	56,440	1	0
Coal and shale	10,750	0	0
Shale.....	8	2	32
Tin.....	188	0	10
Copper	2	2	0
Limestone.....	10	0	0
Bluestone and gravel	12	0	0
Gold	277	2	38
	<hr/>		
	67,689	1	0

The following table shows the areas comprised in authorities, which were in force on the 31st December, 1884, and the minerals to be mined thereunder :—

	a.	r.	p.
Coal	81,416	0	0
Coal and shale	15,410	0	0
Shale.....	8	2	32
Tin.....	193	3	27
Copper	25	1	12
Copper and silver	2	2	16
Limestone.....	10	0	0
Bluestone and gravel	12	0	0
Cobalt and nickel	45	2	0
Antimony.....	2	1	28½
Marble	5	0	0
Gold	336	3	39
	<hr/>		
	97,468	1	34½

The aggregate area held under such authorities in force at the end of 1884 exceeds the area under such authorities at the end of 1883 by 21,293 acres.

In the months of February, May, July, and October, particulars of gold and mineral leases in force in the several Mining Districts were published in the Government Gazette, so that the public may know what lands are so held, and the conditions attached to such holdings. A return of the holdings under the 28th section of the Mining Act to the end of 1884 has also been published, in pursuance of an order of the Legislative Assembly.

In addition to the areas held under leases and authorities respectively, considerable areas are occupied under miners' rights, mineral licenses, and mineral conditional purchases. Fortunately the Crown Lands Act of 1884 has to a very great extent, if not altogether, put an end to the conditional purchase of Crown lands for mining purposes. This, I venture to think, cannot fail to have a beneficial effect upon the mining industry, because it will enable this Department to enforce the labour conditions of mineral leases without fear of the lessees seeking refuge from such action in the purchase of the land. Of course it is necessary that the power thus conferred upon this Department be used with discretion, so as not to cripple the efforts of lessees who are, from adverse circumstances, temporarily prevented from working the lands demised to them; at the same time it is desirable that vigilance be exercised to prevent the locking up of mineral land for purely speculative purposes to the prejudice of those who are ready and willing *bona-fide* to work it.

GEOLOGICAL SURVEY.

The Geological Surveyor in charge, Mr. C. S. Wilkinson, F.G.S., F.L.S., besides attending to Departmental work in Sydney, has inspected the iron ore deposits in the Fitzroy, Berrima, and Goulburn districts, where considerable deposits of brown hematite and magnetic iron ore exist, together with limestone, convenient for carriage to the coal deposits on the Southern Railway. He also examined the coal seams near Meryla and Jordan's Crossing, at the head of the gullies which fall into the Shoalhaven.

In July he inspected and reported upon the silver lodes in the Barrier Ranges. Eighty-one lodes were examined, none of which had then been worked below the water level. The ore in the lodes was found to be very variable, consisting chiefly of brown iron ore, containing argentiferous galena and carbonate of lead, with chloride and chlorobromide of silver. Mr. Wilkinson points out that below the water level the ore will change into a more regular occurrence of the sulphides of iron, lead, and silver, and that the lodes will continue to great depths. He is of opinion that many more lodes will be discovered, and that silver mining in this part of the Colony will become an important and permanent industry.

Copper, tin, bismuth, manganese, and iron lodes, as well as gold-bearing reefs, have also been opened. These are indicated upon a map of the district, which shows how large an area is occupied by the metalliferous formations.

Mr. Wilkinson examined and reported upon the coal measures and iron ore deposits of the Maitland, Branxton, and Singleton districts. Though iron ore occurs in numerous places, yet the deposits are too small to be profitably worked. He also examined the country to the west of Lake Macquarie, throughout which the upper coal measures of the Newcastle coal-field extend.

The cinnabar deposits on the Cudgegong River, 5 miles west of Rylstone, were inspected. They are found to occur in tertiary drift and clays and associated with gold. The Geological Surveyor is of opinion that the cinnabar has been formed by thermal springs, and that the deposits should be further prospected.

During the course of the year a geological examination of the Vegetable Creek district, commenced in the preceding year, has been completed by Mr. T. W. E. David, and a map, sections, and diagrams have been prepared, illustrative of the mining resources, as well as of some of the principal geological features of that district.

The map is accompanied by a general geological report, giving a detailed description of the lodes and deep leads.

The tin lodes are considered as likely to prove permanent to great depths; and out of a number of over thirty lodes shown on the map, several of the larger ones will probably soon be worked to advantage. An interesting addition to the knowledge of the mineral resources of the district has been made by the discovery in July of an extensive silver lode in the Little Plant Creek, 7 miles north-west of Emmaville. A report on this lode has already been published. The land of most immediate commercial value to miners is that which is coloured on the map as basaltic, covering the tin gravels.

The map shows that there are in all probability six principal leads, of which two only, viz., the Vegetable Creek and Graveyard Leads, have been at all extensively worked.

The shape and area of the leads are defined on the map and levels given at the most important points along their course, so as to form some guide to miners as to the probable depth to which shafts would have to be sunk to reach the channel or "gutter," supposing it to lie under these points.

A seam of coal about 30 feet thick, discovered some years ago at Frazer's Creek Station, near Ashford, has been reported on by Mr. David. This seam is about 14 miles west of the western margin of the Vegetable Creek Tin-fields, and an analysis of some of the coal shows it to be suitable for smelting purposes.

The work performed by Mr. David is in every respect highly satisfactory, and he has proved himself an able successor to Mr. H. Y. L. Brown.

During the year 664 assays and analyses of samples from untried deposits were made by the Department, with a view of promoting mining interests by the development of new fields, the result being that a considerable number of payable deposits have been revealed in different parts of the Colony.

The great increase in the number of such tests has resulted from the impetus given to prospecting by the discovery of several payable deposits of argentiferous ores, such as in the Barrier Range, Mitchell and Emmaville districts.

During the year 130 donations were received for the Mining and Geological Museum, many of them embracing large collections. The number of specimens registered amounted to 4,393, making the total to date 13,762.

Numerous

Numerous collections of minerals and fossils have also been made by the Geological Surveyors, the Inspector of Mines, and other officers of the Department.

215 donations were received for the Library, amongst them valuable works of reference from the Geological Survey Departments of Canada, India, and the United States, the Academy of Freiberg, and the Danish Government.

A collection of specimens of fossil leaves, etc., from the lower Tertiary deposits of New England was forwarded to Professor Dr. Constantin F. Von Ettingshausen, of Graz, Austria, to be figured and described.

Small collections of minerals and fossils were arranged for the Technical Board, and for the Hon. J. Macintosh, M.L.C., for transmission to Scotland.

A fair display was made of blocks of ores on a trophy stand, and minerals and fossils in glass cases, together with mining and geological maps, photographs, etc., for the Wealth and Industrial Exhibition of New South Wales.

No space has been available for displaying any of the specimens now in hand, nor for the sorting and preparation of the exchange and promised collections of the Department; but as a temporary structure, to serve for such purposes, has been commenced at the rear of the Head Office, it is expected, early in the coming year, to be able to arrange a typical collection of minerals and fossils for public inspection.

Mr. Carne has ably discharged the duties of Curator under no ordinary difficulties, and it is to be hoped that ere long temporary facilities may be provided for even a limited display of the valuable collection of minerals in his charge.

During the year considerable attention has been paid to increasing the facilities for viewing the several caves.

Additional improvements have been made in the Jenolan Caves (formerly called Fish River Caves) rendering them more accessible for visitors. Arrangements are being made for illuminating the caves by the electric light, so that the interior may be seen to greater advantage, and that the stalactites may be preserved from discoloration caused by the smoke of the numerous candles that are now used. A waterfall near the caves will be utilised for the motive power required for the electric light apparatus. Two new caverns have been reported by Jeremiah Wilson, the keeper of the Jenolan Caves, but they have not yet been fully explored.

At the Wombeian Caves some improvements have also been made, such as new ladders, guard rails, cutting steps, &c., so that visitors can inspect them with greater convenience and safety. The natural beauties of the Wellington caves have been destroyed many years ago; but these caves are of special scientific interest, as the deposits of red earth in them contain numerous remains of extinct animals; on this account they will be preserved for exploration.

Mining Surveys.

During the year 1,188 surveys were made for this Department by thirty-two surveyors, of whom six were paid partly by salary and partly by fees, the remaining twenty-six being paid by fees only. The number of surveys made during 1884 as compared with the number made in 1883 shows an increase of 568, which may be regarded as evidence of the zeal with which Mr. Pittman, the Chief Mining Surveyor, performs his duties. The following work was also performed under his direction by the Charting Branch.

Locality maps compiled and published during the year:—

Map of the parish of Aston.	
" Stephen (part of).	
" Tent Hill. Second edition.	
" Highland Home. "	
" Strathbogie North, &c. Second edition.	
" Herbert. Second edition.	
" Mayo. "	
" Darby. "	
" Annandale. "	
" Bomangaldy and Bray (part of).	
Map of Barrington Gold-field. Third edition.	
Map of the parish of Tianga.	
" Albert (part of)	
" Arvid. Second edition.	
" Strathbogie. "	
" Scone. "	
" Clare. "	
" Cope's Creek. "	
" Swinton. "	
North-west part of County Buller. "	

A map of the silver mining country in the Barrier Ranges was prepared for the Geological Branch. A map of the gold and mineral leases at Sunny Corner was compiled.

The following compilations were made for office use only, viz., gold leases at Burrangong Creek, gold and mineral leases at Milburn Creek, gold and mineral leases at Gara Falls, plan of the parish of Telerare.

A total of 148 copies of maps have been charted up and coloured to show leases in force to date. These have been forwarded for public inspection at the various Wardens' Clerks and Land Agents' Offices in the New England District, and to the District and Mining Surveyors.

4,890 papers (miscellaneous) have been received in the Branch, including 1,436 applications to lease; of these applications 1,100 have been dealt with.

The following is a list of Mining Maps in use, and which have been published by the Department:—

No.	Press.	Parish or Locality.	Sec Note.	County.	Mining District.	Published.
		Parish of Tent Hill. Second edition	F	Gough	New England.

was 12s. 10d. per foot. In comparing the cost of boring in one locality, or during one period with another, it is difficult to form a correct estimate of the results obtained, as there are so many circumstances to be taken into consideration, such as differences in character, and condition of the strata to be pierced, &c. Of course the so-called working cost does not represent the actual cost per foot. The cost to the Department, exclusive of additions to plant, depreciation of plant, and interest on capital invested, is 15s. 1·04d. per foot. The cost to the persons for whom the boring was done equals 13s. 5·95d. per foot, but in respect of 336 feet bored, a concession was made in terms of the regulations, amounting to £153 5s.

The seams of coals bored through in 1883 equalled in the aggregate 109 feet 3½ inches, while in 1884, 156 feet of coal was bored through.

During the year 1884 nine water augers were employed boring for water, and an aggregate of 2,603 feet have been bored at a total cost to the Department (exclusive of plant, new additions, interest on capital, &c.) of £4,834 11s. 7d., equal to (say) £1 17s. 0d. per foot.

The Superintendent estimates the working cost per foot of bores put down on stock routes at £1 7s. 7½d., and the working cost of bores put down for private individuals (who provide some of the labour) at £1 0s. 11½d. per foot. The full cost of the former to the Department (including cost of constructing tanks, but exclusive of cost of additions to plant, depreciation of plant, and interest on capital) was £2 6s. 9½d. per foot, and the cost (as aforesaid) of the latter to the Department was £1 3s. 2½d. per foot, and to the persons for whom the work was done (exclusive of the labour they supplied), 10s. 1½d. per foot.

There can be no doubt that the work of searching for water in the interior has been carried on under very serious difficulties, and due allowance being made therefor, the results obtained are not unsatisfactory. With better seasons, and under such circumstances as will admit of the Superintendent devoting more time to the supervision of the work in the field, I have every confidence that highly satisfactory results will be obtained, and the employment of the augers will prove of the greatest public benefit.

I have not had an opportunity of verifying the information in the water map and the Index to Wells, but they will no doubt receive attention from the scientific officers of the Department, and any defects or inaccuracies that exist will be remedied in future.

The Superintendent of Drills, and the Clerical Officers of the Branch, have been most zealous in the performance of their duties during the year.

ROADS, STREETS, AND GATES.

The officers of this Branch under the direction of Mr. G. E. Herring, the Chief Clerk of the Department, have done good work during the year, as will be seen by the following statement.

The following is a Comparative Statement of the work performed in the Roads Branch for the year 1884, and the years 1882 and 1883 :—

	1882.	1883.	1884.
Number of papers registered	4,161	5,260	5,520
Number of letters written.....	2,146	2,502	2,695
New roads and streets	194	320	263
New gates	83	70	87
Number of plans sent to Executive Council	202	359	249
Tracings and Books of Reference sent away.....	160	354	273

Besides the above, returns for Parliament are prepared in this Branch; this year they have been large in number compared with other years, and also more voluminous. The advertising work for Mines, Roads, and Drills is also done in this branch and occupies the greater part of the time of one clerk. Extraneous work is occasionally done in the branch, and it affords me much pleasure to testify to the efficiency of Mr. Ormiston and the other gentlemen in this branch, and their readiness at all times to undertake any work required of them.

MINERAL PRODUCTS.

In Greville's Year Book for 1885 the value of the mineral products of all the Australian Colonies (not including New Zealand) to the end of 1883 is set down at £312,837,365, the value of the output for that year being £3,374,898, towards which New South Wales contributed £3,204,901. The value of the output

output in this Colony in 1884 was only £3,003,831, which shows a decrease as compared with 1883 of £201,070; this is largely due to the low price of copper and tin, by reason of which not only is the production of these minerals retarded, but the money value of the reduced output is less per ton than last year. And we had not in 1884, except to a very trifling extent, begun to reap any benefit from the discovery of the extensive and apparently rich deposits of silver in the various parts of this Colony. When provision shall have been made for treating these ores locally, this Colony will become one of the great silver producing countries of the world.

The export of minerals in 1883 had reached £2,433,828, whereas the value of our mineral exports in 1884 was only £2,250,171, showing a decrease of £183,657 due to the causes referred to above.

The following table shows the aggregate value of Minerals, the produce of New South Wales, for the years 1883 and 1884 respectively compared:—

Minerals.	Quantity.		Value.		Quantity.		Value.		Increase in value.		Decrease in value.	
	1883.		£ s. d.		1884.		£ s. d.		£ s. d.		£ s. d.	
Gold	123,805·58	ozs.	458,508	16 0	107,193·92	ozs.	395,291	12 5	63,217	3 7
Silver	77,065·90	„	16,488	0 0	93,660·25	„	19,780	0 0	3,292	0 0
Coal	2,521,457·05	tons	1,201,941	12 11	2,749,109·0	tons	1,303,077	0 0	101,135	7 1
Shale	49,250·00	„	90,861	10 0	31,618·0	„	72,176	0 0	18,685	10 0
Tin	9,125·25	„	824,552	0 0	6,665·45	„	521,587	0 0	302,965	0 0
Copper	8,957·35	„	577,201	0 0	7,305·20	„	416,179	0 0	161,022	0 0
Iron	3,434·13	„	26,908	0 0	3,759·12	„	24,571	11 2	2,336	8 10
Antimony	375·55	„	5,555	0 0	433·60	„	6,458	0 0	903	0 0
Bismuth	3·07	„	650	0 0	14·37	„	2,770	0 0	2,120	0 0
Mixed minerals	31·00	„	160	0 0	160	0 0
Silver lead ore	136·20	„	2,075	0 0	9,167·52	„	241,940	0 0	239,865	0 0
Manganese	„	4·0	„	40	0 0	40	0 0

From the above table it will be seen that there is a heavy decrease in the quantity and value of our output of gold, tin, copper, and shale, though the increase on our output of silver and silver ore more than compensates for the falling off in the value of our production of gold, copper, and shale in 1884. And the aggregate value of minerals in 1884 exceeds the decennial average by £542,673.

The following Return shows the quantity and value of Gold, Coal, Shale, Copper, Tin, Silver, Silver lead ore, Iron, Antimony, Asbestos, and Bismuth produced in the Colony of New South Wales during the last ten years:—

Year.	Gold.		Coal.		Shale.		Copper and Regulus.		Tin and Tin Ore.		Silver.		Silver Lead Ore.		Iron.		Antimony and Ore.		Asbestos.		Bismuth.		Mixed Minerals.		Total.							
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

The aggregate value of our mineral products to the end of 1884 is £64,068,584 14s. 8d.

I have much pleasure in once more recording my high appreciation of the services of Mr. Herring, the Chief Clerk, and Mr. Binny, the Registrar of the Department. The Accountant (Mr. Farr) has efficiently performed his duties, which are constantly increasing. To the Geological Surveyor, the Chief Mining Surveyor, the Wardens, the Inspector of Mines, and the Superintendent of Drills, I am indebted for assistance readily given at all times.

GOLD.

GOLD.

From the reports furnished by the Wardens and Mining Registrars, it appears that in most of the districts the effects of the late drought seriously retarded mining operations during the first half of the year, and almost entirely prevented any attempt at prospecting; added to this, the discovery of silver lodes in various parts of the Colony drew away numbers of miners from many of the gold-fields. In some of the older gold-fields no doubt many of the alluvial deposits have been so far exhausted that they no longer yield remunerative employment to the individual miner, though there are strong grounds for believing they would if worked on a large scale with suitable appliances prove profitable, and it is to be hoped that the facilities afforded under the Act 48 Victoria, No. 10, for leasing large tracts of abandoned auriferous lands will be extensively availed of, whereby profitable employment will be provided for a very large number of miners.

In the Bathurst district the Wardens and Mining Registrars report:—Mount M'Donald is at present the richest field for gold in the district, the total yield for the year, 5,815 oz. 6 dwt. 5 gr., being 1,814 oz. in excess of 1883; 3,494 tons of quartz crushed yielded 5,117 oz. 5 dwt. 3 gr. The satisfactory yields obtained from some of the mines has given quite an impetus to mining in the locality. The following are results from some of the principal crushings:—Woman's lease, 180 tons, 591 oz. 19 dwt.; Victoria Co., 84½ tons, 160 oz. 18 dwt. 8 gr.; Adelong Co., 87 tons, 193 oz. 10 dwt. 5 gr.; Butchers Co., 46 tons, 183 oz. 18 dwt.; Balmoral Co., 79½ tons, 1,206 oz. 13 dwt. 15 gr.; Eureka Co., 807 tons, 1,285 oz. 2 dwt. 23 gr.; Grant's, 603 tons, 540 oz.; Woolloomooloo, 88 tons, 207 oz. *Carcoar*.—In this division mining operations were more successful during the year though no new finds have been reported, the total yield for the year being 12,040 oz., which compares favourably with the two preceding years, the output for 1883 being 9,817 oz. 16 dwt. 12 gr., and for 1882, 6,599 oz. 4 dwt. 2 gr. From Galley Swamp in particular the returns have been very good. The shaft in the Prince of Wales mine at Burnt Yards has been sunk to a depth of 476 feet. The pyrites in this mine are very rich; a ton sent to England for treatment yielded 12 oz. of gold, besides silver. The yield of gold at the Brown's Creek mine continues good; 26,157 tons gave 4,521 oz. 5 dwt. *Mitchell's Creek*.—In this division there has been a falling off in the gold yield, partly due to the rush for silver lodes; only about 200 oz. obtained from alluvium and 300 oz. from quartz. At the Paddy Lackey claim, Dark Corner, 400 tons of quartz have been raised but not yet crushed. At Blackman's Swamp, near Limekilns, a rich vein of gold-bearing quartz has been struck by Sinclair and party. *Ophir*.—The prospectors are proving good coarse gold in Stoney Creek, about 5 miles from Ophir. Lucknow is again coming to the front, the New Reform Company's output for the year being £7,500. The Frederic's Valley Company are about starting on an extensive scale to work veins which formerly yielded very handsome returns. The Lumpy Head Company at Forest Reefs is still persevering, but has not yet reached the deep ground. The lead in the south-west end of the Great Extended mine is yielding about ½ oz. per ton. The Inspector of Mines says:—The Great Extended Company is working a lead 230 feet deep under basalt; the lead is 40 to 80 feet wide, the wash is 20 inches thick, and is cemented, requiring crushing. From the 14th January to 12th April, 1884, the Company crushed 858 tons, yielding 712 oz.

In the Tambaroora and Turon district the Wardens and Mining Registrars report:—At Hill End the quantity of gold sent by Escort during the year was 6,202 oz. 3 dwt. 3 gr. Carver and party have now reached a depth of 140 feet; the stone averages nearly 4 oz. per ton, country soft and easily worked. Scholbert and party on the same line south have obtained good stone at 130 feet, which averages 1½ oz. per ton. Myers and Northey, Specimen Gully, at several levels to a depth of 150 feet, have obtained stone which averages 3 oz.; the country is soft. Ackermann and party at Golden Gully have raised stone yielding 2½ oz. per ton, but the ground is patchy. Ellis and party at Tambaroora have had several crushings yielding 1½ oz. per ton. Christy and party, on the Independent Reef, had a crushing in December which gave 3½ oz. per ton—ground patchy. The Red Hill Company during the year crushed about 400 tons, average 2 oz. The following are some of the principal crushings:—Tonkin and Company, 170 tons, 350 oz.; Carver and Company, 421 tons, 1,605 oz.; Myers and Northey, 174 tons, 522 oz.; Perseverance Company, 50 tons, 170 oz.; yield of gold at Hill End for the year, 7,232 oz. 14 dwt. 2 gr. At Sofala the following crushings have been had during the year:—Crawford and party, 19 tons, 62 oz., vein 6 to 10 inches wide; Surface Hill, 14 tons, 23 dwt. per ton; Solitary Creek, 26 tons, 1 oz. per ton, vein 10 inches wide; Scott and Clarke's, vein 9 inches wide, 1 to 3 oz. per ton, average for year, 2 oz.; Perseverance Company, Solitary Reef, 1,263 tons, 723 oz., at 340 feet deep, vein 18 inches wide; Bullock Flat, 226 feet deep, vein 9 inches wide, 20 tons, 23½ dwt. per ton; yield for year in the division, 4,386 oz. 15 dwt. At Ironbarks the majority of the mines are idle for want of appliances to treat the pyrites in the reefs. A new reef has been discovered at Mookerawa by Halliday and party, which, so far as prospected, appears to be an immense blow, showing thousands of tons of quartz. A trial crushing gave 7 dwt.

per ton—287 tons quartz, crushed in the division, gave 174 oz. 4 dwt. The alluvial mines at Mookerawa are idle, although the Mookerawa Company is said to have obtained 400 oz. of gold, and the Junction Point Company, on the opposite side of the River, obtained 5 dwt. per load from a trial washing. Total yield for the division, 1,361 oz. 6 dwt. 3 gr. At Wellington mining very dull.

In the Mudgee district the Wardens and Mining Registrars report:—At Gulgong the output of gold for 1884 exceeds that of 1883 by upwards of 963 ozs., although most of the principal mines were engaged in preliminary work during the year. Rouse's paddock and several other mines on well known leads are in the possession of a Victorian Company, who are likely to thoroughly test them, having erected thereon very complete machinery. On the Star Lead Sweeney and party, after great difficulties, have reached the lead wash $4\frac{1}{2}$ feet in height. A trial washing gave 9 dwts. per load. The White Horse mine has been purchased by a Victorian Company, who raised 500 oz. of gold, but finding the underground works unsafe, have allowed the ground to settle down, and are sinking a new shaft. The wash as tested by boring is 31 feet in height. The Canadian and Mudgee Company, who commenced about May, 1883, had great difficulty in overcoming the water, and were not able to raise wash-dirt till towards the end of 1884. The average yield for the few weeks was 30 oz. per week; total yield, 440 oz. At old Appletree several parties are on payable wash; depth of sinking, about 20 feet; thickness of wash, 2 feet 6 inches; yield, 6 to 10 dwt. per load. The Rhobardah Company's mine contains a pyritous vein, samples of concentrated pyrites from which have been tested and have given very high yields. A parcel of 6 lbs., treated privately, is said to have yielded at the rate of 417 oz. of gold and 114 oz. of silver per ton. Samples of the ore are to be sent to Europe for treatment. 12 nuggets have been found in the division during the year varying from 3 oz. to 39 oz.; yield of gold for the year, 5,681 oz. 5 dwt. 13 gr. At Hargraves and Windeyer there is an increase in the output of gold over the previous year of 1,010 oz. Bond and party at Hargraves raised 35 tons, which yielded 1,500 oz. during the first five months. Since then they have been engaged erecting powerful machinery. At Tomingley the number of miners is considerably decreased. About £7,000 worth of gold was won during the year. At Myall they are about to erect a 20-stamp battery; 1,000 tons of stone at grass ready to be crushed. No alluvial deposits have been found near Tomingley. 3 miles west of the Ten-mile Ridge, Farrell and party have obtained a good prospect; one shaft sunk 190 feet, and some alluvial gold has been found at Buckinbar.

In the Lachlan district the Wardens and Mining Registrars report:—At Bald Hills, 3 miles from Forbes, the only place in the division where any number of miners is employed, they are working an old lead called the British Standard, 190 feet deep; wash, 2 feet thick and from 70 to 80 feet wide, but only 50 feet of the width contains gold. The three parties working on it are just clearing working expenses. No discoveries of importance at Forbes, though a good deal of prospecting has been done; yield of gold, alluvial, 750 oz. 10 dwt. 7 gr.; quartz, 177 oz. 4 dwt. 10 gr. In the Parkes division there is a steady improvement in quartz-mining. From some of the reefs near the town splendid stone was raised. In July, Pennington and party discovered payable gold in quartz at the head of Magpie Gully, near Tichborne; the first crushing of 20 tons gave 3 oz. 6 dwt. per ton; a second crushing of 20 tons gave 11 oz. per ton, not picked stone. The reef is from 2 feet to $2\frac{1}{2}$ feet wide. They have sunk a perpendicular shaft and cut the reef at 80 feet, where the stone appears to contain a large quantity of gold. This reef is named the Eldorado. There are 5 claims besides the prospectors at work on it, but they have not yet struck the reef. During the first five months of the year mining was almost at a standstill for want of water. A vein in the Buchanan line of reef has been struck; it varies from 1 foot to 4 feet wide, and nearly vertical. Two claims, Hazelhurst and Quails, have given good returns—the former obtained about 800 oz. from 210 tons; the latter 700 oz. from 237 tons. Another claim on the line is paying £4 per week per man. A new reef has been found in a selection known as Coulson's, which is said to be good. Between Parkes and Forbes, 8 or 9 miles from the latter town, a reef has been found, 46 tons from which gave 12 dwts. per ton yield of gold. Parkes division (7 months' work)—3,023 oz. 8 dwt. 18 gr.; 2,170 tons quartz gave 2,684 oz. 2 gr.; average, 1 oz. 4 dwt. 13 gr. per ton; and 1,218 tons alluvial gave 339 oz. 14 dwt., equal to 5 dwt. 13 gr. per ton. At Temora the number of miners has considerably reduced, some having been attracted to Sunny Corner, others to Silverton and elsewhere. Of the 13,791 oz. of gold purchased by the banks, 9,742 oz. was obtained from alluvium, and 4,049 oz. from quartz. During the first four months of the year very little mining was done owing to the drought. The quantity of gold sent away by escort was 14,381 oz. 16 dwt. 1 gr.; this is supposed to include the gold won at Temora, Barmednau, and Sebastopol. Of the above quantity 3,351 oz. 5 dwt. 6 gr. was from Barmedman, and probably some 430 oz. from Sebastopol. During the year 21 nuggets were found, varying in weight from 5 oz. to 175 oz. 15 dwt., and weighing in the aggregate 675 oz. 14 dwt. No new leads have been discovered. There are some payable claims near to but at a shallower level than the old Temora main lead, and it is not unlikely that a large tract
of

of payable ground will be found in that direction. Between 45,000 and 50,000 loads of wash-dirt puddled during the year—yield, 10,000 oz. 9 dwt. 3 gr. There are only two quartz-mines at work, viz., the South Australian Company, who crushed during the year 648 tons for 340 oz. of gold, and the Hidden Star, which is said to have crushed about 100 tons, yielding nearly 1 oz. per ton. At Barmedman, from 16 claims, 6,216 tons have been crushed, yielding 3,351 oz. 5 dwt. 12 gr., the average yields from the several claims varying from 5 dwt. 18 gr. to 2 oz. 15 dwt. 12 gr.; the reefs are large and easy to work. The prospects of the Barmedman Company appear to have considerably improved. During the past year from the Little Ada claim some stone near the surface gave 3 oz. per ton, and several crushings from the Fanny Park have given payable returns, but the year's average has been seriously decreased by reason of a large quantity of inferior stone raised from some of the large reefs having to be crushed. Attention has recently been called to the splendid reef country north of Barmedman, and a prospecting party is now engaged in that direction. 30 tons of quartz, taken from an abandoned mine on Pike's Reef, 25 miles south-west of Temora, yielded 173 oz.; 50 tons of quartz from Doctor's Reef, Old Junee reefs, has yielded 6 dwt. per ton; 47 tons of quartz from Sebastopol gave 35 oz. Between 300 and 400 tons of stone has been raised from the Evening Star Claim, Sebastopol, which is expected to yield from 12 to 15 dwts. per ton. The reef is from 11 to 13 feet wide at a depth of 65 feet. At Young the season has been generally unfavourable for mining. The machinery erected at Minter and Company's mine to work the deep lead is not sufficiently powerful to overcome the water and raise wash-dirt, and additional plant is being procured. The quantity of gold purchased by banks at Young is 716 oz. 3 dwt. 20 gr. The prospecting claim and No. 1 are the only claims at work on the newly discovered deposit at Sherlock Creek, near Wombat. At Blind Creek, near Murrumburrah, about 100 miners have been at work. During the year 615 oz. 6 dwts. 1 gr. of gold was purchased locally.

In the Tumut and Adelong district the Wardens and Mining Registrars report:—From Blatchford's mine at Captain's Flat, Queanbeyan, 2,386 tons of quartz crushed gave about 360 oz. This mine was idle during seven months of the year for want of water. The stone assays from 10 to 15 dwt. per ton, but is difficult to treat. Montgomery and party crushed about 800 tons, which yielded 6 dwt. per ton. The reef has widened to about 30 feet. Ore which assays 140 oz. silver, and 59 per cent. lead has been found on the hanging wall of the reef. The character of the reef is auriferous, iron gossan, overhanging a large copper lode of low per centage. Gold has been found on private property at Molonglo, but could not be worked on account of the quantity of water, the prospectors having no machinery for pumping. In the Gundagai division Frearson and party at Coolac crushed stone from the 100 feet level, which gave 21 dwt. per ton. At Mount Adrah, Cole and party have crushed 87 tons for 320 oz. At Kimo reef Hurford Brothers crushed 6 tons for 17 oz. A dyke of gold-bearing material, averaging 10 feet to 20 feet wide, is being tested to a depth of 100 feet, and as the stone can be raised and delivered at the battery at a very low price, it is expected to prove remunerative. A similar deposit is being tested at Tarrabandra. At Adelong there is a great falling off in the yield of gold from the quartz reefs, but the alluvial mines continue to yield well. 1,536 tons from the Adelong reef gave 1,577 oz. 11 dwt., the Great Victoria Company having been working from the 1,060 feet level upwards, the average yield being 15.68 dwts. per ton, total quantity crushed, 6,308 tons 9 cwt.; yield, 5,762 oz. 9 dwt. The alluvial mines, chiefly on the Adelong Creek, at Shephardstown and Grahamstown, yielded 4,962 oz. 15 dwt. 5 gr. At Shephard's mine the works have been shifted to the upper part of the ground, where the opening drives have given exceptional prospects. At Kiandra there are five companies at work sluicing; yield of gold, 1,958 oz. The Kiandra Company, sluicing 2,997 hours, washed 169,651 tons of earth—yield, 933 oz. The hydraulic works at Kiandra were much retarded by want of sufficient water. A vein of quartz was opened in Pollock's Gully, a trial crushing from which gave 4½ oz. per ton. At Yarrara the Rangatira Company, at a depth of 130 feet, cut a reef which varies from 6 inches to 3 feet wide showing gold. 8 tons sent to Adelong to be crushed gave 2½ oz. per ton; since then they have raised 100 tons. At Albury 263 tons of quartz gave 271 oz. 9 dwt. of gold. A rich reef is said to have been opened at Hawk's View, on private property. There are some good claims at the Black Range and Portuguese Gully. A Company has been formed to work the Black Range Flat. At Tumberumba the United Trades Company, who have been three years constructing a very extensive and expensive tail and flood ditch for the purpose of working the bed of abandoned workings on the Tumberumba Creek. The tail-race is 1,800 yards long, and is now ready for work. Total yield of gold, 2,414 oz. 14 dwt. 4 gr. from alluvium; and 1,106 oz. 2 dwt. from quartz.

In the Southern district the Wardens and Mining Registrars report:—At Braidwood mining very depressed from want of water; yield of gold from alluvium, 528 oz. At Major's Creek; no water for ground sluicing. Alluvial gold, 594 oz. 3 dwt.; quartz 37 oz. At Little River a new reef named the "Day Dawn" has been opened, a trial crushing from which of 15 tons gave 39 oz.; yield from alluvium, 1,200 oz.

At

At Araluen there was an increase in the yield of gold as compared with 1883 of over 1,000 oz. The total for 1884 was 4,732 oz. from alluvium, and 92 oz. 14 dwt. from 196 tons of quartz. A larger area of ground than usual was worked, but want of water retarded operations. At Yalwal the output of gold was 883 oz. 10 dwt. from quartz. Although the Shoalhaven River has been proved to be auriferous throughout its course, there are, with the exception of a few wandering miners without capital, no mine on its course from Nerriga to Yalwal, a lineal distance of 80 to 100 miles; the same may be said of several of the creeks in the district. An attempt was made to bottom the drift at the junction of the Shoalhaven and Kangaroo Rivers, but was abandoned for want of capital. At Nerriga—yield from alluvium, 1,100 oz.—the heavy rains stopped work in the river bed. At the Dromedary 97 tons of quartz crushed gave 120 oz. At Bombala 332 ozs. 16 dwt. 6 gr. obtained from alluvium.

In the Hunter and Macleay district the Wardens and Mining Registrars report:—The severe drought caused Copeland to be almost deserted during the first part of the year; but since the rains set in, and the striking of the rich stone in the No. 2 East Mountain Maid, there has been a revival. From this claim 50 tons of quartz gave 16 oz. per ton, and 60 tons from No. 1 East Mountain Maid gave 9 oz. per ton. Other claims followed suit, and during the last half of the year work has been carried on successfully; 1,034 tons of quartz crushed gave 2,768 oz. 3 dwt., equal to 2 oz. 13 dwt. 13 gr. per ton. The total yield for the year was 4,250 oz., being 205 oz. in excess of 1883. At Boranel, where there are five reefs 3 feet wide, the stone from which has averaged 4 oz. per ton, all the claims are idle for want of a crushing plant. The Inspector of Mines reports that Moore and Company crushed 100 tons for 425 oz. 16 dwt. 12 gr., and No. 1 west crushed 10 tons for 33 oz. 12 dwt. At Dungog, Hancock and Co. crushed 230 tons for 150 oz.—reef 6 inches wide. Vanderkolk crushed 282 tons for 155 oz. 8 dwt.—reef 4 inches to 2 feet 6 inches wide.

In the Clarence and Richmond districts the Wardens and Mining Registrars report:—At Dalmorton 95 tons crushed from the Sir Hercules Reef gave 75 oz. 6 dwts—80 tons at grass. 20 tons from the Union Reef gave 11½ dwt. per ton. At Nana Creek the Hidden Treasure Company crushed 60 tons for 16 dwt., and 80 tons for 13 dwt. per ton—reef 2 feet wide. 55 tons from Bungalow Reef gave 1 oz. 4 dwt. per ton. 30 tons from Laura Reef, 1 oz. 7 dwt. per ton. From the Waratah Reef, 7 miles from Nana Creek, 19 tons gave 31 oz. 15 dwt. Waratah No. 1 crushed 20 tons for 11 oz. From Nymboida, 7 miles from Nana Creek, 5 tons gave 61 oz. 8 dwt. 12 gr. From Eleven Tree Creek, Illabo, 25 tons gave 19 dwt. 12 gr. per ton; 16½ tons from Rise and Shine Reef, 1 oz. 13 dwt.—2 tons from this reef, sent to the Mint, gave 6 oz. 14 dwt. The stone from the Lady Mary Mine, Little Plains Creek, yields 1 oz. 4 dwt. 5 gr. per ton. Total for Nana Creek division, 452½ tons yielded 410 oz. 4 dwt. 21 gr.

In the Peel and Uralla district the Wardens and Mining Registrars report:—At Scone 449 tons quartz crushed gave 409 oz. The Inspector of Mines says 570 tons crushed from the Grosvenor Reef at Stewart's Brook gave 225 oz. 10 dwt. The Just-in-Time Company crushed 3 tons for 17 oz. 10 dwt. At Nundle, though, owing to the drought, there has not been more than three months sluicing—1,626 oz. have been obtained from alluvium. At Bowling Alley Point, King and party crushed 40 tons for 3 oz. per ton—great quantity of water. Marquis of Lorne: 460 tons gave 317 oz. 7 dwt. At Hanging Rock a new line of reef opened, 10 tons from which gave 5 oz. Nethersole and party crushed 20 tons for 60 ozs. Total for division: 559 tons crushed, yield, 512 oz.; besides 62 oz. from patches in quartz. At Barraba, the yield of gold was 293 oz., and at Bingera it was 2,964 oz. At the Tia Reefs, Walcha, Matheson and party crushed 40 tons of surface stone for 40 oz. 12 dwt. 12 gr. At Uralla all the mines were retarded by reason of the drought; gold obtained, 863 oz. 11 dwt. 18 gr. At Armidale the Eleanora Company obtained 1,566 oz. 11 dwt. 18 gr. from quartz, from the alluvial mines in the division 116 oz. 19 dwt. 15 gr. was won. The Inspector of Mines, speaking of this mine, says: The veins vary from 6 inches to 3 feet; 1,576 tons crushed yielded 710 oz. 14 dwt. 23 gr., the tailings by assay containing 1 oz. 1 dwt. of gold per ton. In addition to the gold they raised antimony to the value of £150. In the New England district the Mining Registrar at Boorook reports: The Poverty Point Company find the rock too hard to be reduced by hydraulic sluicing, and are intending to erect crushing appliances. Mr. Horton has discovered a similar dyke about 50 feet wide, and intends to erect a battery to crush the granite in which the gold is found. At Pretty Gully the quartz-reefs are attracting some attention, but the absence of crushing plant prevents a proper test being made. Total gold, 738 oz.

In the Albert district the Wardens and Mining Registrars report: At Milparinka during the first five months of the year mining was at a standstill for want of water, dry blowing being the only mode available of treating the stuff. By this mode over 800 oz. was won. At the latter end of May 2 inches of rain fell at Milparinka and Tibooburra, but none at Mount Brown. This enabled the miners to wash up the alluvium, which yielded 1½ to 3 dwt. per load. In June over an inch of rain, and in October a general rainfall all over the

the district. At Mount Browne it was so heavy that it washed away all the dams and reservoirs. At Wittabreenah 125½ tons of quartz crushed gave 39 oz. 2 dwt. At Mount Browne good wages are made by crushing cement found at a depth of about 20 feet; the gold is shotty, but the appliances are so rude that much of the gold is lost. There is one puddling machine at work on tailings and surface clay, which yields 1½ dwt. per load of 15 cwt. Coarse gold has been found at Stringer's Hill at a depth of 3½ feet. A 15-oz. nugget was found at Tibooburra. Total yield of division 2,527 oz. 2 dwt.

The following information has been kindly furnished by R. Hunt, Esq., F.G.S., the Deputy-Master of the Royal Mint.

QUANTITIES of gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1883 and 1884 compared.

Localities unknown	26,031.04	20,349.85
	121,777.38	101,932.68

From the above statement it will be seen that the decrease in the quantities of gold sent to the Mint, as compared with the previous year, equals 16,844.7 ozs.

The

The following table is compiled from information furnished by the Collector of Customs :—

EXPORTS OF GOLD—1884.

Gold.		Quartz Tailings and Pyrites.		Total.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
oz. dwt. gr. 17,546 9 20	£73,593	{ Tailings, 308 pkgs. Pyrites, 830 cwt.	{ £2,245 £2,817 }	oz. dwt. gr. 18,811 19 20	£78,655

The quantity of gold sent to the Mint for coinage, added to the quantity of gold exported, would equal 123,744 oz., valued at £465,825, but it is thought by the Master of the Royal Mint that £70,033 worth of the bar gold exported passed through the Mint, and is included in his return; therefore the output of gold for 1884 would appear to be 107,199 ozs., valued at £395,292. This, of course, takes no account of gold which may have passed by private hands into the adjoining Colonies without being received by the Customs officers on the border.

The output of gold, according to the returns furnished by the Mining Registrars, exceeds the quantity passed through the Mint by 7,655 oz.

RETURN of Gold for 1884 from Mint and Mining Registrars compared :—

District.	Mint.	Mining Registrars.	Excess.	Deficiency.
	oz.	oz.	oz.	oz.
Bathurst.....	18,474	19,825	1,351

			20,390	28,045
				20,390
			The quantity returned by the Mining Registrars exceeded that sent to the Mint by...	7,655

The gold yield of 1884, as compiled from the returns furnished by the Mining Registrars, exceeds that of 1883 by 7,435 oz., but it is not probable that there was in fact any such increase. The apparent increase is, I think, due to the defective returns furnished for 1883.

MINING Registrars' Returns of Gold for 1883 and 1884 compared :—

Increase in yield for 1884.....			7,435	

The following table shows the results obtained from parcels of alluvium washed at some of the Mines during 1884. The low average is due to the fact that nearly the whole of the wash-dirt referred to in the return has been treated by hydraulic sluicing, by which process a very low percentage of gold can be made to pay. Unfortunately there is no possibility of procuring returns of all the wash-dirt puddled or sluiced. If it were possible to compile a complete table the information would be most valuable.

COMPARATIVE

COMPARATIVE statement of Average Yields from Alluvial Mines for 1883-4.

The following table gives the results of crushing sundry parcels of quartz in the several districts, and though far from complete does convey some idea of the value of quartz-reefs. I do not despair of yet making this table practically valuable. I am quite sure the officers, as a rule, try to obtain complete returns, but, unfortunately, our miners have not yet recognised the value to them, as a class, of publishing such information, when they do so we may hope to obtain such a table as will prove that our quartz-veins offer a profitable field for the judicious investment of capital. The difficulty of furnishing returns of the quantity of quartz treated is trifling as compared with alluvium, because account is always taken of the quantity of quartz crushed, though it is, perhaps, not always recorded.

The following table shows the results obtained from the crushing of certain parcels of quartz in 1884, compared with the results of crushing in 1883.

COMPARATIVE Statement of average yields from Quartz Mines for 1883-4.

The number of miners more or less regularly engaged in gold-mining during 1884 was, according to the returns furnished by the Mining Registrars, 6,548. Of these 5,405 were Europeans and 1,103 were Chinese; 4,524 were working alluvial deposits, and 1,984 quartz. The total number of European miners was less in 1884 than in 1883 by 337; this decrease was no doubt mainly due to the discovery of silver lodes in various parts of the Colony.

Taking the quantity of gold won and dividing by the number of miners (the Mining Registrars' returns being taken as a basis) we find that the average earnings for the year was 17.2 ozs. of gold, or £65 1s. 1.35d. per man. This is doubtless a very low average, but it must be remembered that on some of the gold-fields there was no water to wash with during the first five or six months of the year, and there is always a proportion of our miners who follow other occupations during a portion of the year.

During the year the following assays for gold have been made by Mr. C. Watt, the Government Analyst:—

GOLD.

Locality.	Description.	Per ton.		Per cent.	
		Gold.	Silver.	Lead.	Copper.

COAL.

The output of coal for 1884 exceeds that of the previous year in quantity by 227,652 tons, and in value by £101,135 7s. 0d. This increase is very satisfactory, as indicating, not only the enterprise of coal-owners, but also increasing demand for our coals. It is also gratifying to find that the price is only a fraction below the price which obtained in 1883, and, with the exception of that year, is higher than it has been since 1879.

The Diamond Drill is still doing good work in discovering or proving coal in various parts of the Colony, the most important of those recently discovered being a seam of good coal, some 12 feet thick in the parish of Heathcote, only 28 miles from Sydney, on the Illawarra Railway Line. The drill pierced this seam at 847 feet below the surface, and opens up quite a new and most important Coal-field. Hitherto all attempts to find coal near Sydney have been unsuccessful, but whether because the bores have not reached a sufficient depth, or through some defect in the boring by which the drill has pierced the seam without its existence having been detected, is not at present apparent. The discovery of the seam at Heathcote will, however, in all probability lead to further tests being made, and an extensive Coal-field may be found to exist in close proximity to Sydney. When the Illawarra Line of Railway reaches Heathcote it will be possible, not only to send coal from the mine to Sydney by rail at a very moderate cost, but many of the vessels which now have to visit Newcastle at considerable extra cost may be able to obtain their coal supply in Port Jackson direct from this mine. Prospecting operations are still being carried on at the Ballimore Mine, near Dubbo, in No. 1 shaft, 89 feet deep; the largest seam of coal is 5 feet 10 inches. There are other seams varying from 1 foot to 3 feet, but these contain bands. In No. 2 shaft, depth 200 feet, the seams are identical with those in No. 1. In No. 3 shaft, depth 130 feet, the seams appear to be similar to the others. About 50 tons of the coal has been raised; most of it has been sent to the

the Railway Department for the purpose of testing its quality. This mine is about 14 miles from the railway at Murrumbidgee, and the owners intend to lay down a light line between the mine and that place. Some new collieries have been opened in the Southern and Western districts. An attempt is being made to open a coal-mine at Swan Bay, near Lismore, and search for coal at Rocky Mouth, on the Clarence River, is being prosecuted. During the year an important discovery of coal was made at Ashford, on the Severn River, New England. The outcrop was examined by Mr. T. Edgeworth David, one of the Geological Surveyors connected with this Department, from whose report the following extracts are taken:—

“The total thickness of clean coal at Coal Gully is over 30 feet, the greatest thickness of coal without bands being 7 feet.” “An analysis of coal taken from one of the loose blocks found in the river-bed * * * has given the following result:—

Hygroscopic moisture	1.40	
Volatile hydro-carbons, &c.	20.50	
Fixed carbon	71.94	} Coke ... 78.10
Ash	6.16	
Sulphur in coal	0.52	
Specific gravity	1.35	

This analysis shows the sample to belong to the class of bituminous caking coal, suitable for smelting and steam coal purposes; situated, as it is, within 8 miles of large limestone beds of excellent quality for limeburning, and near the border of the extensive Vegetable Creek Tin Fields, this may in time form a valuable source of fuel.” The fact that it is near the recently discovered silver lodes will add much to its prospective value.

QUANTITY and value of Coal raised from the opening of the Coal-seams to 1857 inclusive.

From the foregoing it will be seen that our year's output of coal has now reached 2½ million tons, and our export nearly 1½ millions.

From the following statement it will be seen that there has been an increased output in each of the three coal districts, and also an increase in the value thereof, except in the Western district, where the increased output was proportionately larger than in the other districts. In the Northern district the average price per ton was 9s. 10.16d., whereas in 1883 the price was 9s. 9.24d. In the Southern District the average price was 10s. 4d. per ton as compared with 10 0.87d. in 1883. In the Western District the price per ton was 5s. 5.22d. as compared with 6s. 8.31d. in 1883. The number of Coal and Shale mines under inspection during 1883 was 54 and 13 opening out, while in 1884 it was 64, and 22 new seams opened out. Of these new seams 14 are in the Northern district and 1 at Murrurundi. Western district 3 and 1 at Dubbo. Southern and South-western district, 3.

COMPARATIVE Statement of Output of Coal in the Northern, Western, and Southern Districts.

* Suitable for the enrichment or manufacture of coal gas—as the produced coke, although not good enough for sale—might be used partly as fuel in that manufacture. The sample is not so valuable for the manufacture of illuminating oils as the best kinds of kerosene shales, in consequence of the relative small quantity of volatile matter and large proportion of fixed carbon.

SHALE.

Notwithstanding the discovery of kerosene shale at Capertee and elsewhere, there are still only two mines at work, viz., the New South Wales Shale and Oil Co. at Hartley, and the Australian Kerosene Oil and Mineral Co. at Joadja Creek. The output of shale during the year 1884 was much less than that of the previous year, but the average price per ton realized was considerably higher, indeed the price has not been so high since 1880 as it was last year. The Australian Kerosene Oil and Mineral Co. were engaged in extending their works, the demand for shale or its products being largely in excess of the quantities produced by the extensive plant in use. The manufacture of gasoline now forms an important item of their business. During the year they produced 26,000 cases kerosene oil, 6,000 cases gasoline, benzine, &c., &c., paraffine (hard raw) 100 tons, sulphuric acid, 100 tons.

Shale of an inferior quality has been found on the Nattai River, near Colo also at Meryla, near Fitzroy Falls. Large deposits have also been found near Nerriga.

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1884.

Year.	Quantity.	Average price per ton			Total Value.		
		Tons.	£	s.	d.	£	s.
1865	570	4	2	5.47	2,350	0	0

The following analyses of samples sent to this Department have been made during the year:—

Capertee.—Kerosene shale from near Capertee—

Hygroscopic moisture	0.20
Volatile hydrocarbons, &c.	70.48
Fixed carbon	12.92
Ash	16.40

Sp. gr. 1.12 100.00

Carlo's Gap.—Kerosene shale 7 miles from Carlo's Gap, Mudgee railway line—

Hygroscopic moisture	2.96
Volatile hydrocarbons, &c.	53.70
Fixed carbon	25.04
Ash	18.30

Sp. gr. 1.270 100.00

Katoomba.—Kerosene shale from Katoomba—

Hydroscopic moisture
Volatile hydrocarbons, &c.	85.35
Fixed carbon	9.80
Ash	4.85

Sp. gr. 1.017 100.00

Rylstone.—Kerosene shale from near Rylstone—

Hygroscopic moisture	0.13
Volatile hydrocarbons, &c.	36.14
Fixed carbon	36.13
Ash	27.60

Sp. gr. 1.32 100.00

TIN.

The export of tin in 1884 falls far short of that of the preceding year, and indeed is the smallest both as to quantity and value since 1880; but as regards value it exceeds the average annual export by £20,112. This depression can, however, in view of all the circumstances, be only temporary, dependent chiefly on the price of tin.

According to the reports furnished by the Wardens and Mining Registrars there has been great depression in the tin-fields in consequence of the low price of tin. The Mining Act Amendment Act has given great satisfaction, inasmuch as it enables miners to make a more secure title to land within mining reserves. Notwithstanding the great expense of searching for the deep leads of tin ore on the Vegetable Creek tin-fields, many miners have taken up areas of land for prospecting purposes in the hope and expectation that the price of tin will improve. Some of the shafts are more than 150 feet deep, the greater part of the sinking being through hard basalt rock, containing or overlying large quantities of water. Some of the tin-producing mines have been worked out. Numerous good lodes are unworked for want of the necessary capital. From the Vegetable Creek Company's mine nearly 112 tons of ore were raised by tributors. In Messrs. Cadell and Mitchell's land, at Y-Waterholes, Kay and party tributors were on payable wash at a depth of 42 feet, while Levy and party had struck very rich wash at 39 feet, yielding 60 lb. per load. Messrs. Murgatroyd are on similar wash. Major and party are on good wash

at

at 35 feet deep, averaging 2½ feet in height and yielding about 80 lb. per load. Davidson and party have put down nine shafts ranging from 30 to 35 feet in depth; the wash varies from 1 to 3 feet in height, and yields from 40 lb. to 50 lb. per load. In Messrs. Moore and Company's property the yield of oro continues good; over 161 tons of oro was raised during the year. The Great Britain Company's land is worked on tribute by Chinamen; 285 tons of oro raised during the year. At Silent Grove several parties have been prospecting the Basaltic Hill, and in each case tin ore has been found, but the influx of water was too strong to allow of the quantity or quality of the wash being tested. The Wesley Company's mine has yielded 234 tons of oro during the year. At Tent Hill the Glen smelting works have not been fully employed in consequence of the falling-off in the supply of ore. However, 1,540 tons of ore passed through the furnaces, namely, from deep leads, 436 tons 6 cwt. 3 qr. 9 lb.; from shallow leads, 916 tons 11 cwt. 1 qr. 9 lb.; and from lodes, 187 tons 1 cwt. 3 qr. 10 lb.; and 1,100 tons of metal was despatched to Sydney during the year. The battery at Tent Hill, which is very complete, has been fully employed crushing stone chiefly from the Ottery Reef. On the Ottery lode a considerable amount of work has been done. No. 1 shaft is 210 feet deep; No. 2 is 180 feet deep; No. 3 is 140 feet deep; No. 4 is 80 feet deep; No. 5 is 100 feet deep; No. 6 is down 35 feet; No. 7 is 50 feet deep; No. 8 is 40 feet deep; and in addition to these shafts extensive cuttings into the side of the hill have been made. Trail crushings were made for several parties with various results, some of the parcels were very rich. One parcel stone sent by Messrs. Tomison and Company gave nearly 8 cwt. of ore per ton. The total quantity of stone crushed was 2,107 tons 5 cwt., and the yield obtained therefrom was 110 tons 3 cwt. of ore. Messrs. Bray and Son have taken 17 tons of stone from the Wallaroo lode which yielded 2½ cwt. of ore per ton. At Torrington the battery has been kept going almost continuously crushing the stone raised by the five parties of tributors—three of the parties are on payable stone, the lode varying from 10 to 18 inches wide. On the Dutchman's lode there is a complete battery and dressing plant; 510 tons of stone raised from the Company's land has been treated. The Company has three shafts in which there are two lodes, one 3 feet, the other about 18 inches wide. A tunnel has been cut 229 feet into the hill, the lode being 2 feet 6 inches wide. Several companies have proved the existence of tin lodes in their properties. Messrs. Butler and Co. have sunk several shafts, and have proved a valuable lode which is in places 23 feet wide. They have now 320 tons of stone at grass ready for crushing. The total yield of tin for the year in the Vegetable Creek Division was 2,241 tons 3 cwt. 3 qr. 14 lb. In the Tingha Tin-field tin ore has been found towards the Big River and lower end of Cope's Creek; and tin-mining has revived at Elsmore. In the Maryland Tin-field there has been a slight increase in the output of tin ore for the year, the total output being 490 tons. There appears some probability that the tin deposits near Bendemeer will be thoroughly tested, and if proved payable will be extensively worked.

TABLE showing the quantity and value of tin exported from, and the produce of, the Colony of New South Wales, since the opening of the Tin-fields in 1872.

Year.	Ingots.		Ore.			Total.		
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

The following assays of tin ore have been made during the year:—

Locality.	Description of Mineral.	Metalle Tin. %
Bendemeer	Black sand	19.0
Bendemeer and Tingha	Stanniferous and titanite iron sand	7.25
Jervis Bay	Black sand from coast, south of	54.50
Mount Gipps	Ore from 18 miles north of Mount Gipps	34.10
Tumruk District	Fine black sand	None.

COPPER.

The export of copper for 1884, as compared with that of 1883, shows a decrease, though it exceeds that of any year previous to 1883, both in quantity and value. It moreover exceeds in value the average annual export by £248,340, and the decennial average by £64,616. The decrease, as compared with 1883, is probably due almost entirely to the low price of copper, and a rise in the market, or the introduction of some more economic or effective mode of treating the ores will doubtless restore this branch of mining to the highly prosperous state it had reached in 1883.

During the year the Great Cobar Company raised 21,561 tons, and smelted 23,879 tons, yielding 2,769 tons fine copper. At the end of the year the Company had at grass 1,000 tons 10 per cent. ore, 5,000 tons 8 per cent. ore, and 2,232 tons 5 per cent. ore. Up to the end of 1884 the Company had smelted 122,795 tons of ore, the average yield from which was 13·17 per cent. of fine copper.

The Nymagee Company has raised during the year 14,748 tons of ore, and smelted 14,743 tons, yielding 2,207 tons of fine copper. Up to the end of 1884 this Company had smelted 37,650 tons of ore the percentage of which averages 15·73. Width of lode from 4 to 12 feet.

The New Mount Hope Mine has put out 6,149 tons 20 per cent. ore, 1,426 tons 12 per cent. ore, and 757 tons 6 per cent. ore, and has smelted 1,258 tons fine copper, valued at £54,000. The shaft is 340 feet deep, the deepest level is 270 feet, the width of the lode is from 10 feet to 50 feet.

The Great Central Company has raised 2,221 tons ore, and has made 336 tons fine copper, valued at £14,784. The Company has seven shafts, varying in depth from 82 feet to 206 feet deep; the deepest level is 150 feet, and the lode varies in width from 1 foot to 13 feet.

The Inspector of Mines reports:—"The Cheshire Copper-mine at Cudjcong shows a shoot of ore 46 feet wide, yielding 8 to 10 per cent. copper. This ore is not likely to be found in a continuous lode, but in shoots. At Blayney a new copper lode 2 feet in width has been found within 1 mile of Blayney containing grey ore, which by assay appears to be rich. At the New Mount Hope Mine in the upper levels the ore is found in horizontal layers or floors, but at the 354 feet or lowest level the strata appears to be changing from horizontal to vertical. Should sulphide be found the deposits will probably assume a more permanent character. The Great Central Mine contains several lodes or branches of high quality ore. Brown's Copper-mine, to the north of the Great Central, has several promising lodes. The Boone, West Copper-mine, 2 miles south-west of "Melrose Hotel," has a lode 6 feet wide exposed to view. Half-a-mile north-west from the Boone West Mine is the Big Ben lode. A large outcrop of quartz is visible for 100 yards, where blue and green carbonates, with small patches of grey ore, can be traced. No work has been done on it. The Inspector regards this as the most valuable copper deposit yet discovered in the Melrose Ranges, and thinks it well worth prospecting for copper, silver, and gold. Very little prospecting has been done outside the north-western mines at present working. The Inspector thinks if the hilly country between Cobar and Nymagee, Nyngan and Mount Hope, Nymagee and Melrose, were properly prospected, gold and other minerals, such as copper, silver, &c., might be found, especially now that Government tanks afford the means of obtaining water through the district. The copper lode at Nowendoc, which was abandoned a few years since, has been started again. A newly-discovered gossan lode at Walcha is well worthy a trial.

The Wardens and Mining Registrars report:—"Satisfactory assays have been made of ores from the lodes recently found at Scrubby Rush, Sounding Rock, near Trunkey; Glanmire, near Bathurst; Judd's Creek, near Burruga; and Back Creek, near Rockley. The Burruga Mine has turned out 582 tons of marketable copper. Copper ore has been discovered in several places in the Forbes division. M'Grath and party at Captain's Flat, Queanbeyan, have sunk 30 feet into the lode, the ore from which is said to contain 50 per cent. copper. The Frogmore Company at Burrowa has made 103 tons fine copper, valued at £5,886 10s. 6d.

TABLE showing the quantity and value of Copper, the produce of the Colony, exported from the Colony of New South Wales, from 1858 to 1884.

SILVER.

The export of silver for 1884 exceeds that of 1883 in quantity by 16,594 oz. 7 dwt., and in value by £3,292; but as none of the ore from the mines in the Barrier Ranges or Ennerville had been smelted in the Colony, and none of the silver from the Sunny Corner Mine had been exported up to the end of 1884, the above figures furnish no data on which to estimate the progress now being made in silver-mining. The silver from the Sunny Corner Mine will be included amongst the exports of 1885. The ore from Silverton (Barrier Ranges), or a large proportion of it, has been sent to Europe for treatment, and is supposed to be included in the export of silver lead ore (though both quantity and value are much under estimated), set down at 9,167 tons 11 cwt., valued at £241,940, being 9,061 tons 14 cwt., valued at £240,315, more than was exported in 1883.

There is a strong probability that during 1885 several smelters will be erected at the Barrier Ranges, and if the question of fuel can be satisfactorily met, we may look for an enormous output of silver from that field. At Sunny Corner preparations are already being made for the erection of smelters similar to those on the Sunny Corner Company's Mine, and if the ore continues as rich throughout as it is in that mine, the output of silver from that field will be very large.

Though it would not be possible at the present stage to form an estimate of the value of our silver deposits, there appears to be ample grounds to justify the belief that this Colony will at no distant date become one of the great silver producing countries of the world.

Until quite recently silver ores were quite unknown to the great bulk of our miners, and the treatment of silver ores in bulk was regarded as an insurmountable difficulty. At Boorook the Messrs. Hall Brothers, with the aid of Mr. Thos. Davey and his son, have, with enterprise and perseverance worthy alike of praise and imitation, succeeded in treating not only the chloride but also the sulphide ores. The enterprise of the Sunny Corner Company has led to the introduction to this Colony of the furnaces known as the Pacific and Probert smelters, which has proved so great a success that similar furnaces are in course of erection at other mines in that locality, and others are being sent to the Barrier Ranges. These smelters are likely to prove a great boon to the colony in facilitating the development of our vast deposits of galena and other argentiferous ores, and we are deeply indebted to Messrs. Lamont and Kahlo, not only for introducing these smelters, but also for affording the public so much information concerning the mode of treating the ores, and it is to be hoped their enterprise will be handsomely rewarded. Hitherto the owners of mines on the Barrier Ranges have had no means of treating their ores locally, and the only course open to them was to dress the ores, at considerable expense, and send the higher class to Europe for sale or treatment, leaving the low class ores to be smelted locally when means are available. Under these circumstances it is quite clear that silver mines, no matter how rich, could not be worked by miners without capital, because of the many months which necessarily elapse before any return can be obtained from the parcels of ore sent to Europe; hence in most cases the working miner has had to sell his mine to those who can provide or obtain the capital necessary to carry on the work of development while waiting for returns. The paucity of timber, and the absence of other fuel at or near the Barrier Ranges, will retard the work of smelting locally; but it is quite possible that with the use of the smelters before mentioned, which consume a comparatively small quantity of fuel, some means may be devised of sending fuel to the field at price that will admit of the ores being smelted at a moderate cost.

The following report, furnished by Mr. E. F. Pittman (the Chief Mining Surveyor) as the result of his inspection of several smelting works in this and the adjoining Colony, will, I feel sure, be read with interest by those engaged in silver mining:—

REPORT on the smelting works at the Sunny Corner Silver Mine, Mitchell's Creek.

THE process in use at the Sunny Corner mine consists in fusing the ore by means of a suitable flux (and with the addition of lead when there is not sufficient in the ore) in a "Pacific" or "Probert" smelter—a cupola cold-blast furnace with a water jacket. The ore at present being operated upon is a highly ferruginous ore or gossan, containing some arsenic and sulphur, a little copper, and assaying on an average about 60 oz. of silver and 10 dwt. of gold per ton; with this is also used some of the company's old tailings, of which there is a large supply, and which contain an average of 35 ozs. of silver and about 2 dwt. of gold per ton. One of the essential requirements of the process being the presence of a certain proportion of lead (by which the silver and gold are carried down, and from which they are subsequently removed by cupellation) it becomes necessary to add a certain proportion of lead, if the ores to be treated do not contain a sufficient percentage of that metal, as is the case with the ore now being operated upon. Silver ore.

The flux used is limestone, which, with the silica and iron in the tailings and ore, makes a fusible silicate of lime and iron, and the fusion is assisted by the addition of some of the old slag. If the ore does not contain iron, a sufficiency of that metal is added in the form of scrap iron; the fuel used is prepared Newcastle coke, which costs about £4 per ton, delivered on the ground, the cartage from Rydal alone costing 25s. per ton. Flux.
Fuel.

The furnace in use is said to be capable of smelting about 50 tons of ore per day.

The furnace stands upon a sunk base of brickwork, enclosed in a casing of cast-iron, which is constructed of sixteen flanged sections, 5 feet in height, bolted together, and having a cast iron plate at the bottom. The crucible, which is situated just above the surface of the ground, is built in the centre of the brickwork, and is made of the best Stourbridge fire-bricks; it is cup shaped, and has a diameter of 7 feet and a depth of 21 inches in the centre. The walls of that portion of the furnace within which the smelting takes place, are constructed of vertical water jackets with loose hinged covers. These water jackets are made in ten disconnected sections, 4 feet 6 inches high, 2 feet 6 inches wide, and about 6 inches through; they are made of the best wrought-iron, and are strapped together at the top and bottom. The water is conveyed to the bottom of each of them by a rubber pipe, and escapes by spouts from the top into a trough which surrounds the furnace; from here it flows into a well, when, after cooling, it is again available, being pumped up into a reservoir, a continual circulation of water thus takes place, and Capacity of furnace.
Construction of the furnace.
Water jackets.
Circulation of water in jacket and

Function of water jacket.	and the consumption is small, as there is very little loss by evaporation. The inner surface of the wall of the furnace (water jacket) being cooled by the circulation of water speedily becomes covered with a coating of slag, which effectually protects it from corrosion, and in this manner the wear and tear of the furnace wall is reduced to a minimum. The water jackets are pierced by nine twyers, the nozzles of five of these are flush with the inner face of the water jackets, while the remaining four (which are water twyers) extend further inwards, their nozzles being about 20 inches from the centre of the furnace.
Twyers.	
Slack of furnace	Above the water jackets the furnace is lined with fire-brick for a height of 18 inches; for the first 6 inches the bricks are uncovered, but above that they are protected by a wrought-iron covering. The uncovered space is necessary for the purpose of removing any of the water jacket sections for repairs, &c. Above the fire-bricks the furnace is formed like an inverted cone, lined with ordinary bricks, and having a dome-shaped roof. In the sides of the cone, at a height of 11 feet 9 inches above the crucible, are three feeding holes, where the charges of fuel, ore, and fluxes are thrown in; from the centre of the dome-shaped roof springs a vertical cylinder of wrought iron closed at the top, but having a small trap door. Just above the dome a horizontal wrought-iron flue leads from the vertical cylinder to a brick condensing chamber at the base of a high stack. Attached at intervals to the lower side of this horizontal flue are a number of small V shaped chambers closed at the bottom by slides. These are for the purpose of catching the bulk of the condensed fumes, and as the latter contain both silver and lead, they are returned to the furnace.
Feeding holes.	
Flue and condensing chamber	
Blowing apparatus.	The blast is supplied by a "Baker" Blower, size 5 feet x 4 feet, which is driven at the rate of about 100 revolutions per minute, and which forces the air into a wind pipe (about 1 foot square in section), surrounding the furnace above the water jackets; the air is thence conducted by canvas pipes to the twyers.
Crusher.	The ore when it comes from the mine is first broken to the size of walnuts in a "Dodge Crusher" (of a similar type to the ordinary Alligator jaw crushers). It is then ground fine in a "Dodge Pulverizer," which consists of a revolving horizontal cylinder covered with screens, and protected on the inside by iron laths. The pulverizing is effected inside the cylinder by from 20 to 50 cannon balls, the number being varied according to the hardness of the ore. If the ore does not contain sufficient lead, it is now subjected to treatment in the "lead bath," which necessitates its being first thoroughly dried. For this purpose it is removed to a long drying furnace, which is so constructed that the flame returns over itself, thus providing three drying floors where the moisture is thoroughly expelled.
Pulverizer.	
Drying furnace	
Lead bath.	It is then introduced into the "lead bath," which consists of a cast-iron cauldron filled with molten lead, to the bottom of which the powdered ore is forced by means of a plunger working in a cylinder. The ore as it rises to the surface is coated or mixed with litharge and shots of metallic lead. It is skimmed off the surface, and is then ready to be mixed with the fluxes. (Should the ore contain sufficient galena in the first instance, the treatment in the pulverizer, drying furnace, and lead bath, would be omitted, and it would after being roasted, be taken direct to the mixing floor); the ore is now weighed and mixed with the requisite proportion of limestone (broken to the size of walnuts) slag, dust from the condensing flues, and, if necessary, scrap iron.
Mixing of charge	
Charge	The furnace, being in blast, is fed continuously (as the contents subside) with successive charges of coke and mixed ore, and flux.
Proportion of fuel.	The coke is used in the proportion of 1 ton to every 5 tons of ore.
Siphon for lead "bullion."	The lead "bullion" containing the silver and gold, as it collects in the crucible, escapes by means of a siphon to a heated basin outside the furnace, whence it is ladled into ingot moulds, each holding about 80 lbs. of metal.
Tap holes for slag.	The slag is tapped at intervals from tap holes situated immediately over the surface of the metal in the crucible. A certain proportion of the slag, as before stated, is used for flux; the remainder is carried away in basin-shaped moulds attached to wheels.
Cupelling furnaces.	The ingots of lead "bullion" are now assayed to ascertain the proportion of silver and gold contained in them; they are then introduced into cupelling furnaces; the cupels are made by tamping bone ashes with a rod, and each cupel occupies one man 12 hours in making; the frames are somewhat oval-shaped, but wider at the end nearest the front of the furnace. Each frame weighs about 125 lbs., being made of cast iron, and holds about 350 lbs. of bone ash; through an aperture in the back of each cupel furnace a jet of steam plays over the surface of the molten lead or bullion. It is claimed that the steam aids in the more rapid oxidation of the lead, besides tending to blow the litharge forward into the channel, which is cut across part of the wider end of the cupel, and which communicates with a small hole by which the litharge escapes to the floor beneath the furnace.
Steam jet	
Refining.	The litharge is collected and is at present used for mixing with the ore, as the "lead bath" is not yet in working order. As the bone ashes absorb a considerable quantity of litharge, the old cupels are broken up and are mixed with the ore before charging. The metal now left in the cupels consists of silver and gold, with traces of copper, &c. It is next treated in the "refiners"—small open firebrick-lined furnaces circular in section and sufficiently large to allow coke-room round moderately large plumbago crucibles;—the metal is smelted in these with a flux consisting of borax and nitre. The oxides of the baser metals rise to the surface forming a scum which is removed, and the purified bullion is run into ingots, which upon assay yield 996 to 999 parts of silver and gold in 1,000. As has been already stated, the ore at present being operated upon at Sunny Corner, though generally favourable for smelting, is deficient in lead, which is one of the elements essential to the process. It is therefore requisite to add a certain proportion of that metal, and the operations necessary for effecting its addition in the proper form appear to me to be attended with considerable expense. Should the process under these circumstances be remunerative at Sunny Corner, I think it should certainly prove a success at Silvertown, where, I believe, the ores will be chiefly argentiferous galena. The most interesting question appears to be the price at which the necessary fuel can be delivered there. If coke can be obtained at anything like a moderate cost, I am of opinion that the American process will be the one best adapted to the Silvertown ores.

EDWARD F. PITTMAN,
Assoc. R.S.M., Chief Mining Surveyor.

April 20th, 1885.

Postscript to my Report on the silver smelting works at Sunny Corner.

Since writing my report on the silver smelting works at Sunny Corner, I have inspected the plant recently erected by Messrs. Hudson Brothers, at Clyde. The furnace is called the "Gafford" smelter (after the inventor or patentee), and differs from the "Probert" in only one important particular, viz., that the water jackets, instead of being only 4' 6" high, extend the full height of the furnace. There is consequently no fire-brick or ordinary brick lining, and it is claimed that fewer repairs are required in the interior of the furnace. The water jackets are closed (instead of open as in the "Probert"), and the water escaping from them during the process appeared to me to be of a much higher temperature than was the case at the Sunny Corner works.

If the "Gafford" smelter can do as good work as the "Probert," and I can no reason why it should not, its greater simplicity of construction should constitute an improvement in the way of lessening the wear and tear.

E.F.P., 11/5/85.

The Inspector of Mines reports as follows:—During the year a lode or lodes were found at Melrose, containing galena, carbonate of lead, sulphate of lead, and small per centage of arsenical silver ores. With the exception of a pit 10 feet square little work has been done. An assay of the galena gave 136 oz. of silver per ton. An assay of the carbonate of lead gave 58 oz. 16 dwt. of silver, besides lead and copper. There are several hills likely to contain silver ore. The Waverley silver lodes, between Scone and Murrurundi, consist of quartz-veins several feet in thickness. These veins can be traced in a due north and south direction, fully 2 miles. They were partially worked some years ago. Several shafts were sunk, and one tunnel was driven to intersect them at about 150 feet deep, but was not carried far enough for that purpose.

The Wardens and Mining Registrars report at Green Swamp, about 10 miles from Bathurst, good indications of silver ore have been found, and large areas have been taken possession of. Assays from

from the lodes give from 4 to 18 oz. of gold, and from 9 to 30 oz. of silver, but the lodes have not yet been opened up. Silver lodes found at Scrubby Rush, at Sounding Rock, near Trunkey, at Glanmire near Bathurst, at Judd's Creek, near Burruga, and at Back Creek, near Rockley. An assay of a parcel of ore from Mount Costigan gave 27.15 per cent of copper, 55 oz. of silver, and 6½ dwt. of gold. Silver ore found in the Tingha district and in several places around Forbes, and also around Braidwood. A large quantity of ore has been sent from the Moruya Silver Mine to London for treatment, and it is proposed to erect more powerful and modern appliances with a view to work the mine efficiently. The "Golden Age" Mine, at Boorook (Messrs. Hall Bros), has now been worked to a depth 300 feet on the underlay. The lode in one place is 19 feet wide. 600 tons of ore raised, 390 tons treated. Yield, 34,000 oz. of silver, 23½ oz. of gold. In addition to the ore about 200 tons of poor tailings were treated—yield, 15 oz. The silver is extracted from the ore by roasting, chlorination, and amalgamation. The plant consists of two double-bed reverberatory furnaces 4 wheeler's pans, 2 Denny's pans, 1 Berdan pan, 24-horse-power engine, battery of 10 stampers' Maidin's pulverizer, large circular sieve and feeder, pits, retorts, &c. The Inspector of Mines, speaking of this mine, says:—"There are two distinct lodes in this mine. The richest and largest deposits of silver ore were found at the junction of these lodes. The Addison lode averages only 6 oz. of silver per ton, but the Golden Age has varied from 40 oz. to 600 oz., and in parts near the surface from half an ounce to 19 oz. of gold per ton. As the Golden Age is followed further from the junction it gradually becomes poorer, until, at a distance of about 200 feet, the quantity of silver is merely nominal, though it still carries an abundance of galena, blende, copper, and iron pyrites. From the surface to a depth of 75 feet the silver ore consisted of chloride and bromide; from 75 feet to 140 feet of argentiferous iron pyrites and blende. Below the 140 feet level it occurs principally as a flexible sulphide, of which some magnificent specimens were obtained. The prospectors on the silver lode discovered in July last, near Emmaville, have commenced operations, and as the work progresses the lode improves. The Inspector of Mines, speaking of this lode, says:—"The main lode has a wall-like appearance, and can be traced fully 2 miles along the surface. The cap of the lode is several yards in width, but the portion containing silver varies from 1 to 3 feet in width. South of the Severn River Messrs. Pomeroy & Reynolds have five lodes, running parallel, about 4 feet wide. M'Kenzie & Co. have a good-looking lode, 4 feet wide. The blow in O'Donoghue's block has been opened out about 5 feet, showing a large body of galena. At Pyc's Creek, Mole River, silver ore has been discovered which has every appearance of turning out rich. A sample assayed gave 2,075 oz. per ton.

The following assays have been made during the year:—

IRON.

But little progress has been made during the year in regard to the iron industry, and much depends upon the result of the tenders invited by the Public Works Department for the supply of 150,000 tons of steel rails to be manufactured in the Colony, whether iron-making is to become a permanent and important industry at once, or is to continue to struggle on for years to come.

The following assays have been made during the year:—

ANTIMONY.

There is a slight increase in the quantity and value of antimony exported during 1884 as compared with 1883.

The Inspector of Mines in his report says:—"In the Rockwell Mines, between Cudgong and Rylstone, antimony-ore, associated with quartz, varying in thickness from 3 inches to 4 feet, containing a high percentage of antimony, is found. Very little has been done on these lodes, but being so near the Rylstone Railway Station they are almost sure to be extensively worked."

THE following assays have been made during the year :—

MANGANESE AND COBALT.

The Mining Registrar reports that Messrs. Armstrong and party are working a deposit of cobalt near Bungonia which is likely to become a permanent industry. At Back Creek, near Rockley, two leases have been taken up for manganese, 200 tons of which have been sent to London.

The following analyses has been made during the year :—

BISMUTH, COBALT, CHROMIUM, MERCURY.

Locality.	Description.	Yield.
Mount Gipps	Brown mineral, with cavities filled with carbonate of bismuth.	Metallic bismuth..... 14·55 Silver, 4 ozs. 18 (dwts. per ton; no gold.*
Bungonia	Cobaltiferous manganese ore, from 13 miles south of Bungonia.	Sesquioxide of cobalt
Bungonia	Cobaltiferous manganese ore, ¾ mile from the above.	Oxide of nickel = to metallic do..... 1·15 Sesquioxide of cobalt
Armidale	Chromite, from near Armidale	Oxide of nickel = to metallic do. '40 Sesquioxide of chromium
Bendemeer	Chromite, from Bendemeer	Sesquioxide of chromium
Cudgegong	Red and yellow cement, from Cudgegong ..	38·5
Cudgegong	Red and white mottled silicious and magnesian clinker, from Cudgegong.	No mercury. No mercury.

* NOTE.—Contains also iron, alumina, &c., with a trace of copper and cobalt.

DIAMONDS.

The Wardens and Mining Registrars report:—At Doctor's Creek, Bingera, the Australian Diamond Mining Company obtained 1,193 diamonds, weighing 254 carats, worth 22s. per carat, while the water supply lasted. They raised 5,000 tons of diamondiferous drift, but were able to wash only 418 loads when the supply was exhausted, and works are now being constructed to convey the earth to the banks of the river, where an ample and unfailing supply of water for washing purposes may be obtained. Messrs. Powell and party succeeded in finding the diamond drift, and Messrs. Craddock and party had good-looking wash, a small trial of half a load of which gave 17 diamonds. Messrs. Dempsey and party have 6 feet of wash containing diamonds, but none of them can wash for want of water. Diamonds have been found in the Tingha division, near the Big River, Auburn Vale; they are said to be abundant and of good quality, but the appliances in use are most defective. Diamonds have also been found in patches in the Berrima district, and also in the Mudgee district.

There are indications of this branch of mining assuming an importance that has not hitherto been attached to it.

SLATES.

The Australian Slate Company, at Gundagai, have recently completed the erection of their cutting and dressing machinery, and is now in a position to supply the market with slates. Another company have recently started work on Matchett's slate lease at South Gundagai. As soon as the railway reaches Gundagai it is expected large consignments of slates will be sent to Sydney. There are valuable slate quarries in the Bathurst district, which will probably be opened up in due course.

LIMESTONES AND CALCAREOUS SHALES.

The following analyses have been made during the year:—

Undetermined (alkalis, organic matter, &c.) 1.21		
	100.00	
Shoalhaven.....	Calcareous shale from Shoalhaven	Hygroscopic moisture..... 1.37
		Carbonate of lime 46.10
		" of magnesia 2.68
		Peroxide of iron 2.28
		Protioxide of manganese80
		Silica 37.74
		Alumina 7.82
Undetermined (alkalis, organic matter, &c.) 1.21		
	100.00	

MISCELLANEOUS.

The following analyses have been made during the year:—

Barmednan..... Deposit coating the inside of boiler, derived from the water obtained in the mine workings at the Barmednan United Gold-mining Company's Works. Analysis with a view to its prevention or precipitation before using.

RESULT.—The saline deposit was found to consist chiefly of sulphate of lime. In the absence of any knowledge as to the proportion in which the substance exists in the water it is impossible to recommend any practical method of precipitating the sulphate of lime. The water in any case will be very unsuitable for steam purposes.

Cudal..... Water from a well at Cudal, having an unpleasant taste. Analysis, with a view of ascertaining if taste is due to mineral or organic impurities.

Total fixed matter.....	43.6 grains per gal.
Loss on ignition.....	5.0 " "
Insoluble matter (consisting of alumina, carbonates of lime, and magnesia).....	13.6 " "
Soluble matter (consisting of magnesia, trace of lime, sulphuric acid, and chloride of sodium) ..	30.0 " "

REMARKS.—The unpleasant taste is probably due to salts of magnesia. The quantity sent was too small for anything like a proper examination. Sample received in a soda-water bottle corked.

Darling Watershed..... Sample (B) of soil from Darling Watershed.

Complete analysis.

Fixed substances	Soluble in cold Hydrochloric acid.	Peroxide of iron	1.78
		Alumina	2.71
		Lime	1.27
		Magnesia68

			100.17

Goulburn..... Decomposed basalt from Goulburn district. Analysis, with a view of ascertaining its suitability as an ingredient in the manufacture of cement.

Loss on ignition	11.46
Silica	41.05
Peroxide of iron	14.35
Alumina	13.20
Titanic acid (Ti O ₂)	2.20
Lime	8.97
Magnesia	7.00
Phosphoric oxide	1.28
Alkalies, loss, &c.	.49
100.00	

NOTE.—This mineral, if mixed with a proper proportion of lime, and properly ground, burnt, and otherwise manipulated, might probably make a good cement. Any test which could possibly be made in the laboratory would be utterly worthless to decide the question, inasmuch as everything depends in practice upon the intimacy of the mixture, degree of fineness of constituents, the manner of burning, the subsequent grinding of the final product. In cement making on the large scale, accurate analyses are always made after the mixture and previous to burning, and then afterwards practical tests as to the quality of the cement.

Lucknow..... Calcareous deposit, forming an enamel-like coating on iron and wood, and preventing the proper manipulation of the ores, in the New Reform Gold-mining Company's Crushing machinery.

Silica	3.05
Peroxide of iron	1.20
Carbonate of lime	91.50
of magnesia	2.93
Moisture, loss, &c.	1.32
100.00	

NOTE.—For steam purposes the deposition of carbonate of lime can be prevented by the addition of a certain quantity of "Sal Ammoniac," the quantity being determined by first ascertaining how much carbonate of lime any given quantity of the water contains. Another plan consists in employing a precipitating tank, and adding a sufficient quantity of lime water. This is called Dr. Clark's process.

Rylstone..... Rubble, ferruginous, yellow shale, from near Rylstone—

Loss on ignition	7.49
Peroxide of iron	42.10
Silica	31.12
Alumina	14.42
Lime	.55
Magnesia	1.28
Manganese	trace
Alkalies, loss, &c.	3.04
100.00	

Do Rubble, ferruginous brown shale, from ditto—

Loss on ignition	9.74
Peroxide of iron	51.45
Silica	21.35
Alumina	14.65
Lime	trace
Magnesia	1.17
Manganese	trace
Alkalies, loss, &c.	1.64
100.00	

Do Rubble, ferruginous red shale, from ditto—

Loss on ignition	6.17
Peroxide of iron	41.94
Silica	32.10
Alumina	15.91
Lime	.45
Magnesia	.62
Manganese	trace
Alkalies, loss, &c.	2.81
100.00	

In conclusion I have much pleasure in submitting the following statement of the value of our mineral products up to the end of 1884, amounting to over sixty-four millions sterling.

SUMMARY.

AGGREGATE value of Minerals, the produce of New South Wales, to 31st December last, is—

	Quantity.	Value.	Total Value.
Quantity and value of gold prior to the 1st January, 1884	9,489,454·09 oz.	£ 35,828,887 12 7	£ s. d.
Quantity and value of gold raised in 1884	107,193 92 „	395,291 12 5	
Totals	9,596,653·01 oz.	35,724,179 5 0	35,724,179 5 0
Quantity and value of silver raised prior to the 1st January, 1884	842,462·32 oz.	293,917 0 0	
Quantity and value of silver raised during 1884	93,660·25 „	19,780 0 0	
Totals	936,122·57 oz.	223,697 0 0	223,697 0 0
Quantity and value of coal raised prior to the 1st January, 1884	28,512,218·6 tons	14,406,214 19 3	
Quantity and value of coal raised during 1884	2,749,103·68 „	1,303,076 19 11	
Totals	31,261,326·74 tons	15,709,291 19 2	15,709,291 19 2
Quantity and value of shale raised prior to the 1st January, 1884	338,599 tons	756,022 5 0	
Quantity and value of shale raised during 1884	31,618 „	72,176 0 0	
Totals	370,217 tons	828,198 5 0	828,198 5 0
Quantity and value of tin exported prior to the 1st January, 1884	Ingots 64,794 tons 6½ cwt. } Ore and Regulus 15,268 „ 11 „ }	5,997,590 0 0	
Quantity and value of tin exported during 1884	Ingots 6,315 „ 16 „ } Ore and Regulus 349 „ 13 „ }	521,587 0 0	
Totals	6,519,177 0 0	6,519,177 0 0
Quantity and value of copper exported prior to the 1st January, 1884	Ingots 57,667 tons 10 cwt. } Ore and Regulus 3,383 „ 5½ „ }	4,115,486 0 0	
Quantity and value of copper exported during 1884	Ingots 7,286 „ 6 „ } Ore and Regulus 18 „ 18 „ }	416,179 0 0	
Totals	4,531,665 0 0	4,531,665 0 0
Quantity and value of iron raised prior to the 1st January, 1884	21,810 tons 10 cwt. 3 qr. 9 lb.	181,489 0 4	
Quantity and value of iron raised during 1884	3,759 „ 2 „ 1 „ 22 „	24,571 11 2	
Totals	25,569 tons 13 cwt. 1 qr. 3 lb.	206,060 11 6	206,060 11 6
Quantity and value of antimony exported prior to the 1st January, 1884	Ore 2,053 tons 3 cwt. } Regulus 142 „ 0 „ } Metal 352 „ 17½ „ }	51,463 0 0	
Quantity and value of antimony exported during 1884	Metal 13 „ 6 „ } Ore 420 „ 6 „ }	6,458 0 0	
Totals	57,921 0 0	57,921 0 0
Quantity and value of asbestos exported prior to the 1st January, 1884	19 tons 13 cwt.	398 0 0	
Quantity and value of asbestos exported during 1884	
Totals	398 0 0	398 0 0
Quantity and value of bismuth raised prior to the 1st January, 1884	18 tons 18 cwt.	3,540 14 0	
Quantity and value of bismuth raised during 1884	14 „ 7½ „	2,770 0 0	
Totals	33 tons 5½ cwt.	6,310 14 0	6,310 14 0
Quantity and value of mixed minerals exported prior to the 1st January, 1884	407 tons 5 cwt.	12,286 0 0	
Quantity and value of mixed minerals exported during 1884	
Totals	12,286 0 0	12,286 0 0
Quantity and value of silver lead ore exported prior to the 1st January, 1884	339 tons 16 cwt. 0 qr. 0 lb.	7,460 0 0	
Quantity and value of silver lead ore exported during 1884	9,167 „ 11 „ 1 „ 7 „	241,940 0 0	
Totals	9,507 tons 7 cwt. 1 qr. 7 lb.	249,400 0 0	249,400 0 0
.....	64,068,584 14 8

Department of Mines,
Sydney, 4th April, 1885.

HARRIE WOOD,
Under Secretary for Mines.

TABLE

TABLE showing approximately the number of Miners employed in Gold-mining, the quantity of Gold won, the area of ground worked, and the value of Machinery in the Colony of New South Wales, during the year 1884.

(Compiled from Mining Registrars' Reports.)

District and Division.	Alluvial Miners.		Quartz Miners.		Total Miners.	Quantity of Gold.			Price of Gold per oz.		Value of Gold won.	Alluvial ground worked.	Quartz-reefs proved to be Auriferous.	Value of Machinery

Department of Mines,
Sydney, 4th April, 1885.

HARRIE WOOD,
Under Secretary for Mines.

WARDENS' AND MINING REGISTRARS' REPORTS.

BATHURST DISTRICT—TRUNKY, TUENA, BURRAGA, ROCKLEY, MOUNT M'DONALD, BATHURST, AND MITCHELL CREEK DIVISIONS.

(*Mr. Warden T. A. Smith, P.M., Trunkey.*)

IN forwarding my report for the past year I have the honor to inform you that gold-mining generally has been far from prosperous in this Division. The continuously dry weather and the rush to Silverton has decimated the mining population of these fields, and although the rainfall was upwards of 20 inches for the year it was so steady that scarcely any water found its way into the creeks; consequently the alluvial miner has been unable to work and sluicing out of the question.

In silver-mining there has been some excitement; great results are expected from the lodes at Sunny Corner, but up to date no bullion in quantity has been sent to Sydney. Probably the first escort will leave for the metropolis during this month (January).

At Tuena, between Peelwood and Scrubby Rush, silver ore and copper have recently been found. The assays are reported as encouraging. Similar discoveries have been made at the Sounding Rock, near Trunkey; at Glanmire, near Bathurst; Judd's Creek, near Burraga; and Back Creek, near Rockley. If the ore is sufficiently rich to be payable then there is a bright future in store for these districts, as the ore is so widely distributed.

Trunkey.—Only 108 men are mining here now. The yield of gold cannot be obtained. Only £1,250 worth was sold locally. Seven new gold leases were applied for during the year.

Tuena.—Somewhere about 100 men are working on the mines. Peelwood Copper-mine has stopped working. I think the very low price of copper is the reason. 744 oz. of gold have been sold locally. Only one quartz-reef at work. Machinery will be erected to crush the stone shortly. The owner has about 300 tons rich stone at grass. The silver excitement has cropped up here. 260 acres have been applied for under mineral lease. The ore obtained from Mount Costigan has assayed as follows:—27.15 per cent. copper, 55 oz. fine silver, and 6½ dwt. gold.

Burraga.—This copper-mine has been kept at work most of the year, the return being 582 tons of marketable copper.

Rockley.—The silver excitement has been felt here. Twenty mineral leases have been applied for, the supposed silver lode being on Back Creek. Similar deposits have been found on Judd's Creek, between Rockley and Burraga.

Mount M'Donald is by far the richest gold-field at present in the division. 5,815 oz. of gold obtained last year. The Eureka Lease crushed 807 tons for 1,285 oz. melted gold; Balmoral, 794 tons for 1,206 oz.; Grant's, 603 tons for 540 oz.; Woolloomooloo, 88 tons for 207 oz.; Woman's Lease, 180 tons for 592 oz. Twenty-two new gold leases were applied for. The population of the field is about 500 persons.

Bathurst.—Thirty-four mineral lease applications, and six for gold, were lodged here this year. One hundred and forty-five miners' rights, fifty-two mineral licenses, and nine business licenses have been issued.

Mitchell's Creek.—It is near here the Sunny Corner Silver-mine is situated, which promises to develop into one of the richest mines in Australia. The richness of the ores caused quite a rush for mineral leases and 3,190 acres have been secured. On the Sunny Corner Mine fully 300 men are employed. Expensive furnaces have been erected to treat the ores locally, and everything else done to ensure success. There are also other mines that have been partially prospected, and assays are reported as satisfactory. The Nevada, Silver King, Tonkins, Cornstalk, and Silver Hill are among the first division, most work having been done on or near these leases. A village has sprung up quickly near the mine. The population is about 1,500 persons, but I am afraid water will be a scarce article for some time. I append a printed report taken from the *Sydney Morning Herald*. It is dated 3rd December last, and is a copy of the report of the directors of the Sunny Corner Silver-mine, as presented to the shareholders, and includes all information available up to present time. I hope the most sanguine expectations of the directors may be fully realized, for should this mine be a failure it would have a most depressing effect upon future mining ventures in this Colony.

The position of the Sunny Corner Silver-mining Company (Limited), in whose operations considerable interest centres, is disclosed in the directors' report submitted to the shareholders under date, Sydney, 3rd December. The following extracts will be deemed interesting:—"In submitting this report of the affairs of your Company, your directors may state that your property will, in their opinion, be dividend-paying before the expiration of January of the coming year. The 'Pacific' smelter, which was erected during the present year and successfully 'put in blast' for the first time on 27th August last, has since been running at intervals for fifty days, and the result has been a return of 37,370 oz. of silver and 188 oz. of gold (now at the mine), valued at £9,185. This furnace has hitherto been worked at a great disadvantage, consequent on a want of additional appliances to carry off the arsenical and lead fumes that have affected the workmen injuriously. The required additions have now been completed, and the furnace will be again 'put in blast' on Thursday next, 4th instant. The nominal capacity of the furnace is 25 tons of ore per day, and this quantity has on occasions been slightly exceeded, while, with all the recent additions to the plant, it is confidently expected that this smelter may be now kept continuously at work. On the 29th of October five stamps of the 10-stamper battery recently erected were got to work, and on the 26th November the 10-stampers were set in motion. The crushing shows satisfactory results, as the estimated value of amalgam is now £700, while the tailings from the battery show an assay at the rate of 90 oz. of silver and 6 dwt. of gold per ton. The 'Probert' smelter and its adjuncts are almost completed, and it is confidently expected that this extensive plant will be set in motion within ten days from date. Its capacity is set down at 65 tons per day, and it is thought it cannot fall much short of this estimate. [Actual trial has shown 72 tons to 75 tons per day, the yield exceeding the estimate.] Putting the capacity of the 'Probert' smelter at 60 tons per day, the 'Pacific' smelter at 20 tons per day, and the average yield of silver at 50 oz. per ton (a very fair estimate), excluding value of gold, which has in the 'Pacific' smelter averaged say 3½ dwt., or equal to 14s. per ton of ore, we will obtain a daily result of equal to 4,000 oz. of silver, which, at (say), 4s. 6d. per oz., gives £900, and gold at 14s. per ton of ore, £56; and this, with continuous running of smelters equal to 80 tons per day, would mean a product of gold and silver equal to £348,940, per annum. These figures do not take into account the returns from the battery, which is kept continuously at work, and may be estimated to return in the form of bullion not less than £120 per week, leaving the tailings available for smelting. By the last assay of

f tailings from the battery as above stated, they contained 90 oz. of silver and 6 dwt. of gold, worth (say) £21 per ton. As to cost of smelting, by the terms of our contract with Messrs. La Monte and Rosener, they covenant to smelt 25 per cent. of ore and 75 per cent. of tailings at 24s. per ton, for a run of ninety days; and while your directors are of opinion that the actual cost must exceed this amount, they are satisfied that within a short period the actual cost will, with experience, be brought within a limit that must give satisfactory results to all concerned. The most important fact as affecting the present and future value of the mine, is the quantity of payable ore already 'won', and ready for treatment; and on this point your directors, while they cannot formulate or even approximate the quantity, can give satisfactory assurance. Mr. E. S. Nixon, mining surveyor, recently in charge of the underground surveys of the Great Cobar Copper-mine, has been engaged to effect a complete survey of the workings of your mine. He has only been engaged on the work for about five weeks, and is not yet prepared to give an estimate of ore 'won' and in sight, but putting the ore to be furnaced at 80 tons per day, or 29,200 tons per annum, he is of opinion that the ore now stacked and in sight is at least three years ahead of the present capacity of our smelting power, and this is quite irrespective of the fact that your directors are vigorously pushing on the further development of the mine, and do not intend to relax the opening up of the various lodes, which show no sign of diminution. Instructions have been given to Mr. Nixon to prepare, in conjunction with Mr. Hurley, the mine manager, when the underground surveys of the mine have been completed, a full report of the work done in opening the mine, the ore that has been 'won' and in sight, the prospects and development. This report, when obtained, will be at once printed, and placed in the hands of the shareholders. Your directors are fully alive to the necessity of providing further smelting power when the necessity arrives, which cannot be but in the near future."

BATHURST DISTRICT—ORANGE DIVISION.

(Mr. Warden J. T. Lane, P.M., Orange.)

CIRCUMSTANCES over which I had no control have operated against sending my Annual Report earlier.

Ophir—the parent gold-field in the Australias—continues to attract attention. The *Ophir Drift Gold-mining Company* is still driving under the "Basalt Hill." The Company has incurred a heavy outlay in driving some 300 feet through the blue rock with the view of draining the hill. In a jump of about 40 feet they cut some wash-dirt. The drive is about 400 feet into the very middle of the hill; in their course they passed through lots of petrified wood. If they are fortunate to cut the gutter they will doubtless be amply rewarded. The prospects are encouraging.

On the Stony Creek road, about 5 miles from *Ophir*, prospecting parties are procuring good coarse gold on some land belonging to Mr. Slater, but from the paternal regard he has so long manifested towards *Ophir*, I am sure he will throw no obstacles in the way of the general interest of the gold-mining fraternity.

Nothing is doing at the Belmore. I hope it has not run out. You will remember my views *re* this point at the time of the great find. Perhaps the shareholders are shaking off the effects of the holidays.

The Bluff and the Queen of the Ranges have amalgamated and the shares are all taken up. The engine is to be removed forthwith, and the music of the stampers will give new life to old mother *Ophir*. The prospects are considered good by connoisseurs. The proximity to water, the ease with which the stone, &c., can be brought to the battery, &c., &c., are among the advantages in favour of the site chosen. Drs. Bassett and Spencer, and Messrs. Slater, Combes, Waddell, and others deserve much credit for their indomitable perseverance. The company they have succeeded in floating is said to be strong, and it is to be hoped it will receive its due reward.

Little or nothing is doing at Lucas's Gully nor on the old alluvial spots.

Lucknow.—This old field is coming again to the front. The New Gold-mining Company (Limited) is steadily, but I believe surely, developing its richness. I personally inspected the whole operations a few weeks ago, and I do think the economy manifested cannot be surpassed, the whole cost for six months being under £2,500, whilst the "out-put" is some £7,500, the product of seventeen men's labour, two engines two shafts (300 and 200 feet), and a twelve-stamp battery buddle. The 300-foot shaft is to be sunk 100 feet deeper, another level driven, and facilities for crushing longer hours. The Company is already paying a dividend.

Mr. Newman's success *re* this Company has induced an English syndicate to purchase the adjoining property, known as Frederick's Valley Gold-mining Co. (Limited), London, and preparations are now being made to work it on an extensive scale. They have a 25-horse-power engine, with a 30-horse-power boiler, which will drive the ten head of stampers recently erected. A Munday patent buddle, improved by Mr. Newman upon the same principle as the one working at the Reform, will retain the whole of the ore in a concentrated state within the first 18 inches. The same engine will also do the pumping from the 300-foot shaft, known as Golden Point shaft. A 10-horse power engine is erected to do the winding.

A tram-road 700ft. long has been erected, connecting a shaft 200ft. deep, known as the Shamrock, with the battery. At this shaft the Company purpose erecting an engine, with pumping gear, and if necessary, crushing appliances, similar to those at the Golden Point shaft.

The prospects of this field are considered very encouraging. In the early days many rich veins disappeared and have not been seen since. The original Golden Point vein yielded to the shareholders the enormous sum of £50,000 in nine months, Spicer's 80 feet, £42,000 in six months; Golden Gate, 80 feet, £35,000 in eight months; Shamrock, 80 feet, £30,000 within two years; Crinoline, 20 feet of ground, £20,000 in eighteen months; Snobbs', 80 feet, £20,000 within one year, besides several smaller returns, making in all a large round sum within two years. The pyrites veins have not as yet been opened up. Alluvial gold is being found upon the property in sufficient quantity and it is thought to keep the battery going whilst the veins are being opened.

This property is under the able managership of Mr. H. W. Newman, who is a large shareholder, and who informs me that English capital to any extent is available for *bona fide* mining speculations in the Colony.

I have been more lengthy in my remarks *re* Lucknow Gold-field for two reasons—the presumed relationship existing between it and the other gold-fields in this neighbourhood, and the belief that Mr. Newman's skill and perseverance deserve some special mention.

Forest Reefs.—Operations are still carried on by the Lumpy Lead Co. The shaft has been bottomed at a depth of 168 feet on a hard reef, dipping 5 feet 9 inches in the length of the shaft—9 feet. When the hard country is passed through the deep ground is expected to be good. The sinking is through an exceedingly hard rock. A steam-engine is employed in keeping the water under, and a whim for bringing the dirt to the surface. The shaft, 9 feet by 3 feet 6, is slatted with sawn timber from the top to the bottom.

The

The Great Extended Gold-mining Co. (Limited) is working at the south-west end of the lead, which is very narrow; the wash-dirt is yielding about $\frac{1}{2}$ an oz. to the ton; the lead is expected to widen, when of course the profit will be greater. Nothing is doing at the east end. From a trial crushing of 6 tons from the bottom level 2 dwt. of free gold was procured; the pyrites must be treated ere the total result can be ascertained. The lode has a promising appearance and it is to be hoped will prove remunerative.

At the Four Mile very little is being done. One or two parties evidence their confidence in that locality by continuing to plod along.

Nothing worthy of note is being done in any other locality to my knowledge.

Copper-mining is one of the things of the past so far as my division of the district is concerned.

BATHURST DISTRICT—CARCOAR DIVISION.

(*Mr. Warden Connolly, P.M., Carcoar.*)

I HAVE the honor to submit, for the information of the honorable the Minister for Mines, the annual report of the Carcoar Division of the Bathurst Mining District.

Notwithstanding the fact that no new discoveries of gold have been reported in any fresh locality for the past three years, it is exceedingly satisfactory to note that during that period the yield of gold as shown by the escort returns

	oz.	dwt.	gr.
1882	6,599	4	2
1883	9,817	16	12
1884	12,040	3	14

has so largely increased, evidencing that the capital invested in gold-mining enterprise in the Carcoar district has yielded to the investors most remunerative returns.

From the steadily increasing success attending the operations of those engaged in gold-mining here, it is evident that the influx of an additional body of persevering and practical miners is all that is needed to still further develop the production of gold in this locality.

Owing to the low price of copper, very little is doing in this division in regard to that metal, although the existence, in various parts, of rich lodes, has long been an ascertained fact.

The Great Blayney is at present the only copper-mine being worked. Its close proximity to the railway-line and to the town of Blayney renders the profitable working of this property a matter of great importance in the locality.

Towards the close of the year just passed a considerable amount of excitement existed, in consequence of the reported discovery of tin about 20 miles from Carcoar, on the Belubula, the mineral taken for tin having on assay proved valueless; the excitement has subsided.

BATHURST DISTRICT—BATHURST DIVISION.

(*H. H. Hutchinson, Mining Registrar.*)

I HAVE the honor to forward herewith my annual report, respecting the Bathurst portion of the Bathurst mining district, for the year 1884.

A considerable improvement is noticeable during the past year in mining, owing no doubt to the large deposits of silver ore discovered at Mitchell's Creek, in this vicinity.

At Green Swamp, about 10 miles from here, good indications of silver have been found, and a large quantity of land applied for under mineral leases. Assays from parcels of stone taken from these lodes have given returns of from 4 to 18 oz. gold and from 9 to 30 oz. of silver to the ton. These lodes have not yet been fairly opened up, and no idea can as yet be formed of their extent.

At Blackman's Swamp, near Limekilns, a rich gold leader has been struck by Sinclair and party, and some leases have been applied for on the same line.

On the Winburndale Creek, a few miners are still prospecting, and fossicking is being done on the Old Fontana and Napoleon line of reefs.

Miners are very reticent as to their doings, and very little trustworthy information can be elicited.

I have issued during the year 145 miners' rights, nine business licenses, and fifty-six mineral licenses.

BATHURST DISTRICT—CARCOAR DISTRICT.

(*W. B. Warner, Mining Registrar.*)

DURING the year just closed the operations of the miner in this division have been carried on with an increased measure of success.

No new finds have been reported, but more gold has been obtained from the claims worked in previous years. From Gally Swamp in particular some very good cakes of gold have been received. Croucher's, Barlow's, Tucker's, Lane's, Rowe's, and other claims have, during the year, yielded larger quantities of gold than heretofore.

At the alluvial workings at the Forest, Lumpy Swamp, and Flyer's Creek, all situated on the Church and School Estate, operations during the earlier months of the year were stopped from want of water, thus greatly diminishing the yield of gold from these localities.

At the Burnt Yards the brilliant expectations respecting the Prince of Wales claim have not been realized, although during the year many thousands of pounds have been expended in mining plant, and the shaft, the deepest in this district, has been sunk to a depth of 467 feet. The pyrites in this mine is very rich, a ton sent to England having yielded 12 oz. gold and 12 oz. silver, while a picked specimen assayed at the rate of 800 oz. of gold and 500 oz. silver to the ton of ore.

The Brown's Creek mine is still the largest concern in this division. The yield of gold keeps well up to the average. The amount of gold sent down by escort is rapidly increasing, the amounts for the three years to 31 December, 1884, being as follow:—

	oz.	dwt.	gr.
1882	6,599	4	2
1883	9,817	16	12
1884	12,040	3	14

These returns include the gold forwarded to the local banks here from Mount M'Donald.

Very

Very little prospecting or mining for copper is carried on in the division, the present low price of copper probably having something to do with this. The Great Blayney mine is again working after being closed for some months.

For 1884 I sold fifty-six miners' rights, two business licenses, and one mineral license.

BATHURST DISTRICT—TRUNKY DIVISION

(*W. T. Lee, Mining Registrar.*)

I HAVE the honor to submit my report for the Trunkey Division of the Bathurst mining district, for the year 1884. Mining is in a very depressed state. Early in the year the Eureka Company, locally known as No. 7, stopped work, and have since removed the machinery to Mitchell's Creek. In April last Mr. C. Schultz sank to a depth of 120 feet in the trap rock hill, 2 miles south of this place, and obtained only a few colours at the bottom. The shaft, 4 x 2, was not considered sufficiently safe for driving.

Silver is occupying a very prominent position; many miners are searching for that metal. Mr. Licensed-Surveyor J. Ryan has kindly supplied me with the rainfall for the year, viz., 24 inches 21 points. There has not been any water for alluvial mining, which is consequently almost at a stand. Several attempts have been made to find payable gold north of Trunkey, and at the Parish, all as yet unsuccessful. A large party of experienced miners from Temora will start work at the trap-rock hill, 16-acre lease, early in the year. They are now erecting machinery, and express themselves confident of success. Some of the party have previously worked in the ground.

During the year I have issued 108 miners' rights, 18 business, and 12 mineral licenses.

BATHURST DISTRICT—TUENA DIVISION.

(*M. Jones, Mining Registrar.*)

I HAVE the honor to forward herewith report upon the gold-field in the Tuena division of the Bathurst mining district. In alluvial digging there has not been anything new to note for the past year, the want of water preventing working to any great extent, and quartz reefing has been almost at a stand, there only being one quartz-reef at work, and nothing crushed but what has been done by hand in a mortar.

Within the last four weeks there has been quite a rush in silver mining. About 200 acres of land have been applied for as mineral leases for the purpose of mining for silver, and quite as much more marked out as intended to be applied for.

BATHURST DISTRICT—COWRA DIVISION.

(*W. B. Simpson, Mining Registrar.*)

IN forwarding my report for the year 1885 I have nothing of interest to report. Mining in the Cowra Division has been unusually slack. The season being very dry quite puts a stop to anything in the shape of prospecting.

Three applications for leases have been made during last year. There are none at work. 23 miners' rights were issued to persons principally holding interests at Mount M'Donald.

BATHURST DISTRICT—ROCKLEY DIVISION.

(*T. C. Cromie, Mining Registrar.*)

I HAVE the honor to herewith enclose you the annual returns from Rockley for 1884. I regret there has been any delay, which has been caused by waiting for the copper returns from Burruga, which it now appears have been sent to a wrong Department.

During the year 1884 there were 76 miners' rights, 40 business licenses, and 13 mineral licenses issued at Rockley, being a slight increase on the previous year, owing no doubt to the excitement caused by the discovery of a silver lode at Back Creek, some 6 miles from Rockley, which was discovered early in October last. 20 mineral leases for silver have been paid for there.

As yet very little work has been done there, and until such has been performed no idea can be formed as to how the place will turn out. It is now three months since the greater part of the leases were paid for, and as no surveys have yet been done there will not be much work done until such is completed.

The Burruga copper-mines are still in full swing, and the prospects there are as good as ever, but it is feared that the present low price of copper may eventually cause the mines to close.

The two manganese leases at Back Creek have been worked during the year, and 200 tons have been shipped from there to London.

Gold-mining is at a very low ebb, the continued dry seasons having put a complete stop to all sluicing operations.

There is no quartz-mining in the district.

BATHURST DISTRICT—MITCHELL'S CREEK DIVISION.

(*J. Shumack, Mining Registrar.*)

THERE has been a marked falling off in gold-mining in the division for the year, but an improvement in mining generally. There has been over 3,000 acres of land taken up, under the Mineral Lease Regulations, principally for silver-mining. Several claims have struck the supposed lode, but have got no returns yet. The Sunny Corner Silver-mining Company have erected two smelting furnaces during the year, and are just getting all into good working order. I have sold during the year 363 miners' rights, 62 business licenses, and 56 mineral licenses. I have given what information I could gather in regard to the quantity of stone raised and gold won, &c., but cannot get the required information from the different mines.

BATHURST DISTRICT—MOUNT M'DONALD DIVISION.

(*G. A. Gunning, Mining Registrar.*)

IN submitting my report for the year 1884, I am pleased to state that the total yield for this year exceeds that of the previous one by 1,814oz. 16dwt. 8gr., the gross yield for this year being 5,815oz. 6dwt. 5gr. against 4,000oz. 9dwt. 21gr. for 1883.

I regret that owing to one Company not registering the quantity of stone they crushed, I am unable to give the total tonnage or average yield, but by omitting the gold obtained by this Company we obtain an average of 1 oz. 9 dwt. 4 gr.; thus 3,494 tons yielded 5,117 oz. 5 dwt. 3 gr. During the year an important discovery (the Eureka Line) was made, which caused a decided improvement in the prospects of this field; 931 tons quartz from this line reef yielded 1,574 oz. 11 dwt. 7 gr. The following are the principal crushings for the year:—Woman's Lease, 180 tons for 591 oz. 19 dwt.; Victoria, 84½ tons, 160 oz. 18 dwt. 8 gr.; Adelong, 87 tons, 193 oz. 10 dwt. 5 gr.; Butcher's claim, 46 tons, 183 oz. 18 dwt.; Balmoral, 794 tons, 1,206 oz. 13 dwt. 15 gr.; Eureka, 807 tons, for 1,285 oz. 2 dwt. 23 gr.

I have issued 163 miners' rights and twenty-four business licenses during the year, which also show a favourable increase. The tribute on Balmoral having expired in October last work has been stopped pending fresh arrangements. I believe a Company has been floated in Melbourne to work this mine; if so, I anticipate an improvement in the demand for labour.

The Lachlan River being low during the summer several men have done a little puddling with partial success. It is a pity the reefs on this field have not been tested to a greater depth; in most claims where the hard rock has been met with the claim has been abandoned as the cost of raising exceeds the value of gold obtained. What is required is a sum of money as a bonus to encourage deeper sinking.

TAMBAROORA AND TURON DISTRICT—HILL END AND SOFALA DIVISIONS.

MUDGEES DISTRICT—HARGRAVES AND WINDEYER DIVISIONS.

(*Mr. Warden W. A. Steel, P.M., Hill End.*)

I do myself the honor to submit, for the information of the Honorable the Minister for Mines, my annual report for the year 1884 of the Hill End and Sofala Divisions of the Tambaroora and Turon Mining District, as also the Hargraves and Windeyer Divisions of the Mudgee Mining District under my charge.

I regret to state that the mining interests in the whole of my district continue in a most depressed state, owing partly to the falling off of the yield of gold and from the large number of miners who have left this district for Sunny Corner (Mitchell's Creek), the near proximity of which has induced many to seek more certain employment in that locality.

The Hawkins Hill Consolidated Company, during the early part of the year, was under the management of Mr. T. E. Murphy, but owing to some difficulty arising between him and the directors he resigned and returned to England, when Mr. Alfred Bullock took temporary charge, and very recently all work has been suspended awaiting instructions from England.

The Red Hill Gold-mining Company, Tambaroora, totally suspended work some three months since, for the purpose, it is said, of reorganizing the Company. It is sincerely to be regretted that the results of the above have not been more satisfactory during the past year, as their suspension of labour has thrown out of work many old experienced miners who have had to seek employment elsewhere.

Quartz-mining.—With the exception of about half-a-dozen claims, which are payable, I have little worth recording. Carver and party, which first struck payable gold in July last year (1883), has continued to yield handsome returns, which show total crushings for the year 421 tons, for 1,605 oz., value about £6,219; one of the partners sold a fourth share for £600. The adjoining claim, held by Shoebert and party, have struck payable gold, a crushing of 18 tons having yielded 1 oz. 10 dwt. to the ton. The Perseverance Gold-mining Company (Marshall's Line), Meyers and Northey, Kessell (Tambaroora), and one or two other claims, are yielding highly satisfactory returns.

Anderson and Brown (Golden Gully) have erected expensive pumping machinery on their Canton claim for the purpose of keeping down the influx of water, and have only recently commenced work.

6,202 oz. 3 dwt. 3 gr. have been forwarded by escort from Hill End, Hargraves, and Windeyer, showing an increase of 1,010 oz. over that conveyed during the previous year; this is mainly traceable to the steady yield of Carver and party's claim.

Hargraves.—Bond and party, out of whose claim large quantities of gold have been obtained, forwarded about 1,500 oz. to Sydney during the first five months of the present year, since which they have erected powerful machinery for the purpose of keeping the water under; are now busy pumping night and day. Over 730 oz. of gold were forwarded by escort during the first half-year, since which the escort has been discontinued, and it now has to be sent from Windeyer and Hargraves by private hands.

I have nothing to report from Windeyer, the little mining being carried on by Chinese.

Sofala Division.—This part of my district still maintains its reputation for being the most prosperous, the yield of gold forwarded by escort steadily increasing each quarter, the total quantity sent by escort being 3,936 oz. 2 dwt. 12 gr., showing an increase of 271 oz. 18 dwt. 23 gr. over the previous year.

Spring Creek Company's Mine.—This property has recently changed hands, and is now the property of Mr. Thomas Denny, of Bathurst, who has formed a Company to efficiently work it; a crushing of surface quartz will shortly be made. The attractions of Sunny Corner have induced many miners to leave for that field, which is only some 25 miles distant.

TAMBAROORA AND TURON DISTRICT—IRONBARKS AND WELLINGTON DIVISIONS.

(*Mr. Warden Marsh, P.M., Wellington.*)

HAVING now received reports from the Mining Registrars at Wellington and Ironbarks, copies of which are enclosed, I find that all the information which can be afforded has been so fully given, more particularly as regards details, that I can only endorse all that has been stated.

In a general way I may state that it is a matter for regret that mining matters and enterprise are certainly not improving, the gold won in this division being very far short of what was obtained last year. I am unable to attribute this to any other cause than the general depression consequent on an unusually protracted drought, which the late general and splendid rains may be accepted as a fair indication of now drawing to a close.

I regret to add that the only two Quartz-Crushing Batteries in the Wellington Division, which have been so fully described in former reports, are still idle, and that the most powerful battery, which was at Ironbarks, has been removed from that place, in the latter case showing, as a natural consequence, the falling off from former years of the quantity of gold-bearing quartz stuff, &c.

Wellington.—In submitting my report on the mining industry in the Wellington Division of the Mudgee Mining District, for the year 1884, I regret to state that mining matters during that period have been

been very dull. The only crushing batteries in this division, and which are described in the accompanying returns, have been idle all the year. From inquiries made I find that the amount of gold won was 468 oz. 1 dwt. 14 gr., being 460 oz. 4 dwts. 5 gr. less than the quantity obtained in the preceding year. I may mention that I was informed, in the month of October last, that a number of persons were out prospecting in the vicinity of Buckinbah and Bushranger's Creek, some miles from here, but not having heard of them since concluded that their labours were not attended with success. During the year forty-six miners' rights, four mineral licenses, and one business license were issued, and two applications for mining leases were received.

Ironbarks.—I have the honor to forward my Annual Report on the Ironbarks Division of the Tambaroora and Turon Mining District for 1884.

In quartz I have no improvement to report. Appended hereto are the crushings and results that have taken place during the year. Liddle and party still continue raising good stone, which is so far encouraging as to induce them to sink a new shaft with a view to cutting the reef at a considerably deeper level. Messrs. Marshall & Co. have completed a small crushing on the Moonks Reef and are now sinking a shaft to cut the Iron Duke Reef at a depth of 100 feet.

The majority of the reefs still remain abandoned and it appears to me for a very simple reason. In most cases the water is reached at from 60 to 70 feet, and at the same depth quartz that was previously impregnated with free gold is coated with pyrites. There are no appliances to treat or even save pyrites, and therefore the quartz, at the depth indicated, shows a decrease which is put down as the gold running out. I firmly believe that there is a good future for Ironbarks when machinery is erected capable of dealing with pyrites stone. A number of gold-mining leases locked up, on which no labour has ever been employed, is a further drawback to the progress of this field.

At present there is only one small crushing machine in the district, which is capable of crushing 60 tons per week. The machinery consists of a 12-horse power engine and boiler connected to twelve head of stampers.

A new reef has been discovered at Mookerawa by Halladay and party, a trial crushing from the surface of which returned 7 dwt. per ton. As far as prospected it is an immense blow, and the fact of 7 dwt. per ton being obtained on the surface and thousands of tons in sight it should prove on further development to be a good property.

In alluvial mining the continued dry weather keeps the pudding machines at a stand-still. Beyond the fact of a few fossickers still clinging to the alluvial ground it is, as far as any profitable results can be obtained, a thing of the past.

At the Macquarie River the Mookerawa Gold-mining Company, after spending some £4,000 in pumping machinery for the purpose of ground sluicing, from which great results were anticipated, have abandoned their entire works and machinery to the hands of a caretaker. This ground paid private parties for years from whom it was purchased, but since the Company took possession nothing but changes of managers and mismanagement has been the order of the day. As far as I can learn 400 oz. of gold have been obtained. On the opposite side of the river the Junction Point Company, after putting in an expensive tunnel, some 270 feet, through the rock for a tail race, and connecting this with the trial shaft, suddenly stopped work. A trial washing gave a return of nearly 5 dwt. per load.

Martin's Point is now leased by the representative of a London company, the machinery to work the ground being on the road and expected to arrive within two months. As this is the first machinery of the kind for washing ever introduced into the Colonies, it is looked forward to with great anxiety by the Macquarie miners. It appears to have been working very satisfactorily for some years in America.

The amount of gold won for the year 1884, as taken from returns and storekeepers, is 1,361 oz. 6 dwt. 3 gr.

No. of miners' rights issued, 155.

No. of business licenses, 17.

No. of gold-mining leases applied for, 7.

Return of crushing during the year 1884.

TAMBAROORA AND TURON DISTRICT—HILL END DIVISION.

(Hy. S. Hawkins, Mining Registrar.)

I HAVE the honor to submit, for the information of the Honorable the Minister for Mines, the following report on the mining interests in the Hill End Division of the Tambaroora and Turon Mining District for the year 1884:—

I regret to state that I am unable to report any discoveries of note since last year's report, mining being now in a rather depressed state. There are at present not more than six claims on really good payable gold, and as none of these are in large workings, there is a scarcity of labour; many of the payable claims at the beginning of the year have lately knocked off work altogether on account of poorness of ground; and the greater number of miners left the district for Mitchell's Creek.

Prospecting has been tried by a few of the experienced miners, but without avail. One new reef was discovered at north of recreation ground, about 1 mile from town, several crushings yielding 18 dwt. to the ton, which paid passably well, but the gold not extending to any depth; fifteen to twenty claims were pegged out, but afterwards abandoned.

Alluvial

Alluvial mining is still being carried on by Chinese with passable results ; but indeed it is hard to obtain reliable information from Celestials on any mining matters, more especially if good results are achieved ; judging by the departure of a number of Chinese from the district, I imagine that but few have met with success ; little, if any, alluvial digging is indulged in by Europeans.

Quartz.—Carver and party, on Scandinavian Line, have been fortunate in opening good ground ; at present they hold two leases comprising 5 acres (adjoining), the main shaft being now at a depth of 140 ft., with four or five drives, and in each level splendid stone has been obtained, averaging 3 to 4 oz. ; the ground is soft and easily worked. At the deepest level they have water to contend against, but not of a very detrimental character, having sunk a straight shaft for baling purposes, which is performed at night shifts, their prospects being now as good as ever.

Schobbert and party, adjoining on same reef to the south, on higher ground, are now at a depth of 130 ft., driving south, and have obtained good stone averaging $1\frac{1}{2}$ oz. to the ton, which ought to improve. In both these claims the cross leaders at times are thick, breaking the vein, which is about 3 to 5 inches wide.

Le Messureir and party on same line, north of Carver, have sunk their shaft a depth of 30 feet during the last few months, but without success ; the cross leaders are very thick, ground hard, and vein apparently pinched out.

Denman and party, on Marshall's line, about 2 miles from town, have this month suspended work. They have, during the last year taken 50 tons of stone, yielding as high as 4 oz. to the ton, but on account of the hardness of ground, necessitating heavy expenditure in dynamite, &c., the yield has barely covered expenses ; the vein is not more than 1 inch in width.

Meyers and Northy, at Specimen Gully, are at a depth of 150 feet, and at several levels have taken out stone yielding $3\frac{1}{2}$ oz. ; the ground is soft, and prospects at present are very good.

Ackerman and party, at Golden Gully, have raised good stone, yielding $2\frac{1}{2}$ oz. to the ton ; ground is patchy ; thus a fair average cannot be stated.

With these exceptions few claims about Hill End can be said to really pay more than wages. A number of claims on Hawkins' Hill have been abandoned.

Hawkins' Hill Consolidated Gold-mining Company.—During the early portion of the year the Company was under the management of Mr. Murphy, who intended to try the deep levels at Carroll and Beard's. A drive east at 800 feet was made for about 40 feet ; it was expected to cut the old veins in about 10 feet more. At this period his Grace the Duke of Manchester, who is chairman of the Company, visited Hill End, and stopped the working. Mr. Murphy resigned, the management falling to Mr. Bullock, with instructions to test a quantity of stone from the "blow," 18 feet wide, at Cornelian claim ; 500 tons have been tested, yielding about $3\frac{1}{2}$ dwt., which does not pay expenses ; very little work of any description has been done since ; the Company is in possession of good machinery, which is now idle.

Tambaroora.

T. Ellis and party (Extended Claim), at Dirt Holes, have turned out good stone ; several crushings have yielded $1\frac{1}{2}$ oz. to the ton ; the ground is very soft ; the claim at present is not properly opened, and should develop in a good mine, as the stone appears to be very even at each level.

Christie and party, at Independent Reef, had a crushing in December yielding $3\frac{1}{2}$ oz. stone ; gold is very coarse, but ground patchy.

The Red Hill Amalgamated Gold-mining Company has not been working for some months. I understand the Company is undergoing a thorough reorganization, and before long will be started again. During the past year about 400 tons of stone were crushed, yielding an average of 2 oz. ; in these works the water is very strong, necessitating continuous pumping, the steam being conveyed a distance of about 1,250 feet, the expenditure for fire-wood being great.

Brown and party, at Canton Reef, have lately started work, and have erected a Tangye pump. The shaft has been cleaned out, and a drive started ; it is expected to cut a vein yielding 2 oz. stone.

Export of gold by escort and other means has exceeded that of previous year. To this I attribute the splendid returns from two of the chief claims, viz., Carver and party, and Meyers and Northy.

The yearly return from the district being 7,232 oz. 14 dwt. 2 gr.

Gold-mining leases.—21 applied for, representing an area of 71 acres.

Extended claims.—22 applied for and 9 registered.

Water races and rights.—16 registered.

Ordinary claims.—21 registered.

Miners' rights.—377 issued, being decrease of 68 on previous year.

Business licenses.—12 issued.

Mineral licenses.—3 issued.

TAMBAROORA AND TURON DISTRICT—SOFALA DIVISION.

(M. Fagan, Mining Registrar.)

I HAVE the honor to forward my report relative to the mining interests in this division for the year 1884.

Sofala.

Spring Creek Reef.—Mongan's lease and crushing plant on this reef were sold in October last to Mr. Thomas Denny for £900.

Mr. Denny is now rapidly progressing with additions to the machinery and plant, cleaning out old workings, securing ground, and otherwise preparing for systematic operations.

To the engine of 25-h.p. all available pumping and winding gear is attached, and the mine will be in full working order in the commencement of next year.

Wattle Flat.

O. K. Line, Williams' abandoned quartz-claim. New vein opened by Crawford and party above old reef from 6 to 10 inches wide ; put through the Solitary Company's batteries 19 tons for a yield of 62 oz. Three men at work.

Surface Hill.—The small veins in this once rich hill are now being worked and prospected for by several parties. Ronch and Roberts have followed a narrow vein for months back, yielding remarkably well, and have just crushed at Mackenzie's engine 14 tons ; result, over 23 dwt. per ton.

Caledonian

Caledonian Solitary Creek Company.—About 440 feet on underlay, vein averaging 4 feet, yielding 7 dwt. per ton; five men generally at work; a profitable claim, provided crushing plant were on the ground. Company now making arrangements for machinery.

Solitary Creek.

Bagnell's.—Depth on reef 170 feet, averaging 10 inches in width; two men at work underground; one man at horse and whim. Last crushing of 26 tons result 1 oz. per ton; 14 tons at grass; water rather heavy.

Scott and Clark's.—This vein continues its average, and at a depth of 160 feet, with a vein of 9 inches, produces from 1 to 3 oz. per ton. The last crushing went 1 oz. 15 dwt. per ton, the average yield for the year being 2 oz. per ton. About 16 tons at Solitary Creek Company's engine ready for crushing.

Solitary Creek—Tribute Company.—The present workings at a depth of 340 feet, showing a width of 18 inches, and yielding from 10 dwt. to 1 oz. per ton; fourteen men employed night and day; three hours pumping sufficient to keep mine workable. Average yield for twelve months, $\frac{1}{2}$ oz. per ton.

Bullock Flat.

Heagney and Cassidy's Claim.—About 226 feet in depth; average width, 9 inches. Twenty tons crushed at Solitary went 23 $\frac{1}{2}$ dwt. per ton. Three men at work.

Grice and Clark.—A small vein of about 4 inches increasing in depth. A trial crushing of 4 tons gave 12 oz. Four men at work raising stone.

Smed's Hill Prince's Claim.—A new vein struck 4 to 6 inches in width; trial crushing yielded $\frac{1}{2}$ oz. per ton; fair prospect of better stone. Three men in party.

Box Ridge.

Cole and Party.—This ground, known as the "Old Shakspeare Reef," has been taken up and successfully worked by the above party, placing a 10-h.p. engine on the ground, with two batteries of five stampers each.

At a perpendicular depth of 90 feet in shaft and 63 feet on underlay, a vein of from 3 to 6 inches at last crushing of 16 tons yielded 1 oz. per ton.

Vein extending in depth with several smaller branches.

The average yield for twelve months 1 oz. per ton. Seven men continuously at work.

Tobin's Oakey.

Tom Bros. Extended Claim.—Vein averaging 16 inches in width. Only about 55 tons crushed, through scarcity of water, averaging 5 dwt. per ton. In connection with this claim there is erected a 12-h.p. engine, with two batteries of 5 stampers each.

The machinery is frequently at a stand still from want of water.

Razorback.

Autimony.—Hedgeley's lease, formerly Wannick's—vein now 100 feet in perpendicular depth—shows 2 feet wide, at a depth of 70 feet only from 4 to 6 inches, and continues widening out. Two men employed have now 15 tons on top, and continue sinking.

Crudine, Elkin, and Co., 50-acre Lease.—Two men have been employed during the year in this lease and have obtained about 50 tons of autimony ore from surface to 10 feet; width of vein, from 8 to 12 inches.

The following amount of gold from all sources has been transmitted from this division by Gold Escort and other means during the year 1884:—

	oz.	dwt.	gr.
For March quarter.....	630	2	16
For June quarter.....	859	8	20
For September quarter.....	1,042	19	23
For December quarter.....	1,403	11	1
Total by Gold Escort.....	3,936	2	12
By other means during the year.....	450	12	12

Being an increase of 323 oz. 8 dwt. 16 gr. in the amount of gold transmitted during the previous year. Market value of same, £16,450 6s. 3d.

Miners' rights issued during the year 1884.....	420
Business licenses.....	21
Mineral licenses.....	16

Twenty-eight applications for gold-mining leases have been received by me during the year.

TAMBAROORA AND TURON DISTRICT—IRONBARKS DIVISION.

(S. Y. Smedley, Mining Registrar.)

I HAVE the honor to forward my Annual Report on the Ironbarks Division of the Tambaroora and Turon Mining District for 1884.

In quartz-mining I have no improvement to report. Appended hereto are the crushings and results that have taken place during the year. Liddell and party still continue raising good stone, which is so far encouraging as to induce them to sink a new shaft, with a view to cutting the reef at a considerably deeper level. Messrs. Marshall and Company have completed a small crushing on the Monks Reef, and are now sinking a shaft to cut the Iron Duke Reef at a depth of 100 feet.

The majority of the reefs still remain abandoned, and it appears to me for a very simple reason. In most cases the water is reached at from 60 to 70 feet, and at the same depth quartz that was previously impregnated with free gold is coated with pyrites. There are no appliances to treat or even save pyrites, and therefore the quartz at the depth indicated shows a decrease which is put down as the gold running out. I firmly believe there is a good future for Ironbarks when machinery is erected capable of dealing with pyritous stone; a number of gold-mining leases being still locked up on which no labour has ever been employed is a further drawback to the progress of this field.

At

At present there is only one small crushing machine in the district which is capable of crushing 60 tons per week. The machinery consists of a 12-h.p. engine and boiler connected to twelve-head of stampers. A new reef has been discovered at Mookerawa by Halliday and party, a trial crushing from the surface of which returned 7 dwt. per ton. As far as prospected it is an immense blow, and the fact of 7 dwt. per ton being obtained on the surface, and thousands of tons in sight, it should prove on further development to be a good property.

In alluvial mining the continued dry weather keeps the puddling machines at a standstill. Beyond the fact of a few fossickers still clinging to the alluvial ground it is, as far as any profitable results can be obtained, a thing of the past.

At the Macquarie River the Mookerawa Gold-mining Company, after spending some £4,000 in pumping machinery for the purpose of ground sluicing, from which great results were anticipated, have abandoned their entire works and machinery to the hands of a caretaker. This ground paid private parties for years, from whom it was purchased; but since the Company took possession nothing but changes of managers and mismanagement have been the order of the day. As far as I can learn, 400 oz. of gold have been obtained. On the opposite side of the river the Junction Point Company, after putting in an expensive tunnel some 270 feet through the rock for a tail race, and connecting this with the trial shaft, suddenly stopped work. A trial washing gave a return of nearly 5 dwt. per load. Martin's Point is now leased by the representative of a London company, the machinery to work the ground being on the road, and expected to arrive within two months. As this is the first machinery of the kind for washing ever introduced into the colonies it is looked forward to with great anxiety by the Macquarie miners. It appears to have been working very satisfactorily for some years in America.

The amount of gold won for the year 1884, as taken from returns and storekeepers' books is 1,361 oz. 6 dwt. 3 gr. Number of miners' rights issued, 155; number of business licenses, 17; number of gold-mining leases applied for, 7.

MUDGEE DISTRICT—GULGONG DIVISION.

(Mr. Warden Snape, P.M., Gulgong.)

I HAVE the honor to submit my annual report of the state and prospects of the Mudgee Mining District during the year 1884. In doing so I have much pleasure in recording the fact that the yield of gold has exceeded that of 1883 by upwards of 963 oz. This is very gratifying, showing unmistakably that the various fields in this extensive district are steadily advancing and not retrograding, as has been surmised by some desponding residents. Before closing this report I hope to show to the satisfaction of those interested in mining matters that a very long period of time, in fact ages will elapse, before the minerals in the Mudgee district are finally exhausted.

The Mudgee Mining District is said to contain 1,000 square miles, Gulgong perhaps might be regarded as being about the centre. Messrs. Brigham and Marshall, Victorian capitalists, reputed to be the largest mine-owners in the Australian Colonies, have become the proprietors of several valuable auriferous properties, namely, Rouse's paddock, Scully's reserve, No. 29, on the Black Lead, also No. 44 in the same locality. The celebrated White Horse claim and the Britannia, on which, with the exception of No. 44, costly machinery has been erected and is in the course of erection. The Company broke ground for the first time in Rouse's paddock in October, 1883. Since commencing operations one shaft, 160 feet, principally through basalt, has been put down, a drive has been opened in the direction of the old Redgate lead, extending 800 feet, tertiary bottom, running north. This drive was put in with the view of obtaining ventilation for the men by striking an old shaft that had been sunk many years ago. Another drive extends 600 feet in an easterly direction towards the Little Caledonia, a lead of some celebrity among the diggers years ago. The lead runs north and south; 48 men are employed by the Company on wages at £2 10s. per week. The plant is a most complete one in every respect, consisting of two engines; the pumping engine is 25-h.p., and the one for winding purposes 15-h.p. with the requisite gear, two pumps, a shaft pump and a surface one, two iron puddling machines of a capacious size, erected level with the brace, altogether a most complete plant, costly, at the same time useful; in fact all the appliances in connection with this mine, and indeed all the other holdings belonging to the Melbourne Company, have been constructed and erected regardless of expense. The plant in Rouse's paddock is as perfect as money can make it; the manager informs me that up to the present time £12,000 have been expended on this mine alone; the results up to date are not encouraging, only 60 oz. of gold have been netted, but rich wash-dirt, known to have existed in some of the leads running through the property, may be struck at any moment.

The Black Lead (Scully's Reserve).—On this claim operations have been carried on vigorously. The old plant has been taken down, the pumping and puddling engines have been re-erected with an addition of a winding engine of 12-h.p., the poppet heads have been replaced by new ones, and the shaft sunk 200 feet. The main drive has been opened out 50 feet from the present level. The works just now are at a standstill owing to a misunderstanding among some of the shareholders. I understand the expenditure on this claim amounts, inclusive of labour, to £6,000.

No. 44.—Operations have not yet been commenced by the Company on this portion of their property.

Britannia.—The depth of this mine is 170 feet, but it is surmised that the shaft will have to be carried down another 50 feet before the bottom is reached; poppet heads have been erected preparatory to placing the machinery in position, consisting of three engines with the customary winding gear. The expenditure

on this claim, I am informed, amounts to about £7,000. Everything in connection with this mine is like all other properties belonging to the Company, substantial and strong. The manager expects in three months time to have the Britannia in full working order; the shaft, like the other claims, has been securely timbered from top to bottom. If this claim should turn out as anticipated, the proprietors intend erecting another plant on their adjoining property.

Hatton and Male have put down a shaft on the Upper Black Lead 90 feet; have opened out two drives 190 feet and 160 feet respectively; their earnings average £2 a week; they have been working here two years in the hope of striking a reef. The claims adjoining, but now abandoned, used to yield the owners from £2,000 to £3,000 a man. The gold found about here may be termed coarse.

The Star Lead, near the Black Lead, promises again to come to the front. Sweeney and party of nine miners hold a 10-acre extended claim; they broke ground nearly twelve months ago; work is carried on night and day; the shaft is down 200 feet; they have had great difficulty in contending against the water, but have with unremitting toil and perseverance, deserving of well-merited encomiums, managed to subdue it. Three drives have been opened, one at the 181 feet level, extends 65 feet in an easterly direction; the party is on wash 4 feet 6 inches in height it is expected it will increase in thickness. They have only had one wash which yielded 9 dwt. to the load. The Star was always regarded by the diggers as a wet diggings, only to be worked by the aid of machinery. The party have sunk a 10-foot well below the present level; by using horses have managed to master the water, and with their present appliances have every confidence in being able to overcome the difficulty. It is to be hoped that these steady hard-working men will be handsomely rewarded.

The White Horse Claim, as already stated on a previous page, has since my last report changed owners. Fortunately for the district it has fallen into the hands of those spirited and enterprising Victorian capitalists, Messrs. Brigham and Marshall. It still continues to yield its golden treasures. I have been informed that the present proprietors paid something like £1,800 for the mine. The sale was effected in July last, to the satisfaction of all parties concerned. Two months ago the old workings, showing every indication of subsiding, their able manager, Mr. Mattio Orlovich, very prudently withdrew the men engaged in the mine at the time, and had the props burnt out. Of course the ground fell in, and to a certain extent will be safe to work by the time the main shaft, now in course of construction, is completed. The new shaft, which is already in a forward state, will be carried down 240 feet; it is 10 x 4 in width, and is being planked with sawn timber as the work proceeds. The manager expects to resume operations about the latter end of March, probably before.

The White Horse claim has already been a paying one; since it has fallen into the Company's hands it has yielded 500 oz. The thickness of the payable wash tested by boring is 31 feet. How far it extends beyond that point time only will solve. The ground above the present workings has been worked from 40 to 50 feet, all wash. At the time the subsidence occurred forty men were at work. At present there are only twenty men employed in sinking shafts and putting up machinery; wages £2 10s. per week; mechanics, from £3 to £4.

The Canadian Mudgee Gold-mining Company.—The property held by this Company consists of 4 acres granted, and 15 acres applied for; also 15 acres on the Nil Desperandum lead, adjoining the White Horse claim, with the right also to mine on certain properties belonging to Messrs. Stott and Smith. Work was commenced by the company about May, 1883. After sinking 70 feet limestone was encountered; the sinking was persevered with, when at the depth of 145 feet water was struck, thus making 75 feet sinking through solid limestone. When the water was tapped the miners had to beat a hasty retreat, or lives would have been lost. The pumps were set to work; after pumping without intermission for six months, the aqueous element was at last subdued, and a drive opened at the 140-foot level, and extended 70 feet; pug then, or washdirt with limestone boulders, was met with; cross cut drives to the right and left were driven some 45 feet through wash, intermixed with limestone. There is now a good face of pug or wash on both the right and left hand drives. The Company's machinery consists of a 16-horse power portable engine and a winding engine of 6-horse power; puddling machines estimated to puddle 400 loads per week if kept constantly going. At present the Company employ twenty-one men at £2 10s. per week. It is contemplated by the Company to extend their mining operations shortly. The yield of gold for the last few weeks has averaged 30 oz. a week. The total amount of gold won up to the present time is 440 oz. This may be regarded as very satisfactory, indeed most promising, considering that the Canadian Gold-mining Company are only getting their mine into working order, thus verifying the old adage, *Vincit labor omnia*. The amount expended by the Company has been £2,500 in machinery, and £3,500 for labour.

Ford's Creek, Magpie, and Three-mile, are situated on the main road between Mudgee and Gulgong; the two last-named places are all but deserted, while Ford's Creek is frequented principally by fossickers; only about twenty diggers represent the busy throng that invaded these sylvan solitudes some twelve years ago. Ford's Creek apparently is a favourite spot with those familiar with the locality; the sinking is through very hard ground, consisting of cemented gravel from 8 feet to 18 feet deep, when the wash is reached. Those employed here tell me that they can always earn something, and have no difficulty in obtaining work at certain seasons of the year on the adjacent farms. As these diggings are surrounded by reefs it is not improbable that some day heavy finds of gold will be unearthed. There is an ample supply of water on the ground at present.

Goree, the property of Herbert A. Lowe, Esq.—There are ten miners prospecting in one of Mr. Lowe's paddocks; average depth of shafts, 28 feet; sinking 12 feet through vegetable mould and 12 feet through gravelly drift, with a jagged slate bottom. The water is found to be exceedingly troublesome; the miners at present are only prospecting. One claim yielded 8 dwt. to the load. Goree is about 8 miles from Mudgee.

The Log Paddock.—This auriferous property is owned, I believe, by W. W. Lowe, Esq., of Eurunderee, and will in all probability again become a diggings of considerable importance; but not until what is known by the deep ground is operated upon by powerful machinery. At present there is only a party of four miners at work, who represent that they are doing well; the sinking is about 80 feet, and very wet. The lead of gold was traced from the Pipe-clay Creek Diggings many years ago into this paddock, and followed by the miners into the deep ground when, through an influx of water, they had to succumb to the inevitable and abandon their work. Searching for gold in land of this description is altogether beyond the means of the ordinary miner. It is at this stage the capitalist, and the capitalist only, can step in with any prospect

prospect of successfully unearthing the buried treasures that possibly might be lying beneath the surface. Mr. Francis, of Mudgee, a well-known Victorian miner, owns a considerable area of auriferous land near, if it does not adjoin, the Log Paddock. The lead of gold, snake-like, passes through Mr. Francis' farm. He has been assiduously and most perseveringly searching for it for the last two years, but unfortunately without success. Several shafts have been sunk, some of them exceeding upwards of 100 feet in depth. Mr. Francis employs six men, and has expended over £1,000 in the search. The late Rev. Mr. Clarke visited the Pipe-clay Diggings many years ago, and prognosticated that whoever found the lead would be amply compensated.

Budgee Budgee, on the Maitland Road.—The diggings in this neighbourhood were opened many years ago. The sinking is from 60 to 80 feet. There are about from thirty to forty diggers and fossickers at work, who, from all accounts, are satisfied with their earnings. It is the prevailing opinion among experienced miners that there is some good gold to be won yet in this locality. In the event of the deep-sinking theory now about being tested in the direction of Gulgong turning out a success, highly important results would accrue to the inhabitants directly and indirectly.

Reefing.—The Trinity Reef Company, composed principally of some enterprising Mudgee capitalists, have erected on the margin of Mr. Stott's dam at the Canadian a crushing plant, consisting of a 10-h.p. engine, which drives eight stamp-heads. This engine cost, I have been informed, £700. The Company have expended here in erecting machinery and in excavations at this mine on the old Gulgong Reef a further sum of £2,000. As yet the Company have only crushed a few tons of stone, which averaged 10 dwt. to the ton, and are now prospecting the eastern reef, from which 2 oz. stone was taken about ten years ago. There are three reefs on the Company's ground, running parallel, and it is generally considered by experts that the three reefs will form a reef at about 300 feet to 400 feet deep. Before the Company took up the ground it had been worked, and some thousands of tons of stone had been taken out and crushed, averaging 10 dwt., 15 dwt., and as high as from 2 to 3 oz. to the ton. Some fourteen years ago the reef was worked by Mr. Chappel, who had then a ten stamp battery at work on Reedy Creek, near Gulgong. Finding the cartage too expensive, Mr. Chappel stopped the work, and was arranging to raise funds to put down a main shaft; but before the necessary arrangements could be completed the claim was jumped by Samper and party. A law-suit followed, and the dispute remained in the Supreme Court for a long time; eventually it was settled by Samper paying Chappel £1,000 and resigning all claim to the land. It ultimately fell into other hands. Before the Trinity Reef Company commenced working the ground, work to the value of some £7,000 or £8,000 must have been done on the land. Since falling into the possession of the present proprietors they have carried on the work without intermission day and night, and employed eight to fourteen hands.

Merrindee.—These diggings are situated on the Meroo, a few miles above the junction with the Cudgegong River. Although the neighbourhood abounds with reefs, no reefing has been carried on for many years. However, as population increases and the alluvium exhausted, reefing will become probably a recognised industry. There are only thirty diggers at work at the present time, and about twenty Chinamen. The Europeans, as well as the celestials, appear to be perfectly satisfied with the remuneration received for their labour. The sinking is from 5 to 20 feet deep. The gold won is coarse, an indication that heavier finds may be developed at any time. No nuggets worthy of special remarks have been discovered since my last report, although Merrindee is not very far distant from the locality where the nuggets I shall allude to were discovered, and within 20 miles of the place where the historical nugget found by an aboriginal native, a shepherd in the service of the late Dr. Kerr, and which realized at Bathurst, it is said, £4,000.

It may not perhaps be uninteresting to place on record for reference in the future a brief account culled from official sources of the quantity of gold transmitted to Sydney by the escort established in the year 1871 until its discontinuance in July last, amounting in the aggregate to upwards of 493,636 oz., and estimated by a bank official at Gulgong to have realized in Sydney about £1,974,544. As this large amount of the precious metal was won from the earth principally by appliances of a primitive description it is more than possible that with the improved appliances of to-day, worked by steam power instead of manual labour, that the yield of gold during the next ten years will be largely in excess of the last ten years. The deep sinking system, so successfully carried on in Victoria, will in course of time, no doubt, be adopted in this district; if so, it is surmised by those competent of forming an opinion that in some of the lower levels very rich deposits of gold will be discovered. In that case I predict that other capitalists will follow in the wake of those at present engaged in mining pursuits when Gulgong will become one of the most thriving mining townships in New South Wales.

The following are the particulars of the gold forwarded by escort to Sydney during the last fourteen years, namely:—

	oz.	dwt.	gr.		oz.	dwt.	gr.
1871.....	75,834	16	15	1879	7,404	2	12
1872.....	135,500	7	7	1880.....	6,926	3	13
1873.....	114,587	7	16	1881.....	9,995	11	4
1874.....	65,464	5	6	1882.....	7,897	12	7
1875.....	25,429	7	9	1883.....	4,717	13	7
1876.....	18,445	13	18	1884.....	5,681	5	13
1877.....	9,202	8	21				
1878.....	6,549	18	23		493,636	14	3

The following nuggets have been found in the Mudgee Mining District during the year ended the 31st December, 1884:—

oz.	dwt.	gr.	
37	12	0	At Rats' Castle, near Mudgee.
7	10	0	At Pimbong, 17 miles from Mudgee.
12	0	0	" " " "
7	10	0	" " " "
39	0	0	At Rats' Castle, near Pimbong.
7	0	0	Found by the Manager of the Mudgee Gold-mining Company.
3	0	0	The same.
3	0	0	The same.
3	0	0	The same.
4	0	0	Rochester and party, the Gulf diggings.
5	0	0	The same.
6	0	0	The same.

Cadell's Paddock, from which a large quantity of gold has been extracted, is nearly deserted; only some twenty diggers are working here.

Appletree, a few miles further on in the Cudgegong direction—these diggings, too, are likewise nearly deserted—a few fossickers still frequent their old haunts.

Old Appletree, a few miles further: twelve diggers are delving away with satisfactory results—depth of sinking, 20 feet; a slaty bottom has to be gone through before the wash is reached. Three miles further on the Gulf diggings alongside the mail road are attracting attention; some of the diggers have been doing tolerably well. Rochester and party have washed twenty-five loads for a yield of 8 dwt. to the load. No. 1 south, Ryan and party washed thirty loads which yielded 6 dwt. to the load. No. 2, Howard and party's claim, regarded as the best paying one at the Gulf, washed several loads, which returned $\frac{1}{2}$ oz. to the load. The wash in the claim is 2 feet 6 inches in thickness. Mealey and party are raising wash; the sinking in each claim is from 10 to 24 feet, with a strong hill wash. No. 1 north: Power and party washed eight loads with a yield of 7 dwts. to the load; the wash consists of river gravel; the sinking here is 32 feet deeper. Prospecting is being carried on vigorously, but no fresh finds have been made deserving of special notice. The washing appliances on the field consist of water-races, puddling-troughs, with sluice-boxes attached. The gold won is coarse and nuggety. Rochester and party report having found three nuggets weighing respectively 4 oz., 5 oz., and 6 oz. The lead runs north-east; 1s. 6d. per load is paid for sluicing. There are forty diggers on the ground whose earnings average, it is said, £2 10s. per week each. The Winifred Gold-mining Company report says they intend resuming operations again; their costly plant has been lying idle for the last two years or thereabouts.

Cudgegong.—*The Cheshire Copper-mining Company.*—Matters with this Company are not progressing so satisfactorily as could be desired; at the present time the mine is standing still; a considerable amount of capital has been expended here in labour and in erecting a furnace and buildings, &c. Although the ore has been pronounced by experts as excellent, it appears through the inexperience of the smelter all matters in connection with this mine have been suspended, but only for a time when a properly skilled person can be engaged work will be resumed again. The area on which the mine is situated was held by the proprietors originally under a mining lease of 40 acres; in August last it was converted into a mineral conditional purchase. It is contemplated by the Company, which has been duly registered, to amalgamate this area with the adjoining mineral conditional purchases areas belonging to the Gullen Gullen Gar Company.

The Rhobardah Gold-mining Company.—This Company holds four blocks of land with an aggregate area of 30 acres near the Cudgegong River, and about 1 mile east of the village. The Company started about three years ago and have expended about £3,000 in opening up the mine and in erecting a crushing plant, consisting of 14-horse power engine with 10 stampers, and as at present fixed capable of extension to twenty head. The interests therein are nearly all local, and I hear consist of 100 shares of £50 each. Crushings have been made in past years at the Mint, and at Price's, at Pyramul, and from 1 to 2 ounces has been the yield on several occasions. The striking feature of this claim, however, is a pyrites vein, known as Frank's vein; an assay of concentrated pyrites gave as return 417 oz. 3 dwt. and 1 gr. of gold, and 114 oz. 16 dwt. 3 gr. of silver to the ton of concentrated pyrites; this was a private assay made by Mr. Neal from 6 lbs. weight. Mr. Thomas Chappell, a well known mining engineer, and possessing great experience has obtained a portion of this valuable property upon tribute for three years, and is at present erecting concentrating machinery, and is under covenant to forward pyrites to first-class establishments either to England or upon the Continent of Europe. There is a good road from Cudgegong to the mine; the railway-station at Rylstone is only distant 9 miles. The operations now being carried on at the Rhobardah will be watched with intense interest by all, for if Mr. Chappell's anticipations are realised in regard to these mines a grand future is looming in the distance for Cudgegong and its picturesque vicinity.

The Antimony Mines.

The Antimony-mining Company was established about the latter end of 1881, under the No-Liability Act, by several Mudgee capitalists; 11,000 shares of £1 each have been issued. The area consists of 40 acres; several shafts have been put down, averaging from 20 feet to 100 feet in depth. The last one, a 20 foot shaft, is to be carried down another 20 feet; from this particular shaft most encouraging prospects were obtained; three lodes were cut, bearing north and south, with an easterly dip. On this property excellent ore has been discovered; one lode shows it to be from 1 foot to 4 feet in width. The Company also contemplate carrying the 100 feet shaft down another 100 feet, the ore having shown by analysis 60 per centage with a considerable quantity of silver. It is anticipated if this course be pursued the yield of silver will be largely increased. The mines are situated about 9 miles east of Cudgegong and 3 miles from the railway-station at Rylstone. Mining operations are progressing slowly but surely in this locality. Already £800 have been expended here.

Mr. Edward Clarke, solicitor, of Mudgee, who has ever manifested a warm interest in developing the mineral resources of the district, has written to me in regard to the antimony deposits as follows:—"The ground has been inspected and the opinion given that the formation is of the Silurian or Devonian age bounded upon such side by porphyry. The antimony in lenticular deposits upon joint veins (the joints running across the cleavage at high angle) and seen in some instances to end abruptly at a large fissure in the cleavage, evidently a slide of the country. This fissure has only been explored 80 feet in depth, and may possibly it is thought be the upper portion of a lode, most probably of silver. The rock it lies in verges upon its underlay into that of a micaceous nature. Traces of silver and other minerals are found in the fluran or the fissure."

Cinnabar or Red Sulphuret of Mercury.—Half-way between the village of Cudgegong and Rylstone this valuable ore was discovered some years ago; the prospectors after spending a considerable amount of capital as well as labor abandoned the undertaking. It is a matter of some surprise that enterprising capitalists have refrained from embarking in the search for this mineral. With capital and well directed labor the prospectors, like others engaged in similar mining enterprises, would very likely succeed. The cinnabar is represented as being found associated with gold in a drift covering many acres of ground, which, if systematically prospected, important results no doubt would accrue. It is to be hoped that whoever has to furnish the next annual report will have the satisfaction of recording many finds of this valuable mineral.

The

The Cooyal diggings, near Home Rule, are improving. A Company has been formed among the residents to work a reef on or near Peter Horn's land; the parties are down 60 feet. Another Company, composed of miners from Lithgow, was or is about being formed to work 40 acres of land on the estate of S. A. Blackman, Esq., J.P., and adjoining the Cooyal reserve.

Tallawany diggings.—There are only eighteen diggers at work here; they appear to be satisfied with their earnings, averaging they say £2 per week per man.

Home Rule.—Hewitt and party the last of the diggers on the "Christmas Lead." This party consisting of six men have been working together since May, 1881, and have earned £900 each. The agreement existing amongst them has terminated.

The Narrangaree Silver-mine is some 8 miles from Denison Town. It has been standing idle for several months. I have been informed by one of the most active and the most interested of the shareholders that a competent person will shortly visit the locality. If the report should prove unfavourable, no further action in the mine will be taken.

In bringing this report to a close, I am happy in being able to state that no fatal accident or accident of any kind of a serious character has occurred in the Mudgee Mining District during the year 1884. I desire also to place on record that although the district contains thousands of acres of auriferous lands, no fresh diggings have been opened during that period. Those engaged and interested in mineral pursuits in looking back on the past will perhaps, after perusing these pages, bear in mind that within a few years, comparatively speaking, upwards of 493,636 ounces of gold have been contributed by the Mudgee Mining District to the world's wealth. I would further invite attention to page 61 of the report, describing the particulars of the nuggets that have been unearthed during the past year. I conceive, therefore, that the residents generally, especially those engaged in mining matters, may look forward most hopefully in the future development of the mineral resources of the district, and that the same are almost inexhaustible. The railway cuttings will assist in bearing out this assertion to a certain extent. These cuttings have revealed the existence of coal-seams in some places, iron and shale in others, whilst quartz-reefs have been exposed to view. There is no question but that the district, of which perhaps Gulgong may be regarded as the centre, is marvellously rich in the various minerals so essentially necessary to the advancement of a nation, as New South Wales will some day become.

The amount of gold sent down to Sydney during the year 1884 is as follows:—

	oz.	dwt.	gr.
By Escort	1,134	19	10
By the Managers of the various Banks.....	4,546	6	3
	5,681	5	13

There is no doubt but that considerable quantities of gold are transmitted to Sydney privately.

Gulgong.

Miners' rights issued during the year were	291
Business licenses	27
Gold-mining leases	50
Mineral licenses	nil.

Mudgee.

Miners' rights	121
Business licenses	4
Gold-mining leases	1
Mineral licenses	nil.

MUDGEE DISTRICT—DUBBO DIVISION.

(*Mr. Warden Caswell, P.M., Dubbo.*)

I HAVE the honor to forward the fourth Annual Report upon this division for the year 1884. I succeeded Mr. T. A. Browne, P.M., on the 1st of April last.

I have been unavoidably delayed in furnishing this report, through the lamentable death of First-class Constable Quinn, Mining Registrar of Tomingley, from whom I expected much valuable information. I shall be excused in paying this tribute to his memory in stating, that as a police officer, it will be difficult to replace him; possessed of remarkable strength and courage, combined with great tact and calm judgment, he preserved good order without ever resorting to the Police Court.

Although the number of miners has considerably diminished there is no lack of confidence amongst those remaining as to the future of the Tomingley reefs, and I am pleased to be able to state that confidence is fully justified by the statistical information I have gathered of the returns of gold for the past year.

I find that about £7,000 worth of gold has been won during the year 1884, and as my information has been procured from two different sources I have no doubt it is reliable.

That less than half the number of persons should divide as large a sum as was obtained and divided in 1883 is most satisfactory, as it must have raised the individual earnings to an equality with those on many of the best reefs in the colony.

The high prices paid for shares at Tomingley by some of the capitalists of Dubbo is to be deplored, for the money sunk in this manner would have been better expended in developing the reefs. Impatient of being without returns or insufficient returns many of these persons have forfeited their shares.

Another speculation which serves to indicate the confidence of the miners, Moore and party of No. 1 North Myall have purchased and are about to erect a 20 stamp-head battery at Myall, about 2 miles from Tomingley. This is the claim from which 210 tons yielded at the rate of 3 oz. 5 dwt. per ton. The party have 1,000 tons at grass, and it is not astonishing that their stone waiting to be crushed is valued at £4,000.

There are still two crushing-machines at Tomingley, one belonging to the Star United Gold-mining Company, at work. The other, also a 10 stamp-head, is idle.

There has been an ample supply of water for machinery, but the miners do complain of insufficiency for private use. Mr. Gilliat, Tank Inspector, has recommended a site for another tank.

The mail-coach continues running from Dubbo to Tomingley three times a week.

There are two public-houses with ample accommodation for miners and travellers.

One store has closed, but there are two remaining.

There is an average attendance of thirty-three children at the public school.

At

At Tomingley reef there are three claims being worked ; three under suspension of work, and four abandoned.

At Myall Plan reef there are three in working and ten abandoned.

Ten Mile Ridge is nearly abandoned. Opinions differ as to its future; some are very sanguine about it. Berry and party talk of erecting a puddling machine there.

No payable alluvial workings have been discovered about Tomingley at present. Three miles west of the Ten-mile Ridge Farrell and party have had a good prospect. One shaft has been sunk about 190 feet.

It is estimated there are about forty miners with their families at Tomingley and Myall together.

There have only been two accidents during the year ; one I regret to state was fatal. John Stephen Golding, a miner, was killed by a fall of earth whilst excavating a tank at Myall ; another, Henry Fear, had his leg broken.

Some alluvial workings have been discovered and worked near Yoeval, better known as Buckimbar, but I have not had time to visit that place.

I have been unable to visit the Dubbo Coal-mining Company's property at Ballimore, so I forward you as part of my report a statement written for me by Mr. R. Nancarrow, one of the proprietors.

In conclusion, I think there is much promise of advantage to the district and town of Dubbo from the coal-field on one side and the gold reefs on the other.

January 2, 1885.

The Dubbo Coal Company's property is situated on the north bank of the Talbragar at Ballimore, parish of Frskinc, county Lincoln, about 20 miles to the east of Dubbo, and about 14 miles from the nearest point of railway at Murrumbidgee. It comprises an area of 980 acres mineral conditional purchase, with a frontage of 96 chains to the river, where ample supply of fresh water is available for all purposes. The land in the vicinity of the shafts is chiefly composed of sandstone ridges, and table-land, intercepted with narrow gullies and well-defined bold cliffs of the true carboniferous measures, identical with those of Newcastle and other prominent coal-fields of the colony. The Ballimore Hill is capped with granite sandstone of a contorted appearance. The strata underneath is composed of alternate layers of fine granite sandstone, very rich ironstone, and excellent fire-clay, with undulated beds of coal and shale between. The lower measures are exceedingly well defined beds of coal, having a slight dip to north-east. The coal crops out in several gullies throughout the property, and also do the ironstone and fire-clay.

The work done on the property is, No. 1 shaft 89 feet deep, with two tunnels driven at the 74 feet level and 51 ft. ; do. 30 and 25 ft. respectively. The largest seam of coal in this shaft is 5 ft. 10 in. in width, other seams varying from 12 in. to 3 feet ; those seams have small bands of silt intervening $\frac{1}{2}$ inch to $\frac{1}{4}$ inch thick. No. 2 shaft is sunk to a depth of 200 feet ; the seams in this shaft are identical with No. 1 shaft. No. 3 shaft is 130 feet, with the same appearance as the other two. Besides those shafts a considerable amount of work has been done in opening out the various seams on the property. About 50 tons of coal have been raised, and the most of it given to the Railway Department as an experiment to the locomotive authorities, and with a very good result. About £3,000 have been expended on this property in opening out the seams and developing the mine. It is the intention of the Company to at once construct a light railway to connect the mine with the railway at Murrumbidgee, and as soon as that is done the Company will be ready to supply the public with coal. The Dubbo Coal-mine is in the centre of one of the largest ironbark forests in the colony, and where nearly all the sleepers are got for the Great Western Line. The Dubbo Coal-mine will have the advantage over any other mine, being so far inland, and with the Cobar Mine, Nymagee and other copper-mines springing up, there can be little doubt of its success.

I may say here that No. 1 shaft, 79 feet, is on the the eastern boundary, and No. 2 shaft, 200 feet deep, is about $\frac{1}{2}$ a mile west of No. 1, and the No. 3 shaft north at right angles of Nos. 1 and 2, and about 500 yards from each shaft, thus proving the seams to run right through the property.

MUDGEE DISTRICT—GULGONG DIVISION.

(H. De Boos, Mining Registrar.)

THE hopes expressed in my last report, of a speedy revival of the mining interests in this district, have scarcely been realised as yet, although a great deal of work has been done, and a large amount of money expended on the mining works now in progress, nothing that can be considered as permanently payable has been obtained at present. The most prominent work in this gold-field is the Melbourne Company's claim in Rouse's paddock. About £10,000 or £12,000 has already been expended on this claim, and the work has been carried on in a thoroughly systematic and practical manner ; but the result has not been such as to warrant it being considered as a paying speculation, and whatever good fortune may be in store for the shareholders at some future time it has not yet been a success.

At the reserve on the Black Lead, known as "Scully's," and at present owned by the same Company, work was commenced early in the year. Extensive alterations were made in the machinery at considerable cost, and the work was carried on briskly for some months, when, in consequence of some misunderstanding among the shareholders, the work was suddenly stopped, and the claim had been idle for the last two or three months.

On the Moonlight Lead several claims have been worked during the last twelve months, but none have proved payable, except the claim known as the "Durham," where very encouraging prospects have been obtained, and the works are being pushed forward with all possible despatch. The opening out and putting in the main drive is nearly completed, and they expect soon to be raising wash-dirt in large quantities. Should the trial washing result favourably, it will no doubt lead to fresh exertions on the part of those who have been working the ground on the same lead, but hitherto unsuccessfully.

At the Canadian the White Horse Extended Claim has changed hands, and the present proprietors are erecting powerful machinery on the ground, and are carrying out the necessary operations with great despatch. A new shaft has been sunk to the bed-rock, and extensive drives will be put in so as to open out the limestone caverns where the payable wash-dirt is found. There is no doubt that under proper management this claim will be one of the best mining properties in the district.

The Canadian Gold-mining Company, after a hard fight with the water, has at length got everything into good working order, and is now obtaining about 30 oz. of gold per week.

Several claims in Stott's Paddock, at the Canadian, are on payable gold, and are getting more than fair wages, after paying all working expenses. These claims have been profitably worked for the last two or three years.

Very little work has been done during the past year on the Old Gulgong Reef. The Company, I think, made a mistake by erecting their crushing plant at the Canadian. The stone has not proved rich enough to bear the expense of carting so far. The Company intend to erect machinery on their own ground which will lessen the working expenses of the mine ; and if it is possible to obtain a sufficient supply of water, it is likely to turn out a good investment for the shareholders.

At Home Rule the claim known as Tatton and Party's Extended claim, and which has been paying so well for the last three years, is worked out and the party broken up. This portion of the gold-field presents

presents a very forlorn and desolate appearance. Half the dwellings are empty and fallen to decay, and so many people have left the locality that it may be considered as comparatively deserted. There is, however, a chance of its former prosperity being partially revived, should the works now in progress on the Britannia lead prove successful. The lead known as the Britannia is situated within a mile or two of the village of Home Rule, and has never been thoroughly tested, owing to the heavy flow of water which is met with at a depth of about 190 feet. The necessary machinery for the proper development of the deep wet ground is now being erected. The engine, when finished, will be one of the most powerful and costly in the district. The success of this venture can only be a matter of conjecture, as the ground has never been proved. The prospectors, it is said, were just on to the gold when the water drove them out. This was about nine years ago, since when the ground has never been touched.

Cooyal seems to be deserted. There are no diggers there, and no mining works are now being carried on there. Some months ago it was reported that gold had been struck in Blackman's Paddock. A few diggers were soon on the spot, but nothing payable was found, and the excitement soon died out.

At and about Tallawang there are some twenty or thirty miners, all making a living, and I think for the most part earning more than average wages. The want of water has been a great drawback to the mining industry in this locality, but the winter rains filled the dams and enabled the miners to wash up, and they are better off now than they have been for some time past.

There are a few miners at Two-mile Flat doing fairly well, but no work of any importance is now in progress on this once prosperous portion of the gold-field. A few diamonds were found in this neighbourhood during the year, but none of any size or value. A few months ago there was some talk of a company being formed to work the diamond drift, and ground was taken up for that purpose, but nothing has been done in the matter. Fifty-nine gold-mining leases have been applied for during the year; most of them have been taken up with the intention of forming companies for working them, in the event of the works now in progress proving successful.

The gold escort has been discontinued since last June. The amount of gold sent away by escort and through the banks amounts to 5,681 oz. for the year ending the 31st December last.

There has been issued from this office, during the last twelve months, 291 miners' rights and 27 business licenses.

MUDGEE DISTRICT—MUDGEE DIVISION.

(*R. H. Acheson, Mining Registrar.*)

I HAVE the honor to submit for the information of the Honorable the Minister for Mines my report on the mining of the Mudgee Division of the Mudgee District for the year 1884. I regret to state that on inquiry I find that mining generally in the division for the past year has been very limited, what there has been is chiefly situated in old alluvial workings, principally at Apple-tree Flat, referred to in previous reports under the name of Mullamuddy. New finds have been unimportant and undeveloped, as much from their limited value as from the protracted drought of the year.

The issue of miners' rights, considering the discouraging character of the mining industry generally in the division, numbered 171, business licenses 4, and mineral licenses 5. Many of the miners' rights, however, I may point out, were in connection with workings without the division.

MUDGEE DISTRICT—HARGRAVES DIVISION.

(*T. O'Brien, Mining Registrar.*)

IN submitting my report on the state of the gold workings in my division during the year 1884, it affords me much pleasure in stating that, notwithstanding the scarcity of water consequent on long continued drought, the quantity of gold won has been about 2,000 oz. Although several gold leases have been executed during the year, there has been but one worked, that of Bond and party, which yielded the very handsome return of 1,500 oz. This claim has not been worked for the past seven months, pending the erection of machinery for pumping the water, which is now completed. Mining operations will be commenced again in this claim on the 12th January instant. The shareholders are very sanguine as to the future prospects of this property.

I regret to say that there is no crushing plant in this division, the nearest being at Hill End, a distance of 23 miles. This, no doubt, is a great drawback to quartz-mining in this division, as the carriage on quartz would be about £2 per ton from here to Hill End. I have no hesitation in saying that if there was a crushing plant in Hargraves the numerous quartz veins and reefs in this locality would be extensively worked with profitable results to the persons so engaged. As shown already, unless very rich, the carriage of quartz to Hill End would leave but a very small margin to the miner. There is but very little in the way of alluvial mining in this division, and such little in old ground, most of which is being worked for the third time, principally by Chinese and very old and feeble Europeans. From the number of quartz leases taken up there is every likelihood of giving this class of mining an impetus during 1885.

I may add that the number of miners' rights issued by me for 1884 was 99, and 6 business licenses.

MUDGEE DISTRICT—WELLINGTON DIVISION.

(*W. Carson, Mining Registrar.*)

IN submitting my report on the mining industry in the Wellington Division of the Mudgee Mining District for the year 1884, I regret to state that mining matters during that period have been very dull. The only crushing batteries in this division, and which are described in the accompanying returns, have been idle all the year. From inquiries made, I find that the amount of gold won was 468 oz. 1 dwt. 14 gr., being 460 oz. 4 dwt. 5 gr. less than the quantity obtained in the preceding year.

I may mention that I was informed in the month of October last that a number of persons were out prospecting in the vicinity of Buckinbah and Bushrangers' Creek, some miles from Wellington; but not having heard of them since, conclude that their labours were not attended with success.

During the year 46 miners' rights, 4 mineral licenses, and 1 business license were issued, and 2 applications for mining leases were received.

MUDGEE

MUDGEE DISTRICT—WINDEYER DIVISION.

(T. H. Price, Mining Registrar.)

I HAVE the honor to report that mining in my division during the past year has been almost at a standstill; what gold has been won has been obtained by the old hands in what might be considered worked out alluvial ground.

I regret to say nothing during the year has been done with the quartz-reefs, and the Catherine Company's crushing plant continues idle; the crushing plant lying so long idle at Long Creek was removed last March to Cudgong.

I issued 100 miners' rights and 26 business licenses; the business licenses are almost all issued to Chinese for gardening purposes.

LACHLAN DISTRICT—FORBES, PARKES, AND GRENFELL DIVISIONS.

(Mr. Warden Sharpe, P.M., Forbes.)

I HAVE the honor to submit, for the information of the Honorable the Minister for Mines, my report for the past year on the Mining District under my charge.

I regret that I am unable to report any mining discoveries of importance during the past year as regards extent and permanency, though a good deal of prospecting has been carried on, and is being continued, in various parts of the district with, in some instances, very encouraging results for individuals, which I shall have occasion to refer to hereafter. In the early part of the year various rumours were abroad that a rich gold-field had been discovered on Burra Burra Run, near Gobondry, which is, as nearly as I can ascertain, about 70 miles in a north-westerly direction from Forbes, between the Bogan and Lachlan Rivers.

On the 10th of April last the Mining Registrar at Parkes received a report from Messrs. Hunter, Bodel, and others, that they had discovered payable alluvial gold at a depth of from 4 to 10 feet from the surface, and that the yield of gold was from 1 gr. to 15 gr. to the dish. They reported the wash as thin and on a pipe-clay bottom. As no disputes arose and the rush did not appear to be successful, I did not visit the locality. I gathered from the accounts of various miners who went to the rush from here that nothing payable had been found, and I am informed that the place is now deserted as far as mining is concerned.

On the 9th of April last William Hall reported that he had discovered payable alluvial gold at a place called Reptile Gully, 9 miles north of Forbes. The depth of sinking was 47 feet, and the prospects a grain to the dish for eight dishes. The lead was said to be over 15 feet wide, with 12 inches of wash-dirt. As the locality was near Forbes, a good many block claims were taken up by miners residing here, but I do not think any were proved payable.

On the 28th of July Messrs. Wall and party reported a new discovery of gold, alluvial, at Crooked Creek, 4 miles west of the Tichbourne, which lies between Forbes and Parkes. The prospects of this party, as reported to me, were a grain to the dish all through for 50 feet of driving, and 2 or 3 gr. in parts. The depth of sinking was 100 feet. This discovery gave rise to a small rush, but so far as I can ascertain nothing payable was obtained either in the prospectors' claim or in the vicinity.

On the 21st of July last Messrs. Pennington, Whalan, and M'Millan reported the discovery of payable gold in a quartz-reef at the head of Magpie Gully, near the Tichbourne Lead, which reef they called the Eldorado. They reported an ounce to the ton from stone taken from a depth of 25 feet, but the first crushing of 20 tons gave 3 oz. 6 dwt. to the ton, and a second crushing of the same quantity of stone gave the handsome return of 11 oz. to the ton, or 220 oz. of gold from stone which the prospectors report was not picked. The reef lies in the middle of some old alluvial workings, covering a considerable extent of ground, but which appear to have been shallow. The reef is from 2 feet to 2 feet 6 inches wide, and the prospectors have sunk a straight shaft on it, and cut the reef at 80 feet. I saw some of the stone, and it appeared to contain a large quantity of gold. There were at the date of my visit—early in December—five claims at work on the Eldorado besides the prospectors', but without any success, not even having found the reef. Messrs. M'Millan and party informed me that they had 60 tons at grass apparently not inferior to the quartz which yielded them 11 oz. to the ton. In this neighbourhood I am informed that there are several parties out prospecting for reefs, and it is probable that payable stone will be discovered, as it is only lately that attention has been drawn to the reefs in this locality, in consequence of the valuable discovery of Messrs. M'Millan and party.

The only place near Forbes, or indeed in my district, where many miners are employed is at the Bald Hills, about 3 miles north of the town of Forbes. Here a Company composed, I believe, entirely of local men are working an alluvial mine called the British Standard. They hold under lease 31 acres, and are working an old lead called the Bald Hills Lead. A shaft has been sunk 190 feet, and drives have been made for 800 or 900 feet. The depth of wash averages 2 feet, and the lead is from 70 to 80 feet wide; of this 50 feet carries gold. At the present time the Company are following the run of gold with the result that they are able to make working expenses. The plant this Company have erected must be worth at least £1,000. They have twenty-five men employed, and a 10-h.p. engine—one of Marshall's latest improved engines—for winding and puddling. There is always water making in the mine, and this water, which is very brackish, if not salt, is used for puddling over and over again. Unless this could be done the mine would be unworkable. Seventeen tanks, containing 96 gallons each, are pulled up every hour, and this supply is sufficient for working purposes. The winding-gear is so arranged that a truck of dirt comes up with each tank of water, and thus the working expenses are reduced, which are heavy. The Company have also a Tangye pump, which is used for pumping the salt water from a surface-tank to the brace for sluicing and puddling purposes, and it also pumps fresh water from another tank for the engine. Hitherto the working of the Bald Hills Lead has not been a success; but there is reason to believe that with the present appliances the lead may be made payable.

Messrs. Keeley and party adjoin the British Standard Mine on the south-east. They are working a 10-acre lease on the same lead, and have just erected a valuable plant, including an 18-h.p. stationary engine. As far as can be ascertained from prospects, this party have payable wash.

Adjoining

Adjoining Keeley and party on the east is the lease worked by Murphy and party, consisting of 10 acres. This party have done four or five hundred feet of driving, ready to block out when their plant is erected. They have a 10-h.p. portable engine, and the arrangements for puddling are almost complete. The fact that so much money has been expended in mining machinery at the Bald Hills shows that the proprietors have every confidence that the lead is payable, and it will not encourage mining enterprise in this locality and district should results prove unfavourable.

Parkes.—At Parkes are there a few claims and leases at work on the old lines of reef, but, with one or two exceptions, which I shall mention presently, there is nothing of importance to report. Some of the mines are payable, but I fear that most of the parties at work have not got beyond prospecting.

During the first four months of the year mining operations were almost at a standstill for want of water. The Parkes Quartz Crushing Company's plant, the only one in the district, was idle from the same cause; and the Company took advantage of the opportunity to enlarge and deepen their dam; a heavy fall of rain filled it and the machine has since been constantly employed. The alluvial gold in this neighbourhood appears to be almost exhausted, the yield during the past year being very small. The quartz-claims I have mentioned as worthy of note, in a previous portion of my report, are those known as Hazelhurst's and Quail and party's. These claims have been yielding very handsome returns, and the reef is supposed to be a leader on the well-known line of reef called the "Buchanan," which has been worked for a long distance for some years past. The claim known as Hazelhurst's was the first to strike the gold. The reef will average from 1 foot to 4 feet wide, and is nearly vertical. From this claim I am informed 210 tons of stone yielded about 800 oz. In Quail and party's claim, which adjoins Hazelhurst's, 480 tons of quartz was raised; of this, 237 tons yielded 700 oz.; the remaining 243 tons is supposed to be even of richer quality. There is yet another claim on this long shoot of gold making, I am informed, £4 a week a man. The discovery of this valuable shoot of gold in a reef so well prospected as the "Buchanan," shows how easily a run of gold is missed. In the case of Hazelhurst's claim I am informed that it was held by more than one party before the gold was struck.

A new reef has been struck at a place known as Coulston's paddock or selection—about 7 miles from Parkes in a northerly direction. I am informed that the prospects are considered good, and that several claims have been registered. On the road between Parkes and Forbes, 8 or 9 miles from Forbes, six applications have been made to mine on the reserve known as the Stock Route, for quartz gold. The reef is known as "Stricklands," and was first worked many years ago. Although so many applications have been made, only one party have done much work on the reef, viz., Hazenkamp's; they raised 46 tons, carried the stone 14 miles to the crushing plant at Parkes, and the yield was 12 dwt. to the ton. The cost of carting was £1 per ton. The miners seem to think Strickland's reef is payable if machinery was on the ground or near it. The reef will average 2 feet 6 inches wide, and is fairly easy to work. From what I can learn, stone that will yield 7 dwt. to the ton would give the current rate of wages.

The Pinnacle.—I regret to have to report that the reefs at the Pinnacle are deserted, not a single claim or lease being at work. The engine has been removed, but the battery remains. I am still of opinion that some of these reefs are payable, and several miners have stated to me that they are satisfied that payable alluvial gold exists in the neighbourhood, but prospecting is expensive in this remote locality owing to the difficulty in obtaining provisions, &c.

Grenfell.—At Grenfell the reefs are worked out near the surface, and the only hope the miners have is that they will get payable stone at lower depths. This requires capital, which is not to be obtained at the present time. Trade is very dull and consequently no local money is forthcoming. The only reefs working are those known as the Prussian, the Homeward Bound, the Lucknow, the Enterprise, the Young O'Brien, Lawson's, and the Golden Point. On each of these reefs there are only one or two claims at work, and there is nothing of importance to report concerning them—some are payable, some only prospecting. There are only about 60 working miners at Grenfell, although 187 miners' rights were issued during the year, most of these were taken out for residence areas; seven business licenses were issued and one mineral license. Six gold leases were applied for.

In conclusion, I may be permitted to remark that although there is little mining being carried on in this district and the mineral returns are so small, it does not follow that the mining industry is dying out for good, although the living obtained by the miners is very precarious and often accompanied by much hardship and risk, still the prizes to be obtained are very valuable, and as every year one or more prospectors are successful the incentive to persevere is not allowed to grow faint. There are numbers of miners in this district who never give up the hope that it will be their turn next; and if they do, for want of means, for the time give up their favourite line of reef or place where they believe a payable alluvial lead exists, it is only to return—as soon as they have earned a few pounds by road or other work—and prosecute their prospecting with confidence that they will strike something good in the end. It is well-known that there are localities in this district which contain payable gold or other mineral, but which from too much water (as in the case of the deep leads) or want of water, or other sufficient cause, want of machinery, &c., cannot be worked with profit without considerable capital. These localities doubtless will be thoroughly tested when capital is available; and in view of the large amount of labour that will be employed on Government works in this district, there is reason to think that in accordance with the practice I have just mentioned some of the money earned will be applied in prospecting and proving mines in this district now lying idle. Another cause for the slackness in mining is that a considerable number of the mining population have been tempted away by the glowing reports from Silverton, Sunny Corner, and other places where silver or other valuable mineral has been discovered. This exodus may be productive of good as doubtless many will return with an experience very few have at the present time in this colony, which may enable them to discover new minerals in the district to which they belong. I may also be permitted to remark that if the present railway policy is carried out, mines at present valueless from difficulty of access and the distance from a market will become valuable, and doubtless new discoveries will be made in parts of the colony, and especially this is likely to occur in the remote parts of this district—which from distance and want of carriage have hitherto been inaccessible. Copper has been discovered (and silver) in various parts of this district, as I had occasion to report last year, in my report for 1883, but so far no work has been done on any of the mines worthy of note.

LACHLAN DISTRICT—YOUNG DIVISION,

(Mr. Warden Robinson, P.M., Young.)

I HAVE the honor to lay my report before you for the year 1884.

Mining operations for the past year in this division presents scarcely anything new, except the find at Sherlock Creek, near Wombat. The prospecting claim there is under work, and so is No. 1 claim; the former is worked by four miners, and the latter by two miners. This place, at first of so much promise, will certainly collapse unless new energy and capital are thrown into the venture. About the *bond-fides* and richness of the first find there exists not a shadow of doubt. Old Wombat and Little Wombat still hold a place in the category of localities where gold may be won in exchange for industry and capital, neither of which, at present, is forthcoming.

The steadiest mining enterprise going on about here is at Blind Creek, near Murrumburrah. All the year round over a hundred miners at that place have been constantly employed, and have earned, at least, good wages. Mr. Cutcliffe, mining registrar there, during the year has issued 152 miners' rights and five business licenses. The yield of gold can only be computed approximately. We find, however, that the three banks in Murrumburrah have purchased since I made my last return (for 1883), 651 oz. 6 dwt. 1 gr., valued at £2,535 Os. 11d. Coming to the immediate neighbourhood of Young we have but few changes, if any, to chronicle. This is disappointing. New ground, extending over a considerable area, was taken up in 1881-2-3; valuable machinery erected, expensive shafts put down, and the tests when bottomed were excellent. I may also add that this large extent of new ground is long ago known to be equal to the best auriferous tracks that have been developed on the old Lambing Flat Gold-field. Yet with all, mining in and about Young attracts, if at all, but fitfully. Capital and labour go into other channels; commerce, agriculture, and grazing pursuits command both the labour and money markets of the district; besides, contractors for public works engage any stray hand that happens to find his way in this direction. More powerful machinery is about to be placed on Minter and party's leasehold. Although the present plant is the very best of its kind, it is not capable of working both shafts simultaneously, *i.e.*, to bring up the underground flows of water and the wash-dirt at the same time. These two shafts are over 80 feet deep.

The old extensive claim known as Tonkin's, upon which thousands of pounds have been spent, is now converted into a Joint Stock Company (Limited). New capital and fresh energy is about to be thrown into the undertaking. During the year we have issued 367 miners' rights, 29 business licenses, and 13 mineral licenses. Murrumburrah office returns as its issue 152 miners' rights and five business licenses, making our issues in all of 519 miners' rights, 18 business licenses, and 13 mineral licenses. The gold won during the year can only be known approximately, my information is derived from the bank managers alone. I have to thank these gentlemen very much for their courtesy. The three banks at Murrumburrah give me their returns, which amount to 651 oz. 6 dwt. 1 gr., of the value of £2,535 Os. 11d. The banks in Young return their purchases as amounting to 716 oz. 3 dwt. 20 gr., worth £2,788 13s. 8d. Summarized we find our quantities to be equal to 1,367 oz. 9 dwt. 21 gr., and of the value of £5,323 14s. 7d.

In addition to the above for the year, ten applications for gold-mining leases have passed through the office, representing an aggregate of 93 acres 3 roods. Besides this we have had two applications for mineral leases of 40 acres each.

LACHLAN DISTRICT—TEMORA AND BARMEDMAN DIVISIONS.

(Mr. Warden Baker, P.M., Temora.)

I DO myself the honor to submit my report for the year 1884, *in re* the Mining districts under my charge, namely, Temora and Barmedman divisions of the Lachlan Mining District and the Clarendon division of the Tumut and Adelong Mining District.

Temora.—My report for the year 1883 stated that the population had decreased during the year and that the decrease was still going on, that statement holds good for 1884. In the former year the exodus included a fair proportion of all classes of the community—miners, tradesmen, labourers, and nondescripts—married and unmarried folk of both sexes; but in 1884 the exodus has been more confined to miners, albeit of these, a goodly number of these were married men with families. These have broken up their homes here and gone, taking their belongings with them, to Sunny Corner, Silverton, and other parts of the colony. These removals have, therefore, caused a considerable reduction in what was regarded as the more settled population of the district. A few business people also have left during the year, but not many. I regret to say that at the beginning of the present year (1885) the exodus has not ceased. However, some of the old residents are returning, having found that in removing from Temora "they had gone further and fared worse."

I have no means of ascertaining, with anything like exactness, either the number of the population at the close of 1884, or of the number who had left the district during that year. Nor can I give with certainty either the number of miners or of the mines in actual work on this field. But judging by appearances, assisted by such facts as I have been able to collect, I think, roughly speaking, that during the last two years (1883 and 1884) the population has decreased by one half at least. Nearly all the mines on this field are "alluvial block claims." The law does not require these holdings to be registered, and they are not registered; hence there are no records either of the number of such claims held or the number of miners holding them.

The number of miners' rights issued would perhaps give the best available index to the number of miners in the district, but in making a calculation upon this basis there are many disturbing elements to consider, and even at best the result would be a rough approximation only. I will mention some of these disturbing elements. 1. Some holders of miners' rights hold no mining interest, as they take out those documents to enable them to hold residence areas. 2. Some, but not many, hold mining shares but do not hold miners' rights. Cases in the Wardens Court sometimes disclose these evasions of the law, and, I need scarcely say, generally to the evaders discomfiture. 3. Miners' rights issued in any part of New South Wales are in full force and effect in every mining district in the Colony, and it often happens that these documents are issued in one district to persons residing in another. Then, miners are, as a class, nomadic in their habits, and take, in their wanderings, their miners' rights from one district to another. By way, however, of enabling one to form such an estimate as the figures might fairly warrant, I have obtained from the

the Mining Registrar the number of miners' rights issued during the month of January in 1883, 1884, and 1885 respectively, also the total number issued in each of the years 1883 and 1884 as follows:—

Number of Miners' Rights issued:—			
Year.	At 5s. each.	At 10s. each.	Total.
1883	113	876	989
1884	122	630	752

Miners' Rights issued:—	
In January, 1883	669
In January, 1884	529
In January, 1885	335

It will, of course, be understood that all miners' rights expire on the 31st December of the year in which they are issued, except when they are to be in force for more than one year; but none of the miners' rights referred to above are of that character, nor am I aware of any resident of Temora holding such a document. It will also be understood that the miners' rights issued at 10s. each are such as are issued during the first six months of the year, and those at 5s. each such as are issued after the 30th June. I have given the numbers for January in each of the three years named above for the purpose of showing as correctly as such figures may show, the comparative decrease in the mining population in 1883 and 1884. It will be observed that whereas, in January, 1883, there were issued 669 miners' rights in that month; this year 335 only were issued; that is to say, the issue had fallen off in the two years, from January, 1883, to January, 1885, by just one half, omitting fractions.

The mean between the number of miners' rights issued in January in any year, and the total number issued for the whole of the previous year, may be taken as a rough approximation of the number of miners on the field during such previous year; assuming this theory to be correct, it would give us the average number of miners at Temora 760 for the year 1883, and 540 for the year 1884.

The number of miners' rights issued up to 31st January in any year are specially significant in indicating the number of miners then in the district, because such of those rights as are taken out by way of renewal have a special legal value over and above those issued during any other month in the year. As all miners' rights expire on the 31st December, so do all titles held by virtue of them expire at the same time unless new rights be taken out to take effect when the old ones die. Now, any miner's right issued during January to a person holding one in force on the 31st of the previous December may be dated back so as to have the same force and effect as if it had been issued on the day the old one expired. Consequently if a person allows his title to lapse by reason of not taking out his miner's right at the proper time he may, any time during the January next following, cure the defect, but unless cured during that month it becomes incurable. The title absolutely dies, and cannot be revived, no matter how valuable the tenement held by it might be. Nearly all the miners are aware of the law in these respects, and therefore generally obtain their miners' rights during January.

Gold-mining Leases.—Most of the mines in this district are held under the Mining Board Regulations. Nevertheless a considerable number of gold-mining leases have been applied for at this office, as will be seen by the following:

STATEMENT showing the number of Gold-mining Leases applied for at Temora since the opening of the gold-field in 1881 to the 31st December, 1884.

Year.	Number of Gold-mining Leases applied for.	Aggregate area of land applied for, in acres.
1880	9	56
1881	10	57
1882	33	226
1883	27	117
1884	23	107
	102	563

The greater number of these applications were for land situated outside of the boundary of the Temora Division. 43 only were for land within the division, 51 at Sebastopol and Junee, 1 in the county of Mitchell, and 7 at Barmedman. Applications were received at this office for land situated in other divisions, for the convenience of the public, before Warden's offices were established in such divisions. At Barmedman an office was opened in 1882, since when that office has transacted the business within its division. An office has been established also at Junee, and no doubt but it will be of public convenience, though the Temora office is more convenient for the Sebastopol people than the Junee office.

Yield of Gold.—I am indebted to the gold-receiver at Temora, Sergeant Buckley, for the statement given below of the gold received at the Temora office during the year 1884:—

RETURN showing the quantity of gold received for transmission to the Sydney Branch of the Royal Mint during the year 1884:—

Date—1884.	Name of Gold-field.	Quantity of Gold received.		
		oz.	dwt.	gr.
January 1	Temora	1,384	19	19
January 29	„	359	5	12
February 26	„	512	11	20
March 25	„	760	0	0
April 22	„	392	7	12
May 20	„	347	14	6
June 17	„	1,134	14	0
July 15	„	1,185	17	2
August 12	„	2,300	6	18
September 9	„	2,374	5	6
October 7	„	1,013	3	8
November 4	„	662	1	4
December 2	„	1,084	0	8
December 30	„	864	9	6
	Total	14,381	16	1

The officers of the two banks here—the New South Wales and the Australian Joint Stock—have courteously furnished me with information, from which I learn that during the year they purchased in round numbers 13,791 oz. of gold, of which 9,742 oz. were obtained from alluvium, and 4,049 from quartz, and that the price paid was:—

Maximum.....	78/ per oz.
Minimum.....	70/ „
Average about.....	75/ „

For the purpose of comparison I give the gold sent from Temora by escort for the four last years, 1881 to 1884 inclusive. I regret that I cannot get anything reliable for the year 1880:—

Years.	Weight of Gold.		
	oz.	dwt.	gr.
1881.....	29,652	14	4
1882.....	33,318	0	7
1883.....	17,347	8	6
1884.....	14,381	16	1

Now, having regard to the large decrease in the number of miners on the field, and to the fact that during the first four months of the year very little mining could be done for want of water, the yield of gold for the year was a very satisfactory one. At the average price the total value would be (say) £53,931.

It should, however, be borne in mind that the gold taken by escort from Temora includes the Barmedman and the Sebastopol yields. But as this was the case in all the years mentioned above, and roughly stated would be in about the same proportion, so that for the purposes of comparison this disturbing element in the calculation would apply during all those years with about equal force. I have no means of knowing the quantity of gold brought in from Sebastopol, but 3,351 oz. 5 dwt. 6 gr., of the value of £12,986 2s. 6d., was from Barmedman; deducting this from the yield for 1884 as given above would leave (say) 11,030 oz., of the value of £41,000, for Temora and Sebastopol, of which I think about £1,500 worth would be from Sebastopol and Juneec reefs.

Mr. Francis Hickey has kindly supplied me with a list of the nuggets of which he has taken cognizance as having been obtained during the year, as follows:—One 5 oz., one 6 oz. 7 dwt., two of 8 oz. each, one 8 oz. 12 dwt., one 10 oz., one 12 oz., one 15 oz., one 16 oz., one 17 oz., one 18 oz., one 20 oz., one 25 oz., one 28 oz., one 32 oz., one 38 oz., one 45 oz., one 90 oz., two pieces weighing together 98 oz., and one 175 oz. 15 dwt. All of these nuggets were obtained from alluvium at Temora. They were found, some at Upper Temora, some at lower Temora, and some at various intervening places, covering a distance of about 3 miles. Taking it altogether, I think Temora still shows a tolerably fair record for a place said by some to have been exhausted two years ago.

No new leads have been discovered during the year. Stinson's lead at Upper Temora tempted a very small "rush" in the early part of the year, but it soon died away, and now the lead is all but abandoned. At Lower Temora, Buckley and party, Glasheen and party, and others, got some remunerative claims near to but at a shallower level than the old Temora main lead. And it is not at all unlikely that a large tract of payable ground will be found in that direction.

As a gold-field Temora is patchy. Sometimes a party will find a nugget besides getting good wash-dirt with it, and these together give a very lucrative yield, while the next machine of dirt might barely yield enough to pay the expense of washing it. Nevertheless, taking the good with the bad, and averaging the lot, the yield of gold pays a very fair return for the cost of getting it, especially considering what a large amount of labour and money is wasted for want of a proper system of working. I called attention to this waste in my previous report, and mention it now in the hope that such steps may be taken by the miners as will lead to a reduction of—if not wholly prevent—this waste.

There are but two quartz-mines at work at Temora, namely, the South Australian Company's mine and the Hidden Star. The former Company crushed during the year 648 tons of quartz, which yielded 340 oz. of gold—about 10½ dwt. per ton; the money value of the gold was £1,337. I could not obtain exact information about the Hidden Star, but one of the shareholders informed me that he thought they had crushed during the year about 100 tons of stone, and that it yielded nearly an ounce to the ton.

Barmedman.

I have partly dealt with this division in my remarks about Temora. Barmedman suffered very severely in the first five months of the year, during which time mining operations were almost suspended, causing great depression in the district, and materially interrupting the yield of gold. The district is essentially a quartz-mining district. No alluvial workings of a payable nature have yet been discovered. All the gold obtained during the year was obtained from quartz. 6,216 tons of stone were crushed, from which 3,351 oz. of gold, of the value of £12,986, was obtained (I omit fractions). As before stated, this gold is included in the escort returns for Temora. I am indebted to Mr. Wm. Forbes, the Mining Registrar, for the following:—

STATEMENT showing the quantity of quartz crushed, and the average yield of gold therefrom, from the several mines within the Barmedman Division during the year 1884:—

Name by which workings known.	Whether above or below water-level.	Depth in feet of workings from surface.	Quantity of quartz crushed.	Average yield of gold per ton.			Average width of lode in inches.

The average yield of gold for the whole division for the year was 10 dwt. 16 gr. of gold per ton of quartz; and when it is remembered that the lodes are large, the workings comparatively shallow, and the country easy to work with an abundance of good firewood in the immediate neighbourhood of the crushing machine, such an average yield ought to pay not only fair wages and expenses but a good profit besides. Of course with yields varying from 2 oz. 15 dwt. 12 gr. to 3 dwt. only per ton, while some of the parties may be making very large profits others would be unable to "make both ends meet." But that is common to all gold-fields. Barmedman on the whole ought to be, and I think is, a fairly prosperous mining district. And I think it but the barest justice to say that the district as a whole is largely indebted to the Barmedman United Company for its powerful and superior pumping and crushing machinery. By means of the former the country is drained so that the small claims adjoining can work in nearly dry ground, and by means of the latter all the quartz raised in the district can be crushed and otherwise treated in a fairly satisfactory manner.

Most of the mines are holdings under the Mining Board Regulations. I give below a table showing the number of gold-mining leases applied for during the four years ending 31st December, 1884. These include seven applications, made at Temora before our Barmedman Office was established.

Gold-mining Lease Applications at Barmedman.

Year.	Number of Applications.	Aggregate area of land applied for, in acres.
1881	2	6
1882	8	120
1883	8	36
1884	7	34
	25	196

During the year the Mining Registrar issued 163 miners' rights and 48 business licenses.

The depressed state of mining during the early part of the year, together with the attractions at Silverton, Sunny Corner, and other places, have caused a large decrease of the mining population, and some few business men have also left. But I am sanguine that the year 1885 will close with a larger population than it commences with, and that the year will be more prosperous than the one just closed.

Clarendon Division.

This division includes Sebastopol, Junee, Muttama, and other places, some of which I have not been able to visit. Indeed, I am not aware that it has been necessary that I should visit them. It is a very large division, but the mining operations within it are comparatively few in number and generally of a very primitive kind. Nor have the general results for the year been very encouraging. At Muttama the Cootamundra Quartz Company, from whose mine the shareholders had hoped for very remunerative returns, has collapsed, and the very excellent crushing plant erected by the Company, as I write, is in the market for sale.

A little spurt took place at Pyke's Reef, Doctor's Reef, and the Dust Holes, in the early part of the year, and great hopes were entertained that at all these places payable and permanent mines would be opened up; indeed a good quartz-crushing plant had been recently put up at the Dust Holes, by Mr. William Marshall, of Melbourne, but I regret to say that these large hopes were not realized, and at all these places mining has been suspended, albeit I am sanguine that the suspension will not last very long, and that in the future remunerative mining will be carried on at each of the places named. At Sebastopol most of the works are in a forward state of progress, though not sufficiently forward to give payable returns. The principal mines are the Morning Star, Evening Star, and La Mascotte (late Homeward Bound). The Morning Star has been carrying on operations in two shafts during the year, and has done a large amount of progressive work. Some little gold has been obtained, but not enough to pay the expenses of getting and crushing. Nevertheless the shareholders are sanguine of getting good payable stone in the level they are now driving, where they hope to get the same shoot of gold which in the shallower workings was very rich. These shallower workings were exhausted some years ago, and I have been informed by one of those who then worked it that he cleared £5,000 for his own share. It is not, therefore, a matter of surprise that the present shareholders feel great faith in the ultimate success of the undertaking.

The machine for treating the old tailings at the Morning Star has proved a total failure. It was introduced with a great flourish of trumpets, and great hopes were entertained that it would give the proprietors large profits, but a fortnight's steady work showed that either the process or its sponsor and manipulator was at fault. A fortnight's operations yielded only a few dwt. of gold, about enough to purchase salt for the engine-driver. This was not sufficiently encouraging, and the work was stopped.

The La Mascotte (late Homeward Bound) has changed hands. The old Company exhausted their energies, and one would think their purses too, by their continuous litigation among themselves. Captain Tucker purchased the whole property, and judging by the way in which he has commenced his operations, he intends working the mine with thorough efficiency and economy, and I hope with very profitable results to himself, and this would mean great benefit to the district. He purposes erecting a first-class crushing battery, and for conserving the necessary water to work it has expended several hundred pounds sterling in constructing a splendid reservoir.

The Evening Star Company were for many months suffering from internal disagreements, and the consequence has been great waste of time, labour, and money. I am, however, informed that the differences have been adjusted and arrangements made for working the mine with something like system and economy. The stone is to be crushed at Mr. Marshall's Hibernian machine.

I have not been able to ascertain the exact quantity of gold obtained from the Sebastopol mines during the year, but from the information gathered by me should think 400 oz. would be about the quantity, including the yield from Doctor's Reef, Pykes' Reef, and the Dust Holes.

I have already mentioned that of the gold lease applications made at the Temora office, 51 were for land at Sebastopol and Junee.

General.

The regulations relating to gold-mining leases do not work very satisfactorily in any of the districts under my charge. During the four years ending 31st December 119 applications were received. Now very few of these applications were made with *bona fide* intention of working the ground applied for, as may be supposed

supposed from the fact that at the close of 1884 not more than 12 of the plots of land so applied for were being worked; thus, at Temora, 3; Barnedman, 4; Junec and Sebastopol, 5. The applicants have been very assiduous "waiters on Providence" men who stand by and note very carefully the labour done by others, and very patiently wait for its results, and who are ready to share in such results, but who do not think it necessary to assist in bringing them about. They manage by one pretext or another to hold the ground without work. They wait and watch, watch and wait, while their neighbours do the work. If such work leads to valuable discoveries the "waiters on Providence" will take their share of the good things, and if no such discoveries are made the "waiters" do not sustain loss. Every day's experience confirms the opinion that the Regulations require thorough and radical amendment. I am practically acquainted with the difficulty of providing a code of regulations which on the one hand will offer such terms and security as will tempt capital without on the other hand opening the door monopoly by "legal shepherds." The difficulty is not imaginary, it is real; but for all that I think the Regulations could be greatly amended.

I may say in conclusion that the outlook for 1885 is more cheery than it was for 1884.

LACHLAN DISTRICT—PARKES DIVISION.

(*W. C. Weston, Mining Registrar.*)

I HAVE the honor to forward my yearly returns for the Parkes portion of the Lachlan Gold-field extended, and in doing so it is most gratifying to have a more cheerful report to make after the doleful ones of the past few years, for I have to note a steady improvement in quartz-mining.

Some of the reefs about the town are raising magnificent stone, notably Quayle and party, who have about 250 tons at grass, and will crush early in January, 1885; it is thought they will get over £5,000 worth of gold out of this crushing. Their claim is six men's ground, 360 feet by 400 feet, and is close to the town boundary.

Hazlehurst's claim of 200 x 400 is south of Quayle and party, and was the first to obtain the rich stone. He has had several fine crushings during 1884, and has now 100 tons at grass, and has the machine secured after Quayle and party. His stone looks as good as his last, which went 5 ounces to the ton. Hemmington and McMillan, at the Tichbourne, have a splendid claim. Their last crushing went 11 oz. to the ton, not picked stone, but just as it came out of the reef. They are now raising stone which is richer looking than last crushing. They do not intend to crush until they have 200 tons ready, when they expect a cake of over 2,000 oz. of gold.

Miller and party, at Sardine Gully, have crushed several times during the year, each time with satisfactory results. Their reef is very thick and broad, the stone easily got, and I have no doubt they will secure a competency this next year.

Bushman's Hill is again being tried, Coucher and Murray having got a good show. Keane and Tom, next to them, have also struck good stone, and have sold a half-share each of their claim for £40. Sam Leighton, a well-known old digger, has registered another claim at the Bushman's, as also Kennedy and party. I hope these men will be the means of opening up the hill, as there is no doubt of there being lots of splendid reefs which only require capital to develop them. Everything as regards reefing appears favourable for more prosperous times; in fact my old prognostications are being realised. I am confident that for years to come the Parkes district will hold its own with any in New South Wales.

I have nothing to report about alluvial; a little gold is being got, as the enclosed tables will show.

The dams are full at present, but the quantity of stone there is to put through the stampers will soon reduce them, unless we have a good fall of rain.

The local banks, *i.e.*, the Commercial and the A. J. S. Banks, have purchased 2,929 oz. 8 dwt. 18 gr. of gold, valued at £3 15s. per ounce, totals, £10,980 7s. 9d., and several parcels have been sent to Sydney by private hand.

In consequence of the dams being empty, crushing only commenced at latter end of May. I think the gold obtained in the seven months of last year augurs well for 1885; as it is the quantity obtained in 1884 exceeds 1883 by nearly 500 oz., and if the stone that is now at grass had been crushed, at least 2,500 oz. more would be added to the total of 1884.

Eighty-one claims have been registered by me, and three gold-mining leases applied for in 1884.

323 miners' rights, 15 business licenses, and 4 mineral licenses have been issued in the same period.

LACHLAN DISTRICT—FORBES DIVISION.

(*D. E. Troughton, Mining Registrar.*)

I HAVE the honor to submit my report for the Forbes Division of the Lachlan Mining District for 1884.

The amount of gold won in this division last year was some 460 ounces less than the amount won in 1883.

The British Standard Gold-mining Company at the Bald Hills have been working their leases through the year with but little success. Latterly, I am glad to say, the Company's prospects have looked brighter, and it is to be hoped that in the coming year their pluck may be rewarded.

Attempts to trace the lead north and south of the Company's leases have not been very successful, but I cannot say that any very sustained effort was made; nor is this surprising, capital is wanted and the enterprise is as risky as speculation well can be. Leases were taken up, but apparently as a speculation only, lessees asking for the inevitable "order for suspension" as soon as they were granted.

Extensive prospecting has been carried on between Forbes and Parkes through the year with, as yet, little or no results. Payable gold has been reported several times on what has been literally a "flash in the pan," the result being small abortive rushes and ultimate depression. It is, however, somewhat premature as yet to write the year's prospecting down fruitless, it should be fully tested by the time the next annual report is in preparation, and I trust it may then have developed something more than muscle. Undoubtedly the best finds have been in the Parkes division, to which many Forbes miners have turned their attention.

Of quartz-mining there is little to be said—certainly nothing new. The Pinnacle Reefs have not yielded as much gold as in 1883, and I know of no other place where quartz is being raised in this division.

Copper.—

Copper.—There is nothing fresh to report of the discovery of this mineral at Eurow Mountain. Whatever is there still awaits the coming of the capital, but there is little doubt that the lode, if continuous, will pay.

Miners' rights issued during the year	452
Business licenses ,, ,,	22
Mineral licenses ,, ,,	10

LACHLAN DISTRICT—CARCO DIVISION.

(*R. Hutton, Mining Registrar.*)

THERE has been scarcely any mining done in this Division during 1884. About twelve men have found employment fossicking in the old working at Gum Flat. They washed during the year about 300 loads, which yielded about 3 dwt. to the load, giving a gross yield of 45 oz. This is all the gold that has been won in the division during the year.

Quartz-mining is even in a worse state than alluvial, as from it there has been no returns whatever.

The Ironclad Company had three men employed during part of the year, it is said, putting the mine in order; they raised no stone, nor did they crush any. They had a suspension of the labour-conditions of their lease for the last three months, and are about to go to work again.

Two men (Coghlan and Quinn) have taken up a claim in the Queen of the Ranges Reef, near Canowindra. It is generally reported that they are getting payable gold, but have had no crushings.

Mallon and party, Boney's Rocks, are still sinking; they are very sanguine, but, like the others, had no stone crushed.

Fifty-eight miners' rights and five business licenses were issued at this office during the year.

LACHLAN DISTRICT—GRENFELL DIVISION.

(*W. H. Hazellon, Mining Registrar.*)

I HAVE the honor to furnish my Report for the year 1884, and have to state during the year just ended no fresh discoveries have been made in this Division. In April, Irwin and party (three men) took up an extended claim on the Old Scalded Flat Reef, which is situated on Caragabal Run, about 30 miles due west from Grenfell.

This reef was first discovered about thirteen years ago. The party worked five weeks, during which time they raised 8 or 9 tons of quartz for a trial crushing, which had to be carted to Grenfell to be crushed, no crushing-plant being nearer. This only yielded 8 dwt. to the ton; this, considering the expense of carting and raising, did not pay, but would have paid if a crushing-plant was within a reasonable distance, as the quartz is easily obtained. The party had not the means of procuring machinery and could not induce anyone with capital to assist them; they had to abandon the claim. In June five leases were applied for, one 2-acre and four 3-acre, by Mr. Crommelin; these leases embrace a quantity of quartz-sand or tailings which have passed through quartz-crushing machines. The applicant informed me that from tests made of this sand it is likely to prove very remunerative, and that some gentlemen in Sydney were making arrangements to bring out machinery from England that will separate the gold from the sand. Should this prove true it will open a new industry in gold-mining in this division.

In July, Hanshaw and party applied for a 1-acre lease for quartz-mining at the One Mile, adjoining the western boundary of Petit and Co's 3-acre lease, Enterprise Reef. This lease is worked by a local company; they are prospecting for an extension of the Enterprise Reef. Should they be successful enough to find it they will, I believe, be well rewarded.

In August, Fitch and Sons applied for a 4-acre lease, which embraces O'Brien's or Consol's Reef, which was floated about eleven years ago for £40,000. The applicants are not yet at work. They informed me that they will be raising payable stone within two months from the time they commence work.

In September a party of four men took up an Alluvial Protection Area at Palmer's Springs, about 4 miles north-east from Grenfell. They sunk four shafts, first, 66 feet; second, 120 feet; third, 158 feet; and fourth, 175 feet; and put in a drive 111 feet in the two last-named shafts. Gravelly wash was discovered about 1 foot deep, and only the colour of gold obtained. The party then abandoned the area.

In December a party of three men started to prospect Kelly's Creek, which is situated about 16 miles due east from Grenfell, for alluvial. They report having sunk several shafts, and that the sinking is shallow, and that they can get the colour in every shaft.

The following quartz-claims are raising stone and will crush about April or May next, viz.:—The Enterprise Lease, Lawson's Homeward Bound, Lucknow Nos. 1 and 2, Britannia, Young O'Brien's, and Prussian.

I may also mention that there is a gentleman here from Sydney looking for silver, but has not reported having discovered anything yet. This, I think, embraces all the information to hand at present.

LACHLAN DISTRICT—YOUNG DIVISION.

(*T. E. Blomfield, Mining Registrar.*)

IN the compilation of my Report for the elapsed year and the mining operations in this district I am labouring under the disadvantage of having little material whereon to frame one of much interest, the last twelve months having been especially sterile in the gold-mining field of enterprise, and the metal which has been won in point of value is exceedingly insignificant on so wide an area known to cover illimitable wealth.

At Blind Creek, near Murrumburrah, about 100 diggers have done a fair find, equal to average wages, but with so primitive a process as pursued there no greater results could be expected.

The new find in the Sherlock Creek has not met the expectations of prospectors, and from various causes, chiefly for the want of water; it has proved to be little short of a failure.

To summarize, until some scheme is devised of conserving the great abundance of water which in favourable seasons is precipitated in this district, little hope can be entertained of the gold being won in any considerable quantities, but, given that most essential factor to assist in its recovery, the wealth this district alone

alone is capable of yielding would dwarf the wildest flights of fable in substantial results, but until capital, aided by a more scientific method of searching the earth, together with a plentiful supply of water, is organized, all this great wealth must remain unproductive, to the serious loss to the country at large.

Since the 1st January, 1884, in this section of the district, 1,367 oz. 9 dwts. of gold, equal in value to £5,323 sterling, have been won. 367 miners' rights and 39 business licenses have been issued from this office; also, 13 mineral licenses, 10 gold-mining leases, and 2 mineral leases; these latter being in the hands of substantial Companies, but awaiting more favourable seasons, little has as yet been done to prosecute the works, which under present unfavourable conditions would entail a serious loss. In short, all enterprise is retarded just at present in consequence of the scarcity of water, and will continue so so long as the drought lasts.

LACHLAN DISTRICT—TEMORA DIVISION.

(James Davoren, Acting Mining Registrar.)

I HAVE the honor to submit the following report of mining in the Temora Division of the Lachlan Mining District for the year ending 31st December, 1884.

There appears to be a falling off in the yield of gold in this division since 1883 of 1,081 oz. 13 dwt., the total yield for the year being 11,333 oz. 9 dwt. and 3 gr., as against 12,415 oz. 2 dwt. 3 gr. for the year 1883.

I have good reason to believe that during the year a large quantity of gold won on this field was taken to Melbourne, and several parcels were taken to Sydney, for which this field will not receive credit in these returns.

About the beginning of the year Robins and party took up an old abandoned reef, known as Pike's Reef, about 25 miles south-west of Temora, from which they crushed 300 tons during the year, which gave a return of 173 oz. of gold. This reef was profitably worked several years ago. The old shaft is 180 feet deep; the drives are not safe, and it will be necessary to sink a new shaft to test the deep ground.

The Dust Hole Reef.—This claim is situated within about 3 miles of the last-mentioned claim; it was also abandoned several years ago, and was taken up by Marshall and party. A shaft is sunk to a depth of 100 feet. They expect to cut the reef at a depth of 130 feet. About 50 tons of mullock and rubble taken at the top was crushed at the battery connected with this claim, and only gave 2 dwt. to the ton.

The shareholders in this mine have great confidence that they will get large returns when they strike the reef.

Doctor's Reef, Old Junee Reefs.—This was newly taken up by Messrs. Marshall and party, who have sunk a shaft 50 feet, when they struck the reef. They have crushed 50 tons which gave a return of 6 dwt. to the ton.

There are several quartz-claims at work in and about Sebastopol, but none of them have had a crushing during the year, except the claim formerly known as the Homeward Bound, now known as La Mascotte. There were 47 tons crushed from this claim which gave a return of 35 oz. of gold.

Of the claims in this neighbourhood the Evening Star deserves special mention. There is between 300 and 400 tons of stone to grass. The reef, which is from 11 to 13 feet wide, was struck at a depth of 65 feet. It is considered the stone will yield from 12 to 15 dwt. to the ton, and is easily got out. This is looked upon as the best property in the neighbourhood.

I have received no return of the tailings treated by Messrs. Heffernan and Marshall at Sebastopol and Junee.

Quartz-mining in Temora is very quiet, the South Australian being the only quartz-claim at work.

Alluvial.—Many of the old claims which were abandoned have been taken up afresh during the year and have paid good wages.

The number of miners' rights issued during the year was 752, and 167 business licenses. About 430 of the miners' rights were taken out by people engaged in and about alluvial mining, four by chinamen, and the remainder by people engaged in quartz-mining and parties holding allotments and residence areas.

There was between 45,000 and 50,000 loads of wash-dirt puddled in Temora during the year. The puddlers could not give me the yields of the lots puddled separately, as in most cases the miners took the gold home to clean up, but I am told the average was from 3 to 7 dwt. to the load.

I have been unable, owing to the shortness of the time since notification of my appointment as Acting Mining Registrar reached me (9th January, 1885), to give more details of the working and country gone through, so I hope you will pardon any irregularity.

LACHLAN DISTRICT—BARMEDMAN DIVISION.

(W. Forbes, Mining Registrar.)

I HAVE the honor to submit my report of the past year for the information of the Honorable the Minister for Mines. Mining operations have been somewhat retarded during the year 1884 by the collapse of Jackson's Reef and the Ada Gold-mining Companies. The former has been lately sold to a contributory company, and miners will shortly be employed on tribute. The Ada leased ground having been cancelled, has been occupied by the objectors, who are determined to fully test the claim. The Fiery Cross Reef still holds a premier position on the field, and the Hunted to Death, on the same line, has also yielded payable returns. The Black Angel, a cross reef to the south, has given large yields during the year; but the width of stone is not equal to the Fiery Cross, and the returns for shareholders have in no case exceeded £10 per week, although the yield has, on one occasion, been 3 oz. 6 dwt. per ton. Wright's Reef has been abandoned, the last crushing merely giving 10 dwt. per ton. Owing to the absence of outside capital many reefs have been abandoned, from which fair returns have been obtained. Morellis and Hasset's, at the Hard to Find, are no longer worked. The yield from these claims has varied from 27 dwt. to 15 dwt. per ton; but the width of gold-bearing stone was unsatisfactory, and the means of the working miners were inadequate to the further testing of the ground. Barnett's Reef, at the Hard to Find, appears to greater advantage during the past year, the average yield being 1 oz. 11 dwt. 9 gr. per ton. The stone was taken from the level of 75 feet. Work at the old lease has been abandoned, although several returns of over 1 oz. per ton have been obtained; but the claim was considered patchy by the miners employed. The Phoenix Prospecting Company continues to sustain the high reputation given to it by Mr. Slec, the Inspector of Mines, who affirmed that it was the best and most permanent reef on the field; but the width rarely exceeds 18 inches, and the average is merely

12 inches. As the appended list will show, this reef has given the highest average returns, namely, 2 oz. 15 dwt. 12 gr. Miners are still employed in No. 1 North Phoenix, where there are fair prospects, but there is a dispute between the present occupants and the original applicants for a lease. No. 1 South is under application for lease. The prospects of the Barmedman Gold-mining Company appear to have considerably improved during the past year. Mr. Gleadow has been appointed manager, and since he has taken charge the Little Ada Reef has been found near the surface, the first crushing giving 3 oz. per ton. Several crushings from the Fanny Park have also given payable returns; but the year's average has been sadly decreased by the necessary crushing of enormous quantities of inferior stone previously raised, and taken from some of the big reefs with which the Company's claim abounds. The claim known as the Italians, by No. 2 North Ada, has not of late years yielded up to its usual average. There have been enormous bodies of stone which were taken out from wall to wall, and the result has been a comparatively poor return. There was an immense quantity of stone previously raised by the Italians prior to the date of the claim, so that the late crushings give no actual clue as to the value of the property. Large returns have at various times been obtained from the spare ground owned by Pope Minter and party; but this ground has, together with the Italians, been under suspension, owing to the accumulation of water in the claims while the pumps were undergoing necessary repairs. The shareholders of the Moonlight Reef have left the district, and the claim is unoccupied. Very little prospecting for alluvial has been done, and there has been no surplus of miners to aid in the development of the district. Attention has of late been called to the splendid reef country north of Barmedman. A prospecting party is now employed in the direction, and the large scope of auriferous land inspires faith amongst the residents as to the ultimate opening of other gold-fields. The population has slightly diminished, owing to the rushes to Dark River, Silverton, and Sunny Corner. The number of miners' rights issued during 1884 has been 163. The business licenses are 48; but no mineral licenses have been granted. Seven gold-mining leases have been applied for, the total area being 35 acres of ground. Of these one has been cancelled and two revoked. This reduces the area of ground under application for lease to 27 acres. The population is estimated at from 300 to 400. They are a most orderly class of people, and give little trouble to the authorities. Considering the valuable mining properties there is but little litigation. The following statistics will show that there are sixteen claims being worked with satisfactory results. The average cost of crushing is about 10s. per ton. The total number of tons crushed 6,216, the yield being 3,351 oz. 5 dwt. 12 gr. The estimated money value is £12,986 2s. 6d., showing an average yield of 10 dwt. 16 gr. per ton.

SOUTHERN DISTRICT—ARALUEN, BRAIDWOOD, LITTLE RIVER, MAJOR'S CREEK, AND NERRIGA DIVISIONS.

(*Mr. Warden Aldcorn, P.M., Braidwood.*)

GOLD-MINING operations during the year 1884 in the abovenamed divisions under my charge have been anything but active, and my report with reference thereto may be comprised in a few words.

The chief cause of inactivity has been the almost unexampled continuance of a short supply of water, the past year being the fourth during which the rainfall has been so small as scarcely to do more than penetrate the ground for a few inches, and furnishing at most a few days' supply occasionally for mining purposes. A large portion of the mining population has, therefore, been obliged to seek other employment, chiefly on the tailing works.

In one part of the Araluen Division (that in the bed of the river), where heavy stripping has to be carried on, operations have not been retarded but rather benefited by the dry weather, although some even of these workings may soon have to be prosecuted at the disadvantage of having to pump water for washing operations. Several working men's companies have been engaged on some portions of what were formerly large claims worked with extensive machinery, but which were given up for a time as unremunerative. Some of these small parties have been working on tribute agreements, and as a rule have been earning good wages. A large claim on private ground, which had been abandoned as not payable, was taken up during the year by a tradesman in Araluen who has carried it on with varying success up to the present time. This gives employment to from forty to fifty persons.

At Little River matters remain much the same as at date of my last report. Nothing has been done to utilize the quartz-mining machinery which was erected two years ago at large cost to work several reefs there. A projected Company, with some Sydney capitalists, from which something was expected in this way, seems to have come to nothing; at least all they have done has been to apply for leases of the ground, and to pay a person to look after the idle machinery. A few weeks ago a fresh discovery was made of a line of quartz-reef a mile or more from formerly known lines. A trial crushing has been made of 16 tons, which yielded at the rate of 2½ oz. to the ton. The discoverers are sanguine as to their having a good property, and are sinking to test the reef to a further depth. A second party have found another reef very near that just referred to, and they are getting out a trial crushing.

Any further matters of detail as regards gold-mining will, I doubt not, be furnished by the several Mining Registrars in their respective divisions.

With regard to mining other than gold there is little to report. Within the past two or three months some parties have taken out mineral licenses, and have been prospecting for copper and silver near the Shoalhaven River, a few miles from Braidwood. Quite recently some specimens of silver ore have been found which experienced persons pronounced to be good, and steps are being taken to have them properly tested.

SOUTHERN DISTRICT—MORUYA DIVISION.

(*Mr. Warden Mannsell, P.M., Moruya.*)

I HAVE the honor to state, for the information of the Honorable the Minister for Mines, that I have but little to add to my former report.

Owing to the dryness of the past and present years prospective workings have not perceptively increased.

Recent legislation and regulations have afforded a few Companies opportunities of testing the auriferous qualities of land and reserves, amongst which are some on the Belle of Australia line of reef, where Carter and Company have already erected a crushing plant, and others have applied for leases on the same line with similar intentions.

At Mogo a Company of eight have recently commenced alluvial work, but the results of its labour is as yet problematic.

The

The proprietor of the Moruya silver mines informs me of his intention to erect more powerful and modern machinery with a view to further develop their resources, of which he appears sanguine.

There are about seven men at work at Bermagui, who barely make wages.

On the Dromedary Mountain Messrs. Mills and Company continue to work their crushing plant.

SOUTHERN DISTRICT—NOWRA DIVISION.

(*Mr. Warden Lovegrove, P.M., Nowra.*)

On considering that the yearly Report is not merely for the use of the Department, but is also published for the information of the public, I have thought it not amiss to give a general indication of the features of the district, showing how much has been done and how much left undone in the way of prospecting.

The Shoalhaven River, coming from the south, and passing through the Braidwood district with a winding and broken course, auriferous throughout, is joined by the Endrick River from the east, and proceeds northwards by Nerrimunga, Spring Creek, and Tim's Gully (all well-known names to miners), and after nearly reaching Marulan, suddenly turns eastward, and by a tolerably direct course of about 60 miles falls into the sea.

It is not too much to say that throughout the whole of this distance it is auriferous, and yet, with the exception of a few wandering miners without capital, no one is to be found on its course from Nerriga to Yalwal, a lineal distance of 80 to 100 miles. The Bundanoon and Meryla Creeks from the north have been proved to contain gold; travellers detained by freshes have picked out nuggets with their pocket-knives, and yet the whole actual gold-workings of the district are comprised within 1 square mile.

Again, in this limited space only three mines can be said in any sense to work, and very rarely exceed, if they equal, the labour requirements of their lease; yet, in 1882, they turned out 828 oz. of gold, in 1883, 1,942 oz., and in 1884, 883 oz., the results on an average of a dozen men's work, or less.

I think the causes are principally sentimental. Diggers like to move in bands, and do not like the chance of loneliness, and nothing is more lonely than the Shoalhaven gullies, with the hills surmounted by stupendous cliffs.

Then there is also insufficient mining population for the vast mining area of the Colony, and some places must be left alone for the present.

Management, again, has its various difficulties to interpose. The copper-mine opened by Captain Reynolds, on the Right Arm Creek, is there abandoned with its shaft of 74 feet, its output showing the various brilliant colours of the lode, and the gossan outcropping on the opposite bank, the causes being that the shareholders refused to pay up a sixpenny call, and the workmen left. At the junction of the Kangaroo and Shoalhaven Rivers a bold attempt was made to bottom the drift, and whilst I was hourly expecting to hear of the success of the undertaking, the claim was registered for want of capital, and the principal shortly after accepted an offer to take the management of a mine in India. A time will come when prospecting on this river will be systematic and thorough, and we shall then see many metals paying their way that are now not even looked for.

Nothing has been done in coal. The railway vote has passed, but the holders of the large seams from the Jamberoo Mountain to Broughton Creek, will not open their mines much before the completion of the line.

SOUTHERN DISTRICT—BERRIMA DIVISION.

(*Mr. Warden F. R. Wilshire, P.M., Berrima.*)

In forwarding my annual report for the past year of 1884, I have the honor to state that mining operations generally have not much changed in the division under my supervision during the period under review. The coal and shale mining interests have not made any very considerable developments, and I have little to add in that regard to the information supplied you last year.

The Joadja Coal and Shale Company are still engaged completing and extending their important works at Joadja Creek, the demand for the Company's very excellent kerosene oil being now greater than they can even supply with the extensive plant in use, and the manufacture of gasoline oil (used and known as portable gas) now forms an important item of their business, and this substance is rapidly coming into general use under improved methods of burning it. The local manager, Mr. Forsythe, supplies me with the following particulars relative to the operations of the Company, for the past year, viz. :—Quantity of shale mined, 19,014 tons; quantity of coal, 7,759 tons; kerosene oil, 36,000 cases; gasoline, benzine, and other products, 6,000 cases; paraffine (hard raw), 100 tons; sulphuric acid, 400 tons. Total number of men employed, 160.

A new coal-pit, known as the Ringwood Colliery, has been opened during the year. The quality of the coal is said to be pretty good, but a report is current that the trials for locomotive purposes have not proved so good as expected, and other seams on the same property are being tested, with hopes of better results. The proprietors of this Company have spent some £20,000 or £30,000 in opening the pit, plant, &c., &c., and the works are of a substantial and durable character, with considerable facilities for a large output.

Mr. Baker's colliery (Erith) is still engaged supplying the railway and other contracts. It is currently reported that the proprietor is desirous of selling the mine, or of floating it into a Company.

The Berrima Colliery is still supplying private orders, they having failed to secure a portion of the railway tender for last year, and the pit, in consequence, is very slack at present.

Another Company are commencing to open a coal-seam near Mittagong, of the character of which great confidence is expressed by the owners, notwithstanding the number of failures that have hitherto taken place in coal tests from seams in that vicinity. This Company, I believe, intends constructing 5 or 6 miles of wide gauge (4 feet 8½ in.) railway, to connect with the great Southern Line, near Mittagong.

During the latter part of the year a small rush took place to the Old Mittagong Gold-field, particulars concerning which field I have already furnished you with in a special report under date the 11th September ultimo.

One gold-mining lease was applied for (Messrs. Dunstan, Southey, & Co.). The gold is found in very limited quantity, and as yet only by this party, who have also succeeded in obtaining a few diamonds.

Several mineral leases have also been applied for in the same neighbourhood, and adjoining Messrs. Dunstan & Co., on Diggers Creek, but I have not been able to discover, from two visits made to the locality,

locality, that anything in the way of payable gold or gems has been found outside Dunstan & Co.'s claim, though there are indications of a similar wash in small patches in various places along Diggers' Creek, the character of which, like that in Dunstan & Co.'s claim, is quite distinct from anything there forming now the geological surface of the locality, and in consequence must have come from some great distance by a means not now very easily determined, or thrown up by some volcanic action, all indications of which have long since disappeared. I may state that I have discovered very small patches, a few yards only in extent, of a precisely similar wash containing numerous gems, such as sapphire, zircon, &c., &c., along the course of the Wingecarribee River, flowing through this town, the source or origin of which wash (being quite distinct and totally different from the present river wash or detritus as at Diggers' Creek), forms an interesting question for geologists to solve, the river taking its rise, as it does, in and flowing through sandstone (Hawkesbury rock) the whole of its course.

Two or three mineral licenses have been applied for, to mine for cobalt &c., near Bungonia, in the police district of Goulburn, but I am not in a position to furnish any particulars concerning this, never having visited the neighbourhood, and have heard little or nothing further of the matter.

Kerosene shale, of an inferior quality, has been found in the Nattai River, near Colo, as also at Meryla, near the Fitzroy Falls, but I am not in a position to furnish further particulars at present concerning these finds.

SOUTHERN DISTRICT—BOMBALA DIVISION.

(*Mr. Warden Giles, Bombala.*)

I HAVE the honor to forward my report for the year 1884 on mining matters within the portions of the Tumut and Adelong and Southern Mining Districts, of which I am Warden, and which embrace the following gold-fields, viz.:—Kiandra, Crackenback, Snowy River, Collinton, Nimitybelle, Delegate, and Toowoomba.

As previously instructed, I presume the Mining Registrars and Wardens' clerks stationed at Kiandra, Cooma, Bombala, Nimitybelle, and Eden have already furnished their reports for the past year, giving detailed accounts of the various workings, proceeds, &c., also the number of miners' rights, business, and mineral licenses issued within their respective divisions, to the 31st December last.

At Kiandra there are five Companies at work. The gold won on this field during the past year amounted to about 2,000 oz. There were 136 miners' rights issued by the Mining Registrar.

Scarcity of water, owing to the severe drought, has compelled some of the claim-holders to temporarily suspend sluicing operations. The want of water supply has seriously retarded the progress of this gold-field; otherwise the results would have been much more favourable.

The Kiandra Gold-mining Company have, at a great outlay, constructed hydraulic machinery to wash away the auriferous hills. Sluicing was carried on at the Company's claim for 2,997 hours, washing away 169,651 tons of earth.

At the 8-mile claim hydraulic sluicing with 4½-inch nozzle was commenced on the 14th May, and carried on till the 10th December, removing 249,278 tons of earth.

At the 15-mile, or Golden Crown claim, work has been carried on throughout the year. At two other claims the hydraulic sluicing apparatus has been placed in position, and the Company only await a fair supply of water to enable them to commence sluicing.

A quartz-reef has been opened which promises to yield payable gold.

The mining population may be estimated at 300, consisting of Europeans and Chinese.

Nimitybelle Gold-field.—There has not been very much work done on this gold-field during the past year. The long drought has seriously affected the progress of gold-mining at Kydra.

Delegate and Toowoomba Gold-fields.—There has not been any favourable progress made in gold-mining during 1884 on these gold-fields, although a migratory mining population has been maintained thereon, consisting mainly of Chinese.

I have travelled, in the discharge of my duties as Warden, during the year, 1,453 miles.

SOUTHERN DISTRICT—YASS DIVISION.

(*Mr. Warden Fisher, Yass.*)

I HAVE the honor to submit my report for the year 1884 of that portion of the Southern Mining District of which I am Warden.

Mining has been quite at a standstill during the past twelve months in this portion of the Southern Mining District, and no effort has been made to further develop any of the mines mentioned in my last year's report.

Prospecting has been going on in the Nanima Gold-fields, some 20 miles from Yass. Gold has been found, but not in sufficient quantities to induce permanent mining.

SOUTHERN DISTRICT—BRAIDWOOD DIVISION.

(*C. Osear, Mining Registrar.*)

I HAVE the honor to forward my Annual Report for the year ending the 30th December, 1884, for my portion of the Braidwood District. I regret to say that the mining industry is in anything but a flourishing state; it is greatly attributable to the want of water, but more so to the want of capital to develop the great resources of the district in regard to minerals of all sorts. The miners bitterly complain of the little interest taken by capitalists. Of the two or three mineral selections taken up no favourable reports have arrived.

SOUTHERN DISTRICT—ARALUEN DIVISION.

(*E. F. Carlile, Mining Registrar.*)

THERE has been an increase in the outturn of gold in the Araluen Division for the year 1884 of over 1,000 oz. as compared with 1883, the respective figures being—for 1884, 4,824 oz. 14 dwt. (namely, 4,732 oz. alluvial, and 92 oz. 14 dwt. quartz) of the value of £18,575 2s., as against 3,763 oz. 16 dwt. valued at £14,490 12s. 6d. for 1883. The reason of the increased yield is that a larger area of ground is now being worked, some of it with very fair results. A large scope of ground (idle for some time) is now under tribute, and

and on private land an extensive claim of several acres in area has been resuscitated. A great drawback during the year has been a want of water for washing purposes; not only ground-sluicing claims but those worked by stripping have frequently lost time through having no water to wash. At one spot, where some years ago the ground could not be drained by steam-pumping, water for washing has now to be pumped from the bottom, and after being used in the box allowed to drain back into the pump-hole, and so used over and over again. Near the same spot a steam-engine was washed away fourteen or fifteen years ago during a heavy flood, and was found only a few weeks since, when an underground tail-race which now drains that claim was being extended. These facts show what an immense advantage besides saving of expense is the present plan of draining by gravitation instead of the former costly means of powerful steam-engines and pumps.

Quartz-mining at Bell's Creek has occupied a few men during the year.

SOUTHERN DISTRICT—MAJOR'S CREEK DIVISION.

(*John Heazlet, Mining Registrar.*)

IN drawing up this, my statistical report for the year ending 31st December, 1884, I find that no progress has been made in either quartz or alluvial mining, but the contrary, there being a falling-off in the quantity of gold won—of about 81 oz. as compared with that of 1883—and only forty miners' rights sold as against forty-eight during 1883,—two very important items, which would lead to the supposition that the field is all but exhausted, more especially by those who have no knowledge of the locality or the seasons we have had during the past five years; but to those immediately concerned there is nothing to be surprised at, as with one exception the holders of races and water rights have not any time during the past five years had sufficient water to be of any material benefit to them. And at the present time the tail-races or ground-sluices have the appearance of having been deserted long since, they being coated over with grass, rushes, &c.; it is not therefore to be wondered at that a great many have left the place, some for good and others temporarily, which is the cause of a reduction in the number of miners' rights sold, and a lesser quantity of gold being found; indeed the wonder is that as much as 630 odd oz. have been obtained when scarcely a party could be seen at work during the greater portion of the year. Some two or three parties must have done remarkably well, which is a proof that the field is not quite exhausted, but fortunately for some and unfortunately for others the best ground is private property, and out of the reach of all but the owners of the land, who are taking the gold out of it themselves. The Long Flat portion of my division is also affected by the dry seasons, as during flood times old stuff—(i.e., stuff which has been removed) gets washed away, leaving the sound blocks exposed to view and more room for fresh stripping to be done; besides the stuff so flooded away yields a considerable quantity of gold. I have heard it said that there is as much gold on the Flat as what has been extracted from it, which I doubt. It does appear, however, that there are some who have a good opinion of it; the Messrs. O'Heir and party, whose race and water right extends from the head of the Back Creek to Major's Creek, have recently diverted their race to Long Flat with the view of ground-sluicing on a large scale, and have secured a block of 9 acres as an extended claim. This party have three good reservoirs, and with what is termed dreepy weather are able to make great execution in the old worked ground; there is one obstacle in the way, namely, too little fall in the ground for tailrace, which will necessitate the cutting away of a large quantity of rock between the Flat and the Back Creek, into which the water from the Flat is discharged. With a good fall and plenty of water the Flat will yield a large quantity of gold for many years to come.

Quartz-mining, like the alluvial, has not got on well; still there was, in one instance, a good beginning made if properly carried out. Mr. W. C. Newman, part proprietor and manager of the United Miners at Commissioners' Hill (private land) having put in an adit or drain from the main creek into the hill with a view to escape the trouble and expense of baling. This drain is laid with earthenware pipes, therefore has been expensive for so far, but from some cause unknown to me the work in this mine has been stopped for some months past; about 100 tons of stone from this mine has been put through the battery, and the mundic treated thereat by means of roasting and grinding in the Chilean mills, the yield from which is said to be 37 oz. or thereabouts. Consequent on the absence of Mr. Newman I have not had this information from himself, yet am of the opinion it is pretty correct. It is thought by many of the miners, and specially by those who worked this ground many years ago, that there is a great deal richer stuff than what has been recently crushed; the depth of shaft in this mine will be found in tabular form No. 4, enclosed herewith.

A Mr. Beazley, of Sydney, has lately obtained samples from the Young Australian, the Lady Elizabeth, or Pipe-clay, both situated at Red Hill (private land), also from what is known as Rigbey's Old Reef (near Spring Creek), with the view of ascertaining their respective value, which, if found payable, may be the means of a better trial being made of some or all of these mines than what has already been given. A trial assay from the Young Australian has given at the rate of 12 oz. to the ton; the depth of shaft in this mine will be found in tabular form No. 4, enclosed herewith. The vein in this is narrow, but is well known to be rich in gold, i.e., so far as it has been worked from the surface to the depth at which the latest trial was given, and, like all other reefs at this place, working miners were unable to contend with the rock-water, and especially the mundic. On Rigbey's Reef a new shaft has been put down to a depth of about 54 feet in order to strike the reef where it had been abandoned; the value of the sample obtained from this I have not ascertained, and from what I have learned of the Lady Elizabeth it has not been quite satisfactory, and the reason assigned was that a deal of rubbish or poor stuff was taken out with the vein carrying the gold. I may state that the 12 tons raised from this mine has not been crushed, therefore it may be premature to give an opinion as to its value; the shaft is said to be 60 feet deep, and the vein or lode which consists of quartz and pipeclay is nearly perpendicular.

In the Rise and Shine, Red Hill (Crown Land), owned by a Sydney syndicate, no work has been done during 1884. A crushing of some 5 tons from this mine, put through at the end of 1883, yielded somewhere about 28 oz., and the pyrites were sent to England for treatment (at least I have heard so), and that the owners stopped work pending the returns.

The Spinx Mine, at Calder's Flat, taken up by the Messrs. Harrison & Matthews some three years ago, is not being worked; perhaps they have not got the lease and are not bound to work it. This is a 2-acre block.

The Snob's Reef, at Big Hill, formerly owned by Messrs. Field Brothers and Company, but now owned by Mr. J. H. Blatchford as an extended quartz claim, has not been worked during the past three years,

years, and is now registered for suspension of work pending the formation of a Company. There are other blocks of ground pegged out and applied for by Colonel Halket and others, but whether leases have been granted or refused I have not been informed. The miners would like to know this, as until they do there is danger of their committing a trespass.

In tabular forms Nos. 2 and 3 will be found the number of puddling machines, also the number of crushing mills and other machinery within my division; these latter are all situated on private land. In tabular form No. 1 will be found the number of miners, European and Chinese respectively; also the quantity of gold won and the value of same. It is probable that a few lots may have been sent to Sydney privately, and in such case my estimate will be rather under than over the mark.

In closing this report I wish to say that if any mistakes have been made they have not been wilful. I have no object to serve by stating what is incorrect, but when information has to be obtained from various sources it must not be expected that no errors will creep in.

SOUTHERN DISTRICT—LITTLE RIVER DIVISION.

(*P. J. Galway, Mining Registrar.*)

I HAVE the honor to forward my Annual Report for this district.

In doing so I regret to state that very little has been done in mining matters during the past year, continued dry weather causing the miners holding races and water rights to seek employment elsewhere until a change in the weather takes place; and although 158 miners' rights were issued during the year, not more than one-half that number were working at any one time, and those chiefly making a living by fossicking near where water could be had for washing.

The Homeward Bound Quartz-reefing Co., holding four 10-acre blocks, having been idle during the greater portion of 1883, in the commencement of 1884 applied to lease the ground formerly held in extended claims, and leases were granted and issued some two months past, but the Company has not commenced work yet, and a most extensive plant, consisting of pumps and winding gear, are all going to ruin. The stoppage was caused, not that the claim would not pay, but from the expenditure of the Company's funds in useless "top-work." From an interview had lately with a Sydney manager I am in hopes that work will be renewed on a more solid basis before long. A new and distinct reef has lately been opened, and named the "Day Dawn." Fifteen tons of a trial crushing gave a return of 39 oz., and the stone from an adjoining claim is expected to crush at least 5 oz. per ton. Those claims being situated at the base of a ridge nearly 200 feet high, and the gold being so generally distributed in the stone, indicates that if the other known reefs were only sunk on to a reasonable depth permanent reefs would be found, the stone formerly taken out from the surface 200 feet being patchy, though in some instances very rich.

In the absence of any battery working here at present the quartz has to be sent to Bell's Creek, at a cost of £2 per ton.

SOUTHERN DISTRICT—NERRIGA DIVISION.

(*S. Woollan, Mining Registrar.*)

IN submitting my Report for 1884 I regret to have to chronicle a falling off in the number of miners engaged in this division and a slight falling off in the amount of gold obtained, attributable to the great amount of rain during the last six months, which has driven the miners from the Shoalhaven River, the principal gold-producing part of the division. At the commencement of the year, while the drought continued, a very large amount of gold was being obtained. I know of individuals who made their 7 to 8 oz. per day; but with the rain came the notice to quit, and up to this time the usual number are not engaged at the river, although I hear of several parties who are making arrangements for another campaign.

Near Windellama and Bungonio the Messrs. Armstrong, Perry, & Blackett are working ground for cobalt, which is likely to turn out a permanent source of profit to themselves and very much benefit the district. They have a large quantity of very rich ore to grass, and from the assays made in Sydney and London they are justified in considering they own one of the most valuable mining properties in the southern hemisphere.

Large deposits of kerosene shale have also been discovered near Nerriga within the last few months; and as the locality is but about 15 miles from the proposed Braidwood railway terminus, there is a probability that this may also attract the attention of some speculators, and so help to enliven mining matters in the district.

SOUTHERN DISTRICT—EUROBODALLA AND NERRIGUNDA DIVISIONS.

(*L. J. Clifford, Mining Registrar.*)

IN submitting my Report for the year ending 1884 for the Eurobodalla and Nerrigunda Division, for which I act as Mining Registrar, and as I have been but a short time in this district, I can scarcely be expected to have much knowledge of mining matters in this division.

There are very few European miners left, some are engaged fossicking, and others are scattered about prospecting. I have not heard of any fresh finds. The shareholders of the Bomba Reef have stopped operations, for what I do not know.

The Chinese appear to be doing fairly well, but it is hard to ascertain how much gold they are getting.

There were 41 miners' rights sold for the past year against 33 for the previous year, and 12 business licenses against 12 for the previous year.

Mining matters appear to be at a standstill in this division.

SOUTHERN DISTRICT—BOMBALA DIVISION.

(*A. R. Chopin, Mining Registrar.*)

I HAVE the honor to report for the last year there has been but little progress made in mining in this division. The severe drought of the past two years has tended to dry up the springs and creeks, rendering mining operations in most cases an impossibility. I regret to say that the Messrs. Eisenstaedter have failed to float a Company for the working of Nelbothery. I have experienced considerable difficulty in the issuing of miners' rights, as the Chinese will not, unless compelled, take their rights out.

The quantity of gold purchased by the local banks for the year amounts to 332 oz. 16 dwt. 6 gr., of the value of £1,278 7s. 11d., as against 370½ oz., of the value of £1,421 15s. 10d., for the year 1883.

There were only 16 business licenses, 12 miners' rights, and 3 mineral licenses issued during the past year, as against 8 business licenses and 16 miners' rights issued for 1883.

SOUTHERN

SOUTHERN DISTRICT—WAGONGA DIVISION.

(A. M. Smith, Mining Registrar.)

I HAVE the honor to submit my annual report on mining matters in this division for 1884.

Wagonga North Head.—A few claims have been taken up under the "Mining Act Further Amendment Act of 1884." The permits granted are likely to be converted into leases, when the claim-holders are satisfied with the returns from crushings. One battery of ten stampers has been placed on the ground towards the end of the year. The time being so short, a fair idea of the prospects of the reef could not be arrived at; all parties concerned are, however, sanguine, and should the yield come up to expectation it is not unlikely that additional plant will be erected and induce investment in the lands presently remaining unoccupied.

Mount Dromedary.—Here there are two batteries at work. Bailey & Miles, on the Star of the South line of reef, report a crushing of 97 tons, yielding 120 ounces of gold. Diggers who have been working in the creeks for years still remain, although their gains are small yet sure.

Corunna.—A few parties of diggers still keep at work in ground over 100 feet in depth, but none have reported any find worthy of note.

Montreal.—The same applies to this formerly rich field, which appears to have been pretty well worked out.

SOUTHERN DISTRICT—MORUYA DIVISION.

(H. N. Barton, Mining Registrar.)

I HAVE the honor to forward my report for 1884. Mining matters in my portion of the district have been very quiet during the year and no large amount of gold, as far as can be relied upon, has been obtained.

Two mineral leases of 40 acres each have been applied for, adjoining a lease at the silver-mine, applied for and obtained last year, and a tribute company was or is about to be formed to work the old shaft and surrounding ground. There is a new shaft lately sunk north of old mine 40 feet, and level 12 feet, a cut reef driven north 20 feet. A large quantity of stone has been shipped to England to be treated.

The old 18 horse-power engine still works a battery of 12 stamps, and has put through public stone 340 tons during the year, with results according to average $\frac{3}{4}$ oz. to the ton, obtained from small leaders in the neighbourhood.

At Mogo there has been some old abandoned ground taken up, situated at Monkey Gully, Cabbage-tree Creek, which bids fair (as far as the prospects obtained) to turn out well, and if so machinery will be erected at once.

I have issued between forty and fifty miners' rights during the year. There is a great deal of gold won that is kept secret and cannot be accounted for. At the silver-mine about 260 oz. have been got, and at Mogo about 350 oz.

SOUTHERN DISTRICT—GUNNING DIVISION.

(J. F. Kenyon, Mining Registrar.)

I REGRET to state that I have no improvement to report with regard to mining matters in this division during the year 1884, operations being confined to a few fossickers on the Fish River (or Lachlan) some 15 miles from here. I can gain no reliable information as to quantity of gold obtained, but am of opinion that it was very limited indeed.

There is no machinery of any kind, either at work or idle, in this division at present.

Only five miners' rights were sold by me during the year 1884, and no business licenses or leases of any kind.

SOUTHERN DISTRICT—BURROWA DIVISION.

(W. J. Wotton, Mining Registrar.)

THERE is nothing of any moment to report upon the mining operations in this division. The only mine at work is the Frogmore Copper-mine, but from the low price of copper ruling of late, and other unforeseen circumstances it is thought that works will have to be suspended without a change comes; it will be unfortunate for the shareholders and the district generally, as there is no doubt as to the quantity and quality of the ore; and as there is every conceivable improvement on the ground for the profitable working of copper, besides the mine giving employment to a large number of people, it will be a loss in many ways should they have to stop working.

TUMUT AND ADELONG DISTRICT—TUMUT DIVISION.

(Mr. Warden Vyner, P.M., Tumut.)

In furnishing my Annual Report of the state of mining in that portion of the Tumut and Adelong Mining District under my charge, I regret to have to state that this industry is becoming each succeeding year less prosperous.

Adelong, which is the principal mining centre of my district, shows a great falling off in the production of gold during the past year, as indicated by the quantity forwarded by the monthly escort, and were it not that one or two alluvial claims continue to hold their own, Adelong Gold-field would soon be a thing of the past, and I see no chance at present of any, even a partial, revival of its former prosperity.

The other portions of my District, including Tarcutta, Hillas' Creek, Mount Adrah, Upper and Middle Adelong, Thorp's Creek, Reedy Flat, Adjenbilly, Gobarragandra and Sandy Creek, have only an isolated party here and there working on them, and those are barely making wages.

No mining for metals, other than gold is being prosecuted in the District at present.

The population specially engaged in mining is gradually decreasing, some going to other Fields, and others who may remain in the neighbourhood following more certainly profitable pursuits.

The several Mining Registrars in my Division, have, I presume, already furnished you with the usual statistical information.

TUMUT AND ADELONG DISTRICT—GUNDAGAI DIVISION.

(Mr. Warden W. Love, P.M., Gundagai.)

THE Annual Report of this division for 1884, which I have the honor to forward, is by no means encouraging.

Very little has been done here in gold-mining during the past year, and owing to the demand for labour on the railway line from Cootamundra to Gundagai, many of those formerly employed in gold-mining pursuits have left for more certain remuneration on the railway works.

There are still a few who hold on to reefing. Frearson and party, of Coolac, lately crushed a parcel of stone taken from their 100 feet level, which averaged 1 oz. 1 dwt. to the ton. At

At Mount Adrah Cole and party have raised and lately crushed 87 tons of quartz for a yield of 320 oz. And Harford Brothers, of the Kimo Reefs, have finished crushing a parcel of 6 tons of stone, which yielded 17 oz. of smelted gold. The rock is, however, so hard to work, that even this result is not remunerative. Harford's party has become discouraged, and are now offering their crushing plant for sale.

Prospecting for alluvial gold at considerable expense has been carried on in many quarters, but results disappointing.

In asbestos but little has been done.

The Australian Slate Quarry, about 2 miles from Gundagai, is in full work. As soon as the railway line to Gundagai is completed there will be large consignments of excellent slates to Sydney for roofing and flagging purposes.

A marble quarry is also being partially worked. At present large quantities of it are being burned for lime.

TUMUT AND ADELONG DISTRICT—ALBURY DIVISION.

(*Mr. Warden Keightley, P.M., Albury.*)

I HAVE the honor to forward my Annual Report.

Mining in the Albury Division of the Tumut and Adelong Mining District has not been prosecuted with any great vigour during 1884, owing mainly to new fields having been opened up in other parts. Still there are some very good claims at the Black Range and Portuguese Gully, which only require capital to develop, the best of which are Goldworthy Bros., on May Day Hill; Lawson and party, Old Ethiopian ground; A. T. Johnson and party, Portuguese Gully; and E. C. Pye and party, May Day Hill.

Since last year the alluvial ground on Black Range Flat, above the public school and near the old whim shaft, has been taken up by A. H. McEachern and party and formed into a Company.

This Company has expended about £1,000 in sinking shafts, erecting machinery, &c., and have just got fairly started and are very confident of success. From the richness of this ground in former years, and the appliances of the present holders of the ground the general belief is that the Border Town Gold-mining Company will prove a successful venture. Should this Company succeed, the whole of the alluvial ground on the Black Range will receive a good trial as there seems to be no two opinions as to the gold being there.

TUMUT AND ADELONG DISTRICT—QUEANBEYAN DIVISION.

(*Mr. Warden J. C. Woore, Queanbeyan.*)

I HAVE the honor to submit, for the information of the Honorable the Minister for Mines, my report for the year 1884 upon the Queanbeyan Division of the Tumut and Adelong Mining District.

At Captain's Flat, on Blatchford's 3-acre lease, and Harkness' prospecting claim, adjoining his 5-acre lease on the north, a large amount of work has been done, principally of a preparatory character.

The main tunnel in the hill, going southerly, has been extended about 120 feet, and is now about 420 feet long. Another tunnel, higher up the hill, has been driven about 300 feet, and a third, still higher up, about 200 feet.

These tunnels have been connected with each other by shafts; the main, or lower tunnel, as I stated in my last annual report, is connected with the battery by about a hundred yards of tramway.

The greater portion of this work was done while waiting for water, for the want of which the battery was idle during the first six and a half months of the year, and has again been idle from the same cause during the last six weeks of the year; but during the intermediate period, namely, from about the middle of July to the middle of November, 2,386 tons of stone were crushed, yielding about 360 oz. of gold, although by assay the yield is said to be from 10 to 15 dwts. per ton.

At first the yield was about 7 dwts. per ton, by the ordinary process, but on advancing into the hill the stone was found to contain a large quantity of iron, which, with other matter, acted unfavourably on the mercury, and was difficult to treat by the ordinary process, and arrangements are now being made for other machinery with the hope of obtaining a better yield from the stone.

No work has been done on Harkness' 5-acre lease through which the main tunnel passes, and work has been discontinued on Blatchford's 2-acre lease, the auriferous stone having been exhausted.

On Montgomery and party's 7-acre lease work has been continued; about 800 tons of stone from it have been crushed by Holterman's battery, yielding about 6 dwt. per ton, and the reef has widened out to about 30 feet; ore assaying 140 ounces of silver per ton and 59 per cent. of lead has been found on the hanging wall of the reef.

The character of the line of reef on these holdings is auriferous iron gossan overlying a large copper lode of low percentage.

On McGrath and party's copper leases work has lately been commenced; a shaft has been sunk about 30 feet on the lode, showing ore said to contain up to 50 per cent. of copper.

At Brindabella want of water has retarded operations on Reid's ground-slicing claim; work could not be carried on excepting occasionally after rain, but endeavours are being made to extend the race and increase the supply of water; the alluvial drift washed at intervals during the year yielded about 15 oz. of gold.

Mac's reef has not been worked, and I believe is abandoned.

At Brooks' Creek there is nothing doing worth reporting; I believe two or three fossickers have been at work there on the old ground.

A party of prospectors lately discovered gold on private property near Molonglo, but not in sufficient quantity to pay for working; the ground is very wet, and they were unable to give it a fair trial for want of proper pumping appliances.

TUMUT AND ADELONG DISTRICT—TUMBARUMBA AND GERMANTON DIVISIONS.

(*Mr. Warden J. F. Makinson, P.M., Tumbarumba.*)

I HAVE the honor to report as below of my Division for the year 1884.

Upper Tumbarumba, Bago, and Lower Tumbarumba Creek.

The number of miners employed in these localities has been about the same as for the last few years. Ground sluicing is the only method of gold-getting employed, the ground being cut down by hydraulic pipes in only two instances. The claims and leases are generally worked by parties of two, three, and four, no large parties working anywhere. Three or four new claims and leases have been taken up during the year, and about as many abandoned.

The

The Burra Creek.

The only important works at this place are those of the Burra Gold-slucing Company, which has steadily worked throughout the year with rather more encouraging results than heretofore. A few other claims up the same creek have been worked, and have about paid wages.

Meragle.

On this part of the field nine or ten claims are being worked by ground sluicing by small parties. Some have earned from £4 to £5 per week per man, and others have barely got wages. It is a hilly country, the ground sluiced being from 3 to 20 feet in depth, with a few inches to the foot of wash at bottom on the soft granite beds.

Bald Hill.

This locality is new to mining enterprise; but the Basaltic Gold-mining Company has for some time past been vigorously at work putting in a tunnel at the east side of the hill to drain and work the drift which has been found between the basaltic cap of the range and the granite below. The Company has tested this drift by shafts at various places, and by bores made by steel drills, with encouraging results. The wash is 2 feet thick on the first shaft, and is evidently an old river-bed, there being rounded waterworn pebbles and boulders of quartz, slaty sandstone, and basaltic rock. There is a little mundic to be seen in the quartz boulders, and a few small rubies, diamonds, sapphires, and emeralds are found in the wash. The tunnel is about 380 feet into the hill, and 120 feet more has to be driven before the ground can be practically tested, or any return made for the labour expended. This Company's mine, if successful, will throw open a belt of country about 20 miles long for profitable mining. The south end is the Bald Hill, and the north is towards the head of Paddy's River.

Ournie and Jingellic.

The quartz-reefs which were being worked for gold at Ournie, and the lodes at Jingellic which were worked for gold and tin, have all been abandoned as far as working is concerned, with one exception. This is the Isabella Reef at Ournie, at which place shafts are down two places to 145 feet on a lode 2 feet 6 inches thick in the granite. There is a little galena in the stuff crushed, which stuff yields bullion worth from 30s. to 45s. per oz. This mine has been in work intermittently for eight or ten years; but it is only during the last two years that it has regularly paid working expenses. There is a battery at work on the Company's ground.

Yarrara.

At this place, once a rather busy locality, nearly all work has been left off at the various reefs which were opened. There is a large battery idle at the Perseverance. At the Rangatira Reef six or eight men are at work, and about 100 tons of stone is at grass. There is no crushing plant on the ground yet; but a test crushing was made for the Company at Adelong, and the yield was said to be 3 oz. to the ton. The reef is from 6 inches to 2 feet 6 inches thick, and is almost perpendicular in granite. A few stray diggers are at work about the Four-mile at the alluvial; but they have not had much success.

Carabost.

A couple of new claims have been tried here during the year, one of which was said to have been very good; but the prospector's hopes were not realized. This is a slate country principally. Most of the other places in this division at which gold is being got there are only basalt and granite rocks.

Paddy's River.

A little sluicing has been going on during the year, but it has not paid very well.

Upon the whole matters have been very quiet in this division during the year, nothing exciting having occurred. The diggers sluicing on the creeks are nearly all old residents, and they seem to be tolerably well satisfied. A good many of them are selectors. A very few miners have left for Silverton.

The yield for the year has been, as well as can be ascertained, about 3,520 oz. 16 dwt. 4 gr. gold and 2 tons tin. Most of the gold raised here is worth £3 15s. to £3 18s. per oz.

TUMUT AND ADELONG DISTRICT—ADELONG DIVISION.

(John James, Mining Registrar.)

THREE hundred and eighty-three miners' rights and eight business licenses were issued in 1884. For the half-year ended 30th June 350 miners' rights were issued, the largest number recorded. Under the Mining Board Regulations 42 conditional registrations and 34 registrations in unsurveyed tenement register were made. The reported discovery of payable alluvial gold in the Nacka Nacka Creek, the discovery of several gold-bearing quartz-veins contiguous, and the discovery of an alleged new vein on Donkey Hill, were effective in producing an exceptional stir. The Nacka Creek proved deceptive. It was found to have been previously worked, and a few isolated patches of sound ground gave employment to some. The quartz-veins were tested and 9 tons 8 cwt. yielded 5 oz. Three successive trial crushings from the prospector's, Donkey Hill, proved unremunerative. Several prospecting efforts in and around Adelong shared a similar fate.

The year closes without having the pleasure of noting any fresh sources of supply.

The escort returns for this division are as follow:—

	oz.	dwt.	gr.
Bank of New South Wales	4,983	5	21
Commercial Bank	5,741	18	19
Total for the year	10,725	4	16

The crushing returns are as follow:—

Perseverance Gold-mining Co.'s battery.....	4,519	0	0	tons	cwt.	qr.
Yield	3,542	19	11	oz.	dwt.	gr.
Reefer battery	1,780	9	0	tons	cwt.	qr.
Yielded	2,210	10	0	oz.	dwt.	gr.
Totals.....	6,308	0	0	Tons	cwt.	qr.
Yield.....	5,762	9	11	oz.	dwt.	gr.

At the former battery the yields have ranged from about 3 ounces to a few pennyweights per ton. The crushings include parcels from Mount Adrah, Sharp's Creek, and the Gap; but the bulk was obtained from the Victoria Hill by the Great Victoria Gold-mining Company, who have been working from the 1,060 feet level upwards. The average yield is given as 15·68 dwt. per ton.

At the latter battery the Adelong reef crushings are shown as 1,536 tons, yielding 1,577 oz. 11 dwt. The bulk of this quantity was obtained from the Challenger Company's mine, "Old Hill." Nine other parcels totting 253 tons are from outlying places. Of this quantity Mount Adrah contributed 156 tons 12 cwt. which gave the handsome yield of 499 oz. 13 dwt. 12 gr.

Exclusive of such parcels it will be seen that the batteries have jointly treated about 6,000 tons, a quantity to be credited to the Adelong mines.

Noting the total returns as furnished by the banks and the batteries the difference, viz., 4,962 oz. 15 dwt. 5 gr., must be credited to alluvial, the bulk being obtained from the Adelong Creek workings at Shepards-town and Grahamstown.

The Great Victoria Company's mine has been in full swing of work, and the levels from 1,035 feet have been considerably extended. The Company employs about sixty hands. The mine possesses a winding with compression and air-winding engine. The plant is valued at about £2,500. I had occasion to allude to this mine, still under the able management of Mr. John McLennan, in previous reports. The quantity of quartz raised and the quantity of gold won can be named only approximately. For accuracy reference must be had to the half-yearly reports of the Directory.

The Challenger Company's mine employs about twenty hands. It has two winding engines 16 and 10-h.p. respectively. The plant is valued at about £2,375. The greatest depth is 600 feet, and the deepest level north 254 feet and 134 feet south boundary.

A crosscut in the eastern wall 24 feet in at the 390-foot level north disclosed a reef which is now being vigorously worked. The vein varies from 1 foot to 1 foot 6 inches, and the yield of the stone from 1 oz. to 1½ oz. per ton. Another shoot of stone same size and quality in the same channel going south is also being worked; but the "country" is granite, and consequently hard. The total quantity of stone raised and crushed was 685 tons, which yielded 840 oz. of gold, valued at £3 17s. per oz.

Forty-four tons from deepest north level yielded 1 oz. per ton. The mine is efficiently and economically worked under the management of Mr. Wm. Ellis.

With reference to mining tenements (other than those already alluded to), favourably mentioned in the past, there is nothing exceptional with them worthy of record. Two have collapsed from diametrically opposite causes. The tenement known as that of Perkins Bros., Gibraltar Hill, was abandoned after it had served the party for several years with handsome dividends, from the want of machinery and appliances, which means capital. The other, known as the Williams' Amalgamated Gold-mining Company, possessing all the advantages which hauling machinery, appliances, and capital to prosecute research could confer, after a couple of years of unabated perseverance, boring, sinking, and driving, is now stopped, and placed in the market.

The main shaft approaches 1,000 feet in a pronounced blank. However, it will now await some future proof by means of sinking, whether there is a continuous blank or not.

Alluvial.

The tenement of Mr. A. D. Shepard, under the able management of Mr. W. Ryan, in spite of drawbacks occasioned by removals to upper ground, has held its own, incurring no liabilities. The advantage to accrue by the shifting is said to be one of the best and most lasting to complete a large area to be operated upon. Late trials from opening drives have given exceptional prospects, and when blocking will be resorted to the yield anticipated will be doubled. There are five shafts, two water-wheels, and a winding engine on the upper ground, and one water-wheel on the old ground. Fifty men are employed underground and sixteen on top. A team of eight horses (the property of the mine) is constantly employed bringing props and firewood from Nacka Creek. Upwards of 60,000 laths, at £1 per 100, are used annually. The wages range from £2 15s. to £2 5s. In full work a truck containing a quarter of a yard of wash is landed and sluiced off every 2 minutes.

The tenement of Mr. Travers Jones, below that of Mr. A. D. Shepard's, is also well up in its appointments. Steam-power of twenty and twelve horse respectively, and an 8-inch Tangye special steam-pump, do duty. The plant is valued at about £3,000. In full work, forty-five hands are employed, and the management is under the personal supervision of Mr. Jones. Some drawbacks have been experienced, but on the whole, later on satisfactory results of yield have been obtained. As this tenement progresses and further tracings of existing leads discovered, a very large area of the Adelong Creek will need resumption.

The rainfall in 1884 was insufficient to carry on sluicing with advantage. A comparison of the returns of 1883 and 1884 shows that there is a falling off this year. The deficiency must be attributed to this cause, as a considerable quantity of gold is obtained from tenements up the Adelong Creek and Sharp's Creek.

Writing at the close of January this report cannot close without imparting a knowledge acquired though late, yet nevertheless striking, which indicates the quartz-mining prospects of 1885 as waning. However there is ample room, opportunities, and time, to effect a change for the better.

TUMUT AND ADELONG DISTRICT—KIANDRA DIVISION.

(*W. D. Bailey, Mining Registrar.*)

I HAVE the honor to forward my Report for Kiandra Division. Mining matters are very dull at present. The number of miners rights issued is 136, as compared with 223 for 1883. The amount of gold won cannot be accurately ascertained, as quantities of it go away without passing through the hands of local buyers. The amount known to have been raised is 1,958 oz.

At the Kiandra G. M. Co. hydraulic sluicing was carried on for 2,997 hours, removing 169,651 tons dirt, raising 933 oz. gold. A tunnel has been driven and tail-race boxes laid for 300 feet.

At the Eight-mile Claim hydraulic sluicing was resumed on the 10th of May and suspended on the 10th of December. A 4½-inch nozzle was used; 249,278 tons of dirt were removed. The tail-race and tunnel have been extended about 300 feet and a drop-shaft 55 feet deep sunk.

At the Fifteen-mile Claim work has been carried on with but medium returns.

At

At the Empress or Nine-mile Claim the hydraulic sluicing plant has been placed in position and a little sluicing done. Operations at present suspended owing to want of water.

At the South Bloomfield or Four-mile Claim the hydraulic plant has been placed in position and a little sluicing done. Owing to want of water operations had to be suspended.

Some of the old claims around here are worked when water is available.

Mr. S. Grant has opened a vein of quartz at the back of the town, in Pollock's Gully. A dray load sent to a battery at Adelong yielded at the rate of $4\frac{1}{2}$ oz. to the ton. A battery is required to work this with profit.

Several prospecting parties have been out, but no new ground taken up.

TUMUT AND ADELONG DISTRICT—YARRARA DIVISION.

(*J. K. Armstrong, Mining Registrar.*)

THE Rangatira Gold-mining Co. obtained permission to suspend work on the 18th of last November, for six months, with the view of procuring more powerful pumping machinery, as well as a crushing plant, to be erected on the claim. A fresh start had been made in April last, and after 50 feet deeper from the then 80 feet level had been sunk, the reef was driven to and proved at the point reached, about 3 feet thick, showing gold freely. Some time afterwards 8 tons of quartz taken out of a face from this reef were sent to Adelong to be crushed and gave the handsome yield of $2\frac{1}{2}$ oz. to the ton. From then to time of suspension fully a hundred tons of quartz have been raised, which, judging from appearance, should quite equal in richness that already crushed. The reef varies a good deal in width, running from about 3 feet down to 6 inches, but showing throughout what is considered payable gold. The gold is very fine, and requires the best possible appliances for saving it. The old Perseverance battery, which the Company originally purchased, and had an unsuccessful crushing at, is not now considered good enough, and, moreover, the water has failed owing to the drought. At present the Company have men employed pumping the water and taking care of the claim.

Notice of application has just been made for a gold-mining lease of 8 acres on Four-mile Creek, taking in one of the old workings.

Very little has been done here during the past year in alluvial mining. Prospectors have found some promising prospects in places; but deficiency of water prevents work. The few remaining European and Chinese miners at work, scattered here and there, do not make much.

The fate of the field now depends in a great measure on the Rangatira Company's success, and there appears no reason to anticipate unfavourable results.

The Jingellac Tin-mines have, I am informed, ceased working, without much prospect of starting again.

TUMUT AND ADELONG DISTRICT—ALBURY DIVISION.

(*C. A. Conley, Mining Registrar.*)

I HAVE the honor to report as follows:—During the past year a considerable amount of work has been done at Black Range and Portuguese Gully, but principally in old workings. The crushings have yielded fair returns generally, while in one case 55 oz. for 4 tons speaks very well.

Goldsworthy Bros., Mayday Hill, crushed 41 tons for 67 oz.; depth, 80 feet.

E. C. Pye & Party, Mayday Hill, 39 tons for 32 oz. 9 dwts.; depth, 80 feet.

Osborne Bros., Mayday Hill, 24 tons for 15 oz.; depth, 60 feet.

Weeland's Party, One-tree Hill, 10 tons for 21 oz.; depth, 30 feet.

T. M'Phail, One-tree Hill, 26 tons for 6 oz. 10 dwts.; depth, 20 feet.

Devenc & Party, Clina Claim, 64 tons for 24 oz.; depth, 60 feet.

The above were crushed by the Messrs. Goldsworthy at Black Range.

55 tons from A. T. Johnson & Party's claim at Portuguese Gully, crushed by Mr. Louis Bauer, yielded 50 oz. 10 dwts. for 40 tons.

Messrs. A. T. Johnson & Son, of Portuguese Gully, report that they have lately obtained 55 oz. from 4 tons. This is the best crushing that has been obtained in the neighbourhood, and will no doubt be the means of Portuguese Gully receiving a thorough prospecting.

Mr. Polkinghorne, of Hawkview, 9 miles from Albury (private property), informs me that he has opened out a splendid show, but owing to not having finished crushing, cannot give result. From a crushing last year he obtained 86 oz. from 16 tons.

During this year the alluvial ground at Black Range has received some attention. The Border Town Alluvial Gold-mining Company have taken up a large portion of the flat and expended upwards of £1,000 in machinery, &c., with which to drain and work their ground. They are hard at work, and the general opinion is that Company will pay handsomely. The difficulty hitherto experienced by alluvial miners has been in keeping down the water, but this Company have the most approved machinery for that purpose.

TUMUT AND ADELONG DISTRICT—TUMUT DIVISION.

(*Frederick Burne, Mining Registrar.*)

IN transmitting my returns for the year ending 31st December, 1884, I have the honor to state that in consequence of the scarcity of water there has been very little work done in my Division, the quantity of gold shown in my return being principally from Kiandra on deposit.

TUMUT AND ADELONG DISTRICT—QUEANBEYAN DIVISION.

(*O. Willans, Mining Registrar.*)

I HAD very little to report for 1883 as to the mines in this division working under the Mining Board Regulations, and am sorry to have to state that the year past (1884) is even worse from the want of water to carry on work at all. At Brindabella I believe Mr. Reid has not as yet succeeded in forming a Company to work the mine efficiently. Mr. Reid states that owing to the limited supply of water he has had during the past year he could only get through about 2,000 loads of auriferous drift (varying in depth from 10 to 35 feet), from which he obtained upwards of 15 ozs. of retorted gold. He further states it is only occasionally

occasionally after rain that he is able to work at all. Brindabella is the only place in this division where claims are registered under the Mining Board Regulations. The mines at Captain's Flat, Molonglo, are all under lease as gold-mining and mineral leases. I do not know anything about them as Mining Registrar, and they will be reported upon by the Warden I expect.

TUMUT AND ADELONG DISTRICT—GUNDAGAI DIVISION.

(C. W. Weekes, Mining Registrar.)

HEREWITH I have the honor to submit my Report for the year 1884:—

There is little improvement to note in mining matters in this portion of the district. Prospecting has been carried on to a moderate extent, but no result of any importance has rewarded the miner.

A new Company (the Bongongolong Gold-mining Company) is at present engaged in opening up a 10-acre lease on the Kimo Ranges, about 12 miles north-west of Gundagai. A dyke of gold-bearing material runs through the lease—averaging 10 to 20 feet in width—carrying gold as they go down. The shaft is at present between 60 and 70 feet deep. The prospects are said to show good promise at that depth. The Company intends to prove the lode to a depth of 100 feet before erecting machinery. A valuable dam and machine site has been secured, and as the manager states that about 6s. per ton will raise and deliver the quartz at the battery, this should prove a valuable property in the future.

A somewhat similar class of property is also being put in working order on a 3-acre lease at Tarrabandra, about 6 miles south-east from Gundagai, called the Victoria (with this lease is amalgamated a 40-acre selection adjoining). The proprietors have made arrangements for the expenditure of £5,000 on this mine. A large plant of machinery has been purchased in Victoria, and is now in course of transit. The fortunate owners of this property are very sanguine as to the result of their enterprise.

Australian Slate Company.—Work is still being carried on with energy. Cutting and dressing machinery has been recently erected, and the Company is now in a position to supply the market.

Another Company has recently started operations on a slate lease of William Matchett's at South Gundagai. Machinery has been purchased, and is daily expected on the ground. The proprietors think very highly of their venture, and are prepared to expend some £3,000 in opening it up.

The Floreston Gold-mining Company, Jones' Creek (gold and asbestos).—Prospecting is still going on. Some 4 tons of the gold-bearing material have been sent to Melbourne for special treatment. The result is not yet known.

A large dyke of gold-bearing ironstone is being extensively worked at Eurongilly, but cannot be profitably mined unless machinery be erected on the ground.

Miners' rights issued for 1884	117
Mineral licenses	4
Business licenses	nil

There have been thirteen applications for gold leases (all quartz) during the past year, aggregating 76 acres, and three applications for mineral leases covering 200 acres. The leases not having yet been issued there is very little work being done on these properties.

There has been a little prospecting for alluvial gold during the year in various quarters, I am sorry to report, without payable result.

TUMUT AND ADELONG DISTRICT—MUTTAMA DIVISION.

(A. Armstrong, Mining Registrar.)

I HAVE the honor to report a great falling off in both quartz and alluvial mining in this division for the year 1884.

In quartz-mining all the reefs are now idle, those from which there have been crushings not proving payable, the yield from which I could not ascertain. In alluvial mining there are only twelve men at work at present, but in the first half of the year there were twenty-five or thirty men employed. The men now at work are only making a living. The quantity of alluvial gold won (as near as I could ascertain) was 250 ozs., valued at £968 15s.

TUMUT AND ADELONG DISTRICT—NIMITYBELLE DIVISION.

(G. W. Myers, Mining Registrar.)

I HAVE the honor to report, for the information of the Minister for Mines, that I am unable to furnish a more encouraging report upon gold-mining in this district than was contained in my report of the preceding year. There has scarcely been anything done at Kydra gold-fields for the past year. A fresh quartz-reef has been discovered a few miles from Nimitybelle, and some alluvial digging with good payable results is anticipated in that vicinity.

TUMUT AND ADELONG DISTRICT—GUNDAROO DIVISION.

(A. Agassiz, Mining Registrar.)

I HAVE the honor to report that mining in my division is virtually a thing of the past. No regular work is being proceeded with. Only five miners' rights have been issued during the year. The field has been thrown open for selection, but few have availed themselves of the opportunity to secure portions, as the land is of a barren nature. The Lake George "water supply scheme," alluded to in my last report, has been apparently abandoned.

TUMUT AND ADELONG DISTRICT—TUMBARUMBA DIVISION.

(H. M. Langford, Mining Registrar.)

IN compliance with your request, I have the honor to furnish you with summary and general report of the state and progress of the mines in the Tumbarumba Division of the Tumut and Adelong Mining District for the year 1884. My report has been unavoidably held over awaiting the receipt of forms distributed with the view of collecting statistics from those interested in mining matters; eight herewith only yet to hand. These, however, are from the principal holdings in my division, and will show the result of work.

The

The New Comstock Gold and Silver Mining Company, Ournie.—This claim is and has been paying its way for these past eighteen months. The prospects of these mines have greatly improved since last year, and should an improvement take place during the present year equal to that of the past the company will doubtless be rewarded with satisfactory dividends. None of the other claims at Ournie are being worked. The nearest to the New Comstock are the Jingelle Tin-mines, work on which has been suspended for some time past.

Navada Reef, Paddy's River.—Work on this line of reef is still suspended, nor is it likely to be resumed.

Pilot Reef Company's Leases, New Meragle, Nos. 2 and 3 on the Line, comprising 13 acres.—Work on these leases has also been suspended for some time past, owing to heavy expenses, loss, and inadequate machinery to carry on the work.

The Basaltic Company's Claim, Bald Hill, Tooma.—This company has been at considerable expense during these past three years, but from the prospects obtained there is every reason to hope that this extensive undertaking will be a success. They are in at present 470 feet through granite, and will require a distance of about 1,100 feet before the deep course or ancient river-bed can be penetrated. Ere this, the incline or dip into ancient river-bed will be gold-producing.

The United Trades Company's Claim, Tumbarumba Creek.—This company commenced their preliminary operations about three years ago, and up to this time have removed some thousands of tons of stone and earth in the construction of a tail and flood ditch. This is a sluicing claim, the object being to work the old bed and abandoned workings on Tumbarumba Creek. For this purpose the company have brought up a tail-race for 1,800 yards, 1,000 yards of which is close-boxed with 1½-inch x 12-inch sawn timber. The box is 3 feet high and 3 feet wide. The ditch is capable of working all the Tumbarumba Creek and tributaries. This Company holds by miners' rights and lease about 1 mile of the Tumbarumba Creek. They are now up to the face of the old working, and ready to start running off at once. In bringing up the tail-race the Company had to cut through a very hard basaltic bar for a distance of 600 feet in length and by 12 feet in depth, and through granite for 300 feet by 12 feet in depth—a costly operation, consuming much time and labour.

In tabulated form will be found the yield of gold, &c.

Issue of Miners' Rights, &c., 1884 :—	
Miners' rights	165
Business licenses	6
Mineral „	nil.

PEARL AND URALLA DISTRICT.

(*Mr. Warden Martin, P.M., Glen Innes.*)

COMPARED with the previous twelve months the past year has not been as prosperous for the tin-mining community in my vicinity as had been anticipated from the promise of its opening. Prospecting in the deep ground in new country, from which so much was expected, has not as yet returned anything for the costly outlay incurred by various parties in the search for supposed leads. Old leads have been gradually lessening in production, and the shallow ground operated on has scarcely been rich enough to pay daily wages to the workers.

Mining in the lode has been more systematically carried on, and the plant now possessed by the Great Britain, Torrington, and Tent Hill Smelting Companies leaves little or nothing to be desired in the way of appliances for saving and crushing the ore.

The plant of the Tent Hill Company is most complete. No expense seems to have been spared by the spirited proprietors in perfecting it, and although the stone operated on from the Lottery lode has not hitherto given a return of ore sufficient to cover working expenses, there are indications in the deeper shafts to warrant the expectation of more profitable results in the near future. It is on this phase of mining that the district must eventually rely for the permanence of its tin-mining industry, and it is therefore interesting to note the steps taken in its development.

The ore won during the twelve months—as nearly as can be ascertained—was as follows :—

	tons.	cwt.	qr.	lb.
Vegetable Creek—Deep Leads	818	11	3	6
Shallow workings	1,109	18	3	26
Lodes	312	13	0	10
Glen Innes—Shallow workings	142	0	0	0
Total	2,383	3	3	1

which, at £41 per ton (the average price at the Smelting Works), gives a value of £97,744.

The total shows a falling off of 643 tons when compared with the production of 1883, to which result no doubt the very low prices ruling have contributed.

The Manager of the Tent Hill Smelting Works reports a total of 1,540 tons tin ore received at that establishment for reduction during the year, and that both ore and ingots have been wholly forwarded by the Great Northern Railway to Newcastle since the opening of the extension of that line to Glen Innes.

An average number of about 700 Chinese and 340 European miners have been employed during the year, at wages ranging from £1 10s. for the former to £2 8s. for the latter.

Silver.

The discovery of a silver-bearing lode at Little Plant Creek, near Emmaville, about the middle of the year, caused considerable excitement amongst the miners, and portion after portion of land was applied for on the supposed course of the lead, north and south of the Prospectors' Claim, for a distance each way of about 6 miles. For three-quarters of a mile the lode is well defined, rising in some places to a height of 12 feet over the bed of the creek, to which it runs parallel for some distance. The country is well wooded, and water can be conserved in any quantity by damming the creek or the gullies falling into it. Assays of the ore show a base of lead, antimony, or copper in varying proportions, and a per-centage of silver ranging from 200 to 800 oz. to the ton. Traces of gold were found, but in too minute quantities to be of appreciable value. Operations to test the lode were commenced on the prospectors' ground late in December, but the shaft had only been sunk a few feet at the close of the year.

North

North of Emnaville, 21 miles distant, in the valley of the Mole, another lode yielding as much as 1,300 oz. to the ton has been discovered, but the silver-bearing veins are small and irregular, and as yet not of sufficient promise to induce investment of capital.

Silver is very generally diffused in the ranges east of Glen Innes, but analysis of many samples of ore submitted have hitherto shown a per-centage of metal insufficient to cover the cost of extraction.

Bismuth.

Although a staff of men have been employed at the Kingsgate Mine during the year, I am unable to report the result of their operations, as the management decline to furnish the necessary information.

At the Glen Innes Mine the work carried on has been more of a prospecting nature, and but little ore has been raised for the market.

Gold.

At Glen Elgin and Oban sixteen miners have won 176 oz. from the alluvial—value £733.

The gold at Oban is usually found underlying a loose, sandy drift, worn from the surrounding mountains of granitic formation. At Glen Elgin the fine, overlying, reddish, sandy deposit is of much greater thickness, and is consolidated into the texture and appearance of very soft sandstone. At both places ground sluicing is the only method in use by the miners to win the gold.

The rainfall for the past three years has been insufficient to fill the swampy reservoirs and spring heads, on which the local success of this method of mining depends, and in consequence the yield of gold has been steadily falling off.

PEEL AND URALLA DISTRICT—BINGERA DIVISION.

(*Mr. Warden Brougham, P.M., Bingera.*)

I HAVE the honor to forward my Annual Report for 1884 for the Bingera portion of the Peel and Uralla Mining District.

Copper.—Prince of Wales Mine: I was in hopes of being able to report that this mine was in full work, but up to the present date no work has been done by the English Company.

Diamonds.—The diamondiferous ground at Docter's Creek has been worked by the Australian Diamond Company, and 1,193 stones gained, weighing 254 carats, which have been pronounced by experts at home to be worth 22s. a carat, thus proving that they are of a superior water to the Cape diamonds, which only realize 14s. or 15s. per carat. As the present Company find the well and dam will not give them an adequate supply of water, thereby preventing them from working the ground properly, they have decided upon laying down a line of rail from the mine to the river; also removing their machine. When this is completed there will be a large return of stones, and the other holders of ground will be able to get their wash-dirt passed through. Had the Company kept their machinery on the river, I would have been in a position to report a larger number of diamonds than I have.

Gold.

Bingera.—Several parties sunk shafts on Cemetery Gully and the flat, but failed to find payable gold.

Bobby Whitlow.—There are some twenty or thirty men working here. The Mountain Maid and another reef are showing good stone, and look as if the holders will do well when they have a crushing.

Upper Bingera.—There has not been the usual amount of work done here in 1884, nor has the yield of gold been equal to that of 1883. The diamond drill has commenced work, and will ere long prove the existence or non-existence of a valuable reef, which I still think exists at 100 or 170 feet.

Barraba—Crow Mountain.—Fletcher and party are on good gold, and stand a chance of making a good return for 1885.

Tea-tree Creek.—There is very little work doing here, and those working are barely making wages.

Ironbark.—The ground taken up by the New England Gold-mining Company has been worked under the able management of Mr. Pender, but the yield has not come up to his expectations. They are now putting in a new tunnel, and expect to strike better stone.

The following is an account of the gold sent from Bingera and Barraba. The information is obtained from books, but large quantities of gold leave for Sydney of which no account is given to the Warden:—

	1883. oz.	1884. oz.	Decrease. oz.
Bingera.....	4,584	2,964	1,420
Barraba	320	293	27

Showing a total yield for Bingera and Barraba of 3,257 oz. for 1884.

PEEL AND URALLA DISTRICT—TAMWORTH DIVISION.

(*Mr. Warden Irving, P.M., Tamworth.*)

IN submitting my Annual Report as to the state of mining matters in the portion of the Peel River and Uralla Mining Division, of which I am in charge, I have the honor to state that such portion of said division does not include any recognised gold-field. Although I have issued 26 miners' rights during 1884, chiefly to persons intending to mine on the alluvial ground on Swamp Oak Creek and Mulla Creek, above Moonbi.

I have not heard of any gold having been won during 1884 worth speaking of.

The searching for gold on those creeks has been carried on in the most desultory fashion. Men take out rights, work a little, and then abandon the claim, and are followed by others, who pursue the same course. These holders of miners' rights have other ways of earning their living, and only mine occasionally. No quartz-reefs have yet been struck which could be termed payable in this locality, though such it is to be hoped may yet be found in the neighbourhood of the Swamp Oak and Mulla Creek, where gold in fine scales has been from time to time found.

I have issued 14 mineral licenses during 1884, but I have no knowledge where the holders have used the privileges conferred in such licenses.

Mining for tin, and I believe manganese, is being prosecuted in the parish of Hall, in the extreme north part of the Tamworth Land District, that is to say, some leases for such mining have been granted. I have no knowledge of the locality, and am also ignorant as to whether such mining has been remunerative or otherwise.

I find all the gold received by Tamworth banks from neighbourhood of Moonbi during 1884 amounted to 14 oz. 1 dwt. 10 gr.

PEEL

PEEL AND URALLA DISTRICT—TINGHA AND INVERELL DIVISIONS.

(Mr. Warden Fraser, P.M., Inverell.)

I HAVE the honor to submit my Annual Report on the mining district under my charge for the year 1884.

At Tingha, owing to the continuance of dry weather, and the low price of ore very little has been done in mining, and consequently all other business is necessarily affected.

As I predicted in my last report, the country towards the Big River and lower end of Cope's Creek having been prospected is now being taken up. Tin ore, copper, silver, and diamonds are there to be found. The latter are causing quite a stir amongst the miners at present.

At Auburn Vale the bulk of the land is held under mineral conditional purchases. Diamonds are found there in abundance, and their quality is reported to be finer than those of the Bingera mines. The diamond saving appliances in use are, however, as yet of a very primitive sort, and many stones are lost in consequence. The scarcity of water there, as elsewhere, retards operations.

At Elsmore the tin industry has somewhat revived, and fair results are obtained. The bulk of the lands here, as at Auburn Vale, is freehold, and worked mostly on tribute. The Union Company own and still work the old Elsmore.

On land (adjoining the old Elsmore) belonging to the trustees of the Inverell Estate, the Messrs. Pemberthy, have been doing some heavy work with good results. They are experienced Cornish miners, and have all the recent improved appliances for economically working their lands.

Until we again get into the wet seasons, I do not anticipate much change for the better in this division.

Most of our best country is now back on the ridges where water has to be conserved for mining purposes.

The output of tin ore for the last twelve months you will receive in the Mining Registrar's annual report.

PEEL AND URALLA DISTRICT—SCONE DIVISION.

(Mr. Warden W. F. Parker, P.M., Scone.)

I HAVE the honor to submit, for the information of the Honorable the Minister for Mines, my report for the past year upon the Scone Division of the Peel and Uralla Mining District.

Three weeks ago I visited the fields under my charge, viz., Moondie Brook (the Denison), Stewart's Brook, and the silver mines at Waverley, distant about 32 miles from Scone, north-easterly. At the Denison there are about 18 miners, at Stewart's Brook about 12, all working on quartz-reefs. No work is being done at the silver-mines. During the year four mineral leases for silver have been taken up, comprising a total area of 310 acres, and 43 miners' rights and 1 business license have been issued.

The following is the particulars of the gold raised during the year:—

Crushed at Williams & Company's machine, Moonan Brook—

	Ton.	oz.	dwt.
Fuller's Reef	205	199	10
Jenson's „	10	21	13
Boozer's „	14	32	13
Usher's „	13	15	0
For Dixon & M ^r Laughlan, of Stewart's Brook	2	4	2

Crushed at Grosvenor's machine, Stewart's Brook—

Stewart's Brook	205	196	2
Grand total.....	449	469	0

Accounting for some small lots of gold sent down by private hands, I estimate the total yield of gold from this division at about 500 oz., of the value of £1,750, a falling off from last year's returns.

With reference to the general prospects of the field, I regret I cannot report any hope of improvement. There is no prospecting going on, without which we cannot expect any new finds.

There are two quartz-crushing machines in this division, worked by water-power, viz., a ten-stamper at the Denison and a five-stamper at Stewart's Brook, both very good machines, and it is a great pity that the same are not kept constantly at work.

PEEL AND URALLA DISTRICT—NUNDLE DIVISION.

(Mr. Warden Jones, Nundle.)

I HAVE the honor to transmit you my Report for the Nundle Division, Peel and Uralla Mining District, from the 1st of February last, that being the date of the commencement of my duties here.

I regret to state that last year was a most uneventful one. No new finds reported, and mining in its several branches at a lower ebb than it has been for several years. This I attribute to a great extent to the unprecedented (for this district) dry season. There has not been three months sluicing throughout the last twelve months, yet the amount of gold won estimated at 2,200 oz. is in excess of that of previous years, taking also into consideration the number of miners engaged; the want of water also interfered with prospecting.

There are only three quartz-claims working at present with payable returns, namely, the John Bull, Bowling Alley Point; Nethersole, Hanging Rock; and one on the old Foley's Folly line of Reefs. The crushing results of these claims are furnished you from the carefully compiled report of the Mining Registrar. I have several times inspected the John Bull and Nethersole, and I am very favourably impressed of their value, and I feel confident from the appearance of the stone now being raised their next crushing will exceed former splendid returns. Should my anticipations be realized, I hope to see prospecting in reefs taken up energetically, for to that branch of mining this field must look to for its permanency and prosperity. This field is undoubtedly rich in minerals, and why it receives so little attention from the prospector and capitalist is to me inexplicable. I have been on several gold-fields in New South Wales, and I have never seen anything approaching in richness the quartz-veins occasionally dropped upon here; and, as further proof, the collections of minerals found in the Nundle District, and exhibited by Mr. Martin Isaacsohn, have taken the following prizes, namely:—In 1879 at the Sydney International, second prize; in

1881 at the Melbourne International, silver medal and first order of merit; 1882, at the Singleton Show, the silver medal; 1883, at the Amsterdam International, the gold medal,—taking a prize every time exhibited.

The most important alluvial claim, and one from which I expect to hear of rich returns, is Mount Ephraim. It is worked when water is available by ground sluicing, and the quartz found in the wash examined, and if gold is seen strongly therein, hand-crushed. I forward you a piece of quartz, picked up by me from the heap, showing the size found, and about the average quality. There are two claims in this neighbourhood, each with a water race. I would like to see the proprietors amalgamate their claims, thereby combining their water power; and even then it will require capital to purchase crushing machinery, hydraulic appliances, and to bring up a tail race before it can be effectually and profitably worked. Were this done I am confident that it will pay good dividends for many years.

The cement claim at Mount Pleasant has been energetically worked for the past twelve months under the able management of Mr. James Henderson. I regret to add that with a capital of £1,800, expended in machinery, etc., the shareholders have scarcely realized wages.

Copper.

Work has been for some time past suspended on the three copper-mines situate at Bungowan, namely, the Kurragong, the property of the Tamworth Copper Mining Company, the Mount Pleasant, the property of Messrs. Hole, Stanning, and Company, and the Dungowan, the property of Messrs. Coupland and Company.

I forward you three specimens from the Kurragong Mine, one of metal, found on the surface; one of ore, marked No. 2, found 12 feet from the surface; No. 3 at 34 feet. The Company intend to recommence work as soon as they have reorganized their Company, and with an increased capital. They have about 140 tons of ore paddocked.

The Mount Pleasant also intend to recommence operations at an early date.

The Dungowan I have not inspected, but will do so when it is again at work.

I forward you felspar and quartz, showing fine gold, from the Marquis of Lorne, Bowling Alley Point, and a piece of petrified bark from the Hanging Rock. I regret the smallness and uninteresting character of the collection, but hope this year to be more successful.

PEEL AND URALLA DISTRICT—ARMIDALE DIVISION.

(C. L. C. Badham, Mining Registrar.)

I HAVE the honor to inform you that I find on inquiry about 1,683 oz. 11 dwt. 9 gr. of gold have been purchased by the local Banks, &c., during the year 1884, representing a total worth of about £6,229 4s. 0½d.

The returns are as follows:—

1. Crushings from the Eleanora Gold-mining Company Quartz Claim, 1,566 oz. 11 dwt. 18 gr.
2. Alluvial from other parts of the district, 116 oz. 19 dwt. 15 gr.

I regret I am unable to furnish even a rough estimate of the quantity of gold produced in this portion of the district, for although I have made many inquiries, the individuals asked are very reluctant to furnish the result of their efforts, and could give no idea of the yield generally. There are about twenty people employed at Puddledock in alluvial mining, who are I understand making fair wages. I am informed that a party of diggers have found payable gold near the junction of the Rocky River and Booralong Creek; it is principally surfacing, and the water for sluicing purposes will have to be conveyed to their lease by means of a race which will exceed 3 miles in length when completed.

During the past twelve months the number of miners' rights applied for was 71.

Mineral licenses, 24.

Business licenses, 1.

2 applications for gold-mining lease. (Total acres gold, 6.)

24 for tin. (Total acres tin, 640.)

4 for antimony. (Total acres antimony, 120.)

2 for manganese. (Total acres manganese, 40.)

PEEL AND URALLA DISTRICT—NUNDLE DIVISION.

(Samuel Kermode, Mining Registrar.)

I HAVE the honor to forward my report on the Nundle division of the Peel and Uralla Mining District for the year 1884, and I regret that I have not a very great deal of information that would enable me to make a favourable report for this year of 1884. I will commence with the Bowling Alley Point portion of this field.

Messrs. King and party, on the lins of reef known as the Hard-up Reef, raised and crushed about 40 tons of quartz, which gave a very handsome return of 3 oz. of gold to the ton. Mining operations on this claim have been prevented a great deal—first, by law; secondly, by the heavy body of water in the bottom of the shaft. This shaft is down about 40 feet; they have lately put on more men, being six now in number, and they have managed to beat the water so far that they can sink in the bottom of the shaft a few feet every day after baling out about 2,000 gallons of water. This reef is bearing north and south, underlying to the west, the average thickness being about 9 inches; the stone being raised just now shows gold very well.

The Marquis of Lorne Claim on the Peel River Company's Estate raised and crushed 464 tons of quartz, which gave a return of 317 oz. 7 dwt. of gold, being an average of about 13 dwt. 12 gr. to the ton. I have not been supplied with any other particulars in connection with this claim.

There are not any other reefs being worked of late about Bowling Alley Point.

The old Moonlight Reef, between Nundle and Bowling Alley Point, still stands idle. Mr. Fuller, the proprietor of this old claim, has informed me that he intends to try and raise a party of men and give it another fair trial.

The alluvial gold obtained about Bowling Alley Point as far as I can ascertain during the year is about 400 oz., obtained by Europeans and Chinese miners. I did hear that a party of Chinese obtained about 500 oz. in the river-bed at one time. I have made inquiry and have been informed by the Chinese that they only got about 4 lb. weight,

Nundle.

Nundle.

There are not any quartz-reefs being worked about this township, a few alluvial claims are being worked in Oakenville and Happy Valley Creeks by a few Europeans and Chinese. The alluvial gold-mining lease at the foot of Oakenville Creek has been worked throughout the year by four men, they have not made wages, they appear to me to be working on the wrong gutter of the creek.

Hanging Rock.

A new line of reef was opened by two men, Walsh and Ellis, at Foley's Folly; they crushed about 10 tons of quartz which gave a return of about 10 dwt. to the ton. This reef bears north and south, and underlaying to the west; average thickness about 6 inches.

Messrs. Nethersole and party on a quartz-reef at Quackamacca Creek, near Foley's Folly, Hanging Rock, have been the greater part of this year driving in a level through hard blue rock, about 140 feet, for the purpose of draining the water which was plentiful in the bottom of their claim, which is about 60 feet deep from the surface. They have raised about 20 tons of quartz which gave a return of 60 oz. of gold, or 3 oz. to the ton. This reef bears north and south, underlaying to the west, its thickness being about 8 inches.

Mr. T. Bakewell and party have done a great deal of quartz-reef prospecting about the Hanging Rock; they only obtained one small patch about 15 oz. Mr. J. Ruzicka, the miner that obtained the £3,000 worth in one patch some two years ago, has also been prospecting all the year without any success. Many other miners have prospected all the year through and experienced the same luck.

Mr. J. Clark, the good old miner that has had the luck to handle a number of good heavy patches of gold on this field, has been delving away all the year through hard rock, putting in a level to meet with a shoot of gold which he had lost the trail of some eighteen months ago. He has been lucky enough to meet with this trail again, and obtained a few ounces of gold in time for the merry Christmas. He expects to get something great ere long on this shoot; it is to be hoped he will, as he deserves a good patch after delving through hard rock on the old Black Snake line of reef, as he has done during the last eighteen months.

Messrs. Stringer and party obtained a small patch of gold about 15 oz. in a clay vein on the Hanging Rock sidelands about two months ago, but have failed to find anything extra since.

The alluvial fossickers about the Hanging Rock manage to pick out enough to keep them still searching.

Mr. Robert Northmore and party obtained about 30 oz. of gold by sluicing the surface under the cap of the old Brown Snake reef.

Messrs. J. Henderson, Kennedy, and party's gold-mining leases on the Cement Lead, Mount Pleasant, obtained 235 oz. of gold during the year; there are nine men shareholders in this claim, they have a tunnel in on the lead 1,700 feet long, the depth underground being about 140 feet, all the wash being cement in this claim is put through a four-stamp battery driven by an overshot water-wheel of about 40 feet diameter.

The adjoining claim, known as Wilson and party's old claim, south of Henderson and party, has not been worked much during this year; this claim appears to be worked out.

The next claim south is Mr. C. Johnson's; he did not earn wages. Mr. Johnson has done a lot of work on this claim, but has failed to meet with the proper lead of gold, if any. It appears to me that this portion of the Cement Lead has been split up, thus scattering the gold, which causes so much more dirt to be taken out than would be required if the lead were confined as in Henderson and party's claim.

The next claims south are Messrs. S. Paill and Sons, and Messrs. Rackham and Sons; they have been working away in the cement nearly the whole year; they also have fared about the same as the adjoining claim holders, Mr. Johnson. He did not earn near wages.

Messrs. Howarth and party, on Mount Ephraim, have worked nearly the whole year through; they have not made wages. This claim is a very heavy one to work, being a sluice claim requiring a great quantity of water to carry away the dirt; they are sluicing it at a depth of about 40 feet; they have not water enough half of their time, the seasons being so very dry; there is hardly any water on this field for mining purposes at the present time.

Messrs. Radley, Grenfell, and party have been about twelve months bringing in a water race from the Barnard waters on the eastern side of the main dividing range of the Colony, on to Mount Ephraim, on the western side of said range, a distance of about 8 miles through very rough country; now they have the race completed there is not any water, nor will not be until we get a very wet season.

The total number of miners employed on this field during 1884 are as follows:—

European quartz-miners	40
" alluvial miners	71
Chinese " "	55
Total.....	166

As near as I can ascertain after careful inquiry the quantity of gold won in this division during the year 1884.

From 559 tons quartz crushed.....	512
" quartz patches	62
" alluvial workings.....	1,626
Total.....	2,200
Value at £3 14s. 6d. per oz.	£8,195

The estimated value of all the machinery at work and idle on this field during 1884, from my own knowledge and experience of machinery during the last twenty-five years, I would say not to be worth at the present time more than £3,100.

PEEL AND URALLA DISTRICT—BARRABA DIVISION.

(K. T. Garland, Mining Registrar.)

I HAVE the honor to forward my Annual Report for the Barraba Division of the Peel and Uralla Mining District for the year 1884.

1st. Gold-mining in alluvial not very brisk, about 114 oz. being the quantity won.

2nd. Quartz-reefing, 178 oz.

The number of men employed as miners, about 60, many of whom are engaged at other occupations and residing on their own freeholds, travelling through the country shearing, &c. I

I issued 59 miners' rights and 2 mineral licenses during the year. The dry season and want of a sufficient supply of water has been severely felt in this district.

Messrs. Fletcher & Company are now erecting a quartz-crushing battery at Crow Mountain at the well-known Try Again Reef, from which large quantities of gold has been obtained some years ago, they having raised about 30 tons.

Reading's and Shamrock reefs, owned by Mrs. Haydon and others, are under suspension of work for the purpose of erecting a quartz-crushing battery.

PEEL AND URALLA DISTRICT—BINGERA DIVISION.

(*T. Connolly, Mining Registrar.*)

HEREWITH I have the honor to submit, for your information, my Annual Report of the Bingera Division of the Peel and Uralla Mining District.

I have issued 244 miners' rights, 29 mineral licenses, and 2 business licenses for the year; 66 mineral and 77 gold-mining leases have been applied for. Many of these leases were refused and reapplied for. The amount of gold obtained for the year is 2,964 oz. This is much less than last year. The cause is want of water for washing. The drought is very severe here. Mr. A. S. Low has brought up a diamond drill to test Neal and party's ground, and if he is fortunate in striking gold at a depth no doubt it will cause a reaction in mining.

Of the 66 mineral leases applied for there are only four parties who have done any work, viz., the A.D.M. Company, Craddock and party, Powell and party, and Dempsey and party.

The A.D.M. Company have erected extensive machinery at their mine, and made a dam capable of holding 1½ million gallons of water. There has not been sufficient rain to half fill the dam since it was finished. They have opened out a splendid hill showing 25 feet of diamondiferous wash. They have raised 5,000 tons of dirt, but have only washed 418 loads, which yielded 1,193 diamonds, weighing 254 carats, valued at 22s. per carat in the London market. They sunk a well 97 feet, but the water supply was only sufficient to wash for half an hour each day. To overcome the water difficulty they intend constructing a tram-line between their property and the river, a distance of 3½ miles, which will cost about £6,000 or £7,000.

Powell and party have sunk several shafts, and have succeeded in finding the diamond wash.

Craddock and party are situated ½ a mile in a south-easterly direction from the A.D.M. Company's ground on the side of a high ridge. They have sunk several shafts and put two tunnels into the hill, and in the second tunnel where they are now working they have splendid looking wash. A small trial as a test produced 17 diamonds from half a load of dirt.

Dempsey and party are situated about 4 miles to the west of the A.D.M. Company. They have driven a tunnel into the mountain under the basal about 200 feet, and have 6 feet of wash all the way in. They have also obtained diamonds, but being 3 miles from water very little has been washed. This mine is a fac-simile of the Madam Berry Gold-mine in Victoria, only that this is diamond wash, which ought to turn out well when the centre of the mountain is reached.

PEEL AND URALLA DISTRICT—WALCHA DIVISION.

(*E. Marriott, Mining Registrar.*)

IN furnishing my Annual Report on the Walcha Division of the Peel and Uralla Mining District for the year 1884, I regret to say very little, if any, work was done during that period, as nearly all the claims on the different gold-fields in the district have been at a standstill with the exception of Messrs. Matheson & McIntyre's claim at Tia Reefs. They report having crushed about 40 tons of stone, with a yield of 40 oz. 12 dwt. 12 gr., value £3 12s. per oz. As to this crushing Mr. Matheson reports:—"All the quartz was taken out near the surface, and was very inferior quartz to what there is in the main shaft."

2. No gold leases were applied for during the year, and only three applications for mineral leases (copper) were received during that period. Messrs. Russell & Cope have an extensive copper claim at Coopera Curripa, Nowendoc, of which, and other copper-mines in this district, I hope to be able to give a favourable account in my next annual report.

3. The number of miners' rights and licenses issued was:—

Miners' rights	28
Business license	1
Mineral licenses	10

4. The quantity of gold purchased in Walcha amounts to about 55 oz., value (Sydney Mint) £3 14s. per oz.

PEEL AND URALLA DISTRICT—URALLA DIVISION.

(*J. M. Shehan, Mining Registrar.*)

I HAVE the honor to furnish herewith my Annual Report of the Uralla Division of the Peel and Uralla Mining District for the year ending 31st of December, 1884.

I regret to have to report that during the past year, owing to the want of water, mining has been almost at a standstill during the past twelve months. All the large claimholders inform me that, through the scarcity of water, they have been unable to wash up during the year just closed.

The Long Tunnel Gold-mining Company which, for the last seven or eight years, has been expending a large amount of capital in working their claim on this field are, I am informed by some of the local shareholders, about to suspend work for a time. The number of miners' rights, business licenses, 3; mineral licenses, 3; number of applications for gold-mining leases, 2; minerals, other than gold, 1.

I find on inquiry at the local banks that the quantity of gold purchased during the year was 863 oz. 11 dwt. 18 gr., value £3,238 9s. 1d.

During the month of November I forwarded the usual circulars to claimholders, and received the same reply from all—"Mining operations a dead-letter owing to scarcity of water."

PEEL

PEEL AND URALLA DISTRICT—GLEN INNES DIVISION.

(P. Le Jeune, Mining Registrar.)

THE returns to hand for the year 1884 tend to show a steady decrease in the mining industry in this division. The gold-mining leases applied for in the years 1881 and 1882 for the working of reefs at Nuggetty Gully, Kookaboogra, and Mount Mitchell, have been forfeited, the want of means for testing their value being apparently the cause. No applications for gold-mining leases have been made in this district during the year. Alluvial gold-mining seems also to have decreased, judging from the returns furnished of the gold won, sluicing operations having been almost at a standstill for the want of water.

The number of miners' rights issued for the year is the same as for 1883, namely, 39, whilst the number of mineral licenses issued amount to 35 as against 80 issued in the previous year, showing a decrease of 45.

Great difficulty is experienced in obtaining reliable information, as a decided disinclination to furnish returns, &c., seems to exist on the part of miners in this division.

PEEL AND URALLA DISTRICT—BENDEMEER DIVISION.

(L. H. Stumbles, Mining Registrar.)

L. H. STUMBLES, Mining Registrar at Bendemeer, reports, for the information of the Under Secretary for Mines, that the Warden's Court and Mining Registrar's Office was formed here on the 17th October last. During that time twenty-six applications have been made for mineral leases for the purpose of mining for tin, which is the only mineral at present at work in this district. There has been no tin washed yet, the parties being engaged in erecting dams for the purpose of obtaining water.

PEEL AND URALLA DISTRICT—TINOGA DIVISION.

(W. Norton, Mining Registrar.)

I HAVE the honor to report that the mining industry during the past year has been and still remains in a very depressed state, caused by the low market value of tin, the working out of the shallow ground, and the want of water. Great numbers of Chinese and many Europeans have left the field in consequence. Lately attention has been turned to mining for diamonds, and some country has been taken up for that purpose in the parish of Mayo.

Rumours of the existence of a silver lode in the south-eastern portion of the district have reached me, but I am unable to state the precise locality as those engaged in prospecting it are very reticent on the subject; in fact mining is at a very low ebb, but the miners are looking hopefully forward for better times.

HUNTER AND MACLEAY DISTRICT—COPELAND DIVISION.

(Mr. Warden De Boos, P.M., Copeland.)

DURING the first three months of the year there was virtually no work done on this field. The drought was so very severe that miners were unable to remain on the ranges in which their claims were situated, whilst even lower down the creek, at the township, residents were put to great straits for water for domestic use. The creek was completely dried up and even by sinking only a very precarious supply was obtainable. The Barrington River was lower than the oldest inhabitant ever remembered to have seen it, and the Gloucester had all but ceased running, the water becoming offensive to the smell from the decaying weeds. At the same time bush fires devastated the district in every direction, crushing was altogether out of the question, capital ran short, wages were not forthcoming, men were knocked off from work in all directions, and the field came to a perfect standstill.

No employment offering the exodus from the field continued to the same extent as during the previous year. Family after family left until there seemed every probability that Copeland would be deserted within a very few months and become a thing of the past. And so, in all probability, it would have been had it not been for the happy change of weather which set in, just as the place was reduced to the greatest straits for want of water.

Almost simultaneously with the change of weather came the report that No. 2 East Mountain Maid had struck gold in following a vein which was known to exist in the side of the shaft but which had not been followed by the previous holders of the lease. This vein gradually developed into good rich stone and eventually turned out a crushing of some 16 oz. to the ton for about 50 tons.

This discovery gave considerable impetus to the field and mining was now entered upon most energetically. No. 1 East Mountain Maid, which was being worked on tribute, also struck a good vein and crushed about 60 tons for an average of about 9 oz. to the ton. Other claims followed suit, and during the last six months of the year work has been carried on so successfully that the total yield for the year, judging from the amounts purchased by the Bank, which after all is an unmistakable test, exceeded that for 1883 by 205 oz. 15 dwt. 14 gr., the yield for 1883 being 3,044 oz. 5 dwt. 7 gr., and that for 1884 4,250 oz. 21 gr.

To enable you the better to comprehend the position of affairs I have above described, the manager of the A. J. S. Bank, Mr. Montcagresti, has very courteously supplied me with the amounts purchased by him monthly.

Indeed things would be more than usually promising on this field if it were not that nearly all the larger claims have knocked off work and are now lying idle. The Prince Charlie and the adjoining claims, all on the Church and School Estate, have been idle for the eight months owing to an attempt that has been made, by the parties interested in the several claims, to amalgamate them—to form them into one large consolidated Company—and to work them by a common tunnel put in on south-eastern or Barrington face of the range, so as to cut the several leases and bring out the stone so much lower down as to render cartage of the quartz to the machine both easier and less expensive. This enterprise, which, if properly carried out, would have been of very great advantage to the field, as well as remunerative to the projectors, has unfortunately fallen through, and the whole property is lying waste and neglected.

The

The Hidden Treasure has come to grief financially and is in the hands of a liquidator, no work but baling being done on it; and the Mountain Maid lease has been cancelled for non-payment of rent, and the working plant of the Company sold under Warden's Court execution to pay wages.

With the exception of the Nos. 1 and 2 East Mountain Maid, no large claim was at work at the end of the year, but it is satisfactory to have to record that besides the yield of gold from these two claims several minor leases worked by few hands only have turned out very good stone, and have helped to swell up the amount of gold to its present total for the year.

Since my report, furnished to the Department on the Centennial Tunnel, a contract for putting it in an additional 50 feet has been taken, and I am happy to say that at the time of writing this the manager informs me that a change of country has occurred in the tunnel with strong indications, as well from the metallic appearance of the stone as from the influx of water, of the near vicinity of a reef. Nothing would give me greater pleasure than to be in a position to inform you that a good reef had been struck in the tunnel, since such an event would give fresh life to Copeland and would have the effect of permanently establishing it as a reefing district. For the sake of the Company also I should like to be able to promulgate such a report, as they have shown an amount of steady perseverance and indomitable persistency and courage that deserve to be rewarded.

Outside of what may be called the Copeland field nothing has been done during the year. The Kerriput Reef and plant was taken on tribute about the middle of the year, but after a few weeks' trial the tribute was thrown up. Boranel is lying idle for want of a crushing plant. Here are five reefs 3 feet wide, the stone from which has averaged 4 oz. to the ton, and yet which cannot be worked because there are no means of converting the stone into gold. Carting from Boranel to Kerriput over the heavy mountainous country that lies between these places can only be done at an expense that is prohibitive.

The number of miners' rights issued during the year was 145, as against 258 issued the preceding year, and of business licenses there were 52, of which 11 were for twelve and 41 for six months, being precisely the same number as was issued in 1883.

During the year there have been 29 applications for leases of auriferous lands in this division, of which 2 were for 1 acre, 8 for 2 acres, 11 for 3 acres, 5 for 4 acres, 1 for 5 acres, and 2 for 6 acres; the whole quantity applied for being 88 acres.

In closing this report it may be pointed out that with the exception of the work now being done at the Centennial Tunnel, the field is entirely dependent on itself, the various claims being worked at the cost of Copeland miners and residents.

HUNTER AND MACLEAY DISTRICT—BULLADELAH DIVISION.

(Mr. Warden Fawcett, P.M., Bulladelah.)

I do myself the honor to state that since my report of last January no work has been done on the Bulladelah Division of the Hunter and Macleay Mining Districts, and that only four miners' rights have been applied for this year, and also that the quartz-crushing machinery, formerly at work at Coolonglook, has been removed.

At the same time it is generally supposed that after the Messrs. Dickson have erected machinery and thoroughly tested their claim there will be an improvement, as it is said that many are lying by in order to see if this claim on the Kuruki Reef improves at a lower level.

From specimens which I have seen I have formed an opinion that, with capital and due economy, there is no reason the reefs at Coolonglook should not be a success.

HUNTER AND MACLEAY DISTRICT—KEMPSEY DIVISION.

(Mr. Warden Ducat, Kempsey.)

I HAVE the honor to forward my Annual Report for the information of the Honorable the Minister for Mines of the mining progress of this division.

The only mining now being carried on are the Antimony Mines at Corrangula. The gold and silver leases have been all abandoned.

At the mines of the Corrangula Antimony Company active work is being done and large quantities of ore brought to grass.

The mines are still under the intelligent management of Mr. E. Herbert Becke, who has a staff of eighty men under him. He personally superintends every portion of the works to see that no work is inefficiently done, so that no one may be thus endangered. There are large smelting works in full operation, additional furnaces are in course of erection, to enable the manager to smelt on a larger scale. They now turn out star antimony, regulus and crude.

There are five deep shafts being worked, while others are being opened. The former have passed through several veins or lodes, averaging a thickness of about 3 feet; these lodes ramify to almost every point of the compass and dip in every direction. No. 1 shaft is down 200 feet, and the manager intends sinking an additional 50 feet. No. 2 is down 137 feet, and will be carried down equal to No. 1. Cross cuts have been put in at different levels, cutting the lodes, which were then driven upon with very satisfactory results. To each of these shafts steam-engines have been erected for the purpose of winding and pumping, one of 12-horse power and one of 18-horse power, with poppet-heads. These two deep shafts have drained the other ground, and the water is easily kept under by the machines by baling. The cost to the Company for placing these two engines on the ground has been about £2,000. Three other shafts are down 96, 76, and 64 feet respectively; there are shafts also in course of being opened. Air shafts have been sunk in connection with the deep shafts for the purpose of ventilation.

Two tunnels, 225 and 190 feet, to cut Thomas' shaft and Bolt's shaft, have been opened, and drives 120 feet east and 135 feet west respectively, run on the lode.

The output from the mines, taken December, 1883, to December, 1884, is as follows:—

30 tons, star antimony,	at £65 per ton.
40 „ regulus,	„ £10 „
125 „ crude,	„ £25 „
70 „ ore (stibnite),	„ £12 10s. „

The expenses have been heavy, owing to all the furnaces and cover-sheds, &c., having to be remodelled and built, and their monthly pay sheet is a very considerable amount.

There are also miners working other portions of their ground on tribute.

A new discovery of antimony has been made near Bowra, on the Nambucca River, showing specimens of rich antimony. This field would be about due north from Corrangula, and I have no doubt is a continuance of the north and south veins of that field.

HUNTER AND MACLEAY DISTRICT—DUNGOG DIVISION.

(C. G. Smith, Mining Registrar.)

I HAVE the honor to report concerning the gold-mining workings at Wangat during the year 1884.

The only work that has been done has been on the Golden Spur line of reef, in two claims.

Messrs. Hancock and Co., employing four men, with a plant valued at £20, have crushed 230 tons, yielding 150 ounces, estimated at £500. Depth of shaft, 60 to 100 feet, deepest level 80 feet, width of vein 6 inches to 3 feet, underlay 1 foot in 4, bearing east and west, dipping south. Messrs.

Messrs. Vanderkolk and Co., employing four men, plant worth £50, have crushed 282 tons for 155 oz. 8 dwt. yielding about £512. Depth of shafts 20 to 240 feet, deepest level 180, width of vein 4 inches to 2 feet 6 inches, underlay 1 foot in 3, bearing east and west, dipping south.

No pyrites yet treated.

There are two crushing machines by water power, one of ten stampers, value £1,000, and one of five stampers, value £650, both at work. These claims have recently been amalgamated, and the holders seem to be quite satisfied with their prospects. Sixteen miners' rights have been issued for this year.

The workings at Marsh Creek, Upper Wangat, seem to be quite abandoned for the present.

NEW ENGLAND DISTRICT—TENTERFIELD DIVISION.

(*Mr. Warden J. B. Graham, P.M., Tenterfield.*)

I do myself the honor to submit my Annual Report on the portion of the New England Mining District under my charge.

Gold.

During the past year (1884) very little has been done in gold-mining, but there is some promise of improvement during the current year. At Boonoo Boonoo (an old abandoned gold-field) some miners are now erecting a battery, and intend trying some reefs, the prospects from which they consider satisfactory; the yield of gold from alluvial during the year has been very small.

At Tooloom there is little alteration; the yield has been small. Water has been scarce during the year, and the want of it seriously affects the yield. Pretty Gully is also about the same as last year.

At Poverty Point the Surface Hill Sluicing Company have not yet completed their works, and the want of water for hydraulic sluicing has almost stopped work during the year. A gold lease has been taken about 10 miles north of Poverty Point on the same range. The owners are now erecting a crushing plant and the necessary works for the treatment of the stone. The prospects of this mine are very encouraging and the owners are sanguine of success in their undertaking. I will visit the place as soon as it is in working order, and furnish you with a full report.

I have not had occasion to visit Dalmorton and the mines in that vicinity during the year. I am informed that there is likely to be a revival of mining in that locality. The Mining Registrar's report will give you all information.

At Lionsville and Solferino there is not much doing at present; some rich finds have been made, but the gold is apparently only in patches. I beg to refer you to the Mining Registrar's report for the yield during the year.

At Lunatic and Perseverance little work has been done. A new start is now to be made by a company, who have applied for some of the forfeited leases.

Silver.

I regret to report that the silver-mining at Boorook has not turned out so well as was anticipated. Messrs. Hall and Co. have carried on operations during the past year with varied success. The reports from the field are not encouraging; the yield for the year will be given in the Mining Registrar's report.

Tin.

Little alteration has taken place in tin-mining since my last report. The yield for the year will probably not be as much as for the previous year, but that can be accounted for by the want of water and low price of tin.

I have nothing of interest to report in mining in my portion of the district. Some rich silver finds have been made near the southern boundary of Mr. Warden Martin's district, at the Mole Tableland and near Emmaville. No discoveries of any importance have been made during the year in this portion of the district.

NEW ENGLAND DISTRICT—EMMAVILLE DIVISION.

(*W. E. Henry, Mining Registrar.*)

I HAVE the honor to furnish, for the information of the Honorable the Secretary for Mines, my Annual Report, being for the year 1884.

Mining matters generally have been very much depressed throughout the district, many miners having left the neighbourhood of past labours to seek employment elsewhere, as, owing to the low price of tin, many places where tin could be raised at good profit two years back, can only now be worked at a loss, and the reserve as it stood until a few months back had the effect of completely stopping all prospecting in unoccupied lands; the constituting of this part a mining reserve, and passing of the Mining Act Amendment Act of 1884, have, however, I am very glad to say, inspired our miners with new energy, for as they do not expect that the tin will be so low as it is much longer, and they can now work without being liable to prosecution. Many are now prospecting, and others have taken up land. To prospect in the deep ground is a very expensive undertaking; consequently can only be carried on with satisfactory results by those who are supported by large capital. It is not an unusual thing to see a considerable area of country quite perforated with shafts and yet the run of wash missed, for when it is remembered that some of the shafts are down over 150 feet, and that the larger portion of the sinking is through hard rock which can only be successfully worked by the use of dynamite, and when that is gone through (sometimes before) water in large quantities is met with. It can easily be seen how utterly useless it is for the ordinary miner to undertake the work, except as I mentioned above, so as to be able to introduce suitable machinery. Another reason why the returns of the district are not so good as they were in previous years is that some of the mines which were yielding large quantities of tin have been worked out. The absence of capital is also the reason why numbers of good lodes in various parts of this district are not being worked, for there are many rich reefs which the owners cannot work to advantage because they have not got means, and operations have to be carried on in the most primitive manner.

Mr. T. Cubis' land, near the township of Emmaville, is still in the hands of Chinese tributors, who appear to be working contentedly.

Messrs. Thomas Brothers are working on Mr. A. Cadell's block 116, parish of Scone, where they have found a good leader of lode tin, which they followed down to a depth of 35 feet, when it pinched out,
owing

owing to the hard nature of sinking, but suggests to my mind that it is worth following. The crushing was done by the tributors, who, after burning the stone so as to soften it, they passed it through a two-head stamp battery ingeniously made by themselves of wood, with the heads of the stampers cased in iron.

Vegetable Creek Tin-mining Company's ground has been worked on the same terms as last year (tribute). One party of tributors (Thomas Brothers) have been surfacing during the first half of the year, but finished up before working portion 116.

Messrs. Casley & Co. have done a large amount of work during the year on their tribute; they have sunk nine shafts, varying in depth from 70 to 100 feet; the sinking is easy, and the ground can be worked with comparatively little trouble. The usual number of men employed is from ten to fifteen, but since the great fall in price of tin it has been worked by five men (the tributors) and two boys and two horses. The water required for washing purposes is pumped by an engine to a tank on a stand above the engine-house, from whence it is conveyed to where the tributors want it by means of canvas hose; the Company are, however, going to improve this mode of conducting water by substituting galvanized piping. A large amount of labour is saved through the water being available for sluicing purposes at any given point by the wash-dirt being emptied into the sluice-box from the mouth of the shaft. There are a few parties of Chinese working on this property, and two other lots of Europeans (Messrs. Ferrari & Co., and Carton, & Co.) The total amount of ore raised by the Company's tributors has been nearly 112 tons.

Messrs. Cadell & Mitchell's land at Y. Water-holes is also being successfully worked on the tribute system by various tributors, whose workings I went over in the following order:—Kay and party at a depth of 42 feet sinking, are on payable wash about 1 foot in depth; the shafts are well timbered, and the drives are in such easily worked country that a few props with cap pieces is all that is necessary to render the ground secure; it is expected as they follow up the wash that it will deepen. Levy and party have struck very rich wash at a depth of 39 feet at a short distance from the party I have just named, which is easily worked owing to the ground being of a similar nature to that which Kay and party are working. The wash will go about 60 lbs. to the load and varies in thickness from 6 to 18 inches. The vein is on the western fall of the Y. Water-hole.

Messrs. Murgatroyd, &c., are also working in the same locality on similar conditions to those already described with somewhat the same results. Messrs. Mayjor and party comes next on the Company's ground, where at a depth of 35 feet they are getting good wash averaging 2½ feet in height, and yielding about 80 lbs. to the load; the ground is very easily worked, as only caps and props are required to secure the workings. The washing plant which the gentlemen I have named as owning the land above described have supplied is of a very complete character and available for the whole of the tributors. The water is raised by means of a horse-power machine to a tank at the side of a splendid new dam recently made, capable when full of holding a superficial area of from 7 to 8 acres of water, from whence it is conducted to the sluice-box through 136 yards of 8-inch galvanized iron piping.

Messrs. R. Davidson & Co. are also tributors to the same landowners, and have during the year put down nine shafts, ranging from 30 to 32 feet in depth; the wash is good and ranges from 1 to 3 feet in height; the workings are well opened and secured with caps and props, and that part which requires close timbering has been most faithfully done. The wash yields from 40 to 50 lbs. to the load.

Messrs. Moore & Co., adjoining Messrs. Cadell & Mitchell's land, is being worked on precisely the same conditions or principle as last year, and as it was pretty fully described then I need not say much now as there have not been any improvements worthy of note introduced. The yield of ore continues good; over 161 tons were obtained during the year.

Mr. R. Donoghue's land has been very little worked, one of the chief causes being the death (which was preceded by a rather long illness) of the owner of the land; some tributors are, however, still at work.

There are a few Chinese working at different parts of the Y. Water-holes on their own holdings—some leases and others mineral licenses.

Emmaville.—There are several parties of Chinese working on Messrs. Irby, Andrews, & O'Donnell's land with results which give the tributors satisfaction; one party struck a good patch of rich wash in one of the main streets, which they took good care to clean up nicely when they had the chance.

The Great Britain Company's land is under the same manager as last year. The Chinese tributors are still working away with results which make them quite satisfied. The quantity of tin raised during the year has been 235 tons. Some of the tributors have given up the tailings which they have been washing for a long time past, and gone into new ground, when at from 10 to 12 feet sinking they have got some very nice wash; the ground is easily worked, only needing props and caps.

Tent Hill.—The Glen Smelting Works have not been working to their full capabilities in consequence of the falling off in the supply of tin ore, notwithstanding which, however, 1,540 tons of ore have passed through the furnaces, and 1,100 tons of metal have been despatched to Sydney by the various routes, the major portion of which has been sent by rail via Glen Innes. The battery has been kept going continuously all the year through, during which period the crushing plant has worked splendidly, and all appliances for saving tin are so complete that I know I am safe in saying that there is not a better one in the colonies. It has been principally kept going in crushing stone from the Ottery Reef; several trial crushings have however been made for different parties with varying results, some of which were very rich, particularly that of Messrs. Tomison and Co., which yielded 48 cwt. of ore from 6 tons 8 cwt. of stone, or in other words nearly 8 cwt. to the ton. A small parcel was also put through from Silent Grove, yielding about 4 cwt. to the ton. The total quantity of stone crushed during the year was 2,107 tons 5 cwt., which gave a yield of 110 tons 3 cwt. of tin ore. There is no doubt but what the returns in proportion to the quantity of stone will be far better next year, as the miners having gained by experience more knowledge in dealing with the stone, by selecting only that which will pay to be crushed. The quantity of ore mentioned above as smelted was made up as follows:—436 tons 6 cwt. 3 qr. 9 lb., from Deep Leads; 916 tons 11 cwt. 1 qr. 9 lb., from Shallow Leads; and 187 tons 1 cwt. 3 qr. 10 lb. from Lodes.

Several parties of Chinese are working at and near Tent Hill with results which satisfy them.

The Ottery.—Work has been pushed on in a very systematic manner in all the shafts and drives, and the fact that they are under the immediate supervision of the same manager I named last year, is enough to warrant that everything is being carried out as it should be. No. 1 shaft is now down to a depth of 210 feet, when the reef showing poor quality stone, they ceased sinking, and opened out and drove in different levels, one of which was at 130 feet, from whence they drove 100 feet on both sides of the shaft,

showing a little tin throughout, the lodes run north and south, and underlays to the west. No. 2 shaft is down 180 feet, of which 70 feet is this year's work, in which the lode averages 6 feet in width for 75 feet from the surface, at which level the stone yields a very small per centage of tin, and so continuing for 80 feet further down, when good stone was again struck. At the levels above mentioned the lode was stoped out to the surface, only a block being left in the centre to keep the shaft secure; a little water has to be contended with, but a short time baling in the morning is all that is wanted. At the bottom of the shaft a level has been put in 15 feet, from which good stone was obtained; here the underlay to the west averages about 1 foot in 2 feet. No. 3 shaft is down about 140 feet; at 50 feet level drives were put in on each side of the shaft on the lode. In this shaft a great amount of pyrites was met with, so, as it was also in No. 2 shaft, it was thought well to pass through it in No. 2, and prove what existed underneath. A lot of water was met with here, so that if they had continued it would have necessitated baling for three hours per day. No. 4 shaft, to the west of the above, is now down about 80 feet, but on quite another lode to those just mentioned, and running parallel with it, the underlay of which is to the west, and is about 2 feet wide. No. 5 is situated to the west (about 2 chains) of No. 3 and is down about 100 feet, to which depth the lode has averaged 2 feet in thickness but of poor stone, so work has been suspended for the present; at the bottom of the shaft a level has been put in about 50 feet in a northerly direction; the lode underlays to the east. No. 6 shaft is down 35 feet on another lode, situated westerly from the above, and which runs about east and west; the strike of the lode is barely perceptible to the north, and about 2 feet wide. No. 7 shaft is down 50 feet on another distinct lode, although only about 2 chains from No. 3 shaft, the lode is about 3 feet wide, running north-east and south-west and carries fair tin it underlays a little to the west and is expected eventually to meet the lode in No. 3 as they get down; they have also met with pyrites at the same level as No. 3. There is, however, no water to contend with here. No. 8 shaft is down 40 feet on the lode, which averages about 7 feet and underlays to the west and runs north and south. It is thought that the east and west and north and south lodes will meet here. A large amount of open cuttings have been put in at the side of the hill from some of which fair stone has been obtained. By the above it will be seen how well the property has been prospected and opened out. There is every reason to believe that the Company will soon get on good tin. Trap rock and granite meet about 5 chains easterly from the No. 8 shaft. The tunnel has been put in about 30 feet further during the year, in which the lode shows fairly well about 2½ feet wide, at the edge of trap and granite formation. On an average thirty men have been employed all the year round.

Christian Starke is still working his mineral license holding, and in spite of the low price of tin is able to make a living.

The Wallaroo.—Messrs. Bray and Sons are now prospecting on this property, which they have been doing since March last. They have opened up the lode to about 30 feet down, when it averages 12 inches in thickness. Seventeen tons of stone were taken to the battery at Tent Hill and crushed, yielding 2½ cwt. of ore to the ton. The sale of this property which I mentioned last year as pending has fallen through, chiefly owing to the lessees not being able to agree.

Wellington Vale Run.—Mr. Thomas Flannery continued prospecting on the run, in the neighbourhood I mentioned last, and put down four new shafts averaging in depth about 205 feet, which, however, all turned out to be "duffers," although the locality looks exceedingly likely to be tin producing, so work has been suspended for a time. Ninety feet of the sinking was through basalt (very hard) and 115 were through bands of pipeclay and decomposed basalt.

In the neighbourhood of the Nine-mile Creek a few Europeans are working, the most successful of whom are Messrs. Tomison and party, who have got on very good tin. Several Chinese are also working contentedly.

Battery Creek (F. Davy) left off working on his block a few months since as it changed hands. A few men are working down the creek by virtue of their mineral licenses.

Messrs. Cranc & Co.'s Bark Hut Lode has not been touched during the year, as they have not succeeded as yet in forming a Company with which successfully to work the property.

Lee's Gully.—Messrs. Langton and party have been prospecting on a block for which they made application to lease, and having satisfied themselves that they had got a good reef, ceased working pending the receipt of their lease.

Messrs. Murray & Co. did a lot of prospecting on their land by which it was proved that they possessed a valuable property, so they also left off work until the arrival of their leases.

Messrs. Elliott & Co. got their lease a short time back, and have been doing a considerable amount of work. I am led to understand that the two parties I have named and Elliott & Co., who hold adjoining blocks, have come to an arrangement to place the lot of their holdings into a large Company or Syndicate, by which they could be worked to a very great advantage.

Catarrh Creek.—Chinese miners are the only occupants of this locality, and although the tin (alluvial only) is found in patches, yet they are satisfied to work a lot of ground which will not yield them enough to pay for rations, in the hope of "striking a patch," for when they do so it is usually good.

Not very far from the above locality Mr. Montgomery has been doing a lot of dead work on his lease in the way of cutting races, &c., through very hard country, so as to work his land properly; there is very little doubt but what he will, when he gets down to the wash, find that he is well rewarded for his trouble.

Torrington.—The battery has been kept going almost continuously in crushing stone raised by various parties of tributors, and some from other mines. Five lots of tributors are working at different places on the Company's ground, three of whom are on payable tin, the best of which are Stephens and party and Young and party; the former are down 55 feet on a rich lode of 18 inches wide, and the latter at 45 feet have got good stone 10 inches wide; they drove 12 feet south and 9 feet north, and worked from the surface. The lode runs about north and south. 61 tons of ore were won this year.

Dutchman Lode Mining Company.—This Company's interests are under the same manager as last year, and a visitor has simply to look round the mine to see that economy and good management are the leading features of Mr. Knuckey's labours. The battery has been properly put together and in full working order; five heads of stampers are driven by a twelve horse-power portable engine for twelve hours per day; the dressing plant consists of six jiggers, four round buddles and one dead buddle, which are self-acting; a steam pump (Blake's) raises all the water needed from a dam which has been constructed for the use of the plant.

plant. 501 tons of stone obtained from the mine have been crushed; the machinery is capable of crushing 100 tons of stone per month in 12-hour shifts. All the crushing and washing appliances, including the engine, are under a large iron shed, which is well floored. A good tin house has been built of wooden frames and iron roof in which a large drying-pan had been set; a blacksmith's shop and spacious store have also been constructed, and a good weighbridge set. All the buildings occupied by the miners (who live very near the mine) are very comfortable, particularly the manager's, which is a snug four-roomed cottage. To make matters as complete as possible the manager has had a good 5-acre paddock constructed.

No. 1 shaft has been centred, and cut down and timbered to a depth of 130 feet, at which level a drive 42 feet has been put in to the east and 43 feet to the west; 24 feet of the former and 22 feet of the latter have been done during this year; the back of western drive has been stoped 4 feet high and 12 feet long along the lode which is 3 feet wide.

No. 2 shaft is now down 82 feet, or 42 feet deeper than when I last reported; drives have been put in west; it is situated east of No. 1. The 104-foot level in No. 1 shaft is stoped out to the west 12 feet by 6 feet, and at the bottom of drive 20 feet by 16 feet, where work is being still carried on.

No. 3 shaft is down 56 feet on a separate lode about 18 inches wide, and in connection with it an air-shaft is down 33 feet.

The tunnel has been put 80 feet further into the hill during 1884, making the total length of it 229½ feet; the lode shows itself to be 2½ feet wide in the drive.

Black Swamp.—Very little work has been done here during the latter part of the year, in the way of developing the lodes, as early in the year Messrs. Reid & Co., Messrs. Burke & Co., Messrs. Swyny & Co., and Messrs. Prager & Co., let their blocks on certain terms to some Sydney people with a view to selling, but after a great lot of fuss it has resulted in the works carried on last year being stopped and the agreement broken, so the owners of the blocks will have again to work themselves.

Silent Grove.—Messrs. Swanson & Co. have not done anything worthy of note on their block during the year.

The Silent Grove Company after sinking a few feet during the early part of the year have left off working for a time.

The Basaltic Hill, in the neighbourhood of Silent Grove—where Messrs. Flannery & Co. took up considerable areas, as did also two or three other parties—has been prospected to a considerable extent. In all the shafts tin was found to be present, but it was impossible to ascertain the depth of the wash as the water would not allow the prospectors to bottom. The wash appeared to be exceedingly rich, but when sluiced and what was thought to be good tin was sent to the smelting works, it was discovered that only about half of it was tin, the rest being some foreign matter, which is difficult if not impossible to separate from the tin ore, but the prospectors are in hopes that as they get down to the bottom (which I fear they cannot do without machinery), the quality of wash will improve.

Mole Yard Creek.—Only a few Chinese are now working here.

Near to Black Swamp Messrs. D. Murphy & Co. have been prospecting on some land for which they made application for lease, and have sunk 10 feet in very hard country, but on a lode 10 feet wide, with stone containing tin on each side.

Scrubby Gully.—There is not anything fresh to mention in this locality. Chinese are still the only parties working.

Flaggy Creek.—Mr. Halkett has had to leave the block he held through his health necessitating his going away from the district.

Jno. Goggin has done a little prospecting and surfacing.

Bullock Swamp.—Mr. Jno. Cumberton has been working away contentedly on the land he has held for years.

Messrs. Jno. Moore & Co.'s and Mr. Jno. Rossi's blocks have changed hands, and are now being worked by the Dolcoth Tin-mining Company, under the management of Captain M. Byrant, who is doing a lot of prospecting, which has resulted in his opening up an excellent looking lode. The deepest shaft is down 18 feet, but a considerable amount of cross cutting has been done. The locality is well situated for a battery site, as there is a good supply of water, which by a little deepening can be made never failing.

F. G. Taylor has been prospecting part of the time on his blocks, and rest of the year he has been surfacing.

Butler's Tin-mining Company.—This is the 60-acre block I described last year as Messrs. Butler & Co.'s; has been under the management of Captain Matthew Bryant, who has had a considerable number of men employed, chiefly in proving the extent and quality of the reef on the block, which has been well done, and shows to, I think, the mind of any practical man, that there is quite enough to warrant the crection of a good battery.

No. 1 shaft at the north-east boundary has been sunk 42 feet, from which they have driven along the lode (4 feet wide) a distance of 42 feet.

No. 2 shaft, about the centre of the section, is down 88 feet, and a drive has been put in 30 feet; here the lode is 23 feet wide, and the stone very good, but that on the sides of the lode is the best quality.

No. 3 shaft is 80 feet deep, in which the lode averages about 4 feet wide all the way down. An intermediate shaft has been sunk 40 feet on a fine wide reef. Some galena is found in patches in some places in the shafts I have been referring to. A drive has been put into the side of the hill from where the crushing plant is intended to be erected, for a distance of 220 feet, which is within 20 feet of No. 2 shaft, and will be continued for the purpose of testing the lode, and being used eventually for trucking out the stone to the battery. Over 320 tons of stone are now on grass ready for crushing. A good road has been made to the place, and comfortable iron house built for the manager; also, some men's huts have been constructed. A plan of workings is herewith. [*Plan No. 1.*]

Messrs. T. M'Guinness and party, who own the adjoining block to the above, have put down a prospecting shaft about 30 feet, in which the lode is between 4 and 5 feet wide all the way from the surface; the soil on the surface and sides of the lode will pay well for sluicing as it averages 3 lbs. of good tin to the dish.

Mr. Alfred Ottery has done a large amount of work during the year on his 50-acre block; a shaft has been put down 33 feet, and a drive put in at the bottom of shaft 8 feet in the lode, in a south-westerly direction, where it averages 5 feet wide. About 13 tons of good-looking stone are on the surface ready to be taken away for crushing. At the side of the hill a cut has been put in about 12 feet following the lode which I have just mentioned, and is on the top of the hill.

Carpet

Carpet Snake Creek.—There is a little work being done, but not worth describing.

The Gulf.—Messrs. Cadell & Hall's blocks on Deep-sinker's Creek are being worked by some Chinese tributors, who have raised during the year about 6 tons of ore.

The Red Cross is still being worked, but very little energy has been displayed in developing the lode.

The Gulf Lode Company's property is in much the same condition as last year, as lode-work has not been resumed, and the same will apply to The Yankee and Brown's Gully blocks.

There are several miners working in different places in the locality under mineral licenses, but are unable to do much good as water is very scarce, for they have not had a good fall of rain during the last two years.

Vegetable Creek.—C. Scherf's block is being worked pretty well the same as last year.

Messrs. Hall Brothers' block is being worked by a few Chinese tributors.

The Nonpareil.—This old property has been continuously worked by Chinese during the year, who obtained a few tons of ore.

Messrs. Cadell & Gordon's blocks 125-6, in the parish of Scone, have yielded some 6 or 7 tons of ore.

Rose Valley.—Mr. F. J. Kelly, after working for several months on block 47, had to abandon the ground; although he did a large amount of prospecting he could not find any tin in payable quantities.

The Wesley Company's property, now managed by Mr. James Sales, has yielded 234 tons of ore during the year. About forty men have been employed by the various tributors, who are mentioned in their order below. Messrs. O'Rook & Co. are on good wash at a depth of 163 feet and have been doing well during the year.

Messrs. Webb & Co. are raising good wash from 63 feet sinking out of a narrow gutter, the extent of which is not known.

Messrs. Ryan and Co. are driving on shallow lead at a depth of 50 feet, where they are getting payable wash.

Messrs. Fry and Company are driving through a hard bar at 114 feet sinking, in the hope of reaching the deep ground.

Messrs. Ryley and Company are raising good wash from 65 feet sinking out of the shallow lead near to Messrs. O'Rook and Company's tribute. Two more parties, the manager informed me, are about taking some blocks on tribute.

Mr. Reynolds' 320-acre block (Monk Hopton), where I mentioned last year, prospecting had been suspended owing to the pumping appliances not being equal to the large amount of water struck, has not been prospected further, as the gentleman who has it on royalty has as yet been unable to get pumps capable of reducing the water.

Mr. Kennedy's 320-acre conditional purchase, north of Monk Hopton, and adjoining it, is being well prospected by Messrs. J. Gibson and Company, who (as fortunately most miners are) is very sanguine of finding payable tin. Work has been carried on for seven or eight months, during which time, up to the end of the year, three shafts have been sunk, one 149 feet through hard basalt and drift. At 135 feet a thin vein of wash was met with, the additional 14 feet was sunk for a well hole, from where the wash was met with. They drove along the run in a northerly direction some 20 feet, at which point it cut out, so the shaft was abandoned, and the prospectors went to the shallow ground, where they followed the bottom to a depth of 32½ feet. No. 2 shaft was then sunk, revealing good wash, although in small quantities, the bottom dipping very rapidly (about 3 inches to the foot) in a northerly direction. No. 3 shaft was sunk 66 feet north of No. 2, to a depth of 40 feet, through hard basalt; but only a trace of tin could be obtained, and a few sandstone boulders were found. No. 4 shaft is being sunk about west-north-west from the last; they are down 93 feet, 60 of which are through very hard basalt.

Messrs. Fox and Company's 17½ acres tribute has been worked constantly during the year, but the Company have had a hard time of it (for I may say that they have been prospecting nearly the whole year), as no sooner would a rich run of wash be struck than it would be cut out by a bar of granite, and that gone through, the same thing would again occur; but the party are in great hopes of soon getting on the run Mr. Flannery was working.

Messrs. Bailey and Company have done a lot of prospecting during the year; they put in 800 feet of drives, and one shaft has been sunk to a depth of 137 feet, and the whole workings have been well timbered. They obtained between 40 and 50 tons of tin.

Messrs. Cunneen and Company have, at a depth of 118 feet, got very good wash 12 to 15 inches in depth; the water shaft is down 175 feet, from whence they have put in a drive to tap the water from the lower level, which is now 150 feet long. The whole of the workings are well timbered. The party have been working during the last four and a-half years, and deserve very great credit for their perseverance; six shafts, besides what I have just named, were put down to the water level through hard blue rock; but they had to be abandoned owing to the water being too much for them to master without the aid of machinery.

II. Jew's tribute to John Lennon.—Work has been carried on with considerable energy. He is down about 130 feet to the water level, of which 70 feet was through very hard basalt, and he is at present waiting for the loan of a boring machine, which Mr. Flannery has kindly promised to lend him.

Messrs. Moran and McIntyre have put down three shafts to the water level, but had to abandon them, as they could not master the water. The water has, however, been reduced in shafts by 11 feet through Mr. Fanning pumping on the adjoining land.

Mr. H. Gordon's No. 3 block.—Messrs. Flannery and Company have been very busily engaged in prospecting during the year, and have bottomed five shafts without getting tin; but they are still prospecting from west to east, across the basalt, in hopes of striking the run which, it is thought from the formation of the land, to run through the block. The shafts put down average 100 feet in depth, 40 feet of which are through basalt, 20 feet of pipeclay, and 40 feet of fine drift and water without a trace of tin. In order to get through the drift, Mr. Flannery ingeniously made an iron box, so constructed as to be easily taken to pieces; it is forced down the shaft as work progresses by means of screw jacks followed by the timbering; as the screw-jacks, of which there are six constantly at work, force the box down far enough to admit of another set of timber put in, the screws are removed and then again placed in position against the last fitted in. Sometimes the sand regularly boils up under the boxes into the shaft. They have been pumping night and day for months with a "Deane" pump, which has been throwing water at the rate of 9,000 gallons per hour,

hour, in spite of which it has only reduced the water 15 feet, leaving yet 35 feet in the shaft (pump shaft). It is considered that they are not yet on the deepest run. The box I have mentioned is the only means by which they could get through the water and sand, and is the first of the kind ever introduced into New England. Owing to the large cost of botloming in the way I have described, a boring machine has been introduced which is working most satisfactorily. When once payable tin is struck they will put down a permanent shaft at the western side of the block, which is the lowest, and an engine with two pumps will be started so as to drain the whole ground.

No. 2 block.—One shaft is down 203 feet to the bottom, but no tin found. They sank through about 14 feet of black "pug" at the bottom of the shaft; when in full work the pump throws about 7,000 gallons of water per hour, but they have been temporarily stopped pending the results of the operations on No. 3 block, but the engine and plant are on the ground and ready to commence when wanted.

Messrs. Barry & Co. are now on a rich run about 3 feet high. They have had during the year as much as 9 feet of very good wash, and now are driving in the hopes of getting more of the same; their sinking averages 62 feet, to which depth four shafts have been put down. Since my last report they have driven about 300 feet and washed about 40 tons of ore.

Bourke & Co., tributors to Mr. Hammond, on block 53, are on a good lead which averages about 5 feet in depth. They have been working only about five months, and were fortunate enough to strike the run in the first shaft; they are now very busily engaged in preparing the washing plant; they have about 300 loads on grass, which will I think go $1\frac{1}{2}$ cwt. to the load.

Mr. Flannery is prospecting on Mr. Gordon's block 747, and sunk 45 feet through rotten basalt, which is getting harder as they get down. From the position of the land it is reasonable to expect that they will get good tin. On the block adjoining this a shaft has been sunk to a depth of 74 feet in hard basalt, but the strange feature connected with the sinking was that they had first to go through 9 feet of trap rock, indicating that there must have been an overflow on the top of the basalt, from the ridge near.

Block 309.—Messrs. Reid & Flannery are sinking with indications which they consider encouraging. They are down 115 feet in No. 2 shaft; No. 1 was bottomed at 110 feet.

Messrs. Witherden & Company are still prospecting, and have done a lot of work, but water prevented them from bottoming.

The Chance Company have been sinking on their block in the parish of Hamilton; they have put down five shafts, ranging in depth from 30 feet to 148 feet; 74 feet of the deepest are through hard basalt rock, and the remaining half was through decomposed basalt and pipeclay with leaf impressions and timber; the deepest shaft has been well timbered and centered from the surface to the bottom. I think that this Company is likely to strike the run, as according to the geological formations and general indications it may reasonably be expected to pass through the block.

Captain Wesley has been prospecting on block 137, in the parish of Arvid. The shaft is now down 280 feet through hard rock, in sinking which a little wash was passed through, but as it was not bottom they continued sinking to the depth mentioned; work has been suspended during the last few months, and the mouth of the shaft filled in to keep it secure.

Kangaroo Flat.—Messrs. Hall Bros. have had two men prospecting on their Louisa Mine since February last, during which time they sank 110 feet through hard basalt, and drove 135 feet in the hope of striking the run of wash, as they believe that there is something better than that which is left nicely opened up after last year's work, in another part of the block; in a southerly direction and northerly they have driven 64 feet, in the first 16 feet of which they got wash averaging from 12 to 20 inches in depth, which will go about 7 oz. to the dish; they are also putting in chambers in some of the old shafts.

H. Stormer and Sons' No. 1 shaft is down 64 feet in block 111, parish of Arvid, from which depth they have driven 135 feet on trap rock bottom, but no tin.

No. 2 shaft is down 74 feet, 15 feet of which was through hard rock, and required shooting, while the whole of No. 1 shaft was easy sinking; in going down they passed through a little wash at a depth of 25 feet; from the bottom of the shaft they drove 350 feet west, the whole length of which they found good wash ranging in thickness from 4 to 12 inches.

No. 3 shaft is down 54 feet in No. 12 block, but not bottomed owing to the rock being too hard.

No. 4 shaft is down 96 feet, from which depth they have driven 157 feet in a southerly direction, so as to cut No. 3 shaft for air, but they are not on tin.

No. 5 shaft, on block 112, is down 70 feet, which was bottom, but no wash.

No. 6 shaft, on block 208, is down 64 feet, through hard basalt, but not yet bottomed. The shaft has to be closely timbered and puddled to keep back the water, as it is found troublesome here.

Rocky Creek.—H. Jew and Co. have been working for some months in easily worked ground, at 22 feet sinking; they got fair wash, which will average 60 lb. to load, and runs from 9 to 2 inches in depth.

Messrs. Colgan Bros. are working at 56 feet sinking, through rotten basalt, at which depth they are on fair wash, varying from 8 to 15 inches in depth. The ground is easily worked, only props and cap pieces being wanted.

Messrs. Hopper and Botts are only prospecting at present, and have not yet found anything good.

Messrs. Reid and Co. are working blocks 126-7, in which No. 1 shaft is down 109 feet, but had to be abandoned as it fell in, owing to its not having been timbered.

No. 2 shaft is down 110 feet on bottom, and no tin; but they are now driving to the deep ground.

The whole of the workings, except No. 1 shaft, are well timbered, excepting 14 feet of the shaft, which are through hard basalt. They have driven about 80 feet, and expect to strike the lead in about 40 feet.

Messrs. Hall Bros. (Grampians) and the Rothschild Property, are worked much the same as last year, excepting that Messrs. Moore and Co's. property is now being worked chiefly where the large dam was situated, it having been cut away so as to make that part available for the tributors.

Silver.

Parish of Strathbogie North, County of Gough, on Little Plant Creek.—I am very pleased to be able to say that work has been commenced on the prospectors' blocks, Nos. 1, 2, and 3, as they did so immediately the leases arrived. Mr. Flannery, whose name is so well-known here in mining matters, and is one of the owners of the land, has the management of the operations now going on, which fact is a sufficient guarantee that

that it will be managed in a proper manner. In my report of the 9th of July last, informing you of the discovery of the lode, I stated that it was promising looking. It gives me very great satisfaction now to inform you that as the work progresses the lode improves, tending to prove that at least the hopes of the Prospectors are very likely to be realized, and that it will turn out really a valuable property.

I consider that several of the blocks south of Nos. 1, 2, and 3, and one or two north of them, will also be valuable holdings, and worth the expenditure of capital. It is, of course, quite impossible to speak with certainty at present.

Parish of Gordon, County of Gough, south of the Severn River.—Messrs. Pomroy and Reynolds have sunk five shafts on their blocks on which there are five lodes running parallel with each other, bearing north east and south-west, about 4 feet wide, with exceedingly promising looking stone.

D. M'Konzie and Company (Prospector's Block) have sunk one shaft 12 feet deep, in which a good-looking lode, 4 feet wide, is visible, showing galena, copper, &c. Two other holes have been sunk north of the shaft mentioned above to depths of 4 and 8 feet respectively, showing the same lode.

J. D. O'Donoghue's block is also very promising looking. The blow has been opened out to a depth of about 5 feet, where galena in large quantities is visible.

Assays of stone, obtained from the parish of Gordon, went upwards of 90 oz. of silver to the ton of ore. The country is of basalt, slate, and trap formation.

The new discovery of silver at Pye's Creek, which flows into the Mole River, in the parish of Annandale, county of Clive, has every appearance of turning out rich. It is not very safe to rely on assays; but the stone tested from that part went as much as 2,075 oz. of silver to the ton. I think, with such returns before us, it is reasonable to expect a good future in the locality, as silver producing, and that those who are the applicants for the leases may be congratulated on their having secured the land they hold under application to lease. All the blocks taken up in the parish of Wellington Vale during the silver excitement about six months since have been allowed to fall through.

Tin obtained during the year 1884:—

NEW ENGLAND DISTRICT—BOOROOK DIVISION.

(J. P. Curran, Mining Registrar.)

I HAVE the honor to forward my Annual Report for the year just ended on the present state and future prospects of the mining industry in the Boorook Division. I regret to say that, contrary to expectations at the commencement of the year, the returns from the various mining localities of the amount of metal has been very unsatisfactory. The cause of the decrease in the amount of gold won has hitherto been ascribed to the scarcity of water for sluicing purposes; but I am of opinion that the mines are becoming exhausted, and unless some new discoveries are made the output of metal will be much less during the incoming year.

The works of the Surface Hill Sluicing Company at Poverty Point, which have been looked forward to with much interest, have not made any progress during the year. A change for the better, however, is expected concerning this property, as the original shareholders in the Company have transferred the whole of their interest to Messrs. Batt and Purves, of Sydney. Several thousands of pounds have been expended in connection with this property in the construction of reservoirs, races, fluming, and other appliances for hydraulic sluicing, but up to the present time no satisfactory results have been obtained by this system of working. It has been proved that the greater part of the gold-bearing matter is too hard to be reduced by water, and machinery for the crushing of the stuff is required. Suspension of the labour conditions has been granted by the Warden for three months, to enable the proprietors to make arrangements for the erection of suitable machinery for profitably working this mine.

About 6 miles south of the Surface Hill Company's property, Mr. Thomas Horton is erecting a ten-stamp battery for the purpose of working a dyke of the same kind as that at Poverty Point, which has been secured by a lease of 4 acres. This dyke is about 50 feet wide, and the depth is unknown. From assays made of the auriferous matter it is estimated to yield $\frac{1}{2}$ oz. per ton. This Mr. Horton feels confident will pay well, as the stuff can be so easily and cheaply obtained. Mr. Horton's experience of gold and silver mining in this district extends over a period of twenty years, during which time he has been the leading spirit in various mining enterprises, and was the first to open up and profitably work the well-known Boorook silver mines. For the last three years he has been prospecting for gold at and around Poverty Point, and has at length succeeded in opening up something that will probably give a fresh impetus to gold-mining in the neighbourhood of which it is situated.

At Lunatic Reefs mining seems to be in a languishing state. With the exception of fossicking nothing much has been done during the year. Mr. Molyneaux, of Sydney, has applied for three gold-mining leases on the old Lunatic Reef, but nothing will be done until the leases are granted.

At Pretty Gully a few men are employed in alluvial mining, some of them making fair wages, whilst others are only making a bare living. The quartz-reefs in this neighbourhood are now attracting some attention. The absence of machinery is a great drawback to mining in this part of the division. If a small mill were erected it would be the means of opening up some of the reefs here, which I am sure if worked systematically would pay handsomely; and, besides, it would assist prospecting very much, as at present no means are at hand for having a parcel of stone tested without carrying it a distance of 30 miles.

Respecting the silver mines at Boorook, I cannot give you more information than that contained in the report kindly furnished by Mr. T. G. Davey, under whose able management operations at the Golden Age Mine, and at the Boorook Silver Reduction Works, have been carried out; and I cannot do better than forward Mr. Davey's report in the form in which it has been handed to me.

From various sources I learn that the amount of gold won is 738 oz., but have not ascertained the value. The quantity of silver won, 34,000 oz.

Subjoined

Subjoined is report furnished by Mr. Davey :—

“ The Mining-Registrar, Boorook.

“ Sir,

“ Boorook, 31st December, 1884.

“ I have much pleasure in forwarding you the following brief report on the work done during the past year at the Golden Age and the Addison silver mines, under my supervision, in this district.

“ At the Golden Age claim, property of the Messrs. Hall Bros., work has been carried on uninterruptedly, night and day, throughout the year. The two shafts have been sunk to a further depth of, No. 1, 120 feet, and No. 2, 100 feet, making a total depth, on the underlay, of 300 feet and 260 feet respectively.

“ In my last year's report I informed you that the formation consisted of metamorphic slate. Since then we have passed through a variety of strata. At a depth of 200 feet we met with a stratum of greenstone, traversed, at intervals, by thin layers of pipeclay and chloritic shale, and measuring 30 feet in thickness. We then intersected a bed of black slate, and ultimately, at a further depth of 50 feet, we reached a strong syenite formation, into which we have sunk 20 feet.

“ The lode, which bears N. 29° E. and has an underlay to the W. of 74°, has yielded throughout a fair quantity of rich silver ore. In one place it is 19 feet wide, and literally covered with scales of flexible sulphide of silver.

“ The lode is composed of quartz, a little shale, chlorite, iron and copper pyrites, zinc blende (in abundance), a little galena at intervals, and sulphide of silver. The silver occurs principally as flexible sulphide, but the pyrites and blende are also auro-argentiferous; the galena contains little silver.

The principal and richest deposits of silver ore have been found in the slate strata. The lode continued massive and highly mineralised in the greenstone, but carried much less silver. On reaching the syenite the lode became small and comparatively poor, but it is possible that in depth large deposits of rich silver ore may be found at the junction of the slate and syenite formations, as was the case at the famous Comstock lode.

“ During the year 600 tons of ore have been raised from this mine, of which 390 tons have been treated at the reduction works. The plant on this claim consists of two portable engines of 6-horse power and 4-horse power respectively, one strong horse whim, winding gear, smithy, stables, horses sheds, &c. There are thirty-five men employed. I estimate the ore at surface to contain about 8,000 ozs. of silver and 80 ozs. of gold. Work is still being carried on expeditiously.

“ The Addison claim, Messrs. Hall Bros., is situated at about half-a-mile S. of the Golden Age. The shaft at this claim has been sunk to a further depth of 60 feet, the total depth being 107 feet.

“ The lode in this claim lies in a syenite formation and is composed principally of quartz and chlorite. It is not so highly mineralised as the Golden Age reef, but in places carries an abundance of zinc blende, together with iron and copper pyrites, and a little galena and sulphide of silver. Large and rich deposits of chloride and sulphide of silver were found near the surface at the Addison, but, unfortunately in depth, the lode has not been so productive. There is a large massive lode at the bottom, and, although poor at present, I think it highly probable that at a greater depth there still remain rich deposits to be discovered. A large amount of work has been done here up to September last, when operations were suspended in consequence of influx of water. About 50 tons of rich ore have been raised, of which 37 tons were treated at the reduction works. The strike of the lode is due north, and the dip slightly west. Seven men were employed up to September. I estimate the quantity of silver at surface to be about 1,000 oz.

“ At the Reduction works operations were resumed in May, and continued uninterruptedly until the Christmas vacations. As soon as the necessary repairs are completed, operations will again commence.

During the year 427 tons of ore have been treated, as also about 200 tons of poor tailings. The total yield of silver from the above has been 34,000 oz., and of fine gold 243 oz. The average yield per ton of ore has therefore been about 72 ozs., and that of tailings 15 ozs. of silver.

“ The silver is extracted from the ore by the roasting, chlorination, and amalgamation process.

“ The plant consists of two double bed reverberatory furnaces for roasting and chlorinising, four Wheeler's pans, two Denny's pans, one Berdan pan, one 24-horse power engine, a battery of ten head of stampers, concentrating plant, one Marsden's pulverizer, large circular sieve and feeder, tailings pits (mason work), retorts, laboratory, and assay office, &c. Total value of plant, £9,000.

“ The above plant is arranged to treat over 2,000 tons of the most refractory silver ores per annum.

“ Hoping the above notes may be of some service to you,

“ I remain, &c.,

“ THOS. G. DAVEY, Superintendent,
“ Metallurgist, Analyst, and Assayer.”

NEW ENGLAND DISTRICT—WILSON'S DOWNFALL DIVISION.

(*J. G. Draper, Mining Registrar.*)

In accordance with instructions issued from the Department of Mines, Sydney, I beg to submit the following Report for the information of the Honorable the Secretary for Mines, having lately been appointed to the office of Mining Registrar.

I am informed upon good authority that there is no material falling off in the quantity of tin ore raised on those mines; in fact it seems that there is a slight increase of that of the previous year, which I will endeavour to show later on, although the miners, which are principally Chinese, have a good deal to contend with, chiefly the want of water. As mentioned in previous reports, the tin ore found on this field is very patchy, and with the exception of the Lady Lisgar claim, the property of R. W. Robertson, it is chiefly worked by mineral license. A few claims which are worked on tribute, one of which leased by Mr. D. McAlister, and worked by a party of eight Chinese. They have only been at work a short time, and expect it to realize well, when they get sufficient water for washing.

The workings are on an average 20 feet deep, 60 feet in width, with depth of wash about 6 inches. On Ruby Creek some of the claims appear to be turning out very fair tin, and others are about worked out, as are also adjoining claims in the Colony of Queensland. The horizontal windmill, erected by a man named Allson on New Zealand Gully, has proved a failure, it being unfit to answer the purpose it was intended for. A Chinaman named Tommy Cook applied for a lease of two blocks of 20 acres each on Nelson's Swamp. After going to a good deal of expense to give it a trial, found that it would not pay, whereas the claim below, owned by Mr. T. O. Griffiths, was turning out good tin. Messrs. McGrath and Hogan intend shortly

shortly to prospect in some of the ridges, when I have no doubt they may chance upon something worth recording, as it is the opinion of several experienced miners that there are good indications of lodes, but want of capital being the drawback.

There is no increase in the number of miners on Maryland Creek, 20 Chinese and three Europeans being the total engaged there. They are making fair wages.

The average number of miners on this field for 1884 is 300 Chinese and 60 Europeans, showing a decrease of 20 in the latter, but none in the former.

The quantity of tin ore obtained during the year is 490 tons, of the value of £20,580 on the ground, being an increase of 40 tons raised compared with that of the previous year. During the six months I have been here I sold 46 mineral licenses and two business licenses, and received three applications for mineral leases. The late Mining Registrar also disposed of 39 mineral licenses, and five business licenses, and received one application for mineral lease, making a total of 85 mineral licenses and seven business licenses and four applications received for mineral leases.

In conclusion, I beg to state that there have been no accidents here during the past six months.

NEW ENGLAND DISTRICT—DALMORTON DIVISION.

W. T. Poole, Mining Registrar.

DURING the year I have issued 16 miners' rights and 2 business licenses. Nothing of any consequence has been done in alluvial mining. A few parties have been prospecting the heads of different creeks in the vicinity, but have not found anything payable. It is impossible to say what amount of gold has been won from this source, but I estimate it at 100 oz.

Quartz-mining may be said to be looking up, as the Union Gold-mining Company (limited,) after doing a good deal of dead work dam-making, cutting race, and road-making, have got their mine in something like working order. A shaft has been sunk 30 feet on the Sir Hercules Reef, a trial crushing of 5 tons giving half an ounce per ton. A tunnel has also been driven about 80 feet, from which two crushings have been obtained, one lot of 38 tons giving 13 dwt. per ton, the next lot of 52 tons giving 18½ dwt. per ton. There is about 80 tons more at grass, and the machine is now engaged crushing a portion of this lot, but I do not expect it to be finished in time for this report. A crushing of 20 tons from the Union Reef gave 11½ dwt. per ton. Stone is now being taken out of this reef, and will be crushed after the Sir Hercules stone is put through.

NEW ENGLAND DISTRICT—SOLFERINO DIVISION.

(Robt. Wilkinson, Mining Registrar.)

IN submitting my Report for past year I have the honor to state that mining matters have been very dull, more particularly in regard to the quantity of gold won in my division in regard to quartz-reefing, but it is a very hard matter to find out the exact returns; in fact it seems to be the object with a good many to keep their doings quite dark to the general public; however you will note by the returns attached that from one buyer here there has gone through his hands 150 oz. 15 dwt. worth of gold, obtained from alluviums, and only some 22 oz. of reef gold, the latter only being from one party.

To give a small outline of workings of Solferino field I will begin with the No. 4 North Garibaldi party's claim, of 10 shareholders (6 backers and 4 workers) as this is the only mine that has been continuously at work this past four years, and by what I have been able to learn they have met with very poor success this past year, not having been able to gather a sufficient quantity of specimens together to make a parcel to send to Mint for treatment, as is usual custom when they have something like 300 lb. weight, and they therefore have not been able to realize anything to recoup them for their outlay. Still I believe they have some 80 or 100 lb. weight of rich stone on hand, which it is estimated ought to turn out 40 oz. gold. This party has been stopping down from upper levels the early part of year, but of late are sinking a winze in their bottom drive upon shoot of gold, in hopes of tracing it to a good patch in deep ground.

The next claim at work to the foregoing is held and worked by one man, who has spent most of his time putting in a shallow drive on course of reef, being known as No. 1 North Garibaldi; and it was this man who got the patch of 22 oz., as mentioned in returns, but the general opinion is that he had as much again, but it did not come to light on account of the circumstances that he was placed in. I am given to understand that he has within the last day or two disposed of half the mine to another miner, and they will work together, bringing in a lower tunnel to previous one, to strike the same vein lower down.

The Old Prospector's claim, Garibaldi, was again taken up during the year, under 5-acre lease, and the working shareholders have ever since been doing nothing but dead work in shape of making dam, clearing out and timbering mine, &c., and probably will take them some three to four months more before they will be in a position to commence operations properly.

At Solferino proper the Band of Hope is now being worked by two parties, one of them being an old identity connected with the claim, a Mr. J. F. Adam, who has secured a 3-acre lease on Prospectors. It was only lately taken up by him, and therefore has done but very little, but it is to be hoped that his present attempt will prove a little more productive than his previous ones, as they were all very fruitless.

The other party is under style of A. Tamini and others, they also having a 3-acre-lease, but has been much more fortunate than his neighbour, although he has been longer at work, having managed to put together some 80 lb. of specimens, which have gone to Sydney for crushing at Mint.

As it will appear by the above there are 5 different claims at work upon two lines of reef, and which is more than has been for some three years.

Alluvial mining in this division has just about held its own with previous 3 or 4 years, nothing of a fresh nature having turned up, and still same complaints *re* scarcity of water, one party in particular having had wash-dirt stacked on Bulldog for last 7 or 8 months awaiting water to wash.

In concluding this uninteresting Report I may add that there have been 46 mining rights issued and 5 applications for gold-mining leases received during year.

CLARENCE AND RICHMOND DISTRICT—GRAFTON DIVISION.

(Mr. Warden M'Dougall, P.M., Grafton.)

I HAVE the honor now to forward you my Annual Report as Warden of the Clarence and Richmond Mining District.

During the past year mining matters in this district generally have not received much attention and very little has been done to develop the reefs either at Nana Creek, Chambene, or Dalmorton. I

I have in consequence not thought it necessary to incur the expense attending my visits to those places, and have obtained some information relative to the work being carried on at Nana Creek from M. Lyons, mining agent at Grafton, and Mr. Poole, Mining Registrar at Dalmorton, as follows:—

That 50 tons of stone from the 15-acre lease at Nana Creek were crushed at the Dargue battery which yielded only about 4 oz. of gold, in consequence of which the work at the mine has for a time at least ceased.

At the Illabo Reef work is still going on. The shaft has been put down 140 feet, with reef 6 inches wide, with fair show of gold.

From the Lady Mary Reef, 20 tons of stone have been crushed at the Dargue battery, yielding 1½ oz. gold per ton.

At the Hidden Treasure Prospecting Claim, about 6 miles from Nana Creek, over a very rough road, a battery has been erected by the Nana Creek Quartz-crushing Company at which about 250 tons of stone have been crushed during the year, yielding an average of 1¼ oz. of gold to the ton, and about 40 tons are at grass ready for crushing as soon as the holidays are over. Work is being actively carried on in this claim in sinking shafts and putting in a tunnel, &c., and appears at present to be one of the most prosperous claims on Nana Creek Gold-field.

Fifty tons of stone were crushed from the Nymboida Reef, about 2 miles distant from the Hidden Treasure, at the Company's battery there which yielded over an ounce of gold to the ton, and 20 tons of stone from the Waratah gave 1 oz. 12 dwt. of gold to the ton.

The Eureka claim, near the Hidden Treasure, has lately been taken up by Tranter and party, as also the Advance Australia, and work is being carried on with vigour.

At Dalmorton the only reefs that are being worked are the Sir Hercules and Union Reefs, about 6 miles from Dalmorton in a south-easterly direction.

I have written to the Mining Registrars at Dalmorton and Nana Creek requesting them to give me a detailed account of the gold obtained in their districts as far as possible with the other information they have to supply me with at the end of the year.

At Chambene Reefs nothing whatever is being done to my knowledge, or in any other part of this Mining District.

CLARENCE AND RICHMOND DISTRICT—LISMORE DIVISION.

(*Mr. Warden Bray, Lismore.*)

I do myself the honor to report for your information that the mining in this district is of a most limited character; in fact, none at all, except for coal.

Messrs. Allingham and Company hold a mineral license, but are opening up a coal-mine on the mineral conditional purchase at Swan Bay.

Mr. Green also holds a mineral license, and obtained a protection order over certain other lands at Swan Bay; but I am informed that this land has been abandoned.

No miners' rights whatever have been issued, and there is no mining except as stated.

CLARENCE AND RICHMOND DISTRICT—NANA CREEK DIVISION.

(*George Geddes, Mining Registrar.*)

In keeping with instructions contained in advice of the 6th November last, from the Under Secretary of the Mining Department, I do myself the honor to transmit my Report for the past year for the information of the Honorable the Minister for Mines of the several claims which have been, and are now being worked.

Hidden Treasure Gold-mining Company Prospecting Claim, Nana Creek.—There is a shaft down 126 feet, with a tunnel in of 103 feet, cutting the reef, which runs about east and west at the level. A drive is in 75 feet along the line of reef. The reef is 2 feet wide. Work suspended for the present, the Company contemplating putting in a tunnel to catch the reef at a greater depth. From this mine 60 tons of stone yielded 16 dwt. per ton. On the 23rd July 80 tons from this reef gave 13 dwt. to the ton. The stone is poor at present, still there are good indications of its improving.

The two undermentioned reefs are on the same Company's ground.

Bangalow.—The bearing of this reef is north-east by south-west. Shaft down 47 feet. One lot of 55 tons of stone was crushed on the 6th September, and yielded 1 oz. 4 dwt. per ton. The reef is 3 feet wide.

Laura.—The bearing of this reef is the same as the Bangalow drive, 30 feet in on the reef. On the 7th November 30 tons of stone were crushed, giving 1 oz. 7 dwt. per ton. Both these reefs have gold in them; but as they go down have got poorer. It is confidently expected that they will improve. Four miners are now constantly employed, and for a length of time the works have been vigorously pushed ahead.

Waratah, 7 miles from Nana Creek, adjoining the Nymboida, Neill and party.—This ground was some time back worked by them, but is now abandoned, they not being satisfied with the result of past crushing, quantity of gold obtained being only 11 dwt. to the ton, and when expenses are considered they said would not pay.

Waratah No. 1, on same ground as the Waratah, W. Bourne and party.—This reef runs north and south, width about 8 inches, depth of shaft 30 feet. Gold got from the surface; 19 tons of stone crushed for 31 oz. 15 dwt. retorted gold, being at the rate of 1 oz. 13 dwt. 10 gr. to the ton. Work is being continued in this claim.

Advance Australia, near about 2 miles from T. Wilkinson's claim at Little Plain Creek (Charles Spurling and party).—This reef runs north and south, depth of shaft 70 feet. A tunnel of about 40 feet is driven in so as to meet the reef when the main shaft is deepened. The reef is small, say 3 to 4 inches well defined, showing gold all the way down. The tunnel is to be continued, with the view to obtain a crushing at an early date. There are six or seven other reefs in the vicinity which have not hitherto paid for working, but now it is determined upon to send the stone to the Nana Creek Quartz Crushing Company's machine the expenses will be reduced by one-half the former cost. Some 4 tons of stone are now at grass.

Nymboida, about 7 miles from Nana Creek, A. W. Nystron and party.—This reef runs north and south. Depth of perpendicular shaft 55 feet, width of reef about 3 feet, as near as they can judge. Are much troubled with water, being soaked from the hill. Gold found all the way down, but only payable at the 55 feet.

No.

No. 2 shaft, depth about 40 feet on the underlay; water there also; reef averages in thickness 4 feet. Its bearing is nearly north and south. The last crushing of 50 tons yielded 61 oz. 8 dwt. 12 gr., being at the rate of 1 oz. 4 dwt. 14 gr. to the ton. Stone has been obtained from this claim giving 2 oz. 10 dwt. odd per ton, and it is generally looked upon here as a valuable property. There are 40 tons of stone at grass to be put through the Company's machine at expiration of the Christmas holidays, when work will be resumed.

Illabo, Eleven-tree Creek, Alex. Stout and Jas. Ross, lease applied for. This reef runs north and south; depth of shaft 153 feet. Along the line of reef at the 100-foot level there are two drives, one north 25 feet, and one south 32 feet. At the bottom of the shaft the reef is about 8 inches in thickness. It has been followed all the way down, and is nearly perpendicular. Gold from the surface; the stone improving. The last crushing of 25 tons, I am informed, gave 19 dwt. 12 gr.; but that does not bear out statement received from Dargue and Company's manager, at which machine the stone went through. The greatest difficulty the owners have to contend with is the foul air so frequently found in the shaft, but this they expect to overcome. Mr. Stout tells me there is a big blow of stone north and south in the claim, which, in his opinion, according to the underlay, should nearly cut the bottom of the shaft at the present depth.

Homeward Bound, Tallewidgen Creek, John Cowley and party.—There are several reefs in this ground, and their bearing is north-east and south-west. The shaft is down 75 feet. Reef on an average 2 feet thick, and traced from the surface.

Rise and Shine, Cowling and party.—Shaft 51 feet deep. Reef averages 1 foot 5 inches in thickness. On the 28th July 16½ tons of stone were crushed at J. Dargue and Company's machine, giving a return of about 1 oz. 13 dwt. of retorted gold per ton. From the same heap 2 tons were sent for crushing and assay to the Sydney Mint, and the return was 6 oz. 14 dwt., or 3 oz. 7 dwt. per ton. There have been eight shafts sunk on this property and sinking operations comprise some 400 feet in prospecting these two reefs, and they are all more or less gold-bearing.

Lady Matilda, Nana Creek, F. W. Chapman and Company.—This claim was worked for a short time by J. Dargue and another, and 6 tons of stone gave 2 oz. 16 dwt. 12 gr. retorted gold. It is now idle, the return not thought sufficient to warrant them in prosecuting the work.

Eureka, 4 miles west of Nana Creek.—James Tranter has applied for a 1-acre lease. A shaft is sunk 50 feet. Reef 6 to 8 inches wide, bearing nearly north and south. There are 7½ tons of stone at grass, to be crushed beginning of the new year. A fair yield expected.

Lady Mary, Little Plain Creek, about 8 miles north-west of Nana Creek, under lease to Thomas Wilkinson and party. Depth shaft about 50 feet. Reef averages about 1 foot 8 inches in thickness, and bears north and south. The work done latterly has been stoping chiefly. Stone carries good gold, and the claim is reckoned a profitable one. The returns average about 1 oz. 4 dwt. 5 gr. per ton.

Fifteen-acre Lease, Nana Creek, J. Driscoll and party, lease applied for.—Shaft down 90 feet. Reef 2 feet 6 inches in width, bearing north-east by south-west and well formed the whole distance down, and is perpendicular. From the claim 60 tons stone were taken and crushed on the 6th December, yielding only 4 oz. 12 dwt. This poor result after six or seven weeks' labour and outlay has thus caused the owners much disappointment, and it is therefore, I believe their intention not to work it again.

Machinery.—The same two batteries as mentioned by me in my report for the year 1883 are still upon the field and have been working through the present year.

Nana Creek Quartz-crushing Company's Battery is a 15-stamper one, works but 10, with an engine of 15 horse-power. The value of the plant is about £3,500, and is in good order. In connection therewith are employed: manager, engineer, feeder-boy at the blankets, three men cutting and carting wood, drawing quartz, and as occasion may require them one or two more for outside work. It started work in July last, and the annexed returns give particulars of all crushings. On reference to the report of the directors issued in November last I find that it sets forth their entire approval of how the work of the Company has so far been carried out. Crushing ceased on the 7th November, for repairs, &c., and also on account of there not being water sufficient to replenish the boiler. The absence of rain caused the creek to dry up. Should rain come crushing will be proceeded with immediately after the holidays, and there are now 40 tons at grass to be operated upon.

Lady Matilda Battery, Josh. Dargue and Company.—This consists of 10-stampers, but fifteen can be used if necessary; engine 14 horse-power. The plant is in efficient working order, and valued at £3,000. The annexed returns give the quantities of stone crushed and the yield during the year. When at work four men are employed.

The returns from the Nana Creek Quartz-crushing Company's Battery are as follows:—

Tons		oz.	dwt.	gr.
225Hidden Treasure Gold-mining Company.....	209	0	0
50Nymboida.....	61	10	0

I regret to state that the yield of gold during the present year is less than that of 1883, by nearly 150 ounces. This does not proclaim the gold is not here, but can be readily accounted for, thus:—Many miners have discontinued work, the result of their crushings not being by them deemed satisfactory.

There have been three applications for gold-mining leases, and those being worked are the Illabo and Eureka. The Fifteen-acre Lease, I think will be abandoned.

During the year I issued 26 miners' rights, and 3 business licenses, but no mineral licenses. Many of the miners working on the field, when in Grafton obtain their rights from the Mining Registrar there, and that very considerably reduces my issue.

That many more claims are not being worked is much to be regretted. Several owners of claims have been almost continuously at work raising what in many places would be considered first-class paying stone, but not so here, as the returns, after paying carting from £1 to 30s. per ton, and crushing 17s. 6d. per ton, &c., are not sufficiently remunerative for the labour and other expenses attendant upon getting the gold, the price ranging from £3 7s. per ounce upwards. All the claims being quartz-reefs, many of them excessively hard, the miners are compelled to use a large quantity of powder in their work, and all things considered they conclude that it is too costly. That there is abundance of gold in this locality is an accepted fact, and the depression which unfortunately at present exists, but which I think will be only temporary, is mainly traceable to the absence of capital and confidence in the field. As to the former, that means a considerable outlay 'ere the true state of the field can be known. If those interested in mining matters would only form themselves into Companies and have the ground thoroughly tested in deep-sinking the resources of the field would soon be developed, and thus they would not only be benefited but the whole district. And from what I have seen I am persuaded that the yield of gold would be largely increased, and the miners generally would willingly redouble their efforts to push things ahead. As it is, many of the old hands are still plodding on at their work, having every confidence that matters will 'ere long mend, and things in general become prosperous.

CLARENCE AND RICHMOND DISTRICT—GRAFTON DIVISION.

(*W. Clarke, Mining Registrar.*)

I ISSUED 54 miners' rights, 4 mineral licenses, and 2 business licenses, and registered the following claims:—1 quartz protection area, and 2 ordinary quartz claims at the Mann River. The return of gold is compiled from information obtained from the Banks, and contains that won in other divisions.

CLARENCE AND RICHMOND DISTRICT—LISMORE DIVISION.

(*C. Coghlan, Mining Registrar.*)

I DO myself the honor to report for your information that mining operations in this division of the Richmond are confined to prospecting for coal. That three parties have been working pretty continuously during the past half-year sinking prospecting shafts, with the view of proving whether payable coal-seams exist on the Lower Richmond; but no report of the result has been received. It is, however, very generally believed that good samples of coal have been found near a locality known as Swan Bay, on the Lower Richmond River.

ALBERT DISTRICT—SILVERTON DIVISION.

(*Mr. Warden W. Brown, P.M., Silvertton.*)

SINCE my appointment as Warden and Mining Registrar of the Silvertton Division of the Albert Mining District in June last, two very able reports have been furnished you as to extent and probable resources of this vast argentiferous tract of country, the first by Mr. C. S. Wilkinson, the eminent Government Geologist, the second by Mr. Harrie Wood, the Under Secretary for Mines, both these gentlemen having visited the field during the past year. I know of nothing to add as regards the subjects dealt with by those gentlemen that would likely be of general interest, so will at once briefly deal with facts and results actually obtained from the field.

1. The total amount of revenue received on behalf of the mining interest in this office during the past year was £11,672 12s. 6d. Monthly receipts are shown on paper attached, marked A. During the same period 654 mining lease applications were received (458 since 1st July); this would give an area of about 26,000 acres of land under application to lease. 1,222 mineral licenses, 937 business licenses, and 114 miners' rights were issued during the year 1884.

2. The quantity of ore which is known to have left the field, according to the export returns furnished by the local Customs officer, is 4,500 tons, valued at £118,748. To this must be added the very large quantities of extremely rich ore now lying at the different mines awaiting transit to Terowie. I think I am fully justified in putting the actual output from all mines for the year at 6,000 tons.

Several of the mines which have been more fully developed, more particularly the Day Dream, belonging to the B.R.S.M. Co., are looking remarkably well. The number of men employed, depths of workings, &c., on this and other mines will be found on the attached reports kindly furnished me by the different mining managers. Wherever water can be obtained prospecting is still going on, and weekly rich finds of silver ore are spoken of. Miners and others seem more anxious to develop the resources of the field than was apparent some few months back. Large numbers of claim-holders have sent small parcels of ore away (from 5 to 10 tons) for treatment, from which, if satisfactory results are obtained, and there is very little reason to doubt their being so, will put new life and energy into the working miner.

During the year the first crushing plant was erected on the field by Messrs. Thompson and Company. It consists of a 6-horse-power engine, with Chilian rollers; the intention of the proprietors is to thoroughly mix the ore by crushing it, and after either to purchase or make advances, according to the value by assay. This ought to be an advantage to the working miner, enabling him to get speedy returns for his labour. Between 22nd October and 20th December, 30 tons were operated on, valued at £2,000.

Until the present time very little other than pure prospecting has been done on a large proportion of the land occupied, but as the leases are now being issued which will compel the labour conditions to be complied with, and satisfactory results having been obtained from I believe all mines that have pushed the work ahead, I think we may fully anticipate a tenfold increase in the output of ore during the present year.

Acting

Acting under instructions received, the police have, within the last few days, taken a rough census of the population of Silverton, which is now given at 1,745. These combined with the new and rising township of Purnamoota, the villages of Lake's Camp and Mount Gipps, at which places considerable numbers are gathered together, with the large number of miners scattered wherever water can be found over the vast area of this field, must bring the present population of the Barrier Ranges up to fully 4,000 persons. Great fears were entertained that the water supply would be insufficient to support so large a population during the summer months, but I am happy to state up to this date (10/1/85) no scarcity has been felt.

In conclusion, I may state that in my opinion the permanence, even the very existence of this field, entirely depends on an adequate supply of water for domestic purposes being provided at all the mining centres. This I believe could be accomplished by excavating large tanks, which I would strongly recommend should be at once proceeded with if funds can be secured for the work.

ALBERT DISTRICT—MILPARINKA DIVISION.

(*Mr. Warden C. M'A. King, P.M., Milparinka.*)

I HAVE the honor to hand you herewith my Annual Report for the year 1884.

During the first five months of the year mining was comparatively at a standstill in consequence of the continued dry weather. Dry-blowing being the only method used for separating the gold; but by this means upwards of 800 ounces were recovered and forwarded to Wilcannia by police escort on the 1st May. In the latter end of May 2 inches of rain (nearly fell at Tiboooburra and Milparinka—but there was not any at Mount Brown—which enabled the miners to start their puddling-machines, and finish washing the dirt they had been so long watching and waiting to realize upon, and which realized from 1½ to 3 dwt. to the load or ton. In the month of June there was over an inch of rain, and in October there was a general rain all over the district, falling so heavily at Mount Brown (which part of the field had not previously been visited by rain) as to wash away, with one or two exceptions, all the dams and reservoirs. The miners were thus enabled to finish up all their wash dirt, and many of them have left the field, whilst a few new faces have made their appearance.

In the month of November a second escort took to Wilcannia 979 ounces of gold, making in all for the year, 1,779 oz.; but no doubt a much larger quantity has been obtained, as it is known that many large parcels have been sent away by private hands, and through the Post Office.

Very little work has been done at the quartz-reefs on Whittabrinna Creek, and with the exception of the Whittabrinna Company and the Elizabeth Company, the claims are all under suspension. 71 tons of stone have been crushed for the Whittabrinna Company, yielding 66 oz. of retorted gold. The Whittabrinna South has crushed 57 tons for 21½ oz. of gold, and the Elizabeth claim 3½ tons for 1 oz. 13 dwts. This stone has been taken from the surface to 160 feet deep, and it is hoped that richer stone will be obtained at a greater depth. This portion of the gold-field labours under many disadvantages, the principal one being the very great want of water. The November rains filled the Whittabrinna Company's dam, but it rapidly evaporated, and soaked away into the shafts, and through the slaty bottom. Want of labour, and consequently the high rate of wages demanded by miners (£3 per week), also militates against the advantageous working of these mines.

The population of this district may be roughly estimated at 500, and of this not more than 100 are actually engaged in mining pursuits. Milparinka, with a population of about 120, supports three stone hotels, three stores, and the usual artisans found in a small country township.

The health of the residents in this district has been exceptionally good, with the exception of two deaths from typhoid fever. In the early part of the year there has been no sickness of any consequence.

The future prospects of this division of the Albert Gold-field do not seem to be very encouraging. No new ground has been discovered, and although the October and November rains were sufficient to enable prospecting parties to operate, nothing has resulted, and the greater attractions offered by Silverton have prevented many of the old hands from returning here after the rain; but while gold can be found on the surface of the ground, and at depths never more than 18 to 20 feet, there will always be a small mining population floating about here.

The Milparinka waterhole has afforded sufficient water for the use of the inhabitants and stock purposes since it so opportunely filled in May last. The water has now receded within the fence, and the Government Hill will again have to be resorted to for stock purposes. There is sufficient water in the water-hole to last till April next.

In consequence of the falling in of the sides of the Government well the stone tank became un-serviceable, and, finding the well could not be repaired, it was decided to put down a new well, and a trial shaft struck water at 110 feet, and a contract has lately been let for the construction of a permanent well, which, however, cannot be completed this summer. The old well will therefore have to be resorted to.

On a reference to my Meteorological Journal, appended hereto, it will be seen that the rainfall has been far below the yearly average, only 4.79 points having fallen through the year, and this quantity has been distributed through every month in the year except January.

ALBERT DISTRICT—WILCANNIA DIVISION.

(Mr. Warden Gower, P.M., Wilcannia.)

IN reply to your letter of 29th ultimo, requesting a report on the mining industry in Wilcannia District for the year 1884, I do myself the honor to inform you that since Silvertown has been added to the Menindie district, now no mining of any kind is carried on in the Wilcannia portion of the Albert Gold-field, and it is now a purely pastoral district.

I sold twenty-nine business and twenty-five mineral licenses during the year to persons on their road to Silvertown, and five applications for mineral lease were lodged in this office before the Silvertown Warden's office was established.

ALBERT DISTRICT—MOUNT BROWNE DIVISION.

(E. C. King, Mining Registrar.)

HEREWITH I have the honor to hand you my Annual Report of the Mount Browne Division of the Albert Gold-field.

Since 1st January, 1884, there have only been 310 miners' rights and 78 business licenses issued on the field, which shows a decrease of 207 miners' rights and 23 business licenses.

During 1884 there has been very little work done in connection with mining, owing to the scarcity of water. No fresh ground has been opened out, and no new discoveries made as yet.

In May and June there were partial showers, in all 2 inches, which filled some of the dams and tanks, and most of the miners were enabled to wash part of the tailings stacked by them from the dry blowing, which averaged about $1\frac{1}{2}$ dwt. to the ton. Up till May the principal gold was won by dry blowing alone, and likewise from July to December, when a general rain filled dams and tanks and waterholes, swept most of the dams at Mount Browne away. This was caused by a terrific storm which passed over Mount Browne, and lasted about twenty minutes. There have been very few fresh heaps of washdirt stacked, no new dams or reservoirs constructed. There are now three wells being sunk by miners, in the hope of striking water, both for domestic and mining purposes,—one at Mount Browne, one at Easter Monday and one about 1 mile south-east of Milparinka, which now shows every indication of a lead of gold being struck. They are down about 120 feet.

At Mount Browne there has been an average of about thirty miners, who have been making a living at dry blowing the surface, and good wages are being made by crushing the cement found at a depth of about 20 feet, and contains good shotty gold; but the rude process of crushing which they are obliged to use does not give the true yield, and a lot of gold is lost. There has been only one puddling machine at work at Mount Browne, namely, Martin Berg and party's, at Four-mile, and the dirt puddled has been principally tailings and surface clay, which averages $1\frac{1}{2}$ dwt. to the load of 15 cwt. Some very coarse gold has been found on Stringer's Hill, at a depth of about 3 feet 6 inches; also at the Six-mile about the same depth.

At Albert (The Reefs) there has been very little work done, most of the claims have been abandoned, and the others have been suspended from work on the grounds of there being no water to carry on the working. In November the Whittabrinna Company's dam was filled; but owing to the dryness and open nature of the ground it has already wasted away. The crushing plant has done very little work, as there has been only a few tons of stone raised, and what has been crushed turned out too poor to pay. The only two claims at work were the Whittabrinna Company's and the Elizabeth Prospecting claim, which shows a very rich leader about $1\frac{1}{2}$ inch thick, which they are now following to strike the reef. The gold found in the leader is of such a fine quality that it does not always sink in water. The owners of this claim are trying to float a Company to send the stone to England to have it crushed, as the ordinary crushing does not save the gold.

At Tibooburra there has been steady dry blowing carried on, and in May most of the tanks and dams were filled, which enabled the puddlers to work and wash up their dirt, which turned out quite equal to their expectations. They have also washed a quantity of tailings, which average $1\frac{1}{2}$ dwt. to the load. In April a very large nugget was found on the surface at Nuggetty Gully, weighing 15 oz. It was found within $\frac{1}{4}$ of a mile from where a 12-oz. one was found about four years ago.

At Good Friday there are a few miners at work prospecting, but as there is no water there, and they have to dry blow, nothing of any consequence as has yet been found, but several small nuggets have been found about there, and all the gold that has been dry blown is very coarse and shotty; the want of water considerably debars the place from being thoroughly prospected.

Conan

COBAR DISTRICT—HILLSTON DIVISION.

(Mr. Warden O'Neill, P.M., Hillston.)

I must apologise for not having sooner furnished you with my Report for 1884 upon mining matters in this district. The delay has arisen from my inability to get particulars until now from the New Mount Hope Copper-mining Company.

The reports to hand are as follow, viz. :—

(1.) *New Mount Hope Copper-mining Company.*

Locality—Mount Hope, county of Blaxland, distant from Hillston 65 miles.
 Number employed—236.
 Description of machinery—One 12 h.p. engine.
 Value of plant—£12,000, not including the value of stores and fuel.
 Quantity of ore raised—6,149 of 20%; 1,426 of 12%; 757 of 6%.
 Quantity smelted—1,258 tons.
 Value—£54,000.
 Depth of shaft—340 feet.
 Depth of deepest level—270 feet.
 Width of lode—10 to 50 feet.
 Dip or underlay—South.
 Bearing or strike—North and south.

I am not in a position to say anything as to the permanency of this mine, although there is a prevalent feeling in existence, so I hear, that it cannot last much longer. The town itself is dependent mainly upon the mine—that is, upon the employes,—and business, from what I notice, is not on a sound basis. Until the permanency of the mines becomes an established fact, I would not advise the Government to go to much expense in respect to the making of tanks, &c., for general water supply.

(2.) *Great Central Copper-mining Company.*

Locality—South Mount Hope, county of Blaxland, distant from Hillston 60 miles.
 Number employed—150 men and boys.
 Description of machinery—One 8 h.p. engine, and three reverberatory furnaces.
 Value of plant—£4,000.
 Quantity of copper raised—2,221 tons; smelted in reverberatory furnaces.
 Quantity won—336 tons; fine copper.
 Value—£14,784.
 Depth of shaft—123 feet, 82 feet, 107 feet, 107 feet, 150 feet, 60 feet, 206 feet, respectively.
 Depth of deepest level—150 feet.
 Lode—defined.
 Width—1 foot to 13 feet.
 Dip or underlay—West.
 Bearing or strike—North.

This mine, I think, will eventually prove to be a good one. It only requires to have more capital thrown into its working. The population here is not quite so large as at Mount Hope, but I am under the impression that before long it will take the lead of that locality.

(3.) Brown's mine, which adjoins the Great Central, is at present at a stand-still owing, as I hear, to legal difficulties in connection with the estate of the late Mr. R. A. Brown. These difficulties, however, are being got rid of, and in all probability the mine will shortly be purchased for the purpose of being opened up. It is highly spoken of, and I hope in my next report to be able to say something favourable of it.

A short while ago there was some agitation going on for bringing the Forbes to Wilcannia Railway into Mount Hope. There is nothing at present, as respects the character of the country or the condition of mining industry, to warrant the Government in looking favourably upon such a movement, and I would advise great caution in the matter.

(4.) *Grigg's Gold-mining Company, late Foster's Reef Company.*

Locality—Lake Cudgellico, county of Dowling, 65 miles from Hillston.
 Description of mine—Quartz lodes.
 Number employed—Eight men at present.
 Depth of shaft—200 feet.
 Water in shaft—160 feet.
 Winding and pumping machinery—Erected; pumping going on.
 Crushing machinery—In course of erection.
 Value of plant—£1,500.

This mine has been abandoned for five years, but now a new Company has been formed to rework it. A lease has been applied for, and operations underground will proceed as soon as the water is pumped out.

Lake Cudgellico, owing to the severe droughts for the past few years, has been completely dry, and wells have had to be sunk in the bed of the lake in order to obtain a supply of water for domestic purposes and for stock. Some steps should be taken to have water from the Lachlan River, when flooded, brought into the lake and kept there.

The character of the country is pretty, and the soil is admirably adapted for the growth of crops. In the neighbourhood of the town there is a good sprinkling of selectors, who, notwithstanding the dry seasons and the grasshopper visitation, seem to be in fair circumstances.

COBAR DISTRICT—COBAR DIVISION.

(F. L. Osborn, Mining Registrar.)

I HAVE the honor to report, so far as gold-mining operations are concerned in this district for the year 1884, they have been nil, occasioned by the severe drought experienced for the last three years.

The copper-mines in this district are not in the flourishing condition they were last year, as the low price of copper at the present time scarcely allowed mining companies to pay working expenses; but as soon

as

as a rise in the price of copper takes place, I have no doubt that the mines in this division will again prove to be the most remunerative in the Colony, particularly when the railway taps this part of the country, there being several other mines that cannot be worked at present through great expense of carriage, &c.

16 miners' rights and 4 mineral licenses have been issued.

1 gold-mining lease and 1 mineral lease has been applied for.

COBAR DISTRICT—HILLSTON DIVISION.

(*M. Hogan, Mining Registrar.*)

WITH the exception of the reopening of the old Foster's Reef Mine, at Lake Cudgellico, by Grigg's Gold-mining Company, I have nothing to report upon in the shape of new mining industry in this district. The Warden has furnished you with particulars as supplied by the mining manager, who is spoken of as a thoroughly practical man. He takes a hopeful view of the mine, and judging by his past experience in Victoria, and by the manner in which he is proceeding to work, I imagine he calculates upon success.

During the past year there were in operation in Mr. Warden O'Neill's district, 47 miners' rights, 26 business licenses, and 4 mineral licenses. These were obtained respectively from Hillston, Mount Hope, and Forbes; but for last month (January) I issued 3 business licenses and 31 miners' rights, thus showing that the business is coming here, as being the near place, rather than to Forbes.

I hope next year, when I am better up in the work, to be able to send you a better report; and perhaps I may be then in a better position to gain a knowledge of the mineral character of the country generally.

I may add, by way of suggestion, that the police might be asked to see that no persons hold land for business purposes without having first taken out rights or licenses.

INSPECTOR OF MINES REPORT.

In submitting my Annual Report for the year 1884 I have the honor to acknowledge with thanks the assistance rendered me by Wardens and Mining Registrars by complying with the contents of the circular letter forwarded to them from this Department, in giving early notice of all accidents occurring in their respective districts at or in connection with mines other than coal or shale mines.

I also beg to thank the above-mentioned officers for furnishing me with particulars of the non-compliance of the labour conditions of the several gold and mineral leases during my visit of inspection of the mines in their respective districts.

The following is the number of accidents which have been reported on by Mining Registrars during the year 1884, as having occurred in their respective districts in mines other than coal and shale mines:—

No. of Accidents.	Date.	Name of Mine or Company.	Locality.	Persons killed.	Persons seriously injured.	Occupation.	Cause of death or injury.	Fatal.				Non-fatal.
								Fall of earth.	Falling down shaft.	Using iron pickler with powder.	Timber thrown down shaft.	
1	Jan. 16	Marquis of Lorne.	Nundle	(F. Woodley J. Sanders)	Minor	Soverely cut and bruised by drawing with iron pickler a charge of powder which had missed fire.	1
2	" 16	"		"	Killed by fall of earth	1
3	Feb. 1	Frogmore Copper-mine	Frogmore..	M. Bourke	"	Killed by drawing with iron pickler a charge of powder which had missed fire.	1
4	Mar. 1	Burrage Copper-mine.	Burrage ..	J. Hodge	"	Killed by drawing with iron pickler a charge of powder which had missed fire.	1
5	Mar. 13	Donkey Hill..	Adelong ..	W. Jones	"	Killed by falling down a shaft 90 feet in depth.	..	1
6	Mar. 18	Great Cobar Copper-mine.	Cobar	H. Evans	"	Killed by falling down a winze (shaft in drive) 30 feet in depth	..	1
7	Aug. 25	F. Sheppard's mine.	Adelong ..	G. Meadow	"	Killed by timber being thrown down a shaft, at the bottom of which Meadow stood.	1
8	Oct. 1	No. 1 North Myall Plain.	Tomingley	S. Golding	"	Killed by fall of earth in excavating tank in connection with mine.
9	Dec. 11	Eureka Mine	Mount Macdonald.	T. Thomas	"	Killed by falling off a rope down a shaft 60 feet in depth.	..	1
								2	3	1	1	2

Accidents were reported by the Mining Registrar of Barmedman, where a person named Thomas Doble slightly injured his hand whilst oiling machinery, and from Kiandra, where five men were slightly injured whilst removing some obstruction in the tunnel part of a tail-race, when a heavy flow of water broke on them, sweeping them down the tail-race, but the men were all at work again at the time these accidents were reported to the Department.

During the year 1884 I have inspected the following named mining districts:—Adelong, Temora, Barmedman, Young, and Grenfell, in the South; Mudgee, Gulgong, Cudgegong, Mitchell's Creek, Carcoar, Mount M'Donald, Blayney, Orange, Lucknow, Ophir, and Melrose, in the West; Girilambone, Cobar, Nymagee, Mount Hope, and Great Central, in the North-west; and Copeland, Nowendoc, Walcha, Uralla, Armidale, Cope's Creek, Elsmore, Vegetable Creek, Glen Innes, Bingera, and Scone, in the North.

GOLD.

Adelong is still keeping up its reputation as being so far the most permanent quartz-reefing district in New South Wales. Payable gold is obtained below the perpendicular depth of 1,000 feet from surface; although it may be said that this is only the case on the Victoria Hill, it nevertheless points to the probability that if deep sinking was adhered to in other parts of the Adelong district, results may prove beneficial to all parties concerned. The quartz-crushing and gold-saving appliances at Adelong are of a very superior kind, and certainly not inferior to any in Australia. Generally the richest quartz on this gold-field is heavily impregnated with iron and arsenical pyrites, copper and bismuth, as well as zincblende and galena, which base metals have a tendency of sickening the mercury used for amalgamating purposes. Quartz-crushers have therefore

therefore been compelled by force of circumstances to erect such appliances as would separate the base metals from the quartz brought to their crushing mills with the least possible loss of gold or mercury. In this they have been equal to the task, and have brought their appliances to such a perfection that instead of as formerly the loss of mercury being 1 lb. of mercury for each ton of quartz crushed the loss of mercury is now reduced to almost a minimum. In the alluvial, Mr. A. D. Sheppard's mine and Travers Jones mine on the Adelong Creek, near Grahamstown, are still carrying on extensive mining operations, with apparently payable results. Both Companies deserve success for their enterprise and perseverance. Although no new discoveries have been made during the year 1884, still there are miles of auriferous and metalliferous country which is well worthy of a thorough prospecting.

Temora.

This gold-field, from which some portion of our mining community expected such great results, has dwindled down considerably, both in the yield of gold and population. My opinion, from the first time I visited Temora, has been that the quartz-reefs so far opened would not prove payable, but that narrow rich veins would be discovered at or near the alluvial workings along the valley out of which such heavy deposits of gold have been taken. It is quite evident that there is no continuous lead in the Temora valley, and hence miners must look for the source from which said valley received its payable auriferous deposits in the narrow quartz-veins from the brow of hills in the immediate vicinity of the alluvial workings, or in the alluvial itself. Nearly all the nuggets found appear as if they had been part and parcel of some narrow veins close at hand; few if any of the nuggets have a waterworn appearance. There is still ample room for prospecting in this district, and sooner or later the Temora gold-field may once more advance.

Barmedman

Was inspected by me in February. The population at that time was about 300, but has greatly diminished of late. With one or two exceptions the quartz-veins at Barmedman are very irregular; their strikes are almost all points of the compass; they occur in blocks or fragments of veins, and their very irregularity compels mining managers and miners to follow a system of fossicking rather than systematic mining.

The Barmedman United G.M.C. are still sinking and otherwise developing their mine; they have a 25-head crushing plant at their mine, and during the year 1884 crushed about 1,200 tons of quartz, yielding about 6 dwt. of gold per ton. In alluvial a little prospecting has been done during the year, but the drought has principally prevented a proper system of prospecting for alluvial gold to be carried on.

Burrangong (Young) Gold-field.

At the beginning of the year the Burrangong Gold-mining and Prospecting Company were working at their mine situated on the Burrangong Creek, about 3 miles north-west of the town of Young. Two shafts had been bottomed, each 80 feet in depth, and 74 feet apart from each other, payable gold having been obtained at the bottom of both. A 12-h.p. double cylinder portable engine drives the pumps in both shafts (the flow of water being very heavy) but had not sufficient power to do the winding; the latter was done by the slow process with horse and whim. The main or northern shaft had been opened out and driven north-north-west 47 feet, and was intended to connect the two shafts. Total length of drives, 69 feet; height, 5 feet, and width, 5 feet out of which 75 oz. 9 dwt. 17 gr. of gold, valued at £285 17s. 7d., were obtained. The gold seemed to be very evenly distributed through the wash, which rests on a soft granite bottom, and which is about 18 inches in thickness; but there is a little gold for several feet in height through the drift; hence the drift could be taken for the whole height of the drive and put through the sluice boxes. The lead has been named Minter's Lead, and it is likely to be worked for a considerable distance along the Burrangong valley. On the western side of this valley are several shallow, formerly rich, but now worked-out alluvial workings, tributaries or feeders to Minter's Lead; this lead, probably the main channel of the Burrangong or the Lambing Flat gold-field, is very wet, and too costly to work for the individual miner, or for the speculator who has not sufficient capital, or is not willing to erect sufficient powerful pumping and winding machinery.

Very little has been done in sluicing during the year owing to continued dry seasons, and very little has been done in quartz or alluvial mining. A quartz-reef, or rather quartz containing very rich gold, was found at Wombat, but it is likely only to be a patch, as years gone by patches similar to that found this year were of frequent occurrence; the quartz in which these patches of gold appear are generally of a very glossy nature, what miners would call very raw quartz, not likely to contain any mineral or metal in large quantities.

Grenfell.

The population of this once famous gold-field have emerged from a mining to an agricultural community. Very few miners are now at work at its former rich quartz-reefs or alluvial workings. There is, however, a great probability that these quartz-reefs will, by force of circumstances, again be taken up, and that by proper system and economy they will prove profitable investment for capital expended.

Carcoar.

Since my last inspection the Mount M'Donald gold-field has undergone a great change. At that time it existed on capital brought from Victoria, and money expended on a few of the numerous leases taken up, but since then some of the Companies have wholly or partially failed, in consequence of which nearly the whole of the gold-field has been left in the hands of the individual miners. It is a notorious fact that the Victorian capitalist or scientists have not introduced a better system for crushing, amalgamating, and gold-saving than those adopted for several years past on the gold-fields of New South Wales.

The gold at Mount M'Donald is found in short shoots or bunches; some of these bunches or fragments of quartz veins contain rich gold, generally with an east and west course. Some of the gold-mining leases are let on tribute, and in many instances where Companies failed, tributors, or the individual miners, obtained large returns. Several cases of this kind were brought under my notice at the time of my inspection, but I will only note one, thinking it sufficient for the purpose of this report. Three miners named Woodward, Lynch, and Tough, took a lease on tribute, known as the Woman's Lease. They went to work, employed wages men, and at the time of my inspection had, during seven months, netted £25 per man per week. I saw one crushing of 25 tons finished which yielded 200 oz. 10 dwt. or 8 oz. of gold per ton of quartz

The

The Balmoral and other tributors were also on fair gold.

Mr. Easedown, the energetic and very able manager of the Association ground, also obtained some highly payable quartz. He crushed at his large battery during the first four months of 1884, 789 tons of quartz yielding 1,192 oz. 6 dwt. of gold. The above yield would have been considerably increased, but owing to the severe and protracted drought mining and crushing was greatly retarded.

The Burnt Yard Mine is situated about 9 miles from Carcoar, and 3 miles from the Belubula River. The workings consist of a network of small quartz-veins with decomposed diorite, iron bands, and iron concretions, forming a dyke which is several yards in width. Over 2,000 tons of stuff had been crushed at the time of my inspection. There was a ten-stamp crushing plant in connecting with this mine about $\frac{1}{2}$ a mile distant, but is connected with the mine by iron tramline. The Company's main shaft is down about 500 feet. The whole of the workings is under the able management of Captain Maustaka.

The Frenchmen's is about 3 miles from the Burnt Yard Mine, on the banks of the Belubula River, and consist of quartz-reefs several feet in thickness, lying horizontally, of which several thousand tons had been crushed.

The Junction Mine.—This mine is situated at the junction of the Belubula River and Combing Creek; has been working for several years past with various success. There are several reefs overlaying each other in a horizontal position. Commencing on the surface there are two reefs, 1 foot and 3 feet respectively, next a layer of slate 12 feet thick, resting on a 6-ft. reef; this again rests on slate 12 feet thick, which overlays a reef 20 feet in thickness; again, a layer of slate 3 feet 6 inches in thickness, overlaying a reef 11 feet thick. Through the whole of these horizontal quartz-reefs and bands of slates vertical faults occur, consisting of diorite reefs from 9 to 12 feet in thickness. The Company have a 32-stamp battery worked by a turbine.

Blayney.

The Brown's Creek Gold-mining Company is still in full work; they have now worked down to the depth of 150 feet from surface, where the lode or dyke, which consists of clay, quartzite, limestone, flint, and other matters, is from 20 feet to 90 feet in width. 3 dwt. of gold per ton pays all expenses, a lesser yield paid dividends in times gone by, but the scarcity and high price of mining timber has considerably increased the expenditure in working this mine, every 4 feet or set of timber costing 5s. The mine is worked on the block system. Everything in and about the mine is in good condition and creditable to the management. The Company have now three large boilers, a 50-h.p., 12-h.p., and 8-h.p. engines, with fifty head of stamps; of which six batteries or thirty stamps are 5 cwt. each stamp, and twenty stamps are 8 cwt. each stamp, forty stamps were at work at the time of my inspection and the remaining ten stamps were to be started at an early date. There is also at work a plunger, a Tangye pump, and a draw lift. The blanketing tables at the battery are 40 feet in length; each table for each battery has six of Roberts' electric copper plates, and there are also four of Denny and Roberts' grinders and amalgamators to treat the blanketings. Mr. William Roberts is the general manager of the machinery and mine. Everything reasonable has been done by Captain John Smith and John Carry, mining and underground managers, for the prevention of accidents. Number of men employed in and about the mine and machinery is about 80. This is exclusive of wood and coal carters.

At the Forrest, about 12 miles from Blayney, the Great Extended Gold-mining Company are carrying on extensive alluvial gold-mining operations. Their main shaft is 230 feet in depth of which 225 feet had to be sunk through basalt which required blasting. The wash, which is cemented, averages about 20 inches in thickness, containing in addition to the gold fossil nuts, leaves and wood similar to those found at the Black Lead, Gulgong. Several hundred feet of drives had been driven, proving the lead on the eastern side fully 40 feet in width, and on the western side 80 feet had been driven across at the time of my visit.

The wash-dirt is crushed with a 9-stamp battery through fine gratings, and discharged on the usual mercury ripples and blanketing tables attached to crushing machines. By the courtesy of Mr. O'Shea, the managing director, residing on the mine, I am enabled to give the crushings and the yield of gold from wash-dirt raised from 14th January up to the day of my inspection, 12th April, 1884, as 858 tons of wash crushed yielding 712 oz. of gold which was payable. Four different pyritous veins have also been intersected in the alluvial workings, which, from assays made, have realized from 19 dwt. to 2 oz. 9 dwt. per ton.

The basalt which rested on the wash-dirt forms the roof of the workings, and tends largely to the reduction of expenditure as, with the exception of the main drives very little timber is required for the roof, and although the roof is wet single timbers (props) are sufficient. Ventilation is made complete to all parts of the mine by water jets of simple construction which discharge the water through one-sixteenth of an inch opening which forces the air through a 6-inch galvanised iron pipe. The jets receive their pressure from a 2-inch iron pipe connected with the top of the pump and leading down the shaft 230 feet perpendicular. The machinery consists of a 35-h.p. and 12-h.p. engines, a nine-stamp battery, and 10-inch pump; the latter works with a 4 $\frac{1}{2}$ feet stroke. The mine and machinery was, at the time of my inspection, under the able management of Mr. William Ovington, and everything in and about the mine and machinery was in good order and creditable to the management.

If this district was more thoroughly prospected, which, however, can only be done by the aid of capital, great results might be expected. Some two or three Companies were prospecting, and expected to carry on extensive mining operations before the end of the year.

Ophir.

At the Ophir gold-field there is an extensive area of basaltic country, well worthy of being prospected for payable auriferous drifts, although the patchy nature of the auriferous deposits, and the hard sinking generally met with, both in alluvial and quartz, will somewhat retard the progress of successful mining operations.

Near Slater's Hotel a Company, principally residents of Bathurst, have for several years past expended large sums of money in tunnelling into a basaltic hill opposite Murray's Hill; but it appeared to me, at the time of my inspection in May last, that by the indications in the face of the different drives leading from their tunnel, the Company will most likely not intersect any heavy auriferous drifts ahead of their present drives, but that whatever payable auriferous drifts there may be found will be on the siding of the hill nearest the gully which divides Slayter's and Murray's hills. The prospects of the Company were not

encouraging. At the Upper Ophir, Horrick's and party were also tunnelling under the basalt to, if possible, intersect auriferous drifts. A few persons were also at work near the Belmore Reefs and along the Ophir Creek.

A 15-stamp battery and a large reservoir were in course of erection by a Bathurst Company a few hundred yards from "Slater's Hotel," on Slater's freehold, and close to a reef, or rather large blow of quartz, which the Company intended to work. This blow of quartz, which has been named the Queen of the Ranges, contains a little gold, both in the quartz and the matrix associated with the quartz, but it will require the greatest possible economy and systematic working to make it a payable venture. The quartz appeared to me to contain too little mineral ever to pay.

At Lucas Gully very rich patches of gold have been obtained by Mr. R. Spencer, who manages for an Orange Company. The gold occurs in narrow horizontal quartz veins, which are met with between perpendicular walls of metamorphic rocks. The Belmore quartz-veins have also been rich; a thousand pounds worth of gold has often been taken out of a bucketful of stuff. These veins were lying idle; but it was intended to start work again at an early date.

The principal quartz reef or blow, known as the Bluff, is at or near the historical spot where Hargraves found the first gold, the discovery of which has been the principal cause of Australia's rapid advancement. Here a solid mass of quartz, several yards in thickness, and fully 100 feet in height, meet the eye. The quartz has a decidedly auriferous appearance, containing galena, iron, and arsenical pyrites, and probably a good percentage of silver. There is a very excellent site for quartz-crushing machinery near the Bluff; the quartz can be obtained in almost unlimited quantities, and if worked with a proper system and economy, a small percentage of gold per ton of quartz ought to give payable returns. The country between Ophir and Orange, a distance of about 18 miles, has an auriferous appearance, more especially so within a few miles of Orange, and on the estate known as Trewecke's.

Lucknow.

This famous gold-field has, through the great energy and perseverance of Mr. H. W. Newman, lately made considerable strides in the advancement of our mining industry, and instead of the deserted shafts, or miners' huts, which a few years ago forcibly reminded the visitor to Lucknow of its declining greatness, the working of extensive mining machinery can be heard, and newly-erected comfortable miners' houses can be seen in different directions.

The New Reform Gold-mining Company, which is under the able management of Mr. H. W. Newman, has been fully reported on by me in my annual report for 1883 as to geological formation, the treatment of the pyritous ores, and the machinery in connection with the mine. I can only add that the prospects of the mine looked rather better at my last than the previous visit of my inspection, and that I found everything in and about the mine and machinery in good order—a credit to the management.

Another mine adjoining the New Reform Gold-mining Company has been opened during this year, also under the management of Mr. H. W. Newman, and is named the Frederick Valley Gold-mining Company. This Company is composed of English capitalists, who have taken up a large area of land, which they intend to work extensively, and it is to be hoped for the benefit of our Colony at large that the results will be successful and that ample returns will be obtained for the capital invested. Machinery,—25 horse-power and 10 horse-power engine, ten head battery, and the usual gold saving appliances. A tramway, 700 feet in length, has been constructed along the mines in connection with the mine and machinery; a large dam has also been constructed of bricks and cement on the top of the hill, and the Company have adopted the plan of some of our copper-mines by building comfortable houses for the miners at work in their mine at a very low rental. I hope to be able to report still greater progress from the Lucknow Mines before the end of 1885.

Cudjgong.

The Rhobardah quartz-mines, which were inspected by me, are situated about $2\frac{1}{2}$ miles east of the township of Cudjgong. They consist of, at least, four parallel running veins, namely, the Blanche, the Cheshire, the Francke's, and the Abel. A tunnel had been driven into the hill by which the Blanche vein was intersected from mouth of tunnel about 150 feet, the vein measuring 3 feet in thickness, but of rather inferior quality and containing a large percentage of lime; the other abovementioned veins have also been sunk and driven on, but as far as I could see none of these quartz-veins presented very encouraging prospects. A 10 stamp battery had been bought, which it was intended to erect on the banks of the Cudjgong River within a short distance of the quartz-veins to be operated upon.

Gulgong.

In former reports I pointed out that this gold-field had received but very scant prospecting, and that if capital was judiciously invested by prospecting the lower basaltic covered parts of the Gulgong Leads, results would probably be such as to place Gulgong as the Ballarat of New South Wales. Extensive mining operations are now carried on in various parts of this gold-field, principally by the enterprise of Victorian capitalists. At Rouse Paddock, at the Black Lead, the Canadian and Britannia Leads near Home Rule, powerful pumping and winding machinery has been erected, and the theory that heavy deposits of alluvial gold existed in these valleys will now be thoroughly tested by practical results. Great credit is due to Messrs. Marshall & Co., and the Syndicates they represent, for their pluck in furnishing capital (and such large amounts) to thoroughly test these leads, for which they deserve every justifiable encouragement. Great credit is also due to Mr. Plunkett, J.P., of Gulgong, who never lost an opportunity for years past of placing before the public, in the press or otherwise, the supposed great wealth in the shape of deposits of gold still lying dormant in the Gulgong valleys. I sincerely hope that Mr. Plunkett's prognostications which coincides with my own opinion will be fully borne out by practical results. Several local Companies have also prosecuted mining operations on extensive scales, foremost of which is a Mudgee Company on the Canadian Lead which are likely to be repaid for their large capital laid out and the great difficulty they had to contend against in the early part of the year by the great flow of water in their mine. This difficulty has now been overcome and payable gold has been obtained during the last few months.

Quartz-mining has been dull of late, but sooner or later rich but narrow quartz-veins are almost certain to be discovered. Taking a general view of mining matters Gulgong has during the year 1884 made a decided step forward.

Denison

Denison and Stewart's Brook.

These gold mines are situated near the head of the Hunter River, about 40 miles from Scone, and consist mostly of quartz-veins, some of which yielded large patches of gold. None of these veins have been tested to any great depth, with the exception of Fuller's Reef. The geological formation is Devonian shale and carboniferous. Fossils of the latter formation were brought by me to our Museum of Mines. The auriferous veins generally occur in fragments or short shoots, and owing to the rugged country very little alluvial gold is obtainable. At Moonam Brook, on the Denison, very little mining has of late been carried on. The principal mines at present at work are the Boozer's and the Fuller's Reefs; the latter have a tunnel about 1,200 feet in length, out of which they crushed during the year 205 tons of quartz with a total yield of 199½ oz. of gold. The Boozer's new reef, discovered by a very intelligent and practical miner, crushed during the month of December 11 tons of quartz with a yield of 28 oz. 2 dwt. of gold; thickness of vein from 2 to 10 inches. Several other reefs had been at work, but at the time of my inspection they were lying idle. At Moonam Brook a 10 stamp crushing battery, worked by water power, has been erected, and is under the able management of Mr. Edmund Williams. Stewart's Brook is separated from the Denison by a high mountain range fully 1,800 feet in height, over which the traveller has to climb. The distance from the Denison to Stewart's Brook is about 6½ miles. Here, too, the geological formation is Devonian and carboniferous. Several quartz-veins have been worked, of which the Grosvenor Reef, the Mountain Maid, Just in Time, and the Maud Reef are the principal. The Just in Time completed a crushing of 3 tons quartz, yielding 17½ oz. of gold, and out of the Grosvenor Reef the manager, Mr. Grosvenor, informed me 570 tons of quartz were crushed, yielding 225½ oz. of gold. The greatest depth obtained is only 72 feet. There is a fine 5-stamp battery on Stewart's Brook worked by water power in connection with the Grosvenor mine but for the present at least there seems to be no sufficient quartz raised to keep this battery at work. If deeper sinking were prosecuted the results in the yield of gold would probably be better than that obtained in the shallow unsettled country. The total population of the Denison and Stewart's Brook is about 200.

Nowendoc.

This gold-field, in the heart of the New England mountains, is almost deserted; not more than a dozen men are working about the gullics. Very coarse gold was formerly obtained here, and there is no doubt rich quartz-reefs exist here, as several large quartz specimens have been obtained. A thorough systematic prospecting for reefs about the hills at or near Nowendoc is well worthy the attention of miners. A few parties of miners were at work between Nowendoc and Walcha, but with very little success.

Armidale.

The gold mines situated at Hillgrove, about 20 miles from Armidale, have been successfully worked during the year. The principal mine, named the Eleanora, has been dividend paying of late; it is situated on the highest peaks on the eastern side of the Falls. The lode consists of blue slates intersected by pieces of antimony, and a network of mere films of quartz veins containing gold associated with antimony. A granitic dyke resembling diorite divides the lode or crushing stuff. This dyke averages in thickness from 2 to 6 feet, the vein on each side occurring in irregular patches averaging from 6 inches to 3 feet; the walls of the lode are very broken, but as depth is reached the walls may become regular. During the first half year of 1884 the Eleanora Company crushed 1,576 tons of stuff, yielding 710 oz. 14 dwt. 23 gr. of gold, but losing by assay 1 oz. 1 dwt. of gold per ton of tailings, in addition to which the Company made a profit of £150 out of their antimony, and during the last half year the yield of gold per ton of stuff crushed has slightly increased, which has enabled the Company to pay dividends. The machinery consists of 12 h.p. engine, 10-stamp battery, shaking tables, and berdans; the whole of the mine and machinery is under the able management of Mr. T. D. Scouler, who for many years has managed some of the best crushing plants at Stawell, Victoria. Everything about the mine and machinery is in good order, and a credit to the management. On the western boundary of the Eleanora is the Garibaldi mine. Here the lode is larger, and as far as proven contains very little gold, although a good per-centage of antimony is obtainable. At the southern boundary of the Garibaldi mine is a break in the range, and a magnificent sight presents itself to the eye; a deep gulf fully 1,600 feet can be seen below, wherein Baker's Creek is flowing in a southerly direction.

North of the Eleanora is the Isabella mine, which in formation is similar to the former; the lode, including a dyke 5 feet wide, is about 15 feet in width, containing irregular bunches of antimony, and assays of gold which have been made, yielding over 1 oz. of gold per ton. The Isabella Gold-mining Company were erecting a quartz-crushing plant under the able management of a Mr. Mitchell. There are several other gold-bearing lodes, on which at the time of my inspection very little work was carried on.

Uralla.

Several small parties of miners are still making a living by sluicing when water is available, but the principal mining operations carried on in the district are by the Long Tunnel Gold-mining Company. This Company has been at work for several years past, without being successful. Their main tunnel is northerly from mouth of tunnel 1,800 in length; a branch tunnel has also been driven in a west north-west direction 630 feet in length, with a drive going easterly towards Mount Copeland 300 feet in length, which the manager, Mr. Betheras, informed me he intended extending an additional 130 feet, and hoped to be successful.

Bingera.

This gold-field is well known for its extraordinary rich deposits or patches of gold, as well as for its extensive diamond-bearing deposits.

The diamond-bearing drifts are situated about 7 miles southerly of Bingera, and occur in the Devonian or carboniferous formation. So far the diamonds have been found in the drifts and conglomerates near the surface, or in sinking from 2 to 3 feet in depth; a few isolated diamonds have been discovered in 50 feet sinking, but the principal deposits are found in a valley on the spurs and sidling of low-laying hills within a radius of about 4 miles; but it is but reasonable to suppose that extensive diamond deposits are likely to be discovered in the drifts along the banks of the Gwydir River, and in the basaltic mountainous country which, as far as can be seen, contains drift similar to the diamond-bearing drift at present found in this district. The diamonds so far found are small, but they have of late been classed at

Amsterdam

Amsterdam and London, and pronounced superior to the Cape (African) diamond. With these diamond-bearing drifts which consist of conglomerates, quartz, jasper, and other pebbles, are also associated tourmaline, topaz, garnet, zircon, sapphire, and other gems, but generally with the exception of the tourmaline they are so small as only to be classed as gem sand. The greatest drawback for the development of the diamond-mining industry in the Bingera district is the great scarcity of water near the mines, as the erection of dams and reservoirs have proved a partial failure, owing to the porous nature of the ground. The most speedy and economical plan for the supply of water for diamond-washing purposes would be to connect the mines with the Gwydir River, a distance of about $3\frac{1}{2}$ miles either by wire tram, or iron or steel tram-line. If this was done the drift could be brought at a very small cost to a never-failing supply of water where washing operations could be continually carried on.

At present there are only a few parties at work in search for diamonds, for which the Australian Diamond Company, Messrs. Powell & Co., and Messrs. Craddock & Co., are the principal.

The Australian Diamond Company have erected extensive diamond-saving appliances, and with a plentiful supply of water would be able to wash 200 loads in twenty-four hours; the appliances consist of two steel circular diamond savers and elevator, which are driven by a 12 horse-power engine. The diamond savers are constructed on the principle of pyrites-saving buddles and puddling machine combined. They discharge the lighter stuff and sludge by overflow in the centre, and the heavier stuff is retained in the outer circle of the machine; instead of harrows, square iron bars are fixed in the arms, which work the whole width of the circles and within almost a hair's breadth of the bottom of the machines. The *modus operandi* of washing the drift and saving the diamonds is as follow:—The stuff or drift to be washed is carted from the mine either by horse and dray, or by trucks on iron tramway, and thrown into a shoot; this shoot is connected by an iron grating with machine No. 1. Over this shoot all the stuff intended to be washed passes; the larger stones or lumps of conglomerates separate and fall on one side, whereas the finer stuff passes through the gratings into the machine. During the process of puddling No. 1 machine discharges the lighter stuff and sludge by a centre overflow into machine No. 2, which in turn discharges the sludge by a centre overflow into a well; out of which, however, the sludge is not allowed to escape, but is taken up by an elevator in buckets fastened to an endless rope or belt, and again discharged in No. 1 machine, by which means the water can be used several times; but the main object is to prevent (with the aid of sludge) the diamond drift to settle too tight in the machines. As soon as the stuff is puddled sufficiently clean it is taken out of the machines and put through an iron sieve and on a sorting table, where by hand labour the diamonds are separated from the tourmaline and other small gem stones.

Mr. Falk, the managing director of the above said Company, informed me that he washed out of 279 tons of drift 920 diamonds weighing $197\frac{3}{4}$ carats, valued at 22s. per carat.

Messrs. Powell & Co., and Messrs. Craddock & Co. have both struck the diamond drifts in deeper sinking; both parties have for a length of time done some *bona fide* prospecting.

It is to deeper ground and heavier deposits than hitherto obtained that the permanency of Bingera as a payable diamond-field will depend.

Mr. Charles Rogers, one of the oldest, and a very intelligent miner, has some diamond-saving appliances erected on the banks of the Gwydir River, about $3\frac{1}{2}$ miles from the mines. These appliances consist of a puddling machine, sieves, Hunt's pulsater or diamond-saving machine, and one of Willoughby's machine. Mr. Rogers kindly showed me a large number of small diamonds which he had obtained from near the surface.

GOLD

At Bobby Whitlow's Creek a few parties are at work, and some good quartz is being raised out of the Mountain Maid and Lady Mary mines.

Niel and party's claims at Upper Bingera, known as the Ballarat Reef, out of which such a large amount of gold (several thousand ounces) were obtained during the last two years, is now being tested at a greater depth, at the expense of Mr. A. S. Low, of Sydney, by No. 9 Government diamond-drill. It is to be hoped that Mr. Low's pluck and enterprise will be rewarded.

The quartz-veins at Upper Bingera occur in gossan lodes, and as stated in my former reports these gossan lodes are likely to turn into lodes of copper or copper pyrites.

In alluvial there are several places which ought to be prospected. A large flat leading from the Cemetery deserve especial attention. The gold, both in quartz and alluvial, has always been of a patchy nature, especially so in the serpentine formation. It is therefore but reasonable to suppose that many patches or deposits of gold will yet be discovered in the Bingera district.

Copeland.

Although mining matters on this gold-field are rather dull it cannot be said that this gold-field has been thoroughly prospected or systematically worked. Indications of the existence of auriferous quartz-veins are visible in all directions, but want of capital, and the expense of crushing and bringing the quartz from the mines to the crushing machines have at all times been a drawback to the proper development of this gold-field. The crushing and gold-mining appliances are also of a primitive kind. I might mention one or two mines out of many which are now temporarily idle, but which yielded large returns, and ought with a proper system of working given large returns to shareholders. One of these mines is the Burneal reef, about 18 miles from Copeland, midway between Cobark and Kerripit. There are at present two claims on gold. In the prospecting (Moore's) claim four different auriferous quartz-veins have already been discovered, varying from 4 to 24 inches in thickness. The geological formation is an altered sandstone. Moore's Company erected a small Chilian mill wherewith to crush their quartz, but without the aid of stamps. The consequence was that this Chilian mill, driven by water power, could only grind about four tons of quartz per week. 100 tons of quartz were operated upon, yielding 425 oz. 16 dwt. 12 gr. of gold. Although this high yield of over 4 oz. per ton of quartz was obtained, the whole was frittered away in useless expenditure. No. 1 West Burneal crushed 10 tons of quartz, yielding 33 oz. 12 dwt. of gold. To work the Burneal reef successfully a crushing battery and improved gold-saving appliances should be erected on the Barrington River, where water power could be obtained; and instead of following the expensive system adopted on this gold-field of cutting roads from the mines to the crushing plant, a wire tram-line about half-a-mile in length could be constructed, which would be the best and least expensive plan to bring the quartz from the mines to the battery. A tunnel driven from the Barrington River side of the hill would intersect the Burneal reef several hundred of feet below the cap of the reef. At

At Copeland the Prince Charley and the Prince Llewellyn mines, which are also temporarily idle, yielded large returns of gold. Out of the Prince Charley mine 2,089 oz. 12 dwt. were obtained from 1,944 tons of quartz, or an average of about 1 oz. 1½ dwt. per ton, the thickness of reef being from 3 to 4 feet. 650 tons of quartz were also crushed from the Prince Llewellyn mine, yielding 417 oz. 8 dwt., or 12¾ dwt. of gold per ton, with a reef several feet in thickness. The foregoing statistics proves beyond doubt that if a proper system of working these quartz-reefs, and saving the gold in the process of working, were adapted, profitable results to shareholders would be the consequence.

At the Mountain Maid several mines are at work obtaining at times heavy deposits of gold. 45 tons of quartz, crushed from No. 2 East Mountain Maid, yielded 17 oz. of gold per ton. The Centennial and Baal Gammon Gold-mining Company, under the able management of Mr. L. W. Chubb, are driving a tunnel to intersect several known auriferous veins at about 800 feet from the cap of the reef, and should the Centennial Gold-mining Company's plucky endeavours be successful by obtaining payable gold in their tunnel, Copeland would come to the front as one of the quartz-mining districts in New South Wales.

SILVER.

In the first week of May I inspected the then comparatively unknown silver deposits at Mitchell's, the now famous Sunny Corner silver-mines. I then stated that few persons were perhaps aware of the existence of rich and extensive silver deposits at Sunny Corner, near Mitchell's Creek, and that a furnace was in course of erection, and should the Company be able to treat their ore successfully at the mine, silver-mining would be developed in other parts of New South Wales, and greatly forced ahead. I am glad to state that the opinion I then formed in the first report published on the Sunny Corner silver-mines have been fully realised.

Sunny Corner is situated about 2 miles north of Mitchell's Creek, about 400 feet below the summit of the dividing range, near the head of the Turon River, about 3,800 feet above sea-level, 22 miles from Bathurst, and 15 miles from Rydal railway station. The road from the railway station is very fair. The geological formation in which the Sunny Corner silver ores occur consists of sedimentary rocks, slates, sandstone, and schist with a mass of felsite rock forming the foot or eastern wall of the lode, whereas a clayey slate, with pyritous cubes and associated with hard metamorphic quartzite boulders forms the western or overhanging wall of the lode. The lode has a north and south strike underlying west, and is very irregular in thickness, in places laying flat on the felsite or dipping at right angles. It appears to have a saddle formation, and consists of three different layers, viz., iron pyrites on the felsite or foot wall, the minerals, other than gold, resting on the pyrites, and the quartz or gossan resting on the mineral. The thickness of the gossan in the neighbourhood of the outcrop or cap is from 35 to 40 feet in thickness, of which from 6 to 8 feet has been taken out for crushing purposes. Here the underlay seems to be in three different directions in a curved point of the footwall, at an angle of 45°. Caves and hollows, filled with sand, sludge, or silt, and containing stalactites of oxide of iron, are in the outcrop, and are sometimes found to contain large quantities of rich auriferous stuff. Near the western limit of the workings fully 20 feet have been sunk through the gossan and quartz into a lode of galena, zincblende, and pyrites without reaching the foot wall. That portion of the lode containing gossan, quartz, and chloride of silver, is decomposed, and is richer in gold and silver than the undecomposed part of the lode, the latter of which contains galena, zincblende, and pyrites. Through the courtesy of Mr. William Hurley, the Sunny Corner Company's able manager, I was enabled to gather the following information taken by me personally from the Company's records on the mine:—

During the year 1883 there were crushed 2,376 tons of quartz and gossan, yielding 3,850 oz. of gold, and from the beginning of the year up to the date of my inspection on 1st May, 1884, about 800 tons, yielding about 1,500 oz. of gold. Their gold is, however, of a low quality, containing a large per-centage of silver and was forwarded to England as bullion. 467 tons of ore have been dispatched to England yielding about £17 per ton. The tailings at the mine are estimated to contain nearly £200,000 in gold and silver. I also examined some 145 assay certificates which gave an average of about 63½ oz. of silver per ton with a per-centage of gold and lead. At the end of the year 1884 the Sunny Corner Silver-mine sold 1 ton 5 cwt. refined silver to the Mint. I also inspected Brown's, and Hurley's, Tonkin's and Hemsworth Bros., and Deakan's, now the Nevada Mine, and Copeland's, but as these latter mines have largely extended their workings since my visit, I have no doubt the Warden of the district will fully report on those mines, as in my report in May last I reported as fully as their then development would allow, in which I expressed my opinion that the whole of the above said mines would prove payable ventures.

Two furnaces have now been at work for some time, but with the exception of the unfortunate breakdown of the larger furnace they have worked successfully inasmuch as silver smelting and refining has been carried on for some weeks past.

Melrose Ranges.

In July last I proceeded from Nymagee to the Melrose Ranges for the purpose of reporting on recent discoveries of silver and copper alleged to be very rich.

The distance from Nymagee to Melrose is fully 70 miles. The geological formation for the first 10 miles from Nymagee is silurian, intersected with narrow belts of granite. The later formation gradually predominates towards Melrose, and at the Nangiribone Head Station and its vicinity, from 25 to 30 miles from Nymagee, the country has a decided auriferous appearance and is worthy of being prospected, the great drawback being scarcity of water.

About 1 mile northerly of the "Melrose Hotel," and on the western side of a rugged hill of silurian formation, a discovery of a deposit of galena, carbonate of lead, sulphide of lead, and a small per-centage of arsenical silver ores had been made, but with the exception of a pit about 10 feet square very little work had been done, where the silver deposit showed about 6 feet in thickness with a (horse) rock through the middle. Green and blue carbonates and stains of copper are associated with the silver deposit. By the courtesy of Mr. Blackmore, the assayer of the Nymagee Copper-mine, I am able to note two assays—one of galena, and the other carbonate of lead. The galena contained at the rate of 136 oz. of silver per ton, and the carbonate of lead 58 oz. 16 dwt. of silver per ton with a per-centage of lead and a slight per-centage of copper. There are several hills likely to contain silver ores. The country is well timbered and there are excellent sites for storm water storage. The distance from Condobolin to the nearest mines is about 35 miles.

Boorook.

Boorook.

These silver-mines, situated about 30 miles north-easterly of Tenterfield, have been at work for several years past; but it is only of late that extensive reduction works have been erected by the Messrs. Hall and Company under the able guidance of Mr. Benjamin Davy, and that the ore which is of a very complex nature has been successfully treated by Mr. B. Davy, and his son, Mr. Thomas Davy; the latter young gentleman has now the sole control and general management of mine and reduction works. Silver-mining at Boorook is now confined to the Golden Age Mine, the property of the Messrs. Hall and Company. Greatest depth 300 feet; the geological formation in the Golden Age to a depth of 200 feet, is black slate highly impregnated with iron pyrites and mineral crystals of galena and blende; at the 200-foot level a bed of hard greenstone about 30 feet in thickness is met with, beneath which the slate again occurs to the depth of 280 feet, when a syenite stratum makes its appearance. The ore, as far as it has been proved, is richer in the slate than in the greenstone, or in the syenite formation. There are at present two distinct lodes discovered in the mine, viz.:—The Golden Age proper, which has an underlay to the west of 57° and a strike of N. 29° E., and the Addison contra lode. The latter lode is perpendicular, except at the junction with the former lode, where there is a slight underlay. The strike of this lode is due north; it is at the point of junction where the richest and largest deposits of silver ores have been discovered. The Addison contra lode averages about 6 oz. of silver per ton (not payable), but the Golden Age proper has varied from 40 oz. to 600 oz. of silver per ton, and in parts near the surface from ½ oz. to 19 oz. of gold per ton. It is well worth noting that as the latter lode gets farther from the junction with the former it gradually becomes poorer, until at a distance of about 200 feet the deposit of silver becomes mere nominal; although it still carries an abundance of the baser minerals, such as galena, blende, and copper and iron pyrites. The Golden Age consists of quartz, shale, calcite, iron pyrites, copper pyrites, galena, blende, &c., &c.; and the lode known as Addison, is composed of shale, quartz, calcite, &c., &c., and small per-centage of iron pyrites. The silver ore occurs in a variety of forms; from the surface to a depth of 75 feet it was found as chloride and bromite; from the 75-feet to the 140-foot level as argentiferous, iron pyrites, and blende with sundry spots of silver glance; but below the 140-foot level it occurs principally in a state of flexible sulphite, of which some magnificent specimens were obtained.

Sinking below 300 feet has been suspended, but it appeared to me that the settled country had just been reached in syenite formation, and that to prove the permanency of the lode in the Golden Age Mine, the main shaft ought to be sunk at least 100 feet deeper and crosscut both east and west.

The plant at the mine consist of two portable engines, 6 and 8 horse-power respectively, a horse whim, tramways, &c., &c. Everything is in fair working order, and all reasonable precautions are taken by the manager, Mr. Davy, for the prevention of accidents.

Reduction Works.

These works in connection with the mines are situated about 1½ mile from the Golden Age Mine, on the left bank of the Cataract River. The silver is extracted by the chlorination and amalgamation process; the ore is sorted at the mine in parcels of from 20 to 30 tons, containing from 70 to 140 oz. of silver per ton; this is carted from the mine to the reduction works, where it is dry crushed, mixed, and passed through the roasting and chlorolising furnaces; when cool enough the chlorolised ore is passed through a circular sieve of 2,500 to the square inch, so as to separate the grit, which is again crushed through fine gratings, recalcined and taken to the amalgamators. The poorer ores are crushed by means of a 20 by 3 Marsden's patent fine crusher, and concentrated in the ordinary hand jiggers. A series of Willoughby's Boys were being made for concentrating the dust; after which they undergo a similar treatment to the rich ores. The reason why the poorer ores are not concentrated at the mine, is, that there are no means of crushing, and that there is not sufficient water for such purposes at the mine. The reduction plant consists of two double-bed roasting and chlorising reverberatory furnaces, 52 feet in length, by 10 feet wide, and 6 feet high; four Wheeler's pans, two Denny's grinders, and amalgamators, one Berdan, one 24 h.p. engine, Marsden's fine crusher, with elevator, circular sieve, also two large retorts, jiggers, assay office, laboratory melting furnace, &c., &c. I am informed that the treatment of these ores, although of a very complex nature, is most satisfactory. The tailings from the first treatment averages only from 3 to 6 oz. of silver per ton from ores containing as much as 140 oz. of silver per ton. The total amount of silver extracted from the Golden Age Mine is, in round numbers, about 100,000 oz., and that of gold about 1,000 oz. The silver is refined by Mr. Thomas G. Davy, at the works, and is afterwards forwarded to England for sale. The refined silver contains about ½ per cent. of gold, which is not extracted here.

There is very little worth noting of the work at present done in any of the rest of the Boorook Mines.

Emmaville.

The principal silver lodes so far discovered in this district are situated on Plant Creek, about 7 miles from Emmaville; they occur in a slate, claystone, and felstone formation. The main lode, which has a wall-like appearance, can be traced fully 2 miles along the surface with an average strike of N. 3° E. Although the back or cap of the lode is, in some parts, several yards in width, it appeared to me that the portion containing silver is only from 1 to 3 feet in width, and the ore seemed to be of a very complex nature, consisting of galena, cerussite, chlorides, bromites, copper pyrites, mispickel, and grey copper.

Numerous assays have been made from different parts of the lode, some of the picked assays containing as much as 1,200 oz. of silver per ton, whereas some assays were very low, but the average of all the assays made prove beyond doubt that payable ores are obtainable for a considerable distance along the surface.

As the strike of the lode is nearly at right angles with the strike of the surrounding rocks, it may be reasonably surmised that, in sinking on the lode, it will be found that the walls are not well defined, and that at different parts the lode will be considerably disturbed. Very little work has as yet been done to form anything like an opinion as to its permanency, but the surface indications are good. The out-crop on the surface can be traced for over 2 miles without a break; this, added to the high assays which have been obtained from different parts of the lode, warrants the outlay of considerable capital to thoroughly test and develop these lodes.

The Severn Silver Lodes

Were discovered only within the last two months, and are situated about $2\frac{1}{2}$ miles east of the Severn River, within a short distance of a water reserve, and within a mile of the Emmanville to Inverell Road. The lodes so far discovered are known as Reynold's, Cassin's, M'Kenzie's, and Donnoghue's. The ore is of a very complex kind, consisting of galena, mispickel, zinblend, and copper pyrites. One sample of galena, picked from the mispickel lode, from Donnoghue's Mine, was assayed by Mr. John R6fd, of the Tont Hill Smelting Works, and yielded 98 oz. of silver per ton. This, as stated above, was only a picked sample, and therefore must not be taken as an average sample of this mispickel lode. I could not ascertain if any samples of the ore had been tested by assay from Reynolds' or other lodes. Reynolds' lode seemed certainly to contain more chloride of silver and less mispickel than the other lodes in the neighbourhood.

A new discovery of very rich silver ore was also reported to me as having been made near Emmanville, and I was shown samples of apparently rich silver-bearing galena; but as the locality was kept secret from me by the party who exhibited the galena I could not report on, or take any further notice of, this alleged discovery.

Scone.

The Waverley silver lodes are situated about equi-distance from Scone and Murrurundi, and are by road, *via* Waverley Station, about 32 miles north-easterly of Scone. They occur on a high range in the Devonian shale formation, and consist of quartz-veins, several feet in thickness, containing galena, cerussite, chloride of silver, and arsenical pyrites. These veins can be traced in a due north and south direction for fully 2 miles; southerly they seem to disappear in a limestone formation, and northerly under porphyry formation. These lodes, or veins of quartz containing silver, were taken up and partially worked some years ago, but with unremunerative results, as can be seen by the sites on which had formerly stood a battery and buddles of very primitive kind. Since my visit of inspection to these mines I have been informed that the battery used for crushing had wooden stamps, and the buddles were worked by manual labour. Several shafts had been sunk, and one tunnel driven to intersect the lode at a depth of about 150 feet from surface, and another tunnel on the line of the lode; the first tunnel, however, was not driven far enough to intersect the lode, although a few fathoms further driving would have accomplished that object. I have it from a reliable source that a sample of ore sent to Swansea, England, in 1871, was found to contain by assay 163 oz. of silver per ton, and 67 per cent. of lead, the whole sample forwarded being valued in Swansea at £47 sterling. It appears to me that the development of these lodes has been too hastily abandoned, and their apparent richness is such as ought to induce capitalists to reopen and work them, more especially as the little work which has been done was done at the time when the never-to-be-forgotten mining mania was rampant in New South Wales, and when very little was known here of the treatment of silver ores, but during late years practical proofs are not wanting that even the most complex ores can, by a proper system of economy and scientific knowledge, be successfully treated within the Colony of New South Wales. For instance, the Boorook silver ores are of a most complex nature, still they have been successfully treated by the Messrs. Davy and Son, of Boorook, and lately the same has been accomplished at Sunny Corner, in the Bathurst district. What has been done at Boorook and Sunny Corner could also be done at the Isis and Waverley lodes in the Scone district.

There is a good supply of firewood, and there are excellent sites for dams and reservoirs in the vicinity of the lodes.

Notwithstanding the great strides New South Wales has made in the silver-mining industry during the year 1884, she has still a great deal to learn in cheapening the raising and reduction of silver ores.

In America the ore can be raised and treated and the silver refined far cheaper than has yet been accomplished in New South Wales, as can be seen by the following items compiled from recent statistics on the American silver-mines:—

The Comstock Mine, which employs 4,000 miners, raised 330,000 tons of silver ore, valued at 45 dollars per ton, or	14,850,000 dollars.
Cost of raising and constructing and refining, 30 dollars per ton ...	9,900,000 "
Profit	4,950,000 "
The Santa Rita Mine raised 165,000 tons, valued at 100 dollars per ton, or a total value of	16,500,000 "
Cost of raising and treatment, 7 dollars 50 cents per ton.....	1,236,500 "
Leaving a profit of	15,263,500 "

There is no reason to suppose that we in New South Wales should not be able to raise and treat our silver ores as economically and effectively as our American friends are doing in America. We have everything in our favour: coal and other requisites in abundance, and railways within easy reach. Our mining community is noted as intelligent, energetic, and persevering; we only require the assistance of scientists we already have in our midst, and the necessary capital to carry their theories into practical results, to cope with difficulties of whatever magnitude which may present itself in the economical and effective working, treating, and refining of our silver ores.

During last year I visited the Barrier Silver Mines, now known as the Silvertown Silver Mines, but owing to my having to inspect all the metallic mines throughout New South Wales I have not been able to revisit the Barrier Ranges during 1884.

COPPER.

In the month of March I inspected the Cudgegong copper lodes, which are situated on the spur of the ranges leading on to Aaron's Pass. These ranges are composed of quartzite, limestone, associated with fine-grained marble, metamorphic sandstone, slates, porphyry, diorite, and granite, capped in places by conglomerates of carboniferous formation, the latter occurring horizontally. Within a short distance of these horizontal beds of carboniferous conglomerates are situated the copper deposits, the principal of which is the Cheshire Copper Mine, which occurs in the metamorphic sandstone formation, with a film of black slate on the western or overhanging wall. Two shafts have been sunk, the deepest being 155 feet in depth. Levels have been driven on the lode, which shows a shoot of ore about 4 feet in width. This ore is rather dreggy, but when properly dressed are to contain yellow sulphite ore, yielding from 8 to 10 per cent. of copper. This sulphite ore is slightly intermixed with zinc blend and iron and arsenical pyrites which make it

it a little difficult in smelting and refining the copper, and there are very few carbonates and oxides visible in the workings. The deposits of ore in this mine are not likely to be found continuous as a lode, but in shoots which in parts may spread out considerably.

A smelting furnace has been erected within 100 yards of the main shaft, but considering the ore I saw at grass, the erection of furnace was rather premature. I examined the country for some miles surrounding the Cheshire Mine, but saw nothing to surmise that extensive copper deposits would be discovered in its vicinity.

In the Mount Macdonald district the copper lodes are laying idle, owing principally to the low price of the metal.

At Blayney, the Great Glayney (now named the Ardill Copper mine), started to work during the year under the able management of Captain Moustaka, the Company intend to sink their main shaft 400 feet in depth before they open out: the water is very troublesome, but prospects are encouraging.

A new copper lode, about 2 feet in width, containing grey ore, has been found within 1 mile of Blayney, on the property of Mr. Clausen. The assays have proved the ore to be rich, and the owners anticipate great results therefrom.

North-western Copper Mines.

Girilambone.

THIS mine, which has been at work for some years past with unremunerative results, is situated on No. 5, West Bogan Block, and is under the able management of Captain William Vawdry. Since my last inspection the raising and smelting of ore has been suspended, but the sinking of the main shaft was vigorously proceeded with night and day in three shifts, of four men in each shift. This shaft is 12 feet long by 4 feet wide in the clear; is securely timbered from the surface down to the lowest level. Several bunches of copper ore have been met with in sinking. The first of these deposits was struck at 86 feet from surface, and for about 14 feet in thickness contained gossan and ore. At the 100-foot level a band of iron-stone was met with and sunk through for 7 feet in thickness; and at the 122-foot level carbonate and black ores were met with. At the 300-foot level, in a drive 34 feet to the westward of the shaft, black ore, and a small percentage of yellow sulphites were driven through. But the whole of these deposits appear to be of a broken nature; at the time of my inspection yellow sulphite ores were discovered, in sinking which, although of good quality, and might be dressed up to 20 or 25 per cent.; it was nevertheless very dreggy, and not payable for hand dressing, but requires crushing and jigging. It, however, proves beyond doubt that numerous copper deposits are scattered through the hill; and that probably, as greater depth is reached, and cross-cutting pushed ahead, some of these deposits may form into a solid body of a yellow sulphite lode. Hitherto the Company have not had any sulphite ores to mix with their oxides and carbonites, but have been compelled to cart iron-stone for nearly 3 miles for fluxing purposes.

About three-quarters of a mile in a northerly direction is the Lady Lowrie, or Christenson M.C.P., where the gossan shows on the surface, which ought to be thoroughly prospected. There is also a hill nearly 3 miles west of Girilambone, with a strong hematite iron lode on the surface. With the exception that some of the iron has been carted away for fluxing purposes to the Girilambone Copper-mining Company's furnaces, nothing has been done to ascertain whether or not this hematite iron is the back of a good copper lode.

Nymagee.

Since my last inspection great improvements have been made. Barton's shaft has been sunk to a depth of 423 feet 9 inches. During my previous visit this shaft was only 286 feet in depth, on what appeared then to be a heavy flow of water, which it was thought would necessitate pumps and extra machinery; but Captain Jolly, the Company's able and energetic manager, found after he had started baling that the flow of water became weaker, and that he had only tapped a crevice containing water, which only made 300 gallons in 24 hours. The workings in the lower level are perfectly dry, with the exception of a little water out of the crevice trickling down the shaft. For convenience sake the manager has divided his mine plan into sections; each section represents a hundred feet from north to south. I have drawn attention to this so as to make it intelligible when I refer in this report to any particular section of the Nymagee Mine. At the 40-fathom level, in section 14, high percentage of yellow sulphite ore was raised at the rate of 4s. 9d. per ton, the lode measuring from 12 to 14 feet in width. At this level, 100 feet north of Barton's shaft, a cross-cut had been driven 100 feet in length to the east, intersecting a sulphite lode about 2 feet in thickness, but somewhat dreggy; but operations on this lode has for the present been suspended. Still it would be advisable to continue this cross-cut through the hill, as by so doing a parallel lode may be discovered. Stopping is carried on in different parts of this mine; some of the shoots of ore stopped upon contain large masses of rich copper ore; some of this ore is raised and broken as low as 4s. per ton. Large quantities of carbonates are still obtained near the surface, and mixed with yellow sulphites for smelting purposes.

In section 19 of Pope's shaft in a northerly direction, and about 70 feet from surface, some rich grey ore had been struck, which was dipping rapidly to the north, under the 3-chain road which divides the Nymagee and Hartwood Mine.

In section 8 a prospecting shaft has been sunk on the brow of a hill on which there is a large outcrop of hematite iron, to which I drew attention in former reports. The shaft is 147 feet in depth, a drive 293 feet has been driven south of the shaft; at the end of this drive a winze about 40 feet in depth has been sunk and very rich black grey ore obtained, due in a great measure to the tact and perseverance of Captain Jolly. The above discovery is in section 6, and about 720 feet south, 30 degrees east of Barton's shaft in the flat or level country. A perpendicular shaft has been sunk from the surface to the winze above mentioned, and stopping operations are now in full progress. Extensive operations of a progressive nature are continually carried on in different parts of the Nymagee mine.

Furnaces.—Since my previous inspection one furnace and two calciners have been erected, making a total of eleven furnaces, of which one was under repair and the remaining ten in full work. The yellow sulphite ore is crushed and forced through a wire screen, ten holes to a square inch, after which it is taken on the tram-line to the calciners. By the calcining process the ore is reduced in weight fully 25 per cent., and increased in percentage by 3 to 4 per cent., which enables the smelters to mix nearly two-thirds of sulphites in a charge of 21 cwt. of ore,

During

During the half-year ending 30th June, 1884, the Company raised 7,022 tons, smelted 7,080 tons, producing fine copper, 1,116 tons, and despatched from the mine 1,120 tons.

Machinery—Two 40 horse-power engines, one crusher, jigger, and two Tangye pumps. There was a large supply of firewood on hand and a good supply of water in the reservoir. The total number of men employed in and about the mine, including ten boys, is 450. Everything in and about the mine and machinery is in good order, and Captain Jolly, his second in command, Captain Dawe, and officers under him, use every reasonable precaution for the prevention of accident in mine and machinery.

Hartwood Mine.—This mine is situated on the north of the Nymagee mine; a road 3 chains in width divides the two mines. Hitherto the Hartwood has only been a prospecting mine, nothing of any permanency has been discovered, but there seems to be a probability that a shoot of rich grey ore will be traced from the Nymagee mine, underneath the road into Hartwood's. At the Nymagee mine the shoot of ore was 70 feet from the surface, and still dipping into the Hartwood.

Great Cobar Copper Mine.—This mine has been reported on by me on several occasions. The greatest depth obtained by sinking the main shaft is 564 feet, from which level diamond bores have been put down an additional 60 feet, the lode being 40 feet in width, of fair yellow sulphite ore. Stopping is carried on at the 15, 28, 39, 54 fathoms, and some intermediate levels; but with the exception of the 54 fathoms level the ores obtained are carbonates, oxides, and grey ores, which average about 16 per cent. of copper. A new discovery had been made between the 29 and 36 fathom level, which would average about 14 per cent. But independently of this new find it will take years to work out the different copper ores in sight and known to exist in the mine. Through the courtesy of Captain Dunstan, the Company's able manager, I am able to note the following statistics relating to the raising and smelting of ore for the half-year ending 30th June, 1884. Ore raised, 12,222 tons; ore smelted, 11,876 tons; fine copper, 1,375 tons; despatched, 1,740 tons. In connection with the furnaces is a tramway, over 11 miles in length, on which run six locomotives. This tram-line is constructed into a forest for the supply of firewood for smelting purposes. The cost of tramway and machinery in connection with same is estimated at £30,000. Fourteen furnaces were at work, two under repair, and two under construction. A stack has been erected 150 feet in height, 18 feet square at the base, and 10 feet at the top, with a brick flue about 200 feet long, 9 feet high, and 8 feet wide, which is to be connected with the calciner, roasters, and refining furnaces. A furnace has also been constructed by Mr. Claude F. J. Vautin, to treat sulphite ores without the aid of other ores.

The treatment of sulphite ores and supply of fuel for smelting purposes is the most important problem the Great Cobar Company will have to solve. As stated above, the tram-line is solely constructed to lessen the cost of firewood. Each locomotive makes four trips per day, or about 100 miles, and brings in from 10 to 15 tons of wood each trip. During the half-year ending 30th June, 1884, no less than 31,000 tons of firewood were brought in by trains, and 4,000 tons by drays, making a total of 35,000 tons. The Company, in addition of having excavated 15,000 yards near their mine for tanks, have a reservoir, the embankment of which is 1,243 feet in length, 30 feet high, and 124 feet in width at the bottom, and 43 feet at top; in addition to which 43,000 yards have been excavated out of this reservoir, thus securing a water-shed of about 26,000,000 gallons. The water in this reservoir was the mainstay of water supply for the inhabitants of the Municipality of Cobar. Total number of men employed, about 900.

Considering the large number of men employed at or in connection with the mine, it is but justice to Captain Dunstan, who has had the management of the Great Cobar copper-mine from its infancy, extending over seven years, to state that he and his officers under him deserve great credit for the manner in which they have worked the most extensive copper mine in New South Wales. Only two fatal accidents have occurred during the whole time of his management, and if any blame was attached to any person on account of those accidents, it is to the poor fellows themselves who lost their lives, one by an explosion of powder while loading a hole, the other by stepping into a winze 30 feet in depth, near which he had been working daily for 18 months, and on which he had forgotten to put on the cover, contrary to a rule in the mine.

Mount Hope.

The lode at the new Mount Hope copper-mine consists of shoots and bunches of rich oxides, carbonates, and grey ores, with only a small per centage of yellow sulphites. These deposits occur in the altered sandstone (Devonian) and belts of iron sandstone formation. At the present time there is no mine in New South Wales which produces such interesting geological specimens of copper ores as the New Mount Hope mine. Pieces varying in weight from a few pounds to a ton could be procured, containing all the different carbonates, oxides, and sulphite ores.

The absence of a fair supply of sulphite ores to mix with the rich oxides and carbonates obtained at the mine greatly retards the economical working of this mine, as the Company is compelled to procure iron ore from a distance of 12 miles for fluxing purposes. Progressive works are continuously forced ahead, and Captain Daniels, the Company's able and energetic manager, deserves great credit for so doing, as it is the only practical way by which the mine can be systematically and profitably worked. The copper deposits in the upper levels are met with in horizontal layers or floors, and are patchy; but at the 345 feet, or lowest level, a change for the better seemed to have taken place, the strata changing from horizontal into vertical. This is a very important feature in this mine, because should yellow sulphite ores be struck in the vertical strata it may be confidently expected to be of a permanent character and not as patchy as the ores occurring in the horizontal strata.

Stopping is carried on at different levels. Number of furnaces, 4, and one refiner; also, a 12-horse-power winding engine. About 250 men are employed. The mine and machinery is in good working order, and reasonable precautions are taken for the prevention of accidents by Captain Daniels and his officers under him. The Company have excavated five tanks, from 4,000 to 7,000 yards each; they had also six months supply of firewood at the mine.

South Mount Hope.

The great Central mine is situated about 4 miles south of the New Mount Hope mine, and occurs on a high hill in the porphyry formation. By surface indications there are several lodes or branches of high quality ores in the Great Central mine, but operations have been mainly extended on two lines of reefs, viz., Hodges' and the Comet. If a main shaft were sunk east of Mackenzie's shaft (say from 300 to 400 feet in depth), cross-cut driven east and west, and levels opened out on the different lodes, the Great Central may become an extensive copper-producing mine. Captain Cause, the Company's able manager, seems to do all

in his power to push his mining work ahead in the interest of all parties concerned, but the drought and other circumstances over which he had no control have somewhat retarded his intention of pushing progressive works.

Brown's Copper Mine,

Which is situated on the northern and partly on the eastern boundary of the Great Central Mine, has several promising lodes, containing blue and green carbonates with small patches of grey ore. Five shafts have been sunk, but the deepest is only about 50 feet. The mine is lying idle, which should not be, because the surface indications, so far as they have been sunk on, are excellent. Some of the lodes in Brown's can also be traced along the surface into the Great Central, but they have not been opened out or tested in the Great Central mine. A strong gossan lode, which probably if sunk upon, would contain copper deposits underneath, crops out in the southern part of Brown's mine and east of the Great Central. A shaft has been sunk near but too far to the west.

Melrose Copper Mines.

In July last I started from Nymagee to Melrose, a distance of 70 miles, where it was alleged recent discovery of copper deposits had been made. The first copper deposit I inspected is named the Melrose Copper Mine, which is situated about $1\frac{1}{2}$ mile west of Melrose station, and is owned by Messrs. Glyn and Byrum. Two shafts have been sunk on blue and green earthy carbonates, the shafts being 30 feet and 14 feet respectively; but as far as I could observe there were no indications of the existence of an apparently permanent copper lode. Formation, silurian.

6 miles southerly from the Melrose copper-mine, and west of the Condobolin Road, in high rugged ranges, which are trending in a north-easterly direction, are the recent mineral discoveries. The geological formation, as far as I traversed these ranges, is metamorphic sandstone, felspar, silurian schist, and granite.

In these ranges, and about 2 miles south-west of the "Melrose Hotel," is the Boone West Copper-mine. Here the gossan, and green and blue carbonates can be traced along the surface for about 50 yards in length in the silurian schist formation. A shaft has been sunk 25 feet in depth, exposing to view a lode fully 6 feet wide, consisting of blue and green carbonates with small patches of grey ores. The ore is, however, very sparry, but the spar may disappear when greater depth is reached. Half mile north-west from the Boone West Mine, on a high rugged hill, is situated the Big Ben copper lode. A large outcrop of quartz is visible on the top of the hill, through which for a distance of 100 yards blue and green carbonates with small patches of grey ore can be traced. No shaft has been sunk or any prospecting done to prove the existence of a lode. The ore found at the surface contains a great deal of spar; still by the large amount of carbonates and stains of copper which can be seen through the large blow of quartz, I think the Big Ben is the most valuable copper deposit yet discovered in the Melrose Ranges. This part of New South Wales, which is seldom frequented by the miner, is well worthy of being prospected for copper, silver, gold, and other minerals. The country about Melrose is well timbered, and there are excellent sites for the storage of storm waters. The distance from Condobolin to the nearest mines is 35 miles.

On my return trip to Nymagee I turned off the road, about 5 miles from the "Melrose Hotel," for the purpose of examining an alleged copper discovery, known as Murphy's and Colqueon's, which some time ago caused a great deal of excitement in the Condobolin and Forbes districts. Messrs. Byrum and Flynn kindly acted as my guides. After travelling for about 3 miles in a northerly direction from the main road the ranges became too rugged for buggy travelling. We therefore left buggy and horses behind, and after walking over 3 miles on ranges consisting of hard metamorphic sandstone, belts of hard granite, and narrow streaks of silurian schist, observing no mineral with the exception of an outcrop of iron ore, we halted at a place where a shaft had been sunk about 14 feet in depth, and some scratchings on the surface had been made, and I was informed by Mr. Byrum that we were at Murphy's and Colqueon's Copper Mine, but why it should be called a copper-mine I am at a loss to know. The shaft had been sunk on a narrow vein of limestone, but not a stain of copper could be seen in the shaft or surrounding country. A few stains of iron were observable in the joints of the rocks with a greenish tint caused by vegetable matter or by atmospheric action, and these probably had been mistaken for stains of copper. Pegs were to be seen for a long distance in a northerly and southerly direction, denoting the boundaries of the several mineral holdings.

My inspection during 1884 of the north-western copper-mines of New South Wales induces me once more to draw public attention to the fact that notwithstanding copper-mining has been carried on successfully in these districts for years past, there is very little actual prospecting done outside of the mines at present working. If the hilly country between Cobar and Nymagee were properly prospected, perhaps gold in payable quantities in addition to other minerals would be discovered. The same might be said of the country between Cobar and Nymagee, Nymagee and Mount Hope, and Nymagee and Melrose; at the latter place, in addition to gold and copper, the discoveries of extensive galena and other silver ores may be looked forward to at an early date, more especially so now that large Government tanks are dotted all over these districts, where in former years hardly a drop of water could be obtained for drinking purposes.

Nowendoc.

A copper lode which was abandoned a few years ago has again been started during the year by a Captain Russell, but at the time of my inspection only preliminary work was carried on.

Walcha.

A new discovery was made at Mr. Fenwick's, Europambela Station, about 6 miles east of Walcha. I examined the place and found a strong gossan lode containing carbonates and stains of copper. A sample of this gossan was forwarded by me to the Department of Mines for assay, with the following result:—Metallic copper, 6·7 per cent.; fine silver at the rate of 2 oz. per ton; gold, a trace under 2 dwt. per ton. This gossan lode is well worthy of a thorough trial; it is within 20 miles to a railway station, and a large supply of wood and water close at hand.

Vautin's process of smelting Sulphurite Copper Ores.

During my visit of inspection to Cobar I had the pleasure of witnessing a small trial of Vautin's process of smelting sulphite ores without the assistance of other ores. The blast furnace worked well, but after blowing the compressed air into the converter for about 10 minutes the water-jacket commenced to leak, and operation had to be suspended. Although it cannot be said that a satisfactory trial had been made,

made, still it has proved the principle to be good, and if details can be thoroughly mastered the process will bring incalculable benefits, not only to Cobar but to the whole of our copper-producing industry. The object Mr. Claude F. J. Vautin has in view is to obtain a rapid economical method of treating copper pyrites without the aid of other ores, and to assist the smelting of them (as is now the case in the greater part of the metallurgical establishments) without having to submit the pyrites to previous calcination, to obtain a rich regulus, or even rough copper therefrom, without the aid of extraneous fuel, or reduce the use of such to a minimum, by taking advantage of the great amount of heat that can be generated by the rapid oxidation of the iron and sulphur contained in the pyrites. The process may also be extended to silicaceous ores, as it is necessary in all cases to add an amount of silica to act as flux for the iron present in the pyrites. The plant at present consists of a low blast furnace, and what may be termed a modified form of besomer converter, with blowing machine for producing the necessary blast. The *modus operandi* of the process is as follows:—A given quantity of pyrites or other mixture of ores that will yield a regulus (say) 20 to 40 per cent. of copper, is smelted in the ordinary way in the blast furnace, and the regulus from the same is run into a molten mass as hot and as rapidly as possible through a short shoot into the converter, the blast for same having been turned on before the regulus is admitted. The result of the air being blown through the molten sulphides of copper and iron is that the sulphur is partly burnt into sulphurous acid gas, and partly volatilised, and the iron is burnt into the protoxide (F. O.), and in that form combines with the silica added for the purpose, or contained in the ore so as to form a slag, and in such condition can be removed. It is claimed by Mr. Vautin that such reaction produces either a concentrated regulus of copper (say) from 60 to 80 per cent., or even rough copper from 95 to 98 per cent.

Thus it will be observed that both the sulphur and iron can be removed by one process, and with comparative ease, notwithstanding the fact that, under present methods of treating copper pyrites, these two elements in their removal form the greatest difficulty to deal with. When once the reactions are started in the converter it is thought that raw sulphides might be added direct in the converter without previous smelting in the blast furnace, as the heat produced during the oxidation of the iron and sulphur present in the first charge obtained from the blast furnace is quite sufficient, not only to concentrate it as already described, but to smelt great portions of ore continuously.

Mr. Claude F. J. Vautin is a young Australian with great ability and full of energy to, if possible, carry his ideas to a successful issue, whatever checks he may be subjected to by partial failures. The trial on the above subject, which I had the pleasure of witnessing in July last at Cobar, consisted of about 1 ton of 9 per cent. yellow sulphite ore, mixed with charcoal, being put into the blast furnace, and the blast turned on. After three hours' blast the molten mass was turned into the converter, the latter, as stated above, only worked for ten minutes, owing to a leakage of the water jacket around the converter; still assays taken from the regulus tapped out of the converter assayed from 27 to 60 per cent. of copper. It will thus be seen that 9 per cent. ore in three hours ten minutes was converted into regulus from 27 to 60 per cent. These are facts which prove for themselves. Other trials have been made since my visit to Cobar, and each has proved that with a little more patience and perseverance the result will be perfect.

Tin.

The tin-mining industry has, during the year, received a severe check, owing principally to the low price and dullness of the tin market. Many of the mineral leases, on which hitherto the labour conditions have been faithfully fulfilled, are now either idle or being worked at a loss by the owners; this, in addition to the shallow tin ground being gradually worked out, has caused many miners to leave the district. However, believe that this present dullness is only temporary, as there are miles of basaltic country not yet prospected, where heavy deposits of tin are likely to be met with.

Several parties of European tributors are at work at the Rose Valley, in Wesley's, Fox's, Bailey's, and other mines. Messrs. Thomas Flannery and party, the most persevering and energetic prospectors in this district have, at the expense of about £200 per month, sunk several shafts for the purpose of tracing the rich leads formerly worked by Flannery and Company, in Wesley's mine, but have so far been unsuccessful. About 2 miles westerly of Flannery's prospecting works, Bourke and party and Barry and party are obtaining payable tin; the stanniferous wash is in parts from 4 feet to 5 feet in thickness, is quite different in appearance to the wash formerly worked in Wesley's lead, and in my opinion has no connection with that lead, but seems to be one of a line of waterholes now covered by volcanic fluid. West of the 2 miles several parties are sinking in the basaltic country.

At the Y. Water-holes, the property of A. Cadell, Esq., J.P., several European tributing parties are still at work with varied success. The whole of this property seems to be full of ancient water-courses now covered by volcanic ashes, or alluvium and basalt, several of which have been discovered since my last visit of inspection, and containing good payable tin deposits.

A few parties are also at work at the Grave-yard, and at the Vegetable Creek Tin-mining Company. Wages men were employed by Mr. Cadell to prospect some of the likely looking parts of that property; the consequence is that a narrow lead containing stanniferous wash has been discovered; but as far as proven during the time of my visit the stanniferous wash was not of a rich nature.

Very few, if any, extensive alluvial works are carried on in any part of the Vegetable Creek district, and very little is doing in alluvial mining in places known as The Gulf, Mole Tableland, and Silent Grove.

The Lodes.

At the Torrington Battery, Mole Tableland, some rich tin-stone was crushed during my visit of inspection from the Torrington and Elliott's Lodes. From the Torrington lode 35 tons of tin-stone yielded 16½ tons of tin, and out of Elliott's a cwt. of tin per ton of tin-stone was expected. The Torrington lode runs in shoots containing very rich tin. Some of these shoots are, however, only a few feet in length, but they might considerably increase when a greater depth is reached. The same may also be said of Elliott's lode.

Tributors have started to work at the Dutchman's and Curnow's Lodes. Mr. Nackey, the manager of said lodes, expects to have his battery at work again ere long.

Several small parties are also at work on different lodes at the table-land.

On Butler's lode work has been temporarily suspended for the purpose of purchasing and erecting machinery. Some rich tin-stone is obtained at Glen Creek from surface shoots by the Dalcouth Company. A few parties are also obtaining payable tin from the various lodes in the Gulf District, of which Kerr's is the principal.

Tingha.

Tingha.

At Stony Creek Messrs. Moore, Billings and Company, and Morris and Company were still obtaining payable tin. The former Company has, in addition to shafts, sunk through the basalt, which required blasting for 60 feet in depth, driven several hundred feet. This party obtains at times very rich patches of tin; but the irregularity of their tin deposit has prevented such success as their energy and perseverance justly deserves. Their mine has been opened out in as systematic a manner as their irregular deposits of stanniferous drifts will allow.

About 5 miles in a north-easterly direction from Stony Creek a party known as the Armidale Company are prospecting in the basaltic country, at a place known as the Kangaroo Camp. Should these prospectors be successful, then a large tract of stanniferous country will be opened up, and available for mining purposes. The Red Hill Tin-mining Company, which is situated about 4 miles easterly of Tingha, yields, under the able management of Mr. John Addis, a fair amount of tin. Over 1,000 feet of tunnelling has been done under the basalt into the hill; thickness of wash from 1 to 2 feet; yield about 1 cwt. of tin per ton of wash. A large amount of titaniferous iron, which disseminates throughout the stanniferous drifts, causes a great deal of trouble in separating the tin ore.

The Bismarck, or Bower's Mine, on the north-western slope of the Red Hill, is temporarily idle, pending the formation of a company.

The Brickwood Mine, on which work had been suspended for a short time, has started again. The manager, Mr. Walter Kennedy, J.P., is opening a level from the 120-foot shaft, by blasting through a hard belt of granite rock into a stanniferous drift towards Jones' property. Lumps of oxides of tin ore have been obtained near and on the surface of Jones', but nothing has been done to trace or develop these stanniferous deposits, although the great probability remains that through Jones' land the continuation of the Brickwood lead will be discovered.

At the head of the ponds Thomas Dunstan and party are raising some good dirt from shafts varying from 40 to 60 feet in depth; thickness of wash from 2 to 6 feet; yielding from 40 to 70 lb. of tin per ton. The width of the wash as far as proved is about 140 feet, and opened nearly 400 feet in length. In October last this party had about 1,200 tons of wash at grass.

At R. B. Walmsley's Victor mine work is progressing satisfactorily. This mine has been worked for the last two years, and is likely to continue to do so, the greatest drawback for its development being the limited supply of water, not sufficient having fallen for extensive tin-washing purposes. The mine is systematically worked, and a large area of ground has been opened.

Mr. Daniel Dougherty is opening up the Donnegaller mine at the Upper Stannifer, on the falls to the McIntyre River. Shafts have been sunk through the basalt over 100 feet in depth, with fair prospects of tin ore. Should the Donnegaller's be successful, other mines in the vicinity will be opened, and the water which is now troublesome might by united actions be more easily overcome.

Mr. W. H. Martin, in company with a few spirited local capitalists, is prospecting the basaltic country at the head of Middle Creek, about 4 miles north-east of Stannifer, near the Armidale-road. They have erected a 12 h-p. engine and pumping gear to cope with the heavy flow of water contained in the drift, which was met with in the shaft at the depth of 80 feet. The basalt takes its rise from the head of Middle Creek, and can be traced for several miles towards Elsmore.

Lodes.—Some twenty different lodes have been partially tried in this district. They generally occur in narrow quartz or felspar veins, or micaceous rocks, through which patches of tin ore are irregularly distributed.

The principal lode on this tin-field is the Stannifer Bishoff Tin-mining Company's mine, which was lately placed under the able management of Mr. E. W. Bathurst. It is situated on the fall to the McIntyre River. The lode occurs in porphyritic granite, associated with fluor spar, which is impregnated with separate grains or crystals of tin. Its strike is 35 E. of S., with an easterly underlay. A good deal of work has been done, but so far with apparently little success, although well defined walls and other favourable indications point to the belief that a better defined lode will be met with at a greater depth.

Elsmore.

Mining matters were dull, but there is still a large area of country from Elsmore to Newstead which is well worthy prospecting, and considering so many small leads apparently making into deep country, it is but reasonable to suppose that deep tin-bearing leads will be discovered. Mr. Thomas Bottrell, the Elsmore Company's able and energetic manager, informed me that he intended to thoroughly prospect the deep ground.

We have now some very extensive and complete tin-crushing and saving machinery in connection with lode tin-mining, of which the elaborate machinery in connection with the Ottery mines, Tent Hill Tin-smelting Works, are the principal. The Glen Smelting Works at Tent Hill, Vegetable Creek, have been described by me in former reports. It would, therefore, be superfluous to report again.

ANTIMONY.

During the year I visited the antimony mines between Cudgegong and Rylstone, and those near Armidale.

The Rockwell antimony mines are situated about 4 miles north-west of Rylstone and 8 miles easterly of Cudgegong, near the Cudgegong River. These deposits occur in the slate formation, and are surrounded by metamorphic and micaceous rocks. The ore is associated with quartz, which forms irregular veins underlying west, some of these veins varying from 3 inches to 4 feet in thickness, containing a high percentage of antimony and a percentage of cerrussite. Very little work has been done on these lodes; but being so near the Rylstone railway these antimony lodes are almost sure to be worked extensively, provided the price of antimony will rise in the market. The Armidale lodes are associated with gold, and are described by me above.

The low price in the metal market has greatly retarded progress during the year 1884, especially so in the copper, tin, and antimony mining industry.

I have, &c.,

W. H. J. SLEE,

Inspector of Mines.

COAL AND SHALE.

TABLE compiled from Reports furnished by the Owners of Collieries, showing the quantity and value of Coal and Shale won during the year 1884, and the number of Miners employed in the Collieries.

Decrease in 1884				3,619 8 9

From these returns we find that in the Northern district, in the year under notice, there has been an increase of 155,722 tons in the quantity of coal raised, and an increase of £83,907 in the value of the coal raised, whilst in the previous year there was an increase of 330,103 tons, and in the value of the coal raised, £212,089.

In the Southern District there has been an increase of 30,523 tons, and £20,847 in the value, whilst in the preceding year there was an increase of 47,293 tons, and in the value of £26,020; in the Western District an increase of 41,405 tons, and a decrease of £3,619 in the value, whilst in the previous year there was an increase of 34,779 tons, and in the value of £14,865. The decrease in the value of the western coal is owing to the Lithgow Eskbank and Zig Zag Collieries having reduced the selling price of their coal at the pit to 5s. per ton, and their having entered into a three years contract to supply the goods engines on the Southern and Western Railways, with coal put into Government waggons at their Lithgow Collieries, at the exceedingly low price of 4s. 5d. and 4s. 11d. per ton.

The

The following table shows comparisons between the year under notice and two preceding years total out-put and value; tons of round and small coal raised for each person employed in and about coal raised for each life lost:—

Years.	Exports to Intercolonial Ports.			Exports to Foreign Ports.			Total Exports.			Home consumption.
	Quantity.	Average per ton.	Value.	Quantity.	Average per ton.	Value.	Quantity.	Average per ton.	Value.	
1882	Tons 760,135	£ s. d. 0 0 9 54	£ 372,834	Tons 501,319	£ s. d. 0 10 0 98	£ 274,699	Tons 1,261,545	£ s. d. 0 10 3 09	£ 647,033	Tons 847,737
1883	855,704	0 10 5 76	448,356	656,741	0 11 7 34	381,306	1,512,445	0 10 11 65	829,662	1,009,012
1884	904,087	0 10 8 00	532,938	696,676	0 11 5 10	393,107	1,690,763	0 11 0 16	931,045	1,058,345
	2,609,926	0 10 4 47	1,353,028	1,854,736	0 11 4 40	1,054,112	4,464,753	0 10 9 42	2,407,740	2,915,094

From the above it will be seen that in the year under notice (1884) we exported 138,383 tons more coal to Intercolonial ports than in the preceding year, and 39,935 more to Foreign ports. The Intercolonial increase in 1884 appears to be principally owing to New Zealand having taken 47,642; South Australia, 45,359; Victoria, 26,164; Western Australia, 10,924; and Tasmania, 8,665 tons more coal from Newcastle than they did in 1883; and the increase in the Foreign exports have been in consequence of Hongkong, India, China, Mauritius, and Manilla having taken more Newcastle coal than they did in the previous year. The Newcastle collieries exported 1,550,395 tons, and the Illawarra collieries about 140,468 tons, to Foreign and Intercolonial ports.

It will be seen that the quantity of coal raised during the last three years for each person employed above and underground at the collieries has averaged 451 tons of round and small coal per year, and that each person so employed added £211 3s. 9d. per annum to the wealth of the colony. In the years 1882, 1883, and 1884, forty-one lives were lost for 7,379,847 tons raised, viz., 179,996 tons were raised for each life lost. The proportion the accidents and deaths bear to the number of persons employed in each district—north, south, and west,—and the quantity and value of coal raised for each person employed in and about the northern, southern, and western collieries is as follow:—

NORTHERN DISTRICT.

Number of persons employed in and about the mines	4,735
Number of persons employed underground	3,927
Quantity of coal raised in tons	2,055,342 10 3

Complaints made of deficient ventilation, &c.

I have as usual inquired into sundry complaints made with respect to defective ventilation, and non-compliance with the requirements of the Coal Mines Regulation Act. Proceedings where necessary have been taken to enforce the provisions of the Act and reports furnished thereon.

NEW MINES OPENED OUT OR IN COURSE OF DEVELOPMENT DURING THE YEAR 1884.

Four-mile Creek, near East Maitland.

January 29th.—Mr. Matthew Tulip gave notice that he had sunk and was working a pit on the east side of his land at Four-mile Creek, near East Maitland.

Tighe's Hill.

January 31st.—Mr. Thomas Horsfield gave notice that he had started operations at the No. 3 Fern-dale Colliery.

Murrurundi, county Brisbane.

February 4th.—Mr. J. Y. Neilson gave notice that the Northern Shale-mining Company were opening out a shale-mine about 6 miles north-east of Murrurundi.

Waratah, county Northumberland.

February 20th.—Messrs. Thornton, John Liddle, John Rees, and Mungo Penman gave notice of their intention to open a coal-pit on the Waratah Coal Company's lease, known as the Waratah Commonage, to be named Brickfield Hill Colliery.

Hartley Vale, county Cook.

March 11th.—Mr. Richard Fryar gave notice that he had on behalf of the New South Wales Shale and Oil Company commenced sinking for coal at Main Camp.

Warner's Estate, Lake Macquarie, county Northumberland.

April 1st.—Mr. Arch. Gardiner notified, on behalf of the South Wallsend Coal Company (Limited), of having commenced opening their works on the Warner Estate, Lake Macquarie, to be known as the South Wallsend Colliery.

Glenrock, Burwood Estate, county Northumberland.

June 2nd.—John Reay and S. Palmer gave notice of having started to open out the Glenrock tunnel in January to work the seam known as the Victoria Tunnel seam on the above estate, owned by Mr. E. C. Morewether.

Minmi, county Northumberland.

June 16th.—Mr. J. Croft gave notice that he had opened a new tunnel on this estate (J. & A. Brown's), and expected to reach full height of seam in a fortnight.

Dubbo, county Lincoln.

June 18th.—Mr. R. Nancarrow, on behalf of the Dubbo Coal-mining Company, notified the resumption of work from the 150-foot level.

Tighe's Hill, county Northumberland.

July 2nd.—Mr. J. S. Green notified having commenced working coal from A. A. Company's estate at Tighe's Hill. The colliery to be known as the Tighe's Hill Colliery.

Waratah

Waratah, county Northumberland.

August 18th.—Harmon Key and W. F. Goodhew gave notice of their intention to work the crop coal on the Waratah Coal Company's land, situate between the Government Quarry and Dark Creek.

M'Donald's Hole, Mudgee Railway.

August 29th.—Mr. H. Massey intimates, on behalf of the Carlo's Gap Coal Company, that they are opening a coal-mine at M'Donald's Hole, Mudgee Railway Line, situate about 30 miles from Wallerawang.

Rix Creek, Singleton, county Northumberland.

September 4th.—Mr. Thomas Longworth gave notice that he opened a coal-mine on the land known as Dight's, and adjoining the New Park Colliery at Rix Creek.

Gladstone, near Katoomba, county Cook.

September 6th.—Mr. E. F. Ickerson gave notice that workings have been commenced by the Gladstone Coal Company (Limited), for opening their coal-mine at Gladstone, near Katoomba.

Maryville, Newcastle, county Northumberland.

September 8th.—Mr. Henry Harper notified that he was about to commence the sinking of a shaft for the Maryville Coal Company at Maryville, near Wickham.

Burwood, near Newcastle, county Northumberland.

September 17th.—Mr. Robert Scott, agent for E. C. Merewether, Esq., gave notice of having on 1st instant commenced to make a face on the Burwood seam on Mr. Merewether's M. L. No. 617, and this week commenced to tunnel into the seam.

Lambton, near Newcastle.

September 18th.—John Burnley gave notice of having commenced driving a tunnel for coal-mining purposes on land leased from the Scottish Australian Mining Company, situate near the Lambton and New Lambton Railway Bridges.

North Bulli.

September 20th.—Rose Hill gave notice of driving a tunnel on her property to prove the coal.

Calderwood, county Camden.

October 20th.—Mr. W. J. Weston gave notice that prospecting for coal by means of adits had been commenced on D. C. Watts' M.C.P. of 150 acres, in the parish of Calderwood.

Glenrock, near Newcastle.

October 27th.—Mr. R. L. Simpson gave notice in terms of Coal Mines Regulation Act that a commencement has been made to sink a shaft to open out the tunnel workings of the Burwood seams of coal for the Burwood Coal-mining Company (Limited).

North Bulli, county Camden.

November 6th.—Mr. Garlick, on behalf of the North Illawarra Coal-mining Company (Limited), notified having commenced operations on their lands situated at North Bulli.

Tighe's Hill, near Newcastle.

December 5th.—Mr. James Howell gave notice of having started a coal-mine on his property situate in Henry street, Tighe's Hill, to be called Refuge Colliery, and will employ two men below and one on top.

COAL-MINES ABANDONED OR OPERATIONS SUSPENDED DURING THE YEAR 1884.

Warner's Estate, Lake Macquarie.

On July 24th Mr. Archibald Gardiner, on behalf of the South Wallsend Coal Company, gave notice of the discontinuance of the tunnel opened by his directors.

Dubbo, county Lincoln.

On August 12th Mr. R. Nancarrow notified work at Dubbo Coal-mine, have been suspended pending a visit of directors, when it will be decided as to further sinking, &c. At present the shaft is down 200 feet. Several good seams of coal have been cut in the shaft.

Rix's Creek, Singleton.

On September 4th Mr. Thomas Longworth gave notice that he had abandoned the working of the coal-mines on Mrs. Campbell's land at Rix's Creek.

COLLIERIES which have been opened out in the Newcastle district previous to, or in 1884, and the coal-seam won prior to date of this report:—

Burwood Coal-mining Company.

In September last the Burwood Coal-mining Company commenced operations to develop the coal seams on 1,000 acres and upwards of leasehold land, the property of E. C. Merewether, Esq., being on the southern side of, and adjacent to, the Newcastle Coal Company's mineral land, leased from Mr. Merewether. About the end of December last the upper or Burwood coal-seam, formerly worked by Mr. Merewether, was got ready for work, coal screens erected, and coal sent to market, the Company having obtained the contract to supply the Great Northern, Southern, and Western Railways with engine coal. On the 10th of December last a shaft 14 feet 6 inches in diameter was commenced for the purpose of winning the Borehole coal-seam, at a depth of 290 to 300 feet in depth in March last. (*Vide* section of strata given at p 131.) The shaft when bottomed will, the manager informs me, be fitted with double cages and all latest improvements, viz., steel cages, steel rail-guides, spring box, and patent disengaging catches, to prevent accidents from overwinding, &c.

The

The winding appliances will consist of a pair of 20-inch coupled horizontal engines boilers, 10 screens, over which it is estimated 1,000 tons per day can be passed, &c. Steel skips and hopper waggons are expected to arrive in Sydney the beginning of May. This Company have been fortunate in securing the services of Mr. R. L. Simpson, the well-known and able manager of the Greta Colliery, as their colliery manager, who informs me that he expects to have the Borehole coal from this colliery in the market about August next.

Account of strata sunk through in the A Pit, Burwood Coal-mining Company (Limited), furnished by Mr. Simpson.

Description of strata.	ft.	in.	Description of strata	ft.	in.
Black soil	1	6	Blue metal	2	0
Gravel clay	23	6	Coal	2	0
Clay, mixed with boulders	10	0	Band	0	6
Grey sandstone	1	0	Coal	2	0
Dirty coal, mixed with black stone	3	8	Band	0	2
Soft sandstone, with conglomerate girdles	5	5	Coal	11'	6"
Hard grey sandstone	8	7	Blue metal	1	8

Blue shale, with girdles	21	11			
Dark blue shale	6	0	Depth, March 19th, 1885	120	0
Hard brown post, with iron stone girdles	2	6			

Wickham and Bullock Island Colliery.

About the end of June last Mr. Hugh Walker, with the assistance of Mr. Fairley, commenced to sink a shaft 10 feet in diameter for the above Company on their authority to mine, situated alongside the Government Bullock Island Railway, and only $\frac{1}{2}$ mile from the Bullock Island Wharf and shipping cranes.

Iron cylinders, manufactured by Messrs. Morrison and Bearby, iron founders at Bullock Island, 10 feet in diameter, in six segments 3 feet in depth, were sunk by pressure (to hard rock) to a depth of 173 feet, the total depth of the shaft being 231 feet through the Borehole coal-seam, 19 feet in thickness, which was sunk in the short period of eight months. After the 173 feet of sand, gravel, and clay had been passed through with the cylinders, the strata between it and the Borehole coal consisted of hard rock.

The coal is of excellent quality, and the Company have ordered a 60 horse-power coupled engine, 100 8-ton hopper waggons, wheels and axles for 100 skips from England, and a contract has been let to Mr. Walker for the erection of five screens, foundation for boiler and engines, &c. A branch line has been constructed from the pit's mouth to the Government railway, and it is expected before the end of the year that this colliery will be putting out 400 tons of coal per day into the market.

Maryville Colliery.

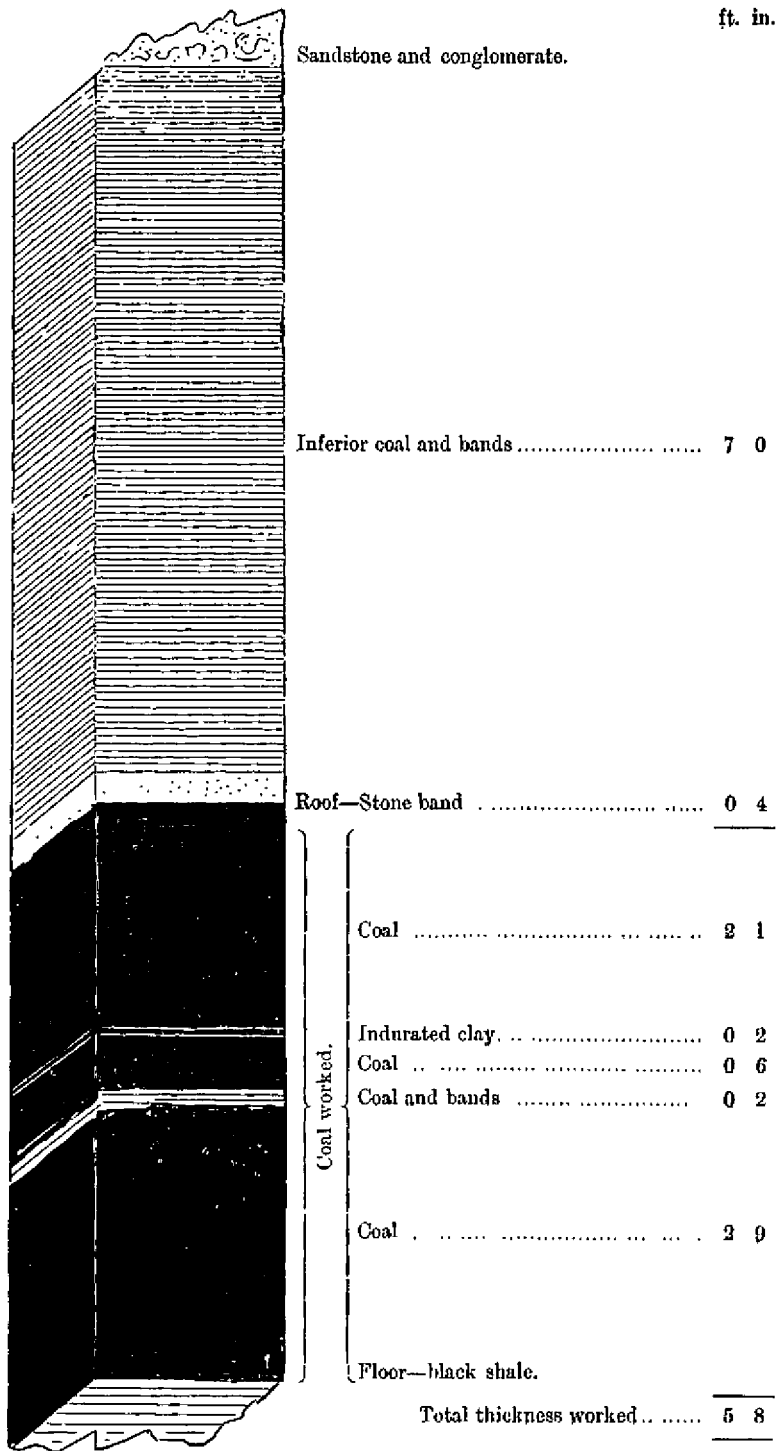

On January 7, 1885, the Maryville Colliery Company sank through the Borehole coal-seam, 14 feet 8 inches in thickness, at a depth of 132 feet, on the Hannell Estate, at Wickham, situated about 2 miles from Newcastle, and $1\frac{1}{4}$ mile from the Bullock Island Wharf and shipping cranes. Mr. Harper, the colliery manager, with the assistance of Mr. Matheson, adopted the system of sinking 7 feet lengths of circular brickwork 14 feet in diameter, as the sinking proceeded, and when soft ground was bottomed the remaining 32 feet was bricked up from below. The coal is of excellent quality, and Mr. Harper is erecting a new head gear, screens, engines, and workshops, and expects to have the colliery in full working order in a very short time.

Stockton Coal Company.

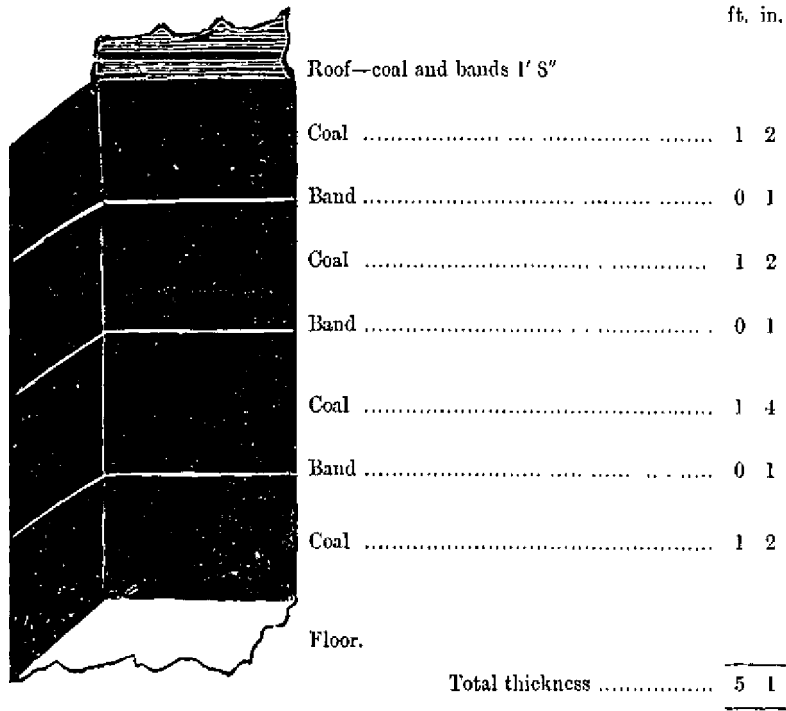

In March, 1885, the Stockton Coal Company, with great success, under the able management of Mr. Rossiter, civil engineer, Sydney, sank through the Borehole coal-seam, 23 feet 6 inches in thickness, at a depth of 335 feet 6 inches, on their leasehold land at Stockton, adjacent to the Stockton wharf, the Hunter River, and Harbour of Newcastle. Iron cylinders, 15 feet in diameter, made of cast iron $1\frac{1}{2}$ inch in thickness, and formed of rings 5 feet 6 inches in depth, weighing about 8 tons, were sunk by pressure by Mr. Rossiter, to hard rock, to a depth of 84 feet, and from there to the bottom of the shaft he sunk through a 4-foot-9-inch coal-seam, and the yard coal 2 feet only in thickness, with conglomerates, hard gray post (rock) and shales between them and the Borehole coal-seam, as shown in the account of strata given below. The machinery, &c., erected consists of two 60 horse power coupled horizontal winding engines, a 45-horse power condensing engine, driving an 8-inch plunger pump, two shell boilers 40 feet long and 6 feet 6 inches in diameter, poppet-head, pit-head, &c. The coal is of excellent quality, and the screens, tramway, and wharf are expected to be completed about the end of July, when the Company will be in a position to ship large quantities of coal. After the successful sinking of the shaft through numerous difficulties had been completed, Mr. Rossiter gave up the management, and Mr. Hardy was appointed the Company's colliery manager.

Account of strata sunk through at Stockton, as near as could be ascertained, furnished by Mr. Hardy, the colliery manager:—

	ft.	in.		ft.	in.
Sand	60	0	Freestone	130	6
Sand and clay	2	0	Blue shale	17	0

The above is a section of the Burwood coal-seam, now being mined and supplied to the Government railways by the Burwood Coal-mining Company from their Colliery, near Newcastle.

The above is a section taken by Mr. Inspector Rowan at "M'Donald's Hole," situated about 1 mile from the Mudgee Government Railway, and 28 miles from the Wallerawang Railway Station. An adit has been driven a distance of 30 yards into the coal-seam, which is identical with and somewhat similar in quality to that worked by the Wallerawang Coal Company, at Piper's Flat.

The above represents a section of the coal-seam, identical with and somewhat similar to that worked by the Wallerawang Coal Company, at Piper's Flat, which has been opened out in an adit 100 yards in length by the "Carlo Gap Coal and Iron Company," situated about a 1/4 of a mile from the Mudgee Government Railway, and 30 miles by rail from Wallerawang Railway Station. The coal seam lies about 2,714 feet above sea-level, and a tramway (1/4 mile) has been constructed from the tunnel mouth, to the Government Railway, by Mr. Forster, the Manager, and one of the proprietors of the mine.

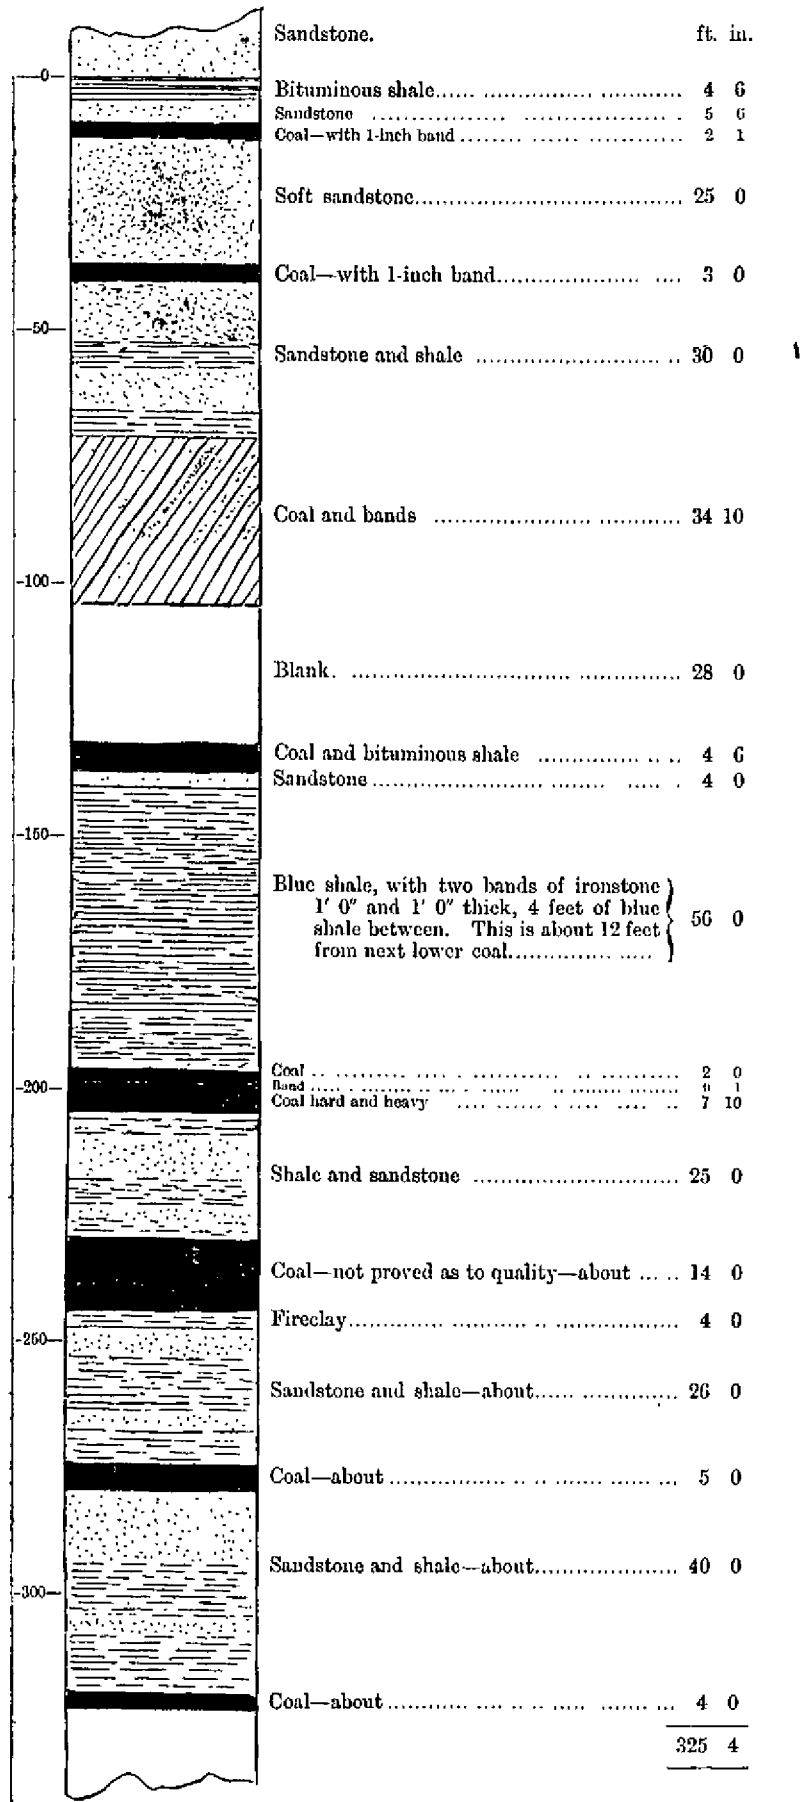

The above section, taken by Mr. Inspector Rowan, represents the coal-seam opened out and about to be worked by the Gladstone Coal Company, situated in one of the gorges, about 1,000 feet below the Great Western Railway, between Wentworth and Lewra Falls, in the parish of Jamieson. Two adits, Mr. Rowan informs me, have been driven into the coal at the face of the cliff and the coal wrought out to a height of 7 feet. The haulage of coal from the mine to the Great Western Railway, a distance of 1 1/2 mile, is by a Wire-rope Pendent Tramway, designed and constructed by Captain Wageman and Oscar Schulze, Esq., C.E., which was nearly completed on my visit in January last. As this is the first wire-rope Pendent Tramway which has been constructed for transport of coal from a mine in these Colonies, I annex the following table given me by the Contractor, Mr. Kern, which may prove interesting to those owning minerals, other than coal, in mountainous places.

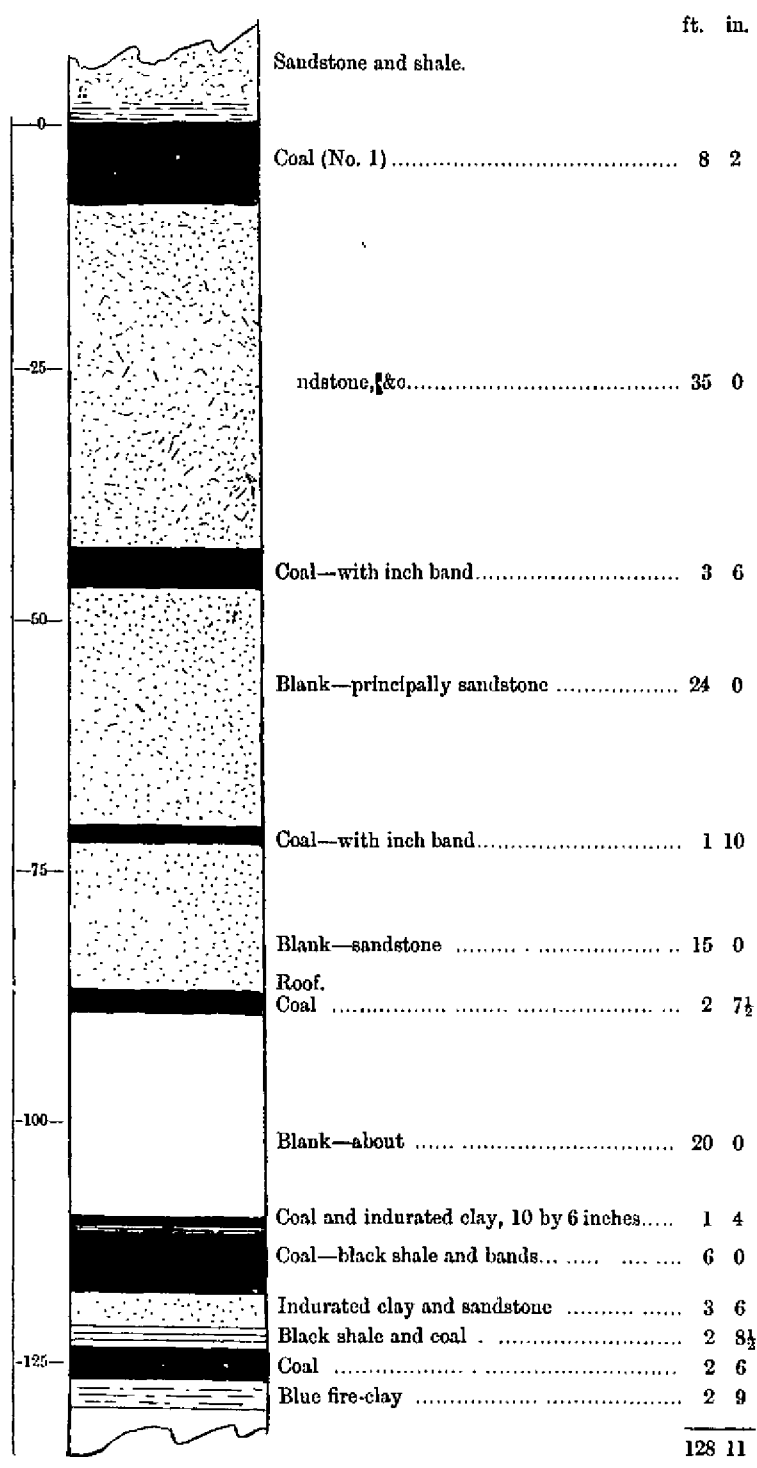

TABLE showing the Dimensions of some of our Wire-rope Pendent Railways in operation.

Name and Location of Wire-rope Pendent Railways.	Material Transported.	Total length in feet.	Total		Max. Grade	Capacity.		No. of Horse-power required for working.	Remarks.
			Rise.	Fall.		Cwt. per Car.	Tons per Day.		
Krupp, Sayn	Iron ore	6,700	60	..	1-9	4	100	3 to 4	
" Braunfels	"	1,080	1-10	4	360	1½	
" Heinrichshütte	"	6,200	..	70	1-10	5½	480	1	One man does all the filling.
Phönix, Laar, 1st	"	2,400	..	190	1-9	Brake	Hand-gear for setting in motion; two men required in all.
" " 2nd	"	6,740	410	..	1-4	4	100	8 to 9	Largest stretch 570 ft., over a valley of 170 ft. depth; takes coal and coke back.
Vieille Montagne, Sweden	Zinc ore	60
Mine Cesar, Spain	Iron ore	1,500	..	303	1-3½	9	50	Brake	..
Rochet & Co., Bilbao, Spain	"	6,130	..	760	1-3	6½	400	..	Automatic brakes on each car.
Lüntorf, Leadworks	Coal	3,450	4	125	3	Takes coal one way, and ores the other way.
Braunfels, Ducal Mines	Iron ore	12,000	..	180	1-8	4	100	5	Largest height of posts, 300 feet; longest span, 250 feet.
Imperial Porcelain Works, Aich..	Coal	2,700	1-7	5	75	1	Taking coal one way and offal the other way; two men needed.
Ver. Friederike, Hamersleben ..	"	900	60	..	1-13	8	300	1½	..
" " "	"	3,270	8	300	4	..
Sielce, Russia	"	4,200	50	..	1-10	9	900	6	Four men needed in all.
Neugattersleben	"	1,680	8	375	1½	Works ten hours, with four men.
Gas-works, Hanover	"	3,960	5	300	2	..
Luther & Rudolph, Helsingford, Sweden.	Wood	In periodical operation, supplying a brick kiln.
Sugar Factory, Dahmen	Beets	1,130	50	..	1-8	2½	125	4	..
Albertgrube, Görlitz	Coal	4,300	9	180	2	..
Schlegel, Silesia	"	15,200	306	..	1-14	5	200	..	In two sections; longest span, 200 feet.
Fortifications, Strassburg	Earth	3,780	5	500	..	Portable; has been used in three different places, with portable switches.
Schramm, Schiedrecht, Holland..	Sand	1-4	12	1,000	..	Transports wet sand from a dredging boat.
Joh. Kann, Forbach	Clay	740	1-17	..	100
Germania, Döbeln	"	1,870	1-15	5	175	2½	..
Cement Works, Lebbin	Sand	1,000	32	5	500	4	..
Hagenah, Stade	Bricks	2,800	25	..	1-10	4	150	2	Used for carrying bricks to the ships and bringing coal and clay back.
Hansemann, Rügen	Chalk	4,300	..	240	1-18	6½	300	Brake	Small engine for starting.
Cement Works, Kröher	Limestone	2,000	120	..	1-5½	3½	75	2	Two men required.
Ziehlke, Düsseldorf	Stones	3,970	..	400	..	6½	125	Brake	..
Krupp, Essen	Machinery	17	For transporting heavy pieces from one shop to the other.
Rybinsk Railway, Russia	Grain	5,700	1-6	4	800	4	..
Sugar Factory, Heilbronn	Beets	1,170	4	Leads through the factory, with five side tracks.
Chemical Works, Gletwitz	Merchandise	For all kinds of goods; works periodically.
Bofors Works, Sweden	Ingots	630	Including one span of 400 feet over a river.
Porcelain Works, Tielsch	Porcelain	1,030	2	Single track railway, with periodical alternate motion.
Raggio, Mont Cenis	Mortar	3,300	1,100	..	1-3	..	120	..	Transports mortar to the fortifications; average rise, 1-3.
Gladstone Colliery	Coal	7,160	1,004	..	1-2	7	20½	50	Engine in centre of tramway, making a break in the straight line from Government Railway of 24°; largest stretch, 764½ feet, over a gorge.

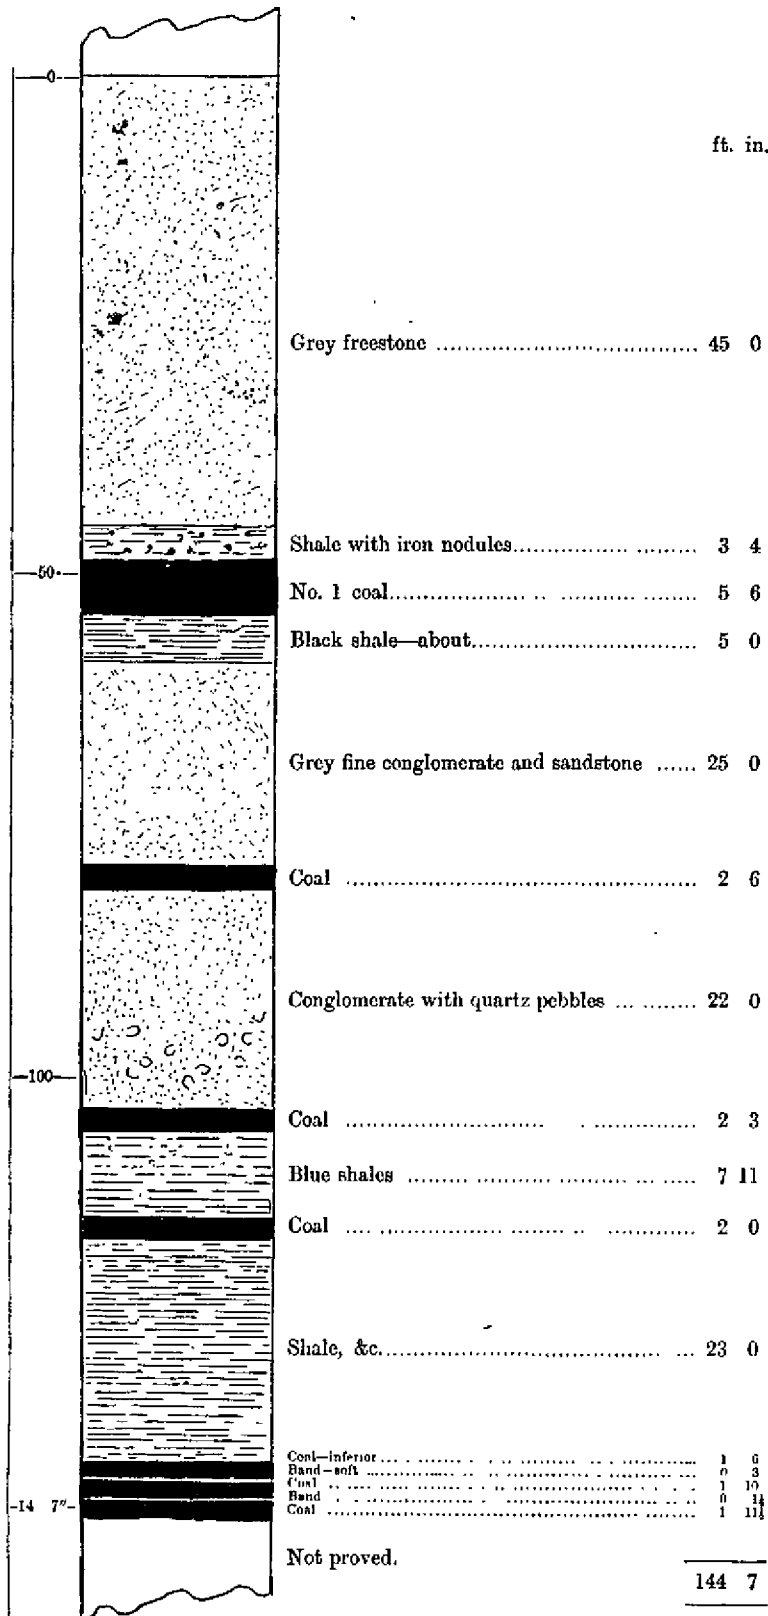

* Tons per hour.

The above is a rough section, taken by me, of the strata and coal-seams opened out by Mr. Hardy, colliery viewer, on Messrs. Watt and others 143 acres mineral conditional purchase, near Dapto, in the parish of Calderwood, county of Cunden; the coal-seams are all of a very inferior quality, but the No. 1 or uppermost coal-seam, identical with that worked at the Wellongong collieries, had not at the time of my inspection been looked for; this I recommended to be done, and the working or proving of the others discontinued

The above represents a rough section, taken by me, of the strata and coal-seams opened out by Mr. Bertram, a certificated colliery viewer lately arrived from England, for the proprietors at Mount Corrimal, situated between Mount Pleasant Colliery and Broger's Nose, and about 4 miles from the Wollongong harbour. The No. 1 coal-seam, shown on section, is identical with and similar in quality to that worked at the different collieries in the Illawarra District.

The above represents a section of the strata and coal-seams recently opened out a $\frac{1}{4}$ of a mile from the northern boundary of the Illawarra Coal-mining Company's Clifton property, at Coal Cliff, in the county of Cumberland, by Mr. Wiley, the Company's general manager. The only coal-seam that could be worked to a profit, shewn in the section, is the No. 1, which is identical with and appears similar in quality to that which is worked at the Coal Cliff Colliery adjacent thereto.

In conclusion, I have only to add that in the year under notice there were 64 Collieries under inspection, and notices have been received of 22 new coal and boghead mineral seams opened out, against 54 under inspection in the preceding year and 13 opening out, and that this year's returns show an increase in the Northern District of 155,722 tons of round and small coal raised, and £83,907 in value; in the Southern District of 30,523 tons, valued at £20,847; and in the Western District an increase of 14,405 tons, and a decrease in the value of £3,619.

I have, &c.,
 JOHN MACKENZIE, F.G.S.,
 Government Examiner of Coal-fields.

THE HALF-YEARLY REPORT of the Inspector of Collieries for the Northern District in New South Wales, and Accidents therein investigated by said Inspector, for the six months ending 31st December, 1884.

The Examiner of Coal Fields, Newcastle,—
Sir,

Glebeland, 14 January, 1885.

Pursuant to provisions of clause 26 in the "Coal Mines Regulation Act, 1876," I have the honor to transmit to you this, my six-monthly report, on the state of the various Collieries in the Northern District for the half-year ending 31st December, 1884.

The total number of Collieries under inspection in the Northern District during the term embraced by this report is thirty-seven. Two of the Collieries reported by me last time have now ceased operations, namely, South Wallsend and Robinson's. Five more mines, however, have been opened out, and have been under inspection during the six months. They are: Maryville, Burwood, Hill End, Burnley's, and Refuge Collieries. Stockton Colliery, where sinking operations have been going on for a considerable time, is also embraced in this report.

Present state of Mines.

A. A. Co.—There are about 600 men, &c., employed in this mine during the day shift, for which about 84,000 cubic feet of air per minute is supplied in eleven separate currents or splits. The number of men in some of the splits is very small, but in no instance are there more men on any split than the Act allows.

The requirements of the Act are complied with in other respects also.

Wallsend.—About 700 men, &c., are employed in this mine on both shifts, and about 130,000 cubic feet of air per minute is supplied in fourteen separate currents or splits, each serving from twenty to seventy men. The requirements of the Act are complied with in other respects also.

Lambton.—There are about 380 men, &c., employed in this mine on both shifts, and about 70,000 cubic feet of air per minute is supplied in nine separate currents or splits, each serving from twenty to fifty men. The Act is complied with in other respects.

New Lambton.—There are now only about seventy men, &c., employed in this mine during the day shift, and about 9,000 cubic feet of air per minute is supplied in one current. The requirements of the Act are also carried out in other respects.

New Lambton New Colliery.—There are about twenty men at present employed in this mine. A second shaft is being sunk and will shortly be bottomed, after which the number of men will be greatly increased. This colliery is splendidly fitted up in every respect, and will doubtless become very extensive. The requirements of the Act are complied with.

Newcastle Co.'s Colliery.—There are about 350 men, &c., employed in this mine on both shifts, and about 60,000 cubic feet of air per minute is supplied in seven separate currents or splits, each serving from thirty to sixty men, &c. Means are now available for men to be brought to the surface from the furnace pit in a case of emergency, but not available for men to pass in and out of the mine at all times. The Act in other respects is complied with.

Co-operative Colliery.—About 380 men, &c., are employed in this mine on both shifts, for which about 70,000 cubic feet of air is supplied in seven separate currents or splits, each serving from thirty to sixty men. The requirements of the Act are also complied with in other respects.

South Waratah.—There are now about forty men, &c., employed in this mine on one shift. The mine is still being worked on the Longwall system, and a current of about 7,000 cubic feet of air per minute is supplied in one current. The Act is also complied with in other respects.

East Waratah.—About 180 men, &c., are employed in this mine on both shifts, and about 22,000 cubic feet of air per minute is supplied in six separate currents or splits, each serving from fourteen to forty-six men, &c. The requirements of the Act are complied with in other matters also.

Old Waratah.—About fourteen men, &c., are employed in this mine. There are several openings to the day, and the ventilation is good. The Act is also complied with in every other respect.

Hill End.—This is a small mine where four men are engaged working the crop coal on the Waratah Co.'s estate. There are two openings to the day. The ventilation is good, and the Act is also complied with in other respects.

Hidden Treasure.—There are only about seven men at present employed in this mine. There are two openings to the day, the ventilation is good, and the Act also carried out in other respects.

Dog and Rat.—There are about ten men employed in this mine. The ventilation is good throughout and the requirements of the Act complied with in every other respect.

Brown's Colliery.—About 210 men, &c., are employed in this mine during the day shift, and about 40,000 cubic feet of air per minute is supplied in five separate currents or splits, each serving from twenty to fifty men. The requirements of the Act are complied with in other respects also.

Duckenfield.—There are about 200 men, &c., employed in this mine during the day shift, and about 40,000 cubic feet of air per minute is supplied in four separate currents or splits, each serving from thirty to sixty-six men, &c. The Act is also complied with in other respects.

Ferndale.—About 120 men, &c., are employed in this mine during the day shift, and about 14,000 cubic feet of air per minute is supplied in three separate currents or splits, each serving from thirty to fifty men, &c. The Act is also complied with in other matters.

Ferndale, No. 3.—There are about twelve men employed in this mine in one shift. A fan has recently been erected for ventilating purposes, and the ventilation is now pretty good throughout the workings. The Act is also carried out in other respects.

Goose Colliery.—Only six men, &c., employed in this mine. The ventilation is good, and the provisions of the Act complied with in every respect.

New Duckenfield.—About twenty-five men, &c., are at present employed in this mine. The ventilation is good and the Act complied with.

Spennymoor.—This mine was under inspection during a portion of the half-year, but is now finally abandoned.

Speedwell.—

Speedwell.—There are only seven men employed in this mine. The ventilation is good, and the provisions of the Act are complied with in other respects also.

Refuge Colliery.—This is a small mine at Tighe's Hill employing about four men who are engaged working pillars. No cause of complaint.

Tighe's Hill Colliery.—This is also a small mine employing about four men who are engaged working a seam of coal on the A. A. Co.'s land near Tighe's Hill. There are two openings to the day. No cause of complaint.

Wickham and Bullock Island Colliery.—There are no miners employed in the Wickham pit at the present time, as operations have ceased until the Bullock Island pit is sunk to the seam and a connection got between the two pits. This will shortly be accomplished, as the sinking on the Island is being pushed on with all speed.

Maryville Colliery, Wickham.—At this mine during the half-year a shaft has been sunk to a splendid seam of coal. The work of opening out at the bottom has been commenced. There are twelve men employed below (four in a shift) and the mine will soon be got into proper working order.

Sneddon's, Brookstown.—There are about twenty-four men, &c., employed in this mine on one shift. The ventilation is good, and the Act complied with in other respects also.

Burwood Colliery.—There are about thirty men, &c., employed in this tunnel on one shift, and are supplied with about 8,000 cubic feet of air per minute in one current. Besides the work in the tunnel a splendid shaft is being sunk to the main seam. The work of erecting screens, &c., is being pushed on with all speed. The provisions of the Act are complied with.

Stockton Colliery.—The work of sinking the main shaft is still being carried on, and it is expected that in the course of about three months the seam will have been reached. The provisions of the Act are complied with.

Marshall's, Thornley Colliery.—There are only nine men employed in this mine. About 3,000 cubic feet of air per minute is supplied in one current. The Act is also carried out in other respects.

Tulip's, Sunderland Colliery.—There are only two men employed in this mine. The ventilation is good, and the Act complied with.

Rathluba.—There are only five men at present employed in this mine. The provisions of the Act are carried out in every respect.

Fonthill.—This mine has been under inspection during a portion of the half-year, but operations are at present suspended.

Greta Colliery.—About 130 men, &c., have been employed in this mine on the day shift during the half-year, supplied with about 19,000 cubic feet of air per minute, in two separate currents or splits, each serving about an equal number of men, &c. The provisions of the Act are also complied with in other respects.

Singleton Colliery.—There are about eighteen men employed in this mine, and supplied with about 4,000 cubic feet of air per minute, in one current. The Act in other respects is also complied with.

Ellesmere.—About thirteen men are employed in this mine; the ventilation is good, and the Act complied with.

Rix's Creek.—Only the lessee getting a little coal occasionally. No cause for complaint.

Burnley's.—This is a small mine opening out near New Lambton to work the crop coal on the Lambton Estate. At present there are only about three men employed below. The provisions of the Act are complied with.

ACCIDENTS IN MINES.

The accidents investigated by me in connection with the Collieries in the Northern District during the six months, ending 31st December, 1884, are fourteen in number, happening in most instances by falls of coal, four of which accidents were fatal; two by falls of coal and stone; one by falling from the headgear of a pit to the surface; and one by a fall of coal. Some of the non-fatal accidents caused serious bodily injury, but the majority of them were not so serious. During the past six months I have also investigated several slight accidents which are not given in this report.

The first of the fatal accidents happened to a miner named Thomas Longworth by a fall of roof (top coal and stone) in the Ellesmere Colliery, Rix's Creek, Singleton, on the morning of the 30th September last. This accident was rendered doubly sad by the fact that another miner named George West met his death by a fall of roof in the same boril, and on the same morning, whilst attempting to rescue Longworth. The body of West was not got out until about twenty-one hours after the accident. On the recovery of this body an inquest was held by J. N. Brooks, Esq., District Coroner, at the residence of the deceased, Rix's Creek, on the afternoon of October 1st; and after taking the evidence of two witnesses, the inquest was adjourned until the body of Longworth should be recovered. This was done on the morning of the 2nd October, and on the following day the adjourned inquest was held at Rix's Creek. I was present at the inquest on each occasion, and fully agree with the following verdicts, as returned by the jury:—

"That the deceased, Thomas Longworth, died from asphyxia or suffocation, together with internal injuries accidentally received on the 30th September, 1884, through a fall of coal in the Ellesmere mine at Rix's Creek; and we are of opinion that every precaution was taken by deceased and his fellow workmen to prevent accident. And we are also of opinion that no blame attaches to the manager of the mine.

"That the deceased, George West, died from asphyxia or suffocation, together with internal injuries accidentally received on the 30th September, 1884, through a second fall of coal in the Ellesmere mine at Rix's Creek, while engaged in assisting to rescue Thomas Longworth.

"The Jury desire to record their sense of the heroism displayed by the deceased, George West, in thus risking and losing his life in the effort to save the deceased, Thomas Longworth."

The following rider was also added:—

"The Jury further desire to place on record an expression of admiration for the way in which the whole of the workmen assisted in recovering the bodies, and especially so in the case of William Longworth and William Hughes, who had so narrow an escape of losing their own lives."

Having been present at the mine from the morning of the 1st October till the recovery of the second body on the following morning, and having watched the whole of the operations during that time, I desire thus publicly to indorse the rider, and express my admiration of the conduct of the miners at Rix's Creek on that trying occasion, as in my opinion the untiring manner in which they worked to recover the bodies of their deceased comrades is beyond all praise. The

The third fatal accident happened to a carpenter named Peter Newman, by falling from a scaffold whilst engaged in the erection of the pit-head gear at the Maryville Colliery, Wickham, on 21st October. The District Coroner, S. Chapman, Esq., J.P., held an inquest on the body of deceased at the "Imperial Hotel," Lake Road, on the following day. I attended the inquest, and fully agree with the verdict of "accidental death."

The fourth fatal accident happened to a miner named Absalom Picking, by a fall of top coal in the Speedwell Colliery on the 5th November. The District Coroner held an inquest on the body of deceased at the Court-house, Lambton, on the following day. I was present at the inquest, and fully agree with the verdict of "accidental death," as returned by the Jury.

The first of the non-fatal accidents happened to a miner named James Hanlon, by a fall of coal in the Lambton Colliery on 11th July, and resulted in leg fracture of a severe nature.

The second was a fracture of ribs to a miner named Andrew McIntyre, by a fall of stone in Brown's Colliery, on 18th July.

The third was a leg fracture to a miner named Thomas Thomas, by a fall of coal in the Lambton Colliery, on 21st July.

The fourth resulted in very severe injury to head to a miner named Robert Cottier, by a train of empty skips in the Duckenfield Colliery, on 22nd July.

The fifth was severe injury to chest and head, to a miner named Owen O'Hare, by being crushed between the roof and the top of a loaded skip in the Co-operative Colliery on 25th July.

The sixth was also caused by a loaded skip, and resulted in a leg fracture to a miner named Thomas Lewis, in the Newcastle Company's Colliery, on 4th August.

The seventh resulted in a thigh fracture to a miner named Ralph Sheridan, by a fall of coal in the South Waratah Colliery, on 6th August.

The eighth non-fatal accident happened to a miner named Joseph Eade, in the Wallsend Colliery, and resulted in very severe burns on body and arms by the explosion of loose powder whilst in the act of charging a down-hole.

The ninth was fracture of arm to an engine-driver named William Smith, by falling from the boiler-seat at the A. A. Company's No. 2 pit, on 26th August.

The tenth and last, was a fracture of arm, and internal injuries to a miner named Samuel Chapman, by a fall of coal in the Co-operative Colliery, on 28th October.

The usual tabulated list of accidents is hereto appended.

I have, &c.,
JOHN DIXON,
 Inspector of Collieries.

TABULATED List of Fatal and Non-fatal Accidents in the Northern Collieries of New South Wales investigated by the Inspector of Collieries during the half-year ending 31st December, 1884.

THE HALF-YEARLY Report of the Inspector of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and accidents therein for the half-year ending December, 1884.

The Examiner of Coal-fields, Newcastle,—

Sir,

Wollongong, 22 January, 1885.

In compliance with the requirements of clause 26 in Coal Mines Regulation Act, 1876, I have the honor to transmit to you this my six-monthly report on the state of the various Collieries for the half-year ending December 31st, 1884.

Four new Collieries have been added to the number during the last six months, viz., the Gladstone Gladstone Gold-mining Company (Katoomba), Carlo's Gap (on the Mudgee line), Rose Hill Colliery (near Coal Cliff), Calderwood Colliery (near Dapto), making in all twenty-seven Collieries.

Western District	12 coal-mines	and	2 shale mines.
Berrima	4	..	1
Southern	8	..	
	<u>24</u>		<u>3</u> .. = 27 Collieries.

PRESENT STATE OF MINES.

Gladstone Coal-mining Company.—This is a new colliery, near Katoomba, and expected to be in full operation about the month of May. It is situated in one of the gorges between the Wentworth Falls and Lowra Falls. From the top of the gorge down into the mine is a distance of about 37 chains. Two seams of coal have been opened out in the face of the mountain, the vertical cover overlying the seams about 800 feet. The No. 1 seam is driven a few yards, and the coal measures 2 feet thick at the face, with 1 inch band running through the centre, this seam being the same as that which is now being wrought at Katoomba Colliery. No. 2 seam is about 40 feet perpendicular below the upper, or No. 1. Two tunnels are driven into this seam a distance of 90 and 65 yards respectively. Coal measures at the working face 7 feet high, with 4 bands running through it from 1 to 4 inches thick. The haulage over the gorge is to be conducted on the pendent wire tramway system. The distance between the top of the gorge to the Government line is about 72 chains.

Carlo's Gap Coal and Iron Company.—This is a new Colliery, about 30 miles from Wallerawang, situated near to the Mudgee railway. A tramway 21 chains long, gradient 1 in 20, has been constructed to connect the Colliery with the Mudgee line, and to be wrought with a self-acting incline. The tunnel is driven into the mountain 250 feet. The coal at the working face measures 7 feet 5 inches, with two thin bands running through it. The coal is very jointy and resembles the seam wrought at Irondale Colliery. Coal is expected to be in the market at an early date.

Katoomba Colliery.—56 men employed underground, divided into a day and night shift, 28 men on each shift, supplied with 3,000 cubic feet of air per minute. Travelling roads and working faces safe. No complaint. The Act complied with.

New South Wales Mine (Hartley Vale).—About 40 men and horses employed underground, and supplied with 1,400 cubic feet of air per minute, in two currents, No. 1 split supplying 30 men with 10,000 cubic feet of air, per minute, No. 2 split supplying 10 men with 4,000 cubic feet of air per minute. The mine in a healthy condition throughout. Travelling roads and working faces safe. No complaint. The Act complied with.

Main Camp (Hartley Vale).—Sinking operations completed. The seam of coal reached at a depth of 497 feet from surface level. At my last inspection I could not get the section and measurement of coal owing to 10 feet of water overlying the seam of coal in the bottom of shaft. Surface arrangements are almost completed for the output of coal, engines, boilers, &c.; all being of the best material.

Eskbank Pit.—About forty men employed underground, and supplied with 8,000 cubic feet of air per minute in one current. The travelling roads and faces safe. The communication mine has been finished. Section 12 sub-section 1 of Coal Mines Regulation Act complied with. No complaint.

Eskbank Old Tunnel.—Ten men employed underground, and supplied with 3,500 cubic feet of air per minute in one current. The rise workings have been abandoned on account of soft coal, and new headings opened out about 80 yards from entrance of the tunnel. Travelling roads safe. No complaint. The Act complied with.

Lithgow Valley Colliery.—About forty men employed underground, and supplied with 10,000 cubic feet of air per minute in one current. Travelling roads and working faces safe. No complaint.

Vale of Clwydd Colliery.—About forty men employed underground, and supplied with 12,000 cubic feet of air per minute. The colliery in a healthy and safe condition throughout. No cause of complaint. The Act in all respects complied with.

Coorerwall.—Only one man working in the mine getting coal for the factory. No cause of complaint.

Zig Zag Colliery.—About twenty men employed underground, and supplied with 2,000 cubic feet of air per minute. The ventilating current weak along the working faces. The air shaft on my last inspection was sunk down 120 feet; it is expected to reach the seam at 165 feet. When this shaft has reached the workings it will produce a plentiful supply of ventilation for the colliery.

Irondale Colliery.—About forty men employed, and supplied with 12,000 cubic feet of air per minute in one current. Ventilation good throughout the colliery. Travelling roads and working faces safe. The Act in other respects complied with.

Bowenfels Colliery.—Two men employed in this mine. The ventilation good throughout, and the Act in other respects complied with.

BERRIMA

BERRIMA DISTRICT.

Erith Colliery.—About twenty men employed, and supplied with about 2,000 cubic feet of air per minute. The ventilating current weak along the working faces. I have called the manager's attention to this matter, namely, the necessity of some motive power to produce ventilation. He (Mr. Baker) promised to have a furnace put in by next inspection. The Act in other respects complied with.

Ringwood Colliery.—Underground operations meanwhile suspended owing to extensive alterations being made in connection with the surface arrangements. These arrangements will soon be completed and the colliery in full working operation.

Berrima Colliery.—About eight men employed underground, and supplied with 4,000 cubic feet of air per minute. This colliery is being wrought at present on the long-wall system. Travelling roads and working faces safe. The Act is complied with in other respects.

Australian Kerosene Oil Company.—About forty men employed underground, and supplied with 10,000 cubic feet of air per minute. The ventilation divided into two currents, each current supplying twenty men with 5,000 cubic feet of air per minute. Several adits have been driven into the side of the mountain to test the quality and extent of shale on the estate. The Act is complied with in every respect.

Mittagong Coal-mining Company.—Underground operations meanwhile suspended until surface arrangements are completed.

SOUTHERN DISTRICT.

Avondale Colliery, parish of Calderwood, about 13 miles from Wollongong.—Six prospecting mines have been driven several yards into the mountain side testing the quality and thickness of coal which is known to exist along the belt of mountains in the Illawarra District. Each adit driven into the coal several yards. The whole of the six seams are situated within about 200 feet in the mountain face—that is, the top and bottom ones are about that distance apart. About 30 feet above these six seams referred to is the well known upper seam of the Illawarra District. The prospectors have not yet discovered this seam. Meanwhile prospecting operations are suspended.

Mount Kembla Colliery.—110 men employed underground and supplied with 11,000 cubic feet of air per minute in two splits—No. 1 split supplying sixty men with 6,000 cubic feet of air per minute; No. 2 split supplying 50 men with 5,000 cubic feet of air per minute. The No. 4 division of workings is very warm and uncomfortable; the coal being extra hard requires a deal of blasting, causing an immense powder smoke. I advised the miners and manager to arrange to have the greater portion of the blasting done before leaving at night, which would improve the ventilation in that district. The Act in other respects complied with.

Mount Keira Colliery.—100 men employed and supplied with 22,000 cubic feet of air per minute in two currents, each split supplying about equal number of men with 11,000 cubic feet of air per minute. The Act in all respects complied with.

Mount Pleasant Colliery.—Second seam about eight men employed and supplied with 3,000 cubic feet of air per minute. This seam is wrought on the long-wall system. The Act in other matters complied with.

Mount Pleasant Old Tunnel.—About eighty men employed underground and supplied with 10,000 cubic feet of air per minute in one current. Travelling roads and faces safe. The Act complied with. No cause of complaint.

Bulli Old Tunnel.—130 men and horses employed underground, and supplied with 15,000 cubic feet of air per minute in three separate splits, each split supplying about equal number of men with 5,000 cubic feet of air per minute. The ventilation in the Hill End district not in a satisfactory condition. An air-course is being driven through the workings, which will greatly improve this division of workings. A new air-shaft is to be put down in the centre of the workings, which will improve the ventilation throughout the colliery. The Act in other respects complied with.

North Bulli.—About twenty men employed underground and supplied with 7,000 cubic feet of air per minute. Travelling roads and working faces safe. The Act in every respect complied with.

Rose Hill (near Coal Cliff).—A tunnel has been driven 40 yards into the side of the hill. The coal at the working face is of a soft nature, measures 3 feet thick, and supposed to be the upper seam in the Illawarra district.

North Illawarra Coal-mining Company.—Several tunnels have been driven to further test the quality and thickness of coal. The timber is being laid down to construct a jetty for the shipment of coal, and other surface arrangements are being busily carried forward.

Coal Cliff Colliery.—About 100 men employed underground and supplied with 14,000 cubic feet of air per minute in two currents—No. 1 split supplying sixty men with 10,000 cubic feet of air per minute; No. 2 split supplying twenty men with 4,000 cubic feet of air per minute. Travelling roads and working faces safe. The Act in every respect complied with.

ACCIDENTS IN MINES.

During the last six months I have investigated ten separate accidents, three of which were fatal and seven non-fatal. The first of the fatal accidents happened to a sinker named George Hayward, who was killed instantaneously by a fall of stone in the sinking shaft, Main Camp (Hartley Vale), on 26th July. The district coroner held an inquest on the body of deceased at Hartley Vale, which inquest I attended. A verdict of accidental death was returned by the jury, with which verdict I fully agree. The second fatal accident happened to a miner named Andrew Bell, at Mount Keira Colliery, on 9th September, by a fall of coal, whereby he received fatal injuries resulting in death. An inquest was held by the district coroner, C. F. Smith, Esq., at Wollongong, on September 15th, which inquest I attended. The jury returned a verdict of accidental death, with which verdict I fully agree. The third fatal accident to a miner named Francis

Francis Bonar, at Bulli Colliery, on 5th November, being run over on the engine plane by a set of loaded skips, from which cause he died shortly after. An inquest was held by the district coroner, C. F. Smith, Esq., on 12th November, which inquest I attended. The jury returned a verdict of accidental death, with which verdict I fully agree. The first of the non-fatal accidents happened to a miner named Edward Kennedy, on July 3, in Berrima Colliery, by a fall of stone from the roof which gave him a nasty cut on the right foot, through the effects of which the foot was afterwards taken off in the Goulburn Hospital. The second to a miner named Peter Jansen, on August 2, at Irondale Colliery; right leg broken by a fall of coal. The third to a fireman named James Aitken, on 18th August, on the main incline, Joadja Creek; arm and leg broken by riding on a loaded truck which broke away. The fourth to a miner named George Bell, at Mount Kembla Colliery, on September 8; collar-bone broken by a fall of coal. The fifth to a labourer named William Ring, at Mount Keira Colliery, on October 7; bruised about the head and shoulders by falling before a loaded truck on the slack heap. The sixth to a wheeler named Daniel Thompson, at Mount Pleasant Colliery, on October 23; leg bruised by falling before a loaded skip. The seventh to a labourer named L. Branskio, on November 1, at Mount Pleasant Colliery; leg broken against a post of timber by a loaded skip at the screens.

The usual tabulated list of accidents is hereto appended.

I have, &c.,
JAMES ROWAN,
 Inspector of Collieries.

TABULATED List of Fatal and non-fatal Accidents in the Southern and Western Districts of New South Wales Collieries investigated by the Inspector of Collieries during the half-year ending 31st December, 1884.

GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Report of Progress for 1884 by the Geological Surveyor in Charge to The Under Secretary for Mines.

DURING the year I have been engaged upon Departmental work in Sydney, and in examining various portions of the Colony.

In April I inspected the iron ore deposits in the Mittagong, Berrima, and Goulburn districts. There are numerous outcrops of iron ore at Willeroo, near Lake George, but these are not of sufficient extent to be of value for iron-smelting; it is probable that some of them are the caps of copper lodes like that at the old Currawang copper-mine. The principal iron deposits are those which occur within from 3 to 6 miles north of Goulburn. They are not so extensive as the deposits in the Mittagong district; but from them might be obtained a large quantity of rich brown hematite, and therefore, taken in conjunction with the Mittagong deposits, we have assurance of a large supply for smelting works.

I also inspected the coal-seam at Meryla, where it crops out just beneath the base of the Hawkesbury sandstone formation. The seam had been only partly opened by a small tunnel, in which it showed the following section:—

	ft.	in.		ft.	in.
Coal with thin $\frac{1}{4}$ -inch partings from 3 to 6 inches apart	4	0	Band	0	0 $\frac{1}{2}$
Band	0	1	Coal	0	10
Coal	0	2 $\frac{1}{2}$	Band	0	0 $\frac{1}{2}$
Band	0	0 $\frac{1}{2}$	Coal	0	11 $\frac{1}{2}$
Coal	0	8 $\frac{1}{2}$	Band	0	0 $\frac{1}{2}$
Band	0	0 $\frac{1}{2}$	Coal	0	7 $\frac{1}{2}$
Coal	0	0 $\frac{1}{2}$	Band	0	1 $\frac{1}{2}$
Band	0	2	Coal	0	3
Coal	0	3 $\frac{1}{2}$	Band	0	0 $\frac{1}{2}$
			Coal	0	9

Bottom not seen, but grey shales crop out 4 feet below. The seam dips at W. 30° N. at 6°.

An average sample of the coal yielded on analysis—

Moisture	1.77	
Volatile hydrocarbons	24.11	
Fixed carbon	51.62	} Coke 74.12
Ash	22.50	
	<u>100.00</u>	
Specific gravity	1.42	
Sulphur	0.357	

From the occurrence of the numerous bands in the seam, and the high per-centage of ash in the coal, I do not think that the seam at this place could be profitably worked.

On 23rd June I left Sydney and proceeded overland by way of Hay and Wilcannia to the silver-mining country in the Barrier Ranges.

From Hay on the Murrumbidgee to the town of Booligal on the Lachlan River, a distance of 50 miles, the country consists chiefly of wide open salt-bush plains, with a few belts of timber and scrub. The plains are formed of red and grey loamy clay, the grey coloured portions generally being the shallow depressions where water lodges after rain. There are occasional low ridges and patches of red sand; the former trend about east and west and have evidently been formed by the wind. A few days before my visit there had been some rain, and the clay soil depressions were partly filled with water, but elsewhere the surface of the plains was almost destitute of vegetation excepting the small saltbushes; the soil thus exposed is easily removed by the strong winds—the particles of dust clouding the atmosphere for several days together, while the coarser sand is drifted and piled up in low ridges and mounds wherever any obstruction is presented. In this way enormous quantities of earth and sand are removed and redeposited. One of the largest of these ridges forms a belt extending across from 4 to 7 miles north of Hay, and is covered with boree, pine, and various saline shrubs. With the exception of these low rises and wide shallow hollows the country between the Murrumbidgee and the Lachlan is almost level, the vast expanse of open plains looking like the ocean, especially when the horizon here and there happens to be lost in mirage; but the general fall of the plains appears to be at the rate of about 1 foot in the mile towards the west. Artesian water is likely to be obtained by boring in places throughout the flat country through which the Murrumbidgee and Lachlan Rivers flow.

The channel of the Lachlan River at Booligal is not so large as it is 230 miles higher up at Forbes; the flood waters are partly carried off by ana-branches, or natural flood-races, which in places form lignum swamps several of which the road crosses within 10 miles north of Booligal. The soil in these lignum swamps is dark grey clay, which in dry weather is broken open by deep fissures and holes.

For the next 24 miles the road passes over salt-bush plains of red soil to the Jumping Sand Hills, which are small irregular rises of sand from 20 to 50 feet high, and with the exception of a few scattered pines are almost devoid of vegetation. There is a Government well here, 160 feet deep. Then for 55 miles to Ivanhoe the country consists of open saltbush plains with a little tea-tree and yarran scrub and some lignum swamps. The country for the next 55 miles to Mount Monara is more sandy, undulating and scrubby, and between 12 and 30 miles from Ivanhoe are several remarkable basin-shaped hollows from 30 to 40 feet deep and from 15 to 30 chains in diameter. In seasons of drought these are usually dry, but I was informed that there is permanent water in the Government tank which has been made in the hollow called the Banooka Swamp. The soil in banks around these swamps contains nodules of marl and gypsum, especially at the "Gypsum Palace Inn." Here, and for 2 miles beyond, large quantities of crystalline and earthy gypsum crop out in low rises which are covered in places with red sand. Near the swamps are small box-trees, balar, mulga, blue-bush, yarran, lignum, and other scrubby vegetation.

Mount Monara consists of several picturesque rocky hills rising to about 200 feet above the surrounding country, and formed of thick bedded quartz pebble conglomerates and grits, dipping W. 20° N. at 40°, with slickenside joints. I did not see any fossils in them, but from their lithological character they are probably

probably of upper Devonian or Lower Carboniferous age. After crossing these rocks for about a mile the road again passes on to red sandy plains and slightly undulating country, covered with salt-bush, cotton-bush, mulga, emu-bush, &c., for about 60 miles from Monara, with, in one part, a belt 6 miles wide of mallee scrub, growing upon sand ridges; then for 7 miles the Devonian sandstones and conglomerates come to the surface in places, and form the steep southern bank of the great alluvial flat through which the Darling River flows. This flat is from here to Wilcannia about 7 miles wide, with here and there several sand ridges, which appear to have been formed by the action of the winds.

The town of Wilcannia is situated on the northern bank of the Darling, on a high level deposit of the Pleistocene formation; but 4 miles N.E. from the town are some low hills of the Devonian formation composed of thin bedded fine-grained sandstones, dipping E. at 18°, and traversed by vertical E. and W. joints, and other joints dipping W. at 75°. This sandstone is of good quality for building purposes, and has been extensively used in the public buildings in Wilcannia.

From Wilcannia south-westerly to Glen Lyon Station, a distance of 62 miles, the country consists of low rises of Devonian conglomerates and sandstones covered more or less with Pleistocene gravel, sand and clay detritus from these rocks, forming undulating salt-bush plains, which in places are open, and in others covered with apple, mulga, leopard-wood, blue-bush, and scrubby vegetation. Caulker's Well, 30 miles from Wilcannia, has been sunk to a depth of 130 feet in the Pleistocene red clay, and drift sand, and brackish water obtained. The soil of the plains is usually red sandy loam, covered with pebbles of ironstone, sandstone, quartz, &c., from the size of peas to 3 inches in diameter. The shifting sand is often seen piled up on the lee (S.E. and S.) sides of the bushes, fences, and other objects which obstruct the wind. Sometimes the low rises appear at a distance as if covered with snow, which is due to a covering of white quartz pebbles. These pebbles being of a harder material than the rest of the detritus from the Devonian conglomerates have withstood the disintegrating action of the weather, and so have remained, while the softer material has been carried off by the wind and rain.

About 38 miles from Wilcannia, near the Eight-mile Tank, there is a belt, about 1 mile wide, of altered Silurian sandstones, with quartz-reefs, forming the south-eastern limit of the metalliferous rocks of the Barrier Ranges. This place should be prospected for silver and gold.

Three miles east from Glen Lyon Station a quarry for building stone has been opened in thin bedded Devonian sandstones, dipping west at 23°. The sandstone shows a false-bedding structure, and sometimes contains small pebbles of slate.

Near the Glen Lyon Homestead, which is situated in the centre of a large plain opening towards the south, a shaft has been sunk 260 feet deep in Pleistocene red sandy clay and pebble drift, but not bottomed; it yields a small supply of hard but drinkable water. As this alluvial deposit fills an old valley draining from the hills on the north, it no doubt contains a large body of water in the deeper parts, which could be proved by sinking or boring.

About 12 miles south-west from Glen Lyon a well has been sunk for 200 feet, and 100 feet bored into the Devonian reddish and white sandstones and conglomerates, without obtaining a good supply of water. In such rocks I do not think that much water will be obtained. Close to the well these rocks form steep rugged hills, at the foot of which, and at the mouth of a rocky ravine are some small caves, known as "Burke's Cave," where Burke and Wills camped on their memorable journey across Australia, in the year 1860. The strata dip about north 25° west, at from 16° to 25°, and are traversed by joints more or less vertical, also by a network of segregated siliceous veins from 2 inches thick to mere threads. The conglomerates are full of white quartz pebbles, and are the source of the immense quantities of the white pebbles scattered over the low ridges and plains as above mentioned. These rocks are not of a metalliferous character. The same Devonian formation continues for 4 miles from Burke's Cave, and for the next 5 miles the country consists of red sand supporting a thick growth of mulga and quandong scrub; then the road crosses an extensive open salt-bush plain about 28 miles wide, through the centre of which the Yancowinna Creek flows. The channel of this creek is from 2 to 3 chains wide and 15 feet deep; the bed of it is drift sand, and the banks are of red sandy clay and gravel. This vast plain undulates slightly, and consists of Pleistocene, red, sandy clays, with abundance of semi-angular and rounded pebble drift scattered over the surface. The occurrence of so many pebbles at the surface is, I think, chiefly due to the removal by the strong northerly and westerly winds of the finer material (sand and clay) in which the pebbles were embedded in the original deposit. The broad sandy belt just referred to on the east side of the plain is probably the accumulation of the sand recently swept off the plain by the wind.

The wide-spreading Pleistocene deposits flanking the hills and filling all the depressions are evidences of the great rainfall and denudation during the Pleistocene period.

On the western side of the plain at "The Gorge," where Stephen's Creek, flowing south-easterly from the Barrier Ranges, enters the plain, talcose hornblende and mica schists and quartzites rise to the surface and form rugged hills. I could not detect any fossils in these rocks, but I am of opinion that they are of Lower Silurian age, if not still older. They here dip about N.W. at 75°, and are traversed by numerous quartz-reefs, and dykes of diorite and granite; in places they are altered into gneiss. They constitute the formations in which the lodes containing silver, gold, copper, tin, bismuth, manganese, iron, &c., occur throughout the Barrier Ranges, and which have been already described in my published report of August, 1884.

The western margin of this great and rich metalliferous area is about 3 miles west of the town of Silverton, and within 10 miles from the boundary-line between the Colonies of New South Wales and South Australia; beyond it an immense open salt-bush plain stretches away to the west and north as far as the eye can see. The Barrier Ranges rise so abruptly out of this level plain to a height of from 200 to 500 feet, that the name given them appropriately designates their appearance. The steep face of these ranges extends almost in a straight line in a north-easterly direction for about 50 miles to Campbell's Creek, beyond which they slope more gradually into the plain along a line running northerly for 40 miles. At the road crossing on Campbell's Creek the altered sandstones and slates dip E. 10° S. at 80°; they are traversed by numerous quartz-reefs, striking N. 10° E., which extend for a few yards and pinch out. Sometimes the reefs (one I saw is 30 feet wide) stand out above the surface, and when seen from a distance they appear like short white lines following one after the other over the dark surface of the slate hills.

At Corona Station on Morphett's Creek, is a belt of yellow limestone 20 chains wide; it extends northerly as far as I followed it for about 12 miles, where the associated clay slates and altered sandstones dip E. 10° N. at 45°.

About

About 8 miles north of Corona, a small flat-top hill, called "Tent Hill," stands prominently out near the foot of the Silurian hills, and on the edge of the great plain. Its nearly flat summit, surrounded by precipitous sides, is about 100 yards long and from 20 to 60 yards wide, and slopes to the west at an angle of about 5°. It consists of argillaceous quartzite, containing a few quartz pebbles, which has a partly columnar and semi-concretionary structure, and rests unconformably upon the slate formation. This singular hill, which rises to about 120 feet above the level of the plain, is a remnant of the upper beds of the Cretaceous formation, and affords undoubted evidence of the effect of the denuding forces which have almost isolated it from the Silurian ranges on the flanks of which the cretaceous strata were deposited. It also affords the important evidence of the extension to this point of the great Cretaceous formation which occupies such an immense area to the west, north, and north-east, and in which artesian water may be obtained by boring or sinking; to the south the Cretaceous beds do not probably extend under the plains beyond Thackeringa. The surface of the red sandy plain within a mile from the base of Tent Hill is strewn with round nodules of the Cretaceous quartzite, together with angular and rounded pebbles of quartz and sandstone from the Silurian rocks.

The map accompanying my previous report indicates the large area of the Palaeozoic formations, in which metalliferous lodes are likely to occur, viz., over 4,000 square miles. Since that report was written a few silver and tin-bearing lodes have been discovered, and the progressive work that has been done upon the lodes already described shows that the Barrier Ranges mining field has become of very great importance. The great desideratum is water; but this can be met by the construction of large and deep tanks, seeing that the rainfall affords a sufficient supply. Timber and fuel for mining purposes are very scarce upon the field, and must be supplied either from the Darling River or from Adelaide.

For the working of the tin and silver lodes it is believed that the Cornish crusher or Rollers might be introduced with advantage. Mr. T. W. E. David, who has seen this machinery in operation, is of opinion that it would be specially adapted for crushing the micaceous tin ore of the Barrier lodes. It is a dry crusher.

In December I examined the country on the western side of Lake Macquarie, in the parishes of Awaba, Teralba, Coorumbung, and Mandolong, in the county of Northumberland. The whole of this country consists of the Upper Coal Measures of the Newcastle coal-field, and in the diamond drill bores which have been put down at Teralba, Awaba, Coorumbung, Wyong, and in other intermediate localities, valuable seams of coal have been found to exist within workable depths and near to the Great Northern Railway line, which is now in course of construction from Sydney to Newcastle, so that for a distance of at least 25 miles in a southerly direction from the Wallsend Colliery the coal-field may be considered to extend; but the borings show that in different places throughout this large area not only do the seams of coal vary considerably in character but also that the coal-bearing strata, which are only about 500 feet thick where the seams have been worked in the Newcastle district, are about 900 feet thick at Teralba. This latter fact is, I believe, not due to a thickening of the Measures, but to the occurrence in the southern localities of lower seams, which thin out before reaching the places where the lower beds have been bored through, near Newcastle. As the seams of coal which have been proved in the different bores near Lake Macquarie vary so much in their thickness and stratigraphical position, it is impossible, until borings have been made in other places, to accurately correlate them with the seams now worked in the Newcastle field. But in the hills immediately south of Cackle Creek, at Teralba, the highest or top seam of the series crops out about 17 feet thick on Mr. Black's land, at about 140 feet above sea-level; and as it has a south-easterly dip it disappears below sea-level under the conglomerate cliffs on the western shore of Awaba Bay. This valuable seam is the same that I have already mentioned in my Annual Report for 1877 as occurring near the Sugarloaf Mountain, and also at and near the head of LT Creek, where I measured the following section of it:—

Conglomerate and sandstone.....	Roof.
	ft. in. ft. in.
Bituminous coal, varying from.....	1 8 to 2 1
Clay band.....	0 1
Splint coal with partings of bright bituminous coal.....	3 8
Clay band.....	0 2½

Below this it was hidden by water in the shaft; but Mr. Donaldson, who sunk the shaft, gave me the following particulars of it:—

	ft. in.
Splint coal.....	1 0
Parting.....	0 0½
Bituminous coal.....	5 0
Parting.....	0 0½
Splint coal.....	3 6
Parting.....	0 0½
Splint coal.....	1 6

The dip of the seam here is east at 6°.

There is abundance of splendid timber for mining purposes throughout the district.

In the Railway cutting, distant 88 miles 64 chains from Sydney, the strata dip S. 5° E. at 9°, and show in section a bed of fireclay shale 10 feet thick. The above mentioned thick coal seam probably crops out about 50 feet below this.

The Coal Measures on the western shores of Lake Macquarie contain numerous fragments of coniferous tree stems, completely silicified. On account of their extreme hardness some of them have resisted the denuding agencies which have swept away the softer material of the rock in which they were imbedded in the conglomerate cliffs of Awaba Bay. The late Rev. W. B. Clarke, M.A., F.R.S., many years ago described the fossil tree stems of Lake Macquarie in a paper written for the Geological Society, but which was only partly published. Mr. Mordant W. Clarke, son of the late revered geologist, has kindly placed this paper at my disposal, and I beg to append it herewith. (See Appendix F.)

In November I reported upon the coal and iron ore deposits in the Greta, Branxton, and Singleton Districts. (See Appendix A.)

In Appendix B will be found a report on the discovery of coal in the diamond drill bore, put down by Mr. J. Coghlan, at Heathcote, in the County of Cumberland.

In December I inspected the cinnabar deposits on the Cudgegong River, near Rylstone. (See Appendix C.)

Mr.

Mr. T. W. E. David, B.A., F.G.S., Geological Surveyor, has completed his field-work in connection with his geological survey of the Vegetable Creek tin-fields, and is now engaged in the preparation of the map and description of the deposits and various minerals and rocks met with. This work will prove of great practical and scientific value. Mr. David's progress report is herewith appended. (See Appendix D.)

For a detail report upon additions to the collections of the Mining and Geological Museum I would refer you to the report of the Curator, Mr. G. E. Carne. (See Appendix E.) Notwithstanding the inconvenience arising from want of a suitable sorting room, Mr. Carne has in the most energetic and able manner labelled and registered the large number of specimens received; so that the arrangement of the collections will be much facilitated when the museum building now in course of erection will be available.

Mr. Carne's report also gives a statement of the assays of mineral samples that have been made by the Department for the public.

Information has been given to persons who almost daily seek advice regarding minerals submitted for examination.

Mr. Robert Etheridge, junr., F.G.S., assistant Paleontologist to the South Kensington Museum in London, and Sir Richard Owen, have kindly described and returned to me several rare fossils which I forwarded to them. Amongst these Sir Richard has determined the remains of a gigantic species of carnivorous lizard—*Notiosaurus*—which was found in the Pleistocene mud deposits at Cuddie Springs by the collector to the Geological Survey, Mr. Charles Cullen. From the same deposits Mr. John Ycomans, of Gilgoin station, has generously forwarded to the Department a collection of fossil bones.

A large collection of fossil leaves from the stanniferous deep lead deposits of the New England districts, has been sent to Baron von Ettingshausen, of Graz, who has kindly undertaken to examine and describe them.

During the year additional improvements have been made to the Jenolan Caves and the Wambian Caves, rendering them safer and more accessible for visitors. Mr. Jeremiah Wilson, the keeper, reports that during 1884 there were 770 visitors to the Jenolan Caves. Arrangements are now being made in connection with the Superintendent of Telegraphs for the lighting of the caves by electricity, which will not only enable the natural beauties of the caves to be seen to greater advantage, but also will prevent them from getting discoloured by the smoke from the numerous candles that now have to be used. It is proposed to utilize the waterfall in the creek close to the Caves as the means of providing the motive power for the electrical apparatus. Mr. Jeremiah Wilson has reported that he has discovered some new caverns near the Jenolan Caves; but they have not yet been explored. The Wellington Caves are of special interest from a scientific point of view on account of the numerous fossil bones occurring in them. Mr. James Sibbald has been engaged to collect these fossils, and he has obtained some valuable specimens.

I have, &c.,

C. S. WILKINSON,

Geological Surveyor in charge.

APPENDIX A.

The Under Secretary for Mines,—

Sir,

In accordance with your instructions I have examined the coal measures in the Greta and Branxton District, and have the honor to report thereon as follows:—

The coal measures here consist of a series of marine strata, chiefly of conglomerates, not less than 2,500 feet thick, with some intercalated plant beds. In the latter occur the seams of coal, one of which has been extensively worked in Greta and Anvil Creek Collieries, where the seams crop out at the surface, and dip about west 20° north at angles of 7° to 12°.

At the Anvil Creek Colliery a section of the main seam is as follows:—

	ft.	in.	
Not worked.....	2	0	Inferior coal.
	0	3	Band.
	4	2	Coal.
	0	2	Band.
	0	5	Coal.
Thickness of coal worked—11 feet 8 inches...	0	1½	Band.
	1	10	Coal.
	0	2	Band.
	5	3	Coal.
Thickness of seam.....	14	4½	

The thickness of coal worked varies from 9 feet to 11 feet 8 inches in different parts of the colliery. 16 feet below is another seam 4 feet 4 inches thick which has not been worked.

In the Greta Colliery Company's A pit the seam shows the following section, as reported by the Examiner of Coal Fields.

Conglomerate:—		ft.	in.
Coal.....		2	3
Petroleum oil cannel coal		1	2
Coal.....		5	3
Clay band		0	4
Coal.....		1	1
Clay bands and coal.....		4	4
Coal.....		5	10
Shale		1	6
Coal.....		4	3
Total thickness.....		26	0

Conglomerate.

In the B pit, about 32 chains westerly from the A pit, the seam is 17½ feet thick, inclusive of clay bands. These sections show how considerably the seam varies in thickness even within a short distance.

Again,

Again, on the Dalwood Creek, about 3 miles to the north of Greta, a seam of coal 6 feet thick crops out. This is the seam which was opened in the year 1864, by the late Mr. W. Keene, then Examiner of Coal Fields. It occurs on the line of strike of the Greta seam, and as the Coal Measures can be traced with much regularity from Greta to this point, there is no doubt that it is, as Mr. Keene supposed, identical with the Greta seam. (See Appendix.) It here dips west 10° south at 16° , and shows in section in the shaft sunk upon the bank of the creek :—

	ft.	in.
Sandstone and conglomerate	10	0
Good firm bituminous coal with occasional small partings	6	0
Coal and shale bands	1	6
Shales	4	0

About a mile to the south on Leconfield, a seam 3 feet 3 inches thick has been proved on its outcrop on the side of a hill. It is believed to be the continuation of the above-mentioned seam, but it only contains 2 feet 2 inches of good coal, yielding on analysis 50.91 per cent. of volatile hydrocarbons. It is probable, therefore, that the seam is continuous, though varying in thickness, from Greta, through the Leconfield Estate to Dalwood Creek, and also for a distance of 2 miles to the west, as the Coal Measures have a regular dip in that direction at about 12° and do not appear to have been disturbed.

A diamond drill bore is now being put down about $\frac{1}{2}$ mile west of Leconfield to prove the seam. And according to the dip of the strata the seam should be struck at a depth of about 620 feet. The site is in a large unproved area. The result of this boring will also be of interest, as showing whether the two upper seams which were proved in the northern portion of Mr. Wyndham's Estate in a diamond drill bore put down about 14 chains westerly from the above-mentioned seam on Dalwood Creek, extend so far to the south; for they are either separate seams which do not occur at Greta or else they represent the Greta seam divided, in which case they will be found closer together, if not almost united at this point. The following is the section of Mr. Wyndham's bore :—

	ft.	in.
Sandstones, shale, and conglomerate	179	2
Coal.....	4	3
Sandstone, shale, and conglomerate.....	34	4
Coal.....	0	7
Sandstone, shale, and conglomerate.....	15	10
Coal.....	3	7
Sandstone and conglomerate	31	10
Coal	0	9
Sandstone, shale, and conglomerate.....	65	7
Coal	6	1
Shale and conglomerate	46	2
Coal.....	0	3
Sandstone, shale, and conglomerate.	70	0
Total depth	459	3

The lower seam, 6 feet thick, is evidently the same as the one prospected by Mr. Keene, which is believed to be the main, or Greta and Anvil Creek seam.

As this seam is thus seen to vary so much in thickness at the different places where it has been opened, it would be impossible to state definitely what would be its average thickness, but for each foot in thickness it will yield, after making an allowance of one-third for loss and waste in getting, at the rate of 1,061 tons of coal per acre.

The following is an analysis of the coal from the Greta Colliery:—

<i>Analysis.</i>	
Water	2.25
Volatile hydrocarbons	39.21
Fixed carbon	54.41
Ash	2.72
Sulphur.....	1.41
Specific gravity, 1.287.	100.00

The coal is of excellent quality for gas, steam and household purposes; it is very firm and does not make much slack. Lenticular layers of kerosene oil cannel coal have sometimes been found with it.

Near the Branxton railway station the dip of the strata is west at 18° , and then it suddenly changes to the north, thus showing some local disturbance. It is probable that the Coal Measures in this locality have been faulted, for, on the Black Creek, about 2 miles west-north-west from Branxton, two seams of coal crop out which I believe are the equivalents of the seams at Greta, for they are associated with conglomerate beds similar in character and in their contained fossils to those of Greta. Their reappearance at the surface in this place, where they dip west 20° north at 25° , must be due to a faulting of the beds a short distance to the south-east of Branxton.

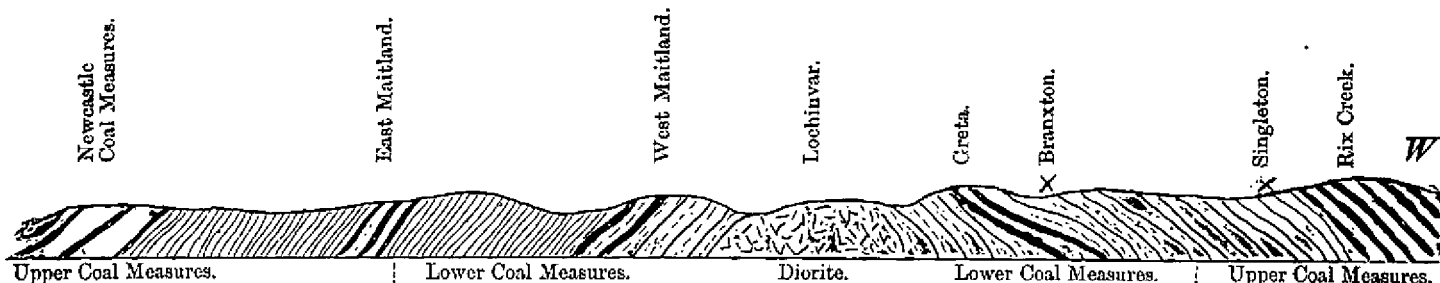

Within 1 mile west from Branxton, the strata resume their westerly dip at 15° . Two miles further, near Belford, they dip in the opposite direction at 60° , but about half-a-mile east of the Jump-up Creek, they become horizontal for a few chains forming an anticline, and again dip westerly continuing so at various low angles to Rix Creek, $3\frac{1}{2}$ miles beyond Singleton. Here three seams of coal are at present worked, the largest of them, the Singleton Colliery seam, being 17 feet 8 inches thick, including numerous bands, the lower portion only, 6 feet 8 inches, of this seam is at present worked. It dips west at about 10° passing into portions 474 and 463, parish of Auckland. The coal is of a bituminous character. A description of this and Longworth's seams are given by the Examiner of Coal-fields in the Annual Report of the Department of Mines, 1880, pp. 203, 204.

I visited this locality to ascertain not only the relative position of the Coal Measures of Greta and Rix Creek, but also to inspect the deposits of iron ore which occur there. The numerous small blocks of iron ore which are scattered here and there upon the surface had led to the belief that it existed in large quantities, but on close examination I found that it has been derived from layers of brown iron ore, *limonite*, from 1 to 13 inches thick, which are interstratified with the Coal Measures. These small layers are so far apart and irregular in their mode of occurrence that they could not be profitably worked.

I next inspected the reported large deposits of iron ore at Ravensworth and at Westbrook Creek. These also consist of many thin layers of limonite interstratified with the Coal Measures and similar to those of Rix Creek. In these localities coal-seams also occur; on Westbrook Creek, within a distance of 20 chains, I observed nine seams of coal from 1 foot to 24 feet thick, and twenty ironstone bands from 1 inch to 15 inches thick, but they have been tilted up at various angles from 36° to vertical and could not be profitably worked.

Similar small ironstone layers occur in the Coal Measures of East Maitland, which are probably identical with the Measures of the Singleton district, the coal-seams of West Maitland being the equivalents of the Greta seam.

The following sketch section illustrates the relative position of the different Coal Measures:—

In this section it will be seen that the Greta seams are the lowest of the series in this district, and that their present outcrop at the surface is due to the denudation of a great anticline caused by the eruption of the diorite near Lochinvar.

Four and a half miles to the north of Greta, on the banks of the Hunter River, there is another mass of diorite, and immediately beyond this the Coal Measures are tilted into an almost vertical position and form steep rocky ranges attaining a height of 1,300 feet. In the midst of these ranges, at Jourdan's farm, is a mass of intrusive vesicular basalt which evidently marks a point of volcanic eruption. From here the Coal Measures extend westerly and are connected with the coal-bearing beds which I have already referred to on Westbrook Creek.

Annexed is a map of the locality and extracts from reports by the late Mr. Keene, Examiner of Coal-fields, to the Under Secretary for Lands.

I have, &c.,
C. S. WILKINSON,
Geological Surveyor in Charge.

EXTRACTS from Reports by W. Keene, Examiner of Coal-fields, to The Under Secretary for Lands.

"DISCOVERY of a workable seam of excellent Steam Coal, running into Crown and Church and School Lands.
"Newcastle, 20 December, 1864.

* * * * "I am glad to be able to report to you that I have been successful. I found a locality in which, by trial pits, I have been able to lay bare a succession of fossiliferous beds, and have found underlying these beds a good and workable coal-seam."

"Newcastle, 12 May, 1865.

* * * * "I have every confidence that the seams, being identical with the seams of Anvil Creek, will furnish coal of equally good quality, and give considerable value to the Crown Lands into which they pass."

"Sydney, 11 September, 1865.

* * "I have now further to report to you, for the information of the Hon. the Secretary for Lands, that having lowered the level of the waters in Dalwood Creek, I have been able to pass through and lay bare the coal-seam.

"The quality of coal extracted and on the ground offers sufficient evidence of the existence of a workable seam of good quality; an extension of the same seam worked at Braxton alongside the Railway, about 3½ miles distant from the Dalwood Creek."

APPENDIX B.

Sir,

In accordance with your instructions I inspected the diamond-drill bore in which a seam of coal has recently been struck at a depth of 846 feet at Heathcote, near the Illawarra Railway line.

I was informed by Mr. Coghlan, who is superintending the boring operations, that the drill had already penetrated 3 feet into the coal. I was present when the drill was again started, and within four hours a further depth of 3 feet 1 inch was bored, when the water issuing from the bore showed that the drill was still in coal. The duplex-core barrel on being raised was found to contain 3 feet of firm splint and bituminous coal, precisely similar to the coal in the Coal Cliff and Bulli seam.

The coal ignites quickly, has a specific gravity of 1.372, and appears to be of excellent quality for steam, smelting, and household purposes. An analysis of it has not yet been made for determining the amount of volatile hydrocarbons.

It is to-day reported that the drill has pierced to a further depth of 3 feet without having passed through this valuable seam, making a total thickness of 9 feet.

The bore is situated in a gully within 3 chains from the 28-mile peg on the Illawarra Railway line, and at an elevation of 334 feet above sea-level; the seam therefore at this point occurs at a depth of 512 feet below sea-level. As it is 4½ miles in a straight line from the Coal Cliff Colliery, where the seam dips beneath sea-level, the seam has a general dip of nearly 108 feet per mile in a northerly direction; but the regular dip cannot be ascertained with certainty, as faults in the strata are likely to exist in places.

The

The section of the strata exposed in the sides of the hills and proved in the bore show a thickness of about 600 feet of Hawkesbury sandstones ; 75 feet of shaly ironstone ; 846 feet of sandstones, conglomerates and clay shales (including a bed of clay ironstone 65 feet thick) on to the coal.

From this place to Sydney the formation consists of the same Hawkesbury rocks, capped in places with concretionary iron ore ; it is probable therefore that the coal extends under the whole of this country.

I have, &c.,

C. S. WILKINSON,

Geological Surveyor in Charge.

APPENDIX C.

The Under Secretary for Mines,—

Sir,

In accordance with your instructions I have examined the deposit in which cinnabar has been found, near the Cudgegong River, about 5 miles west from the town of Rylstone.

Here the course of the river makes a sudden bend from the S.E. to the S.W., and across the point formed by this bend occurs a patch, about $\frac{1}{2}$ a mile long and from 5 to 10 chains wide in places, of very waterworn quartz pebble drift and red ferruginous sandy clays, with irregular masses of brown ironstone. This drift deposit is the remains of the old bed of the stream, which in the Tertiary period flowed down the Cudgegong Valley, the present river channel having been subsequently eroded. The ranges on either side of the river, which consist of porphyry and Devonian sandstones, shales, and limestones, rise to a height of about 250 feet, and this old drift deposit is seen to have once filled the valley to a height of at least 120 feet above the level of the river ; but it has since been extensively denuded, and now forms a gravelly spur gradually sloping down to the river. Old shafts and surface excavations show that a considerable amount of work has been done, but as the ground which is private property is now idle, I could not ascertain if the prospecting for cinnabar had been carried on systematically. However, Mr. Waters, the manager of a company who had the ground about six years ago, informed me that he sunk a prospecting shaft 203 feet deep, and it was then abandoned. He states that the cinnabar was found more or less through the drift from the surface to a depth of 50 feet on to a false bottom, and that the deposit without cinnabar continued to 117 feet, when the true bed rock of Devonian schists was met with ; but at 170 feet, when in black schists, he cut through a vein 4 inches thick, dipping to the S.W., and containing a little cinnabar. He also informed me that this shaft was commenced with the object of striking at a greater depth than it was sunk to, a ferruginous stratum which crops out on the range about 20 chains to the south, and dips to the N.E. ; but as this stratum is only a soft sandstone, full of remains of fossil shells, I do not think that it has any necessary connection with the occurrence of the cinnabar. Near this deep shaft, Mr. Knoblancho pointed out a shaft which he and others had sunk and bottomed at a depth of 68 feet, and he also said that the cinnabar was found above the false bottom, which here occurs at about 40 feet below the surface. The cinnabar taken from here occurs usually in sharp angular pieces from $\frac{1}{2}$ an inch in diameter down to the size of fine dust, and pieces have been obtained several pounds in weight. Often the surface of the cinnabar is somewhat rounded, but this may be the original form and not due to attrition. I took some of the drift from close to the surface, and on washing it fair prospects of both cinnabar and fine gold were obtained, in these the grains of cinnabar were much waterworn, as might be expected, as the drift at the surface has been much denuded.

Perhaps the most important feature connected with the occurrence of the ore is that the solid cinnabar is sometimes seen to gradually merge into or impregnate the clay or drift of the deposit in which it is found. This is, then, direct evidence that it has not been drifted by running water, like the waterworn pebbles and other material forming the old Tertiary lead, and that it has probably been derived from thermal water, which issued from the underlying Devonian rocks and permeated the Tertiary deposit. Its occurrence, therefore, must be more or less local, and I would suggest that further prospecting operations should be carried on by sinking a shaft about 3 chains south-west from the old deep shaft down to the false bottom, and in the latter carry drives north and south across the lead, so as to intersect any fissure veins through which the mineral water came up ; such veins would probably be better defined in the false bottom than in the more pervious drift above it. Should any veins be struck, then they should be followed down into the bed-rock. The vein said to have been cut through at a depth of 170 feet in Waters' shaft, should be traced out to the surface. Another shaft might be put down 3 chains south-east from Waters' shaft and the deposit similarly explored by drives being put in east and west.

About 3 chains south-east from the north-west corner of portion No. 37, a lode of brown iron ore from 1 to 16 feet thick traverses for a short distance the Devonian strata. A shaft has been sunk upon this lode. I could not see any cinnabar in the ironstone, or in a sample of the drift which I took from alongside the lode and had washed in a tin dish. Another ironstone lode 12 feet wide, crops out about 10 chains E. 30° S. from this ; it has a brecciated appearance from the iron oxide having filled numerous joint fissures in the altered sandstone rock. These lodes are, I think, much older than the cinnabar deposits but as both the iron oxides and cinnabar have evidently originated from hydro-thermal springs, issuing from the same Devonian strata, it is not improbable that the lodes may contain cinnabar.

As before mentioned, I obtained fine grains of both gold and cinnabar from samples taken from the surface of the deposit ; but as the ground is not at present worked, I could form no reliable estimate of its richness. I was informed that the average yield of the drift has been from $\frac{1}{2}$ dwt. to 1 dwt. of gold to the load, with a variable quantity of cinnabar. The gold is fine and scaly, and has evidently been brought like the very water-worn pebbles of the drift, from a long distance up the Cudgegong valley. Some of the gold is coated with amalgam, showing the occurrence in the drift of mercury in a free state. Some of the drift is very coarse, containing rounded boulders of all sizes up to 4 feet in diameter of the various rocks of the district.

I am of opinion that the indications are sufficiently encouraging to warrant the deposit being systematically prospected for cinnabar and gold ; it could be readily worked by hydraulic sluicing with water pumped from the river. The main body of the drift is not more than 110 feet above the level of the river.

I have, &c.,

C. S. WILKINSON,

Geological Surveyor in Charge.

APPENDIX D.

Progress Report for 1884, by T. W. E. David, Geological Surveyor.

Sir,

I have the honor to furnish you with the following report of the work upon which I have been engaged for the past year:—

From January 1st until August 20th I was employed in field work, at Emmaville, completing the map of the tin-fields, commenced by me in the preceding year, and reporting upon an untried coal-seam, near Ashford, and a newly-discovered silver lode in the Little Plant Creek, near Emmaville.

On August 21st I left Emmaville *en route* for Sydney, arriving in Sydney on August 23rd.

For the remainder of the year I have been employed in preparing a map and sections, to accompany my special report on the general geology and mining industry of the Vegetable Creek district. These are now in an advanced state of preparation, and will shortly be published.

Without anticipating the details of the special report, reference may be made to a few points likely to be of immediate public interest.

Since the discovery of tin in 1872 the district has grown into an important mining centre, and from that date until the end of 1883 has produced about 31,000 tons of tin ore.

In 1881 the total produce of the New South Wales tin-fields was, in round numbers, 7,590 tons of tin and 609 tons of ore. Assuming that this ore yielded on the average 72 per cent. of metal, the total amount of tin produced in the Colony for that year may be estimated at 8,030 tons, of which 2,910 tons came from the Vegetable Creek district. The world's produce of tin for the same year was 38,123 tons.

These tin-fields therefore, besides being of vast economic importance to this Colony, must have an appreciative influence on the markets of the world. The country, geologically examined, has an area of about 800 square miles. It is situated on the western slope of the Cordillera, touching the northern boundary between New South Wales and Queensland. It presents a system of deeply eroded rocky valleys and hills, having for its principal orographic feature a central elevated mass of granite, called the Mole Tableland. The eastern margin of this plateau is situated about 12 miles west of the water-parting of the Cordillera, and attains here, at the Battery Mountain, an altitude of about 3,970 feet above the sea-level, the highest point in the district. This Tableland descends westward, with an increasing slope towards the valleys of the Dumaresq and Beardy Rivers. The lowest ground in the district lies at their confluence, about 1,120 feet above sea-level.

The district is drained by four rivers, the Mole, the Dumaresq, the Beardy, and the Severn; but the most important of these from a commercial point of view is the Beardy, or Glen Creek, on account of some of its tributaries being rich in stream-tin. Almost the whole of this district is well wooded; and though droughts occasionally retard mining operations yet the average rainfall compares favourably with that of many parts of England.

The average rainfall at Strathbogie, near Vegetable Creek, for the ten years preceding 1884, was 33.11 inches, as recorded by Mr. H. Gordon, to whom I am indebted for the information. Such a rainfall, if properly stored, should be amply sufficient for all the requirements of local mining.

The mining industry of the district naturally falls under two main divisions, *alluvial* and *lode-mining*.

The *alluvial* mining is concerned with working the recent gravels and rubble in the channels of the present creeks, as well as the older Tertiary gravels. The latter are found in places lying high up on the hill slopes distant from the existing water-courses, and are generally covered over with a thick coping of stony lava, constituting in the latter case the "deep leads." The *lode-mining* is located principally within the area of the tin-bearing granites of the Mole Tableland.

Of the shallow *alluvial* tin workings the most important centre has been the Vegetable Creek proper, in the immediate neighbourhood of Emmaville. The greater part of the rich tin ground here has been worked over at least once; some of it even three times. A considerable body of ore, however, still remains in the old tailings from the Great Britain to the Rothschild Mines. Most of this ground might be worked over again to advantage, if a sufficient body of water were available for hydraulic sluicing.

At the Y Water-holes Mines an area of about 200 acres of tin sands still remains unworked. These sands are comparatively poor in tin, excepting where it has been concentrated in the channels, most of which have been followed and exhausted. The body of stream tin, however, left in the poorer sands at the sides of the channels, which yield from 6 to 10 lb. of tin per cubic yard, must be considerable. Taking the average thickness of the tin sands as 6 feet, and the area as 200 acres, an average yield of 5 lb. per cubic yard would give over 4,300 tons of stream tin, and this would probably be rather below the true quantity.

Recent stream tin gravels have also been worked on the northern, southern, and western slopes of the Mole Tableland.

Small patches of *alluvial* ground still remain unworked at the lower end of Catarrhy Creek; and payable tin ground may yet be found in some of the Mole Tableland Swamps, as Trollope, Wyndham, and Paradise Swamps.

These lie in trough-like depressions in the granite, having a length of from $\frac{1}{4}$ to 1 mile, and an average width of about $\frac{1}{4}$ mile. No shafts, as far as I am aware, have been bottomed in them, attempts having failed on account of the heavy influx of water. If it could be proved that tin was present in sufficient quantity to justify the outlay of some capital, the swamps might be drained by syphons. The metalliferous character of the underlying sands might be previously tested by sinking shafts, casing the sides with thin wrought iron cylinders, which would have obvious advantages over wooden slabbing, in passing through running sand.

The stream tin in these shallow alluvial workings has been derived, partly from the waste of the neighbouring tin-bearing rocks, which has taken place since the formation of the Tertiary tin gravels, and partly from the stream tin contained in the latter.

The Tertiary gravels, though brought into their present position chiefly by the action of fresh water, were probably originally of marine origin, as would appear from the intensely worn surfaces of the stones, of which they are formed, as well as from the fact that only the hardest and most indestructible minerals have survived in them. These are chiefly well rolled pebbles of quartz, associated with gems, as zircon, beryl, sapphire, topaz, spinel, garnet, etc., and oxide of tin.

Small

Small isolated patches of these gravels have been worked at Scrubby Gully, Surface Hill, and near Ruby Hill. These insignificant outliers, a few acres in extent, are the only visible remnants of what must have been once extensive gravel beds; and the question at once suggests itself, what has become of the rest of these beds, and their ore deposits?

In the long ages which elapsed since the deposition of the Tertiaries and the erosion of the present land surface much of the stream tin from these gravels has been removed by denudation. Some has probably been ground into fine dust and transported to great distances; some has been dropped nearer its original source, and occurs mingled with the recent angular tin in the present creeks; but by far the greater part lies concealed in old valleys buried under sheets of lava and volcanic dust. The sites of these old valleys are now marked by the red hills of scoria and dust, and the smooth basaltic flats, which stretch away almost without a break from Emmaville to Ruby Hill, a distance of about 30 miles. Another buried valley underlies the lava sheets, which extend from the Battery Mountain towards Wellington Vale. Similar basalt-capped gravels occur at Surface Hill and Maid's Valley.

A detailed description of these lava streams and their points of eruption will be given in the special report. Omitting the Surface Hill and Maid's Valley leads, the deep leads of the Vegetable Creek district may be classed as follows:—

1. The Vegetable Creek Lead, including the basaltic country to "Kangaroo Flat," "Hall's Sugarloaf," "Paddy's Sugarloaf," and the "Surprise."
2. The Graveyard Lead.
3. The Springs Lead.
4. Rocky Creek Lead.
5. Ruby Hill Lead.
6. Wellington Vale Lead.

Of these six leads only the first two have been at all extensively worked.

1. *The Vegetable Creek Lead.*—This is by far the most important alluvial ore deposit in the district. It has been worked from its source, close to the township of Emmaville, for a distance of 2 miles, to Fox's, in portion 120, parish of Hamilton. The same lead has been proved to be payable tin-bearing at Barry's, 2 miles west of Fox's, and also at Kangaroo Flat, 10 miles further down the lead from Barry's, in a north-north-west direction.

Work is being actively carried on at the upper end of the unworked ground at Fox's and Bailey's mines. At Kangaroo Flat Hall Brothers have suspended their mining operations temporarily on account of the present low price of tin.

The intervening basaltic country is being prospected by several enterprising companies. Great difficulty has been experienced in developing the lead below the Wesley ground, owing to the water which is met with in the sands as soon as the basalt is pierced.

Hart, Flannery, and Company have sunk a row of shafts across the basalt in portion 3, parish of Hamilton, without succeeding as yet in finding the channel. Several of these shafts have been bottomed by means of boring rods, the bore being tubed with iron. This admits of a sample of the sand or gravel being obtained from any depth, without having to resort to the expensive method of putting down shafts through running sands.

The Chance Company are also engaged in active prospecting lower down the lead, as well as Reid and others, Barry and party, Kelly and party, &c.

In portion 137, parish of Arvid, Messrs. Wesley and Company have sunk a prospecting shaft, which at the time when I left Emmaville was down 255 feet. The shaft was sunk through basalt to within $7\frac{1}{2}$ feet of the bottom, when gravel was struck. This extended to the bottom of the shaft, which was here found to consist of basalt. This proves that more than one channel must underly the made country at this part of the lead.

The ultimate chances of the success of these companies are as certain as they can be in any mining venture; nevertheless the labour and money expended in sinking shafts and pumping for a period of over two years, without attaining much practical result have, in combination with the low price of tin, had a very depressing effect on the neighbourhood; and it is sincerely to be hoped for the welfare of mining in the Colony as well as in this community that these efforts to further develop its mineral wealth will soon be crowned with the success which they deserve. Much labour and expense might be saved in developing this lead if it were worked systematically from its lower end at the Fishing Grounds, or Kangaroo Flat upwards towards Barry's. If this method of working were adopted the water in the tin gravels, which now proves such an obstacle to their being worked, might be drained out of them by gravitation.

2. *The Graveyard Lead.*—This lead has not been worked to any extent west of Curtin's and Ceruti's. The gutter has been proved in portion 520, Scone, but did not contain tin in payable quantity at the point where it was crossed by the prospecting drive. As there is evidence of the tin in this lead having been drifted chiefly from the north, prospecting should be carried on from the northern side of the lead towards the south. It is quite possible that a reef wash of payable tin may be found here above the level of the channel or gutter. This has been Mr. Warrell's experience at Kangaroo Flat, and has been confirmed at the Surprise Mines and Hall's Sugar Loaf, where the high level wash has proved richer in stream tin than the adjoining low level.

3. *The Springs Lead.*—This has been worked on a small scale at the Springs and Cockatoo. As the gravels between the Springs and Rocky Creek are nearly on the same level it is difficult to determine by aneroid whether there is a water-parting between this and the Rocky Creek Lead, or whether the two join. Prospecting should be carried on from the outcrops of tin gravel at the lower end of the lead, up the lead; for if the gutter has been fed chiefly from the north it may become poor when followed in a southerly direction, no payable stream tin having been found in the recent gullies on either side of the lead, south of the Springs.

4. *The Rocky Creek Lead.*—The supply of tin to this lead appears to have come chiefly from the N.E. This accounts for the richness of the gravels in the small feeder known as the "Gem," as compared with that of the main channel, which runs through the narrow valley at the N.E. corner of portion 101, Hawthorne.

The Gem lead falls from the N.E. to the S.W.; while the main lead apparently descends from its junction with the Gem in a south-easterly direction towards Mr. H. Gordon's overseer's paddock.

In prospecting this lead it might be advisable to follow the Gem Lead into the deep ground, which is known to contain extensive beds of coarse river gravel, yielding a little fine tin. That some of this tin ground at Rocky Creek is payable is proved by the fact that at the Gem 3 tons of ore were washed from seventy loads of gravel. As yet none of this country has been fairly tested.

5. *The Ruby Hill Lead.*—This lead heads probably from the present source of the Springs Creek. It has been worked at its lower end at Ruby Hill, where I am informed about 80 tons of stream tin have been raised. The stream tin here is very fine, and difficult to separate from the sands, as they contain so many heavy gem stones.

It is probable that none of the last three leads will be extensively worked until the exhaustion of the richer Vegetable Creek and Grave-yard Leads.

6. *The Wellington Vale Lead.*—A payable shallow lead has been worked at the upper western side of this lead, but the adjoining basalt country has been very little prospected.

A suitable point for testing this lead would be at a small outcrop of sand under basalt in the main creek, flowing westerly through portion 534, parish of Annandale, county of Olive.

This outcrop bears about W.N.W. from the S.E. corner of the above-mentioned portion, 14 chains distant.

There is evidence here of two sheets of basalt, one overlying the other. The under-sheet is about 100 feet thick, the upper over 200 feet. Two leads may therefore be expected here, the older on the eastern side of the made country, near the outcrop mentioned, and underlying the lower lava flow; the younger nearer the western edge of the upper flow.
