In your opinion that trap-door is simply a means of splitting the air—to supply a certain quantity of air per man? Quite so; the supply is more than is required.

That is within the meaning of the sub-section attached to section 12 of the Coal-mines Regulation Act? Yes.

Supposing you left the door open altogether, would the supply of air then be sufficient for the men who were working in the splits? No, I do not think so; not sufficient for the men that were working with the current passing through the cross-cut.

You mean if the door was left open continually? Yes; but it is not intended to be left open—in fact it will not keep open.

Oh, no. They will have to be careful that it does not slam in passing; there is a great draught there. When the door is shut, is there not ample ventilation for the men? There are fifty or sixty men there, and I think the supply is sufficient for the lot.

Is there any necessity, in your opinion, for anything to be done to these Jubilee workings? I should say certainly not at the present time.

Was it possible to have anything more safe or more complete than the arrangements in these Jubilee workings? I cannot see how it is possible, especially in view of what Mr. Neilson is now doing there in the erection of fans.

Is there, so far as you can see, any possibility of danger to any person working in the mine? I cannot see it.

Knowing the nature of the coal, and what this colliery is, do you think there is any likelihood of any sudden outburst of gas, or would it not be first shown by a change in the nature of the coal. If there was likely to be any great outburst of gas, is it not likely that there would be some change? Well, I do not think so. I perfectly understand you, but I have never known any quantity of gasing being in a seam of coal, unless you go considerably ahead of the air.

You have never known any gas in these seams of coal? Nothing at all serious. I think Minmi coal is the most inflammable.

They talk about the inflammable nature of the gas—do you not think that the coal would change its nature before you came to a large outburst of gas, or would you not get warning in some way? The warning that you would get would be the appearance of the blowers.

And there are no signs of them now visible? None whatever.

At 5 o'clock, the Court adjourned until 10 a.m. on the following day.

SATURDAY, 10 MARCH.

Alexander Ross called in and examined:—

Mr. Want: I believe that you are the Manager of the Newcastle Coal Company? I am.

For how many years have you occupied that position? Ten years.

What experience have you had altogether in coal-mining? Previous to this I had been sixteen years with Mr. Neilson, the last five years of that time I spent in learning my profession under him in the Wallsend Company's mine.

And you know the whole of this mine well? I do.

Have you lately inspected this Wallsend Colliery? I have.

At the Jubilee workings? Yes, at the Jubilee shaft and workings.

In company with several other mining managers of large experience? Yes; I examined the mine twice this week.

I believe you examined the mine on the 3rd and 7th March? Yes.

Did you make a critical examination of all workings and everything connected with the ventilation? Yes, as close as I possibly could do.

When you saw the mine on each of these occasions, which, in your opinion, was dangerous or defective? Nothing that I saw in connection with the mine was dangerous or defective.

And you saw everything? I believe so.

Mr. Edmunds: I again object to this evidence, and on the same grounds as before.

Mr. Want: Was there anything in the mine on the occasions of your visits that threatened bodily harm to the persons who were working there? Nothing, in my opinion.

Now, you know this mine very well, you know the quality and the nature of the coal, and I ask you is there any liability of any large outburst of inflammable gas?

Mr. Edmunds: I again object to this evidence.

Witness: From my extensive knowledge of the workings of this Newcastle-Wallsend mine, I say there is no liability to any outburst of inflammable gas.

Mr. Want: Now, is there any danger whatever, in your opinion, to the men or to the works from the fact of this air passing over the small blowers that are there? No, I do not think so.

In your experience, have you ever seen safer or better ventilated workings than those which are in that mine? No, I have not.

Could anything possibly be done to improve the ventilation in any shape or form? No; nothing could be done to improve it, so far as I know.

Now

Now, in working in this mine, you have seen, I presume, some of the little gas blowers which are there? You mean previously to these visits in March? Yes, I have seen them before.

Do these blowers increase or decrease in the mine? I have always found them to decrease after a very short space of time.

That is after, I presume, they have been tapped? Yes; after they have been tapped and the workings surrounding them have been opened out.

Has there ever been any danger at all from these blowers so far as you have seen? No, not that I have seen.

Now, will you just describe to his Worship what these wonderful blowers are, their extent, and so forth? At the first examination which we made, on the 3rd March, we tried the air with the door open to see the quantity which travelled into the mine, and even supposing the door were down altogether, we found 4,250 cubic feet of air travelling per minute with the door open. From that point we went into the face of the heading.

Wait a moment. Will you tell me now was there the slightest necessity there for a double door? In my opinion there was not the slightest necessity, because the air was so well regulated.

There is a split in the Jubilee heading? Yes.

And a canvas door in the Jubilee heading? Yes; the canvas regulator marked on the plan No. 1.

Tell me this, just to give us an idea,—could you have kept a candle alight for a moment at that regulator? No, you could not. It must have been a very strong flame indeed that would not have been put out in a few seconds.

Who held the lamps the morning that I went down there? Mr. Neilson, and both lamps were blown out.

You mean a large lamp? Yes; a large copper lamp.

Well, now, whether that door is up or down, has it anything to do with the gas, or is it not simply a question of ventilation? I should think it is simply placed there for the purpose of the ventilation.

The door was placed there to regulate the supply in accordance with the provisions of the sub-sections to the 12th section of the Coal-mines Regulation Act? Yes.

You went from there along the Jubilee headings and examined this? We went first along the main heading to the engine-plane heading.

Mr. Edmunds: That is a new name.

Mr. Want: I think we had better call it the end of the main road, so as not to confuse things. You mean where the men were working? Yes; but there were no men working there that day. Some four men usually worked there.

So that that is perfectly safe? Perfectly safe; but we heard a slight humming sound in the face of the coal.

Did you look and examine what caused that humming sound? Yes. Mr. Bosfield and I examined it very closely to see if we could detect what it was. We carefully searched with a naked light all along the face.

Was there any sign of inflammable gas there? We could not find the least sign.

Was the air there perfectly good? Yes, perfectly good. It was coursing round and travelling within a yard of the face.

Did you go from there to the Jubilee heading? We did.

Did you make a critical and careful search for any gas that might have been existing there? We did as we went along towards the shaft.

What did you find? We found a little gas exuding from a blower over a little pool of water.

Did you try that blower? Yes, we tried it.

With the naked light? Yes; we tried it with the naked light, but we had a Davy lamp there too. When we tried it with the naked light it lit up. I should think we had to light within an inch or an inch and a half of it.

What was the extent of it? Just like, in my opinion, an ordinary gas jet.

Now, that day that I was down there, did you examine the blower then? Yes, at the same place.

Was it as strong then as before you went there? I saw it again on the 8th, and it had increased very considerably in the meantime.

Would it light at all on the 8th? I forget, but I do not think it would—the gas was so light.

Did you go any further and look for another blower? Yes, a little farther, and we were shown what was termed the main blower.

Can you give his Worship an idea of what that main blower was like? That was fully equal I think to a street gas-lamp.

And you lit that without putting the lamp up against it? No; you could not do that. It was quite an inch between it and the floor.

That blower also was in the floor? Yes, it was also in the floor.

Have you since seen that blower, and, if so, has it decreased? Yes, I have seen it since, and it has decreased very considerably indeed; it is now down to more than half.

Did you then go further on? We tested the air then—that is, the main intake air leading from the shaft from Nos. 3 and 4 splits.

Did that air pass over these blowers? Yes.

What was the quantity passing over? The total quantity was 12,015 cubic feet per minute.

Mr. Edmunds: Where was this.

Mr. Want: This was the main intake air.

To witness: Would you kindly give me some idea as to the amount of gas per hour that was coming from these blowers, putting it at the outside? There was another blower that we saw there.

You went on then to the Jubilee shaft where there was a short heading or narrow bord, and there you saw another blower? Yes, we saw another blower there on the side on the face of the coal.

What was the extent of that? It was burning very lightly indeed.

When you lit it it burned? Yes, but we had the greatest difficulty in the world to light.

Has that blower decreased considerably since? Yes, it has decreased very much, although it was a very small blower when we saw it; it has decreased very considerably since.

Mr. Edmunds: Then you think it will decrease.

Mr. Want: It has decreased. *To witness:* Well, now, taking these altogether, where were the only traces of gas that you noticed in the mine? Yes, these were the only traces of gas that we could find.

We

We have been told here that there were some fifteen or sixteen blowers along that road. Now you tell us there are only three there now? That number was all we could find.

Now, putting these altogether in one lot, in your opinion what amount of gas coursed through that heading? Judging from the quantity that passes through an ordinary street-lamp—which burns at the rate of about 5 cubic feet per hour—I assume that the amount coming from these blowers was a little less than that. I judge the other two blowers to be equal to half a lamp, and after making a very liberal allowance, I think I may safely say that from 15 to 20 cubic feet of gas would equal what we saw there that morning.

That is per hour? Yes.

Would that have the slightest possible effect upon the air passing down that heading? That quantity could not possibly have affected the air.

Then I find by calculation that 720,000 cubic feet of air passed down there per minute? Yes. There would be about 1 foot of gas to every 36 feet of air.

And the amount of gas is a great deal less now? Yes. From what I saw on the 7th and 8th March there would not be one-half that quantity of gas there now.

Is it possible for anyone to find these blowers without being taken to where they are and having them pointed out? I would not like to have the job of finding them set down to me. I do not think I could possibly have found them unless they had been pointed out to me.

Now, we have been told that in this short bord, near the Jubilee shaft, that some time ago there was a great amount of stagnant gas. Is that the case at the present time? No; that bord is quite clear now.

And it is connected with the main heading? Yes.

Well, now, if, on the 5th January, that mine was described by any person as being dangerous and defective, and threatening bodily injury with the air passing over these blowers and the accumulation of stagnant gas—does that state of affairs exist now, if it ever did exist? No, it does not exist now.

There is no defect, and no danger of bodily injury, and no chance of the pollution of the air? No.

Mr. Edmunds: I think you said that you were there in that mine on the 3rd and 7th March? I said I was there on the 3rd and 8th March.

When you were in that mine, Mr. Ross, was the air current from the Jubilee shaft ventilating one split where about sixty-eight men were working, and another split containing some thirty men, all working with naked lights and lighting—after that current had coursed through the Jubilee headings—and, if so, is that state of things still in existence? So far as I know, it is.

Then the air-current from the Jubilee shaft is still allowed to ventilate two splits, one containing about sixty-eight men, and the other about thirty men?

Mr. Want: Do you know how many men were there at all? No; I do not; I was only told about it.

Mr. Edmunds: Then, in that case, we will leave it out. (*To witness*): You say that you saw some men working there? Not during my first visit.

Well, during your second visit?

Mr. Want: I object to this. If you are going to be technical, I will be technical also. The information charges us with having committed this offence on the 5th March, and I will object to the reception of any evidence except evidence which relates to that day.

Mr. Edmunds: The requisition has to be complied with within twenty days from the date of the notice, and any evidence having relation to any day within that period will be admissible. All I am asking is were the men working during that time.

Mr. Want: How can we have another thing brought up in this way. The second charge has nothing to do with the first. The notice we receive is, "I have therefore to urge your serious and immediate attention to the abovenamed matters, with a view to have them remedied as speedily as possible." Now, that information charges us with not obeying that notice.

The Police Magistrate: You are now trying to show that the mine is in a proper state, whatever its condition was on the 5th January.

Mr. Want: Yes; that is it exactly, your Worship. My learned friend wants to persuade your Worship that, although we have done something to remedy the things complained of, and made this connection between the short bord and the main heading—although there is not the slightest necessity—still we must carry the thing out because there is something mentioned about it in the notice; and he will then ask your Worship to inflict a penalty because we have remedied certain things which are not mentioned in the notice.

Mr. Edmunds: I must again remind your Worship that the complaint here is that the defendant did not comply with the requisition contained in the Inspector's notice. He did not obey that notice or go to arbitration, and therefore he had committed an offence against the Act.

The Police Magistrate: The whole of this 25th section is very difficult to construe. It places me in rather a difficult position, because there is not a single creature in the world that I can apply to for information. Although I ask you gentlemen to help me in every way, I may tell you that I have my own views. I am willing to hear what your views are also, and if they coincide with mine I shall have no hesitation in acting on what I think at the present moment. As far as I can see just now, the defendant is only proceeding to prove that no injury is likely to occur to the men. That is the reason why I admit this evidence. I want the public to understand that there is no further danger likely to arise in this mine. I presume there is no Government in the world who would allow such a thing to be concealed if there were danger, but would give it the utmost publicity. It is for the purpose of easing the people's minds, and showing them that at the present moment there is no likelihood of any calamity overwhelming them like that unfortunate affair at Bulli, that I admit this evidence.

Mr. Want: And that is the reason why we come into this Court.

Mr. Edmunds (to witness): Now, I want to know from you, was that air allowed to ventilate the two splits when you were down in the mine? Yes.

Were the men that you saw working there working with naked lights? Yes. I saw them working during the second visit I made to the mine.

Now, did the current of air spoken of course through the Jubilee heading where the gas was exuding? Yes.

Again, was there on both these occasions only a single trap-door on the main road between the Jubilee headings? Yes, one single door.

How long did you keep that trap-door open? We did not keep an account of the time. We did not "time" it; but I think that we kept the door open from five to seven minutes. You

You only did that once? That was all.

And the air supply, I understand you to say, during the five to seven minutes decreased from 7,000 to something like 4,200 cubic feet per minute? Yes, that is correct.

If the door was kept open a still longer time than seven minutes, do you think that it would result in a further reduction of the air current that was passing through? I do not think so.

Why not; if the air current decreased from 7,000 to 4,200 cubic feet in from five to seven minutes, why would it not decrease still further if the door were kept open for a still further period? I think it would not decrease owing to the regulator in the next heading being in one of the Jubilee headings.

Look at the plan and tell me if, when this door is shut, the air enters at that split and allows some of it to go round and go through another split, is not that the usual passage for the air? Yes.

Now, if that be so, why would not the whole of the air go through this way if the door were left long enough open? Because I understand that there is another regulator inside again.

But you are not to say what you understand. Is it this regulator which would prevent it? There is another regulator inside here.

I did not ask you anything about the other regulator which you say is inside. Is it this regulator which regulates the air when the door is allowed to remain open? No; it would not prevent the air from going down.

Does it tend to prevent it? No; it would not prevent it at all.

Does this tend to prevent the air from going down No. 3 split and through this passage to No. 4 split? That regulator does not. The other one —

We will come to that by-and-bye. Did you see the other regulator that you have just spoken of? No; but I was told about it.

We cannot have evidence of that kind. You must speak from your own personal observation, and not from what you were told. Then any regulator that you spoke of in your examination-in-chief as preventing the air from going into No. 4 split you did not yourself see? No.

Then all your evidence regarding that regulator was given from hearsay? Yes, it was.

Mr. Want: Of course it was, but I will prove the existence of the regulator by-and-bye for you.

Mr. Edmunds: Now, in regard to No. 3 split, is not that a shorter road for the air and the track of least resistance? I cannot say just now.

Now, I think that you said that in the five days the quantity of gas exuded would be diminished by about 50 per cent. Yes; about 50 per cent., in my opinion.

Mr. Want: If you do not go down quickly into the mine you will never see any gas at all.

Mr. Edmunds: Do you know that the blowers were first of all found on inspection on 15th January? I do not know that.

But suppose that these blowers have been blowing from 15th January, and reduced some 50 per cent. within three days, could you form any estimate of the quantity blowing out in the seven days afterwards? No; I cannot just now.

But the blowers decreased 50 per cent. in the five days from the 3rd to the 8th March? I think so.

Mr. Want: Supposing this to be a correct plan of the mine (*plan produced*) and of the workings where the air goes up to, would not a regulator at this point have the effect of preventing the air from going into this split? It would check it. That regulator is the one I before referred to. (*Plan marked No. 2 put in evidence.*)

And that would be all that was required? Yes.

You were asked whether the air still goes over these blowers. Now, supposing that it does, is it at the present moment entirely free from any danger? It is, in my opinion, entirely free from any danger.

Mr. Edmunds: I object.

Mr. Want: And entirely free from danger, and does not tend to anybody's bodily harm? No.

Thomas John Evans called in and examined:—

Mr. Want: What is your occupation, Mr. Evans? I am a colliery manager.

At what colliery? At West Wallsend Colliery.

What experience have you had in coal-mining? I have been manager for some twenty-four years at Home and in South Wales.

And how long have you been in this colony? I took charge here on the 23rd January last.

I suppose you have had experience in fiery mines in Wales. Oh, yes.

I believe you made an examination of the Newcastle-Wallsend Colliery on the 3rd March last. Yes.

Was there anything, when you examined it, in the Jubilee district which was dangerous or defective, or which threatened to cause bodily injury to the persons working in the mine? No.

Mr. Edmunds: Again I wish to object to the reception of such evidence as this.

Mr. Want: You were in the Jubilee headings, and saw what are called blowers? Yes.

Was there any danger or fear of injury either to the persons working in that mine from the fact that the air passed over these blowers? No, not the least danger, in my opinion.

Was there any accumulation of gas in what is called the narrow bord? No; it has been removed by a connection having been made with the heading.

If any of these dangers did exist on the 5th January, when the Colliery Inspector visited the mine, they have been remedied since? Yes.

Mr. Want: I wish to know if the counsel for the Crown will admit that the measurements of the air taken on the occasion were correct.

Mr. Edmunds: I do not dispute the accuracy of the observations of these witnesses in that matter; but the evidence is perfectly unnecessary. I never disputed it.

Mr. Want: Well, there is such a thing as not disputing a point and yet not admitting it. (*To Witness*): Will you tell me what these blowers of gas were? Well, they were very small blowers. I saw that there was one in the cross-cut that came out of the coal. I should say that there were 4 or 5 cubic feet of gas coming out per hour. I saw two others on the floor of the road, and another one in the face of the narrow bord. These could not have been very fierce, or they would have blown up the bottom of the seam.

When you speak of the cross-cut you mean the narrow bord at the foot of the Jubilee shaft? Yes.
With:

With regard to the two on the floor, they would give out about the same amount of gas as the other one? Yes, just about the same.

And you say that those blowers could never have been very bad, or they would have lifted up the floor? Yes, they would have lifted it up long ago. There are only about 18 inches of coal on the floor?

Now, you say that the door which was there was put up for the purposes of ventilation? Yes.

Was there the slightest necessity for having two doors there? No; I should say not under the present circumstances. Of course the arrangements would be more complete if there were a double door at that place; but, under the present circumstances, I think the Company would be perfectly justified in having only a single door there, as only four miners are employed in that locality, and only sufficient air to supply them is required.

If more than four men were working there I presume you would insist on another door being there? I would.

But where there are only four men working in a place like that you think the single door is quite sufficient? I do.

If the door was being frequently opened it would interfere with the air? It would.

Now, door or no door, has that anything to do with the mine, except for the object of supplying air to the men? No; that was the purpose of the door.

Would it be possible to have a mine safer or more complete than is this portion of the mine about the Jubilee shaft? No, it would not be possible; and I think it reflects great credit on the management that they have gone to so much trouble and expense to get their air-shaft down close to the face of the workings.

This is an enormously expensive shaft, is it not? Yes, I believe it is. It is a 16-foot diameter shaft.

And a very complete one? Yes, very.

Mr. Edmunds: Did you notice the system of ventilation existing in that mine? Yes, I noticed the system of ventilation in that district.

On the 3rd of March, when you were there, was the air coming from the Jubilee shaft allowed to ventilate the two splits after that current had coursed through the Jubilee headings where gas was exuding? Yes.

Mr. Want: You have already proved that.

Mr. Edmunds: And there was also only a trap-door on the main road from the Jubilee headings? Yes.

We will now take a supposition, as you have already been asked your opinion. If there was a liability to a large outburst of inflammable gas—assuming that at the time of your visit to that mine that there was such a liability—then was that system of ventilation of the main workings of the mine while men were working with naked lights a good one? No.

Mr. Want: Why, no system of ventilation would be any good then.

Mr. Edmunds: Because you would get all your intake air over inflammable gas.

Mr. Want: When you hear Mr. Neilson's evidence you will learn that we are remedying that as fast as we can.

Mr. Edmunds: It is a pity that you do not use the safety-lamp while you are doing this.

Mr. Want: We do not require it.

Witness: It is not the system of ventilation; but still it would be necessary to work with safety-lamps.

Mr. Edmunds: It would not be safe to work with naked lights? No.

Mr. Want: But is there the slightest necessity, in your opinion, for the use of safety-lamps in that mine? No, not in the least.

Mr. Edmunds: I object to this evidence.

Mr. Want: Or is there any liability at all to a large outburst of gas? No; because I do not think that the seam could be classified as a fiery seam at all.

Mr. Edmunds: It is good coal right along the heading.

Mr. Want: Yes, tip-top coal.

Archibald Gardiner called in and examined:—

Mr. Want: You are a colliery manager? I am.

Where? I am manager of the Minni Colliery.

Mr. Want: What experience have you had in mining? I have had over thirty years' experience underground.

And how long have you been in this Colony? What experience have you had here? I have been about five years in this Colony.

Have you had any experience in what are called fiery mines? Yes; I am a certificated manager under the Coal-mines Regulation Act of Great Britain.

Did you examine this colliery on the 3rd March? I did.

Was there anything there on that occasion which, in your opinion, was dangerous or defective? Nothing that I saw.

Mr. Edmunds: I again object to this evidence.

Mr. Want: Was there anything dangerous or defective in the Jubilee workings? No.

Or was there anything there tending or threatening bodily injury to any of the persons working in the mine? Nothing that I saw.

Did you critically examine all these workings to ascertain if there was anything of that kind wrong? I did.

Would it be possible to have a mine more safe or better ventilated than you saw this Newcastle-Wallsend mine on that day? The mine was splendidly ventilated.

Was there the slightest possibility or probability of any danger to the men employed in that mine? Not the slightest.

Mr. Edmunds: I again object.

Mr. Want: There was no danger from any source? No.

You saw some blowers there, did you not? Yes.

Was there any danger to be apprehended from the air passing over these blowers? No, none.

What

What was the proportion of air that was playing over these blowers to the gas that was exuding? I do not think that there were 20,000 cubic feet of gas from all the blowers altogether per hour during my visit.

And we are told that there would be about 800,000 cubic feet of air per hour? There were about 12,045 cubic feet of air passing per minute when I was there.

That would be 1 foot of gas to 3,000 cubic feet of air? Yes.

If there were any danger existing from any gas or from any fouling of the air, has it all been remedied? Yes; it was all remedied on the 3rd March, if it ever existed previously.

Is there any liability whatever there or even any probability of any large outbreak of gas? None whatever.

Or of any outbreak of gas? No.

If there had been any strength in these blowers on the floor, would they not have blown it up? I do not think that there could have been any strength in them.

If there had been any pressure in them, would they not have lifted the floor up? I think so.

Was it easy or was it difficult to find out the locality of these blowers with a naked light? It was very difficult to find them out. I heard a singing noise, but I could only detect two of the blowers.

Now, you know that narrow bord at the bottom of the Jubilee shaft? Yes, I do.

Was there any accumulation of gas in that bord while you were down there? No.

You have seen the door there which checks the ventilation? Yes, in the main heading.

Does that door do anything except regulate the supply of air to the men? It is made to turn the air and to check the course of the ventilation. That is the object of the door.

Is there the slightest necessity in your opinion for any second door to be put there? No, no necessity.

You know that these headings are not being worked, and that they are being used simply as air conduit pipes? Yes, in the Jubilee heading.

Is there the slightest necessity in that mine for the use of safety-lamps by the men? None whatever.

Could the arrangements for the supply of air be more perfect than they are now? No; I would recommend no alteration.

Could that mine be more perfect or as safe a mine than it is at the present time? No.

Mr. Edmunds: Were you some time ago convicted of a breach of the Coal-mines Regulation Act for imperilling the safety of the miners? No.

Were you not convicted of a breach of section 12 of the Act? No.

Well, then, were you not convicted of some offence under the Coal-mines Regulation Act? No, I was not, but my Company was, and it was for work done before I took the management of the mine.

How long had you the management of the mine at that time? I think I had it for eight or nine months. Of course I cannot say to a month.

Was that conviction for not having a sufficient shaft for the air in accordance with one of the sub-sections of section 12?

Mr. Want: I object. How can this have anything to do with us.

The Police Magistrate: I presume the question was asked to test his credibility as a witness, although I do not see that we have any right to doubt the witness's credibility.

Mr. Edmunds: I only wish to test the opinion of the witness as to the safety of the mine.

The Police Magistrate: But he may form a different opinion of another mine that he is not connected with. That circumstance would not affect him in considering the case of a mine like this. Very often pressure is brought to bear upon men to do certain things which otherwise they never would have thought of. Very often it is done for the purpose of saving money.

Witness: I should like to make an explanation.

The Police Magistrate: I do not think we need go any further. I am quite sure that you are capable of conducting any mine where you have power to exercise, but a man may be coerced by some influence.

Witness: The thing is quite beyond my control.

Mr. Want: I only ask the opinion of the witness. Of course as he is not responsible I admit that he is entirely exonerated. (*To Witness*): When you inspected the mine, did you find that the air current from the Jubilee shaft was allowed to ventilate two splits? Yes.

One moment—After that current had coursed through the Jubilee heading, where inflammable gas was exuding? Yes.

And also that there was only a single trap-door on the main road between the Jubilee headings? Yes.

Mr. Want: Was there the slightest danger to be apprehended in your opinion from that state of affairs? None whatever.

Mr. Want: I desire to call Mr. Croft.

The Police Magistrate: Do you think it desirable to call any further. I am quite satisfied as to what you are driving at.

Is there any chance of your Worship seeing the mine?

The Police Magistrate: No, I think not.

John Young Neilson called in and examined:—

Mr. Want: You are the manager of the Newcastle-Wallsend Colliery? Yes.

How long have you occupied that position? For twenty-seven years I have been manager of the Company.

And you have had experience in coal-mines before that? Yes; I have been in them all my lifetime.

Now, you have worked this colliery for twenty-seven years—have you during that time had any danger or difficulty with gas? Yes; from the very beginning I had less or more difficulty.

That is what I said. Was there any danger? Yes, occasionally there was danger.

In what way? We came suddenly upon bursts of gas.

And,

And, therefore, you have always taken precautions in every shape and form? Yes; every precaution I could possibly take.

And is it not a fact that wherever you have got the trace of gas you have always begun the workings there by working with safety-lamps? Yes.

Your Company have safety-lamps, and whenever necessary you use them? We have any quantity of them.

In driving this heading from the main heading towards the Jubilee shaft you came across some blowers? Yes, continuously; little blowers kept cropping out.

And I believe that while you were working there with the blowers you used safety-lamps? No; but we had the place trellised up, and then worked with naked lights.

Was there any danger whatever? Not the slightest.

That was before the connection was completed? There was no danger, or I would not have done it.

But was that before the connection was completed? Before the connection was driven to the end of the single heading.

Now, I believe you drove from the heading a certain distance towards the shaft, and from the shaft a certain distance towards the heading? Yes; 200 yards with the double. There is a shaft at the double heading, and 50 yards from the shaft we met with the single heading.

This double shaft or heading, before the shaft was sunk, was given up and was bratticed? Yes; it was to be bratticed, and the air came down to the stentons and then back.

And then the air came back towards the men? Yes; just the same as now. The only difference is that the air went from this end [*looking on plan*] to the Jubilee shaft.

Before you put that shaft the air used to course through the mine and go back to the men? Yes.

And whatever gas was there went with it? Yes; just the same as now.

Except that you now get fresh air from the Jubilee shaft? Yes.

Did the air go to these men in the same way before as it does now, with the exception that you get some from the Jubilee shaft? Yes.

Were these Jubilee headings done under the Government Inspector? Yes.

Who was this Government Inspector? His name is Bates.

Is he about Newcastle? Yes; I saw him here yesterday morning. Nearly every visit he made he used to inspect this special place, because this was the place where we thought to cut the connection. Mr. Bates inspected this place about once a fortnight.

Did he see the blowers when he went through? He must necessarily have seen them if he inquired. He must have seen them as he went along.

Did he ever make any complaint in connection with that shaft? No; he seemed pleased.

Did he express satisfaction with the mode of ventilation? He expressed high satisfaction with it.

Mr. Edmunds: I object to this evidence; we cannot have conversations or expressions of opinion.

Mr. Want: Did Mr. Dixon ever express any opinion to you? No, not to me; but I believe he did express the opinion that it would be a good job when it was done. On the 20th August, before we commenced, he said that it would be a good job when it was done. We were then working with safety-lamps, and Mr. Dixon expressed his satisfaction with the arrangements that had been made. He said this to my son and to the acting overman.

That was in driving this heading to connect with the shaft? Yes. He saw my plan for the connection, and we talked the matter over every time he came up.

I believe that you are now putting down this shaft at a considerable expense? It will cost from £7,000 to £8,000 when we get all complete. This is for nothing but ventilation, simply to supply the men with air.

There is no pumping required? No; and no coals to be drawn or anything. It is to be done simply for the purpose of ventilation.

Is there any working being done in this heading at all, or is it used simply as an air-pipe? No working. It is used simply to conduct the air down there. These Jubilee headings are simply the air-course.

When was this work being done that Mr. Dixon spoke of? We were only just taking a little corner off with the engine. We wanted to straighten the road a little, and to find coals for the engine.

Since the 6th January, have you been continuously progressing with the erection of machinery at that shaft? Yes; the work has been let, and I will show you the plans, if you like.

The stonemasons, brickmen, and labourers are all working there now? Yes.

(Plan submitted showing machinery on shaft.)

Mr. Want: You say that amongst the machinery there is a driving fan? Yes.

And have you been taking active measures to get this going as soon as you can? Yes.

And you have been told that it will be in position within six weeks? No; I think it will be in position in about eight or ten weeks.

When this machinery is erected and all is completed, what will the system of ventilation there be like? The system will then be reversed; the air will go up the Jubilee shaft instead of coming down, and the total quantity of air in the mine will be doubled.

Now, in addition to taking these active measures and doing all that you could to get that matter finished, you have also endeavoured to remedy Mr. Dixon's complaint of the letting off of gas from this narrow bord, of its remaining stagnant, and of the air passing over it and bringing it down the workings? I was not here when he said that.

I believe there was some stagnant gas there? Yes.

But was anybody working there? No; there would be about 3 feet of water there at the time of the inspection.

Did the gas then do any harm at all? No; it could not have done any harm, as nobody could have got into the place.

And supposing that Mr. Dixon was right, could it have done any harm? No; it could not possibly have done any harm with the amount of ventilation that was there. It was blocked up.

Well, now, tell me this: Did you not, in obedience to his wishes, as a matter of fact, alter that and make your connection with the main heading? Yes.

I will read again for you this letter of the 6th January :—

J. Y. Neilson, Esq., Colliery Manager, Wallsend,—
Sir,

Yesterday (Thursday), accompanied by Mr. J. Mackenzie, Examiner of Coal-fields, I carefully inspected the workings in the vicinity of the Jubilee shaft in connection with the Newcastle-Wallsend Coal Company's Colliery, and found inflammable gas very freely exuding from numerous blowers in the floor of the Jubilee headings; also in the narrow bord, 36 feet in length, 6 feet wide, and 5 feet 9 inches high (near the shaft bottom), inflammable gas could be detected in the Davy lamp, 9 inches from the roof at a point 7 yards from the face, and 3 feet 5 inches from the roof at the face.

2. Having by such inspection proved beyond a doubt that inflammable gas was being engendered at the abovenamed places, and in view of the liability of a large outburst of inflammable gas occurring at any time, I hereby, in accordance with the provisions contained in the 25th section of the Coal-mines Regulation Act of 1876, give you notice that, in my opinion, it is a dangerous practice to allow the air current from the Jubilee shaft to ventilate one split of about sixty-eight men, and another split of about thirty men, all working with naked lights, after such current of air has coursed through the Jubilee headings, where the gas is exuding.

3. I would also draw attention to the practice of having only a single trap-door on the main road between the Jubilee headings, where, in my opinion, two doors are necessary.

4. I have therefore to urge your serious and immediate attention to the abovenamed matters, with a view to have them remedied as speedily as possible.

I have, &c.,

JOHN DIXON,

Inspector of Collieries.

You say that the matters complained of by the Inspector are not worthy of notice, but still you have done something to remedy them? Yes.

You thought that, under the circumstances, you would drive right round, and make the connection more complete? Yes.

And that course altered the connection there? It did.

Now, was there any danger from that gas at all? Not after the connection was made. There was no ventilation before.

Mr. Edmunds: I again object to this evidence.

Mr. Want: Is there any danger there now? There is less now than before.

Is there anything at all in the mine which is dangerous or defective? Not that I know of. I do not see that anything could be better or safer than it is.

Is there any danger or any harm whatever now in the air passing over these floors? No, not the slightest.

Is the supply of gas in the mine greater or less than it was before. What was it before, in your opinion? The very most that we have had was 40 cubic feet per hour from the whole of the blowers combined. The outside strength of the gas before we connected with the Jubilee shaft was not more than 60 ft. per hour.

And what has the supply come down to now? I do not think that it is more than 20 cubic feet. The blowers here now are that small that they are not worth noticing in any way.

Have they diminished every day since Mr. Dixon was there? Yes; every day that I was down there. The big blower that used to go like a gas jet is not so bad now as it was.

And since you have made this circuit of the shaft the ventilation is still better than before? Yes; it has been improved considerably.

And therefore the gas would not so much affect the air because it is insignificant when compared with the quantity of air that is in the mine, and also because the gas has more outlet? Yes.

Now, you see this door here (pointing to plan)? Yes.

Has that door got anything to do with anything required under any portion of the Act except the 12th section? No.

Is there the slightest necessity for a double door there? No.

And you will not put a double door there? No; I do not intend to do anything of the kind.

I suppose you know that under the 12th section of the Coal-mines Regulation Act of this Colony you are bound to supply an adequate amount of air to the men working in the mine? Yes.

And you know that you are liable to punishment if you do not take the men out when ordered to do so by the Inspector? Yes; they can order the men out.

And have you ever had any complaint from the men or from their Inspectors? Have you ever been prosecuted? Occasionally the check inspectors have not acknowledged quite sufficient air.

Do you mean in these workings? Oh! no; not in these workings at all. These are new workings altogether.

Will you tell us how many men are working up in this place to which the air passes after it leaves the door? Only four men.

And one horse is the only thing else that passes through this door? That is all.

How many times in the day would the horse pass through? In and out about twenty times each way, or forty times altogether. I am wrong, because a man brings out three skips at a time, so that it would only be about twelve. The work is done by one boy and a horse.

So that all that happens is that the door is opened and shut twelve times in a day? Just so. The door is worked so that it cannot stand open. The door is able to keep itself shut.

And there is wind enough there to bang it to? Yes, if there is wind there at all.

We have heard something about a fault being there. How many times has this fault been tapped before it was tapped in this Jubilee heading? This is the fourth time. It has been tapped four times altogether. It is a new mine where the men are working, but not virgin ground, as the ground all round has been opened out.

Is there any danger whatever of any large outburst of gas in this heading? No possibility of danger.

You are not doing any work there to speak of? No, and we do not intend to until we finish this ventilation.

And you never did intend to? No; we only wanted to get the connection completed. This is a part and parcel of the erection of the plant, and was included in the one estimate.

Did Mr. Mackenzie and Mr. Dixon know that you were only going to work there until the fan was up? I think Mr. Dixon did, but I am not sure about Mr. Mackenzie.

And all that you have done has been done to increase the ventilation of the mine? Yes; it has been no profit to the Company at all. It has all been done in the interests of the men. We could have gone on in the old way if we liked.

You

You have been in Court and have heard all these experts giving their evidence. To put it shortly, is that the correct state of affairs which they have described? I think they have not said any more than they should have said.

You have heard Mr. Dixon, the Government Inspector, say that the mine is not fit to work in? Yes.

Did these Government officers ever suggest anything to you which you refused to do? No; this is the first case of the kind in which I have refused to comply with their request. They made no suggestion to me to remedy anything except that for which I am brought here.

With regard to this door, this is the first time that you have refused to comply with the request of the Government Inspector? Yes.

And you intend to stick to that refusal, do you? I do, because I do not believe that there is any necessity whatever for it.

You do not mind if they prosecute you for it under the 12th section? No; but I would rather go under the 25th.

Was that connection with that heading from the Jubilee completed within twenty days from the day on which the Inspector's notice was served upon you? It was done within eleven days. Perhaps I might explain—

Well, now, we have heard something about this door being blown down;—it is not a strong door? Yes, it is.

But supposing it did come down, is there not another regulator there? Yes, at the far end of the working.

So that if the door was blown down this regulator would prevent any damage? Yes; even if the door were blown down or were left open the regulator would prevent any damage being done.

The Court, at 1 o'clock, adjourned to 1-30 p.m.

The Court resumed at 1-30 p.m.

The examination of John Young Neilson was resumed:—

Mr. Want: You have heard it said that the using of safety-lamps would result in some disadvantage to the Company which you represent. Now, is it not a fact that more accidents occur through the use in mines of safety-lamps than through the use of naked lights? That must necessarily be the case.

What percentage of accidents is due to falls from coal in this district? Over 70 per cent. of the accidents are due to falls from coal.

Now, is it not a great advantage to the men themselves to have a good light to work with? Decidedly it must be so. Compare the difference between daylight and the light given by a lantern.

Do you know as a matter of fact that the men wherever possible prefer to have the open lights? I know it was recommended that we should have the very best light possible to avoid these falls from coal, &c., and the naked light is undoubtedly the best.

Do you agree with this paragraph from the report of the Royal Commission appointed to inquire into accidents in mines in Great Britain—

The evidence taken by the Commissioners had made it clear that one important factor of protection against falls of roof and sides was to provide the miner with a good light, convenient and handy, which will enable him whilst engaged in getting coal, or other mineral, to see and to protect himself against defects in the sides and roof of the working places.

The evidence made it equally clear that in order to guard against ignition of explosive gas mixtures, this light must be so protected as to render the ignition of an explosive mixture and air practically impossible under any conditions likely to occur in a mine.

I agree with that perfectly. I have read the same clause before.

What percentage of accidents occur from fire in the mines of this Colony? The percentage of accidents from fire until last year was only 3 or 4.

It was increased by the Bulli catastrophe?—Yes, by the Bulli and Lithgow disasters. Until then the percentage was very small—about 3 or 4, and the increase has been brought up by these accidents.

Mr. Edmunds: How long have you been a manager for this Company? Twenty-seven years during the course of last month.

What experience have you had as a colliery manager outside of the Newcastle-Wallsend mine? I have had experience in everything from driver up to head overman.

But my question was as to what other experience you have had as manager? I was under-manager for some time at Home before I left.

And were you ever a head manager before you came here? No; I was only 25 years of age when I came to this colony.

Did you serve any apprenticeship as manager of a coal-mine? No; I did not serve any official apprenticeship—nor in coal-viewing or mining management.

Are you a certificated manager, Mr. Neilson? I am not. There was none of that kind of thing when I left the old country.

When was that, may I ask? Well, that was in the year 1857.

I believe that as a Royal Commissioner in the Bulli matter you recommended—

Mr. Want: I object entirely to this. My learned friend might as well refer to the Crimean war.

The Police Magistrate: We have had quite enough of that. It only causes me pain whenever I hear of it, and every feeling man must experience the same thing.

Mr. Edmunds: Well, then, I shall avoid any reference to Bulli, your Worship. (*To Witness:*) In what year was explosive gas first found in the Newcastle-Wallsend mine? In the year 1861. I think it commenced about that time.

Can you say the number of accidents that have occurred in the Newcastle-Wallsend mine through the use of gas? No; I cannot tell you just now. There were some slight burnings in 1861, and up to some time in 1873. A man got his hand burned in 1861.

Mr. Want: I object to these questions.

Mr. Edmunds: If I can show that similar circumstances existed in other portions of the mine, where accidents took place, it might show the liability to an outburst of gas in this heading. (*To Witness:*) As a matter of fact there have been some accidents in the mine from explosive gas? There have been some accidents in this work; men were in a pit by themselves and the stoppings were knocked down, and though the men found their way out they were slightly burned.

The

The Police Magistrate: Very often accidents occur amongst men for which the manager or agent of the mine is in no way culpable. Often it is the carelessness of the men themselves, though sometimes the men are different and do everything they can to obey orders.

Mr. Edmunds: Unforeseen circumstances arise under the best management. (*To Witness*): So that on one occasion two men were burned in this unforeseen way? That did not occur in the Jubilee heading at all.

But you do have unforeseen accidents occurring, and on one occasion two men were burned? Yes.

Mr. Want: Was not this in an old place? Yes, in an old place.

What happened on that occasion? I was sinking a pit with men, and four men remained behind, when the gas was lit up.

Mr. Edmunds: And what was the consequence of that? I did not know where I was, and two of the other men were burned; but that was an accident that could not occur in the working.

I do not refer to anything except to unforeseen circumstances? This was in 1879.

Mr. Want: I want the whole of this put down from the very beginning.

Witness: It is all in the Mines Office.

The Police Magistrate: Some of the best men may get burned occasionally.

Mr. Want: Did this occur in anything like the Jubilee shaft? No. At this time the coal came all down in a lump.

The Police Magistrate: I do not think there is any necessity of going into this unless you can show or expect to show gross carelessness on the part of the manager.

Mr. Edmunds: I do not attribute that to him.

The Police Magistrate: No matter how good or careful a manager may be there are thoughtless men in these mines who will use lights to enjoy their pipes, not caring whether themselves or others are blown into eternity the next moment. These careless men—I was going to call them contemptible wretches—would destroy themselves if they thought they could injure others at the same time. That is the feeling of some of these men.

At this stage a man in Court interrupted the Police Magistrate, asking, "Where will you find these men," alluding to the men of whom the Police Magistrate had been speaking. The Police Magistrate addressed the man, and told him to keep quiet or he would be put out, and as the person continued to interrupt the business he was removed.

Mr. Edmunds: Have you seen a notice from Mr. Dixon telling you not to allow the air current to ventilate one split of sixty-eight men and another split of thirty men, all working with naked lights, after this current had coursed through the Jubilee headings, where gas was exuding? I have not made the slightest change since he was there, except to get off this gas in the 36-yard place. The rest of it remains exactly as it was when Mr. Dixon visited it just for the sake of examination. The same thing is going on now except that there is a diminishing of the fissures.

Then I take the answer as yes to that question.

Mr. Want: No, you do not.

Mr. Edmunds: Then I will repeat the question: Have you seen the notice of Mr. Dixon telling you not to allow the air current to ventilate one split of sixty-eight men and another split of thirty men, all working with naked lights, after this current had coursed through the Jubilee headings, where gas was exuding? This is rather a long question for me to say yes or no to. I have never altered it, and do not intend to alter it.

Mr. Want: Then you have allowed this thing to go on as before? Yes, except with regard to the narrow bord.

Mr. Edmunds: I must have an answer to my question. Have you since the receipt of the notice from Mr. Dixon allowed a current from the Jubilee shaft to ventilate one split of about sixty-eight men and another split of about thirty men, all working with naked lights, after that current of air had coursed through the Jubilee headings, where gas was exuding? I have not made the slightest change since Mr. Dixon was there except to increase the air by a section cutting the 36-feet narrow bord where standing gas previously existed.

Do you say that that has increased the quantity of air ventilating the mine? Yes, in a moderate degree, but it has not increased it very much.

Does not that increase the quantity of air going down the Jubilee shaft? Yes; it must necessarily do so; the more room you have the more air you get.

Mr. Want: I should think that my learned friend would not want the Examiner of Coal-fields to tell him that.

Mr. Edmunds: Now, do the men still work with naked lights? Certainly. There is not a Davy lamp in the pit.

Mr. Want: And you are going to continue the use of the naked lamps?

Mr. Edmunds: In No. 3 split, how many men have been working? I forget how many are working in Nos. 3 and 4 splits, but there are sixty-four in one split and thirty in another.

There are also some boys and horses? Yes, I believe there are. Each boy has twenty-four men and a horse.

Have you since the receipt of the notice from Mr. Dixon only had a single trap-door on the main road between the Jubilee heading? It is just the same now as when Mr. Dixon was there.

May I ask how many single trap-doors there are in No. 3 split? Well, I think there are two; I am not sure for a moment unless I look at the plan.

Will it take long to look at the plan? I am almost certain that there are only two. There is a trapper at each door, not at the single door referred to in the information.

There is no trapper at this door in the main road that we have been speaking of? No, there is not.

Are there any doors in No. 3 split? There must be three or four in No. 4 split, coming down from one heading to the other, but I cannot tell you for the moment whether there are trappers at each door in No. 4 split.

The system of ventilation comes to this, that the explosive gas is taken in with the intake air to where the men are working with naked lights? There is no explosive gas coming in.

Are there no blowers there? Yes; but the gas from them is diluted.

Yes, but it is being blown to the face where the men are working with naked lights.

Mr. Want: Yes; but when it does it ceases to be gas.

Mr.

Mr. Edmunds : I do not know that that is correct. That seems to be a disputed theory. Does not the gas with the air go down to the men with the naked lights? Yes; but it is no longer gas.

Well, air containing gas, however much it was, being taken up to where the men are working with naked lights at the face of the heading? About one-thousandth part of gas to one of air.

Mr. Want : There would be thirty-six parts of air to one of gas—would not that be the case?

Mr. Edmunds : Now, will my learned friend leave the witness alone and allow him to answer for himself.

Witness : Yes; I think it would be about 30,000 parts of air to one of gas.

And then does not the air afterwards go from the furnace fire in the upcast shaft? It has no other way to go, and when it gets there it meets with the other 85,000 feet of air.

Have not both the Jubilee headings given off gas more or less from the time they were first opened out? They gave out jets of gas as we went along.

Then they have given out gas since they were opened? Yes; since they were opened out from the main road. We found out two or three in the face, and then those behind died out.

Did they all die out? Yes; just as some are dying out in the 50-yard portion.

But not all of them have given out? No; they are not all gone out, but that is the rule.

Mr. Want : They have all gone into the back, near the main heading? They have gone out of the double heading. They went into the single heading when they left the double heading.

You have heard the evidence of the experts that through the trap-door in the main road something like 4,000 cubic feet of air will pass to the men working in No. 3 split? Yes; to the sixty-four men, the boys, and the horses. That will be sixty-eight persons requiring gas.

Mr. Want : Requiring air you mean. I daresay they do not want gas.

Mr. Edmunds : But that quantity of gas is something less than they should get? I do not know. That will give them about 75 feet, but this is assuming that the door is open.

But that will not give the men who are working there all the air which the Act requires? No.

The Police Magistrate : We are not dealing with that now, because that matter is provided for by the 12th section.

Mr. Edmunds : It is not a thing which your Worship will take into account as being a part of this complaint, but the object of my question is to show that there is a prospective danger.

The Police Magistrate : So far as it has gone it would appear that all the gas was drawn into the air.

Mr. Edmunds (to witness) : What kind of stoppings have you in the bords? In all the headings we have brick stoppings. In the Jubilee headings there are also brick stoppings, but in the far heading the stopping is canvas.

What stoppings are there in the bords? There are none. You never put stoppings in the bords.

How do you conduct the air from one place to another in the bords; are there no stoppings in the bord ends to prevent the air from going up further and in the ordinary bords? It would take all the bricklayers in the country to do what you want. In the narrow bord ends brick stoppings are put up if they are important places, but if the places are unimportant, canvas stoppings are put up, and sometimes it is only rubbish. [*Witness then examined the plan, pointing out the position of the brick and canvas stoppings.*] Having cut through across the ordinary bords no one would ever think of putting up a stopping, and none have been put there.

Mr. Want : Did you ever see anyone lunatic enough to do that—I do not mean in this Court? No; not yet.

Mr. Edmunds : What system do you follow in regard to the preparation of shots in the Jubilee district? We have a man who uses naked lights and exercises his own discretion. Men prepare and fire the shots at their own discretion, but before the connection is made we use the safety-lamps, and then a man is appointed to fire the shots. I took Mr. Bates once down to see it in the interests of the men.

Mr. Want : And all this was done under the supervision of the Inspectors? Yes. Mr. Bates, who is an Inspector, made a special inspection of it.

Mr. Edmunds : Do you insert any boreholes to gauge the quantity of gas coming out of the floor? No; there was no necessity for it. The gas came up through the gutters in the coal.

What did you say about the gas coming up? That it came up in a little opening about an eighth of an inch wide. It was through this that the gas came.

I have no doubt you will admit that if, before the time of the Inspector's visit, there had been any large and sudden outbreak of gas there would be a likelihood of a very serious accident? Well, I cannot admit an "if" in that question at all.

I do not ask you to admit an "if," I ask you would there not have been a serious accident had there been a large sudden outbreak of gas? Well, I cannot suppose any such thing happening in that mine. I consider that any large outbreak of gas was impossible under the circumstances.

Mr. Want : I want that answer taken down.

Mr. Edmunds : Well, that is not an answer to my question. I say that if there is any large outbreak of gas in that mine, is there not a probability of a serious accident occurring.

Mr. Want : Well, now, you have the answer already. I object to this, and say that the witness has already answered the question.

The Police Magistrate : The answer was given by Mr. Neilson before, but Mr. Edmunds supplemented it with another question.

Mr. Edmunds : Allowing that you considered it impossible that there could be a large outburst of gas in the mine, still if such a thing did happen and gas broke out suddenly, would there not be a likelihood of a serious accident ensuing? Most decidedly; just the same as if you put a lot of powder there.

Mr. Want : In fact, if there was an accident there would be an accident.

Mr. Edmunds : Does not explosive gas gradually find its way through the coal? Yes, in some cases. But this all has to be looked after. We keep men specially to look after such things as this.

Inspectors are of course appointed to do that? Yes.

But sometimes, notwithstanding, large unexpected outbreaks occur? No, not at the Newcastle-Wallsend Colliery.

I am not speaking of the Newcastle-Wallsend Colliery just now. Do not these outbreaks sometimes suddenly occur? Yes, in the deep mines in the old country.

Has

Has this thing never happened in the shallow mines? No, not to my knowledge.

Have not experiments shown that the pressure of gas varies in one and the same seam? No; I do not know that experiments have shown that; I do not see how they could do so.

The quantity of gas varies with the pressure, the greater the pressure the larger the quantity, of course.

What plan have you had for estimating the quantity of gas exuding from any part of the Jubilee district? I do not think there is any particular plan existing except judging by the safety-lamps. You can bottle it up and send it to Professor West, of Sydney, if you like.

Did you do so, because I do not like. Have you ever heard of other means of estimating the quantity of gas? No.

Have you ever heard of Lieving's fire-damp indicator? I have read about it, but I have never seen it.

Do you know what percentage of gas a safety-lamp will indicate the existence of? Well, estimates have been made of from 5 to 9 per cent., but it depends on the nature of the gas principally.

Then do you know that this Lieving's indicator will indicate as low as $\frac{1}{4}$ per cent. of gas? Yes; I have read that, but I do not believe it.

And you do not think it necessary to get any fire-damp indicator for your mine? No; I think the ordinary practice with the Davy safety-lamp is all that is required. If the Government has got one to give us we will be happy to receive it. The Davy lamp is the only safe one that is used.

The Police Magistrate: There is another safety-lamp, but I believe it is not a good one.

Mr. Edmunds: Now, do you agree with this portion of the report of Her Majesty's Royal Commissioners appointed to inquire and report on accidents in mines in England in 1886. Just listen to this and see if you agree with this portion of the report:—

It has been shown that mines which have hitherto been considered free from fire-damp may have the air which passes through them vitiated to an extent corresponding to about 2 per cent. of its volume of marsh gas. The air in many such mines may probably never be entirely free from explosive gas, at all events, in the neighbourhood of freshly-cut faces of coal and in the return air-ways.

It has been demonstrated in our experiments that when the atmosphere contains 5 to 5.5 per cent. of marsh gas it becomes highly explosive. We have even obtained explosions which, though less violent, might be nevertheless destructive of life if they occurred, on the large scale possible in a mine, when the air contained only 4 per cent. of marsh gas.

It will thus be seen that air, which would appear free from gas if tested in the ordinary way, may become, by the addition of only about 2 per cent. of marsh gas, capable of propagating flame and causing destruction; while the addition of about 3 per cent. converts it into a highly explosive mixture.

As we have already pointed out, air which would appear quite free from gas if examined by a fire-flame, may become explosive when laden with fine, dry coal-dust.

It has been stated that appliances now exist by which very small proportions of marsh gas in the air may be readily detected, and which can be used for examining the atmosphere of a mine. With Lieving's indicator gas present in the air can be estimated with sufficient accuracy for all practical purposes, even when the proportion is as low as 0.25 per cent. Maurice's indicator is also capable of giving accurate measures of the proportion of gas, and is very portable, but the time required in taking an observation with the instrument in its present form seems to preclude its practical application.

The natural inference from the foregoing is that some mines hitherto considered safe with naked lights may at times be in peril.

It may be that risks of explosion, arising out of the possibility of an unforeseen contamination of the air by fire-damp to a dangerous extent in parts of the workings of some coal-mines, can only be provided against by the invariable use of safety-lamps. We have not, however, considered it advisable to make a suggestion of this nature, because the great preponderance of casualties due to falls of stone and coal over those arising from explosions, points to the importance of miners having the advantage of the superior illumination afforded by naked lights in comparison with even the best forms of safety-lamps, when the circumstances of the mine, in regard to association of fire-damp and coal-dust, do not necessitate the use of safety-lamps.

We have, therefore, arrived at the following conclusions:—

1. That it is most important that most mines should be carefully examined by means of indicators capable of detecting as small a proportion as 1 per cent. of gas; such examination to be made before the commencement of each day-shift, and, in case of an interval, also before the succeeding shift.

2. That in all dry mines where the air may be laden with coal-dust, and where fire-damp is either known to be given off from the strata, or may, from experience, reasonably be suspected to exist, the Secretary of State may require safety-lamps to be used, unless the owners and workmen of such mines prove, to the satisfaction of the Court of Arbitration to be appointed by the respective parties, that less liability to accident generally will be involved by the working of the mine with open lights than by the use of safety-lamps. It should be a special instruction to such Court that the circumstances of each mine be taken into consideration with reference to the following points:—

- (a) The mode of working.
- (b) The nature of the coal-seams and of the roofs and floors of the seams and of the adjoining strata.
- (c) The proximity of the seams to each other.
- (d) The emission of gas from the seam, and the liability to blowers, or outbursts of gas from the coal, roof, or floor.
- (e) The order of working the seams of coal.

For the system which prevails in some places of working with mixed lights, that is, with open lights and safety-lamps intermixed in the same set of workings, there is no justification, and this practice should be strictly prohibited.

We are of opinion that in mines where safety-lamps are required, the position of lamp stations, or places where open lights are allowed, in reference to the possibility of access of vitiated air, should receive much more attention than at present. It is desirable that, at convenient places near the working faces, reserves of lighted and locked lamps be kept available for exchange with those extinguished in the workings.

It has long been known that if the atmosphere becomes inflammable, the Davy and Clanny lamps, and, in a less degree, the Stephenson lamp, are unsafe in currents having velocities much below those encountered in well-ventilated mines; our experiments fully confirm this. The ordinary Davy lamp becomes unsafe before a velocity of 400 feet per minute is attained. The ordinary Clanny lamp will almost certainly cause an explosion in a current having a velocity of 600 feet per minute. A Stephenson lamp will frequently cause an explosion in a current with a velocity of 800 feet per minute.

From the information supplied to us by your Majesty's Inspectors of Mines and others, currents having velocities of more than 400 feet per minute are now frequently found in working-places. The currents sweeping longwall faces have very often higher velocities; in main airway current velocities approaching 2,000 feet per minute are recorded, and considerably higher velocities are encountered at regulators and in narrow places, or when large falls occur.

It is thus obvious that, in the present improved ventilation of collieries, ordinary Davy and Clanny lamps have ceased to afford protection from explosion, and that the Stephenson lamp, though more secure than the two former, cannot be relied upon.

We felt it our duty at an early stage of our investigation to draw the attention of the Secretary of State to the danger attending the use of ordinary Davy and Clanny lamps, and our subsequent experiments have made this danger still more conspicuous. We have no hesitation in stating that these lamps should be prohibited, unless they are enclosed in cases capable of effectually preventing the gauze from being exposed to the full force of the current of air.

Many lamps now exist which are able to resist in highly explosive atmospheres current velocities up to 3,000 feet per minute, at all events, for several minutes. Ample time is thus obtained for bringing into operation a "shut off" appliance for the extinction of flame produced both by the illuminant and by ignited gas within the lamp.

We consider that all safety-lamps should be provided with such an appliance.

Yes;

Yes; but I think you will find these things explained in other portions of the book. I have read that report three or four times over. I believe that when the atmosphere contains 3 or 4 per cent. of marsh gas it becomes highly explosive, that is, under the circumstances under which the Commissioners made their experiments.

Do you agree with that part of the report which states that an explosion may be caused by 4 per cent. of marsh gas? That depends altogether on certain circumstances—if it were a wet or a dry mine; or if it were a dusty mine. As soon as dust gets about, an explosion is very usual.

The Police Magistrate: In fact, a dry mine is a very dangerous one.

Mr. Edmunds: Do you think that, under certain circumstances, even 4 per cent. of gas might cause a dangerous explosion? In dry, dusty mines 4 per cent. of marsh gas might cause an explosion, but ours is a wet mine.

Mr. Want: You were asked about these outbursts of gas in deep mines;—now, is it not a fact that outbursts occur where there are underlying seams? Yes; that is true as a rule. They heave up the floor, but there are none of these underlying seams in the Wallsend Colliery.

Have they not gone down 400 feet in the A.A. Company's Colliery?

Thomas Bonsfield called in and examined:—

Mr. Want: I believe you are a deputy overman in charge of the Jubilee workings in the Newcastle-Wallsend Colliery? Yes.

Did you at any time ever tell Mr. Mackenzie, Examiner of Coal-fields, that there was more gas in this mine than at Bulli? No.

Mr. Edmunds: I object to this evidence. This answer of Mr. Mackenzie's came out from my learned friend's own cross-examination, and not from me. It is no part of my case.

The Police Magistrate: I do not think it is necessary.

Mr. Want: A statement is sent forth that this is a fiery mine. Mr. Mackenzie has stated that this mine is a worse mine than Bulli, and I do not think that it is right that that statement should be allowed to go forth to the world.

The Police Magistrate: Then under these circumstances you may ask the question.

Mr. Edmunds: Well, I again object, your Worship, and I ask that this objection of mine may be noted.

The Police Magistrate: Your objection will not affect me.

Mr. Want (to witness): Did you ever tell Mr. Mackenzie, the Examiner of Coal-fields, that there was as much gas in this mine as there was at Bulli? No.

Have you ever been to Bulli? No.

Mr. Edmunds: I believe you have a fireman in this mine? They have.

Mr. Want: And that fireman goes all round the place before any of the men are allowed to go in? Yes; and he writes up his name on the door in chalk every morning, to show that the mine is perfectly safe.

The fireman goes round and signs his name? Yes; he signs his name, and alters the date.

That is a precaution against any accident occurring? Yes.

It is not only as regards fire, but as regards everything else? Yes; he reports that when he comes out to the boards.

Mr. Want: I have a number of other colliery managers, your Worship, whom I am prepared to examine.

The Police Magistrate: Do you think it necessary? I am perfectly satisfied so far as I have gone.

Mr. Edmunds (to witness): Has not the fireman whom you have in that mine come from Bulli? No. Who is the fireman? William Matthews. He was never at Bulli.

Is there any man working in the pit who was at Bulli? Yes.

Is not the pit where the singing was near the Jubilee pit? Yes; it is the Jubilee shaft.

Then you have a man who was at Bulli? Yes.

Mr. Want: Yes, and he has a brother who likes cheese. One thing has as much to do with it as the other. I should think that the fact that the man had been at Bulli would show that he was not much afraid of the air. That is the case for the defence.

The Police Magistrate: Is there any other evidence?

Mr. Want: There will be no other evidence. I do not feel it necessary to speak at any great length, because I expect your Worship's decision will be guided by the construction of the section of the Act which you have before you. Now, I agree entirely with your Worship that this section is a most difficult one to construe. I also agree with you, and every member of the Bar will do the same, that it is no part of a barrister's duty to attempt to induce a Magistrate or a Judge to give a verdict which is not in accordance with the law. There would be no advantage to my client if I were to make any attempt to mislead your Worship on a matter of law.

The Police Magistrate: I thoroughly believe that.

Mr. Want: I must admit, your Worship, that for myself I have considerable doubts as to the meaning of this section. I have read this thing through coming up from Sydney, and have read it through again and again; and now I have no hesitation in saying that I really do not know what construction to put upon it. I am ready to admit that it leans in my learned friend's favour. I have no hesitation in telling your Worship where the argument lies in my friend's favour, as where, I think, it leans in mine. But at the present moment I cannot say myself which is the correct reading of the section. I believe myself that the words of the section leave the matter at issue open to doubt, but the first part of it is in my learned friend's favour, little as that may be.

The Police Magistrate: The difficulty with me is, that I have to construe the section on my own responsibility, without reference to any human being.

Mr. Want: Well, I will endeavour to put it fairly before your Worship. I admit at once that, after some consideration, and having heard what my learned friend has said, I admit at once, although I had some serious doubts about it at first, I admit at once that we were properly within the 25th section of the Coal-mines Regulation Act. And, therefore, I think your Worship was quite right in ruling that if there was any prosecution at all that prosecution should have been brought under this 25th section.

But

But this question about the trap-door should never have been included in the information at all; and therefore I must ask your Worship to dismiss that matter from your mind, because, undoubtedly, it came under the 12th section of the Act, and we cannot be brought here and fined for that. We have not put two doors at the place mentioned, and we have no intention of putting a second door there, and if the Crown prosecute us for not having done so under the 12th section, we will fight that matter out to the end. Now, my construction of this section is this—mind, I will say it is so far in my favour,—and I will ask you to take my view of it first, and then I will point out where it is in my learned friend's favour. The 25th section says:—"If in any respect (which is not provided against by any express provision of this Act or by any special rule) any Inspector find any mine, or any part thereof, or any matter, thing, or practice in or connected with any such mine, to be dangerous or defective, so as, in his opinion, to threaten or tend to the bodily injury of any person, such Inspector may give notice in writing thereof to the owner or agent of the mine, and shall state in such notice the particulars in which he considers such mine, or any part thereof, or any matter, thing, or practice, to be dangerous or defective, and require the same to be remedied, and unless the same be forthwith remedied, the Inspector shall also report the same to the Minister. If the owner or agent of the mine objects to remedy the matter complained of in the notice, he may, within seven days after the receipt of such notice, send his objections in writing, stating the grounds thereof to the Minister, and thereupon the matter shall be determined by arbitration in manner provided by this Act in relation to the special rules, and the date of the receipt of such objection shall be deemed to be the date of the reference. If the owner or agent fail to comply either with the requisition of the notice given by the Inspector when no objection is sent within the time aforesaid, or with the award made on arbitration within twenty days after the receipt of such notice or the making of the award." And then the section goes on to say that the defendant shall be guilty of an offence under this Act. Now, I think your Worship was right in saying that we should have gone into the merits of the case in order to show that the opinion given by Mr. Inspector Dixon was an entirely mistaken one. I am willing to admit that I think that the Company made a mistake in making this request to be allowed to withdraw from arbitration, and so far as that is concerned we cannot go back at all. Now, my second contention is this: that although we cannot go into the merits of the case, as the mine was on the day of the Inspector's visit—and that was the question you really had to try—you would not have had much to consider, especially if you saw the mine. The section says if the Inspector shall "find any mine or any part thereof, or any matter, thing, or practice with or connected with any such mine, to be dangerous or defective, so as, in his opinion, to threaten or tend to the bodily injury of any person, such Inspector may give notice in writing thereof to the owner or agent of the mine," and so on. The notice shall state the particulars which prove the mine or any part thereof to be dangerous. Now, the real point in the charge is that the mine is now actually in a dangerous or defective state. But these particulars are not dated, and so far as we can see, it is only the Inspector's opinion which renders the mine dangerous. What your Worship, therefore, really has to decide is, whether the mine is now actually dangerous or defective in its present condition. We then get notice, "I have therefore to urge your serious and immediate attention to the above-named matters with a view to have them remedied as speedily as possible." Now, what we have to remedy is not stated in that notice, and the only construction to be put upon it is that the mine is generally dangerous and defective, and is such as to tend to the bodily injury of those working in it. Now, my learned friend states that the Act requires that the things complained of shall be remedied and that the particulars shall be stated, but he says that the particulars given are sufficient. He contends that whatever the Inspector says in his notice causes the mine to be dangerous, and his argument is that we must carry out whatever the Inspector demands, whether it has anything to do with the mine or not. If the Inspector says that certain things make the mine dangerous to those working in it, and tells us that we must alter the condition of affairs—

The Police Magistrate: But is there not an alternative course of proceeding to arbitration in case the opinion of the Inspector is disputed?

Mr. Want: I will come to that presently, your Worship. Now, I am giving first of all the construction which my learned friend puts upon this section. It is in effect that we must remedy these things thoroughly, whether we know what to remedy or not, or we must go to arbitration. The Act, I admit, says, "If the owner or agent fail to comply either with the requisition of the notice given by the Inspector when no objection is sent within the time aforesaid or with the award made on arbitration, within twenty days after the receipt of such notice with the making of the award (as the case may be), he shall be guilty of an offence against the Act." Now, we do not object to remedy anything which is wrong in the mine. Of course if we had said "we will not remedy these things," then my learned friend would have been quite right in his contention. We would then have to go to arbitration—there is no doubt of that. But I say that we have remedied the matter complained of; we have supplied a substantial remedy. My learned friend's contention will be that we should have remedied this in the way that Mr. Dixon had told us to do it; but my contention is that we need not do it in that way. We have a perfect right to remedy this matter in our own way if we desire to do so, so long as the matter complained of is substantially remedied. Now, it is for your Worship to decide what construction you will accept, because the point at issue is simply a matter of applying a remedy. As I have said, the Act provides that "if the owner or agent fail to comply with the requisition in the notice" he shall be guilty of an offence. I ask you to mark these words, "fail to comply." So that the issue you have to try is this: Have we complied with the requisition of the notice? Now, my learned friend will have to admit that this is the real point. The whole question now is, have we done what the Act says we should do, and if so, have we not complied with the requisition of the notice? Now, upon that point I shall draw your attention to one or two things in connection with the notice; but before I leave this section I must say this, that although I willingly admit that it is a difficult section to construe as it bears on this case, and that it may cause your Worship some trouble, still it is in such a state that if you have any doubt as to the construction of it, this being a penal section (because failing to pay the penalty the defendant would go to gaol), I ask your Worship to give my client the benefit of the doubt.

The Police Magistrate: It would not be penal. It would be levy and distress. The other matter does not come.

Mr. Want: But failing levy and distress the defendant would go to prison. This is what is called a penal statute, and there can be no doubt as to its effect. We are therefore entitled to have this matter considered in our favour, because in all such cases any doubt that arises acts against the Crown and in favour

favour of the prisoner. But then, I contend, we are entitled to a dismissal of this case; and now comes a still further point. I will venture to say that such a case as this was never in the mind of the person who drew this Act, or in the mind of the Legislature which helped to enact it, for here is a provision brought in at the end which reads:—"Provided that the Court, if satisfied that the owner or agent has taken active measures for complying with the notice or award, but has not with reasonable diligence been able to complete the works, may adjourn any proceedings taken before them for punishing such offence, and if the works are completed within a reasonable time no penalty shall be inflicted." Your Worship is therefore entitled to judge for yourself, and to say that you will be guided by the evidence, as to the state of the mine, which has been submitted here. You have to ask yourself—Is it safe enough to allow men to work there, and are active measures being taken to remedy the thing complained of? I say that this last clause or proviso puts you above the Inspector's opinion, and you can decide for yourself. Supposing, now, that Mr. Dixon were perfectly right—and I give him credit for doing all this with the best possible intentions—what would be the effect? But if he were wrong in his opinion—and I think his opinion is utterly wrong, because the mine is perfectly safe—could anyone blame him for being on the safe side? I therefore cannot object to his calling on us to remedy certain things, if it be thought they were dangerous to the persons employed in the mine. But now let us suppose that Mr. Dixon was right when he gave this notice. "As you have not complied with the notice," he says, "you must be guilty." But within the time mentioned—within the twenty days—precautions had been taken to remedy the matters complained of; and if you believe the evidence of all these experts, then you must come to the conclusion that this mine is now in a better condition than any other mine in the Colony. A more complete system of ventilation could not possibly be imagined than that which prevailed in this mine, if you believe the evidence of these experts. Therefore you must come to this—that the case would have to be heard on its merits, and, under these circumstances, I think you can come to no other conclusion than that this mine is now perfectly safe. That being so, we now come in here, and the question arises—Shall we be punished for not having made the mine safe in compliance with the requisition of Mr. Dixon? That being the issue, I contend that we are entitled to a dismissal of this case, because the 25th section gives you power—I have already read the clause to your Worship—to dismiss the case, in case you are satisfied that the owner or agent has taken active measures for complying with the notice or award. Now, if you have any doubt about the construction of this section, here is a safe course which allows you to get away from the difficulty. I know that if you felt strongly you would not have had any doubt about this latter part of the section; but then you have all this evidence to consider, and you know that these expensive operations are going on for the ventilation of the mine. Then I say that the fair thing to do between both parties is to give the defendant the benefit of any doubt which may have arisen in your mind as to the construction of the statute. Now, there is one argument which I would like to anticipate. My learned friend will argue that we have not remedied the engendering of inflammable gas within the twenty days allowed. What the Crown complain of is that there are a number of gas blowers, and that the air is passing over them and going to the men. Now, you can have no doubt but that we have proved there is only 1 foot of gas to every 36,000 feet of pure air. Therefore you must come to the conclusion that there is no danger there, and that that matter has been remedied. My learned friend will probably argue that it does not matter whether we have remedied it or not. He may say your mine is no longer dangerous or defective; but Mr. Dixon says that you must not allow the air to pass over the gas and get to the men who are working with naked lights. And my learned friend's argument will be that even if we put a shaft there within five days, and that 500 times as much air passed along it, that simply goes for nothing, because we are guilty of an offence for not doing the thing in the way the Inspector wished. Supposing that the gas blowers had stopped two days after the Inspector had visited the mine, he would still come here and say that the air still went over the place where the gas exuded, although at the end of the twenty days all the gas had disappeared. Now, surely this is not an argument which should be addressed to the Bench in a case like this. I am rather astonished at the action of the Crown in this case, and I do not object to their instituting a prosecution if they thought it was their duty to do so; but they must now be satisfied that the opinion of Mr. Dixon was wrong, and that the mine is all right, and, that being so, they should not go any further with this prosecution. No one representing the Government has been in the mine now for some two months, so that how can they tell what has been done meanwhile or how the condition of affairs has altered. The prosecution simply comes from this: that the officials have got stirred up with a long pole for the Bulli matter, and now the defendant here is to be "butchered to make a Roman holiday"; he is to suffer for the inaction of the Inspector before the Bulli occurrence. It is the old story. The words of the section are that we must comply with the Inspector's notice. The question of arbitration does not come in here at all, because the Company and the agent do not object to remedy the thing complained of, and we say that we have done this already. We have remedied the matter complained of.

The Police Magistrate: I must say that this section is a most difficult one to construe. If one or two lines had been added they would have made it plain, and this is the case with most of the Acts of Parliament that we have to deal with. As Mr. Nichols used to say, you can drive a coach-and-four through any of them.

Mr. Want: Yes, and I believe you might drive an omnibus or a tramway through this Coal-mines Regulation Act. Now, your Worship, this is not a case here of arbitration. My contention is that we are not called on to arbitrate at all. What the information leads to is that the mine is now in a dangerous and defective condition, and threatens bodily injury to the persons working in the Jubilee district. I say that having removed this matter—having remedied the thing complained of—we are not guilty of an offence, even if we did not proceed in accordance with the terms of the notice served on us by the Inspector. But my learned friend will say that it does not matter how we remedied this thing; he will say that you did not do it as Mr. Inspector Dixon wanted it done, and that therefore we have committed a breach of the Act. Now, admitting that all these things which Mr. Dixon has told us to do were needed to be done for the safety of the mine, we are not bound to carry out the remedy in the way which he tells us it should be done. We are really only bound to stop that of which the Inspector complains. My contention is that it does not matter how we remedy these things. We have simply got to satisfy the Court that we have within a certain time put the mine in a condition where it was not dangerous to the men who were working in it. Now, your Worship must already, from the evidence which has been submitted to you, have come to the conclusion that the mine is perfectly safe, that it is not defective in any shape or form, and that it is perfect in its ventilation. But my learned friend may say

that the Government Inspector found that these people were not using safety-lamps, and I say that if they had done this there should be no penalty. Why should you fine a man for nothing? The first part of this 25th section says:—

If in any respect (which is not provided against by any express provision of this Act or by any special rule) any Inspector find any mine or any part thereof or any matter thing or practice in or connected with any such mine to be dangerous or defective so as in his opinion to threaten or tend to the bodily injury of any person such Inspector may give notice in writing thereof to the owner or agent of the mine and shall state in such notice the particulars in which he considers such mine or any part thereof or any matter thing or practice to be dangerous or defective and require the same to be remedied, and unless the same be forthwith remedied the Inspector shall also report the same to the Minister.

Well, I say we have remedied the danger, and that there is now no gas in the mine. Why should we be fined because we did not fall in with Mr. Dixon's suggestions, and because we thought we could do work more effectually otherwise. Then we come to you and say that we have made the mine safe; but my learned friend says, "No, you must do it in another way altogether." Now, I contend that by doing this we have brought ourselves clearly within the latter portion of this section, which provides for such a contingency. We have to look at this case in this way. Your Worship must have been impressed with the enormous importance of the case in several ways: first, with regard to the Company; second, with regard to the Crown; and thirdly, with regard to Mr. Neilson, who is charged here with a grievous offence. He has hundreds of people under his control, and if this were true he was sending them down day after day to what might be a living death. I could conceive nothing more cruel than to tell a colliery manager who is anxious to safeguard the lives of his workmen in every way that he has the workings of his mine in a dangerous and defective condition, and that bodily injury to those engaged in these workings is constantly threatened. It is enough to make a man's hair stand on end on reading it. When I read this information the first thing I said was, that it was hardly possible for a man to be guilty of such a thing, because no more frightful charge than this could ever be laid at a man's door. If the mine had been allowed to remain in this condition, the colliery should have been shut up, the gas collected for twenty years, and then blown to pieces. We are here now to deny that this Company has got this mine at the present moment in a condition tending to the bodily injury of the persons in it. If your Worship fine us here—no matter how small the fine may be—you will say to the whole world that the colliery is in a condition set forth in that information. And then your Worship will have to say that we had an opportunity of remedying this. Now, can any man who has listened to this evidence that we have heard in this Court say that Mr. Neilson has been guilty of an offence in the first instance, and that he has continued that offence? I would scorn to put Mr. Neilson's reputation as being open to doubt. But if your Worship should entertain a doubt on the subject, he is undoubtedly entitled to the benefit of it. Mr. Neilson stands in this Court to-day a proud man amongst the colliery managers of this country, and we have had the picked men from all the collieries round here. They are all men of repute and of vast and varied experience, and yet they all come here and speak of this mine in a manner which ought to make Mr. Neilson feel a proud man, and also make his Company feel proud of him. And yet the Crown come here and, under this doubtful Act of Parliament, endeavour to get him criminally punished. With regard to the latter portion of the 25th section of the Coal-mines Regulation Act—of course I merely point it out so that your Worship having any doubt about it, we are entitled to the benefit of it, and your duty will be to dismiss the case. It would perhaps be best for all parties if your Worship availed yourself of this latter part of the clause and dismiss the case on the point of law. The remedy which the Legislature has provided applies to cases where there is no doubt that a colliery proprietor has broken the law. There is no other means of remedying what has been complained of unless we shut up the colliery. Now, if your Worship is of opinion that putting up this upcast shaft, putting up this machinery and the other things, are steps towards "taking active measures," then we have clearly brought ourselves within the latter part of the section, if you come to the same conclusion on other grounds. We have destroyed the effect of these gases in the narrow bord by a connection with the main heading which has brought down a large quantity of air that passes the gas jets which are now defunct. We are not allowing the air to go over the blowers as it did, but to circulate so that the air will complete a circuit. So that really we have done what the Inspector has asked us to do; and if we have remedied the matter complained of then we are entitled to an acquittal. We have actually given the men working in the mine more air than ever they had before; but had we gone to the end of the up-shaft and allowed the men to wallow in this gas there would never be a word said about it. There never would have been a word said about it because there is something at the back of all this. People have been down and saw what was going on, and then they complain about this Jubilee shaft. I say we are entitled, if this gas is dangerous, to come within this latter portion of the section, in case you do not give us an acquittal. In all these matters, whether it be the words of the section or the words of the Inspector's notice, they must bear a reasonable construction. You cannot treat the words as if they were a number of Chinese metaphors, but as language which conveys an idea of something that is wanted to be done. And a Court always puts what is called a reasonable construction on such terms. And reading this notice of Inspector Dixon's, and seeing what we have done, you will admit that we have done something to that mine which prevents the air from being foully laden with gas. Let your Worship put a reasonable construction on the words, and then take into consideration the remedy that we have applied, and if you go into the merits of the case your decision cannot be against us. You have to consider this: Have we not remedied what we had the notice to remedy, and if we have remedied we are entitled to a dismissal. There is nothing now to complain of for which we can be brought under this 25th section. Then there is the latter portion of the section which you might avail yourself of, and this really would be the safest course for your Worship to pursue; although I say that on the evidence we are entitled to an absolute dismissal, because we have remedied the things of which complaint was made. Unfortunately your Worship cannot try this case as an arbitrator; but if you could, you would have found that the mine was perfectly safe, and that we were entitled to the benefit of the evidence to that effect; and that we should not have this accusation flung at our heads. I think we have satisfied everyone that the mine is now a perfectly safe one, whatever it was when the Inspector made an examination of it. The Crown should not attempt to punish a man who is innocent, nor a Company either, especially with regard to a manager whose conduct has been proved to be exemplary in every respect. I ask your Worship for an absolute dismissal of this case, in order that Mr. Neilson may be able to say to the world that if there were anything wrong I am not guilty of the damnable crime charged against me here.

Mr.

Mr. Edmunds: My learned friend addressed to your Worship what I must admit is very good law and if I may further remark, some very bad logic. For while he admits now what the law really is—and which I contended was the law all along—he contends that this action is on the merits as to whether the mine was dangerous or safe. But nevertheless he tries to make your Worship believe that if the defendant was guilty of an offence under this Act you disgrace him as being the agent of a mine which is unfit to go into—as being guilty of a damnable practice for any one to allow. While my learned friend admits that there is no question about the law, he yet makes an appeal to your Worship not to find the defendant guilty of this ignominious thing of having a mine that is dangerous to the men who were employed in it. This, I contend, is bad logic, because it does not follow from the previous part of my learned friend's address that we are not dealing with the fact whether that mine was dangerous or not; and therefore it will not be the slightest departure from the decision of this Court to say that this mine is dangerous at the present time. And yet it is by representing that to be an offence that he appeals to the sympathy of your Worship to dismiss the charge against the defendant. Now, the law is as stated by my learned friend, and I take this admission thankfully from him even now. Therefore, your Worship has now merely to consider the question as to whether the agent of this Company complied, or failed to comply, with the requisition in the notice which he received from the Inspector of Collieries. That is the sole question which your Worship has to determine in this case: Did the defendant comply, or did he fail to comply, with the notice which was written to him by the Inspector on the 6th January. Now, whenever a person gets an admission from the other side he has a right to be thankful, but whenever any one gets an admission from my learned friend he may know that he is very hard pressed or he would not give it. There is no man in the profession who battles for his client more than my learned friend. He never concedes anything but what you can wrest from him, and therefore when he so graciously offers something to me I am perfectly sure he is offering me something which is very dangerous.

Mr. Want: It was his Worship that I offered it to.

Mr. Edmunds: I would not have got it from him, your Worship, unless I was in this position. I admit that it is a difficult section to construe, but it appears to me that it can only be construed in one way. It is undoubtedly true that counsel will not mislead the Court, but then counsel will try to get a verdict for his client. Counsel for the Crown always feels that having the authority of the Crown he has also its responsibility in carrying out his duty. He will not endeavour to get the Magistrate to misconstrue an Act of Parliament or any portion of it. When my learned friend said that it was the duty of counsel not to mislead the Bench, it certainly is the duty of the person representing the Crown that if he has behind him the influence of the Crown, he also has its responsibility to have the law fairly pronounced in open Court without consideration to persons. He has to see that if the law is broken, and the person who breaks it comes before the tribunal of justice, justice shall be calmly and fairly administered to him—be the man the meanest of persons or the greatest of mining managers. Now, when my learned friend admits that the plain question which I put before you is the correct one, I thank him for it, but I have no hesitation in saying that he would have argued the other way if your Worship had come to the other conclusion.

Mr. Want: That is very difficult to say indeed.

Mr. Edmunds: I have very little doubt but that it would be done. There would be no use in the Act providing a certain course of procedure, and clothing the Inspector of Collieries with a certain authority, if the managers of collieries were allowed to resist that authority. The Act says:—"If the owner or agent of the mine objects to remedy the matter complained of in the notice, he may, within seven days after the receipt of such notice, send his objection in writing, stating the grounds thereof to the Minister, and thereupon the matter shall be determined by arbitration in manner provided by this Act in relation to the special rules, and the date of the receipt of such objection shall be deemed to be the date of the reference. If the owner or agent fail to comply either with the requisition of the notice given by the Inspector when no objection is sent within the time aforesaid, or with the award made on arbitration within twenty days after the receipt of such notice or the making of the award (as the case may be), he shall be guilty of an offence against this Act, and the notice and award shall respectively be deemed to be written notice of such offence." Your Worship is directed by the words of the section not to look into the merits of the case, and therefore you have intimated a very correct view that the whole thing turns upon the construction of the notice, because it is disobedience to the notice which constitutes the offence—the offence being, failing to comply with the requisition contained in the notice of the Inspector. Now, looking into this notice, we will see exactly what the offence is. The notice is divided into four consecutive paragraphs. The first is purely introductory:—"Yesterday (Thursday), accompanied by Mr. J. Mackenzie, Examiner of Coal-fields, I carefully inspected the workings in the vicinity of the Jubilee shaft in connection with the Newcastle-Wallsend Coal Company's Colliery, and found inflammable gas very freely exuding from numerous blowers in the floor of the Jubilee headings; also in the narrow bord, 36 feet in length, 6 feet wide, and 5 feet 9 inches high (near the shaft bottom), inflammable gas could be detected in the Davy lamp 9 inches from the roof at a point 7 yards from the face, and 2 feet 4 inches from the roof 3 yards from the face, and 3 feet 5 inches from the roof at the face." That, as I have said, is simply introductory. The notice now comes on, and this part constitutes the real ground for the Inspector's opinion which he formed:—

2. Having by such inspection proved beyond a doubt that inflammable gas was being engendered at the above-named places, and in view of the liability of a large outburst of inflammable gas occurring at any time. I hereby, in accordance with the provisions contained in the 25th section of the Coal-mines Regulation Act of 1876, give you notice that, in my opinion, it is a dangerous practice to allow the air current from the Jubilee shaft to ventilate one split of about sixty-eight men and another split of about thirty men, all working with naked lights, after such current of air has coursed through the Jubilee headings, where the gas is exuding.

3. I would also draw attention to the practice of having only a single trap-door on the main road between the Jubilee headings, where, in my opinion, two doors are necessary.

These are the things which make the mine dangerous in the opinion of the Inspector. It is "in view of the liability of a sudden further outburst of inflammable gas," not by reason of the gas actually existing there, that he considered it dangerous. Of course the first part of the notice can be remedied by the use of safety-lamps, and the second part by the making of another door at the place indicated; or the defects may be remedied in other ways. The Inspector concludes:—

I have, therefore, to urge your serious and immediate attention to the above-named matters, with a view to have them remedied as speedily as possible.

Now, there is the requisition, there are the things the Inspector complains of, and the things which he asks should be remedied. The only other point which you have to consider is,—did the agent, Mr. Neilson, fail to

to comply with the requisition in that notice? If he failed to comply with that requisition, then there has been an offence against this Act. The words of the Act are:—"If the agent fail to comply with the requisition in the notice within twenty days after the receipt thereof he shall be guilty of an offence against this Act." Now, what is the requisition of the notice? It is not to take the air going over these blowers down to the men who are working with naked lights. My learned friend said, "But you should have pointed out the remedy to us." Well, you can see that it would be a very objectionable thing for the local Inspector to say how the thing was to be remedied, or that it should be remedied in a certain way, because then his hands would thereby be tied for all future time in regard to this particular matter, But it is as clearly the law as possible that if the Inspector did this he would be exceeding the scope of his authority; and the case which I have quoted to your Worship fully bears this out. I would like again to refer your Worship to the judgment of the Court of Appeal in England on the duty of the Inspector of Collieries under this Act:—

Now, going through the 46th section, we find, first of all, that the Inspector has to see whether any mine or part of a mine, or any matter, thing, or practice in or connected with such mine, is dangerous or defective, so as, in his opinion, to threaten or tend to the bodily injury of any person. Then he is to give a notice and state, not merely that the mine or practice is dangerous, but the particulars in which he considers it is so, and to require the same to be remedied. Where does his duty stop? At requiring the matter to be remedied. He is not told to say what he thinks to be the remedy, nor to require that remedy to be carried out. When the complaint is brought to the notice of the owner, agent, or manager, if he objects, not to a remedy proposed, but to remedy the matter complained of, he is to send an objection in writing, stating his grounds, to a Secretary of State, and thereupon the matter shall be determined by arbitration. What is the matter to be determined by arbitration? The Inspector has required a matter or practice to be remedied, the owner has stated his grounds for objecting to remedy the matter complained of, and the requisition of the Inspector and the objection to it of the owner are the matter which is to be determined by arbitration—that is, whether the requisition of the Inspector is one to which the objections of the owner form a sufficient answer. That is all that is to be determined. There being no words which enable the Inspector to name a remedy, the arbitrator has no question of a remedy before him. If the arbitrator finds that the objections of the mine-owner are unfounded, the requisition of the Inspector stands. If after that the mine-owner does not remedy the matter complained of, he must take the consequences; but the arbitrator has nothing to do with the consequences of the mine-owner's neglect; that is for another tribunal. Applying these principles, I think the award goes beyond what I have stated to be the power of the arbitrator. The award should have followed the requisition of the Inspector, and pronounced that the matter—that is, the working of the mines with open lamps—was dangerous or defective, so as to threaten or tend to the bodily injury of the persons employed in and about the said colliery. But the arbitrator has determined that the mines are to be worked with safety-lamps—that is, he has determined what is the remedy which should be adopted, and directed that to be followed. He has substantially found that the complaint is well founded, though he goes beyond his powers in other respects. I can see no reason, therefore, why the award should not go back to him, so that he may put it into form. When that is done, it will be for the mine-owner to remedy the defect, for if he does not he will, if the opinion of the next tribunal is against him, be liable to penalties under the Act.

Now the requisition in that case was this —

The Police Magistrate: The Inspector here has only to report to the Minister, "unless the same be forthwith remedied," and when the case goes to the Minister it is out of the hands of the Inspector. Then the agent is allowed to send in an objection to the Minister, and thereupon the matter goes to arbitration.

Mr. Want: But we did not send in any objection in this case, your Worship.

The Police Magistrate: But when the case goes to the Minister it passes out of the hands of the Inspector, whether an objection is sent or not.

Mr. Want: It is only when the owner or agent objects that the case goes to arbitration.

The Police Magistrate: But the section goes on to say:—"If the owner or agent fail to comply either with the requisition of the notice given by the Inspector when no objection is sent within the time aforesaid or with the award made on arbitration within twenty days after the receipt of such notice or the making of the award (as the case may be) he shall be guilty of an offence against this Act, and the notice and award shall respectively be deemed to be written notice of such offence."

Mr. Edmunds: But if he does not object, and fails to comply with the requisition of the notice, then he shall be guilty of an offence. By the 25th section the duty of prosecuting is placed on the Examiner of Coal-fields:—

All penalties imposed by this Act may be recovered summarily before two or more Justices of the Peace, at the suit of the Examiner, Inspector, or other officer authorized in that behalf by the Minister, but every information shall be laid within two months after the offence has been complained of.

The only question here is whether the defendant complied with the requisition of the notice or not.

Mr. Want: In effect, that is it.

Mr. Edmunds: And this prosecution is properly brought by the Examiner of Coal-fields. Now, I shall deal with the notice, and I think I shall be able to show your Worship that Mr. Neilson, the defendant here, did fail to comply with the Inspector's requisition. My learned friend says, "Why did you not point out the remedy?" It would have been outside the Inspector's authority altogether to have done such a thing. He said it was dangerous to use naked lamps in such a mine, but we do not pretend to say what you are to do to remedy that. Lord Justice Fry, in the judgment already referred to in the Court of Appeal, said:—"The requisition relates to the habitual use of open lamps, and this is declared dangerous. It seems to me clear that this is not a matter dealt with in the Act or in the special rules, and if that is so it was within the jurisdiction of the Inspector. The thing to be remedied is the practice which the Inspector has found to be dangerous, and the Act deals with objections by the owner to remedy not the danger, but the matter complained of. Whether the matter complained of ought to be remedied is therefore the question about which a dispute arises, and that is the dispute which the arbitrator has to determine, and he has not to deal with anything further. I think the award ought to follow the requisition, and to state that the danger exists and ought to be remedied, because that is the subject-matter of the dispute, but it is beyond the competence of the arbitrator to direct what is to be done to remedy the danger. Inasmuch, however, as the true meaning in dispute was whether the requisition of the Inspector was right, and that has clearly been determined by the umpire, I think the award ought to go back to him to be dealt with." And that is precisely what this is, a dangerous practice.

The Police Magistrate: But open lamps must be dangerous if gas is about.

Mr. Edmunds: The requisition in the notice in this case is that the men were working with naked lights, and that the practice was a dangerous one, inasmuch as it threatened to do them bodily injury. Now, the only remedy that could be applied was to comply with the requisition, and to do what the Inspector required to be done; and it is by an ambiguous use of this word that any doubt at all has arisen in this case. Has the defendant here made the air current course in a different way to the way we complain of? No, he has not. Has he done with the fire-drive so as to prevent other explosions? No. Has he caused the

the men who are employed in the mine to work with safety-lamps? No, he has not. Has he caused a double trap-door to be placed there? No. Mr. Neilson says he has done none of these things, and that he does not intend to take any action. He says, "I do not intend to obey the Inspector with reference to the safety-lamps." He tells us also that he does not intend to make use of any other safety-lamps. I asked the defendant if he still allowed the air to course from the Jubilee shaft to ventilate—

The Police Magistrate: Perhaps I may tell you the conclusion that I have come to. I am now fully persuaded that the mine is now in a most excellent state of ventilation. I could not go beyond the testimony of these gentlemen, who, on oath, state that there is at the present moment nothing that is dangerous or defective in the mine; and, therefore, you will have to show me that the defendant was guilty of an offence by not attending to the notice. I am perfectly satisfied with regard to the present condition of the mine. My reason for receiving evidence so far was in order that it might be shown, if it could, that the mine was now perfectly safe, and to question the relations of the men in other parts of the country. The danger appears to have been entirely rectified by the precautions adopted.

Mr. Want: And, therefore, we are entitled to an acquittal.

The Police Magistrate: What I have to decide is whether the management of the mine are not guilty of an offence under the Act by not attending to the requisition in the Inspector's notice.

Mr. Want: It is for your Worship to say whether this has not been done in effect. We really in effect have complied with the notice.

Mr. Edmunds: But I question whether what you have done complies with the requisition in Mr. Dixon's notice. This remedying things according to their own ideas is not a compliance with the requisition of the notice, and cannot be entertained as such. Mr. Dixon says it is dangerous after taking the air one way to have but one single trap-door in a certain place. That being so, how can the defendants' counsel say that they have complied with the requisition of the notice when a double trap-door has not been placed there? Mr. Dixon required the defendant to do several things which he has not done; and it does not matter whether he has kept up a splendid system of ventilation or not, or that the gases are still diminishing in force. It does not matter whether experts have agreed that there is no liability to a sudden outburst of gas, but the question is, did the defendant comply with the notice? The defendant comes into the box here and states that he has not done anything, and will not do it, which is a virtual admission that he has not complied with the requisition of the notice. And then my learned friend says if your Worship finds Mr. Neilson guilty of this you will find him guilty of a most serious charge. The charge is, indeed, a serious one, and if you find Mr. Neilson guilty of it you do not thereby find that the mine is now in a dangerous state. You merely find that Mr. Neilson has disputed the lawful authority of the Inspector of Collieries, because that is the gist of his action—that is what it amounts to. When an officer is appointed by the Crown and clothed with large powers and large authority—all in the interests of certain persons working in coal-mines—and with certain duties cast upon him for the protection of the lives of the persons employed in the mine, we cannot allow Mr. Neilson or any other manager advisedly to dispute the Inspector's authority and still persist in disobeying him. The Inspector states that such and such a thing is required, and the defendant does not go to arbitration to show that the Inspector's opinion is unfounded. He has given the defendant notice, and I contend that when arbitration was not resorted to the notice must be regarded as the notice of an offence. This is the act of disobedience to the lawful authority of the Inspector of Collieries, and that is the gist of the offence committed by the defendant under this section. If such a thing were allowed, the result of it would be that the person appointed by the Government to inspect collieries would be a person of no authority whatever. If Mr. Neilson wished to resist the Inspector, then he should have taken advice as to whether he could do so legally; and, having been guilty of this act of resistance, he renders himself liable to a penalty under the Act or under some portion of it. It is not Mr. Neilson who is guilty of this error of judgment in resisting the authority of the Inspector; it is the management of the mine. The Company first offered to go to arbitration, and then withdrew the offer; so that it is the Company which has placed Mr. Neilson in this position, and not the Crown. However your Worship may decide, the penalty will merely be a pecuniary one—that it will have no such terrible result as my learned friend has told you. The charge really means that Mr. Neilson has resisted the lawful authority of the Inspector of Collieries, lawfully exercised, and that he is now being prosecuted in a police court for an offence against the Coal-mines Regulation Act. The Crown come into this case without any bias against the defendant or the Company which he represents, and without any undue or improper motive. My learned friend merely suggests this insinuation, but it is only my duty to tell your Worship that there is no justification whatever for such a charge. It is the Inspector of Collieries who is carrying on this prosecution. My learned friend said there were three interests involved in this case. Now, I say that there are only two—the Crown and the owners of the mine. The interests of the general public are the interests of Her Majesty's officers, who act in the interests of those who are labouring in the bowels of the earth, and whose protection is sought in this prosecution. The general public, therefore, have no interests separate or diverse from those of the Crown in this case. The officers of the Government come here merely as the exponents of the wishes of the people. This law is for the protection of Her Majesty's subjects, and when it was passed Inspectors were appointed for the purpose of carefully inspecting and examining these mines; and they were told if they found anything dangerous, whether their opinion was right or wrong, they were enjoined to tell these people so, and cause the matter which was dangerous to be remedied. And when the Inspector fairly come to the conclusion that a mine was dangerous, what sort of man would he be to fill the high and responsible office whose duties he now creditably discharges if he did not take the steps which he has taken? If he did not do as he has done he would, on the contrary, be utterly unfit for his duties. Instead of his action being a stigma on Mr. Dixon, he would have been a disgrace as a man who, although understanding his duties, had not the courage to carry them out against the owners of an important colliery. What is being contended for in this prosecution is the authority of the Inspector, and that authority must be maintained. The owners of this mine say that they will not comply with the requisition—an attitude which it is undoubtedly wrong to assume with regard to a man who is merely exercising his lawful authority. It is well that this authority has never been disobeyed before, and it will be an unfortunate thing if this case is permitted to leave this Court without some certainty that it will not be disobeyed in future. It is well that these colliery managers should be taught that they must respect the lawful authority of the Inspector of Collieries, or they will be held to be guilty of an offence under this Act; and powerful and strong as they are, no matter what their position may be, let them come into a Court of Justice, and they will be told that they

they have been guilty of a breach of this law. The Inspector had a duty to perform, and he told them so, and the consequence of disobeying his instructions. It may be asked why they would not do this? Simply that they would not undergo the additional expense of hewing coal and working with safety-lamps. They said, "We will not incur this additional expense." It might run up to a shilling on the ton, said one witness for the defence, if the coal is hewn by the aid of safety-lamps. But Mr. Dixon has said, "You shall work with safety-lamps," to which they reply, "We will not." Now, they have boasted of the expense they have gone to in protecting the interests of their workmen. Would it not be much better if they paid their miners some additional money per ton and work with safety-lamps in order to show their respect and obedience to the law. Or if they objected to do this, thinking that the Inspector was wrong, why did they not proceed to set his decision aside by arbitration. They are now in this position that they have spent a lot of money, while, by spending a little more, they could have respected the authority of the Crown, which, by its Inspector, guards the lives and interests of the people working in these mines. Every witness that has been examined for the defence stands in the same position as the defendant and the owners of this particular property, except Mr. John Thomas, the Victorian coal-viewer, Mr. Turnbull —

The Police Magistrate: None of these gentlemen would think of swearing what was false.

Mr. Edmunds: I do not suggest such a thing, your Worship. I was the first to say in open Court that I did not believe any one of these gentlemen would say anything which he did not believe to be true.

The Police Magistrate: I could not allow any slur to be cast upon these gentlemen. That was my reason for interrupting you.

Mr. Edmunds: I should be unfit to be the representative of the Crown in this or any other case if I were to cast a slur upon such a body of men. But my argument is, that in forming opinions on matters on which two opinions are possible it is not in human nature to look at the matter from any other standpoint but that from which men are generally accustomed to look at it. And so it is frequently stated in the law courts by Judges and Magistrates that there is no evidence of so little weight as the opinions of experts, because they come into Court wedded strictly to an opinion. And the more honest they are the more firmly do they stick to their opinions.

The Police Magistrate: And when in company together talking over their theories they are like a lot of old women.

Mr. Edmunds: It is only in the sense which I have indicated that I have desired to comment on the evidence given by these colliery managers, because I take pleasure in saying that what each one has said he thoroughly believes. But as your Worship has said, when it comes to a disputed point of scientific interest I would not believe one of them.

The Police Magistrate: However learned they may be, what is the value of it? They may, after all, know very little about the subject.

Mr. Edmunds: In many cases they hold different opinions.

The Police Magistrate: All some of these scientific men know is that they will die, and that their bodies will go into the ground.

Mr. Edmunds: And for these very reasons the Act provides for the state of things which exist here. The Inspector is appointed under the Act, and it is his duty to form an opinion. That opinion of the Inspector has to be respected by the colliery managers, unless they can succeed in setting it aside on arbitration. Now, all these gentlemen speak about further outbreaks of gas, but the evidence on that point is hardly worth anything. I would like to refer to the evidence of one witness, who said that these blowers would decrease at the rate of 50 per cent. in five days, 20 cubic feet of gas having exuded in that time. Therefore, if that were the case, your Worship will remember that the blowers would have exuded 40 feet five days before —

The Police Magistrate: There is not a particle of evidence that I could not repeat.

Mr. Edmunds: At that rate the total amount of gas which would have exuded from these blowers from the date of the commencement of the notice would be 81,920 cubic feet—that is, if they had decreased 50 per cent. in five days. While even Mr. Thomas says that the total quantity that exuded would be 34,200 cubic feet, but still there must have been a reservoir containing a large quantity of inflammable gas.

Mr. Want: Not one reservoir.

Mr. Edmunds: And yet they attempt to convince your Worship that there is no liability to a further outburst. The learned Mr. Thomas says that if there was any large quantity of gas there would be a change in the nature of the coal. Mr. Thomas forgets that the nature of the coal frequently changes, so that he is contradicted by his own evidence.

The Police Magistrate: Various kinds of coal are about, but the amount of gas exuding depends upon the nature of the coal.

Mr. Edmunds: I take it, therefore, your Worship, that I have proved that the requisition in the notice was that the management should obey the Inspector; also, that they have failed to comply with it, and, therefore, it follows that the defendant has been guilty of an offence under the Act. The consequence of this is, not that the defendant is covered with indelible shame, but that he must be found guilty of disobeying the lawful authority of the Inspector of Collieries. Then my learned friend says you should take the course of allowing the defendant to escape the penalty imposed by the Act by availing himself of the proviso at the end of the section. But when my learned friend gave up the law he also gave up the proviso.

Mr. Want: I most certainly say not.

Mr. Edmunds: But my learned friend would make six more speeches if he were allowed to do so.

Mr. Want: If the Company will pay for it, I will go on for ever.

Mr. Edmunds: At the same time I may say that I would like to be allowed to go on. Now, I say again that my learned friend having given up the law he has also given up all hope of any protection under the proviso, because the Act does not provide that the Magistrate shall have any power to say whether a remedy has been applied or not. That would place the Magistrate over the Inspector—a thing which the Act never intended should be done. The defendant can get no relief by reason of this proviso by any such course as that. The Company must recognize the authority of the Inspector and take active measures to comply with the requirements contained in his notice. What active measures have they taken in this case? They might have taken "active steps" in ten minutes to remedy the matter by getting safety-lamps. But they have taken no step whatever to comply with the notice. They have said to the Inspector,

Inspector, "We will not obey you," and then they come into Court and say again that they will not obey, and they think the Court will justify them. This is the whole case. It is simply a matter of upholding the authority which is lawfully vested in him by the statute. Having failed to comply with the requisition and refused to go to arbitration, then, when the Inspector, superior in authority, brings this prosecution, his authority is merely questioned, and a defence is set up that no offence was committed. What penalty should meet the circumstances of the case I will leave to your Worship; but it is quite clear now that the defendant can not come under this proviso. I ask you, therefore, to find that Mr. Neilson has been guilty of failing to comply with the requisition of the notice given by Mr. Dixon, and that, therefore, he has been guilty of an offence under the Act.

Mr. Want; That is failing to remedy.

Mr. Edmunds: The information sets out with introductory statements containing a history of the case, and then states the offence in these words:—"And that the said John Young Neilson has failed to comply with the requisition of the said notice given by the said Inspector, and remedy the matter complained of as aforesaid. And that more than twenty days have elapsed since the receipt of such notice. And the said informant further informs me, the undersigned, that he verily believes that the matter of complaint aforesaid is not provided against by any express provision of the Act 39 Vic. No. 31 or any special rule to be observed in the working of the said Newcastle-Wallsend Coal Company's mine, contrary to the provisions of the Act 39 Victoria No. 31, whereupon the said informant prays that I, the said Justice, will proceed in the premises according to law." This information states the offence in the very words of the Act, and the gentlemen who drew it drew it in exact compliance with the terms of the Act. I want to show not that the mine is dangerous, but that Mr. Neilson did not comply with the requisition in the Inspector's notice. My learned friend states that Mr. Neilson is an innocent agent. Mr. Neilson in the box says that he did not intend to comply with the notice. My learned friend cannot now possibly bring his client within the proviso of the section, because he has not taken active steps to comply with the notice. I ask your Worship's ruling on that point, and if you are of opinion you can decide to that effect, and then inflict such a penalty as seems to you suitable. But the proviso cannot possibly be made apply in this case.

The Police Magistrate: I have heard both legal gentlemen at great length, and I will now adjourn the Court for half an hour, in order to put my decision in writing.

The Court was then adjourned.

On resuming, the Police Magistrate said:—In delivering a judgment in this matter, I consider it necessary to make a few observations on what has taken place. By the Coal-mines Regulation Act, 39 Victoria No. 31, of this Colony an Inspector of Mines is obliged, within a certain time, to make an inspection of a mine—about every eight weeks—and report the same to the Minister of Coal-mines, if anything dangerous appear. Then the Inspector takes the steps named in the 25th section of the before-mentioned Act, as in this case. Now, this Act is expressly made, not for the purpose of annoying colliery managers or the proprietors of mines, but for the safety of the people employed therein, as it has been found that men managing mines are not always the most careful, while even ignorance and the grossest carelessness prevail amongst men employed in mines, by which their lives are often in great danger; and, as in the Bulli catastrophe, destroyed. The men, however, at their own cost, have, under the 30th section of this Act, 39 Victoria No. 31, the power to employ two of their number to inspect the mine once a month, and go to every part, and their report to be recorded in a book at the mine kept for the purpose. So that the men have it in their own power to see that all is right as well as the Government Inspector. Every provision that man can make for the prevention of accidents, as far as can be seen, seems to have been made by this Act and the rules given to the men at collieries. Still, notwithstanding all, it is necessary that a person unconnected with the colliery should also supervise all workings, &c., as in this case. Now, from all I have heard of Mr. Dixon, the Inspector, a more competent man cannot be found for the duty, and what is more, a most honest, conscientious man. It has been said in Court that only for the Bulli catastrophe this would never have been heard of. Now, I cannot permit it to go abroad that this person was, or could ever be actuated by any other feeling than of duty; nor his superior either, the Examiner of Coal-fields (Mr. Mackenzie). That ever-to-be-lamented accident at Bulli has, doubtless, had the effect of exciting the utmost vigilance; and therefore no reflections of any kind should in the least be cast on the officer appointed to carry out the regulations they are specially called on to perform, no matter where. The Inspector has done his duty by taking the course that he has taken, no matter whom he may offend; otherwise he would not be fit for his position, especially when the lives of fully ninety-three men might be at stake. And now I must in justice say a few words of the manager, Mr. Neilson, whom I have known for over eight years, and I can safely say that I have ever considered him a most humane man, always spoken of as a careful one—one who would not for a single moment put the life of any man in jeopardy, if he knew it. Yet even this matter, as complained of by the Inspector, might have been unknown to him and not reported. Here, I must observe, that all managers or agents of mines are responsible for the acts of the officers beneath them, unless they can show gross and wilful negligence to their orders. In fact I laid this down in a colliery case from Miumi some time ago, in this way, or a way similar to it. A manager or agent is like the captain of a man-of-war, who gives his orders and sees them carried out, and where disobeyed the delinquent is punished; so here, he is either degraded or dismissed. I have said this much in justice to the persons concerned, and now I deliver my judgment.

This action was properly brought under the 25th section of the 39th Victoria No. 31; and as in the latter part of the section it states that the Court, if satisfied that the owner or agent has taken active measures for complying with the notice or with the award, but has not with reasonable diligence been able to complete the work, may adjourn any proceedings taken before punishing such offence; and if the works are completed within a reasonable time no penalty shall be inflicted. Now, as the evidence for the defence—all highly practical men accustomed to fiery mines in the mother-country—have said that that portion of the mine, the Jubilee heading, was perfectly safe at the time they visited it, and that the intake air from that shaft, from alterations made, is perfectly pure, and that the blowers give little or no gas off from the floor, and neither any likelihood of the slightest danger to the men working in splits Nos. 3 and 4, I am fully satisfied that the mine is perfectly safe and the men's lives in no way placed in jeopardy in so far as human forethought can devise against. Here I regret to say that I consider portions of the Act already stated do not apply to the remedy effected, but to the intention of the Inspector's notice. It may happen that similar cases may occur, so many coal-mines being opened, perhaps presided over by men who try to defy all legal authority and all moral responsibility in their greed for obtaining money—not caring

carrying for the lives of those working for them so long as they can obtain any benefit to themselves. It therefore appears to me that in wording this section the framers of this Act had this in view; and therefore made it imperative that the Inspector's notice on all occasions should be attended to. Consequently, I find myself unable to deal with it as I could wish. Now, the remedy as adopted by the defendant, not being perfected under the provisions made by the notice referred to, I am therefore compelled, in support of the inattention paid to the Inspector's notice, to inflict a fine as a caution to others, which fine in this case will be merely nominal. I therefore order you, John Young Neilson, to pay a fine of £1; if not paid directly, to be levied by distress; at the same time I have found from the evidence before me that the mine is perfectly safe and free from any danger, so far as human wisdom can foresee.

Mr. Want: I will have to ask your Worship to state a special case for the Supreme Court.

The Police Magistrate: Will you dictate it for me.

Mr. Want: We will have it stated in writing; it is a strictly legal matter.

The Police Magistrate: I may tell you, gentlemen, that I have had a great difficulty in arriving at a proper conclusion in this case. A more important case has not engaged my attention, and I could arrive at no other conclusion.

Mr. Want: I hope your Worship will not think that I am finding fault with your decision. My client does not care about the fine, being quite satisfied now that the reputation of the mine has been cleared. What we propose to do is to take the opinion of the Full Court upon the matter at issue upon the points of law.

The Police Magistrate: Certainly, because my decision would be a precedent, unless it were upset. What would be the use of these Government Inspectors, unless their authority is respected.

Mr. Want: The information charges us with an actual offence. The second charge is with respect to the door, but that can only come within the 12th section, and the third is non-compliance of the notice. But we have adopted the only remedy suggested there.

The Police Magistrate: I had it in view that the thing had been remedied, but I cannot see my way clear to overlook the inattention to the Inspector's notice.

Mr. Want: Then your Worship puts this construction on it, that we must do whatever the Inspector directs.

The Police Magistrate: I do not say that. The Inspector's notice is sent in, and there is a certain power given in the Act to go to arbitration, to say whether the Inspector is right or wrong. I have no power to give you relief otherwise than by arbitration. I only wish I could say there was an end of it.

Mr. Want: Then you say that, although we have remedied this thing, in effect, by not having gone to arbitration, you are debarred from dealing with the case itself.

Mr. Edmunds: I beg to apply to your Worship for costs. Of course I would not do so if all the cost were to fall personally on Mr. Neilson, but you know that it is the Company who will have to pay the money.

The Police Magistrate: The costs of Court will follow the decision.

Mr. Want: I would like your Worship to hear me before you give any decision as to costs. I submit to you that this is essentially a case in which costs ought not to be given. I feel perfectly certain that if you had the power to deal with this case on its merits you would not have inflicted a fine at all. My client, under a misconstruction of this statute, the Coal-mines Regulation Act, threw aside the privilege which he had of going to arbitration, and now comes into Court. I am quite sure that your Worship would now say, if you saw this mine, that it is in a perfectly safe condition.

The Police Magistrate: I admit what you say, that no penalty should have been inflicted if the case had been dealt with on its merits.

Mr. Want: It is very hard for me to say, your Worship, what the true construction of this 25th section is; but as you have said that you would not have inflicted a penalty if you could have helped it, then we should not be mulct in costs. We are here, in consequence of having misread a very difficult section of the Act.

The Police Magistrate: But, at the same time, it is necessary to fine as a caution to others.

Mr. Want: Yes, I understand that; but your fining us is the result which the Inspector desired. But you do this only because you cannot help it, for we are clearly entitled to a verdict on the merits of the case. The Government might, at all events up to the present time, have sent their Inspector down to see whether the ventilation was right or not. We are charged with an offence and brought here, when Mr. Mackenzie or any man of experience, might have gone down and ascertained if the mine was all right. We ought not to be punished here by the infliction of costs for an offence which your Worship finds, as a matter of fact, does not exist at all—a mere technical offence. But we are charged here with having an unsafe mine, although you find it to be perfectly safe. I never heard of the Crown asking for costs before in such a case as this, after taking advantage of a technicality to snatch a verdict.

The Police Magistrate: That is the point that I cannot get over.

Mr. Want: I quite see that your Worship was compelled to give a verdict against us by your construction of the statute. I have still my own opinion of the law, but still I admit now that you have given your decision that it was the only course for you to take, and that you were bound to give it that way. We would have got the verdict only for this technical objection on the part of the Crown, and I submit that we ought not to be punished with costs.

Mr. Edmunds: My learned friend is confusing the two questions again, as usual. On the legal question that the defendant was guilty of disobedience to the Inspector, I am with my learned friend, but certainly not with him in saying that the merits of the case were in his favour. They have acted in violation of the law, and on that point they have no merits at all, and then they come here and dispute with us as to whether the mine was safe or not. My learned friend raises a false issue, and then asks the Crown to take it up, which we refuse to do. I hope your Worship will not depart from the usual practice in such matters, but that you will give us costs.

The Police Magistrate: What will be the amount of costs?

Mr. Edmunds: We do not ask for much.

Mr. Want: We have simply made the mine safe, but not in the way that the Inspector wished, so that the merits of the case are in our favour.

The Police Magistrate: I will not give costs; the Government will have to pay them.

The Court then adjourned.

[One plan.]

Plan referred to in M^r Inspector Rowans report dated 12th January 1888 showing method of Ventilation when he and M^r Inspector Bates inspected the Jubilee Heading District on 9th and 11th January 1888.

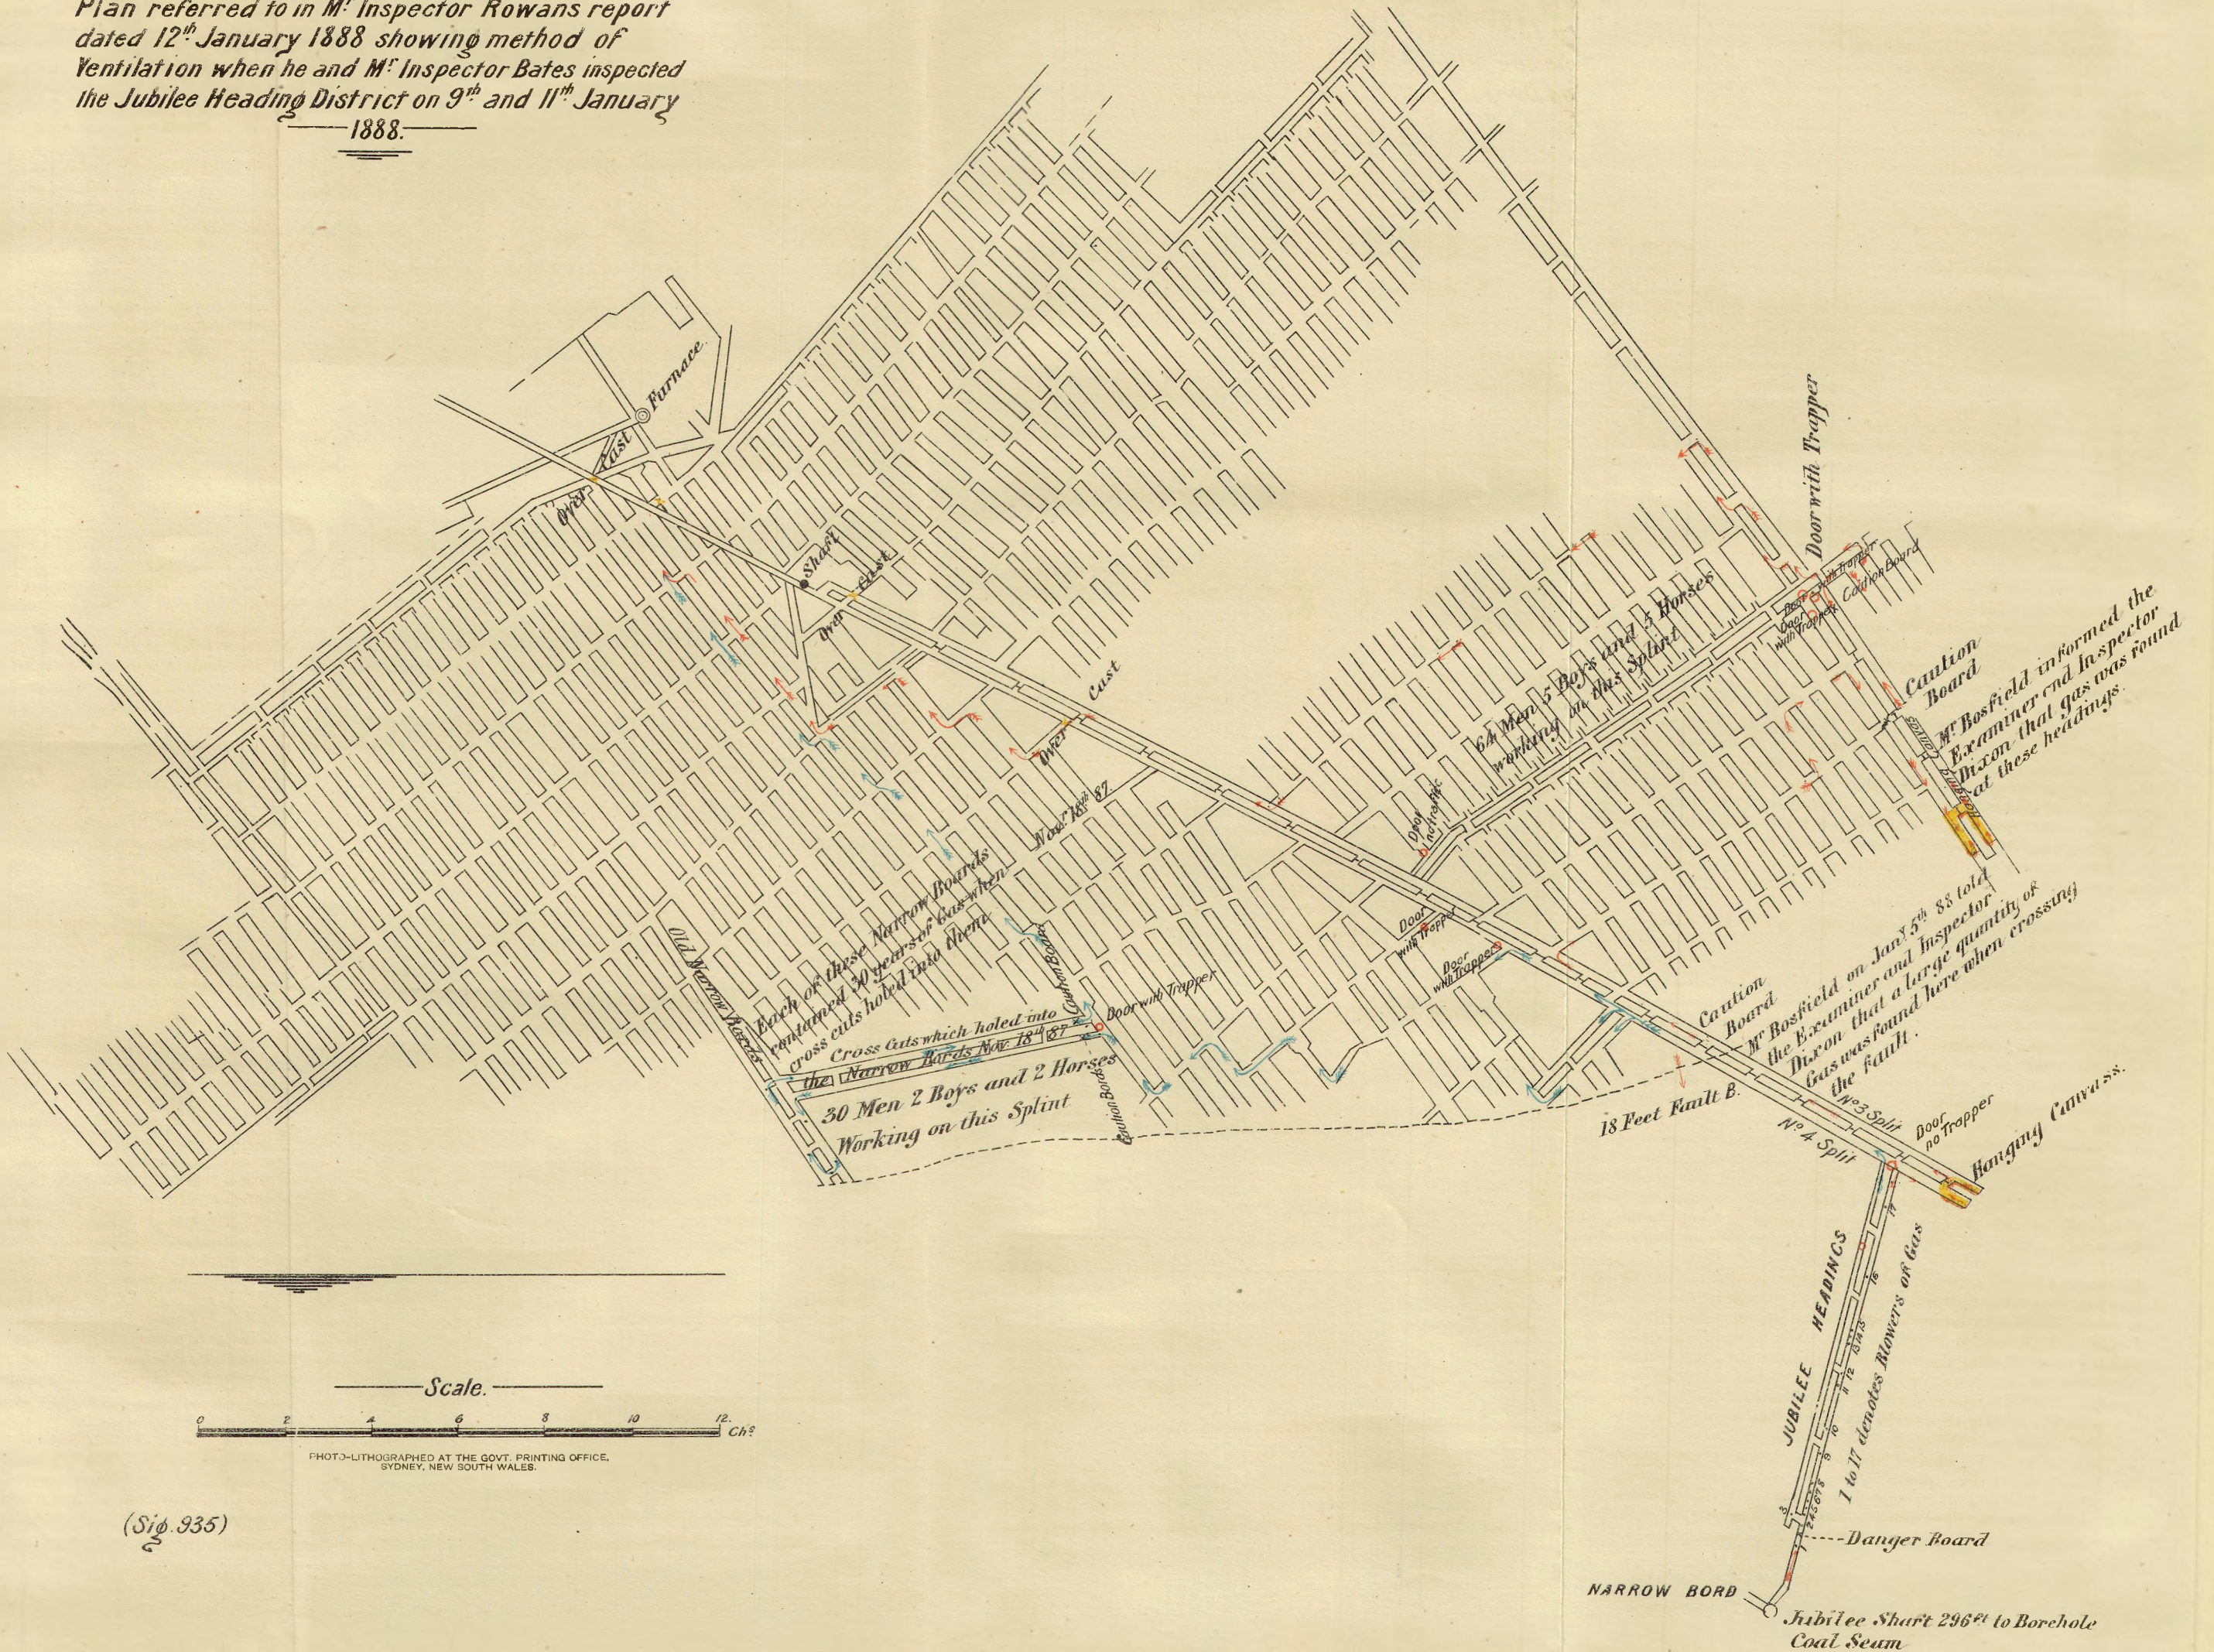

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

(Sig. 935)

Caution Board
M^r Bosfield informed the Examiner and Inspector Dixon that gas was found at these headings.

Caution Board
M^r Bosfield on Jan 5th 88 told the Examiner and Inspector Dixon that a large quantity of Gas was found here when crossing the fault.

1887.
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

APPLICATIONS FOR MINERAL LEASES.
(INFORMATION RESPECTING.)

Ordered by the Legislative Assembly to be printed, 14 December, 1887.

RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated 31st May, 1887, That there be laid upon the Table of this House,—

“ A Return of all Mineral Lease Applications which have been refused in consequence of the applicants wishing to withdraw or abandon same, showing in detail (1) names of applicants, (2) date of application, (3) date of refusal, (4) area applied for, (5) amount refunded, (6) any special reasons for the action taken.”

(Mr. Moore.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ALLEGED BREACHES OF THE COAL-FIELDS REGULATION ACT AT THE DUCKENFIELD COLLIERY.

(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 7 February, 1888.

CORRESPONDENCE between Mr. Dixon, Mr. Mackenzie, the Minister for Mines, and Officers of the Back Creek Lodge, No. 10, at Minmi, relating to alleged breaches of the Coal-fields Regulation Act at the Duckenfield Colliery.

Mr. J. Curley to Mr. Inspector Dixon.

Sir, Hamilton, 16 August, 1887.
I am instructed by the Back Creek and Duckenfield miners to respectfully draw your attention to the fact of black damp issuing from old workings on to an old road in close proximity to what is known as fault heading in the Duckenfield Colliery, and in some cases has extinguished miners' lights. This will indicate what would transpire if a large fall was to displace it, and force it out on to the main intake. As it is it is sometimes with difficulty the men get through it. Hoping you will give this your earliest consideration,

I am, &c.,
JAMES CURLEY,
Miners' General Secretary.

Mr. Inspector Dixon to The Examiner of Coal-fields.

Duckenfield Colliery inspection.

Sir, Glebecland, 22 August, 1887.
For your information I herewith forward a letter which I received on the 17th instant from the Miners' general secretary, *re* an alleged accumulation of carbonic acid gas (black damp) on the fault road in the Duckenfield Colliery.

I inspected the place complained of on the following day, 18th instant, and beg to report as follows:—

The road to the fault workings runs from the main heading past the furnace to the split known as the fault, and is used as a wheeling road, and also for the purpose of travelling to and from the working faces in the fault-split. For the most part the road has been made through old workings, which during the latter part of last year crushed from the surface several acres in extent, and the present wheeling road had to be ridded through the crush for some hundreds of yards. The persons employed in the fault-split are supplied with fresh air from a shaft in close proximity to the working headings. This air, after being used in the split, returns along the road above-mentioned to the ventilating furnace, near the west headings. The portion of the road complained of is near the west headings, and after very careful examination I could only find trace of carbonic acid gas in one place, and that only after putting my light over the top of the gob. The road at this spot is about 34 feet area, and at the time of my visit the air-current passing this place was almost 6,900 cubic feet per minute. This air passes direct to the furnace, and is not used again by any person. I found no difficulty in carrying a light anywhere on the road, and the escape of black damp appeared to me to be very trifling. Nevertheless, the manager (Mr. Croft) promised me that he would, as soon as possible, endeavour to convey this issue of black damp direct to the furnace in boxes or pipes, clear of the road altogether.

I have, &c.,
JOHN DIXON,
Inspector of Collieries.
Mr.

Mr. Inspector Dixon should make a further inspection and report when sufficient time has been allowed to admit of the boxes or pipes being fitted up.—H.W., 5/9/87. Submitted. Approved.—F.A., 6/9/87. Mr. Inspector Dixon.—E.F. (*per* U.S.), B.C., 10/9/87.

The boxes have been fixed and are acting well, yet, on Friday last, 16th instant, I found traces of carbonic acid gas in the gob alongside of the road, and requested the manager to brattice the place off by wood or brickwork. This he (the manager) promised to do. I have also served the manager with a written notice to keep the ventilating furnace at work day and night, and to have the gas walled off.—J.D., 19/9/87.

The Under Secretary for Mines, B.C., 19/9/87. Seen. Mr. Inspector Dixon will please report again at an early date.—G.E.H. (*per* U.S.), B.C., 24/9/87.

I visited the place complained of yesterday (Thursday) along with Mr. Inspector Bates, and although the colliery was idle, and the ventilating power of the furnace reduced to less than one-half, and only about 1,890 cubic feet of air per minute passing along the fault-road, we could not discover the slightest trace of carbonic acid gas. The place is not entirely bratticed off, but now the boxes are connected with the return air-way, the black damp has drained from the road.—J.D., 7/10/87.

Mr. Inspector Dixon to The Examiner of Coal-fields.

Sir,

Glebeland, 24 September, 1887.

I have the honor to report inspection of the Duckenfield Colliery on the 14th and 16th instant, as follows:—

H heading, dip side: On the first day of inspection the current of air in this split was about 3,240 cubic feet per minute for about thirty-nine men, &c. This defect was caused by a fall in the return bord, and at the time of inspection two men were at work clearing the fall. On the second day (16th instant) I again visited this split, and found that the Act was being complied with, as there was a current of air of about 4,000 cubic feet per minute.

The intake current of air for the B, D, and K headings was about 7,800 cubic feet per minute for about 66 men, &c. This air current was well sustained in the split, with the exception of the top end of B heading, where I found a quantity of air escaping through some of the stenton stoppings. I at once drew the manager's attention to the matter, and he (Mr. Croft) promised to have it remedied as soon as possible. It is expected that the narrow place off B heading will shortly be connected with the west heading, close to the ventilating furnace, which will be beneficial to the whole of this split, and also to the H heading dip split.

M heading split: In this split the current of air ranged from about 5,760 cubic feet per minute to about 6,000 cubic feet per minute for about forty men, &c.

Fault split: The current of air in this split was about 8,400 cubic feet per minute for about thirty-eight men, &c. Furnace air returns about 47,210 cubic feet per minute. The ordinary stoppings in this colliery are built of 4-inch brick-work, set in mortar, and the permanent stoppings of 9-inch brick-work, set in mortar. I found the wheeling and travelling roads in good condition, with the exception of some of them being extremely muddy under foot.

There was plenty of timber on hand ready for use.

I have, &c.,

JOHN DIXON,

Inspector of Collieries.

Seen.—J.M., 19/10/87.

The Under Secretary for Mines, B.C., 19/10/87.

Messrs. W. Teague and J. Cook to The Examiner of Coal-fields.

Sir,

Back Creek Lodge, No. 10, Minmi, 29 September, 1887.

We are instructed by the Duckenfield and Back Creek Lodge of Miners to forward to you the accompanying reports of check inspectors of this colliery, and to draw your attention to the many instances in which the requirements of the Act are not met.

Our Lodge, finding that all complaints of theirs *re* bad ventilation of the Duckenfield Colliery were ineffectual, some two months ago sent for Mr. Dixon, inspector, who came and examined the mine. No improvement having been made to the ventilation after this inspection, Mr. Dixon again came, and, we presumed, examined the colliery.

One of these reports (that of 4th August, 1887) was made between these two visits of Mr. Dixon. Consequently, seeing that the requirements of the Act were not complied with at this time, Mr. Dixon must have known the fact; seeing also that no improvement was made between his first and second visit, he must have known that the Act was not complied with.

What we wish to point out to you is, that the Act is violated, and the person whose office it is to see that proceedings shall be taken against the offenders does not take proceedings, and our Lodge considers Government inspection a failure. We hope you will give your consideration to these two reports, and take such action as shall secure to the miners of this Lodge the full benefits of the Coal-fields Regulation Act.

On behalf of the above miners,

We are, &c.,

W. TEAGUE,

J. COOK,

Miners' Secretaries.

The matters complained of appear, from the Inspector's report, to have been remedied.—J.M., 17/10/87. To the Back Creek Lodge Miners' Secretary, B.C., 17/10/87.

[Enclosures.]

Check inspection of the Duckenfield Colliery.

4 August, 1887.

WE, the undersigned, do hereby certify that we have examined the various headings, cut throughs, and intake, and the following is a correct account taken on above date:—

Intake, narrow place below main flat, 7,755 cubic feet per minute; ther., 62°. Intake, M. heading, 6,720 cubic feet per minute; 66°. No. 4 cut-through, No. 4 bord, 5,872 cubic feet per minute, 36 men, 4 wheelers, 2 horses; ther., 67°. At

At No. 11 bord, 4 cut-through, 4,500 cubic feet per minute; ther., 68°. At Nos. 16 and 17 bords, anemometer registered 2,600 cubic feet per minute; 70°. Return, M heading district, anemometer registered 8,815 cubic feet per minute; ther., 72°.

Intake, fault heading district, anemometer registered 6,500 cubic feet per minute; 68°; 30 men, 4 wheelers, and 2 horses work on this split of air. No. 1 cut-through off gannon bord, 4,252 cubic feet of air per minute; 68°; 6 men working in this place. No. 10 bord, 6,885 cubic feet per minute; 70°; 24 men, 4 wheelers, and 2 horses. At Nos. 11, 12, and 13 bords could not get anemometer to work.

Return, fault heading, 6,938 cubic feet; 70°. Intake to B, D, and K heading district, 9,900 cubic feet per minute; 62 men, 7 wheelers, 4 horses, and 1 pony work on this split of air. At 64 bord, main B heading, 2,925 cubic feet per minute; 70°; 14 men, 2 wheelers, 1 horse, 1 pony. At No. 43 bord, 2,520 cubic feet per minute; 73°; 10 men, 1 horse, 2 wheelers. At 38 bord, No. 2, cut-through, 5,635 cubic feet per minute; 73°; 12 men work in this cut-through. At 33 bord, No. 3 cut-through, 4,933 cubic feet per minute; 74°; 6 men, 2 horses, 3 wheelers. No. 4 cut-through, 31 bord, 3,780 cubic feet per minute; 74°; 4 men. At 36 bord, 3 cut-through, 1881; 74°; 2 men. At 25 to 30 bords, D heading district, anemometer would not work; 10 men working here; 76°. At No. 1 gannon bord, K heading, anemometer registered 1,623 cubic feet per minute; 73°; 4 men working here. H heading district, intake, 3,362 cubic feet per minute; 30 men, 3 wheelers, work on this split of air. Return, H heading, 3,594 cubic feet; 68°. Return of the whole of the workings in front of the west heading furnace, 48,070 cubic feet per minute. We would draw the manager's attention to the bords from Nos. 25 to 30, where the anemometer would not work.

We found plenty of timber at the flats, and the roads in a pretty safe condition.

As far as the travelling, pretty dry, with the exception of part of H and part of M headings.

GEORGE CLARK.
FRANCIS CROFT.

Check inspection of the Duckenfield Colliery.

26 September, 1887.

We, the undersigned, do hereby certify that we have this day examined the various headings, cut-throughs, and air-ways of the Duckenfield Colliery, this 26th September, 1887.

Intake, narrow place below main flat, 9,625 cubic feet per minute; 66°. H heading district intake, anemometer registered 3,340 cubic feet per minute; 65°; 35 men, 3 wheelers, 2 horses. No. 1 cut-through, 3 bord, anemometer gave 2,117 cubic feet per minute; 66°; 16 men work here. At 16 bord, main heading, 3,638 cubic feet per minute; 72°; 19 men. Return, H heading, anemometer gave 2,948 feet; 72°; took return a second time which gave 3,594 cubic feet. Intake, B heading district, anemometer registered 9,317 cubic feet; 63°; 20 men work on B heading, 2 wheelers, 2 horses. At 64 bord, B heading, anemometer would not work; would not work anywhere in this heading; 20 men, 2 wheelers, and 2 horses work here. At 49 bord, No. 1 cut-through to 44 bord, anemometer would not work; 77°; 10 men, 2 wheelers, 1 horse work here. At 43 bord, 2 cut-through, 3,105 cubic feet per minute; same cut-through at 39 bord, 5,025 cubic feet; 76°. At 36 bord, 3 cut-through, 2,371 cubic feet per minute; 76°; 4 men. At 33 bord, 4 cut-through, 3,250 cubic feet per minute; 76°; 6 men. At 31 bord, 5 cut-through, 3,850 cubic feet; 77°; 4 men. At 30 bord, 6 cut-through, no result; 78°; 8 men. Return for 4 bords at narrow place off narrow bord, 2,174 cubic feet; 77°. Return for B, D, and H heading districts, 22,720 cubic feet per minute.

Fault heading district, No. 1 cut-through, 20 bord, 3,685 cubic feet per minute; 67°; 12 men work in this cut-through. From 14 bord to No. 2 bord anemometer would not work; 36 men, 4 wheelers, and 2 horses work in this district. Return, fault heading, 3,040 cubic feet; 73°; at this place the air seemed to come in gusts, not regular. M heading district intake, 9,760 cubic feet; 72°; 34 men, 4 wheelers, 2 horses work in this section. At 14 bord, 3 cut-through, 2,745 cubic feet per minute; 73°; 20 men. At 6 bord, 3 cut-through, 4,806 cubic feet; 70°. Return to whole of the workings in front of west heading furnace, 38,500. We waited for a little time and tried it again, when the anemometer gave 47,850 cubic feet.

We found plenty of timber at the various flats.

Roads in pretty good order. There is one place in the H heading where the water is lying which might be kept down.

GEORGE CLARK,
FRANCIS CROFT,
Check Inspectors.

Messrs. W. Teague and J. Cook to The Secretary for Mines.

Sir,

Minmi, 29 September, 1887.

We are instructed to forward to you the accompanying reports of check inspections made at the Duckenfield Colliery, one on the 4th day of August, 1887, and one on the 26th day of September, 1887.

The object of our Lodge in forwarding these reports to you is that you may see for yourself the fact that the requirements of the Act are not met at this Colliery; if this or these were exceptional instances we should not have troubled you in the matter, or if your subordinate officers were fulfilling their duties we could not complain to you, but the fact is Mr. Dixon, Government Inspector, at the request of the miners, visited the mine immediately prior to the first of these inspections, and again between the first and second, and he must have known that the mine was worked in violation of the Act, yet he took no action against the firm. Seeing that mine-owners can with impunity violate the Act of Parliament to the detriment of the health and safety of the miners, this Lodge considers that Government inspection, as carried on at present, is a failure. These reports, if examined by you, will prove to you that at this colliery the Act is violated, and it will be evident to you that the offenders should have been punished, which they have not.

It will be evident to you from the foregoing facts that Mr. Dixon has failed in his duty, and we would respectfully request that you should take such measures as shall secure the miners the full benefits of the law.

Without trespassing further on your time and patience we leave the matter in your hands, and beg to remain,

Yours, &c.,

W. TEAGUE, }
J. COOK, } Secretaries to Miners.

The Under Secretary for Mines to Mr. Inspector Dixon.

Sir,

Department of Mines, Sydney, 4 October, 1887.

I have the honor to forward herewith copy of a letter from Messrs. W. Teague and J. Cook, Secretaries to the Duckenfield colliers, covering reports (copies of which are enclosed) by the Duckenfield Colliery check inspectors on the state of the colliery, and I am to ask you to be good enough to at once report upon the matters therein referred to.

I have, &c.,

G. E. HERRING,
(For the Under Secretary).

Copies, with
letter addressed
to Examiner of
Coal-fields,
29th September

Mr.

Mr. Inspector Bates to The Examiner of Coal-fields.

Duckenfield Colliery inspection.

Newcastle, 14 October, 1887.

Sir,

I have the honor to report having inspected the above Colliery in company with Mr. Inspector Dixon, on October 11th.

H heading.—The intake current of air registered 4,300 cubic feet per minute for thirty men, three boys, and one horse (total, thirty-four), giving an average of 126 cubic feet per minute.

1st. Cut off H heading, between Nos. 9 and 10 bords, intake current of air registered 2,590 cubic feet per minute for 16 men.

B, D, and K headings.—The intake current of air registered 10,200 cubic feet per minute for fifty men, seven boys, five horses, and one pony (total, sixty-three), giving an average of 161 cubic feet per minute. There were four men working at the top of B heading, driving through to connect B heading with the west heading.

No. 46 Bord.—Intake current of air registered 2,856 cubic feet per minute for ten men.

No. 43 Bord, 2nd cut-through.—Intake current of air registered 6,630 cubic feet per minute for fourteen men.

No. 36 bord, 3rd cut-through.—Intake current of air registered 3,420 cubic feet per minute for four men.

No. 34 bord, 4th cut-through.—Intake current of air registered 5,740 cubic feet per minute for six men.

No. 31 bord, 5th cut-through.—Intake current of air registered 4,100 cubic feet per minute for four men.

No. 30 bord, 6th cut-through.—Intake current of air registered 3,705 cubic feet per minute for eight men.

M heading.—The intake current of air registered 10,290 cubic feet per minute for thirty-two men, four boys, and two horses (total, thirty-eight), giving an average of 270 cubic feet per minute.

Fault heading.—The intake current of air registered 7,800 cubic feet per minute for thirty-six men, four boys, and two horses (total, forty-two), giving an average of 185 cubic feet per minute.

At No. 20 bord the air current registered 6,800 cubic feet per minute. The return at furnace registered 44,000 cubic feet per minute. I tried for black damp on the fault road above the west heading, but could not find any trace whatever.

I have, &c.,

THOS. L. BATES,
Inspector of Collieries.

Mr. Inspector Dixon to The Under Secretary for Mines.

Sir,

Glebeland, 15 October, 1887.

I do myself the honor to acknowledge receipt of your communication of 4th instant, together with copies of the Duckenfield Miners Inspectors' reports, and copy of letter from the joint secretaries of the Back Creek and Duckenfield Miners' Lodges, wherein I am charged with laxity of duty in not having punished the manager of the Duckenfield Colliery for alleged deficient ventilation, &c., in reply to which letter I beg to state:—

1. That I did not visit the Duckenfield Colliery "immediately prior" to the date of the miners 4th August inspection, "at the request of the miners"; but on the 17th August I received a communication from the miners' general secretary, drawing my attention to an issue of "black damp" on one part of the fault road, and in that letter (a copy of which I herewith beg to forward) there is no complaint concerning any defect in any other part of the Duckenfield Colliery. On the following day (18th August), I visited the colliery, and made a thorough examination of the spot complained of, and all the length of the fault road, and at once took such steps as caused the matter to be remedied eventually. I also beg to forward copies of miners inspectors' reports of 4th August and 26th September, as taken from the report book kept in the Duckenfield Colliery office, from which it will be seen that there is no mention of black damp in either report. The only place where the manager's attention is drawn to any defect is in the August report, and that relates to the bords 25 to 30 in the D heading, where it is alleged the anemometer would not work. Why one report of inspection should be entered in the book specially kept for the purpose in the colliery office, and another report of the same inspection (but very different in many respects) should be written for the Miners' Lodge, and forwarded to the Department as a true report of said inspection, I am at a loss to know.

2. On 15th July last I inspected the Duckenfield Colliery, and as regards the ventilation found nothing to complain of. (*Vide* my report of 16th July.) Again, on 14th and 16th September, I made another inspection of said colliery, and on 24th September wrote a report on the state of the colliery. On the first day I found the ventilation a little defective in the H heading district, but on the second day the matter was remedied. During this inspection the ventilation at the far end of the B heading was not quite up to the requirements of the Act for the number of men, &c., employed at that time. I at once drew the manager's attention to the matter, and since that time about sixteen miners have been withdrawn from the top end of B heading, until such times as the special places are holed into the west heading. It is a fact well known to the miners' inspectors that the places above referred to are being pushed ahead with all speed, in order to connect the B heading district with the west heading ventilating furnace. When completed the whole of the dip side workings will be benefited, as the route for the air currents will be considerably shortened. I however see no notice taken of this matter in either report, which, in fairness to the management, ought to have been done, as I have no doubt the connection would have been made before now, only for trade being so slack at the colliery, as I am informed that only about twelve days have been worked during the last five weeks.

3. If the miners' inspectors had found the ventilation ever so defective in the Duckenfield Colliery between my inspections, I submit that would be no evidence of any laxity of duty on my part, providing I found the Act complied with during my inspections, for it is a fact well known to anyone acquainted with mine ventilation that air currents can be deranged even in a few minutes, let alone a few days.

In

In the colliery under notice, where so many doors are to be depended upon for the proper circulation of the air currents, it would be impossible for one person to check the measurements of another person, even after the lapse of only 10 minutes, unless the same conditions could be observed during each measurement in keeping all the doors shut and having an uniform velocity in the air current at the ventilating furnace. And further, I have found in my experience that a difference has been found in the observed reading of two anemometers both in the same air current at the same time, and I recollect an instance where the anemometer, at present used by the Duckenfield miners' inspectors would not register 1 foot in the same air current where the anemometer used by me registered over 2,000 cubic feet per minute.

4. In conclusion, I further beg to state that I have held the office of Inspector of Collieries for a period extending over five years, and I defy any person to truthfully charge me with neglect of duty or laxity in carrying out the provisions of the Coal Mines Regulation Act either at the Duckenfield Colliery or any other colliery in the trade. I have at all times endeavoured to keep every mine up to the Act in every particular, and have paid immediate attention to every complaint brought under my notice, and had the Duckenfield miners requested a joint inspection of the colliery they could have had one at any time. To show the present state of the Duckenfield Colliery, I herewith beg to forward a report of inspections made by Mr. Inspector Bates on Tuesday last, the 11th inst. I accompanied Mr. Bates through the colliery, but he took the measurements of air currents in every instance.

Hoping that the above explanation will be deemed satisfactory,

I have, &c.,

JOHN DIXON,

Inspector of Collieries.

Submitted.—H.W., 25/10/87. Seen.

I have the fullest confidence in the honesty and ability of Mr. Inspector Dixon. I feel sure he will administer the law without fear or favour, and so confirm my present good opinion. Mr. Inspector Bates' report is a strong confirmation of the correctness of Mr. Dixon's report.—F.A., 27/10/87.

Messrs. W. Teague and J. Cook informed, 4th November, 1887.

The Under Secretary for Mines to Messrs. W. Teague and J. Cook.

Gentlemen,

4 November, 1887.

Referring to your letter of the 29th September last, covering reports of check inspections made at the Duckenfield Colliery on the 4th August and 29th September last, and intimating that Mr. J. Dixon, Inspector of Collieries, was lax in his duty in not prosecuting the manager of that colliery for the alleged deficient ventilation therein, I am directed to inform you that Mr. Dixon has been called upon for an explanation of the circumstances, and that the Secretary for Mines deems such explanation satisfactory.

I have, &c.,

G. E. HERRING,

(For the Under Secretary).

Messrs. W. Teague and J. Cook to The Secretary for Mines.

Sir,

Minmi, 13 November, 1887.

We are instructed to acknowledge receipt of communication from your Department, dated 4th November, and to request that you would forward a copy of Mr. Dixon's explanation *re* Duckenfield Colliery, as our Lodge is anxious to know how such, or any, explanation could be deemed satisfactory.

We are, &c.,

W. TEAGUE,

JAMES COOK,

Secretaries to Miners.

The writer may be informed that the Minister regrets he cannot comply with the request, as to comply would tend to impair the efficiency of the Inspectors.—H.W., 18/11/87. Approved.—F.A., 19/11/87. Informed, 23/11/87.

The Under Secretary for Mines to Messrs. W. Teague and J. Cook.

Gentlemen,

23 November, 1887.

Referring to your letter of the 13th instant, in which you ask that a copy of Mr. Inspector Dixon's explanation in relation to the Duckenfield Colliery may be furnished to your Lodge, I have the honor to inform you that the Secretary for Mines regrets that he cannot comply with the request, as to comply would tend to impair the efficiency of the Inspectors.

I have, &c.,

HARRIE WOOD,

Under Secretary.

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

APPLICATION OF MR. J. F. CONNELLY TO MINE IN
PARISH OF CURRAJONG.

(CORRESPONDENCE, &c., RESPECTING.)

Ordered by the Legislative Assembly to be printed, 23 February, 1887.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 3rd November, 1887, That there be laid upon the Table of this House,—

“Copies of all letters, minutes, and correspondence having reference to the application of Mr. John F. Connelly, of Parkes, between the years 1884 and 1887, to mine upon portion 423, parish of Currajong, county of Ashburnham.”

(Mr. Stokes.)

SCHEDULE.

No.	PAGE.
1. John F. Connelly to the Under Secretary for Lands, for permission to mine upon portion 423, parish of Currajong, county of Ashburnham (Minutes). 6 August, 1884	2
2. Same to same. 16 August, 1884	2
3. The Under Secretary for Lands to J. F. Connelly. 4 September, 1884	2
4. J. F. Connelly to the Secretary for Lands, enclosing copy of above (No. 2). 6 September, 1884	2
5. Same to same. 20 September, 1884	3
6. The Under Secretary for Lands to J. F. Connelly. 26 September, 1884	3
7. J. F. Connelly to the Secretary for Lands. 29 September, 1884	3
8. Same to same. 18 October, 1884	3
9. The Under Secretary for Lands to J. F. Connelly. 27 October, 1884	4
10. J. F. Connelly to the Secretary for Lands (Sketch enclosed). 28 October, 1884	4
11. The Under Secretary for Lands to J. F. Connelly. 7 January, 1886	4
12. J. F. Connelly to the Secretary for Mines (Minute and tracing). 12 July, 1886	4
13. Same to the Secretary for Lands (Minute). 30 July, 1886	5
14. J. F. Connelly to A. Stokes, Esq., M.P. 30 August, 1886	5
15. The Under Secretary for Mines to J. F. Connelly. 7 September, 1886	5
16. J. F. Connelly to the Secretary for Lands. 27 September, 1886	5
17. Certificate from Wm. Hazelhurst, that he has done with permit. 27 September, 1886	6
18. J. F. Connelly to A. Stokes, Esq., M.P. (Minute). 27 September, 1886	6
19. The Under Secretary for Lands to the Under Secretary for Mines. 29 September, 1886	6
20. Mr. Warden Sharpe (B.C.) to the Under Secretary for Mines. 20 October, 1886	6
21. J. F. Connelly to the Secretary for Lands (Minute). 20 November, 1886	7
22. The Under Secretary for Lands to J. F. Connelly. 10 December, 1886	7
23. Copy of permit issued to J. F. Connelly. 11 December, 1886	7
24. J. F. Connelly to the Secretary for Lands. 22 December, 1886	7

No. 1.

Mr. J. F. Connelly to The Secretary for Lands.

Sir,

Parkes, 6 August, 1884.

There is a suburban allotment of about 2 acres of land, held by Mr. E. M'Gee as a freehold, fenced in for a yard, and a hay-shed stands upon it, situated on the left-hand side of Dalton-street and adjoining section 42. The said freehold is surrounded on three sides by quartz-mining in full operation, and I would most respectfully request that you will kindly grant me permission to mine upon the said land, as provided in the "Lands Act Further Amendment Act of 1880." Trusting you will kindly grant my application,—

I remain, &c.,

JOHN F. CONNELLY.

For report of survey officer as to nature of purchase under which the land is held.—J.G.B., 12/8/84. The freehold referred to cannot be identified from the information given in this letter.—J. SMALL, 22/8/84. Submitted that the applicant be asked to furnish particulars of the land referred to.—J.G.B., 29/8/84. Ask.—H.W. (for U.S.), 30/8/84.

No. 2.

Mr. J. F. Connelly and Party to The Secretary for Lands.

Sir,

Parkes, 16 August, 1884.

I wrote you on the 6th inst. *in re* an application to mine upon a particular piece of land that has lately become a freehold to the great surprise of every one, and held by Mr. Edward M'Gee. I may mention that the said land is in the great centre of present quartz-mining operations, and has been occupied almost continuously for the last fourteen years for mining purposes, and that the above person has never resided upon it. Trusting that, at your earliest convenience, you will kindly grant our application under the "Lands Act Further Amendment Act of 1880," we are awaiting your kind consideration to commence operations.

I remain, &c.,

JOHN F. CONNELLY

(For self and party).

No. 3.

The Under Secretary for Lands to Mr. J. F. Connelly.

Sir,

Department of Lands, Sydney, 4 September, 1884.

In reference to your letter of the 6th ultimo, applying for permission to mine on certain land at Parkes, held as a freehold by Mr. E. M'Gee, I have the honor to inform you that the particulars given in your application are not sufficient to admit of the freehold referred to being identified, and I have therefore to request that you will be good enough to furnish me with more definite information on the subject.

I have, &c.,

CHARLES OLIVER,

Under Secretary.

No. 4.

Mr. J. F. Connelly and Party to The Secretary for Lands.

Sir,

Parkes, 6 September, 1884.

In reply to yours of the 4th instant, I beg most respectfully to inform you that you do not refer to my letter of the 16th ultimo, where I have given you particulars under which I apply to mine upon Mr. Edward M'Gee's land. (Copy of same I enclose.)

I would further beg to draw your attention to the fact that the said land has been occupied for mining purposes nearly the whole of the last fourteen years, and it was occupied for mining purposes while under application by Mr. E. M'Gee, and has been occupied ever since. He never resided upon it, he got it by ways and means unknown to the miners, and contrary to the Crown Lands Alienation Act; therefore I pray that you will grant my application to mine upon said land, as I know of a quartz reef going through it containing gold. Trusting this will meet with your favourable consideration,—

I remain, &c.,

JOHN F. CONNELLY

(For self and party).

13 October, 1884.

Neither this letter nor the one of the 16th August contains any further information by which the land referred to can be identified on the maps of this office, and no freehold in the name of M'Gee, fronting Dalton-street, can be traced, except allotments 8 and 11, of section 6, neither of which would appear to be the one referred to, as their areas are only 31½ perches and 34 perches respectively. A new map of the town of Parkes was published in July last, and the writer should therefore be able to give the number of the portion. Perhaps he might be asked to give a sketch showing the position of the land upon which he wishes to mine; at all events, to give the number of the portion.

J. T. SMALL,

13 October, 1884.

May again be written to perhaps.—J.G.B., 21/10/84. Yes; and inform as suggested.—F.H.W., 21/10/84.

No. 5.

Mr. J. F. Connelly and Party to The Secretary for Lands.

Sir,

Parkes, 20 September, 1884.

I again most respectfully beg to ask that you will kindly grant our application to mine upon Mr. E. M'Gee's 2-acre freehold suburban land referred to in my previous letters, under clause 29 of the Lands Act Further Amendment Act, also clauses 6 and 23, Crown Lands Regulations of 1883.

Trusting this will meet with your most favourable consideration and earliest convenience, as we are anxiously waiting to commence operations,—

I remain, &c.,

JOHN F. CONNELLY

(For self and party).

Invite attention to letter of the 4th instant.—J.G.B., 23/9/84.

No. 6.

The Under Secretary for Lands to Mr. J. F. Connelly.

Sir,

Department of Lands, Sydney, 26 September, 1884.

With reference to your letter of the 20th instant, respecting your application for permission to mine upon certain land at Parkes held by Mr. E. M'Gee as a freehold, I have the honor to invite your attention to my letter of the 4th instant, requesting you to be good enough to furnish me with particulars as to the position of the land referred to.

I have, &c.,

CHARLES OLIVER,

Under Secretary.

No. 7.

Mr. J. F. Connelly and Party to The Secretary for Lands.

Sir,

Parkes, 29 September, 1884.

In reply to yours of the 26th instant, *in re* particulars and position of Mr. E. M'Gee's 2 acres, suburban allotment, I beg to inform you that on looking over the plan of the town of Forbes, find it is adjoining the reserve for gold-mining purposes, and abutting W. Boyd's allotment No. 424, Dalton-street, on the south, and No. 423, in the name of J. M'Connell, but known as Mr. E. M'Gee's paddock. I may inform you that W. Boyd's allotment has been called in from sale (cancelled), because it interfered with the mining industry, as also does No. 423, which is being mined upon three sides of it, and where quartz reefs are known to be going through the whole of the said 2 acres, is now, and has been, held by the miners for years, and should duly belong to the miners, as it is known to be highly auriferous, and was occupied by the miners while under application, and up to the purchase it has been fenced off, partly fencing in the holdings of the miners. Trusting that this will be sufficient explanation, and that you will kindly grant our application to mine upon the same,—

I remain, &c.,

JOHN F. CONNELLY

(For self and party).

No. 8.

Mr. J. F. Connelly and Party to The Secretary for Lands.

Sir,

Parkes, 18 October, 1884.

I beg most respectfully to draw your attention to the fact that I have been writing to you since last August 6th, *in re* our application to mine upon Mr. Edward M'Gee's freehold suburban land. Particulars I have given in detail, being No. 423, in the name of John M'Connell, now known as Mr. Edward M'Gee. I may inform you that we have permission by the owner to mine under, but not upon, said land, which we are doing, and also other parties, but under a very great disadvantage, and trust you will kindly grant our application to mine upon the said land, as provided under the "Lands Act Further Amendment Act of 1880." The land is highly auriferous, and we are anxiously waiting your kind consideration to commence operations.

I remain, &c.,

JOHN F. CONNELLY

(For self and party).

No. 9.

No. 9.

The Under Secretary for Lands to Mr. J. F. Connelly.

Sir,

Department of Lands, Sydney, 27 October, 1884.

In reference to your letter of the 6th ultimo, respecting your application for permission to mine on a suburban allotment of 2 acres fronting Dalton-street, in the town of Parkes, and held as a freehold by Mr. E. M'Gee, I have the honor to inform you that the land in question cannot be identified on the maps in this Department from the particulars given in your communications, and the only freehold in the name of the gentleman mentioned, fronting the street referred to, are allotments Nos. 8 and 11 of section 6, containing $31\frac{1}{2}$ and 34 perches respectively.

I have, therefore, to request that you will be good enough to specify the number of the allotment alluded to you in your application, or to furnish me with a sketch showing the position.

I have, &c.,

CHARLES OLIVER,

Under Secretary.

No. 10.

Mr. J. F. Connelly and Party to The Secretary for Lands.

Sir,

Parkes, 28 October, 1884.

In reply to your letter of the 27th instant, *in re* the land mentioned in my letters, to mine upon Mr. E. M'Gee's freehold suburban land, I beg most respectfully to inform you that upon examining the map of Parkes, I find the allotment No. 423, in the name of J. M'Connell, being a 2-acre block, with a barn and hut upon it, adjoining the gold-mining reserve, which is the block of land I am applying for to mine upon, and which we are now mining under, and trust you will kindly grant our application to mine upon the same.

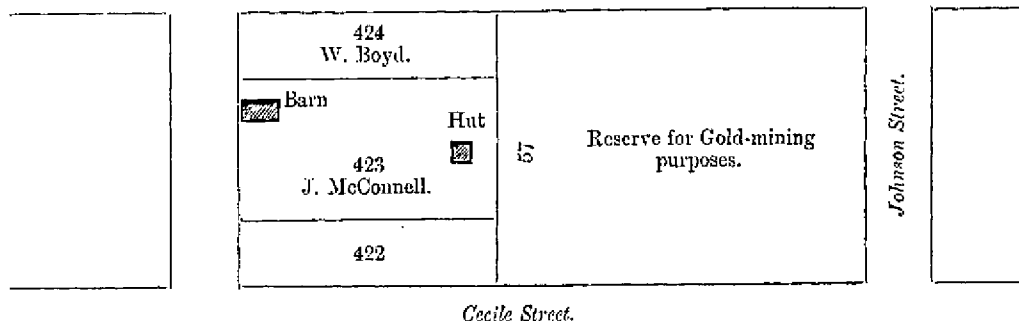

I remain, &c.,

JOHN F. CONNELLY

(For self and party).

P.S.—A copy or plan of the block of land requested.

Dalton Street.

Cocite Street.

Portion 423, parish of Currajong, was purchased by John M'Connell under improvement purchase.—J. T. SMALL, 8/12/84. Submitted. Writer may be informed.—J.G.B., 18/12/84. Yes.—F.H.W. (for U.S.), 19/12/84.

No. 11.

The Under Secretary for Lands to Mr. J. F. Connelly.

Sir,

Department of Lands, Sydney, 7 January, 1885.

Referring to your letter of the 28th October last, I have the honor to inform you that portion 423, parish of Currajong, was purchased in virtue of improvements by John M'Connell.

I have, &c.,

F. H. WILSON,

(For the Under Secretary).

No. 12.

Mr. J. F. Connelly to The Secretary for Mines.

Sir,

Parkes, 12 July, 1886.

I beg most respectfully to ask that you will kindly grant me permission to mine upon that piece of land, No. 423, being 2 acres applied for by John M'Connell, since transferred to Edward M'Gee, and situated in the town of Parkes (as per enclosed sketch).

I further wish to draw your attention that some months back I wrote seven letters to the Minister for Lands, asking the same privilege, and giving all particulars *in re* the said land, and was in treaty with the Minister some eight or ten months pending his reply, and could get no satisfaction.

I did a great deal of prospecting outside and under the said land, until I could do no more for baid air.

I have good reason to believe that there is gold-bearing quartz reefs in said land, because I found good gold-bearing veins outside the fence running into said land, and I wish to further continue prospecting said land. The land is being mined upon on three sides at present, and I have been prospecting upon the fourth for some considerable time, and wish to continue.

Trusting you will kindly grant my request to mine upon said land, and if so, to grant me an opening through the fence,—

I remain, &c.,

JOHN F. CONNELLY.

If the land in question has been sold the power to grant permission to search rests with the Minister for Lands. Inform, and then forward to the Lands Department.—H.W., 3/9/86.

No. 13.

Mr. J. F. Connelly to The Secretary for Lands.

Sir,

Parkes, 30 August, 1886.

I have the honor to request that you will grant me permission to mine in and upon that piece of land, No. 423, situate in the town of Parkes, and being 2 acres applied for by Mr. John M'Connell, and since transferred to Mr. Edward M'Gee.

The said land, I believe, is conditionally purchased, and the deeds issued about two years, although the ground was then held and in occupation for years for mining purposes when granted to him.

I have done a great deal of prospecting outside and under the said land, but through insufficient air and fear of trespass I had to abandon the search.

I beg to state that within the past eighteen months I have written seven or eight letters to the Minister to the above effect, and have been in treaty some eight or ten months, pending his reply, but up to the present have received none; whilst on the other hand Mr. Wm. Hazelhurst has, within the last three or four months, obtained permission to mine upon the said land, and which he has since abandoned. The land is being worked on all sides.

Trusting you will kindly consider my application in the most favourable light,—

I have, &c.,

JOHN F. CONNELLY.

As it is herein alleged that Wm. Hazelhurst, the person to whom a permit was granted on 25th June, 1886, has not prosecuted the search for gold as required by Regulation 171, perhaps the Department of Mines may be asked to procure a report from the Warden as to the facts.—S.F., 18/9/86. C.O., 20/9/86. Approved.—H.C., 22/9/86.

No. 14.

Mr. J. F. Connelly to A. Stokes, Esq., M.P.

Sir,

Parkes, 30 August, 1886.

I have the honor to request that you will kindly interview the Minister for Lands on my behalf respecting an application (posted this 30th day of August, 1886) to mine upon 2 acres of land, No. 423, situate in the town of Parkes, being a conditional purchase applied for by John M'Connell, and since transferred to Mr. Edward M'Gee.

I beg to state that within the past eighteen months I have written seven or eight letters to the Minister *in re* the above, but up to the present have elicited no reply; whilst on the other hand Mr. Wm. Hazelhurst has, within three or four months, had an application to mine on part of said land granted him, but has since abandoned it.

The land I seek is not held in occupation for mining purposes by others.

Regretting that I should have occasion to trespass so much on your valuable time,—

I have, &c.,

JOHN F. CONNELLY, SENR.

No. 15.

The Under Secretary for Mines to Mr. J. F. Connelly.

Sir,

Department of Mines, Sydney, 7 September, 1886.

Referring to your letter of the 12th July last, in which you apply for permission to mine upon portion No. 423 in the town of Parkes, containing 2 acres, applied for as an improvement purchase by John M'Connell, I have the honor to inform you that if the land in question has been sold, the power to grant permission to search for gold rests with the Minister for Lands, to whose Department your letter has been forwarded.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 16.

Mr. J. F. Connelly to The Secretary for Lands.

Sir,

Parkes, 27 September, 1886.

I most respectfully beg that you will kindly grant my application to prospect for gold upon portion 423, town of Parkes, parish of Currajong, county of Ashburnham, Billabong Gold-field, which, on the 14th April, 1883, was sold to John M'Connell, as an improvement purchase.

I further humbly beg to draw your attention to the fact that I have been applying to the Minister for Lands nearly two years for the same privilege, and have written eleven or twelve letters during that time, to the Minister, for permission to mine upon the same, and, up to the present, can get no satisfactory reply.

I now beg that you will grant me the permission so long sought for, and enclose you an acknowledgment from Mr. Hazelhurst, who, strange to say, has been a privileged person, he having made application for the said land on 10th May, and through the instrumentality of Arthur Cubitt, gets the permit on the 13th July, 1886, and abandoned it in August following.

I have been expecting that you would send me up the proper form to fill up for my application, which certainly must have been first (viz., nearly two years), corresponding for same.

Trusting that, under the existing circumstances, you will send me up the proper form to fill in, and also the permit for same, to search and dig for gold,—

I remain, &c.,
JOHN F. CONNELLY.

No. 17.
Certificate.

Parke, 27 September, 1886.

Permit to dig and search for gold, dated 13th July, 1886.

This is to certify that I, the undersigned, have done with the above permit (having prospected the land to my satisfaction), and am willing to return the permit to the Under Secretary for Lands.

WILLIAM HAZELHURST.

No. 18.

Mr. J. F. Connelly to A. Stokes, Esq., M.P.

Sir,

Parke, 27 September, 1886.

The telegram from Mr. Freeman, and your memo. attached, to hand, which does not seem very favourable on my behalf, when you say that the Warden will be called upon to report on the prior applications, and my claim comes next.

I beg to draw your attention to my letter of explanation to you, in which I have already stated that my application to the Minister to mine upon portion 423, in the town of Parke, has been pending nearly two years, and I have written eleven or twelve letters *in re* same, consequently, my application being first, should have prior claim; and, strange to say, W. Hazelhurst has been privileged, having made application in May last, obtained the permit on 13th July, prospected, and abandoned the same in August last.

My case seems to me a very hard one, under these circumstances, and, I think, requires a little looking into, as there certainly seems to be some very great misunderstanding or neglect somewhere.

Trusting that, under the existing circumstances, you will kindly see into the matter, and get for me the proper form to fill in, and also the permit to search and dig for gold, and I will be ever thankful. Sorry for trespassing so much upon your valuable time,—

I remain &c.,
JOHN F. CONNELLY.

P.S.—I have again (27th instant) written to the Minister for Lands *in re* my application, stating my exceptional case.—J.F.C.

Will the Under Secretary for Lands be good enough to say what has been done in this case, so that I may inform Mr. Stokes, M.P., to-day.—H.W., B.C., 14/10/86.

No. 19.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir,

Department of Lands, Sydney, 29 September, 1886.

I have the honor to request that you will be good enough to procure for the information of the Minister for Lands a report from the Warden of the Parke District as to whether W. Hazelhurst, to whom a permit was granted on the 25th June, 1886, to dig and mine for gold on the land noted below, has executed the same as required by the 171st Regulation of the "Crown Lands Act of 1884."

I have, &c.,
STEPHEN FREEMAN
(For the Under Secretary).

Parke, 2 acres, E. M'Gee, No. 423. Mr. Warden Sharpe for report.—G.E.H. (for U.S.), B.C., 26/9/86.

No. 20.

Mr. Warden Sharpe to The Under Secretary for Mines.

20 October.

I do not understand what information I am requested to supply, and the Regulation referred to affords no clue. W. Hazelhurst has not presented his permit to me, nor is he required to by the Regulation referred to. I have seen the permit, and the holder, who informs me that he has abandoned the land in question for a month past, and has written to the Department stating that he will surrender his permit.

ERNEST L. SHARPE,
Warden.

The Under Secretary for Lands.—G.E.H. (for U.S.). B.C., 23/9/86.

No. 21.

No. 21.

Mr. J. F. Connelly to The Secretary for Lands.

Sir,

Parkes, 20 November, 1886.

I again respectfully beg to inform you that this is the thirteenth or fourteenth letter that I have written to you within a period of two years, making applications for permission to mine or prospect for gold upon portion No. 423, town of Parkes, being an improvement purchase sold to J. M'Connell (No. 80-1,393, Parkes), and up to the present can get no satisfactory reply. I do not know what to think of such treatment, and shall be compelled to bring this matter before the House.

Strange to say that in June last Mr. W. Hazelhurst applied for the same land for same purpose, obtained it, worked it, and has abandoned it (all within three months). He tells me he had to tip £5 for it, and here are my applications (twelve or fourteen, as above) now standing two years perfectly ignored. I may inform you that I have on different occasions sent you plans and particulars, and as I wish to search for gold on that parcel of land, believing it to exist, I humbly trust you will kindly grant me that permit so long sought for.

Yours, &c.,
JOHN F. CONNELLY.

Submitted.—R.H.D., 23/11/86.

William Hazelhurst, to whom a permit was granted on 25th June, 1886, has not prosecuted the search for gold, as required by Regulation 171. Backstrom and party have made application in due form for a similar permit, but Connelly has for years been seeking for permission in respect of the same land, although he has not lodged same in due form (L.A.—M.) As, however, the form is not a schedule to the Act or Regulations its use is not apparently imperative. Submitted that a permit be granted to Connelly and that Backstrom and party be informed that their application cannot for that reason be granted.

S.F., 7/12/86.

Approved.—H.C., 7/12/86. Permit to Hazelhurst cancelled. Permit issued to Mr. Connelly, and informed. 10/12/86.

No. 22.

The Under Secretary for Lands to Mr. J. F. Connelly.

Sir,

Department of Lands, Sydney, 10 December, 1886.

With reference to your letter of the 20th ultimo, I have the honor to inform you that Mr. W. Hazelhurst having failed to prosecute the search for gold upon the land noted below under the permit granted to him, the Secretary for Lands has approved of a permit to dig and search for gold upon the said land being granted to you, and herewith I forward such permit.

I have, &c.,
STEPHEN FREEMAN
(For the Under Secretary).

Portion 423, parish of Currajong, county of Ashburnham.

No. 23.

Copy of Permit.

(Crown Lands Act of 1884—Part III, section 45.)

Permit to dig and search for gold.

THIS is to permit John F. Connelly to take possession in accordance with the Mining Board Regulations, and to dig and search for gold within a parcel of land of the dimensions of a prospecting protection area, as prescribed by the said Regulations, situated within the Billabong Gold-field, county of Ashburnham, parish of Currajong, being part of portion No. 423, which, on the 18th day of January, 1884, was sold to John M'Connell as an improvement purchase (No. 80-4, Parkes), but so as not to interfere with any prospecting protection area occupied in virtue of any permit of prior date to this.

Given under my hand at the Department of Lands, Sydney, in the Colony of New South Wales, this 11th day of December, 1886,—

HENRY COPELAND,
Minister for Lands.

No. 24.

Mr. J. F. Connelly to The Secretary for Lands.

Sir,

Parkes, 22 December, 1886.

I respectfully beg to inform you that, having commenced operations by a special permit from the Secretary for Lands to dig and search for gold on part of portion No. 423, parish of Currajong, upon a piece of land sold to Mr. John M'Connell on the 18th January, 1884, as an improvement purchase No. 80-4, Parkes, that I have started two shafts which I propose sinking to a depth of 200 feet, a great part through blue rock; that there is a party known as Messrs. Drummond and party trespassing upon my right by undermining said land and taking out auriferous quartz, whom I beg you will kindly order to discontinue.

I most positively declare that there is highly auriferous quartz now being worked and traced under said land, which I respectfully beg you will cause to be cancelled at an early date.

I have, &c.,
JOHN F. CONNELLY.

No. 25.

No. 25.

Quaile and Party to The Secretary for Lands.

Sir,

Parkes, 10 January, 1887.

See Appendix A.

We beg most respectfully to call your attention to the fact that Mr. John F. Connelly, of Parkes, has applied for and obtained a permit from you to search for gold on a portion of land situate at Parkes, and numbered 423. According to plan sent herewith you will see that our party have sunk two shafts on each side of this land, and we have traced the reef right through it and are at present, with the permission of the owner of the land, working the reef, and we claim that the spirit of the law was never intended to grant permission to mine for gold where gold had already been discovered. Connelly knew well of the direction of the line of reef, having frequently gone down our shaft with the pretended purpose of buying into the claim, but as it turns out only to find the direction of the line of reef. Having the permission of the owner of the land to drive under it we thought that was sufficient, but now we learn Mr. Connelly has got a permit and he is now sinking a shaft right on the reef. We claim that the permit should be revoked and permission given to us to mine, as we are the discoverers of the reef and should have prior claim to the ground. We enclose plan herewith. Your early attention would greatly oblige,—

See enclosure A. Appendix A.

Yours, &c.,

A. DRUMMOND

(For Quaile and party).

The application is for cancellation of Connelly's permit for the reasons set out in this letter.—S.F., 11/1/87.

The permit to Connelly has been issued in error and was obtained by what appears a suppression of the facts of the case. Under the Mining Board Regulations a prospecting protection area can only be held when gold is not being worked within half-a-mile of the land applied for, whereas it appears that Quaile and party have a claim immediately adjoining this land and are obtaining gold from the very ground applied for by Connelly, and this with the permission of the owner of the land. Connelly's permit must therefore be cancelled as contrary to the Mining Board Regulations, and I think additional regulations should be provided before any more such permits be granted.—H.C., 15/1/87.

Inform parties, and call upon Connelly & Co. to return the permit at once.—R.H.D., 18/1/87.

No. 26.

Mr. J. F. Connelly to R. M. Vaughn, Esq., M.P.

Sir,

Parkes, 18 January, 1887.

About the 22nd December, 1886, by letter, and since personally I called upon Mr. A. E. L. Sharpe, the Warden, *in re* the said trespass. He positively declined to have anything to do with private land, he refused me an order to enter trespassers' shaft, a licensed surveyor to inspect and report, a summons against them, and an injunction; consequently, I have no redress here.

I have a shaft down over 100 feet, and can hear the trespassers undermining my shaft, which will take a considerable time to sink. Trespass still going on.

I have just returned from Sydney, where I went purposely to consult the Lands and Mines Departments, but with no result other than from the Under Secretary for Mines, who thought an order from the Attorney-General against the trespassers for stealing gold from private land as against the Queen without being specially authorized, would be the proper course. It seems to me a very hard case, considering that there is now about two and a half years I have been continuously applying for said land, and now that I have the permit from the Crown, Messrs. Drummond and party still continue the trespass, and strange to say, up to the present I have no alternative. Trusting you will, in conjunction with Messrs. Jas. Watson, E. A. Baker, T. F. De Courcy Browne, A. A. Stokes, Esqs., M.S.P., with whom I am personally acquainted, use your influence and see me protected at as early a date as possible; and as the party are about to crush in three weeks' time, I beg that you will, if possible, kindly get an order from the Attorney-General to stay their trespass, and also their crushing, pending further hearing.

The above party have taken about 400 or 500 tons of stone from underneath the said private land.

I may also inform you that during the last three years the reef in question has been working Messrs. Drummond and party have had every opportunity, if they so desired, to secure and protect themselves in that private land, because they must have known the course of the reef better than any other persons. On the other hand, from the first discovering of said line of reef, self and party sunk and drove about 1,000 feet, prospecting for said reef from the outside of said private land, and while so doing I sent in my application to the Minister for Lands for permission to mine upon the same, and for nearly two years and a half I persisted in my application for permission to mine upon said land, and under the above circumstances I certainly consider I am the first applicant; and had it been attended to in due course by the powers that were I should have had permission granted me two years ago, which would have given me 400 or 500 tons of stone averaging 4 ounces to the ton in soft country; but now through the delay or neglect of the Department, I have to content myself by sinking one and probably two shafts to a depth of 250 feet, a great portion being through blue rock, for a reef now reduced to 15 inches thick, and about 1½ ounce per ton; hence, my loss through the powers that were, with all due respect. Trusting you, with the assistance of the other gentlemen, will put this through for me at an early date, under the circumstances, when I will be ever thankful.

Apologising for trespassing so much upon your valuable time,—

I remain, &c.,

JOHN F. CONNELLY.

P.S.—On my return home from Sydney I called upon Messrs. M'Loughlin and Pileher, solicitors, &c., of Orange, *in re* as to how I stood affected under my special authority from the Crown as against the trespassers. They told me the Minister had the power to grant and also to withdraw my permit, but consider that he had ample time in my case to consider, and to know what he was doing, and that it should have been granted long ago, but should he be unfavourably disposed towards me, the Government in all probability

probability would recoup me for my loss and expenses through having misled me; that in view of the present Ministry going out I had better await the new Minister, who will likely hold a very different view; that a few influential members of the House could put the matter through at once for me by getting the conditional purchase cancelled; my title would then be sound; that they thought the Mining Department had a right to deal with the case; that Drummond and party had had the same opportunity as myself, but did not embrace it; that it legally belongs to the first applicant, and that Drummond and party were illegally winning gold as against the Crown, and open to criminal prosecution.—J.F.C.

No. 27.

R. M. Vaughn, Esq., M.P., to The Under Secretary for Lands,

Sir,

I beg to hand you enclosed a letter I have received from J. F. Connelly, and to ask that it may be favourably considered, and that the protection asked for may be granted. See No. 28.

Sydney, 20 January, 1887.

Yours, &c.,

R. M. VAUGHN.

Special.—This letter of Mr. Vaughn's, M.P., and its enclosed letter from John F. Connelly, are submitted in view of the Minister's decision of 15th January, 1887 (on letter of the 10th January), to the effect that the permit to Connelly was issued improvidently. It is observed that the letter of this Department to Connelly, conveying the Minister's decision, is dated 20th instant. Connelly's letter is dated the 18th instant. The letters have crossed each other evidently.—R.H.D., 25/1/87.

No. 28.

The Under Secretary for Lands to Mr. J. F. Connelly.

Sir,

Department of Lands, Sydney, 20 January, 1887.

Referring to the permit, dated 11th December, 1886, to dig and search for gold within the improvement purchase noted below, issued to you, I am directed to inform you that the authority thereunder has been withdrawn, as it was obtained by what appears a suppression of the facts of the case, and issued contrary to the Mining Board Regulations, and therefore request that you will be good enough to return the permit to this Department at once.

I have, &c.,

STEPHEN FREEMAN

(For the Under Secretary).

Parkes, I.P. 80-4, 7th July, 1880, 2 acres, parish of Currajong, county of Ashburnham, John M'Connell.

No. 29.

Mr. J. F. Connelly to The Under Secretary for Mines.

Sir,

Sydney, 25 January, 1887.

I respectfully beg to inform you that I have, during the last two years and a half, been continuously applying for permission to mine upon part of portion 423, which, on the 18th day of January, 1884, was sold to John M'Connell as an improvement purchase, No. 80-4, Parkes, and strange to say that in June last a Mr. W. Hazelhurst made application for same land and got it at once over my head. He prospected said land to his satisfaction and then abandoned it. Then again, after considerable writing to the Department of Lands, I got special permission to search and dig for gold. I commenced my operations about the 14th of December last, when I found that Messrs. Drummond and party were undermining my workings (shaft) from outside on Crown lands. I cautioned them not to trespass by undermining my special authority from the Crown, as I would hold them responsible for any gold they may have taken from under said private property.

I have applied to the Warden on different occasions for protection. He declined having anything to do with it, it being private property.

I then came to Sydney, saw the Assistant Under Secretary for Lands, who told me to settle the matter between ourselves as best we could, as I had no right to the ground.

On the 22nd instant I received a letter from the Lands Department, stating that the authority has been withdrawn, as it was obtained by what appears a suppression of the facts of the case, and issued contrary to the Mining Board Regulations, and therefore requests that I will be good enough to return the permit at once.

Now, Sir, I would respectfully beg to draw your attention to the facts that I have, during the last three years, been prospecting outside said private land, and have sunk and drove about 1,000 feet unsuccessfully, and during two years and a half of that time I have been continuously making applications to mine in said private property (I am the first applicant), and during the last two years the said Messrs. Drummond and party have been continuously undermining said private land without being specially authorized, and have taken 400 or 500 tons of auriferous quartz from underneath, being detrimental to my interest; whereas had my application been attended to in due course by the Department, I would this day have been £2,000 or £3,000 a better man. As it is I am out at least £300, and now told to withdraw from the land.

Messrs. Drummond and party certainly had the privilege, if they so were inclined, by making the first application, inasmuch as they were the only persons in possession of the direction and the course of the vein when they opened it some three or four years ago.

Trusting you will see that my application has not been a suppression of the facts, as alleged, and that I, being the first applicant, should have been duly considered, that Drummond and party, having neglected to protect themselves by special authority, have been in illegal possession, taking out what should have been my legal right had it been attended to in due course.

Trusting you will kindly see me protected in the above,—

I remain, &c.,

JOHN F. CONNELLY.

Will the Under Secretary for Lands do me the favour to say why the permission to search has been withdrawn from Mr. Connelly? He has shown me your letter, dated 20th January, in which the reasons assigned are a suppression of the facts of the case, and issued contrary to the Mining Board Regulations. Kindly say which Regulation is infringed, and what was the suppression of facts?—H.W., B.C., 27/1/87. Urgent.

No. 30.

Mr. J. F. Connelly to E. A. Baker, Esq., M.P.

Dear Sir,

Sydney, 27 January, 1887.

In re our interview, this day, with Mr. Freeman, I feel very much hurt to think that he should be under the impression that I should cast any reflections upon the Department *in re* taking tip from Mr. W. Hazelhurst, as I could not possibly say so, because I knew better. What I did say, or meant to convey, was that Hazelhurst had to tip £5 to get the permit, which he told me he had done to an agent outside.

I certainly felt hurt to think that he could get a permit at once, when I had been applying and waiting so long without any result. Should you see Mr. Freeman, I trust you will kindly explain this matter to him. Trusting he will banish that idea from his mind, as it was never meant,—

I remain, &c.,

JOHN F. CONNELLY.

Notwithstanding this disclaimer, there is no possibility of misunderstanding the nature of Mr. Connelly's insinuation, or his foolish threat to bring the matter before the House. The threats were, however, not allowed to prejudice what then appeared to be his very strong claim for a permit.—S.F., 22/2/87.

This letter has been attached to the papers at the request of Mr. E. A. Baker.—S.F., 22/2/87.

No. 31.

Mr. A. Drummond to The Secretary for Lands.

Sir,

Parkes, 27 January, 1887.

As the permit to Mr. J. F. Connelly to mine for gold on portion No. 423, at Parkes, has been cancelled, we beg to renew our application for a permit, we already having the permission of the owner of the land to mine under it.

Yours, &c.,

A. DRUMMOND

(For Quaile and party).

Submitted in view of memo. of 25th January, 1887. Attention is invited to the minute of the Under Secretary for Mines, dated 27th January, 1887.—R.H.D., 31/1/87. Refer the papers to the Under Secretary for Mines with reference to the minute above referred to.—C.O., B.C., 22/2/87. The Under Secretary for Mines.

No. 32.

Minute by The Under Secretary for Mines.

8 March, 1887.

IN view of the decision of the late Minister for Lands (Mr. Copeland), dated 15th January last, in regard to the permit granted to Mr. J. F. Connelly, I venture, with great diffidence, to submit that the decision appears to be based on a misconception concerning the Regulations relating to such permits. The Regulation (169) provides that the person named in the permit shall mark out the land in such position as shall interfere as little as possible with any permanent improvements on such land.

This is the only provision in the Regulation concerning the position of the "area." The words in the Regulation quoted, which may have misled the late Minister for Lands, are:—"Such area shall be of the dimensions, and subject to the conditions, and shall be marked out in the manner [*e.g.*, with posts and trenches at each angle] prescribed by the Mining Board Regulations."

The power to cancel such a permit is contained in Regulation 171, and the grounds of cancellation are failure to "maintain the boundary marks of such area, and prosecute the search for gold in accordance with the provisions of the Regulations aforesaid."

If the facts are as set out by Mr. Connelly, that he has expended a sum of money in sinking a shaft while holding his permit, he will probably lose the money so spent unless the permit can be revived.

H. W.,

8/3/87.

Submitted. For the consideration of the Minister for Lands.—F.A., 8/3/87. The Under Secretary for Lands.—G.E.H. (for U.S.), B.C., 9/3/87. Submitted specially.—R.H.D., 15/3/87. S.F., 17/3/87. Perhaps the opinion of the Attorney-General may be sought as to the power of the Minister to cancel a permit under section 45, for reasons other than those set out in Regulation 171.—S.F., 30/3/87. Approved.—T.G., 31/3/87. The Crown Solicitor.—R.H.D. (for the U.S., Lands), B.C., 4/8/87.

No. 33.

Mr. W. S. Ritchie to The Secretary for Lands.

Sir,

Parkes, 16 March, 1887.

Mr. J. F. Connelly, who, in December last, was in error granted a permit to mine in portion No. 423, of 2 acres, parish of Currajong, county of Ashburnham, and which authority was withdrawn by the late Minister of Lands, on or about the 18th day of January, 1887, continues to work in said portion, despite the fact that authority to mine in said portion was vested in Drummond and party by the late Minister, they also holding a duly registered permission to mine in said portion from Mr. Edward M'Gee, the owner thereof.

Connelly has now broken into Drummond and party's mineral selection No. 251, damaging the workings, knocking out our timber, and dropping stones, &c., on Drummond and party, one of them being injured thereby to-day.

Drummond and mates are patient, law-abiding men, suffering from great provocation; have summoned Connelly to the Warden's Court. The Warden said he had no jurisdiction, but forwarded the papers to the Lands Department. Drummond and party ask that you will take prompt steps, as per telegram, for their protection, to prevent a breach of the peace, and possible bloodshed, if Connelly attempts to remove quartz from the mine, which he will be in a position to do in a few days.

I am, &c.,

W. S. RITCHIE,

Underground Manager

(For Drummond and party).

Referred to the Under Secretary for Mines in connection with the previous papers.—R.H.D. (for U.S.), 16/5/87. Seen.—H.W., 21/5/87.

No. 34.

Telegram from Mr. W. S. Ritchie to The Secretary for Mines.

Parkes, 16 March, 1887.

CONNELLY, working in portion 423, broken into Drummond and party's mining tenement No. 251, weakening the walls of the mine, knocking out our timber, and dropping stones and mullock into Drummond and party's workings, one of whom injured to-day. Prompt steps necessary to prevent a breach of the peace.

W. S. RITCHIE,

Underground Manager

(For Drummond and party).

Ask Mr. Warden Sharpe to inquire at once into this matter, and ask the Lands Department whether the cancellation of the permit to Connelly has been revoked.—H.W., 17/3/87. Mr. Warden Sharpe.—G.E.H. (for U.S.), B.C., 18/3/87.

No. 35.

Parkes, 16 March, 1887.

CONNELLY, working in portion 423, broken into Drummond and party's mining tenement No. 251, weakening the walls of the mine, knocking out our timber, and dropping stones and mullock into Drummond and party's workings, one of whom injured to-day. Prompt steps necessary to prevent a breach of the peace.

W. S. RITCHIE,

Underground Manager

(For Drummond and party).

No. 36.

Mr. W. S. Ritchie to The Secretary for Mines.

Sir,

Parkes, 16 March, 1887.

Mr. J. F. Connelly, who, in December last, was in error granted a permit to mine in portion No. 423, of 2 acres, parish of Currajong, county of Ashburnham, and which authority was withdrawn by the late Minister for Lands on or about the 18th day of January, 1887, continues to work in said portion despite the fact that authority to mine in said portion was vested in Drummond and party by the late Minister for Lands, they also holding a duly registered permission to mine in said portion from Mr. Edward M'Gee, the owner thereof.

Connelly has now broken into Drummond and party's mineral selection No. 251, damaging the workings, knocking out our timber, and dropping stones and mullock on Drummond and party, one of them being injured thereby to-day. Drummond and mates are patient, law-abiding men, suffering from great provocation; have summoned Connelly to the Warden's Court. The Warden said he had no jurisdiction, but forwarded the papers to the Lands Department. Drummond and party ask that you will take prompt steps as per telegram, for their protection, to prevent a breach of the peace and possible bloodshed, if Connelly attempts to remove quartz from the mine, which he will be in a position to do in a few days.

I am, &c.,

WM. S. RITCHIE,

Underground Manager

(For Drummond and party).

My report in this case was sent to the Department on the 18th instant. I have nothing to add to it except that it appears the No. of Drummond's mining tenement is 252, and not 251. See telegram herewith.—ERNEST A. L. SHARPE, Warden. The Under Secretary for Mines, B.C., 26/3/87.

No. 37.

No. 37.

Telegram from The Under Secretary for Mines to Mr. Warden Sharpe.

Sydney, 17 March, 1887.

COMPLAINT received that one Connelly, working in portion 423, had broken into Drummond and party's mining tenement 251, weakening the walls of mine, and damaging workings. Please inquire into matter at once.

HARRIE WOOD,
Under Secretary for Mines.

No. 38.

E. A. Baker, Esq., M.P., to The Secretary for Lands.

Dear Sir,

Sydney, 18 March, 1887.

It is so difficult to see you that I send you a line to ask you to be good enough to give a decision as soon as possible in the matter I spoke to you about some time since (Connelly's permit to search for gold in alienated land).

You referred the matter to the Mines, and the papers are back with the opinion of the Minister. Mr. Freeman tells me they will be on your table to-day.

Will you give your decision, and have me communicated with.

Yours, &c.,
E. A. BAKER.

No. 39.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines, Sydney, 18 March, 1887.

I have the honor to request that you will be good enough to inform me whether the cancellation of the permit granted to one Connelly, to mine on certain land, portion 423, I.P. 80-4, Parkes, has been revoked. The papers were forwarded to your Department on the 10th instant.

I have, &c.,
GERARD E. HERRING
(For the Under Secretary.)

No. 40.

W. T. Coonan, Esq., to The Secretary for Lands.

Sir,

Sydney, 18 March, 1887.

On behalf of Messrs. Quaile and party, gold-miners, of Parkes, I am instructed to respectfully call your attention to the fact that, notwithstanding the cancellation of J. F. Connelly's permit to search and dig for gold on portion No. 423, town of Parkes, he is still working under the said authority, and has sunk a shaft on the line of reef discovered by Quaile and party, and has also broken into their workings. The permit having been obtained by a suppression of the facts of the whole case, and the same having been cancelled, I respectfully submit that action should at once be taken by the proper officer of your Department to compel Mr. Connelly to return the permit granted to him.

Yours, &c.,
W. T. COONAN.

P.S.—Quaile and party seem to have right on their side. Could not the Minister demand from Connelly the return of permit, and at same time advertise in the local papers that the permit had been drawn? Presented by H. H. Cooke, M.P.

The question as to the cancellation of Connelly's permit being revoked is now under the consideration of the Minister for Lands, submitted on the 16th instant.—R.H.D.

No. 41.

Telegram from Mr. Warden Sharpe to The Warden's Clerk, Parkes.

18 March, 1887.

PLEASE ask Connelly, working portion 423, and Drummond and party, working mining tenement No. 251, to meet me at Court-house this evening at half-past 5, re complaint that former has broken into latter's mining tenement, weakening walls of mine, and damaging workings.

No. 42.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir,

Warden's Office, Forbes, 19 March, 1887.

Referring to the annexed telegram, I have the honor to state that, in accordance with your request, I proceeded to Parkes with the least possible delay and made inquiry concerning the matter complained of. I requested the parties interested to meet me at the Court-house, Parkes, on yesterday evening, which they did, and made certain statements, which are annexed for the information of the Minister for Mines.

2. It appears that portion 423 is freehold land, 2 acres in area, the property of Edward M'Gee, of Parkes. Mr. John F. Connelly obtained permission from the Minister for Lands to mine on this land, but the permission it seems was withdrawn, having been issued in error, and Messrs. Quaille and party or Drummond and party were informed by letter, dated 20th January last. Drummond and party have been mining under portion 423 for a considerable period, and have removed probably a large body of stone with the permission of Mr. M'Gee. Drummond and party admit that they have no permit from the Minister for Lands. They sunk two shafts on their quartz claim (see rough sketch) which adjoins portion No. 423, and have taken out the reef between these shafts, but under the freehold. Connelly and party sunk a shaft on the freehold, and broke through into the workings which Drummond and party had partly filled up and timbered as they took out the reef.

Enclosure No. 18.
Appendix B.

It seems that a stone about the size of an egg fell through and inflicted a slight wound on the head of Thomas Tulloch, who was in the workings below Connelly's shaft, and that about a load of mullock has fallen through since. Connelly says fine sand fell through. Drummond and party say rocks and mullock.

Connelly states that his party are in danger from Drummond and party, and that they have threatened to do them serious injury if they persist in sinking the shaft, which, if continued down, will follow the wall of the reef, with one side open to the workings, where the reef has been removed by Drummond and party, and this is what Drummond and party are anxious to prevent. These workings are timbered and partly filled with mullock. Connelly states that his object is to get down to the reef Drummond and party are working. Some time since Drummond and party summoned Connelly and party in the Warden's Court, at Parkes, for trespass on the freehold land, and the case was dismissed for want of jurisdiction, and the parties were warned that they should take the proper steps to determine who had a right to mine on the land, and they informed me that they would take legal advice.

It seems to me that neither party has, at present, any right to mine under portion 423, as they do not possess any legal permit, and I would urge that the necessary steps be taken at once to determine who has a right to mine on it, as a great deal of ill-feeling exists between the parties, who are each evidently under the impression that the other is depriving them, or endeavouring to deprive them, of the reef, which they each claim. Having heard the statements of each side, I advised them that they should abstain from working on the freehold until the dispute was determined, and I also stated that I would bring the urgency of the matter under the notice of the Minister.

I may add that I believe the reef in Quaille and party's claim (now Drummond and party) was very profitable, if not rich, and as it runs through the freehold where Drummond and party have been working, probably the stone taken out was rich, and this is the reason the parties in question were so bitter against one another.

I have, &c.,
ERNEST A. L. SHARPE,
Warden.

[Enclosure.]

DEPOSITIONS taken at Court-house, Parkes, on the 18th March, 1887.

ALEXANDER DRUMMOND states that he is one of the shareholders in mining tenement No. 251, at Parkes, six men's ground, quartz claim; I have complained that John F. Connelly and party have so worked the adjoining mine, which is on a freehold, portion 423, that the lives of our working men are endangered; if not stopped, Connelly and party will do our mine serious damage; we are on the freehold belonging to Mr. M'Gee; we started to work on our mining tenement, but the workings are in the freehold; but I can't say how far we are under it; I have no permit from the Minister for Lands, but I have leave from Mr. M'Gee to work under his land; I have a letter, which I produce, from the Department of Lands, dated 20th January, 1887, stating that the permit issued to John F. Connelly was issued in error, and that the authority has been withdrawn.

William Spark Ritchie states that he is an underground manager for Drummond and Company; their workings are under the freehold portion No. 423; we are on the northern side of portion 423; our southern boundary adjoins the north boundary of portion 423; one of the shafts is about 20 feet from the north boundary of portion 423, the other is on the eastern boundary, one 197 feet, the other 180 feet, connected with a drive, and the reef has been taken out to the surface, and we are about 17 feet under the freehold at the 197-foot level; the danger is, Connelly and party have broken into our workings at about the 150-foot level, and drop rocks through; one of the shareholders received a blow from a rock; his head was cut, and I stanchied the blood; the mullock and rock were falling; the workings of Connelly and party are still being carried on; I consider that I am responsible for the safety of the men working in our mine and the mine itself; if their work proceeds they will be in a position to remove quartz from the reef we are working.

John F. Connelly states that he and his party are working on freehold land, portion 423; we have a permit, but I don't produce it; I can't say whether it has been cancelled or not; we are sinking a shaft to catch a reef—any we can find; we have come into the workings of Drummond and party; we have sunk two shafts and driven about 450 feet; the shaft complained of is down about 170 feet, and broke through into Quaille and party's working (now Drummond and party); we have been three days, and successfully timbered up the workings; there is a pass and an opening, through which small stuff (small mullock) can dribble through; I can't account for the fact that a rock fell on Thomas Tulloch; there are no rocks to come through; in their workings there is a floor which would prevent anything from falling down; when we were breaking through I cautioned Drummond and party to look out below several times for fear anything might fall through; I have been threatened by Drummond and party that they will injure us if we attempt to do any more work; I complain that we are in danger from Drummond and party; I have asked them to put in a stull below to prevent anything that may fall from our workings so as to protect their crossing; this they refused to do, and I offered to do it myself for our mutual benefit and protection.

Thomas Tulloch says he was working in the freehold of Edward M'Gee; I am one of Drummond's party; I received an injury from a stone, about the size of an egg; I got a nasty knock; the skin was cut; it is nearly well; the stone came from above; I could not say that it came from Connelly's shaft; I think it did; about a load of mullock has come from where Connelly and party broke through.

Taken before me this 18th day of March, 1887,—
E.T.

Both parties should be ordered to withdraw at once from the private land until the Minister for Lands has decided what is to be done in regard to Connelly's permit. Drummond and party appear to have been guilty of stealing gold, the property of Her Majesty the Queen, and are probably liable to prosecution. As soon as the Minister for Lands has dealt finally with Connelly's permit, it might be considered whether the land, or some part of it, should not be resumed, and whether Drummond and party might not be allowed to pay royalty upon the gold taken out.—H.W., 21/3/87. Submitted. Approved.—F.A., 25/3/87.

The Under Secretary for Mines to Mr. Warden Sharpe.

Sir, Department of Mines, Sydney, 25 March, 1887.

I have the honor to acknowledge the receipt of your letter of the 19th instant, with your report on the complaint of Drummond and party, that one Connelly had broken into their mining tenement No. 231, in the parish of Currajong, which lies adjacent to portion 423, on which Connelly was working under a permit from the Secretary for Lands; and I am directed by the Secretary for Mines to request that you will order both parties to withdraw at once from the private land on which they have been working, until the Minister for Lands has decided what is to be done in regard to Connelly's permit.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 47.

Mr. J. F. Connelly to Mr. Warden Sharpe.

Sir, Parkes, 1 April, 1887.

In reply to yours of the 28th ultimo, *in re* withdrawal from Mr. E. M'Gee's private land, I beg to say that I have, since your inquiry a fortnight ago, also to inform you that Messrs. Drummond and party are working under said land detrimental to my interest, and ask that you will stay them, pending decision from the Department.

Yours, &c.,

JOHN F. CONNELLY.

No. 48.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir, Forbes, 2 April, 1887.

I enclose a letter I have received from Mr. John F. Connelly, stating that he has withdrawn from certain private land at Parkes, portion 423, belonging to Mr. Edward M'Gee, and complaining that Drummond and party are working under the said portion. I have the honor to state that I have made inquiry as to Connelly's statement, and am informed by Drummond and party that they have not been working under the said land since an order was served on them to desist. Having regard to the fact that their working shafts are connected under the freehold land, although the said shafts have been sunk on their quartz claim, and follow the reef under the freehold land, at the request of Messrs. Drummond and party I have registered the said quartz claim for suspension of labour for a short time; but the parties interested have requested me to urge that the matter may be settled as soon as possible, as they are unable to follow their occupation pending the settlement of the dispute, and are consequently, they allege, suffering a heavy loss. I may add that I think that it is very advisable that the question, who has or has not a right to mine on the freehold, should be determined with as little delay as possible.

I have, &c.,

ERNEST A. L. SHARPE,
Warden.

No. 49.

15

No. 49.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir,

Forbes, 4 April, 1887.

Referring to your letter of the 25th ultimo, respecting the complaint that Connelly and party were trespassing on the mining tenement of Drummond and party, which lies adjacent to portion No. 423, on which Connelly and party were working under a permit from the Secretary for Lands, and requesting me to order both parties to withdraw from the private land until the Minister for Lands has decided what is to be done in regard to Connelly's permit, I have the honor to state that the said request has been complied with.

I may add that I am informed that the number of the claim abovementioned is 252, and not 251.

I have, &c.,

ERNEST A. L. SHARPE,

Warden.

I understand the Lands Department has referred the question for opinion of the Attorney-General, and I presume definite action will be taken as soon as that is given.—H.W., 7/4/87.

No. 50.

H. H. Cooke, Esq., M.P., to The Secretary for Lands.

Baxtrom and Connelly.

Sir,

Parkes, 11 April, 1887.

I have the honor to again draw your attention to this case, and I earnestly ask you to give it your early consideration, as I have reason to believe there has been some occult working, with the intention, perhaps, of misleading your Department.

My only desire is, as I am sure it is yours also, that a just and equitable decision may be arrived at.

The case seems perfectly clear to me, and to my mind the whole matter depends on the priority of the respective applications for the permits of Baxtrom and Connelly, as I think you will also see by referring to your letters to Baxtrom, of 5th October and 10th December, 1886, and to the respective applications.

In dealing with this case some confusion may have arisen through the party being variously designated as Baxtrom and party, Quaile and party, and Drummond and party, which are one and the same.

If when Baxtrom and party's application of 24th August, 1886, was received, the prior application of Hazelhurst had been granted, Baxtrom's application could not be entertained, but when Hazelhurst relinquished, and abandoned his right to mine by virtue of his permit, Baxtrom's application being next in order, and not having been withdrawn, ought, I respectfully submit, to have been at once granted.

Connelly's name does not appear in the correspondence until in your letter to Baxtrom on the 10th December, 1886, more than two months after you acknowledged Baxtrom's application.

Baxtrom and party in continuing to work their mining claim, which adjoins the freehold, followed their quartz reef on the underlay into and under the freehold, having first obtained permission from the owner to do so.

There was no intention to evade any law, and they having obtained permission from the owner of the freehold were at first ignorant of the necessity of making an application to you. They are now prepared to pay any royalty due on account of any gold obtained from the ground in question, and to comply with the law in all respects.

To my mind, by every right in law and equity, Baxtrom and party are entitled to have their application granted, and the withdrawal of Connelly's permit sustained, and to be allowed peaceable possession, without having recourse to the Law Courts, which to them would be perhaps costly beyond their means.

In addition to the foregoing, please allow me to remind you that the reasons which existed when Connelly's permit was withdrawn still exist.

I may add that a great injustice is attempted against Baxtrom and party, and will fall especially heavy on some of the shareholders who bought into the claim, believing the right to mine under the freehold was a good right.

Leaving the case with all confidence in your hands,—

I have, &c.,

HENRY H. COOKE.

Forward to the Under Secretary for Mines with reference to previous correspondence.—S.F., B.C., 14/4/87. Inform.

No. 51.

The Crown Solicitor to The Under Secretary for Lands.

Subject:—Permit granted to Mr. J. F. Connelly.

Sir,

Crown Solicitor's Office, Sydney, 13 April, 1887.

I have the honor to return herewith the papers relating to the above matter, which were forwarded to me from your Department on the 30th day March, 1887, and to state that I have submitted them to Mr. Attorney-General Foster, a copy of whose memo. thereon will be found below.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Memo.

MEMO.

I CAN conceive that there may be cases not within 171 of the Regulations under the Lands Act in which the Minister might withdraw or cancel a permit granted under section 45 of the Lands Act. No case is stated sufficient to enable me to form any opinion whether the papers before me come in the category of such cases (which must be very exceptional), and I cannot undertake to search through the documents of other Departments than my own to find out what the case contained in them is. Unless a clear statement of facts and acts, and the authority under which they purport to be done, is sent, I must decline to enter upon the consideration of matters submitted for my opinion.

W.J.F.,
Attorney-General, 6/4/87.

The Under Secretary for Mines.—S.F., B.C., 23/4/87.

No. 52.

The Under Secretary for Lands to H. H. Cooke, Esq., M.P.

Sir,

Department of Lands, Sydney, 14 April, 1887.

I have the honor to acknowledge receipt of your letter of the 11th instant, respecting the matter of Baxtrom's application for permission to dig and search for gold, and to inform you that your communication has been forwarded to the Department of Mines, where all matters in connection with the issue of such permits are now dealt with.

I have, &c.,

STEPHEN FREEMAN
(For the Under Secretary).

No. 53.

E. A. Baker, Esq., M.P., to The Under Secretary for Lands.

Dear Sir,

Sydney, 1 May, 1887.

As regards the case of Mr. Connelly, of Parkes, to whom was granted a permit to search for gold in alienated land by the late Secretary for Lands, will you be good enough to inform me what is being done in the matter?

Mr. Garrett referred the case to the Attorney-General for his opinion, but on inquiry of the Secretary, Mr. Stephen, I find the Attorney-General has returned the case to your Department, as he cannot, it seems, understand what he is to advise about.

This case has been sent to the Mines Department, who, I believe, advised on it. It has been in hand for a very long time.

Yours, &c.,

E. A. BAKER.

Inform Mr. Baker that his letter has been forwarded to Mines Department. Informed, 28/5/87.
The Under Secretary for Mines.—S.F., B.C., 28/5/87. Mr. Baker, M.P., informed of decision of Secretary for Mines, dated 6/5/87.

No. 54.

Minutes by The Under Secretary and Minister for Mines.

Subject:—Permission to dig and search for gold on portion 423, at Parkes.

THE papers in this case disclose the following facts:—J. F. Connelly's application for a permit (not on the printed form) is dated 6th August, 1884. In this he sets out that the land in question is bounded on three sides by quartz-mining in full operation. On the 16th August, 1884, he states, when urging his application, "the land is in the centre of quartz-mining operations." On the 29th September, 1884, he states the land is being mined on three sides, and quartz reefs are known to run through it.

Mr. Hazelhurst's first application for a permit is dated 3rd November, 1885; his second application is dated 10th May, 1886. Permits were granted to Hazelhurst, one dated June, 1886, the other 13th July, 1886. On the 1st October, 1886, Hazelhurst notified the Lands Department that he had tested the ground and abandoned the permit. The Warden reported on the 20th October, 1886, that Hazelhurst had abandoned his permit a month since. Permit to Hazelhurst cancelled by the Minister for Lands on the 7th December, 1886. Permits returned by Hazelhurst to the Lands Department on the 22nd December, 1886.

Baxtrom and party made application for permit on the printed form, dated 24th August, 1886. On the same date as Hazelhurst's permit was cancelled, namely, 7th December, 1886, the Minister for Lands decided that a permit be granted to J. F. Connelly, and a permit dated 11th December, 1886, was granted to him.

On the 15th January, 1887, the Minister for Lands decided that the permit had been issued to Connelly in error, "and was obtained by what appears a suppression of the facts of the case" * * * "whereas it appears Quaille and party (Baxtrom and party) have a claim immediately adjoining this land" * * * "Connelly's permit must therefore be cancelled." From the above facts it will be seen that Connelly was the first applicant, and that he not only set out in his first application, but reiterated the statement, that mining was being actively carried on upon three sides of the land, that the land was in the centre of quartz-mining, and that quartz reefs were known to run through it. His application was not on the printed form, because the printed form (Form L.A.M.) was not then in use.

From the papers it appears that, relying upon the permit, Connelly has sunk two shafts and constructed drives, the cost of which will be lost to him if he be deprived of his permit.

Baxtrom

Baxtrom and party rely upon a permission granted by the owner of the land to mine upon and remove gold from the land. The owner of the land never had any right to the gold, and has never obtained a permit in terms of the Crown Lands Act of 1884, section 7, to remove the gold from such land. It appears that a large quantity of gold has been wrongfully removed from the land without the sanction of the Crown and without paying any royalty thereon.

Baxtrom and party, it is stated, had no intention to evade the law, and are now prepared to pay any royalty due. I do not know whether the royalty can now be received, or whether, in view of the 7th section of the Act aforesaid, the Attorney-General will consider that the parties should be punished; but if the royalty can be received it is not clear how the amount due is to be ascertained. As it appears to me, the questions to be decided are: 1. Should Connelly's permit be cancelled? 2. If so, should he receive compensation; and if so, by whom should it be paid? 3. Should Baxtrom and party be prosecuted for removing gold without permission, and if not, should they pay the royalty due?

H.W., 5/5/87.

Submitted.

After going through these papers I do not feel justified in altering the decision of the late Minister for Lands (Mr. Copeland). Replying to the questions submitted by the Under Secretary in their order: 1. I decide that Connelly's permit should be cancelled. 2. He should not receive any compensation. 3. Baxtrom and party should not be prosecuted for removing gold without permission, but should be called upon to at once pay the royalty on all gold taken out of the land.—F.A., 6/5/87.

Inform Mr. Connelly, and call upon Baxtrom and party to pay royalty upon all gold taken out of the land, portion 423, Parkes. The Warden should obtain from Baxtrom and party a statutory declaration as to the quantity of gold taken, and satisfy himself as far as practicable that a true return is made. Inform the members.—H.W., 7/5/87.

No. 55.

Mr. J. F. Connelly to The Secretary for Mines.

Sir,

Parkes, May, 1887.

I have the honor to submit to your notice that having been granted a permit from the Lands Department to mine and search for gold upon the improvement purchase of Mr. E. M'Gee, No. 423, situate upon the gold-fields reserve, town of Parkes, the great injustice I have suffered through an error of judgment on their part when after being put to an outlay of over £100, has been withdrawn from me, and the whole of the affair now held in abeyance.

Within the last three years I have completed considerably over 1,000 feet of sinking and driving in prospecting for Quaille's or any other line of reef (a plan of which I herein enclose).

I now beg that you will be pleased to call for the whole of my papers, &c., that have passed through the Lands Department for the past three years, and cause the same to be laid before the Assembly, showing the injustice I have been subjected to anent my applications to mine upon the said improvement purchase as compared with others.

I would also humbly ask:—

1. By what influence was Wm. Hazelhurst lately granted a permit to mine upon the said I.P., my application being prior by two years?
2. Why was my permit withdrawn after subjecting me to such expense?
3. What right has Quaille and party to mine such I.P. without a permit?
4. How did E. M'Gee become possessed of the decds of said I.P. situate on gold reserve?
5. When is a decision of the Mines and Lands Departments likely to be arrived at over same?

Trusting some light will be thrown upon this unsatisfactory state of affairs,—

I have, &c.,

JOHN F. CONNELLY, SENR.

See enclosure G.
Appendix G.

This matter has recently been decided by the Minister. I presume it is not intended to reopen the case.—H.W., 11/5/87. Approved.—F.A., 12/5/87.

ERNEST A. SHARPE,
Warden.

No. 65.

No. 65.

Mr. J. F. Connelly to The Secretary for Mines.

Sir,

Parkes, 26 August, 1887.

I respectfully beg to place before your notice the great injustice which has been done to the mining community of Parkes in reference to portion No. 423-80-4, sold to John M'Connell on the 18th January, 1884, who held said land without improvements or fulfilling the residence clause, he being an employé for Mr. E. M'Gee, was shifted and resided at different places to suit Mr. M'Gee's convenience, who afterwards bought said land from J. M'Connell, the said land being then lawfully occupied by surveyed and registered claims, viz., Messrs. Bolcher and party, and others who have been in full occupation before and since (refer dates in the Mining Registrar's Books).

I now beg that you will kindly cause an inquiry to be made to show and prove that said land was sold to John M'Connell for Mr. E. M'Gee's benefit as an undue preference to him as against all others in same locality, when the sale of all other lands on same hill was refused on account of its contiguity to the mines surrounding.

I therefore beg to ask that said piece of land be cancelled for the above reasons.

Under the above circumstances I respectfully beg to ask and hereby make application for part of said portion No. 423-80-4, town of Parkes, sold to John M'Connell on the 18th January, 1884, for to dig and search for gold under the Lands Act so provided, and guarantee not to interfere in any way whatever with any existing rights, and will do no injury to said land more than is required for ordinary mining purposes.

I have, &c.,

JOHN F. CONNELLY

(For Self and party).

The deed for the portion has issued. Application for permit under section 7 of the Land Act of 1884 has been made by E. M'Gee (the owner), and the application has been approved by His Excellency and the Executive Council. The permit is to-day being sent on for His Excellency's signature.—W.R.C., 22/9/87.

No. 1.

Application by Messrs. Houghton and Palmer.

The Honorable the Secretary for Mines, Sydney,—

Sir,

“Aaron’s Exchange Hotel,” Sydney, 31 July, 1886.

By virtue of our mineral licenses of 12th and 31st July, 1886, we hereby make application for permission, under the 28th section of the Mining Act, 1874, to mine for coal upon and under that portion, containing about 1,280 acres, of the reserves hereunder described, such portions being more particularly

See Appendix A defined on the sketch annexed.

We make this application subject to the notice of the 21st December, 1881, published in *Gazette* No. 542, and I agree to accept the permission, if granted, subject to the terms, conditions, and restrictions set forth in such notice.

We have, &c.,

V. T. SHERBROOKE HOUGHTON.
SAMUEL PALMER.

Description referred to.

All lands comprising portions Nos. 114, 115, and 221, parish of Kahibah, county of Northumberland, being portion of W.R. No. 27, notified 23rd November, 1875; also the whole of W.R. No. 4, notified 1st of January, 1867, including part R. 23a, notified 8th February, 1876, in all about 1,280 acres.

Conditions under which the Application for Authority is made.

1. The area upon or under which permission to mine for minerals or for gold, as the case may be, may be granted by virtue of an authority as aforesaid shall not exceed, in regard to coal or shale, 640 acres for each person, but several persons may make a joint application for any area not exceeding 6,000 acres; in regard to any mineral other than coal, shale, silver, and gold, 80 acres; and in regard to gold and silver, 20 acres.

2. In regard to mining for coal or shale upon or under any reserve (other than small reserves, such as roads, streets, &c.), the Secretary for Mines may impose a royalty of not less than 6d. per ton upon all coal or shale taken under such authority from any reserve, and may fix the times for payment of such royalty, and may, in any case in which it may appear to him expedient, require the persons to whom the authority is granted to pay periodically a certain fixed sum of money, and so long as such sum exceeds the royalty reserved under the authority, no further sum by way of royalty will be claimed, but if at any time, upon adjustment, it appears that the royalty reserved upon the coal or shale raised to date amounts to more than has been received to such date by such periodical payments, the difference may be thereupon claimed.

3. In regard to mining for minerals other than coal, shale, or gold under any reserve (other than small reserves, such as roads, streets, &c.), the Secretary for Mines may impose a royalty not less than 5 per centum upon the value of the ore raised from such reserve, and may fix the times for payment of such royalty, and may, in any case in which it may appear to him expedient, require the persons to whom the authority is granted to pay periodically a certain fixed sum of money, and so long as such sum exceeds the royalty reserved under the authority no further sum by way of royalty will be claimed, but if at any time, upon adjustment, it appears that the royalty reserved upon the minerals raised to date amounts to more than has been received to such date by such periodical payments, the difference may be thereupon claimed.

4. In regard to mining upon or under small reserves, such as roads, streets, &c., for coal, shale, or other minerals, the Secretary for Mines may require the persons to whom the authority is granted to hold a certain number of mineral licenses, instead of paying royalty.

5. In regard to mining for gold upon or under any reserve, the Secretary for Mines may require the person to whom the authority is granted to hold such a number of miner’s rights as shall appear to him necessary to represent a reasonable rent for the use of the land.

6. The Secretary for Mines may require the person to whom any such authority is granted to deposit such a sum of money as he may think fit as security that such person will make good any damage that may be done to any road, street, or reserve, or to any adjoining property by reason of the mine works carried on under or in connection with such authority.

V. T. S. Houghton, No. 140, 12 July, 1886; S. Palmer, No. 155, 31 July, 1886; received, 11.30 a.m., £6 cheque.—E.C.P., 3/8/86. Receipt sent, 5/8/86; *Gazette* notice, 6/8/86; copies herewith for Lands and Examiner; Chief Draftsman for sketches, please.—W.L., 9/8/86. Mr. J. H. Mayes, 12/8/86. Entered, sketches herewith—P.D., *pro* S.W., 16/8/86. Chief Mining Surveyor, Chief Clerk.—E.F.B., 18/8/86. Mines, 18/8/86. Copies sent, 19/8/86. Chief Draftsman,—Please state if survey is necessary.—W.C., 19/8/86. Survey necessary for that portion of W.R. 4, included in the application; fee £8, with 50 per cent. added, in all £12.—P.D., *pro* Chief Draftsman, 1/10/86. The Chief Mining Surveyor,—It is recommended that survey fee (£12) be asked for.—E.F.P., 6/10/86. The Under Secretary Mines, 6/10/86. Approved.—H.W., 11/10/86. Asked, 14 Oct., 1886. Appendix A.

Government Gazette Notice.

COPY of advertisement which appeared in the *Government Gazette* of the 6th, 13th, 20th, and 27th August, 1886, and in the *Daily Telegraph* on the 14th August, *Evening News* on the 26th August, and *Sydney Morning Herald* on the 20th August, 1886, and four insertions in the *Newcastle Call*.

Department of Mines, Sydney, 6 August, 1886.

APPLICATION received in the Department of Mines for permission to mine under roads, &c., &c., under the Mining Act, 1874, section 28.

JAMES FLETCHER.

Date of Application	Date of Receipt of Application.	Name.	Description of Land applied for.	Extent.	Purpose for which land is to be used.
31 July, 1886	3 Aug., 1886	V. T. Sherbrooke Houghton and Samuel Palmer.	Part of water reserve 27, being portions 114, 115, and 221; also whole of water reserve 4, including part of reserve 23a., parish of Kahibah, county of Northumberland.	About a. r. p. 1,280 0 0	To mine for coal.

No. 3.

Report of The Examiner of Coal-fields.

W.R. No. 4 has been previously applied for by sundry persons, and in my report of 27/4/84 on Mr. Lane's application I said I know of no objections to granting authority to mine under it on the usual terms. I also know of no objection of granting authority to mine under portions 114 and 115, applied for, to the applicants, if there is no prior application.

J.M., 7/9/86.

Under Secretary for Mines, B.C., 7/9/86.

No. 4.

Mr. V. T. S. Houghton to The Under Secretary for Mines.

Sir,

"Aaron's Exchange Hotel." Sydney, 7 October, 1886.
I do myself the honor of herewith enclosing £12, the survey fee for W.R. No. 4, parish of Kahibah, county of Northumberland, in satisfaction of application under the 28th section by Messrs. Houghton & Palmer.

I have, &c.,

V. T. S. HOUGHTON.

£12.—E.C.P., 27/10/86. Amount to Treasury. Receipt acknowledged, 30/10/86. Secn.—H.W., 30/10/86. The Lands Department may perhaps be asked to expedite report.—W.R.C., 30/10/86. Yes.—H.W., 30/10/86. Lands Department asked, 1/11/86. Instructions may be issued to Mining Surveyor, J. T. Gray.—E.F.P., 1/11/86. Chief Draftsman. Mr. Gray instructed, 10/11/86.

No. 5.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines, Sydney, 1 November, 1886.
I have the honor to request that you will be good enough to cause the report on the application of Messrs. Houghton & Palmer, for permission, under the 28th section of the Mining Act of 1874, to mine on and under about 1,280 acres of water reserves, Nos. 27 and 4, parish of Kahibah, county of Northumberland, to be expedited.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 6.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir,

Department of Lands, Sydney, 12 November, 1886.
Referring to your letter of the 1st instant, relative to an application by Messrs. Houghton & Palmer, for permission, under the 28th section of the Mining Act of 1874, to mine on and under about 1,280 acres of water reserve, Nos. 27 and 4, parish of Kahibah, county of Northumberland, I have the honor to inform you that the matter is at present under reference to the District Surveyor.

I have, &c.,

STEPHEN FREEMAN

(For the Under Secretary).

Await Lands, report and plan.—W.R.C., 16/11/86.

No. 7.

No. 7.

Mr. Mining-Surveyor Gray to The Chief Mining Surveyor.

Sir,

Winding Creek, 3 December, 1886.

*Appendix B.

I have the honor to transmit herewith the plan*, together with three tracings, of portion M.P. 177, parish of Kahibah, county of Northumberland, the survey of which has been effected by me in accordance with your instructions.

I have, &c.,

JAMES T. GRAY.

Submitted that this application be referred for the consideration of the Local Land Board.—R.H.D., 31/8/86. S.F., 31/8/86. Approved.—H.C., 1/9/86. The Chairman, Land Board, Metropolitan District, for consideration, 6/9/86. The Metropolitan District Surveyor for report.—T. WARRE HARRIOTT, Chairman. Sydney, 7/9/86. The Chairman, L.L. Board, Sydney. This land is in the district under the supervision of Mr. District-Surveyor Allworth.—J.W.D., Metropolitan District-Surveyor, 10/9/86. The District Surveyor, East Maitland, for report. Lands, B.C., 25/9/86. Returned to Lands Department, as the land referred to herein is not within the Metropolitan Land Board Division.—D.H. (for Chairman). L.B. Office, Sydney, 18/9/86.

Telegram to V. T. S. Houghton.

"Aaron's Exchange," 8 November, 1886.

Yes; forwarded to Lands Department on the 5th instant. Collect, Houghton & Palmer.

J. W. ALLWORTH,
District Surveyor, East Maitland.

M.L. for coal, parish of Kahibah, county of Northumberland.

I am not aware of any objection to granting the permission. I would, however, point out that part of portion 114 falls only within the Newcastle population area. Is this a reserve within the meaning of the 28th section of the Mining Act of 1874.—J. WITTE ALLWORTH, District Surveyor, 4/11/86.

Submitted that this report be forwarded for the information of the Mines Department.—R.H.D., 10/11/86. S.F., 15/11/86. The Under Secretary for Mines. Department of Lands.—R.H.D. (for the U.S.), B.C., 16/11/86.

S6-13,539. V. T. S. Houghton and another—28th section—1,280 acres.—The Examiner of Coal-fields has furnished his report herewith. The Lands Department has also reported. Attention is invited to that part of the District Surveyor's report respecting portion 114. Survey is necessary in this case. Fee, £12, paid, and the surveyor has been instructed to measure the land, but has not furnished his plan yet.—W.R.C., 18/11/86.

Submitted. Surveys should be expedited, and application dealt with as speedily as possible.—H.W., 18/11/86. The Chief Mining Surveyor.—G.E.H. (for the U.S.), 18/11/86. I believe the survey has already been made, but the plan has not yet been received. Let action be expedited as soon as it arrives.—E.F.P., 18/11/86. Chief Draftsman.

The Lands Department and the Examiners' reports have been received. No objections reported. It is submitted as to whether the application may be granted, provided no prior application for the same area has been granted or is pending.—W.R.C., 9/12/86.

Submitted for approval.—G.E.H. (for the U.S.), 9/12/86.

V. T. S. Houghton and another. Authority, 352. 1,263 acres, being part of W.R. 4, part of W.R. 27, and part of reserve 23a, county Northumberland, parish Kahibah, portions Nos. 115, M.P. 177, and part of portion 114, 610-325, 82-2-14. The areas comprised in portions M.P. 177 and 221 are now held by the parties under M.Ls. 215 and 216 (48 Vic. No. 107), and Mr. Houghton, on the 2nd instant, tendered the sum of £14 5s. rent in respect of the balance of the area, viz., 569 acres 2 roods 1 perch. It is submitted as to whether the amount may be accepted and be paid to Treasury (Revenue Account).—W.R.C., 5/4/87.

Full rent on the 1,263 acres under authority has been paid to the 31st March ultimo. The rent under leases 215 and 216 (being portions of the 1,263 acres) has been paid for one year in advance, from 26th March, 1887. He now tenders the rent under authority for the balance of the 1,263 acres for one quarter in advance, from the 31st March ultimo. I think such rent should be accepted. Submitted.—H.W., 6/4/87. Approved.—F.A., 7/4/87.

The amount having been paid to Suspense Account may perhaps be transferred to Revenue from Suspense Account, and the Treasury be informed as above as to the amount £14 5s. being received. Submitted.—W.R.C., 7/4/87. Approved.—G.E.H. (for the Under Secretary), 14/4/87.

Will the Chief Mining Surveyor please state whether the whole of the area previously held under the within permit is now held under mineral lease?—W.R.C., 27/7/87. Chief Draftsman.—E.F.P., 28/7/87. Mr. J. H. Mayes, 28/7/87.

Area held under application.—Lease, 215; in force, 87-1; Newcastle, M. 4,280. Lease, 216; in force, 87-2; Newcastle, M. 4,281. Lease, 241; in force, 87-7; Newcastle, M. 4,332. Lease, 242; in force, 87-8; Newcastle, M. 4,333.—J.H.M., 22/7/87. W.S.C., 29/7/87.

The Under Secretary.—C.S.W. (for C.M.S.), 5/8/87. Please give dates of above leases.—W.R.C., 13/8/87. M.L. 215, section 48, 26th March, 1887; M.L. 216, section 48, 26th March, 1887; M.L. 241, section 48, 26th May, 1887; M.L. 242, section 48, 26th May, 1887.—E.C.P., 16/8/87. Rent under the authority has been paid to the 30th June, 1887. It is submitted as to whether these papers may now be put away.—W.R.C., 16/8/87. Yes.—H.W. The land being now covered by leases, the authority, No. 352, may be cancelled.—H.W., 17/8/87. Submitted. Approved.—F.A., 18/8/87.

No. 8.

Copy of Permit issued to Messrs. Houghton & Palmer.

Schedule A.—Authority to mine—issued under section 28. Mining Act, 1874.

VICTOR THOMAS SHERBROOKE HOUGHTON and Samuel Palmer, each being the holder of a mineral license, having applied to me in writing, in accordance with section 28 of the Mining Act, 1874, and I having inquired into the case and decided that the same can be effected without injury to adjoining property, or injury

injury or obstruction to water reserve 4, part of water reserve 27, and part of reserve 23a, county of Northumberland, parish of Kahibah, I, James Fletcher, the Secretary for Mines for the Colony of New South Wales, in pursuance of the power to me given in this behalf by the said Act, do, by this order, authorize, empower, and permit the said Victor Thomas Sherbrooke Houghton and Samuel Palmer, hereinafter called lessees, to mine for coal under all those parts of the reserves aforesaid, being portions Nos. 115 and M.P. 177, and part of portion No. 114, delineated in the diagram on the other side hereof,* and containing, exclusive of all reserved roads, except that shown from A to B on diagram, 1,263 acres, upon condition that the said lessee shall not mine under this authority in any place other than that hereinbefore described, and on the terms and conditions set out on the back hereof, so far as they are applicable to this authority, and on the further special terms and conditions, and subject to the restrictions following, that is to say:—

See Appendix (a)

- First.—That the said lessees, during their occupancy under this authority, shall each be the holder of one mineral license in force, which shall be produced at the Department of Mines on the 12th and 31st days of July in each year, and failure therein shall render this authority void, and shall on delivery of this authority pay the sum of £6 10s. 5d., as rent for the quarter ending 31st December, 1886, and thereafter shall pay the sum of £31 11s. 6d., on the first day of January, April, July, and October in each year, and shall on the 1st day of January, April, July, and October respectively, in each year, pay to the Colonial Treasurer, by way of royalty, a sum equal to 6d. for every ton of coal raised from under the said reserves during the three months next preceding the day on which such payment should be made as aforesaid. Provided that if the royalty for any quarter shall exceed the sum of £31 11s. 6d., no rent shall be payable for such quarter; but if during any quarter the royalty at the rate aforesaid does not amount to the said sum of £31 11s. 6d. such sum shall be paid as rent for that quarter in lieu of royalty.
- Second.—That plans and sections of the mine, and books and vouchers showing the quantity of coal raised, shall be kept by the lessees, and shall, together with the mine works, be open at all times to the inspection of the Examiner of Coal-fields or such officer as the Secretary for Mines shall authorize to inspect the same.
- Third.—That no excavation shall be made or carried under any public railway line, or any building or erection, or within 30 feet thereof, or of any site upon which any building is about to be erected, or under any road or street within the portions, except the road aforesaid, and that the said lessees shall in no way interfere with the surface of such reserves without the express sanction in writing of the Secretary for Mines aforesaid, who may, and if necessary shall, before giving such sanction, require the said lessees to deposit in the hands of the Colonial Treasurer a sum of money sufficient to cover the cost of repairing any damage that may be done to any such building or erection by reason of such excavation, and may impose such conditions as he shall deem advisable.
- Fourth.—The Secretary for Mines may, at any time, by an order in writing, or by a notice in the *Government Gazette*, prohibit the construction of mine works under such portion of the reserve as shall or may be required for any public purpose, until such Secretary shall be satisfied that such works may be carried on without interfering with such purpose.
- Fifth.—That all mine works within the portion of the reserves hereby permitted to be mined under shall be commenced on or before the 14th day of June, 1887, by six miners, workmen, or others and shall thereafter be carried on by such number of miners, workmen, or other persons, and shall be constructed in such a manner as shall be satisfactory to the Secretary for Mines.
- Sixth.—Such works shall at all times be open to inspection by the Examiner of Coal-fields or such officer as the Secretary for Mines shall authorize to inspect the same; and if it shall appear to the Secretary for Mines that the work has not been commenced, or is not being carried on as aforesaid, or that any excavation or mine work is being, or has been, so made or constructed as to endanger or injure any adjoining property, or to interfere with the use or enjoyment of the said reserves aforesaid, or any public railway line, or any building or erection, or if for any other reason it shall appear to the Secretary for Mines expedient so to do, he may cancel this authority, and thereupon the right to mine under the said reserves shall cease and determine absolutely.
- Seventh.—And if the said lessees shall continue to mine under the said reserves after notice of cancellation of this authority shall have been served upon them or published in the *Government Gazette*, they shall be liable to be prosecuted for unlawfully mining under reserved land, in terms of the Mining Act, 1874, section 123.

And if the said reserves shall at any time during the existence of this authority be cancelled, or if the said lessees shall fail to observe, perform, and keep all and every the terms and conditions upon which this order or permission is granted as aforesaid, or shall mine in any way contrary to the restrictions hereinbefore stated, then, and in any such case, the permission and authority hereby given shall immediately cease and determine. And the occupation of such reserves under this authority, and the making of improvements or construction of works thereunder, shall confer no right to purchase the land in virtue of improvements or otherwise, or entitle the said lessees to any compensation upon the cancellation of the reserves or of this authority.

In witness whereof, I have hereunto set my hand, at Sydney, in the said Colony, this 14th day of December, in the year of our Lord 1886.

JAMES FLETCHER,
Secretary for Mines.

We hereby accept the within permit upon the terms herein stated,—

V. T. SHERBROOKE HOUGHTON,
SAMUEL PALMER

(By his Agent,—V. T. S. HOUGHTON).

Witness,—

W. LLOYD, 14/12/86.

Authority

Authority from Samuel Palmer for V. T. S. Houghton to sign for him.

Brook-street, Newcastle, 13 December, 1886.

THIS is to certify that I, Samuel Palmer, do hereby authorize V. T. S. Houghton, of "Aaron's Exchange Hotel," Sydney, to sign on my behalf all papers in connection with our joint application for permission to mine under water reserve No. 4 and sections 114 and 115, portions, county Kahibah.

SAMUEL PALMER.

Witness,—JOHN REAY.

No. 9.

The Under Secretary for Mines to The Under Secretary for Finance and Trade.

Sir,

Department of Mines, Sydney, 16 April, 1887.

I have the honor, by direction of the Secretary for Mines, to inform you that the balance of rent, amounting to £14 5s., tendered by Mr. V. T. S. Houghton and another, in respect to authority No. 352, may be accepted; and I am to request that you will be good enough to move the Colonial Treasurer to cause the amount above-mentioned, which was placed to Suspense Account on the 7th instant, to be transferred to Revenue.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 1.

Application by Mr. V. T. S. Houghton.

"Aaron's Exchange Hotel," Sydney, 2 August, 1886.

The Honorable the Secretary for Mines, Sydney,—

Sir,

By virtue of my mineral license of 12th July, 1886, I hereby make application for permission, under the 28th section of the Mining Act, 1874, to mine for coal upon and under that portion containing 480 acres, of the reserve hereunder described, such portions being more particularly defined on the sketch annexed

I make this application subject to the notice of the 21st December, 1881, published in *Gazette*, No. 542, and I agree to accept the permission, if granted, subject to the terms, conditions, and restrictions set forth in such notice.

I have, &c.,

V. T. SHERBROOKE HOUGHTON.

Description referred to.

All lands comprising portions 119 and 120, parish Kahibah, county Northumberland, being part of reserve 27, notified 23rd January, 1875.

Conditions under which the application for authority is made.

1.—The area upon or under which permission to mine for minerals or for gold, as the case may be, may be granted by virtue of an authority as aforesaid, shall not exceed, in regard to coal or shale, 640 acres for each person, but several persons may make a joint application for any area not exceeding 6,000 acres; in regard to any mineral other than coal, shale, silver, and gold, 80 acres; and in regard to gold and silver, 20 acres.

2.—In regard to mining for coal or shale upon or under any reserve (other than small reserves, such as roads, streets, &c.), the Secretary for Mines may impose a royalty of not less than 6d. per ton upon all coal or shale taken under such authority from any reserve, and may fix the times for payment of such royalty, and may in any case in which it may appear to him expedient require the persons to whom the authority is granted to pay periodically a certain fixed sum of money, and so long as such sum exceeds the royalty reserved under the authority no further sum by way of royalty will be claimed, but if at any time, upon adjustment, it appears that the royalty reserved upon the coal or shale raised to date amounts to more than has been received to such date by such periodical payments, the difference may be thereupon claimed.

3.—In regard to mining for minerals other than coal, shale, or gold under any reserve (other than small reserves, such as roads, streets, &c.), the Secretary for Mines may impose a royalty not less than 5 per centum upon the value of the ore raised from such reserve, and may fix the times for payment of such royalty, and may in any case in which it may appear to him expedient, require the persons to whom

whom the authority is granted to pay periodically a certain fixed sum of money, and so long as such sum exceeds the royalty reserved under the authority no further sum by way of royalty will be claimed, but if at any time, upon adjustment, it appears that the royalty reserved upon the minerals raised to date amounts to more than has been received to such date by such periodical payments, the difference may be thereupon claimed.

4.—In regard to mining upon or under small reserves, such as roads, streets, &c., for coal, shale, or other minerals, the Secretary for Mines may require the persons to whom the authority is granted to hold a certain number of mineral licenses instead of paying royalty.

5.—In regard to mining for gold upon or under any reserve, the Secretary for Mines may require the person to whom the authority is granted to hold such a number of miner's rights as shall appear to him necessary to represent a reasonable rent for the use of the land.

6.—The Secretary for Mines may require the person to whom any such authority is granted to deposit such a sum of money as he may think fit as security that such person will make good any damage that may be done to any road, street, or reserve, or to any adjoining property, by reason of the mine works carried on under or in connection with such authority

V. T. Sherbrooke Houghton—2S section application.

THE Lands Department has not yet furnished the required report. A reminder was sent respecting same on 1st instant. The Examiner of Coal-fields has reported, and his report is favourable. Survey is not necessary. It is submitted as to whether this application may be granted, subject to the usual conditions, provided no prior application for the same land has been granted or is pending.

W.R.C., 12/11/86.

Yes, submitted for approval.—H.W., 13/11/86. Approved.—J.F., 15/11/86. Chief Mining Surveyor, for action, 16/11/86. Chief Draftsman.—E.F.P. The Under Secretary for Lands, for report.—G.E.H. Copy of Permit.

Schedule A.—Authority to mine, issued under Section 28, Mining Act, 1874.

VICTOR THOMAS SHERBROOKE HOUGHTON, of Sydney, being the holder of a mineral license, having applied to me in writing, in accordance with section 28 of the Mining Act, 1874, and I, having inquired into the case and decided that the same can be effected without injury to adjoining property, or injury or obstruction to water reserve 27, county Northumberland, parish Kahibah, I, James Fletcher, the Secretary for Mines for the Colony of New South Wales, in pursuance of the power to me given in this behalf by the said Act, do, by this order, authorize, empower, and permit the said Victor Thomas Sherbrooke Houghton, hereinafter called lessee, to mine for coal under all those parts of the reserve aforesaid being portions 119 and 120 delineated in the diagram on the other side hereof,* and containing 480 acres, exclusive of roads running through the portions, upon condition that the said lessee shall not mine under this authority in any place other than that hereinbefore described, and on the terms and conditions set out on the back hereof, so far as they are applicable to this authority, and on the further special terms and conditions, and subject to the restrictions following, that is to say:—

See Appendix (b)

First.—That the said lessee during his occupancy under this authority shall be the holder of one mineral license in force, which shall be produced at the Department of Mines on the 12th day of July in each year, and failure therein shall render this authority void, and shall on delivery of this authority pay the sum of £2 17s. 6d. as rent for the quarter ending 31st December, and thereafter shall pay the sum of £12, on the 1st day of January, April, July, and October in each year, and shall, on the 1st day of January, April, July, and October respectively, in each year, pay to the Colonial Treasurer, by way of royalty, a sum equal to 6d. for every ton of coal raised from under the said reserve during the three months next preceding the day on which such payment should be made as aforesaid: Provided that if the royalty for any quarter shall exceed the sum of £12, no rent shall be payable for such quarter; but if during any quarter the royalty at the rate aforesaid does not amount to the said sum of £12, such sum shall be paid as rent for that quarter in lieu of royalty.

Second.—That plans and sections of the mine, and books and vouchers showing the quantity of coal raised, shall be kept by the lessee, and shall, together with the mine works, be open at all times to the inspection of the Examiner of Coal-fields or such officer as the Secretary for Mines shall authorize to inspect the same.

Third.—That no excavation shall be made or carried under any public railway line, or any building or erection, or within 30 feet thereof, or of any site upon which any building is about to be erected, or under any road or street within the portion, and that the said lessee shall in no way interfere with the surface of such reserve without the express sanction in writing of the Secretary for Mines aforesaid, who may, and if necessary shall, before giving such sanction, require the said lessee to deposit in the hands of the Colonial Treasurer a sum of money sufficient to cover the cost of repairing any damage that may be done to any such building or erection by reason of such excavation, and may impose such conditions as he shall deem advisable.

Fourth.—The Secretary for Mines may, at any time, by an order in writing, or by a notice in the *Government Gazette*, prohibit the construction of mine works under such portion of the reserve as shall or may be required for any public purpose until such Secretary shall be satisfied that such works may be carried on without interfering with such purpose.

Fifth.—That all mine works within the portion of the reserve hereby permitted to be mined under shall be commenced on or before the 10th day of June, 1887, by four miners, workmen, or others, and shall thereafter be carried on by such number of miners, workmen, or other persons, and shall be constructed in such a manner as shall be satisfactory to the Secretary for Mines.

Sixth.—Such works shall at all times be open to inspection by the Examiner of Coal-fields or such officer as the Secretary for Mines shall authorize to inspect the same; and if it shall appear to the Secretary for Mines that the work has not been commenced, or is not being carried on as aforesaid, or that any excavation or mine work is being, or has been, so made or constructed as to endanger or injure any adjoining property, or to interfere with the use or enjoyment of the said reserve aforesaid, or any public railway line, or any building or erection, or if for any other reason it shall appear to the Secretary for Mines expedient so to do, he may cancel this authority, and thereupon the right to mine under the said reserve shall cease and determine absolutely.

Seventh—

Seventh.—And if the said lessee shall continue to mine under the said reserve after notice of cancellation of this authority shall have been served upon him or published in the *Government Gazette*, he shall be liable to be prosecuted for unlawfully mining under reserved land, in terms of the Mining Act, 1874, section 123.

And if the said reserve shall at any time during the existence of this authority be cancelled, or if the said lessee shall fail to observe, perform, and keep all and every the terms and conditions upon which this order or permission is granted as aforesaid, or shall mine in any way contrary to the restrictions hereinbefore stated, then, and in any such case, the permission and authority hereby given shall immediately cease and determine. And the occupation of such reserve under this authority, and the making of improvements or construction of works thereunder, shall confer no right to purchase the land in virtue of improvements or otherwise, or entitle the said lessee to any compensation upon the cancellation of the reserve or of this authority.

In witness whereof, I have hereunto set my hand, at Sydney, in the said Colony, this 10th day of December, in the year of our Lord, 1886.

JAMES FLETCHER,
Secretary for Mines.

I hereby accept the within permit upon the terms herein stated.—

V. T. SHERBROOKE HOUGHTON.

Witness—WM. LLOYD, 14/12/86.

No. 7.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines, Sydney, 24 December, 1886.

I have the honor to forward herewith a tracing showing certain lands in the parish of Kahibah, county of Northumberland, under which permission to mine for coal, in terms of section 28 of the Mining Act of 1874, has been granted, under authority No. 352, to Victor Thomas Sherbrooke Houghton and Samuel Palmer.

I have, &c.,

GERARD E. HERRING
(For the Under Secretary).

No. 1.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 6.—Notice of application and deposit.

Sir

Newcastle, 17 January, 1887.

We have the honor to inform you that we have this day deposited with the Land Agent at Newcastle the sum of £61 10s., being the first year's rent in advance of 615 acres of land at Redhead, parish of Kahibah, county of Northumberland, for the purpose of mining for coal. The number of our application is 87-1.

We have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON.
SAMUEL PALMER.

The Under Secretary for Mines, Sydney.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 2.—Form of application under 48 Vic. No. 10, section 3.

To the Honorable the Secretary for Mines, Sydney,—
Sir,

Newcastle, 17 January, 1887.

We hereby make application for a mineral lease of that piece or parcel of land situated at Redhead, parish of Kahibah, county of Northumberland, containing 615 acres, of which we took possession on the 17th day of January, 1887, at the hour of 5 o'clock in the forenoon, for the purpose of mining thereon and therein for coal for a period of twenty years, by placing 3-foot stakes and 6-foot trenches at each angle thereof. The datum point is the south-west corner of water reserve No. 4, notified 1st January, 1867.

Notice of our having made this application will be given in accordance with the regulations in that behalf, and we hand herewith the sum of £61 10s., being the first year's rent in advance of the said land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £61 10s. deposited as aforesaid any cost to which in his opinion the Crown may have been put in, or about, or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than three men during the first three years of the term thereby created, and not less than six men during the remainder of such term. And shall, and will, at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon we shall and will forfeit the said sum of £61 10s., and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON,
of Sydney.
SAMUEL PALMER,
of Newcastle.

Description.

All that part of water reserve No. 4, notified 1st January, 1867, situated to the south of portions 221 of 79 acres, 58 of 40 acres, 49 of 56 acres 1 rood, 57 of 40 acres, and 92 of 44 acres 1 rood, situated in the parish of Kahibah, county of Northumberland, containing 615 acres.

This application was received by me this 17th day of January, 1887, at the hour of 10 o'clock in the forenoon, and is numbered 87-1.

ALEXANDER LUMSDAINE,
Crown Lands Agent, Newcastle.

Questions to be answered by applicants for lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or Land Agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such in writing. The statement, when complete, to be read over to, and signed by, the persons furnishing the answers:—

1. Were you, or each of you (applicants), the holder of a miner's right in force at the date of taking possession of the land referred to in application No. 87-1? Not within a gold-field.
2. Do you produce them? Stated to be in Sydney, in favour of V. T. S. Houghton.
3. What was the date and hour of the day when you took possession of the land referred to in application No. 87-1? 17th February, 1887, at 5 a.m.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
If No. 4 be replied to in the affirmative, then 5, 6, and 7.
5. What was the diameter of the posts? 3 inches.
6. How high did they project above the surface when fixed in the ground? 3 feet.
7. What was the length of each arm of each trench? and what was the depth of each trench? 6 feet; 9 inches.
8. If a substitute for post or trench was used, describe it.
9. At which angle of the land is the datum post fixed? South-west corner.
10. Did you affix a board or metal plate to the datum post? Board.
11. What was written or painted on such board or plate? Mineral lease applied for 17th January, 1887, by V. T. S. Houghton and S. Palmer.
12. Where did you post the notices, Schedule 1? At Crown Lands Office, Newcastle, and Post Office, Charlestown.
13. When did you post such notices? 17th January, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice in the form Schedule 1 upon every such person? and when? (See answer to question 14.)
16. Have you obtained the consent of every such person to the granting of the lease for which you apply? (See answer to questions 14, 15.)

I, Samuel Palmer, on behalf of Victor Thomas Sherbrooke Houghton and myself, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me and are correctly taken down in writing.

SAMUEL PALMER.

Application 87-1, at Newcastle.

Description.

610 acres 3 roods 25 perches, county of Northumberland, parish of Kabibah, portions M.P. 177. Commencing at the south-east corner of portion 92, and bounded thence on part of the north by part of the south boundary of that portion bearing south $87^{\circ} 50'$ west 11 chains 44 links; on part of the west by the east boundary of portion 57, bearing south $34'$ west 20 chains 50 links; again on the north by the south boundary of that portion bearing north $89^{\circ} 26'$ west 20 chains; on part of the east by the west boundary of that portion bearing north $34'$ east 20 chains 39 links; again on the north by part of the south boundary of portion 49 bearing west 9 chains 93 links; again on the west by the east boundary of portion 58 bearing south $35'$ east 20 chains 36 links; again on the north by the south boundary of that portion bearing south $89^{\circ} 25'$ west 20 chains 24 links; again on the west by part of the east boundary of portion 221 bearing south $35'$ east 60 links; again on the north by the south boundary of that portion bearing south $87^{\circ} 45'$ west 20 chains 1 link; again on the west by part of the east boundary of portion 90 bearing south $2^{\circ} 30'$ east 16 chains 48 links; on the remainder of the north by part of the south boundary of that portion bearing south $87^{\circ} 30'$ west 2 chains 54 links; on the remainder of the west by parts of the east boundaries of portions 115 and 116 bearing respectively south $1^{\circ} 30'$ east 28 chains 35 links and south $1^{\circ} 36'$ east 14 chains 73 links; on the south by part of the north boundary of portion 113 bearing north $88^{\circ} 29'$ east 91 chains 32 links to the edge of the high cliffs fronting the South Pacific Ocean; and on the remainder of the east by the edge of the cliffs northwards, to the point of commencement.

W.S.C.

Application No. 87-1, at Newcastle, for a Mineral Lease.

1. By whom application was received? Crown Lands Agent.
2. At what place? Newcastle.
3. Date and hour when received? 17th January, at 10 a.m.
4. Receipt for first year's rent, No. 87-1. Date? 17th January, 1887.
5. To whom receipt was issued? Samuel Palmer, of Newcastle, one of the two applicants.
6. Date when notice to survey was sent to surveyor? Portions surveyed.
7. Date when report and plan were received from the surveyor?
8. Names of objectors, and dates on which they lodged their objections by the 31st January, 1887? Nil lodged.
9. Date of inquiry? 3rd February, 1887.
10. Are the applicants holders of miners' rights? No; land not being within a gold-field, but of mineral licenses.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? No.
12. Is the time proposed for commencing work reasonable? Yes.
13. Is the number of men proposed to be employed reasonable? Yes.

ALEXR. LUMSDAINE,
Crown Lands Agent.

Crown Lands Office, Newcastle, 1st February, 1887.

Within W.R. 4, notified 1st January, 1867; within R. 23a, notified 8th February, 1876.

Mr. District-Surveyor Allworth reports that he does "not see any objections to granting permission to mine upon and under the area herein applied for." *Vide* 86-13,539, Mines. The area applied for is 615 acres, and the rent for this area (£61 10s.) was paid. The area available is only 611 acres, the rent for which is £61 2s. It is submitted that the balance of rent, 8s., be made available for the excess area in application 87-2.

Dealt with. Diagrams herewith.—W.S.C., 22/2/87. Chief Draftsman.—E.T.P., 4/2/87. Area within applied for is included in permit granted to same applicants, 9th December, 1886.—P.D. (*pro* C.D.), 4/2/87. Chief Mining Surveyor. The Under Secretary.—C.S.W. (for Chief Mining Surveyor), 15/2/87. Mines, 15/2/87. Authority 352 granted 9th December, 1886, to Houghton & Palmer still in force. Rent paid to 31st March, 1887. Submitted.—W.R.C., 15/2/87. May go on.—H.W., 15/2/87. The Chief Draftsman.—C.S.W. (for C.M.S.), 16/2/87.

Will the Examiner of Coal-fields please say whether it is necessary to reserve any of the surface, as the applicants cannot at present fix the best position to open out and work the coal?—S.B., 19/3/87. Under the above circumstances, I recommend that the surface be granted over the whole area, any portion of which may be resumed at any time.—J.M., 22/3/87. Under Secretary for Mines, B.C., 22/3/87. Approved.—H.W., 23/3/87.

No. 3.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 6.—Notice of Application and Deposit.

Sir,

Newcastle, 17 January, 1887.

We have the honor to inform you that we have this day deposited with the Land Agent at Newcastle the sum of £7 18s., being the first year's rent, in advance, of 79 acres of land at Redhead, parish of Kahibah, county of Northumberland, for the purpose of mining for coal. Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 2.—Form of Application under 48 Vic. No. 10, section 3.

To the Honorable the Secretary for Mines, Sydney.

Sir,

Newcastle, 17 January, 1887.

We hereby make application for a mineral lease of that piece or parcel of land situated parish of Kahibah, county of Northumberland, portion No. 221, containing 79 acres, of which we took possession on the 17th day of January, 1887, at the hour of 6 o'clock in the forenoon, for the purpose of mining thereon and therein for coal, for a period of twenty years, by placing 3-foot stakes and 6-foot trenches at each angle thereof. The datum point is the south-west corner of portion 221, of 79 acres.

Notice of our having made this application will be given in accordance with the regulations in that behalf, and we hand herewith the sum of £7 18s., being the first year's rent in advance of the said land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £7 18s. deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than two men during the first three years of the term thereby created, and not less than four men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, we shall and will forfeit the said sum of £7 18s., and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

Crown Lands Agent, Newcastle.

17th January, 1887.

Questions to be answered by Applicants for Mineral Lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or Land Agent, as the case may be, shall hand to the applicant or applicants, or his or their agent, to answer to the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to, and signed by, the person furnishing the answers:—

1. Were you, or each of you (applicants), the holder of a miner's right in force at the date of taking possession of the land referred to in application No. 87-2? Not within a gold-field.
2. Do you produce them (mineral license, 31st July, 1886)? In favour of S. Palmer, stated to be in Sydney.
3. What was the date and hour of the day when you took possession of the land referred to in application No. 87-2? 17th January, 1887, at 6 a.m.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
If No. 4 be replied to in the affirmative, then 5, 6, and 7.
5. What was the diameter of the posts? 3 inches.
6. How high did they project above the surface when fixed in the ground? 3 feet.
7. What was the length of each arm of each trench? and what was the depth of each trench? 6 feet; 9 inches.
8. If a substitute for post or trench was used, describe it.

9. At which angle of the land is the datum post fixed? South-west corner.
10. Did you affix a board or metal plate to the datum post? Board.
11. What was written or painted on such board or plate? Mineral lease applied for 17th January, 1887, by V. T. S. Houghton and S. Palmer.
12. Where did you post the notices, Schedule 1? At Crown Lands Office, Newcastle, and Post Office, Charlestown.
13. When did you post such notices? 17th January, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice in the form Schedule 1 upon every such person? and when? (See answer to question 14.)
16. Have you obtained the consent of every such person to the granting of the lease for which you apply? (See answers to questions 14 and 15.)

I, Samuel Palmer, on behalf of Victor Thomas Sherbrooke Houghton and myself, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me, and are correctly taken down in writing.

SAMUEL PALMER.

No. 7.

Copy of Lease issued to Messrs. Houghton and another.

THIS Indenture, made the 26th day of March, in the year of our Lord 1887, between Her Most Gracious Majesty Queen Victoria, of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales, and Samuel Palmer, of Newcastle, in the Colony aforesaid (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of £61 2s. paid by the said lessee on the 17th day of January, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisos hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement 610 acres 3 roods 25 perches, and more particularly described and delineated in the Schedule hereto or in the plan hereunto annexed, and numbered MP 177, and all those mines, veins, seams, or deposits of coal, in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for coal, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface of the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect, on that portion of the surface of the said land, all buildings,

buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper, to hold the said land, mine, and premises, with the appurtenances (subject nevertheless to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose.—Yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £61 2s. in advance, or in lieu thereof a royalty equal to 6d. for every ton of coal raised during the year, the first year's rent having been paid as aforesaid on the 17th day of January, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of March, 1889, shall be made to the Colonial Treasurer, in Sydney, on or before the 26th day of March, 1888, and thereafter on or before the 26th day of March in each and every year the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during that year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such rent or royalty shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever, in, upon, and about the said land and premises; and in every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees, under these presents shall cease and determine both at law and in equity. And the said lessees do hereby for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises, by employing thereon not less than three men for the first three years of the term.

3. And shall and will, after the expiration of the said three years, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the first of the said term, and during the usual hours of labour, six able and competent workmen and miners at the least; unless prevented by inevitable accident or during the execution of repairs: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person, who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than 3 feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon, in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal, without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and Assigns to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof,

17. And if the said lessees, their executors, administrators, or transferees, shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessees, their executors, administrators, or transferees, is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees, shall at any time during the said term fail to use such land *bonâ fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals the 28th day of March, 1887.

CARRINGTON.

Signed, sealed, and delivered by the within-named Victor Thomas Sherbrooke Houghton and Samuel Palmer, in the presence of.—

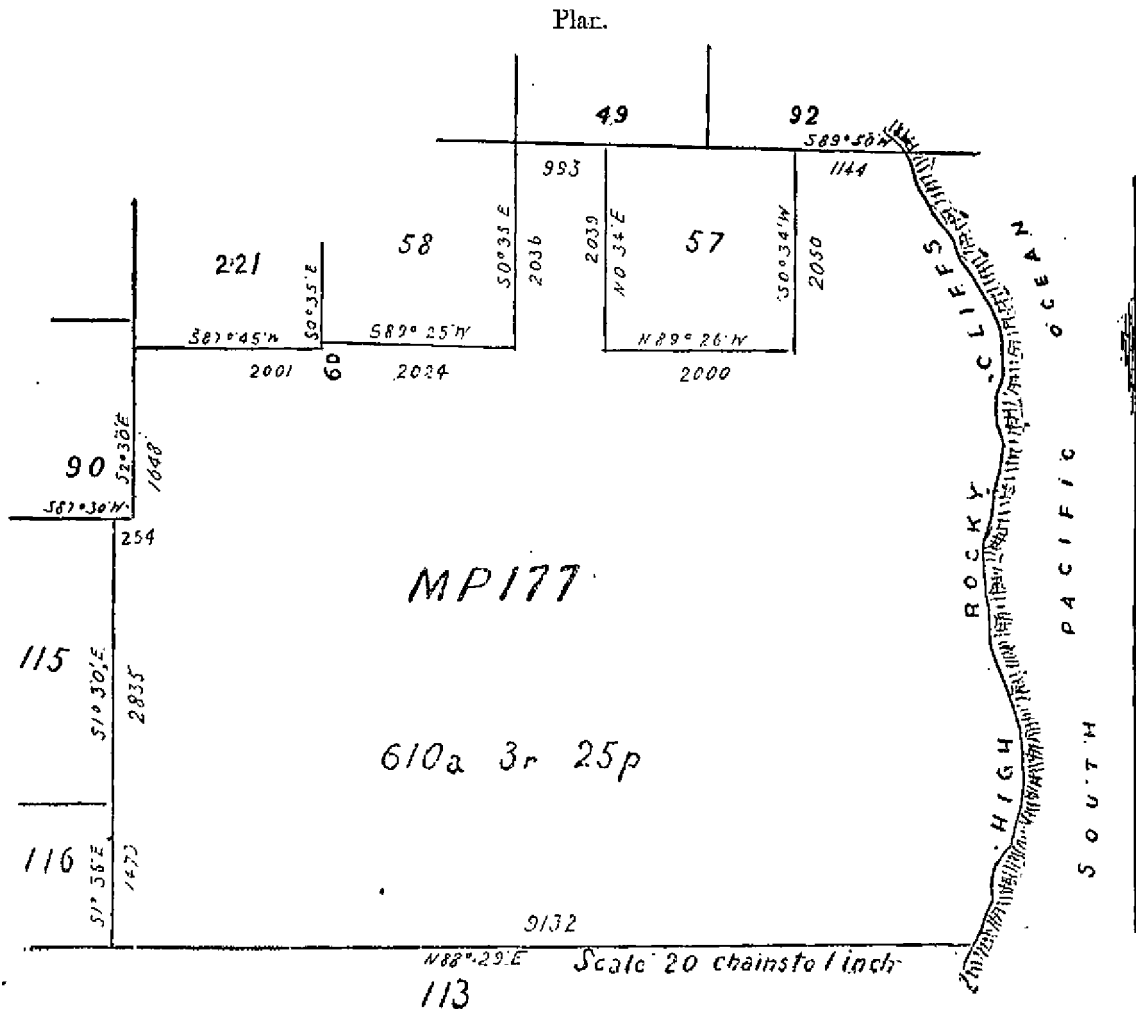

VICTOR THOMAS SHERBROOKE HOUGHTON.
SAMUEL PALMER.

STEPHEN T. BURCHER.

FRANCIS ABIGAIL.

Schedule.

610 acres 3 roods 25 perches. County of Northumberland, parish of Kahibah, portion M.P. 177: Commencing at the south-east corner of portion 92; and bounded thence on part of the north by part of the south boundary of that portion bearing south 87 degrees 50 minutes west 11 chains 44 links; on part of the west by the east boundary of portion 57 bearing south 34 minutes west 20 chains 50 links; again on the north by the south boundary of that portion bearing north 89 degrees 26 minutes west 20 chains; on part of the east by the west boundary of that portion bearing north 34 minutes east 20 chains 39 links; again on the north by part of the south boundary of portion 49 bearing west 9 chains 93 links; again on the west by the east boundary of portion 58 bearing south 35 minutes east 20 chains 36 links; again on the north by the south boundary of that portion bearing south 89 degrees 25 minutes west 20 chains 24 links; again on the west by part of the east boundary of portion 221 bearing south 35 minutes east 60 links; again on the north by the south boundary of that portion bearing south 87 degrees 45 minutes west 20 chains 1 link; again on the west by part of the east boundary of portion 90 bearing south 2 degrees 30 minutes east 16 chains 48 links; on the remainder of the north by part of the south boundary of that portion bearing south 87 degrees 30 minutes west 2 chains 54 links; on the remainder of the west by part of the east boundaries of portions 115 and 116 bearing respectively south 1 degree 30 minutes east 28 chains 35 links, and south 1 degree 36 minutes east 14 chains 73 links; on the south by part of the north boundary of portion 113 bearing north 88 degrees 29 minutes east 91 chains 32 links, to the edge of the high cliffs fronting the South Pacific Ocean; and on the remainder of the east by the edge of the cliffs northwardly, to point of commencement.

Registered in the Department of Mines, at Sydney, this 28th day of March, A.D. 1887, at the hour of 12 o'clock noon, and numbered in the Register 215.

(For the Registrar).

No. 8.

Copy of Lease issued to Messrs. Houghton and Palmer.

This indenture, made the 26th day of March, in the year of our Lord 1887, between Her Most Gracious Majesty Queen Victoria, of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales, and Samuel Palmer, of Newcastle, in the Colony aforesaid (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of £80 6s., paid by the said lessees on the 17th day of January, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisos hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land containing by admeasurement 82 acres 2 roods 14 perches, and more particularly described and delineated in the Schedule hereto or in the plan hereunto annexed, and numbered 221, and all those mines, veins, seams, or deposits of coal, in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon or under the said land for coal, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other work necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface of the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect, on that portion of the surface of the said land, all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper: to hold the said land, mine, and premises, with the appurtenances (subject nevertheless to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof,

hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose.—Yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £8 6s., in advance, or in lieu thereof a royalty equal to 6d. for every ton of coal raised during the year, the first year's rent having been paid as aforesaid, on the 17th day of January, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of March, 1889, shall be made to the Colonial Treasurer in Sydney, on or before the 26th day of March, 1888, and thereafter on or before the 26th day of March, in each and every year, the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during that year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such rent or royalty shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever, in, upon, and about the said land and premises; and in every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises, by employing thereon not less than two men for the first three years of the term.

3. And shall and will, after the expiration of the said three years, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the said term, and during the usual hours of labour, four able and competent workmen and miners at the least; unless prevented by inevitable accident or during the execution of repairs: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person, who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary lines as shall be necessary, so as plainly and accurately to define the boundary lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than 3 feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal,

coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees, from the Crown of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections and fixtures therein and thereon, in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless, the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal, without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always, and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and Assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land or of the surface thereof which shall be so required; and as soon as the same shall be so set out such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof.

17. And if the said lessees, their executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessees, their executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees shall at any time during the said term fail to use such land *bonâ fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone shall finally judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette*, containing a notice purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs, in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals, the 28th day of March, 1887.

CARRINGTON.

Signed, sealed, and delivered by the within-named Victor Thomas Sherbrooke Houghton and Samuel Palmer, in the presence of,—
STEPHEN T. BURCHER.

VICTOR THOMAS SHERBROOKE HOUGHTON.

No. 1.

Application by Mr. V. T. S. Houghton.

Mineral Lease Regulations.—Schedule 6.—Notice of application and deposit.

Sir,

Newcastle, 14 February, 1887.

I have the honor to inform you that I have this day deposited with the Crown Lands Agent, at Newcastle, the sum of £48, being the first year's rent in advance of 480 acres of land at Redhead for the purpose of mining for coal. The number of my application is 87-6.

I have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON.

The Under Secretary for Mines, Sydney.

No. 2.

Application by Mr. V. T. S. Houghton.

Mineral Lease Regulations.—Schedule 2.—Form of application.

To the Honorable the Secretary for Mines, Sydney,—

Sir,

Newcastle, 12 February, 1887.

I hereby make application for a mineral lease of that piece or parcel of land situated near Redhead, parish of Kahibah, county of Northumberland, containing 480 acres, of which I took possession on the 12th day of February, 1887, at the hour of 1 minute past 12 o'clock in the afternoon, for the purpose of mining thereon and therein for coal for a period of twenty years, by placing 3-foot stakes and 6-foot trenches at each angle thereof. The datum point is the south-west corner of portion No. 7, parish of Kahibah, county of Northumberland.

Notice of my having made this application will be given in accordance with the regulations in that behalf, and I hand herewith the sum of £48, being the first year's rent in advance of the said land.

I hereby acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £48, deposited as aforesaid, any cost to which, in his opinion, the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted I shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than four men during the first three years of the term thereby created, and not less than eight men during the remainder of such term. And shall and will, at any time when called upon, in terms of the regulations relating to mineral leases, to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, I shall and will forfeit the said sum of £48 and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON,

Sydney.

Description.

Description.

Portions 119 and 120, parish of Kahibah, county of Northumberland, being part of water reserve No. 27, notified 23rd November, 1875.

This application was received by me this 14th day of February, 1887, at the hour of 11 o'clock in the forenoon, and is numbered 87-6.

ALEXR. LUMSDAINE,
Crown Lands Agent, Newcastle.

Questions to be answered by applicants to lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or an Agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such in writing. The statement, when complete, to be read over to and signed by the person furnishing the answers:—

1. Were you or each of you (applicants) the holder of a miner's right in force at the date of taking possession of the land referred to in application? No.
2. Do you produce them?
3. What was the date and hour of the day when you took possession of the land referred to in application No. 87-6? 12th February, 1887, at 12.1.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
If No. 4 be replied to in the affirmative, then 5, 6, and 7.
5. What was the diameter of the posts? 3 inches.
6. How high did they project above the surface when fixed in the ground? 3 feet.
7. What was the length of each arm of each trench? and what was the depth of each trench? 6 feet; 9 inches.
8. If a substitute for post or trench was used, describe it.
9. At which angle of the land is the datum post fixed? South-west corner of portion 7.
10. Did you affix a board or metal plate to the datum post? Board.
11. What was written or painted on such board or plate? Mineral lease applied for by V. T. Sherbrooke Houghton, of Sydney.
12. Where did you post the notices, Schedule 1? At Crown Lands Office, Newcastle, and Post Office, Charlestown.
13. When did you post such notice? 14th February, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice in the form Schedule 1 upon every such person, and when? No.
16. Have you obtained the consent of every such person to the granting of the lease for which you apply? No.

I, V. T. Sherbrooke Houghton, on behalf of myself, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me, and are correctly taken down in writing.

VICTOR THOMAS SHERBROOKE HOUGHTON.

Witness to signature,—

ALEX. LUMSDAINE, Crown Lands Agent, Newcastle, 14/2/87.

Application No. 87-6, at Newcastle, for a Mineral Lease under 48 Vic. No. 10, Reserve 480 (320 × 160) acres, portions 119 and 120, at Redhead, parish of Kahibah, county of Northumberland.

1. By whom application was received? Crown Lands Agent.
2. At what place? Newcastle.
3. Date and hour when received? 14th February, 1887, at 11 a.m.
4. Receipt for first year's rent, No. 87-6, at 2s. per acre. Date? 14th February, 1887, £48.
5. To whom receipt was issued? Applicant, Victor Thos. Sherbrooke Houghton, of Sydney.
6. Date when notice to survey was sent to surveyor? Portions already surveyed.
7. Date when report and plan were received from the surveyor?
8. Names of objectors, and dates on which they lodged their objections?
9. Dates of inquiry? Notified for Saturday, 5th March, 1887, at 12 noon.
10. Is the applicant holder of a miner's right? Land not within a gold-field.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? No.
12. Is the time proposed for commencing work reasonable? Yes.
13. Is the number of men proposed to be employed reasonable? Yes.

ALEXR. LUMSDAINE,

Crown Lands Office, Newcastle, 7th March, 1887.

Crown Lands Agent, Newcastle.

Mining District, Hunter and Macleay; applicant's locality, near Redhead.

Application, No. 87-6, at Newcastle.

Description.

480 acres, county of Northumberland, parish of Kahibah, area included in portions 119 and 120: Commencing at the north-east corner of portion No. 5; and bounded thence on the north-west by the south-east boundary of that portion bearing south 45° west 33 chains 68 links; thence on part of the north-east by the south-west and north-west boundaries of that portion bearing respectively north 45° west 36 chains 98 links and north 45° east 9 chains, and the south-west boundary of portion No. 59 and a line bearing respectively north 45° 15' west 6 chains 35 links and south 45° west 6 chains 72 links; thence on part of the west by part of the east boundary of portion M.L. 1 bearing south 51 chains 71 links; thence on part of the south by part of the north boundary of portion No. 121 bearing east 55 chains 95 links; thence on part of the east by part of the west boundary of portion No. 61 bearing

bearing north 15 chains 76 links; thence again on the south by the north boundary of that portion bearing east 25 chains 70 links; thence again on part of the east by the west boundary of portion 62 and part of the west boundaries of portions 115 and 114, in all bearing north 40 chains 5 links; thence on part of the north by part of the south boundary of portion 83 bearing west 10 chains; thence again on part of the east by the west boundary of that portion bearing north 20 chains; thence again on part of the south by part of the north boundary of same portion bearing east 10 chains; then on the remainder of the east by part of the west boundary of portion 114 bearing north 20 chains 65 links; thence on the north by part of the south boundary of portion 108 bearing west 12 chains 21 links, a line bearing south 7 chains 31 links, a line and the south boundary of portion No. 7, in all bearing west 27 chains 73 links, part of the east boundary of portion 6 bearing south 10 chains 8 links, the south boundary of portion 6 bearing west 20 chains 12 links, part of the west boundary of same portion bearing north 17 chains 39 links, and part of the south boundary of portion No. 107 bearing west 21 chains 67 links; thence again on part of the west by a line bearing south 9 chains 90 links; thence on the remainder of the south-west by a part of the north-east boundary of T. Williams's 112 acres bearing south 45° east 20 chains 96 links; thence on the remainder of the south by part of the north-west and the north boundaries of portion No. 59 bearing respectively north 45° east 3 chains 69 links and east 16 chains 50 links; thence on the remainder of the west by the east boundary of that portion bearing south 21 chains 53 links to a creek forming the north-east boundary of portion No. 5 before mentioned; and thence by that creek in a south-easterly direction, to the point of commencement.

Exclusive of reserved roads, 1 chain wide, passing through the portion.

W.L.C.

J.H.M., 1/4/87.

Coal.—Application 87-6, at Newcastle.—V. T. Sherbrooke Houghton; 480 acres, portions 119 and 120, parish of Kahibah, county of Northumberland. Identical with area granted to same applicant under section 28, on 15th November, 1886. Within water reserve 27, notified 23rd November, 1875, and population boundary, Newcastle, portion 119, subject of application 86-13, Newcastle. Portion 120, included in application 86-12, at Newcastle.

These portions were measured in 1874 as mineral selections under the Crown Lands Occupation Act, 1861. Submitted as to form of measurement.—W.L.C., 1/4/87. J.H.M., 1/4/87. Chief Mining Surveyor.

The portion is already held under the 28th section by the same person who now applies for a mineral lease. Under the circumstances it is recommended that the dimensions be approved.—E.F.P., 2/4/87.

The Under Secretary Mines, 4/4/87. Submitted for approval.—G.E.H. (for the U.S.), 14/4/87. Approved.—F.A., 15/4/87. Chief Draftsman.—E.F.P., 18/4/87. Dealt with. Diagrams herewith.*—W.L.C., 18/4/87. 86-12, Newcastle, refused, 11/2/87. 86-13, Newcastle, refused, 11/2/87.—S.B., 4/3/87.

No. 3.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 6.—Notice of application and deposit.

Sir,

Newcastle, 14 February, 1887.

We have the honor to inform you that we have this day deposited with the Land Agent, at Newcastle, the sum of £32, being the first year's rent in advance of 320 acres of land at Redhead, for the purpose of mining for coal. The number of our application is 87-8.

We have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON.
SAMUEL PALMER

The Under Secretary for Mines, Sydney.

(By his Agent, V. T. S. HOUGHTON).

No. 4.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 2.—Form of application.

To the Honorable the Secretary for Mines, Sydney,—

Newcastle, 12 February, 1887.

Sir,

We hereby make application for a mineral lease of that piece or parcel of land situated at Redhead, parish of Kahibah, county of Northumberland, containing 320 acres, of which we took possession on the 12th day of February, 1887, at the hour of 6 o'clock in the forenoon, for the purpose of mining thereon and therein for coal for a period of twenty years, by placing 3-foot stakes and 6-foot trenches at each angle thereof. The datum point is the south-east corner of portion 115, parish of Kahibah, county of Northumberland.

Notice of our having made this application will be given in accordance with the regulations in that behalf, and we hand herewith the sum of £32, being the first year's rent in advance of the said land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £32 deposited as aforesaid any cost to which in his opinion the Crown may have been put in, or about, or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than three men during the first three years of the term thereby created, and not less than six men

men

men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, we shall and will forfeit the said sum of £32, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON,
Sydney.
SAMUEL PALMER,
Newcastle.

Description.

All lands comprising portion 115, parish of Kabibah, county of Northumberland, being part of water reserve No. 27, noted 23rd November, 1875.

This application was received by me this 14th day of February, 1887, at the hour of 11 o'clock, and is numbered 87-8.

ALEX. LUMSDAINE,
Crown Lands Agent, Newcastle.

Questions to be answered by applicants for mineral lease 87-8.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or an agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer in writing the following questions. The statement, when complete, to be read over to, and signed by, the persons furnishing the answers:—

1. Were you or each of you (applicants) the holder of a miner's right in force at the date of taking possession of the land referred to in application No. ?
2. Do you produce them ?
3. What was the date and hour of the day when you took possession of the land referred to in application No. 87-8? 12th February, 1887, at 6 a.m.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
If No. 4 be replied to in the affirmative, then 5, 6, and 7.
5. What was the diameter of the posts? 3 inches.
6. How high did they project above the surface when fixed in the ground? 3 feet.
7. What was the length of each arm of each trench, and what was the depth of each trench? 6 feet 9 inches.
8. If a substitute for post or trench was used, describe it
9. At which angle of the land is the datum post fixed? South-east corner.
10. Did you affix a board or metal plate to the datum post? Board.
11. What was written or painted on such board or plate? Mineral lease applied for by V. T. Sherbrooke Houghton, of Sydney.
12. Where did you post the notices, Schedule 1? At Crown Lands Office, Newcastle, and Post Office, Charlestown.
13. When did you post such notices? 14th February, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice in the form Schedule 1 upon every such person, and when? No.
16. Have you obtained the consent of every such person to the granting of the lease for which you apply? No.

I, V. T. Sherbrooke Houghton, on behalf of myself and Samuel Palmer, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me and are correctly taken down in writing.

VICTOR THOMAS SHERBROOKE HOUGHTON.

Witness to signature—ALEX. LUMSDAINE, Crown Lands Agent, Newcastle, 14/2/87.

Application No. 87-8, at Newcastle, for a mineral lease, under 48 Vic. No. 10. Reserve 320 acres (por. 115), at Redhead, parish Kabibah, county Northumberland.

1. By whom application was received.—Crown Lands Agent.
2. At what place.—Newcastle.
3. Date and hour when received.—14th February, 1887, at 12 noon.
4. Receipt for first year's rent, No. 87-8, date, 14th February, 1887, at 2s. per acre—£32.
5. To whom receipt was issued.—Applicant, Victor Thos. Sherbrooke Houghton, of Sydney, for himself and partner, Samuel Palmer, of Newcastle.
6. Date when notice to survey was sent to surveyor.—Portion already surveyed.
7. Date when report and plan were received from the surveyor.
8. Names of objectors, and dates on which they lodged their objections.—Thos. G. Alcock, of Redhead, Charlestown, on 28th February, 1887, at 3:30 p.m.
9. Dates of inquiry.—Notified for 5th March, 1887, at 12 noon.
10. Are the applicants holders of miners' rights? Land not within a gold-field.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? No.
12. Is the time proposed for commencing work reasonable? Yes.
13. Is the number of men proposed to be employed reasonable? Yes.

Crown Lands Office, Newcastle, 7th March, 1887.

ALEX. LUMSDAINE,
Crown Lands Agent, Newcastle.

This application may go on.—H.W., 29/3/87. Chief Draftsman.—E.F.P., 30/3/87. Mr. J. H. Mayes, 30/3/87. Diagrams in hand.—J.H.M., 18/4/87. Dealt with. Diagrams herewith.—W.S.C., 18/4/87. Will the Examiner of Coal-fields please say whether it is necessary to reserve any of the surface, as the applicants cannot at present fix the best position to open out and work the coal?—S.B., 17/5/87.

Mining

Mining district, Hunter and Macleay; applicant's locality, at Redhead.

Application No. 87-8, at Newcastle.

Description.

320 acres, county of Northumberland, parish of Kahibah, portion No. 115: Commencing at the north-east corner of portion No. 116; and bounded thence on part of the east by a line bearing north 27 chains 77 links; thence on a part of the north by part of the south boundary of portion 90a bearing south 89° 14' west 17 chains 44 links, part of the west boundary of that portion bearing north 46' west 3 chains, the south boundaries of portion 91 bearing south 89° 14' west 20 chains; thence again on part of the east by the west boundary of portion 91 bearing north 46' west 20 chains; thence again on part of the south by the north boundary of portion 91 bearing north 89° 14' east 20 chains, part of the east boundary of portion 91 bearing south 46' east 3 chains, and part of the north boundary of portion 90a, bearing north 89° 14' east 17 chains 71 links: thence on the remainder of the east by a line bearing north 3 chains 50 links; thence again on part of the north by the south boundary of portion 114 bearing west 88 chains 81 links; thence on part of the west by part of the east boundary of portion 119 bearing south 2 chains 7 links; thence again on the south by the north boundary of portion 62 bearing east 23 chains 68 links; thence again on part of the west by the east boundary of portion 62 bearing south 24 chains 50 links; thence on the remainder of the north by the south boundary of portion 62 bearing west 23 chains 68 links; thence on the remainder of the west by the east boundary of portion 61 bearing south 24 chains 70 links; and thence on the remainder of the south by the north boundary of portion 116, before mentioned, bearing east 88 chains 81 links, to the point of commencement. Exclusive of reserved roads 1 chain wide passing through this portion.

W.S.C.

J.H.M.—1/4/87.

Coal application, 87-8, at Newcastle. V. T. Sherbrooke Houghton and S. Palmer; 320 acres; being portion No. 115, parish of Kahibah, county of Northumberland. Within water reserve No. 27, notified 23rd November, 1875. Within population boundary, Newcastle. Included in area granted to Palmer & Houghton (under section 28), 9th December, 1886. This portion was subject of application 86-10, at Newcastle. Portion was measured in 1874 as a mineral selection, under C.L. Occ. Act 1861. Submitted as to form of measurement.—J.H.M. W.S.C., Chief Mining Surveyor, 1/4/87.

86-10, Newcastle, refused, 11/2/87.—S.B., 4/3/87.

The portion is already held under the 28th section of the Mining Act by the same persons who now apply for it as a mineral lease. Under the circumstances it is recommended that the dimensions be approved.—E.F.P., 4/4/87.

Submitted for approval.—G.E.H. (for the U.S.), 14/4/87. Approved.—F.A., 15/4/87. Chief Draftsman.—E.F.P., 16/4/87. Dealt with. Diagrams herewith.—W.S.C., M.C., 18/4/87.

Department of Mines.

Hunter and Macleay Mining District.

Applications, No. 87-6, 8, Newcastle, for mineral leases submitted herewith for the consideration of the Honorable the Minister for Mines.

The plans and descriptions have been checked.

No objections appear to have been made.

The number of men proposed to be employed appears reasonable.

The time for commencing work appears to be reasonable.

Applications, No. 87-6, 8, Newcastle Hunter and Macleay Mining District, approved of. Minute for the Executive Council.

No. 5.

Minute for the Governor and Executive Council.

Recommending the approval of certain Applications for Mineral Leases.

Department of Mines, Sydney, 26 April, 1887.

THE applications for Mineral Leases of Crown Lands specified in the annexed Schedule are submitted for the approval of His Excellency the Governor and the Executive Council, in terms of the Mining Act Further Amendment Act of 1884.

FRANCIS ABIGAIL.

Approved.—CARRINGTON, 5/5/87. The Executive Council approve of the course herein recommended, and advise that effect be given thereto.—A. C. BUDGE, Clerk of the Council. Min. 87-29., 5/5/87. Confirmed, 10/5/87. Gazette Notice, 17/5/87. The Examiner of Coal-fields as to reservation of roads.—S.B., 20/5/87. I see no objection to the roads being included in the lease, the coal not to be wrought from under them at a less depth than 500 feet.—J.M., 20/5/87. Under Secretary for Mines, B.C., 20/5/87. The works under the roads to be supported to the satisfaction of the Examiner of Coal-fields and Inspector of Colliceries.—H.W., 20/5/87.

A further sum for increased area is required on the following applications, viz., 87-8, 6s.; 87-6, £2 4s.; 87-7, 18s.; total, £3 8s. Perhaps the applicants might be asked to forward same.

Submitted.—S.B., 21/5/87. E.F., Acting Registrar, 23/5/87. £3 8s. Received.—E.F., 23/5/87. Amount to Treasury, Revenue Account. Receipt acknowledged.—E.F., 16/7/87. Noted.

No. 7.

Copy of Lease issued to Mr. V. T. S. Houghton.

THIS indenture, made the 26th day of May, in the year of our Lord 1887, between Her Most Gracious Majesty Queen Victoria of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales (hereinafter called the lessee), of the other part, witnesseth:—That in consideration of the sum of £50 4s., paid by the said lessee on the 14th day of February, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisos hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessee, his executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement 501 acres 2 roods, and more particularly described and delineated in the Schedule hereto or in the plan hereunto annexed*, and numbered 119 and 120, except the surface of that portion thereof tinted red, containing 21 acres 2 roods, more or less, and all those mines, veins, seams, or deposits of coal in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for coal, and also with full power for the said lessee, his executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface not excepted as aforesaid of the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessee, his executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject, nevertheless, to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, tinted red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessee, his executors, administrators, and transferees, from the date hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose,—yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £50 4s. in advance, or in lieu thereof a royalty equal to 6d. per ton on all coal raised during the year, the first year's rent having been paid as aforesaid on the 14th day of February, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of May, 1889, shall be made to the Colonial Treasurer, in Sydney, on or before the 26th day of May, 1888, and thereafter on or before the 26th day of May, in each and every year; the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year, or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during the year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such

Appendix (c)

such rent or royalty shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever, in, upon, and about the said land and premises; and in every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessee, his executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessee, his executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessee, his executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessee doth hereby, for himself, his heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessee, his executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises.

3. And shall and will, after the expiration of the said six months, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the first three years of the said term, and during the usual hours of labour, four able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than eight such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than three feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and, for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon, in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor, or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things, to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessee, his executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine, and will not for any purpose occupy any portion of the surface excepted as aforesaid, or make or construct any excavation, adit, level, gallery, or drive within 500 feet below the surface of the said land, or of the excepted portion thereof, without the sanction in writing of the Secretary for Mines. The works under the roads to be supported to the satisfaction of the Examiner of Coal-fields and Inspector of Collieries.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessee or his transferees, or in cases where the lessee or his transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always, and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land or of the surface thereof which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessee, his executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof.

17. And if the said lessee, his executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessee, his executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessee, his executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessee, his executors, administrators, or transferees shall at any time during the said term fail to use such land *bonâ fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessee, his executors, administrators, or transferees, and the lessee, his executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication

in

in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessee, his executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessee, his executors, administrators, and transferees to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessee, his executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs, in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessee has also set his hand and seal the 26th day of May, 1887.

No. 8.

Copy of Lease issued to Messrs. Houghton & Palmer.

THIS indenture, made the 26th day of May, in the year of our Lord, 1887, between Her Most Gracious Majesty Queen Victoria, of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales, and Samuel Palmer of Newcastle, in said Colony (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of £32 Gs., paid by the said lessees on the 14th day of February, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement 322 acres 1 rood, and more particularly described and delineated in the Schedule hereto or in the plan herunto annexed, and numbered 115, except the surface of that portion thereof tinted red, containing 2 acres 1 rood, more or less, and all those mines, veins, seams, or deposits of coal, in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for coal, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface not excepted as aforesaid of the said land, races, drains, dams, reservoir, roads, and tramways, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, tinted red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose,—Yielding and paying therefore unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £32 Gs. in advance, or in lieu thereof a royalty equal to 6d. per ton on all coal raised during the year, the first year's rent having been paid as aforesaid on the

14th day of February, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of May, 1889, shall be made to the Colonial Treasurer in Sydney, on or before the 26th day of May, 1888, and thereafter on or before the 26th day of May, in each and every year the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during that year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such rent or royalty shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever, in, upon, and about the said land and premises; and in every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition, make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises.

3. And shall and will, after the expiration of the said six months, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the first three years of the said term, and during the usual hours of labour, three able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than six such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than 3 feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the

the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon, in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine, and will not for any purpose occupy any portion of the surface excepted as aforesaid, or make or construct any excavation, adit, level, gallery, or drive within 500 feet below the surface of the said land, or of the excepted portion thereof, without the sanction in writing of the Secretary for Mines. The works under the roads to be supported to the satisfaction of the Examiner of Coal-fields and Inspector of Collieries.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal, without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always, and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months notice of his intention so to do, to cause to be set out the part or parts of the said land or of the surface thereof which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof.

17. And if the said lessees, their executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessees, their executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained

18. And, lastly, that if the lessees, their executors, administrators, or transferees shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

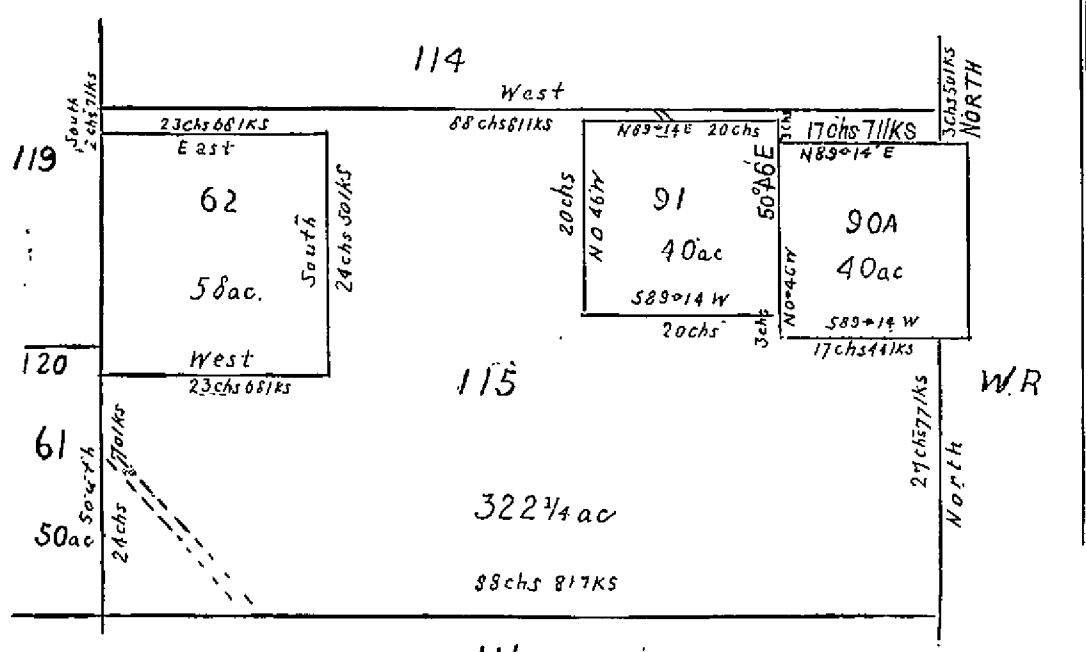

In witness whereof, His Excellency the Right Honorable Charles Robert Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals, the 26th day of May, 1887.

CARRINGTON.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule G.—Notice of Application and Deposit.

Sir, Newcastle, 14 February, 1887.
We have the honor to inform you that we have this day deposited with the Crown Lands Agent at Newcastle the sum of £25, being the first year's rent in advance of 250 acres of land at Redhead, for the purpose of mining for coal. The number of our application is 87-7.

We have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON.
SAMUEL PALMER

The Under Secretary for Mines, Sydney.

(By his Agent, V. T. S. HOUGHTON).

No. 2.

Application by Messrs. Houghton & Palmer.

Mineral Lease Regulations.—Schedule 2.—Form of Application.—No. 87-7.

To the Honorable the Secretary for Mines, Sydney,—

Newcastle, 12 February, 1887.

Sir,
We hereby make application for a mineral lease of that piece or parcel of land situated at Redhead, parish of Kahibah, county of Northumberland, containing about 250 acres, of which we took possession on the 12th day of February, 1887, at the hour of one minute past 12 o'clock in the forenoon, for the purpose of mining thereon and therein for coal for a period of twenty years, by placing 3-foot stakes and 6-foot trenches at each angle thereof. The datum point is the north-west corner of portion 114, parish of Kahibah, county of Northumberland.

Notice of our having made this application will be given in accordance with the Regulations in that behalf, and we hand herewith the sum of £25 sterling, being the first year's rent in advance of the said land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £25 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than three men during the first three years of the term thereby created, and not less than six men during the remainder of such term. And shall and will, at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, we shall and will forfeit the said sum of £25 and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

VICTOR THOMAS SHERBROOKE HOUGHTON,
Sydney.
SAMUEL PALMER,
Newcastle.

Description

Description.

All that part of portion No. 114, parish of Kahibah, county of Northumberland, coming within W.R. No. 27, notified 23rd November, 1875.

This application was received by me this 14th day of February, 1887, at the hour of 12 o'clock noon, and is numbered 87-7.

ALEX. LUMSDAINE,
Crown Lands Agent, Newcastle.

Questions to be answered by applicants for mineral lease No. 87-7.

When receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or Land Agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to and signed by the person furnishing the answers:—

- 1.* Were you or each of you (applicants) the holder of a miner's right in force at the date of taking possession of the land referred to in application No. ? * In regard to all applications for a gold lease.
- 2.* Do you produce them?
3. What was the date and hour of the day when you took possession of the land referred to in application No. 87-7? 14th February, 1887, at 12.1 p.m.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
If No. 4 be replied to in the affirmative, then 5, 6, and 7.
5. What was the diameter of the posts? 3 inches.
6. How high did they project above the surface when fixed in the ground? 3 feet.
7. What was the length of each arm of each trench; and what was the depth of each trench? 6 feet; 9 inches.
8. If a substitute for post or trench was used, describe it?
9. At which angle of the land is the datum post fixed? At north-west corner.
10. Did you affix a board or metal plate to the datum post? Board.
11. What was written or painted on such board or plate? Mineral lease, applied for by V. T. Sherbrooke Houghton, of Sydney, and Samuel Palmer, of Newcastle.
12. Where did you post the notices, Schedule 1? At Crown Lands Office, Newcastle, and Post Office, Charlestown.
13. When did you post such notices? 14th February, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice in the form Schedule 1 upon every such person, and when? No.
16. Have you obtained the consent of every such person to the granting of the lease for which you apply? No.

I, V. T. Sherbrooke Houghton, on behalf of Samuel Palmer and myself, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me and are correctly taken down in writing.

VICTOR THOMAS SHERBROOKE HOUGHTON.

Witness to signature,—

ALEX. LUMSDAINE, C.L.A., Newcastle.

14/2/87.

Application No. 87-7, at Newcastle, for a mineral lease under 48 Vic. No. 10, reserve 250 acres (portion 114), at Redhead, parish of Kahibah, county of Northumberland.

1. By whom application was received.—Crown Lands Agent.
2. At what place.—Newcastle.
3. Date and hour when received.—14th February, 1887, at 12 noon.
4. Receipt for first year's rent, No. 87-7, at 2s. per acre.—Date, 14th February, 1887; £25.
5. To whom receipt was issued.—Applicant, Victor T. Sherbrooke Houghton, of Sydney, for himself and Samuel Palmer, of Newcastle.
6. Date when notice to survey was sent to surveyor.—Portions already surveyed.
7. Date when report and plan were received from the surveyor.
8. Names of objectors, and dates on which they lodged their objections.—Thos. G. Alcock, of Redhead, Charlestown, on 28th February, 1887, at 3.30 p.m.
9. Dates of inquiry.—Notified, *pro sub.*, 5th March, 1887, at 12.1 noon.
10. Are the applicants holders of miners' rights? Land not within a gold-field.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? No.
12. Is the time proposed for commencing work reasonable? Yes.
13. Is the number of men proposed to be employed reasonable? Yes.

ALEX. LUMSDAINE,
C.L.A., Newcastle.

Crown Lands Office, Newcastle, 7th March, 1887.

Coal application, 87-7, at Newcastle. V. T. Sherbrooke Houghton and S. Palmer, about 250 acres, being all that part of portion No. 114, parish of Kahibah, county of Northumberland, within water reserve No. 27, notified 23rd November, 1875. Included in area granted to Houghton & Palmer (under section 28), 9th December, 1886, within water reserve 27, notified 23rd November, 1875, and population boundary, Newcastle. The whole of this portion was included in application 86-9 at Newcastle, but applicant (T. G. Alcock) consented to take the 70 acres available outside reserve boundary in 87-2,729. Portion No. 114 was measured in 1874 as a mineral selection under the Crown Lands Occupation Act, 1861.

Submitted

Submitted as to form of measurement.—W.C.C., 1 April, 1887. Chief Mining Surveyor.

In view of the fact that Houghton & Palmer already have a title to this land under the 28th section of the Mining Act, and as the prior applicant has consented to take the 70 acres available in satisfaction of application 86-9, it is now recommended that Houghton & Palmer's application (No. 87-7) be granted for the area shown by pink edging—about 250 acres.—E.F.P., 13/4/87.

Submitted for approval.—H.W., 3/5/87. Approved.—F.A., 5/5/87.

Department of Mines.

Hunter and Macleay Mining District.

Application No. 87-7, Newcastle, for gold-mining leases submitted herewith for the consideration of the Honorable the Minister for Mines.

The plans and descriptions have been checked.

No objections appear to have been made.

The Warden reports that the land does not belong to either of the classes exempted from the power of leasing.

The applicants are holders of miners' rights.

The number of men proposed to be employed appears reasonable.

The time for commencing work appears to be reasonable.

Application No. 87-7, Newcastle, Hunter and Macleay Mining District approved of.

Minute for the Executive Council.

F.A.

No. 3.

Mr. J. G. Alcock to The Land Agent, Newcastle.

Sir,

Charlestown, Newcastle, 28 February, 1887.

A notice being posted outside the Court-house, Newcastle, signed by Mr. V. T. Sherbrooke Houghton and Samuel Palmer, setting forth that they had made an application for a mineral lease of lots 114 and 115, as per plan* of the parish of Kahibah, I beg respectfully to protest against the leases being granted, as I have complied with the conditions of the Act, and made an application for these blocks in November and December last.

I have, &c.,

J. G. ALCOCK.

No. 4.

Report of Inquiry.

INQUIRY holden at the Crown Lands Office, in Newcastle, on Saturday, 8th March, 1887, at 12 o'clock noon, by the Crown Lands Agent at Newcastle, into objections duly lodged by Thomas G. Alcock, against the issue to the applicants of applications Nos. 87-7 and 8* (Victor Thos. Sherbrooke Houghton and Samuel Palmer), of mineral leases of portions and measurement of Crown Lands No. 114 and 115, consisting respectively of 250 and 320 acres, in parish of Kahibah, county of Northumberland, within the district of Newcastle.

Thomas Gerouse Alcock, being duly sworn, on oath, states:—On the 20th November last, I applied for the mineral lease (for the purpose of mining for coal) of portion 114, 320 acres, at Redhead, in the parish of Kahibah, county of Northumberland, and with reference to same. I complied with the conditions of the Act bearing upon the matter.

Applicants have no questions to ask.

T. G. ALCOCK.

Sworn at Newcastle aforesaid, this 5th day of }

March, 1887, before me,—

ALEX. LUMSDAINE, Crown Land Agent, Newcastle.

* Inquiry not gone into re application No. 87-8, for portion 115.—A.L., Crown Lands Agent, Newcastle.

Victor Thomas Sherbrooke Houghton, on oath, states:—We (myself and partner, Samuel Palmer) have been in possession of 250 acres (about) since the 3rd of August, 1886, by virtue of our mineral licenses of the 12th July, 1886, for myself, and of the 31st of July, 1886, for Mr. Palmer. The said 250 acres form part of reserve (water) No. 27, which also forms part of portion 114, in parish Kahibah, county of Northumberland.

Examined by objector:—

1. Did you comply with the regulations under the Mining Act with respect to your mineral license?

Yes.

2. How were you in prior possession of this portion No. 114? By virtue of our application of 3rd August, 1886, published in the *Government Gazette* of 13th August, 1886.

VICTOR THOMAS SHERBROOKE HOUGHTON.

Sworn at Newcastle, upon the 5th day of }

March, 1887, before me,—

ALEX. LUMSDAINE, Crown Lands Agent, Newcastle.

No. 5.

Minute for The Governor and Executive Council.

Recommending the approval of a certain Application for a Mineral Lease.

Department of Mines, Sydney, May, 1887.

THE application for mineral lease of Crown Lands specified in the annexed schedule is submitted for the approval of His Excellency the Governor and the Executive Council, in terms of the Mining Act of 1874.

FRANCIS ABIGAIL.

SCHEDULE

SCHEDULE alluded to:—
HUNTER AND MACLEAY MINING DISTRICT.

No.	Name.	Portion No.	Locality.	Area.	Period.	Date of Application.
Newcastle 87-7	V. T. S. Houghton and another.	Part of 114	Redhead, parish Kahibah	acres. 250	20	1887. 14 February.

The Executive Council advise that the recommendation herein set forth be approved, and the necessary notices issued.—A. C. BUDGE, Clerk of the Council. Min. 87-30, 10/5/87. Confirmed, 17/5/87. Approved.—CARRINGTON. *Gazette* notice, 25/5/87.

The Examiner of Coal-fields as to reservation of roads.—S.B., 20/5/87. I see no objection to the roads being included in the lease, the coal not to be wrought under them at a less depth than 500 feet.—J.M., 20/5/87.

Under Secretary for Mines, B.C., 20/5/87. The works under the roads to be supported to the satisfaction of the Examiner of Coal-fields or Inspector of Collieries.—H.W., 20/5/87.

No. 6.

Government Gazette Notice.

Department of Mines, Sydney, 25 May, 1887.

NOTICE TO APPLICANTS FOR MINERAL LEASE.

NOTICE is hereby given that the undermentioned application for mineral lease of Crown Lands has been approved by His Excellency the Governor and the Executive Council.
[87-6,227 ; 6,316]

FRANCIS ABIGAIL.

HUNTER AND MACLEAY MINING DISTRICT.

No.	Name.	Portion No.	Locality.	Area.	Years.	Date of Application.
Newcastle 87-7	V. T. S. Houghton and another.	Part of 114	County Northumberland, parish of Kahibah.	a. r. p. 250 0 0	20	14 Feb., 1887.

No. 7.

Copy of Lease issued to Messrs. Houghton and another.

This indenture, made the 26th day of May, in the year of our Lord 1887, between Her Most Gracious Majesty Queen Victoria, of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales, and Samuel Palmer, of Newcastle, in said Colony (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of £25 18s., paid by the said lessees on the 14th day of February, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisos hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement 258 acres 3 roods 10 perches, and more particularly described and delineated in the Schedule hereto or in the plan hereunto annexed,* and numbered 114, except the surface of that portion thereof tinted red, containing 5 acres 1 rood 24 perches more or less, and all those mines, veins, seams or deposits of coal, in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for coal, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface not excepted as aforesaid of the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, tinted red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose,—Yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £25 18s., in advance, or in lieu thereof a royalty equal to 6d. per ton on all coal raised during the year, the first year's rent having been paid as aforesaid on the 14th day of February, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of May, 1889, shall be made to the Colonial Treasurer in Sydney, on or before the 26th day of May, 1888, and thereafter on or before the 26th day of May in each and every year the yearly rent aforesaid shall be paid to the Colonial Treasurer

*Appendix (g).

Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during that year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such rent or royalty shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever, in, upon, and about the said land and premises; and in every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months, from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises.

3. And shall and will, after the expiration of the said six months, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the first three years of the said term, and during the usual hours of labour, three able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than six such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs. Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine, that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than 3 feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term, make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and

and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown, of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and, for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine, and will not for any purpose occupy any portion of the surface excepted as aforesaid, or make or construct any excavation, adit, level, gallery, or drive within 500 feet below the surface of the said land, or of the excepted portion thereof, without the sanction in writing of the Secretary for Mines. The works under the roads to be supported to the satisfaction of the Examiner of Coal-fields and Inspector of Collieries.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessee or his transferees, or in cases where the lessee or his transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always, and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land or of the surface thereof which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessee, his executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof.

17. And if the said lessee, his executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessee, his executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessee, his executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessee, his executors, administrators, or transferees shall at any time during the said term fail to use such land *bonâ fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessee, his executors, administrators, or transferees, and the lessee, his executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry, and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals the 26th day of May, 1887.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINING LEASES, BINGERA DISTRICT.

(APPLIED FOR BETWEEN 31ST DECEMBER, 1880, TO 31ST DECEMBER, 1885.)

Ordered by the Legislative Assembly to be printed, 27 March, 1888.

RETURN to an Order of the Honorable the Legislative Assembly, dated 3rd August, 1886, That there be laid upon the Table of this House, a Return showing,—

- “ (1.) The number of mining leases applied for in the Bingera District
“ from the 31st December, 1880, to the 31st December, 1885, with date of
“ applications and names of applicants.
“ (2.) The number of leases dealt with and the number still under con-
“ sideration.
“ (3.) The amount of moneys paid on the same, and the amount now due,
“ with names and dates.
“ (4.) The number of leases refused; also, the number of leases where the
“ labour conditions have been carried out.
“ (5.) The number of official visits paid by the Warden to the various
“ mining centres, the number of Wardens' Courts held, and the number
“ of mining cases dealt with during the present Warden's term of office.”

(Mr. Hassall.)

RETURN of Mining Leases in the Bingera District between 31st December, 1880, and 31st December, 1885.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT DIAMOND DRILL, No. A.
(INFORMATION RESPECTING APPLICATION FOR USE OF.)

Ordered by the Legislative Assembly to be printed, 7 February, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 16th December, 1887, That there be laid upon the Table of this House,—

“Copies of all correspondence and agreements between Mr. John Henry Mulholland, the Honorable the Secretary for Mines, the Under Secretary for Mines, and Mr. W. B. Henderson, Superintendent of Drills, and any other persons having reference to an application for the use of a Government Diamond Drill, No. A, dispatched to Clarence Siding some time between 1st and 8th April, 1885.”

(Mr. Frank Smith, for Mr. Hurley.)

NO.	SCHEDULE.	PAGE.
1.	J. H. Mulholland, Esq., to Under Secretary for Mines, applying on behalf of the Brookdale Coal, Shale, and Iron Mining Co., for use of diamond drill to bore for coal and shale at Dargan's Creek, near Clarence Siding. (Minute thereon.) 23 July, 1884	3
2.	Under Secretary for Mines to J. H. Mulholland, Esq., in reply to above. 29 July, 1884	3
3.	J. H. Mulholland, Esq., to Under Secretary for Mines, forwarding plan, &c. (Minute thereon.) 30 July, 1884	3
4.	Under Secretary for Mines to J. H. Mulholland, Esq., as to depth required to be bored. 2 January, 1885	3
5.	J. H. Mulholland, Esq., to the Under Secretary for Mines, that information as to depth, &c., will be supplied in a few days. (Minutes thereon.) 6 January, 1885	3
6.	Under Secretary for Mines to J. H. Mulholland, Esq., that drill is now available for work. 14 February, 1885	4
7.	Same to same, for appointment of day to meet Superintendent of Drills to inspect site. 2 March, 1885	4
8.	J. H. Mulholland, Esq., to Under Secretary for Mines, appointing a day as requested. (Minutes thereon.) 10 March, 1885	4
9.	Under Secretary for Mines to J. H. Mulholland, Esq., that a man will be sent to see the proposed site. 12 March, 1885	4
10.	J. H. Mulholland, Esq., to Superintendent of Drills, as to cost of boring at per foot or by the week. (Minutes thereon.) 8 April, 1885	5
11.	Under Secretary for Mines to J. H. Mulholland, Esq., stating price and conditions. 21 April, 1885	5
12.	J. H. Mulholland, Esq., to Under Secretary for Mines, that above letter will be laid before proprietors of the Company. 22 April, 1885	5
13.	Same to same, accepting drill on weekly terms. 6 May, 1885	5
14.	Superintendent of Drills to Under Secretary for Mines reporting supervision of recovery of core-barrel. 14 January, 1886	6
15.	Same to same, drawing attention to amount due for bore by Company up to 31st December, 1885. 17 February, 1886	6
16.	Under Secretary for Mines to J. H. Mulholland, Esq., forwarding account, &c. 25 February, 1886	6
17.	J. H. Mulholland, Esq., to Under Secretary for Mines, that he has convened a special meeting to deal with the account. (Minutes thereon.) 2 March, 1886	6
18.	J. H. Mulholland, Esq., to Superintendent of Drills, further respecting account due. (Minutes thereon.) 31 March, 1886	6
19.	Memo. Superintendent of Drills to Under Secretary for Mines, will advise by telegram when leaving Mitchell, and asking if the Brookdale Company have settled their account. (Minutes thereon.) 2 April, 1886	7
20.	Superintendent of Drills to Under Secretary for Mines, that he will leave on Wednesday, 7th instant, to inspect drill at Clarence Siding. 3 April, 1886	7
21.	Under Secretary for Mines to J. H. Mulholland, Esq., forwarding statement of amount due to 3rd April, 1886 (see enclosure). 5 April, 1886	7
22.	Superintendent of Drills to Under Secretary for Mines, re payment of above account. (Minute, &c.) 6 April, 1886	7
23.	Same to same, that unless amount due be paid the drill may be removed. (Minute thereon.) 9 April, 1886	8
24.	Under Secretary for Mines to J. H. Mulholland, Esq., further directing attention to amount due, and informing him that unless same be paid on or before the 14th inst. the matter will be placed in the hands of the Crown Law Officers for recovery. 12 April, 1886	8

76. Minute, Under Secretary for Mines, that Mr. Mulholland states that if a writ be issued at once for the amount due the money will be paid forthwith. November, 1887.....	22

GOVERNMENT DIAMOND DRILL, No. A.

No. 1.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

Brookdale Coal, Shale, and Iron Mining Company, Dargan's Creek.

Waterloo Chambers, 458, George-street,

Sydney, 23rd July, 1884.

Dear Sir,

On behalf of the proprietors of the abovenamed Company I write to ask you if we can have the use of the diamond drill to bore for coal and shale at Dargan's Creek, about 1 mile from Clarence Siding, Great Western Railway line. The site selected is about 50 yards from the rail line, and is perfectly level. We estimate to cut the first seam at about 230 feet, and the lower seam at about 700 from the surface. Plenty of water and coal for fuel is easily obtainable by rail from Lithgow. The country is of sandstone formation, and easily worked.

I enclose my cheque for £2 2s., the inspection fee, and if the Superintendent would let me know a day or two before he is prepared to inspect, I would arrange that one of the proprietors would meet him at Clarence Siding, and point out the proposed site where we wish to bore.

Trusting to be favoured with an early answer.

I am, &c.,

JOHN HY. MULHOLLAND,

(For Proprietors).

Applicant might be asked to supply a plan of the land, indicating thereon proposed site of bore.—W.B.H., B.C., 25/7/84. The Under Secretary for Mines. Approved.—H.W., 26/7/84.

No. 2.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 29 July, 1884.

With reference to your letter of the 23rd instant, in which you apply for the use of a diamond drill to bore for coal and shale at Dargan's Creek, I have the honor to request you to be good enough to furnish a plan showing the site of the proposed bore.

I have, &c.,

HARRY WOOD,

Under Secretary.

No. 3.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

Sir,

458, George-street, Sydney, 30 July, 1884.

In reply to your favour of yesterday, I now beg to hand you herewith * plan showing approximate site of bore marked with a red cross. The exact spot will be pointed out by the Company's representative at Dargan's Creek as soon as the Government Engineer visits the place; but please let me know a day or two before he leaves, so that I may make the necessary arrangements.

Appendix.

I remain, &c.,

JOHN HY. MULHOLLAND,

(For the Brookdale Company).

I recommend applicant be asked to name the depth it is intended to bore.—W.B.H., B.C., 2/1/85. The Under Secretary for Mines. Approved.—H.W., U.S., 2/1/85.

No. 4.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

2 January, 1885.

Referring to your letter of 30th July, 1884, in reference to putting down bore on the Brookdale Company's land at Dargan's Creek, I have the honor to request that you will be good enough to inform me the depth it is intended to bore.

I have, &c.,

GERARD E. HERRING,

(For the Under Secretary).

No. 5.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

The Brookdale Coal and Iron Company (Limited).

Waterloo Chambers, 458, George-street,

Sydney, 6 January, 1885.

Sir,

In reply to yours of the 2nd instant, re boring at Dargan's Creek, I am making such inquiries as will, I trust, enable me to supply the information you ask for in the course of a few days.

Yours, &c.,

JOHN HY. MULHOLLAND,

Manager.

I recommend the writer may be informed that a drill is now available to carry out the work, and request that an early date may be named to inspect site.—W.B.H., B.C., 7/2/85. The Under Secretary for Mines.

I recommend that Mr. Mulholland be informed that I am ready to go on with inspection of site on the 4th instant, and that his answer is requested to this to say what arrangements he will make for some one to accompany.—W.B.H., B.C., 2/3/85. The Under Secretary for Mines.

No. 6.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 14 February, 1885.

Referring to your letter of the 6th ultimo and previous correspondence respecting boring at Dargan's Creek, I have the honor to inform you that a drill is now available for the work, and to ask you to name an early day for inspection of the site.

I have, &c.,

GERARD E. HERRING,
(For the Under Secretary).

No. 7.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

2 March, 1885.

With reference to my letter of the 14th ultimo (to which I have not received any reply), requesting you, on behalf of the Brookdale Coal and Iron Company (Limited), to appoint a day on which you could meet the Superintendent of Drills, in order that he might inspect the site at which your Company desire to bore for coal at Dargan's Creek, I have now the honor to inform you that the Superintendent of Drills will be prepared to visit the proposed site on Wednesday next, the 4th instant, and I have to request that you will be so good as to inform me whether you can make arrangements for a representative of your Company to accompany the Superintendent on that day.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 8.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

The Brookdale Coal and Iron Mining Company (Limited):

Waterloo Chambers, 458, George-street, Sydney,

Sir,

10 March, 1885.

In reply to your favour of 2nd March, I will be prepared, on Thursday or Friday next (which ever day suits the Inspector best), with a guide at Clarence Tunnel, Great Western Railway, to point out the proposed site for boring for coal. Mount Clarence Platform is about a mile from Dargan's Creek, where we propose to begin operations. As it will be necessary for me to get some one up from Lithgow to meet the Superintendent at the platform, will you please give me early intimation after you decide the day.

I am, &c.,

JOHN HY. MULHOLLAND,

Manager and Trustee of the above Company.

Inform that a man will be sent to-morrow in the absence of the Superintendent. The man will leave Sydney by the morning train.—H.W., 12/3/85. The site having been inspected I recommend that the drill be sent on and work undertaken at once.—W.B.H., B.C., 24/3/85. The Under Secretary for Mines. At what rate and on what terms?—H.W., 24/3/85. I presume the application is made on the published weekly terms of charges, as there is no mention made to payment by the foot in the papers.—W.B.H., 24/3/85.

On the assumption that the recommendation is made that the drill be worked at the weekly rate under the regulations, and subject to the conditions therein, it is approved.—H.W. (in the absence of the Minister), 24/3/85.

Storeman has orders to send on drill to-morrow morning; weight and list of all sent to be obtained. For storeman's proof of carrying out the work. Engineer-in-charge to sign for all handed him. Boiler from No. 13 drill to be sent on after and as soon as repaired. Charge carriage and all wages from this date on to finish of work; railway carriage to be included.—W.B.H., 24/3/85. Mr. M'Neil. Seen.—J.M., 24/3/85. Seen, T.C., 24/3/85. Seen, W.B.H.

No. 9.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 12 March, 1885.

Referring to your letter of the 10th instant stating that you are prepared to point out the site on which your Company desires to bore for coal at Dargan's Creek, I have the honor to inform you that, in the absence of the Superintendent of Drills, a man will be sent by to-morrow morning's train to see the proposed site.

I have, &c.,

GERARD E. HERRING,
(For the Under Secretary).

No. 10.

No. 10.
J. H. Mulholland, Esq., to The Superintendent of Drills.
Brookdale Coal and Iron Mining Company (Limited).

Waterloo Chambers, 458, George-street, Sydney,

Dear Sir,

8 April, 1885.

Begging reference to our conversation of this morning *re* the drill for Dargan's Creek, I may say that on Saturday last I was on the ground, and your man in charge wished me to arrange for the carriage of the machinery from Clarence Siding to the spot selected. This I declined to do, as I told him that arrangements had not yet been completed. I am under the impression that I wrote to the Department asking them to name a price per foot for the work after inspection, but if I have not done so would you now kindly name a price per foot, so that I may lay the matter before the owners, &c. Of course we are anxious for the drill to start work as soon as possible, and must conform to the regulations I presume, but still you might give the Company the option of drilling at per foot or by the week.

I hope to be on the ground on Saturday, and should feel obliged if you will notify the rate the Company will be expected to pay.

Yours, &c.,

JOHN HY. MULHOLLAND,
(For Brookdale Company).

After the drill had been sent to Clarence Siding the engineer reported that Mr. Mulholland had informed him that no terms had been arrived at between his Company and the Department. On receipt of this report I at once waited upon Mr. Mulholland and explained the position. The letter herewith is the result, so that work was not stopped. I inspected the site on the 11th instant and estimate cost of work as follows:—15s. 9d. from the surface down to a depth not exceeding 500 feet, with an additional 3s. per foot on each 100 feet below 500, the Department finding everything. Payment to be made fortnightly as the work proceeds. The applicant to name his local agent, whose certificate will be proof of work executed.—W.B.H., B.C., 14/4/85. The Under Secretary for Mines.

The Company might be asked to hand the core over to the Department. A section from this plan would, I think, be of public benefit.—W.B.H. State price, and ask the Company to say at once if they prefer paying by the foot, as the drill has been sent up by the week, and request core.—H. W., 20/4/85. Very urgent.

No. 11.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 21 April, 1885.

With reference to your letter of the 8th instant, asking the price per foot for the use of a diamond drill for boring at Dargan's Creek, I have the honor to inform you that from the surface down to a depth not exceeding 500 ft., the price will be 15s. 9d. per foot, with an additional 3s. per foot on each 100 ft. below 500; and I am to request you to be good enough to state at once whether the Company prefer paying by the foot, as the drill has been sent up to the site on the understanding that it was to be paid for by the week.

2. Payments for the work are to be made fortnightly, the Department finding fuel, water, &c.
3. I am also to ask the Company to hand the core over to this Department.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 12.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

The Brookdale Coal and Iron Mining Company.

Waterloo Chambers, 458 George-street, Sydney,

Sir,

22 April, 1885.

In reply to your favour of yesterday's date *re* the cost of diamond drill boring at Dargan's Creek per foot, I haste to intimate that your letter will be laid before the proprietors on Friday next, and be then fully replied to, and election made of the modes of payment either per foot or by the week.

This, I presume, will not interfere with the drill starting at first possible moment. But it seems to me that the extra 3s. per foot for every foot below 500 is rather an excessive increase on the rate to 500 ft.; but you may, in view of the opening up of a new industry, assist the Company by some reduction in the cost. I will do my best to have the matter settled on Friday. The water and timber close to the drill, and the property of the Company, could be used by the Department without charge, and thus reduce the cost a little.

The core will be handed over, except such small pieces as may be required for specimens.

Yours, &c.,

JOHN HY. MULHOLLAND,
Managing Trustee.

No. 13.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

Waterloo Chambers, 458, George-st., City,

Sir,

6 May, 1885.

In reply to your letter of the 21st April, *re* the diamond drill for boring at Dargan's Creek, I am instructed to say that the Company (the Brookdale Coal and Iron Mining Company) have resolved that they will pay for the drill by the week and not by the foot. If you will render me the accounts fortnightly the payments will be made as you intimate. I intend leaving for Dargan's Creek, on Friday next, to inspect work done, and render any assistance I can, *re* fuel, water, &c.

The core will be handed to the Department as requested.

I have, &c.,

JOHN HY. MULHOLLAND,
Managing Trustee, Brookdale Coal Company.

No. 14.

The Superintendent of Drills to The Under Secretary for Mines.

Sir,

Clarence Siding, 14 January, 1886.

I have the honor to inform you that I arrived here on the 11th instant for the purpose of personally supervising the recovery of the core-barrel and rods, which were stuck in No. A drill bore at this place.

The men have worked since Monday morning, the 11th instant, from daylight till dark, to recover the core-barrel, but so far we have not met with much success. No less than three steel rods were torn asunder through the great power of the hydraulic jacks, but yesterday and to-day we lifted the core-barrel about 5 feet from the bottom.

I cannot get the clamps to hold the great strain, although I have two on at the one time. I have instructed the storekeeper to forward another clamp belonging to No. 2 drill, and I have great hopes that the engineer-in-charge will be able to carry on the work of recovering the core-barrel without my personal supervision, and without any more extra tools or expense.

It seems to me that something has been dropped down the bore-hole which is stuck between the sides of the hole and the core-barrel.

I will leave here to-morrow and be at head office on Saturday morning.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

No. 15.

The Superintendent of Drills to The Under Secretary for Mines.

Sir,

Sydney, 17 February, 1886.

I have the honor respectfully to direct attention to the fact that the Brookdale Coal-mining Company owe this Department to December 31st, 1885, the sum of £443 3s. 1d. The depth bored to the date given is 338 feet. The small depth bored arises from several accidents which occurred; the core-barrel being lost on two occasions. Everything is now in good working order, and I would suggest that the Company be informed that unless the amount be paid forthwith, the drill will be removed, and proceedings taken for the recovery of the amount due.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

Approved.—H.W., 17/2/86. Account to 13 February, 1886, forwarded, and Company informed, 25 February, 1886.

No. 16.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 25 February, 1886.

I have the honor to forward herewith the account due to the Department by the Brookdale Coal-mining Company, amounting to £490 10s. 5d., for work done with Diamond Drill, at Clarence Siding, and I am to inform you that unless the amount be paid forthwith the drill will be removed, and proceedings taken for the recovery of the amount due.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 17.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

Sir,

458, George-street, City, 2 March, 1886.

In reply to your letter marked D *re* the Brookdale Coal-mining Company, and dated February 25th (received to-day), I have the honor to intimate that I have convened a special board meeting of the present shareholders and trustees to make arrangements to pay whatever may be due to your Department for the work of boring at Dargan's Creek.

I remain, &c.,

JOHN HY. MULHOLLAND.

As the Company has failed to pay the amount due the work may be stopped and proceedings taken to recover the amount owing.—H.W., 23/3/86. Submitted. I have seen the manager, Mr. Mulholland, who promised that account should be settled during next week.—W. H. J. SLEE, 27/3/86. Seen.—H.W., 27/3/86.

No. 18.

J. H. Mulholland, Esq., to The Superintendent of Drills.

Re The Brookdale Coal Company's Account at Clarence.

Sir,

458, George-street, 31 March, 1886.

Begging reference to our conversation this morning, I have consulted with my co-trustee, Mr. Garsed, and we have requested the directors to meet on Friday, for the purpose of signing a cheque to meet the greater part of the amount due. We shall then submit a statement asking for some reduction in cost on account of the matters explained to you, but the Department may rest assured that whatever is found to be due will be honorably paid by the Company. As some two of the directors reside at Newcastle and one at Lithgow, it is impossible to make any payment to-day, as I have no power to sign cheques unless passed at a board meeting duly convened.

I regret that there should be any delay, but it will only be for a few days, when I trust to have the matter definitely settled, which is now my pressing business.

I am, &c.,

JOHN HY. MULHOLLAND,

Trustee.

I leave to-morrow by 9 a.m. train for Sunny Corner, Mitchell. Should the Brookdale Company pay up in the meantime please let me be informed, and I will at once leave for Clarence Siding to set the engineer to work to bore through the coal. The Brookdale Company could also be informed at the same time.—W. H. J. SLEE, 31/3/86. The Under Secretary for Mines.

Seen.—I understand this work has been stopped till the money be paid.—H.W., 1/4/86.

No. 19.

Memo. from The Superintendent of Drills to The Under Secretary for Mines.

Mitchell, 2 April, 1886.

I AM likely to be here, at Mitchell, until the 6th or 7th instant, but will advise by telegram should I leave earlier.

If Brookdale Company (Clarence Siding) have settled their account, please send me a telegram to that effect, and I will stay at Clarence Siding to see Goodare bore through the coal.

W. H. J. SLEE.

See the Company at once, and inform that unless the money due be paid at once the drill will be removed.—H.W., 3/4/86.

Account made out for 3rd instant, £624 11s. 3d., and letter informing the Company as directed above. I also informed Mr. Mulholland verbally to the same effect. He stated he could not give a definite decision till Wednesday, and was powerless before the shareholders meet, but will communicate with the Department to-morrow (Tuesday), and intends waiting personally on the Under Secretary with reference to the matter.—J. M. (*pro* Superintendent), 5/4/86.

No. 20.

The Superintendent of Drills to The Under Secretary for Mines.

Sir,

Mitchell, 3 April, 1886.

I have the honor to inform you that I will complete my work here on Tuesday evening, 6th instant. Early on the following morning I will leave here for Clarence Siding, to inspect No. A drill, and hope to be at head office at 9 a.m. on Friday morning, the 9th instant.

No letters will reach me here which are posted in Sydney after Monday, the 5th instant, and no telegrams will reach me here after Tuesday, 6th instant.

Please inform me by telegram, on Tuesday afternoon, if Mr. Mulholland has arranged with you about the Clarence Siding bore.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

No. 21.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 5 April, 1886.

I have the honor to hand you the attached statement of this Department's claim upon you for boring at Clarence Siding with No. A diamond drill, and have to request that you will be good enough to forward the amount owing to this office at once, or the drill will be removed. See enclosure £624 11s. 3d.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 22.

Minute of The Superintendent of Drills to The Under Secretary for Mines.

Re Payment of the Brookdale Company's account for boring at Clarence Siding.

6 April, 1886.

I CALLED at Mr. Mulholland's office again to-day, with the view of urging a settlement. Did not see Mr. Mulholland, but saw a gentleman who represented himself as one of the shareholders of the Company.

He informed me that the meeting of shareholders convened for last Friday, 2nd instant, did not take place, as some of them could not attend on that day; but it has been definitely arranged since that the meeting will be held on Saturday first, 10th instant, and promised that, without fail, the matter would then be satisfactorily settled.

I stated that as Mr. Mulholland's promise had failed to be carried out last week the matter demanded their immediate attention.

They are to communicate with the Department to-night, and give explanation.

J. S. M'NEIL,

(*Pro* Superintendent of Drills).

I handed a letter to the Under Secretary this morning *re* the above subject, giving the Company time up till Wednesday, the 14th instant. If no payment made by that time, the drill is to be taken away. This will be submitted to the Minister, and likely to be approved of.—W. H. J. SLEE, 9/4/86.

No. 23.

The Superintendent of Drills to The Under Secretary for Mines.

Sir, Diamond Drill Branch, Sydney, 9 April, 1886.

I have the honor to again draw your attention to the non-payment of the Brookdale Coal-mining Company for boring done for them by No. A drill at Clarence Siding. They are now indebted to this Department £624 11s. 3d. I have seen Mr. Mulholland (the Company's Secretary) on two different occasions. Mr. McNeil has also interviewed Mr. Mulholland, but without any practical results.

I beg to recommend that, unless the amount due be paid by the Brookdale Company on or before Wednesday, the 14th instant, No. A drill be taken from Clarence Siding, and placed in the store, Sydney.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

Submitted for approval; and the Crown Solicitor may be instructed to take proceedings to recover the amount due.—H.W., 9/4/86. Approved.—J.F., 12/4/86.

No. 24.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir, Department of Mines, Sydney, 12 April, 1886.

I have again the honor to direct your attention to the amount which is owing by your Company to the Government for the use of No. A diamond drill at Clarence Siding, amounting on the 9th instant to the sum of £624 11s. 3d.

Application has been frequently made to you, as representing such Company, both personally by officers of this Department and by letter, without having any effect.

I have now the honor, by direction of the Secretary for Mines, to inform you that, unless the amount due is paid on or before Wednesday next, the 14th instant, the matter will be placed in the hands of the Crown Law Officers for recovery, and the machinery removed from the land.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 25.

Minute of The Superintendent of Drills to The Under Secretary for Mines.

19 April, 1886.

No arrangements have been made by the Brookdale Coal Company up to date, although ample time has been allowed them. I beg to be instructed whether or not I should have No. A drill removed at once and put in store.

W. H. J. SLEE.

The Crown Solicitor may be instructed to take proceedings for the recovery of the amount due.—H.W., 19/4/86. Submitted. Approved.—J.F., 20/4/86.

Inform Messrs. Turnbull, Christy, Russell, and Mulholland that unless the money be paid on Friday next, the drill will be removed, and the Crown Solicitor will commence proceedings to recover the amount due.—H.W., 12/5/86.

No. 26.

Mr. W. Christy to The Secretary for Mines.

Dear Sir, 20 April, 1886.

Kindly extend time for two days for drawing the rods, &c., of Brookdale Mining Company, as I am waiting to see Mr. Turnbull, senior, and Mr. Russell, who are both shareholders, and who will settle the matter, and enable me, in the absence of Mr. J. H. Mulholland, who, through severe illness, is unable to give the matter his attention.

Your kind consideration of the above will much oblige the shareholders.

I have, &c.,

WALTER CHRISTY.

No. 27.

DRILL, Clarence Siding, to be allowed one week from to-day, if money not then paid drill to be removed, and proceedings taken to recover amount due.

H.W.

Seen.—W. H. J. SLEE, 3/5/86. The drill may now be removed, and proceedings taken to recover the amount due.—H.W., 6/5/86. Approved.—J.F., 12/5/86.

No. 28.

The Superintendent of Drills to The Under Secretary for Mines.

Re No. A Drill, Clarence Siding.

Sir, 11 May, 1886.

I do myself the honor to again draw your attention to the fact, that the Brookdale Coal-mining Company have not complied with the decision of the Honorable the Minister for Mines, as no money whatever has been received from said Company up to date for boring done for them by No. A drill at Clarence Siding.

This

This Company has been requested for months past to pay up.

They have received several concessions from the Honorable the Minister for Mines, the last being that they should pay at least half of the money due up to the 6th instant, or the drill would be withdrawn. This decision they have also ignored.

In the mean time the wages of the men and other expenditure is going on, and at the end of the year this enforced delay and idleness of No. A drill at Clarence Siding will be a blotch in returns of my management.

I beg respectfully to suggest that the Honorable the Minister's decision may now be carried out, and that I may be instructed to remove the drill.

Apologising for again drawn attention to this matter so soon after my letter of the 7th instant, to which I have not as yet received a reply.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

Submitted for approval.—H.W., 11/5/86. Approved.—J.F., 14/5/86. Seen.—W. H. J. SLEE, 14/5/86.

The Superintendent of Drills to Mr. Engineer Goodare.

Department of Mines, Diamond Drill Branch,

Sydney, 17 May, 1886.

Sir,

I am in receipt of your telegram of to-day's date.

I had telegraphed a little earlier in the day, which you probably did not receive until after yours was dispatched.

The contents thereof were to the effect, that you were not to draw tubing or remove drill, but to wait further instructions, which will be sent you when definitely determined upon.

W. H. J. SLEE,
Superintendent of Drills.

No. 38.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

The Brookdale Coal, Shale, and Iron Company.

Sir,

Office, 458, George-street, Sydney, 26 May, 1886.

I have the honor to intimate that the trustees of the abovenamed Company have this day paid into the Department the sum of £300 (per their cheque), on account of the work performed by the Department, in boring with the diamond drill at Dargan's Creek, near Clarence Siding (as per agreement). I have now to request that you will permit the work of boring to be resumed without delay, in order to reach the lower seam of coal; and with a desire to expedite the work of boring, I have to suggest that the size of the bore be reduced to 2 inches, if possible (with the present appliances). Regretting that such delay occurred in making this payment.

I have, &c.,
JOHN HY. MULHOLLAND.

The Superintendent of Drills.—H.W., U.S., 26/6/86. Amount to Treasury; receipt acknowledged, 27/5/86.

If the Honorable the Minister for Mines decides that boring operations on Clarence Siding shall be resumed, then there can be no objections that the bore may be reduced in size from 2½ to 2 inches.—W. H. J. SLEE, 26/5/86.

Submitted—the half of sum due would be £345 7s. 1d. Cheque now received for £300.—H.W., U.S., 26/5/86. Work may be again resumed at once, and the bore reduced as asked for.—J.F., 27/5/86. Mr. Mulholland informed, 27/5/86. Seen.—W. H. J. SLEE, 9/6/86.

The Brookdale Coal Company, Waterloo Chambers,

458, George-street, Sydney, 20 July, 1886.

Sir,

I have to acknowledge the receipt of the Department's claim against the above Company to the amount of £428 17s. 4d., as per an account furnished.

It seems to me that there is considerable overcharge in the account, but as the directors are to meet on the 24th instant, the matter will be brought before them, when doubtless some steps will be taken to have the account adjusted.

I would like to call your attention to the fact that up to the present date we have not received any report as to the work performed by the drill or what results have been obtained, and whether more than one seam of coal had been met with and at what depth. I have personally inquired of Mr. Goodare, who is on the ground in charge of the drill, but was informed that his instructions were such as precluded him from giving any information. I have therefore to request that you will furnish me with such official information as may enable the Company to estimate the value of the coal measure or measures passed through by the drill, and the various depths at which same were reached. To ascertain this was the principal object the Company had in view in obtaining the services of the drill, but up to the present date all information has been withheld, much to our detriment.

If you could furnish the information asked for on or before Saturday next, you would confer a favour upon the Company.

I am, &c.,

JOHN HY. MULHOLLAND,

Managing Director.

By Ministerial authority any person or Company for whom boring operations are carried on by Government, diamond drills are entitled to one section of their bore, free of cost, provided they have paid the full amount due which this Company has not done. Engineers of diamond drills have instructions from me not to give any information about their boring operations only to the person or authorised person of the Company for which we bore. The Company should have had a person to watch boring operations at least once a fortnight, but they have throughout been very careless in the matter. They now try to blame this Department for their own folly and neglect.—W. H. J. SLEE, 22/7/86.

Information concerning the strata passed through may be supplied, but the Company should be compelled to pay up at once the amount due.—H.W., 22/7/86. Submitted. Approved.—J.F., 23/7/86. Particulars of strata herewith, as directed.—J.M., 24/7/86. Statement of strata passed through forwarded July 27, 1886. Seen.—W. H. J. SLEE, 29/7/86. Called on the 27th re account, and found the office shut.—D.M.C., 29/7/86. Called again to-day and found office shut.—J.M., 29/7/86. Called on Mr. Mulholland to-day and informed him that unless payment was made soon the Department would employ other means.—J.M., 30/7/86. I am afraid that it is very little good to call on Mr. Mulholland, and very little, if any, money will be obtained from the Company unless action is taken.—W. H. J. SLEE, 4/8/86.

No. 43.

12

No. 43.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir, Department of Mines, Sydney, 27 July, 1886.
Referring to that portion of your letter of the 20th instant, in which you ask, on behalf of your Company, for particulars of the work done by No. A diamond drill at Clarence Siding, I have the honor to forward herewith a statement of the strata passed through to the 17th instant.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 44.

Mr. Engineer Goodare to The Superintendent of Drills.

Sir,

No. A Diamond Drill, Clarence Siding,
8 September, 1886.

Please forward me return another boiler. I have to press the one I have here to 90 lb. before I can start boring, and will not retain that pressure for more than half an hour, when I have to stop machine, and run her up again. I have worked her as long as I possibly can to be safe. 90 lb. pressure is too much for this boiler.

The small boiler that was at Dempsey Island will suit. Please send with her stop-valves, fittings, and mountings complete. Let me have it at once, or I shall have to stop boring. It would be advisable for you to come and inspect boiler and machinery in motion, it being in a critical condition.

I have, &c.,

ALF. GOODARE.

As it is the intention of the Superintendent to visit this work within the next few days, this matter had better wait his instructions.—J.M., 9/9/86. Submitted. The Under Secretary. Yes; inform.—H.W., 9/9/86. Informed, 9/9/86. Mr. Storeman Leigh will please forward the small boiler and fittings used with No. 7 drill at Dempsey Island at once to No. A drill, Clarence Siding.—W. H. J. SLEE, 14/9/86. Employed Peterson to assist in getting this boiler away. No. 4 boiler has to be shifted as well as another before the one wanted can be moved.—J.S.L., 15/9/86. Seen.—W. H. J. SLEE, 18/9/86.

No. 45.

The Superintendent of Drills to Mr. Engineer Goodare.

Sir,

Department of Mines, Diamond Drill Branch,
Sydney, 9 September, 1886.

In answer to your letter of the 8th instant, I have to inform you that the Superintendent, Mr. Slee, is presently in the country districts, and intends visiting your work on his way back to town.

I am, &c.,

J. S. M'NEILL,

(Pro Superintendent of Drills).

No 46.

The Superintendent of Drills to The Under Secretary for Mines.

Sir,

Clarence Siding, 14 September, 1886.

I have the honor to inform you of my arrival here for the purpose of inspecting No. A drill, and everything in connection therewith. The depth of bore is now 840 feet, and probably another 60 feet will have to be bored before coal is pierced. I find that the boiler, which is only 6-h.p., is not powerful enough to supply sufficient steam to bore below the present depth.

The boiler has to be worked up to from 95 to 100 lb. steam, whereas with safety it should not be worked with higher pressure than 75 lb. To prevent an accident to the machinery, or perhaps a calamity, I have instructed Storeman Leigh to forward at once the small 3-h.p. vertical boiler formerly in use at Dempsey Island with No. 7 drill.

I hope the above will meet approval, as it is of very urgent necessity. While waiting for the boiler I have instructed the engineer to do certain necessary repairs.

Will be at head office, Thursday, 16th instant.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

The action of the Superintendent may be approved.—H.W., 15/9/86. Approved.—J.F., 16/9/86. Seen.—W. H. J. SLEE, 18/9/86.

No. 47.

The Superintendent of Drills to The Under Secretary for Mines.

Department of Mines, Diamond Drill Branch,

Sydney, 16 September, 1886.

HAVING only yesterday inspected No. A drill at Clarence Siding, which is now down 840 feet, and being of opinion that coal is likely to be pierced within the next 50 or 60 feet, I beg to recommend that the Brookdale Coal-mining Company be informed that unless they pay the money due for boring on their land

13

land, near Clarence Siding, with No. A drill, within eight days from date, boring operations will be stopped as soon as coal is struck, but without boring through the coal; the drill will be taken away to save expenditure, and proceedings may be commenced to recover all moneys due.

W. H. J. SLEE.

Submitted for approval.—H.W., 17/9/86. The Company may be informed that no more work will be done until the money is paid.—J.F., 18/9/86. Seen.—W. H. J. SLEE, 20/9/86. Informed, 25/9/86.

No. 48.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

Sir,

458, George-street, Sydney, 21 September, 1886.

Your account against the Brookdale Coal Company, No. 513, amounting to £557 15s. 9d., will be brought before a meeting of the proprietors during next week, when I have no doubt that prompt steps will be taken to reduce the amount considerably.

May I ask for a further report as to the progress of the drill, and results to date of last report from Clarence Siding.

I have, &c.,

JOHN HY. MULHOLLAND,

Secretary.

The writer has made similar promises before and has not kept them; he should be warned that unless the money be paid forthwith proceedings will be taken.—H.W., 24/9/86. Mr. Mulholland informed, 28/9/86.

No. 49.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 25 September, 1886.

I have the honor, by direction of the Secretary for Mines, to inform you that until the account due to this Department (enclosed herewith) is paid, the diamond drill now at work for the Brookdale Coal Company, at Clarence Siding, will be stopped in its working.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 50.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 28 September, 1886.

Referring to your letter of the 21st instant, in respect to the account due to the Department for work done with the diamond drill, for the Brookdale Coal Company, and in which you state that prompt steps will be taken to reduce the amount, I have the honor to invite your attention to the fact that similar promises have been made before, which have not been kept, and I am to inform you that if the money due to the Department is not paid, proceedings will be taken.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 51.

Memo. by The Superintendent of Drills to The Under Secretary for Mines.

INFORM Under Secretary that diamond drill at Clarence Siding has hardly sufficient power to bore to the depth of a thousand feet. To bore deeper with said drill would be dangerous.

W. H. J. SLEE.

Submitted, 12/11/86. The Under Secretary. I do not think another drill should be sent until the persons for whom the bore is being sunk pay what is due.—H.W., 12/11/86. Submitted. Approved.—J.F., 13/11/86. Account herewith to 6 November, 1886, £749 0s. 2d. Mr. Mulholland informed, 16/11/86. Seen.—W. H. J. SLEE, 31/12/86.

No. 52.

Mr. Engineer Goodare to The Superintendent of Drills.

Sir,

No. A Diamond Drill, Clarence Siding, 15 November, 1886.

You will find by my report that for week ending, 31/11/86, that I am 1,005 feet from the surface.

I shall not be able to bore more than another 20 feet with the steam-power I have. At present I am working boiler at 85 lb. which is not a very safe pressure to carry.

With a little repairs I could bore 250 feet more with this machine, providing I have the large boiler that is in the store, and the steam-winch that is at Holt-Sutherland for hauling.

ALF. GOODARE.

Submitted.—J.M., 16/11/86. The Under Secretary. Inform that it is not proposed to send any additional machinery till the Company has paid for the boring done, and he may proceed as far as he can with safety.—H.W., 16/11/86.

No. 53.

14

No. 53.

The Superintendent of Drills to Mr. Engineer Goodare.

Sir,

Department of Mines, Diamond Drill Branch,
Sydney, 16 November, 1886.

In reply to your letter of the 15th instant, and *re* forwarding another boiler to the drill under your charge, I have to inform you that owing to the non-payment of the boring account by the Company no more machinery will be sent you until such is paid, and you must proceed as far as you safely can with the present appliances at your disposal.

J. S. McNEIL,
(*Pro* Superintendent of Drills).

No. 54.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 19 November, 1886.

I have the honor, by direction of the Secretary for Mines, to inform you that it has been reported that the diamond drill at Clarence Siding has hardly sufficient power to bore the depth required, and that to continue operations with the drill would be dangerous, but I am to state that another drill can be sent to complete the boring on payment by your Company of the amount due to the Department, which is herewith enclosed (£749 Os. 2d.).

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 55.

Mr. Engineer Goodare to The Superintendent of Drills.

Sir,

No. A Diamond Drill, Clarence Siding, 19 November, 1886.

I have worked these boilers and steam-winch as long as it is safe, having reached a depth of 1,020 feet from surface.

There are good indications of coal. On Wednesday last I bored through a 2-inch band of very bright coal.

Should this work be continued, I should recommend No. 7 drill being sent here, with the large boiler and steam-winch requisitioned for.

I have got the levels between Lithgow and Clarence Siding, also dip of the coal. From my calculations I find that I shall have to go 1,350 feet before I touch coal, and which is too much for No. A plant.

It is my opinion that the Brookdale Company did not calculate upon the dip.

While I am waiting your instructions it would be advisable to disconnect the present machinery under my charge, then it would be all ready and packed, in case of removal, and be out of the way should any other be sent in its place.

Should you require to have this done, will you please issue the necessary instructions.

You need not send the stores requisitioned for unless more machinery is to be sent here.

I stopped boring last night (Thursday).

I have, &c.,
ALF. GOODARE,
Engineer.

By direction of the Under Secretary and Minister's approval, no other machinery is to be sent till the Company have paid the amount due for boring.—J.M., 20/11/86. Submitted. The Under Secretary. Inform Company boring stopped, and request prompt reply.—H.W., 22/11/86. Informed, 24/11/86. Let a stronger drill be sent at once.—J.F., 29/11/86. No. 7 drill and No. 12 boiler forwarded, and Engineer Goodare instructed accordingly.—J.M., 30/11/86.

No. 56.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 24 November, 1886.

I have the honor to inform you that boring at Clarence Siding has been stopped, and I am to request an immediate reply to my letter of the 19th instant, in which the terms upon which another drill would be supplied to the Company were definitely stated.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 57.

J. H. Mulholland, Esq., to The Under Secretary for Mines.

Sir,

Waterloo Chambers, 458, George-street,
Sydney, 24 November, 1886.

In reply to your favour of the same date herewith, I beg to intimate that a full meeting of proprietors of the above Company has been convened, and will be held on Saturday next, when some decision must be come to. As several of the shareholders reside at Newcastle and Lithgow, I cannot arrange a meeting earlier. I will advise you promptly *re* the future working of the drill as requested.

Yours, &c.,
JOHN HY. MULHOLLAND,
Secretary.

Inform

Inform that the Company will be charged for the time lost by reason of such delay.—H.W., 27/11/86. Informed, 29/11/86.

By direction of the Honorable the Minister for Mines, another drill is being sent to continue the bore. The Company is to arrange with the Minister *re* payment to the Department of the amount due for boring at Clarence Siding, as per account rendered, viz., £749 0s. 2d.—J.M., 29/11/86. Submitted. The Under Secretary.

There is a very large sum, £749 0s. 2d., due by this Company. Only one payment has been made, and that under extreme pressure. The bore has nearly reached coal, and unless payment be enforced before coal is found, I fear there will be difficulty in getting it.—H.W., 1/12/86.

I concur that some settlement should be made, and that speedily; but I am satisfied that the cost of putting down the bore has been very much greater than it should have been. The strata is anything but unfavourable for boring operations, and had there been anything like intelligence and industry practiced among the men the bore should have been done at little more than half what it is now said to have cost. Altogether, according to Mr. McNeil's statement to me, the work has been eighteen months in hand, and it must be apparent to any one with the most superficial knowledge of boring that it should not have taken that length of time to put down 1,000 feet if anything like attention had been paid to the work by the men in charge of it. Perhaps the better plan would be to call upon the Company to pay, and unless they pay the claim without delay, steps should be taken to enforce payment. If, however, the charges are proved to be excessive and unreasonable, then some compromise must be arrived at.—J.F., 2/12/86.

Let payment be demanded at once, and inform if not paid. Proceedings will be taken.—H.W., 3/12/86.

No. 58.

The Superintendent of Drills to Mr. Engineer Goodare.

Department of Mines, Diamond Drill Branch,
Sydney, 29 November, 1886.

Sir,

You are hereby instructed to disconnect the present machine and prepare to erect No. 7 drill, which, along with the boiler, will be sent you to-morrow.

Send word if it will be necessary to forward you the steam-winch, seeing you have got this strong drill. Do not arrange about the forwarding of any machinery to Sydney until you are further instructed, but arrange with Richards at as low a rate as possible for the conveying of No. 7 drill and boiler to site.

I am, &c.,

J. S. McNEILL,
(*Pro* Superintendent of Drills).

P.S.—Wire Richards' price to take drill and boiler to site, and you will thereupon receive definite reply from office.—J.M., 29/11/87.

No. 59.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir,

Department of Mines, Sydney, 29 November, 1886.

Referring to your letter of the 24th instant, to the effect that a full meeting of your Company is convened, when some decision will be arrived at in the matter of continuing the work with diamond drill at Clarence Siding, of which the Department will be duly advised, I have the honor to inform you that your Company will be charged for time lost by reason of such delays.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 60.

Mr. Engineer Goodare to The Superintendent of Drills.

Sir,

No. A Diamond Drill, Clarence Siding, 30 November, 1886.

I shall require the large steam-winch, it is much quicker, and will save about fourteen hours per week in lifting and lowering rods, and will also be a saving in wear and tear of No. 7 machine.

I also require a large Tange pump for hydraulics,—should you not have one in stock, one from No. 8 would be suitable. A small pump would be of no use.

The pump I have I want it for the bore.

When I receive No. 7 machine I will send a requisition for stores I require. I cancel the requisition of a fortnight ago.

Shall I accept Richards' offer of £5 to convey the machinery, boiler, &c., from station to the site?

I am, &c.,

ALF. GOODARE.

The stores formerly asked for were forwarded along with the drill and boiler yesterday. It is considered that the drill and boiler sent yesterday should be capable of boring to depth of about 1,500 feet without steam-winch, and the storekeeper informs me that there is already on the site one of the best pumps we have. Will the winch and another pump be sent as asked for? The weight of machinery, boiler, stores, and connections just sent is about 3½ tons; will Richards' offer of £5, to convey same to site, be accepted?—J.M., 1/12/86.

Submitted. The Under Secretary.

The foreman may be asked why he cannot make the pump on the ground serve the purpose, and why he should require the steam-winch. Richards' offer for carriage, £5, should be accepted.—H.W., 1/12/86.

Submitted. Approved.—J.F., 2/12/86. Engineer Goodare instructed, 3/12/86.

Mr. J. B. Turnbull to The Secretary for Mines.

Dear Sir,

Lithgow, 2 December, 1886.

I am sorry to draw your attention to the most unjust way which the Mining Department, now under your charge, are billing my Company, viz., (Brookdale Coal-mining Company).

On or about the 1st May, 1885, your Department consented to put down a bore at Dargan's Creek, near Clarence Siding, on the Great Western Railway, to a depth of about 1,200 feet, to intersect, if possible, the seam known in that locality as the Vale of Clwydd Company's main seam, and I am given to understand that such arrangements were made between Mr. Mulholland, one of our shareholders at that time, and Mr. Henderson, then the Government Superintendent of Drills.

Well, sir, my Company think, that as this drill has now been more than eighteen months on the property, and having only obtained a depth of 1,020 feet, they are of an opinion that a greater depth and a better core ought to have been obtained, had better management and good machinery been put on their estate at the commencement.

I may further inform you that the stratified rocks passed through up to the present depth are not at all of such a nature as would throw any light on the subject to prevent your Department from not seeing their way very clear to allow my Company a large reduction on the present amount charged by them. It is no use my dwelling on the point *re* the first plant sent to our estate by your Department, and which has been removed during the past week to allow more suitable machinery being erected.

I am quite sure that when the new plant has commenced work, your present engineer-in-charge will give you every reason to believe that had this plant been put on our estate in the first instance, and under Mr. Goodare's charge, the depth, viz., 1,200 feet, would have been reached within eight months from the commencement.

Now, sir, seeing that other bores under your Department have been put down to a greater depth than 1,200 feet, and in a much less time than eight months, my Company are of an opinion that their demands are a most true and just one.

In conclusion, sir, I beg to inform you that the charges made by your Department from the commencement and up to the present date, are £1,049 0s. 2d. for a period of eighteen months boring, but had this bore been conducted under good management, and better machinery sent on our estate at the commencement, it would not have cost us more than £466 4s. 6d.

I may further inform you that we paid your Department the sum of £300 on account some time ago, but are still indebted to them up to date in the sum of £749 0s. 2d.

I trust you will take our claim into your account, and give us a favourable reply thereto.

J. P. TURNBULL,
Resident Director.

As regards the time occupied in performing this work, I regret to say the speed has not been such as could be desired, but so far as I can see, that fault is mainly due to the man placed in charge by the late Superintendent, who lost the core-barrel in the bore, and to the failure of the Company to make payment at the proper times. As regards the cost, I find that the delay in recovering the core-barrel cost £258 5s. 2d., and the cost of delay through failure on the part of the Company to pay for boring cost £65 11s. 8d., equal together to £323 16s. 10d., leaving £772 3s. 2d. as the cost of boring 1,020 feet, equal to 15s. 1d. per foot, which, considering the conglomerate bored through, is a reasonably low price. So far as I know the loss of the core-barrel was purely accidental, and a contingency which may occur in any bore, but there can, I think, be no excuse for the want of punctuality in paying for the work done.—H.W., 15/12/86.

Submitted.

The time occupied in boring 1,020 feet appears to disclose a state of indolence or ignorance on the part of those in charge of the drill, which is lamentable. The measures in the Clarence Siding district are well known, and it must be admitted by those who have any knowledge of the rocks to be passed through, and their sequence, that they are not difficult to bore into. I venture to think that, with ordinary diligence, the bore should have been put down in six months. The price (21s. 5½d.) per foot is very excessive. Had the Department done the work at per foot, I am convinced that the bore would have cost considerably less than it has. It appears that the drill sent was not fit for that work. It, therefore, becomes a question, whether the Department, having supplied an unsuitable drill, the owners should be held responsible and made to pay for it. But, admitting the drill to be suitable, if the delay arose either from carelessness or ignorance on the part of those in charge of the drill, should the parties for whom the bore was being put down be held responsible. The fairest way, both to the Department and to the Company, would be to have the work valued by two competent persons, one to be appointed by the Company, and one to be appointed by the Department. Failing to agree, they might choose a third to act as umpire, and whatever sum per foot was fixed upon, the Company should be compelled to pay; of course the Company is responsible for any stoppage of work that occurred through their failing to pay their account, but it must be evident that 15s. 1d. per foot named in the Under Secretary's minute, is very excessive. The best proof to me that the drill first sent was unsuitable, is in the fact that another drill has had to be sent.—J.F., 21/12/86.

The Superintendent of Drills.—H.W., 21/12/86.

Through my absence from Sydney in the Silverton district, I have not seen Mr. Turnbull's letter before to-day; but in his letter he states that Engineer Goodare is very competent, and Goodare was put on by me in charge of Clarence Siding drill, in November, 1885; therefore, by Mr. Turnbull's own writing, the work has not been delayed through ignorance of those in charge. The fact is, the bore has been an exceptionally difficult one, as it required 3-inch tubing for 340 feet, and 575 feet of 2½-inch. There were no less than four difficult drifts and conglomerate to go through, of this Mr. Turnbull is well aware. Please note my letter herewith.—W. H. J. SLÉE, 21/12/86.

17

No. 62.

Memo. from The Superintendent of Drills to Mr. Engineer Goodare.

Department of Mines, Diamond Drill Branch,
Sydney, 3 December, 1886.

REFERRING to your letter of the 30th ultimo, requesting that another pump and a steam-winch be sent you, I have the directions of the Under Secretary for Mines to request you to explain why the pump you have on the ground will not serve the purpose, and the necessity you have for a steam-winch.

J. S. M'NEIL,
(Pro Superintendent of Drills).

Telegram from The Superintendent of Drills to Mr. Engineer Goodare.

3 December, 1886.

ACCEPT Richards' offer of £5 to remove machinery to site, also offer of 30s. to provide second team.

J. S. M'NEIL,
(Pro Superintendent of Drills).

Memo. from The Superintendent of Drills to Mr. Engineer Goodare.

Department of Mines, Diamond Drill Branch,
Sydney, 3 December, 1886.

You have been wired to to-day to accept Richards' offer of £5 to remove No. 7 drill and boiler to present site of operations; also his offer of 30s. to provide second team of bullocks to assist with boiler.

J. S. M'NEIL,
(Pro Superintendent of Drills).

Memo. from The Superintendent of Drills to Mr. Engineer Goodare.

Drill Branch, Sydney, 7 December, 1887.

ENGINEER Goodare is informed that a pump will be sent him as soon as possible, and the steam-winch (which is now at No. 11 drill, Sutherland) the moment it is available.

J. S. M'NEIL,
(Pro Superintendent of Drills).

No. 63.

The Under Secretary for Mines to J. H. Mulholland, Esq.

Sir, Department of Mines, Sydney, 4 December, 1886.

I have the honor, by direction of the Secretary for Mines, to inform you that if the account due to the Department for work done with the diamond drill at Clarence Siding, amounting to £749 0s. 2d., be not paid at once, proceedings will be taken against your Company for the amount due.

I have, &c.,
GERARD E. HERRING,
(For the Under Secretary).

No. 64.

Mr. Engineer Goodare to The Superintendent of Drills.

No. A Diamond Drill, Clarence Siding,
4 December, 1886.

Sir,

In answer to yours of the 3rd instant, re pump and steam-winch, I beg to state that I require another pump to feed hydraulics.

The pump I have is a 3 x 4, and is too small to feed hydraulics and wash the silt out of bore.

My reason for having a steam-winch is that I have to lift the rods very often 18 inches, caused by core-splitting and jamming in the core-barrel, which takes up a great deal of time if lifted by machine, besides knocking it to pieces in a very short time.

A steam-winch is as quick again, and will be a great saving in the end. Hoping you will let me have them as soon as possible.

I am, &c.,
ALF. GOODARE.

Submitted.—J.M., 6/12/86. The Under Secretary. Forward pump and inform that winch will be sent when available, though it is thought he ought to be able to manage without one.—H.W., 7/12/86. Informed, 7/12/86. Winch need not be sent until after I have been able to inspect Clarence Siding boring operations.—W. H. J. SLEE, 31/12/86. No. 5 Blake's pump brought from Redhead, and forwarded to Clarence Siding with piping, 13/12/86.

No. 65.

The Superintendent of Drills to The Under Secretary for Mines.

Department of Mines, Diamond Drill Branch, Sydney,
4 December, 1886.

Re boring at Clarence Siding for the Brookdale Coal, Shale, and Iron Company, with No. A drill:—

Total depth bored, 1,020 feet.
Cost to Company to date about £1,000.
Cost per foot, 21s. 6½d.

442—C

Sir,

Sir,

The following facts are most respectfully pointed out, viz. :—

That the work was visited on various occasions by the Superintendent.

There is nothing that can be found on record showing that 1,200 feet was the depth which was anticipated that might have to be bored. When application was made by the Company, they stated that it was estimated the first seam would be about 230 feet, and the lower one about 700 feet from surface. They were subsequently asked to mention depth again, which question they do not appear to have answered.

Before No. A drill was forwarded, to begin the work, it was thoroughly overhauled at Messrs. Mort & Co's. works, which repairs cost about £50, and everything was added to the plant, in order to make the drill complete and to ensure its capability to perform the work for which it was intended.

When the Superintendent visited the work in September last, the depth then obtained was 840 feet, and as the lower seam had not been met a second boiler was forwarded to enable the drill to bore to a greater depth. At that time it was thought that the lower seam would be reached at about a depth of 900 feet.

Considerable delay to the boring has taken place, owing to non-payment of accounts due and promises made by the Company, but without the result promised, except in one instance, when the drill was kept idle for about two months, and, after considerable correspondence, the sum of £300 was paid on 26th May of present year. The Company at this time promised to pay the sum of £345.

Other delays took place which at times cannot be obviated, but the Superintendent adopted what he considered the best and most expeditious means to overcome such, and during which the Superintendent employed the men at the drill by performing other work of importance, *i.e.*, finding and cutting fuel or performing repairs to the machinery, &c., in order that when boring was resumed the operations should not be retarded, thereby saving the Company considerable cost for fuel, and, by doing such repairs, prevented stoppages which might otherwise have taken place.

I have, &c.,

J. S. M'NEIL,

(*Pro* Superintendent of Drills).

Mr. Slec took charge about latter part of September, 1885.

Discharged Engineer Durning and appointed Engineer Goodare about middle of November, 1885.

Report of inspections by Superintendent, dated 14 January, 1886, and 14 September, 1886.

Re payment of accounts see dates—17 February, 1886; 11 May, 1886; 15 May, 1886; 17 May, 1886 (telegram); 11 November, 1886; and 19 November, 1886.

Strata from week ending on 13 February, 1886, to 3 April, 1886—102 feet of conglomerate (some of it mixed with sandstone) was bored through. The other strata consisted of sandstone, chirtz, chocolate clay, shale, and such like.

Concession whereby the Company speak of such before the boring was started :—

	ft.	in.
Depth bored prior to Mr. Slec taking charge...	283	6
Depth bored since taking charge	736	6
	1,020	0

Extracting rods and core-band, reaming, and recovering diamonds—

No. 66.

No. 66.

The Superintendent of Drills to The Under Secretary for Mines.

Complaint of Mr. J. B. Turnbull to The Honorable the Minister for Mines, *re* boring with Diamond Drill near Clarence Siding.

Department of Mines, Diamond Drill Branch,
Sydney, 21 December, 1886.

Sir,

Re Clarence Siding boring operations, and complaint of Mr. Turnbull, I have the honor to inform you that in September, 1885, I took charge as Superintendent of Drills, and in November dismissed the then engineer-in-charge of No. A drill, Clarence Siding, and placed the present Engineer Goodare (who is considered as very competent by Mr. Turnbull) in charge. (See Mr. Turnbull's letter).

When the application for a diamond drill was made, the recognised Secretary of the Brookdale Company stated in his letter that they expected to strike two seams of coal—the first at 230 feet, and the second at 700 feet, from surface.

I have no doubt that, in accordance with this statement, the late Superintendent (Mr. Henderson), to save expenditure of carriage to the Company, forwarded a smaller drill than he otherwise would have done, but still a drill powerful enough to bore at least 300 feet deeper than the Company informed the Mines Department they intended to go. The bore put down by No. A. drill before No. 7 drill was forwarded, is 1,020 feet. Since the first application was made Mr. Mulholland informed me personally that the Company expected to bore from 700 to 800 feet, but now the Company finds that the seams of coal have dipped considerably more than they expected. They blame the Mines Department for not forwarding a drill at first, which was powerful enough to bore over 1,200 feet.

The late Superintendent of Drills estimated the cost of boring at Clarence Siding at 15s. 9d. per foot for the first 500 feet, and 3s. per foot extra for every additional 100 feet. Had the Company accepted these terms, they would have had to pay a greater sum than at present charged to them.

Whatever the strata may be near Lithgow, at Clarence Siding several layers of loose sand and conglomerate have been bored through, which have had to be tubed off, and the bore at the lowest depth is continually silting up, requiring the pump whether the drill works or not.

On three different occasions I have been instructed by the Honorable the Minister for Mines to stop boring operations until the Company had paid a certain sum, by which over two months of time was lost.

On the 11th May I wrote to you that some action may be taken, either to make the Brookdale Coal Company respect the decision of the Honorable the Minister for Mines by paying some money, or to have the drill withdrawn, and I added that in the meantime the wages of the men and other expenditure was going on, and, at the end of the year, this enforced delay and idleness of No. A drill at Clarence Siding would be a blotch in the returns of my management. This also received the approval of (Mr. Fletcher) the Honorable the Minister for Mines.

I beg respectfully to submit that, when all the circumstances of the case are considered, it will be found that the Company is more to blame than the Mines Department:—

1st.—In causing a small drill to be sent, by stating the depth of boring to be only 700 feet.

2nd.—By causing stoppage of work, extra expenditure, and loss of time in not paying up when the decision of the Honorable the Minister for Mines was made known to them.

The average cost of boring, exclusive of office expenditure, during the year 1885, was a fraction under 17s. per foot.

Mr. Coghlan, of the Australian Diamond Drill Company, informed me some time ago that he reckoned his cost of diamond drill boring at £1 per foot.

I have, &c.,

W. H. J. SLEE,

Superintendent of Drills.

This explanation shows the action of the Department is not deserving of the censure. The broken character of the country, and the fact that the bore has passed through conglomerate, and also through drifts, is evidence that more than ordinary difficulties have had to be contended with. For example, the bore, 2½ inches diameter, was sunk 454 feet when, in consequence of a running drift, it had to be tubed. In order not to reduce the size of the bore too much, it had to be increased to 3¼ inches diameter by reaming, which occupied considerable time, and the conglomerate added to the difficulty of inserting tubes. At a lower level another running drift was struck, necessitating other tubing, whereby the diameter is now reduced to 2 inches. In view of all these circumstances, I do not think a reduction should be made, and the Company should be required to pay the amount due in terms of the contract.—H.W., 22/12/86. Submitted.

Approved.—C.K.M., 17/1/87.

No. 67.

The Under Secretary for Mines to J. B. Turnbull, Esq.

Sir,

Department of Mines, Sydney, 19 January, 1887.

Referring to your letter of the 4th ultimo, in respect to the work done for your Company with the diamond drill at Clarence Siding, and to your statement that your Company consider that the Department should make some reduction on the charge, as the boring operations have been so protracted, I have the honor to inform you that the Secretary for Mines does not see his way to make any reduction on the charge; and I am to request that the Company pay the amount due, in terms of the contract, an account of which has been already rendered.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 68.

The Local Land Board to The Under Secretary for Mines.

Sir,

Local Land Board Office, Sydney, 28 January, 1887.

I have the honor to request that you will be good enough to furnish me with the amounts and dates of expenditure in mining operations in connection with the mineral conditional purchase noted below.

I have, &c.,

CHAS. W. THOMAS,
(For the Chairman).

Lithgow M.C.P., 81/67, John M. Gardner; por. 164, parish Clwydd, county Cook.

This information can only be supplied with certainty from the application at Lands; it is suggested that reference be made to that Department, or that Mr. S. P. Mayes be directed to obtain it from there.—P.D. (*pro* C.H. D.), 4/2/87. The C.M.S. Mr. Mayes may obtain it.—E.J.P., 7/2/87. On reference to Lands Department I find this matter is in connection with diamond drill operations upon the Brookdale Coal, Shale, and Iron Mining Company's property at Clarence Tunnel, Great Western Railway. It is submitted that this paper be referred to the Diamond Drill Branch.—P.D. (*pro* C.D.), 9/2/87. The C.M.S. Submitted.—C.S.W. (*pro* C.M.S.), 11/2/87. The Under Secretary. The Superintendent of Drills, B.C., 11 February, 1887. The diamond drill bored near Clarence Siding 1,020 feet, at a cost of £1,176 2s., of which sum only £300 has been paid, and £876 2s. is still due.—W. H. J. SLEE, 14/2/87. The Land Board may be informed that £300 has been paid for boring with diamond drill at Clarence Siding for the Brookdale Coal Company. W. H. J. SLEE, 14/4/87. Approved.—H.W., U.S., 14/4/87.

No. 69.

The Superintendent of Drills to The Under Secretary for Mines.

The partial caving in and silting up of the Clarence Siding bore, recommending that the Brookdale Coal-mining Company should make some payment before further reaming is carried on.

Department of Mines, Diamond Drill Branch,

Sydney, 23 March, 1887.

Sir,

I have the honor to inform you that Engineer Goodare is down from Clarence Siding this morning to personally report on the partial caving in and silting up of the Clarence Siding bore, thereby jamming the rods in the bore. This bore has been a very difficult one, owing to the several layers of conglomerate and sand-drifts. At times the sides of the bore have fallen in, and at other times it has silted up. To prevent this 338 feet were tubed with 3-inch, and again 2½-inch tubes had to be put to the depth of 570 feet. The lowest depth reached is 1,040 feet, where the bore has again caved in.

This necessitates reaming with 3½-inch from the 338 feet, to enable 3-inch tubes to be lowered to the whole depth of 1,040 feet. This reaming must be done before any further boring can be proceeded with. I have instructed Engineer Goodare to recover the rods as soon as possible.

2nd. I beg to recommend that before any further reaming is commenced the Brookdale Coal-mining Company may be requested to make payment for the work already performed, or else that the drill machinery had better be withdrawn, more especially as the Company now seem to think that the second seam of coal will not be tapped under 1,200 feet from surface; although at one time they stated, through their Secretary, it would be obtained about 700 feet.

Herewith see paper setting forth the amount the Company are liable to pay, and the amount they would have had to pay had they accepted Mr. Henderson's terms at per foot. Had they accepted the late Superintendent's terms they would have gained; they took it as a speculation, and have slightly more to pay.

W. H. J. SLEE,

Superintendent of Drills.

The Company should be required to pay the balance due, namely, £978 1s. 9d., before any further tubing is put in, otherwise the recommendation of the Superintendent may be approved.—H.W., 23/3/87. Submitted. Approved.—F.A., 24/3/87. Balance of account asked for, 29/3/87. Seen.—W. H. J. SLEE, 31/3/87.

No. 70.

The Under Secretary for Mines to The Secretary, Brookdale Coal-mining Company.

Sir,

Department of Mines, Sydney, 29 March, 1887.

I have the honor, by direction of the Secretary for Mines, to inform you that the Superintendent reports that owing to the character of the country it is necessary to tube the bore to the bottom, and this cannot, in view of the present size of the bore, be done without reaming the bore to 3½ inches from a depth of 338 feet, and that the balance of account amounting to £978 1s. 9d., due by your Company for work done with the diamond drill at Clarence Siding, must be paid before further tubing is put down or boring operations proceeded with.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 71.

Office Memo.

14 April, 1887.

The shareholders of the Brookdale Coal Company are as follows, viz. :—

William Turnbull, Manager, A. A. Co., Newcastle.

J. B. Turnbull, Resident Director, Lithgow.

John Garsed, Helsarmel, Leichhardt, Sydney.

Walter

Walter Christy, care of J. H. Mulholland, George-street.
 James Russell, Newcastle.
 J. H. Mulholland, Secretary, George-street, Sydney.
 A copy of account may be forwarded to each of the shareholders of the Brookdale Coal Company.
 W. H. J. SLEE,
 14/4/87.

Copies forwarded, 14/4/87.

No. 72.

The Under Secretary for Mines to The Chairman of the Local Land Board Office.

Sir, Department of Mines, Sydney, 16 April, 1887.
 Referring to your letter of the 28th January last in which you ask to be furnished with the amount of expenditure in mining operations in connection with the mineral conditional purchase noted below, I have the honor to inform you that the sum of £300 has been paid for boring with the diamond drill on land held at Clarence Siding by the Brookdale Coal Company.

I have, &c.,
 HARRIE WOOD,
 Under Secretary.

Lithgow, mineral conditional purchase 81-67, John M. Gardner, portion 164, parish of Clwydd, county of Cook.

No. 73.

Memo. by the Superintendent of Drills.

9 June, 1887.
 THE amount due by this Company up to 21st May, 1887, is £1,086 16s. 7d., who, by direction of the Under Secretary, are informed as follows, *i.e.* :—

Unless the amount be paid within thirty days, the Crown Solicitor will be instructed to take proceedings to recover the amount.

J.M.,
 (Pro Superintendent of Drills).

As the thirty days have expired, and the amount due has not been paid, the Crown Solicitor may be asked to take proceedings to recover the amount.—H.W., 13/7/87. Submitted. Approved.—F.A., 14/7/87. Crown Solicitor asked, 20/7/87.

No. 74.

The Under Secretary for Mines to The Crown Solicitor.

Sir, Department of Mines, Sydney, 30 July, 1887.

I have the honor to forward herewith a statement of particulars of amount due to this Department for the use of diamond drill No. A, and I am directed by the Secretary for Mines to request that you will be good enough to take the necessary steps for the recovery of such sum.

I have, &c.,
 HARRIE WOOD,
 Under Secretary.

Statement :—

Name—Brookdale Coal Company (Limited).

Amount due—£1,086 16s. 7d.

Date on which payment has been demanded—27th May, 1887, final.

No. 75.

Memo. by The Superintendent of Drills.

12 August, 1887.
 THE Brookdale Company agreed to pay for the use of the diamond drill at Clarence Siding, at rate per week, as per copy of published conditions herewith.

See document, dated 6th May, 1885, from Company, informing the Department of their acceptance of the weekly conditions.

W. H. J. SLEE,
 Superintendent of Drills.

[Enclosure.]

Diamond Drills.

Department of Mines, Sydney, 30 November, 1883.
 The following terms and conditions under which the use of diamond drills may be obtained are published for general information. JOSEPH P. ABBOTT.

1. Applications for the use of diamond drills must be in writing, addressed to the Under Secretary for Mines, accompanied by a deposit of £2 2s. towards the cost of inspection. If an application be refused without inspection having been made the deposit will be refunded.

2. Each application must state the mineral to be bored for, the probable depth to be bored, and whether the work is to be confined to one or more holdings owned or occupied by the applicant, or to be spread over a tract of country for prospecting purposes, and in either case a plan, sketch, or description, defining the holding or tract of country to be operated upon must accompany the application. Upon receipt of any such application and deposit, the Minister for Mines may direct an inspection and report to be made, or he may refuse the application without inspection or report.

3. Applications approved of will be dealt with in the order of priority.
4. Before commencing operations the Minister may require the applicant to deposit a sum of money as security that the conditions will be observed, and the payments duly made.
5. *The person to whom the use of the drill is granted must:—*
 - (a.) *Defray the cost of removing the drill and all necessary appliances from the place where standing to the site of the operations, and placing it in position thereon.*
 - (b.) *Supply or defray the cost of all necessary fuel and water for working the drill.*
 - (c.) *Pay the cost price of any tubes that may be damaged or destroyed, or that cannot be withdrawn from the bore.*
 - (d.) *Pay £10 per week to cover the cost of diamonds and wear and tear of machinery.*
 - (e.) *Pay the actual wages of the foreman and labourers working the drill.*
6. *Payments shall be made on demand or within fourteen days thereafter, and upon failure to do so the drill may be withdrawn, and the money deposited applied to payment of amount due.*
7. Persons preferring to pay for the work by the foot instead of the foregoing rates may, in their application, state that fact, and the Minister may, if the site be considered suitable, cause a price per foot to be fixed for various depths, such price to include the cost of all labour, diamonds, wear and tear of machinery, and all material, except tubing, and shall be inclusive or exclusive of cost of fuel and water according to agreement.
8. When a drill is required by any body of co-operative miners, association, or corporation for the purpose of developing in the public interest the mineral deposits of any district, or for prospecting any lead or lode or the Crown lands generally in any given locality, the Minister may reduce the rates aforesaid according to the importance to the public of the work. The reduction in no case to exceed 50 per cent.
9. In any case in which it shall appear necessary in the interest of the public to do so, areas may be reserved under the Mining Act, in order to secure to the persons contributing towards the expense of the prospecting operations the benefit of any discovery that may be made.
10. Persons desiring the use of a diamond drill to bore for water can, on application made as aforesaid if the site prove on inspection suitable, obtain the use of a drill in the order of priority of application, on the terms set out in clause 5, subject, in cases where in the opinion of the Minister the work is of public benefit, to a reduction proportionate to the public importance of the work.

The portion in italics refer to the weekly terms.—W. H. J. SLEE, Superintendent of Drills.

No. 76.

Minute by The Under Secretary for Mines.

MR. MCLHOLLAND, Manager of the Brookdale Company, says, if a writ be issued at once for the amount due for boring at Clarence Siding, the money will be paid forthwith.

The papers are with the Crown Solicitor.

The Attorney-General would be obliged if the Crown Solicitor would see to this matter.

W.W.S., 23/11/87.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BULLI COLLIERY EXPLOSION.

(OPINION OF MR. ATTORNEY-GENERAL WISE.)

Ordered by the Legislative Assembly to be printed, 29 September, 1887.

COPY of Mr. Attorney-General Wise's Opinion *re* Bulli Colliery Explosion.

THE questions I am asked to decide are :—

1. Whether any ground for a criminal prosecution against any person or persons is afforded by the Report of the Royal Commission on the Bulli Colliery Accident? And
2. If not, whether the Report justifies the Government in taking any other legal steps?

The finding of the Report so far as it concerns these questions is (p. 23) :—“ That the person or persons to whom blame is attachable for this disastrous accident is the man Westwood, or his mate (both deceased), who at the moment were working at the face of No. 2 heading, and who prepared and fired the shot which, in the opinion of the Commission, was the immediate or primary cause of the explosion. The Commission are, however, of opinion that the deputy, Robert Millward (deceased), Richard White, overman, and to a less extent (except in the matter of providing bratticing, for which he was alone responsible), Alexander Ross, manager, were guilty of contributory negligence. The Commission are firmly convinced that the carelessness, want of skill, and the loose and perfunctory manner in which the principal operations in this mine were performed by the majority of the men, and countenanced by at least the overman and deputies, were intimately connected with and led up to the occurrence of the final catastrophe, whereby by the direct negligence of probably one man eighty other men lost their lives.” Assuming, as I must, that this finding of a body of experts is justified by the evidence, which is mostly of a scientific character, it implicates criminally only one man, who is a Mr. Westwood, or his mate, both of whom are dead.

The criminal law knows nothing of the doctrine of contributory negligence in the sense in which that term is used in the Report. If the accident was caused by the negligence of Westwood, although White or Ross by the exercise of proper forethought might have prevented the consequences of Westwood's negligence (as to which I express no opinion), still Westwood alone is liable to the criminal law. Neither White nor Ross can be made criminally responsible for the results of the conduct of another man, unless the results were equally the results of their own conduct, and would have followed upon their action, even if Westwood had done nothing.

Of course this does not relieve the Company from their civil liability (if any), but that is a question between the Company and the individual claimants with which the Government cannot interfere.

As to the second question, I notice that the Report (p. 14, p. 21, p. 23) indicates that the rules under the Coal Mines Regulation Act, with reference to the use of safety lamps and to the method of preparing shots were not complied with, although it is said that the neglect of these rules was not the cause of the accident. None the less, the persons responsible for the non-observance of these rules might be proceeded against for a £10 penalty under s. 34 if the Department think that the evidence implicates with sufficient clearness any particular individual. For my part I have not the necessary scientific knowledge to say where in what respects these rules were not complied with, or whether the non-compliance with them was culpable or was the result of a mere error of judgment. The evidence on both these points seems to me, as an unscientific man, conflicting and obscure, and I would not recommend that any proceedings be taken, unless the Department are satisfied that there was a wilful and culpable neglect of the regulations.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BULLI COLLIERY EXPLOSION.

(LETTER FROM MR. MACKENZIE, EXAMINER OF COAL FIELDS, ON REPORT ON, AND MINUTES &c., THEREON.

Ordered by the Legislative Assembly to be printed, 30 November, 1887.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25th November, 1887, That there be laid upon the Table of this House,—

“Copies of all replies, letters, &c., furnished by Mr. Mackenzie *re* Commission’s Report on Bulli Accident.”

(Mr. Melville.)

SCHEDULE.

No.	PAGE.
1. Memo. of Under Secretary for Mines, that a copy of the Report of the Royal Commission on the Bulli Colliery Disaster be forwarded to the Examiner of Coal Fields for his report. 5 September, 1887.....	1
2. Under Secretary for Mines to Examiner of Coal Fields, forwarding abovementioned report. 5 September, 1887.....	1
3. The Examiner of Coal Fields to the Under Secretary for Mines, furnishing report on above. Minute thereon. 15 September, 1887.....	2

No. 1.

Memo. by the Under Secretary for Mines.

Bulli Colliery.—Report of the Royal Commission.

5 September, 1887.

SHALL a copy be forwarded to the Examiner of Coal Fields for any remarks he may make.

H. W.

Submitted. Approved.—F.A., 5/9/87.

No. 2.

The Under Secretary for Mines to The Examiner of Coal Fields.

Sir,

Department of Mines, Sydney, 5 September, 1887.

I have the honor, by direction of the Secretary for Mines, to forward by accompanying post, under separate cover, a copy of the report of the Royal Commission on the Bulli Colliery Accident for any remarks you may choose to make with reference thereto.

I have, &c.,

GERARD E. HERRING

(for the Under Secretary).

No. 3.

The Examiner of Coal Fields to The Under Secretary for Mines.

Sir,

"Botanic Hotel," Adelaide, 15 September, 1887.

I have the honor to acknowledge the receipt of your letter of the 5th instant, forwarding me, by direction of the Minister, a copy of the Report of the Royal Commission on the Bulli Colliery Disaster for any remarks I may choose to make with reference thereto.

In reply, I beg to say that the Commission have arrived at one conclusion and I at another. I am prepared to receive and pay all respect to the opinions expressed by the Commission as the conscientious utterance of their belief, though I entirely disagree with their finding as to the cause of the disaster, at the same time I can only express regret that the Commission has not displayed the same courtesy to me, but should so unnecessarily, and with evident warmth, have subjected my convictions to contemptuous and sneering criticism.

2. As an evidence of the recklessness with which damaging assertions are made concerning me, I beg to call the Minister's attention to the following extract from the report:—

"The object of the Examiner's visit was not to inspect, but to report upon, a section of coal in the Western District, leased by the Company from the Government. It is somewhat unfortunate that he did not thoroughly perform the mission by visiting the face of Nos. 3 and 4 headings, in which some of the plans are shown within Government lands."

In answer to this, I have only to say that there is no Government land in the Hillend or Gassy District. The Commission having full power, was in a position to avail itself of all and every information.

They have accepted an inaccurate plan instead of the correct one (although they had a special survey made of these and other workings), and bases upon it a charge against me of indifference to or neglect of duty, which, in reality, recoils upon themselves. The other inferences which this fact alone suggests, it is, I think, unnecessary that I should dilate upon.

I have, &c.,

JOHN MACKENZIE,
Examiner of Coal Fields.

Submitted.—G.E.H. (for Under Secretary).

Seen.—I do not approve of the manner Mr. Mackenzie deals with the Report of the Royal Commission on the Bulli Disaster. I am of opinion that his conclusion must give way to that of a number of men who inquired and took evidence, and who are not directly interested in any particular theory.—F.A., 21/9/87.

Seen.—J.M., 28/10/87.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON

MINERAL CONDITIONAL PURCHASES, PARISH
OF METZ ;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
5 July, 1888.

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

1888.

1887-8.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 45. TUESDAY, 20 DECEMBER, 1887.

16. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ:—Mr. Levien moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, for the purpose of inquiring into and reporting upon the granting of certain mineral conditional purchases in the parish of Metz, county of Sandon, to John Moore and others, of Armidale; also, with reference to the refusal of certain applications, and the granting of other applications, for permission to mine on the same land.
- (2.) That such Committee consist of Mr. Abbott, Mr. Abigail, Mr. Copeland, Mr. Frank Farnell, Mr. Garrett, Mr. Hassall, Mr. Moore, Mr. Vaughn, and the Mover.
- Debate ensued.
- Question put and passed.

VOTES NO. 69. WEDNESDAY, 21 MARCH, 1888.

11. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ:—Mr. Tonkin presented a Petition from John Moore and John M'Bean, of Armidale, praying that they may be heard by Counsel or Solicitor before the Select Committee on "Mineral Conditional Purchases, Parish of Metz," with liberty to adduce such evidence as may be advised concerning the subject of the inquiry, in the interests of the Petitioners.
- At the request of Mr. Tonkin, the Petition was read by the Clerk, by direction of Mr. Speaker, and received.

VOTES NO. 70. THURSDAY, 22 MARCH, 1888.

8. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ (*Formal Motion*):—Mr. Hugh Taylor, for Mr. Tonkin, moved, pursuant to Notice, That the prayer of the Petition, presented on the 21st March, from John Moore and John M'Bean, of Armidale, for leave to be heard by Counsel or Solicitor before the Select Committee on "Mineral Conditional Purchases, Parish of Metz," be granted.
- Question put and passed.

VOTES NO. 92. THURSDAY, 17 MAY, 1888.

5. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ:—Mr. J. P. Abbott (*by consent*) moved, without Notice, That the name of Mr. J. P. Abbott, one of the Members for Wentworth, be removed from the Committee sitting on "Mineral Conditional Purchases, parish of Metz."
- Question put and passed.
- * * * * *
16. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ:—Mr. Melville (*by consent*) moved, without Notice, That the Return to Order and Further Return (*in part*) to Order, laid upon the Table and ordered to be printed on the 7th July and 21st September, 1887, respectively, respecting "Applications for Mineral Conditional Purchases, parish of Metz," be referred to the Select Committee now sitting on that subject.
- Question put and passed.

VOTES NO. 94. WEDNESDAY, 23 MAY, 1888.

4. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ:—Mr. Melville presented a Petition from Joseph Francis M'Kinlay, of Armidale, representing that Petitioner is, and has been for many years, the holder of a miner's right; that he and others, forming a mining party, have, for a period of thirteen months, been in possession of certain portions of land, parish of Metz; that John Moore, John M'Beau, and Peter Speare, claim to be entitled to possession of the said land; that a Select Committee has been duly appointed to inquire into the matter; and praying that Petitioner may be heard before the said Committee, with liberty to adduce evidence.
- Petition received.
- Mr. Melville (*by consent*) moved, without Notice, That the prayer of the Petition be granted.
- Question put and passed.

VOTES NO. 112. THURSDAY, 5 JULY, 1888.

3. MINERAL CONDITIONAL PURCHASES, PARISH OF METZ:—Mr. Levien, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee, for whose consideration and report this subject was referred on 20th December, 1887, together with Appendix.
- Ordered to be printed.

MINERAL CONDITIONAL PURCHASES, PARISH OF METZ.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 20th December, 1887, "with power to send for persons and papers, for the purpose of inquiring into and reporting upon the granting of certain mineral conditional purchases in the parish of Metz, county of Sandon, to John Moore and others, of Armidale; also, with reference to the refusal of certain applications, and the granting of other applications, for permission to mine on the same land," and to whom was referred on 22nd March, 1888, "the Petition from John Moore and John M'Bean," on the 17th May, 1888, "the Returns to Order, 'Applications for Mineral Conditional Purchases, Parish of Metz,'" and on the 23rd May, 1888, "the Petition from Joseph Francis M'Kinlay,"—have agreed to the following Report:—

Your Committee, having examined the witnesses named in the List* *See list, page 5. (whose evidence will be found appended hereto), and carefully considered the whole of the evidence, find as follows:—

- (1.) That John Moore, of Armidale, selected portion 110 of 80 acres, in the parish of Metz, county of Sandon, as a mineral conditional purchase in his own name, but the evidence is conclusive that the selection was made in the interest and on behalf of the copartnership of which he, John Moore, was a member.
- (2.) That the said portion 110 was held in conjunction with portions 109 and 58, and remained throughout the property of the said copartnership.
- (3.) That the expenditure in mining—other than gold-mining—on portions 58 and 109 was sufficient to also cover the expenditure otherwise required to be made on the adjoining portion 110.
- (4.) That when the said John Moore applied to the Minister for Lands for the consolidation of portion 110 with portions 58 and 109, he did so on behalf of himself and copartners.

Your Committee therefore are of opinion that there is no evidence before them which would tend to invalidate the title of the said "John Moore and others" to the said mineral conditional purchases.

ROBERT HENRY LEVIEN,
Chairman.

No. 3 Committee Room,
Sydney, 26th June, 1888.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 16 MAY, 1888.

MEMBERS PRESENT:—

Mr. Levien, | Mr. Copeland,
Mr. Frank Farnell.

Mr. Levien called to the Chair.

Entries from Votes and Proceedings, appointing the Committee and referring the Petition of John Moore and John M'Bean to be heard by counsel or solicitor before the Committee, read by the Clerk. Committee deliberated.

[Adjourned to Tuesday, 29th May, at half-past Ten o'clock.]

TUESDAY, 29 MAY, 1888.

MEMBERS PRESENT:—

Mr. Levien in the Chair.

Mr. Abigail, | Mr. Garrett,
Mr. Copeland, | Mr. Frank Farnell.

Entries from Votes and Proceedings, discharging the name of Mr. J. P. Abbott from the Committee, and referring the petition from Joseph Francis M'Kinlay, and the Returns to Order "Applications for Mineral Conditional Purchases, parish of Metz," read by the Clerk.

Printed copies of Petitions and Papers referred before the Committee.

Present:—R. D. Pring, Esq., Counsel, and Alfred Horrocks, Esq., Solicitor (for Joseph Francis M'Kinlay), W. C. Proctor, Esq., Solicitor (for Messrs. Moore and M'Bean).

Mr. Pring addressed the Committee.

W. H. Capper, Esq. (Clerk in charge, Conditional Sales Branch, Lands Department), called in, sworn, and examined.

Witness [handed in] application by John Moore for mineral conditional purchase of portion 110, 80 acres, parish of Metz (Appendix A 1), two declarations by Mr. Moore (Appendix A 2), application by John Moore and party (Appendix A 3), Inspector Harper's report respecting mineral conditional purchase of John Moore (Appendix A 4), depositions before Land Board at Armidale (Appendix A 5).

Mr. Joseph Francis M'Kinlay, called in, sworn, and examined.

Witness withdrew.

Mr. John Moore, called in, sworn and, examined.

Witness produced agreement between Glass, Powrie, and himself, receipt from Oriental Bank for balance of account sales of antimony shipped to London, and regular permit to mine for minerals.

Cross-examined by Mr. Pring.

Witness withdrew.

[Adjourned to Tuesday next, at half-past Ten o'clock.]

TUESDAY, 5 JUNE, 1888.

MEMBERS PRESENT:—

Mr. Levien in the Chair.

Mr. Moore, | Mr. Copeland.

The Clerk laid before the Committee the MS. evidence of Mr. Moore, to which new matter had been added during its revision by the witness.

Committee deliberated, and instructed the Clerk to strike out the new matter which had been introduced.

Present:—W. C. Proctor, Esq., Solicitor (for Messrs. Moore and M'Bean), R. D. Pring, Esq., Counsel, and Alfred Horrocks, Esq., Solicitor (for Mr. J. F. M'Kinlay).

Mr. John Moore called in and further examined.

Witness produced account book showing account with M'Bean, and [handed in] medical certificate for John M'Bean, and statutory declarations of John M'Bean and Lambert Skene Gordon. (Appendices B 1, 2, and 3.)

Cross-examined by Mr. Proctor and Mr. Pring.

Witness withdrew.

[Adjourned to To-morrow, at Ten o'clock.]

WEDNESDAY, 6 JUNE, 1888.

MEMBERS PRESENT:—

Mr. Levien in the Chair.

Mr. Copeland, | Mr. Frank Farnell,
Mr. Moore.

Present:—R. D. Pring, Esq., Counsel, and Alfred Horrocks, Esq., Solicitor (for J. F. M'Kinlay), W. C. Proctor, Esq., Solicitor (for Messrs. Moore and M'Bean). Mr.

Mr. John Moore called in and further examined.
 Witness *produced* copy of mortgage, M'Bean to Mrs. Davis, W. G. S. and E. C. Moore.
 Cross-examined by Mr. Pring.
 Mr. Richard Palmer called in, sworn, and examined.
 Witness withdrew.
 Mr. Peter Speare called in, sworn, and examined.
 Witness *produced* his agreement with Palmer for purchase of share in land at Armidale; and Moore's receipt to him for third share of instalments paid on block 110.
 Cross-examined by Mr. Pring.
 Witness withdrew.
 Mr. William Westren called in, sworn, and examined.
 Cross-examined by Mr. Proctor.
 Witness withdrew.
 Mr. Alfred James Hack called in, sworn, and examined.
 Cross-examined by Mr. Proctor.
 Room cleared.
 Committee deliberated.
 Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned]

TUESDAY, 26 JUNE, 1888.

MEMBERS PRESENT:—

Mr. Copeland, | Mr. Moore,
 | Mr. Frank Farnell.

Mr. Copeland called to the Chair *pro tem.*
 Committee deliberated.
 Deputy Chairman submitted draft report.
 Same read and agreed to.
 Chairman to report to the House.
 Claims for expenses as witnesses from Joseph M'Kinlay, £18 17s.; J. Elliott, £18 17s.; Wm. Westren, £18 17s.; and A. J. Hack, £18 17s., were considered and disallowed.

LIST OF WITNESSES.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

MINERAL CONDITIONAL PURCHASES, PARISH OF METZ.

TUESDAY, 29 MAY, 1888.

Present:—

MR. LEVIEN,		MR. COPELAND,
MR. ABIGAIL,		MR. FRANK FARNELL,
	MR. GARRETT.	

R. H. LEVIEN, Esq., IN THE CHAIR.

Mr. R. D. Pring, Counsel, instructed by Mr. Horrocks, appeared on behalf of Mr. J. F. M'Kinlay.
Mr. W. C. Proctor, solicitor, appeared on behalf of Messrs. Moore and M'Bean.

William Henry Capper, Esq., called in, sworn, and examined:—

1. *Chairman.*] You are clerk in charge of the conditional sales branch of the Lands Department? Yes.
2. Have you got with you the original papers with reference to the applications for certain mineral conditional purchases, in the parish of Metz, which were ordered to be printed by the Legislative Assembly on the 7th July, 1887? Yes.
3. Do you produce the application for the mineral conditional purchase of portion 110, 80 acres, made by John Moore, on the 29th September, 1881? Yes. [*Vide Appendix A 1.*]
4. Do you produce two declarations, the first and the final one, by Mr. Moore? Yes. [*Vide Appendix A 2.*]
5. Do you produce a statutory declaration, and a notice of prosecution of complaint, by Joseph F. M'Kinlay? No; they are not with these papers.
6. Do you produce the application made by John Moore and party, on the 1st June, 1887, to the Secretary for Lands, and the reply thereto? Yes. [*Vide Appendix A 3.*]
7. Do you produce Mr. Inspector Harper's report respecting the mineral conditional purchase of John Moore? Yes. [*Vide Appendix A 4.*]
8. Do you produce the telegram sent by the Under Secretary for Lands to the Chairman of the Land Board, at Armidale, respecting the return of certain departmental papers? I have not the telegram itself, I have the authority for sending it.
9. Do you produce the depositions of J. F. M'Kinlay, W. Westren, J. Moore, and M. A. Maclean, before the Land Board at Armidale? Yes. [*Vide Appendix A 5.*]

W. H. Capper,
Esq.
29 May, 1888.

Mr. Joseph Francis M'Kinlay called in, sworn, and examined:—

10. *Chairman.*] Of whom does your party consist? I am not exactly sure of all the names. There are twelve or thirteen in the party, which includes Mr. Hack, Mr. Elliott, Mr. Westren, and a brother of mine.
11. You are one of the principal persons in the party? Yes.
12. Do you know portion 110, about which there is a dispute between Moore and party and yourself? Yes.
13. Are there any improvements at all on that portion? There is a little hole sunk in one place, like a prospecting hole.
14. How much do you think has been expended in all upon the portion? A man could do it all in a couple of days.
15. How much money do the improvements represent? Not more than £2 or £3. It may have been done by some prospector.

Mr. J. F.
M'Kinlay.
29 May, 1888.

- Mr. J. F. M'Kinlay.
29 May, 1888.
16. You went on to the land? Yes.
 17. With what object? To prospect. I did not know that anyone else had a claim on the land.
 18. Did you apply for a permit afterwards to mine on the land? Yes.
 19. Did you discover any gold there? When gold was discovered we gave notice of our intention to apply for a lease, not knowing that any one had a claim on the ground. It was not distinctly surveyed. We found out that Mr. Moore claimed that portion. We each pegged out a miners' rights claim. I lodged the complaint before the Land Board.
 20. On the 10th May, 1887? Yes.
 21. You lodged £10 with the notice of prosecution of complaint? Exactly.
 22. An inquiry was held afterwards, and the Board gave a decision against you? Yes.
 23. Did you ever hear that Moore and Company applied to consolidate these portions? They did some time afterwards.
 24. Do you know as a fact that Moore applied for the consolidation of the portions after you lodged your complaint? Yes.
 25. *Mr. Copeland.*] Was it on portion 110 that you discovered the gold? Yes.
 26. I believe you made an application for permission to mine on that land? Yes; to the Mines Department.
 27. The Minister refused your application? Yes.

Mr. John Moore called in, sworn, and examined:—

- Mr. J. Moore.
29 May, 1888.
28. *Mr. Proctor.*] You reside at Armidale? Yes.
 29. Do you remember taking up some mineral leases and mineral conditional purchases in the parish of Metz, county of Sandon, near Armidale? Yes.
 30. With whom were you in partnership at first? With James Glass, James Powrie, Richard Palmer, and John M'Bean.
 31. Do you remember having a dispute with Glass and Powrie? Powrie and Glass issued a writ against me to recover £10,000 for trespass.
 32. It brought forward an agreement? The action was settled by the agreement, which I now produce. It is duly registered.
 33. What portion did it refer to? Portion 58.
 34. Did you afterwards apply for portion 110, 80 acres? On the 29th September, 1881, I might mention that portion 109, which is mentioned in the agreement, is on the eastern side of portion 58. It was not surveyed until some time afterwards.
 35. Is portion 110 mentioned in the agreement? No.
 36. You applied yourself for that portion? Yes.
 37. Why did you apply for yourself? I applied for myself, Speare, and M'Bean. Speare had bought out Palmer for £1,000.
 38. Did you apply for the portion at that time for yourself and your partners? For Speare, M'Bean, and myself. It was after Speare gave £1,000 to Palmer for his interest.
 39. You knew of the existence of an agreement between Speare and Palmer? Yes; I brought about the matter. Palmer wanted to sell out. Speare happened to be in Sydney at the time. I wrote to him saying that Palmer would take £1,000 for his interest, and he took it at that price.
 40. Does the schedule to the agreement referring to 80 acres refer to portion 110? Yes; we could not have worked portions 58 and 109 without portion 110.
 41. Did you continue to work portions 109, 110, and 58 in conjunction with one another for any lengthened period? About three years.
 42. How much money has been spent? About £3,050.
 43. *Mr. Pring.*] On each portion? On portions 58 and 109. I have receipts to show that £3,051 18s. 6d. has been paid for work done.
 44. *Mr. Proctor.*] How much was spent on portion 109? The greater part of the money was spent on that portion named—on some very extensive tunnels and shafts, and tramways.
 45. Was it absolutely necessary that you should have portion 110? We could not work the others without it; the place is so abrupt; it is 1,400 feet from the top to the bottom.
 46. You afterwards bought Glass' interest? Yes. Powrie, according to the agreement I have produced, was to remain in England and sell the antimony. I was to have the management of the mine, and Mr. Mitchell was to find me with money as I required it; he held a power of attorney for Powrie. He sent home 1,000 tons of antimony; Powrie offered it for sale, but did not sell it. He came out and remained a couple of days here, but I have never heard of him since. The Oriental Bank sent me account sales, showing a loss of £1,030 on several shipments. I sent a cheque for one-third of the amount to the bank, but they would not take it. They sued me for the full amount, and I produce a receipt from the bank's solicitor for it.
 47. The Oriental Bank agreed to transfer Powrie's interest to you in consideration of your paying his share? Yes. I sued Mrs. Glass, and she transferred her interest to me, in consideration of my paying her share.
 48. You held and used all these lands together for a long time; do you remember when you made the first declaration as to the improvements being of the value of £1 4s. an acre—on portion 110? On the 24th December, 1884.
 49. Portion 110 was then in your name? Yes. After we gave up working it was considered a question whether we should throw it up or not. Speare did not press the transfer, and I did not press it. Afterwards he got a little crotchety, and I had to transfer to M'Bean and him. It was some time in May, 1886.
 50. When did you make the final declaration? On the 30th December, 1886.
 51. Was the land all this time the property of yourself, M'Bean, and Speare? Yes, from the commencement.
 52. In your evidence at Armidale before the Land Court you said, "This always belonged to me." What did you mean? I meant that I took it up in my own name; but that, the document shows, it was taken up really on behalf of myself and the others.
 53. It was a joint interest? Yes.
 54. As a matter of fact it was held by you in trust for the others? No doubt about it. Speare would not give £1,000 unless I had promised that he was to participate in it.

55. I believe you knew that there was gold in these properties long before? Oh, yes. From the time we commenced to work it was understood that an assay was to be made of the antimony before we could get an advance on a shipment to London. I suggested to Mr. Mitchell that an assay should be taken for gold as well as for antimony. Not one of the assays but showed that it contained from 2 to 4 oz. of gold to the ton. Mr. J. Moore.
29 May, 1883.
56. You knew five or six years ago that there was gold there? From the time we got the first advance on the antimony.
57. I suppose that if you are deprived of the property it will be a very serious loss to you, having spent so much money on it? I should say so.
- 57½. Do you know M'Kinlay? Yes.
58. Have you been down the mine since he applied for it? Yes.
59. Has he spent any money on the property, do you think? No; I was on block 110.
60. They have spent no money of any consequence? Not that I could see.
61. You applied to consolidate the properties? Yes; on the 1st June, 1887.
62. Do you know whether it was granted? Yes.
63. The Minister approved of your application? Yes.
64. Mr. Pring.] Did you get a document to that effect? Yes; I have not got it with me.
65. Mr. Proctor.] Do you mean the letter from the Under Secretary for Lands to J. Moore and party? No; I think there is another letter. There was a letter of some kind to that effect.
66. Mr. Pring.] I think you said that the reason why you made the declaration on the 24th December was that portion 110 then stood in your own name? Yes; for myself and partners.
67. It is only made in your own name? Yes.
68. The reason you gave was that at that time it stood as far as the Government books were concerned in your own name? Yes.
69. And therefore you did not put it, on behalf of Speare and M'Bean? No.
70. Did you, on the 31st May, 1884, make a declaration in regard to portion 109? I did.
71. Did you not state in that declaration, "I, John Moore, of Armidale, do solemnly and sincerely declare that John Moore, Peter Speare, and John M'Bean are the lawful owners, by conditional purchase of the land?" I believe I did.
72. At that time you yourself were not the lawful owner of portion 109? No; there were other parties in with me.
73. Portion 109 was taken up by Powrie and Glass on the 3rd March, 1881? Yes.
74. It was not transferred to you until the 9th December, 1881? It was transferred on the 10th September, 1881, from James Powrie and James Glass, to James Powrie, James Glass, and John Moore.
75. You made the final declaration as regards portion 110 on the 30th December, 1886? Yes.
76. You say that it was held by you in trust for others—Speare, M'Bean, and Palmer? Yes.
77. Is there any document showing that trust? No; except that receipt which Speare got for his £1,000.
78. Does it say a word about it being in trust for him? I am not sure; but if my memory serves me aright, I gave him a written document.
79. What about Palmer and M'Bean, did you give them a written document also? M'Bean got a verbal understanding.
80. Did he get a written document? No.
81. Did Palmer get one? I believe he did, as well as Speare.
82. Who were the others in with you, when you say it was held by you in trust for others? Only Speare and M'Bean.
83. To the one you gave a written document, and to the other you did not? Speare insisted, and I believe I gave him one.
84. When? It was about the date of that document. It was through me that the purchase of the land was made.
85. Mr. Proctor.] The agreement contains this schedule:—"Also 80 acres situated near the above land selected at Armidale on Thursday, 29th day of September last, by John Moore, on behalf of Powrie, Glass, Moore, Palmer, and M'Bean." Did you know of the existence of that schedule when you gave the document to Speare? Yes.
86. Chairman.] In your first declaration you say that you had expended an amount equal to £1 4s. per acre on portion 110? Yes.
87. As a matter of fact there was no such expenditure on the land as £1 4s. per acre? There was a very large quantity of our antimony on it.
88. Was there any expenditure at all except £2 or £3 worth? That was all, except for the purpose of mining the other two blocks.
89. Was there an expenditure of £1 4s. per acre on the portion when you made that declaration? I do not think so. I did it by virtue of the others.
90. Is there one word in the declaration saying that you did it by virtue of the others? I do not see any.
91. You made that declaration in your own name? Yes.
92. But in the second declaration you included Peter Speare and John M'Bean? Yes.
93. You state that an expenditure of £2 per acre had been made on the land? Yes.
94. Both declarations, as far as an expenditure of £2 per acre on portion 110 is concerned, are incorrect? There was no expenditure except the antimony that was blasted out of the others.
95. Was there any expenditure on portion 110? There was not.
96. I notice that you never made any application to what is termed consolidate the portions until the 1st June, 1887? No; I was asked to do so, but from some cause or other I did not.
97. You did not do it until 1887? No.
98. When were you asked to do so? About the time I made the first declaration.
99. You allowed nearly three years to pass before you thought of doing it? We thought of doing it, but we did not think the land of sufficient value at the time.
100. When it became of sufficient value you asked for leave to consolidate the portions? Yes.
101. So that it could not have been thought of sufficient value at the time when you made those declarations? It was of very great value from the outset. When we took the antimony out of the land the value fell off. While we were taking it out it was of very great value, but the price afterwards fell in England from £16 to £8.

- Mr. J. Moore. 102. Why did you not include M'Bean and others in this declaration? I cannot assign any reason.
103. Can you assign any reason for including him in the second declaration? I cannot.
- 29 May, 1888. 104. It stood in your own name in the first instance? Yes.
105. That is the reason why you did not include him? I expect so.
106. Has portion 110 ever been transferred to the three names? Yes.
107. When? On the 3rd May, 1886. It was about the time Speare insisted on the transfer being made.
108. Mr. Proctor.] Twelve months before any disputes arose? Yes.
109. Chairman.] You say that Speare insisted on his rights being preserved? Yes.
110. Was there any legal document drawn up by a legal gentleman to that effect? I believe I signed some printed document; I suppose Speare has it.
111. A printed document? I believe there were some printed documents.
112. Do you know at what time? I cannot tell you.
113. Have you any idea of it? No; I think it was about, or a little before, the 3rd of May.
114. In your evidence before the Land Board at Armidale, you say—the property, I think, when I made declaration on 109 belonged to Powrie, Glass, and Moore. I made declaration on portion 110; this always belonged to me. I supposed the improvements on 109 would more than cover the £1 4s. improvements on 110. When I made the first declaration of £1 4s. per acre it was my own, not in the name of Powrie, Glass, and Moore. So that the whole of the expenditure was borne by yourself? No; every shilling of the money was paid by the firm, although it stood in my name.
115. Who presented the letter on the 1st June to the Lands Office asking for permission to consolidate these portions. It is signed Moore and party? It was not presented. I was in Sydney at the time with a bad hand. I got Mr. Sievers, in Dangar, Gedye, & Co.'s office, to write the note, and I posted it myself.
116. Mr. Proctor.] M'Kinlay's objection was heard by the Land Board and dismissed? Yes.
117. He appealed to the Minister? Yes.
118. And the Minister decided against him? Yes.
119. You have applied for permission to mine for minerals to the Secretary for Mines? Yes; I produce a regular permit. I have not got a permit for portion 110; Speare has it. I can produce a certificate of conformity, and the permit to mine for gold on portion 109.
120. Mr. Copeland.] With regard to the final declaration on portion 109. Seeing that you had a superabundance of expenditure to cover that portion, why did you not make a declaration for portion 110 at the same time? I cannot explain, except that Speare and I were not on very friendly terms at the time. There was some obstacle in the way; but what it was I can hardly recollect.
121. You stated before the Land Board that portion 110 was always your property, in contradistinction to the other, which stood in the names of several? I told Mr. Blythe afterwards that although it stood in my name it belonged to the others, but he would not insert the correction in my evidence.
122. You say that portion 110 was always held by the partnership? In my name, with the understanding that they were to participate in it.
123. How would the question be affected by your being on bad terms with Mr. Speare at the time you made the declaration of expenditure on portion 109—it was equally in his interest that the declaration of expenditure should be made on the two portions? Speare takes very little interest in these matters. If you can get anything done for him, you can do it. If you do it, well and good; he does not bother himself. We had some disputes about mining matters at Vegetable Creek. We were not on the best of terms.
124. When you made the final declaration on the 31st June, 1886, with regard to portion 109, seeing that you had made more than the necessary expenditure, and had a surplus expenditure which could have been made to apply to portion 110, why did you not also make a declaration as regards that portion? I cannot assign any reason.
125. Taking your statement before the Land Board that that particular piece of land was always yours, in connection with the fact that you only made a declaration on portion 109, totally ignoring portion 110, it gives one the impression that portion 110 had no connection with portion 109? It always had. It was understood. We were compelled to take up portion 110 for the purpose of working portion 109. It was impossible to work the one without the other. I took it up in my own name with the distinct understanding that Speare and M'Bean would participate in it.
126. You have no documents to show that they were partners in portion 110? It was understood. I believe Speare has a document of mine to that effect. M'Bean was living on the spot. He took my word. He prospects a great deal for me.
127. Have M'Bean and Speare an interest in portion 110 now? Yes.
128. Mr. Proctor.] What share? M'Bean has a third, Speare has a third, and I have a third.
129. Mr. Copeland.] They have the same interest in portion 110 as they have in portion 109? Yes.
130. Has any additional consideration passed between you in connection with portion 110? Except that I have paid M'Bean's way all along. I sent him a bill the other day. I paid £1,016 on his account. He has given me a security on his share.
131. Has any additional consideration passed between you in respect of portion 110? No.
132. You always keep books in connection with your business. Have you any entry to show that the time when you lodged £40 with your application for portion 110 the amount was debited to the account of this firm? I believe Speare paid in his share of the amount. M'Bean's share was charged to his account.
133. I understood you to say that Speare was away at the time? He very likely sent up a cheque for his share.
134. Have you any entry showing that the "antimony" firm was debited with the amount? There is no doubt that M'Bean was charged with his share.
135. At the time? Yes. I have no books here.
136. Considering that portion 109 was held in the name of the firm, and that you applied for portion 110 separately, it is only reasonable to assume that you took it up separately from the firm? M'Bean was charged with a third of the amount.
137. Can you produce books to show that, at the time you took up the land, you debited M'Bean and Speare with their shares of the amount? I know that I have M'Bean's account.
138. Mr. Proctor.] Did you keep an account? I kept an account against M'Bean.
139. Chairman.] Why not against Speare? It is very likely I have.
140. You say that you took a security from M'Bean? Yes.

141. Is it drawn up by a legal gentleman, or registered? It is not registered.
 142. When was it given? A memorandum was given some time ago, and a legal document was drawn up lately.
 143. Since the inquiry has been initiated? Yes. There is a document before that, in which he makes over his interest.
 144. *Mr. Copeland.*] If you had time at your disposal, could you produce any evidence to show that, at the time you selected portion 110, you debited the members of the firm with their proportion of the amount? I can produce what books I have.

Mr. J. Moore.
 29 May, 1888.

TUESDAY, 5 JUNE, 1888.

Present:—
 MR. MOORE, | MR. COPELAND,
 | MR. LEVIEN.
 R. H. LEVIEN, ESQ., IN THE CHAIR.

Mr. R. D. Pring, Counsel, instructed by Mr. Horrocks, appeared on behalf of Mr. J. F. M'Kinlay. Mr. W. C. Proctor, solicitor, appeared on behalf of Messrs. Moore and M'Bean.

Mr. John Moore recalled and further examined:—

145. *Mr. Proctor.*] You were asked the other day this question, "Do you remember having a dispute with Glass and Powrie," was that before or after the partnership? It was before the partnership.
 146. And you said the action was settled by agreement. Have you that agreement? Yes.
 147. Was it duly registered? Yes.
 148. You were then asked "What portion did it refer to," and you said, "portion 58?" Yes; it included several portions.
 149. The agreement says "the eastern boundary of portion 58, 80 acres." That is measured as 109? Yes.
 150. Then you said that portion 110 was not included in it? No; it was not.
 151. Then you were asked, "Why did you apply for yourself?" and you said, "I applied for myself, Speare, and M'Bean; Speare had bought out Palmer for £1,000?" On the 29th September, 1881, I took up the land. Speare was in treaty with Palmer to purchase for £1,000. It was a week after the land was taken up. The sale of the land by Palmer to Speare was made in October, 1881.
 152. You negotiated that sale, I understand? Yes.
 153. You were asked, "Did you apply for the portion at that time for yourself and your partners," and in reply to that you said, "for Speare, M'Bean, and myself. It was after Speare gave £1,000 to Palmer for his interest." That agreement had not actually been completed, had it? No; it had not.
 154. Then you say afterwards that the schedule to the agreement referring to the 80 acres refers to portion 110. That is the agreement between Speare and Palmer, I suppose? Yes.
 155. Then you were asked, "you held and used all these lands together for a long time; do you remember when you made the first declaration as to the improvements being of the value of £1 4s. an acre?" I believe you have some explanation to make in regard to that information given to you by the land agent? When I went to make this declaration, Mr. Gordon, the land agent, asked what improvements I had on it. I said, "Very little, but I consider the improvements on lot 109 quite sufficient according to the 39 Victoria No. 13, section 26." He then took the declaration.
 156. *Chairman.*] Is there anything said in the declaration as to these facts that because there were improvements on lot 109, you made the declaration on lot 110? I do not know.
 157. *Mr. Proctor.*] You were asked, "Was the land all this time the property of yourself, M'Bean, and Speare," and you said it was. What did you mean by that? It was not from the commencement. From the 18th July it was in the name of Powrie, Glass, Palmer, myself, and M'Bean. On the 5th October it was transferred,* and on the 5th October that agreement was made. Speare bought out Palmer.
 158. In whose name was it then? Powrie, Glass, M'Bean, and Moore.
 159. I believe the other partners bought out Powrie's interest? Yes.
 160. Then it was Moore, Speare, M'Bean, and Glass? I sued Mrs. Glass, as executrix under her husband's will, for my share of £1,030 to settle that agreement, her third share. She transferred the land to me, by power given, I suppose, under her husband's will.
 161. And you were asked, "Have you been down the mine since he (Mr. M'Kinlay) applied for it," and you said, "Yes?" We have to go over lots 58 and 109 to get to 110.
 162. Then you were asked by Mr. Pring this question—"I think you said that the reason why you made the declaration on the 24th December was, that portion 110 then stood in your own name," and you said, "Yes, for myself and partners." I understand that there was a reason for its being in our name? Yes. When I went with Mr. Palmer to take up the land—and I may say here that a portion of my evidence on that point was not taking down at the last sitting—I met Glass, and he asked me if I knew that there were two men shooting antimony down the falls. I said, "No." I went out with Mr. Palmer, and he found 10 or 20 tons shot on the vacant block. I called a man out, and asked what they were doing, and he said, "We are earning as much money with you as will enable us to take up the land and pack up the antimony." I went to Bray, the land agent, and I said, "I want to take up conditional mineral land to-morrow." I said, "I want papers to take up a mineral conditional purchase," and I intimated that I wanted to take up under certain names. He said, "You cannot do that, by the 39 Victoria number 7, sec. 13, it is absolutely necessary to have all the parties present." I said, "These fellows are very likely to come to-morrow to take it up," and when I went on Thursday I took it up in my own name.
 163. Why was it that you had to make the declaration in reference to portion 110 in your own name. Could you have transferred it to the other parties. You declare on the 24th December that it was yours; why did it stand in your name? Because as I have explained just now.
 164. Could you have transferred it to the other names? No; the three years were not up. I could not have had it in any other name.

Mr. J. Moore.
 5 June, 1888.

* NOTE (on revision):—Palmer transferred his share to Speare.

- Mr. J. Moore. 165. Then you were asked, "You say it was held by you in trust for others—Speare, M'Bean, and Palmer," and to that you said, "Yes." Is not that a mistake, Palmer not being a partner at the time?
 5 June, 1888. Yes; Palmer was not a partner, he had sold out.
166. Then you were asked, "Who were the others in with you when you say it was held by you in trust for others," and your reply was, "Only Speare and M'Bean." You have already explained the antimony partnership how it existed from the commencement. For some time it was held in trust for Speare and M'Bean, was it not, and at others for Powrie, Glass, and M'Bean? The land was all held up to the 5th October, 1881, in the name of Powrie, Glass, M'Bean, and myself.
167. Then the Chairman asked, "In your first declaration you say that you had expended an amount equal to £1 4s. per acre on portion 110," and you said, "Yes." You have some explanation to make, I believe, about that? When I went to make the declaration Mr. Gordon said he would take it after reading the Act.
168. *Chairman.*] At all events you did not include anything in your declaration as to improvements upon the other lot that made up the requisite amount? The declaration speaks for itself.
169. As a matter of fact the declaration shows no such facts, does it? I have not looked at the declaration.
170. *Mr. Proctor.*] You made a declaration believing that the improvements on lot 109 covered lot 110, because the land was used in conjunction with it? Yes.
171. In the second declaration in reference to portion 110 you include Peter Speare and John M'Bean, why did you do that? Because Mr. Speare insisted upon it.
172. Had the land been transferred in the mean time? Yes.
173. When? On the 3rd May, 1886.
174. And that is why you included that? Yes.
175. You were asked, "Why did you not include M'Bean and the others in this declaration." You had some reason for that, I presume. That was the first declaration on lot 110. You said you could not assign a reason; but I believe that you can now give a reason. Did you make the declaration in your own name when the land stood in your own name, and in the others' when it stood in the names of others? Yes. When I made the first declaration it stood in the Government books in my name. After it was transferred, after the 3rd May, 1886, I declared in the names of the three. It was transferred to John Moore, P. Speare, and J. M'Beath.
176. Then you were asked, "Can you assign any reason for including him (M'Bean) in the second declaration," and you said that you could not. It was because the land had been transferred, was it not? Yes.
177. Mr. Copeland asked, "With regard to the final declaration on portion 109. Seeing that you had a superabundance of expenditure to cover that portion, why did you not make a declaration for portion 110 at the same time?" My answer to that is, the three years were not up as regards 110.
178. You made a declaration when the three years expired? Yes.
179. When did the three years expire on lot 110? They were up on the 29th September, 1884.
180. *Chairman.*] How did you come to give this answer, "I cannot explain, except that Speare and I were not on very friendly terms at the time. There was some obstacle in the way, but what it was I can hardly recollect." How was it that you made that statement. You say not that the three years has not expired. Is the reason you assigned to Mr. Copeland correct or incorrect. Which statement is correct, the statement that the three years had not expired, or the statement that you were at loggerheads with Speare? We were at loggerheads at the time, but the three years were not up.
181. What was the use of making that statement? I have refreshed my mind since I went home.
182. Is the statement which you made on the last occasion had nothing to do with the matter? That was correct.
183. Then is your present statement correct or incorrect? I cannot give any further explanation than is given in the margin of my corrected evidence.
184. You said, "I cannot explain, except that Speare and I were not on very friendly terms at the time. There was some obstacle in the way, but what it was I can hardly recollect." Was it not that you and Speare had not come to final arrangements as to his having any interest in it? He had an interest in it all along.
185. By any document? Yes.
186. Where is it? It is here.
187. *Mr. Copeland.*] You stated that you were not able to make a transfer, because three years had not expired. Yes. I understood that it was necessary that three years should expire.
188. At the time you declared on lot 109, what name did lot 110 stand in? It stood in my name.
189. *Mr. Pring.*] Have you spent £3,000 on the two blocks? No; £3,000 altogether, and more than half of that was spent on lot 109.
190. That was in December, 1884? Yes; when I made the declaration on 110.
191. You say that on the 31st May, 1884, you made one final declaration on lot 109? Yes.
192. In December, 1884, you only declared to the extent of £1 4s. on lot 110? Yes.
193. Although you were in a position then to make a final declaration on lot 110? Mr. Gordon told me that £1 4s. was quite enough.
194. *Mr. Copeland.*] You had a surplus on expenditure, and instead of making a declaration for £1 4s. you could have made it for the full amount, and have got your title straightaway? Mr. Gordon told me that £1 4s. an acre was quite sufficient, until the five years were up.
195. *Mr. Proctor.*] You said in the same reply, "I took it up in my own name, with the distinct understanding that Speare and M'Bean would participate in it." I believe that at that time Powrie and Glass were the other partners? Yes. Speare was negotiating.
196. You kept an account? Yes. I was a manager of the mine, and I kept an antimony account, and there is an entry on the 1st October, "Cash, taking up land, £40." [*Account book produced.*]
197. Look at the item, "Cash, taking up land?" That was for taking up block 110.
198. Was it charged on the date mentioned there? It was charged two days afterwards.*
199. Did you take up land for anyone else? No.
200. *Mr. Copeland.*] That entry does not show that that expenditure was on behalf of the firm. You may have been transacting business on your own account? The agreement states that I shall be manager, and I was not connected with any other company.

201. *Mr. Proctor.*] You keep no other antimony account? No.
202. I believe that you have charged the item to M'Bean also? I did, by error. I have a separate account here, M'Bean's account in its entirety. [*Account produced.*]
203. I understand you to say that Speare was away at the time you took up block 110? He was not a partner at the time.
204. Who was present when you took up block 110? Palmer was present at the court-house.
205. And he knows the reason why you took it up in your own name? Yes. Mr. Bray objected unless we were all present.
206. Palmer went down to mark it out, did he not? Yes.
207. On the Sunday previously? Yes.
208. And he was then a partner, was he not? Yes.
209. You said M'Bean was charged one-third of the amount, and you were asked, "Can you produce books to show that at the time you took up the land you debited M'Bean and Speare with their share of the amount?" Speare was not a partner. I debited the antimony account with £10.
210. You were asked why you did not keep the account against Speare, and you said it was charged to the antimony account? Yes.
211. Do you remember just before you took up lot 110 having written a letter to Speare? Yes.
212. Is this the letter? Yes; that is my handwriting.

[Letter read by Chairman as follows:—

Dear Sir,

Armidale, 26 September, 1881.

I have this day sent you per Cobb & Co. several samples of antimony which were taken on the reef yesterday, Sunday, by myself and Palmer, at a distance of 600 feet down the falls. At this point it is one mass of antimony, many pieces being quite a load. We have 480 acres of mineral conditional purchase land on which 10s. per acre is paid up, the smelting works which must have cost upwards of £500, in fact Mr. Powrie says £900, in addition to which I take up 80 acres more on Thursday. As promised, I have seen Palmer. He is disposed to sell his share as under, three shares in all,—Mr. Powrie one share, Mr. Glass one share, Moore, Palmer, and M'Bean, one share, total three—for the sum of (£1,000). Mr. Proctor can tell you whether the title is correct or not. I commenced to work with fourteen men on 8th August last, and up to the present moment have despatched 65 tons.—August, 19; September, 46; total 65—out of the working time we had at least ten days' wet. I have no hesitation in stating that this is a property that will not be picked up every day. The black antimony contains more gold than the light.

Mr. P. Speare.

Yours, &c,
J. MOORE.]

213. Did he receive that letter? Yes; he told me that he did.
214. This was at the time you were negotiating for the sale of Palmer's share to Speare? Yes.
215. You know the 80 acres referred to in the letter—is it what you took up three days afterwards? Yes.
216. In pursuance of that letter was this agreement entered into between Speare and Palmer? Yes.
217. And that 80 acres is the 80 acres you refer to in the schedule? Yes; in fact I understood from Mr. Speare that he would not buy it unless it was included.
218. Have you been up to Armidale since you were last examined? Yes.
219. Have you seen Mr. M'Bean? Yes.
220. In what state of health is he? He is in the Armidale hospital, very bad.
221. Unable to attend? He is quite a cripple. I got a declaration made by him, and here is the medical certificate, and the declaration by Lambert Gordon (*vide Appendices 1, 2, and 3*).
222. *Chairman*] Did Messrs. Waut and Johnson, solicitors, act for you in any business matters at all of late? Yes.
223. Did you instruct them to write a letter to M'Bean demanding that he should transfer his interest in this block 110 to anyone? Some time ago he transferred all his right, title, and interest to my daughter, a widow, Mrs. Davis, and to my two sons.
224. When did he execute this transfer? I could not tell.
225. He transferred it? Yes; he signed a document transferring his right, title, and interest.
226. Who got this declaration from him? He made it himself.
227. Did you go to the hospital to get it? I drove Mr. Sheahan, the Commissioner for Affidavits, over to the hospital.
228. Who got the particulars for the declaration before he signed it? I got the particulars.
229. And you gave them to Mr. Sheahan? No; Mr. Proctor drew up that affidavit.
230. From whom did he get the particulars? From me.
231. He says, "I am a partner with John Moore and Peter Speare in regard to mineral conditional purchases 58, 109, and 110, in the parish of Metz, county of Sandon, and I have been such partner since January, 1881, and I have resided on block portion 58 from January, 1881, until about three months ago, when I was compelled to come into Armidale for medical advice." This statement, then, is not true. As a matter of fact he transferred all his interest to your daughter? He simply gave a memorandum to my daughter and my two sons, and has since executed a mortgage, which has been registered.
232. A mortgage to whom? To my daughter and two sons.
233. For what? To cover my £1,000.
234. But they gave him no consideration? They did; they gave it through me.
235. Your daughter and your sons did not give Mr. M'Bean one farthing consideration, did they? They gave it through me; they did not give it directly.
236. So that this consideration money included in the mortgage never existed as between M'Bean and your daughter and the other persons mentioned? No; I got the money from my daughter and sons.
237. Why did you not, when you gave Mr. Proctor these particulars, insert here, that M'Bean was at one time partner, but had transferred all his interest to your daughter? Why did you not instruct Mr. Proctor as to this transfer of mortgage? There was no mortgage at the time, it was only a document.
238. Am I to understand that there is no mortgage? No; there is a mortgage.
239. Is it registered? It has been registered lately.
240. When? Last week. The last time I was in Sydney I went to Messrs. Waut, Johnson, and Company, and they said I should have to commence an equity suit against M'Bean. I said that I did not want to do that. I went and told my son, who is a magistrate, and when I came back and explained the matter to M'Bean, he consented to execute the mortgage for £1,000 to my daughter and two sons.

WEDNESDAY, 6 JUNE, 1888.

Present:—

MR. FRANK FARNELL,		MR. COPELAND,
MR. MOORE,		MR. LEVIEN.

R. H. LEVIEN, ESQ., IN THE CHAIR.

Mr. R. D. Pring, Counsel, instructed by Mr. Horrocks, appeared on behalf of Mr. J. F. M'Kinlay. Mr. W. C. Proctor, solicitor, appeared on behalf of Messrs Moore and M'Bean.

Mr. John Moore called in, and further examined:—

- Mr. J. Moore. 241. *Chairman.*] Can you tell when the last rent was paid on lots 109 and 110? It was paid before the balance of the purchase money was paid.
- 6 June, 1888. 242. You paid on the 24th March, in the name of Moore, Speare, and M'Bean, £18 on the 58 and 109 blocks? Yes.
243. Did you pay it before the 24th March on the 110 block? Yes; I paid it earlier.*
244. When? Some weeks before. The three blocks were paid for in 1888.
245. Who collected these moneys? I paid them into the Land Office.
246. Did Mr. Dean ever call upon you for payment of these moneys? No; I paid Mr. Gordon.
247. What interest have you now in these blocks? My share was one-third less that portion which I transferred to my two boys. It is not registered, but simply a memorandum. As I mentioned, I got some money from them.
248. Your interest in the matter then is through the two boys? I gave them a memorandum that they held certain interest. I held about one-sixth. I have a memorandum as to payment of rent and balance of purchase money; but I have no date.†
249. You say that Dean had nothing whatever to do with this? I never thought of going to Dean. I went to the land agent—first Mr. Bray, and then Mr. Gordon.
250. *Mr. Pring.*] When were the first instalments on the 110 block paid? On the 24th December, 1884.
251. You have no receipt for that then? I have not got it here. I have the land agent's receipt here for 1884, 1885, and 1886.
252. There is no receipt in 1884 for block 110? I declared it on the 24th December, and no receipt was given until after I had declared.
253. Who was the land agent there in 1884? Either Mr. Bray or Mr. Gordon, I do not know which.
254. I see that a transfer of that 110 block was made on the 3rd May, 1886, by yourself to Moore, Speare, and M'Bean; can you account for the lapse of time between the taking up of the conditional purchase and the transfer to those persons? I think I mentioned that Mr. Speare and I had some dispute about the Vegetable Creek matter. He then insisted upon a transfer. He has a document that will show the transaction. We ceased to work for antimony; and he insisted that I should make a proper transfer, and produced the documents, which I signed.
255. *Mr. Proctor.*] It is almost impossible, I suppose, for you to remember all the transactions in the matter? I have business of such a character that it requires my undivided attention. It is impossible to remember everything accurately.
256. You were asked yesterday about a mortgage, or some transfer of M'Bean to Mrs. Davis?‡ Yes; that was a mortgage for £1,000.
257. Which he owes to you? I got the greater part of the money from my daughter and sons.
258. Is this a copy of it [*document produced*]? I believe that is a copy of it.
259. Then M'Bean holds that third share still? Yes, subject to the mortgage for twelve months. I may mention that I had some difficulty with M'Bean. He is very much crippled from rheumatism. There were several people camping out there, and they used to bring out bottles of whisky and poison his mind against me. My daughter and my sons authorised me to employ Want, Johnson, and Company to start an equity suit against him. Mr. Minter will testify to that statement.

Mr. Richard Palmer called in, sworn, and examined:—

- Mr. R. Palmer. 260. *Mr. Proctor.*] You are an hotel-keeper at North Shore? I am.
- 6 June, 1888. 261. You formerly lived at Arndale? Yes.
262. Do you remember any mining properties in which you were interested with Mr. Moore? Yes.
263. Who were with you? Powrie, Glass, Moore, and M'Bean.
264. Do you remember what date? About seven years ago.
265. Do you remember having a dispute with Powrie and Glass? I do.
266. Did it result in an agreement by which you became entitled to certain shares? It did.
267. Do you remember what shares you held under the agreement? I, Mr. Moore, and M'Bean had a share between us, that is one-third.
268. Do you remember that you went one Sunday down the falls with Mr. Moore? I do.
269. What occurred? We took up 80 acres more.
270. On what date? I could not recall the date.
271. Where was the land situated? Down under the falls, near block 109. I think it was in block 110.
272. Do you remember after visiting the land going to the land agent? Yes; Mr. Moore and I went together.
273. What did you do? I could not recollect. 274.

*NOTE (*on revision*):—31st March, 1887, and again on 31st December, 1887, for year 1888; three months before I had any right to do.

†NOTE (*on revision*):—Balance of purchase money paid on 110 was about 11th January, 1888.

‡NOTE (*on revision*):—Aud W. G. S. and E. C. Moore—my two sons.

274. Whom did you see? Mr. Bray.
 275. What did he tell you—did you apply to take up the land? Yes, between the lot of us; and he said that we could not do so without all being present. Then Moore took it up for the lot of us himself.
 276. You knew you had a share in it? Yes.
 277. Did Mr. Moore negotiate your interest in it afterwards? Yes.
 278. For how much? £1,000.
 279. Did you execute an agreement of transfer? I did.
 280. The portion mentioned in the schedule to the agreement—80 acres taken up by Mr. Moore on behalf of Powrie, Glass, Moore, and M'Bean—is that the portion which you are referring to? Yes.
 281. Then M'Bean became entitled to a share? Yes.
 282. Did you know that Mr. Moore knew of the agreement? Yes. It was Mr. Moore who initiated the sale.

Mr. R.
Palmer.
6 June, 1888.

Mr. Peter Speare called in, sworn, and examined:—

283. *Mr. Proctor.*] Do you reside at Summer Hill? Yes.
 284. What are you? I am a mining speculator.
 285. Do you remember purchasing a share in some land at Armidale, from Mr. Palmer? Yes.
 286. Was this the agreement [*produced*]? It was.
 287. You have been on the land yourself, I believe? I went on to it shortly after I purchased.
 288. Who negotiated the sale? Mr. Moore.
 289. Do you remember receiving a letter from Mr. Moore on the subject? Yes.
 290. And that letter, which has been produced here, refers to the 80-acre block? Yes.
 291. Did you give Palmer an interest in it under the agreement? Yes.
 292. Did you know in whose name it stood? At the time I did not. I did not understand the transaction at first. It seemed to be mixed up between Powrie, Glass, and a lot of them.
 293. You bought Palmer's interest in that 80 acres included in the agreement? Yes.
 294. And you have held a share ever since? Yes.
 295. You bought out Glass and Powrie, subsequently? Yes.
 296. What interest do you hold in it now? I hold a third, and I think a ninth share.
 297. Does M'Bean claim a third? I do not know what he claims.
 298. You know he has an interest in it? Yes.
 299. You have held the property and used it in conjunction with other ground adjoining it, have you not? Yes. Some of it has been forfeited. That was lot 113.
 300. Do you know block 109? Yes.
 301. Has much money been spent on that? Yes; a very large sum.
 302. Enough to cover the improvements on 110? Yes, ten times over.
 303. You have always held and used the lands in conjunction with each other? Yes.
 304. There is no doubt that you, Speare, and M'Bean have always been partners in the property? No doubt at all.
 305. You had a dispute with Moore some time ago, had you not, at Glen Innes? Yes.
 306. Did it result in any agreement? Yes.
 307. It is dated the 25th April, 1886, is it not? Yes.
 308. It was drawn by Mr. Boyd of Glen Innes, solicitor? Yes.
 309. Did Mr. Moore agree in this to transfer one-third interest on all these properties to you? Yes.
 310. In substance the agreement says that Mr. Moore agrees to transfer one-third interest in the Gara antimony mines to you? Yes.
 311. Have you held these blocks ever since in conjunction with Mr. Moore and M'Bean? Yes.
 312. *Chairman*] Were you interested with Mr. Moore in any other mining speculations? Yes; in lots of mines.
 313. Was there any dispute as to whether you had any right in block 110? No; none whatever. The only difficulty was that I was dissatisfied with the way in which the land stood in the Department. I wanted to get a proper transfer. Powrie's interest was transferred to Moore, so was Glass's, and I had nothing to show that I had any claim to their interest which had been purchased by Moore and myself.
 314. Did you know that the block stood in Moore's name? I knew by the agreement.
 315. And that is how you got it inserted in that deed? No, I did not insert it at all. Mr. Proctor inserted it at the time when I bought.
 316. How did you come to get that inserted. I see that it is in the latter part of the deed after the other had been done? The other land was in the partnership agreement between them. This was taken up afterwards, and therefore was not in this partnership agreement.
 317. The land was not at the time in the name of this person when the agreement was drawn; how is it that it was put in afterwards? It was not put in afterwards. It was put in before I paid the money.
 318. I see that you have not got this document registered? It has been fulfilled.
 319. You always held an interest in this 110 block? Yes.
 320. Do you know how it was paid for? No, I do not. I did not hold an interest in it until after it was taken up.
 321. You knew nothing about it until it was taken up? No, I did not, except by Mr. Moore's letter.
 322. *Mr. Proctor.*] You have since had to pay your share of the instalments? Yes; I paid my one-third share, and here is Mr. Moore's receipt [*produced*].
 323. You have a permit from the Mines Department to work for gold? Yes.
 324. Did you know long ago that there was gold there? Yes.
 325. You produce also a permit to mine for gold dated 27th August, 1887? Yes.
 326. *Chairman.*] You got your permit after you heard that they had discovered gold, I suppose? Yes; we had not applied previously, and we could not work it until we got a permit.
 327. Why had you not applied? None of us knew how to take up gold land under mineral conditional purchase. We did not find it out until we were recommended to take up a gold mine lease on our own property.
 328. You then became aware that they had discovered the gold? Oh, yes; I knew it before.
 329. Do you mean to tell us that mixing up with mining matters as you have done you did not know how to do that? No; I did not.

Mr. P. Speare.
6 June, 1888.

Mr. P. Speare. 330. And you did not think it worth while to inquire? I did. I went to Harrie Woods myself about taking out gold on a mineral conditional purchase, and all he said was, "Oh, we have nothing to do with mineral conditional purchases."

6 June, 1888. 331. And you mean to say that he would not tell you? My opinion is that he did not know anything at all about it.

332. Mr. Proctor.] Do you know that assays have been made of the antimony ore which was sent home? Yes.

333. Do you know that there was gold in it? I made an agreement with Mr. Moore to work on my own account for gold and antimony, but some men actually jumped the land whilst working on wages for me.

334. You paid one-third of the money to the Oriental Bank? Yes; £1,030.

335. Mr. Pring.] Did you know anything about there being gold before M'Kinlay's party came? No.*

336. You have only been up there once or twice? A couple of times a year.

337. Do you know whether lot 110 was used in connection with antimony mining? No; it was not. It was very steep, and there was a difficulty in getting the ore; but it was necessary to have that, because we had no water frontage to the other land.

338. It was necessary for the water frontage? Yes.

Mr. William Westren called in, sworn, and examined:—

Mr. W.
Westren.
6 June, 1888.

339. Mr. Pring.] You are a miner? Yes.

340. Do you know blocks 109 and 110 at Gara? Yes.

341. How long have you known them? I have known them a long time.

342. Have you known them the last four or five years? Yes.

343. Have you been living there during the last four or five years? I have been living there thirteen or fourteen years.

344. Has block 110 ever been used in any way in conjunction with 109? No.

345. Has anything been done at 110? There is a small bit of a pot-hole sunk on 110.

346. Have you seen anything done on 110 in connection with the mining on 109? No.

347. And you have been living there all this time? Yes.

348. I think you are one of the men who discovered the gold on 110? Yes.

349. And your party are still in possession of it? Yes.

350. Chairman.] Do you think it was necessary to take up 110 for the purpose of working lot 109? I cannot see any reason for it.

351. Mr. Proctor.] Who are your party? There were Hack, John Allingham, and myself.

352. How many parties are there? There are different parties. Those are all that are in the claim that we are in.

353. Do you know that there are any tunnels in block 109? Yes; there are.

354. How many? I think there are three.

355. Where would the material taken out of that go to? It would go into the gully just underneath.

356. Under 110? No, not near it, I am certain of it.

357. Is it not a fact that the stuff has actually gone into 110? It would not go near it.

358. Mr. Frank Farnell.] What experience have you had in mining? I have been mining for years.

359. Where? In different places. First on the Peak Downs, then at Ironbarks, and at Bingera.

360. Mr. Proctor.] You say that you have been there this four years? No; fourteen or fifteen years.

361. Where? At Gara.

362. What have you been doing there all that time? I have been doing a lot of fencing.

Mr. Alfred James Hack called in, sworn, and examined:—

Mr.
A. J. Hack.
6 June, 1888.

363. Mr. Pring.] I think you are one of those who discovered gold on lot 110? I am not one of the first, but I was there about two days afterwards.

364. How long have you known lots 109 and 110? About fifteen months.

365. Have you ever seen any work done on 110 in connection with the mining on lot 109? No.

366. Is there any trace of any work at all? Yes, a small hole there, but nothing beyond that.

367. I suppose you know the lay of the country there pretty well? Yes.

368. Do you know where the tunnels are? Yes.

369. Where does any antimony taken out of the tunnels go to? It would roll down the gully, and a little of it might pass what we suppose to be the boundary of 109 and 110, but very little.

370. When were you last there? About a month ago.

371. Did you see any antimony ore at 110 then? Nothing to speak of.

372. You have never at any time seen more than a few lumps? That is all—a few which had fallen down the cliffs, water-worn pieces which had come down owing to the cliff decaying, but none from the workings of 109. Very little would go down on to lot 110. It would lodge in the gully, and I should say that it would lodge on lot 109.

373. Mr. Proctor.] Does not the gully go through lot 110 to Baker's Creek? Yes.

374. You never saw them working at all? Yes, on 109; at the time when the antimony was first discovered I was out there.

375. Since that you have never seen them at work at all, I believe? No.

376. And, of course, you could hardly say what the result of working lot 109 would be, or whether the stone would go over into lot 110 or not? Yes; I can form a very good opinion, because of the formation of the gully.

377. But it would only be a matter of opinion? Of course, it would be a matter of opinion.

378. Mr. Pring.] Are you a practical miner? I am not.

379. Mr. Proctor.] What party do you belong to? My own; to Westren's party.

380. Are there several parties, or only one? Several.

* NOTE (on revision):—Yes.

MINERAL CONDITIONAL PURCHASES, PARISH OF METZ.

APPENDIX.

[To evidence of *W. H. Capper.*]

A 1.

Application by J. Moore.

[Alienation Act, section 19.]

Application for the conditional purchase, without competition, of unimproved Crown Land,
District of Armidale.

No. 266 of 1881.

Application by John Moore for the conditional purchase, without competition, of 80 acres, unimproved Crown Land.

Received by me, with a deposit of £40, this 29th day of September, 1881, at 10 o'clock,—

J. BRAY,

Agent for the sale of Crown Lands at Armidale.

Sir,

29 September, 1881.

I am desirous of purchasing, without competition, under the Crown Lands Alienation Act of 1861, the portion of unimproved Crown Lands hereunder described, containing 80 acres; and I herewith tender the sum of £40, being a deposit at the rate of 10s. per acre on the area for which I apply.

I am, &c.,

JOHN MOORE,

Armidale.

The Agent for the Sale of Crown Lands at Armidale.

DESCRIPTION :

County of Sandon, parish of Cooney, 80 acres, extending along the eastern boundary of mineral conditional purchase of 80 acres, made by James Powrie and James Glass, on the 3rd March, 1881, and adjoining said portion from south-east corner to north-east corner, and extending towards the river or creek.

Mr. L.-S. Martyn.—For measurement in accordance with regulations, due regard being had to the river or creek mentioned in the application in view of circular 80/18 of 21 April, 1880—J.H. (for Sur.-Gen.), B.C., 27 Oct., 1881. Replied to by my letter to the Surveyor-General, dated 11 March, No. 82-13.—JOHN G. MARTYN.

A 2.

Declaration of Conditional Purchaser.

(C.P. 81-266.)

[Alienation Act, 1861.]

Declaration of conditional purchaser for mining purposes.

I, JOHN MOORE, of Armidale, do solemnly and sincerely declare that I am the lawful owner, by conditional purchase, of the land hereunder described, and that an expenditure equal to £1 4s per acre for the area of the land has been made on mining operations other than gold-mining on the land, and since the selection on 29th September, 1881. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

DESCRIPTION :

County of Sandon, parish of Metz, 80 acres, on Hillgrove Run, being (part of) conditional mining purchase No. 266, of 1881, in the district of Armidale.

Taken and declared at Armidale, this 24th day of December, 1884, before me,—

LAMBART S. GORDON, Commissioner for Affidavits.

JOHN MOORE.

Instalment (£8) credited at Treasury, 30 December, 1884.—J.C., 15/1/85. Inspector Harper, 18/4/85.

Final Declaration of Conditional Purchaser.

(Final C.P. 81-266.)

[Alienation Act, 1861.]

Declaration of conditional purchaser for mining purposes.

I, JOHN MOORE, of Armidale, do solemnly and sincerely declare that John Moore, Peter Speare, and John M'Bean are the lawful owners, by conditional purchase, of the land hereunder described, and that an expenditure equal to £2 per acre for the area of the land has been made on mining operations other than gold-mining on the land, and since the selection on 29th September, 1881. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

DESCRIPTION :

County of Sandon, parish of Metz, 80 acres, being (part of) conditional mining purchase No. 266, of 1881, in the district of Armidale

Taken and declared at Armidale, this 30th day of December, 1886, before me,—

LAMBART S. GORDON, Commissioner for Affidavits.

JOHN MOORE.

Instalment (£8) credited, 31/12/84. (*Vide* 1st declaration.) Examined and entered C.P. Register.—C.C., 14/1/87.

A 3.

Sir,

Armidale, N.S.W., 1 June, 1887.

We have the honor to report that we are the holders of the following M.C.Ps., situate county Sandon, parish of Cooney or Metz, district of New England, viz.:—No. 80-357, 100 acres, taken up 29th July, 1880; No. 81-54, 80 acres, taken up 24th February, 1881; No. 81-265, 80 acres, taken up 29th October, 1881; and we desire to call your attention to the fact that these blocks are all adjoining; that we have spent the large sum of £2,500 upon improvements upon the first

two mentioned areas; we have, however, made declarations of having spent £2 per acre upon the whole three blocks, and we have now the honor to request that you will allow the three blocks to be consolidated for the purposes of the improvement under the 26th section of the Crown Lands Act of 1875.

We have, &c.,
JOHN MOORE & PARTY,
(*pro* JOHN MOORE.)

The Secretary for Lands.

The papers are with the Board. So far as can be stated in their absence, there is no objection to the request being complied with. Mr. Moore may be so informed, and this letter referred to the Board.—C.O., 3/6/87. Approved.—T.G., 3/6/87. Inform at once, and refer to Chairman.—C.O., 3/6/87. Informed, 4/6/87. The Chairman, Local Land Board, Armidale.—S.F., B.C., 4/6/87.

Gentlemen,

4 June, 1887.

M.C.P. 80-357, Referring to your letter of the 1st instant, requesting that the mineral conditional purchases noted in the margin may be consolidated, I have the honor to inform you, by direction of the Minister for Lands, that the papers relating to the purchase referred to are under reference to the Local Land Board at Armidale, but so far as can be stated in their absence, there is no objection to your request being complied with.

I am to add that the letters under reply have been referred to the Local Land Board, Armidale.

I have, &c.,
STEPHEN FREEMAN,
(For the Under Secretary.)

J. Moore and Party.

A 4.

Report by Mr. Inspector Harper.

Respecting the mineral conditional purchase of J. Moore, made at Armidale, on 29th September, 1881.

Armidale, 9 June, 1887.

Sir,

I have the honor to report that I visited and inspected the above described conditional purchase on the 6th day of June, 1887, and that I found the selector then not resident upon this selection.

The land, which consists of precipitous gulf and steep spurs, inaccessible in places, and comprises 80 acres, is held by applicant for mining purposes, and the selector, who follows the avocation of merchant, had, at the time of my visit, made the improvements hereunder particularly described, the value of which I estimate at the sums respectively stated, viz.:—Pot-holes, 12 feet x 3 feet average, and 5 feet deep, £6. No other improvements on the block made by selector.

From the appearance of the land and the circumstances stated in the following remarks, I am of opinion that the selector has been continuously resident upon the selection.

Remarks.

A gold-bearing reef has been recently discovered on this land which promises to be very rich.

The dividing line between this portion and No. 109 has never been marked, I presume, because of the precipitous nature of the country. At the south-west corner, however, an apple-tree is marked 109 over 110. A line due north from this tree to a position on top of high spur about 10 chains. A line north would cut perpendicular cliffs, inaccessible deep gulf intervening

I have, &c.,
WM. HARPER,
Inspector of Conditional Purchases.

The Chairman of the Local Land Board at Armidale.

A 5.

Caption to Deposition of Witness.

New South Wales, }
to Wit. }

[Crown Lands Act of 1884—Part II, section 14, subsection 1.]

The examination of Joseph Francis M'Kinlay, of Armidale, in the Colony of New South Wales, publican, William Westren, of Hillgrove, John Moore, of Armidale, and Mordaunt Abster Maclean, of Armidale, in the said Colony, draftsman.

WHEREAS it hath been alleged that the necessary expenditure required by law has not been made in mining operations (other than gold-mining) on the mineral conditional purchase mentioned in the margin, made at Armidale on the 29th September, 1881, 80 acres, county Sandon, parish Metz, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

[Enclosure.]

Examined by Mr. Kearney, solicitor: This witness being duly sworn on oath states: My name is Joseph Francis M'Kinlay; I am the person who lodged the complaint against the mineral conditional purchase, John Moore and others; I know the mineral conditional purchase portion 110, subject of inquiry; it adjoins mineral conditional purchase portion 109 on the eastern boundary; I have known this portion under inquiry about three months; I have been over the land; there is one place on it that there is a small hole about 5 or 6 feet deep x 2 feet wide; this comprised all the improvements on portion 110.

By Mr. Simpson, solicitor: I know the boundaries of the lands as far as they are surveyed; I know the portion subject to inquiry, it adjoins portion 109; I know portion 58; they all adjoin each other; on portion 58 there is a good deal of improvements; as far as the tracing in my possession shows me there is little expenditure on 109; there is a good deal of mining expenditure on portion 109 in the tracing now shown me by you, and I will not say there is not £850 worth of improvements on this portion.

Sworn at Armidale, this 24th day of }
June, 1887, before us, — }

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.

JOSEPH F. M'KINLAY.

This witness on oath states: My name is William Westren; I am a miner; I have been out in the neighbourhood of Hillgrove for this fourteen or fifteen years; I know a mineral conditional purchase of Mr. Moore, portion 110; it is only a short time ago that I knew it; the place I know now as 110 I have known for a number of years; I did not know it was a mineral conditional purchase until very lately; I do not consider there are any mining operations on this portion; there is a bit of a pot-hole on it that a man could work for about £1; it is on the falls.

Sworn at Armidale, this 24th day of }
June, 1887, before us, — }

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.

WM. WESTREN.

This closed the evidence for the complaint.

This witness being duly sworn on oath states: My name is John Moore; I, Peter Speare and M'Bean are the holders of three mineral conditional purchases, portions 58, 109, and 110, Nos. of conditional purchases, 80-357, 100 acres, 81-54, 80 acres, and 81-266, 80 acres; all these three selections belonged to myself, Peter Speare, and M'Bean; I produce the receipt for payment of interest at the rate of 2s. per acre, dated 31st of March, 1887; on portions 58, 110, and 109 of 80 acres we have actually expended £2,566, the greater part of which has been spent on portion 109; I could produce vouchers for £1,743, money actually expended in men's wages; I have been in possession of this land uninterrupted since 1881; M'Bean resided

resided on the land; it has been his home since it was taken up; these three blocks named above all adjoin each other; the lectr which has been read by the Chairman, dated 1st June, 1887, is the one forwarded by me to the Minister for Lands, and I produce the reply to the same.

By Mr. Kearney, solicitor: We made separate declarations on the three portions named; I could not state when I made declaration on portion 58; when I made this declaration I could not state if it stood in the name of Powrie, Glass, and Moore; I could not tell unless I saw the papers whether I made the declaration on mineral conditional purchase 80-357; I could not say from memory whether the expenditure was made by Powrie, Glass, and Moore; I do not think we applied for an extension of time; the property I think when I made declaration on 109 belonged to Powrie, Glass, and Moore; I made declaration on portion 110; this always belonged to me; I suppose the improvements on 109 would more than cover the £1 4s. improvements on 110; when I made the first declaration of £1 4s. per acre it was my own, not in the name of Powrie, Glass, and Moore; I subsequently transferred this to the firm, and made the declaration at the end of five years at £2 per acre in the name of firm, John Moore, Peter Speare, and John M'Bean.

Sworn at Armidale, this 24th day of }
June, 1887, before us,-- }
SYDNEY BLETHE, J.P., Chairman.
C. E. SMITH, P.M. JOHN MOORE.

This witness being duly sworn, on oath, states: My name is Mordaunt Alister Maclean; I am in the Survey Office; I represent the District Surveyor; I produce the original plans showing portions 58, 109, and 110, parish Metz and Cooney; I look at plan of portion 109; portion 109 is surveyed for 80 acres, including portions applied for as gold leases; I have no doubt whatever; nor of portion 58, 100 acres, surveyed inclusive of any application for gold leases; there was a gold-field proclaimed Gwyrn, 29th June, 1833; that embraces only portion 58 of these three portions; portions 109 and 110 have never been within any gold-field.

By Mr. Kearney, solicitor: These plans are from the Surveyor-General's Office; they do not show any gold lease applications; the local map does not show the boundaries of gold lease applications as being within portion 109; three of them are upon portion 109 and one on portion 58; the fact of their being shown on the local map would not necessarily show that these gold leases had been surveyed before the mineral conditional purchase; the mineral gold lease on portion 58 is the only one that is really included within the gold-field.

Sworn at Armidale, this 24th day of }
June, 1887, before us,-- }
SYDNEY BLETHE, J.P., Chairman.
C. E. SMITH, J.P. M. A. MACLEAN.

This closed the evidence.

B 1.

[To Evidence of John Moore.]

Glenhurst, Armidale, 1 June, 1888.

JOHN M'BEAN is an inmate of the Armidale hospital. He is suffering from chronic rheumatic arthritis. In my opinion, he is unfit to undertake a journey to Sydney.

L. G. MALLAM, M.B., M.R.C.S., England,
Med. Officer, Armidale Hospital.

B 2.

Statutory Declaration.

I, JOHN M'BEAN, of Armidale, in the Colony of New South Wales, do hereby solemnly and sincerely declare as follows:—

1. I am a partner with John Moore and Peter Speare in regard to mineral conditional purchases 58, 109, and 110 in the parish of Metz, county of Sandon, and I have been such partner since January, 1881, and I have resided on block portion 58, from January, 1881, until about three months ago, when I was compelled to come into Armidale for medical advice.
2. I hold a one-third share or interest in the aforesaid mineral conditional purchases 58, 109, and 110, and have done so ever since they were taken up.
3. Previous to the 29th day of September, 1881 (the day in which block 110 was taken up), Mr. Moore came over to inspect the mine and found two men shooting the antimony down into block 110. These men stated in the presence of Mr. Moore that they intended earning as much money as would enable them to take up the block, and pack up the antimony by horses.
4. Mr. Moore proceeded to Armidale and took up the land in his own name.
5. Mr. Moore came out two or three days later and stated that the land agent could not take our deposit unless Mr. Speare and myself were present, and that as I was crippled with rheumatics, to prevent delay, he had taken up the land in his own name. Mr. Moore further stated that I would have a one-third share or interest in this block as well as in the others. He made this statement in the presence of his son Mr. James Moore.
6. I have no document or writing to show that I hold any such share or interest, but merely Mr. Moore's word.
7. Mr. Moore has paid for my share of all the expenses in taking up the whole of the land, and the expenses of erecting machinery thereon, and I am still indebted to him for my share of such expenses.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Subscribed and declared at Armidale, this 31st day of }
May, before me,-- }
JOHN M. SHEAHAN, a Commissioner for Affidavits. JOHN M'BEAN.

B 3.

Statutory Declaration.

I, LAMBERT SKENE GORDON, of Armidale, in the Colony of New South Wales, Crown Lands Agent, do hereby solemnly and sincerely declare as follows:—That I recollect at the time, John Moore, of Armidale, made his declaration before me as Crown Lands Agent, on the 24th day of December, 1884, as to M.C.P., No. 81-266 being improved to £1 4s. per acre, I asked him if such improvements were on such mineral conditional purchase when he, the said John Moore replied that same adjoined and formed one holding with mineral conditional purchases, Nos. 80-357 and 81-54, and under the 26th section of Crown Lands Act Amendment Act, 39 Victoria No. 13, I accepted the said John Moore's declarations as to improvements above referred to. I also recollect the said John Moore declaring on the same mineral conditional purchase above referred to, viz., No. 81-266 on the 30th December, 1886, when he valued the improvements thereon at £2 per acre, by virtue of mineral conditional purchase adjoining thereto, No. 81-54 being improved to the value of £5 per acre, and by virtue of mineral conditional purchase adjoining, No. 80-357 being improved to the value £8 per acre. And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "an Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Subscribed and declared at Armidale, this 1st day of June, }
1888, before me,-- }
JOHN CRAIGIE, J.P. LAMBERT S. GORDON.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINERAL CONDITIONAL PURCHASES, PARISH OF METZ.

(APPLICATIONS FOR.)

Ordered by the Legislative Assembly to be printed, 21 September, 1887.

FURTHER RETURN (*in part*) to an Order of the Honorable the Legislative Assembly of New South Wales, dated 2nd June, 1887, That there be laid upon the Table of this House,—

“Copies of all papers in connection with the applications for mineral conditional purchase of portions 109, 110, and 113, parish of Metz, county of Sandon; also, copies of all papers in respect to applications to mine for gold on the above-mentioned portions.

(*Mr. Copeland.*)

SCHEDULE.

NO.	PAGE.
1. Mr. J. A. M'Donald to the Honorable the Secretary for Lands, enclosing application by Messrs. Westren and others for permit to take possession of and mine for gold upon part of portion 110, parish of Metz, with minutes. 7 April, 1887	2
2. Mr. Joseph Penglase to the Honorable the Secretary for Mines, calling attention to the injustice that will be done to miners in Armidale District if the rent due by Messrs. Moore and party on portions 109 and 110, parish of Metz, be accepted, with minutes. 20 April, 1887	2
3. The same to Mr. H. Copeland, M.P., on same subject as No. 2, with minutes. 20 April, 1887.....	3
4. Mr. J. A. M'Donald to the Honorable the Secretary for Lands (telegram), for reply to No. 1. 22 April, 1887...	3
5. The Under Secretary for Mines to Mr. Warden C. E. Smith, to report if any gold is taken from M.C.P. 81-266, portion 110, parish of Metz. 25 April, 1887	3
6. The Under Secretary for Mines to Mr. J. Penglase, in reply to No. 2. 25 April, 1887.....	3
7. The Under Secretary for Mines to Mr. John Moore, informing him that he has no right to remove gold from land held by him under M.C.P. 81-266. 25 April, 1887	3
8. Messrs. Moore and others application for permit to remove mineral from M.C.P. 80-357, parish of Metz, county of Sandon.....	4
9. The same, application for permit to remove mineral from M.C.P. 81-54, parish of Cooney, county of Sandon.....	4
10. Messrs. Moore and others, application for permit to remove mineral from M.C.P. 81-266, parish of Cooney, county of Sandon	4
11. Mr. John Moore to the Honorable the Secretary for Mines, in reply to No. 7. 28 April, 1887	4
12. Mr. T. F. De C. Brown, for Messrs. Moore and others, to the Honorable the Secretary for Mines, that No. 10 be forwarded to the Lands Department to facilitate speedy issue of authority to mine for gold, with minutes. 2 May, 1887	5
13. Mr. Warden C. E. Smith to the Under Secretary for Mines, in reply to No. 5. 3 May, 1887	5
14. Mr. J. M'Kinlay, application for authority to dig and search for gold on alienated land within a proclaimed gold-field. 19 May, 1887.....	5

[805 copies—Approximate Cost of Printing (labour and material), £3 18s. 2d.]

MINERAL CONDITIONAL PURCHASES, PARISH OF METZ.

No. 1.

Mr. J. A. M'Donald to The Secretary for Lands.

Sir,

Armidale, 7 April, 1887.

I have the honor by request of the applicants to hand you enclosed herein application by Messrs. Wm. Westren, C. Allingham, Jno. Allingham, and Wm. H. Allingham, for a permit from you to take possession and mine for gold in and upon a part of a measured portion No. 110, in the parish of Metz, within the Gyra River Gold-field, in this district. The land is part of a mineral conditional purchase of one John Moore, taken up 29th September, 1881, and I am informed by the present applicants that no mining operations of any kind nor any expenditure whatever have been made on this portion, and that consequently the mineral conditional purchase is forfeitable for non-performance of the conditions attaching to same, if the same has not already been forfeited, and they desire to be informed whether the said mineral conditional purchase stands good in the books of the Department, or whether it has been forfeited or lapsed.

I have, &c.,

J. A. M'DONALD,
(per J.A.G.)

Mr. Capper,—What is the state of M.C.P.?—R.H.D., 13/4/87. The C.P. stands good. Papers under reference to the Chairman of the Armidale Board.—W.H.C., 27/4/87.

[Enclosure.]

WE, the undersigned William Westren, Christopher Allingham, John Allingham, and William Henry Allingham, of Hill-grove, near Armidale, hereby apply for a permit to take possession in accordance with the Mining Board Regulations, and to dig and search for gold within a parcel of land of the dimensions of a prospecting protection area as prescribed by the said regulations, situated within the Gyra River Gold-field, county of Sandon, parish of Metz, being part of portion No. 110, which on the 29th day of September, 1881, was sold to John Moore as a mineral conditional purchase.—Dated at Armidale, this 7th day of April, 1887.

WILLIAM WESTREN.
CHRISTOPHER ALLINGHAM.
JOHN ALLINGHAM.
W. H. ALLINGHAM.

The Secretary for Lands.

Must await action in re letter from Messrs. Moore & Co., per Mr. T. F. DeC. Browne, of 2nd May, 1887.—W.B.C., 23/5/87.

No. 2.

Mr. J. Penglase to The Secretary for Mines.

Sir,

Armidale, 20 April, 1887.

I have, on behalf of the miners of this district, to call your attention to a great injustice that will be done to them in reference to accepting the rent on two blocks of land situate at Gara Falls, Nos. 109 and 110. Your Mining Act states that the rent must be paid yearly in advance. The ground was held by John Moore as a mineral conditional purchase; the rent, I believe, has not been paid for two years, and we know that the labour conditions have not been fulfilled. Our party, thinking the ground abandoned, began prospecting, and discovered a payable quartz-lode on the block 110. Immediately on its becoming known, the rent I have heard was paid into the office here, and Moore claims the ground, threatening to sue for trespass. I protest against the rent being received, and apply to you as Minister for Mines to see that justice is done in this matter; the rent not being paid according to law, I presume that you will throw the land open for selection. I know that you have been the instrument in exposing much corruption in the Civil Service and Government Departments generally, and now you have before you a case demanding your best attention. Shall the working man be deprived of his right? If you administer the Act in its integrity, which I believe you will, you will see your way clear to refuse the rent on blocks 109 and 110 and cancel their leases. Give the pioneers a chance; the men who have entered into these awful ravines endeavouring to open up roads for the commerce of the nation, and never let it be said that these oft-times half-famished creatures should be driven away from the ground that their pluck and perseverance has found for them. Hoping to hear that you will forfeit this ground and give it to those better entitled,

I have, &c.,

JOSEPH PENGLASE.

Presented by Mr. Copeland, 21/4/87. This was handed to me by Mr. Copeland evidently in error; forward it to Mines.—THOMAS GARRETT, 22/4/87. The writer refers to the holdings as M.C.P.'s; let me know if the land is held under mining lease.—H. W., 22/4/87. Urgent. Chief Draftsman,—The Under Secretary is waiting for this information.—E.F.P., 22/4/87. 109 and 110 are both M.C.P.'s.—W.S.C., 22 April, 1887. Forward to the Lands Department and inform.—H.W., 22/4/87. The Under Secretary for Lands.—G.E.H., B.C., 23/4/87.

C.P. 81-266, Armidale, John Moore. The C.P. still stands good. The papers, 85-12,440, are under reference to the Chairman of the Armidale Land Board for inspection of the C.P. and inquiry if necessary. Under recent arrangements it is presumed the enclosed application to mine may be forwarded for consideration to the Under Secretary for Mines.—W.H.C., 29/4/87. The Under Secretary for Mines.—S.F., B.C., 7/5/87.

No. 3.

No. 3.

Mr. J. Penglase to H. Copeland, Esq., M.P.

Sir,

Armidale, 20 April, 1887.

I have to call your attention to a great injustice likely to be done to some of the working men of this district. Mr. Moore had two blocks of ground at Gara Falls, taken as mineral purchases. On block No. 110 there has been no work done for years, and the diggers believing it to be abandoned started work and discovered a gold-bearing quartz-reef. Mr. Moore at once pays up his arrears of rent, about two years', and claims the ground. The Mining Act is distinct in stating that the rent must be paid yearly in advance, and therefore I enter a protest against the money being accepted by Government, and I have called upon the Minister for Mines to declare the land forfeited. Trusting you will see this matter through, and assist the working man to obtain what is justly his own, and acquaint me with the first intimation of cancellation,

I have, &c.,

JOSEPH PENGLASE.

Chief Mining Surveyor.—M.L. No., please.—E.C.P., 20/4/87.
20/4/87. M.C.P., 81-266.—W.S.C., 20 April, 1887.

Chief Draftsman.—E.F.P.,

The writer may be informed that the land has been conditionally purchased. The owner's attention may be invited to the fact that he has no right to the gold, and the warden may be asked to report any gold taken from the land.—H.W., 20/4/87. Approved.—F.A., 21/4/87.

No. 4.

Telegram from Mr. J. A. M'Donald to The Secretary for Lands.

Armidale, 22 April, 1887.

My letter, 7th instant, *re* Allingham and party's permit. Kindly reply soon as possible.

JOHN A. M'DONALD,

Solicitor.

The letter of the 7th inst. has not been received in C.S. Records.—J.P.M., 23/4/87. Further particulars may be asked for.—W.H.C., 27/4/87.

No. 5.

The Under Secretary for Mines to Mr. Warden Smith.

Sir,

Department of Mines, Sydney, 25 April, 1887.

I have the honor, by direction of the Secretary for Mines, to request that you will be good enough to report if any gold is taken from the land held by Mr. John Moore, of Armidale, under mineral conditional purchase, 81-266, the land being situated on block No. 110 at Gara Falls.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 6.

The Under Secretary for Mines to Mr. J. Penglase.

Sir,

Department of Mines, Sydney, 25 April, 1887.

Referring to your letter of the 20th instant, presented by Mr. Copeland, M.P., to the effect See No. 2 that a Mr. Moore held two blocks of land at Gara Falls, under a mineral conditional purchase, and that no work has been done on the land for some years, and deeming it abandoned, certain miners started work and discovered a gold-bearing quartz-reef, and in which you ask that the arrears of rent, which have been paid by Mr. Moore, might not be accepted, and that the land might be forfeited, I have the honor to inform you that the land appears to be held under conditional purchase, and as the Lands Department deals with such holdings your letter on the subject has been sent thither.

In the meantime I may inform you that you have no right to remove any gold from the land.

I have, &c.,

GERARD E. HERRING,

(For the Under Secretary.)

No. 7.

The Under Secretary for Mines to Mr. J. Moore.

Sir,

Department of Mines, Sydney, 25 April, 1887.

I have the honor, by direction of the Secretary for Mines, to inform you, that it appears that mining operations have been carried on by certain persons on the land held by you under mineral conditional purchase, No. 81-266, and that a gold-bearing quartz-reef has been discovered, and I am to point out to you that you have no right to remove gold from the land in question.

The papers have been referred to the Lands Department, which deals with mineral conditional purchases.

I have, &c.,

GERARD E. HERRING,

(For the Under Secretary.)

No. 8.

Application by P. Speare and others.

Crown Lands Act of 1884—(Part I, section 7.)

Application for permit to remove Mineral.

WE, Peter Speare, John Moore, and John M'Bean, being the owners of that piece or parcel of land, being M.C.P. 80-357, in the county of Sandon, parish of Metz, containing 100 acres, more or less, hereby apply for permission to dig, mine for, win, and remove any gold that may be found in such land. We make this application in terms of and subject to the conditions prescribed in the regulations made under the provisions of the Crown Lands Act 1884; and we agree to accept such permit, subject to, and to be bound by the conditions set forth in such regulations, and such other conditions as the Governor may impose.

Mr. Cope. Not issued according to C.P. register.—C.C., 2/5/87. Submitted.—W.R.C., 2/5/87.

No. 11.

Mr. J. Moore to The Secretary for Mines.

Sir,

In reply to your letter of the 25th instant, relative to M.C.P. 81-266, I have the honor to state that your informant is not stating facts—report states that a gold-bearing reef has been discovered. I am not aware of any person working the land, nor have I given any authority to do so.

I have, &c.,

JOHN MOORE.

No. 12.

No. 12.

Mr. T. F. DeC. Browne to The Secretary for Mines.

Sir,

52, Castlereagh-street, Sydney, 2 May, 1887.

I have the honor to acknowledge the receipt of your letter No. 87-5,001, dated 25th April, See No. 7. informing me that gold-mining operations have been carried on by persons other than the owners on mineral conditional purchase 81-266, Armidale, and that I have no right to remove any gold under my mineral conditional purchase title.

In reply, I beg to state that a quartz reef carrying gold has been discovered as stated, and that on See No. 10. the 23th April an application, under section 7 of the Land Act of 1884, was lodged in your Department by the owners of the above mineral conditional purchase to remove the gold. Will you please cause the application to be forwarded to the Lands Department (as provided for under the new arrangements of Departmental business) without delay, in order to facilitate a speedy issue of the necessary authority to mine for gold.

I have, &c.,

JOHN MOORE,

For Self & Co., Owners.

By their authorised agent, T. F. DeCOURCY BROWNE.

Has the application for permit been received.—H.W., 3/5/87.

The only application for permission to extract gold from M.C.P. 81-266, Armidale (portion of 80 acres, county of Sandon, parish of Metz), is one by Messrs. P. Speare, J. Moore, and J. M'Bean (conditional purchasers). The application (No. 22) is under submission, as upon enquiry at the Lands Department, it was found that the deed had not been issued, balance not having been paid.—W.R.C., 3/5/87.

Inform Mr. DeCourcy Browne.—H.W., 9/5/87.

Ascertain whether this was within a gold-field when the M.C.P. was made; what would be the terms of the deed of grant that will be issued to the purchasers; and then, it may, perhaps, be necessary to refer to the Crown Law Officers for an opinion whether the permit can issue before the purchase is completed and the deed of grant issued.—H.W., 23/5/87.

Expedite. The Chief Mining Surveyor.—W.R.C., 23/5/87. The Chief Draftsman.—E.F.P., 23/5/87. Urgent.

No. 13.

Mr. Warden Smith to The Under Secretary for Mines.

Sir,

Warden's Office, Armidale, 3 May, 1887.

Referring to your letter of the 25th ultimo, as to whether any gold is taken from the land See No. 5. held by Mr. John Moore, of Armidale, under mineral conditional purchase 81-266, portions 109 and 110, at Gara Falls, it is alleged a small quantity of gold has been taken from the blocks in question, but not by Mr. Moore or any person acting in authority under him.

I have, &c.,

C. E. SMITH.

Submitted.—W.R.C., 9/5/87.

I presume no further action need be taken.—H.W., 9/5/87.

Submitted. Approved.—F.A., 10/5/87.

No. 14.

Application by J. M'Kinlay.

Crown Lands Act of 1884—(Part III, section 46).

Application for authority, to dig and search for gold on alienated land within a proclaimed gold-field.

I, JOHN M'KINLAY, hereby apply for authority to dig and search for gold within a parcel of land situated in the county of Sandon, parish of Metz, being portion No. 110, which on the 29th day of September, 1881, was alienated to Peter Speare, John Moore, and J. M'Bean as a mineral conditional purchase. That part of the said portion upon which I request authority to mine is described at the foot hereof.

I make this application in terms of and subject to the Crown Lands Act of 1884, and the regulations made thereunder; and I agree, if such authority be granted, to be bound by the conditions imposed by the said regulations, and any other conditions which may be contained in the permission or authority.

Description of land to be mined upon.

Being mineral conditional purchase No. 81-266 of 80 acres applied for by Speare, Moore, and M'Bean: Commencing on north-west corner of lot 110, and from thence along western boundary for a distance of 20 chains south, thence 20 chains east, thence 20 chains north to northern boundary, and 20 chains west to point of commencement.

JOHN M'KINLAY,

c/o Mr. Kennedy, Cove-street, Balmain,
19th May, 1887.Witness—P. J. COOKE.
The Under Secretary for Lands, Sydney.

The Chief Mining Surveyor,—Urgent.—W.R.C., 27/5/87. Chief Draftsman.—E.F.P., 27/5/87.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINERAL CONDITIONAL PURCHASES, PARISH OF METZ.

(PETITION TO BE HEARD BEFORE SELECT COMMITTEE, BY COUNSEL OR SOLICITOR—JOHN MOORE AND OTHERS.)

Ordered by the Legislative Assembly to be printed, 21 March, 1888.

To the Honorable the Speaker and Legislative Assembly of New South Wales, in Parliament assembled.
The Humble Petition of John Moore, John M'Bean, of Armidale, and Peter Speare, of Sydney,
in the Colony of New South Wales,—

RESPECTFULLY SHOWETH:—

1. That on the twenty-ninth day of July, one thousand eight hundred and eighty-one, John M'Carthy applied for a portion of land being portion fifty-eight, parish of Metz, county of Sandon, under the thirteenth section of the Crown Lands Alienation Act of 1861, 25 Victoria Number 1, and that on the twenty-first of October, one thousand eight hundred and eighty, the said John M'Carthy applied to have this conditional purchase converted into a mineral conditional purchase, under the nineteenth section of the said Act, 25 Victoria Number 1.

2. That the said John M'Carthy transferred the said mineral conditional purchase to James Powrie and James Glass, on the thirty-first day of January, one thousand eight hundred and eighty-one.

3. That the said James Powrie and James Glass transferred the said mineral conditional purchase to James Powrie, James Glass, and John Moore, on the tenth day of September, one thousand eight hundred and eighty-one.

4. That the said mineral conditional purchase was transferred by the said James Powrie, James Glass, and John Moore, to John Moore, on the ninth of December, one thousand eight hundred and eighty-four.

5. That the said John Moore transferred the said mineral conditional purchase to John Moore, Peter Speare, and John M'Bean, on the third day of May, one thousand eight hundred and eighty-six.

6. That a Select Committee of your Honorable House was on Tuesday, the twentieth of December, one thousand eight hundred and eighty-seven, duly appointed by your Honorable House, with power to send for persons and papers to inquire into and report upon the granting of the above mineral conditional purchase, also with reference to the refusal of certain applications, and the granting of other applications for permission to mine on the said land.

Your Petitioners therefore humbly pray as follows:—

That your Petitioners may be heard by Counsel or Solicitor before the Select Committee with liberty to adduce such evidence as may be advised concerning the subject matter of the said inquiry in the interests of your Petitioners.

And your Petitioners as in duty bound will ever pray, &c.

Dated this twelfth day of March, in the year of our Lord one thousand eight hundred and eighty-eight.

Witness—JAMES J. MOORE, J.P.

JOHN MOORE.
JOHN M'BEAN.

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINERAL CONDITIONAL PURCHASE, PARISH OF METZ.

(PETITION TO BE HEARD BEFORE SELECT COMMITTEE ON—JOSEPH F. M'KINLAY.)

Received by the Legislative Assembly, 23 May, 1888.

In the matter of certain mineral conditional purchases in the parish of Metz or Cooney, county of Sandon,
Colony of New South Wales.

To the Honorable the Speaker and Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Joseph Francis M'Kinlay, of Armidale, in the Colony of New South Wales,
miner;—

RESPECTFULLY SHOWETH:—

1. That your Petitioner is, and has been since the year one thousand eight hundred and eighty-six, the holder of a miner's right issued under and in pursuance of the Mining Act of 1874, and was and is by virtue of such miner's right entitled amongst other things to enter upon, mine in for gold, and occupy for gold-mining purposes, any Crown Lands.

2. That your Petitioner and others forming a mining party have been in possession under their miner's rights, and have been occupying for gold-mining purposes certain portions of land, known as portion 58, parish of Metz, county of Sandon, and portion 109, parish of Metz or Cooney, county of Sandon, and portion 110, parish of Metz or Cooney, county of Sandon, for the period of thirteen months.

3. That John Moore, John M'Bean, and Peter Speare, claim to be entitled to the possession of the said portions by virtue of certain mineral conditional purchases under the Crown Lands Alienation Act of 1861.

4. That a Select Committee of your Honorable House was on Tuesday, the twentieth day of December, in the year one thousand eight hundred and eighty-seven, duly appointed by your Honorable House, with power to send for papers and persons, to inquire into and report upon the above mineral conditional purchases; also, with reference to the refusal of certain applications, and the granting of other applications, for permission to mine on the said land.

Your Petitioner therefore humbly prays as follows:—

That your Petitioner may be heard by counsel or solicitor before the said Select Committee, with liberty to adduce such evidence as he may be advised concerning the subject matter of the said inquiry in the interest of your Petitioner.

And your Petitioner, as in duty bound, will ever pray, &c.

Dated this seventeenth day of May, in the year of our Lord one thousand eight hundred and eighty-eight.

JOSEPH F. M'KINLAY.

Witness—ALFRED HORRICKS, Solr., Sydney.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINERS' RIGHTS.

(PETITION FROM MINERS OF HILL END, SOFALA, SUNNY CORNER, &c., &c.)

Received by the Legislative Assembly, 12 April, 1888.

To the Honorable the Speaker and the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned miners of Hill End, Sofala, Sunny Corner, Rylstone, Cargo, Gulgong, Silverton, Limestone, Mount McDonald, Bathurst, Wattle Flat, Nymagee, Hargreaves, Copeland, Parkes, Mount Brown, Oberon, and Tambaroora,—

HUMBLY SHOWETH:—

That the charge made for a miner's right is excessive.

That great relief will be afforded to them if the miners' right remains in force for twelve months, irrespective of date of issue.

Your Petitioners pray that your Honorable House will give consideration to the matters referred to, and grant such relief as you may deem fit.

And your Petitioners will, as in duty bound, ever pray, &c.

[Here follow 929 signatures.]

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINING ON PRIVATE PROPERTY.

(PETITION—MINERS OF FOREST REEF.)

Received by the Legislative Assembly, 8 February, 1888.

The humble Petition of the miners of Forest Reef.

To the Legislative Assembly of the Colony of New South Wales,—

WE, the undersigned, being miners or interested in the mining developments of New South Wales, respectively request that the Bill about to be introduced on our behalf by Mr. C. L. Garland, M.L.A., for the purpose of mining on private properties be favourably entertained by you.

There are, without doubt, in this extensive territory of New South Wales, large areas of land known to be highly auriferous, and to contain vast deposits of mineral wealth, but which, under existing laws, cannot be touched, thus retarding all tendencies towards natural progress and advancement in the line referred to.

The Bill about to be brought forward by Mr. Garland is, we believe, a step in the right direction, and as such should be entitled to the hearty support of all classes.

It is undoubtedly a matter of the deepest importance, not only to the mining but also to all other industrial classes, that the mineral resources of the country should be fully developed, as by those means new centres of industry would be established, which, with their consequent advantages to the country, would contribute largely to the prosperity and welfare of the whole Colony.

We therefore hope and pray that the said Bill will be treated in the manner in which we desire, and we, your humble Petitioners, will ever pray.

[Here follow 64 signatures.]

Similar Petitions were received,—

On 8th February, 1888,	from miners of Ironbarks ;	28 signatures.
”	”	” from miners of Brown’s Creek ; 49 signatures.
”	”	” from miners of Canowindra ; 50 signatures.
”	”	” from miners of Galley Swamp ; 31 signatures.
”	”	” from miners of Deepwater ; 37 signatures.
”	”	” from miners of Lismore ; 17 signatures.
”	”	” from miners of Capertee Flat ; 14 signatures.
”	”	” from miners of Nymagee ; 31 signatures.
”	”	” from miners of Adelong ; 45 signatures.
”	”	” from miners of Barraba ; 30 signatures.
”	”	” from miners of Araluen ; 60 signatures.
”	”	” from miners of Bingera ; 44 signatures.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOLD-MINING AND MINERAL LEASES.

(INFORMATION RESPECTING.)

Ordered by the Legislative Assembly to be printed, 29 November, 1887.

RETURN to an *Order* of the Honorable the Legislative Assembly, dated 29th September, 1887, That there be laid upon the Table of this House,—

“A Return showing the total number of Gold-mining and Mineral Leases applied for during the five years ending the 1st of September, 1887; also showing the period that has intervened between the date of application and the date of issue in the case of all applications where the delay has exceeded six months.”

(Mr. Wall.)

TOTAL number of Gold-mining Leases applied for during the five years ending the 1st of September, 1887, 2,331.

TOTAL number of Mineral Leases applied for during the five years ending the 1st of September, 1887, 4,942.

LEASES issued in which the period intervening between date of application and date of issue has exceeded six months, and showing such period during the five years ending 1st September, 1887.

(PAPERS IN CONNECTION WITH MESSRS. DUNCAN AND WADE'S APPLICATION FOR.)

Ordered by the Legislative Assembly to be printed, 23 July, 1888.

LAI'D upon the Table of the Honorable the Legislative Assembly of New South Wales by the Secretary for Mines—"Copies of papers in connection with "Messrs. Duncan and Wade's application for a Gold-mining Lease at Armidale."

Application for Gold-mining Lease.

Gold-mining Lease Regulations.—Schedule 2.

To the Honorable the Secretary for Mines, Sydney,—

Sir,

Armidale, 3 May, 1887.

We hereby make application for a gold-mining lease of that piece or parcel of land situated at Hillgrove Falls, county of Sandon, containing 4 acres, of which we took possession on the 29th day of April, at the hour of twelve o'clock in the forenoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and digging trenches at each angle thereof. The datum post is distant about 6 inches, adjoining the south-east corner of T. Smith & Co.'s 15 acres, between Smith's ground as surveyed and Brereton's land as pegged, about $\frac{1}{4}$ mile north-westerly from the Eleanor mine.

Notice of our intention to make this application has been given, in accordance with the Regulations in that behalf; and we hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such contents as we have obtained. We also hand herewith the sum of £4, being the first year's rent in advance of the said land, and £1 10s. to cover the cost of survey: And we hereby request that survey may forthwith be made of the said piece or parcel of land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of £4 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within fourteen days from and after the granting thereof, and shall and will employ upon such land not less than two men during the first three months of the term thereby created, and not less than two men during the remainder of such term. And shall and will at any time when called upon in terms of the Regulations relating to gold-mining leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of £4, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

JOHN MACKIE DUNCAN.
P. WADE.

This application was received by me this 3rd day of May, 1887, at the hour of 11 o'clock in the forenoon, and is numbered 1,325.

CHARLES S. BADHAM,
Warden's Clerk, Armidale.

Questions to be answered by Applicants to Lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's clerk, or an agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to, and signed by, the person furnishing the answers:—

1. Were you, or each of you (applicants), the holder of a miner's right in force at the date of taking possession of the land referred to in application No. 1,325? Yes. P. Wade, No. 12, 3 January, 1887, of Beardy-street, Armidale; J. M. Duncan, No. 7, 3 January, 1887, of Beardy-street, Armidale.
2. Do you produce them? Yes.
3. What was the date and hour of the day when you took possession of the land referred to in application No. 1,325? 29 April, 1887; 12 noon.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
[If No. 4 be replied to in the affirmative, then 5, 6, and 7.]
5. What was the diameter of the posts? 6 inches.
6. How high did they project above the surface when fixed in the ground? 4 feet.
7. What was the length of each arm of each trench; and what was the depth of each trench? 6 feet long, 9 inches deep—each trench.
9. At which angle of the land is the datum post fixed? North-east corner.
11. What was written or painted on each board or plate? Gold lease applied for by Wade & Duncan.
12. Where did you post the notices, Schedule 1? Warden's Office, Armidale; Post Office, Hillgrove.
13. When did you post such notices? 29 April, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.

I, John Mackie Duncan, on behalf of myself and Patrick Wade, declare that the foregoing questions have been answered by me truthfully, in every particular, and the answers thereto have been read over to me and are correctly taken down in writing.

Witness to signature,—

CHARLES L. BADHAM, Warden's Clerk.

J. M. DUNCAN,
P. WADE,
Beardy-street, Armidale.

APPLICATION No. 1,325, at Armidale, for a gold-mining lease:—

1. By whom application was received.—The Warden's Clerk, Armidale.
2. At what place.—Armidale.
3. Date and hour when received.—3 May, 1887, 11 a.m.
4. Receipt for first year's rent, No. 8-87.—Date 3 May, 1887.
5. To whom receipt was issued,—John Mackie Duncan, of Armidale; Patrick Wade, of Armidale.
6. Date when notice to survey was sent to Surveyor.—14 May, 1887.
10. Are the applicants holders of miner's rights?—Yes. J. M. Duncan, No. 7, 3 January, 1887; P. Wade, No. 12, 3 January, 1887.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? No.

Gold-mining Lease Regulations.—Schedule 6.

Notice of Application and Deposit.

Sir,

Beardy-street, Armidale, 3 May, 1887.

We have the honor to inform you that I have this day deposited with the Warden's Clerk, at Armidale, the sum of £4, being the first year's rent in advance of 4 acres of land at Hillgrove Falls, for the purpose of gold-mining, and the sum of £1 10s., being the fees for survey of the said land. The number of our application is 1,325.

We have, &c.

J. M. DUNCAN,
P. WADE.

The Under Secretary for Mines, Sydney.

Mr. W. G. Brereton to The Warden, Armidale.

Sir,

Armidale, 3 May, 1887.

I object to Mr. Patrick Wade and Mr. John Mackie Duncan applying for a gold-mining lease on a 10-acre block of land that I have already paid for, south, and adjoining Smith and party's 15-acre lease applied for; and I wish you to caution them.

Yours, &c.,

W. G. BRERETON.

Notice to make Survey.

Sir,

Department of Mines, Sydney, 18 May, 1887.

An application for a gold-mining lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the Regulations relating to leases, the area so applied for, and to furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to the Regulations for mineral leases numbered respectively, 2, 3, 12, 13, and 14 [or to the Regulations relating to gold-mining leases, numbered respectively, 1, 2, 3, 4, 5, 14, and 15].

I have, &c.,

EDWD. F. PITTMAN,
Chief Mining Surveyor.

J. H. McEwen, Mining Surveyor.

Copy of description of the land, as given in the application:—County of Sandon, parish of Metz, 4 acres, at Hillgrove Falls; datum 6 inches distant and adjoining the south-east corner of T. Smith & Co.'s 15 acres; between Smith's ground, as surveyed, and Brereton's Camp, as pegged; about $\frac{1}{4}$ mile north-westerly from the Eleanora mine.—CHARLES S. BADHAM, Warden's Clerk, Armidale, 14th May, 1887.

Mr.

Mr. Warden Smith to the Under Secretary for Mines.

Sir,

Armidale, 3 June, 1887.

With respect to question 7 and the answer thereto, as at first written in was a clerical error, and has been altered to 6 feet long and 9 inches deep.

The address of each applicant is now inserted, viz., Beardy-street, Armidale.

As regards the objection to the lease by W. G. Brereton, that Brereton declined to lodge an objector's fee (£5) with the Warden's Clerk when he handed in the document, so I could not treat the objection as a formal one; so I merely ordered it to be placed with the papers so that it might come under the notice of the Mining Surveyor.

C. E. SMITH,

Warden.

Notice to make Survey.

Sir,

Department of Mines, Sydney, 26 September, 1887.

An application for a gold-mining lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the Regulations relating to leases, the area so applied for, and to furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to the Regulations for mineral leases numbered respectively 2, 3, 12, 13, and 14 [or to the Regulations relating to gold-mining leases, numbered respectively, 1, 2, 3, 4, 5, 14, and 15].

I have, &c.,

EDWD. F. PITTMAN,

Chief Mining Surveyor.

No. of application, 1325; lodged at Armidale; area, 4 acres; names and addresses of applicants—John Mackie Duncan, Patrick Wade, Armidale.

H. B. Sullivan, Mining Surveyor.

Copy of description of the land, as given in the application:—At Hillgrove Falls, county of Sandon. The datum post is distant about 6 inches, adjoining the south-east corner of T. Smith & Co's 15 acres; between Smith's ground, as surveyed, and Brereton's land, as pegged; about $\frac{1}{4}$ of a mile north-westerly from the Eleanora mine.

Transmitted to the Chief Mining Surveyor with plan of survey.—H. B. SULLIVAN, 14/11/87.

Mr. W. G. Brereton to Mr. Mining-Surveyor Sullivan.

Sir,

Hillgrove Falls, 19 October, 1887.

I wish to inform you that I object to the survey of a portion of a 4-acre lease, applied for by Patrick Wade and J. M. Duncan, as about $2\frac{1}{2}$ acres encroaches on a 10-acre lease applied for by me previous to the application of the abovenamed, in accordance with the Gold-mining Act of 1874.

Yours, &c.,

WILLIAM GORDON BRERETON.

[No. 87-173.]

Gold-mining Lease.

Sir,

Bingara, 14 November, 1887.

I have the honor to transmit herewith the plan of one portion of land, containing 4 acres, numbered G.L. 167, in the parish of Cooney, in the county of Sandon, applied for by Duncan & Wade, under the Mining Act of 1874, measured by me on October 6th, 1887, in accordance with instructions.

W. G. Brereton objects to this survey, as he claims part of the land under application 1,324 (measured as G.L. 1,325).

I have, &c.,

H. B. SULLIVAN,

Mining Surveyor.

The Chief Mining Surveyor, Sydney.

Gold-mining Lease Regulations.—Schedule 1.

Notice of intention to apply for a Gold-mining Lease.

NOTICE is hereby given, that the undermentioned persons intend applying for a gold-mining lease of 4 acres of land, situated at Hillgrove Falls, county of Sandon, parish of Metz.

Possession of the said land was taken by post and trenches at each angle thereof on the 17th day of December, 1887, at the hour of five o'clock in the forenoon, and the datum post is distant 6 inches in an easterly direction from the eastern angle of Smith & Co.'s lease of 15 acres.

Application for the said lease will be lodged with Warden at Armidale on the 23rd day of December, 1887.

Dated at Hillgrove, this 17th day of December, 1887.

J. M. DUNCAN.

P. WADE.

[THIS ground has already been surveyed to Duncan and Wade, but has been re-pegged by them, it being numbered G.L. 167. 4 acres.]

Gold-mining Lease Regulations.—Schedule 2.

Application for Gold-mining Lease.

To the Honorable the Secretary for Mines, Sydney,—

Sir,

Armidale, 23 December, 1887.

We hereby make application for a gold-mining lease of that piece or parcel of land situated at Hillgrove Falls, county of Sandon, parish of Metz, containing 4 acres, of which we took possession on the 17th day of December, at the hour of five o'clock in the forenoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and trenches at each angle thereof. The datum post is distant 6 inches in an easterly direction from the eastern angle of Smith & Co.'s lease of 15 acres.

Notice of intention to make this application has been given, in accordance with the Regulations in that behalf, and we hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such contents as we have obtained. We also hand herewith £4, being the first year's rent in advance of the said land, and £2 to cover the cost of survey: And we hereby request that survey may forthwith be made of the said piece or parcel of land.

We

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £4 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land forthwith from and after the granting thereof, and shall and will employ upon such land not less than two men during the first period of the term thereby created, and not less than two men during the remainder of such term. And shall and will at any time, when called upon in terms of the Regulations relating to gold-mining leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of £6, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,
J. M. DUNCAN.
P. WADE.

This application was received by me this 23rd day of December, 1887, at the hour of 2 o'clock in the afternoon, and is numbered 1,343.

C. H. BADHAM,
Warden's Clerk.

Questions to be answered by Applicants to Lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's clerk, or an agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to, and signed by, the person furnishing the answers:—

1. Were you, or each of you (applicants), the holder of a miner's right in force at the date of taking possession of the land referred to in application No. 1,343? Yes. J. M. Duncan, No. 7, 1st January, Armidale; P. Wade, No. 11, 1st January, Armidale.
2. Do you produce them? Yes.
3. What was the date and hour of the day when you took possession of the land referred to in application No. 1,343? 17th December, 1887, at 5 o'clock in the forenoon.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
[If No. 4 be replied to in the affirmative, then 5, 6, and 7.]
5. What was the diameter of the posts? 6 inches in diameter.
6. How high did they project above the surface when fixed in the ground? 4 feet.
7. What was the length of each arm of each trench; and what was the depth of each trench? 7 feet long, 9 inches deep.
9. At which angle of the land is the datum post fixed? North-east.
10. Did you affix a board or metal plate to the datum post? Yes.
11. What was written or painted on each board or plate? Applied for by us as a gold-mining lease by J. M. Duncan and P. Wade.
12. Where did you post the notices, Schedule 1? At Hillgrove Post Office, and Court House, Armidale, and on a tree adjoining the datum post.
13. When did you post such notices? 17th December, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice, in the form Schedule 1, upon every such person; and when? No.

I, J. M. Duncan, on behalf of J. M. Duncan and P. Wade, do declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me and are correctly taken down in writing.

J. M. DUNCAN.
P. WADE.

Witness to signature,—

CHARLES H. BADHAM, Warden's Clerk.

Gold-mining Lease Regulations.—Schedule 6.

Notice of Application and Deposit.

Sir,

We have the honor to inform you that we have this day deposited with the Warden's Clerk at Armidale the sum of £4, being the first year's rent in advance of 4 acres of land at Hillgrove Falls, for the purpose of gold-mining, and the sum of £2, being the fees for survey of the said land. The number of my application is 1,343.

We have, &c.,
J. M. DUNCAN.
P. WARD.

The Under Secretary for Mines, Sydney.

The above 4 acres has already been surveyed to us, and is numbered portion G.L. 167, but has been re-pegged.

Memo. from The Warden's Clerk, Armidale, to The Under Secretary for Mines.

Armidale, 4 January, 1888.

Gold-lease 1,343.—Wade & Duncan.

THE Warden handed me a telegram between the Christmas and New Year holidays, asking that this application might be sent down. The telegram I have mislaid, but the lease application is herewith enclosed for inspection. Please return it for Warden's report, which is due on the 7th inst.

CHARLES H. BADHAM,
Warden's Clerk.

This application may be refused, the land not being available at date of taking possession.—
H.W., 11/11/88. Submitted. Approved.—F.A., 12/1/88.

Notice

Notice to make Survey.

Sir,

**MESSRS. HUGH M'NEILL AND PARTY—MINERAL LEASE AT
CAPTAIN'S FLAT.**

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 24th April, 1888,—“with power to send for persons and papers to inquire into and report upon the claims (if any) of Hugh M'Neill and party to compensation for loss sustained through the neglect of the Mining Department to issue them a mineral lease at Captain's Flat,” and to whom was referred on the 6th June, 1888; the “Petition from Hugh M'Neill, William Edwards, and John Huxham Blatchford,”—have agreed to the following Report:—

Your Committee find from the evidence (appended hereto) that M'Neill and party took possession and made application for a mineral lease of 20 acres at Captain's Flat, on 9th August, 1884.

That the evidence given by Mr. Capper, of the Lands Department, and the *Gazette* Proclamation, prove that at the date of application portion (about one-half) of the land applied for was embraced in a reserve, known as the Quarry Reserve, and the other portion (about one-half) was included in a mineral conditional purchase of one Jason Irving.

That in accordance with a minute of Mr. J. P. Abbott, as Minister for Mines, M'Neill and party were informed, on 6th January, 1885, that their application was refused, the land applied for being a reserve, and that they could take possession and apply afresh under the Further Amendment Act.

That the application was formally gazetted refused on the 13th January, 1885.

That in so informing M'Neill and party that the land was a reserve clearly incorrect information was given.

That the minute of the Minister (Mr. Abbott) undoubtedly implied that an application, made in accordance with the minute, by M'Neill and party, would be granted.

That in accordance with the Minister's minute M'Neill and party made a fresh application, with all formalities, on 29th January, 1885.

That for a year and ten months from the date of this second application M'Neill and party held possession of the land, believing that their application would be granted.

That on the 12th November, 1886, M'Neill and party were informed that their application of 29th January, 1885, was refused, the land being unavailable.

That the evidence of Mr. Stephen, of the Mines Department, and the production of papers in similar cases, show that the application might have been granted as to one half of the land upon the Quarry Reserve which was clearly available for mineral lease at the date of application.

That the delay in the Mines Department in dealing with the application was excessive, and operated to the prejudice of M'Neill and party.

That as the other half of the land formed portion of a mineral conditional purchase application at the date of application, and an application made by Messrs. Lewis and Holtermann on the 16th February, 1885, for mineral lease of 20 acres of land, also embraced in this mineral conditional purchase application, was granted on the 31st August, 1885, before the lapse or cancellation of the mineral conditional purchase application, M'Neill and party had strong claims to have their application granted as to this half as well.

That

That prior to the refusal of their application of 29th January, 1885, the mineral conditional purchase application was refused, but no notice whatever was sent to M'Neill and party either of this fact or that this mineral conditional purchase application clashed as to portion of the land with their mineral lease application.

That on the refusal of their application of 29th January, 1885, M'Neill and party according to the practice of the Department were entitled to a beforehand notice to enable them to take up the land in respect of which their application was refused, and apply afresh.

That the then Minister for Mines, Mr. J. P. Abbott, in refusing the application, made the following minute:—

“It is recommended that the application be refused, the land not having been available at date of applying, and the applicants be informed that they may reapply.”

That no such notification, in accordance with the Minister's minute, was sent to M'Neill and party.

That the evidence proves that, on the 12th November, 1886, the land was available, and therefore the letter of that date, notifying to M'Neill and party that their application of 29th January, 1885, had been refused, the land being unavailable, is distinctly wrong and misleading.

That the land was then open for application by any party for a period of five months, and was afterwards granted as a mineral lease to Garland and party.

That Garland and party were subsequently granted a mineral lease of the said land upon an application made on the 25th April, 1887, approved on 3rd January, 1888, and issued on 31st January, 1888, and sold it for £7,000 to a syndicate consisting of seven persons, including some members of Garland and party.

That the said syndicate shortly afterwards sold the property to a mining company called “The Vanderbilt,” at a price to the vendors, in excess of £30,000.

That the capital of the Vanderbilt Company is £100,000, and the shares therein have had a market value of at least 25s. each.

That it is clear, from the evidence, that the Mines Department erred (firstly) in informing M'Neill and party, on 6th January, 1885, that the land applied for was on a reserve, when one-half thereof indisputably was embraced in a mineral conditional purchase application; (secondly), in informing the applicants on 12th November, 1886, that their application was refused, the land not being available, as the evidence shows it was available; (thirdly), in not sending an intimation in accordance with the Minister's minute in November, 1886; (fourthly), in not sending a beforehand notice in accordance with the practice of the Department; and (fifthly), in granting the application of Lewis & Holtermann for mineral lease of a portion of the land embraced in the mineral conditional purchase application, while refusing the application of M'Neill and party for mineral lease of lands, half of which were indisputably available, and the other half embraced in the mineral conditional purchase application.

That in consequence of these errors of the Mines Department, M'Neill and party have been made seriously to suffer by the loss of a most valuable mining property.

That your Committee are of opinion that M'Neill and party have a clear and distinct claim on all grounds in respect of the 10 acres, forming part of the Quarry Reserve; and also, in respect of the other 10 acres, which, through the blunders and neglect of the Mines Department, and the misleading information given by that Department, M'Neill and party have been wrongly deprived of. And your Committee therefore recommend their claim to the favourable consideration of your Honorable House.

E. W. O'SULLIVAN,
Chairman.

No. 2 Committee Room,
Sydney, 4th July, 1888.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 17 MAY, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan,		Mr. Gale,
Mr. Hawken,		Mr. Garland.

Mr. O'Sullivan called to the Chair.

Entry from Votes and Proceedings appointing the Committee, *read* by the Clerk.

Committee deliberated.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 30 MAY, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Dowel,		Mr. Ryrie,
		Mr. Gale.

Mr. Hugh M'Neill called in, sworn, and examined.

Witness *handed in* plan of Captain's Flat Gold Field. [*Appendix A.*]

Witness withdrew.

Evelyn Stephen, Esq. (*Clerk, Mines Department*), called in, sworn, and examined.Witness *produced* M'Neill and Party's first application for a Mineral Lease at Captain's Flat.

Witness withdrew.

[Adjourned to To-morrow, at *Eleven o'clock.*]

THURSDAY, 31 MAY, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Dowel,		Mr. Garland,
Mr. Gale,		Mr. Ryrie.

Evelyn Stephen, Esq., called in and further examined.

Witness withdrew.

John Huxham Blatchford, Esq., called in, sworn, and examined.

Witness withdrew.

Evelyn Stephen, Esq., recalled and further examined.

Witness withdrew.

[Adjourned to *half-past Two o'clock.*]

2:30 p.m.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Ryrie,		Mr. Gale,
Mr. Garland,		Mr. Walker.

Mr. William Edwards called in, sworn, and examined.

Witness withdrew.

Mr. Hugh M'Neill called in and further examined.

Room cleared.

Committee deliberated.

[Adjourned to Wednesday next, at *half-past Eleven o'clock.*]

WEDNESDAY, 6 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Gale,		Mr. Garland,
Mr. Ryrie,		Mr. Hawken.

Entry from Votes and Proceedings referring the Petition from Hugh M'Neill, William Edwards, and John Huxham Blatchford, *read* by the Clerk.Copies of Petition *referred* before the Committee.Present:—G. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

At

At the request of Mr. Waldron, the Committee directed the Clerk to furnish him with a copy of the evidence as printed.

Evelyn Stephen, Esq., called in and further examined.

Witness withdrew.

William Garland, Esq., called in, sworn, and examined.

Cross-examined by Mr. Waldron.

Witness withdrew.

W. H. Capper, Esq. (*Clerk in charge, Conditional Sales Branch, Lands Department*), called in, sworn, and examined.

Cross-examined by Mr. Waldron.

Room cleared.

Committee deliberated.

[Adjourned to To-morrow, at *half-past One* o'clock.]

THURSDAY, 7 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Ryrie, | Mr. Garland.

Present:—G. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

Mr. Edward Holehan called in, sworn, and examined.

Cross-examined by Mr. Waldron.

Witness withdrew.

Evelyn Stephen, Esq., appeared before the Committee, and requested that several inaccuracies in his printed evidence might be corrected.

Committee directed the Clerk to make corrections as requested.

Room cleared.

Committee deliberated.

Ordered,—That the Under Secretary for Mines, and W. H. J. Snee, Inspector of Mines, be summoned to give evidence next meeting.

[Adjourned to Tuesday next, at *half-past One* o'clock.]

TUESDAY, 12 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Abigail, | Mr. Gale,
Mr. Garland, | Mr. Hawken.

Present:—G. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

W. H. J. Snee, Esq. (*Inspector of Mines*), called in, sworn, and examined.

Witness withdrew.

Evelyn Stephen, Esq., called in and further examined.

Witness *produced* papers respecting applications from W. Garland, Lewis and Holtermann, J. H. Blatchford and Hugh M'Neill and others, for mineral leases at Captain's Flat.

Cross-examined by Mr. Waldron.

Witness withdrew.

[Adjourned to To-morrow, at *half-past One* o'clock.]

WEDNESDAY, 13 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Gale, | Mr. Garland,
Mr. Ryrie.

Present:—J. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

Evelyn Stephen, Esq., called in and further examined.

Witness *handed in* papers respecting applications from William Garland, and Lewis and Holtermann, for mineral leases at Captain's Flat. [*Appendices B 1 and 2.*]

Mr. William Harkness called in, sworn, and examined.

Witness withdrew.

C. L. Garland, Esq., M.L.A. (*a Member of the Committee*), sworn and examined in his place.

Committee deliberated.

[Adjourned to Wednesday next, at *half-past One* o'clock.]

WEDNESDAY, 20 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Ryrie, | Mr. Gale.

Present:—G. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

Mr. Waldron requested the Committee to secure the attendance of C. L. Garland, Esq., M.P., at the next meeting, to be further examined.

Room cleared.

Committee deliberated.

Ordered,—That C. L. Garland, Esq., M.P., be requested to attend to-morrow to be further examined.

[Adjourned to To-morrow, at *One* o'clock.]

THURSDAY,

THURSDAY, 21 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan, | Mr. Hawken.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 27 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Ryrie, | Mr. Garland,
Mr. Abigail.

Present:—G. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

C. L. Garland, Esq., M.L.A. (*a Member of the Committee*), further examined in his place.

Room cleared.

Committee deliberated.

[Adjourned to To-morrow, at Two o'clock.]

THURSDAY, 28 JUNE, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Ryrie, | Mr. Hawken.

Present:—G. C. Waldron, Esq. (*Solicitor*), for M'Neill and party.

Mr. Waldron addressed the Committee and handed in Prospectus of the "Vanderbilt Silver Mining Company [Limited]," Captain's Flat. [*Appendix C.*]

[Adjourned to Wednesday next, at half-past One o'clock.]

WEDNESDAY, 4 JULY, 1888.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Gale, | Mr. Ryrie,
Mr. Garland.

Chairman submitted Draft Report as follows:—

"THE Select Committee of the Legislative Assembly, appointed on the 24th April, 1888,—'with power to send for persons and papers to inquire into and report upon the claims (if any) of Hugh M'Neill and party to compensation for loss sustained through the neglect of the Mining Department to issue them a mineral lease at Captain's Flat,' and to whom was referred on the 6th June, 1888, the 'Petition from Hugh M'Neill, William Edwards, and John Huxham Blatchford,'—have agreed to the following Report:—

"Your Committee find from the evidence (appended hereto) that M'Neill and party took possession and made application for a mineral lease of 20 acres at Captain's Flat, on 9th August, 1884.

"That the evidence given by Mr. Capper, of the Lands Department, and the *Gazette* Proclamation, prove that at the date of application portion (about one-half) of the land applied for was embraced in a reserve, known as the Quarry Reserve, and the other portion (about one-half) was included in a mineral conditional purchase of one Jason Irving.

"That in accordance with a minute of Mr. J. P. Abbott, as Minister for Mines, M'Neill and party were informed, on 6th January, 1885, that their application was refused, the land applied for being a reserve, and that they could take possession and apply afresh under the Further Amendment Act.

"That the application was formally gazetted refused on the 13th January, 1885.

"That in so informing M'Neill and party that the land was a reserve clearly incorrect information was given.

"That the minute of the Minister (Mr. Abbott) undoubtedly implied that an application, made in accordance with the minute, by M'Neill and party, would be granted.

"That in accordance with the Minister's minute M'Neill and party made a fresh application, with all formalities, on 29th January, 1885.

"That for a year and ten months from the date of this second application M'Neill and party held possession of the land, believing that their application would be granted.

"That on the 12th November, 1886, M'Neill and party were informed, 'to their great surprise,' that their application of 29th January, 1885, was refused, the land being unavailable.

"That the evidence of Mr. Stephen, of the Mines Department, and the production of papers in similar cases, show that the application 'should at least' have been granted as to one half of the land upon the Quarry Reserve, which was clearly available for mineral lease at the date of application.

"That the delay in the Mines Department in dealing with the application was 'most extraordinary and wrongful.'

"That as the other half of the land formed portion of a mineral conditional purchase application at the date of application, and an application made by Messrs. Lewis and Holtermann on the 16th February, 1885, for mineral lease of 20 acres of land, also embraced in this mineral conditional purchase application, was granted on the 31st August, 1885, before the lapse or cancellation of the mineral conditional purchase application, M'Neill and party had strong claims to have their application granted as to this half as well.

"That prior to the refusal of their application of 29th January, 1885, the mineral conditional purchase application was refused, but no notice whatever was sent to M'Neill and party either of this fact or that this mineral conditional purchase application clashed as to portion of the land with their mineral lease application.

"That

"That on the refusal of their application of 29th January, 1885, M'Neill and party, according to the practice of the Department, were entitled to a beforehand notice to enable them to take up the land in respect of which their application was refused, and apply afresh.

"That the then Minister for Mines, Mr. J. P. Abbott, in refusing the application, made the following minute:—

"It is recommended that the application be refused, the land not having been available at date of applying, and the applicants be informed that they may reapply."

"That no such notification, in accordance with the Minister's minute, was sent to M'Neill and party.

"That the evidence proves that, on the 12th November, 1886, 'the whole of' the land was available, and therefore the letter of that date, notifying to M'Neill and party that their 'application' had been refused, the land being unavailable, is distinctly wrong and misleading.

"That the 'land' was afterwards granted as a mineral lease to Garland and party, 'and M'Neill and party were not informed till after Garland and party's application had been made either the reason their (M'Neill and party's) application was refused, or that the land was available for mineral lease.'

"That Garland and party were subsequently granted a mineral lease of the said 'land,' and sold it for £7,000 to a syndicate, consisting of seven persons, including some members of Garland and party.

"That the said syndicate shortly afterwards sold the property to a mining company called 'The Vanderbilt,' at a price to the vendors in excess of £30,000.

"That the capital of the Vanderbilt Company is £100,000, and the shares therein have had a market value of at least 25s. each.

"That it is clear, from the evidence, that the Mines Department erred (firstly) in informing M'Neill and party, on 6th January, 1885, that the land applied for was on a reserve, when one-half thereof indisputably was embraced in a mineral conditional purchase application; (secondly) in informing the applicants on 12th November, 1886, that their application was refused, the land not being available, as the evidence shows it was available 'on that date;' (thirdly) in not sending an intimation in accordance with the Minister's minute in November, 1886; (fourthly) in not sending a beforehand notice, in accordance with the practice of the Department; and (fifthly) in granting the application of Lewis & Holtermann for mineral lease of a portion of the land embraced in the mineral conditional purchase application, while refusing the application of M'Neill and party for mineral lease of lands, half of which were indisputably available, and the other half embraced in the mineral conditional purchase application.

"That in consequence of these errors of the Mines Department M'Neill and party have been made seriously to suffer by the loss of a most valuable mining property.

"That your Committee are of opinion that M'Neill and party have a clear and distinct claim on all grounds in respect of the 10 acres forming part of the Quarry Reserve, and also in respect of the other 10 acres, which, through the blunders and neglect of the Mines Department, and the misleading information given by that Department, M'Neill and party have been wrongly deprived of. And your Committee therefore recommend their claim to the favourable consideration of your Honorable House."

Paragraphs 1 to 8 read and *agreed to*.

Paragraph 9 read and considered.

Amendment proposed (*Mr. Gale*), line 25. *Omit* "to their great surprise."

Amendment put and *agreed to*.

Paragraph as amended *agreed to*.

Paragraph 10 read and considered.

Amendment proposed (*Mr. Gale*), line 28. *Omit* "should at least." *Insert* "might."

Amendment put and *agreed to*.

Paragraph as amended *agreed to*.

Paragraph 11 read and considered.

Amendment proposed (*Mr. Gale*), lines 30 and 31. *Omit* "most extraordinary and wrongful."

Insert "excessive and operated to the prejudice of M'Neill and party."

Amendment put and *agreed to*.

Motion (*Mr. Gale*), and Question,—“That paragraph as amended be agreed to”—put.

Committee divided.

Ayes, 2.

Noes, 1.

Mr. Gale,
Mr. Ryrie.

Mr. Garland.

And so it was resolved in the affirmative.

Paragraphs 12 to 16 read and *agreed to*.

Paragraph 17 read and considered.

Amendments proposed (*Mr. Gale*), line 50. *Omit* "the whole of." And line 51, *after* "application" *insert* "of 29th January, 1885."

Amendments put and *agreed to*.

Motion made (*Mr. Gale*), and Question,—“That paragraph as amended be agreed to”—put.

Committee divided.

Ayes, 2.

Noes, 1.

Mr. Gale,
Mr. Ryrie.

Mr. Garland.

And so it was resolved in the affirmative.

Paragraph 18 read and considered.

Amendments proposed (*Mr. Gale*), line 53, *after* "land," *insert* "was then open for application by any party for a period of five months and," and lines 53 to 55, *omit* "and M'Neill and party were not informed till after Garland and party's application had been made, either the reason their (M'Neill and party's) application was refused, or that the land was available for mineral lease."

Amendments put and *agreed to*.

Paragraph, as amended, *agreed to*.

Paragraph 19 read and considered.

Amendment proposed (*Mr. Garland*), line 56, *after* "land" *insert* "upon an application made on the 25th April, 1887, approved on 3rd January, 1888, and issued on 31st January, 1888."

Amendment

Amendment put and *agreed* to.

Paragraph, as amended, *agreed* to.

Paragraphs 20 and 21 read and *agreed* to.

Paragraph 22 read and considered.

Amendment proposed (*Mr. Gale*), line 65, *omit* " on that date."

Amendment put and *agreed* to.

Paragraph, as amended, *agreed* to.

Paragraphs 23 and 24 read and *agreed* to.

Motion made (*Mr. Ryrie*), " That Draft Report as amended be the Report of the Committee."

Amendment proposed (*Mr. Garland*) to *omit* all the words after the word "That," with a view to the insertion instead thereof of the words "in view of there being only a minority of the Committee present, and the Report never having been submitted to the absent majority, it is not desirable to adopt this Report till another meeting is called."

Question,— "That the words proposed to be omitted stand part of the question,"—put.

Committee divided.

Ayes, 2.

Noes, 1.

Mr. Gale,

Mr. Garland.

Mr. Ryrie.

And so it was resolved in the affirmative.

Question then,— "That Draft Report as amended be the Report of the Committee,"—put and *agreed* to.

Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Blatchford, J. H., Esq.	19
Capper, W. H., Esq.	26
Edwards, Mr. W.	21
Garland, C. L., Esq., M.P.	36, 37
Garland, W., Esq.	23
Harkness, Mr. W.	84
Holchan, Mr. E.	27
McNeill, Mr. H.	11, 23
Slee, W. H. J., Esq.	80
Stephen, E., Esq.	15, 18, 21, 23, 32, 34

1. The first part of the text discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes that these records are essential for determining the correct amount of tax liability.

2. The second part of the text explains how to calculate the tax liability based on the recorded transactions. It provides a step-by-step guide to determining the taxable income and the corresponding tax amount.

3. The third part of the text discusses the various deductions and credits that can be claimed to reduce the tax liability. It provides a list of eligible deductions and credits, along with the conditions for claiming them.

4. The fourth part of the text discusses the different methods for paying taxes, including direct payment, payment by check, and payment by credit card. It also provides information on the due dates for tax payments.

5. The fifth part of the text discusses the consequences of failing to pay taxes on time, including penalties and interest charges. It also provides information on how to resolve any disputes or issues related to tax payments.

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

MESSRS. HUGH M'NEILL AND PARTY—MINERAL LEASE
AT CAPTAIN'S FLAT.

WEDNESDAY, 30 MAY, 1888.

Present:—

MR. O'SULLIVAN,
MR. DOWEL,MR. GALE,
MR. RYRIE.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Mr. Hugh M'Neill called in, sworn, and examined:—

1. *Chairman.*] What are you? A miner.
2. Where? On Captain's Flat, district of Queanbeyan.
3. Did you, in August, 1884, mark out in virtue of a mineral license a mineral prospecting claim on Captain's Flat? I did.
4. After prospecting the land for some time did you discover a payable lode of silver and copper ore? Yes, with gold.
5. And on the 20th August, 1884, did you apply for a 20-acre mineral lease, supposing it to be Crown land? I did.
6. Did you afterwards discover that about 10 acres were unoccupied Crown land? Yes, after I took possession of the land.
7. As portion of a proclaimed gold-field? Yes.
8. And what was the remainder of the land? A mineral conditional purchase.
9. Occupied by whom? Jason Irving.
10. Did he abandon it? He never did anything to it.
11. He was not residing on it? He was doing some trifling work on this mineral conditional purchase, but he did not pay the men who were working for him, and they abandoned it.
12. From that time to the present has anyone ever asserted a right to this mineral conditional purchase? No one ever asserted a right to it, but Mr. Garland applied for a lease of it, and got it.
13. Has this mineral conditional purchase been declared void by the Government? Yes.
14. Did you ever receive notice from the Mines Department that your application was refused, as the land applied for was in a reserve? I did.
15. Was it a reserve? It was not. The land was a mineral conditional purchase, not a reserve.
16. What led you to believe it was not a reserve? I could show you the pegs. The man had the land marked and applied for as a mineral conditional purchase.
17. You put in this plan of Captain's Flat as documentary evidence? Yes. [*Vide Appendix A.*]
18. Will you kindly show us on this plan which is your claim? Number 81, mineral lease.
19. That was supposed to be upon the reserve? Yes.
20. But in point of fact the map shows it is not on the reserve? Yes.
21. Was any portion of this reserve cancelled before the map was drawn? I do not think so; it may have been cancelled since.
22. But, in point of fact, when you took up the land according to this map you believed that this was Crown land? Some 10 chains was a part of the gold-field, and the other a mineral conditional purchase, applied for by Jason Irving.

Mr.
H. M'Neill.
30 May, 1888.

- H. M'Neill. 23. Then he had applied for a mineral conditional purchase on the reserve? Yes; on what I was informed was a reserve, but actually Mr. Irving's mineral conditional purchase.
- 30 May, 1888. 24. That was disallowed? Yes.
25. Your application for a mineral lease was outside the reserve? Yes. Part on Crown Lands and part on an abandoned mineral conditional purchase.
26. Can you point out on the map where the lease applied for by Holtermann and Lewis stands? Yes; to the south-west, 20 acres on this mineral conditional purchase.
27. These 20 acres applied for by Holtermann and Lewis were granted? Yes.
28. And their claim adjoins yours, and was found to be on the mineral conditional purchase? Yes.
29. You applied for a mineral lease on a portion of the gold-field marked 81? Yes; a portion of the proclaimed gold-field.
30. That was refused? Yes.
31. Holtermann and Lewis applied for a mineral lease on the portion adjoining you on the gold-fields? On this mineral conditional purchase of Jason Irving's.
32. Holtermann and Lewis applied for the piece of land next to you? Yes.
33. Which is found to be on the gold field's reserve? Yes; only it is right in the heart of this mineral conditional purchase.
34. But the land adjoined you, and by the map is not on the reserve? By the map it is not.
35. This was granted to them? Yes.
36. Although their application was made two years later than yours? Yes.
37. *Mr. Gale.*] Was the land so granted to them of the same character as yours—on a similar reserve? No difference. Both on the same mineral conditional purchase.
38. Do I understand that a portion of land was applied for by you at a certain period, and refused, and subsequently applied for by them—if not the same portion, an area on the same reserve—and granted to them? Yes; I swear positively that this is a part of the mineral conditional purchase; and this is more in the middle of the mineral conditional purchase. This mineral conditional purchase is right in the middle of the mineral conditional purchase, and mine was a part of the portion of the proclaimed gold-field adjoining the private property, portion 3, and partly on the mineral conditional purchase.
39. *Chairman.*] When was the first intimation you received from the Under Secretary for Mines that this land was on a reserve? I got a letter after my application had been in for a long time—some twelve months—previous to Garland applying for the land. The Under Secretary wrote back to tell me that the land was unavailable. He did not tell me that it was on a reserve.*
40. Did he recommend you to make a fresh application? The Under Secretary wrote a letter instructing me how to apply for the land, and the Acts and Regulations I should take it up under.
41. Under the Amending Mining Act, 48 Victoria, No. 10? Yes.
42. And you applied, according to instructions, on the 29th January, 1885? I did.
43. Having thus acted on the advice of the Under Secretary for Mines, did you feel secure of getting the lease? I was quite confident that I would get the lease; by the way I held the land under a mineral license.
44. Did you make any improvements? Yes; I built a house and made a garden. I put between £150 and £200 worth of improvements upon the land.
45. Did you build your house and make your garden on the land you applied for, which is now the subject matter for investigation? Yes.
46. *Mr. Gale.*] And only on the faith of your application? I held a mineral license too, which allowed me to work and hold a mineral lease; but I was too poor. I sent assays to Sydney which went 2½ ounces of gold to the ton; but still, in the face of that, I was afraid the Government might take it from me any day, because they did something of the kind before.
47. *Chairman.*] Was this map charted before you sent in your application? I applied some two years or eighteen months before this map was made.
48. On the 12th November, 1886, after a lapse of two years and three months from the date of the first application, did you receive notice from the Under Secretary for Mines that this second application which he himself had recommended was refused, on the ground that the land was not available on the date of taking possession? Yes, I got a letter to say that.
49. After two years and three months? Yes; he sent me a letter to say that the land was unavailable, and said that I had no reason for complaint.
50. This occurred after you had acted upon the advice of the Under Secretary and made fresh application? Yes.
51. *Mr. Dowel.*] In writing? Yes.
52. *Chairman.*] So that after occupying the land for two years and three months, making valuable improvements, discovering a lode, recently sold for a large sum of money, and applying for it as recommended by the Under Secretary for Mines, you were told that it was unavailable on the date of taking possession? Yes.
53. And do you contend that it was available on the date of taking possession? It was available for me when I first took possession; I had possession for two years and eight months before. I was still in possession of the land, and doing a certain amount of prospecting under a mining license.
54. *Mr. Ryrie.*] Before it was proclaimed a gold-field? No, not before it was proclaimed a gold-field, but this mineral conditional purchase was taken up before it was proclaimed a gold-field.
55. *Mr. Dowel.*] In what year was it proclaimed a gold-field? I am not sure—I think in 1884 we applied to have it proclaimed a gold-field in Queanbeyan.
56. *Chairman.*] What led you to believe that the land was available at the time you first made application for it? There was no one in possession of the land. It is all bare rocks, and I was prospecting about, thinking it a very likely place for minerals, and I discovered this lode.
57. *Mr. Gale.*] At that time it was some one's leasehold area—Mr. Osborne's? It might have been. When I applied for the land the Warden's clerk told me that no one had anything to do with it.
58. *Chairman.*] What further proof have you that the act of the Department led you to believe that this was not a reserve? There was another act of the Department. They could not have known exactly where the land was situated, because they made it a reserve after I applied for it.
59. Did the granting of Holtermann and Lewis's application for 20 acres adjoining, on the south of Jason Irving's mineral conditional purchase, lead you to believe that your land was also a portion of the gold-field?

*NOTE (on revision).—This is an error; he did tell me it was on a reserve.

gold-field? I thought my land was quite secure. I asked Mr. Holtermann to get me this lease granted, and I would try the land. It took two men to do anything in the land; it was very hard and had to be blasted; one man with a hammer could make no headway at all.

H. McNeill.

30 May, 1888.

60. If the land selected by Jason Irving, and afterwards granted to Holtermann and Lewis, was allowed to be open for mineral selection or mineral lease, I suppose you naturally thought the piece adjoining, which you selected, was also available? I made sure that the Government would never think of reserving a piece of land between a private property.

61. *Mr. Gale.*] What was the area? 20 acres. I thought that, having granted Holtermann and Lewis a lease out of the middle of this portion which they said was the reserve, they could not refuse my application, and that I had as good a right as Holtermann.

62. *Chairman.*] As the map shows that the land is not on the quarry reserve, and the Government granted a piece adjoining you to Holtermann and Lewis, there was every indication to show that the land you applied for was open to mineral lease? Yes, every indication. Beyond doubt that is very plain.

63. And you submit that you are still entitled to the land? I still say that the land is mine, because my pegs are in the land to the present time, with the No. 81 and M.L. on them. The Government holds my money for the land applied for. They hold the first year's rent.

64. Do you hold that at least the portion of land outside the measured conditional purchase is yours? I maintain that that was a part or portion of the gold-field which any man could take up.

65. What was the area? 7 chains, from portion No. 3. Jason Irving applied for land to start 7 chains from portion No. 3. Thinking there was going to be a road, he did not want to take up the road. His area was 40 acres. That left 7 chains along portion No. 3, which was a part or portion of the proclaimed gold-field, where anybody could take up a living.

66. What led you to believe that—the mineral lease registration? Under a mineral lease you could take up a prospecting right to hold any land until you found anything payable in it. You need not lease it, provided you complied with the labour conditions.

67. Mineral lease regulation II provides that an application for a mineral lease, which shall comprise the whole or part of the land held under a mineral license, the interest of the applicant shall be in no wise affected by its refusal or abandonment or failure? The Act specifies that distinctly.

68. And you contend that under that provision those 7 chains are indisputably yours? Those 7 chains are my property.

69. Consequently, with all these facts before you, you believe the Government has acted illegally in granting the lease of land held by you under a mineral license to others? It has.

70. *Mr. Gale.*] Is that portion held by Holtermann and Lewis a portion of that you originally applied for? No; mine is adjoining. Mine is between private property and Holtermann's portion.

71. With regard to the question put to you by the Chairman, that certain land granted by the Department to certain persons was illegally granted—if so, would not this grant for which you applied be likewise illegally granted? No; through the land being in my possession.

72. *Chairman.*] There is one point I would like to bring out. What reason have you for splitting this in two, saying that the 7 chains are indisputably yours, and admitting there is a haze of doubt about the other? This land of mine was on Jason Irving's conditional purchase. I saw the man was not fulfilling the labour conditions on it, and I said I would have 20 acres.

73. And you overlapped him? Yes. They would not have granted me 10 acres on mineral lease if I had applied for them.

74. These 7 chains of your area overlapped Jason Irving's? Fourteen chains. The 7 chains were on it. Seven chains were on Jason Irving's mineral conditional purchase, and the other 7 chains are undoubtedly my property.

75. The remaining 7 chains were free and unencumbered Crown lands open to mineral selection? Yes.

76. *Mr. Dowel.*] You could only take that by application for a gold lease. You could not take less than 20 acres? By my applying for 20 acres I was quite sure that if they came to measure it I could have got 20 acres to go further back. I would have to pay the rent and fee for 20 acres.

77. *Chairman.*] Do you still hold a mineral license? Yes.

78. And you continued to do so from the date of application to the present time? Yes.

79. Have you anything further to say, or any document to put in? I have the dates of Lewis and Holtermann's application for the land to prove very clearly that at the time they applied for the land the Department held my application.

80. You produce them to corroborate what you say about the dates? Yes; to show the date of my application applying for this land.

81. What date is that? That is the second application, January 29th, 1885, and signed by three parties, Hugh McNeill, William Edwards, and B. O. Holtermann.

82. Holtermann was in with you in the original application? Yes.

83. He was a sleeping partner, I suppose? No; he was paying the same as I was.

84. What is this other document? That is the same.

85. To show the later application? No; that is the older application.

86. This document is to show what? The first application for a mineral lease at Captain's Flat.

87. Dated August 11, 1884? Yes.

88. *Mr. Dowel.*] This is an application for five people? Yes. I was the principal in the application. That will give the correct dates. On the 9th of August I took possession of the land, and applied for it on the 11th at Queanbeyan.

89. What made you put in a fresh application after this of the 11th August, 1884? The Under Secretary for Mines wrote a letter to me, stating that the land was unavailable.

90. *Mr. Gale.*] And instructing you to apply in another form? In another form for the land, writing the form of application on the letter he sent me.

91. *Mr. Dowel.*] Have you that letter? Yes; I can get it.

92. *Chairman.*] And that you complied with in making the second application? I did.

93. And yet found after all that, though acting under the instructions of the Under Secretary for Mines, your application was disallowed? Yes.

94. While the adjoining piece was granted to Holtermann and Lewis? The piece which I should think in a worse position than mine was granted.

95.

* NOTE (on revision) :—No, only in the second.

- H. M'Neill.
30 May, 1889.
95. *Mr. Ryrie.*] The Government still hold the money you paid? The Government hold my rent for the land, and the survey fee.
96. *Mr. Gale.*] Your contention is that the land granted to Holtermann and party was illegally granted? I am alluding to the land granted to Messrs. William Garland and party being illegal. Garland and party bought out Holtermann and Lewis.
97. *Mr. Dowel.*] Did I not understand you to say that you consider you have a right to this application in consequence of Holtermann and party having theirs granted? Yes.
98. *Mr. Ryrie.*] And that portion has never been cancelled? It has never been cancelled. One portion of this reserve is unavailable for me, but it is available for every one else. Holtermann and Lewis got 20 acres out of the reserve, and yet my application is unavailable.
99. *Mr. Gale.*] Your argument is that if you are not entitled to the land neither are they? Yes.
100. But the fact of their having been granted the land is presumptive evidence that yours should be granted? I cannot understand the answer of the Minister for Mines when the honorable member for Queanbeyan asked the question in the House—as this lease was granted to a party on a reserve, why should not M'Neill get his. He said the land was void.
101. *Chairman.*] You hold that the fact that the Department granted Holtermann and Lewis this piece adjoining is evidence that Holtermann and yourself were not on the reserve, and that it was granted to them without the reserve being cancelled? I could not say in what way B. O. Holtermann got permission; but I do not think he could have got any permit to take up a lease. He must have gone through the same course and complied with the same instructions as I did to get a mineral lease.
102. You swear positively that you complied faithfully with the instructions of the Under Secretary for Mines, and that you found after all that your application was not granted, while an adjoining piece of similar land was granted to Holtermann and Lewis? Yes.
103. *Mr. Ryrie.*] After your application? Yes; I was before them.
104. Was that before any cancellation of any portion of the reserve? Yes, before anything was done. This mineral conditional purchase was void all the time that the man was not legally in possession of the land.
105. Jason Irving? Yes; he did not fulfil the labour conditions.
106. *Mr. Gale.*] Is there anything to show that that reserve, as a reserve has been subsequently cancelled? Nothing that I can see, only by these parties taking possession of the land.
107. You are not aware of any notification? No. I swear positively that the Department gave me no notification. No notice was given me by the Department that Garland was taking possession of that land. This was run through in a day or two. Approved of and granted the day after, I think.
108. *Chairman.*] You now swear that you never received any notification from the Mines Department that you were on a reserve after you had complied with the Under Secretary for Mines instructions? I never did. I got this letter saying that the land was unavailable, and that I had no cause of complaint. It went under some revolution that I did not know of. He said in his letter that the land was lying idle for two months, but I never got notice of the land being available for anyone but myself.
109. Then, without knowing that this land had been declared open for mineral lease, you were fully under the impression that your application would be granted by the Mines Department? I still thought my application was good.
110. And for that reason did not attempt to peg out again? Yes. My pegs are in the ground now; they were put in by the surveyor, Raymond.
111. Do you hold that this neglect on the part of the Mines Department to acquaint you with the fact that your application was void led you into the belief that your application was good, and by that means prevented you from taking the land up when it was open to selection? I thought my application was still good because I never got notice of anything. To prove the fact that my title to the land was good, and a genuine title, the Government after taking this land from me, this 20 acres, sent a surveyor from Sydney to excise nearly 2 acres out of it, where my house and garden stands.
112. As a proof of your *bona fide* application the Department have since granted you 2 acres of this very land in dispute? Yes, very nearly. They have not measured it; but they sent the surveyor to peg me in and see that my rights were protected. After taking the flesh they leave me the bone.
113. *Mr. Ryrie.*] How long is it since Garland took possession of that land? I could not say how long; I do not know whether he ever took possession at all, except by using my pegs. My pegs are the only ones holding the land. They have others; but mine appear to be standing in the ground with the old numbers.
114. *Mr. Dowel.*] When you applied in the first instance for mineral lease S1, who was supposed to be the holder of it? Jason Irving had a portion of it.
115. *Chairman.*] Seven chains of it? Yes.
116. *Mr. Dowel.*] You then, as I understand, made an application for it, believing that they had abandoned it, that they had not complied with the labour conditions, and pegged it out as a prospecting area? Yes, under a mineral license.
117. That is your title to it? Yes.
118. The land was not granted to anyone then? To nobody. It is granted now, but not to me.
119. But at the time it had not been granted to Irving even? No; Irving's was a mineral conditional purchase.
120. *Chairman.*] The first intimation that you got that the land was open for selection was some time after it had been granted to another person? Yes.
121. To whom? Garland and party.
122. And then you were told that the land had been open for two months to the public, and you had not pegged it out? And that I had no reason for complaint.
123. That was the first intimation you received that the land was open to the public? Yes. I thought I had a good claim, and would rest and wait until such time as I could get a title and put men on to work.
124. *Mr. Ryrie.*] Was there any person in authority that ever saw you working or in occupation of that ground? Yes.
- 124½. A Government official? Yes, Mr. Slee. He said to me, "M'Neill, you have a nice bit of silver lode there; stick to it and it will be real good."

Evelyn Stephen, Esq., called in, sworn, and examined:—

125. *Chairman.*] What are you? Clerk in the Department of Mines.
126. In what particular department? The lease branch.
127. Do you produce papers and documents in this case? Yes, I have all the papers here.
128. Do you know the date of M'Neill and party's first application for this land? I produce the application—9th August, 1884.
129. That is the first application for this land? That is the first application. It is by Hugh M'Neill, William Edwards, Thomas Edwards, James Geary, and Edward Polehan.
130. That was refused? This application was refused because the land was situated on a quarry reserve, and at that time reserves were not open to lease. That was why the Act 48 Victoria, No. 10, "The Mining Act Further Amendment Act" was passed to make them available. But when this further amending Act was passed M'Neill and party took up the land again, and in dealing with the second application it was found that it clashed with a conditional purchase so that the land was not available at the time, although that conditional purchase was forfeited afterwards, and M'Neill's application was refused in consequence, in November, 1885. Then the land was open for anyone to take up for about four months. In April, 1886, the land was applied for by William Garland, but from November, 1885, until April, 1886, the land was open for selection.
131. *Mr. Gale.*] It was so open because of the cancellation or the forfeiture of the conditional purchase? Yes, the forfeiture of the conditional purchase and the refusal of M'Neill's application.
132. M'Neill's application was refused because of the conditional purchase? Yes.
133. Then afterwards the conditional purchase became forfeited? The conditional purchase was forfeited prior to the refusal of M'Neill's application. M'Neill's second application was made on the 29th January, 1885. The conditional purchase lapsed on the 27th February, 1886, so that when M'Neill and party applied in 1885 for that land it was really held under this mineral conditional purchase. This mineral conditional purchase lapsed on the 27th February, 1886, but the application was gazetted refused on the 12th November, 1886, and was refused because the land was not available at the date of taking possession.
134. *Mr. Dowel.*] It was held by a mineral conditional purchase? At the date of taking possession, not at the date of refusal.
135. *Chairman.*] But Mr. M'Neill's application covers 7 chains outside of Jason Irving's mineral conditional purchase; why was that 7 chains not granted? Well, the piece coloured blue is the measured portion which they applied for.
136. The total area comes over into Irving's area for 7 chains? Yes.
137. What I want to arrive at is this: Putting out of sight Jason Irving's application as if it never existed, was this land a portion of the quarry reserve, or was it Crown land in the gold-field? Part of it was in the quarry reserve and part it appears was not.
138. Which part was not? This dotted line is the quarry reserve. You ask me why they did not grant that. That would have been less than 20 acres, and we do not grant leases for less than 20 acres unless permission is obtained from the Minister before applying.
139. *Mr. Dowel.*] A special lease? Well, we do not call them special leases. The special leases are gold-leases.
140. *Mr. Ryrie.*] What was the cause of the lapsing of the mineral conditional purchase? Non-fulfilment of various conditions. This mineral conditional purchase was cancelled on the 27th February, 1886, for non-receipt of declarations and non-payment of instalments.
141. Had it virtually lapsed before that notice? No.
142. *Chairman.*] Can you tell us whether this quarry reserve was declared before or after Jason Irving's application for a mineral conditional purchase? The quarry reserve was notified on the 20th September, 1882.
143. What was the area of that reserve. Did it cover the land that Jason Irving's mineral conditional purchase afterwards covered? No; because the reserve boundaries only include unalienated lands.
144. The reserve surrounded the purchase? Yes.
145. Instead of the purchase being taken out of the quarry reserve? I should say the conditional purchase was prior to the quarry reserve.
146. Can you tell us the date of Jason Irving's application for the mineral conditional purchase? No, I could not tell you that; that is a matter for the Lands Department.
147. *Mr. Gale.*] What is the date of the quarry reserve? The 20th September, 1882.
148. Did the quarry reserve ever come up to the river frontage? Only a portion of it.
149. *Chairman.*] It seems to me that there must have been some reason for giving this reserve the extraordinary shape it has? But Jason Irving's was no part of that quarry reserve.
150. Can you tell us this: Was Jason Irving's mineral conditional purchase good. If he had complied with all the conditions would his application have been granted. Was there any other bar to his application beyond what you say there? Nothing that I can see. It is not a matter for our Department to deal with. The Lands Department deals with mineral conditional purchases, and I should not like to make any statement with regard to their action.
151. *Mr. Dowel.*] The ground of refusal, as I understand, was that it was not available as it was on the reserve? Yes.
- [Witness here explained the position of the land on the map.]
152. *Chairman.*] You said just now that if this Jason Irving had complied with all the conditions his application would have been granted? I could not say, because mineral conditional purchases are dealt with in the Lands Department, and I know nothing of them at all.
153. *Mr. Gale.*] The mineral lease could have been granted if there had been no mineral conditional purchase there. The second application of Hugh M'Neill and party could have been granted, because a quarry reserve is open to lease under 48 Victoria No. 10? Yes.
154. And the mineral conditional purchase? I cannot say about the mineral conditional purchase; it is a question for the Lands Department.
155. *Chairman.*] If that mineral conditional purchase had not been there Hugh M'Neill's application would have been granted? Yes, the second one, but as that was there at the time we had to refuse the application, although the mineral conditional purchase had been cleared away prior to the gazetting of the refusal of M'Neill's application.

E. Stephen,
Esq.

30 May, 1888.

E. Stephen, Esq.
30 May, 1888. 156. But how did you come to grant the lease to Holtermann and Lewis, from whom Garland bought? I have not the papers in that case. I suppose they took it up after the cancellation of the conditional purchase.

157. *Mr. Ryrie.*] I think it was taken up before the cancellation of the quarry reserve? You ask me about a case that I have not looked at; but I presume that the date of Holtermann and Lewis's application was after the cancellation of the mineral conditional purchase. The quarry reserve might have been still in force, but that would not matter a bit, because now the Mining Act Further Amendment Act has been passed we can grant mineral leases on reserves. That Act was passed specially for the purpose of throwing open reserves to lease, because there was only one clause in the Mining Act under which we could allow people to mine, that is the 28th section of the Mining Act.

158. *Mr. Dowel.*] It is still in existence now? It is still in existence now, but in order to enable people to get leases, they passed that Act specially.

159. *Chairman.*] Are you aware that Holtermann and Lewis's application was nearly two years after that of M'Neill and party's and was granted when the other was refused? Yes. It was granted, but I don't know the date of their application.

160. Why did you not give notice to M'Neill and party that the conditional purchase had been cancelled? We have nothing to do with the mineral conditional purchases: that is a question for the Lands Department. We refused the application because the land was not available upon date of application, and it is for Mr. M'Neill himself to find out whether there is anything in the Lands Department blocking the lease.

161. Did you detain Hugh M'Neill's money all this time, giving him to understand that the application was good? We do not refund such moneys under any circumstances. If a man's application is refused his money will stay in the Treasury for ever, unless he applies for it.

162. *Mr. Dowel.*] When you found this application overlapped a portion of this mineral conditional purchase, why was not it measured to him in another shape—There was nothing to prevent the Department giving him his 20 acres then? Certainly, if he had pegged it out, but he did not peg it out. He pegged out a certain block, and we gave it according to the pegs. If he put pegs in, not a square, then we should measure according to that position, and then submit to the Minister whether he would grant it. If M'Neill had pegged out his portion like this, it would not have been in accordance with the Act, because a man has to peg out a square. But he might have pegged out and asked the Minister specially to be allowed to have it, and it would be in the power of the Minister to grant it. In a case like this where a square is pegged out the portion is measured in accordance with the applicant's peg. He puts a peg in each corner and the land is measured. If we find that there is something blocking half of it, leaving only 8 or 9 acres, it is not usual to grant that portion as a lease when by refusing the application the whole area is available.

163. Is it a hard and fast rule that a lease is never granted in any other form but a square? If Mr. M'Neill had pegged out that portion to make 20 acres, then it would have been a question for the Minister to decide whether he should have it in that shape.

164. *Chairman.*] Are you aware that the second application of Hugh M'Neill was made under specific instructions from the Under Secretary for Mines himself? Yes; certainly.

165. If that was done, apparently in compliance with the law and the regulations, why was it not granted at once? Because it was discovered afterwards that there was a mineral conditional purchase there. At the time of the refusal of the first application by M'Neill's party it was not known that the mineral conditional purchase was there.

166. And you discovered this between the two applications? No; after the second application was made. The first application was dealt with straight away. Directly they found that it was on a quarry reserve they saw that it was not open to lease, and it was refused on the grounds of not being available because of this reserve. Then, an Act of Parliament having passed to enable us to throw open reserves, we wrote to give notice that they could apply again. When they applied the second time for the land the district surveyor reported the conditional purchase.

167. *Mr. Ryrie.*] Does the Department not often inform applicants that their application is wrong, but that they can take up in such and such a manner? If there had been no other land available than that little portion that was outside the conditional purchase, and was in the reserve, about 10 acres—if there had been no other land available, then a lease of that might have been granted; but there was the whole of the quarry reserve available, and not only that. The conditional purchase at the date of the second application had been cancelled, consequently it was no use granting that small portion, because the whole of the other was available. We could not grant the application, because at the date of possession it was not available, although at the date of the *Gazette* notice it actually was available. It has been decided that when land is not available at date of possession the application must be refused. But the land at the date of the *Gazette* notice of the refusal of M'Neill's second application was open, and if they had pegged out then they could have got the land. It was then open to anyone, and lay idle for three or four months.

168. Were they informed of the refusal? They were informed, certainly.

169. *Chairman.*] They say they never received that notice? The papers will show that they did.

170. Can you produce a copy of any document you posted to them? This is the form:—

Department of Mines, Sydney,

188

No.

I am directed by the Secretary for Mines to inform you that application for the lease has been refused.

noted in the margin, ha

I have the honor to be,

Your most obedient servant,

Under Secretary for Mines.

171. *Mr. Gale.*] Should not the cancellation of the mineral conditional purchase be gazetted? I presume it was gazetted.

172. *Chairman.*] They say that they never received this notice? There is the notation of it, "*Gazette* notice 12-11-86. Applicant and warden informed."

173. *Mr. Ryrie.*] You do not know the date of the *Gazette* notice of the forfeiture of the mineral conditional purchase? The 27th February. Being a Lands matter I cannot tell you whether it was gazetted or not.

E. Stephen,
Esq.

30 May, 1888.

174. *Mr. Gale.*] Garland's application was granted in April, 1886? On the 23rd December, 1887. He applied for it on the 25th April, 1887. M'Neill's application was gazetted refused on the 12th November, 1886. Garland applied on the 25th April, 1887; so that from the 12th November, 1886, to the 25th April, 1887, the land was open to anyone to take it.

175. *Mr. Dowel.*] It distinctly states here that the within application may be refused, the land applied for being reserved, and the applicant can take possession and apply afresh? Yes, and he did so. After that we found that it clashed with another title to land.

176. *Mr. Ryrie.*] But it was virtually lapsed at the time? Not at the time of the second application. If it had lapsed M'Neill's application would have been granted.

177. What was it eventually refused for? The mineral conditional purchase was cancelled on the 27th February, 1886, for non-receipt of declaration as to conditions and non-payment of instalments.

178. And how long after the time allowed by law was it cancelled? I could not tell you that. I know nothing of the conditional purchase excepting the date of its being cancelled.

179. *Chairman.*] Can you draw up a *précis* of the case for us? I have a *précis* by the Under Secretary here, which I will read:—

"The facts of the case are as follow:—'On the 9th August, 1884, M'Neill and party made application to lease this land. This application was refused 13th January, 1885, the land applied for being within a reserve, and the applicants were thereupon informed they could apply again in terms of the Act 48 Vic., No. 10. Accordingly, on the 29th January, 1885, they applied again and in dealing with this application the District Surveyor reported that the application clashed with a mineral conditional purchase. This mineral conditional purchase was cancelled on the 27th February, 1886, for non-receipt of declaration and non-payment of instalments. In consequence of this clash M'Neill and party's second application was refused on the 12th November, 1886, and the applicants were informed of the fact. From the 12th November, 1886, till the 25th April, 1887, no application for land was made and during that period the land was open to the world. On the 25th April, 1887, W. Garland lodged an application for a lease of the land and then it was discovered that the land had been surveyed for a police paddock, consequently action upon this application was delayed. The Lands Department have now stated that the Minister for Lands knows of no objection to the lease being granted, and it has been decided that action upon W. Garland's application may proceed. I do not see that M'Neill and party have any valid grounds of complaint, but I would recommend that before W. Garland's application be further dealt with, the whole of the facts as stated herein be forwarded to M'Neill and party through Mr. O'Sullivan, M.P., and they be invited to say what objection, if any, they have to urge against the granting of the lease to W. Garland.' Submitted.—H. W., 18/11/87.

If the above be a true statement of the facts of this case, I cannot see any reasons for delaying the lease of Garland, and desire that the same may be proceeded with in the usual manner until completed, without further reference to M'Neill and party, who, according to what is here stated, have no rights in connection with this land.—F. A., 19/11/87."

180. *Mr. Gale.*] The application lay in the office from the date of pegging out, or some time immediately thereafter, until the 12th November, 1886, and on the 12th November, 1886, being ten months after the forfeiture of the mineral conditional purchase, M'Neill was told that the application was refused? Yes.

181. *Chairman.*] Then his application was really good? No.

182. Why, if this had been forfeited ten months before? The second application was made before the forfeiture of the mineral conditional purchase.

183. Then for ten months it would have been good if he had pegged it out? It would have been good, certainly if his second application had not been in existence.

184. *Mr. Dowel.*] There is a minute which I find written on this application by the Under Secretary, which says, "The within application may be refused, the land applied for being a reserve"—distinctly stating that it is a reserve—"and the applicant can take possession, and apply for it afresh after the F. A. Amendment Act." They did so, did they not? Yes.

185. That was approved by Mr. Abbott, and M'Neill and party as I understand put in a second application in compliance with this minute of the Minister and the Under Secretary? Yes; but that was no promise to grant the application without reference to any other Department. When we referred to the district surveyor he reported that there was a conditional purchase in force, taken up in 1882.

186. But the Under Secretary says that if the applicant does apply in this form the application will be granted. He points out the reason of the refusal? That was refused because it was on a reserve.

187. *Chairman.*] But then he complied with the information, and in accordance with instructions supplied by the Under Secretary for Mines. Then he got no notification whatever that his second application was no good. He was allowed to remain on the land all this time under the supposition that his application was a *bonâ fide* one. He built a house, cultivated a garden, and then to his great surprise he found that all this time he had no right at all, and the first intimation he got that his application was refused, was by seeing another person on the ground. You say you sent a notice, but he says he never got it. If he was not informed he lost the opportunity of pegging out when he might have made it good? We sent this notice, filled in directly the application was refused.

188. *Mr. Dowel.*] How many months after his application? It was not refused, I think, for eight or ten months.

189. *Chairman.*] In this minute it distinctly states that the only grounds for refusal were that it was on a reserve? Not the only grounds.

190. It does not refer to anything else? There might be something else. Afterwards we found out the conditional purchase on reference to the district surveyor. As far as we knew at that time the reason of the refusal was because it was on a reserve. We dealt with it as quickly as we could, and told him to apply again. On the second application we referred to the district surveyor, and he stops the application because of this conditional purchase of 1882.

191. This objection has been taken by Mr. M'Neill. On a letter stating to the Department that he finds his application is on a reserve, and asking what steps he will take, the Under Secretary writes this minute, stating that he can take possession and apply? Yes; but it does not say that he will grant that application.

E. Stephen, Esq. tion. It would have been granted if there had not been a prior title. It is impossible for the Department of Mines to issue a mineral lease for land which we discover has been granted as a mineral conditional purchase by another Department.

80 May, 1888.

192. It seems to me that all this trouble has arisen from the fact that the Lands Department deal with the mineral conditional purchases, and you deal with mineral leases? Yes.

193. *Mr. Ryrie.*] I thought you said that the only objection to his second application was that he had not pegged out? No; that was in answer to a question asking why the land was not granted by extending the strip of land and giving him 20 acres, but that is never done.

194. But his land was pegged out, and those pegs were never removed, they were always retained there. Then after the mineral conditional purchase was cancelled why should not those pegs be allowed to remain? It has been decided by the Supreme Court, I believe, if not by the Attorney-General, that if the land is not available at date of taking possession the application has to be refused.

195. The pegs were still kept in? Certainly; but he would have to take them up again if he wanted to make the application afresh. Supposing in November, 1886, when this application was gazetted refused he had gone to take possession again, he could never have used those pegs by not touching them. He would have had to go round and actually put those pegs in afresh, and take possession again as if the land had never been taken possession of.

196. *Chairman.*] Have you any copy in your Department of the notice that you sent to M'Neill, stating that his second application had been refused? Only this form of notice, which is just a printed notice filled in and posted in the ordinary way. We have no registered letter or anything, so that we cannot trace it. We have simply to take as evidence that it has been sent this notation on the *Gazette*, which is in my handwriting: "Applicants informed."

197. Did you send the letter yourself, or was it done by a subordinate? No, I did not send the letter myself, but I noted the action on it. I did not write the letter myself.

198. You may have given instructions for it to be done, but can you swear that you sent it, because these men say they never received it? I can only say that to the best of my belief it was done, and I feel sure that the clerk who did it would be willing to swear to it. I note these things and hand them over to him, and he immediately writes them out; it is not put off for any time at all.

199. *Mr. Gale.*] In addition to the printed form of notification, is it not usual to have that refusal likewise gazetted? It was gazetted certainly. It was published in the *Gazette*, so that if he had seen the *Gazette* he would have known it had been refused.

200. *Chairman.*] Do you keep a despatch book in your department? No, not of this sort. We have only the notation.

201. You noted that it had gone, but you have no further proof to offer that it did go, beyond the best of your belief that it was sent by a subordinate? Yes; but I feel sure that the gentleman who writes these notices would be prepared to swear that he sent it. He would be in this position. He would know that every paper in the office that was noted in that way had been sent. There are certain actions on papers, and if I saw my writing on a paper ever so long ago I would know that I had taken certain action afterwards.

THURSDAY, 31 MAY, 1888.

Present.—

MR. O'SULLIVAN,
MR. DOWEL,
MR. GALE,

MR. GARLAND,
MR. RYRIE,
MR. WALKER.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Evelyn Stephen, Esq., called in, sworn, and examined:—

E. Stephen, Esq. 202. *Chairman.*] I understand that you have certain papers which will show the case so far as the Department are concerned? The only paper I have is a copy of the *procès* by Mr. Wood, the Under Secretary, with the decision of the Minister. That you already have. Of course, if the Committee wish any further copies of papers, the Under Secretary will be very happy to supply them.

31 May, 1888.

203. I believe you have a letter from Mr. W. P. Crick, a solicitor, on behalf of M'Neill and party, to the Department? I think not. There is a letter signed by a Mr. Edwards, apparently written in a lawyer's office, with which I can supply you. It is in these terms:—

The Honorable the Minister for Mines, Sydney,—
Sir,

Braidwood, 28 October, 1887.

I desire, on behalf of Hugh M'Neill and myself, to place before you for your consideration the reasons we urge why a lease should be granted to us for the land applied for in the lease referred to in the margin hereof.

In the year 1884 the applicants held mineral licenses, and occupied 20 acres of land (the land described in the application) in accordance with the regulations. A lease was afterwards applied for on August 9th, 1884, and this application was refused on the ground that the land applied for was on quarry reserve 163.

In this I respectfully submit that the Department was in error, as no part of the land applied for was on the said reserve as shown on the official plan containing leases on Captain's Flat.

From this it appears that not only is this land outside the reserve but also about 30 acres additional to the south thereof. In the mean time the Act 48 Vic., No. 10, was passed. A second application was put in, No. 13, dated 29th January, 1885, in accordance with advice received from your department dated 6th January, 1885.

This application was refused on the 12th November, 1886, on the ground that it clashed with a mineral conditional purchase.

On searching it appears that on the 16th February, 1885, a lease of adjoining land was granted to W. J. Lewis. On the plan referred to this lease to Lewis appears to embrace portion of the land supposed to be included in the mineral conditional purchase in the name of Jason Irving, and I cannot see why our application, which was in at the time Lewis' was granted, should be refused, there being no objection to offer to ours that could not with equal force be urged against Lewis'.

Our mineral licenses were taken out regularly and the land occupied.

The Act 48 Vic. No. 10, came into operation on the 19th August, 1884, and it will thus be seen that even if the mineral conditional purchase was a bar to the granting of the whole lease there would be at any rate 7 chains of land to the south of G. Osborne's portion 3 of 79 acres, and I respectfully submit that at the date of each application there were lands to which we were entitled. I urge nothing of the fact of our great expenditure and labour on the land, but submit the bare facts and ask that the Minister will favourably consider this application and cause a lease to be issued.

I have, &c.,

WILLIAM EDWARDS.

204.

204. *Mr. Ryrie.*] I think you said yesterday that the second application was refused on the ground that there were not 20 acres of land left? It was refused because a large portion of it was comprised in a mineral conditional purchase taken up by Irving.

E. Stephen,
Esq.

205. But you said the applicant could not receive the surplus land because it did not amount to 20 acres? Yes.

31 May, 1888.

206. Is that one of the rules of the Department? As a rule where there are less than 20 acres involved the application is refused. It is not always the case.

207. What area was available, supposing it to be the practice of the Department in some cases to allow less than 20 acres to be taken up? If M'Neill had requested the Department to allow a lease to be taken up in respect to a smaller portion, I have no doubt that his application would have been granted. Irving's mineral conditional purchase had lapsed, and consequently the whole area was available. When M'Neill's application was gazetted as refused he had the opportunity of taking the whole portion up. Instead of that he left the matter open for four months, and the land was applied for by Mr. Garland.

208. Supposing the datum peg of the application had been in a reserve would it be possible for the Department to measure the ground, or would a fresh application require to be made embracing the spare ground? Yes.

209. *Chairman.*] Are you aware that any leases for less than 20 acres have been granted without a special application? Yes, I believe that leases have been issued for less than 20 acres. If a man applies for 20 acres and it is found that a small portion of 1 acre or so is not available, instead of the application being refused it can be granted as modified. Where half the portion applied for is concerned, however, no application in a case like this would be granted without application to the Minister. In this particular case the reason why the matter did not come before the Minister was that at the time the whole area was available, that is at the time of the gazetting of the second application. When we discovered that the mineral conditional purchase had lapsed the whole area was available. The application was refused in order that M'Neill or anyone could take up the whole area.

210. *Mr. Garland.*] In any case M'Neill's application with a mineral conditional purchase would have been gazetted as refused, inasmuch as the application was made before the land was cleared? That is the usual practice of the Department.

211. *Mr. Ryrie.*] Where was the datum peg in this case? The datum peg is about 4 chains in a south-easterly direction from the south-western corner of Mr. Osborne's 79 acres. I could not say whether the peg was in or out of the reserve, and I could not answer the question definitely as I am not a draftsman.

212. But according to the tracing and the description the datum peg would be on available ground? At the date of the first application it appears it would have been on a reserve; at the date of the second application the datum peg, judging from the tracing and description, would have been outside Irving's conditional purchase.

213. *Mr. Dowel.*] When M'Neill and party's first application was refused and a minute was made by the Under Secretary and by the Minister that M'Neill could reapply, did he reapply in the form required by the minute? He appears to have done so, but at that time we had no knowledge of the conditional purchase. It appears that the conditional purchase was not surveyed.

214. How long from the time of M'Neill and party's second application did they receive a notification that the second application was refused? M'Neill and party applied on the 29th January, 1885. Their application was gazetted as refused on the 12th November, 1886. It would be about a year and ten months after.

215. On that date the Department gave M'Neill and party notice that the application was refused? Yes.

216. *Chairman.*] You say that M'Neill and party, acting under instructions from the Department, applied in a proper manner? Yes.

217. And that a year and ten months elapsed between the date of their application according to instructions and their information that they could not have the land? Yes. There appears to have been some delay in dealing with the application. There appears to have been some error in regard to the answering of questions. The application was made on the 29th January, and it arrived in the Department of Mines on the 10th April. It was in the hands of the Warden's clerk until that time; but he had no right to keep it more than fourteen days. Then the Under Secretary decided to let the lease go on.

218. *Mr. Dowel.*] Was not that an intimation that the lease should be granted to this man? No; it amounts to saying that at that time there was nothing against it, or that the Department had not discovered anything against it. The matter then went to the chief draftsman, and the draftsman then sent a memo. to the surveyor. On the 21st July I find this memo.:—"Wait return of memo. from the surveyor." The memo. to surveyor is dated 21st December, 1885. He appears to have taken no notice of this memo.; and a reminder was sent on the 29th January, 1886. There seems to have been some need for reference to the surveyor. There was something wrong, requiring an explanation from the surveyor. He was asked two questions as regards the connection of the portions, and this delayed the case for some time.

219. Is one year and ten months an unusual length of time for the Department to decide whether the application for a mineral lease shall be granted or refused? Certainly. I have been looking at the papers, endeavouring to find out the reason for the delay. I find the delay has occurred through the reference to the surveyor and to the warden's clerk.

220. *Mr. Garland.*] Are there not cases in which delays have occurred for as long a period as four years? There are cases where applications have been kept back for, certainly, four years. The mineral conditional purchase cases at Silverton are an instance. The applications for mineral leases clashing with mineral conditional purchases were put by, waiting decision as to the means of dealing with mineral conditional purchases on gold-fields.

John Huxham Blatchford, Esq., called in, sworn, and examined:—

221. *Chairman.*] Where do you reside? At Bell's Creek.

222. What is your employment? I have no particular employment, but I own a few mines.

223. Can you give us any evidence in reference to this matter? I have come here in compliance with a request that I should attend; but I know very little about the case. I could give you evidence with reference to Irving's mineral conditional purchase, because I was in treaty with him for the purchase of it. Irving's application was made on the 13th July, 1882, and the reserve was gazetted on September 20th, 1882. The first refusal which my party got was on the ground that they had selected on a reserve, and it was consequently inaccurate. As Mr. Stephen has told you, 10 acres were available.

J. H.
Blatchford,
Esq.

31 May, 1888.

J. H.
Blatchford,
Esq.
31 May, 1888.

224. Why do you state that the answer of the Department was inaccurate? I have a *Gazette*, and a memo. from the land agent at Queanbeyan, showing that it is so.
225. *Mr. Garland.*] On what date did M'Neill and party apply? The first application was in 1884.
226. But the reserve, you say, was gazetted in September, 1882. The answer of the Department would therefore be correct? They could not make a reserve of a mineral conditional purchase. Ten acres of the application referred to Crown lands, and 10 acres to a mineral conditional purchase. The reserve was to the eastward of this land, and had no connection with it.
227. *Chairman.*] There could have been no reserve so far as a portion of the application was concerned, because it related to a mineral conditional purchase? No.
228. The reserve never covered M'Neill and party's intended lease? No.
229. What reasons have you for making this statement? I have evidence in the shape of a memorandum from the land agent at Queanbeyan, and the *Gazette* notice. The *Gazette* notice shows that the mineral conditional purchase was taken up two months prior to the proclamation of the reserve, and it has already been explained to the Committee that the reserve was made in ignorance of the mineral conditional purchase.
230. If the mineral conditional purchase was taken up prior to the reserve, as shown by the documents, it is evident that the proclamation of the reserve in so far as it related to land covered by the mineral conditional purchase was in error? Yes.
231. The description of the reserve covers the very ground covered by the mineral conditional purchase? Yes.
232. You say that M'Neill and party's claim to the land is good because it was partly Crown land, and partly on a mineral conditional purchase which was afterwards forfeited? Yes. We claim positively in respect to the 10 acres of Crown land. We also say that the Department having granted a lease to Lewis and Holtermann of the balance of the mineral conditional purchase applied for on the 16th February, 1885, a month after our second application; if the land was available for them it was also available for us.
233. What is the date of the *Gazette* to which you have referred? The 27th February, 1886.
234. *Mr. Garland.*] At the time Lewis and Holtermann got their lease what had become of the mining conditional purchase;—had it been refused? It was in precisely the same condition as from the first. I know of this intimately, because I was in treaty with Irving for the purchase of the land. The land was taken up by Irving, a little work was done, and then it was absolutely abandoned. The land was in precisely the same state when Lewis and Holtermann applied for it as when we applied for it, and they applied only a month later. We applied a second time in January, 1885, and Lewis and Holtermann applied on the 16th February, 1885. The reserve at present in existence was in existence then, and it is distinct from the land in question. The reserve, as I have already explained, is to the eastward.
235. Can you give any documentary evidence sustaining the position which you take up with reference to the reserve? I have a memo. from the land agent at Queanbeyan in these words:—"Jason Irving's M.C.P. application No. 82-198, made 13 July, 1882, at Queanbeyan, 40 acres. Under 19 sec. C.L. Act of 1861. Description: County of Murray, parish of Ballalaba, starting at a peg on the east bank of the Molonglo River, about 7 chains south of the south-west corner of portion No. 3; then running east and south, bounded on the west by the Molonglo River."
236. *Chairman.*] Are you aware of any areas of less than 20 acres being granted under mineral lease without special application being made for it? Yes; there are three cases of mine. I cannot give the exact details now; but I applied for three 20-acre blocks at Captain's Flat, which included three or four gold leases which had been gazetted as void. They were gazetted in December, 1884, and I applied for them in June or July, 1885. I applied for mineral leases including these gold leases. When Surveyor Raymond came to measure the land, he pointed out that these leases were included within my pegs. He telegraphed down to the Department to know if the leases were void. I saw the answer; it was in the affirmative, and he included them. The claim was afterwards set up by the late Mr. Holtermann upon technical ground, namely, that the applicants for these gold leases had not been notified that the leases were ready for their acceptance. Thereupon the Mines Department took action, and cut out the gold leases from my mineral leases. Consequently one of my leases amounted only to 11 acres some perches, another to 15 acres some perches, and the third to 17 acres some perches. I made no special application in these cases. I applied for three 20-acre blocks, and I obtained 11, 15, and 17 acres.
237. Have you heard of any other parties having a lesser area granted without a special application? I never knew such a striking instance as that in my own case, but I know that it is a common thing to excise small portions. For instance, I had a lease of 32 acres; two portions were excised; one of them was the residence of a miner; that was excised at my suggestion.
238. *Mr. Garland.*] It is not usual for the applicant to state his willingness to accept a less area than applied for? Yes; if he is certain that the other persons have a right to the land.
239. *Chairman.*] You consider that as the Department reduced the area granted to you in the three instances which you have named, without your special application, it was also their duty to do the same thing for M'Neill? Yes. Instead of notifying us that there were only 10 acres available, they gave an answer in general terms that the land was not available at date of application. If they had said that there were only 10 acres available we could have applied.
240. *Mr. Dowell.*] As a rule 10-acre leases are not applied for unless specially? I know that we cannot apply for less than 20 acres as a rule; but it is in the power of the Department to grant less than that area.
241. *Mr. Gale.*] Did the Department in the three instances you have mentioned intimate to you that 20 acres were not available? I am not sure.
242. You have had considerable experience in mining matters? Thirty-four years.
243. Your experience has caused you to make a study of the mining laws? I was a private gold commissioner for seven years. I had charge of all Major's Creek, the property of Messrs. Hassall and Roberts.
244. With your experience and knowledge of the mining law do you consider that M'Neill was entitled to these 10 acres of land under the circumstances narrated? I feel sure that he was entitled to it on the ground of his holding a mineral license. A clause in the Act says that an application for a lease shall not be affected by its refusal, abandonment, or failure, if the land was previously held under a mineral license as a mineral prospecting area.
245. *Mr. Garland.*] Is it not the law that the holder of a mineral license should work from day to day upon the land? Yes.

246. Do you know, as a fact, that McNeill has worked this land from day to day? I do not know. I know that he has worked it for a long time. I saw him working it myself. He built a house upon the land, and I know that he has lived upon it, and that he is living upon it now.

247. Is he not living on an area held under a miners right? He did not hold a miners right as far as I know. He had a mineral license. He took up this land on his mineral license, and built a house upon it, and he has lived there ever since.

248. *Mr. Dowel.*] He pegged out land as a prospecting area on his mineral license? Yes; and after finding gold he applied for it as a mineral lease.

249. *Chairman.*] While he was under the impression that his application was good and that the lease was likely to be granted, did he start work and make improvements upon the land? I do not know that. I saw him working off and on for a long time. He told me that he was quite sure of getting the lease, because he had acted upon the suggestion of the Under Secretary for Mines.

250. From your knowledge of the Mining law and your experience, are you aware that it is absolutely necessary for the Department of Mines to send a notification to an applicant when his application has been refused? I know that it is a matter of courtesy only. If a man has any equitable claim they give him an early intimation of it, so that he can have an opportunity of repegging immediately after the notification is gazetted.

251. Supposing you had been in McNeill's position and had made an application according to instructions from the Under Secretary for Mines, carrying out those instructions to the letter, and you had been led to believe that your application was good, and had not received a notice that it was not good, would you remain under the impression that your lease was likely to be granted? I should have relied implicitly on any advice given me by the Under Secretary for Mines under the circumstances.

252. Whenever there is an assumed equitable claim or notice beforehand of the gazettal or the refusal of the application, is it the custom of the Department to give notice without special application? I think it is the rule of the Department to assist those whom they think have an equitable claim to the land. These persons generally get a notice in advance of the gazettal.

253. Whenever there is an equitable claim to the land, the Mining Department is in the habit of giving persons a prior notice to be first in the ground to repeg and reapply for it? Yes.

254. Do you consider that McNeill and party had an equitable claim to this land? Certainly.

255. Do you not think the Department should have given them prior notice to repeg or reapply? Yes; I never knew a stronger case for it.

256. You think that the failure of the Department to do so was a neglect of duty? It was a neglect of the usual courtesy.

257. It was a departure from their usage? Yes; as far as I know it.

258. *Mr. Ryrie.*] Is it not the case that Irving's mineral conditional purchase was taken up on the 13th July, 1882? Yes.

259. And that the reserve was gazetted, including Irving's mineral conditional purchase, on the 20th September, 1882? I do not know positively that it includes Irving's mineral conditional purchase, but the reserve was gazetted on that date.

Evelyn Stephen, Esq., recalled and further examined:—

260. *Mr. Garland.*] It is the custom of the Department to give a prior notice to anyone interested in an application for land that the land will be cancelled on a certain date, unless special application is made to the Minister for prior notice, and unless such reasons exist why such prior notice should not be given? Yes; that is, if it appears from the papers that the applicant is entitled to the land.

261. In the event of the purchase of a gold lease and the parties who purchased finding that through the non-fulfilment of labour conditions on the part of the previous holders it has gone on for cancellation, is it the custom of the Department then to give a prior notice to the purchasers? No; not unless they can place before the Minister sufficient evidence to show that they clearly own the land, and that they are not responsible for the non-fulfilment of the labour conditions.

262. It is a rule of the Department that when an application is made for a mineral lease it shall be a square block of 20 acres? Yes.

263. Is that ever departed from? In any number of cases; but is submitted to the Minister for approval.

264. Was there any difficulty in the way of McNeill taking up his 20 acres in another form? We do not measure any land outside the outermost pegs at any time. If he does not peg it out square we measure it in the form according to his pegs, and then it is submitted to the Minister to approve or not of the form in which the land is pegged out. In no cases is land granted which is not included within the applicant's pegs.

265. As a matter of fact, had McNeill pegged out a double square as it were, that is to say, a long strip of land containing 20 acres, it would have been within the regulations of the Department? It would have been in all probability granted. It would have been submitted to the Minister to decide whether he would approve of that form of measurement.

266. Is the land at the rear of the 10 acres refused to McNeill still open to mineral lease? I could not say whether the land is occupied or not.

Mr. William Edwards called in, sworn, and examined:—

267. *Chairman.*] What are you? I am an hotel-keeper at Braidwood.

268. In what way are you connected with Hugh McNeill and party? I am a shareholder. I hold a mineral license, and I was a partner with McNeill.

269. Do you supply any money to work the claim? Yes; I have found the money to take the land up.

270. How much money has been expended there altogether? I could not very well say.

271. Can you give us an estimate as nearly as possible? I know that the land has cost me alone £100.

272. How long did McNeill work the land? I could not say.

273. How long do you think? I was only there now and again.

J. H.
Blatchford,
Esq.

31 May, 1888.

E. Stephen,
Esq.

31 May, 1888.

Mr. W.
Edwards.

31 May, 1888.

- Mr. W. Edwards.
31 May, 1888.
274. *Mr. Garland.*] You do not claim that £100 has been expended upon the land? No.
275. The expenses to which you have been put directly and indirectly amount to £100? Yes.
276. *Mr. Gale.*] That sum has been advanced by you in the direct interest of the claim? Yes.
277. *Chairman.*] When you took up the land as a mineral license did you take it up with the *bonâ fide* object of working it as a mineral claim? Yes.
278. And you made application in the usual way? Yes; M'Neill made the application for the party.
279. Do you remember what was the first answer you received from the Government? The first answer I received was that the land was unavailable. Then M'Neill wrote to the Department asking for instructions as to how to proceed.
280. You were not working on the claim yourself? No.
281. You were living at Braidwood, and supplying funds to work the claim? Yes.
282. How far from Captain's Flat is Braidwood? About 26 miles.
283. What was the letter you received from the Department on the 7th February, 1887? It is in these terms:—"Department of Mines, Sydney, 7 February, 1887. Sir,—Referring to your letter of the 28th ultimo, in which you direct attention to the refusal of mineral lease application No. 13, Queanbeyan, by H. M'Neill and others, I have the honor to inform you that the application was refused, as the land was not available to lease. I have the honor to be, sir, your most obedient servant,—HARRIE WOOD, Under Secretary."
284. Have you any other letter from the Department? Yes; I have a letter dated the 6th July, 1887. It is in these words, "Department of Mines, Sydney, 6th July, 1887. Sir,—Referring to your letter of the 11th ultimo in which (at the request of Messrs. McNeill, Edwards, and others, residents of Captain's Flat) you bring under notice the fact that mineral lease application, numbered 84-12, at Queanbeyan, by them has been granted to Messrs. Garland and others, I am directed by the Secretary for Mines to inform you that application 84-12 at Queanbeyan, by McNeill and party, dated 9th August, 1884, was refused on the 13th January, 1885, as it was for land on a reserve which, at that date, was not open to lease. The applicants were informed on the 6th January, 1885, that they may again apply under the Mining Act Further Amendment Act, 48th Victoria, No. 10. M'Neill and party again applied for the same land under application No. 13, dated 29th January, 1885; the District Surveyor reported that the application clashed with a conditional purchase forfeited 27th February, 1886. This application was refused on the 12th November, 1886, the land being unavailable at the date of taking possession of it. Mr. Garland applied for the same land on the 25th April this year. It will thus be seen that Messrs. M'Neill and party have no cause for complaint—the land was open for anyone to take possession of, from the 12th November, 1886, to the 25th April last, when it was applied for by Mr. Garland. Messrs. M'Neill and party never had any title to the land, except through their applications, which were refused, the land being unavailable at the dates of taking possession of it. I have the honor to be, sir, your most obedient servant,—HARRIE WOOD, Under Secretary."
285. Do you remember M'Neill receiving a letter from the Mining Department instructing him to make out a fresh application? Yes.
286. That fresh application under instruction from the Mining Department was made out? Yes.
287. You believed all the time that the application was good? Yes.
288. Were you not led to believe that in consequence of the action of the Department in not notifying you to the contrary? Certainly. We got no notice whatever.
289. And you went on working the claim as if you really were in occupation by law? Yes. I thought we should get the land.
290. *Mr. Walker.*] Who applied? M'Neill applied for the party.
291. *Mr. Garland.*] After the land was gazetted as refused, notice was sent to you from the Department; why did you not act upon that notice? I did not receive any such notice.
292. *Chairman.*] You are one of the parties, and you swear that you did not receive such a notice? No; I did not receive any notice.
293. *Mr. Garland.*] You state that you were paying M'Neill to work the land. Are you aware that no work was being done on it? A little prospecting was being done. I was paying M'Neill to look after the land. I was not there myself.
294. You could not say whether M'Neill was at work? I saw him at work myself.
295. *Chairman.*] Do you swear that you saw M'Neill doing *bonâ fide* work? I not only saw him prospecting, but on one occasion I assisted him myself.
296. *Mr. Walker.*] I suppose prospecting is about the most work that has been done; you have sunk no shaft? No.
297. When Holehan and Garland applied for the land as a lease, was M'Neill living on it? Yes.
298. Did he not see the men at work? I could not say.
299. Did you say that he was living on the ground at the time? Yes.
300. Then I think he must necessarily have seen men at work? I dare say he did; I could not be positive. I heard him say that he had given the men notice not to work upon the land.
301. *Mr. Garland.*] That he had given notice to whom? To Holehan and Garland; I heard him say that he had done so.
302. Why did not M'Neill object to the granting of the lease? I could not say.
303. How many parties were there? In the first application there were five or six of us, but some dropped out, and in the second application there were M'Neill, the late B. O. Holtermann, and myself.
304. Can you state whether Holehan was in the first application? Yes; but not in the second.
305. Holtermann was in the second? Yes.
306. You know that the police authorities spoke at one time about having the land as a police paddock? I am not aware of it; they did not ask me.
307. Did they not ask you whether you would have any objection to their having the land for a police paddock? The application was not made to me, or to anyone else to my knowledge.
308. They did not speak to you on the subject? No.
309. *Mr. Walker.*] None of those who applied for the lease notified that that had been done? No.

Mr. Hugh M'Neill recalled and further examined:—

310. *Chairman.*] Did you ever warn Garland and party not to work upon the land which you claimed? I told them that the land was mine.
311. Did you ever object to their mining on the land they had pegged out? I told Holehan that the land was mine. He said that he would see that I did not get a lease of the land.
312. You gave this intimation to them as a protest against their going on the land? Yes.
313. *Mr. Garland.*] Yet you never objected to the issue of a lease, although the notice was put up and the pegs were put in within the prescribed time? The pegs in the ground at the present time show the portion as measured for me. I did not think that you or your agents were putting in any pegs.
314. Notices were put up in the ordinary way? I am not aware that that is so.
315. Yet you were living on the ground? I had to work. I had too much to do to be looking about after Garland and Holehan.
316. You say that you did not lodge a protest with the Department against them? No; but our solicitor, Mr. Crick, did.
317. Did you lodge a protest with them verbally? Yes.
318. *Chairman.*] After you had had a mining lease secured would you have considered yourself bound to lodge a protest with the Mining Department in order to drive men off your lease? I put in an application for the land, and the Department held my money for it. I did not think there was need for me to do anything of the kind.
319. Can you tell the Committee what kind of work was done upon the land? I can.
320. Did you sink any shafts? I cut trenches, and got the ore on the surface. I was working there when the Inspector of Mines, Mr. Slec, came to Captain's Flat, and he saw me at work.
321. Did Mr. Slec make any comment upon your position there? He did. I washed a dish of stuff while he was there, and gave him some of the gold out of the dish to bring to Sydney.
322. *Mr. Garland.*] Was not Holehan then your partner in the concern? Not at that time. He was my partner in the first application.
323. I believe Holehan first discovered the outcrop when the gold was found? No; I discovered the gold.
324. What comment did Mr. Slec make about your find? He said I had a valuable property in a silver lode, pointing to the rocks close to where the gold was got, and he advised me to stick to it.
325. *Chairman.*] Mr. Slec is the Inspector of diamond drills, I believe? Yes.
326. And I believe that he is considered an expert in mining matters? Yes; I believe so.

Mr. Hugh
M'Neill.
31 May, 1888.

WEDNESDAY, 6 JUNE, 1888.

Present:—

MR. O'SULLIVAN,
MR. GALE,

MR. GARLAND,
MR. HAWKEN,

MR. RYRIE.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

G. C. Waldron, Esq., Solicitor, appeared on behalf of Messrs. M'Neill & Party.

Evelyn Stephen, Esq., called in and further examined:—

327. *Chairman.*] We requested you at the last meeting to produce a document? Yes, I have it with me. I will read it and hand it in. It is as follows:—

E. Stephen,
Esq.
6 June, 1888.

Application No. 12, Queenbeyan.

The within application may be refused, the land applied for being a reserve and the applicants can take possession and apply afresh under the Further Amendment Act.

H.W., 11/12/84.

Submitted. Approved.—J. P. Abbott, 12/12/84. Gazette notice, 13/1/85. Applicants informed, 6/1/85.

William Garland, Esq., called in, sworn, and examined:—

328. *Chairman.*] What are you? A miner.
329. Residing where? In Sydney at present.
330. *Mr. Garland.*] How long is it since you first went to Captain's Flat? Two years this last May.
331. You then went to look after some purchases which I and others made in the Holtermann estate mining leases? Yes.
332. When did you first become acquainted with the land which is the subject of dispute, and which is now known as the Vanderbilt mine? Shortly after I went there, as I was offered an interest in the adjoining land if I would approve of it.
333. Mr. Holehan and you were prospecting in that part of the country for some considerable time? For a considerable time before last Christmas twelve months.
334. Previous to your applying for the ground Mr. Holehan told you that he had in prospecting found a silver lode? No; gold.
335. He asked you if you would join him in taking up the ground? Yes; if I approved of it.
336. You were there when Holehan did some prospecting on the ground, and you were so satisfied with the results that you made an application in your own name for it? Yes, for 20 acres.
337. You then wrote to myself and Mr. Forsythe to ask us whether we, with a half interest in the ground, would contribute half-wages to yourself and Holehan to develop it? Yes.
338. What amount of work had been done on the ground when you took it up? On the crown of the hill there were two small holes put down, which Holehan claimed to have done.
339. What would the whole amount represent? About two days work for one man.

W. Garland,
Esq.
6 June, 1888.

- W. Garland, Esq.
6 June, 1888.
340. On the whole ground? Yes. One of the holes is about 2 feet deep by 4 or 5 feet wide.
341. You have traversed the whole of the ground? I have been over every foot of it.
342. And you can swear positively that there is not more than two days' honest work done on the ground? Yes.*
343. And that Holehan claimed to have done it? Yes.
344. Did you notice whether the ground was of such a character that such work could be done without much labour? I should not like to pay a man more than two days' wages to get the work done for myself.
345. On taking possession and pegging out the ground, you and Holehan went to work in a systematic manner to develop it? Yes; the day I pegged it out and applied for it we started work. I think it was on the 25th of April, 1887.
346. You worked it continuously from that date? Continuously, until we sold out.
347. What shafts did you sink upon it? We sunk one 35 feet and another 62 feet. We drove about 90 feet below that; 30 feet one way, and 60 feet another.
348. Did you do any driving in the top shaft? Yes; we drove about 10 feet and sunk a monkey shaft in it about 8 feet down.
349. Did you do any trenching on the surface? Yes; we did trenching before we found the lode.
350. The lode had not been opened out in any way before you opened it out? The silver lode had not been touched by any one. We had to clear the bush away before we could find it.
351. What lode had been opened out? A small gold lode, about 6 or 7 inches wide.
352. That was all that was opened out on the ground? Yes; and that is what Holehan claimed to have opened when he first found the gold.
353. Mr. McNeill has said in his evidence that Mr. Snee saw him working the land, and told him that he had a valuable silver lode;—what could he have referred to? He must have taken Mr. Snee up and shown him the small gold lode. He lived on the ground.
354. When you pegged out the ground did M'Neill offer any objections? None whatever.
355. M'Neill must have seen your notice? Yes; he would have to pass it about four times a day to go to his work. It was posted in the post-office and in the Warden's office.
356. What was M'Neill doing at this time? He was working in the Koh-i-noor on wages.
357. During the time you were on the field did you ever know M'Neill to do any prospecting? None whatever.
358. He was working on wages all the time? Yes; either at mining or ring-barking, or something of the kind. Finally he was working on wages in the Koh-i-noor mine.
359. During the whole of the time you were on the field did he do any work on this 20 acres? I never saw him doing any, except cutting firewood for his house outside of his mining tenement.
360. Did M'Neill at any time speak to you or your mate, and claim to own this mine? No. He has spoken to me as he passed, going to and from his work. He has asked us at times how we were getting on at the shaft; that is the only question I remember his putting in connection with the lease.
361. He never made any complaint or offered any objection to your being there? No; I never heard of any complaint being made until I saw in the *Braidwood Despatch* a notice of questions which Mr. O'Sullivan had asked in the House in connection with the lease. That was the first I heard of it.
362. That was some considerable time after you had developed the line? Yes, some months afterwards.
363. As a matter of fact, neither directly or indirectly did Mr. M'Neill in any way object to your occupying or developing this ground, although he was living on the spot? No, he did not.
364. The only objection you heard in reference to your securing the lease was from the questions asked by Mr. O'Sullivan in the House? Yes.
365. You are aware that the police authorities at one time had an idea of utilizing this piece of land as a police paddock. Did they ever inform you that they had asked Edwards whether he had any objection to their having the land for which he had applied as a police paddock? The question was asked when I was in the shaft, but it was not put to me.
366. Was the remark made to Holehan or to you? Holehan was informed that they had inquired about the matter.
367. What transpired with regard to the sale of this property; of what did it consist? There were nine gold leases and five mineral leases.
368. Was there anything else with it? A 10-head stamper, battery and engine, and everything complete.
369. What was the cost of constructing the battery? It was said to have cost £3,000.
370. I believe there was also a water right to the Molonglo River, and a water race about a mile long? Yes.
371. The whole of this property after you had developed it and had discovered a valuable silver lode, and had stacked about 200 tons of rich silver ore, realized how much? £9,000 net.
372. *Chairman.*] You are aware that it is the practice of cute miners after they had made a discovery to cover it up? Yes, usually.
373. Might not that course have been pursued in regard to the lease you have spoken of? It could not have been in respect of this land. I know every inch of it, and I could see where it had been developed.
374. Could you not walk over the whole of the ground without finding any plants? I do not think there could have been any on the line of lode.
375. *Mr. Hawkin.*] As a matter of fact you saw nothing of the kind? No.
376. *Chairman.*] But such a thing may have been there, although you did not see it? Yes.
377. Holehan told you that he had dug the holes you have referred to? Yes.
378. Are you aware that Holehan was formerly a partner of M'Neill's? Yes.
379. May he not have dug the holes when he was with M'Neill's party? No; the party was broken up when he prospected the ground.
380. Did he work with M'Neill when he first went on to the Vanderbilt hole? No.
381. Was he not one of the parties who applied for the lease? Yes.
382. Did he not work with M'Neill at that time? Very likely.
383. Might he not have been working at Edwards' expense in the original party when he made these holes? He claims never to have worked at Edwards' expense.
384. So far as you know he did not? So far as I know he did not. 385.

*NOTE (on revision).—Of course this statement refers to work done on the lodes only, and does not take into account a couple of alluvial holes sunk by Holehan, about 8 chains to the east of the lodes.

385. Was there no work at all there that M'Neill could have claimed to have been done before you went on to the ground? The only work that was done when I went on to the ground was that which I have already referred to. There was about two days' work for one man. It would be very hard to cover any holes such as you refer to, because the ground is all rock.
386. You said just now that the battery was constructed at a cost of £3,000? I was told that that was the cost; that is what it cost Mr. Holtermann.
387. Carriage and labour were higher then? Labour was no higher, though carriage may have been a little higher.
388. You did not give anything like £3,000 for it? No.
389. Have you any objection to state what you did give for it? I am not one of the purchasers.
390. Did you ever hear what the price given for it was? Yes.
391. Will you state the amount? £500.
392. You say that the fourteen leases, with the battery thrown in, fetched only £9,000? Yes.
393. Are you aware that one of the leases was floated for £100,000? Yes.
394. *Mr. Garland.*] Nominal capital? Yes. They floated 100,000 shares.
395. *Chairman.*] Is not a large proportion of the value of 100,000 shares given to them by what is now called the Vanderbilt? Yes.
396. The value of that land alone, quite apart from the battery and the other leases, would be £40,000 or £50,000? Not at the present time.
397. What do you suppose would be the value of the Vanderbilt lead at an ordinary time? I do not believe it is worth more than £20,000.
398. Supposing you were purchasing the lead owned by M'Neill what would be the marketable value? We sold it for £7,000.
399. Supposing it were put upon the open market, what do you think would be the real value under competition? We thought ourselves lucky to get what we did for it.
400. What would you put down the whole thing at now? I would not be one of the parties to purchase at £7,000.
401. Supposing you floated M'Neill and party's lease into a company, what would you consider a fair return for your labour and good fortune in finding the lode, and your efforts to develop it? If I got £2,000 for a fourth share in the lease I should think myself well paid.
402. *Mr. Garland.*] As a matter of fact you were satisfied with what you got? Yes.
403. What is your opinion of Captain's Flat as a mining centre? Outside of the Vanderbilt I would not give a great deal for any property, that is so far as it is developed at present.
404. I believe the Vanderbilt mine is likely to turn out a very valuable property? Yes.
405. It might be worth half a million yet? Yes.
406. And M'Neill and party have lost the chance of getting that mine then? Yes, I suppose so.
407. At the time you made application for the land had you any information showing you whether it was available or not? I knew that it had been refused to M'Neill because that had been some months before I took it up; I wrote down and found it was available for lease, and I leased it in the ordinary course.
408. As a matter of fact, when you leased the land you found that it had been available for five months? Yes.
409. Had you known before prospecting it that the land was rich in silver you would have taken possession of it before? Yes.
410. *Mr. Hawken.*] You say you are aware that the lease had been refused to M'Neill and party? I saw it through the *Gazette*.
411. *Mr. Rylie.*] You say that no objection was raised by M'Neill when you took possession. Did you see his pegs upon the ground? I saw the surveyor's pegs, because I accepted the survey of it.
412. Did you not see M'Neill's pegs? No.
413. You have not seen them at all? No.
414. *Chairman.*] Did you ever come across any datum pegs? No. The only pegs I saw were surveyors' pegs.
415. You have also said that after pegging out, you and Holehan worked the land continuously. Up to what date did you work it continuously? Up to the 26th November, 1887.
416. *Mr. Gale.*] You say you never knew M'Neill to do any prospecting? Yes; that is what I said.
417. But you came upon the hole and took up the lease subsequent to his residence on the spot? Yes. He had a quarter of an acre on this lease. That was taken up before we made application for the lease at all.
418. Are you not aware from rumour that M'Neill was the original prospector, and the means of developing whatever there is at Captain's Flat? I know that M'Neill's name on the field was never mentioned in connection with the prosperity of the Vanderbilt mine. Holehan's name has been mentioned though.
419. Do you say that you are not aware that M'Neill was the original prospector at Captain's Flat? He was one of them.
420. *Chairman.*] You went there two years after he had prospected? I went there in April, 1886.
421. That was two years after M'Neill and party were said to have prospected this land? Yes.
422. Therefore it was impossible for you to see them prospecting? Yes.
423. *Mr. Waldron.*] Did you mention in your evidence that anyone was in possession of the land? No.
424. And yet you saw M'Neill's house upon a portion of it? Yes.
425. Did you give any special notice to him? No.
426. M'Neill's portion of it was only a mining tenement? He had taken it up as a mining tenement, and that cannot be objected to when you take up a lease.
427. Did you know that he held a mineral license? I did not.
428. He never told you so? No; I am certain that he did not, at the time I took up the ground, hold a miner's right.
429. Then how did he come to have this quarter of an acre? Like a great many other men there, he was in possession.
430. *Mr. Gale.*] Was he not residing on a mineral conditional purchase application? No; it was a mineral lease application.

W. Garland,
Esq.
6 June, 1888.

William Henry Capper, Esq., called in, sworn, and examined:—

W. H.
Capper, Esq.
7 June, 1888.

431. *Chairman.*] What is your position? I am clerk-in-charge of the Conditional Sales Branch of the Lands Department.
432. Can you tell us the date of the application for the mineral conditional purchase of Jason Irving? 13th July, 1882.
433. I believe that Irving never fulfilled certain conditions? No; he did not at the end of the three years lodge the necessary declaration and pay the usual instalments.
434. And the mineral conditional purchase was forfeited? Yes.
435. Then the land became open to the public? Yes; that I cannot say. It may have been notified as a reserve.
436. Could it have been notified as a reserve while it was a mineral conditional purchase? No.
437. Until the land was forfeited it could not possibly have been a portion of the quarry reserve? No; provided Jason Irving's title was good.
438. And there are indications that the title of Jason Irving was good up to the time he failed to fulfil certain conditions? Yes.
439. During the times the conditions were fulfilled the quarry reserve should not have been declared over the mineral conditional purchase? No.
440. Can you produce any document relating to the quarry reserve? Yes.
441. What is the date of proclamation? The 20th September, 1882.
442. That is subsequent to the application of Jason Irving for a mineral conditional purchase? Yes.
443. Two months later? Yes.
444. Can you give us the boundaries of this quarry reserve? Yes. They are contained in a *Gazette* notice in these terms:—

Department of Lands, Sydney, 20th September, 1882.

RESERVE FROM SALE FOR QUARRY.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified that in pursuance of the provisions of the 4th section of the Crown Lands Alienation Act of 1861, the land specified in the schedule appended hereto shall be reserved from sale for quarry.

JOHN ROBERTSON.

No. 163. County of Murray, parish of Ballallaba, at Captain's Flat, area, about 140 acres. The Crown lands within the following boundaries: Commencing on the right bank of the Molonglo River, at the south-west corner of portion 3 (John Hosking's 79 acres), and bounded thence on the north by the south boundary of that portion east to its south-east corner; thence on the east by a line south 40 chains; thence on the south by a line bearing west to the right bank of the aforesaid river; and thence on the west by that river downwards to the point of commencement.

445. These boundaries include the land given to Jason Irving as a mineral conditional purchase? That I cannot say; but suppose it does include Jason Irving's selection it would not affect the validity of the purchase, provided he had fulfilled the conditions.
446. But, as a matter of fact, the mineral conditional purchase would affect the validity of that part of the reserve? Yes.
447. You could not well declare a reserve over a mineral conditional purchase? Not while it stood good.
448. Yet the proclamation has done so? No, it has not. The proclamation refers to Crown lands only; the mineral conditional purchase was not Crown land.
449. Assuming that Jason Irving's mineral conditional purchase became forfeited would not the whole of it revert to the quarry reserve—would it be Crown land, and be subject to a fresh proclamation? I think it would require a fresh proclamation. The case of *Edolls v. Terle* to some extent governs this.
450. If the Department wrote to the applicant for a mineral lease, whose land was on this mineral conditional purchase, and told him that it could not be granted because the land was on a reserve, that would be an incorrect answer? I do not know that I quite follow your question, but so far as I understand it if what you say were done it would seem to be an error. I am an officer of the Lands Department, and am supposed to know nothing about mineral leases.
451. *Mr. Waldron.*] Is there anything in the papers to show that this application of Joseph Irving's might not have been granted? It was granted as far as the Department were concerned. It rested with Irving to fulfil the conditions.
452. The application was regular? Yes.
453. Is it not the practice of the Department to chart these applications on a map within a short time after they are made? They are not charted as a rule until they are measured.
454. What would be the average time? There is no limit.
455. Would it be within three years? No; it might never take place.
456. But it must take place before the issue of a grant? Certainly.
457. Then it is quite conceivable that a person applying otherwise in respect to the same land might not know of the application for a mineral conditional purchase? I cannot answer that question.
458. *Chairman.*] Do you not communicate with the Mines Department when you are granting mineral conditional purchases; that is to say, do you have any communication with them to ascertain whether they are covering their ground? Under certain circumstances we have; but there would be no necessity to communicate in this case, because the land is described as ordinary Crown land, open to selection.
459. As a matter of fact does the Mining Department know when and where you issue these mineral conditional purchases until after they have issued? No, certainly not.
460. They have no knowledge of your granting mineral conditional purchases? We do not grant mineral conditional purchases; if the land is Crown land the title is good.
461. Has the Mines Department any knowledge of the area covered by these conditional purchases? Mining conditional purchases cannot be made on land reserved for mining purposes.
462. But they have in this case? No; this purchase was taken up before the gold reserve was proclaimed. If the conditional purchase had been taken up subsequent to the date of that proclamation it would be a bad one.
463. But how comes it in your opinion that the Mining Department can go and issue a mineral lease? They could not do it, only on account of the gold-field having been proclaimed on the 27th September, 1882.
464. *Mr. Gale.*] The gold-field extends over an area of the quarry reserves? Yes.
- 464½. If the mineral conditional purchase taken up by Jason Irving was within the boundaries of the gold reserve proclaimed in September, 1882, would it become Crown land, or become a portion of the gold reserve, in the event of it becoming forfeited? It would become Crown lands.

THURSDAY,

THURSDAY, 7 JUNE, 1888.

Present:—

Mr. RYRIE, | Mr. GARLAND.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

G. C. Waldron, Esq., appeared on behalf of Hugh M'Neill and party.

Mr. Edward Holchan called in, sworn, and examined:—

465. *Chairman.*] What are you? I am a miner.

466. Where are you residing at present? Captain's Flat is my address.

467. *Mr. Garland.*] I believe you were amongst the first party who went to prospect at Captain's Flat? I was one of the first. Mr.
E. Holchan.
7 June, 1888.

468. Who went with you at that time? Hugh M'Neill and William Harkness.

469. You went at the same time? Yes.

470. You and Harkness and M'Neill went in the same party? Yes; we were partners.

471. At that time, or some time afterwards, you prospected the piece of ground now known as the Vanderbilt ground? Yes.

472. Was M'Neill a partner with you then? No.

473. *Chairman.*] Can you fix the date? No; we never kept a diary.

474. Could you mention it approximately? I could not.

475. How long do you think it was? About four years ago.

476. That would be in 1884? I could not say exactly; I think it must have been.

477. Had you dissolved partnership with M'Neill and Harkness then? Long before that.

478. *Mr. Garland.*] When you first went on to this piece of land which is the subject of inquiry it was virgin ground, was it not? There was not a sign of a pick ever having been put into it.

479. The surface had not been broken? No; not at that time.

480. Will you state what took place after you prospected the ground, it being virgin ground? When Mr. Holtermann set down his battery we were all along the Flat, and I asked several to give me a hand to try to find something better, but they all declined. However I got one man, Mr. McGrath; he agreed to prospect with me; but gave it up after two days. He said it was too far to carry the stuff. I said I would stick to it myself. It was costing me the same amount to be idle as it was to work. I worked on the land for between three weeks and a month single-handed.

481. *Chairman.*] What did you do? I sank shafts up the gully, getting reef gold; then started cutting up a hill until the gold ran out. Then I cut back and found the vein.482. *Chairman.*] What depth did you sink the shafts? The depths were about 7 feet.

483. You are quite positive of that? Some may be over and some less than 7 feet.

484. How many of the shafts would be 7 feet deep? There is one that I am sure is 7 feet, and the others are more or less.

485. How many shafts are there? Three shafts, one of which will be 7 feet; I could not be exact; I took no measurement.

486. *Mr. Garland.*] Was M'Neill with you at this work? No.487. *Chairman.*] How did you come to apply in 1884 with M'Neill and party? We will come to that directly.488. *Mr. Garland.*] How did you take M'Neill in as a partner? When I found the lode I went down to him with the dish of stuff in my hand, and I said, "I have found the lode, and I think it is very good."489. *Chairman.*] What part of the year was it—was it in the winter when there is frost and snow? No, it was not winter; it was mild weather.

490. Then it was at the beginning or the end of 1884? It was very close to the winter. I went away to do a job of carpentering at Braidwood, and I remember that the timber was frosty every morning when I began.

491. That would be in the autumn of 1884? I cannot say exactly.

492. *Mr. Waldron.*] How long had you been on the place before you spoke to M'Neill? I do not know; I suppose a few weeks.493. *Mr. Garland.*] You then saw M'Neill? I went to his place and called him out. I had a prospect in the dish. I said, "The vein is pretty good, and we had better secure the ground." I said I had a promise of a job from the Government to do a bridge at Wagga Wagga, and that if I got the job I should earn a few pounds, and be able to put a good shaft down when I came back. M'Neill said to me, "Do you think this is any good?" I said, "It is good enough for me, but I do not want to force you to take shares in it. I can get plenty to come in with me." I also went to Mr. Edwards, at Braidwood, and I brought both of them on to the ground. I said to them, "There is the shaft, and there is the vein. There are my tools; you can take them and prospect for yourselves. You will never have to say that I have run you into anything which you might regret." They went and tried the ground at once.494. *Mr. Waldron.*] What time elapsed between your coming to M'Neill and you going to Mr. Edwards, and bringing them on to the ground? I think the two things occurred on the same day.495. *Chairman.*] But does not Edwards live 26 miles away? He was at Captain's Flat at the time. After trying the ground they appeared to be satisfied. I said, "I want only one-fifth of this, and by your paying for the taking up of the ground M'Neill and you can have the rest between you." All that it cost Edwards was £9 2s. 6d.496. *Mr. Garland.*] M'Neill has sworn that he was the discoverer of this land? I can bring up fifty witnesses to prove that he was not. As far as I know, M'Neill has not discovered anything in Captain's Flat yet.497. *Chairman.*] You say that you discovered the gold lode? Yes.

498. Then is it not possible that M'Neill may have discovered a silver vein? I do not know what he claims to have discovered, but I have not heard of his discovering anything.

- Mr. E. Holohan.
7 June, 1888.
499. It is quite possible that after you had been at work another man might have come along and discovered the same vein? I have prospected all along the land, and I have found no work done except that which I have done myself.
500. After what you say happened you went away? I did.
501. How long were you away? Seven months.
502. Is it not the practice of old miners to occasionally cover up a find which they are anxious that other people should not see? I have been twenty years prospecting, and I have never done such a thing yet; I have never seen any mate of mine do it.
503. *Mr. Garland.*] Would it be possible where the silver lode occurs for any work in a practical sense to be done without your detecting it, no matter what effort might be made to conceal it? I do not think it would be possible to avoid detection. It might be possible in alluvial country, but it would not be possible in country like that.
504. *Chairman.*] Supposing a man had sworn that there were no shafts sunk, and that there was very little work done on the land here and there, you yourself having sworn that three shafts were sunk on the ground to which you are now referring? I should reckon that the man who said so had made a mistake.
505. In the same way you yourself may be making a mistake? I might be making a mistake as to the work on the alluvial land, but I cannot be making a mistake as to any work claimed to have been done where the lode is.
506. *Mr. Garland.*] The shafts you claim to have sunk are on the alluvial flat? Yes. I also opened up the lode on the hill.
507. It would be impossible to do a day's work on the hill without the result of that work being detected? Yes.
508. Even though they were covered up with earth? It would be a hard job to get earth. It is not likely that if I were prospecting the ground I should pass over many yards unnoticed.
509. *Mr. Waldron.*] When you took M'Neill and Edwards on to the ground did you show them the shafts you had sunk? I showed them nothing but the vein.
510. *Chairman.*] Will you continue your narrative of what took place? Yes. After Edwards had paid the necessary money in connection with the taking up of the land, we all paid our expenses equally. There were Geary, the two Edwards, M'Neill, and myself. McGrath would have nothing to do with it. M'Neill and I rode into Queanbeyan and took up the land. I saw my name in the application. I said to M'Neill, "I must now earn some money to prospect this ground; look out that nothing occurs to it before I come back." He said, "It will be all right, wherever you go." I said, "That is all I want; if any money is required while I am away I will send it." I sent a cheque to Edwards from Wagga. When I had finished work there, I came back with the intention of thoroughly prospecting the ground. I was prepared to do so at the time. When I came on to the place I found that I had no interest. I went to M'Neill and asked him what was the cause of it. He told me that Edwards had advised him to do what he had done. I said, "I did not think that anyone could advise you against me after what I had done." However it was so. I went to Edwards, and accused him of doing it. I went into his bar at Braidwood. He said to me, "It is M'Neill's doing." I said, "Between both of you you have done the trick anyhow; but you had better watch the land, because I will get it if I possibly can."
511. Granting that your story is perfectly true, you went away under the belief that you had made a *bonâ fide* application in your name? Yes; I believed that a *bonâ fide* application had been made.
512. Supposing that *bonâ fide* application were refused? I left it to my mates to look after me. They assured me that they would do so.
513. Supposing they did their best to comply with the law as far as they were concerned, and yet were thrown out of the land, suppose they made their application and were refused, would not your whole argument fall through? They passed me by when they made the second application.
514. Suppose the application was refused through no fault of theirs, then, so far as they are concerned, they cannot be held in any way responsible for it? Certainly, I do not mean to say they are.
515. *Mr. Garland.*] But if they had been honorable men, seeing that you had made the discovery, you would have expected them, in making the second application, to have included your name? I got an assurance from them before they went away that they would do so.
516. *Chairman.*] When did you ascertain that your first application had fallen through? Not until I came back from Wagga Wagga.
517. What did you understand then? I found that a second application had been made, and that three of us had been put out and strangers taken in.
518. But would not all the work you had done go for naught in the face of the fact that your application was refused? From a legal point of view of course it would.
519. I suppose they started afresh when they made the fresh application, leaving your name out. Up to that point you had been connected with them? There was no fresh party. I do not know that you can say a fresh party made the application.
520. Your connection with the first application in your opinion gave you a moral claim to a part in the second application? Yes.
521. All you have told us hitherto led up to the failure of the first application. What connection had you with the claim after that. So far as you are concerned you knew nothing about the second application? I knew it was made, and that was all.
522. You did not know what became of it? I did some time afterwards. I saw from a local paper that it was refused.
523. *Mr. Garland.*] Who was the prospector of the Koh-i-noor? I was.
524. Did M'Neill do any prospecting there? No. We were partners at that time.
525. Did you discover both the Koh-i-noor and the Vanderbilt leads? Yes, and also Holtermann's quart-crushing mine.
526. You have been on the field all this time? Yes, until my funds have been exhausted and I have been compelled to get some work.
527. Is there any known vein on the field that has been opened by M'Neill? Not that I am aware of. He has helped to work a claim after it has been found.
528. You would not consider M'Neill a prospector? Not as finding the vein himself.
529. His work has been nearly all confined to wages? Yes, pretty well. I cannot see where he has ever done any prospecting.

Mr.
E. Holehan.

7 June, 1888.

530. Then any claim he might make to be a prospector would be a bogus one? I should think so. I do not know that he has done any prospecting for which he was not paid.
531. Is not a man called a prospector when he is working on wages? No.
532. *Chairman.*] M'Neill was one of the original prospecting party who opened the Flat as a field? Yes.
533. Although he had not the good luck to discover any special vein? No.
534. Did he belong to any party as a contributing shareholder when they discovered a vein? Certainly, as far as his labour was concerned, but not as a money contributor.
535. You were acting in the interests of M'Neill as well as your own when you discovered the Koh-i-noor? Yes.
536. Have you ever seen M'Neill working on the Vanderbilt ground at any time, except to try a dish of dirt? I have never seen him work continuously at any time.
537. When you came back from Wagga Wagga you found the ground in much the same condition as when you left it? To the best of my belief there was no change. I think no prospecting had been done. I am sure that there had been no work.
538. *Mr. Ryrie.*] Did you ever see M'Neill's pegs in the ground? I saw pegs which M'Neill and I first put into the ground; but I do not admit that they were M'Neill's pegs.
539. *Chairman.*] You discovered the lead and M'Neill and Edwards joined you, and you put in your pegs as applicant for a mineral lease? Yes. I held the land under a mineral license before I held it under a mineral lease.
540. If any witness has stated that he did not see the datum peg he must be in error? Yes. The peg was in the ground, although the witness might not have seen it.
541. *Mr. Garland.*] M'Neill says in his evidence
542. To your knowledge did he mark out the land in virtue of a mineral license? Not to my knowledge.
543. As a matter of fact M'Neill says he pegged out the land in virtue of a mineral license, and subsequently applied for it as a lease? He pegged out the residence tenement under a miner's right. I helped him to get the timber and to build the house.
544. Then the land he holds there is not in virtue of a mineral license? I do not think so. I think if he had had a mineral license I should have known it. He pegged out the residence long before there was any prospecting on the Vanderbilt hill.
545. *Mr. Ryrie.*] The residence tenement was on the lease? Yes.
546. How many years was it before you discovered the vein? A good while, because at the time we were only just starting Holtermann's Gold-mining Company. They were getting their machinery erected.
547. Are you sure that M'Neill took out a residence under his miner's right long before the land was prospected or applied for? I am sure of it.
548. And that his house was placed there? Yes.
549. How long before? It must have been a long time. M'Neill told me that he was thinking of getting married, and he asked me if I knew of any good place which he could peg out as a residence allotment. I took him across the flat, and I said, "This is about as nice a place as any about the flat." He asked me to put up the house, and I did so.
550. *Chairman.*] As a matter of fact you can tell us nothing about the second application? No.
551. Beyond the fact that you claim that you ought to have been included in it? Yes.
552. *Mr. Garland.*] In regard to the silver lode, now the Vanderbilt lode, which gives value to the land, who first opened it? I think your brother and myself.
553. When you found that silver lode was valuable what did you do? I went to your brother and told him about it, and had some assays made privately myself.
554. *Mr. Waldron.*] This was before application was made by William Garland? Yes. I met M'Neill every day when we were working on the land, and he never said anything to me about it.
555. How long did you work upon the land from the time you opened it? Some five or six months. We sunk a considerable length of shaft.
556. You sent a payment to Edwards while you were away at Wagga? Yes.
557. What was it for? To pay my mining liabilities.
558. What would they be? My liabilities in Captain's Flat.
559. Had he applied to you for anything? I told him when I was leaving that if any expenses occurred from time to time I would send him money if he would let me know.
560. Did he write to you for money? Yes.
561. What amount did you send him? £5.
562. You say that when you discovered what you thought to be a payable vein you went at once to M'Neill, and on the same day M'Neill and Edwards looked over the land and agreed to take it up? Yes.
563. Then you pegged it out at once? Yes.
564. At that time did M'Neill hold a mineral license? I could not say.
565. You claim to have held the land at that time under a mineral license yourself? Yes.
566. What season of the year was it when you were away at Wagga Wagga? I was away from two to seven months in a part of the winter and the summer.
567. The first application was made in August, 1884, I believe? I could not say about the day, but I suppose it would be something like that.
568. When you came back you found that the application to which you were a party had been refused, and that the land had been applied for again? Yes.
569. When did you know that the land was open to be taken up as a mineral lease? I did not come here prepared with dates.
570. *Mr. Garland.*] Was it before you pegged out the ground? Yes.
571. As a matter of fact the land applied for by William Garland and party was included in the application? Yes.
572. *Mr. Waldron.*] Did it not include the land where M'Neill lives? I do not think so. You cannot include a man's private residence.
573. As a matter of fact was it not included? I do not think so.
574. Did you put in the pegs for the application by William Garland? I helped him to do so.
575. Did you see the datum peg? No.
576. Did you see M'Neill's pegs? There was a peg on the south-west corner, and a peg in the north-east corner, but I do not know whose pegs they were.

- Mr. E. Holehan.
7 June, 1888.
577. Did you put in the pegs with M'Neill? Yes.
578. Did you not see the same pegs then? I could not say that they were the same pegs.
579. Mr. Garland.] As a matter of fact might not these pegs be those of M'Neill's second application? Yes.
580. Chairman.] The first time you pegged out the land did it include M'Neill's residence area? It included part, but not the whole.
581. The second time you pegged out with William Garland did you peg out the same area as before? It might not have been the same. We pegged out according to the survey pegs the second time.
582. Mr. Ryrie.] Was not the land surveyed according to M'Neill's first application? Yes; but the survey lines might not strike through pegs.
583. So far as you can gather, the land you pegged out the second time was the same as that which you pegged out when you were with M'Neill and Edwards? I cannot swear that it was the same land.
584. But to the best of your belief it was? Yes.
585. Mr. Waldron.] You say that the first pegging included a portion of the residence area? Yes.
586. Then the second must have done the same? Yes; I suppose so.
587. In pegging out the second time you followed the survey pegs which had been put in on M'Neill's application? Yes, certainly.
588. You were in the party with William Garland which took up the ground which had been surveyed on M'Neill's former application? Yes.
589. You sold your interest in it? Yes.
590. What was the price you obtained for it? I got £1,700 odd, and I held one-fourth interest. That was for the 40 acres.
591. To whom did you sell? To the Vanderbilt Company.
592. Did you have any interests in excess of the cash price in the shares of the Company? None.
593. Mr. Garland.] M'Neill told us this? If he stated such a thing he stated what was not true.
594. Mr. Waldron.] Is there any difficulty in finding evidence of the work you did on the land? No. There are four or five men in Sydney at the present time who are prepared to give evidence with reference to it.
595. What work was done prior to M'Neill's coming on to it? It was chiefly on the alluvial ground, and it may have been washed away. There would be no difficulty in discovering what was done on the rock.
596. What would be the extent of the work you had done on the rock? I should have to make a calculation. I suppose it might represent a few weeks work. A portion of the time I may have been carrying my pick on my shoulder, but at other times I was working with a hammer and pick, and a shovel.

TUESDAY, 12 JUNE, 1888.

Present:—

MR. O'SULLIVAN,
MR. ABIGAIL,

MR. HAWKEN.

MR. GALE,
MR. GARLAND,

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

G. C. Waldron, Esq., solicitor, appeared for Hugh M'Neill and party.

William Henry John Slee, Esq., called in, sworn, and examined:—

- W. H. J. Slee,
Esq.
12 June, 1888.
597. Chairman.] What is your position? I am Inspector of mines, and Superintendent of diamond drills.
598. Can you produce any papers in this case of M'Neill and party? I have reported with regard to Captain's Flat silver-field.
599. What was your opinion of the flat? I suppose you mean as a silver-field. I reported on the field in 1885, when it was worked for gold. I was the first to inform them that they had silver which they had thrown away. I reported generally on the field in February, 1885.
600. What was the nature of your reports? It was with reference to general matters; I have made two reports with reference to Captain's Flat.
601. What is your opinion of the flat as a mining centre; is it likely to last? I think so; I have every reason to believe so.
602. Have you any recollection of the different mines there? I was there only two or three months ago.
603. Do you know the Vanderbilt lode? Yes; I was over them.
604. What is your opinion of that property? I have not seen it since it has been open. I saw it first when it was Irving's selection.
605. What is your opinion of the hill as a silver lode? When I reported upon it only gold had been found.
606. Mr. Garland.] The silver lode had not been found? No.
607. Chairman.] You were there a few months ago? Yes; but I was not over this land.
608. You did not go over the Vanderbilt hill when you went up the last time? No.
609. You think, however, that Captain's Flat is likely to be a permanent silver-field of great value? I think so.
610. Do you remember ever giving a report to the Lands Department against the granting of Irving's conditional purchase? Yes.
611. What induced you to give that report? I had tried some prospecting on the land myself. I was there with another man who took out some prospects; I washed them and found gold in them. I reported to the Department of Mines, as it was my duty to do, drawing attention to the fact, and saying that I thought a mineral conditional purchase should not be allowed.
612. You wanted the land reserved as a gold-field? Yes.
613. But the Lands Department went on with the mineral conditional purchase? That I cannot say. My report was sent to the Department of Mines.
614. Did you report in favour of the granting of a quarry reserve? I reported that a reserve might be made for limestone on that same hill.

615. I suppose you were not aware when the reserve was marked out that it included a mineral conditional purchase? No. W. H. J. Slee,
Esq.
616. *Mr. Waldron.*] When did you first report upon the matter? In March, 1885.
617. What was the nature of your report at that time, that is, the general nature of it? I reported generally on the field. I reported that instead of there being quartz-veins as there were supposed to be there were gossan lodes. Instead of its being a gold-field it was likely to turn out a large silver-field. 12 June, 1885;
618. You know at the time of the mining conditional purchase application of Jason Irving? I did.
619. And in the course of your report you referred to it? I did.
620. Do you know a man named M'Neill up there? Yes. He showed me where the land was.
621. That was in March, 1885? Yes.
622. He was prospecting it? Yes, he was prospecting there; but there was a mineral conditional purchase application at the time.
623. Have you a distinct recollection of referring to the land as being silver-bearing, in a conversation with M'Neill? No; I referred to gold being found on this particular piece of land; but Montgomery's land, now called the Kooch-i-noor, was the only mine at work at that time. I referred to its being silver-bearing. I reported with reference to this particular mining conditional purchase that the land was gold-bearing, and I requested that it might not be sold.
624. You consider that the whole nature of the district was silver-bearing? The whole nature of the district was mineral-bearing silver, gold, and copper.
625. Then if M'Neill has sworn that you referred to the place where he was working as being silver-bearing, it is likely that he would be right? I referred to the place where he was working as being gold-bearing; but I referred generally to the field as being gold and silver bearing.
626. *Mr. Garland.*] If M'Neill has sworn that you pointed out what is now the silver lode on the Vanderbilt, and told him that he had a very valuable silver property would that be true? No. What I pointed out to him was the gold in the land which he had prospected. I sent some prospects down to the Department, and said that probably the whole district would turn out to be a silver-field.
627. Did you not pick out any particular lode close by? Not as a silver-bearing lode.
628. *Mr. Waldron.*] M'Neill says in his evidence,—
1244. A Government official? Yes, Mr. Slee. He said to me, "M'Neill, you have a nice bit of silver lode there; stick to it and it will be real good."
- No; I did not say that. I might have said to him that if the conditional purchase were disallowed he ought to stick to the land and try to get it. No doubt I said something to that effect.
629. *Chairman.*] Why ought he to stick to the land. If the conditional purchase were disallowed he would have as much right to it as any one else—because it was valuable, I suppose? Well, gold had been found on it.
630. From what you said, he might draw the inference which has been named? I am quite sure that I did not say anything about silver on this side of the creek. As a matter of fact, silver had not been discovered there.
631. *Mr. Gale.*] Were you the first person who discovered the presence of silver at Captain's Flat? I was the first person to draw Montgomery's attention to the fact that they were not working quartz-reefs, but gossan lodes containing silver. I told them the stuff which they had thrown over the shaft was actually silver ore. I took some silver ore and had it assayed.
632. *Mr. Garland.*] That was on the Kooch-i-noor lode? Yes.
633. *Chairman.*] You remember in 1885 when you looked over the Vanderbilt lode and saw some indication of gold-bearing stuff, did you see any prospecting work about there? Yes; there were some holes here and there. M'Neill told me that he did all the prospecting.
634. Did you see any shafts sunk? No; I do not think so.
635. How deep would the holes be? They were all shallow holes.
636. Was M'Neill actually working the ground when you spoke to him? I came on to the ground and saw the man at work, and asked him what he was doing.
637. *Mr. Hawken.*] What was the nature of the ground? It was rocky on the surface, but there were little soft veins running right through the rock containing gold.
638. *Mr. Waldron.*] You know the boundaries of the 20 acres pointed out by M'Neill? No; I could not say that I do; but I went all over the land.
639. Some portions are alluvial and some are rocky, I suppose? The lower portion going towards the creek is covered with alluvium, but in the upper portion, that is on the middle of the hill, the rocks come right out to the surface.
640. I suppose the work you principally saw there would consist of the holes. You do not remember seeing any work below? No. Of course there might have been work there. The work was done when the land was under conditional purchase application.
641. *Mr. Garland.*] At the time you saw M'Neill, what is now known as the Vanderbilt lode was not discovered? I saw the lode on the top, but it was not discovered as a silver lode.
642. No work was being done on it? No.
643. What M'Neill was prospecting on the hill was a little narrow gold-vein? It was a narrow vein containing gold. There were three or four places where we tried and got gold on the length of the hill.
644. *Mr. Gale.*] Assuming that M'Neill was prospecting for gold was it subsequently discovered that this identical piece of land was rather silver-bearing? I believe that has since been the result. But in my report I stated distinctly that I recommended the Minister for Mines to disallow the granting of the mineral conditional purchase because the land contained gold, as I thought, in payable quantities. I mentioned nothing about silver in my report at that time.
645. It was subsequent to that, then, that you discovered that there was silver there? Yes. That was at Montgomery's mine.
646. *Mr. Abigail.*] Effect was given to your report afterwards by refusing a mineral conditional purchase? Yes, I have read so since.
647. *Mr. Waldron.*] You say that effect was given to your report by the refusal of Jason Irving's application. You cannot say what were the reasons of the refusal? No. My report was sent to the Lands Office with a strong recommendation that the mineral conditional purchase should not be granted.
648. But you are not prepared to say that it was in consequence of this report that the application was refused? No; I can only say that I reported upon it.
- 649.

- W. H. J. Stee, Esq.
12 June, 1888. 649. *Mr. Abigail.*] Do you know whether the Minister approved of your report, and sent that approval on to the Lands Department to influence them in granting a refusal? I believe he did so.
650. That was in 1886? Yes.
651. *Mr. Waldron.*] The mineral conditional purchase was applied for in July, 1882? It might be. I was not specially sent to report upon it. I gave a general report of the field.

Evelyn Stephen, Esq., recalled and further examined:—

- E. Stephen, Esq.
12 June, 1888. 652. *Chairman.*] Have you the papers you were directed to produce? Yes. I produce all papers in connection with the application of William Garland for a mineral lease at Captain's Flat; all papers in connection with the application of Lewis and Holtermann for a mineral lease at Captain's Flat; all papers in connection with Mr. J. H. Blatchford's application for three mineral leases of 20 acres each at Captain's Flat; and all the papers, including letters written by the Department, in connection with the first and second applications of M'Neill and others at Captain's Flat.
653. *Mr. Waldron.*] With regard to Blatchford's application for the three 20 acres, have you not in your experience seen a great number of mineral lease applications granted at as low an area as 10 acres when the whole of the area of 20 acres has not been available? A considerable number.
654. That is to say, when 20 acres were applied for, it being found by the Department that 20 acres were not available, and that something less than 10 acres was available, you have known cases where the Department has given a lease of the available land? Yes. What I intended to convey to the Committee before in my evidence was that that course would have been pursued in this case, only that at the date of the refusal of the application the whole area appeared to be available, and in consequence the application was refused to enable the man to take up the whole land afresh, which might obviate the necessity of his paying a fresh survey fee.
655. The Department having refused an application of 20 acres in this case did not in accordance with its ordinary practice grant a lease for the available portion in the interest, we would say, of the applicant, that he might apply again to take up the 20 acres? There was no departure from the practice of the Department. The usual practice of the Department in these cases is this: If at the time of the refusal of the first application the portion embraced in the reserve had not been available, the applicant would have been asked if he would accept a lease of the smaller portion of about 9 or 10 acres, and he would have got that lease granted. But as the Mining Act Further Amendment Act had been passed the reserve became open to lease, consequently the application was refused to enable the applicant to take up the whole area, the whole area being apparently available. It is never the practice to grant a lease of a small portion of the land when the whole area would be available if the application was refused.
656. At the date of the first application as a matter of record no portion of the land was available; one-half was included in Jason Irving's mineral conditional purchase, and the other half was included in a quarry reserve? In reality at that time no portion of the land was available; Jason Irving's mineral conditional purchase had not been surveyed at the time.
657. I mean that as a matter of record at the time of the first application by M'Neill no portion of the land applied for was available? No portion was available.
658. But the Under Secretary pointed out to Jason Irving in refusing his application that it was a part of a reserve, and pointed out to M'Neill that the application was refused because the whole of the land applied for was part of a reserve? Yes, because it was on a reserve.
659. And there is this further matter of record, that the intimation by the Under Secretary to M'Neill was incorrect because a portion of the land was not on a reserve, but was included in Jason Irving's mineral conditional purchase? I am not in a position to say yes or no to that question, because I do not know the law. The *Gazette* notice of the reserve takes no notice of Jason Irving's application, because that application had not been measured. Consequently it appeared to the Department that the whole land as comprised in the *Gazette* notice was part of the reserve. Then afterwards Jason Irving's application for a mineral conditional purchase was measured. That cut into this reserve. The question is one of law, of which I know nothing, that is, whether Jason Irving's conditional purchase could be declared a reserve while it was in force, and also the point whether the mineral conditional purchase becoming cancelled for non-fulfilment of the declarations the land comprised in it would fall into the reserve without a fresh proclamation.
660. *Chairman.*] Are you not aware that the Privy Council has decided that all forfeited conditional purchases should be Crown Lands? I know nothing of the legal aspect of the case.
661. *Mr. Waldron.*] The Under Secretary at the time of the refusal of the first application intimated to M'Neill that the application was refused because the land was on a reserve, but between the time of the application and the time of its refusal the new Mining Act had been passed? Yes.
662. M'Neill made his second application shortly after the intimation of the Under Secretary? Yes.
663. At the time of the refusal of the second application, was the ground of refusal stated to M'Neill? Immediately after the gazetting of the refusal it was.
664. The ground of refusal was stated? The ground of refusal given was that the land was not available. Here is a document dated the 12th November, 1886. It is in these terms:—
- Gentlemen,
I am directed by the Secretary for Mines to inform you that your application for the mineral lease noted in the margin has been refused, the land being unavailable.
I have, &c.,
GERARD HERRING.
665. That, I take it, was the notice which M'Neill received that his second application had been refused? That is the notice which M'Neill appears to have sworn that he never received.
666. As a matter of fact, was any portion of the land available at the time of the second application? Yes; a portion of it was on a quarry reserve, outside of Jason Irving's mineral conditional purchase.
667. Was any intimation whatever given to M'Neill at the time of the notice which I have just read that this land was available? No.
668. Yet you say that the portion of the land was available at that time? Yes.
669. And the course pursued in other cases of informing applicants that although the whole of the land for which they have applied is not available a portion of it is available, was not adopted in this case? No.
670. *Mr. Abigail.*] Who was the Minister for Mines at that time? Mr. Fletcher.

671. Is it the custom of the Department to deal with any application for a lease of less than 20 acres, unless the permission of the Minister is obtained before applying? No; in such cases the application is refused. H. Stephen,
Esq.

672. Before an application is made for less than 20 acres an application must be made to the Minister? Yes; otherwise the application would be refused. 12 June, 1888.

673. In this case M'Neill did not apply for any less area? No.

674. *Mr. Hawken.*] I understood you to say that in some cases, where a less quantity of land was available than that applied for, notice was sent to the applicant that such area could be had;—is that the case? That is done frequently in cases where the area, not available at the date of application, is still not available at the date of refusal.

675. Can you state the peculiar circumstances which prevented the Department from sending this applicant the customary notice with regard to the less quantity of land being available? Because the whole area was available at the date of refusal.

676. *Mr. Waldron.*] Then, as a matter of fact, the application was in a worse position as far as notice from the Department was concerned, because all the land he had applied for was available at the time of refusal than it would have been if a less amount had been available at the time? If a less area had been available he would have received notice of it.

677. Because the whole of the land was available he was not notified? The custom to which reference has been made is not invariably adopted.

678. In this case, because the whole of the land applied for was available at the time of refusal, the applicant got no particular notice? I cannot say that he got no notice because the whole of the land was available.

679. Had there been only 10 acres available at the time of refusal would he have got notice that that area was available? The application in that case would not have been refused at all.

680. If only a portion of the land had been available at the time of refusal, as I understand, he would have received a notice, but because the whole of the land was available he received a notice in these terms, that the application was refused, the land not being available? If at the time of the application a portion of the area applied for had not been available and had remained unavailable until the date of refusal, the application would not have been refused, but probably the applicant would have been asked if he would accept the smaller portion rather than have his application refused.

681. That is the practice? It is the practice, but not the invariable practice.

682. *Mr. Abigail.*] Is this not the case, that the refusal was made because the land was not available at the date of taking possession? A small portion of it was available, but not all.

683. *Mr. Gale.*] Would it not have been more in accordance with the facts of the case and the usage of the Department if this notification had been worded thus: "The land being unavailable at the time of application?" Yes.

684. *Mr. Waldron.*] Would not that have been especially the case from the Under Secretary communicating the reason for the refusal of the first application? I do not think that would have any further effect upon the matter.

685. In making an application for mineral lease should not the application state whether the land is occupied or whether any right in it is claimed by other people? In making an application for lease the applicant is asked this question: "Does anyone claim or appear to be in possession of the land applied for, or any portion of it?"

686. Have you Mr. Garland's application? Yes.

687. What is the answer to the question in that application? The answer is "No."

688. Does not the Department require a document distinct from the application to the same effect? This document is distinct from the application.

689. That is the document then? Yes.

690. Can you say what fees were paid by M'Neill on his first application, and what fees were paid by him on his second application? On the first application he paid £5 rent and £4 survey fees, but the £5 paid as rent appears to have been refunded. In the case of the second application £4 was lodged for rent, and the survey-fees were also £4.

691. Have the fees on the second application been returned? I do not see any application for them.

692. There is a plan published by the Mines Department showing this quarry reserve. I believe that that plan has been put before the Committee? Yes.

693. I see it was published on the 8th October, 1886? Yes; it appears to have been.

694. Does this plan represent the exact position of the quarry reserve? Yes. According to the plan the reserve would appear to embrace the whole area applied for.

695. Do the letters Q. R. on this plan appear to include 81 mineral lease and 117 mineral lease? Yes. It appears to embrace the whole lot up to the eastern bank of the river.

696. To what mineral lease does this 117 refer—is that Lewis and Holtermann's? Yes.

697. What is the date of the granting of Lewis and Holtermann's application? The 31st August, 1885.

698. But this plan is dated the 8th October, 1886? Yes.

699. Is it likely that the quarry reserve as shown here is intended to cover an application granted by the Executive a year before? It certainly appears to cover the application according to the map.

700. *Mr. Hawken.*] If the reserve is as stated by you would not it make the mineral lease of Lewis and Holtermann illegal, as being granted on a reserve? The fact of Lewis and Holtermann's lease being on a reserve would not make it illegal.

701. *Chairman.*] I suppose the application was made after the passing of the Mining Act Further Amendment Act? Yes. The date of their application is the 16th February, 1885. The Mining Act Further Amendment Act was in force at that time.

702. So that Lewis and Holtermann could take up a mining lease on a reserve? Yes; anyone could do so at that date.

703. *Mr. Waldron.*] This plan issued from the Department makes no reference to Jason Irving's mineral conditional purchase? The date of this map is the 8th October, 1886; the mineral conditional purchase lapsed on the 27th February, 1886, consequently when this map was issued the mineral conditional purchase was not in existence.

704. Yet you say that looking at the map the quarry reserve appears to embrace 81 mineral lease, and 117 mineral lease? Yes. That portion of 117 mineral lease which is on the eastern side of the river.

- E. Stephen, Esq.
12 June, 1888.
705. *Mr. Abigail.*] Have you the Minister's minute approving of the first refusal? Yes. It is already in evidence.
706. Have you the Minister's minute with regard to the refusal of the second application? Yes. It is in these terms:—"It is recommended that the application be refused, the land not having been available at date of applying, and the applicants be informed that they may reapply." Submitted and approved by Mr. Fletcher.

WEDNESDAY, 13 JUNE, 1888.

Present:—

MR. O'SULLIVAN,		MR. GARLAND,
MR. GALE,		MR. RYRIE.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

G. C. Waldron, Esq., Solicitor, appeared on behalf of M'Neill and party.

Evelyn Stephen, Esq., called in and further examined:—

- E. Stephen, Esq.
13 June, 1888.
707. *Mr. Waldron.*] Was any notice sent in accordance with the Minister's minute in regard to the refusal of the second application; was any intimation given to the applicant in terms of that minute? No.
708. That minute refers to what is known in the Department as a beforehand notice? Yes.
709. Can you give any reason why that information in accordance with the minute was not given to the applicant? No.
710. Then, in fact, the recommendation of the minute was not carried out? No.
711. *Mr. Ryrie.*] Why was it not carried out? I cannot say.
712. Was it intentional or otherwise? I am sure it was not intentional; it was an omission.
713. *Mr. Waldron.*] The notice in evidence, of the 12th November, 1886, is the only notice that was sent? Yes.
714. And that one is the notice referred to in your answer to question 172? Yes.
715. Referring to question 170, do you note the addition of the words "The land not being available" to the form of notice which you put in as your answer? Yes.
716. Will you produce a copy of William Garland's, and Lewis and Holtermann's applications, and any papers in connection therewith? Yes. [*Vide Appendices B 1 and 2.*]
717. *Chairman.*] It has been admitted by M'Neill that he received a document dated the 12th November, 1886, notifying that the ground was not available. But it is denied by him that he ever received any document stating that the land was afterwards open to mineral lease. Have you any knowledge of any document being sent to M'Neill and party notifying that the land was then open to mineral lease? No.
718. You find no record in the Department to that effect? No.

Mr. William Harkness called in, sworn, and examined:—

- Mr. W. Harkness.
13 June, 1888.
719. *Chairman.*] What are you? A miner.
720. You are one of the prospectors of Captain's Flat? Yes.
721. *Mr. Garland.*] You went to Captain's Flat with M'Neill and Holehan? Yes.
722. Can you tell us who was the prospector of the particular ground which is now known as the Vanderbilt? It was not looked at for a long time after we first went to Captain's Flat.
723. But who first prospected the ground? The first who went to the hill, to my knowledge, was a man named Irving. He never found anything that I know of.
724. Who were the first to find the gold lode on the hill? Holehan and M'Grath.
725. Were you a partner of Holehan's at that time? I was not.
726. Were you partners with M'Neill? No; we had parted before that.
727. Do you know what Holehan did when he found the gold lode on the Vanderbilt hill? He and M'Grath went and told M'Neill about it, and it was taken up the first time in the names of Holehan, M'Neill, Edwards, and Edwards. M'Grath was left out of it.
728. Do you know whether M'Neill was ever prospecting on that hill? I cannot say that I ever saw him working there.
729. Yet you have been living on the field all the time? Nearly all the time.
730. You were living on the field at the time of the first application? I was.
731. And you consider that M'Neill was in no way a prospector of the ground? I should not consider him altogether a prospector, but when a man is taken in with another, whether he happens to be there at the time or not, he is looked upon as one of the party.
732. Were you there when the second application was made? I was not.
733. Was Holehan there? I think not. When the second application was made Holehan was left out of it altogether.
734. Are you aware whether M'Neill opened up any other veins at Captain's Flat, that is, any known veins? Not to my knowledge.
735. And you know all the veins that have been opened up there? All the principal ones.
736. And you do not identify M'Neill as the opener of any of those veins as a prospector? Not personally. I do not believe he was.
737. If M'Neill set up a claim to be considered the discoverer of the Vanderbilt, would you consider it a bogus claim? Yes.
738. Were you on the field when Holehan and Garland applied for their land? I was not. I was at the head of the Shoalhaven River at that time prospecting.
739. How long after they applied for it was it when you came on to the field? I cannot exactly say when they applied for it, but I was not at Captain's Flat until the June following.
740. What amount of work had there been done on the hill? There was a lot of work done on the hill then. Irving and others had been working there.
741. But with respect to this particular 20 acres? They were sinking a shaft, but I could not say how deep it was. When I came back Holehan and Mr. William Garland were working there.

Mr.
W. Harkness.
13 June, 1888.

742. They had opened out a new silver lode? Yes.
743. It was not opened out when you left the field? No.
744. *Chairman.*] You are a pioneer prospector in this district? Yes.
745. You have been in the habit of going all round the country pioneering and prospecting, and leading other people on to good things? Sometimes.
746. Since you went on to the Flat have you followed this pursuit? Yes; when I have not been doing anything else.
747. You have been away at times? Yes.
748. Since you went on to the Flat have you spent more time away from it than on it? I cannot say that.
749. Have you not been a sort of cut-and-come-again miner, working on the Flat for a time, and then going away? I worked on the Flat for nearly four years to begin with.
750. But when times have been bad you have struck out for yourself, and have gone to other places? Yes.
751. You have been away for weeks and months at a time? Yes.
752. Of course in your business you have not been able to see what was being done on the Vanderbilt hill? No.
753. Then your statement to-day that McNeill was not doing any work there was purely a matter of hearsay? Yes.
754. Would you be surprised to hear that Mr. Slee, the Inspector of Mines, has sworn that McNeill was working on the hill, and that he discovered gold there? I would not be at all surprised, as far as that goes.
755. *Mr. Garland.*] When an Inspector of Mines comes on to a field it is the usual practice for miners to go down their holes and pretend to be prospecting, whether they are really doing any work or not, that is if they desire to hold their ground? It might be done, but I do not know that I would go down a hole just simply because the Inspector happened to be present.
756. *Chairman.*] The fact of there being a hole upon the hill shows that some work must have been done? Of course.
757. You know that it is a practice for prospectors not to leave what they find open, that is to say, they generally cover it up, and hide it as much as possible? Yes, until they secure the ground.
758. Do you not think that McNeill may have opened up discoveries and covered them up in this way? He may.
759. Do you know why McGrath left the party? He was left out against his will. How it was managed I do not know.
760. Holehan and McNeill were in the first application? Yes.
761. It was upset on the ground that the land was on a reserve? Yes.
762. Do you know anything of the second application? I was not on the field at the time.
763. Holehan never was in that application? No.
764. Therefore he cannot testify as to what the men did, beyond the fact that he was left out? I do not know how long he had been on the Flat when I came back.
765. What is your opinion of Captain's Flat as a field? I believe it will ultimately be a good one.
766. What is your opinion of the Vanderbilt lode? I believe it is a good lode.
767. A valuable property? Yes. I am only speaking from hearsay.
768. Do you know that the piece of land in dispute is in the very centre of the Vanderbilt lode, the most valuable portion of it? That I cannot say.
769. But you know that it was on the Vanderbilt property? I believe so. The Vanderbilt is the only mine that is doing anything yet.
770. What is the value of the 20 acres in dispute? I should not like to give an opinion.
771. Cannot you give us an approximate idea? I do not know the value.
772. Supposing you had been the prospector, what would you have considered a fair offer? I should get as much as I could.
773. But would you take £30,000? Yes.
774. Then you think it is worth £30,000? I do not know; but I would take it.
775. You know that the Company was floated for £100,000? I believe it was.
776. From the richness of the lode and the depth of it, it might be worth a million? It might.
777. *Mr. Waldron.*] When did you first go on to the field? About the 20th December, 1880.
778. How long did you stay on the Flat at that time continuously? From then until 1884.
779. Was McNeill there all the time? He went away for a little time.
780. But he was there pretty well all the time? He was away once, I think.
781. Was Holehan there all the time? Yes.
782. You say that the first to find anything on the Vanderbilt portion were Holehan and McGrath, and that they told McNeill? Yes. McGrath told me so himself.
783. Do you know that McNeill says that he was the first to discover the vein on the Vanderbilt? I never heard him say so.
784. *Mr. Garland.*] If he said so it would not be correct? No, because McGrath came and told me about it.
785. *Mr. Waldron.*] Your information is gathered from what you heard from McGrath? Yes.
786. And McGrath claimed to be interested? Yes.
787. Are you in with Holehan and McGrath at the present time? I do not even know now where McGrath is.
788. You left the Flat at the time of the first application, at the end of 1884? Shortly after.
789. You were then away for a long time? Yes.
790. Until the June after Garland's application? Yes.
791. Then you would have been away from August, 1884, until sometime in 1887? Yes; I suppose so.
792. *Mr. Garland.*] How long have you been on the Flat this time? I went back last June.
793. *Mr. Gale.*] Were you prospecting during the whole of the time from 1880 to 1884 on the Flat? I was working on a claim there.
794. During those four years did your prospecting extend to what is known as the Vanderbilt; did you do any prospecting in that locality? I did.
795. Was there any indication of the metal? I never got anything there.

- Mr. W. Harkness. 796. While prospecting on the Vanderbilt you were a mate of M'Neill? I was mate with none of them. We parted company in 1881 through a little disagreement.
- 13 June, 1888. 797. Mr. Waldron.] When you left in 1884 M'Neill was doing some work in the Vanderbilt—he was prospecting it? I never saw him.
798. But you are not prepared to say that he was not doing it? I am not; but I was working there a little time before I left.
799. No one was working on the Vanderbilt at the time? Not that I know of.
800. Chairman.] Since 1884 have you spent more time on the Flat than you have spent away from it? I do not think I have.
801. In point of fact you have been away so much since 1884 that you could not swear as to what was done by M'Neill or anyone else on the Vanderbilt? I could not.
802. Supposing it was said that prior to 1884 a lot of work had been done, that a shaft of 7 feet had been sunk, that other shafts had been sunk, and that there had been prospecting on the hill—is that, of your knowledge, true or untrue? It is untrue.
803. Mr. Garland.] But there was a trench and a bit of a shaft on the gold lead? Yes; where the gold was first found.
804. Chairman.] If you saw a hole sunk on the alluvial ground you would consider it prospecting work? Shafts were sunk a long time before the Vanderbilt started.
805. From your experience as a prospector you admit that there were *bonâ fide* indications of prospecting work? Yes.
806. Mr. Waldron.] I suppose a good deal of prospecting work could be done on such a hill as the Vanderbilt without any evidence of it appearing on the surface? A man might break a great many stones perhaps without it being noticed; but he could not sink a shaft without something of it being seen.
807. Would you consider that the breaking of stones here and there was fair prospecting? Yes.
808. A good deal of work could be done in that way without there being any indication of it? Yes, certainly.
809. Chairman.] When you go into a new locality prospecting what is the first thing you do? I shoulder my pick and go through the bush.
810. Would you not consider that prospecting? Yes, of course, it is the first thing it is necessary to do.

Charles Launcelot Garland, Esq., M.P. (a member of the Committee), sworn and examined in his place:—

- O. L. Garland, Esq., M.P. 13 June, 1888. 811. Chairman.] What are you? I am a journalist.
812. I believe you wish to make a statement? Yes. I proceeded to Captain's Flat just about the time of the starting of the El Capitaine furnace. I was so impressed with the value of the place that I induced my brother, who was a practical miner, to go on to the field, with a view to obtaining an interest there. I heard that the Holtermann estate was for sale, and that estate embraced a great number of leases in the field. Eventually Mr. Mark John Hammond, Mr. Thomas Forsythe, Mr. Jamieson, and myself, purchased the whole of the interest in the Holtermann estate from the trustees. That interest included a part of M'Neill's second application for the identical lease about which the Committee are now sitting.
813. Mr. Waldron.] Was your brother interested in the purchase? To a small extent, but only through me. He was not a purchaser, he had only an indirect interest. Of course, in any claim against the Government for compensation, I and my party would be entitled to a third of whatever compensation might be secured, that is to say, compensation which might be based on the second application. In regard to the amount of work done on this particular lease when I went on to the ground there was simply some very small trenching, not much larger than what a man would cut in putting in the corner pegs of a lease. There was a small hole down in a vein, which, on being tested, showed very fair gold. I am not speaking of the alluvial working now. That was all the work that was done when I went on to the field, and it was shown to me by Edward C. H. Holehan, who took some stuff from the shaft and showed me a prospect. He claimed to have done the work. The size of the vein and the prospect shown were not sufficient to induce me to place any value whatever on the discovery, though it might have been worth further development. From that date up to the time my brother made application for the land no further work had been done by any one except Holehan and my brother. I knew every foot of the land from having on many occasions gone over it. Although my party are entitled to a third in any compensation that may be got from the State, I do not consider that we have a just claim inasmuch as the land was not available at the time, and we made no effort to secure it when it became available. The land had been available for, I think, five months before Holehan found the silver lode, and if I had valued the land or any of the party had valued the land, we could have taken it up in the ordinary way. No one appeared to set any value upon it. Even after my brother and Holehan had prospected the land no one appeared to take the slightest interest in it until it became generally known that our efforts had resulted in the discovery of valuable metal. Subsequently, when the value of the mine became known, overtures were made to me by Mr. O'Sullivan to compromise with M'Neill, who then claimed to have some moral right to the land. I did not know M'Neill in the matter, and consequently I refused to negotiate in any way, not recognizing M'Neill's or any one else's claim, except that of the prospectors of the ground. Subsequently a solicitor, by the name of Crick, approached me again on the subject, and threatened that if we did not take M'Neill into our discovery and give him a share, Edwards and M'Neill would dispute our lease, and if they failed in that way they would enter the Supreme Court with a view to securing our land. I told Mr. Crick that I did not recognize that they had any right whatever, and that if he intended to take that course he was quite at liberty to do so, that we intended to stick to our lease. Since then no proceedings whatever have been taken. The next I heard of the matter was by a question asked by Mr. O'Sullivan in the House, which seemed to imply that my brother had been able to obtain the lease through some occult influence; but I think the fact of the land being open for several months entirely does away with any suspicion of that character, for if we wanted the land at the time it became available as Crown land we could have pegged it out at 12 o'clock on the night of the *Gazette* notice, which was some five months before we did peg it out.

WEDNESDAY, 27 JUNE, 1888.

Present:—

Mr. O'SULLIVAN,		Mr. GARLAND,
Mr. ABIGAIL,		Mr. RYRIE.

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

G. C. Waldron, Esq., solicitor, appeared on behalf of Messrs. Hugh McNeill and party.

Charles Launcelot Garland, Esq., M.P., recalled, and further examined:—

814. *Mr. Waldron.*] Did you receive notice to produce a contract for the purchase of Holtermann's C. L. Garland, interest in Captain's Flat, including his interest in the application which is the subject of the present inquiry? Yes. Esq., M.P.

815. Do you produce that document? I cannot find the document; it is not amongst my papers. I have a notion that it is amongst the papers of the late Mr. Thomas Forsyth. He kept nearly all the documents in connection with the Captain's Flat property. 27 June, 1888.

816. Are you prepared to say that the interest in McNeill's application is stated in this sale note? All interest held by Holtermann are included, I know. I know that as a condition of the purchase.

817. What I mean is is this particular one stated? I cannot say that. The fact is I had very little to do with the original contract; it was Mr. Mark John Hammond who conducted all the negotiations about that. But I know that all the interests held by Holtermann were included in that—everything.

818. At any rate you were a partner with Mr. Hammond in this speculation? Yes.

819. Was your brother, Mr. William Garland, interested in the purchase? Only indirectly. He was not one of the original purchasers.

820. But he acquired an interest? We agreed to give him a small interest after this purchase was made—some considerable time after—if he would remain on the Flat for nine months to look after these leases.

821. He was to do something and was to get an interest for doing it? Yes, and he carried out that agreement, and consequently, when the property was sold, we gave him some small interest. His whole share amounted to something like £20. Of course it was nothing like an adequate return for the services he rendered.

822. You have heard the evidence of Mr. William Garland as to his interest in the property after he sold to the Vanderbilt Company. How far were you interested in that sale? To the extent of one-fourth.

823. You were interested in the sale to the Vanderbilt Company to the extent of one-fourth? Yes.

824. What was the purchase money you received for your interest in the properties sold to the Vanderbilt Company? I suppose you mean the whole interest, taking this property under dispute and the Holtermann leases. I had a one-fourth interest in £7,000 for the Vanderbilt side, and a one-fifth interest in £2,000 for the other side of the creek.

825. The £7,000 applied to the leases now under consideration? Yes.

826. Practically £7,000 was the purchase money for this lease? Yes.

827. As a matter of fact the lease now being considered by the Committee was the valuable lease? Yes; it was one of two valuable leases. It was the one upon which most work had been done.

828. Did you receive as consideration any shares in the Vanderbilt Company? Not as a seller, but as a purchaser I did.

829. As a matter of fact, the sale made by you of your one-fourth interest in these two leases was not made to the Vanderbilt Company but to a syndicate? I formed one of a syndicate to purchase the whole of the interest held by myself, and the remainder of my party at Captain's Flat.

830. Then the purchase money in the sale to the syndicate of the two leases under consideration was £7,000? Yes.

831. You received as a vendor one-fourth of that? Yes.

832. What was the proportion of your interest as a purchaser? There was a syndicate of seven, and I held one-seventh.

833. That syndicate sold to the Vanderbilt Company? Yes.

834. Do you produce the prospectus of the Vanderbilt Company? That is the prospectus issued by the syndicate for the formation of the Company.

835. Was the Company formed on the basis of this prospectus? Yes.

836. By this prospectus it appears that the syndicate received £10,000 in cash and 50,000 shares, which appear to have been worth 8s. each, taking the subscribed value? Yes.

837. You received one-seventh of the £10,000 cash? Yes.

838. And you had allotted to you one-seventh of the 50,000 shares? Yes.

839. These shares have been to your knowledge dealt with in the market? Yes.

840. I believe they have sold at as high a figure as £1 and 23s.? They have sold at as high a figure as 26s.

841. Then, upon that calculation, the Company must be considered to be worth over £100,000? At one time, but not now.

842. You cannot sell the shares at the same price now? No; although the mine is better now than it was then. At the present time the highest price obtainable, according to the market quotations of to-day, is 6s.

843. *Mr. Abigail.*] At the time the shares were bringing 26s. the recent mining fever was at its height? Yes.

844. *Chairman.*] Do you consider 26s. a good value for the shares? I did not buy any at that price.

845. *Mr. Ryrie.*] And you say that the mine is more valuable now than it was then? Yes.

846. *Chairman.*] Would 6s. per share represent the value now? I would not say that, but I think the shares were well worth 8s. when the Company was floated.

847. If they were worth 26s. to the public at one time surely they are worth it now? I think the public would be more warranted in giving a higher price now than they were at that time. Do not understand me as meaning that I think the shares were worth 26s. as an investment. I had telegrams asking for thousands of shares at 25s., but I refused to sell.

848. Do you believe that the buyers at 26s. got a good bargain? I believe the sellers got a good bargain.

- C. L. Garland, 849. *Mr. Waldron.*] You did not sell at 25s., because you were waiting for a bigger price? Yes.
Esq., M.P. 850. There is at the present time a depression in the share market? Yes; I think the shares were well worth 8s. when the Company was floated.
- 27 June, 1888. 851. *Chairman.*] You say that you did not sell at 25s. because you were waiting for a higher price. Does not that imply that you did not consider 25s. a fair value? I think it was more than the value, but of course I was prepared to get as much as I could for my shares.
852. *Mr. Waldron.*] You are at the present time a shareholder in the Vanderbilt Company? Yes.
853. Then you claim to be interested in the land in respect to which decision is now sought, firstly, as one of M'Neill's party, and secondly, as one of the proprietors in the Vanderbilt Company? I am interested as one of the proprietors in the Vanderbilt Company, but if M'Neill's second application is a good one, and he is entitled to any consideration, of course I am interested with others of the party to the extent of one-third, having bought Holtermann's interest in it. But I do not place any value on it myself. I would not make a claim in regard to it.
854. You are not a party to this claim being made? No.
855. But yet you volunteer the evidence that if any compensation were granted you would claim one-third? Quite so, as I have purchased it.
856. Then it becomes pertinent for me to ask if you propose to further sit on this Committee? I am not claiming this money at all; I am opposing the granting of the money.
857. Let me repeat this question: Do you propose to further sit on this Committee? Yes.
858. Do you consider it right in your position as one interested to form part of this judicial Committee? In the first place, I do not know on what grounds M'Neill is claiming compensation. I understand that he is claiming compensation, but I do not know on what grounds. If he claims compensation in regard to the second application made for the land of which I am a part purchaser from the Holtermann estate, then of course I am interested in it; but I do not know that that is the basis of his claim for compensation.
859. You have seen the evidence which has been taken? Yes.
860. Does it not appear clear from that evidence that it is upon the refusal of the second application that this claim for compensation is based? Nothing of that kind appears to me clear in the evidence. The only thing that appears clear to me is that M'Neill is claiming compensation from the State.
861. Is it not clear to you from the evidence that the application for M'Neill's lease is in respect of this land at Captain's Flat, in which you admit you hold an interest? I certainly cannot say that it is clear to me that that is the basis of the claim.
862. Then do I understand that you do not know the basis of the claim? Certainly not. So far nothing appears clear to me except that the applicant is claiming compensation.
863. You consider it right for you to further sit on this inquiry? Yes.
864. Let me repeat what has been said to the Committee in my hearing several times, that M'Neill's claim is based upon the refusal of his second application. Have you not hitherto clearly understood that that was so? No.
865. Upon this statement I again repeat my question: Do you propose to further sit upon this Committee? Yes.
866. And you consider it right in your position as a person interested to form part of the Committee? I am not understood. I do not claim to be interested; I am opposing the granting of compensation.
867. Are you not interested in any compensation that might be granted by this Committee? In regard to that I may make a claim subsequently, I make no claim at present.
868. Have you not already made a claim? Certainly not.
869. Let me quote from your evidence taken on the 13th June. You say, "Of course in any claim against the Government for compensation I and my party would be entitled to a third of whatever compensation might be secured, that is to say, compensation which might be based on the second application." How does your answer to my last question accord with that? Perfectly. I said I do not claim any compensation in regard to this matter, neither have I. I may at some subsequent stage if compensation is granted. I am not making any claim against the Government for compensation; I am not making any claim against whatever reward may be granted in this case, that is, so far.
870. Then, though you have stated that in any claim for compensation you would be entitled to one-third of the compensation that might be granted, you think that because you have not actually made such a claim you are entitled to sit as a judge in this matter? Certainly I think so. I do not think my sitting here will militate against the interest of the State.
871. *Mr. Rylie.*] You said you were not aware on what basis M'Neill had made his claim for compensation? Yes.
872. Had you not an opportunity of questioning him on that subject? I did not ask him.
873. But you had it in your power to ask him? Yes, certainly; but from the evidence given it is difficult to ascertain on what the claim is based.
874. *Mr. Waldron.*] You are quite aware that two courses might be pursued by M'Neill and party, not conflicting with one another—one, to contest the Vanderbilt title, and the other, to secure compensation from the Government. And if the latter course were taken, as the parties were practically prevented from the want of money from fighting a wealthy Company? I deny that the former course is open at all, because M'Neill's fighting the Vanderbilt Company would not give him a title to the land, even supposing he were successful in upsetting the Vanderbilt lease. It is one thing to upset the Company's lease, and another matter to get possession of the ground yourself.
875. If he held the land under a mineral lease, and his holding had not been revoked by a special act of the Department, is there any doubt about his holding being a good one? If he held it under mineral license.
876. But you know that that is his contention? I should think then that he would have an action against the Government.
877. But do you not know that it is his contention that he held a mineral license? I do not know so.
878. Were you not present at the first meeting of the Committee, when M'Neill was examined, and when evidence to that effect was given? No.
879. You have read the evidence? I have.
880. Then do you not know that that is M'Neill's contention? I dare say it may be; I do not question that.

881. Do not you think that the opposition you are showing suggests that you have a doubt about the Vanderbilt title, and that you want M'Neill crushed by discredit being thrown upon his evidence at this inquiry? Certainly not. If I had any doubt about the Vanderbilt title my policy would be to assist M'Neill in getting satisfaction and compensation from the Government, to protect the Vanderbilt Company from any claim. C. L. Garland, Esq., M.P. 27 June, 1888.

882. That might be your view of the course to adopt? I think it would be a natural course.

883. Is it not also possible that by nipping a poor man in the bud of his inquiry, and throwing discredit upon his evidence with regard to it, you would prevent him from fighting a wealthy Company? I never took that view of the case. I do not know whether M'Neill is a poor or a wealthy man; I have no knowledge of his financial standing.

884. But you have met M'Neill a good many times during the last few years? Only twice in my life—once at this Committee, and once at the Flat.

885. But I understood from your evidence that you had nearly lived at the Flat for the last two years? I have been backwards and forwards a great number of times, but I have not happened to meet M'Neill; I have had no connection with him whatever.

886. Have you any doubt about his being a poor working miner? I have no reason to believe that he is anything else; but I suppose those connected with him are well able to initiate any proceedings—that is, those interested with him in this affair.

887. Are you not the proximate cause of William Garland, Edward Holehan, and William Harkness being at this inquiry? Yes.

888. I asked you on the last occasion to produce for the Committee some evidence of the number of your visits to Captain's Flat, and of the length of them. Have you any such evidence to produce? No, I cannot say that I can give any definite evidence on oath as to the number of my visits, or as to the duration of each. In regard to their duration, I can say that I have never been there for more than four or five days at a time. So far as the number of visits is concerned, I cannot give you information, because I have not kept a diary of them, and they have gone out of my mind.

889. You say in one part of your evidence that you know every foot of this land. Did you mean to say that you were in a position to point to any portion of the land where work had been done? Yes; I have travelled over the land for hours, looking for indications or lodes, as I invariably do when I go on to a field in which I am interested.

890. How often did you do that in connection with this particular lease? I cannot say how often. Whenever I have been at the flat and have had a few hours to spare, I have employed them in looking over the ground.

891. How often have you been over this particular land? I could not say how many times, but I know all the work that has been done on it.

892. Is Holehan's evidence correct about the number of shafts, and the extent of the shafts on the lower portion? Yes; I believe it is as nearly as possible.

893. Then is William Garland's evidence correct as to the work that has been done on the higher ground? Yes; substantially correct.

894. And when each contradicts the other, which is mistaken? I do not know that they contradict each other.

895. Do you not know that William Garland, in answer to question 347, says: "And you can positively swear that there is not more than two days' honest work done on the ground? Yes."? The only work M'Neill claimed to have done was on the hill, and he was alluding to that work, I suppose, at the time. The other work resulted in no discovery, and was not called into question. Holehan was referring to work done on the flat I take it, and my brother was referring to work done on the lode.

896. Will you note this evidence (question 346): "You have traversed the whole of the ground? I have been over every foot of it." Would it not appear from that question that the subsequent question in reference to the amount of work refers to the whole ground? It would seem so.

897. How does that accord with Holehan's evidence about that he sank upon the ground? If the evidence you have quoted is given in respect to the whole ground it does not accord with the other evidence, but I think it is evident that William Garland is referring to the work in dispute only.

898. What do you mean by the work in dispute? The work that resulted in the discovery is the work on the main range, on the lodes, and the dispute was as to whether Holehan did that work, or whether M'Neill did it. William Garland's evidence purported to show that Holehan did the work on the lodes, and referring to the work done on the ground I take it that he referred to that work only.

899. Taking the whole of the ground, every portion of it, would you not consider that a considerable amount of work was done? There was no considerable amount of work.

900. Holehan has sworn that he did several weeks' work? Yes.

901. Suppose that extent of work was done? That is no very great amount of work. I take it that the alluvial holes were not sunk at all in connection with this application. Those holes were sunk in prospecting for alluvial on the flat. This lease was not taken up for the sake of those alluvial holes sunk down there. That was prospecting that might be done by any man to discover an alluvial lead. This lease was not taken up with any view of utilising those holes. The probability is that this lease was not taken up at all when those holes were sunk.

902. As a matter of fact, when you were at Captain's Flat you were generally very busy? Yes; I did not waste any time.

903. What was the nature of your occupation up there? It was in connection with the mining interest I held there.

904. *Mr. Abigail.*] You said in your previous examination that overtures were made to you by Mr. O'Sullivan to compromise with M'Neill. Was that Mr. O'Sullivan the Chairman of this Committee? Yes.

905. You also said, "Of course, in any claim against the Government for compensation, I and my party would be entitled to one-third of whatever compensation might be secured." Have you any grounds for thinking, from your knowledge of this case, that there is any fair claim for compensation? Certainly not, or I should have taken the ground long ago when the application was refused you.

906. In saying that you are perfectly conscious that the evidence you are now giving is against the third interest that you would have if compensation were given? Yes. My evidence and the action I have taken with this Committee are against my receiving any compensation in regard to this claim, if it is based upon the second application. 907.

- C. L. Garland, Esq., M.P.
27 June, 1888.
907. So that, as a matter of fact, your evidence to this Committee is against your own interest, and in what you conceive to be the interests of the State? Decidedly so.
908. *Chairman.*] You said just now that I made overtures to you; will you kindly state what those overtures were? You stated that McNeill claimed to have a right to this particular ground for which my brother had made application, and you suggested to me that we should admit McNeill as a partner in this application, so as to save any dispute.
909. I did not say that I was authorized by McNeill to make that suggestion? No.
910. You say, in point of fact, that the action you are now taking is in opposition to your pecuniary interest, inasmuch as it might prevent your getting a share in any compensation which might be granted? Yes, if compensation were granted in respect to this particular application.
911. At the same time you admit being a shareholder in the Vanderbilt mine? Not a very large shareholder.
912. Yet you are considerably interested? I have a substantial interest in the Company.
913. We will say, for the sake of argument, that McNeill and party succeeded in upsetting the title of the Vanderbilt Company in the Supreme Court. In that case, although you might get one-third of the compensation, you would lose a greater interest in the Vanderbilt mine? No, I do not think so.
914. But surely your interest in the Vanderbilt mine is a larger interest than your one-fourth of the one-third compensation would be? No; I do not think so. I had only one-fourteenth in the Vanderbilt Company before I sold the shares, an interest of one-fourth.
915. What do you suppose approximately is the amount which you would get as the holder of one-fourth of the one-third share of compensation? I cannot answer that question until I know what the amount of compensation is likely to be.
916. Then what makes you suppose that it would amount to a greater interest than your interest in the Vanderbilt mine? If the value of the Vanderbilt mine is obtained from the State I should have in the shape of compensation a larger share than I now have.
917. Do you think that if McNeill and party got just compensation they would get the full value of the Vanderbilt mine? I do not admit that.
918. What do you think is the amount of compensation that might be awarded? I think that if they are entitled to compensation at all they are entitled to full compensation.
919. *Mr. Abigail.*] Do you think they are entitled to compensation? Certainly not.
920. *Mr. Waldron.*] Take the Vanderbilt mine at the prospector's value, and suppose compensation to that extent were given, your interest, on your own confession, would be one-twelfth, whereas your interest in the Company is only one-fourteenth. But you have to add to your one-fourteenth interest in the Company one-seventh of the £10,000 cash? Just so.
921. Do you not think that your one-fourteenth interest in the Company, and one-seventh of the £10,000 cash is better than one-twelfth of the amount which would probably be awarded as compensation? I do not hold one-fourteenth.
922. But I am going back now to the time the Company was floated? It might have been then, but it would not be now.
923. But you have said that the mine is more valuable now than when the Company was floated? I think the development which has taken place since then would warrant the public in giving more for the mine than now than at that time.
924. If any compensation were given would it not to a certain extent damage the lease of the Vanderbilt mine? Certainly not; it is a Crown lease. If this lease were upset the present Vanderbilt Company would have a clear claim against the State for the full value of the property.
925. Would they not have a claim against you as the vendors to them? Certainly not; they took our lease for what it was worth.
926. *Chairman.*] You sold the lease believing it to be a good one? Yes.
927. And they bought it as such? Yes.
928. *Mr. Abigail.*] Have you any reason to doubt now that it is not a *bonâ fide* lease? If ever a lease was a *bonâ fide* lease I suppose this is one.
929. It was issued in the usual form, I suppose? Yes.
930. *Chairman.*] Admitting that the lease is perfectly sound still is there not a possibility that it might have been improperly granted to you? If there is anything improper in the granting of it it does not arise from any fault on the part of the applicants.
931. Granting that your application is good and *bonâ fide* as far as you are concerned, and that you got the lease properly signed and delivered, still there is a possibility that the State may have blundered? Under those circumstances the State would be responsible for its blunders.
932. *Mr. Abigail.*] Are you aware of any evidence being tendered in support of that contention? Of none whatever.
933. *Mr. Waldron.*] Are you not aware that evidence as to any person having, or claiming to have, a right, title, or interest, on the land, should be stated to the Department at the time of application? Yes.
934. Are you not aware that McNeill has sworn that he held land at the time of William Garland's application? Yes.
935. And you are also aware that William Garland said that no one claimed any interest in the land? Yes, and it might have been true at that time.

MESSRS. HUGH McNEILL AND PARTY—MINERAL LEASE AT CAPTAIN'S FLAT.

APPENDIX.

[To evidence of H. McNeill.]

A.

[Plan.]

[To evidence of E. Stephen.]

B 1.

Minute for the Governor and the Executive Council, recommending the approval of certain application for Mineral Leases.

Department of Mines, Sydney, 3 December, 1887.

The application for mineral leases of Crown Lands specified in the annexed Schedule are submitted for the approval of His Excellency the Governor and the Executive Council, in terms of the Mining Act, of 1874.

FRANCIS ABIGAIL.

SCHEDULE ANNEXED 10.

Tumut and Adelong Mining District.

No	Name.	Portion No.	Locality.	Area.	Period.	Date of Application.
87.5	Captain's Flat. W. Garland.	ML 81.	County Murray, parish Ballalaba.	20	15	25 April, 1887.

The Executive Council advise that the recommendation in each case herein set forth be approved and the necessary notices issued.—ALEX. C. BUDGE, Clerk of the Council. Min. 87-66, 13/12/87. Confirmed, 15/12/87. Approved.—CARRINGTON. *Gazette* notice, 23/12/87.

Tumut and Adelong Mining District.

Department of Mines.

APPLICATION No. 87-5, Captain's Flat, for mineral lease, submitted herewith for the consideration of the Honorable the Minister for Mines:—

The plan and description has been checked.

No objections appear to have been made.

The number of men proposed to be employed appears reasonable.

The time for commencing work appears to be reasonable.

Application No. 87-5, Captain's Flat, Tumut and Adelong Mining District approved of.

Minute for the Executive Council.

F. A.

APPLICATION No. 14, at Queaubeyan, for a mineral lease on a reserve:—

1. By whom application was received.—O. Willans, Warden's Clerk.

2. At what place.—Queaubeyan.

3. Date and hour when received.—16 February, 3 o'clock p.m.

4. Receipt for first year's rent, No. 14.—Date 16 February, 1885.

5. To whom receipt was issued.—Walter J. Lewis.

6. Date when notice to survey was sent to surveyor.—18 March, 1885. T.W.R., 10/4/85.

8. Names of objectors, and dates on which they lodged their objections.—Nil.

9. Dates of inquiry.—Nil.

Answer to question 11 not in accordance with the Regulations. Signature to declaration not witnessed.—J.R.N., 11/4/85. Will the Warden's Clerk please have omissions supplied.—W.C., 13/4/85. G.E.H. (for U.S.) Declaration witnessed. Do not know what Regulations are meant, surely not those gazetted 27th February, 1885, with reference to question 11, replied to on 16th February, 1885.—O. WILLANS, W.C., B.C., Queaubeyan, 15/4/85. Mines, 16/4/85. The attention of the W.C. should be called to clause 2 of the Regulations relating to mineral leases, Mining Act, 1874.—J.R.N., 17/6/85. Will the Warden's Clerk please supply the information required. G.E.H. (for U.S.), B.C., 18/4/85.

Referring to question 11 the Warden's Clerk had to send for Mr. Lewis. He states that the answer at first given was at the Board when here, and that when he went back he wrote as now given, and that this is on it at present.

Report as to whole surface required.—It is on a precipitous hill, three reefs running through it. Mr. Lewis could not say what part of the surface he would not want. This lease and No. 13 are on a limestone reserve of 80 acres, and where limestone has been taken out; it is not on the leases. It is difficult for the Warden's Clerk to make reports on surface ground without going to see it, which he cannot do; and as Mr. Warden Woore is in Sydney, and will be there for some time, perhaps Mr. Aldcorn might be asked to report.

O. WILLANS, Warden's Clerk, 20/4/85.

Mines, 1/5/85. Submitted, 2/5/85. Answer to question 11 amended: *vide* above report, *re* surface.—J.R.N. Submit in due course, assume that the whole of the surface is required.—H.W., 13/5/85.

Sir,

Department of Lands, Sydney, 12 November, 1887.

Referring to your letter of the 30th May last (No. 87-5,328), I am to inform you that the Secretary for Lands knows of no objection to the granting of Mr. William Garland's application (No. 5) for a mineral lease of 20 acres of land at Captain's Flat.

I have, &c.,

F. H. WILTON,
(For the Under Secretary.)

The Under Secretary for Mines.

All

All the papers in connection with the application herein referred to are at present with the Lands Department in connection with the site for proposed police paddock at Captain's Flat: in view of this decision perhaps the Lands Department should be asked to return the papers bearing No. 87-14,223—E.H.R., 15/11/87. Approved.—H.W., 15/11/87.

Papers now herewith, two or three documents bearing Mine's numbers have been detained by the Lands Department, but they are not now necessary, and will not interfere with the final action in the case.—E.H.R., 17/11/87.

The facts of the case are as follows:—

On the 9th August, 1884, M'Neill and party made application to lease this land. This application was refused 13th of June, 1885; the land applied for being within a reserve, and the applicants were thereupon informed they could apply again in terms of the Act 48 Vic. No. 10. Accordingly on the 29th June, 1885, they applied again, and, in dealing with this application, the District Surveyor reported that the application clashed with a mineral conditional purchase. This mineral conditional purchase was cancelled on the 27th February, 1886, for non-receipt of declaration and non-payment of instalments. In consequence of this clash M'Neill and party's second application was refused on the 12th November, 1886, and the applicants were informed (form of notice herewith) of the fact. From the 12th November, 1886, till the 25th April, 1887, no application for land was made, and during that period the land was open to the world. On the 25th April, 1887, W. Garland lodged an application for a lease of the land, and then it was discovered that the land had been surveyed for a police paddock. Consequently, action upon this application was delayed. The Lands Department have now stated that the Minister for Lands knows of no objection to the lease being granted; and it has been decided that action upon W. Garland's application may proceed. I do not see that M'Neill and party have any valid grounds of complaint, but I would recommend that before W. Garland's application be further dealt with the whole of the facts as stated herein be forwarded to M'Neill and party through Mr. O'Sullivan, M.P., and they be invited to say what objection, if any, they have to urge against the granting of a lease to W. Garland.—H.W., 18/11/87. Submitted.

If the above be a true statement of the facts of this case, I cannot see any reasons for delaying the lease of Garland, and desire that the same may be proceeded with in the usual manner until completed without further reference to M'Neill and party, who, according to what is here stated, have no rights in connection with this land.—F.A., 19/11/87.

Form referred to.

No. Department of Mines, Sydney, 188
I am directed by the Secretary for Mines to inform you that application for the
lease noted in the margin, has been refused.
I have the honor to be,
Your most obedient servant,
Under Secretary for Mines.

Sir, 35, Albion-st., Surry Hills, Sydney, 31 August, 1887.
On behalf of Mr. Hugh M'Neill, myself, and others, I hereby lodge a protest against the granting of mineral lease No. 5, Captain's Flat, near Braidwood, by William Garland or anyone else. We had made a prior application, and our money for survey fees and for rent had been accepted by the Mining Department. The last letter sent to us did not state that the obstacles raised against our application were removed, and there was nothing to show that any other application had been received or was likely to be entertained.

We beg to give notice to the Mining Department that, in the event of the said lease being granted to anyone else, we shall contest the same in the Supreme Court as we believe we have a prior claim to the land.

We have, &c.,
for H. M'NEILL & others,
WILLIAM EDWARDS.

The Hon. Francis Abigail, Minister for Mines.

I understand that the C.P. referred to in the minute on 87-7,559, is a M.C.P. If so, when was it made? Was the land within a Gold-field when it was made? Why was it forfeited?—H.W., 1/9/87. Chief Mining Surveyor, 1/9/87. Chief Draftsman, E.F.P., 1/9/87. Urgent. M.C.P. 82-198, Queanbeyan, referred to, is dated the 13th July, and when made was not within a Gold-field. The Molonglo Gold-field having been proclaimed 27th September, 1882, and lapsed for lease receipt of declaration and non-payment of instalments. Papers, C.S., 85-8,115 Dep., and Gazette 22/2/86.—P.D. (pro J. C.), 6/9/87. The Chief Mining Surveyor. There appears to be no reason why preparation of lease should be stayed.—G.E.H. (for U.S.) Submitted. Approved.—F. A., 16/9/87. Chief Draftsman.—E.F.P., 17/9/87. Diagrams have already been drawn and are with these papers.—P. D. (pro W.S.C.), 21/9/87. The Chief Clrk.—E.F.P., 21/9/87.

(87-5,328.)
Mineral lease application 87-5 at Captain's Flat, by William Garland, for portion M.L. 51, parish of Ballalaba, county of Murray (20 acres.)
Final action noted on papers 87-5,328.—W.S.C., 1/7/87.

Sir, Department of Lands, Sydney, 25 August, 1887.
I have the honor to inform you that your letter of 13th inst., on the subject mentioned hereunder, has been referred to Mr. District-Surveyor Betts for report.
I have, &c.,
R. H. DeLOW
(For the Under Secretary).

The Under Secretary for Mines.

Asking that present site for police paddock at Captain's Flat be not insisted on.

Sir, Department of Mines, Sydney, 30 July, 1887.
In accordance with your instructions contained in papers No. 8,529 herewith, I proceeded to Captain's Flat and examined the land referred to.

I find that a valuable silver lode passes through it. This lode has been opened upon by two shafts, one 62 feet deep. Average samples of the lode have yielded good assays. Besides this lode there are other ironstone and gossan lodes, and also large quartz-reefs which have not yet been opened up. I am decidedly of opinion that this land ought not to be alienated from the miner. I have also examined the land on which it is proposed to place the township, and find that on certain portions of it quartz reefs occur, some of them of considerable size.

I am of opinion that before any land be granted in the township, a map of the township should be submitted to this Department in order that certain portions be closed to purchase.

I have, &c.
WM. ANDERSON,
Geological Surveyor.

The Geological Surveyor-in-Charge.

The land referred to measured for a police paddock contains a valuable silver-bearing lode, which is being worked; it is therefore required for mining. It is requested that as the land selected for a township contains certain reefs that plan of the township be referred to this Department so that the portions which may be alienated may be indicated thereon.—C.S.W., 30/7/87. The Under Secretary.

The attention of the Lands Department may be invited to the reports herewith, and may be urged not to insist upon the land proposed as a police paddock being set apart for that purpose, as it would retard mining operations. The Department may be asked to refer to this Department before selling land in the township.—H.W., 30/7/87.

Submitted.—J.J., 3/8/87. The Under Secretary for Lands, B.C., 8/8/87. By letter.—H.W., 9/8/87. Lands, 13/8/87.

Mineral

Mineral Lease Regulations.—Schedule 2.
Form of Application.

Sir,
I hereby make application for a mineral lease of that piece or parcel of land situated at Captain's Flat, Molongie, containing 20 acres, of which I took possession on the 25th day of April, at the hour of 9 a.m. of the o'clock in the forenoon, for the purpose of mining thereon and therein for silver, under 48 Vic. No. 10, for a period of fifteen years, by erecting posts and cutting trenches at each angle thereof. The datum point is distant 100 yards in a south-east direction from police quarters and adjoining Mr. Osborn's 79a.

Captain's Flat, 25 April, 1887.

Notice of my having made this application will be given in accordance with the regulations in that behalf, and I hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such consents as I have obtained. I also hand herewith £5 being the first year's rent in advance of the said land, and the sum of present survey; accepted. Herchy acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £5 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted I shall and will commence mining operations upon or in connection with the demised land within one week from and after the granting thereof, and shall and will employ upon such land not less than two men during the first three years of the term thereby created, and not less than two men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases, to do so, execute, and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon I shall and will forfeit the said sum of £5 and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,
WILLIAM GARLAND,
Captain's Flat.

To the Honorable the Secretary for Mines, Sydney.

This application was received by me this 25th day of April, 1887, at the hour of 12 o'clock noon, and is numbered five.—THOS. CANNING, Warden's Clerk, Captain's Flat.

Questions to be answered by Applicants for Mineral Lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or Land Agent, as the case may be, shall hand to the applicant or applicants one of these forms, and shall require him or them, or his or their agent, to furnish answers in writing to the following questions, within one week after lodging the application. The statement, when complete, shall be signed in the presence of a Justice of the Peace or Government Officer by the person furnishing the answers:—

- 1. What was the date and hour of the day when you took possession of the land referred to in application No. 5? 25 April, 1887.
- 2. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes. If No. 2 be replied to in the affirmative, then 3, 4, and 5.
- 3. What was the diameter of the posts? 4 inches.
- 4. How high did they project above the surface when fixed in the ground? 3 feet.
- 5. What was the length of each arm of each trench? and what was the depth of each trench? 6 ft. long by 9 in. deep.
- 6. If a substitute for post or trench was used, describe it? Nil.
- 7. At which angle of the land is the datum post fixed? North-east corner.
- 8. Did you affix a board or metal plate to the datum post? Yes.
- 9. What was written or painted on such board or plate? Application for M.L.
- 10. Where did you post the notices, Schedule 1? Post Office, Captain's Flat, and Warden's Clerk's Office.
- 11. When did you post such notices? 25th April, 1887, at 12 noon.
- 12. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
- 13. Did you serve notice in the form of Schedule 1 upon every such person? and when? _____
- 14. Have you obtained the consent of every such person to the granting of the lease for which you apply? _____

I, William Garland, on behalf of self, do hereby declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me and are correctly taken down in writing. Witness to signature—

THOMAS CANNING, Warden's Clerk.
Chief Draftsman.—E.F.P., 7/5/87. Mr. Greville, 11/5/87. WILLIAM GARLAND,

Mineral Lease Regulations.—Schedule 4.

No. 4.0. 1887. Receipt for Rent.

RECEIVED this 25th day of April, 1887, the sum of Five pounds shillings, being the first year's rent in advance of Twenty acres of land at Captain's Flat, applied for by the undermentioned applicant under the Mineral Lease Regulations, for the purpose of mining for silver, Application No. 5.

THOMAS CANNING,
Warden's Clerk, Captain's Flat.

Name and Address of Applicant:—
WILLIAM GARLAND, Captain's Flat.

Mineral Lease Regulations.—Schedule 6.

Sir, Notice of Application and Deposit.

I have the honor to inform you that I have this day deposited with Warden's Clerk, at Captain's Flat, the sum of five pounds shillings, being the first year's rent in advance of 20 acres of land at Captain's Flat, for the purpose of mining for silver, and the sum of survey accepted shillings, being the fees for survey of the said land. The number of my application is 5.

Captain's Flat, 25 April, 1887.

I have, &c.,
WILLIAM GARLAND.

The Under Secretary for Mines, Sydney.

Submitted.—The land applied for apparently identical with portion mineral lease 81, parish of Ballalaba, county of Murray, includes portion 12, measured as a site for Police Station, the date of survey (9th March, 1887, being prior to the date of application 87-5). Herewith (see report on tracings herewith).—W.S., 25/5/87. The Chief Mining Surveyor.

Perhaps the Lands Department may be asked whether they have any objection to the lease being granted.—E.F.P., 26/5/87. The Under Secretary for Mines. Approved.—H.W., 26/5/87. Lands Department asked (tracing), 30/5/87. May go on but not to be finally approved by the Executive till the decision of the Lands Department is made known.—H.W., 3/6/87. Chief Draftsman.—E.F.P., 4/6/87. Examined, &c., diagrams drawn, 30/6/87. Dealt with. Diagrams herewith. See above.—W.S.C., 1/7/87.

B 2.

Minute for the Governor and the Executive Council recommending the approval of certain applications for mineral leases]
 Department of Mines, Sydney, 24 August, 1885.
 THE applications for mineral leases of Crown Lands specified in the annexed schedule are submitted for the approval of His
 Excellency the Governor and the Executive Council in terms of the Mining Act of 1874.

J. P. ABBOTT.

The Executive Council advise that the course recommended be approved.—ALEX. C. BUDGE, Clerk of the Council.
 Min. 85-27, 26/8/85. Confirmed 31/8/85.—A.L., 26/8/85.

SCHEDULE ALLUDED TO.
Tumut and Adelong Mining District.

No.	Name.	Portion No.	Locality.	Area.	Period.	Date of Application.

48 Vic., No. 10.

Department of Mines.

Tumut and Adelong Mining District.

APPLICATION No. 14, Queanbeyan for a mineral lease submitted herewith for the consideration of the Honorable the Minister
 for Mines :—

The plans and descriptions have been checked.
 No objections appear to have been made.
 The number of men proposed to be employed appears reasonable.
 The time for commencing work appears to be reasonable.
 Application No. 14, Queanbeyan, Tumut and Adelong Mining District approved of.
 Minute for the Executive Council, 24/8/85.

J. P. ABBOTT.

Sir,

Camp Eurobodalla, 6 July, 1885.

I have the honor to transmit herewith the plan of one portion of land containing 25 acres, numbered M.L. 117,
 in the parish of Bulladelah, in the county of Murray, applied for by W. J. Lewis and B. O. Holtermann, under the
 section of Mining Act, measured by me on 6th June, 1885, in accordance with instructions from Chief Mining Surveyor,
 dated 10th April, 1885.

Value of improvements, dam, £90.

Tracings have been forwarded to the D.S. and Mining Warden. This lease is situated within Q.R. 163, and
 encroaches partly on M.C.P. 82, Irving, 40 ac. I have, &c.,

T. WALTER RAYMOND,
 Mining Surveyor.

The Chief Mining Surveyor.

App. No. 85-14 at Queanbeyan herewith records, then to Mr. Neate and Chief Draftsman.—E.F.P., 13/7/85. 75
 per cent. advance paid 14 July, 1885, con.; Balance on 30 July, 1885. Mr. Onslow, 23/7/85.

The portion applied for within is included within an area applied for by B. O. Holtermann, February 2nd, 1885,
 under section 28, "Mining Act of 1874" (papers No. 85-2,451). This application was refused by Ministerial minute 9/7/85.
 Also within quarry reserve No. 163, notified 20/9/82. Dealt with for diagrams.—W.S.C., 30/7/85.

On a Reserve—Notice to make survey.

Mines, 10 April, 1885.

Sir,

An application for a mineral lease, particulars as per margin, having been lodged in this office, I request you
 will be good enough to survey, in accordance with the regulations relating to mineral leases, the area so applied for, and to
 furnish me at your earliest convenience with a plan and report. Your attention is particularly directed to the regulations
 for mineral leases numbered respectively 2, 3, 12, 13, and 14.

I have, &c.,
 EDWD. F. PITTMAN,
 Chief Mining Surveyor.

T. W. Raymond, Esq., Mining Surveyor, Sydney.

Copy of description of the land as given in the application :—On the east of Captain's Flat, Molonglo River, parish of
 Bullalaba, county of Murray, and on a reserve. The datum point is distant 40 ft., in an easterly direction, from the north-
 west corner of the area applied for. We require the whole of the surface.

Mining district, Tumut and Adelong; applicant's locality, east of Captain's Flat.

Application No. 14, at Queanbeyan.

Description.

20 acres, county of Murray, parish of Bullalaba, portion M.L. 117: Commencing at the south-west corner of portion
 M.L. 81, and bounded thence on the north by the south boundary of that portion, bearing east 14 chains and 14 links; on the
 east by a line bearing south 14 chains and 15 links; on the south by a line bearing west 14 chains and 14 links; and on the
 west by a line bearing north 14 chains and 15 links to the point of commencement.

Questions to be answered by Applicants to Lease.

WHEN receiving an Application to lease land for mining purposes, the Warden, Warden's Clerk, or an Agent, as the
 case may be, shall require the applicant or applicants, of his or their agent, to answer the following questions, and shall
 take down such answers in writing. The statement when complete, to be read over to, and signed by, the person furnishing
 the answers :—

- What was the date and hour of the day when you took possession of the land referred to in application No. 14 ?
10th day of February, 5 o'clock, p.m.
- Did you take possession by erecting posts and cutting trenches at each angle of the land ? Yes.
If No. 4 be replied to in the affirmative, then 5, 6, and 7.
- What was the diameter of the posts ? Three inches.
- How high did they project above the surface when fixed in the ground ? Over 3 feet.
- What was the length of each arm of each trench ? and what was the depth of each trench ? About 6 feet long
about 9 inches deep.
- If a substitute for post or trench was used, describe it ? Substitute for trench, in two corners being rocky (stones
laid).
- At which angle of the land is the datum post fixed ? Forty-feet easterly from the north-west corner.
- Did you affix a board or metal plate to the datum post ? A board.

WALTER J. LEWIS.

On a Reserve.

Mineral Lease Regulations.—Schedule 2.

Form of Application.

Sir,

Captain's Flat, Molonglo River, 16 February, 1885.

We hereby make application for a mineral lease for 20 years of that piece or parcel of land situated on the east of Captain's Flat, Molonglo River, parish of Ballalaba, county of Murray, and on a reserve, containing twenty acres, of which we took possession on the (10th) tenth day of February, at the hour of five o'clock in the afternoon, for the purpose of mining thereon and therein for silver, lead, and copper. Posts and L trenches at each angle thereof. The datum point is distant (40) forty feet in a easterly direction from the north-west corner of the area applied for.

Notice of our intention to make this application has been given in accordance with the regulations in that behalf, and we hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such consents as have obtained. We also hand herewith the sum of (£2) two pounds, being the first year's rent in advance of the said land, and the sum (£4) four pounds to cover the cost of survey.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of six pounds deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than four men during the first six months of the term thereby created, and not less than six men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases, to do so, execute, and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, we shall and will forfeit the said sum of six pounds, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled. The land applied for is on a reserve, and we require the whole of the surface.

We have &c.,

WALTER J. LEWIS,

Major's Creek, *via* Braidwood.

BERNARD O. HOLTERMANN,

674, George-street, Sydney.

To the Honorable the Secretary for Mines, Sydney.

This application was received by me this 16th day of February, 1885, at the hour of 3 o'clock in the afternoon, and is numbered 14.

O. WILLANS.

Mineral Lease Regulations.—Schedule 6.

Notice of Application and Deposit.

Sir,

Queanbeyan, 16 February.

I have the honor to inform you that I have this day deposited with the Warden's Clerk at Queanbeyan the sum of £2, being the first year's rent in advance of 20 acres of land at Captain's Flat, for the purpose of mining for silver and copper, and the sum of £4, being the fees for survey of the said land. The number of my application is 14.

I have, &c.,

WALTER J. LEWIS

(For self and B. O. HOLTERMANN).

The Under Secretary for Mines, Sydney.

If the land herein referred to is within a reserve, you will please insert such word on the notice in accordance with instructions forwarded to you in November last, and return it.—T.C.B. (for U.S.), B.C., 19/2/85. The Warden's Clerk, Queanbeyan. The Warden's Clerk begs to state this is not an application for a lease, and is not properly a letter I should have anything to do with. The noting of a reserve will be found on the applications as directed by your memo. of 27 October last, and have been carried out since. This is, of course, on a reserve.—O. WILLANS, Warden's Clerk, 20/2/85, Queanbeyan. The Under Secretary for Mines.

Sir,

674, George-street, Sydney, 24 March, 1885.

I have to request that you will kindly receive this as a special application for the immediate survey and issue of a mineral lease of 20 acres, situate at Captain's Flat, Molonglo River, and applied for on the 16th February, 1885, at Queanbeyan, by myself and W. J. Lewis, as we are anxious to test the value of the same, prior to the removal of machinery from an adjoining locality, which has hitherto proved a failure. The number of my application is 14.

I have, &c.,

B. O. HOLTERMANN & Co.

The Honorable The Minister for Mines.

Application not received.—E.W.R., 27/3/85. The Warden's Clerk should be asked to forward the application for inspection, and to furnish his weekly returns of applications received during the end of month. Submitted.—R.N., 28/3/85. Warden's Clerk asked, 7/4/85. Approved.—G.E.H. (for U.S.), 30/3/85.

[Handed in by Mr. Waldron.]

C.

PROSECUTOR of the Vanderbilt Silver-mining Company (limited), Captain's Flat, N.S.W.

To be registered under "The Companies Statute, 1864."

Capital, £100,000, in 100,000 shares of £1 each.

50,000 shares, paid up to 15s., are offered to the public at 4s. on application and 4s. on allotment; the remaining 50,000 shares are issued to the vendors as paid up to 15s., and also the sum of £10,000 in cash as payment for the property. The balance, £10,000, goes to the credit of the Company, less cost of printing, legal expenses, &c., in connection with the formation of the Company.

Brokers :

Chapman & Wakley, Melbourne,	Horn & Co., Adelaide,
R. M. Turner, Melbourne,	Keats & Temple, Adelaide.

THIS Company is formed to acquire and work for gold, silver, and lead, leases Nos. 1, 2, 4, 14, 19, 20, 21, 22, and 84, situate on the Molonglo gold-field (Captain's Flat), in the parishes of Bullongong and Ballallaba, Colony of New South Wales, and containing in all about 67 acres 2 roods; and also mineral lots Nos. 36, 37, 81, and 117, containing about 120 acres, together with a fifteen-head stamp mill now erected thereon.

The above properties have been carefully examined by mining experts engaged by the Provisional Directors, and highly satisfactory reports have been received, which can be seen on application to the Secretary.

It is not considered necessary to publish further particulars, beyond stating that active operations will at once be commenced under first-class management; and as the financial position of the Company will be a sound one, good results are confidently looked for within a reasonable time.

NOTE.—The above is printed for public information only, as all the shares are allotted.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

**MESSRS. HUGH M'NEILL AND PARTY—MINERAL LEASE
AT CAPTAIN'S FLAT.**

(PETITION FROM HUGH M'NEILL AND PARTY TO BE HEARD BY COUNSEL OR SOLICITOR BEFORE
SELECT COMMITTEE ON.)

Received by the Legislative Assembly, 5 June, 1888.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of Hugh M'Neill, William Edwards, and John Huxham Blatchford, of
Captain's Flat, in the said Colony,—

HUMBLY SHOWETH:—

1. That on the twenty-fourth day of April, one thousand eight hundred and eighty-eight, a Select Committee of your Honorable House was duly appointed by your Honorable House, with power to send for persons and papers, to inquire into and report upon the claims (if any) of Hugh M'Neill and party to compensation for losses sustained through the neglect of the Mining Department, to issue them a mineral lease at Captain's Flat.

2. That your Petitioners are the persons referred to as Hugh M'Neill and party.

3. That your Petitioners have been in possession of twenty acres of land at Captain's Flat aforesaid, since the eleventh day of August, one thousand eight hundred and eighty-four, on which date your Petitioners applied for a mineral lease of the said land, which application was refused.

4. That subsequently, namely, on the twenty-ninth day of January, one thousand eight hundred and eighty-five, your Petitioners again applied for a mineral lease of the said land, which application has also been refused.

5. Your Petitioners therefore humbly pray as follows:—That your Petitioners may be heard by Counsel or Solicitor before the said Select Committee, with liberty to adduce such evidence as they may be advised concerning the subject matter of the said inquiry in the interest of your Petitioners, and to examine and cross-examine such witnesses as may give evidence at such inquiry.

And your Petitioners, as in duty bound, will ever pray.

Dated at Sydney, this 4th day of June, 1888.

[3 signatures.]

1887-8.

NEW SOUTH WALES.

MINING ACT FURTHER AMENDMENT ACT OF 1884.
(REGULATIONS RELATING TO MINING LEASES.)

Presented to Parliament pursuant to Act 37 Vic. No. 13.

Department of Mines,
Sydney, 2nd May, 1888.

NOTICE is hereby given that the following Regulations relating to Mining Leases under the Mining Act Further Amendment Act of 1884 are published for general information.

FRANCIS ABIGAIL.

REGULATIONS RELATING TO MINING
LEASES UNDER THE MINING ACT
FURTHER AMENDMENT ACT OF 1884.

WHEREAS, by the Mining Act Further Amendment Act of 1884, the Governor is empowered to make Regulations for certain purposes, to be dealt with as Regulations made by the Governor under the Principal Act: Now, therefore, His Excellency the Governor, by and with the advice of the Executive Council, doth make the Regulations following, that is to say:—

1. The holder or holders of any permit or authority granted under the Principal Act, and still in force, may make application in the form in the Schedule A hereto for the conversion of such permit or authority into a lease.

2. Upon receipt in the Department of Mines of such application, together with a sum of money equal to one year's rent of the land, and (if required) the fee for survey of the land, the Governor may, subject to the rents or royalties, or both, and to the covenants and conditions hereinafter prescribed, and to such special covenants and conditions as shall in certain cases appear to the Governor necessary, grant a lease of the land for the term applied for, or subject to such modifications as shall appear proper.

3. To obtain a lease of land referred to in section 2 of the said Act, not included in any permit or authority, the mode of taking possession, giving notice, and lodging application shall, where practicable, be the same as prescribed in the Regulations made under the Principal Act, relating respectively to Gold-mining and Mineral Leases; and such Regulations shall, except as otherwise expressly provided

in these Regulations, apply to all other matters relating to applications and objections thereto and to leases,—but the restrictions in such Regulations as to the form and dimensions of the land and the position of the boundary lines in regard to any vein, reef, or lode, shall not apply. Where, by reason of the land being under water, or from any other sufficient cause, possession cannot be taken, the applicant shall attach to his application a plan or sketch of the land applied for, and shall, in the notices and application, give such description as will lead to the ready identification thereof.

4. The Regulations made under the Principal Act relating to gold-mining shall, except as regards the form of application, the area, and the dimensions of the land, and the position of the boundaries in relation to any vein, reef, or lode, or as otherwise provided in these Regulations, apply to any Special Lease for gold-mining purposes. Every application for a Special Lease shall be in the form in the Schedule B hereto, and the extent of land demised by any such lease shall be in proportion to the number of men to be employed, and the capital to be expended in the purchase and erection of machinery, or the construction of costly works for the purpose of working the land, not exceeding 2 acres for every man employed, and 1 acre additional for every £200 to be expended in machinery, dams, or races, provided that the area demised by any one lease shall not exceed 100 acres.

5. Upon approval by the Governor of any application for a special lease, notice shall be published in the Gazette promising a lease of the land applied for, or so much thereof as may be available, upon condition that within a period to be named in such

notice, such a sum of money as may be approved by the Governor shall be expended in the purchase and erection of machinery or in the construction of works said in the application to be necessary, and upon compliance within such period or such extension thereof as may upon cause shown be approved by the Secretary for Mines, a special lease of the land aforesaid shall forthwith issue to the applicant; but upon the applicant failing to comply with the conditions aforesaid, the Governor may revoke the promise of lease and refuse the application, or may reduce the area of the land applied for to the dimensions proscribed for an ordinary lease.

6. Every lease granted under the Mining Act Further Amendment Act of 1884, shall be subject to the rents, or rents and royalties, and conditions following:—

7. Leases for mining for minerals, other than coal or gold, including the right to occupy the surface or some portion thereof, five shillings per acre per annum; (when no right to occupy any portion of the surface can be granted the Secretary for Mines may reduce the rent to two shillings and sixpence per acre per annum); for land wholly under water, one shilling and sixpence per acre per annum. Leases for coal-mining, including the right to occupy the surface or some portion thereof, two shillings per acre per annum; without the right to occupy any portion of the surface, one shilling and sixpence per acre per annum; for land wholly under water, one shilling per acre per annum. Leases for gold-mining, one pound per acre per annum. In respect of every ton of coal raised from the land demised, the sum of sixpence shall be paid as royalty: Provided that if the royalty payable in respect of the coal raised during any one year exceeds the rent paid for such year, the amount paid as rent may be deducted from the sum payable as royalty; but if the royalty as aforesaid in any one year amounts to less than the rent paid for such year, the lessee shall not for such year be required to pay royalty.

8. Upon or in connection with the land demised by any such lease, work shall be commenced within such period, and be carried on by such a number of men, in such manner, within such limits, and subject to such supervision as the Governor may in each case direct: Provided that the Secretary for Mines may at any time, and for any period, authorize the suspension, wholly or in part, of work upon or in connection with any such lease.

9. The term of any such lease shall be that named in the application, or such shorter term as shall be approved by the Governor, not being less than one year; and such term shall commence upon, and be computed from, the date on which the Governor shall approve of the granting of the lease.

10. The rents reserved under any such lease shall be paid in advance to the Colonial Treasurer, on or before the first day of each year of the term.

11. The royalties reserved under any such lease shall, subject to the deduction of rent as aforesaid, be paid to the Colonial Treasurer at the expiration of each year, or within one month thereafter, and with each such payment a statement shall be furnished, under the hand of the lessees, or some one of them, or of the manager of the mine, setting out the quantity and value of mineral raised from the land demised, and the accuracy of every such statement shall be verified by the statutory declaration of the person making it. The lessees or lessee shall keep a proper book, in which shall be entered the quantity of coal raised each day from the demised land, and such book shall at all times be open to the inspection of any officer of the Department of Mines.

12. If any lessee shall fail to execute his lease when called upon to do so, or shall fail to pay the rent or royalty reserved under his lease within the prescribed time, or shall fail to keep a proper record

of the quantity and value of the coal raised, or shall refuse to allow such record to be inspected by any officer of the Department of Mines, or shall fail to observe and perform the other conditions or covenants of his lease, or in the case of a special lease shall fail to expend in the purchase and erection of machinery, or the construction of dams, races, or other costly works, the amount of money proposed in the application to be so expended, he shall forfeit his right to such lease, and the Governor may thereupon, or at any time thereafter, cancel such lease, and upon publication in the Gazette of such cancellation the lease shall be absolutely void.

13. From and after the publication of these Regulations, the Regulations relating to Mining Leases, under the Mining Act Further Amendment Act, 1884, made by the Governor on the 16th day of March, 1886, and published in the Gazette, No. 164, on the 18th day of March, 1886, are hereby repealed; but such repeal shall not affect any proceeding, matter, or thing lawfully taken, done, commenced, or rights acquired before these Regulations came into operation; nevertheless, any application made under the repealed Regulations may be dealt with under these Regulations, and the holders of any lease granted under the repealed Regulations may surrender such lease with a view to obtain a lease of the same land under these Regulations, and upon such surrender being approved by the Governor, a lease in terms of these Regulations may forthwith issue to the holders of the surrendered lease.

SCHEDULE A.

To the Honorable the Secretary for Mines,
being the holder of a _____ granted
under section _____ of the Mining Act, 1874, to mine for _____
all that piece or parcel of land being _____
and containing _____ acres, more or less, do hereby apply for a
lease of the said land for a period of _____ years, with the right
to occupy _____ acres of the surface thereof in such position
as may be approved of, and _____ undertake if such lease
be granted to execute the same when called upon to do so, and
within _____ days after the granting of such lease to commence
work thereon [or upon adjoining land proposed to be worked
in connection therewith, and to extend the underground works
into such land with the utmost possible speed] and thereafter
to employ in mining upon [or under] such land _____ men,
and to observe and perform all the covenants and conditions
contained in such lease; and _____ herewith tender
the sum of _____ being the first year's rent of such land,
and the fee for survey of the land, and _____ agree to
forfeit such rent if _____ fail to accept and execute such
lease when called upon to do so.
Dated at _____ this _____ day of _____

Received at the Department of Mines, Sydney; this
day of _____ 188 _____, at _____ o'clock in the _____ noon.
Registrar.

SCHEDULE B.

To the Honorable the Secretary for Mines,
hereby make application for a Special Lease for
_____ years, of all that piece of land, being _____
containing _____ acres for the purpose of gold-mining,
possession of which was taken on the _____ day of
188 _____, at the hour of _____ o'clock, m. The deposit proposed
to be worked consists of _____ and by reason of _____
requires for its proper development the
erection or construction of the following machinery or works:—

the estimated cost of which is £ _____, and _____ propose to
employ upon or in connection with such land _____ men; and
herewith tender the sum of _____, being the first
year's rent of such land and the fee for the survey of the land,
and _____ agree, upon notification of approval of this applica-
tion, to expend the sum of _____ in the purchase and erection
of the machinery, or the construction of the works aforesaid,
within _____ of notice of such approval, and to accept and
execute the lease when ready, or failing therein to forfeit the
rent deposited herewith.
Dated at _____ this _____ day of _____ 188 _____.

Received this _____ day of _____ 188 _____, at the hour
of _____ in the _____ noon.
No. of application _____ Mining Registrar.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINING ON CHURCH AND SCHOOL LANDS BILL.

(MESSAGE No. 10.)

Ordered by the Legislative Assembly to be printed, 18 November, 1887.

CARRINGTON,
Governor.

Message No. 10.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to make better provision for Mining on Church and School Lands.

Government House, Sydney,
18th November, 1887.

1887.

(THIRD SESSION.)

NEW SOUTH WALES.

DEPARTMENT OF MINES.

(ANNUAL REPORT OF THE STOCK BRANCH, 1886.)

Presented to Parliament by Command.

TO THE HONORABLE FRANCIS ABIGAIL, ESQ., M.P., MINISTER FOR MINES.

Sir,

In submitting the Annual Report of the Chief Inspector of Stock for the year 1886, I have to express regret that, in consequence of the Branch being short-handed, and the pressure of work in the Government Printing Office, it could not be presented earlier; but the Progress Report furnished on the 10th of February last supplied such information as rendered the issue of this Report perhaps less urgent.

The return of horses for 1886 shows an increase for the year of 16,966, and a decrease of 5,040, as compared with the number at the end of the previous decennial period. The highest number—namely, 398,577—was reached in 1881; but in 1883 the number had fallen to 326,964. Since then there has been a steady increase.

The return of cattle for 1886 shows an increase for the year of 50,529, and a decrease, as compared with the number at the end of the previous decennial period, of 1,763,169. During the past ten years, with slight fluctuations, there was a steady decline, the lowest number being reached in 1885. In fact, in 1885 there were fewer cattle than at any time during the past twenty-six years.

The return of sheep for 1886 shows an increase for the year of 1,348,398. As compared with the number at the end of the previous decennial period, the number in 1886 shows an increase of 13,899,549. During the past twenty-six years the number of sheep has increased steadily from 6,119,169 in 1861 to 39,169,304 in 1886; while at the commencement of the present decennial period the number was only 21,521,662.

The total clip of wool for 1886 exceeds that of 1885 by 5,138,222 lb. Notwithstanding this increase, the quantity sent to Sydney in 1886 was less by 3,515,075 lb. than the quantity so sent in 1885; while the quantity sent to Melbourne shows an increase in 1886 of 4,431,839 lb., and to Adelaide of 5,047,323 lb.

The appendices to the Report contain interesting and important information, well deserving of careful consideration.

I have, &c.,

HARRIE WOOD,

Under Secretary.

Department of Mines,

Sydney, 1st September, 1887.

6—A

The

The Chief Inspector of Stock to The Under Secretary for Mines.

Sir,

Department of Mines, Stock Branch, Sydney, 1 July, 1887.

On the 10th February last I submitted a Progress Report for the year ending 31st December, 1886, giving the approximate number of the Horses, Cattle, and Sheep then in the colony; and I have now the honor to submit for your consideration my complete Report for that year on the working of this Branch, which is as usual based very much upon Inspectors' estimates, owners still showing very little inclination to furnish data. It will be seen that the actual numbers of Cattle and Sheep in the complete Report exceed those slightly in the Progress Report.

ALEX. BRUCE,
Chief Inspector of Stock.

I.—INSPECTORS AND THEIR WORK.

1. *The Inspectors.*

There are now forty-five Inspectors, having charge of fifty-nine Sheep Districts.

2. *The Inspections made.*

The inspections made during the year were as follows:—

Of Stock	12,844
Of Reserves	3,448
Of Pounds	442
Of Pastures	6,947
Of Dogs (imported)	921
Of Pigs (imported from the other colonies)	305

Total 24,907

This would give an average of 554 inspections made by each of the forty-five Inspectors.

3. *Horses, Cattle, and Sheep inspected.*

Horses.—The number of horses inspected during the year was 70,612, by forty-two Inspectors.

Cattle.—The number of cattle inspected during the year was 706,037.

Sheep.—The number of sheep inspected during the year was 18,550,361. This is a decrease of 5,472,570 on last year's inspection. The decrease arises through their having been very few sheep travelling for feed during the year.

4. *Inspections at Homebush Sale-yards.*

During the year bi-weekly visits to the Homebush Yards have been made by the Sydney Inspector, with the view to inspecting the stock yarded. The total number of stock submitted to auction was as follows:—Cattle, 88,214 head; sheep, 1,187,211 head, or a weekly average of 1,697 cattle and 22,830 sheep.

5. *Distance travelled by Inspectors during the year on duty.*

The total number of miles travelled by forty-five Inspectors was 181,356, or an average of 4,030 each per annum, being a slight decrease on last year.

6. *Prosecutions and Convictions.*

The prosecutions instituted during the past year were as follows:—

Under Sheep Act	133
„ Lands Act, trespass on reserves	1
„ Brands Act	7
„ Pastures Act	586
„ Public Watering Places Act	18
Total	745

This shows a very large decrease in the prosecutions under the Pastures Acts, and is accounted for by stockowners becoming better acquainted with the provisions of the Act and its enforcement by Inspectors.

The number of convictions were:—

Under Sheep Act	118
„ Lands Act	1
„ Brands Act	7
„ Pastures Act	398
„ Public Watering Places Act	12
Total	536

II.—HORSES.

1. *The Number.*

By returns the number of horses in the Colony during the twenty-six years previous to and including 1886 was as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	251,497	1870	280,304	1879	360,038
1862	233,220	1871	337,597	1880	395,984
1863	273,389	1872	304,100	1881	398,577
1864	262,554	1873	328,408	1882	328,026
1865	284,567	1874	334,462	1883	326,964
1866	282,587	1875	357,697	1884	337,172
1867	278,437	1876	366,703	1885	344,697
1868	280,201	1877	328,150	1886	361,663
1869	280,818	1878	386,468		

This shows an increase of 16,966 during the year, and is due to the favourable season. The number of horses in each Sheep District will be found in Appendix A.

2. *The different Breeds.*

Draught.—The number returned under this head is ordinary, 90,509; thoroughbred, 15,473; total, 105,982.

Light Harness.—The number returned as ordinary is 87,820; thoroughbred, 12,294; total, 100,114.

Saddle.—The number of ordinary is given as 135,439; thoroughbred, 20,128; total, 155,567.

3. *Horses introduced.*

From other districts.—The number of stud horses introduced was 205, and stud mares, 286; ordinary mares, 1,774; and horses, 2,790.

From other Colonies.—The number introduced by sea was—stud horses, 86; stud mares, 92; and ordinary horses and mares, 1,188.

The number introduced overland was 85 stud mares and 65 stud horses; and ordinary, 117 mares and 102 horses.

From England and other Countries.—The numbers introduced under this head were 4 stud mares and 27 stud horses.

4. *Horses fit for Sale.*

The number returned as being fit for market during the present year is 17,979 draught, 16,422 light harness, and 26,380 saddle.

Of this number it is estimated that 14,877 are suited for the India and China Markets.

There were sent from five districts 690 horses to be shipped from Sydney, and from eight districts 847 horses to Melbourne for foreign countries.

5. *Improvement.*

In thirty eight districts the horses are said to be improving. The principal reasons given are—introduction of superior stud horses, breeding from good mares, more attention to the rules of breeding, and better prices obtainable. In seventeen districts the breed of horses is, so far as regards improvement, reported as stationary, and in four districts deteriorating; the reasons given being too much light blood introduced, breeding from weedy mares for racing purposes, and drought.

6. *Diseases in Horses.*

During the past year several cases of disease amongst horses were reported and investigated by the Government Veterinarian; amongst others, a disease termed "Australian Stringhalt," and chronic poisoning at Coonong, through the use of musty ensilage, particulars of which are detailed in Appendices B and C.

Besides this the only diseases reported were mild attacks of strangles in twelve districts, and a few cases of inflammation, worms, and colic.

In thirty-nine districts the horses are reported to have been entirely free from disease.

7. *Losses in Horses.*

The losses in horses from drought, starvation, wire in chaff, and other accidents as reported amount to 2,482. This must be considerably under-estimated.

8. *Wild Horses.*

The number of wild horses in the Colony is estimated at 7,443, which shows a decrease on the previous year of 2,179.

9. *Tax on Entire Horses.*

At the Rabbit Conference, held in Sydney in June 1886, the following resolution was carried on the motion of Mr. W. H. Walker, delegate for Tenterfield, viz.:—"That in view of the falling off in quality of the Australian horse, a tax of £5 be placed on entire horses over one year of age, and that the funds raised by this tax be distributed among the agricultural societies for prizes for horses, as the Government think fit." With the view of obtaining an expression of opinion from the various Pastures and Stock Protection Boards throughout the Colony, the then Secretary for Mines caused a circular letter (with copy resolution attached), dated 30th June, 1886, to be forwarded to the Chairman of each Board, with the request that it be submitted to the Board for consideration, and the decision arrived at to be intimated to this Department.

Out of fifty-nine Boards written to, forty have forwarded their opinions. Of this number twenty-three Boards approved of the tax suggested, some, however, consider the age should be eighteen months, while many are of opinion that it should be two years. One Board recommends that the tax should be increased to £10, so as to weed out inferior stallions. Two Boards only suggest a tax lower than that fixed in resolution.

Fourteen Boards are opposed to a tax; some as they consider it an interference with the liberty of the people, others that it would be a tax on the poor man's horse, others that it is not within the province of the Board, and others that the improvement of horses should be left to private enterprise.

One Board recommends the consideration of the resolution by the various Agricultural and Pastoral Societies; one Board considers the tax unnecessary so far as that particular district is concerned; the members of one Board are equally divided; and two Boards decline to express an opinion.

III.—CATTLE.

1. *Number.*

The returns of cattle in the Colony during the twenty-six years ending 31st December, 1886, stand as follows:—

Year.	No.	Year.	No.
1861	2,271,923	1874	2,856,699
1862	2,620,383	1875	3,134,086
1863	2,032,522	1876	3,131,013
1864	1,924,119	1877	2,746,385
1865	1,961,905	1878	2,771,583
1866	1,771,809	1879	2,914,210
1867	1,728,427	1880	2,580,040
1868	1,761,411	1881	2,597,343
1869	1,795,904	1882	1,859,985
1870	2,195,096	1883	1,640,753
1871	2,014,888	1884	1,425,130
1872	2,287,660	1885	1,317,315
1873	3,794,327	1886	1,367,844

This shows an increase during the year of 50,529, and a decrease as compared with the year 1876 of 1,763,169.

The number of cattle in the several sheep districts will be found in Appendix A.

2. *Different Breeds.*

Shorthorns.—The number of pure-bred and stud Shorthorns is estimated at 34,819; and ordinary 526,099; total, 560,918.

Herefords.—Pure and stud, 15,430; ordinary, 151,801; total, 167,231.

Devon.—Pure and stud, 5,699; ordinary, 43,138; total, 48,837.

Black-polled.—Pure and stud, 368; ordinary, 719; total, 1,087.

Ayrshire.—Pure and stud, 942; ordinary, 2,595; total, 3,537.

Alderneys.—Pure and stud, 298; ordinary, 175; total, 473.

Crosses.—First crosses, 3,485; ordinary, 582,276; total, 585,761. The crosses are estimated as follows:—Shorthorn and Hereford, 220,463; Shorthorn and Devon, 75,618; Hereford and Devon, 34,533; Shorthorn and Black-polled, 2,560; Ayrshire and Shorthorn, 4,000; the balance, 248,247 being unrecognizable.

3. *Stock introduced.*

From other Districts.—Stud bulls, 218; stud cows, 764; total, 982; ordinary cattle, 53,267.

From other Colonies by Sea.—Stud bulls, 58; stud cows, 113; total, 171; ordinary cattle, 3,723.

Overland.—Stud bulls, 57; stud cows, 1,284; ordinary cattle, 68,172; total, 69,513.

From England and other Countries.—Nil. Importation prohibited.

4. *Increase and Decrease of Cattle.*

In thirty-three districts the cattle are reported to be increasing, for which the following reasons are given:—(1.) The good season. (2.) Considerable numbers of store cattle have been introduced from Queensland. (3.) More owners have taken to breeding cattle, and are selling off their sheep to replace them with cattle.

5. *The "Cast" of Fat and Store Cattle.*

The estimated "cast" of fat cattle to be sent to market during the coming year is 213,279, and store cattle, 139,269. From fifteen districts the fat cattle are principally sent to Melbourne; from three districts they are principally sent to Adelaide; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, and Tamworth.

6. *How kept.*

The number of cattle kept wholly in paddocks is returned as 937,595; on open runs, 274,596; and the balance, 155,653, are depastured both ways.

7. *Improvement and Deterioration.*

In thirty-four districts the cattle are said to be improving; in twenty-one districts they are stationary; and in four districts deteriorating. The principal reasons given for the improvement are—introduction of good stud stock; more attention and care in selection; also, in culling and keeping in paddocks. The reasons given for deterioration are—inattention to breeding, many owners breeding from all sorts without respect to breed or quality.

8. *Their Diseases and Ailments (Pleuro-Pneumonia).*

In twenty-eight districts, on 177 runs, the cattle were reported as affected slightly with pleuro-pneumonia; and in thirty-one districts the cattle are reported as being free from that disease.

In twenty-five of the infected districts the disease was caused by contagion, from infected travelling stock from Queensland; in two districts its cause could not be traced, and in one district the cause not known.

From twenty-seven districts it is reported that inoculation was successfully performed on 117 out of 119 holdings or stations.

On the two holdings where the inoculation was unsuccessful the failure is attributed to bad virus, for a second operation proved successful.

In every case the result was satisfactory, the disease leaving the herds.

The number of owners in favour of inoculation is given as 4,592; against 1,106; undecided, 2,215; and 6,610 opinions not known.

The

The number of owners in favour of compulsory inoculation in the case of infected herds is given as 3,645; against it, 1,682; undecided, 2,066; and 6,628 opinions not known.

The Inspectors' reports show that the practice of inoculation for pleuro-pneumonia is becoming more and more general, and with very favourable results.

Having recently had occasion to obtain information with respect to the preservation of virus for inoculation, a circular was addressed to a few of the owners who have the largest dealings in cattle in the Colony; and in doing so the opportunity was taken to ask them to give their experience in inoculation. The questions asked, together with their answers, will be found in Appendix D to this report.

It is scarcely necessary to add that they thoroughly confirm the previous experience of this Colony; and it is inconceivable how any one, who is not utterly prejudiced against inoculation, can for a moment dispute its efficacy in the face of the statements here made by owners of such extensive experience as the gentlemen referred to, and who have been practising inoculation for upwards of twenty years,—for that would be tantamount to saying that our most intelligent and successful stock-owners are guilty of the absurdity of regularly going to the trouble, risk, and expense of performing an operation which is utterly useless—a conclusion to which, it is submitted, no sensible person will come.

But this is not all which can be adduced in support of inoculation.

It was stated at the Intercolonial Stock Conference held in Sydney, in September and October last, by Mr. John M'Kenzie, M.H.R., Otago, one of the delegates from New Zealand, that New Zealand having had to import cattle from Australia introduced pleuro into Otago, in the end of 1863, and that it existed there for two or three years; but that with careful regulations and inoculation they had been able to stamp it out, and that there was not a case of that disease now in New Zealand. (See page 93 of the Report of the Proceedings of the Conference.)

This is information of the greatest value, and ought, with the other confirmatory evidence, to lead to the introduction and passing of a law making inoculation compulsory in the case of all cattle infected or suspected of being infected with pleuro-pneumonia, and the slaughter of all those actually diseased.

9. Losses from Disease and Drought.

The number of cattle reported to have died from Cumberland disease is 298; from blackleg, 12; from swelling in jaw or throat, 1,130; from ophthalmia, 527; from tuberculosis, 490; from red-water, 500; starvation, 500; and poisonous plants, 159; total, 3,616.

Tuberculosis.

This disease is attracting more attention year by year as its subtle character and incurable nature are better understood. It has in several instances been detected at the Homebush sale-yards, and brought under the notice of the police, who acting under instructions by the Board of Health, have seen that the cattle were destroyed as unfit for human food. At the Abattoirs too, cattle affected with this disease have been condemned, and the meat destroyed. As this disease is hereditary, and apt to be confounded with pleuro-pneumonia, and even may be communicated to the human subject by inoculation as well as by contact from one animal to another, it is very desirable that it should be stamped out by slaughter of all affected animals.

IV.—SHEEP.

1. The Number.

The number of sheep in the Colony during the twenty-six years ending 31st December, 1886, stands as follows:—

1861	6,119,169	1874	22,797,416
1862	6,550,896	1875	25,353,924
1863	7,169,126	1876	25,269,755
1864	9,082,463	1877	21,521,662
1865	9,650,106	1878	25,479,484
1866	11,644,593	1879	30,062,910
1867	15,066,377	1880	35,398,121
1868	16,000,090	1881	36,591,946
1869	16,848,217	1882	36,114,814
1870	16,218,825	1883	37,915,510
1871	16,766,012	1884	31,660,321
1872	17,873,696	1885	37,820,906
1873	18,990,595	1886	39,109,304

The number of sheep in the several sheep districts will be found in Appendix A.

Increase and Decrease.

This shows an increase of 1,348,398, which is attributable mainly to the favourable season, and good lambing in most of the districts. During the year 672,903 sheep crossed the border into Queensland.

2. *The different Breeds.*

3. Sheep introduced and imported.

- (1.) From other districts in this Colony.—Stud, 5,292; ordinary 1,164,449; total, 1,169,741.
- (2.) Overland from other Colonies.—Stud, 18,487; ordinary, 266,471; total, 284,958.
- (3.) By sea from other Colonies.—Stud, 2,199; ordinary, 44; total, 2,243.
- (4.) From England and Countries and Colonies other than Australian.—Nil.—Importation prohibited.

Number of sheep passed through quarantine and dressed.—During the year 1,500 stud sheep from the other Colonies (nearly all of which were from Tasmania) passed through quarantine and were dressed. The sheep from the inland districts in this Colony, through having been in contact with the imported sheep at the annual sales, were also dipped. The reports received from the various inspectors, into whose districts the sheep went after being dipped, show that the dipping has had no ill effects on the sheep either as to health or condition of wool. In one case only out of so large a number is it reported that a ewe died, and there is nothing to show that death was caused from the effects of the dip. For particulars of sales see Appendix E.

4. Long-woolled sheep.

Amongst the long-woolled sheep the Lincoln is said, in a large majority of the districts, to give the best returns in wool and in weight of mutton, the cross-bred sheep being second.

5. The "Cast" of Fat and Store Sheep.

The annual "cast" of fat sheep for the ensuing season is estimated at 3,824,333, and store sheep, 3,644,703.

6. How Sheep are kept.

Paddocked	36,682,801
Shepherded	1,504,904
Both ways	981,599
						39,169,304

7. Condition of the Flocks.

In forty-two districts the sheep are said to be improving; the principal reasons given being—more attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling, and better season.

In ten districts they are said to be stationary, and in seven districts they are deteriorating. The reasons given are—effects of bad seasons, country not suitable, breeding from inferior ewes, bad management, and errors of judgment in selecting rams.

8. Lambing.

The general average for the whole of the Colony of the paddocked sheep is returned by Inspectors at 65½ per cent., and shepherded sheep at 61½ per cent. In thirty-three districts the lambing was high; in ten districts, ordinary; in eleven districts, low; and in three districts, very low. The reason given for the high percentage is the favourable season, sheep not harassed by dogs; while the ordinary and low percentages are attributable to the drought in early part of year, ewes weak and not able to rear lambs owing to scarcity of water and feed, followed by too much rain; and losses by dogs and eagle hawks.

The paddocked sheep show a higher percentage than the shepherded sheep by 4½ per cent.

9. The Clip.

Average per Sheep.

Lambs.—The number of lambs shorn in the grease was 5,525,350; the number washed, 62,100; total lambs shorn, 5,587,450.

Sheep.—The number of sheep shorn in the grease was 29,446,157; hot water and spout washed, 36,645; creek-washed, 494,544; and scoured, 965,874.

The average weights of the clip are estimated as follows:—

	Lambs.		Sheep.	
	lb.	oz.	lb.	oz.
Grease	1	9½	5	5½
Washed
Hot water and spout	3	6
Creek-washed	1	3½	3	0½
Scoured	2	14

Total Clip.

The total clip in the Colony for the year 1886, according to the number of sheep, would be 29,446,157 sheep shorn in the grease, average clip, 5 lb. 5½ oz. per sheep = 157,046,170 lb.; 36,645 sheep hot water and spout washed, average clip, 3 lb. 6 oz. per sheep = 123,677 lb.; 494,544 sheep, creek-washed, average clip, 3 lb. ¼ oz. per sheep = 1,491,359 lb.; 965,874 sheep scoured, average clip, 2 lb. 14 oz. = 2,776,838 lb. Lambs—5,525,350 lambs shorn in the grease, average clip, 1 lb. 9½ oz. per lamb = 8,719,693 lb.; 62,100 lambs washed, average clip per lamb, 1 lb. 3½ oz. = 75,634 lbs.; total clip, 170,233,471 lb.

Condition of Clip.

In twenty-six districts the clip is reported as very good and sound; in twenty-three districts, light and sound; and in remaining districts, light, tender, large quantity grass-seeds and burrs, and almost entire absence of yoke.

Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped to England, America, France, and other countries, from the principal ports of the three Border Colonies, as well as from Sydney. The portion of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies.

The

The following is an estimate of the clip sent to Sydney, and also the proportion sent across the Borders and to Melbourne, Adelaide, and Brisbane, for the years 1885 and 1886:—

Port of Shipment.	1885.			1886.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney	119,565,541	2,265,685	121,831,226	115,810,501	2,505,650	118,316,151
Melbourne	32,430,779	336,759	32,767,538	35,913,969	1,285,408	37,199,377
Adelaide	9,216,164	299,322	9,515,486	13,891,088	671,721	14,562,809
Brisbane	836,064	94,935	930,999	150,305	4,829	155,134
	162,038,548	2,996,701	165,035,249	165,765,863	4,467,608	170,233,471

The decrease in the quantity of wool sent to Sydney in 1886 is accounted for by the Murray, Murrumbidgee, and Darling Rivers being higher than ordinary during the latter part of the year, which enabled a large portion of the clip in the western and south-western districts to be sent by steamer to Echuca and Goolwa.

Classing the Clip.

In thirty-two districts the clip is reported as being well classed, and in the other districts it is not considered so; the reasons being—owners do not think it pays, want of convenience, sheds not large enough to warrant expense, and the difficulty of obtaining competent woolsorters.

Wool-presses.

A great number of different kinds of presses are used; those most in favour are Williams and Robinson's; rack, screw, and pinion presses are used. There is still room for improvement in the mode of pressing, especially by small owners.

Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. × 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.

On forty-two stations the wool is dumped before leaving.

10. Sheep-brands and marks.

Ear-marking.

In most districts the system of ear-marking sheep is now properly carried out, and nearly all the owners approve of it.

Tattoo-marking.

This system of marking is mostly used by owners of stud sheep—not, as yet, to any great extent in the case of ordinary flock sheep; but where tried it has been found to act as a good preventive to sheep-stealing.

V.—DISEASES IN SHEEP.

1. Scab.

The flocks in this Colony, and in the Colonies of Queensland, Victoria, South Australia, and Tasmania are free from scab. It exists, but to no great extent, in New Zealand and Western Australia, and good progress in stamping out the disease is being made in both these Colonies. It is hoped they will soon be declared clean. The importation of sheep from New Zealand and Western Australia is prohibited.

2. Anthrax—Splenic Apoplexy.

Anthrax was very disastrous in some districts last year, sheep dying by thousands; and at Dubbo the Government Veterinarian investigated an outbreak of this disease in which some 200 cattle in a travelling mob died.

It is so far satisfactory to know the cause is now well understood; and steps are being taken to cultivate a virus for protective inoculation, as the reports shown below, received from foreign countries in reply to questions submitted by this Department, recommend that course to be adopted:—

ABSTRACT OF REPORTS.

Belgium.—The only successful treatment for this disease is preventive treatment, which consists of Pasteur's method of inoculation, which has been tried against bacteridian anthrax with good practical results, the vaccine being procured from Paris. The virus of splenic apoplexy is not considered to be protective against all forms of anthraloid diseases, and is suitable for sheep, cattle, and horses as long as the bacteridian anthrax is being dealt with. Impossible to say if any danger would exist by introducing to this Colony a European form of anthrax by importing the attenuated virus of Pasteur; such should be tested,

tested. As it is probable colonial anthrax is the same as that in Belgium, it would present but little difference in animals of same species. Think that the cultivation of virus as in Paris could be carried on elsewhere. Have no special method, being too near place of production; but are studying mode of cultivation of vaccine. In practising inoculation we use Pravaz syringe, and conform to Mons. Pasteur's recommendations. The period animals are protected from disease—after successful inoculation has not been mathematically solved.

America.—Has taken no action in the matter.

France.—Forwarded book on treatment as practised by Mons. Pasteur, from which translations have been made, and steps are being taken to cultivate virus.

England.—Has not attempted the cultivation of virus for general inoculation.

3. *Anæmia.*

This ailment, which has carried off a good many young rams in the country lying between the Murray and Murrumbidgee, was investigated by the Government Veterinarian. His report appeared in my Report for the year 1885. The ailment again made its appearance last year in the Scone district to some slight extent.

4. *Foot-rot.*

In eight districts the sheep have been slightly affected with foot-rot during the year; the reasons given being—wet season, swampy ground, country not suitable, and overgrowth of hoof. The remedies principally used were paring, arsenic and blue-stone; carbolic acid, turpentine, &c., with satisfactory results.

5. *Fluke.*

In nine districts the sheep were slightly affected with fluke, through drinking stagnant water and depasturing on sour, unsound country. The remedies used were—removing to sound country, salt, tar and turps, sulphate of iron, and salt and sulphur, with good results.

6. *Parasitic Worms.*

In four districts the sheep are reported as having been infested with worms, caused by the rainy season and feeding on wet country.

Sheep suffer from many varieties at the same time. Amphistomes, in the runner or paunch; pentastomes, in the frontal sinuses; strongyles, in the intestines; flukes, in the liver; hydatids, in the brain; tœnia, in the bowels; cysticercus, in the flesh; filaria, in the bronchial tubes; ascarides lumbricoides, in the bowels; nematodes, eight ovine species; anchytostonum, in the stomach.

Of these, the most common and most injurious to the sheep, are the tœnia (the tape-worm), the filaria (the lung worm), and the anchytostonum (the thread stomach worm).

It will be easy to understand that too much reliance should not be placed on the curative effects of any one anthelmintic. These remedies should be combined; as some act on one part of the animal, some on another; but the best remedy of all is to move to good feed on sound land.

It is during the first year, immediately after weaning, that worms are most likely to do harm, therefore that is the time to avoid their invasion, and to adopt preventive measures, such as keeping the sheep well supplied with Liverpool salt, and drenching, where necessary, with arsenic.

7. *Supposed Poison Plant*—"Euphorbia Drummondii."

Euphorbia Drummondii is no longer looked on as being poisonous in this Colony. In March, and again in December, the Government Veterinarian fed sheep on and otherwise experimented with this weed, and chemical analysis have been made in the Government Laboratory, which confirm the opinion that it contains no poison, while many of the sheep owners in the Riverina district have purposely allowed sheep to eat it experimentally in places where it has grown luxuriantly; and although they eat it voraciously and filled their stomachs with it, no ill effects whatever have followed.

It has been noted that this weed grows abundantly in parts of the Colony, and has been constantly eaten by sheep and cattle without any ill effects.

A probable explanation of its evil reputation among drovers and others may be that it might cause flatulency and indigestion to hungry stock, in the same manner as trefoil, clover, young thistles, and other succulent herbage would be liable to do under similar circumstances, especially where starving stock have gorged themselves on the weed, and then been allowed to drink freely of water.

8. *Losses through Drought.*

Although the returns for the year show a considerable increase in sheep, yet it will be seen, on reference to appendix A, that in some districts (the south-western) the ordinary increase has not been reached, through the continuance of the drought in the early part of the year.

VI.—PIGS.

As pigs were declared by proclamation of 8th January, 1885, to be subject to the provisions of the Imported Stock Acts of 1871 and 1884, it is necessary that they should find a place in this Report.

The number of pigs in the Colony, as returned, is 209,576, being an increase of 882 as compared with returns for previous year.

Disease in Pigs.

No disease has been reported amongst pigs.

VII.—DOGS.

Thirty-two foreign dogs, *i.e.*, dogs from England, India, America, France, and Germany, and other places outside the Australasian Colonies, passed through a 6-months' quarantine during the year, and 632 Colonial dogs were inspected at the port of Sydney.

Diseases in Dogs.

Rabies has been more prevalent in England, France, and America than usual; outbreaks are also reported from South Africa and the Mauritius. In England packs of fox hounds have had to be killed, and the deer in Richmond Park became rabid from the bite of a dog; they had to be destroyed. In the United States of America a rabid dog bit a number of cattle and all had to be killed; the last case did not develop the disease until 160 days after being bitten.

Rabies never having been introduced into these Colonies it is of the greatest importance that no relaxation in the quarantine regulations be entertained; as the short time in which steamers make their passages increases the risk of the importation of this the most dreaded of all animal diseases.

VIII.—TRAVELLING STOCK.

1. *Trespass on Reserves.*

In forty-three districts the driftways and reserves for travelling stock are reported as having been trespassed upon, more or less, by neighbouring lessees' and selectors' stock. In many instances the stripping of the reserves of pasture arises through their not being withdrawn from lease, and being used by the lessees of the run. In sixteen districts they are reported as being entirely free from trespass. Inspectors suggest, in order to enable them to exercise proper supervision over them, that the boundaries should be properly marked. Some of them also suggest fencing in the reserves and appointing care-takers.

The marking of the reserves has not yet been commenced, notwithstanding the urgent necessity for this work.

2. *Grass on Reserves and Driftways.*

In fifteen districts the Inspectors report that there is not sufficient grass on the reserves and driftways in their districts to enable fat stock to reach the market in good condition; in seven districts that there is only sufficient in good seasons; and in thirty-seven districts, that as a rule, there is sufficient grass on these reservations.

3. *Ringbarking Driftways and Reserves.*

Although the pasture on the driftways and reserves is not now, during the good season, short of the requirements of the stock traffic, it is urged that as the ringbarking of the driftways and reserves used by travelling stock would everywhere largely increase and improve the pastures upon them—in some cases to the extent of even 400 and 500 per cent., that this work be undertaken. It would give employment to a large number of the men now out of work, and could be carried out by contract at reasonable rates.

4. *New Roads for Travelling Stock.*

In seventeen districts new roads for travelling stock are required; and in forty-two districts no new droving roads are recommended, except those previously reported on.

5. *New Reserves for Travelling Stock.*

In sixteen districts new reserves for travelling stock are required; in forty-three districts there are sufficient reserves, with the exception of those previously recommended.

6. *New Wells, Tanks, or Dams.*

In twenty-five districts the Inspectors report that new wells, tanks, or dams should be constructed by the Government at places which they indicate.

7. *Travelling Charges for Stock.*

In twenty districts travelling charges for stock have been collected on sixty-two separate occasions; the total amount collected being £7,570 9s. 5d., of which £5,057 9s. 5d. has been refunded to date on appeal to the Boards.

8. *Laws relating to Travelling.*

In all the districts the Inspectors report that the provisions of the amended sheep Acts relating to travelling stock are working well, and have almost put an end to loafing.

9. *Sheep Travelling for Grass and Water.*

In the case of thirty-four districts the Inspectors report that during the year 2,290,250 sheep passed through, either making for country where they could obtain grass and water, or returning to their own runs. This shows a very large reduction in the number of sheep travelling for this purpose, attributable to the good season.

IX.—REGISTRATION OF HORSE AND CATTLE BRANDS.

1. *Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1886, was 55,049. The number of brands registered during the year 1886 was—horse brands (alone), 348; cattle brands (alone), 396; and horse and cattle brands, 817; making a total of 1,561, being a decrease of 3 applications on the previous year.

2. *Brands transferred.*

The brands recorded during the year 1886 as transferred were—horse brands, 11; cattle brands, 13; horse and cattle brands, 69; total, 93.

3. *Brands cancelled.*

The brands cancelled (horse and cattle) in 1886 were 6.

4. *Address changed.*

The number of addresses of owners changed in 1886 was 47.

5. *Compliance with the Act.*

In fifty-three districts the provisions relating to registration and the other requirements of the Act are reported as being duly carried out, and in the remaining six districts fairly so.

6. *Benefits of the Act.*

In all the districts the Inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

X.—POUNDS.

1. *Number and Inspection.*

There are 291 pounds in the Colony, some of which are at present closed for want of pound-keepers. The whole of the pounds are inspected periodically by the various Inspectors of Stock.

2. *State of Yards.*

Thirty-four of the pound yards are reported to be old, and several require renewing, being unfit for the safe custody of stock; eight are reported as not being up to the requirements of the Act, and the remainder are said to be in a fair and good condition.

3. *Keeping and Depasturing Pound Stock.*

The provision made for the proper sustenance of impounded stock, according to the reports received, is satisfactory. As a rule poundkeepers have now paddocks for the stock.

4. *Management of Pounds.*

The poundkeepers generally are reported to be performing their duties in a satisfactory manner, except in one instance; and the appointment of Inspectors of Stock as Inspectors of Pounds has had a very beneficial effect.

XI.—NOXIOUS ANIMALS.

1. *The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts, except Kiama.

2. *Receipts and Expenditure under the Act.*

The amount of assessment paid by stock-owners during the year 1885 was £61,754 15s. 4d., and the amount expended, £67,432 1s. 8d. The amount of assessment paid by stock-owners in 1886 was £41,585, and the amount expended £64,023 8s. 9d., the difference being accounted for by the subsidy granted by the Government to the Boards. Five districts are reported to be in debt to the amount of £1,177 5s. 6d.

In twenty districts full rates were levied, in seven districts half rates, and in twenty-six districts less than full rates, while in six districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 2d. to 1s. 6d.; wallaby, from 1d. to 1s.; paddymelon, from 2d. to 1s.; hares, from 2d. to 1s. 6d.; eagle hawks, 3s. to 3s. 6d.; native dogs, from 10s. to 60s.; pups, 2s. 6d. to 10s.; wild pigs, 1s.; and opossums, 2d.

3. *Estimated number of Noxious Animals.*

The aggregate of the returns by Inspectors of the estimated numbers of noxious animals in their districts shows that there are supposed to be 2,225,700 kangaroos, 2,952,634 wallabies, and 33,618 native dogs, 301,532 hares, and 2,460 wild pigs in the Colony.

4. *Increase and Decrease.*

Kangaroos are reported to be increasing in three districts, wallabies in six districts, native dogs in seven districts, hares in sixteen districts, and wild pigs in two districts. In forty districts kangaroos are reported to be decreasing, wallabies and native dogs in thirty-two districts, hares in four districts, and wild pigs in six districts.

5. *Number destroyed.*

The number of kangaroos destroyed during the past year was 1,106,478; of wallabies, 594,603; of wild pigs, 562; of hares, 28,623; of native dogs, 9,560; and of eagle hawks, 137.

6. *Steps taken for their Destruction.*

In the majority of the districts hunting with dogs, drives, shooting, and trapping have been adopted with satisfactory results. In thirty-six districts poison has been used with fair to best results, and only from six districts has it been reported as unsuccessful.

7. *Amendments suggested in the Act.*

It is suggested that the Government should administer the Act, and grant subsidy at rate of 10s. in the £, irrespective of whether full rates have been levied or not; that uniform rates be levied; that all assessments be paid to a general fund at the Treasury; that the rates of bonuses be the same throughout the Colony; that all owners make returns of their stock on a particular day; and that all owners should contribute, irrespective of the number of stock.

8. *Losses from Tame and Native Dogs.*

The losses in stock for the past year from the ravages of native dogs are estimated at 72,861 sheep, valued at £22,530; and from tame dogs, 67,979 sheep, valued at £23,319; making the loss from tame and native dogs together £50,849.

XII.—COMMONS.

1. *Number and Extent.*

The number of permanent commons in the Colony is 140, with an average extent of about 1,250 acres each. The number of temporary commons is 167, with an average extent of 2,000 acres each.

2. *Number of Commoners, Stock, &c.*

The average number of commoners to each common is estimated at 148, and the average number of stock kept on each common is 237.

In twelve districts the commons are reported to be used for other purposes than that of grazing commoners' stock.

XIII.—MISCELLANEOUS.

1. *Artificial Grasses.*

In twenty-six districts artificial grasses have been sown during the year to a small extent, in fourteen districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

2. *Number and Division of Runs.*

The number of open or unenclosed runs in the Colony is 7,233; the number enclosed is 30,395; the number partially subdivided is 12,974; and the number properly subdivided is 17,389.

3. *Improvements, Fencing, Dams, Tanks, and Wells.*

The number of miles of fencing throughout the Colony is estimated at 992,269, at an average cost of £50 Gs. 9d. per mile, amounting to £49,948,340 16s.

The number of dams used for stock purposes is estimated at 19,121, at an average cost of £84 13s. 9d.; number of tanks, 23,347, average cost of each, £167 10s. 6d.; and the number of wells used is estimated at 2,703, at an average cost of £208 4s. each.

Cost of fencing, £49,948,340 16s.; cost of dams, £1,619,326; cost of tanks, £3,911,291; cost of wells, £562,772; making a total of £56,041,730, as representing the amount expended by way of improvements, &c.

4. *Plants and Weeds.*

In twenty-one districts Trefoil burr grows to a slight extent; in twenty-seven districts to a large extent; and in eleven districts there is none reported.

In twenty-eight districts variegated thistle is reported to a slight extent; in twenty to a considerable extent; and eleven districts are reported as free from it.

In thirty-two districts black thistle is reported to a slight extent; in twelve to a great extent; and fifteen districts are reported to be free from it.

In thirty-four districts the land is reported as being slightly infested with Bathurst burr; in twenty-one to a large extent; and in four the land is not infested.

Other noxious weeds are reported to a slight extent from twenty-six districts; to a great extent from eighteen districts; and fifteen districts are said to be free from them.

Darling pea reported in three districts; also roley poley, dandelion, barley green, and a plant known as "Saucy Jack" is making its appearance.

5. Cost of Clearing Commons, Reserves, &c., of Weeds.

The cost of clearing the permanent commons of noxious woods throughout the Colony is estimated at £20,321; the temporary commons, £35,817; the police paddocks, £1,990; the travelling stock reserves, £114,083; and the droving roads at £102,417; amounting in all to (say) £274,623.

6. Examination of intending Applicants for appointment of Inspector.

During the past year two examinations were held by the Stock Board of Examiners. The following table shows the result in each case.

Date of Examination.	Number of Candidates.	Names of Successful Candidates.	Nature of Certificate issued.
1886.			
February 26	12	W. G. Dowling	1st Class.
		John A. Gamaack	2nd Class.
		B. O. Meek	2nd Class.
		Alfred Welman	2nd Class.
December 15	4	Arthur James	2nd Class.

From the above it will be seen that sixteen candidates were examined, of whom one received 1st class, and four 2nd class certificates.

7. A Fresh Meat Trade.

Mr. Gilderoy W. Griffin, Consul for the United States, who has done so much to make our resources known there, and to promote trade between the Colonies and America, has kindly obtained from the Commissioner of Agriculture, Washington, an exhaustive and very valuable report on the fresh meat trade in the United States.

This Report, which is given at length as Appendix F, completely confirms the views frequently advanced by me during the last five or six years,—“That our fat stock should no longer be subjected to the terrible illusage and starvation from which they now so frequently suffer, but should be killed near the pastures, and the meat sent to market by rail;” for it shows that the fat stock trade in America, in spite of the powerful vested interests which exist there, is fast becoming a fresh meat one. In the short space of six years the volume of the fresh meat trade from the Western to the Eastern States of America, which only began in 1880, has increased with great rapidity, and has by this time overtaken and passed that of the live stock trade; and the Commissioner of Agriculture in reply to the question whether the fresh meat trade is likely to increase, very tersely observed that, “It must continue to increase unless there should be a revolution in trade affairs, and in the desire of the people to obtain the best meat for the smallest outlay,” a contingency which it would be simply absurd would ever arise.

When, again, we see by this report that fresh meat is now regularly carried at all seasons of the year from the States in the far West to the Eastern seaboard; and when we know that some 2,000 bodies of beef chilled (not frozen) are regularly sent every week 1000 miles from Chicago to New York or Boston by rail, thence by steamer across the Atlantic, over 3,000 more, to Liverpool, and thence by rail to London, there to be sold in such good condition that the consumers who purchase it do not know but they are being served with Scotch beef—it is ridiculous to assert, as some of those in the live stock trade in Sydney do, that we cannot kill our fat stock at Bourke and send the meat down safely for sale in Sydney, seeing that the meat from there can be delivered in Sydney in twenty-six hours, while it must take at least ten or twelve days before meat from Chicago can be delivered in London.

Then as to the cost of conveying the cattle alive and dead to market,—it is found, as was supposed, that fully one-third more bodies of beef can be carried on the train in the same space than live cattle, so that taking the charge for the conveyance of a bullock from Bourke to Sydney at 25s., the current rate for live stock, under the Fresh Meat Trade (as four more bodies of beef can be put in a truck than live cattle) there would be a saving in cost of freight of (say) £5 on the truck load. This would, of course, far more than cover the cost of ice (in America with the temperature at from 90° to 110° in the shade, the ice for the same distance costs 2s. per body), and other necessary expenses incurred in carrying out the fresh meat system. In fact, it is believed that there would be a direct saving of 15s. a head by killing and chilling cattle at Bourke instead of sending them down alive, while at the same time the following other highly important advantages would accrue from the adoption of a fresh meat trade:—

- (1.) The terrible illusage and cruelty to which the live stock are now subjected would, to a very large extent, be prevented. Fat stock trucked at Bourke, or even 100 miles nearer Sydney, are on an average six or seven days at least without any food whatever.
- (2.) All the flavour and nutriment of the meat would be preserved.
- (3.) The heavy shrinkage in the weight of the stock which occurs through this treatment would be saved.
- (4.) The Railway Department, by being able to make use of the meat-vans for all kinds of back loading, would save tens of thousands a year now spent in hauling empty sheep and cattle trucks back up country, as there are very few sorts of ordinary loading which can be put into these trucks. Whatever trouble may be taken to clean them the smell of the stock can never be got rid of.

Nor would this be all the advantages which would be attained by the change. With the completion of the spacious meat market on the railway line at Darling Harbour, now being fitted up with salemen's stalls and chill-room, we will very shortly see extensive Freezing, Tinning, and Salting Works erected in the vicinity of the market (they would create no nuisance whatever), and in this way the whole of the meat, and every part of it, will be turned to the best possible account, and the heavy losses which have been entailed on owners in byepast years through glutted markets will, to a very large extent, be avoided; for the meat thus killed up country will, as a rule, be of the primest quality and fit for any market

in the world, and when the requirements of the Sydney trade are met the balance will, as the case may be either be sold for freezing and shipment to London, or for tinning or salting, and the market cleared. If, our fat stock trade were conducted this way, and due care exercised in its management, Sydney, with its large ocean-going steamers, cheap coals, and the railways running to Hay, Bourke, and Tenterfield, ought to do by far the largest meat export trade of any port in the Australian Colonies.

Besides the completion of the meat market and chill-rooms at Darling Harbour, it will be necessary that proper meat trucks with refrigerating fittings should be placed on the line, and that a killing and chilling depôt should be established at Bourke, and another at (say) Dubbo or Wellington on the Western line, and at (say) Hay and Junee on the Southern. When they are, others at places such as Orange and Goulburn would very soon follow, and also on the Northern line when it is completed.

It is understood that the Railway Department will provide the necessary meat trucks.

As regards again, the killing and chilling depôts, these will have to be provided by Joint Stock Companies, in which both owners of stock and the trades people of the towns in which they are established will take shares, the owners to enhance the value of their stock and the tradespeople to increase their business.

It is believed that £5,000 or £6,000 will be sufficient capital to erect and work a killing and chilling depôt, as the business will be a purely agency one.

The companies will receive and slaughter the stock, and chill and put the meat in the trucks at a moderate charge per head, as they will take such of the offal as they can utilize as part payment.

For particulars *re* surplus meat of the Colonies see paper by Mr. Coghlan, Government Statistician given as Appendix G.

S. *Intercolonial Stock Conference.*

With the view to assimilating the regulations in force in the Australasian colonies, relating to stock and noxious animals and plants, the Government of this colony on 30th July, 1886, addressed a circular letter to the other colonies inviting them to send their Chief Inspectors of Stock, and two (afterwards altered to three) gentlemen connected with stock breeding, to a conference on these subjects to be held in Sydney.

This invitation was accepted by all the colonies (except Western Australia), and the Conference met on the 27th September following; but not in equal numbers from all the colonies. The Delegates were:—

New South Wales.—Mr. A. Bruce, Chief Inspector of Stock; Mr. R. G. Higgins, Stock Breeder; Mr. E. Stanley, F.R.C.V.S., Government Veterinarian.

Victoria.—Mr. E. M. Curr, Chief Inspector of Stock.

Queensland.—Mr. P. R. Gordon, Chief Inspector of Stock; Hon. H. C. Wood, M.L.C., Stock Breeder.

Tasmania.—Mr. T. A. Tahart, Chief Inspector of Stock; Mr. A. Park, M.R.C.V.S., Government Veterinarian; Mr. J. Meredith, Stock Breeder.

New Zealand.—Hon. W. S. Peter, M.L.C., Stock Breeder; Mr. J. D. Iance, M.H.R., Stock Breeder; Mr. J. Mackenzie, M.H.R., Stock Breeder; Mr. G. S. Cooper, Under-Secretary, Wellington.

The Conference held ten meetings, and dealt with the following subjects:—

1. Diseases in animals and their treatment.
2. Interchange of Australasian animals.
3. The introduction of foreign animals.
4. Publication of information with respect to diseases.
5. Destruction of noxious animals.
6. Destruction of noxious plants.
7. Branding and marking of stock.
8. A Triennial Intercolonial Stock Conference.

These matters were fully discussed and resolutions passed with respect to them, which, if adopted by the several colonies, will, it is believed, effect the object of the Conference; and while they will increase the protection of the stock from disease, and the land from noxious animals and plants, they will also remove unnecessary restrictions from the Intercolonial Stock Traffic.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

APPENDIX A.

RETURN of Stock in the Several Sheep Districts.

Districts.	Year 1885.					Year 1886.				
	Acreage.	Horses.	Cattle.	Sheep.	Pigs.	Acreage.	Horses.	Cattle.	Sheep.	Pigs.
Albury	5,846	12,698	598,171	834,801	5,624	11,772	539,561

History of this disease in New South Wales.

The first case brought under notice was at Richmond, in a brood mare, sent from Dandenong, in Victoria, five or six years ago; she came for stud purposes, and was noticed to be badly affected with Stringhalt in both hind legs. At the time this attracted little attention; but the following year many brood mares occupying the paddock she had been in were seen to be affected with Stringhalt, all within a few weeks of each other. These mares were of different ages and breeds, and came from various districts. Inquiry was diligently made in the neighbourhood, but nothing of the sort could be found outside this one paddock; and, strange to say, this paddock has retained its reputation for producing this disease, outbreaks having occurred in it from time to time; but no fresh case has been seen there for the last two years, for this reason,—that cattle and ponies have, during that time, occupied the paddock, instead of mares. In May, of this year, I visited Moss Vale in consequence of serious losses being reported from this disease. I found that a very few cases only had been seen in 1885, and it was never seen in that locality previous to that year, when a stud mare had been sent to the breeding station first named, and returned with Stringhalt. The following year, almost an epidemic of this singular affection suddenly appeared amongst the breeding mares, colts, and fillies in the paddock she had occupied. The disease this season was wide-spread throughout the district, and many horses, of all descriptions, were found to be more or less affected; and being so general it was impossible to trace the source of contamination. It was certain, however, nothing of the kind had previously been seen.

I visited a third centre of the disease at Camden, and found the history of this outbreak agreed so far as the year of invasion was concerned, but the actual method of its introduction could not be defined; two sources were open, one being by purchased animals from an infected place brought on to the station, although showing no symptom of the disease at the time; the second probable source being a river frontage, so shallow from drought that trespassing horses may have introduced the disease.

It is most satisfactory to find, from a circular letter sent to all Inspectors of Stock in New South Wales, that the disease is unknown beyond the places already named in this report. The disease is only seen in the horse species; I believe it to be communicated indirectly from one horse to another, and therefore it is contagious.

It is certain that one animal may contaminate a paddock, so that others will have the disease; and it may spread by water, dust storms, and food, as well as by other means.

Nature.

It is a local, nervous affection, characterized by an involuntary spasmodic action of the muscles of both hind legs, continuing for several weeks, or months, then most frequently recovery slowly takes place; in others the disease becomes chronic, and in some instances degeneration and paralysis are the results.

Death occurs from animals being unable to extricate themselves from difficult situations, or being unable to get about after food and water.

Causes.

Hitherto the cause has been enveloped in considerable obscurity, and I find that Veterinary Surgeon Kendal, in his book on "Diseases of Australian Horses," describes the disease as so common to Australian horses that some breeders attribute it to a certain herb, prevalent in certain localities, others to a species of dandelion. Kendal evidently considers it to be rheumatic in origin, and not dietetic, and that a sudden chill may be a sufficient exciting cause to develop it.

The Richmond outbreak was attributed to a metallic poison known as vanadium, which was found on analysis to exist in the clay taken from the waterhole supplying the affected paddock, the water being very low at the time, and the fact of the disease being only in this paddock, and recurring year after year in it, strengthened the assumption.

With the kind assistance of Messrs. Watt and Hamlet, the Government Analysts, I obtained information on the poisonous action of this mineral, the Tribasic sodium vanadate, being used for experiments by Professor Gamgee, and it was found to act upon the central system of the spinal cord, and medulla oblongata, especially affecting the respiratory nerve centres. This action does not agree with the symptoms exhibited in this disease, which is excited action in the periphery of nerves. However, to satisfy myself, I visited the North Shore (Sydney) brick-yards, which are working identically the same formation of clay as that found at Richmond, and which extends over a very large geographical area. From these yards lightly burnt bricks, richly tinted by the yellowish-green oxide of vanadium are to be seen in many of the surrounding buildings. I also made inquiries of horse owners and shoeing-smiths as to the prevalence or otherwise of the disease, and failed to get information of a single case of Australian Stringhalt having ever been across the harbour, although horses are drinking water from these clayholes continually. Further, at Moss Vale I found a similar clay formation; also the vanadium efflorescence on burnt bricks in several places, which were free from disease. This metal exists probably in very minute quantities, and has undoubtedly been present in these clays for all time; but no case of poisoning has occurred, and this particular disease was quite new in the localities, never having been seen to attract attention until the recent outbreak.

At Camden, where the disease was very severe, and in one paddock only, the water supply was from a running stream, and no vanadium could be detected, so that the vanadium theory is untenable.

The Victorians say a dandelion causes it. The weed suspected is not a dandelion; it is the *hypochaeris radicata*, the common names being cat's ear, or flat weed. It was introduced from Great Britain, is hardy, spreads rapidly, and smothered other herbage. It is wholesome and nutritious. Horses and ruminants eat it freely, and for weeks together have little else to live on, and apparently did well on it. That *hypochaeris radicata* has no connection with Australian Stringhalt is proved by great numbers of horses eating it, and never having the disease. The disease is known to exist in localities free from this weed. The weed has no medicinal or poisonous properties. It is very prevalent in many parts of this colony which are free from this disease. After deliberate inquiry and a close investigation of many cases, *post-mortem* and microscopic examinations, with a very careful analysis of facts, I have formed the opinion that the origin of this disease is *intestinal parasites*; in other words, it is caused by worms attacking the mucous membrane of the horses' digestive organs. This they do in countless numbers, and as larva, or as they escape from their ova, set up intense irritation in the bowels. This is conveyed by certain nerves to a certain set of muscles, as will be explained further on, and involuntary muscular action is the consequence. Based on this foundation, my hypothesis is fully supported by the symptoms, peculiarities, and progress of this singular affection.

No one is able to produce this disease at will, but certain places are known to be liable to produce it; and again, it is noticed to originate at certain seasons of the year, and recoveries take place under well defined conditions.

The localities favourable to its production and propagation are grazing paddocks. It has never occurred in stable-fed horses, but may and does occur in horses that run into a paddock and are stable-fed also. Such paddocks are cold, wet, and badly drained, with swampy patches, claysoil where gum and oak trees, and sour herbage, such as coarse and fine tussocky grasses, and the weeds, sorrel, rumex acetosa, hypochaeris radicata helichrysum, scorpioides apiculatum grow. These have no poisonous properties, but thrive in moist places. Hills, vales, and river borders possessing the above characteristics are liable to become the home of this plague; but there is little fear of its appearance without being introduced.

Its commencement is only noticed in the summer months, most of the cases I have seen having cropped up in January and February of this year. About Christmas there was a slight rainfall after a long drought, and at the end of spring there was a rush of vegetation, and at the same time of parasitic life. No combination of circumstances could be more favourable for the development of the lower organisms from their ova, in which condition they have been dormant waiting a suitable season for their development; and this is the season that the migratory parasites of the horse enter his stomach and bowels with food and water in the form of minute larva, there to find their natural habitat and food, grow and attain sexual maturity; and during the ensuing months they are entertained at the expense of their host, finally discharging their ova, or being themselves discharged in the animal's excrement, and so scattered abroad. Some become incepted in the animal's tissues, and in that manner enter the stomach of a carnivorous animal or bird of prey, and thus their distribution is extended and their cycle of development ensured.

The symptoms of this extraordinary affection are very marked and distinctive, but require a veterinarian's discrimination to show its distinction from other diseases to which horses are liable.

Symptoms.

There is nothing to indicate the disease so long as the horse is stationary, and although nervous on a stranger approaching, he will not move; the pulse, temperature, and respiration are normal, his coat is harsh, and the skin sticks to his ribs; usually he is in poor condition, the eye is bright, and the conjunctiva often stained, of a brownish colour, and unhealthy looking; the fœces are hard, dark-coloured, and coated with mucous, although on green feed. The urine is gelatinous and dark-coloured; the disease makes the evacuation of these excretions difficult; this must be remembered, as it influences their appearance; any limb can be picked up and manipulated without inconvenience to the animal; but if urged to go forward, he will advance first one fore foot, and then the other, taking two short steps, stretch his head forward, and put his ears back, fix his neck and the muscles of his back, and then with extreme suddenness one hind leg is spasmodically flexed right up to the belly, and for a second it appears fixed in that position, the fetlock touching the belly; during this action the fore feet are shuffled a few inches further forward, the back is arched, and the body is drawn forward by the muscles of the back, assisted by the weight of the head and neck, so that the hind leg on the ground is behind the centre of gravity; then this is suddenly snatched up close to the belly, and the first leg as suddenly released, or stamped down to save the animal's hind quarters from falling; so suddenly is it released, and so straight is it put down that often the front of the fetlock strikes the ground, the foot being flexed backwards, and foothold is regained with a struggle.

Progression is not assisted by the hind limbs, but is begun by the fore feet, and finished by contraction of the back, and the jumping, not propelling, motion of the hind legs. These movements being repeated in rapid succession, both legs being now flexed together, and as the movement is kept up the spasmodic action decreases, and a slow gallop is maintained, not unlike the hopping of a kangaroo, but with very short contracted strides. On stopping to a trot the spasm returns, and, in two or three spasmodic steps with alternate legs, the animal comes to a standstill. He is found blowing hard, and evidently much distressed by the exertion, in some cases breaking out into a profuse perspiration. Others will not show the spasmodic action until they pull up after a gallop, or on being suddenly urged to start; and others, less affected, only show it on being made to turn or move backwards. This movement is most difficult, because the hind legs cannot be flexed while the weight is upon them, and the raised foot cannot be either carried forward or backward, being forcibly thrust straight down; the horse, having himself no control over the affected muscles, the disease prompts him to contract his back and throw all the weight forward on to his front feet, the more he begins progressively shifting them forward. He has great difficulty in lateral movement of his quarters, and to move back is impossible. It is to be noticed that these animals lie down and get up at will, and without difficulty. In many cases pain is absent. I have seen a horse gallop up to his mob, pull up, go through the peculiar spasmodic hopping, and, before he could properly steady himself, he would bite at one, and attempt to kick at another, showing the inconvenience was functional, or mechanical, and caused him no suffering, as it immediately returned after an attempt at a frolic. The spasmodic symptoms never entirely leave a badly affected animal, but get less marked as he moves, and vary very much in degree in others. The spasm or tetanic action is confined to the hind legs, both being affected in about the same degree, although as time progresses one limb often makes more rapid recovery than the other. Out of several horses of mixed breeds and all ages exposed in the same paddocks, every degree of the spasmodic affection may be seen, from scarcely perceptible to very severe cases; and many in the same paddocks escape being attacked altogether, because their systems are less favourable habitations for the parasites, or it may be their nervous system is less irritable.

The sufferers continue for weeks and months in about the same state, and as soon as abatement of the spasms is noticed, it is observed to gradually subside week by week; but months after apparent recovery it affects the animal on being made to go backward, showing that complete recovery is a very slow process indeed. Nevertheless, recovery does take place in from three to six months after the attack, and in slight cases earlier. This will depend a good deal on the treatment of the animal—whether still exposed to the same influences or removed into the same pasture, or stable fed; also, his age and condition; all these circumstances favour recovery, or the reverse, as the case may be. The majority recover; but if the symptoms are severe, and unaltered for several weeks, structural changes of tissues follow the functional excitement, and then grave consequences supervene. As the spasms cease, weakness of the

hind limbs becomes apparent, the muscles surrounding the thighs from the hock to the stifle have wasted away, the hind legs are advanced with difficulty, the toe dragging on the ground, the fetlock joints knuckle forward from want of tone in the extensor and flexor muscles. This state may be arrested, and even eventual recovery achieved, but not until several months have elapsed. More frequently, as a sequel, the joints suffer, and lameness aggravates the case. The poor sufferer—for now he is a pitiable object—is unable to move out of a walk, and with difficulty lifts his feet over a door-sill, being scarcely able to recover his balance if he stumbles. Such cases are hopelessly incurable.

Pathology.

The pathological changes are chronic inflammation and thickening of the mucous membrane of the stomach and large intestines, with abscesses and ulcers infested with worms, living and dead. The intestines literally swarm with parasites, male and female. Some are embedded in the tissues; others are attached by their heads. Some are free, and vary in size from the *trichonema arcuata*—microscopic objects, to the large common *ascaris megalocephalus*, a foot long. These worms are of several distinct varieties, and are in myriads. The spinal cord and nerves present nothing abnormal to the naked eye until the popliteal region is reached, where clots of extravasated blood and serous effusions are seen; also an unusual amount of fatty matter surrounding the bundles of nerves within their sheath. The arteries and veins are healthy, and free from any obstruction whatever. The muscles of the back, loins, and haunch are all healthy; but the muscles surrounding the thigh are flabby and wasted in a most conspicuous manner, the stifle-joint looking very prominent. The muscles are progressively paler as their lower attachments are reached, their texture getting tendinous, from atrophy, and yellow, from fatty metamorphosis of the muscular fibres. The affected muscles were,—the biceps femoris, vastus externus and internus; these were atrophied and pale, but the gastrocneinii, solens, flexor perforans, perforatus, and popliteus, flexor metatarsi, and extensor pedis were extremely atrophied, and of a dirty, oily appearance, all undergoing fatty metamorphosis. I found the tibio femoral joints, in chronic cases, to be seriously diseased. The posterior attachment of the capsular ligament was ruptured, and synovia, of a slight bloody colour, extravasated into the popliteal space and surrounding tissues, the synovial membrane being in a state of chronic inflammation. The cartilage on the inner condyle of the femur was worn flat, and so thin that the congested blood-vessels could be easily seen through it on the bony surface. The tibia had over-ridden the articular surface during extreme flexion, and had rested on the outer neck of the femur, the friction exposing the bare bone, and the crucial ligaments were also roughened by the attrition with sanguineous effusion, and small blood-clots in the joint. The fetlocks also bore evidence of inflammatory changes in the synovial membranes, the sheaths of both tendons and ligaments, and also the synovial fringes, being highly congested and fatty, and the cartilages being almost worn through in patches. The hoofs become deformed, the soles sink, and the toe elongates; and the other minor structural changes are seen, consequent on the prolonged perverted muscular action. That this disease may not be mistaken for others, I will briefly describe the most important of them:—

Spinal injury causes more or less paralysis. If the horse is down, he sits like a dog, and cannot rise without great difficulty and after many attempts; he has a helpless swaying motion of the hind quarters, the tail hangs limp, and almost useless; he cannot walk straight and steady, but strikes one hind fetlock with the other foot, and places one hind foot across the front of the other; he can move backward with difficulty, but without any snatching up or spasmodic action of the hind legs. Chronic cases show atrophy of the muscles of the loins and haunch.

Recovery is rarely complete, on account of the injury involving the spinal cord and some branches of nerves.

A horse suffering from a chronic spinal injury is called chinked in the back, or a shiverer. Such an one can go forward and trot with ease, frequently without any snatching up of the hind legs; but make him go backwards, and the muscles of the haunch and tail tremble or shiver with slight spasm, the hind legs are snatched up and held outwards in a rigid manner, and set down on the ground carefully. Such animals sleep standing, and if they fall down, rise with difficulty.

Stringhalt, as ordinarily understood, is an intermittent spasmodic affection of one hind leg, which disappears when warm at work, and scarcely interferes with the horses usefulness. It seldom affects both legs. Recovery rarely occurs, and it is incurable. He can advance the foot and place it on the ground voluntarily, and propel himself and draw a load. There is no alteration of external structure to indicate the existence of this disease.

A comparison of these diseases will show they are distinct from Australian Stringhalt; and the prognosis of the latter is favourable, although from 20 to 50 per cent., or even more in a mob, may become affected, but only a small percentage will retain the affection sufficiently long to become chronic and incurable. My theory being correct, the disease is then not only under control, but can be cured in the early stages; and what is more important, it can be prevented. The contagion is the ova or larvæ of worms eaten in the spring and autumn on young, fresh herbage, or taken in the water.

The drought and heat of summer and the frosts in winter arrest germ life. It is almost needless to say that spontaneous generation of life has no place in science in these days; a horse can no more breed worms than an orchard grow oak trees, unless ova and acorns have been first deposited. It is interesting to know that horses are infested with several distinct varieties of worms at the same time, and they are far more numerous and wide-spread in these colonies than many suppose. To give an idea of their procreative properties, Krause mentions a two-year old horse, which contained 500 ascarides, 190 oxyurides, 214 stronguli armati, several millions of stronguli tetracanthi, sixty-nine tæniæ, 287 filaria, and six cysticerci. Sixty millions of eggs have been counted in a single worm; and in a colony of a tape worm a thousand millions of eggs. These figures show how extremely easy it is for one animal to infest a paddock with ova, and should the soil, herbage, season, and weather be favourable, and the unfortunate victims, a mob of horses, be brought together and only graze for a few hours, under such circumstances they cannot fail to become infested; and I believe such has been the cause of every outbreak of this disease that has recently been investigated; and this will account for travelling horses becoming suddenly attacked, assuming the sudden invasion of myriads of these minute pests into the digestive organs of the horse, in a few days after being hatched, and getting active, they individually attack the mucous membrane, some boring right through it, and take up their abode in its structure, others attach themselves to its surface

surface, all feed on its nutrient juices. The result is intense irritation, and interference with the circulation and nutrition, the irritation disturbing the sympathetic nervous system is conveyed through the mesenteric nerves and communicates the impression through the lumbar and sciatic ganglia to the great crural and sciatic nerves, and acting on their peripheries, or terminal extremities, produces the spasmodic muscular movements which are so diagnostic a symptom of this disease. This phenomenon is known to physiologists as reflex nervous action. Reflex nervous action is shown in young dogs, when infested with worms, by cerebral disturbance they have fits, and when teething suffer from convulsions, vomiting is a familiar illustration of reflex action. It is also seen in horses, after eating wheat, they have laminitis,—tetanus, arising from a wound, is also from similar reflex nervous action; and many other instances could be cited. We see the same effects in a horse suffering from cholera, or spasm of the bowels; irritation, pain, restlessness, and its results, are remarkably identical; it causes a peculiar and diagnostic symptom called "kicking at the belly," supposed to indicate the seat of pain. This action is spasmodic and quite involuntary, and is caused by reflex nervous action, indicated by sudden spasmodic contraction of the flexor muscles of the hind legs. We know that various articles of food, introduced to a horse's stomach, will cause colic, such as change of food, new corn, green food, dry coarse feed, also worms. Each of these may cause pain, irritation, altered peristaltic action, cramp or spasm of the bowels. Ruminants are far less subject to spasmodic colic, because their nervous system is more lowly organized, and they are less susceptible to pain.

The persistence and continuation of the affection is coincident with the development of the parasites; they increase in size and activity, and the irritation they set up only subsides as they arrive at maturity. Such an explanation of cause and effect agrees in every particular with the facts observed in the history of this disease. The disease may only be seen in one paddock, or a run, showing it must contain a special infective material, as horses in the next paddock, with the same formation of soil, herbage, water, and climatic influences, all escape. The disease is only seen on cold, wet, retentive soils, and in horses that have been in such paddocks, whether temporarily or otherwise. Complete recovery is very remarkable, clearly proving that the disease arose from a temporary cause, and that it was strictly functional in character, *there could have been no actual change of structure as in most diseased processes.*

Susceptibility.

Horses of all ages and classes are equally liable to attack; brood mares perhaps suffer most; cobs and ponies seem the least susceptible, and young animals suffer less than the aged, whether horses are working, unbroken, or for breeding purposes, makes no difference, and strange horses contract the disease quicker than local ones. The recovery of horses brought into the stable, or taken on board ship for a voyage, is well known, and proves that feed and situation are important elements in connection with recovery. That it is not a poison either mineral or vegetable, or sand in the stomach, is proved by history, symptoms, progress, and *post-mortem* examinations. Foals never show it whilst sucking their affected mothers.

That it is not rheumatism, or the result of over-driving, a sudden chill, exposure to rain or cold wind, must be apparent, because such influences have for ever existed everywhere, and this disease is of recent introduction, and its geographical extent can be clearly defined, at least in this Colony.

Treatment.

The curative treatment is to expel the parasites by the administration of anthelmintics, and dose after dose may be required for this purpose. It is necessary to remember that brood after brood have to be poisoned; and that when they are ensconced in a living being, whose tissues are also liable to suffer from the introduction of drastic drugs, it is impossible to effect our object without perseverance; and to prevent reinfection it is advisable to move the patients to a sound paddock, or, better still, into a yard or stable, to feed liberally, and also constantly supply salt with their food.

Prevention.

Preventive measures, I consider, are very important; with this object avoid putting an affected animal into a paddock at all favourable for the development of worms. Infected paddocks should not be used by horses, even temporarily; half an hour's grazing may effect them, especially during the spring and autumn. The first grass after summer will scour animals, and has been known to cure them, because at that season the parasites are prepared for exit, microscopical examination shows this, for many males are encysted and dead, and females pregnant with fully developed eggs, some are viviparous; and it is to be noted that this is the time the paddocks get contaminated, and suitable soils may retain the ova for an indefinite period; so that one affected animal introduced, though he may be eventually cured, means later on (all circumstances being favourable) a hot-bed of infection for future tenants of the paddock.

An interesting case came under my notice of a recovery, almost as sudden as the attack, it occurred accidentally; the owner jumped on the affected horse which had only been attacked a few days, to help to yard an obstreperous beast; and warmed with the excitement he worked hard and fast, and afterwards he was astonished to find his horse had recovered. The explanation is that the excitement increased the peristaltic action of the horse's bowels, and purged him, and so expelled the parasites; and subsequent stable feeding established a cure. The obscurity of the subject, and its importance, has entailed my giving much detailed information, which has increased considerably the length of this report.

My thanks are due to those gentlemen who assisted me in the inquiry, by generously giving their horses for observation, and subsequent *post-mortem* examination, as this proved to be of great importance in making the investigation.

I have, &c.,

EDWARD STANLEY,

Fellow of the Royal College of Veterinary Surgeons, London,
Government Veterinarian. N.S.W.

To Alex. Bruce, Esq., Chief Inspector of Stock.

APPENDIX C.

HORSE DISEASE AT COONONG.

THE following is a copy of a report upon the recent outbreak of disease among horses at Coonong, forwarded to the Chief Inspector of Stock by the Government Veterinarian, Mr. Edward Stanley, F.R.C.V.S.L. :—

“ Stock Branch Office, Department of Mines,

“ Sydney, 16 July, 1886.

“ Having concluded my official investigation of this outbreak of disease among horses, I have the honour to report that for the last six months the station and working horses have been fed entirely on ensilage, and are said to have put on fat for the first few weeks while they were idle. At that time they were having a spell. When put to work they were soft, and soon lost their condition.

“ About the middle of June a second silo was opened. This contained about 100 tons of wheaten hay, cut while green and with grain in the ears, grown on 130 acres in the swamp paddock. This paddock was flooded early in September, when the crop was yellow from drought and about 6 inches high. It grew rapidly until cut, and was not noticed to have been otherwise than healthy. No one remarked rust or blight of any kind, but such a condition may or may not have existed.

“ The ensilage appeared to be good, but the horses were remarked to be sluggish and spiritless. They sweated a good deal while at work, and all got thin. Some had diarrhœa. These matters were not heeded at the time, beyond the manager thinking that the work was reducing the animals. The manager gave a few oats with the ensilage to the horses engaged in tank sinking. This silo pit being 2 miles from the station and 3½ miles from the tank work, necessitated a three or four days' supply being fetched from the silo twice a week, instead of being fresh every day, as it ought to be. If kept over three days it becomes whitened with a fungus like mould, and became rotten and stinking. Usually, the feed troughs were cleaned out before fresh ensilage was given, but not always; hence, the mould fungus was cultivated.

“ This went on for three weeks, some of the horses working down thin. As soon as the tank was finished, they were turned into paddocks for a spell. (Grain is very scarce in this district.)

“ The first case of illness noticed was a station mare in a yard standing at the feed trough at mid-day on July 3. She was bled, and a dose of oil was given her. She died on the evening of that day. This mare had eaten nothing but ensilage for the preceding eight days. Previously she had been in a grass paddock.

“ The next animal noticed to be ill was one of a pair used to draw out the dead animal. She had eaten ensilage for nine days. She was in a low condition, and was nearly knocked up while employed at the work. On the same day she died.

“ The third animal taken ill was a valuable four-year-old draught entire horse. He had never been in the paddock, nor had he been worked. He was kept in the yard during the day, and was put in a stable at night. He had been fed on ensilage only for the last six weeks. It was noticed that he was lying in the yard on Saturday. He was bled, and oil was given to him. He died the same night.

“ The fourth animal attacked was a station hack. He had been fed on ensilage only for six weeks; was taken ill on Sunday, and died on Tuesday.

“ The fifth animal taken ill was a draught horse. He had been tank-sinking, and had been kept at the tank with the other horses. He was 5 or 6 miles from the station, and there fed on ensilage and a few oats for six weeks. He was turned into a paddock situate 4 miles from the station with several others when the work was completed. On Monday he was seen ill, and was too weak to walk home. He fell and died in the paddock during Tuesday night.

“ The sixth, a draught horse (companion to the last-mentioned), seemed all right on Monday. On Tuesday he was lying down. Upon being roused up, he walked weakly. He staggered a quarter of a mile, fell into a crab hole, and died the same night.

“ And so on with ten more hacks and draughts, everyone of them working horses, fed on similar ensilage. Their water supply had been obtained from various sources—crab holes in the paddocks filled by the recent rains, tanks, and station creek water. Water from the same sources was used for domestic purposes and for cattle, sheep, dogs, and swine.

“ This mortality had occurred before my arrival. There were several horses still alive, but ill. The symptoms in all the cases I saw were alike, varying only in degree. These were listlessness, prostration of strength, sore throat, without swelling or pain upon manipulation. Extreme irritation was shown by liquids being swallowed with great difficulty, although thirst was marked. Food and water were both returned through the nostrils; this often being accompanied by fits of coughing. This abnormal process is still seen in the convalescents, now feeding well. The bowels were constipated, with straining, the dung was dark coloured and most offensive. The urine was passed freely in large quantities. It was of the usual colour and clear. It presented nothing diagnostic on examination.

“ The pulse was small, hard, feeble, and indistinct. The heart was irritable and laboured, ranging from 40 to 60 beats per minute. Respiration was slightly accelerated; but with feeble chest and abdominal movements. Visible mucous membranes were of a dirty brownish-yellowish colour. The tongue was pasty and dry, emitting a horrid nauseating odour, almost unbearable. The temperature ranged from 95 to 100 degrees. The extremities were cold.

“ There was no indication of suffering from pain, of inclination to lie down, or of cerebral or spinal disturbance. The animals were conscious up to the last and attempted to eat and drink, even when lying prostrate and unable to rise. Mastication was very slow, as if from muscular weakness, and quids were often retained in the mouth. The horses could scarcely swallow fluids, but could eat dry oaten hay. Drenching always caused coughing so that medicine had to be given in other ways.

“ Assisted by Mr. Day, I made two *post-mortem* examinations. One was of a horse that died on the night preceding our arrival; the other animal died on the night after our arrival. None of the animals under treatment died during our stay.

“ The *post-mortem* appearances I give as briefly as possible, avoiding technicalities. They were as follow :—Congestion of the nasal passages, larynx, tracheæ. This was more marked in the first case. The tongues were dry and thickly furred. The pharynx was inflamed, but free from ulceration or diphtheritic deposit. The stomachs and large intestines were of a brownish black colour, the mucous membrane being deeply stained. The stain would not wash off. The contents were soft. The bowels were less affected.

The

The contents of the rectum were dry and hard. The peritoneum was stained in large patches of a ruddy colour, and the mesenteric veins were filled with black coagulated blood. The bladders were ecchymosed in a most remarkable manner. The heart was flabby, dark in colour. Extravasations of blood occurred along the course of the blood vessels, and also on the fleshy pillars inside the ventricles. Both right and left cavities contained firm clots of blood, formed partly of yellow lymph and almost black blood, separated by gravitation. The liver was dark, and slightly ecchymosed. The spleen was healthy in appearance. The lungs, in one case, were full of congested blood, and the tracheæ and bronchial tubes were greenish black in colour. In the other case, the lungs were nearly normal.

"I noticed the entire absence of fat, which circumstance is very unusual in the horse. I also noticed the presence of many intestinal worms, four varieties being recognised.

"Death was the result of failure of the heart's action, the blood being in a state of chronic poisoning, and the vital powers consequently exhausted. No bacilli were in the blood.

"Mr. Day's successful treatment, carried out by Mr. Morales, who undertook the hospital duty, consisted in evacuating the poison, and restoring the blood to its normal condition by the judicious administration of salines and antiseptics, with easily-digested and nutritious food. The sufferers were sheltered at night from the cutting winds. General attention was given to cleanliness and comfort.

"As a means of prevention, I suggest the institution of change of feed for ensilage, such as chaff, with bran, oats, oaten hay, and grass—and a constant supply of salt within their reach.

"It is to be noted that these horses have been living on ensilage from the first pit for the last six months, getting a fresh supply daily, and that they did satisfactorily on it.

"Cattle and sheep do well on this artificially-preserved food; but it is never advisable to limit animals to one article of diet. Change of food is as necessary for them as it is for human beings. No doubt ruminating animals, which have only to eat and sleep and time to browse over the paddocks, stand a far better chance of thriving on food of this character than the single-stomached, hard-worked horse, who is required to exhaust his muscular strength day by day, so that he cannot thrive and work unless fed on clean and wholesome food with concentrated nutriment in small bulk. Hence, grain of some kind or other is his usual fare.

"I cannot call to mind any record of ill-effects arising from the use of ensilage, which is now largely in use in Great Britain, Europe, and America. No doubt it will prove to be a very valuable means of preserving food for stock in these colonies. If possible, it should be used in conjunction with other feed, and care should be taken that it is not used if damaged by age or exposure to the air. Mixed grasses would make a more nutritious ensilage for horses than growing grain. Wheat and wheat straw are both unsuitable, and are bad feed for horses; and, in the form of ensilage, being heated by fermentation is soft, and not wholesome as a stable diet. Consequently the strength of the horses is lowered.

"The unfortunate fatality leads me to the conclusion that ensilage exposed to the air for a very few days, under favourable climatic conditions, such as moisture and temperature heat, forms an excellent seed-bed and nourishing medium for fungoid growths, such as moulds and low forms of vegetable life. Their germs, being always present in the air, are increased to myriads under favourable conditions, and such undoubtedly existed in this outbreak. Rain having recently fallen, following on a long period of heat and drought, and the horses being weak, predisposed them to the ill-effects of the fungus, which not only entered their systems through the stomach, but also during respiration. Being exposed to the same poisonous agents day after day, chronic poisoning and fatal consequences followed.

"Sixteen valuable horses died. Eleven horses were treated by Mr. Day, in consultation with me. Ten of the latter are convalescent, recovery being a slow process. One animal, I fear, is incurable, it being dangerously ill, utterly prostrate and delirious.

"There are several other horses scattered on the station; but these have not had ensilage. They are all healthy.

"I cannot conclude without expressing my sympathy for Mr. Craig, the station manager, and thanking him for his assistance in carrying out the inquiry. Mr. Inspector P. R. Brett deserves especial thanks, for he spared neither himself nor his horses. From his long experience in the district and his practical knowledge of stock and their management, his services, so willingly rendered, were most opportune.

"EDWARD STANLEY, F.R.C.V.S.L.,

"Government Veterinarian.

"To A. Bruce, Esq., Chief Inspector of Stock."

Accompanying the report were three packages of ensilage obtained from the station. The samples are of "Fresh Ensilage," "Ensilage, three or four days exposed, showing mould fungus—as given to the horses on the station," "Ensilage, showing fully-developed mould fungus."

APPENDIX D.

PLEURO-PNEUMONIA.

Question No. 1.—What number of cattle on an average pass through your hands during the year?

Names of Owners.	Replies.
Mr. Thos. Mitchell	... Now about 300.
Mr. Edward White	... Varies much with the season, but would average about 4,000.
Mr. Thos. Hungerford	... About 3,000 or 4,000.
Mr. G. Loder	... 5,000.
Mr. J. K. Mackay	... 2,000 or 3,000.
Mr. D. F. Mackay	... 2,000 head of store bullocks have been placed on Ravensworth within last twelve months from my Tilpah Station, Rockhampton.

Question

Question No. 2.—What is your experience in inoculation for pleuro-pneumonia?

- (1.) When did you first inoculate?
- (2.) How often (approximately) have you done so?
- (3.) How many cattle (approximately) have you inoculated?

Names of Owners.	Replies.
Mr. Thos. Mitchell	... If properly done believe in it, never having known it to fail, except on one occasion of a mob of 100 bullocks. (1.) About twenty-eight years ago I was instructed how to do it by a gentleman from the Cape of Good Hope, and have continued to do so ever since. (2.) About twice annually. (3.) 50,000 head, but could say with truth nearer 100,000.
Mr. Edward White	... I believe inoculation to be an absolute preventive of pleuro-pneumonia, and even ameliorates an attack if performed in the earlier stages of the disease. (1.) I first inoculated cattle in 1864. (2.) Have inoculated on an average 2,000 head per annum. (3.) From 40,000 to 50,000.
Mr. Thos. Hungerford	... My experience has effectually satisfied me that inoculation is an effective preventive. (1.) Inoculated first in 1863. (2.) Inoculated all cattle newly purchased when I could get good virus. (3.) About 20,000 head or over.
Mr. G. Loder	... (1.) 1862, with effect. (2.) (3.) I should think 7,000.
Mr. J. K. Mackay	... I believe in it thoroughly. (1.) When pleuro first appeared in this district, some thirty years back. (2.) (3.) Perhaps 10,000 head.
Mr. D. F. Mackay	... I am in favour of inoculation, and have inoculated my stock for the last 15 years when I can get virus, and would recommend every one to inoculate their weaners when 12 months old. I have also inoculated store bullocks, and always found it beneficial, as regards stopping disease. I cannot say how many I have inoculated, but many thousands. The above also answers your question No. 3.

Question No. 3.—Do you believe in the efficacy of inoculation, if so, why?

Names of Owners.	Replies.
Mr. Thos. Mitchell	... Yes, from long experience; have never known it to fail except on one occasion.
Mr. Edward White	... I thoroughly believe in its efficacy; have inoculated one portion of a draft and left the other uninoculated; the former have become sound and the latter continued to die of pleuro. On one occasion I purchased a draft of mixed cattle (stores and fats) travelling through Denman, on the way to market, the owner was with them and they had pleuro very badly; the owner offered them to me at a low figure, and I accepted the risk, selected the best of the fats (40), and inoculated the balance 160. Out of the 160, I lost none and fattened them off; of the 40 I lost several, and then sold them to save further loss. On one occasion I halved a lot of stores with a neighbour, who did not believe in inoculation; these cattle proved to have pleuro. I inoculated my half and the disease soon disappeared, but the other half left to chance continued dying for months and the losses were very heavy. After this my friend inoculated his store cattle, and now there is hardly a grazier in this district who does not inoculate.
Mr. Thos. Hungerford	... I have great faith in inoculation; I have known it to stop pleuro; and have seen uninoculated cattle dying while running with inoculated cattle, while the latter were perfectly healthy.
Mr. G. Loder	... In all cases, with proper virus, a change or staying of disease the result.
Mr. J. K. Mackay	... Because it always stops disease and does good.

Question No. 8.—Do you know any case in which cattle which had recovered for a time, and afterwards had a relapse, infected others; if so, after what length of time?

Names of Owners.	Replies.
Mr. Thos. Mitchell	... No; having always inoculated, they never got a chance of taking the disease.
Mr. Edward White	... I do not think these cattle can communicate the disease to sound ones, as the <i>post mortem</i> appearances in this case display no signs of actual pleuro; death seems to arise in these cases from ulceration of the lung and gradual wasting of the system extending over months and even years, hastened by want of nourishment, and retarded by soft succulent vegetation.
Mr. Thos. Hungerford	... I have never known any case of this kind.
Mr. J. K. Mackay	... Cannot answer.
Mr. D. F. Mackay	... I do not think cattle that have been inoculated take the disease a second time.

Question

Question No. 10.—How soon after inoculation of an infected herd would it be safe to mix them with healthy cattle?

Names of Owners.	Replies.
Mr. Thos. Mitchell	... About three months; but if healthy cattle were well inoculated they could mix any time, I think, with safety.
Mr. Edward White	... Twenty-eight days.
Mr. Thos. Hungerford	... I should not like to mix them before two months.
Mr. G. Loder	... Immediately after they recover from effects of inoculation.
Mr. J. K. Mackay	... Perhaps one month or six weeks.
Mr. D. F. Mackay	... I have known diseased cows suckling a diseased calf, and <i>vice versa</i> ; but cannot say if the disease is contagious or not, having seen it act in different ways. I have known cattle in different paddocks, only divided by the fence, with disease in one paddock and none in the other.

APPENDIX E.

ANNUAL SHEEP SALES.

The following lots of sheep, bred by the several New South Wales, Queensland, and Tasmanian owners, were disposed of at the Annual Stud Sales held in July 1886:—

Names of Breeders.	Address.	Number of Rams.	Number of Ewes.	Total.	
				Rams.	Ewes.
Sold by Messrs. Mort & Co., Ltd., on account of—					
<i>New South Wales.</i>					
A. Lucian Faithfull, Esq.	Springfield, Goulburn	8	1
H. R. F. Hume, Esq.	Everton, Rye Park	3	4
Hon. G. H. Cox	Mudgee	7
Richard Rouse, Esq.	Guntawang, Gulgong	10
James D. Cox, Esq.	Mudgee	3	4
F. & A. Cox, Esqs.	Mudgee	7	21	26
<i>Tasmania.</i>					
James Gibson, Esq.	Bellevue	216
David Taylor, Esq.	St. Johnston	20
W. H. Gibson, Esq.	Fairfield	54
Thos. Parramore, Esq.	Beaufront	54	25
George Parramore, Esq.	Wetmore	21
Robert Jones, Esq.	Riccarton	12
J. B. Gibson, Esq.	Perth	24
G. W. Keach, Esq.	Chiswick	26	5
Chas. Field, Esq.	Cressy	36	5
Wm. Gatenby, Esq.	Woodburn	26	12
Robt. D. Finlay, Esq.	Douglas Park	20	8
W. H. Bennett, Esq.	Bloomfield	9	10
Percy W. Archer, Esq.	Panshanger	12
D. M'Kinnon, Esq.	Dalness	44
James Cox, Esq.	Clarendon	3
E. Dowling, Esq.	Quorn Hall	15
Henry S. Smith, Esq.	Evandale	18
Messrs. T. & W. A. Gatenby	Lake River	18
Arthur Gatenby, Esq.	Lemon Springs	18
John L. Smith, Esq.	Camboch	7	12
Thos. Riggall, Esq.	Somercotes	8	661	77
<i>Queensland.</i>					
Messrs. G. Clark & Co.	East Talgai	16
Messrs. Marshall & Slade	Glengallan	12	6	28	6
Sold by Messrs. Bruncker & Wolfe on account of—					
<i>Tasmania.</i>					
Messrs. W. Gibson & Son	Scone	203	16
Thos. Gibson, Esq.	Eskvale	21	42
Robert Taylor, Esq.	Valleyfield	11	25
Robert Viney, Esq.	Fernhill, Lynton	11
Chas. B. Grubb, Esq.	Strathray	41
Herbert Gatenby, Esq.	Rhodes	40
A. M. Mackinnon, Esq.	Mountford	35
Miles Bennett, Esq.	Esk Farm, Longford	6	4
Basil Archer, Esq.	Woodside, Cressy	12	380	87
Grand total		1,090	196

N.B.—Particulars of other sales effected not to hand.

APPENDIX F.

APPENDIX F.

AMERICAN CHILLED MEAT TRADE.

REPORT of the U.S. Commissioner for Agriculture.

The Hon. Jas. D. Porter, Assistant Secretary of State, Washington, D.C.

Sir,

Your favour of the 2nd ultimo, enclosing a despatch from Mr. G. W. Griffin, U.S. Consul at Sydney, New South Wales, requesting information relating to the subject of "Chilled Meat," which had been requested by the Premier of that Colony, was duly received. The information desired occasioned considerable correspondence with parties engaged in the dressed meat business, and this must be my apology for an apparent delay in replying to your request. In the following pages and accompanying enclosures I think will be found answers to the questions propounded by Mr. Griffin:—

The Dressed Meat Traffic.

1. By whom is the dressed meat traffic conducted, and how?—The dressed meat traffic in the United States is conducted almost exclusively by firms employing large amounts of capital and many men in the work.

[This may ultimately be the case in Australia; but at first it is thought the business will be conducted by companies killing, chilling, loading, and icing for owners at per carcase, the meat being sent on for sale in the public meat market.]

The greatest part of the slaughtering is done in Kansas City, Mo.; Omaha, Nebraska; St. Louis, Missouri; and Chicago, Illinois. (These places are from 1,000 to 1,500 miles from the seaboard and eastern markets.) All of these places are centres to which the live stock of the western and middle states are sent for sale. The slaughter-houses are in nearly every instance near the stock-yards in which the animals to be slaughtered are received from the railroads and are fed, watered, and sold, or are shipped to other markets. Firms engaged in the dressed meat traffic employ professional buyers who receive liberal salaries for their services, because of their ability to judge accurately of the weight and quality of the animals offered for sale. In all cases the cattle or sheep are weighed after purchase, the price per cent. having been first agreed upon by the purchasers and sellers. The scales are so arranged that from fifty to eighty cattle may be weighed together upon the platform.

[The sales should be conducted the same way here. All the cattle should be weighed alive. This leaves only one thing to judge—the quality, and owners get paid for every pound their stock weigh.]

Within the last two years an abattoir has been established on the line of the Northern Pacific Railway in Dakota (1,500 miles from Rolton) for the purpose of killing cattle grazed and fattened on the range near the abattoir, and of sending the beef from such cattle in refrigerator cars or vans to the markets of the eastern States, of Great Britain, and the Continent.

[The meat when offered in London could not be less than from ten to fourteen days killed; and yet the consumers do not know but they are eating Scotch beef.]

2. In what part of the States is it carried on?—Chiefly Eastern Kansas, Nebraska, Missouri, and Illinois. At Kansas City large numbers of cattle, sheep, and swine are received from Arizona, Colorado, New Mexico, the Indian Territory, Kansas, and Missouri. At Omaha live stock from Idaho, Utah, Wyoming, Kansas, Dakota, and Nebraska are received. The stock so received is either sold to resident buyers, who slaughter in houses in the town named, or who ship to other markets farther east, or the animals are forwarded to those other markets without having been sold. Agents of the refrigerator car companies are called upon to furnish cars for a large number of western points, some of them in the heart of the range country where grass-fed cattle are cheap and abundant. Cattle that could not endure the hardships of transportation "on the hoof," can be shipped in refrigerator cars with profit.

[If this is the case with respect to American cattle, it is very much more so here, where the cattle are never taken out of the trucks to be watered and fed (as they are in America every twenty-four hours), although the journey by train may occupy more than two days, and that too after perhaps a long tramp of from 200 to 400 miles on foot with scanty feed.]

3. Is the business carried on to the same extent all the year round, or more at one season than another, and if it varies, why?—This business is carried on throughout every month, and the traffic is extending each year into more distant parts; the extent of the trade depending largely upon the available supply of cattle and not upon the condition of the weather, for heat or cold in the weather seems to have little effect upon the volume of the business. In the winter here it is as necessary that the meat shall be kept from freezing as it is that it shall be protected from the effects of heat in the summer. The receipts of dressed beef at New York City may be taken as showing fairly the volume of the traffic month by month throughout the year, therefore the subjoined statement has been prepared. As the greater part of the traffic in dressed meat has its origin in Chicago, another statement has been prepared showing the number of tons of 2,000 pounds sent to the eastern markets by Chicago houses. That question (No. 18), "What proportion does the dead meat trade now bear to the fat stock trade?" may be answered at the same time in convenient form. I have included in that table shipments of cattle from Chicago to the same eastern markets for the same years.

STATEMENT of Tons of Dressed Beef received at New York between January 1, 1882, and December 31, 1885—by months.

Months.	1882.	1883.	1884.	1885.	Average.
January		1,201	1,913	3,643	2,252 3
February		1,555	1,846	3,246	2,216
March		1,590	1,937	3,564	2,364
April		1,311	1,960	4,593	2,621
May		769	3,176	4,237	2,727
June		748	3,122	4,074	2,648
July		921	3,024	4,050	2,665
August		1,321	3,187	4,577	3,028
September		1,670	3,526	5,392	3,529
October		1,783	3,941	5,638	3,787
November	1,283	1,569	3,555	4,953	3,770
December	1,400	1,919	3,869	5,377	4,155
Total	2,683	16,365	34,956	53,344	36,821

In July of each year cattle from Texas and the plains of the south-west generally begin to reach the great live stock markets named above. The arrivals generally increase in number until they are joined in August and later by cattle from the ranges of the States and territories further north. The receipts of the plains cattle continue until December, at which time the supply from the plains ceases, but its place is at once occupied in the market by the stock which has fattened on the grass of the pastures of the States east of Missouri River.

COMPARATIVE STATEMENT.

SHIPMENTS of Cattle and Dressed Beef during Calendar Years 1880-85, inclusive, from Chicago.
Tons of 2,000 lbs.

Destination.	1880.	1881.	1882.	1883.	1884.	1885.

[Nothing can be more encouraging than these statements. They show that the fat stock trade is fast—notwithstanding the powerful vested interests—becoming a fresh meat trade in America, and there are much stronger reasons for its doing so in Australia.]

4. Do those engaged in it carry on the trade on their own account as dealers in stock or in meat or as agents for others? If as agents on what terms?—This trade is in the control of firms using their own capital, owning the slaughter-houses, and in some cases the refrigerator cars used in the business. These firms buy, kill, transport, and in some cases even retail their meat to the consumers. At the termini they have built and own cold storage rooms for their own uses, and are in almost every way independent of all outside dealers or agents, so far as concerns the buying of the cattle in the west, the selling to the actual consumer in the east, and all intermediate transactions necessary to the business, except the hauling of the refrigerator cars over the railways. I do not intend to convey the idea that the firms in the business do sell large quantities of their meat to the consumer, for they do not; but they are able to do so at any time. They do not carry on any part of the business as agents for others.

[Here the Railway Department will provide the meat trucks, as they will be able with a fresh meat, instead of a live stock trade, to take any kind of goods back in the meat trucks, and thus save the expense of hauling empty sheep and cattle trucks back long distances like those to Bourke and Hay.]

5. How are the stock awaiting slaughter kept?—Beeves and sheep are brought from day to day at the stock-yards named above; the supply is scarcely ever below the needs of the shippers of dressed beef or mutton, therefore there is never any need of keeping a supply on hand for the next coming day. On arrival in the stock-yards, usually at an early hour in the morning, the stock receives hay; after eating the hay they receive water in practically unlimited quantities. They are then, if sold, weighed and delivered to the buyer. His assistants drive the stock to the slaughter-houses near, and there they are killed, very often almost immediately after arrival at the slaughter-houses.

6. Describe the yards, slaughter-houses, and appurtenances, sending plans and lithographs where procurable.—The stock-yards of Chicago are the largest in the world, and may be considered representative yards; but they are perhaps less perfectly planned than are those built at a comparatively recent date in Kansas City, Missouri. The latter are on the sandy bank of the Kan River, to which the drainage of the yards flows freely through the sewers of ample size. These sewers underlie nearly every street in the yard, as their branches underlie nearly every alley. The area covered by the yards is divided by streets and alleys into blocks as nearly square as the nature of the ground permits. The blocks are subdivided into pens of various sizes by fences made of strong cedar posts deeply planted in the earth, and of pine planks 2 inches thick firmly nailed to the posts. The planks are 6 inches wide, and are surmounted by a broad plank 2 inches thick extending along the entire length of the fences, including the tops of the many gates. This broad plank thus affords a continuous walk from one part of the yard to any other part, high above the ground. At frequent intervals elevated bridges span the streets and alleys, that there

there may be no necessity for descending to the level of the ground. To each block a letter is given to distinguish it from the others, as block A, &c. To each pen in a block a number is given. When a lot of stock is put into a pen a record is made on the books of the company operating the yards, as for illustration, if a car load of cattle was received for John Doe, the record would read: "16 cattle, John Doe, lot 34, block G." At convenient places in the yards scales are placed for weighing the stock. These scales are made expressly for this purpose, and are each covered by a substantially built house. Of their capacity something has been said above. The pens are floored with pine planks 4 inches thick, resting on other planks of like description. The latter rests in turn upon their edges upon planks lying upon the ground. In places where the pens are not so floored, they are paved or macadamized. For cattle-pens no roofs are provided, but pens for sheltering hogs and sheep are roofed. In every pen is a water-trough of ample size, filled, when desired, from cocks in pipes connecting with a water-tank. In Chicago the water supply is taken from a stand-pipe, 100 feet in height and 7 feet in diameter. This pipe is filled by engines driving strong pumps, taking their supply from artesian wells, some 1,200 to 1,300 feet deep. The stock-yards of Chicago cover 360 acres. The slaughter-houses are of brick. From the stock-pens at one side of the houses, an inclined plane, 7 or 8 feet wide, extends to the height of the second floor. Between the side of the building and the drive-way mentioned is a row of pens, each 8 feet long and 4 feet wide. Each of these pens connects by a strong door with the drive-way, and at the other end is another door covered by a plate of iron, through which door access can be had to the interior of the slaughter-house. In the operation of the business cattle are driven up the inclined plane to the level drive-way, and a gate closes behind them. The gates of the small pens are open, and the cattle naturally enter to escape the crowd and the shouting drivers behind. Only one animal, or at the least two small beasts, can enter one of these pens at a time. The door is closed behind the animal, and it finds itself imprisoned in a space so small that it cannot turn itself around, but must stand with its nose close to the ironclad door, beyond which are the butchers. Over the heads of the beast awaiting death is a running board or walk 1 foot wide. Along this goes a man armed with a rifle carrying a ball 44:100 calibre, or with a piece of iron pipe $\frac{3}{4}$ inch in diameter, in the end of which a lance-shaped point has been fastened. With the rifle placed within a few inches of the head of the animal the trigger is pulled, and the heavy ball tears its way through the menulla oblongata and the brain, or if the lance is used, the spinal cord is severed by its sharp edge; either way causes instant death. The ironclad door is raised when the butchers within are ready, and a chain is passed around the horns of the beast. This chain is operated by a steam engine, and quickly drags the bullock into the dressing-room, where it lies upon a floor sloping slightly toward a gutter through which runs a stream of water, carrying away all the blood and offal that is not saved in the operations of slaughtering. When the throat of the bullock is cut, the blood is caught in shallow pans and saved. The skin is quickly stripped from the warm carcass, which is then hoisted by steam machinery, split along the backbone, and the sides, hanging by hooks depending from wheels running upon a suspended rail of iron, are pushed into the cooling-room, there to hang until their temperature shall have fallen to that of the outer air. The sides are then taken to the chill-rooms to be kept until they shall be ready and wanted for shipment.

[This was asked in order to obtain information as to the system (companies killing for owners) which it is expected will exist here.]

7. What is the cost of slaughtering the stock?—No definite answer can be given to query No. 7, for the reason that so many elements enter into the cost that it is quite impossible for any one not having access to the books of the slaughterers to arrive at it. The cost varies, being less in some houses having the best appliances and superior management than it is in smaller or less completely appointed establishments, or large ones not so nicely managed as others. Those engaged in the business naturally object to telling what the cost is of their operations.

8. Are beasts slaughtered at a price for their owners,—if so, at what rate?—As a rule, animals are not so slaughtered. It is said, however, that it is the intention of those who have recently started slaughtering establishments in the plain country of the west to slaughter for any and all who may bring them a cartload or more at a time for that purpose.

9. Are fat, tongues, or the offal taken by slaughterers as part payment for their work?—This query is answered by the reply to No. 8.

10. Describe the chill-rooms,—how they are built, and of what material?—Chill-rooms are prepared by making next to their walls, a dead air-space, as nearly air-tight as possible. In some of the rooms racks or cribs rise from the floor of the room to that of the room next above. These cribs are filled from time to time with ice, traps in the floor above being opened for the purpose. Means for ventilation are provided at the top of the chill-room. In most chill-rooms, and in cold storage houses in the north, naturally-formed ice is used; but in the cold storage houses in the south artificial means are used for reducing the temperature. They are of brick or of wood.

[From the specifications, advertisements, and plans furnished, it would seem that the cheapest mode of chilling is by one of the processes like Mori's at Darling Harbour, and at the Sydney Ice-making Company, while the best for freezing for export would seem to be Bell & Coleman's, and Haslam's machines.]

11. Describe the cooling machinery, and state which is the best?—Without personal experience of the workings of the different kinds of refrigerating machinery, I would not be competent to decide as to which is the best adapted to the purposes of the dressed beef business.

12. What are the modes, extent, and cost of cooling meats per pound or per carcass?—Without knowing the cost of ice, of coal, or other fuel and the other elements of cost, it will be difficult to answer the question quoted, and the operators are as reluctant about answering this as they are about answering other queries as to the cost of the several operations necessary to their business. The cost of the operation may be ascertained approximately from the statements of the matter of cooling machines in the circulars sent herewith.

13. Describe the van by which the meat is carried by rail, the mode of sending it, and give full details as to how cold is provided on the way where necessary and the cost?—Several different cars are used for the purpose of carrying fresh meats long distances by rail; of these the oldest in use is that invented some twenty years ago by Mr. Wm. Chandler. Since that gentleman put the first refrigerator car into service, hundreds of patents have been taken out in the United States for devices of the kind. Of these none are more generally used than is the one known as the Tiffany refrigerator car. As at present constructed these are 30 feet long inside, and provided with hooks for suspending the fore and hind

hind quarters into which the meat is cut just before it is placed in the car. In the top of the car are ice boxes, which are filled with ice before the meat is placed in the car. The car is closed as quickly as possible after the meat is placed in the car. From thirty to sixty minutes are required in loading a car with 20,000 lbs. (20,000 lbs. would be equal to twenty-five bodies) of beef quarters, four men clad in white frocks doing the work. While hanging in the cooling or chill-room the meat is usually in halves or sides, and is cut apart by workmen as it leaves the hook on the scale where it is weighed at the place of loading. The ice tanks are examined two or three times on the way from Chicago to New York or Boston, or once in twenty-four or thirty-six hours, and, if necessary, are replenished with ice and salt. The larger concerns attend to this at their own expense, having ice and men ready at the stations where required. The cost depends upon the condition of the weather at the time the beef is in transit and also at the time of putting up the ice used. In a favourable winter ice can be housed in the north for less than one dollar per ton. From 1,600 to 1,200 lbs. are placed in each car, the quantity depending on the season. During the hottest part of August last dressed beef was sent from Chicago to New York and to Boston in cars in which 900 lbs. of ice were placed at Buffalo, and 600 lbs. at Albany, to replace that which was put in before starting from Chicago. (That is three iceings altogether, one at starting, and two by the way, for 1,005 miles.) Several cars safely took their loads of beef from Chicago to New York, using only 1,800 lbs. of ice in the trip. It may be said that the average cost of icing will range from 5d. to 7d. per car at each icing station.

[Taking the distance from Bourke to Sydney at 505 miles, and the average cost of an icing of a car with 20,000 lbs. meat at 25s.; and supposing that two iceings would be required in the height of summer, one before starting, and one at Dubbo or Wellington, the cost of ice for a car load of meat, 20,000 lbs., would be 50s., or one-thirty-third of a penny per lb., or (say) 2s. per body, while only one icing would be sufficient for a good part of the year, and in the winter none would be needed. The cost is, however, so little that it would be bad policy to run any risk.]

14. Say how trains with chilled meat are run, the distances they run, their average speed, and the average cost per mile per ton, or per body, for carrying and for keeping cool?—It is the custom with railroad companies carrying meats from Chicago to make up special trains carrying fresh meats and other perishable freight to the seaboard. Each day such a train consisting of twenty or thirty cars is made up, to which are added those containing butter, cheese, and fruit, all in refrigerator cars. Such trains run at the rate of twenty-five or thirty miles per hour, including stoppages. Trains not infrequently make the run from Chicago to Buffalo, 523 miles, in twenty-six hours, including one stop at Cleveland, when it is found necessary to ice there. As Buffalo is a common point at which eastward bound trains meet on their way from the west to New York and Boston, all refrigerator cars are examined there, and iced if re-icing appears to be required. The tariff rate on dressed beef is 65 cents per 100lb. (£3 10s. 8d. per ton) from Chicago to New York. To this charge is to be added the cost of icing as given above. In answering the above questions I have been largely guided by the conditions of the trade of Chicago, because this city has done by far the greater part of the dressed meat business of this country. In the year 1884 shipments of dressed beef from Chicago amounted to 694,026 carcasses, and they have since that time increased. Perishable property is, it may be added here, carried to the Atlantic seaboard (making a journey altogether of 2,000 miles) in refrigerator cars named, from points 1,000 miles or more west and south-west from Chicago, at which points the temperature ranges from 90° to 100° F., in the shade, during the heated months. In trips through such heated districts new supplies of ice are put into the tanks in the cars three times in each 1,000 miles.

15. Whether the meat ever arrives in bad condition? If it does, what is the cause and the percentage of loss from this cause?—In the earlier days of this business, when people were experimenting for the purpose of overcoming the obstacles then met, some cargoes reached their destinations in bad order, the cause having been imperfect insulation, and the ignorance of employees; but it is now held that there is little, if any, risk of loss in shipping fresh meats or other perishable property. The percentage of loss of goods in refrigerator cars is too small to be estimated.

16. What are the form and construction of the meat markets, and of the cold store attached; the rate of market dues and the charges per day for keeping meats in the chill rooms?—As the markets are largely owned or rented by private parties who make leases, when they do lease, upon private terms, no answer that would have value in another country, or in other conditions, can be made. In a few cities, stalls are rented by retailers from the municipal authorities; but the rates and conditions vary greatly. In regard to the construction of the markets, it may perhaps be well to try to answer by describing the retail market of one of Chicago firm, which ships large quantities of fresh beef to the eastern States, to Europe, and to many interior points in this country. In the market referred to, a counter extends the entire length of the room, the walls of which are frequently covered by a coating of whitewash, and the floor thickly carpeted each day with fresh clean fine pine sawdust. Through the middle of the room is a row of square pine posts supporting the floor above. These posts are also whitewashed, and each has attached to it brackets which support bunches of fresh flowers during the season when the flowers bloom in the open air here. The top of the counter on which the meat is served to customers is of marble, smoothly polished. Behind the counter are rows of strong hooks upon which are suspended a few—and only a few—pieces of meat in a fresh state, most of the meats thereon being cured hams or bacon, or sausage. On the heavy cutting blocks under the rows of hooks the butchers cut such pieces as the buyers require. Immediately after the wants of the buyer are satisfied the quarter of beef from which the cuts have been taken is returned to the cool room from which it was brought. It remains there until another piece is wanted for another buyer. Scales are suspended behind the counter for weighing the meats as they are served to the buyers. The chill room or cold store in which the meat is kept while awaiting the coming of the buyers, has walls insulated by dead air spaces, or by other devices, or is kept cool by ice stored in proper receptacles so arranged that while the chilled air falls in the room below, the moisture thereupon passes away without coming into contact with the meats. Great care is used in all cold store arrangements to prevent the cold air bearing moisture to the goods to be preserved, and so perfect are some of the cooling devices in use that not the slightest trace of moisture can be seen in the apartment where the goods are stored. In this room the ice is placed in a receptacle at one side. From the ice the cold air falls into a store-room below where it becomes slightly warmed by passing over the meats or other food placed there. The warm air rises through the open floor of the second chill-room, and thence through openings near the ceiling into the room where the ice is stored to again make the round as before. Arrangements are made so that valves close the opening near the ceiling the instant the door of either of the

the cold storage rooms is opened. The closing of the valves stops the current of warm air, which would but for this fall upon the ice and cause it to waste rapidly away. When the door is again closed, the valve is opened and the circulation of air goes on as before.

17. Describe the receiving of meat intended for sale in the market; the mode of selling and delivery?—Upon arrival of the train conveying fresh meat, say in New York, the cars are run into a storage establishment. The meat is carried into the cold storage room, and remains there in a temperature of about 36 deg. to 42 deg. F. until wanted. As a rule the quarters are sold to retailers, who come at an early hour in the morning, or who send in their orders in the afternoon of one day for the meats they want for the next morning. Waggon prepared for the purpose go about in the morning delivering the meats ordered by the retailers. In some cases hotel managers and others using large quantities of meat order one or two car loads at a time, and keep the meat in cold storage rooms until required for their daily business. Poultry and game are also kept in this way.

18. What proportion does the dead meat now stand to the fat stock trade? Is the dead meat increasing and likely to increase?—This question is in part answered by the reply to query No. 3. The traffic in fresh meats grew rapidly, but not steadily, almost from its inception. It must continue to increase unless there shall be a revolution in trade affairs, and in the desire of the people to obtain the best meats for the smallest outlay. During the last five years the growth of the trade in dressed beef has been as follows:—From 1881 to 1882 the increase was 42.5 per cent. over the trade of 1880; in 1882 the gain was 52.3 per cent. over the traffic of 1881; in 1883 it was 127.5 per cent.; in 1884 it was only 23.6 per cent., and in 1885 it was 25.2 per cent. The relation borne by the entire dressed beef trade of Chicago to the fat stock traffic of that city may be seen by a glance at the figures given in the second table sent herewith.

19. What distances are live stock carried by rail, and are they taken out and fed on the journey; if so, how often?—Cattle have been sent by rail from Oregon on the Pacific Coast to New York on the Atlantic seaboard. It is a law that cattle shall not be kept confined in cattle cars for a period longer than twenty-four hours without being unloaded for food, water, and rest. In the region west of Chicago trains do not, as a rule, run at as high a rate of speed as trains maintain on railways east of Chicago. Such trains now run from 250 to 500 miles without stopping for feeding and resting the stock.

20. What is the average cost of carrying a fat bullock per mile for 100 miles and upwards?—From Kansas city to Chicago the distance is 500 miles, and the rate is 65 dollars (that is, at 4s. 1d. for the dollar, £13 5s. 5d. for the truck for 500 miles or (say) 16s. 8d. per head) per car load for cattle, nominally 20,000 lb. but really often nearly or quite 24,000 lb. From Chicago to New York the rate charged is £22 per truck for 1,005 miles, or £1 8s. per head. The average number of cattle in a car load is sixteen, the range being from twelve fat heavy cattle to twenty thin and small ones.

This shows that while it costs in this Colony 25s. to convey a fat bullock by rail 500 miles, in America it only costs from 14s. to 16s. 3d.

Very respectfully,
NORMAN J. COLMAN,
Commissioner of Agriculture.

Washington, D.C., 19 July, 1886.

APPENDIX G.

THE question of meat supply has lately attracted a considerable amount of attention, and opinions have been expressed by well known authorities amongst the stock breeders of this Colony and Queensland, that the supply of meat was little, if any, in excess of the demand. The matter appeared of so much importance, that, at my request, Mr. Coghlan, the Government Statistician, made an investigation of the requirements of Australia, and the supply available. A copy of this gentleman's report is appended, from which it will appear that the time is still fairly distant when, if our present rate of consumption continue, the demand will overtake the supply.

Increase of Population.

The ratio at which the population of the Colonies tends to increase, intimately concerns the question of food supply. We are not only our own chief customer for meat in ordinary seasons, but in the most abundant times the surplus, after the wants of the Colonies have been supplied, is but a small proportion to the total quantity produced.

In the year 1871, the population of the five Colonies, New South Wales, Victoria, Queensland, South Australia, and Western Australia, numbered 1,610,382. Ten years afterwards it reached 2,193,730, which gives a ratio of increase of about 3.14 per cent. per annum. The probabilities are, that towards the end of the decennial period the increase was larger than at its commencement, for since 1881, the increase of population has been at the rate of 4.15 per cent. It will therefore be safe to take 4.0 per cent. as the probable rate at which the population of the Colonies may be expected to increase during the coming decade.

Increase of Stock.

There has been no regularity in the increase of either sheep or cattle, the numbers especially of the latter have increased for a series of years, and then have declined, have risen and again fallen, and though the upward tendency will be visible over a long series of years, it cannot be discovered from viewing a short period. Thus there were less cattle in 1885, and less sheep in 1884, than in 1880. Yet, taking a long series of years, the general law of increase of stock is plainly visible, and it would appear that the ratio of increase is inversely as the number of stock. The numbers of sheep and cattle in the five Colonies during each year, from 1876 to 1885, were:—

Year.	Number of Sheep.	Number of Cattle.	Year.	Number of Sheep.	Number of Cattle.
1876... ..	50,896,507	6,612,756	1881... ..	63,230,862	7,880,465
1877... ..	44,807,810	6,498,279	1882... ..	65,981,116	7,608,307
1878... ..	47,737,531	6,733,941	1883... ..	68,154,228	7,568,618
1879... ..	52,047,975	7,176,386	1884... ..	59,850,111	7,440,075
1880... ..	60,389,987	7,399,955	1885... ..	65,896,190	7,230,891

The

The number of sheep tends generally to increase, but bad years succeed good years, and it often happens the gains of three or four years of plenty are swept away by one bad season. Taking the largest number of sheep in any year of a series of fair years between two bad seasons and compare it with the largest number in any other series of a similar kind, a fair ratio of increase may be established. The same result will be got by taking the lowest of any series with the lowest of another series of years. Thus in the table given above the number of sheep in 1877 was 44,807,810, in 1884 the number had risen to 59,850,111, being an increase of 15,042,301 in seven years, or at the rate of 4.22 per cent. per annum. This ratio fairly represents the increase for the whole of Australia.

The rate of increase of cattle is not so apparent, inasmuch as the number at the close of 1885 was considerably less than in 1880. Leaving out the year 1876, and commencing with the following year we have a series of five years in which the number of cattle increased year by year till 1881, the average number of each year of the five being 7,137,800; then follows a period of five descending years from 1881 to 1885; the average of which is 7,445,670. The number of years between these two means is four, and the total increase for the four years is 307,870. This gives a rate of increase of only 1 per cent., a very small increase truly, but one which seems to agree with the experience of Queensland, where the bulk of the cattle are grazed.

Having established the respective rates of increase of sheep and cattle it will be necessary to find the ratio of increase of sheep and cattle combined, as the deficiency in the supply of mutton may be, and is, made good by beef, and *vice versa*; for, though the consumption of meat per head may remain the same in quantity per annum in the various divisions of Australia, it differs in kind in different places, mutton being the predominating diet in some parts, beef in others, and an almost equal proportion of each in other places, as in Sydney.

Working on the basis of the last year of the series given above (1885), the increase of sheep and cattle, after allowing for all the requirements of the country, should be—

65,896,190 sheep	@ 4.22 % =	2,770,829
7,230,891 cattle	@ 1.00 % =	72,309

The weight of the annual increase, assuming 700 lb. as the weight per head of cattle, and 48 lb. per head of sheep, would be—

Sheep	2,770,829 @ 48 lb. =	132,999,792 lb.
Cattle	72,309 @ 700 „ =	50,616,300 „
Giving a total increase of		<u>183,616,092 „</u>

The total equivalent weight of the sheep and cattle at the close of 1885 would be—

Sheep	65,896,190 × 48 lb. =	3,163,017,120 lb.
Cattle	7,230,891 × 700 „ =	5,061,623,700 „
Total		<u>8,224,640,820 „</u>

The net annual increase has been found to be 183,616,092 lb. on a total weight of sheep and cattle of 8,224,640,820 lb., or equal to 2.23 per cent.

Having determined the respective rates of increase of population, and of food, it will be necessary to ascertain the amount of the surplus supply which obviously exists. In order to do this, the whole Colonies must be taken as one run, otherwise the individual experience of any one district, or even Colony, will be likely to mislead, by making the "cast" appear on the one hand too high, if a fattening country be taken as a standard, or on the other hand too low if a breeding station is adopted. I have preferred taking a representative herd or flock of 20,000 head, and applying the experience of qualified persons to arrive at a general notion of the cast or yield.

In a herd of 20,000 cattle there would be on an average about 5,000 breeding cows, and from these cows there would be obtained 72 per cent. of calves, or 3,600 in all—1,800 male and 1,800 female. In five years the males would be fit for market, and the females at eight years. During these years the loss of stock would be about 5 per cent. for bullocks and 6 per cent. for cows, for each year.

Out of 1,800 males born, 1,710 would survive at the end of the first year, 1,625 at the end of the second, 1,544 at the end of the third, 1,467 at four years, 1,394 at five years, and would be then available for market.

Similarly with the cows there would be out of 1,800 born—

1,692 surviving at 1st year
1,591 „ 2nd „
1,496 „ 3rd „
1,406 „ 4th „
1,322 „ 5th „
1,243 „ 6th „
1,170 „ 7th „
1,100 „ 8th „

Or 1,100 ready for market at eight years old.

Meanwhile the herd would be increasing, as already shown, at the rate of 1 per cent. per annum so that a herd of 20,000 would number 21,420 in five years, and in eight years would reach 21,658, giving an average of 21,339 head when the 1,394 bullocks and 1,100 cows were fit for slaughter. The "cast," therefore, would virtually be 2,494 on a herd of 21,339, or at the rate of 11.7 per cent.

At the close of 1885 the total stock numbered 7,230,891, and the cast of fat stock at the rate of 11.7 per cent. would be 846,014 head, which at 700 lb. per head gives the total weight of beef available, viz., 846,014 × 700 lb., = 592,209,800 lb.

Similarly in regard to sheep, out of a flock of 20,000 there will be on an average about 6,500 breeding ewes. The general average of lambing is in round numbers 60 per cent., so that the lambing may be set down at 3,900. Allowing a loss of 4 per cent. alike on male and female, out of 1,950 ewes, 1,458

would reach seven years, at which age they would probably be ready for market; and of a similar number of wethers, 1,648 would reach four years, when they too would be available for slaughter, thus:—

Year.	Ewes.	Wethers.
0	1,950	1,950
1	1,872	1,872
2	1,797	1,797
3	1,715	1,715
4	1,648	1,648
5	1,582
6	1,519
7	1,458

The total available would, therefore, be 1,458 + 1,648, or 3,106 sheep. In four years the flock of 20,000 would, increasing at the rate of 4.22 per cent., number 23,604, and in seven years 26,724, giving an average of 25,165 sheep, upon which there would be a cast of 3,106, or 12.34 per cent. The sheep at the close of 1885 numbered 65,896,190, and 12.34 on this would be 8,131,590. Taking 48 lb. as the weight of each, the cast would represent $8,131,590 \times 48 \text{ lb.} = 390,316,320 \text{ lb.}$

The total quantity of stock available for consumption would then be:—Beef, 592,209,800 lb.; mutton, 390,316,320 lb.; total, 982,526,120 lb.

Against this there is a demand for meat equivalent to 799,500,000 lb. In this Colony there is a consumption at the rate of 2.5 sheep and 0.18 cattle for every inhabitant. Taking this as true of the rest of Australia, we have a consumption of—

Beef	$0.18 \times 700 \text{ lb.} = 126 \text{ lb.}$
Mutton	$2.50 \times 48 \text{ lb.} = 120 \text{ ,,}$
						246 lb.

The average annual consumption per head is therefore, say 246 lb. for the whole of Australia, though the respective quantities of beef and mutton consumed very probably differ from those given above, while the total would remain the same. At the end of 1885 the population was approximately 3,250,000, and at 246 lb. per head the year's consumption would be 799,500,000 lb., as against a total cast of 982,526,120 lb., showing an estimated surplus of 183,026,120 lb., which is practically the same amount as already ascertained.

According to these figures there would be, in ordinary seasons good and bad, an annual meat surplus of nearly 183 million lb. A series of good seasons, by diminishing the losses of stock, may materially increase this surplus; but on the other hand we have no reason to rely on the clemency of future seasons to a greater degree than is warranted by the experience of the seasons that have gone.

It has already been shown that past experience determines the yearly rate of increase of food supply to be 2.23 per cent. The increase of population is, however, 4.0 per cent., and the demand therefore must eventually, if the present rate of consumption continue, overtake the supply, no matter how great the surplus may be. How long it will be before this happens is of course doubtful, but with a surplus supply of 183 million lb., increasing at the rate of 2.23 per cent., and with a population increasing as it does at 4.0 per cent., the time cannot be more than twelve years.

New South Wales, however, is much more favourably situated than any other continental colony in respect to meat supply derived from its own territory. It has relatively more stock than any other colony, and the yearly cast therefrom is larger than the average of all Australia. Against this, its population increases much more rapidly. Thus though the meat supply increases at the rate of 3.50 per cent. in each year, as against 2.23 per cent. for Australia, and shows a present surplus of nearly 100,000,000 lb., or five-ninths of the entire surplus, the population of this colony increases at the rate of 5 per cent.; and so to a great extent, counterbalances the gain from the larger cast and proportionately larger flocks. The total consumption of meat in the colony at the end of 1886 amounted to 250,000,000 lb., while the total cast or return from cattle and sheep amounted to nearly 350,000,000 lb.

The former increasing at 5 per cent., will overtake the latter at 3.5 per cent. per annum in 23.4 years.

16th March, 1887.

T. A. COGHLAN,
Statistician.

1887-8.

NEW SOUTH WALES.

DEPARTMENT OF MINES.

(ANNUAL REPORT OF STOCK BRANCH, 1887.)

Presented to Parliament by Command.

TO THE HONORABLE FRANCIS ABIGAIL, ESQ., M.P., MINISTER FOR MINES, &c., &c.

Sir,

I have the honor herewith to submit the Report of the Chief Inspector of Stock upon the working of the Branch of this Department under his charge for the year 1887.

The increases in the number of horses, cattle, and sheep respectively are very satisfactory. The number of sheep in 1887 was considerably larger than in any previous year since 1861, but the number of horses has been exceeded in two years, namely, 1880 and 1881, while the number of cattle in 1887 was less than half the number in 1873, and little more than half the number in 1875 and 1876.

The clip for 1887 exceeds that of 1886 by 21,334,089 lb. Of this excess 9,835,003 lb. was exported from Sydney, 9,813,610 lb. by way of Melbourne, 1,491,754 lb. by way of Adelaide, and 193,722 lb. by way of Brisbane. However, more than two-thirds of our total clip is shipped from Sydney, which, considering all the circumstances, may be regarded as satisfactory.

Some of the appendices contain matter of great interest to stock owners.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

Department of Mines,

Sydney, 21st April, 1888.

The

The Chief Inspector of Stock to The Under Secretary for Mines.

Sir,

Department of Mines, Stock Branch, Sydney, 1 March, 1888.

On the 1st February last I submitted a Progress Report for the year ending 31st December, 1887, giving the approximate number of the horses, cattle, and sheep then in the Colony; and I have now the honor to submit for your consideration my complete Report for that year on the working of this Branch, which is as usual based very much upon Inspectors' estimates—owners still showing very little inclination to furnish data. It will be seen that the actual number of cattle and sheep in this Report exceed those in the Progress Report.

ALEX. BRUCE,
Chief Inspector of Stock.

I.—INSPECTORS AND THEIR WORK.

1. *The Inspectors.*

There are now forty-six Inspectors, having charge of fifty-nine Sheep Districts.

2. *The Inspections made.*

The inspections made during the year were as follows:—

Of Stock	15,669
„ Reserves	4,254
„ Pounds	389
„ Noxious Animals	4,914
„ Dogs	637
„ Pigs	147
Total	26,010

This would give an average of 565 inspections made by each of the forty-six Inspectors.

3. *Horses, Cattle, and Sheep inspected.*

Horses.—The number of horses inspected during the year was 78,509, by forty-five Inspectors.

Cattle.—The number of cattle inspected during the year was 1,011,357.

Sheep.—The number of sheep inspected during the year was 22,021,120. This is an increase of 3,470,759 on last year's inspection.

4. *Inspections at Homebush Sale-yards.*

During the year bi-weekly visits to the Homebush Yards have been made by the Sydney Inspector, with the view to inspecting the stock yarded. The total number of stock submitted to auction was as follows;—Cattle, 91,659 head; sheep, 1,433,921, or a weekly average of 1,762 cattle and 27,575 sheep. These inspections are called for not only for the prevention of disease but also to check stock stealing, and with that view the Inspector sees that the brands and marks of the stock correspond with those in the permits or travelling statements accompanying the stock, which are collected and filed in this office for future reference, should, as it at times happens, enquiry be made with respect to stock suspected of having been stolen.

5. *Distance travelled by Inspectors during the year on duty.*

The total number of miles travelled by forty-six Inspectors was 179,081, or an average of 3,893 each per annum, being a slight decrease on last year.

6. *Prosecutions and Convictions.*

The prosecutions instituted during the past year were as follows:—

Under Sheep Act	80
„ Brands Act	14
„ Pastures Act	505
„ Public Watering Places Act	7
Total	606

This shows a decrease in the prosecutions under the Pastures Acts, and is accounted for by stock-owners becoming better acquainted with the provisions of the Act and its enforcement by Inspectors.

The number of convictions were:—

Under Sheep Act	68
„ Brands Act	13
„ Pastures Act	394
„ Public Watering Places Act	5
Total	480

II.—HORSES.

1. *The Number.*

The number of horses in the Colony during the twenty-seven years previous to and including 1887 was as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	251,497	1870	280,304	1879	360,088
1862	233,220	1871	337,597	1880	395,984
1863	273,389	1872	304,100	1881	398,577
1864	262,554	1873	328,408	1882	328,026
1865	284,567	1874	334,462	1883	326,964
1866	282,587	1875	357,697	1884	337,172
1867	278,437	1876	366,703	1885	344,697
1868	280,201	1877	328,150	1886	361,663
1869	280,818	1878	336,468	1887	390,609

This shows an increase of 28,946 during the year, and is due to the very favourable season. The number of horses in each Sheep District will be found in Appendix A.

2. *The different Breeds.*

Draught.—The numbers returned under this head are ordinary, 112,026; thoroughbred, 17,255; total, 129,281.

Light Harness.—The number returned as ordinary is 89,610; thoroughbred, 13,098; total, 102,708.

Saddle.—The numbers of ordinary are given as 136,168; thoroughbred, 22,452; total, 158,620.

3. *Horses introduced.*

From other districts.—The numbers of stud horses introduced were 186, and stud mares, 320; ordinary mares, 1,597; and horses, 1,811.

From other Colonies.—The number introduced by sea was—stud horses, 30; stud mares, 43; and ordinary horses and mares, 388.

The number introduced overland was 71 stud mares and 86 stud horses; and ordinary, 261 mares and 271 horses.

From England and other Countries.—The numbers introduced under this head were 2 stud mares and 10 stud horses.

4. *Horses fit for Sale.*

The numbers returned as being fit for market during the present year are 19,731 draught, 18,103 light harness, and 26,938 saddle.

Of this number it is estimated that 15,446 are suited for the India and China Markets.

There were sent from six districts 464 horses to be shipped from Sydney, and from nine districts 994 horses to Melbourne for foreign countries.

5. *Improvement.*

In forty-four districts the horses are said to be improving. The principal reasons given are—introduction of superior stud horses, breeding from good mares, more attention to the rules of breeding, and better prices obtainable; and in twelve districts there is no improvement. In three districts they are deteriorating,—the reasons given being too much light blood introduced, breeding from weedy mares for racing purposes, and the effect of the drought in 1884.

6. *Diseases in Horses.*

Horse Fever.—An epizootic contagious equine fever broke out in South Australia in 1886, and the infection was carried by teamsters and coaching horses from that Colony to the horses in the Silverton district in the end of that year and the beginning of 1887. It continued with considerable virulence during the hot dry summer, but disappeared with the autumn rains. It will be found fully described in Mr. Government Veterinarian Stanley's report on the outbreak, which forms Appendix B to this report.

Australian Stringhalt.—This ailment again appeared in this Colony at Perricoota, on the Murray below Moama, but subsided under the treatment prescribed by Mr. Stanley. His report on the case forms Appendix C to this.

Rheumatism and Pneumonia.—These ailments, especially the former, attacked horses on several holdings in the south-western portion of the Colony, and caused some losses. The Government Veterinarian attributes these ailments to the wet changeable weather and rank grass. (See his report, Appendix D.)

Strangles.—This disease has been somewhat widely spread, and, in a few instances, of a malignant type, as in that reported on as per Appendix E.

In most of the other outbreaks of this disease the attacks were mild and caused few losses.

In thirty-four districts the horses are reported entirely free from disease.

7. *Losses in Horses through accidents, &c.*

The losses in horses from wire in chaff, and other accidents as reported amount to 1,632.

8. *Wild Horses.*

The number of wild horses in the Colony is estimated at 6,220, which shows a decrease on the previous year of 1,223.

9. *Tax on Entire Horses.*

A large majority of owners are still in favour of a special tax being placed on entires.

III.—CATTLE.

1. *Number.*

The returns of cattle in the Colony during the twenty-seven years ending 31st December, 1887, stand as follows:—

Year.	No.	Year.	No.
1861	2,271,923	1875	3,134,086
1862	2,620,383	1876	3,131,013
1863	2,032,522	1877	2,716,385
1864	1,924,119	1878	2,771,583
1865	1,961,905	1879	2,914,210
1866	1,771,809	1880	2,580,040
1867	1,728,427	1881	2,597,348
1868	1,761,411	1882	1,859,985
1869	1,795,904	1883	1,640,753
1870	2,195,696	1884	1,425,130
1871	2,014,888	1885	1,317,315
1872	2,287,660	1886	1,367,844
1873	3,791,327	1887	1,575,487
1874	2,856,699		

This shows an increase during the year of 207,643, and a decrease as compared with the year 1877 of 1,170,898.

The number of cattle in the several sheep districts will be found in Appendix A.

2. *Different Breeds.*

Shorthorns.—The number of pure-bred and stud Shorthorns is estimated at 43,402; and ordinary 642,140; total, 685,542.

Hereford.—Pure and stud, 17,534; ordinary, 179,131; total, 196,665.

Devon.—Pure and stud, 7,502; ordinary, 56,240; total, 63,742.

Black-polled.—Pure and stud, 312; ordinary, 831; total, 1,143.

Ayrshire.—Pure and stud, 1,277; ordinary, 3,297; total, 4,574.

Alderneys.—Pure and stud, 242; ordinary, 340; total, 582.

Jersey.—Pure and stud, 19; ordinary, 240; total, 259.

Brittany.—Pure and stud, 106.

Crosses.—First crosses, 2,230; ordinary, 620,644; total, 622,874. The crosses are estimated as follows:—Shorthorn and Hereford, 218,065; Shorthorn and Devon, 64,641; Hereford and Devon, 34,065; Shorthorn and Black-polled, 1,551; Black-polled and Devon, 200; Ayrshire and Shorthorn, 2,700; Jersey and Shorthorn, 1,000; the balance, 300,652 being unrecognizable.

It will be observed that there is a proportionately large increase in the milking breeds of cattle. This arises through many of our cattle owners in the coast districts having turned their attention to dairying instead of fattening for market; and it is believed that this change will continue and increase.

3. *Stock introduced.*

From other Districts.—Stud bulls, 323; stud cows, 672; total, 995; ordinary cattle, 75,726.

From other Colonies by Sea.—Stud bulls, 52; stud cows, 136; total, 188; ordinary cattle, 347.

Overland.—Stud bulls, 126; stud cows, 937; ordinary cattle, 115,785; total, 116,848.

From Countries outside the Australian Colonies.—Nil. Importation prohibited.

4. *Increase and Decrease of Cattle.*

In fifty-one districts the cattle are reported to be increasing, for which the following reasons are given:—(1.) The good season. (2.) Runs heavily stocked. (3.) Increase in number of owners. (4.) Considerable numbers of store cattle have been introduced from Queensland. (5.) More owners have taken to breeding cattle, and are selling off their sheep to replace them with cattle.

5. *The "Cast" of Fat and Store Cattle.*

The estimated "cast" of fat cattle to be sent to market during the coming year is 278,081, and store cattle, 160,319. From twelve districts the fat cattle are principally sent to Melbourne; from two districts they are principally sent to Adelaide; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, and Tamworth.

6. *How kept.*

The number of cattle kept wholly in paddocks is returned as 1,150,511; on open runs, 254,592; and the balance, 170,384, are depastured both ways.

7. *Improvement and Deterioration.*

In thirty-seven districts the cattle are said to be improving; in twenty districts they are stationary; and in two districts deteriorating. The principal reasons given for the improvement are—introduction of good stud stock; more attention and care in selection; also, in culling and keeping in paddocks. The reasons given for deterioration are—inattention to breeding, many owners breeding from all sorts without respect to breed or quality.

8. *Their Diseases and Ailments.*

Pleuro-Pneumonia.—In forty-two districts, on 467 runs, the cattle were reported as affected with pleuro-pneumonia; and in seventeen districts the cattle are reported as being free from that disease.

In thirty-eight of the infected districts the disease was caused by contagion, from infected travelling stock from Queensland; in three districts supposed to be latent in herds, and in one district the cause not known.

From

From forty-one districts it is reported that inoculation was successfully performed on 328 out of 333 holdings or stations.

In two cases only was it unsuccessful through using bad virus.

In almost every case the result was satisfactory, the disease leaving the herds without further loss.

The number of owners in favour of inoculation is given as 5,531; against, 582; undecided, 2,324; and 7,871 opinions not known.

The number of owners in favour of compulsory inoculation in the case of infected herds is given as 4,268; against it, 1,519; undecided, 2,209; and 8,439 opinions not known.

This shows a very large majority of owners in favour of the compulsory inoculation of all herds in which the disease appears; and I am glad to say that there is now a near prospect of this being brought about, as the Stock Conference held in Sydney in May last, for the purpose of revising the Stock and Pastures Bill, passed an almost unanimous resolution to that effect, and the necessary provisions have been included in the Bill.

9. Losses from Disease and other causes.

The number of cattle reported to have died from Cumberland disease is 1,780; from blackleg, 87; from swelling in jaw or throat, 1,598; from ophthalmia, 409; from tuberculosis, 724; from poisonous plants, 52; and from pleuro-pneumonia, 260; total, 4,910.

Tuberculosis still prevails in cattle, although the importance of stamping it out is now recognized by breeders, and cattle sent into the Sydney markets are condemned and destroyed as unfit for food. As tuberculosis is hereditary, infectious, and liable to be communicated to human beings, it is most important that it should, as far as possible, be eradicated from our herds. It is to be feared, too, that this disease is at times mistaken for pleuro-pneumonia in inoculating for that disease; and inoculation with such virus must be attended with disastrous consequences.

Blaine.—This disease was reported at Jamberoo in April last, and the attack is the first which has been brought under the notice of the Department. The Government Veterinarian's report on the case will be found as Appendix F.

IV.—SHEEP.

1. The Number.

The Number of sheep in the Colony during the twenty-seven years ending 31st December, 1887, stands as follows:—

1861	6,119,169	1875	25,353,924
1862	6,558,896	1876	25,269,755
1863	7,169,126	1877	21,521,662
1864	9,082,463	1878	25,479,484
1865	9,650,106	1879	30,062,910
1866	11,644,593	1880	35,398,121
1867	15,066,377	1881	36,591,946
1868	16,000,090	1882	36,114,814
1869	16,848,217	1883	37,915,510
1870	16,218,825	1884	31,660,321
1871	16,766,012	1885	37,820,906
1872	17,873,696	1886	39,169,304
1873	18,990,595	1887	46,965,152
1874	22,797,416				

The number of sheep in the several sheep districts will be found in Appendix A.

Increase and Decrease.

This shows an increase of 7,795,848, which is attributable mainly to the very fine season, and good lambing in most of the districts. During the year, 500,000 sheep crossed the border into Queensland.

2. The different Breeds.

(1) Merino.

3. Sheep introduced and imported.

- (1.) From other districts in this Colony.—Stud, 6,403 ; ordinary, 1,702,058 ; total, 1,708,461.
- (2.) Overland from other Colonies.—Stud, 16,211 ; ordinary, 597,907 ; total, 614,118.
- (3.) By sea from other Colonies.—Stud, 3,399 ; ordinary, 195 ; total, 3,594.
- (4.) From England and Countries and Colonies other than Australian.—Nil. Importation prohibited.

Number of sheep passed through quarantine and dressed.—During the year 2,199 stud sheep from the other Colonies by Sea (nearly all of which were from Tasmania) passed through quarantine and were dressed. The sheep from the inland districts in this Colony, through having been in contact with the imported sheep at the annual sales, were also dipped. The reports received from the various Inspectors into whose districts the sheep went after being dipped, show that the dipping has had no ill effects on the sheep, either as to health or condition of wool. In one case only out of so large a number is it reported that a ram died, and there is nothing to show that it died from the effects of the dip. (*For particulars of Sales see Appendix G.*)

4. Long-woolled and cross-bred Sheep.

Amongst the long-woolled sheep the Lincoln is said, in a large majority of the districts, to give the best returns in wool and in weight of mutton, the cross-bred sheep being second.

5. *The "Cast" of Fat and Store Sheep.*

The annual "cast" of fat sheep for the ensuing season is estimated at 5,182,890, and store sheep, 6,711,716.

6. *How Sheep are kept.*

Paddocked	44,725,073
Shepherded	1,238,868
Both ways	1,001,211
	46,965,152

7. *Condition of the Flocks.*

In forty-five districts the sheep are said to be improving; the principal reasons given being—more attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling, and better season.

In ten districts they are said to be stationary, and in four districts they are deteriorating. The reasons given are—effects of bad seasons in 1884 and 1886, breeding from inferior ewes, bad management, and country not suitable for sheep.

8. *Lambing.*

The general average for the whole of the Colony of the paddocked sheep is returned by Inspectors at 76½ per cent., and shepherded sheep at 68½ per cent. In thirty-one districts the lambing was very high; in fourteen districts, high; in seven districts, fair; in five districts, low. The reason given for the high percentage is the very fine season, sheep in good condition and not harassed by dogs; while the fair and low percentages are attributable to the rams not being in good condition, want of attention, lambs lost in long grass, and deaths through continuance of wet weather.

The paddocked sheep show a higher percentage than the shepherded sheep by 8½ per cent.

9. *The Clip.*

Average per Sheep.

Lambs.—The number of lambs shorn in the grease was 8,185,458; the number washed, 123,745; total lambs shorn, 8,309,203.

Sheep.—The number of sheep shorn in the grease was 31,082,201; hot water and spout washed, 90,000; creek-washed, 647,945; and scoured, 554,687.

The average weights of the clip are estimated as follows:—

	Lambs.		Sheep.	
	lb.	oz.	lb.	oz.
Grease	1	12½	5	9
Hot water and spout	3	12
Creek-washed	1	5	3	1½
Scoured...	2	14

Total Clip.

The total clip in the Colony for the year 1887, according to the number of sheep, would be 31,082,201 sheep shorn in the grease, average clip, 5 lb. 9 oz. per sheep = 172,894,743 lbs.; 90,000 sheep hot water and spout washed, average clip 3 lb. 12 oz. per sheep = 337,500 lbs.; 647,945 sheep, creek-washed, average clip, 3 lb. 1½ oz. per sheep = 1,997,830 lbs.; 554,687 sheep scoured, average clip, 2 lb. 14 oz. = 1,594,725 lbs. Lambs—8,185,458 lambs shorn in the grease, average clip, 1 lb. 12½ oz. per lamb = 14,580,347 lbs.; 123,745 lambs washed, average clip per lamb, 1 lb. 5 oz. = 162,415 lbs.; total clip, 191,567,560 lbs.

Condition of Clip.

In twenty-eight districts the clip is reported as sound and full of yolk; in twenty-six districts, sound, but light in yolk; and in the ten remaining districts, light and tender. On the whole the clip was clean and free from burrs, but in a few districts the value of the wool was considerably affected by grass-seed.

Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped to England, America, France, and other countries, from the principal ports of the three neighbouring Colonies, as well as from Sydney. The portion of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies, more particularly for that of Victoria, and South Australia.

The following is an estimate of the clip sent to Sydney, and also the proportion sent across the Borders and to Melbourne, Adelaide, and Brisbane, for the years 1886 and 1887.

Port of Shipment.	1886.			1887.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney	115,810,501	2,505,650	118,316,151	125,167,424	2,983,730	128,151,154
Melbourne	35,913,969	1,285,408	37,199,377	45,922,914	1,090,073	47,012,987
Adelaide	13,891,088	671,721	14,562,809	16,054,563	16,054,563
Brisbane	150,305	4,829	155,134	330,189	18,667	348,856
	165,765,863	4,467,608	170,233,471	187,475,090	4,092,470	191,567,560

Through the Murray, Murrumbidgee, and Darling Rivers being navigable during the wool season a considerable portion of the clip in the northern, north-western, and western districts of the Colony have been sent by steamers to Echuca and Goolwa, consigned to Melbourne and Adelaide.

Classing

Classing the Clip.

In twenty-seven districts the clip is reported as being well classed, and in the other districts it is not considered so; the reasons being—owners do not think it pays, want of convenience, sheds not large enough to warrant expense, and the difficulty of obtaining competent woolsorters.

Wool-presses.

A great number of different kinds of presses are used; those most in favour are William's and Robinson's; rack screw, and pinion presses are used. There is still room for improvement in the mode of pressing, especially by small owners.

Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. x 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.

On forty-six stations the wool is dumped before leaving.

10. *Sheep-brands and marks.*

Ear-marking.

In most districts the system of ear-marking sheep is now properly carried out, and nearly all the owners approve of it.

Tattoo-marking.

This system of marking is mostly used by owners of stud-sheep—not, as yet to any great extent in the case of ordinary flock sheep, but where tried it has been found to act as a good preventive to sheep-stealing.

V.—DISEASES IN SHEEP.

1. *Scab.*

The flocks in this Colony, and in the Colonies of Queensland, Victoria, South Australia, and Tasmania are free from scab. It exists, but to a very slight extent, in New Zealand and Western Australia, and it is hoped they will soon be declared clean. The importation of sheep into this Colony from New Zealand and Western Australia is prohibited.

2. *Anthrax—Splenic Apoplexy.*

This most fatal disease continues its ravages in several parts of the Colony, and pastoralists seem content to trust to moving their sheep from the dangerous ground and leaving it idle during the height of summer rather than attempt to eradicate the infection from it altogether, or to protect their sheep by inoculation, as advised by M. Pasteur. If, however, M. Pasteur's nephew comes to Australia, as it is expected he will, with the view to the introduction of the microbes of chicken cholera for the destruction of rabbits, the Minister for Mines intends, if possible, to make an arrangement with him to teach some qualified person here the culture of the germs of splenic apoplexy (Cumberland disease) for the protection of our flocks in the infested country. This disease and the method of its treatment are occupying the attention of the veterinary profession in England, and much valuable information will no doubt be gained by watching the result of the inquiries carried out there. A fatal attack of anthrax in travelling sheep is reported on by the Government Veterinary Surgeon as having taken place in a flock near Bourke, in August last. (*See Appendix H*).

3. *Foot-rot.*

In twenty-two districts the sheep have been more or less affected with foot-rot during the year; the reasons given being—wet season, long grass, swampy ground, and unsuitable country. The principal remedies were careful paring, butter of antimony and bluestone for hand-dressing, and arsenic, carbolic acid, in shallow bath—with satisfactory results.

4. *Fluke.*

In thirteen districts the sheep were slightly affected with fluke, through the continued wet season and depasturing on sour, unsound country. The remedies used were—removing to sound country, salt, tar, and turps, sulphate of iron and Liverpool salt and sulphur—with good results.

5. *Parasitic Worms.*

In twenty-five districts the sheep are reported as having been infested with worms, to an extent of (say) 14 per cent., caused by the rainy season, feeding on wet country, and rank pasture.

Of these worms the most common and most injurious to the sheep have been the *tenia* (the tapeworm), the *anchytostomum* (the thread stomach worm), and the *filaria* (the lung worm).

It is during the first year, immediately after weaning, that worms are most likely to do harm, therefore that is the time to avoid their invasion, and to adopt preventive measures, such as keeping the sheep well supplied with Liverpool salt, and drenching, where necessary, with arsenic, which has proved the most effective drench, and for which the prescription has already been published in the various country papers. Some owners have used turpentine and linseed oil with fair success. Turpentine, sulphur and salt, and an infusion of tobacco, have also been tried.

VI.—PIGS.

The number of pigs in the Colony, as returned at 31st December, 1887, is 263,900, being an increase of 54,324 as compared with the returns for the previous year.

Diseases in Pigs.

No disease whatever has been reported amongst pigs.

VII.—

VII.—DOGS.

Twenty-two foreign dogs, *i.e.*, dogs from England, India, America, France, and Germany, and other places outside the Australasian Colonies, passed through quarantine during the year, and 615 Colonial dogs were inspected at the port of Sydney.

Diseases in Dogs.

Rabies has been very prevalent in Europe during the past year, and has attracted considerable attention owing to Pasteur's method of treatment, which has not turned out so satisfactory as he anticipated. It requires every precaution to be taken to prevent its introduction, and with this object the period of quarantine for foreign dogs has been extended to six months from the date of arrival in this Colony.

VIII.—TRAVELLING STOCK.

1. *Trespass on Reserves.*

In thirty-eight districts the driftways and reserves for travelling stock are reported as having been trespassed upon, more or less, by neighbouring lessees' and selectors' stock. In many instances the stripping of the reserves of pasture arises through their not being withdrawn from lease, and being used by the lessees of the run. In twenty-one districts they are reported as being entirely free from trespass. Inspectors suggest, in order to enable them to exercise proper supervision over them, that the boundaries should be properly marked. Some of them also suggest fencing in the reserves and appointing caretakers.

The systematic marking of the reserves has not yet been commenced, notwithstanding the urgent necessity for this work.

2. *Grass on Reserves and Driftways.*

In twelve districts the Inspectors report that there is not sufficient grass on the reserves and driftways in their districts to enable fat stock to reach market in good condition; in nine districts that there is only sufficient in good seasons; and in thirty-eight districts that, as a rule, there is sufficient grass on these reservations.

3. *Ringbarking Driftways and Reserves.*

Although the feed on the driftways and reserves is not now, during the good season far short of the requirements of the stock traffic, it is urged that as the ringbarking of the driftways and reserves used by travelling stock would everywhere largely increase and improve the pasture upon them—in some cases to the extent of even 400 and 500 per cent.—that this work be undertaken. It would give employment to a large number of the men now idle, and could be carried out by contract at reasonable rates.

4. *New Roads for Travelling Stock.*

In twenty districts new roads, including those previously reported on, are required for travelling stock; and in thirty-nine districts no new droving roads are recommended.

5. *New Reserves for Travelling Stock.*

In fourteen districts new reserves and alteration of existing ones for travelling stock are required; in forty-five districts there are sufficient reserves.

6. *New Wells, Tanks, or Dams.*

In twenty-two districts the Inspectors report that new wells, tanks, or dams, should be constructed by the Government at places which they indicate.

7. *Travelling Charges for Stock.*

In eight districts travelling charges for stock have been collected on eleven separate occasions; the total amount collected being £970 5s., of which £815 has been refunded to date on appeal to the Boards.

8. *Laws relating to Travelling.*

In all the districts the Inspectors report that the provisions of the amended Sheep Acts relating to travelling stock are working well, and have almost put an end to loafing.

9. *Sheep Travelling for Grass and Water.*

Owing to the abundance of grass and water throughout the Colony during the year, no sheep are reported as having left their runs in search of either.

IX.—REGISTRATION OF HORSE AND CATTLE BRANDS.

1. *Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1887, was 57,054. The number of brands registered during the year 1887 was—horse brands (alone), 499; cattle brands (alone), 439; and horse and cattle brands, 1,067; making a total of 2,005, being an increase of 444 applications on the previous year.

This large increase is accounted for by the increase of settlement in the outlying portions of the Colony. The total number of registrations is larger than that of any previous year for twelve years back. There is also a large increase in the number of brands transferred, and changes of addresses recorded.

2. *Brands-transferred.*

The brands recorded during the year 1887 as transferred were—horse brands, 13; cattle brands, 22; horse and cattle brands, 136; total, 171.

3. *Brands cancelled.*

The brands cancelled (horse and cattle) in 1887 were 25.

4. *Addresses changed.*

The number of addresses of owners changed in 1887 was 174.

5. *Compliance with the Act.*

In fifty districts the provisions relating to registration and the other requirements of the Act are reported as being duly carried out, and in the remaining nine districts fairly so.

6. *Benefits of the Act.*

The Inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

X.—POUNDS.

1. *Number and Inspection.*

There are 378 pounds in the Colony, some of which are at present closed for want of pound-keepers. The whole of the pounds are inspected periodically by the various Inspectors of Stock.

2. *State of Yards.*

Forty-one of the pound yards are reported to be old; several require renewing, being unfit for the safe custody of stock; and the remainder are said to be in a fair and good condition.

3. *Keeping and Depasturing Pound Stocks.*

The provision made for the proper sustenance of impounded stock, according to the reports received, is satisfactory. As a rule, poundkeepers have now paddocks for the stock.

4. *Management of Pounds.*

The poundkeepers generally are reported to be performing their duties in a satisfactory manner, and the appointment of Inspectors of Stock as Inspectors of Pounds has had a very beneficial effect.

XI.—NOXIOUS ANIMALS.

1. *The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts, except Kiama.

2. *Receipts and Expenditure under the Act.*

The amount of assessment paid by stock-owners during the year 1886 was £41,585 2s. 8d., and the amount expended, £64,023 8s. 9d. The amount of assessment paid by stock-owners in 1877 was £32,651 13s. 8d., and the amount expended, £37,354 11s. 1d., the difference being accounted for by the subsidy granted by the Government to the Boards. One district is reported to be in debt to the amount of £175 7s. 10d.

In nineteen districts full rates were levied, in twelve districts half rates, and in twenty-two districts less than half rates, while in six districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows—For kangaroos, from 2d. to 1s. 6d.; wallaroo, 4d. to 9d.; wallaby, from 1d. to 1s.; paddymelon, from 2d. to 1s. 6d.; hares, from 2d. to 1s. 6d.; kangaroo rats, 2d. to 6d.; native dogs, from 10s. to 80s.; pups, 2s. 6d. to 10s.; opossum, 2d. to 4d.; wombats, 2s. 6d.; wild pigs, 1s. to 2s.; bilbees, 5s.; eagle hawks, 3s. 6d. to 7s. 6d.; and emus, 6d. to 2s.

3. *Estimated number of Noxious Animals.*

The aggregate of the returns by Inspectors of the estimated numbers of noxious animals in their districts shows that there are supposed to be 1,881,510 kangaroos, 2,742,550 wallabies, 32,706 native dogs, 429,670 hares, and 2,480 wild pigs in the Colony.

4. *Increase and Decrease.*

Kangaroos are reported to be increasing in nine districts, wallabies in six districts, native dogs in six districts, hares in sixteen districts, and wild pigs in two districts. In forty districts kangaroos are reported to be decreasing, wallabies and native dogs in thirty-eight districts, hares in eight districts, and wild pigs in six districts.

5. *Number destroyed.*

The number of kangaroos destroyed during the past year was 476,438; of wallabies, 388,089; of wild pigs, 664; of hares, 56,628; of native dogs, 7,739; and of eagle hawks, 234.

6. *Steps taken for their Destruction.*

In the majority of the districts hunting with dogs, drives, shooting, and trapping have been adopted with satisfactory results. In thirty-seven districts poison has been used with fair to best results, and only from one district has it been reported as unsuccessful.

7. *Amendments suggested in the Act.*

It is suggested that the Government should grant subsidy at rate of £1 for £1; that the Stock and Pastures Bill as amended become law; that uniform rates be levied; that all assessments be paid to a general fund at the Treasury; that the rates of bonuses be the same throughout the Colony; and that all owners make returns of their stock on a particular day

8. *Losses from Tame and Native Dogs.*

The losses in stock for the past year from the ravages of native dogs are estimated at 74,195 sheep, valued at £24,181; and from tame dogs, 71,063 sheep, valued at £24,930; making the loss from tame and native dogs together £49,111.

Appendix I. shows the work which has been done under the Pastures and Stock Protection Acts since they were passed, and how far the objects for which they were so have been attained. The statement is not a very satisfactory one; for it shows that with the exception of kangaroos, the number of the other noxious animals is supposed to have decreased very little, and in the case of some of these vermin, none at all, although the large sum of upwards of £360,000 has been expended.

With respect to the estimated numbers in the statement referred to, it will perhaps be as well to explain, though I have done so before on more occasions than one, that while there is no certainty as to the correctness of numbers estimated by the Inspectors, and that they are in fact mere guesses, it is much better to get an idea of the prevalence of these pests from them in this way than in the exceedingly vague and doubtful expressions such as "very numerous," "numerous," "few," "very few," &c., &c., which, according to the views of no two individuals, mean the same number.

As regards again the reduction in the number of kangaroos to about one-third of what it was in 1850, that has been mainly brought about by the high price of the larger skins, and as the older kangaroos have been mostly killed off, and there is not the same inducement to shoot the younger, it is not to be expected that there will be much of a decrease in the existing number, unless the law be differently administered.

The fact is the compulsory provisions of these Acts, in so far as they relate to the destruction of noxious animals, have not been put in force in any of the districts. Some owners have been and still are neglecting to destroy the noxious animals on their land. These have been allowed to breed up and re-infest their neighbours land, and the result is that the work has not been so thoroughly simultaneously nor economically carried out, as if the Directors (who have the full power to do so) had enforced the law against defaulting owners.

XII.—COMMONS.

1. *Number and Extent.*

The number of permanent commons in the Colony is 140, with an average extent of about 1,250 acres each. The number of temporary commons is 167, with an average extent of 2,000 acres each.

2. *Number of Commoners, Stock, &c.*

The average number of Commoners to each common is estimated at 98, and the average number of stock kept on each common is 178.

In twelve districts the commons are reported to be used for other purposes than that of grazing commoners' stock.

XIII.—MISCELLANEOUS.

1. *Artificial Grasses.*

In fifteen districts artificial grasses have been sown during the year to a small extent, in sixteen districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

2. *Number and Division of Runs.*

The number open or unenclosed runs in the Colony is 8,201; the number enclosed is 30,888; the number partially subdivided is 12,228; and the number properly subdivided is 19,039.

3. *Improvements, Fencing, Dams, Tanks, and Wells.*

The number of miles of fencing throughout the Colony is estimated at 998,486, at an average cost of £50 2s. per mile, amounting to £50,024,148.

The number of dams used for stock purposes is estimated at 20,558, at an average cost of £85 14s.; number of tanks 21,561, average cost of each £193 10s.; and the number of wells used is estimated at 2,738, at an average cost of £207 13s. each.

Cost of fencing, £50,024,148; cost of dams, £1,762,069; cost of tanks, £4,172,568; cost of wells, £568,538; making a total of £56,527,323 as representing the amount expended by way of improvements, &c.

4. *Plants and Weeds.*

In ten districts *Trefoil Burr* grows to a slight extent; in thirty-two districts to a large extent; and in seventeen districts there is none reported.

In twenty districts *Variiegated Thistle* is reported to a slight extent; in twenty-six to a considerable extent; and thirteen districts are reported as free from it.

In fifteen districts *Black Thistle* is reported to a slight extent; in thirty to a great extent; and fourteen districts are reported to be free from it.

In sixteen districts the land is reported as being slightly infested with *Bathurst Burr*; in thirty-six to a large extent; and in seven the land is not infested.

Darling Pea is reported in seven districts; also roley poley, daudelon, "Saucy Jack," and a plant known as "Yellow Boy" is making its appearance.

Euphorbia Drummondii.—Although this plant has been carefully experimented with, and shown so far to be non-poisonous, and put to a practical test by owners (see Mr. Stanley's report, Appendix J), reports still continue to be received of its causing the death of sheep.

Annexed will be found as Appendix K a Report, obtained from the Director of the Botanic Gardens, on the plants near Bourke and Dubbo, known or suspected to be poisonous to stock.

Other noxious weeds are reported to a slight extent from fourteen districts; to a great extent from thirty-three districts; and twelve districts are said to be free from them.

5. *Cost of Clearing Commons, Reserves, &c., of Weeds.*

The cost of clearing the permanent commons of noxious weeds throughout the Colony is estimated at £32,247; the temporary commons, £14,201; the police paddocks, £2,036; the travelling stock reserves, £118,448; and the droving roads at £83,988; amounting in all to (say) £250,920.

6. *Examination of intending Applicants for appointment of Inspector.*

During the past year four examinations were held by the Stock Board of Examiners. The following table shows the result in each case.

Date of Examination.	Number of Candidates.	Names of Successful Candidates.	Nature of Certificate issued.
1887.			
March 28	7	Joseph Weir	2nd Class.
		Theodore Watson	2nd Class.
June 24	1	Cecil W. Dargin	2nd Class.
July 18	12	H. J. Sealy	1st Class.
		H. A. Gethings	2nd Class.
		E. W. Procter	2nd Class.
		N. Silverthorne	2nd Class.
		Joseph Wilks	2nd Class.
		S. T. Cox	2nd Class.
		E. May-Steers	2nd Class.
November 7	4	Thomas Cadell	2nd Class.
Total	24		

It will thus be seen that twenty-four candidates were examined, of whom one received a 1st class certificate, and ten received 2nd class certificates.

The result of these examinations is considered highly satisfactory, and, since their initiation, the Staff has been considerably strengthened by the addition of some very capable men.

7. *Stock Conference to consider the Stock and Pastures Bill.*

On the 23rd May last, in response to a circular issued by the Sydney Pastures and Stock Protection Board, a Conference of delegates from no less than 49 of the Boards in the Colony assembled in Sydney to discuss the provisions of this Bill, which has for its object the consolidation and amendment of nineteen Acts of Parliament relating to prevention of cruelty to animals, branding, prevention of stock stealing, impounding, diseases in stock, dog nuisance, noxious animals, and noxious plants.

The Conference continued to sit until 1st June, and very careful consideration was given to the various clauses of the proposed Bill, most of which were adopted; but some were amended and others omitted altogether with the view to the insertion of new clauses embodying the ideas of the Conference. There was a general feeling amongst the members of the Conference that the Local Boards should have more control in these matters, and the Bill was amended in that direction. There cannot be a doubt, whatever shape the Bill may ultimately take, that the consolidation of the Acts above referred to will be hailed with satisfaction by those interested when the Bill becomes law; and it is hoped that Government business will at an early date be in such a state as to admit of its being introduced.

8. *The Fresh Meat Trade.*

It is satisfactory to be able to report that the arrangements for this trade are fast progressing towards completion, and there is a good prospect of its being shortly commenced.

This will not be a day too soon, for with an increase for this year of 7,795,848 sheep and 207,643 cattle, and every appearance of another favourable season in 1888, it is of the highest importance to owners that their stock should be killed as near as possible to their pastures, and thus save the very serious waste and deterioration in the meat which the live stock trade entails, inasmuch as the best outlet for our surplus stock is in the exportation of frozen meat, and that again will never be put on a payable footing until we can place our meat in prime condition (which the fresh meat trade will enable us to do) on the London market. It is only courting disappointment and loss to offer inferior or wasted meat in that market.

At present New South Wales mutton usually sells at from $\frac{1}{4}$ d. to $\frac{1}{2}$ d. per lb., or say 6 to 13 per cent. less than New Zealand, and although this is to some extent attributable to the New Zealand sheep being crossbreds, and heavier than ours, the condition and flavour of our mutton has still more to do with the difference. Besides, as we have suitable country, there is no doubt but our owners will in many cases raise crossbreds, which, when properly managed, pay well for wool as well as mutton.

necessity compelled them to fulfil their contracts, and familiarity with the disease reduced its terrors, and experience had taught them to avoid some errors in treatment which, on the outbreak of the malady, had caused fatal results. In consequence of the brevity of my visit, compared with the progress and numerous phases of this interesting disease, my report must be accepted as merely introductory; and I anticipate much valuable information may be added to the subject by veterinary surgeons in the adjoining colonies, where I have reason to believe it is not unknown.

History.

So far as I can learn, the present outbreak was first noticed in a teamster's horses from the Barrier Ranges' mining districts (it is not known which Colony they came from). A dead horse was left at Mingary, South Australia, early in December, 1886, and the contagion spread through the railway contractors' teams, which were idle at that time, proving fatal to forty horses out of 150. These were valuable draught animals in good condition. Those young and fat suffered most.

The construction of the Petersburg to Silverton railway, also the mining industries, caused the extensive employment of horse labour; and the disease being attributed to a local cause, the *bete noir* being *Euphorbia Drummondii* (which my experiments hitherto have proved to be an innocent weed) misled horseowners as to its true contagious character, therefore farmers and teamsters easily contracted the disease, and, becoming alarmed, rushed away from the plague spot, taking the disease with them. So the country has become gradually invaded, following the railway line south to Port Pirie, and by sea it has gone to Albany, Western Australia, and north to Cockburn, there crossing the Barrier Ranges into New South Wales. It appeared in Silverton on 12th January, 1887, and has travelled to Corowa, Malcolma, The Gorge, Round Hill, Gardiner's Creek, Poolamacca, Purnamoota, Langawera, Double Wells, Mount Brown, Bencamina Lake *en route* for Wilcannia and Menindie. Mundy Mundy, Mount Gipps, and Burra stations have taken the disease home by buggy horses visiting Silverton, and have infected the home station horses; but, by careful isolation, had prevented the disease spreading to paddocked horses and breeding stock.

Character.

It is an epizootic contagious equine fever—a disease which elaborates a virulent element, through the medium of which it is propagated and extended by contagion from horse to horse, and it appears not to spread through the medium of the air, or to attack any other animals.

In some respects it resembles the horse diseases I have seen in other countries, and are described in veterinary works under the names of epizootic cellulitis, rheumatic influenza, pinkeye, purpura, hæmorrhagica, epizootic pneumonia, but differs from all these very materially.

The fever which follows the reception of the diseased germs, although high in many cases, is very variable in intensity, the disease is by no means uniform in attack, location, or subsequent complications.

The blood withdrawn in the early stages is dark-coloured, the corpuscles rapidly coalesce, and sink to the bottom of the vessel, leaving a thick, buffy upper surface. During the height of the fever the blood is darker, and coagulates so rapidly that the buffy coat does not appear. In the last stages the blood is tarry and only forms soft clots.

The remarkably rapid loss of flesh very characteristic in this disease is, I think, explained by Dr. Lionel Beale, who says that "in cases where the body heat rises several degrees in the course of a few hours the germinal matter increases with great rapidity. The capillaries of a great part of the body are found to be gorged with particles of living matter, for the most part descended from the colourless blood corpuscles, while the masses of bioplasm of the neighbouring tissues have increased to twice their normal size." On microscopic examination of the blood, the white corpuscles were conspicuous by their absence; many of the red cells appeared granular, micrococci, diplococci, and bacilli could be detected in the same field, but in so far as I could judge were not sufficiently numerous to be distinctively pathogenic, and possibly some were accidental contaminations during the examinations. This is a field for further research and experimental demonstration.

The disease shows a disturbance of the vascular system, with alterations in the character of the blood which cause obstructions in the capillary vessels, followed by hæmorrhagic spots, accompanied by organic complications, more or less severe.

Cause.

This is due to specific poison, most likely a micro-organism, eliminated from a diseased animal, entering the system of a healthy one, apparently through the digestive organs. In no case has the disease (so far as I can learn) spread atmospherically. Horses carefully kept from contaminated food and water have continued free from the disease, although only a few yards have separated them from the diseased and dying, and it has not spread to paddocked horses along the routes the disease has taken without actual contact.

Symptoms.

On the first day of illness attracting attention, the following symptoms are presented:—Drowsy, sleepy appearance, loss of energy, appetite diminished; if worked, is slow to answer the whip, and soon tires; at rest, the coat stands up; it is harsh and dry, the skin sticks to the ribs, the flanks are hollow, the bowels constipated, the urine scanty and often high-coloured. The conjunctiva lining the eyelids, the mucous membrane of the lips, gums, and tongue, are a reddish colour.

Pulse, 60 beats per minute, full and distinct; respiration, 20 to 30 per minute; temperature of the body, 101° to 103°; ears and legs are uniformly warm throughout the illness.

Second day.—Increasing lassitude, muscular weakness, general debility, unsteady gait; if driven, drag the limbs wearily along, carry the head low, with drooping ears and half-closed eyes; tears trickle down face, and tenacious foam hangs from flabby lips, giving the countenance a most dejected appearance, which is not improved by swarms of flies and dust; heart beats quicker and with force, the bodily temperature is rising; eats and drinks in a dreamy, indifferent way.

Third day.—The eyes are extremely sensitive to light, are retracted in the orbits, the eyelids are swollen, the membrana nectitans is œdematous, and very distinct dark red blood-spots appear on the now orange-red conjunctiva; the cornea loses its transparency, and becomes dull and opaque, so that the pupil cannot be seen; tears mingled with a muco-purulent discharge continually escape from the eyes and adhere to the face, attracting swarms of flies, the poor animal being too ill to disturb them.

The

The lips are swollen and pendulous, and masses of tenacious mucous fall into the feed as he eats in a very languid, indifferent manner.

The mouth and sides of the tongue are high coloured, the mucous papillæ are inflated, presenting a spotted appearance; the upper surface is covered with a thick dirty gray fur.

The nostrils are dry and dusty, they are less inflamed than the eyes, and I have not seen any catarrhal discharge.

Fourth day.—The fever is now at its height, and continues for three or four days with little variation; pulse ranges from 70 to 80 or higher, full and distinct; respirations from 25 to 35, movements are thoracic; temperature from 105° to 106° or even higher, varying two or three degrees in 12 hours. Although nearly blind, the patient is perfectly conscious and sensitive to touch or sound; he will not seek food or water, but takes both when offered; stands in one place, uneasily shifting the quarters by continually flexing first one hind leg and then the other without moving the feet, indicating pain in the joints; does not lie down or give any indication of abdominal pain. The fæces soften with the mashed diet, and the bowels act normally; the urine is clear, deep yellow, and often gelatinous. The cornea is milky; the blood-spots in the eyes enlarge into patches of extravasated purple blood, giving a liver colour to the membrana nectitans, the mouth and lips get darker and purplish, and patches of extravasated blood are visible in the vagina.

The appetite never entirely fails, but the act of drinking, especially if the head is held low, is difficult; the lips are frequently dipped before swallowing; the act sometimes excites coughing, but this is painful, as it shakes the aching joints; it is low and suppressed, so as almost to escape notice. The rima glottis is inflamed and œdematous, but there is no external swelling apparent in the glands or throat. The loss of flesh is incredible; a stout horse is reduced almost to a skeleton.

On the seventh or eighth day the crisis is reached; the advent of œdematous swelling in all the limbs is favourable. The joints appear relieved from pain, the respirations are less frequent; the pulse becomes softer and slower, and the temperature is more settled, being two or three degrees lower. Very slowly, but surely, day by day, cheerfulness returns, the appetite improves, and the patient moves slowly about; the evacuations become natural, the eyes improve, cornea clears from the top, leaving a white, saucer-shaped patch, and small, ulcerated spots; in process of time these clear away. During convalescence the muscles are often functionally deranged. Some walk most painfully and exceedingly slow, feeling their way step by step like a man with rheumatism; others are weak, they roll like a drunken man; others droop the quarters, crouching along as if suffering from lumbago, drag the hind feet along the ground, and appear in danger of falling at every step. Others walk stiff jointed as if the swelling was only a mechanical hindrance to progression; others have cramp in the muscles, causing partial luxation of the fetlock; others have stringhalt; others have laminitis in all the feet. No case of paralysis or cerebro spinal disturbance came under my notice. Convalescence after the severe fever is never rapid; the dropsical swellings extend under the abdomen to the sheath; it is two or three weeks before the legs get fine, or health and spirits are restored.

The conjunction changes from liver colour to a dirty brown, and as the debris of disease get absorbed, the deeper spots of extravasated blood show up clearly on the rest of the membrane, which gradually assumes the healthy pink colour.

Course and Termination.

Some cases run a mild course throughout, and may even escape observation; others go to work with swollen legs after two or three days' spell, and recover; but the fatal cases occur in horses fresh in to work off grass, or hard-worked horses urged on while the disease is in progress. All rapidly lose flesh and condition. This is due in a great measure to want of nutritious feed. The mistaken practice of bleeding and making the poor brutes walk about while they have a drowsy headache, eyes so painful to open, and shooting pains in every limb—such treatment, aided by drugging, has killed many a good horse; others turned into a paddock to "rip," where food is scanty and water scarce, being too ill to walk, die from such inhuman neglect.

If good green feed and water were abundant, I think affected horses would make good recoveries, especially if unmolested.

Pathological Anatomy.

Hæmorrhagic spots and stellate patches of inflammation are diffused over both serous and mucous surfaces, effusions of serous lymph, and adhesive inflammation of the coverings of the lungs, heart, liver, and spleen; also serous effusions into cellular tissues of the limbs and head. In fatal cases, the inflammation is so intense as to obstruct the circulation; local mortification is speedily followed by death.

No animal under my observation died. I made post-mortems on four casual cases of fever, but knowing very little of their history or treatment, simply state the cause of their deaths:—

1. A coach horse.—Putrid lungs.
2. A teamster's hack.—Pleuritic inflammation and gelatinous effusion covering the pericardial sac; also slight enlargement and inflammation of the spleen.
3. A teamster's mare, 5 years old.—Ill three or four weeks. The spleen was very much enlarged and honey-combed, with purulent matter, and the lymphatic glands generally inflamed.
4. A hack mare, 3 years old; foal at foot.—Ill about three weeks, with spleen in the same condition.

The microscope revealed crowded clusters of bacteria in these spleens.

The small intestines in every case were healthy.

Contagium.—The virus probably escapes from the infected by the mucous membranes—that is, from all the orifices of the body—and appears to be principally communicated by the discharges from the head.

Mode of access.—This is by contaminated drinking water-troughs, buckets, feed, mangers, boxes, bags, bridles, harness, horse brushes, rubbers, &c., and also by the evacuations. These, after drying in the sun, are actually eaten by stray loafers (loose horses).

Under certain atmospheric conditions, which are at present incompletely understood, this disease may spread through the air; but usually intense heat with a dry pure atmosphere are unfavourable to such development; while a moist atmosphere with impure air, such as is found in crowded stables, would favour such a result.*

Incubation.—

* Note.—This disease entirely disappeared as soon as rain set in.

Incubation.—From the time of exposure to infection is from three days to three weeks.

Extension.—Only by contagion from horse to horse, healthy horses becoming contaminated by direct contact with the virus escaped from a diseased animal. It has distinctly followed the horse tracks used by mails and teamsters, and has been taken to run homesteads by infected animals, and has been arrested on runs by isolation.

Mortality and Loss.—Most deaths occur during first week of attack; some chronic cases also die weeks later. About 10 to 15 per cent. was the average number of deaths during my inquiry, although at Mingary, I was told forty deaths occurred in a mob of 150. The indirect loss from illness is very great. Few horses are fit for work for two or three weeks; many require twice as long, and they lose all their flesh and strength, requiring good feed and a long spell of rest; others do not make good recoveries, and suffer from chronic mischief, linger for weeks, and then die. Good feed and care are necessary to ensure complete recovery.

Immunity.—A team of nine donkeys have drank and fed with the sick constantly, and have escaped infection. Bullocks are also exempt. About 20 per cent. of horses escaped infection, or more probably have it so lightly as to escape observation. I know of no case in which a human being has contracted the disease.

Sanitary Measures.—Carcases should be burned or buried with the sacks, cloths, feed-boxes, and valueless articles used about them. Bits and harness should be put into boiling water. Stable sheds should be limewashed, or tarred, and disinfected with chloride of lime, carbolic acid, or chlorine gas. Horse droppings and manure should be burned, especially on watering reserves and camping grounds. Local authorities should look to this.

Preventive Measures.—Sick animals should be isolated from the healthy, and every article used about them be kept separate.

The hospital attendant should not mix with the healthy animals, and strangers should be cautioned against visiting the sick. Regulations prohibiting the movements of infected animals should be enforced. As the disease is rapidly approaching to the river Darling, and its flooded condition diverts the traffic to the punt crossings, this is where I recommended the plague should be stayed. The river, forming a natural barrier, would be an invaluable adjunct to assist legislation in preventing the spread of this distinctly contagious disease throughout this Colony.

Curative measures consist of absolute rest, with room to move about, pure air and water, soft food, as wet bran, scalded oats, and chaff, given in small quantities, and often, and not allowed to become soiled or sour; linseed tea and gruel to drink; green fodder when it can be had.

Saline Medicines.—Give early a dose of sulphate of magnesia, 4 ozs. in a pint of water, to relax the bowels; then chlorate or nitrate of potass, 2 to 4 drams, night and morning, in the drinking water, during the fever, and until the urine is clear and free. Some cases with languid circulation may benefit by beer or porter, carbonate ammonia, aromatic spirits of ammonia, spirit aether nitrous, &c.

Restoration will be promoted by liberal feeding, and the addition of such tonics as sulphate of iron, liquor arsenicalis, vegetable aromatics, bitters, and common salt.

APPENDIX C.

AUSTRALIAN STRINGHALT.

Sir,

Department of Mines, Stock Branch, Sydney, 1 September, 1887.

I have the honor to report having visited Perricoota Station, accompanied by Mr. Watson, Inspector of Stock, Moama. I at once recognized the disease, Australian stringhalt, as described in my report, July, 1886.

It appears the disease was first noticed in the latter end of May and the beginning of June amongst the selectors' horses (it has not attacked the station horses), and now some fifty are affected on an area of about 30 miles at Altcarr, Caloola, Wamboota, and Bunaloo.

The disease is on the decline at the present time, a few having died and some recovered, others are progressing favourably. No recent outbreak of fresh cases has occurred.

At Altcarr I met Messrs. Lyons, Bairstows, Denny, Grimison, Thompson, Smith, and others. Having inspected the horses, paddocks, herbage, water, &c., we had a general consultation. I made a *post-mortem* examination of a young horse (two years old) given by Mr. Lyons and killed for the purpose. He had been ailing three months, and was a typical case of the disease.

The gentlemen present were all satisfied that their horses were affected in a similar manner.

The selections are in a rung swamp box forest surrounded by chocolate soil on the plains.

Water is in earth tanks filled by surface drainage.

Herbage is made up of mixed weeds, notably cocks-spur, flat-weed the misnamed dandelion, Cape-weed, larks-spur, geranium, &c. Spring grasses and trefoil are now growing.

Shortly before this outbreak the district was unusually wet, having had heavy rains, and locusts had cleared off the grasses.

The symptoms of the disease were identical with those already very fully described in my former report.

The *post-mortem* appearances were also the same, briefly the stomach and digestive portion of the bowels were extraordinarily infested with parasitic worms, and the mucous membrane highly diseased throughout. In the diseased limbs I have observed delicate oval cells with granular contents distributed in innumerable numbers in the muscular tissues. They probably thrive at the expense of these tissues, but whether these cells are pathogenic or only saprophytic has yet to be determined. Hitherto I have only seen this disease in its chronic forms. More light will be thrown upon it when it has been investigated from its origin or commencement, and carefully watched all through the progressive stages of development and microscopic examination of the affected parts carried on during the life of the patient.

As to the manner of its introduction into this district, the germs may have been disseminated by shearers' horses allowed to feed in these paddocks. I may add that it is not impossible that the locusts may have played the part of intermediate bearers of parasitic organisms, as it is well known that animal parasites do pass a portion of their cycle of existence in the bodies of insects.

I still find the disease associated with parasitism, and I cannot connect it with the toxic effects of herbage, therefore I wish again to record my opposition to the poison plant theory.

As remedial measures, I advise the infested paddock tanks to be fenced in from horses, and if the water is to be used from them it should be first boiled so as to destroy the germs of disease.

I am informed wells could be sunk at very little expense.

The brackish water from this source and locality, containing as it does the salts of sodium and iron, would have a valuable medicinal effect. These salines are not unpleasant or unwholesome for horses.

Change of feed and locality will certainly assist recovery.

Such medicines as the sulphate of iron, given in combination with chloride of sodium (2 drams of the iron to 1 ounce of salt), should be given once in every twenty-four hours in a feed and continued for six days.

Then administer a drench consisting of 2 ounces each of oil turpentine and oil eucalyptus and a pint of linseed or olive oil. Allow one week to pass without giving any medicine, then repeat the iron and salt, and follow up with the turpentine and oil drench.

It will be necessary to watch the progress of the case, as recovery is usually very slow indeed, but the treatment should not be given up until the horses' skin gets loose, the healthy gloss returns to the hair, and other symptoms which denote a change indicating progressive restoration to health.

It is well known some horses recover without any doctoring whatever and others die.

There are several anthelmintic and tonic medicines which I feel sure would act beneficially, but their administration would require veterinary supervision.

I have taken the opportunity of exchanging ideas on this subject with the veterinarians in Melbourne, and I am sanguine as to the results.

I have, &c.

EDWARD STANLEY, F.R.C.V.S.,
Government Veterinarian.

APPENDIX D.

MUSCULAR RHEUMATISM AND PNEUMONIA.

Sir,

Stock Branch, Sydney, 7 May, 1887.

In connection with my recent investigation *re* horse diseases, I have the honor of submitting the following reports:—

On April 19 I visited Lake Midgeon Station, Narrandera, and found three deaths had occurred within about a fortnight—

1. One paddock horse was shot.
2. One plough horse, ill a few days, died.
3. One entire horse, also working, was taken ill and died in a week. I made a *post-mortem*, and found pneumonia was the cause of death. From inquiries I made I concluded this horse had been chilled by cold winds after being heated by work, and both draught horses had been recently feeding on damaged wheat chaff, which would predispose them to disease.

No other cases of illness existed either on this run or in the neighbourhood. I prescribed for a police horse suffering from a wound in the shoulder and for another horse that had constipation in the bowels, and for a third having chronic diarrhœa. These three cases were in the town of Narrandera.

April 23rd, at Urana.—During this month about twenty-five horses had been reported ill to Inspector Brett; nineteen had recovered, and five had died or been killed.

The illness was described as of a lingering character, with weakness of the limbs and difficulty in getting up when down.

I saw one case that was recovering—an eight-year old harness mare, in good health and condition; she had defective action, and a peculiar wide gait with the front limbs. There being no cerebro-spinal disease, I conclude she was suffering from muscular rheumatism.

At Burrenong Station I saw two horses that had completely recovered

And at a selector's I saw a case of severe injury to the stifle joint, causing considerable lameness; and two horses belonging to teamsters, said to have been affected, had recovered.

The teamsters reported the disease at Corowa. I telegraphed to Inspector Lowes, and he wired me they were cases of illness due to feeding on wheat.

No other cases of illness could be found in Urana or the district during my stay there.

April 26th, at Germanton.—During the month seventeen horses, scattered throughout the district, had been reported ill. Twelve had completely recovered, five had been killed, none had died.

On the 27th I saw a five-year old pony with several large bed-sores, caused by bruising while on the ground. He could not lift his head from the ground, and the rolling eyes and quivering lids indicated disturbance of the brain. On the head being raised he got up, and had no indication of ill-health. I found the hair had been knocked off the forehead, and concluded the case was concussion of the brain—now in a convalescent condition—and he has gone on well without any treatment beyond nursing.

I next went to Three-mile Creek, and saw a yearling colt. He was very badly bruised, and required help to get up. He was suffering from acute rheumatism in the sheath and tendons of all four legs. I advised killing him. On 28th, owner consented, and I made a *post-mortem* confirming my opinion.

On 28th I visited a joining selection and saw a ten-year old cart horse in good condition, slightly lame on near hind leg, and dragging the toe. Otherwise he was in perfect health.

On 29th this horse was down and could not get up. He fell while his fore-leg was strapped up to prevent his kicking. I suggested treatment which the owner acted on.

On 30th he was still prostrate, and being an irritable brute, was very restless, and got badly bruised.

I advised putting him up in slings, as he was not paralyzed, and was in perfect health.

May 1st.—Is in the same state. Owner decided to kill him rather than sling him.

Post-mortem.—Internal organs healthy; the cartilage was worn off outer-condyle of the femur, almost exposing the bone, indicating defective muscular action of the limb of long standing; the lumbar spinal cord was congested, and hæmorrhage had taken place into the cancellated structure of three or four of the bones.

I concluded that this was a case of muscular rheumatism, and the inability to rise was due to accidental injury to the spine.

My attention was called to several cases, which I visited and examined, then prescribed for—

A case of spasmodic colic; she recovered.

An old harness mare, with chronic diarrhoea.

A draught entire horse, quidding his food, caused by irregular teeth.

A hack with open fetlock joint, caused by a stake.

A blood horse, unthrifty, suffering from worms.

Other cases were reported; but being of the same miscellaneous description, I did not stay to see them, having satisfied myself that no disease existed of a destructive character or likely to extend in the district.

It is to be noted that during the time these cases of horse disease have been reported there has been a sudden and remarkable change in their surroundings—rank herbage, abundant rain, and sudden fall in temperature. Animals exposed to such changes often suffer, and rheumatism is not unusual.

May 3.—At Berry Jerry Station five or six horses had died from various causes. One from old age; and another, ruptured bladder, caused by getting hung up in a fence. One had taken cold, and died with inflammation of the lungs; another, supposed to be the same, but was not opened.

I saw a working mare with inflammation of the lungs, brought on by exposure, while sweating from work, to the raw, cold, wet night air and wet paddock. I prescribed treatment, and believe no other cases of illness existed in the neighbourhood

EDW. STANLEY, F.R.C.V.S.,
Government Veterinarian.

To Alex. Bruce, Esq., Chief Inspector of Stock.

APPENDIX E.

MALIGNANT STRANGLES.

Department of Mines, Sydney, 1 April, 1887.

MEMO.—Acting on your instructions, I have visited Mr. T. Cook's station near Scone, and have the honor to report that his horses are not suffering from the contagious horse fever that I had recently reported on at Silvertown; but I found he had many of the young horses, suffering from strangles, an epidemic contagious disease of an unusually severe form, attributable to the moist wet season. I gave instructions as to general treatment and special advice suitable to the worst cases.

EDWD. STANLEY,
Government Veterinarian.

To Alex. Bruce, Esq., Chief Inspector of Stock.

APPENDIX F.

BLAINE.

Stock Office, 12 April, 1887.

MEMO.—In reply to your inquiries for further information, *re* cattle, Jamberoo District, I have the honor to report that Blaine is caused by wet pastures and exposure to the weather; it is a sore throat with cough and swelling in the submaxillary region. It rarely assumes a severe form; when it does it is anthracoid in character; then the *post-mortem* appearances would be sanguineous effusions in the region of the throat and mouth. It is not infectious. Treatment that I prescribed was 1 lb. cattle salt, 2 oz. ginger as a drench, in 2 quarts of water; hot fomentations, and mustard applications to the throat; shelter and dry bed. Disease was first noticed about 5th April; one cow died that day, and two on the following day. The symptoms of illness reported were very ambiguous, and did not resemble the bullock.

The disease was confined to the one farm. I suggested, and advised movement to drier pasture ground; as I have already said the remainder of the herd appeared healthy.

EDWD. STANLEY, G.V.S.

To Alex. Bruce, Esq., Chief Inspector of Stock.

APPENDIX G.

ANNUAL SHEEP SALES.

THE following lots of sheep, bred by the several New South Wales, Queensland, and Tasmanian owners, were disposed of at the Annual Stud Sales held in July, 1887:—

Name of Breeders.	Address.	Number of Rams.	Number of Ewes.	Total.	
				Rams.	Ewes.
Sold by Messrs. Mort & Co., Ltd., on account of—					
<i>New South Wales.</i>					
A. L. Faithfull, Esq.	Goulburn	10
H. R. F. Hume, Esq.	Rye Park	5	2
Stephen White, Esq.	Bethungra	2	6

APPENDIX H.

ANTHRAX IN SHEEP.

Sir, Department of Mines, Stock Branch, Sydney, 18 August, 1887.

In accordance with instructions from the Under Secretary for Mines on August 9th, I proceeded to Bourke, to investigate the sudden fatality in a mob of sheep, and have the honor of submitting the following report:—

It appears that Mr. Hurtle Fisher purchased a mob of 12,000 ewes in lamb, from Nelyambo; and, owing to the flooded state of the country, had to rent a paddock on Jandra Station, near the Cobar Road. After remaining there for four months, during which time most of the ewes lambed, they commenced the journey with 9,000 lambs, via Bourke, in order to cross the Darling River to Nee Nee Station, Queensland—Mr. C. Gould, drover, in charge.

On the afternoon of the fifth day some of the leading sheep began to lag behind, looked ill, staggered about, and quickly died. The mob went on to the camp named Stone Quarry Reserve, and next morning, 800 were dead.

The ewes were old and low in condition; the lambs were vigorous, well grown, and healthy. About fifteen or twenty sheep were too ill to walk off the camp; these, and several others that were ailing (say) 150, were bled; about twenty of these are alive still. All the mob that could move passed on leaving a track, marked by dead sheep here and there, for a distance of 3 miles. Twelve more died at the sixth camp, on Bourke Common, and two the following night. Since then very few deaths have occurred.

Accompanied by Mr. C. Gould, drover, and Mr. Inspector Mallon, I visited the sheep; and, on passing the tail of the mob, a very few sickly ones could be noticed walking slowly, and carrying their heads straight, with stiff necks, not attempting to feed. The mob, both ewes and lambs, were well spread and feeding, and looked healthy.

Several

Several dead sheep were passed scattered along the track, presenting nothing striking in their appearance. At length we reached Stone Quarry Reserve Camp, and there saw about 800 lying dead in all sorts of attitudes; some having died asleep; others having struggles in convulsions; some in groups and many apart; but all being upon a two-acre space. Almost all these were ewes; not more than a dozen lambs had died. On the fatal patch there were three sheep alive; one too ill to stand and almost unconscious; this was killed and examined. Two others had jumped on their feet; they watched us; then soon lay down again, and did not attempt to move when we examined them. Another lot of six had moved off together; these had been left behind ill; this was evident, as they had been bled and recovered; they were too lively to be caught.

About half the carcasses were skinned; they were decomposing. I opened and examined some of them, but they were of no use for diagnosis. On looking through the unskinned carcasses I noticed a great many had blood trickling from the nostrils; and on the skin being removed the characteristic bruised patches of anthrax were unmistakable; and the butcher informed me that he had not skinned a single sheep that did not show the blood-stained patches in some part or other of the body, chiefly about the shoulders and neck.

I made ten or twelve *post-mortem* examinations, two being killed for the purpose. Three had apparently died only a few hours. The internal organs were very variably affected, and the pathological changes were not very decided in any one case, as it was at least the fourth day after the outbreak. The sheep I saw ill only suffered from a mild form of the disease, and that explained the absence of the virulent indications. The spleens of several were enlarged and dark coloured, but in some were very little affected. In one the urine was blood-stained in the bladder. The stomach and bowels were comparatively healthy.

I could see no indication of plant poisoning. I secured the spleens of two fresh cases (but the disease was not well marked in them) for further examination, and I mixed a little of the spleen blood with water and gave it to three hoggets. Fifty-six hours afterwards it had taken no effect whatever. I then introduced a seton (saturated with this blood while fresh and then dried) under the skin of the thigh in two of these hoggets, but it did not produce any ill effects. The cultivation of micro-organisms is necessary, to determine whether they are bacilli or bacterias, to distinguish splenic anthrax from symptomatic anthrax.

With reference to the rumour that the *euphorbia drummondii* caused their deaths, it is simply too absurd: and I cannot understand the tenacity with which stockmen are content to stick to this blunder.

I went to the place and examined the feed with the drover, where he said they had eaten it (the *euphorbia drummondii*), and instead of finding abundance we had to search for it, and found small plants scattered about here and there just as it is found to be the case wherever it has been introduced; and I subsequently found it quite as plentiful on the town common; also, in the town, and near the trucking yards, where hundreds of thousands of sheep have eaten it on all occasions with impunity. At this season of the year the plant is very small indeed, and close to the ground. There was ample feed besides it. These sheep were not hungry; therefore, I fail to connect it in any way whatever with their deaths.

In my opinion anthrax was the poison; and the germs were left on this road at this place last year during spring, when eighty sheep died out of 4,000 in one night. These germs have renewed their virulent vitality with the early spring vegetation, and hence the mortality of this mob. A similar case occurred 8 miles from Bourke, on the Western Railway stock last year; then 150 died in a night in a mob of 15,000.

I have, &c.,

EDWD. STANLEY, F.R.C.V.S.,
Government Veterinarian.

The Chief Inspector of Stock, Sydney.

APPENDIX I.

STATEMENT of the estimated number of noxious animals in the Colony at 31st December in the years 1880 to 1887 inclusive; the number of the different kinds of noxious animals killed during these years; the amount of assessment collected; the amount of Government subsidy received, and the total expenditure for each of these years.

N.B.—The whole of the accounts of expenditure for 1887 are not yet to hand. When they are the total amount of expenditure for that year will reach about £20,000.

APPENDIX J.

Department of Mines, Stock Branch, 13th December, 1887.

Re EUPHORBIA DRUMMONDII.

Memo.—To the Chief Inspector of Stock,—

With reference to the question of the properties of this weed, I have the honor to report that, while in Melbourne, I interviewed Baron von Mueller on the subject, and, as I have every respect for the view he takes on the matter, I am especially careful in giving my opinion, which is the result of two years' observation, and having recently repeated experiments with this weed, by feeding starving sheep upon it for several consecutive days, with some sheep using the weed green and fresh, and others dry, some sheep living on the weed alone, others taking it with other food. Rabbits and Guinea pigs also eat it.

I introduced the milky juice into the eyes of sheep and dogs, and applied it to the skin of sheep, in every instance, without being able to detect the slightest toxic or irritant action, either from its internal or external use.

In order to confirm my opinion, I have, from time to time, asked stock-owners to make careful observations of its effects under ordinary conditions on their runs, and having received written statements that support my views, I annex extracts from their letters, and take this opportunity of thanking them for courteously supplying the information.

Devlin & Co., Ganmain, 24/8/87, says,—“That our sheep have picked out this weed from amongst other grass, and have eaten it ravenously, and no ill effects have resulted; that sheep have been fed exclusively on this weed with no ill effects; that the herbage in the paddocks where the milking cows were kept last year was entirely composed of this weed, and no harm ever resulted.”

Mr. J. Holloway, Mumbledool, 25/8/87, says,—“It is first-rate feed for our station sheep. During the drought this run was badly off for feed, and stock were very weak. In several small paddocks which had been eaten completely out, and the sheep removed, after a long spell and a little rain this plant came up and grew luxuriantly, spreading in some instances to 12 inches from the centre. Into one of these paddocks I put a few hundred of our best ewes; they were very hungry, famishing in fact, and were yarded the previous night; they eat the *Euphorbia Drummondii* ravenously, and had a good belly full right away, without seeking for anything else; these sheep were left in the same paddocks for weeks and did first-rate the whole time, although there was little or nothing but the plant in question for them. I am satisfied it is in no way injurious to sheep, and consider it a good useful plant.”

Mr. J. E. Warby, Billenbah,—“This plant grows more or less over my estate of 8,000 acres; and on 50 acres that had been irrigated it grew very abundantly, from plants half the size of the hand to a foot in diameter. I have had horses, cattle, and sheep—five or six to the acre—in the paddock for several weeks at a stretch, and have noticed cattle and sheep eat large mouthfuls of it, and none of my stock suffered from it in any way.”

Mr. D. M'Carthy, Bundure,—“There is a large quantity of the plant grows over the run here, and when other feeds were scarce stock could get plenty of this said poisonous plant. I never considered it poisonous, and never saw any bad results from it.”

Inspector of Stock P. R. Brett, Urana, formerly believed the plant to be poisonous, and consequently has taken a good deal of trouble, and made several experiments to satisfy himself.—“He shut up 400 wethers in a yard for two days, and then turned them into a paddock full of this weed, and next day he could not find one sick sheep, and says, ‘The fact is, in place of this plant being a poisonous one, I think it is a very valuable one, being the first to show above ground after summer rain.’ A small lot of sheep for killing purposes are doing very well on this weed and crowsfoot, no grass.”

Mr. George Faithful, Brewarrana, writes.—“I have frequently observed cattle eating it in large quantities, and have watched individuals, but have never observed any effects. It cannot be poisonous, or numbers of my cattle would die.”

Mr. J. H. Spiller, Tubbo, writes,—“My experience proves that it is perfectly harmless. I had a paddock covered with it, and was afraid to put sheep in; at last I ventured to do so; the sheep ate it and thrived well on it.”

Mr. David McCaughey, Corce, writes,—“I have a great deal of this so-called poison plant on the run, and never find any loss of stock or bad effect from them eating it. Paddocks that have had a spell, after the first summer rains throw up an immense quantity of this milk-weed. I generally put my most valuable sheep in these paddocks, and find they do splendidly on the fresh green feed, of which this milk-weed forms a very large proportion.”

Mr. Angus Robertson, Yarrabee Park, writes,—“As to the so-called poison plant, I have really known sheep to thrive on it.”

Mr. Arthur Devlin, Uarah, writes,—“I penned some sheep and fed them on *Euphorbia Drummondii* for about a week. They appeared to be very partial to it, and were thriving on it. I also put a large number of sheep into a paddock where there was an abundance of it growing very luxuriantly, and the sheep devoured it without any injurious effect.”

Mr. J. A. Gunn, Yalgogrin Station, writes,—“I have seen the ground covered with the plant after autumn rains, before grass had time to spring, and sheep feeding on very little else for weeks without the slightest harm resulting, either to station stock or to travelling sheep.”

Inspector of Stock W. J. Elworthy, Narrandera, writes,—“The plant was growing all over the recreation reserve, and I watched to see its effects on a flock of sheep that had eaten it, but no ill results followed.”

It is worth noting that all this evidence is from actual observation of facts, and I have purposely avoided hearsay testimony.

Mr. Hamlett, the Government Analyst, 2/8/86, reports on *Euphorbia Drummondii*,—“The samples of plant, extracts and tinctured, sent by you in April last, have been found to contain an alkaloid or crystalline body, capable of giving the usual alkaloid reactions and having a bitter astringent taste. As far as it was possible to ascertain, no distinctly poisonous properties were observed.”

The Queensland authorities were very strong in their opinions of its being a fatal and poisonous weed; but, judging from a recent letter, the views of Mr. Chief-Inspector Gordon, are changing. He says about *Euphorbia Drummondii*,—“From what we have seen here, no results of any value will follow the feeding of sheep on that plant.” He further says,—“We have immense quantities of *Euphorbia Drummondii*”

Drummondii in Queensland, and sheep eat it in any quantity, and with no evil results;" and then he adds,—“ Yet if you place sheep on ground where they can eat it in the early morning, just as it has come through the ground, it is decidedly poisonous.”

To say the least of this, it strikes me as very extraordinary. Sheep invariably feed early in the morning, and during the drought were kept alive by eating this plant, keeping it so close to the ground that whatever they ate were young shoots; but no bad effects have been recorded that will bear investigation.

The wholesale losses in stock that occur from time to time are caused by micro-organisms named bacilli, far more subtle and fatal in their effects than the action of any plants, and the wide-spread distribution and hardy nature of the weed, *Euphorbia Drummondii*, which is probably eaten by tens of thousands of sheep every day in the various Colonies of Australasia, should I think, make us careful, to search further into the causes of disease and fatalities in stock, and not to be content to attribute such calamities to the popular phantom, “poison plant.”

The *Materia Medica* contains a long list of medicinal plants, and several are undoubtedly poisonous, so far as their special toxic action goes; but it should be remembered that the active principles are so combined with digestible materials, that animals provided with the powerful stomachs of ruminants can resist the ill effects of improper feed. They are provided with a keen sense of taste and smell, and naturally avoid noxious plants, which are frequently acrid, bitter, nauseous, or odourous, so that it is only when pressed by a craving appetite that they feed indiscreetly. At such times, lucerne, trefoil, thistles, or any other succulent green food may be so rapidly swallowed as to engorge the first stomach, and then chemical action proves stronger than the vital functions, suffocation from flatulency is the consequence. This condition has often been mistaken for poisoning, and this explains, I think, the very conflicting views that have been expressed on the subject of this paper.

As the object of this inquiry is to elicit truth and dispel error, I would caution drovers and others to be careful about permitting hungry sheep to engorge themselves with this weed, which is often abundant near creeks and water-holes. Do not water immediately after feeding or drive them about; it is better to let them rest until rumination gives them relief from the discomfort of over feeding.

I have, &c.,

EDWARD STANLEY, F.R.C.V.S.,
Government Veterinarian.

APPENDIX K.

POISONOUS PLANTS.

Sir,

Botanic Gardens, Sydney, 19th December, 1887.

I have the honor to enclose to you the report of my assistant, Mr. Betche, who was sent by me, at the request of the Minister for Mines, to examine those districts of the Colony where a large number of both sheep and cattle lately died, as alleged through their having eaten some poisonous plant or plants.

In Mr. Betche's list of plants, found both in Bourke and Dubbo districts, there is not one peculiar to those parts, all being found, more or less, throughout the western country. Those to which any danger may reasonably be attached are—*Cassia*, *Sophora*, *Solanum esuriale*, *S. ellipticum*, *Datura*, *Tatula*, *Polygonum hydropiper*, *Euphorbia Drummondii*, *Swainsona procumbens*, *S. galegifolia*, and *S. coronillifolia*; but, as already said, none of these are purely local. I do not think, therefore, that the deaths referred to could have arisen from eating in quantity one or more of these plants.

I would, however, suggest that steps be taken to practically test whether they be really dangerous, by feeding stock with food in which each of these plants separately should be largely intermixed.

I have, &c.,

CHARLES MOORE.

REPORT ON POISONOUS PLANTS.

Ch. Moore, Esq., F.L.S., &c., Director, Botanic Gardens.

Sir,

Botanic Gardens, 2 December, 1887.

I have the honor to submit to you the report on the poisonous plants near Bourke and near Dubbo.

The properties of the Australian plants are still so imperfectly known that a great uncertainty exists as to which plants are harmless and which are noxious. Fortunately, plants nearly allied in form and structure are also usually allied in chemical properties, *i.e.*, the same or similar properties pervade whole natural groups of plants. This law of nature enables us to estimate the properties of an unknown plant from its affinities to other well known plants; and though we cannot positively qualify plants as poisonous because some nearly allied plants are poisonous, they must be considered suspicious till they have been proved to be harmless by practical test or chemical analysis.

I. BOURKE.

General character of the vegetation.

The country, from Bourke to about 30 miles on the Cobar Road, consists of sparsely timbered woods, interspersed with treeless plains. The woods are chiefly composed of the following trees:—A few species of *Eucalyptus*, about six species of *Acacia*—*Flindersia maculosa* (Leopard tree) *Heterodendron oleifolium*, *Atalaya hemiglauca*, *Geijera parviflora* (Wilga), *Codonocarpus cotinifolius*, *Casuarina glauca* (Bull Oak), *Tusanus acuminatus* (Quandong), *Capparis Mitchellii* (Wild Orange). The shrubs consist chiefly of several small or tall species of *Eremphoila*, of *Dodonaea attenuate* (Hopbush), and of a few species of *Cassia*. The low or herbaceous vegetation is composed to the greater part of plants of the natural orders of *Chenopodiaceæ* and *Compositæ*, too numerous to be enumerated. Other herbs or low undershrubs, observed as common in the district, are:—Several species of *Sida*, *Abutilon cryptopetalum*, *Goodenia*, *cycloptera*, *Convolvulus erubescens*, *Erythraea australis*, *Teucrium racemosum*, *Solanum esuriale* and *ellipticum*, *Trichinium senilanatum*, *Alternanthera triandra*, *Muhlenbeckia Cunninghamii* (Lignum), *Euphorbia Drummondii*, *Marsilea Drummondii* (Nardoo), and a small number of grasses.

Poisonous

Poisonous or suspicious plants.

No plant positively known as poisonous has been found in the district in the present season, but the following plants are suspicious:—*Solanum esuriale* and *ellipticum*, *Codonocarpus cotinifolius*, *Nicotiana suaveolens*, *swainsona procumbens*, and *Pimelea pauciflora*.

Solanum esuriale, Lindl and *S. ellipticum*, R. Br. (Nightshade).—Very common in the country the sheep travelled over. All species of *Solanum* contain a narcotic alkaloid solanine; in most species in harmless small quantities, but some species are known as poisonous.

Codonocarpus cotinifolius, F. v. M.—A small tree, rather common in some parts of the district. The small order to which the tree belongs contains generally an acrid drastic principle, and one American species is a violent purgative.

Nicotina suaveolens, Lehm. (Australian Tobacco).—Common on river banks, but rare in the country the sheep travelled over. All species of *nicotiana* contain more or less the dangerous alkaloid—nicotine.

Swainsona procumbens, F. v. M. (Darling pea).—Not common in the country examined. Reputed to be injurious to stock, but the nature of the poison is entirely unknown.

Pimelea pauciflora, R. Br.—Rare in the district. All species of *Pimelea* contain, more or less, a volatile acrid principle, chiefly in the bark, which, in some species, may be dangerously powerful. None of the numerous species appears to be ever touched by cattle.

Euphorbia Drummondii, Boiss.—Would have been included amongst the suspicious plants, but practical experiments, lately undertaken by the Inspector of Stock in Bourke, have proved it to be quite harmless.

II. DUBBO.

General character of the vegetation.

The country examined near Dubbo is densely wooded, with occasionally a thick scrubby undergrowth. The woods are chiefly composed of various species of *Eucalyptus* and the Pine-tree, *Frenela robusta*, intermixed with *Casuarina*, *Acacias*, *Sterculia diversifolia* (Kurrajong), *Fusanus acuminatus* (Quandong), *Myoporum acuminatum* (White Wood), *Eremophila Mitchelli*, &c. The underwood is formed by a great variety of shrubs, chiefly from the genera—*Calythrix*, *Baccha*, *Kunzea*, *Melaleuca*, *Callestemon*, *Acacia*, *Cassia*, *Dillwynia*, *Daviesia*, *Dodonaea*, *Pimella*. The low or herbaceous vegetation is less varied and numerous than in the western plains, and the *Chenopodiaceæ* and *Compositæ* are less predominant. Introduced European weeds are very common on roadsides and in paddocks, especially the variegated Thistle, *Carduus Marianus*, and the Black Thistle, *Carduus lanceolatus*.

Poisonous and suspicious plants.

The following poisonous plants have been found:—*Datura Tatula*, *Solanum nigrum*, and *Polygonum hydropiper*; and the following suspicious plants:—*Swainsona procumbens* and *galegifolia*, *Pimelea glauca*, *Cassia Sophera* and *Sambucus Gaudichaudiana*.

Datura Tatula, Linn. (Stramonium).—Very common in the paddock where the first lot of cattle died. Contains a violent narcotic poison, but cattle are said never to touch it on account of its fetid smell.

Solanum nigrum, Linn. (Nightshade).—Common in the paddock. Contains a narcotic poison, but in less dangerous quantities than the *Datura*.

Polygonum hydropiper, Linn. (Water-pepper).—Very common on the river banks. Contains an irritant poison, but it has such a very pungent taste, owing to an acrid volatile oil, that cattle are not likely to touch it more than once.

Swainsona galegifolia, R. Br. (erroneously called "Indigo plant") and *S. procumbens*, F. v. M. (Darling pea).—Rather common in grasslands. Both are known as injurious to cattle, but the nature of the poison is entirely unknown.

Pimelea glauca, R. Br.—Very common in open forest-land (*see* remarks on *Pimelea pauciflora*, Bourke).

Cassia Sophera, Linn. (called "yellow boy" in the district).—Very common in grasslands and clearings in forests. Reputed to be poisonous, and never touched by cattle.

Sambucus Gaudichaudiana, Dl. (Australian Elder).—Very common on river banks. The leaves of all species of *Sambucus* have a very strong taste and smell; one European species, *S. Ebulus*, has violent purgative and emetic properties, and is considered as poisonous.

E. BETCHE.

THE UNIVERSITY OF CHICAGO PRESS

1887.

(THIRD SESSION.)

NEW SOUTH WALES.

IMPORTED STOCK ACTS, 1871-1884.

(REGULATION.)

Presented to Parliament pursuant to Acts.

Department of Mines, Stock Branch,
Sydney, 17 June, 1887.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to cancel so much of No. 8 of the Regulation of 1st July, 1886, issued under the abovenamed Act, as refers to the quarantine of Stud Sheep imported from any clean Australian Colony, and to substitute the following Regulation in lieu thereof:—

Quarantine of Australian Imported Sheep.

The quarantine for such sheep shall only extend to such time as will admit of their being once dipped.

FRANCIS ABIGAIL.

1887.

(THIRD SESSION.)

NEW SOUTH WALES.

IMPORTED STOCK ACTS, 1871-1884.

(REGULATION.)

Presented to Parliament pursuant to Acts.

Department of Mines, Stock Branch,
Sydney, 13 August, 1887.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

THE following Regulation, made by His Excellency the Governor, with the advice of the Executive Council, under the provisions of the abovenamed Act, is hereby published for general information, in lieu of Regulation of 6th August, 1886, which is hereby cancelled.

How imported Australian sheep are to be admitted overland from other Colonies.

Sheep imported from any clean Australian Colony into any other clean Colony, and intended to be introduced overland into this Colony, may be admitted, if their owner produce to the Inspector for this Colony at the border a certificate, under the hand of the Chief Inspector for the Colony from which they are intended to be introduced, that when such sheep were introduced into that Colony they were certified to be free from infection by the Chief Inspector for the Colony from which they were imported, and that such sheep have been once dipped with proper preparations of tobacco and sulphur, or of sulphur and lime, in a bath given at the temperature and of the duration and in the manner prescribed by number 8 of the Regulations of 1st July, 1886. But all such sheep, unless they shall have been imported, quarantined, and dressed as herein prescribed, shall, on crossing the border, be placed in quarantine, and kept and dipped in the same manner in every respect as prescribed with regard to Australian imported sheep landed at Sydney.

JAS. INGLIS.

1887-8.

NEW SOUTH WALES.

IMPORTED STOCK ACTS.

(REGULATIONS UNDER.)

Presented to Parliament pursuant to the Imported Stock Act of 1871.

IMPORTED STOCK ACTS.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section three of an Act passed in the forty-eighth year of the Reign of Her present Majesty, intituled "The Imported Stock Act Amendment Act of 1884," it is enacted that the term "Stock" shall, in addition to cattle and sheep, include goats, swine, dogs, and such other animals, as the Governor may, by Proclamation published in the Government Gazette, declare to be subject to the provisions of the said Act: And whereas horses suffer from the diseases known as Glanders and Farcy, and deer suffer from the diseases known as Foot and Mouth Disease and Rinderpest: And it is therefore desirable that their importation into the Colony should be made subject to the provisions of the abovenamed Act and of the "Imported Stock Act of 1871": Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, hereby cancel the Proclamation of 6th February, 1888, and declare that horses, camels, and deer shall be included in the term "Stock," and shall be subject to the provisions of "The Imported Stock Act of 1871" and "The Imported Stock Act Amendment Act of 1884."

Given under my Hand and Seal, at Government House, Sydney, this twenty-second day of May, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,

FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

929—A

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section one of an Act passed in the thirty-fifth year of the Reign of Her present Majesty, intituled "The Imported Stock Act of 1871," the Governor, with the advice of the Executive Council, is empowered to declare, by Proclamation in the Gazette, diseases, other than Rinderpest, Foot and Mouth Disease, and Sheep-pox, to be infectious or contagious diseases for the purposes of the said Act: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, hereby cancel the Proclamation of 6th February, 1888, and declare the diseases known as Scab, Catarrh, Rabies, Pleuro-Pneumonia, Tuberculosis, Glanders, Farcy, Swine-fever, and Mange in Dogs to be infectious or contagious diseases within the meaning and for the purposes of the said Act.

Given under my Hand and Seal, at Government House, Sydney, this twenty-second day of May, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,

FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section 10 of the "Imported Stock Act of 1871," the Governor is empowered, by Proclamation in the Government Gazette, to restrict or absolutely prohibit for any specified time the importation or introduction of any

stock, fodder, or fittings from any other colony or country in which there is reason to believe any infectious or contagious disease in stock exists; and whereas there is reason to believe that certain infectious and contagious diseases exist in some of the countries in Europe, Asia, Africa, America, and in colonies other than the Australian Colonies: And whereas the introduction of certain stock was prohibited by Proclamation dated 6th February last from the countries and colonies therein named: Now, therefore I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, do, by this my Proclamation, hereby cancel the said Proclamation, and absolutely prohibit for a period of two years from the date hereof the importation or introduction into this Colony of the stock, articles, or things mentioned in Schedule A hereto, except from the countries and colonies therein named, and under the conditions therein specified, and subject to the Regulations issued under the abovenamed Act.

SCHEDULE A.

IMPORTED STOCK ACT OF 1871 AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

Foreign Stock and Things Prohibited from being Imported or Introduced.

Stock.	From what colony or country.
Cattle, Sheep, and Dogs.	From all foreign countries and colonies, except from Great Britain and Ireland, unless such cattle, sheep, or dogs shall have been 14 days in Great Britain or Ireland.
Swine	From all foreign colonies and countries.
Goats and Deer	From all foreign colonies and countries, unless they are imported for a Zoological Society, when they may be landed and quarantined as provided by regulation.
Fodder and Litter.....	From any foreign colony or country, or from any foreign vessel.

Given under my Hand and Seal, at Government House, Sydney, this twenty-second day of May, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

Note.—The foreign stock undermentioned are not within the terms of the above prohibition.

Foreign Stock not Prohibited.

Stock.	From what colony or country.
Horses.....	Any colony or country.
Camels	Any colony or country.
Cattle	From Great Britain and Ireland.
Sheep	From Great Britain and Ireland.
Goats	From any colony or country, if they are intended for a Zoological Society; otherwise they are inadmissible.
Deer	
Dogs	From Great Britain and Ireland.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.)
CARRINGTON,
Governor.

WHEREAS by the third section of an Act passed in the forty-eighth year of the reign of Her present Majesty, intituled "The Imported Stock Act Amendment Act of 1884," the Governor is empowered by Proclamation to suspend the provisions of any one or more of the sections of that Act or of "The Imported Stock Act of 1871" for any period not exceeding six months, in respect to any stock introduced or proposed to be introduced from any of the Australian Colonies: And whereas it is desirable to suspend the operation of the provisions of the fourth section of "The Imported Stock Act Amendment Act of 1884" and of any regulation made thereunder relating to the quarantining of stock, other than sheep imported from any of the Australian Colonies, for a period of six months: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do hereby suspend, for a period of six months from this date, the provisions of section 3 of "The Imported Stock Act

Amendment Act of 1884," and of any such regulation as aforesaid, so far as the same relate to the quarantining of stock other than sheep from any of the Australian Colonies.

Given under my Hand and Seal, at Government House, Sydney, this twenty-second day of May, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.)
CARRINGTON,
Governor.

WHEREAS by section ten of the "Imported Stock Act of 1871," the Governor is empowered by Proclamation in the Government Gazette, to restrict or absolutely prohibit for any specified time the importation or introduction of any stock, fodder, or fittings from any other colony or country in which there is reason to believe any infectious or contagious disease in stock exists: And whereas by a Proclamation under the hand of His Excellency the Governor, published in the Government Gazette of this date, pursuant to the provisions of "The Imported Stock Act of 1871," amongst other things Scab in Sheep was declared to be an infectious or contagious disease: And whereas there is reason to believe that Scab at the present time exists in sheep both in the Colony of New Zealand and also in the Colony of Western Australia: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, absolutely prohibit for a period of twelve months from the date of this Proclamation, the importation or introduction of any sheep, or any fodder or fittings put on board any vessel with, or for the use of, any sheep, from either of the Colonies of New Zealand or of Western Australia.

Given under my Hand and Seal, at Government House, Sydney, this twenty-second day of May, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

Department of Mines,
Stock Branch,
Sydney, 22nd May, 1888.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

THE following Regulations which have been made by His Excellency the Governor, with the advice of the Executive Council, for carrying into effect the provisions of the abovenamed Acts relating to the importation and introduction of stock by sea into this Colony, are hereby published for general information.

FRANCIS ABIGAIL.

These Regulations are divided into the following Parts:—

- A.—INTRODUCTORY AND GENERAL.
- B.—FOREIGN STOCK AND THINGS.
- C.—AUSTRALIAN STOCK AND THINGS.
- D.—PENALTIES, CONFISCATIONS, &c.

PART A.—INTRODUCTORY AND GENERAL.

I.—INTRODUCTORY.

Repeal of previous Regulations.

1. All previous Regulations under the abovenamed Acts are hereby repealed.

Interpretation.

2. In these Regulations, the following words and terms shall have the meanings which they bear in section 1 of the Imported Stock Act of 1871, namely:—

"Attendant," "Cattle," "Destroy," "Disease," "Fodder," "Governor," "Inspector," "Master," "Minister," and "Sheep"; and the following other words and terms shall, in these Regulations, unless the context otherwise indicate, have the meanings set against them respectively, namely:—

"Australian."—As regards places—any of the Colonies of Queensland, New South Wales, Victoria, South Australia, Western Australia, Tasmania, and New Zealand, and any port or place in any of such Colonies; as regards stock or things—any stock or things from any of such Colonies; and as regards vessels—any vessels trading solely and which have traded solely for twelve months preceding between such Colonies.

- "Dog."—Any dog, slut, or whelp of any breed or age.
- "Fittings."—Any pens, stalls, boxes, cages, cases, or materials for keeping or confining stock; and any halters, brushes, clothes, buckets, and other articles used with, for, or about stock.
- "Foreign."—As regards places, stock, things, or vessels—any place, stock, thing, or vessel other than any Australian place, port, stock, thing, or vessel.
- "Horses."—Any one or more horses, mares, colts, fillies, foals, asses, or mules.
- "Imported stock."—Any stock arriving in this Colony by sea, and for six months after arrival; and the skin, hair, wool, horns, and hoofs of any such stock.
- "Infected."—As applicable to stock—any stock suffering from or actually affected with disease, or which have been in direct or indirect contact with, or on the same vessel as, such infected stock during the next preceding six months, or which have been under treatment during such period for disease, or dressed or disinfected for disease; and as applicable to vessels or things—any vessels or things with which any such infected stock shall have come in contact within the next preceding three months.
- "Infectious or Contagious Disease."—Cattle plague or rinderpest, foot and mouth disease, sheep-pox, swine-fever, scab, in sheep and camels, catarrh, rabies, pleuro-pneumonia, glanders, farcy, and tuberculosis.
- "Litter."—Any straw, or other bedding or litter, or any manure or other excreta with which stock shall have been in direct or indirect contact.
- "Owner."—Any consignee or owner, jointly or in severalty, superintendent, or person in the possession or charge of any stock, fodder, or fittings.
- "Prescribed" means prescribed by any Regulations.
- "Stock."—Any one or more horses, camels, cattle, sheep, goats, swine, deer, and dogs.
- "Stud stock."—Any stock, whether thoroughbred or not, intended to be bred from.
- "Swine."—Any one or more boars, sows, farrows, or pigs of any breed or age.
- "Vessel."—Any steamer, ship, lighter, launch, boat, punt, or ferryboat.

II.—GENERAL.

Owners to give notice of arrival of stock.

3. If any stock are brought by sea to a port or place in this Colony, the owner thereof shall, within twelve hours of their arrival, give the inspector at or near such port or place notice to the effect of Form 1 hereto.

Declaration and certificate to accompany all stock.

4. All stock intended to be landed shall be accompanied by a Declaration and Certificate to the effect of Form 3 hereto.

No stock to be landed but on Inspector's permit.

5. No stock, fodder, fittings, or effects relating to stock, nor any skins, although their introduction may not be prohibited, shall be landed, or moved from, or allowed to leave the vessel by which they shall have arrived, without the written permission of an Inspector, to the effect of Form 2 hereto, except Australian dogs as provided by No. 39 hereof.

Owner to receive notice when stock are ailing or when destroyed.

6. When any stock are ailing or shall have been destroyed under the abovenamed Acts or Regulations thereunder, notice thereof shall be given to the owner of such stock to the effect of Form 4 hereto.

How notices are to be given.

7. Notices under the abovenamed Acts or Regulations may be either served personally on the person to whom such notice is required to be given, or left at his residence or place of business, or sent to him by registered letter through the post.

PART B.—FOREIGN STOCK AND THINGS.

III.—FOREIGN STOCK, &c., ADMISSIBLE.

8. The foreign stock and things specified which are permitted to be imported or introduced into this Colony shall be so, subject to the provisions of the abovenamed Acts, and of the Regulations hereinafter prescribed.

I.—Foreign Stock prior to leaving Port of Shipment.

Foreign horses, camels, cattle, sheep, swine, and goats to be accompanied by Certificate from Inspector for District from which they come.

9. If an owner intend to introduce any foreign stock into this Colony he shall give the Chief Inspector of Stock at least six weeks' notice of his intention to the effect of Form 5 hereto. All foreign horses and camels, cattle, sheep, swine, and goats intended and permitted to be introduced into this Colony,

shall be accompanied by a declaration from the breeder or owner, and by a certificate to the effect of Form 3 hereto, from the Inspector for the District from which they start for the port of shipment, that they are not, nor have within the next preceding six months been, infected with any infectious or contagious disease.

Inspection of stock by Veterinary Surgeons appointed for the Colony at port of shipment.

10. Prior to any foreign stock which are intended to be introduced into this Colony leaving the port at which they are to be shipped, all such stock, as well as all other stock put or to be put on board the same vessel as the first-mentioned stock (including those not intended to be introduced and those for the use of the passengers and crew), shall be carefully inspected by a duly qualified Veterinary Surgeon appointed in that behalf for this Colony, and the owner or shipper of the stock shall satisfy such Veterinary Surgeon that the stock are not infected, and shall pay him the authorized fee for their inspection.

If stock are not infected Veterinary Surgeon to grant and hand certificate to Master.

11. If the Veterinary Surgeon appointed in that behalf for this Colony shall have been satisfied that the stock intended to be introduced into this Colony have been brought direct to the port of shipment, and that they have not been in any conveyance, stable, or other place where stock liable to the same diseases as such stock have been within the next preceding sixty days, and that such stock have been fourteen days at least in Great Britain or Ireland, and that such stock and all other stock put on board, or to be put on board for the ship's use, are free from infection, and that all the other requirements of the abovenamed Acts and of these Regulations up to that time, have been duly complied with, he shall, but not otherwise, grant a certificate to the effect of Form 5 hereto, and shall deliver the same to the Master of the vessel, together with the certificate by the Inspector hereinafter mentioned where prescribed.

II.—Foreign Stock during the Voyage.

Record of health of stock to be kept by attendant and certified by Master.

12. If any stock on board a foreign vessel bound for this Colony become infected, or show any symptoms of disease, the attendant on such stock shall during the voyage make a daily entry in a book, to be kept by him for that purpose, of the state of their health; and the Master of the vessel shall once in every week during the voyage examine all such stock and certify to the correctness of the entries made by the attendant.

Skins of stock slaughtered or dying not to be landed.

13. The skins of all stock which may have died or been slaughtered on board any foreign vessel during the voyage, and not destroyed or thrown overboard, shall be salted and securely packed in cases or casks, and shall not be landed in this Colony.

III.—Foreign Stock on arrival, and while in the Waters of this Colony.

Stock while in New South Wales waters to be properly confined.

14. It shall be the duty of the Master of the vessel, on board of which there are any foreign stock, as well as of the actual owner thereof, to cause all such stock to be kept securely confined, penned, chained, or fastened up, as soon as such vessel is in the waters of this Colony; and no person except the attendant on such stock shall touch or handle the same without the permission of the Inspector; and while the vessel remains thereon all such stock shall be kept and treated, to the satisfaction of the Inspector, so as that they shall not be able to come in contact with any person other than their attendant, nor with other stock which may come on board such vessel, until the Inspector shall otherwise order in writing.

Master on arrival to make declaration, and hand over certificate, &c.

15. On the arrival of a foreign vessel the Master and the attendant on the stock on board such vessel shall make and deliver to the Customs Officer first boarding such vessel a declaration to the effect of Form 6 hereto, and shall forthwith deliver at the Office of the Chief Inspector of Stock the record kept by the attendant (if any) on board such vessel, and all documents relating to the same required by the abovenamed Acts or these Regulations.

Foreign stock only admitted at Sydney.

16. No foreign stock shall be admitted into this Colony except at the Port of Sydney.

IV.—As to Foreign Stock Intended to be Landed.

All foreign stock intended to be landed to be examined by a veterinary surgeon and inspector.

17. Foreign stock which may lawfully be landed in this Colony shall, previous to landing, be forthwith examined on board the vessel by which they arrived, by a duly qualified veterinary surgeon and by an inspector of stock, who shall report whether or not such or any other stock on board such vessel are infected, and shall join in a certificate to the effect of Form 8 hereto, which they shall forthwith forward to the Chief Inspector of Stock.

Foreign stock infected to be disposed of as Minister directs.

18. If such stock are reported to be infected, the report shall be immediately submitted by the Chief Inspector to the Minister; and if the Minister decide that such stock are infected they shall be forthwith destroyed or otherwise disposed of as he shall direct; and if ordered to be destroyed, the Inspector shall serve the owner with a notice to the effect of Form 14 hereto.

As to camels.

19. If camels are found on arrival to be infected with scab, they shall not be destroyed, but shall be dressed as the Chief Inspector shall direct.

V.—Landing, Quarantine, Disinfecting, and Dressing of Foreign Stock.

Foreign horses admitted on inspection.

20. Foreign horses shall be admitted without detention or quarantine, if found, on inspection at Sydney, to be free from disease.

Foreign stock not infected, if intended to be landed, to be sent to quarantine.

21. If foreign stock other than horses are not prohibited from being landed, and are reported to be free from infection, and if the Chief Inspector is satisfied that they are not infected, and that the requirements of the abovenamed Acts and these Regulations have been complied with, he shall, on obtaining from the owner or consignee of such stock a bond and guarantee, duly executed by the owner or consignee and two approved sureties, in the terms of Form 9 hereto, grant an order for the removal of such stock to quarantine to the effect of Form 2 hereto, without which no stock shall leave the vessel by which they arrived.

Stock to be taken by water to quarantine, and kept at owner's risk and expense.

22. All such foreign stock found on inspection to be free from infection shall, where necessary, before leaving the vessel, be washed and disinfected as the Chief Inspector shall direct, and shall be taken from the vessel by which they arrive in "the stream," and previous to her coming to or near the wharf, and shall be conveyed by water, at the owner's risk and expense, to the quarantine set apart for such foreign stock, and shall remain in quarantine for the terms respectively prescribed hereunder for the different kinds of such stock, during which they shall be kept at their owner's risk and expense, and shall be washed, dipped, and disinfected as prescribed by these Regulations, and as the Chief Inspector of Stock shall direct.

Quarantine of foreign stock.

23. Foreign stock permitted to be introduced shall, on being landed, remain in quarantine for the periods specified in Form 7 hereto.

As to foreign sheep in quarantine.

24. All foreign sheep landed in this Colony shall forthwith receive three dressings with tobacco and sulphur or with lime and sulphur, at intervals of from ten to fifteen days between each dressing; and the medicaments shall be of the strength and the bath at the temperature and for the duration hereinafter prescribed in regard to imported Australian sheep under the abovenamed Acts and Regulations thereunder.

Foreign dogs may in certain cases be at once destroyed.

25. In all cases which the Inspector or Veterinary Surgeon consider urgent, dogs found to be infected with rabies, may be forthwith destroyed by the order of either officer.

How foreign stock released from quarantine.

26. On the expiry of the prescribed term of quarantine for such stock, they shall be examined by a duly qualified Veterinary Surgeon and an Inspector of Stock, who shall ascertain whether the disinfecting and dressing prescribed by the abovenamed Acts and Regulations, as well as all the other requirements thereof, have been duly complied with, and shall thereupon determine whether such stock are free from infection, and forthwith forward to the Chief Inspector of Stock a certificate to the effect of Form 11 hereto; but such stock shall not leave quarantine until the charges and expenses due thereon shall have been paid to the Inspector, and until an order for their release shall have been endorsed by the Chief Inspector on such certificate.

IV.—CHARGES FOR INSPECTION AND RISK OF TRANSPORT, AND QUARANTINE OF FOREIGN STOCK.

Charges and expenses in relation to foreign stock to be borne by owner.

27. All charges and expenses connected with the veterinary inspection or treatment, and the landing, conveying, detaining, feeding, dressing, disinfecting, and reconveying of any stock, or with the destruction, or other dealing with any stock fodder or under the said Acts or any regulations thereunder, shall be borne by the owner of such stock, and such charges and expenses shall be at the rates stated respectively in Form 12 hereto, in so far as therein specified.

The like as to risk and loss.

28. All loss sustained with respect to such stock fodder, or whilst being conveyed to or from, or whilst in quarantine, whether by accident or by sickness arising from natural causes, or contracted from other stock, or by the destruction or detention or quarantine of such stock, to prevent the spread of disease, shall be borne by the owner of such stock, and he shall have no claim whatever for compensation for any such loss nor for any loss sustained by such owner through the carrying out or enforcement of these Regulations.

V.—FOREIGN STOCK FOR SHIPS' USE AND FOR TRANSHIPMENT.

Foreign stock to be quarantined.

29. All foreign dogs brought into New South Wales waters, whether intended to be introduced into this Colony or not, shall within twenty-four hours after they shall have been examined by an Inspector, be removed to quarantine, where they shall remain at their owner's risk and expense until re-shipped on the order of the Chief Inspector of Stock, on board some foreign vessel about to leave this Colony.

No foreign stock to be transhipped without permit and not on to Australian vessels.

30. No foreign stock, except dogs as provided by No. 39 hereof, shall be transhipped in the waters of this Colony without the permission, in writing, of the Inspector: And no stock, other than stock from any Australian Colony, brought by any vessels into the waters of this Colony, shall be transhipped from such vessel to any of the vessels usually or occasionally trading between any of the Australian Colonies until such stock, if allowed to be landed, shall have performed the quarantine, and otherwise complied with the provisions of the abovenamed Acts and these Regulations.

31. Foreign dogs which are securely penned and fastened up may, if there are no other dogs on board an Australian vessel, be transhipped by such vessel to their destination.

VI.—MISCELLANEOUS REGULATIONS RELATING TO FOREIGN STOCK.

Foreign stock and attendants' clothes and stalls and pens to be disinfected.

32. While within the waters and territory of New South Wales all foreign stock shall be kept and cleansed and disinfected, together with the clothes of their attendants, and of any person coming in contact therewith, and their stalls, pens, and fittings, as the Chief Inspector shall direct.

Foreign fodder or litter not to be landed, fillings, &c., to be disinfected.

33. No fodder or litter on board any foreign vessel, nor any fodder or litter with which foreign stock or their attendants shall have come into direct or indirect contact, shall be landed in this Colony; and all fillings used on board any foreign vessel with or about any stock, and all effects belonging to their attendants, shall be disinfected both before and after being landed, as and where the Chief Inspector shall direct.

Australian stock coming into contact with foreign stock to be held to be infected.

34. All Australian stock coming into direct or indirect contact with foreign stock, or with infected stock, shall be held and deemed to be infected stock; and all foreign or infected stock, as the case may be, which have not passed through quarantine, and which shall not have been released in accordance with the abovenamed Acts and these Regulations, shall be held and deemed to be infected stock.

PART C.—AUSTRALIAN IMPORTED STOCK AND THINGS.

X.—GENERAL, AS REGARDS AUSTRALIAN IMPORTED STOCK AND THINGS.

Declaration and certificate to be produced to Inspector examining stock.

35. If an owner intends to introduce any Australian imported stock other than sheep into this Colony, he shall produce to the Inspector examining the same a declaration duly certified by the Inspector of the port or place from which such stock were shipped to the effect of Form 8 hereto.

If found free from infection, stock, other than sheep, to be allowed to land.

36. If any such stock other than sheep brought to port or place in this Colony shall be accompanied by a declaration as prescribed, and be found, on examination by the Inspector, to be free from infection, he may grant permission for the same to be landed in terms of Form 2 hereto, without which such stock shall not be landed.

If Inspector is doubtful he may detain stock.

37. If on the examination of such stock the Inspector has any reason to doubt their entire freedom from infection, he may either temporarily detain the same on board the vessel by which they were brought, or temporarily isolate them on some other vessel or in some safe and convenient place; and the owners of the stock shall bear the expense of such detention or isolation.

Infected stock, how to be disposed of.

38. If any such stock shall be found on arrival or within one month thereafter to be infected, such stock shall be either destroyed by the owner, without compensation, or otherwise disposed of as the Minister shall direct.

2. SPECIAL AS REGARDS AUSTRALIAN DOGS.

Imported Australian Dogs to be admitted by Customs Officer on Declaration of Certificate from Inspector.

39. All Australian dogs imported from any of the Australian Colonies, if they are apparently free from disease and are accompanied by a declaration, duly certified by the Inspector for the port from which such dogs were shipped, to the effect of Form 3 hereto—may be landed on the permit of the Officer of Customs in charge of the vessel by which such dogs are so imported.

Dogs not accompanied by certificate to be admitted on inspection if found uninfected.

40. If any Australian dog imported from any of the Australian Colonies is not accompanied by a declaration and certificate, as provided by the next preceding Regulation, such dog shall not be landed until the owner thereof shall have made a declaration to the effect of Form 3 hereto, and the dog shall have been examined by the Inspector and found to be free from disease.

3. AUSTRALIAN STUD SHEEP.

Sheep to be only landed at Sydney.

41. No stud sheep from any Colony other than New South Wales shall be landed at any port or place in New South Wales other than the port of Sydney.

What is to be deemed a clean Colony.

42. No Colony shall be deemed to be a clean Colony in which scab or catarrh or any other infectious or contagious disease exists, or is suspected to exist, nor any Colony in which scab shall have existed within the next preceding twelve months, and no sheep shall be imported except from a clean Australian Colony.

What is to be deemed a clean vessel.

43. No stud sheep shall be imported except by a clean vessel, and no vessel shall be deemed a clean vessel which shall within the next preceding twelve months have traded to a place not in a clean Australian Colony, nor any vessel which shall within the period hereinbefore mentioned have had any sheep on board from any place not in a clean Australian Colony.

Vessel to carry sheep must be cleansed and disinfected.

44. Every part of a vessel where it is intended to place any such stud sheep shall be thoroughly cleansed and disinfected before the sheep are shipped.

Sheep must be accompanied by a certificate from Inspector of exporting Colony.

45. All such stud sheep shall be accompanied by a certificate and declaration to the effect of Form 3 hereto, that they have been examined carefully by an Inspector for the Colony from which they are exported certifying that they have been so examined and that they are free from any infectious or contagious disease, and that scab has not existed in such Colony for the next preceding twelve months.

Sheep on arrival to be examined by an Inspector and Veterinary Surgeon.

46. No sheep from any clean Australian Colony shall be landed in this Colony until they shall have been examined and a certificate to the effect of Form 3 hereto, granted by an Inspector of Stock and a duly qualified Veterinary Surgeon, that all the requirements of the abovenamed Acts and of these Regulations with respect to such sheep have been duly complied with and that they are not infected.

Infected sheep, how destroyed or disposed of.

47. If any such stud sheep brought by sea into a port or place in this Colony be found to be infected they may be forthwith destroyed, or otherwise disposed of, as the Minister may direct.

Quarantine and dressing of Australian imported sheep.

48. Stud sheep from any clean Australian Colony may, if found on inspection to be not infected, be landed and taken by a conveyance to the quarantine for such sheep, where they shall be quarantined and dipped under the supervision and direction of the Inspector, and the length of such quarantine, the medicaments to be used in dipping, the temperature and duration of the bath, the dipping, and the fees to be charged for the keeping and dipping of the sheep, shall be as follows, viz. :—

Quarantine.

(1.) The sheep shall remain in quarantine until they shall have been dipped as hereinafter prescribed.

Medicaments.

(2.) The medicaments to be used in dipping shall be good sound tobacco, or tobacco leaves and flowers of sulphur, at the rate of 1lb. of each to every 5 gallons of water, the tobacco to be put into boiling water and infused for five hours at least, and the sulphur to be added to the infusion in the dip.

Temperature.

(3.) The temperature shall not be less than 100 nor more than 110 degrees Fahrenheit.

Bath and Duration.

(4.) The sheep shall swim and be completely immersed while in the bath, and the bath shall last from one to two minutes, according to its temperature, and as the case may require.

Number of Dippings.

(5.) The sheep shall receive one dipping.

Charges.

(6.) The rates to be charged for the keeping and dressing of sheep in quarantine shall be as set forth in Form 12 hereto.

Declaration by persons dipping, dressing, or disinfecting.

49. Every Inspector or other person who shall have superintended any dipping, dressing, or disinfecting, shall make and transmit with due despatch to the Chief Inspector a declaration to the effect of Form 13 hereto.

How sheep are to be released from quarantine.

50. No sheep shall be released from quarantine until they shall have been examined by the Inspector and a duly qualified Veterinary Surgeon in consultation, and a certificate granted by them to the effect of Form 11 hereto that such sheep have been duly quarantined and dressed, as prescribed by these Regulations, and are free from infection.

How imported Australian sheep are to be admitted overland from other Colonies.

51. Sheep imported from any clean Australian Colony into any other clean Colony, and intended to be introduced overland into this Colony, may be admitted if their owner produce to the Inspector for this Colony at the border a certificate under the hand of the Chief Inspector for the Colony from which they are intended to be introduced, that when such sheep were introduced into that Colony they were certified to be free from infection by an inspector of that Colony from which they were imported, and that such sheep have been once dipped with proper preparations of tobacco and sulphur, or of sulphur and lime, in a bath given at the temperature and of the duration and in the manner prescribed by number 47 of these Regulations. But all such sheep, unless they shall have been imported, quarantined, and dressed as herein prescribed, shall, on crossing the Border, be placed in quarantine, and kept and dipped in the same manner in every respect as prescribed with regard to Australian imported sheep landed at Sydney.

How Australian imported sheep which have not complied with all the Regulations are to be admitted.

52. Should any Australian sheep be imported into this Colony by a vessel which shall not have been cleansed and disinfected, as provided by these Regulations, or should any such sheep not have been examined in the Colony from which they were exported, as prescribed by these Regulations, then such sheep may, with the sanction of the Minister, be admitted to and shall remain in quarantine for twenty-one days, and shall in every such case receive three dippings at intervals of not less than ten days.

Stud sheep from inland or overland from other Colonies to be treated as "imported" if in or near Sydney at same time.

53. Stud and show sheep brought from any of the inland districts of this Colony or introduced overland from any adjoining clean Colony which shall be in Sydney or in any of the suburbs during the time that any imported sheep shall remain in Sydney or the suburbs, shall, prior to their leaving the coast district, be dipped the same as if they were imported Australian sheep.

Owners of special quarantines to pay for attendant.

54. In any case where a special quarantine has been granted for Australian imported sheep, an attendant may, where necessary, be placed by the Chief Inspector of Stock in charge of the sheep in such quarantine; and the person to whom such quarantine has been granted shall pay the expense of such attendant.

No fodder, &c., to be landed, without disinfecting.

55. No fodder or other food, straw, or litter, which shall have been used for, with, or about imported sheep, nor any fittings on board any vessel for such sheep shall be landed; and all cases or cages brought with such sheep shall before being landed be cleansed and disinfected as the Chief Inspector shall direct.

XI.—AS TO AUSTRALIAN FAT SHEEP FOR SLAUGHTER.

Conditions on which these sheep may be landed for slaughter.

56. Fat imported sheep from a clean Australian Colony may be landed at the port of Sydney for slaughter under the following conditions, namely:—

Owner to give notice of arrival and produce certificate.

1st. The owner of such sheep shall give the Inspector for the Port immediate notice of their arrival, and shall produce to him a declaration and certificate of health to the effect of Form 3 hereto, from the Inspector of the Port from which such sheep were shipped.

Sheep not to leave vessel until inspected.

2nd. Such sheep shall not be allowed to leave the vessel by which they arrive until they have been examined by the Inspector.

Sheep to be taken direct to Abattoirs.

3rd. Upon being inspected and found free from infection such sheep shall be taken direct to the Abattoirs on Glebe Island, and there delivered into the charge of the Inspector of Slaughter-houses, to be slaughtered under his supervision.

XII.—TRANSHIPMENT OF AUSTRALIAN IMPORTED STOCK.

Transshipment of Australian stock.

57. No Australian imported stock shall be transhipped in the waters of this Colony without the permission, in writing, of the Inspector.

Australian uninfected stock may be landed for transshipment.

58. Any such stock arriving at a port or place in this Colony for transshipment may, if accompanied by the prescribed declaration and certificate, and found to be free from infection, be landed and kept in any place approved by the Chief Inspector for a period not exceeding fourteen days without being subject to quarantine and dipping.

PART D.—PENALTIES, CONFISCATIONS, &c.

XIII.—PENALTIES.

I.—General Penalties.

Penalties for breaches of Regulations.

59. If any person does any of the following things he shall be guilty of an offence against these Regulations, and shall on conviction for every such offence be liable to a penalty not exceeding £20.

For introducing infected stock.

- (1.) If he lands, introduces, or tranships, or attempts to land, introduce, or tranship, or assists, or is concerned in landing, introducing, or transhipping any infected stock.
- (2.) If, not being the attendant, he touches, handles, or in any way interferes with foreign stock on board any vessel in the waters of this Colony without the permission of the Inspector.

For trespass on Quarantine.

- (3.) If he shall enter upon any quarantine without the written permission of an Inspector, or approach or handle, examine, let loose, or in any way interfere with any foreign stock without such permission.

For refusing to carry out Inspector's directions.

- (4.) If he shall refuse or neglect forthwith to carry out any requisition made or direction issued under these Regulations.

For obstructing an Inspector.

- (5.) If he shall obstruct or hinder an Inspector in the execution of his duty under these Regulations.

For not paying expenses incurred by Inspector.

- (6.) If he shall neglect or refuse to pay on demand by an Inspector any costs, charges, or expenses for which he is liable under these Regulations.

For refusing to give information.

- (7.) If, being in a position to give any information required by an Inspector as such, he refuses to give such information or gives misleading information with respect to any stock or thing.
- (8.) If he commits any other breach of these Regulations for which a penalty is not specially provided.

II.—Penalties for Offences by Masters of Vessels.

60. Every master of a vessel with any stock on board who does any of the following things, shall be guilty of an offence against these Regulations,—

For failure to give notice to Inspector.

- (1.) If he shall fail or neglect to forward to the Inspector notice of the arrival of such vessel with stock on board, or to produce on demand the declaration and certificate as per Form 3 hereto for such stock.

For allowing stock to stray off vessel or to be transhipped without Inspector's order.

- (2.) If he shall, without the written permission of an Inspector, permit or suffer any stock to stray or go ashore from his vessel or to be transhipped or moved to or from any other vessel while such first-mentioned vessel is in the water of this Colony.

For failing to secure animal as Inspector directs.

- (3.) If he shall fail or neglect to cause any foreign stock on board his vessel to be securely confined or otherwise secured, as the Inspector shall direct, or shall allow any person to touch or handle such stock.

For allowing stock to stray on to vessel.

- (4.) If the master, mate, or other member of the crew of any foreign vessel shall permit or suffer any stock to go on board such vessel while there is any foreign stock thereon.

And he shall, on conviction for every such offence, be liable to a penalty not exceeding £20.

III.—Penalties for Offences by Owners of Stock.

61. The owner (including the consignee, agent of the owner, or person in possession or charge) of any stock who does any of the following things shall be guilty of an offence against these Regulations,—

For allowing stock to stray on to Foreign vessels.

- (1.) If he takes or allows any stock, of which he is the owner, to stray on to any vessel on which there is any foreign stock.

For allowing stock to stray on to Quarantines.

- (2.) If he takes or allows any stock, of which he is the owner, to stray on to any quarantine for foreign stock.

For failing to carry out Inspector's instructions.

- (3.) If he for more than twenty-four hours fails or neglects, when directed by an Inspector, to remove any stock from any vessel to or from a quarantine ground, or other place, or to any vessel.

And he shall, on conviction for every such offence, incur a penalty not exceeding £20.

XIV.—DESTRUCTION OR CONFISCATION OF STOCK AND THINGS.

When Stock and things may be disposed of by Minister.

62. Stock may under all or any of the following circumstances, be destroyed or otherwise disposed of, as the Minister shall direct:—

If they are infected.

- (1.) If stock are infected with any infectious or contagious disease, whether they be on land, or on board any vessel within the territorial limits of this Colony.

If owners commit breach of Acts or Regulations.

- (2.) If the owners of any stock shall have committed, or attempted to commit, or be concerned in committing, any breach of the abovenamed Acts or of any Regulations thereunder.

If stock are Foreign, and are not properly confined or secured.

- (3.) If foreign stock be found unconfined or unsecured on, or be removed or stray from, the vessel by which they arrive, or from quarantine.

If stock stray on board a foreign vessel.

- (4.) If stray stock from shore be found on board a vessel on which there is any foreign stock.

If stock are found in quarantine.

- (5.) If stock, other than those for which an Inspector shall have issued an order for quarantine, are found within any quarantine for foreign stock.

If charges and expenses be not paid.

- (6.) If the fees, charges, and expenses connected with any stock be not duly paid.

If stock are not removed when quarantine is up.

- (7.) If any stock shall not be removed on the expiry of the term of quarantine.

FORMS.

Form 1.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

Notice of arrival of stock.

To **Inspector of Stock,** 188 .

TAKE notice that the
belonging to
of, more particularly described in the Schedule
below, are expected to arrive by the vessel named, at or about
the time therein stated (or have arrived).
Owner or his Agent.

SCHEDULE.

No.	Description of stock.	Where from.	By what vessel, and where lying.	When expected.		For what purpose.
				Date.	Time.	

N.B.—A separate notice must be given for each owner's stock.

Form 2.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

Permit to land imported stock.

To the Landing Waiter
at **Wharf,**
Sydney, 188 .

Please allow which has arrived by the
from to be landed **Inspector of Stock.**

Form 3.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

Declaration and Certificate of Health.

I (*Name and Address*) do solemnly and sincerely declare that the undermentioned stock are, to the best of my knowledge and belief, free from all infectious and contagious diseases, and have not within the next preceding six months been in direct or indirect contact with stock infected with any such diseases, and are the produce of

Particulars of Numbers, Sexes, Kinds, and Brands of the Stock:—
And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales and to substitute Declarations in lieu thereof and for the suppression of Voluntary and Extra-judicial Oaths and Affidavits."

NEW SOUTH WALES.

DISEASES IN SHEEP ACTS AND IMPORTED STOCK ACTS.
(REGULATIONS UNDER)

Presented to Parliament pursuant to Acts 30 Vic. No. 16, sec. 77, and 35 Vic. No. 6, sec. 7.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section 45 of an Act passed in the thirtieth year of the Reign of Her present Majesty, and numbered sixteen, intituled "The Diseases in Sheep Act of 1866," it is, amongst other things, enacted that no sheep shall be introduced from an adjacent Colony at any crossing-places other than those appointed from time to time by Proclamation in the Gazette: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, hereby appoint the crossing-places named below to be crossing-places at which sheep may cross from the Colonies of Queensland, Victoria, and South Australia into this Colony, namely:—

	For Sheep from Queensland.
Ballandean	Dangar's Horse Station, near Barrington
Goondiwindi	Hungerford
Mungindi	Brenda

	For Sheep from Victoria.
Tintaldra	Bama
Jungollic	Swan Hill
Wagga	Euston
Albury	Tooleybuc
Corowa	Wentworth
Mulwala	Bondi
Tocumwal	Kirkmanong, near Delegate
Mouma	

	For Sheep from South Australia.
Thackeringa	Chowella
Mootra	

Given under my Hand and Seal, at Government House, Sydney, this sixth day of February, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section 49 of an Act of the Parliament of New South Wales, passed in the thirtieth year of the Reign of Her present Majesty, intituled "The Diseases in Sheep Act of 1866," it is enacted that the Governor may, for any period not exceeding six months, by Proclamation, suspend the provisions of any one or more of the sections 45, 46, and 48 thereof, in respect of sheep introduced or proposed to be introduced from any adjoining Colony in which disease is not known to exist. And whereas the disease called "Scab in Sheep," is not known to exist in the Colonies of Queensland and South Australia: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do hereby suspend for a period of six months from the date of this Proclamation, the whole of sections 45 and 48 of the said Act, and so much of the provisions of section 46 of the said Act, with respect to sheep introduced or proposed to be introduced from the said Colonies of Queensland and South Australia, as will admit of such sheep being introduced, upon their owner giving the Inspector for the District in this Colony, into which such sheep cross, not less than 48 nor more than 96 hours notice in writing, stating where and when such sheep shall first enter this Colony, and their route and destination.

Given under my Hand and Seal, at Government House, Sydney, this sixth day of February, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
Council, Knight Grand Cross of the
Most Distinguished Order of Saint
Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

(L.S.)
CARRINGTON,
Governor.

WHEREAS by section 30 of an Act passed in the forty-first year of the reign of Her present Majesty, intitled the "Diseases in Sheep Acts Amendment Act of 1878," it is enacted that the Governor, with the advice of the Executive Council, may, by Proclamation in the Gazette, suspend all or any of the provisions of the fifty-fifth and fifty-eighth sections of the principal Act (the Diseases in Sheep Act of 1866), for any period not exceeding twelve months: And whereas it is provided by the said sections that Coastwise and Coast District Sheep shall receive certain dressings prior to their being taken inland or out of the Coast Seab District: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do hereby for a further period of twelve months from the date of this Proclamation suspend the whole of the provisions of the said sections 55 and 58 so far as they apply to Coastwise Sheep, and so much of the provisions of the said sections in as far as they relate to the dressing of Coast District Sheep, and declare that for the said period Coastwise Sheep may be taken inland, and Coast District Sheep may be taken out of the Coast Seab District without such dressings, upon their owner obtaining from the Inspector a certificate that such sheep are free from disease and a permit for their removal.

Given under my Hand and Seal, at Government House, Sydney, this sixth day of February, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

Department of Mines,
Stock Branch,
Sydney, 6th February, 1888.

DISEASES IN SHEEP ACT OF 1866, AND THE
DISEASES IN SHEEP ACTS AMENDMENT ACTS
OF 1878 AND 1882.

The following Regulations, which have been made and issued by His Excellency the Governor, with the advice of the Executive Council, for carrying into effect the provisions of the abovenamed Acts, are hereby published for general information.

FRANCIS ABIGAIL.

I. PRELIMINARY.

Repeal of previous Regulations.

1. All previous Regulations under the abovenamed Acts are hereby repealed.

Definition of words and terms.

2. In these Regulations the following words and terms shall have the meanings which they bear in section 2 of the Diseases in Sheep Act of 1866, and section 3 of the Diseases in Sheep Acts Amendment Act of 1878, namely:—"Brand," "Coast Sheep," "Destroy," "Director," "Disease," "District," "Drover," "Governor," "Infected Sheep," "Inspector," "Introduced Sheep," "Minister," "Owner," "Proprietor," "Run," "Sheep," and "Travelling Stock"; and the following other words and terms shall in these Proclamations and Regulations, unless the context otherwise indicate, have the meanings set against them respectively, namely:—

"Crossing-place"—Any place on the Border of the Colony proclaimed a crossing-place under the abovenamed Acts.

"Distinctive"—As applied to any brand or mark—any brand or mark branded or marked to denote any matter or thing other than ownership.

"Mark"—Any mark made by cutting on stock.

"Reserve"—Any travelling stock or camping reserve.

"Tattoo Mark"—Any tattoo mark on sheep.

C.—INTRODUCED ANIMALS.

II.—REGULATIONS AS TO INTRODUCED SHEEP.

Imported Sheep introduced Overland.

3. No sheep which have been imported within the next preceding six months into any adjoining Colony shall be introduced into this Colony unless in conformity with the provisions of the Imported Stock Act of 1871 and of the Imported Stock Act Amendment Act of 1884, and of any Proclamations or Regulations issued or made thereunder in regard to imported sheep.

Crossings for sheep intended to be introduced.

4. All sheep intended to be introduced into this Colony from any adjoining Colony shall, unless the provisions of section 45 of the Diseases in Sheep Act of 1866 shall have been suspended with respect to sheep from any such Colony, be so at one or other of the proclaimed crossing-places, or at some other crossing-place specially sanctioned by the Directors for the District through which the sheep would first pass on crossing the Border.

Owner to give Inspector notice of intention to cross.

5. The owner of sheep, which it is proposed to bring overland into this Colony, shall give the Inspector for the crossing-place at which they are intended to be introduced not less than forty-eight nor more than ninety-six hours' notice in writing, stating the day and hour when it is intended to cross such sheep, to the effect of Form A hereto.

Sheep to be branded before crossing.

6. All such sheep shall, before crossing the Border, be legibly branded as required by section 47 of the Diseases in Sheep Act of 1866, in addition to their owners brand, and shall be kept so branded for six months after their introduction.

D.—TRAVELLING STOCK.

Districts in which Regulations relating to travelling sheep are in force.

7. The Regulations 1, 2, 3, and 4, contained in section 14 of the Act 41 Vic. No. 19, with respect to travelling sheep, shall apply to and be in force in the following sheep districts, namely:—

Albury.	Ihume.
Armidale.	Ivanhoe.
Balranald.	Menindie.
Bathurst.	Molong.
Bombala.	Merriwa.
Brewarrina.	Moree.
Braidwood.	Mudgee.
Bourke.	Murrumbudi.
Booligal.	Narrandera.
Cannonbar.	Narrabri.
Carcoar.	Pilliga.
Cobar.	Queanbeyan.
Cooma.	Singleton.
Coonabarrabran.	Tamworth.
Coudobolin.	Penterfield.
Coonamble.	Urana.
Corowa.	Wagga Wagga.
Deniliquin.	Walgett.
Dubbo.	Warraldra.
Forbes.	Wentworth.
Glen Innes.	Wilcannia.
Goulburn.	Yass.
Gundagai.	Young.
Hay.	

Owner requiring permit, or renewed permit, to make application to Inspector.

8. Every owner intending to travel any sheep for which a permit or renewed permit is required shall, as the case may be, make an application to an Inspector, to the effect of Form B hereto; and if the application is for a renewed permit the owner shall, with such application, transmit or deliver to the Inspector the original or renewed permit under which such sheep shall be travelling at the time the application is made; and the Inspector shall, in accordance with these Regulations, grant the applicant, as the case may be, a permit to the effect of Form C, or a renewed permit to the effect of Form D hereto, on receipt of the travelling charges payable for such renewed permit.

Owner may appeal against travelling charges on depositing amount or giving bond for it.

9. The travelling charges payable for any renewed permit for travelling sheep, may be paid under protest to the Director or Inspector granting the same, or a bond for the amount thereof, and of the expenses of appeal, in terms of Form G hereto, executed by two responsible persons to be approved by the Director or Inspector, as the case may be, may be lodged with him under protest; and the drover of the sheep or their owner, or some one on his behalf, may appeal to the Minister against the payment of such charges; and the Minister on obtaining the report of the proper Board or Boards of Directors will decide whether or not such charges shall be paid.

Inspector may call for declaration as to returning fat sheep.

10. Every owner requiring a renewed permit for sheep which are represented as fat sheep sent *bona fide* to and returning unsold from market, shall, when required by the Inspector, make and deliver to him a statutory declaration (Form E) to the effect that the statements contained in the application for such permit are true.

Stock may be counted.

11. The Inspector may, when necessary, count any travelling stock, and the drover thereof shall, when required, afford the Inspector every assistance in making such count.

E.—SHEEP MARKS AND BRANDS.

I.—CUT MARKS.

The "Tip" or "Crop" Ear-mark prohibited.

12. The tip or point shall not be cut or cropped off any sheep's ear except unless in so far as it shall be so by an authorized mark.

Number of Cuts in Ear-mark.

13. All owners' sheep ear-marks shall consist of one or two cuts or marks and no more, except in the case of special marks.

Shape and size of Ear-marks.

14. The shape and size of the several "owners'" sheep ear-marks (other than special marks, which may be of such shape and size as the Chief Inspector shall decide) shall be as set forth in Form H hereto.

No marks shall be made except with ear-pliers.

15. All sheep ear-marks shall be made or marked with an ear-plier, the cutters of which shall be of the size and shape described by Form H hereto; and all owners' sheep ear-marks made or marked in any other way than with an ear-plier shall be held and deemed to be unrecorded ear-marks.

Rules of marking "owners" and "distinctive" marks.

16. The "owners'" sheep ear-mark shall in every case be marked on the near or left ear of male sheep, and on the off or right ear of female sheep; and "distinctive" ear-marks, such as those denoting the age and class of sheep, shall in every case be marked on the off or right ear of male sheep, and on the near or left ear of female sheep. And all ear-marks made on sheep after the publication of this Regulation shall be held and deemed to be "owners'" or "distinctive" ear-marks, according to the ear of the sheep on which they are marked.

When the same brand or mark is claimed by two or more applicants.

17. Sheep brands and marks not already registered, if unobjectionable, shall be recorded in the order in which they are received; and if two or more owners in the same district apply at the same time for a similar brand or mark, it shall be allotted by the Inspector to the applicant who can prove that he was the first to use such brand or mark in that district; but if no such proof can be adduced the brand or mark shall be allotted to the applicant who owns the larger number of sheep.

II.—RECORDING OF SHEEP BRANDS AND MARKS.

Order of Registration.

18. When two or more applicants claim the same owners' brand or mark, and they decline to agree to the settlement proposed by the Inspector, their claims shall be referred by him to the Directors for the District, who shall hear and decide the same, and deal with the expenses of such hearing in the same manner as applications are heard and decided under the "Diseases in Sheep Act of 1866"; and the brand or mark in dispute shall be allotted and recorded as the Directors shall so decide. If the Directors decline to decide, the brand or mark shall be allotted as the Minister shall direct.

A fee of ten shillings to be paid for special brands.

19. An Owner applying for a special brand must lodge with his application the sum of ten shillings to cover the expense of the block required for publishing the same in the Government Gazette.

III.—TATTOO SHEEP MARKS.

Their description, size, registration, and order of marking.

20. All tattoo sheep marks shall be of the description and size, and shall be registered and marked as follows, namely:—

Description and size of Tattoo Marks.

- (1.) Tattoo marks used as owners' sheep marks shall consist of one or more letters, signs, or characters.
- (2.) The letters used shall be of the Roman or Script style, and all letters and signs or characters shall be not less than $\frac{3}{8}$ of an inch in length and $\frac{1}{4}$ of an inch in width.

Mode of Registration of Tattoo Marks.

- (3.) All applications for tattoo marks shall be made in the first instance to the Inspector for the District in which it is intended to use such marks (Form L. 1), who will make the necessary entries in his Record, and forward the applications to the office of the Registrar of Brands, Sydney, to be recorded for the Colony.
- (4.) The fee for recording each tattoo mark, including publication in the Gazette, will be six shillings (6s.)

Mode and order of marking and proof of ownership of Tattoo Marks.

- (5.) The portions of the sheep on which recorded tattoo marks shall be imprinted shall be the following:—
 - Portion 1. The under side of the near or left ear.
 - " 2. The under side of the off or right ear.
 - " 3. The under side of the tail.
 - " 4. On the ribs, beneath the near fore arm.
 - " 5. On the ribs, beneath the off fore arm.

- (6.) The part of the sheep's ears nearest to the head shall be held to be highest part of that portion; and the part of the tail nearest to the body of the sheep the highest part of that portion.
- (7.) In imprinting recorded tattoo marks on sheep, the breeder or person imprinting the first mark shall do so on the highest available part of portion 1; and the second and every subsequent tattoo mark imprinted shall be so immediately under the preceding mark, if there be room on the same portion, and, if not, then on the highest available part of the next portion, according to the order hereinbefore laid down.
- (8.) All sheep shall be deemed to be marked with the recorded tattoo mark which shall appear to be the last mark imprinted upon such sheep, according to the order hereinbefore prescribed.
- (9.) Notwithstanding any thing contained in these Regulations, the owner of pedigree sheep may, with the sanction of the Directors, number such sheep with a tattoo mark on the off ear for stud purposes, and in that case the third portion shall be held to be the next in order to the first.

F.—STOCK BOARD OF EXAMINERS.

VIII.—EXAMINATION OF APPLICANTS FOR APPOINTMENT AS INSPECTORS.

21. The Chairman of the Board of Sheep Directors, Sydney, the Chief Inspector of Stock, and such duly qualified Veterinary Surgeon as the Minister may from time to time appoint, shall be a Board to examine persons who may intend to apply for the appointment of Inspector of Sheep, and such Board shall meet at such places and times, and hold such examinations as the Minister for Mines shall direct, and shall report the result of the same to the Minister within ten days after the holding of the same.

22. The Board on being satisfied that the persons examined possess the necessary qualifications, and are in all other respects fit to hold the appointment of Inspector, shall grant a certificate to the effect of Form M. hereto; and any person unable to produce any such certificate shall not be eligible to apply for such appointment.

23. No certificate shall be granted by the Board unless the person examined shall produce to the Board satisfactory testimonials as to character, temperance, honesty, trustworthiness, as well as practical experience of stock and their management, and is found to possess, among others, the following qualifications:—

- (1.) That the applicant is over 25 and under 50 years of age.
- (2.) That he is not in any way incapacitated by ill-health or bodily infirmity for the active discharge of an Inspector's duties.
- (3.) That he is thoroughly conversant with the provisions of the Acts relating to Diseases in Stock, the branding, marking, mustering, travelling, and impounding of stock; to the prevention of stock-stealing; to the destruction of noxious animals; to public watering-places; to dividing fences; and to those portions of the Land Law which relate to reserves for travelling stock.
- (4.) That he is possessed of a practical knowledge of horses, cattle, and sheep, and their management, and a thorough theoretical and practical knowledge of the diseases known as Scab, Catarrh, Fluke, Worms, Foot-rot, Pleuro-pneumonia, Black-leg, Tuberculosis, Anthrax (Cumberland) Disease, Influenza in horses, and of the proper treatment of these diseases.
- (5.) That he has a general knowledge of the character, nature, cause, symptoms, and treatment of Rinderpest, Sheep-pox, Foot and Mouth Disease, Glanders, Farcy, Swine-fever, Rabies, and Hydatids.

24. Notwithstanding anything hereinbefore contained, the Board, on receiving twenty-four hours notice may, in urgent cases, where the Minister may deem it necessary to appoint Acting-Inspectors, examine provisionally the persons applying for such appointments; and if the Board is satisfied that the examinees are qualified to fill such appointments it shall grant provisional certificates accordingly.

25. At all meetings for examinations two members shall form a quorum.

G.—APPEALS AND APPLICATIONS.

26. Any person intending to make an application or appeal to a Board of Sheep Directors, as provided by section 86 of the Diseases in Sheep Act of 1866, shall, with every such application or appeal, deposit with the Inspector the sum of £10, to pay the expenses connected therewith, and in the case of appeals against the payment of travelling charges on sheep, the amount of such charges shall also be deposited, or a bond for the amount, to the effect of Form G. hereto.

IMPORTED STOCK ACTS.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section three of an Act passed in the forty-
eighth year of the Reign of Her present Majesty, intituled,
"The Imported Stock Act Amendment Act of 1884," it is
enacted that the term "Stock" shall, in addition to cattle
and sheep, include goats, swine, dogs, and such other animals
as the Governor may, by Proclamation published in the Govern-
ment Gazette, declare to be subject to the provisions of
the said Act: And whereas horses suffer from the diseases
known as Glanders and Farcy and deer suffer from the diseases
known as Foot and Mouth Disease and Rinderpest: And it is
therefore desirable that their importation into the Colony
should be made subject to the provisions of the abovenamed
Act and of the "Imported Stock Act of 1871": Now, there-
fore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor
aforesaid, with the advice of the Executive Council, do, by
this my Proclamation, hereby cancel the proclamation of 5th
January, 1885, and declare that horses, camels, and deer
shall be included in the term "Stock," and shall be subject to
the provisions of "The Imported Stock Act of 1871," and
"The Imported Stock Act Amendment Act of 1884."

Given under my Hand and Seal, at Government House,
Sydney, this sixth day of February, in the year
of our Lord one thousand eight hundred and eighty-
eight, and in the fifty-first year of Her Majesty's
Reign.

By His Excellency's Command,

FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) Council, Knight Grand Cross of the
CARRINGTON, Most Distinguished Order of Saint
Governor. Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS by section one of an Act passed in the thirty-
fifth year of the Reign of Her present Majesty, intituled,
"The Imported Stock Act of 1871," the Governor, with
the advice of the Executive Council, is empowered to
declare, by Proclamation in the Gazette, diseases, other than
Rinderpest, Foot and Mouth Disease, and Sheep-pox, to be
infectious or contagious diseases for the purposes of the said
Act: Now, therefore, I, CHARLES ROBERT, BARON CARRING-
TON, the Governor aforesaid, with the advice of the Executive
Council, do, by this my Proclamation, hereby cancel the
proclamation of 5th January, 1885, and declare the diseases
known as Scab, Catarrh, Rabies, Pleuro-Pneumonia, Tubercu-
losis, Glanders, Farcy, Swine-fever, and Mange in Dogs to be
infectious or contagious diseases within the meaning and for
the purposes of the said Act.

Given under my Hand and Seal, at Government House,
Sydney, this sixth day of February, in the year of
Lord one thousand eight hundred and eighty-eight,
and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,

FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
Council, Knight Grand Cross of the
Most Distinguished Order of Saint
Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

(L.S.)
CARRINGTON,
Governor.

WHEREAS by a Proclamation dated the fourteenth day of January, 1887, issued under the 10th section of the Act of Parliament of New South Wales, passed in the thirty-fifth year of the reign of Her present Majesty, intituled the "Imported Stock Act of 1871," and numbered six, the importation or introduction into this Colony of cattle, sheep, goats, or swine, and of fodder or fittings from Europe, Asia, Africa, and America, or any place not being within the Australian Colonies as defined by the said Act, are prohibited for a period of twelve months, from the 1st of February, 1887: And whereas it is considered that while certain descriptions of stock may, under proper regulations, be imported into this Colony from certain colonies and countries without introducing infectious or contagious disease, there are other colonies and countries in which there is reason to believe such disease exists: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, for a period of two years from the date hereof, absolutely prohibit the importation or introduction into this Colony of the stock mentioned in Schedule A hereto.

SCHEDULE A.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

Foreign Stock and things prohibited from being Imported or Introduced.

Stock.	From what colony or country.
Cattle, Sheep, and Dogs.	From all foreign countries and colonies, except from Great Britain and Ireland, unless such cattle, sheep, or dogs shall have been 14 days in Great Britain or Ireland.
Swine	From all foreign colonies and countries.
Goats and Deer	From all foreign colonies and countries, unless they are imported for a Zoological Society, when they may be landed and quarantined as provided by regulation.
Fodder and Fittings...	From any foreign colony or country, or from any foreign vessel.

Given under my Hand and Seal, at Government House, Sydney, this sixth day of February, in the year of our Lord, one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.

GOD SAVE THE QUEEN!

NOTE.—The foreign stock undermentioned are not within the terms of the above prohibition.

Foreign Stock not prohibited.

Stock.	From what colony or country.
Horses	Any colony or country.
Camels	Any colony or country.
Cattle	From Great Britain and Ireland.
Sheep	From Great Britain and Ireland.
Goats	From any colony or country, if they are intended for a Zoological Society; otherwise they are inadmissible.
Deer	From Great Britain and Ireland.
Dogs	From Great Britain and Ireland.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
Council, Knight Grand Cross of the
Most Distinguished Order of Saint
Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

(L.S.)
CARRINGTON,
Governor.

WHEREAS by the third section of an Act passed in the forty-eighth year of the reign of Her present Majesty, intituled "The Imported Stock Act Amendment Act of 1884," the Governor is empowered by Proclamation to suspend the provisions of any one or more of the sections of that Act or of

"The Imported Stock Act of 1871" for any period not exceeding six months, in respect to any stock introduced or proposed to be introduced from any of the Australian Colonies: And whereas it is desirable to suspend the operation of the provisions of the fourth section of "The Imported Stock Act Amendment Act of 1884" and of any regulation made thereunder relating to the quarantining of stock, other than sheep imported from any of the Australian Colonies, for a period of six months: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do hereby suspend, for a period of six months from this date, the provisions of section 3 of "The Imported Stock Act Amendment Act of 1884," and of any such regulation as aforesaid, so far as the same relate to the quarantining of stock other than sheep from any of the Australian Colonies.

Given under my Hand and Seal, at Government House, Sydney, this sixth day of February, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.
GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
Council, Knight Grand Cross of the
Most Distinguished Order of Saint
Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

(L.S.)
CARRINGTON,
Governor.

WHEREAS by section ten of the "Imported Stock Act of 1871," the Governor is empowered, by Proclamation in the Government Gazette, to restrict or absolutely prohibit for any specified time the importation or introduction of any stock, fodder, or fittings from any other Colony or country in which there is reason to believe any infectious or contagious disease in stock exists: And whereas by a Proclamation under the hand of His Excellency the Governor, published in the Government Gazette of this date, pursuant to the provisions of "The Imported Stock Act of 1871," amongst other things Scab in Sheep was declared to be an infectious or contagious disease: And whereas there is reason to believe that Scab at the present time exists in sheep both in the Colony of New Zealand and also in the Colony of Western Australia: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, absolutely prohibit for a period of twelve months from the date of this proclamation, the importation or introduction of any sheep, or any fodder or fittings put on board any vessel with, or for the use of, any sheep, from either of the Colonies of New Zealand or of Western Australia.

Given under my Hand and Seal, at Government House, Sydney, this sixth day of February, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,
FRANCIS ABIGAIL.
GOD SAVE THE QUEEN!

Department of Mines,
Stock Branch,
Sydney, 6th February, 1888.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

The following Regulations which have been made by His Excellency the Governor, with the advice of the Executive Council, for carrying into effect the provisions of the above-named Acts relating to the importation and introduction of stock by sea into this Colony, are hereby published for general information.

FRANCIS ABIGAIL.

These Regulations are divided into the following Parts:—

- A.—INTRODUCTORY AND GENERAL.
- B.—FOREIGN STOCK AND THINGS.
- C.—AUSTRALIAN STOCK AND THINGS.
- D.—PENALTIES, CONFEISCATIONS, &c.

PART A.—INTRODUCTORY AND GENERAL.

I.—INTRODUCTORY.

Repeal of previous Regulations.

1. All previous Regulations under the above-named Acts are hereby repealed.

Interpretation.

2. In these Regulations the following words and terms shall have the meanings which they bear in section 1 of the Imported Stock Act of 1871, namely:—

"Attendant," "Cattle," "Destroy," "Disease," "Fittings," "Fodder," "Governor," "Inspector," "Master," "Minister," "Owner," and "Sheep"; and the following other words and terms shall, in these Regulations, unless the context otherwise indicate, have the meanings set against them respectively, namely:—

"Australian"—As regards Colonies, places, or ports—any of the Colonies of Queensland, New South Wales, Victoria, South Australia, Western Australia, Tasmania, and New Zealand, and any port or place in any of such Colonies; as regards stock or things—any stock or things from any of such Colonies; and as regards vessels—any vessels trading solely and which have traded solely for twelve months preceding between such Colonies.

"Dog"—Any dog, slut, or whelp of any breed or age.

"Foreign"—Any Colony, place, port, animal, thing, or vessel other than any Australian Colony, place, port, stock, thing, or vessel.

"Horses"—Any one or more horses, mares, colts, fillies, foals, asses, or mules.

"Imported stock"—Any stock arriving by sea, and for six months after arrival.

"Infected"—As applicable to stock—any stock suffering from or actually affected with disease, or which have been in direct or indirect contact with, or on the same vessel as, such infected stock during the next preceding six months, or which have been under treatment during such period for disease, or dressed, or disinfected for disease; and as applicable to vessels or things—any vessels or things with which any such infected stock shall have come in contact within the next preceding three months.

"Infectious or Contagious Disease"—Cattle plague or rinderpest, foot and mouth disease, sheep-pox, swine-fever, scab, in sheep and camels, catarrh, rabies, pleuro-pneumonia, glanders, farcy, and tuberculosis.

"Prescribed" means prescribed by any Regulations.

"Stock"—Any one or more horses, camels, cattle, sheep, goats, swine, deer, and dogs.

"Stud stock"—Any stock, whether thoroughbred or not, intended to be bred from.

"Swine"—Any one or more boars, sows, farrows, or pigs of any breed or age.

"Vessel"—Any steamer, ship, lighter, launch, boat, punt, or ferry.

II.—GENERAL.

Owners to give notice of arrival of stock.

3. If any stock are brought by sea to a port or place in this Colony, the owner thereof shall, within twelve hours of their arrival, give the inspector at or near such port or place notice to the effect of Form 1 hereto.

Declaration and certificate to accompany all stock.

4. All stock intended to be landed shall be accompanied by a Declaration and Certificate to the effect of Form 3 hereto.

No stock to be landed but on Inspector's permit.

5. No stock, although their introduction may not be prohibited, shall be landed, or moved from, or allowed to leave the vessel by which they shall have arrived, without the written permission of an Inspector, to the effect of Form 2 hereto.

Owner to receive notice when stock are ailing or when destroyed.

6. When any stock are ailing or shall have been destroyed under the abovenamed Acts or Regulations thereunder, notice thereof shall be given to the owner of such stock to the effect of Form 4 hereto.

How notices are to be given.

7. Notices under the abovenamed Acts or Regulations may either be served personally on the person to whom such notice is required to be given, or left at his residence or place of business, or sent to him by registered letter through the post.

PART B.—FOREIGN STOCK AND THINGS.

III.—FOREIGN STOCK, &c., ADMISSIBLE.

8. The foreign stock and things specified which are permitted to be imported or introduced into this Colony shall be so, subject to the provisions of the abovenamed Acts, and of the Regulations hereinafter prescribed.

1.—Foreign Stock prior to leaving Port of Shipment.

Foreign horses, camels, cattle, sheep, swine, and goats to be accompanied by Certificate from Inspector for District from which they come.

9. All foreign horses and camels, cattle, sheep, swine, and goats intended and permitted to be introduced into this Colony, shall be accompanied by a declaration from the breeder or owner, and by a certificate to the effect of Form 3 hereto, from the Inspector for the District from which they start for the port of shipment, that they are not, nor have within the next preceding six months been, infected with any infectious or contagious disease.

Inspection of stock by Veterinary Surgeons appointed for the Colony at port of shipment.

10. Prior to any foreign stock which are intended to be introduced into this Colony leaving the port at which they are to be shipped, all such stock, as well as all other stock put or to be put on board the same vessel as the first-mentioned stock (including those not intended to be introduced and those for the use of the passengers and crew), shall be carefully inspected by a duly qualified Veterinary Surgeon appointed in that behalf for this Colony, and the owner or shipper of the stock shall satisfy such Veterinary Surgeon that the stock are not infected and shall pay him the authorised fee for their inspection.

If stock are not infected Veterinary Surgeon to grant and hand certificate to Master.

11. If the Veterinary Surgeon appointed in that behalf for this colony shall have been satisfied that the stock intended to be introduced into this colony have been brought direct to the port of shipment, and that they have not been in any conveyance, stable, or other place, where stock liable to the same diseases as such stock have been within the next preceding sixty days, and that such stock have been fourteen days at least in Great Britain or Ireland, and that such stock and all other stock put on board, or to be put on board for the ship's use, are free from infection, and that all the other requirements of the abovenamed Acts and of these Regulations up to that time, have been duly complied with, he shall, but not otherwise, grant a certificate to the effect of Form 5 hereto, and shall deliver the same to the Master of the vessel together with the certificate by the Inspector hereinafter mentioned where prescribed.

2.—Foreign Stock during the Voyage.

Record of health of stock to be kept by attendant and certified by Master.

12. The attendant on foreign stock intended to be introduced into this Colony shall during the voyage make a daily entry in a book, to be kept by him for that purpose, of the state of their health, and of that of all other stock on board such vessel; and the Master of the vessel shall once in every week during the voyage examine all such stock and certify to the correctness of the entries made by the attendant.

Skins of stock slaughtered or dying not to be landed.

13. The skins of all stock which may have died or been slaughtered on board any foreign vessel during the voyage, and not destroyed or thrown overboard, shall be salted and securely packed in cases or casks, and shall not be landed in this Colony.

3.—Foreign stock on Arrival, and while in the Waters of this Colony.

Stock while in New South Wales waters to be properly confined.

14. It shall be the duty of the Master of the vessel, on board of which there are any foreign stock, as well as of the actual owner thereof, to cause all such stock to be kept securely confined, penned, chained, or fastened up, as soon as such vessel is in the waters of this Colony; and while the vessel remains therein all such stock shall be kept and treated, to the satisfaction of the Inspector, so as that they shall not be able to come in contact with any person other than their attendant, nor with other stock which may come on board such vessel, until the Inspector shall otherwise order in writing.

Master on arrival to make declaration, and hand over certificate, &c.

15. On the arrival of a foreign vessel the Master shall make and deliver to the Customs Officer first boarding such vessel a declaration to the effect of Form 6 hereto, and shall forthwith deliver at the Office of the Chief Inspector of Stock the record kept by the attendant (if any) on board such vessel, and all documents relating to the same required by the abovenamed Acts or these Regulations.

Foreign stock only admitted at Sydney.

16. No Foreign stock shall be admitted into this Colony except at the Port of Sydney.

4.—As to Foreign stock intended to be landed.

All foreign stock intended to be landed to be examined by a Veterinary Surgeon and Inspector.

17. Foreign stock which may lawfully be landed in this Colony shall, previous to landing, be forthwith examined on board the vessel by which they arrived by a duly qualified Veterinary Surgeon and by an Inspector of Stock, who shall report whether or not such or any other stock on board such vessel are infected, and shall join in a certificate to the effect of Form 8 hereto, which they shall forthwith forward to the Chief Inspector of Stock.

Foreign stock infected to be disposed of as Minister directs.

18. If such stock are reported to be infected, the report shall be immediately submitted by the Chief Inspector to the Minister; and if the Minister decide that such stock are infected they shall be forthwith destroyed or otherwise disposed of as he shall direct; and if ordered to be destroyed, the Inspector shall serve the owner with a notice to the effect of Form 14 hereto.

As to Camels.

19. If camels are found on arrival to be infected with scab or skin disease, they shall not be destroyed, but shall be dressed as the Chief Inspector shall direct.

V.—Landing, Quarantine, Disinfecting, and Dressing of Foreign Stock.

Foreign horses admitted on inspection.

20. Foreign horses shall be admitted without detention or quarantine, if found, on inspection at Sydney, to be free from disease.

Foreign stock not infected, if intended to be landed, to be sent to quarantine.

21. If foreign stock other than horses are not prohibited from being landed, and are reported to be free from infection, and if the Chief Inspector is satisfied that they are not infected, and that the requirements of the abovenamed Acts and these Regulations have been complied with, he shall, on obtaining from the owner or consignee of such stock a bond and guarantee, duly executed by the owner or consignee and two approved sureties, in the terms of Form 9 hereto, grant an order for the removal of such stock to quarantine to the effect of Form 2 hereto, without which no stock shall leave the vessel by which they arrived.

Stock to be taken by water to quarantine, and kept at owner's risk and expense.

22. All such foreign stock found on inspection to be free from infection, shall, where necessary, before leaving the vessel be washed, and disinfected as the Chief Inspector shall direct, and shall be conveyed by water, at the owner's risk and expense, to the quarantine set apart for such foreign stock, and shall remain in quarantine for the terms respectively prescribed hereunder for the different kinds of such stock, during which they shall be kept at their owner's risk and expense, and shall be washed, dipped, and disinfected as prescribed by these Regulations, and as the Chief Inspector of Stock shall direct.

Quarantine of Foreign Stock.

23. Foreign stock permitted to be introduced shall, on being landed, remain in quarantine for the periods specified in Form 7 hereto.

As to foreign sheep in quarantine.

24. All foreign sheep landed in this Colony shall forthwith receive three dressings with tobacco and sulphur or with lime and sulphur, at intervals of from ten to fifteen days between each dressing; and the medicaments shall be of the strength and the bath at the temperature and for the duration hereinafter prescribed in regard to Imported Australian sheep under the abovenamed Acts and Regulations thereunder.

Foreign dogs may in certain cases be at once destroyed.

25. In all cases which the Inspector or Veterinary Surgeon consider urgent, dogs found to be infected with rabies, may be forthwith destroyed by the order of either officer.

How foreign stock released from quarantine.

26. On the expiry of the prescribed term of quarantine for such stock, they shall be examined by a duly qualified Veterinary Surgeon and an Inspector of Stock, who shall ascertain whether the disinfecting and dressing prescribed by the abovenamed Acts and Regulations, as well as all the other requirements thereof, have been duly complied with, and shall thereupon determine whether such stock are free from infection, and forthwith forward to the Chief Inspector of Stock a certificate to the effect of Form 11 hereto; but such stock shall not leave quarantine until the charges and expenses due thereon shall have been paid to the Inspector, and until an order for their release shall have been endorsed by the Chief Inspector on such certificate.

IV.—CHARGES FOR INSPECTION AND RISK OF TRANSPORT, AND QUARANTINE OF FOREIGN STOCK.

Charges and expenses in relation to foreign stock to be borne by owner.

27. All charges and expenses connected with the veterinary inspection or treatment, and the landing, conveying, detaining, feeding, dressing, disinfecting, and reconveying of any stock, or with the destruction, or other dealing with any stock under the said Acts or any regulations thereunder, shall be borne by the owner of such stock, and such charges and expenses shall be at the rates stated respectively in Form 12 hereto, in so far as therein specified.

The like as to risk and loss.

28. All loss sustained with respect to such stock whilst being conveyed to or from, or whilst in quarantine, whether by accident or by sickness arising from natural causes, or contracted from other stock, or by the destruction or detention or quarantine of such stock, to prevent the spread of disease, shall be borne by the owner of such stock, and he shall have no claim whatever for compensation for any such loss nor for any loss sustained by such owner through the carrying out or enforcement of these Regulations.

V.—FOREIGN STOCK FOR SHIPS' USE AND FOR TRANSHIPMENT.

Foreign stock to be quarantined.

29. All foreign stock brought into New South Wales waters, whether intended to be introduced into this Colony or not, shall within twenty-four hours after they shall have been examined by an Inspector, be removed to quarantine, where they shall remain at their owner's risk and expense until re-shipped on the order of the Chief Inspector of Stock, on board some foreign vessel about to leave this Colony.

No Foreign stock to be transhipped without permit and not on to Australian vessels.

30. No foreign stock shall be transhipped in the waters of this Colony without the permission, in writing, of the Inspector: And no stock, other than stock from any Australian Colony brought by any vessels into the waters of this Colony, shall be transhipped from such vessel to any of the vessels usually or occasionally trading between any of the Australian Colonies until such stock, if allowed to be landed, shall have performed the quarantine, and otherwise complied with the provisions of the abovementioned Acts and these Regulations.

VI.—MISCELLANEOUS REGULATIONS RELATING TO FOREIGN STOCK.

Foreign stock and attendants' clothes and stalls and pens to be disinfected.

31. While within the waters and territory of New South Wales all foreign stock shall be kept and cleansed and disinfected, together with the clothes of their attendants and their stalls, pens, and fittings, as the Chief Inspector shall direct.

Foreign fodder or fittings not to be landed except in certain cases.

32. No fodder, or fittings, which shall have been put on board any vessel for the use of foreign stock, nor any fodder or fittings with which foreign stock or their attendants shall have come into direct or indirect contact, shall be landed in this Colony.

Australian stock coming into contact with foreign stock to be held to be infected.

33. All Australian stock coming into direct or indirect contact with foreign stock, or with infected stock, shall be held and deemed to be infected stock; and all foreign or infected stock, as the case may be, which have not passed through quarantine, and which shall not have been released in accordance with the abovenamed Acts, and these Regulations shall be held and deemed to be infected stock.

PART C.—AUSTRALIAN IMPORTED STOCK AND THINGS.

X.—GENERAL, AS REGARDS AUSTRALIAN IMPORTED STOCK AND THINGS.

Declaration and certificate to be produced to Inspector examining stock.

34. If an owner intends to introduce any Australian imported stock other than sheep into this Colony, he shall produce to the Inspector examining the same a declaration duly certified by the Inspector of the port or place from which such stock were shipped to the effect of Form 3 hereto.

If found free from infection, stock, other than sheep, to be allowed to land.

35. If any such stock other than sheep brought to port or place in this Colony, shall be accompanied by a declaration as prescribed and be found, on examination by the Inspector, to be free from infection, he may grant permission for the same to be landed in terms of Form 2 hereto, without which such stock shall not be landed.

If Inspector is doubtful he may detain stock.

36. If on the examination of such stock the Inspector has any reason to doubt their entire freedom from infection, he may either temporarily detain the same on board the vessel by which they were brought, or temporarily isolate them on some other vessel, or in some safe and convenient place; and the owners of the stock shall bear the expense of such detention or isolation.

Infected stock, how to be disposed of.

37. If any such stock shall be found on arrival or within one month thereafter to be infected, such stock shall be either destroyed by the owner, without compensation, or otherwise disposed of as the Minister shall direct.

2.—SPECIAL AS REGARDS AUSTRALIAN DOGS.

Imported Australian Dogs to be admitted by Customs Officer on Declaration of Certificate from Inspector.

38. All Australian dogs imported from any of the Australian Colonies, if they are apparently free from disease and are accompanied by a declaration, duly certified by the Inspector for the port from which such dogs were shipped, to the effect of Form 3 hereto—may be landed on the permit of the Officer of Customs in charge of the vessel by which such dogs are so imported.

Dogs not accompanied by certificate to be admitted on inspection if found uninfected.

39. If an Australian dog imported from any of the Australian Colonies is not accompanied by a declaration and certificate, as provided by the next preceding Regulation, such dog shall not be landed until the owner thereof shall have made a declaration to the effect of form 3 hereto, and the dog shall have been examined by the Inspector, and found to be free from disease.

3.—AUSTRALIAN STUD SHEEP.

Sheep to be only landed at Sydney.

40. No stud sheep from any Colony other than New South Wales shall be landed at any port or place in New South Wales at other than the port of Sydney.

What is to be deemed a clean Colony.

41. No colony shall be deemed to be a clean Colony in which scab or catarrh or any other infectious or contagious disease exists, or is suspected to exist, nor any Colony in which scab shall have existed within the next preceding twelve months, and no sheep shall be imported except from a clean Australian colony.

What is to be deemed a clean vessel.

42. No stud sheep shall be imported except by vessels that have not traded to any but a clean Australian Colony within the next preceding twelve months, nor by any vessel which shall within the period hereinbefore mentioned have had any sheep on board from any Colony other than a clean Australian Colony.

Vessel to carry sheep must be cleansed and disinfected.

43. Every vessel on which it is intended to carry any such stud sheep shall be thoroughly cleansed and disinfected before the sheep have been shipped.

Sheep must be accompanied by a certificate from Inspector of exporting Colony.

44. All such stud sheep shall be accompanied by a certificate and declaration to the effect of form 3 hereto, that they have been examined one by one by an Inspector for the Colony from which they are exported certifying that they have been so examined, and that they are free from any infectious or contagious disease, and that scab has not existed in such Colony for the next preceding twelve months.

Sheep on arrival to be examined by an Inspector and Veterinary Surgeon.

45. No sheep from any clean Australian Colony shall be landed in this Colony until they shall have been examined and a certificate to the effect of Form 3 hereto, granted by an Inspector of Stock and a duly qualified Veterinary Surgeon, that all the requirements of the abovementioned Acts and of these Regulations with respect to such sheep have been duly complied with, and that they are not infected.

Infected sheep, how destroyed or disposed of.

46. If any such stud sheep brought by sea into a port or place in this Colony be found to be infected they may be forthwith destroyed, or otherwise disposed of, as the Minister may direct.

Quarantine and dressing of Australian imported sheep.

47. Stud sheep from any clean Australian Colony may, if found on inspection to be not infected, be landed and taken by a conveyance to the quarantine for such sheep, where they shall be quarantined and dipped under the supervision and direction of the Inspector, and the length of such quarantine, the medicaments to be used in dipping, the temperature and duration of the bath, the dipping, and the fees to be charged for the keeping and dipping of the sheep, shall be as follows, viz. :—

Quarantine.

(1.) The sheep shall remain in quarantine until they shall have been dipped as hereinafter prescribed.

Medicaments.

(2.) The medicaments to be used in dipping shall be good sound tobacco, or tobacco leaves and flowers of sulphur, at the rate of 1lb. of each to every 5 gallons of water, the tobacco to be put into boiling water and infused for five hours at least, and the sulphur to be added to the infusion in the dip.

Temperature.

(3.) The temperature shall not be less than 100 nor more than 110 degrees Fahrenheit.

Bath and Duration.

(4.) The sheep shall swim and be completely immersed while in the bath, and the bath shall last from one to two minutes, according to its temperature, and as the case may require.

Number of dippings.

(5.) The sheep shall receive one dipping.

Charges.

(6.) The rates to be charged for the keeping and dressing of sheep in quarantine shall be as set forth in Form 12 hereto.

Declaration by persons dipping, dressing, or disinfecting.

48. Every Inspector or other person who shall have superintended any dipping, dressing, or disinfecting, shall make and transmit with due dispatch to the Chief Inspector a declaration to the effect of Form 13 hereto.

How sheep are to be released from quarantine.

49. No sheep shall be released from quarantine until they shall have been examined by the Inspector and a duly qualified Veterinary Surgeon in consultation and a certificate granted by them to the effect of Form 11 hereto that such sheep have been duly quarantined and dressed, as prescribed by those Regulations, and are free from infection.

How imported Australian sheep are to be admitted overland from other Colonies.

50. Sheep imported from any clean Australian Colony into any other clean Colony, and intended to be introduced overland into this Colony, may be admitted if their owner produce to the Inspector for this Colony at the border a certificate under the hand of the Chief Inspector for the Colony from which they are intended to be introduced, that when such sheep were introduced into that Colony they were certified to be free from infection by an inspector for the Colony from which they were imported, and that such sheep have been once dipped with proper preparations of tobacco and sulphur, or of sulphur and lime, in a bath given at the temperature and of the duration and in the manner prescribed by number 47 of these Regulations. But all such sheep, unless they shall have been imported, quarantined, and dressed as herein prescribed, shall, on crossing the Border, be placed in quarantine, and kept and dipped in the same manner in every respect as prescribed with regard to Australian imported sheep landed at Sydney.

How Australian imported sheep which have not complied with all the Regulations are to be admitted.

51. Should any Australian sheep be imported into this Colony by a vessel which shall not have been cleansed and disinfected, as provided by these Regulations, or should any such sheep not have been examined in the Colony from which they were exported, as prescribed by these Regulations, then such sheep may, with the sanction of the Minister, be admitted to and shall remain in quarantine for twenty-one days, and shall in every such case receive three dippings at intervals of not less than ten days.

Stud sheep from inland or overland from other Colonies to be treated as "imported" if in or near Sydney at same time.

52. Stud and show sheep brought from any of the inland districts of this Colony or introduced overland from any adjoining clean Colony which shall be in Sydney or in any of the suburbs during the time that any imported sheep shall remain in Sydney or the suburbs, shall, prior to their leaving the coast district, be dipped the same as if they were imported Australian sheep.

Owners of special quarantines to pay for attendant.

53. In any case where a special quarantine has been granted for Australian imported sheep, an attendant may, where necessary, be placed by the Chief Inspector of Stock in charge of the sheep in such quarantine; and the person to whom such quarantine has been granted shall pay the expense of such attendant.

No fodder, &c., to be landed, without disinfecting.

54. No fodder or other food, straw, or litter, which shall have been used for, with, or about imported sheep, nor any fittings on board any vessel for such sheep shall be landed; and all cases or cages brought with such sheep shall before being landed be cleansed and disinfected as the Chief Inspector shall direct.

XI.—AS TO AUSTRALIAN FAT SHEEP FOR SLAUGHTER.

Conditions on which these sheep may be landed for slaughter.

55. Fat imported sheep from a clean Australian Colony may be landed at the port of Sydney for slaughter under the following conditions, namely:—

Owner to give notice of arrival and produce certificate.

1st. The owner of such sheep shall give the Inspector for the Port immediate notice of their arrival, and shall produce to him a declaration and certificate of health to the effect of Form 3 hereto, from the Inspector of the Port from which such sheep were shipped.

Sheep not to leave vessel until inspected.

2nd. Such sheep shall not be allowed to leave the vessel by which they arrive until they have been examined by the Inspector.

Sheep to be taken direct to Abattoirs.

3rd. Upon being inspected and found free from infection such sheep shall be taken direct to the Abattoirs on Glebe Island, and there delivered into the charge of the Inspector of Slaughter-houses, to be slaughtered under his supervision.

XII.—TRANSHIPMENT OF AUSTRALIAN IMPORTED STOCK.

Transhipment of Australian stock.

56. No Australian imported stock shall be transhipped in the waters of this Colony without the permission, in writing, of the Inspector.

Australian uninfected stock may be landed for transhipment.

57. Any such stock arriving at a port or place in this Colony for transhipment may, if accompanied by the prescribed declaration and certificate, and found to be free from infection, be landed and kept in any place approved by the Chief Inspector for a period not exceeding fourteen days without being subject to quarantine and dipping.

PART D.—PENALTIES, CONFISCATIONS, &c.

XIII.—PENALTIES.

I.—General Penalties.

Penalties for breaches of Regulations.

58. If any person does any of the following things he shall be guilty of an offence against these Regulations, and shall on conviction for every such offence be liable to a penalty not exceeding £20.

For introducing infected stock.

(1.) If he lands, introduces, or tranships, or attempts to land, introduce, or tranship, or assists, or is concerned in landing, introducing, or transhipping any infected stock.

For trespass on Quarantine.

(2.) If he shall enter upon any quarantine without the written permission of an Inspector, or approach or handle, examine, let loose, or in any way interfere with any foreign stock without such permission.

For refusing to carry out Inspector's directions.

(3.) If he shall refuse or neglect forthwith to carry out any requisition made or direction issued under these Regulations.

For obstructing an Inspector.

(4.) If he shall obstruct or hinder an Inspector in the execution of his duty under these Regulations.

For not paying expenses incurred by Inspector.

(5.) If he shall neglect or refuse to pay on demand by an Inspector any costs, charges, or expenses for which he is liable under these Regulations.

For refusing to give information.

(6.) If, being in a position to give any information required by an Inspector as such, he refuses to give such information or gives misleading information with respect to any stock or thing.

(7.) If he commits any other breach of these Regulations for which a penalty is not specially provided.

II.—Penalties for Offences by Masters of Vessels.

59. Every master of a vessel with any stock on board who does any of the following things, shall be guilty of an offence against these Regulations,—

For failure to give notice to Inspector.

(1.) If he shall fail or neglect to forward to the Inspector notice of the arrival of such vessel with stock on board, or to produce on demand the declaration and certificate as per Form 3 hereto for such stock.

For allowing stock to stray off vessel or to be transhipped without Inspector's order.

(2.) If he shall, without the written permission of an Inspector, permit or suffer any stock to stray or go ashore from his vessel or to be transhipped or moved to or from any other vessel while such first-mentioned vessel is in the water of this Colony.

For failing to secure animal as Inspector directs.

(3.) If he shall fail or neglect to cause any foreign stock on board his vessel to be securely confined or otherwise secured, as the Inspector shall direct.

For allowing stock to stray on to vessel.

(4.) If the master, mate, or other member of the crew of any foreign vessel shall permit or suffer any stock to go on board such vessel while there is any foreign stock thereon,

And he shall, on conviction for every such offence, be liable to a penalty not exceeding £20.

III.—Penalties for Offences by Owners of Stock.

60. The owner (including the consignee, agent of the owner, or person in possession or charge) of any stock who does any of the following things shall be guilty of an offence against these Regulations,—

For allowing stock to stray on to Foreign vessels.

(1.) If he takes or allows any stock, of which he is the owner, to stray on to any vessel on which there is any foreign stock.

For allowing stock to stray on to Quarantines.

(2.) If he takes or allows any stock, of which he is the owner, to stray on to any quarantine for foreign stock.

For failing to carry out Inspector's instructions.

(3.) If he for more than twenty-four hours fails or neglects, when directed by an Inspector, to remove any stock from any vessel to or from a quarantine ground, or other place, or to any vessel.

And he shall, on conviction for every such offence, incur a penalty not exceeding £20.

XIV.—DESTRUCTION OR CONFISCATION OF STOCK AND THINGS.

When Stock and Things may be disposed of by Minister.

61. Stock may, under all or any of the following circumstances, be destroyed or otherwise disposed of, as the Minister shall direct:—

If they are infected.

(1.) If stock are infected with any infectious or contagious disease, whether they be on land, or on board any vessel within the territorial limits of this Colony.

If owners commit breach of Acts or Regulations.

(2.) If the owners of any stock shall have committed, or attempted to commit, or be concerned in committing, any breach of the abovenamed Acts or of any Regulations thereunder.

If stock are Foreign, and are not properly confined or secured.

(3.) If foreign stock be found unconfined or unsecured on, or be removed or stray from the vessel by which they arrive, or from quarantine.

If stock stray on board a foreign vessel.

(4.) If stray stock from shore be found on board a vessel on which there is any foreign stock.

If stock are found in quarantine.

(5.) If stock, other than those for which an Inspector shall have issued an order for quarantine, are found within any quarantine for foreign stock.

If charges and expenses be not paid.

(6.) If the fees, charges, and expenses connected with any stock be not duly paid.

If stock are not removed when quarantine is up.

(7.) If any stock shall not be removed on the expiry of the term of quarantine.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ABATTOIRS, GLEBE ISLAND.

(PETITION FOR REMOVAL OF—MAYOR AND ALDERMEN OF LEICHHARDT.)

Received by the Legislative Assembly, 22 September, 1887.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of the Mayor and Aldermen of the Municipal District of Leichhardt, in the Colony of New South Wales,—

SHOWETH:—

1. That your Petitioners and the inhabitants of Leichhardt suffer great injury, and live in considerable danger to their health through the unwholesome odours arising from the public Abattoirs on Glebe Island.

2. That although the existence of typhoid and other diseases, which are caused by inhaling noxious smells, has been officially attributed to other sources, your Petitioners are of opinion that such diseases are largely traceable to the pestiferous odours from the Abattoirs.

3. That Leichhardt contains 2,540 houses and 10,500 inhabitants, fully one-half of the latter being directly affected by the foul smells above alluded to.

4. That some three or four years ago the Mayor and Aldermen of this Council were, at a deputation to the then Colonial Treasurer, Mr. Dibbs, promised by that Minister that the Abattoirs should be forthwith abolished.

5. That nothing has been done to ameliorate the condition of the thousands so disastrously affected by the noxious odours, and that unless some remedial steps be soon taken your Petitioners apprehend serious consequences to the inhabitants.

Your Petitioners therefore humbly pray that your Honorable House will take immediate steps for the abolition of the public Abattoirs now existing on Glebe Island.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated this 18th day of April, in the year of our Lord, 1887.

[Here follow 10 signatures.]

PUBLIC TANKS AND WELLS.

(INFORMATION RESPECTING CONSTRUCTION AND MAINTENANCE.)

RETURN TO AN ORDER MADE BY THE HONORABLE THE
LEGISLATIVE ASSEMBLY OF NEW SOUTH WALES,
DATED 23 NOVEMBER, 1887.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,

7 February, 1888.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1888.

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC TANKS AND WELLS.

INFORMATION RESPECTING CONSTRUCTION AND MAINTENANCE.)

Ordered by the Legislative Assembly to be printed, 7 February, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 23rd November, 1887, That there be laid upon the Table of this House,—

“Copies of all papers, minutes, and reports with reference to complaints made by Officers of the Mines Department against Mr. Bennett, Commissioner and Engineer for Roads, *re* the construction and maintenance of wells and tanks; also, all other correspondence between the Works and Mines Department having reference to loss and inconvenience that have been occasioned through the works of construction and maintenance of wells and tanks being divided between the two Departments,—with additional information, subsequent to date of order, embodied on authority of the Minister for Mines.”

(Mr. Stokes, for Mr. Waddell.)

Department of Mines, Public Watering Places,
Sydney, 20 January, 1888.

Minute Paper by The Chief Inspector of Public Watering Places.

Subject :—Papers to be submitted to Tanks and Wells Commission as evidence.

The Chairman of the Royal Commission *re* Tanks and Wells, having stated that no papers will be received in evidence unless verified on oath, should perhaps be informed that the printed papers herewith are submitted in evidence, that the originals are at the service of the Commissioners, and that no doubt the originals can be verified by the writers. The Commissioners should perhaps be invited to call for this evidence.

P.W.P.,
88-474.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Submitted for approval. The Commission will of course decide which of the matters require verification, and what witnesses will be required for that purpose.—H.W., 23/1/88.

Approved. I should think the Royal Commission will satisfy themselves as to the truth or otherwise of any statements made in any of the papers submitted; in cases where this is not done, I should take it as accepting in truth that which does not want confirmation.—F.A., 24/1/88.

Minute Paper by The Chief Inspector of Public Watering Places.

Subject :—Summary of deductions based on cases submitted to Royal Commission on Tanks and Wells.

Department of Mines, Public Watering Places, Sydney, 10 January, 1888.

In the cases herewith submitted to the Royal Commission *re* tanks and wells, there appears to be evidence of—

1. Faults of judgment in the selection of sites for tanks.
2. Of defective design and faulty construction, with but little concern to take advantage of formation of ground or selection of catchment area, so as to avoid collection of silt; of too steep batters in most cases, and apparently the adoption of a certain form of tank, without reference to formation of ground or nature of soil; the defective construction of flumes and erection of inlet pipes, with carelessness in laying out drains, and excessive cost in construction.

3.

422—A

[1,005 copies—Approximate Cost of Printing (labour and material) £288 3s. 3d.]

3. Expensive forms of machinery for lifting water, necessitating greater cost of maintenance.
 4. Faulty construction and excessive cost of fencing.
 5. Interference with caretakers and overseers; greasing of service tanks.
 6. Sub-letting of contracts.
 7. Faulty construction of wells, sinking, timbering and centering of shafts, erection of head works, whim, service tanks, and troughing before testing for supply and quality of water.
 8. Excessive cost of construction.
 9. Costly hutting for caretakers.
 10. Defective construction of troughing.
- And finally, the evidence throughout confirming the unfortunate effects of a divided control, under which each Department denies responsibility.

The Under Secretary for Mines.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Précis of Cases submitted to the Royal Commission *re* Construction and Maintenance of Tanks and Wells.

I—P.W.P.,
87-5,750. A PARAGRAPH appeared in the *Sydney Morning Herald* containing statements and reflections upon the officers of the Public Works Department. Mr. Bennett wrote a reply to the *S.M. Herald*, imputing the authorization of paragraph to interested motives of the officers of Mines Department. The Chief Inspector, in denying this, desired to be allowed to reply publicly, but the Minister refused, urging that although Mr. Bennett had broken a well-known departmental rule, it was a bad example to follow, and that Mr. Bennett's reflections upon the Mines officers were unjust and unwarrantable, and that the Commission will judge who is right and who is wrong.

II—P.W.P.,
87-6,426. THE Minister's minute, directing preparation of papers for submission to the Commission, and directing that Chief Inspector should hand the minute to the Commissioners and state the facts of the case that no reflections had been cast upon the integrity or capacity of Works officers, but reference only had been made to the way the works were carried out and the rates paid.

III—P.W.P.,
87-6,920. MR. Overseer Brett informs the Chief Inspector that Mr. Road-Superintendent Cronin had written to him asking an expression of opinion upon certain matters relating to tanks and wells. Mr. Abigail drew Mr. Sutherland's attention to this, and the Works Department forwarded copy of circular that had been sent to their local officers as evidence of the only instructions issued to them *re* the inquiry. This Mr. Abigail referred to Mr. Sutherland, and, commenting upon it, asked if this sort of thing, circulated over the Colony, was likely to promote good feeling between the Departments.

IV—P.W.P.,
87-1,360. THE Minister's minute to the Cabinet, showing legal status of public watering places, and recommending construction and maintenance be placed in the hands of the Mines Department covering an uncopied and unsigned draft prepared by Mr. Gilliat for Mr. Abigail's information, pointing out the results of dual control, &c. This, it is believed, was handed either to the Secretary for Works or the Premier, and all traces of it have been lost. To this Mr. Bennett replied mainly attributing the whole faults to the Mines Department officers. The Chief Inspector replied in 87-2,586, rebutting Mr. Bennett's statements, and adducing evidence of what he states. (See Appendices, *Précis*, and Extracts from Cases.)

V—P.W.P.,
87-5,102. AN article from Bourke paper *re* dual control, "Centralistic Bureaucracy;" Chief Inspector's minute thereon, and note by the Minister for Mines.

VI—P.W.P.,
87-6,084. A LETTER from a Mr. Earngey, offering to give evidence *re* conduct of Public Works officers.

VII—P.W.P.,
87-1,583,
87-6,585. PAPERS and extracts relative to subletting of contracts: Fencing at Ivanhoc, £114 per mile; sublet three times; drains, 26 miles—let, 4s. 6d. per chain, sublet, 3s. 6d.; Mount Manara Tank—let, 1s. 4½d. per cubic yard, sublet at 1s. per cubic yard; Hulong fence—sublet; 12-mile tank—let at 2s. 6d. per cubic yard, sublet at 1s. 3d. per cubic yard.

Wooloondool Well.

THIS well has been bored from bottom of shaft, neither pipe nor floor placed in well. Bore liable to, and is, constantly choked from silt. Constant baling, even when water is not required, necessitating great wear and tear and useless labour, insisted on by Works Department as necessary to keep bore from silting. Bore choked on many occasions, and has caused much needless labour and correspondence. The Works Department endeavour to show it is fault of Mines caretaker or lessee.

viii—
P.W.P.,
86-1,521,
et seq.

Dry Lako Well.

A SIMILAR case as foregoing, in which request for repairs and alterations are referred to by Mr. Bennett as complaints.

ix—Tanks
and Wells,
85-2,008,
et seq.

Willandra Well.

THE construction of this well not asked for by the Mines Department; site selected by Works Department. When nearly completed, and supply tank, troughs, and whim erected, it was found portion of head-works were upon Kilfera private property. Chief Inspector recommended one tank between Clare and Ivanhoe. Works constructed one tank and one well. He also pointed out that, from experience gained in district, wells were not suitable. Construction so defective that although only 102 feet deep the cost has exceeded £1,050.

x—P.W.P.,
86-933.

86-5,781.
87-5,092.

Peri Springs Tank.

THESE papers show that a tank had been constructed within 500 yards of a number of springs, one of which is opened and yields 7,000 gallons per diem. Works defends the selection of this site.
This is simply a case of construction alongside permanent water.

xi—Public
Works,
84-804,
et seq.

Interference of Works Officer with orders of Local Mines Officer at Pulletop and Hulong Tanks.

IN this case, orders were issued to lessee by Mines officer. These, the papers show, were countermanded by Works officer, though it is denied by that officer, and reflections made upon Mines officers. Lessee uses this to neglect the conditions of his lease and regulations under the Act. At Hulong, orders *re* shoots by local Mines officer countermanded, and a 2½-inch rubber hose sent to do work a shoot 1 foot in chord barely suffices for. Orders *re* painting steam pump interfered with.

xii—P.W.P.
86-5,852,
et seq.

Re coating inside of Supply Tank and Troughs with objectionable Composition.

IN this case a travelling mechanic, employed by Works Department, and paid £6 per week, instructed to coat inside of service tank and troughs with tar-pitch and tallow, rendering water undrinkable, especially for domestic use. When tarring is required, it is the duty of the caretaker or lessee. It is unnecessary to employ skilled and highly paid labour to do the work of the Mines caretaker or tenant.

xiii—P.W.P.
87-371,
et seq.

Old Gunbar Well.

WELL completed and transfer accepted by this Department, subject to an analysis of water, which proved to be too salt for any purpose. Although admitted by the Works Department that this water is too salt, they endeavour to show the water is fit for use, and urge that constant baling will improve the quality. This was done for about two years without any improvement. Works then consented to bore well, but this has apparently been abandoned. Mines Department have had in meantime to employ caretaker to bale and protect headworks. The well was completed, supply-tank, troughs, whim, and fencing erected, although Works Department was requested to defer latter work till the water was proved. No stock ever watered here. A small tank has been recommended at this place. Well useless as a public watering-place.

xiv—T. & W.,
84-1,637,
et seq.

Clearing out Silt-tank at Merimerriwa by Works Department.

THIS work is one of the Mines caretaker's duties. Papers show this had not been neglected; but at the time, owing to rain and water in silt-tank, caretaker could not perform the work. The Works Department officer conceives this to be a case of neglect by Mines caretaker, and lets a contract for this work; but the contractor also has to wait till silt-tank dries before commencing work. A case of unnecessary expenditure. See also paper *re* caretaker by Mr. Bennett.

xv—87-3,060

Ivanhoe Tank.

THE Waiko (or Ivanhoe) well fallen in through neglect prior to 1879. Tank required for use of township and travelling stock, and, after much correspondence, the Works consented to construct it. A site was recommended by Mr. Gilliat, but not adopted—another site chosen for tank upon Waiko private property. Tank site was altered to present position in main street of Ivanhoe. Compensation paid to contractor for moving. Tank sunk in bad holding ground. Papers relating to prices paid for fencing and drains, also to character of drains and fencing, in this case.

xvi—83-325.

Holy Box Well.

- xvii. THIS well was sunk, and small supply of fresh water tapped, followed by a great flow of salt water, which, when twice analysed, was declared unfit for use. Evidence as to saltiness was submitted. Well was abandoned and tank commenced. Works officer stopped work at tank when about 3 feet deep, declaring well water good. Well again handed to Mines, and constant baling insisted upon to improve quality of water; this done without result. Cost of well and price referred to—94 feet deep, cost over £1,000. Mines has to bear cost of maintenance and employ caretaker to bale and protect head-works. There is no prospect of leasing salt wells. Caretaker has carted drinking water 17 miles. Whim, service tank, and troughs erected before quality of water decided suitable. Iron in troughs destroyed by action of salt. Well almost useless for stock, and quite unfit for travelling public.

Mount Manara Well.

- xviii—Pub. Works, 78-3,677. T. & W., 80-58. THIS well sunk on shoulder of hill; but supply too limited, and depth too great, to be of use. Works erected whim, tank, and troughs before testing supply. Endeavours were made to increase supply by driving without success. Well finally abandoned, and tank sunk 4 miles away. See paragraph from *Sydney Morning Herald*—Mr. Abbott's and Chief Inspector's minutes.

Boro and Bunghill Tanks.

- xix. Tanks and Wells, 84-616. IN this case the tanks were transferred to the Mines Department, and the state of them shortly afterwards reported by the local Mines officer. The construction, the system of open drinking tanks, is referred to, and the Works officers, while admitting some statements fair, give denial to others. Several minutes passed between the Departments, culminating in one of Mr. Bennett's, in which he states the Mines first neglect the works, and then complain. This Mr. Abbott replied to in minute 30/5/84.

Day Dream Tank.

- xx. THIS is simply an illustration where faulty work has been passed by the Works Department, necessitating expense in alteration and repairs.

Dolmoreve Well.

- xxi. IS an instance of brackish and what is considered stock water by the Department of Works. The local officer at time of transfer called attention to quality of water, and advised tank. Constant baling was urged by Works Department to improve the quality, but without success. Possibility of leasing this well is small. Caretaker has had to take his horse 4 miles to fresh water. Case of breakage of wire rope submitted as an instance of action of saline matter in water.

Papers re Fencing.

- xxii. THESE papers show the cost of fencing, as alleged to have been paid by the Works Department; also the cost at which this Department is prepared to erect it. Examples of undesirable concession made to contractors at One-trec and Ivanhoe, &c., viz., the erection of fence without straining posts, and disregard to the requirements of travelling stock, as at Ivanhoe, and the delay in completion of contracts.

Erection of Caretakers' Cottages.

- xxiii. THE erection of cottages for caretakers having been decided to be necessary, a vote of £13,000 for the service was taken. Tenders for the work were called for by the Works Department, the average price being £85 each, the highest £114, lowest £46, and these were recommended for acceptance. The papers were submitted to the Mines Department, before committing the country to this expense, for an expression of opinion. This was given, and it stated that £85 was considered too high for the service required, and named £50 each as an average. This is stated by the Works officers to be absurd, and that the work should be transferred to the Mines Department. The Mines Department undertook the work. This work was performed by contract, with exception of four cases, in which daily labour was used, but unfettered by the conditions of the Works Department, the approval of both Ministers being obtained. This Mr. Bennett considered to be a censure upon himself, although the proposal to transfer to the Mines emanated from his own Department; but, after an explanation from the Secretary for Mines that no censure was intended, the vote was transferred and operations commenced with the result that the average of £50 has not been exceeded. The average is now £42 15s. for thirty-four cottages.

Walla Walla Tank.

- xxiv. PAPERS indicate that this tank is in close proximity to large swamp, although this site was reported upon adversely by the Chief Inspector, Public Watering Places. Even if required at its present site, the rainfall is sufficiently great to have rendered a very much smaller tank sufficient.

Papers *re* Fluming.

SHOWING the defective design and construction in many cases of the inlets or flumes at Government tanks, whereby the difficulties of maintenance have been increased, and where neglect has been imputed to Mines caretakers when flumes have failed to meet the requirements.

xxv.

Baloola and Normanstonc Wells.

THESE wells have been for a lengthened period in course of construction. The usual headworks erected before supply assured. There appears a reasonable doubt that the sites recommended by the Chief Inspector were not adhered to by the Works Department. Basaltic formation and cost of the wells per foot is also shown. The Normanstone is reported as abandoned.

xxvi.

Papers *re* Transfers.

SHOWING directions of Minister for Mines that all public watering places are to be taken over when notified ready for transfer, and that alterations are to be made good by the Works Department. Showing delays in effecting transfers after notification by Works Department owing to non-completion.

xxvii.

Papers *re* Troughing Rails.

AN alteration, owing to faulty erection of troughing, was found necessary in the railings to enable large stock to water with readiness and comfort. It was authorized by Hon. Secretary for Mines, and in calling attention to this, the Works officers express doubt as to there being any *bonâ fide* complaints; and it was suggested that the alteration, at the caprice of an overseer, should be prevented. Cases are submitted, showing the grounds for complaints and the action taken by this Department.

xxviii.

Drains.

THESE papers show cases of defective levels, and where it has necessitated grading by the caretaker—Hulong, Ivanhoe, Tom's Lake.

xxix.

Yentabangee and Warramurtee Tanks.

THIS is a case similar to that of the Peri Springs Tank, viz., tanks excavated in vicinity of almost permanent water. Their construction is defended by the Works Department. The minutes of Chief Inspector and letters from independent sources are submitted.

xxx.

Roto Well.

THIS well has been sunk alongside almost permanent waterhole in Willandra Creek. The lessee of this well was prosecuted by local overseer for breach of regulations under Public Watering Places Act. The case was dismissed, and the decision of the Bench upholds the above statement.

xxxi.

Tanks, Bourke to Wanaaring.

MEMO. by the Superintendent of Drills, and telegram from Inspector Mackenzie, show that tanks have been let by the Works Department upon this road, in close proximity to artesian borings, without reference to this Department.

xxxii.

Chesney's Papers.

A SERIES of articles from *S. M. Herald*, and letters from Mr. Chesney, condemning the system of supplying water, &c., to stock. The replies of Chief Inspector and Mr. A. P. Wood are submitted, showing the reasons for the present system.

xxxiii.

Galathera and Boggy Creek Tanks.

THIS is simply a proof of the inconvenience of open drinking tanks system, and points out delay in furnishing supply tanks and troughs at these tanks.

xxxiv.

Papers *re* Cost of Works.

xxxv. THESE papers show cost of works, as indicated by returns called for by Mr. Abbott; the prices stated to have been paid for excavation, draining, fencing, engine-sheds, &c., by the Works Department; also showing delay by Works Department to furnish return desired by Mr. Abigail. Cost of steam pumping plant is also shown.

Cost of hutting and fencing and engine-sheds by the Mines and Works Departments respectively is compared.

xxxvi. *Re* non-adaptation of work to formation of ground or local conditions, in case of wells, without reference to the probability of obtaining suitable water.

Roto Well	Proximity to waterhole.

Tarella and Menamurtee Well.

xxxviii. THESE papers are simply as an example of the construction of tank and well in close proximity to permanent water. The minutes in this case and Mr. Quin's letter are referred to.

Papers *re* Appliances.

xxxix. SHOW that the adoption of steam-pumps, for the service of water to travelling stock, was not advocated by the Mines Department—that their recommendation for simpler appliances was overruled.

xl. REPORTS by Inspectors and Overseers.

Miscellaneous Papers.

xli. CARSON's swamp tank; means for watering stock; Hovell's dam by-wash; Muriel horse-walk; Shearleg's tank.

Reports of Chief Inspector of Tanks for 1880-81-82-83.

xlii. PUBLIC Watering Places Act.

I.

LETTER of Mr. W. C. Bennett, Commissioner and Engineer for Roads and Bridges, to *Herald*, re charges made by Mines Department against Officers of Works Department, and minutes thereon.

Minute by The Chief Inspector of Public Watering Places.

Department of Mines, Public Watering Places, Sydney, 2 November, 1887.

MR. W. C. BENNETT, in his letter to this morning's *Herald* (copy attached), implies that the allegations of the previous day's article, reflecting upon the construction of public watering places, proceeded from officers of the Mines Department. This, I think, should be as publicly denied as it has been made.

P.W.P.,
87/5,750.

That it is not the case is admitted by the writer of the article of which Mr. Bennett complains. I must also ask leave to point out, with the greatest respect, that I am unaware of any accusation having been made by this Department against Mr. Bennett, as stated in the minute of the Honorable the Secretary for Public Works, quoted by Mr. Bennett.

I beg to submit, for the consideration of the Secretary for Mines, that this information may be given to the editor of the *Herald*.
HARRY GILLIAT.

EXTRACT from *Sydney Morning Herald* of 2nd November, 1887.

"Government Tanks and Dams.

"Sir,

(To the Editor of the *Herald*.)

"In reference to the allegations as to the jobbery, as it is styled, in carrying out the tank and well works by this Department, it is right the public should be aware that I asked (nay, pressed) for an inquiry into the statements sent to this office from the Mines for the last twelve months. This inquiry has not been instituted; I presume the Government thought it unnecessary.

"I forwarded your article of this morning to the Minister for Works, with the following minute:— 'I request the attention of the Honorable Secretary for Public Works to the extract from this morning's *Herald*, which I attach; I need not say it is unfounded. I would remind the Minister that I pressed for an inquiry into the allegations made by the officers of the Mines Department, and that I furnished reams of replies and reports rebutting these accusations. The article calls for a full vindication of my honesty and capabilities. The allegations are made for a purpose in a way I will not characterize; but if they are well founded I should be at once dismissed; if false, the originators should, on the other hand, be dismissed.'

W.B., 1/11/87."

Mr. Sutherland submitted the paper to the Chief Secretary, who was pleased to write as follows:— "I have carefully read this printed paragraph, which has the internal evidence of being a newspaper writing, and not derived from official sources. In this case Mr. Bennett's only course is to seek redress from the newspaper, who, if demanded of them, must either give up the authority or assume all the responsibility of the publication. Clearly it is not a case for a Board of Inquiry."—H.P.

On which the Minister for Works endorsed the following:—"A Board of Inquiry will be granted as asked for by Mr. Bennett months ago to inquire into the accusations of the officers of the Mines Department against Mr. Bennett and officers of the Roads Department.—J.S."

I must now wait the result of the inquiry for a vindication of the character borne by me in the service for thirty-three years, and in the service of the Crown for nearly forty-three years. This character, which is the sole result of that number of years' hard work, it is now sought to deprive me of in this underhand way by those who have misled your reporter for a purpose which will be patent when the papers are published.—WILLIAM C. BENNETT, Roads Office, 1 November.

Submitted for the consideration of the Minister for Mines. I do not think the letter of Mr. Bennett's should have been sent to the Press, and I cannot recommend that any officer of this Department be allowed to reply to it.—G.E.H. (*pro* U.S.), 2/11/87.

Approved. See minute attached.—F.A., 3/11/87.

Minute of The Hon. the Secretary for Mines.

Department of Mines, Sydney.

Mr. W. C. Bennett's letter to the *Herald*.

I THINK Mr. Bennett has broken a well-known Governmental rule in replying to newspaper paragraphs, and it would be following a very bad example to take the same course. My opinion is that Mr. Bennett's references to officers of this Department are unwarrantable and unjust. As the whole of the papers have been moved for, they may be prepared as speedily as possible; the public will then be able to judge who is right and who is wrong.

F.A., 3/11/87.

II.

MEMO. by Minister for Mines *re* allegations by Works Department that charges against integrity and capacity of their Officers have been made by Mines Officers.

Tanks and Dams Inquiry.

Department of Mines, Sydney.

P.W.P.
87-6,426.

SEEING that a Commission, consisting of the Hon. G. H. Cox, M.L.C., Major Penrose, R.E., and Mr. J. C. Woore, Police Magistrate at Queanbeyan, has been appointed by the Executive Council to inquire into and report as to certain allegations made inside and out of Parliament, respecting the construction of tanks, wells, &c., by the Roads Department, I have to request that all the particulars in this Department may be prepared in the clearest manner for submission to the Commission.

When Mr. Gilliat is called it should also be pointed out by that officer that so far as this Department is concerned no reflection has been cast on the integrity of the officers of the Roads Department. What has been done had reference to the unsatisfactory manner that many of the works appear to have been carried out, and the very high prices paid for them.

I hope, therefore, this may be made plain to the Commission.

F. ABIGAIL, 29/11/87.

The Chief Inspector of Public Watering Places.—H.W., 29/11/87.

The Chief Inspector of Public Watering Places to the Under Secretary for Mines,—I may, perhaps, point out that the Royal Commission may elect to peruse all papers before calling witnesses, in which case the explanation herewith authorized by the Minister would not be before them at the commencement of their labours. It is, I urge, of the utmost importance that the attention of the Chairman of the Commission should be called to this statement, as an act of simple justice to this Department, which could not reply to the paragraphs in the press alleging that such charges had been made.—H.G., 1/12/87.

A copy of this minute might perhaps be sent to the Hon. G. H. Cox, as Chairman of the Commission. He might be informed that the papers are being prepared to lay on the Table of the Legislative Assembly, and if he would like to have copies before entering upon the inquiry the printing will be expedited, and copies supplied without delay. He may also be asked how soon the Royal Commission will commence to take evidence so that the country officers may be directed to hold themselves in readiness. Submitted.—H.W., 5/12/87.

Approved.—F.A., 6/12/87. Prepare letters.—H.G., 6/12/87. Letter to Hon. G. H. Cox, 7/12/87.

III.

Re Circular sent by Works Department to their local Officers.

Urana, 19 November, 1887.

Harry Gilliat, Esq., Chief Inspector of P.W. Places,—

Dear Sir,

P.W.P.
87-6,290.

Your very kind note of the 15th duly to hand to-day. I saw Morris, the owner of the ponies, and he tells me they belong to his children, and he could not say if they were for sale.

I will see him again, and if I cannot get this pair I will get as good, and break them in myself for Mr. Abigail, so that he can drive them with safety. Last week I had a letter from Mr. Cronin, asking me to give an opinion *re* the public watering places I had seen; whether open tanks or troughing were best for watering cattle and sheep, and also as to the general character of the works. In reply I informed him. I understood a Board would be appointed to investigate the dispute between the Works and our Department, and as most likely I would be called to give evidence, I must decline to give an opinion just now. Was not this the best reply to give, my dear Mr. Gilliat? I sincerely hope you will not be like my poor countryman, but come out of this fight in flying colours.

As I have had a lot of tank work some years back, perhaps my evidence would be of some good; if so, drop me a line.

Yours sincerely,

P. R. BRETT.

I beg to call attention to the marked portion of annexed letter. Mr. Inspector Low also reports a letter having been written to a gentleman near Ivanhoe in similar terms. It will, perhaps, be advisable to inform the local officers that a Commission is to be appointed, and that they should be prepared to give evidence if called upon.—H.G., 21/11/87. The Under Secretary.

Submitted that any information they desire to furnish should be sent through this office.—H.W., 28/11/87. Approved.—F.A., 29/11/87.

Sir,

Sir, Department of Public Works, Sydney, 7 December, 1887.
 Referring to your letter of the 21st ultimo, in regard to officers of the Roads Department seeking information from subordinate officers of the Department of Mines on the subject of tanks and dams, I am directed to transmit for your information copy of the only instructions upon the subject which have been issued to officers of the Roads Department.

P.W.P.,
 87-6,738.
 Works.—No.
 87-10,927.

I have, &c.,

JOHN RAE.

The Hon. F. Abigail, M.P., Minister for Mines.

Roads and Bridges Department, Sydney, 3 November, 1887.

MEMO.

As the Minister for Works has promised that a Board shall be appointed to enquire into the working of the Tank and Well Branch of this Department, you are requested to furnish full information on the following points at once:—

P.W.P.,
 87-6,738.

- 1st. Mention any and all cases that have come under your notice where the contractors with this Department have sub-let their work, and to what extent this has been done in each case.
- 2nd. Give such reliable information you may possess or may be able to obtain as to whether the contractors for these works have made excessive profits out of the works.
- 3rd. Give a full statement of all such works let without tendering or without public notice being given; the prices paid in all such cases; as also the prices for similar work let under same considerations, but for which tenders were received after public notice.
- 4th. Give a full report of the maintenance of these works by the Mines Department, whether such maintenance has been efficient, or whether neglect has been shown.
- 5th. Give a concise record of all cases where the Mines' Officers in charge of these works have clashed with your suggestions or operations to the detriment of the public interest, and where they have neglected to make repairs recommended by you, or have opposed your making such repairs.
- 6th. Obtain from the Crown lessees, or others who can form reliable opinions on the matter, an expression of opinion *in writing* as to the advantages of the open and trough systems of watering, and furnish the addresses of such gentlemen, as we might open direct communication with them.
- 7th. Obtain records of the prices paid by the squatters for excavation during the dry seasons, giving depth, slopes, &c., of the tanks, also such details in regard to water, grass, rations, &c., as bear on a comparison of prices.
- 8th. Give your own opinion and that of others as to the character of our appurtenances.
- 9th. Give full details as to the capabilities of our pumps, as to their simplicity, effectiveness, &c.; whether they can be kept in good order by an average careful man; and whether their maintenance by the Mines has been neglected and their efficiency impaired.

The report on the preceding points must be in this office not later than the 15th inst.

ARTHUR P. WOOD,
 Assistant Engineer.

Letter to Minister for Works from Minister for Mines.

My dear Sutherland,

12 December, 1887.

I have just received from your office copy of a memo. sent out from the Roads and Bridges Department, bearing the signature of Mr. Arthur P. Wood, Assistant Engineer, and, while admitting much of the contents are very proper, I desire to direct your attention to the following:—

- Clause 4. Give a full report of the maintenance of these works by the Mines Department; whether such maintenance has been efficient, or whether neglect has been shown.
- Clause 5. Give a concise record of all cases where the Mines Officers in charge of these works have clashed with your suggestions or operations to the detriment of the public interest, and where they have neglected to make repairs recommended by you, or have opposed your making such repairs.
- Clause 9. Give full details as to the capabilities of our pumps, as to their simplicity, effectiveness, &c.; whether they can be kept in good order by an average careful man, and whether their maintenance by the Mines has been neglected, and their efficiency impaired.

I desire to know if you think the above a proper document to be sent all over the Colony from one branch of the Public Service, referring to another, and whether such is calculated to promote that good feeling between Departments so necessary to protect the public interest. Awaiting the favour of your reply,—

I am, yours,
 F. ABIGAIL.

Copies of the letters addressed to the Inspectors and Overseers of P.W. Places in connection with the enquiry by the Royal Commission may perhaps be attached for the information of the Commissioners.—H.G., 12/12/87. The Under Secretary.

Submitted.—H.W., 12/12/87. Approved.—F.A., 13/12/87. Copies annexed.—T.H.S., 14/12/87.

P.W.P.,
87-6,095.

Sir, Department of Mines, Public Watering Places, Sydney, 1 December, 1887.
In compliance with a direction of the Hon. the Minister for Mines, you will be good enough to furnish me as quickly as possible with replies to the following questions. It is to be understood that the information afforded shall be based on your own experience or observation:—

1. At the public tanks whether is it preferable that stock should have admission to the excavation, or be supplied from troughing? State reasons for your preference.
2. What are the general rates paid per cubic yard for excavation by private persons and by the Government?
3. What are the general rates for sinking wells per lineal foot paid by private persons and by the Government?
4. What are the relative costs of head-works paid by private persons and by the Government?
5. Are the costly appliances at the Government tanks more effective than simpler methods of raising water? State which are most liable to get out of repair, and present greater difficulties in restoring them to order.
6. Are there any substantial reasons why the Government works should not be constructed at the same relative prices as those given for work undertaken by private enterprise? If so, state them.
7. State the most serious errors in construction you have noticed of public tanks and wells.

I have, &c.,

HARRY GILLIAT,

Inspectors of P.W. Places.

Chief Inspector, Public Watering Places.

P.W.P.,
87-6,290.

Sir, Department of Mines, Public Watering Places, Sydney, 2 December, 1887.
I have the honor to inform you that a Commission is being appointed to inquire into the manner in which the Government tanks and wells have been constructed. The Hon. the Minister for Mines directs that any information you may desire to furnish should be sent through this office.

It is desirable that you should be prepared to give evidence if called upon by the Commission.

I have, &c.,

HARRY GILLIAT,

Overseers of P.W. Places.

Chief Inspector of P.W. Places.

IV

MINUTE by The Minister for Mines for Cabinet—Minutes, Appendices, *précis* of cases and copies of extracts.

Minute by The Secretary for Mines.

Department of Mines, 21 March, 1887.

P.W.P.,
87-1,360.

THE administration of the Public Watering Places Act, 48 Vic., No. 16, which gives statutory authority for the construction, control, and maintenance of works for storing or providing water, adjacent to any public road, is charged to the Department of Mines.

The administrative arrangements of 1880, which are still in force, also allot to that Department the charge of works for the storage of water in the pastoral districts. In addition to the control, maintenance, and leasing, the survey of the watering places, and the construction of huts have more recently been undertaken, and it is now found necessary to assume the charge of fencing, and provision has been asked for that purpose on this year's estimates.

The construction and repairs still remain with the Department of Public Works, but this division of authority is accompanied by drawbacks, such as much unnecessary correspondence, great loss of time, and a resulting want of economy, which it is thought will be obviated if the service is placed under one Department.

The Secretary for Public Works will perhaps agree with me that under the circumstances it might be desirable in the public interest that the whole of the business connected with these works, including construction and repairs be handed over to this Department.

FRANCIS ABIGAIL.

Alternative proposal in case the Cabinet should decide that Works Department retain construction of tanks, leaving all head works and subsequent control to Mines Department.

If the Cabinet decide to retain the construction of tanks and wells with the Works Department, it may in the interests of economy be desirable that the Works should be confined to the bare construction. Hutting, fencing, erection of machinery, and troughing to be dealt with by this Department, as well as subsequent repairs.

In short, that, after the tank or well has been transferred from the Works Department, all control or interference on the part of that Department ceases.

Memorandum which was covered by the Minister's minute, and which was attached for the information of the Minister was handed to him uncopied and unsigned.

The Memo. in question, it is supposed was handed to the Premier, and all trace of it has been lost.
J.W.B.

Minute

Minute by the Chief Inspector of Public Watering Places.

Subject :—Administration of Public Watering Places.

Department of Mines, Public Watering Places, Sydney, 13 May, 1887.

It appears, to put it briefly, from Mr. Bennett's minute, that the difficulties connected with the maintenance and construction of public watering places are chiefly the fault of the officers of the Mines Department. There are no doubt faults in this as in other Departments, but I submit that this is not a reply to the ministerial minute, or my memorandum prepared for the Secretary for Mines, and which I regret to see was forwarded to the Works Department unsigned, but which I desire to acknowledge and affirm as an impartial statement.

P.W.P.
87-2,536.

See papers *re* tone of minutes.

See paper comparative cost of hutting, with hutting papers.

See Muriel Tank case,
Seaville's Tank case,
Cobham Lake Tank case.
See Peri Springs Tank case,
Yentabangee "
Warramurtie "

The papers now annexed are a few of the cases referred to by the Commissioner for Roads; they are not selected, but are some of the more recent ones, and do not, I respectfully submit, bear out the contention of Mr. Bennett; the character of the minutes written by the Mines and Works officers will speak for themselves.

With reference to economy in construction I must refer to the cost of hutting as quoted by the Works Department, and the rates now being paid by this Department. With respect to the fencing I must refer to the Ivanhoe case.

With respect to the construction of tanks, reference may perhaps be allowed to the Dry Lake, Seaville's, Cobham Lake, and Copago Tanks. The first three new tanks, the latter an old one, but all four under water for the last fifteen months; to the Paroo Tanks, three of which are sunk within easy distance of water more permanent than they afford.

More professional training in construction of tanks is hardly, I contend, so much required as practical experience and absolute economy. Pastoral tenants construct scores of tanks for one by the Government, comparing favourably in most respects, at cheaper rates per cubic yard, and I fail to see why Government work should be paid so much in excess of private, and I venture to submit the opinion that contractors would not ask it if they were properly supervised and promptly paid.

It will be neither necessary nor desirable in my opinion to maintain such a staff as employed by the Commissioner for Roads; half a dozen active practical men, similar to Mr. Inspector Boulbee, with ample bush experience, who can use a level, will readily do all the work required, ensuring, I have every reason to believe, a marked reduction in prime outlay without interfering with efficiency (the result as shown with the hutting is in favour of this view).

The reflections upon the officers of this Department have been, I think, uncalled for and unjust.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

The Under Secretary for Mines.

APPENDIX A.

Extract from Mr. Overseer Tully's letter, Wilcannia, *re* fencing in his district.

See P.W.P., 87-1,314, with papers *re* fencing.

19 March, 1887.
Wire delivered anywhere within 100 miles of Wilcannia, £20 per ton. If a supply of the wire required was purchased privately it could be delivered here under £14 per ton; at least the stores offer to supply it at that price, and carriage is very low at present.

M. J. C. TULLY.

See P.W.P., 87-2,048, with papers *re* fencing.

Ferguson, Wilcannia, quotes by wire on 11th inst.:—Best brands, No. 8 steel wire, £13 5s. a ton in bond.

APPENDIX B.

Extract from Mr. Overseer Yeo's letter of 5th May, 1887, covering estimates for huts.

Their (the contractors') tenders would be ridiculous, as they inform me the huts would cost from £90 to £120 each; in fact they are very reluctant in giving any information to assist me, as they are afraid if they do it will be the means of cutting down the very high prices received for Government works.

J. YEO, Ivanhoe.

APPENDIX C.

COMPARATIVE statement, showing prices of tenders recommended for acceptance by the Works Department, and the prices at which this Department is doing the work.

Erection of Cottages.

District.	Works Tender.			Mines Prices.		
	£	s.	d.	£	s.	d.
Bourke ...	93	7	8	60	0	0
Cobar (a) ...	82	6	0	50	0	0

				Actual cost ...	30	11

Estimate reduced to £48 10s., at which price it was let.

*This estimate is now reduced to £38, and erection authorized and completed.

Some of these are let and completed by the Mines officers.

(a) 16 completed. (b) 3 completed. (c) 5 complete. (d) 1 complete for £47 10s. (e) 1 completed. (f) 3 completed for £38 10s.; 1 completed for £35 10s. (g) 1 completed.—12/12/87.

A list prepared up to date is with papers *re* cost of works.—J.W.B., 31/12/87.

APPENDIX D.

Fencing.

OVERSEERS have only been lately asked to furnish specifications and estimates for fencing in their districts, and replies have not yet been received from all.

The following have replied, and the price quoted is per mile complete:—

	£	s.	d.		
* Including gates; £54 without.					
Narrandera ...	59	11	0*		
Silverton ...	75	0	0		
Cobar ...	£38 to	45	0		
	according to distance from Cobar.				
Deniliquin ...	69	0	0		
Condobolin ...	39	19	0		
Wilcannia ...	{	52	0		
		40	0		
Information received since original was written.	{	Coonamble ...	47	10	0
		Ivanhoe ...	54	5	0
		Narrabri ...	61	14	0
		Coonabarabran ...	48	1	0

See also later list with papers *re* "cost" of works.

Faulty construction.—Horse-walk at Muriel Tank.

See papers *re* Muriel Tank.

For some reason inexplicable the Department of Works decided to erect the horse-walk and works on the upper side of the embankment.

The bottom of embankment is, so near as I remember, about 30 feet from edge of tank.

To raise the horse-walk a sufficient height it became necessary that a portion of it should extend into the tank, and load after load of spoil was tipped in until the tank was almost filled in (after being just excavated) without bringing the walk to the desired height. The tank was full of water when this work was done, and every load of spoil tipped in, melted like sugar, till the tank was half full or more of silt. 3,000* loads of earth were used to build up this horse-walk.

*Approximate.—The tank is in this condition now. The horse-walk after last flood subsided, and there was considerable amount of work in repairs.—J.W.B.

J.W.B.

Précis

Comparative cost of Fencing.

With papers *re* sub-letting contracts. Mr. Yeo's letters, 87-1,583 and 87-5,971. Mr. Low's letters, 87-6,083 and 87-4,999. Mr. Boulbee's letter, 86-5,782, with papers *re* fencing.

Mr. Yeo's letter, 87-5,788, with papers *re* fencing. Mr. Yeo's letter, 87-2,154. Mr. Low's report, 87-5,047, with papers *re* fluming. Mr. Boulbee's report, 86-5,442, with papers *re* One Tree Tank. Mr. Boulbee's report, 86-5,441, with papers *re* fencing.

See 87-34 and minutes with papers *re* troughing rails.

See 87-30 with papers *re* troughing rails, Boonoonoon.

Mr. A. P. Wood's minute, 87-2,321, with papers *re* Willandra Well. Mr. Boulbee's report, 86-5,781, also, with case *re* Willandra Well.

Mr. Boulbee's report, 86-5,687, with Ivanhoe Tank papers. Mr. Low's report, 87-4,960, with Ivanhoe Tank papers.

Mr. Keighran's report, 86-4,015, with papers *re* "Drains."

See Wooloondool Well papers.

See Cobham Lake Tank papers. See Scavil's Tank papers. See Tarella Tank papers.

See Peri Springs Tank papers. See Warramurtee Tank papers. See Yentabungee Tank papers.

See 86-2,849, 86-5,927, with above papers.

See 87-667, with papers *re* tarring inside of Service tank and troughs.

See 86-5,927, with papers *re* interference with officers.

See 87-1,228, with papers *re* fencing. Mr. Yeo's letter, 87-1,583, also Mr. Low's, 87-6,583, 6,586, 6,311, and 6,588, with papers *re* sub-letting contracts. See also fencing papers.

The papers (which are now with the Minister) show that at the Ivanhoe Tank the fencing was let in first instance to Bevan at £112 per mile. He sub-let to Elliot at a price not ascertained; Elliot sub-let again to Anderson at a price equal to about £52 per mile; he sublet again (the wiring of the fence) presumably; each of the four contractors expected to realise a profit out of the fencing.

The price of £112 per mile is about £60 per mile over station rates.

Fencing along the Booligal and Ivanhoe Road erected by the Works Department was in very many cases erected without straining posts, the wires being simply attached to the posts in strains extending to 160 yards, *i.e.*, for No. 4, and to tighten that length properly is impossible.

At Wooloondool the fence consists of six strains of barbed wire, an apparently very unnecessary expense; it is not well constructed, and cost, though not accurately ascertained, must be high.

Faulty construction.

The dwarf railing at Ivanhoe, Mt. Manara, Boonoonoon troughing, and in many other cases is too high to admit of small stock (*i.e.*, calves, &c.) drinking over or under it, and did not prevent sheep from getting into trough, and polluting the water.

Alterations were directed by the Hon. the Secretary for Mines, and the Commissioner for Roads asked in a minute if these alterations at the caprice of an overseer should not be prevented. Mr. Stillwell expressed a doubt as to whether there were any *bona fide* complaints. (See decision of Mossiel Bench of Magistrates.)

Willandra Well.—Mr. A. P. Wood's minute on 87-2,321 and Mr. Boulbee's report on same submitted for comparison.

Ulong and Ivanhoe Tanks Drains, see 86-5,855.

Tom's Lake Drains, see 86-5,491.

At Wooloondool and Dry Lake Wells no pipe has been placed in bore-hole, which is continually filling in and choking, necessitating constant baling to keep them clear—a source of continual trouble to the Department.

Cobham Lake, Dry Lake, Copago, and Scaville's Tanks. These have been under water for nearly two years.

Of four tanks on the Paroo River three are in neighbourhood of water more permanent than their own.

Private individuals are able to get work done at prices from 75 to 100 per cent. less than Government pays. See Mr. Tully's and Mr. Yeo's letters, now with Minister.

Interference with Officers.

Pulletop Tank papers, 87-1,128. Ch. Inspector's minute. Ulong tank (same papers).

General.

Troughing at Ivanhoe, Boonoonoon, Mount Manara coated with composition of tar, tallow, and pitch, which was most objectionable, and rendered water undrinkable by stock and human beings. (See Chief Inspector's minute.)

A skilled mechanic paid at rate of £6 per week for this work, which is part of caretaker's duty.

Tops of embankments lately dished by direction of this Department to prevent scour of embankments. Storm water is carried off in shoots at the four angles, and they are 1 foot in the chord and they are barely adequate. Mr. Stillwell, as an innovation, desired caretakers not to fix the shoots in position, but provided 2½-inch diameter india-rubber hose to act as syphon and carry off what four 1-foot shoots would hardly do.

Fencing upon Booligal Road has cost, so far as is ascertainable, £94, £105, £112 per mile.

Average fencing throughout the Colony should not exceed £50 per mile.

Erection

Erection of Cottages.

See list with papers *re* erection of cottages.

The tenders received by the Department of Works for erection of cottages averaged about £87 for each cottage throughout the Colony, the maximum price being £114.

The tenders were submitted to the Department of Mines for concurrence before committing the country to such an expenditure, and it was considered that by utilizing the caretakers' labour the cottages could be erected at a far less cost, and £50 was the amount named by the Chief Inspector as an average. This sum has not been exceeded by this Department.

In Ivanhoe District the Works tenders recommended for acceptance were £114 per cottage. This Department is prepared to erect in this same district at £53 each. (Papers with Minister.)

Engine Sheds.

See 87-4,712, 87-2,286, with papers *re* cost of works.

Several have been erected on the Booligal and Wilcannia Roads at £50 each, and later on at £30.

The shed about to be erected by this Department at Broilgan Creek tank will cost £9 7s.

In the Condobolin District Mr. Jones has offered to have them erected for £10 each.

Cottages are being erected by this Department in Silverton District at £50 each.

Extract from Telegram from Mr. Overseer Tully, 27 May, 1887.

87-2,286. Original, with papers referring to cost of works.

* * * * *
Fencing on Booligal Road, £94 per mile. Beefwood now going up, down to £52 per mile.
* * * * *

M. J. C. TULLY.

Attention is also called to the price quoted for fencing on the Booligal Road, which is nearly double the estimate considered ample by this Department.
H. GILLIAT.

Minute by Chief Inspector.

11 May, 1887.

Re Fencing at Public Watering Places.

Copy attached, original with papers *re* sub-letting contract.

* * * * *
This letter from Mr. Overseer Yeo shows the prices alleged to have been given by Mr. Stillwell for the erection of fencing at the Ivanhoe Tank.

First and original contract to Bevan, £112 per mile; Bevan sublet to R. Elliott, price not ascertained. Elliott sub-let again to Anderson; 30s. per 100 for getting posts, £18 per mile for erecting same; £5 per hundred for carting posts from Kajulijah to Ivanhoe, equal to about £52 per mile, to which may be added cost and carriage of wire from Hay, showing that from £35 to £40 per mile has been paid in the excessive prices given over and above a fair estimate, and about £60 per mile above the current station rates, which should not, I submit, be exceeded by this department.

NOTE—Anderson sublet the wiring of this fence at £9 per mile.

In

In submitting these particulars, I may state that from what I understand, the prices paid for fencing upon this road, and indeed at most of the P.W. places fenced by the Roads and Bridges Branch are greatly in excess of ordinary rates, but this is the only instance in which I have directed the overseer to endeavour to verify the statement.

I have, however, reports from Mr. Inspector Boulton and Mr. Overseer Keighran, and a declaration made by the late caretaker of the One Tree Tank, of a very undesirable and, I may say, unfortunate concession to some fencing contractors by allowing them to dispense with straining posts. I append extracts that bear very forcibly upon the existing state of things, and show the necessity of the Government making a stand against the exorbitant prices that the careless manner of accepting contracts have induced contractors now to stand out for.

See Mr. Low's report 87-4,909, with papers re subletting contracts. See Mr. Yeo's letter re cottages.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Sir,

Stock Office, Ivanhoe, 1 April, 1887.

87-1,583.

I beg to submit for your information the cost of fencing at the Ivanhoe Tank, which seems to me to be an extravagant price, taking into consideration the price station-owners get their fencing done for; of course I make allowance for the extra-sized posts, &c, required for Government fences. Mr. Bevan, the contractor for the fencing at the Ivanhoe Tank, told me that he was getting £112 per mile; he also told me that he had sublet the contract to Mr. R. Elliot, but to find wire himself (Bevan). Elliot afterwards sublet the work to a man called Anderson at 30s. per 100 for cutting and splitting posts, £18 per mile for putting up posts and wiring same, £5 per 100 for carting the posts from Kajulijah to Ivanhoe. Anderson's sub-contract should cost about £52 per mile. The cost of wire delivered at Ivanhoe should not exceed £30 per mile. I consider this will show that £30 per mile is being paid in excess of what it could be done for.

Original, with papers, re subletting contracts.

I have not been able to ascertain the price that Elliot was to receive from Bevan. Anderson told me himself the price he was to get for his sub-contract, which I have already stated.

In forwarding this information I trust I am not exceeding my duty, as I considered you would wish to know.

I omitted to mention that Anderson sublet a portion of the wiring to a man at 60s. per mile.

JAS. YEO.

Harry Gilliat, Esq., Chief Inspector, P.W.P., Sydney.

Extract from report on Wooloondool Well, by Inspector Boulton.

16 November, 1886.

P.W.P.,

The T.L. is newly fenced with split pine posts and six wires of barbed wire, in my opinion a most useless expenditure, the plain wire being ample for all requirements. The wire is of a poor description, named, I think, the "Fish Barbed Wire"; it is impossible to make a really satisfactory splice in this kind; it is fastened to the posts by staples, and in most cases the post is split an inch up from each staple, in some cases the staple is bent over and broken, and there is a very poor strain on the wire. The wire is flat iron galvanized, with a small core, and barbs cut.

86-5,441. Original with fencing papers.

J. W. BOULTBEE.

Sir,

Stock Office, Ivanhoe, 16 May, 1887.

P.W.P.,

I herewith beg to apply to you for instructions re taking delivery of fencing at P.W. Places from Department of Works, whether I must object to take delivery of a fence which has no straining post provided, as in the case of the fence in course of construction at Ivanhoe, where the wires are run out to its full length, and strained to the post to which it might reach.

87-2,154. Original with fencing papers.

I am of opinion that this is not a good way to strain wires in a fence, consequently I don't care to take delivery of a fence erected in this way unless instructed to do so.

JAMES YEO.

Mr. Boulton,—Have you ever seen a fence constructed on this principle, except in Mr. Road-Superintendent Stillwell's experiment at the One Tree?—H.G., 23/5/87.

I have never seen fences erected in this manner outside of Mr. Stillwell's district, and I beg in the most unqualified terms to condemn it, since I cannot see how it is possible to strain the wire properly without straining posts. The fence at One Tree is a strong case in point. It was finished by contractors, and, I presume, passed by Mr. Stillwell, for within a few weeks after its completion the caretaker was reported by Mr. Stillwell for having the wires all slack, and some very harsh comments made upon the Mines officers.—J. W. BOULTBEE.

See 86-5,802, with papers re One Tree Tank.

As the future direction of these works is at present under consideration, Mr. Yeo may perhaps be instructed to take over the fencing at Ivanhoe, stating in his receipt the objections he takes to the character of the fence.—HARRY GILLIAT. The Under Secretary.

Submitted.—H.W., 26/5/87. Approved.—F.A., 27/5/87. Mr. Yeo.—H.G., B.C., 28/5/87.

Contents noted.—J. YEO, 4/6/87. Mr. Inspector Low.—H.G., B.C., 22/8/87.

I have inspected this fence, and can strongly bear out Mr. Inspector Boulton's condemnation of this style of fencing. I have seen no instance where such a style of fencing was done by a practical man, neither do I expect to; it is simply absurd to attempt to strain a wire fence in the manner tried here; some of the posts are already splitting from wires being strained to them, being split pine, and many are much pulled over.—J. Low, 30/8/87.

Extract

Extract from Mr. Low's report on Ivanhoe Tank.

27 September, 1887.

P.W.P.,
87-5,047.
Original with
fencing papers.

The cause of the posts splitting is that they are split pine posts, which, unless much stronger, and at least $4\frac{1}{2}$ -in., are liable to commence splitting by the insertion of pin to hold wire while fastening it. When one wire is strained on them—*i.e.*, one wire round one half of post—other wire round other half causes a strain which in some instances here the posts have been unequal to, and are splitting.

JOHN LOW.

Sir,

Stock Office, Moss Vale, 1 November, 1887.

P.W.P.,
87-5,788.
Original and
sketch with
fencing papers.

Before leaving Ivanhoe I omitted to point out what I considered a defect in the fence erected round the T.L. at the Ivanhoe Government Tank, *viz.*, the way in which the wire is strained to the post; the greater quantity of the posts are split pine posts 8 x 4, with no straining posts, except at corners and angles in fence. The wire is run out to its full length, then strained to any post which it may reach; but instead of the wire going round the whole of the post it only goes round half, and the next wire goes round the other half, consequently, when the wire is strained from both sides it in many cases splits the posts in half. I beg to enclose a rough sketch which may possibly explain more fully what I mean.

J. YEO.

Minute by Mr. A. P. Wood.

Reply to a letter asking when the Willandra Well will be ready for transfer to this Depôt.

papers.
As to cost -
£1,087 6s. 8d.
Papers, 87-5,636.

I went below and inspected the shaft and workings, and I would strongly recommend that this shaft should be abandoned, and a new one sunk alongside. The state of the shaft below, even if temporarily put right, cannot ever admit of a permanent or satisfactory job being made. The shaft for about 75 ft. is plumb and true; below this the plumb line is gradually left, and at 102 ft. (the bottom) the shaft is over 6 in. out. A bore has been put down, and the pipe is immediately under the plumb line. There is about 20 ft. of drift, an iron box is in, and this and the pipe and 25 ft. of timber will have to be removed to bring the shaft plumb. An immense amount of drift has come in, and there must be a large cavity. The man in charge has made a chamber below to enable them to raise pipe and box. The box he may raise, but he has no appliances for raising the pipe out of wet drift. If he succeeds in raising these and straightens the shaft, I am afraid, from the amount of drift that comes in, of the cavity behind the slabs; and that it will only be, at the best, a patched-up job, and very liable to go wrong and set out of plumb again.

I did not like the look of the shaft at all. He has some very strong stout box-beams that bend and split in all directions. I never saw any good done by trying to patch or straighten a drift-well if the (box) shaft got out of plumb. A new shaft would be cheaper in the long run.

Low's report,
86/4,900, also
with Ivanhoe
Tank papers.

There is one drain that for a considerable distance runs up hill, and a cutting 3 feet deep is required to run the water down. Mr. Stillwell had a man at this, but it is now left for our caretaker to do. I instructed him not to touch it until he has everything else in good order. The place is fully half-mile from the tank, and working there he can have no check upon travellers.

J. W. BOULTBEE.

Sir,

Whitton, 23 December, 1886.

P.W.P.,
86/5,964.
Original and
sketch with
draining papers.

Referring to the enclosed papers relative to the drainage at Hulong Tank and the complaints of Mr. Road-Superintendent Stillwell against the caretaker that he is not giving the drains proper attention, I now have the honor to submit a rough plan of drains which I inspected, and from my own observation, and from the statements of both Mr. Elworthy and the caretaker, who have seen the drains full of water, I have no hesitation in saying they have been very badly and carelessly laid out, and that our caretaker, who has I think honestly done his best to remedy the very glaring defects, is being blamed for neglecting other portions of his work to do what he never should have been called upon to do, namely, grade and level the drains. The inlet flume was lowered 9 inches before the water would run into the tank at all. The main and side drains have been lowered a long distance up, and two of the drains are I submit quite useless. The drains at Hulong are not an isolated case. At the Ivanhoe tank the levels are imperfect, and water expected to run up hill.

J. W. BOULTBEE.

Extract from Mr. Keighran's report on Tom's Lake Tank, 12 August, 1886.

* * * * *

P.W.P.,
86/4,015.
Original with
draining papers.

The main drain, which is over 1 mile in length, was in my opinion badly laid out at first, the levels not properly taken, as at its head there is a swamp where an embankment of earth had to be formed to force the water from there into the drain, which embankment has given way; the consequence is that the drains render no assistance in conveying water from the plain into the tanks. Besides this, the drain is on the

the main route, where travelling stock has to pass along, and is constantly getting damaged by being trampled in, and again at its junction near the tank teams, coaches, &c., have to cross over, and get bogged.

At the time of my inspection it was a perfect quagmire and a hindrance to the travelling public. Two culverts are required, otherwise the drains are useless.

J. A. KEIGHRAN.

Extract from Mr. A. W. Stillwell's report on Ivanhoe Tank, dated 22/12/87.

The caretaker was lowering the dwarf fence rail of the troughing to 7 inches from bearer. This will prevent sheep watering on that side, practically curtailing the length of troughing one half for sheep. He said it was by the Mines overseer's instructions, and to facilitate watering of cattle, the rail having been found too high for them. It is of the same height as at the troughing in the district, and the raising of ground level along that side would have answered the purpose if there were any bona fide complaints, which I doubt.

P.W.P., 87-34. Original, with troughing rail papers. See also 87-30, with troughing rail papers. Boonona case.—Pub. Works, 86-11,803 (30-12).

Mr. Wood,—Should not alteration of this sort, at the caprice of the overseer, be prevented.—W.C.B., 24/12/86. Yes; I do not think, as we are responsible for these works, that this should have been done. The same levels suit in other cases, and should do in this case.—A.P.W., 24/12/86. The Under-Secretary for Mines.—J.R., B.C., 31/12/86.

The action was taken under the authority of the Secretary for Mines and by statutory power conferred by the Public Watering Places Act—the only statute empowering construction, the administration of which is vested in him.—H.G.

Minute by Chief Inspector re alleged interference with Mr. Overseer Elworthy's instructions to the tenant at Pulletop Tank.

In this case the alleged interference by Mr. Stillwell is denied by the Department of Public Works, and here, in the ordinary course of business, the question would have dropped. But the minute of Mr. A. P. Wood, concurred in by the Commissioner and Engineer for Roads and Bridges, contains what I venture to think such an entirely unauthorized criticism upon the administration of the Public Watering Places, as unjust as it is incorrect, that I consider myself justified in asking that the attention of the Hon. the Secretary for Mines may be specially drawn to all the papers. I am in entire agreement with the officers of the Department of Public Works with respect to the serious disadvantages of a divided control, and reference to our records will show that the attention of the heads of both Departments have been directed by me on several occasions to its unfortunate results.

P.W.P., 87-2,849. Original, with papers, re interference with officers, papers 86-5,852, 5,707, 5,027; 87-137, 417, 741, 1,123.

The administration of the Public Watering Places Act, which is the only Act that I am aware of, gives legal powers for the construction of works of this nature, is vested in the Hon. the Secretary for Mines, and I may perhaps respectfully submit for his consideration that some permanent arrangement of the duties of the two Departments is probably desirable.

The statements of Mr. Wood can be readily refuted, were he entitled to a reply; but, in the interests of the Public Service and of the special duties allotted to me, I consider any reply from me unnecessary—unless specially directed to do so.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

The Under Secretary for Mines.

Minute of the Chief Inspector.
Tarring inside of Troughing.
12 February, 1887.

On Mr. Inspector Boulton's return from his last inspection, he reported an objectionable composition of pitch, tar, and tallow, was being used for coating a portion of the inside of service tank and troughing at some of the watering places, by a man in the service of the Works Department, acting under instructions from the Local Road Superintendent. Repairs of this nature are carried out by our own caretakers, who are paid for the service, and the employment of a skilled mechanic for the purpose appears unnecessary.

P.W.P., 87-667. Original, with papers re tarring inside of troughs, &c., Ivanhoe Tank.

Objection has been taken to the use of the composition referred to (vide Mr. Boulton's memo.), and I need hardly point out that it is apparently even more unsuitable when the water may, at any time, be required in considerable quantities for domestic purposes as at the Ivanhoe Tank.

Our own officers are instructed to use boiled coal-tar and pitch for coating service tank and joints of troughing, when required. This forms a hard glaze, and has, so far, been found suitable.

With above papers.

I am in doubt whether Mr. Wood is correct in assuming that the Department of Public Works is responsible for repairs until they are authorized by the Hon. the Secretary for Mines; and I am equally in doubt whether it is desirable for that Department to take such steps as it may deem necessary to protect or render the works more efficient without reference to the Department responsible for their maintenance and control, under the Act. The effect of a divided control can only tend to confusion and lowering the standard of efficiency, as well as cause friction between the Departments; and any steps taken, I would respectfully suggest for the consideration of the Hon. the Secretary for Mines, would preferably be in the direction of relieving the Works Department entirely of all repairs in future.

H. GILLIAT.

Mr. Inspector Boulton states:—A composition of tar, tallow, and pitch, and the water was, after standing a short time, most objectionable and undrinkable, bearing a greasy prismatic scum on top.

Mr. Overseer Yeo states:—It melts and forms a scum on top of the water which prevents stock from drinking. Boonoma and Mount Manara troughing had already been done. There have been several complaints about it.

If the use of the composition renders the water unfit for the purpose for which it is conserved, it is not clear how the use of it can be said to render the works more efficient. It is very desirable, in the public interest, that when the works have been taken over by this Department they should not be interfered with by the officers of another Department; and it is to be hoped the question of construction, control, &c., will be dealt with at an early date.—H.W., 16/2/87.

Submitted. Approved.—F.A., 21/2/87.

Size of shed 12 × 12. The same shed is about to be erected in Forbes district for £9. In Condobolin district offers are made to erect shed for £10. * * * *

H. GILLIAT, 30/5/87. The Under Secretary.

Submitted for the information of Minister.—H.W., 30/5/87. Seen.—F.A., 30/5/87.

Extract.

Sir,

Whitton, 21 December, 1886.

86-5,927.
Original, with
papers relative
to interference
by Works Officer
at Pulletop.

Referring to my instructions to visit Hulong Tank, I now have the honor to inform you that I did so, and found that Mr. Road-Superintendent Stillwell, after Mr. Overseer Elworthy had instructed the caretaker to coat the boiler, &c., in accordance with your circular, 3rd September last, had issued fresh orders to the caretaker to paint it red, and to apply to Mr. Elworthy for paint.

Mr. Elworthy instructed the caretaker to prepare the newly dished top of embankments for the reception of a shoot for carrying off the storm-water, material for which Mr. Elworthy was supplying. These instructions were also countermanded; and a length of India-rubber hose, 2½ inches in diameter, was supplied by Mr. Stillwell to carry off all the storm-water from the four embankments. I need hardly say how totally inadequate this is, and must, at the same time, protest against such a useless waste of money, and such a childish innovation, that in the eyes of the travelling public so reflects upon the Public Watering Places officers. I wish to bring this immediately and urgently before you, as I understand Mr. Stillwell is about supplying other tanks with the same. A shoot of less than 1 foot across is perfectly useless, and is required in each angle. Actual experience, both at Hulong and Pulletop, have proved the folly of the 2½-inch hose, and caretakers have now definite instructions to proceed with the shoots so soon as material arrives.

J. W. BOULTBEE.

V.

MINUTE of Minister for Mines, and Extract from Bourke paper, *re* Centralistic Bureaucracy.

With P.W.P., 86-5,102 Mr. Quin, late member for Wentworth, told me to day of a case where a small piece of fencing at a tank requiring renewal at a cost of £3 cost £50 to have it inspected by the district officers of the works, to see if the local officers had not made a mistake

The report stated yes, the fences must be removed as recommended.

F.A., 1/6/87.

Extract from *Central Australian*, Bourke, Saturday, 23 October, 1886.

Centralistic Bureaucracy.

P.W.P.,
86-5,102

To show the evils of centralizing all authority in Sydney, we quote a couple of glaring instances that have recently come to our knowledge. Some time ago the lessees of country adjoining a Government tank

tank submitted to the Public Watering Places Branch of the Mines Department a plan for the modification of one of the fences. The proposed alteration would have cost exactly £3, for which sum the caretaker was fully prepared to undertake the work. Red-tape routine, however, and Sydney bureaucracy demanded an official inspection by an inspector; even one inspection was not sufficient and two had to be made.

The travelling expenses of this inspector amounted to over £30, so what it really cost to supervise the outlay of this £3 is almost beyond calculation.

As the above appeared in a Bourke paper, will Mr. Mallon be good enough to report to what it refers.—H.G., B.C., 28 Oct., 1886. Mr. Overseer Mallon, Bourke. I am not aware to what the paragraph refers.—JAS. MALLON, Bourke, 2/11/86.

Memorandum from *Central Australian*, Bourke, 30 Oct., 1886. to Jas. Mallon, Esq., Bourke. Dear Sir,—*Re* article in *Central Australian* headed "Centralistic Bureaucracy," the statements made therein I believe to be perfectly correct, and refer to this Colony. Beyond this I do not feel inclined to go at present.—J. L. PARSONS, Editor.

I have ascertained that no such action has occurred in this Department, and am informed it refers to a tank at Silverton and the officer belonged to the Department of Public Works.—H.G., 10 Nov., 1886. The Under Secretary for Mines. Seen.—H.W., 24/11/86.

It has since been ascertained from Mr. Quin, who furnished the information to the Minister, that this refers to the Warramurtee Tank. The recommendation of an alteration to some fencing at a cost of £3, made by Mr. Tully. This was referred to Works Department for action, and the expense referred to was presumably incurred in effecting and supervising the alteration.—J.W.B., 20/12/87.

VI.

LETTER from Mr. Earngey.

Envelope addressed H. Gilliat, Esq., Inspector of Public Watering Places, Mines Department, Sydney.

Dear Sir,

Mangrove Creek, 13 November, 1887.

Concerning the Roads Department's management of tanks and wells, I could show that in Copy of the Albert District the most criminal management existed, and the embezzlements by the officers in P.W.P., charge there up to 1883 were more daring and formidable than ever happened to any public department 87-6,084. in the history of the Colony. The officer, who was a particular favorite of Mr. Bennett, never explored for best sites; the publican or the coachman invariably picked out the well and tank sites, consequently each picked to suit individual interest, and seldom or ever were the measurements according to specification. The tank, say, was to be 18 feet deep; well, since there were no sections of the work, the contractors heaped the material all over the surface previous to forming embankments; consequently, by only going 15 feet deep the tank was well made to appear 18 feet deep. But the worst features are the atrocious sites, endorsed too by inspecting officers, who do not leave the coach, and remain satisfied that coachy knows more about it than they, and coachy's opinion is endorsed by the publican, who joins in chorus with coachman, singing, splendid site, beautiful catchment; some of their beautiful catchments have been on the summit of high ground. The officer whom I allude to, in 1882, out of 100 engagements there were sixty-five embezzlements; and in 1883, out of twenty-two engagements there were nineteen embezzlements. The officer had trial shafts 18 feet deep at 5s. per foot, according to vouchers, sunk all over the country, and was accordingly looked upon as a very energetic and painstaking officer; one shaft in perhaps twenty was sunk, but not more; he pocketed those items to pay hotel expenses. This officer, although he had a fidelity guarantee for £1,000 in the Victoria Life Assurance Society, the Commissioner for Roads dared not close on it, knowing that the Company would prosecute, and the Roads Department consequently would be exposed.

There have been dozens of officers guilty of fraud, and not one (with the exception of one only) has been prosecuted. Mr. Bennett cannot entertain the veriest reflection upon his Department; accordingly everything is hushed up. The non-passing of the Local Government Bill is terribly annoying him, as this hushing up business is multiplying, and he is impotent to stop irregularities; he looks to the Bill to do so.

I can give you any amount of such management if you wish.

Yours, &c.,
GEORGE EARNGEY.

This letter was received by me to-day. I am not acquainted with the writer, who addresses me, I assume from the envelope, officially.—H.G., 15/11/87. The Under Secretary. Submitted as to whether any action should be taken upon it.—H.W., 16/11/87. The writer should be called upon by the Commission appointed to make inquiry into such matters to give evidence, and this letter should be placed before the Commission as soon as they are ready to commence the work of inquiry.—F.A., 17/11/87. Should the letter be acknowledged and the writer informed as to what action has been taken on it?—J.R., 17/11/87. In ordinary courtesy, this course might be taken.—H.G., 17/11/87. The Under Secretary. Approved.—H.W., 18/11/87. Mr. Earngey informed, 21/11/87.

VII.

Re sub-letting Contracts ; refers also to faulty construction of fencing.

P.W.P.,
87-6,585.
Original with
papers re fencing

Extract from Mr. Low's report on 26-mile Tank, 26th November, 1887.
The drains here in first instance were let at 4s. 6d. per chain, and afterwards sub-let at 3s. 6d. per chain to man who did the work. These are quite equal to drains at Ivanhoe Tank.

J. LOW.

NOTE:—See Mr. Boulbec's report Ivanhoe Tank, 86-5,587, with Ivanhoe Tank papers recost of drains.

P.W.P.,
87-6,586.
Original with
papers re fencing

Extract from Mr. Inspector Low's report on Mount Manara Tank, 24th November, 1887.
Mr. Hay, Mount Manara Station, contracted to excavate tank at 1s. 4½d. He sub-let to Fred. Hardie, who did the work at 1s. per cubic yard.

J. LOW.

Sir,

Stock Office, Ivanhoe, 1st April, 1887.

P.W.P.,
87-1,583.

I beg to submit for your information the cost of fencing at the Ivanhoe Tank, which seems to me to be an extravagant price, taking into consideration the price station owners get their fencing done for. Of course, I make an allowance for the extra size posts, &c., required for Government fences. Mr. Bevan, the contractor for the fencing at the Ivanhoe Tank, told me that he was getting £112 per mile, he also told me that he had sub-let the contract to Mr. R. Elliott but to find wire himself (Bevan). Elliott afterwards sub-let the work to a man called Anderson at 30s. per 100 for cutting and splitting posts, £18 per mile for putting up posts and wiring same, £5 per 100 for carting the posts from Kagulijah to Ivanhoe. Anderson's sub-contract should cost about £52.

The cost of the wire delivered at Ivanhoe should not exceed £30 per mile. I consider this will show that £30 per mile is being paid in excess to what it could be done for.

I have not been able to ascertain the price that Elliott was to receive from Bevan.

Anderson told me himself the price he was to get for his sub-contract, which I have already stated.

In forwarding this information I trust I am not exceeding my duty, as I considered you would wish to know.

I omitted to mention that Anderson sub-let a portion of the wiring to a man at 60s. per mile.

I have, &c.,

JAMES YEO,

Overseer, Public Watering Places.

Harry Gilliat, Esq., Chief Inspector, Public Watering Places, Sydney.

Stock Inspector Yeo, late overseer at Ivanhoe, statement re sub-letting of fencing at Ivanhoe Tank and bad quality of said fence.—S.B., 87-29.

Sir,

Stock Office, Moss Vale, 11 November, 1887.

P.W.P.,
87-5,971.

Referring to your letter dated 2nd inst., re fencing at the Ivanhoe Tank for report, I herewith beg to submit the required information which I obtained personally while in charge of the Ivanhoe District. In the first instance I might mention that the contractor, Mr. Bevan, informed me that he did not tender for this work, but as he had done other fences along the Booligal and Wilcannia Road, Mr. Stillwell let him this fence at £112 per mile. Mr. Bevan then sub-let the fencing to R. Elliott (but I was unable to ascertain the price), but to find wire himself (Bevan). Elliott then sub-let it to a man called Charles Anderson at 30s. per 100 for cutting and splitting posts, £5 per 100 for carting posts from Kagulijah to Ivanhoe (a distance of 36 miles), £18 per mile for putting up posts and wiring same. I consider Anderson's sub-contract should not cost more than £52. The cost of the wire delivered at Ivanhoe should not be more than £20 per mile, consequently the fence at the above-named prices would cost £72 per mile, which shows that the original contractor (Bevan) obtained £40 per mile for doing nothing; and notwithstanding this very high price paid I consider, from my own experience as well as other practical men in the Ivanhoe District, that this fence is not erected in a practicable manner, there being no straining posts only at the corners and angles in fence, the posts are pine, and a great portion of them are split 8 × 4. The wire is drawn out at its full length, and in a great many instances it reaches a split post and the consequence is that when the wire is strained to those posts it simply splits them through the centre where they have been bored as stated in my letter of the 1st instant.

I might mention that I have not seen the specifications, but of course presume the work has been done according to specifications supplied by Mr. Assistant-Engineer Stillwell.

I have, &c.,

JAMES YEO,

Ex-Overseer, Public Watering Places,

Ivanhoe District.

Sir,

Department of Mines, Public Watering Places, Ivanhoe, 11 November, 1887.

P.W.P.,
87 6,08 .

In answer to your telegram of 10th inst. re sub-letting of Government work or contracts, I have the honor to report that the only case upon which I can as yet get any definite information is the erection of fence on Public Watering Place, Ivanhoe, which in first instance was let to one Bevan at either £116 or £120 per mile; this was sub-let to Elliott who afterwards sub-let to one Anderson at the following rates:—30s. per 100 splitting, 100s. per 100 carting, and £18 per mile erecting; the panels are 10 feet, which would allow the following per mile:—

	£	s.	d.
Splitting posts, 530 at 30s.	7	19	0
Carting „ 530 at 100s.	26	10	0
Erecting per mile	18	0	0
Wire per mile	30	0	0

£82 9 0

The allowance for wire is amply sufficient for any season, which would allow of a net profit of at least £33 11s. per mile from first contract.

I shall endeavour to find out if any others have occurred, but I can place little reliance on outside information. The contractors under the Works Department evince the strongest dislike to giving any information as to prices and specifications.

I am writing Mr. Webb, of Kilfera, who I hear is in Melbourne, to see if he can give any information re Willandra Well, and shall forward same to you as well as any further information I can glean.

I have, &c.,

JOHN LOW,
Inspector of Public Watering Places.

Sir, Department of Mines, Public Watering Places, Ivanhoe, 23 September, 1887.

I have the honor to acknowledge receipt of yours of 15th instant, re furnishing estimate of cost in items when submitting recommendations for work to be done at public watering places, which shall have my attention.

P.W.P.,
87-4,999.

I may here add that the value of work by me are much lower, and leave a great margin to the rates I can get parties willing to perform any work for, and when they are spoken to by me on the subject simply refer to the previous rates paid for Government work, and are unwilling on their part to tender at lower rates in case they should be blamed by others for reducing the former high rates. In support of this, instances have come under my notice where a Government contract has been sub-let as often as three times ere it got to the party that actually did the work.

I have, &c.,

JOHN LOW,

The Chief Inspector, Public Watering Places, Sydney.

Inspector, Public Watering Places.

Submitted for the information of the Honorable the Secretary for Mines as an illustration of the evils I have called attention to.—H.G., 30/9/87. The Under Secretary. Submitted.—H.W., 5/10/87. Seen.—F.A., 12/10/87. Request Mr. Inspector Low to report all the cases of which he is aware Government work being sub-let, giving the fullest particulars at his command. Urgent.—H.G., 8/11/87. Wire sent, 10/11/87.

Extract from 87/5,614—Report A1 for 3rd October, 1887, by Mr. Inspector Boulton, on the Hulong Tank.

Narrandera District, 24 October, 1887.

The fence was let, so I understand, to a man named Hackett for £52 per mile; he has sub-let, but at what price I was unable to ascertain.

P.W.P.,
87-6,065.

J. W. BOULTBEE.

See following paper, 87-3,261, sub-contract.

Extract from Mr. Inspector Low's report on Hulong Tank, 9th July, 1887.

The price of £700 for fencing, Mount Elliot, Pulletop, and this appears also very high, as a sub-contract, which I saw, has been let for splitting, erecting, boring, and wiring at £16 10s. per mile. This does not include large posts, rails, and gates.

P.W.P.,
87-3,261.
Original, with
papers re
fencing.

J. LOW.

Sir, Department of Mines, Public Watering Places, Ivanhoe, 12 November, 1887.

I have the honor to report that Mr. G. Williamson, Ivanhoe, informs me that contract for excavating 12-mile tank was, by Works Department, let to Burton Brothers, Balranald, at 2s. 6d. per cubic yard, who afterwards sub-let to Ford Brothers, tank-sinkers in this district, at 1s. 3d. per yard, who performed contract and made money at it.

P.W.P.,
87-6,099.

I have, &c.,

JOHN LOW,

The Chief Inspector, Public Watering Places, Sydney.

Inspector, Public Watering Places.

Memorandum.—Mr. G. W. Townsend, C.E., informs me that he was present on the 70-mile track, Booligal to Wilcannia, at the time when Burton Brothers obtained the contract for the construction of certain tanks upon that road at the rate of 2s. 6d. per cubic yard; they immediately sub-let it to Ford Brothers at about 1s. or 1s. 2d. per cubic yard.

P.W.P.,
87-6,068.

Mr. Townsend authorized me, in the presence of Mr. H. G. McKinney, C.E., to call upon him, if necessary, to verify this statement.—H.G., 11 Nov., 1887.

VIII.

Wooloondool Well.

Telegram from Mr. Overseer Keghran to The Chief Inspector of Public Watering Places.

Hay, 31 March, 1886.

WOOLOONDOL well giving out; can be baled dry in one hour; requires deepening; 40,000 sheep approaching.

P.W.P.,
86-1,521.

J. A. KEIGHRAN.

This may perhaps be forwarded at once to the Commissioner and Engineer for Roads and Bridges.—H.G., 1/4/86. The Under Secretary for Mines. The Under Secretary for Public Works.—H.W., B.C., 1/4/86. Roads.—J.R., B.C., 3/4/86. Mr. Wood.—W.C.B., 7/4/86. Telegram sent to have well deepened at once, and full report sent. I doubt the statement.—A.P.W., 9/4/86.

Telegram from Mr. Road-Superintendent Stillwell to The Commissioner for Roads.

Hay, 10 April, 1886.

In reply to Mr. Wood, Wooloondool well, supply strong as ever; inexhaustible; reported by post yesterday.

A. W. STILLWELL.
Telegram

Telegram from Mr. Overseer Keighran to The Chief Inspector of Public Watering Places.

Hay, 2 April, 1887.

P.W.P.,
86-1,539.

Wooloondool Well now all right; particulars post.

JOHN A. KEIGHRAN.

In view of the former telegram sent to the Works Department this may perhaps be forwarded to the Commissioner and Engineer for Roads and Bridges.—H.G., 5/4/86. The Under Secretary for Mines. The Under Secretary for Public Works.—G.E.H. (for U.S.), B.C., 7/4/86. Roads.—J.R., B.C., 10/4/86. Mr. Wood.—W.C.B., 12/4/86. Mr. Keighran telegraphs this well "now" all right. It has never been wrong; there has been no occasion for any alarm, not even on account of the 40,000 approaching sheep.—A.P.W., 12/4/86. Papers herewith.—W.B.

Sir,

Hay, 3 April, 1886.

P.W.B.,
86-1,593.

Referring to your telegram of 1st April *re* Wooloondool Well, I have the honor to report that the well has been regularly baled in accordance with your instructions. The chief cause of the well giving out was that when bored for to get the supply of water there was no pipe left in the bore, consequently, with the constant baling, the bore gets choked up by the fine drift sand which is drawn up by the suction of the buckets.

I reported the matter to Mr. Road-Superintendent Stillwell, and he at once sent his man out, who went down and probed the bore with an iron rod, so that the well is now in working order. What is required is that the bottom of the shaft be cleaned out, fresh bored, and a pipe left in the bore, otherwise she will be constantly getting choked up with sand.

I have, &c,

JOHN A. KEIGHRAN,

Overseer of Tanks and Wells.

The Chief Inspector of Public Watering Places.

This may perhaps be forwarded for the consideration of the Commissioner and Engineer for Roads.—H.G., 13/4/86. The Under Secretary for Mines. Approved.—H.W., 14/4/86. The Under Secretary for Public Works.—H.W., B.C., 15/4/86. Roads.—J.R., B.C., 16/4/86. Mr. Wood.—W.B., 17/4/86. Mr. Stillwell reports that the supply was never stopped.—A.P.W., 22/4/86. This is another case in which a groundless complaint is made; so far from the supply being stopped as reported, there was very great difficulty in bailing it down to get at bore.—W.C.B., 22/4/86. Under Secretary.—P.W.O., B.C., 27/4/86. Under Secretary for Mines.—J.R., B.C., 27/4/86. Mr. Keighran will be good enough to furnish an explanation without delay.—H.G., B.C., 29/4/86.

I don't know what Mr. Road-Superintendent Stillwell means by a groundless report. All I can say is this, that I was present when the man was baling, and before he had worked one hour the buckets were coming up half-empty—then of course with iron buckets there would be a difficulty in baling it down for a man to get at the bore. But how would that answer with 40,000 sheep approaching that required water? It would never do to depend upon quarter or half-buckets water filling the service tank—why a body of sheep would drink it faster than it could be hauled up—therefore I considered it my duty to report the matter. Mr. Stillwell being a trained engineer his opinion must be taken before mine, consequently it will be better for me not to make any reports on these unfinished works.—J.A.K., 3/5/86. The Chief Inspector, P.W. Places, Sydney.

Wooloondool or 13-mile Well.

Sir,

Hay, 9 April, 1886.

P.W.P.,
86-1,873.

On 31st ultimo Mr. Keighran, the local Mines officer, reported that the supply at this well had failed, but it took three hours hard baling to lower water sufficiently to free the bore, which only took a few minutes, running an iron rod down, when the normal flow was at once restored, maintaining 17 feet of water in the well against the fastest baling.

The fencing in of T.L. here has been let to W. Richmond, but the work is suspended until a decision respecting the alteration of the surveyed area is come to by Mines Department. (See paper 86-448.)

I have, &c,

A. W. STILLWELL.

The Commissioner and Engineer for Roads.

Mr. Wood.—W.C.B., 12/4/86.

Mr. Keighran's telegram of the 31st ultimo stated that the well was giving out; that it could be baled dry in one hour; that it required deepening; and that 40,000 sheep were approaching. It is interesting to compare this telegram with Mr. Stillwell's report on the facts of the case, which proves that there was not the slightest ground for the sensational statements conveyed by the telegram. This is not the first incorrect report we have received on our works, and I think it would be very much better in the interests of both Departments if the complaints made in reference to these works were only sent on to this office when there were some grounds to base them on. There would then be very few received.—A.P.W., 12/4/86.

I recommend that this paper be sent on to Mines. Mr. Keighran's telegram received this morning herewith.—W.C.B., 12/4/86. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 14/4/86. Mr. Overseer Keighran for report.—H.G., B.C., 21/4/86.

P.W.P.,
86-2,103.

Extract from Report of Mr. Overseer J. A. Keighran of 5th April, 1886, on Wooloondool Well.

I would beg leave to recommend that the shaft of this well be deepened until a good or sufficient supply of water was obtained, the bottom of shaft to be well secured, and, if bored, a pipe left in, then there would be no fear of her giving out, as I am confident a large supply of water could be obtained by sinking the shaft a few feet deeper.

J. A. KEIGHRAN,

Overseer.

P.W.P.,
86-2,360.

As Mr. Overseer Keighran is a very old resident, I think his suggestion may be forwarded for the consideration of the Commissioner and Engineer for Roads.—H.G., 27/4/86. The Under Secretary for Mines.

Approved.—H.W., 30/4/86. The Under Secretary for Public Works.—H.W., B.C., 30/4/86. Roads.—J.R., B.C., 4/5/86. Mr. Wood, see me *re* this.—W.C.B., 4/5/86.

Mr.

Mr. Stillwell, in paper 86-536, forwarded to Mines on the 12th ultimo, states that 17 feet of water was maintained in well against fastest baling. What more can be required?—it is practically an unlimited supply. I shall be in the Hay district in a few days hence, and will report on this case; in the meantime, in the face of Mr. Stillwell's report, I cannot recommend any deepening of shaft.—A.P.W., 4/5/86.

Paper might now be sent on to Mines.—W.C.B., 5/5/86. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 10/5/86.

Minute by the Chief Inspector of Public Watering Places.

Department of Mines, Public Watering Places Branch, Sydney, 13 May, 1886.

P.W.P.,
86-2,360.

I beg to submit the annexed papers as one out of many instances of the unfortunate results of the control of the Public Watering Places resting between two Departments. In this case reports that flatly contradict are received from two local officers resident within 13 miles of the spot. From my personal knowledge of the character of the well at the time I took it over from the Public Works Department, I consider the evidence in favour of Mr. Keighran's statement; but I must take leave to point out that more interest appears to be taken in detecting the errors committed by either Department than in maintaining the works or promoting the best interests of the service. As it has been decided that all repairs should be effected by the Works Department, it is my duty to report any defects that are apparent to my local officers.

The attached correspondence shows what is unfortunately too frequently the result.

I would suggest that these papers may be brought to the notice of the Hon. the Secretary for Mines.

HARRY GILLIAT,

Chief Inspector, Public Watering Places.

This should await settlement of Mr. Keighran's case.—H.G.

IX.

Dry Lake Well.

Dry Lake Well.—Carrathool to Hillston Road.

Sir,

Hay, 25 July, 1885.

Tanks &
Wells,
85-2,008.

On the 21st instant I found all in fair working order here, but the service tank was only half full. The work is now in charge of the Mines, and their caretaker promised to fill the tank without delay; but it is evident there had been negligence.

If the well is not kept baled frequently the bore will choke again, as it did recently, entailing expense to free it.

There is surface water along the road now, so that there is no demand for the well water.

The joints of the lining of the tank require tightening up near the top, and I will send the repairer out to do it shortly.

I have, &c.,

The Commissioner for Roads and Bridges.

A. W. STILLWELL.

I recommend that this paper be transmitted to Department of Mines. The Under Secretary.—W.C.B., B.C., 28/7/85. Forward to Mines.—F.A.W., 29/7/85. The Under Secretary for Mines.—J.R., B.C., 29/7/85. Mr. Gilliat.—A.B., B.C., 31/7/85.

Mr. Keighran's attention should be called to the neglect here attributed to the caretaker, the orders are strict that the tank shall always be kept full, and with this and the other bored wells frequent baling is needed.—H. GILLIAT, 11/9/85.

Sir,

Department of Mines, Stock Branch, Sydney, 15 September, 1885.

I beg to draw your attention to the fact that it has been reported that the caretaker at Dry Lake Well has shown negligence in not keeping the supply tank full. The orders are strict that the tank shall be always kept full, and with this and the other bored wells frequent baling is needed. Be good enough to see that these matters are strictly attended to.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

Mr. Overseer Keighran, Hay.

It would, I think, be well to frame additional instructions to caretakers in charge of wells in regard to the care of the lifting appliances, and keeping the service tank full, and where, as in the present case, there was any doubt as to the quality of the water, the necessity for frequent baling. Please submit draft.—A.B., 14/9/85. Mr. Gilliat.—Instructions framed, 1st December, 1885.

Sir,

Dry Lake Well, Hay, 29 December, 1885.

P.W.P.,
86-88.

The service tank jointing has been repaired by Jones, the travelling mechanic, and is now tight; one of the well runners, which had become loose, has also been fixed, and the bore, which had become choked by negligence in baling by the Mines caretaker, again freed; the supply now being as strong as ever. All was left in perfect order by him on the 10th instant, and two or three days afterwards the caretaker let a bucket go down. He says the rope—a new one and quite sound—broke at the bucket shackle. If so, it must have been from overwinding or other negligence. The bucket was full and was of course much damaged. I have had an old damaged one lying in store here repaired and have sent it out to replace it. It will be sent in and, if possible, repaired.

The fencing in of lease area is proceeding, and should be finished in three weeks.

I have, &c.,

The Commissioner and Engineer for Roads and Bridges.

A. W. STILLWELL.

I

I recommend that this copy of report be sent to Mines. The Under Secretary.—W.C.B., B.C., 6/1/85. The Under Secretary for Mines.—J.R., B.C., 8/1/86. Mr. Stillwell's report implies negligence or incompetence on the part of the caretaker. Mr. Overseer Keighran for report.—H.G., B.C., 11/1/86.

I agree with Mr. Road-Superintendent Stillwell that this work was in good order on the 16th December, but cannot see how or why he (Mr. Stillwell) can say that the damage to the bucket by rope breaking was caused by negligence of caretaker. I came to the well some two hours after the accident occurred, and I reported it to Mr. Stillwell.—J.A.K., Overseer, 10/2/86. The Chief Inspector of Public Watering Places.

Is the caretaker in your opinion an attentive and reliable man, or has Mr. Stillwell any grounds, as far as you can judge, for considering him negligent? Even a Roads and Bridges caretaker may meet with an accident; but I wish to be kept informed by the local officers whether they are satisfied with the manner in which the caretakers perform their duty.—H.G., B.C., 11/2/86. Mr. Keighran:

P.W.P.,
86-730.

Sir,

Hay, 17 February, 1886.

Re Dry Lake Well. The caretaker at this watering place, William Egan, appears to be an attentive and careful man, no complaints having been made of inattention to his duties, therefore I cannot understand Mr. Road-Superintendent Stillwell reporting negligence or incompetence on the part of the Mines caretaker when anything goes wrong at any of the works. If a well gives out,—blame is attached to the caretaker; again, when a rope breaks,—“negligence on the part of the caretaker caused it.” The fact of the wells giving out is that there is not one public well in my district thoroughly sunk. Instead of the contractors being compelled to sink until the supply of water was obtained, they were allowed to bore them with no pipe left in the bore. What is the consequence? In a few months the bore chokes up, and the works are at a standstill; whereas if the shaft was properly sunk, and the bottom secured by a box, there would be no danger of choking. Although not a trained engineer, I have had for many years practical training in well-sinking and dam-making. There is no accounting for wire ropes breaking; they may be new and strong, but liable to snap at any moment on a whim; steel wire rope stands best.

I have, &c.,

JOHN A. KEIGHRAN,

Overseer, Tanks and Wells.

The Chief Inspector of Public Watering Places, Sydney.

Dry Lake Well.—Carrathool to Hillston Road.

P.W.P.,
86-5,417.

Sir,

Hay, 13 November, 1886.

I visited this well on the 11th instant; 9,000 sheep had just been watered, and the service tank was not half full. The caretaker's horse was not there, and consequently he could not bale. He said he should not have it in until the following day. I remained there two hours. No baling had been done for a fortnight, and the consequence will probably be that the bore will be found choked, which has on several occasions here been the result of neglect in baling.

The well is, I believe, leased to Cobb & Co., and their man was in charge.

All appurtenances were in good order so far as visible; the buckets I could not see.

I have, &c.,

A. W. STILLWELL.

The Commissioner and Engineer for Roads and Bridges.

Mr. Wood.—W.C.B., 15/11/86. Copy should be sent to Mines.—A.P.W., 15/11/86.
Yes. Under Secretary for transmission to Mines.—W.C.B., 15/11/86. The Under Secretary for Mines.—J.R., B.C., 17/11/86.

P.W.P.,
87-563.

Dear Sir,

Hay, 2 February, 1887.

We respectfully beg to draw your attention to the fact that the supply of water in Dry Lake Well, on the road from Carrathool to Gunbar, has given out in consequence of the bore-hole, from which the tube or pipe had been extracted, becoming choked. This has happened on previous occasions, and a supply of water again obtained by forcing a pole down the bore; but this has now failed, and we ask you to kindly take such steps as will put the water supply in the well past the chances of being periodically stopped through the want of a pipe in the bore.

We are, &c.,

ROBERTSON, WAGNER & Co.

A copy of this may perhaps be forwarded to the Department of Works.—H.G., 7/3/87. The Under Secretary. Submitted.—H.W., 8/3/87. Approved.—F.A., 9/3/87. Forward, 10/3/87. Not to be sent to Works Department.

87-661.

Copy of Extract from Mr. Overseer Keighran's Report (87-548) on Dry Lake Well.

January, 1887.

I would beg leave to recommend that a pipe or tube be placed in the bore-hole at once, or as soon as possible, as on several occasions the bore has got choked, and the well may give out at a time when most required by the travelling public for watering their stock.

The lessees say they will not hold themselves responsible for the water failing.

J. A. KEIGHRAN.

Can you obtain pipe of proper diameter in Hay? If not, forward diameter and length required, and I will submit for approval that you may have it tamped in to bore.—H.G., B.C., 16/2/87. Mr. Keighran.

Pipe of proper size or diameter could be obtained at the Roads Office, Hay, by asking or getting authority from the Works Department, Sydney. The well having again given out, I am afraid it will be a troublesome and costly job to put right.—JOHN A. KEIGHRAN, Overseer, Hay, 3/3/87. The Chief Inspector, P.W. Places.

Urgent.

Urgent. Your first report recommends that a pipe be placed in the bore-hole. Your last states that you are afraid it will be a troublesome and costly job. What has occurred since you first wrote to make you think so? Be good enough to furnish a careful report on this matter without delay, replying to my question as to length and diameter of pipe that will be required, what difficulties you anticipate. The tenants, of course, would furnish you with all assistance you might require.—H.G., B.C., 7/3/87. Mr. Overseer Keighran.

My reason for stating in my last report that I was afraid that the placing of a pipe in the bore-hole would be a troublesome and costly job, was in consequence of information obtained from the man who went down the well, he said that the bore-hole from having been probed so often, had enlarged to such an extent, that a man could nearly get into it at the top, and that the hole had not been bored straight, but slantways, consequently it would require a fresh hole bored for a pipe, and if that was done, the suction of the buckets coming up, would draw with them the fine drift sand from the old bore-hole, and fill up the bottom of the shaft.—JOHN A. KEIGHRAN, Overseer, 22/4/87. The Chief Inspector, P. W. Places.

A copy of this may perhaps be forwarded for the information of the Commissioner for Roads.—H.G., 4/5/87. The Under Secretary. Submitted.—H.W., 5/5/87. Approved.—F.A., 6/5/87. Inform Works Department.—H.G., 6/5/87.

Sir,

Hay, 7 March, 1887.

P.W.P.,
87-1,071.

Re Dry Lake Well. In consequence of the lessee's manager reporting that the well had given out a second time, within two months, I have the honor to make the following report:—Visited this watering place on the afternoon of the 4th instant, and found the service tank a little more than half full of water; asked the man in charge the reason of it not being kept filled, and he said the supply of water was not sufficient, and that he could bale the well dry in one hour. Mr. Road-Superintendent Stillwell arrived shortly afterwards, and I informed him of my business, viz., to test the supply of water. Then, in company with Mr. Stillwell, measured the depth of water in the shaft, and found that it was 20 ft. 6 in.; ordered the man to start baling, which he did, but it being late and the gear going wrong, only 13 buckets could be drawn. Upon measuring, found that the water had only reduced some 4 ft. 6 in., a very large quantity of fine sand came up in the buckets, which was with difficulty removed, and caused delay. The following morning at 7 o'clock commenced baling again, and continued for one hour, during which time 40 buckets were lifted, representing 1,000 gallons of water; we then measured the depth and found that the water had only been reduced 5 ft., leaving about 14 ft. 6 in. still in the shaft, which would take some considerable time to bale dry, as she appeared to be making water fast; the man wanting to make out that the bottom of the well must have blown up since his last baling. I have written a rather lengthy report on this matter to show that Messrs. Robertson and Wagner's manager's report was unfounded, and caused me a journey for nothing.

The man that the lessees have in charge of the well is not capable of fulfilling the work that is required of him (through old age), and I have given instructions to the manager that he must put a man on in his place at once.

NOTE.—This is not "Egan" previously referred to on 86-730.

I have, &c.,

The Chief Inspector of Public Watering Places.

JOHN A. KEIGHRAN,
Overseer.

Telegram from The Chief Inspector of Public Watering Places to Messrs. Robertson and Wagner, Hay.
9 March, 1887.

A COMPETENT man as caretaker must be sent at once to the Dry Lake Well. Mr. Keighran reports present one incapable.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Telegram from The Chief Inspector of Public Watering Places to Mr. Overseer Keighran, Hay.

9 March, 1887.

Re Dry Lake Well. Have wired Robertson and Wagner to send competent caretaker at once. If they delay doing so, report immediately.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Dry Lake Well.

Sir,

Hay, 7 March, 1887.

P.W.P.,
87-1,246.

The Mines Overseer having reported to me that the supply of water had failed at this well, and that the lessee had endeavoured in vain to make it good. When out there to arrange as to the fence alteration, I tested the supply in presence of Mines officer, and found it practically unlimited. No practical amount of baling being able to lower the depth of water below 15 feet, and the yield above that depth being at rate of 1,500 gallons an hour. Two hours baling was done.

The well had most evidently been neglected by the lessee, who has an incapable old man in charge, who does not raise water at all if he can help it. The service tank was nearly empty. It was solely owing to want of the most ordinary attention in baling that the bore had become temporarily obstructed.

I have, &c.,

The Commissioner and Engineer for Roads.

A. W. STILLWELL.

I forward this report of Mr. Stillwell in further reference to the character of the complaints made by the Mines officers.—W.C.B., 11/3/87. Under Secretary, B.C. Forward to Mines. The Under Secretary for Mines.—J.R., B.C., 14/3/87.

Report by tenant at Dry Lake Well for week ending Saturday, March 5, 1887.—

P.W.P.,
87-1,209.

Depth of water in tank, dam, or well—dry. Estimated rainfall for week—nil. Condition of feed on Reserve and neighbourhood—good.

Dated at Dry Lake Well, this 5th day of March, 1887.

JOSHUA PORTER,
Caretaker.
(*pro* ROBERTSON & WAGNER.)

This well again reported dry.—R.W.G., 14/3/87. Mr. Keighran's report, that this is not the case, is dated 7/3/87.—R.W.G., 14/3/87.

22 March, 1887.

MEMO.—I have the honor to acquaint you that the last weekly return G, dated 12th March, received from Dry Lake Well, again shows that watering place to be dry.

The same caretaker, Joshua Porter, signs this.

R. W. GEORGE,
Record Clerk of Public Watering Places.

The Chief Inspector of Public Watering Places.

Urgent. Inform the overseer by wire, and request him to inform me by wire if the tenants have failed to carry out his instructions with respect to sending competent caretaker.—H.G., 22/3/87.

Telegram from The Chief Inspector of Public Watering Places to Mr. Overseer Keighran, Hay.

Sydney, 22 March, 1887.

CARETAKER PORTER, Dry Lake Well, signs weekly report, and states well to be dry. Be good enough to inform me by wire if tenants have failed to carry out your instructions with respect to sending a competent caretaker to Dry Lake Well.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Telegram from Messrs. Robertson, Wagner, & Co., Hay, to The Chief Inspector of Public Watering Places, Sydney.

P.W.P.,
87-1,103.

Hay, 10 March, 1887.

CAPABLE man will be sent Dry Lake, Sunday.

ROBERTSON, WAGNER, & CO.

Resubmit with the overseer's reply.—H.G., 14/3/87.

Telegram from Overseer Keighran, Hay, to The Chief Inspector of Public Watering Places, Sydney.

P.W.P.,
87-1,402.

Hay, 23 March, 1887.

ROBERTSON & WAGNER have placed competent caretaker, F. Langshaw, at Dry Lake Well; 20 ft. water now in well.

J. A. KEIGHRAN,
Overseer.

P.W.P.,
87-2,322.

Sir, I have the honor to forward herewith a copy of an extract from Mr. Overseer Keighran's report upon the Dry Lake Well, for your information.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 17/5/87. Mr. Wood.—W.C.B., 17/5/87. Mr. Stillwell will be in office on Friday. This paper can then be submitted to him.—A.P.W., 18/5/87.

In consequence of complaints as to failure of supply at this well, in company with Mr. Keighran I tested the yield some two months ago. It was then found to be inexhaustible, and that the suspension of flow through bore was owing to neglect in baling. Mr. Keighran's statements are not based upon his own knowledge, but upon hearsay; but if the bore is enlarged as he reports, this rather proves the strength of the inflow than otherwise, and goes to show that a fresh bore is unnecessary.—A.W.S., 20/5/87.

Should be forwarded to Mines.—A.P.W., 27/5/87. Under Secretary for Mines.—J.R., B.C., 28/5/87.

This matter may perhaps be permitted to stand over until the question of construction and repairs is finally settled. The baling is always insisted upon; but I need hardly point out that the construction must be very faulty when such a useless waste of water and labour is required to keep the bore free.—H.G., 1/6/87. The Under Secretary for Mines.

Submitted.—H.W., 1/6/87. Approved.—F.A., 2/6/87. Mr. Keighran directed to insist upon regular baling by the lessees, and to report failure to do so.— , 1/6/87.

P.W.P.,
87-2,441.

Sir, Referring to paper S7-2,322 of the 1st June, I have the honor to report that my instructions to the lessees of the various wells under my inspectorate are that they are to be baled regularly; and I know for certain that either of the wells mentioned (Wooloondool and Dry Lake) can be baled dry in three hours' continuous baling.

The Chief Inspector, Public Watering Places.

J. A. KEIGHRAN.

X.

Willandra Well.

Extract from Mr. Inspector Gilliat's report upon the road from Balranald to Ivanhoe, 13th January, 1880.

On the road from Balranald to Ivanhoe the water supply is required chiefly for carriers and their teams, and the works do not need to be on so large a scale, or so close to each other, as upon roads more frequently used by travelling stock. I am of opinion that, if the proposed tank at Clare is completed, one other half-way from Clare to Ivanhoe will be sufficient. Remembering that the larger number of trial-shafts sunk for wells throughout the district have resulted in obtaining water either salt or brackish, I consider the works best adapted at present for the water supply to be tanks, and, judging by the numbers that have been constructed with private capital, my view appears to be confirmed by the pastoral tenant.

H. GILLIAT.

NOTE.—Two works have been constructed on this road between Clare and Ivanhoe—viz, Gunnarsmy and Willandra Wells—neither of which were recommended by this Department.—H.G., 1/12/87.

Sir,

Ivanhoe, 30 January, 1885.

I have the honor to transmit herewith the plan of a special lease around the Willandra Creek Government Well, containing 200 acres exclusive of reserved road situated in the parish of Whitumbah, county of Manara, and surveyed in compliance with instructions, No. 84-89, August 18, to Mr. Surveyor Conolly, and transferred to me on the 3rd September, 1884, numbered S. L. Well 84-2, upon reference to the plan it will be seen the works have been partially erected on the Kilfera Pastoral Company's portion No. 2, containing 125 acres, I presume it will now be necessary to resume a small area from that property and would suggest that the northern boundary of the special lease be continued easterly for 10 chains, then south 10 chains, and west 10 chains, to its eastern boundary, which would allow of sufficient access to the troughing.

P.W.P.,
86-933.

I have, &c.,

G. B. CARTER,

Licensed Surveyor.

The Surveyor-General.

Received, 16 February, 1885. Forwarded to Mr. District-Surveyor, R. M'Donald.—F. W. CONOLLY, Surveyor, Wentworth, 17 February, 1885.

Forwarded to the Surveyor-General. The instructions direct the measurement of areas of Dolmoreve, North Clare, and Willandra tanks, but Mr. Carter has only measured the last-mentioned; the instructions have therefore been detained. With reference to the encroachment of improvements on portion No. 2, I think it would be more advisable to move the cistern and tank, there appears to be room. The connection charged for appears to be unnecessary.—ROBERT M'DONALD, District Surveyor, Hay, 3/3/85.

It is submitted that these papers be forwarded for the information of the Department of Mines with tracing enclosed, which shows the position of portion measured, and the reserves in which it is situated, and for amendment of survey if considered desirable.—LEWIS (for the Surveyor-General), 19 February, 1885. The Under Secretary for Lands.

The action suggested may be taken. The Under Secretary for Mines.—R.H.D.

Parish of Whitumbah, county of Manara.—Tracing.

(Vide Appendix A.)

Willandra Well.

Sydney, 14 March, 1886.

In this case it appears that a portion of the head works of the Willandra Well have been placed on improvement purchase No. 2, of the Kilfera Pastoral Company.

P.W.P.,
86-981.

Mr. Licensed-Surveyor Carter recommends the resumption of a certain part of the improvement purchase, while Mr. District-Surveyor M'Donald considers it would be more advisable to remove the cistern, that is, service tank and troughing.

Mr. Carter's view appears to me the least expensive and most easily carried out, but I would suggest that the papers may be forwarded in the first instance, for the information and opinion of the Commissioner and Engineer for Roads and Bridges.

I may at the same time suggest a letter be forwarded to the Department of Lands stating the action taken and advising that as surveys are being made under arrangement with that Department of all the public watering places of the Colony no further action is required with respect to the special lease well 84-2, parish of Whitumbah, county of Manara.

The Under Secretary for Mines.

HARRY GILLIAT.

Approved.—H.W., 6/3/86. The Under Secretary for Works.—H.W., B.C., 10/3/86. Inform Lands Department. Lands informed, 9/3/86. Roads, B.C., 11/3/86. Mr. Wood.—W.C.B., 12/3/86. Should be sent on to Mr. Stillwell for a full report and recommendation. The cost of removing service tank and troughing would be very great. I think resumption would be preferable.—A.P.W., 13/3/86. Will Mr. Stillwell make an accurate plan on a larger scale showing troughing, &c., and best position to move it to. State cost, also show land required to be resumed and probable cost.—W.C.B., 13/3/86. Mr. Stillwell. Report and plan herewith.—A.W.S., 29/3/86.

Sir,

Department of Mines, Sydney, 9 March, 1886.

With reference to your blank cover communication of the 26th ultimo (Misc. 85-5,135) respecting measurement of lease area of 200 acres at Willandra Well, and Mr. Licensed-Surveyor Carter's and Mr. District-Surveyor M'Donald's views as to the resumption of certain land to include a portion of the head works, I have the honor to inform you that the matter has been referred to the Commissioner for Roads and Bridges for his opinion, and as surveys are being made, under arrangement with your Department, of all the public watering places of the Colony, no further action is required with respect to the special lease well, 84-2, parish Whitumbah, county of Manara.

P.W.P.,
86-1,044.

I have, &c.,

HARRIE WOOD.

The Under Secretary for Lands.

Sir,

Sir,

Hay, 29 March, 1886.

P.W.P.,
86-1,703.

In reply to your minute S6-392, attached herewith is submitted a plan at 4 chains to the inch, showing position of Willandra Well and appurtenances with reference to the Kilfera estate freehold on which portion of them have been placed.

The best position to which troughing, &c., could be removed would be to the opposite, or western side of well. As the service tank and whim would then also require removal, the cost would not be less than, say, £140.

On the plan is also shown portion (within red lines) of which it is suggested resumption should be made in order to obviate removal of any of the appurtenances. Eight acres is comprised for which Mr. Webb demands £60, as he says it would constitute a partial severance of their property. This is an excessive price, and I do not recommend payment of it. In order to reduce the severance, and thus remove Mr. Webb's chief objection to the resumption, I suggest a reduced area—to dotted pencil line on plan, of 6 acres. For this a payment of £30 should amply suffice.

I have, &c.,
A. W. STILLWELL.

The Commissioner and Engineer for Roads.

I recommend that this paper go on to the Mines Department, which has power to deal with land resumptions; it should be ascertained that this really was alienated land at the time the troughing was put there. I think they might offer Mr. Webb £30, if there is no objection or other way of doing this under Act.—W.C.B., 31/3/86. The Under Secretary for transmission to Mines. The Under Secretary for Mines.—J.R., B.C., 2/4/86.

This may perhaps be forwarded to the Department of Lands with the view of having the resumption made; the plan suggested by Mr. Assistant-Engineer Stillwell will meet, I think, all the requirements of the case, and reduce the cost.—H.G., 12/4/86. The Under Secretary for Mines.

The power to resume land for such purposes is in the Minister for Public Works, but it is possible the area required could be purchased and thus save the trouble and delay attending resumption.—H.W., 14/4/86. The Under Secretary for Works, B.C., 15/4/86. Roads.—J.R., B.C., 16/4/86. Mr. Wood.—W.C.B., 17/4/86.

Mr. Stillwell might offer Mr. Webb the reduced sum named by him (£30), this should be accepted by him. This Department has in all cases done all it could to meet Mr. Webb's views in regard to these works, and the least he can now do is to accept a reasonable offer for this land.—A.P.W., 22/4/86.

Approved.—W.C.B., 22/4/86. Mr. Stillwell.

Mr. Webb, to whom, I have made this offer of £30 as instructed, says his company decline to part with the land at less than the price he first named, viz., £60 for the 8 acres, or the same price, viz., £7 10s. an acre for any less area. This, for the suggested reduced area of 6 acres, would amount to £45.—A.W.S., 8/5/86.

Mr. Wood.—W.C.B., 10/5/86. Presume we had better purchase and settle the matter.—A.P.W., 10/5/86. Inform Mr. Webb this will be notified to Lands as value of an acre of land here for their guidance.—W.C.B., 10/5/86. Mr. Stillwell, B.C.

Kilfera Pastoral Company.—Plan.
(Vide Appendix B.)

Willandra Well.—As to purchase of land from Kilfera Pastoral Company, on which appurtenances are erected.

Sir,

Hay, 24 June, 1886.

P.W.P.,
86-3,286.

Referring to S6-476, &c., herewith, after conferring on the spot with Mr. Wood respecting the area necessary to be purchased from the Kilfera I. P. holding to afford access to the troughing, &c., at Willandra Well, I submit attached tracing showing a modified area of about 4 acres, coloured pink, bounded by lines starting from the peg at northern boundary of the T. L. area marked T L 57, and running south-easterly $7\frac{1}{2}$ chains to a peg 2 chains north-east from eastern end of the troughing; thence southerly 2 chains to a peg 2 chains south-east from end of the troughing; thence south-westerly $7\frac{1}{2}$ chains to a peg on the western boundary of the Kilfera I. P.; and thence northerly 11 chains to the peg at the starting point.

I presume the next step is to have a legal conveyance prepared by the Crown Law officers, which can be forwarded to me for execution, and the purchase completed.

I also send, as you direct, a voucher in favour of the Kilfera Company for £30, being for the 4 acres at their price, viz., £7 10s. an acre.

I have, &c.,
A. W. STILLWELL.

The Commissioner and Engineer for Roads.

Before paying the money, I think paper should be sent to Mines to advise that office, as it is just possible there may be some adjustment of boundaries, or exchanges by which this could be arranged without paying money.—W.C.B., 26/6/86. Under Secretary for transmission.

The Under Secretary for Mines—B.C., 30/6/86.

To effect an exchange would probably require reference to the Lands Department, and would certainly entail considerable delay. I am unable to state whether any readjustment of boundary would meet the views of the Kilfera Pastoral Company.—H.G., 6/7/86. The Under Secretary for Mines.

The papers may be forwarded to the Lands Department to ascertain whether the exchange suggested can be effected.—H.W., 13/7/86. The Under Secretary for Lands.—B.C., 13/7/86. Submitted.—R.H.D., 18/8/86. Is the I. P. a freehold?—S.F., 28/8/86. No. De Low, very urgent. The deeds of portions 1 and 2 of 125 acres each, in the parish of Whitumbah, were sent to the Registrar-General on 19/9/82 in favour of Messrs. J. MacDonald and J. Makson.—R.H.D., 2/9/86.

Dear

Dear Sir,

"Kilfera," Ivanhoe, 22 March, 1886.

In reply to yours of 18th instant, asking at what price per acre the Kilfera Pastoral Company would be willing to sell 8 acres at the Willandra Well, I think £60 (sixty pounds) for the 8 acres is a fair estimate. You will bear in mind that I do not by any means value the land itself at that price. It is that you would almost cut half-way across our portion, and as we have extensive and valuable water improvements on this portion, it would necessitate our going to some expense in removing some of our fencing. I may here state that until the Surveyor surveyed the well reserve, I was unaware that the Government improvements encroached on our portion. Otherwise, I should have drawn your attention to the matter earlier.

Mr. Assistant-Engineer Stillwell.

I remain, &c.,

R. CAPPER WEBB.

Proposed exchange of part of Willandra Tank Reserve for part of a Freehold granted to MacDonald and Matheson.

P.W.P.,
87-2,329.

SUBMITTED as to whether the exchange is such as was contemplated by clause 105 of the Crown Lands Act of 1884, or whether this land to be exchanged under that section for reserved or dedicated areas is only Crown Land.

The clause, line No. 9, refers to the exchange of reserved land for other land, and the Governor is empowered—see last two lines of the section—"to issue such grants and execute" such exchanges, deeds, assurances, and "instruments as the circumstances of each case may require." The matter is urgent.

S.F., 4/9/86.

The section referred to was inserted in the original Bill to facilitate dealings with dedicated and reserved lands which were found to be unsuitable for the purpose for which they had been appropriated; and although it is not perfectly clear that it was intended that lands other than Crown Lands should be granted in exchange, it appears that there is no specific enactment to the contrary, and, therefore, the provisions of the section 105 may be applied to this case.—C.O., 6/9/86.

Approved.—H.C., 7/9/86. The District Surveyor at Hay for description.—Lands, B.C., September, 1886.

The legality of dealing with granted lands under section 105 having on another paper, S6-11,320 Ms., been considered, it was decided to seek the advice of the Crown Law Officers, and an adverse opinion was given. It is therefore submitted that the action proposed to be taken in this case must be abandoned.—C.O., 30/5/87.

Approved.—T.G., 30/5/87. Enter in Precedent Book and then send to Department of Mines.—W.D., 1/6/87. Mr. Stevens. Entered.—J.G.S., 1/6/87. The Under Secretary for Mines. Department of Lands, B.C., 1 June, 1887.—R.H.D., for the U.S.

Reporting on well recently constructed at Willandra Creek, Kilfera.—Road from Ivanhoe to Balranald.—Distance from and name of Post Town.—18 miles from Ivanhoe.—10 December, 1886.

P.W.P.,
86-5,781.

- (1.) Name of road and length? Ivanhoe to Balranald, 160 miles.
- (2.) If near a town; give estimate of population that may be dependent on the watering place? 18 miles from Ivanhoe; none.
- (3.) Estimate traffic in stock and teams? ———.
- (4.) The traffic; by what roads; the destination? This road is an offshoot from the main track, and will largely relieve it. The Victorian railway is now open to Kerang, 30 miles from Swan Hill, and from Balranald to that place is not far; I expect considerable traffic this way.
- (5.) Its distance from nearest watering place, or permanent natural water on each side? Ivanhoe tank, 18 miles; Gunarramby tank, 16 miles.
- (8.) Depth of well; depth and quality of water? 102 feet; 26 feet of water; very brackish, but stock water.
- (13.) Full description of watering appliances, and delivery in gallons per hour? Whim and galvanized iron self-acting buckets.
- (14.) Supply tank; size, construction, capacity in gallons? Wood, iron lined, 30 x 15 x 5; 27,000 gallons.
- (15.) Troughing; length, width, depth, material, and position? 300 feet, galvanized iron, 2 feet 6 inches wide.
- (16.) Area enclosed; description, distance between posts, number and gauge of wires? None.
- (17.) Gates? None.
- (18.) Probabilities of obtaining tenant, and estimated rent? Would be leased when finished by Kilfera.
- (19.) Area, position, and quantity of land included or to be included in tenant's lease; area notified for public watering place? 640 acres, poor country.
- (20.) Caretaker's cottage and description? None yet.

The Chief Inspector of Public Watering Places.

J. W. BOULTBEE,

Acting Inspector, Public Watering Places.

General remarks.

THE appliances at this well, namely, whim, tank troughing, &c., are almost identical with others lately erected. I, however, in this one noticed a serious fault, and which I do not remember seeing anywhere except here and at Dolmoreve, and that is from the brace of the shaft to the spindle gudgeon is only 15 feet 9 inches, and the same distance from gudgeon to either king post. The horse is consequently walking on the extreme edge of horse-walk, and has barely room to turn, and if required to turn close to shaft or either king post he has not room, and has to be backed. 23 feet is the distance required from gudgeon to brace, and 18 feet 6 inches from gudgeons to king post. Horse and balance arms, 14 feet 6 inches each; span beam, 32 feet. I went below and inspected the shaft and workings, and I would strongly recommend that this shaft should be abandoned and a new one sunk alongside. The state of the shaft below, even if temporarily put right, cannot ever admit of a permanent or satisfactory job being made. The shaft for about 75 feet, is plumb and true; below this the plumb line is gradually loft, and at 102 feet, the bottom, the shaft is over 6 inches out. A bore has been put down, and the pipe is immediately under the plumb line. There is about 20 feet of drift; an iron box is in, and this, and the pipe, and 25 feet of timber will have to be removed to bring the shaft plumb; an immense amount of drift has come in, and there must be a large cavity. The man in charge has made a chamber below to enable them to raise pipe and

Extract for
Works
Department.

and box. The box he may raise, but he has no appliances for raising the pipe out of wet drift. If he succeeds in raising these and straightens the timber I am afraid, from the amount of drift that comes in, of the cavity behind the slabs, and that at the best it will only be a patched up job, and very liable to go wrong and set out of plumb again. I did not like the look of the shaft at all; he has some very stout box beams that are bent and split in all directions.

I never saw any good done by trying to patch or straighten a drift well if the shaft got out of plumb. A new shaft would be cheaper in the long run. The timber is all available. A new shaft could be put down to the drift, and boring could be started from this point, and fresher water possibly be obtained. The present supply is about 5,000 gallons.

JAMES W. BOULTBEE,
Acting Inspector, Public Watering Places.

Willandra Well.—Tracing.

Appendix C.

(1.) No action need be taken on this report until the well is notified ready for transfer, when it must be resubmitted.

(2.) Mr. Inspector Boulton's general remarks upon the shaft should be copied into tank book.

(3.) Mr. Yeo may be asked if any work is being done in the old shaft, or if a new one is commenced.
H.G., 16/2/87.

Mr. Yeo asked.—J.W.B., 17/2/87.

P.W.P.,
86-5,781.

Sir, Department of Mines, Public Watering Places, Sydney, 17 February, 1887.
I have the honor to request that you will be good enough to inform me whether any work is being done by the Department of Public Works in the old shaft at Willandra Well, or whether a new shaft has been commenced.

I have, &c.,

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Mr. Overseer Yeo.

P.W.P.,
87-913.

Sir, Ivanhoe, 23 February, 1887.
I have the honor to inform you that no work is being done by the Department of Works in the old shaft at the Willandra Well.

The sub-contractor will not proceed with the work on account of his not being able to get an advance on his contract to pay his men, consequently all work is at a standstill, and has been for some time.

I have, &c.,

JAMES YEO,
Overseer, Public Watering Places.

The Chief Inspector, Public Watering Places.

Mr. Inspector Boulton's general remarks have yet to be entered in tank book. See report and minute thereon.—7/3/87. Noted in action book.—S.A.M., 7/3/87. The Works Department may perhaps be asked whether it is intended to abandon the shaft, or to proceed with a new one.—HARRY GILLIAT, 16/5/87. The Under Secretary. Submitted.—H.W., 16/5/87. Approved.—F.A., 17/5/87. Asked, 25/5/87.

P.W.P.,
87-2,321.

Sir, Public Watering Places, Department of Mines, 25 May, 1887.
I have the honor to request that you will be good enough to inform me when the Willandra Well will be ready for transfer to this Department.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

The Under Secretary for Public Works.

Roads.—B.C., 27/5/87. Mr. Wood.—W.C.B., 27/5/87.

We are not in a position to give the required information at present. The deepening of this well in loose running drift has been a most difficult undertaking; the contractor has had further difficulties, causing great delay, in obtaining and keeping good men. The work is now being pushed on, and should be finished without any unnecessary delay.—A.P.W., 28/5/87.

Under Secretary.—W.C.B., B.C., 28/5/87. The Under Secretary for Mines.—B.C., 30/5/87.

The annexed plan of shaft (*Vide* Appendix C) of this well gives a very different complexion to that of Mr. A. P. Wood's reply, but bears out very strongly the views I have had occasion so often to express as to the faulty construction and defective design, resulting in waste of money, dissatisfied contractors, and tends to explain the exorbitant prices now asked for Government work.—H.G., 1/6/87. The Under Secretary.

Submitted.—H.W., 1/6/87.

P.W.P.,
87-2,435.

Sir, Ivanhoe, 4 June, 1887.
I have the honor to report for your information that nothing is being done towards the completion of the Willandra Well, but I would beg to state that I have been informed by a good authority that the contractor, a Mr. Stanley, engaged with five men in Sydney to complete the well, and the men deposited £5 each with the contractor, which they would forfeit if the work was not completed. The men worked at it for some little time, and found they could do nothing with it; consequently, they have cleared out, and forfeited their deposits.

I am of an opinion that it is simply waste of time and money attempting to complete this well, as there has been four different parties to my knowledge who have given it up, and some of them have been successful well-sinkers in this district for some years past.

I have, &c.,

JAMES YEO,
Overseer, Public Watering Places.

The Chief Inspector, Public Watering Places.

Submitted in connection with the papers relating to this well, now with the Minister for Mines.—HARRY GILLIAT, 10/6/87. The Under Secretary. Submitted.—H.W., 10/6/87.

Minute

Minute by the Chief Inspector, Public Watering Places to The Under Secretary for Mines.

Willandra Well.

Department of Mines, Public Watering Places, Sydney, 29 June, 1887. P.W.P., 87-2,817.
 THE shaft is so defective that a new one will probably have to be put down, in which case the tenant's lease need not be disturbed. But until the final adjustment of works, to be completed by the Works Department, takes place no further action need be taken, as I am of opinion that if a new shaft is to be sunk it should be done by this Department.

HARRY GILLIAT,
 Chief Inspector, Public Watering Places.

Submitted.—H.W., 1/7/87. Approved.—I would like to know how much has been spent on this work up to the present, and who is responsible for the apparent waste of public money.—F.A., 2/7/87. A letter may perhaps be addressed to the Works Department asking for the information desired by the Secretary for Mines.—H.G., 7/7/87. The Under Secretary. Approved.—H.W., 13/7/87. Works asked,—14/7/87. The Works may perhaps be reminded of the Minister's request.—H.G., 29/9/87. The Under Secretary. Approved.—H.W., 7/10/87. Letter to Under Secretary Works.—10/10/87.

Sir,

Public Watering Places, Mines Department, 14 July, 1887. P.W.P., 87-2,819.
 The Honorable the Secretary for Mines is desirous of ascertaining how much the Willandra Well, now being sunk by your Department, has cost up to the present time, I have, therefore, the honor to request that you will be good enough to furnish the required information.

The Under Secretary for Public Works.

I have, &c.,
 HARRIE WOOD.

Sir,

Department of Mines, Sydney, 10 October, 1887. P.W.P., 87-5,636.
 I have the honor to invite your attention to my letter, 14th July last, informing you that the Honorable the Secretary for Mines is desirous of ascertaining certain information *re* Willandra Well, and beg to request the favour of an immediate reply.

The Under Secretary for Public Works.

I have, &c.,
 HARRIE WOOD,
 Under Secretary.

Roads, B.C., 17/10/87. Mr. Wood. Urgent.—W.C.B., 18/10/87. The information is attached.—A.P.W., 18/10/87. Accountant.—W.C.B., 21/10/87. The cost of the work up to the present date is £1,087 5s. 8d. Under Secretary for transmission to Mines.—W.C.B., 24/10/87. The Under Secretary for Mines, B.C., 26/10/87. The information asked for by the Secretary for Mines in his Minute, 2nd July, 1887, is given herewith, it may perhaps be read with Mr. Inspector Low's report marked red.—H.G., 4/11/87. Submitted.—G.E.H. (for U.S.) 7/11/87. Approved. Let a copy of this report be sent to Colonial Secretary.—F.A., 7/11/87. Copy of Report forwarded with letter.—22/11/87.

Reporting on well in course of construction at Willandra Creek.

Road from Balranald to Ivanhoe—Distance from and name of post town, 20 miles from Ivanhoe, nearest post town.—Reserve, No., and date—T.S.R. No. 428, 29 September, 1877, County of Manara. P.W.P., 87-5,092

1. Name of road and length? Balranald to Ivanhoe, 153 miles.
2. If near town, give estimate of population that may be dependent on the watering place? Not near any town.
3. Estimate of traffic in stock and teams? Mail coach, teams, about 14,000 sheep.
5. Its distance from nearest watering place or permanent natural water on each side? 20 miles from Ivanhoe Tank, 11 miles Gunarramby Tank.
8. Depth of well, depth and quality of water? 98 feet depth of shaft, 11 feet depth of water; shaft, 5 feet 3 inches x 2 feet 6 inches. Has stood too long without baling to give any definite opinion, but I should say at no time first class stock water. Certainly unfit for human consumption.
13. Full description of watering appliances and delivery in gallons per hour? Whim, to be worked by one horse, erected.
14. Supply tank, size, construction, capacity in gallons? Timber, lined with galvanized iron, 55 feet x 15 feet x 5 feet, 25,000 gallons, 4-inch service valve and wheel erected.
15. Troughing, length, width, depth, material, and position? Timber, lined with galvanized iron, 300 feet 30 inches x 12 inches, fenced, two rails and one rail erected.

General Remarks.

This well is, I should say, a most unsuitable means of supplying travelling stock and the public with water. The water is unfit for human use. Upon inspection I could find no means of getting down shaft, as there was only a wire rope there lying on the ground, and quite unfit for any one going down with, owing to its being rusty.

The shaft is reported by Mr. Overseer Yeo to have been given up by different contractors owing to drift, and it having caved in. Should such be the case it can never be made safe, as any one with any experience in sinking wells or shafts in drift can testify to.

Since my inspection a carrier came to Ivanhoe and asked me to go out to this well, and receive 20 tons of red gum timber he had brought from Balranald for this well. This I declined to do. Of course I don't know what it is intended to do with this timber, but if it is to be put down present shaft, I can unhesitatingly say it will be so much money wasted.

Close

Close to the present well there is a good site for a tank, and were a tank of 12,000 yards excavated, it would be ample for all the requirements of this track, and furnish travellers with water they could drink.

The Chief Inspector of Public Watering Places.

JOHN LOW, 17/9/87.

Sir,

Department of Mines, Sydney, 22 November, 1887.

I am directed by the Honorable the Minister for Mines to forward, for the information of the Honorable the Colonial Secretary, the enclosed copy of a report, dated 17th September, 1887., by Mr. Inspector Low, on the Willandra Well, now in course of construction by the Department of Works.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Principal Under Secretary.

XI.

Peri Springs Tank.

Dear Sir,

Wilcannia, 13 December, 1877.

Public Works,
84-804.

As the Estimates are about being prepared, we take the liberty of putting before you the pressing wants of this portion of your electorate.

Tanks.

Tanks for the conservation of water on the Paroo Road are of the first necessity to enable stock and even teams to travel safely; at the present time there is not a drop of water in the road for the first 45 miles, for travelling stock and teams have to carry it themselves. We therefore trust you will use every effort to get a sufficient sum put on the Estimates so as to keep this important stock route open.

Booiligal Road.

The works are now left half completed at the Tallywalka, and all the money that has been spent will be simply thrown away, unless Government place a sufficient sum on the Estimates for their completion.

Hospital.

In this widely scattered district it is simply inhuman for a township of this importance to be without, and we trust you will get the Government grant for same.

Very faithfully yours,

Colin W. Simson, Esq.

CRAMSIE, BOWDEN, & CO.

Forwarded to Minister for Works. I have already preferred applications personally, and shall be glad to have an immediate reply for the information of my constituents, as the matters referred to are urgently required.—C.W.S. Roads, B.C., 4/1/78.

The works are still in progress, and there is no intention of stopping; the only delay is difficulty in obtaining timber.—W.C.B., 25/1/78.

I have recommended £1,000 to be put on Supplementary Estimates for dam at Copago on the Paroo Road. Mr. Simpson might be informed.—W.C.B., 30/1/78.

Sir,

21, Exchange, Sydney, 9 February, 1877.

Public Works,
84-804.

We have been requested to call your attention to the necessity of having a sum of money placed on the Additional Estimates for sinking three or four tanks or wells on the Paroo Road, between Wilcannia, on the Darling, and Hungerford.

We would point out to you that the road is perfectly unavailable without these tanks, as there is not a drop of water on that line in dry seasons, also that considerable losses have been sustained by travelling stock during the last dry weather, in one instance not less than 4,000 sheep having perished in one night. As there is now very considerable traffic on this road it would be of inestimable value to the travelling public, as well as a benefit to the whole community, if these tanks were placed on the line, and we would therefore feel obliged by your giving this matter your earliest consideration.

We have, &c.,

The Secretary for Public Works.

H. H. BROWN & CO.

I am very doubtful of the propriety of sinking tanks in the wholesale way now proposed. A small expenditure is useless. To make a route available for stock in droughts will cost at least £150 a mile. We have not yet got one really good route. The difficulties as to reserves and station rights are greater than the mechanical difficulties of sinking the tanks or wells. That we can control ourselves, but the reserves, &c., require the intervention of the Lands Department, and that delay renders our work much more expensive.—W.C.B., 5/3/77.

H. H. Brown, Esq., informed, 18/3/77.

Sir,

Wilcannia, 26 January, 1878.

Public Works,
84-804.

I have the honor to inform you that, at a public meeting held here last evening, the 25th instant, a copy of the proceedings of which accompanies this letter, it was resolved that you be written to and respectfully requested to take into your earnest consideration the desirability of at once constructing tanks on the main roads from this town to Hungerford (on the Queensland border), as the present state of things seriously interferes with trade, and completely stops all traffic in stock, and if the drought continues the mails will have extreme difficulty in getting through. I would also respectfully call your attention to the fact that many lives have been sacrificed in consequence of the absence of water at shorter intervals.

I have been asked to call your attention to the foregoing matters, as it is of vital importance to the interests of Wilcannia and surrounding district.

The Secretary for Public Works.

I have, &c.,
EDWARD QUIN.

Mr. Quin might be informed that £1,000 will be placed on Supplementary Estimates (decision herewith) for dam at Copago, on this road, and that further inquiry will be made as to what other tanks are necessary.—W.C.B., 12/2/78. Mr. Quin informed.

Report by Mr. Road-Superintendent Henry Cambridge.

Sir,

Tanks, Paroo Road, Hay, 30 June, 1879.

In accordance with your instructions, I visited the Paroo, respecting proposed tanks on that road. I found that the following would be about the stages from Wilcannia to—

- 1. Copago Dam, 27 miles.—Dam and tank here already made by Department.
- 2. Momba Dam, 50 miles.—Nothing required here.
- 3. Peri Sand Hills, 70 miles.—Tank required here.
- 4. Nipper's Creek, 83 miles, or Yentabangoo Lake, 89 miles.—Good sites for tank at either.
- 5. Warramurtie, 106 miles.—Tank.
- 6. Gumbalara, 131 miles.—Tank.

23
20
13 or 19
23 or 11
25

I think the £6,000 available will make four tanks, at £1,500 each; they need not be very large—say 12,000 cubic yards each. I should recommend that tanks be put down at Peri Sand Hills, Nipper's Creek, or Yentabangoo Lake, Warramurtie, and Gumbalara. At this last place the Paroo Channel becomes defined, and water is found in the water-holes. The places recommended are all cane grass swamps, and have good drainage area.

The sites recommended have been suggested by some of the oldest residents in the district, to whom I am indebted for a great deal of information respecting the road and sites suitable for tanks.

I should have mentioned that we already have a tank and dam at Copago. At Momba there's a good billabong, which is very seldom dry, and has at present a good supply of water, so that the tanks I suggest will cover the portion of the track at present unwatered.

My visit was very hurried, and consequently I had not such a good opportunity of thoroughly examining the country as I could have wished, especially as it rained the whole of the time I was away from Wilcannia; but I think that very little more can be said of these sites I propose than that they are suitable.

I should not think of recommending any tanks with pumping gear for this portion of the district, but similar ones to those that are being put down between Hay and Booligal.

The Commissioner for Roads.

I am, &c.,
HENRY CAMBRIDGE.

I should suggest that these tanks be let as soon as possible, to enable contractor to take advantage of grass and water. This will save at least 20 per cent.

Copy of Minutes on Mr. Cambridge's Report, dated 30th June, 1879, and No. 79/4,616, on the Tanks, Paroo Road.

In order to take advantage of the grass and water here, I recommend that tenders be invited; plans to be deposited at Wilcannia, Bourke, and Hay. I also recommend that a copy of Mr. Cambridge's report be transmitted to the Chief Officer-in-charge, Crown Lands Occupation Office, for the report of the local Commissioner on the proposed sites.—W.C.B., 3/7/79.

Under Sec., B.C. Approved.—J.L., 9/7/79. U.S. Mines, with copy of report; C.W. Simpson, M.P., with copy of report, 12/7/79. Roads,—W.H., B.C., 14 7/79.

Will Mr. Cambridge confer with the Comm. Crown Lands for this district (Mr. Woore, I think), and invite tenders for these works, and forward same to Sydney, with C.L. Officer's report, and a report and recommendation from Mr. C. himself? It is not necessary he should visit.—W.C.B., 18/7/79.

Mr. Cambridge, B.C., 18 7/79. See C.C.L. Officer's reports.—H.C., 21/8/79. (Again understood).—W.C.B., 7/6/84.

Sir,

Sydney, 12 July, 1879.

I am directed by the Secretary for Public Works to forward herewith copy of a report which has been received from the local Road Superintendent, respecting tanks on the road between Wilcannia and Paroo, and I am to request that you will have the goodness to obtain a report on the sites proposed from the local Commissioner for Crown Lands.

I have, &c.,
GERALD HALLIGAN,
Acting Under Secretary.

The Under Secretary for Mines.

The copy of report can be forwarded to Mr. Commissioner Woore, requesting his report upon the sites proposed.—T.W.H., 16/7/79. J. C. Woore, C.C.L., with copy to be returned, 17 July, 1879.

Sir,

Crown Lands Office, Albert, 4 August, 1879.

With reference to your letter of the 17th ultimo, requesting me to report upon the sites for Tanks between Wilcannia and the Paroo, proposed by Mr. Road-Superintendent H. Cambridge in his report of the 30th June last, returned herewith, I have the honor to state that there are very suitable sites for Tanks at the places named by Mr. Cambridge.

I have, &c.,
JOHN C. WOORE,
Commissioner of Crown Lands, Albert.
Forwarded

The Chief Officer, Occupation of Lands Office.

Forwarded for the information of the Commissioner for Roads.—T.W.H., Occupation Lands, 16 August, 1879, B.C. Acknowledge with thanks. Resubmit when Cambridge comes.—W.C.B., 16/8/79. T. W. Harriot, Esq., 16/8/79. Mr. Cambridge will give specifications and have tenders invited.—W.C.B., 21/8/79. Tenders invited, 22/8/79.

Wilcannia to Paroo.

Extract from Mr. H. Cambridge's report, dated 20th March, 1880, on the Tanks in progress, Wilcannia to Hungerford.

Peri Tank.—On the 22nd January I received the enclosed letter from the contractor, advising me that he had got on to a hard sandstone in the drinking tank, and asking for extra remuneration on that account. I wrote him the reply herewith, and on my visit found matters as described by the contractor. I found powder was being used to blast out the stone. I brought a sample with me, which I send by post. I think some slight allowance might be made. Will you kindly inform me if the stone, being in the tank and not having shown in any of the trial shafts, will nullify the contract; I have never had such a case before, and shall be glad to know for future guidance. The main tank and also the silt tank were completed. A good deal of gritty material came out of the main tank; the banks round the tank were well consolidated and were well trimmed. I laid out a series of drains, shown on accompanying plan; they follow the water courses, which at this tank are fairly plain and are well graded,—in fact the fall throughout is about 1 in 200 to 1 in 100. I laid out about 113 chains of drains, which will be quite sufficient here. The water at this tank will be good, as it all runs off sand hills and hard ground. I find a great deal of salt in all the ground about, but I do not think this will injure the water.

There are a good many clay-pans; these places are hollows that have been coated with clay from water lying in them; these will all be drained into the main drains.

Reduce the size of the tank; arrange it so that the cattle will stand on the stone as far as possible when drinking. I find that it is objected to that they bog in these tanks.—W.C.B.

One would think Mr. Cambridge's common sense would guide him here; of course the man must be paid extra, but I cannot conceive how Mr. Cambridge laid out a tank in a place where there was the slightest possibility of meeting rock; I hope such a thing will not occur again; if the printed specification was complied with it could not. Will the tank be water-tight?—W.C.B.

My dear Mr. Hogarth,

Ivanhoe, 18 January, 1883.

Tanks&Wells,
83-319.

I wish to obtain an opinion from an independent observer with regard to the value of the Peri Sand Hill, the Yentabangee, and Warramutty Government Tanks on the Paroo, and whether they are or are not so close to other sources of water as to interfere with their being leased.

Any remarks you may have to make upon them will be sure of careful attention.

As I am preparing a paper on these works I shall be glad if you will let me hear from you as early as possible.

I am sorry to say that the tracing you lent me with the other papers connected with the wells of the Colony were destroyed in the fire at the Garden Palace.

I expect to be on the Paroo in four or five months' time, when I hope to have the pleasure of meeting you.

HARRY GILLIAT.

W. Hogarth, Esq., Manager, Momba Pastoral Company.

My dear Mr. Gilliat,

Momba, 27 January, 1883.

Tanks&Wells
83-319.

Yours of the 18th to hand, *re* tanks in this district. Peri Sand-hill Tank I don't think you will ever be able to let, simply because it is within quarter of a mile of the Peri Springs, therefore I think putting the tank down in the present site a great waste of public money. Had the Government and station owners (M. P. Co.) combined and spent, say £300 on the Springs, they would have watered all the stock that ever came down the Paroo, and all station stock that the country would carry.

Yentabangee is almost similarly situated, being within about 3 miles of the Tongo Waterhole, which is almost permanent on the one side, and Olpoloko Waterhole on the other side, also about 3 miles distant from tank. In my opinion this tank should have been put down at the Olpoloko Waterhole, as it would have divided the distance between the Peri Springs to the Tongo Waterhole, making about 10 miles from the former and 6 or 6½ from the latter.

Warramutty Tank I don't know anything about, as I have never seen it. I note the tracing, &c., I sent you, got burnt; should it be of any further use to you I could get you another, and also showing another well where I was fortunate in getting good stock water at 148 feet. The supply is not great, but I believe by going down 5 or 6 feet there will be an abundant supply. Hoping to see you in the course of a few months.

I am, &c.,

W. HOGARTH.

Mr. H. Gilliat, Inspector of Tanks and Wells.

Sir,

Tongo, 10 February, 1883.

Tanks&Wells,
83-308.

I have the honor to hand you my report on Peri Sand-hills Tank.

On visiting this tank I found that the caretaker had just finished repairing the fence around the main tank. For months past drovers and others have used the tank for a stockyard. Something like twenty-five rails are missing; these, I suppose, have been used as firewood. The tank is nearly full; the size of inlet-pipe is 12 inches; connecting-pipe, 4 inches, same as at the other tanks. This tank is useless where it is, for there is plenty of water all the year round at the several springs.

If,

If, instead of constructing this large tank, a small one, say 1,500 yards, had been made near one of the best springs it would have answered all purposes, and a large amount would have been saved, or expended some distance further down the road towards Wilcannia. The station people have constructed 150 feet of stone troughing at a spring about 500 yards away from the tank; only a portion of the water flows into the troughing, the balance goes to waste. This spring discharges something like 7,000 gallons in the twenty-four hours.

There are several other springs that would furnish large supplies. This tank will never be leased; if left unprotected it will be destroyed.

I have, &c.,

JOHN HANSEN,
Overseer of Public Tanks and Wells.

The Inspector of Public Tanks and Wells.

MEMO.

Referring to Mr. Overseer Hansen's report on the Paroo Tanks, and others papers herewith, Tanks & Wells
83-302. it appears that the Peri Sand Hill and Warramurtie Tank have permanent water close by, and that the Nipper's Creek or Yentabangee Tank has the Tongo Waterhole about 3 miles distant on one side, and the Opoloko Waterhole about the same distance on the other.

The Goomboolara Tank has water at 8 and 12 miles on either side.

I agree with Mr. Hansen that it is unlikely that the first three tanks will find tenants on this account; so far no tenders have, I believe, been received for the latter. A travelling caretaker visiting the tanks in turn has been tried and proved to be unsuccessful in protecting them from injury.

Overseer Hansen reports that certain repairs are required at the Nipper's Creek and Peri Sand Hill Tanks. A good resident caretaker if supplied with wire, wheelbarrow, and a few tools, would be able to do all that is required at any of the works.

I would recommend that caretakers be appointed at the Peri Sand Hills and Goomboolara Tanks, and that they, with the caretaker at the Nipper's Creek Tank be furnished with the requisite tools, and that the caretaker at the latter, under the overseer's supervision, clean as much as possible of the watering tank before rain falls. To call for tenders for this with the present scarcity of grass and water would be expensive, nor at present do I consider that or the fencing the mouth of the watering tank necessary. I would further recommend that all the caretakers are authorized to collect rates.

H.G., 21/2/83.

The Chief Inspector of Stock.

See abstract overseer's reports and separate memoranda on papers herewith.—A.B., 5/3/83. The Under Secretary for Mines.

Mr. Gilliat's report on Paroo Tanks for April, 1881, cannot be traced. It was presumably destroyed in the fire at the Garden Palace.

The Minister for Mines with reference to an extract from the *Sydney Morning Herald*.

Department of Mines, Sydney.

84-541.

In an article published in the *Sydney Morning Herald* on the 10th instant, I find the following:—
"Tanks and wells have been repeatedly constructed where they were not wanted, and where no local authority would ever have placed them. For example, on Menamurtee Station a Government well has been sunk within a mile or two of permanent waterholes, both on the stock road. A Government tank has been constructed on Tarella Station, close to the Coonawatta dam, on the stock route. This dam has been used by travellers and drovers for long; and though a station work it is available for the general public, there being abundance of water. A Government tank has been made on the Paroo Road, close to the Peri springs, a natural reservoir on the Stock Reserve, sufficient for all the stock that ever can travel that way. Now for a case of another kind. On Mount Manara an expensive well has been sunk, securing abundance of water good for stock. The well has been abandoned, and no one is looking after it. It is said that some years ago one of the slabs with which the well is lined got loose; the bucket stuck, and could not be brought up. No attempt was made to put it right, and there it remains. As the well is sunk in hard rock, there is not the least risk of its giving way, and it is believed that it could be put in working order for a few pounds, but no official has any instructions to deal with it, and though the public suffer by the want nothing is done. This is certainly a burlesque of centralization and officialdom."

It is alleged that a Government tank has been sunk within one mile of two permanent waterholes, on a stock road on Menamurtee Station. I shall be glad if Mr. Gilliat will inform me whether this allegation—1st, Is true; 2nd, If true, why was the tank so constructed?
10 May, 1884.

J. P. ABBOTT.

Mr. H. Gilliat, Inspector of Public Tanks and Wells, in reply to the memo. of The Minister for Mines. Tanks & Wells,
84-583.
The Peri Springs and Public Tank. 20 May, 1884.

In reply to the minute of the Hon. the Secretary for Mines, T. and W. 542, with reference to the statement in the *Sydney Morning Herald* of the 10th instant, that a public tank has been made close to the Peri Springs, I have to say it is correct.

Early in 1881 I was directed by the Secretary for Mines to take delivery and report upon the tanks on the Paroo, between Wilcannia and Hungerford. My report was submitted in April of that year, and pointed out that it was improbable that tenants would ever be obtained for the Peri, the Nipper's Creek, or the Warramurtie, on account of their neighbourhood to good water supply.

The Peri Springs are within 500 yards of the Peri Tank, and are practically inexhaustible.

The Nipper's Creek Tank has the Olepoloko W. H., 5 miles on one side, and the Tongo W. H., 3 miles on the other side.

The Warramurtie tank is about half-a-mile distant from the Warramurtie W. H., one of the finest in the Lower Paroo.

The attention of the Department has on various occasions been directed to these works. I may add that it is only within the past ten months that the Department of Mines has been admitted to have any voice in the selection of sites for works, and that I am not aware of any instance in which it has been consulted with regard to their construction.

HARRY GILLIAT.

Minute

Copy from Press-book; original with the U. S. Works, on 23/4/84. Asked to return, 17/11/87.

Minute by The Commissioner and Engineer for Roads and Bridges.

Roads, Sydney, 8 August, 1884.

Tanks & Wells,
84-1,026.Original, with
Tarella Tank
case.

In compliance with instructions to report on the strictures contained in a paragraph by letter from the *Herald* of 10th May, on the operations of this Department in the dry country, I think it necessary to deal with the paragraph in its entirety.

It begins by pointing out the desirability of a Local Government Act. As I have long advocated such a course I append two paragraphs from reports of mine, dated 31st March, 1865, and 9th February, 1871, respectively.

It is generally represented that the Department is opposed to such a measure; the extracts appended show on the contrary that I have always advocated it, but from reasons different to those generally put forward as I cannot admit that the works would be better done as throughout the Colony where municipalities do exist, it will almost without exception be found that the best roads and bridges therein have been made under this Department either prior or subsequent to the formation of the municipality.

As to not giving consideration to the wishes of those on the spot, Mr. Cambridge reports that the sites were recommended by the oldest residents, and Mr. Quin's letter of approval was an evidence that Mr. Wood gave satisfaction.

The first specific accusation in the paragraphs is with reference to the Peri Tank. The Minister for Mines asks that the Minister for Works will ascertain who is responsible for this gross waste of public money, and the cost or amount so wasted.

The amount is £1,500. The tanks in this Paroo Route were demanded in very strong terms by the local press, by a petition forwarded and urged on by the then Member for the district, Mr. Colin Simpson, and by letter from Mr. W. Brown, of Wilcannia. Mr. Cambridge, Road Superintendent at Hay, was directed to report.

I attach copy of his report* with parts underlined; but, not satisfied with Mr. Cambridge's examination, as he was then new to the locality, and liable to be misled by interested persons, I requested that the opinion of the gentleman whom I considered, and had a right to be, the best and most disinterested authority—Mr. Woore, the then Commissioner for Crown Lands—should be obtained, and asked Mr. Cambridge to confer with him. His letter is attached.†

The water-holes referred to by Mr. Gilliat either have been made since, or it was considered that they were private property, and not available for public purposes, as Mr. Brown distinctly states there was not a drop of water on the line in dry seasons, and that great losses of travelling stock had been sustained. I am not sufficiently informed on this point, but I will endeavour to ascertain.

It is no doubt extremely easy to find faults now that the country is known and of easy access, water conserved, and communication facilitated.

When the inquiry as to works was being made the course of post was at least six weeks, and there was no railway nearer than Junee.

It should not be forgotten that tenders were invited for the construction of these works in *Gazette* and local papers for some weeks. No one during that time objected, and excessive pressure was put on the Department to get the work executed during the season when it was alone possible.

If there has been a gross waste of public money, which, notwithstanding Mr. Gilliat's assertions, I doubt very much, I alone am responsible if it is considered I could have done more and laid the Department open to accusations of delay and accountable for loss of stock.

Mr. Wood had nothing whatever to do with these Paroo works; but that the springs were not overlooked is evident from the sketch plans sent by Mr. Cambridge.

I have not had time to get detailed information about the relative positions of other works, and respecting adjacent waters; but Mr. Woore's approval applies to all on this line.

I need not further dwell on accusations made after seven years, when the whole circumstances of the case have changed; but in the interests of the future, I think that Mr. Gilliat's recommendation as to further expenditure on these works should be considered in the light of Mr. Higman's recommendation of 26 November, 1878, as to the probability of this route being superseded when rail opens to Bourke. I will therefore not proceed with the alterations and additions suggested by Mr. Gilliat until further instructed. At most the Copago Tank or well there, which I believe would be most advisable; and at the Peri Mr. Hanna reports that the slopes are easy and the ground firm, and stock can be watered with safety and despatch, thus avoiding expense which the erecting of pumping gear would involve.

As regards Mount Brown Road and Mr. Abbott's memo. on Mr. Gilliat's paper, requesting that searching inquiry be made into the matter, I append Mr. Wood's paper.

There were a number of communications from the district urging on the construction of some sort of water supply about the commencement of 1881, and at the urgent and pressing request of those interested Mr. Wood was despatched to let such works and take such steps as seemed to him necessary for the permanent opening of route to a large gold-field which was then pronounced to have been proved. Mr. Wood's mission gave great satisfaction at the time, and I might say an unparalleled letter was written by Mr. Quinn, M.P., expressing approval of the action taken.

The Under Secretary for Public Works.

W. C. BENNETT.

Under Secretary, B.C. Printed paragraph herewith. Forward to Mines. The Under Secretary for Mines.—J.R., B.C., 11/8/87.

Extract from Commissioner for Roads' Report, dated 31st March, 1865.

Future management.

Having endeavored to set before the Honorable Secretary for Public Works a full statement of the past working of the Department, it is now my duty to submit my views as to future management of the roads of the Colony.

I am decidedly of opinion that the time has now arrived when, in the more settled parts of the Colony, either by extension of the Municipalities' Act, the consolidation of municipalities, or some new legislation analogous to the District Road Boards' Act of Victoria, the management and cost of local roads in the first instance, and ultimately of the main roads, should be transferred to local bodies. The

Recommending
local manage-
ment.

The anomaly existing in this Colony of the main trunk roads most used being in the most thinly settled portions of the Colony, will be obviated by the railway extensions to Mount Victoria and Berrima; beyond these points, within the settled districts, and in the county of Cumberland, with few exceptions, where roads are required, sufficient population exists to create a local interest in their construction and maintenance, and to initiate a system of local taxation for such purposes.

Provision might be made for the partial endowment of those bodies at first; but I would not recommend the transfer to their charge of the main thoroughfares to the interior until the system had got into working order on the roads of local importance, say for three years; and, when transferred, the efficient maintenance of the main roads should be made imperative.

The portions of the main roads within the railway termini should, however, be transferred to the charge of the local bodies in the first instance, and as soon as possible.

It would be beyond my province to point out how such an Act should be framed in detail; but I think the "District Road Act" in Victoria, and a modification of the "Irish Grand Jury Act," would be the best models for legislation.

It would be for the Parliament to determine whether such local taxation should comprise provision for gaols, court-houses, or other public works, as in Ireland; but there are two provisions in the Irish Act which, I think, should certainly be contained in any Act for this purpose in New South Wales.

One, for the compulsory repair by Government, and recovery of cost of same from local body, of any important postal road allowed to get out of order by them.

The other, that a properly qualified professional officer or surveyor should be appointed for each board or trust, who should have had a regular professional training, and have passed a professional examination before a board in Sydney, to be composed of civil engineers of standing, either in or out of the Government service. The district should be sufficiently large to admit of the adequate remuneration of such an officer, the engagement of whom I consider indispensable to the success of the measure.

With reference to the roads beyond the more settled districts, or roads of more than local importance, the "Main Roads Act" might be amended, as recommended by "Joint Report on Transfer of Minor Roads," so as to admit of the Government proclaiming any road a main road.

I more particularly refer to the roads to the frontier districts, communication with which should be facilitated as much as possible, to prevent trade gravitating to the other Colonies, viz. —

The road from Grafton to the Tableland.

" " South Coast to Tableland.

" " Murrurundi, via Breeza and Pocataroo, to the frontier of Queensland.

" " Molong or Wellington to Fort Bourke.

" " Wagga, via Deniliquin, Balranald, and Wentworth, to the South Australian frontier.

Main thoroughfares not to be transferred for a time.

Roads parallel to railways to be transferred at once.

Compulsory repair.

Qualified surveyor to be appointed.

Roads in thinly populated places.

Roads of colonial importance

Extract from Commissioner for Roads Report, dated 9th February, 1871.

In conclusion, I feel it my duty again to repeat my recommendation of 1865—that some local administration, similar to the Irish Grand Jury system, be at once adopted, with the modifications then recommended by me. Each day strengthens my conviction on this point, and I cannot too strongly urge its adoption, for every reason. The census about to be taken might be made a means of partially introducing this system, by refusing to expend money on such works in any district when the population exceeded a certain number per square mile, unless through the medium of a municipality.

Pending the introduction of such system, it is absolutely necessary that the Act amending the "Main Roads Act" should be made law.

Minute by Mr. A. P. Wood, Assistant Engineer for Roads and Bridges.

Roads, Sydney, 3 June, 1884.

Subject:—Wells and Tanks—Wilcannia to Mount Browne.—Reply to the statements made by the *Herald* correspondent.

I have to submit the following report on the statements made in the *Sydney Morning Herald* of Tanks & Wells, the 10th ult., regarding certain wells and tanks in the Wilcannia District. These statements include 84-1,026. four different works as under:—

1. Menamurtie Well.
2. Tarella Tank.
3. Peri Springs Tank.
4. Mount Manahra Well.

I will deal with these in the order in which they stand.

1. *Menamurtie Well*.—This work is stated to be within a few miles of two permanent waterholes—the inference being that the assumed permanent water is at the command of the travelling public, and the work being carried out by this Department a waste of public money. In reply to this, I may state that there are no permanent waterholes on the Brunker Creek; that, in a natural state, this creek would in an ordinary season be dry from end to end; that the water alluded to by the *Herald* correspondent has been artificially conserved by the lessee of the run; that, though on reserves, the improvements belong to the squatter, as the reservation is from sale only, not from lease; that though the present lessee may not object to the travelling public using his conserved water at the present time, there is no guarantee that in the event of there being a large stock traffic, the same tolerance would be shown; or that, in the event of the run changing hands, the new owners would permit stock to use the water, for it must be remembered that travelling stock watering at private improvements might, and often would, materially interfere with station stock.

2. *Tarella Tank*.—The above remarks apply to this case also, the conditions being the same.

3. *Peri Springs Tank*.—This work was constructed before I had any connection with this Branch, and I have never seen the site; but I know that it was approved by the Crown Lands Commissioner and by those who petitioned for the works on the Paroo Road.

4. *Mount Manahra Well*.—This was one of the first works constructed by me in this district, and the yield, though of good quality, was of limited quantity, the test only giving 400 gallons an hour. This deficiency was met by the construction of a chamber in the bottom of the shaft, and by an extra large service-

service tank on the surface. This work, with all others constructed by us, was handed over to the Mines, and, as was the case with several other similar works, was eventually condemned by that Department, after having been maintained and repaired by them for some years. The works were handed over in good order, and this Department is not responsible for the present state of the well. This question has not been dealt with in Mr. Gilliat's memo., but as it is mentioned by the *Herald's* correspondent I have pointed out the real facts of the case.

In regard to the Menamurtie Well and the Tarella Tank, for which this Department is blamed, I may state that if such blame has any lodgment it must be on my shoulders. I was sent up to that district with full power to select sites and let all necessary works. I went over the road in company with Mr. Barlow, the District Surveyor, and Mr. Cambridge, the Road Superintendent, and the action taken by me was supported by their opinions. I acted at the time in the interests of the public and the Department I represented, and notwithstanding the adverse opinions that have been expressed I have no reason to alter my views, and still think that the two works referred to and as yet unfinished, though within a few miles of station improvements, are necessary in the public interest.

I am well aware that my recommendations were not referred to the Mines for the approval of its officers; such a course would have entirely negatived the object of my special trip by causing endless delay in settling the question; nor was such a course necessary, as the powers given me were sanctioned by the then Minister for Works.

I may add that I gave Mr. Quin, M.L.A., a list of the works let during that visit, and that the people in that district, through that gentleman, expressed their satisfaction at the course adopted by me at the time.

The Commissioner for Roads.

ARTHUR P. WOOD.

The Overseer of Public Tanks and Wells to the Inspector of Public Tanks and Wells, reporting on Peri Tank.

Peri Springs and Tank.

Tanks & Wells, Road—Hungerford Road. Situation—75 miles from Wilcannia and Post Town, 25 miles from Momba, 85-852 (85). 15, Nipper's Creek. Reserve, Nature, and No.—C.R., No. 631, S.L. 1; Camping Reserve, 631; Special Lease, 1, inside the Reserve. This Reserve also numbered 37. Notified 11th March, '68. Parish—Lake. County—Killara.

WILLIAM FRASER,
Overseer of Public Tanks and Wells.

April 7th, 1885.

Questions:—

1. Name of road, its commencement, termination, and length? Hungerford Road, Wilcannia and Hungerford, 250 miles.
- 1½. If in or near a town, give the number of inhabitants in the town and neighbourhood, and the number which would likely have to depend on watering place in dry weather? No town near.
2. Extent and description of annual traffic—(1) general, (2) stock—and probable increase or decrease? Only the travelling public. Permanent springs being close to it, very little traffic of late years of any description, but probably the traffic in stock will increase again after the general rain and break-up of the drought.
- 2½. Mr. Tully, report how many springs there are, and what area it would be necessary to fence to enclose all the springs so as to prevent stock being watered without payment of watering charges. If spring is to be used instead of tank, describe fully how the stock should be watered at it? There are about twenty springs of different sizes, comprised in an area of about a ½ of a mile by ¼ of a mile, but to enclose them by a fence it would be advisable to alter, or rather extend, the Special Lease so as to include them. (See sketch other side. See separate sheet. Vide Appendix D.)
3. The direction of the traffic—(1) where from; (2) by what roads; and (3) its destination? From Queensland, principally by the Hungerford Road; Melbourne and Adelaide principally; a few to Sydney, and from Wilcannia to Queensland, *via* Hungerford.
4. The site of proposed new watering place; its position, and how marked? None proposed, and none required at the Peri Springs. Would recommend Peri Springs be utilized; they are about 20 chains from this tank.
- 4½. How? Describe fully what would have to be done to enable stock to water without bogging or destroying springs? Would recommend making an embankment round some of the springs, and convey the water by means of pipes to large stone troughs. (See separate sheet. Vide Appendix E.)
5. The distance from nearest watering place, or permanent natural water on each side? Permanent springs close to existing tank.
6. The natural features, description, and suitability of proposed site, with rough sketch of creeks, lagoons, roads, reserves, &c., &c.? No new site proposed. Say also the nearest natural supply, and its extent and permanency. Rough sketch showing position of tank, various springs, and state area they occupy? The springs.

If a Tank.

7. The length, width, depth, and capacity, cubic yards, gallons? 100 yards long on top, 40 yards wide, may be 10 or 12 feet deep, slopes probably 1½ to 1, probably 10,000 yards, 1,687,500 gallons.
8. The height of the embankment; its length, form, and construction? Embankment is 8 feet high and very solid, quite 24 feet wide on top in places, less at ends, 400 yards measuring right round, and the slopes are about 1 to 1.
9. Any other remarks with regard to tanks, its site, dimensions, or capacity? Peri Springs are simply low hillocks of muddy sand, not more than from 2 to 4 feet high. They are about twenty in number, but only four or five give any quantity of water; the others show only by oozing at their sides. The best spring is utilized by having a pipe conveying the water from the spring into 130 feet of stone troughing, 4 feet wide and about 1 foot 2 inches deep, the surplus water flowing over the edge and away to the lake, as shown. If a good foundation could be got for stone shallow service

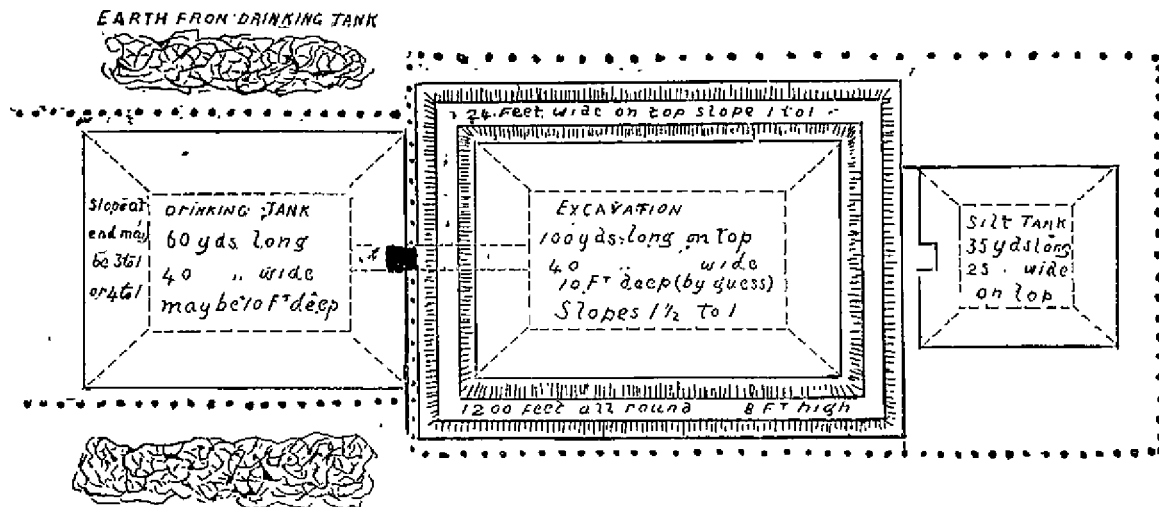

service-tank and troughing at a lower spot, and the water conveyed by pipes to the tank from the best of the springs, I think it would be the best way to make them really serviceable. If a low bank was thrown up round each spring, and a pipe through this bank to lead the water to the troughs, a great quantity of water might be collected. This might be done at one or two of the best, and perhaps no more would need to be done. The present troughing might do for small lots, coming every few hours as paddocked stock water, but it would require a very long trough and wide to contain at least 10,000 gallons if no tank was erected, and I believe this would be the cheaper plan; 400 feet long, 4 foot wide, and 15 inches deep would contain just about 10,000 gallons. In this spot it would cost from 12s. 6d. to 15s. per foot for troughing. The springs could be included in the Special Lease, as shown by dashes on sketch. I could not find the peg of Camping Reserve, but the dotted line must be nearly its position, as the S.L. is right in the middle on the west side.

10. Estimate of cost of work? 2s. per yard.

Watering appliances.

If drinking tank describe fully? An open drinking tank.

20. Description of whip; its advantages, delivery, and position? Size—60 yards by 40 yards on top. Slope—May be 4 to 1 at ends, and 3 to 1 at sides. Fencing—Only two lines from fence of main tank; not enclosing drinking tank. Condition—Apparently in good order; quite full. Efficiency—As a drinking tank it appears quite right, but should be fenced in properly, and fence made out in line with main fence.

Fencing as dotted, 62 panels by 32 round the main and silt tanks, and 22 panels each side of drinking tank, which has never been fenced across the end, as the water is above the edges of the excavation. I could only guess at the size, but I think it is correct; if not, there must be a correct measurement of these tanks in the Roads and Bridges Department.

This is the tank where the service-tap is broken, but it appears to be open. When I first visited these tanks the wells were so full of sludge that I could not tell how the taps were.

23. Supply tank; sort, size, position, construction, and estimated cost? The supply tank here is not fitted with any watering appliances, the stock watering at the open tank. May have been 1,500 cubic yards, probably 4,000 yards. Probably 675,000 gallons.
24. Pipes and connections; extent, sizes, &c.? C.I. inlet pipe, and also C.I. service pipe, with tap between main and supply tank. The tap is broken, but as it appears to be open I would not recommend anything to be done to it at present.
25. Troughing; sort, size, position, extent, &c.? 300 feet good. 18-inch iron troughing required to be erected at the Peri Springs, together with a good wooden storing tank of about 50,000 gallons.

Fencing.

26. Description, position, extent, and cost per rod (with sketch)? The main and silt tank are fenced in (but not the drinking tank) with six wires and top rail posts, about 9 feet apart; about 116 rods of fencing.

General.

28. Reasons for proposing the sort of work recommended in preference to either of the others? None proposed.
29. Chances of letting when constructed, and rental? I think if a Reserve of 640 acres were proclaimed at the existing tank and springs, well fenced, that it could be rented for £50 or £60. As there is no one living near, I don't think this tank will let well, for the following reasons:—1st. Peri Lake will have water in for years, and is only half a mile from tank, and a quarter of a mile from springs. There is an outer road, by which most of the traffic goes, quite 2 miles eastward of the road by the springs, and it is only in very wet times that the springs road is used, as it is very heavy sandy country, and the springs road is much longer.

30. Extent and position of Reserves required for use of tenant, and in connection with the watering-place for the use of travellers, teamsters, and drover's stock? I would recommend a Reserve of 640 acres at each of the tanks, with the tank in one corner of the Reserve. If this were done there would be no difficulty in renting any of them.

The description of the land and its grazing capabilities. Whether or not it is fenced? The land is rather poor and sandy; good grazing land in a good season, but would not carry much stock all the year round; 8 acres to a sheep, as much of the area consists of bare sandy country and clay-pans.

Whether there is a caretaker's cottage? No.

Tanks&Wells, Report by Overseer Tully on the Peri Tank and Springs.—Road from Wilcannia to Hungerford, in charge
85-1,128. of J. B. Cameron, on taking delivery from Overseer Fraser.

State of drains.—In good order.

Silt tank.—Is full of water, probably much silted.

Inlet or flume.—C.I. pipes, under water at present.

Main tank.—Full, in good order.

Embankments.—Good order.

Fencing.—In good order, save where a few rails have been destroyed by teamsters as reported by Caretaker Cameron, and on which I made a special report.

General remarks.—Would recommend the springs to be utilized instead of the tank, as more permanent, and not dependent on rainfall.

Peri Springs.

State of shaft.—There are a number of inferior springs, each giving a little water, and one main spring with a C.I. pipe inserted, from which the water flows in a continuous stream into about 50 feet of good stone troughing. These works were made by the lessees of the run (Momba). I am convinced that a sufficient supply of water for all travelling stock is running from this spring, and with a large shallow stone supply tank, and (say) 400 feet of stone troughing a never failing supply would be at hand.

Whims, &c.

Rope, buckets
&c.

Watering appliances.

State of drinking tank.—Full, and in order.

Service pipe and tap.—Pipe under water, well for access to tap has several feet of mud in it, covering the tap.

State of fencing.—The drinking tank has never been fenced around, but only two wings from main tank fence.

Work laid out for caretaker.—Cleaning the well for access to service-tap of silt, and to put the tap in proper order.

Repairs and alterations recommended to be given in detail, with estimated cost of each item:—

Cost of erecting supply tank and troughing of stone and cement at Peri Springs—

	£	s.	d.
400 feet troughing, at 10s. 6d.	210	0	0
30,000-gallon tank	220	0	0

Reply to circular 109.—No work of repair or alterations has been done here by Works Department.

MARK J. C. TULLY.

Dated at Wilcannia this 4th day of May, 1885.

Has the alteration in the special lease, so as to include the springs as recommended by me, been yet carried into effect? If so, I would submit that a recommendation for the fencing to be completed as soon as possible, may be forwarded to the Department of Public Works.—H. GILLIAT, B.C., 15/6/85.

Minute by Mr. H. Gilliat.

Department of Mines, Stock Branch, Sydney, 16 September, 1885.

Tanks&Wells, REFERRING to Mr. Overseer Tully's report on the Peri Springs and Tank I submit for the consideration
85-3,438. of the Honorable the Secretary for Mines the following remarks:—

1st. The Peri Tank, as pointed out in my first report upon it, and in frequent minutes since, has been constructed within a short distance, some 15 or 18 chains, of a group of the best flowing fresh water springs in the Colony, which only require tapping and fitting with service tank and troughing to furnish an ample supply for all the stock and traffic ever likely to pass up and down the Paroo.

Both the tank and springs are unfortunately off the road used in dry weather, and upon one about two miles to the west passing over heavy sand ridges; this back track is several miles longer, and is rarely used, except in wet weather, or when the Paroo is in flood.

Had the Peri Tank been placed upon the shorter or dry weather track there would have been some apparent reason for its construction; but at present both sources of supply, the tank and springs, are on the wet weather and longer road, forcing stock and traffic to make a detour of some four miles, when there is no water in the Peri Lake, or when that becomes—as in these lakes it always does after two or three years' storage—too salt for use.

2nd. Under the circumstances it is now, I think, desirable the Minister should decide which source of supply is to be adopted, and that in future no expense may be incurred for the other. In my reports and minutes upon the Peri Tank and Springs I have opposed any outlay upon the tank for the same reasons given by Mr. Tully, that the springs afford a permanent and ample supply, entirely independent of the limited and uncertain rainfall.

While repeating my former recommendations that the lease area should be extended to include within its limits both springs and tank, I think it will be desirable to abandon the latter so far as further outlay upon it is concerned, reserving it merely as a stand-by until the improvements to be made at the springs are completed.

3rd. There is an alternative plan that I have always had in view when the time should come of dealing with this subject.

As

As shown by Mr. Tully and myself the supply at present is some 2 miles west of the shortest and dry weather track, and compels a longer journey at the very time ready access to water is the most urgent.

Ahead of the Peri Tank and Springs, but a few hundred yards to the east of the shorter or dry weather track, is another spring. A shallow shaft has been sunk in it, in which as far as I could learn the water is always standing, and in cloudy or before wet weather usually overflows. My informant, the late Mr. Bonny, of Mombah, was a careful observer, and had the experience of a twenty years residence on the Paroo.

It struck me when first visiting this spring that a bore in its immediate neighbourhood would probably tap artesian water, which, from its position on the shorter dry weather road, would prove more convenient to stock and traffic, attract more custom and rates, and be much more likely to find a tenant than at the present springs.

There are three water augurs on the Bourke-Wanaaring road, and but one, I believe, unless quite recently, has been in regular work. One of these might perhaps be sent to test the supply at this spring, a distance of about 140 miles, before finally deciding upon the improvements being made at Peri.

The time is favourable for the experiment, as there is both grass and water, and the expense would be inconsiderable.

4th. Should the Minister's decision be favourable to the improvements suggested at either of these springs, the question of the stone service tank and troughing, recommended by Mr. Tully (and which, personally, I think the best under the circumstances), as well as the embanking and tapping of the spring at Peri (should the alternative course submitted not be decided upon or prove unsuccessful), should, I think, be referred to the Commissioner for Roads for an opinion.

5th. In any case, I would recommend a lease area of 640 acres being laid out and marked at the spring on the inner road.

HARRY GILLIAT.

I should like to be informed of the estimated cost of boring at the spot recommended by Mr. Gilliat.—F.A.W., 12/10/85. The Superintendent of Drills.—H.G., B.C., 12/10/85. The cost to the Department of boring with water augur at per foot was £2 6s. 9½d. during last year, but I hope to be able to reduce the cost considerably.—W. H. SLEF, 30/11/87. No funds for the work; resubmit in three months.—H.G., 4/12/85.

XII.

Interference by Mr. Road-Superintendent Stillwell with Mr. Overseer Elworthy, at Pulletop and Hulong Tanks.

Pulletop Tank.

Hay, 6 December, 1886.

Sir,

P. W. P.,
86-5,852.

On visiting this tank on 3rd instant, the water was 2 ft. above level of berm—20 ft. depth in the tank. John O'Neil is lessee; he has been in possession six weeks, and was in charge when I visited. The embankment was in very bad repair, and no effort had been made by lessee to remedy it. Water had been allowed to accumulate on top (which is dished) and break over at two corners, carrying down some thirty cubic yards of earth. The batters throughout were also corrugated by neglected rain-scour. The wires of enclosing fence were very slack, and should be attended to.

The service-tank was not full, and the lessee appeared to know little about the care or working of the steam pump. I got it to work, and he said he would employ a man to take charge of it. It worked satisfactorily, but the boiler needed cleaning. The troughing was in good repair; but it also needed cleaning.

The Commissioner and Engineer for Roads.

I have, &c.,

A. W. STILLWELL.

Make copy to send Mines; resubmit on Mr. Wood's return.—W.C.B., 8/12/86. The Mines should certainly be informed, and requested to insist on lessees keeping works in proper order.—A.P.W., 10/12/86 Herewith.—13/12/86. Under Secretary for transmission to Mines.—W.C.B., 13/12/86. The Under Secretary for Mines.—J.R., B.C., 15/12/86. Mr. Overseer Elworthy for report. If these statements are correct, Mr. Elworthy will please say why reports of neglect at watering places in his district should be so frequently received through another Department before being reported on by him.—HARRY GILLIAT, B.C., 20/12/86. Mr. Overseer Elworthy.

These statements by Mr. Stillwell are very annoying. I visit these tanks regularly, and report you fully after each inspection. The last time I reported on this tank was when I handed it over to O'Neil in October. At two ends of the embankment the earth was washing away, and I gave O'Neil instructions to mend this up, and have sent him iron to make the V shaped gutter at corners. When passing the tank subsequently I noticed my instructions had not been carried out, mainly owing to Mr. Stillwell, whom the lessee said had countermanded my orders, and told O'Neil not to touch the embankments without instructions from him. Why does Mr. Stillwell do this? I have personally complained of this interference to Mr. Boulton, who can tell Mr. Gilliat all about it, and I am sending Mr. Boulton copies of several letters on the subject. I also refer you to my letter of 10th instant, wherein I complained about Mr. Stillwell. I will write O'Neil, and insist on the work being carried out at once; and if not done by the time I pay my next periodical inspection in January, I will report to you. I opposed O'Neil's tender for this tank, but he got it after all.—W. J. ELWORTHY, 22/12/86.

Sir,

Whitton, 21 December, 1886.

P.W.P.,
86-5,927.

Referring to my instructions to visit the Hulong Tank, I now have the honor to inform you that I did so and found that Mr. Road-Superintendent Stillwell—after Mr. Overseer Elworthy had instructed the caretaker to coal tar the boiler, &c., in accordance with your circular, 3rd September last,—had issued fresh orders to the caretaker to paint it red and to apply to Mr. Elworthy for paint. Mr. Elworthy instructed the caretaker to prepare the newly dished top of the embankment for the reception of a shoot, for carrying off the storm water and material, for which Mr. Elworthy was supplying. These instructions were also countermanded and a length of india-rubber hose 2½ in. diameter was supplied by Mr. Stillwell to carry off all the storm water from the four embankments. I need hardly say how totally inadequate this is, and must at the same time protest against such a useless waste of money and such a childish innovation, that in the eyes of the travelling public so reflects upon the Public Watering Places' officer. I wish to bring this immediately and urgently before you, as I understand Mr. Stillwell is about supplying other tanks in his district with the same. A shoot of less than 1 ft. across is perfectly useless and is required in each angle. Actual experience, both at Hulong and Pulletop, has proved the folly of the 2½-in. hose, and caretakers have now definite instructions to proceed with shoots so soon as material arrives.

See P.W.P.,
86-4,292 &
86-5443
attached.

The interference on the part of Mr. Stillwell and his assistant in regard to the control of Public Watering Places transferred to us is highly objectionable. The overseers do not appear to have the interest in their work they should have, while dictated to and snubbed by an officer who has no control over them. The caretakers cannot understand what appears to them a divided and antagonistic authority (antagonistic, however, only on the part of the Works officer), and between the two the Public Watering Places suffer.

After the transfer of Public Watering Places to us in good order, I would urge that the responsibility of the Works officers should cease. We have capable men as overseers, who, if they understood it to be their duty, could see all repairs executed, and, I think, with less expense, and thus avoid a correspondence and interference that, I venture to think, is hardly creditable to Mr. Stillwell and his endless and groundless complaints.

It is only from Mr. Stillwell's district that these frivolous charges come.

The accompanying copies of letters are, I think, a substantiation for my remarks.

I have, &c.,

JAMES W. BOULTBEE,

Inspector, Public Watering Places.

The Chief Inspector of Public Watering Places.

Extract from Mr. Inspector Boulthbee's report on Quandong Tank, 17 November, 1887.

* * * * * P.W.P.,
86-5,443.

Shoots are required to carry off the water from the top of the embankments at each angle. Caretaker informs me Mr. Stillwell intends to supply him with a length of indiarubber hose to act as a syphon. I think a pannikin to bail it out would be as much use. The excavation for the road embankments hold water for a long time, and greatly interfere with the takings here. Stock drinking at these excavations should be compelled to pay if it can be done.

J. W. BOULTBEE,
Hay, 17/11/86.

Submitted in confirmation of my report on hose at Hulong Tank.—J.W.B.

1 September, 1886.

Subject :—Referring to the enclosed extract from your report upon the Quandong Tank, you will be good enough to state if you mean that such a hole as described exists in the embankment. P.W.P.,
86-4,292.

HARRY GILLIAT,

Mr. Overseer Keighran, Hay.

Chief Inspector of Public Watering Places.

Extract from Mr. Overseer Keighran's report upon Quandong Tank, 27th August, 1886.

Embankments.—Newly repaired, but are now damaged by rain in consequence of the top being made flat or rather hollowed out, which catches the rain, the soakage from which causes the earth to give way, leaving a hole big enough to swallow a bullock.

J. A. KEIGHRAN,
Overseer, Public Watering Places.

Hay, 6 September, 1886.

Yes, such a hole as described did exist in the embankment, and could not be filled up until such time as the ground dried sufficient to allow it to be done. Mr. Assistant Engineer Stillwell talks of having a syphon placed to carry off the rain water; but I question very much if that will answer.

JOHN A. KEIGHRAN,

The Chief Inspector of Public Watering Places.

Overseer.

Mr. Gilliat's letter of 3rd September, stating colours to be used in painting engine, &c.

Sir,

I have to request that you will be good enough to instruct the caretakers of steam-pumps in your district that boilers should in all cases be coal tarred while hot, and that steam-pumps should always be painted a dark green.

H. G.

Sir,

Mr. Stillwell was here yesterday; tried engine, which went splendid; he was quite pleased with her. He gave instructions for her to be painted—the boiler, red; engine, dark green; discharge-pipe, black. I have to take paint off facing, and shall want sand-paper. &c.

W. J. Elworthy, Esq.

4th December.

S. LEIGHTON.

Extract from S. Leighton's letter, 1st December.

"I should also inform you that when Mr. Stillwell came here he brought a hose to take water off embankment, so the ridging will not be required."

S. LEIGHTON.

Pulletop Tank.

Sir,

Public Watering Places Office, Narrandera, 10th December, 1886.

A few days before I handed over this tank to John O'Neill on 20th October last, a heavy rainfall washed a by-gutter on the two outer corners of the embankment, and I told O'Neill it would be necessary to have these repaired, and I would send him material to avoid a similar break away; and I read him your instructions, dated 16th September, explaining how the drainage from embankment was to be carried down corners into tank. When passing the tank last week I noticed no repairs had been made, firstly, because the material which I had sent on 6th November had not arrived; and, secondly, O'Neill informed me Mr. Stillwell had been at the tank subsequent to my visit, and said nothing was to be interfered with at embankment without his instructions.

I merely mention this to save myself from blame should the embankment break away further, as Mr. Stillwell has countermanded my instructions.

H. Gilliat, Esq.

I have, &c.,

W. J. ELWORTHY,

Overseer.

Dear sir,

4th December, 1886.

I beg to let you know that Mr. Stillwell was here yesterday. I pointed out to him that the hose he sent was useless for the purpose of taking off the water from the bank. He told me he did not think Jardine had done anything to the bank; but I told him that he had made the bank up. Whatever blame there is about the bank solely lies on Mr. Stillwell himself. I told Mr. Stillwell that I would put in the ridging as soon as it came, and he did not say anything. It appears to me that he wants to leave his own shortcomings on other people's shoulders.

I drew his attention to the state of the road crossing the drain, but he took no notice.

W. J. Elworthy, Esq.

JOHN O'NEILL.

Memo. *re* above.

O'Neill told me personally, and previous to this, that when he told Mr. Stillwell what instructions I had given him *re* embankment, Mr. Stillwell countermanded, and said O'Neill was not to do anything without his, Mr. Stillwell's, instructions.

W. J. E.

Sir,

Sir,

Public Watering Places Office, Narrandera, 17 September, 1886.

I have the honor to acknowledge your 86-3,332 of 3rd instant, *re* painting of boilers, and I would advise that I left instructions with caretakers to coal tar the boilers, &c., but these instructions were superseded by the Road Superintendent, Hay (Mr. Stillwell), who has had the boilers painted red and the remainder black, French grey, blue, and other colors.

H. Gilliat, Esq.

W.J.E., Overseer.

Minute Paper.

P.W.P.,
87-137.

Subject:—Interference of Works Officer with Mr. Overseer Elworthy's instructions to tenant, Pulletop Tank.

Department of Mines, Public Watering Places, 13 January, 1887.

Mr. Elworthy's report upon Mr. Road-Superintendent Stillwell's action in directing the tenant to disobey the instructions of the overseer with respect to the repairs to the embankments at Pulletop Tank, were, owing to my absence on leave, withheld from action till now.

The course pursued by Mr. Stillwell is open to several objections, notably that the authority of the local officers must be weakened by such interference in his dealings with a tenant.

2. That such interference is not warranted by any existing arrangement between the two departments.

3. That the maintenance of the Public Watering Places and the administration of the Act is vested in this department, and, under its regulations, the tenant is made responsible for these repairs, and the overseers, that they are carried out properly. This it is impossible he can successfully accomplish, when his orders are countermanded by an officer of another department possessed of no authority to interfere.

In this case the interference is with the functions of the Hon. the Minister for Mines, I think it necessary to submit my recommendation that through the proper channel the Commissioner for Roads may perhaps be requested to direct his local officers to refrain from any interference with either the tenants, caretakers, or overseers of the Public Watering Places. With reference to Mr. Elworthy's letter he may, I think, be desired to direct the attention of the tenant at Pulletop to the regulations under the Act, and to his indenture of lease, and to inform him that he is solely responsible to this department for his instructions, and that any failure in the conditions arising from disobedience of them will necessitate the enforcing of the penalties therein contained.

The Under Secretary for Mines.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Submitted for approval.—H.W., 17/1/87. Approved.—C.K.M., 18/1/87. Inform. Mr. Elworthy informed.—J.W.B., 21/1/87. The Under Secretary for Works.—H.W., B.C., 18-27/1/87. Roads, B.C., 27/1/87. W.C.B., 29/1/87. Mr. Stillwell for full report on separate paper.—J.W.B., 7/2/87. Report attached.—A.W.S., 9/2/87.

Sir,

Public Watering Places, Mines Department, Sydney, 21 January, 1887.

P.W.P.,
87-137.

Referring to your communication of 10th ultimo, complaining of the interference of Mr. Road-Superintendent Stillwell with your orders to the tenant of Pulletop Tank, I have the honor to inform you that the matter has been referred to the Under Secretary for Works, with a request that the Commissioner for Roads may be asked to direct his local officers to refrain from any interference with either tenants, caretakers, or overseers of Public Watering Places. You are at the same time requested to be good enough to direct the attention of the tenant of Pulletop Tank to the Regulations under the Act and to his Indenture of Lease, and to inform him that he is solely responsible to this department for his instructions and that any failure in the conditions arising from disobedience of them will necessitate the enforcing of the penalties therein contained.

Mr. Overseer Elworthy.

HY. GILLIAT.

Sir,

Public Watering Places Office, Narrandera, 24 January, 1887.

P.W.P.,
87-417.

I have the honor to acknowledge your 87-137 of 21st instant, *re* interference of Works Department Officers with my instructions to caretakers and tenants, and I have advised the caretakers in my charge, as also the tenant of Pulletop Tanks, of the contents of your letter under reply.

I have, &c.,

W. J. ELWORTHY,

The Chief Inspector, Public Watering Places.

Overseer.

As to alleged interference with the authority of the Mines Overseer at Pulletop Tank.

Sir,

Hay, 9 February, 1887.

Tanks and
Punt-,
87-119.

Referring to the attached papers, it is to be observed that Mr. Elworthy does not state that I countermanded his orders to the tenant, but that the tenant, O'Neill, informed him so. An obvious preliminary on Mr. Elworthy's part would have been to ascertain whether such were the facts. For your information I may state that it is about the reverse of the facts; but as this was not elicited by Mr. Elworthy it may perhaps be neglected as irrelevant, and now apparently the points to be considered are that this man's unsupported statement is taken by his overseer (as he intended it should be) as an excuse for gross neglect, for some two months, of a most obvious and urgent duty, and that his hand is unwittingly played further to by Mr. Elworthy's report and Mr. Gilliat's consequent minute being based upon it.

It would really appear that up to the present Mr. O'Neill has been master of the situation. I do not see how any responsibility regarding it rests with this department.

In

In fact, the matter should be one as Mr. Gilliat somewhat elaborates in his minute—so obviously and solely between the Mines officers and their tenant, that unless it had been forced upon me I should have had some delicacy or reluctance in dealing with it.

I can however heartily concur in what Mr. Gilliat says respecting the interference of officers with the men under another department—the more especially as this has been at times somewhat realised for me by actions of his overseers at works still under my jurisdiction; but I confess that I have failed to draw from it the somewhat anomalous conclusion that it is impossible an officer can successfully accomplish his work if his orders are countermanded by an officer of another department possessed of no authority to interfere.

On the contrary, I have found little difficulty in maintaining my authority, and little harm has resulted, and I have taken it all in good part as evincing only mistaken zeal on the part of his officers.

The Commissioner and Engineer for Roads.

I have, &c.,

A. W. STILLWELL.

Mr. Wood.—W.C.B., 11/2/87. Minute by the Commissioner for Roads:—Copies to be made of this correspondence and retained in this office.

Minute Paper.

Subject:—Alleged interference with Mr. Elworthy's instructions to tenant of Pulletop Tank.

Roads, Sydney, 11 February, 1887.

P. W. P.,
87-741.

THE attached minute from the Mines, enclosing a report from Mr. Elworthy, complaining of Mr. Stillwell's interference with the tenant of Pulletop Tank, has been submitted to that officer for report, and his reply proves that there was no ground for the charges made by Mr. Elworthy, nor for the protest made in the minute against the so-called "interference with the functions of the Hon. the Minister for Mines."

From the tenor of Mr. Stillwell's report attached, it would appear that any complaint as to interference should, if made at all, have been made by him; but his good sense prevented any such action being taken, as he preferred attributing the actions of the local Mines officers to "mistaken zeal," and found himself fully equal to coping with their interference, and maintaining his own authority in his own province without any appeal to the head office for support.

The minute from the Mines is, as regards the charges made against Mr. Stillwell, fully disposed of, but it more than ever proves what this department has been cognizant of for a long time—that the existing arrangements in regard to the control of these works should be radically altered. A large sum of money has now been expended on tanks and wells, and, in the interests of the general public, to whom these works are a great boon, the management of them should be as perfect as possible. Under existing arrangements this is not the case, and the system of dual control has long proved an evil. The works are constructed by this department, and the maintenance of them when it involves an expenditure of over £10 is also one of our duties, but here we are confronted by a serious evil, for the lessees and caretakers, being subjected to the control of the Mines, any action on our part involving instructions to them is, as is evident in this case, jealously resented, the public interests being sacrificed to personal or departmental feeling. The old adage of "a stitch in time saving nine" is peculiarly applicable to the maintenance of these works, and in many cases the saving stitch, through the neglect or want of knowledge on the part of the local watering places overseers, is never put in, the result being complaints levelled at this department, and a large increase in the cost of maintenance. Should any of our officers instruct the lessees or caretakers as to the necessity of attending to any small point, instead of this course being received as being in the public interest, which both departments should equally strive to maintain, it is at once brought up against us as an interference with the functions of the Hon. the Minister of that department, and while the red tape is being unravelled and unknotted, the amount that will have to be expended on repairs is rapidly increasing.

As the Roads officers in charge of the dry districts construct the works, and are practically responsible for them afterwards, they are reasonably and justly entitled to have a controlling influence, and it would be in the public interest, both as regards the efficiency of them, and also as a step towards retrenchment, if the full supervision of them were placed in our hands, leaving to the Mines, which includes the Stock Branch, the determination of the routes to be watered, and the number of works required.

ARTHUR P. WOOD.

The Commissioner for Roads.

I concur in Mr. Wood's remarks. I have nothing to add to them except to disclaim any intention whatever of interfering with the functions of the Minister for Mines.—W.C.B., 11/2/87. Under Secretary, B.C. Forwarded to Mines.—J.R., B.C., 14/2/87.

Minute Paper.

Subject:—Alleged interference with Mr. Overseer Elworthy's instructions to the tenant of Pulletop Tank.

Department of Mines, Public Watering Places, Sydney, 11 March, 1887.

P. W. P.,
87-1,128.

IN this case the alleged interference by Mr. Stillwell is denied by the Department of Public Works, and here in the ordinary course of business the question would have dropped. But the minute of Mr. A. P. Wood, concurred in by the Commissioner and Engineer for Roads and Bridges, contains, what I venture to think, such an entirely unauthorized criticism upon the administration of the Public Watering Places, as unjust as it is incorrect—that I consider myself justified in asking that the attention of the Hon. the Secretary for Mines may be specially drawn to all the papers. I am in entire agreement with the officers of the Department of Public Works with respect to the serious disadvantages of a divided control, and reference to our records will show that the attention of the heads of both departments have been directed by me on several occasions to its unfortunate results.

The

The administration of the Public Watering Places Act, which is the only Act that I am aware of that gives legal powers for the construction of works of this nature, is vested in the Hon. the Secretary for Mines, and I may perhaps respectfully submit for his consideration, that some permanent arrangement of the duties of the two Departments is probably desirable. The statements of Mr. Wood can be readily refuted, were he entitled to receive a reply, but in the interests of the public service, and of the special duties allotted to me, I consider any reply from me unnecessary, unless specially directed to do so.

HARRY GILLIAT.

The Under Secretary for Mines.

Submitted. If the Minister could spare time to confer with the Minister for Public Works upon this subject, a more satisfactory arrangement may perhaps be made.—H.W., 14/3/87.

XIII.

Re coating inside of Service Tank and Troughs with objectionable composition by Works Department.

Telegram.

25 January, 1887.

P.W.P.
87-371.

TRAVELLING mechanic is here, by instructions from Mr. Assistant-Engineer Stillwell, to tar inside of troughing, and about 2 feet from top of supply tank. I object to its being done as the tar melts and forms a scum on top of the water which prevents stock from drinking. The Boonoon and Mount Manara troughing had already been done; there has been several complaints about it; please inform me by wire if I am to prevent its being done to troughing at Ivanhoe Tank.

JAMES YEO,
Overseer.

The Chief Inspector, Public Watering Places.

Minute.

Subject:—Tarring inside supply tank and troughs, at Ivanhoe.

Department of Mines, Sydney, 25 January, 1887.

P.W.P.,
87-375.

It is perhaps unnecessary for a travelling mechanic to employ his time in tarring troughing and service tank, when there is a competent caretaker. I understand from Mr. Inspector Boulton the mixture used for the purpose contains tallow, and should not therefore be used inside; probably boiled coal tar is not objectionable.

Mr. Yeo may perhaps be directed to inform the travelling mechanic that this service is not required and to write to Mr. Assistant-Engineer Stillwell for his instructions to that effect.

HARRY GILLIAT,

The Under Secretary for Mines.

Chief Inspector of Public Watering Places.

Submitted for approval.—H.W., 25/1/87. Approved.—F.A., 25/1/87. Telegram sent.—J.W.B. Copy of minute forwarded to Mr. Overseer Yeo, 25 January, 1887. Telegram from the Chief Inspector of Public Watering Places to Mr. Overseer Yeo, Sydney, 25th January, 1887. Inform travelling mechanic this service, that is, tarring troughs and service tank is not required; write also to Stillwell that you have been instructed as above.—HARRY GILLIAT, Chief Inspector of Public Watering Places.

Subject:—Tarring inside supply tank and troughs, at Ivanhoe.

Sir

29 January, 1887.

P.W.P.,
87-536.

I have the honor to acknowledge receipt of your instructions re the above subject, contents noted. I beg to state that I am communicating next mail with Mr. Assistant-Engineer Stillwell, informing him that my instructions are to the effect that this service is not required.

I have, &c.,

JAMES YEO,

Overseer.

The Chief Inspector, Public Watering Places.

Sir,

Stock Office, Ivanhoe, 25 January, 1887.

87-433.

I am instructed by the Chief Inspector of Public Watering Places to inform you that tarring troughs and supply tank is not required at the Ivanhoe Tank.

I have, &c.,

JAMES YEO,

Overseer.

A. W. Stillwell, Esq., Assistant Engineer, Hay.

Memo. from Mr. Inspector James W. Boulton.

In reference to Mr. Overseer Yeo's protest of 25th instant against tarring the inside of the troughing, &c., at Ivanhoe, I have the honor to state that when at Mount Manara Tank on 25th November last, I observed that the Works mechanic had covered the inside of the tank and troughs with a composition of tallow, tar, and pitch, and that the water pumped into them was, after standing a short time, most objectionable and undrinkable,

undrinkable, bearing a greasy and prismatic scum on the top. Macdonald, the drover, who was fined £10 for removing the rails at Boonoona, attributed the fact that his cattle would not drink at Mount Manara to this as much as to the height of the dwarf rail. The water at these tanks is quite fresh, and I think it is only where brackish water is met with that the galvanized iron of the troughs requires any dressing, and then I should omit the tallow, well boiled coal tar and pitch answering all requirements in my opinion. Another matter for your consideration is this, that this duty is clearly laid down as part of the caretakers' duties, and, with deference I submit, hardly the work for a skilled mechanic, who is, I believe, paid £6 per week.

The Chief Inspector of Public Watering Places.

JAMES W. BOULTBEE,
Inspector, Public Watering Places.

Ivanhoe Tank.

Sir,

Hay, 29 January, 1887.

The Douglas pump has been fixed on the service tank, and the steam pump taken apart, cleaned, and new leathers put in by the travelling mechanic.

P.W.P.,
87-617.

The Mines overseer would not permit the troughing to be coated with a composition of pitch, tar, and tallow, in accordance with Mr. Wood's instruction. He told the mechanic it was unnecessary, and that he had received instructions from Sydney not to have it done. He has since written me to same effect; his letter is attached.

There was 5 feet of water in the tank on 27th instant, and up to that time no rain had fallen sufficient to cause any flow in drains, so that the subsidence since my last report on 17th December last, when there was 7½ feet, has been at rate of ¾-inch per diem only.

I have, &c.,
A. W. STILLWELL.

The Commissioner and Engineer for Roads.

Noted. Mr. Wood.—W.C.B., 31/1/87. It appears to me that, as this Department is responsible for repairs and renewals, no objection should be raised to such steps being taken as we consider necessary to protect the works or make them more efficient.—A.P.W., 7/2/87. I think the instructions of this Department should be carried out for the protection of this iron. Mr. Wood gave those orders after consulting on the matter, and the work is absolutely necessary.—W.C.B., 7/2/87. Under Secretary, B.C., for transmission. The Under Secretary for Mines, B.C., 10/2/87. Transmitted.—J.R.

Minute by the Chief Inspector of Public Watering Places.

WITH respect to the Commissioner's Minute, I find, after enquiry from all the overseers, that the use of tallow with the pitch and tar has, apparently, only been found necessary in Mr. Road-Superintendent Stillwell's district.

H.G.

Minute of the Chief Inspector.

Subject:—Tarring inside of troughing, &c.

Department of Mines, Sydney, 12 February, 1887.

ON Mr. Inspector Boulton's return from his last inspection, he reported an objectionable composition of pitch, tar, and tallow was being used for coating a portion of the inside of service tank and troughing at some of the watering places by a man in the service of the Works Department, acting under instructions through the Local Road Superintendent. Repairs of this nature are carried out by our own caretakers, who are paid for the service, and the employment of a skilled mechanic for the purpose appears therefore unnecessary.

P.W.P.,
87-667.

Objection has been taken to the use of the composition referred to (*vide* Mr. Boulton's memo.), and I need hardly point out that it is apparently even more unsuitable when the water may at any time be required in considerable quantities for domestic purposes, as at the Ivanhoe Tank.

Our own officers are instructed to use boiled coal tar and pitch for coating service tanks and joints of troughing when required. This forms a hard glaze, and has so far been found suitable.

I am in doubt whether Mr. Wood is correct in assuming that the Department of Public Works is responsible for repairs, until they are authorized by the Honorable the Secretary for Mines, and I am equally in doubt whether it is desirable for that Department to take such steps as it may deem necessary to protect or render the works more efficient without reference to the Department responsible for their maintenance and control under the Act.

The effect of a divided control can only tend to confusion and lowering of the standard of efficiency, as well as to create friction between the Departments; and any steps taken, I would respectfully suggest, for the consideration of the Honorable the Secretary for Mines, would preferably be in the direction of relieving the Works Department entirely of all repairs in the future.

The Under Secretary for Mines.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Mr. Inspector Boulton states:—"A composition of tallow, tar, and pitch; and the water was, after standing a short time, most objectionable and undrinkable, bearing a greasy and prismatic scum on top."

Mr. Overseer Yeo states:—"It melts and forms a scum on top of the water, which prevents stock from drinking. Boonoona and Mount Manara troughing had already been done. There have been several complaints about it."

If the use of the composition renders the water unfit for the purpose for which it is conserved it is not clear how the use of it can be said to render the works more efficient. It is very desirable, in the public interest, that when the works have been taken over by this Department they should not be interfered with by the officers of another Department, and it is to be hoped the question of construction, control, &c., will be dealt with at an early date.—H.W., 16/2/87.

Submitted. Approved.—F.A., 21/2/87. Prepare copy for transmission to Works Department.
—H.G., 23/2/87. Copy prepared and forwarded by letter.—J.W.B., 24/2/87.

Sir,

Public Watering Places, Mines Department, Sydney, 24 February, 1887.

Sir,
 Referring to your B.C. communication of the 10th instant, relative to the coating of the inside of the service tanks and troughing with a composition at several of the public watering places, and to the minute thereon, I now have the honor to forward for your information a copy of a minute dealing with the matter.

I have, &c.,
HARRIE WOOD,
 Under Secretary for Mines.

P.W.P.,
 87-67.
 Public Works,
 87-867.
 Tanks and
 Pumps,
 87-89.

The Under Secretary for Public Works.
 Copy of Minute, P.W.P. 87/667, enclosed.

XIV.

Old Gunbar Well.

Telegram from the Inspector of Tanks and Wells to Chief Inspector of Stock.

17 December, 1884.

Tanks & Wells,
 84-1,637. *Re* Old Gunbar Well, have accepted transfer subject to Minister's approval; require analysis of water; report to follow.

HARRY GILLIAT.

Submitted for approval.—A.B., 17/12/84. The Under Secretary for Mines. Mr. Gilliat.—A.B., B.C., 29/12/84. I have to request that I may be furnished with two 1-gallon Winchester bottles; I wish to submit samples of this water for analysis.—H.G., B.C., 30/12/84. Requisition, 3/1/85. Supplied, 19/1/85.

Report respecting sample of water received from The Honorable the Minister for Mines.—Sample received 21st March, 1885.

Old Gunbar Well, near Carathool.

Tanks & Wells,
 85-612.

25 March, 1885.

Total solids, grains per gallon	982.00
Soluble solids	"	826.20
Insoluble solids	"	68.00
Volatile, at red heat...	87.80
								982.00
Chlorine	313.25
Saline ammonia, parts per 100,000	0.028
Organic ammonia,	"	not determined

This water has been found to contain a very large quantity of organic impurity, derived partly from animal and partly from vegetable origin. This alone is quite sufficient to condemn it for domestic use.

There is also an excessive amount of saline matter, consisting chiefly of common salt, carbonate, and sulphate of lime. The water may be used for cattle if no other is to be obtained in the neighbourhood, but it should never be used for domestic purposes without first being boiled or properly filtered. However, no amount of boiling or filtration will remove the extraordinary quantity of soluble matter present. Distillation would be the only method of properly purifying such a water, and as I am not acquainted with the history of the water and its surroundings, I am unable to indicate the sources of pollution.

CHAS. WATT,

The Honorable the Minister for Mines.

Government Analyst.

Mr. Gilliat.—A.B., B.C., 26/3/85. The report of the Government Analyst upon the water of the Old Gunbar Well cannot be regarded as satisfactory, but I would point out that the organic impurities, especially those derived from animal origin, in water from a well shaft recently sunk 100 feet deep, lead to a suspicion that the water may not have been taken from the source intended. I would recommend that a gallon jar be packed and forwarded to Mr. Keighran with a request that he should draw the water himself and forward for analysis.—H.G., B.C., 7/4/85.

Forward jar and instruct Mr. Keighran.—A.B., 11/4/85. Letter sent, 15/4/85.

Gunbar Well.

Tanks & Wells
 85-981.

Newspaper extract. Name of paper and date not noted.

I observe that you had the Minister for Mines in Hay lately, and promised to send up apparatus for deep bore water. The Government has lately put down a well at Old Gunbar, on the Hay to Hillston road, about 100 feet deep.

It is *on dit* that there is not one animal in Riverina that would drink one pint of this water unless he was first subjected to starvation by thirst, the water is so salt. Therefore, it is to be hoped that the Members for the District will urge the Minister for Mines to bore deeper in this well, so as to test what sort of water is to be procured at a greater depth, for a poor selector could not do worse than the Government has done in this case up to this.

Mr.

Mr. Gilliat,—A.B., 23/4/85.

Water was sent down from this well and condemned by the Government Analyst, but as there appeared some reason to suspect that the sample procured was not a pure one from the well, a fresh sample has been sent for. In any case, I have no hesitation in saying that in its present state horses will not drink it, and I am doubtful if sheep or cattle will. I have withheld making a recommendation to the Works Department upon the subject until the analysis of the water could accompany the paper.—H.G., B.C., 23/4/85.

Mr. Overseer Keighran was asked to obtain sample of the water on the 15th instant.—E.W., 23/4/85.

Sir,

Hay, 4 May, 1885.

Referring to instructions contained in your 85-612 "Tanks" of the 15th ultimo, I do myself the honor to inform you that I visited Old Gunbar Well and drew a jar of water from the well, which I am forwarding you by rail to-morrow, *per* Messrs. Wright, Heaton, & Co. Tanks&Wells,
85-1,066

I have, &c.,

JOHN A. KEIGHRAN,
Inspector of Stock.

The Chief Inspector of Stock.

The Government Analyst might be asked to furnish a report upon the sample of water now submitted by Mr. Overseer Keighran.—A.B., 8/5/85. Under Secretary for Mines. Approved.—H.W., 8/5/85. The Government Analyst.—H.W., 8/5/85., B.C.

Government Laboratory, 12 May, 1885.

MEMO.—The sample of water was found to contain 1,094.4 grains of solid matter per gallon. The water is quite unfit for use. The remarks made in the report, dated 25th March, apply to this sample even more strongly than to the previous one. Tanks&Wells,
85-1,167.
85-612.

It is possible that the organic matter may arise at any rate in part from the well not having been thoroughly cleaned out after the workmen left it. Nevertheless, the saline matter alone condemns the water.

CHAS. WATT,

Government Analyst.

The Under Secretary for Mines.

Copy and forward to Mr. Gilliat.—A.B., 14/5/85. Letter and copy to Mr. Gilliat.—18/5/85.

Overseer Keighran's Report on Old Gunbar Well, Carrathool to Hillston, in charge of Jacob Marks, April, 1885. Tanks&Wells,
85-1,156.

State of shaft.—Very good.

Whim.—Very good.

Rope, buckets, &c.—Good.

Fencing.—No fencing here only that which protects the troughing.

General remarks.—This work is in very good repair throughout, but I am afraid that it will never answer the purpose for which it was intended, on account of the water being too salt for stock purposes, several shafts having been sunk in the vicinity by Armstrong Brothers, and had to be abandoned.

Watering appliances.

State of supply tank.—Full of water and in good condition.

Troughing.—In very good condition.

Machinery.—Horse-power; water raised by whim.

State of fencing.—None; only that which protects the troughing.

General remark.—Would not recommend any further outlay of money until such time as the water was proved to be fit for stock.

Work done by caretaker.—Little or no work here for a caretaker to do, only to see that the works are not damaged.

Work laid out for caretaker.—To clean up surroundings.

Repairs and alterations to be given in detail, with estimated cost of each item.—The excavation of a tank near to the township of Gunbar would have answered all purposes much better than this well, as it would have benefitted the public travelling out back, *via* Wheelbah, as well as those travelling to Hillston, besides benefitting the townspeople of Gunbar.

JOHN A. KEIGHRAN,
Inspector of Stock.

Hay, 12 May, 1885.

A copy of this report, with papers relating to the analysis of the water, might perhaps be forwarded to the Works Department for consideration before allowing the fencing of the special lease to be proceeded with.—A.B., 22/5/85. The Under Secretary for Mines. Approved.—H.W., 30/5/85. Letter and copy of papers to Works, 2/6/85.

Sir,

Department of Mines, Stock Branch, Sydney, 18 May, 1885.

Herewith I have the honor to forward you copy of report by the Government Analyst on the second sample of water from Old Gunbar Well, submitted by Mr. Overseer Keighran. Tanks&Wells,
85-1,446.

I have, &c.,

ALEX. BRUCE,
Chief Inspector of Stock.

Mr. Harry Gilliat.

I would submit that these, with the previous papers and my telegram at the time of inspecting this well, may be forwarded for the information of the Commissioner and Engineer for Roads and Bridges, with the view of learning whether measures can be taken to improve the quality by boring.—H. GILLIAT, B.C., 9/6/85.

Submitted.—A.B., 11/6/85. The Under Secretary for Mines. The Under Secretary for Public Works.—H.W., B.C., 15/6/85. Roads.—T.R., B.C., 17th June, 1885. Mr. Hiles,—Can the telegram be traced.—W.C.B., 19/6/85. Telegram herewith, 19/6/85. As Mr. Wood was present when this work was taken, will he report?—will it not be included in his proposed trip?—W.C.B., 19/6/85. Mr. Wood, 19/6/85.

My own opinion was that this water was unsuitable for stock. The Department, in carrying out this work, was misled by the sample furnished by the local officer. I have, on a previous paper, recommended that continuous baling be carried out, and that that failing to give better water, a bore should be put down to bottom of shaft.—A.P.W., 25/6/85.

Telegram to Mr. Stillwell to know what he is doing. Sent.—A.P.W., 30/6/85.

Sir,

Department of Mines, Sydney, 2 June, 1885.

Tanks & Wells,
85-1,573.

I have the honor to forward you herewith copy of report and papers relating to the analysis of water from the Old Gunbar Well for your consideration, before allowing the fencing of the special lease to be proceeded with.

I have, &c.,

HARRIE WOOD.

The Under Secretary for Public Works.

Roads, B.C., 9th June, 1885. Re-submit with all papers relating to this well.—W.C.B., 10/6/85. Mr. Hiles,—There must be other papers, probably with papers relating to other works on this road; see me with them and book.—W.C.B., 11/6/85. Will Mr. Wood report on this, which was taken over by Mr. Gilliat who tasted the water, and whose inspection was to be considered final on such points.—W.C.B., 13/6/85.

See former
minute by Mr.
Wood, 25/6/85,
ante.

Mr. Wood,—This work was inspected by Mr. Gilliat and myself on the 15th of December last year. The water was tested, and the whole taken over by Mr. Gilliat on that date. I was under the impression that Mr. Gilliat accompanied me on these trips to finally decide for his Department as to whether these works should be taken over or not. It is now rather late in the day to condemn the water. Would it not be advisable for the Mines to have the well baled for (say) eight hours a day; this might lead to an improvement in the water. In the event of this not being the case, a bore might be put down from the bottom of shaft and the country tested at a lower level.—A.P.W., 15/6/85.

Very few of the well waters, though good enough for stock, will stand the test of analysis. The only course is to give up well-sinking completely if the works are to be rejected because water is not chemically pure. Mr. Gilliat passed this water, and took over the well. The character of the water may have since deteriorated, since finis being allowed to remain in well. If it does not improve in working, it may be advisable to bore, which will be done if ordered.—W.C.B., 15/6/85.

Under Secretary for transmission. Submitted.—J.R., 17/6/85. Forward to Mines.—F.A.W., 17/6/85. Under Secretary for Mines, J.R., B.C., 17/6/85. Mr. Gilliat, B.C., 19/6/85. Please attach the papers with my minute recommending this analysis being forwarded to the Works Department.—H. GILLIAT, B.C., 20/6/85.

Sir,

Sydney, 9 July, 1885.

Tanks & Wells,
85-1,755.

I have the honor to bring under your notice the fact that the Government well at Old Gunbar, on the Hay and Hillston Road, although about 100 feet deep, and elaborately supplied with whim, troughing, &c., is altogether useless by reason of the water being so brackish that no animal can be got to drink of it.

I have therefore the honor to request that you will be good enough to cause the salt water to be puddled back, and a bore to good water be sunk in the shaft, or otherwise take steps to cause this well to be of some use.

I have, &c.,

ROBT. B. WILKINSON.

The Honorable the Minister for Mines.

I think the suggestion of Mr. Wilkinson a very good one, but should like a report without delay from Mr. Bruce.—J. P. ABBOTT, 10/7/85.

Sir,

Department of Mines, Stock Branch, Sydney, 13 July, 1885.

I have the honor to forward you herewith copy of a letter from Mr. R. B. Wilkinson, M.P., re Old Gunbar Well, and request that you will be good enough to furnish a report upon this matter for the information of the Honorable the Minister without delay.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

Mr. Harry Gilliat.

See minute paper herewith.—H.G., 16/7/85.

“The Gunbar Well.”

Department of Mines, Cobar, 16 July, 1885.

Tanks & Wells,
85-1,839.

I HAVE to request that the previous papers connected with this case may be attached, for the information of the Honorable the Secretary for Mines.

It will be seen from my telegram, amongst these, that this well was taken over subject to an analysis of the water.

That, on my recommendation, two analyses were made, both condemning the water.

And, finally, my minute, recommending that the papers should be referred to the Works Department for the purpose of a bore being put in the shaft, as suggested by Mr. Wilkinson, M.L.A.

Mr. Alex. Bruce.

HARRY GILLIAT.

This

This might be forwarded to the Works Department, with a request that the previous papers, which were referred to that Department on the 16th June last, may be returned.—A.B., 22/7/85. The Under Secretary for Mines. The Under Secretary for Public Works.—H.W., B.C., 28/7/85. Roads, J.R., B.C., 3/8/85.

I would point out that fair water was got from this well in the first instance, and sample sent to this office of very good water. Doubts are now raised as to the authenticity of this sample; but in any case I think the well should have a trial, by being baled dry for several days, which has not been done, as surface water was abundant. The well not being baled the water accumulates, gets tainted and spoiled by the timber, and is unfairly condemned, as in the case of the Holy Box Well, the water of which is practically good, the purity necessary to secure chemical approval would be quite impossible to attain. I would refer the Minister to the tests of the Sydney water some years ago, which pronounced it to be unfit for use, though the people have been drinking it ever since.—W.C.B., 8/8/85. Forward to Mines.—F.A.W., B.C., 12/8/85. The Under Secretary for Mines.—J.R., B.C., 13 August, 1885. Mr. Gilliat.—A.B., B.C., 14/8/85. Mr. Keighran should be instructed to have the well baled for three days, and to report the result, and to forward a gallon of the water after baling is finished; a gallon jar might be sent him.—H. GILLIAT, B.C., 11/9/85.

Write Mr. Keighran, and forward jar for sample of water.—A.B., 15/9/85. Mr. Keighran informed.—R.W.G., 18/9/85.

Sir,

Hay, 25 July, 1885.

On 22nd inst., I found all in good (order) at this well and the service tank full, but the Mines Tanks & Wells, 85-2,009. caretaker was absent. The water continues very salt, and is reputed unfit for stock. There is no demand for water now, as there is plenty of surface water obtainable; but the well should be kept baled at the rate of at least 2,000 gallons a day to test whether a better quality of water is obtainable. A constant flow frequently produces this result, and I recommend that the Mines be requested to have this done. Periodical samples of the water could then be obtained for comparison. Sec 85-1,573, note.

The fencing of the special lease here is now in hand.
The Commissioner for Roads and Bridges.

I have, &c.,

A. W. STILLWELL.

I recommend this paper be transmitted to the Mines—W.C.B., 28/1/85. Mr. Gilliat.—A.B., B.C., 31/7/85.

Report by Overseer Keighran on Old Gunbar Well.—August, 1885.

9 September, 1885.

Fencing.—Good—that is, the fencing that protects the troughing.

General remarks.—I consider this work in good order and condition; but as the water in the well is so very salt, am greatly afraid stock won't drink it. Tanks & Wells, 85-3,956.

Watering Appliances.

State of supply tank.—Full of water and in good condition.

Machinery.—Horse-power and whim for lifting water from shaft.

General remarks.—No stock water at this well, consequently the caretaker has nothing to do.

Paddocks, &c.

State of fencing.—At date of my inspection, 12th July, contractors were at work fencing the reserve area.

State of gates.—There was none at that time.

JOHN A. KEIGHRAN.

Mr. Gilliat, B.C., 11/9/85.

Hay, 20 October, 1885.

Gunbar Well—Further as to quality of water.

Sir,

In reply to Mr. Wood's minute attached, the water in this well is generally reported unfit for stock. I have not seen this put to the test, as since I have been in the district there has been surface water obtainable, and consequently no demand for that from the well. My own knowledge is only that it is unfit for horses. Tanks & Wells, 85-3,949.

I have before reported advising constant baling be persisted in for (say) a month, to test whether a better quality of water is obtainable at the present depth—but this has not been done. The well is in charge of Mines Department, and while I have been here (10 months) practically no water has been raised from it. As Mr. Wood says, something must be done to render the well available. I would again suggest that Mines Department be asked to direct their caretaker to bale at rate of (say) not less than 10,000 gallons daily for a month. This should be done under responsible supervision, and samples of the water forwarded weekly to Sydney. This should be started at once.

If better water is then not obtained it will be necessary to try deeper for it. The Government boring party and plant are in the district, about putting a trial bore down on the Hay to Gunbar Road, and they might be directed to bore from the bottom of this well.

I have, &c.,

The Commissioner for Roads.

A. W. STILLWELL.

This should be forwarded to the Mines, asking them to have this well baled, as suggested by Mr. Stillwell.—A.P.W., 22/10/85. Under Secretary.—W.C.B., B.C., 2/10/85. The Under Secretary for Mines.—J.R., B.C., 24/10/85.

Request Mr. Overseer Keighran to give instructions to the caretaker at the Gunbar Well to bale forty buckets per diem until further orders. Mr. Keighran will please report at his next inspection whether he considers there is any improvement in the quality of the water. Please inform Works.—H.G., 29/10/85. Mr. Keighran and Works informed, 29/10/85.

Sir,

Sir,

Hay, 12 November, 1885.

P.W.P.,
85-4,137.

Referring to your telegram of the 30th ultimo, I have the honor to inform you that I inspected the Old Gunbar Well on the 6th instant, the service tank being at the time full of water, which tasted very much of salt. I ran off about half the water from the tank, and instructed Caretaker Marks to bale forty buckets per diem until further orders.

I have, &c.,

JOHN A. KEIGHRAN,
Overseer, Tanks and Wells.

The Chief Inspector of Public Watering Places.

Seen.—H.G., 17/11/85.

Sir,

Cowl Cowl Station, 13 December, 1885.

P.W.P.,
85-4,669.

I have the honor to report for your information of my having visited and inspected Old Gunbar Well on the 9th instant, and found Caretaker Marks baling. He informed me that he had been drawing forty buckets of water per day from the well for the last month, in accordance with my instructions.

I stayed at the well and saw thirty-five buckets lifted, and from out of the last bucket drawn I took a pannikin and tasted it (a good gulp), and found it to be very salt, with a nasty bitter taste, which did not leave my mouth for hours afterwards. I then tried my horses, and although very thirsty they would not drink. Therefore I am of the opinion that the water in this well is not fit for stock purposes.

I have, &c.,

JOHN A. KEIGHRAN,
Overseer, Tanks and Wells.

The Chief Inspector of Watering Places.

Chief Inspector of Public Watering Places to Under Secretary for Mines.—A copy of this might perhaps be forwarded for the information of the Commissioner and Engineer for Roads and Bridges.—H.G., 16/12/85. Approved.—H.W., 18/12/85. Copy for Department of Works.—H.G., 21/12/85.

Sir,

Hillston, 12 June, 1886.

P.W.P.,
86-2,982.

Referring to your telegram instructing me to report upon those cases in which the access for stock to the troughing is inconvenient, I now have the honor to report that at the Old Gunbar Well the troughing is parallel to, and only 30 feet to 35 feet distant from, a portion of the west fence of the T. L. I append a rough diagram overlaf, showing that on the east side of troughs there is little or no room for stock. Thirsty sheep would be very liable to jam and smother in such a narrow place.

I am, &c.,

JAMES W. BOULTBEE,

The Chief Inspector of Public Watering Places.

Acting Inspector, Public Watering Places.

Mr. Boultee.—Will stock drink this water?—H.G., 31/8/86. No; since the well was taken over by this Department there has not been a penny collected for fees. Thirsty sheep have been tried at it, but refused to drink. Mr. Keighran's last report attached.—J.W.B., 31/8/86.

Report by Mr. Overseer John A. Keighran on the Old Gunbar Well, Road from Carathool to Hillston, in charge of Jacob Marks, Caretaker, for 1st August, 1886.

P.W.P.,
86-4,013.

State of shaft.—In good order; has been lately repaired.

Whim, &c.—In good order, with the exception of tarring, which will be done as soon as the weather permits; both tar and brushes are now on the ground for that purpose.

Rope, buckets, &c.—Wire rope good; buckets in good order.

Watering Appliances.

State of supply tank.—In good order, and in about the same state as when taken over from the Works Department.

Troughing.—In good order, with the exception of tarring, which will be done along with whim and tank.

Machinery.—All the appurtenances and appliances for lifting water are in good condition.

Paddocks and Fencing.

State of fencing.—In good order.

State of gates.—New, but of a bad description, nor are so many gates and slip-panels required.

Remarks.—The water here being so very bad that stock won't drink it, consequently the caretaker collects no fees.

Caretaker's

Caretaker's Work.

Work done by caretaker.—Baling water and cutting burrs.

Work laid out for caretaker.—*To bale water regularly*, and to tar whim, &c., service tank, and troughing, as soon as the weather permits—tar and brush having been provided.

Remarks and recommendations.—As this watering place has proved a failure on account of the water being so bad that stock won't drink it, I would recommend that it be abandoned, and a tank excavated. There is a grand place here for a tank in close proximity to the well. The paddock would then be available for the same purpose as it is now. I don't believe boring will improve the water, because, allowing they bored and struck fresh water, the bad water now in the shaft would require to be puddled back, which would cost more money than the excavating of a tank; besides, in summer time stock cannot get a drink between Dry Lake and Crow's Nest Well, a distance of 40 odd miles.

JOHN A. KEIGHRAN,

Overseer of Public Watering Places.

Hay and Booligal, 19th August, 1886.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

Minute.

Failure of Old Gunbar Well as a Watering Place.

In view of the reiterated report of Mr. Overseer Keighran upon the saltiness of the water, and in spite of P.W.P., the continuous baling ordered at this well, and its consequent inutility as a watering place for stock, the 86-4,192. Department of Public Works may, perhaps, be asked to inform this department if it is their intention to bore this well for a supply of better water.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

The Under Secretary for Mines.

Approved.—H.W., 17/9/86.

Sir,

I have the honor to request that you will be good enough to inform me if it is the intention of P.W.P., your Department to bore the Old Gunbar Well, on the road from Carrathool to Hillston, for a supply of 86-4,642. better water.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

Roads, J.R., B.C., 25/9/86. Mr. Wood.—J.W.B., 27/9/87. Mines have been previously informed that such was our intention. Work is now in hand.—A.P.W., 27/9/86. Under Secretary.—W.C.B., B.C., 27/9/86. The Under Secretary for Mines.—J.R., B.C., 29/9/86. Note.—Mr. A. P. Wood's minute in Tank Book.—H.G., 12/10/86. Noted, 25/10/86.

Extract from Mr. Overseer Keighran's Report upon the Old Gunbar Well for January, 1887.

I would recommend that this well be abandoned and a tank excavated in its stead, as I do not P.W.P., believe the boring party will succeed in obtaining fresh water. 87-660.

They are now down 130 feet from bottom of shaft (on rock), and are going to leave it for a time.

J. A. KEIGHRAN.

Is there a good tank site within the area of the T.L. or P.W.P.?—H.G., 16/2/87. Mr. Overseer Keighran.—B.C., 16/2/87. The Chief Inspector. One of the best catches for a tank is within the area of the T.L.; in fact, inside of the paddock enclosure.—JOHN A. KEIGHRAN, Overseer, Hay, 28/2/87. This may perhaps be forwarded for the information of the Commissioner for Roads, with the view, in the first instance, of ascertaining if it is the intention of the Works Department to abandon boring.—H.G., 7/3/87. The Under Secretary. Approved.—H.W., 8/3/87. The Under Secretary for Works, —H.W., B.C., 10/3/87. Roads, B.C., 16/3/87. Mr. Stillwell.—W.C.B., 18/3/87. There is no question at present of abandoning this well. A contract of boring from the bottom is in hand, and pending the result of this no decision could be come to.—A.W.S., 26/3/87. The Under Secretary for Mines.—J.R., B.C., 29/3/87.

Sir,

Hay, 24 May, 1887.

I have the honor to report having visited this well on the 20th instant, and found caretaker P.W.P., Marks in charge; also that the boring party were working in the shaft. They had bored down 133 feet, 87-2,244. and were on rock which was causing slow progress.

I have, &c.,

JOHN A. KEIGHRAN,

Overseer.

The Chief Inspector of Public Watering Places.

Mr. Keighran,—Be good enough to forward as early as you can a sample of the stuff from the bottom of the bore.—H.G., B.C., 3/6/87.

The Chief Inspector of Public Watering Places,—As requested a sample of the stuff will be forwarded to your office as soon as possible, say ten days.—JOHN A. KEIGHRAN, Overseer Tanks and Wells, 12/6/87.

Sir,

P.W.P.,
87-2,856.

Sir,
I have the honor to report that there is no possible chance of my being able to send you any stuff (sample) from the bottom of the bore of this well (at all events for some time to come), as the men cannot get to the bottom on account of the drift sand. They have not been working latterly, awaiting the arrival of machinery from Sydney.

Hay, Stock Office, 26 June, 1887.
I have, &c.,
JOHN A. KEIGHRAN,
Overseer, Tanks and Wells.

The Chief Inspector of Public Watering Places.

For Mr. Inspector Boulton's information and report.—H.G., B.C., 23/8/87.

P.W.P.,
87-4,046.

Sir,
I have the honor to forward herewith enclosed a communication from Caretaker Marks upon the Old Gunbar Well, from which you will observe that the men have abandoned the work of boring.

Hay, Stock Office, 17 August, 1887.
I have, &c.,
JOHN A. KEIGHRAN,
Overseer, Tanks and Wells.

The Chief Inspector of Public Watering Places.

Mr. Inspector Boulton.—H.G., B.C., 1/9/87.

P.W.P.,
87-4,047.

Sir,
I beg to inform you that the boring party that was working at this well when you were last here on the 2nd instant only remained here one day, putting smaller pipes inside of the former ones that they had previously put down. They went to Hay, and returned on the 9th. The men told me they were sent back by the contractor, Stanley, to draw the pipes they last put in, which they did, and left them here, and told me they were the property of the Government; and they gave me to understand that the contractor intended to abandon the work altogether. I thought I had better let you know about the matter at once.

Old Gunbar Well, Hay, 15 August, 1887.
I have, &c.,
JACOB MARKS.

John A. Keighran, Esq., Overseer of Public Watering Places.

Report by Overseer John A. Keighran on the Old Gunbar Well, road from Hay and Carrathool to Hillston, in charge of Jacob Marks, caretaker, for August, 1887.

P.W.P.,
87-4,911.

State of Shaft.—Apparently sound.
Whim &c.—Good.
Rope, buckets, &c.—Good.

Watering Appliances.

State of supply tank.—Good but empty, and has been for months.
Troughing.—Good.

Paddocks and Fencing.

State of fencing.—Good.
State of Gates.—Good.

Remarks.—The shaft of this well has been in the hands of the Works Department for over 12 months. Mr. Assistant-Engineer Stillwell has had a party of men boring down to try and obtain a supply of fresh water, but after boring down some 133 feet the men cleared out and abandoned it; I don't know what the Works intend doing next, it has been a great mistake all through.

Rates collected since last report.—There has been no fees collected on account of the water being that bad stock would not drink it.

Weekly depth of water since last report.—Cannot say.

Caretaker's Work.

Work done by caretaker.—Cutting burrs from off T.L. and killing rabbits, no other employment for a man.

Work laid out for caretaker.—There is no work to lay out for a caretaker to do, nor has there been except to protect Government property. As a watering place it has been a complete failure.

Remarks and recommendations.—I would recommend that the well be abandoned and a tank excavated in its stead; there is a grand catch for a tank close by in the paddock. It is very desirable that this should become a public watering place on account of it being nearly central between Crow's Nest and Dry Lake Wells, 20 miles from the former and 18 miles from the latter.

JOHN A. KEIGHRAN,
Overseer of Public Watering Places.

Hillston, 21st September, 1887.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

Extract from Stock Branch, 87-10,904.

Hay, Stock Office, 22 October, 1887.

"Diseases in Sheep Act Amendment Act," "Pastures and Stock Protection Act."

P.W.P.,
87-6,403.

A meeting of the Hay Board of Directors, under the abovenamed Acts, was held this day, 22nd October, 1887, at Messrs. Wilkinson and Lavender's offices, Hay.

Mr. Keighran said there was a well at Old Gunbar, on the road from Carrathool to Hillston, and a man in charge of it for over three years, and no stock had been watered there during that time. The man got 8s. per day, and was still doing nothing but looking after the works.

Mr. Grant.—When things like this were allowed to go on, it was not likely to inspire confidence in the Department.

Mr.

Mr. Keighran said there was a tank wanted badly at Old Gunbar, as there was no public watering place where stock could get water between Dry Lake and Crow's Nest Wells, a distance of about 30 miles. Mr. Grant said they could put down a tank to supply water all the year round at one-half the cost of wells. Half the wells were of no use for watering stock, yet men were being paid to look after them. Mr. Grant asked Mr. Bruce if he was aware that there was a party boring for artesian water a few miles out. Twelve months ago they had got down 400 feet, and they were at that depth still. They had been over two and a half years boring, and the men were there still; but he did not know what they were doing. The bore was within 6 miles of a navigable river, and artesian water would be of no use if it was got. That is another waste of public money.

Mr. McFarland,—This bore would be of some use if it were at Ivanhoe or some other place. The Chief Inspector Public Watering Places.—A.B., B.C., 26/11/87.

Minute by Chief Inspector of Public Watering Places.
Old Gunbar Well.

9th December, 1887.

With reference to the annexed minutes of a meeting of the Hay Stock Board:—1st. With respect to Mr. Keighran's, Overseer of Public Watering Places, remarks upon the extravagance of keeping a caretaker in charge of the Old Gunbar Well, it will be seen from the papers that in my telegram of 17th December, 1884, I informed the Department I had accepted transfer, subject to Minister's approval; but that an analysis of the water would be required. This analysis was furnished on 25th March, 1885, and condemned the water for domestic use; but it seemed desirable for certain reasons that a fresh analysis should be made. This second analysis, received 12th May, 1885, still more strongly condemned the water. On 17th June, 1885, I recommended that the papers should be sent to the Works Department to ascertain if they would take steps to try and improve the quality of the water by boring. Baling was continued daily at the desire of the Works Department to see if any improvement would result. On 17th September, 1886, I wrote, calling attention to Mr. Keighran's continued reports that there was no improvement in the water in spite of the continued baling, and urging that the Works be asked for the second time if it was their intention to bore this well. On the 27th September, 1886, this Department was informed that the boring was in hand. On 17th August, 1887, we are informed by Overseer Keighran that the bore was abandoned.

A caretaker was kept on to endeavour to improve the water by constant baling, as requested by the Works Department, and to protect the head-works and Government property.

It will be seen that in June, 1885, and September, 1886, after analysis of the water, the Works Department were asked to bore, for the purpose of improving the water, and that to this date we have no intimation from them that they have abandoned it.

This case may be, I think, regarded as an illustration of the bad effect of a dual control, and also supports my view of the defective method adopted in the construction of wells—viz., of erecting expensive head-works—whim, service tank, and troughing—before obtaining, by trial-shaft or boring, a satisfactory test of the quality and supply of the water. Before recommending the abandonment of the well, I have waited an intimation from the Works Department that their boring operation had failed. Mr. Inspector Boulton was, however, directed to report upon it on receipt of Overseer Keighran's notice of 17th August, 1887. This he has been unable, so far, to do on account of the pressing nature of other duties.

2nd. With reference to the boring operations on the road from Hay to Gunbar, on 17th February, 1884, I reported that a well half-way—i.e., about 25 miles—would meet all requirements. On 19th July, 1884, I again reported to the same effect.

Boring was subsequently commenced by the Drills Branch. A minute of mine—9th February, 1887—points out that, owing to the position selected for the bore being only 13 miles, instead of 25, from Hay, a second source of water supply will be needed to bridge the gap of 37 miles to Gunbar, and I recommended a tank, which paper was forwarded to the Department of Works. As soon as a report is received from Mr. Boulton re the Old Gunbar Well, its abandonment will most probably become necessary, and it may be found advisable to remove the whim to the bore put down by the Drills Branch, as a tank site is available on the present public watering place at Old Gunbar, and any further boring required for Public Watering Places should, I think, be done by contract, if reasonable tenders can be obtained.

HARRY GILLIAT,

The Under Secretary for Mines.

Chief Inspector, Public Watering Places.

Submitted.—H.W., 20/12/87. Seen. These papers should be submitted to the Commission on Tanks, Dams, and Wells, when they commence the inquiry.—F.A., 23/12/87.

XV.

Cleaning out Silt Tank at Merri Merriwa.

Report by Overseer James Yeo on the Merri Merriwa Tank, road from Hillston to Cobar, in charge of William Mortimer, caretaker, for 16th February, 1887.

P.W.P.,
87-851.

State of drains.—Slightly filled with silt in places.

Silt tank.—Full of water.

Inlet or flume.—In good repair.

Main tank.—Full of water.

Embankments.—Slightly scoured from late heavy rains. Caretaker is proceeding with hollowing the top, and is making a very good job of it.

Watering

Watering Appliances.

State of supply tank.—In very good order.
 Troughing.—In good order.
 Machinery.—In good working order, and is kept nice and clean.

Paddocks and Fencing.

State of fencing.—In good order.
 State of gates.—In good repair.
 Rates collected since last report.—Books examined and found correct to date.
 Weekly depth of water since last report.—Full of water.

Caretaker's Work.

Work done by caretaker.—Hollowing and repairing embankments, cleaning, screwing bolts, and painting service tank, cleaning engine and troughing, cleaning silt tank and drain, and general duties.

Work laid out for caretaker.—Complete hollowing embankments, keep machinery clean, clean drains, cut scrub in spare time, and general duties.

JAMES YEO,

Overseer of Public Watering Places.

Ivanhoe, 21 February, 1887.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

Report by Overseer James Yeo on the Merri Merriwa Tank, road from Hillston to Cobar, in charge of William Mortimer, for 18th April, 1887.

P.W.P.,
87-1,837.

State of drains.—Filled with sand in places.
 Silt tank.—A great quantity of sand has washed in the silt tank during the late heavy rains.
 Inlet or flume.—Under water.
 Main tank.—Full of water over top of excavation.
 Embankments.—Scoured in places.

Watering Appliances.

State of supply tank.—In good order, but water has been standing about under the tank around the concrete piers. I have instructed the caretaker to run off a portion of the water.

Troughing.—In good order.
 Machinery.—Clean and in good order.

Paddocks and Fencing.

State of fencing.—In good repair, with exception of a portion round silt tank which was washed out of ground, during late heavy rain. A portion of fence round T. L. was washed away, but has been repaired again by caretaker.

Remarks.—The caretaker reports that enormous quantities of sand is continually washing off the ranges, and completely fills the drains and silt tank. I have instructed him to put in a few breaks in the drains which will block the sand from going into the silt tank, but will not prevent the water going its usual course.

Rates collected since last report.—Books examined and found correct to date.
 Weekly depth of water since last report.—Full over top of excavation.

Caretaker's Work.

Work done by caretaker.—Repairing and hollowing embankments, cleaning drains, repairing fence, and general duties.

Work laid out for caretaker.—Continue cleaning drains, complete hollowing and repairing embankments, put remainder of fence in order, let part of water out of service tank, clean silt tank when sufficiently dry (at present full of water which is backed out in the drains) and general duties.

JAMES YEO,

Overseer of Public Watering Places.

Ivanhoe, 19 April, 1887.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

P.W.P.,
87-4,648.

Extract from report H by Caretaker William Mortimer, for August, 1887, on Merri Merriwa Tank.

Mr. Adam, Road Superintendent, has got a contract for cleaning out silt tank when it is dry enough.

WILLIAM MORTIMER,

Caretaker, Merri Merriwa Tank.

4th September, 1887.

The respective responsibilities of the Department of Public Works and of the Mines, with regard to the maintenance of public watering places, will perhaps be definitely settled shortly by the Cabinet, otherwise, it appears undesirable that the former Department should continue to undertake the charge of repairs as in this instance. I should perhaps point out that the cleaning of silt tanks is considered by this Department a portion of the caretaker's duty, and that having it done by contract appears an unnecessary expenditure.—H.G., 14/9/87.

The Under Secretary. Inform.—G.E.H., (*pro* U.S.) 15/9/87. Letter to Works, 5/10/87.

P.W.P.,
87-5,361.

Sir,

Department of Mines, Sydney, 5 October, 1887.

I have the honor to inform you that the caretaker at the Merri Merriwa Tank reports that Mr. Road-Superintendent Adams "has got a contract for cleaning out silt tank when it is dry enough," and I would point out that this work is considered a portion of the caretaker's duties, and to do it by contract would seem to be an unnecessary expenditure.

I have, &c.,

HARRIE WOOD,

Under Secretary.

Roads

The Under Secretary for Public Works.

Roads.—J.R., B.C., 7/10/87. Mr. Wood.—W.C.B., 10/10/87.

There is no doubt that the caretaker should keep the silt tank clean, but when this duty is neglected, and silt tank is allowed to fill with deposit, then, in the general interest, it is time for steps to be taken to save the main tank. In this case, seeing the work was necessary, this Department took action.—A.P.W., 18/10/87.

Under Secretary for transmission to Mines.—W.C.B. 10/10/87. Under Secretary, B.C. Forward to Mines Department. The Under Secretary for Mines.—J.R., B.C., 11/10/87. Ascertain from Mr. Yeo if up to the time he left the district any opportunity to clean out the silt tank was neglected.—H.G., 2/11/87.

Sir, Department of Mines, Public Watering Places, Sydney, 4 November, 1887.

I have to request that you will be good enough to inform me whether, up to the time you left the Ivanhoe District, any opportunity to clean out the silt tank at Merri Merriwa Tank was neglected.

P.W.P.,
87-5,361.

I have, &c.,

HARRY GILLIAT,

Chief Inspector, Public Watering Places.

Mr. J. Yeo, Inspector of Stock, Moss Vale.

Sir, Stock Office, Moss Vale, 5 November, 1887.

Referring to your letter of the 4th instant, *re* cleaning silt tank at the Merri Merriwa Tank, I beg to state that no opportunity was missed to clean out silt tank previous to my leaving the Ivanhoe District.

P.W.P.,
87-5,881.

I might also mention that this is the most difficult silt tank in the district to keep clean, owing to the great quantity of silt coming off the ranges, but the caretaker always did his utmost to keep it clean.

I have, &c.,

JAMES YEO,

Inspector of Stock.

Harry Gilliat, Chief Inspector of Public Watering Places.

Minute by Harry Gilliat, Chief Inspector of Public Watering Places, to The Under Secretary for Mines.

The attention of the Hon. the Secretary for Mines is invited to the Minute of Mr. A. P. Wood, on 87-5,361, and to Mr. Yeo's reply.

P.W.P.,
87-6,242.

Mr. Wood makes an assertion without advancing a shadow of evidence, that the caretaker has neglected to clean the silt tank; this is directly denied by the late overseer, and in the absence of any evidence advanced by Mr. Wood, I am disposed to rely upon my own officer.

It is, of course, very probable owing to the wet season, that the caretaker has been obliged to wait until the tank is dry enough to clean it, but it will be observed on 87-4,648 that the contractor engaged by the Works Department is compelled to do the same. But the main point which does not appear to occur to the officers of the Works Department, is that any proven neglect on the part of the caretaker can hardly be regarded as a justification for expending public money on a contract to do work that should properly be performed by a public servant, and that a due regard for the public service would have led them to show to this Department that the caretaker's duties were neglected.

Since writing the above, my attention has been called to the minute of Mr. Bennett, 86-3,060.

In justice to the caretaker, I beg to submit it with the other papers.

HARRY GILLIAT,

18 November, 1887.

Submitted.—H.W., 22/11/87. Approved.—F.A., 22/11/87.

Extract from P.W.P., 87-5,780, report A1, by Mr. Overseer Proctor, for September, 1887, on the Merri Merriwa Tank.

Silt Tank.—In good order, newly cleaned out by contract, by order of Mr. Road-Superintendent Adams. E. W. PROCTOR.

P.W.P.,
87-6,609.

Ivanhoe, 21 October, 1887.

Merri Merriwa Tank.

Extract from Mr. Alexander Adams' (Road Superintendent) Report, dated 9/8/86.

* * * * *

Embankments also are in very good order; the caretaker at this tank keeps his embankments in better order than any other.

P.W.P.,
86-3,960.

I think this should go on to Mines. We report bad men; a good man should have the benefit of the favourable report, as far as it may weigh with the authorities at the Mines.—W.C.B., 14/8/86. Under Secretary, for transmission to Mines. The Under Secretary for Mines.—J.R., B.C., 17/8/86.

Dept. of
Public Works,
86-7,457.

Extract from Mr. Inspector Low's Report on Mount Manara Tank.

* * * * *

24 November, 1887.

87-6,586.

Silt tank, one on north side of main tank, dry and silted up to within two feet of surface. Caretaker Murray informs me, Mr. Stillwell, in August, told him not to interfere with silt tank, as he (Mr. Stillwell) would get it cleaned out.

* * Original with
fencing papers.

J. LOW.

P.W.P.,
30/12/87,
87-7,124.

My minute upon the Merri Merriwa case applies to this. The cleaning of the silt tank is a portion of the caretaker's or tenant's duty, and it appears an unnecessary expenditure of money to have it done either by contract or by the Roads Department.—H.G., 30/12/87. The Under Secretary.

The Under Secretary directed me verbally to place this with the Merri Merriwa case.—J.W.B., 30/12/87.

XVI.

Ivanhoe Tank.

Tanks & Wells,
80-50. Sir, I have the honor to inform you that the following tenders have been received for the repairs at the Waiko Well, Ivanhoe:—

Ivanhoe, 27 April, 1880.

B. Ford	£410
W. R. Parker	450
R. G. Casey	900

The difficulty of estimating the amount of damage at the bottom of the shaft, without a large preliminary expenditure, accounts for the high prices, and I have therefore the honor to recommend that the work be abandoned, and that the timber of the whim and shaft be sold.

I am in correspondence with Mr. George Williamson, of Ivanhoe, upon whose land the only available site for a tank in the neighbourhood is found, which I shall have the honor to submit to you, if it terminates in a reasonable proposal, with a recommendation for the construction of a tank at this place.

I have, &c.,

HARRY GILLIAT,

The Chief Inspector of Stock.

Inspector, Tanks and Wells.

Tanks & Wells,
82-122. Sir, I have the honor to report that since the 23rd February the tanks and wells upon the road from Hay to Booligal, and from Booligal to Wilcannia, have been inspected, specifications prepared, and tenders for repairs invited and accepted.

Sydney, 25 June, 1880.

The contractors have completed their work at the Mossiel and Holy Box Wells, and are rapidly proceeding with it at the Jumping Sand-hill Well, the 12-mile, 35-mile, and 48-mile Tanks.

Boonoona Tank flooded.—At the Boonoona Tank the flood-water from the last rains will prevent the contractor from completing his work for some months.

Abandonment of wells, Waiko and Mount Manara.—After careful consideration I have thought it advisable to recommend the Department to abandon the Waiko and Mount Manara Wells, and to dispose of the material.

Reasons for this at Waiko.—My reasons for this, with regard to the Waiko Well, are that the shaft is in a dangerous condition, and attempted repairs will be attended with risk; that the extent of the injury at the bottom of the shaft, occasioned by the giving way of the slabbing and silting in of the drift, may be, and probably is, of such a character as to make it questionable whether the damage could be repaired to the satisfaction of the inspecting officer; and, finally, that the amount required by that one of the contractors who had the requisite plant to undertake the work with a prospect of success, is more than sufficient to sink and complete a new shaft and whim of the best description.

Reasons for abandoning Mount Manara.—The shaft of the Mount Manara Well is one of the oldest on the line. The supply from it is too limited to be depended upon. A few years since an officer of the Works Department expended a considerable sum of money in deepening it, in the hope of securing a better supply, but without success, and the shaft is now 210 ft. deep, and bottomed on a hard clay slate. I do not consider that further expenditure on a work of this class would be desirable, more especially since the immediate neighbourhood has numerous good situations for tanks.

Tanks preferred.—The large proportion of wells sunk in this district are salt; I am, therefore, strongly in favour of the construction of tanks wherever practicable, both as affording fresh water to travelling stock, and also, when properly made, being practically permanent.

Tank at Ivanhoe.—At Ivanhoe, the site of the Waiko well, the only good drainage area suitable for a tank is upon an 80-acre selection of Mr. George Williamson, postmaster and storekeeper. He is willing to alienate this to the Government with the improvements, consisting of fencing and several small tanks, in consideration of receiving 640 acres of vacant Crown Lands adjoining his selection. It is very desirable, in my opinion, that the Government should secure this, either by exchange or purchase, no other suitable situation that has not already been secured by the lessee of the run occurring between this and the Boonoona Tank, 22 miles distant.

Reserve at the Boonoona Tank.—At the Boonoona Tank a reserve was originally gazetted of 4 square miles. This was subsequently cancelled, and the Reserve No. 423, 2nd October, 1879, 450 acres, proclaimed. The lessee has been allowed to purchase, immediately adjoining the Government tank, 200 acres, including within it a considerable portion of the drains which supply the work at the high level. The swamp is sufficiently large to allow the owners of the run 200 acres without interference with the Government work, and the gentleman in charge, R. G. Casey, Esq., Kilfera, is willing that a resurvey should be made, and I would strongly recommend that it should be done as early as possible.

Reserve beyond Hardy's.—At a point near the road $12\frac{1}{2}$ miles northerly from the Boonoona Tank, the lessees, Messrs. J. McDonald & Co., Kilfera, have secured a cane grass swamp; it is the only one suitable in point of distance from the Boonoona and Mount Manara works; the lessees are willing to exchange it for an equal area at Hardy's public house, 8 miles from the Boonoona Tank. It is desirable that the swamp should be secured and proclaimed as a water reserve with a view to future requirements.

Between Ivanhoe and the Boonoona Tank the road passes through thick scrub for a distance of 22 miles; it is a long stage in the hot weather for travelling stock without water, and is especially dreaded by drovers. By clearing the road a chain wide, stock would be enabled to travel by night and avoid any serious risk of loss.

These are several portions of the 72-mile track that would be benefitted by clearing, and would form a great inducement to drovers to follow this route. As the scrub is light, with but little timber, the cost would be small—probably from £15 to £20 sterling per mile. This, I consider a most important step in the interests of travelling stock. Would urge its early consideration.

Errors

Errors in construction of tanks.—I had occasion in my former report to point out some of the errors in construction that were apparent to me in the One-tree and Quondong Tank, and my objections have been confirmed by the opinions of the drovers and lessees of runs. They are extremely wasteful of water, difficult of access, and largely increase the area of evaporation as well as the cost of construction. This plan, I regret to say, has been followed in the four new tanks just completed on the Paroo River. I am of opinion that the watering tank will eventually have to be abandoned, and suitable troughing and pump substituted.

Tenders to be invited for remaining works.—I take leave to suggest that tenders should be called at an early date for the lease of the tanks on the road between Hay and Deniliquin, those on the road between Bourke and Cobar, and those between Cobar and Nyngan; and that as soon as the Department is notified of the completion of the works upon the Paroo that also should be offered for lease, it being undesirable that these works should be left in the charge of irresponsible caretakers, unless where tenants cannot be obtained.

Policy for the future extension of these works.—I have also the honor to call your attention to the rapidly increasing demand from the dry parts of the Colony for the adoption of measures for the conservation of water, and would beg to submit that it has now become necessary that for the future these works should be constructed as parts of a carefully considered and arranged plan, by means of which the passage of stock and traffic may be facilitated through the dry districts to the railways of this Colony, and that no work should be undertaken without careful consideration of its value in relation to this plan.

Probable lines of roads requiring to be dealt with.—It may be briefly stated that a scheme of this kind would probably include works on the road from Mount Gipps to Wilcannia; from Mount Poole, on the north-west frontier, to some point on the Paroo River; from Hungerford, southward. From Wilcannia it will probably be found desirable to proclaim a stock route direct to Cobar, thus opening a line, *via* Cobar to Orange, in one direction, and Nyngan in another, both on the road; and that from Louth to Cobar, works will probably be required.

A detailed examination of the Northern Districts would be required before submitting the general outline of a plan for consideration.

I would also take leave to suggest that I should be furnished with a circular letter to the Sheep Inspectors of the Colony, desiring them to afford me all information concerning the various reserves in their districts; and it would be advisable, also, that I should have a letter authorizing my taking delivery from the officers of the Works Department at the completed works upon the different roads.

I have, &c.,

HARRY GILLIAT,
Inspector, Tanks and Wells.

The Chief Inspector of Stock.

Memo. to accompany Report.

THE accompanying Schedule shows that at several points distances exceeding 25 miles are waterless, and I have already explained that the saline character of the water at the Mossgiel and Holy Box Wells would make it necessary for them to be ultimately superseded by tanks. Tanks & Wells,
82-121.

In the meantime I would suggest taking into consideration the construction of tanks at the following points along the road:—

- (1.) At the Tom's Lake Mail Station, about 13 miles from the Reserve, at the Adelaide Camp, and 9 miles from the Jumping Sand Hill Well.
- (2.) At the Polygonum Hut, half way between the Jumping Sand Hill Well and the township of Mossgiel.
- (3.) At a point about $12\frac{1}{2}$ miles southerly from Mount Manara.
- (4.) At Mount Manara.
- (5.) At the 26-mile peg, $13\frac{1}{2}$ miles from the 12-mile tank.
- (6.) That a trial shaft should be sunk to test the character of the water at a point between Ivanhoe and the Boonoona Tank, about 11 miles from each.

SCHEDULE showing the distances between existing works on the road from Hay to Wilcannia, omitting the Wanko and Mount Manara Wells recommended to be abandoned:—

Hay to—		Miles.

Inspector, Tanks and Wells.

7/7/80.

PRESENT

PRESENT AND ADDITIONAL WORKS.

Schedule I.

In order to show at a glance how far the road from Hay to Wilcannia is now provided with water, and what works are still required, Schedule I, showing the former, and Schedule II, showing the latter, have been prepared.

Place.	Well or Tank.	Dimensions.	Depth of Water.	Distance from other Works.	Distance from Hay.
One Tree	Tank	17,000 yards..	16 feet..	12 miles..	25 miles
Quondong	"	16,000 " ..	16 " ..	12 " ..	37 "
Booligal Crossing, Lachlan River Reserve, Adelaide Camp	13 " ..	50 "
.....	To river...	10 " ..	60 "
Jumping Sand Hill	Well	{ 130 feet } 3 × 6 " }	32 feet..	23 " ..	83 "
Mossgiel	"	{ 130 " } 3 × 6 " }	30 " ..	28 " ..	110 "
Holy Box	"	{ 130 " } 3 × 6 " }	30 " ..	13 " ..	123 "
Waiko (?)	"	16 " ..	139 "
Boonoona	Tank	15,000 yards..	14 feet..	22 " ..	161 "
Mount Manara (?)	Well	{ 210 feet } 3 × 6 " }	24 " ..	185 "
12-mile	Tank	16,000 yards..	15 feet..	12½ " ..	197½ "
35-mile	"	16,000 " ..	8 " ..	23 " ..	220½ "
48-mile	"	16,000 " ..	15 " ..	13 " ..	233½ "
Tallywalka Creek	15 " ..	248½ "
Wilcannia, Darling River	9 " ..	257½ "

Memo.—Not having received the plans and measurements relating to these works, I am able to give only approximate particulars. I may add that the falling in of the banks at some of the tanks has materially affected the depth originally excavated.—H.G., 9/7/80.

Schedule II.

Watering Places as proposed.

Place.	Well or Tank.	Dimensions.	Depth of Water.	Distance from Works.	Distance from Hay.
One-tree	Tank	17,000 yards..	16 feet..	12 miles..	25 miles.
Quondong	"	16,000 " ..	16 " ..	12 " ..	37 "
Booligal Crossing, Lachlan River Reserve, Adelaide Camp	13 " ..	50 "

Waiko (?)	"	16 " ..	139 "
New. 11-mile, near Ivanhoe... ..	"	11 " ..	150 "
Boonoona	Tank	15,000 yards..	14 feet..	11 " ..	161 "
New. 12½-mile, Boonoona	"	18,000 " ..	18 " ..	12½ " ..	173 "
Mount Manara (?)	Well	12 " ..	12 " ..	185 "
12-mile	Tank	16,000 yards..	15 " ..	12½ " ..	197 "
New. 26-mile Peg	"	18,000 " ..	18 " ..	14 " ..	211 "
35-mile	"	16,000 " ..	8 " ..	9 " ..	220 "
48-mile	"	16,000 " ..	15 " ..	13 " ..	233 "
Tallywalka Creek	15 " ..	248 "
Wilcannia, Darling	9 " ..	257 "

(?) Works recommended to be abandoned.—H.G., 9/7/80. The most urgently needed works are the Waiko, the 11-mile, near Ivanhoe, Mount Manara, 26-mile Peg, 12½ miles beyond Boonoona, in the order here given.—H.G., 10/7/80.

Statement.

Mr. GILLIAT; when engaged, what he has done, what repairs, to what tanks, what lines now require inspection, what have been leased, briefly what terms of lease, what tanks in charge of caretakers, and who they are; map showing additional tanks.

1st. Mr. Gilliat, when appointed—6th October, 1879.

2nd. What he has done:—Inspected the tanks and wells on the roads between Hay and Wilcannia, and between Balranald and Ivanhoe, fourteen in number; examined the country carefully with a view to recommending water reserves, and to the selection of situations for additional works when required. Submitted to the Departments two reports upon the matter.

From the 23rd of February, 1880, engaged in calling for tenders for repairs to the works on the abovenamed lines, preparing estimates, tenders, and specifications; further inspection of works, and closing arrangements with successful tenderers.

Visit of inspection with the Chief Inspector of Stock.

My reports and letters deal with the above matters in full.

Repairs have been completed but not yet passed at the Jumping Sand Hill, Mossgiel, and Holy Box Wells, and are in progress and well towards completion at the 12-mile, 35-mile, and 48-mile tanks.

At the Boonoon Tank the contractor has been unable to commence work owing to the flood-water in the surrounding swamp.

The repairs to the works on the Balranald and Ivanhoe road require to be put at once into the hands of the contractor. Works on the road from Hay to Deniliquin inspected and taken delivery of.

The road from Jerilderie to Tocumwal to be reported upon; the works between Hay and Wilcannia to be inspected, and contractors' work examined and passed; the new works on the Paroo River to be inspected and taken delivery of; the road from Mount Poole to Wilcannia to be reported upon; the road from the Paroo to the Darling to be reported upon; the works upon the roads from Bourke to Cobar, from Cobar to Nyngan, to be inspected and taken delivery of; the works on the road from Bourke to Fringonia and Bourke to Ford's Bridge to be inspected and taken delivery of. If recommendations with regard to the roads from Wilcannia to Cobar, and Louth to Cobar, be approved, these roads will require reporting upon with regard to reserves and sites for water supply.

I am informed that the works on the road from Hay to Wilcannia have been leased to Messrs. Cobb & Co. What terms of lease? £350 sterling per annum. No papers embodying conditions of lease have been referred to me.

Tanks in charge of caretakers:—The One-tree Tank, Wm. Small; the Quondong Tank, H. Richmond; the 12-mile Tank, Charles Millar; the 35-mile Tank, Ed. Ford; the 48-mile Tank, Hn. Hiskins; the Til Til and Yool Plain Tank, M. Guerin; the Box Creek Tank, J. Thompson.

My report of the 2nd July, 1880, deals fully with the more important of these subjects.

HARRY GILLIAT,

Inspector, Tanks and Wells.

Sydney, 8 July, 1880.

Sir,

Sydney, 2 July, 1880.

With reference to my future movements, I have to suggest that after leaving Sydney I should, on reaching the Murrumbidgee, deal with Mr. Barbour's (M.L.A.) paper 80-25. Then visit and take delivery of the tanks between Hay and Deniliquin. Going on to the Lachlan, put men to work on the Balranald and Ivanhoe tanks; inspect and pass the works repaired between Booligal and Wilcannia. Crossing the Darling, report on paper 80-83, road from Mount Poole to Wilcannia; paper 80-37, road from Warramurtie to Tilpah. Take delivery of the tanks on the Paroo. Recrossing the Darling, take delivery and report on the Bourke, Cobar, and Nyngan works.

Should these suggestions be approved of, I think it desirable that I should start at as early a date as may be convenient to the Department.

I have, &c.,

HARRY GILLIAT,

Inspector, Tanks and Wells.

The Chief Inspector of Stock.

Road Superintendent Cambridge's Report as to abandoning or repairing Waiko and Mount Manara Wells.

Sir,

Hay, 26 July, 1880.

I have the honor to report herewith on the wells at Waiko and Mount Manara.

Waiko Well.—I personally examined this well throughout about 18 months ago. I found that the shaft was very much out of order. The ground behind the lining had by degrees been washed down to the bottom of the well, to a distance of some 20 feet from the bottom, by the surface water soaking downwards, and when the water was baled, large quantities of sand were brought up in the buckets. The shaft,

Tanks & Wells,
80-154.

shaft, or at least a portion, is standing without any support to it. This I consider a very serious damage, and may, if interfered, fall down. The slabs are, on an average, in fair order. About one-third would require replacing with new ones.

The whim requires a thorough repairing, as it is very much out of order. The spindle is also out of plumb. The tank requires reconstructing; a good deal of the timber in it is decayed, and some of the galvanized iron lining corroded, and full of holes.

* Tender is for £410. Most likely Mr. Cambridge contemplates more extensive repairs.

The timber work in the troughing is also very much decayed and will have to be replaced by new. I estimate that the shaft, whim, tank, and troughing can be put in efficient order at a cost of about £800.* The shaft would have to be relined throughout, the best of the present lining being worked in with the new material, and where the supply of salt water comes in, the space behind the slabs to be puddled with the best clay obtainable (in the district) in the immediate neighbourhood.

The chief objection to this well being repaired is that the quality of the water is very bad and not fit for use, in fact sheep will only drink it when very thirsty. The people in Ivanhoe are working to get a tank put down, as the water for domestic use is very scarce, and that the inhabitants are dependent on Mr. George Williamson for drinking water, during the summer months.

† I think the character of the water should condemn the well.

Before deciding on a recommendation to abandon this well, finally or otherwise, I should like to again make a thorough and careful examination if you would authorize the expenditure which would be small.†

NOTE.—These marginal notes are in Mr. Bennett's handwriting, but not initialled.—J.W.B.

NOTE.—For completion of report, see Mount Manara Well papers.

Waiko Well.

Tanks & Wells, 80-167. It seems to be the opinion of the Commissioner for Roads that this well should be abandoned mainly on account of the bad quality of the water.

As this is also Mr. Inspector Gilliat's opinion, I presume that course will be taken, and a tank constructed in place of the well. If so, I would recommend that the work be carried out with all possible despatch, as Ivanhoe, where the Waiko Well is situated, is one of the most important points on the Wilcannia and Hay route, and in the meantime Mr. Gilliat might perhaps be asked to report on the most suitable site in this neighbourhood for a tank.

I believe there are no funds now available for such work, but if its construction be approved the site might be selected, and plans and specifications prepared in the meantime, so that it could be carried out immediately the money is voted.

The Under Secretary for Mines.

A.B., 11 August, 1880.

Submitted.—H.W., 14/8/80. Approved.—E.A.B., 18/8/80. Inspector Gilliat, 19 August, 1880.

Memo.—Under Secretary for Mines to Stock Branch.

Tanks & Wells, 80-79. As the construction of the works still rests with the Public Works Department, should not the matter be referred for report as to probable cost of constructing tanks in order that a decision may be arrived at upon Mr. Gilliat's recommendation? H.W., 14/5/80.

Approved.—E.A.B., 21/5/80.

Referred to the Works Department for report as to the probable cost of constructing a tank in place of repairing the well herein referred to, for which tenders have been received by Mr. Inspector Gilliat. The Under Secretary for Works.—H.W., B.C., 4th June, 1880. Commissioner for Roads.—J.R., B.C., 9/6/80. Mr. Cambridge.—W.C.B., 10/6/80. Report herewith, 15/6/80.

I attach reports. Tanks have been made in the Bourke district, for from £750 to £1,000; as such works are to a certain extent experimental in their locality, I consider £1,000 sufficient. Reports appended.—W.C.B., 29/7/80. Under Secretary for Mines, B.C., 2/8/80.

Sir,

Hay, 15 June, 1880.

I have the honor to report as follows on the cost of putting down tanks, and abandoning the Mount Manara and Waiko Wells:—Tanks, such as have lately been constructed on the Paroo, consisting of silt tank, main tank, and drinking tank, containing 18,500 cubic yards, with fencing, piping, and all complete, will cost £1,500 each. I am, &c.,

The Commissioner for Roads.

HENRY CAMBRIDGE.

It was not necessary to send the papers to Mr. Cambridge to get this amount of information. I wish to know what state the wells referred to are in, and if it is advisable to abandon them. I would not do so without regret. Could not a gallery be driven, or the wells relined from the top and sunk deeper. I do not like this ignoring of our work, and I wish Mr. Cambridge had gone into the matter more fully. Will he write a fresh report on a separate paper, and let me have it as soon as possible.—W.C.B., 21/6/80.

Recommendation by the Inspector, Public Tanks and Wells, for the construction of two new tanks on the road from Hay to Wilcannia, between the Lachlan and the Darling.

Sir,

Sydney, 22 July, 1881.

Tanks & Wells, 81-424. I have the honor to recommend the construction of two new tanks, between Hay and Wilcannia.

The road is a most important one, leading directly from the great pastoral districts in the west and north-west of the Colony to the terminus of the Southern Railway, which will shortly be completed to Hay.

The

The traffic in stock and wool passing over it has always been large, but hitherto has been to a great extent diverted to Victoria; but on the completion of the Southern line this road will become one of its most important feeders, and the direct route between the lower Darling and the great pastoral districts beyond and Sydney.

The tanks recommended are doubly important, as contributing towards the completion of the water supply of the road, and by bridging over in each case distances exceeding 30 miles without provision of water. The first tank to be at Ivanhoe, the site being at the junction of the Balranald road, will have the additional advantage of contributing towards the completion upon that road, as well as upon the main line, between Hay and Wilcannia; estimated cost, £1,500 sterling. The second tank to be at Mount Manara, replacing the old and useless well at that place; estimated cost, £1,500 sterling.

I have, &c.,

HARRY GILLIAT,

Inspector, Tanks and Wells.

The Chief Inspector of Stock.

Sir,

No. 133, Macquarie-street, 25 June, 1881.

I enclose you a letter sent to me by the Honorary Secretary of the Wilcannia Progress Committee, dated the 14th instant, and addressed by mistake to the Minister for Public Works, with reference to the necessity that exists for the construction of two or more tanks on the main road between Wilcannia and Booligal, viz., one at Mount Manara and the other at Ivanhoe. Owing to the bad state of the Darling River for some time past provisions here are very scarce, so the merchants are now buying largely in the Sydney market, intending to have goods conveyed by carriers from Narrandera, on the Murrumbidgee River, the present terminus of railway.

I hope you will kindly take these important matters into your consideration, and have these tanks completed as early as possible.

I have, &c.,

W. A. BRODRIBB.

The Honorable The Minister for Mines.

Mr. Bruce.—These works have been recommended in my paper upon the subject.—H.G., 22/7/81.

Sir,

Wilcannia, 14 June, 1881.

I have been requested by the Wilcannia Progress Committee to bring under your notice the necessity that exists for the construction of two more tanks on the main road between Wilcannia and Booligal, viz., one at Mount Manara and the other at Ivanhoe.

Owing to the low state of the Darling River for some time past, provisions here are very scarce, so the merchants are now buying largely in the Sydney market, intending to have the goods conveyed by carriers from Narrandera, on the Murrumbidgee, and the present terminus of the railway. The merchants here feel convinced that after the railway reaches Hay a considerable trade will be done between Sydney and Wilcannia, for the river navigation is very uncertain and cannot be depended upon. There will therefore be a constant traffic by teams between Hay and this place, and water should be made plentiful in order to enable carriers to travel. Tanks at Ivanhoe and Mount Manara will then be an absolute necessity, and if taken in hand at once could be completed by the time the railway reached Hay.

Apart from the traffic by teams that will be certain to ensue, great numbers of sheep and cattle travel by this route. Last summer a flock of 7,000 store sheep nearly perished for water near Mount Manara, owing to the distances between the Government tanks being too great. Probably when the railway reaches Hay several stations will truck their stock to the Sydney market.

It will be wise policy for the Government to render the principal roads leading to the railway termini easy to travel over, in order to induce the residents of the middle Darling to trade more with Sydney than they have done during the past.

Trusting this request of the Committee will meet with your favourable consideration.

I have, &c.,

T. J. JAYDON.

The Honorable The Minister for Mines.

Hon. Sec., Wilcannia Progress Committee.

Sir,

Sydney, 31 May, 1882.

Referring to our conversation yesterday, and Mr. Cramsie's and my previous conversations with you on the subject of the tank at Mossgiel, I have now the honor to bring under your notice the great necessity for having that tank in the township of Mossgiel, or as near to the township as possible, as the inhabitants are in the summer-time entirely dependent on it for their water supply.

Tanks & Wells,
82-443.

I have, &c.,

ROBT. B. WILKINSON.

The Chief Inspector of Stock.

Minute by the Commissioner and Engineer for Roads.

In further reference to the tanks and wells, it may be desirable that I should report to the Minister the action taken with respect to those ordered on 1st March to be commenced immediately.

16 May, 1882.

Tanks & Wells,
82-416.

On the Hay and Wilcannia route tenders have been instructed to be accepted for tank at Tom's Lake.

Tank or dam at Willandra.—Local officer has been instructed to invite tenders for plain square tank or dam, leaving adjuncts to be determined and contracted for afterwards.

Further correspondence about the Mossgiel Holy Box and Waiko or Ivanhoe Wells shows that the two first are in fair order, and yield a fair supply of water, which can be used by the station sheep, and Mr. Wood, Assistant Engineer for Roads, states that he has known himself that during the first year of the Waiko Well travelling stock constantly watered there, and that the experience is that the water in such wells improves by the washing out of the salt instead of deteriorating.

At the same time, I would point out the anomaly of sinking tanks here where the Department has made wells, and on the Mount Browne Road sinking wells where the Department has made small emergency tanks.

At

At Mount Manara, the supply from well is insufficient, and tank will be let at once. On the other roads represented by Mr. Bruce as of the first importance, viz., Carathool to Hillston, and Hillston to Cobar, Mr. Wood has marked out the sites for tanks, and his reports have been forwarded to Mining Department with a view to the approval of sites and proclamation of reserves.

The urgent communication from the Department of Mines relating to Mount Browne road rendering the immediate presence of Mr. Cambridge necessary on that route, he proceeded from Cobar to Wilcannia, where he now is preparing to start out to let the tanks and wells; and Mr. Wood, with whom it was arranged he should proceed from Cobar, Louth, and Wamaring, returned to Sydney from Cobar via Nyngan, inspecting the Booramugga, Muriel, and Hermitage Tanks *en route*.

This will delay a little the determination of the sites of the seven tanks decided on between Cobar, Louth, and Wamaring, and thence to Bourke.

Mr. Postle has not yet been able to report on the four tanks, Bourke to the Culgoa, on sites for which he was instructed to report on 13th March. This comprises all the works which I have been instructed to proceed with; but, in addition, tenders have been invited for the tank at Mount Hope. It is extremely difficult in this dry season to let such works, and even if tenders are accepted, the contractors cannot be expected to proceed until rain falls.

16 May, 1882.

WILLIAM C. BENNETT.

The Under Secretary for Public Works.

Forward to Mines Department.—J.L., 19/5/82. The Under Secretary for Mines, J.R., B.C., 19/5/82. Mr. Gilliat.—E.W. (for A.B.), 22/5/82.

Extracts from Report by the Chief Inspector of Public Watering-Places.

Sir,

Sydney, 25 April, 1883.

Tanks & Wells,
Extracts from
82-283.

In referring to my proposal to put tanks in place of the wells constructed by the Works Department at Mossgiel, the Holy Box, and Ivanhoe, the Commissioner says:—

“All these wells where sunk gave a strong supply of fair stock water. The gear and slabbing, I am told, has been allowed to get out of order, and if the water accumulates in a well it would necessarily get very bad.”

The Commissioner has apparently been misinformed upon several important points. There has been no question of want of supply at any of the works named.

At the Ivanhoe or Waiko Well, the slabbing at the bottom had fallen in, and the whim was useless before this Department took it over from the care of the Department of Public Works. The gear, at all three of these works, had certainly been allowed to get out of order, and at the time this Department received the charge of them, none of them were in working order, the Mossgiel, and Holy Box were completely refuted by this Department, and have been in effective working order ever since; the objection to them is that they do not afford stock water.

The well at Ivanhoe, owing to its state of disrepair, I advised to be abandoned, finding that it would cost nearly as much to repair it as to put down a new shaft. Mr. Cambridge's minute against this work upon my list of works annexed to the Commissioner's paper must be read, therefore, as applying to his own Department.

The water from this well was said to be fair stock water but unfit for human use. Judging that Ivanhoe, from its situation at the junction of the Balranald and Paddington roads, would probably support a small population, I advised the construction of a tank of sufficient size to supply the wants of both township and travelling stock.

With regard to the Mossgiel and Holy Box Wells, it is not necessary to make, as suggested by the Commissioner, “Some judicious effort to put and keep the wells and gear in order,” that having been done and maintained by the Mines Department ever since they were transferred from the Department of Public Works. As regards the well at Ivanhoe, I have submitted my opinion and my reasons for it.

The Commissioner continues:—

“And that if a tank is decided on it should be placed at some convenient distance from the existing wells, so as to utilize the small supply therefrom.”

The objection urged by me against these wells, with the exception of that at Mount Manara, is not that the supply is insufficient, but that they do not yield stock water, or in other words water which not only sheep, but horses and cattle will drink, and which it appears to me, at public works of this nature, should also be suitable for human consumption. I would submit, therefore, that no advantage can be gained by placing tanks at convenient distances from such wells.

In cases of wells with small supply, such as at Mount Manara, the advantage seems doubtful; this well does not yield more than 3,000 gallons in the twenty-four hours. Even for a large supply tank for storage this is insufficient for travelling stock, and yet it would be necessary to maintain it at the same expense as a good work. Unless leased by some one who could utilize it for a special purpose, it would remain on the hands of the Department, charged with the expense of a caretaker, horse, and harness.

I have, &c.,

HARRY GILLIAT.

Inspector, Tanks and Wells.

Tanks & Wells,
82-425.

I had the honor recently to give some details in connection with the Mossgiel, Holy Box, and Waiko Wells for the information of the Hon. the Secretary for Mines; from the annexed Minute-paper of the Commissioner and Engineer for Roads and Bridges, to whom the paper was sent, it appears that I have failed to express myself with sufficient clearness on some points.

1st. In the previous paper, I endeavoured to show that the supply of water from the wells named was ample, and that after being received from the Department of Public Works they were thoroughly refitted, and had been maintained in effective order since.

2nd. That the real objection to the Mossgiel and Holy Box Wells was that they did not yield stock water, stating that while the station sheep would drink in dry seasons the water from the Mossgiel Well, neither travelling stock, cattle, or horses would drink from either that or the Holy Box Well.

3rd.

3rd. That the Waiko or Ivanhoe Well being so much out of repair at the time of its transfer from the Works Department I advised its abandonment, on the ground that it would cost nearly as much to repair it as to sink a new shaft, adding that, while fair stock water, it was not fit for human consumption, and that the probable increase of population at Ivanhoe made it desirable that a tank should be placed there.

Two telegrams were submitted at the same time—one from Messrs. Robertson, Wagner, & Co., the present lessees, stating that no application for water had been made at either of the works during their tenancy, and that their own horses would not drink it; the other, from Overseer Hansen, was to the same effect. With regard to Mr. Wood's recollection of travelling stock watering at the Ivanhoe Well, it was distinctly stated that the water was reported fair stock water.

In wells not so brackish, but that water will be drunk by sheep broken to it on the station, Mr. Wood's experience and my own agrees—viz., that by constant use for a sufficient period a proportion of the salts in the water-bearing strata may become diluted, and the water improves in consequence; but I do not see how this can affect these wells, for if no stock will drink the water they are not likely to be improved by constant use, and baling for weeks would probably have no effect upon them.

But what appears to be the fatal objections to these wells remaining part of a line of public water supply on one of the most largely travelled roads of the Colony I would submit, are:—

- 1st. Their being unfit for human consumption, which may be considered of great importance in public works of this nature.
- 2nd. That two out of three wells are unfit for stock, and the third being so much out of repair a new work is advisable that would be of use to the inhabitants.

Referring to the information given by the Commissioner that a tank or dam near or in the Willandra is to be constructed, which will supersede the Mossgiel Well, the site is the one that I proposed; but it has recently been suggested by Messrs. Cramsee and Wilkinson, the Members for the district, that a site near the township of Mossgiel would be jointly available to the residents, as well as the travelling public. The consideration of this joint service is now with the Secretary for Mines, and I have only to say that a very suitable site may be found in "Smith's Clump," half a mile south-west of the township. As soon as the position is determined, it will be very desirable that a Reserve of 2 square miles should be applied for.

See letter from Mr. Wilkinson herewith. 82-443.

The anomaly of the Mines Department recommending tanks where the Department of Public Works has placed wells, and on the road to Mount Brown Wells where that Department has constructed service tanks, may, I think, be simply explained. I referred in my report on the latter to the exceptionally low average and irregular rainfall common to the district, and to the fact that wells had been sunk in various parts of it obtaining fair supply of good water at moderate depths, and drew my conclusion that wells would prove the more reliable source of supply under such conditions.

Plan of Water Supply, Wilcannia to Albert Gold-field. (Tarella Tank Case).

The Government wells on the road from Booligal to Wilcannia, five in number, cannot be considered successful; three are not fit for human consumption; one is unpalatable from its sickly sweet flavour, so noticeable that tea made from it does not need sweetening; and the fifth has no supply. The climatic conditions are different, the rainfall is slightly heavier and more regular. Under these circumstances I considered it my duty to advise the adoption of tanks.

As the Commissioner notifies his intention of abandoning the well at Mount Manara on account of insufficient supply, the course I had the honor of recommending in 1880, I would suggest that the overseer of that division may be authorized to remove such of the material as may prove useful for repairs at neighbouring works.

HARRY GILLIAT,
25/5/82.

Abandonment of Holy Box and Waiko Wells.

MEMO.—It is, I think, evident from Mr. Gilliat's Memo., and the evidence to which he alludes that the Holy Box Well cannot be deemed a suitable watering place, for if the water there had been drinkable, even by sheep, no drover would, in such a trying season as the last, have passed it, as every one of them did, without watering his sheep, supposing they had been supplied, which they were not, with water at Mossgiel. The fact that no application was made to water stock at the "Holy Box" is sufficient proof that the water is unfit for any but station sheep, which have been made to drink such water by three or four days starvation, a course of procedure drovers dare not attempt with sheep on the road.

Tanks & Wells, 82-439.

Then as regards the "Waiko" Well, at Ivanhoe, there is no doubt but that this will be a township of some size, and likely before long a place of Petty Sessions, situated as it is about midway between Balranald and Cobar, and about the same position between Booligal and Hay, at the point where the roads between these townships cross each other, and it would tend not only to the comfort of the people travellers on these roads, to have a sufficient supply of fresh water here, but also to promote the growth of the township.

It would, I think too, be unsafe to have two doubtful means of supply, such as the "Holy Box" and "Waiko" Wells afford, next each other; for if the water at both wells were to be refused by stock (I was informed by several persons, on my way to Wilcannia and back, that only some stock would drink the Waiko water) they would have to travel 45 miles (from Mossgiel to Boonoonna) without a drink. Then again with regard to travellers. It is not right that on an important road, such as this now is, they should have to go half that distance in dry times without being able to obtain fit water for themselves or their horses, except perhaps by begging it, which they could only do at one or two places by the way.

See also Mr. Bennett's minute on Mr. Cambridge's letter, 20th July, 1880, 80-154.

Taking all these circumstances into consideration, and also the important fact pointed out by Mr. Gilliat, that the cost of repairing the "Waiko" Well will be nearly as much as sinking a new shaft, I would suggest that these papers be returned to the Department of Public Works, with a view to a reconsideration of the question of the abandonment of the two wells here referred to, especially that at Ivanhoe; and in doing so it should also be borne in mind that the nearest watering place on the Balranald Road (on which there is a considerable amount of both stock and general traffic) is at Til Til, more than 25 miles from Ivanhoe, and that if a sufficient supply of good water is not provided at the latter place, travellers by the Balranald Road will get none till they reach Boonoonna, some 16 miles farther on.

The Under Secretary for Mines.

A. B., 30/5/82.

Submitted.—H. W., 1/6/82. Refer to Department of Public Works, together with the letter of Mr. R. B. Wilkinson, M.P., on this subject.—A.R., 2/6/82. The Under Secretary for Public Works, B.C., 3/6/82. Roads.—J.R., B.C., 3/6/82.

It is no use writing more.—I have not time. Will Mr. Wood prepare instructions to Mr. Gordon to invite tenders for a tank at Mossiel, though in another paper from the Mines the combination of town and stock tank is objected to. Will Mr. Wood also note the importance of having a section of the Willandra and of the Lachlan at its junction taken. This information may probably be at Harbours and Rivers Office. Instructions to be also given to invite tenders for tank at Holy Box and a small tank at Waiko, which, in the event of the artesian bore turning out a failure, can be supplemented by a large stock tank.

Also a tank at Mount Manara, as, even if sufficient water could be obtained in well, it would probably be too deep to lift economically.—W.C.B., 7/6/82. Mr. Wood.

Draft instructions herewith.—ARTHUR P. WOOD, 9/6/82.

Ivanhoe Tank.—Contractor's claim for compensation.

Roads, Sydney, 10 March, 1885.

Tanks & Wells,
85-521.

WHEN works for watering stock routes were first undertaken in 1870 a well was sunk at Ivanhoe, which yielded a plentiful supply of good water. This well was subsequently handed over to the Mining Department, fell into disrepair, and was ultimately condemned by its officers.

In 1882 application was made for a tank at this place, but in view of the fact that good water has been proved to exist under ground a well was strongly recommended by the Department, both on the score of economy and certainty of supply. This proposal was strongly opposed, and tenders were then invited for constructing a tank on the Balranald Road, about 1 mile west from the township, but owing to the seasons no reasonable tenders were received, or, when accepted, were not taken up. This occurred time after time until a change took place in the season, and tenders were again invited and Casey's tender accepted for constructing a tank at the site already mentioned. This being settled, the lessees of Kilfera Run, in conjunction with some of the townspeople, brought pressure to bear, and the site was removed to the Box Swamp, about 1 mile east of the town, on Ticehurst Run. Here the contractor was served with a notice by the lessee that he was trespassing, and it was then discovered that the land was selected a few weeks before.

The question of site was ultimately settled by constructing the tank on the Village Reserve, which pleases Kilfera, Ticehurst, and the residents of the township.

Mr. Casey's letter gives a faithful account of the changes that were made, and by which he lost the time for which he claims compensation.

The amount of his claim, £497 16s., is excessive; but as he is fairly entitled to some compensation for the fifteen weeks loss of time, it can be estimated at £10 a week for idle plant, £150, which added to £152 16s., Mr. Stillwell's estimate of actual cash losses, makes a total of £302 16s.

ARTHUR P. WOOD.

It will be seen the bungling was not the fault of this Department but of the law. The contractor has been offered £300. Mr. Wood advises that he should get £302 16s. and no more.—W.C.B., 11/3/85. Under Secretary, B.C. Forward to Mines.—F.A.W., 13/3/85. The Under Secretary for Mines.—J.R., B.C., 14/3/85. Mr. Gilliat.—A.B., B.C., 17/3/85.

Minute by The Chief Inspector Public Watering Places.

Ivanhoe Tank.

18 March, 1885,

Tanks & Wells,
85-541.

THE exception taken by this Department to a well at Ivanhoe has always been based on the ground that the subterranean water, while good stock water, was too brackish for domestic purposes; 2nd., that any watering-place constructed here would be required for the use of the township, as well as for stock purposes.

It was therefore submitted the watering-place should be a tank, and within a convenient distance of the township. These conditions are, I think, fully met with in the site Mr. Wood has selected.

I must ask leave to correct a misapprehension of Mr. Wood with respect to the Waiko Well. He states, "the well was subsequently handed over to the Mining Department; fell into disrepair, &c." The well was leased by the Works Department to the Messrs. Kennedy, of Ticehurst; fell into disrepair while in their hands, and was thrown up by them before I took delivery, in 1879.

As I was unable to find a contractor who would undertake the repairs at a lower price than $\frac{2}{3}$ the cost of a new well, and in view of the requirements of the inhabitants of the township, I recommended the construction of a tank.

HARRY GILLIAT.

Mr. Gilliat,—Be so good as to report with reference to the subject of the Commissioner's minute.—A.B., 23/3/85. The changes of site alluded to by Mr. Assistant-Engineer Wood were made without reference to or in consequence of any action on the part of this Department.—H.G., 23/3/85.

Minute by The Chief Inspector of Stock.

Correspondence between the Works and Mines Departments.

26 March, 1885.

Tanks & Wells,
85-621.

I THINK, with Mr. Gilliat, that such remarks as those made by Mr. Assistant-Engineer Wood, on 85-164, herewith, should be carefully avoided, as likely to cause friction between the Departments, and unnecessary correspondence. This applies also to references to matters which have been long settled, such as that made by Mr. Wood in the accompanying paper, in regard to the Waiko (Ivanhoe) Well, where he has, I think quite unnecessarily, taken the trouble to recur to matters which took place some seven years ago, and unfortunately without being careful that his statements are borne out by the facts. Mr. Gilliat's reply with regard to state of well when transferred.

A.B., 27/3/85.
Submitted.—

Submitted.—H.W., 11/4/85.

If Mr. Gilliat is correct, then the statements of Mr. Wood are somewhat reckless, and seem to be exceedingly offensive. I have no desire to encourage anything like illfeeling between the two Departments, but have at all times condemned in officers of this Department any action of theirs likely to produce such a feeling, and Mr. Wood should be certain of his facts.—J. P. ABBOTT, 21/4/85.

Mr. Gilliat, 23.

It may, perhaps, be as well to submit extracts from my reports on the Waiko Well, to show my opinion of the state of the work in 1879 and 1880; and Mr. Brougham, the Messrs. Kennedy's manager at Ticehurst, who leased the well, can, if it is thought necessary, no doubt confirm all I have said in my minute 85-541. The Chief Inspector of stock also visited this well with me, and heard from local report all that I have here stated.—H.G., B.C., 24/4/85.

Minute by the Commissioner and Engineer for Roads and Bridges to The Under Secretary for Public Works.

Re F. A. Casey's claim for compensation, re Ivanhoe Tank.

May 18, 1885.

On the 12/3/85 I forwarded a minute paper recommending that the sum of £302 16s. be paid to Mr. Casey in full of all demands. Mr. Casey having now intimated his willingness to accept the sum named, I have to request the return from the Department of Mines of the paper in question, as no action can be taken in the matter pending its receipt. Tanks & Wells
85-1,299
W.C.B., 18/5/85.

Forward to Mines, 22/5/85. The Under Secretary for Mines.—J.R., B.C., 22/5/85. Return papers 85-521, tanks, to the Works Department, 29/5/85.

Sir,

Department of Mines, 29 May, 1887.

Herewith I have the honor to return papers, tanks and punts, forwarded by you to this Department on the 14th March last, respecting the claim made by F. A. Casey, for compensation in connection with the Ivanhoe Tank, as asked for by you in your blank cover communication of the 22nd instant. Tanks & Wells
85-1,299

I have, &c.,
HARRIE WOOD,
Under Secretary.

The Under Secretary, Public Works.

Sir,

Ivanhoe, 18 May, 1885.

I herewith enclose rough sketch of tank in course of construction at Ivanhoe. The contractor has, I should think, excavated about 15,000 to 16,000 yards of soil, and is now into a sand drift which will be the bottom of the tank which, in my opinion, will not hold water. There is a good drainage, and I think the position I have shown the drains in the rough sketch would be most suitable for the catchment of surface water. The best position for the troughing will be at the south-east end. It will avoid stock from running across the drains. There is no reserve round this tank; the land adjoining has been laid out for the township, but I believe it has not yet been offered for sale by the Government. I cannot give an estimate of the cost of fencing, not knowing the description of fence required by the Government. There is no timber round this immediate neighbourhood that would be suitable for posts. I think there is a possibility of leasing this tank when finished to Cobb and Co. Tanks & Wells
85-1,254

I have, &c.,
JAMES YEO,
Overseer of Tanks and Wells.

The Chief Inspector of Stock.

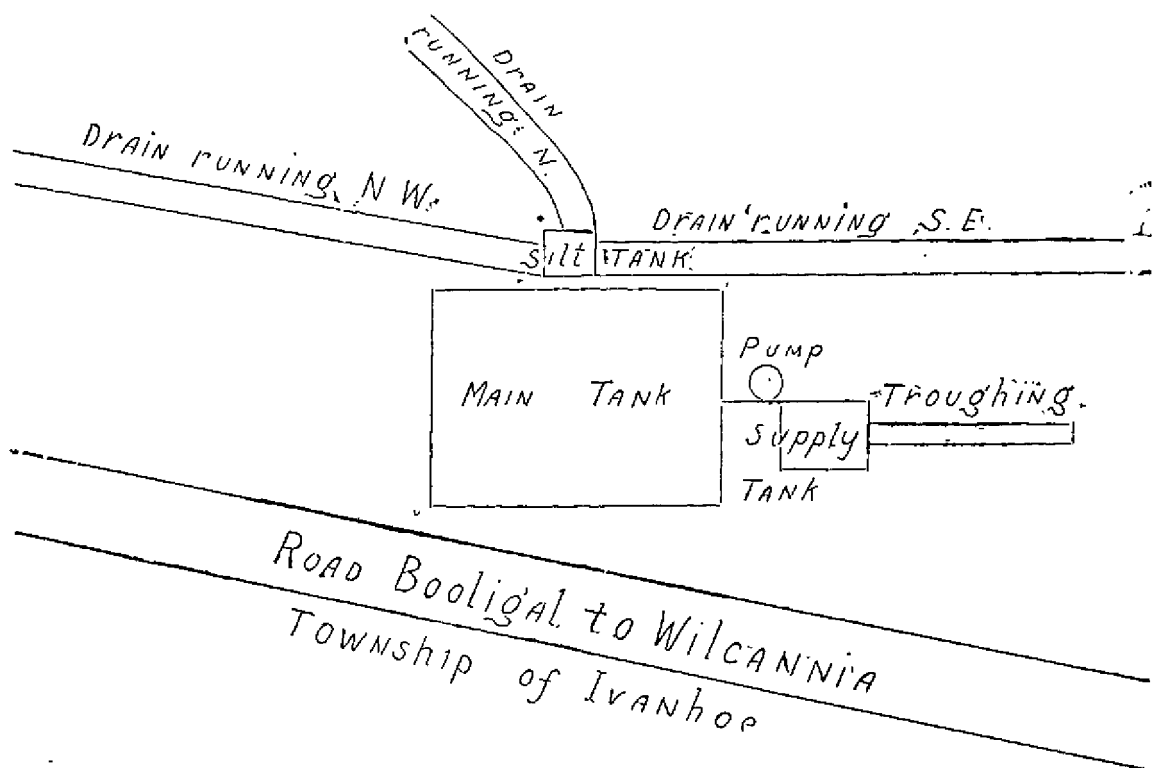

Mr. Gilliat.—A.B., B.C., 22/5/85.

I do not see what use can be made of this information. The construction of the work is being conducted under the supervision of a qualified officer of the Works Department. Criticisms of this sort, with suggestions as to the method of continuing the work, appear to me impossible between the two Departments, unless proceeding from an officer specially instructed to that effect by the head of the Department. The information, if conveyed as a private memo. for the information of the Chief Inspector of Public Watering Places, would perhaps have some value. I cannot recommend any action upon this.—HARRY GILLIAT, B.C., 9/6/85.

Ask Mr. Yeo to report on this tank on printed form.—A.B., 13/6/85.

Mr. Overseer Yeo should have used the printed form of report (he will be asked to do so) in reporting on this work, as the greater part of the information which is required with respect to it has not been sent. I think, however, the information which he gives in regard to the unsoundness of the ground should, in the public interest, have been transmitted by him, and that it should, as you suggest, be conveyed in a private note from you to Mr. A. P. Wood, of the Works Department. The other matters to which he alluded may be considered as for your information only.—A.B., B.C., 13/6/85. Mr. Gilliat.

Letter to Mr. Yeo, 16/6/85.

Inspector J. W. Boulton to the Chief Inspector of Public Watering Places, reporting on tank recently constructed at Ivanhoe.—Road—from Hay to Wilcannia; distance from and name of post town—at Ivanhoe; parish—Warwilly; county—Manara.

Questions:—

25 April, 1884.

1. Name of road and length?—Hay to Wilcannia, 286 miles.
2. If near a town, give estimate of population that may be dependent on the watering place?—In centre of Ivanhoe township; from one to two hundred.
3. Estimate of traffic in stock and teams?—The traffic is very large, especially in seasons like this, when it is necessary to send sheep to the mountains.
4. The traffic; by what roads; the destination?—Both stock and teams; it is the main stock route from the north.
5. Its distance from nearest watering-place, or permanent natural water on each side?—18 miles from Holy Box Well on south; 23 miles from Boonoon Tank.

If a Tank.

6. The dimensions and capacity in cubic yards? 65 x 65, 18 feet deep; 20,000 cubic yards.
7. Form of embankment and distance from excavation?—Amphitheatre. The bank on the inlet side is lower, however, than the others.

Watering appliances.

13. Full description of watering appliances and delivery in gallons per hour?—A 4-horse power Tangye steam force pump in course of erection.
14. Supply tank; size, construction, capacity in gallons? A buckleplate iron tank, 25 x 25 x 25; 20,500 gallons.
15. Troughing, length, width, depth, material, and position? 300 feet galvanized iron troughing, with post and rails of sawn pine.

Fencing.

16. Area enclosed; description; distance between posts; number and gauge of wires?—Tank is enclosed in T. L.; 640 acres; Nos. 6 and 8.
17. Gates?—None erected yet.

General.

18. Probabilities of obtaining tenant and estimated rent?—The distances from watering-places on either side are greatly in this tank's favour; a high rent should be obtained. The paddock being in the township, so to say, should render it valuable for agistment. Not less than £100 a year should be taken.
19. Area, position, and quality of land included or to be included in tenant's lease; area notified for public watering-place?—The T.L. now being fenced is 640 acres in extent, is not first-class country, being open broom and hop brush scrub; clearing would increase the value.
20. Caretaker's cottage and description?—None erected.

JAMES W. BOULTBEE,
Acting Inspector, Public Watering Places.

General

General Remarks on Ivanhoe Tank.

I visited this tank on 29th April last, and found that it was not out of the contractor's hands. I do not think, however, that it will be long before it is ready for transfer. The main tank is a fine excavation, 65 feet \times 65 feet and 18 feet deep, excavated in red clayey soil with a substratum of white greasy sand. I heard several opinions expressed that it would not hold, but anywhere where the sand shows the smallest admixture of clay, the ground holds well. The tank is surrounded by a drain to carry off the water from the batters and thus save guttering; but the ends of the drain, where they run into the flume, are at present closed. The embankments are 10 feet high upon three sides, and on the side where the inlet upon East comes in the bank is considerably less. The arrangement at the flume is different from any I have seen, and I think the plan a weak one. The drains empty into a small silt tank, 10 yards square and 6 feet deep, excavated almost in the banks, and a lower horseshoe bank is raised and passes over the flume on a logging of rough leopard wood, a timber that is perfectly useless in the ground. The following diagram may perhaps explain:—

The effect of this will be that the body of water coming down the drains will fill the silt tank, and dam back and eventually carry away the bridge and all the embankment in the half circle into the tank. If the bridging of the flume had been well made, and the banks of the same height as main banks, I think risk would have been avoided.

The drains, of which there is a very great extent, are well made; but they run about and through the township, and must collect a great amount of filth, on the drain from the north from the tank. On its very edge is a piggery belonging to Macdougall's Hotel, and Cobb & Co.'s yards are in close proximity too close for the benefit of the water. The fluming on the east, connecting the small silt and main tank, is sawn pine tarred, 5 \times 2, ending upon a 12 \times 12 apron, also sawn pine. That on the west is round iron flume, leading to an open box flume of sawn pine 2 \times 2, and ending in an apron 12 \times 12. On the inlet side of this flume the valve is quite unprotected; even now the earth is falling in around it. A small staging and a protection of stubbing to keep the loose earth of the embankment from falling in is highly necessary. The silt tank on the west side is 30 \times 30 \times 6 feet; is almost half full of sludge. The embankment is pierced for the suction pipe upon the ground level, which is supported by sawn pine uprights, upon which the depth in feet could now be easily marked. There is no nozzle tank. The supply tank is the usual buckle plate iron, 25 \times 25 \times 5, upon small girders upon concrete piers. It has now a coating of refrigerating paint. The valve to the troughs is defective; it is too short to allow of the wheel being fixed. The pipe or valve is shorter than others I have seen, and it consequently brings the wheel against the side of the tank. If it is retained as placed, a spanner will have to be used. The troughing is the usual 300 feet galvanized iron troughing, protected by posts and rails, which, in this as in other cases, has the same fault—the rails are too high from the edge of the troughs. There is no flushing outlet to troughs.

The engine and gear is a 4-horse power Tangey now in course of erection. It is, however, in my opinion, too close to the supply tank. There is no room left for the erection of engine-house. The fencing is pine posts with top rail of pine of a substantial character, but without any bands. As pine is of a very brittle nature when dry, I think these hoop-iron bands would be an improvement. The T. L. is now being fenced in, and comprises an area of fair country—hop bush and broom scrub; its value would be largely enhanced by being cleared and burned off. A paddock like this, almost in the heart of the township, should command a high rental. The tank is enclosed in the area, but the troughs are outside, and running parallel to the fence. From the north the approach to the troughs is only down the main street, or by going behind some of the houses and entering the street again by a narrow pass. I think all arrangements of the position of tanks and troughing should be made with a view to the convenience of stock. To get cattle or sheep into the troughs from the north will necessitate knocking them about to get them there.

The space between the troughs and the T. L. fence does not give very much space on the one side of the troughs for a body of stock.

The

The tank is a considerable distance from watering places on either side. The township is at present dependent upon a small private tank of Mr. Williamson's. This public watering place should let well and readily, and I think nothing less than £100 a year should be taken as rent. When particulars of surveys of township public watering places are complete, I am of opinion that these public watering places are better in the hands of trustees.

JAMES W. BOULTBEE,
Acting Inspector, Public Watering Places.

Mr. Yeo will be good enough to note this report carefully, with a view of pointing out defects when taking over from the Works Department. I shall be glad to have a report as soon as he can make it, and to be informed of the probable date of transfer.—H.G.

Mr. Overseer Yeo for report,—B.C., 21st May, 1886. To be returned.—H.G. Contents noted. Report will be forwarded at an early date.—J. YEO, 28/5/86.

Sir,

Stock Office, Ivanhoe, 1 June, 1886.

P.W.P.
86-2,761.

Referring to your request to report on the Ivanhoe tank I now beg to furnish you with the following general remarks, viz. :—

1. The tank is still in the hands of the contractor who has only to finish the erection of the machinery, when it should be ready for transfer, provided that the tank will hold water, which, I think, is very doubtful. There was about 4 feet of water in the tank on the 18th May last, since then it has soaked away, with the exception of 4 inches on the west side of the tank, which is a little deeper than the east side, the water has quite gone from the east side. The main tank is a fine piece of workmanship, 67 x 67 x 18 feet deep, which is excavated in a red clayey soil with a substratum of white sand, which, in my opinion, will never hold water unless it is puddled with clay. There is a drain surrounding the main tank to catch the water from the embankments and thus save the batters of the main tank from guttering, but the ends of the drains on the east side of the tank, when they should empty, are at present closed by an embankment over the flume and round the end of the silt tank, which, in my opinion, will be washed into the main tank after a heavy fall of rain, for it will be impossible for the flume under the embankment to carry the water away into the main tank. The flume is of the ordinary size, 5 feet by 2 feet deep. I consider the silt tank on the east side is much too small and also too near the main tank.

The embankments are 10 feet high and 60 feet wide at base on three sides; on the east side is much less. It is necessary that some one should attend to the embankments as soon as possible for there are several deep gutters washed in them already.

It would have been much better if the embankments had not been so steep, then they would not have washed in gutters nearly as bad as they will now.

The drains are very well made, and I consider they are about three miles altogether. The drain which runs from the north-west corner of the main tank goes through the township allotments, consequently it will frustrate the idea of ever forming a township here unless the drain is done away with. It also goes, as Mr. Boultee reports, on the very edge of Mrs. Macdougall's piggery, and Cobb & Co.'s stable yards are in very close proximity. Mrs. Macdougall holds a special lease (on which the piggery and Cobb & Co.'s yard stands) granted from 1st January, 1884, to 31st December, 1888, to H. T. Millie. This drain is naturally bound to collect a great amount of filth. Mrs. Macdougall says she will remove the piggery if required, but complains that she has been done a great piece of injustice by cutting off the supply of water. The fluming on the east is sawn pine, tarred, 5 x 2, ending upon a 12 x 12 apron, also sawn pine. That on the west is round iron flume, leading to an open flume of sawn pine 2 feet x 2 feet, and ending in an apron 12 x 12. The valve is quite unprotected on the west side of the tank, consequently the earth from the embankments is continually falling around it; some protection should be erected around it, which I presume will be done by the Department of Works. The silt tanks are both nearly full of water.

The service tank is of buckled plate iron 25 feet x 25 feet x 5 feet upon iron girders upon concrete piers. The valve mentioned in Mr. Boultee's report has since been removed, and another put in its place which appears to be all right. The section pipe goes through the embankment on the ground level which is supported by sawn pine uprights, and on which I have arranged with a man to paint the depths in feet, which will cost 10s.

The engine and gear is a 4-h.p. Tangye, now in course of erection.

The troughing is 300 feet in length, 30 inches x 12 inches deep, galvanized iron on timber bearers; the troughing is protected by post and rails of sawn pine, tarred, of the usual description. I am of the same opinion as Mr. Boultee that the rail is too high from the edge of the trough. The fence round the T.L. is now being erected. The country which it includes is very fair, but a great deal of the scrub can be cleared, which I propose to have done by the caretaker when it is handed over to this Department. It will be a great improvement to set back the fence some distance on the east side of the tank, so that stock will not require to go through the main street.

The tank is about 20 miles from the Holy Box Well, and 20 miles from Boonoona Tank.

The township people have for some time been dependent upon a small private tank belonging to Mr. George Williamson, who complains very strongly about the drain which runs from the north-west side of the tank and cuts off the water-supply. It will be a serious matter with the township people if this tank does not hold water, for it prevents private tanks being filled that will hold water.

There are parties who are anxious to rent this tank, but I would recommend that it should be placed in the hands of trustees.

I have, &c.,

J. YEO,
Overseer, Public Watering Places.

The Chief Inspector, Public Watering Places.

Connect this with Mr. Boultee's report and all other papers relating to this tank. Has Mr. Yeo wired any reports of its filling from late rains?—H.G., 9/6/86. All papers herewith.—S.N., 10/6/86. Suspend until notice is received that the tank is ready for transfer.

Sir,

Sir,

Stock Office, Ivanhoe, 21/6/86.

I have the honor to inform you that 3 ft. 6 in. of water ran into the Ivanhoe Tank on Thursday, 17th instant, but is soaking away at the rate of 3 inches per day.

P.W.P.,
86-3,173.

The same depth of water which ran into the tank about a month since had all soaked away previous to this catch of water. I do not think it is possible for this tank to hold water unless it is puddled, which I consider should be done as soon as possible.

J. YEO.

The Chief Inspector, Public Watering Places.

This tank is not yet transferred, I think.—H.G. No.—S.M. Please watch the loss by percolation, and report from time to time. In taking delivery of this tank (when you are instructed), you should embody in your report the exact loss you have noted from time to time.—H.J., B.C. 29/6/86. Mr. Yeo.

Contents noted. The loss by percolation from 17th June to 5th July was 2 ft. 6 in. We had 1.30 points of rain on night of 5th July, which put 5 ft. 10 in. of water into the tank, and with 1 ft. in it before, it now has 6 ft. 10 in. in it.—J. YEO, 7/7/86.

Resubmit with Mr. Yeo's new works report.—H.G.

Department of Roads and Bridges, Sydney, 1 September, 1886.

MEMO.—Mr. Stillwell wires that Ivanhoe Tank will probably be ready to transfer to your Department in a fortnight. The heavy roads have delayed delivery of material necessary to complete alterations ordered by this office.

P.W.P.,
86-4,728.ARTHUR P. WOOD,
Assistant Engineer.

The Chief Inspector, Public Watering Places.

Mr. Wood states he will wire to-day to Mr. Stillwell, and ask if Ivanhoe Tank is ready for transfer, and when answer is received will at once send memo. to Mr. Gilliat.—R.W.G., 7/10/86.

Department of Roads and Bridges, Sydney, 7 October, 1886.

MEMO.—Telegram from Mr. Stillwell this day that Ivanhoe Tank will be visited in the course of a few days, when it can be transferred; 12 feet of water.

P.W.P.,
86-4,793.

The Chief Inspector, Public Watering Places.

ARTHUR P. WOOD.

Mr. Yeo can be instructed by wire to arrange with Mr. Stillwell as to date of transfer of Ivanhoe Tank, and Mr. A. P. Wood informed by memo. that such instructions have been given.—H.G., 8 October, 1886.

Telegram to Mr. Yeo, 9/10/86. Memo. to Mr. Wood, 9/10/86.

Telegram from Mr. Overseer Yeo to The Chief Inspector, Public Watering Places.

Ivanhoe, 12 October, 1886.

MR. STILLWELL is here, and proposes transferring the Ivanhoe Tank on Thursday next, when there will be a trifling amount of work left to complete. Shall I take delivery until the whole of work is completed? Please arrange for Carctaker Playford to proceed here to take charge. I can arrange with a man prior to his arrival.

P.W.P.,
86-4,844.JAMES YEO,
Overseer.

I think transfer may be made without delay.—H.G., 12 October, 1886. The Under Secretary for Mines. Approved.—H.W., 12/10/86. Inform Mr. Yeo by wire.—H.G., 12 October, 1886. Telegram to Mr. Overseer Yeo, 18/10/86.

Telegram from Mr. Overseer Yeo to The Chief Inspector, Public Watering Places.

Ivanhoe, Sydney, 18 October, 1886.

DELIVERY was taken of the Ivanhoe Tank on Saturday, 16th instant.

P.W.P.,
86-4,947.JAS. YEO,
Overseer, Public Watering Places.

Resubmit with report.—H.G., 19/10/86.

16 October, 1886.

Overseer James Yeo to the Chief Inspector of Public Watering Places, reporting on tank recently constructed at Ivanhoe.—Road—from Hay to Wilcannia; distance from and name of post town—at Ivanhoe; reserve (nature, No., and date)—within T.L. 56, 29/1/86; parish—Ivanhoe; county—Mossgiel.

P.W.P.,
86-4,992.

Questions:—

1. Name of road and length? Hay to Wilcannia, 255 miles.
2. If near a town give estimate of population that may be dependent on the watering place? In centre of Ivanhoe township, 40.

3.

Estimate of traffic in stock and teams? The traffic is very large, it being a main road from Victoria to Queensland; at present there is a great number of cattle coming down from Queensland for the Victorian markets.

4. The traffic, by what roads, the destination? Both stock and teams. It is the main road from Queensland to Victoria and from Paddington to Balranald.
5. Its distance from nearest watering place or permanent natural water on each side? 20 miles from Boonoon Tank; 20 miles from Holy Box Well.

If a Tank.

6. The dimensions and capacity in cubic yards? 200 × 200 ft., top; 146 × 146 ft., bottom; 18 ft deep; 20,000 cubic yards.
7. Form of embankment and distance from excavation? Surrounding tank 20 ft. from excavation.

Watering appliances.

13. Full description of watering appliances and delivery in gallons per hour? Especial three h.-p. steam pump (Tangye), 4,000 gallons per hour.
14. Supply tank; size, construction, capacity in gallons? 25 × 25 × 5 ft.; iron buckled plates on concrete piers; 20,000 gallons.
15. Troughing, length, width, depth, material, and position? 300 ft. long, 30 in. wide, 9 in. deep; galvanized iron on timber bearers; south side of service tank.

Fencing.

16. Area enclosed; description; distance between posts; number and gauge of wires? 640 acres in progress, post and wire; 10 ft. apart; five No. 6, and one No. 4 wires.
17. Gates? To be 12 ft. wide.

General.

18. Probabilities of obtaining tenant and estimated rent? There would be no difficulty in getting a tenant for this tank, it being, so to say, in the centre of the township, and should command a high rental. I consider at least it would be worth £100 a year.
19. Area, position, and quality of land included or to be included in tenant's lease. Area notified for public watering place? T.L., 640 acres, fencing in progress, on south-east side of main tank. The country is fairly good, but its value can be improved by clearing the useless scrub.
20. Caretaker's cottage and description? None erected.

General Remarks.

The Ivanhoe Tank, with its appurtenances, was transferred by Mr. A. W. Stilwell, A.E., Hay, to James Yeo, overseer of P.W. Places, Ivanhoe, on Saturday, October 16th, 1886.

The main tank at present has 11 ft. 6 in. water in it, which is soaking away and evaporating at the rate of 1½ inch every twenty-four hours, which is much less than it has been. (About six weeks since the water was going out of the tank at the rate of 3 in. every twenty-four hours.) The batters are washed from the continual swell of the water into little steps, which I consider will be advisable to let remain, for it will catch any silt which might settle on the batters, and perhaps eventually stop the leakage.

The embankments have been hollowed out the top to prevent them from scouring; they were scoured previous to it being done. The caretaker can put them in order again with two days' work. The embankment over the flume on the east side of the tank is on a logging of leopard wood, which I consider is not suitable for the purpose. I drew Mr. Stilwell's attention to this when taking delivery.

The silt tanks are both partly full of water, but are in a good state of repair. The silt tank on the east side was first put inside the embankment, which was found to be too near the main tank. It has since been filled up, and a fresh one put down outside the embankment.

The drains are well made, but will require a lot of grading and clearing before the water will run in them properly. In places they will require to be cleaned at least 3 ft. deep, which I have set the caretaker to do at once.

There is a piggery, belonging to M'Dougall's hotel, on the edge of the drain running north, which I consider should be removed, but I don't know if I have power to have it removed, it being on a conditional lease.

The fencing round tank and T.L. is in course of construction.

Machinery is in good working order, but requires painting, tarring, and cleaning.

The troughing is in good order, but the rail over which cattle have to drink is much too high; this I pointed out to Mr. Stilwell, and he has since made arrangements to raise the ground.

J. YEO,

Overseer of P.W. Places.

The percolation and evaporation now does not exceed 1 in. every 24 hours. There is, I think, little doubt but that every succeeding rain will help the holding powers of this tank. There is already a diminution of 2 in. per day in the soakage.—JAMES W. BOULTBEE, Acting Inspector of Public Watering Places, Ivanhoe, 27/11/86.

Report by Acting-Inspector J. W. Boulton, on the Ivanhoe Tank, road from Ivanhoe to Wilcannia, in charge of Playford, for 23rd November, 1886.

Tanks & Wells,
86-5,587.

State of drains.—In fair order; require levelling and cleaning at crossings.

Silt tank.—Half-full of water. The small one has been filled in, and a larger one excavated.

Inlet or flume.—In good order, but covered with a logging of leopard wood.

Main tank.—Cut into shelves by action of waves.

Embankments.—In good order, dished on top, but no shoot for water to run out—it is left to run out the one end of embankment, which is apparently the highest part.

Watering

Watering Appliances.

State of supply tank.—Good ; the refrigerating paint has peeled off.
 Troughing.—In good order. Earth been raised, but rails are still too high.
 Machinery.—In very good order.

Paddocks and Fencing.

State of Fencing.—T.L. incomplete, apparently in the same state as my last visit. Contractor Bevan has sub-let to Elliot, he has sub-let to Anderson, and he has sub-let again. Bevan and Elliot are, I believe, wool-carting ; meanwhile travelling stock are skinning the paddock. No alteration has been made to give access to tank by the back, as suggested in my new works report. The wire round enclosure is simply reeved, and I hear that there are no strainers, and that the wire is to be strained in long lengths to the post where it ends. This is a concession made by Mr. Stillwell. The first contractor must be getting a fine price for this.

Rates collected since last Report.

	£	s.	d.
Month ending October, 1886	0	1	2
„ November, 1886... ..	4	2	2
	<hr/>		
	£4	3	4

Traffic since last Report.

Month ending October, 1886	7 horses.
„ November, 1886... ..	31 horses, 7,638 sheep.

Weekly Depth of water since last report.—The water is going away at the rate of $\frac{1}{2}$ of an inch per day ; now about 8'6.

Ivanhoe Tank.

The alterations made by Works Department since my last report, are as follows :—
 Top of embankment dished, but no way of storm water to escape. The small silt tank and horse shoe embankment has been filled in and removed. A new tank excavated and long fluming put down.
 The alterations suggested in fencing have not been attended to. I think it is highly necessary, and I furthermore think that the troughs should be enclosed. Red lines show fence as it is, blue lines the proposed fence.
 The iron fluming mouth has been protected by a sort of cover. The drains will always be a source of trouble, especially where the road crosses them. All the stock traffic runs over them, and one runs right through the town allotments, which are advertised for sale. I think the leopard wood cover to fluming should be removed. It is very useless timber, especially in the ground. I believe 15s. per chain was paid for the drains here, work that I got done on the Darling for 3s. 6d. to 4s. 6d. a chain, 6 ft. wide, and 18 in. deep. Gauge has been painted on derricks.

JAMES W. BOULTBEE.

Caretaker's Work.

Work done by caretaker.—Trimming embankments, tarring engine, and painting and pumping.
 Work laid out for caretaker.—To clean drains and finish embankments, cut scrub when able.
 Remarks and recommendations.—There is one drain that for a considerable distance runs up hill, and a cutting 3 ft. deep is required to run the water down. Mr. Stillwell had a man at this, but it is now left for our caretaker to do. I instructed him not to touch it until he has put everything else in good order. The place is fully half a mile from tank, and working there he can have no check upon travellers. Travelling stock are watering at Elliott's Tank in preference to Government Tank since the rails are inconvenient. The ground has been raised, but the rails seem to block wild cattle. We are losing hundreds of pounds all over the Colony, owing to this one defect.
 The alterations made by the Works Department, since my last report, are as follows :—Top of embankments dished, but no way for storm water to escape. The small silt tank and horse shoe embankment has been filled in and removed, a new tank excavated, and long fluming put down.

The alterations suggested in fencing have not been attended to. I think it is highly necessary, and I furthermore think that the troughs should be enclosed.

JAMES W. BOULTBEE.

Extract from Report by Mr. Inspector Low.

Ivanhoe Tank.

31 August, 1887.

P.W.P.,
87-4,960.

State of fencing.—Not yet transferred from Works Department. This style of fencing cannot be too strongly condemned, by running wire and straining to any post. Although this is only lately erected some of the posts are now splitting, owing to being split pine and straining wires to them.

The drains here have evidently been constructed with no respect as to what a drain is for. One drain for a good half-mile running water from tank. Another is brought along road to Mossgiel and cut up very badly by both stock and teams. The water from this drain overflows silt tank, which is very small, and partly upon main road, and runs into Elliott's tank on opposite side of road. Which water Elliott afterwards sells to the public. Another long drain runs through township allotments which have been sold, and is now being blocked up.

The Chief Inspector, Public Watering Places.

JOHN LOW,
Inspector of Public Watering Places.

I submit this extract from Inspector Low's report upon the Ivanhoe Tank and fencing for the information of the Hon. the Secretary for Mines, as it so strongly confirms my former remarks. It is work of this sort that occasions so much discredit, and for which this Department is so frequently blamed.—H.G., 28/9/87. The Under Secretary for Mines. Submitted.—H.W., 29/9/87.

Seen. I cannot help saying after having seen this tank that, in my opinion, a very improper situation was selected, and the work, in my estimation, is badly done.—F.A., 12/10/87.

XVII.

Holy Box Well.

Tanks and
Punts,
77-9.

Sir, I have this day let to Fred. Richelman, a task for sinking a trial shaft in the Holy Box Paddock, between Ivanhoe, Waiko, and Mossgiel, at 6s. per lineal foot, to 150 feet; and 7s. 6d. per foot, 50 feet deeper. I have, &c.,
The Commissioner for Roads. W. H. HIGMAN.

Wilcannia, 13 May.

I understood that there was to be a tank here.—W.B.C., 22/5/77. A tank was never proposed, the country is unsuited.—W.H.H. Mr. Higman to telegraph result.—W.C.B., 13/6/77.

Telegram from Mr. W. H. Higman, to Commissioner, Roads.

Tanks and
Punts,
77-34.

Sir, In passing through Hay early this month, I saw the iron-work, fittings, and sheet iron, required for this work, on drays. The timber (pine) is being cut about 60 miles north. I have, &c.,
The Commissioner for Roads. W. H. HIGMAN.

Wilcannia Road, 29 October, 1877.

Holy Box.

Tanks and
Punts,
77-38.

Sir, I have to report that the material for this work is daily arriving on the ground. I am not without hope that it may be completed to be available during the present summer. I attach a statement showing detailed quantities and schedule rates to agree with contractor's bulk sum. I have, &c.,
The Commissioner for Roads. W. H. HIGMAN.

Wilcannia Road, 1 December, 1877.

Little or no progress here yet. No possibility of getting timber. Three or four thousand feet of timber on the ground. Trial shaft down 95 feet, good water.—26/1/78.

Holy Box.

Tanks and
Punts,
78-16.

Sir, The bulk of the material for this work is now on the ground, the shaft and tank have been started by the same men who built those at the Jumping Sand Hill, and I anticipate equally good work. The utility of this well has been strikingly proved by the saving of three lives. In each case the men reached the trial shaft utterly exhausted, and by making ropes of their blankets fortunately succeeded in getting water. I am anxious to receive instructions for Taylor to go on with the Lignum Hut Well. I forward return by same mail with this. I have, &c.,
The Commissioner for Roads. W. H. HIGMAN.

Darling Road, 1 April, 1878.

I do not wish to give instructions for the commencement of more work until I know exactly how Mr. Higman stands with respect to funds.—W.C.B., 16/4/78. Mr. Higman.—To be returned.

Unless the amount required would be advanced from some general vote, I am afraid the work must stand over. I regret this as Taylor has an excellent staff together, and it is an important work.—W. H. HIGMAN, 23/4/78.

W.C.B., 29/4/78.

Holy Box Well.

Sir,

I have to report that work at this place is progressing very satisfactorily, the shaft is timbered for 65 feet, and is now in hard slate, which must be blasted. The tank timber is all fitted ready for erection. This well should be complete in two months at the outside.

The Commissioner for Roads.

I have, &c.,

W. H. HIGMAN.

Tanks and
Punts,
78-20.

Mr. Higman gives no idea of the quantity of water. Would a bore hole through this slate answer?—W. C. B., 17/5/78. Mr. Higman, B.C. To be returned.

No water obtained yet in main shaft, nor expected until reaching depth of trial shaft, 95 feet; it is too early yet to bore, we must have a certain depth of water to work the buckets in.—W.H.H., 23/5/78.

Holy Box Well.

Sir,

Work at this place is progressing, the shaft being timbered and centred for 80 feet. The tank and whjm are commenced all material is on the ground fitted and ready for fixing. I am in great hopes that the well will be ready for use in August.

The Commissioner for Roads.

Seen.—W.C.B., 25/6/78.

I have, &c.,

W. H. HIGMAN.

Tanks and
Punts,

Telegram

Telegram from Mr. W. H. Higman to Commissioner for Roads.

We have splendid water, Holy Box Well, every prospect large supply; work now progressing satisfactorily.

W. H. HIGMAN.

Boohigal, 26 August, 1878.

Holy Box Well.

Sir,

Hay, 16 August, 1878.

Tanks and
Punts,
78-41.

I have to report unsatisfactory progress at this place, some difficulty with the men being the cause; there has been scarcely any work done since my last report. I have given the contractor, J. H. Taylor, to understand that unless he can make an immediate arrangement for completion at an early date the work will be taken off his hands and carried out at his risk. This I am prepared to do. I return here in a day or two.

I have, &c.,

W. H. HIGMAN.

The Commissioner for Roads.

Mr. Cambridge to report on this at once.—W.C.B., 19/8/78. Hay, B.C. Mr. Cambridge, B.C. To be returned.

As mentioned in this report I returned to these works immediately, and found work recommenced on good progress being made. On the return trip again I found that excellent water had been struck at 92 feet, and in the next 3 feet increased rapidly, giving every prospect of a good supply.—W. H. HIGMAN, 28/8/78. File.—W.C.B., 6/9/78.

CONTRACTOR for Holy Box Well likely to become insolvent. Can the workmen claim their wages due from bondsmen if they agree to carry out work?

HENRY CAMBRIDGE.

Mr. Flynn to see with reference to payments due, then record for reference.—W.C.B., 29/9/78. Accountant.—J. K. Taylor is the contractor for the work. The amount of the contract is £1,031, paid on account £611 12s. There are no vouchers in office at present.—J.W.F., 25/9/78. Put with papers.—W.C.B., 25/9/78.

Telegram from Henry Cambridge to Commissioner for Roads.

Hay, 28 September, 1878.

Tanks and
Punts,
78-37.

TAYLOR relinquishes contract Holy Box; gives up all claim to balance of money now due. Saunders, his security, agrees to complete and pay all arrears of wages provided he be guaranteed all moneys now due or to become due on contract, even though Taylor should be forced into Insolvent Court. Instruct at once as I leave Hay in the morning. I have promised to relet to Saunders.

H. Y. CAMBRIDGE.

Telegram from Mr. James H. Saunders to Commissioner for Roads.

Hay, 30 September, 1878.

Tanks and
Punts,
78-38.

As surety for Taylor, I should complete the work, Holy Box, if he fails to do so. If I accept the position and pay wages due and Taylor be made insolvent, can assignee impound or obtain possession of balance of contract money, about £400? Will the Department guarantee that I receive it?—if so what steps must Taylor take? Reply immediately. Important.

JAMES H. SAUNDERS.

Mr. Cambridge has been instructed. File.—4/10/78.

Extract from Mr. Cambridge's Report.

The Holy Box Well.

Wilcannia, 9 September, 1880.

Tanks and
Punts,
80-17.

The Holy Box Well has been attended to by Mr. Gilliat. The wood work has received two coats of tar. All joints in troughing and tank have been attended to and everything is in good order. I could not ascertain what cost of repairs were here or at the Mossgiel Well.

Telegram from Messrs. Robertson, Wagner, & Co., to Mr. Harry Gilliat, Inspector, Public Tanks and Wells.

Hay, 27 April, 1882.

Tanks & Wells,
82-299.

No applications at either place. Coach horses won't drink the water.

ROBERTSON, WAGNER, & CO.

Mr. Bruce,—In answer to my request for information whether they had received any applications for water from travelling stock, or if their own horses would drink the water from the Holy Box or Mossgiel Well, I have received this reply from Messrs. Robertson & Wagner (Cobb & Co's.)—H.G., B.C., 1/5/82.

Telegram from Mr. John Hansen to Mr. Harry Gilliat, Inspector, Public Tanks and Wells.

Wilcannia, 4 May, 1882.

Tanks & Wells,
82-359.

No travelling sheep or cattle have ever applied for water at Holy Box and Mossgiel wells, water too salt, no stock will drink it, cannot get to Copago, return to-morrow Ivanhoe. Then Hay report re Clancey sheep posted.

JOHN HANSEN,
Overseer, Felgate's Hotel.

Mr. Bruce,—This telegram might be attached to the similar one from the lessces of these wells.—H.G., B.C., 5/5/82.

This might perhaps be forwarded to the Department of Public Works, in connection with previous papers. (Works 82-299, T. & W., 82-45).—The Under Secretary for Mines.—A.B., 5/5/82. The Under Secretary for Public Works, B.C., 6/5/82. G.E.H. (for U.S.) Roads.—J.R., B.C., 10/5/82. Holy

Holy Box Well.

H. Cambridge—Well is finished.

Memo. with voucher for completion of the Holy Box Well.

The well is finished at last, and everything is satisfactory.

I visited the work on the 7th, and had the supply tested; and am of opinion that it will not only give the required supply, but four or five times as much in every twenty-four hours, and then not fail. The quality of the water is good. The material and workmanship is very fair. I could not get to the bottom, but the shaft had been timbered to the bottom before the supply was obtained.

When the bailing began, there was a depth of nearly 30 feet; after bailing about two hours, the top water was got rid of, and the depth then was about 15 feet, at which depth it kept, whilst bailing at the rate of 1,500 gallons an hour.

HENRY CAMBRIDGE.

Tanks and Pumps, 83-180.

Original of above bears no date, but was forwarded with final voucher of Dec. 1/82.—T.H.

MEMO.

I had the honor recently to give some details in connection with the Mossgiel, Holy Box, and Waiko wells, for the information of the Honorable the Secretary for Mines, from the annexed minute paper of the Commissioner and Engineer for Roads and Bridges, to whom the paper was sent. It appears that I have failed to express myself with sufficient clearness on some points.

Tanks & Wells, 82-416. Original, with Ivanhoe Tank papers.

- 1st. In the previous paper I endeavoured to show that the supply of water from the wells named was ample, and that after being received from the Department of Public Works, they were thoroughly refitted, and had been maintained in effective order since.
- 2nd. That the real objection to the Mossgiel and Holy Box wells was that they did not yield stock water, stating that while the station sheep would drink in dry seasons the water from the Mossgiel Well neither travelling sheep, cattle, or horses would drink from either that or the Holy Box Well.
- 3rd. That the Waiko or Ivanhoe well being so much out of repair at the time of its transfer from the Works Department, I advised its abandonment, on the ground that it would cost nearly as much to repair as to sink a new shaft, adding that while fair stock water, it was not fit for human consumption, and that the probable increase of population at Ivanhoe made it desirable that a tank should be placed there.

Two telegrams were submitted at the same time, one from Messrs. Robertson, Wagner, & Co., the present lessees, stating that no application for water had been made at either of the works during their tenancy, and that their own horses would not drink it. The other, from Overseer Hansen, was was to the same effect.

With regard to Mr. Woods' recollection of travelling stock watering at the Ivanhoe Well, it was distinctly stated that the water was reported fair stock water.

In wells not so brackish, but that water will be drunk by sheep broken to it on the station, Mr. Woods' experience and my own agrees, viz., that by constant use for a sufficient period, a proportion of the salts in the water bearing strata may become diluted, and the water improved in consequence; but I do not see how this can effect these wells, for if no stock will drink the water, they are not likely to be improved by constant use, and bailing for weeks would probably have no effect upon them. But what appears to be the fatal objection to these wells remaining part of a line of a public water supply on one of the most largely travelled roads of the Colony, I would submit,—

- 1st. Their being unfit for human consumption, which may be considered of great importance in public works of this nature.
- 2nd. That two out of the three wells are unfit for stock, and the third being so much out of repair, a new work is advisable that would be of use to the inhabitants. Referring to the information given by the Commissioner that a tank or dam near or in the Willandra is to be constructed (which will supersede the Mossgiel Well), the site is the one that I proposed; but it has been recently suggested by Messrs. Cransie and Wilkinson, the Members for the District, that a site near the township of Mossgiel would be jointly available to the residents as well as the travelling public, the consideration of their joint service is now with the Secretary for Mines; and I have only to say that a very suitable site may be found in Smith's Chump, 1/2 mile S.W. of the township. As soon as the position is determined, it will be very desirable that a reserve of (say) 2 miles should be applied for.

The anomaly of the Mines Department recommending tanks where the Department of Public Works has placed wells, and on the road to Mount Brown (wells where the department has constructed service tanks), may, I think, be simply explained. I referred in my report on the latter to the exceptionally low average and irregular rainfall common to the district, and to the fact that wells had been sunk in various parts of it, obtaining fair supply of good water at moderate depths, and drew my conclusions that wells would prove the more reliable source of supply under such conditions.

The Government wells on the road from Booligal to Wilcannia, five in number, cannot be considered successful. Three are not fit for human consumption, one is unpalatable from its sickly, sweet flavour, so noticeable that tea made from it does not need sweetening, and the fifth has no supply. The climatic conditions are different; the rainfall is slightly heavier, and more regular. Under these conditions I considered it my duty to advise the adoption of tanks.

As the Commissioner notifies his intention of abandoning the well at Mount Manara, on account of insufficient supply, the course I had the honor of recommending in 1880, I would suggest that the overseer of that division may be authorised to remove such of the material as may prove useful for repairs at neighbouring works.

HY. GILLIAT, 25/5/82.

Abandonment of Holy Box and Waiko Wells.

MEMO.

It is I think evident from Mr. Gilliat's memo., and the evidence to which he alludes, that Holy Box Well cannot be deemed a suitable watering place, for if the water there had been drinkable, even by sheep, no drover would in such a trying season as the last have passed it as every one of them did without watering his sheep, supposing they had been supplied, which they were not, with water at Mossgiel.

Tanks & Wells, 82-439.

The

The fact that no application was made to water stock at Holy Box is sufficient proof that the water is unfit for any but station sheep which have been made to drink such water by three or four days' starvation, a course of procedure drovers dare not attempt with sheep on the road.

Then as regards the Waiko Well at Ivanhoe. There is no doubt but that this will be a township of some size, and likely before long a place of Petty Sessions, situated as it is about midway between Balranald and Cobar, and about the same position between Booligal and Hay at the point where the roads between these townships cross each other, and it would tend not only to the comfort of the people in the township and that of the travellers on these roads to have a sufficient supply of good, fresh water here but also promote the growth of the township.

It would I think be unsafe to have two doubtful means of supply such as the Holy Box and Waiko wells afford next to each other, for if the water at both wells were to be refused by stock (I was informed by several persons on my way to Wilcannia and back that only some stock would drink the Waiko water) they would have to travel 45 miles from Mossgiel to Boonoonoon without a drink. Then, again, with regard to travellers, it is not right that on an important road such as this now is they should have to go half that distance in dry times without being able to obtain fit water for themselves or their horses, except perhaps by begging it, which they could only do at one or two places by the way.

Taking all these circumstances into consideration, and also the important fact pointed out by Mr. Gilliat, that the cost of repairing the Waiko Well will be nearly as much as sinking a new shaft, I would suggest that these papers be returned to the Department of Public Works with a view to reconsideration of the question of the abandonment of the two wells here referred to, more especially that at Ivanhoe, and in doing so it should also be borne in mind that the nearest watering place on the Balranald Road (on which there is a considerable amount of both stock and general traffic) is at Til Til, more than 25 miles from Ivanhoe, and that if a sufficient supply of good water is not provided at the latter place travellers by the Balranald Road will get none till they reach Boonoonoon, some 16 miles further on.

A. BRUCE.

Mr. Wood.—Draft instructions herewith. A. P. Wood, Commissioner Roads.—B.C. Submitted.—H.W., 1/6/82. Refer to Department of Public Works together with the letter of Mr. R. B. Wilkinson, M.P., on same subject.—A.R., 2/6/82. The Under Secretary for Public Works.—B.C., 3/6/82. Roads.—J.R., B.C., 3/6/82.

It is no use writing more, I have not time. Mr. Wood, prepare instructions to Mr. Gordon to invite tenders for a tank at Mossgiel, though in another paper from the Mines the combination of town and stock tanks are objected to. Will Mr. Wood also note the importance of having a section of the Willandra and of the Lachlan at its junction taken? This information may probably be at Harbours and Rivers Office. Instructions to be also given to invite tenders for tank at Holy Box and a small tank at Waiko which, in the event of the artesian bore turning out a failure, can be supplemented by a large stock tank.

Also a tank at Mount Manara, as even if sufficient water could be obtained in the well it would probably be too deep to lift economically.

W.C.B., 7/6/82.

Holy Box and Mossgiel Wells.

Sir,

Jumping Sand Hill Well, 27 August, 1882.

Tanks & Wells,
82-920.

These works are in repair. Whilst at Mossgiel Station I drove over with Mr. Parsons, the owner, to inspect Mossgiel Well. He is prepared to buy the material above and below ground of these two wells, filling up the old shafts. For the Mossgiel Well, the material of which is not so good or is it in such good order, he is prepared to give £100, and for the Holy Box, £200. If this price suits the department he would like an early answer, as the material is wanted for other wells. Address—Messrs. C. J. Parsons & Co., Mossgiel Station.

Mr. H. A. Gilliat, Inspector of Public Tanks and Wells.

I have, &c.,

T. ILBERY,
Overseer, Public Tanks and Wells,
S. W. Division.

Mr. Bruce.—This letter with another, was missent, and has just reached me, please forward it or a copy to me at Ivanhoe that I may make enquiries. It may be advisable also to instruct me if such a sale would be confirmed by the Hon. the Secretary for Mines.—H.G., B.C., 2/11/82. Copy forwarded, 17/11/82.

Do you not think that the owners of the runs on which these wells are might purchase the wells? If they would, more would be got than by selling the material.—A.B., B.C., 17/11/82.

Mr. Gilliat.—The water from these wells is practically useless; sheep in very dry seasons have drunk that at the Mossgiel, but been always more or less injured in doing so; neither stations will buy them; but the present offer from the managing partner of Mossgiel is too good in my opinion to be neglected.—H.G., 8/1/83.

Sir,

Kilfera, 30 November, 1882.

I have just returned from having visited these works. I was unable to see Mr. Armstrong, the resident partner of C. J. Parsons & Co., he being absent from the station; his representative, however, informed me that they were still prepared to purchase at the prices already quoted to you, and would like an early answer; I wired you to this effect from Mossgiel.

H. A. Gilliat, Inspector of Public Tanks and Wells.

I have, &c.,
T. ILBERY,
Overseer, Public Tanks and Wells,
S. W. Division.

Mr.

Tanks on Hay to Wilcannia Road.

As the price here quoted (1s. 10d. per cubic yard) is an extremely high one, and as the season of the year is becoming more favorable for getting the work done at a reasonable price, I would suggest that the Works Department be invited to call for fresh tenders, and if a scarcity of water still exists it might be conditional (as Mr. Quin, M.P., tells me it often is in such cases in the Darling District) that the period allowed to do the work should be counted from the date at which sufficient rain fell, to enable the contractor to obtain grass and water for his working stock.

The Under Secretary for Mines.

ALEXR. BRUCE,
Stock Branch, 1/9/82.
Under Secretary for Works.—

Submitted.—H.W., 2/9/82.
H.W., B.C., 6/9/82.

Approved.—A.R., 4/9/82.

Roads.—B.C., 13 Sept., 1882. Holy Box and Mossgiel tanks are let, and new shaft, Waiko, will be let as soon as a reasonable offer can be obtained.—A.P.W., 3/1/83. Commissioner for Roads.

Sir,

Stock Office, Euston, 10 November, 1882.

When in Balranald, a few days ago, I met Mr. Brougham, from Tycehurst Station, near Ivanhoe, and he informed me that the well at Ivanhoe had fallen in, and that stock have now to travel along the Booligal Road, for a distance of 85 miles, without getting water from Government tanks or wells, viz. from Boonoona Tank to the Jumping Sand Hill. Mr. Brougham states that there are two wells between Ivanhoe and the Jumping Sand Hill, but they are both as salt as the sea.

Can any water improvement be made on this very important line of stock route?

I have, &c.,

J. McLEOD,
Inspector of Stock.

Mr. Alexr. Bruce, Chief Inspector of Stock.

Mr. Gilliat.—A.B., B.C., 6/12/82.

The subject of this letter has formed the material of numerous reports from me during the last three years, and the steps, considered most suitable to cure the evil, have been urged as often; at present I understand that a tank has been marked at the Holy Box Well, and another near the Mossgiel Well. I shall shortly have occasion to visit those sites, and shall inform the department more particularly.

The actual distance from the Jumping Sand Hill Well to the Boonoona Tank is 80 miles, in this interval are three Government wells, two of which are salt and the third fallen in and condemned.

Full particulars of this road and the works on it, with schedule of the distances between water, have been furnished by me on several occasions in addition to my reports, and recommendations for the construction of works suitable for stock purposes, and at proper distances apart.—H.G., B.C., 29/12/82.

Telegram to The Chief Inspector of Stock.

Mossgiel, 3 January, 1883.

Mossgiel and Holy Box Wells

OWNERS urge early reply to their offer, viz., one hundred pounds sterling for material, Mossgiel; two hundred, Holy Box—not likely to get more. Will reply. Mossgiel, thirty January.

H. GILLIAT,
Inspector,
Ivanhoe.

Telegram to The Chief Inspector of Stock.

Booligal, 8 January, 1883.

Re Mossgiel and Holy Box Wells.

THE manager urges a reply to his offer for the material by the 20th instant. I expect to be there eighteenth. Will you wire decision to Mossgiel that I may inform. Papers posted to-day.

HARRY GILLIAT,
Inspector of Public Tanks, &c.

Telegram from Mr. H. Gilliat to Chief Inspector of Stock.

Mossgiel, 19 January, 1883.

HAS a decision been arrived at regarding sale of material at Holy Box and Mossgiel Wells? Unless dealt with at once tender must be withdrawn, as contractor's men are waiting for the material.

H. GILLIAT.

Mr. Gilliat informed by telegram.—22/1/83.

Minute by Commissioner and Engineer for Roads.

Subject:—Transfer of the Holy Box Well and appurtenances from the Mining Department to this Department.

Roads, Sydney, 8 January, 1883.

THE officers of the Mining Department having condemned the quality of water in the Holy Box Well as being unfit for stock use, I have to recommend, that, as the timber and ironwork in the shaft and appurtenances will greatly reduce the costs of the work now being constructed to replace the well, the Mining Department be requested to hand the well, &c., over to this Department, the material to be used up in the new tank works. This course should be the more readily adopted, as the local officer reports that it is the intention of that Department to sell the material to certain residents in that district. While recommending this course I feel it to be my duty to again draw your attention to the difference of opinion regarding the quality of the well water entertained by their officers and ours.—W.C.B., 8/1/83.

The Under Secretary for Mines.—B.C., 9/1/83. This recommendation might perhaps be acted on, and the wells and material handed over to the Department of Works. The prices offered for the material were £100 and £200—£300 for the two.—A.B., 19/1/83. The Under Secretary for Mines. Submitted.—H.W., 20/1/83. Approved.—J.P.A., 20/1/83. Public Works informed.—24/1/83. Mr. Gilliat informed by telegram.—24/1/83.

Mr.

Sir,

Hay, 5 February, 1883.

Tanks & Wells,
83-217.

I have the honor to request that you will give me authority to use material of abandoned tanks and wells on the road from Booligal to Wilcannia, so that same may be utilized in new works now in progress.

I have, &c.,

JOHN GORDON,

Assistant Engineer.

Mr. Gordon informed that the material at the Holy Box and Mossgiel Wells are at his disposal, but that they are the only ones I have been directed to transfer to his Department.—H.G., B.C., 9/2/83.

Mr. Bruce.—Mr. Gilliat may perhaps be instructed to hand over the material of any abandoned works for which the Officers of the Department of Works may apply.—A.B., 13/2/83. The Under Secretary for Mines.

Submitted.—H.W., 14/2/83.

Mr. Gilliat may do so, always at once reporting to his Department

that fact.—J. P. ABBOTT, 14/2/83.

Mr. Gilliat.—A.B., B.C., 15/2/83.

Mr. Gordon informed.—

H.G., B.C., 22/2/83.

Holy Box Tank.

Copy of Telegram from A. P. Wood, dated Wilcannia, 27 February, 1883.

Tanks and
Punts,
83-111.

THE construction of the Holy Box Tank in the face of the recent test, which has proved the well fit for human consumption, will be an absolute loss of £1,900. I must strongly recommend abandonment of tank works. If you think they should go on despite this, please telegraph Gordon.

A. P. WOOD,

Assistant Engineer.

Telegram sent to Mr. Gordon to proceed with tank works.—28/2/83.

Telegram to The Commissioner for Roads.

Wilcannia, 26 February, 1883.

83-333.

INSTRUCT Contractor at Holy Box Tank to start and bale well. The result has been most satisfactory for Department, as Mr. Gordon telegraphs me that water is better than Jumping Sandhill, and was readily drunk by horses, and this is a crucial test. This should be communicated to Mines, and is another proof in support of views already advanced. Further comment is unnecessary.

ARTHUR P. WOOD,

Assistant Engineer.

Mr. Wood has been instructed to let work at tank proceed.

Sir,

Tank at Holy Box, Hay, 9 March, 1883.

Tanks and
Punts,
83-128.

On testing the water at the "Holy Box" Well, and finding that stock would use it, I told Parker not to do any more to the tank.

I have a letter from him stating that since he had shifted his camp from the Holy Box, the sheep had used all the water he had in the silt tank, and that he could not do any more there till rain came. I have written reminding him that water can be got from the well, which I consider better than what they were using from the silt tank at the time I was there, and that he must push on the work. I will let you know the result when I hear from him.

I have, &c.,

JOHN GORDON.

The Commissioner for Roads.

Mr. Hiles as to last action about tank or well here.

Has not a telegram been sent on to Mines.

Has not Mr. Gordon been told to wait.—W.C.B., 12/3/83.

Last action submitted.—12/3/83.

Sir,

Hay, 28 February, 1883.

Tanks and
Punts,
83-113.

I have the honor to forward a jar containing water taken from the well at Holy Box. This well has been for months condemned by the Mines Department as unfit for use, and the construction of a tank was in consequence commenced.

When on our way to Mount Manara a few days ago, Mr. Wood and myself thought it advisable before dismantling the well, to have it baled out and see what quality of water would be found after taking out what had been standing in the shaft for months, and which was as salt as sea-water. Accordingly a horse was put to work on Monday eve, and baling carried on until my return on Friday morning, when good water was being brought up, a sample of which I forward. I showed it to Mr. Armstrong, and his opinion is that, so long as we can get water like it from the well, no tank will be required. When I drove up to the well on Friday the horses drank two buckets full each, and would have taken more. When I saw that, and tasted the water, I stopped the work at the tank. Parker had about 3,000 cubic yards out, I told him to level out the bed of the pit so that it might be measured.

In my opinion the well only requires to be regularly wrought, in order to have a plentiful supply of good water.

Mr. Armstrong would like to know the result of the analysis, as he has two wells giving water of a similar quality.

I have, &c.,

JOHN GORDON.

The Commissioner and Engineer for Roads.

Mr. Flynn, look up the jar.—W.C.B., 2/3/83. Jar received this day, 14/3/87.

I forward sample of water from well condemned by the Mines Department. It seems to me good enough for all purposes, though it has a slight taste; in all probability the tank water would also have a taste. I wait instructions as to whether in the face of this sample I am to direct work to be resumed at tank.—W.C.B.,—14/3/83.

Under Secretary, B.C., with bottle of water. The Minister of Mines with sample of the water.—A.S., 2/4/83. The Under Secretary for Mines.—J.R., B.C., 4/4/83. Submitted. Shall the water be analysed?—H.W., 5/4/83. Yes.—J. P. ABBOTT, 6/4/83. The Geological Surveyor.—B.C., 6/4/83.

Mr.

Holy Box Well.

Sir,

1 Albert-street, 10 April, 1883.

For the information of the Honorable the Minister for Mines, I have the honor to report as follows, respecting the sample of water received from you on the 9th instant.

Tanks & Wells,
83-858.

This sample (about 3 ozs.), was far too small for a proper analysis.

	Grains.
Total fixed matter (about)	370.4 per gallon.
Total chlorine " " " " " " " " " " " "	173.95 per gallon.
Fixed matter consisting of chlorides of sodium and magnesium, carbonate, and sulphate of lime.	
Unsuitable for domestic use.	

I have, &c.,
CHAS. WATT,
Government Analyst.

The Under Secretary, Department of Mines.

Mark No. 65—Water from well at Holy Box for analysis.—The Geo. Surveyor, 16/4/83. Noted. A.H.T., 16/4/83. Mines, 17/4/83. Result may be sent to Works Department and Mr. Russell informed.—H.W., 17/4/83. Submitted. Approved.—J. P. ABBOTT, 18/4/83. Mr. Russell informed.—20/4/83. The Under Secretary for Public Works.—H.W., B.C., 17/4/83. Roads.—J.R., B.C., 24/4/83.

Mr. Watt considers this water unfit for domestic use. He also considers the sample too small. I have a jar of it here, but I think further analysis only unnecessary delay; the water, as I have on another paper stated, has been tried by Messrs. Broadbent, Crausie, and Quin, who all pronounced it excellent, and I now attach a message stating that ten thousand sheep had been watered at it, and that the drover considered it better than the Jumping Sand Hill. I have stopped the tank, and still wait instructions. I think the decision as to Ivanhoe should also be reconsidered.—W.C.B., 26/4/83.

The Under Secretary for Mines.—J.R., B.C., 7/6/83. The Chief Inspector of Stock.—H.W., 9/6/83. Mr. Gilliat, B.C., 28/7/83.

The evidence I have submitted as to the character of the water and Mr. Watt's analysis, renders it unnecessary for me to add more evidence; the annexed letter from Mr. Surveyor Carter might, however, be attached to these papers. In the interests of the public it is desirable to ascertain if this well has been thoroughly baled. At the time of my report, and for the reasons given in it, there was no appearance of it. I fear that the fresh water alluded to in the Commissioner's minute will be found to prove the drainage of the surface water that, from its lighter specific gravity, remains on the top. Half-hour's constant baling may, under proper supervision, probably settle the question.—H.G., B.C., 1/8/83.

Re Holy Box Well.

Sir,

Mount Manara, 28 February, 1883.

I learn through a private letter yesterday from Wilcannia that Mr. Assistant Engineer Wood, of the Roads Branch, has received a telegram from the contractor sinking a tank near the Holy Box Well, stating that he was using the water from the well, which was drunk readily by his horses, and he considered it better than the water at the Jumping Sand Hill. It was further stated that Mr. Assistant Engineer Wood had stopped work at the tank.

Tanks & Wells,
83-346.

As this well was condemned upon my report that I considered the water unfit for stock purposes, and that horses would not drink of it, it seems due to myself that the Department should at once be informed of this statement.

I have written to Mr. Overseer Casey, directing him to forward, after inspecting the well, an independent report, with a sample of the water.

I shall inspect and report on the well personally and forward a sample of the water for the information of the Department.

I have, &c.,
HARRY GILLIAT.

Alex. Bruce, Esq., Chief Inspector of Stock.

Submitted in connection with previous papers, 83-333. Submitted.—A.B., 5/3/83. The Under Secretary for Mines.

Holy Box Well, Ivanhoe, 9/3/83.

On the 7th instant I visited the Holy Box Well, in company with H. C. Brougham, Esq., of Ticehurst, and Mr. Overseer Casey, and found that the contractor for the new Government tank there had removed his camp and plant, so that I was unable to obtain any information from him. On raising a bucket of water from the shaft, I found it was excellent stock water, quite fit for horses to drink, and, although slightly brackish, sufficiently palatable for man; two bottles were filled and given Mr. Casey to forward to the Department. The reports that reached me were that the water had improved by steadily baling—one saying for six days and nights, the other for three. On examination I have been unable to detect any signs that the well has been closely baled down; the horse-walk has not apparently been much used recently; the service tank has only about a foot of water in it, and in this are several dead birds and a great number of feathers that seem to have been there for some time; there is no appearance around the well, or below the troughing, of any quantity of water having been run out, and the sheep troughing, through which it probably would have been allowed to waste, has small bones, feathers, and other rubbish along its length; these, with even a few buckets full passing through, would have been carried to the lower end; the cattle troughing had about 4 inches of water in it, and was thickly crusted with salt, the water being quite thick with it; samples of it are forwarded by Mr. Casey and herewith.

Tanks & Wells,
83-387.

As this well has not been previously worked for a year, and horses or cattle to have drunk the water must have used the troughing, it seems probable that the salt has been deposited from the water lately lifted.

If the well has not been baled out it is probable that the water from the fresh spring, of which there is nearly always one or more yielding a limited supply in these shafts, has from its lesser density collected, during the last ten or twelve months, above the heavier salt water, in this case I fear, on baling, bitter water will be again obtained.

If,

If, however, the well has been heavily baled it may prove that a more powerful fresh water spring has broken in when there will probably be a permanent improvement in the water. A case of this kind occurred a number of years ago on the adjoining station, and has, I am informed, yielded excellent water ever since. Or, it is possible, that continuous baling night and day may have caused the water to flow into the shaft so rapidly, from a point beyond the saline stratum, in which it usually becomes impregnated, that it has not had time to take up the salts, in which case the well may continue to improve if constantly worked. I would suggest that information be obtained from the Works Department, how long the well was baled, and if, as reported for several days and nights, it will be advisable to put on a caretaker and to supply him with a horse, as at present there is no water between the Boonooa Tank and the Jumping Sand Hill Well.

I hand you herewith letters from Messrs. Armstrong and Brougham, the latter gentleman, probably the oldest resident in the district, which will show what the water from this well has hitherto been.

Both the water and salt I think should be sent for analysis.

I should add that, as regards the quality of the water, I do not consider it as nearly equal to that from the Jumping Sand Hill Well, the water from that leaves no trace of salt on evaporation. I have also, since visiting the Holy Box, inspected two station wells. One with the water about equally brackish, the other a little more so, but at neither of these, which have been carefully examined, can any trace of salt be found in either troughing or service tank, while at the Holy Box it can be picked up in large lumps below every leak in the troughing or tank.

HARRY GILLIAT.

Telegram from Mr. Inspector Gilliat to Chief Inspector of Stock.

Ivanhoe, 13 March, 1883.

Tanks & Wells, 83-391. IF rain comes, Mr. Brougham will send down enough horses, men, and feed to bale Holy Box for three nights and days, and fill the supply tank for £27. It cannot be done cheaper. Wire me Wilcannia if I can accept. H. GILLIAT.

Telegram from Mr. Inspector Gilliat to Chief Inspector of Stock.

Wilcannia, 14 March, 1883.

Tanks & Wells, 83-395. AM informed contractor is sent back to work at Holy Box, and that well is to be baled out by him. Have received no communication from officers of the Works Department with regard to this. H. GILLIAT.

Mr. Gilliat informed by telegram, 14/3/83.

Mr. Gilliat's report on the Holy Box Well, which is now said to give good stock water, is herewith, and he suggests that the well be baled to settle the question as to the fitness of the water. As, however, it seems from this telegram that the Department of Works is about to have this done, no action appears called for by this Branch in the meantime, unless it be thought necessary to inquire whether or not the baling has been ordered. The sample salt is herewith, but the water has not arrived. Inquiry will be made if it does not come to hand to-day.—A.B., 15/3/83.

The Under Secretary for Mines. Submitted.—H.W., 15/3/83. Approved.—J. P. ABBOTT, 17/3/83.

Telegram from Chief Inspector of Stock to Inspector, Tanks and Wells.

Sydney, 14 March, 1883.

I THINK you should instruct Mr. Casey to be at Holy Box when well is baled.

ALEX. BRUCE,
Chief Inspector of Stock.

Memorandum.

Mount Manara, 28 February, 1883.

I LEARN by the last mail from Wilcannia that Mr. Assistant Engineer Wood, of the Roads Department, has received a telegram from the contractor sinking a tank near the Holy Box Well, to the effect that he has pumped out the well and finds the water better than at Jumping Sand Hill Well, and that his horses drink it readily. This well has recently been condemned by this Department on the score that the water was unfit for stock; it is important that the truth of this report should at once be inquired into and a report made upon the quality of the water, or if horses have really been drinking it readily. I will visit the well myself about the 6th of March, but I wish you to do so at once on your return from Gol Gol, and to prepare an independent report. You will also procure a bottle of the water from the shaft and forward it to Sydney for the satisfaction of the Department. You will please spare no pains in obtaining the facts of the case.

HARRY GILLIAT,

Inspector, Tanks and Wells.

Frank G. Casey, Esq., Overseer, Tanks and Wells, Ivanhoe.
Urgent.

Sir,

Ivanhoe, 6 March, 1883.

Tanks & Wells, 83-398. I have the honor to forward to you the following report on the water in the Holy Box Well on the Wilcannia Road.

On the 5th instant I visited this well, and obtained from the shaft two bottles of water, which I forward for your inspection. The water I have obtained appears to be a good stock water; but I feel quite sure from what I have heard from people who have resided in this district for some years, and from my own knowledge of the water in the well, that after it has been baled for some time, until all the drainage water has been baled out, that the water in the well will be found quite unfit for watering stock of any description.

In evidence of this theory, I collected from the cattle-troughs in which there was some water left, the salt which is forwarded for your inspection. This salt was formed in a thick cake on the top of the water that remained in the troughs, and was collected by me by just running my hand along the top of the water.

Messrs.

Messrs. Robertson and Wagner also leased this tank from the Government, and have never taken any money at it, though numerous mobs of both sheep and cattle have frequently passed this well, wanting water very badly.

In some places, where the troughs have leaked, there are large deposits of salt and solid lumps.

Residents who have lived in this part of the country for years are quite unanimous in declaring that this water, when it was in use before, was quite unfit for watering stock with.

I have, &c.,

FRANK G. CASEY,
Overseer, Public Tanks and Wells, South-western Division.

The Chief Inspector of Stock.

Submitted in connection with previous papers, 83-395.—A.B., 16/3/83. The Under Secretary for Mines. Submitted.—H.W., 16/3/83. Approved. The saline matter forwarded may be analysed, and the result submitted to me; and when the water comes to hand it should also be analysed.—J. P. ABBOTT, 17/3/83. Water also herewith—two bottles. The Under Secretary for Finance.—A.B., B.C., 19/3/83. To Mr. Watt, for analysis.—21/3/83. The Government Analyst.—J.T. for U.S., B.C., 22/3/83. Samples herewith—two bottles and two packages.—Mr. C.

Telegram from Mr. Geo. Parker to Mr. Assistant-Engineer Wood.

Mossgiel, 13/4/83.

Ten thousand sheep waiting at Holy Box Well. Drover considers it better than Jumping Sand Hill.

GEO. PARKER.

Tanks and
Punta,
83-179.

Sir,

Albert-street, 28 March, 1883.

I have to acknowledge the receipt of two bottles of water, and two samples of saline matter, respecting which I have now the honor to report as follows:—

Tanks & Wells,
83-484.

The "saline matter" was found to consist almost entirely of chloride of sodium (com. salt).

Water from the Holy Box Well, Wilcannia Road.

The sample of water marked as per margin yielded:—

Total solids	373.44	grs. per gallon
Containing chlorine	163.30	" "

By far the largest proportion of the above consists of chloride of sodium (com. salt); the remainder of carbonates of lime and magnesia, sulphate of lime, iron, alumina, &c.

The water when received was found to be much charged with sulphuretted hydrogen gas; information should be furnished whether the water has this odour originally. This water is seriously charged with saline matter; it is unfit for human consumption, and should only be used for cattle when no better water is obtainable. It is probable that cattle will refuse it unless they have been long without water. Nevertheless, I am aware that in parts of this Colony and in Queensland, cattle have to depend upon water containing even more saline substances than exist in this water. Such water should not be exposed in open troughs, as by evaporation the relative quantity of saline matter may thus be much increased, and then the water would be rendered totally unfit to support animal life.

I have, &c.,

CHAS. WATT,
Government Analyst.

The Under Secretary, Finance and Trade.

The Under Secretary for Mines.—B.C., 29/3/83. J.T. for U.S. Submitted.—A.B., 30/3/83. The Under Secretary for Mines. Submitted. See Overseer's report herewith.—H.W., 31/3/83.

I wish Mr. Bennett to see this report of Mr. Watts, also Mr. Hansen's report. I desire then that a copy of each of these should be made and forwarded to Mr. Russell, the Astronomer, with a statement of the locality of the well.—J. P. ABBOTT, 2/4/83. The Under Secretary for Public Works.—H.W., B.C., 4/4/83.

Mr. Gilliat is in error in regard to the salt in the troughs, &c., having been deposited from the water baled out at the late trial. It was there before the baling, and had very probably been accumulating for a lengthened period. As the result of the trial bears out the direct evidence of our officers as to the character of the water, which is further supported by the telegram, which I now attach, the better plan to adopt to satisfy the "Mines" and this Department that the water is suited for watering purposes, will be to bale the well night and day for a week. I may add that Mr. Gilliat's opinion that the water drawn being fresh has by its lesser specific gravity floated on the salt water beneath, is scarcely tenable, inasmuch as the buckets run to the bottom of the well; and did such a state of things ever exist, which is improbable, the whole would, by the disturbance caused by the buckets, soon be uniformly mixed.—A. P. WOOD, 17/4/83. Commissioner for Roads.—B.C.

Some more of the water is in this office. It has been pronounced excellent by Messrs. Brodribb, Quinn, & Cramsie. As the tank was let and the resumption of the work ordered by telegram, in accord with the orders from Mining Department, but the contractor has not yet resumed, I wait further instructions as to whether this work should be gone on with or not. It will cost £2,000.—W.C.B., B.C., 17/4/83. Under Secretary.

Mount Manara, 28 February, 1883.

I AM informed by last mail from Wilcannia that Mr. Assistant Engineer Wood, of the Roads Department, has received a telegram from the contractor sinking a tank near the Holy Box Well, to the effect that he has pumped out the well and finds the water better than that at the Jumping Sand Hill, and that his horses drink it readily. The work has recently been condemned by this Department on the score that the water was unfit for stock, and this step was taken, in a considerable measure, on your reports that the water would not be used by any travelling stock, not even sheep.

Please

Please inform me at once what tests were made by you during the time the work was in your charge, and also if it was pumped out and offered to any stock during the time it was leased to Robertson, Wagner, & Co.

All particulars bearing on the subject are important, and you will please report without delay.

HARRY GILLIAT,

Inspector, Public Tanks and Wells.

Mr. Overseer Hansen.

Sir,

Fort Bourke, 8 March, 1883.

Tanks & Wells,
83-482.

I have the honor to acknowledge your letter dated 28th February last, requiring further particulars *re* Holy Box Well on road from Ivanhoe to Mossgiol.

If the information referred to in your letter is correct, viz., that the water in said well is now drinkable, all I can say is, something extraordinary must have brought this change about. While stationed in that division, I never knew of any stock that would drink the water during the time this well was leased to Messrs. Robertson, Wagner, & Co. The said well was baled down repeatedly, but no stock of any kind would touch it. I do not speak from what I heard, but what I saw myself. I often tried my horses, but they would not drink it. Further, I have seen sheep brought there in very hot weather, that had been travelling for three days without water, but the result was the same; and as no money was taken by lessees, it proves that the water was very bad. Had it been otherwise, large sums would have been collected, as there was no water on either side of this well for a long while nearer than about 20 miles.

I visited Canoble Station, as per your instructions, dated 2nd May, 1882, in order to ascertain whether this well could be sold to the station. The Manager, Mr. Evans, was not at home, but the officer in charge, Mr. Ridgway, promised to write to Mr. Evans, telling me, at the same time, that he would not advise to have it bought on station account, as the water was too salt.

If the water at present in the Holy Box Well is better than the Jumping Sand Hills, it must be very good indeed. I have always drunk the water at the last-named well, and so have many others that had to pass that way.

I have, &c.,

JOHN HANSEN,

Overseer, Public Tanks and Wells.

Re Holy Box Well.—H.G., 26/3/83. Mr. Bruce, B.C. Submitted.—A.B., 30/3/83. The Under Secretary for Mines.

Dear Sir,

Booligal, 3 March, 1883.

Tanks & Wells,
83-386.

It is quite true that the contractor for the Holy Box Tank has baled out the well, and that the water it now yields is not simply drinkable but very good—at least I may say this of the sample he brought to me.

Of the quality of the water previously obtained I can speak only from hearsay, not having at any time tested it personally; but I think it must be conceded to have been very bad, because, during the time the well was worked (it had a fairly extended trial), stock taken there to water refused to drink.

This is all I know of the matter. 67 points of rain on Tuesday.

Yours, &c.,

A. ARMSTRONG.

Mr. Inspector Gilliat.

My dear Gilliat,

Caiwarra, 1 July, 1883.

Tanks & Wells,
83-1,183.

Your letter, dated as far back as 9th March last, only to hand last week, which will account for my not replying sooner. *In re* Holy Box Well, I can quite understand you and Brougham finding the water so good. The first water tapped in the well was good, but considered not sufficient supply; consequently contractor bored and struck a heavier supply, but quite salt in comparison to the first water. I drank some of the first water (so did my horse), and must say it was quite equal to the North Abbotsford Well near main road. I also tasted the second water when first struck, and must confess it was so salt that I wondered the Road Superintendent did not block up the bore and put a chamber in the well to help the light supply of good water. The second water was so salt that it used to leave a very large deposit of salt and potassium in the troughs.

We missed each other, I regret to say, by half an hour in Wilcannia last March. I hope you will come and see us should you visit the Cuttaburra, on the road from Bourke to Hungerford. That township, and along the border for 30 odd miles east of that town, forms the south boundary of these two runs. The Cuttaburra Creek at the crossing is only 40 miles from our Thorbindah Station, and 56 miles from Caiwarra H. S. With kind regards.

I have, &c.,

ALFRED J. COTTER.

Mr. Inspector Gilliat.

Re Holy Box Well.—Mr. Cotter was for a long time manager of North Abbotsford, within a few miles (eight, I think) of this well, and was on the spot at the time the shaft was put down. I have now submitted so much evidence with regard to the quality of the water, and the opinion entertained of it by old residents of the district, that should the water prove, on being lowered in the shaft to the salt spring, unfit for stock purposes, the responsibility will not rest with this Department. Mr. Cotter's letter might be annexed to the previous papers.—H.G., B.C., 2/8/73.

Submitted.—A.B. The Under Secretary for Mines. Submitted.—H.W., 8/8/83. Seen.—J. P. ABBOTT, 14/8/83.

Sir,

St. Kilda, 9 April, 1883.

Tanks & Wells,
83-1,176.

With reference to your recent letter, asking my opinion as to the utility of the Holy Box Well, I beg to state that the water contained therein is the very worst for stock purposes within the whole district. I am continually passing the well when carrying out my instructions in the neighbourhood, and when the swamp dries up have tried on several occasions to get my horses to drink the well water, but could never induce them to touch it however hot and thirsty they might be. The neighbouring squatters inform

inform me that it is equally distasteful to sheep and other stock. It appears to have been a great oversight that the excellence of the site (close to where the shaft is sunk) for a large tank was not pointed out to the Department, it being the best for that purpose within a considerable radius, and, from my own knowledge of the water after a fair rainfall, is retained in the swamp for a longer period than in any other swamp in the neighbourhood.

Mr. Inspector Gilliat.

I am, &c.,

G. B. CARTER.

This might be attached to report and evidence as to the quality of the water at the Holy Box Well.—H. GILLIAT, B.C., 1/8/83. Submitted.—A.B., 3/8/83. The Under Secretary for Mines.

Re Holy Box Well.

Dear Sir,

57, Bourke-street West, Melbourne, 6 March, 1883.

In reply to your query as to quality of water in the Holy Box Well, in my opinion the water is utterly unfit for stock purposes. Tanks & Wells,
83-397.

I have tried to get my thirsty buggy horse to drink it in hot weather unavailingly. I have seen an inch and a half of saline deposit in the troughs after water has been left lying in them. The opinion of drovers and others interested in travelling stock used to be that it was simply a trap for drovers who expected to get water there for their stock and found poison. In an old shaft close to Mossgiel station, which I knew to be as salt as the sea, I saw water nearly fresh drawn up for a few weeks—after some years' interval of disuse—but the water became again as bad as in former times.

I think a tank in this locality is an urgent public want.

Yours faithfully,

R. G. CASEY.

Mr. Inspector Gilliat.

Mr. Casey managed Kilfer for the late Mr. John Mathison, of the Bank of Victoria; is considered, from his great experience, one of the best authorities on wells in Riverina.—H.G., 11/3/83. Mr. Bruce, B.C.

Dear Gilliat,

Ticehurst, 2 March, 1883.

Yours *re* Holy Box Well to hand, and, as requested therein, give you particulars as far as I know respecting said well. What you say about the water greatly surprises me, for I know, not only from hearsay, but from personal knowledge, that the water is unfit for travelling stock. I know of instances of cattle and sheep perishing for a drink, and being taken to the well and not touching the water, and have had drovers coming to me and offering fabulous prices for water, stating that the stock would not touch the water at Holy Box. Had the water been as good as you tell me it is, two or three years ago, there would not have been the severe losses that have occurred on the Darling track. This well is so thoroughly condemned by drovers that not one ever thinks of applying to the lessees for a drink.

Last year and this year also I have known cattle to go from Boonoona Tank to Mossgiel, a distance of 60 miles, without a drink, and one mob this year from Boonoona to Jumping Sand Hill Well, a distance of 80 miles. I think this goes to prove (whatever the water may be like now) that at one time it was perfectly unfit for stock.

Yours, &c.,

H. E. BROUGHAM.

Sir,

Ticehurst.

Since writing you my former letter on the subject of the Holy Box Well, we having inspected said well together, I now, at your request, give you my opinion about it. Tanks & Wells,
83-385.

The water drawn up by us last Wednesday is not only fit for stock, but would be used, on emergency, for domestic purposes. I must say I am somewhat at a loss to account for this change; it must be either owing to a spring of fresh water having broken out below, or that the well has not had a thorough baling, and, as is often the case, there is a small spring of fresh water, which water rises to the surface, and, after baling a short time, the supply of fresh water is exhausted.

I am rather inclined to think the latter is the cause in this case, as there are no great signs of constant baling being done.

In the supply-tank there are quantities of feathers and the remains of several dead birds. Had the tank been filled, these naturally would have been carried through the escape-pipe into the sheep troughing, which also contains a number of small bones and other rubbish, showing there had not been a rush of water down the troughing at all; this matter would have been carried to the far end of the trough, whereas it is now lying all along the troughing.

The cattle-trough had about 4 or 5 inches of water in it, which was covered with a coating of pure salt—and this could only have originated from the water that had lately holed, as no water had been drawn out of the well for months previous. Lumps of salt are to be found under the troughing and around the tank where the water has been leaking out. I do know of an instance of a well in this district where the water changed from salt to good water. This well was sunk in 1868. The water was perfectly salt; the whim horses would not touch it; water had to be carted for them. In 1873, I rented this well from the station. I found, to my surprise, that not only was the water good enough for horses, but for domestic purposes also, and has since remained so.

I have, &c.,

H. E. BROUGHAM.

The Chief Inspector of Public Watering Places.

Minute by Commissioner and Engineer for Roads to Under Secretary for Public Works.

Holy Box Well, road Booligal to Wilcannia.

I HAVE to suggest that the Department of Mines be requested to again take over charge of this well and make the necessary arrangements for its being worked. Tanks & Wells,
83-1,454.

The water has been a second time tested by Mr. Gordon, Assistant Engineer, and been pronounced quite fit for the use of stock. Mr. Gordon's report is forwarded herewith. W.C.B., 24/9/83. Under Secretary for Public Works.

Forward to Mines.—E.A.W., 26/9/83. The Under Secretary for Mines. J.R., B.C., 26/9/83.

Acting on this report, Mr. Oversocr Casey might perhaps be instructed to meet Mr. Gordon or some other officer of the Works Department, take over the well, and place a caretaker in charge, pending the work being let.—A.B., 27/9/83. The Under Secretary for Mines. Submitted.—H.W., 28/9/83. Approved.—J. P. ABBOTT, 29/9/83. Mr. Casey informed, 1/10/83.

Reporting

Reporting on trial of water at Holy Box Well.

Sir,

Hay, 19 September, 1883.

Tanks and
Punts,
83-569.

When in Mossgiel, on the 13th instant, I was shown a copy of the *Wilcannia Times*, in which reference was made to the bad quality of the water in the Holy Box Well.

In that letter it was stated that the water was not fit for stock after the well had remained for a few days unwrought.

Knowing that the well had not been wrought for more than three months, I thought it was a good time to put the said statement to the test, and got the contractor for the Mossgiel Tank to send a horse and man to the well. I followed, and was in time to taste the water from the first bucket drawn up. I cannot detect any difference between it and the water drawn after the well had been wrought for four days.

At that time I sent you a sample in a jar. I now send you a sample in a bottle, being a portion taken from the first bucket brought up after the well having remained unwrought for more than three months.

Parker, the contractor for the tank at Mossgiel, informs me that about three and a half months ago a drover got him to work the whim when 10,000 sheep were watered, and that he did not hear of any damage being done by it or any deaths as the result of having taken the water.

When at the Quondongs, on my way home, I met with a drover in charge of sheep. I got him to taste the water, and he pronounced it good stock water.

Parker informs me that Mr. Evans, the Manager of Canoble, said he would work the well during the summer months if allowed. It might be well to let him do so, in order that the efficiency of it might be established, on the presumption that he would charge the public no more than the usual Government rates.

If you think of this I will try and make arrangements.

I have, &c.,
JOHN GORDON.

I do not know of any man in the mean time, but will be on the look out, lest you should object to Mr. Evans' proposal.—J.G., 19/9/83.

Sir,

Department of Mines, Stock Branch, Sydney, 1 October, 1883.

Tanks,
83-1,454.

It having been decided to again take over the charge of the Holy Box Well, I am directed by the Minister for Mines to instruct you to meet Mr. Assistant-Engineer Gordon, or some other officer of the Works, take of (over?) the well, and place a caretaker in charge until the work is let.

You will, of course, report as to the rate of wages to be paid, and date of caretaker's appointment.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

Mr. Overseer Casey.

Telegram from Mr. J. G. Casey to Chief Inspector of Stock.

Balranald, 22 October, 1883.

Tanks & Wells, I HAVE not seen Mr. Gordon. Have telegraphed him, and waiting reply.
83-1,595.

J. G. CASEY.

Sir,

Clare, 20 October, 1883.

Tanks & Wells,
83-1,564.

I have the honor to report that, through the Postmasters not having followed my instructions about my letters, I have not received them until to day.

Your letter re the Holy Box Well, I have received. Have telegraphed to Mr. Engineer Gordon to find out what date I can meet him there.

Chief Inspector of Stock.

I have, &c.,
F. G. CASEY.

Sir,

Waiko, 26 October, 1883.

Tanks & Wells,
83-1,595.

I have the honor to report having seen Mr. Engineer Gordon on the 26th instant. He stated, when I showed him your telegram, that he had received no instructions to hand over the Holy Box Well to me, and that he was at present making arrangements for working the well, and having the water properly analysed, then advertising in the papers the result.

Will you please inform me how to proceed in the matter.

I have, &c.,
F. G. CASEY.

The Chief Inspector of Stock.

These papers should perhaps be referred to the Works Department, with a view to the necessary instructions being issued to Mr. Engineer Gordon.—A.B., 2/11/83. The Under Secretary for Mines. The Under Secretary for Public Works.—H.W., 3/11/83, B.C. Forward to Roads.—F.A.W., 8/11/83. B.C., 8/11/83. Mr. Wood.—W.C.B., 12/11/83. Mr. Gordon has been instructed to arrange for working this well, when it has been still further proved that the water is suitable; then it will be advisable to transfer to the Mines again.—A.P.W., 12/11/83. Under Secretary.—W.C.B., 12/11/83, B.C. Submitted.—J.R. Approved.—F.A.W., 16/11/83. The Under Secretary for Mines.—J.R., 19/11/83, B.C. Mr. Casey might perhaps be so informed.—E.W., 21/11/83. Mr. Overseer Casey informed.—22/11/83. No reply was received from Mr. Casey in this matter.—E.W., 8/2/84. Mr. Gilliat,—Should Mr. Keighran not visit this well and report?—A.B., 8.

Since the date of Mr. A. P. Wood's minute, no stock could have travelled this road, so that his proposal to further test the water under Mr. Gordon's supervision cannot yet have been acted on; but as Mr. Gordon's head quarters are in Hay, Mr. Keighran might perhaps arrange to be present when the test is made. To be any way conclusive, it will require at least four or five days and nights continuous baling.—H.G., 11/2/84.

Sir,

Sir, Department of Mines, Stock Branch, Sydney, 22 November, 1883.
 With reference to your letter of the 26th instant, respecting the Holy Box Well, I have the honor to inform you that Mr. Gordon has been instructed to arrange for working and handing over this well to the Mines Department, when it has been ascertained beyond all doubt that the water is good.

Copy.
83-1,595.

Mr. Overseer Casey.

I have, &c.,
 ALEX. BRUCE,
 Chief Inspector of Stock.

Report by Mr. Overseer Keighran upon Holy Box Well.

February, 1884.

HERE there is a well newly erected, with all necessary appliances for watering stock; but, on account of the water killing some two or three hundred sheep belonging to Canoble Station, it is now shunned by the travelling public, teamsters, and others. Tanks & Wells, 84-258.

I noticed that a tank had been commenced within half a mile from this well, and had been abandoned. It was a great pity the work was not carried out, as there is no water between the Jumping Sandhill and Boonocua, a distance of 70 miles.

JOHN A. KEIGHRAN,
 Inspector of Stock.

I have so frequently reported on this well and the bad quality of the water, that it is unnecessary for me to say more.—H.G., 4/3/84, B.C. The Chief Inspector of Stock. Inspector Gilliat,--- Recommend that Inspector Keighran be instructed to be present when Engineer Gordon again tests the water at the well. Mr. Inspector Keighran will be good enough to arrange with Mr. Gordon, as recommended by Mr. Gilliat.—A.B., 12/3/84, B.C. Mr. Engineer Gordon and myself having tested the water at the Holy Box Well, we are of opinion that it is fit for the use of stock.—JOHN A. KEIGHRAN, Inspector of Stock. Mr. Gilliat.—A.B., 2/7/84, B.C. No further action can be taken until it has been shown whether this is a permanent improvement or not.—H.G., 19/7/84, B.C. Tanks & Wells, 83-1,595.

Sir,

Hay, 25 March, 1884.

Referring to your 1,595/83 Tanks, of the 12th instant, I have the honor to inform you the engineer (Gordon) is at the present time in Sydney. On his return, will arrange to be present when he tests the water at Holy Box Well, as recommended by you. Tanks & Wells, 84-392.

Inspector, Tanks and Wells.

I have, &c.,
 JOHN A. KEIGHRAN.

Holy Box Well—That the Mines be requested to take charge.

This well which was constructed by this Department some years ago and handed over to the Mines, was condemned by them under the impression that the water was unfit for stock purposes. It was subsequently handed over to us to be dismantled, but prior to doing this, as the reports of our officers were so different to those furnished to the Mining Department, it was deemed advisable to have the well tested. This was done, the result being that the water was found to be quite suitable for stock. Since then travelling sheep have been watered there. The Canoble sheep were watered there, and Cobb & Co. are now using it for their horses. In the face of these facts I must recommend that the Mining Department be requested to resume charge of this work, which was constructed at great cost and is now in first rate order, and work it for the benefit of the travelling public. Tanks & Wells, 84-1,208.

ARTHUR P. WOOD.

I recommend that this well be taken charge of by the Mines.—W.C.B., Under Secretary, B.C., 25/9/84. Forward to Mines.—F.A.W., 29/9/84. The Under Secretary for Mines.—J.R., B.C., 30/9/84. Mr. Gilliat.—A.B., B.C., 2/10/84. The Chief Inspector of Stock.—I have already submitted a minute upon the well. I would recommend that tenders for its lease should be immediately called.—H.G., B.C., 28/10/84.

Minute by Mr. Inspector Gilliat, suggesting leasing Holy Box Well.

Department of Mines, 29 November, 1884.

I would suggest, with reference to the Holy Box Well, that as it is impossible to put a caretaker in charge without making arrangements to cart water for his use, it is desirable no delay should be made in calling for tenders for its lease. Tanks & Wells, 84-1,511.

But as the well has an inexhaustible supply of water, and all our experience tends to show the more these salt-water wells are used the greater the chance of the water improving, I would submit, for the consideration of the Hon. the Secretary for Mines, the propriety of leasing the well to the pastoral lessee, with permission to water his own sheep, he being bound to give priority to travelling stock.

HARRY GILLIAT.

Submitted for approval.—A.B., 15/12/84. The Under Secretary for Mines. Submitted.—G.E.H., (for the Under Secretary), 29/12/84. Approved.—J. P. Abbott, 3/12/84. Mr. Inspector Gilliat, 2/1/85. Mr. John Evans, of Canoble, Mossgiel, might now be informed that tenders have been called for the lease of the Holy Box Well, and that if his tender should be that accepted, permission will be given to water his own sheep, travelling stock in all cases having priority.—H.G., B.C., 5/1/85. Mr. Evans, 28/1/85.

Sir,

Department of Mines, Stock Branch, Sydney, 28 January, 1885.

The Holy Box Well is about to be advertised for lease, and as I believe you are to tender for same, I am directed by the Minister for Mines to ask whether you will be good enough to take charge of the well on behalf of the Department until such time as it is handed over to you as lessee, in the event of your tender being the highest. Tanks, 84-1,511.

You will be allowed to water your own stock, but must give priority to travelling stock.

John Evans, Esq., Canoble, Mossgiel.

I have, &c.,
 ALEX. BRUCE,
 Chief Inspector of Stock.
 24 September, 1884.

Report

Report by Mr. Road-Superintendent Stillwell on Holy Box Well.

May, 1885.

Tanks & Wells,
85-1,081.

ON visiting this well to-day I found no one in charge; the service tank empty; six rails and one stud missing from cattle troughing; the top wire broken on sheep troughing, and trough foul with sediment and sheep droppings; fifteen rails gone from the fence round sheep trough, and the wire broken, and two of the drum struts loose.

At my last inspection I found a man of Mr. Evans', of Konoble Station, in charge, and watering the station sheep, but since the rain has rendered this unnecessary the well apparently has been abandoned, and at the mercy of travellers and teamsters.

Were it not that the track in present use is some $\frac{1}{2}$ mile away much more wanton damage would probably have been done.

Should not the "Mines" be communicated with as to this?

A. W. STILLWELL.

I recommend that this paper be sent on to Mines.—W.C.B., 5/5/85. Under Secretary.—B.C.
Forward to Mines. Under Secretary for Mines.—J.R., B.C., 6/5/85. Letter and Copy of Report
to Mr. Keighran. Letter and extract to Mr. Evans.—9/5/85.

P.W.P.,
85-1,511.

Sir, Department of Mines, Stock Branch, Sydney, 5 May, 1885.
I have the honor to call your attention to the notice published in the *Gazette* of the 1st instant, calling for tenders for the lease of certain watering places, including the Holy Box Well.

If you are still desirous of obtaining a lease of this well you should submit a fresh tender.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

Mr. John Evans, Canoble, Mossgiel.

Tanks,
85-1,081.

Sir, Department of Mines, Stock Branch, Sydney, 9 May, 1885.
Herewith I forward you copy of report upon Holy Box Well, by Mr. Road-Superintendent Stillwell, and beg to state that you will be held responsible for the damage done, for if you had handed the works that are in the Ivanhoe district to Mr. Yeo before this, the well would have been under Mr. Yeo's supervision. Be good enough to attend to this at once.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

Mr. J. Keighran, Overseer, Public Watering Places, Hay.

Tanks,
85-1,081.

Sir, Department of Mines, Stock Branch, Sydney, 9 May, 1885.
Herewith I forward you extract from report upon Holy Box Well, and have the honor to inform you that as the Government allowed you to have the charge of this well until such time as it was handed to you as lessee in the event of your tender being the highest, you ought to have taken better care of it, and I have to request that you will be good enough to at once put it and keep it in good order.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

Mr. John Evans, "Canoble," Mossgiel.

Extract from Tanks, 85-1,081. Report by Mr. Road-Superintendent Stillwell, re Holy Box Well, Booligal to Wilcannia Road.

Tanks & Wells,
85-1,327.

"On visiting this well to-day I found no one in charge; the service tank empty; six rails and one stud missing from cattle troughing; the top wire broken on sheep troughing, and trough foul with sediment and sheep droppings; fifteen rails gone from the fence round sheep trough, and the wire broken, and two of the drum struts loose."

A. W. STILLWELL.

Sir,

Hay, 27 May, 1885.

I have the honor to acknowledge the receipt of your 85/1,081 tanks of the 9th May, with copy of report from Mr. Road Superintendent Stillwell, on the Holy Box Well, and beg to state that the well referred to in his report was never handed over to me by my superior officer, Mr. Inspector Gilliat. If it had I should have placed a man in charge of the works as caretaker, and you would have been made acquainted with the fact of my having done so.

I was under the impression that Holy Box Well was still in the hands of the Works Department, as the water in it was considered too salt, and not fit for stock purposes, in fact it was said to be poisonous. Then allowing that it had been passed and taken over by the Mines Department, why was I not instructed to put a man in charge, the same as had been done at other watering places in my district.

I should like to be informed who the person was that gave Mr. Evans, of Canoble Station, permission to water his sheep at the well, as Mr. Stillwell says in his report. At my last inspection I found a man of Mr. Evans', of Konoble Station in charge and watering the station sheep; then I think it was Mr. Stillwell's duty to have ascertained by whose authority the man was placed in charge, and reported the matter at once to the Department for enquiry.

Therefore under these circumstances I consider it very hard, and fail to see why I should be held responsible for damages done through no fault or neglect on my part.

Mr. Yeo had every opportunity of inspecting and reporting on the works as they stood; he had his authority the same as was supplied me when appointed overseer of Public Tanks and Wells.

I have, &c.,

J. A. KEIGHRAN.

The Chief Inspector of Stock.

Send Mr. Yeo, who has now taken this work over a copy of letters to Mr. Evans, to show him how the matter stands, and let him see that the repairs are carried out at once by them, or report.—A.B., 1/6/85.

Letter and copy of papers to Mr. Yeo.—2/6/85.

Sir,

Sir, Department of Mines, Stock Branch, Sydney, 2 June, 1885.
 Herewith I forward you copy of letter and extract *re* Holy Box Well, sent to Mr. Evans, of Tanks, Canoble, on the 9th May last, to show you how matters stand, and I have to request that you will see that the repairs are carried out at once by him, or report. I have, &c., 85-1,327.

ALEX. BRUCE,
Chief Inspector of Stock.

Mr. James Yeo, Overseer, Public Watering Places, Ivanhoe.

[Enclosure.]

Copy of letter and extract from report, sent to Mr. John Evans, Canoble, *via* Mossziel, from the Chief Inspector of Stock, on the 9th May, 1885.

Report by Overseer Yeo, on the Holy Box Well, on taking delivery from Mr. Keighran. Tanks & Wells, 85-1,358.

State of Shaft.—In good order.

Whim, &c.—In good order, with the exception of two stays which want a bolt or large nail in each.

Ropes, buckets, &c.—Ropes in good order, the buckets were down the shaft, and could not see them.

Fencing round sheep troughing is in bad repair.

General remarks.—This well has not been used for a long while, the water being too salt for stock to drink.

Repairs required.—Cattle troughing has six panels missing, and the end post which will require to be replaced. The top wire on the sheep troughing is broken, and fence round sheep troughing wants 14 new panels and the wire to be mended.

JAMES YEO,
Overseer, Public Watering Places.

Ivanhoe, 28th May, 1885.

Mr. Overseer Yeo to Chief Inspector of Stock.

Sir, Ivanhoe, 6 June, 1885.

With reference to yours of June 2nd, *re* Holy Box Well, I have already reported on its state of repair. Tanks & Wells, 85-1,420.

I intend going by way of Canoble on Tuesday next, and will then see Mr. Evans and know his intentions with regard to repairing Holy Box Well, and will report accordingly.

I have, &c.,
JAMES YEO,
Overseer, Public Watering Places.

Mr. Gilliat.—A.B., B.C., 9/6/85.

Reference to these papers shows that on the 29th November, 1884, I called attention to this well, and stated that it was impossible to put a man in charge without arranging to cart water for him. That the well being unfit for domestic use, no delay should be made in calling for tenders for its lease, and recommending that Mr. Evans of Canoble, should be informed.

My minute of 12th December, 1884, again recommends Mr. Evans to be informed. The present papers do not show any action between the Department and Mr. Evans, except that a letter was sent to him, 28th January, 1885, and a passage in Mr. Stillwell's undated report, that on a former inspection a man of Mr. Evans' was in charge. I am unable to make any recommendation on the subject until I am informed of the arrangements made as to Mr. Evans and his position with the Department.—H. Gilliat, B.C., 13/6/85.

Sir, Ivanhoe, 12 June, 1885.

By your request I have visited the Holy Box Well and find that no repairs have been done. Tanks & Wells, 85-1,498.

I have also seen Mr. Evans, and he informs me that he does not intend doing repairs beyond the two stays on the whim. Mr. Evans also informs me that he does not hold himself responsible for any charge of this well.

I have, &c.,
JAMES YEO,
Overseer, Public Watering Places.

The Chief Inspector of Stock.

Mr. Evans has not replied to letter of 28th January last, but appears to have taken possession of the tank, which is confirmed by the fact that he informed Mr. Overseer Yeo he would repair the stays on the whim.

No tender having been received from Mr. Evans or any one else, it appears necessary to make some fresh arrangements, and to ask the Works Department to make the slight repairs which are required.—A.B., 20/6/85. The Under Secretary for Mines. Submitted.—G.E.H. (for the U.S.), 2/7/85. Approved.—J. P. ABBOTT, 3/7/85.

Sir, Canoble, Mossziel, 17 June, 1885.

I have received two letters from you in reference to the Holy Box Well, and in reply beg to state that I have never been the lessee of it, and am, therefore, not responsible for the present state of the fences, troughing, &c. Tanks & Wells, 85-1,594.

I presume you are aware that the well has been abandoned for some years, and that there was nothing to prevent any swag-man using the timber for firewood.

If you wish me to take charge of the well I am willing to do so, providing you have it put in repair, and allow me to water the stock at it.

I will not bind myself to keep a man always at the well, as the man in charge of the paddock lives at the Oat Swamp out station, which is 5 miles distant, but will supply travelling-stock with water on receipt of not less than twelve nor more than twenty-four hours' notice. I may add that I do not think the well is good unless it is worked continually.

I have, &c.,
JOHN EVANS.

The Chief Inspector of Stock. Report

Report by Mr. Overseer Yeo on the Holy Box Well.

Ivanhoe, 1 August, 1885.

Tanks & Wells,
85-2,046.

State of Shaft.—Appears to be in good order.
Whim, &c.—Two stays want repairing.
Rope, Buckets, &c.—In good working order.
Fencing.—Fencing rounding troughing very much out of repair.
General Remarks.—Nothing has been done with regard to any repairs at this well since my last report.

State of Supply Tank.—In good order.
Troughing.—In very bad repair.

JAMES YEO,
Inspector of Stock.

Précis.—Re Holy Box Well.

85-1,594.

24 Sept., 1884.

29 Nov., 1884.

28 Jan., 1885.

5 May, 1885.

9 May, 1885.

9 May, 1885.

27 May, 1885.

2 June, 1885.

12 June, 1885.

2 June, 1885.

Date of letter,
17 June.

In September last the Works Department asked that this well be again resumed by us.

This it appears was done, and Mr. Gilliat suggested that instead of placing a caretaker in charge it be leased.

Mr. Evans, of Canoble Station, was asked that as we believed he was to tender for this well, that he would take charge of it until it was handed over to him as lessee, in event of his tender being the highest.

This letter was never acknowledged until his attention was called to notice in *Gazette* of 1st May, calling for tenders, and he was asked if he was still desirous of obtaining a lease of this well.

The well having been reported by Mr. Road Superintendent Stillwell, as out of repair, and that when he visited it he found a man of Mr. Evans' in charge and watering the station sheep.

Mr. Evans was informed that as the Government allowed him to have charge of the well, he would have to put it, and keep it in good order.

Mr. Keighran was also informed of the damage and told that he was held responsible for it.

He replied that it was never handed over to him by Mr. Gilliat, and that he was under the impression that it was still in the hands of the Works Department.

The tank having in the meantime been put under Mr. Yeo's charge, the case was reported to him, and he was asked to see that the repairs were carried out at once by Mr. Evans. He replied that he had seen Mr. Evans, who informed him he did not hold himself responsible for the charge of this well.

As Mr. Evans had not, up to this date, replied to letter of 28 January, it was submitted, that as no tender had been received from Mr. Evans or any one else, fresh arrangements be made, and the Works Department asked to make the slight repairs needed. This was approved by the Honorable the Minister on the 3rd inst. While this was under submission, a letter was received on the 24th June from Mr. Evans, acknowledging letters, and stating that he had never been the lessee of this well, and was therefore not responsible for the present state of it, but offering to lease it under certain conditions.

S.A.M., 9/7/85.

Mr. Evans letter of the 17th ultimo, with Mr. Stillwell's memo. May last, and Mr. Overseer Yeo's letter of the 12th ultimo, show that although Mr. Evans made use of the well he refuses to make the slight repairs necessary, and only offers to rent the well on his own terms. *Vide* his letter of the 17th ultimo, 85/1,594, Tanks. A.B., 13/7/85.

Mr. Gilliat, B.C.

Sir,

Holy Box Well, Ivanhoe, 10 August, 1885.

Tanks & Wells,
85-3,202.

I visited this well to-day; found no one in charge, the service-tank empty, six of the rails over cattle-trough missing, and also 19 fence rails from the sheep troughing enclosure. Three of the cage struts of whim are also loose.

The Mines Department appears to have abandoned this work to its fate. Their local Inspector says that the water is reputed unfit for stock, but last summer Mr. Evans, of Kanoble Station, used it for his sheep.

The fencing in of the special lease here is let, and will shortly be in hand.

I have, &c.,

The Commissioner for Roads.

A. W. STILLWELL.

Telegraph to Mr. Stillwell to appoint a caretaker. Make copy of this and re-submit when Mr. Wood is in office.—W.C.B., 14/8/85. Telegram sent.—14/8/85.

The attention of the Mines should be drawn to this, and the question of water settled finally. In November last it was arranged that this work should be taken over, and I was under the impression that a caretaker had been appointed. Before fencing is carried out and repairs effected, there should be a distinct understanding that the well will be worked.—A.W.P., 15/8/85.

There is a sample of this water in this office—it is perfectly good; the bad water referred to by officers of Mines Department must have been drawn after the shaft had been lying unused for some time, as stated. It is desired to economize, and not have unnecessary outlay in sinking tank when well should answer. It is no use referring to analysis, for chemists would condemn most of the well water in the interior, though used for years by cattle and men with impunity.—W.C.B., 15/8/85.

The Under Secretary for transmission to Mines. Forward to Mines.—F.A.W., 24/8/87. Under Secretary for Mines.—J.R., B.C., 25/8/85. Mr. Gilliat.—A.B., B.C., 28/8/85.

Referring to my previous minute, 13/6/85, T.W., 1,420, I recommend that Mr. Overseer Yeo may at once make arrangements to put a caretaker in charge of this well. The man will have to provide himself with a horse and harness to work the whim, and some sort of vehicle to cart water for his own consumption. The slight repairs, a handy man can make without any trouble. Especial care should be taken that Mr. Evans' sheep do not interfere with the grass or water on this reserve.—H. GILLIAT, 9/9/85., B.C. Submitted for approval.—A.B., 10/9/85.

Submitted.—H.W., 17/9/85. Approved.—J. P. ABBOTT, 18/9/85. Inform Mr. Yeo. Mr. Yeo informed.—21/9/85.

Holy

Holy Box Well.—Referring to my report of 16th August, is it advisable to fence lease area? Hay, 21 Oct., 1885.

Tanks & Wells,
86-3,950.

The Commissioner for Roads.

A. W. STILLWELL,
Assistant Engineer.

Mr. Wood.—W.C.B., 2/10/85. Paper transmitted to Mines, 15/8/85, requesting a definite understanding regarding this well—fencing can stand over pending their reply.—A.P.W., 21/10/85. Desirable that a definite reply be obtained from Mines in reference to paper 85/1,384, sent to that office.—W.C.B., 22/10/85. Under Secretary for Mines.—J.R., B.C., 24/10/85.

The extension of tenants' leases, approved by the Honorable the Secretary for Mines, is in the case of this well to 640 acres, but should not, I think, be permitted to interfere with the completion of fencing previously arranged for by the Department of Works, especially as our survey cannot now be completed this year. The Department of Works may perhaps be informed that a caretaker is in charge, and that this Department has no wish to delay the completion of the fencing or repairs.—H. G., 29/10/85.

The Under Secretary for Mines.—Approved, H.W., 29/10/85. Inform the Works Department.—H.G., 29/10/85. Works informed.—31/10/85.

Extract from Monthly Report of T. Pollard, caretaker of Holy Box Well, for month of January, 1886.

Fence over cattle troughing too low, and is continually being broken while stock are watering.

P.W.P.,
86-493.
86-1,173.

T. POLLARD,
Caretaker.

Mr. Overseer Yeo, for report.—B.C., 6 February, 1886. To be returned.—H.G.

The fence over cattle troughing has been in a very indifferent state of repair for some time. The caretaker, by my instructions, has repaired it at different times with some saplings, but he could only make a temporary job of it, which I have stated in a previous report.—J. YEO, 12/2/86.

Are not the repairs to this well being carried out by the Works Department at the present time?—H.G., B.C., 16/2/86. Mr. Yeo.

The repairs which were carried out by Department of Works were repairing buckets, whim, sheep troughing, and bottom of cattle troughing, but nothing was done to the rail over cattle troughing. Nothing is being done in this well by Department of Works at present time.—J. YEO, Overseer, P.W.P., 3/3/86.

This may perhaps be forwarded to the Department of Public Works, with the view of having such repairs as may be found necessary effected.—H.G., 11/3/86. The Under Secretary for Mines. Approved.—H.W., 12/3/86. The Under Secretary for Works.—H.W., B.C., 12/3/86. Roads.—J.R., B.C., 15/3/86. Mr. Wood.—W.C.B., 15/3/86.

This, a report for January, is rather late; we have a report from the local officer, dated 12th inst., stating that well and troughing have been repaired by the travelling mechanic. I may add that had not this well been condemned by the Department of Mines, on the ground of bad water, the top works would have been in better order. I may also add, as a corollary to this, that the last report referred to above, states that the water is better than that of the Jumping Sand-hill, which has been used for human consumption for years.—A.P.W., 15/3/86.

Under Secretary for transmission.—W.C.B., 15/3/86. The Under Secretary for Mines.—J.R., B.C., 18/3/86. Mr. Overseer Yeo, for report on Mr. Assistant Engineer Wood's minute, B.C., 20 March, 1886. To be returned.—H.G.

Re Mr. Assistant Engineer Woods Minute.—The top rail of cattle troughing has not been repaired since I last reported. The water has slightly improved since it has been regularly baled, but it is not fit for human consumption. At the present time the caretaker in charge carts water for his own use a distance of three miles. I may also add that drovers with stock avoid watering their stock at this well on account of the saltiness of the water, and in no case do they water stock unless they are perishing.—J. YEO, 1/4/86.

Have a copy prepared for transmission to the Works Department.—H.G. Copy to Works.—19/4/86.

Sir,

Department of Mines, Stock Branch, Sydney, 21 September, 1885.

Tanks,
83-3,202.

I have the honor to inform you that you may at once arrange and put a caretaker in charge of Holy Box Well; he will have to provide horse and harness to work the whim, and some sort of vehicle to cart water for his own consumption. Please report date of engagement and rate of wages.

The slight repairs required at this watering place, a handy man can make; he should take especial care that Mr. Evans' sheep do not interfere with the grass or water on this reserve.

I have, &c.,

ALEX. BRUCE,
Chief Inspector of Stock.

Mr. J. Yeo, Overseer, Public Watering Places, Ivanhoe.

Sir,

Department of Mines, Sydney, 3 October, 1885.

Tanks,
85-3,950.

With reference to your blank cover communication of 24th instant, 83-8,917, respecting the fencing in of the lease area at the Holy Box Well, I am directed to state that the lease area has been extended to 640 acres, but this need not interfere with the completion of the fencing previously arranged, especially as the survey of the increased area will not be made for some time.

I may add that a caretaker is in charge, and this Department has no wish to delay the completion of the fencing or repairs.

I have, &c.,

HARRIE WOOD,
Under Secretary.

The Under Secretary for Public Works.

Mr.

Mr. Assistant Engineer Stillwell's Report on Holy Box Well, in reply to complaints by Mr. Yeo, Inspector of Stock.

P.W.P., 86-2,515. THE whim, well buckets, and troughing have recently been repaired by the travelling mechanic. As it is purposed shortly to renew the troughing, any direct outlay upon this portion of the work is not justifiable. The repair of the trough nails from time to time in the interim (a slight matter) is quite within the power of the caretaker. As to the quality of the water:—On 7th March last I saw Mr. Yeo in Ivanhoe, and he then informed me that baling had greatly improved it, rendering it quite fit for stock. On the following day I visited the well, when the caretaker more than confirmed this—saying, horses drank it well, and that it was generally reputed better than the Jumping Sand-hill water. This I have heard repeated since by people travelling the road. As to the caretaker not using it—neither does the caretaker at Jumping Sand-hill. He carts all the water for his own consumption. I could not distinguish any difference in the waters to the taste.

A. W. STILLWELL,
14/5/86.

I recommend this copy of report be transmitted to Mines for the Chief Inspector, Watering Places.—W.C.B., 17/5/86. The Under Secretary. The Under Secretary for Mines.—B.C., 18/5/86. J.R.

There is a remarkable discrepancy between these statements. It will be advisable, I think, to send a gallon carefully corked and sealed for analysis; the vessel should be absolutely clean. Be good enough to give me categorical reply to Mr. Stillwell.—H.G., 5/6/86.

Mr. Overseer Yeo for report.—B.C., 5 June, 1886. Contents noted; water and reply forwarded.—J. YEO, 24/6/86.

Sir,

Ivanhoe, 24 June, 1886.

P.W.P.,
86-3,199.

Referring to your memo of 5th June, *re* giving a categorical reply to Mr. Stillwell's report *re* Holy Box Well, Mr. Stillwell is correct in his statement that the water had slightly improved after baling, but he must have misunderstood me, because I never told him that the water was quite fit for stock. As regards the caretaker confirming the statement made by Mr. Stillwell, I consider the reason the caretaker makes out the water is better than it really is, is for fear that the well should be abandoned and he would lose his billet. With reference to its being better water than at the Jumping Sand-hill, I beg to state I am informed from good authorities that the Jumping Sand-hill water is much better than the Holy Box Well water; but from my own judgment, I am not in a position to say which is the best, for I don't know the qualities of the water at the Jumping Sand-hill. I might further state that the caretaker at the Holy Box Well has carted his water from the Mossziel Tank, which is 17 miles, rather than use the well water.

I have, &c.,
J. YEO.

The Chief Inspector, Public Watering Places.

Resubmit when water arrives.—H.G., 29/6/86. Resubmitted.—C.H., 2/7/86. It is submitted that this water may be forwarded for analysis.—H.G., 2/7/86. The Under Secretary for Mines. Approved.—H.W., 7/7/86. The Geological Surveyor.—H.W. Send for analysis.—C.S.W., 14/7/86. The Curator.

Sir,

Ivanhoe, 24 June, 1886.

P.W.P.,
86-3,198

I have the honor to inform you that I have forwarded from Mossziel, per Cobb and Co.'s coach, addressed to you, a small case containing six bottles water from the Holy Box Well; I could not get a jar to hold a gallon of water, and as you requested me to forward a gallon of water, I considered the bottles would do as well. The water was taken from the well after the care-taker had been baling for a quarter-of-an-hour.

I have &c.,
J. YEO.

The Chief Inspector, Public Watering Places.

Sent for analysis No. 909—J. E. C., 14/7/86. Result of analysis herewith—J.E.C. (for Geo. Sur.), 21/7/86.

Report on a sample of water received 15th July, from the Department of Mines.

909.—Six bottles of water for analysis.

Total solids, grains per gallon	437.2
Soluble saline matter	408.4
Insoluble matter	55.2
Volatile at a red heat	3.3
Total solids	437.2
Chlorine	135.0
Saline ammonia, parts per 100,000	None
Organic ammonia002

Remarks.

Remarks.

This water when viewed through the standard two foot tube was clear and bright, but not free from suspended matter.

The organic impurity is very small indeed, and were it not for the abnormal quantity of saline matter, the water might be used for domestic purposes.

The solid saline matter however, is so great, that its use must be prohibited for drinking, either raw or as tea. It may be used for boiling vegetables and for washing. Distillation would be the only means of rendering the water drinkable.

WILLIAM M. HAMLET, F.C.S.,
Assistant Government Analyst.

The Hon. The Minister for Mines.

Holy Box Well.—Analysis of Water.

This paper should be put away for reference, as the matter will probably be reopened.—H.G. 24 Aug., 1886. P.W.P., 86-3,643.

A copy of this might perhaps be forwarded for the information of the Works Department.—E. W. (for H. G.), 24/7/86. The Under-Secretary for Mines. Approved.—H.W., 24/7/86. The Under-Secretary for Works.—B.C., 24/7/86. To be returned.—H.W. Roads.—J.R., B.C., 28/7/86.—Mr. Wood.—W.C.B., 28/7/86.

This water is often used by humans without any ill effects.—A. P. W., 30/7/86.

No doubt much of the water used as stock water, and approved of by stock owners, would be condemned by chemists. I have a jar of this water in my room, which has been pronounced by experienced people as really good stock water. W.C.B.

Sir,

Hatfield, 9 December, 1886.

P.W.P., 86-5,967

Referring to the enclosed papers relative to the alleged saltness of the Holy Box and Dolmoreve Wells, I now have the honor to report that I visited the Holy Box, 22nd November, and found the caretaker baling; on two subsequent dates I passed the well, 30th November and 2nd December, and on each occasion the caretaker was drawing water. At my first visit I took my horse to it, thirsty, and he refused to drink it; I also tasted it myself, and I am of opinion that stock would be very hard pushed indeed to drink it. It is totally unfit for human consumption, and if, as the caretaker says, the quality is improving it must have been very bad indeed at first. I do not think baling can have much effect upon it. The Jumping Sand-hill and Lignum Hut Wells are far before this in quality. Having tasted them all I do not concur with Mr. Yeo's remarks, which are made from hearsay. Last season, a dry and bad one, the Ivanhoe Tank was not available, and stock had a long stage to travel from Boonoono to Mossiel, 55 miles, and only those who were compelled broke the stage at the Holy Box. In rough numbers, only half the stock watered at Boonoono were watered at Holy Box. I think this speaks for itself. I hear it is intended to renew troughing, &c., here. I would suggest that the outlay should be deferred until definite action is decided upon. The present troughs though old and worn are sufficient for all present requirements. A tank was commenced here in a good and large catchment, and after being sunk a few feet was abandoned. I think this is much to be regretted, as I am of opinion that for the use of travelling stock tanks are superior to wells.

In regard to Dolmoreve Well, the caretaker in three hours forks the well. The supply, so far as I could ascertain, is barely 6,000 gallons in 24 hours. The rope and runners, however, do not let the buckets to the bottom of the shaft. This water is, I think, freer from organic matter than the Holy Box—very clear and sparkling. It is, however, very salt and quite unfit for human consumption. Stock used to fresh water would, I think, hardly drink it; 8,000 sheep were lately watered there, and I understand from Mr. Lindsay, Til Til, two-thirds did not touch it, and on the other hand the caretaker says they drank fairly. The other mobs of the same owner (Chrystal) did not try it, but got permission to try the Station Well, 1/2-a-mile away. Mr. Lindsay's offer I can quite understand; he has the well 1/2-mile away somewhat similar in quality. His stock are bred on brackish water, and used to it; it would save him using his own well, and at the same time give him opportunity and excuse for eating down P.W.P. and T.S.R.

There is no doubt whatever that sheep used to this class of water can live on it, but they do not thrive or do so well, and stock from frontages or tanks will not drink it unless almost in extremis. Ireland used to take his horse 4 miles daily to fresh water. For station sheep, bred on and watering regularly, used to and broken into brackish water, these may be stock water wells, but for the general travelling stock I am decidedly of opinion that neither well yields stock water. A further trial of the baling might be made, and in the event of there being no improvement boring might be tried; three months more of regular baling would enable a better opinion to be formed before further expense is incurred.

I have, &c,

JAMES W. BOULTBEE,

Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

XVIII.

Mount Manara Well.

Sir,

Hay, 18 June, 1878.

Public Works,
78-3,677.

I have to report the completion of repairs at this well; the tank has been strengthened by stays and made thoroughly water-tight, so that a top ground water supply of 50,000 gallons may always be on hand. The whim and troughing has also been overhauled and put into repair, wanting only a pair of brasses on the spindle, which I cannot at present procure. I have at this well a portion of the wire rope purchased of McLean Brothers and Rigg working admirably, and one pair of buckets.

These repairs will obviate the necessity for attempting an increased supply, a step which I have always regarded as of uncertain success at this place. Though I should wish to see a deep bore started somewhere in the district, I could propose no special site at present; but I should be glad to receive instructions to make a barometric survey of the country north and west of the Darling as low as Menindie. This would take about a month, and would cost not less than £100.

I remain, &c.,

W. H. HIGMAN,

Road Superintendent.

The Commissioner for Roads, Sydney.

I have asked the Department of Mines to attend to this.—W.C.B., 25/6/78. Mr. Higman, B.C.
To be returned. Noted.—W.H.H., 10/7/78.

Mr. Gilliat's report upon this well at time of transfer destroyed by fire at Garden Palace.

Mount Manara Well.

Sir,

Ivanhoe, 27 April, 1880.

Tanks & Wells,
80-58.

I have the honor to inform you that I have received the following tenders for repairs to the Mount Manara well—

B. Ford	£260
W. R. Parker	£350

The supply from this well is so limited that I cannot recommend any further expenditure upon it. I would advise its being abandoned, the timber of whim and shaft, iron, &c., to be sold to the best advantage.

The immediate neighbourhood affords excellent situations for a tank, and I have the honor to recommend the construction of one at this place.

I have, &c.,

HARRY GILLIAT,

Inspector of Tanks and Wells.

The Chief Inspector of Stock.

Mount Manara Well.

Public Works,
80-5,535.

I EXAMINED the well some eighteen months ago, and found then that the spikes holding the slabs were all rusted away, and the lining was giving way.

The depth of this well (240 feet) makes the cost of lifting the water very heavy and the watering of stock very expensive and tedious, besides which the supply is very limited.

Mr. Hay of the Mount Manara station has water in a well about half-a-mile away from the Government well, and in that he has a never failing supply at from 60 to 70 feet from the surface. The station well is fully 20 feet higher than the Government well; that should give us the water at from 40 to 50 feet from the surface, if we could cut the strata that supplies the station well.

I think that before any decision is arrived at with regard to giving up the well, we might try, by boring between the two wells, to see how near the Government well the reservoir that supplies the station well could be got to the Government well. If it is found that the distance is reasonable, a drive could be put from the Government well to meet the supply.

Until these experiments are tried I cannot recommend any definite action as to abandoning or repairing the well.*

I may also suggest that boring from the bottom of the well may be tried, as we may thus tap a supply that may rise well up in the shaft.

The tank and troughing, as well as the whim, all requiring thoroughly repairing, I cannot well estimate the cost of repairing this well, as I have not been down it lately.

I have, &c.

HENRY CAMBRIDGE.

The Commissioner for Roads, Sydney.

* Memo. by Commissioner for Roads.—I concur.

Mount Manara Well.

11 August, 1880.

MEMO.—

Tanks & Wells,
80-168.

Mr. Commissioner Bennett here concurs in Mr. Cambridge's recommendation not to abandon this well in the meantime, but to make another attempt by boring and driving to secure a good supply of water.

If this course be taken, perhaps the Minister for Works might be moved to direct that Mr. Cambridge's recommendations may be carried out as soon as possible, at any rate in time to place the necessary amount on the Estimates for 1881, should new works be required here.

ALEX. BRUCE.

The Under Secretary for Mines.

Submitted.—H. W., 14/8/80. The Minister for Mines would like an expression of opinion from Mr. Gilliat.—H. W., 19/8/80. Mr. Bruce. Copy Mr. Cambridge's report on this well, and send to Mr. Gilliat for his opinion.—A.B., 21/8/80. Mr. Gilliat, for an expression of opinion on this report for the information of the Minister for Mines.—A.B., B.C., 21/8/80. Minute annexed.—H.G., 8/9/80.

Report

Report by Mr. Inspector Gilliat, as to improving the Water Supply at Mount Manara Well.
Mr. Cambridge's Report.

Tanks & Wells,
80-213.

MEMO.—

1. I thoroughly agree with Mr. Cambridge in respect to the tediousness and expense of lifting water from such a depth, more particularly with a limited supply.

2. Mr. Hay, of the Mount Manara Station, has obtained excellent water at the depth named by Mr. Cambridge, 60 to 70 feet, but I have no information to lead me to the conclusion that it is "a never failing supply."

Unless I am wrongly informed, Mr. Hay's well has been sunk since the last drought, and I cannot learn that its supply has ever been put to any severe test.

I am disposed to think that the supply to Mr. Hay's well is obtained from the strata of the adjoining ridges, known as Mount Manara, a low isolated range extending nearly east and west for 6 or 7 miles, and upon a shoulder of which the shaft is sunk.

The freedom of the water from any salts would support my inference that it is not from the same source from which the wells of the district usually derive their supply.

Water in these is obtainable at from 120 to 130 ft., and is more or less impregnated with salt.

If the supply to this well is from the strata, I fear it would fail in severe drought.

I would suggest that the opinion of the Government Geologist would be of great value on this point.

"Boring between the two Wells."

If it is decided that a sufficient supply is probable, I would support action being taken to test it, but I think a trial shaft could be put down here as cheaply as a bore.

Driving from the present well would, I think, prove a costly and tedious task, the bottom being of hard clay slate.

4. Boring from the bottom of the present shaft is open to the same objections, and has, I am informed, already been tried by an officer of the Works Department.

5. Troughing and supply tank are hardly worth repairing.

Remarks.—I am of opinion that if the Government Geologist considers the circumstances favourable for obtaining a permanent supply of water, the expense of a bore or trial shaft would be amply justified.

If the water was obtained, I would recommend putting down a permanent shaft, and erecting new whim and appliances.

I would not advise boring from the present well, taking into consideration the character of the bottom.

I may add that no point on this road affords better sites for tanks—should it be deemed inexpedient to sink a shaft—than this neighbourhood.

HARRY GILLIAT,
Inspector of Tanks and Wells.

The Chief Inspector of Stock to The Under Secretary for Mines.

This report might perhaps be referred to the Government Geologist (as suggested by Mr. Gilliat, page 3) for his opinion as to the permanency of the supply of water obtained by Mr. Hay.

A. B.,
20/9/80.

The Under Secretary for Mines. The Geological Surveyor.—H.W., 20/9/80.

If the drainage area above Mr. Hay's shaft be of considerable extent, say about five or six square miles, then I believe that the present supply of water in the well will be permanent, and it would therefore be advisable to sink a trial shaft as near as possible to Mr. Hay's, in order to trace the course of the fresh water-bearing strata.

I agree with Mr. Inspector Gilliat that it would be useless to sink a bore in the clay slate formation, for the water obtainable does not occur in quantity in that formation, but in the sandy drifts which have been deposited in hollows or depressions worn out in the slate formation by denudation. The slate may be considered the bed rock of the district.—C.S.W., 8/10/80.

Re Tank Site, Mount Manara.

Sir,

Mount Manara, 9 March, 1883.

I have the honor to inform you that the site recommended by me for the Public Tank at Mount Manara, is on water reserve 441, notified 9th February, 1880, Arlington Run B, about 300 yards south from the gate or the main road, in the boundary fence between Arlington Runs B and A.

The site was recommended on account of its excellent catch, and its being almost exactly half-way between the Boonoono and Twelve-mile Tanks.

I have, &c.,

HARRY GILLIAT,
Inspector of Tanks and Wells.

Alex. Bruce, Esq., Chief Inspector of Stock, Sydney.

Original papers to U. S. Works, 17/2/83. Requested to return, 30/11/87.

10 May, 1884.

Mr. Gilliat will inform me whether it is true, as stated in the *S. M. Herald* of the 10th instant, that on Mount Manara an expensive well had been sunk, securing an abundance of good water for stock, that the well has been abandoned and allowed to go to ruin. If this is true why was it abandoned?

J. P. ABBOTT.

Mr. Inspector Gilliat,—A. B., B.C., 12/5/84. Memo. herewith.—H.G., B.C., 20/5/84.

Extract
84-541, with
Peri Springs
papers.

In

Sydney, 20 May, 1884.

Tanks & Wells,
81-584.

In reply to the minute of the Hon. the Secretary for Mines (Tanks and Wells, 540), with respect to the sinking of an expensive well at Mount Manara, I have to say that a shaft was sunk there some twelve or fourteen years ago by the Department of Public Works. When these works were transferred to the Department of Mines, I made a careful inspection of, and report upon it, and pointed out that owing to the small supply, 2,800 gallons per diem, the work, as a public watering place, was useless. This report, and my subsequent representations urging the importance of a public watering place at this point, induced a correspondence with the Department of Public Works, resulting in their consenting to construct a tank about 4 miles south of the old well.

At the time of its transfer, the well was in such a state of disrepair, that to utilize even the limited supply would have necessitated a considerable outlay, which appeared undesirable, anticipating the construction of a tank by the Department of Public Works, and as the travelling public, in ordinary seasons, were supplied with water by Mr. John Hay, the lessee, it was recommended the well should be abandoned.

The correspondent of the *Sydney Morning Herald*, of the 10th instant, has been misinformed with respect to the abundant supply. The papers in the records of this Department and that of the Public Works contain ample evidence in support of this.

The Hon. The Minister for Mines.

HARRY GILLIAT.

Submitted.—H. W., 19/5/84.

20 May, 1884.

This may be shown to the *S. M. Herald*, with a request that this report should be published, and inform that I am causing inquiries into the other matters of a most searching character.

J. P. ABBOTT.

Boro and Bunghill Tanks.

Telegram from Mr. Road-Superintendent Adams to The Commissioner for Roads.

Walgett, 28 August, 1882.

Public Works,
Tanks & Wells,
82-702.

TANK at Boro Waterhole finished; going to make final measurement; Mr. Gilliat who is here should be instructed to take it over.

J. H. ADAMS.

Under Secretary B.C., for transmission to Mines.—W.C.B., 28/8/82. Under Secretary for Mines.—J.R., B.C., 29/8/82.

Mr. Gilliat is now on his way to Sydney and will not likely be at Walgett again for some time. Perhaps Mr. Inspector Doyle might be directed to take this tank over and place a caretaker in charge, till it can let. The nearest overseer is Mr. Hansen, at Bourke.—A.B., 4/9/82.

The Under Secretary for Mines. Submitted.—H.W., 5/9/82. Approved.—A.R., 6/9/82. Mr. Gilliat.—B.C., 8/9/82.

Mr. Bruce,—This work was inspected by me two days before the final measurements were made, and at the same time I made arrangements for placing a caretaker in charge as soon as the Department should be notified that the work was ready to be transferred. I consider that tenders should be called for as soon as the tank is ready for delivery by advertisements for one month in the *Walgett* paper.—H.G., B.C., 12/9/82.

Tenders called—*Gazette*, 21/9/82.

Tenders for Government Tank at Boro Waterhole on the road from Walgett to Bangate.

Dear Sir,

2, Spring-street, Sydney, 25 October, 1882.

P.W.P.,
82-889.

We are desirous of leasing the abovementioned tank, subject to the conditions specified in the *Government Gazette*, and hereby beg to tender for leasing same at £50 per annum.

Yours, &c.,

JOHN GORDON,

J. A. CAMPBELL,

Care of Australian Mortgage Land and Finance
Company, 2, Spring-street, Sydney.

Guarantors:—W. A. Cotter, 2, Spring-street; G. N. Griffiths, care of Griffiths & Weaver, corner Hunter and George Streets.
The Under Secretary for Mines, Sydney.

Telegram from The Chief Inspector of Stock to Mr. Inspector Gilliat, Bourke.

Sydney, 13 November, 1882.

MESSRS. GORDON AND CAMPBELL'S tender for Boro Waterhole Tank at £50, report on receipt as to whether it should be accepted.

ALEX. BRUCE,
Chief Inspector of Stock.

Recommended.—A.B., 4/12/82. The Under Secretary for Mines. Submitted.—H.W., 4/12/82.
Approved.—A.R., 4/12/82. Treasury informed.—6/12/82.

Gentlemen, Stock Branch, Department of Mines, Sydney, 6 December, 1882.

Referring to your tender to lease 200 acres of Crown Lands including the Boro Waterhole Tank on the road from Walgett to Bangate, I have the honor to inform you that your tender has been accepted, subject to your paying the amount mentioned in the margin into the Government Treasury, when an interim authority will be sent you to take possession forthwith. Annual rent,
£50. Amount
now called
for, £50.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

Messrs. Gordon & Campbell, 2, Spring-street, Sydney.

Australian Mortgage, Land, and Finance Company (Limited),

2, Spring-street, Sydney, 15 December, 1882.

Sir, I have the honor to acknowledge the receipt of your letter of the 6th instant (82-1,002 Tanks & Wells, 82-1,070.)

The Boro Waterhole Tank has been damaged by flood waters since date of tender, and Messrs. Gordon and Campbell stipulate that you have it placed in good order before they complete the matter.

I have, &c.,

W. A. COTTIE,

Manager,

Agent for Gordon & Campbell.

The Chief Inspector of Stock.

Minute of the Commissioner for Roads.

That Mining Department be requested to take charge of tank at Lightning Ridge, Walgett district.

Sydney, 7 December, 1882.

The local officer having reported that the tank at Lightning Ridge, on the road from Walgett to Bangate, is finished and full of water, I have to request that the Mining Department be requested to take charge of the work. Public Works,
82-8,420.
Tanks and
Punts,
82-394.
Tanks & Wells,
82-1,038.

I would also call the attention to the fact that, on the 28th August, notice was sent from this office of the completion of tank at Boro Waterhole, in same vicinity, and a request made that Mines would take charge. This has not been done, and this Department has been paying out of Capital Vote for a caretaker since that date. After the 1st of January there will be no funds for this purpose.

W.C.B., 7/12/82.

The Under Secretary for Public Works, B.C.

The Under Secretary for Mines.—J.R., B.C., 8/12/82. Mr. Inspector Doyle, Walgett, might perhaps be instructed to place a caretaker in charge, who would do any necessary work pending the leasing of this tank. Wages, £2 2s. a week.—A.B., 28/12/82. The Under Secretary for Mines. Submitted.—H.W., 29/12/82. Approved.—A.R., 30/12/82. Inspector Doyle, by telegram.—28/12/82.

Boro Tank, 82-8,420, Works.—Extract from 82-1,038 Tanks.

I would also call the attention to the fact that, on the 28th August, notice was sent from this office of the completion of tank at Boro Waterhole in same locality, and a request made that Mines would take charge. This has not been done, and this Department has been paying out of Capital Vote for a caretaker since that date. After the 1st of January there will be no funds for this purpose. Tanks & Wells,
82-1,000.

The Under Secretary, B.C.

W.C.B., 7/12/82.

The Under Secretary for Mines.—J.R., B.C., 8/12/82. Ask Mr. Gilliat whether caretaker has been placed in charge; if so, when? Telegram, 11 December, 1882.

Telegram from Mr. Inspector Gilliat to Chief Inspector of Stock.

Mossgiel, 22 December, 1882.

Boro Tank was nearly completed when I saw it, but had not been delivered by contractor to Roads Superintendent. I think a telegram was sent to that officer with regard to a caretaker, but have had no intimation since. Tanks & Wells,
82-1,087.

HARRY GILLIAT,

Inspector, Tanks and Wells.

28 December, 1882.

Mr. Doyle should place caretaker in charge, at salary of £2 2s. per week, and report. Inspector Doyle, by telegram, 28/12/82. Mr. Gilliat informed—29/12/82.

Sir, Stock Branch, Department of Mines, Sydney, 29 December, 1882.

Referring to your telegram of 22nd instant re Boro Tank, I have the honor to inform you that Mr. Doyle, Inspector of Stock, has been instructed to place a caretaker in charge. Tanks & Wells
82-42.

I have, &c.,

ALEX. BRUCE.

Mr. Inspector Harry Gilliat.

Mr. Bruce.—Was Messrs. Gordon and Campbell's tender declined for this tank?—H.G., B.C., 2/1/83. Sir,

Tanks & Wells,
83-79.

Sir,

Walgett, 6 January, 1883.

I have the honor to acknowledge receipt of your recent telegram *re* the Lightning Ridge and Boro Tanks, and to report upon the same, having visited them in accordance with your instructions.

The Lightning Ridge Tank is in good order, but is capable of holding 3 feet of water more than is at present in it.

The Boro Tank, I regret to say, is very much damaged, owing to the recent heavy rains which fell about five weeks ago. I attribute the damage to the water finding its way along (outside) the pipe connecting the main and watering tanks. This caused the earth to give way and to fall into the tank, together with an immense quantity of the silt, that had been heaped upon it to such an extent as to choke the supply pipe, which I discovered by ordering the caretaker to turn the tap on, the supply tank being 2 feet lower than the main tank. Although the tap was open for 36 hours, no water passed through. The caretaker has so far repaired outward damages that to a casual observer the tank is in good order, but as I visited the tank just after the rains, I am of opinion that very serious damage has been sustained, though, owing to the presence of the water, it is difficult to say to what extent. I do not think any one would be found to lease it in its present state, or that with the appliances here available the damage can be repaired even sufficiently to allow the supply pipe to work, as there must be at least 17 feet of water or silt above the pipe in question. I have appointed caretakers at each tank.

The Chief Inspector of Stock.

I have, &c.,
J. R. DOYLE.

Mr. Gilliat.—This report will enable you to see why a caretaker was necessary at the Boro Tank. Being out of repair through the damage caused by the flood water, the lessees will not take delivery till it is put in proper order. Nothing can, I suppose, be done in the case till the water subsides.—A.B., B.C., 19/1/83.

It might perhaps be advisable in the case of this tank and that of Lightning Ridge to authorize the caretakers to collect charges, if they are suitable men.—A.B., B.C., 20/1/83.

Nothing can be done to this tank until the water in the watering tank has gone down either by evaporation or by consumption. The embankment of the main tank was far too close, being only 6½ yards from the main excavation, and even closer to the watering tank. I have, however, communicated with Messrs. Gordon and Campbell's manager to inquire if any of their contractors will tender for the repairs. Before any considerable repairs are undertaken I wish to submit a report upon the way in which this tank has been constructed, and to suggest alterations in the method of admitting the water as well as adopting troughing and a double whip.—H.G., B.C., 14/2/83.

Mr. Bruce.—I have already submitted a recommendation that all caretakers should be authorized to collect rates. The men therefore should be carefully selected, and a close supervision kept over their accounts.—H.G., B.C., 14/2/83.

Sir,

Walgett, 26 February, 1883.

Tanks & Wells,
83-330.

Referring to the Government tanks at Boro and Lightning Ridge, I have the honor to inquire whether travelling stock are to be allowed access thereto for the purpose of watering. Since visiting and reporting upon the first named tank on 6th January, I find that the water has fallen about 6 feet in the supply tank, and as the supply pipe will not act and admit of its being refilled from the main tank, a considerable amount of damage will be done by allowing stock (large stock more particularly) to water thereat. I would therefore suggest that some immediate steps be taken to put the supply pipe into working order, and that in the meantime the tank be closed against travelling stock.

The Chief Inspector of Stock.

I have, &c.,
J. R. DOYLE.

The admission of stock to the watering tanks will, as Mr. Doyle points out, do great injury to the tanks; these are lined with stones, and stock walking down will push them into the bottom, and increase the accumulation over the supply tank. I cannot suggest any remedy, except what I have recommended of whip and troughing without delay.—H. G., B.C., 1/8/83.

Sir,

Walgett, 13 September, 1883.

Tanks & Wells,
83-1,409.

I have the honor to enclose a letter just received from the caretaker of the tank at Boro. This letter shows clearly the necessity of having a fence erected round the tank as first mentioned in my letter to you of the 28th ultimo.

I would beg further to suggest that, should the fencing be approved of, the whole of the 200 acres reserved should be fenced in, as the cost would not be much greater than a fence which would include all the drains.

The Chief Inspector of Stock.

I am, &c.,
J. R. DOYLE.

Mr. Gilliat.—A.B., B.C., 17/9/83.

Sir,

Boro Tank, 10 September, 1883.

I beg to call your earliest attention to the present condition of the tank at this place. There has no water come through the suction pipe from supply tank during the past four months. The water in drinking tank is 3 feet less than the supply tank. The stones all round the drinking tank are dropping down, having no foundation. Every morning for the past week I have pulled out from the drinking tank bogged and dead sheep.

Mr. Stock-Inspector J. R. Doyle.

I am, &c.,
WILLIAM REGAN.

Mr.

Mr. Stock-Inspector J. R. Doyle's report.
Lightning Ridge Tank.

Walget, 1 March, 1884.

THIS tank contains 15 feet of water at the end of the platform, being 3 feet below high-water mark thus showing that very little silt has found its way into this portion of the tank. This tank is in excellent order with the exception of a little caving in of the sides of the main tank caused by the rippling of the water. The drinking tank is also in good order, the paving stones round it have not been displaced to any extent, and the caretaker appears to devote a good deal of time in keeping his tank in repair; the water is sweet and wholesome and the supply pipe acts freely. As the tank seems to have been made after the same plan as the others, I attribute its present good condition to the fact of its having been filled gradually and stock not being allowed to use it until there was a sufficient supply of water to enable them to drink, without crushing down into the drinking tank. This tank also requires fencing, but the caretaker is not so much annoyed by stray stock, as the other caretakers, because the lessees' paddocks do not open to this tank. A hut also is required here.

Tanks & Wells,
84-292.

J. R. DOYLE.

Mr. Gilliat.—A.B., B.C., 6/3/84. Memo. herewith.—H.G., B.C., 10/3/84.

Although this tank has not suffered yet from the caving in of the steep batters, it will undoubtedly do so, and the same stoppage of the connecting pipe sooner or later occur.
